Index

Preface

Welcome to the JD Edwards EnterpriseOne Applications Localizations for Norway Implementation Guide.

Audience

This guide is intended for implementers and end users of the JD Edwards EnterpriseOne systems for Norway localizations.

JD Edwards EnterpriseOne Products

This implementation guide refers to the following JD Edwards EnterpriseOne products from Oracle:

- JD Edwards EnterpriseOne Accounts Payable.
- JD Edwards EnterpriseOne Accounts Receivable.
- JD Edwards EnterpriseOne Address Book.
- JD Edwards EnterpriseOne General Accounting.
- JD Edwards EnterpriseOne Inventory Management
- JD Edwards EnterpriseOne Procurement.
- JD Edwards EnterpriseOne Sales Order Management.

JD Edwards EnterpriseOne Application Fundamentals

Additional, essential information describing the setup and design of your system appears in a companion volume of documentation called *JD Edwards EnterpriseOne Applications Financial Management Fundamentals 9.1 Implementation Guide*.

Customers must conform to the supported platforms for the release as detailed in the JD Edwards EnterpriseOne minimum technical requirements. In addition, JD Edwards EnterpriseOne may integrate, interface, or work in conjunction with other Oracle products. Refer to the cross-reference material in the Program Documentation at <http://oracle.com/contracts/index.html> for Program prerequisites and version cross-reference documents to assure compatibility of various Oracle products.

See Also:

- "Getting Started with JD Edwards EnterpriseOne Financial Management Application Fundamentals" in the *JD Edwards EnterpriseOne Applications Financial Management Fundamentals Implementation Guide*.

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

Related Documents

You can access related documents from the JD Edwards EnterpriseOne Release Documentation Overview pages on My Oracle Support. Access the main documentation overview page by searching for the document ID, which is 1308615.1, or by using this link:

<https://support.oracle.com/CSP/main/article?cmd=show&type=NOT&id=1308615.1>

To navigate to this page from the My Oracle Support home page, click the Knowledge tab, and then click the Tools and Training menu, JD Edwards EnterpriseOne, Welcome Center, Release Information Overview.

Conventions

The following text conventions are used in this document:

Convention	Meaning
Bold	Indicates field values.
<i>Italics</i>	Indicates emphasis and JD Edwards EnterpriseOne or other book-length publication titles.
Monospace	Indicates a JD Edwards EnterpriseOne program, other code example, or URL.

Introduction to JD Edwards EnterpriseOne Localizations for Norway

This chapter contains the following topics:

- [Section 1.1, "JD Edwards EnterpriseOne Localizations for Norway Overview"](#)
- [Section 1.2, "JD Edwards EnterpriseOne Localizations for Norway Implementation"](#)
- [Section 1.3, "Understanding Translation Considerations for Multilingual Environments"](#)
- [Section 1.4, "Understanding Translation Routines"](#)
- [Section 1.5, "Setting Up User Display Preferences"](#)

1.1 JD Edwards EnterpriseOne Localizations for Norway Overview

This guide includes information about setting up and using the country-specific software for Norway.

Before you can use county-specific software in the JD Edwards EnterpriseOne system you must enable access to the country-specific forms and processing. The setup to enable country-specific functionality is described in this introduction chapter.

In addition to the setup described in this guide, you must set up the base software for the particular process you implement. For example, you must follow the steps to set up the base software JD Edwards EnterpriseOne Accounts Payable system in addition to performing the setup for any country-specific functionality for the JD Edwards EnterpriseOne Accounts Payable system.

1.2 JD Edwards EnterpriseOne Localizations for Norway Implementation

In the planning phase of your implementation, take advantage of all JD Edwards EnterpriseOne sources of information, including the installation guides and troubleshooting information.

When determining which electronic software updates (ESUs) to install for JD Edwards EnterpriseOne systems, use the EnterpriseOne and World Change Assistant. EnterpriseOne and World Change Assistant, a Java-based tool, reduces the time required to search and download ESUs by 75 percent or more and enables you to install multiple ESUs at one time.

See *JD Edwards EnterpriseOne Tools Software Updates Guide*.

1.3 Understanding Translation Considerations for Multilingual Environments

The system can display menus, forms, and reports in different languages. All software is shipped with the base language of English. You can install other languages as needed. For example, if you have multiple languages installed in one environment to enable different users to display different languages, each user can work in the preferred language by setting up user preferences accordingly.

In addition to the standard menus, forms, and reports, you might want to translate other parts of the software. For example, you might want to translate the names of the accounts that you set up for the company or translate the values in some user-defined codes (UDCs).

This table illustrates common software elements that you might want to translate if you use the software in a multinational environment:

Common Software Elements	Translation Considerations
Business unit descriptions	<p>You can translate the descriptions of the business units that you set up for the system.</p> <p>The system stores translation information for business units in the Business Unit Alternate Description Master table (F0006D).</p> <p>Print the Business Unit Translation report (R00067) to review the description translations in the base language and one or all of the additional languages that the business uses.</p>
Account descriptions	<p>You can translate the descriptions of the accounts into languages other than the base language.</p> <p>After you translate the chart of accounts, you can print the Account Translation report. You can set a processing option to show account descriptions in both the base language and one or all of the additional languages that the business uses.</p>
Automatic accounting instruction (AAI) descriptions	You can translate the descriptions of the AAIs that you set up for the system.
UDC descriptions	You can translate the descriptions of the UDCs that you set up for the system.

Common Software Elements	Translation Considerations
Delinquency notice text	<p>Specify a language preference for each customer when you create customer master records. The language preference field on the Address Book - Additional Information form determines the language in which the delinquency notice and the text on the notice should appear when you use final mode. (In proof mode, the statements print in the language preference that is assigned to the client in the JD Edwards EnterpriseOne Address Book system.)</p> <p>The base software includes the delinquency notice translated into German, French, and Italian. You should translate any text that you add to the bottom of the notice. To do this translation, follow the instructions for setting up text for delinquency notices, and verify that you have completed the Language field on the Letter Text Identification form.</p>

The translations that you set up for the system also work with the language that is specified in the user profile for each person who uses the system. For example, when a French-speaking user accesses the chart of accounts, the system displays the account descriptions in French, rather than in the base language.

1.4 Understanding Translation Routines

The system provides several translation routines to convert amounts to words. These translation routines are generally used by payment formats, draft formats, and check-writing programs that produce numerical output in both numeric and text form. You specify the translation routine that you want to use in the processing options for these programs.

The system provides these translation routines:

- X00500 - English.
- X00500BR - Brazilian Portuguese.
- X00500C - Including cents.
- X00500CH - Chinese.
- X00500D - German (mark).
- X00500ED - German (euro).
- X00500FR - French (franc).
- X00500EF - French (euro).
- X00500I - Italian (lira).
- X00500EI - Italian (euro).
- X00500S1 - Spanish (female).
- X00500S2 - Spanish (male).
- X00500S3 - Spanish (female, no decimal).
- X00500S4 - Spanish (male, no decimal).

- X00500S5 - Spanish (euro).
- X00500U - United Kingdom.
- X00500U1 - United Kingdom (words in boxes).

In some cases, the translation routine that you use depends on the currency that you are using. For example, if you are converting euro amounts to words, you should use a translation routine that has been set up to handle euro currencies. In Spanish, the gender of the currency determines the translation routine that you choose.

1.5 Setting Up User Display Preferences

This section provides an overview of user display preferences and discusses how to:

- Set processing options for the User Profiles program (P0092).
- Set up user display preferences.

