## Bugs

The following bugs are known at the time of publication.

### 4829764

- **The Sun Management Center agent might not report external disks reliably when they are hot-plugged.**

Hot-plug removals, insertions and reconfiguration of external storage devices are not detected dynamically by the agents, although they are correctly reported at agent initialisation.

### 4856644

- **The XVR-1200 graphics card is identified incorrectly as the XVR-500.**

The XVR-1200 graphics card is listed incorrectly as a XVR-500 graphics card in the Expansion Card Table and the Physical View.

## 4907414

- **The HDD Service LED should not be modelled as the LED is not physically present.**

This bug applies to Sun Management Center 3.5 on the Sun Fire V250 platform.

The firmware on certain systems reports a Service LED which is not present on the system. This LED is also modelled in Sun Management Center and the LED should report its state as 'off'.

## 4908602

- **Console create node operation fails if it is executed immediately after agent startup.**

If you attempt to create a Sun Management Center 3.5 topology object for a platform supported by the VSP Common Config Reader(that is, Sun Fire V210, V240, V250 and V440, and Sun Blade 1500 and 2500) immediately after the agent has been started, the operation fails with a message of the form `Cannot contact agent - check host/port`.

This error occurs because at startup the agent initialization code is executing and the agent will not respond to console and/or server requests while it is running.

Depending on the platform, initialization takes up to three minutes, and once completed you can complete the create node operation successfully.
