1.1. ATM01 - ATM Bank Params Maintenance

Using this option, you can define the bank parameters / GL accounts required for **Oracle FLEXCUBE**, which are necessary for maintaining ATM (Automated Teller Machine) transactions, which occur through various ATM channels across the network. The hold variance percentage and the hold period is also defined here.

The system places a Master Money Hold on the account when it grants authorisation on an offline POS i.e. signature based POS transaction. The Hold has a certain validity period. The Master Money Hold will be removed by the system if the debit has a matching Authorisation Code and is within the defined tolerance range. The debit will then be posted to the account. If either the Authorisation Code and/or settlement amount for debit (not within the tolerance) does not match, the Hold is not removed. Such a Hold will expire on the expiry date.

- BAM20 - Bank Codes Maintenance

1.2. ATM02 - ATM Acquirer POS Id Maintenance

Using this option, you can maintain the various Switch IDs, the physical ATM terminals that connect to these switches and the originating branch code for a particular ATM.

Each ATM is logically attached to a GL (ATM CASH GL) in some branch (originating branch) in **FLEXCUBE**. Every ATM in the ATM network of a Bank has two ATM IDs (Card Acceptor terminal ID and Card Acceptor ID code), which uniquely identify the ATM. The ATM Acquirer POS ID Xref maintenance, maintains the cross-reference between the ATM IDs, ATM CASH GL and the ATM branch. Also, every Forwarder (VISA/Master Card), which the bank interfaces with, has to be configured through this option.
