1.BACKGROUND

Integration of different applications and solutions is a key area in today's systems. A variety of specialized applications deployed on disparate platforms and using different infrastructure need to be able to communicate and integrate seamlessly with FLEXCUBE UBS in order to exchange data. The FLEXCUBE UBS Integration Gateway (referred to as Gateway) will cater to these integration needs.

The integration needs supported by the Gateway can be broadly categorized from the perspective of the Gateway as follows:

1. Inbound application integration – used when any external system needs to add, modify or query information within FLEXCUBE UBS

2. Outbound application integration– used when any external system needs to be notified of the various events that occur within FLEXCUBE UBS

The following sections provide detailed XSD documentation of all operations available in FCUBSCNService of CN-Module

FCUBS_HEADER

Attribute	Description
Name	FCUBS_HEADER
Datatype	

Description	This is a standard node that would form the header for FLEXCUBE UBS Envelope. Information to identify the partner system, service, operation, user and branch etc., will form the tags in this node. Entire processing in FLEXCUBE UBS Messaging Database Layer is based upon the information provided in this node.
