Cause: the sum of PCTUSED and PCTFREE for a subpartition whose number (subpartitions are numbered starting with 1) is displayed in this message exceeds 100. Note that if PCTUSED and/or PCTFREE values for this subpartition were not specified explicitly, default values at partition-level would be used. If, in turn, default PCTUSED and/or PCTFREE values at partition-level were not specified, default values for the partitioned table or index would be used. If those values were also not specified explicitly, system defaults would be used.

Action: ensure that a sum of PCTUSED and PCTFREE for the subpartition does not exceed 100

ORA-14162: subpartition "*string*": sum of PCTUSED and PCTFREE may not exceed 100

Cause: the sum of PCTUSED and PCTFREE for a subpartition whose name (explicitly specified by the user) is displayed in this message exceeds 100. Note that if PCTUSED and/or PCTFREE values for this subpartition were not specified explicitly, default values at partition-level would be used. If, in turn, default PCTUSED and/or PCTFREE values at partition-level were not specified, default values for the partitioned table or index would be used. If those values were also not specified explicitly, system defaults would be used.

Action: ensure that a sum of PCTUSED and PCTFREE for the subpartition does not exceed 100

ORA-14163: subpartition number *string*: INITRANS value must be less than MAXTRANS value

Cause: Value of INITRANS was found to be greater than that of MAXTRANS for a subpartition whose number (subpartitions are numbered starting with 1) is displayed in this message. Note that if INITRANS and/or MAXTRANS values for this subpartition were not specified explicitly, default values at partition-level would be used. If, in turn, default INITRANS and/or MAXTRANS values at partition-level were not specified, default values for the partitioned table or index would be used. If those values were also not specified explicitly, system defaults would be used.

Action: ensure that value of INITRANS (whether specified explicitly or derived from the default value at partition-level, table-level or index-level) is no greater than that of MAXTRANS

ORA-14164: subpartition "*string*": INITRANS value must be less than MAXTRANS value

Cause: Value of INITRANS was found to be greater than that of MAXTRANS for a subpartition whose name (explicitly specified by the user) is displayed in this message. Note that if INITRANS and/or MAXTRANS values for this subpartition were not specified explicitly, default values at partition-level would be used. If, in turn, default INITRANS and/or MAXTRANS values at partition-level were not specified, default values for the partitioned table or index would be used. If those values were also not specified explicitly, system defaults would be used.

Action: ensure that value of INITRANS (whether specified explicitly or derived from the default value at partition-level, table-level or index-level) is no greater than that of MAXTRANS

ORA-14165: MODIFY DEFAULT ATTRIBUTES FOR PARTITION may not be combined with other operations

Cause: ALTER TABLE or ALTER INDEX statement attempted to combine MODIFY DEFAULT ATTRIBUTES OF PARTITION with some other operation (e.g. ADD PARTITION or PCTFREE) which is illegal

Action: Ensure that MODIFY DEFAULT ATTRIBUTES is the sole operation specified in ALTER TABLE or ALTER INDEX statement; operations other than those dealing with partitions, default attributes of partitioned tables/indices or specifying that a table be renamed (ALTER TABLE RENAME) may be combined at will

ORA-14166: missing INTO keyword

Cause: keyword INTO missing

Action: supply missing keyword

ORA-14167: only one subpartition may be moved

Cause: ALTER TABLE MOVE SUBPARTITION contained descriptions of more than one subpartition to be moved

Action: Ensure that the statement describes exactly one subpartition to be moved and that it does not contain any commas

ORA-14168: only one subpartition may be modified

Cause: ALTER TABLE | INDEX MODIFY SUBPARTITION contained descriptions of more than one subpartition to be modified

Action: Ensure that the statement describes exactly one subpartition to be modified and that it does not contain any commas

ORA-14169: invalid ALTER TABLE MODIFY SUBPARTITION option

Cause: An option other than PCTFREE, PCTUSED, INITRANS, MAXTRANS, STORAGE, was specified in an ALTER TABLE MODIFY SUBPARTITION statement.

Action: Specify only legal options.

ORA-14170: cannot specify <(sub)partition-description> clause in CREATE TABLE or CREATE INDEX

Cause: A request was made to generate default partition description(s) (possibly via PARTITIONS *number-of-partitions*) while at the same time specified <(sub)partition-description> clause which is illegal.

Action: Remove one of offending clauses.

ORA-14171: cannot specify *subpartition-description* clause in CREATE | ALTER TABLE

Cause: User requested to generate default subpartition description(s) (possibly via SUBPARTITIONS) while at the same time specified *subpartition-description* clause which is illegal

Action: Remove one of offending clauses.

ORA-14172: invalid ALTER TABLE EXCHANGE SUBPARTITION option

Cause: Name of the table to be EXCHANGED has to be followed by [(INCLUDING | EXCLUDING) INDEX][(WITH | WITHOUT) VALIDATION]

Action: Ensure that no options besides INCLUDING INDEX or EXCLUDING INDEX are specified with ALTER TABLE EXCHANGE SUBPARTITION

ORA-14173: illegal subpartition-extended table name syntax

Cause: Subpartition to be accessed may only be specified using its name. User attempted to use a subpartition number or a bind variable.

Action: Modify statement to refer to a subpartition using its name

ORA-14174: only a *parallel clause* may follow COALESCE PARTITION | SUBPARTITION

Cause: ALTER TABLE COALESCE PARTITION | SUBPARTITION may be followed by an optional *parallel clause*. No partition/subpartition attributes may be specified

Action: Ensure that no partition/subpartition attribute was specified.

ORA-14175: a subpartition maintenance operation may not be combined with other operations

Cause: ALTER TABLE or ALTER INDEX statement attempted to combine a subpartition maintenance operation (e.g. MOVE SUBPARTITION) with some other operation (e.g. MODIFY PARTITION ADD SUBPARTITION or PCTFREE) which is illegal

Action: Ensure that a subpartition maintenance operation is the sole operation specified in ALTER TABLE or ALTER INDEX statement; operations other than those dealing with subpartitions, default attributes of partitioned tables/indices or specifying that a table be renamed (ALTER TABLE RENAME) may be combined at will

ORA-14176: this attribute may not be specified for a hash partition

Cause: An invalid option was encountered while parsing physical attributes of a partition of an object partitioned using the HASH method. The TABLESPACE option is the only valid option for such partitions.

Action: Remove the invalid option(s).

ORA-14177: STORE-IN (Tablespace list) can only be specified for a LOCAL index on a Hash or Composite Range Hash table

Cause: STORE-IN (Tablespace list) clause was used while creating a local index on a range/list/composite range list partitioned table

Action: Do not use the STORE_IN (Tablespace list) clause while creating a local index on range/list/composite range list partitioned table

ORA-14178: STORE IN (DEFAULT) clause is not supported for hash partitioned global indexes

Cause: STORE IN (DEFAULT) is valid only for local indexes.

Action: a) Specify a tablespace list in place of DEFAULT, or b) Remove STORE IN clause and specify tablespaces individually for each index partition.

ORA-14179: An unsupported partitioning method was specified in this context.

Cause: An attempt was made to specify an unsupported partitioning method in this context.

Action: Remove the invalid option.

ORA-14183: TABLESPACE DEFAULT can be specified only for Composite LOCAL index

Cause: User attempted to specify TABLESPACE DEFAULT for a partition of a Range/System/Hash partitioned LOCAL index object, which is illegal.

Action: Replace TABLESPACE DEFAULT with TABLESPACE <ts_name> or remove it.

ORA-14185: incorrect physical attribute specified for this index partition

Cause: unexpected option was encountered while parsing physical attributes of a local index partition; valid options for Range or Composite Range partitions are INTRANS, MAXTRANS, TABLESPACE, STORAGE, PCTFREE, PCTUSED, LOGGING and TABLESPACE; but only TABLESPACE may be specified for Hash partitions STORE IN () is also disallowed for all but Composite Range partitions

Action: remove invalid option(s) from the list of physical attributes of an index partition

ORA-14186: number of sub-partitions of LOCAL index must equal that of the underlying table

Cause: User attempted to create a LOCAL partitioned index with a number of sub-partitions which is different from that of the underlying table.

Action: Correct the CREATE INDEX statement to specify a correct number of sub-partitions

ORA-14187: partitioning method for LOCAL index is inconsistent with that of the underlying table

Cause: User attempted to create a LOCAL partitioned index that is not equi-partitioned with the underlying table. The partitioning types are mismatched.

Action: Correct the CREATE INDEX statement to ensure that the index partitioning method is consistent with that of the base table

ORA-14188: sub-partitioning columns must form a subset of key columns of a UNIQUE index

Cause: User attempted to create a UNIQUE partitioned index whose sub-partitioning columns do not form a subset of its key columns which is illegal

Action: If the user, indeed, desired to create an index whose subpartitioning columns do not form a subset of its key columns, it must be created as non-UNIQUE; otherwise, correct the list of key and/or subpartitioning columns to ensure that the index' subpartitioning columns form a subset of its key columns

ORA-14189: this physical attribute may not be specified for an index subpartition

Cause: unexpected option was encountered while parsing physical attributes of an index subpartition; TABLESPACE is the only valid option

Action: remove invalid option(s)

ORA-14190: only one ENABLE/DISABLE ROW MOVEMENT clause can be specified

Cause: One of three possible actions caused the error: 1) ENABLE ROW MOVEMENT was specified more than once. 2) DISABLE ROW MOVEMENT was specified more than once. 3) Both ENABLE ROW MOVEMENT and DISABLE ROW MOVEMENT were specified.

Action: Remove all but one of the ENABLE ROW MOVEMENT or DISABLE ROW MOVEMENT clauses; then, reissue the command.

ORA-14191: ALLOCATE EXTENT may not be specified for composite partitioned object

Cause: User specified ALLOCATE STORAGE clause in ALTER TABLE/ALTER INDEX statement issued against a composite partitioned index which is illegal.

Action: Remove the illegal option. If you want to add storage to individual [sub]partitions, the ALLOCATE EXTENT clause may be specified with ALTER TABLE OR INDEX MODIFY [SUB]PARTITION statement.

ORA-14192: cannot modify physical index attributes of a Hash index partition

Cause: User attempted to modify one of INITRANS/MAXTRANS/LOGGING/STORAGE clause for an index partition of a Hash partitioned index

Action: Remove the physical attributes one is trying to modify

ORA-14193: invalid ALTER INDEX MODIFY SUBPARTITION option

Cause: An option other than UNUSABLE, ALLOCATE EXTENT, DEALLOCATE UNUSED was specified in an ALTER INDEX MODIFY SUBPARTITION statement.

Action: Specify only legal options.

ORA-14194: only one subpartition may be rebuilt

Cause: ALTER INDEX REBUILD SUBPARTITION contained descriptions of more than one subpartition to be rebuilt

Action: Ensure that the statement describes exactly one subpartition to be rebuilt and that it does not contain any commas

ORA-14195: ALLOCATE STORAGE may not be specified for RANGE or LIST partitioned object

Cause: User specified ALLOCATE STORAGE clause in ALTER TABLE/ALTER INDEX statement issued against a range-partitioned index which is illegal.

Action: Remove the illegal option. If it is desired to add storage to individual partitions, `ALLOCATE STORAGE` clause may be specified with `ALTER TABLE/INDEX MODIFY PARTITION` statement.

ORA-14196: Specified index cannot be used to enforce the constraint.

Cause: The index specified to enforce the constraint is unsuitable for the purpose.

Action: Specify a suitable index or allow one to be built automatically.

ORA-14201: specified subpartition bound is too long

Cause: Length of a linear key representation of a high bound of a table subpartition being added or along which an existing table or index subpartition is being split exceeded the legal limit (4K).

Action: Change the representation of a subpartition high bound to bring its length within legal limit.

ORA-14202: subpartition bound of subpartition "*string*" is too high

Cause: High bound of the specified subpartition displayed in this message did not collate lower than that of the subsequent subpartition.

Action: Ensure that high bound of every subpartition (except for the last one) collates lower than that of a subsequent subpartition.

ORA-14203: subpartition bound of subpartition "*string*" is too long

Cause: Length of linear key representation of a high bound of the specified subpartition displayed in this message exceeded the legal limit (4K).

Action: Change the representation of a subpartition high bound to bring its length within legal limit.

ORA-14204: subpartition bound of subpartition number *string* is too high

Cause: High bound of the specified subpartition displayed in this message did not collate lower than that of the subsequent subpartition.

Action: Ensure that high bound of every subpartition (except for the last one) collates lower than that of a subsequent subpartition.

ORA-14205: subpartition bound of subpartition number *string* is too long

Cause: Length of linear key representation of a high bound of the specified subpartition displayed in this message exceeded the legal limit (4K).

Action: Change the representation of a subpartition high bound to bring its length within legal limit.

ORA-14206: table is not subpartitioned by List or Range methods

Cause: A subpartition maintenance operation such as `ALTER TABLE DROP | SPLIT | MERGE SUBPARTITION` can only be performed on List or Range subpartitioned objects

Action: Issue the command only against a List or Range subpartitioned object.

ORA-14207: maximum number of subpartitioning columns is 16

Cause: number of columns in a subpartitioning column list exceeded the legal limit of 16

Action: modify subpartitioning column list so that it consists of at most 16 columns

ORA-14208: lower-bound subpartition must be specified first

Cause: A higher-bound subpartition was specified before the lower-bound subpartition in ALTER TABLE MERGE SUBPARTITIONS statement.

Action: Specify lower-bound subpartition first and then higher-bound subpartition

ORA-14209: subpartitions being merged are not adjacent

Cause: Attempted to merge two subpartitions that are not adjacent to each other.

Action: Specify two subpartitions that are adjacent

ORA-14210: cannot reuse lower-bound subpartition as resulting subpartition

Cause: Attempted to reuse the lower-bound subpartition of the subpartitions being merged.

Action: Specify new resulting subpartition name or reuse the higher-bound subpartition only

ORA-14211: subpartition bound must collate higher than that of the last subpartition

Cause: Subpartition bound specified in ALTER TABLE MODIFY PARTITION ADD SUBPARTITION statement did not collate higher than that of the partition's last subpartition.

Action: Ensure that the subpartition bound of the subpartition to be added collates higher than that of the table partition's last subpartition.

ORA-14212: subpartition cannot be split along the specified high bound

Cause: Attempted to split a subpartition along a bound which either collates higher than that of the subpartition to be split or lower than that of a subpartition immediately preceding the one to be split

Action: Ensure that the bound along which a subpartition is to be split collates lower than that of the subpartition to be split and higher than that of a subpartition immediately preceding the one to be split

ORA-14213: VALUES LESS THAN or AT clause cannot be used for List subpartitioned tables

Cause: VALUES LESS THAN or AT clause was used for List subpartitioned tables

Action: Use VALUES (*value list*) clause for List subpartitioned tables

ORA-14214: VALUES (*value list*) cannot be used for Range subpartitioned tables

Cause: VALUES (*value list*) clause was used for Range subpartitioned tables

Action: Use VALUES LESS THAN or AT clause with Range subpartitioned tables

ORA-14215: subpartition bound list contains too many elements

Cause: Subpartition bound list contained more elements than there are subpartitioning columns

Action: Ensure that the number of elements in subpartition bound list is equal to the number of subpartitioning columns of the table or index

ORA-14216: subpartition bound list contains too few elements

Cause: Subpartition bound list contained fewer elements than there are subpartitioning columns

Action: Ensure that the number of elements in partition bound list is equal to the number of partitioning columns of the table or index

ORA-14217: VALUES (*value list*) clause expected

Cause: VALUES (*value list*) clause was not specified for the list subpartition being added

Action: Specify a VALUES (*value list*) clause

ORA-14218: Invalid operation for object without a segment

Cause: The object (table or index or lob) did not have a segment.

Action: Create segments for the object with the ALTER TABLE ALLOCATE EXTENT command.

ORA-14220: Invalid operation for object without a segment

Cause: Attempted to modify storage or allocate an extent for an object (table or LOB or index) without a segment.

Action: Create segments for the object with the ALTER TABLE ALLOCATE EXTENT command.

ORA-14221: Dictionary managed tablespace cannot be used for this operation

Cause: Attempted to create an index or add a LOB column in a dictionary managed tablespace to a table without a segment.

Action: Specify a locally managed tablespace OR create segments for the table with the ALTER TABLE ALLOCATE EXTENT command.

ORA-14223: Deferred segment creation is not supported for this table

Cause: The SEGMENT CREATION DEFERRED clause was specified in the CREATE TABLE statement.

Action: Remove the SEGMENT CREATION DEFERRED clause.

ORA-14224: Deferred segment creation is not supported for this schema

Cause: The SEGMENT CREATION DEFERRED clause was specified in the CREATE TABLE statement.

Action: Remove the SEGMENT CREATION DEFERRED clause.

ORA-14225: The INDEXING clause is not supported for this table.

Cause: The INDEXING clause was specified for an unsupported table type.

Action: Remove the INDEXING clause from the statement.

ORA-14226: unique index may not be PARTIAL

Cause: INDEXING PARTIAL was specified during creation or modification of a unique index.

Action: Remove the INDEXING PARTIAL clause from the statement.

ORA-14227: INDEXING may be specified only when the underlying table is partitioned

Cause: INDEXING FULL or INDEXING PARTIAL was specified during CREATE INDEX or ALTER INDEX when the base table was not partitioned.

Action: Remove the INDEXING clause from the statement.

ORA-14228: INDEXING may not be specified for this index

Cause: INDEXING FULL or INDEXING PARTIAL was specified during CREATE INDEX or ALTER INDEX for an unsupported index type.

Action: Remove the INDEXING clause from the statement.

ORA-14229: cannot modify the indexing attribute of a composite partition

Cause: An attempt was made to perform ALTER TABLE MODIFY PARTITION INDEXING [ON | OFF] on a composite table partition.

Action: Run ALTER TABLE MODIFY SUBPARTITION INDEXING [ON | OFF] on each subpartition individually.

ORA-14251: Specified subpartition does not exist

Cause: Subpartition not found for the object.

Action: Retry with correct subpartition name.

ORA-14252: invalid ALTER TABLE MODIFY PARTITION option for a Hash partition

Cause: Only ALLOCATE EXTENT and DEALLOCATE UNUSED may be specified in ALTER TABLE MODIFY PARTITION for a Hash partition.

Action: Specify only legal options.

ORA-14253: table is not partitioned by Composite Range method

Cause: The table in a subpartition maintenance operation (ALTER TABLE EXCHANGE/MODIFY/MOVE/TRUNCATE SUBPARTITION, or ALTER TABLE MODIFY PARTITION ADD/COALESCE SUBPARTITION command must be partitioned by Composite Range method

Action: Ensure that the table is partitioned by Composite Range method

ORA-14254: cannot specify ALLOCATE STORAGE for a (Composite) Range or List partitioned table

Cause: User specified ALLOCATE STORAGE clause in ALTER TABLE statement issued against a Range or Composite Range partitioned table which is illegal.

Action: Remove the illegal option. If it is desired to add storage to individual partitions/subpartitions, ALLOCATE STORAGE clause may be specified with ALTER TABLE MODIFY PARTITION/SUBPARTITION statement. If it is desired to add storage to all subpartitions of a Composite partition, ALLOCATE STORAGE clause may be specified with ALTER TABLE MODIFY PARTITION.

ORA-14255: table is not partitioned by Range, List, Composite Range or Composite List method

Cause: The table was not partitioned by Range, List, Composite Range or Composite List method.

Action: ALTER TABLE SPLIT/DROP PARTITION or ALTER TABLE MERGE PARTITIONS command is only valid for table partitioned by Range, List, Composite Range or Composite List methods. Ensure that the table is partitioned appropriately.

ORA-14256: invalid resulting partition description(s)

Cause: User specified STORE-IN clause, SUBPARTITIONS clause, and/or *subpartition-description* clause in partition description(s) in ALTER TABLE SPLIT PARTITION or ALTER TABLE MERGE PARTITIONS statement but the table in the maintenance operation is not a Composite Range partitioned table which is illegal

Action: Remove invalid clause(s), or ensure that the table is partitioned by Composite Range method

ORA-14257: cannot move partition other than a Range, List, System, or Hash partition

Cause: User attempt to move a partition that is not a Range,List,System, or Hash partition which is illegal

Action: Specify MOVE PARTITION for a Range,List,System, or Hash partition only

ORA-14258: invalid partition description

Cause: User specified STORE-IN clause, SUBPARTITIONS clause, and/or *subpartition-description* clause in ALTER TABLE ADD PARTITION statement but the table in the maintenance operation is not a Composite Range/Hash partitioned table which is illegal

Action: Remove invalid clause(s), or ensure that the table is partitioned by Composite Range/Hash method

ORA-14259: table is not partitioned by Hash method

Cause: ALTER TABLE COALESCE PARTITION is only valid for table partitioned by Hash method

Action: Specify valid ALTER TABLE option for the table, or ensure that the table is partitioned by Hash method

ORA-14260: incorrect physical attribute specified for this partition

Cause: User specified INITRANS, MAXTRANS, STORAGE, PCTFREE, PCTUSED, and/or [NO]LOGGING option to a Hash partition via ALTER TABLE ADD/MOVE PARTITION command which is illegal. Only TABLESPACE may be specified.

Action: Remove invalid option(s)

ORA-14261: partition bound may not be specified when adding this Hash partition

Cause: User specified VALUES LESS THAN clause when adding a partition (via ALTER TABLE ADD PARTITION) to a Hash partitioned table which is illegal

Action: Remove VALUES LESS THAN clause from the description of partition being added

ORA-14262: new subpartition name must differ from the old subpartition name

Cause: User entered ALTER TABLE/INDEX RENAME SUBPARTITION specifying *new-subpartition-name* which is identical to the name of the subpartition being renamed

Action: Ensure that the new subpartition name is different from the name of any (including the one being renamed) existing subpartition of a given table or index

ORA-14263: new subpartition name must differ from that of any other subpartition of the object

Cause: User entered ALTER TABLE/INDEX RENAME SUBPARTITION specifying *new-subpartition-name* which is identical to the name of some existing subpartition of the object

Action: Ensure that the new subpartition name is different from the name of any (including the one being renamed) existing subpartition of a given table or index

ORA-14264: table is not partitioned by Composite Range method

Cause: The table in the MODIFY DEFAULT ATTRIBUTES FOR PARTITION operation is partitioned by method other than Composite method

Action: Ensure that the table is partitioned by Composite method

ORA-14265: data type or length of a table subpartitioning column may not be changed

Cause: User issued ALTER TABLE statement attempting to modify data type and/or length of a column used to subpartition the table named in ALTER TABLE statement, which is illegal

Action: Avoid modifying data type and/or length of table subpartitioning column(s)

ORA-14266: data type or length of an index subpartitioning column may not be changed

Cause: User issued ALTER TABLE statement attempting to modify data type and/or length of a column used to subpartition some index defined on the table named in ALTER TABLE statement, which is illegal

Action: Avoid modifying data type and/or length of index subpartitioning column(s)

ORA-14267: cannot specify PARALLEL clause when adding a (Composite) Range partition

Cause: User issued ALTER TABLE ADD PARTITION statement with PARALLEL clause for a Range or Composite Range partition which is illegal

Action: Remove the PARALLEL clause.

ORA-14268: subpartition '*string*' of the partition resides in offlined tablespace

Cause: User attempted an operation requiring that we access data in a subpartition which resides in a tablespace which was taken offline. Such operations include trying to drop a tablespace of a table which has indices defined on it or is referenced by a constraint.

Action: Bring tablespace online before attempting the operation.

ORA-14269: cannot exchange partition other than a Range,List,System, or Hash partition

Cause: User attempt to exchange a partition with a non-partitioned table but the specified partition is not a Range,List,System, or Hash partition which is illegal

Action: Specify EXCHANGE PARTITION for a Range,List,System, or Hash partition only

ORA-14270: table is not partitioned by Range, System, Hash or List method

Cause: The table in ALTER TABLE MODIFY PARTITION { UNUSABLE LOCAL INDEXES | REBUILD UNUSABLE LOCAL INDEXES } statement is not partitioned by Range,List,System, or Hash method which is illegal.

Action: Ensure that the table is partitioned by Range,List,System, or Hash method

ORA-14271: table is not partitioned by Composite Range method

Cause: The table in ALTER TABLE MODIFY SUBPARTITION { UNUSABLE LOCAL INDEXES | REBUILD UNUSABLE LOCAL INDEXES } statement is not partitioned by Composite Range method which is illegal.

Action: Ensure that the table is partitioned by Composite Range method

ORA-14272: only a partition with higher bound can be reused

Cause: User attempt to reuse a lower-bound partition in ALTER TABLE MERGE PARTITIONS statement as the resulting partition which is illegal.

Action: Use the higher-bound partition to be the resulting partition or specify a new partition name

ORA-14273: lower-bound partition must be specified first

Cause: User specified higher-bound partition before lower-bound partition in ALTER TABLE MERGE PARTITIONS statement which is illegal

Action: Specify lower-bound partition then higher-bound partition

ORA-14274: partitions being merged are not adjacent

Cause: User attempt to merge two partitions that are not adjacent to each other which is illegal

Action: Specify two partitions that are adjacent

ORA-14275: cannot reuse lower-bound partition as resulting partition

Cause: User attempt to reuse lower-bound partition of the partitions being merged which is illegal

Action: Specify new resulting partition name or reuse the higher-bound partition only

ORA-14276: EXCHANGE SUBPARTITION requires a non-partitioned, non-clustered table

Cause: The table in the ALTER TABLE EXCHANGE SUBPARTITION operation is either clustered or partitioned

Action: Ensure that the table with which the subpartition is being exchanged for is not partitioned or clustered.

ORA-14277: tables in EXCHANGE SUBPARTITION must have the same number of columns

Cause: The two tables specified in the ALTER TABLE EXCHANGE SUBPARTITION have different number of columns

Action: Ensure that the two tables have the same number of columns with the same type and size.

ORA-14278: column type or size mismatch in EXCHANGE SUBPARTITION

Cause: The corresponding columns in the tables specified in the ALTER TABLE EXCHANGE SUBPARTITION are of different type or size

Action: Ensure that the two tables have the same number of columns with the same type and size.

ORA-14279: index mismatch for tables in ALTER TABLE EXCHANGE SUBPARTITION

Cause: The two tables specified in the ALTER TABLE EXCHANGE SUBPARTITION have indexes which are not equivalent

Action: Ensure that the indexes for the two tables have indexes which follow this rule For every non partitioned index for the non partitioned table, there has to be an identical LOCAL index on the partitioned table and vice versa. By identical, the column position, type and size have to be the same.

ORA-14280: all rows in table do not qualify for specified subpartition

Cause: There is at least one row in the non partitioned table which does not qualify for the subpartition specified in the ALTER TABLE EXCHANGE SUBPARTITION

Action: Ensure that all the rows in the segment qualify for the subpartition. Perform the alter table operation with the NO CHECKING option. Run ANALYZE table VALIDATE on that subpartition to find out the invalid rows and delete them.

ORA-14281: CHECK constraint mismatch in ALTER TABLE EXCHANGE SUBPARTITION

Cause: The corresponding columns in the tables specified in the ALTER TABLE EXCHANGE SUBPARTITION statement have CHECK constraint defined on them.

Action: Ensure that the two tables do not have CHECK constraint defined on any column

ORA-14282: FOREIGN KEY constraint mismatch in ALTER TABLE EXCHANGE SUBPARTITION

Cause: The corresponding columns in the tables specified in the ALTER TABLE EXCHANGE SUBPARTITION statement have different FOREIGN KEY constraints.

Action: Ensure that the two tables do not have FOREIGN KEY constraints defined on any column or disable all FOREIGN KEY constraints on both tables. Then retry the operation.

ORA-14283: UNIQUE constraints mismatch in ALTER TABLE EXCHANGE SUBPARTITION

Cause: One of the tables named in the ALTER TABLE EXCHANGE SUBPARTITION command has a UNIQUE constraint for which no matching (vis-a-vis key columns) constraint is defined on the other table or a matching constraint is defined on the other table, but it differs from that defined on the first table vis-a-vis being enabled and/or validated.

Action: Ensure that for every UNIQUE constraint defined on one of the tables named in the ALTER TABLE EXCHANGE SUBPARTITION statement there is a matching (vis-a-vis key columns and being enabled and/or validated) UNIQUE constraint defined on the other table. If UNIQUE constraints are enabled, UNIQUE constraints on the partitioned table should be enforced using local indexes.

ORA-14284: one or more of table's subpartitions reside in a read-only tablespace

Cause: User issued ALTER TABLE statement attempting to modify an existing VARCHAR2 (or VARCHAR) column to be of type CHAR (or CHARACTER), increase length of an existing CHAR (or CHARACTER) column, or add a column with user-specified default for a table one or more subpartitions of which reside in read-only tablespaces, which is illegal

Action: Avoid performing aforementioned operations on a partitioned table one or more subpartitions of which reside in read-only tablespaces

ORA-14285: cannot COALESCE the only partition of this hash partitioned table or index

Cause: A COALESCE PARTITION command was issued when there is only one partition in the table or index, which is illegal

Action: Ensure that there is at least one partition. Drop the table or index to remove all partitions.

ORA-14286: cannot COALESCE the only subpartition of this table partition

Cause: A COALESCE SUBPARTITION command was issued when there is only one subpartition in the partition which is illegal

Action: Ensure that there is at least one subpartition. Drop partition to remove all subpartitions.

ORA-14287: cannot REBUILD a partition of a Composite Range partitioned index
Cause: User attempted to rebuild a partition of a Composite Range partitioned index which is illegal

Action: REBUILD the index partition, a subpartition at a time

ORA-14288: index is not partitioned by Composite Range method

Cause: The index in a partition or subpartition maintenance operation (ALTER INDEX MODIFY [SUBPARTITION | DEFAULT ATTRIBUTES FOR PARTITION] or ALTER INDEX REBUILD SUBPARTITION command must be partitioned by Composite Range method

Action: n/a

ORA-14289: cannot make local index partition of Composite Range partitioned table unusable

Cause: User attempted to rebuild a partition of a Composite Range partitioned index which is illegal

Action: n/a

ORA-14290: PRIMARY KEY constraint mismatch in ALTER TABLE EXCHANGE [SUB]PARTITION

Cause: The corresponding columns in the tables specified in the ALTER TABLE EXCHANGE [SUB]PARTITION statement have different PRIMARY KEY constraints.

Action: Ensure that the two tables do not have PRIMARY KEY constraints defined on any column or disable all PRIMARY KEY constraints on both tables. Then retry the operation.

ORA-14291: cannot EXCHANGE a composite partition with a non-partitioned table

Cause: A composite partition can only be exchanged with a partitioned table.

Action: Ensure that the table being exchanged is partitioned or that that the partition being exchanged is non-composite.

ORA-14292: Partitioning type of table must match subpartitioning type of composite partition

Cause: When exchanging a partitioned table with a composite partition the partitioning type of the table must match the subpartitioning type of the composite partition.

Action: Ensure that the partitioning type of partitioned table is the same as the subpartitioning type of the composite partition.

ORA-14293: Number of partitioning columns does not match number of subpartitioning columns

Cause: When exchanging a partitioned table with a composite partition the number of partitioning columns of the table must match the number of subpartitioning columns of the composite partition.

Action: Ensure that the number of partitioning columns in the partitioned table is the same as the number of subpartitioning columns in the the composite partition.

ORA-14294: Number of partitions does not match number of subpartitions

Cause: When exchanging a partitioned table with a composite partition the number of partitions of the table must match the number of subpartitions of the composite partition.

Action: Ensure that the number of partitions in the partitioned table is the same as the number of subpartitions in the the composite partition.

ORA-14295: column type or size mismatch between partitioning columns and subpartitioning columns

Cause: When exchanging a partitioned table with a composite partition the type and size of the partitioning columns of the table must match the type and size of the subpartitioning columns of the composite partition.

Action: Ensure that the type and size of the partitioning columns of the partitioned is the same as the type and size of the subpartitioning columns of the composite partition.

ORA-14296: Table block size mismatch in ALTER TABLE EXCHANGE [SUB]PARTITION

Cause: The block sizes of the two tables specified in the ALTER TABLE EXCHANGE [SUB]PARTITION statement are different. For index organized tables, either the block sizes of the index or the overflow (or both) do not match.

Action: Ensure that the block sizes of the tables involved in the ALTER TABLE EXCHANGE [SUB]PARTITION statement are the same. For index organized tables, ensure that the block sizes of both the index and the overflow of the two tables match.

ORA-14297: Index block size mismatch in ALTER TABLE EXCHANGE [SUB]PARTITION

Cause: The block sizes of a pair of indexes being exchanged in the ALTER TABLE EXCHANGE [SUB]PARTITION statement are different.

Action: Ensure that the block sizes of the corresponding pairs of indexes that need to be exchanged in the ALTER TABLE EXCHANGE [SUB]PARTITION statement are the same.

ORA-14298: LOB column block size mismatch in ALTER TABLE EXCHANGE [SUB]PARTITION

Cause: The block sizes of a pair of corresponding LOB columns of the two tables specified in the ALTER TABLE EXCHANGE [SUB]PARTITION statement are different.

Action: Ensure that the block sizes of corresponding pairs of LOB columns of the tables involved in the ALTER TABLE EXCHANGE [SUB]PARTITION statement are the same.

ORA-14299: total number of partitions/subpartitions exceeds the maximum limit

Cause: The total number of combined fragments specified in partitions /subpartitions exceeds 1048575.

Action: Reissue the statement with fewer number of fragments

ORA-14300: partitioning key maps to a partition outside maximum permitted number of partitions

Cause: The row inserted had a partitioning key that maps to a partition number greater than 1048575

Action: Ensure that the partitioning key falls within 1048575 partitions or subpartitions.

ORA-14301: table-level attributes must be specified before partition-level attributes

Cause: While processing an ALTER TABLE ADD COLUMN statement, table-level attributes of LOB columns were encountered after processing partition-level

attributes of LOB columns or while processing CREATE TABLE statement, table-level attributes of LOB columns were encountered after processing partition descriptions.

Action: Modify the SQL statement to specify table-level attributes prior to partition-level attributes or partition descriptions; then retry the statement.

ORA-14302: only one list of added-LOB-storage-clauses can be specified in a statement

Cause: While parsing an ALTER TABLE ADD COLUMN statement, one list of added-LOB-storage-clauses was parsed when another list of added-LOB-storage-clauses was encountered. There cannot be more than one list of added-LOB-storage-clauses in a statement; all added-LOB-storage-clauses must be combined into one list.

Action: Combine all of the lists of added-LOB-storage-clauses into one list and retry the statement.

ORA-14303: partitions or subpartitions are not in the right order

Cause: User attempted to rebuild a partition of a Composite Range partitioned index which is illegal

Action: Re-order the partitions or subpartitions in the added LOB storage clause by partition or subpartition DDL order, and retry the statement.

ORA-14304: List partitioning method expects a single partitioning column

Cause: number of columns in a partitioning column list exceeded the legal limit of 1 for List partitioned objects

Action: modify partitioning column list so that it consists of at most 1 column

ORA-14305: List value 'string' specified twice in partition 'string'

Cause: A list value cannot be specified more than once

Action: Remove one of the specifications of the value

ORA-14306: List value 'string' specified twice in partitions 'string', 'string'

Cause: A list value cannot be specified more than once

Action: Remove one of the specifications of the value

ORA-14307: partition contains too many list values

Cause: Partition list contains more than 524288 list values

Action: Reduce the number of values to not exceed 524288 values

ORA-14308: partition bound element must be one of: string, datetime or interval literal, number, or NULL

Cause: Partition bound list contained an element of invalid type (i.e. not a number, non-empty string, datetime or interval literal, or NULL)

Action: Ensure that all elements of partition bound list are of valid type

ORA-14309: Total count of list values exceeds maximum allowed

Cause: Partitioned object contains more than 524288 list values

Action: Reduce number of values to less than 524288.

ORA-14310: VALUES LESS THAN or AT clause cannot be used with List partitioned tables

Cause: VALUES LESS THAN or AT clause can be used only with Range partitioned tables

Action: Use VALUES (*value list*) clause with List partitioned tables

ORA-14311: Expecting VALUES LESS THAN or AT clause

Cause: VALUES (*value list*) clause can be used only with List partitioned tables

Action: Use VALUES LESS THAN clause with Range partitioned tables

ORA-14312: Value *string* already exists in partition *string*

Cause: One of the list values in the ADD PARTITION or ADD VALUES statement already exists in another partition

Action: Remove the duplicate value from the statement and try again

ORA-14313: Value *string* does not exist in partition *string*

Cause: One of the list values in the SPLIT PARTITION or DROP VALUES statement does not exist in the partition

Action: Remove the value from the statement and try again

ORA-14314: resulting List partition(s) must contain atleast 1 value

Cause: After a SPLIT/DROP VALUE of a list partition, each resulting partition(as applicable) must contain at least 1 value

Action: Ensure that each of the resulting partitions contains atleast 1 value

ORA-14315: cannot merge a partition with itself

Cause: The same partition name was specified twice for the merge operation

Action: Re-submit operation with 2 distinct partition names

ORA-14316: table is not partitioned by List method

Cause: ALTER TABLE ADD|DROP VALUES can only be performed on List partitioned objects

Action: Re-issue the command against a List partitioned object.

ORA-14317: cannot drop the last value of partition

Cause: ALTER TABLE DROP VALUES tried to drop the last value of the partition

Action: Cannot execute the command, unless two or more values exist for partition

ORA-14318: DEFAULT partition must be last partition specified

Cause: A partition description follows the one describing the default partition

Action: Ensure that the DEFAULT partition is the last partition description

ORA-14319: DEFAULT cannot be specified with other values

Cause: DEFAULT keyword has been specified along with other values when specifying the values for a list partition

Action: Ensure that if DEFAULT is specified, it is the only value specified

ORA-14320: DEFAULT cannot be specified for ADD/DROP VALUES or SPLIT

Cause: DEFAULT keyword has been specified when doing a ADD VALUES or DROP VALUES or SPLIT partition or subpartition.

Action: Ensure that DEFAULT is not specified for ADD/DROP VALUES or SPLIT partition/subpartition operation.

ORA-14321: cannot add/drop values to DEFAULT partition

Cause: A ADD/DROP VALUES operation is being done on the default partition

Action: Ensure that ADD/DROP VALUES is not done on the DEFAULT partition

ORA-14322: DEFAULT partition already exists

Cause: A partition already exists with DEFAULT value

Action: n/a

ORA-14323: cannot add partition when DEFAULT partition exists

Cause: An ADD PARTITION operation cannot be executed when a partition with DEFAULT values exists

Action: Issue a SPLIT of the DEFAULT partition instead

ORA-14324: values being added already exist in DEFAULT partition

Cause: An ADD VALUE operation cannot be executed because the values being added exist in the DEFAULT partition

Action: Issue a SPLIT of the DEFAULT partition and then MERGE the split partition into the partition to which values need to be added

ORA-14325: only LOCAL indexes may be specified in this clause

Cause: A global index has been specified in the UPDATE INDEXES (..) clause

Action: Only specify local indexes when using this clause

ORA-14326: Primary index on an IOT, DOMAIN and LOB indexes may not be specified in the UPDATE INDEXES clause

Cause: A Primary index on an IOT, DOMAIN or LOB index has been specified in the UPDATE INDEXES (..) clause

Action: Do not specify any of these indexes when using this clause

ORA-14327: Some index [sub]partitions could not be rebuilt

Cause: The first phase (partition DDL and index [sub]partition placement) completed successfully. During the second phase, some of the index [sub]partitions could not be rebuilt.

Action: Search the alert log for the string DBMS_INDEX_UTL. Check the error associated with each of the [sub]partitions that could not be rebuilt and take the appropriate corrective action.

ORA-14329: domain index [sub]partitions cannot be renamed in this clause

Cause: The user tried to rename a domain index [sub]partition in the UPDATE INDEXES clause of a ALTER TABLE MOVE [SUB]PARTITION operation. This is not allowed.

Action: Leave the name blank or use the same name.

ORA-14330: Cannot drop a partition of a global hash-partitioned index

Cause: An attempt was made to drop a partition of a hash-partitioned global index.

Action: Try COALESCE PARTITION instead.

ORA-14331: cannot drop all [sub]partitions of a partitioned table

Cause: An attempt was made to drop all partitions of a partitioned table.

Action: Try DROP TABLE instead.

ORA-14332: duplicate partition or subpartition names specified

Cause: The list of partitions contained duplicate partition or subpartition names.

Action: Ensure that list of partition or subpartition names are distinct.

ORA-14333: subpartition names specified are across multiple partitions

Cause: The specified subpartitions did not belong to the same partition.

Action: Ensure that all subpartitions specified belong to the same partition.

ORA-14334: guard column expected

Cause: There was no guard column or the NOT NULL constraint was not specified for this column.

Action: Add a guard column or NOT NULL constraint for column.

ORA-14335: number of new fragments for adding partitions exceeds the maximum limit

Cause: The total number of new fragments for adding partitions exceeded 125000.

Action: Reissue the statement with a fewer number of new fragments.

ORA-14400: inserted partition key does not map to any partition

Cause: An attempt was made to insert a record into, a Range or Composite Range object, with a concatenated partition key that is beyond the concatenated partition bound list of the last partition -OR- An attempt was made to insert a record into a List object with a partition key that did not match the literal values specified for any of the partitions.

Action: Do not insert the key. Or, add a partition capable of accepting the key, Or add values matching the key to a partition specification

ORA-14401: inserted partition key is outside specified partition

Cause: the concatenated partition key of an inserted record is outside the ranges of the two concatenated partition bound lists that delimit the partition named in the INSERT statement

Action: do not insert the key or insert it in another partition

ORA-14402: updating partition key column would cause a partition change

Cause: An UPDATE statement attempted to change the value of a partition key column causing migration of the row to another partition

Action: Do not attempt to update a partition key column or make sure that the new partition key is within the range containing the old partition key.

ORA-14403: cursor invalidation detected after getting DML partition lock

Cause: cursor invalidation was detected after acquiring a partition lock during an INSERT, UPDATE, DELETE statement. This error is never returned to user, because is caught in opiexe() and the DML statement is retried.

Action: nothing to be done, error should never be returned to user

ORA-14404: partitioned table contains partitions in a different tablespace

Cause: An attempt was made to drop a tablespace which contains tables whose partitions are not completely contained in this tablespace

Action: find tables with partitions which span the tablespace being dropped and some other tablespace(s). Drop these tables or move partitions to a different tablespace

ORA-14405: partitioned index contains partitions in a different tablespace

Cause: An attempt was made to drop a tablespace which contains indexes whose partitions are not completely contained in this tablespace, and which are defined on the tables which are completely contained in this tablespace.

Action: find indexes with partitions which span the tablespace being dropped and some other tablespace(s). Drop these indexes, or move the index partitions to a different tablespace, or find the tables on which the indexes are defined, and drop (or move) them.

ORA-14406: updated partition key is beyond highest legal partition key

Cause: An attempt was made to update a record with a concatenated partition key that is beyond the concatenated partition bound list of the last partition.

Action: Do not update the key. Or, add a partition capable of accepting the key.

ORA-14407: partitioned table contains subpartitions in a different tablespace

Cause: An attempt was made to drop a tablespace which contains tables whose subpartitions are not completely contained in this tablespace

Action: find tables with subpartitions which span the tablespace being dropped and some other tablespace(s). Drop these tables or move subpartitions to a different tablespace

ORA-14408: partitioned index contains subpartitions in a different tablespace

Cause: An attempt was made to drop a tablespace which contains indexes whose subpartitions are not completely contained in this tablespace, and which are defined on the tables which are completely contained in this tablespace.

Action: find indexes with subpartitions which span the tablespace being dropped and some other tablespace(s). Drop these indexes, or move the index partitions to a different tablespace, or find the tables on which the indexes are defined, and drop (or move) them.

ORA-14409: inserted partition key is outside specified subpartition

Cause: the concatenated partition key of an inserted record is outside the ranges of the two concatenated subpartition bound lists that delimit the subpartition named in the INSERT statement

Action: do not insert the key or insert it in another subpartition

ORA-14411: The DDL cannot be run concurrently with other DDLs

Cause: Another conflicting DDL was already running.

Action: Retry after the conflicting DDL has finished.

ORA-14413: ALTER INDEX UNUSABLE ONLINE cannot be used with certain types of indexes.

Cause: An attempt was made to use the ALTER INDEX UNUSABLE ONLINE statement on an index type (for example, indexed-organized table (IOT), cluster, LOB, domain indexes) that was not allowed.

Action: Using the ALTER INDEX UNUSABLE ONLINE statement on certain types of indexes (for example, indexed-organized table (IOT), cluster, LOB, domain indexes) is illegal. Remove the ONLINE keyword from the statement.

ORA-14414: DROP INDEX ONLINE cannot be used with certain types of indexes.

Cause: An attempt was made to use the DROP INDEX ONLINE statement on an index type (for example, indexed-organized table (IOT), cluster, LOB, domain indexes) that was not allowed.

Action: Using the DROP INDEX ONLINE statement on certain types of indexes (for example, indexed-organized table (IOT), cluster, LOB, domain indexes) is illegal. Remove the ONLINE keyword from the statement.

ORA-14415: index in partially dropped state, submit DROP INDEX

Cause: An attempt was made to access an index in a partially dropped state.

Action: Submit the DROP INDEX *index* statement to drop the index.

ORA-14416: Online DDL's cannot be used with certain types of tables.

Cause: An attempt was made to use the DROP INDEX ONLINE, ALTER TABLE DROP CONSTRAINT ONLINE, or ALTER TABLE SET UNUSED COLUMN ONLINE statement on a table type (for example, cluster, temporary, index-organized table (IOT), external tables) that was not allowed.

Action: Using online DDL's like DROP INDEX ONLINE, ALTER TABLE DROP CONSTRAINT ONLINE, or ALTER TABLE SET UNUSED COLUMN ONLINE statement on certain types of tables (for example, cluster, temporary, indexed-organized table (IOT), external tables) is illegal. Remove the ONLINE keyword from the statement.

ORA-14417: Online DDL's cannot be used with deferrable constraints.

Cause: An attempt was made to use the DROP CONSTRAINT ONLINE or SET UNUSED COLUMN ONLINE statement on constraint states (for example, deferrable, deferred) that was not allowed.

Action: Using DROP CONSTRAINT ONLINE or SET UNUSED COLUMN ONLINE statement on constraints that are deferrable or deferred is illegal. Remove the ONLINE keyword from the statement.

ORA-14418: Online DDL's cannot be used with this constraint type.

Cause: An attempt was made to use the DROP CONSTRAINT ONLINE or SET UNUSED COLUMN ONLINE statement on a constraint type other than check, primary key, unique, referential, or not null constraint.

Action: Using DROP CONSTRAINT ONLINE or SET UNUSED COLUMN ONLINE statement on any other constraint types excluding check, primary key, unique, referential, or not null constraints is illegal. Remove the ONLINE keyword from the DDL.

ORA-14419: DROP CONSTRAINT ONLINE does not support the CASCADE option.

Cause: An attempt was made to use the CASCADE option with DROP CONSTRAINT ONLINE statement.

Action: Using the CASCADE option with the DROP CONSTRAINT ONLINE statement is illegal. Remove the CASCADE keyword from the statement. Drop the child key constraint in a separate DROP CONSTRAINT ONLINE statement on the child table.

ORA-14450: attempt to access a transactional temp table already in use

Cause: An attempt was made to access a transactional temporary table that has been already populated by a concurrent transaction of the same session.

Action: do not attempt to access the temporary table until the concurrent transaction has committed or aborted.

ORA-14451: unsupported feature with temporary table

Cause: An attempt was made to create an IOT, specify physical attributes, specify partition or parallel clause.

Action: do not do that.

ORA-14452: attempt to create, alter or drop an index on temporary table already in use

Cause: An attempt was made to create, alter or drop an index on temporary table which is already in use.

Action: All the sessions using the session-specific temporary table have to truncate table and all the transactions using transaction specific temporary table have to end their transactions.

ORA-14453: attempt to use a LOB of a temporary table, whose data has already been purged

Cause: An attempt was made to use LOB from a temporary table whose data has been dropped either because table was transaction-specific and transaction has committed or aborted, table was truncated or session which created this LOB has ended.

Action: This LOB locator is invalid and cannot be used.

ORA-14454: attempt to reference temporary table in a referential integrity constraint

Cause: An attempt was made to reference temporary table in a referential integrity constraint. This is not supported.

Action: Use triggers.

ORA-14455: attempt to create referential integrity constraint on temporary table

Cause: An attempt was made to create a referential integrity constraint on a temporary table. This is not supported.

Action: Use triggers.

ORA-14456: cannot rebuild index on a temporary table

Cause: An attempt was made to rebuild an index on a temp table.

Action: The index data is anyway lost at end of session/transaction.

ORA-14457: disallowed Nested Table column in a Temporary table

Cause: An attempt made to create a Nested Table column in a temporary table. This is not supported.

Action: Do not specify these datatypes for temporary tables.

ORA-14458: attempt was made to create a temporary table with INDEX organization

Cause: An attempt was made to create an Index Organized Temporary table. This is not supported.

Action: Create the table with HEAP organization and the primary key.

ORA-14459: missing GLOBAL keyword

Cause: keyword GLOBAL is missing while creating temporary table.

Action: supply keyword.

ORA-14460: only one COMPRESS or NOCOMPRESS clause may be specified

Cause: COMPRESS was specified more than once, NOCOMPRESS was specified more than once, or both COMPRESS and NOCOMPRESS were specified.

Action: specify each desired COMPRESS or NOCOMPRESS clause option only once.

ORA-14461: cannot REUSE STORAGE on a temporary table TRUNCATE

Cause: REUSE STORAGE was specified with TRUNCATE on a temporary table. This is unsupported as it is meaningless.

Action: Specify DROP STORAGE instead (which is the default).

ORA-14462: cannot TRUNCATE temporary table in an autonomous transaction which is already in use by the parent transaction

Cause: An attempt was made to TRUNCATE a temporary table in an autonomous transaction which is already in use by the parent transaction.

Action: Make sure the temporary table is not being used by the parent transaction before trying to TRUNCATE in an autonomous transaction.

ORA-14463: OPERATIONS keyword not specified

Cause: OPERATIONS keyword was not specified in the Compression Clause.

Action: specify OPERATIONS in the Compression Clause.

ORA-14464: Compression Type not specified

Cause: Compression Type was not specified in the Compression Clause.

Action: specify Compression Type in the Compression Clause.

ORA-14465: Fast-Split is not possible on these partitions

Cause: The Fast-Split event was forced in this session.

Action: Disable the event that forces Fast-Split.

ORA-14500: LOCAL option not valid without partition name

Cause: Incorrect syntax specified

Action: Retry the command

ORA-14501: object is not partitioned

Cause: Table or index is not partitioned. Invalid syntax.

Action: Retry the command with correct syntax.

ORA-14503: only one partition name can be specified

Cause: More than one partition name has been specified for analyze

Action: Specify one partition name.

ORA-14504: syntax not supported for analyze

Cause: A partition/subpartition number or bind variable has been used

Action: Specify a valid partition/subpartition name.

ORA-14505: LOCAL option valid only for partitioned indexes

Cause: Incorrect syntax specified

Action: Retry the command

ORA-14506: LOCAL option required for partitioned indexes

Cause: Incorrect syntax specified

Action: Retry the command

ORA-14507: partition corrupt. all rows do not fall within partition bounds

Cause: The partition contains rows which should really be in some other partition. Possibly due to an exchange partition without validation

Action: Delete rows in partition which do not qualify

ORA-14508: specified VALIDATE INTO table not found

Cause: The specified table either does not exist or user does not have the proper privileges.

Action: Specify the correct table to use.

ORA-14509: specified VALIDATE INTO table form incorrect

Cause: The specified table does not have the proper field definitions.

Action: Specify the correct table to use. See utlvalid.sql for more information.

ORA-14510: can specify VALIDATE INTO clause only for partitioned tables

Cause: The VALIDATE INTO has been specified for a non partitioned table or cluster or index.

Action: Use syntax correctly

ORA-14511: cannot perform operation on a partitioned object

Cause: An attempt was made to perform an operation that is not allowed on partitioned tables or indexes.

Action: Retry the command with correct syntax.

ORA-14512: cannot perform operation on a clustered object

Cause: An attempt was made to perform an operation that is not allowed on clustered tables or indexes.

Action: Retry the command with correct syntax.

ORA-14513: partitioning column may not be of object datatype

Cause: Partitioning column specified by the user was an object datatype (object, REF, nested table, array) which is illegal.

Action: Ensure that no partitioning column is an object datatype.

ORA-14514: LOCAL option not valid without subpartition name

Cause: Incorrect syntax specified

Action: Retry the command

ORA-14515: only one subpartition name can be specified

Cause: More than one subpartition name has been specified for analyze

Action: Specify one subpartition name.

ORA-14516: subpartition corrupt. all rows do not fall within subpartition bounds

Cause: The subpartition contains rows which should really be in some other subpartition. Possibly due to an exchange subpartition without validation

Action: Delete rows in subpartition which do not qualify

ORA-14517: subpartition of index '*string.string*' is in unusable state

Cause: An attempt has been made to access an index subpartition that has been marked unusable by a direct load or by a DDL operation

Action: REBUILD the unusable index subpartition

ORA-14518: partition contains rows corresponding to values being dropped

Cause: table partition contains rows for the values being dropped.

Action: DELETE all rows for the values being dropped and reissue statement

ORA-14519: Conflicting tablespace block sizes for *string* *string*: Tablespace *string* block size *string* [*string*] conflicts with previously specified/implied tablespace *string* block size *string* [*string*]

Cause: An attempt has been made to create a partitioned object in a manner that would require the partitioned object to span tablespaces of more than one block size.

Action: Ensure that all tablespaces specified in the DDL command for the given object as well as any tablespaces implicitly assigned to partitions or subpartitions of the object being created are all of the same block size.

ORA-14520: Tablespace *string* block size [*string*] does not match existing object block size [*string*]

Cause: A DDL statement was issued that would require a tablespace of a block size different from the block size of the specified partitioned object to be assigned either: (1) As the object's default tablespace (or one of the object's partition-level default tablespaces, if composite partitioning is being used) OR (2) To one of the object's partitions/subpartitions.

Action: Specify a tablespace of the same block size as the partitioned object.

ORA-14521: Default tablespace *string* block size [*string*] for *string* *string* does not match existing *string* block size [*string*]

Cause: A DDL statement was issued that would require creation of a new partition/subpartition in the object-level default tablespace of an existing partitioned object. However, the object-level default tablespace block size does not match the block size of the partitioned object.

Action: Either (1) Modify the default tablespace of the partitioned object to a tablespace of the same block size as the object and then retry the DDL command, OR (2) Ensure that tablespaces of the correct block size are specified for all new partitions/subpartitions being created.

ORA-14522: Partition-level default tablespace *string* block size [*string*] for *string* *string* does not match existing *string* block size [*string*]

Cause: A DDL statement was issued that would require creation of a new subpartition in one of the partition-level default tablespaces of an existing composite partitioned object. However, the partition-level default tablespace block size does not match the block size of the partitioned object.

Action: Either (1) Modify the partition-level default tablespace of the appropriate partition of the partitioned object to a tablespace of the same block size as the object and then retry the DDL command, OR (2) Ensure that tablespaces of the correct block size are specified for all new subpartitions being created.

ORA-14523: Cannot co-locate [sub]partition of *string* *string* with table [sub]partition because *string* block size [*string*] does not match table block size [*string*]

Cause: A DDL statement was issued that would require a partition/subpartition of a local index/LOB column to be co-located with the corresponding partition/subpartition of the base table. However, this is not possible because the block sizes of the table and the LOB column/local index are different.

Action: Either (1) Specify an object-level default tablespace (or partition-level default tablespace for the appropriate partition, if composite partitioning is used) for the partitioned local index/LOB column and then retry the DDL command, OR (2) Ensure that tablespaces of the correct block size are specified for all new partitions/

subpartitions being created. Also ensure that neither of TABLESPACE DEFAULT and STORE IN (DEFAULT) is specified for a local index whose block size does not match that of the base table.

ORA-14530: row mismatches found in table *string.string* and index *string.string*

Cause: rows in table and index inconsistent

Action: run complete analyze to determine corrupt rows

ORA-14551: cannot perform a DML operation inside a query

Cause: DML operation like insert, update, delete or select-for-update cannot be performed inside a query or under a PDML slave.

Action: Ensure that the offending DML operation is not performed or use an autonomous transaction to perform the DML operation within the query or PDML slave.

ORA-14552: cannot perform a DDL, commit or rollback inside a query or DML

Cause: DDL operations like creation tables, views etc. and transaction control statements such as commit/rollback cannot be performed inside a query or a DML statement.

Action: Ensure that the offending operation is not performed or use autonomous transactions to perform the operation within the query/DML operation.

ORA-14553: cannot perform a lob write operation inside a query

Cause: A lob write operation cannot be performed inside a query or a PDML slave.

Action: Ensure that the offending lob write operation is not performed or use an autonomous transaction to perform the operation within the query or PDML slave.

ORA-14554: cannot perform requested operation during database startup

Cause: Requested operation requires the Cost Based Optimizer(CBO) which is not available during database startup. Features like partitioning, IOTs, grouping sets, and flashback cursor require the CBO.

Action: Retry the query after the database is open.

ORA-14601: Illegal to specify SUBPARTITIONS or STORE-IN while specifying a subpartition template

Cause: Cannot specify these clauses while specifying a template

Action: Correct the subpartition template clause.

ORA-14602: SUBPARTITION TEMPLATE is legal only for a composite partitioned table

Cause: SUBPARTITION TEMPLATE can be specified only for composite partitioned tables

Action: Do not use SUBPARTITION TEMPLATE on non-partitioned or non-composite partitioned tables.

ORA-14603: [SUBPARTITIONS | SUBPARTITION TEMPLATE] subpartition_count syntax is valid only for range-hash tables

Cause: This syntax is valid only if subpartitioning dimension is hash

Action: n/a

ORA-14604: During CREATE TABLE time it is illegal to specify SUBPARTITIONS or STORE IN once a SUBPARTITION TEMPLATE has been specified

Cause: Once a subpartition template has been specified during a CREATE TABLE it is illegal to specify SUBPARTITIONS or STORE IN anywhere else

Action: Remove either the SUBPARTITIONS | STORE IN or remove the SUBPARTITION TEMPLATE clause

ORA-14605: Name missing for subpartition / lob segment in template

Cause: A subpartition / lob segment was not specified a name in the template descriptions

Action: All subpartitions / lob segments must have names specified in the template

ORA-14607: Tablespace was not specified for previous subpartitions in template but is specified for *string*

Cause: Tablespaces may either be specified for all subpartitions or must not be specified for any subpartitions

Action: Either specify tablespaces for all or for none of the subpartitions

ORA-14610: Lob attributes not specified for lob column *string* for subpartition *string*

Cause: Lob attributes of a column must be specified for all subpartitions or must not be specified at all

Action: Ensure lob attributes of a column are specified for all subpartitions or not specified at all

ORA-14611: Duplicate subpartition name *string* in template

Cause: A subpartition name cannot be duplicated within the template

Action: Rename one of the subpartitions.

ORA-14612: Duplicate lob segment name *string* for lob column *string* in template

Cause: Two lob segments of the same column were given the same name in the template

Action: Rename one of the lob segments

ORA-14613: Attempt to generate name from parent name *string* and template name *string* failed as the combine named would have been longer than allowed

Cause: Any name generated from a partition name and template name must be less than the maximum permissible name for an identifier

Action: Shorten either partition or template name.

ORA-14614: List value '*string*' specified twice in subpartition '*string*'

Cause: A list value cannot be specified more that once

Action: Remove one of the specifications of the value

ORA-14615: List value '*string*' specified twice in subpartitions '*string*', '*string*'

Cause: A list value cannot be specified more that once

Action: Remove one of the specifications of the value

ORA-14616: table is not subpartitioned by List method

Cause: A subpartition maintenance operation, such as ALTER TABLE MODIFY SUBPARTITION ADD|DROP VALUES, was performed on a non-List subpartitioned object.

Action: Reissue the command against a List subpartitioned object.

ORA-14617: cannot add/drop values to DEFAULT subpartition

Cause: A ADD/DROP VALUES operation is being done on the default subpartition

Action: Ensure that ADD/DROP VALUES is not done on the DEFAULT subpartition

ORA-14618: cannot drop the last value of subpartition

Cause: ALTER TABLE DROP VALUES tried to drop the last value of the subpartition

Action: Cannot execute the command, unless two or more values exist for subpartition

ORA-14619: resulting List subpartition(s) must contain at least 1 value

Cause: After a SPLIT/DROP VALUE of a list subpartition, each resulting subpartition(as applicable) must contain at least 1 value

Action: Ensure that each of the resulting subpartitions contains atleast 1 value

ORA-14620: DEFAULT subpartition already exists

Cause: A subpartition already exists with DEFAULT value

Action: Remove the DEFAULT value from the list specified

ORA-14621: cannot add subpartition when DEFAULT subpartition exists

Cause: An ADD SUBPARTITION operation cannot be executed when a subpartition with DEFAULT values exists

Action: Issue a SPLIT of the DEFAULT subpartition instead

ORA-14622: Value *string* already exists in subpartition *string*

Cause: One of the list values in the ADD SUBPARTITION or ADD VALUES statement already exists in another subpartition

Action: Remove the duplicate value from the statement and try again

ORA-14623: Value *string* does not exist in subpartition *string*

Cause: One of the list values in the SPLIT PARTITION or DROP VALUES statement does not exist in the subpartition

Action: Remove the value from the statement and try again

ORA-14624: DEFAULT subpartition must be last subpartition specified

Cause: A subpartition description follows the one describing the default subpartition

Action: Ensure that the DEFAULT subpartition is the last subpartition description

ORA-14625: subpartition contains rows corresponding to values being dropped

Cause: table subpartition contains rows for the values being dropped.

Action: DELETE all rows for the values being dropped and reissue statement

ORA-14626: values being added already exist in DEFAULT subpartition

Cause: An ADD VALUE operation cannot be executed because the values being added exist in the DEFAULT subpartition

Action: Issue a SPLIT of the DEFAULT subpartition and then MERGE the split subpartition into the subpartition to which values need to be added

ORA-14627: Invalid operation was specified on a GLOBAL partitioned index

Cause: An invalid operation such as ALTER INDEX DROP | SPLIT SUBPARTITION was specified on the global index

Action: Ensure that subpartition level operations are not specified on a GLOBAL index, since these are only RANGE partitioned

ORA-14628: specification of bounds is inconsistent with LIST method

Cause: An operation such as ALTER TABLE SPLIT | ADD SUBPARTITION specified bounds that were inconsistent with List subpartitioning method

Action: Specify VALUES/subpartition descriptions correctly for SPLIT/ADD of List subpartitions

ORA-14629: cannot drop the only subpartition of a partition

Cause: A drop subpartition command is being executed when there is only one subpartition in the partition

Action: n/a

ORA-14630: subpartition resides in offlined tablespace

Cause: User attempted an operation requiring that we access data in a subpartition which resides in a tablespace which was taken offline. Such operations include trying to drop a tablespace of a table which has indices defined on it or is referenced by a constraint.

Action: Bring tablespace online before attempting the operation.

ORA-14631: the partition bounds do not match the subpartition bounds of the partition

Cause: When exchanging a partitioned table with a composite partition the bounds that describe the partitions of the table must match the bounds that describe the subpartitions of the composite partition.

Action: Ensure that the bounds describing partitions in the partitioned table is the same as the bounds of the subpartitions in the the composite partition.

ORA-14632: cannot specify PARALLEL clause when adding a List subpartition

Cause: User issued ALTER TABLE ADD SUBPARTITION statement with PARALLEL clause for a List subpartition of a Range/List partitioned object which is illegal

Action: Remove the PARALLEL clause.

ORA-14633: Index maintenance clause not allowed for ADD list subpartition to a Composite partitioned table

Cause: The clause INVALIDATE or UPDATE GLOBAL INDEXES is allowed only for ADD hash subpartition to a composite partitioned table.

Action: Remove clause and reissue operation

ORA-14634: Subpartition descriptions cannot be specified during the SPLIT/MERGE of a partition of a Range-List partitioned table

Cause: During a split or a merge of a partition of a range list partitioned table you cannot specify any subpartitioning information for the resulting partition (s)

Action: Remove all subpartitioning information from the DDL.

ORA-14635: only one resulting subpartition can be specified for MERGE SUBPARTITIONS

Cause: ALTER TABLE MERGE SUBPARTITIONS contained more than one resulting subpartition for the MERGE

Action: Ensure that the statement describes exactly one subpartition as the target that need to be MERGED

ORA-14636: only 2 resulting subpartition can be specified for SPLIT SUBPARTITION

Cause: ALTER TABLE SPLIT SUBPARTITION contained more than 2 resulting subpartition for the SPLIT

Action: Ensure that the statement describes exactly 2 subpartitions as the target of the SPLIT operation

ORA-14637: cannot merge a subpartition with itself

Cause: The same subpartition name was specified twice for the merge operation

Action: Re-submit operation with 2 distinct subpartition names within the same composite partition

ORA-14638: cannot MERGE subpartitions in different Range Composite partitions

Cause: Attempted to MERGE subpartitions in different Range Composite partitions

Action: Reissue the command after ensuring that the 2 subpartitions being merged lie in the same composite partition

ORA-14639: SUBPARTITIONS clause can be specified only for Hash, Composite Range Hash table/partition

Cause: Attempted to specify SUBPARTITIONS clause on table that is not partitioned by the Composite Range-Hash method

Action: Reissue the command after ensuring that the SUBPARTITIONS clause is not specified, to specify a template for a Composite Range List object use the SUBPARTITION TEMPLATE clause

ORA-14640: add/coalesce index partition operation is valid only for hash partitioned global indexes

Cause: User attempted to add or coalesce an index partition of a global index not partitioned by hash method.

Action: Issue the statement on a global index partitioned by hash method. or if the index is partitioned by range method consider using split/drop instead of add/coalesce.

ORA-14641: STORE-IN clause can be specified only for a Hash, Composite Range Hash table/partition

Cause: Specifying a STORE-IN clause during CREATE/ALTER of a Range, Composite Range List partitioned table which is not allowed"

Action: Re-issue the stament after removing the STORE-IN clause

ORA-14642: Bitmap index mismatch for tables in ALTER TABLE EXCHANGE PARTITION

Cause: The two tables in the EXCHANGE have usable bitmap indexes, and the INCLUDING INDEXES option has been specified and the tables have different hakan factors.

Action: Perform the exchange with the EXCLUDING INDEXES option or alter the bitmap indexes to be unusable.

ORA-14643: Hakan factor mismatch for tables in ALTER TABLE EXCHANGE PARTITION

Cause: Either records_per_block has been minimized for one of the tables to be exchanged, but not the other, or the hakan factors for the tables to be exchanged are not equal.

Action: If records_per_block has been minimized for one of the tables, but not the other, either perform alter table with the NOMINIMIZE RECORDS_PER_BLOCK option for both tables, or perform alter table with the MINIMIZE RECORDS_PER_BLOCK for both tables. If the hakan factors do not match perform alter table with the NOMINIMIZE RECORDS_PER_BLOCK option for both tables.

ORA-14644: table is not subpartitioned by Hash method

Cause: A subpartition maintenance operation such as ALTER TABLE MODIFY PARTITION COALESCE SUBPARTITION can only be performed on Hash subpartitioned objects

Action: Re-issue the command against a Hash subpartitioned object.

ORA-14645: STORE IN clause cannot be specified for Range List objects

Cause: A STORE IN clause was specified for Range List partitioned object

Action: Re-issue the command after removing the STORE IN clause

ORA-14646: Specified alter table operation involving compression cannot be performed in the presence of usable bitmap indexes

Cause: The first time a table is altered to include compression, it cannot have a usable bitmap index (partition). Subsequent alter table statements involving compression do not have this same restriction.

Action: A) Drop any bitmap indexes defined on the table, and re-create them once the operation is complete or, B) Mark all index fragments of all bitmap indexes defined on the table UNUSABLE and rebuild them once the operation is complete.

ORA-14647: cannot MERGE subpartitions in different list composite partitions

Cause: An attempt was made to MERGE subpartitions in different list composite partitions.

Action: Reissue the command after ensuring that the two subpartitions being merged lie in the same composite partition.

ORA-14650: operation not supported for reference-partitioned tables

Cause: Attempted to perform an operation on a reference-partitioned table that was not supported.

Action: Do not perform the unsupported operation.

ORA-14651: reference partitioning constraint is not supported

Cause: The specified partitioning constraint was not supported for reference-partitioned tables. The partitioning constraint must be enabled, validated, and not deferrable. The partitioning constraint must not have ON DELETE SET NULL semantics.

Action: Correct the statement to specify a supported partitioning constraint.

ORA-14652: reference partitioning foreign key is not supported

Cause: The specified partitioning foreign key was not supported for reference-partitioned tables. All columns of the partitioning foreign key must be constrained NOT NULL with enabled, validated, and not deferrable constraints. Furthermore, a virtual column cannot be part of the partitioning foreign key.

Action: Correct the statement to specify a supported partitioning foreign key.

ORA-14653: parent table of a reference-partitioned table must be partitioned

Cause: Attempted to create a reference-partitioned table with a non-partitioned parent table.

Action: Correct the statement and reenter.

ORA-14654: number of partitions of reference-partitioned table must equal that of the parent table

Cause: Attempted to create a reference-partitioned table with a number of partitions which was different from that of the parent table.

Action: Correct the CREATE TABLE statement to specify a correct number of partitions.

ORA-14655: reference partitioning constraint not found

Cause: Partitioning constraint specified in CREATE TABLE ... PARTITION BY REFERENCE was not one of the referential constraints on the table being created.

Action: Ensure that the specified partitioning constraint is one of the referential constraints on the table being created.

ORA-14656: cannot drop the parent of a reference-partitioned table

Cause: Attempted to drop the parent of a reference-partitioned table.

Action: Drop all reference-partitioned child tables before dropping the parent table.

ORA-14657: cannot cascade row migration to reference-partitioned child table

Cause: Update of a parent key may require migration of rows in reference-partitioned child tables, however this is not supported because the parent key was not suitably indexed.

Action: Replace the existing index on the parent key with a unique index that does not contain any columns in addition to the parent key.

ORA-14658: specified dependent table is not affected by this operation

Cause: A table has been specified in the DEPENDENT TABLES clause that is not a reference-partitioned table affected by the operation.

Action: Correct the statement and reenter.

ORA-14659: Partitioning method of the parent table is not supported

Cause: An attempt was made to create a reference-partitioned table with an interval partitioned parent table.

Action: Do not create a reference-partitioned table with an interval partitioned parent table.

ORA-14660: parent table of a reference-partitioned table cannot be index-organized

Cause: Attempted to create a reference-partitioned table with a index-organized parent table.

Action: Correct the statement and reenter.

ORA-14661: row movement must be enabled

Cause: Attempted to disable row movement for a reference-partitioned table, although row movement was enabled for its parent table.

Action: Disable row movement for parent table before disabling row movement for the reference-partitioned table.

ORA-14662: row movement cannot be enabled

Cause: Attempted to enable row movement for a partitioned table, although row movement was disabled for a reference-partitioned child table.

Action: Enable row movement for reference-partitioned child tables before enabling row movement for the parent table.

ORA-14663: reference partitioning parent key is not supported

Cause: Parent key of the reference-partitioned table's partitioning constraint contained virtual columns.

Action: Correct the statement to specify a partitioning constraint with supported parent key and reenter.

ORA-14664: Cannot use PL/SQL expressions in reference partitioning parent key

Cause: Parent key of the reference partitioned table's partitioning constraint contained a virtual column that referenced a PL/SQL expression.

Action: Correct the statement to specify a partitioning constraint with supported parent key and reenter.

ORA-14665: Cannot use expressions involving ROWID data type in reference partitioning parent key

Cause: Parent key of the reference partitioned table's partitioning constraint contained a virtual column that involved the ROWID data type.

Action: Correct the statement to specify a partitioning constraint with supported parent key and reenter.

ORA-14666: Cannot use expressions involving BLOB or CLOB data types in reference partitioning parent key

Cause: Parent key of the reference partitioned table's partitioning constraint contained a virtual column that involved a BLOB or CLOB data type.

Action: Correct the statement to specify a partitioning constraint with supported parent key and reenter.

ORA-14667: Cannot use expressions involving object data types in reference partitioning parent key

Cause: Parent key of the reference partitioned table's partitioning constraint contained a virtual column that involved an object data type (object, REF, nested table, array).

Action: Correct the statement to specify a partitioning constraint with supported parent key and reenter.

ORA-14668: Cannot drop a unique or primary key referenced by the partitioning constraint of a reference-partitioned table.

Cause: An attempt was made to drop a unique or primary key referenced by the partitioning constraint of a reference-partitioned table.

Action: Drop all reference-partitioned child tables before dropping the unique or primary key of the parent table.

ORA-14669: interval partition of reference-partitioned table must correspond to interval partition of the parent table

Cause: An attempt was made to create a reference-partitioned table with an interval partition that does not pair with an interval partition in the parent table.

Action: Correct the CREATE TABLE statement to specify a correct number of partitions.

ORA-14670: there is no usable index on the reference partitioning parent key

Cause: An attempt was made to run an operation on a reference partitioned table that requires a usable index on the reference partitioning parent key, but no such index exists.

Action: Create a usable index on the reference partitioning parent key, or rebuild the existing unusable index on the reference partitioning parent key.

ORA-14690: value too long for MIN or MAX aggregate

Cause: An attempt was made to use a MIN or MAX aggregate with a value that was too long.

Action: Limit the size of MIN and MAX aggregate inputs to 32763 bytes.

ORA-14691: Extended character types are not allowed in this table.

Cause: An attempt was made to create VARCHAR2 or NVARCHAR2 columns larger than 4000 bytes, or a RAW column larger than 2000 bytes, in a cluster, clustered table or index-organized table.

Action: Correct the statement and reenter.

ORA-14692: STORE AS clause is not allowed for extended character type column

Cause: An attempt was made to use the STORE AS clause to specify storage attributes for an extended character type column.

Action: Correct the statement and reenter.

ORA-14693: The MAX_STRING_SIZE parameter must be EXTENDED.

Cause: An attempt was made to set the MAX_STRING_SIZE parameter to STANDARD in a database that has been created with, or migrated to, the EXTENDED setting.

Action: Set MAX_STRING_SIZE to EXTENDED and retry.

ORA-14694: database must in UPGRADE mode to begin MAX_STRING_SIZE migration

Cause: An attempt was made to update the MAX_STRING_SIZE parameter to EXTENDED when the database was not in UPGRADE mode.

Action: Restart the database in UPGRADE mode, modify the parameter, run the utl32k.sql script in \$ORACLE_HOME/rdbms/admin, and restart the database in normal mode.

ORA-14695: MAX_STRING_SIZE migration is incomplete

Cause: An attempt was made to open the database in normal mode before the MAX_STRING_SIZE migration process completed.

Action: Restart the database in UPGRADE mode, run the utl32k.sql script in \$ORACLE_HOME/rdbms/admin, and restart the database in normal mode.

ORA-14696: MAX_STRING_SIZE migration is incomplete for pluggable database *string*

Cause: An attempt was made to open the database in normal mode before the MAX_STRING_SIZE migration process completed for the specified pluggable database.

Action: Restart the database in UPGRADE mode, run the utl32k.sql script in \$ORACLE_HOME/rdbms/admin in the specified pluggable database, and restart the database in normal mode.

ORA-14697: This connection does not support bind variables larger than 4000 bytes for SQL statements.

Cause: An attempt was made to use a bind variable larger than 4000 bytes for a SQL statement when the client initially connected to a container with STANDARD MAX_STRING_SIZE, and then within the same session switched to a container with EXTENDED MAX_STRING_SIZE.

Action: Initialize a new connection for the container with EXTENDED MAX_STRING_SIZE and retry.

ORA-14700: Object(s) owned by SYS cannot be locked by non-SYS user

Cause: Attempt to issue a LOCK TABLE statement on SYS owned object(s) by a non-SYS user, user should minimally have DML privileges

Action: Re-issue LOCK TABLE statement for non-SYS user after granting DML privileges on object, or non-SYS user should connect as SYS

ORA-14701: partition-extended name or bind variable must be used for DMLs on tables partitioned by the System method

Cause: User attempted not to use partition-extended syntax for a table partitioned by the System method

Action: Must use of partition-extended syntax in contexts mentioned above.

ORA-14702: The partition number is invalid or out-of-range

Cause: Attempted to use nonnumerical value or the number was out of range of the partitions.

Action: Use a valid partition number.

ORA-14703: The AFTER clause can be used to ADD PARTITION only to a System Partitioned table.

Cause: The table is not partitioned by the System method

Action: Skip the AFTER clause.

ORA-14704: Create table as select disallowed for SYSTEM partitioned tables

Cause: User attempted to create a SYSTEM partitioned table by doing a create table as select.

Action: Do a create table followed by an insert as select into each partition.

ORA-14705: unique or primary keys referenced by enabled foreign keys in table *"string"."string"*

Cause: An attempt was made to truncate a table with unique or primary keys referenced by enabled foreign keys in another table.

Action: Before performing the TRUNCATE operation on the table, disable the foreign key constraints in other tables. You can see what constraints exist in a table by issuing

the following command: `SELECT * FROM USER_CONSTRAINTS WHERE TABLE_NAME = :1;`

ORA-14706: multiple child tables reference constraint "*string*" in table "*string*". "*string*"

Cause: An ALTER TABLE EXCHANGE [SUB]PARTITION CASCADE command found that the specified parent key in the specified table was referenced by partitioning constraints in multiple reference partitioned child tables.

Action: Perform EXCHANGE [SUB]PARTITION without the CASCADE option. The CASCADE option is not supported if a parent key in the reference partitioned table hierarchy is referenced by multiple partitioning constraints.

ORA-14707: no match found for table "*string*". "*string*" for EXCHANGE CASCADE

Cause: There was no table matching the specified table in the ALTER TABLE EXCHANGE [SUB]PARTITION CASCADE command.

Action: Perform EXCHANGE [SUB]PARTITION without the CASCADE option or ensure that exactly one table matches the specified table.

ORA-14708: multiple matches found for table "*string*". "*string*" for EXCHANGE CASCADE

Cause: There were multiple tables matching the specified table in the ALTER TABLE EXCHANGE [SUB]PARTITION CASCADE command.

Action: Perform EXCHANGE [SUB]PARTITION without the CASCADE option or ensure that exactly one table matches the specified table.

ORA-14709: index mismatch for table "*string*". "*string*" in ALTER TABLE EXCHANGE [SUB]PARTITION

Cause: An ALTER TABLE EXCHANGE [SUB]PARTITION command was attempted for the specified table, however, the exchange table did not have equivalent indexes.

Action: Ensure that the indexes for the two tables have indexes which follow this rule: For every nonpartitioned index for the nonpartitioned table, there has to be an identical LOCAL index on the partitioned table and vice versa. To be identical, the column position type and size have to be the same.

ORA-14750: Range partitioned table with INTERVAL clause has more than one column

Cause: You attempted to create an interval partitioned table with more than one partitioning column.

Action: Use a single partitioning column.

ORA-14751: Invalid data type for partitioning column of an interval partitioned table

Cause: You attempted to use interval partitioning on a table partitioned on a column of data type other than number or date/time.

Action: Use only number or date/time columns as partitioning columns for interval partitioned tables.

ORA-14752: Interval expression is not a constant of the correct type

Cause: You attempted to use either a nonconstant interval or an interval whose data type does not correspond to the partitioning column

Action: Use only constant expressions for the interval. If the data type of partitioning column is numeric, the interval must be a numeric constant. If the data type is of type date/time, the interval must be a constant of interval type

ORA-14753: Interval cannot be zero

Cause: The interval mapped to zero.

Action: You must use a nonzero interval.

ORA-14754: Interval string is too long

Cause: The interval string was too long

Action: Specify interval using a shorter string

ORA-14755: Invalid partition specification for FOR VALUES clause.

Cause: The [SUB]PARTITION FOR VALUES (...) clause can only take constants. In addition it takes as many arguments as there are partitioning columns and the values must be coercible to the partitioning columns.

Action: Specify a valid FOR VALUES clause.

ORA-14756: Table is not partitioned by Interval method.

Cause: The table was not partitioned by Interval method.

Action: ALTER TABLE SET STORE IN is only valid for Interval partitioned tables. Ensure that the table by Interval.

ORA-14757: Table is already a range partitioned table

Cause: SET INTERVAL () is used to convert an interval partitioned table to a range partitioned table. It is not legal on a range partitioned table

Action: Use SET INTERVAL () only on an interval partitioned table.

ORA-14758: Last partition in the range section cannot be dropped

Cause: An attempt was made to drop the last range partition of an interval partitioned table.

Action: Do not attempt to drop this partition.

ORA-14759: SET INTERVAL is not legal on this table.

Cause: SET INTERVAL clause was specified. ALTER TABLE SET INTERVAL is only legal on a range partitioned table with a single partitioning column. Additionally, this table cannot have a maxvalue partition and cannot be the parent table for any reference partitioned tables.

Action: Use SET INTERVAL only on a valid table.

ORA-14760: ADD PARTITION is not permitted on Interval partitioned objects

Cause: ALTER TABLE ADD PARTITION was attempted on an Interval partitioned object.

Action: Do not perform the operation on an Interval partitioned object. Insert a row to create the new partition.

ORA-14761: MAXVALUE partition cannot be specified for Interval partitioned objects

Cause: An attempt was made to create a partition with a MAXVALUE highbound on an Interval partitioned object.

Action: Do not create a partition with a MAXVALUE highbound.

ORA-14762: Domain index creation on interval partitioned tables is not permitted

Cause: An attempt was made to create a domain index on an interval partitioned table.

Action: Do not create a domain index on an interval partitioned table.

ORA-14763: Unable to resolve FOR VALUES clause to a partition number

Cause: Could not determine the partition corresponding to the FOR VALUES clause.

Action: Remove bind variables and dependencies on session parameters from the values specified in the FOR VALUES clause.

ORA-14764: FOR VALUES clause cannot be specified for only one partition

Cause: An attempt was made to specify the FOR VALUES clause for only one of the two partitions being merged.

Action: Specify a FOR VALUES clause for each of the two partitions being merged or do not specify the FOR VALUES clause for either.

ORA-14765: Cannot create a partition while doing a create index

Cause: An attempt was made to create a partition concurrently with index creation.

Action: Retry the statement after the index build is finished.

ORA-14766: Unable to obtain a stable metadata snapshot

Cause: This operation was not able to obtain a stable snapshot of the interval partitioning metadata.

Action: Retry the statement.

ORA-14767: Cannot specify this interval with existing high bounds

Cause: The interval specified conflicts with the existing high bound for the last partition. The combination might lead to invalid dates for high bounds in the future.

Action: If this is a CREATE TABLE, try specifying a different high bound value for the last partition, or a different interval. If this is an ALTER TABLE SET INTERVAL, please choose either a different interval, or, modify the table to change the high bound for the last partition.

ORA-14769: cannot interval partition nested table or XMLType with object-relational storage

Cause: Interval partition was not supported for nested table and XMLType with object-relational storage.

