**Level:** 1

**Type:** ERROR

**Impact:** Data

**BDSS-20005: Failed to update a PIM record. The Sync-Engine will continue to push any additional update-record actions to the target PIM.**

**Cause:** The Sync-Engine detected an error while attempting to update a PIM record.

**Action:** Ensure that the target PIM and PIM connector are installed and working correctly. Look in the Sync-Engine log and the target connector log for clues to identify the failure.

**Level:** 1

**Type:** ERROR

**Impact:** Data

**BDSS-20006: Failed to update a PIM record.**

**Cause:** The Sync-Engine has detected an exception while in the process of updating a PIM record. The failure may be due to a problem in the hub, rather than a connector issue.

**Action:** Examine the Sync-Engine log for the exception text that should give a clue as to why the failure occurred.

**Level:** 1

**Type:** ERROR

**Impact:** Data

**BDSS-20010: Failed to write an error status message to a PIM metadata record for Connector {0}, Hub Domain {1}, PIM User {2} PIM record ID {3}.**

**Cause:** The Sync-Engine is unable to write an error message to the database for a particular PIM Map Record. In particular, the Sync-Engine detected an exception when invoking method SyncConfig::updatePimMapRecordError.

**Action:** Examine the Sync-Engine log to find the underlying exception message. Ensure that the BDSS database is accessible. Check configuration of the hub components and consider restarting the hub components.

**Level:** 1

**Type:** ERROR

**Impact:** Data

**Cause:** The Sync-Engine detected an error while preparing to write an error message to the database for a particular PIM Map Record.

**Level:** 1

---

**Type:** ERROR

**Impact:** Data

**BDSS-20013: Failed to update metadata to the BDSS hub-record. \tSource Connector user = {0} \tSource PIM Connector Name = {1} \tSource PIM Record Identifier = {2}.**

**Cause:** This error occurs when the Sync-Engine is unable to persist updated metadata to the BDSS database for a particular BDSS hub-record. In particular, this error occurs when the Sync-Engine catches an exception when invoking method `SyncConfig::getHubRecordForPimRecord`. This error could indicate corrupt metadata for a particular BDSS hub-record, or perhaps a network or database failure, or a problem with the SyncConfig component.

**Action:** Check that the database is accessible. Perhaps try restarting the BDSS hub. If corrupt metadata is suspected, then try removing all metadata for a user and perform initial synchronization for a user.

**Level:** 1

**Type:** ERROR

**Impact:** Data

**BDSS-20014: Failed to update the error code for a record.**

**Cause:** The Sync-Engine cannot find a hub record for the specified PIM record identifier and Connector. This problem is unexpected and should not occur under normal operating conditions. This error message signifies that either hub metadata is missing or incorrect, or there was some other problem - such as a database access error. The Sync-Engine detects this error by means of an Exception thrown from SyncConfig method `getHubRecordForPimRecord`.

**Action:** Examine the log for evidence of exception text that will give more specific information as to the cause of the problem. Ensure that all infrastructure, such as the database and network, are working correctly. Ensure that all configuration is correct. Ensure that metadata is not corrupt for the specified user, Connector user and PIM Connector Name and PIM Record identifier. If the problem is due to hub metadata corruption for a given user then try clearing that user hub metadata and perform first-time synchronization for the user.

**Level:** 1

**Type:** ERROR

**Impact:** Data

**BDSS-20015: Failed to find an BDSS PIM metadata record for BDSS master hub record ID = {0}**

**Cause:** This error message is logged when a PIM metadata record could not be found for the specified hub user ID, hub record ID and Connector. In particular, the Sync-Engine logs this message when it detects an exception from method `SyncConfig::getPimRecordForHubRecord`. This problem could be due to corrupt metadata (e.g. the PIM metadata record is actually missing) or some other cause.

**Action:** Examine the log for the exception text that should give a better clue as to the underlying cause of the error. Ensure that all infrastructure, such as the database and network, are working correctly. Ensure that all configuration is correct. Ensure that hub metadata is not corrupt for the logged hub record ID. If the problem is due to hub metadata corruption for a given user then try clearing that user hub metadata and perform first-time synchronization for the user.

---

**Level:** 1

**Type:** ERROR

**Impact:** Data

**BDSS-20016: The Hub User {0} is already being synchronized and cannot be synchronized again until that session has ended.**

**Cause:** A new sync session cannot be started until the old session has ended.

**Action:** Wait for the original sync session to finish. If a new sync session for the Hub User still cannot be started, restart the BDSS Hub.

**BDSS-20018: (Target PIM Connector Name)**

**Cause:** This message string is a label for the name of a PIM connector that is a destination target for record events that are being pushed to a PIM. This string is never logged by itself but is only ever appended to another primary logged message string. The primary message may be an error or may simply be a debug message.

**Action:** See the log for the primary logged message to determine whether any action is needed. No action is needed based on this message alone.

**Level:** 1

**Type:** NOTIFICATION

**Impact:** Other

**BDSS-20019: BDSS queue message receiver timeout expired. Queue message not received.**

**Cause:** This error indicates that the Sync-Engine ExtractResponseTimeout occurred because the Sync-Engine did not receive an ExtractResponse for which it was waiting. In particular, this error represents a failure to receive an ExtractResponse via a queue message in a timely fashion. The Sync-Engine uses the ExtractResponseTimeout as a time-trigger to determine when a connector has become unresponsive. In such a case, the Sync-Engine has determined that it will not receive an ExtractResponse in a timely fashion and thus takes recovery action to abort the synchronization. This problem could be caused when a connector does not correctly send an ExtractResponse to the Sync-Engine. Alternatively, the ExtractResponse was sufficiently large, or network latency slow enough, that the

---

timeout occurred before the ExtractResponse could be properly transferred to the Sync-Engine from a connector.

**Action:** Ensure that all connectors are properly working and can successfully send ExtractResponse objects to the Sync-Engine. Ensure that the Sync-Engine machine is not overloaded and can handle receiving ExtractResponse objects efficiently. Ensure that the amount of data transferred via an ExtractResponse is not too large, or the network latency too slow, to trigger the ExtractResponseTimeout. If necessary, increase the ExtractResponseTimeout timeout value. Determine whether an http webservice timeout is occurring when a connector sends an ExtractResponse to the Sync-Engine.

**Level:** 1

**Type:** ERROR

**Impact:** Data

**BDSS-20020: Received queue message that is an unexpected message class type. Expecting class type ObjectMessage. {0}.**

**Cause:** This error indicates that the Sync-Engine has received a queue message with an unexpected Java class type. This error suggests a communication protocol failure within the Sync-Engine.

**Action:** Ensure the BDSS product is installed and configured correctly and ensure that a rogue producer is not sending messages to the BDSS message queue.

**Level:** 1

**Action:** Contact Oracle Support Services.

**Level:** 1

**Type:** ERROR

**Impact:** Data

**BDSS-20022: Invalid Hashtable element value for key = {0}.**

**Cause:** This error indicates that the Sync-Engine has detected an invalid hash table element value for the specified element key.

**Action:** Contact Oracle Support Services.

**Level:** 1

**Type:** ERROR

**Impact:** Data

**BDSS-20023: null Hub User ID detected in an element of UsersArray.**

**Cause:** The Sync-Engine has detected an invalid hub-user in the UsersArray. The Sync-Engine cannot synchronize an invalid hub user. In particular, a string array element is null, instead of specifying a valid hub user.

**Action:** Ensure that the array of users sent to the Sync-Engine has a valid hub user for each element in the array.

---

**Level:** 1

**Type:** ERROR

**Impact:** Data

**BDSS-20024: Invalid Hub User ID detected in an element of UsersArray.**

**Cause:** The Sync-Engine has detected an invalid hub-user in the UsersArray. The Sync-Engine cannot synchronize an invalid hub user. In particular, a valid string array element has been detected, but the string is empty and does not specify a hub user.

**Action:** Ensure that the array of users sent to the Sync-Engine has a valid hub user for each element in the array.

**BDSS-20026: Must configure a user hub-domain synchronization between two connector URLs. Currently detecting {0} URLs.**

**Cause:** Specifies that an invalid number of connector URLs have been identified for synchronization of a hub domain for a user. Synchronization can only occur between two connector URLs for a given user and hub domain.