1.5.1 Understanding User Display Preferences

Some JD Edwards EnterpriseOne localized software uses country server technology to isolate country-specific features from the base software. For example, if during normal transaction processing, you record additional information about a supplier or validate a tax identification number to meet country-specific requirements, you enter the additional information by using a localized program; the tax validation is performed by a localized program instead of by the base software. The country server indicates that this localized program should be included in the process.

To take full advantage of localized solutions for the business, you must set up the user display preferences to specify the country in which you are working. The country server uses this information to determine which localized programs should be run for the specified country.

You use localization country codes to specify the country in which you are working. The system supplies localization country codes in UDC table 00/LC. This table stores both two-digit and three-digit localization country codes.

You can also set up user display preferences to use other features. For example, you can specify how the system displays dates (such as DDMMYY, the typical European format) or specify a language to override the base language.

See Also:

- *JD Edwards EnterpriseOne Tools System Administration Guide.*

1.5.2 Form Used to Set Up User Display Preferences

Form Name	FormID	Navigation	Usage
User Profile Revisions	W0092A	JD Edwards EnterpriseOne banner, click on Personalization Select My System Options, and then User Profile Revisions. On User Default Revisions, select User Profile Revisions.	Set display preferences.

1.5.3 Setting Processing Options for User Profile Revisions (P0092)

Processing options enable you to set default values for processing.

1.5.3.1 A/B Validation

Address Book Number

Enter **1** to enable editing on address book number against the Address Book Master table (F0101).

1.5.3.2 PIM Server Setup

PIM Server

Enter **D** if you use an IBM Domino Server. Enter **X** if you use a Microsoft Exchange Server.

1.5.4 Setting Up User Display Preferences

Access the User Profile Revisions form.

Figure 1–1 User Profile Revisions form

The screenshot shows the 'My System Options - User Profile Revisions' form in the Oracle JD Edwards EnterpriseOne interface. The form is organized into several sections:

- Display Preferences:**
 - Language: A text input field.
 - Justification: Radio buttons for 'Right To Left' and 'Left to Right'.
- Accessibility:**
 - Set Accessibility Mode: Radio buttons for 'Yes' and 'No'.
- Localization and Formatting:**
 - Date Format: A dropdown menu set to 'MDE' with a tooltip 'Month, Day, 4-digit Year'.
 - Date Separator Character: A text input field with a tooltip 'System value'.
 - Decimal Format Character: A text input field containing a comma (,) with a tooltip 'Comma indicator'.
 - Localization Country Code: A text input field containing 'NO' with a tooltip 'Norway'.
 - Universal Time: A text input field.
 - Time Format: A text input field.
 - Daylight Savings Rule: A text input field.

Localization Country Code

Enter a UDC (00/LC) that identifies a localization country. It is possible to attach country-specific functionality based on this code by using the country server methodology in the base product.

Language

Enter a UDC (01/LP) that specifies the language to use on forms and printed reports. Before you specify a language, a code for that language must exist at either the system level or in the user preferences. Additionally, you must have the language CD installed.

Date Format

Enter the format of a date as it is stored in the database.

If you leave this field blank, the system displays dates based on the settings of the operating system on the workstation. With NT, the Regional Settings in the Control Panel control the settings for the operating system of the workstation. Values are:

Blank: Use the system date format.

DME: Day, month, four-digit year

DMY: Day, month, year (DDMMYY)

EMD: Four-digit year, month, day

MDE: Month, day, four-digit year

MDY: Month, day, year (MMDDYY)

YMD: Year, month, day (YYMMDD)

Date Separator Character

Enter the character to use when separating the month, day, and year of a given date. If you enter an asterisk (*), the system uses a blank for the date separator. If you leave the field blank, the system uses the system value for the date separator.

Decimal Format Character

Enter the number of positions to the right of the decimal that you want to use. If you leave this field blank, the system value is used as the default.

Understanding Localizations for Norway

This chapter contains the following topics:

- [Section 2.1, "Norway-Specific Setup and Processes"](#)

2.1 Norway-Specific Setup and Processes

This table lists the country-specific setup and functionality for Norway.

Setup or Process	Description
UDCs (user-defined codes)	<p>No Norway-specific UDC values exist. However, to use Intrastat reporting and International Payment Instructions (IPI):</p> <ul style="list-style-type: none"> ■ Set up UDCs for European Union reporting. See "Setting Up UDCs for Intrastat Reporting" in the <i>JD Edwards EnterpriseOne Applications Localizations for European Reporting and SEPA Processing Implementation Guide</i>. ■ Set up UDCs to print invoices with an attached IPI. See "Setting Up UDCs for International Payment Instructions" in the <i>JD Edwards EnterpriseOne Applications Localizations for European Reporting and SEPA Processing Implementation Guide</i>. ■ Set up these UDCs for companies: <ul style="list-style-type: none"> – Affiliated Companies (74/AC) – Code Number (74/30) See "Setting Up UDCs for European Companies" in the <i>JD Edwards EnterpriseOne Applications Localizations for European Reporting and SEPA Processing Implementation Guide</i>.
AAIs (automatic accounting instructions)	No Norway-specific AAIs exist. Set up the standard AAIs.
Next numbers	No Norway-specific next numbering requirements exist. Set up the standard next numbering schemes.
Bank accounts	Enter additional customer and security information for bank accounts. See Setting Up Enterprise Information for Norway .

Setup or Process	Description
Suppliers	<p>In addition to the standard setup for suppliers, in Norway:</p> <ul style="list-style-type: none"> ■ Enter Norway-specific supplier master information. See "(CAN, DEU, FIN, GBR, NOR, SWE, and USA) Setting Up Country-Specific Supplier Bank Account Information" in the <i>JD Edwards EnterpriseOne Applications Financial Management Fundamentals Implementation Guide</i>. See Setting Up Bank Information for Suppliers for Norway. ■ Enter additional bank account information including the bank account type, fee codes, and payment method for foreign suppliers. See Setting Up Additional Bank Information for Foreign Suppliers.
Payment processing	<p>In addition to the standard setup for payment processing, in Norway:</p> <ul style="list-style-type: none"> ■ Set up payment formats. See Setting Up Payment Formats for Norway. ■ Enter an identification code that the Central Bank uses to identify foreign payments. See Entering Foreign Payment Information for the Central Bank. <p>To work with payment processing in Norway:</p> <ul style="list-style-type: none"> ■ Use the Nordic Work with Payments program (P0474N5) to revise the GL date for payments and update payments from different control groups. See Working with Payment Groups for Norway. ■ Upload and review debit advice note information and then update or reset the payments as required. See Receiving Debit Advice Notices in Norway. ■ Upload customer payment information. See Uploading Customer Payment Information for Norway. See Uploading Information to the F03B13Z1 Table for Norway.
Voucher processing	<p>When processing vouchers in Norway, use the Enhanced Due Date Processing Sweden program (R74W0020) to automatically change the due date of a credit note to the due date of a matching voucher. See Preparing Vouchers and Credit Notes for Payment Processing in Norway.</p>
Invoice processing	<p>In addition to standard invoice processing, you can print invoices with attached IPI. To print these invoices and attachments:</p> <ul style="list-style-type: none"> ■ Set up UDCs for IPIs. See "Setting Up UDCs for International Payment Instructions" in the <i>JD Edwards EnterpriseOne Applications Localizations for European Reporting and SEPA Processing Implementation Guide</i>. ■ Print invoices with attached IPIs. See "Printing Invoices with an Attached International Payment Instruction" in the <i>JD Edwards EnterpriseOne Applications Localizations for European Reporting and SEPA Processing Implementation Guide</i>.