Action: Use a list or range partition instead.

ORA-14801: Hash composite partitioning is not supported

Cause: An attempt was made to partition a table using a Hash composite method.

Action: Do not partition the table by a Hash composite method.

ORA-14802: Specified operation is not permitted on Hash composite partitioned objects

Cause: An unsupported operation was attempted on a Hash composite partitioned object.

Action: Do not perform the operation on a Hash composite partitioned object.

ORA-14803: partition bound may not be specified for hash subpartitioned tables

Cause: A VALUES LESS THAN or VALUES clause was specified with a subpartition description.

Action: Remove the VALUES LESS THAN or VALUES clause from the subpartition description.

ORA-14804: A partition must be split into two or more partitions

Cause: An ALTER TABLE SPLIT PARTITION contained a description for only one resulting partition.

Action: Specify at least 2 resulting partitions.

ORA-14805: last resulting partition cannot contain bounds

Cause: An ALTER TABLE SPLIT PARTITION contained a description for the last partition which included the bounds.

Action: Do not specify bounds for the last resulting partition.

ORA-14806: merging more than two partitions or subpartitions is only supported for heap tables

Cause: An ALTER TABLE MERGE PARTITIONS or MERGE SUBPARTITIONS with more than two source partitions or subpartitions was issued. Merging more than two partitions or subpartitions is only supported for heap tables.

Action: Specify exactly two partitions or subpartitions to merge.

ORA-14807: merging partitions or subpartitions using *name TO name* syntax is only supported for range partitioned tables

Cause: An ALTER TABLE MERGE PARTITIONS *pname TO pname* or an ALTER TABLE MERGE SUBPARTITIONS *subpname TO subpname* was issued. This is only supported for range partitions or subpartitions.

Action: Specify all the partitions or subpartitions to be merged.

ORA-14808: ONLINE MOVE PARTITION is not supported for this table

Cause: An ALTER TABLE MOVE PARTITION ONLINE statement was issued on a table that was either not a heap table or had an object type, domain index or bitmap join index defined on it. This operation is only supported for heap tables.

Action: Do not use the ONLINE keyword.

ORA-14809: ONLINE MOVE PARTITION not supported for this schema

Cause: An ALTER TABLE MOVE PARTITION ONLINE statement was issued on a table owned by SYS, SYSTEM, PUBLIC, OUTLN or XDB.

Action: Do not use the ONLINE keyword.

ORA-14810: ONLINE MOVE PARTITION not supported while database is not open or in migrate mode

Cause: An ALTER TABLE MOVE PARTITION ONLINE statement was issued on a table while the database was not open or was in migrate mode.

Action: Do not use the ONLINE keyword.

ORA-14811: ONLINE MOVE PARTITION not supported under supplemental logging

Cause: An ALTER TABLE MOVE PARTITION ONLINE statement was issued on a table while supplemental logging was enabled.

Action: Do not use the ONLINE keyword.

ORA-14812: DBMS_LOB operations not allowed on partition while it is being moved online

Cause: A DBMS_LOB operation was issued on a LOB while an ALTER TABLE MOVE PARTITION ONLINE was concurrently executing on the partition containing the LOB.

Action: Reissue DBMS_LOB operation after MOVE PARTITION ONLINE has completed.

ORA-14900: The logical transaction ID is no longer valid.

Cause: The logical transaction ID has been purged and the commit failed.

Action: Reconnect and re-run the transaction.

ORA-14901: Commits during replay are not permitted.

Cause: The transaction tried to commit during replay.

Action: Contact Oracle Support Services.

ORA-14902: Instance has not been configured for application continuity.

Cause: The partition of the transaction history table had not been created.

Action: Contact Oracle Support Services.

ORA-14903: Corrupt logical transaction detected.

Cause: The logical transaction was corrupt. The size was incorrect.

Action: Verify your network configuration.

ORA-14904: Corrupt logical transaction ID detected.

Cause: The logical transaction was corrupt. The database ID was incorrect.

Action: Verify your network configuration.

ORA-14905: Serializable transactions cannot be replayed.

Cause: The transaction tried to replay a serializable transaction.

Action: This is not supported.

ORA-14906: Get LTXID outcome operation is not permitted on the current session.

Cause: The transaction tried to execute get LTXID outcome on the current session.

Action: Check the parameters used to invoke get LTXID outcome.

ORA-14907: Cannot execute get LTXID outcome for the transaction of another user.

Cause: The transaction tried to execute get LTXID outcome for a different user session.

Action: Check the parameters used to invoke get LTXID outcome.

ORA-14908: Cannot invoke get LTXID outcome while a transaction is open.

Cause: Get LTXID outcome could not be executed because a transaction was open.

Action: Invoke get LTXID outcome after the transaction has been completed.

ORA-14909: Current session has been blocked by another user with the same user name using GET_LTXID_OUTCOME.

Cause: Could not commit after GET_LTXID_OUTCOME was invoked.

Action: Contact Oracle Support Services.

ORA-14910: Sessions with SYSDBA privilege are not allowed to connect to a service that has commit outcome enabled.

Cause: A session with SYSDBA privilege tried to connect to a service that has commit outcome enabled.

Action: Connect without the SYSDBA privilege.

ORA-14911: XA transactions are not supported by Transaction Guard.

Cause: The transaction tried to commit an XA transaction.

Action: This is not supported.

ORA-14912: Transactions by DRCP clients are not supported by Transaction Guard.

Cause: The Database Resident Connection Pooling (DRCP) client tried to commit a transaction while Transaction Guard was enabled.

Action: This is not supported.

ORA-14950: Force outcome failed. Client transaction is too old.

Cause: The client transaction had been committed or forced earlier.

Action: None

ORA-14951: Force outcome failed. Client transaction is ahead of server logical transaction ID.

Cause: The client transaction had not been seen by the server and could not be forced. This can happen if the server is restored or a flashback operation has been executed.

Action: None

ORA-14952: Force outcome failed. General error occurred.

Cause: The force outcome operation failed. See previous error for the reason.

Action: None

ORA-14953: Invalid partition ID specified.

Cause: The partition IDs of the transaction history table were not consecutive.

Action: Specify the next higher partition ID.

ORA-14954: Invalid tablespace name specified.

Cause: The tablespace did not exist.

Action: Specify an existing tablespace.

ORA-15000: command disallowed by current instance type

Cause: The user has issued a command to a conventional RDBMS instance that is only appropriate for an ASM instance. Alternatively, the user has issued a command to an ASM instance that is only appropriate for an RDBMS instance.

Action: Connect to the correct instance type and re-issue the command.

ORA-15001: diskgroup "*string*" does not exist or is not mounted

Cause: An operation failed because the diskgroup specified does not exist or is not mounted by the current ASM instance.

Action: Verify that the diskgroup name used is valid, that the diskgroup exists, and that the diskgroup is mounted by the current ASM instance.

ORA-15002: parameter LOCK_NAME_SPACE exceeds limit of *string* characters
Cause: The LOCK_NAME_SPACE initialization parameter contained a value that is too long.

Action: Correct the LOCK_NAME_SPACE initialization parameter.

ORA-15003: diskgroup "*string*" already mounted in another lock name space
Cause: The diskgroup could not be mounted by the ASM instance because it was operating in a lockspace different than another existing ASM instance which had already mounted the diskgroup.

Action: Check the LOCK_NAME_SPACE initialization parameter value, or dismount the diskgroup from the other ASM instances.

ORA-15004: alias "*string*" does not exist
Cause: The specified alias did not exist within the diskgroup.

Action: Check the alias name and diskgroup name.

ORA-15005: name "*string*" is already used by an existing alias
Cause: An existing alias in the diskgroup used the same name.

Action: Select another alias name, or drop the existing alias.

ORA-15006: template "*string*" does not exist
Cause: The specified template did not exist within the diskgroup.

Action: Check the template name and diskgroup name.

ORA-15007: name is already used by an existing template
Cause: A template with the same name already exists.

Action: Select another template name, or drop the existing template.

ORA-15008: cannot drop system template
Cause: The specified template was created by the system and must always exist for proper operation.

Action: Select another template name.

ORA-15009: ASM disk "*string*" does not exist
Cause: The specified ASM disk was not found.

Action: Check the ASM disk name.

ORA-15010: name '*string*' is already used by an existing ASM disk
Cause: The specified name was already used in this diskgroup.

Action: Specify a different ASM disk name.

ORA-15011: failure group "*string*" does not exist in diskgroup "*string*"
Cause: The specified name did not match the failure group of any disks in the diskgroup. This usually indicates that the failure group name was specified incorrectly.

Action: Check the failure group name.

ORA-15012: ASM file '*string*' does not exist
Cause: The ASM file was not found.

Action: Check the ASM file name.

ORA-15013: diskgroup "*string*" is already mounted

Cause: An ALTER DISKGROUP MOUNT command specified the name of a diskgroup which is already mounted by the current ASM instance.

Action: Check the name of the diskgroup.

ORA-15014: path '*string*' is not in the discovery set

Cause: The operating system path specified was outside the set of disks that are discovered by the instance.

Action: Specify a operating system path within the set of disks that are discovered based upon the ASM_DISKSTRING parameter. Alternatively, check the setting of the ASM_DISKSTRING parameter.

ORA-15015: Specified path '*string*' conflicts with path '*string*'

Cause: The ASM instance previously discovered specified disk with an ASM library using a different path.

Action: Use the discovery string of the ASM library to add the disk.

ORA-15016: inconsistent respecification of path '*string*'

Cause: The specified path was provided more than once with different properties.

Action: Do not provide a path more than once. Alternatively, provide consistent properties.

ORA-15017: diskgroup "*string*" cannot be mounted

Cause: The disk group could not be mounted by the ASM instance either of an IO error or due to other reasons explained in alert log or trace files.

Action: Check for additional errors reported. Correct the error and retry the operation.

ORA-15018: diskgroup cannot be created

Cause: The specified diskgroup could not be created.

Action: Check for additional errors reported.

ORA-15019: discovered duplicate path '*string*' for '*string*'

Cause: The discovery encountered multiple paths to the same disk.

Action: Check that the ASM_DISKSTRING parameter specifies only a single path for each disk.

ORA-15020: discovered duplicate ASM disk "*string*"

Cause: The discovery encountered two disks claiming to be the same named ASM disk.

Action: Check that the ASM_DISKSTRING parameter specifies only a single path for each disk.

ORA-15021: parameter "*string*" is not valid in *string* instance

Cause: The specified parameter was not supported when starting an instance of this type.

Action: Delete the specified parameter from the INIT.ORA file.

ORA-15022: unable to load an Oracle ASM library

Cause: An Oracle instance attempted to load an Oracle ASM library which could not be discovered.

Action: Check other error messages to determine why Oracle is unable to retrieve the library path from the Oracle ASM instance.

ORA-15023: reached maximum allowable number of disks *string*

Cause: An attempt was made to add another disk to a diskgroup which already contains the maximum number of disks allowed.

Action: Consider dropping existing disks from the diskgroup before adding additional ones, or create a new diskgroup.

ORA-15024: discovered duplicately numbered ASM disk *string*

Cause: ASM discovered two disks claiming to have the same ASM disk number in the same disk group.

Action: Check that the ASM_DISKSTRING parameter specifies only a single path for each disk.

ORA-15025: could not open disk "*string*"

Cause: The specified disk could not be opened. If the database instance is running as an Operating System (OS) user different from that of the ASM instance, then the permissions on the database oracle binary may be incorrect.

Action: Check the additional error messages, if any. If the database instance is running as an OS user different from that of the ASM instance, use the "srvctl" command to stop and restart the database to fix the permissions.

ORA-15026: disk '*string*' is not an ASM disk

Cause: The disk did not contain a valid ASM disk header.

Action: Check to see if the data on the disk has been changed by some system administrator action.

ORA-15027: active use of diskgroup "*string*" precludes its dismount

Cause: An ALTER DISKGROUP ... DISMOUNT command specified a diskgroup which had clients with open files in the diskgroup. Diskgroups cannot be dismounted until all open files in the diskgroup are closed.

Action: Stop all clients that are using this diskgroup and retry the ALTER DISKGROUP ... DISMOUNT command. Query the V\$ASM_CLIENT fixed view in an ASM instance or use ASMCMD LSOFF to list active clients.

ORA-15028: ASM file '*string*' not dropped; currently being accessed

Cause: An attempt was made to drop an ASM file, but the file was being accessed by one or more clients and therefore could not be dropped.

Action: Stop all clients that are using this file and retry the drop command. Query the V\$ASM_CLIENT fixed view in an ASM instance or use ASMCMD LSOFF to list active clients.

ORA-15029: disk '*string*' is already mounted by this instance

Cause: An attempt was made to add to a diskgroup a disk that was already mounted by the current instance as part of some (possibly other) diskgroup.

Action: Specify a different disk in the command. Note that not even the FORCE option can be used to correct the situation until the diskgroup containing the disk becomes dismounted by this instance.

ORA-15030: diskgroup name "*string*" is in use by another diskgroup

Cause: A CREATE DISKGROUP command specified a diskgroup name that was already assigned to another diskgroup.

Action: Select a different name for the diskgroup.

ORA-15031: disk specification '*string*' matches no disks

Cause: The device specification string to a CREATE DISKGROUP command did not match any devices which could be discovered.

Action: Check the device specification string matches a disk on the system.

ORA-15032: not all alterations performed

Cause: At least one ALTER DISKGROUP action failed.

Action: Check the other messages issued along with this summary error.

ORA-15033: disk '*string*' belongs to diskgroup "*string*"

Cause: An attempt was made to ADD to a diskgroup (or REPLACE with) a disk that was already part of another diskgroup, or an attempt was made to DROP / OFFLINE / ONLINE / CHECK a disk that was not part of the specified diskgroup.

Action: For ADD and REPLACE, check the path specifier for the disk. If it is certain that the disk is not in use by another diskgroup, the FORCE option may be used to override this check. For the other commands, check the name of the specified disk.

ORA-15034: disk '*string*' does not require the FORCE option

Cause: An attempt was made to add the disk to the diskgroup using the FORCE option. The disk was not found to be in use at the present time, so the FORCE option was not permitted.

Action: Avoid gratuitous use of the FORCE option.

ORA-15035: no disks belong to diskgroup "*string*"

Cause: An attempt was made to mount a diskgroup for which no member disks were discovered.

Action: Specify a valid diskgroup name that contains disks.

ORA-15036: disk '*string*' is truncated

Cause: The size of the disk, as reported by the operating system, was smaller than the size of the disk as recorded in the disk header block on the disk.

Action: Check if the system configuration has changed.

ORA-15037: disk '*string*' is smaller than minimum of *string* MBs

Cause: The size of the disk, as reported by the operating system, was too small to allow the disk to become part of the diskgroup.

Action: Check if the system configuration is correct.

ORA-15038: disk '*string*' mismatch on '*string*' with target disk group [*string*] [*string*]

Cause: An attempt was made to mount into a disk group a disk whose recorded allocation unit size, metadata block size, physical sector size, or creation time stamp was inconsistent with the other disk group members.

Action: Check if the system configuration has changed. Verify disk discovery string.

ORA-15039: diskgroup not dropped

Cause: An attempt to drop a diskgroup failed.

Action: See the associated messages for details about why the drop was not successful.

ORA-15040: diskgroup is incomplete

Cause: Some of the disks comprising a diskgroup were not present.

Action: Check the hardware to ensure that all disks are functional. Also check that the setting of the ASM_DISKSTRING initialization parameter has not changed.

Alternatively, for normal or high redundancy diskgroups, use MOUNT FORCE to offline missing disks as part of mounting the diskgroup.

ORA-15041: diskgroup "*string*" space exhausted

Cause: At least one disk in the diskgroup is out of space.

Action: If all disks are evenly balanced, add more disks to the diskgroup,

ORA-15042: ASM disk "*string*" is missing from group number "*string*"

Cause: The specified disk, which is a necessary part of a diskgroup, could not be found on the system.

Action: Check the hardware configuration.

ORA-15043: ASM disk "*string*" is not a diskgroup member

Cause: The specified disk has been removed from the diskgroup, but a disk matching its name was found.

Action: Check the hardware configuration.

ORA-15044: ASM disk '*string*' is incorrectly named

Cause: Either the specified disk had its contents changed such that it no longer contained an ASM disk name in its header that matches the diskgroup information or its FAILGROUP information may have become inconsistent.

Action: Drop the disk from the diskgroup.

ORA-15045: ASM file name '*string*' is not in reference form

Cause: The ASM file name was not in a form that can be used to reference an existing file because a file/incarnation number or an alias name was not present or a template name was included.

Action: Correct the specified ASM file name.

ORA-15046: ASM file name '*string*' is not in single-file creation form

Cause: The ASM file name was not in a form that can be used to create a single file because a file/incarnation number was present.

Action: Correct the specified ASM file name.

ORA-15047: ASM file name '*string*' is not in multiple-file creation form

Cause: The ASM file name was not in a form that can be used to create multiple files because either a fully-qualified file name or an alias name was present.

Action: Correct the specified ASM file name.

ORA-15048: ASM internal files cannot be deleted

Cause: An attempt was made to delete a metadata file used by ASM to manage the diskgroup.

Action: Check the specified ASM file name.

ORA-15049: diskgroup "*string*" contains *string* error(s)

Cause: Errors were discovered by the ALTER DISKGROUP CHECK command.

Action: See the alert log for details of the errors.

ORA-15050: disk "*string*" contains *string* error(s)

Cause: Errors were discovered by the ALTER DISKGROUP CHECK DISK command.

Action: See the alert log for details of the errors.

ORA-15051: file '*string*' contains *string* error(s)

Cause: Errors were discovered by the ALTER DISKGROUP CHECK FILE command.

Action: See the alert log for details of the errors.

ORA-15052: ASM file name '*string*' is not in diskgroup "*string*"

Cause: The ASM file name did not contain a diskgroup name that specified the correct diskgroup as implied by the other arguments to the command.

Action: Correct the specified ASM file name or diskgroup name.

ORA-15053: diskgroup "*string*" contains existing files

Cause: An attempt was made to drop a diskgroup that still contains existing files.

Action: Specify the INCLUDING CONTENTS option to drop the diskgroup and all of its existing files.

ORA-15054: disk "*string*" does not exist in diskgroup "*string*"

Cause: An attempt was made to alter a disk that is not part of the specified diskgroup.

Action: Check the name of the specified disk and the specified diskgroup.

ORA-15055: unable to connect to ASM instance

Cause: The RDBMS instance was unable to connect to the required ASM instance when accessing a disk group.

Action: Check the additional error messages. May need to configure correct ASM sid or make sure the RDBMS instance has OS privileges for ASM SYSDBA.

ORA-15056: additional error message

Cause: An operating system error occurred.

Action: Correct the operating system error and retry the operation.

ORA-15057: specified size of *string* MB is larger than actual size of *string* MB

Cause: A disk size expression exceeded the amount of storage actually available, as reported by the operating system.

Action: Specify a valid size.

ORA-15058: disk '*string*' belongs to an incompatible diskgroup

Cause: An attempt was made to ADD to a diskgroup a disk which was already part of another diskgroup. The other diskgroup was written by a more recent software release.

Action: Check the path specifier for the disk. If it is certain that the disk is not in use by another diskgroup, the FORCE option may be used to override this check.

ORA-15059: invalid device type for ASM disk

Cause: The device type of the discovered disk was not valid for use as an ASM disk.

Action: Check the file path and retry or exclude it from the discovery set. See the accompanying operating system error for additional information.

ORA-15060: template "*string*" does not exist

Cause: A command specified a template name, either directly or as part of an ASM file name, which did not exist.

Action: Check the template specifier in the command.

ORA-15061: ASM operation not supported [*string*]

Cause: An ASM operation was attempted that is invalid or not supported by this version of the ASM instance.

Action: This is an internal error code that is used for maintaining compatibility between software versions and should never be visible to the user; contact Oracle support Services.

ORA-15062: ASM disk is globally closed

Cause: The disk to which the I/O request was issued has gone offline or has been globally closed by the background process. Check other messages in the trace files for more information.

Action: Bring the disk online for I/Os to get through.

ORA-15063: ASM discovered an insufficient number of disks for diskgroup "*string*"

Cause: ASM was unable to find a sufficient number of disks belonging to the diskgroup to continue the operation.

Action: Check that the disks in the diskgroup are present and functioning, that the owner of the ORACLE binary has read/write permission to the disks, and that the ASM_DISKSTRING initialization parameter has been set correctly. Verify that ASM discovers the appropriate disks by querying V\$ASM_DISK from the ASM instance.

ORA-15064: communication failure with ASM instance

Cause: There was a failure to communicate with the ASM instance, most likely because the connection went down.

Action: Check the accompanying error messages for more information on the reason for the failure. Note that database instances will always return this error when the ASM instance is terminated abnormally.

ORA-15065: hash collision for diskgroup names '*string*' and '*string*'

Cause: There was a collision in the group name used for the diskgroup. The diskgroup(s) cannot be mounted using colliding names.

Action: Use a different diskgroup name and also report to Oracle Support Services the two diskgroup names which collided.

ORA-15066: offlining disk "*string*" in group "*string*" may result in a data loss

Cause: Following I/O failures, the disks holding all copies of a data block were attempted to be taken offline.

Action: Check the accompanying error messages for more information on the reason for the disk I/O failures.

ORA-15067: command or option incompatible with diskgroup redundancy

Cause: An attempt was made to use a feature which is not permitted by the diskgroup's redundancy policy. Common examples are forcibly dropping a disk from

an EXTERNAL REDUNDANCY diskgroup, using the FAILGROUP clauses with an EXTERNAL REDUNDANCY diskgroup, or using invalid template attributes.

Action: Omit the option from the command.

ORA-15068: maximum number of diskgroups *string* already mounted

Cause: An attempt was made to mount more diskgroups than the instance is capable of mounting at one time.

Action: Dismount a mounted diskgroup and retry the command.

ORA-15069: ASM file '*string*' not accessible; timed out waiting for lock

Cause: An attempt was made to access an ASM file, but the file is currently being created, resized, or deleted and therefore cannot be accessed.

Action: No action required, or try again later, after the create or resize has completed.

ORA-15070: maximum number of files *string* exceeded in diskgroup "*string*"

Cause: The diskgroup ran out of space.

Action: Delete some existing ASM files or create files in a new diskgroup.

ORA-15071: ASM disk "*string*" is already being dropped

Cause: An attempt was made to drop or replace a disk that was already in the process of being dropped from the diskgroup. Alternatively, an attempt was made to forcibly drop a disk from a diskgroup using the FORCE option that was already being forcibly dropped from the diskgroup.

Action: Check the ASM disk name and FORCE option as specified in the command.

ORA-15072: command requires at least *string* regular failure groups, discovered only *string*

Cause: An attempt was made to create either a normal redundancy diskgroup for which fewer than two regular failure groups were both specified and discovered, or a high redundancy diskgroup for which fewer than three regular failure groups were both specified and discovered, or an external redundancy diskgroup for which only quorum disks were both specified and discovered.

Action: Check that the command does specify the required number of failure groups, and that all of the specified disks are discovered by ASM. A query of the V \$ASM_DISK fixed view will show which disks are discovered by ASM. Note that a quorum failure group will not be used as a regular failure group. An external redundancy diskgroup requires at least one regular disk.

ORA-15073: diskgroup *string* is mounted by another ASM instance

Cause: An attempt was made to drop a diskgroup that is still mounted somewhere in the cluster by another instance.

Action: Dismount the diskgroup from all nodes except the one performing the drop diskgroup command.

ORA-15074: diskgroup *string* requires rebalance completion

Cause: An attempt was made to repeatedly add or drop disks from a diskgroup. ASM could not perform the operation given the current state of the diskgroup.

Action: Manually invoke the ALTER DISKGROUP REBALANCE command and allow the rebalance to run to completion. Alternatively, invoke the ALTER DISKGROUP UNDROP DISKS command and allow the rebalance to run to completion. After the rebalance has completed, retry the operation.

ORA-15075: disk *string* is not visible on instance number *string*

Cause: An ALTER DISKGROUP ADD DISK command specified a disk that could not be discovered.

Action: Check operating system permissions for the device and the storage subsystem configuration on the specified node.

ORA-15076: Emulating I/O errors on the OSM disk

Cause: The disk to which the I/O request was issued is in an error emulation mode.

Action: Bring the disk online for I/Os to get through.

ORA-15077: could not locate ASM instance serving a required diskgroup

Cause: The instance failed to perform the specified operation because it could not locate a required ASM instance.

Action: If you want to start a database instance, start an ASM instance and mount the required diskgroup. If you want to start an ASM instance, relink the ORACLE binary with ASM_ON or explicitly set INSTANCE_TYPE initialization parameter to ASM.

ORA-15078: ASM diskgroup was forcibly dismounted

Cause: The diskgroup to which the I/O request was issued was forcibly dismounted (with the ALTER DISKGROUP DISMOUNT FORCE command) so that it could not be accessed.

Action: Mount the diskgroup to allow access again.

ORA-15079: ASM file is closed

Cause: The file to which the I/O request was issued was closed. This could have been a consequence of the diskgroup being dismounted.

Action: Make sure the diskgroup is mounted and the file is open.

ORA-15080: synchronous I/O operation failed to *string* block *string* of disk *string* in disk group *string*

Cause: A synchronous I/O operation invoked on a disk has failed.

Action: Make sure that all of the disks are operational.

ORA-15081: failed to submit an I/O operation to a disk

Cause: A submission of an I/O operation to a disk has failed.

Action: Make sure that all the disks are operational.

ORA-15082: ASM failed to communicate with client

Cause: There was a failure or time out when ASM tried to communicate with a connected RDBMS or Oracle ASM Dynamic Volume Manager (Oracle ADVM) client.

Action: Check the accompanying error messages and alert logs for more information on the reason for the failure. Check system specific logs (/var/log/messages on Linux, Event Log on Windows) for Oracle ADVM messages.

ORA-15083: failed to communicate with ASMB background process

Cause: A database instance failed to communicate with its ASMB background process when attempting to access an ASM file.

Action: Check the alert log for more information on the reason for the failure.

ORA-15084: ASM disk "*string*" is offline and cannot be dropped.

Cause: An attempt was made to drop a disk that is offline.

Action: Check the ASM disk name as specified in the command; or, if needed, use the DROP DISK FORCE option.

ORA-15085: disk "*string*" has inconsistent sector size (expected *string*, actual *string*) with disk group "*string*"

Cause: An attempt to mount a disk group failed because a disk reported inconsistent sector size value.

Action: Use disks with sector size consistent with disk group sector size, or make sure the operating system can accurately report the disk sector size.

ORA-15086: Diskgroup sector size must be specified.

Cause: The `_disk_sector_size_override` parameter was used but the sector disk value was not specified in the command.

Action: Specify the sector size value, or do not set (or do not set to TRUE) the `_disk_sector_size_override` parameter.

ORA-15087: disk '*string*' is formatted as an ext2/ext3 or OCFS2 file system.

Cause: A signature was found on the specified disk indicating that it is in use by an existing ext2/ext3 or OCFS2 file system.

Action: Adjust discovery string and device permissions to exclude previously formatted disks from discovery.

ORA-15088: diskgroup creation incomplete

Cause: A previous failure during diskgroup creation left the diskgroup in an inconsistent state.

Action: Issue DROP DISKGROUP ... FORCE INCLUDING CONTENTS to clean up the failed creation, then re-create the diskgroup.

ORA-15090: handle *string* is not a valid descriptor

Cause: The file handle was not valid in this session.

Action: Submit a handle obtained from a successful call to `DBMS_DISKGROUP.OPEN()`.

ORA-15091: operation incompatible with open handle in this session

Cause: The current session contained an open handle from the `DBMS_DISKGROUP PL/SQL` package which precluded performing the command.

Action: Execute the command in a different session.

ORA-15092: I/O request size *string* is not a multiple of logical block size *string*

Cause: The length of the request was not a multiple of logical block size.

Action: Correct the error and retry the operation.

ORA-15093: buffer only contains *string* bytes, I/O requested is *string* bytes

Cause: The buffer supplied for write was too small to satisfy the request.

Action: Correct the error and retry the operation.

ORA-15094: attempted to write to file opened in read only mode

Cause: The file handle passed to `DBMS_DISKGROUP.WRITE()` did not have write privileges.

Action: Obtain a file handle in read-write mode and retry the write operation.

ORA-15095: reached maximum ASM file size (*string* GB) for this disk group

Cause: An ASM file creation or file resize operation exceeded the maximum file size permitted by ASM for this disk group.

Action: Use smaller files. Alternatively, set the disk group attribute `compatible.rdbms >= 11.1` if not set already.

ORA-15096: lost disk write detected

Cause: A failure either by disk hardware or disk software caused a disk write to be lost, even though ASM received acknowledgement that the write completed. Alternatively, a clustering hardware failure or a clustering software failure resulted in an ASM instance believing that another ASM instance had crashed, when in fact it was still active.

Action: The disk group is corrupt and cannot be recovered. The disk group must be recreated, and its contents restored from backups.

ORA-15097: cannot SHUTDOWN ASM instance with connected client (process *string*)

Cause: A SHUTDOWN command was issued to an ASM instance that had one or more connected clients.

Action: Stop all clients that are using this ASM instance and retry the SHUTDOWN command. Alternatively, use the SHUTDOWN ABORT command. Note that issuing the SHUTDOWN ABORT command to an ASM instance results in abnormal termination of all RDBMS instances connected to that ASM instance. One of the active clients has been listed in the error message. Query the V\$ASM_CLIENT fixed view in an ASM instance or use ASMCMD LSOFF to list all active clients.

ORA-15098: file type not recognized by ASM instance

Cause: An attempt was made by DB instance to create a file for a file type that is not recognized by current version of ASM instance.

Action: Upgrade ASM to higher version that recognizes this file type.

ORA-15099: disk '*string*' is larger than maximum size of *string* MBs

Cause: The specified size of the disk was too big to allow the disk to become part of the diskgroup.

Action: Specify a smaller disk size than the maximum allowed size.

ORA-15100: invalid or missing diskgroup name

Cause: The command did not specify a valid diskgroup name.

Action: Specify a valid diskgroup name.

ORA-15101: no action specified

Cause: The ALTER DISKGROUP command did not specify any alterations.

Action: Specify at least one operation clause.

ORA-15102: invalid POWER expression

Cause: The syntax of the POWER expression was invalid.

Action: Specify a valid POWER expression.

ORA-15103: conflicting or duplicate REPAIR options

Cause: The command specified conflicting or duplicate REPAIR keywords.

Action: Specify only one REPAIR action.

ORA-15104: conflicting CONTENTS options

Cause: The command specified conflicting or duplicate INCLUDING CONTENTS or EXCLUDING CONTENTS options.

Action: Specify only one option.

ORA-15105: missing or invalid FAILGROUP name

Cause: The command did not specify a valid failure group name.

Action: Specify a valid failure group name.

ORA-15106: missing or invalid operating system disk locator string

Cause: The command did not specify a valid operating system path for the device as a string.

Action: Specify a valid operating system path for the device.

ORA-15107: missing or invalid ASM disk name

Cause: The command did not specify a valid ASM disk name identifier.

Action: Specify a valid ASM disk name identifier.

ORA-15108: missing or invalid template name

Cause: The command did not specify a valid template name identifier.

Action: Specify a valid template name identifier.

ORA-15109: conflicting protection attributes specified

Cause: The command contained an invalid combination of the UNPROTECTED, MIRROR, or PARITY keywords.

Action: Specify only one keyword.

ORA-15110: no diskgroups mounted

Cause: No diskgroups were specified in the ASM_DISKGROUPS parameter, so instance startup or the ALTER DISKGROUP ALL MOUNT command did not mount any diskgroups.

Action: Specify valid diskgroups in the ASM_DISKGROUPS parameter or ignore the error.

ORA-15111: conflicting or duplicate STRIPE options

Cause: The command contained both a FINE and COARSE keyword, or contained the FINE keyword more than once, or contained the COARSE keyword more than once.

Action: Specify only one keyword.

ORA-15112: no diskgroups currently mounted

Cause: An ALTER DISKGROUP ALL command did not find any mounted diskgroups upon which to operate. Either instance shutdown or an ALTER DISKGROUP ALL DISMOUNT command did not dismount any diskgroups, or an ALTER DISKGROUP ALL UNDROP DISKS command did not undrop any disks.

Action: Mount the diskgroups on which you wish to operate or ignore the error.

ORA-15113: alias name '*string*' refers to a directory

Cause: The name specified referred to a directory in the alias directory and not a valid alias entry.

Action: Check the alias name and retry.

ORA-15114: missing or invalid ASM file name

Cause: The command did not specify a valid ASM file name identifier.

Action: Specify a valid ASM file name identifier.

ORA-15115: missing or invalid ASM disk size specifier

Cause: The command did not specify a valid ASM disk size.

Action: Specify a valid ASM disk size.

ORA-15116: invalid combination of ALTER DISKGROUP options

Cause: The ALTER DISKGROUP options may not be combined in this manner.

Action: Issue separate ALTER DISKGROUP commands to accomplish the desired action.

ORA-15117: command only operates on one diskgroup

Cause: An ALTER DISKGROUP, CREATE DISKGROUP, or DROP DISKGROUP command specified a list of diskgroups or the keyword ALL in a context where only a single diskgroup was permitted.

Action: Issue separate ALTER DISKGROUP, CREATE DISKGROUP, or DROP DISKGROUP commands to accomplish the desired action.

ORA-15118: ASM diskgroup '*string*' was forcibly dismounted.

Cause: The diskgroup to which the I/O request was issued was forcibly dismounted (with the ALTER DISKGROUP DISMOUNT FORCE command) so that it could not be accessed.

Action: Mount the diskgroup to allow access again.

ORA-15119: too many disk groups (*string*); maximum allowed *string*

Cause: An attempt was made to mount more than the maximum allowed number of disk groups.

Action: Do not attempt to mount more than the maximum allowed number of disk groups. Check ASM instance parameters.

ORA-15120: ASM file name '*string*' does not begin with the ASM prefix character

Cause: A file name was specified to ASM which did not begin with the ASM prefix character (currently '+'). ASM uses the prefix to determine that a file specification is in fact an ASM file.

Action: Correct the file name specification.

ORA-15121: ASM file name '*string*' contains an invalid diskgroup name

Cause: A file name was specified that did not contain a valid diskgroup name. The diskgroup name follows immediately after the ASM prefix character. It must start with an alphabetic character, and consist of up to 30 characters which are alphabetic, numeric, or the characters '\$' and '_'.

Action: Correct the file name specification.

ORA-15122: ASM file name '*string*' contains an invalid file number

Cause: A numeric file name was specified which did not contain a valid ASM file number. The ASM file number follows immediately after the diskgroup name. It must be preceded by a '.' character, and contain only numeric characters.

Action: Correct the file name specification.

ORA-15123: ASM file name '*string*' contains an invalid incarnation number

Cause: A numeric file name was specified which did not contain a valid ASM incarnation number. The ASM incarnation number follows immediately after the ASM file number. It must be preceded by a '.' character, and contain only numeric characters.

Action: Correct the file name specification.

ORA-15124: ASM file name '*string*' contains an invalid alias name

Cause: A file name was specified which did not contain a valid ASM alias name. The ASM alias name, if present, follows immediately after the diskgroup name, in place of the ASM file number. It must be preceded by a slash, start with an alphabetic character, and consist of up to 48 characters which are alphabetic, numeric, or the characters '\$', '_', '-', or '#'. A space can separate two parts of an alias name.

Action: Correct the file name specification.

ORA-15125: ASM file name '*string*' contains an invalid template name

Cause: A file name was specified to ASM which did not contain a valid template name. The template name, if present, follows immediately after the ASM incarnation number or the ASM alias name, if such is used in place of the ASM file number. It must be enclosed in parenthesis, start with an alphabetic character, and consist of up to 30 characters which are alphabetic, numeric, or the characters '\$' and '_'.

Action: Correct the file name specification.

ORA-15126: component within ASM file name '*string*' exceeds maximum length

Cause: The maximum identifier length of 48 characters was exceeded for the diskgroup name, template name, or alias name field within the ASM file name.

Action: Correct the file name specification.

ORA-15127: ASM file name '*string*' cannot use templates

Cause: A fully qualified ASM file name was specified. Such a specification does not permit the inclusion of a template name in the ASM file name.

Action: Correct the file name specification.

ORA-15128: ASM file name '*string*' exceeds maximum length *string*

Cause: The maximum ASM file name length of 256 characters was exceeded for the combination of diskgroup name, file number, template name, alias name plus punctuation within the ASM file name.

Action: Correct the file name specification.

ORA-15129: entry '*string*' does not refer to a valid directory

Cause: The entry indicated did not refer to a directory. Attempt was made to access the contents of this directory.

Action: Correct the error and try again.

ORA-15130: diskgroup "*string*" is being dismounted

Cause: The diskgroup is being dismounted by request or because an I/O error was encountered that could not be handled by taking the disks offline. A disk cannot be offlined whenever doing so could result in all copies of a redundant extent being unavailable.

Action: Repair the hardware problem and re-mount the diskgroup. Refer to the alert log to determine which disks have failed.

ORA-15131: block *string* of file *string* in diskgroup *string* could not be read

Cause: A block could not be read because the disk containing the block is either offline or an I/O error occurred while reading the block. If this is mirrored file, then all disks that contain a copy of the block are either offline or received errors.

Action: Repair the affected disk and bring it back online. Refer to accompanying error messages to determine which disk has failed.

ORA-15132: block *string* of file *string* in diskgroup *string* could not be written

Cause: A block could not be written because the disk containing the block is either offline or an I/O error occurred while writing the block. If this is mirrored file, then insufficient disks which contain a copy of the block are either offline or received errors.

Action: Repair the affected disk and bring it back online. Refer to accompanying error messages to determine which disk has failed.

ORA-15133: instance recovery required for diskgroup *string*

Cause: An instance in the cluster crashed making instance recovery necessary.

Action: None. This error should not normally be seen by an ASM client. ASM will trap this error and retry the operation after doing instance recovery automatically.

ORA-15134: mirror resilvering not supported for *string*

Cause: The specified device requires Oracle to take mirror resilvering responsibility. ASM does not resilver logical volume manager (lvm) based mirrors.

Action: Disable lvm-based mirroring or set the parameter `_asm_allow_lvm_resilvering` to TRUE. One might experience performance degradation when lvm-based resilvering is enabled with ASM.

ORA-15135: The *string* cluster is not in rolling patch state. The patch level [*string*] of instance *string* is not the same as the current cluster patch level [*string*].

Cause: During startup, this instance found one or more other instances running at a different patch level, and the cluster was not in rolling patch state. Startup of this instance failed.

Action: The patch level of this instance differs from the cluster patch level. If the intention is to patch the cluster using the rolling option, then set the cluster in rolling patch state using the 'crsctl start rollingpatch' command from an active node, and restart Oracle Clusterware on this node. If the intention is to patch the cluster in a non-rolling manner, and the patch has been applied on the local node, then stop all of the active nodes in the cluster that have a patch level that does not match the patch level of the current node. Use the 'crsctl query crs softwarepatch *host*' command to retrieve the configured patch level of a node. If the intention is to patch the cluster in a non-rolling manner, and the patch has not been applied on the local node, then apply the requisite patch, and restart Oracle Clusterware on this node. Patches applied on a node can be obtained by issuing the 'crsctl query crs releasepatch' command.

ORA-15136: cluster in rolling patch from patch level [*string*] to [*string*]

Cause: The current patch level of the instance was incompatible with the rolling patch operation of the cluster.

Action: The patch level of the new member instance must be one of the two patch levels involved in the rolling patch operation.

ORA-15137: The *string* cluster is in rolling patch state.

Cause: The cluster was already in the middle of rolling patch.

Action: Rolling patch needs to be stopped before attempting to start again.

ORA-15138: cluster rolling patch incomplete

Cause: The cluster was still performing rolling patch.

Action: Ensure that all of the instances in the cluster are patched before retrying the command.

ORA-15139: patch level of *string* instances differ in cluster

Cause: Not all of the instances in the cluster had the same set of patches.

Action: Ensure that all of the instances in the cluster have the same patches before retrying the command. Find the configured patch level on a node using the 'crsctl query crs softwarepatch' command.

ORA-15140: rolling patch prevented by *string*

Cause: One or more instances were blocking the rolling patch.

Action: Terminate or wait until the reported operation is complete before attempting the rolling patch to the cluster.

ORA-15141: The *string* cluster is not in either rolling upgrade or rolling patch state.

Cause: The ALTER SYSTEM STOP ROLLING MIGRATION or ALTER SYSTEM STOP ROLLING PATCH command was executed when the cluster was not in either the rolling upgrade or rolling patch state.

Action: The system has to be set to rolling upgrade or rolling patch state before attempting to execute the command.

ORA-15142: either MIGRATION or PATCH keyword expected

Cause: The keyword was missing.

Action: Supply the missing keyword.

ORA-15143: either APPLY or ROLLBACK keyword expected

Cause: The keyword was missing.

Action: Supply the missing keyword.

ORA-15144: disk '*string*' is about to fail

Cause: An attempt was made to ADD (or REPLACE) a failing disk to a disk group.

Action: Specify a different disk in the command. Note that not even the FORCE option can be used to add the disk to the disk group.

ORA-15145: ASM disk '*string*' is online and cannot be replaced.

Cause: The REPLACE DISK operation specified a disk which is online.

Action: Check to confirm that the ASM disk is offline. Online disks can be replaced while maintaining redundancy by issuing ADD and DROP disk commands in a single SQL statement.

ORA-15146: Rolling migration or patching operation failed

Cause: Operation failed due to temporary issue.

Action: Retry the command.

ORA-15147: failed to start the instance

Cause: The instance could not be started during rolling upgrade from ASM instance versions prior to 12.1.0.0.0

Action: Complete the rolling upgrade process and start the instance.

ORA-15148: Too many CRS users are created.

Cause: The number of CRS users has reached its limit of 999. The situation is unexpected.

Action: Check to see why so many CRS users are created.

ORA-15149: another ASM instance found running on the host

Cause: Another ASM instance found on the host. Only one ASM instance is supported on a host.

Action: Shut down the other instance before starting this ASM instance.

ORA-15150: instance lock mode '*string*' conflicts with other ASM instance(s)

Cause: Some other ASM instance used the lock name space in a conflicting mode.

Action: Shut down the other instance or start up in compatible mode. Alternatively, set the DB_UNIQUE_NAME initialization parameter to avoid the conflict.

ORA-15151: missing or invalid version number for rolling migration

Cause: The command did not specify a valid version number.

Action: Correct the version number in the command. It should be of the form v#.#.#.# or other forms with fewer numbers delimited by a period. The version number must be different from the current software version of the instance.

ORA-15152: The *string* cluster is in rolling upgrade state.

Cause: The cluster was already in the middle of rolling upgrade.

Action: Rolling upgrade needs to be stopped before attempting to start again.

ORA-15153: The *string* cluster is not in rolling upgrade state. The version [*string*] of instance *string* is not the same as the current cluster version [*string*].

Cause: During startup, this instance found one or more other instances running at a different version, and the cluster was not in rolling upgrade state. Startup of this instance failed.

Action: The version of this instance differs from the cluster version. If the intention is to upgrade the cluster using the rolling option, then set the cluster in rolling upgrade state using the 'crsctl start rollingupgrade' command from an active node, and restart Oracle Clusterware on this node. If the intention is to upgrade the cluster in a non-rolling manner, and the local node has already been upgraded, then stop all of the active nodes in the cluster that have an older version than the current node. Use the 'crsctl query crs softwareversion *host*' command to retrieve the configured version of a node. If the intention is to upgrade the cluster in a non-rolling manner, and the local node has not been upgraded yet, then upgrade the node by running the rootupgrade.sh script.

ORA-15154: cluster rolling upgrade incomplete

Cause: The cluster was still performing rolling upgrade.

Action: Ensure that all the instances in the cluster are upgraded before retrying the command.

ORA-15155: version incompatible with the cluster

Cause: The current software version of the instance was incompatible with the other members of the cluster.

Action: Make sure that all the members of the cluster are at the same version. If you are attempting to perform rolling upgrade, execute ALTER SYSTEM START ROLLING command. Ensure that the version being upgraded to is compatible with the existing version of the cluster.

ORA-15156: cluster in rolling upgrade from version [string] to [string]

Cause: The current software version of the instance was incompatible with the rolling upgrade operation of the cluster.

Action: The version number of new member instance must be one of the two versions involved in the rolling upgrade.

ORA-15157: rolling migration is not allowed

Cause: The cluster was not capable of handling ASM rolling migration.

Action: The Oracle Cluster Services is using vendor clusterware. Oracle cannot perform rolling upgrade or downgrade using vendor cluster ware. Restart ASM instances using Oracle cluster ware and retry the operation.

ORA-15158: rolling upgrade prevented by string

Cause: One or more instances were blocking the rolling upgrade.

Action: Terminate or wait until the reported operation is complete before attempting the rolling upgrade to the cluster.

ORA-15160: rolling migration internal fatal error in module string,string

Cause: Rolling migration experienced a fatal error.

Action: Please contact Oracle support services.

ORA-15161: invalid SYS_CLUSTER_PROPERTIES parameter

Cause: The parameter passed in for SYS_CLUSTER_PROPERTIES is invalid

Action: Pass in the correct parameter, refer to user documentation for a list of allowed parameter values.

ORA-15162: cluster in rolling downgrade

Cause: The cluster was already in the middle of rolling downgrade.

Action: Rolling downgrade needs to be stopped before attempting to start again.

ORA-15163: cluster is not in the rolling downgrade to string

Cause: The cluster was not in the rolling downgrade.

Action: Start the rolling downgrade using the ALTER SYSTEM START ROLLING MIGRATION command from another ASM instance and restart this instance.

ORA-15164: cluster rolling downgrade incomplete

Cause: The cluster was still performing rolling downgrade.

Action: Ensure that all the instances in the cluster are downgraded before retrying the command.

ORA-15166: cluster in rolling downgrade from version [string] to [string]

Cause: The current software version of the instance was incompatible with the rolling downgrade operation of the cluster.

Action: The version number of new member instance must be one of the two versions involved in the rolling downgrade.

ORA-15168: rolling downgrade prevented by *string*

Cause: One or more instances were blocking the rolling downgrade.

Action: Terminate or wait until the reported operation is complete before attempting the rolling downgrade to the cluster.

ORA-15169: destination '*string*' is a subdirectory of '*string*'

Cause: Attempt to rename directory failed because the new directory name was a subdirectory of the original directory.

Action: Correct the path of the destination and try again.

ORA-15170: cannot add entry '*string*' in directory '*string*'

Cause: Other errors prevented directory/alias creation.

Action: Correct the errors and try again.

ORA-15171: invalid syntax in the alias path after '*string*'

Cause: An invalid alias/directory name syntax was specified.

Action: Correct the alias path and try again.

ORA-15173: entry '*string*' does not exist in directory '*string*'

Cause: The specified alias did not exist in the given directory.

Action: Correct the alias path and try again.

ORA-15174: unable to create alias name

Cause: An attempt to create an alias name for an ASM file failed.

Action: Check the alert logs and trace files of the Oracle ASM instance for more information on the failure, as well as checking the accompanying error messages.

ORA-15175: cannot create alias for diskgroup metadata file '*string*'

Cause: An attempt was made to create an alias for a diskgroup metadata file.

Action: Correct the alias path and try again.

ORA-15176: file '*string*' already has an alias associated with it

Cause: An attempt was made to create an alias for a file that already had an existing alias.

Action: Correct the file name and try again or drop existing alias.

ORA-15177: cannot operate on system aliases

Cause: An attempt was made to modify a system alias.

Action: Correct the alias name and try again.

ORA-15178: directory '*string*' is not empty; cannot drop this directory

Cause: An attempt was made to drop a directory that contained valid entries.

Action: Correct the directory path or specify the FORCE option to drop a directory that is not empty.

ORA-15179: missing or invalid alias name

Cause: The command did not specify a valid alias identifier.

Action: Specify a valid alias identifier.

ORA-15180: could not open dynamic library *string*, error [*string*]

Cause: The library was not accessible

Action: Correct the permissions of the library and try again.

ORA-15181: symbol [*string*] not found in library *string*, error [*string*]

Cause: An error was encountered while loading the specified ASMLIB symbol.

Action: Correct the error reported and try again.

ORA-15182: ASMLIB [*string*] version mismatch, ORACLE version [*string*]

Cause: The ASMLIB version reported is not supported by the ORACLE binary.

Action: Install the correct library and try again.

ORA-15183: ASMLIB initialization error [*string*]

Cause: Unable to initialize the ASMLIB in ORACLE.

Action: Check the configuration of ASMLIB or deinstall ASMLIB if not used.

ORA-15184: ASMLIB error could not be determined [*string*] [*string*]

Cause: An error was encountered which cannot be diagnosed further.

Action: Contact ASMLIB library vendor for support.

ORA-15185: could not close dynamic library *string*, error [*string*]

Cause: Could not close the dynamic library.

Action: Contact ASMLIB library vendor for support.

ORA-15186: ASMLIB error function = [*string*], error = [*string*], mesg = [*string*]

Cause: An error occurred during a call to function listed in the error.

Action: The detailed message associated with the error is listed along with the error. Correct the error and try again or contact ASMLIB library vendor for support.

ORA-15187: Incompatible RDBMS operation [*string*] pushed to storage

Cause: RDBMS to storage version mismatched with incompatibility operation.

Action: Upgrade RDBMS to match storage version.

ORA-15188: process terminated due to an ASMLIB error

Cause: A process was terminated as a result of an ASMLIB error.

Action: See the alert log for more information. Reconnect to the database or the ASM instance. If the process termination resulted in instance termination, restart the instance.

ORA-15192: invalid ASM disk header [*string*] [*string*] [*string*] [*string*] [*string*]

Cause: ASM encountered an invalid disk header.

Action: Contact Oracle Support Services.

ORA-15196: invalid ASM block header [*string:string*] [*string*] [*string*] [*string*] [*string*] [*string* != *string*]

Cause: ASM encountered an invalid metadata block.

Action: Contact Oracle Support Services.

ORA-15197: suppressing *string* additional ASM messages

Cause: The ASM command generated so many errors that this summary message was reported in place of many individual messages.

Action: If the command contained multiple actions, try separating each action into its own command and executing each command by itself. Otherwise, try not to generate so many errors.

ORA-15198: operation *string* is not yet available

Cause: An unimplemented operation was attempted.

Action: Consider upgrading to later releases as they become available.

ORA-15200: initialization parameter *string* (*string*) is not a power of two

Cause: The value specified for this initialization parameter was not a power of two.

Action: Correct the initialization parameter value and restart the instance.

ORA-15201: disk *string* contains a valid RDBMS file or foreign volume

Cause: A disk specified in a CREATE DISKGROUP or ALTER DISKGROUP ... ADD DISK command appeared to contain a file from an existing database or a foreign volume. By default, as a safeguard against damaging an existing database or foreign volume, ASM does not allow a disk group to be created using this disk.

Action: Check that the ASM disk specification is correct. Otherwise, when storage from a defunct database or unmounted foreign volume is reused as part of an ASM disk group, specify the FORCE option to the ASM SQL command. See the alert log for more information.

ORA-15202: cannot create additional ASM internal change segment

Cause: The mount of a diskgroup by an additional instance in a RAC cluster required more space for internal use by ASM than was available in the diskgroup.

Action: Delete unused files from the diskgroup or add additional disks to the diskgroup and retry the operation.

ORA-15203: diskgroup *string* contains disks from an incompatible version of ASM

Cause: Diskgroup was created by an ASM instance with a higher compatibility setting.

Action: Use an ASM instance with the appropriate software version to mount the diskgroup.

ORA-15204: database version *string* is incompatible with diskgroup *string*

Cause: The COMPATIBLE parameter for the RDBMS instance is less than the value of the compatible.rdbms attribute for the disk group.

Action: Update the COMPATIBLE parameter for RDBMS instance to a version greater than or equal to compatible.rdbms version. The compatible attributes for diskgroups cannot be lowered.

ORA-15205: requested mirror side unavailable

Cause: The requested mirror side of a block is either unallocated or allocated on a disk that has been dropped from the diskgroup.

Action: Resubmit the request or try another mirror side.

ORA-15206: duplicate diskgroup *string* specified

Cause: A command specified the same diskgroup twice.

Action: Specify each diskgroup only once.

ORA-15210: conflicting or duplicate PERMISSION options

Cause: The PERMISSION clause contained the USER, GROUP, or OTHER keyword more than once.

Action: Specify each keyword, at most, once.

ORA-15211: conflicting or duplicate OWNERSHIP options

Cause: The OWNERSHIP clause contained either the OWNER or the GROUP keyword more than once.

Action: Specify each keyword, at most, once.

ORA-15212: missing or invalid OWNER or GROUP name

Cause: The command did not specify a valid name for either the OWNER or the GROUP keyword.

Action: Specify a valid name for either the OWNER or the GROUP keyword.

ORA-15213: command operates on only one attribute

Cause: More than one disk group attribute was specified in the ALTER DISKGROUP statement.

Action: Specify only one disk group attribute per ALTER DISKGROUP statement.

ORA-15214: missing or invalid attribute specification

Cause: The command did not specify a valid attribute name or a valid attribute value.

Action: Specify a valid attribute name and value pair.

ORA-15215: missing or invalid user name

Cause: The command did not specify a valid user name.

Action: Specify a valid user name.

ORA-15216: missing or invalid user group name

Cause: The command did not specify a valid user group name.

Action: Specify a valid user group name.

ORA-15217: missing or invalid timeout value after DROP AFTER

Cause: The command did not specify a valid timeout value after the DROP AFTER clause.

Action: Specify a valid timeout value after the DROP AFTER clause.

ORA-15218: timeout value exceeded range

Cause: The OFFLINE timeout value exceeded the range of 0-136 years, inclusive. 136 years are 49674 days, 1192176 hours, and 71530560 minutes.

Action: Specify a timeout value within the range of 0-136 years, inclusive.

ORA-15219: conflicting or duplicate disk region options

Cause: The command contained one or more of the following: - both the HOT and the COLD keywords - both the MIRRORHOT and the MIRRORCOLD keywords - the HOT keyword more than once - the COLD keyword more than once - the MIRRORHOT keyword more than once - the MIRRORCOLD keyword more than once

Action: Specify either the HOT or the COLD keyword and either the MIRRORHOT or the MIRRORCOLD keyword, at most, once.

ORA-15220: invalid file attribute specification

Cause: The keyword UNPROTECTED, MIRROR, HIGH, FINE, or COARSE was specified in a MODIFY FILE clause. These file attributes are immutable once a file is created.

Action: Specify a disk region keyword; for example, HOT, COLD, MIRRORHOT, or MIRRORCOLD.

ORA-15221: ASM operation requires compatible.asm of *string* or higher

Cause: The ASM operation specified requires a higher disk group attribute value for compatible.asm.

Action: Set the disk group attribute compatible.asm to or above the requested version.

ORA-15222: ASM disk "*string*" is offline and cannot be renamed.

Cause: An attempt was made to rename a disk that is offline.

Action: Check the ASM disk name as specified in the command.

ORA-15223: conflicting disk operations for *string*

Cause: An attempt was made to ADD and DROP the specified ASM disk in the same statement.

Action: Revise the statement to specify distinct ASM disks in the ADD disk and DROP disk clauses.

ORA-15224: disk "*string*" is already provisioned for ASM

Cause: An attempt was made to label a disk that is already provisioned for ASM.

Action: Check the ASM disk name as specified in the command.

ORA-15225: label name '*string*' is already in use

Cause: A LABEL SET command specified a label name that was already used by another ASM disk.

Action: Select a different name for the label.

ORA-15226: label name '*string*' is not used by ASM

Cause: A LABEL CLEAR command specified a label name that was not used by ASM.

Action: Select a different name for the label.

ORA-15227: could not perform label set/clear operation

Cause: An error occurred while setting/clearing the ASM label.

Action: Look at the underlying error(s) on the error stack. Check other messages in the trace files for more information.

ORA-15230: diskgroup '*string*' does not require the FORCE option

Cause: An attempt was made to MOUNT or DROP a disk group with the FORCE option.

Action: MOUNT and DROP diskgroup with the FORCE option are only permitted if the diskgroup cannot be mounted normally.

ORA-15231: advancing diskgroup compatibility would exclude connected clients

Cause: Disk group compatibility could not be advanced because connected clients were at a lower compatibility than the target value.

Action: Make sure all connected clients are at target compatibility level or higher.

ORA-15232: cannot advance diskgroup compatibility due to offline disks

Cause: Disk group compatibility could not be advanced because some disks are offline.

Action: Retry the command after offline disks are dropped.

ORA-15233: cannot advance diskgroup compatibility due to [string]

Cause: Disk group compatibility could not be advanced because of errors.

Action: Check the alert log for more information on the reason for the failure.

ORA-15234: target RDBMS compatibility (string) exceeds ASM compatibility (string)

Cause: An attempt was made to advance RDBMS compatibility beyond the disk group's ASM compatibility.

Action: Advance ASM compatibility before advancing RDBMS compatibility.

ORA-15235: diskgroup string mount mode conflicts with existing mount

Cause: The mode specified in the diskgroup mount command conflicted with the mode in which it was mounted on some other instance.

Action: Specify a compatible mode in the diskgroup mount command.

ORA-15236: diskgroup string mounted in restricted mode

Cause: The specified diskgroup was mounted in restricted mode prohibiting client access.

Action: Dismount the diskgroup and remount it in appropriate mode.

ORA-15237: invalid attribute string to CREATE DISKGROUP command

Cause: An invalid attribute was specified with the CREATE DISKGROUP command.

Action: Check the valid attributes for CREATE DISKGROUP command and specify a valid one.

ORA-15238: string is not a valid value for attribute string

Cause: The specified value was not valid for the attribute.

Action: Check the attribute name and value.

ORA-15239: allocation unit size higher than string requires RDBMS compatibility string

Cause: The allocation unit size requested exceeded the limit imposed by the RDBMS compatibility setting.

Action: Use a smaller allocation unit size or specify a higher RDBMS compatibility setting.

ORA-15240: attribute name string is invalid

Cause: The attribute name was not valid or was not recognized.

Action: Check the attribute name.

ORA-15241: attribute string is read only

Cause: The attribute value is read-only and cannot be changed.

Action: None. The attribute value cannot be changed.

ORA-15242: could not set attribute string

Cause: An error occurred while setting the attribute.

Action: Look at the underlying error(s) on the error stack.

ORA-15243: *string* is not a valid version number

Cause: The given version number was invalid, or not valid in this context.

Action: Verify that the version number is valid and is appropriate for this command. Check for additional errors reported.

ORA-15244: new compatibility setting less than current [*string*]

Cause: The compatibility setting was invalid. The compatibility setting can only be advanced.

Action: Check the version number.

ORA-15245: ASM disk *string* is already being brought online

Cause: An attempt was made to bring online a disk that is already being brought online.

Action: Change the ONLINE statement to exclude the disk.

ORA-15246: cannot bring ASM disk *string* both online and then offline in the same statement

Cause: An attempt was made to bring the specified disk both online and offline in the same statement.

Action: Revise the statement to either bring the disk online or take the disk offline.

ORA-15247: cannot specify both WAIT and NOWAIT options in the same statement

Cause: An attempt was made to specify both WAIT and NOWAIT options in the same statement.

Action: Revise the statement and include at most one option.

ORA-15248: ASM attributes feature not enabled

Cause: The ASM attributes feature was not enabled.

Action: Advance disk group ASM compatibility to version 11.1.0 or newer.

ORA-15249: could not locate ASM attribute *string*

Cause: The specified attribute could not be accessed.

Action: Check the attribute name and examine underlying error(s) on the error stack.

ORA-15250: insufficient diskgroup space for rebalance completion

Cause: The command attempted to reduce the available diskgroup space below the current space used.

Action: Consult V\$ASM_DISK to determine the space requirements for the diskgroup contents, and repeat the command after making the required storage available.

ORA-15251: only restricted mount is allowed in the ASM instance

Cause: The ASM instance was started in restricted mode, and an attempt was made to mount a diskgroup in non-restricted mode.

Action: Start the ASM instance in non-restricted mode and mount the diskgroup again, or mount the diskgroup in restricted mode.

ORA-15252: user name '*string*' does not exist in OS user dictionary

Cause: The specified user name was not a valid operating system user.

Action: Specify a valid operating system user.

ORA-15253: user group name '*string*' exceeds limit of *string* characters

Cause: The length of the specified user group name exceeded the maximum limit.

Action: Reduce the length of the user group name to a value within the limit.

ORA-15254: user group '*string*' already exists in disk group

Cause: The specified user group name already existed in the disk group.

Action: Specify a different user group name.

ORA-15255: user group '*string*' does not exist in disk group '*string*'

Cause: The specified user group name did not exist in the disk group.

Action: Specify a valid user group name.

ORA-15256: user '*string*' is already a member of user group '*string*'

Cause: The specified user was already a member of the specified user group.

Action: Specify either an alternate user or an alternate user group.

ORA-15257: exceeded *string* number of members per user group

Cause: The maximum number of members per user group was exceeded.

Action: Delete existing members of the user group to create space.

ORA-15258: user group entry number must be between *string* and *string*, inclusive

Cause: The specified user group entry number was beyond the acceptable range.

Action: Specify a valid value for the user group entry number.

ORA-15259: user '*string*' is not a member of user group '*string*'

Cause: The specified user was not a member of the specified user group.

Action: Specify either an alternate user or an alternate user group.

ORA-15260: permission denied on ASM disk group

Cause: An attempt was made to perform an operation on an ASM disk group without the appropriate privileges.

Action: Ask the ASM administrator to perform the operation or grant the required privileges.

ORA-15261: user '*string*' already exists in disk group '*string*'

Cause: The specified UID already existed in the disk group.

Action: Specify a different UID.

ORA-15262: user '*string*' does not exist in disk group '*string*'

Cause: The specified UID did not exist in the disk group.

Action: Specify a user with a valid UID.

ORA-15263: user name '*string*' exceeds limit of *string* characters

Cause: The length of the specified user name exceeded the maximum limit.

Action: Reduce the length of the user name to a value within the limit.

ORA-15264: Operating system function returned error *string*

Cause: An operating system error occurred.

Action: Correct the operating system error and retry the operation.

ORA-15265: user identification number not in range of [*string,string*]

Cause: The operating system user identification number exceeded the maximum value.

Action: Change the user identification number to a value within the accepted range.

ORA-15266: user identification number '*string*' is not allowed

Cause: This user identification number is used internally by ASM.

Action: Please choose a different user identification number.

ORA-15268: internal Oracle file *string* already exists.

Cause: File was already in existence.

Action: This is an internal error. Contact Oracle Support Services.

ORA-15269: group identification number not in range of [*string,string*]

Cause: The operating system group identification number exceeded the maximum value.

Action: Change the group identification number to a value within the accepted range.

ORA-15270: disk *string* is not a quorum disk

Cause: The specified disk was not a quorum disk.

Action: Retry the operation without the quorum attribute for the disk.

ORA-15271: failgroup *string* is a quorum failgroup

Cause: The specified failgroup was a quorum failgroup.

Action: Retry the operation with the quorum attribute for the failgroup.

ORA-15272: failgroup *string* is not a quorum failgroup

Cause: The specified failgroup was not a quorum failgroup.

Action: Retry the operation without the quorum attribute for the failgroup.

ORA-15273: Could not create the required number of voting files.

Cause: The required number of voting files could not be created. See accompanying messages for possible causes.

Action: See accompanying messages for possible actions.

ORA-15274: Not enough failgroups (*string*) to create voting files

Cause: The number of failgroups required for this redundancy were not present in the diskgroup to create voting files.

Action: Retry the operation after creating new failgroup(s).

ORA-15275: Not enough contiguous space (*string* AUs) in disk *string* to allocate a voting file

Cause: The specified disk did not have enough space to allocate a voting file on it.

Action: Ensure that there is at least 1 disk with the required space in atleast the required number of failgroups for the diskgroup.

ORA-15276: ASM diskgroup *string* has cluster voting files

Cause: An attempt was made to drop a diskgroup that contained cluster voting files.

Action: Move the cluster voting files out of the diskgroup and retry the operation.

ORA-15277: disk *string* is a quorum disk

Cause: The specified disk was a quorum disk.

Action: Retry the operation with the quorum attribute for the disk.

ORA-15278: external redundancy diskgroup requires at least one regular disk

Cause: An attempt was made to create an external redundancy diskgroup with only quorum disks.

Action: Specify atleast one regular disk to create an external redundancy diskgroup.

ORA-15279: user '*string*' is currently being deleted

Cause: The specified user was in the process of being deleted and could not be used.

Action: Either abandon this operation or specify a different user.

ORA-15280: user '*string*' owns existing files

Cause: An attempt was made to drop a user that still owns existing files.

Action: Specify the CASCADE option to drop the user and all of the owned files.

ORA-15281: not all specified disks were brought ONLINE

Cause: Some of the disks specified either experienced I/O errors while being brought ONLINE, or were simultaneously brought OFFLINE or dropped in another session, or were full.

Action: Query V\$ASM_DISK or use ASMCMD LSDSK to determine which disks were not brought ONLINE. Inspect any additional error messages and the alert log to determine the exact cause. If some of the disks failed, either fix the cause of the failures or drop the disks. If some of the disks are full, either free space in the disk group or add new disks to the diskgroup.

ORA-15283: ASM operation requires compatible.rdbms of *string* or higher

Cause: The ASM operation specified requires a higher disk group attribute value for compatible.rdbms.

Action: Set the disk group attribute compatible.rdbms to or above the requested version.

ORA-15284: ASM terminated ALTER DISKGROUP ONLINE

Cause: None of the disks specified by ALTER DISKGROUP ONLINE could be brought ONLINE.

Action: Inspect additional error messages and the alert log to determine why the specified disks cannot be brought ONLINE.

ORA-15285: disk '*string*' violates disk group attribute *string*

Cause: Including the specified disk would violate a restriction imposed by the specified disk group attribute.

Action: Retry the operation while omitting the offending disk or change the attribute.

ORA-15286: could not set disk group attribute *string* due to offline disks

Cause: The specified disk group attribute could not be set because the disk group includes offline disks.

Action: Retry the operation after the offline disks in this disk group are dropped or brought online.

ORA-15287: could not set disk group attribute *string* due to incompatible disks

Cause: The specified disk group attribute could not be set because the disk group includes disks that conflict with the new value.

Action: Retry the operation after dropping the conflicting disks in this disk group.

ORA-15288: disk(s) require disk group attribute *string* clause

Cause: Some of the disks specified by the command also require the specified disk group attribute to be stated.

Action: Retry the command including an ATTRIBUTE clause for the required disk group attribute. Alternatively, omit the disks that require setting the disk group attribute. See the alert log for additional information on the disks that require setting the disk group attribute.

ORA-15289: disk *string* is limited to *string* MB on instance *string*

Cause: An ALTER DISKGROUP ADD DISK or RESIZE DISK command specified a disk with a size greater than the specified instance could use.

Action: Check the storage subsystem configuration on the specified node.

ORA-15290: operation not permitted on offline disk *string*

Cause: An attempt was made to specify an operation that is only permitted on disks that are online. The specified disk was not online.

Action: Online the disk or wait for online to complete before retrying the operation.

ORA-15291: ASM could not add disk "*string*" to disk group "*string*"

Cause: An attempt was made to add a disk to a disk group while the distribution of disks in failure groups was too uneven.

Action: Add or drop disks to or from failure groups to balance their distribution in all failure groups and retry the operation.

ORA-15292: Disk name *string* is being used by another disk

Cause: The specified disk name could not be reused because an 11.1.0.6.0 or earlier database instance had it cached in memory.

Action: Do one of the following - Specify a different name for the disk. - Wait for the rebalance to complete successfully. - Identify the database instance with the problem and shut it down before retrying the command.

ORA-15293: operation disallowed by ASM_POWER_LIMIT

Cause: This operation required data movement in order to complete successfully. However, ASM_POWER_LIMIT was set to zero, thereby preventing this operation.

Action: Repeat the operation after setting ASM_POWER_LIMIT to a non-zero value.

ORA-15294: SYSASM privilege not allowed on database instance

Cause: The SYSASM privilege was not allowed on this database instance; it is allowed only on an ASM instance.

Action: Use either the SYSDBA or the SYSOPER privilege.

ORA-15295: ASM instance software version *string* less than client version *string*

Cause: The ASM instance software version was less than the client version.

Action: Upgrade the ASM instance software. Check the alert log for more information on the reason for the failure.

ORA-15298: possible lost disk write detected during crash recovery

Cause: ASM crash recovery read a block whose version was older than expected.

Action: None. End users will not see this error. ASM automatically traps this error and attempts a fallback recovery.

ORA-15299: FINE striping not allowed for the Staleness Registry

Cause: An SQL command attempted to set the striping attribute of the ASM_STALE template to FINE striping.

Action: Do not modify the striping attribute of the ASM_STALE template.

ORA-15300: File *string* is incompatible with this operation

Cause: The file type was incompatible with the operation.

Action: Use another file of the correct type.

ORA-15301: cannot change *string* of the open file '*string*'

Cause: A SET OWNERSHIP or SET PERMISSION command was attempted on an open file.

Action: Close the file and retry the SQL command.

ORA-15302: active use of files owned by user '*string*' precludes its drop

Cause: A DROP USER command specified a user owning files that were in use.

Action: Close all files owned by this user.

ORA-15303: Voting files could not be created in diskgroup *string* due to small Allocation Unit size

Cause: An attempt was made to create voting files in a diskgroup with a small Allocation Unit size.

Action: Create voting files in a different diskgroup whose Allocation Unit size is at least 1 mega byte.

ORA-15304: operation requires ACCESS_CONTROL.ENABLED attribute to be TRUE

Cause: An attempt was made to run an operation that required the ACCESS_CONTROL.ENABLED attribute to be set to TRUE, but its existing state was FALSE.

Action: Set the ACCESS_CONTROL.ENABLED attribute to TRUE and retry the operation.

ORA-15305: cannot operate on ASM internal files

Cause: An attempt was made to operate on Automatic Storage Management (ASM) metadata used to manage the diskgroup.

Action: Check the specified ASM file name.

ORA-15306: ASM password file update failed on at least one node

Cause: A CREATE USER, ALTER USER, DROP USER, GRANT, or REVOKE command failed on at least one node of the Automatic Storage Management (ASM) cluster.

Action: Check the ASM alert logs for more information.

ORA-15307: disk *string* not discoverable by CSS; diskgroup *string* has CSS voting files

Cause: An attempt was made to add a disk which cannot be discovered by Cluster Synchronization Services (CSS). CSS has voting files in the disk group and will not be able to use the new disk if CSS cannot discover the disks.

Action: Update the Automatic Storage Management (ASM) disk string in the Grid Plug and Play (GPnP) profile to include the specified disk and retry the operation. Alternatively, migrate the CSS voting files out of the diskgroup and retry the operation

ORA-15308: could not access ASM SPFILE in RDBMS instance

Cause: A relational database management system (RDBMS) instance attempted to access an Automatic Storage Management (ASM) SPFILE.

Action: Connect to an ASM instance and reissue the command. Alternatively, specify an RDBMS SPFILE.

ORA-15309: could not access database SPFILE in ASM instance

Cause: An Automatic Storage Management (ASM) instance attempted to access a relational database management system (RDBMS) SPFILE.

Action: Connect to an RDBMS instance and reissue the command. Alternatively, specify an ASM SPFILE.

ORA-15310: process terminated due to signal

Cause: A process was terminated as a result of a signal in the I/O path.

Action: Reconnect to the database or the ASM instance. If the process termination resulted in instance termination, restart the instance.

ORA-15311: process terminated due to fenced I/O

Cause: A process was terminated because it was fenced from doing any more I/Os.

Action: Reconnect to the database or the ASM instance. If the process termination resulted in instance termination, restart the instance.

ORA-15312: invalid file type

Cause: Automatic Storage Management (ASM) could not determine the type of file.

Action: The file specified is not supported with Automatic Storage Management (ASM). Specify a supported file type for the operation.

ORA-15313: Oracle ASM disk *string* cannot be resized under *string* M

Cause: An Oracle ASM disk resize command specified a size that was less than the size required to support the voting file present on the disk.

Action: Increase the size specified for the disk.

ORA-15315: Write errors in disk group *string* could lead to inconsistent ASM metadata.

Cause: One or more failures occurred while writing ASM metadata to disk.

Action: Repair the hardware problem and remount the disk group. Check the accompanying errors and alert log for the disks which reported the error.

ORA-15316: Previous client instance *string* has not fully exited.

Cause: One or more processes from a prior instantiation of this client were not fenced.

Action: Make sure all processes belonging to the client instance exited. Check the client alert log and the trace file of the process that terminated the instance.

ORA-15317: user identification number '*string*' does not exist in operating system user dictionary

Cause: The specified user identification number did not belong to a valid operating system user.

Action: Specify a valid operating system user.

ORA-15318: disks in disk group *string* cannot be resized

Cause: Execution of ASM Storage Reclamation Utility script was incomplete on the specified disk group.

Action: Execute ASM Storage Reclamation utility on the disk group to complete the operation.

ORA-15319: ownership assignment of files to user '*string*' precludes its drop

Cause: A DROP USER command specified a user currently being assigned as the owner of one or more files with a SET OWNERSHIP command.

Action: Wait for the SET OWNERSHIP command to complete and then retry the DROP USER command

ORA-15320: cannot drop user '*string*' that has been assigned as the owner of one or more open files

Cause: A SET OWNERSHIP command assigned this user as the owner of one or more files which were open at the time of assignment, and hence this user cannot be dropped due to possible inconsistencies in file ownerships.

Action: Restart all ASM client instances of the cluster in a rolling manner.

ORA-15321: cannot set attribute with connected clients

Cause: The disk group attribute could not be set because there were connected clients.

Action: Shut down connected clients and retry the command. Query the V \$ASM_CLIENT fixed view in an ASM instance or use ASMCMD LSOFF to list active clients.

ORA-15322: cannot drop the owner '*string*' of user group '*string*' in disk group '*string*'

Cause: An attempt was made to drop the owner of a user group from the group's member list.

Action: Specify a user group member who is not the owner of the user group.

ORA-15323: ASM password update has failed on local node

Cause: A CREATE USER, ALTER USER, DROP USER, GRANT, or REVOKE command failed on the local node of the Automatic Storage Management (ASM) cluster.

Action: Check the ASM alert logs for more information.

ORA-15324: requested operation is not allowed on the password file *string*

Cause: An attempt was made to run an operation that is not supported on password files.

Action: Specify a new file name or a file with the correct file type and retry the operation.

ORA-15325: file *string* is not a valid password file

Cause: An attempt was made to open a file that had a type different from the password file.

Action: Specify correct password file name and retry the operation.

ORA-15326: specified input *string* is a not an ASM file

Cause: The attributes could not be obtained as the specified input is either a disk group or a directory.

Action: Specify a valid Automatic Storage Management (ASM) file name.

ORA-15327: remote ASM is not enabled

Cause: An operation was requested that requires remote ASM to be enabled.

Action: Enable remote ASM.

ORA-15328: user identification string '*string*' exceeds limit of *string* characters

Cause: The user identification string provided for this operation exceeded the maximum number of characters allowed.

Action: Provide a user identification string of shorter length.

ORA-15329: cluster identification string '*string*' exceeds limit of *string* characters

Cause: The cluster identification string provided for this operation exceeded the maximum number of characters allowed.

Action: Provide a cluster identification string of shorter length.

ORA-15330: ASM user name format requires COMPATIBLE.ASM of *string* or higher

Cause: The ASM user name format specified requires a higher disk group attribute value for COMPATIBLE.ASM.

Action: Set the disk group attribute COMPATIBLE.ASM to or above the requested version.

ORA-15331: ASM proxy instance ORACLE_SID *string* does not start with *string*

Cause: The ASM proxy instance was started with an invalid ORACLE_SID prefix.

Action: Start the ASM proxy instance with an ORACLE_SID that begins with the correct prefix.

ORA-15332: ASM proxy instance cannot connect to an ASM server

Cause: The ASM proxy instance could not find an ASM server to connect to during startup.

Action: Verify that an ASM server instance is running and accessible in the cluster and restart the proxy instance.

ORA-15333: disk is not visible on client instance

Cause: An ALTER DISKGROUP ADD DISK statement specified a disk that could not be discovered by all ASM client instances.

Action: Check the ASM alert logs for more information. Check operating system permissions for the device and the storage subsystem configuration.

ORA-15334: VUBG process terminated with error

Cause: The volume background process terminated with error.

Action: Warm start instance.

ORA-15335: ASM metadata corruption detected in disk group '*string*'

Cause: A corruption was detected reading a block. It may be recoverable.

Action: The corruption could be the result of a storage problem, a configuration issue, or a software bug. Check the alert log for the result of the recovery attempt. If unsuccessful, contact Oracle Support Services with the incident information.

ORA-15336: STRIPE_WIDTH cannot be set when STRIPE_COLUMNS equals 1

Cause: An ADD VOLUME command specified a STRIPE_COLUMNS equal to 1 and specified the STRIPE_WIDTH argument.

Action: If striping is required, set STRIPE_COLUMNS to greater than 1. If striping is not required, do not set STRIPE_WIDTH.

ORA-15337: invalid or missing database name

Cause: You did not specify a valid database name for this command.

Action: Specify a valid database name.

ORA-15338: ASM client instance *string* reconnection refused

Cause: The client was not found as an orphaned client and hence is not a legitimate candidate to reconnect to Oracle ASM.

Action: Shut down and restart the remote client to be considered as a new client in the cluster.

ORA-15339: ASM client instance *string* has been fenced by ASM

Cause: Oracle ASM has already fenced this client.

Action: Shut down and restart the remote client to be considered as a new client in the cluster.

ORA-15340: unable to create Client Cluster '*string*'

Cause: Creation of the Client Cluster failed.

Action: Check the alert logs and trace files of the Oracle ASM instance for more information on the reason for the failure, as well as checking the accompanying error messages.

ORA-15341: unable to delete Client Cluster '*string*'

Cause: Deletion of the Client Cluster failed.

Action: Check the alert logs and trace files of the Oracle ASM instance for more information on the reason for the failure, as well as checking the accompanying error messages.

ORA-15343: Feature *string* ASM is not enabled

Cause: An operation was requested that requires Oracle Flex ASM to be enabled.

Action: Enable Oracle Flex ASM.

ORA-15344: client *string* not found

Cause: The specified Oracle ASM client was not registered with this instance.

Action: Check the alert logs and trace files of the client for more information on the reason for the failure, as well as the accompanying error messages.

ORA-15345: disconnected client instance(s) detected

Cause: One or more ASM client instances were not connected to an ASM instance.

Action: Check that all of the ASM client instances are connected to an ASM instance and retry the operation.

ORA-15346: process attempting to identify or create ASM file *string* was aborted

Cause: The client process attempting to identify or create the ASM file terminated or was interrupted.

Action: Correct the cause of the process interruption and retry the operation.

ORA-15347: logical block size *string* of ASM file '*string*' is too small for disk group sector size *string*

Cause: An attempt was made to create a file on ASM whose logical block size was less than the sector size for the disk group.

Action: Check if the system configuration has changed. Correct the error and retry the operation.

ORA-15348: ASMLIB misconfiguration error [*string*]

Cause: ASMLIB was found in more than one location.

Action: Check the configuration of ASMLIB and ensure that only one library is configured.

ORA-15349: failed to set or get AFD_DISKSTRING parameter

Cause: The operation failed because Oracle Local Repository (OLR) was not available.

Action: Check that Oracle Clusterware is properly configured.

ORA-15350: invalid SYS_ASMFD_PROPERTIES parameter

Cause: The parameter passed in for SYS_ASMFD_PROPERTIES was invalid.

Action: Pass in the correct parameter. Refer to the product documentation for a list of allowed parameter values.

ORA-15351: I/O request issued to a sparse grid disk failed because the disk was out of space.

Cause: The sparse grid disk was out of space.

Action: Add more space to the disk group by adding more disks or add more space to existing disks by resizing them.

ORA-15352: invalid client name *string* specified

Cause: The client name passed in was invalid.

Action: Pass in a valid client name. The valid client name is of format *instance name:dbunique name:cluster name* or *instance name:dbunique name*

ORA-15353: disk '*string*' cannot be added to disk group '*string*'

Cause: The disk type did not match the disk group sparse type.

Action: Make sure the disk type matches the disk group sparse type.

ORA-15354: failed to format grid disk "*string*"

Cause: The grid disk format command failed.

Action: Check the grid disk logs and take corrective actions.

ORA-15357: Can not create file "*string*" on a sparse disk group

Cause: An attempt was made to create fine-grained striping files on sparse disk groups. Fine-grained striping files cannot be created on sparse disk groups.

Action: Create the file on a regular disk group, or create a coarse-grained striping file on a sparse disk group.

ORA-15358: query for materialized space to sparse grid disk "*string*" of disk group "*string*" has failed

Cause: The query for materialized space to the cell server has failed.

Action: Check the ASM and cell alert logs and take corrective actions.

ORA-15359: could not perform label scan operation

Cause: An error occurred while scanning for ASM label.

Action: Look at the underlying errors on the error stack. Check other messages in the trace files for more information.

ORA-15360: could not perform label filter operation

Cause: An error occurred while setting AFD filter status.

Action: Look at the underlying errors on the error stack. Check other messages in the trace files for more information.

ORA-15361: unable to find Client Cluster '*string*'

Cause: Looking up of the Client Cluster failed.

Action: Execute the 'asmcmd lsc' command to list all of the configured Client Clusters. If the Client Cluster listed in the message is not present, it might have been forcibly deleted. Refer to the product documentation for more information. If the Client Cluster listed in the message was present, contact Oracle Support Services.

ORA-15362: invalid cluster name '*string*' specified

Cause: An invalid cluster name was supplied.

Action: Specify a cluster name which is at least one character but no more than 15 characters in length. The cluster name must be alphanumeric, it cannot begin with a numeric character, and it may contain hyphen (-) characters. However, it cannot end with a hyphen (-) character.

ORA-15363: invalid version number '*string*' specified

Cause: The command did not specify a valid version number.

Action: Correct the version number in the command. It should be of the form v#.#.#.# or other forms with fewer numbers delimited by a period.

ORA-15364: Client Cluster version *string* is incompatible with Storage Server version *string*

Cause: The specified Client Cluster version was not supported by the Storage Server.

Action: Upgrade or downgrade the Storage Server to a version that is compatible with Client Cluster and retry the operation. Install a Client Cluster using a supported version. Refer to product documentation for a complete list of supported releases.

ORA-15365: Client Cluster '*string*' already configured

Cause: The specified Client Cluster was already configured.

Action: Execute the 'asmcmd lsc' command to list all of the configured Client Clusters. Reexecute the command with a Client Cluster name that has not already been configured.

ORA-15366: unable to delete configuration for Client Cluster '*string*' because the directory '*string*' was not empty

Cause: Deleting the Client Cluster configuration failed because some files were present.

Action: Deinstall the Client Cluster and rerun the command. If the command fails again, execute the 'asmcmd rmcc <client_cluster_name> -f' command to force deletion of the configuration for the Client Cluster.