**Action:** Validate that BDSS configuration is correct for synchronizing between two connectors.

**Level:** 1

**Type:** ERROR

**Impact:** Configuration

**BDSS-20027: Synchronization cannot start because the Hub user ID provided is either null or an empty string.**

**Cause:** The Hub user id provided is either null or an empty string.

**Action:** Verify that the mechanism used to start synchronization is providing a non-null non-empty value for the Hub User.

**Level:** 1

**Type:** ERROR

**Impact:** Data

**BDSS-20028: Invalid ExtractResponse detected. The ExtractResponse sent by a connector indicates that it contains delete events but the delete events do not exist.**

---

**Cause:** This error occurs when the Sync-Engine detects that an ExtractResponse specifies a true value for member ExtractResponse.ExtractResponseData.hasDeletes and yet specifies a null value for member ExtractResponse.ExtractResponseData.deleteRecordIdArray. Thus, the ExtractResponse object is corrupt and cannot be processed.

**Action:** Fix the connector that is providing the invalid ExtractResponse.

**Level:** 1

**Type:** ERROR

**Impact:** Data

**BDSS-20029: Invalid ExtractResponse detected. The ExtractResponse sent by a connector contains a null delete record ID.**

**Cause:** This error is logged when the Sync-Engine detects a null array element in member ExtractResponse.ExtractResponseData.deleteRecordIdArray when a valid delete record ID is expected.

**Action:** Fix the connector that is providing the invalid ExtractResponse.

**Level:** 1

**Type:** ERROR

**Impact:** Data

**BDSS-20030: An ExtractResponse indicates that upserts exist but they do not.**

**Cause:** This error occurs when the Sync-Engine determines that an ExtractResponse should contain upsert records when it does not. In particular, the member ExtractResponse.ExtractResponseData.hasUpserts is true but upsertRecordArray in ExtractResponse.ExtractResponseData.upsertRecordArray is invalid.

**Action:** Fix the connector that is providing the invalid ExtractResponse.

**BDSS-20035: Cannot find a PIM connector endpoint for the current user and Connector {0}**

**Cause:** The Sync-Engine queried all connector URLs for a particular Connector using connector interface method getPimServerEndPoint. However, none of the

---

connector instances provided a connector endpoint for a particular Connector user.

**Action:** See the log entry to identify the Connector and the corresponding hub user ID for this error. Ensure that the Connector user is configured in the PIM, that BDSS configuration is correct, that all connector instance URLs are properly configured, and that the connector instance can successfully return the endpoint for the Connector and user for which this problem occurs.

**Level:** 1

**Type:** ERROR

**Impact:** Data

**BDSS-20040: An error occurred while pushing create, update or delete changes to Connector {0} for hub domain {1}.**

**Cause:** This is a generic high-level error message indicating that an error occurred while pushing create, update, or delete events to the specified Connector and hub domain.

**Action:** Examine this message in the log to find the pertinent Connector and hub domain. Examine the log for the underlying error that is expected to have been logged prior to this error message. Take appropriate action once the underlying error has been identified.

**Level:** 1

**Type:** ERROR

**Impact:** Data

**BDSS-20041: The BDSS Engine will continue to push record changes to the next PIM if any are available.**

**Cause:** The text of this informational message is a supplement to the text of message SYNCENG\_PUSH\_TO\_PIM\_ERROR. This message text is logged only when the Sync-Engine has changes to additional PIMs that can be propagated for the same hub domain.

**Action:** No action is necessary that is specific to this message. Instead, see the action text for error message SYNCENG\_PUSH\_TO\_PIM\_ERROR.

**Level:** 1

**Type:** ERROR

**Impact:** Data

**BDSS-20043: Unexpected or failure result code detected in an ExtractResponse. ExtractResponse Result Code = {0}. ExtractResponse Error Description = {1}**

**Cause:** An ExtractResultCode value of either PARTIAL\_EXTRACT\_COMPLETED\_OK or PARTIAL\_EXTRACT\_COMPLETED\_NOTOK has been detected in an ExtractResponse received from a connector. An ExtractResponse, with either of these ExtractResultCode values, is considered nonviable for synchronization by the Sync-Engine. Thus, the Sync-Engine cannot perform synchronization with the corresponding ExtractResponse.

**Action:** Examine the connector, PIM server and configuration corresponding to the failed ExtractResponse. Fix the problem with this connector-related error.

**Level:** 1

**Type:** ERROR

---

**Impact:** Data

**BDSS-20044: Unknown failure code detected in an ExtractResponse.**

**ExtractResponse Result Code = {0}. ExtractResponse Error Description = {1}**

**Cause:** The Sync-Engine detects an unknown ExtractResultCode value in an ExtractResponse received from a connector.

**Action:** Examine the connector, PIM server and configuration corresponding to the failed ExtractResponse. Fix the problem with this connector-related error.

**Level:** 1

**Type:** ERROR

**Impact:** Data

**BDSS-20045: Unknown Connector detected when retrieving an extract response.**

**Cause:** The Sync-Engine recognizes only two Connectors - one for Exchange and the other for Webcenter. The Connector, received in an ExtractResponse from a connector, is not recognized by the Sync-Engine.

**Action:** Examine the log entry for this message to obtain the Connector retrieved from the problematic ExtractResponse. Examine the connector, PIM server and configuration corresponding to the problematic ExtractResponse. Ensure that the connector provides the correct PIM server type in the ExtractResponse objects it sends to the Sync-Engine.

**Level:** 1

**Type:** ERROR

**Impact:** Data

**BDSS-20046: Error getting ExtractResponse objects.**

**Cause:** This message indicates that the Sync-Engine detected an error while receiving ExtractResponse objects during a synchronization session. The underlying problem should already have been logged.

**Action:** Examine earlier log messages, just prior to this log message, to identify the underlying problem.

**Level:** 1

**Type:** ERROR

**Impact:** Data

**BDSS-20047: Null name-key object detected in PIM record description array.**

**Cause:** This error occurs when the Sync-Engine is comparing records using their key fields and detects that the name of a field is invalid, in other words empty or null, for an UpsertRecord provided by a connector ExtractResponse.

**Action:** Ensure that key-field configuration is correct. Examine recent ExtractRequests in the log to help determine which connector is providing an invalid key-field. Ensure that all connectors are providing valid ExtractRequest responses to the Sync-Engine.

**Level:** 1

**Type:** ERROR

**BDSS-20063: Detected an invalid message type. Expecting type `javax.jms.MapMessage`. {0}**

**Cause:** The SyncUserMDB Message Driven Bean has erroneously received a queue message that is not of type `javax.jms.MapMessage`. SyncUserMDB retrieves messages from a Weblogic Server in-memory queue. It retrieves queue messages having message property `RECIPIENT = BDSS SyncUser MDB Recipient`.

**Action:** Ensure that no other software products are sending messages to the configured WLS in-memory queue with queue message having property `RECIPIENT = BDSS SyncUser MDB Recipient`. For reference, content of the erroneous queue message is appended to this log entry. Contact Oracle Support Services.

**BDSS-20084: PIM Record Description:**

**Cause:** This message string is a label whose purpose is to indicate that PimRecordDescription metadata is being logged for a PIM record. This string is never logged by itself but is only ever appended to another primary logged message string. The primary message may be an error or may simply be a debug message.

**Action:** See the log for the primary logged message to determine whether any action is needed. No action is needed based on this message alone.

**Level:** 1

**Type:** ERROR

**Impact:** Data

**BDSS-20085: Field Name**

**Cause:** This message string is a label that identifies a single PimRecordDescription field name for a PIM record. This string is never logged by itself but is only ever appended to another primary logged message string. The primary message may be an error or may simply be a debug message.

**Action:** See the log for the primary logged message to determine whether any action is needed. No action is needed based on this message alone.

**Level:** 1

**Type:** ERROR

**Impact:** Data

**BDSS-20086: Field Value is null**

**Cause:** This message string indicates that a PimRecordDescription.descriptionArray object contains a KeyValuePair object with a null field value. This string is never logged by itself but is only ever appended to another primary logged message string. The primary message may be an error or may simply be a debug message.

**Action:** See the log for the primary logged message to determine whether any action is needed for the primary log message. Also, fix the cause of this null field value within the PimRecordDescription metadata of a PIM record.

