This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

U.S. GOVERNMENT END USERS: Oracle programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, delivered to U.S. Government end users are "commercial computer software" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, shall be subject to license terms and license restrictions applicable to the programs. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate failsafe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle and Java are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

This software or hardware and documentation may provide access to or information on content, products and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services.

1 Adapter Usage Details **1**

Preface

Oracle Banking Platform Extensibility - Adapter Usage Details guide is an extension of the Oracle Banking Platform Extensibility guide. It contains information about the detailed list of adapters which can be used for extending and customizing the product.

This preface contains these topics:

- Audience
- Documentation Accessibility
- Related Documents
- Conventions

Audience

This guide is intended for the users of Oracle Banking Platform.

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at `http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc`.

Access to Oracle Support

Oracle customers have access to electronic support through My Oracle Support. For information, visit `http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info` or visit `http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs` if you are hearing impaired.

Related Documents

For more information, see the following documentation:

- For information related to customization and extension of Oracle Banking refer the Oracle Banking Extensibility Guide

Conventions

The following text conventions are used in this document:

Convention	Meaning
boldface	Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.
italic	Italic type indicates book titles, emphasis, or placeholder variables for

	which you supply particular values.
`monospace`	Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.

1

Adapter Usage Details

This chapter provides information on the list of adapters which can be used for extending and customizing the product.

Table 1–1 Adapter Usage Details

Adapter Path	Adapter Method	Interface Method Javadoc	Consumer Service	Consumer Service Method	Consumer Service Method Javadoc
com.ofss.fc.app.adapter.internal.interface.jar@\com\ofss\fc\app\adapter\lcm\collaterals\valuation\IValuerEligibilityAdapter	addRestrictionLinkageAndException		com.ofss.fc.module.lcm.jar@\com\ofss\fc\app\lcm\service\collaterals\valuation\valuer\preference\CollateralValuerPreferenceApplicationService	addCollateralValuerPreference	This method <u>Adds</u> a new Valuer Preference. @see CollateralValuerPreferenceSystemConstraint#isSatisfiedBy @see CollateralValuerPreferenceService#addCollateralValuerPreference @see IValuerEligibilityAdapter#addRestrictionLinkageAndException @param SessionContext,sessionContext @param CollateralValuerPreferenceDTO,collateralValuerPreferenceDTO @return {@link com.ofss.fc.service.response.TransactionStatus} An instance of TransactionStatus contains the information whether the transaction is success\failure. @throws FatalException

Adapter Path	Adapter Method	Interface Method Javadoc	Consumer Service	Consumer Service Method	Consumer Service Method Javadoc
Adapter Path	Adapter Method	Interface Method Javadoc	Consumer Service	Consumer Service Method	Consumer Service Method Javadoc
com.ofss.fc.app.adapter.internal.interface.jar@\com\ofss\fc\app\adapter\lcm\collaterals\valuation\IValuerEligibilityAdapter	addRestrictionLinkageAndException		com.ofss.fc.module.lcm.jar@\com\ofss\fc\app\lcm\service\collaterals\valuation\valuer\preference\CollateralValuerPreferenceApplicationService	addCollateralValuerPreference	This method <u>Adds</u> a new Valuer Preference. @see CollateralValuerPreferenceSystemConstraint#isSatisfiedBy @see CollateralValuerPreferenceService#addCollateralValuerPreference @see IValuerEligibilityAdapter#addRestrictionLinkageAndException @param SessionContext,sessionContext @param CollateralValuerPreferenceDTO,collateralValuerPreferenceDTO @return {@link com.ofss.fc.service.response.TransactionStatus} An instance of TransactionStatus contains the information whether the transaction is success\failure. @throws FatalException
com.ofss.fc.app.adapter.internal.interface.jar@\com\ofss\fc\app\adapter\lcm\collaterals\valuation\IValuerEligibilityAdapter	addRestrictionLinkageAndException		com.ofss.fc.module.lcm.jar@\com\ofss\fc\app\lcm\service\collaterals\valuation\valuer\preference\CollateralValuerPreferenceApplicationService	updateCollateralValuerPreference	This method <u>updates</u> the status of the existing Valuer preference. @see CollateralValuerPreferenceSystemConstraint#isSatisfiedBy @see CollateralValuerPreferenceService#updateCollateralValuerPreference @see IValuerEligibilityAdapter#addRestrictionLinkageAndException @param SessionContext,sessionContext @param