ORA-15367: Client Cluster '*string*' not configured

Cause: The specified Client Cluster was not configured.

Action: Execute the 'asmcmd lscc' command to list all of the configured Client Clusters. Reexecute the command with a Client Cluster name that is configured.

ORA-15368: Oracle Cluster Registry operation failed with error *string*.*nstring*

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-15369: OCI invalid handle *string*

Cause: An Oracle Call Interface (OCI) call returned the OCI_INVALID_HANDLE return code and did not store the error on the stack.

Action: Contact Oracle Support Services.

ORA-15371: The command is not supported on a Client Cluster.

Cause: An attempt was made to run a command that is not supported on a Client Cluster.

Action: Rerun the command on the Storage Server.

ORA-15400: not running on supported ASM appliance

Cause: An attempt was made to initialize the server code as an appliance when it was not running a supported appliance configuration.

Action: Check the appliance configuration and retry the operation.

ORA-15401: command not supported on ASM appliance '*string*'

Cause: An attempt was made to run an operation that is not supported by the specified appliance.

Action: Check the documentation to see which operations are allowed or disallowed for the specified appliance.

ORA-15402: insufficient number of disks to support ASM appliance '*string*'

Cause: An attempt was made to do an operation that resulted in insufficient number of disks required for the specified appliance.

Action: Check the appliance configuration and retry the operation after inserting disks in the appropriate slots.

ORA-15403: unable to read an ASM appliance configuration file

Cause: Oracle ASM was unable to read an appliance configuration file.

Action: Check the operating system error messages to determine the identity of the configuration file. Then, fix the configuration file.

ORA-15404: Oracle ASM could not add disk "*string*" to disk group "*string*" on appliance *string*

Cause: There were too many dropping or offline disks in the specified disk group.

Action: Wait for the drop and rebalance operations to complete, or online the offline disks and wait for the online to complete. Then, retry the operation.

ORA-15405: Slot *string* in Oracle ASM appliance '*string*' contains more than one disk

Cause: An attempt was made to add a disk to a slot in the ASM appliance that already had a disk (possibly OFFLINE) associated with it.

Action: Use FORCE to drop the disk that exists in the specified slot. Then, retry the operation.

ORA-15406: ASM disk *string* is being replaced.

Cause: An attempt was made to either online or replace a disk that was already being replaced, probably by another instance.

Action: Change the ONLINE statement to exclude the disk.

ORA-15407: Disk specification '*string*' matches multiple disks.

Cause: More than one disk is discovered matching the specified disk string.

Action: Change the disk string to specify one and only one disk.

ORA-15408: Replacement disk '*string*' for '*string*' must be at least *string* MB.

Cause: The replacement disk must be at least of the same size of the old disk.

Action: Use a larger physical disk to replace.

ORA-15409: All disks in disk group *string* are not of the same type.

Cause: An attempt was made to add disks of a different type to the disk group under appliance mode.

Action: Check if all the disks in the disk group are of the same type. Do not add flash and hard disks to the same disk group.

ORA-15410: Disks in disk group *string* do not have equal size.

Cause: The disks in the disk group were not of equal size.

Action: Ensure that all disks in the disk group are of equal size. If adding new disks to the disk group, their size must be equal to the size of the existing disks in the disk group. If resizing, all disks in the disk group must be resized to the same size.

ORA-15411: Failure groups in disk group *string* have different number of disks.

Cause: An attempt was made to enable appliance mode with a different number of disks in each failure group.

Action: Check if all failure groups have an equal number of disks and try again.

ORA-15412: Operation on disk group *string* is incompatible under appliance mode.

Cause: An attempt was made to do an operation that resulted in dropping all disks in a failure group or creating a new failure group.

Action: Disable appliance mode, perform the operation and reenables appliance mode.
WARNING: To reenables appliance mode, ensure the following constraints are met: * There are a sufficient number of disks in each failure group. * All failure groups have an equal number of disks. * There are no offline disks in the disk group. * Every disk

in the disk group is of the same type (flash or hard disk). * All disks in the disk group have an equal size.

ORA-15413: Appliance mode is disabled.

Cause: Appliance mode could not be set because it was explicitly disabled.

Action: Enable appliance mode and appliance partnering parameters.

ORA-15414: Appliance mode requires at least *string* failure groups and either *string* or *string* disks in all failure groups.

Cause: Appliance mode could not be enabled because it did not meet the minimum requirements.

Action: Check if there are sufficient failure groups and a sufficient number of disks in each failure group.

ORA-15415: could not retrieve appliance properties for disk group *string*

Cause: Some of the appliance properties were invalid. This could be due to a cell software downgrade after setting the 'appliance.mode' attribute.

Action: Check the cell software on all of the cells or disable appliance mode.

ORA-15416: ASM disk *string* in disk group *string* is offline.

Cause: An offline disk prevented the current ADD or DROP operation.

Action: Drop the offline disk or online the offline disk or disable appliance mode.

ORA-15418: Appliance mode is not supported for compatible.asm *string*.

Cause: Appliance mode could not be enabled for the current value of the compatible.asm attribute.

Action: Disable appliance mode if it is enabled or advance compatible.asm to a version that supports appliance mode.

ORA-15419: disk group *string* is not mounted in restricted mode

Cause: The specified disk group was not mounted in restricted mode prohibiting the requested operation.

Action: Dismount the disk group, remount it in restricted mode and retry the operation.

ORA-15420: Operation on disk group *string* is disabled.

Cause: The current operation could not be completed because the disk group is in the middle of an appliance migration.

Action: Wait for the migration to complete and then retry the command.

ORA-15440: VIO0 process terminated with error

Cause: A volume IO background process terminated with error.

Action: Wait for the process to restart.

ORA-15450: invalid volume name specifier

Cause: The volume name specified was invalid

Action: Specify a valid volume name.

ORA-15451: missing or invalid volume size specifier

Cause: The volume size specified was invalid.

Action: Specify a valid volume size.

ORA-15452: missing or invalid stripe width specifier

Cause: The volume stripe width specified was invalid.

Action: Specify a valid volume stripe width.

ORA-15453: invalid STRIPE_COLUMNS specifier

Cause: An ADD VOLUME command did not specify a valid number of stripe columns.

Action: Specify a valid number of stripe columns.

ORA-15454: ALTER DISKGROUP ALL cannot use single volume names

Cause: An ALTER DISKGROUP ALL command specified a single volume or a list of volumes

Action: Use the ALL keyword when specifying volumes on multiple diskgroups.

ORA-15455: FORCE option cannot be used when specifying ALL volumes

Cause: The FORCE option was used to disable ALL volumes.

Action: Use FORCE option to disable one volume at a time.

ORA-15456: missing or invalid volume usage specifier

Cause: The command did not specify a valid volume usage string.

Action: Specify a valid volume usage string with alphanumeric characters.

ORA-15457: first letter of the volume name is not alphabetic

Cause: A volume name was specified with a nonalphabetic first character.

Action: Set the first character of the volume name to be alphabetic.

ORA-15458: invalid character in volume name

Cause: A volume name was specified with an invalid character.

Action: Use a volume name with only alphanumeric characters.

ORA-15459: STRIPE_WIDTH of *string* is not a power of two

Cause: An ADD VOLUME command specified a STRIPE_WIDTH that was not a power of two.

Action: Select a STRIPE_WIDTH that is a power of two; for example, 4K, 8K, etc.

ORA-15460: volume name '*string*' is already in use

Cause: An ADD VOLUME command specified a volume name that was already used by another volume.

Action: Select a different name for the volume.

ORA-15461: STRIPE_WIDTH of *string* bytes is less than the minimum of *string* bytes

Cause: An ADD VOLUME command specified a STRIPE_WIDTH that was too small.

Action: Select a larger STRIPE_WIDTH.

ORA-15462: STRIPE_WIDTH of *string* bytes is greater than the maximum of *string* bytes

Cause: An ADD VOLUME command specified a STRIPE_WIDTH that was too large.

Action: Select a smaller STRIPE_WIDTH.

ORA-15463: volume size of *string*K is less than the minimum of *string*M

Cause: The volume size specified was too small.

Action: Select a larger volume size.

ORA-15464: STRIPE_COLUMNS of *string* is greater than the maximum of *string*

Cause: An ADD VOLUME command specified a STRIPE_COLUMNS that was that was too large.

Action: Select a smaller STRIPE_COLUMNS value.

ORA-15465: STRIPE_COLUMNS of *string* is less than the minimum of *string*

Cause: An ADD VOLUME command specified a STRIPE_COLUMNS that was too small.

Action: Select a larger STRIPE_COLUMNS value.

ORA-15466: volume '*string*' in disk group '*string*' does not exist

Cause: The command specified a volume name that does not exist.

Action: Ensure a valid volume name is used.

ORA-15467: volume operation is already in progress

Cause: Another command was currently operating on a volume.

Action: Wait a short time before retrying the command.

ORA-15468: volume '*string*' in diskgroup '*string*' is currently being accessed

Cause: An attempt was made to communicate with the volume driver. The volume was being accessed by another application and, therefore, could not be changed.

Action: Shut down all applications that might be accessing this volume and then retry the command.

ORA-15469: VBG process terminated with error

Cause: A volume background process terminated with error.

Action: Wait for process to restart.

ORA-15470: VDBG process terminated with error

Cause: The volume driver background process terminated with error.

Action: Warm start instance.

ORA-15471: volume redundancy incompatible with disk group redundancy

Cause: An ADD VOLUME command specified a volume redundancy that was incompatible with the redundancy of the disk group.

Action: Specify a valid volume redundancy. An unprotected redundancy volume cannot be added to a normal or high redundancy disk group, and a mirror or high redundancy volume cannot be added to an external redundancy disk group.

ORA-15472: volume library cannot be loaded. Platform may not support volume creation.

Cause: The volume library could not be loaded. Either the platform does not support volume operations, or there is a problem with the library.

Action: Ensure that the platform supports volumes. If the platform does support volumes, check the alert log for library loading failure information.

ORA-15473: access to a volume's storage through an unsupported interface

Cause: An attempt was made to access or modify a volume's storage through an unsupported interface.

Action: Use supported interfaces for access to volume devices.

ORA-15474: volume name is greater than *string* characters

Cause: An ADD VOLUME command specified a volume name that was too long.

Action: Select a smaller volume name.

ORA-15475: usage string is greater than *string* characters

Cause: The usage string specified was too long.

Action: Select a smaller usage string.

ORA-15476: ACFS volumes must be resized with the 'acfsutil size' operating system command.

Cause: An attempt was made using SQL to resize an ADVM volume that contains an ACFS file system.

Action: Use the 'acfsutil size' operating system command to resize the volume.

ORA-15477: cannot communicate with the volume driver

Cause: An attempt was made to communicate with the volume driver.

Action: Check that the ASM volume driver is loaded. If so, check the alert log to identify the reason for failure and take necessary action to prevent such failures in the future.

ORA-15478: ACFS process terminated with error

Cause: The ACFS background process terminated with error

Action: Wait for process restart

ORA-15479: ASM diskgroup does not support volumes

Cause: Volumes were not supported. A common example is having disks, such as NFS, in the diskgroup that are not supported by volumes.

Action: Remove unsupported disks in the diskgroup.

ORA-15480: error reported in the ASM volume driver

Cause: An error was reported in the ASM volume driver.

Action: Check the operating system log files to identify the reason for the failure and take necessary action to prevent such failures in the future.

ORA-15481: missing or invalid volume mountpath specifier

Cause: A invalid volume mountpath string was specified.

Action: Specify a valid volume mountpath string with alphanumeric characters.

ORA-15482: failed to create/remove device file for volume *string* on diskgroup *string*

Cause: Improper driver installation.

Action: Check the alert log for device file creation failure information. Reload the driver using the supported installation method.

ORA-15483: volume driver version is not compatible with the ASM instance

Cause: The version of the ASM volume driver was not supported by ASM.

Action: Update the volume driver or the ASM instance.

ORA-15484: volume '*string*' contains *string* error(s)

Cause: Errors were returned by the ALTER DISKGROUP CHECK VOLUME command.

Action: See the alert log for details of the errors.

ORA-15485: number of volumes in diskgroup exceeds the maximum of *string*

Cause: A volume was added on a diskgroup that already contained the maximum number allowed.

Action: Remove volumes on the diskgroup.

ORA-15486: internal error while altering volume

Cause: An internal ASM error occurred while altering a volume.

Action: See the alert log for details of the error.

ORA-15487: cannot shutdown the ASM instance with an open ASM volume

Cause: One or more ASM volumes were found to be open during shutdown.

Action: Close the ASM volume and retry the shutdown.

ORA-15488: volume *string* is open on instance *string*

Cause: ASM volume was not closed prior to instance termination on node specified.

Action: Close the ASM volume either via unmount or node restart and retry the operation

ORA-15489: conflicting volume already open on this node

Cause: An ASM volume was not closed prior to instance shutdown on node specified. It is conflicting with the volume that is to be enabled.

Action: Close the ASM volume either via unmount or node restart and retry the operation.

ORA-15490: not all instances could add/drop the volume

Cause: The ASM volume cannot be added/dropped on all instances.

Action: See the alert log for the reason the volume could not be added/dropped.

ORA-15491: volume redundancy conflicts with disk region options

Cause: Non-mirrored volumes erroneously contained the MIRRORHOT or MIRRORCOLD keyword.

Action: Remove the MIRRORHOT or MIRRORCOLD keywords from non-mirrored volumes.

ORA-15492: command or option incompatible with ASM volumes

Cause: An attempt was made to use a feature which is not compatible with existing ASM volumes. A common example is adding a disk to the diskgroup that is unsupported by ASM volumes.

Action: Omit the option from the command.

ORA-15493: target ADVN compatibility (*string*) exceeds ASM compatibility (*string*)

Cause: An attempt was made to advance ADVN compatibility beyond the disk group's ASM compatibility.

Action: Advance ASM compatibility before advancing ADVN compatibility.

ORA-15494: compatible.advm must be *string* or higher

Cause: An attempt was made to set the ADVN compatibility to a version that was lower than the minimum supported.

Action: Set ADVN compatibility to at least the minimum supported version.

ORA-15495: ASM operation requires compatible.advm of *string* or higher

Cause: The ASM operation specified required a higher disk group attribute value for compatible.advm.

Action: Set the disk group attribute compatible.advm to or above the requested version.

ORA-15496: volume size is greater than the maximum of *string*T

Cause: The volume size specified was too large.

Action: Select a smaller volume size.

ORA-15497: diskgroup uses a sector size that is incompatible with volumes

Cause: The diskgroup used a sector size that was not 512 bytes.

Action: Create the volume in a diskgroup with a sector size of 512 bytes.

ORA-15498: Volume name '*string*' would collide with existing volume(s) '*string string*'.

Cause: A volume name was specified that would conflict with existing volume device(s). A volume '<vol_name>-<dg_num>' is the name of the block device. Additionally, a raw device named 'r<vol_name>-<dg_num>' is also created. Since that name already existed, a name collision occurred.

Action: Choose another name for the volume (no leading 'r' is recommended).

ORA-15499: Volume Membership (VMB) process terminated with error

Cause: The volume driver background process terminated with error.

Action: Warm start the instance.

ORA-15501: cannot start workload capture on instance *string*

Cause: Given instance encountered unexpected errors while trying to start the workload capture.

Action: Check the alert log and other diagnostics in the given instance to diagnose the problem.

ORA-15502: cannot stop workload capture on instance *string*

Cause: Given instance encountered unexpected errors while trying to stop the workload capture.

Action: Check the alert log and other diagnostics in the given instance to diagnose the problem.

ORA-15503: cannot startup instance when procedures in "DBMS_WORKLOAD_CAPTURE" or "DBMS_WORKLOAD_REPLAY" are in the middle of their execution

Cause: The new instance could not be started because the database was executing a procedure in either the DBMS_WORKLOAD_CAPTURE or DBMS_WORKLOAD_REPLAY package.

Action: Start the new instance after such procedures in the given packages have finished execution.

ORA-15504: cannot start workload capture because instance *string* not present in RESTRICTED SESSION mode

Cause: The NO_RESTART_MODE option in DBMS_WORKLOAD_CAPTURE.START_CAPTURE was FALSE, therefore all the active instances were expected to be in the RESTRICTED SESSION mode.

Action: Start all instances using STARTUP RESTRICT or execute ALTER SYSTEM ENABLE RESTRICTED SESSION on all active instances before issuing DBMS_WORKLOAD_CAPTURE.START_CAPTURE.

ORA-15505: cannot start workload capture because instance *string* encountered errors while accessing directory "*string*"

Cause: Given instance could not access the specified CAPTURE directory or the specified CAPTURE directory already had a workload capture in it.

Action: Provide a directory object that is valid, empty and accessible from all the instances in the database cluster.

ORA-15506: cannot prepare instance *string* for replay

Cause: Given instance encountered unexpected errors while trying to prepare for a workload replay.

Action: Check the alert log and other diagnostics in the given instance to diagnose the problem.

ORA-15507: cannot start workload replay on instance *string*

Cause: Given instance encountered unexpected errors while trying to start a workload replay.

Action: Check the alert log and other diagnostics in the given instance to diagnose the problem.

ORA-15508: cannot cancel workload replay on instance *string*

Cause: Given instance encountered unexpected errors while trying to cancel a workload replay.

Action: Check the alert log and other diagnostics in the given instance to diagnose the problem.

ORA-15509: workload replay has been cancelled

Cause: Workload replay was cancelled.

Action: Restart the workload replay.

ORA-15510: cannot perform operation when "STATISTICS_LEVEL" is "BASIC"

Cause: The STATISTICS_LEVEL initialization parameter was set to BASIC.

Action: Change the STATISTICS_LEVEL initialization parameter setting to either TYPICAL or ALL.

ORA-15511: cannot process workload capture because no user sessions were recorded

Cause: No user sessions were recorded in the given workload capture. Processing this capture failed because no user workload was captured.

Action: Capture a workload in which at least one user session connects and performs some operations.

ORA-15512: directory "*string*" does not contain a valid processed workload capture

Cause: One or more files created by
DBMS_WORKLOAD_REPLAY.PROCESS_CAPTURE were missing.

Action: Process the workload capture using
DBMS_WORKLOAD_REPLAY.PROCESS_CAPTURE and then retry the command.

ORA-15513: cannot access the input directory

Cause: Given input directory is either invalid or inaccessible.

Action: Verify that the input directory is valid and accessible and then retry the
command.

ORA-15514: cannot find a match for the remote procedure call during replay

Cause: The corresponding PL/SQL program was either dropped or modified.

Action: Verify that the corresponding PL/SQL program is defined the same way
during replay as it was defined during workload capture.

ORA-15515: error while replaying remote procedure call: "*string.string.string*"

Cause: Error encountered during the replay of a remote procedure call.

Action: Correct the cause of the preceding error and restart workload replay.

ORA-15516: parallel preprocessing worker hit error ORA-*string*

Cause: One of the parallel preprocessing workers died unexpectedly while processing
the workload.

Action: Find the root cause or simply preprocess the workload using only one
process.

ORA-15517: cannot start parallel preprocessing worker

Cause: One of the parallel preprocessing workers could not be started.

Action: Find the root cause or simply preprocess the workload using only one
process.

ORA-15518: parallel preprocessing encountered an unexpected error

Cause: An unexpected error occurred during parallel preprocessing.

Action: Find the root cause or simply preprocess the workload using only one
process.

ORA-15519: cannot access database link "*string*" because it is disabled

Cause: For security considerations, access to external databases via database links
were disabled during workload replay.

Action: Use advanced parameter for Database Replay to enable database links during
workload replay.

**ORA-15520: Directory is corrupted. Two WMD files are found at "*string*" and
"*string*"**

Cause: Two WMD files were found in the directory.

Action: Check that the WMD files in capture directory were not modified, moved,
duplicated or deleted.

ORA-15521: failed to create file "*string*" during workload processing

Cause: An attempt was made to create a file during workload processing without the
proper file permissions.

Action: Correct the file permissions and try again.

ORA-15522: failed to generate a workload capture subset: "string"

Cause: An attempt to generate a workload capture subset failed. Possible reasons are included in the error message.

Action: Correct the issue and try again.

ORA-15551: workload replay client cannot connect to database server

Cause: The server connection identifier was invalid.

Action: Restart the client with correct server connection identifier.

ORA-15552: workload replay client cannot login to database server

Cause: 1) the replay client used an invalid username or password; 2) the replay user does not have the privilege to switch user; 3) the recorded username does not exist in the replay database.

Action: 1) restart replay client with correct username and password 2) grant user switching privilege to the replay user 3) verify whether the replay database was restored properly

ORA-15553: workload replay client cannot execute the DBMS_WORKLOAD_REPLAY package

Cause: Workload Replay Client's replay user did not have EXECUTE permission on the DBMS_WORKLOAD_REPLAY package.

Action: Grant execute permission on the DBMS_WORKLOAD_REPLAY package to replay user and restart the Workload Replay Client.

ORA-15554: cannot start workload replay client because the database server is not in PREPARE mode

Cause: The Workload Replay Client could not connect to the database server because the database server was not in the PREPARE mode.

Action: Put the database in PREPARE mode by using DBMS_WORKLOAD_REPLAY.PREPARE_REPLAY, and restart the Workload Replay Client.

ORA-15555: workload replay client encountered unexpected error: "string"

Cause: Workload Replay Client encountered an unexpected error.

Action: Check the Workload Replay Client's log files and the database server alert log to diagnose the problem.

ORA-15556: invalid input specified to the workload replay client; type 'wrc HELP=Y' for help

Cause: Invalid input was specified.

Action: Use the Workload Replay Client's HELP=Y option to know more about valid input options.

ORA-15557: workload replay client cannot access the replay directory or the database version do not match the preprocessing one

Cause: The Workload Replay Client could not access the directory that contained the workload to be replayed, or the workload was preprocessed by a different version of the database.

Action: Restart the workload replay after specifying the correct replay directory, or preprocess it with the correct database.

ORA-15558: replay thread encountered unexpected error

Cause: A single replay thread got disconnected from the server due to an unexpected error.

Action: Check the Workload Replay Client's log files and the database server alert log to diagnose the problem.

ORA-15559: workload replay client cannot open workload capture file

Cause: The Workload Replay Client could not access one or more workload capture files from the replay directory.

Action: Restart the workload replay after copying all the workload capture files to the replay directory.

ORA-15560: workload replay client cannot access the work directory

Cause: The Workload Replay Client could not access the work directory to write log files for debug information.

Action: Restart the Workload Replay Client after specifying the correct work directory.

ORA-15561: workload replay client cannot connect to the remapped connection with conn_id : *string*

Cause: The specified connection is invalid or the specified host is inaccessible.

Action: Test the specified connection using other methods and redefine the connection remapping, if necessary. Consult the view DBA_WORKLOAD_CONNECTION_MAP to inspect connection remappings.

ORA-15562: workload replay client cannot read the DBA_WORKLOAD_CONNECTION_MAP view

Cause: The DBA_WORKLOAD_CONNECTION_MAP view did not exist or was not accessible.

Action: Re-create the workload capture and replay views. For additional information, see the documentation.

ORA-15563: workload replay client cannot spawn new threads

Cause: The Workload Replay Client does not have enough resource (CPU or memory) to spawn new threads.

Action: Restart the workload replay after allocating more resource (CPU and memory) to the Workload Replay Client or use more hosts as replay clients to drive the workload.

ORA-15564: contents of the replay directory provided to the workload replay client do not match with the replay directory provided to the database server

Cause: The processed workload capture files given to the workload replay client directory did not match the contents of the replay directory given as input to DBMS_WORKLOAD_REPLAY.INITIALIZE_REPLAY.

Action: Provide the same processed workload capture files to both the database server and all the workload replay clients and restart the replay. If the same workload capture files were processed more than once, provide a copy of the latest processed workload capture files to all the workload replay clients and the database server.

ORA-15566: workload replay client cannot replay user call in the current version

Cause: The workload replay client encountered a user call in the captured workload that was not supported for replay in the current version.

Action: Look in the DBA_WORKLOAD_REPLAY_DIVERGENCE view for details about the call that encountered this error. Refer to the documentation for more details on the types of workload that are not supported in the current version.

ORA-15567: replay user *string* encountered an error during a sanity check

Cause: The replay user encountered an error when accessing internal objects for Database Replay or switching user.

Action: Set up the replay user appropriately at the replay database. Make sure the replay user can access SYS-owned objects and has BECOME USER privilege.

ORA-15568: login of user *string* during workload replay failed with ORA-*string*

Cause: The recorded user did not exist in the replay database or encountered other problems during log in.

Action: Check the returned error number and set up the recorded user appropriately at the replay database.

ORA-15569: timeout encountered during the replay of a recorded user call

Cause: The replay of a recorded user call was terminated since it was significantly slower than the workload capture.

Action: Find the root cause for the performance issue. Or, use DBMS_WORKLOAD_REPLAY API to disable the timeout check if the replay is expected to be slower.

ORA-15590: encountered incomplete workload capture files

Cause: The captured workload contained one or more incomplete recording files. This can happen when the original workload capture's FINISH_CAPTURE command timed out while waiting for all the active sessions to close their workload capture files.

Action: Incomplete capture files will not interfere with the processing and replaying of the captured workload. This is simply a warning message to point out that some database calls might not have been recorded due to FINISH_CAPTURE command timing out. For a list of the incomplete files, check the alert log for lines containing DBMS_WORKLOAD_REPLAY.PROCESS_CAPTURE after capture processing.

ORA-15591: encountered corrupt workload capture files

Cause: The captured workload contained one or more corrupt recording files.

Action: For a list of the incomplete files, check the alert log for lines containing DBMS_WORKLOAD_REPLAY.PROCESS_CAPTURE after capture processing. The corrupt files will be replayed up to the point of the corruption. Alternatively, it is possible to remove the corrupt files and run DBMS_WORKLOAD_REPLAY.PROCESS_CAPTURE again. In this case, no workload from the corrupt files will be replayed.

ORA-15601: Invalid value specified for parameter "*string*"

Cause: An invalid value was specified for the given parameter.

Action: Correct the value being specified for the parameter.

ORA-15602: Parameter "*string*" cannot be NULL.

Cause: An attempt was made to call a procedure without a required parameter.

Action: Specify a valid value for this parameter.

ORA-15603: Action cannot be performed when database is in read-only mode.

Cause: A procedure in DBMS_AUTO_TASK_ADMIN package was invoked when database was open in read-only mode.

Action: Retry when database is open in read/write mode.

ORA-15604: Initialization parameters prevent client from being enabled.

Cause: An attempt was made to enable a client that was disabled for automatic execution by an initialization parameter.

Action: Check the related client parameters and try again.

ORA-15605: "string" is not a Maintenance Window

Cause: Window name passed to DBMS_AUTO_TASK_ADMIN.ENABLE procedure must be a member of the MAINTENANCE_WINDOW_GROUP.

Action: Make the window a member of the MAINTENANCE_WINDOW_GROUP and retry the call.

ORA-15700: SQL limit already reached by prior task execution

Cause: An attempt was made to resume the execution of a task when the prior execution already reached the SQL limit.

Action: Task execution is complete. Examine the report to review Advisor's recommendations.

ORA-15701: All "SQL Tuning Set(s)" with name like "string" and owner like "string" are empty

Cause: An attempt was made to pack one or more SQL Tuning Sets, none * of which contained any statements.

Action: Check the input and try again.

ORA-15702: duplicate values for plan line ID in input collection

Cause: An invalid input was provided containing duplicate values for plan line IDs causing the load of the statement to fail.

Action: Check the input and try again.

ORA-15703: invalid version number "number" for SQL tuning set staging table

Cause: An invalid version number was provided for a staging table used to pack a SQL tuning set.

Action: Check the input and try again.

ORA-15739: invalid name "string" for SQL Performance Analyzer task

Cause: An invalid SQL Performance Analyzer task name was used.

Action: Check the name of the SQL Performance Analyzer task to ensure that it is correct.

ORA-15740: parameter "string" not set for SQL Performance Analyzer task "string"

Cause: Could not find the specified parameter name for the SQL Performance Analyzer task.

Action: Check that the specified parameter exists for the SQL Performance Analyzer task so that the parameter is set.

ORA-15741: no COMPARE_PERFORMANCE execution exists for SQL Performance Analyzer task "*string*"

Cause: Could not find an execution of type COMPARE_PERFORMANCE for specified SQL Performance Analyzer task.

Action: Ensure that the given SQL Performance Analyzer task has at least one execution of type COMPARE_PERFORMANCE.

ORA-15742: specified execution name "*string*" is not a valid COMPARE_PERFORMANCE execution for SQL Performance Analyzer task "*string*".

Cause: The specified execution name was not a valid execution of type COMPARE_PERFORMANCE for the SQL Performance Analyzer task.

Action: Ensure that a valid COMPARE_PERFORMANCE execution name is used for the SQL Performance Analyzer task.

ORA-15743: need to specify the object ID if the tuning task is on a SQL set.

Cause: There could be multiple objects in the SQL tuning task. Specify which one.

Action: Add object ID to the interface.

ORA-15744: The directory name is null.

Cause: The directory name for finding the SQL traces was null.

Action: Create the directory.

ORA-15745: The plan type is not valid.

Cause: The specified plan type was not valid

Action: Check the existing plan types and specify the right one.

ORA-15746: Missing EXECUTE privilege on DBMS_AUTO_SQLTUNE.

Cause: The current user was missing the necessary privileges to execute the API.

Action: Grant the privilege and try again.

ORA-15747: The previous Oracle Data Masking job is unfinished. "*string*" table is not empty.

Cause: The previously executed Oracle Data masking job was not successfully completed.

Action: Execute Oracle Data masking cleanup.

ORA-16000: database or pluggable database open for read-only access

Cause: The database or pluggable database was opened for read-only access. Attempts to modify the database using DML or DDL statements generate this error.

Action: In order to modify the database or pluggable database, it must first be shut down and reopened for read/write access.

ORA-16001: database already open for read-only access by another instance

Cause: The database has been opened for read-only access by another instance, and cannot be opened for read/write access by this instance.

Action: This instance must be opened for read/write access, or all other instances must first be shut down and reopened for read-only access.

ORA-16002: database or pluggable database already open for read/write access by another instance

Cause: The database or pluggable database has been opened for read/write access by another instance, and cannot be opened for read-only access by this instance.

Action: This instance must be opened for read-only access, or all other instances must first be shut down and reopened for read/write access.

ORA-16003: standby database is restricted to read-only access

Cause: An attempt was made to open a physical standby database in read/write mode.

Action: Reissue the ALTER DATABASE OPEN specifying READ ONLY.

ORA-16004: backup database required recovery

Cause: The database could not be opened for read-only access by this instance because it requires recovery.

Action: Perform the necessary recovery and reopen for read-only access.

ORA-16005: database requires recovery

Cause: The database requires recovery, and therefore cannot be opened for read-only access by this instance.

Action: Perform the necessary recovery and reopen for read-only access.

ORA-16006: A remote archival request was aborted due to database shutdown.

Cause: When opening or closing a database instance, the database may wait for pending remote archival requests to complete before proceeding with the operation. This error was reported because a shutdown was detected.

Action: This is an informational message so no action is required.

ORA-16007: invalid backup control file checkpoint

Cause: The database could not be opened for read-only access because its control file did not contain a valid control file checkpoint.

Action: Open the database for read/write access to create a valid control file checkpoint. The database can then be opened for read-only access.

ORA-16008: indeterminate control file checkpoint

Cause: The control file for the database being opened for read-only access was created using the CREATE CONTROLFILE statement. Therefore, a control file checkpoint could not be calculated and the database could not be opened for read-only access.

Action: First, open the database for read/write access. This creates a valid control file checkpoint. Then, reopen the database for read-only access.

ORA-16009: invalid redo transport destination

Cause: The redo transport destination could not accept redo data because it was not a valid redo transport destination type.

Action: Verify that all redo transport destinations are either standby databases or downstream capture databases.

ORA-16011: Remote File Server process is in Error state.

Cause: The Remote File Server (RFS) process at the specified redo transport destination experienced an unrecoverable error and was unable to receive further redo data.

Action: Correct the problem at the redo transport destination.

ORA-16012: database identifier mismatch

Cause: The database identifier of a physical standby database did not match that of the primary database.

Action: Ensure that the database identifier of each physical standby database matches that of the primary database.

ORA-16013: log *string* sequence# *string* does not need archiving

Cause: An attempt was made to archive the named file manually, but the file did not require archiving. The file had previously been successfully archived.

Action: No action is required.

ORA-16014: log *string* sequence# *string* not archived, no available destinations

Cause: An attempt was made to archive the named log, but the archive was unsuccessful. The archival failed because there were no archive log destinations specified, or all destinations are in an error state.

Action: Verify that archive log destinations are specified or take the necessary step to correct any errors that may have occurred.

ORA-16015: Log *string* sequence# *string* was not archived.

Cause: An attempt was made to archive the named log to a destination, but the operation did not succeed because the destination was not in ARCHIVELOG mode.

Action: Enable ARCHIVELOG mode at all destinations and retry.

ORA-16016: archived log for thread *string* sequence# *string* unavailable

Cause: Redo apply timed out waiting for the requested archived log file.

Action: Verify that the primary database is still archiving redo data to the standby database and reissue the RECOVER STANDBY DATABASE command.

ORA-16017: cannot use LOG_ARCHIVE_DUPLEX_DEST without a primary archive destination

Cause: The parameter LOG_ARCHIVE_DUPLEX_DEST was set to a non-NULL value when the primary archive destination was set to NULL explicitly.

Action: Set the primary archive destination to a valid non-NULL value.

ORA-16018: cannot use *string* with LOG_ARCHIVE_DEST_n or DB_RECOVERY_FILE_DEST

Cause: One of the following events caused an incompatibility: 1) Parameter LOG_ARCHIVE_DEST or LOG_ARCHIVE_DUPLEX_DEST was in use when a LOG_ARCHIVE_DEST_n (n = 1...31) parameter was encountered while fetching initialization parameters. 2) An ALTER SYSTEM ARCHIVE LOG START TO command was in effect when a LOG_ARCHIVE_DEST_n parameter was encountered while fetching initialization parameters. 3) A LOG_ARCHIVE_DEST_n parameter was in use when an ALTER SYSTEM command was used to define a value for either the LOG_ARCHIVE_DEST or LOG_ARCHIVE_DUPLEX_DEST parameter. 4) Parameter DB_RECOVERY_FILE_DEST was in use when an attempt was made to use an ALTER SYSTEM or ALTER SESSION command to define a value for LOG_ARCHIVE_DEST or LOG_ARCHIVE_DUPLEX_DEST.

Action: Eliminate any incompatible parameter definitions.

ORA-16019: cannot use *string* with LOG_ARCHIVE_DEST or LOG_ARCHIVE_DUPLEX_DEST

Cause: One of the following events caused an incompatibility: 1) Parameter LOG_ARCHIVE_DEST or LOG_ARCHIVE_DUPLEX_DEST was in use when the specified LOG_ARCHIVE_DEST_n (n = 1...31) or DB_RECOVERY_FILE_DEST parameter was encountered while fetching initialization parameters. 2) Parameter LOG_ARCHIVE_DEST or LOG_ARCHIVE_DUPLEX_DEST was in use when an attempt was made to use an ALTER SYSTEM or ALTER SESSION command to define a value for the specified LOG_ARCHIVE_DEST_n or DB_RECOVERY_FILE_DEST parameter. 3) An ALTER SYSTEM ARCHIVE LOG START TO command was in effect when the specified LOG_ARCHIVE_DEST_n parameter was encountered while fetching initialization parameters. 4) An ALTER SYSTEM ARCHIVE LOG START TO command was in effect when an attempt was made to use an ALTER SYSTEM or ALTER SESSION command to define a value for the specified LOG_ARCHIVE_DEST_n parameter.

Action: Eliminate any incompatible parameter definitions.

ORA-16020: fewer destinations available than specified by LOG_ARCHIVE_MIN_SUCCEED_DEST

Cause: The number of archive log destinations that could be used was less than the LOG_ARCHIVE_MIN_SUCCEED_DEST parameter value.

Action: Either adjust the log archive destination parameters, or lower the value of LOG_ARCHIVE_MIN_SUCCEED_DEST.

ORA-16021: session *string* destination cannot be the same as session *string* destination

Cause: An attempt was made to change the first specified archive log parameter using ALTER SESSION to have a destination value that duplicates the session-level destination value of the second specified archive log parameter.

Action: Specify a different session destination value for one of the LOG_ARCHIVE_DEST_n parameters.

ORA-16022: LOG_ARCHIVE_DEST cannot be NULL because LOG_ARCHIVE_DUPLEX_DEST is non-NULL

Cause: An attempt was made to change parameter LOG_ARCHIVE_DEST to NULL when parameter LOG_ARCHIVE_DUPLEX_DEST is non-NULL.

Action: Either set parameter LOG_ARCHIVE_DEST to a non-NULL value, or set parameter LOG_ARCHIVE_DUPLEX_DEST to a NULL value.

ORA-16023: system *string* destination cannot be the same as session *string* destination

Cause: An attempt to change the first specified LOG_ARCHIVE_DEST_n (n = 1...31) parameter produced a destination that duplicates the session destination value of the second specified LOG_ARCHIVE_DEST_n parameter. This error can occur when setting a non-NULL value with the ALTER SYSTEM command. Or, this error can occur when setting a NULL value with ALTER SESSION command, because then the associated system destination value may appear as a duplicate.

Action: Specify a different destination value for the first specified LOG_ARCHIVE_DEST_n parameter.

ORA-16024: parameter *string* cannot be parsed

Cause: The value for the indicated LOG_ARCHIVE_DEST_n (n = 1...31) parameter could not be parsed. Common causes for this error are a misplaced equal sign, an unrecognized attribute, or an attribute that is missing a required value.

Action: Correct the value for the indicated LOG_ARCHIVE_DEST_n parameter.

ORA-16025: parameter *string* contains repeated or conflicting attributes

Cause: The value for the specified LOG_ARCHIVE_DEST_n (n = 1...31) parameter contained either repeated attributes or attributes that conflicted with each other.

Action: Correct the value for the indicated LOG_ARCHIVE_DEST_n parameter.

ORA-16026: parameter *string* contains an invalid attribute value

Cause: The value for the specified LOG_ARCHIVE_DEST_n (n = 1...31) parameter contained an attribute with an invalid value.

Action: Correct the value for the indicated LOG_ARCHIVE_DEST_n parameter.

ORA-16027: parameter *string* is missing a destination option

Cause: The value for the indicated LOG_ARCHIVE_DEST_n (n = 1...31) parameter failed to include a destination option. A destination option is specified using either the LOCATION or SERVICE attribute.

Action: Correct the value for the indicated LOG_ARCHIVE_DEST_n parameter.

ORA-16028: new *string* causes less destinations than LOG_ARCHIVE_MIN_SUCCEED_DEST requires

Cause: An attempt was made to change the indicated LOG_ARCHIVE_DEST_n or LOG_ARCHIVE_DEST_STATE_n parameter (n = 1...31) to a value that reduces the number of archive log destinations to less than the specified LOG_ARCHIVE_MIN_SUCCEED_DEST value.

Action: Either select different options for the LOG_ARCHIVE_DEST_n or LOG_ARCHIVE_DEST_STATE_n parameters, or reduce the value for parameter LOG_ARCHIVE_MIN_SUCCEED_DEST.

ORA-16029: cannot change LOG_ARCHIVE_MIN_SUCCEED_DEST, no archive log destinations

Cause: An attempt was made to change the LOG_ARCHIVE_MIN_SUCCEED_DEST parameter when there are no archive log destinations.

Action: Define one or more log archive destinations using parameters LOG_ARCHIVE_DEST, LOG_ARCHIVE_DUPLEX_DEST, or LOG_ARCHIVE_DEST_n (n = 1...31). Then, change the value of parameter LOG_ARCHIVE_MIN_SUCCEED_DEST.

ORA-16030: session specific change to the LOG_ARCHIVE_MIN_SUCCEED_DEST parameter requires a LOG_ARCHIVE_DEST_n destination

Cause: The following event caused an incompatibility: Parameter LOG_ARCHIVE_DEST or LOG_ARCHIVE_DUPLEX_DEST was in use when an attempt was made to change the LOG_ARCHIVE_MIN_SUCCEED_DEST parameter with an ALTER SESSION command.

Action: Replace any LOG_ARCHIVE_DEST and LOG_ARCHIVE_DUPLEX_DEST parameters with LOG_ARCHIVE_DEST_n (n = 1...31) parameters.

ORA-16031: parameter *string* destination string exceeds *string* character limit

Cause: The value for the specified parameter contained a destination string that is too long.

Action: Replace the destination value for the specified parameter with a character string that has a length below the limit specified in the error message.

ORA-16032: parameter *string* destination string cannot be translated

Cause: The value for the specified parameter contained a destination string that could not be translated.

Action: Use a valid destination string in the specified parameter.

ORA-16033: parameter *string* destination cannot be the same as parameter *string* destination

Cause: An attempt was made to change the first specified archive log parameter to have a destination value that duplicates the system-level destination value of the second specified archive log parameter.

Action: Specify a different value for one of the archive log parameters.

ORA-16034: Recovery could not be started.

Cause: Database recovery could not be started because the FROM and MANAGED STANDBY DATABASE clauses were both specified when attempting to start recovery.

Action: Retry the command with either the FROM or MANAGED STANDBY DATABASE clause, but not both.

ORA-16035: missing required keyword *string*

Cause: The indicated keyword is required but was not specified.

Action: Correct the syntax and retry the command.

ORA-16036: invalid CANCEL option

Cause: A mode other than IMMEDIATE followed the CANCEL keyword in RECOVER MANAGED STANDBY DATABASE statement.

Action: Specify either nothing or IMMEDIATE following CANCEL.

ORA-16037: user requested cancel of managed recovery operation

Cause: The managed standby database recovery operation has been canceled per user request.

Action: No action is required.

ORA-16038: log *string* sequence# *string* cannot be archived

Cause: An attempt was made to archive the named file, but the file could not be archived. Examine the secondary error messages to determine the cause of the error.

Action: No action is required.

ORA-16039: RFS request version mismatch

Cause: A request to archive a redo log to a redo transport destination failed because of an Oracle software version mismatch at the destination.

Action: Verify that a compatible version of Oracle software is running at the redo transport destination.

ORA-16040: Destination archive log file is locked.

Cause: The target archive log file was locked. This indicates that the file is being archived to another Remote File Server (RFS) process.

Action: Ensure that each remote redo transport destination uses a unique network service name.

ORA-16041: Remote File Server fatal error

Cause: The Remote File Server (RFS) process at a redo transport destination encountered a fatal error and was no longer available. Further redo transmission to this destination may not be possible.

Action: Refer to the appropriate RFS trace file located at the redo transport destination for details regarding the error encountered and take corrective action.

ORA-16042: user requested cancel immediate of redo apply

Cause: Redo apply was canceled immediately per user request. Processing of the current archive log file has been interrupted and, therefore, the database is in an inconsistent state.

Action: No action is required.

ORA-16043: Redo apply has been canceled.

Cause: Redo apply was canceled per user request or operation timeout.

Action: More specific messages will accompany this message.

ORA-16044: Destination *string* attribute cannot be specified at session level.

Cause: An attempt was made to modify a redo transport destination attribute using the ALTER SESSION command.

Action: Use the ALTER SYSTEM command to modify the destination attribute.

ORA-16045: circular redo transport destination dependency chain

Cause: An attempt was made to make a redo transport destination dependent on a redo transport destination that was dependent on it.

Action: Ensure that no redo transport destination is dependent on any destination that is dependent on it.

ORA-16046: Redo transport destination failed due to failed dependent destination.

Cause: The redo transport destination was dependent upon another destination, which failed. Therefore, this destination failed.

Action: No action required.

ORA-16047: DGID mismatch between destination setting and target database

Cause: The DB_UNIQUE_NAME specified for the destination did not match the DB_UNIQUE_NAME at the target database.

Action: Make sure the DB_UNIQUE_NAME specified in the LOG_ARCHIVE_DEST_n parameter matches the DB_UNIQUE_NAME parameter defined at the destination.

ORA-16050: destination exceeded specified quota size

Cause: An archive log was attempted to be created in a destination with a specified maximum quota size. The creation of the archive log exceeded the specified quota size. Therefore, the destination has been made inaccessible to future archival operations.

Action: No action is required.

ORA-16051: parameter *string* contains an invalid delay time

Cause: The value for the specified LOG_ARCHIVE_DEST_n (n = 1...31) parameter contained a DELAY attribute with an invalid numeric value. The valid range is 0-5760 (in minutes).

Action: Correct the value for the indicated LOG_ARCHIVE_DEST_n parameter.

ORA-16052: DB_UNIQUE_NAME attribute is required.

Cause: DB_UNIQUE_NAME attribute was not specified. The value of the LOG_ARCHIVE_DEST_n parameter for each remote redo transport destination must contain the DB_UNIQUE_NAME attribute if the LOG_ARCHIVE_CONFIG parameter value contains the DG_CONFIG attribute.

Action: Use the DB_UNIQUE_NAME attribute to specify the DB_UNIQUE_NAME for the destination.

ORA-16053: DB_UNIQUE_NAME *string* is not in the Data Guard Configuration

Cause: The specified DB_UNIQUE_NAME is not in the Data Guard Configuration.

Action: If the DG_CONFIG attribute of the LOG_ARCHIVE_CONFIG parameter is enabled, you must specify a valid DB_UNIQUE_NAME. The list of valid DB_UNIQUE_NAMES can be seen with the V\$DATAGUARD_CONFIG view. This problem can also occur when specifying a non-standby destination with an DB_UNIQUE_NAME attribute that does not match the DB_UNIQUE_NAME initialization parameter for the current instance.

ORA-16055: FAL request rejected

Cause: Fetch archive log (FAL) server rejected a redo gap fetch request from the client. This may have various causes.

Action: Check the alert log on the primary database. Take the appropriate action to solve the problem.

ORA-16056: Backup control file archival requires proper syntax.

Cause: An attempt was made to perform an online log file archival using a backup control file. However, the USING BACKUP CONTROLFILE syntax was not specified.

Action: Use the USING BACKUP CONTROLFILE clause to perform an online log file archival using a backup control file.

ORA-16057: server not in Data Guard configuration

Cause: The primary database or fetch archive log (FAL) server was not found in the Data Guard configuration of the standby database.

Action: Add the database unique name of the primary database or FAL server to the DG_CONFIG attribute of the LOG_ARCHIVE_CONFIG database initialization parameter.

ORA-16058: standby database instance is not mounted

Cause: The Remote File Server (RFS) process on the standby database received an internal error.

Action: Check the standby alert log and RFS trace files for more information.

ORA-16059: empty log file or invalid next available block

Cause: An attempt was made to archive an empty or invalid log file.

Action: No action is required.

ORA-16060: Log file is current.

Cause: An attempt was made to archive current log file.

Action: No action is required.

ORA-16061: Log file status has changed.

Cause: The online log file was reclaimed as a new log file either before archival started or during the archival operation.

Action: No action is required.

ORA-16062: standby database not in Data Guard configuration

Cause: The standby database was not found in the Data Guard configuration of the server.

Action: Add the database unique name of the standby database to the DG_CONFIG attribute of the LOG_ARCHIVE_CONFIG database initialization parameter.

ORA-16065: remote archival disabled at standby destination

Cause: Receipt of remote archived REDO log files has been disabled at the associated standby destination host database.

Action: If appropriate change the associated archive log parameter to specify a local destination with the LOCATION keyword or defer the associated archive log destination. Or, if possible, set the standby REMOTE_ARCHIVE_ENABLE parameter to TRUE, or enable the RECEIVE attribute of the LOG_ARCHIVE_CONFIG parameter and restart the standby database instance before further REDO log file archivals occur.

ORA-16066: remote archival disabled

Cause: An archive log destination parameter has specified a remote destination with the SERVICE keyword. Remote archival of REDO log files has been disabled for this database. The associated archive log destination has been disabled.

Action: If appropriate change the archive log parameter to specify a local destination with the LOCATION keyword or (if appropriate) set the REMOTE_ARCHIVE_ENABLE parameter to TRUE, or enable the SEND attribute of the LOG_ARCHIVE_CONFIG parameter and restart the database instance before further REDO log file archivals occur.

ORA-16067: activation identifier mismatch in archive log *string*

Cause: The activation identifier contained in the archive log file header does not match the activation identifier of the database being recovered. The indicated archive log cannot be applied to the database.

Action: Locate the appropriate archive log for the database.

ORA-16068: redo log file activation identifier mismatch

Cause: The activation identifier of the indicated redo log file does not match the activation identifier of the database.

Action: n/a

ORA-16069: activation identifier mismatch

Cause: Redo transport failed because the activation identifier of the primary and physical standby databases did not match. This can happen if the physical standby database was not created from a backup of the primary database.

Action: Create a valid configuration and re-try the failed operation.

ORA-16070: parameter *string* contains an invalid REGISTER attribute value

Cause: The value for the specified LOG_ARCHIVE_DEST_n (n = 1...31) parameter contained a REGISTER attribute that specified an invalid file name template string. If specified, the REGISTER file name template string must indicate an O/S-specific file path name including thread and log sequence number substitution directives (%t, %T, %s, %S).

Action: Correct the value for the LOG_ARCHIVE_DEST_n parameter.

ORA-16071: Archived log file *string* was not found at dependency destination.

Cause: The specified archived log file was not found at a redo transport destination on which other destinations are dependent.

Action: Verify that all redo transport destinations that are dependent upon another destination or upon which other destinations are dependent are configured correctly.

ORA-16072: a minimum of one standby database destination is required

Cause: No standby database archive log destinations were specified.

Action: Specify a standby archive log destination in the initialization parameter file.

ORA-16073: archiving must be enabled

Cause: Online log file archiving is disabled.

Action: Enable log file archiving.

ORA-16074: No ARCH processes are active.

Cause: All ARCH processes have stopped.

Action: Restart the instance.

ORA-16075: standby database destination mismatch

Cause: Another instance had access to a standby database destination that this instance did not. If the initialization parameter LOG_ARCHIVE_CONFIG does not define a DG_CONFIG, this may be due to a standby database becoming unavailable recently.

Action: Ensure that at each instance the set of standby databases referred to by LOG_ARCHIVE_DEST_n initialization parameters is the same and define a DG_CONFIG at each instance to identify those databases explicitly.

ORA-16076: unknown standby database destination

Cause: A standby database destination was specified that was not accessed by another instance. If the initialization parameter LOG_ARCHIVE_CONFIG does not define a DG_CONFIG, this mismatch may be due to a standby database having been restarted recently.

Action: Ensure that at each instance the set of standby databases referred to by LOG_ARCHIVE_DEST_n initialization parameters is the same and define a DG_CONFIG at each instance to identify those databases explicitly.

ORA-16078: media recovery disabled

Cause: The database is not in ARCHIVELOG mode.

Action: Place the database in ARCHIVELOG mode.

ORA-16079: standby archival not enabled

Cause: The standby database did not have archival enabled.

Action: In order to allow the standby database to access the standby log files, the standby database must be in ARCHIVELOG mode.

ORA-16080: invalid LogMiner session *string* for APPLY

Cause: Logical standby apply engine was started with an invalid LogMiner session identifier.

Action: Fix the problem with the LogMiner session or create a new session.

ORA-16081: insufficient number of processes for APPLY

Cause: Logical standby apply engine was started with fewer processes available than needed.

Action: Increase the values of the initialization parameters PROCESSES and or the MAX_SERVERS parameter seen in the DBA_LOGSTDBY_PARAMETERS view.

ORA-16082: logical standby is not initialized correctly

Cause: Logical standby apply engine was started but it found inconsistencies in its metadata.

Action: Look in the trace file for more information.

ORA-16083: LogMiner session has not been created

Cause: Logical standby apply engine was started without creating a LogMiner session.

Action: Create a LogMiner session and restart the apply engine.

ORA-16084: an apply engine is already running

Cause: A logical standby apply engine was running when another was created.

Action: Shut down the previous apply engine before starting a new one.

ORA-16086: Redo data cannot be written to the standby redo log

Cause: The primary database was in MAXIMUM PROTECTION or MAXIMUM AVAILABILITY mode, but redo data could not be written to the standby redo log at the standby database(s).

Action: Check the Remote File Server (RFS) trace file for specific errors and reconfigure the standby redo log as appropriate.

ORA-16087: Switchover requires standby or current control file.

Cause: An attempt was made to perform a switchover operation using a backup or clone control file.

Action: Convert the backup control file into a current control file prior to attempting a switchover operation. A clone control file cannot be used for a switchover operation.

ORA-16088: archive log has not been completely archived

Cause: An attempt was made to register an archive log that has not been completely archived. The specified archive log may be a "current" log file.

Action: Specify a completed archive log.

ORA-16089: archive log has already been registered

Cause: An attempt was made to register an archive log that already has a corresponding thread# and sequence# entry in the standby database control file. Duplicate information is not permitted.

Action: Use the V\$ARCHIVED_LOG fixed view to verify the archive log information.

ORA-16090: archive log to be replaced not created by managed standby process

Cause: An attempt was made to replace an archive log entry that was not originally created by the managed standby operation.

Action: No user action required.

ORA-16091: dependent archive log destination already archived

Cause: An archive log destination contains a dependency to another archive log destination that has previously been archived.

Action: The parent archive log destination cannot be dependent on another archive log destination. Use the ALTER SYSTEM command to remove one of the dependency attributes.

ORA-16092: dependent archive log destination is not active

Cause: An archive log destination contains a dependency to another archive log destination that is not active"

Action: The child archive log destination cannot be dependent on another invalid archive log destination. Use the ALTER SYSTEM command to remove one of the dependency attributes.

ORA-16093: dependent archive log destination is not LGWR-enabled

Cause: An archive log destination contains a dependency to another archive log destination that is not enabled for the LGWR process"

Action: The child archive log destination cannot be dependent on another archive log destination not archived by the LGWR. Use the ALTER SYSTEM command to change the parent archive log to specify the LGWR process.

ORA-16094: Database shut down during archival operation.

Cause: The database was shut down while an online log file archival was active.

Action: None required.

ORA-16095: Dependent destination removal for inactivation

Cause: A dependent archive log destination was inactivated due to the parent archive log destination becoming intelligible for archival. This may be due to the parent destination being manually deferred by an application user.

Action: None required.

ORA-16096: ALTER DATABASE COMMIT TO SWITCHOVER TO PHYSICAL STANDBY

Cause: None

Action: Specify this command to switch the primary database to the physical standby role.

ORA-16097: ALTER DATABASE COMMIT TO SWITCHOVER TO PRIMARY

Cause: None

Action: Specify this command to switch the physical standby database to the primary role.

ORA-16098: Primary database has been shut down to prevent data loss.

Cause: The primary database was shut down because it was operating in maximum protection mode and no suitable standby databases were available to protect the primary database from data loss.

Action: Diagnose and correct whatever errors exist in the configuration or configure the primary database for maximum availability or maximum performance mode.

ORA-16099: internal error ORA-00600 occurred at standby database

Cause: The RFS process on the standby database received an internal error.

Action: Check the standby alert log and RFS trace files for more information.

ORA-16100: not a valid Logical Standby database

Cause: This database has not been completely configured as a Logical Standby database.

Action: Verify that the database is the intended Logical Standby database. Ensure that you already started logical standby apply with the ALTER DATABASE START LOGICAL APPLY INITIAL statement. See the Oracle8i SQL Reference manual for the statement syntax.

ORA-16101: a valid start SCN could not be found

Cause: An SCN from which to start could not be found.

Action: Register the first log file following the backup from which this database was generated. Using the ALTER DATABASE REGISTER LOGFILE statement to register the database is recommended. Alternatively, you can provide a starting SCN value with this statement.

ORA-16102: remote information is not available on the specified primary

Cause: The new primary has not completed generating the necessary information for the standby to begin consuming its log stream.

Action: Verify that the database link provided references a system that is about to become a new primary. Wait a short time before retrying the command to allow the primary some time to generate the necessary information.

ORA-16103: Logical Standby apply must be stopped to allow this operation

Cause: Logical Standby is currently applying changes. The apply must complete or be stopped to allow the requested operation.

Action: Execute the ALTER DATABASE STOP LOGICAL STANDBY APPLY statement, then re-enter or respecify the operation.

ORA-16104: Invalid Logical Standby parameter

Cause: The specified parameter is not valid.

Action: Check spelling or refer to the DBMS_LOGSTDBY PL/SQL package documentation for the correct statement syntax.

ORA-16105: Logical Standby is already running in background

Cause: A Logical Standby apply operation is already running.

Action: None

ORA-16106: loading previously applied transaction information

Cause: Logical Standby coordinator was performing a scan to identify previously applied transactions.

Action: No action necessary. This informational statement is provided to record the event for diagnostic purposes.

ORA-16107: all log data from primary has been processed

Cause: On the primary system, the log stream has been ended by the ALTER DATABASE COMMIT TO SWITCHOVER TO LOGICAL STANDBY command.

Action: Issue one of the following commands to make this standby a primary or resume applying changes from a new primary. ALTER DATABASE COMMIT TO SWITCHOVER TO LOGICAL PRIMARY; ALTER DATABASE START LOGICAL STANDBY APPLY NEW PRIMARY dblink;

ORA-16108: database is no longer a standby database

Cause: The current database has already been made a primary database.

Action: Issue the following commands to make this primary a standby. ALTER DATABASE COMMIT TO SWITCHOVER TO LOGICAL STANDBY; ALTER DATABASE START LOGICAL STANDBY APPLY NEW PRIMARY dblink;

ORA-16109: failed to apply log data from previous primary

Cause: Log data from previous primary could not be completely applied.

Action: Check DBA_LOGSTDBY_EVENTS for failures and take corrective action. Then, reissue command.

ORA-16110: user procedure processing of logical standby apply DDL

Cause: A user provided stored procedure has been called to inspect a DDL statement prior to it being processed.

Action: No action necessary, this informational statement is provided to record user involvement in the processing of a statement. Additional information can be found in the DBA_LOGSTDBY_EVENTS and the DBA_LOGSTDBY_SKIP views.

ORA-16111: log mining and apply setting up

Cause: This logical standby process is setting up to begin processing changes.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16112: log mining and apply stopping

Cause: This logical standby process is cleaning up and stopping Logical Standby apply.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16113: applying change to table or sequence *string*

Cause: The process is applying changes to a specific schema object.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16114: applying DDL transaction with commit SCN *string*

Cause: The process is applying a DDL change that's committed at the given SCN.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16115: *string*\% of LogMiner dictionary loading is done

Cause: The process is loading dictionary information from the redo stream. This activity may take a few minutes.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16116: no work available

Cause: The process is idle waiting for additional changes to be made available.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16117: processing

Cause: The process is performing its primary function and is not waiting on any significant event.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16119: building transaction at SCN *string*

Cause: The transaction being committed at the given SCN is being prepared for apply.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16120: dependencies being computed for transaction at SCN *string*

Cause: The transaction committed at the given SCN is being analyzed for dependencies.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16121: applying transaction with commit SCN *string*

Cause: The transaction committed at the given SCN is being applied.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16122: applying large dml transaction at SCN *string*

Cause: A large transaction is being applied before the commit has been seen. The current redo being applied ends as the given SCN.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16123: transaction *string string string* is waiting for commit approval

Cause: The apply process is waiting for approval to commit a transaction. This transaction may depend on another or other synchronization activity may delay the committing of a transaction.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16124: transaction *string string string* is waiting on another transaction

Cause: The apply process is waiting to apply additional changes. This transaction likely depends on another.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16125: large transaction *string string string* is waiting for more data

Cause: The apply process is waiting until additional changes for a large transaction are retrieved from the log stream.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16126: loading table or sequence *string*

Cause: Information on the given table or sequence is being loaded into an in memory cache for future use.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16127: stalled waiting for additional transactions to be applied

Cause: This process is waiting for additional memory before continuing. Additional log information cannot be read into memory until more transactions have been applied to the database, thus freeing up additional memory.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes. If this message occurs often and changes are not being applied quickly, increase available SGA or the number of apply processes.

ORA-16128: User initiated stop apply successfully completed

Cause: Logical standby was shutdown in an orderly fashion.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16129: unsupported DML encountered

Cause: One or more DMLs to an unsupported table were encountered and skipped.

Action: No action necessary. This informational statement is provided to record the event for diagnostic purposes. Optionally, check the DBA_LOGSTDBY_EVENTS view for more information including the impacted table owner and name.

ORA-16130: supplemental log information is missing from log stream

Cause: Supplemental logging is not enabled at the primary database.

Action: Issue the following command to enable supplemental logging. ALTER DATABASE ADD SUPPLEMENTAL LOG DATA (PRIMARY KEY, UNIQUE INDEX) COLUMNS;

ORA-16131: An error occurred during a Terminal Recovery of the standby.

Cause: An error occurred during a Terminal Recovery of the standby.

Action: Check the standby alert log additional information.

ORA-16132: An error occurred during activation of the standby.

Cause: An error occurred during activation of the standby database following a Terminal Recovery.

Action: Check the standby alert log additional information.

ORA-16133: Datafile *string* has incorrect terminal recovery stamp.

Cause: After activation of a standby database following a terminal recovery (recovery of standby using current logs), recovery of a datafile from before the activation must have completed the same terminal recovery to avoid corruption.

Action: A backup of the datafile taken after the terminal recovery and before activating the standby must be used for recovery.

ORA-16134: invalid MANAGED recovery FINISH option

Cause: A mode other than NOWAIT follows the FINISH keyword in RECOVER MANAGED STANDBY DATABASE statement.

Action: Specify either nothing or NOWAIT following FINISH.

ORA-16135: Invalid LOG_ARCHIVE_CONFIG modification while in protected mode

Cause: The LOG_ARCHIVE_CONFIG parameter can not be modified while any RAC instance is open in either maximum protection or maximum availability mode. Also, the parameter can not be modified in such way that would cause all destinations to fail while in maximum protection mode.

Action: Make the modification before the database is opened by any instance.

ORA-16136: Managed Standby Recovery not active

Cause: An attempt was made to cancel a managed recovery session but no managed recovery session was active.

Action: No action is necessary.

ORA-16138: end of log stream not received from primary

Cause: The standby system has not received notification that the primary system log stream has been terminated. A graceful switchover is not possible.

Action: Verify that the primary log stream has been terminated. Ensure that the standby has applied all necessary redo from the primary system and, if appropriate, reissue the graceful switchover command.

ORA-16139: media recovery required

Cause: An error has occurred while performing a switchover.

Action: If you were switching a primary database to the standby role, the conversion was successful, but one or more errors occurred after the conversion completed. See the alert log for more information. You can proceed with switching the target standby database to the primary role, but you must address the errors reported at the old primary database before it can protect the new primary database. If you encountered this error while switching a physical standby database to the primary role, the switchover did not succeed because additional redo must be applied. Verify that redo apply is active and wait until the SWITCHOVER_STATUS column of the V_\$DATABASE dynamic performance view reports TO_PRIMARY or SESSIONS_ACTIVE before retrying the switchover.

ORA-16140: standby online logs have not been recovered

Cause: The standby database has online logs containing redo that has not been recovered. Activating the standby would lose redo contained in the online logs.

Action: To recover the standby online logs issue the following command: ALTER DATABASE RECOVER MANAGED STANDBY DATABASE FINISH. Then reissue the ALTER DATABASE ACTIVATE STANDBY DATABASE command. To activate the standby without recovering the online logs, issue the following command: ALTER DATABASE ACTIVATE STANDBY DATABASE SKIP STANDBY LOGFILE.

ORA-16143: RFS connections not allowed during or after terminal recovery

Cause: An attempt was made, by an RFS process, to access a standby online log file during or after a terminal recovery.

Action: The primary must not attempt to archive to the standby after a terminal recovery.

ORA-16145: archival for thread# *string* sequence# *string* in progress

Cause: The indicated archived log file is not available for recovery due to the fact that it is still being archived.

Action: Verify that archival of the indicated log file has completed and reissue the RECOVER STANDBY DATABASE command.

ORA-16146: *string*control file enqueue unavailable

Cause: The control file enqueue is currently unavailable.

Action: No Action is required. We will try to re-fetch it at a later time.

ORA-16147: standby database referenced by multiple archive log destinations

Cause: Multiple archive log destinations reference the same standby database, using different service names. This is not allowed.

Action: Remove one of the duplicate archive log destinations.

ORA-16148: user requested expiration of managed recovery operation

Cause: The managed standby database recovery operation has been canceled per user specified EXPIRE option of the RECOVER MANAGED STANDBY DATABASE statement.

Action: No action is required.

ORA-16150: FINISH recovery performed on another, older standby database

Cause: An archive log containing a FINISH recovery indicator was received by a standby database that has received archive logs in the future of the received archive log. Because of the possibility that these future archive logs have been applied to this standby database, the received archive log must be rejected.

Action: No action is required.

ORA-16151: Managed Standby Recovery not available

Cause: The attempted operation failed because of a pending CANCEL of the managed standby recovery operation.

Action: Wait for the managed standby recovery session to end. Then retry the operation.

ORA-16152: standby database is in 'no-data-loss' protected mode

Cause: The attempted database operation is not allowed while the standby database is in 'no-data-loss' protected mode.

Action: Verify that the attempted database operation is warranted, ALTER DATABASE SET STANDBY DATABASE UNPROTECTED and reissue the statement.

ORA-16154: suspect attribute: *string*

Cause: Use of the indicated attribute is illegal in the given context.

Action: Make the appropriate changes and reissue the statement.

ORA-16156: LGWR archive log dependency not allowed if database is standby protected

Cause: The use of a LGWR archive log dependency is not allowed when the primary is protected by a standby database, as this requires use of the standby redo log files.

Action: Remove the LGWR archive log dependency and use normal LGWR archival instead.

ORA-16157: media recovery not allowed following successful FINISH recovery

Cause: A RECOVER MANAGED STANDBY DATABASE FINISH command has previously completed successfully. Another media recovery is not allowed.

Action: Issue one of these operations following a FINISH recovery: ALTER DATABASE OPEN READ ONLY or ALTER DATABASE COMMIT TO SWITCHOVER TO PRIMARY.

ORA-16159: Cannot change protected standby destination attributes

Cause: An attempt was made to change the LGWR/ARCH or SYNC/ASYN attributes for a destination that is participating in the standby protection mode of the database.

Action: No action is required.

ORA-16160: Cannot change protected standby database configuration

Cause: An attempt was made to change the standby database configuration when the primary database is in standby protected mode.

Action: The standby database must be added to the configuration before the primary database is opened.

ORA-16161: Cannot mix standby and online redo log file members for group *string*

Cause: An attempt was made to add a log file member that did not match the other member types. This problem typically occurs when adding a standby log file member to an online redo log file group, or adding an online redo log file member to a standby redo log file group.

Action: Verify the log file group type using the TYPE column of the V\$LOG fixed view.

ORA-16162: Cannot add new standby databases to protected configuration

Cause: An attempt was made to enable a new standby database destination when the primary database is in standby protected mode.

Action: The standby database must be added to the configuration before the primary database is opened.

ORA-16163: LGWR network server host attach error

Cause: The LGWR network server could not attach to remote host

Action: The alert log contains more problem-specific information

ORA-16164: LGWR network server host detach error

Cause: The LGWR network server could not detach from remote host

Action: The alert log contains more problem-specific information

ORA-16165: LGWR failed to hear from network server

Cause: The LGWR lost its connection to the network server

Action: The alert log contains more problem-specific information

ORA-16166: LGWR network server failed to send remote message

Cause: The LGWR network server could not communicate with the remote host

Action: The alert log contains more problem-specific information

ORA-16167: LGWR network server could not switch to non-blocking mode

Cause: The LGWR network server could not switch to non-blocking mode

Action: The alert log contains more problem-specific information

ORA-16168: LGWR network server could not switch to blocking mode

Cause: The LGWR network server could not switch to blocking mode

Action: The alert log contains more problem-specific information

ORA-16169: LGWR network server invalid parameters

Cause: The LGWR network server could not switch to blocking mode

Action: The alert log contains more problem-specific information

ORA-16170: Terminal recovery may have left the database in an inconsistent state

Cause: When terminal recovery is invoked in a standby database without synchronous log shipping, in the rare case of the recovery session being in an unrecoverable state, terminal recovery cannot bring the standby database to a consistent SCN boundary if the primary database continues to have redo thread(s) open.

Action: Continue standby recovery with additional log shipping from primary.

ORA-16171: RECOVER...FINISH not allowed due to gap for thr *string*, seq *string-string*

Cause: See alert log for more details

Action: Copy missing archived logs from primary or another standby. Register the logs and reissue the RECOVER...FINISH command. If the logs are not available, issue the ALTER DATABASE RECOVER MANAGED STANDBY SKIP command to ignore the standby redo log files.

ORA-16172: archive logs detected beyond Terminal End-Of-Redo

Cause: An attempt to archive a Terminal End-Of-Redo archive log to a remote destination failed due the existence, at the remote site, of archive logs containing REDO in the future of the Terminal EOR.

Action: n/a

ORA-16173: incompatible archival network connections active

Cause: One of two situations can cause this error: 1) An attempt to start a Terminal Incomplete Recovery operation failed due to an active Remote File Server process detected. 2) An attempt to archive a Terminal End-Of-Redo archive log to a remote destination failed due to an active Remote File Server process at the remote site. An active Remote File Server (RFS) process implies connectivity with the primary database which may indicate that a Terminal Incomplete Recovery operation is not warranted.

Action: Verify the Managed Standby environment and re-evaluate the necessity of a Terminal Incomplete Recovery operation.

ORA-16174: user requested thread/sequence termination of managed recovery

Cause: The managed standby database recovery operation has been terminated per user specified THROUGH THREAD/SEQUENCE option of the RECOVER MANAGED STANDBY DATABASE statement.

Action: No action is required.

ORA-16175: cannot shut down database when media recovery is active

Cause: An attempt was made to shut down a standby database while media recovery was active.

Action: Cancel media recovery to proceed with the shutdown.

ORA-16176: background dictionary build cannot be running

Cause: The background process dedicated to dictionary build is active.

Action: wait and try it later.

ORA-16177: media recovery is not required

Cause: The THROUGH LAST SWITCHOVER clause of the ALTER DATABASE RECOVER MANAGED STANDBY DATABASE was specified and the database has been recovered to the most recent End-Of-Redo marker. All known archived logs have been applied. Managed recovery is not required.

Action: No action is necessary. The standby database may be activated as a new primary or may continue as a standby.

ORA-16178: Cannot specify remote destinations in manual archiving mode

Cause: The database is operating in manual archiving mode. Remote archive log destinations are not allowed in this mode.

Action: Use the ALTER DATABASE ARCHIVELOG command to place the database in automatic ARCHIVELOG mode, or defer the archive log destinations that specify the SERVICE= attribute.

ORA-16179: incremental changes to "string" not allowed with SPFILE

Cause: Incremental changes to a log_archive_dest_n parameter cannot be made when using an SPFILE.

Action: Specify either LOCATION or SERVICE plus all other attributes to be set in one ALTER SYSTEM/SESSION SET command.

ORA-16180: number of processes specified is too large

Cause: The number of server processes available for Logical Standby is currently limited to 1024 LogMiner processes and 1024 apply processes or a total of 2048.

Action: Retry with a lower value.

ORA-16181: SGA specified for Logical Standby is too large

Cause: MAX_SGA is larger than 75% of the larger of initialization parameters SHARED_POOL_SIZE, MEMORY_TARGET, and SGA_TARGET.

Action: Specify the value of MAX_SGA to be less than 75% of the maximum of SHARED_POOL_SIZE, MEMORY_TARGET, and SGA_TARGET.

ORA-16182: Internal error on internal channel during remote archival

Cause: An internal error was encountered on the internal channel between LGWR and Network Server.

Action: No action is required, as an attempt will be made to re-archive the file that had this failure during archival.

ORA-16184: DB_UNIQUE_NAME string hashes to the same value as DB_UNIQUE_NAME string

Cause: The internal hash value generated for one DB_UNIQUE_NAME collided with the hash value of another DB_UNIQUE_NAME.

Action: Slightly modify one of the DB_UNIQUE_NAMES so it hashes to a different value.

ORA-16185: REMOTE_ARCHIVE_ENABLE and LOG_ARCHIVE_CONFIG mutually exclusive

Cause: Both the REMOTE_ARCHIVE_ENABLE and LOG_ARCHIVE_CONFIG parameters are defined in the initialization file and they are mutually exclusive.

Action: The REMOTE_ARCHIVE_ENABLE parameter has been made obsolete. Use only the LOG_ARCHIVE_CONFIG parameter.

ORA-16186: Modifying LOG_ARCHIVE_CONFIG requires SID='*' qualifier

Cause: The setting for the LOG_ARCHIVE_CONFIG parameter must be exactly the same on all RAC instances so the SID='*' qualifier is required.

Action: Re-enter the command using the SID='*' qualifier.

ORA-16187: LOG_ARCHIVE_CONFIG contains duplicate, conflicting or invalid attributes

Cause: The LOG_ARCHIVE_CONFIG parameter was specified with duplicate, conflicting or invalid attributes.

Action: Check the documentation regarding the correct specification of the LOG_ARCHIVE_CONFIG parameter.

ORA-16188: LOG_ARCHIVE_CONFIG settings inconsistent with previously started instance

Cause: The settings for the LOG_ARCHIVE_CONFIG parameter are inconsistent with the settings of a previously started instance. The settings for this parameter must be exactly the same for all instances.

Action: Make sure all instances use the exact same LOG_ARCHIVE_CONFIG settings.

ORA-16191: Primary log shipping client not logged on standby

Cause: An attempt to ship redo to standby without logging on to standby or with invalid user credentials.

Action: Check that primary and standby are using password files and that both primary and standby have the same SYS password. Restart primary and/or standby after ensuring that password file is accessible and REMOTE_LOGIN_PASSWORDFILE initialization parameter is set to SHARED or EXCLUSIVE.

ORA-16192: Primary and standby network integrity mismatch

Cause: Standby wants sqlnet network integrity for redo shipment which is not configured properly at the primary.

Action: Check sqlnet.ora documentation regarding how to setup network integrity and set it up identically on both primary and standby. Restart primary and/or standby.

ORA-16193: Primary and standby network encryption mismatch

Cause: Standby wants sqlnet network encryption for redo shipment which is not configured properly at the primary.

Action: Check sqlnet.ora documentation regarding how to setup network encryption and set it up identically on both primary and standby. Restart primary and/or standby.

ORA-16194: Modifying DB_UNIQUE_NAME requires SID='*' qualifier

Cause: The setting for the DB_UNIQUE_NAME parameter must be exactly the same on all RAC instances so the SID='*' qualifier is required.

Action: Re-enter the command using the SID='*' qualifier.

ORA-16195: DG_CONFIG requires DB_UNIQUE_NAME be explicitly defined

Cause: The DG_CONFIG attribute of the LOG_ARCHIVE_CONFIG parameter can only be used if the DB_UNIQUE_NAME parameter has been explicitly defined.

Action: Explicitly define a valid DB_UNIQUE_NAME.

ORA-16196: database has been previously opened and closed

Cause: The instance has already opened and closed the database, which is allowed only once in its lifetime.

Action: Shut down the instance.

ORA-16197: Invalid DB_UNIQUE_NAME parameter specification

Cause: The DB_UNIQUE_NAME parameter has an invalid specification. The DB_UNIQUE_NAME parameter has a maximum length of 30 characters and the only characters allowed are alpha-numeric characters and "_", "\$" and "#".

Action: Check the documentation and re-enter the parameter.

ORA-16198: Timeout incurred on internal channel during remote archival

Cause: A timeout was incurred during remote archival.

Action: No action is required, as an attempt will be made to re-archive the file that had this failure during archival.

ORA-16199: Terminal recovery failed to recover to a consistent point

Cause: See alert log for more details

Action: Try to resolve the problem. Retry terminal recovery. If the problem occurs repeatedly and cannot be resolved, call Oracle support.

ORA-16200: Skip procedure requested to skip statement

Cause: Logical standby called a skip procedure that requested for a particular statement not to be applied.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16201: Skip procedure requested to apply statement

Cause: Logical standby called a skip procedure that requested for a particular statement to be applied.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16202: Skip procedure requested to replace statement

Cause: Logical standby called a skip procedure that requested for a particular statement to be replaced with a new statement.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16203: Unable to interpret skip procedure return values

Cause: The skip procedure returned conflicting or invalid values.

Action: Ensure that the new_statement output parameter is non-NULL when returning DBMS_LOGSTDBY.SKIP_ACTION_REPLACE and NULL otherwise. Also ensure SKIP_ACTION is specified correctly.

ORA-16204: DDL successfully applied

Cause: A DDL statement has successfully committed on the logical standby database.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16205: DDL skipped due to skip setting

Cause: A setting in the logical standby skip table indicates that this type of DDL should always be skipped.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16206: database already configured as Logical Standby database

Cause: This database has been previously configured as a Logical Standby database. A Logical Standby database is not capable of processing the requested operation.

Action: Ensure that you entered the command on the correct database as this database is a Logical Standby and is not capable of servicing the request.

ORA-16207: Logical standby dictionary build not permitted.

Cause: A dictionary build is currently in progress. Only one build can be active at a time.

Action: Wait for the active build to complete before invoking a new build.

ORA-16208: Logical standby dictionary build failed to start.

Cause: Failure to start the logical standby dictionary build process (LSP1)

Action: Check the accompanying messages, and the background process trace file. Correct the problem mentioned in the messages. Then shut down and restart the instance. If the trace file mentions any other background process messages, check the trace file for the mentioned process until the root message is found.

ORA-16209: Logical standby dictionary build failed to complete.

Cause: The logical standby dictionary build process terminated abnormally.

Action: Check the accompanying messages, and the background process trace file. Correct the problem mentioned in the messages. Then shut down and restart the instance. If the trace file mentions any other background process messages, check the trace file for the mentioned process until the root message is found.

ORA-16210: Logical standby coordinator process terminated with error

Cause: The logical standby coordinator process terminated abnormally.

Action: Check the accompanying messages, and the background process trace file. Correct the problem mentioned in the messages. Then shut down and restart the instance. If the trace file mentions any other background process messages, check the trace file for the mentioned process until the root message is found.

ORA-16211: unsupported record found in the archived redo log

Cause: Log apply services encountered a record in the archived redo log that could not be interpreted.

Action: 1. Use DBMS_LOGSTDBY.INSTANTIATE_TABLE to re-create the table on the standby database or simply drop the table if it's unimportant. 2. ALTER

DATABASE START LOGICAL STANDBY APPLY; 3. Examine the current_scn column in the DBA_LOGSTDBY_EVENTS view to determine which log file contains the unsupported record. 4. Provide the log file to Oracle Support Services.

ORA-16212: number of processes specified for SQL Apply is too great

Cause: Logical standby apply engine was started with more processes requested than are available.

Action: Adjust the values of the initialization parameters PROCESSES or the MAX_SERVERS parameter seen in the DBA_LOGSTDBY_PARAMETERS view. If you did not specify MAX_SERVERS, but instead specified PREPARE_SERVERS and APPLY_SERVERS through the dbms_logstdby.apply_set procedure, you will need to decrease either one or both of them.

ORA-16213: ddl encountered, stopping apply engine

Cause: stop_on_ddl callout specified and DDL was encountered.

Action: Either disable stop_on_ddl callout or remove DDL.

ORA-16214: apply stalled for apply delay

Cause: A delay has been specified on the primary database for this destination.

Action: Either turn off the delay on the primary or use DBMS_LOGSTDBY.APPLY_UNSET('APPLY_DELAY'); to override.

ORA-16215: history metadata inconsistency

Cause: internal error.

Action: This is an internal error. Contact Oracle support.

ORA-16216: Log stream sequence error

Cause: The log stream being processed did not follow the last processed stream.

Action: If the database is in an active configuration, issue an ALTER DATABASE START LOGICAL STANDBY APPLY NEW PRIMARY command to synchronize log stream data with the current primary database. If the database is not in an active configuration, manually add the next dictionary-begin log file that followed the previous log stream.

ORA-16217: prepare to switchover has not completed

Cause: An ALTER DATABASE PREPARE TO SWITCHOVER command was issued, but the prepare activity did not complete.

Action: Verify that the standby was prepared properly. You may cancel the prepare and perform an unprepared switchover which requires a database link to complete. Or reissue the prepare operation on the standby.

ORA-16218: This database is already preparing to switch over.

Cause: The database was already preparing to switch over and was not able to accommodate another prepare attempt.

Action: Cancel the current prepare attempt with the ALTER DATABASE PREPARE TO SWITCHOVER CANCEL command, then reissue the prepare request.

ORA-16219: This database is not preparing to switch over.

Cause: The database was not preparing to switch over. Therefore, it was not possible to cancel the SWITCHOVER command.

Action: Preparing for the SWITCHOVER command can be accomplished with the ALTER DATABASE PREPARE TO SWITCHOVER command.

ORA-16220: no failed transaction found

Cause: No failed transaction was found.

Action: Retry the ALTER DATABASE START LOGICAL STANDBY APPLY command without the SKIP FAILED TRANSACTION option.

ORA-16221: history table synchronization error

Cause: internal error.

Action: This is an internal error. Contact Oracle support.

ORA-16222: automatic Logical Standby retry of last action

Cause: A failure occurred while running Logical Standby apply. A new attempt is automatically being made by Logical Standby apply.

Action: No action is necessary. This informational statement is provided to record the event for diagnostic purposes.

ORA-16223: DDL skipped, unsupported in current version

Cause: The given DDL statement was not supported in the current version of Logical Standby and was skipped.

Action: No action is necessary. This informational statement is provided to record the event for diagnostic purposes.

ORA-16224: Database Guard is enabled

Cause: Operation could not be performed because database guard is enabled

Action: Verify operation is correct and disable database guard

ORA-16225: Missing LogMiner session name for Capture

Cause: An attempt was made to register the log file for Capture without a specified LogMiner session name.

Action: Specify a valid LogMiner session name to which the log file will be registered.

ORA-16226: DDL skipped due to lack of support

Cause: Logical Standby does not support this type of DDL in this version, so the DDL is skipped.

Action: The DBA may apply the DDL explicitly at a later time or a procedure to handle this type of DDL can be created. see DBMS_LOGSTDBY.SKIP procedure for details.

ORA-16227: DDL skipped due to missing object

Cause: A table or other database object upon which this DDL depended was not defined on the Logical Standby database.

Action: No action is necessary. This informational statement is provided to record the event for diagnostic purposes.

ORA-16228: Insufficient recovery for logical standby

Cause: Insufficient amount of recovery was run for logical standby instantiation.

Action: Continue to recover the database using ALTER DATABASE RECOVER MANAGED STANDBY DATABASE.

ORA-16229: PDML child *string string string* for parent *string string string* cannot be skipped.

Cause: A request was made to skip a parallel DML child transaction id. This is not supported.

Action: Using the DBMS_LOGSTDBY.UNSKIP_TRANSACTION procedure, remove the child transaction id, then specify the parent transaction id using DBMS_LOGSTDBY.SKIP_TRANSACTION if appropriate.

ORA-16230: committing transaction *string string string*

Cause: Logical Standby apply was committing changes for the given transaction.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16232: adding Logical Standby skip entry for table *string.string*

Cause: Table was previously unsupported due to datatype or storage attribute definitions. Table is now capable of being supported.