Setup or Process	Description
Intrastat and other European Union reporting	<p>See "Setting Up European Union (EU) and SEPA Functionality" in the <i>JD Edwards EnterpriseOne Applications Localizations for European Reporting and SEPA Processing Implementation Guide</i>.</p> <p>See "Using European Union Functionality" in the <i>JD Edwards EnterpriseOne Applications Localizations for European Reporting and SEPA Processing Implementation Guide</i>.</p>
OECD SAF-T Generic Extractor Report	<p>You can generate the SAF-T XML report in version 2.0 for exporting the accounting information of a company to the tax authorities.</p> <p>For more information, see the <i>JD Edwards EnterpriseOne Applications OECD Standard Audit File for Tax Purposes (SAF-T) Localizations Implementation Guide</i>.</p>

Setting Up Localizations for Norway

This chapter contains the following topics:

- [Section 3.1, "Setting Up Bank Information for Suppliers for Norway"](#)
- [Section 3.2, "Setting Up Additional Bank Information for Foreign Suppliers"](#)
- [Section 3.3, "Setting Up Enterprise Information for Norway"](#)
- [Section 3.4, "Setting Up Payment Formats for Norway"](#)

See Also:

- "Setting Up European Union (EU) and SEPA Functionality" in the *JD Edwards EnterpriseOne Applications Localizations for European Reporting and SEPA Processing Implementation Guide*.

3.1 Setting Up Bank Information for Suppliers for Norway

When entering supplier master information:

- Complete the Bank Account Number field with your bank, *Bankgiro* or *Postgiro*, account number.
- Complete the Remark field with the correct identification code for foreign vouchers.
- Complete the Reference/Roll Number field with the number provided by the DNB Telebank.

See Also:

- "(CAN, DEU, FIN, GBR, NOR, SWE, and USA) Setting Up Country-Specific Supplier Bank Account Information" in the *JD Edwards EnterpriseOne Applications Financial Management Fundamentals Implementation Guide*.

3.2 Setting Up Additional Bank Information for Foreign Suppliers

This section provides an overview of additional bank information for foreign suppliers, lists prerequisites, and discusses how to:

- Set up additional bank information for foreign suppliers.
- Override additional bank information when writing or updating payments.

3.2.1 Understanding Additional Bank Information for Foreign Suppliers

You use the Supplier Inf. Foreign Payments program (P74W001) to add additional bank information that is required for foreign payments made by Nordic companies. If you use a foreign payment format, you must enter this additional bank information for each foreign supplier. The system writes the information that you enter to the Supplier Info. Foreign Payment table (F74W001).

You can use the Work With Payment Groups program (P04571) to override the additional bank information for a specific payment, if necessary. You can also set the processing options in the Create A/P Bank Tape - Finland Foreign program (R04572FI2) to override the payment method and fee code that you enter here.

3.2.2 Prerequisites

Before you complete the tasks in this section, create an address book record for each bank, ensuring that both the name of the bank and the name of the local office are entered in the Alpha Name field.

See "Entering Address Book Records" in the *JD Edwards EnterpriseOne Applications Address Book Implementation Guide*.

3.2.3 Forms Used to Set Up Additional Bank Information for Foreign Suppliers

Form Name	FormID	Navigation	Usage
Revise Supplier Info. Foreign	W0474N3B	Swedish Localization (G74W), Swedish Supplier Inf. Foreign Payments Click Add on the Work With Supplier Info. Foreign form.	Set up additional bank information for foreign suppliers.
Work With Payment Groups	W04571A	Automatic Payment Processing (G0413), Work with Payment Groups	View payment groups for a specific bank account or a specific status.
Foreign Supplier Info Override	W74W001B	On the Work With Payment Groups form, select a record and select Payments from the Row menu. On the Work With Payment Group - Write or Update Status form, select a payment and then select Regional Info from the Row menu.	Override additional bank information.

3.2.4 Setting Up Additional Bank Information for Foreign Suppliers

Access the Revise Supplier Info. Foreign form.

Figure 3–1 Revise Supplier Info. Foreign form

The screenshot shows a software window titled "Swedish Supplier Inf. Foreign Payments - Revise Supplier Info. Foreign". The window has a standard toolbar with a save icon, a close icon, and a "Tools" menu. The main content area is titled "Supplier Info." and contains four input fields:

- Address Number:** A text box containing the value "4002".
- Fee code:** A text box containing the value "1".
- Payment Method:** A text box containing the value "0".
- Supplier Number:** An empty text box.

Address Number

Enter the address book number of the supplier.

Account flag

Enter the type of bank account to be used for payments, for example, checking or currency account. Values are:

0: SEK account (Sweden), NOK account (Norway), DKK account (Denmark), or EUR/FIM account (Finland)

1: Currency account

Fee code

Enter a code that indicates who is going to pay the bank fees.

Values are:

0: All fees are paid by the payer.

1: The payee is responsible for paying the charges in Norway and the payer is responsible for paying the charges abroad.

2: All fees are paid by the payee.

Payment Method

Enter a code that indicates the type of payment, for example, normal or express payment. Values are:

0: Normal.

1: Express (always bank).

M: Payment order.

P: Urgent payment.

Q: SWIFT check.

S: Check forwarded to the customer.

T: Account transfer within the bank.

K: Group payment.

R: Capital payment

Supplier Number

The system displays a unique seven-digit number that the bank uses to identify the supplier. The system generates this number automatically for existing records.

3.2.5 Overriding Additional Bank Information

Access the Foreign Supplier Info Override form.

3.3 Setting Up Enterprise Information for Norway

This section provides an overview of enterprise information for Norway and discusses how to set up enterprise information for Norway.

3.3.1 Understanding Enterprise Information for Norway

To transmit bank files, you must enter additional information about the financial institution for security and identification reasons. For example, you can seal the bank file before transmitting it to *Postgirot/Bankgirot*.

The information that is required depends on the financial institution that you use for electronic payments. You receive the required information, such as the seal (*sigill*) and customer number, from your bank.

3.3.2 Form Used to Set Up Enterprise Information for Norway

Form Name	FormID	Navigation	Usage
Revise Enterprise Info. - Norway DNB	W0474N2B	Norwegian Localization (G74O), Enterprise Information for DNB-Domestic Click Add on the Work With Enterprise Info - Norway DNB form.	Set up enterprise information for Norway.

3.3.3 Setting Up Enterprise Information for Norway

Access the Revise Enterprise Info. - Norway DNB form.

Figure 3–2 Revise Enterprise Info. - Norway DNB Form

The screenshot shows a web-based form titled "Enterprise Information for DNB-Domestic - Revise Enterprise Info. - Norway DNB". The form has a standard toolbar at the top with icons for save, close, and help. Below the toolbar, there are several sections of input fields:

- Enterprise Number ***: A text box containing the value "98762".
- Division**: A text box containing the value "A13".
- Password 1**: An empty text box.
- Operator No**: An empty text box.
- Proc. Count Date**: An empty text box.
- Date Proc. Count**: An empty text box.
- Proc. Counter**: An empty text box.

Enterprise Number

Enter the customer's identification number in the bank. Enter the same number as in the Reference/Roll Number field on the BACS Info form.

Division

Enter the identifying designation of the division, department, subsidiary, and so on. You can use only one division number within a batch. Enter the same information as in the Bank Reference Name field on the BACS Info form.

Password 1

Enter the password, chosen by the customer, that the bank knows at all times.

Norwegian banks require a password.

Operator No (operator number)

Enter the number of the operator of the verifier or signatory. This number is allocated to the verifier or signatory by the bank.