Adapter Path	Adapter Method	Interface Method Javadoc	Consumer Service	Consumer Service Method	Consumer Service Method Javadoc
					CollateralValuerPreferenceDTO,collateralValuerPreferenceDTO @return {@link com.ofss.fc.service.response.TransactionStatus} An instance of TransactionStatus contains the information whether the transaction is success\failure. @throws FatalException
com.ofss.fc.app.adapter.internal.interface.jar@\com\ofss\fc\app\adapter\lcm\collaterals\valuation\IValuerEligibilityAdapter	addRestrictionLinkageAndException		com.ofss.fc.app.adapter.impl.jar@\com\ofss\fc\app\adapter\impl\lcm\collaterals\valuation\valuers\ValuerEligibilityAdapter	addRestrictionLinkageAndException	
com.ofss.fc.app.adapter.internal.interface.jar@\com\ofss\fc\app\adapter\lcm\collaterals\valuation\IValuerEligibilityAdapter	addRestrictionLinkageAndException		com.ofss.fc.module.lcm.jar@\com\ofss\fc\app\lcm\service\collaterals\titlesearch\agent\preference\CollateralTitleSearchAgentPreferenceApplicationService	addCollateralTitleSearchAgentPreference	This method <u>Adds</u> a new Agent for the Colateral TitleSearch. @see CollateralTitleSearchAgentPreferenceService#addCollateralTitleSearchAgentPreference @see IValuerEligibilityAdapter#addRestrictionLinkageAndException @param SessionContext,sessionContext @param CollateralTitleSearchAgentPreferenceDTO, collateralTitleSearchAgentPreferenceDTO @return {@link com.ofss.fc.service.response.TransactionStatus} An instance of TransactionStatus contains the information whether the transaction is success\failure. @throws FatalException

Adapter Path	Adapter Method	Interface Method Javadoc	Consumer Service	Consumer Service Method	Consumer Service Method Javadoc
com.ofss.fc.app.adapter.internal.interface.jar@\com\ofss\fc\app\adapter\lcm\collaterals\valuation\IValuerEligibilityAdapter	addRestrictionLinkageAndException		com.ofss.fc.module.lcm.jar@\com\ofss\fc\app\lcm\service\collaterals\titlesearch\agent\preference\CollateralTitleSearchAgentPreferenceApplicationService	updateCollateralTitleSearchAgentPreference	This method <u>updates</u> the value of existing AgentID for Collateral TitleSearch. @see CollateralTitleSearchAgentPreferenceService#updateCollateralTitleSearchAgentPreference @see IValuerEligibilityAdapter#addRestrictionLinkageAndException @param SessionContext,sessionContext @param CollateralTitleSearchAgentPreferenceDTO, collateralTitleSearchAgentPreferenceDTO @return {@link com.ofss.fc.service.response.TransactionStatus} An instance of TransactionStatus contains the information whether the transaction is success\failure. @throws FatalException
com.ofss.fc.app.adapter.internal.interface.jar@\com\ofss\fc\app\adapter\lcm\collaterals\valuation\IValuerEligibilityAdapter	fetchAllAllowableValues		com.ofss.fc.module.lcm.jar@\com\ofss\fc\app\lcm\service\collaterals\valuation\CollateralValuationApplicationService	fetchEligibleValuers	This method is used to fetch the Eligible valuers This will call the Eligibility Framework with the collateral Facts , and the call will return the list of Valuers that are applicable for the valuation. @see IValuerEligibilityAdapter#fetchAllAllowableValues @see CollateralValuationAppLayerHelper#fetchPartyDetailsForRole @param SessionContext sessionContext : holds the basic information about the user of the system. @param CollateralValuationDTO collateralValuationDTO : Collateral

