Preface

The Oracle Fusion Middleware Patching Guide for Oracle Forms and Reports describes the tools and procedures required for you to patch your existing Oracle Forms and Reports 11g Release 2 (11.1.2).

Intended Audience

This guide is intended for existing Oracle Fusion Middleware users who are upgrading their Oracle Fusion Middleware Oracle Forms and Reports 11g Release 2 (11.1.2) environment to a more recent version or to the latest version. To follow the instructions provided in this document, the reader should be comfortable running system administration operations, such as creating users and groups, adding users to groups, and installing operating system patches on the computer where the products are going to be installed. Users on UNIX systems who are updating their Oracle Fusion Middleware software may need root access to run some scripts.

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc.

Access to Oracle Support

Oracle customers have access to electronic support through My Oracle Support. For information, visit http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info or visit http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs if you are hearing impaired.

Related Documents

For additional information, see the following manuals:

- Oracle Fusion Middleware Concepts. This book introduces the common terms and concepts in an Oracle Fusion Middleware environment.

- Oracle Fusion Middleware Administrator’s Guide. This book contains information for managing your Oracle Fusion Middleware environment after installation and configuration is complete.

Conventions

The following text conventions are used in this document:

<table>
<thead>
<tr>
<th>Convention</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>boldface</strong></td>
<td>Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.</td>
</tr>
<tr>
<td><em>italic</em></td>
<td>Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.</td>
</tr>
<tr>
<td><code>monospace</code></td>
<td>Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.</td>
</tr>
</tbody>
</table>
This book describes the tools available for you to patch your existing Oracle Fusion Middleware Forms and Reports environment.

The following topics are covered:

- Section 1.1, "Installation, Patching, and Upgrade Terminology"
- Section 1.2, "Patching and Upgrade Tools"
- Section 1.3, "About Database Patches for Oracle Fusion Middleware"

1.1 Installation, Patching, and Upgrade Terminology

This section describes various terms that you should be familiar with before you continue.

1.1.1 Patching

Patching involves copying a small collection of files over an existing installation. A **patch** is normally associated with a particular version of an Oracle product and involves updating from one minor version of the product to a newer minor version of the same product (for example, from version 11.1.1.2.0 to version 11.1.1.3.0).

A **patch set** is a single patch that contains a collection of patches designed to be applied together.

1.1.2 Migration

Migration typically involves moving from a third-party (non-Oracle) product to an Oracle product.

It can also be used to refer to moving an existing set of software parameters (for example, an existing configuration or existing domain) from one release to another.

1.1.3 Upgrade

Upgrade involves moving from a previous major version to a new major version. For example, an upgrade would be required to move from Oracle Application Server 10g to Oracle Fusion Middleware 11g.
1.1.4 Installation

Installation is when new software is copied onto your system for use. After the new software is installed, you can patch it or upgrade it as necessary.

1.2 Patching and Upgrade Tools

Table 1–1 provides a brief summary of the patching and upgrade tools, and provides pointers to more detailed information.

1.3 About Database Patches for Oracle Fusion Middleware

This guide provides instructions for applying Oracle Fusion Middleware patches to your existing Oracle Fusion Middleware installations.

However, there are specific cases where you might be instructed to apply an Oracle Database patch to an existing Oracle Fusion Middleware Oracle home. This is because some Oracle Fusion Middleware products include specialized components, such as application programming interfaces (APIs), software libraries, and other software code developed for Oracle Database products.

In these specific cases, you might be referred to Oracle Database patching and installation documentation for more information.

Note that in most cases Oracle Fusion Middleware patches include all necessary software updates. You should apply Database patches only when specifically instructed or if you are experiencing a specific issue that can be resolved by the database patch.
This document describes patching options available for Oracle Fusion Middleware. The following topics are covered:

- Section 2.1, "About Patching"
- Section 2.2, "About OPatch"
- Section 2.3, "OPatch in a Fusion Middleware Environment"
- Section 2.4, "Running OPatch"
- Section 2.5, "Troubleshooting OPatch in a Fusion Middleware Environment"

2.1 About Patching

Patches are a small collection of files copied over to an existing installation. They are associated with particular versions of Oracle products.

2.1.1 Types of Patches That can be Used with OPatch

OPatch can be used for the following types of patches:

A patch set exception (also known as a PSE, one-off, or interim patch)
This is usually a single fix for a single problem. One-offs in ST products (GC, DB/AS Control etc) are packaged and applied via OPatch. One-offs are bug fixes given to customers in critical need and are not cumulative, regressed or versioned. You can use the `opatch lsinventory` command to see which one-off patches are installed on your system.

A patch bundle (also known as an MLR patch)
This type of patch is created by putting several fixes into a single patch. This is usually done if several fixes are needed and the various interim patches apply to the same modules and cause the prior patch to be removed if applied individually as they can not coexist. Patch bundles are also applied using OPatch and metadata information about them are also kept in a set of XML files in the inventory and manipulated by OPatch.

Security Patches (also known as Critical Patch Updates or CPUs)
Security patches are different from other patch types in that they only fix a single or small number of problems, and that they should be applied as soon as possible – when
a security patch is released extra attention is brought to the existence of the security problem. CPUs are periodic security bundles released by Oracle and are very much like interim patches and will be applied just like an interim patch using OPatch. Just like interim patches, CPUs are not versioned.

**Patch Set Updates (PSUs)**

Patch Set Updates are released on a quarterly basis, following the same schedule as the Critical Patch Updates (CPUs). These come out the closest Tuesday to the 15th of the months of January, April, July and October. Patch Set Update content is intended to address the top fifty critical bugs affecting the broad customer base.

### 2.1.2 Types of Patches That can not be Used with OPatch

The only type of patch that cannot be used with OPatch is a patch set. A patch set contains a large number of merged patches, is thoroughly tested, changes the version of the product it is applied to, and can sometimes introduce new functionality. Patch sets are cumulative bug fixes that fix all bugs and consume all patches since the last base release. Patch sets and the Patch Set Assistant are usually applied through OUI-based product specific installers.

### 2.2 About OPatch

OPatch is a Java-based utility that runs on all supported operating systems and requires installation of the Oracle Universal Installer. This document contains information pertaining to OPatch commands that are most commonly used in an Oracle Fusion Middleware environment. You can use all supported OPatch commands if you choose; for a full list of OPatch commands and for more information about the OPatch utility, refer to the *Oracle Universal Installer and OPatch User’s Guide* at the following URL:

http://download.oracle.com/docs/cd/E11882_01/em.112/e12255/toc.htm

This section contains the following:

- Section 2.2.1, "Getting OPatch"
- Section 2.2.2, "Getting Patches"
- Section 2.2.3, "OPatch Environment Variables"
- Section 2.2.4, "OPatch System Requirements"
- Section 2.2.5, "Backup and Recovery Considerations for Patching"

### 2.2.1 Getting OPatch

OPatch can be found in your Fusion Middleware product’s `ORACLE_HOME/OPatch` (on UNIX operating systems) or `ORACLE_HOME\OPatch` (on Windows operating systems) directory.

Oracle recommends that you always check for and obtain the latest version of OPatch from My Oracle Support (formerly Oracle MetaLink).

1. Access and log into My Oracle Support at the following location:

   http://support.oracle.com/

2. In the Search Knowledge Base field, enter 224346.1. This is the ID of the document that describes how to obtain the latest version of OPatch.
3. In the search results, click on the link corresponding to document ID 224346.1.

