com.ofss.fc.app.adapter.internal.interface.jar@\com\ofss\fc\app\adapter\integration\IIntegrationAdapter	update	This method uses appropriate Assembler and IntegrationStrategy to invoke appropriate Adaptee method, to propagate the changes done by the FC business method. This will be implemented as part of Async strategies @param dto - This is the domain DTO which has been changed by the FC business method. This can be aggregation of DomainDTOs as well. @param dto	com.ofss.fc.module.party.jar@\com\ofss\fc\app\party\service\search\MDMPartySearchApplicationService	searchParty	<p> This service searches for a party given a set of search criteria. This service will search for parties from various sources depending on the adapter that is implemented for {@link com.ofss.fc.common.integration.config.IntegrationAdapters#party_service_core_PartySearchApplicationService_searchParty} . This adapter dictates whether internal or external source is responsible for getting details for the search results. NullAdapter is implementation of this interface where integration end points are absent. The input search criteria {@link com.ofss.fc.app.search.dto.SearchCondition#searchType} defines the type of party search intended. Any one of the following values can be supplied in this variable: <dl> <dt>PrimarySearchDetails</dt> <dd>For basic search conditions like partyId, partyType, partyClass (Refer {@link com.ofss.fc.domain.party.service.dto.search.PrimarySearchDetails} for complete list of input criteria)</dd> <dt>IdentificationDetails</dt>

Adapter Path	Adapter Method	Interface Method Javadoc	Consumer Service	Consumer Service Method	Consumer Service Method Javadoc
					<dd>For search on the basis of identification details like identificationType, identificationValue, issueDate, expiryDate (Refer {@link com.ofss.fc.domain.party.service.dto.search.IdentificationDetails} for complete list of input criteria)</dd> <dt>NameDetails</dt> <dd>For search on the basis of secondary name details like firstName, middleName, shortName, lastName (Refer {@link com.ofss.fc.domain.party.service.dto.search.NameDetails} for complete list of input criteria)</dd> <dt>AddressDetails</dt> <dd>For search on the basis of address details like city, state, country (Refer {@link com.ofss.fc.domain.party.service.dto.search.AddressDetails} for complete list of input criteria)</dd> <dt>BrokerDetails</dt> <dd>For search on the basis of broker details like spid, serviceProviderStatusType commissionReceipientId, commissionReceipientName (Refer {@link com.ofss.fc.domain.party.service.dto.search.BrokerDetails} for complete list of input criteria)</dd> <dt>RoleDetails</dt> <dd>For search on the basis of role details like roleId (Refer {@link com.ofss.fc.domain.party.service.dto.search.RoleDetails} for complete list of input criteria)</dd> </dl> For each

Adapter Path	Adapter Method	Interface Method Javadoc	Consumer Service	Consumer Service Method	Consumer Service Method Javadoc
					of the above search conditions, the user can choose whether the search is to use exact match or not by specifying {@link com.ofss.fc.app.party.dto.search.input .PartySearchRequest.isExactSearch}. Default value is true For example if the user intends to search on first name, and specifies input as isExactSearch=true and firstName='A', the service will fetch records where the firstName='A' but if isExactSearch='false', the service will fetch records where the firstName like '%a%' This transaction supports the Pagination feature. The user can control the number of records to be fetched by specifying {@link com.ofss.fc.app.party.dto.search.input .PartySearchRequest.totalRecordsFetc hed} Default value is 10 The user can also specify the first row from which data is sought by setting {@link com.ofss.fc.app.party.dto.search.input .PartySearchRequest.firstResult}. Default value is 0 The party search results returned in a search contain the basic details of each party found {@link com.ofss.fc.app.party.dto.search.outp ut.PartySearchResponseDTO}. There may be times when additional details are required. To facilitate this, the search transaction supports an

Adapter Path	Adapter Method	Interface Method Javadoc	Consumer Service	Consumer Service Method	Consumer Service Method Javadoc
					inquiry level which the user can specify through {@link com.ofss.fc.app.party.dto.search.input .PartySearchRequest.isBasicSearch} Default value is true If account adapter is not null, populate PartySearchResponseDTO with account details too. The response fetches the following details for parties which match the search criteria: - Party id - unique identifier for the party - Party name - full name of the party - Party class - Party type - indicator of whether the party is Individual, Bank, Trust etc. - Date of birth - birth date of the party - Email id - email of the party - Postal code - address postal code of the party - Role id - customer or banker role </p> @see IntegrationAdapterFactory#fetchAda pterInstance @see IIntegrationAdapter#updateWithResp onse @see IAccountAdapter#fetchAccountByAcc ount @param sessionContext @param partySearchrequest: is an object with an array of search conditions based on various input fields (e.g. party id, name, party type, party role, email, service provider id etc) @return PartySearchResponseDTO: stores an array of response dtos which contain