Proc. Count Date (process count date)

Enter the 6-digit sequence number that works in conjunction with the AH transaction date. Set this field to **000001** every day.

Date Proc. Count

Enter the date when you last transferred payments to the bank.

Proc. Counter

The system displays a counter that runs continuously up to 9999, regardless of the date. The first time that data is transferred to the bank, the counter starts with 0001. The number after 9999 is 0000.

3.4 Setting Up Payment Formats for Norway

This section provides an overview of payment formats for Norway and discusses how to set up processing options for:

- Create A/P Bank Tape - Norway DNB - Domestic (R04572NO1).
- Create A/P Bank Tape - Norway DNB - Foreign (R04572NO2).

3.4.1 Understanding Payment Formats for Norway

JD Edwards EnterpriseOne software provides these payment formats for Norway:

Format	Description
R04572NO1	Create bank tape for domestic payments.
R04572NO2	Create bank tape for foreign payments.

3.4.2 Setting Processing Options for Create A/P Bank Tape - Norway DNB - Domestic (R04572NO1)

Processing options enable you to specify the default processing for programs and reports.

3.4.2.1 Tape

Use these processing options to specify the default values for the bank tape.

1. Devise Name

Enter the devise name.

2. Tape Density

Enter the tape density.

3. Label Name

Enter the label name.

4. Block Size

Enter the block size.

5. New Volume

Enter the new volume name.

3.4.2.2 More Tape

6. New Owner ID

Enter the new owner ID.

7. File Name

Enter the file name.

3.4.2.3 Payment Date

Due Date

Enter **1** to use the due date as the payment date and GL date. If you leave this processing option blank, the system uses the date entered during the write process as the payment date and GL date.

Due Date Warning

Enter **1** to enable warnings for the due date. The system ignores this processing option if you leave the Due Date processing option blank.

3.4.2.4 Bank Format

Format

Enter 1 to print TBII in the application header of the flat file. Leave the processing option blank or enter a value other than 1 to print IPII in the application header.

Contact your bank for information about whether to specify TBII or IPII for the application header of the flat file.

3.4.3 Setting Processing Options for Create A/P Bank Tape - Norway DNB - Foreign (R04572NO2)

Processing options enable you to specify the default processing for programs and reports.

3.4.3.1 Tape

Use these processing options to specify the default values for the bank tape.

1. Devise Name

Enter the devise name.

2. Tape Density

Enter the tape density.

3. Label Name

Enter the label name.

4. Block Size

Enter the block size.

5. New Volume

Enter the new volume name.

3.4.3.2 More Tape

6. New Owner ID

Enter the new owner ID.

7. File Name

Enter the file name.

3.4.3.3 Payment Date

Due Date

Enter 1 to use the due date as the payment date and GL date. If you leave this processing option blank, the system uses the date entered during the write process as the payment date and GL date.

Due Date Warning

Enter 1 to enable warnings for the due date. The system ignores this processing option if you leave the Due Date processing option blank.

3.4.3.4 Bank Format

Format

Enter 1 to print TBIU in the application header of the flat file. Leave the processing option blank or enter a value other than 1 to print IPIU in the application header.

Contact your bank for information about whether to specify TBIU or IPIU for the application header of the flat file.

Payment Category Code

Enter the default value for the Payment Category Code for the Central Bank of Norway.

You can determine the payment category code for the Central Bank at these levels:

- Accept the default value, which is hard-coded in the print program, for each country (for example, Norway = %14).
- Override the default value by entering a value.
- When entering a voucher, enter a value in the Remark field to override the default value.

Description of Goods

Enter the description of goods.

Working With Localizations for Norway

This chapter contains the following topics:

- [Section 4.1, "Understanding Payment Processing for Norway"](#)
- [Section 4.2, "Understanding Additional Information for Vouchers for Norway"](#)
- [Section 4.3, "Working with Payment Groups for Norway"](#)
- [Section 4.4, "Receiving Debit Advice Notices in Norway"](#)
- [Section 4.5, "Uploading Customer Payment Information for Norway"](#)
- [Section 4.6, "Uploading Information to the F03B13Z1 Table for Norway"](#)

4.1 Understanding Payment Processing for Norway

When you write payments for Nordic countries, the system produces the A/P Bank File Report - Nordic Countries report (R0474N1). This report lists every voucher in the payment group or groups that have been written. To access this report, view submitted jobs.

Note: Nordic payments do not use a print sequence for payments. However, the system requires that a print sequence be set up. You should use the DEMO sequence to set up Nordic payments.

4.2 Understanding Additional Information for Vouchers for Norway

You must enter foreign payment information for the Central Bank during standard voucher entry.

4.2.1 Entering Foreign Payment Information for the Central Bank

The Central Bank requires that an identification code be included on foreign payments. The Central Bank issues a list of valid identification codes for foreign payments. You enter the appropriate identification code in the Remark field during voucher entry. If you do not enter an identification code, the system assigns one of these values when you create the automatic payment file:

Country	Value
Sweden	%101
Denmark	%0006

Country	Value
Norway	%14
Finland	%999

You can change this default value by using the processing options for the various Write programs (for example, P04572SE2).

4.3 Working with Payment Groups for Norway

The Nordic Work with Payments program (P0474N5) enables you to change the GL date for single or multiple payments, and to update payments from different payment control groups.

This section discusses how to:

- Set processing options for A/P Bank File Report - Nordic Countries (R0474N1).
- Set processing options for Nordic Work with Payments (P0474N5).

4.3.1 Forms Used to Work With Payment Groups for the Nordic Countries

Form Name	FormID	Navigation	Usage
Revise Payments	W0474N5C	Norwegian Localization (G74O), Work with Payments. Perform one of the following actions: Select Load Date from the Row menu to update the GL date. Select Update from the Row menu to update payments from different control groups.	Locate payments for which you want to revise the GL date and update payments from different control groups. See Working with Payment Groups for Norway .

4.3.2 Setting Processing Options for A/P Bank File Report - Nordic Countries (R0474N1)

Processing options enable you to specify the default processing for programs and reports.

4.3.2.1 Default

Exchange Rate Effective Date

Enter a date to use for the effective date of the exchange rate.

Use Voucher's Rate for Exchange Rate

Enter 1 to use the exchange rate of the voucher rate as the exchange rate. If you leave this processing option blank, the system uses the exchange rate as of the payment GL date.

Summary record for Finland

This processing option is used for Finland only.

4.3.3 Setting Processing Options for Nordic Work with Payments (P0474N5)

Processing options enable you to specify the default processing for programs and reports.

4.3.3.1 Update

Version Number

Enter a version number for the register program, or leave this processing option blank to use version ZJDE0001.

Post Void Payments

Enter 1 to post void payments to the GL.

Submit AP Post Program

Enter 1 to automatically submit the AP payment post program after payments are updated.

4.4 Receiving Debit Advice Notices in Norway

This section provides an overview of receiving debit advice notices and discusses how to:

- Run the Load Payments Return File program.
- Set processing options for Load Payments Return File (R74W210).
- Set processing options for Debit Advice Payment Driver (R74W211).
- Set processing options for Debit Advice - Format Program, DNB (R74O212).
- Review debit advice notes and update or reset payments.

4.4.1 Understanding Debit Advice Note

In the Nordic countries, the bank sends a debit advice note to the company after the bank has made electronic payments on behalf of the company. The most common types of debit advice notes are:

- Notice of Delivery
 - This debit advice note indicates that the bank has received the payments file.
- Confirmation of Payment
 - This debit advice note indicates that the bank has made the payments, and the payment groups can be updated.
- Error message
 - This debit advice note contains information about payments that have not been made.