Action: To have Logical Standby maintain the table, import that table directly from the primary.

ORA-16233: The table *string.string* is unsupported now

Cause: Table was previously supported but now is unsupported due to altered datatype or storage attribute definitions.

Action: None

ORA-16234: restarting to reset Logical Standby apply

Cause: Logical Standby encountered a work load that required a restart to properly reschedule.

Action: No action necessary. This informational statement is provided to record the event for diagnostic purposes.

ORA-16235: DDL skipped because import has occurred

Cause: An object was exported from the primary database and imported into the Logical Standby database. This DDL occurred before the export.

Action: No action necessary. This informational statement is provided to record the event for diagnostic purposes.

ORA-16236: Logical Standby metadata operation in progress

Cause: The requested operation failed because an incompatible Logical Standby metadata operation such as DBMS_LOGSTDBY.SET_TABLESPACE, DBMS_LOGSTDBY.APPLY_SET or DBMS_LOGSTDBY.INSTANTIATE_TABLE was still running.

Action: Wait for the incompatible Logical Standby metadata operation to finish, then reenter or respecify the operation.

ORA-16237: SGA specified for Logical Standby is too small

Cause: MAX_SGA must be at least 10 Megabytes for proper functioning of Logical Standby.

Action: Specify the value of MAX_SGA to be greater than or equal to 10Mb. Alternatively, increase the shared_pool_size/sga_target so that 1/4 of it will amount to 10 Megabytes.

ORA-16238: attempt to use version 9 log

Cause: Version 9 log files are not supported.

Action: Use log files of a supported version.

ORA-16239: IMMEDIATE option not available without standby redo logs

Cause: The IMMEDIATE option cannot be used without standby redo logs.

Action: Do not specify the IMMEDIATE option unless standby redo logs are being used.

ORA-16240: Waiting for log file (thread# *string*, sequence# *string*)

Cause: Process is idle waiting for additional log file to be available.

Action: No action necessary. This informational statement is provided to record the event for diagnostic purposes.

ORA-16241: Waiting for gap log file (thread# *string*, sequence# *string*)

Cause: Reader process was idle waiting for the log file to fill the log sequence gap.

Action: No action necessary. This informational statement is provided to record the event for diagnostic purposes.

ORA-16242: Processing log file (thread# *string*, sequence# *string*)

Cause: Reader process was processing the log file.

Action: No action necessary. This informational statement is provided to record the event for diagnostic purposes.

ORA-16243: paging out *string* bytes of memory to disk

Cause: Builder process is paging out memory to free up space in lcr cache.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16245: change db_name to *string* in the server-side parameter file (SPFILE)

Cause: An ALTER DATABASE RECOVER TO LOGICAL STANDBY new-dbname command was successfully executed without a modifiable server parameter file (SPFILE).

Action: The server-side parameter file must be modified so that db_name is set to the given name before mounting the database again. You must do this by executing CREATE PFILE FROM SPFILE, editing the resulting text parameter file, and then executing CREATE SPFILE FROM PFILE.

ORA-16246: User initiated abort apply successfully completed

Cause: SQL Apply was stopped using the abort option.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16247: DDL skipped on internal schema

Cause: Logical Standby ignores DDLs on internal schemas such as SYS and SYSTEM. For a complete list of internal schemas ignored by Logical Standby perform the following query: SELECT owner FROM dba_logstdby_skip WHERE statement_opt = 'INTERNAL SCHEMA'.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16248: RFS connections not permitted during Terminal Apply

Cause: Writes by RFS are not permitted while Logical Standby is performing Terminal Apply.

Action: Permit any outstanding Logical Standby operations to complete.

ORA-16249: Terminal apply failed to complete during failover

Cause: The logical standby coordinator process terminated abnormally."

Action: Examine the DBA_LOGSTDBY_EVENTS view for the reason behind the abnormal shutdown, and resolve accordingly. Once the problem has been rectified, reissue the ALTER DATABASE ACTIVATE LOGICAL STANDBY DATABASE command to complete the failover.

ORA-16250: Failed to acquire starting scn of new log stream

Cause: The starting SCN for the new log stream could not be determined.

Action: Please reissue the ACTIVATE LOGICAL STANDBY DATABASE command.

ORA-16251: LSP1 Background Build not permitted

Cause: The LSP1 background process is not permitted to start because it had previously been attempted.

Action: This is an internal error. Contact Oracle support.

ORA-16252: Rebuild operation not permitted

Cause: The REBUILD operation is not permitted.

Action: Only on a primary database that has failed to complete the LogMiner dictionary build may the REBUILD operation take place. Reissue the ACTIVATE LOGICAL STANDBY DATABASE command if it previously failed to complete.

ORA-16253: Logical standby cannot start due to a prior, incomplete operation

Cause: A failure during a prior failover or configuration-related operation left the logical standby in an inconsistent state.

Action: Identify and reissue the operation before attempting to restart the logical standby apply engine.

ORA-16254: change db_name to string in the client-side parameter file (pfile)

Cause: An ALTER DATABASE RECOVER TO LOGICAL STANDBY new-dbname command was successfully executed without a server parameter file (spfile).

Action: The client-side parameter file must be edited so that db_name is set to the given name before mounting the database again.

ORA-16255: Log Auto Delete conflicts with another LogMiner session

Cause: Log Auto Delete cannot be on while another LogMiner session is running on the same database.

Action: Start Logical Standby without Log Auto Delete or destroy other LogMiner sessions first.

ORA-16256: Failure to complete standby redo log file archival after failover

Cause: The standby redo log files processed during the failover of a logical standby were not archived.

Action: Execute DBMS_LOGSTDBY.REBUILD to reattempt the archival.

ORA-16257: Switchover initiated stop apply successfully completed

Cause: SQL Apply was stopped because of a switchover.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16258: marking index unusable due to a constraint violation

Cause: A constraint violation occurred during the apply of a direct path load. The index will be marked unusable and the apply will be restarted.

Action: No action necessary. See alert log for index schema and name.

ORA-16259: Switchover to logical standby requires a log archive destination

Cause: A valid log archive destination was not found to which the local system could archive the end of redo (EOR) log file. A minimum of one destination is required.

Action: Ensure all log archive destinations are properly configured and, if applicable, have network connectivity before reissuing the ALTER DATABASE COMMIT TO SWITCHOVER TO LOGICAL STANDBY DDL operation.

ORA-16260: Waiting to replace partial or corrupt log file (thread# *string*, sequence# *string*)

Cause: LogMiner Reader process reached the end of a partial log file or encountered a corrupted block. It is now waiting for the log file to be recovered and reregistered.

Action: No action necessary. Once the fetch archive log (FAL) archiver replaces the log file, standby will automatically restart to process the replaced file.

ORA-16261: Identification key mismatch for table "*string*"."*string*".

Cause: Internal error in SQL Apply.

Action: Contact Oracle Support Services.

ORA-16262: Invalid value specified for Logical Standby parameter

Cause: The value specified in APPLY_SET is invalid for the parameter.

Action: Specify correct parameter value. Please refer to documentation on DBMS_LOGSTDBY PL/SQL package for details.

ORA-16263: Dynamic parameters can only be set on SQL apply instance

Cause: Attempt to set a Logical standby dynamic parameter on an instance other than where SQL apply coordinator is running.

Action: Connect to the instance where SQL apply coordinator is running and reissue the statement.

ORA-16264: invalid value for PREPARE_SERVERS parameter

Cause: attempt to set PREPARE_SERVERS parameter to zero or to a value which would require MAX_SERVERS to be increased.

Action: set PREPARE_SERVERS parameter to a non zero value and or increase MAX_SERVERS parameter accordingly.

ORA-16265: Unsupported PL/SQL procedure encountered

Cause: Apply encountered an unsupported procedure from an Oracle supplied PL/SQL package that is otherwise supported

Action: Either add a skip rule for this procedure or manually apply the procedure and restart apply skipping the failed transaction Please refer to documentation on the PL/SQL package for details.

ORA-16266: Cannot instantiate a Logical Standby from another Logical Standby

Cause: An instantiation of a Logical Standby has been attempted for another database with the Logical Standby role, which is not supported.

Action: Instantiate a Logical Standby database only from a Primary Database.

ORA-16267: Cannot instantiate a Logical Standby during a switchover

Cause: An instantiation of a Logical Standby has been attempted for a primary database that is in the middle of a switchover.

Action: Execute ALTER DATABASE PREPARE TO SWITCHOVER CANCEL to cancel the switchover, and attempt the instantiation again.

ORA-16268: user procedure processing of logical standby apply PL/SQL

Cause: A user-provided stored procedure was called to inspect a PL/SQL statement prior to the statement being processed.

Action: No action necessary, this informational statement is provided to record user involvement in the processing of a statement. Additional information can be found in the DBA_LOGSTDBY_EVENTS and the DBA_LOGSTDBY_SKIP views.

ORA-16269: PL/SQL procedure skipped due to failure on primary database

Cause: Because the PL/SQL procedure failed when executed on the primary database, it could not be executed on the standby database.

Action: This informational statement is provided to record the event for diagnostic purposes. The failed PL/SQL procedure needs to be investigated to ensure it did not commit interesting data before it failed.

ORA-16270: PL/SQL procedure skipped due to unmaintained standby objects

Cause: Because the PL/SQL procedure manipulated objects not being maintained by the standby database, it was skipped.

Action: No action necessary. This informational statement is provided to record the event for diagnostic purposes.

ORA-16271: PL/SQL successfully applied

Cause: A PL/SQL procedure was successfully applied on the logical standby database.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16272: PL/SQL procedure skipped due to skip setting

Cause: A setting in the logical standby skip table indicated that this PL/SQL procedure should always be skipped.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16273: invalid value for APPLY_SERVERS parameter

Cause: attempt to set APPLY_SERVERS parameter to zero or to a value which would require MAX_SERVERS to be increased.

Action: set APPLY_SERVERS parameter to a non zero value or increase MAX_SERVERS parameter accordingly.

ORA-16274: failure to perform operation on all Oracle RAC instances

Cause: One or more instances encountered an error while performing an operation.

Action: Ensure every instance in the Oracle RAC meets the requirements for the operation, and retry the operation.

ORA-16275: prior failed CTAS detected and pre-existing table dropped

Cause: During the processing of a CTAS operation, an existing empty table with the same name and attributes as the CTAS source table was found, and the table was dropped.

Action: No action is necessary. This informational statement is provided to record the event for diagnostic purposes.

ORA-16276: specified database link does not correspond to primary database

Cause: The database link specified to DBMS_LOGSTDBY.INSTANTIATE_TABLE did not link to the primary database for this logical standby database.

Action: Specify a database link that corresponds to the primary database for this logical standby database. The link should have privileges to read and lock the table being instantiated, as well as the SELECT_CATALOG_ROLE.

ORA-16277: specified table is not supported by logical standby database

Cause: A call was made to DBMS_LOGSTDBY.INSTANTIATE_TABLE to instantiate an unsupported table on the logical standby database. Tables with unsupported data types cannot be replicated to a logical standby database.

Action: Specify a table which is not listed in the DBA_LOGSTDBY_UNSUPPORTED_TABLE view.

ORA-16278: specified table has a multi-object skip rule defined

Cause: A table that is instantiated via DBMS_LOGSTDBY.INSTANTIATE_TABLE must not have any skip rules defined with wildcard characters.

Action: Remove or rewrite any skip rules defined for the specified table so that they no longer contain wildcard characters, or no longer affect the specified table.

ORA-16279: supplied dblink does not have sufficient privileges

Cause: A dblink was specified that lacked one or more of the CONNECT, RESOURCE, or SELECT_CATALOG_ROLE roles or that connects to a user with insufficient privileges to lock the table.

Action: Grant the necessary privileges to the dblink and the user to which the dblink connects and retry the operation.

ORA-16280: cannot change master key on a logical standby database

Cause: An attempt was made to change the master key for transparent data encryption on a logical standby database.

Action: Set GUARD to NONE and reissue the command. This prevents you from replicating tables with encrypted columns from the primary database.

ORA-16281: missing identification key for table "*string*"."*string*".

Cause: No identification key was created for specified table.

Action: Create a primary key or unique index for specified table.

ORA-16282: operation not permitted during rolling upgrade

Cause: An operation was attempted that is not supported during a rolling upgrade.

Action: Retry the operation upon completion of the upgrade.

ORA-16283: operation not permitted on non-apply instance

Cause: An operation was attempted that is not supported since it requires a running logical apply on the local instance.

Action: Retry the operation on the instance on which the apply engine is running.

ORA-16284: timed out waiting for an in-progress operation to complete

Cause: An operation timed out waiting for another operation to complete.

Action: Retry the operation when the in-progress operation has completed.

ORA-16285: operation not permitted due to inconsistent role state

Cause: A prior attempt to change the role of this database has failed before the new role state could be fully committed.

Action: Retry the previously attempted role-related operation before attempting the current operation.

ORA-16286: operation not permitted due to lack of synchronized destination

Cause: A synchronized log archive destination was not found to which the end-of-redo log file could be archived.

Action: Before re-attempting the operation, wait at least one minute for the Remote File Server to automatically recover any missing log files or manually recover and register any missing log files with logical standby.

ORA-16287: operation not permitted due to active apply state

Cause: An operation was attempted that was not supported while the logical standby database had an active apply state.

Action: Confirm the procedures used to configure the logical standby database. Procedures which attempt to reconfigure a logical standby database for a new primary database may encounter this error if an error in a preliminary step was encountered.

ORA-16288: DDL skipped due to missing edition "*string*"

Cause: The edition in which the DDL was performed on the primary did not exist on the standby database.

Action: No action is necessary. This informational statement is provided to record the event for diagnostic purposes.

ORA-16289: unable to access Pluggable Database "*string*"

Cause: Logical standby attempted to access a Pluggable Database that did not exist.

Action: Create or plug in the specified Pluggable Database or add an appropriate skip rule and then restart logical standby.

ORA-16290: cannot alter the session logical replication state within a transaction

Cause: A transaction was already in progress.

Action: Commit or rollback the transaction and then reexecute.

ORA-16300: LSBY architected tracing event

ORA-16302: extended data type support is not supported for specified table

Cause: A call was made to DBMS_LOGSTDBY.EDS_ADD_TABLE for a table that was not supported for such an operation. The table either does not have a primary key or it has a data type not supported by this procedure.

Action: Specify a table for which support exists in EDS_ADD_TABLE.

ORA-16303: specified table already has extended data type support

Cause: A call was made to DBMS_LOGSTDBY.EDS_ADD_TABLE for a table that already had EDS added on the local database.

Action: None

ORA-16304: procedure must first be called on primary database

Cause: A call was made to DBMS_LOGSTDBY.EDS_ADD_TABLE on a logical standby database without having first called it on the primary database.

Action: Call DBMS_LOGSTDBY.EDS_ADD_TABLE on the primary database and then retry on the standby.

ORA-16305: procedure not supported on a logical standby

Cause: A call was made to DBMS_LOGSTDBY.EDS_EVOLVE_TABLE on a logical standby database which can only be called on a primary database

Action: Call DBMS_LOGSTDBY.EDS_EVOLVE_TABLE on the primary database

ORA-16306: specified table does not have a primary key

Cause: A call was made to DBMS_LOGSTDBY.EDS_ADD_TABLE for a table that did not have a primary key.

Action: Add a primary key and retry the operation.

ORA-16307: TSE key *string* successfully applied

Cause: An ALTER SYSTEM SET ENCRYPTION KEY statement was successfully committed on the logical standby database.

Action: No action necessary. This informational statement is provided to record the event for diagnostic purposes.

ORA-16308: specified table has extended data type support

Cause: A call was made to DBMS_LOGSTDBY.INSTANTIATE_TABLE for a table that is being maintained by extended data type support.

Action: Call DBMS_LOGSTDBY.EDS_REMOVE_TABLE followed by either DBMS_LOGSTDBY.EDS_ADD_TABLE or a retry of the operation.

ORA-16309: extended data type support evolve operation not yet started

Cause: A call was made to finish an extended data type support evolve operation without having first started the operation.

Action: Call DBMS_LOGSTDBY.EDS_EVOLVE_MANUAL with START option and then retry.

ORA-16310: extended data type support evolve operation in progress

Cause: An extended data type support evolve operation was started but not yet completed.

Action: Wait a few seconds and retry the command if automatic evolve has been enabled or call DBMS_LOGSTDBY.EDS_EVOLVE_MANUAL with the FINISH option and then retry.

ORA-16311: materialized view log already exists

Cause: A call was made to DBMS_LOGSTDBY.EDS_ADD_TABLE for a table with a LOB that requires the creation of a specifically-defined materialized view log but one already exists.

Action: Drop the existing materialized view log and retry the operation.

ORA-16330: error in container "*string*"

Cause: An operation was attempted on a container and an error occurred.

Action: Address the failure condition and then retry.

ORA-16331: container "*string*" is not open

Cause: An operation was attempted on a container. However, the container was not open.

Action: Open the container and then retry.

ORA-16332: logical standby encountered non-fatal error ORA-*string* during DDL execution

Cause: Logical standby apply encountered a non-fatal error during DDL execution and continued to process subsequent transactions.

Action: This error is informational only. No user action is required.

ORA-16333: `_MAX_LOG_LOOKBACK` parameter not sufficiently larger than `MAX_SGA`

Cause: `_MAX_LOG_LOOKBACK` or `MAX_SGA` parameter was set to a value that will lead to decreased performance.

Action: Reset parameters such that `_MAX_LOG_LOOKBACK` is at least 5 times the value of `MAX_SGA`.

ORA-16334: skip procedure does not exist

Cause: The specified skip procedure did not exist.

Action: Ensure that the specified skip procedure exists and is accessible by the calling user.

ORA-16400: quota attributes are not allowed with `DB_RECOVERY_FILE_DEST`

Cause: Quota attributes for the destination parameters are not allowed when the parameter `DB_RECOVERY_FILE_DEST` is defined.

Action: No action is required.

ORA-16401: archive log rejected by Remote File Server (RFS)

Cause: An attempt was made to re-archive an existing archive log.

Action: See alert log and trace file for more details. No action is necessary. This is an informational statement provided to record the event for diagnostic purposes.

ORA-16402: `TRANSPORT=ONDEMAND` is unsupported.

Cause: The ARCHIVELOG destination `TRANSPORT=ONDEMAND` attribute was specified on the primary database.

Action: Use of the `TRANSPORT=ONDEMAND` is no longer supported. Remove this attribute from the `LOG_ARCHIVE_DEST_n` initialization parameter.

ORA-16403: shut down in progress - remote connection is not permitted

Cause: A redo transport session could not be started because the database was shutting down.

Action: Wait for the remote instance to be restarted, or contact your DBA.

ORA-16406: primary and standby database software version mismatch

Cause: The primary and standby databases were not running compatible versions of Oracle server software.

Action: Install the correct Oracle server software and try again.

ORA-16407: An archive log from an earlier redo branch has been rejected

Cause: An archive log from a redo branch that is earlier than the one that the standby database is currently applying was rejected.

Action: No action is required.

ORA-16408: An archive log from an incompatible redo branch has been rejected.

Cause: An archive log from a redo branch that is incompatible with the one that the standby database is currently applying was rejected.

Action: No action is required.

ORA-16409: archive log switchover reference number mismatch

Cause: The archive log switchover reference numbers of the primary and standby database did not match. Remote archival of redo log files is not allowed to incompatible standby database instances.

Action: No action is required.

ORA-16411: TRANSPORT=ONDEMAND is unsupported

Cause: The archivelog destination TRANSPORT=ONDEMAND attribute was specified on the primary database.

Action: Use of the TRANSPORT=ONDEMAND is no longer supported. Remove this attribute from the LOG_ARCHIVE_DEST_n initialization parameter.

ORA-16412: TRANSPORT=ONDEMAND is unsupported

Cause: The archivelog destination TRANSPORT=ONDEMAND attribute was specified on the primary database.

Action: Use of the TRANSPORT=ONDEMAND is no longer supported. Remove this attribute from the LOG_ARCHIVE_DEST_n initialization parameter.

ORA-16413: TRANSPORT=ONDEMAND is unsupported

Cause: The archivelog destination TRANSPORT=ONDEMAND attribute was specified on the primary database.

Action: Use of the TRANSPORT=ONDEMAND is no longer supported. Remove this attribute from the LOG_ARCHIVE_DEST_n initialization parameter.

ORA-16416: No viable *strings* switchover targets available

Cause: Switchover failed because no standby databases of the appropriate type were available.

Action: Check the alert log for errors, correct the problem and retry the switchover.

ORA-16417: Activation occurred after recovery from standby redo log files; a full database backup is required

Cause: Activation occurred after recovery from standby redo log files.

Action: Take a full database backup.

ORA-16419: Snapshot standby must be converted to a physical standby database.

Cause: The database was not a physical standby database.

Action: Convert to physical standby database and retry the operation.

ORA-16420: fast-start failover target cannot be converted to snapshot standby

Cause: The database chosen for conversion to a snapshot standby was the fast-start failover target standby database.

Action: Choose another physical standby database and retry the operation.

ORA-16424: RECOVER FINISH cannot complete due to a redo gap.

Cause: RECOVER FINISH failed because there was a redo gap on the standby database.

Action: Resolve redo gap or issue ALTER DATABASE ACTIVATE STANDBY DATABASE to perform an immediate failover with some data loss.

ORA-16425: RECOVER FINISH cannot be issued when recovery branch *string* is not the target branch *string*.

Cause: RECOVER FINISH failed because a new branch existed on the physical standby database.

Action: Issue real-time apply recovery and see if recovery can proceed on the new branch by checking if logs on the new branch are applied by recovery. If so, issue another RECOVER FINISH. Otherwise, issue ALTER DATABASE ACTIVATE STANDBY DATABASE.

ORA-16426: Recovery requested an incorrect log from which to apply redo data.

Cause: Media recovery selected an incorrect log.

Action: Verify that the appropriate log has been properly registered and restart media recovery.

ORA-16427: Redo gap is too large to resolve.

Cause: The redo transport lag at this database was too large for automatic redo gap detection to take place.

Action: Re-create this standby database from a current backup copy of the primary database.

ORA-16431: cannot expand control file

Cause: Additional redo log threads were added on the primary database after the standby control file was created.

Action: Shut down the standby database and replace the control file with a new standby control file from the primary database or change the COMPATIBLE parameter to 10.2.0 or above and restart the standby database.

ORA-16432: inconsistent set of logs applied at a standby database

Cause: Redo apply stopped because it detected an inconsistency in the progression of the SCNs. If this database is a bystander standby database, this is most likely due to a failover operation in which incompatible logs were applied from the old and new primary databases.

Action: Determine the STANDBY_BECAME_PRIMARY_SCN by selecting it from V \$DATABASE on the new primary database. Then, flashback the target database to this SCN and use RMAN to delete all archive logs at or beyond this SCN. Finally, fetch all terminal end of redo (EOR) logs corresponding to the failover operation from the new primary and register all these logs at the target database. Restart redo apply.

ORA-16433: The database or pluggable database must be opened in read/write mode.

Cause: An attempt was made to open the database or pluggable database in read-only mode after an operation that requires the database or pluggable database be opened in read/write mode.

Action: Open the database in read/write mode. The database can then be opened in read-only mode.

ORA-16434: archive log for branch *string* thread *string* sequence *string* cannot be queued

Cause: An archive log needed by the standby database to resolve a redo gap was not found on the source database. This is a fatal situation during a switchover or far sync instance assisted failover because the source database waits for the target standby to be clear of all archive log gaps before allowing the operation to proceed. If a redo gap cannot be resolved during these operations, the operation cannot succeed so it must be failed.

Action: If the specified log is listed in V\$ARCHIVED_LOG for the DEST_ID of the local destination on the source database but no longer exists at that location on disk, the archived log can be copied back to that location to allow gap processing to automatically resolve the gap. If the specified log has been purged from V\$ARCHIVED_LOG, the archived log can be copied to disk on either the source or destination database and registered using the ALTER DATABASE REGISTER OR REPLACE LOGFILE command.

ORA-16436: ALTER DATABASE ... RECOVER FINISH could not start

Cause: ALTER DATABASE ... RECOVER FINISH failed to start because the standby database was missing redo changes below the checkpoint of data files.

Action: Issue ALTER DATABASE ACTIVATE STANDBY DATABASE command instead.

ORA-16437: No active coordinator RFS for current operation

Cause: The coordinator Remote File Server (RFS) for this parallel archival either abnormally terminated or ran down before this subordinate RFS could begin its leg of the operation.

Action: No explicit user action is required.

ORA-16438: Switchover to primary cannot be executed at this time

Cause: ALTER DATABASE COMMIT TO SWITCHOVER TO PRIMARY could not be executed because an incompatible operation such as RMAN restore or flashback was in progress. See the database alert log for details.

Action: Wait for the incompatible operation to complete. The files that have been flashed back or restored need recovery before you can reissue ALTER DATABASE COMMIT TO SWITCHOVER TO PRIMARY statement. Start redo apply and verify that the SWITCHOVER_STATUS column of the V\$DATABASE view reports TO_PRIMARY or SESSIONS_ACTIVE before retrying ALTER DATABASE COMMIT TO SWITCHOVER TO PRIMARY.

ORA-16439: Standby not ready to receive redo at this time

Cause: A logical standby or down stream capture database was not in a state where it could accept a request to receive redo from another database. This was likely due to the database not being open.

Action: See the database alert log at the receiving side of the transfer for details of why the database was not ready. If the database was mounted but not open, open it to clear the problem. The initialization parameter LOG_ARCHIVE_DEST_STATE_n at the sending site may need to be set to ENABLE.

ORA-16440: Control file is corrupt.

Cause: ALTER SYSTEM FLUSH REDO TO STANDBY failed because the control file was corrupt.

Action: Restore the current control file at the primary database and then reissue ALTER SYSTEM FLUSH REDO TO STANDBY from a mounted primary instance.

ORA-16441: Current log *string* for thread *string* sequence *string* is invalid.

Cause: ALTER SYSTEM FLUSH REDO TO STANDBY failed because the current redo log file was corrupt.

Action: Restore the current log at the primary database, and then reissue ALTER SYSTEM FLUSH REDO TO STANDBY from a mounted primary instance.

ORA-16442: ALTER SYSTEM FLUSH REDO TO STANDBY succeeded, but some redo has not been applied.

Cause: The target standby database did not apply all received redo.

Action: Allow the target standby database to apply all redo and then reissue the ALTER SYSTEM FLUSH REDO TO STANDBY statement.

ORA-16443: could not switch out of log *string* thread *string*

Cause: ALTER SYSTEM FLUSH REDO TO STANDBY could not switch out of the current log.

Action: This can happen if there are one or more errors during archival of the current log at the primary database. Reissue ALTER SYSTEM FLUSH REDO TO STANDBY after resolving the archiving errors.

ORA-16444: ALTER SYSTEM FLUSH REDO TO STANDBY failed due to a corrupted control file or online log file.

Cause: A flush redo operation discovered SCNs greater than a previously failed flush redo operation.

Action: This can happen if there are one or more errors that have corrupted the control file or online redo logs. In these cases, flush redo operation is not possible.

ORA-16445: Database has to be mounted and cannot be open

Cause: ALTER SYSTEM FLUSH REDO TO STANDBY required that the database be mounted, but not opened.

Action: Mount the database and then reissue the operation.

ORA-16446: Target database was not a standby database

Cause: ALTER SYSTEM FLUSH REDO TO STANDBY failed because the target database is not a standby database.

Action: Reissue the ALTER SYSTEM FLUSH REDO TO STANDBY statement and specify a standby database as the target database.

ORA-16447: Redo apply was not active at the target standby database

Cause: ALTER SYSTEM FLUSH REDO TO STANDBY failed because redo apply is not active at the target database.

Action: Start redo apply at the standby database and reissue the ALTER SYSTEM FLUSH REDO TO STANDBY statement, or reissue the ALTER SYSTEM FLUSH REDO TO STANDBY statement with the NO CONFIRM APPLY clause.

ORA-16448: Primary database corruption has been detected by standby database.

Cause: The primary database became corrupted.

Action: Identify the extent of the corruption on both the primary and standby database and take remedial action.

ORA-16449: incomplete redo thread enable operation

Cause: The switchover operation could not continue because it failed to disable a thread that was left in an incomplete thread enable state.

Action: Check alert log for more details.

ORA-16451: A remote archival request has timed out.

Cause: When opening or closing a database instance, the database may wait for up to 1 minute for pending remote archival requests to be performed before proceeding with the operation. This error was reported because that time limit was exceeded.

Action: This is an informational message so no action is required.

ORA-16455: switchover to standby failed

Cause: An attempt to switchover to a physical standby database failed.

Action: Check alert log for more details. Issue the SHUTDOWN ABORT command on the database before issuing another ALTER DATABASE COMMIT TO SWITCHOVER TO STANDBY command.

ORA-16456: switchover to standby in progress or completed

Cause: The requested operation was not allowed because a switchover to standby operation was either in progress or had completed.

Action: Issue the SHUTDOWN ABORT command on the database after switchover operation completes.

ORA-16459: recovery already beyond standby failover

Cause: Redo Apply stopped because it detected that it had proceeded beyond a standby failover operation.

Action: Determine the STANDBY_BECAME_PRIMARY_SCN by selecting it from V \$DATABASE on the new primary database. Then, flashback the target database to this SCN and use RMAN to delete all archive logs at or beyond this SCN. Finally, fetch all terminal end-of-redo (EOR) logs corresponding to the failover operation from the new primary database and register all these logs at the target database. Restart Redo Apply.

ORA-16461: database not flashed back or recovered to a consistent point

Cause: ALTER DATABASE CONVERT TO STANDBY command failed because either the database was not properly flashed back to STANDBY_BECAME_PRIMARY_SCN, or at least one of the online data files was not current.

Action: Flashback database to STANDBY_BECAME_PRIMARY_SCN and retry the ALTER DATABASE CONVERT TO STANDBY command.

ORA-16463: invalid target database name

Cause: ALTER DATABASE FAILOVER TO <target_db_name> or ALTER DATABASE SWITCHOVER TO <target_db_name> FORCE command failed because

the `target_db_name` was invalid. The `target_db_name` must be the same as the name of the database on which the SQL command is issued.

Action: Change the target database name and reissue the command.

ORA-16464: operation not allowed

Cause: An attempt was made to issue the ALTER DATABASE FAILOVER TO <target_db_name> or the ALTER DATABASE SWITCHOVER TO <target_db_name> FORCE command on a database other than a physical standby database.

Action: Issue the command on a physical standby database.

ORA-16465: operation not allowed

Cause: An attempt was made to issue the ALTER DATABASE SWITCHOVER TO <target_db_name> [VERIFY] command on a database other than an open primary database.

Action: Issue the command on an open primary database.

ORA-16466: invalid switchover target

Cause: The switchover target was not a valid, enabled, or active standby database.

Action: Fix the problem in the switchover target and reissue the command.

ORA-16467: switchover target is not synchronized

Cause: The switchover target was not synchronized with the primary database.

Action: Wait until the switchover target is synchronized with the primary database, then reissue the command.

ORA-16468: error connecting to switchover target *string*

Cause: The primary database could not connect to the switchover target.

Action: Check the alert log for detailed errors.

ORA-16469: switchover target version number is lower than 12

Cause: The switchover target version number was lower than 12.

Action: Upgrade the switchover target to a higher release.

ORA-16470: Redo Apply is not running on switchover target

Cause: The switchover target was not running Redo Apply.

Action: Start Redo Apply on the switchover target and reissue the command.

ORA-16471: cannot convert switchover target *string* to a primary database

Cause: Switchover failed because the switchover target could not convert to a primary database.

Action: Check the database role of the switchover target. If the switchover target database role is standby, do one of the following: - Fix the problem shown in the alert log. - Issue the remedial ALTER DATABASE SWITCHOVER TO <target_db_name> FORCE command to convert the switchover target to a primary database. - If the problem in the switchover target cannot be fixed, issue the remedial ALTER DATABASE SWITCHOVER TO <target_db_name> FORCE command on the old primary database to convert the old primary database back to a primary database. If the switchover target database role is primary, the switchover has completed. Open the switchover target and startup the old primary database to finish the switchover process.

ORA-16472: failover failed due to data loss

Cause: The database was in MaxAvailability or MaxProtection mode but terminal recovery finished with data loss.

Action: For a data loss failover, issue ALTER DATABASE ACTIVATE STANDBY DATABASE command.

ORA-16473: database is not in limbo

Cause: The ALTER DATABASE SWITCHOVER TO <target_db_name> FORCE command could not proceed because the database was not in limbo state.

Action: Make sure the SWITCHOVER_STATUS column in V\$DATABASE has the value TO PRIMARY or SESSIONS ACTIVE. If needed, start managed standby recovery and reissue the command after the SWITCHOVER_STATUS column value changes to one of the above values.

ORA-16474: target_db_name not found in the LOG_ARCHIVE_DEST_n parameter

Cause: ALTER DATABASE SWITCHOVER TO <target_db_name> or ALTER SYSTEM FLUSH REDO TO <target_db_name> command failed because the target_db_name was not defined in the LOG_ARCHIVE_DEST_n parameter.

Action: Make sure the target_db_name is defined in the LOG_ARCHIVE_DEST_n parameter.

ORA-16475: succeeded with warnings, check alert log for more details

Cause: The ALTER DATABASE SWITCHOVER TO <target_db_name> VERIFY command succeeded but with warnings.

Action: Check alert log for more details.

ORA-16476: far sync instance does not allow *string* operation

Cause: The specified operation was invalid on a far sync instance.

Action: Do not attempt the specified operation on a far sync instance.

ORA-16477: destination is being serviced by another viable source

Cause: An attempt was made by a far sync instance to perform gap analysis with a remote destination that already had connectivity with a different viable source of live redo.

Action: No action is required. This exception code is informational and is used by the far sync instance to remain idle with respect to this destination until it establishes connectivity with the primary database.

ORA-16478: cannot locate far sync instance connect string

Cause: The connect string for the far sync instance that is flagged as the source of live redo for this database could not be located.

Action: Define a LOG_ARCHIVE_DEST_n parameter for the far sync instance using the SERVICE attribute to define the connect string for the far sync instance destination. This destination should be set to DEFER using the corresponding LOG_ARCHIVE_DEST_STATE_n parameter. Once the connect string is defined, retry the failover operation. Using the FORCE option on the failover command allows the operation to proceed and bypass the far sync instance but bypassing the far sync instance increases the potential for data loss.

ORA-16479: cannot connect to the far sync instance

Cause: An attempt was made to connect to the far sync instance to help facilitate the failover operation but the connection attempt failed.

Action: Make sure the far sync instance is mounted. Check the alert log and trace files on both the current database and the far sync instance for further details. Retry the operation if a problem is identified and corrected. Using the FORCE option on the failover command allows the operation to proceed and bypass the far sync instance but bypassing the far sync instance increases the potential for data loss.

ORA-16480: operational error during far sync instance assisted failover

Cause: After successfully connecting to the far sync instance, an error was encountered when polling the far sync instance for progress.

Action: Check the alert log and traces of both the current database and the far sync instance for further details. Retry the operation if a problem is identified and corrected. Using the FORCE option on the failover command allows the operation to proceed and bypass the far sync instance but bypassing the far sync instance increases the potential for data loss.

ORA-16481: destination error during far sync instance assisted failover

Cause: After successfully connecting to the far sync instance, an error was encountered when managing the failover target destination on the far sync instance.

Action: Check the alert log and traces of both the current database and the far sync instance for further details. Retry the operation if a problem is identified and corrected. Using the FORCE option on the failover command allows the operation to proceed and bypass the far sync instance but bypassing the far sync instance increases the potential for data loss.

ORA-16482: a role transition is in progress

Cause: The operation failed because a role transition was in progress.

Action: None

ORA-16483: unable to set a LOG_ARCHIVE_DEST_n parameter to the switchover target

Cause: An attempt was made to set a LOG_ARCHIVE_DEST_n parameter to the switchover target failed.

Action: Manually set a LOG_ARCHIVE_DEST_n parameter to the switchover target.

ORA-16484: compatibility setting is too low

Cause: The compatibility setting in the redo log transported to this standby database exceeded the current compatibility setting.

Action: Check the compatibility setting on the primary and standby database, and increase the compatibility setting in the initialization parameter file on the standby database accordingly.

ORA-16485: redo log is already received at destination

Cause: A copy of this redo log was already received at the destination.

Action: None

ORA-16486: redo log is rejected by the destination

Cause: The destination was not allowed to receive this redo log.

Action: Ensure the source database is registered at the destination, the destination is up and running, and storage is available.

ORA-16487: the destination database is not writable

Cause: The destination database was in read-only mode.

Action: Ensure the destination database is open for write.

ORA-16488: cannot create a bookkeeping entry in database

Cause: The destination database failed to create an entry in the table used to track the redo log.

Action: Examine the trace file of the Remote File Server (RFS) process. Check and make sure space is available in your database.

ORA-16489: cannot register the redo log at the destination database

Cause: Registering the redo log to the destination database failed.

Action: Examine the trace file of the Remote File Server (RFS) process. Check and make sure space is available in your database.

ORA-16491: operation not allowed due to insufficient online redo log files *string*

Cause: A minimum of two online redo log files per active thread were not supplied.

Action: Add the required redo log files and reissue the command.

ORA-16492: switchover target local destination has error

Cause: The switchover target local destination either exceeded quota size or had an error.

Action: Fix the problem in the switchover target and reissue the command.

ORA-16493: using SYSDBA, SYSOPER, SYSDG, or SYSBKUP user for redo shipping to Recovery Appliance is not supported

Cause: An attempt was made to use a SYSDBA, SYSOPER, SYSDG, or SYSBKUP user to ship redo logs to a Recovery Appliance.

Action: Use a user without the SYSDBA, SYSOPER, SYSDG, or SYSBKUP privilege to ship redo logs to a Recovery Appliance.

ORA-16494: process started from pluggable database (PDB)

Cause: The Remote File Server (RFS) process or Remote Message Interface (RMI) process or Fetch Archive Log (FAL) process was started from the PDB.

Action: Check the service name that the RFS or RMI or FAL client connected to. Ensure the service is not from PDB.

ORA-16495: Using fast recovery area to receive redo log files on Recovery Appliance is not supported.

Cause: An attempt was made to use fast recovery area to receive redo log file on a Recovery Appliance.

Action: Do not configure fast recovery area for receiving redo log files on a Recovery Appliance.

ORA-16501: The Oracle Data Guard broker operation failed.

Cause: The Oracle Data Guard broker operation failed.

Action: See accompanying messages for details.

ORA-16502: The Oracle Data Guard broker operation succeeded with warnings.

Cause: The Oracle Data Guard broker operation succeeded with warnings.

Action: See accompanying messages for details.

ORA-16503: cannot exceed the maximum number of databases in this configuration

Cause: The Oracle Data Guard broker configuration already contained the maximum number of databases that could be configured and managed by the broker.

Action: Select and remove an existing database from the broker configuration, then reissue the command to add another database to the configuration. Note that when COMPATIBLE is set lower than 11.2.0.0.0, the broker can configure and manage up to 10 databases. When COMPATIBLE is set to 11.2.0.0.0 or higher, this limit is increased to 31.

ORA-16504: The Oracle Data Guard configuration already exists.

Cause: A request to create an Oracle Data Guard configuration was made while connected to a database that is part of an existing configuration.

Action: To create a new configuration, the existing configuration must be deleted.

ORA-16506: out of memory

Cause: Process exceeded private or shared memory limits.

Action: Check for memory leaks, increase system parameters and restart.

ORA-16509: request timed out

Cause: The Oracle Data Guard broker timed out the request.

Action: Check the Oracle Data Guard broker log file for more information. Ensure that the network connections between the databases are functioning properly and retry the request.

ORA-16513: maximum requests exceeded

Cause: The maximum number of requests that the broker can service on the database instance was exceeded.

Action: Wait for the broker to complete processing the requests before issuing more requests.

ORA-16516: current state is invalid for the attempted operation

Cause: The broker may have returned this error for either switchover operations or for database state change operations. If this error was returned for a switchover operation, the broker determined that either: - The databases changing roles are shut down. - The primary database is not shipping redo data. - The standby database that will become the primary database is not applying redo data. If this error was returned for database state change operations, the database state specified was invalid.

Action: If this error is returned when attempting a switchover operation, make sure that: - The databases changing roles are started. - The primary database is shipping redo data. - The standby database is applying redo data. If this error is returned when attempting a database state change operation, make sure a valid database state is specified.

ORA-16521: operation requires connection to the multitenant container database

Cause: The command required the client to connect to the multitenant container database.

Action: Connect to the multitenant container database and reissue the command.

ORA-16522: configuration is part of Global Data Services pool

Cause: The attempted command was not allowed because the configuration was part of a Global Data Services pool.

Action: Remove the configuration from the Global Data Services pool using GDSCTL. Then, retry the broker command. If the command was attempting to repair a database, disable or remove the individual database from the configuration and fix the issue. After the issue is resolved, reenab the database, or add the database back to the configuration if it had been removed.

ORA-16523: operation requires the client to connect to instance "*string*"

Cause: The switchover or failover operation required the client to connect to the apply instance of the target database.

Action: Connect to the indicated instance and reissue the SWITCHOVER or FAILOVER command.

ORA-16524: unsupported command, option, or argument

Cause: A command, option, or fast-start failover condition argument was specified that is not supported in this release.

Action: If trying to enable or disable a fast-start failover condition, try a different Oracle error number. Otherwise, contact Oracle Support Services.

ORA-16525: The Oracle Data Guard broker is not yet available.

Cause: The Oracle Data Guard broker process was either not yet started, was initializing, or failed to start.

Action: If the broker has not been started, set the DG_BROKER_START initialization parameter to true and allow the broker to finish initializing before making the request. If the broker failed to start, check the Oracle Data Guard log for possible errors. Otherwise, retry the operation.

ORA-16526: unable to allocate memory to process request

Cause: The Oracle Data Guard broker was unable to allocate memory for a request.

Action: Increase the size of the System Global Area (SGA).

ORA-16527: unable to allocate broker System Global Area (SGA) memory

Cause: The Oracle Data Guard broker was unable to allocate memory within the System Global Area (SGA).

Action: Increase the size of the System Global Area (SGA) memory.

ORA-16528: unable to allocate Program Global Area (PGA) memory

Cause: There was insufficient space in Program Global Area (PGA) to allocate memory.

Action: Increase process virtual memory.

ORA-16530: invalid buffer or length

Cause: A NULL buffer or a length of zero was specified.

Action: Correct the command parameters and retry the command.

ORA-16532: Oracle Data Guard broker configuration does not exist

Cause: A broker operation was requested that required a broker configuration to already be created.

Action: Create a Data Guard broker configuration prior to performing other broker operations. If only one instance of a RAC database is reporting this error, ensure that the DG_BROKER_CONFIG_FILE[1 | 2] initialization parameters are set to file locations that are shared by all instances of the RAC database.

ORA-16534: switchover, failover or convert operation in progress

Cause: The Oracle Data Guard broker returned this status because a switchover, failover or convert operation was in progress. The broker could not accept new commands until the operation finished.

Action: Wait until the operation is complete and reissue the command.

ORA-16535: Oracle Restart or Oracle Clusterware prevented completion of broker operation

Cause: The broker could not complete the operation because Oracle Restart (for single instance databases) or Oracle Clusterware (for RAC databases) could not stop services or instances on this database.

Action: Check the Oracle Data Guard broker log file for more information and stop the appropriate services or instances using SRVCTL. Then retry the broker operation.

ORA-16538: no match on requested item

Cause: The Oracle Data Guard broker did not recognize the specified property or state name, or a fast-start failover condition was specified that is not enabled.

Action: Verify the command parameters and reissue the command.

ORA-16540: invalid argument

Cause: One of the arguments for the specified command was invalid.

Action: Verify the arguments and then reissue the command.

ORA-16541: member is not enabled

Cause: The member specified in the command was not enabled.

Action: Select an enabled member and reissue the command.

ORA-16544: modifying DG_BROKER_START requires SID='*' qualifier

Cause: The setting for the DG_BROKER_START parameter must be exactly the same on all RAC database instances. The SID='*' qualifier was required in the command.

Action: Reenter the command using the SID='*' qualifier.

ORA-16547: cannot disable or remove the primary database

Cause: An attempt was made to disable broker management of the primary database or remove the primary database from the broker configuration while the configuration was enabled.

Action: If you wish to disable broker management of the primary database when the configuration is enabled, you must instead disable broker management of the entire broker configuration. If you wish to remove the primary database from the broker configuration while the configuration is enabled, you must instead remove the entire broker configuration.

ORA-16548: database not enabled

Cause: An attempt was made to modify or query a disabled database. This error is also returned on an attempt to enable, modify, or query a database that the broker has disabled because of a switchover or failover operation. The broker disables its management of a database when it detects that the database needs to be re-created because of a failover or switchover operation.

Action: If broker management of the database is disabled, enable it and reissue the command.

ORA-16549: invalid string

Cause: An invalid or NULL string value was specified.

Action: Correct command parameters and retry.

ORA-16550: truncated result

Cause: A string property value was truncated due to insufficient buffer size.

Action: Specify a larger receive buffer.

ORA-16551: short string copied

Cause: A string property value that did not fill the receive buffer was placed in the receive buffer.

Action: This is an informational message only.

ORA-16552: error occurred while generating directives for client

Cause: The operation could not be completed because the broker required assistance from the client that it was unable to provide because of the accompanying error.

Action: See the accompanying error message for more information and follow the directions provided in the Action section of that message. Then retry the operation.

ORA-16555: database is not active

Cause: An operation was attempted on a database that was not active. not active.

Action: Verify that the database is active and retry the operation.

ORA-16556: observer version mismatch

Cause: This version of the observer was incompatible with the version of the specified Oracle database server to which the observer had been connected. This observer client cannot be used to observe the specified Oracle server.

Action: Use a version of the observer that is compatible with the Oracle database server to be observed.

ORA-16557: database is already in use

Cause: An attempt was made to create a duplicate database in the broker configuration, or to add a duplicate instance (sid) for an existing database in the broker configuration.

Action: Check the database to be added to ensure there are no duplicates.

ORA-16558: database specified for switchover is not a standby database

Cause: An attempt was made to switchover to a database that was not a standby database.

Action: Locate an enabled standby database and select that database as the target of the switchover.

ORA-16561: cannot remove an active instance

Cause: The instance to be removed was running.

Action: Shut down the instance and reissue the REMOVE command.

ORA-16568: cannot set property *string*

Cause: The specified property could not be modified because it was either a monitorable property or a property that did not exist.

Action: Retry the command with a valid configurable property.

ORA-16569: Oracle Data Guard configuration is not enabled

Cause: The requested operation required that broker management of the Data Guard configuration must be enabled.

Action: Enable the Oracle Data Guard configuration and reissue the command.

ORA-16570: database needs restart

Cause: The Oracle Data Guard broker operation required this database instance to be shut down and restarted.

Action: If DGMGRL or Enterprise Manager has not already done so, shut down the Oracle instance and then restart it.

ORA-16571: Oracle Data Guard configuration file creation failure

Cause: The Oracle Data Guard broker was unable to create the configuration file on permanent storage.

Action: Verify space, permissions and file name as indicated by the DG_BROKER_CONFIG_FILE[1 | 2] initialization parameters and retry the operation.

ORA-16572: Oracle Data Guard configuration file not found

Cause: The Oracle Data Guard broker configuration file was either unavailable or did not exist.

Action: Verify that the configuration file was successfully created. If the DG_BROKER_CONFIG_FILE[1 | 2] initialization parameters were changed, ensure the file name on disk and the parameter value match, there is space on the device, and the proper permissions are granted. For a RAC database, ensure that these initialization parameters are set to file locations that are shared by all instances of the RAC database.

ORA-16573: attempt to change or access configuration file for an enabled broker configuration

Cause: The operation was rejected because the Oracle Data Guard broker configuration file was in use. The attempted operation was unsafe while broker management of the configuration was enabled. For example: - An attempt was made to alter the DG_BROKER_CONFIG_FILE[1 | 2] initialization parameters while the broker was running. - Non-broker access (such as DBMS_FILE_TRANSFER) to the configuration files was attempted. See the alert log for additional information.

Action: Disable the broker configuration and shut down the Oracle Data Guard broker, then retry the operation. If the operation includes altering the DG_BROKER_CONFIG_FILE[1 | 2] initialization parameters, be sure that the new parameter values correctly specify the files at their expected location before reenabling broker management of the configuration.

ORA-16574: switchover disallowed when required databases are shut down

Cause: Switchover failed because either the primary database or the designated standby database were shut down.

Action: Ensure that the primary and standby databases are running and that primary database is shipping redo data to the designated standby database. Also ensure that that the designated standby database is applying the redo data received from the primary database.

ORA-16575: request terminated because failover is in progress

Cause: This error was returned when the broker terminated a request because it was processing a failover command.

Action: Wait for failover to complete and then retry the request.

ORA-16576: failed to update Data Guard configuration file

Cause: A failure was encountered while the broker was updating the Oracle Data Guard broker configuration file on permanent storage.

Action: Verify space, permissions and file name as indicated by the DG_BROKER_CONFIG_FILE[1 | 2] initialization parameters.

ORA-16577: corruption detected in Data Guard configuration file

Cause: The Oracle Data Guard broker detected errors while loading the configuration file.

Action: Verify space, permissions and file name as indicated by the DG_BROKER_CONFIG_FILE[1 | 2] initialization parameters. Contact Oracle Support Services.

ORA-16578: failed to read Data Guard configuration file

Cause: A failure was encountered while the broker was reading the configuration file on permanent storage.

Action: Verify space, permissions and file name as indicated by the DG_BROKER_CONFIG_FILE[1 | 2] initialization parameters.

ORA-16582: cannot change instance-specific property

Cause: An attempt was made to change an instance-specific property for a database that had more than one instance.

Action: Retry the command and identify a specific instance whose property value is to be changed.

ORA-16584: operation cannot be performed on a standby database

Cause: The database specified for the operation was a standby database, or the operation was attempted on a standby database.

Action: Check the database type and retry the operation. If the command must be executed on a primary database, connect to the primary database and retry the operation.

ORA-16585: operation cannot be performed on a primary database

Cause: The database specified for the operation was a primary database, or the operation was attempted on a primary database.

Action: Check the database type and retry the operation. If the command must be executed on a standby database, connect to a standby database and retry the operation.

ORA-16586: cannot change database property with EDIT INSTANCE command

Cause: An attempt was made to change a database property using an EDIT INSTANCE command instead of an EDIT DATABASE command.

Action: Use the EDIT DATABASE command to change database properties.

ORA-16587: ambiguous object specified to Data Guard broker

Cause: An object was specified that the broker could not uniquely distinguish from other objects in the configuration.

Action: Try to further distinguish the object specified for the operation and reissue the command.

ORA-16589: Oracle Data Guard broker detected network transfer error

Cause: The Oracle Data Guard broker detected an error while transferring data from one database to another. This may happen when: - The broker detects an inconsistency in the block count of configuration file when the file is transmitted between databases. - The broker encountered an error when writing the configuration file.

Action: Contact Oracle Support Services.

ORA-16594: DMON background process is not running

Cause: The Oracle Data Guard broker background process, DMON, was not running.

Action: Check the Oracle Data Guard broker log file and DMON process trace file to determine why the DMON process is not running.

ORA-16595: process *string* failed to terminate

Cause: The specified process did not terminate at the request of the Data Guard broker.

Action: Contact Oracle Support Services.

ORA-16596: database not part of the Oracle Data Guard broker configuration

Cause: The specified database was not in the Oracle Data Guard broker configuration.

Action: Retry the command with a database that is in the broker configuration.

ORA-16597: Oracle Data Guard broker detects two or more primary databases

Cause: The Oracle Data Guard broker detected two or more primary databases in the broker configuration and could not continue.

Action: Contact Oracle Support Services.

ORA-16598: Oracle Data Guard broker detected a mismatch in configuration

Cause: The Oracle Data Guard broker detected a significant mismatch while performing configuration membership validation between two or more databases in the broker configuration. This can occur when the primary database has stale broker configuration files.

Action: Contact Oracle Support Services.

ORA-16599: Oracle Data Guard broker detected a stale configuration

Cause: The Oracle Data Guard broker detected a stale configuration during initialization for this database.

Action: The broker will automatically resolve this situation once the primary database completes its initialization.

ORA-16600: not connected to target standby database for failover

Cause: The failover command failed because the client was not connected to the target standby database.

Action: Explicitly connect to the standby database to be failed over to and retry the failover command.

ORA-16602: database must be disabled to perform this operation

Cause: An attempt was made to edit a database property while the database was enabled.

Action: Disable the database and retry the command.

ORA-16603: database is part of another Data Guard broker configuration

Cause: The database was part of another Data Guard broker configuration. This could occur if the original configuration was re-created while this database was disconnected from the network or the same database was added to two different Data Guard broker configurations.

Action: Make sure the database belongs to only one broker configuration. Shut down the broker by setting the DG_BROKER_START initialization parameter to false. Then, remove the Oracle Data Guard broker configuration files. Finally, restart the broker by setting the DG_BROKER_START initialization parameter to true.

ORA-16604: operation not allowed on a database that ships redo data

Cause: An attempt was made to delete, disable, or convert a database that ships redo data to another database.

Action: Ensure that the name of the database to be deleted, disabled, or converted is not specified in another database's RedoSource property.

ORA-16606: unable to find property "*string*"

Cause: The specified property did not exist.

Action: Specify a valid property name and reissue the command.

ORA-16607: one or more databases have failed

Cause: A failure was detected for one or more databases in the Data Guard broker configuration.

Action: Locate the database(s) with a failure status and correct it.

ORA-16608: one or more databases have warnings

Cause: A warning was detected for one or more databases in the Data Guard broker configuration.

Action: Locate the database(s) with a warning status and correct it.

ORA-16609: database is being disabled

Cause: A command was attempted on a database that was being disabled. For example, attempting to reinstate the old primary database, the database that was the primary database prior to the most recent failover, before it was ready to be reinstated.

Action: Wait for the Oracle Data Guard broker to disable the database and then retry the command.

ORA-16610: command "*string*" in progress

Cause: The specified broker command was already running and the command issued could not be completed.

Action: Wait for the specified command to finish and then retry the command.

ORA-16611: command aborted at user request

Cause: The command was aborted at the user's request.

Action: No action required.

ORA-16612: string value too long for attribute "*string*"

Cause: The string value for the named attribute was too long.

Action: Specify a shorter string value.

ORA-16613: initialization in progress for database

Cause: A request was made that required access to the Oracle Data Guard broker configuration before the Oracle Data Guard broker had completed initialization.

Action: Wait until the Oracle Data Guard broker has completed initialization, then reissue the command.

ORA-16614: Oracle Data Guard broker configuration is disabled

Cause: An attempt to enable a database failed because the Oracle Data Guard broker configuration was disabled.

Action: Enable the Oracle Data Guard broker configuration and issue the DGMGRL CLI SHOW CONFIGURATION command to see if there are any databases that are still disabled. If the database you tried to enable is still disabled, issue the DGMGRL CLI SHOW DATABASE command to check the status of the database. If the database status indicates that the database needs to be reinstated, then issue the DGMGRL CLI REINSTATE DATABASE command to reinstate and enable the database. If the database does not require reinstatement, then issue the DGMGRL CLI ENABLE DATABASE command to enable the database.

ORA-16617: unknown object identifier specified in request

Cause: Object identifier specified in the request was invalid or unknown.

Action: Verify that a valid object identifier is specified and reissue the command.

ORA-16619: condition for fast-start failover is already enabled

Cause: The condition specified for fast-start failover was already enabled.

Action: No action is required. Use the DGMGRL CLI SHOW FAST_START FAILOVER command to see the conditions that are enabled.

ORA-16620: one or more databases could not be reached for a delete operation

Cause: One or more standby databases could not be reached for either a DGMGRL CLI REMOVE DATABASE or a REMOVE CONFIGURATION command.

Action: This typically indicates a network problem where the standby database is unable to respond to the primary database. In the event of this situation, examine the primary database Data Guard broker log file to determine which standby databases could not be reached. For each standby database not reached, connect to that database and shut down the broker by setting the initialization parameter, DG_BROKER_START, to false. After the broker has been shut down for the standby database, locate the Data Guard broker configuration files from the standby database DG_BROKER_CONFIG_FILE[1 | 2] initialization parameter values and delete them. Then restart the broker by setting DG_BROKER_START to true.

ORA-16621: database name for ADD DATABASE must be unique

Cause: An attempt was made to add a database to the broker configuration that already included a database with the specified name. The database names must be unique.

Action: Verify that a unique name is specified for the new database to be added. Also, the database name must match the DB_UNIQUE_NAME initialization parameter of the database.

ORA-16622: two or more broker database objects resolve to the same database

Cause: Multiple database objects referred to the same database.

Action: Examine the details of all databases in the broker configuration and verify that there are not two or more databases referring to the same database. If two or

more database profiles in the broker configuration have the same value for the DGConnectIdentifier database property, either: - Remove and re-add the erroneously defined database(s) to resolve the ambiguity. - Ensure that the DGConnectIdentifier database property for each database allows the broker to properly connect to that database.

ORA-16623: database detected role change

Cause: A successful switchover or failover operation had been completed and was detected during database startup or broker health check. If this database was unavailable during a switchover or failover operation, it may not be a viable standby database for the new primary database and was disabled by the Oracle Data Guard broker.

Action: Connect to the new primary database and examine the broker configuration for databases that were disabled and that may require reinstatement or re-creation.

ORA-16624: broker protocol version mismatch detected

Cause: A network protocol version number mismatch was detected. This could happen if the databases in the broker configuration were not running the same version of Oracle. The broker would disable standby databases that were not running the same version of Oracle as the primary database if this situation was detected.

Action: Examine the version of Oracle installed on all databases in the broker configuration to ensure they are identical. Once all of the databases in the broker configuration are running the same version of Oracle, reenabling the standby databases that were disabled.

ORA-16625: cannot reach database "*string*"

Cause: The command could not be executed because the database noted in the error text was not reachable from the database where the command was issued.

Action: See accompanying messages for more information. Check the network connections to the specified database. Alternatively, connect to a different database in the Oracle Data Guard broker configuration and retry the command.

ORA-16626: failed to enable specified database

Cause: This status was returned when attempting to enable a standby database that: - Could not locate itself in the broker configuration file. - Failed to distinguish itself from two or more databases in the configuration file. - Determined it missed a role change within the configuration.

Action: To correct the problem, try one of these actions: - Confirm that the host and SID names for the database exactly match the values in the HOST_NAME and INSTANCE_NAME columns of V\$INSTANCE. - Confirm that there are not two or more databases with the same connect identifier. That is, multiple databases in the broker configuration should not reach the same database. - If a failover had been performed and the old primary database has been re-created (or a standby database has been re-created), make sure the Oracle Data Guard broker configuration files have been removed for that database. Do NOT remove the configuration files that are in use by the new primary database.

ORA-16627: operation disallowed since no standby databases would remain to support protection mode

Cause: This status was returned because of one of the following: - The broker rejected an attempt to change the overall configuration protection mode since it could not find any enabled standby databases that supported the proposed protection mode. - The broker rejected an attempt to enable the configuration if it determined that there were

no enabled standby databases that supported the overall protection mode. - The broker rejected an attempt to disable or remove a database that, if disabled or deleted, would result in no remaining standby databases that could support the overall configuration protection mode. - The broker rejected an attempt to switchover if doing so would violate the overall configuration protection mode. - Performing automatic health check if the broker determined that no standby databases supported the overall protection mode.

Action: - If changing the overall protection mode, confirm that at least one standby database satisfies the new protection mode. - For enable failures, confirm that at least one standby database has a LogXptMode configurable property setting that supports the current overall protection mode. - For delete and disable failures, confirm that at least one other standby database has a LogXptMode configurable property setting that supports the overall protection mode. - For switchover failures that occur when the configuration is operating in maximum protection or maximum availability mode, confirm that at least one other standby database has its LogXptMode configurable property set to the value "SYNC". If the configuration contains a primary database and a single standby database and is operating in either maximum protection or maximum availability mode, ensure that the LogXptMode configurable property of the primary database is set to the value "SYNC". Since the old primary database will become the standby database after switchover completes, its LogXptMode configurable property setting must support the configuration protection mode. - For health check error, confirm that at least one standby database has a LogXptMode configurable property setting that supports the current overall protection mode.

ORA-16628: broker protection mode inconsistent with the database setting

Cause: The Oracle Data Guard broker protection mode saved in the broker configuration file was inconsistent with the actual database setting.

Action: Reset the protection mode through the Oracle Data Guard broker.

ORA-16629: database reports a different protection level from the protection mode

Cause: The current database protection level was different from the configured protection mode. This typically was caused by redo transport problems, or the primary database was not open.

Action: Check the database alert log files and Data Guard broker log files for more details. Also, check the redo transport status. Ensure that one standby database supports the configured protection mode and that the network to that standby database is working properly. Ensure the primary database is open.

ORA-16630: database property has been deprecated

Cause: The property that was specified in the command was deprecated.

Action: Check the broker documentation to identify a replacement property or SQL command for the deprecated property.

ORA-16631: operation requires shutdown of database or instance "*string*"

Cause: The Oracle Data Guard broker operation required a shutdown of the database or instance.

Action: If database or instance has not been shutdown by the DGMGRL CLI or Enterprise Manager, shutdown the database or instance manually.

ORA-16632: instance being added to database profile

Cause: The Oracle Data Guard broker determined that an instance successfully found its database profile within the broker configuration file, but lacked an instance-

specific profile. The broker automatically created an instance-specific profile and associated the instance with its database profile.

Action: No user action is required. The broker will automatically associate the instance with its database profile and incorporate the instance into broker activity.

ORA-16633: the only instance of a member cannot be removed

Cause: The instance to be removed was the only instance of the corresponding member that was known to the broker.

Action: Remove the corresponding member from the broker configuration instead of the individual instance of the member.

ORA-16635: network connection failed during transmission

Cause: The Oracle Data Guard broker detected a connection failure to a remote database in the broker configuration. This failure happened in the middle of a transmission session. A transmission session usually requires more than one send operation for sending a large amount of data (for example, the broker configuration file) to the remote database.

Action: In most cases, no user action is required. The Oracle Data Guard broker always tries to resend the data. This error will be reported if the problem persists. This error indicates there are some problems with the network connection between broker managed databases. Further network troubleshooting should be done to identify and correct the actual problem.

ORA-16636: fast-start failover target standby in error state, cannot stop observer

Cause: A STOP OBSERVER operation could not be completed when fast-start failover was enabled because the target standby database could not participate in the STOP OBSERVER operation.

Action: Additional information about this failure is recorded in the Data Guard broker log file for the primary database. This information helps to identify the reason why the target standby database was unable to participate in the STOP OBSERVER operation. If the problem can be corrected by the information in the broker log file, retry the operation. Alternatively, fast-start failover may be forcibly disabled by connecting to the primary database and issuing the DISABLE FAST_START FAILOVER FORCE command from the DGMGRL CLI. Once fast-start failover has been forcibly disabled, the observer can be stopped regardless of the current state of the target standby database.

ORA-16637: maximum number of Oracle error numbers for fast-start failover already reached

Cause: The broker could not enable any more Oracle error numbers for initiating a fast-start failover.

Action: Use the DGMGRL CLI SHOW FAST_START FAILOVER command to help identify an Oracle error number that can be disabled before attempting to enable an additional error number for initiating a fast-start failover.

ORA-16638: could not obtain instance status

Cause: The broker could not determine whether the specified instance was running.

Action: See the next error message in the error stack for more detailed information. If the situation described in the next error in the stack can be corrected, do so; otherwise, contact Oracle Support Services.

ORA-16639: specified instance inactive or currently unavailable

Cause: An attempt was made to perform an operation on an instance that was not running or was unavailable.

Action: Ensure that the instance specified in the operation is running and then retry the operation.

ORA-16642: DB_UNIQUE_NAME mismatch

Cause: The expected DB_UNIQUE_NAME value did not match the actual DB_UNIQUE_NAME value for the database that the broker contacted using the connect identifier that was associated with that database.

Action: Verify that the connect identifier correctly connects to the intended database. Verify that the name of the database the broker expects to find by that connect identifier matches the actual DB_UNIQUE_NAME for that database.

ORA-16643: unable to determine location of broker configuration files

Cause: The Oracle Data Guard broker was unable to determine the location of its configuration files from the DG_BROKER_CONFIG_FILE[1 | 2] initialization parameters.

Action: Retry the operation and, if the error persists, contact Oracle Support Services.

ORA-16644: apply instance not available

Cause: The broker operation could not finish, because it requires a running apply instance for the standby database, and either there was no such instance designated for the standby database or the designated apply instance was not currently available.

Action: Start the designated apply instance or wait until the broker specifies an instance to be the apply instance and reissue the command.

ORA-16645: startup of an instance interrupted current operation

Cause: The startup of an instance that is not part of the broker configuration prevented the operation from completing.

Action: Reissue the operation after the new instance has joined the Data Guard configuration.

ORA-16646: fast-start failover is disabled

Cause: The operation was not allowed because fast-start failover was disabled.

Action: Enable fast-start failover and retry the operation.

ORA-16647: could not start more than one observer

Cause: The observer could not start because there was another observer already observing the Oracle Data Guard configuration for which fast-start failover may have been enabled.

Action: Stop the running observer. Retry the operation.

ORA-16648: a new observer registered with identifier *string*

Cause: The observer was registered with the Oracle Data Guard broker and will begin observing the Oracle Data Guard configuration for conditions that warrant doing a fast-start failover.

Action: None

ORA-16649: possible failover to another database prevents this database from being opened

Cause: An attempt to open the primary database was made either after a failover occurred, or when it was likely to have occurred as the result of the primary being isolated from the fast-start failover target standby database and from the fast-start failover observer.

Action: Check if a failover did occur. If fast-start failover is enabled, and a failover did not occur, ensure that connectivity exists between the primary database and either the observer or the target standby database. Then, try opening the database again.

ORA-16650: unrecognized object specified

Cause: An unrecognized database or far sync instance was specified in the command.

Action: Try the command again using a valid object name. Use the SHOW CONFIGURATION command to identify the members in the configuration.

ORA-16651: requirements not met for enabling fast-start failover

Cause: The attempt to enable fast-start failover could not be completed because one or more requirements were not met: - The Oracle Data Guard configuration must be in either MaxAvailability or MaxPerformance protection mode. - The LogXptMode property for both the primary database and the fast-start failover target standby database must be set to either SYNC or FASTSYNC if the configuration protection mode is set to MaxAvailability mode. - The LogXptMode property for both the primary database and the fast-start failover target standby database must be set to ASYNC if the configuration protection mode is set to MaxPerformance mode. - The primary database and the fast-start failover target standby database must both have flashback enabled. - No valid target standby database was specified in the primary database FastStartFailoverTarget property prior to the attempt to enable fast-start failover, and more than one standby database exists in the Oracle Data Guard configuration. - fast-start failover target standby database did not receive redo data directly from the primary database or from a far sync instance.

Action: Retry the command after correcting the issue: - Set the Oracle Data Guard configuration to either MaxAvailability or MaxPerformance protection mode. - Ensure that the LogXptMode property for both the primary database and the fast-start failover target standby database are set to either SYNC or FASTSYNC if the configuration protection mode is set to MaxAvailability. - Ensure that the LogXptMode property for both the primary database and the fast-start failover target standby database are set to ASYNC if the configuration protection mode is set to MaxPerformance. - Ensure that both the primary database and the fast-start failover target standby database have flashback enabled. - Set the primary database FastStartFailoverTarget property to the DB_UNIQUE_NAME value of the desired target standby database and set the desired target standby database FastStartFailoverTarget property to the DB_UNIQUE_NAME value of the primary database. - Ensure the RedoSource properties of both the primary and the target standby database are set to either the empty value or the name of a far sync instance.

ORA-16652: fast-start failover target standby database is disabled

Cause: The command to enable or disable fast-start failover could not be completed because Data Guard broker management of the fast-start failover target standby database is currently disabled.

Action: Enable broker management of the target standby database and reissue the command. If an attempt was made to disable fast-start failover when this error was reported, disable fast-start failover forcibly using the DGMGRL DISABLE

FAST_START FAILOVER FORCE command. Consult the documentation for more information.

ORA-16653: failed to reinstate database

Cause: The Oracle Data Guard broker failed to reinstate the specified database because the reinstatement could not be completed or the database was already enabled.

Action: Additional information about this failure is recorded in the primary database or the specified database Data Guard broker log files. This information is helpful in determining how to proceed.

ORA-16654: fast-start failover is enabled

Cause: The attempted command was not allowed while fast-start failover was enabled: - The FastStartFailoverTarget property may not be modified. - The LogXptMode property for either the primary database or the fast-start failover target standby database may not be modified. - The configuration's protection mode may not be modified. - Neither the broker configuration nor the fast-start failover target standby database may be disabled using the DGMGRL CLI DISABLE command. - Neither the broker configuration nor the fast-start failover target standby database may be removed using the DGMGRL CLI REMOVE command. - The FAILOVER IMMEDIATE command is not allowed. - The DG_BROKER_START initialization parameter may not be set to FALSE.

Action: Disable fast-start failover, using the FORCE option if required. Then retry the attempted command.

ORA-16655: specified target standby database invalid

Cause: The attempted command was not allowed because fast-start failover was enabled for this Data Guard configuration and the target standby database specified in the command differs from the standby database that was indicated by the FastStartFailoverTarget property associated with the current primary database.

Action: Retry the attempted command by specifying the standby database that is indicated by the FastStartFailoverTarget property that is associated with the current primary database. Alternatively, fast-start failover may be disabled. Then retry the command using the originally specified target standby database.

ORA-16656: Oracle Data Guard broker detected role change

Cause: The Oracle Data Guard broker detected a role change during database startup or health check.

Action: Additional information about this failure is recorded in the Oracle Data Guard broker log files, one for the primary database and one for each standby database in the Oracle Data Guard configuration. This information is helpful in determining how best to proceed from this failure.

ORA-16657: reinstatement of database in progress

Cause: Reinstatement of this database was in progress.

Action: None

ORA-16658: unobserved fast-start failover configuration

Cause: The fast-start failover configuration was currently unobserved so failover was disallowed.

Action: Make sure the observer is running and has connectivity to both the primary and the target standby databases. Otherwise, disable fast-start failover to perform a failover in the absence of the observer process.

ORA-16659: failover operation in progress

Cause: A primary database that restarted contacted a standby database that is being failed over to.

Action: Shut down the primary database and wait for failover to complete on the standby database. Once failover is complete, restart the old primary database. If the failover occurred due to fast-start failover, restarting the primary database after failover is complete allows it to be automatically reinstated as a standby database to the new primary database.

ORA-16660: fast-start failover operation attempted in absence of a broker configuration

Cause: An attempt was made to enable or disable fast-start failover when connected to a standby database for which broker configuration details are currently unavailable. For instance, the standby database may currently require re-creation (or flashback reinstatement) before it may respond to broker client commands.

Action: 1) An attempt to enable or disable (non-FORCE) fast-start failover at this standby database will be rejected until such time that the broker configuration details have been made available to that standby database from the primary database. This normally occurs when the standby database is successfully re-created or flashed back, and then reenabled at the primary database. 2) Use the FORCE option to override fast-start failover that has been enabled at the standby database even when the broker configuration details are currently unavailable to the standby database. In this case, this status message is only a warning. Note that fast-start failover is not formally disabled in the broker configuration. The effect of this command issued under these circumstances may or may not be permanent, depending upon when the primary and standby databases regain full communication between each other and if the state of fast-start failover has been altered at the primary database in the meantime.

ORA-16661: the standby database needs to be reinstated

Cause: A role change has caused this database to require reinstatement.

Action: Use the DGMGRL REINSTATE DATABASE command or Enterprise Manager to reinstate the database. Reinstatement the database as soon as possible, because the database will have to be re-created if another role change occurs while it is in this state.

ORA-16662: network timeout when contacting a database

Cause: In response to the issued command, the Oracle Data Guard broker attempted to contact a database in the Oracle Data Guard configuration. That attempt failed because there was no response from that database after the period of time specified by the CommunicationTimeout configuration property.

Action: Check the Oracle Data Guard broker log file for the details of the failure. Fix the problem and try the command again.

ORA-16664: unable to receive the result from a database

Cause: During execution of a command, a database in the Oracle Data Guard broker configuration failed to return a result.

Action: Check Oracle Data Guard broker log files for the details of the failure. Ensure network communication is working properly amongst the members of the configuration. Fix any possible network problems and reissue the command.

ORA-16665: timeout waiting for the result from a database

Cause: The Oracle Data Guard broker was forced to time out a network connection to a remote database because: - The network call to the remote database did not

complete in a timely manner. - The remote database was unable to execute the command due to an instance failure.

Action: Check Data Guard broker log files for the details of the failure. If the network call did not complete in a timely manner, increase the CommunicationTimeout configuration property value and reissue the command.

ORA-16666: unable to initiate fast-start failover on a bystander standby database

Cause: The request to initiate a fast-start failover using DBMS_DG.INITIATE_FS_FAILOVER was made on a bystander standby database. DBMS_DG.INITIATE_FS_FAILOVER can only be called on either the primary or fast-start failover target standby database.

Action: Call DBMS_DG.INITIATE_FS_FAILOVER on either the primary or fast-start failover target standby database.

ORA-16667: request Oracle Data Guard broker client to reissue command

Cause: The Oracle Data Guard broker operation required the same command be issued again from the client.

Action: If DGMGRL or Enterprise Manager has not already done so, reissue the same command to the Oracle Data Guard broker manually.

ORA-16668: operation cannot be performed on the fast-start failover target standby database

Cause: The database specified for the operation was the fast-start failover target standby database.

Action: Retry the operation on a different database. Alternatively, disable fast-start failover and retry the operation.

ORA-16671: instance-specific property must be set uniquely for instances of an Oracle RAC database

Cause: An attempt was made to set an instance-specific property to the same value for all instances of an Oracle RAC database for a property whose value must be unique for each instance.

Action: Use the EDIT INSTANCE command and specify the SID of each instance whose instance-specific property value is to be changed.

ORA-16672: some switchover databases need to be restarted manually

Cause: An error occurred during the restart of either the old and the new primary databases or both in a switchover operation.

Action: Manually restart both the old and new primary databases, including all their Oracle RAC instances if it is an Oracle RAC database.

ORA-16673: standby database running different Oracle version

Cause: The standby database was running a different version of Oracle than the primary database.

Action: Ensure the primary and standby databases are running the same versions of Oracle.

ORA-16674: standby database type has changed

Cause: An attempt to enable a database whose standby type changed from physical or snapshot to logical (or vice versa) was disallowed.

Action: If the intention is to retain the database conversion to the new type, the database must be removed and re-added to the configuration in order to obtain correct values for database properties specific to the new standby type.

ORA-16675: database instance restart required for property value modification to take effect

Cause: One or more properties that correspond to static initialization parameters were modified, but the database instances were not restarted. Or, a static initialization parameter that corresponds to a broker property was modified using an ALTER SYSTEM SQL*Plus statement.

Action: Restart the database instances for the modified property values to take effect. If the error persists after having restarted the instance, use the DGMGRL CLI or Enterprise Manager to modify the property the static initialization parameter corresponds to.

ORA-16676: RedoRoutes property for two or more databases contains a circular route

Cause: The value of a RedoRoutes property for two or more databases was set such that a database that sends redo also receives redo data in the same route. For example, A sends to B, B sends to C, and C sends to A.

Action: Correct the setting of the RedoRoutes property on one or more databases to eliminate the circular route.

ORA-16677: physical standby database cannot be an alternate destination

Cause: A physical standby database was set as an alternate destination for another physical standby, or for a far sync instance and the FALLBACK keyword was not specified.

Action: Check the Oracle Data Guard broker log file for the reason for the failure and reissue the command. Ensure that a physical standby database is not set to be an alternate destination for another physical standby. If the physical standby is to be an alternate destination for a far sync instance, be sure to specify the FALLBACK keyword.

ORA-16678: unrecognized or duplicate attribute specified

Cause: The specified value contained an unrecognized or duplicated attribute.

Action: Ensure the property string does not contain any undefined or duplicate attributes. See the Oracle Data Guard broker documentation for supported attributes.

ORA-16679: one or more illegal keywords found

Cause: The specified value contained one or more illegal keywords.

Action: See the Oracle Data Guard broker documentation for the supported keywords.

ORA-16680: value contains unbalanced set of parentheses

Cause: The specified value contained an unbalanced set of parentheses or a missing set of parentheses.

Action: Ensure the parentheses are correctly matched and specify parentheses when required. See the Oracle Data Guard broker documentation for more information.

ORA-16681: value does not contain a colon

Cause: The specified value did not contain a colon (:).

Action: Include the colon (:) in the value.

ORA-16682: value contains duplicate databases or far sync instances

Cause: The specified value contained the same database or far sync instance multiple times.

Action: Ensure that a database or far sync instance is specified only once.

ORA-16683: illegal, empty substring specified in property value

Cause: The value specified contained an illegal, empty string or substring, e.g. "()".

Action: Remove the illegal empty strings and retry the command.

ORA-16684: maximum number of destinations exceeded

Cause: The value specified for the RedoRoutes property contained more than the 30 destinations.

Action: Ensure that no more than 30 destinations are specified.

ORA-16685: database does not receive redo data

Cause: The RedoRoutes property for all members of the configuration were set such that this database did not receive redo data. Or, the transport state of the database that sends redo data to this database is not valid.

Action: Check the setting of the RedoRoutes property for all members of the configuration. Ensure that at least one member's RedoRoutes property value is set to ship redo data to this database. Also check the transport state of the database that sends redo data to this database.

ORA-16686: database may not receive redo data if redo source is an alternate destination

Cause: This database may not receive redo data if the redo source is an alternate destination that does not ship redo to this database.

Action: Ensure that any alternates for the redo source for this database includes this database in its send to list.

ORA-16687: database has multiple redo sources

Cause: Using the RedoRoutes properties, multiple redo sources were shipping redo to the standby.

Action: Using the RedoRoutes properties, ensure that only one redo source ships redo to the standby.

ORA-16688: illegal alternate destination specified for RedoRoutes property

Cause: The specified value contained an alternate destination that was duplicated with a regular destination or another alternate destination.

Action: Ensure that any database that's specified as an alternate is not also specified as a regular destination or as an alternate destination for another regular destination in the same rule.

ORA-16689: illegal sender specified for RedoRoutes property

Cause: A far sync instance or a recovery appliance was specified as the redo source in a RedoRoutes property rule.

Action: Check the setting of the RedoRoutes property and confirm that a far sync instance or a recovery appliance is not specified as the redo source in the RedoRoutes property rule.

ORA-16690: illegal destination specified for RedoRoutes

Cause: A specified destination in a RedoRoutes rule either appears in the primary setting of the same rule or is the local database itself.

Action: Ensure that any specified destination in a RedoRoutes rule neither appears in the primary setting of the same rule nor be the local database itself.

ORA-16691: cannot remove a configuration member that is specified in a RedoRoutes property

Cause: An attempt was made to remove a database or far sync instance that is specified in another configuration member's RedoRoutes property.

Action: First remove the database or far sync instance from all other member's RedoRoutes property values. Then retry the remove command.

ORA-16692: operation disallowed for a database or far sync instance that sends redo data

Cause: An attempt was made to delete, disable, or convert a database that sends redo data to another database or far sync instance.

Action: Reset the value of the RedoRoutes property to the empty string of the database or far sync instance to be deleted, disabled, or converted (physical standby database).

ORA-16693: requirements not met for enabling fast-start failover

Cause: The attempt to enable fast-start failover could not be completed because one or more requirements were not met: - The Oracle Data Guard configuration must be in either MaxAvailability or MaxPerformance protection mode. - The LogXptMode property for both the primary database and the fast-start failover target standby database must be set to either SYNC or FASTSYNC if the configuration protection mode is set to MaxAvailability mode. - The LogXptMode property for both the primary database and the fast-start failover target standby database must be set to ASYNC if the configuration protection mode is set to MaxPerformance mode. - The primary database and the fast-start failover target standby database must both have flashback enabled. - No valid target standby database was specified in the primary database FastStartFailoverTarget property prior to the attempt to enable fast-start failover, and more than one standby database exists in the Oracle Data Guard configuration. - fast-start failover target standby database did not receive redo data directly from the primary database when the protection mode was set to maximum performance mode. - The primary database has multiple routes to the fast-start failover target standby database.

Action: Retry the command after correcting the issue: - Set the Oracle Data Guard configuration to either MaxAvailability or MaxPerformance protection mode. - Ensure that the LogXptMode property for both the primary database and the fast-start failover target standby database are set to either SYNC or FASTSYNC if the configuration protection mode is set to MaxAvailability. - Ensure that the LogXptMode property for both the primary database and the fast-start failover target standby database are set to ASYNC if the configuration protection mode is set to MaxPerformance. - Ensure that both the primary database and the fast-start failover target standby database have flashback enabled. - Set the primary database FastStartFailoverTarget property to the DB_UNIQUE_NAME value of the desired target standby database and set the desired target standby database FastStartFailoverTarget property to the DB_UNIQUE_NAME value of the primary database. - Ensure the RedoRoutes property of the primary includes the name of the fast-start failover target standby database when the protection mode is set to

maximum performance mode. - Ensure the RedoRoutes property of the primary database has only one route to the fast-start failover target standby database.

ORA-16694: one or more databases involved for switchover need to be restarted

Cause: An error occurred during the restart of either the old and the new primary databases or both in a switchover operation.

Action: Manually restart both the old and new primary databases, including all their Oracle RAC instances if it is an Oracle RAC database.

ORA-16695: redo transport mode incompatible with RedoRoutes property value

Cause: The standby database could not be set to receive redo data from another standby database or a far sync instance because either a RedoRoutes rule for that standby did not specify ASYNC or the database's LogXptMode property was not set to ASYNC.

Action: A standby database or far sync instance can only send redo data in asynchronous mode. Set the standby database's LogXptMode property to ASYNC before changing the RedoRoutes of the standby that is to send redo data. Or, specify ASYNC in the sending database's RedoRoutes property to override the value specified in the receiving database's LogXptMode property.

ORA-16696: redo source is disabled

Cause: An attempt was made to enable a database whose redo source was disabled.

Action: Enable the redo source first and then retry the command.

ORA-16697: wrong standby type specified for RedoRoutes property modification

Cause: A logical standby database or snapshot standby database was specified to send redo data.

Action: Check the setting of the RedoRoutes property and confirm that a primary database, physical standby database, or far sync instance is specified to send the redo data.

ORA-16698: member has a LOG_ARCHIVE_DEST_n parameter with SERVICE attribute set

Cause: One or more LOG_ARCHIVE_DEST_n initialization parameters that contain a SERVICE attribute for another member in the configuration were set on the new member when attempting to add a standby database or far sync instance to the configuration.

Action: Clear all LOG_ARCHIVE_DEST_n initialization parameters that contain a SERVICE attribute for another member in the configuration on the new member to be added.

ORA-16699: connect identifier not specified

Cause: The connect identifier was not specified for the DGMGRL CLI ADD command.

Action: Retry the ADD command with a connect identifier for the object to be added.