4. In the document, click on the Patch 6880880 link which will take you to the screen where you can obtain the latest version of OPatch based on release versions and platforms.

Make sure you verify that the OPatch release number in the "Release" column is "11.1.0.0.0" as this is the correct version of OPatch for Oracle Fusion Middleware 11g products.

2.2.2 Getting Patches

You can obtain the latest patches by specifying the patch ID in My Oracle Support (formerly MetaLink):

1. Access and log into My Oracle Support at the following location:

   http://support.oracle.com/

2. Click the Patches & Updates link.

3. Enter the Patch ID or Number, then click Search. A Patch Search Results table appears.

4. Using the Release and Platform columns, find the desired patch, then click the associated Patch ID.

5. In the page that now appears, click the Download button in the right-hand column.

2.2.3 OPatch Environment Variables

OPatch uses the environment variables listed in Table 2–1:

<table>
<thead>
<tr>
<th>Variable</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ORACLE_HOME</td>
<td>Points to the location of the Oracle home directory.</td>
</tr>
<tr>
<td>MW_HOME</td>
<td>Points to the location of the Middleware home directory.</td>
</tr>
<tr>
<td>PATH</td>
<td>Points to the location(s) from which various commands should be run.</td>
</tr>
</tbody>
</table>

2.2.4 OPatch System Requirements

The OPatch utility has the following requirements:

- The ORACLE_HOME environment variable must point to a valid Oracle home directory and match the value used during installation of the Oracle home directory.

- If the -invPtrLoc command-line argument was used during installation, then it must be used when using the OPatch utility. Oracle recommends the use of the default central inventory for a platform.

- The java, ar, cp, and make commands must be available in one of the directories listed in the PATH environment variable. The commands are not available for all platforms.
2.2.5 Backup and Recovery Considerations for Patching

It is highly recommended that you back up the ORACLE_HOME before any patch operation. You can back up the ORACLE_HOME using your preferred method. You can use any method such as zip, cp -r, tar, and cpio to compress the ORACLE_HOME.

If the ORACLE_HOME does not appear when you execute the opatch lsinventory -detail command, the ORACLE_HOME might be missing from the Central Inventory, or the Central Inventory itself could be missing or corrupted.

If the ORACLE_HOME is listed when you execute the opatch lsinventory -detail command, but the products and components within the ORACLE_HOME are not listed, the inventory within the ORACLE_HOME (local inventory) might be missing or corrupted.

If the local inventory is corrupted or lost for some reason, you can simply restore the ORACLE_HOME/inventory (on UNIX operating systems) or ORACLE_HOME\inventory (on Windows operating systems) if it was backed up. If a backup does not exist, you may have to reinstall the software.

2.3 OPatch in a Fusion Middleware Environment

This section describes the Oracle OPatch utility as it pertains to an Oracle Fusion Middleware environment. You should be familiar with the Oracle Fusion Middleware concepts introduced in the Oracle Fusion Middleware Installation Planning Guide, which is available at the following URL:

http://download.oracle.com/docs/cd/E15523_01/install.1111/b32474/toc.htm

This section contains the following:

■ Section 2.3.1, "A Typical Patching Scenario"
■ Section 2.3.2, "Patching a Fusion Middleware Product"
■ Section 2.3.3, "Patching in a Distributed Environment"
■ Section 2.3.4, "Patching Artifacts Deployed Outside the Oracle Home"

2.3.1 A Typical Patching Scenario

Consider a common, non-distributed Fusion Middleware topology for Oracle SOA Suite, as shown in Figure 2-1:

Note: OPatch can be used to patch any Fusion Middleware product, even though only a few are shown in this example. OPatch can not be used to patch Oracle WebLogic Server.
Suppose you have a problem in the SOA Domain. Below is a typical patching process:

**Step 1. Contact Oracle Support**
You can contact your Oracle support representative, or you can go to My Oracle Support (formerly OracleMetaLink):

http://support.oracle.com/

**Step 2. Check for Existing Patches**
If Oracle Support is not able to resolve the issue, they may ask to see if you have any patches already installed on your system. To determine this information, you should run the `opatch lsinventory` command.

To check if a particular patch is installed in the Oracle home (or the set of Oracle homes within a Middleware home) you use the `opatch checkInstalledOneOffs` command. See Section 2.4.7, "Listing Patches Applied to an Oracle Home or WebLogic Domain" for more information about this command.

**Step 3. Obtain OPatch and the Necessary Patch**
Upon determining that you are in need of a new patch and it has not already been installed on your system, you should do the following:

1. Make certain that you have the latest version of OPatch, as described in Section 2.2.1, "Getting OPatch".
2. Obtain the patch as described in Section 2.2.2, "Getting Patches".

**Step 4. Determine the Oracle Home**
Once you obtain the patch, determine the Oracle home directory to which you are going to apply the patch.

The most common type of patch available in a Fusion Middleware environment involves patching a specific Oracle home directory. Some patches (for example, a patch pertaining to JRF) may apply to multiple Oracle home directories within a
specific Middleware home. A third type of patch could involve client components in one Oracle home and server components in a different Oracle home (for example, Oracle WebCenter in the WebCenter Oracle home depends on BPEL Process Manager in the Oracle SOA Suite Oracle home).

If you do not know the name of your Oracle home, you should run the `opatch lshomes` command as described in Section 2.4.6, “Listing the Applicable Oracle Homes for a Patch” to obtain a list of Oracle homes that pertain to the domain. In this example, the Oracle home to which the patch should be applied is the SOA Oracle home.

After you determine your Oracle home, you should run the `opatch checkApplicable` command as described in Section 2.4.6, "Listing the Applicable Oracle Homes for a Patch" to make sure that the patch can actually be applied to the Oracle home.

As the Middleware home is the top-level entity in a Fusion Middleware topology, the location of your Middleware home will be required for many of the OPatch commands in a Fusion Middleware environment.

**Step 5. Read the README File**

Read the README file that accompanies the patch. This file contains important information and instructions that must be followed prior to applying your patch.

For example, the README file may instruct you apply the patch using the `-auto` option (described in Section 2.4.1.2, "Using the -auto Option"). The more common scenario is that the README will instruct you to use a series of OPatch commands, including `opatch stop` and `opatch start` (see Section 2.4.10, "Starting or Stopping a Runtime Instance").

**Step 6. Apply the Patch**

After you determine the Oracle home to which you need to apply the patch, you should apply the patch with the `opatch apply` command as described in Section 2.4.1, "Applying Patches and Deploying Patched Artifacts to WebLogic Servers”.

**After Applying the Patch...**

In most cases, after you apply the patch the instructions in the README file will tell you to run the `opatch start` command to re-start your servers.

After the patching is complete and your servers are restarted, you should check your product software to verify that the issue has been resolved.

If for some reason the result is not satisfactory, you can use the `opatch rollback` command to remove the patch from the Oracle home. See Section 2.4.2, "Rolling Back Patches and Deploying Patched Artifacts to WebLogic Servers” for more information, and consult the README file for specific instructions.