Adapter Path	Adapter Method	Interface Method Javadoc	Consumer Service	Consumer Service Method	Consumer Service Method Javadoc
					valuation request details DTO. @return {@link com.ofss.fc.app.lcm.dto.collaterals.valuation.valuer.fetchvaluer.FetchValuerInquiryResponse} This class holds the values of all the DTOs defined in it. @throws FatalException
com.ofss.fc.app.adapter.internal.interface.jar@\com\ofss\fc\app\adapter\lcm\collaterals\valuation\IValuerEligibilityAdapter	fetchAllAllowableValues		com.ofss.fc.app.adapter.impl.jar@\com\ofss\fc\app\adapter\impl\lcm\collaterals\valuation\valuers\ValuerEligibilityAdapter	fetchAllAllowableValues	
com.ofss.fc.app.adapter.internal.interface.jar@\com\ofss\fc\app\adapter\brop\IBranchAccountAdapter	addTransactionLog	This method is used to add (log) an entry in Teller Transaction Log Table. @param transactionLogDTO the <tt>TransactionLogDTO</tt> object	com.ofss.fc.module.brop.jar@\com\ofss\fc\app\brop\service\foreignexchange\ForeignExchangeApplicationService	processForeignExchange	This method processes the buy or sell foreign exchange transaction. @param sessionContext @param foreignExchangeDTO @return @throws FatalException
com.ofss.fc.app.adapter.internal.interface.jar@\com\ofss\fc\app\adapter\brop\IBranchAccountAdapter	addTransactionLog	This method is used to add (log) an entry in Teller Transaction Log Table. @param transactionLogDTO the <tt>TransactionLogDTO</tt> object	com.ofss.fc.module.brop.jar@\com\ofss\fc\app\brop\service\foreignexchange\ForeignExchangeApplicationService	addTransactionLogs	This method is used to log an entry in Teller Transaction Log Table. @param cashPositionDTO @param convAmount @param forexTransactionType @param exchangeRate @param taskCode @param customerIdentificationNumber @throws FatalException

Adapter Path	Adapter Method	Interface Method Javadoc	Consumer Service	Consumer Service Method	Consumer Service Method Javadoc
com.ofss.fc.app.adapter.internal.interface.jar@\com\ofss\fc\app\adapter\brop\IBranchAccountAdapter	addTransactionLog	This method is used to add (log) an entry in Teller Transaction Log Table. @param transactionLogDTO the <tt>TransactionLogDTO</tt> object	com.ofss.fc.module.brop.jar@\com\ofss\fc\app\brop\service\currencyindent\CurrencyIndentApplicationService	update	Once an indent is been raised all the updation and changes or maintaining approval or rejection of currency indent is been done by this method. This method will update any changes made on a raised indent in currency indent table and changed record is been added to currency indent history table for auditing. If the indent is been updated from NextGen screen before any action on it is been taken by the approver in workflow, the old process is been terminated and a new process is been initiated. @see CurrencyIndentService#updateCurrencyIndent @see CurrencyIndentService#fetchingTellerRole @see WorkflowManager#abortCompositeInstancesByTitle @see CashPositionApplicationService#updateCashPositionForCurrencyIndent @see IBranchAccountAdapter#addTransactionLog @see BranchCommonHelper#convertIntoLocalCurrency @see BranchCommonHelper#makeAccountingEntriesForIndent @see IBranchProcessAdapter#initiateCurrencyIndentProcess @see StateTransitionService#changeState @param com.ofss.fc.app.context.SessionContext,sessionContext, , This parameter captures the basic information about