ORA-16700: the standby database has diverged from the primary database

Cause: The primary database may have been flashed back or restored from a backup set and then reopened with the RESETLOGS option.

Action: Re-create the standby database from the primary database or flash back the standby database to the same point the primary database had been flashed back to.

ORA-16701: Oracle Data Guard broker command failed

Cause: The command to modify or query the database failed.

Action: Check the Oracle Data Guard broker log file for the reason for the failure and reissue the command.

ORA-16702: Oracle Data Guard broker command warning

Cause: The command to modify or query the database resulted in a warning.

Action: Check the Oracle Data Guard broker log file for the warning and, if necessary, reissue the command.

ORA-16703: cannot set property while the database is enabled

Cause: An attempt was made to change a database property while the database was enabled.

Action: Disable the database first, update the property and then, reenable the database.

ORA-16704: standby database not valid for primary database

Cause: The standby database was not added to the Oracle Data Guard broker configuration because it was not a valid standby database for the primary database.

Action: Add a database to the Oracle Data Guard broker configuration that is a valid standby database to the primary database.

ORA-16706: Oracle Data Guard broker worker process not available

Cause: The Oracle Data Guard broker worker process was not available to service the request.

Action: Contact Oracle Support Services.

ORA-16707: the value of the property *string* is invalid, valid values are *string*

Cause: An invalid property value was specified while broker management of the database was disabled.

Action: Reset the property to a valid value.

ORA-16708: the state supplied to broker is invalid

Cause: The state name specified was invalid for the database.

Action: Check the state name and reissue the command.

ORA-16709: standby archived log location settings conflict with database recovery area

Cause: The StandbyArchiveLocation or AlternateLocation property was set to USE_DB_RECOVERY_FILE_DEST, but the initialization parameter DB_RECOVERY_FILE_DEST did not specify a valid destination.

Action: Use a value other than USE_DB_RECOVERY_FILE_DEST for StandbyArchiveLocation or AlternateLocation, or set up a valid database recovery area by setting DB_RECOVERY_FILE_DEST to a valid destination.

ORA-16710: snapshot standby database should be converted back to a physical standby database as soon as possible

Cause: A failover causes this snapshot standby database to enter a state that requires it to be re-created if another failover occurs before it is converted back to a physical standby database.

Action: Reenable the snapshot standby database if it is disabled and convert it back to a physical standby database as soon as possible because the snapshot standby database will have to be re-created if another failover occurs while it is in this state.

ORA-16713: The Oracle Data Guard broker command timed out.

Cause: The Oracle Data Guard broker timed out the command.

Action: Verify that the command is valid for the database and then retry the command.

ORA-16714: the value of property *string* is inconsistent with the database setting

Cause: The value of the specified configuration property was inconsistent with database in-memory settings or server parameter file settings. This may be caused by changing an initialization parameter that corresponds to a configuration property.

Action: Query the InconsistentProperties property on the database to determine the which properties are set inconsistently. Reset the properties to make them with the database settings.

ORA-16715: redo transport-related property *string* of standby database "*string*" is inconsistent

Cause: The value of the specified redo transport-related configuration property of the given standby database was inconsistent with the primary database redo transport service setting. This may be caused by changing an initialization parameter that corresponds to a configuration property.

Action: Query the InconsistentLogXptProps property on the primary database to determine which redo transport properties are set inconsistently. Reset the properties on the standby database to make them consistent with the primary database redo transport settings.

ORA-16716: clearing parameter LOG_ARCHIVE_DEST failed

Cause: An attempt to clear the LOG_ARCHIVE_DEST parameter failed.

Action: Contact Oracle Support Services.

ORA-16717: clearing parameter LOG_ARCHIVE_DUPLEX_DEST failed

Cause: An attempt to clear the LOG_ARCHIVE_DUPLEX_DEST parameter failed.

Action: Contact Oracle Support Services.

ORA-16718: failed to locate database

Cause: The Oracle Data Guard broker was unable to locate the database in the broker configuration.

Action: Add the database to the broker configuration and then reissue the command.

ORA-16719: unable to query V\$ARCHIVE_DEST fixed view

Cause: The broker failed to query the V\$ARCHIVE_DEST fixed view."

Action: Test and clear the problem using SQL*Plus.

ORA-16720: no LOG_ARCHIVE_DEST_n initialization parameters available

Cause: All LOG_ARCHIVE_DEST_n initialization parameters were in use, or all initialization parameters from LOG_ARCHIVE_DEST_1 through LOG_ARCHIVE_DEST_10 that can support SYNC or ALTERNATE were in use.

Action: Clear one or more LOG_ARCHIVE_DEST_n initialization parameters so that Data Guard broker can use them to set up the primary database redo transport.

ORA-16721: unable to set LOG_ARCHIVE_DEST_n initialization parameters

Cause: The broker was unable to set one or more LOG_ARCHIVE_DEST_n initialization parameters.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log files for more details.

ORA-16722: unable to set LOG_ARCHIVE_DEST_STATE_n initialization parameters

Cause: The broker was unable to set one or more LOG_ARCHIVE_DEST_STATE_n initialization parameters.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log files for more details.

ORA-16723: setting AlternateLocation property conflicts with the redo transport setting

Cause: The standby database was not using standby redo logs, and the redo transport service to the standby database is set to a nonzero value for the ReopenSecs property and a value of zero for the MaxFailure property. In this case, the redo transport service will attempt to send redo data to the standby database indefinitely and never switch to the alternate destination.

Action: Any one of the following actions will solve the problem: - add standby redo logs to the standby database. - set ReopenSecs property to zero. - set MaxFailure property to a nonzero value. After performing one of the above actions, reset the standby database AlternateLocation property.

ORA-16724: cannot resolve gap for one or more standby databases

Cause: The primary database could not resolve a gap request from one or more standby databases.

Action: To see which standby database has an unresolvable gap, check the status of the primary database using either Enterprise Manager or the DGMGRL CLI SHOW DATABASE command. Copy the missing archived log files from either backups or from another database in the configuration that has the files to the standby database that is missing the files.

ORA-16727: cannot close database

Cause: The Oracle Data Guard broker could not close the database.

Action: Terminate any active sessions connected to the database and then reissue the command.

ORA-16728: consistency check for property *string* found *string* error

Cause: The consistency check for the specified property failed due to the error shown.

Action: Check the error message and clear the error.

ORA-16729: validation of value for property *string* found *string* error

Cause: The property value validation failed due to the error shown.

Action: Check the error message and clear the error.

ORA-16730: SQL Apply was not started

Cause: SQL Apply was not started because there were no pluggable databases opened in read/write mode.

Action: Open at least one pluggable database in read/write mode. Data Guard will then automatically start SQL Apply.

ORA-16731: No pluggable databases are opened in read/write mode

Cause: The operation failed because there were no pluggable databases opened in read/write mode.

Action: Open at least one pluggable database in read/write mode and retry the command.

ORA-16732: Oracle Clusterware is restarting the database instance

Cause: The Oracle Data Guard broker operation required this database instance to be shut down and restarted.

Action: If Oracle Clusterware has not already done so, shut down the Oracle instance and then restart it.

ORA-16736: unable to find the destination entry of standby database "*string*" in V\$ARCHIVE_DEST

Cause: Either the standby destination was manually changed or deleted outside of Oracle Data Guard broker, or no entry was available for the Oracle Data Guard broker to use.

Action: Clean up the destination setting, remove the unused settings, and reset the redo transport service.

ORA-16737: the redo transport service for standby database "*string*" has an error

Cause: A communication problem with the standby database caused the redo transport to fail.

Action: Query the LogXptStatus property to see the error message. Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

ORA-16738: redo transport service for database "*string*" is not running

Cause: The redo transport service for the specified standby database was not running.

Action: Check the Oracle Data Guard broker log file or the Oracle alert log file for more details. If necessary, start the redo transport service for the standby database.

ORA-16739: redo transport service for standby database "*string*" is running

Cause: The redo transport service for the standby database was running.

Action: Check the Oracle Data Guard broker log file for more details. If necessary, stop the redo transport service for the standby database.

ORA-16740: redo transport service for standby database "*string*" incorrectly set to ALTERNATE

Cause: The redo transport service to the standby database was set to ALTERNATE when no other destination was set to alternate to this destination.

Action: Reenable the standby database or the entire configuration to allow the configuration property settings to be propagated to the initialization parameters.

ORA-16741: the destination parameter of standby database "*string*" has incorrect syntax

Cause: The destination defined in the server parameter file of the primary database had incorrect syntax and Data Guard broker failed to update the destination when redo transport services were enabled.

Action: Fix the syntax error in the primary database server parameter file or remove the entry from the server parameter file. Also, check the values of the redo transport-related properties for the specified standby database.

ORA-16742: the standby database "*string*" has exhausted its quota

Cause: The standby database exhausted its quota for storing archived redo logs.

Action: Remove some archived redo logs from the standby database or increase its quota.

ORA-16743: cannot determine status of redo transport service for standby database "*string*"

Cause: The status of redo transport to the specified standby database could not be determined.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

ORA-16744: The DG_CONFIG list of LOG_ARCHIVE_CONFIG parameter is full.

Cause: The DG_CONFIG list of the LOG_ARCHIVE_CONFIG attribute was full and the Oracle Data Guard broker was not able to add a new DB_UNIQUE_NAME to the list.

Action: Remove some unused entries in the DG_CONFIG list, then reenale the database.

ORA-16745: unable to add DB_UNIQUE_NAME "*string*" into the DG_CONFIG list because it is full

Cause: The DG_CONFIG list of the LOG_ARCHIVE_CONFIG attribute was full and the Oracle Data Guard broker was not able to add the specified DB_UNIQUE_NAME to the list.

Action: Remove some unused entries in the DG_CONFIG list then reenale the database.

ORA-16746: Oracle Data Guard broker cannot mount the database

Cause: The Oracle Data Guard broker failed to mount the database.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

ORA-16747: logical standby database guard could not be turned on

Cause: The Oracle Data Guard broker could not turn on the logical standby database guard.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

ORA-16748: Oracle Data Guard broker cannot open the primary database

Cause: The Oracle Data Guard broker failed to open the primary database.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

ORA-16749: switchover to logical standby database failed

Cause: The Oracle Data Guard broker failed to switch a logical standby database over to a primary database.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

ORA-16750: failed to activate logical standby database

Cause: The Oracle Data Guard broker failed to activate a logical standby database.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

ORA-16751: failed to switchover to physical standby database

Cause: The Oracle Data Guard broker failed to switch a physical standby database over to a primary database.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

ORA-16753: Oracle Data Guard broker cannot open standby database

Cause: The Oracle Data Guard broker failed to open the standby database.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

ORA-16754: failed to activate physical standby database

Cause: The Oracle Data Guard broker failed to activate the physical standby database.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

ORA-16755: failed to set initialization parameter

Cause: The Oracle Data Guard broker failed to set an initialization parameter using either the ALTER SYSTEM SET or ALTER SYSTEM RESET command.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

ORA-16757: unable to get the value of this property

Cause: The Oracle Data Guard broker failed to get the value for the specified property because the value for the specified property is not available for the current database role.

Action: If the value of the specified property is not available for the current role of the database, specify this property for a database for which the value is available. Otherwise, check the Oracle Data Guard broker log file for more details.

ORA-16758: the specified apply instance is not running

Cause: The Oracle Data Guard broker could not start apply services on the specified instance because that instance was not running.

Action: Start the instance and then retry the command.

ORA-16759: cannot start SQL Apply with initial SCN

Cause: The Oracle Data Guard broker failed to start SQL Apply with an initial system change number (SCN).

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

ORA-16760: cannot start SQL Apply

Cause: The Oracle Data Guard broker failed to start SQL Apply.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

ORA-16761: cannot stop SQL Apply

Cause: The Oracle Data Guard broker failed to stop SQL Apply.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

ORA-16762: invalid database state

Cause: Database was not in the intended state.

Action: Determine the reason why the database is not running in the intended state and reissue the command.

ORA-16763: redo transport service for a member is running

Cause: The redo transport service for a member was running.

Action: For more details, check the status of the primary database using either Oracle Enterprise Manager or the DGMGRL CLI SHOW DATABASE command. If necessary, stop the redo transport service to the member.

ORA-16764: redo transport service to a member is not running

Cause: The redo transport service to a member was not running.

Action: For more details, check the status of the primary database using either Oracle Enterprise Manager or the DGMGRL CLI SHOW DATABASE command. If necessary, start the redo transport service to the member.

ORA-16765: Redo Apply is running

Cause: Redo Apply was running when it should have been stopped.

Action: If necessary, stop Redo Apply.

ORA-16766: Redo Apply is stopped

Cause: Redo Apply was stopped when it should have been running.

Action: Check the alert log to see why Redo Apply terminated, correct any problems that may exist, and restart Redo Apply by setting the physical standby database state to APPLY-ON.

ORA-16767: SQL Apply is running

Cause: SQL Apply was running when it should have been stopped."

Action: If necessary, stop SQL Apply.

ORA-16768: SQL Apply is stopped

Cause: SQL Apply was stopped when it should have been running."

Action: Check the alert log to see why SQL Apply terminated, correct any problems that may exist, and restart SQL Apply by setting the logical standby database state to APPLY-ON.

ORA-16769: the physical standby database is open read-only

Cause: All instances in the physical standby database were put into a read-only state instead of APPLY-OFF.

Action: Issue the EDIT DATABASE SET STATE command to set the database to the APPLY-OFF state.

ORA-16770: Redo Apply not started since physical standby database is opening

Cause: Redo Apply services could not be started on the physical standby database because it was being opened. The Oracle Data Guard broker will start Redo Apply services once the physical standby database has been opened.

Action: No action required.

ORA-16771: failover to a physical standby database failed

Cause: The Oracle Data Guard broker encountered errors when converting a physical standby database to a primary database.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

ORA-16772: switchover to a standby database failed

Cause: The Oracle Data Guard broker encountered errors when switching over to the specified standby database.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

ORA-16773: cannot start Redo Apply

Cause: The Oracle Data Guard broker failed to start Redo Apply.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details. If the database is already open, the broker will not start Redo Apply if the Oracle Active Data Guard option is not enabled.

ORA-16774: cannot stop Redo Apply

Cause: The Oracle Data Guard broker failed to stop Redo Apply.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

ORA-16775: target standby database in broker operation has potential data loss

Cause: The target standby database specified for the broker operation did not have all the redo data from the primary database.

Action: Confirm that the redo transport service on the primary database is functioning correctly by checking its status using either Enterprise Manager or the DGMGRL CLI SHOW DATABASE command. Reissue the broker command once all redo data is available on the target standby database.

ORA-16776: health check of the redo transport service failed

Cause: The Oracle Data Guard broker could not complete the health check for the redo transport service.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

ORA-16777: unable to find the destination entry of a standby database in V\$ARCHIVE_DEST

Cause: Either a destination was manually deleted or no entry was available for Oracle Data Guard.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details. The redo transport service may need to be reset.

ORA-16778: redo transport error for one or more databases

Cause: The redo transport service was unable to send redo data to one or more standby databases.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details. Query the LogXpStatus property to see the errors.

ORA-16779: the destination parameter of a database is set incorrectly

Cause: The destination was defined in the LOG_ARCHIVE_DEST_n server parameter file with incorrect syntax. The Oracle Data Guard broker failed to update the destination when the redo transport was turned on.

Action: Check the Oracle Data Guard broker log file to see which database has the problem. Fix the syntax error in the server parameter file or remove the entry from the server parameter file. Check if the syntax of the redo transport-related properties are correct.

ORA-16780: a database has exhausted its archived redo log storage quota

Cause: A database has exhausted its quota for storing archived redo logs.

Action: Check the Oracle Data Guard broker log file to see which database has the problem. Remove some archived logs at the standby database or increase its quota.

ORA-16781: cannot determine status of redo transport service for standby database

Cause: The status of redo transport to the specified standby database could not be determined.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

ORA-16782: instance not open for read and write access

Cause: The database was mounted on an instance but not opened for read and write access.

Action: For more details, check the status of the database using either Enterprise Manager or the DGMGRL CLI SHOW DATABASE command. If possible, open the instance manually.

ORA-16783: cannot resolve gap for database *string*

Cause: The primary database could not resolve a gap request from the specified standby database(s).

Action: Copy the missing archived redo log files from either backups or from another database in the configuration that has the files to the standby database(s) missing the files.

ORA-16784: database name specified by Dependency property is incorrect

Cause: The database name, that should be the value of the DB_UNIQUE_NAME initialization parameter, specified in the Dependency property was incorrect.

Action: Reset the Dependency property to the correct name of the database.

ORA-16785: the database is in NOARCHIVELOG mode

Cause: The database was in NOARCHIVELOG mode when it was either a primary database or when it was a standby database that was being switched over to be a primary database.

Action: Set the database to ARCHIVELOG mode by issuing the ALTER DATABASE ARCHIVELOG command.

ORA-16786: unable to access Oracle Data Guard broker configuration files

Cause: The Oracle Data Guard broker configuration files did not exist or could not be accessed.

Action: Check the Oracle Data Guard broker log file for more details.

ORA-16788: unable to set one or more database configuration property values

Cause: This situation occurred when the broker attempted to set database configurable property values into the database by issuing ALTER SYSTEM or ALTER DATABASE commands. Typical causes of this error are: - The values of redo transport-related properties contain syntax syntax errors. - The value of the LogArchiveTrace property was out of range.

Action: Check the Oracle Data Guard broker log file to see which property has the problem and set the property to the correct value.

ORA-16789: standby redo logs configured incorrectly

Cause: Standby redo logs were not configured or were configured incorrectly for the database.

Action: Standby redo logs are required when the redo transport mode is set to SYNC or ASYNC. Check the Oracle Data Guard documentation to find more information about the correct configuration of standby redo logs.

ORA-16790: the value of the configurable property is invalid

Cause: An invalid property value was entered, or a RESET was attempted on a property for which no Broker default value exists.

Action: Set the property to a correct value.

ORA-16791: unable to check the existence of the standby redo logs

Cause: The database may not be mounted, or the query of the V\$STANDBY_LOG fixed view failed.

Action: Ensure the database is mounted and query the V\$STANDBY_LOG fixed view to see if the problem has been corrected, and retry the operation.

ORA-16792: configurable property value is inconsistent with database setting

Cause: The values of one or more configurable properties were inconsistent with database in-memory settings or server parameter file settings. This may happen by directly altering initialization parameters instead of editing configurable property values using Oracle Data Guard broker.

Action: Query the InconsistentProperties property on the database or check the Oracle Data Guard broker log file to find which properties are set inconsistently. Reset these properties to make them consistent with the database settings. Alternatively, enable the database or the entire configuration to allow the configurable property settings to be propagated to the initialization parameters.

ORA-16793: logical standby database guard is off

Cause: The logical standby database guard was turned off.

Action: Issue the ALTER DATABASE GUARD ALL command to turn the guard on and verify that Data Guard health check error or warning is cleared.

ORA-16794: database guard is on for primary database

Cause: The database guard was turned on for the primary database.

Action: Issue the ALTER DATABASE GUARD NONE command to turn off the guard and verify that Data Guard health check error or warning is cleared.

ORA-16795: the standby database needs to be re-created

Cause: A switchover or failover operation caused this database to require re-creation. The database was marked for re-creation because it was not a viable standby database for the new primary database. Until this error status is resolved for this database,

information about this database and the broker configuration to which it belongs is unavailable to a broker client that is connected to this database. Therefore, all commands directed by that client to this database cannot be completed.

Action: Re-create (or flash back) the standby database. Connect to the primary database in the broker configuration and reenables broker management of that database. Once enabled, it is possible to connect to that standby database and manage it with the broker. Alternatively, many client commands that cannot be completed at the standby database when in this error state can be completed successfully when issued to the primary database. In this case, simply reconnect to the primary database and retry the command.

ORA-16796: one or more properties could not be imported from the member

Cause: The broker was unable to import property values for the member being added to the broker configuration. This error indicates: - The Oracle Net service name specified in DGMGRL CREATE CONFIGURATION, ADD DATABASE, ADD FAR_SYNC, or ADD RECOVERY_APPLIANCE command was not one that provides access to the member being added. - There were no instances running for the member being added.

Action: Remove the member from the configuration using the REMOVE CONFIGURATION, REMOVE DATABASE, REMOVE FAR_SYNC, or REMOVE RECOVERY_APPLIANCE command. Make sure that the member to be added has at least one instance running and that the Oracle Net service name provides access to the running instance. Also, check the broker log file for additional information. Then, reissue the CREATE CONFIGURATION, ADD DATABASE, ADD FAR_SYNC, or ADD RECOVERY_APPLIANCE command.

ORA-16797: member is not using a server parameter file

Cause: The member was not using a server parameter file or the broker was unable to access the server parameter file.

Action: Issue the CREATE SPFILE='..' FROM PFILE='..' command to create a server parameter file and then restart the member to use it.

ORA-16798: unable to complete recovery during failover

Cause: The physical standby database could not complete recovery during failover.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log files to see more details on the reason for the failure.

ORA-16799: Redo Apply is not running

Cause: Either the Oracle Data Guard broker configuration indicated that Redo Apply was turned off, or the MRP0 recovery process was not running. As a result, Redo Apply-related properties could not be set.

Action: Turn on Redo Apply through Oracle Data Guard broker and reissue the command to set a Redo Apply-related property.

ORA-16800: redo transport service for a standby database incorrectly set to ALTERNATE

Cause: The redo transport service for a standby database was set to ALTERNATE when no other destination is set to alternate to this destination.

Action: Reenable the standby database or the entire configuration to allow the configuration property settings to be propagated to the initialization parameters.

ORA-16801: redo transport-related property is inconsistent with database setting

Cause: The values of one or more redo transport-related configuration properties were inconsistent with database in-memory settings or server parameter file settings. This may happen by directly altering initialization parameters instead of editing configurable property values using Oracle Data Guard broker.

Action: Query the InconsistentLogXptProps property on the primary database or check the Oracle Data Guard broker log file to find which properties are set inconsistently. Reset these properties to make them consistent with the database settings. Alternatively, enable the database or the entire configuration to allow the configurable property settings to be propagated to the initialization parameters.

ORA-16802: downgrading redo transport mode from SYNC disallowed

Cause: An attempt was made to downgrade the redo transport mode of a standby database from SYNC to ASYNC when the configuration was in Maximum Protection or Maximum Availability mode and the primary database was an Oracle RAC database. This was disallowed even though there may have been other standby databases with redo transport modes set to SYNC to support the protection mode.

Action: Do one of the following if the redo transport mode of the standby must be downgraded: - Shut down all instances of the primary database and restart one instance with the initialization parameter CLUSTER_DATABASE set to FALSE. Downgrade the redo transport mode of the standby database of interest. Then, shutdown the instance, set the the CLUSTER_DATABASE initialization parameter to TRUE, and restart all primary database instances. - Downgrade the protection mode to Maximum Performance mode and then, downgrade the redo transport mode of the standby database of interest. Finally, upgrade the protection mode. This will require a restart of all primary database instances if upgrading to Maximum Protection mode. Note that the above only works when there is at least one standby database in the configuration that has its redo transport mode set to SYNC.

ORA-16803: unable to query a database table or fixed view

Cause: Querying a database table or fixed view failed. The database may not be opened or mounted.

Action: Check the Oracle Data Guard broker log file for more details.

ORA-16804: one or more configuration properties have invalid values

Cause: Oracle Data Guard broker health check detected that one or more configuration properties in the broker configuration had invalid values. The property values were changed while broker management of the database was disabled.

Action: Check Data Guard broker log file for more details on which properties have invalid values and reset them through the Oracle Data Guard broker.

ORA-16805: change of LogXptMode property violates overall protection mode

Cause: The broker disallowed the attempt to change the LogXptMode configurable property for the standby database because, if allowed, the overall protection mode for the configuration would have been violated.

Action: If the LogXptMode configuration property must be changed for the specified standby database, first downgrade the overall protection mode for the broker configuration. After that operation has completed, the LogXptMode configuration property for the standby database can be changed.

ORA-16806: supplemental logging is not turned on

Cause: Supplemental logging was not turned on while there was a logical standby database in the configuration. This could happen either on the primary database or on

the logical standby database that was being switched over to become the primary database.

Action: Check the Oracle Data Guard broker log file for more details. Issue the ALTER DATABASE ADD SUPPLEMENTAL LOG DATA (PRIMARY KEY, UNIQUE INDEX) COLUMNS to add supplemental logging.

ORA-16807: unable to change database protection mode

Cause: An attempt to issue the ALTER DATABASE SET STANDBY TO MAXIMIZE {PROTECTION | AVAILABILITY | PERFORMANCE} failed.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more information.

ORA-16808: primary database is not open

Cause: A prior attempt to open the primary database was disallowed because the primary had shut itself down earlier after being isolated from both the fast-start failover observer and the target standby database for more than FastStartFailoverThreshold seconds. It was assumed that a fast-start failover was underway. Since that time, re-contact with either the observer or the target standby database indicates that no such failover had actually occurred. The primary database can now be opened.

Action: Open the database by issuing the SQL*Plus ALTER DATABASE OPEN command.

ORA-16809: multiple warnings detected for the database

Cause: The broker detected multiple warnings for the database.

Action: To get a detailed status report, check the status of the database specified using either Enterprise Manager or the DGMGRL CLI SHOW DATABASE command.

ORA-16810: multiple errors or warnings detected for the database

Cause: The broker detected multiple errors or warnings for the database.

Action: To get a detailed status report, check the status of the database specified using either Enterprise Manager or the DGMGRL CLI SHOW DATABASE command.

ORA-16811: apply instance not recorded by the Oracle Data Guard broker

Cause: The broker did not register an apply instance for a standby database.

Action: Reenable the standby database to clear the error.

ORA-16812: log apply service not running on apply instance recorded by the broker

Cause: Log apply services were not running on the instance the Data Guard broker expected them to be running upon.

Action: Reenable the standby database to clear the error.

ORA-16813: log apply service not running on apply instance *string* recorded by the broker

Cause: Log apply services were not running on the instance the Data Guard broker expected them to be running upon.

Action: Reenable the standby database to clear the error.

ORA-16814: incorrect redo transport setting for AlternateLocation for standby database

Cause: The Oracle Data Guard broker detected an incorrect redo transport setting for a standby database AlternateLocation property. The incorrect setting could be one of

the following: - The AlternateLocation property was empty, but the redo transport to the standby database had an ALTERNATE setting. - The AlternateLocation property was not empty and the redo transport to the standby database had no ALTERNATE setting. - The AlternateLocation property did not match the ALTERNATE setting in the redo transport. The mismatch may include service string, directory specification of the alternate location, or the DB_UNIQUE_NAME attribute. - The LOG_ARCHIVE_DEST_STATE_n parameter corresponding to the alternate location was not set to ALTERNATE. - The flash recovery area was being used by the standby database for archived logs, but the redo transport to the standby database still had an ALTERNATE setting for the AlternateLocation property. Data Guard broker log files provide more details on which of the above cases caused the error.

Action: Reenable the primary database to clear the error.

ORA-16815: incorrect redo transport setting for AlternateLocation for standby database "*string*"

Cause: The Oracle Data Guard broker detected an incorrect redo transport setting for a standby database AlternateLocation property. The incorrect setting could be one of the following: - The AlternateLocation property was empty, but the redo transport to the standby database had an ALTERNATE setting. - The AlternateLocation property was not empty and the redo transport to the standby database had no ALTERNATE setting. - The AlternateLocation property did not match the ALTERNATE setting in the redo transport. The mismatch may include service string, directory specification of the alternate location, or the DB_UNIQUE_NAME attribute. - The LOG_ARCHIVE_DEST_STATE_n parameter corresponding to the alternate location was not set to ALTERNATE. - The flash recovery area was being used by the standby database for archived logs, but the redo transport to the standby database still had an ALTERNATE setting for the AlternateLocation property. Data Guard broker log files provide more details on which of the above cases caused the error.

Action: Reenable the primary database to clear the error.

ORA-16816: incorrect database role

Cause: The Oracle Data Guard broker detected that the specified database had a different database role than that recorded in the Oracle Data Guard broker configuration. This could be the result of a failed switchover or failover operation, or a switchover or failover operation performed with SQL*Plus.

Action: Check the Oracle Data Guard broker documentation to see how to recover from failed role change operations, or from role changes that were performed using SQL*Plus for databases managed by Oracle Data Guard broker.

ORA-16817: unsynchronized fast-start failover configuration

Cause: The fast-start failover target standby database was not synchronized with the primary database. As a result, a fast-start failover could not happen automatically in case of a primary database failure.

Action: Ensure that the fast-start failover target standby database is running and that the primary database can ship redo data to it. When the standby database has received all of the redo data from the primary database, the primary and standby databases will then be synchronized. The Oracle Data Guard configuration may then fail over automatically to the standby database in the event of loss of the primary database.

ORA-16818: fast-start failover suspended

Cause: The primary database was intentionally shutdown. As a result, a fast-start failover could not happen automatically.

Action: Start the primary database. This effectively restores the ability to automatically perform a fast-start failover in the event of a failure of the primary database.

ORA-16819: fast-start failover observer not started

Cause: The observer for fast-start failover was not started. As a result, fast-start failover could not happen in the case of a primary database failure.

Action: Start the fast-start failover observer by using, for example, the DGMGRL START OBSERVER command.

ORA-16820: fast-start failover observer is no longer observing this database

Cause: A previously started observer was no longer actively observing this database. A significant amount of time elapsed since this database last heard from the observer. Possible reasons were: - The host where the observer was running was not available. - The network connection between the observer and this database was not available. - The observer process was terminated unexpectedly.

Action: Check the reason why the observer cannot contact this database. If the problem cannot be corrected, stop the current observer by connecting to the Oracle Data Guard configuration and issue the DGMGRL STOP OBSERVER command. Then, restart the observer on another host. Finally, use the DGMGRL START OBSERVER command to start the observer on the other host.

ORA-16821: logical standby database dictionary not yet loaded

Cause: The logical standby database had not loaded the dictionary. This status was detected by the broker health check mechanism. Alternatively, this status may be returned when attempting to switch or fail over to a logical standby database that had not yet loaded its dictionary.

Action: Start SQL Apply on the logical standby database, if it is not already running, and wait for it to reach the APPLYING state.

ORA-16822: new primary database not yet ready for standby database reinstatement

Cause: The new primary database, as a result of a logical standby database failover operation, had not fully completed the failover operation. An attempt to reinstate a disabled standby database could not be completed until failover completed on the new primary database.

Action: Wait until the failover operation has completed on the new primary database. Then retry the reinstate operation.

ORA-16823: redo transport mode is incompatible for current operation

Cause: The redo transport mode of this database was incompatible for this broker operation.

Action: Reset the LogXptMode database property for this database and retry the broker operation.

ORA-16824: multiple warnings, including fast-start failover-related warnings, detected for the database

Cause: The broker detected multiple warnings for the database. At least one of these warnings may have prevented fast-start failover from occurring.

Action: To get a detailed status report, check the status of the database specified using either Enterprise Manager or the DGMGRL CLI SHOW DATABASE command.

ORA-16825: multiple errors or warnings, including fast-start failover-related errors or warnings, detected for the database

Cause: The broker detected multiple errors or warnings for the database. At least one of these errors or warnings may have prevented a fast-start failover from occurring.

Action: To get a detailed status report, check the status of the database specified using either Enterprise Manager or the DGMGRL CLI SHOW DATABASE command.

ORA-16826: apply service state is inconsistent with the DelayMins property

Cause: This warning was caused by one of the following reasons: - The apply service was started without specifying the real-time apply option or without the NODELAY option when the DelayMins property was set to zero. - The apply service was started with the real-time apply option or with the NODELAY option when the DelayMins property was set to a value greater than zero.

Action: Reenable the standby database to allow the broker to restart the apply service with the apply options that are consistent with the specified value of the DelayMins property.

ORA-16827: Flashback Database is disabled

Cause: The broker detected that the Flashback Database feature was disabled. With Flashback Database disabled, the broker would not be able to: - reinstate a database that required reinstatement. - convert a physical standby database to a snapshot standby database. - convert a snapshot standby database to a physical standby database. Flashback Database may be disabled manually with the ALTER DATABASE FLASHBACK DATABASE OFF command or automatically by the database in the event of an error.

Action: Check the database alert log to determine whether Flashback Database was disabled due to errors and then correct the problem. If Flashback Database had been manually disabled, reenable Flashback Database with the ALTER DATABASE FLASHBACK DATABASE ON command. If, after enabling Flashback Database, the database still cannot be reinstated or converted, you must re-create the database from a copy of the primary database.

ORA-16828: invalid value specified for REDO_TRANSPORT_USER initialization parameter

Cause: An invalid value was specified for the REDO_TRANSPORT_USER initialization parameter. The length of the user name exceeded 30 characters.

Action: Check the documentation and specify a new value for the REDO_TRANSPORT_USER initialization parameter.

ORA-16829: fast-start failover configuration is lagging

Cause: The fast-start failover target standby database was not within the lag limit specified by the FastStartFailoverLagLimit configuration property. As a result, a fast-start failover could not happen in the event of a primary database failure.

Action: Ensure that the fast-start failover target standby database is running and applying redo data and that the primary database is successfully transmitting redo data. If this condition persists consider raising the value of the FastStartFailoverLagLimit configuration property.

ORA-16830: primary isolated from fast-start failover partners longer than FastStartFailoverThreshold seconds: shutting down

Cause: The primary database was isolated from both the observer and target standby database for longer than the seconds specified by the FastStartFailoverThreshold property. A fast-start failover probably occurred. If the

FastStartFailoverPmyShutdown configuration property was set to TRUE, the broker will shut down the primary database in this situation.

Action: Ensure one instance of this database is running and the database is mounted on that instance so that the broker may reinstate the old primary database.

ORA-16831: operation not allowed on this member

Cause: The Oracle Data Guard broker operation was not allowed for the specified member of the Oracle Data Guard broker configuration.

Action: Check the documentation for the Oracle Data Guard broker command and then reissue the command with the correct member.

ORA-16832: user-configurable fast-start failover initiated: shutting down

Cause: The broker initiated a fast-start failover to the target standby database because a user-configurable condition was detected on the primary database. In addition, the broker shut down the primary database.

Action: Correct the problem on the old primary database that caused the broker to initiate a fast-start failover, then reinstate the old primary database.

ORA-16833: no logging operations detected on database

Cause: The broker detected that no logging operations were performed on this database. The data modified by these operations may be lost if failover or switchover was performed.

Action: Use Data Repair Advisor to determine which operations were not logged before attempting a switchover or failover.

ORA-16834: control file corruptions detected on database

Cause: The broker detected control files corruptions. Many database operations, including switchover and failover, may not be possible.

Action: Use Data Repair Advisor to determine the extent of the corruptions and how to repair them.

ORA-16835: standby database has one or more unavailable standby redo log groups

Cause: The broker detected that the standby database had one or more unavailable standby redo log groups.

Action: Use Data Repair Advisor to determine which standby redo log groups are unavailable and how the log groups can be made available.

ORA-16836: one or more system data files are missing

Cause: The broker detected that one or more system data files were missing.

Action: Use Data Repair Advisor to determine which system data files are missing and how the files can be restored.

ORA-16837: one or more system data files are corrupt

Cause: The broker detected that one or more system data files were corrupt.

Action: Use Data Repair Advisor to determine which system data files are corrupt and how the files can be restored.

ORA-16838: one or more system data files are offline

Cause: The broker detected that one or more system data files were offline.

Action: Use Data Repair Advisor to determine which system data files are offline and how the files can be made online.

ORA-16839: one or more user data files are missing

Cause: The broker detected that one or more user data files were missing.

Action: Use Data Repair Advisor to determine which user data files are missing and how the files can be restored.

ORA-16840: one or more user data files are corrupt

Cause: The broker detected that one or more user data files were corrupt.

Action: Use Data Repair Advisor to determine which user data files are corrupt and how the files can be restored.

ORA-16841: one or more user data files are offline

Cause: The broker detected that one or more user data files were offline.

Action: Use Data Repair Advisor to determine which user data files are offline and how the files can be made online.

ORA-16842: block corruptions detected

Cause: The broker detected block corruptions on this database.

Action: Use Data Repair Advisor to determine which files are affected by block corruptions and how the files can be repaired.

ORA-16843: errors discovered in diagnostic repository

Cause: The broker detected one or more errors in the Automatic Diagnostic Repository.

Action: Use Data Repair Advisor to see the errors that were discovered and how they can be repaired.

ORA-16844: redo transport mode incompatible with RedoSource property value

Cause: The standby database could not be set to receive redo data from another standby database or a far sync instance because the standby database LogXptMode property was not set to ASYNC.

Action: Set the standby database LogXptMode property to ASYNC before setting its RedoSource property to a non-empty value. Or, set the standby database RedoSource property to the empty value before setting its LogXptMode property to a value other than ASYNC.

ORA-16845: database specified by RedoSource property is disabled

Cause: An attempt was made to either set a database RedoSource property to the name of a database that was disabled or to enable a database whose RedoSource property was set to the name of a database that was disabled.

Action: Enable the database specified by the RedoSource property and retry the command.

ORA-16846: too many cascading levels

Cause: The value of the RedoSource property was not set to the name of either a far sync instance or a database that receives redo data directly from the primary database.

Action: Set the RedoSource property to either a far sync instance or a database that receives redo data directly from the primary database.

ORA-16847: a previous switchover from this database failed with error *string*

Cause: A previous switchover operation from this database failed.

Action: Fix the underlying problem and reissue the switchover command again.

ORA-16848: a previous switchover to this database failed with error *string*

Cause: A previous switchover operation to this database failed.

Action: Fix the underlying problem and reissue the switchover command again.

ORA-16849: a previous switchover from this database was interrupted and aborted

Cause: A previous switchover operation from this database was interrupted by the user. It may be caused by a hang.

Action: Fix the underlying problem and reissue the switchover command again.

ORA-16850: a previous switchover to this database was interrupted and aborted

Cause: A previous switchover operation to this database was interrupted by the user. It may be caused by a hang.

Action: Fix the underlying problem and reissue the switchover command again.

ORA-16851: a previous failover to this database failed with error *string*

Cause: A previous failover operation to this database failed.

Action: Fix the underlying problem and reissue the failover command again.

ORA-16852: a previous failover to this database was interrupted and aborted

Cause: A previous failover operation to this database was interrupted by the user. It may be caused by a hang.

Action: Fix the underlying problem and reissue the failover command again.

ORA-16853: apply lag has exceeded specified threshold

Cause: The current apply lag exceeded the value specified by the 'ApplyLagThreshold' database property. It may be caused either by a large transport lag or poor performance of apply services on the standby database.

Action: Check for gaps on the standby database. If no gap is present, tune the apply services.

ORA-16854: apply lag could not be determined

Cause: Apply lag could not be determined because either apply services were not running or there was no connectivity between the redo source and standby database.

Action: Start apply services if they are not running. Also, ensure that there is network connectivity between the redo source and standby databases, and the redo source is sending redo data to the standby.

ORA-16855: transport lag has exceeded specified threshold

Cause: The current transport lag exceeded the value specified by the 'TransportLagThreshold' database property. It is caused by either poor network performance between the redo source and the standby databases or a network disconnection.

Action: Check the network connection between the redo source and standby databases. If they are connected, check the network performance between the redo source and the standby databases and tune it if necessary.

ORA-16856: transport lag could not be determined

Cause: Transport lag could not be determined because there was no connectivity between the redo source and standby databases.

Action: Ensure that there is network connectivity between the redo source and standby databases, and the redo source is working properly.

ORA-16857: standby disconnected from redo source for longer than specified threshold

Cause: The amount of time the standby was disconnected from the redo source database exceeded the value specified by the 'TransportDisconnectedThreshold' database property. It is caused by no network connectivity between the redo source and the standby databases.

Action: Ensure that there is network connectivity between the redo source and standby databases, and the redo source is working properly.

ORA-16858: last communication time from redo source could not be determined

Cause: The standby database had never been contacted by the redo source.

Action: Ensure that there is network connectivity between the redo source and standby databases, and the redo source is working properly.

ORA-16859: request terminated because delete, disable, or failover operation is in progress

Cause: The broker terminated a request because it was processing a delete, disable, or failover operation.

Action: Wait for the operation to complete and then retry the request.

ORA-16860: invalid member specified as the fast-start failover target

Cause: The member specified as the fast-start failover target was either a far sync instance or snapshot standby database, or does not exist in the configuration.

Action: Only a physical or logical standby database can be specified as a fast-start failover target. Check the database name and retry the command.

ORA-16861: ExternalDestination property requires DB_UNIQUE_NAME attribute

Cause: The value specified for the ExternalDestination property did not contain the DB_UNIQUE_NAME attribute.

Action: Ensure that DB_UNIQUE_NAME is specified as the value for the ExternalDestination property.

ORA-16862: unsupported attribute specified for the ExternalDestination property

Cause: The value specified for the ExternalDestination property contained unsupported attributes.

Action: Ensure that the value specified for the ExternalDestination property does not contain any of these attributes: LOCATION, ALTERNATE, MAX_FAILURE, SYNC, TEMPLATE, MANDATORY, DELAY, NET_TIMEOUT, and VALID_FOR.

ORA-16863: A member whose MaxFailure property is set to zero cannot have an alternate destination.

Cause: A member was specified to have an alternate destination when its MaxFailure configurable property was set to zero.

Action: Set the member's MaxFailure property to a nonzero value and retry the command.

ORA-16864: The MaxFailure property cannot be set to zero for a member that has an alternate destination.

Cause: An attempt was made to set the MaxFailure configurable property to zero when it had an alternate destination specified.

Action: Set the member's MaxFailure configurable property to a nonzero value.

ORA-16865: database is closing or is not mounted on the instance

Cause: Broker health check was unable to complete because the database was closing or was not mounted on the instance.

Action: No action is required if the database is closing. Mount the database if it is not yet mounted on the instance.

ORA-16900: change of LogXptMode or RedoRoutes property violates overall protection mode

Cause: The broker did not allow the attempt to change the LogXptMode or RedoRoutes configurable property for the standby database or far sync instance because, if allowed, the overall protection mode for the configuration would have been violated.

Action: If the LogXptMode or RedoRoutes configuration property must be changed for the specified standby database or far sync instance, first downgrade the overall protection mode for the broker configuration. After that operation has completed, the LogXptMode or RedoRoutes configuration property for the standby database can be changed.

ORA-16901: inconsistent alternate destinations specified with RedoRoutes

Cause: The specification of alternates for the RedoRoutes property for a member was set inconsistently with respect to another member's RedoRoutes property.

Action: Check the Oracle Data Guard broker log file for the reason for the failure and reissue the command. Ensure that the member's RedoRoutes alternate setting is set consistently with other member's RedoRoutes property.

ORA-16950: Remote mapped cursors are not supported by this feature.

Cause: This cursor is a remote mapped cursor which could not be processed locally.

Action: Try to process this statement directly on the remote site.

ORA-16951: Too many bind variables supplied for this SQL statement.

Cause: Binding this SQL statement failed because too many bind variables were supplied.

Action: Pass the correct number of bind variables.

ORA-16952: Failed to bind this SQL statement.

Cause: Binding this SQL statement failed.

Action: Check if bind variables for that statement are properly specified.

ORA-16953: Type of SQL statement not supported.

Cause: This type of SQL statement could not be processed.

Action: n/a

ORA-16954: SQL parse error.

Cause: The specified SQL statement failed to be parsed.

Action: Check if syntax is correct and ensure that this statement can be parsed by the specified user name.

ORA-16955: Unknown error during SQL analyze.

Cause: The specified SQL statement failed to be analyzed.

Action: This is an internal error, please contact Oracle support.

ORA-16956: Only SELECT or DML statements are supported for test execute.

Cause: The specified SQL statement cannot be tested for execute.

Action: n/a

ORA-16957: SQL Analyze time limit interrupt

Cause: This is an internal error code used indicate that SQL analyze has reached its time limit.

Action: n/a

ORA-16958: DML statements running parallel are not supported for test execute.

Cause: The specified DML statement cannot be tested for execute because part of it is running parallel.

Action: n/a

ORA-16959: Statement type has been disabled for SQL Analyze

Cause: The system attempted to analyze a type of statement that was disabled by the current feature.

Action: Try a different feature capable of analyzing this statement type.

ORA-16960: SQL Analyze could not reproduce the desired plan.

Cause: SQL Analyze failed to reproduce a particular plan using an outline.

Action: Check the outline data.

ORA-16961: SQL statement with SQL patch is ignored

Cause: SQL statements with SQL patches are not supported by SQL tuning advisor.

Action: Check the SQL patch information. Rerun SQL repair advisor on that SQL statement for a potential better SQL patch.

ORA-16962: SQL statement attempted to begin an autonomous transaction

Cause: The SQL statement being analyzed attempted to begin an autonomous transaction, which is not supported.

Action: Analyze another statement or remove the autonomous transaction from the current statement.

ORA-16963: The given user or schema is not supported by this feature.

Cause: The SQL statement being analyzed had a parsing user or schema which is not currently supported for SQL Analyze.

Action: Analyze another statement.

ORA-17500: ODM err:string

Cause: An error returned by ODM library

Action: Look at error message and take appropriate action or contact Oracle Support Services for further assistance

ORA-17501: logical block size *string* is invalid

Cause: logical block size for oracle files must be a multiple of the physical block size, and less than the maximum

Action: check INIT.ORA file parameters

ORA-17502: ksfdcre:string Failed to create file string

Cause: file creation failed due to either insufficient OS permission or the file already exists

Action: check additional error messages

ORA-17503: ksfdopn:string Failed to open file string

Cause: file open failed due to either insufficient OS permission or the name of file exceeds maximum file name length.

Action: check additional error messages

ORA-17504: ksfdde:Failed to delete file string

Cause: The file that was being deleted is still in use or the process has insufficient permission to delete file.

Action: check additional error messages

ORA-17505: ksfdrsz:string Failed to resize file to size string blocks

Cause: There is insufficient space left on the device or the process has insufficient permission to resize file.

Action: check additional error messages

ORA-17506: I/O Error Simulation

Cause: The i/o request is marked with error because the i/o error simulation event is turned on.

Action: n/a

ORA-17507: I/O request size string is not a multiple of logical block size

Cause: i/o's are done in multiple of logical block size

Action: Check additional error messages

ORA-17508: I/O request buffer ptr is not aligned

Cause: i/o request buffer should be alligned, check additional information for buffer ptr value

Action: Call Oracle Support Services

ORA-17509: Attempt to do i/o beyond block1 offset

Cause: When a file is identified with logical block size of 0, only i/o's to block1 is allowed.

Action: check additional error messages and call Oracle Support Services

ORA-17510: Attempt to do i/o beyond file size

Cause: The i/o request points to a block beyond End Of File

Action: check additional error messages and call Oracle Support Services

ORA-17512: Block Verification Failed

Cause: Block Verification after a read operation on a database file failed since the block is media corrupt.

Action: check additional error messages in the trace file and call Oracle Support Services

ORA-17513: dNFS package call failed

Cause: An attempt was made to call a dNFS package in a non-dNFS environment

Action: Make sure dNFS is enabled and the file can be accessed using dNFS.

ORA-17514: Access to clonedb bitmap file failed

Cause: Accessing the bitmap block file in clonedb environment has encountered an error

Action: check additional error messages in the trace file and call Oracle Support Services

ORA-17515: Creation of clonedb failed using snapshot file *string*

Cause: Creating a datafile in a clonedb environment failed.

Action: Make sure the snapshot file passed to clonedb is not from another clonedb instance and call Oracle Support Services for further assistance

ORA-17516: dNFS asynchronous I/O failure

Cause: The asynchronous I/O request failed due to storage server reboot.

Action: Make sure the storage server does not reboot repeatedly during database operations.

ORA-17517: Database cloning using storage snapshot failed on file *string:string*

Cause: An invocation of the storage clone command was returned with an error.

Action: Make sure all necessary steps are performed for storage cloning and check the Oracle trace file for additional information.

ORA-17518: backup file *string* cannot be found

Cause: Access to the specified backup file was required for Instant Restore.

Action: Make sure the path and file name are correct for the backup file and the path to the backup file can be accessed from the node of the instance.

ORA-17519: Reason(*string*): data file *string* cannot be prepared

Cause: The snapshot layer could not prepare the specified data file.

Action: Make sure the file does not already exist, is already part of a clone setup, or is being repopulated by an Instant Restore background process. Make sure the path specified is accessible and writable by the instance.

ORA-17520: data file *string* cannot be added to repopulation

Cause: Instant Restore could not add the file to the repopulation work queue.

Action: The repopulation process may be working on too many files for the system. Try waiting for some files to complete and try again.

ORA-17521: Instant Restore is not enabled

Cause: The initialization parameters for Instant Restore were not set.

Action: Make sure Instant Restore initialization parameter is set as required for this feature.

ORA-17522: file *string* is already being repopulated

Cause: The file is currently being repopulated from a previous restore.

Action: Make sure the file completes restore before you start another restore.

ORA-17523: Instance *number* cannot spawn repopulation (RPOP) process

Cause: Instance may have too many running processes.

Action: Make sure maximum number of processes initialization parameter is set properly for this feature.

ORA-17524: Repopulation cannot take place - no RPOP processes

Cause: Maximum processes initialization parameter may not be set properly.

Action: Make sure maximum number of processes initialization parameter is set properly for this feature. check alert log for other related errors.

ORA-17525: Database clone using storage snapshot not supported on file *string*

Cause: Cloning a database using storage level snapshot is not supported on the underlying storage.

Action: Use storage product that has snapshot based cloning support for Oracle.

ORA-17526: Block size of file *string* is too small *string*. Must be \geq *string*.

Cause: Files with block sizes smaller than a minimum size cannot be used for clones backed by snapshot file.

Action: Use files with larger block size.

ORA-17527: Creation of a snapshot failed because the destination *string* was not a sparse disk group.

Cause: Creating a snapshot failed because the destination disk group was not sparse.

Action: Make sure the 'create_file_dest' clause passed to the snapshot copy is in a sparse disk group.

ORA-17528: cannot write to file *string* opened for read

Cause: The file is read-only or was opened read-only and an attempt was made to write to the file, or there was an internal error.

Action: If the file is a parent of a snapshot, then you cannot open read/write, drop or unplug the database. Otherwise, look at trace file and contact Oracle Support Services.

ORA-17610: file '*string*' does not exist and no size specified

Cause: An attempt to create a file found neither an existing file nor a size for creating the file.

Action: Specify a size for the file.

ORA-17611: ksfd: file '*string*' cannot be accessed, global open closed

Cause: An attempt to write to a file which has gone offline/unidentified

Action: Check for other errno in the stack

ORA-17612: Failed to discover Oracle Disk Manager library, return value *string*

Cause: Discovery of the odm library by calling odm_discover() failed

Action: Contact your storage vendor who has provided the ODM library or call Oracle Support

ORA-17613: Failed to initialize Oracle Disk Manager library: *string*

Cause: ODM initialization for the thread failed due to insufficient privilege or memory.

Action: Make sure there is enough system resources available for the oracle process and it has access to the ODM library

ORA-17618: Unable to update block 0 to version 10 format

Cause: An attempt was made to update block 0 to version 10 format.

Action: Check additional error messages and call Oracle Support Services

ORA-17619: max number of processes using I/O slaves in a instance reached

Cause: An attempt was made to start large number of processes requiring I/O slaves.

Action: There can be a maximum of 35 processes that can have I/O slaves at any given time in a instance.

ORA-17620: failed to register the network adapter with Oracle Disk Manager library: *string*

Cause: The ODM library returned an error while trying to register the network adapter.

Action: Make sure the network adapter name given in the fileio_network_adapters is a valid name, and that the Oracle user has the correct access privileges.

ORA-17621: failed to register the memory with Oracle Disk Manager library

Cause: The ODM library returned an error while trying to register the memory.

Action: Contact the Oracle Disk Manager Library provider.

ORA-17622: failed to deregister the memory with Oracle Disk Manager library

Cause: The ODM library returned an error while trying to deregister the memory.

Action: Contact the Oracle Disk Manager Library provider

ORA-17624: Failed to delete directory *string*

Cause: The directory that was being deleted is still in use or the process had insufficient permission to delete the directory.

Action: check additional error messages.

ORA-17626: ksfdcre: *string* file exists

Cause: trying to create a database file, but file by that name already exists

Action: verify that name is correct, specify REUSE if necessary

ORA-17627: *string*

Cause: An error returned by OCI while sending/receiving message from remote instance

Action: Look at error message and take appropriate action or contact Oracle Support Services for further assistance

ORA-17628: Oracle error *string* returned by remote Oracle server

Cause: Oracle server on the remote instance has returned an error.

Action: Look at remote instance alert log/trace file for more information and take appropriate action or contact Oracle Support Services for further assistance

ORA-17629: Cannot connect to the remote database server

Cause: Connecting to the remote server specified by database connect string for network file transfer failed.

Action: Check additional error messages

ORA-17630: Mismatch in the remote file protocol version client *string* server *string*
Cause: Cannot communicate with the remote database server as there is a mismatch in the Oracle file protocol version.

Action: Check additional error messages

ORA-17631: dbname '*string*' specified by remote server does not match the instance name '*string*'

Cause: The dbname specified by the remote server is not intended for this instance.

Action: Check the dbname specified in the command of the remote instance and look for further error messages.

ORA-17632: file '*string*' is a formatted ASM disk

Cause: An attempt to create a datafile on a device that was formatted for ASM disk failed.

Action: Check that the device specified is not an ASM disk. If you would like to use the disk for datafiles, please clear the disk before you retry the operation.

ORA-17633: Operation not supported as one of the servers involved is not capable of performing the requested operation

Cause: An attempt was made to perform an operation involving two Oracle servers where both servers did not have the capability required for carrying out the operation. It is likely that one of the servers needs a patch or an upgrade to successfully participate in the operation.

Action: Apply the required fix or update on the lower version server. Contact Oracle Support Services for further assistance.

ORA-17634: network file transfer operation aborted

Cause: An error occurred during network file transfer operation.

Action: Check additional error messages.

ORA-17635: failure in obtaining physical sector size for '*string*'

Cause: An error occurred while determining the physical sector size from the underlying storage (ASM/ODM/OSD).

Action: Check additional error messages.

ORA-17636: Invalid sparse block format (*string*). Start block=*string*. Error=*string*. File=*string*

Cause: An error occurred while reading the block on sparse media.

Action: Contact Oracle Support Services.

ORA-17676: Failed to mount '*string*' with error:'*string*'

Cause: Mounting database file system failed with an error.

Action: Check additional error messages in the trace file.

ORA-17677: failed to unmount '*string*' with error:'*string*'

Cause: Unmounting database file system failed with an error.

Action: Check additional error messages in the trace file.

ORA-18000: invalid outline name

Cause: The parser detected a missing or invalid outline name

Action: n/a

ORA-18001: no options specified for ALTER OUTLINE

Cause: The parser detected that no clause was specified on the command. Our performance tests, which are not typical as they exercise all branches of the code, have shown approximately a 30% performance increase for ALTER OUTLINE.

Action: Re-issue the command, specifying a valid ALTER OUTLINE clause.

ORA-18002: the specified outline does not exist

Cause: Either the outline did not exist to begin with, or a timing window allowed for another thread to drop or alter the outline midstream.

Action: n/a

ORA-18003: an outline already exists with this signature

Cause: The signature generation algorithm generates signatures that are 16 bytes in length so it is highly unlikely that any 2 signatures will be identical. This message is raised in such a rare case.

Action: Either re-issue the statement that led to the outline being created with some whitespace added or force the outline to be created in a different category.

ORA-18004: outline already exists

Cause: An outline already exists, either with the specified name, or for the specified SQL text.

Action: n/a

ORA-18005: CREATE ANY OUTLINE privilege is required for this operation

ORA-18006: DROP ANY OUTLINE privilege is required for this operation

ORA-18007: ALTER ANY OUTLINE privilege is required for this operation

ORA-18008: cannot find OUTLN schema

Cause: The database creation script that creates this schema must not have been executed.

Action: Review the log files to see what happened when the database was created.

ORA-18009: one or more outline system tables do not exist

Cause: Either the database creation script that creates these tables was not executed or a user accidentally deleted the table.

Action: Review the log files to see what happened when the database was created.

ORA-18010: command missing mandatory CATEGORY keyword

Cause: User failed to specify the CATEGORY keyword.

Action: Re-issue the command with the CATEGORY keyword included.

ORA-18011: the outline specified in the FROM clause does not exist

ORA-18012: select_catalog_role role is required for this operation

ORA-18013: timed out while waiting for resource *string*

ORA-18014: deadlock detected while waiting for resource *string*

ORA-18015: invalid source outline signature

Cause: User imported an 8i outline into a 9i database without updating signatures

Action: execute dbms_outln.update_signatures

ORA-18100: XUST0001 - Updating expression in a wrong position

Cause: An updating expression was used in a position other than one of the following: - The topmost expression in the body of a query. - The MODIFY clause of a TRANSFORM expression. - The RETURN clause of a FLWOR expression. - The RETURN clauses of a TYPESWITCH expression in which every RETURN clause contains an updating expression, an empty expression (), or a call to the fn:error function. - The THEN and ELSE clauses of a conditional statement in which both the then and else clauses contain either an updating expression, an empty expression (), or a call to the fn:error function. - An operand of a comma expression in which each operand is either an updating expression, an empty expression (), or a call to the fn:error function. - The content of a parenthesized expression. - The body of a function declaration in which the keyword UPDATING is specified.

Action: None

ORA-18101: XUST0002 - Non-updating expression in a wrong position

Cause: A non-updating expression other than an empty expression () or a call to the fn:error function was used in one of the following positions: - The MODIFY clause of a TRANSFORM expression. - The top-level expression in the body of a function declaration in which the keyword UPDATING is specified.

Action: None

ORA-18102: XUST0003 - Repeated revalidation declaration

Cause: Prolog contained more than one revalidation declaration.

Action: None

ORA-18103: XUTY0004 - Invalid attribute node in the insertion sequence

Cause: The insertion sequence of an INSERT expression contained an attribute following a node that was not an attribute node.

Action: None

ORA-18104: XUTY0005 - Invalid target expression for INSERT

Cause: In an INSERT expression where INTO, AS FIRST INTO, or AS LAST INTO was specified, the target expression returned a nonempty result that did not consist of a single element or document node.

Action: None

ORA-18105: XUTY0006 - Invalid target expression for INSERT

Cause: In an INSERT expression where BEFORE or AFTER was specified, the target expression returned a nonempty result that did not consist element, text, comment, or processing instruction node.

Action: None

ORA-18106: XUTY0007 - Invalid target expression for DELETE

Cause: The target expression of a DELETE expression did not return a sequence of zero or more nodes.

Action: None

ORA-18107: XUTY0008 - Invalid target expression for REPLACE

Cause: In a REPLACE expression, the target expression returned a nonempty result that did not consist of a single element, attribute, text,

Action: None

ORA-18108: XUDY0009 - Invalid target expression for REPLACE

Cause: In a REPLACE expression where VALUE OF was not specified, the node returned by the target expression did not have a parent.

Action: None

ORA-18109: XUTY0010 - Invalid replacement sequence for REPLACE

Cause: In a REPLACE expression where VALUE OF was not specified and the target was an element, text, comment, or processing instruction node, the replacement sequence did not consist of zero or more element, text, comment, or processing instruction nodes.

Action: None

ORA-18110: XUTY0011 - Invalid replacement sequence for REPLACE

Cause: In a REPLACE expression where VALUE OF was not specified and the target is an attribute node, the replacement sequence did not consist of zero or more attribute nodes.

Action: None

ORA-18111: XUTY0012 - Invalid target expression for RENAME

Cause: In a RENAME expression, the target expression returned a nonempty result that did not consist of a single element, attribute, or processing instruction node.

Action: None

ORA-18112: XUTY0013 - Invalid COPY expression for TRANSFORM

Cause: In a TRANSFORM expression, a source expression in the copy clause did not return a single node.

Action: None

ORA-18113: XUDY0014 - Modified node was not created by the COPY clause

Cause: In a TRANSFORM expression, the MODIFY clause modified a node that was not created by the COPY clause.

Action: None

ORA-18114: XUDY0015 - Duplicate RENAME for the same target node

Cause: A node was the target of more than one RENAME expression within the same query.

Action: None

ORA-18115: XUDY0016 - Duplicate REPLACE for the same target node

Cause: A node was the target of more than one REPLACE expression (without VALUE OF being specified) within the same query.

Action: None

ORA-18116: XUDY0017 - Duplicate REPLACE for the same target node

Cause: A node was the target of more than one REPLACE VALUE OF expression within the same query.

Action: None

ORA-18117: XUDY0018 - External not updating function returns an updated value

Cause: A function that was declared to be external but not updating returned a nonempty pending update list.

Action: None

ORA-18118: XUDY0019 - External updating function returns an invalid value

Cause: A function that was declared to be both external and updating returned a nonempty data model instance.

Action: None

ORA-18119: XUDY0020 - Deleted node has no parent

Cause: Node was deleted that had no parent before execution of the query began.

Action: None

ORA-18120: XUDY0021 - The result XDM instance violates XDM constraints

Cause: XDM instance resulting from applying all the updates in a query violated constraint specified in [XQuery/XPath Data Model (XDM)]. In this case, none of the updates in the query were made effective.

Action: None

ORA-18121: XUTY0022 - Invalid attribute insertion into a document node

Cause: INSERT expression specified the insertion of an attribute node into a document node.

Action: None

ORA-18122: XUDY0023 - Updating expression introduces a namespace conflict

Cause: An INSERT, REPLACE, or RENAME expression affected an element node by introducing a new namespace binding that conflicted with one of its existing namespace bindings.

Action: None

ORA-18123: XUDY0024 - Updating expression introduces a namespace conflict

Cause: Effect of a set of updating expressions introduced conflicting namespace bindings into an element node.

Action: None

ORA-18124: XUDY0025 - Invalid QName for processing instruction RENAME

Cause: Target of a RENAME expression was a processing instruction node, and the new name expression returned a QName with a nonempty namespace prefix.

Action: None

ORA-18125: XUST0026 Revalidation mode *string* is not supported

Cause: Revalidation declaration in a Prolog specified a revalidation mode that is not supported by the current implementation.

Action: None

ORA-18126: XUDY0027 - Invalid target expression

Cause: Target expression of an INSERT, REPLACE, or RENAME expression evaluated to an empty sequence.

Action: None

ORA-18127: XUST0028 - Updating function should not have a return type

Cause: Function declaration specified both UPDATING and a return type.

Action: None

ORA-18128: XUDY0029 - INSERT expression target node doesn't have a parent

Cause: In an INSERT expression where BEFORE or AFTER was specified, a node returned by the target expression did not have a parent.

Action: None

ORA-18129: XUDY0030 - Invalid insertion of an attribute node

Cause: INSERT expression specified the insertion of an attribute node before or after a child of a document node.

Action: None

ORA-18130: FOUP0001 - Invalid 'fn:put' first operand

Cause: The first operand of fn:put was not a node of a supported kind.

Action: None

ORA-18131: FOUP0002 - Invalid 'fn:put' second operand

Cause: The second operand of fn:put was not a valid lexical representation of the xs:anyURI type.

Action: None

ORA-18150: SQL input value cannot be modified in updating expression

Cause: Updating expression was specified as top-level XMLQuery expression.

Action: Use XQuery TRANSFORM expression to copy input value and modify it.

ORA-18160: FTST0001 - FTMildNot operator not supported

Cause: An attempt was made to use the mild not option when the FTMildNot operator was not supported. An implementation that does not support the FTMildNot operator must raise a static error if a full-text query contains a mild not.

Action: Do not use the FTMildNot full-text query operator.

ORA-18161: FTST0002 - FTUnaryNot operator not supported

Cause: An implementation that enforces one of the restrictions on FTUnaryNot must raise a static error if a full-text query does not obey the restriction.

Action: Do not use the FTUnaryNot full-text query operator.

ORA-18162: FTST0003 - FTUnit and FTBigUnit not supported

Cause: An implementation that does not support one or more of the choices on FTUnit and FTBigUnit must raise a static error if a full-text query contains one of those choices.

Action: Do not use the FTUnit or FTBigUnit option.

ORA-18163: FTST0004 - FTScope not supported

Cause: An implementation that does not support the FTScope operator must raise a static error if a full-text query contains a scope.

Action: Do not use the FTScope full-text query operator.

ORA-18164: FTST0005 FTTimes not supported

Cause: An implementation that does not support the FTTimes operator must raise a static error if a full-text query contains a times.

Action: Do not use the FTTimes full-text query operator.

ORA-18165: FTST0006 FTStopwordOption not supported

Cause: An implementation that restricts the use of FTStopwordOption must raise a static error if a full-text query contains a stop word option that does not meet the restriction.

Action: Do not use the FTStopwordOption full-text query operator.

ORA-18166: FTST0007 FTIgnoreOption not supported

Cause: An implementation that restricts the use of FTIgnoreOption must raise a static error if a full-text query contains an ignore option that does not meet the restriction.

Action: Do not use the FTIgnoreOption full-text query operator.

ORA-18167: FTST0008 stop word list not found

Cause: It is a static error if, during the static analysis phase, the query is found to contain a stop word option that refers to a stop word list that is not found in the statically known stop word lists.

Action: Please make sure the stop word list exist.

ORA-18168: FTST0009 language option not supported

Cause: It may be a static error if, during the static analysis phase, the query is found to contain a language identifier in a language option that the implementation does not support. The implementation may choose not to raise this error and instead provide some other implementation-defined behavior.

Action: Do not use the language full-text query option.

ORA-18169: FTST0010 FTOrder not succeeding FTWindow or FTDistance operator

Cause: It is a static error if, during the static analysis phase, an expression is found to use an FTOrder operator that does not appear directly succeeding an FTWindow or an FTDistance operator and the implementation enforces this restriction.

Action: Do not use the FTOrder succeeding FTWindow or FTDistance full-text query operator.

ORA-18170: FTST0011 FTWindow and FTDistance restriction

Cause: An implementation may restrict the use of FTWindow and FTDistance to an FTOr that is either a single FTWords or a combination of FTWords involving only the operators && and | |. If it a static error if, during the static analysis phase, an expression is found that violates this restriction and the implementation enforces this restriction.

Action: Follow FTWindow and FTDistance restriction.

ORA-18171: FTST0012 FTContent not supported

Cause: An implementation that does not support the FTContent operator must raise a static error if a full-text query contains one.

Action: Do not use FTContent full-text query operator.

ORA-18172: FTST0013 more than one language encountered

Cause: It is a static error if, during the static analysis phase, an implementation that restricts the use of FTLanguageOption to a single language, encounters more than one distinct language option.

Action: Do not use more than one language in FTLanguage full-text option.

ORA-18173: FTST0014 score computation restriction

Cause: An implementation may constrain the form of the expression used to compute scores. It is a static error if, during the static analysis phase, such an implementation encounters a scoring expression that does not meet the restriction.

Action: n/a

ORA-18174: FTST0015 FTCaseOption restriction

Cause: It is a static error if, during the static analysis phase, an implementation that restricts the choices of FTCaseOption encounters the "lowercase" or "uppercase" option.

Action: n/a

ORA-18175: FTDY0016 weights invalid

Cause: It is a dynamic error if an implementation that does not support negative weights encounters a weight expression that does not meet the restriction.

Action: Do not use invalid weights value.

ORA-18176: FTDY0017 mild not selection containings StringExclude

Cause: It is a dynamic error if an implementation encounters a mild not selection, one of whose operands evaluates to an AllMatches that contains a StringExclude

Action: n/a

ORA-18177: XQuery full text expression '*string*' cannot be evaluated using XML full-text index

Cause: There was no XML full-text index to evaluate the XQuery full text expression filtering XML documents that were stored in an XMLType table or column.

Action: Create an XML full-text index on the XML documents stored in an XMLType table or column and ensure that the XQuery full text expression can be evaluated by an XML full-text index.

ORA-18178: XMLType input to XMLTABLE row expression needs to use PASSING BY REF clause

Cause: The XMLTABLE column expression used the XMLTYPE(SEQUENCE) BY REF clause which requires XMLType input to the XMLTABLE row expression to use the PASSING BY REF clause.

Action: Specify the PASSING BY REF clause for XMLType input to the XMLTABLE row expression.

ORA-18179: XMLTABLE column expression needs to be specified using XMLTYPE(SEQUENCE) BY REF clause

Cause: Output of the XMLTABLE column expression was passed to an XMLTABLE row expression with PASSING BY REF clause.

Action: Specify the XMLTABLE column expression using XMLTYPE(SEQUENCE) BY REF clause.

ORA-18180: wrong argument is passed to XMLTABLE row expression using PASSING BY REF clause

Cause: An XML document that was not stored in an XMLTYPE table or column was passed to an XMLTABLE row expression using the PASSING BY REF clause.

Action: Make sure only XML documents that are stored in an xmltype table or column can be passed in as input to XMLTABLE row expression using the PASSING BY REF clause

ORA-18181: XQuery full text expression option '*string*' is not supported

Cause: An attempt was made to use an XQuery full text expression option that is not supported.

Action: Avoid using an XQuery full text expression option which is not supported.

ORA-18182: FTST0018 unknown thesaurus is used

Cause: During the static analysis phase, the query was found to contain a thesaurus option that referred to a thesaurus that was not found in the statically known thesauri. This is a static error.

Action: Avoid using unknown thesaurus.

ORA-18183: FTST0019 more than one match option of any given match option group is used within a single FTMatchOptions.

Cause: Within the single FTMatchOptions, there was more than one match option of any given match option group. This is a static error.

Action: Avoid using more than one match option of any given match option group is used within a single FTMatchOptions.

ORA-18184: FTDY0020 a query string violates wildcard syntax when wildcards is in effect

Cause: Because wildcards were in effect, the query string violated wildcard syntax. This is a dynamic error.

Action: Fix wildcard syntax when wildcards is in effect.

ORA-18185: query is not parsed correctly

Cause: The query string was not parsed correctly.

Action: Check the syntax of the query string.

ORA-19000: missing RELATIONAL keyword

Cause: The keyword RELATIONAL in the work OBJECT RELATIONAL is missing in the XMLTYPE storage clause specification.

Action: Supply the RELATIONAL keyword in the storage clause

ORA-19001: Invalid storage option specified

Cause: An invalid storage option was specified for the XMLType.

Action: Supply a valid storage option.

ORA-19002: Missing XMLSchema URL

Cause: A XML schema URL must be specified in the storage option.

Action: Specify a URL for the XMLSchema.

ORA-19003: Missing XML root element name

Cause: A root element in the XMLSchema must be specified if the XML schema is given.

Action: Specify a root element in the XML schema.

ORA-19004: Duplicate XMLType OBJECT RELATIONAL storage option

Cause: A duplicate storage option for the XMLType column was specified

Action: Specify a single storage option for an XMLType column

ORA-19005: Duplicate XMLType LOB storage option

Cause: A duplicate storage option for the XMLType column was specified

Action: Specify a single storage option for an XMLType column

ORA-19006: XMLType TYPE storage option not appropriate for storage type

Cause: The TYPE option can only be used in case of OBJECT RELATIONAL storage option

Action: Remove the TYPE option or specify an OBJECT RELATIONAL storage for the XMLType column

ORA-19007: Schema *string* does not match expected *string*.

Cause: The given XML document conformed to a different schema than expected.

Action: Insert/Update only the XML documents that conform to that particular schema.

ORA-19008: Invalid version of the XMLType

Cause: An invalid version of the XMLType was found.

Action: This is possible due to data corruption or an internal error or running an older client against a newer version of the database. Make sure that the version of the client can understand the XMLType in the database.

ORA-19009: Missing XMLSchema keyword

Cause: The XMLSchema keyword is missing

Action: Specify the XMLSchema URL and element name.

ORA-19010: Cannot insert XML fragments

Cause: XML fragments got from extractNode cannot be inserted into the database.

Action: Convert the fragment into a proper XML document before insertion.

ORA-19011: Character string buffer too small

Cause: The string result asked for is too big to return back

Action: Get the result as a lob instead

ORA-19012: Cannot convert XML fragment to the required datatype

Cause: A conversion to a datatype was requested which cannot be performed

Action: The XMLType may contain fragments and other elements which cannot be converted to the appropriate datatype.

ORA-19013: Cannot create VARRAY columns containing XMLType

Cause: An attempt was made to create a VARRAY column which contains a XMLType

Action: You cannot store VARRAYs containing XMLTypes in tables. Use nested tables instead

ORA-19015: Invalid XML tag identifier (*string*)

Cause: An invalid XML identifier was detected during XML generation

Action: Fix the offending tag to not contain characters or symbols that are not allowed by the XML specification

ORA-19016: attributes cannot occur after element specifications

Cause: Attributes specified using the "@" identifier can only occur before any other element definition when creating XML

Action: Change the order of the types so that the attributes occur in the beginning

ORA-19017: Attributes can only be simple scalars

Cause: Attribute values can only be simple scalar values

Action: Use only simple datatypes for attribute values

ORA-19018: Invalid character in XML tag '*string*'

Cause: A tag name was found to have an invalid XML character during XML generation.

Action: Rewrite the query so that the generated XML tag, corresponding to a column name or alias, contains only valid characters.

ORA-19019: Invalid context passed to DBMS_XMLGEN.GETXML

Cause: The value of context passed to GETXML was invalid.

Action: Rewrite the query so that the value of context passed to GETXML is valid.

ORA-19020: invalid dereference of XMLType columns

Cause: An attempt was made to dereference the attributes of an XMLType column which is not part of a base table

Action: You can only dereference the attributes of a base table XMLType column

ORA-19022: Unoptimized XML construct detected.

Cause: XMLOptimizationCheck is enabled and unrewritten XML construct was detected. This prevents execution of XML construct.

Action: Make sure that XML construct is being optimized. See trace file for further information. Disable XMLOptimizationCheck if you want the unoptimized XML operation to be executed.

ORA-19023: The first argument to UPDATEXML operator has to be an XMLTYPE

Cause: The first argument passed to the update value operator was not an XMLTYPE.

Action: Rewrite the query so that the first argument to the UPDATEXML operator is XMLTYPE.

ORA-19024: Cursor expression must be named

Cause: The value of context passed to GETXML was invalid.

Action: Rewrite the query so that the value of context passed to GETXML is valid.

ORA-19025: EXTRACTVALUE returns value of only one node

Cause: Given XPath points to more than one node.

Action: Rewrite the query so that exactly one node is returned.

ORA-19026: EXTRACTVALUE can only retrieve value of leaf node

Cause: Given XPath does not point to a leaf node.

Action: Rewrite the query so that a leaf node is returned.

ORA-19028: Invalid ADT parameter passed to toObject() function

Cause: The object passed as ADT parameter to sys.XMLType.toObject() is not the same type, or a super-type, of the mapped type.

Action: Pass an object of the correct type to toObject().

ORA-19029: Cannot convert the given XMLType to the required type

Cause: The passed in XMLType could not be convert to the required type

Action: Binary XMLtype instances or other objects cannot be converted to the required object or collection types.

ORA-19030: Method invalid for non-schema based XML Documents.

Cause: The method can be invoked on only schema based xmltype objects.

Action: Don't invoke the method for non schema based xmltype objects.

ORA-19031: XML element or attribute *string* does not match any in type *string.string*

Cause: The passed in XML tag does not match any in the object type

Action: Pass a valid canonical XML that can map to the given object type

ORA-19032: Expected XML tag *string* got *string*

Cause: When converting XML to object, a wrong tag name was present

Action: Pass a valid canonical XML that can map to the given object type

ORA-19033: schema specified in the XML document does not match the schema parameter

Cause: When creating schema-based XML, the schema specified in the XML document is different from the schema passed in as the 'schema' parameter.

Action: Change the schema parameter to match the schema specified in the XML document.

ORA-19034: Type not supported during schema generation

Cause: The object type contained a type that is not supported for schema generation.

Action: Use a different type or do not generate a schema.

ORA-19035: Invalid select item of the query in newContextFromHierarchy()

Cause: The query does not have a number select item followed by an XMLType select item only.

Action: Make sure the result set of the query used in the newContextFromHierarchy() must have only two selected items: the first item must be number type and the second item must be XMLType.

ORA-19036: Invalid query result set in newContextFromHierarchy()

Cause: The result set of the query used in the newContextFromHierarchy() does not have the same property as the result set generated by a CONNECT BY query.

Action: Make sure the query used in newContextFromHierarchy() is a CONNECT BY query or the query returns the result set have the same property as the result set generated by a CONNECT BY query.

ORA-19037: XMLType result can not be a fragment

Cause: The select item of the query in newContextFromHierarchy() is an XML fragment.

Action: Make sure the select item of the query in newContextFromHierarchy() is NOT an XML fragment

ORA-19038: Invalid operations on query context

Cause: SetMaxRows, SetSkipRows, SetRowTagName operations are applied to a query context created from newContextFromHierarchy().

Action: SetMaxRows, SetSkipRows, SetRowTagName operations can not be applied to a query context created from newContextFromHierarchy().

ORA-19039: Keyword *string* reserved for future use

Cause: The keyword is reserved for future use as a builtin function.

Action: Change the name mentioned above to a different one.

ORA-19040: Element *string* does not match expected *string*.

Cause: The given XML document had a different root element than expected.

Action: Insert/Update only the XML documents that conform to that particular schema and element.

ORA-19041: Comment data cannot contain two consecutive '-'s

Cause: The given comment string expression has two consecutive '-'s.

Action: Modify comment string to eliminate one or both of the consecutive '-'s.

ORA-19042: Enclosing tag *string* cannot be xml in any case combination

Cause: The given enclosing tag matched 'xml' in some case combination

Action: Modify the enclosing tag so that it is not xml in any case combination.

ORA-19043: Multiply nested XMLROOT function disallowed

Cause: An XMLROOT function has an operand that is also an XMLROOT function.

Action: Modify the query so that there are no multiply nested XMLROOT functions.

ORA-19044: character length specified for XMLSerialize is too small.

Cause: An XMLSerialize function was called with a type of character type (e.g. VARCHAR2(27)), and the length specified (27 in the example) was too small.

Action: Modify the query so that the character length specified is larger.

ORA-19045: character set id specified for XMLSerialize not valid

Cause: An XMLSerialize function was called with an invalid value for the character set id.

Action: Modify the query so that the character set id is valid.

ORA-19046: Out-of-line table cannot be shared by two top-level tables (table '*string.string*' and the current table being created).

Cause: An attempt was made to share an out-of-line table between two top-level tables.

Action: Use the existing top-level XML table.

ORA-19047: Cannot specify storage for individual VARRAYS

Cause: An attempt was made to combine storage specification for a particular VARRAY with STORE ALL VARRAYS clause.

Action: Either specify storage for individual VARRAYS or use the STORE ALL VARRAYS clause.

ORA-19048: Cannot specify VARRAY storage in tableProps

Cause: An attempt was made to store all varrays as tables or LOBs in tableProps.

Action: Do not specify varray store as tables or LOBs in tableProps.

ORA-19051: Cannot use fast path insert for this XMLType table

Cause: Error while trying to insert into an XMLType table using fast path insert.

Action: Set event 19049 to disable fast path insert and try again.

ORA-19100: PASSING or RETURNING keyword expected

Cause: The keyword PASSING or RETURNING was missing.

Action: Specify the PASSING or RETURNING keyword.

ORA-19101: CONTENT keyword expected

Cause: The keyword CONTENT was missing.

Action: Specify the CONTENT keyword.

ORA-19102: XQuery string literal expected

Cause: The string literal containing the XQuery expression was missing.

Action: Specify the XQuery expression as a string literal.

ORA-19103: VALUE keyword keyword

Cause: The keyword VALUE was missing.

Action: Specify the VALUE keyword.

ORA-19104: invalid XQueryX: missing attribute *string*

Cause: The XQueryX expression was not assigned the expected attribute.

Action: Specify a valid XQueryX.

ORA-19105: invalid XQueryX: expected text node - got *string*

Cause: The XQueryX expression did not contain a text node as expected.

Action: Specify a valid XQueryX.

ORA-19106: invalid XQueryX: expected *string* - got *string*

Cause: The XQueryX expression did not contain the node as expected.

Action: Specify a valid XQueryX.

ORA-19107: invalid XQueryX - unsupported construct - *string*

Cause: The given XQuery expression contains an unsupported construct.

Action: Specify a valid XQueryX.

ORA-19108: WHITESPACE keyword expected

Cause: The keyword WHITESPACE was missing.

Action: Specify the WHITESPACE keyword.

ORA-19109: RETURNING keyword expected

Cause: The keyword RETURNING was missing.

Action: Specify the RETURNING keyword.

ORA-19110: unsupported XQuery expression

Cause: The program specified an XQuery expression that is not supported.

Action: Rewrite the XQuery with a expression that is supported.

ORA-19111: error during evaluation of the XQuery expression

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19112: error raised during evaluation: *string*

Cause: The error function was called during evaluation of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19113: trace function called during evaluation: *string*

Cause: The trace function was called during evaluation of the XQuery expression.

Action: Check the log file for the trace message.

ORA-19114: XPST0003 - error during parsing the XQuery expression: *string*

Cause: An error occurred during the parsing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19115: too many context items specified

Cause: More than one context item was specified as input to the XMLQuery function.

Action: Specify a single context item for the XMLQuery function.

ORA-19116: too many xmlspace declarations

Cause: The query prolog contained multiple xmlspace declarations.

Action: Remove the duplicate xmlspace declarations.

ORA-19117: XQST0070 - invalid redefinition of predefined namespace prefix '*string*'

Cause: The given predefined namespace was being redefined in a namespace declaration.

Action: Remove the namespace declaration that redefines the predefined namespace prefix.

ORA-19118: XQST0066 - duplicate default namespace definition - *string*

Cause: More than one default namespace declaration used the given namespace URI.

Action: Remove the duplicate default namespace definition.

ORA-19121: duplicate attribute definition - *string*

Cause: More than one attribute with the same name.

Action: Remove the duplicate attribute definition.

ORA-19122: unsupported XQuery declaration

Cause: The program specified an XQuery declaration that is not supported.

Action: Rewrite the XQuery with a declaration that is supported.

ORA-19123: FORG0003: fn:zero-or-one() called with a sequence containing more than one item

Cause: sequence with more than one item was passed into fn:zero-or-one() function

Action: correct input argument to fn:zero-or-one() function

ORA-19124: FORG0004: fn:one-or-more() called with a sequence containing no items

Cause: sequence containing no items was passed into fn:one-or-more() function

Action: correct input argument to fn:one-or-more() function

ORA-19125: FORG0005: fn:exactly-one() called with a sequence containing zero or more than one item

Cause: sequence containing zero or more than one item was passed into fn:exactly-one() function

Action: correct input argument to fn:exactly-one() function

ORA-19126: XQuery extension expression contains neither a pragma that is recognized by the implementation nor an expression enclosed in curly braces

Cause: No expression was enclosed in curly braces for the extension expression or the pragma content was not recognized.

Action: Correct inputs to extension expression.