**Impact:** Data

**BDSS-20088: The description array is empty**

**Cause:** This string is never logged by itself but is only ever appended, to another primary logged message string, to provide ancillary information. The primary message may be an error or may simply be a debug message. This message indicates that a PimRecordDescription information is not available. In this case, the PimRecordDescription object is valid, and contains a valid KeyValuePair array object, but the KeyValuePair array has no elements.

**Action:** See the log for the primary logged message to determine whether any action is needed.

**Impact:** Data

**BDSS-20092: No PimRecordDescription data is provided in this record**

**Cause:** This string is never logged by itself but is only ever appended, to another primary logged message string, to provide ancillary information. The primary message may be an error or may simply be a debug message. This message indicates that PimRecordDescription information is not available, for a PIM record, because the PimRecordDescription object is null.

**Action:** See the log for the primary logged message to determine whether any action is needed.

**Level:** 1

**Type:** ERROR

**Impact:** Data

**BDSS-20093: A null field name is detected for a PimRecordDescription field name.**

**Cause:** This message string indicates that a field name is null within the PimRecordDescription metadata of a PIM record. This string is never logged by itself but is only ever appended to another primary logged message string. The primary message may be an error or may simply be a debug message.

---

**Action:** See the log for the primary logged message to determine whether any action is needed for the primary log message. Also, fix the cause that is producing this null field name.

**Type:** NOTIFICATION

**Impact:** Other

**BDSS-20107: A user synchronization session has ended. User sync status is {0}.**

**Cause:** This is an informational message that indicates when a hub user synchronization session has ended. In particular, the call to method `SyncConfig::setUserSyncSessionToEnded` has succeeded. This notification does not imply whether domain synchronization succeeded or not for this same synchronization session. The hub user is specified in the log message header.

**Action:** No action needed.

**Level:** 1

**Type:** NOTIFICATION

**Impact:** Other

**BDSS-20108: Failed to end a user synchronization session.**

**Cause:** This error message indicates that a hub user synchronization session did not end successfully. In particular, the call to method

---

SyncConfig::setUserSyncSessionToEnded threw an exception. This error does not imply whether domain synchronization succeeded or not for this same synchronization session. The hub user is specified in the log message header.

**Action:** No specific action recommended. However, check configuration - perhaps for the hub user in particular. Also suggest restarting the BDSS application server, or reinstalling BDSS.

**Type:** ERROR

**Impact:** Other

**BDSS-20109: Hub-domain {0} will not be synchronized for Connector {1} because no other Connector is configured to synchronize it for the current hub-user.**

**Cause:** Hub-user configuration, for the specified hub-domain, is set to synchronize the hub-domain using only a single Connector. It is invalid to synchronize a hub-domain by only a single Connector. The Sync-Engine has modified its only local copy of configuration, for the current hub-user sync-session, so that it will not synchronize the specified hub-domain for the current hub-user sync-session.

**Action:** Fix configuration for the specified hub-user so that the specified hub-domain is configured to synchronize by more than one Connector. Alternatively, remove the specified hub-domain from configuration for the specified hub-user.

**Level:** 1

**Type:** WARNING

**Impact:** Configuration

**BDSS-20110: Connector {0} will not be synchronized, for the current hub-user sync-session, because it is not configured to synchronize any hub-domains.**

**Cause:** The Sync-Engine has determined that hub-user configuration, for the specified Connector, is not valid because it is not configured to synchronize any hub-domains. The specified Connector will not be allowed to synchronize for the current hub-user sync-session.

**Action:** Ensure that configuration, for the specified hub-user and Connector, is correct for synchronizing at least one hub-domain with another Connector.

**BI-SVR-03223: No joins found where required**

**Cause:** An operation was attempted where a join is required to another folder, and no join was found.

**Action:** Determine which joins are required to support the operation and enter the joins first.

**Level:** 1

**Type:** ERROR

**Impact:** Process

**BI-SVR-03224: Invalid join configuration - includes a master with two separately joined detail folders**

**Cause:** An attempt was made to join a master folder with two detail folders at the same time. The resulting Cartesian product would give potentially confusing or incorrect results from the database. This combination of joins is not allowed within Oracle Business Intelligence Discoverer.

**Action:** Construct the join so that the folder specified as the master actually contains the master key and the folders specified as detail actually contain the detail keys. If the join configuration includes a master with two separately joined detail folders then create a complex folder to hide one of the joins. This is normally only the case where the relationship between the folders is one-to-one, and there is no actual master folder.

## BPM-09708 to BPM-40011

**NOTE:** Some errors are shared between SOA and BPM, and their prefix may be "BPM" instead of the correct prefix "ORABPEL". However, the error number is always accurate. If you cannot locate a particular error in this file -- if the prefix does not match with the error number, then consider the error number while searching for a solution.

**BPM-09708: Error while querying workflow task {0}**

**Cause:** Error while querying workflow task {0}

**Action:** Check the underlying exception and the database connection information. If the error persists, contact Oracle Support Services.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**BPM-09713: Invalid logical operator in predicate**

**Cause:** An invalid logical operator was used in the predicate.

**Action:** Specify a valid logical operator (AND or OR) for the predicate.

**Impact:** Programmatic

**BPM-30758: Could not locate Dynamic Assignment Function implementation class: {0}**

**Cause:** The Dynamic Assignment Framework could not locate function implementation class: {0} Either the class name is incorrect, or the class is not in the classpath

**Action:** Check that the specified class is located in the classpath. Check that the correct classname is specified in the workflow configuration file.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**BPM-30759: Dynamic Assignment Function class interface implementation error.**

**Cause:** Dynamic Assignment Function class Classes that implement {0} does not implement IDynamicUserAssignmentFunction or IDynamicGroupAssignmentFunction.

---

**Action:** Dynamic Assignment Functions must implement at least one of the interfaces `IDynamicUserAssignmentFunction` or `IDynamicGroupAssignmentFunction`. Check the specified class and ensure it implements one of the interfaces.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**BPM-30760: Failed to instantiate instance of Dynamic Assignment Function class.**

**Cause:** The Dynamic Assignment Framework could not instantiate the Dynamic Assignment Function class: {0} because it is not a concrete class.

**Action:** Ensure that the class {0} is not an interface or abstract class.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**BPM-30761: Dynamic Assignment Function class constructor error.**

**Cause:** The Dynamic Assignment Framework could not instantiate an instance of {0} because there is no accessible no-argument constructor.

**Action:** Ensure that the class {0} is public, and provides a public, no-argument constructor.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**BPM-30762: Dynamic Assignment Function class does not implement IDynamicAssignmentFunction.**

**Cause:** Dynamic Assignment Function class {0} must implement the interface `IDynamicAssignmentFunction`.

**Action:** Check the specified class and ensure it implements the interface `IDynamicAssignmentFunction`.

---

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**BPM-36335: Fact not found in the rule engine working memory, rule session execution failed.**

**Cause:** The rule session {0} failed because an instance of the fact {1} could not be found in the working memory of the rule session.

**Action:** This is most likely a rule modeling error. The decision service interaction expects the fact instance to exist in the working memory of the rule session. Check the rule actions in rule designer and make sure that a fact of the expected type is being asserted. If the error persists, contact Oracle Support Services.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**BPM-36336: Error while executing a rule session unit of work, duplicate fact instances found.**

**Cause:** The rule session {0} failed because more than one fact instance of the fact {1} exists in the rule session working memory. The decision service cannot identify which one to take.

**Action:** This is most likely due to a rule modeling issue. Make sure that the fact of the given type is asserted only once. One common issue is that the rule conditions are not mutually exclusive and as a result of that more than one rule action is executed. In case the rule action has a assert new statement of the given fact type then multiple fact instances are created in the rule session working memory and the decision service is not able to identify the one that should be returned as the result of the decision service interaction. If the error persists, contact Oracle Support Services.