### 2.3.2 Patching a Fusion Middleware Product

Many Fusion Middleware artifacts are deployed to a runtime environment, where applications pick up these binaries for execution. A common example of this are J2EE artifacts (for example, `.ear`, `.war`, or `.rar` files) or J2EE shared libraries deployed to a Managed Server or cluster running within a domain. Patching in a Fusion Middleware environment involves updating and replacing these artifacts in the Oracle home. The servers to which the artifacts are deployed need to be restarted for the changes to take effect.
After the artifacts are deployed, there are various staging modes that affect how WebLogic Server treats these artifacts, which in turn determine how the applications are patched. All artifacts in Oracle Fusion Middleware 11g Release 2 (11.1.2) are deployed in NoStage Mode, which means that each Managed Server must access the archive files from a single source directory for deployment. If a J2EE application is deployed to three Managed Servers within a cluster, each Managed Server must be able to access the same application archive files from a shared or network-mounted directory in order to deploy the new J2EE application.

Take note of the following:

- If multiple Managed Servers on multiple machines are used, the path to the application bits must be the same on all machines because there is a single point of entry for the application in the domain configuration.
- Since the source location for the application bits is fixed and points back to its own ORACLE_HOME location, all domains that were created using a given ORACLE_HOME will pick up the patched bits once the ORACLE_HOME is patched.
- If you are using multiple Managed Servers on multiple machines and the product ORACLE_HOME is not shared or network-mounted on the target Managed Servers, then each machine must have the product installed on an ORACLE_HOME on the local file system from which the Managed Servers can access the application binaries. Therefore, the ORACLE_HOME on each local file system of each machine must be patched separately.

The steps that need to be performed for this scenario are as follows:

1. Stop all Managed Servers in the WebLogic Domain to which the application is deployed.
2. Use the opatch apply command to apply the bits to an Oracle home.
3. Restart all the Managed Servers in the same WebLogic Domain.

Steps 1 and 3 are performed by the Fusion Middleware capabilities in OPatch.

### 2.3.3 Patching in a Distributed Environment

The process to patch in a distributed environment depends on whether or not your Middleware home directory is shared or not shared.

#### 2.3.3.1 Patching with a Local Middleware Home

Consider the environment shown in Figure 2–2. This is a distributed environment, where you have identical topologies on separate machines, each with its own local Middleware home and Fusion Middleware products inside the Middleware home:
If you encountered a problem in the SOA domain, you would have to patch the corresponding Oracle home on each machine separately, according to the instructions in the README file. After you patch the SOA Oracle home on "Middleware Host 1," for example, you must then repeat the same procedure on "Middleware Host 2."

2.3.3.2 Patching with a Shared Middleware Home
Consider the environment shown in Figure 2–3. This is also a distributed environment, where you have identical topologies on separate machines, but the Middleware home on "Middleware Host 2" is shared or NFS mounted:
In this topology, if you encountered a problem in the SOA Domain, you would only need to patch the SOA Oracle home on either "Middleware Host 1" or "Middleware Host 2" in accordance with the instructions in the README file, and OPatch would automatically patch all of the matching Oracle homes that share the same Middleware home.

2.3.4 Patching Artifacts Deployed Outside the Oracle Home

Some applications, such as Oracle Enterprise Manager Fusion Middleware Control and Oracle Web Services Manager Policy Manager (WSM-PM), are deployed outside of the product Oracle home (in the Oracle Common Home or oracle_common directory). OPatch can also apply patches to files that reference the oracle_common directory.
2.4 Running OPatch

The OPatch utility is located in the ORACLE_HOME/OPatch (on UNIX operating systems) or ORACLE_HOME\opatch (on Windows operating systems) directory. Below is the syntax for the OPatch utility:

`path_to_opatch/opatch command -options`

Acceptable values for `command` are described in Table 2–2.

Valid options for each command are described in the sections that describe each command.

<p>| Table 2–2 Commands for the OPatch Utility in a Fusion Middleware Environment |</p>
<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>apply</td>
<td>Apply the patch to an Oracle home and deploy the patch to a WebLogic domain. For details, see Section 2.4.1, &quot;Applying Patches and Deploying Patched Artifacts to WebLogic Servers&quot;.</td>

<td>start</td>
<td>Stop</td>
</tr>
</tbody>
</table>

To view additional information for these Fusion Middleware options, use the following command:

`path_to_OPatch/opatch -help -fmw`

2.4.1 Applying Patches and Deploying Patched Artifacts to WebLogic Servers

The apply command in a Fusion Middleware environment applies the patch to the Oracle home on the local machine.
2.4.1.1 Using the OPatch Property File

Sensitive information such as Administration Server credentials, and other important information such as the Administration Server URL, domain location and applications directory location, are obtained by prompts from the console. In some cases, default values may be found and specified by OPatch; in these cases, press Enter to use these default values.

Automation applications such as Grid Control may invoke OPatch with the -silent option, which does not prompt for any input from the console. To supply the necessary Administration Server credentials and other information, a response file can be created and passed to OPatch as an argument with the -property_file option.

For Fusion Middleware components, userConfigFile and userKeyFile can be specified in the property file as keys with corresponding file names. The userConfigFile file contains an encrypted user name and password, while the userKeyFile contains a secret key that is used to encrypt and decrypt the user name and password. Similarly, the AdminServerURL (URL of the Administration Server), DomainHome (full path to the domains directory) and ApplicationsDir (full path to the applications directory) can also be specified in the properties file.

2.4.1.2 Using the -auto Option

Some patches are certified by Oracle Product Support as capable of being used with the -auto option, which can automate certain portions of your patching procedure. The -auto option applies the patch to the Oracle home; verifies that the patch is actually applied, then performs any necessary redeploy operations against the specified WebLogic Domain, including stopping and starting all the servers that are affected by the patch. If your patch is certified for use with the -auto option, you will be informed of such in the patch’s README file.

2.4.1.2.1 Configuring Node Manager

Beginning with OPatch release 11.1.0.8.2, the -auto option requires the Node Manager user name and password. In order for OPatch to be used properly:

- The Administration Server must be up and running.
- If the Managed Servers are up and running, OPatch will stop the servers, apply the patch, then restart the servers.

If the Managed Servers are not running, OPatch will apply the patch but then you must manually start the servers in order to see the effects of the patch.

To configure Node Manager, refer to "General Node Manager Configuration" in Oracle Fusion Middleware Node Manager Administrator’s Guide for Oracle WebLogic Server.

2.4.1.2.2 Using the -auto Option with the -domain Option

The -auto option should be used in conjunction with the -domain option; the only exception is if only one WebLogic Domain was configured from the Oracle home. In such cases, OPatch will use that domain as the default domain. If multiple domains have been created and the -domain option is not used, then it is the user’s responsibility to run opatch deploy to redeploy the patched artifacts to their respective domains, and also stop and start the affected servers in each of the domains.

---

**Note:** The option to apply a patch to a Middleware home (including all Oracle homes inside that Middleware home) is not yet available.
2.4.1.3 Using the apply Command

The apply command (with the -auto option specified) performs the following:

1. Stops all affected target servers.
   This might involve stopping server instances on other nodes for:
   a. Staged mode applications.
   b. NoStage mode applications sharing the Oracle home.
2. Applies the patch to the Oracle home on the local machine.
3. Performs any required deploy operations for patched artifacts.
4. Restarts all affected servers.