This service will search for parties from various sources depending on the adapter that is implemented for {@link com.ofss.fc.common.integration.config.IntegrationAdapters#party_service_core_PartySearchApplicationService_searchParty} . This adapter dictates whether internal or external source is responsible for

Adapter Path	Adapter Method	Interface Method Javadoc	Consumer Service	Consumer Service Method	Consumer Service Method Javadoc
					getting details for the search results. NullAdapter is implementation of this interface where integration end points are absent. The input search criteria {@link com.ofss.fc.app.search.dto.SearchCondition#searchType} defines the type of party search intended. Any one of the following values can be supplied in this variable: <dl> <dt>PrimarySearchDetails</dt> <dd>For basic search conditions like partyId, partyType, partyClass (Refer {@link com.ofss.fc.domain.party.service.dto.search.PrimarySearchDetails} for complete list of input criteria)</dd> <dt>IdentificationDetails</dt> <dd>For search on the basis of identification details like identificationType, identificationValue, issueDate, expiryDate (Refer {@link com.ofss.fc.domain.party.service.dto.search.IdentificationDetails} for complete list of input criteria)</dd> <dt>NameDetails</dt> <dd>For search on the basis of secondary name details like firstName, middleName, shortName, lastName (Refer {@link com.ofss.fc.domain.party.service.dto.search.NameDetails} for complete list of input criteria)</dd> <dt>AddressDetails</dt> <dd>For search on the basis of address details like city, state, country (Refer {@link

Adapter Path	Adapter Method	Interface Method Javadoc	Consumer Service	Consumer Service Method	Consumer Service Method Javadoc
					com.ofss.fc.domain.party.service.dto.search.AddressDetails} for complete list of input criteria)</dd> <dt>BrokerDetails</dt> <dd>For search on the basis of broker details like spid, serviceProviderStatusType commissionReceipientId, commissionReceipientName (Refer {@link com.ofss.fc.domain.party.service.dto.search.BrokerDetails} for complete list of input criteria)</dd> <dt>RoleDetails</dt> <dd>For search on the basis of role details like roleId (Refer {@link com.ofss.fc.domain.party.service.dto.search.RoleDetails} for complete list of input criteria)</dd> </dl> For each of the above search conditions, the user can choose whether the search is to use exact match or not by specifying {@link com.ofss.fc.app.party.dto.search.input.PartySearchRequest.isExactSearch}. Default value is true For example if the user intends to search on first name, and specifies input as isExactSearch=true and firstName='A', the service will fetch records where the firstName='A' but if isExactSearch='false', the service will fetch records where the firstName like '%a%' This transaction supports the Pagination feature. The user can control the number of records to be

Adapter Path	Adapter Method	Interface Method Javadoc	Consumer Service	Consumer Service Method	Consumer Service Method Javadoc
					fetched by specifying {@link com.ofss.fc.app.party.dto.search.input.PartySearchRequest.totalRecordsFetched} Default value is 10 The user can also specify the first row from which data is sought by setting {@link com.ofss.fc.app.party.dto.search.input.PartySearchRequest.firstResult}. Default value is 0 The party search results returned in a search contain the basic details of each party found {@link com.ofss.fc.app.party.dto.search.output.PartySearchResponseDTO}. There may be times when additional details are required. To facilitate this, the search transaction supports an inquiry level which the user can specify through {@link com.ofss.fc.app.party.dto.search.input.PartySearchRequest.isBasicSearch} Default value is true If account adapter is not null, populate PartySearchResponseDTO with account details too. The response fetches the following details for parties which match the search criteria: - Party id - unique identifier for the party - Party name - full name of the party - Party class - Party type - indicator of whether the party is Individual, Bank, Trust etc. - Date of birth - birth date of the party - Email id - email of the

The method fetches accounting entry templates based on product code,status and/or event code. For each accounting entry template the credit and debit account role attributes are retrieved and also the credit and debit amount tag attributes. If the account role retrieved has derivation type as MODULE_SUPPLIED, then corresponding ledger code for the product, account role and status is returned as null from the account role to head mapping If the account role retrieved has derivation type as DERIVED, then corresponding ledger code for the product, account role and status is fetched from the account role to head mapping. If the accounting entry templates are not found then null object is returned.