**Level:** 1

**Type:** ERROR

**Impact:** Cloning

**CLONE-20210: The archive file is invalid.**

**Cause:** The archive file failed an internal consistency check.

**Action:** Make sure that the archive file is created using T2P operation.

**Level:** 1

**Type:** ERROR

**Impact:** Cloning

**CLONE-20211: Unable to update JRE\_LOCATION in Oracle Home.**

**Cause:** Unable to determine JRE\_LOCATION.

**Action:** Update JRE\_LOCATION attribute in {0} file present under Oracle Home.

**Level:** 1

**Type:** ERROR

**Impact:** Cloning

**CLONE-20212: Target location is not provided.**

**Cause:** Archive had Middleware Home and/or Oracle Home.

**Action:** Provide the target location.

**Level:** 1

**Type:** ERROR

**Impact:** Cloning

**CLONE-20213: Parameters are missing for component pasteConfig.**

**Cause:** There are two possible causes: 1. Target component name was empty. 2. If target instance did not exist, then either target instance name or Oracle Home was empty or Oracle Home was not a directory.

**Action:** Provide a nonexistent component name and a target instance location. If the instance does not exist, provide the instance name and an existing Oracle Home.

**Level:** 1

**Type:** ERROR

**Impact:** Cloning

**CLONE-20214: T2P of asinstance is not possible.**

**Cause:** No movable component was found under the instance home.

**Action:** Make sure that the instance home has at least one movable component.

**Level:** 1

**Type:** ERROR

**Impact:** Cloning

---

**CLONE-20215: T2P of asinstance failed.**

**Cause:** Unable to archive all the movable components.

**Action:** Provide the clone log and error file for investigation.

**Level:** 1

**Type:** ERROR

**Impact:** Cloning

**CLONE-20216: Instance home location "{0}" is invalid.**

**Cause:** There are two possible causes: 1. Instance did not have the required configuration files. 2. Instance was not associated with a valid Oracle Home.

**Action:** Provide a valid instance home location.

**Level:** 1

**Type:** ERROR

**Impact:** Cloning

**CLONE-20217: Component does not exist.**

**Cause:** The component "{0}" did not exist under the instance "{1}".

**Action:** Provide an existing component.

**Level:** 1

**Type:** ERROR

**Impact:** Cloning

**CLONE-20218: Cloning is not successful.**

**Cause:** An internal operation failed.

**Action:** Provide the clone log and error file for investigation.

**Level:** 1

**Type:** ERROR

**Impact:** Cloning

**CLONE-20219: Clone type is invalid.**

**Cause:** Clone type was either empty or not supported.

**Action:** The clone type is either "{0}" or "{1}" or "{2}".

**Level:** 1

**Type:** ERROR

**Impact:** Cloning

**CLONE-20220: Parameters are missing.**

**Cause:** Either archiveLocation or cloneType was empty. The values provided were archiveLocation : "{0}" cloneType : "{1}".

**Action:** Make sure that the correct values are provided.

**Level:** 1

**Type:** ERROR

**Impact:** Cloning

---

**CLONE-20221: Invalid clone type.**

**Cause:** The clone type "{0}" did not match "{1}" or "{2}".

**Action:** The clone type should be either "{0}" or "{1}".

**Level:** 1

**Type:** ERROR

**Impact:** Cloning

**CLONE-20222: Parameters validation has failed.**

**Cause:** Primary parameters validation for "{0}" failed.

**Action:** Check the clone log and error file and provide correct value.

**Level:** 1

**Type:** ERROR

**Impact:** Cloning

**CLONE-20223: Invalid Oracle Home.**

**Cause:** There are four possible causes for an invalid Oracle Home "{0}": 1. It did not exist. 2. It was an empty directory. 3. It had invalid inventory pointer file (if operating system is other than Windows). 4. It had no top component or invalid top component version.

**Action:** Provide a valid Oracle Home.

**Level:** 1

**Type:** ERROR

**Impact:** Cloning

**CLONE-20224: T2P operation failed.**

**Cause:** Unable to restore all movable components.

**Action:** Check the clone log and error file.

**Level:** 1

**Type:** ERROR

**Impact:** Cloning

**CLONE-20225: Invalid number of sourceid(s) and their restore locations.**

**Cause:** There was a mismatch between the count of sourceids and restore locations specified in the command line. The number of sourceids was "{0}" and number of restore locations was "{1}".

**Action:** Provide the same number of sourceids and their corresponding restore locations.

**Level:** 1

**Type:** ERROR

**Impact:** Cloning

**CLONE-20226: Duplicate target location.**

**Cause:** An attempt was made to restore same or different sourceid at same location multiple times.

**Action:** Provide unique target location for each sourceid.

---

**Level:** 1

**Type:** ERROR

**Impact:** Cloning

**CLONE-20227: Invalid target location for Oracle Home.**

**Cause:** Two Oracle Homes target location "{0}" and "{1}" were either equal or a parent or child of one another.

**Action:** Oracle Home(s) target location(s) should not be either equal or parent or child of one another.

**Level:** 1

**Type:** ERROR

**Impact:** Cloning

**CLONE-20228: Invalid target location for Middleware Home.**

**Cause:** Two Middleware Homes target locations "{0}" and "{1}" were either equal or the parent or child of one another.

**Action:** Middleware Home(s) target location(s) should not be either equal or a parent or child of each other.

**Level:** 1

**Type:** ERROR

**Impact:** Cloning

**CLONE-20229: The archive file is invalid.**

**Cause:** Internal id was absent in the archive.

**Action:** Make sure that the archive file is valid.

**Level:** 1

**Type:** ERROR

**Impact:** Cloning

**CLONE-20230: Primary validation prior to clone operation has failed for {0}.**

**Cause:** Parameter(s) were missing or some validation(s) failed.

**Action:** Check the clone log and error file for information about which parameter is missing or why validation failed.

**Level:** 1

**Type:** ERROR

**Impact:** Cloning

**CLONE-20231: Middleware Home archive creation has failed.**

**Cause:** The command "{0}" was not run successfully. The possible causes are: 1. All WebLogic product directories (like WebLogic Server, Coherence) were not installed inside this Middleware Home. 2. In case of Windows, some Java or WebLogic processes were running from this Middleware Home.

**Action:** Make sure all WebLogic products are installed inside, no process is running from the Middleware Home (in case of Windows), and check the clone log, clone error and "WebLogic error file at current location" for more details.

**DMS-57003: Failed to process the wrapped DMS execution context {0} sent by {1} (user-agent: {2}) when requesting the resource {3}.**

**Cause:** By scrutinizing the incoming HTTP request DMS has attempted to detect and, if appropriate, make use of a wrapped execution context. That process has failed. This should not affect the processing of the servlet handling the request, but the ability to correlate the processing of this request with others to which it may be related will have been adversely affected. A DMS execution context is an object that contains context information about the piece of work being performed at a particular moment in time. The type of context information carried by the DMS execution context may include the URL of the http request, the unique correlation key (ECID) assigned to that piece of work, etc - information that is useful for tracking requests through the system. The execution context does not carry user names, passwords or general application parameters. The DMS execution context should not be confused with application specific context objects, such as

---

ADF-context or Faces-context, which are vital to the accurate execution of the application concerned.

**Action:** Contact Oracle Support Services.

**Level:** 1

**Type:** WARNING

**Impact:** Other

**DMS-57004: Failed to initialize the DMS trace to be associated with DMS execution context {0}, that itself is associated with a request of resource {1}.**

**Cause:** A problem has occurred in the initialization of the trace system for this request. This should not affect the processing of the servlet handling the request but will be a problem if the trace (aggregate, debug or triggered) data was of value to the system's administrator.

**Action:** If the trace of this request was important, and has been affected by this error, then contact Oracle Support Services

**Level:** 1

**Type:** WARNING

**Impact:** Other

**DMS-57005: Failed to terminate the DMS trace associated with DMS execution context {0}, that itself is associated with a request of resource {1}.**

**Cause:** A problem has occurred in the finalization of the trace system for this request. This should not affect the processing of the servlet handling the request but will be a problem if the trace (aggregate, debug or triggered) data was of value to the system's administrator.

**Action:** If the trace of this request was important, and has been affected by this error, then contact Oracle Support Services

**Level:** 1

**Type:** WARNING

**Impact:** Other

**DMS-57006: Failed to deactivate the DMS execution context, {0}, associated with a request of resource {1}.**

**Cause:** A problem has occurred in the termination of the DMS execution context in place during the processing of the HTTP request. This should not affect the servlet handling the request, but may result in an invalid execution context being in place for the processing of future requests and possibly prevent accurate trace data from being gathered.