The syntax for the apply command is shown below:

```bash
opatch apply
   [-auto [-domain domain_name]]
   [-mw_home MW_HOME]
   [-oh ORACLE_HOME]
   [-property_file path_to_property_file]
   [-report]]
```

A summary of the options for the apply command are described in Table 2–3.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>-auto [-domain domain_name]</td>
<td>Optional - causes OPatch to automate the rollout of the patch to Oracle Fusion Middleware entities. If -auto is used then -domain must also be used to indicate the name of the domain in which the rollout should occur; the exception is when there is only one domain configured out of the Oracle home, in which case the -domain flag is optional. See Section 2.4.1.2, &quot;Using the -auto Option&quot; for more information.</td>
</tr>
<tr>
<td>-mw_home MW_HOME</td>
<td>Optional - The Middleware home to which the patch will be applied. The Middleware home specified here supersedes the MW_HOME environment variable. If neither is specified, then the Middleware home from where the command is run will be used.</td>
</tr>
<tr>
<td>-oh ORACLE_HOME</td>
<td>Optional - This option is used to specify the Oracle home to which the patch should be applied. This value supersedes the ORACLE_HOME environment variable. If neither is specified, OPatch will apply the updates to the Oracle home from which it was launched.</td>
</tr>
<tr>
<td>-property_file name</td>

   Redeploy operation will not be performed for the affected applications.
   Please refer to the log file for more details.
--------------------------------------------------------------------------------
OPatch Session completed with warnings.
OPatch completed with warnings.

2.4.2 Rolling Back Patches and Deploying Patched Artifacts to WebLogic Servers

The rollback command allows you to remove an existing one-off patch by specifying the unique patch ID.

The rollback command (with the -auto option specified) performs the following:
1. Stops all affected target servers.
   This might involve stopping server instances on other nodes for:
   a. Staged mode applications.
   b. NoStage mode applications sharing the Oracle home.
2. Rolls back the patch on the Oracle home on the local machine.
3. Performs any required deploy operations for patched artifacts.
4. Restarts all affected servers.

The syntax for the rollback option is shown below:

```
opatch rollback -id patch_id
   [-auto [-domain domain_name]]
   [-mw_home MW_HOME]
   [-oh ORACLE_HOME]
   [-property_file path_to_property_file]
   [-report]]
```

2-14  Oracle Fusion Middleware Patching Guide for Oracle Forms and Reports
A summary of the options for the `rollback` command are described in Table 2–4.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>-id patch_id</code></td>
<td>Use the <code>-lsinventory</code> option to display all applied patch IDs. Each one-off patch is uniquely identified by an ID. To rollback to a previous patch version, that patch version's ID must be supplied.</td>
</tr>
<tr>
<td><code>-auto [-domain domain_name]</code></td>
<td>Optional - causes OPatch to automate the rollout of the patch to Oracle Fusion Middleware entities. If <code>-auto</code> is used then <code>-domain</code> must also be used to indicate the name of the domain in which the rollout should occur; the exception is when there is only one domain configured out of the Oracle home, in which case the <code>-domain</code> flag is optional. Refer to Section 2.4.1, &quot;Applying Patches and Deploying Patched Artifacts to WebLogic Servers&quot; for more information.</td>
</tr>
<tr>
<td><code>-mw_home MW_HOME</code></td>
<td>Optional - The Middleware home to which the patch will be applied. The Middleware home specified here supersedes the <code>MW_HOME</code> environment variable. If neither is specified, then the Middleware home from where the command is run will be used.</td>
</tr>
<tr>
<td><code>-oh ORACLE_HOME</code></td>
<td>Optional - This option is used to specify the Oracle home to which the patch should be applied. This value supersedes the <code>ORACLE_HOME</code> environment variable. If neither is specified, OPatch will apply the updates to the Oracle home from which it was launched.</td>
</tr>
<tr>
<td><code>-property_file name</code></td>
<td>Optional - absolute path and name of the property file. Refer to Section 2.4.1, &quot;Applying Patches and Deploying Patched Artifacts to WebLogic Servers&quot; for more information.</td>
</tr>
<tr>
<td><code>-report</code></td>
<td>Optional - print out the actions that will be taken by executing the command, but does not actually execute the command.</td>
</tr>
</tbody>
</table>

### Table 2–4 Options for the OPatch rollback Command

2.4.3 Deploying Patched Artifacts to WebLogic Servers

This operation deploys modified artifacts from the Fusion Middleware `ORACLE_HOME` to the Fusion Middleware domain.

The location of the patch binaries must be specified using the `-ph` option. If the patch is installed in the current Oracle home (the Oracle home from which you are running this command) then the `-ph` option is not required.

If the patch is already applied to the Oracle home, the `-id` option can be used to specify the patch you want to use for deployment.

The syntax for the `deploy` command is shown below:

```
opatch deploy -id patch_id -ph patch_location
   [-auto [-domain domain_name]]
   [-mw_home MW_HOME]
   [-oh ORACLE_HOME]
   [-property_file path_to_property_file
   [-report]]
```

A summary of the options for the `deploy` command are described in Table 2–5.
2.4.4 Listing the Source Oracle Homes

The `lshomes` command lists all the Oracle homes pertaining to logical entities such as Host or Domain. For a Host, the list of Oracle homes is obtained from the machine’s central inventory. For a WebLogic domain, the list of homes is limited to product Oracle homes that are installed within a top-level Middleware home.

If the `-domain` or `-domaindir` option is used, the command lists the Oracle homes that have been used to create or extend the WebLogic domain. If not, all the homes registered with the machine’s central inventory or the inventory location specified using `-invPtrLoc` are listed.

The Middleware home can be specified by using the `-mw_home` option or by setting the `MW_HOME` environment variable. When the Middleware home is specified and the `-domain` or `-domaindir` option is not specified, this command will list all the Oracle homes within the Middleware home that are registered with the machine’s central inventory or the specified inventory location.

The syntax for the `lshomes` option is shown below:

```
opatch lshomes
    [-domain domain_name | -domain_dir domain_location]
    [-mw_home MW_HOME]
    [-invPtrLoc path_to_oraInst.loc]
```

A summary of the options for the `lshomes` command are described in Table 2–6.
Below is an example of the `opatch lshomes` command on a UNIX operating system:

```
[aime@stadn41 Oracle_SOAl]$ ./OPatch/opatch lshomes
-domain MySOAWebCenterDist
Invoking OPatch 11.1.0.6.9
Oracle Interim Patch Installer version 11.1.0.6.9

OPatch command 'lshomes' done.

OPatch succeeded.
```

### Table 2–6 Options for the OPatch lshomes Command

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>-domain domain_name</td>
<td>Optional - list the Oracle homes that have been used to create or extend this WebLogic Domain.</td>
</tr>
<tr>
<td>-domain_dir domain_location</td>
<td>Optional - list the Oracle homes that have been used to create or extend the WebLogic Domain at this location. You must specify the absolute path to the WebLogic Domain.</td>
</tr>
<tr>
<td>-mw_home MW_HOME</td>
<td>Optional - list only the Oracle homes registered with the machine’s central inventory that are located in this Middleware home. You must specify the absolute path to the Middleware home directory; this value supersedes the MW_HOME environment variable. If neither is available, the Middleware home from which the command is executed will be used.</td>
</tr>
<tr>
<td>-invPtrLoc path_to_oraInst.loc</td>
<td>Optional - absolute path to the location of your oraInst.loc file; this option is needed if the installation was performed using the -invPtrLoc option.</td>
</tr>
</tbody>
</table>

2.4.5 Listing the Domains Created from the Middleware Home or Oracle Home

The `lsdomains` command lists all the WebLogic Domains that have been created from a certain Oracle home:
If the Oracle home is specified, then only those domains created from the specified
Oracle home are listed. If no Oracle home is specified, OPatch will list the domains
created from the Oracle home as defined by the ORACLE_HOME environment
variable. If neither is available, then OPatch will use the Oracle home directory
from which the command is run.

