

**Oracle[®] Retail Security Manager
Release Notes
Release 12.0
May 2006**

Copyright © 2006, Oracle. All rights reserved.

The Programs (which include both the software and documentation) contain proprietary information; they are provided under a license agreement containing restrictions on use and disclosure and are also protected by copyright, patent, and other intellectual and industrial property laws. Reverse engineering, disassembly, or decompilation of the Programs, except to the extent required to obtain interoperability with other independently created software or as specified by law, is prohibited.

The information contained in this document is subject to change without notice. If you find any problems in the documentation, please report them to us in writing. This document is not warranted to be error-free. Except as may be expressly permitted in your license agreement for these Programs, no part of these Programs may be reproduced or transmitted in any form or by any means, electronic or mechanical, for any purpose.

If the Programs are delivered to the United States Government or anyone licensing or using the Programs on behalf of the United States Government, the following notice is applicable:

U.S. GOVERNMENT RIGHTS Programs, software, databases, and related documentation and technical data delivered to U.S. Government customers are "commercial computer software" or "commercial technical data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the Programs, including documentation and technical data, shall be subject to the licensing restrictions set forth in the applicable Oracle license agreement, and, to the extent applicable, the additional rights set forth in FAR 52.227-19, Commercial Computer Software—Restricted Rights (June 1987). Oracle Corporation, 500 Oracle Parkway, Redwood City, CA 94065

The Programs are not intended for use in any nuclear, aviation, mass transit, medical, or other inherently dangerous applications. It shall be the licensee's responsibility to take all appropriate fail-safe, backup, redundancy and other measures to ensure the safe use of such applications if the Programs are used for such purposes, and we disclaim liability for any damages caused by such use of the Programs.

Oracle, JD Edwards, PeopleSoft, and Siebel are registered trademarks of Oracle Corporation and/or its affiliates. Other names may be trademarks of their respective owners.

The Programs may provide links to Web sites and access to content, products, and services from third parties. Oracle is not responsible for the availability of, or any content provided on, third-party Web sites. You bear all risks associated with the use of such content. If you choose to purchase any products or services from a third party, the relationship is directly between you and the third party. Oracle is not responsible for: (a) the quality of third-party products or services; or (b) fulfilling any of the terms of the agreement with the third party, including delivery of products or services and warranty obligations related to purchased products or services. Oracle is not responsible for any loss or damage of any sort that you may incur from dealing with any third party.

A Release Notes document can include some or all of the following sections, depending upon the release:

- Overview of the release.
- Functional, technical, integration, and/or performance enhancements.
- Assumptions.
- Fixed and/or known issues/defects.

Audience

Release Notes are a critical communication link between Oracle Retail and its retailer clients. There are four audiences in general for whom a Release Notes document is written:

- Retail clients who wish to understand the contents of this release.
- Integrators and implementation staff who have the overall responsibility for implementing RSM into their enterprise.
- Business analysts who are looking for high-level functional information about this release.
- System analysts and system operation personnel who are looking for high-level functional and technical content related to this release.

Related Documents

Customer Support

- <https://metalink.oracle.com>

When contacting Customer Support, please provide:

- Product version and program/module name.
- Functional and technical description of the problem (include business impact).
- Detailed step-by-step instructions to recreate.
- Exact error message received.
- Screen shots of each step you take.

Overview

RSM is an application that provides a retailer's Oracle Retail applications with a centralized method of authenticating and authorizing system users. RSM leverages a Lightweight Directory Access Protocol (LDAP)-compliant directory service to authenticate valid users. RSM provides centralized administration screens for system administrators to:

- Safely pass encrypted passwords
- Maintain roles
- Add workflow permissions roles
- Create data permissions and assign them roles
- Assign users to roles

Technical Enhancements

Certifications

The Oracle Retail software certification is the process of developing in order to conform to certain information technology industry's standards and specifications.

Database Server Certification

The RSM application has been upgraded to work with the Oracle 10g database server.

Application Server Certification

The RSM application has been upgraded to work with the Oracle Application Server 10.1.3.

Internationalization

RSM now supports the following languages:

- German
- French
- Spanish
- Japanese
- Korean
- Chinese-Simplified
- Chinese-Traditional
- Portuguese-Brazil

Automated Installation on UNIX Environments

A new installation tool is available to install RSM on UNIX environments. This tool is Java-based and automates the following:

- The creation of database objects.
- The creation of the XML and LDAP login modules in OC4J for the RSM application.
- The deployment of the RSM ear file.
- The installation of the RSM WebStart client files.
- WebHelp setup

Complete installation instructions are in the RSM 12.0 Installation Guide.

Functional Enhancements

Increased Audit/Logging Support

Functionality has been added to RSM that allows clients to direct a limited amount of audit information to a separate audit file. The audit logger must be configured in the log4j.xml and security.properties files. The audit logger writes to the audit log for every failed login attempt, every successful login, and every time an account is locked.

The output below is an example of what the audit log may resemble.

Note: The format of this output is configurable per Log4J specifications.

```
27-01-2006 11:45:19 INFO    Error logging in user jim.retail. Exception is:
                          Authentication failed for user jim.retail, invalid user credentials
27-01-2006 11:45:19 INFO    Adding one to login failure count for user jim.retail
27-01-2006 11:45:53 INFO    Error logging in user jane.retail. User does not exist
27-01-2006 11:46:40 INFO    User jane.doe successfully logged in
27-01-2006 11:46:40 INFO    Removing user login failure (count = 3) entries from DB
                          for user jane.doe
27-01-2006 11:57:04 INFO    joe.retail's user account has been locked due to repeated
                          failed login attempts
```

Rebranding

Oracle Retail Security Manager software and documentation has been rebranded to comply with Oracle industry standards. The rebranding provides visual consistency among the integrated platforms.

Assumptions

Oracle Retail Price Management (RPM) is dependent upon RSM for authorization and authentication. RSM must be installed prior to the installation of RPM. RSM relies on RPM to administer RPM's data level permissions. RPM must be installed before this functionality within RSM can be tested. For additional information, please see the RPM Installation Guide and the RPM Operations Guide, as well as the RSM Installation Guide and the RSM Operations Guide.

Noteworthy Fixed Issues/Defects

The following is a list of defects that were fixed within Oracle Retail Security Manager:

- BugDB 4882831
When rsm11.user_role is out of sync with the LDAP server, RSM cannot log in.
- BugDB 5111166
In some RSM screens, changing the sort column causes a screen paint problem.