**Action:** Contact Oracle Support Services.

**Level:** 1

**Type:** WARNING

**Impact:** Other

**DMS-57007: Failed to url-decode a wrapped execution context ({0}) due to a problem in the decoding process itself: {1}**

**Cause:** A problem has occurred while trying to url-decode a wrapped execution context found as a url-parameter. The consequence is that the execution context being passed from client to server can not be used. A failure in the DMS execution

---

context feature does not generally result in a complete failure of the system or application making use of it, but it can result in misleading trace output or misleading correlation keys (ECID) in log messages: generally only the administrator will be aware of such changes in the behavior of an affected application.

**Action:** Determine if there is any code in the system that integrates with the Oracle DMS Context API (java package oracle.dms.context) but was not produced by Oracle. If there is no such code then contact Oracle Support Services. Otherwise scrutinize and test the non-Oracle code, and if necessary contact Oracle Support Services.

**Level:** 1

**Type:** WARNING

**Impact:** Other

**DMS-57008: The execution context put in place at the start of the request, {0}, is not the execution context in place at the end of the request, {1}. The request is as follows: {2}**

**Cause:** When enabled to do so DMS associates an execution context with the resources (typically a thread) assigned to process an incoming request. In this case the context that DMS assigned at the start of the processing is not the one in place at the end of the processing. At some point during the processing the context has been changed. This could result in the loss of the ability to correlate the work performed across the complete request lifecycle for this request. A failure in the DMS execution context feature does not generally result in a complete failure of the system or application making use of it, but it can result in misleading trace output or misleading correlation keys (ECID) in log messages: generally only the administrator will be aware of such changes in the behavior of an affected application.

**Action:** Determine if there is any code in the system that integrates with the Oracle DMS Context API (java package oracle.dms.context) but was not produced by Oracle. If there is no such code then contact Oracle Support Services. Otherwise scrutinize and test the non-Oracle code, and if necessary contact Oracle Support Services.

**Level:** 1

**Type:** WARNING

**Impact:** Other

**DMS-57009: An error prevented selection of an appropriate execution context implementation for this environment - the feature will be disabled.**

**Cause:** At the point of initialization DMS needs to determine the environment in which it is operating in order to select the most appropriate implementation of the execution context feature. An unexpected error has occurred during that process. The DMS execution context feature will be disabled.

**Action:** Review the error to see if it can be resolved and then restart the server.

**Level:** 1

**Type:** ERROR

**Impact:** Other

**DMS-58002: Could not create trace output directory ({0}) - Disabling {1} traces.**

---

**Cause:** An attempt to create a file system directory, into which trace files were to be written, has failed. Consequently no trace information can be saved and therefore, to save unnecessary burden on the system, trace information will not be collected.

**Action:** Check that the system user that owns the process has permissions to create such a directory. Check that the system has sufficient disk space to create a new directory.

**Level:** 1

**Type:** WARNING

**Impact:** Files

**DMS-58005: ignoring exception: {0}**

**Cause:** An unanticipated problem has occurred for which the runtime code can not take automatic remedial action.

**Action:** Refer to the base exception to see if there is a problem with the system that can be addressed (e.g. run low in disk space, run out of memory, etc).

**Level:** 1

**Type:** WARNING

**Impact:** Other

**DMS-58006: Problem encountered while removing old files from trace output directories.**

**Cause:** DMS was attempting to remove old files from the trace output directories but for some reason (see base exception) has failed.

**Action:** The system is unlikely to fail as a consequence of this error, but disk space will be used that would otherwise have been released. Refer to the base exception to see if the problem can be addressed, and consider deleting unrequired files manually (DMS no longer needs these old files so any or all of them can be removed).

**Level:** 1

**Type:** WARNING

**Impact:** Files

**DMS-58007: Problem encountered when closing file and associated streams.**

**Cause:** As part of the termination of a normal read or write operation on a file the file could not be closed.

**Action:** If a file can not be properly closed then the operating system's file-handle associated with that file may not be properly released. An operating system can manage only a finite number of file-handles and if they are not released then new file-handles can not be created. One consequence of a depletion of file-handles is that file input/output on the machine concerned may be forced to come to a stop. It is more likely, however, that this is a one-off problem and that Java will tidy up the file-handle internally. This type of problem suggests a problem with either the JVM, the operating system or the state of the machine on which they are running. Review the base exception to see if the issue can be resolved (e.g. memory issues, disk space issues, file access issues, etc.). In order to understand the scale of the problem continue to monitor the system for similar or related issues. If necessary stop and start the product to fully reinitialize the JVM on which it runs.

**DMS-58008: error writing trace data to disk**

**Cause:** DMS has failed to create or use the objects required to write trace output to disk. The output intended to be written will be discarded.

**Action:** This type of problem suggests a problem with either the JVM, the operating system or the state of the machine on which they are running. Review the base exception to see if the issue can be resolved (e.g. memory issues, disk space issues, file access issues, etc.). In order to understand the scale of the problem continue to monitor the system for similar or related issues. If necessary stop and start the product to fully reinitialize the JVM on which it runs.

**Level:** 1

**Type:** WARNING

**Impact:** Other

**DMS-58013: Problem encountered aggregating trace: {0}.**

**Cause:** DMS has failed to perform the aggregation process on the trace data collected during the handling of this particular task or servlet request. A DMS trace is composed of a series of DMS trace events that represent an operation performed within DMS. Examples of trace events are: a sensor update, the start and end of an HTTP request. An aggregate trace is the result of aggregating trace data for tasks (typically HTTP requests) associated with the same URI. Failure to perform the aggregation processing for this task will mean that the summary data for the URI concerned will not be accurate.

**Action:** Review exception details and the log for any seemingly related messages. If the problem has come from the JVM itself: This type of problem suggests a problem with either the JVM, the operating system or the state of the machine on which they are running. Review the base exception to see if the issue can be resolved (e.g. memory issues, disk space issues, file access issues, etc.). In order to understand the scale of the problem continue to monitor the system for similar or related issues. If necessary stop and start the product to fully reinitialize the JVM on which it runs. Otherwise the problem is with the code written to run on the JVM: Determine if there is any code in the system that that integrates with the Oracle DMS Trace API (java package oracle.dms.trace) but was not produced by Oracle. If there is no such code then contact Oracle Support Services. Otherwise scrutinize and test the non-Oracle code in order to isolate the problem.

**Level:** 1

**Type:** WARNING

**Impact:** Other

**DMS-58014: Failed to handle REQUEST\_BEGIN for {0}. The trace will not be aggregated.**

**Cause:** DMS did not find the trace event that marks the start of the series of trace events to be associated with an HTTP request. Without that particular trace event DMS can not be sure that the set of collected trace events will accurately represent the actions performed during that HTTP request and consequently will not process them further. Failure to perform the aggregation processing for this task will mean that the summary data for the URI concerned will not be accurate.

**Action:** Review exception details and the log for any seemingly related messages. If the problem has come from the JVM itself: This type of problem suggests a

**Level:** 1

**Type:** WARNING

**Impact:** Other

**DMS-58015: Can not get the current task's execution context and therefore the trace events that occurred during this task's lifecycle can not be used to contribute to the aggregate trace associated with the task's URL.**

**Cause:** In order to perform the process of trace aggregation for a completed task the execution context for that task is required. In this case the execution context could not be found; without the execution context object the trace aggregation process can not be performed. A DMS trace is composed of a series of DMS trace events that represent an operation performed within DMS. Examples of trace events are: a sensor update, the start and end of an HTTP request. An aggregate trace is the result of aggregating trace data for tasks (typically HTTP requests) associated with the same URI. **DMS-58016: Can not get the URI associated with the current thread's recent activities.**

**Cause:** In order to perform the process of trace aggregation for a completed task the URI associated with that task is required. In this case the URI could not be found; without the URI the trace information collected cannot be aggregated. A DMS trace is composed of a series of DMS trace events that represent an operation performed within DMS. Examples of trace events are: a sensor update, the start and end of an HTTP request. **Type:** WARNING

**Impact:** Other

**DMS-58017: The maximum number of allowed aggregates has already been reached. Traces referring to URLs not already being aggregated will not contribute to aggregate information.**

**Cause:** In order to prevent too much memory being consumed by the DMS trace system the current request will not be added to the aggregate trace set because the maximum number of URIs for which trace data will be aggregated has already been reached. A DMS trace is composed of a series of DMS trace events that represent an operation performed within DMS. Examples of trace events are: a sensor update, the start and end of an HTTP request. An aggregate trace is the result of aggregating trace data for tasks (typically HTTP requests) associated with the same URI.