The debit advice notes contain the following information regarding the payments that were made:

- Paid amount.
- Payment date.
- Reference number.
- Actual currency rate that was used for foreign payments.

- Error messages.

You can upload the debit advice note information into these tables:

- F74W001
- F74W201
- F74W202
- F74W203
- F74W204

You can review the debit advice note information in these tables and then update or reset the payments. You can also update or reset the payments when you upload the debit advice note information without reviewing the information.

4.4.1.1 Loading the Payment Return File

The Load Payments Return File program uploads the debit advice file to the F007101 and F007111 tables, and then calls the Debit Advice Payment Driver program (R74W211), which calls a debit advice format program. The debit advice format program writes the debit advice information to the following tables:

- F74W001
- F74W201
- F74W202
- F74W203
- F74W204

The Debit Advice - Format program, DNB (R74O212), is currently available.

Note: If the debit advice file has already been loaded in the F007101 and F007111 tables, you can set up the Load Payments Return File program (R74W210) to call the Debit Advice Payment Driver program (R74W211) without first loading the debit advice file. For this action, leave the Path to the Bank File processing option on the Load Payments Return File program blank.

You use a processing option on the Debit Advice Payment Driver program (R74W211) to specify whether the program should automatically update or reset the payments. If the program does not automatically update or reset the payments, you can review the debit advice information in the Work with Debit Advice program (P74W200), and then update or reset the payments.

If you specify in processing option 1 that the program should automatically update or reset the payments, the program uses the status of the file and the value in processing option 2 (individual update) to determine whether to update, reset, or take no action for each payment group as described in this table:

File Status	Value in Processing Option 2	Action
0 - Debit Advice no errors	1	Update
	0	Update

File Status	Value in Processing Option 2	Action
1 - Notice of Delivery no errors	1	None
	0	None
2 - Debit Advice with errors	1	Update passed groups, reset the others
	0	Reset all groups
3 - Server Error	1	None
	0	None
4 - Notice of Delivery with errors	1	Reset
	0	Reset

4.4.1.2 Working with Debit Advice Notes

If you do not automatically update or reset payments when you load the payment return file, you can review the debit advice information in the Work with Debit Advice program (P74W200), and then update or reset the payments.

You can update payments using any of the following programs:

- Work with Payment Groups (P04571)
- Work with Debit Advice (P74W200)
- Work with Payments (P0474N5)

You can reset payments by using the Work with Debit Advice program or the Work with Payment Groups program.

To change the GL date of the payment or payments, use the Work with Payments program. To review debit advice information, use the Work with Debit Advice program. Otherwise, use the Work with Payment Groups program.

Note: The Delete option on the Row menu for the Work With Debit Advice program deletes debit advice information from the following tables:

F74W201

F74W202

F74W203

F74W204

The Delete option does not undo the payment group.

4.4.2 Form Used to Review Debit Advice Notes and Update or Reset Payments

Form Name	FormID	Navigation	Usage
Work With Debit Advice	W74W200A	In the Fast Path, enter P74W200. To update payments, select Update from the Row menu. To reset payments, select Reset from the Row menu.	Locate debit advice records. Update and reset selected payments.
Work With Invoices	W74W200B	Click Select on the Work With Debit Advice form.	Review invoice information.
Display Errors	W74W200C	Click Select on the Work With Invoices form.	Review errors.

4.4.3 Running the Load Payment Return File Program

Run the Load Payments Return File program (R74W210) from Batch Versions.

4.4.4 Setting Processing Options for Load Payment Return File (R74W210)

Processing options enable you to specify the default processing for programs and reports.

4.4.4.1 Defaults

1. Company

Specify the company for which you are loading the payments return file.

2. Payment Instrument

Specify the payment instrument that is assigned to the payment return file.

3. Path to the Bank File

Specify the location of the bank file.

If you are running this program on an NT server, enter the path in the following format: c:\bankdata\bankfile.txt

If you are running this program on a UNIX server, enter the path in the following format: c//bankdata//bankfile.txt

If you are running this program on an AS/400 server, enter the path in the following format: bankdata/bankfile

4. Version to use when calling R74W211

Specify the version to use when for the Debit Advice Payment Driver (R74W211) program.

4.4.4.2 Process

1. Interface Files (F007101 and F007111)

Enter 1 to purge the F007101 and F007111 tables after loading the information from these tables to the F03B13Z1 table.

4.4.5 Setting Processing Options for Debit Advice Payment Driver (R74W211)

Processing options enable you to specify the default processing for programs and reports.

4.4.5.1 Defaults

Automatic Reset

Enter **Y** to automatically reset and update the payments that you received.

Reset Individually

Enter **1** to update and reset payments individually. Enter **0** to reset the entire file if it contains errors.

Format Program

Enter the name of the format program that extracts data from the file that you received.

Version Number

Enter a version number for the format program. If you leave this processing option blank, the system uses version ZJDE0001.

4.4.5.2 Update

Version Number

Enter a version number for the register program. If you leave this processing option blank, the system uses version ZJDE0001.

Post Void Payments

Enter **1** to post void payments to the general ledger.

Submit

Enter **1** to automatically submit the AP payment post program after payments have been updated.

4.4.6 Setting Processing Options for Debit Advice - Format, DNB (R74O212)

Processing options enable you to specify the default processing for programs and reports.

4.4.6.1 Update

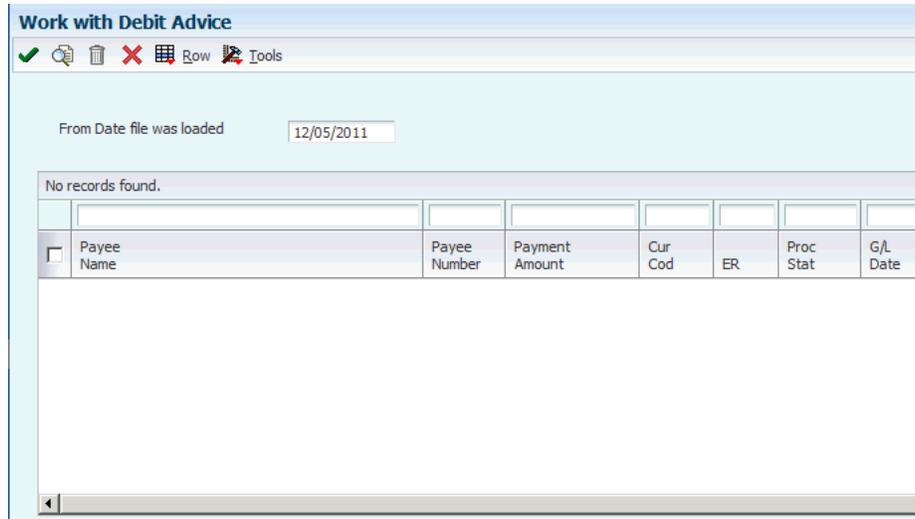

Spot Rate Allow Update (Y/N)

Enter **Y** to enable an update to the spot rate.

4.4.7 Reviewing Debit Advice Notes, Updating Payments, and Resetting Payments

Access the Work With Debit Advice form.

Figure 4–1 Work With Debit Advice Form

4.5 Uploading Customer Payment Information for Norway

This section provides an overview of the upload of customer payment information and discusses how to:

- Upload customer payment information for Norway.
- Set processing options for Automatic Receipts Norway (R74O001).
- Print interest invoices.

