		In case of DBDataStore, this method will perform both export and audit. @param SessionContext @param BaseResponse @param String key: key of the business entity @param String taskCode: business configuration task code @param String service: service name from where the export of the business entity has been called @param configVersionNo : unique config package id for the business entity @throws FatalException			@see IExportImportAdapter#audit @see IExportImportAdapter#export @see #fetchFloatConfiguration @see FloatConfigurationService#fetchFloatConfiguration @param com.ofss.fc.app.context.SessionContext,sessionContext, , This parameter captures the basic information about the user of the system. @param domainObjectDto @return entityInquiryResponse @throws FatalException

Adapter Path	Adapter Method	Interface Method Javadoc	Consumer Service	Consumer Service Method	Consumer Service Method Javadoc
com.ofss.fc.app.adapter.internal.interface.jar@\com\ofss\fc\app\adapter\ops\IExportImportAdapter	audit	This method audits the response containing list of response objects of the Business Entity for the provided key, task code and config package id. The response object contains the DTO of the exported entity. In case of DBDataStore, this method will perform both export and audit. @param SessionContext @param BaseResponse @param String key: key of the business entity @param String taskCode: business configuration task code @param String service: service name from	com.ofss.fc.module.pc.jar@\com\ofss\fc\app\pc\service\floatconfiguration\FloatConfigurationApplicationService	importAndfetchFloatConfiguration	This represents the importAndFetch method of the entity. This method imports the serialised response of the entity from the earlier exported location and returns entity inquiry response which can be used to populate screen This method calls the importBusinessEntity method of the adapter with the requested input. Once it gets the desired response then calls the audit method of the adapter to make a log of the imported data @see ExportImportAdapterFactory#fetchAdapter @see IExportImportAdapter#importBusinessEntity @see IExportImportAdapter#audit @param com.ofss.fc.app.context.SessionContext,sessionContext, , This parameter captures the basic information about the user of the system. @param domainObjectDto @return entityInquiryResponse @throws FatalException

Adapter Path	Adapter Method	Interface Method Javadoc	Consumer Service	Consumer Service Method	Consumer Service Method Javadoc
		where the export of the business entity has been called @param configVersionNo : unique config package id for the business entity @throws FatalException			
com.ofss.fc.app.adapter.internal.interface.jar@\com\ofss\fc\app\adapter\ops\IExportImportAdapter	audit	This method audits the response containing list of response objects of the Business Entity for the provided key, task code and config package id. The response object contains the DTO of the exported entity. In case of DBDataStore, this method will perform both export and audit. @param SessionContext @param	com.ofss.fc.module.pc.jar@\com\ofss\fc\app\pc\service\floatconfiguration\FloatConfigurationApplicationService	importConfig	This represents the importAll method of the entity. This method aims at importing all the exported data for the entity and updating the same in the target environment This method first fetches the record in the target environment if it persists then it updates the same with the inputed response else make an add operation . @see ExportImportAdapterFactory#fetchAdapter @see FloatConfigurationRepository#getAnonymously @see IExportImportAdapter#audit @see #addFloatConfiguration @see FloatConfigurationService#addFloatConfiguration @see #updateFloatConfiguration @see FloatConfigurationService#updateFloatConfiguration @param com.ofss.fc.app.context.SessionContext,sessionContext, , This parameter captures the basic information about