**Action:** If aggregate trace information is not required for this request there is no action required. Otherwise please review the value of the system property `oracle.dms.trace.maxAggregates`.

**DMS-58018: Cannot delete old trace file: {0}.**

**Cause:** An attempt to delete a file system file has failed (the deletion attempt was intended to keep files organized and their number manageable). The system is unlikely to fail as a consequence of this error, but disk space will be used that would otherwise have been released.

**Action:** This type of problem suggests a problem with either the JVM, the operating system or the state of the machine on which they are running. Review the base exception to see if the issue can be resolved (e.g. memory issues, disk space issues, file access issues, etc.). **Level:** 1

**Type:** WARNING

**Impact:** Configuration

**DMS-58033: Can not associate a destination, id={0}, with a filter, id={1} if the filter declares that it will not pass any events.**

**Cause:** An instance of a filter should declare the set of event types in which it has an interest. In this particular case the set is empty and thus the filter is apparently interested in no events at all. Such a filter serves no sensible purpose and therefore will be ignored.

**Action:** Check the log file for other error relating to this filter to see if there were problems in its construction. ---

**DMS-58060: An event route exists using filterID="{0}" and destination(s) "{1}". The filter cannot be removed.**

**Cause:** An event route already exists using filterID="{0}".

**Action:** Remove the event route(s) first, before removing the filter.

**Level:** 1

**Type:** WARNING

**Impact:** Configuration

**DMS-58061: The class name "{0}" in destination "{1}" does not exist.**

**Cause:** A class name has been specified for the destination, but the class cannot be found.

**Action:** Check the class name is spelled correctly.

**Level:** 1

**Type:** WARNING

**Impact:** Configuration

**DMS-58062: The mandatory property "{0}" is not present in destination "{1}" for class "{2}".**

**Cause:** The destination expected a mandatory property, but that property was not specified.

**Action:** Execute the command again, specifying the mandatory property, or change the destination class.

**Level:** 1

**Type:** WARNING

**Impact:** Configuration

**DMS-58063: The class "{0}", used by destination "{1}", implements FilterProvider. Instances of "{0}" need not, and cannot be associated with user defined filters.**

**Cause:** The class specified may not be used with a user defined filter.

**Action:** Specify a different class name in the destination.

**Level:** 1

**Type:** WARNING

**Impact:** Configuration

**DMS-58064: The DMS event configuration document has failed to parse. The configuration is null.**

**Cause:** There has been a problem generating the configuration from the configuration file.

**Action:** Check the dms\_config.xml configuration file exists, has the correct permissions, and valid XML syntax. Consider reverting to a backup of the configuration file.

**Level:** 1

**Type:** ERROR

**Impact:** Configuration

---

**DMS-58065: Either no condition, or no element, or no document has been passed to buildConditionElement(). Condition="{0}", Element="{1}".**

**Cause:** There has been a problem extracting the condition from the filter.

**Action:** Check the condition, element and document passed to buildConditionElement are not null.

**Level:** 1

**Type:** WARNING

**Impact:** Configuration

**DMS-58066: A null DMS configuration cannot be saved.**

**Cause:** The configuration was null when attempting to activate it in the runtime.

**Action:** Review the server log, and check the server started successfully.

**Level:** 1

**Type:** WARNING

**Impact:** Configuration

**DMS-58067: There are invalid arguments; filter ID="{0}". Check the id, event types and condition are valid for server "{1}".**

**Cause:** One or more of the arguments passed are invalid, or have not been specified where required.

**Action:** Examine the syntax used for the command, identify the issue, and try again using the correct syntax.

**Level:** 1

**Type:** WARNING

**Impact:** Configuration

**DMS-58068: No runtime configuration exists.**

**Cause:** A problem occurred loading the runtime configuration from the dms\_config.xml configuration file

**Action:** Review the server log, and check the server started successfully.

**Level:** 1

**Type:** WARNING

**Impact:** Configuration

**DMS-58069: The configuration is invalid for server "{0}".**

**Cause:** An invalid configuration has been detected.

**Action:** The dms\_config.xml configuration file must be corrected manually before configuration changes are allowed.

**Level:** 1

**Type:** WARNING

**Impact:** Configuration

**DMS-58070: The destination "{0}" is only valid on the Weblogic platform using the Oracle Corporation (JRocket) VM. The actual platform is "{1}" and VM is "{2}".**

**Cause:** Either the platform is not Weblogic, or the VM is not the Oracle Corporation (JRocket) VM, or both.

---

**Action:** No action is required. The destination will be ignored and may be removed from the configuration file during the next update.

**Level:** 1

**Type:** WARNING

**Impact:** Configuration

**DMS-58071: The following properties are not supported for destination {0}: {1}. The set of supported properties is: {2}.**

**Cause:** The configuration for a destination specifies properties that the destination does not support.

**Action:** Correct the configuration by either removing the unsupported properties or correcting their names to match one of the supported properties.

**Level:** 1

**Type:** WARNING

**Impact:** Configuration

**DMS-58072: Unable to instantiate DiagnosticsFramework. The DMSTraceProvider will not be able to add traced data to incidents.**

**Cause:** A problem with the DiagnosticsFramework has prevented it from being used.

**Action:** Check log files for any reference to failures or errors in the DiagnosticsFramework, and if possible correct them.

**Level:** 1

**Type:** WARNING

**Impact:** Other

**DMS-58073: Failed to create a logger to which DMS trace events can be logged.**

**Cause:** A problem has been encountered creating a logger that is required by the DMSTraceProvider.

## DVT-02012 to DVT-26021

**DVT-02012: Column {0} exceeds boundary {1}.**

**Cause:** The specified column number was greater than the total number of columns.

**Action:** Get the total number of columns, by calling the getColumnCount method of the graph or of the column header in the pivot table. Then specify a column that does not exceed the total number of columns.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-02013: Row {0} exceeds boundary {1}.**

**Cause:** The specified row number was greater than the total number of rows.

**Action:** Get the total number of rows, by calling the getRowCount method of the graph or of the column header in the pivot table. Then specify a row that does not exceed the total number of rows.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-02015: Slice {0} exceeds boundary {1}.**

**Cause:** The specified slice number was greater than the total number of slices.

**Action:** Specify a slice that does not exceed the total number of slices.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-02016: Layer {0} exceeds boundary {1}.**

**Cause:** The specified layer was greater than the total number of layers that are available on the given edge.

**Action:** Specify a layer that does not exceed the total number of layers.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

---

**DVT-02017: Series {0} exceeds boundary {1}.**

**Cause:** The specified series was greater than the total series that is available in the graph.

**Action:** Specify a zero-based series index that does not exceed the total series. The `Graph.getDisplaySeries` method should provide the number of series that are displayed in the graph. Or, if `Graph.isDataRowShownAsASeries` returns true, then `Graph.getRowCount` returns the number of series that can be displayed. If `Graph.isDataRowShownAsASeries` returns false, then `Graph.getColumnCount` returns the total number of series that can be displayed.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-02018: Edge {0} exceeds boundary {1}.**

**Cause:** The specified edge was greater than the total number of edges that are available on the given edge. Valid edges for methods that require an edge are: `DataDirector.COLUMN_EDGE`, `DataDirector.ROW_EDGE`, and `DataDirector.PAGE_EDGE`.

**Action:** Specify a valid edge constant.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-02019: Current DataSource does not support required type: {0}.{1}.**

**Cause:** The `DataSource` did not support the required type of data in its `DataMap`. For example, the view requested `DataMap.DATA_GROUPSORT` information, and the `DataSource` that the view uses did not supply group sort information.

**Action:** Request support for the required data types in the `DataSource`, or use a different `DataSource`.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-02020: DTD file cannot be found.**

**Cause:** The specified DTD could not be found. The XML parser needed the DTD in order to validate XML files.

**Action:** Ensure that the specified DTD file exists, or disable XML validation. DTDs for Data Visualization components are in their respective packages. To turn off validation, call `Dataview.setXMLValidated(false)`;

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-03000: No Mergeable object is provided.**

**Cause:** No default Mergeable object was provided to resolve rules.

---

**Action:** Provide at least one default Mergeable object, so that rules can be resolved. For more information about Mergeable objects, see the Javadoc for the `oracle.dss.rules.Mergeable` interface.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-03001: attempt to call `merge(Mergeable)` on an incompatible Mergeable class**

**Cause:** An attempt was made to merge incompatible Mergeable classes. Only Mergeable objects of the same class can be merged. For example, `ViewStyle` objects can be merged, but a `ViewStyle` cannot be merged with a `ViewFormat`.