See Also:

- "Processing EDI Transactions for Accounts Receivable" in the *JD Edwards EnterpriseOne Applications Accounts Receivable Implementation Guide*.
- "Mapping Fields for Automatic Receipts Processing" in the *JD Edwards EnterpriseOne Applications Accounts Receivable Implementation Guide*.
- "Revising, and Adding Electronic Receipts" in the *JD Edwards EnterpriseOne Applications Accounts Receivable Implementation Guide*.

4.5.1 Understanding the Upload of Customer Payment Information for Norway

You can use the Nordic bank format programs to upload a text file containing bank-supplied receipt information to the Text Processor Header (F007101) and Text Processor Detail (F007111) tables, and then transfer the information from those tables to the F03B13Z1 table.

Alternatively, you can use the Copy Bank File to Interface file A/R program (R74W0010) to load information from the bank file to tables F007101 and F007111. In this case, you use the Nordic bank format programs only to transfer receipt information from the F007101 and F007111 tables to the F03B13Z1 table. You use a processing option on the Nordic bank format programs to specify whether the bank file has already been loaded to the F007101 and F007111 tables.

4.5.2 Uploading Customer Payment Information for Norway

The JD Edwards EnterpriseOne system provides this Norwegian bank format:

Object	Navigation	Bank Format
R74O001	Norwegian Localization (G74O), Automatic Receipts Norway	Standard, OCR Giro (OCR)

4.5.3 Setting Processing Options for Automatic Receipts Norway (R74O001)

Processing options enable you to specify the default processing for programs and reports.

4.5.3.1 Defaults

These processing options enable you to specify various settings that are used by the bank format program.

1. Company

Specify the company to use to select payments. If you enter a company number, only payments for the company you enter are loaded into the F03B13Z1 table. Only transactions for that company are matched.

If you leave this processing option blank, transactions are matched for all companies in the environment. This option is useful if customers are paying to the wrong company in a group.

2. Document Type

Specify the document type for the invoices to be paid, for example, RI.

3. Payment Instrument

Specify the payment instrument to applied to the payments. This processing option is optional.

4. G/L Bank Account

Specify the short account ID of the default G/L bank account, if the short account ID field is blank in the F03B13Z1 table.

A valid short account ID must exist for the system to process records. Enter the short account ID as an eight-digit number starting with zeros. For example, 00000108.

5. Bank File

Specify whether the bank file has already been loaded to the Text Processor Header (F007101) and Text Processor Detail (F007111) tables. Values are:

Blank: The bank file has already been loaded.

1: The bank file has not been loaded.

If you enter **1**, the system loads the bank file to the F007101 and F007111 tables, and then populates the F03B13Z1 table with information from the F007101 and F007111 tables.

If you leave this processing option blank, the system populates the F03B13Z1 table with information already in the F007101 and F007111 tables. Leave this processing option blank only if the F007101 and F007111 tables are already loaded with payment information.

6. Path to the Bank File

Specify the location of the bank file.

If you are running this program on an NT server, enter the path in this format:

c:\\bankdata\\bankfile.txt

If you are running this program on a UNIX server, enter the path in this format:

c//bankdata//bankfile.txt

If you are running this program on an AS/400 server, enter the path in this format:

bankdata/bankfile

4.5.3.2 Process

This processing option lets you specify whether to purge the Text Processor Header (F007101) and Text Processor Detail (F007111) tables.

1. Interface Files (F007101 and F007111)

Specify whether the system should purge the F007101 and F007111 tables after loading the information from these tables to the F03B13Z1 table. Values are:

Blank: Do not purge the text processor tables.

1: Purge the text processor tables.

4.5.3.3 Select

These processing options let you specify the position of the customer and invoice numbers in the reference number.

1. Starting Position of Supplier Number and End Position of Supplier Number

Specify the positions in the reference number (OCR number) at which the customer number starts and ends. The reference number can be the invoice number, or the customer number and the invoice number.

For example:

- The customer number is 1001.
- The invoice number is 1234.
- The reference number is displayed as 00010011234.

You enter **4** in the Starting Position of Supplier Number processing option because the customer number starts at position 4. You enter **7** in the End Position of Supplier Number processing option because the customer number ends at position 7.

3. Starting Position of Invoice Number and End Position of Invoice Number

Specify the positions in the reference number (OCR number) at which the invoice number starts and ends. The reference number can be the invoice number, or the customer number and the invoice number.

For example:

- The customer number is 1001.
- The invoice number is 1234.
- The reference number is displayed as 00010011234.

You enter **8** in the Starting Position of Invoice Number processing option because the invoice number starts at position 8. You enter **11** in the End Position of Invoice Number processing option because the invoice number ends at position 11.

4.6 Uploading Information to the F03B13Z1 Table for Norway

This section provides an overview of the Copy Bank File to Interface File A/R program and discusses how to:

- Run the Copy Bank File to Interface File A/R program.
- Set processing options for Copy Bank File to Interface File A/R (R74W0010).

4.6.1 Understanding the Copy Bank File to Interface File A/R Program

You use the Copy Bank File to Interface File A/R program (R74W0010) to upload bank files that contain receipt information into the F007101 and the F007111 tables. You use country-specific bank format programs to transfer the receipt information from tables F007101 and F007111 to the F03B13Z1 table. After the information is transferred to table F03B13Z1, the information can be uploaded and matched against outstanding customer invoices.

Uploading the information in the text file processor enables data to be managed efficiently with automatic maintenance of the processing status of each tape record, including purging capability.

Complete these steps to upload a text file from the bank to the F03B13Z1 table:

1. Receive a text file containing payment information from the bank.
2. Run the Copy Bank File To Interface File A/R program (R74W0010) to load the bank information into table F007101 and table F007111 in the correct format. You then run the appropriate bank format program (R74W001, R74V001, and so on) to transfer the data from tables F007101 and F007111 to table F03B13Z1.
3. Run the standard automatic receipts matching process.

Note: Alternatively, you can run the appropriate bank format program (R74W001, R74V001, and so on), configuring the processing options on the bank format program to first upload the bank information into tables F007101 and F007111, and then transfer that data into table F03B13Z1. This process does not use the Copy Bank File to Interface File A/R program and is well-suited to small businesses in which the person who uploads the file from the bank is also the person who processes automatic receipts.

4.6.2 Running the Copy Bank File to Interface File A/R Program

Select Norwegian Localization (G74O), Copy Bank File to Interface File A/R.

4.6.3 Setting Processing Options for Copy Bank File to Interface File A/R (R74W0010)

Processing options enable you to specify the default processing for programs and reports.

4.6.3.1 Defaults

These processing options let you specify information that the system uses when loading the bank file.

1. Description

Specify the description of the interface file. If you are uploading a file from the Swedish BG and it is in the OCR format, enter BG OCR.

2. Format Program

Specify the bank format program that you are using to load the bank file. Values are:

R74W001: Sweden BG OCR

R74W002: Sweden PG OCR

R74W003: Sweden BG AA

R74O001: Norway OCR

R74M001: Denmark OCR

R74V001: Finland Reference Payments

3. Path to the Bank File

Specify the location of the bank file.

If you are running this program on an NT server, enter the path in this format:

c:\\bankdata\\bankfile.txt

If you are running this program on a UNIX server, enter the path in this format:

c://bankdata//bankfile.txt

If you are running this program on an AS/400 server, enter the path in this format:

bankdata/bankfile

4.6.3.2 Version

This processing option lets you specify the version of the bank format program to use.

1. Version of the Format Program

Specify the version name of the bank format program that you are using to upload the bank file.