ORA-19127: XQST0067: XQST0067: A static error is raised if a Prolog contains more than one construction declaration

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19128: XQST0068: A static error is raised if a Prolog contains more than one boundary-space declaration

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19129: XQST0069: A static error is raised if a Prolog contains more than one empty order declaration

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19130: XQST0070: A static error is raised if the predefined namespace prefix xml or xmlns is redeclared by a namespace declaration or namespace declaration attribute

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19131: XQST0071: A static error is raised if the namespace declaration attributes of a direct element constructor do not have distinct names

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19132: XQDY0072: It is a dynamic error if the result of the content expression of a computed comment constructor contains two adjacent hyphens or ends with a hyphen

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19133: XQST0073: It is a static error if the graph of module imports contains a cycle (that is, if there exists a sequence of modules M1 ... Mn such that each Mi imports Mi+1 and Mn imports M1), unless all the modules in the cycle share a common namespace

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19134: XQDY0074: It is a dynamic error if the value of the name expression in a computed element constructor cannot be converted to an expanded QName (for example, because it contains a namespace prefix not found in statically known namespaces.)

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19135: XQST0075: An implementation that does not support the Validation Feature must raise a static error if it encounters a validate expression

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19136: XQST0076: It is a static error if a collation subclause in an order by clause of a FLWOR expression does not identify a collation that is present in statically known collations

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19137: XQST0079: It is a static error if an extension expression contains neither a pragma that is recognized by the implementation nor an expression enclosed in curly braces

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19138: The target type of a cast or castable expression must be an atomic type that is in the in-scope schema types and is not xs:NOTATION or xs:anyAtomicType, optionally followed by the occurrence indicator "?"; otherwise a static error is raised

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19139: XPST0081: It is a static error if a QName used in a query contains a namespace prefix that cannot be expanded into a namespace URI by using the statically known namespaces

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19140: XPST0083: It is a static error if the target type of a cast expression or constructor function is xs:QName or a type derived from xs:QName or

xs:NOTATION, and the argument of the cast expression or constructor function is not a string literal

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19141: XQDY0084: It is a dynamic error if the element validated by a validate statement does not have a top-level element declaration in the in-scope element declarations, if validation mode is strict

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19142: FONC0001 = FONC0001: undefined context item

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19143: XQTY0086: It is a type error if the typed value of a copied element or attribute node is namespace-sensitive when construction mode is preserve and copy-namespaces mode is no-preserve

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19145: XQST0087: It is a static error if the encoding specified in a Version Declaration does not conform to the definition of EncName specified in [XML 1.0]

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19146: XQST0088: It is a static error if the literal that specifies the target namespace in a module import or a module declaration is of zero length

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19147: XQST0089: It is a static error if a variable bound in a for clause of a FLWOR expression, and its associated positional variable, do not have distinct names (expanded QNames)

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19148: XQST0090: It is a static error if a character reference does not identify a valid character in the version of XML that is in use

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19149: XQDY0091: An implementation may raise a dynamic error if an xml:id error, as defined in [XML ID], is encountered during construction of an attribute named xml:id

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19150: XQDY0092: An implementation may raise a dynamic error if a constructed attribute named xml:space has a value other than preserve or default

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19151: XQST0093: It is a static error to import a module M1 if there exists a sequence of modules M1 ... Mi ... M1 such that each module directly depends on the next module in the sequence (informally, if M1 depends on itself through some chain of module dependencies.)

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19152: FOCH0001 = FOCH0001: codepoint not valid

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19153: FOCH0002: unsupported collation

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19154: FOCH0003: unsupported normalization form

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19155: FOCH0004: collation does not support collation units

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19156: FODC0001: no context document

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19157: FODC0002: error retrieving resource

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19158: FODC0004: invalid argument to fn:collection()

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19159: FODC0005: invalid argument to fn:doc

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19160: XPST0003 - syntax error: invalid variable name *string*

Cause: The given XQuery variable does not begin with the '\$' sign

Action: Fix the variable name to start with the "\$" sign.

ORA-19161: XPTY0004 - XQuery type mismatch: invalid argument type '*string*' for function '*string*'

Cause: The type of the argument that was passed to the given function was not valid.

Action: Fix the argument to be of a type supported by the given function.

ORA-19162: XPTY0004 - XQuery type mismatch: invalid argument types 'string', 'string' for function 'string'

Cause: The type of the arguments that were passed to the given function was not valid.

Action: Fix the arguments to be of a type appropriate for the given function.

ORA-19163: XPTY0004 - XQuery type mismatch: argument type mismatch: expected - 'string' got - 'string' for function 'string'

Cause: The type of the arguments that were passed to the given function was not valid.

Action: Fix the arguments to be of a type appropriate for the given function.

ORA-19164: XQST0085 - It is a static error if the namespace URI in a namespace declaration attribute is a zero-length string, and the implementation does not support [XML Names 1.1].

Cause: There was a zero-length URI in namespace declaration.

Action: Fix the namespace declaration.

ORA-19165: FONS0003: no prefix defined for namespace

Cause: There was a zero-length URI in namespace declaration.

Action: Fix the namespace declaration.

ORA-19166: FONS0003: FONS0004: no namespace found for prefix

Cause: There was a zero-length URI in namespace declaration.

Action: Fix the namespace declaration.

ORA-19167: FONS0005: base uri not defined in the static context

Cause: There was a zero-length URI in namespace declaration.

Action: Fix the namespace declaration.

ORA-19168: FORG0002: invalid argument to fn:resolve-uri()

Cause: There was a zero-length URI in namespace declaration.

Action: Fix the namespace declaration.

ORA-19169: FORG0006: invalid argument type in 'string'

Cause: There was a zero-length URI in namespace declaration.

Action: Fix the namespace declaration.

ORA-19171: FORG0007: invalid argument to aggregate function

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19172: FORG0008: both arguments to fn:dateTime have a specified timezone

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19173: FORG0009: error in resolving a relative URI against a base URI in fn:resolve-uri

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19174: FORX0001: invalid regular expression flags

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19175: FORX0002: invalid regular expression

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19176: FORX0003: regular expression matches zero-length string

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19177: FORX0004: invalid replacement string

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19178: FOTY0001: type error

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19179: FOTY0011: Type error. Context item is not a node

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19180: FOTY0012: argument node does not have a typed value

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19181: FOTY0014: type exception

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19182: FORT0001: invalid number of parameters

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19183: FOTY0002: type definition not found

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19184: FOTY0021: invalid node type

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19185: FOAR0002: numeric operation overflow/unflow

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19186: FOCA0001: input value too large for decimal

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19187: FOCA0002: invalid lexical value

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19188: FOCA0003: input value too large for integer

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19189: FOCA0005: NaN supplied as float/double value

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19190: FOER0000: Unidentified error

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19191: FOAR0001: division by zero

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19192: XQST0047: It is a static error if multiple module imports in the same Prolog specify the same target namespace

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19193: XQST0045: It is a static error if the function name in a function declaration is in one of the following namespaces: <http://www.w3.org/XML/1998/> namespace, <http://www.w3.org/2001/XMLSchema>, <http://www.w3.org/2001/XMLSchema-instance>, <http://www.w3.org/2005/04/xpath-functions>, <http://www.w3.org/2005/04/xpath-datatypes>

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19194: XQDY0026: It is a dynamic error if the result of the content expression of a computed processing instruction constructor contains the string ">"

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19195: Invalid policy in ora:contains

Cause: An invalid policy was specified in ora:contains.

Action: Rename the policy name, policy schema name, or do not specify any policy to pick up default policy.

ORA-19196: XMLType table or view is not allowed with this form of fn:collection

Cause: The table or view specified in fn:collection was of XMLType.

Action: XMLType table or view is not allowed in the form of fn:collection('oradb:/schema/table/ROW/column'). It has to be a relational table or view.

ORA-19197: Column not found or invalid column type with this form of fn:collection

Cause: The column to be retrieved was not found or was not of XMLType.

Action: The column to be retrieved in the form of fn:collection('oradb:/schema/table/ROW/column') or fn:collection('oradb:/schema/table/ROW[predicate]/column') has to be of XMLType.

ORA-19198: Column not found or invalid column specified in the predicate with this form of fn:collection

Cause: The column specified in the predicate was not found or was not allowed.

Action: The column specified in the predicate in the form of fn:collection('oradb:/schema/table/ROW[predicate]/column') cannot be of XMLType.

ORA-19200: Invalid column specification

Cause: All input arguments must be valid columns

Action: Specify a valid list of columns

ORA-19201: Datatype not supported

Cause: The particular datatype is not supported in the XMLGEN operator

Action: Specify only supported datatypes as arguments to the XMLGEN operator

ORA-19202: Error occurred in XML processingstring

Cause: An error occurred when processing the XML function

Action: Check the given error message and fix the appropriate problem

ORA-19203: Error occurred in DBMS_XMLGEN processingstring

Cause: An error occurred when processing the DBMS_XMLGEN functions

Action: Check the given error message and fix the appropriate problem

ORA-19204: Non-scalar value 'string' is marked as XML attribute

Cause: Only scalar values (i.e. values which are not of object or collection type) can be marked as XML attribute, i.e. is prefixed by '@'. In this case, a non-scalar value was prefixed with '@'

Action: Remove the '@' sign, or make the value a scalar.

ORA-19205: Attribute 'string' qualifies a non-scalar value in the select list

Cause: The attribute immediately follows a value of object or collection type in the select list or type definition.

Action: Remove the '@' sign, or make the previous value a scalar.

ORA-19206: Invalid value for query or REF CURSOR parameter

Cause: The queryString argument passed to DBMS_XMLGEN.newContext was not a valid query, or REF CURSOR.

Action: Rewrite the query so that the queryString argument is a valid query or REF CURSOR.

ORA-19207: scalar parameter string of XMLEMENT cannot have an alias.

Cause: The scalar parameter to XMLEMENT has been qualified with an alias.

Action: Remove the AS clause of the scalar element.

ORA-19208: parameter *string* of function *string* must be aliased

Cause: The indicated parameter of the XML generation function has not been aliased, although it is an expression.

Action: Specify an alias for the expression using the AS clause.

ORA-19209: invalid or unsupported formatting argument

Cause: An invalid or unsupported formatting argument was supplied

Action: Change the formatting argument to legal supported values

ORA-19210: column '*string*', specified to be a key or update column for DBMS_XMLSTORE, does not exist in table '*string*'

Cause: The column specified using setKeyColumn()/setUpdateColumn() did not exist in the table.

Action: Change the column specified to be a column in the table

ORA-19211: column '*string*', specified as key using DBMS_XMLSTORE.setKeyColumn() , must be of scalar type

Cause: The column specified using setKeyColumn() was a non-scalar type column.

Action: Change the column specified to be a scalar column in the table

ORA-19212: no key columns specified before call to DBMS_XMLSTORE.updateXML()

Cause: No columns were specified as key columns before the call to DBMS_XMLSTORE.updateXML.

Action: Use DBMS_XMLSTORE.setKeyColumn() to specify key columns

ORA-19213: error occurred in XML processing at lines*string*

Cause: An error occurred when processing the given lines in an XML function.

Action: Check the given error message and fix the appropriate problem.

ORA-19221: XPST0001 - XQuery static context component *string* not initialized

Cause: An uninitialized static context component was encountered during the static analysis of the expression.

Action: initialize the given static context.

ORA-19222: XPDY0002 - XQuery dynamic context component *string* not initialized

Cause: An uninitialized dynamic context component was encountered during the evaluation of the expression.

Action: Initialize the particular dynamic context component.

ORA-19223: XPST0003 - syntax error in XQuery expression

Cause: The given XQuery expression contains syntax errors.

Action: Fix the syntax error in the XQuery expression.

ORA-19224: XPTY0004 - XQuery static type mismatch: expected - *string* got - *string*

Cause: The expression could not be used because it's static type is not appropriate for the context in which it was used.

Action: Fix the expression to be of the required type or add appropriate cast functions around the expression.

ORA-19225: XPST0005 - XQuery static type error: expected non empty type got empty sequence

Cause: The static type assigned to an expression other than the () expression must not be the empty type.

Action: Fix the expression so it does not return empty sequences.

ORA-19226: XPTY0006 - XQuery dynamic type mismatch: expected *string* got *string*

Cause: The expression could not be used because it's dynamic type did not match the required type as specified by XQuery sequencetype matching rules.

Action: Fix the expression to return the expected type or use appropriate cast functions.

ORA-19227: XPTY0007 - fn:data function is applied to a node (type (*string*)) whose type annotation denotes a complex type with non-mixed complex content.

Cause: The input node for atomization contained a type annotation that denoted a complex type with non-mixed complex content.

Action: Fix the input expression to fn:data to be a node that does not contain non-mixed complex content.

ORA-19228: XPST0008 - undeclared identifier: prefix '*string*' local-name '*string*'

Cause: The given identifier refers to either a type name, function name, namespace prefix, or variable name that is not defined in the static context.

Action: Fix the expression to remove the identifier, or declare the appropriate variable, type, function or namespace.

ORA-19229: XQST0009 - schema import not supported

Cause: A schema import was encountered in the query.

Action: remove the schema import.

ORA-19230: XPST0010 - unsupported axis *string*

Cause: An unsupported axis was encountered in the given expression.

Action: Remove the unsupported axis from the expression.

ORA-19231: XPST0011 -

ORA-19232: XQST0012 - imported schemas violate validity rules

Cause: The imported schemas did not satisfy the conditions for schema validity specified in the XMLSchema specification.

Action: Fix the imported schemas to satisfy the validity rules. In particular, the definitions must be valid, complete, and unique -- that is, the pool of definitions must not contain two or more schema components with the same name and target namespace.

ORA-19233: XQST0013 - invalid pragma

Cause: A pragma was specified whose contents are invalid.

Action: Specify the pragma with the correct contents.

ORA-19234: XQST0014 - invalid or unsupported must-understand extension

Cause: The must-understand extension specified was either invalid or unsupported.

Action: remove the unsupported must-understand extension or fix the error.

ORA-19235: XQST0015 - unsupported must-understand extension

Cause: The XQuery flagger was enabled and the query contained a must-understand extension.

Action: remove the unsupported must-understand extension.

ORA-19236: XQST0016 - module declaration or import not supported

Cause: The given query had a module declaration or module import.

Action: Remove the import module or module declaration.

ORA-19237: XPST0017 - unable to resolve call to function - *string:string*

Cause: The name and arity of the function call given could not be matched with any in-scope function in the static context.

Action: Fix the name of the function or the number of parameters to match the list of in-scope functions.

ORA-19238: XPTY0018 - It is a type error if the result of the last step in a path expression contains both nodes and atomic values

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19239: XPTY0019 - It is a type error if the result of an step (other than the last step) in a path expression contains an atomic value

Cause: The step expression returned a sequence containing an atomic value.

Action: Fix the path expression to return only nodes.

ORA-19240: XPTY0020 - context item must be node in an axis expression

Cause: The context item that was used in the axis expression is not a node.

Action: Change the context item to be a node.

ORA-19241: XPDY0021 - cast to type *string* failed

Cause: The value inside a cast expression could not be cast to the required type.

Action: Fix the input to the cast expression to be of a castable type.

ORA-19242: XQST0022 - namespace declaration attribute must be a literal

Cause: The namespace declaration attribute was not a literal string.

Action: Fix the namespace declaration to be a literal string.

ORA-19243: XQTY0023 - invalid document node content in element constructor

Cause: The content sequence in an element constructor contained a document node.

Action: Change the content of the element constructor so that it does not contain a document node.

ORA-19244: XQTY0024 - invalid attribute node in element constructor

Cause: The content sequence in an element constructor contained an attribute node following a node that was not an attribute node.

Action: Change the content sequence of the element constructor so that it does not contain the attribute node.

ORA-19245: XQDY0025 - duplicate attribute name *string*

Cause: The content sequence of the element constructor contained more than one attribute that had the same name.

Action: Remove the duplicate attributes.

ORA-19246: validation failed - element *string* not found in in-scope element declarations

Cause: The validation mode was strict and the element-constructor contained an element name that was not present in the in-scope element declarations.

Action: Fix the validation mode to be lax or import the schema definition that contains the required element declaration.

ORA-19247: XQDY0027 - validation error

Cause: An error was encountered during the validation of the expression.

Action: Fix the validation error.

ORA-19248: XQTY0028 - invalid node in document constructor

Cause: The content sequence in a document constructor contained either a document or an attribute node.

Action: Fix the content so it does not contain any of the above node types.

ORA-19249: XQDY0029 - value does not match facet of the target type

Cause: The input value to a cast expression did not satisfy the facets of the target type.

Action: Fix the value to conform to the facets of the target type.

ORA-19250: XQTY0030 - too many values to validate expression

Cause: The argument of a validate expression returned more than one element or document node.

Action: Fix the argument of the validate expression to return a single element or document node.

ORA-19251: XQST0031 - unsupported query version

Cause: The query version specified in the prolog was not supported.

Action: Supply the version of the query that is supported.

ORA-19252: XQST0032 - too many declarations for base URI

Cause: The query prolog contained multiple declarations for the base URI.

Action: Remove the duplicate definitions for the base URI.

ORA-19253: XQST0033 - too many declarations for namespace prefix *string*

Cause: The query prolog contained multiple declarations for the same namespace prefix.

Action: Remove the duplicate definitions for the namespace prefix.

ORA-19254: XQST0034 - too many declarations for function *string*

Cause: The query module contained more than one function, either declared or imported, which have the same expanded QName.

Action: Remove the duplicate function definitions.

ORA-19255: XQST0035 - too many declarations of *string* in imported schemas

Cause: Two schemas were imported that defined the same name in the same symbol space and in the same scope.

Action: Fix the schema imports to remove the name conflict.

ORA-19256: XQST0036 - missing type definitions in imported module

Cause: A module was imported, which contains references to type names that are not defined in the in-scope type definitions inside the module.

Action: Fix the module definition to include the in-scope type definition.

ORA-19257: XQST0037 - function or variable *string* in module already defined

Cause: A module being imported contained the function or variable that is already declared in the static context of the importing module.

Action: Remove the conflicting declarations.

ORA-19258: XQST0038 - unsupported or duplicate default collation specified

Cause: The query prolog either specified more than one default collation or the collation specified was not supported.

Action: Remove the duplicate definition or specify a supported collation.

ORA-19259: XQST0039 - duplicate parameter name *string* in function declaration

Cause: The function declaration contained more than one parameter with the same name.

Action: Fix the function declaration to remove the duplicate parameters.

ORA-19260: XQST0040 - invalid namespace node in element constructor

Cause: The content sequence in an element constructor contained a namespace node following a node that was not a namespace node.

Action: Remove the namespace node in the element constructor.

ORA-19261: XQDY0041 - non empty URI in QName

Cause: The name expression in a computed processing instruction or computed namespace constructor returned a QName whose URI part was not empty.

Action: Fix the processing instruction or computed namespace constructor to return the QName with an empty URI part.

ORA-19262: XQST0042 - namespace constructor not inside an element constructor

Cause: The enclosing expression of a computed namespace constructor was not a computed element constructor.

Action: Fix the namespace constructor to be inside an element constructor.

ORA-19263: XQST0043 - duplicate namespace prefix *string*

Cause: Two or more computed namespace constructors within the same computed element constructor attempted to bind the same namespace prefix.

Action: Remove the duplicate namespace definitions.

ORA-19264: XQDY0044 - invalid namespace in attribute constructors

Cause: A computed attribute constructor returned a QName that is in the pre-defined XML namespace (corresponding to namespace prefix xmlns).

Action: Change the namespace for the computed attribute constructor.

ORA-19265: XQST0045 - invalid or unknown prefix *string* in function declaration

Cause: The declared function name in a function declaration had no namespace prefix or had one of the predefined namespace prefixes other than local.

Action: Fix the function declaration to have the correct prefix.

ORA-19266: XQST0046 - invalid URI

Cause: The given URI contained a lexical form that was not valid according to the definition of `xs:anyURI` in XML Schema.

Action: Fix the URI.

ORA-19267: module *string* not found

Cause: The module with the given target URI could not be found.

Action: Fix the prolog to import only available modules.

ORA-19268: XQST0048 - namespace *string* does not match target namespace *string*

Cause: The module contained a function or variable whose namespace did not match the target namespace of the module.

Action: Fix the namespace of the function or variable to match the target namespace of the module.

ORA-19269: XQST0049 - variable *string* defined multiple times

Cause: The module defined or imported the same variable multiple times.

Action: Fix the import or the module definition to remove duplicate definitions.

ORA-19270: XPDY0050 - treat failed - expected *string* got *string*

Cause: The type of the operand to the treat expression did not match the required type.

Action: Fix the input operand to be of the correct type.

ORA-19271: XPST0051 - invalid atomic type definition

Cause: The QName used as an AtomicType in a SequenceType was not defined in the in-scope type definitions as an atomic type.

Action: Use the correct atomic type name.

ORA-19272: XQDY0052 - invalid atomic value in attribute or element constructor

Cause: The content of the element or attribute constructor included an atomic value that could not be cast into a string.

Action: Fix the content to contain atomic values that can be cast to a string.

ORA-19273: XQST0053 - empty string in namespace declaration

Cause: An empty string was used in a namespace declaration.

Action: Fix the namespace declaration to have a non-empty string.

ORA-19274: XQST0054 - variable initialization failed due to circularity

Cause: A circular definition was encountered when the variable was initialized.

Action: Remove the circularity in the initialization.

ORA-19275: XQST0055 - schema path *string* not found in list of in-scope schema definitions

Cause: The ElementTest specified a schema path that could not be found in the list of in-scope schema definitions.

Action: Include the appropriate schema that can be used to resolve the ElementTest.

ORA-19276: XPST0005 - XPath step specifies an invalid element/attribute name: (string)

Cause: The XPath step specified invalid element or attribute name that did not match any nodes according to the input XML schema or structure.

Action: Correct the element or attribute name as the name may be mis-spelled.

ORA-19277: XPST0005 - XPath step specifies an item type matching no node: (string)

Cause: The XPath step specified an item type that did not match any nodes according to the input XML schema or structure.

Action: Correct the item type definition as node of such type does not exist in the input XML schema or structure.

ORA-19278: Invalid value: (string) for type: (string)

Cause: The value was invalid for the type.

Action: Correct the value or change the type.

ORA-19279: XPTY0004 - XQuery dynamic type mismatch: expected singleton sequence - got multi-item sequence

Cause: The XQuery sequence passed in had more than one item.

Action: Correct the XQuery expression to return a single item sequence.

ORA-19280: XQuery dynamic type mismatch: expected atomic value - got node

Cause: A node was passed in to the expression where an atomic value was expected.

Action: Correct the XQuery expression to return an atomic value.

ORA-19281: XQST0055 - It is a static error if a Prolog contains more than one copy-namespaces declaration

Cause: The query prolog contained multiple copy-namespaces declarations.

Action: Remove the duplicate copy-namespaces declarations.

ORA-19282: XQST0068 - It is a static error if a Prolog contains more than one xmlspace declaration

Cause: The query prolog contained multiple xmlspace declarations.

Action: Remove the duplicate xmlspace declarations.

ORA-19283: XQST0031 - It is a static error if the version number specified in a version declaration is not supported by the implementation.

Cause: The query contained a version declaration not supported by this implementation.

Action: Change the version declaration to 1.0 which is the version supported by this implementation.

ORA-19284: Encoding specification in version declaration not supported

Cause: The query contained an encoding specification.

Action: Remove the encoding specification.

ORA-19285: FODC0002 - error retrieving resource

Cause: The URI provided could not be resolved to a valid resource.

Action: Provide a valid URI for a resource.

ORA-19286: XPST0017 - unable to resolve call to function - *string*

Cause: The name and arity of the function call given could not be matched with any in-scope function in the static context.

Action: Fix the name of the function or the number of parameters to match the list of in-scope functions.

ORA-19287: XPST0017 - invalid number of arguments to function - *string:string*

Cause: The name and arity of the function call given could not be matched with any in-scope function in the static context.

Action: Fix the name of the function or the number of parameters to match the list of in-scope functions.

ORA-19288: XPST0017 - invalid number of arguments to function - *string*

Cause: The name and arity of the function call given could not be matched with any in-scope function in the static context.

Action: Fix the name of the function or the number of parameters to match the list of in-scope functions.

ORA-19289: XQST0034 - function *string:string* declared or defined multiple times

Cause: Multiple functions declared or imported by a module had the same expanded QName and the same number of arguments.

Action: Fix the function declaration or definition to remove duplicates.

ORA-19290: XQST0069 - more than one empty order declaration declared in the prolog

Cause: A prolog had more than one empty order declaration.

Action: Fix the prolog to have just one empty order declaration.

ORA-19291: XPST0081 - specified QName cannot be expanded into a namespace URI

Cause: The namespace prefix of the QName could not be expanded into a namespace URI by using the statically known namespaces.

Action: Use a namespace prefix that can be resolved into a namespace URI from the statically known namespaces.

ORA-19292: XQST0057: It is a static error if a schema import binds a namespace prefix but does not specify a target namespace other than a zero-length string

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19293: XQST0058: It is a static error if multiple schema imports specify the same target namespace

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19294: XQST0059: It is a static error if an implementation is unable to process a schema or module import by finding a schema or module with the specified target namespace

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19295: XQST0060: It is a static error if the name of a function in a function declaration is not in a namespace (expanded QName has a null namespace URI)

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19296: XQDY0061: It is a dynamic error if the operand of a validate expression is a document node whose children do not consist of exactly one element node and zero or more comment and processing instruction nodes, in any order

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19297: XQDY0064: It is a dynamic error if the value of the name expression in a computed processing instruction constructor is equal to "XML" (in any combination of upper and lower case)

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19298: XQST0065: A static error is raised if a Prolog contains more than one ordering mode declaration

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19299: XQST0066: A static error is raised if a Prolog contains more than one default element/type namespace declaration, or more than one default function namespace declaration

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19300: Error occurred in uri processingstring

Cause: An error occurred when processing the URL

Action: Check the given error message and fix the appropriate problem

ORA-19320: Host name not specified in HTTP URL

Cause: A host name was not specified in the HTTP url

Action: Specify a host name in the HTTP url when creating the URL string

ORA-19321: Could not open HTTP connection to host (string): port (string)

Cause: A HTTP connection could not be opened to the host

Action: Specify a valid host name and port to connect to

ORA-19322: An error occurred while reading from host (string): port (string)

Cause: An error occurred while reading from the HTTP host

Action: Specify a valid host name and port to read from

ORA-19323: Invalid url string

Cause: The URL must be a valid URL string

Action: Specify a valid url string

ORA-19330: Type '*string*.'*string*' not installed. Please install the type before using the CREATE_DBURI operator

Cause: The type required for the CREATE_DBURI operator has not been installed correctly.

Action: Read the installation notes to install the type correctly.

ORA-19331: Last argument to CREATE_DBURI operator must be a column

Cause: The final argument to the CREATE_DBURI operator must be a column to which the reference is being created.

Action: Specify a valid column name in the query.

ORA-19332: Invalid column in the CREATE_DBURI operator

Cause: The argument to the CREATE_DBURI operator can only be a column.

Action: Specify a valid column name for the operator

ORA-19333: Invalid flags for the CREATE_DBURI operator

Cause: The flags argument given to the DBURI operator is invalid

Action: Specify a valid flag value (TEXT) for the DBURI operator

ORA-19334: Invalid column specification for CREATE_DBURI operator

Cause: All columns must be valid and pointing to the same table or view

Action: Specify valid list of columns that are from the same table or view.

ORA-19335: Invalid format type object

Cause: An invalid format type object was specified for the XML function

Action: Specify a valid format type object

ORA-19336: Missing XML root element

Cause: The XML being generated does not have an enclosing root element.

Action: The XML generated must have a root element

ORA-19361: ONLINE option not allowed with this type of index

Cause: The ONLINE option was specified to validate the structure of a system-generated metadata index

Action: The ONLINE option can not be used with system-generated metadata indexes such as an LOB index, an IOT Top index, an Index on Clusters etc., Run query without using the ONLINE option.

ORA-19371: invalid update option

Cause: The user attempted to call load_sqlset with an update option that is different than REPLACE and ACCUMULATE.

Action: Adjust the update option and retry the operation.

ORA-19372: invalid update condition

Cause: The user attempted to call load_sqlset with an invalid update condition.

Action: Check the update condition (e.g., NEW.COL1_NAME >= OLD.COL2_NAME) and retry the operation.

ORA-19373: invalid staging table or tablespace

Cause: The user attempted to create a staging table and specified an invalid staging table (or one that already exists) or tablespace

Action: Check the arguments and try again.

ORA-19374: invalid staging table

Cause: The user specified an invalid staging table to one of the pack, unpack, or remap stgtab routines, or the user does not have the correct privileges on the staging table

Action: Provide a correct staging table or grant the appropriate privileges

ORA-19375: no CREATE TABLE privilege on schema "*string*"

Cause: The user tried to create a staging table when he is missing the CREATE TABLE privilege on the specified schema.

Action: Grant the privilege to the user and retry

ORA-19376: no privileges on tablespace provided or tablespace is offline

Cause: The user tried to create a staging table on a tablespace on which he does not have any space allocated, or it is offline

Action: Allocate space on the tablespace, bring it online, and retry

ORA-19377: no "SQL Tuning Set" with name like "*string*" exists for owner like "*string*"

Cause: The user specified a filter to a pack/unpack function for the SQL Tuning Set that targets no STS in the SYS schema or the staging table, respectively

Action: Provide a different filter after checking the state of the system

ORA-19378: invalid mode

Cause: The user specified an invalid mode argument to the capture function.

Action: Provide a mode argument that was defined in the dbmssqlt file

ORA-19379: invalid time_limit or repeat_interval

Cause: The user specified a NULL value for either the time_limit or the repeat_interval, or a repeat_interval that is greater than the time_limit

Action: Provide a non-null value and make sure time_limit >= repeat_interval

ORA-19380: invalid plan filter

Cause: The user specified an invalid filter for the plan when calling the select_sqlset table function.

Action: Adjust the the filter to be one of the following values and retry the operation: MAX_ELAPSED_TIME, MAX_CPU_TIME, MAX_DISK_READS, MAX_OPTIMIZER_COST, MAX_BUFFER_GETS, FIRST_LOADED LAST_LOADED, FIRST_GENERATED, or LAST_GENERATED.

ORA-19381: cannot create staging table in SYS schema

Cause: The user attempted to create a staging table in the sys schema

Action: Create the table in another schema.

ORA-19384: cannot pack into staging table from previous version

Cause: An attempt was made to perform a pack operation on a staging table from a previous version.

Action: Create a staging table in the current version and retry the operation.

ORA-19385: staging table is empty

Cause: An attempt was made to perform an operation on an empty staging table.

Action: Check the staging table to make sure that it has rows.

ORA-19386: target object already exists for tuning task "*string*"

Cause: An attempt was made to set a target object for a tuning task when one had already been set.

Action: Create a new task if another target object is needed.

ORA-19387: "SQL Tuning Set" "*string*" belongs to another tuning task

Cause: The user attempted to tune a task-managed SQL Tuning Set belonging to one task within the scope of another task.

Action: Check the SQL Tuning Set and retry the operation.

ORA-19388: operation not supported for "SQL Tuning Set" type

Cause: The attempted operation was unsupported for the type of the given SQL Tuning Set.

Action: Check the SQL Tuning Set and retry the operation.

ORA-19389: LOB types are not supported for SQL binds

Cause: A LOB type was provided in a SQL bind list.

Action: Replace the LOB binds with legal bind types or try another SQL.

ORA-19390: The profile type is not valid

Cause: The profile type is not valid.

Action: Check the available profile types.

ORA-19400: System type conflict with object SYS.*string*

Cause: The user had an object with the same name as one of the system types. The system types were not initialized properly.

Action: Remove the conflicting object and rerun migration.

ORA-19500 to ORA-19997

ORA-19500: device block size *string* is invalid

Cause: the device block size returned by sequential I/O OSD is invalid

Action: If the block size was set by using the PARMS option of the Recovery Manager ALLOCATE CHANNEL command, then the specified block size must be changed. If no PARMS option was specified on the ALLOCATE CHANNEL command, then this is an internal error that should be reported to Oracle.

ORA-19501: read error on file "*string*", block number *string* (block size=*string*)

Cause: read error on input file

Action: check the file

ORA-19502: write error on file "*string*", block number *string* (block size=*string*)

Cause: write error on output file

Action: check the file

ORA-19503: cannot obtain information on device, name="*string*", type="*string*", parms="*string*"

Cause: call to get device information returned an error

Action: check device name, type and parameters

ORA-19504: failed to create file "*string*"

Cause: call to create file returned an error

Action: check additional messages, check access permissions.

ORA-19505: failed to identify file "*string*"

Cause: call to identify the file returned an error

Action: check additional messages, and check if the file exists.

ORA-19506: failed to create sequential file, name="*string*", parms="*string*"

Cause: call to create the sequential file returned an error

Action: check additional messages, check access permissions.

ORA-19507: failed to retrieve sequential file, handle="*string*", parms="*string*"

Cause: call to retrieve the sequential file returned an error

Action: check additional messages, and check if the file exists.

ORA-19508: failed to delete file "*string*"

Cause: call to delete the file returned an error

Action: check additional messages.

ORA-19509: failed to delete sequential file, handle="string", parms="string"

Cause: call to delete the sequential file returned an error

Action: check additional messages.

ORA-19510: failed to set size of string blocks for file "string" (block size=string)

Cause: call to resize the file returned an error

Action: check additional messages.

**ORA-19511: non RMAN, but media manager or vendor specific failure, error text:
\n string**

Cause: An error occurred in the media management software which is linked with the Oracle server to perform backup and restore in cooperation with Recovery Manager.

Action: If the text of message 19511 does not provide enough information to resolve the problem, then you should contact the vendor of the media management software.

ORA-19512: file search failed

Cause: Recovery manager or Oracle Server attempted to discover files that matched the specified pattern but failed.

Action: Check errors on the error stack for an explanation why the search for files could not be successfully executed.

ORA-19513: failed to identify sequential file

Cause: Unable to identify the sequential file.

Action: Check additional messages, and check if the file exists on media.

ORA-19525: tempfile for the clone database must be renamed

Cause: Opening a clone database failed because Oracle server forces the tempfile to be renamed, in order to avoid overwriting the primary tempfile.

Action: Rename the tempfiles manually or automatically by using the DB_FILE_NAME_CONVERT initialization parameter.

ORA-19526: only one location allowed for parameter string

Cause: A list of default locations was provided in an Oracle-managed files parameter.

Action: Edit the parameter to include a single location.

ORA-19527: physical standby redo log must be renamed

Cause: An attempt was made to clear redo log at a physical standby database. Clearing an OMF redo log will not work unless DB_CREATE_FILE_DEST, DB_CREATE_ONLINE_LOG_DEST_n or DB_RECOVERY_FILE_DEST parameter is specified. Clearing a non-OMF (or user-defined) redo log file will not work unless the LOG_FILE_NAME_CONVERT initialization parameter is set.

Action: Set DB_CREATE_FILE_DEST, DB_CREATE_ONLINE_LOG_DEST_n or DB_RECOVERY_FILE_DEST parameter for OMF redo log files and re-issue the operation that attempted to clear redo log. Set LOG_FILE_NAME_CONVERT parameter for non-OMF redo log files and re-issue the operation that attempted to clear redo log.

ORA-19528: redo logs being cleared may need access to files

Cause: The redo logs are being cleared. This procedure may need the files this operation is being applied to.

Action: Wait for the redo logs to be cleared.

ORA-19529: Pattern *string* in initialization parameter *string* has an Oracle Managed Files file name.

Cause: An attempt was made to convert a database file name to an Oracle Managed Files file name using DB_FILE_NAME_CONVERT, PDB_FILE_NAME_CONVERT or LOG_FILE_NAME_CONVERT initialization parameter. This was not a valid operation.

Action: Retry the operation with a pattern template instead of a full Oracle Managed Files file name.

ORA-19550: cannot use backup/restore functions while using dispatcher

Cause: Attempted to use backup/restore functions while connected to the dispatcher in a shared server. This is not allowed because the device that is used for backup and restore must remain allocated to a single process.

Action: Connect directly to the instance then re-execute the backup or restore function.

ORA-19551: device is busy, device type: *string*, device name: *string*

Cause: The indicated device could not be allocated because it is allocated to another session, or no device was named, or all devices of the requested type are busy.

Action: Either attempt to allocate another device or wait until the required device is no longer busy.

ORA-19552: device type *string* is invalid

Cause: The device type indicated is invalid.

Action: Supply a correct device type and retry the allocation.

ORA-19553: device name *string* is invalid

Cause: The device name indicated is invalid.

Action: Supply a correct device name and retry the allocation.

ORA-19554: error allocating device, device type: *string*, device name: *string*

Cause: The specified device could not be allocated.

Action: One or more other messages should be displayed to help pinpoint the cause of the error. Correct the error and retry the allocation.

ORA-19555: invalid LOG_ARCHIVE_MIN_SUCCEED_DEST parameter value

Cause: The value of parameter LOG_ARCHIVE_MIN_SUCCEED_DEST was not set within the valid range.

Action: Specify a correct value for parameter LOG_ARCHIVE_MIN_SUCCEED_DEST. If the archive log parameters LOG_ARCHIVE_DEST or LOG_ARCHIVE_DUPLEX_DEST are in use, set parameter LOG_ARCHIVE_MIN_SUCCEED_DEST to either 1 or 2.

ORA-19556: required destination LOG_ARCHIVE_DUPLEX_DEST currently is deferred

Cause: The destination for parameter LOG_ARCHIVE_DUPLEX_DEST was deferred when it was required to be enabled. The destination was deferred automatically when an ALTER SYSTEM command for parameter LOG_ARCHIVE_DEST defined a destination which duplicated an existing LOG_ARCHIVE_DUPLEX_DEST parameter destination.

Action: Change the destination value for the LOG_ARCHIVE_DUPLEX_DEST parameter.

ORA-19557: device error, device type: *string*, device name: *string*

Cause: An error occurred in the platform-specific device code

Action: One or more other messages should be displayed to help pinpoint the cause of the error. Correct the error and retry the allocation.

ORA-19558: error de-allocating device

Cause: The specified device could not be de-allocated.

Action: One or more other messages should be displayed to help pinpoint the cause of the error. Correct the error and retry the allocation.

ORA-19559: error sending device command: *string*

Cause: An error occurred while sending the indicated command to the session device.

Action: One or more other messages should be displayed to help pinpoint the cause of the error. Correct the error and retry the allocation.

ORA-19560: *string* is not a valid device limit name

Cause: An invalid name of device limit was specified in a call to DBMS_BACKUP_RESTORE.SETLIMIT.

Action: Use one of the device limit names described in dbmsbkrs.sql

ORA-19561: *string* requires a DISK channel

Cause: The attempted command requires that a DISK device channel be allocated to the session, but a non-DISK device was found.

Action: Deallocate the current device and allocate a DISK channel, then then retry the command.

ORA-19562: file *string* is empty

Cause: The indicated file, which is an archived log, control file, or datafile was found to be empty during a copy, backup, or scan] operation.

Action: Ensure that the correct files are being specified for the copy or backup operation.

ORA-19563: *string* header validation failed for file *string*

Cause: When opening the file to be placed in a copy or backup set, to be inspected, or used as the target for an incremental restore, its header was not recognized as a valid file header for a file of the indicated type (datafile, archived log, or control file) belonging to the current database.

Action: Ensure that the correct files are being specified for the copy or backup operation.

ORA-19564: error occurred writing *string* bytes at block number *string*

Cause: An error occurred while writing to a file.

Action: One or more other messages should be displayed to help pinpoint the cause of the error. Correct the error if possible, then retry the copy, backup, or restore operation.

ORA-19565: BACKUP_TAPE_IO_SLAVES not enabled when duplexing to sequential devices

Cause: An attempt was made to specify duplexing to sequential devices, but the BACKUP_TAPE_IO_SLAVES initialization parameter was not enabled.

Action: Specify `BACKUP_TAPE_IO_SLAVES=TRUE` in the `INIT.ORA` file, or do not specify duplexing to sequential devices.

ORA-19566: exceeded limit of *string* corrupt blocks for file *string*

Cause: The user specified limit of allowable corrupt blocks was exceeded while reading the specified datafile for a datafile copy or backup.

Action: None. The copy or backup operation fails. The session trace file contains detailed information about which blocks were corrupt.

ORA-19567: cannot shrink file *string* because it is being backed up or copied

Cause: An `ALTER` statement attempted to reduce the size of the indicated file while the same file is being backed up or copied.

Action: Retry the resize after the backup or copy is complete.

ORA-19568: a device is already allocated to this session

Cause: A device cannot be allocated to a session if another device is already allocated.

Action: Deallocate the current device

ORA-19569: no device is allocated to this session

Cause: An operation was attempted which requires a device to be allocated to the current session, and there is no device allocated.

Action: Allocate a device then retry the operation.

ORA-19570: file number *string* is outside valid range of 1 through *string*

Cause: A file number used in a copy, backup, or restore operation is not valid for the current database.

Action: Specify a valid file number.

ORA-19571: *string* RECID *string* STAMP *string* not found in control file

Cause: The input file specified for a copy or backup operation could not be opened because the record describing the file is not found in the control file.

Action: Specify a correct RECID/STAMP and retry the copy or backup.

ORA-19572: cannot process file *string*, file is being being resized

Cause: The input file specified for a copy or backup operation could not be opened because the file is being resized.

Action: Wait for the resize to complete then retry the copy or backup.

ORA-19573: cannot obtain *string* enqueue for datafile *string*

Cause: The file access enqueue could not be obtained for a file specified in a backup, copy or restore operation. If the enqueue type shown is 'shared', then the file is the input file for a backup or copy. If the type is 'exclusive', then the file is the output file for a datafile copy or restore which is attempting to overwrite the currently active version of that file - in this case, the file must be offline or the database must be closed. If the type is 'read-only', then you are attempting to back up or copy this file while the database is in NOARCHIVELOG mode.

Action: Wait until the conflicting operation is complete, then retry the copy or backup. If the database is in NOARCHIVELOG mode, then all files being backed up must be closed cleanly.

ORA-19574: output file name must be specified

Cause: This type of copy or restore requires an output file name.

Action: Specify an output file name and retry the copy.

ORA-19575: expected *string* blocks in file *string*, found *string*

Cause: During a backup, restore, copy, or scan operation, the indicated file did not contain as many blocks as were indicated in the file header.

Action: The input copy or backup piece is probably corrupt. If another backup or copy exists of the file that is being restored, then the corrupt file can be deleted from the recovery catalog and the operation can be restarted.

ORA-19576: datafile *string* not defined in control file

Cause: The specified file number was not found in the control file.

Action: Specify a correct file number and retry the operation.

ORA-19577: file *string* is MISSING

Cause: A COPYDATAFILECOPY, RESTOREDADATAFILETO or PROXYRESTOREDADATAFILE function specified a file number but no output file name, indicating that the output file name should be taken from the control file. However, the control file entry for this file indicates that it was created for a file that was present in the data dictionary but not named during the last CREATE CONTROLFILE statement, so the name in the control file cannot be used for restoration.

Action: Either specify an output file name or issue a SQL RENAME command to enter a valid name for this file in the control file.

ORA-19578: end of volume while duplexing to sequential files, backup piece incomplete

Cause: An end of volume (EOV) condition was detected while duplexing to sequential files, and this condition cannot be handled currently.

Action: Before retrying the backup, make sure the backup pieces will fit in the volume, or disable duplexing.

ORA-19579: archived log record for *string* not found

Cause: No archived log record corresponding to input file could be found in the control file.

Action: Specify a valid archived log file name and retry the operation.

ORA-19580: *string* conversation not active

Cause: A backup or restore operation was attempted before a conversation was started.

Action: Start a conversation then retry the operation.

ORA-19581: no files have been named

Cause: An attempt was made to proceed from the file naming phase to the piece processing phase of a backup or restore conversation before any files have been specified for backup or restore.

Action: Specify some files then retry the operation.

ORA-19582: archived log file header validation for *string* failed

Cause: Archived log file header is corrupt and could not be validated.

Action: Provide a valid archived log file and retry the operation.

ORA-19583: conversation terminated due to error

Cause: An error occurred which forced the termination of the current backup or restore conversation.

Action: There should be other error messages to help identify the cause of the problem. Correct the error and begin another conversation.

ORA-19584: file *string* already in use

Cause: The indicated file, which was specified as the target for a copy, restore, or delete operation is already in use by the database.

Action: Specify a different name and retry the operation.

ORA-19585: premature end of volume on piece *string*

Cause: While creating the indicated backup piece, an end-of-volume condition was encountered before all of the backup set control data was written to the backup piece. This is most likely a media error, because the amount of backup set control data is very small in relation to the total amount of data in a backup set.

Action: Retry the piece with a larger piece of output media.

ORA-19586: *string* k-byte limit is too small to hold piece directory

Cause: The user-specified limit for MAXPIECESIZE for this channel is not enough to hold the backup set control data.

Action: Allocate a channel specifying a larger value for MAXPIECESIZE and retry the operation.

ORA-19587: error occurred reading *string* bytes at block number *string*

Cause: An error occurred while reading from a file.

Action: One or more other messages should be displayed to help pinpoint the cause of the error. Correct the error then retry the copy, backup, or restore operation.

ORA-19588: *string* RECID *string* STAMP *string* is no longer valid

Cause: The indicated record has been marked as deleted. This indicates that the corresponding file has either been overwritten by another copy or restore, or that the copy was 'consumed' by a SWITCHTOCOPY operation.

Action: If you know the name of the file you wish to copy, then inspect it and then retry the copy specifying the new RECID.

ORA-19589: *string* is not a snapshot or backup control file

Cause: The control file that is the source for a backup or copy operation is not a snapshot or backup control file.

Action: Specify the name of a snapshot or backup control file.

ORA-19590: conversation already active

Cause: You tried to begin a backup or restore conversation, but another conversation is already active in this session.

Action: Either continue the current conversation, or call BACKUPCANCEL or RESTORECANCEL to end the current conversation before starting a new one.

ORA-19591: backup aborted because job time exceeded duration time

Cause: You tried to backup with duration option and the time provided was not sufficient to complete the backup.

Action: Adjust the duration time and re-run the command. Or run the backup command without duration option.

ORA-19592: wrong *string* conversation type

Cause: You attempted to specify a type of file to be backed-up or restored, but the current conversation cannot process this type of file. For example, you specified an archived log to be included in a datafile backup set. The specified file will not be included in the backup or restore operation.

Action: No action required - the conversation is still active, and more files can be specified.

ORA-19593: datafile number *string* already included as *string*

Cause: This datafile is already specified for inclusion in this backup or restore conversation. A backup or restore conversation may process only a single instance of a datafile.

Action: No action required - the conversation is still active, and more files can be specified.

ORA-19594: control file already included as *string*

Cause: The control file is already specified for inclusion in this backup or restore conversation. A backup or restore conversation may process only a single instance of the control file.

Action: No action required - the conversation is still active, and more files can be specified.

ORA-19595: archived log *string* already included in backup conversation

Cause: The indicated archived log has already been specified for inclusion in this backup conversation.

Action: No action required - the conversation is still active, and more files can be specified.

ORA-19596: SPFILE already included

Cause: The SPFILE is already specified for inclusion in this backup or restore conversation. A backup or restore conversation may process only a single instance of the SPFILE.

Action: No action required - the conversation is still active, and more files can be specified.

ORA-19597: file *string* block size *string* does not match set block size of *string*

Cause: A file was specified for inclusion in a backup set but it has a logical block size different from the rest of the files in the backup set. All files in a backup set must have the same logical block size.

Action: Specify a file that has the same block size as the rest of the files in the backup set. The conversation is still active and more files can be specified.

ORA-19598: can not backup SPFILE because the instance was not started with SPFILE

Cause: A backup command requested a backup of the SPFILE, but no SPFILE was used to startup the instance.

Action: Create an SPFILE and re-start the instance using the SPFILE.

ORA-19599: block number *string* is corrupt in *string string*

Cause: A corrupt block was found in a control file, archived log, or backup piece that is being read for a backup or copy. Corruption shall not be tolerated in control files, archived logs, or backup pieces.

Action: None. The copy or backup operation fails. Note that in the case of a backup set, the conversation is still active and the piece may be retried.

ORA-19600: input file is *string string (string)*

Cause: This message identifies the input file for a failed copy operation. Both the file number and name (if the name has been determined) are shown. For a datafile, the file number refers to the datafile's absolute file number as shown in the DBA_DATA_FILES view. For a datafile copy, the file number refers to the copy's control file record number as shown in the RECID column of the V\$DATAFILE_COPY view. For an archived log, the file number refers to the log's control file record number as shown in the RECID column of the V\$ARCHIVED_LOG view.

Action: See other error message.

ORA-19601: output file is *string string (string)*

Cause: This message identifies the output file for a failed copy operation. The fields are as described in message 19600. When creating a new datafile copy, its control file record number may not have been determined when the message is printed. In that case, the record number shown is zero.

Action: See other error message.

ORA-19602: cannot backup or copy active file in NOARCHIVELOG mode

Cause: You tried to copy or backup a file that was not closed cleanly, and the database was in NOARCHIVELOG mode. This is not allowed because when restored, the file will require redo application before it is usable, and redo is not currently being saved beyond the contents of the online redo logs.

Action: Take the tablespace offline clean or close the database and retry the copy or backup.

ORA-19603: cannot backup or copy active file with KEEP .. UNRECOVERABLE option

Cause: The user tried to copy or backup a file that was not closed cleanly, with KEEP .. UNRECOVERABLE option. This is not allowed because when restored, the file will require redo application before it is usable, and redo will not be saved because of KEEP .. UNRECOVERABLE option.

Action: Take the tablespace offline cleanly, or close the database and retry the copy or backup.

ORA-19604: conversation file naming phase is over

Cause: A call was made to specify a file to be backed up or restored after the first backup piece has been processed.

Action: You cannot specify more files to be processed during a backup or restore conversation after the first backup piece has been processed. If more files must be specified, you must begin a new conversation.

ORA-19605: input file name must be specified

Cause: The input file name was not specified for a control file copy operation.

Action: Specify an input file name and retry the operation.

ORA-19606: Cannot copy or restore to snapshot control file

Cause: A control file copy or restore operation specified the name of the snapshot control file as the output file. It is not permitted to overwrite the snapshot control file in this manner. Other methods are available to create the snapshot control file.

Action: Specify a different file name and retry the operation. If this is a restore, then the restore conversation remains active and more files may be specified.

ORA-19607: *string* is an active control file

Cause: A control file copy, restore, or backup specified the name of a control file named in the INIT.ORA file as the input or output file.

Action: Specify a different file name and retry the operation. If this is a backup or restore conversation, then the conversation remains active and more files may be specified.

ORA-19608: *string* is not a backup piece

Cause: The specified file is not a backup piece produced by the DBMS_BACKUP_RESTORE package. Either the first block of the backup piece is corrupt or this file is not a backup piece.

Action: Specify a different file name and retry the operation.

ORA-19609: *string* is from different backup set: stamp *string* count *string*

Cause: The specified file is not from the backup set which is currently being processed. It is part of a different backup set. The identification of the set containing this piece is shown.

Action: Specify the correct backup piece and retry the operation.

ORA-19610: directory block *string* is corrupt

Cause: The indicated directory block failed checksum validation. This backup piece is unusable.

Action: Supply another copy of the same backup piece, or terminate the restore conversation.

ORA-19611: backup piece out of order. Expected *string* but found *string*

Cause: This backup piece is out of sequence.

Action: Supply the correct backup piece.

ORA-19612: datafile *string* not restored due to *string*

Cause: The indicated file could not be restored, because all of its data blocks were not found in the backup piece.

Action: The restore conversation remains active, and the current piece must be re-processed. If the failure cannot be resolved by re-processing the current piece, then the restore conversation must be cancelled.

ORA-19613: datafile *string* not found in backup set

Cause: The indicated file could not be restored, because it is not in this backup set. If the file number is zero, then this refers to the control file.

Action: This message is issued when the directory from the first backup piece is read and one or more files named for restoration were not found. The restore conversation is still active, but no data has been read and you must supply the first backup piece of a backup set that contains all of the requested files.

ORA-19614: archived log thread *string* sequence *string* not found in backup set

Cause: The indicated archived log file was named explicitly for restoration but is not contained in this backup set.

Action: This message is issued when the directory from the first backup piece is read and one or more files named for restoration were not found. The restore conversation is still active, but no data has been read and you must supply the first backup piece of a backup set that contains all of the requested files.

ORA-19615: some files not found in backup set

Cause: Some files that were specified for restoration were not found in the backup set directory. Message 19613 or 19614 is issued for each file that was not found.

Action: See the instructions for message 19613.

ORA-19616: output file name must be specified if database not mounted

Cause: A datafile restore specified no target file name, but the database is not mounted. The database must be mounted when no target file name is specified, so that the target file name can be obtained from the control file.

Action: The restore conversation remains active. If you wish to restore datafiles without their target file names, then mount the database before continuing. Otherwise, a target file name must be specified on all datafile restoration calls.

ORA-19617: file *string* contains different RESETLOGS data

Cause: The indicated file contains RESETLOGS data which is different from the archived log files which are already included in the backup set. All archived log files in a backup set must have the same RESETLOGS data.

Action: The restore conversation remains active, and you may continue to specify archived log files for inclusion in the backup set.

ORA-19618: cannot name files after RESTOREVALIDATE has been called

Cause: A call was made to specify a file to restore from a backup set, but a previous call to RESTOREVALIDATE has already been made.

Action: You must cancel and restart the conversation if you wish to specify files to restore.

ORA-19619: cannot call RESTOREVALIDATE after files have been named

Cause: RESTOREVALIDATE was called after some files had already been specified for restoration.

Action: You must cancel and restart the conversation if you wish to call RESTOREVALIDATE.

ORA-19620: *string* is not of *string* type

Cause: When opening the file to be placed in a copy or backup set, to be inspected, or used as the target for an incremental restore, its header was not recognized as a valid file header for a file of the indicated type (datafile, archived log, or control file) belonging to the current database.

Action: The indicated file cannot be processed. Ensure that the correct files are being specified for the copy or backup operation.

ORA-19621: archived log range has already been specified

Cause: A range of logs has already been specified. Only one SCN range may be specified per conversation.

Action: The restore conversation remains active and more logs may be specified by thread and sequence number, if desired.

ORA-19622: archived log thread *string* sequence *string* not restored due to *string*

Cause: The indicated file could not be restored, because all of its data blocks were not found in the backup piece.

Action: The restore conversation remains active, and the current piece must be re-processed. If the failure cannot be resolved by re-processing the current piece, then the restore conversation must be cancelled.

ORA-19623: file *string* is open

Cause: A SWITCHTOCOPY operation specified a datafile copy whose parent datafile is open.

Action: Take the owning tablespace offline or close the database, then retry the operation.

ORA-19624: operation failed, retry possible

Cause: A backup, restore or image copy operation failed with an I/O error. If the source of the I/O error can be corrected, then the operation may be retried.

Action: This message is used by recovery manager to decide whether or not to retry the operation.

ORA-19625: error identifying file *string*

Cause: A file specified as input to a copy or backup operation, or as the target for an incremental restore, could not be identified as an Oracle file. The file may have been deleted or moved so that it is no longer accessible to RMAN. An operating system-specific error accompanies this error to help pinpoint the problem.

Action: Specify a different file and retry the operation. If the problem file has simply been deleted or moved, you can run crosscheck to allow RMAN to update its metadata with the correct file status.

ORA-19626: backup set type is *string* - can not be processed by this conversation

Cause: The data in the backup set is not compatible with the current conversation.

Action: Either supply the first piece from a backup set that matches the current conversation or start a new restore conversation which can process this backup set.

ORA-19627: cannot read backup pieces during control file application

Cause: This is a control file restore conversation, which is using the offline range information from one or more control files to update datafile checkpoint data. Backup sets are not used during this type of conversation.

Action: The conversation is still active and more control files may be applied.

ORA-19628: invalid SCN range

Cause: The starting SCN for RESTOREREDOLOGRANGE is greater than the ending SCN.

Action: Specify a starting SCN which is less than or equal to the ending SCN.

ORA-19629: no files in specified archived log SCN range

Cause: This backup set contains no files in the specified range.

Action: Either supply a backup set that contains files in the correct range or start a new conversation and specify a range which will select some files from this backup set.

ORA-19630: end of volume encountered while copying backup piece

Cause: While copying a backup piece from the OS native file system to an output device, the output device encountered end-of-volume.

Action: The copy fails. This could happen if a tape was used which is not large enough to hold the entire backup piece.

ORA-19631: archived log record contains no file name

Cause: This archived log record represents a switch into an active log that took place without archiving its prior contents. The prior contents of the log file are lost.

Action: Specify the RECID of an archived log record that contains a file name. Fixed view v\$archived_log can be used to examine the archived logs.

ORA-19632: file name not found in control file

Cause: The name passed to GETFNO was not found in the control file.

Action: Supply a valid file name.

ORA-19633: control file record *string* is out of sync with recovery catalog

Cause: The control file record describing the file to be deleted in a call to DELETEBACKUPPIECE, DELETEDATAFILECOPY, PROXYDELETE or DELETEARCHIVEDLOG does not match the validation data supplied by recovery manager.

Action: contact Oracle support

ORA-19634: file name required for this function

Cause: The FNAME or HANDLE parameter was not specified for DELETEDPIECE, DELETEDATAFILECOPY, DELETEDEREDOLOG or PROXYDELETE.

Action: Specify the FNAME or HANDLE parameter when calling these functions.

ORA-19635: input and output file names are identical: *string*

Cause: Identical input and output file names were specified for a datafile copy operation.

Action: Specify an output file name which is different from the input file name.

ORA-19636: archived log thread *string* sequence *string* already included

Cause: The indicated archived log has already been specified for inclusion in this restore conversation. A restore conversation may process only one copy of any archived log.

Action: No action required - the conversation is still active, and more files can be specified.

ORA-19637: BACKUPPIECECREATE requires file name when using DISK device

Cause: The session device is currently allocated to disk, and so a file name is required.

Action: Supply a file name and retry the operation.

ORA-19638: file *string* is not current enough to apply this incremental backup

Cause: The checkpoint of the target for this incremental backup is less than the start of the incremental backup. If this backup were applied, then any changes made between the datafile checkpoint and the start of the incremental backup could be lost.

Action: Supply a backup set that can be applied and retry the operation.

ORA-19639: file *string* is more current than this incremental backup

Cause: The checkpoint of the target for this incremental backup is greater than or equal to the checkpoint of the file in the incremental backup set. This backup cannot advance the checkpoint of the target file, so there is no point in applying it.

Action: Supply a backup set that can be applied and retry the operation.

ORA-19640: datafile checkpoint is SCN *string* time *string*

Cause: This message identifies the datafile checkpoint for a datafile that was too old to take an incremental backup from, or the target of an incremental restore that could not be applied.

Action: See other error message.

ORA-19641: backup datafile checkpoint is SCN *string* time *string*

Cause: This message identifies the checkpoint of a datafile in an incremental backup set that could not be applied.

Action: See other error message.

ORA-19642: start SCN of incremental backup is *string*

Cause: This message identifies the starting SCN of an incremental backup that could not be applied.

Action: See other error message.

ORA-19643: datafile *string*: incremental-start SCN is too recent

Cause: The incremental-start SCN which was specified when starting an incremental datafile backup is greater than the datafile checkpoint SCN, which could cause some blocks to be missed.

Action: Specify a smaller incremental-start SCN.

ORA-19644: datafile *string*: incremental-start SCN is prior to RESETLOGS SCN *string*

Cause: The incremental-start SCN which was specified when starting an incremental datafile backup is less than the RESETLOGS SCN.

Action: Specify a larger incremental-start SCN.

ORA-19645: datafile *string*: incremental-start SCN is prior to creation SCN *string*

Cause: The incremental-start SCN which was specified when starting an incremental datafile backup is less than the datafile's creation SCN.

Action: Specify a larger incremental-start SCN.

ORA-19646: cannot change size of datafile *string* from *string* to *string*

Cause: Restore needs to adjust the size of the file as indicated, but the file size adjustment failed.

Action: Examine the other messages which should be present to indicate the cause of the failure.

ORA-19647: non-zero LEVEL cannot be specified when INCREMENTAL is FALSE

Cause: BACKUPSETDATAFILE was called with a non-zero backup_level and a FALSE incremental indication.

Action: Either set incremental to TRUE or change backup_level to zero.

ORA-19648: datafile *string*: incremental-start SCN equals checkpoint SCN

Cause: The incremental-start SCN which was specified when starting an incremental datafile backup is equal to the datafile's checkpoint SCN. Since an incremental backup can only be applied to a datafile whose checkpoint SCN is between the backup set incremental-start SCN (inclusive) and the backup set checkpoint SCN (exclusive), there is no datafile that this backup set could ever be applied to.

Action: Specify a smaller incremental-start SCN. NOTE that this message will usually only be encountered by the user while taking an incremental backup with Recovery Manager. Recovery Manager should intercept all usual cases of this error and simply ignore the incremental backup for this file. So, if you do encounter this error, please report it to Oracle Support.

ORA-19649: offline-range record RECID *string* STAMP *string* not found in file *string*

Cause: APPLYOFFLINERANGE was called with a RECID/STAMP which was not found in the indicated control file. This probably means that the specified control file is no longer the same control file that Recovery Manager thinks it is.

Action: Specify the RECID/STAMP of a record that exists in the control file copy.

ORA-19650: Offline-range record RECID *string* STAMP *string* in file *string* has SCN *string*

Cause: This messages identifies the offline-clean SCN from the indicated offline-range record in the indicated file.

Action: See other error message.

ORA-19651: cannot apply offline-range record to datafile *string*: SCN mismatch

Cause: APPLYOFFLINERANGE cannot apply an offline-range record to a target datafile unless the datafile's checkpoint SCN exactly matches the offline-clean SCN in the specified offline-range record.

Action: Specify an offline-range record whose offline-clean SCN matches the target datafile's checkpoint.

ORA-19652: cannot apply offline-range record to datafile *string*: file is fuzzy

Cause: The target datafile for an APPLYOFFLINERANGE call is fuzzy.

Action: Specify a target datafile that is closed cleanly.

ORA-19653: cannot switch to older file incarnation

Cause: SWITCHTOCOPY was called with a datafile copy for a datafile that was dropped prior to the time this control file was backed up.

Action: Restore and mount an earlier control file. It is acceptable to use a control file that was backed up prior to the creation of the specified datafile.

ORA-19654: must use backup control file to switch file incarnations

Cause: This SWITCHTOCOPY operation is attempting to switch incarnations of a datafile, but the currently mounted control file is not a backup control file.

Action: Restore and mount a backup control file.

ORA-19655: cannot switch to incarnation with different RESETLOGS data

Cause: This SWITCHTOCOPY operation is attempting to switch to a datafile which comes from a different RESETLOGS version of the database.

Action: Either restore a backup control file that was taken from the same database version as the target datafile copy, or switch to a different datafile copy.

ORA-19656: cannot backup, copy, or delete online log *string*

Cause: The indicated log file is an active log. You can only backup, copy, or delete archived logs.

Action: The indicated log file cannot be processed - select another file.

ORA-19657: cannot inspect current datafile *string*

Cause: The file being inspected is already part of the currently mounted database.

Action: None - the file is already part of the database.

ORA-19658: cannot inspect *string* - file is from different RESETLOGS

Cause: The RESETLOGS data in the log file being inspected does not match that in the currently mounted control file.

Action: The indicated file cannot be processed - inspect another file.

ORA-19659: incremental restore would advance file *string* past RESETLOGS

Cause: This incremental backup cannot be applied to the specified datafile, because the datafile is from an earlier incarnation of the database, and its checkpoint would be advanced too far to be recoverable in the current incarnation of the database.

Action: This incremental cannot be applied to this datafile. If you wish to recover the file to the RESETLOGS SCN so that the database can be opened with the RESETLOGS option, then you must use redo-log recovery, not incremental restore, to continue recovering this file.

ORA-19660: some files in the backup set could not be verified

Cause: A restore conversation was made to verify all the files in a backup set, and the files which were printed in messages 19661 or 19662 could not be verified because corrupt blocks for those files were found in the backup set.

Action: Unless the damage to the backup set can be repaired, the indicated files cannot be restored from this backup set.

ORA-19661: datafile *string* could not be verified

Cause: Some data blocks for the indicated datafile were corrupt in the backup set.

Action: Unless the damage to the backup set can be repaired, the indicated datafile cannot be restored from this backup set.

ORA-19662: archived log thread *string* sequence *string* could not be verified

Cause: Some data blocks for the indicated archived log were corrupt in the backup set.

Action: Unless the damage to the backup set can be repaired, the indicated archived log cannot be restored from this backup set.

ORA-19663: cannot apply current offline range to datafile *string*

Cause: An attempt was made to apply the current offline range to the specified datafile, but the datafile is either not current enough or is not at the correct SCN to apply the offline range.

Action: The datafile remains unchanged.

ORA-19664: file type: *string*, file name: *string*

Cause: This message is issued to identify the file which is the subject of an error.

Action: None - this is an informational message. There should be other Oracle messages explaining the cause of the error.

ORA-19665: size *string* in file header does not match actual file size of *string*

Cause: The size of the file as indicated in the file header does not match the true size of the file. The two differing sizes are shown in units of logical blocks.

Action: This file is not usable - it has most likely been truncated.

ORA-19666: cannot do incremental restore of the control file

Cause: The control file was included in an incremental restore conversation

Action: If you wish to restore the control file, you must do a full restore of the control file

ORA-19667: cannot do incremental restore of datafile *string*

Cause: The backup of the datafile is a full backup

Action: If you wish to restore the datafile, you must do a full restore of the datafile

ORA-19668: cannot do full restore of datafile *string*

Cause: The backup of the datafile is an incremental backup

Action: If you wish to restore the datafile, you must do an incremental restore of the datafile

ORA-19669: proxy copy functions cannot be run on DISK channel

Cause: A proxy copy procedure was called, but the device which is allocated to the current session has type DISK.

Action: Allocate a non-DISK channel and retry the operation. Note that proxy copy requires a 3rd-party media management software product that supports the this backup/restore feature.

ORA-19670: file *string* already being restored

Cause: A proxy restore function has already named this file as a restore destination.

Action: Use a different file name. If this message occurs during a recovery manager job, then this is an internal error in recovery manager, and you should contact Oracle support.

ORA-19671: media management software returned invalid proxy handle

Cause: During a proxy backup or restore, the media management software returned an invalid file handle.

Action: This is an internal error in the media management software which is linked with Oracle to provide backup/restore services. Contact the media management software vendor.

ORA-19672: media management software returned invalid file status

Cause: During a proxy backup or restore, the media management software returned an invalid file status.

Action: This is an internal error in the media management software which is linked with Oracle to provide backup/restore services. Contact the media management software vendor.

ORA-19673: error during proxy copy of file *string*

Cause: During a proxy backup or restore, an error occurred while copying this file, but other files may have been copied successfully.

Action: There should be other errors on the error stack which explain why the file could not be successfully copied.

ORA-19674: file *string* is already being backed up with proxy copy

Cause: Recovery manager attempted to back up the specified file with proxy copy, but the file is already being backed up by another recovery manager job.

Action: Wait until the other recovery manager backup of this file is complete, then retry the backup.

ORA-19675: file *string* was modified during proxy copy

Cause: A proxy backup of the specified file failed because the file was brought on-line or otherwise modified while the proxy backup was in progress. This file was off-line or read-only when the backup began, so the file was not put into hot-backup mode, therefore no modifications are permitted while the backup is in progress.

Action: Take another backup of this file.

ORA-19676: one or more files failed during proxy backup or restore

Cause: During a proxy backup or restore, errors were encountered while processing some files. The files for which no error messages are shown were processed successfully.

Action: Examine the messages regarding the specific files to determine the cause of the problems.

ORA-19677: RMAN configuration name exceeds maximum length of *string*

Cause: The configuration name string exceeds maximum length.

Action: Supply a correct configuration name and retry the function.

ORA-19678: RMAN configuration value exceeds maximum length of *string*

Cause: The configuration value string exceeds maximum length.

Action: Supply a correct configuration value and retry the operation.

ORA-19679: RMAN configuration number *string* is outside valid range of 1 through *string*

Cause: An invalid RMAN Configuration number was specified.

Action: Specify a correct datafile number and retry the operation.

ORA-19680: some blocks not recovered. See trace file for details

Cause: Some blocks are not recovered during block media recovery.

Action: See trace files for details of the problem.

ORA-19681: block media recovery on control file not possible

Cause: file number 0 specified in block media recovery

Action: check file number

ORA-19682: file *string* not in block media recovery context

Cause: Internal error

Action: n/a

ORA-19683: real and backup block size of file *string* are unequal

Cause: block size changed between backup & real file

Action: use right backup

ORA-19684: block media recovery failed because database is suspended

Cause: Database is suspended, probably by an ALTER SYSTEM SUSPEND statement

Action: Execute ALTER SYSTEM RESUME then retry block media recovery

ORA-19685: SPFILE could not be verified

Cause: Some data blocks for the SPFILE were corrupt in the backup set.

Action: Unless the damage to the backup set can be repaired, the SPFILE cannot be restored from this backup set.

ORA-19686: SPFILE not restored due to *string*

Cause: The indicated file could not be restored, because some of its data blocks were not found in the backup piece.

Action: Unless the damage to the backup set can be repaired, the SPFILE cannot be restored from this backup set.

ORA-19687: SPFILE not found in backup set

Cause: The SPFILE could not be restored, because it is not in this backup set.

Action: This message is issued when the directory from the first backup piece is read and one or more files named for restoration were not found in the piece. You must supply the first backup piece of a backup set that contains the requested file.

ORA-19688: control file AUTOBACKUP format(*string*) for *string* does not have %F

Cause: control file AUTOBACKUP format must contain %F for the device.

Action: Change control file format using RMAN command CONFIGURE CONTROLFILE BACKUP FORMAT FOR DEVICE TYPE *type* TO *format*.

ORA-19689: cannot have more than one %F in control file AUTOBACKUP format(*string*) for *string*

Cause: control file AUTOBACKUP format contains more than one %F for the device.

Action: Change control file format using RMAN command CONFIGURE CONTROLFILE BACKUP FORMAT FOR DEVICE TYPE *type* TO *format*.

ORA-19690: backup piece release *string* incompatible with Oracle release *string*

Cause: The backup piece was created by incompatible software.

Action: Either restart with a compatible software release or create another backup using the current release.

ORA-19691: *string* is from different database: id=*string*, name=*string*

Cause: The database name or database id in backup piece header does not match the one in control file.

Action: Supply the correct backup piece belonging to this database.

ORA-19692: missing creation stamp on piece *string*

Cause: The backup piece doesn't have information about creation stamp.

Action: Supply another backup piece which is created by oracle 9i or later version.

ORA-19693: backup piece *string* already included

Cause: This backup piece was already specified for inclusion in the restore conversation. A restore conversation may process only a single instance of a backup piece.

Action: Remove the specified duplicate backup piece in restore steps and restart the conversation.

ORA-19694: some changed blocks were not found in the change tracking file

Cause: A backup or copy found that some changed blocks had not been recorded in the change tracking file. The details of which files and blocks are affected will be in an Oracle trace file.

Action: This indicates that there is a problem with the change tracking feature. Disable change tracking and re-start the backup.

ORA-19695: fixed table X\$KRBMSFT has not been populated

Cause: This is an internal error. The fixed table X\$KRBMAFT was not populated using the function DBMS_BACKUP_RESTORE.SEARCHFILES.

Action: Internal error - contact Oracle Customer Support.

ORA-19696: control file not found in backup set

Cause: The control file could not be restored because it is not in this backup set.

Action: This message is issued when the directory from the first backup piece is read and one or more files named for restoration were not found in the piece. You must supply the first backup piece of a backup set that contains the requested file.

ORA-19697: standby control file not found in backup set

Cause: The standby control file could not be restored because it is not in this backup set.

Action: This message is issued when the directory from the first backup piece is read and one or more files named for restoration were not found in the piece. You must supply the first backup piece of a backup set that contains the requested file.

ORA-19698: *string* is from different database: id=*string*, db_name=*string*

Cause: Catalog failed because the database id in file header does not match the one in control file.

Action: Supply the correct file belonging to this database.

ORA-19699: cannot make copies with compression enabled

Cause: Datafile copies with compression are not supported.

Action: If the function DBMS_BACKUP_RESTORE.BACKUPPIECECREATE is called outside RMAN, then the incompatible values are being passed for the parameters DOCOMPRESS and IMAGCP. If this message occurs during an RMAN job, then this is an internal error in RMAN, and you should contact Oracle support.

ORA-19700: device type exceeds maximum length of *string*

Cause: The device type indicated is invalid.

Action: Supply a correct device type and retry the allocation.

ORA-19701: device name exceeds maximum length of *string*

Cause: The device name indicated is invalid.

Action: Supply a correct device name and retry the allocation.

ORA-19702: device parameter exceeds maximum length of *string*

ORA-19703: device command string exceeds maximum length of *string*

Cause: The device command string exceeds maximum length.

Action: Correct the command and retry the operation.

ORA-19704: file name exceeds maximum length of *string*

Cause: The specified file name, which was a parameter to a copy, backup, or restore operation, exceeds the maximum file name length for this operating system.

Action: Retry the operation with a shorter file name.

ORA-19705: tag value exceeds maximum length of *string* characters

Cause: During a backup or copy operation, the user supplied a tag value too long to fit in the file header.

Action: Supply a shorter tag and retry the operation.

ORA-19706: invalid SCN

Cause: The input SCN is either not a positive integer or too large.

Action: Check the input SCN and make sure it is a valid SCN.

ORA-19707: invalid record block number - *string*

Cause: The input number is either negative or too large.

Action: Check the input record block number and make sure it is a valid number clauses in the create database statement.

ORA-19708: log destination exceeds maximum length of *string* characters

Cause: When starting a restore conversation, the user specified a log restore destination longer than the port-specific maximum.

Action: Supply a shorter destination and retry the operation.

ORA-19709: numeric parameter must be non-negative integer

Cause: A numeric parameter to an DBMS_BACKUP_RESTORE procedure is negative or contains a fractional portion.

Action: Supply a valid numeric parameter.

ORA-19710: unsupported character set *string*

Cause: When the target database is not mounted, RMAN sets the target database character set to the value specified in the users environment.

Action: Specify a valid character set in the environment. This is usually done via the NLS_LANG environment variable.

ORA-19711: cannot use RENORMALIZEALLFILENAMES while database is open

Cause: An attempt was made to re-normalize all the file names in the control file while the database is open.

Action: Close the database before using the RENORMALIZEALLFILENAMES procedure.

ORA-19712: table name exceeds maximum length of *string*

Cause: The table name string exceeds maximum length.

Action: Retry the operation with a shorter table name.

ORA-19713: invalid copy number: *string*

Cause: The copy number is not in a valid range or you have reached maximum limit.

Action: Report the error and other information to support.

ORA-19714: length for generated name longer than *string*

Cause: The specified format exceeds the maximum length for the piece name.

Action: Change the format to create shorter piece names.

ORA-19715: invalid format *string* for generated name

Cause: A restricted format or undefined format was used incorrectly.

Action: Change the format specified in the additional information by removing the restricted format.

ORA-19716: error processing format *string* to generate name for backup

Cause: There were errors while processing the format to generate name for backup.

Action: Change the format.

ORA-19717: for non-OMF search the pattern must be specified

Cause: The procedure DBMS_BACKUP_RESTORE.SEARCHFILES was called with an empty pattern while the parameter OMF was set to FALSE.

Action: Either specify the pattern or set the parameter OMF to TRUE.

ORA-19718: length for command id longer than *string*

Cause: The specified command id exceeds the maximum length for command id.

Action: Supply a shorter command id and retry the operation.

ORA-19719: length for operation name longer than *string*

Cause: The specified operation name exceeds the maximum length for operation name.

Action: Supply a shorter operation name and retry the operation.

ORA-19720: Error occurred when converting an OCI number into an SCN

Cause: This is most likely caused by an invalid SCN number that came from an external file, such as an export file.

Action: See other errors on the error stack to look for the source of the problem.

ORA-19721: Cannot find datafile with absolute file number *string* in tablespace *string*

Cause: Can not find one of the datafile that should be in the Pluggable Set.

Action: Make sure all datafiles are specified via import command line option or parameter files.

ORA-19722: datafile *string* is an incorrect version

Cause: The datafile is an incorrect version. It contains either less or more changes than the desired version.

Action: Make sure the right datafiles are transported. Make sure the datafile is copied while its tablespace is read only.

ORA-19723: Cannot recreate plugged in read-only datafile *string*

Cause: The datafile is plugged in read only. It can not recreated.

Action: Use ALTER DATABASE RENAME FILE command instead.

ORA-19724: snapshot too old: snapshot time is before file *string* plug-in time

Cause: The snapshot SCN is before the SCN at which the referred datafile is plugged into the database.

Action: retry the query.

ORA-19725: can not acquire plug-in enqueue

Cause: There may be another "ALTER DATABASE RESET COMPATIBILITY" command issued concurrently, preventing this process from acquiring the plug-in enqueue.

Action: retry the operation.

ORA-19726: cannot plug data [*string*] at level *string* into database running at compatibility level *string*

Cause: Some of the data in the pluggable set requires a compatibility level higher than what is currently allowed by the database. The string in square bracket is the name of the compatibility type associated with the data.

Action: Raise the "compatible" init.ora parameter and retry the operation.

ORA-19727: cannot plug data [*string*] at level *string* into database running Oracle *string*

Cause: Some of the data in the pluggable set requires a compatibility level higher than the release level of the Oracle executable. The string in square bracket is the name of the compatibility type associated with the data.

Action: Upgrade Oracle and retry the operation.

ORA-19728: data object number conflict between table *string* and partition *string* in table *string*

Cause: The non-partitioned table has the same data object number as one of the partitions in the partitioned table. One can not exchange the table with the partition in this case.

Action: Use "alter table move partition" command to move the offending partition, so that the partition will get a new data object number. Retry the operation then.

ORA-19729: File *string* is not the initial version of the plugged in datafile

Cause: The file is not the initial version of the plugged in datafile.

Action: Use the correct initial version of the plugged in datafile.

ORA-19730: can not convert offline plugged-in datafile *string*

Cause: As part of making a tablespace read-write, we need to convert datafiles that are plugged in read-only. The file must be online.

Action: Online the datafile and retry the operation.

ORA-19731: cannot apply change to unverified plugged-in datafile *string*

Cause: Recovery was not able to verify the referred datafile according to information in the control file. Before encountering this change vector for this file, somehow recovery did not encounter the file conversion redo that is supposed to verify the file. This may happen due to corrupted or incorrect control file used for media recovery.

Action: Use the correct control file and continue recovery.

ORA-19732: incorrect number of datafiles for tablespace *string*

Cause: The number of datafiles in the export file for the referred tablespace is not the same as expected. This is most likely caused by a user editing the export file.

Action: Use the correct export file and retry the operation.

ORA-19733: COMPATIBLE parameter needs to be *string* or greater

Cause: The COMPATIBLE initialization parameter is not high enough to allow the operation. Allowing the command would make the database incompatible with the release specified by the current COMPATIBLE parameter.

Action: Shutdown and startup with a higher compatibility setting.

ORA-19734: wrong creation SCN - control file expects converted plugged-in datafile

Cause: When a tablespace is plugged into a database, the tablespace is initially read-only. Oracle converts the header of the plugged-in datafiles (assign them a new creation SCN) when the tablespace is first made read-write. This error occurs when the creation SCN in the file header is different from the creation SCN in the control file, possibly because this is the initial version of plugged-in datafile.

Action: Either restore the converted datafile or continue recovering the datafile.

ORA-19735: wrong creation SCN - control file expects initial plugged-in datafile

Cause: When a tablespace is plugged into a database, the tablespace is initially read-only. Oracle converts the header of the plugged-in datafiles (assign them a new creation SCN) when the tablespace is first made read-write. This error occurs when the creation SCN in the file header is different from the creation SCN in the control file, possibly because this is the converted datafile.

Action: Either restore the initial version of the plugged-in datafile, or continue database recovery, which will recover the control file.

ORA-19736: can not plug a tablespace into a database using a different national character set

Cause: Oracle does not support plugging a tablespace into a database using a different national character set.

Action: Use import/export or unload/load to move data instead.

ORA-19738: cannot find language information for character set: '*string*'

Cause: The compatibility check failed because a character set name that was provided is not valid.

Action: Correct the character set name and retry.

ORA-19740: text is longer than *string*

Cause: The specified text exceeds the maximum length for text.

Action: Supply a shorter text and retry the operation.

ORA-19741: *string* exceeds maximum allowable length of *string* for parameter '*string*'

Cause: The specified string exceeds the maximum allowable length for the parameter

Action: Supply a shorter string for the parameter and retry the operation.

ORA-19742: control file is not a backup control file

Cause: This parameter could not be set because the control file was not a backup control file.

Action: Do not use this call for this control file.

ORA-19750: change tracking file: '*string*'

Cause: This message reports the name of a file involved in other messages.

Action: See associated error messages for a description of the problem.

ORA-19751: could not create the change tracking file

Cause: It was not possible to create the change tracking file.

Action: Check that there is sufficient disk space and no conflicts in file names and try to enable block change tracking again.

ORA-19752: block change tracking is already enabled

Cause: The ALTER DATABASE ENABLE BLOCK CHANGE TRACKING command was issued, but block change tracking is already turned on for this database.

Action: None, this is an informative message only.

ORA-19753: error writing to change tracking file

Cause: An I/O error occurred while writing to the change tracking file.

Action: There will be other messages on the error stack that show details of the problem.

ORA-19754: error reading from change tracking file

Cause: An I/O error occurred while reading from the change tracking file.

Action: There will be other messages on the error stack that show details of the problem.

ORA-19755: could not open change tracking file

Cause: The change tracking file could not be opened.

Action: There will be other messages on the error stack that show details of the problem.

ORA-19756: corrupt block number *string* found in change tracking file

Cause: The specified block number is corrupt in the change tracking file.

Action: There will be other messages on the error stack that show details of the problem. There will also be a trace file that contains a complete dump of the corrupt block.

ORA-19757: could not resize change tracking file to *string* blocks

Cause: An error occurred while trying to change the size of the change tracking file.

Action: There will be other messages on the error stack that show details of the problem.

ORA-19758: failed to enable/disable block change tracking: out of SGA memory

Cause: out of SGA memory

Action: Increase SGA and restart the instance.

ORA-19759: block change tracking is not enabled

Cause: A command was entered that requires block change tracking to be enabled, but block change tracking is not enabled.

Action: None, this is an informative message only.

ORA-19760: error starting change tracking

Cause: Change tracking is enabled, but a problem was encountered while enabling the change tracking subsystem in this instance. The alert log and the trace file from the CTWR process will contain more information about the error.

Action: Examine the trace and alert files. Correct the error if possible, otherwise disable change tracking.

ORA-19761: block size *string* is not valid for change tracking file

Cause: While opening the specified change tracking file, it was found that the file header did not contain a valid logical block size. This probably means that the file is corrupt.

Action: If the file can be repaired, do so, otherwise disable and re-enable change tracking to re-initialize the file.

ORA-19762: invalid file type *string*

Cause: An invalid file type was found in the change tracking file. Some other file was put in place of the change tracking file, or the file is corrupt.

Action: Disable then re-enable change tracking.