**Action:** Merge two classes that are compatible. For more information, see the Javadoc for the `oracle.dss.rules.RuleBundle` class.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-06000: unexpected data error from Pivot Table data model**

**Cause:** An unexpected exception was thrown by the Pivot Table's data model.

**Action:** Log a bug against the application. Verify that the Pivot Table's data model is configured properly.

**Level:** 1

**Type:** ERROR

**Impact:** Data

**DVT-06001: no Converter for data type {0} during Pivot Table text formatting**

**Cause:** The application could not create a Converter for a specific data type. The most likely reason was that a Converter was not registered for that data type.

**Action:** Log a bug against the application. Verify that the application can create a default Converter for all data types rendered by the Pivot Table.

**Level:** 1

**Type:** TRACE

**Impact:** Configuration

**DVT-07001: cannot create Graph image**

**Cause:** Under heavy loads, there was not enough memory to create the `BufferedImage`, or the `Graphics` instance from the `BufferedImage`. Therefore, the generated image file is empty.

**Action:** Reduce the memory load; for example, reduce the image size or allocate more memory to the JVM.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-08000: unexpected data error from Data Model**

**Cause:** An invalid operation was performed by Data Model.

---

**Action:** Log a bug against the application. Verify that the Data model is configured properly.

**Level:** 1

**Type:** ERROR

**Impact:** Data

**DVT-09006: cannot copy event: {0}**

**Cause:** An error occurred while trying to copy the specified event.

**Action:** Invoke the `printStackTrace` method on the exception object to display the full error stack and to identify the root cause of the problem.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-09007: Measure argument must not be null in `initCubeQuery`.**

**Cause:** A null measure list was passed to the `initCubeQuery` method.

**Action:** Pass in a valid list of measures to the `initCubeQuery` method.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-09008: Dimensions and measures arguments must not both be null in `initQuery`.**

**Cause:** Arguments for dimensions and a measure list were both null when passed to the `initQuery` method.

**Action:** Pass in a valid value for either one or both of these arguments when calling the `initQuery` method.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-09011: Dimension is out of range in metadata cursor for edge and dimension: {0} and {1}.**

**Cause:** The specified dimension was out of range in the method that was called for the specified edge and dimension arguments.

**Action:** Ensure that the dimension is valid when calling the method.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-09013: cannot create new instance of `QueryManager` or subclass when cloning**

**Cause:** Application code could not call the constructor that takes a `QueryManagerObject` parameter when trying to clone an instance of `QueryManager` or a subclass of `QueryManager`.

**Action:** If the actual object is a subclass of `QueryManager`, then examine the subclass constructors for failure in the code that extends `QueryManager`.

---

**Level: 1**

**Type: ERROR**

**Impact: Programmatic**

**DVT-09016: cannot find property**

**Cause:** The persistent XML file was not compatible with this object.

**Action:** Re-create the object.

**Level: 1**

**Type: ERROR**

**Impact: Programmatic**

**DVT-09017: cannot redo**

**Cause:** There were no more operations on the stack to redo.

**Action:** No action is necessary.

**Level: 1**

**Type: ERROR**

**Impact: Programmatic**

**DVT-09032: The specified measure {0} is invalid.**

**Cause:** A measure name was specified that cannot be found in the database.

**Action:** Ensure that all named measures exist in the database.

**Level: 1**

**Type: ERROR**

**Impact: Programmatic**

**DVT-09036: cannot undo**

**Cause:** There were no more operations on the stack to undo.

**Action:** No action is necessary.

**Level: 1**

**Type: ERROR**

**Impact: Programmatic**

**DVT-09042: MetadataManager cannot return the measure dimension.**

**Cause:** Invalid or corrupt metadata was found in the database.

**Action:** Repair problems with or rebuild the database schema.

**Level: 1**

**Type: ERROR**

**Impact: Programmatic**

**DVT-09044: illegal DataDirector type request**

**Cause:** A relational DataDirector was requested for a nontabular query.

**Action:** Either call createCubeDataDirector, or set the QueryConstants.PROPERTY\_TABULAR\_QUERY property to true before requesting a relational data director.

---

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-09511: illegal pivot operation**

**Cause:** Dimensions or locations were provided that would not result in a legal pivot operation.

**Action:** Check the given arguments and reconcile them with the layout of the current query.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-09512: illegal swap operation**

**Cause:** Dimensions or locations were provided that would not result in a legal swap operation.

**Action:** Check the given arguments and reconcile them with the layout of the current query.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-09513: illegal swap edges operation**

**Cause:** Edges were provided that would not result in a legal swap operation.

**Action:** Check the given edges and reconcile them with the layout of the current query.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-09515: No query is defined.**

**Cause:** A method was called that requires an existing query.

**Action:** Create a query before calling the method.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-09532: The specified dimension or item is invalid: {0}.**

**Cause:** A dimension or item name was specified that cannot be found in the current database.

**Action:** Ensure that all named dimensions or items are in the current database.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-10000: Event is not consumable.**

---

**Cause:** An attempt was made to consume an event that is not consumable.

**Action:** No action is necessary.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-10100: Cannot connect to the database. (Reason: See error {0})**

**Cause:** There are a variety of possible reasons why the connection was not made.

**Action:** Check the cause and action text for the DVT error message that is specified after "Reason:".

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-10101: Handler fails to handle UserObject.**

**Cause:** A failed attempt was made to bind or look up an object whose state could not be set or retrieved.

**Action:** Check the underlying error stack to find the root cause of the problem.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-10105: BISession is not specified.**

**Cause:** An instance of BISession was not set on the MetadataManager object.

**Action:** Set a BISession on the MetadataManager object, using the setSession method.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-10107: User cannot set the specified property: {0}.**

**Cause:** An attempt was made to set a property other than Label on an MDOObject.

**Action:** Ensure that only the Label property is set on the MDOObject.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-10108: MetadataManager cannot disconnect the connection.**

**Cause:** MetadataManager could not disconnect the connection.

**Action:** Check the underlying error stack to find the root cause of the problem.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

---

**DVT-10109: MetadataManager cannot free the connection.**

**Cause:** The MetadataManager could not release the connection.

**Action:** Check the underlying error stack to find the root cause of the problem.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-10110: MetadataManager cannot retrieve the OracleConnection.**

**Cause:** The MetadataManager could not retrieve the OracleConnection.

**Action:** Check the underlying error stack to find the root cause of the problem.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-10300: cannot bind a context**

**Cause:** An attempt was made to save a folder using the bind method.

**Action:** To create a new folder, use the createSubcontext method. To copy a folder to another folder, use the copy method. To move a folder to another folder, use the move method.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-10301: The specified attribute is not valid.**

**Cause:** The key or the value of one or more attributes in the method was not valid.

**Action:** Specify a valid attribute key and value.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-10302: Name {0} is invalid; the name must not be an empty string.**

**Cause:** The specified name was not valid. For any methods of BIContext that require a name argument, the user cannot specify a null value. The following methods also require that the name argument not be an empty string: bind, rebind, createSubcontext, destroySubcontext, rename and unbind.

**Action:** Specify a name whose value is not an empty string.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-10303: The specified object is invalid.**

**Cause:** An attempt was made to save a UserObject that contains an object that is not accepted by the specific driver.

**Action:** Set the appropriate object in UserObject for the specified driver type.

---

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-10304: The specified search control is invalid.**

**Cause:** The specified search control was not valid for one of the following reasons: The search scope was not valid. It must be one of the following: OBJECT\_SCOPE, ONELEVEL\_SCOPE, SUBTREE\_SCOPE, ONELEVEL\_SCOPE\_WITH\_FOLDERS, or SELECTIVE\_ONELEVEL\_SCOPE. The specified time limit was a negative number. The specified count limit was a negative number.

**Action:** Review the possible reasons and take the appropriate action.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-10305: Object with name {0} already exists.**

**Cause:** An attempt was made to save an object with a name that was already bound to an object in the storage system, or the destination folder already contained an object that was bound to that particular name when the copy or move operation was performed.