4.7 Preparing Vouchers and Credit Notes for Payment Processing in Norway

This section provides an overview of the process for preparing vouchers and credit notes for payment processing and discusses how to:

- Run the Enhanced Due Date Processing Sweden report.
- Set processing options for Enhanced Due Date Processing Sweden (R74W0020).
- Run the Enhanced Due Date Processing - Discounts Sweden - 04.
- Set processing options for Enhanced Due Date Processing - Discounts Sweden - 04 (R74W0021).

Note: The Enhanced Due Date Processing Sweden (R74W0020) and Enhanced Due Date Processing - Discounts Sweden - 04 (R74W0021) programs are used in Denmark, Finland, Norway, and Sweden.

4.7.1 Understanding the Process for Preparing Vouchers and Credit Notes for Payment Processing

Businesses in Nordic countries use a credit note, if one exists, for payments before using the company's bank account. If you use due date processing in automatic payments, which is common in Nordic countries, the base system requires you to

manually match the due dates for a credit note and a voucher. In this localization, the system can automatically match the due dates of credit notes and vouchers.

If a supplier offers payment terms with a discount, the system sets the payment date to the discount due date. If the discount due date has passed, you might want to change the due date to the net due date. In the base system, you must change the net due date manually. This localization enables you to automatically change the due date.

4.7.1.1 Revising Due Dates for Credit Notes

Use the Enhanced Due Date Processing Sweden program (R74W0020) to automatically change the due date of a credit note to the due date of a matching voucher. The program creates a report that specifies the new due date for the credit note. The program can be run in proof or final mode.

You can run the Enhanced Due Date Processing Sweden program from the Create Payment Control Groups program (R04570) or as a stand-alone program. It is recommended that you first submit this program as a stand-alone program in proof mode. Use processing options to specify whether the program runs as a stand-alone program or is launched from the Create Payment Control Groups program.

If you set the processing options to run the Enhanced Due Date Processing Sweden program (R74W0020) from the Create Payment Control Groups program (R04570), the processing options on the Select tab and the first four processing options on the Process tab use the values of the corresponding processing options from the Create Payment Control Groups program.

To run this program as a stand-alone program, you must set up a menu selection for the Enhanced Due Date Processing Sweden program.

Important: The Enhanced Due Date Processing Sweden program retrieves pay items from the F0411 table. If a voucher contains both negative and positive pay items, this program might change the due date for a negative pay item that is a part of a voucher. If it does so, the action results in the negative and positive amounts on the same voucher having different due dates.

The program matches credit notes to vouchers in this sequence:

- Payment ID.
- GL bank account.

- Payee address number (only if the Process by Payee processing option is set to 1).
- Company.
- Address number.
- Due date.

4.7.1.2 Example of Credit Note Equal to Voucher Amount

In this example, a supplier has a credit note for the amount of negative 500 with a due date of July 15, 2012, and a voucher for the amount of 500 with a due date of July 30, 2012.

If you use due date processing without changing the due date, the voucher is paid in full and the credit is not used because the due dates for the credit note and the voucher are different.

This illustration shows the voucher number 1564 and the credit note number 1567 with different due dates:

Figure 4–2 Supplier Ledger Inquiry form

Document Number	Doc Type	Document Type	Doc Co	Invoice Date	G/L Date	Due Date	Gross Amount	Open Amount
1564	PV	Voucher	00001	06/05/2005	06/30/2005	06/15/2005	1.500,00	1.500,00
1565	PV	Voucher	00001	06/15/2005	06/30/2005	07/15/2005	2.500,00	2.500,00
1565	PV	Voucher	00001	06/15/2005	06/30/2005	08/14/2005	2.500,00	2.500,00
1567	PD	Debit Memo	00001	06/23/2005	06/30/2005	06/30/2005	1.000,00-	1.000,00-
1569	PV	Voucher	00001	04/15/2005	04/30/2005	04/25/2005	4.500,00	
1570	PV	Voucher	00001	05/05/2005	05/31/2005	05/15/2005	3.000,00	3.000,00
1571	PV	Voucher	00001	05/10/2005	05/31/2005	05/20/2005	2.700,00	2.700,00

When you run the Enhanced Due Date Processing Sweden program (R74W0020) in proof mode, the system produces a report that shows that the due date of the credit note can be changed to match the due date of the voucher.

When you run the Enhanced Due Date Processing Sweden program in final mode, the system changes the due date of the credit note to July 30, 2012. Because the due dates of the credit note and the voucher are now the same, the system reduces the payment amount by the amount of the credit note in the next automatic payment to the supplier.

The Supplier Ledger Inquiry form displays the voucher and credit note with matching due dates.

4.7.1.3 Example of Credit Note in Excess of Voucher Amount

In this example, a supplier has a credit note for the amount of negative 1,200 with a due date of July 14, 2012 and a voucher for the amount of 1,000 with a due date of July 06, 2012. The amount of the credit exceeds that which is needed to pay the voucher.

When you run Enhanced Due Date Processing Sweden (R74W0020) in final mode, the system uses part of the credit note to pay the voucher. The system creates a new pay item for the remaining part of the credit note. The matching pay item has the same due date as that of the voucher. The remaining amount on the credit note has an unchanged due date.

The system generates the Enhanced Due Date Processing Sweden report, which shows the new due date of the credit note and the newly created pay item.

The Supplier Ledger Inquiry form now displays the new pay item that offsets the voucher.

4.7.1.4 Revising Due Dates for Discounted Vouchers

Use the Enhanced Due Date Processing - Discounts Sweden - 04 program (R74W0021) to automatically change the payment date of a voucher from the discount due date to the net due date if the discount due date has passed. The program creates a report that lists the new due date. The program can be run in proof or final mode.

You can run the Enhanced Due Date Processing - Discounts Sweden - 04 program from the Create Payment Control Group program (R04570), or you can run it as a stand-alone version. It is recommended that you first submit this program as a stand-alone version in proof mode. Use processing options for this program to control whether the program runs as a stand-alone version or runs from the Create Payment Control Group program.

To run this program as a stand-alone version, you need to set up a menu selection for the Enhanced Due Date Processing - Discounts Sweden - 04 program.

4.7.1.5 Example of Discount Due Date Has Passed

In this example, a supplier has a voucher with payment terms that offer a discount if paid within ten days of the invoice date. The invoice date is February 15, 2012; thus, the due date is February 25, 2012.

When you run Enhanced Due Date Processing - Discounts Sweden (R74W0021) in final mode after the discount due date has occurred, the system changes the due date of the voucher from the discount due date to the net due date, which is March 16, 2012, or 30 days after the invoice date.

4.7.2 Running the Enhanced Due Date Processing Report

Norwegian Localization (G74O), Enhanced Due Date Processing.

4.7.3 Setting Processing Options for Enhanced Due Date Processing (R74W0020)

Processing options enable you to specify the default processing for programs and reports.

4.7.3.1 Select

1. Pay Thru Date

Specify the due date through which you want to process credit notes. The system processes all credit notes with due dates up to and including the date that you enter. For example, to process a group consisting of credit notes with due dates through March 15, 2005, enter 03/15/05. Enter the date in this processing option or leave the processing option blank to select credit notes using the Displacement Days processing option.

Note: If you leave the Pay Through Date field blank and the Displacement Days processing option blank, the system uses the system date as the pay through date.

2. Displacement Days

Specify the number of days from the current date through which you want to process credit notes. For example, if the current date is March 10 and you specify three displacement days, the system processes vouchers with due dates through March 13.

Enter the number of days in this processing option or leave this processing option blank and use the Pay Through Date processing option to select credit notes.

Note: If you leave the Displacement Days processing option blank and leave the Pay Through Date processing option blank, the system date is used as the pay through date.

