## Supported JDK Versions

ALDSP 3.2 JDK support is dependent on the supported WebLogic Server 10.0 MP1 JDK for each vendor and operating system listed in [Table 1-1](#).

To view the supported JDK for your environment:

1. Click the link for your vendor and operating system in [Table 1-1](#).
2. Select the requirements link for the hardware appropriate for your environment in the Configuration Requirements section of the *WebLogic Server 10.0 Supported Configurations* document.
3. Review the information in the JDK row of the certification table.

**Note:** BEA does not support the Azul Virtual Machine for ALDSP 3.2.

## IDE Support

The ALDSP IDE requires Eclipse 3.2.2 and Eclipse WTP 1.5.4. If you do not have Eclipse 3.2.2 and WTP 1.5.4 in your environment, select these plug-ins from the appropriate panel of the installer.

## Supported Relational Database Management Systems

In general any thread-safe, transaction-callable relational database management system (RDBMS) accessible through JDBC should be available to AquaLogic Data Services Platform. ALDSP provides the following levels of RDBMS support:

**Table 1-2 Levels of RDBMS Support**

Support Level	Description
Extended	Support is provided for tables, stored procedures, vendor caching, and some database functions.
Generic	Support only for basic SQL read and write calls if the database supports JDBC standards.

1. PointBase Server is an all-Java DBMS product included in the WebLogic Server distribution solely for evaluation purposes, either in the form of custom trial applications or through packaged sample applications provided with WebLogic Server. Non-evaluation development or other use of the PointBase Server requires that a separate PointBase Server license be obtained by the end user directly from DataMirror.

## Known Issues

### Stack Overflow Issues on JRockit

You may encounter a stack overflow issue when using JRockit versions prior to BEA JRockit 5.0 (R27.3.1) JDK. The issue is resolved by using BEA JRockit 5.0 (R27.3.1) JDK and later 5.0 releases of JRockit.

### java.lang.UnsupportedOperationException

This exception may be encountered due to difference in implementation of security encryption algorithm between IBM JVM and other JVMs such as Sun or Jrockit.

Modify the `$BEA_HOME/Weblogic92/common/bin/commEnv.sh` file to include the following command:

```
JAVA_OPTIONS="$JAVA_OPTIONS -Dcom.bea.dsp.security.encryption.algorithm=PBEWithMD5AndDES"
```