**Action:** If this is a save operation, then use the rebind method to overwrite the existing object that is bound with that name. If this is a copy operation, then specify a different target name.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-10306: Object with name {0} cannot be found.**

**Cause:** An attempt was made to retrieve, copy, or move an object that does not exist.

**Action:** No action is necessary.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-10307: User lacks sufficient privileges to perform the operation.**

**Cause:** An attempt was made to perform an operation that requires specific privileges, for example, saving an object to a folder in which the user does not have write access.

**Action:** Request that the owner or user of the folder with full-control privileges assign sufficient privileges to the appropriate user to perform the operation.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-10308: The object is not a valid context.**

---

**Cause:** Depending on the operation, this error could occur because: The destination folder for copy or move operations was not a valid folder. The name argument in list, listBindings, or search operations did not resolve to a folder.

**Action:** Specify a valid folder name.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-10309: This operation is not supported.**

**Cause:** The operation was not supported by the driver in which the operation was invoked.

**Action:** No action is necessary.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-10310: unknown exception**

**Cause:** An unknown error occurred.

**Action:** Check the underlying error stack to find the root cause of the problem.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-10311: error while adding, removing, or modifying attributes**

**Cause:** An error has occurred while performing the modifyAttributes operation.

**Action:** Check the underlying error stack to find the root cause of the problem.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-10313: A circular reference is detected.**

**Cause:** The operation attempted to use aggregated, copied, or moved objects that cause a circular reference.

**Action:** If this is a bind or rebind operation, then ensure that no circular reference exists in the aggregate tree. If this is a copy or move operation on a folder, then ensure that the parent folder is not copied or moved to the subfolder.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-10315: The specified folder path is invalid.**

**Cause:** An attempt was made to save an object in a folder path that does not exist.

**Action:** Specify a valid folder path.

**Impact:** Programmatic

**DVT-10500: MetadataManager driver cannot be instantiated.**

**Cause:** A failure occurred while creating an instance of the MetadataManager driver. The failure can happen only if the MetadataManager drivers are interfaces or are abstract classes.

**Action:** Check the underlying error stack to find the root cause of the problem.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-10501: illegal attempt to access the MetadataManager driver**

**Cause:** A failure occurred while creating an instance of the MetadataManager driver. The failure can happen only if the MetadataManager drivers are not public or are not in the MetadataManager package.

**Action:** Check the underlying error stack to find the root cause of the problem.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-10502: MetadataManager driver is not found.**

**Cause:** A failure occurred while creating an instance of the MetadataManager driver. The failure can happen only if the necessary jar files are not referenced in the CLASSPATH setting.

**Action:** Ensure that all necessary classes are included in the CLASSPATH setting.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-10503: User cannot set the specified property: {0}.**

**Cause:** An attempt was made to set a property other than Label on the MeasureDimension MObject.

**Action:** Ensure that only the Label property is set on the MeasureDimension MObject.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-10504: MetadataManager cannot retrieve the OracleConnection.**

**Cause:** The MetadataManager could not retrieve the OracleConnection.

**Action:** Check the underlying error stack to find the root cause of the problem.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

---

**DVT-12000: unexpected error**

**Cause:** An unknown exception occurred in a call to a different class.

**Action:** Check the underlying error stack to find the root cause of the problem.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-16001: BSession is not specified.**

**Cause:** An instance of BSession was not set on the Connection object.

**Action:** Set a BSession on the Connection object using the setSession method.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-16002: Operation is incomplete because there is no database connection.**

**Cause:** The connection was not initialized.

**Action:** Invoke the connect method before performing this operation.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-16003: cannot set the connection object because a connection already exists**

**Cause:** Could not set the connection object because a connection already exists.

**Action:** Disconnect and set the connection object again.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-16004: The operation cannot complete because the object retrieved is a nonserializable object.**

**Cause:** The operation was not completed because the retrieved object was not serializable.

**Action:** Retrieve an object only if it does not require serialization.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-16400: Connection driver cannot be instantiated.**

**Cause:** A failure occurred while creating an instance of the Connection driver. The failure can happen only if the Connection drivers are interfaces or abstract classes.

**Impact:** Programmatic

**DVT-16402: Connection driver is not found.**

**Cause:** A failure occurred while creating an instance of the Connection driver. The failure can happen if the necessary jar files are not referenced in the CLASSPATH setting.

**Action:** Ensure that all necessary classes are included in the CLASSPATH setting.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-18008: No QueryContext is defined.**

**Cause:** A method was called that requires an existing QueryContext object.

**Action:** Create a QueryContext object before calling the method.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-18009: No Selection is defined.**

**Cause:** A method was called that requires an existing Selection object.

**Action:** Create a Selection object before calling the method.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-18010: The QueryAccess object cannot be created.**

**Cause:** A QueryAccess object could not be created.

**Action:** Verify that a valid QueryContext object exists. To create a QueryAccess object, use syntax such as queryContext.createQueryAccess.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-18011: A DataAccess object cannot be created.**

**Cause:** A DataAccess object could not be created.

**Action:** Verify that a valid QueryAccess object exists and that the dimension that is specified for the Selection is valid.

**Impact:** Security

**FEDSTS-18034: Untrusted server certificate chain.**

**Cause:** Certificate Authority certification keystore in JRE did not contain the Certificate Authority certificate.

**Action:** Add the Certificate Authority certificate of the LDAP server to the Certificate Authority certs keystore of the JRE.

**Level:** 1

**Type:** ERROR

**Impact:** Security

**FEDSTS-18041: Illegal UTF encoding**

**Cause:** The UTF encoding was not supported.

**Action:** Verify the UTF encoding to be a valid one.

**Level:** 1

**Type:** ERROR

**Impact:** Security

**FEDSTS-18047: Certificate {0} is replaced with the certificate {1}.**

**Cause:** Old certificate was replaced with the newer one.

**Action:** Ensure correct certificate is uploaded for normal functioning of the Oracle federation server.

**Level:** 1

**Type:** WARNING

**Impact:** Security

**FEDSTS-18048: The certificate corresponding to the private key is expired: {0}**

**Cause:** The certificate was expired.

**Action:** Use the certificate with the correct validity period.

**Level:** 1

**Type:** WARNING

**Impact:** Security

**FEDSTS-18049: Public key algorithm is not known:{0}.**

**Cause:** Public key algorithm was unknown.

**Action:** Use the correct certificate with the correct public key algorithm.

**Type:** ERROR

**Impact:** Security

**Cause:** The signature might be have been spoofed.

**Action:** Contact Administrator to verify

---

**FEDSTS-18075: Decryption operation failed for message sent by provider ID {0}**

**Cause:** The Oracle Identity Federation / Oracle Secure Token Service metadata at the remote provider could be outdated.

**Action:** Contact remote provider to uptake the latest Oracle Identity Federation / Oracle Secure Token Service metadata containing the latest encryption certificate

**Level:** 1

**Type:** ERROR

**Impact:** Security

**Cause:** The message is not intended for Oracle Identity Federation / Oracle Secure Token Service.

**Action:** Contact Administrator to verify

**FEDSTS-18076: Security services exception: {0}**

**Cause:** An error occurred while verifying/signing/encrypting/decrypting a message.

**Action:** Please check previous log entries for more specific information.

**Level:** 1

**Type:** ERROR

**Impact:** Security

**FEDSTS-18077: XML decryption error: EncryptedData element not found**

**Cause:** The XML EncryptedData element was not found when trying to decrypt the incoming data.

**Action:** Check the message and contact the remote server administrator if necessary.

**Level:** 1

**Type:** ERROR

**Impact:** Security

**FEDSTS-18078: XML decryption error: could not get the decryption secret key**

**Cause:** The key to decrypt the EncryptedData element could not be retrieved.

**Action:** Check the message and contact the remote server administrator if necessary.

**Level:** 1

**Type:** ERROR

**Impact:** Security

**FEDSTS-18079: The return URL could not be validated: {0}**

**Cause:** The specified return URL could not be validated against the list of approved hostnames/domains.

**Action:** Check if the return URL points to a valid host name/domain, and update if necessary the list of approved host names/domains. If the return URL is not recognized or invalid, do not update the list of approved host names/domains.