3. Discount Cutoff Date

Enter the final date for which you allow discounts. Pay items with a due date prior to the date that you enter are not eligible for discounts, so the system sets the discount amounts of these pay items to zero. If you leave this processing option blank, the program takes all discounts that are currently available for the selected pay items.

4.7.3.2 Process

1. Company

Enter **1** to create separate payments based on the company.

2. Due Date

Enter **1** to create payments separately, based on due date. If you leave this processing option blank, the Enhanced Due Date Processing program does not run.

3. Payee

Enter **1** to create payments separately based on payee, regardless of the supplier.

For example, this list illustrates one possible voucher, supplier, and payee combination:

Voucher 1, Supplier 1001, Payee 1001.

Voucher 2, Supplier 1001, Payee 1002.

Voucher 3, Supplier 1001, Payee 1002.

Voucher 4, Supplier 1002, Payee 1002.

Voucher 5, Supplier 1003, Payee 1001.

If you leave the Payee processing option blank in the Create Payment Control Groups program, the system generates four payments, based on the payee and then on the supplier:

Payee 1001: Supplier 1001, Voucher 1.

Payee 1001: Supplier 1003, Voucher 5.

Payee 1002: Supplier 1001, Vouchers 2 and 4.

Payee 1002: Supplier 1002, Voucher 4.

If you set the Payee processing option to **1**, you have two payments based only on the payee:

Payee 1001: Supplier 1001, Voucher 1, and Supplier 1003, Voucher 5.

Payee 1002: Supplier 1001, Vouchers 2 and 3, and Supplier 1002, Voucher 4.

4. Business Unit

Enter **1** to create payments separately based on business unit.

5. Inline Execution from within R04570

Specify whether to run the Enhanced Due Date Processing Sweden program (R74W0020) from the Create Payment Control Groups program (R04570) prior to generating payments. Running the Enhanced Due Date Processing Sweden program from the Create Payment Groups program produces the best match of debit and credit documents. However, running this program online might slow down processing. If you rarely use the enhanced due date processing feature, consider leaving this processing option blank. Values are:

Blank: Do not run the Enhanced Due Date Processing Sweden program.

1: Run the Enhanced Due Date Processing Sweden program.

6. Stand-Alone Execution from Menu Item

Specify whether to run the Enhanced Due Date Processing Sweden program (R74W0020) stand-alone from a menu item. Running the Enhanced Due Date Processing Sweden program stand-alone enables you to reorganize credit invoices to produce best matching against debit documents at any time. Values are:

Blank: Do not enable the Enhanced Due Date Processing Sweden program to run stand-alone.

1: Run the Enhanced Due Date Processing Sweden program stand-alone.

7. Mode

Specify whether to run the report in proof or final mode. If you select proof mode, the system generates a report of possible changes, but no changes are made in the database. If you select final mode, the system generates a report and updates the invoices specified on the report. Values are:

Blank: Run the report in proof mode.

1: Run the report in final mode.

4.7.3.3 Defaults

This processing option lets you specify the minimum payment amount.

1. Payment Amount

Specify the smallest possible value of a payment. Specify an amount to avoid creating zero amounts when matching vouchers and credit notes.

4.7.4 Running the Enhanced Due Date Processing - Discounts Report

Norwegian Localization (G74O), Enhanced Due Date Processing - Discounts.

4.7.5 Setting Processing Options for Enhanced Due Date Processing - Discounts (R74W0021)

Processing options enable you to specify the default processing for programs and reports.

4.7.5.1 Process

These processing options enable you to specify whether the Enhanced Due Date Processing - Discounts Sweden - 04 (R74W0021) should run stand-alone or inline, and whether the program should run in proof or final mode.

1. Inline Execution from within R04570

Specify whether to run the Enhanced Due Date Processing - Discounts Sweden program (R74W0021) from the Create Payment Control Groups program (R04570) prior to generating payments. Running this program online can slow down processing. If you rarely use the enhanced due date processing - discounts feature, you might want to run this program as standalone. Values are:

Blank: Do not run.

1: Run.

2. Stand-Alone Execution from Menu Item

Specify whether to run the Enhanced Due Date Processing - Discounts Sweden program (R74W0021) standalone from a menu item. Values are:

Blank: Do not enable the Enhanced Due Date Processing - Discounts Sweden program to run standalone.

1: Run the Enhanced Due Date Processing - Discounts Sweden program standalone.

3. Mode

Specify whether to run the report in proof or final mode. If you select proof mode, the system generates a report of possible changes but makes no changes in the database. If you select final mode, the system generates a report and updates the invoices specified on the report. Values are:

Blank: Run the report in proof mode.

1: Run the report in final mode.

Glossary

2nd Item Number, 3rd Item Number, and Item Number

Enter a number that identifies the item. The system provides three separate item numbers plus an extensive cross-reference capability to alternative item numbers. The three types of item numbers are:

Item Number (short). An 8-digit, computer-assigned item number.

2nd Item Number. A 25-digit, user defined, alphanumeric item number.

3rd Item Number. A 25-digit, user defined, alphanumeric item number.

In addition to these three basic item numbers, the system provides an extensive cross-reference search capability. You can define numerous cross-references to alternative part numbers. For example, you can define substitute item numbers, replacements, bar codes, customer numbers, or supplier numbers.

You can enter ***ALL** in the **Item Number** field to indicate that all items for the supplier come from the specified country of origin and original country of origin.

Fixed Asset Number

Enter an 8-digit number that uniquely identifies an asset.

G/L Date (general ledger date)

Enter a date that identifies the financial period to which the transaction will be posted. You define financial periods for a date pattern code that you assign to the company record. The system compares the date that you enter on the transaction to the fiscal date pattern assigned to the company to retrieve the appropriate fiscal period number, as well as to perform date validations.

Main Fixed Asset Number

Enter an identification code for an asset in one of these formats:

Asset number (a computer-assigned, 8-digit, numeric control number)

Unit number (a 12-character alphanumeric field)

Serial number (a 25-character alphanumeric field)

Every asset has an asset number. You can use unit number and serial number to further identify assets as needed. If this is a data entry field, the first character you enter indicates whether you are entering the primary (default) format that is defined for the system, or one of the other two formats. A special character (such as / or *) in the first position of this field indicates which asset number format you are using. You assign special characters to asset number formats on the Fixed Assets system constants form.

Object Account

Enter the portion of a general ledger account that refers to the division of the Cost Code (for example, labor, materials, and equipment) into subcategories. For example, you can divide the Cost Code for labor into regular time, premium time, and burden.

If you use a flexible chart of accounts and the object account is set to 6 digits, it is recommended that you use all 6 digits. For example, entering 000456 is not the same as entering 456 because if you enter 456 the system enters three blank spaces to fill a 6-digit object.

Subledger

Enter a code that identifies a detailed, auxiliary account within a general ledger account. A subledger can be an equipment item number or an address book number. If you enter a subledger, you must also specify the subledger type.

Subledger Type

Enter a user-defined code (00/ST) that is used with the **Subledger** field to identify the subledger type and how the system performs subledger editing. On the User-Defined Codes form, the second line of the description controls how the system performs editing. This is either hard-coded or user-defined. Values include:

A: Alphanumeric field, do not edit.

N: Numeric field, right justify and zero fill.

C: Alphanumeric field, right justify and blank fill.

Subsidiary

Enter a subset of an object account. Subsidiary accounts include detailed records of the accounting activity for an object account.

If you are using a flexible chart of accounts and the object account is set to six digits, you must use all six digits. For example, entering 000456 is not the same as entering 456 because, if you enter 456, the system enters three blank spaces to fill a six-digit object.