This method will check if the activation date for the transaction is a holiday in the network calendar, then without checking cut-off, set the transaction as executed post cut-off and raise held over accounting event. This will handle the post cut off transaction and place a hold on the funds of the remitter account, if the holds funds are enabled at the template level for the post cutoff transactions. When the transaction is picked up during the batch processsing this will remove the hold on the remitter account for the hold reference number of the respective transaction. @see IPaymentsCASAAdapter#earmarkFundsForOutgoingPayment @see PCUtil#fetchSessionContext @see CompositeCalendarFactory.getCalendarGenerator()#fetchCompositeCalendar @see CompositeCalendarFactory#getCalendarGenerator @see IPaymentsCASAAdapter#removeEarmark @param transactionContext @param transactionLog @param transactionTemplate @param messageLogItem @param fundsExchangeDateDTO @throws FatalException @exception The following error codes are generated {@link

com.ofss.fc.app.adapter.internal.interface.jar@\com\ofss\fc\app\adapter\sms\IAccessPolicyAssertionAdapter	assertFraudPolicies	This method invokes the OAAM policies for user. @param serviceInputValues , This parameter captures the method arguments. The method parameters and arguments are stored in key-value pair the HashMap. @return Object @throws fatalException , persistenceException, nestedException	\middleware\projects\common\com.ofss.fc.appcore.jar@\com\ofss\fc\app\AbstractSecureApplication	checkAccessInternal	This method delegates the calls to the appropriate methods during security access check process. First of all, if the service is blacked out for the period in which the user is accessing it, then he will not be allowed to perform the transaction. Access policies are maintained on OID server corresponding to roles. Based on the policies, the user has access on a particular service or not is validated. If the service under execution is eligible for OAAM validations, call is made to OAAM. OAAM validates the policies and rules set for the service and returns the action to be taken. Action can be Allow, Block, Challenge1FA, Challenge1FADelay, Challenge2FA, Challenge2FADelay. Next assertRequiredAuthorizations is used to test for business conditions that can be either rejected, ignored or overridden. If status is marked as overridden, system fetches the configured workflow and distributes workitems accordingly. @see ITransactionBlackoutAssertionAdapter#checkBlackout @see IAccessPolicyAssertionAdapter#validateUserPrivilege @see IAccessPolicyAssertionAdapter#assertFraudPolicies @see

com.ofss.fc.app.adapter.internal.interface.jar@\com\ofss\fc\app\adapter\agent\IAgentArrangementLinkageAdapter	fetchPartyName	This method is used to fetch the party name for a given commission recipient id. @param sessionContext @param commissionReceipientId @param agentType @return @throws FatalException	com.ofss.fc.module.agent.jar@\com\ofss\fc\app\agent\service\agent\AgentInquiryApplicationService	fetchAgentDetails	This method is used to persist the agent related details which consists mainly of agentId,commission Details(AutoCommision OR DiscretionaryCommisin OR ExistingCommission) ,commission receipient Id , commission receipient Name into the DB. Key is the arrangement Id which can be account Id or submission Id or facility Id and Serial Number. This method checks if the arrangement ID is already existing then it copies the entry in backup table and updates it. otherwise it adds the new entry into the DB. This method is called in amend scenarios when the commission of a agent changes as the limits changes. In this case we copy the current agent details to history table and update the current record with the new commission details. The previous commission Details are copied to the existing commission details of the updated record. Commission present can be of 3 types:- (1) Existing commission - this refers to the commission which the broker is currently holding before he changes it. (2) AutoCommission :- This refers to the commision either manually entered or fetched from external system. (3) Discretionary Commission :- If auto commision is changed then it is entered in the discretionary commission Brief Procedure of