If a Middleware home is specified, all domains created from all Oracle homes
within the specified Middleware home are listed.

If neither is specified, and neither the MW_HOME or ORACLE_HOME
environment variable is defined, then OPatch will run the command for the
Middleware home from where the command was run.

The syntax for the lsdomains command is shown below:

```bash
opatch lsdomains  
[-oh ORACLE_HOME]  
[-mw_home MW_HOME]  
[-invPtrLoc path_to_oraInst.loc]
```

A summary of the options for the lsdomains command are described in Table 2–7.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>-oh ORACLE_HOME</td>
<td>Optional - absolute path to the Oracle home directory.</td>
</tr>
<tr>
<td>-mw_home MW_HOME</td>
<td>Optional - absolute path to the Middleware home directory.</td>
</tr>
<tr>
<td>-invPtrLoc path_to_oraInst.loc</td>
<td>Optional - absolute path to the location of your oraInst.loc file; this option is needed if the installation was performed using the -invPtrLoc option.</td>
</tr>
</tbody>
</table>

Below is an example of the opatch lsdomains command on a UNIX operating
system:

```
[aime@stadn41 Oracle_SOA1]$ ./OPatch/opatch lsdomains
-oh /OracleFMW/Middleware_PS1_RC2/oracle_common
Invoking OPatch 11.1.0.6.9
Oracle Interim Patch Installer version 11.1.0.6.9

OPatch detects the Middleware Home as "/OracleFMW/Middleware_PS1_RC2"

Invoking utility 'lsdomains'
Domain Name = "MySOAWebCenterDist" Path =
```
Running OPatch

Patching Oracle Fusion Middleware with Oracle OPatch

"/OracleFMW/MyDomains/domains/MySOAWebCenterDist"
Domain Name = "MyWebCenterOnly" Path =
"/OracleFMW/MyDomains/domains/MyWebCenterOnly"
OPatch command 'lsdomains' done.

OPatch succeeded.

2.4.6 Listing the Applicable Oracle Homes for a Patch

This checkApplicable command produces a list of Oracle homes to which the patch can be applied. For Fusion Middleware, this command is limited in scope to the top-level Middleware home:

- If only the Middleware home is specified, OPatch will check to see whether or not this patch can be applied to all Oracle homes within the specified Middleware home.
- If an Oracle home is specified in addition to the Middleware home, OPatch will check to see if the patch can be applied to the specified Oracle home in the specified Middleware home.
- If neither is specified, and neither the MW_HOME or ORACLE_HOME environment variable is defined, then OPatch will run the command for the Middleware home from where the command was run.

The syntax for the checkApplicable command is shown below:

```
opatch checkApplicable
   [-ph patch_location]
   [-mw_home MW_HOME]
   [-oh ORACLE_HOME]
   [-invPtrLoc path_to_oraInst.loc]
```

A summary of the options for the checkApplicable command are described in Table 2–8.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>-ph patch_location</td>
<td>Optional - location of the patch for which you want to run the checkApplicable command. If not specified, then the patch in the current directory is used.</td>
</tr>
<tr>
<td>-mw_home MW_HOME</td>
<td>Optional - absolute path to the Middleware home directory.</td>
</tr>
<tr>
<td>-oh ORACLE_HOME</td>
<td>Optional - absolute path to the Oracle home directory.</td>
</tr>
<tr>
<td>-invPtrLoc path_to_oraInst.loc</td>
<td>Optional - absolute path to the location of your oraInst.loc file; this option is needed if the installation was performed using the -invPtrLoc option.</td>
</tr>
</tbody>
</table>

Below is an example of the opatch checkApplicable command on a UNIX operating system:

```
[aime@stadn41 Oracle_SOAl]$ ./OPatch/opatch checkapplicable
   -ph /OracleFMW/Middleware_PS1_RC2/FMWPatches/9991008/
Invoking OPatch 11.1.0.6.9
Oracle Interim Patch Installer version 11.1.0.6.9
Copyright (c) 2009, Oracle Corporation. All rights reserved.
```

OPatch detects the Middleware Home as '/OracleFMW/Middleware_PS1_RC2'

Invoking utility 'checkapplicable'

"checkApplicable" passed for Patch '9991008' and Oracle Home
"/OracleFMW/Middleware_PS1_RC2/oracle_common".
"checkApplicable" failed for Patch '9991008' and Oracle Home
"/OracleFMW/Middleware_PS1_RC2/Oracle_SOA1".
The details are:
Patch 9991008: Required component(s) missing : [ oracle.jrf.j2ee, 11.1.1.2.0 ] , [ oracle.jrf.dms, 11.1.1.2.0 ]
"checkApplicable" failed for Patch '9991008' and Oracle Home
"/OracleFMW/Middleware_PS1_RC2/Oracle_WC1".
The details are:
Patch 9991008: Required component(s) missing : [ oracle.jrf.j2ee, 11.1.1.2.0 ] , [ oracle.jrf.dms, 11.1.1.2.0 ]
Some of the Oracle Homes under the Middleware Home "/OracleFMW/Middleware_PS1_RC2" have failed this check.

OPatch command 'checkApplicable' done.

The following warnings have occurred during OPatch execution:
1) OUI-67124:Some of the Oracle Homes under the Middleware Home
   "/OracleFMW/Middleware_PS1_RC2" have failed this check.

OPatch Session completed with warnings.

2.4.7 Listing Patches Applied to an Oracle Home or WebLogic Domain

The checkInstalledOneOffs command checks to see if the specified patch or patches have been applied to certain Oracle homes or WebLogic Domains:

- If a Middleware home is specified, OPatch checks all the Oracle homes within the specified Middleware home that are registered with the machine’s central inventory. If not specified, then the MW_HOME environment variable is used.
- If an Oracle home is specified, OPatch checks the patch against the specified Oracle home only.
- If neither is specified, and neither the MW_HOME or ORACLE_HOME environment variable is defined, then OPatch will run the command for the Middleware home from where the command was run.
- If a WebLogic Domain is specified, OPatch checks against all the Oracle homes within the specified WebLogic Domain.
The syntax for the checkInstalledOneOffs command is shown below:

```bash
opatch checkInstalledOneOffs -id patch_IDs
  [-mw_home MW_HOME]
  [-oh ORACLE_HOME]
  [-domain domain_name]
  [-invPtrLoc path_to_oraInst.loc]
```

A summary of the options for the checkInstalledOneOffs command are described in Table 2–9.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>-id patch_IDs</code></td>
<td>ID of the patch or patches that you want to check. Separate multiple patch IDs with a comma (,) character.</td>

OPatch Session completed with warnings.
OPatch completed with warnings.

2.4.8 Maintaining OPMN, Oracle HTTP Server, Fusion Middleware Control, and WebLogic Server

Oracle Process Management Notification (OPMN), Oracle HTTP Server, and Fusion Middleware Control are included in this release. These components, and any others installed within the Middleware home (including WebLogic Server 10.3.5), may be updated with any patch meant for these components (for example, a one-off patch applied via OPatch for OHS 11.1.1.5, or the WLS PSU 10.3.5.0.2). Note that some component versions may differ.

