This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, delivered to U.S. Government end users are "commercial computer software" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, shall be subject to license terms and license restrictions applicable to the programs. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle and Java are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

This software or hardware and documentation may provide access to or information on content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services.

Understanding Enterprise Manager for Oracle Tuxedo

Enterprise Manager for Oracle Tuxedo extends Oracle Enterprise Manager Cloud Control to add support for monitoring and managing Oracle Tuxedo instances. The complexity of Oracle Tuxedo and the applications running on top of it makes performance measurement extremely complex. By deploying the Enterprise Manager for Oracle Tuxedo within the Cloud Control environment, it becomes easier.

Enterprise Manager for Oracle Tuxedo provides comprehensive monitoring and reporting for Oracle Tuxedo system and applications. It enables collection of various application performance metrics (including transactions, services, system servers, and so on).

The Enterprise Manager for Oracle Tuxedo provides a Web-based graphical user interface that integrates with the Oracle Enterprise Manager Cloud Control console for central management. It allows you to view real time, as well as, historic performance metrics collected from middleware targets. This enables you to monitor Oracle Tuxedo system availability and

performance both in real time and from a historical perspective for trend analysis and diagnosing availability and performance problems.

Enterprise Manager for Oracle Tuxedo Features

The following is a list of Enterprise Manager for Oracle Tuxedo features:

- Same console for management and monitoring
- Easy Tuxedo target discovery and automatic update
- Monitor health of multiple domains from same console
- Oracle Tuxedo admin console functionality integration to Oracle Enterprise Manager console
- Centralized application management, including pre-defined provision and deployment procedures
- Dynamic resource broker for application rule-based scale up and scale out
- Integration with OEM SLA and reporting framework
- Support for monitoring Oracle Tuxedo as a JMX-compatible target
- Load balancing algorithm based on target nodes real-time usage information
- Monitor and manage all Oracle Tuxedo family components (including new add-on products introduced in this release)
- Support for Oracle Tuxedo system and user event monitoring

Monitoring Architecture

[Figure 1](#) shows the complete Oracle Enterprise Manager Cloud Control monitoring architecture when deploying with Enterprise Manager for Oracle Tuxedo.

Figure 1 Monitoring Architecture When Deploying Enterprise Manager for Oracle Tuxedo

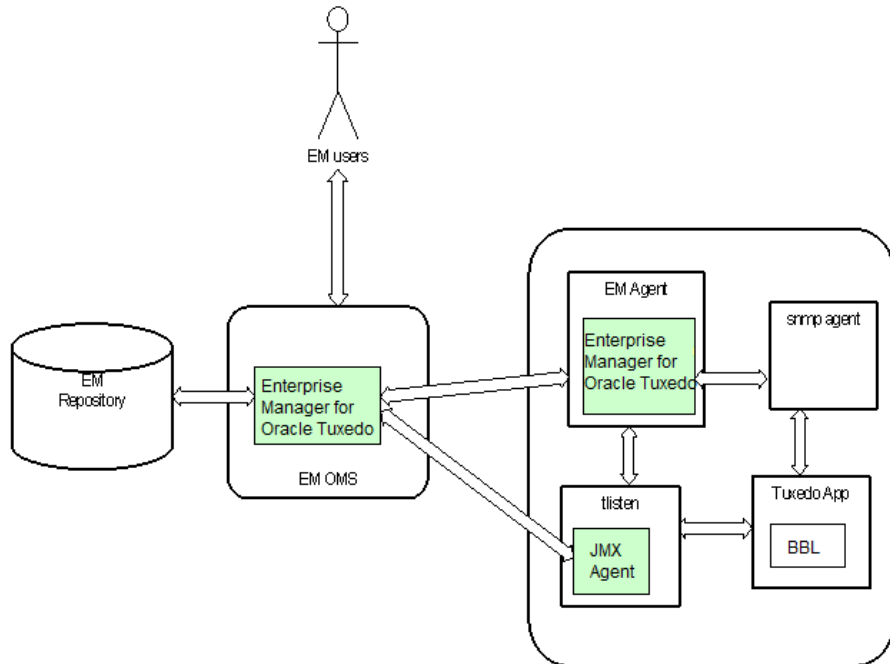

Figure 1 contains the following main components:

- Enterprise Manager for Oracle Tuxedos on both Enterprise Manager server- and agent-side.
- Enhanced Tuxedo `tlisten` process

Works as a proxy and agent between Tuxedo and Enterprise Manager agent. A JMX agent is embedded and every target instance inside the associated Tuxedo domain corresponds to an MBean instance in the JMX domain. JMX agent receives metrics and job requests from Enterprise Manager agent and forwards them to the corresponding Tuxedo target instances.

- BBL

Ensures that the MBean instances embedded in the connected JMX agent `tlisten` is consistent with the Tuxedo domain it is running on.

- `tux_snmpd`

Must be started for Oracle Tuxedo Event collection and Oracle ART Batch System Server. The Enterprise Manager for Oracle Tuxedo on Enterprise Manager agent receives the event trap from `tux_snmpd` after the receive port is configured.