Adapter Path	Adapter Method	Interface Method Javadoc	Consumer Service	Consumer Service Method	Consumer Service Method Javadoc
					working of ADD is like this:- it checks if module calling is not ELCM then it fetches the latest arrangement Id record from DB. if there are no records present for the arrangement ID then it checks if the calling module is ELCM or not, if ELCM then fetches the latest serial number and increases it by 1 and then adds the records to DB. If calling module is not ELCM and no records are found then directly add record to DB. IF records were already found in while fetching latest arrangement from DB then it is first copied to history, then the current record is deleted from the base table and then from the passed DTO a entity object is formed and the key and commission Receipient id and agent party id are set to it and sent to add to DB. Following are the mandatory attributes in the DTO being passed to add a record to DB:- (1) arrangement ID - refers to account Id or submission Id or facility Id (2) Agent ID- refers to Broker / Introducer ID. @see AgentArrangementLinkageService#fetchProductGroupFromProduct @see IAgentArrangementLinkageAdapter#fetchPartyName @see IAccountPartyAdapter#fetchPartyBySpidAndRoleId @param com .ofss.fc.app.context.SessionContext,sessionContext, , This parameter captures the basic information

com.ofss.fc.app.adapter.internal.interface.jar@\com\ofss\fc\app\adapter\dda\IDDASettlementAdapter	closeSettlementDetails	This method close the ComponentPreferenceDTO stored against the reference number and the accountId. @param componentPreferenceDto	com.ofss.fc.module.dda.jar@\com\ofss\fc\domain\dda\entity\account\facility\instruction\SweepOutInstruction	execute	This is the concrete implementation of the execute method. This method executes the Sweepout Instruction as follows: - The Sweep out is initiated during End Of Day Batch processing if the EpochType is set as EOD, if it is set up as BOD, it initiates in Beginning of the Operation Day. - The system checks the accounts which are due for sweep out based on the Sweep out Start Date and the Recurrence pattern maintained. - The System Validates end date for the instruction. The Conditions when the Sweep out is to be terminated is maintained in the recurrence pattern. - System checks the status of the provider and beneficiary Accounts. Business rules to be built to allow or reject based on the status of the account - The system checks if the previous calendar date was a holiday, refer holiday processing explained in the documentation. - System identifies the accounts eligible to execute Sweep outs on this processing date - The System Checks the following balances defined for the sweep out arrangement.

Adapter Path	Adapter Method	Interface Method Javadoc	Consumer Service	Consumer Service Method	Consumer Service Method Javadoc
					- The Cash Balance (Minus the Hold) - Minimum amount To be retained - Threshold Balance - Maximum Sweep Out amount - The Amount Basis to arrive at the sweep out amount. - The Execution of the instruction is based on the ???level??? and the priority defined for the accounts. - The System Executes the transfers- Amounts which are greater than the maximum limit specified in the sweep out instruction are swept out to a pre-specified Savings account or a Time Deposit account. - The System Sweeps out funds based on the ???Sweep Out Amount Basis??? Defined during Set up - The system updates the book balance and passes the accounting entries (posting dated will be the current system date) - The System maintains a Transaction Reference number for Audit purpose - The System updates the Next Execution date . (For Accounts which the Sweep out Instructions ends the next execution date is not updated. - The system executes the next instruction in the same way as the first instruction execution. Holiday Processing for Sweep Out Instructions - The

Adapter Path	Adapter Method	Interface Method Javadoc	Consumer Service	Consumer Service Method	Consumer Service Method Javadoc
					Operations Executive can configure the ???day of execution??? as defined by the business rules of the bank - If the Business rule indicates that the execution is to be processed the previous day, then the accounts for which the funds transfer is due will be processed the day before the bank holiday - If the date for execution is not configured to previous, the system will initiate the instruction order on the next working day. - Transactions falling on a holiday will be executed on next working day, but if the frequency is daily, the transactions will only be executed on working days. - Scenario 1: ???Day Of Execution??? is ???Previous Day??? - The System identifies that the next day is a holiday in the Bank Calendar - The System validates all the account due for sweep out till the next working day. - Scenario 2: ???Day Of Execution ??? is the ???Next Working Date??? - The System checks if the previous day was a holiday in the Bank Calendar - The System validates all the account due for sweep out from the last working date. For Example: - Single provider Single