To determine the component versions installed in your environment, you can print a report using the following command from the ORACLE_HOME/OPatch directory:

```
opatch lsinventory -detail
```

2.4.9 Maintaining Oracle Client, JDBC and Networking

Oracle Fusion Middleware 11g is installed with Oracle Client Networking libraries equivalent to an 11.1.0.7 version. This includes libraries required for SSL processing and JDBC drivers where the included libraries will support connections to all certified Oracle Database Server versions.

There are specific cases where you might be instructed to apply an Oracle Database one-off patch to an existing Oracle Fusion Middleware Oracle home. This is because some Oracle Fusion Middleware products include specialized components, such as application programming interfaces (APIs), software libraries, and other software code developed for Oracle Database products. 11.1.0.7 Database one-off patches (bundled patches on Windows) may be applied to the Oracle Fusion Middleware 11g (11.1.2.x) homes.

2.4.10 Starting or Stopping a Runtime Instance

The start and stop commands allow Fusion Middleware runtime entities to be started or stopped, respectively. Only entities of the same type can be started or stopped; if you need to start or stop entities of multiple types, you must run this command separately for each entity type.

In order to run this command:

- Node Manager must be configured and running on the target server machine.
Running OPatch

- The `WebLogic_Home/common/nodemanager/nodemanager.domains` (on UNIX operating systems) or `WebLogic_Home\common\nodemanager\nodemanager.domains` (on Windows operating systems) must be populated.

- You must be able to connect to the Administration Server, which must be up and running.

The syntax for the `start` and `stop` commands is shown below:

```
opatch start|stop
  -domain domain_name
  -targets product_entity_name
  -target_type product_entity_type
  [-oh ORACLE_HOME]
```

A summary of the options for the `start` and `stop` commands are described in Table 2–10.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>-domain domain_name</td>
<td>The name of the domain in which the specified targets will be started or stopped.</td>
</tr>
<tr>
<td>-targets product_entity_name</td>
<td>The name of the WebLogic or Fusion Middleware entity you want to start or stop. Only entities of the same type can be specified; multiple entities should be separated by a comma.</td>
</tr>
<tr>
<td>-target_type target_type</td>
<td>The type of WebLogic or Fusion Middleware entity you want to start. Valid values are:</td>
</tr>
<tr>
<td></td>
<td>■ fmwApplication</td>
</tr>
<tr>
<td></td>
<td>■ fmwServer</td>
</tr>
<tr>
<td></td>
<td>■ fmwCluster</td>
</tr>
<tr>
<td></td>
<td>■ fmwContainer</td>
</tr>
<tr>
<td></td>
<td>The <code>fmwContainer</code> option starts or stops the container (for example, the WebLogic Server) hosting the application.</td>
</tr>
<tr>
<td></td>
<td>The <code>fmwServer</code> option starts or stops the actual java process that is running (for example, a Managed Server).</td>
</tr>
</tbody>
</table>

-oh ORACLE_HOME

Optional - the absolute path to the Oracle home directory. If this is not specified, the value in the `ORACLE_HOME` environment variable is used. If neither is available, then the Oracle home from which the command is executed is used.

Below is an example of the `opatch start` command on a UNIX operating system:

```
[aime@stadn41 Oracle_SOAl]$ ./OPatch/opatch start
  -targets soa_server1
  -target_type fmwserver
  -domain MySOAWebCenterDist
```

OPatch command 'stop' done.

OPatch succeeded.
2.5 Troubleshooting OPatch in a Fusion Middleware Environment

This section describes common issues you may encounter when running the OPatch utility in a Fusion Middleware environment.

2.5.1 Notes About Patching the MDS Repository

For special information about patching the MDS repository, refer to “Understanding the MDS Repository” in the Oracle Fusion Middleware Administrator’s Guide.

2.5.2 Setting the Machine Name and Listen Address

The machine name of the Administration Server and Managed Servers must be set to a valid value. It cannot be set to blank or None.

The listen address of the Administration and Managed Servers must be set to the real physical host’s address (hostname, FQDN, or IP address). It cannot be set to blank or localhost.

These values need to be properly set only once; you will not need to reset them should you ever need to patch your software.

To set the machine name and listed address of the Managed Servers:

1. Open the Administration Console.
2. In the Domain Structure, navigate to domain_name > Environments > Machines.
3. If your WebLogic Server is running in Production Mode, click the Lock & Edit button on the left hand side. If your WebLogic Server is running in Development Mode, this step is not needed.
4. Click the New button to create a new machine. Specify a name and select the operating system.
5. Select the machine you just created, go to Configuration > Node Manager and change the Listen Address to the host on which the Node Manager is listening, then click the Save button.
6. In the Domain Structure, navigate to domain_name > Environments > Servers.
7. For each Managed Server, assign the machine you just created. In the Listen Address field, specify the name of the host on which the Node Manager is listening. Click Save when you are finished.
8. If your WebLogic Server is running in Production Mode, click the Activate Changes button on the left hand side. If your WebLogic Server is running in Development Mode, this step is not needed.

To set the machine name and listen address of the Administration Server:

1. Stop the Administration Server and all Managed Servers.
2. Back up the config.xml file in the domain.
   
   The default location of this file is the config directory inside your Domain home.
3. Modify the existing config.xml file as follows:
   a. Find the following line:
      
      <name>AdminServer</name>
   b. Add the following lines:
c. Save the file.

4. Restart the Administration Server and all the Managed Servers.
   
   If you encounter any problems, revert back to the saved version of the config.xml file and contact Oracle Support.
Applying the Latest Oracle Fusion Middleware Patch Set

This chapter describes the tools and procedures required for you to patch your existing Oracle Forms and Reports 11g Release 2 (11.1.2).

- Section 3.1, "Summary of the Oracle Fusion Middleware Patching Process"
- Section 3.2, "General Pre-Patching Tasks"
- Section 3.3, "Downloading and Starting the Installer"
- Section 3.4, "Applying the Patch Set"
- Section 3.5, "Starting the Servers and Processes"
- Section 3.6, "Verifying Your Patch Set Installation"

3.1 Summary of the Oracle Fusion Middleware Patching Process

Table 3–1 provides links to additional information for each of the patching steps.

<table>
<thead>
<tr>
<th>Table 3–1 Summary of Patching Procedures and Links to Documentation</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step</strong></td>
</tr>
</tbody>
</table>
| 1 | Perform the following general pre-patching tasks:  
   1. Section 3.2.1, "Reviewing System Requirement, Certification and Interoperability Information"  
   2. Section 3.2.2, "Stopping the Servers and Processes"  
   3. Section 3.2.3, "Backing Up Your Middleware Home, Domain Home and Oracle Instances"  
   4. Section 3.2.4, "Backing Up Your Database and Database Schemas"  
   If you are patching in silent mode, see Section 3.2.5, "Renaming the emCCR File for Silent Patching". |
| 2 | Download and start the appropriate installer for your product:  
   For details, see Section 3.3, "Downloading and Starting the Installer". |
| 3 | Update the software in your Oracle home using the downloaded Installer. |
| 4 | Perform any necessary post-patching tasks (for example, starting the servers and processes in a domain, starting Oracle instances, running scripts or modifying configuration files). The tasks that need to be performed will vary depending on the version of your existing software and components configured in your environment. |
| 5 | Start the servers and processes.  
   For more information, see Section 3.5, "Starting the Servers and Processes". |
| 6 | Verify that your patch installation is complete.  
   For more information, see Section 3.6, "Verifying Your Patch Set Installation". |
If you are running your products in a distributed environment (for example, you have Managed Servers running in multiple domains on multiple systems) and you have set up a shared Middleware home on a shared network drive mounted to each machine that is part of your domain, then this patching procedure only needs to be done once (see Section 2.3.3, "Patching in a Distributed Environment").