ORA-19763: compatibility version *string* is higher than maximum allowed: *string*

Cause: The compatibility version in the change tracking file is greater than what can be used by the current release of Oracle. This can happen when you upgrade, use change tracking with a new release, then downgrade.

Action: Disable then re-enable change tracking.

ORA-19764: database id *string* does not match database id *string* in control file

Cause: The change tracking file is not the correct one for this database. This can happen when the database ID for this database has been changed.

Action: Disable then re-enable change tracking.

ORA-19765: mount id *string* does not match mount id *string* in control file

Cause: The change tracking file does not match the one that was present when this instance was opened. In RAC, this error is most likely caused by having a change tracking file that cannot be consistently updated by all instances.

Action: In RAC, ensure that the name specified for the change tracking file truly represents the same disk location for all nodes in the cluster. Disable then re-enable change tracking.

ORA-19766: missing CHANGE keyword

Cause: Syntax error.

Action: Use the correct syntax: ENABLE/DISABLE BLOCK CHANGE TRACKING

ORA-19767: missing TRACKING keyword

Cause: Syntax error.

Action: Use the correct syntax: ENABLE/DISABLE BLOCK CHANGE TRACKING

ORA-19768: USING clause only valid with ENABLE CHANGE TRACKING

Cause: The USING clause was specified with DISABLE CHANGE TRACKING

Action: Correct the statement.

ORA-19769: missing FILE keyword

Cause: Syntax error.

Action: Use the correct syntax: ENABLE/DISABLE BLOCK CHANGE TRACKING

ORA-19770: invalid change tracking file name

Cause: The USING clause was specified with ALTER DATABASE ENABLE BLOCK CHANGE TRACKING, but no file name was given.

Action: Specify the change tracking file name, or omit the USING clause to allow Oracle to create a default name for the change tracking file.

ORA-19771: cannot rename change tracking file while database is open

Cause: The ALTER DATABASE RENAME FILE command was used to rename the change tracking file, and the database is open by one or more instances. The database must be mounted, and not open, to rename the change tracking file.

Action: Close the database and reissue the command.

ORA-19772: change tracking file name exceeds limit of *string* characters

Cause: The name specified for the change tracking file is too long.

Action: Specify a shorter change tracking file name.

ORA-19773: must specify change tracking file name

Cause: No file name was specified with the ALTER DATABASE ENABLE CHANGE TRACKING command, and the DB_CREATE_FILE_DEST parameter was not set.

Action: Either specify a file name, or set the DB_CREATE_FILE_DEST parameter.

ORA-19776: PROXY restore to ASM disk group "*string*" is not supported.

Cause: An attempt was made to proxy restore a file to ASM disk group using RMAN command. This is not supported.

Action: Use a different file name and reissue RMAN command.

ORA-19777: ASM file *string* cannot be proxy backed up.

Cause: An attempt was made to proxy backup a ASM file. This is not supported.

Action: Use a different file name and reissue RMAN command.

ORA-19779: could not obtain resilvering status for change tracking file

Cause: An error occurred while obtaining the mirror resilvering status of the change tracking file.

Action: Refer to other error messages shown for additional details of the problem.

ORA-19780: Active Data Guard option not enabled

Cause: Change tracking at a standby database required the Active Data Guard option.

Action: Enable the Active Data Guard option.

ORA-19800: Unable to initialize Oracle Managed Destination

Cause: The name given for an Oracle managed files destination cannot be initialized.

Action: Check previous error messages for the reason Oracle was unable to initialize destination. Take corrective action, if possible, and retry the command or use a different name for destination.

ORA-19801: initialization parameter DB_RECOVERY_FILE_DEST is not set

Cause: An attempt was made to create a file in DB_RECOVERY_FILE_DEST when DB_RECOVERY_FILE_DEST was not set. There are number of possible causes of this error, including: 1) A LOG_ARCHIVE_DEST_n parameter was specified using a LOCATION attribute whose value was DB_RECOVERY_FILE_DEST and an archived log file creation was attempted. 2) STANDBY_ARCHIVE_DEST parameter was

specified using a LOCATION attribute whose value was DB_RECOVERY_FILE_DEST and an archived log file creation was attempted.

Action: Specify a valid destination for DB_RECOVERY_FILE_DEST in initialization parameter file or with the ALTER SYSTEM SET command.

ORA-19802: cannot use DB_RECOVERY_FILE_DEST without DB_RECOVERY_FILE_DEST_SIZE

Cause: There are two possible cause for this error: 1) The DB_RECOVERY_FILE_DEST parameter was in use when no DB_RECOVERY_FILE_DEST_SIZE parameter was encountered while fetching initialization parameter. 2) An attempt was made to set DB_RECOVERY_FILE_DEST with the ALTER SYSTEM command when no DB_RECOVERY_FILE_DEST_SIZE was in use.

Action: Correct the dependency parameter definitions and retry the command.

ORA-19803: Parameter DB_RECOVERY_FILE_DEST_SIZE is out of range (1 - string)

Cause: Parameter DB_RECOVERY_FILE_DEST_SIZE specified was not valid.

Action: Specify a valid number within the range.

ORA-19804: cannot reclaim string bytes disk space from string limit

Cause: Oracle cannot reclaim disk space of specified bytes from the DB_RECOVERY_FILE_DEST_SIZE limit.

Action: There are five possible solutions: 1) Take frequent backup of recovery area using RMAN. 2) Consider changing RMAN retention policy. 3) Consider changing RMAN archived log deletion policy. 4) Add disk space and increase DB_RECOVERY_FILE_DEST_SIZE. 5) Delete files from recovery area using RMAN.

ORA-19805: RECID string of string was deleted to reclaim disk space

Cause: The file described by the record in control file was deleted in order to reclaim disk space from recovery area for other operations.

Action: Wait and try again.

ORA-19806: cannot make duplex backups in recovery area

Cause: Duplex backup to recovery area is not supported.

Action: Remove duplex option and try again.

ORA-19808: recovery destination parameter mismatch

Cause: The value of parameters DB_RECOVERY_FILE_DEST and DB_RECOVERY_FILE_DEST_SIZE must be same in all instances. All databases must have same recovery destination parameters.

Action: Check DB_RECOVERY_FILE_DEST and DB_RECOVERY_FILE_DEST_SIZE values in all instances.

ORA-19809: limit exceeded for recovery files

Cause: The limit for recovery files specified by the DB_RECOVERY_FILE_DEST_SIZE was exceeded.

Action: There are five possible solutions: 1) Take frequent backup of recovery area using RMAN. 2) Consider changing RMAN retention policy. 3) Consider changing RMAN archived log deletion policy. 4) Add disk space and increase DB_RECOVERY_FILE_DEST_SIZE. 5) Delete files from recovery area using RMAN.

ORA-19810: Cannot create temporary control file *string* in DB_RECOVERY_FILE_DEST

Cause: An attempt was made to create a control file for a temporary purpose in DB_RECOVERY_FILE_DEST.

Action: Retry the operation with a new file name.

ORA-19811: cannot have files in DB_RECOVERY_FILE_DEST with keep attributes

Cause: An attempt was made to 1) Create a backup piece or image copy in the recovery area with KEEP option. 2) Update the KEEP attributes of an existing backup piece or image copy in the recovery area.

Action: Reissue RMAN command without KEEP options.

ORA-19812: cannot use *string* without DB_RECOVERY_FILE_DEST

Cause: There are three possible cause for this error: 1) The indicated parameter was in use when no DB_RECOVERY_FILE_DEST parameter was encountered while fetching the initialization parameter. 2) An attempt was made to set indicated the parameter with the ALTER SYSTEM command when no DB_RECOVERY_FILE_DEST was in use. 3) An attempt was made to clear DB_RECOVERY_FILE_DEST with the ALTER SYSTEM command when the indicated parameter was in use.

Action: Eliminate any incompatible parameter definitions.

ORA-19813: cannot have unavailable file *string* in DB_RECOVERY_FILE_DEST

Cause: An attempt was made to change a backup piece or image copy in recovery area to UNAVAILABLE.

Action: Correct and resubmit the RMAN command. Do not use messages 19814; it is used for simulating crash.

ORA-19815: WARNING: *string* of *string* bytes is *string*%% used, and has *string* remaining bytes available.

Cause: DB_RECOVERY_FILE_DEST is running out of disk space.

Action: One of the following: 1. Add disk space and increase DB_RECOVERY_FILE_DEST_SIZE. 2. Backup files to tertiary device using RMAN. 3. Consider changing RMAN retention policy. 4. Consider changing RMAN archived log deletion policy. 5. Delete files from recovery area using RMAN.

ORA-19816: WARNING: Files may exist in *string* that are not known to database.

Cause: One of the following events caused this: 1. A database crash happened during file creation. 2. A backup control file was restored. 3. The control file was re-created. 4. DB_RECOVERY_FILE_DEST has previously been enabled and then disabled.

Action: Use RMAN command CATALOG RECOVERY AREA to re-catalog any such files. If the file header is corrupted, then delete those files using an OS utility. Do not use messages 19817; it is used for simulating lock failure Do not use messages 19818; it is used for space reclamation before backup Do not use messages 19819; it is used to disable clearing file name

ORA-19820: database must be in NOARCHIVELOG mode to disable logging

Cause: Logging was disabled when ARCHIVELOG mode was used.

Action: Execute ALTER DATABASE NOARCHIVELOG in mount state.

ORA-19821: an intentionally corrupt log file was found

Cause: A log file that was intentionally corrupt for testing or benchmarking purposes was found and failed the operation.

Action: Remove such log files and retry or use the NOARCHIVELOG option if possible.

ORA-19830: error from target database: \nstring

Cause: This error should be followed by other errors indicating the cause of the problem.

Action: No action required.

ORA-19831: incompatible string.string.string.string DBMS_BACKUP_RESTORE package: string.string.string.string required

Cause: This version of database was incompatible with the the indicated DBMS_BACKUP_RESTORE package installed in the database.

Action: If the database has been upgraded from an earlier version, ensure that the catxxx.sql script has been run successfully. Re-install dbmsbkrs.sql and prvtbkrs.plb if necessary.

ORA-19836: cannot use passphrase encryption for this backup

Cause: Passphrase encryption was attempted for a backup that contains encrypted tablespaces and uses compression.

Action: Do not use passphrase encryption for this backup. Use transparent wallet-based encryption instead.

ORA-19837: invalid blocksize string in backup piece header

Cause: The blocksize of the backup piece obtained from the header was invalid.

Action: The backup piece is corrupted, a different backup piece should be used for restore.

ORA-19838: Cannot use this control file to open database

Cause: This control file was restored by a DUPLICATE operation used only to restore and recover the datafiles of the new database. It is not meant to be used for opening the database, as allowing so might corrupt datafiles or online redo logs of the target database or both.

Action: Re-create control file manually specifying all names of datafiles and online redo logs. Do not forget to use NID to change the name or DBID or both of the new database.

ORA-19839: snapshot datafile checkpoint time is greater than snapshot time

Cause: The snapshot time which was specified when starting the recovery less than data file's checkpoint time. The snapshot recovery is only possible with data file's whose checkpoint time is less than snapshot time.

Action: Restore the data file's associated for the specified snapshot time or specify the correct snapshot time associated with the data file.

ORA-19840: SNAPSHOT TIME recovery is not enabled

Cause: An attempt was made to use SNAPSHOT TIME recovery. But, the feature was not enabled.

Action: Contact Oracle Support Services to enable snapshot time recovery and then retry the command.

ORA-19841: Cross-platform backups require COMPATIBLE string or greater

Cause: An attempt to create a cross-platform backup was made but the COMPATIBLE parameter was not set to a high enough value to allow this.

Action: Do not attempt to use this functionality or raise the compatibility level.

ORA-19842: The current database incarnation changed during backup

Cause: The backup failed because the current database incarnation was changed during the backup. One of the following events caused this incarnation change: - The database was opened using ALTER DATABASE OPEN RESETLOGS statement. - RMAN command RESET DATABASE TO INCARNATION was issued. - If this happened on physical standby database, then redo apply has applied redo data from a new database incarnation.

Action: Retry the backup.

ORA-19843: Cannot obtain datafile name for datafile *string*

Cause: While trying to obtain the file enqueue for the datafile the datafile name could not be obtained.

Action: Examine the trace and alert files for possible causes. Fix underlying problem before attempting command again.

ORA-19844: database ID is from different database: ID=*string*

Cause: The database ID on the remote site did not match the ID of the target database. This is most likely caused by a wrong service name for the remote connection.

Action: Supply the correct service name and retry the command.

ORA-19845: error in *string* while communicating with remote database server

Cause: An error occurred while initiating backup on remote database server for network restore. Additional error messages will be issued to describe the failure.

Action: Check additional error messages.

ORA-19846: cannot read header of datafile *string* from remote site

Cause: Unable to read the file header from remote site.

Action: Make sure the data file is accessible on remote site and retry the command.

ORA-19847: cannot read header of control file from remote site

Cause: Could not read the control file header from the remote site.

Action: Make sure the database is mounted on the remote site and retry the command.

ORA-19848: cross-platform backup piece requires COMPATIBLE *string* or greater

Cause: An attempt was made to perform a cross-platform operation from a backup piece created with a higher compatibility than the current COMPATIBLE parameter.

Action: Raise the compatibility level or do not attempt a cross-platform restore from this backup piece.

ORA-19849: error while reading backup piece from service *string*

Cause: This error should be followed by other errors indicating the cause of the problem.

Action: See other errors actions.

ORA-19850: backup piece constructed from service *string* is corrupt

Cause: This error indicates that the backup piece that was constructed from the service is corrupt.

Action: See alert log for details of the corruption. Fix the corruption and retry the command.

ORA-19851: OS error while managing auxiliary database *string*

Cause: An OS error was received while managing the automatic auxiliary instance.

Action: Check the accompanying errors.

ORA-19852: error creating services for auxiliary instance *string* (error *string*)

Cause: An error was received while managing the services of the auxiliary instance.

Action: Check the accompanying errors.

ORA-19853: error preparing auxiliary instance *string* (error *string*)

Cause: An error was received while managing the automatic auxiliary instance.

Action: Check the accompanying errors.

ORA-19854: error obtaining connect string from target

Cause: Could not obtain the connect string from the target database

Action: Check the accompanying errors.

ORA-19860: piece validation cannot be performed more than once

Cause: The user attempted to validate a list of backup pieces more than once. Validation may only be performed once for a given validation conversation.

Action: Do not attempt to validate the pieces more than once.

ORA-19861: additional backup pieces cannot be validated in this conversation

Cause: The user tried to add new pieces to the list of files being validated after the validation had already been performed. In a validation conversation, the list can only be validated once.

Action: Add all the backup pieces to the list before validating, or start a new validation conversation for the remaining pieces.

ORA-19862: backup pieces must be validated before accessing results

Cause: The user tried to get validation results for backup pieces before the pieces were actually validated.

Action: Validate the pieces before trying to access the results.

ORA-19863: device block size *string* is larger than max allowed: *string*

Cause: The user specified a device BLKSIZE that is larger than the device BLKSIZE specified during compressed backup.

Action: Change the device BLKSIZE to be smaller than the maximum allowed.

ORA-19864: *string*

ORA-19865: Backup piece *string* has no data

Cause: No data was returned for the specified backup piece.

Action: This normally indicates a problem with the media management software which is linked with Oracle to provide backup and restore services. Contact the media management software vendor.

ORA-19866: error writing file header for datafile *string*

Cause: During a block recovery, the header of the datafile could not be updated.

Action: Contact Oracle Support Services.

ORA-19867: backup piece *string* is from a different container identifier *string*; data file *string*

Cause: This backup piece container identifier did not match the supplied data file container identifier.

Action: Retry the command with the correct backup piece or the correct data file.

ORA-19870: error while restoring backup piece *string*

Cause: This error should be followed by other errors indicating the cause of the problem.

Action: See other errors actions.

ORA-19872: Unexpected end of file at block *string* while decompressing backup piece *string*

Cause: While reading a compressed backup piece, RMAN received an end-of-file without finding the end-of-compression stream.

Action: This is most likely caused by a corrupted backup piece. Consider using a different backup piece for restore.

ORA-19873: cannot apply this backup section to file *string*

Cause: RMAN cannot restore a multi-section backup to the indicated file, because this section is not a backup of this file, or the file was not prepared correctly for this restore.

Action: If this error occurs while running RMAN, then it is an internal error and you should contact Oracle support.

ORA-19874: cannot finish multisection restore or copy to file *string*

Cause: During a multisection restore or copy, the file being restored was not a file in which a multisection restore or copy was in progress.

Action: If this error occurs while running RMAN, then it was an internal error and you should contact Oracle Support Services.

ORA-19875: multisection restore or copy not complete for file *string*

Cause: While completing a multisection restore or copy, it was found that all required sections for this file were not correctly applied.

Action: If this error occurs while running RMAN, then it is an internal error and you should contact Oracle Support Services.

ORA-19880: Corrupted space header for datafile *string*, block *string*

Cause: When reading the space header block to use Unused Block Optimization for the backup of the datafile, the space header block had corrupted information.

Action: The corrupt space header must be fixed before Unused Block Optimization can be used for this file. Note that you should fix the corruption in any case because it will affect the availability of the data in the file, beyond just taking backups.

ORA-19881: Corrupted space bitmap for datafile *string*, block *string*

Cause: When reading a space bitmap block to use Unused Block Optimization for the backup of the datafile, the space bitmap block had corrupted information.

Action: The corrupt space bitmap must be fixed before Unused Block Optimization can be used for this file. Note that you should fix the corruption in any case because it will affect the availability of the data in the file, beyond just taking backups.

ORA-19882: datafile *string* checkpoint *string* is ahead of space bitmap datafile *string* checkpoint *string*

Cause: When checkpointing the datafile containing the space bitmaps for the datafile being backed up in order to use Unused Block Optimization, the checkpoint of the datafile containing the space bitmaps did not advance.

Action: Examine the trace and alert files for possible causes. Fix underlying problem to use Unused Block Optimization for datafile's backup.

ORA-19884: datafile *string* is unable to use Unused Block Optimization because tablespace has been dropped

Cause: When attempting to find information about datafile that holds bitmaps of migrated tablespace, the tablespace was found to have been dropped.

Action: None. This is an informational message.

ORA-19899: missing incarnation information

Cause: Media recovery stopped because information of one or more ancestor incarnations of recovery target incarnation was not available.

Action: Register logs from the missing incarnations and retry recovery.

ORA-19900: RESETLOGS must be specified after recovery to new incarnation

Cause: Recovery was done to an incarnation after changing the destination incarnation using RMAN's RESET DATABASE command.

Action: Open the database with the RESETLOGS option.

ORA-19901: database needs more recovery to create new incarnation

Cause: Recovery was done to an incarnation after changing the destination incarnation using RMAN's RESET DATABASE command, but one or more of the recovered datafiles still belongs to the parent incarnation. This usually happens when recovery is ended before any logs from the desired incarnation have been applied.

Action: Continue recovery.

ORA-19902: incarnation key *string* not found

Cause: The specified incarnation was not found in the control file.

Action: Resubmit request with known incarnation key. To see which incarnations are available for this target database, query V\$DATABASE_INCARNATION or use RMAN's LIST INCARNATION command.

ORA-19903: test recovery not allowed when recovering to new incarnation

Cause: Either a new incarnation was set using RMAN's RESET DATABASE command for a control file that was CURRENT, or the control file is from a prior incarnation. As recovery to a new incarnation requires changing the control file, test recovery is not allowed.

Action: Perform actual recovery or RESET DATABASE to incarnation that was last opened using the control file to do test recovery.

ORA-19904: test recovery not allowed for datafile *string*

Cause: The specified datafile has been restored from a backup that was taken before the last RESETLOGS. Recovering this datafile will require a file header update that is incompatible with test recovery.

Action: Perform actual recovery.

ORA-19905: log_archive_format must contain %string, %string and %%r

Cause: log_archive_format is missing a mandatory format element. Starting with Oracle 10i, archived log file names must contain each of the elements %s(sequence), %t(thread), and %r(RESETLOGS ID) to ensure that all archived log file names are unique.

Action: Add the missing format elements to log_archive_format.

ORA-19906: recovery target incarnation changed during recovery

Cause: While a media recovery was active, a new incarnation was detected by the server due to inspection or cataloging of archived logs or backup files.

Action: If you want recovery to use the new incarnation, restart recovery. This is the most common action on a standby database when RESETLOGS is done in primary. If you do not want recovery to use the new incarnation, change the recovery destination using RMAN's RESET DATABASE TO INCARNATION <incarnation#> command. To see which incarnations are available for this target database, query V \$DATABASE_INCARNATION or use RMAN's LIST INCARNATION command.

ORA-19907: recovery time or SCN does not belong to recovered incarnation

Cause: A point-in-time recovery to an SCN or time stamp prior to the last RESETLOGS was requested.

Action: Either change the specified recovery time/SCN, or change the recovery destination using RMAN's RESET DATABASE command.

ORA-19908: datafile string has invalid checkpoint

Cause: The specified datafile has an invalid checkpoint.

Action: Restore the datafile from a backup.

ORA-19909: datafile string belongs to an orphan incarnation

Cause: Either the specified datafile was restored from a backup that was taken during a period of time that has already been discarded by a RESETLOGS operation, or Oracle cannot identify which database incarnation the file belongs to. The alert log contains more information.

Action: Restore a backup of this file that belongs to either the current or a prior incarnation of the database. If you are using RMAN to restore, RMAN will automatically select a correct backup.

ORA-19910: can not change recovery target incarnation in control file

Cause: The RESET DATABASE TO INCARNATION command was used while the database is open. This is not allowed.

Action: Close the database then re-issue the command.

ORA-19911: datafile string contains future changes at the incarnation boundary

Cause: The file did not hit end backup marker redo during recovery at the incarnation boundary, hence may contain changes discarded by new incarnation.

Action: Use older backup of the file and then re-issue the command.

ORA-19912: cannot recover to target incarnation string

Cause: The control file is not in the recovery path of the target incarnation, and does not contain enough information as to how to recover to the target incarnation.

Action: Restore the latest control file from the target incarnation and retry.

ORA-19913: unable to decrypt backup

Cause: A backup piece could not be decrypted. This message is accompanied with another message that indicates the name of the encrypted backup that could not be restored. The reason could be either that an invalid password was entered, or that, when using transparent decryption, the database external security device is not open.

Action: If password-based restore was enabled for this backup, then supply the correct password using the RMAN SET DECRYPTION command. If transparent restore was enabled for this backup, then ensure that the database external security device is open.

ORA-19914: unable to encrypt backup

Cause: RMAN could not create an encrypted backup. This message will be accompanied by other messages that give more details about why the encrypted backup could not be created. The most common reason for this message is that you are trying to create a backup that can be transparently decrypted, and the database external security device is not open.

Action: If the external security device is not open, then open it. If the external security device is not configured, then the only type of encrypted backup that you can create is a password-based backup.

ORA-19915: unable to encrypt pre-10.2 files

Cause: An RMAN encrypted backup was requested, but this backup includes one or more archived logs that were generated by an older release of Oracle. These archived logs cannot be encrypted.

Action: Back up the older logs without encryption. Logs created with Oracle release 10.2 and greater can be encrypted.

ORA-19919: encrypted backups to tertiary storage require Oracle Secure Backup

Cause: RMAN was configured to create encrypted backups, but the channel is neither a DISK channel nor an Oracle Secure Backup channel.

Action: Allocate a DISK channel or an Oracle Secure Backup channel to use backup encryption.

ORA-19920: RMAN does not support PKI-based master key for encryption.

Cause: An attempt was made to use Oracle public key infrastructure (PKI) based master key algorithm. RMAN only supports Advanced Encryption Standard (AES) based encryption.

Action: Use AES based encryption.

ORA-19921: maximum number of *string* rows exceeded

Cause: The maximum number of rows in the V\$RMAN_STATUS or V\$RMAN_OUTPUT table has been exceeded.

Action: Close some of existing and unused RMAN connections and sessions.

ORA-19922: there is no parent row with id *string* and level *string*

Cause: RMAN tried to add a new V\$RMAN_STATUS row, but the parent row did not exist.

Action: This is an internal error. Contact Oracle Support.

ORA-19923: the session for row with id *string* is not active

Cause: RMAN tried to update an V\$RMAN_STATUS row but the process which owns this row died.

Action: This is an internal error. Contact Oracle Support.

ORA-19924: there are no row with id *string*

Cause: RMAN tried to update an V\$RMAN_STATUS row, but the row don't exist.

Action: This is an internal error. Contact Oracle Support.

ORA-19925: Internal error while cleaning memory used by V\$RMAN_STATUS view

ORA-19926: Database cannot be converted at this time

Cause: Another CONVERT DATABASE operation is already in progress.

Action: Retry CONVERT DATABASE command later.

ORA-19927: CONVERT DATABASE operation cannot proceed

Cause: An error occurred earlier during CONVERT DATABASE operation.

Action: Retry CONVERT DATABASE command.

ORA-19928: CONVERT of data files with undo segments between different endian is not supported.

Cause: Conversion of data files with undo segments was not supported between endianness. The only time that data files with undo segments can be converted is between the same endianness as part of convert database. Convert database between different endian is not supported.

Action: Do not attempt to convert data files with undo segments between different endian.

ORA-19929: no archive log registered

Cause: An error occurred during ALTER DATABASE RECOVER with the FORCE START AT option because there were no archive logs registered in the control file covering the specified start SCN or time.

Action: Register archive logs covering the specified SCN or time.

ORA-19930: file *string* has invalid checkpoint SCN *string*

Cause: When opening the file to be placed in a copy or backup set, to be inspected, the file header was not recognized as a valid header because it contained a invalid checkpoint SCN. The indicated file cannot be processed.

Action: Ensure that the correct files are being specified for the catalog or backup operation.

ORA-19931: file *string* has invalid creation SCN *string*

Cause: When opening the file to be placed in a copy or backup set, to be inspected, the file header was not recognized as a valid header because it contained a invalid creation SCN. The indicated file cannot be processed.

Action: Ensure that the correct files are being specified for the catalog or backup operation.

ORA-19932: control file is not clone, standby or backup

Cause: The operation failed because the control file was not mounted as clone, standby or backup.

Action: Mount the database as clone, standby or backup and retry.

ORA-19933: catalog backup piece *string* of data pump dump file is not supported
Cause: This backup piece contained data pump dump file. Cataloging such a backup piece is not supported.

Action: Do not request to catalog data pump dump file backup piece.

ORA-19934: cannot validate block 0

Cause: An attempt was made to validate block 0 of a datafile.

Action: Do not specify block 0 for validation.

ORA-19936: some tablespaces were not found in backup set

Cause: Some tablespaces that were specified for restoration were not found in the backup set directory. Message 19937 is issued for each file that was not found.

Action: See the instructions for message 19937.

ORA-19937: tablespace *string* was not found in backup set

Cause: The indicated tablespace could not be restored because it was not in this backup set.

Action: This message is issued when the directory from the first backup piece is read and one or more tablespaces named for restoration are not found. The restore conversation is still active, but no data has been read and you must supply the first backup piece of a backup set that contains all of the requested files or tablespaces or both.

ORA-19938: Data Pump dump file backup requires COMPATIBLE *string* or greater

Cause: Data Pump dump file backup requested but COMPATIBLE did not allow it.

Action: Do not request dump file backup or set COMPATIBLE to minimum value and retry backup.

ORA-19939: Data Pump dump file can only be included in a cross-platform backup

Cause: Data Pump dump file backup requested but the backup conversation is not a cross-platform conversation.

Action: Start a new cross-platform backup conversation or do not include a Data Pump dump file.

ORA-19940: cannot use cross-platform backups to convert whole database to different endianness

Cause: Cross-platform backups or restores of whole database between different endianness was requested but it is not supported.

Action: Revise the specified platforms for conversion before retrying the command.

ORA-19941: invalid blocksize in cross-platform datafile *string*

Cause: Blocksize in header of datafile copy being converted at target was invalid. Either datafile has not been made read/write with compatibility 10.0 or greater at source database or datafile copy is corrupted.

Action: Make a new datafile copy taken after tablespace has been made read/write with compatibility 10.0 at source database and retry conversion.

ORA-19942: datafile copy *string* not created with compatibility 10.0 or greater

Cause: The specified datafile copy to be converted at the target was not produced after making the tablespace in read/write mode with compatibility 10.0 or greater at the source database.

Action: Make a new datafile copy taken after tablespace has been made read/write with compatibility 10.0 at source database and retry conversion.

ORA-19943: Data Pump dump file not found in backup set

Cause: The Data Pump dump file could not be restored because it was not in this backup set.

Action: This message is issued when the directory from the first backup piece is read and the Data Pump dump file is not found in the piece. You must supply the first backup piece of a backup set that contains the requested file.

ORA-19944: Specified platform: '*string*' does not match piece header platform: '*string*'

Cause: The backup piece did not belong to the platform specified in FROM PLATFORM.

Action: Retry the restore using the correct FROM PLATFORM or without specifying FROM PLATFORM at all.

ORA-19945: file *string* already included to be restored to *string*

Cause: This file was already specified for inclusion in this restore conversation. The restore conversation may process only a single instance of a datafile.

Action: No action required. The conversation is still active and more files can be specified.

ORA-19946: Cannot determine block size of backup piece '*string*' (*string*)

Cause: It was not possible to determine the cross-platform transportable backup piece block size.

Action: Contact Oracle Support Services.

ORA-19947: Invalid block size *string* in backup piece '*string*' from specified platform '*string*'

Cause: The block size obtained from the backup piece using the specified platform was not valid. Either the piece is corrupted or the specified platform is incorrect.

Action: Retry the restore using the correct FROM PLATFORM clause.

ORA-19948: Backup piece does not contain a cross-platform datafile backup, reason=*string*

Cause: A cross-platform transportable restore was specified but the backup piece was not produced with the correct command.

Action: Produce a cross-platform transportable backup piece by using BACKUP ... TO PLATFORM and retry the restore.

ORA-19949: Specified platform: '*string*' has different endianness than piece '*string*', cannot read

Cause: The backup piece had a different endianness than the platform specified in FROM PLATFORM.

Action: Retry the restore using the correct FROM PLATFORM or without specifying FROM PLATFORM at all.

ORA-19950: tablespace *string* already included to be restored

Cause: This tablespace was already specified for inclusion in this restore conversation.

Action: No action required. The conversation is still active and more tablespaces or files or both can be specified. The restore conversation may process only a single instance of a tablespace.

ORA-19951: cannot modify control file until DBNEWID is completed

Cause: An operation requiring to modify the control file was attempted, but a NID change is in progress.

Action: Wait until NID completes before attempting the operation.

ORA-19952: database should be mounted exclusively

Cause: The database was started in parallel mode. To change the DBID, the database must be mounted exclusively.

Action: Shut down the database and start it in exclusive mode.

ORA-19953: database should not be open

Cause: The database was open. To change the DBID, the database must be mounted exclusively.

Action: Shut down the database and mount it in exclusive mode.

ORA-19954: control file is not current

Cause: The operation failed because a non-current, non-standby control file was mounted.

Action: Make the control file current and retry.

ORA-19955: only one open thread is allowed to change the DBID

Cause: The operation failed because there were active threads in the database. The most likely cause is that the database crashed the last time it was shut down.

Action: Ensure that all threads are closed before retrying the operation. Start and open the database to perform crash recovery, then shut down with the NORMAL or IMMEDIATE options to close it cleanly. Finally, try running the utility again.

ORA-19956: database should have no offline immediate datafiles

Cause: The operation failed because the database had one or more datafiles that were in OFFLINE IMMEDIATE mode.

Action: Drop the datafiles or recover them and bring them online.

ORA-19957: database should have no datafiles in unknown state

Cause: The operation failed because the database had one or more datafiles that were in an unknown state.

Action: Drop the datafiles or recover them and bring them online.

ORA-19958: potential deadlock involving DIAG process

Cause: DIAG requested a control file operation that may lead to a deadlock

Action: Try last operation later when the control file is released

ORA-19959: DBNEWID utility only allowed in CDB\$ROOT

Cause: An attempt was made to use the DBNEWID utility in a pluggable database.

Action: Connect to CDB\$ROOT and retry the command.

ORA-19960: Internal use only

Cause: NID usage

Action: None

ORA-19961: compression algorithm *string* requires advanced compression option to be enabled

Cause: Requested compression algorithm in initialization parameter or by RMAN configuration requires that the advanced compression option be enabled and it was not.

Action: Change initialization parameter `advanced_compression_option_usable` to true or change RMAN configurations and retry the operation.

ORA-19962: compression algorithm *string* is not valid with release *string*

Cause: Algorithm in initialization parameter requires a lower compatibility that is currently set.

Action: Change algorithm in initialization parameter file or lower compatibility.

ORA-19963: error getting logical block size of file *string*

Cause: Error occurred when querying the logical block size of a file.

Action: None

ORA-19965: ALTER DATABASE RECOVER STANDBY TABLESPACE has been deprecated

Cause: The STANDBY TABLESPACE clause of the ALTER DATABASE RECOVER statement (`partial_database_recovery` clause) has been deprecated.

Action: If you want to recover the standby database to a consistent point, but no further, use the statement ALTER DATABASE RECOVER MANAGED STANDBY DATABASE UNTIL CONSISTENT.

ORA-19966: ALTER DATABASE RECOVER STANDBY DATAFILE has been deprecated

Cause: The STANDBY DATAFILE clause of the ALTER DATABASE RECOVER statement (`partial_database_recovery` clause) has been deprecated.

Action: If you want to recover the standby database to a consistent point, but no further, use the statement ALTER DATABASE RECOVER MANAGED STANDBY DATABASE UNTIL CONSISTENT.

ORA-19970: multi-instance standby role transition in progress

Cause: ALTER DATABASE MOUNT failed because a multi-instance standby role transition was in progress.

Action: Retry after the multi-instance standby role transition finishes.

ORA-19971: event 10875 or 10879 is set

Cause: Event 10875 or event 10879 was set which prevented the operation from completing with multiple instances running in Oracle RAC.

Action: Shutdown all but one instance, then retry the command.

ORA-19972: ALTER DATABASE RECOVER TO LOGICAL requires one instance left

Cause: ALTER DATABASE RECOVER TO LOGICAL required only one instance to be left running.

Action: Shutdown all but one instance, then retry the command.

ORA-19973: flashback database is not enabled

Cause: Physical standby transition to snapshot standby required only one instance left running if flashback database logging was not enabled.

Action: Shutdown all but one instance, then retry the command.

ORA-19974: database name has changed

Cause: Physical standby role transition required only one instance left running if database name was changed and flashback database logging was enabled.

Action: Shutdown all but one instance, then retry the command.

ORA-19975: database must not be started in any other instance

Cause: The physical standby role transition command failed because a certain condition required the database to be mounted in this instance and not started in any other instance.

Action: See associated error message for detailed explanation.

ORA-19976: a concurrent standby role transition in progress

Cause: The standby role transition operation failed because a concurrent standby role transition was already in progress.

Action: None

ORA-19980: cannot open Data Pump dump file *string*

Cause: When attempting to open the specified dump file, an error was received.

Action: Verify that the specified dump file exists and is accessible.

ORA-19981: cannot read header of Data Pump dump file *string*

Cause: When attempting to read the header of the specified dump file, an error was received.

Action: Verify that the specified dump file is complete.

ORA-19982: file *string* is not a Data Pump dump file

Cause: The specified dump file did not contain data created by Data Pump.

Action: Verify that the specified dump file is really a file created by Data Pump.

ORA-19983: Data Pump dump file could not be verified

Cause: Some data blocks for the Data Pump dump file were corrupt in the backup set.

Action: Unless the damage to the backup set can be repaired, the Data Pump dump file cannot be restored from this backup set.

ORA-19984: Data Pump dump file restore requires COMPATIBLE *string* or greater

Cause: Data Pump dump file restore requested but COMPATIBLE did not allow it.

Action: Do not request dump file backup or set COMPATIBLE to minimum value and retry backup.

ORA-19985: Data Pump dump file can only be requested in a cross-platform restore

Cause: Data Pump dump file restore requested but the restore conversation is not a cross-platform conversation.

Action: Start a new cross-platform restore conversation or do not include a Data Pump dump file.

ORA-19986: archived log backup piece found for cross-platform backup

Cause: A cross-platform backup was requested for a backup piece that contained archived logs.

Action: Specify a datafile backup piece for cross-platform processing.

ORA-19987: unknown platform ID *string*

Cause: The platform ID obtained from a cross-platform backup was incorrect.

Action: Verify that the platform specified in the FROM PLATFORM clause is correct.

ORA-19988: must specify FROM PLATFORM for cross-platform restore of backup sets with pre-12.1 compatibility

Cause: A cross-platform restore was requested from a backup piece created with pre-12.1 compatibility without providing the platform name that created it.

Action: Reissue the command including the FROM PLATFORM clause.

ORA-19990: restore from cross-platform encrypted backup with different endianness is not supported

Cause: A cross-platform restore was requested from an encrypted backup set with different endianness from the current platform.

Action: Specify a non-encrypted backup set from which to perform the restore.

ORA-19991: cross-platform backup of encrypted backups to different endianness is not supported

Cause: A cross-platform backup was requested for an encrypted backup to a different endianness from the current platform.

Action: Do not specify an encrypted backup or specify the same endian platform.

ORA-19992: cross-platform backup of encrypted backup piece with different endianness is not supported

Cause: A cross-platform backup was requested for an encrypted backup piece with different endianness from the current platform.

Action: Specify a backup piece without encryption to the backup.

ORA-19993: must specify FROM PLATFORM for cross-platform backup of backup pieces with compatibility set prior to 12.1

Cause: A cross-platform backup was requested for a backup piece created with compatibility prior to 12.1 without providing the platform name that created it.

Action: Reissue the command including the FROM PLATFORM clause.

ORA-19994: cross-platform backup of compressed backups to different endianness is not supported

Cause: A cross-platform backup was requested for a compressed backup to a different endianness from the current platform.

Action: Do not specify a compressed backup or specify the same endian platform.

ORA-19995: controlfile cannot be restored from a cross-platform backup with different endianness

Cause: A restore of the controlfile was requested from a cross-platform backup, but the backup did not have the same endianness and restore was not possible.

Action: Do not attempt to restore a controlfile from a cross-platform backup set.

ORA-19996: cross-platform backup of backup pieces with pre-10.2 compatibility is not supported

Cause: A cross-platform backup was requested for a backup created with pre-10.2 compatibility.

Action: Do not attempt to perform cross-platform backup of backups created with pre-10.2 compatibility.

ORA-19997: backup pieces prior to 10.2 cannot be operated for cross-platform

Cause: A cross-platform operation was requested for a backup created with pre-10.2 compatibility.

Action: Do not attempt to perform the cross-platform operation of backups created with pre-10.2 compatibility. 19998 is used for event

ORA-19999 to ORA-24279

ORA-19999: skip_row procedure was called

Cause: The skip_row procedure was called which raises this error

Action: Skip_row should only be called within a trigger or a procedure called by a trigger.

ORA-20000: string

Cause: The stored procedure 'raise_application_error' was called which causes this error to be generated.

Action: Correct the problem as described in the error message or contact the application administrator or DBA for more information.

ORA-21000: error number argument to raise_application_error of stringstring is out of range**ORA-21001: error number argument to raise_system_error of stringstring is out of range****ORA-21300: objects option not installed**

Cause: The objects option is not installed at this site. object types and other object features are, therefore, unavailable.

Action: Install the objects option. The objects option is not part of the Oracle Server product and must be purchased separately. Contact an Oracle sales representative if the objects option needs to be purchased.

ORA-21301: not initialized in object mode

Cause: This function requires the OCI process to be initialized in object mode.

Action: Specify OCI_OBJECT mode when calling OCIInitialize().

ORA-21500: internal error code, arguments: [string], [string], [string], [string], [string], [string], [string], [string]

Cause: This is the generic error number for the OCI environment (client-side) internal errors. This indicates that the OCI environment has encountered an exceptional condition.

Action: Report as a bug - the first argument is the internal error number.

ORA-21501: program could not allocate memory

Cause: The operating system has run out of memory.

Action: Take action to make more memory available to the program.

ORA-21503: program terminated by fatal error

Cause: A program is in an unrecoverable error state.

Action: Report as a bug.

ORA-21520: database server driver not installed

Cause: User attempted to access a database server through an object-mode OCI environment but the necessary driver for supporting such access to the database server is not installed or linked in.

Action: Check if the driver corresponding to the database server has been installed/linked in and entered in the server driver table.

ORA-21521: exceeded maximum number of connections in OCI (object mode only)

Cause: User exceeded the maximum number of connections (255) that can be supported by an OCI environment in object mode.

Action: Close some of existing and unused connections before opening more connections.

ORA-21522: attempted to use an invalid connection in OCI (object mode only)

Cause: User attempted to use an invalid connection or a connection that has been terminated in an OCI environment (object mode), or user attempted to dereference a REF obtained from a connection which has been terminated.

Action: Ensure that the connection exists and is still valid.

ORA-21523: functionality not supported by the server (object mode only)

Cause: User attempted to use a functionality that the server does not support.

Action: Upgrade the server

ORA-21524: object type mismatch

Cause: The object type of the object is different from what is specified.

Action: Check the type of the object and correct it.

ORA-21525: attribute number or (collection element at index) *string* violated its constraints

Cause: Attribute value or collection element value violated its constraint.

Action: Change the value of the attribute or collection element such that it meets its constraints. The constraints are specified as part of the attribute or collection element's schema information.

ORA-21526: initialization failed

Cause: The initialization sequence failed. This can happen, for example, if an environment variable such as NLS_DATE_FORMAT is set to an invalid value.

Action: Check that all NLS environment variables are well-formed.

ORA-21527: internal OMS driver error

Cause: A process has encountered an exceptional condition. This is the generic internal error number for Oracle object management services exceptions.

Action: Report this as a bug to Oracle Support Services.

ORA-21528: internal error, image could not be understood

Cause: The format of the image passed to the pickler is incorrect and cannot be understood.

Action: Contact Oracle Support Services.

ORA-21560: argument *string* is null, invalid, or out of range

Cause: The argument is expecting a non-null, valid value but the argument value passed in is null, invalid, or out of range. Examples include when the LOB/FILE positional or size argument has a value outside the range 1 through (4GB - 1), or when an invalid open mode is used to open a file, etc.

Action: Check your program and correct the caller of the routine to not pass a null, invalid or out-of-range argument value.

ORA-21561: OID generation failed

Cause: The handles passed in may not be valid

Action: Check the validity of the env, svc handles

ORA-21600: path expression too long

Cause: The path expression that is supplied by the user is too long. The path expression is used to specify the position of an attribute in an object. This error occurs when one of the intermediate elements in the path expression refers to an attribute of a built-in type. Thus, the OCI function cannot proceed on to process the rest of the elements in the path expression.

Action: User should pass in the correct path expression to locate the attribute.

ORA-21601: attribute is not an object

Cause: The user attempts to perform an operation (that is valid only for an object) to an attribute of a built-in type. An example of such an illegal operation is to dynamically set a null structure to an attribute of a built-in type.

Action: User should avoid performing such operation to an attribute of built-in type.

ORA-21602: operation does not support the specified typecode

Cause: The user attempts to perform an operation that does not support the specified typecode.

Action: User should use the range of valid typecodes that are supported by this operation.

ORA-21603: property id [*string*] is invalid

Cause: The specified property id is invalid.

Action: User should specify a valid property id. Valid property ids are enumerated by OCIObjectPropId.

ORA-21604: property [*string*] is not a property of transient or value instances

Cause: Trying to get a property which applies only to persistent objects.

Action: User should check the lifetime and only get this property for persistent objects.

ORA-21605: property [*string*] is not a property of value instances

Cause: Trying to get a property which applies only to persistent and transient objects.

Action: User should check the lifetime and only get this property for persistent and transient objects.

ORA-21606: can not free this object

Cause: Trying to free an object that is persistent and dirty and the OCI_OBJECTFREE_FORCE flag is not specified.

Action: Either flush the persistent object or set the flag to OCI_OBJECTFREE_FORCE

ORA-21607: memory cartridge service handle not initialized

Cause: Attempt to use the handle without initializing it.

Action: Initialize the memory cartridge service handle.

ORA-21608: duration is invalid for this function

Cause: Attempt to use a duration not valid for this function.

Action: Use a valid duration - a previously created user duration or OCI_DURATION_STATEMENT or OCI_DURATION_SESSION. For callout duration or external procedure duration, use OCIEExtProcAllocCallMemory.

ORA-21609: memory being resized without being allocated first

Cause: Attempt to resize memory without allocating it first.

Action: Allocate the memory first before resizing it.

ORA-21610: size [*string*] is invalid

Cause: Attempt to resize memory with invalid size.

Action: Pass in a valid size (must be a positive integer).

ORA-21611: key length [*string*] is invalid

Cause: Attempt to use an invalid key length.

Action: Key length is invalid and valid range is 0 to 64

ORA-21612: key is already being used

Cause: Attempt to use a key that is already used.

Action: Use a new key that is not yet being used.

ORA-21613: key does not exist

Cause: Attempt to use a non-existent key

Action: Use a key that already exists.

ORA-21614: constraint violation for attribute number [*string*]

Cause: Constraints on the attribute were violated

Action: Correct the value (of the attribute) so that it satisfies constraints

ORA-21615: copy of an OTS (named or simple) instance failed

Cause: see following message

Action: Check that no attribute value violates constraints.

ORA-21700: object does not exist or is marked for delete

Cause: User attempted to perform an inappropriate operation to an object that is non-existent or marked for delete. Operations such as pinning, deleting and updating cannot be applied to an object that is non-existent or marked for delete.

Action: User needs to re-initialize the reference to reference an existent object or the user needs to unmark the object.

ORA-21701: attempt to flush objects to different servers

Cause: User attempted to flush objects to different servers in one function call. These objects are obtained by calling a callback functions provided by the program.

Action: User should avoid performing such operation.

ORA-21702: object is not instantiated or has been de-instantiated in cache

Cause: User attempted to perform an inappropriate operation to a transient object that is not instantiated in the object cache. Operations that cannot be applied to a not-instantiated transient object include deleting or pinning such an object.

Action: User should check their code to see if they are performing such an operation without instantiating the object first, or performing such an operation after the allocation duration of the object has expired.

ORA-21703: cannot flush an object that is not modified

Cause: See the error message.

Action: The object should not be flushed.

ORA-21704: cannot terminate cache or connection without flushing first

Cause: See the error message.

Action: The transaction should be aborted or committed before terminating the cache or connection.

ORA-21705: service context is invalid

Cause: The service context that is supplied by the user is not valid.

Action: User needs to establish the service context.

ORA-21706: duration does not exist or is invalid

Cause: The duration number that is supplied by the user is not valid.

Action: User needs to establish the duration or use a correct predefined duration.

ORA-21707: pin duration is longer than allocation duration

Cause: The pin duration supplied by the user is longer than the allocation duration. This affects operations such as pinning and setting default parameters.

Action: User should use a shorter pin duration or use the null duration.

ORA-21708: inappropriate operation on a transient object

Cause: User attempted to perform an inappropriate operation on a transient object. Operations that cannot be applied to a transient object include flushing and locking.

Action: User should avoid performing such operation on a transient object.

ORA-21709: cannot refresh an object that has been modified

Cause: User attempted to refresh an object that has been marked for delete, update or insert (new).

Action: User should unmark the object before refreshing it.

ORA-21710: argument is expecting a valid memory address of an object

Cause: The object memory address that is supplied by the user is invalid. The user may have passed in a bad memory address to a function that is expecting a valid memory address of an object.

Action: User should pass in a valid memory address of an object to the function.

ORA-21779: duration not active

Cause: User is trying to use a duration that has been terminated.

Action: User should avoid performing such operation.

ORA-21780: Maximum number of object durations exceeded.

Cause: This typically happens if there is infinite recursion in the PL/SQL function that is being executed.

Action: User should alter the recursion condition in order to prevent infinite recursion.

ORA-22053: overflow error

Cause: This operation's result is above the range of Oracle number.

Action: Decrease the input value(s) so that the result is in the range of Oracle number.

ORA-22054: underflow error

Cause: This operation's result is below the range of Oracle number.

Action: Increase the input value(s) so that the result is in the range of Oracle number.

ORA-22055: unknown sign flag value [string]

Cause: Signed flag used is not OCI_NUMBER_SIGNED or OCI_NUMBER_UNSIGNED.

Action: Use either OCI_NUMBER_SIGNED or OCI_NUMBER_UNSIGNED as sign flag.

ORA-22056: value [string] is divided by zero

Cause: Given value is divided by zero.

Action: Modify divisor value to be non-zero.

ORA-22057: bad integer length [string]

Cause: The length of the integer (ie number of bytes) to be converted to or from an Oracle number is invalid.

Action: Use integer length 1, 2, 4 or 8 bytes only.

ORA-22059: buffer size [string] is too small - [string] is needed

Cause: The buffer to hold the resulting text string is too small.

Action: Provide a buffer of the required size.

ORA-22060: argument [string] is an invalid or uninitialized number

Cause: An invalid or uninitialized number is passed in.

Action: Use a valid number. To initialize number call OCINumberSetZero().

ORA-22061: invalid format text [string]

Cause: The numeric format string for converting characters to or from an Oracle number is invalid.

Action: Use valid format string as documented in OCI Programmer's Guide.

ORA-22062: invalid input string [string]

Cause: The text string for converting to numbers is invalid.

Action: Use a valid input string as documented in OCI Programmer's Guide.

ORA-22063: reading negative value [string] as unsigned

Cause: Attempt to convert a negative number to an unsigned integer.

Action: Use the sign flag ORLTSB to convert a signed number.

ORA-22064: invalid NLS parameter string [*string*]

Cause: The NLS parameter string for converting characters to or from an Oracle number is invalid.

Action: Use valid format string as documented in OCI Programmer's Guide.

ORA-22065: number to text translation for the given format causes overflow

Cause: Rounding done due to the given string format causes overflow.

Action: Change the string format such that overflow does not occur.

ORA-22130: buffer size [*string*] is less than the required size [*string*]

Cause: The size of the buffer into which the hexadecimal REF string is to be written is too small.

Action: Provide a buffer of the required size.

ORA-22131: hexadecimal string length is zero

Cause: The given hexadecimal string length must be greater than zero.

Action: Specify a length greater than zero.

ORA-22132: hexadecimal string does not correspond to a valid REF

Cause: The given hexadecimal string is invalid.

Action: Provide a valid hexadecimal string which was previously returned by a call to OCIRefToHex().

ORA-22140: given size [*string*] must be in the range of 0 to [*string*]

Cause: The given resize size is invalid.

Action: Ensure that the given size is in the required range.

ORA-22141: given size [*string*] must be even in UTF-16 environment

Cause: The given resize size is odd. In a UTF-16 environment, all characters are 2 bytes in length.

Action: Ensure that the given size is even.

ORA-22150: variable-length array has not been initialized

Cause: An un-initialized variable-length array is being operated upon.

Action: Initialize the variable-length array prior to calling this function.

ORA-22151: cannot resize non-zero variable-length array to zero elements

Cause: Trying to resize a non-zero variable-length array to 0 elements.

Action: Specify a non-zero size.

ORA-22152: destination variable-length array is not initialized

Cause: The variable-length array on the right-hand-side of an assignment or the destination array of an append is not initialized.

Action: Initialize the destination variable-length array prior to calling this function.

ORA-22153: source variable-length array is not initialized

Cause: The variable-length array on the left-hand-side of an assignment or the source array of an append is not initialized.

Action: Initialize the destination variable-length array prior to calling this function.

ORA-22160: element at index [*string*] does not exist

Cause: Collection element at the given index does not exist.

Action: Specify the index of an element which exists.

ORA-22161: type code [*string*] is not valid

Cause: Given type code is not valid.

Action: Use one of the typecodes enumerated in OCITypeCode.

ORA-22162: element at index [*string*] has been previously deleted

Cause: Trying to delete a non-existent collection element.

Action: Check for the existence of the element prior to calling this function.

ORA-22163: left hand and right hand side collections are not of same type

Cause: Left hand and right side collections are not of same type.

Action: Ensure that the same collection type is passed for both left hand and right hand side of this function.

ORA-22164: delete element operation is not allowed for variable-length array

Cause: Trying to delete an element of a variable-length array.

Action: Ensure that the collection is not a variable-length array prior to calling this function.

ORA-22165: given index [*string*] must be in the range of [*string*] to [*string*]

Cause: Given index is not in the required range.

Action: Ensure that the given index is in the required range.

ORA-22166: collection is empty

Cause: Given collection is empty.

Action: Test if collection is empty prior to invoking this function.

ORA-22167: given trim size [*string*] must be less than or equal to [*string*]

Cause: Given trim size is greater than the current collection size.

Action: Ensure that the given size is less than or equal to the collection size prior to calling this function.

ORA-22275: invalid LOB locator specified

Cause: There are several causes: (1) the LOB locator was never initialized; (2) the locator is for a BFILE and the routine expects a BLOB/CLOB/NCLOB locator; (3) the locator is for a BLOB/CLOB/NCLOB and the routine expects a BFILE locator; (4) trying to update the LOB in a trigger body -- LOBs in trigger bodies are read only; (5) the locator is for a BFILE/BLOB and the routine expects a CLOB/NCLOB locator; (6) the locator is for a CLOB/NCLOB and the routine expects a BFILE/BLOB locator;

Action: For (1), initialize the LOB locator by selecting into the locator variable or by setting the LOB locator to empty. For (2),(3), (5) and (6)pass the correct type of locator into the routine. For (4), remove the trigger body code that updates the LOB value.

ORA-22276: invalid locator for LOB buffering

Cause: There are several causes: (1) the locator was never enabled for buffering (2) it is not an updated locator but is being used for a write/flush operation

Action: For (1) enable the locator for buffering; (2) ensure that only an updated locator is used for a LOB update operation

ORA-22277: cannot use two different locators to modify the same LOB

Cause: LOB buffering is enabled and an attempt was made to modify the LOB using two different LOB locators.

Action: When using LOB buffering, modify the LOB through one LOB locator only.

ORA-22278: must update the LOB only through the LOB buffers

Cause: LOB buffering is enabled for this LOB and there are buffers for this LOB in the buffer pool. Thus, updating the LOB through means other than the LOB buffers is not allowed.

Action: Update the LOB through the LOB buffers using the locator that has LOB buffering enabled. If this operation is required, buffers associated with this LOB should either be flushed as necessary or buffering should be disabled. Once this is done, reissue the command.

ORA-22279: cannot perform operation with LOB buffering enabled

Cause: The operation attempted is not allowed when LOB buffering is enabled.

Action: If the operation is required, LOB buffering should not be used. In this case, flush buffers associated with the input LOB locator as necessary, disable buffering on the input LOB locator and reissue the command.

ORA-22280: no more buffers available for operation

Cause: There are two causes: (1) All buffers in the buffer pool have been used up by previous operations (2) Attempt to flush a LOB without any previous buffered update operations.

Action: For (1), flush the LOB(s) through the locator that is being used to update the LOB. For (2), write to the LOB through a locator enabled for buffering before attempting to flush buffers.

ORA-22281: cannot perform operation with an updated locator

Cause: The input locator has buffering enabled and was used to update the LOB value through the LOB buffering subsystem. The modified buffer has not been flushed since the write that was performed by the the input locator; thus, the input locator is considered an updated locator. Updated locators cannot be the source of a copy operation. Only one locator per LOB may be used to modify the LOB value through the LOB buffering subsystem.

Action: Depending on whether the modifications made through the input locator to the LOB buffering subsystem should be written to the server, either flush the buffer to write the modifications, or, disable buffering on the locator to discard the modifications. Then, reissue the command.

ORA-22282: non-contiguous append to a buffering enabled LOB not allowed

Cause: The buffered write operation has an input offset value more than one byte or character past the end of the LOB.

Action: Specify an input offset value which is exactly one character or byte greater than the length of the LOB that you are attempting to update through a buffered write operation.

ORA-22283: filename contains characters that refer to parent directory

Cause: Filename contains a path "../" which references a parent directory

Action: Ensure that the filename does not contain characters which reference a parent directory.

ORA-22284: duplicate LONG binds are not supported

Cause: LOB access layer could not handle duplicate LONG binds.

Action: Provide distinct LONG or VARCHAR binds.

ORA-22285: non-existent directory or file for *string* operation

Cause: Attempted to access a directory that does not exist, or attempted to access a file in a directory that does not exist.

Action: Ensure that a system object corresponding to the specified directory exists in the database dictionary, or make sure the name is correct.

ORA-22286: insufficient privileges on file or directory to perform *string* operation

Cause: The user does not have the necessary access privileges on the directory alias and/or the file for the operation.

Action: Ask the database/system administrator to grant the required privileges on the directory alias and/or the file.

ORA-22287: invalid or modified directory occurred during *string* operation

Cause: The directory alias used for the current operation is not valid if being accessed for the first time, or has been modified by the DBA since the last access.

Action: If you are accessing this directory for the first time, provide a valid directory name. If you have been already successful in opening a file under this directory before this error occurred, then close the file and retry the operation with a valid directory alias as modified by your DBA. Oracle recommends that directories should be modified only during quiescent periods.

ORA-22288: file or LOB operation *string* failed \nstring

Cause: The operation attempted on the file or LOB failed.

Action: See the next error message in the error stack for more detailed information. Also, verify that the file or LOB exists and that the necessary privileges are set for the specified operation. If the error still persists, report the error to the DBA.

ORA-22289: cannot perform *string* operation on an unopened file or LOB

Cause: The file or LOB is not open for the required operation to be performed.

Action: Precede the current operation with a successful open operation on the file or LOB.

ORA-22290: operation would exceed the maximum number of opened files or LOBs

Cause: The number of open files or LOBs has reached the maximum limit.

Action: Close some of the opened files or LOBs and retry the operation.

ORA-22291: Open LOBs exist at transaction commit time

Cause: An attempt was made to commit a transaction with open LOBs at transaction commit time.

Action: Close the LOBs before committing the transaction.

ORA-22292: Cannot open a LOB in read-write mode without a transaction

Cause: An attempt was made to open a LOB in read-write mode before a transaction was started.

Action: Start a transaction before opening the LOB in read-write mode. Ways to start a transaction include issuing a SQL DML or SELECT FOR UPDATE command. Opening the LOB in read-only mode does not require a transaction.

ORA-22293: LOB already opened in the same transaction

Cause: An attempt was made to open a LOB that already is open in this transaction.

Action: Close the LOB before attempting to re-open it.

ORA-22294: cannot update a LOB opened in read-only mode

Cause: An attempt was made to write to or update a LOB opened in read-only mode.

Action: Close the LOB and re-open it in read-write mode before attempting to write to or update the LOB.

ORA-22295: cannot bind more than 4000 bytes data to LOB and LONG columns in 1 statement

Cause: An attempt was made to bind data more than 4000 bytes of data to both LOB and LONG columns in the same insert or update statement. You can bind more than 4000 bytes of data to either a LONG column or one or more LOB columns but not both.

Action: Bind more than 4000 bytes of data to either the LONG column or one or more LOB columns but not both.

ORA-22296: invalid ALTER TABLE option for conversion of LONG datatype to LOB

Cause: An attempt was made to specify ALTER TABLE options which are disallowed during conversion of LONG datatype to LOB. The only ALTER TABLE options allowed during conversion of LONG datatype to LOB are the default clause and LOB storage clause for the column being converted to LOB.

Action: Remove the disallowed options.

ORA-22297: warning: Open LOBs exist at transaction commit time

Cause: An attempt was made to commit a transaction with open LOBs at transaction commit time.

Action: This is just a warning. The transaction was committed successfully, but any domain or functional indexes on the open LOBs were not updated. You may want to rebuild those indexes.

ORA-22298: length of directory alias name or file name too long

Cause: The length of directory alias name or file name given for a BFILE is too long.

Action: Use a shorter alias or file name.

ORA-22303: type "*string*"."*string*" not found

Cause: The user is trying to obtain information for a type that cannot be found.

Action: Check that the schema is correct and that the type has been created correctly.

ORA-22304: input type is not an object type

Cause: The user is trying to obtain the supertype information for a non-object type.

Action: Pass in only an object type.

ORA-22305: attribute/method/parameter "*string*" not found

Cause: Type element with the given name is not found in the type.

Action: Check to make sure that the type element exists.

ORA-22306: type "*string*"."*string*" already exists

Cause: The user is trying to create a type that already exists.

Action: Check to make sure that the type has not been created prior to this.

ORA-22307: operation must be on a user-defined type

Cause: attempt to perform an operation that is allowed only on a user-defined type, and the type is not a user-defined type.

Action: Check to make sure that only user-defined types are being operated on.

ORA-22308: operation not allowed on evolved type

Cause: An attempt was made to replace a type whose attribute definition been been altered.

Action: Submit ALTER TYPE ADD/DROP statement instead of ALTER TYPE REPLACE.

ORA-22309: attribute with name "string" already exists

Cause: The user is attempting to create an object type where more than one attributes have the same name.

Action: Check to make sure that all attribute names are unique.

ORA-22310: ALTER TYPE error. Refer to table "string"."string" for errors

Cause: An invalid alter type statement was submitted.

Action: Correct the errors listed in specified table and resubmit statement.

ORA-22311: type for attribute "string" does not exist

Cause: The type of the attribute does not exist.

Action: No types were created/modified for this DDL transaction. Redo the DDL transaction and add the creation of the attribute's type in the DDL transaction.

ORA-22312: must specify either CASCADE or INVALIDATE option

Cause: An attempt was made to alter a type which has a dependent type or table without specifying the CASCADE or INVALIDATE option.

Action: Resubmit the statement with either the CASCADE or INVALIDATE option. Specify CASCADE if you want to cascade the type change to dependent types and tables; otherwise, specify INVALIDATE to invalidate all dependents.

ORA-22313: cannot use two versions of the same type "string"

Cause: The version of this type conflicts with the version of this type used by another library that was linked in with the application. An application may only use one version of a type.

Action: Check that the libraries being linked with this application and use the same versions of the type.

ORA-22314: method information mismatch in ALTER TYPE

Cause: The number of methods or the method signature do not match that of the original type declaration. This is not supported.

Action: Make sure the method signature stay identical for the previously declared method. Do not drop existing methods.

ORA-22315: type "string" does not contain a map or order function

Cause: The input type does not contain a map or order function so one cannot be returned.

Action: Add a map or order function to the type or catch this error.

ORA-22316: input type is not a collection type

Cause: The user is trying to obtain information for collection types on a non-named collection type.

Action: Use a named collection type for the function.

ORA-22317: typecode *string* is not legal as a number type

Cause: The user is trying to use a number typecode that is not valid.

Action: Use only OCI_TYPECODE_SMALLINT, OCI_TYPECODE_INTEGER, OCI_TYPECODE_REAL, OCI_TYPECODE_DOUBLE, OCI_TYPECODE_FLOAT, OCI_TYPECODE_NUMBER, or OCI_TYPECODE_DECIMAL.

ORA-22318: input type is not an array type

Cause: The user is trying to obtain the number of elements for a non-array type.

Action: Pass in only a named collection type which is an array.

ORA-22319: type attribute information altered in ALTER TYPE

Cause: The type attribute information does not match that of the original type declaration when altering type. Attributes cannot be altered during ALTER TYPE. Only new methods can be added.

Action: Check that all type alterations are legal.

ORA-22320: missing user version string

Cause: The VERSION option is specified without a user version string.

Action: Resubmit the statement with the version string following the VERSION keyword.

ORA-22321: method does not return any result

Cause: OCITypeResult() was called on a method that does not return any results.

Action: Check that you are passing in the correct method descriptor, or that your method creation was done correctly.

ORA-22322: error table "*string*"."*string*" has incorrect structure

Cause: The specified error table does not have the expected table structure.

Action: Execute the DBMS_UTILITY.CREATE_ALTER_TYPE_ERROR_TABLE procedure to create an error table, then resubmit the statement using the new error table.

ORA-22323: error table "*string*"."*string*" does not exist

Cause: The error table does not exist.

Action: Resubmit the statement with a correct error table name.

ORA-22324: altered type has compilation errors

Cause: The use of the ALTER TYPE statement caused a compilation error.

Action: Correct the error reported and resubmit the statement.

ORA-22325: event for create type with user version string

ORA-22326: cannot change a type to FINAL if it has subtypes

Cause: An attempt was made to change a type with subtypes to FINAL.

Action: Drop all subtypes of the target type before changing it to FINAL.

ORA-22327: cannot change a type to NOT INSTANTIABLE if it has dependent tables

Cause: An attempt was made to change a type with dependent tables to NOT INSTANTIABLE.

Action: Drop all dependent tables of the target type and resubmit the statement.

ORA-22328: object "string"."string" has errors.\nstring

Cause: Altering the target type causes errors in its dependent object.

Action: Correct the problem in the dependent object and resubmit the statement.

ORA-22329: cannot alter a non-object type

Cause: An attempt was made to execute ALTER TYPE on a non-object type.

Action: Drop the non-object type first, then re-create it as an object type.

ORA-22330: cannot alter a type that is not valid

Cause: An attempt was made to perform ALTER TYPE on an invalid type.

Action: Use the CREATE OR REPLACE TYPE command to modify the type.

ORA-22331: cannot alter an incomplete type

Cause: An attempt was made to perform ALTER TYPE on an incomplete type.

Action: Use CREATE TYPE to completely define the original type before executing the ALTER TYPE.

ORA-22332: a dependent object in schema "string" has errors.\nstring

Cause: Altering the target type causes errors in its dependent object.

Action: Correct the problem in the dependent object and resubmit the statement.

ORA-22333: cannot reset type "string"."string" due to invalid dependent types and tables

Cause: An attempt was made to reset the type version with invalid dependent types and tables.

Action: Use the ALTER TYPE COMPILE statement to compile all invalid dependent types and use the ALTER TABLE UPGRADE INCLUDING DATA to upgrade all the dependent tables then resubmit the statement.

ORA-22334: cannot reset type "string"."string". Dependent tables must be upgraded to latest version

Cause: An attempt was made to reset the type version when the data in the dependent table has not been upgraded to the latest type version.

Action: Use the ALTER TABLE UPGRADE INCLUDING DATA statement to upgrade the data in the dependent tables then resubmit the statement.

ORA-22335: The client cannot work with an altered type

Cause: A pre 8.2 client has requested a type that has been altered on the server.

Action: Only 8.2 or higher clients could access altered types

ORA-22336: table contained 8.0 image format, must specify INCLUDING DATA

Cause: One of the following: 1) An attempt was made to alter a type with a dependent table in 8.0 image format and the NOT INCLUDING TABLE DATA option was specified. 2) An attempt was made to upgrade a table in 8.0 image format with the NOT INCLUDING DATA option specified.

Action: Resubmit the statement with INCLUDING DATA option.

ORA-22337: the type of accessed object has been evolved

Cause: The type of the accessed object has been altered and the client's object is based on an earlier type definition.

Action: The user needs to exit application and modify application to accommodate the type change. From SQL/PLUS, reconnect and resubmit statement.

ORA-22338: must specify CASCADE INCLUDING DATA when altering the final property

Cause: An attempt was made to alter the final property of a type with dependent table(s) without specifying the CASCADE INCLUDING DATA . option.

Action: Resubmit the statement with the CASCADE INCLUDING DATA option.

ORA-22339: cannot alter to not final since its attribute column is substitutable

Cause: An attempt was made to alter a type to not final when its embedded attribute is defined as substitutable in some tables. Note, this is a restriction in 9.0 version because when a type is altered to not final, column of that type is set to not substitutable at all levels; thus, it is an error if one of its embedded attribute column is already marked substitutable.

Action: Recreate the table and specify NOT SUBSTITUTABLE AT ALL LEVELS for all columns of non final type. Then resubmit the ALTER TYPE statement.

ORA-22340: cannot *string* type "*string*".*string*". Dependent tables must be upgraded to latest version

Cause: An attempt was made to reset the version, drop or alter a type when the data in dependent table has not been upgraded to the latest version.

Action: Use the ALTER TABLE UPGRADE INCLUDING DATA statement to upgrade the data in the dependent tables then resubmit the statement.

ORA-22341: cannot assign supertype instance to subtype

Cause: An attempt was made to assign or copy a supertype instance to a container (destination) that can only hold a subtype instance.

Action: Make sure the runtime type of the source of the assignment or copy is the same type as the destination or is a subtype of the destination type

ORA-22342: dependent VARRAY column exceeds the maximum inline column size

Cause: An attempt was made to alter a type (add or modify attribute) which causes the size of its dependent VARRAY column to exceed the maximum inline column size. However, the VARRAY column was not specified to be stored as LOB at the table level when the table was created.

Action: Specify the VARRAY column to be stored as LOB at the table level when the table is created.

ORA-22343: Compilation error for type invalidated by ALTER TYPE

Cause: Compilation failed for a type which was invalidated by ALTER TYPE. We throw this error and rollback the compilation effort so that the user may be able to fix whatever is causing the compilation error and try again. It is important that we do not change status here and modify the dependency information as this will affect the creation of versions.

Action: Check what is causing the compilation error and correct it and try again.

ORA-22344: can not specify CONVERT TO SUBSTITUTABLE option for ALTER TYPE other than NOT FINAL change

Cause: An attempt was made to specify CONVERT TO SUBSTITUTABLE option for ALTER TYPE other than NOT FINAL change.

Action: Specify CONVERT TO SUBSTITUTABLE option only for ALTER TYPE NOT FINAL change.

ORA-22345: recompile type *string.string* before attempting this operation

Cause: An attempt was made to perform an operation which requires the specified datatype to be valid, but the datatype is invalid

Action: Recompile the specified type and retry the operation

ORA-22346: Type has cyclical dependency. Should use CASCADE option

Cause: An attempt was made to alter a type which has a cyclical dependency, with invalidate option.

Action: Give CASCADE option instead of INVALIDATE

ORA-22347: No changes to type specified for ALTER TYPE

Cause: The ALTER TYPE does not contain any changes to the type.

Action: If any change is required for the type, modify the ALTER TYPE to specify the change. Else no need for the ALTER.

ORA-22348: The object type DDL is not supported in Editioned schema

Cause: The object type DDL was not supported in an Editioned schema.

Action: Do not perform this DDL on an Editioned schema object.

ORA-22349: This version of the Oracle server does not support PL/SQL package type descriptions.

Cause: An attempt was made to get PL/SQL package type description information from a version of the Oracle server that does not support the description of PL/SQL package types.

Action: Do not attempt to describe package types on this Oracle server.

ORA-22350: Incomplete opaque type cannot be used here

Cause: An incomplete SYS.AnyType or SYS.AnyData or SYS.AnyDataSet is being used inappropriately.

Action: Check the documentation for correct usage.

ORA-22351: OCI API is not supported by this version of the Oracle server.

Cause: An attempt was made to call an Oracle Call Interface (OCI) API which is not supported by this version of the Oracle server.

Action: Do not call the unsupported OCI API when connected to this Oracle server.

ORA-22352: Type is unsupported or contains an unsupported attribute or element.

Cause: A PL/SQL package type was not supported on the client or contained an attribute or element that was not supported on the client. Unsupported types include index by VARCHAR2 collections, remote types and MLSLABELs.

Action: Do not attempt to use unsupported PL/SQL package types or types that contain unsupported attributes or elements on the client.

ORA-22369: invalid parameter encountered in method *string*

Cause: An invalid parameter is being passed to this method of SYS.AnyType ,SYS.AnyData or SYS.AnyDataSet

Action: Check the parameters being passed to this method and make sure that the parameters are allowed.

ORA-22370: incorrect usage of method *string*

Cause: This method of SYS.AnyType or SYS.AnyData or SYS.AnyDataSet is being used inappropriately.

Action: Check the documentation for correct usage.

ORA-22371: Table contains data of type *string.string*, version *string*, which does not exist

Cause: Some of the older versions of the type may have got deleted because one or more of the types it were referencing was dropped.

Action: These data could not be read as the whole ADT. Read the data at individual scalar attribute level.

ORA-22372: Event for type dictionary upgrade

Cause: This is an internally used event for type dictionary upgrades from 8.0 to 8.1.

Action: None

ORA-22373: Older version hashcode encountered

Cause: An older version HC is encountered when creating a new version hahscode. Currently this is handled internally.

Action: None

ORA-22374: cannot reset the version of a type with table dependents

Cause: The type for which reset version was requested has table dependents.

Action: None

ORA-22375: Event to check for subtypes in complete type tree

Cause: This event is used to check for subtypes in complete type tree without any restriction on depth in the fix for bug# 12430142.

Action: None

ORA-22376: Event to keep old behavior for type public synonyms

Cause: A public type synonym was qualified with a schema which may lead to incorrect name resolution. This issue has been resolved. However, this event allows you to use the old behavior if desired.

Action: None

ORA-22377: Unpacking of ANYDATA columns is not supported for attribute columns.

Cause: An attribute column has been referenced in the 'modify_opaque_type' clause.

Action: Do not use an attribute column in the 'modify_opaque_type' clause.

ORA-22378: cannot add, drop or modify attributes of a type with synonym dependents defined on FINAL types

Cause: An attempt to ALTER TYPE [ADD | DROP | MODIFY] ATTRIBUTE on a type with synonym dependents defined on a FINAL type, which has table dependents, failed.

Action: None

ORA-22379: event to bypass hashcode in kottypncequ

Cause: This event is used to bypass the error "ORA-39779" during the import of table data which occurs because of the mismatch in the hashcodes of a user-defined type between the source and the target databases. The event has to be used when the source database has an improper hashcode for the user-defined type.

Action: None

ORA-22380: event to skip updating the dependencies

Cause: This event is used to bypass regenerating dependencies during upgrade while running ALTER TABLE MOVE on type dictionary tables to enable storage in row. This happens on the upgrade path from 10.1.

Action: None

ORA-22600: encountered 8.0.2 (Beta) VARRAY data that cannot be processed

Cause: Production Oracle8 (8.0.3 and beyond) encounters some VARRAY data which was created and stored by Oracle8 8.0.2 (Beta 2). Production Oracle8 cannot understand or process such VARRAY data.

Action: Delete the VARRAY data from the table by dropping the table, deleting the rows, or nulling out the VARRAY columns, and then re-insert the VARRAY data. There is no provided script or tool to help automate this conversion.

ORA-22601: pickler TDS context [*string*] is not initialized

Cause: Attempt to use the pickler TDS context without initializing it.

Action: Use OCIPicklerTdsCtxInit to initialize the context.

ORA-22602: pickler TDS handle [*string*] is not well-formed

Cause: Attempt to use the pickler TDS handle without initializing/ constructing it.

Action: Use OCIPicklerTdsInit to initialize the handle before it is constructed. Use OCIPicklerTdsGenerate to generate the TDS before its attributes can be accessed.

ORA-22603: cannot add an attribute to the already generated TDS handle

Cause: Attempt to add an attribute to the already constructed TDS.

Action: Use a TDS handle that is initialized but not yet constructed.

ORA-22604: TDS handle already generated

Cause: Attempt to generate TDS that is already generated.

Action: Use a TDS handle that is initialized but not yet generated.

ORA-22605: FDO handle [*string*] is not initialized

Cause: Attempt to use an uninitialized FDO handle.

Action: Use OCIPicklerFdoInit to initialize FDO handle".

ORA-22606: pickler image handle [*string*] is not well-formed

Cause: Attempt to use the image handle without initializing/ constructing it.

Action: Use OCIPicklerImageInit to initialize the handle before it is constructed. Use OCIPicklerImageGenerate to generate the image before its attributes can be accessed.

ORA-22607: image handle already generated

Cause: Attempt to generate image that is already generated.

Action: Use a image handle that is initialized but not yet generated.

ORA-22608: cannot add an attribute to the already generated image handle

Cause: Attempt to add an attribute to the already constructed image.

Action: Use a image handle that is initialized but not yet constructed.

ORA-22609: error *string* during initialization of FDO

Cause: Error during FDO initialization.

Action: Take an action based on the specified error.

ORA-22610: error while adding a scalar to the image handle

Cause: Error while adding a scalar attribute to the image handle

Action: Make sure image handle is initialized before adding scalar

ORA-22611: TDS version is not recognized

Cause: Incorrect TDS handle is passed

Action: Make sure image handle is initialized with the correct TDS

ORA-22612: TDS does not describe a collection TDS

Cause: collection construct/access routines are being on an image but the TDS does not describe that a collection TDS

Action: Make sure a collection TDS is used before invoking collection routines on the image handle

ORA-22613: buflen does not match the size of the scalar

Cause: buflen is incorrect

Action: Make sure buflen is correct and matches the size of the scalar

ORA-22614: error while construction the collection in the image

Cause: Error during the construction of collection

Action: Make sure image handle is initialized and OCIPicklerImageCollBegin is called to begin collection

ORA-22615: attribute is not a collection

Cause: collection routine is invoked upon a non-collection attribute

Action: Make sure attribute is a collection

ORA-22616: image is not of Oracle 8.1 format

Cause: The function being invoked is applicable only for 8.1 images

Action: Make sure image is of 8.1 format

ORA-22617: error while accessing the image handle collection

Cause: Error while accessing collection in the image handle

Action: Make sure image is initialized correctly and the collection is constructed properly.

ORA-22618: attribute is a BAD NULL in the image handle

Cause: attribute in question is probably the attribute of a null embedded image

Action: Make sure attribute number is valid or it is NULL or NOT NULL.

ORA-22619: all collection elements have already been accessed

Cause: Accessing a collection element after all the collection elements are already accessed

Action: This function should not be invoked any more.

ORA-22620: buffer size too small to hold the value

Cause: Buffer size is not enough to hold the value. Most likely while doing the character set conversion, a bigger buffer is needed.

Action: Pass in a bigger buffer. If the client character set format differs from that of server, doing the conversion may result in 4X expansion.

ORA-22621: error transferring an object from the agent

Cause: Any error returned from pickler routines on the agent side.

Action: Contact Oracle Support.

ORA-22625: OCIAnyData is not well-formed

Cause: Attempt to use the OCIAnyData without initializing constructing it.

Action: Use OCIAnyDataBeginConstruct to initialize the handle before it is adding attributes. Use OCIAnyDataEndConstruct to complete the construction. Or use OCIAnyDataConvert to do the construction. Make sure it is properly constructed before accessing attributes.

ORA-22626: Type Mismatch while constructing or accessing OCIAnyData

Cause: Type supplied is not matching the type of the AnyData. If piece wise construction or access is being attempted, the type supplied is not matching the type of the current attribute.

Action: Make sure the type supplied matches the type of object to be constructed or accessed.

ORA-22627: tc [*string*] must be that of object/varray/nested table

Cause: Type code is not that of object/varray/nested table

Action: Make sure the type code is OCI_TYPECODE_OBJECT or OCI_TYPECODE_VARRAY or OCI_TYPECODE_TABLE

ORA-22628: OCIAnyData already constructed

Cause: Attempt to add attributes to OCIAnyData that is already constructed.

Action: Use the OCIAnyData that is initialized but not yet constructed.

ORA-22629: OCIAnyData is null

Cause: Attempting an operation that is not valid on null OCIAnyData

Action: Make sure OCIAnyData is not null.

ORA-22630: attribute [*string*] is null or it is not well-formed

Cause: Passing an attribute that is null or not well-formed

Action: Make sure the attribute is not null or is well-formed.

ORA-22631: attribute [*string*] is is not well-formed or does not match the type

Cause: Passing an attribute that is not well-formed or does not match the input type.

Action: Make sure the attribute is well-formed and matches the type specified.

ORA-22632: AnyDataSet parameter is not valid for the current operation

Cause: The AnyDataSet parameter is null or it is somehow invalid for the current operation.

Action: Check the documentation for the current operation.

ORA-22633: Error freeing AnyDataSet

Cause: AnyDataSet that is passed in may not be valid.

Action: Check all the AnyDataSet parameters.

ORA-22634: Error adding new instance to AnyDataSet

Cause: Current instance in the AnyDataSet has not been fully constructed.

Action: Make sure that the current instance is fully constructed before adding new instance.

ORA-22635: time stamp with time zone type not supported

Cause: OCIAnyData did not support conversion of time stamp with time zone when the version of time zone files differ.

Action: Use same version of time zone files.

ORA-22800: invalid user-defined type

Cause: An attempt was made to use an incomplete type as a constructor.

Action: Complete the type definition before using it in a query.

ORA-22801: invalid object row variable

Cause: The specified object row variable is not available in the scope of name resolution.

Action: Verify the specified object row variable is correct, or use an object row variable visible in scope.

ORA-22802: remote implementation type not supported

Cause: Remote type reference was not supported with user-defined aggregate function.

Action: Use local implementation type with user-defined aggregate function.

ORA-22803: object type contains zero attributes

Cause: An attempt was made to create or specify a column or constructor of an object type that has no attributes. Only object types that have at least one attribute are allowed in this context.

Action: specify a valid object type

ORA-22804: remote operations not permitted on object tables or user-defined type columns

Cause: An attempt was made to perform queries or DML operations on remote object tables or on remote table columns whose type is one of object, REF, nested table or VARRAY.

Action: n/a

ORA-22805: cannot insert NULL object into object tables or nested tables

Cause: An attempt was made to insert a NULL object into an object table or a Nested Table.

Action: Ensure that a non-NULL object is inserted into the table or insert an object with attributes whose values are NULL.

ORA-22806: not an object or REF

Cause: An attempt was made to extract an attribute from an item that is neither an object nor a REF.

Action: Use an object type or REF type item and retry the operation.

ORA-22807: cannot resolve to a scalar type or a collection type

Cause: Invalid use of a non-scalar (for example, object type) item.

Action: Change the item's data type and retry the operation.

ORA-22808: REF dereferencing not allowed

Cause: An attempt was made to access an object type's attributes by dereferencing a REF item.

Action: Make the item an object type instead of a REF to an object type.

ORA-22809: nonexistent attribute

Cause: An attempt was made to access a non-existent attribute of an object type.

Action: Check the attribute reference to see if it is valid. Then retry the operation.

ORA-22810: cannot modify object attributes with REF dereferencing

Cause: An attempt was made to modify the attributes an object by dereferencing a REF column in an UPDATE statement.

Action: Update the table containing the object that the REF points to, or change the REF column to an object type column.

ORA-22812: cannot reference nested table column's storage table

Cause: An attempt to access the nested table column's storage table is not allowed in the given context.

Action: Issue the statement against the parent table containing the nested table column.

ORA-22813: operand value exceeds system limits

Cause: Object or Collection value was too large. The size of the value might have exceeded 30k in a SORT context, or the size might be too big for available memory.

Action: Choose another value and retry the operation.

ORA-22814: attribute or element value is larger than specified in type

Cause: Value provided for the object type attribute or collection element exceeded the size specified in the type declaration.

Action: Choose another value and retry the operation.

ORA-22816: unsupported feature with RETURNING clause

Cause: RETURNING clause is currently not supported for object type columns, LONG columns, remote tables, INSERT with subquery, and INSTEAD OF Triggers.

Action: Use separate select statement to get the values.

ORA-22817: subquery not allowed in the default clause

Cause: An attempt was made to use a subquery in the column default clause expression.

Action: Remove the subquery from the default clause.

ORA-22818: subquery expressions not allowed here

Cause: An attempt was made to use a subquery expression where these are not supported.

Action: Rewrite the statement without the subquery expression.