Adapter Path	Adapter Method	Interface Method Javadoc	Consumer Service	Consumer Service Method	Consumer Service Method Javadoc
					beneficiary - The Cash Balance (Minus the Hold) = 25000 - Overdraft Balance (If considered) = NA - Minimum amount To be retained = 5000 - Threshold Balance= NA - Maximum Sweep Out amount = 15000 - Amount basis: Percentage (25%) - The sweep out amount = (Cash Balance ??? Minimum amount to be retained)Amount basis =(25000-5000)25% =5000 - Since 5000 is less than 15000 (The Max Sweep out Amount) the amount swept out is 5000.00 - Single Provider Multiple Beneficiary - The Cash Balance (Minus the Hold) = 25000 - Overdraft Balance (If considered) = NA - Minimum amount To be retained = 5000 - Threshold Balance= NA - Maximum Sweep Out amount = 15000 - Amount basis: Multiples of 400 - Beneficiary A ??? 20% - Beneficiary B ??? 50% - Beneficiary C ??? 30% - The Sweep Out Amount = (25000-5000) = 15000 - Since the amount basis is multiples of 400 only 14800 (40037 times) is eligible to be swept out - Beneficiary A = 1480020% = 2960 - Beneficiary B = 14800 50%=

Adapter Path	Adapter Method	Interface Method Javadoc	Consumer Service	Consumer Service Method	Consumer Service Method Javadoc
					7400 - Beneficiary C = 14800 30% = 4440 - If any sweep out instruction fails the amount will remain with the provider account. For instance the sweep out to ???Beneficiary B??? Fails, then only 7440 (to A- 2960 + to C 4440) is debited from the provider account. This method works as follows : <pre> <pre> Event Id = SWEEP_OUT_EVENT_CODE boolean isAllowed = true; try { Call {@link IDemandDepositAccount#validateStatus()}. }catch (Exception e) { <i> Log the message, and execute next SweepOut Instruction</i> isAllowed = false; } eligibleSweepOutAmount = {@link SweepOutInstruction#deriveEligibleSweepOutAmount()} generate transactionReferenceNumber {@link UUIDGenerator#generate()} List<InstructionInstance> instructionInstanceList; for({@link BeneficiaryAccount} benificiaryAccount : {@link SweepOutInstruction#getBeneficiaryAccountList()}) { requestedSweepOutAmount = {@link SweepOutInstruction#deriveRequestedSweepOutAmount(eligibleSweepOutAmount)} if(requestedSweepOutAmount <= eligibleSweepOutAmount) {

This method executes the Sweepout Instruction as follows: - The Sweep out is initiated during End Of Day Batch processing if the EpochType is set as EOD, if it is set up as BOD, it initiates in Beginning of the Operation Day. - The system checks the accounts which are due for sweep out based on the Sweep out Start Date and the Recurrence pattern maintained. - The System Validates end date for the instruction. The Conditions when the Sweep out is to be terminated is maintained in the recurrence pattern. - System checks the status of the provider and beneficiary Accounts.