If your distributed environment has a separate Middleware home on each system, then this patching procedure must be repeated for each domain on each system.

More information about distributed topologies can be found in the Enterprise Deployment Guide for your specific product.

3.2 General Pre-Patching Tasks

This section describes tasks that should be completed before you patch your software:

- Section 3.2.1, "Reviewing System Requirement, Certification and Interoperability Information"
- Section 3.2.2, "Stopping the Servers and Processes"
- Section 3.2.3, "Backing Up Your Middleware Home, Domain Home and Oracle Instances"
- Section 3.2.4, "Backing Up Your Database and Database Schemas"
- Section 3.2.5, "Renaming the emCCR File for Silent Patching"

3.2.1 Reviewing System Requirement, Certification and Interoperability Information

Before you begin to update your software, you should make sure that your system environment and configuration meet the minimum requirements for the software you want to install in order to perform the update. This section contains links to several key pieces of documentation you should review:

- System Requirements and Specifications
- Certification and Supported Platforms for Oracle Forms and Reports
- Interoperability and Compatibility

3.2.1.1 System Requirements and Specifications

For certification information, refer to the System Requirements and Supported Platforms for Oracle Fusion Middleware 11gR1 document on the Oracle Fusion Middleware Supported System Configurations page at the following URL:

This document contains information related to hardware and software requirements, minimum disk space and memory requirements, database schema requirements, and required system libraries, packages, or patches.

3.2.1.2 Certification and Supported Platforms for Oracle Forms and Reports

Read the System Requirements and Supported Platforms for Oracle Forms and Reports 11g Release 2 (11.1.2.x) Certification Matrix document. This document contains certification information related to supported 32-bit and 64-bit operating systems, databases, web servers, LDAP servers, adapters, IPv6, JDKs, and third-party products.
3.2.1.3 Interoperability and Compatibility

Read Oracle Fusion Middleware Interoperability and Compatibility Guide for Oracle Forms and Reports. This document contains important information regarding the ability of Oracle Fusion Middleware products to function with previous versions of other Oracle Fusion Middleware, Oracle, or third-party products. This information is applicable to both new Oracle Fusion Middleware users and existing users who are upgrading their existing environment.

3.2.2 Stopping the Servers and Processes

Before you run the installer to update your software, you should stop all servers and processes (including OPMN) on all machines which are part of any domain used from the Middleware home.

Instructions for stopping an Oracle Fusion Middleware environment are provided in "Stopping an Oracle Fusion Middleware Environment" in Oracle Fusion Middleware Administrator’s Guide.

If your environment is running Oracle Process Manager and Notification Server (OPMN), you should also stop OPMN with the opmnctl stopall command.

If you are running Node Manager, you should also stop Node Manager. You can do this by closing the console window in which Node Manager is running, or by using the stopNodeManager WLST command.

---

**Note:** In order for the stopNodeManager command to work, Node Manager must be configured with QuitEnabled=true.

See "stopNodeManager" in Oracle Fusion Middleware WebLogic Scripting Tool Command Reference for more information.

---

3.2.3 Backing Up Your Middleware Home, Domain Home and Oracle Instances

After stopping the servers and processes, back up your Middleware home directory (including the Oracle home directories inside the Middleware home), your local Domain home directory, your local Oracle instances, and also the Domain home and Oracle instances on any remote systems that use the Middleware home.

If your patch set installation is unexpectedly interrupted, or if you choose to cancel out of the installation before it is complete, you may not be able to install the patch unless you restore your environment to the previous configuration before running the Installer again.

---

**Note:** There is no patch set deinstallation procedure. The -deinstall procedure that you would use for a typical installation will not remove the patch set.

---

3.2.4 Backing Up Your Database and Database Schemas

If the product you are installing has associated database schemas, you should also back up your database before you begin the patching procedure. Make sure this back up includes the schema version registry table, as each Fusion Middleware schema has a row in this table. The name of the schema version registry table is SYSTEM.SCHEMA_VERSION_REGISTRY$. Refer to your database documentation for instructions on how to do this.
If you run the Patch Set Assistant to update an existing schema and it does not succeed, you must restore the original schema before you can try again. Make sure you backup your existing database schemas before you run the Patch Set Assistant.

### 3.2.5 Renaming the emCCR File for Silent Patching

If you are patching your software in silent mode, you may encounter the following error messages:

```
"SEVERE:Values for the following variables could not be obtained from the command line or response file[s]:
MYORACLESUPPORT_USERNAME(MyOracleSupportUsername)"
```

To work around this issue, rename the `ORACLE_HOME/ccr/bin/emCCR` (on UNIX operating systems) or `ORACLE_HOME\ccr\bin\emCCR` (on Windows operating systems) file.

**Caution:** Be sure to change the name back after the patching process has completed or you may encounter errors with other operations (such as My Oracle Support or other installers.)

For example, on a UNIX operating system:

```
cd ORACLE_HOME/ccr/bin
mv emCCR emCCR_LAST
```

On a Windows operating system:

```
cd ORACLE_HOME\ccr\bin
mv emCCR emCCR_LAST
```

### 3.3 Downloading and Starting the Installer

The following sections contain instructions on how to obtain the proper installer required to patch your product:

- **Section 3.3.1, "About the Installers Used for Patching"**
- **Section 3.3.2, "Downloading the Required Installer"**
- **Section 3.3.3, "Starting the Installer"**

#### 3.3.1 About the Installers Used for Patching

The installers you use to apply the latest Oracle Fusion Middleware patch sets vary in their behavior and capabilities, depending upon the product you are using. The installer for Oracle Forms and Reports is a full installer that can also function as an update installer. You can use it to update an existing Oracle Forms and Reports home, or you can use it to install a new, complete Oracle Forms and Reports home.

#### 3.3.2 Downloading the Required Installer

To download and unpack the Installer files for your product:
1. Download the installer from the Oracle Technology Network, My Oracle Support, or Oracle Software Delivery Cloud (formerly E-Delivery).

For more information, see "Select an Oracle Fusion Middleware Software Download Site" and "Download the Software Required for Your Starting Point" in Oracle Fusion Middleware Download, Installation, and Configuration ReadMe Files.

2. Unpack the downloaded archive that contains the installer and software that you want to install into a directory on the target computer.

### 3.3.3 Starting the Installer

To start the installer you just downloaded and unpacked:

1. Change directory to the Disk1 folder inside the unpacked archive folder.

2. Start the Installer:
   - On UNIX operating systems:
     ```bash
     ./runInstaller
     ```
   - On Windows operating systems run the following:
     ```bat
     setup.exe
     ```

Depending on your system environment and product you are updating, you may be prompted to provide the location of a JRE/JDK on your system when you start the installer. When you installed Oracle WebLogic Server, a JRE was installed in the jdk160_version directory inside the Middleware home; you can use this location to start the installer.

If you do not have Oracle WebLogic Server installed on your system, you can use the JDK in the jdk directory inside the Oracle home.

Make sure you specify the absolute path to your JRE/JDK location; relative paths are not supported.

The Installer can also be run in silent mode. See "Silent Oracle Fusion Middleware Installation and Deinstallation" in Oracle Fusion Middleware Installation Planning Guide for more details.

