WebLogic Portlets for Siebel User Guide

This guide, which shows you how to use the WebLogic Portlets for Siebel, includes the following sections:

- Introduction
- Getting Started with WebLogic Portlets for Siebel
- Login Portlet
- Sales Order Portlet
- Service Request Portlet
- My Accounts Portlet
- My Team Accounts Portlet
- Agreements By Expiry Date Portlet
- All Assets By Account Portlet
- Contacts By Account Portlet
- Customer List with Address Info Portlet
- Repair Status Portlet
- RMA Order Status Portlet

This guide assumes that you have working knowledge of the following:

WebLogic Portlets for Siebel User Guide

- WebLogic Portlets for Siebel
- BEA WebLogic Platform 8.1
- Siebel 7.0.4

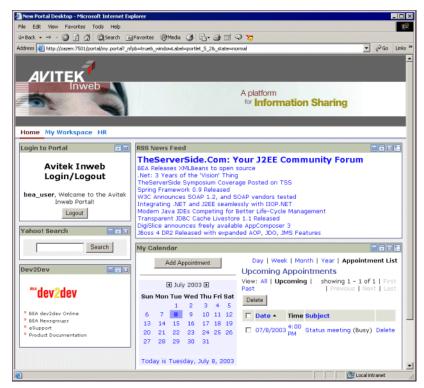

Introduction

Since the dawn of World Wide Web users have been accessing one Web page at a time. And that's been just fine. At first, excitement over the ability to provide platform-agnostic content to all users with network access or an Internet connection overshadowed any drawbacks or inadequacies with the new technology. Later, emerging technologies such as Java, JavaScript, and application servers provided application functionality, usability, stability, and performance improvements that have been the mainstay of Internet computing.

Now organizations need more. They want to not only surface their legacy applications, processes, and data in a Web interface, but they want to be able to do so more than one page at a time. They want portals.

A portal is a powerful Web site that gives users a single point of access to applications and information in a unified interface. A portal lets users view each application or Web page in its own window, called a portlet, and a single browser window can contain multiple portlets. For example, a portal page can contain portlets for logging in, searching, displaying news feeds, and managing appointments with a calendar application, as shown in the following Figure.

Figure 1 Portal desktop

Portlets are arranged or grouped on portal pages, and users can easily navigate among pages with page tabs, drop-down menus, or other mechanisms to access the portlets they want. The portal in Figure 1 contains three pages: Home, My Workspace, and HR, whose links appear just above the Login portlet.

Siebel 7.0.4- WebLogic Portlets for Siebel automates change and product content propagation related business processes that span across Siebel 7.0.4 and WebLogic Portlets for Siebel.

Business Goals of WebLogic Portlets for Siebel

Business Requirements addressed by WebLogic Portlets for Siebel at a high level are:

- Integrating Siebel 7.0.4 with WebLogic Portlets for Siebel.
- Facilitating real time collaborative practices between organization partners by transferring information from Siebel 7.0.4 to WebLogic Portlets for Siebel.

• Ensuring a smooth and fast Product Content propagation in high volume transactions scenario.

Key Features of WebLogic Portlets for Siebel

Key design goals of WebLogic Portlets for Siebel are:

- Easy to Deploy
- Easily Configurable to suit varying business needs
- Easy to Monitor
- Easy to Maintain with application upgrades

WebLogic Portlets for Siebel supports the following business processes:

S.No.	Business Process
1.	Sales Order (View, Edit, and Create)
2.	Shipping Status (View, Edit, and Create)
3.	Service Request (View, Edit, and Create)
4.	Service Request Activity (View, and Create)
5.	My Accounts (View, Edit, and Create)
6.	My Team Accounts (View)
7.	Agreements By Expiry Date (View)
8.	All Assets By Account (View)
9.	Contacts By Account (View and Edit)
10.	Customer List With Address Info (View and Edit)
11.	Repair Status (View)
12.	RMA Order Status (View)

Table 1 List of business processes for BEA WebLogic Portlets

Acronyms, Abbreviations, and Definitions

Acronym	Definition
во	Business Objects
ERP	Enterprise Resource Planning
RMA	Return Material Authorization
BC	Business Component

Table 2 List of Acronyms, Abbreviations, and Definitions for BEA WebLogic Portlets

Supported Platforms

BEA WebLogic Suite 8.1

Product Life Cycle Management Applications

Siebel 7.0.4

Operating Systems

Windows NT, Windows 2000, Windows 2000 Server and Windows XP

Process Flow

Follow the steps given below to complete the flow from BEA WebLogic Suite 8.1 to Siebel Applications through WebLogic Portlets for Siebel.

Start the web server (/).

Logon to WebLogic Portlets for Siebel (Optional).

Viewing, and Editing the Sales Orders etc., that are created from WebLogic Portlets for Siebel and, which are to be transferred to Siebel Applications instance.

Once the Sales Order is created successfully you can view the details in the Siebel Applications instance.

Getting Started with WebLogic Portlets for Siebel

To start WebLogic Portlets for Siebel, open Internet Explorer and type the following URL:

http://<WebLogic Portlets for SiebelServer>:<port>/<project name>/<Portal file>

WebLogic Portlets for Siebel User Guide

For example:

http://siebelserver:7001/beaportal/BEAPortalNet.portal

The login page appears.

Note: The parameters in the URL are to be replaced by actual values.

Login Portlet

The login screen is used to authenticate the user. Only those users who have a valid authentication are allowed to login.

Figure 2 WebLogic Portlets for Siebel Login Screen

Login					
Welcome BEA WebLogic Portal User					
Please enter your usernam password below.	e and				
Username:					
Password:]				
Sign In					

Username

Enter Username to log into the WebLogic Portlets for Siebel.

Password

Enter the Password details. The user may note that the password details entered are not visible instead an asterisk (*) is displayed for each and every keystroke entered by the user. Since, this field is case sensitive the user should ensure that the Caps Lock key is set to off mode from the keyboard.

Sign In

Click on Sign In after the Username and Password details are entered to successfully login to WebLogic Portlets for Siebel.

In order to log into WebLogic Portlets for Siebel system, the user should be of one of the following user type:

• Administrator

- Employee
- Customer

It is advised that the user refer to the BEA WebLogic Portlet Administration Guide. The guide details how to create a user, group and assign privileges, and so on.

The privileges, which are available for an Administrator, are not available to Employee and Customer. The details displayed on the Portlets vary depending on the user type selected.

In this user guide we will select the user type as Employee, which will contain all the privileges of a Customer and some more details as compared to a Customer.

After successfully logging into the WebLogic Portlets for Siebel a screen as illustrated in the following figure is displayed:

SR#

This field displays the Service Request number. This field is not updatable.

Abstract

This field displays the abstract (narration) for the Service Request. This field is not updatable.

Area

This field displays the area or location. This field is not updatable.

Commit Time

This field displays the time, which was committed. This field is not updatable.

Status

This field displays the current status and allows the user to select and update the status. This field is updatable.

Severity

This field displays the assigned severity and allows the user to select and update the severity. This field is updatable.

Priority

This field displays the priority assigned and allows the user to select and update the priority. This field is updatable.

Once the changes are updated, click Submit.

Creating a new Activity for the Service Request Activity

In order to create a new Service Request Activity scroll to the Service Request portlet.

Click on Activity hyperlink from the Service Request portlet. A screen as illustrated below is displayed:

Figure 28 WebLogic Portlets for Siebel – Service Request Activity portlet Screen