Adapter Path	Adapter Method	Interface Method Javadoc	Consumer Service	Consumer Service Method	Consumer Service Method Javadoc
					Business rules to be built to allow or reject based on the status of the account - The system checks if the previous calendar date was a holiday, refer holiday processing explained in the documentation. - System identifies the accounts eligible to execute Sweep outs on this processing date - The System Checks the following balances defined for the sweep out arrangement. - The Cash Balance (Minus the Hold) - Minimum amount To be retained - Threshold Balance - Maximum Sweep Out amount - The Amount Basis to arrive at the sweep out amount. - The Execution of the instruction is based on the ???level??? and the priority defined for the accounts. - The System Executes the transfers- Amounts which are greater than the maximum limit specified in the sweep out instruction are swept out to a pre-specified Savings account or a Time Deposit account. - The System Sweeps out funds based on the ???Sweep Out Amount Basis??? Defined during Set up - The system updates the book balance and passes the accounting entries (posting dated will be the current system date) - The System maintains a Transaction

Adapter Path	Adapter Method	Interface Method Javadoc	Consumer Service	Consumer Service Method	Consumer Service Method Javadoc
					Reference number for Audit purpose - The System updates the Next Execution date . (For Accounts which the Sweep out Instructions ends the next execution date is not updated. - The system executes the next instruction in the same way as the first instruction execution. Holiday Processing for Sweep Out Instructions - The Operations Executive can configure the ???day of execution??? as defined by the business rules of the bank - If the Business rule indicates that the execution is to be processed the previous day, then the accounts for which the funds transfer is due will be processed the day before the bank holiday - If the date for execution is not configured to previous, the system will initiate the instruction order on the next working day. - Transactions falling on a holiday will be executed on next working day, but if the frequency is daily, the transactions will only be executed on working days. - Scenario 1: ???Day Of Execution??? is ???Previous Day??? - The System identifies that the next day is a holiday in the Bank Calendar - The System validates all the account due for sweep out till the next

Adapter Path	Adapter Method	Interface Method Javadoc	Consumer Service	Consumer Service Method	Consumer Service Method Javadoc
					working day. - Scenario 2: ???Day Of Execution ??? is the ???Next Working Date??? - The System checks if the previous day was a holiday in the Bank Calendar - The System validates all the account due for sweep out from the last working date. For Example: - Single provider Single beneficiary - The Cash Balance (Minus the Hold) = 25000 - Overdraft Balance (If considered) = NA - Minimum amount To be retained = 5000 - Threshold Balance= NA - Maximum Sweep Out amount = 15000 - Amount basis: Percentage (25%) - The sweep out amount = (Cash Balance ??? Minimum amount to be retained)Amount basis =(25000-5000)25% =5000 - Since 5000 is less than 15000 (The Max Sweep out Amount) the amount swept out is 5000.00 - Single Provider Multiple Beneficiary - The Cash Balance (Minus the Hold) = 25000 - Overdraft Balance (If considered) = NA - Minimum amount To be retained = 5000 - Threshold Balance= NA - Maximum Sweep Out amount = 15000 - Amount

Adapter Path	Adapter Method	Interface Method Javadoc	Consumer Service	Consumer Service Method	Consumer Service Method Javadoc
					basis: Multiples of 400 - Beneficiary A ??? 20% - Beneficiary B ??? 50% - Beneficiary C ??? 30% - The Sweep Out Amount = (25000-5000) = 15000 - Since the amount basis is multiples of 400 only 14800 (40037 times) is eligible to be swept out - Beneficiary A = 1480020% = 2960 - Beneficiary B = 14800 50%= 7400 - Beneficiary C = 14800 30% = 4440 - If any sweep out instruction fails the amount will remain with the provider account. For instance the sweep out to ???Beneficiary B??? Fails, then only 7440 (to A- 2960 + to C 4440) is debited from the provider account. This method works as follows : <pre> <pre> Event Id = SWEEP_OUT_EVENT_CODE boolean isAllowed = true; try { Call {@link IDemandDepositAccount#validateStatus()}. }catch (Exception e) { <i> Log the message, and execute next SweepOut Instruction</i> isAllowed = false; } eligibleSweepOutAmount = {@link SweepOutInstruction#deriveEligibleSweepOutAmount()} generate transactionReferenceNumber {@link UUIDGenerator#generate()} List<InstructionInstance>