### 3.4 Applying the Patch Set

After you have started the Installer, follow the instructions on the screen to apply the patch set to your existing Middleware home.

---

**Note:** If your domain includes multiple host computers, you must run the Installer separately on each host to update the software on that host.

---

As you review each screen of the installer, note that there are two significant differences between applying a patch set and installing software for the first time:

---

**Note:** When you are applying a patch set, you must identify an existing Middleware home on the Specify Installation Location screen.
Table 3–2 provides a summary of the typical installation screens you will see when you are applying a patch set to an existing Middleware home.

If you need additional help with any of the installation screens click Help to access the online help.

Table 3–2 Typical Installation Flow For Installing a Patch Set

<table>
<thead>
<tr>
<th>Screen</th>
<th>When Does This Screen Appear?</th>
<th>Description</th>

<tr>
<td>Installation Complete</td>
<td>Always.</td>
<td>Click Save to save your configuration information to a file. This information includes port numbers, installation directories, URLs, and component names which you may need to access at a later time. After saving your configuration information, click Finish to dismiss the installer.</td>
</tr>
</tbody>
</table>

3.5 Starting the Servers and Processes

After you have finished patching your software and performing any necessary post-patching tasks, you are ready to start the servers and processes.

Instructions for starting an Oracle Fusion Middleware environment are provided in "Starting an Oracle Fusion Middleware Environment" in Oracle Fusion Middleware Administrator’s Guide.
You can start Node Manager as described in "Starting Node Manager" in Oracle Fusion Middleware Node Manager Administrator’s Guide for Oracle WebLogic Server.

3.6 Verifying Your Patch Set Installation

To verify the installation after applying the patch set, start your browser and enter the following URLs:

- To access the Administration Server console:
  
  http://host:admin_server_port/console

  You can verify that both Forms and Reports appear in various locations on this screen. For more information about using Fusion Middleware Control with Oracle Forms and Reports, see "Getting Started Using Oracle Enterprise Manager Fusion Middleware Control" in Oracle Fusion Middleware Administrator’s Guide.

- If you configured your Administration Server to accept SSL connection, use the following URL to access the Administration Server console in secure mode:

  https://host:secure_admin_server_port/console

- To access Enterprise Manager:

  http://host:admin_server_port/em

- To access Oracle Forms:

  http://host:port/forms/frmservlet

- To access Oracle Reports:

  http://host:port/reports/rwservlet

  You should receive a login screen. Enter your Administration Server user name and password to access the site.

  For more information about the Administration Console, see "Getting Started Using Oracle WebLogic Server Administration Console" in Oracle Fusion Middleware Administrator’s Guide.

  For more information about Enterprise Manager, see "Getting Started Using Oracle Enterprise Manager Fusion Middleware Control" in Oracle Fusion Middleware Administrator’s Guide.
This appendix contains screenshots and descriptions for the Oracle Forms and Reports Patch Set Installer screens.

The following screens are described:

- Welcome
- Software Updates
- Installation Type
- Prerequisite Checks
- Specify Installation Location
- Specify Security Updates
- Installation Summary
- Installation Progress
- Installation Complete
A.1 Welcome

This page introduces you to the Oracle Fusion Middleware installer and provides two important pieces of information:

- A navigation pane on the left that summarizes the tasks the installer will help you complete. Each item in the navigation pane represents a specific installer screen that will prompt you for information required to install the software.

- Information about any prerequisites you might need to perform before continuing with the installation.

Review the information on this screen carefully to be sure you have performed all the necessary prerequisites.
A.2 Software Updates

Use this screen to quickly and easily search for the latest software updates, including important security updates, via your My Oracle Support account.
The following table describes the options on this screen.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Install and Configure</td>
<td>This option is used during new installations only.</td>
</tr>
<tr>
<td>Install Software - Do Not Configure</td>
<td>Select this option to have the installer update an existing Oracle Home directory where the software will be installed. This is the option you will use when upgrading your existing installation. If you did not configure your working instance in the previous release, then you will need to run the Configuration Tool after the patch is installed.</td>
</tr>
</tbody>
</table>
A.4 Prerequisite Checks

This screen analyzes the host computer to ensure that specific operating system prerequisites have been met.

If any of the prerequisite checks fail, then a short error message appears in the bottom portion of the screen. Fix the error and click Retry to try again. If you want to ignore the error or warning messages and continue with the installation, click Continue.

Click Abort to stop prerequisite checking for all components.
A.5 Specify Installation Location

Use this screen to identify the Oracle home directory you want to patch. The following table describes the fields that appear on this page.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Oracle Middleware Home</td>
<td>Use this field to specify the absolute path to your existing Oracle Middleware home directory; this is the directory that was created when you installed Oracle WebLogic Server. If you do not know the full path to your Middleware home, you can click <strong>Browse</strong> to select an existing directory in your system.</td>
</tr>
<tr>
<td>Oracle Home Directory</td>
<td>Use this field to specify the existing product Oracle home directory inside the Oracle Middleware home. This is the directory that will be patched with this installation.</td>
</tr>
<tr>
<td></td>
<td><strong>NOTE:</strong> If you are performing an installation on a Windows operating system, be sure that your directory paths are valid and do not contain double backslashes (\).</td>
</tr>
<tr>
<td></td>
<td><strong>NOTE:</strong> If you specify an Oracle home directory that has already been patched, then you will receive an error message and the installation will not continue. Re-patching an Oracle home is not supported.</td>
</tr>
</tbody>
</table>
A.6 Specify Security Updates

Use this screen to enter your My Oracle Support account information so you can receive the latest product information and security updates via your My Oracle Support account.

The following table describes the fields on this screen.

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Email</td>
<td>Enter the email address you used to register with My Oracle support.</td>
</tr>
<tr>
<td>I wish to receive security updates via My Oracle Support</td>
<td>Select this check box to indicate that you have a My Oracle Support account and that you want to receive updates via My Oracle Support.</td>
</tr>
<tr>
<td>My Oracle Support Password</td>
<td>Enter the password for your My Oracle Support account.</td>
</tr>
</tbody>
</table>

If you do not want to register for security updates or if you do not have a My Oracle Support account, then leave all the fields on this screen empty. You will be prompted to confirm your selection; click Yes in the dialog box:
A.7 Installation Summary

This screen summarizes the selections you have made during this session. It includes the following information:

- The location of the software that will be patched
- How much disk space will be used for the installation of the patch
- The applications that will be patched

Review information on this screen carefully, and take one of the following actions:

- If you want to make any changes to the configuration before starting the installation of the patch, use the navigation pane to select the Installer screen you want to return to and edit.
- If you are satisfied with the information, click **Install** to begin the installation procedure.
- If you want to save this configuration to a text file (called a response file), click **Save**. The resulting response file can be used later if you choose to perform the same installation from the command line.
A.8 Installation Progress

This screen shows you the progress of the installation. An installation log file is automatically generated and saved in your /oraInventory/logs directory.

If you want to quit before the installation is completed, click Cancel. Doing so will result in a partial installation; the portion of the software that was installed on your system before you click Cancel will remain on your system, and you will have to remove it manually.
A.9 Installation Complete

This screen summarizes the installation that was just completed. Your screen will show you specifically what was patched. The screen above is shown here as an example only.

If you want to save this summary information to a text file for future reference, click Save.

Click Finish to dismiss the screen.