ORA-22819: scope of input value does not correspond to the scope of the target

Cause: An attempt to operate on a REF value scoped to a different table than the expected one

Action: Use a ref which is scoped to the expected table and retry the operation

ORA-22826: cannot construct an instance of a non instantiable type

Cause: An attempt was made to use a non instantiable type as a constructor.

Action: None

ORA-22828: input pattern or replacement parameters exceed 32K size limit

Cause: Value provided for the pattern or replacement string in the form of VARCHAR2 or CLOB for LOB SQL functions exceeded the 32K size limit.

Action: Use a shorter pattern or process a long pattern string in multiple passes.

ORA-22833: Must cast a transient type to a persistent type

Cause: An attempt was made to use the transient type in the query result.

Action: Cast the transient type to a structurally equivalent persistent type.

ORA-22835: Buffer too small for CLOB to CHAR or BLOB to RAW conversion (actual: *string*, maximum: *string*)

Cause: An attempt was made to convert CLOB to CHAR or BLOB to RAW, where the LOB size was bigger than the buffer limit for CHAR and RAW types. Note that widths are reported in characters if character length semantics are in effect for the column, otherwise widths are reported in bytes.

Action: Do one of the following: 1. Make the LOB smaller before performing the conversion, for example, by using SUBSTR on CLOB 2. Use DBMS_LOB.SUBSTR to convert CLOB to CHAR or BLOB to RAW.

ORA-22837: Relational hint or keyword is disallowed for user-level DML

Cause: An attempt was made to use relational hint or keyword in user-level DML.

Action: Avoid using DML with relational hint or keyword.

ORA-22839: Direct updates on SYS_NC columns are disallowed

Cause: An attempt was made to update SYS_NC columns directly.

Action: Avoid direct updates on SYS_NC columns.

ORA-22850: duplicate LOB storage option specified

Cause: A LOB storage option (CHUNK, PCTVERSION, CACHE, NOCACHE, TABLESPACE, STORAGE, INDEX, SECUREFILE/BASICFILE, [A]SYNC) was specified more than once.

Action: Specify all LOB storage options only once.

ORA-22851: invalid CHUNK LOB storage option value

Cause: The specified CHUNK LOB storage option value must be an integer.

Action: Choose an appropriate integer value and retry the operation.

ORA-22852: invalid PCTVERSION LOB storage option value

Cause: The specified PCTVERSION LOB storage option value must be an integer.

Action: Choose an appropriate integer value and retry the operation.

ORA-22853: invalid LOB storage option specification

Cause: A LOB storage option was not specified

Action: Specify one of CHUNK, PCTVERSION, CACHE, NOCACHE, TABLESPACE, STORAGE, INDEX, [A]SYNC or DATA SYNC as part of the LOB storage clause.

ORA-22854: invalid option for LOB storage index

Cause: A valid LOB store index option was not specified.

Action: Specify one of (INITRANS, MAXTRANS, TABLESPACE, STORAGE) as part of the LOB storage index.

ORA-22855: optional name for LOB storage segment incorrectly specified

Cause: The optional name for LOB storage segment was specified with multiple columns in the column list.

Action: Specify each column LOB storage only with optional name(s).

ORA-22856: cannot add columns to object tables

Cause: An attempt was made to add columns to an object table. Object tables cannot be altered to add columns since its definition is based on an object type.

Action: Create a new type with additional attributes, and use the new type to create an object table. The new object table will have the desired columns.

ORA-22857: cannot modify columns of object tables

Cause: An attempt was made to alter the object table by modifying existing columns. An object table cannot be altered to modify existing columns since it is based on an object type. The table definition must be in sync with the corresponding type.

Action: Create a new type with the desired attribute types and use it to create an object table. The new object table will have the desired columns.

ORA-22858: invalid alteration of datatype

Cause: An attempt was made to modify the column type to object, REF, nested table, VARRAY or LOB type.

Action: Create a new column of the desired type and copy the current column data to the new type using the appropriate type constructor.

ORA-22859: invalid modification of columns

Cause: An attempt was made to modify an object, REF, VARRAY, nested table, or LOB column type.

Action: Create a new column of the desired type and copy the current column data to the new type using the appropriate type constructor.

ORA-22860: object type expected

Cause: An attempt was made to create an object table using a non- object type, or to create a column that is a REF to a non-object type.

Action: Use a valid object type in the table or column definition.

ORA-22861: invalid user-defined type

Cause: An attempt was made to create a column or object table of a non-existent type.

Action: Specify a valid type in the table or column definition.

ORA-22862: specified object identifier doesn't match existing object identifier

Cause: An attempt was made to specify an object identifier for the type that does not match the existing identifier of the incomplete type of the same name.

Action: Specify the correct object identifier or leave it out of the statement.

ORA-22863: synonym for datatype *string.string* not allowed

Cause: A synonym specification for a datatype is not supported

Action: do not use the synonym for the datatype

ORA-22864: cannot ALTER or DROP LOB indexes

Cause: An attempt was made to ALTER or DROP a LOB index.

Action: Do not operate directly on the system-defined LOB index. Perform operations on the corresponding LOB column.

ORA-22865: more than one column specified

Cause: An attempt was made to specify multiple columns where only one is allowed.

Action: Specify a single column and retry the operation.

ORA-22866: cannot replace a type with table dependents

Cause: An attempt was made to replace a type that has table dependents.

Action: Drop all table(s) depending on the type, then retry the operation.

ORA-22868: table with LOBs contains segments in different tablespaces

Cause: An attempt was made to drop a tablespace which contains the segment(s) for the LOB columns of a table but does not contain the table segment.

Action: Find table(s) with LOB columns which have non-table segments in this tablespace. Drop these tables and reissue drop tablespace.

ORA-22869: depth of type dependency hierarchy exceeds maximum limit

Cause: The type dependency hierarchy was structured to have depth greater than 1024.

Action: Re-structure the type dependency hierarchy to a shorter depth.

ORA-22870: ALTER TYPE with REPLACE option a non-object type

Cause: attempt to perform ALTER TYPE with REPLACE option a non-object type

Action: drop the non-object type first, then re-create it as an object type

ORA-22871: ALTER TYPE with REPLACE is not allowed for pure incomplete types

Cause: An attempt to perform ALTER TYPE with REPLACE option for a pure incomplete type

Action: Completely define the original type, before using the ALTER TYPE with REPLACE option.

ORA-22872: OID INDEX clause not allowed on tables with primary key based object identifiers

Cause: An attempt to create an OID INDEX on a table with primary key based object identifiers.

Action: Remove the OID INDEX clause

ORA-22873: primary key not specified for primary key based object table

Cause: An attempt to create a primary key based object table without specifying a primary key

Action: Specify a primary key and retry the operation

ORA-22874: attribute "string" is not part of the type "string"

Cause: Attribute specified in the user_defined clause is not an attribute of the REF type

Action: Ensure that the name specified in the user_defined clause is the name of a valid attribute of the REF type

ORA-22875: cannot drop primary key of an object table whose object identifier is primary key based

Cause: An attempt to drop the primary key of an object table which has a primary key based object identifier

Action: Remove the drop primary key clause

ORA-22876: this user-defined type is not allowed or it cannot be used in this context

Cause: An attempt to create a kind of user-defined type which is not allowed, or an attempt to create table columns or use default constructor with a type on which these are not supported.

Action: Ensure that the type is permitted in this context.

ORA-22877: invalid option specified for a HASH partition or subpartition of a LOB column

Cause: One or more invalid options were encountered while parsing the physical attributes of a LOB partition or subpartition. Either the LOB partition is in a table partitioned using the HASH method, or the LOB subpartition is in a table subpartitioned using the HASH method. TABLESPACE is the only valid option for a HASH partition or subpartition.

Action: Remove the invalid option(s).

ORA-22878: duplicate LOB partition or subpartition specified

Cause: An attempt was made to specify a partition or subpartition that has already been specified for the LOB column.

Action: Remove the duplicate specification.

ORA-22879: cannot use the LOB INDEX clause for partitioned tables

Cause: An attempt was made to specify a LOB INDEX clause in a CREATE TABLE or ALTER TABLE statement for a partitioned table.

Action: Remove the LOB INDEX clause.

ORA-22880: invalid REF

Cause: An invalid REF was accessed.

Action: Modify the REF and retry the operation.

ORA-22881: dangling REF

Cause: The object corresponding to the REF that was accessed does not exist.

Action: Ensure that the REF value is pointing to an existing object.

ORA-22882: object creation failed

Cause: The object cannot be created in the database.

Action: Check to see if the object table exists and the object size is not too big. Then retry the operation.

ORA-22883: object deletion failed

Cause: The object could not be deleted from the database.

Action: Check to see if the object table exists. Then retry the operation.

ORA-22884: object modification failed

Cause: The object could not be modified in the database.

Action: Check to see if the object table exists and the object size is not too big. Then retry the operation.

ORA-22885: cannot get REF to a non-persistent object

Cause: An attempt was made to get a REF for something other than an object in an object table. REFs can only be taken for objects in object tables.

Action: Rewrite the query to obtain REF values from object tables.

ORA-22886: scoped table "*string*" in schema "*string*" is not an object table

Cause: The scoped table specified for a REF column is not an object table.

Action: Ensure that the scoped table is an object table. Then retry the operation.

ORA-22887: type of REF column is not the same as that of its scoped table

Cause: The type specified for the REF column and the type specified for the scope table are different.

Action: Ensure that the types of a REF column and its scoped table are the same.

ORA-22888: duplicate SCOPE clauses for a REF column

Cause: Multiple SCOPE clauses were specified for a single REF column.

Action: Remove the duplicate SCOPE clauses and retry the operation.

ORA-22889: REF value does not point to scoped table

Cause: An attempt was made to insert a REF value that does not point to the scoped table.

Action: Ensure that the REF values point to the scoped table.

ORA-22890: cannot specify name for REF column constraint

Cause: An attempt was made to specify a constraint name for a constraint on a REF column.

Action: Remove the constraint name and retry the operation.

ORA-22891: cannot have multiple columns in REF constraint

Cause: An attempt was made to specify multiple columns in a single REF constraint.

Action: Specify separate constraints for each column and retry the operation.

ORA-22892: scoped table "string" does not exist in schema "string"

Cause: The scoped table specified for a REF column does not exist.

Action: Ensure that the scoped table exists and retry the operation.

ORA-22893: constraint can be specified only for REF columns

Cause: The constraint specified does not apply to non-REF columns.

Action: Remove the constraint and retry the operation.

ORA-22894: cannot add constraint on existing unscoped REF columns of non-empty tables

Cause: An attempt was made to add a constraint to existing unscoped REF columns of a table which contains one or more rows.

Action: Remove the constraint specification or add the constraint after emptying the table.

ORA-22895: referenced table "string" in schema "string" is not an object table

Cause: The referenced table specified for a REF column is not an object table.

Action: Ensure that the referenced table is an object table. Then retry the operation.

ORA-22896: cannot have both scope and referential constraint on REF column "string"

Cause: REF column has both a referential and a scope constraint. A referential constraint implies a scope constraint.

Action: Remove either the referential or scope constraint and then retry the operation.

ORA-22897: no scope clause specified for user-defined REF column "string"

Cause: User-defined REF column does not have a scope constraint.

Action: Specify a scope constraint for the user-defined REF column and retry the operation.

ORA-22898: existing scope clause on "string" points to a table other than the one mentioned in the referential constraint

Cause: Table mentioned in the referential integrity constraint is different from the scope table of the REF column.

Action: Specify the scope table of the REF column in the referential integrity constraint and then retry the operation.

ORA-22899: cannot specify both scope and rowid constraint on ref column

Cause: An attempt was made to specify both a scope and a rowid constraint on a REF column.

Action: Remove either the rowid or scope constraint and then retry the operation.

ORA-22900: the SELECT list item of THE subquery is not a collection type

Cause: The THE subquery must SELECT a nested table or VARRAY item.

Action: change the subquery to SELECT a nested table or VARRAY item.

ORA-22901: cannot compare VARRAY or LOB attributes of an object type

Cause: Comparison of VARRAY or LOB attributes of an object type was attempted in the absence of a MAP or ORDER method.

Action: Define a MAP or ORDER method for the object type.

ORA-22902: CURSOR expression not allowed

Cause: CURSOR on a subquery is allowed only in the top-level SELECT list of a query.

Action: n/a

ORA-22903: MULTISET expression not allowed

Cause: MULTISET expressions are allowed only inside a CAST to a nested table or VARRAY type.

Action: put the MULTISET(subquery) expression inside a CAST to a nested table or VARRAY type.

ORA-22904: invalid reference to a nested table column

Cause: invalid use of a nested table column

Action: remove invalid reference to the nested table column

ORA-22905: cannot access rows from a non-nested table item

Cause: attempt to access rows of an item whose type is not known at parse time or that is not of a nested table type

Action: use CAST to cast the item to a nested table type

ORA-22906: cannot perform DML on expression or on nested table view column

Cause: Attempted to perform a DML on an expression or on a nested table view column where a nested table column of a base table is expected.

Action: Only nested table column of a base table is allowed in the DML.

ORA-22907: invalid CAST to a type that is not a nested table or VARRAY

Cause: Attempted to CAST to a type that is not a nested table or VARRAY

Action: Re-specify CAST to a nested table or VARRAY type.

ORA-22908: reference to NULL table value

Cause: The evaluation of the THE subquery or nested table column resulted in a NULL value implying a NULL table instance. The THE subquery or nested table column must identify a single non-NULL table instance.

Action: Ensure that the evaluation of the THE subquery or nested table column results in a single non-null table instance. If happening in the context of an insert statement where the THE subquery is the target of an insert, then ensure that an empty nested table instance is created by updating the nested table column of the parent table's row specifying an empty nested table constructor.

ORA-22909: exceeded maximum VARRAY limit

Cause: The total number of elements used in VARRAY construction exceeds the specified VARRAY limit.

Action: Don't use the more than the specified limit of elements for VARRAY construction.

ORA-22910: cannot specify schema name for nested tables

Cause: Table name was qualified with schema name in the nested table column's (or attribute's) storage clause.

Action: Re-specify the nested table item's storage clause without the schema name qualification. By default, the storage table for the nested table item is created in the same schema as the containing table.

ORA-22911: duplicate storage specification for the nested table item

Cause: The storage clause is specified more than once for the NESTED TABLE column.

Action: Remove the duplicate storage specification.

ORA-22912: specified column or attribute is not a nested table type

Cause: The storage clause is specified for a column or attribute that is not a nested table column or attribute.

Action: Specify a valid nested table column or attribute.

ORA-22913: must specify table name for nested table column or attribute

Cause: The storage clause is not specified for a nested table column or attribute.

Action: Specify the nested table storage clause for the nested table column or attribute.

ORA-22914: DROP of nested tables not supported

Cause: Attempted to DROP a nested table.

Action: nested tables cannot be explicitly dropped. nested tables can only be dropped by dropping their containing parent table.

ORA-22915: cannot ALTER a nested table's storage table to ADD/MODIFY columns

Cause: An attempt was made to ADD or MODIFY columns of a nested table's storage table.

Action: Columns cannot be added or modified for a nested table's storage table. You must alter the parent table's nested table column to cause any such change.

ORA-22916: cannot do an exact FETCH on a query with Nested cursors

Cause: Exact FETCH on a query was specified which is not allowed if the query returns any cursors.

Action: Do not use an exact FETCH.

ORA-22917: use VARRAY to define the storage clause for this column or attribute

Cause: Not using VARRAY to define storage clause for VARRAY column or attribute.

Action: Specify VARRAY before the column storage clause and resubmit statement.

ORA-22918: specified column or attribute is not a VARRAY type

Cause: Attempt to define a VARRAY storage clause for a column or attribute which is not VARRAY type.

Action: Specify VARRAY storage clause for a VARRAY column or attribute.

ORA-22919: dangling REF error or lock object failed for no wait request

Cause: The error could be one of the following. The object corresponding to the REF does not exist or the object was locked by another user and the lock with nowait request failed.

Action: Ensure that the REF value is pointing to an existing object or issue a lock request without the nowait option.

ORA-22920: row containing the LOB value is not locked

Cause: The row containing the LOB value must be locked before updating the LOB value.

Action: Lock the row containing the LOB value before updating the LOB value.

ORA-22921: length of input buffer is smaller than amount requested

Cause: The buffer length is not big enough to hold the amount of data requested.

Action: Verify that the number of bytes/characters specified in the input amount parameter is not bigger than the number of bytes specified in the input buffer length parameter. Allocate more space for the input buffer if necessary.

ORA-22922: nonexistent LOB value

Cause: The LOB value associated with the input locator does not exist. The information in the locator does not refer to an existing LOB.

Action: Repopulate the locator by issuing a select statement and retry the operation.

ORA-22923: amount of data specified in streaming LOB write is 0

Cause: Trying to write LOB value via the streaming mechanism (i.e. unlimited write) but the input amount of data to stream was specified as 0. Thus, the user is trying to write 0 bytes to the LOB value.

Action: Write more than 0 bytes to the LOB value.

ORA-22924: snapshot too old

Cause: The version of the LOB value needed for the consistent read was already overwritten by another writer.

Action: Use a larger version pool.

ORA-22925: operation would exceed maximum size allowed for a LOB value

Cause: Trying to write too much data to the LOB value. LOB size is limited to 4 gigabytes.

Action: Either start writing at a smaller LOB offset or write less data to the LOB value.

ORA-22926: specified trim length is greater than current LOB value's length

Cause: The input length for which to trim the LOB value to is greater than the current length of the LOB value.

Action: May not need to trim the LOB value because it's already smaller than the trim length specified. Or, if trimming the LOB value really is required, use a smaller trim length.

ORA-22927: invalid LOB locator specified

Cause: There are several causes: (1) the LOB locator was never initialized; (2) the locator is for a BFILE and the routine expects a BLOB/CLOB/NCLOB locator; (3) the locator is for a BLOB/CLOB/NCLOB and the routine expects a BFILE locator; (4) trying to update the LOB in a trigger body -- LOBs in trigger bodies are read only.

Action: For (1), initialize the LOB locator by selecting into the locator variable or by setting the LOB locator to empty. For (2) and (3), pass the correct type of locator into the routine. For (4), remove the trigger body code that updates the LOB value.

ORA-22928: invalid privilege on directories

Cause: An attempt was made to grant or revoke an invalid privilege on a directory.

Action: Only CREATE, DELETE, READ, WRITE and EXECUTE privileges can be granted or revoked on directories. Do not grant or revoke other privileges.

ORA-22929: invalid or missing directory name

Cause: The required directory name is invalid or missing.

Action: Specify a valid name.

ORA-22930: directory does not exist

Cause: Attempt to access a directory that does not exist.

Action: Make sure the name is correct.

ORA-22933: cannot change object with type or table dependents

Cause: Attempt to replace, drop or rename an object with type or table dependents.

Action: Drop depending objects or use FORCE option if available.

ORA-22936: cannot replace a system predefined type

Cause: An attempt was made to replace a system predefined type.

Action: Use other names for newly created system types.

ORA-22950: cannot ORDER objects without MAP or ORDER method

Cause: an object type must have a MAP or ORDER method defined for all comparisons other than equality and inequality comparisons.

Action: Define a MAP or ORDER method for the object type

ORA-22951: NULL returned by ORDER method

Cause: ORDER method used to compare two object values returned NULL which is not allowed.

Action: Redefine the ORDER method to not return a NULL.

ORA-22952: Nested Table equality requires a map method on the element ADT

Cause: Nested Table equality was tried where the element ADT did not have a map method defined on it.

Action: Define a map method on the element ADT..

ORA-22953: Cardinality of the input to powermultiset exceeds maximum allowed

Cause: The cardinality of the input nested table to the powermultiset should not exceed 32 elements

Action: Reduce the number of elements to the input.

ORA-22954: This multiset operation is not supported for this element type.

Cause: The multiset operation attempted was not supported for the nested table element type.

Action: Use a supported element type.

ORA-22955: The cardinality parameter is not within the allowed limits

Cause: The cardinality parameter has to be greater than 1 and less than or equal to the cardinality of the input.

Action: Give a valid cardinality value.

ORA-22956: The set contains no elements

Cause: An empty set was given as input to the powermultiset function.

Action: Give a non-empty set as input

ORA-22957: NULL is an invalid input to powermultiset and COLLECT functions

Cause: NULL was given as input to the powermultiset or COLLECT function.

Action: Give a non-null value as input

ORA-22958: This operation is not allowed in check constraints or triggers

Cause: An invalid operation is used in a check constraint or trigger

Action: Do not use the operation

ORA-22970: name does not correspond to an object view

Cause: Either the expression is not a view name or the name specified does not correspond to an object view.

Action: Replace the expression with the name of an object view.

ORA-22971: invalid datatype for PRIMARY KEY-based object identifier

Cause: When creating an object view, the datatype of an expression in the WITH OBJECT OID clause is not allowed for PRIMARY KEY-based OID.

Action: Replace the expression with one of appropriate scalar datatype.

ORA-22972: NULL value not allowed in PRIMARY KEY-based object identifier

Cause: A value constituting the PRIMARY KEY-based object identifier is NULL.

Action: Ensure the expressions in MAKE_REF system function or attributes in the WITH OBJECT OID clause of an object view do not evaluate to NULL.

ORA-22973: size of object identifier exceeds maximum size allowed

Cause: Size of the PRIMARY KEY-based object identifier of an object view exceeds the maximum size of 4000 bytes.

Action: Specify fewer or smaller PRIMARY KEY attributes in the WITH object OID clause when creating the object view.

ORA-22974: missing WITH OBJECT OID clause

Cause: WITH OBJECT OID clause is not specified when creating an object view.

Action: Specify the WITH OBJECT OID clause.

ORA-22975: cannot create a PRIMARY KEY-based REF to this object view

Cause: The object view specified in the MAKE_REF function does not have a PRIMARY KEY-based object identifier. A PRIMARY KEY-based REF cannot be created for such a view.

Action: Specify an object view that has a PRIMARY KEY-based object identifier in the MAKE_REF function.

ORA-22976: incorrect number of arguments to MAKE_REF

Cause: Number of arguments for MAKE_REF is different from the number of PRIMARY KEY attributes of the object view.

Action: Specify all the necessary arguments for MAKE_REF.

ORA-22977: missing or invalid attribute

Cause: Either the attribute name is missing in the WITH OBJECT OID clause or it is invalid.

Action: Specify a valid attribute of the object type of the object view.

ORA-22978: only simple attribute name is allowed in the WITH OBJECT OID clause

Cause: Attempted to specify a Nested attribute in the WITH OBJECT OID clause.

Action: Specify a top-level attribute of the object type of the object view.

ORA-22979: cannot INSERT object view REF or user-defined REF

Cause: Attempt to insert an object view REF or user-defined REF in a REF column created to store system generated REF values"

Action: Make sure the REF to be inserted is not from an object view or from a user-defined REF column

ORA-22980: must specify a set of attributes for the WITH OBJECT OID clause

Cause: The WITH OBJECT OID DEFAULT clause was used, but the underlying view or table does not have a OID.

Action: Specify attributes for the WITH OBJECT OID clause to create a primary key based object identifier for the object view.

ORA-22981: must specify a table/view having system generated OID

Cause: The super-view is based on a table/view having the system generated OID and the sub-view must also be based on a similar table/view.

Action: Specify table/view having system generated OID and retry the the operation.

ORA-22982: cannot create sub-view under this view

Cause: The view derives its OID from a table/view having primary key based OID and sub-views cannot be created under such views.

Action: Specify view having system generated OID or a view created with the specification of attributes in the WITH OBJECT ID clause and retry the operation.

ORA-22983: not a user-defined REF

Cause: Attempt to use a system generated REF value where a user-defined REF value should be used.

Action: Make sure the REF value is user-defined.

ORA-22984: view query cannot contain references to a super view

Cause: The query defining the view contains references to a super-view of the view being created.

Action: Make sure that the view query does not reference a super-view.

ORA-22990: LOB locators cannot span transactions

Cause: A LOB locator selected in one transaction cannot be used in a different transaction.

Action: Re-select the LOB locator and retry the operation.

ORA-22991: insufficient space allocated for argument *string*

Cause: The data to be returned in the argument is greater than the amount of space allocated for the argument.

Action: Allocate more space for the argument.

ORA-22992: cannot use LOB locators selected from remote tables

Cause: A remote LOB column cannot be referenced.

Action: Remove references to LOBs in remote tables.

ORA-22993: specified input amount is greater than actual source amount

Cause: (1) For LOB write, the amount of data received is different from the amount that was indicated would be sent. (2) For LOB copy and loadfromfile, the end of the

source LOB/FILE value was reached before the specified input amount was copied/loaded.

Action: (1) will happen when using OCI's piecewise mechanism with polling or with a callback function. Modify the code either to send the amount specified or to pass 0 as the input amount so that any amount of data can be sent. (2) will happen if the specified input amount is too large for the source LOB/FILE given the starting source offset. Either decrease the starting source offset, or decrease the amount to copy/load.

ORA-22994: source offset is beyond the end of the source LOB

Cause: The source offset for a LOB COPY or LOB LOADFROMFILE is beyond the end of the source LOB.

Action: Check the length of the LOB and then adjust the source offset.

ORA-22995: TABLESPACE DEFAULT option is invalid in this context

Cause: TABLESPACE DEFAULT option can be specified for LOB columns only in the following contexts: - at the table level for a partitioned table - at the partition level for a composite partition. An attempt was made to use the TABLESPACE DEFAULT option in a different context.

Action: Remove the TABLESPACE DEFAULT option.

ORA-22996: NEXT extent size is smaller than LOB chunksize

Cause: An attempt was made to create or alter a LOB segment so that its NEXT extent size was less than the LOB chunksize

Action: Specify a NEXT extent size that is greater than or equal to the LOB chunksize

ORA-22997: VARRAY | OPAQUE stored as LOB is not specified at the table level

Cause: An attempt was made to specify a VARRAY|OPAQUE column to be stored as LOB at the partition/subpartition/template level. However the VARRAY|OPAQUE column was not specified to be stored as LOB at the table level when the table was created.

Action: Specify the VARRAY | OPAQUE column to be stored as LOB at the table level when the table is created. Alternatively, do not specify the VARRAY | OPAQUE column to be stored as LOB at the partition/subpartition/template level if it is not specified at the table level when the table is created.

ORA-22998: CLOB or NCLOB in multibyte character set not supported

Cause: A CLOB or NCLOB in a fixed-width or varying-width multibyte character set was passed to a SQL character function which does not support multibyte LOB data.

Action: Use DBMS_LOB functions such as DBMS_LOB.INSTR() and DBMS_LOB.SUBSTR() or use PLSQL DBMS_LOB.READ/WRITE to access LOB data.

ORA-22999: CLOB or NCLOB data may have been corrupted

Cause: CLOB or NCLOB contains invalid character data. One possible cause is that the wrong csid was specified for the external file when calling DBMS_LOB.LOADCLOBFROMFILE or DBMS_XSLPROCESSOR.READ2CLOB to load CLOB or NCLOB data from external files.

Action: Reload the CLOB/NCLOB data with the correct csid specified for the external file.

ORA-23290: This operation may not be combined with any other operation

Cause: ALTER TABLE RENAME COLUMN/CONSTRAINT operation was given in conjunction with another ALTER TBALE Operation. This is not allowed.

Action: Ensure that RENAME COLUMN/CONSTRAINT is the only operation specified in the ALTER TABLE.

ORA-23291: Only base table columns may be renamed

Cause: Tried to rename a column of a non-base table, like object table/ nested table/ materialized view table.

Action: None. This is not allowed.

ORA-23292: The constraint does not exist

Cause: The given constraint name does not exist.

Action: Give an existing constraint's name.

ORA-23293: Cannot rename a column which is part of a join index

Cause: The column participates in a join index.

Action: If you need to rename the column, you need to drop the join index.

ORA-23300: *string*

Cause: The stored procedure 'raise_system_error' was called which causes this error to be generated.

Action: Correct the problem as described in the error message or contact the application administrator or DBA for more information.

ORA-23301: mixed use of deferred rpc destination modes

Cause: Replication catalog determined deferred RPC destinations were mixed with destination determined by other mechanisms in the same transaction.

Action: Do not mix destination types in the same transaction.

ORA-23302: application raised communication failure during deferred RPC

Cause: An application declared a communication failure during a deferred RPC.

Action: Retry the application when communication is restored.

ORA-23303: application raised generic exception during deferred RPC

Cause: An application declared a generic failure during a deferred RPC.

Action: Determined by the application

ORA-23304: malformed deferred rpc at arg *string* of *string* in call *string*, in tid *string*

Cause: A deferred RPC call was issued without the correct number of arguments as determined by the count parameter to dbms_defer.call

Action: Be sure the number of actuals matches the count.

ORA-23305: internal deferred RPC error: *string*

Cause: An internal error occurred in deferred rpc.

Action: Report the error and other information to support.

ORA-23306: schema *string* does not exist

Cause: The schema name was null or misspelled, or the schema does not exist locally.

Action: Specify the schema correctly, or create it with CREATE USER.

ORA-23307: replicated schema *string* already exists

Cause: The given database already replicates the given schema.

Action: Choose a different schema or a different database.

ORA-23308: object *string.string* does not exist or is invalid

Cause: The given name was null or misspelled, the given type was wrong, the object does not exist as a valid database object, or the object does not exist as a replicated object with the appropriate status.

Action: Ensure the object is valid in the database, is visible to the user, and, if appropriate, is a valid object in all_repobject.

ORA-23309: object *string.string* of type *string* exists

Cause: An object in the same namespace exists, perhaps with a different type or shape, or the same object has already been registered as an repobject in another object group.

Action: Remove the offending object with the SQL DROP command, unregister the offending object with dbms_repcat.drop_master_repobject(), or reinvoke the request using TRUE for a boolean parameter such as retry or use_existing_object.

ORA-23310: object group "*string*"."*string*" is not quiesced

Cause: The requested operation requires the object group to be suspended.

Action: Invoke suspend_master_activity at the repgroup's masterdef, wait until the status has changed to quiesced, and then retry the original request.

ORA-23312: not the masterdef according to *string*

Cause: The group name is null, the group name is misspelled, the invocation or given database is not the masterdef, or one of the masters does not believe the invocation database is the masterdef.

Action: If the given group name and masterdef were both correct, connect to the masterdef and retry the request, or relocate the masterdef at the (errant) databases using relocate_masterdef.

ORA-23313: object group "*string*"."*string*" is not mastered at *string*

Cause: The group name is null, the group name is misspelled, the invocation database is not a master, or the invocation database does not believe the given database is a master.

Action: If the given group name was correct, connect to a current master and retry the request, make the invocation database a master with add_master_database, or use switch_mview_master if the invocation database is a materialized view site.

ORA-23314: database is not a materialized view site for "*string*"."*string*"

Cause: The invocation database is not a materialized view database for the given object group.

Action: Connect to the desired materialized view database and retry the request, or make the invocation database a materialized view site with create_mview_repschema or create_mview_repgroup.

ORA-23315: repcatlog version or request *string* is not supported by version *string*

Cause: Either incompatible repcat versions are used, or a repcatlog record has been corrupted.

Action: Convert the master to a compatible version of repcat or retry the request.

ORA-23316: the masterdef is *string*

Cause: The requested operation is not permitted on a masterdef site.

Action: Relocate the masterdef to another master and retry the operation.

ORA-23317: a communication failure has occurred

Cause: The remote database is inaccessible.

Action: Ensure the remote database is running, the communications network is functioning, and the appropriate database links are present.

ORA-23318: a ddl failure has occurred

Cause: User-supplied or system-generated ddl did not execute successfully.

Action: Examine ddl, database state, repcatlog, and all_errors to determine why the failure occurred.

ORA-23319: parameter value *string* is not appropriate

Cause: The given value of a parameter is either null, misspelled, or not supported.

Action: Refer to the documentation and use parameter values that are appropriate for the given situation.

ORA-23320: the request failed because of values *string* and *string*

Cause: A missing ddl record for a repcatlog record, or inconsistency in repcat views.

Action: Retry the request, or make the views consistent.

ORA-23321: Pipename may not be null

Cause: You called dbms_pipe with a null pipe name.

Action: Find out the name of the pipe and call function with non-null pipename.

ORA-23322: Privilege error accessing pipe

Cause: You either tried to create a pipe that already existed and belonged to someone else, or remove a pipe that you were not authorized to use, or put a message into a pipe that you were not authorized for, or get a message from a pipe that you were not authorized for.

Action: You may have to use a different pipename.

ORA-23323: parameter length exceeds deferred RPC limits

Cause: A deferred rpc parameter was longer than the deferred rpc limits of 4000 bytes for char/varchar2 parameters and 2000 bytes for raw parameters.

Action: Use smaller parameters.

ORA-23324: error *string*, while creating deferror entry at "*string*" with error *string*

Cause: The given error was encountered while attempting to create a deferror entry for the give error code and the give database.

Action: Correct the cause of the given error.

ORA-23325: parameter type is not *string*

Cause: A conflict resolution priority function was given a type different than the type assigned to the priority group; or the priority group has no type assigned or a function; or dbms_defer_sys_query was called to retrieve a deferred rpc parameter from the deferred rpc queue, but the type of the parameter does not match the return type of the function.

Action: Use the function corresponding to the parameter type.

ORA-23326: object group "*string*."*string*" is quiesced

Cause: Either suspend_master_activity has been called before the object group has resumed normal operation or a (deferred) rpc operation was attempted while the object group was quiesced.

Action: If suspend_master_activity has been called and a resume_master_activity request is pending, wait until it completes, and then reinvoke suspend_master_activity. Otherwise, resume database activity with the resume_master_activity call.

ORA-23327: imported deferred rpc data does not match *string* of importing db

Cause: Deferred rpc queues were imported from a database with a different global name or operating system than importing database.

Action: Deferred rpc data should only be imported into a database with the same global name and hardware and operating system.

ORA-23328: mview base table "*string*".*string*" differs from master table "*string*".*string*"

Cause: When creating a materialized view through repcat, the materialized view base table name did not match a replicated table name at the master.

Action: Change the materialized view ddl to use the same base table as the replicated table name at the master.

ORA-23329: successful user-provided ddl but no materialized view "*string*".*string*"

Cause: The DDL provided by the user to create a materialized view was executed without error, but materialized view does not exist.

Action: Manually back-out the DDL, and reregister with matching ddl and materialized view.

ORA-23330: column group *string* already exists

Cause: The column group was already registered in the object group.

Action: Use a column group name not yet registered in the replicated object group.

ORA-23331: column group *string* does not exist

Cause: The given column group is either null, misspelled or not registered.

Action: Use a registered column group.

ORA-23332: group *string* is in use; cannot drop

Cause: The given column group or priority group is being used to resolve conflicts.

Action: Call dbms_repcat procedures drop_update_resolution, drop_delete_resolution, drop_unique_resolution so that the column group or priority group is no longer in use before dropping.

ORA-23333: column *string* is already part of a column group

Cause: Attempted to add a column to a column group when the column was already a member of a column group.

Action: Drop the column from its existing column group before trying to add it to another.

ORA-23334: column *string* does not exist in table or column group

Cause: The given column is either null, misspelled or is not part of the given table or column group.

Action: Use a column that is a member of the table or column group.

ORA-23335: priority group *string* already exists

Cause: The priority group was already registered in the object group.

Action: Use a column group name not yet registered in the object group.

ORA-23336: priority group *string* does not exist

Cause: The priority group was already registered in the object group.

Action: Use a priority group name not yet registered in the object group.

ORA-23337: priority or value not in priority group *string*

Cause: The specified value or priority has not been registered as part of the priority group.

Action: Either specify a different value or priority that is already part of the priority group, or add the value to the priority group.

ORA-23338: priority or value already in priority group *string*

Cause: The specified value or priority has already been registered as part of the priority group.

Action: Either specify a different value or priority that not already part of the priority group, or drop the value to the priority group.

ORA-23339: duplicate conflict resolution information

Cause: The specified combination of column group, sequence, conflict type and/or parameter table name, parameter column name, and parameter sequence number has already been registered.

Action: Verify that additional conflict resolution information needs to be added and provide a new sequence number. If modifying existing information, the existing information must be dropped first.

ORA-23340: incorrect resolution method *string*

Cause: User function is specified when conflict resolution method was not "USER FUNCTION" or specified resolution method is not one of the predefined methods.

Action: If user function is specified when conflict resolution method was not "USER FUNCTION", either reregister function with method as "USER FUNCTION" or specify a NULL user function. Otherwise Specify one of the documented supported conflict resolution methods.

ORA-23341: user function required

Cause: A NULL user function was specified for the "USER FUNCTION" method.

Action: Provide user function name (e.g., "schema"."package"."function") that conforms to the documented user function specifications or specify one of the documented supported conflict resolution methods.

ORA-23342: invalid parameter column *string*

Cause: The parameter column name is null or misspelled, the invocation database is not a master, or is of the wrong type for the specified conflict resolution method.

Action: Specify a parameter column from the specified column group that has a correct type for the conflict resolution method.

ORA-23343: no match for specified conflict resolution information

Cause: The specified combination of column group, sequence, conflict type has not been registered (e.g., for adding a comment).

Action: Specify a combination of column group, sequence, conflict type has been registered.

ORA-23344: constraint (*string.string*) does not exist

Cause: A null, misspelled or nonexistent constraint was specified when registering a uniqueness conflict.

Action: Register a named constraint for the specified table.

ORA-23345: table "*string*"."*string*" not registered to collect statistics

Cause: A procedure that deals with conflict resolution statistics-gathering was called for a table that was not registered to collect statistics.

Action: Call `dbms_repcat.register_statistics` to register the table.

ORA-23346: primary key or object ID is undefined for table or materialized view *string*

Cause: Trying to generate replication support for a table or materialized view without a primary key (as defined by a constraint or `dbms_repcat.set_columns`) or an object ID.

Action: For a table, add a primary key constraint or define a primary key using `dbms_repcat.set_columns` or use object tables. For a ROWID materialized view, set `min_communication` to false or use primary key or object ID materialized views.

ORA-23347: datatype *string* for column *string* table *string* not supported

Cause: The table has a column whose datatype is not supported by `repcat`.

Action: Remove the column from the table, or alter the column to have one of the supported datatypes.

ORA-23348: cannot replicate procedure *string*; only IN parameters supported

Cause: Trying to generate replication support for a package that has a procedure with OUT or IN OUT parameters.

Action: Remove the procedure from the package, or remove the OUT or IN OUT parameters from the procedure.

ORA-23349: cannot generate replication support for functions

Cause: Trying to generate replication support for a package that has a public function, or for a stand-alone function.

Action: Remove the public function from the package, or alter the function to be a procedure.

ORA-23350: maximum number of recursive calls exceeded

Cause: This usually occurs when trying to resolve conflicts in a table while concurrent updates to the same row create more conflicts.

Action: Re-execute the deferred transaction from `DefError` using `dbms_defer_sys.execute_error`

ORA-23351: parameter datatype *string* for procedure *string* not supported

Cause: The procedure has a parameter whose datatype is not supported by `repcat`.

Action: Remove the parameter from the procedure, or alter the parameter to have one of the supported datatypes.

ORA-23352: duplicate destination for deferred transaction

Cause: A duplicate destination was specified for a deferred transaction either in a `dbms_defer.call` call or an earlier `dbms_defer.transaction` call or a `dbms_defer_sys.add_default_dest` call.

Action: Remove the duplicate entry

ORA-23353: deferred RPC queue has entries for object group "*string*".*string*"

Cause: The requested action cannot be performed until the queue is empty for the given object group

Action: Use `dbms_defer_sys.execute` or `dbms_defer_sys.delete_tran` to empty the queue.

ORA-23354: deferred RPC execution disabled for "*string*" with "*string*"

Cause: Deferred RPC can not be executed at the destination with the specified catchup value because their propagation has been disabled.

Action: Enable deferred RPC execution with the `dbms_defer_sys.set_disabled` call.

ORA-23355: object *string.string* does not exist or is invalid at master site

Cause: The given name was null or misspelled, the given type was wrong, the object does not exist as a valid database object at the master site, or the object does not exist as a replicated object with the appropriate status.

Action: Ensure the object is valid in the master database, and is visible to the user, and, if appropriate, is a valid object in all_reobject.

ORA-23356: masterdef recognizes a master which does not recognize the masterdef

Cause: Possibly `drop_master_repgroup` was run at a master site but `remove_master_databases` was not run at master definition site for that master.

Action: Run `remove_master_databases` from master definition site to remove the appropriate master (see associated error messages).

ORA-23357: the propagator does not exist

Cause: The propagator does not exist.

Action: Register a new propagator.

ORA-23358: invalid remote user

Cause: The local user does not match the remote user connected via a database link.

Action: Drop and recreate the identified database link with the connect-to user identical to the owner of the database link.

ORA-23359: error on creating a ddl record for a repcatlog record

Cause: The userid in the repcatlog record does not match the userid of the connected user.

Action: Retry the operation with a different user.

ORA-23360: only one materialized view for master table "*string*" can be created

Cause: Trying to create more than one materialized view on a given master table in the same rep group.

Action: Create these other materialized views in a different rep group at another site.

ORA-23361: materialized view "*string*" does not exist at master site

Cause: The materialized view does not exist at the master site for offline instantiation of the materialized view.

Action: The correct procedure is to create the materialized view in a different schema at the master site, and then follow the instructions for offline instantiation of materialized views.

ORA-23362: invalid user

Cause: The given user does not exist.

Action: n/a

ORA-23363: mismatch of mview base table "*string*" at master and mview site

Cause: The name of the base table of the materialized view at the master site is different from the base table at the materialized view site. This error may arise during offline instantiation of materialized views.

Action: Retry offline instantiation with a materialized view name less than 24 bytes

ORA-23364: Feature not enabled: Advanced replication

Cause: The Advanced Replication feature is not enabled at this site. Updatable materialized views, deferred RPCs, and other replication features are, therefore, unavailable.

Action: Do not attempt to use this feature. Contact an Oracle Customer Support representative if the Advanced Replication feature has been purchased but not enabled.

ORA-23365: site *string* does not exist

Cause: site specified in argument "reference_site" or argument "comparison_site" in call to "differences()" routine or "rectify()" routine does not name an existing site.

Action: Make sure that database sites specified really do exist, and re-run the routine.

ORA-23366: integer value *string* is less than 1

Cause: Value of argument "max_missing" to routine "differences()" cannot be less than 1. Value of argument "commit_rows" to routines "differences()" and "rectify()" cannot be less than 1.

Action: Choose an integer value for those arguments to be 1 or greater.

ORA-23367: table *string* is missing the primary key

Cause: Table specified in argument "oname1" or "oname2" in call to "differences()" routine does not contain either a primary key or a virtual primary key (defined through dbms_repcat package under symmetric replication).

Action: Make sure the tables specified have a primary key defined.

ORA-23368: name *string* cannot be null or the empty string

Cause: Argument "sname1," "sname2," "oname1," "oname2," "missing_rows_sname," "missing_rows_oname1," "missing_rows_oname2" to "differences()" or "rectify()" cannot be NULL or " (empty string).

Action: Change argument to non-null or non-empty string.

ORA-23369: value of "*string*" argument cannot be null

Cause: Argument "max_missing" to "differences()" routine cannot be NULL.

Action: Legal values for "max_missing" are integers 1 or greater.

ORA-23370: table *string* and table *string* are not shape equivalent (*string*)

Cause: The tables specified are not shape equivalent, which means intuitively that the number of columns, the names, their datatypes and lengths are not the same. Specifically, problem is in the parentheses and is one of the following: the number of columns are not equal, datatypes of columns with same name in different tables are different, lengths of varchar2 and char columns are not equal, precision and scale of number datatypes are not equal.

Action: Make sure the two tables being compared have the same number of columns, same column names, and same datatypes.

ORA-23371: column *string* unknown in table *string*

Cause: Some column in "array_columns" argument (or "column_list" argument) to "differences()" routine does not correspond to a column in the specified table.

Action: Make sure that all the columns in either "array_columns" or "column_list" are present in the specified table.

ORA-23372: type *string* in table *string* is unsupported

Cause: Certain types in the table comparison utility are not supported.

Action: Make sure that the types of columns in the tables to be compared are the ones supported by symmetric replication.

ORA-23373: object group "*string*."*string*" does not exist

Cause: The group name was null or misspelled, or the group does not exist locally.

Action: Specify the group correctly, or create it with dbms_repcat.create_master_repgroup().

ORA-23374: object group "*string*."*string*" already exists

Cause: The given database already replicates the given object group. A materialized view repgroup cannot be created at a given site where a master repgroup with the same name already exists.

Action: Choose a different group or a different database.

ORA-23375: feature is incompatible with database version at *string*

Cause: A feature not compatible with the specified database was used

Action: Set or raise the value of the "compatible" INIT.ORA parameter to match the necessary compatibility level.

ORA-23376: node *string* is not compatible with replication version "*string*"

Cause: A feature not compatible with the remote database was used

Action: Upgrade the remote database and retry the operation

ORA-23377: bad name *string* for missing_rows_ownership argument

Cause: An attempt was made to use the name of the reference site table as the name of the missing_rows_ownership argument.

Action: Provide a separately created table with a different name for missing_rows_ownership argument. The separately created table will contain the differences between the tables being compared.

ORA-23378: connection qualifier "*string*" is not valid for object group "*string*".*string*"

Cause: The connection qualifier used in the database link for the specified object group does not match the qualifier specified for the group in create_master_repgroup.

Action: Use or create a database link which contains the correct connection qualifier.

ORA-23379: connection qualifier "*string*" is too long

Cause: The maximum length of a database link, including the connection qualifier, is 128 bytes.

Action: Use a shorter connection qualifier, or shorten the name of the database link

ORA-23380: propagation mode "*string*" is not valid

Cause: The specified propagation may be misspelled, or is not supported. For materialized view sites, all materialized view object groups at the same materialized view site with the same master object group must all have the same propagation method.

Action: Refer to the manual on replicated data for valid propagation modes. For materialized view sites, also ensure that the propagation modes of all materialized view object groups with the same master object group are the same.

ORA-23381: generated object for base object *string.string@string* does not exist

Cause: The system generated object(s) for the specified base object do not exist at the specified site. The current operation requires the base object to have generated replication support.

Action: Ensure that the generated replication object(s) for the base object exist and are valid at the specified site. If the generated object(s) do not exist, then the procedure dbms_repat.generate_replication_support() needs to be called from the master definition site for the base object. missing_rows_onsame argument. The separately created table will contain the differences between the tables being compared.

ORA-23382: materialized view repgroup "*string*".*string*" is not registered at site *string*

Cause: The materialized view repgroup is not currently registered at the master and so cannot be unregistered.

Action: None

ORA-23383: registration for materialized view repgroup "*string*".*string*" failed at site *string*

Cause: Insertion into local repschema table failed.

Action: None

ORA-23384: replication parallel push *string* argument out of range

Cause: Specified numeric argument to dbms_defer_sys.push is invalid.

Action: Fix the argument value and try again.

ORA-23385: replication parallel push *string* argument not valid

Cause: Specified string argument to dbms_defer_sys.push is invalid.

Action: Fix the argument value and try again.

ORA-23386: replication parallel push cannot create slave processes

Cause: An error was occurred while creating slave processes for parallel push.

Action: n/a

ORA-23387: replication parallel push dequeue error

Cause: An attempt to dequeue a deferred transaction failed while trying to assign a new queue batch number.

Action: n/a

ORA-23388: replication parallel push watermark error

Cause: An error occurred during parallel push while trying to update the high-watermark information in system.def\$_destination.

Action: n/a

ORA-23389: obsolete procedure; drop objects and recreate using new master

Cause: dbms_repcat.switch_mvview_master is no longer supported.

Action: Drop the objects in the object group and recreate them using the new master.

ORA-23392: could not find materialized view to be associated with "string"."string"

Cause: Could not find materialized view associated with a trigger or index that is being pulled from the master site.

Action: Ensure that materialized view, master, and master index or trigger is registered as replicated objects.

ORA-23393: the user is already the propagator

Cause: The given user is already the current propagator.

Action: n/a

ORA-23394: duplicate propagator

Cause: More than one valid propagator exist.

Action: Unregister any duplicate propagator.

ORA-23395: object "string"."string" of type "string" does not exist or is invalid

Cause: The given name was null or misspelled, the given type was wrong, the object does not exist as a valid database object, or the object does not exist as a replicated object with the appropriate status.

Action: Ensure the object is valid in the database, is visible to the user, and, if appropriate, is a valid object in all_repobject.

ORA-23396: database link "string" does not exist or has not been scheduled

Cause: the database link does not exist in the schema of the replication propagator or has not been scheduled.

Action: Ensure that the database link exists in the database, is accessible and is scheduled for execution.

ORA-23397: global name "string" does not match database link name "string"

Cause: the database link name at the local node does not match the global name of the database that the link accesses.

Action: Ensure that global names is set to true and the link name matches the global name.

ORA-23398: user name "*string*" at database link "*string*" does not match local user name "*string*"

Cause: the user name of the replication administration user at the local node and the user name at the node corresponding to the database link are not the same. Symmetric replication expects the two users to be the same.

Action: Ensure that the user ID of the replication administration user at the local node and the user ID at the node corresponding to the database link are the same.

ORA-23399: generation of replication support for "*string*".*string*" is not complete

Cause: Replication support for the specified object has not been generated or the generation process is not yet complete.

Action: Ensure that replication support has been generated for the object. Use DBMS_REPCAT.GENERATE_REPLICATION_SUPPORT() to generate replication support for the object.

ORA-23400: invalid materialized view name "*string*"

Cause: A null, misspelled, or badly formed materialized view name was given to dbms_mview.refresh.

Action: Provide a valid materialized view name to dbms_mview.refresh.

ORA-23401: materialized view "*string*".*string*" does not exist

Cause: A materialized view name was given to dbms_mview.refresh that is not in sys.snap\$ or its associated views.

Action: Provide a materialized view name that is in sys.snap\$, all_mvviews or user_mvviews.

ORA-23402: refresh was aborted because of conflicts caused by deferred txns

Cause: There are outstanding conflicts logged in the DefError table at the materialized view's master.

Action: Resolve the conflicts in the master DefError table and refresh again after the table is empty. Alternatively, refresh with refresh_after_errors set to TRUE, which will proceed with the refresh even if there are conflicts in the master's DefError table. Proceeding despite conflicts can result with an updatable materialized view's changes appearing to be temporarily lost (until a refresh succeeds after the conflicts are resolved).

ORA-23403: refresh group "*string*".*string*" already exists

Cause: Making a new refresh group when there is already a group of the same name in sys.rgroup\$.

Action: Choose a different refresh group name.

ORA-23404: refresh group "*string*".*string*" does not exist

Cause: A refresh group name was given that is not in sys.rgroup\$.

Action: Provide a refresh group name that is in sys.rgroup\$ or dbs_rgroup.

ORA-23405: refresh group number *string* does not exist

Cause: A refresh group number was given that is not in sys.rgroup\$.

Action: Provide a refresh group number that is in sys.rgroup\$ or dbs_rgroup.

ORA-23406: insufficient privileges on user "*string*"

Cause: The caller is not the owner of the materialized view and does not have ALTER ANY MATERIALIZED VIEW privileges.

Action: Perform the operation as the owner of the materialized view or as a user with ALTER ANY MATERIALIZED VIEW privileges.

ORA-23407: object name *string* must be shaped like "schema"."object" or "object"

Cause: The object name (e.g., the rollback segment, the materialized view name, the refresh group) was incorrectly specified.

Action: Retry the operation with the object name properly specified (like "schema"."object" or "object")

ORA-23408: this replication operation is not supported in a mixed configuration

Cause: operation is not supported if the object group is replicated at a pre-V8 node.

Action: Ensure that all nodes of the replicated object group are V8.

ORA-23409: could not find an unused refresh group number

Cause: 1000 consecutive refresh group numbers, as defined by the rgroupseq number, were already used by rows in sys.rgroup\$.

Action: Alter the sequence number to be within a legal unused range and destroy unneeded refresh groups.

ORA-23410: materialized view "*string*"."*string*" is already in a refresh group

Cause: A materialized view of the same name is already in a refresh group.

Action: Subtract the materialized view from the current refresh group and add it to its new refresh group, or combine the two refresh groups into a single refresh group.

ORA-23411: materialized view "*string*"."*string*" is not in refresh group "*string*"."*string*"

Cause: The specified materialized view is not in the specified refresh group.

Action: Try again with the proper materialized view and refresh group names.

ORA-23412: master table's primary key columns have changed

Cause: The master table's primary key constraint was modified after the primary key materialized view was created.

Action: Drop and recreate the primary key materialized view

ORA-23413: table "*string*"."*string*" does not have a materialized view log

Cause: The fast refresh can not be performed because the master table does not contain a materialized view log.

Action: Use the CREATE MATERIALIZED VIEW LOG command to create a materialized view log on the master table.

ORA-23414: materialized view log for "*string*"."*string*" does not record rowid values

Cause: A rowid materialized view is being fast refreshed, but the materialized view log does not record rowid information.

Action: Use the CREATE MATERIALIZED VIEW LOG...ADD ROWID command to begin recording rowid information in the materialized view log.

ORA-23415: materialized view log for "string"."string" does not record the primary key

Cause: A primary key materialized view is being fast refreshed, but the materialized view log does not record primary key information.

Action: Use the CREATE MATERIALIZED VIEW LOG...ADD PRIMARY KEY command to begin recording primary key information in the materialized view log.

ORA-23416: table "string"."string" does not contain a primary key constraint

Cause: The master table does not contain a primary key constraint or the primary key constraint has been disabled.

Action: Create a primary key constraint on the master table or enable the existing constraint.

ORA-23417: unknown materialized view type: string

Cause: A fast refresh is being performed on a materialized view of an unknown or unsupported type.

Action: Check all_mvviews and ensure that the materialized view being refreshed is a valid materialized view.

ORA-23418: cannot unregister the propagator who is currently in use

Cause: The propagator is currently used in propagating replication RPCs.

Action: Try again later when there is no transaction active in propagating replication RPCs.

ORA-23419: regenerate replication support before resuming master activity

Cause: There are tables in the object group that require regeneration of replication support.

Action: Check the generation_status column in the all_reobjects view. Regenerate replication support for any table in the object group with a 'NEEDSGEN' status. Resume master activity.

ORA-23420: interval must evaluate to a time in the future

Cause: The parameter "interval" evaluates to a time earlier than SYSDATE.

Action: Choose an expression that evaluates to a time later than SYSDATE.

ORA-23421: job number string is not a job in the job queue

Cause: There is no job visible to the caller with the given job number.

Action: Choose the number of a job visible to the caller.

ORA-23422: Oracle Server could not generate an unused job number

Cause: Oracle Server could not generate a job number that was not used to identify another job.

Action: Retry the operation.

ORA-23423: job number string is not positive

Cause: The given job number is less than 1.

Action: Choose a positive integer.

ORA-23424: materialized view "string"."string" at string not registered

Cause: The specified materialized view has not been successfully registered at this site.

Action: Register the materialized view manually at either the master site or the materialized view site.

ORA-23425: invalid materialized view identifier *string*

Cause: The argument provided to `dbms_mview.purge_mview_from_log` is an invalid materialized view identifier or it does not identify an Oracle 8 fast refreshable materialized view or the materialized view has been already purged.

Action: If the materialized view is an Oracle 8 fast refreshable materialized view then provide `purge_mview_from_log` with its valid materialized view identifier.

ORA-23426: deferred RPC queue has entries for *string*

Cause: The requested action cannot be performed until the queue is empty for the given site/dblink

Action: Use `dbms_defer_sys.push`, `dbms_defer_sys.purge_queue` or `dbms_defer_sys.delete_tran` to empty the queue.

ORA-23427: deferred purge queue argument *string* out of range

Cause: Specified numeric argument to `dbms_defer_sys.purge_queue` is invalid.

Action: Fix the argument value and try again.

ORA-23428: job associated instance number *string* is not valid

Cause: A job is associated with an instance that is not running.

Action: Choose a running instance for job affinity, or set force parameter to TRUE.

ORA-23430: argument "*string*" cannot be NULL or empty string

Cause: The caller has provided an argument whose value cannot be NULL or the empty string.

Action: Check that the `varchar2` value provided is not NULL or the empty string, and retry the call.

ORA-23431: wrong state: *string*

Cause: The routine was executed against a replicated object group that was in the wrong state.

Action: Make sure that the replicated object group is in the state given in the error message.

ORA-23432: master site *string* already exists

Cause: An attempt was made to instantiate a replicated object group at a master site that was already a part of the object group.

Action: If you were trying to add this site, do nothing because it already exists; otherwise, pick the name of another site, and re-run the routine.

ORA-23433: executing against wrong master site *string*

Cause: An attempt was made to execute the routine at a site that is different from the site specified in the argument of the routine.

Action: Provide an argument to the routine that correctly indicates the site against which the routine should be executing.

ORA-23434: master site *string* not known for object group

Cause: The site name given as an argument to a routine was not already known to the replicated object group.

Action: Execute the `dbms_offline_og.begin_instantiation()` routine to add a new site to the replicated object group.

ORA-23435: cannot create an updatable ROWID materialized view with LOB columns

Cause: The propagation of LOB data from materialized view sites to the master site requires a primary key on the replicated table. Thus updatable ROWID materialized views that contain LOB columns are not supported.

Action: Create a primary key materialized view instead of a ROWID materialized view. If the materialized view already exists, it can be converted to a primary key materialized view using the `ALTER MATERIALIZED VIEW DDL` command.

ORA-23436: missing template authorization for user

Cause: The specified template authorization does not exist.

Action: Check the values for user name and refresh template name to ensure a valid row exists in the `DBA_REPCAT_USER_AUTHORIZATIONS` view.

ORA-23437: template authorization already exists for user

Cause: The specified user already has been authorized to use the specified refresh group template.

Action: Check the values for user name and refresh template name or query the `DBA_REPCAT_USER_AUTHORIZATIONS` view to ensure that the correct values were passed as parameters.

ORA-23438: missing refresh group template

Cause: The specified refresh group template does not exist.

Action: Verify that the refresh group template does not exist by querying the `DBA_REPCAT_REFRESH_TEMPLATES` view.

ORA-23439: refresh group template already exists

Cause: The specified refresh group template already exists.

Action: Verify that the refresh group template exists by querying the `DBA_REPCAT_REFRESH_TEMPLATES` view.

ORA-23440: incorrect public template value

Cause: The public template parameter is not 'Y', 'N' or NULL.

Action: Correct the value of the public template parameter. It must be 'Y','N' or NULL.

ORA-23441: object does not exist for refresh group template

Cause: The specified object does not exist in the refresh group template.

Action: Correct the object name and object type parameters. Check the `DBA_REPCAT_TEMPLATE_OBJECTS` view to verify the correct name and type of the object.

ORA-23442: object already exists for the refresh group template

Cause: The specified object already exists in the refresh group template.

Action: Change the object name and object type parameters. Query the `DBA_REPCAT_REMPLATE_OBJECTS` view to verify the correct name and type of the object.

ORA-23443: missing template parameter

Cause: The specified template parameter does not exist.

Action: Correct the template parameter value and execute the procedure again. Use the DBA_REPCAT_TEMPLATE_PARAMS view to verify the name of the refresh group template and parameter name.

ORA-23444: duplicate template parameter

Cause: The template parameter already exists for the specified refresh group template.

Action: Correct the template parameter value and execute the procedure again. Use the DBA_REPCAT_TEMPLATE_PARAMS view to verify the name of the refresh group template and parameter name.

ORA-23445: missing template site

Cause: The template site specified by the site name, user name and refresh group template name does not exist.

Action: Correct the invalid parameter and execute the procedure again. Use the DBA_REPCAT_TEMPLATE_SITES view to query the existing template sites.

ORA-23446: duplicate template site

Cause: The template site specified by the site name, user name and refresh group template name already exists.

Action: Correct the invalid parameter and execute the procedure again. Use the DBA_REPCAT_TEMPLATE_SITES view to query the existing template sites.

ORA-23447: missing user parameter value

Cause: The user parameter value specified by the user name, parameter name and refresh group template name does not exist.

Action: Correct the invalid parameter and execute the procedure again. Use the DBA_REPCAT_USER_PARAMS view to query the existing user parameters.

ORA-23448: duplicate user parameter value

Cause: The user parameter value specified by the user name, parameter name and refresh group template name already exists.

Action: Correct the invalid parameter and execute the procedure again. Use the DBA_REPCAT_USER_PARAMS view to query the existing user parameters.

ORA-23449: missing user name

Cause: The user specified by the user name parameter does not exist in the database.

Action: Correct an invalid user name or create the user in the master database. Use the DBA_USERS view to select the valid database users.

ORA-23450: flavor already contains object "*string*"."*string*"

Cause: The flavor already contains the specified object.

Action: Check that the specified object is correct. To add all columns of a table object, delete the object from the flavor and then add it again.

ORA-23451: flavor *string* already defined for object group "*string*"."*string*"

Cause: The given object group already contains a (possibly unpublished) definition of the specified flavor.

Action: Check the spelling of the flavor name. Check for an unpublished flavor of the desired name.

ORA-23452: flavor *string* of object group "*string*".*string*" is already published

Cause: The given object group already contains a (published) definition of the specified flavor.

Action: Check the spelling of the flavor name.

ORA-23453: requested operation is not supported on top flavor

Cause: The TOP flavor has a NULL name and may not be directly defined or deleted.

Action: Supply the name of a flavor other than the TOP flavor or use `dbms_repcat` routines to implicitly change the TOP flavor.

ORA-23454: flavor *string* not defined for object group "*string*".*string*"

Cause: The given object group does not contain a (published) definition of the specified flavor.

Action: Check the spelling of the flavor name. Ensure the flavor has been defined (and published) for the object group.

ORA-23455: flavor *string* contains object "*string*"

Cause: The given flavor contains the object to be dropped.

Action: Purge the flavor or choose another object to drop.

ORA-23456: flavor *string* does not contain "*string*"

Cause: The flavor does not contain the given object, column, or attribute.

Action: Either drop the flavor or choose a different object, column, or attribute.

ORA-23457: invalid flavor ID *string*

Cause: The given flavor ID is invalid.

Action: Make sure this flavor has been instantiated. If the flavor ID is outside the range (-2147483647, 2147483647), contact customer support.

ORA-23458: inappropriate flavor *string* at *string*

Cause: The given flavor at the given database prevents the operation from succeeding.

Action: Either change the database flavor or choose a different operation.

ORA-23459: flavor *string* must contain "*string*"

Cause: The flavor must contain the given object, column, or attribute.

Action: Either choose a different database flavor or ensure the object, column, or attribute is available.

ORA-23460: missing value for column *string* in resolution method "*string*" for "*string*".*string*".*string*"

Cause: before resolving conflicts, some values necessary resolving conflicts are not available, or after resolving conflicts, some values necessary for re-trying of the SQL are not available

Action: define appropriate flavors, provide necessary values through availability vector in USER FLAVOR FUNCTION for conflict resolution

ORA-23461: fail to resolve conflict for "*string*".*string*".*string*"

ORA-23462: flavor *string* in use at site *string*

Cause: The given flavor cannot be deleted because it is being used at the given site.

Action: Change the flavor of the site, or unregister it if it is a materialized view site.

ORA-23463: flavor incompatible with object "*string*".*string*"

Cause: An existing flavor includes the specified object with an incompatible type.

Action: Change the type of the object, or delete the flavor if it is not in use.

ORA-23464: flavor lacks column *string* of "*string*".*string*"

Cause: The flavor includes some columns of an object group but not all the required columns.

Action: Change the flavor definition to include all required columns.

ORA-23465: flavor already includes column *string* of "*string*".*string*"

Cause: The flavor includes the specified column which is being added.

Action: Check that the specified column is correct.

ORA-23466: flavor requires missing object "*string*".*string*"

Cause: The flavor includes the specified object which does not exist

Action: Check that the specified object name is correct, and create the object if appropriate.

ORA-23467: flavor lacks object "*string*".*string*"

Cause: The flavor does not include the specified object which is being dropped.

Action: Check that the specified object is correct.

ORA-23468: missing *string string*

Cause: The template is missing the object with the specified key.

Action: Add the object to the template.

ORA-23469: *string* is different between templates

Cause: The values for the specified columns are different in each template for the same key values.

Action: Correct the column values to make the templates the same.

ORA-23470: invalid status

Cause: The status should be DELETED, INSTALLING or INSTALLED. Any other status is invalid.

Action: Check that the specified status value is correct.

ORA-23471: template not authorized for user

Cause: The refresh template is private and the user has not been authorized to instantiate the template.

Action: Authorize the user to use the template.

ORA-23472: materialized view "*string*".*string*" must be atomically refreshed

Cause: Non-atomic refresh is not supported for the specified materialized view.

Action: Set the value of the ATOMIC parameter to FALSE in the refresh procedure being used or remove the specified materialized view from the set of materialized views being refreshed.

ORA-23473: replication RPC processing for "*string*".*string*" is disabled

Cause: The processing of replication RPCs for the object group that contains this object is disabled. This includes RPCs in the error queue.

Action: Processing of replication RPCs is disabled when the object group is being offline instantiated. Wait until offline instantiation is finished.

ORA-23474: definition of "*string*".*string*" has changed since generation of replication support

Cause: The current columns in the specified table and their column types do not match the columns and column types when replication support was last generated.

Action: Regenerate replication support for the affected table. All flavors that include the specified table should be checked for validity. Types for any UDT columns should also be checked for validity.

ORA-23475: key column *string* must be sent and compared

Cause: The specified column is a key column and must be sent and compared during replication propagation.

Action: Make sure every key column is sent and compared.

ORA-23476: cannot import from *string* to *string*

Cause: This object was imported from a database with a different global name than the importing database.

Action: Only import this object into a database with the same global name.

ORA-23477: unable to alter propagation mode for object group "*string*".*string*"

Cause: The propagation method of a materialized view object group can only be altered when no other object groups with the same master object group are sharing the materialized view site.

Action: Ensure that there are no other materialized view object groups at the local site with the same master object group.

ORA-23478: object group "*string*" is already mastered at *string*

Cause: There is at least one other materialized view repgroup at the local site with the same group name but a different master site.

Action: Ensure that all materialized view repgroups at the local site with the same group name have the same master.

ORA-23480: Column *string* is not a top-level column of "*string*".*string*".

Cause: The column is either not a top-level column or is not present in the table or materialized view.

Action: Ensure only valid top-level columns are used.

ORA-23481: unexpected name string "*string*"

ORA-23482: column *string* of "*string*".*string*": object types not allowed.

Cause: The column is of Object Type.

Action: Ensure that all the columns are not of Object Type.

ORA-23483: object "*string*".*string*" not allowed in this operation.

Cause: The specified operation does not support the given object.

Action: Do not invoke the operation for this object.

ORA-23484: internal internet Application Server error: *string*

Cause: An internal error occurred in internet Application Server.

Action: Report the error and other information to support.

ORA-23485: Column group "*string*" must consist of a single numeric column only

Cause: The column group doesn't contain only one numeric column.

Action: Use a column group containing a single numeric column.

ORA-23487: object groups "*string*".*string*" and "*string*".*string*" do not have the same connection qualifier

Cause: The specified two object groups do not have the same connection qualifier.

Action: Do not invoke the operation on the above object groups, or ensure they have the same connection qualifier.

ORA-23488: propagation mode "*string*" for "*string*" is not allowed for this operation

Cause: This operation does not support the specified dblink in the above propagation mode.

Action: Do not invoke the operation for this dblink, or change the propagation mode for this dblink.

ORA-23489: duplicate entry "*string*"

Cause: The specified value is duplicated in the parameter list.

Action: Remove duplicated entries in the parameter list.

ORA-23490: extension request "*string*" with status "*string*" not allowed in this operation

Cause: The specified operation is not allowed for the extension request with the specified status.

Action: Ensure the extension request has the appropriate status before retrying this operation.

ORA-23491: no valid extension request at "*string*"

Cause: The specified database does not have a valid extension request.

Action: Ensure there is a valid extension request in DBA_REPEXTENSIONS view before retrying this operation.

ORA-23492: no new sites for extension request "*string*"

Cause: There is no new site with the specified extension request.

Action: Ensure there is at least one new site in DBA_REPSITES_NEW view for this request before retrying this operation.

ORA-23493: "*string*" is not a new site for extension request "*string*"

Cause: The specified extension request does not include the specified site as a new site.

Action: Ensure the specified site is a new site for this extension request before retrying this operation.

ORA-23494: too many rows for destination "*string*"

Cause: The specified destination has too many rows in system.def\$_destination table.

Action: Ensure the specified destination has at most two valid rows before retrying this operation.

ORA-23495: serial propagation can not be used for "string"

Cause: The sites involved may be in the process of adding a new site without quiescing.

Action: Check the def\$_destination table for this destination and try parallel propagation.

ORA-23496: can not change disabled status for "string" and "string"

Cause: The disabled status for this site is set internally for synchronization during adding a new master without quiescing.

Action: Ensure adding a new master without quiescing finished before invoking this procedure.

ORA-23497: repgroup name cannot be null

Cause: The array of Repgroup names contains a null value.

Action: Ensure that the array of Repgroup names is dense and is not null terminated.

ORA-23498: repgroups specified must have the same masters

Cause: The Repgroup names specified do not have the same masters.

Action: Ensure that the Repgroup names specified have the same masters.

ORA-23500: cannot switch master for a multi-tier materialized view repgroup "string"."string"

Cause: An attempt was made to switch master for a materialized view repgroup when its parent repgroup is also a materialized view repgroup. This is not allowed.

Action: Drop and recreate the materialized view repgroup based on a proper parent repgroup.

ORA-23501: refresh template cannot be instantiated for database with compatibility equal to or less than 8.0

Cause: Instantiation of a refresh template is not supported for database compatibility 8.0 or less.

Action: Be sure the database compatibility is 8.1 or above.

ORA-23502: valid directory for offline instantiation is not specified

Cause: An attempt was made to offline instantiate to a directory which is not specified or null.

Action: There are two ways to specify the directory: o As a parm offline_dirpath to the API o As an init.ora parm named utl_file_dir Make sure you have specified an appropriate directory in which the offline file can be created.

ORA-23503: error occurred during IAS instantiation

Cause: An attempt was made to instantiate a IAS site. Error occurred during IAS instantiation.

Action: See other errors on the error stack to look for the source of the problem. If the error still persists, contact Oracle Support.

ORA-23504: columns added to table do not match list of columns to be added

Cause: The list of columns passed as a parameter does not match the columns to be added to the table.

Action: Correct the DDL string or list of columns and reexecute.

ORA-23505: Object "*string*"."*string*" is missing.

Cause: The specified object does not exist.

Action: Check that the specified object is correct.

ORA-23514: invalid or incorrect number of arguments

Cause: The arguments passed to the online redefinition API were invalid or missing.

Action: Call the online redefinition API with the right number of valid arguments.

ORA-23515: materialized views and/or their indices exist in the tablespace

Cause: An attempt was made to drop a tablespace which contains materialized views and/or their indices.

Action: Drop the materialized views in this tablespace. Also, find indices belonging to materialized views in this tablespace and drop them. Then try dropping the tablespace.

ORA-23531: site owner already exists in the template.

Cause: Site owner for the template already exists.

Action: Do not create multiple siteowners for this template.

ORA-23532: tables with different synchronization mechanisms are in the same group

Cause: Tables belonging to the same replication group were specified to be cached with different synchronization mechanisms.

Action: Do not specify different synchronization mechanisms while caching tables belonging to the same replication group.

ORA-23533: object "*string*"."*string*" can not be cached

Cause: An attempt was made to cache an object which is not supported.

Action: Do not cache an object which is not supported.

ORA-23534: missing column in materialized view container table "*string*"."*string*"

Cause: After import, the materialized view container table has missing columns.

Action: Check if materialized view container table was imported correctly.

ORA-23535: instantiating templates from multiple back ends is not allowed.

Cause: An attempt was made to set a new non-null back end database for an iAS site.

Action: Call `dbms_ias_configure.set_back_end_db` procedure with null `dblink`. Then, call the same procedure with the new non-null `dblink`.

ORA-23536: the object "*string*"."*string*" is not cached at the middle tier as expected.

Cause: The object may have been dropped or renamed at the back end after `dbms_ias_inst.start_ias_inst` was executed.

Action: Check the validity of the object at the back end and retry the instantiation.

ORA-23537: function or procedure *string* is not allowed to be invoked from this site.

Cause: This function or procedure is restricted to the backend or middle tier site

Action: Connect to the proper site before calling this function or procedure.

ORA-23538: cannot explicitly refresh a NEVER REFRESH materialized view ("*string*")

Cause: An attempt was made to explicitly refresh a NEVER REFRESH MV.

Action: Do not perform this refresh operation or remove the MV(s) from the list.

ORA-23539: table "*string*"."*string*" currently being redefined

Cause: An attempt was made to redefine a table which is currently involved in an ongoing redefinition.

Action: Do not perform this redefinition operation on this table or wait till the ongoing redefinition of the table is completed.

ORA-23540: Redefinition not defined or initiated

Cause: An attempt was made to continue or complete a redefinition which was not defined or initiated.

Action: Define or initiate the redefinition before performing this operation.

ORA-23541: tables do not match tables used while defining the redefinition

Cause: An attempt was made to continue or complete a redefinition by providing different tables than those used while defining or initiating the redefinition.

Action: Repeat this operation and specify the same tables as those that were specified while defining or initiating the redefinition.

ORA-23542: dependent object "*string*"."*string*" already registered

Cause: An attempt was made to register an already registered dependent object to an ongoing redefinition.

Action: Do not attempt to register an already registered dependent object to an ongoing redefinition.

ORA-23543: materialized view log on "*string*"."*string*" is in an inconsistent state

Cause: There was an error while creating the materialized view log and the log is currently in an inconsistent state. A possible cause could be that schema redefinition has occurred on the master table while the log was being created. Another possible cause could be that there were DMLs being applied on the master table concurrently in another session at the time the materialized view log creation started and those DML transactions haven't committed even after a very long period of time.

Action: Drop the materialized view log and recreate it.

ORA-23546: cannot create rowid mapping table *string.string*

Cause: The online partition mover could not create a rowid mapping table.

Action: Rename the conflicting table or rerun the SQL statement. * There may be a concurrent online operation on the same object.

ORA-23547: dml_lock_timeout value is out of the permitted range

Cause: The value for dml_lock_timeout was out of the permitted range of 0 to 1,000,000.

Action: Use a value within the range of 0 to 1,000,000 and reexecute the procedure

ORA-23600: cannot create PROPAGATION, *string* already exists

Cause: The propagate_name already exists.

Action: Drop the propagate_name using DROP_PROPAGATE command or specify propagate_name.

ORA-23601: PROPAGATION_NAME *string* does not exist

Cause: Propagation does not exist.

Action: Query DBA_PROPAGATION view to find existing propagation_name

ORA-23602: Invalid *string* process type *string*

Cause: Specified GoldenGate, XStream or Streams process type is not valid.

Action: Specify either capture or apply.

ORA-23603: *string* enqueue aborted due to low SGA

Cause: An attempt to enqueue a GoldenGate, XStream or Streams message was aborted because ORACLE is running low on memory allotted.

Action: Either start consuming messages by enabling any GoldenGate, XStream or Streams propagation or apply which might be disabled. An alternative is to allot more memory to STREAMS, which can be done by increasing the streams_pool_size initialization parameter if one was defined or by increasing the shared_pool_size.

ORA-23605: invalid value "*string*" for *string* parameter *string*

Cause: An attempt was made to specify an invalid parameter value.

Action: Specify a valid value for the parameter. Check the documentation for valid parameter values.

ORA-23606: invalid object *string*

Cause: An attempt was made to specify an invalid object.

Action: Specify a valid object.

ORA-23607: invalid column "*string*"

Cause: An invalid column was specified in the column list.

Action: Check the columns in the object and specify the right column name.

ORA-23608: invalid resolution column "*string*"

Cause: An invalid column was specified as the resolution column. The resolution column must belong to the list of columns specified in the 'column_list' parameter.

Action: Check the columns in the column_list and specify the right resolution column name.

ORA-23609: unable to find directory object for directory *string*

Cause: There was no entry in ALL_DIRECTORIES corresponding to the specified directory.

Action: Grant to the current user appropriate privileges on either a new directory object or an existing directory object.

ORA-23610: internal dbms_streams_tablespaces error: [*string*] [*string*] [*string*] [*string*]

Cause: Streams detected an erroneous result.

Action: Look for information in the session trace file and contact customer support.

ORA-23611: tablespace "*string*" has more than one data file

Cause: The specified tablespace had more than one data file and hence did not qualify as a simple tablespace.

Action: Choose a self-contained tablespace with a single data file, or use a procedure that supports any tablespace.

ORA-23612: unable to find tablespace "*string*"

Cause: Either the tablespace did not exist, or the current user did not have sufficient privileges on the tablespace.

Action: Grant appropriate privileges on the tablespace to the current user or choose a different tablespace.

ORA-23613: Script *string* already exists

Cause: A script for the specified invoking package already existed.

Action: Complete the previous invocation or drop the previous invocation before proceeding with the current invocation.

ORA-23614: Script *string* does not exist

Cause: The named script did not exist.

Action: Create the script.

ORA-23615: Block number *string* does not exist for script *string*

Cause: The specified block number did not exist for the script.

Action: Add the block or check the block number and reexecute.

ORA-23616: Failure in executing block *string* for script *string* with *\nstring*

Cause: The execution of specified block failed.

Action: Check the error. Query DBA_RECOVERABLE_SCRIPT_BLOCKS to view the failed block. Rectify and rerun the block or script.

ORA-23617: Block *string* for script *string* has already been executed

Cause: The specified block was already executed.

Action: Check the block number and reissue the command.

ORA-23618: Generation of script *string* is not complete.

Cause: Script generation for the specified script was not completed in a prior invocation.

Action: Purge the specified script by calling the RECOVER_OPERATION API in the package DBMS_STREAMS_ADM and reattempt the entire operation.

ORA-23619: non-Oracle system error: *string*

Cause: A non-Oracle database has returned an error message to STREAMS when attempting to apply a DML statement. The non-Oracle system error message is a parameter to this Oracle error.

Action: Corrective action may or may not be possible (depending on the non-Oracle system error). If corrective action is possible, correct the problem and try applying the transaction again.

ORA-23620: bind value size too large for PL/SQL CALL operation

Cause: In a PL/SQL CALL to a stored procedure, the bind string size exceeded 4K.

Action: Either make the bind string size shorter (less than 4K) or use BEGIN-END to call the procedure instead of CALL.

ORA-23621: Operation corresponding to script *string* is in progress.

Cause: The script was already being run in a different session or was terminated before status for the script was updated to ERROR or EXECUTED.

Action: Make sure the script is not being run in a parallel session. Then call the RECOVER_OPERATION API in the DBMS_STREAMS_ADM package with the appropriate OPERATION_MODE argument.

ORA-23622: Operation *string.string.string* is in progress.

Cause: An attempt was made to execute a procedure which was being executed in a parallel session or failed execution.

Action: Query the DBA_RECOVERABLE_SCRIPT view to identify the operation that is currently in progress for the specified invoking procedure. Complete the operation before proceeding.

ORA-23623: internal DBMS_COMPARISON error: [string] [string] [string] [string]

Cause: DBMS_COMPARISON detected an erroneous result.

Action: Look for information in the session trace file and contact Oracle Support Services.

ORA-23624: A comparison operation is currently in progress for *string*.

Cause: Another session was already performing an operation on this object.

Action: Retry the operation once other sessions are done with the specific comparison object.

ORA-23625: Table shapes of *string.string* and *string.string@string* did not match.

Cause: Table shapes of local and remote tables to compare did not match.

Action: Retry by explicitly specifying columns that match in column_list or create views on the tables as appropriate.

ORA-23626: No eligible index on table *string.string*

Cause: Table did not have an eligible index to use for comparison.

Action: For a table to be compared using DBMS_COMPARISON, the table must have an appropriate index on a column of certain data types. Check the documentation for supported data types.

ORA-23627: Comparison object *string* already existed.

Cause: A comparison object by the specified name already exists.

Action: Retry with a different name.

ORA-23628: Comparison query too long (actual *string*, allowed *string*).

Cause: A generated query for comparison was too long.

Action: Comparison is unsupported for very large tables with long column names. Retry with a subset of columns or with shorter column names.

ORA-23629: *string.string* is not an eligible index on table *string.string* for comparison

Cause: The specified index was not an eligible index to use for comparison.

Action: For a table to be compared using DBMS_COMPARISON, the table must have an appropriate index. Please specify an eligible index for the table to be compared.

ORA-23630: Cannot switch to apply-state checkpoint mode (value "*string*", *string* parameter *string*), due to the following reason:

Cause: Could not switch to apply-state checkpoint mode, or already in apply-state checkpoint mode.

Action: Can switch to apply-state checkpoint mode only if the capture is new (it never ran), the capture wasn't cloned from a capture with checkpoints, the capture doesn't include any extra attributes, and combined capture and apply is enabled.

ORA-23631: apply-state checkpoint mode cannot change (value "string", string parameter string)

Cause: Could not switch to checkpoints because apply-state checkpoint mode was set.

Action: Drop the apply-state checkpoint capture and create a new one that will / take checkpoints.

ORA-23632: Cannot force checkpoints in apply-state checkpoint mode (value "string", string parameter string)

Cause: The capture process was in apply-state checkpoint mode.

Action: Cannot take checkpoints in apply-state checkpoint mode.

ORA-23633: Cannot turn off combined capture and apply mode in apply-state checkpoint mode (value "string", string parameter string)

Cause: The capture was running in apply-state checkpoint mode and had to run in combined capture and apply mode also.

Action: Ensure that this capture runs in combined capture and apply by dropping additional propagation or apply processes for the same queue.

ORA-23634: Cannot include extra attributes in apply-state checkpoint mode

Cause: The capture process was in apply-state checkpoint mode.

Action: Extra attributes are not supported in apply-state checkpoint mode.

ORA-23635: MAINTAIN_TTS: tablespace(s) already exist(s) in target database.

Cause: The tablespaces were already in existence in the target database when the streams MAINTAIN_TTS APIs were called."

Action: Check whether you can drop the tablespaces to be maintained in the target database. If not, don't use streams MAINTAIN_TTS APIs to setup streams. Check the Oracle documentation on how to setup streams.

ORA-23636: MAINTAIN_TTS: Invalid tablespace name, reason: string.

Cause: The tablespace name was either NULL or too long when the streams MAINTAIN_TTS APIs were called.

Action: Check that the specified tablespace names are not NULL and are spelled correctly. If there are too many tablespaces, group them together and call the streams MAINTAIN_TTS APIs for the group.

ORA-23637: Capture started in checkpoint mode

ORA-23638: Capture cloned from a capture with checkpoints

ORA-23639: Extra Attribute included

ORA-23640: Combined capture and apply disabled

ORA-23641: Capture started in apply-state checkpoint mode already

ORA-23642: Cannot switch to checkpoint mode (value "string", string parameter string)

Cause: Capture was cloned from a capture in apply-state checkpoint mode.

Action: Clone from a capture with checkpoints.

ORA-23643: Capture cloned from a capture in apply-state checkpoint mode

ORA-23644: Cannot switch to apply-state checkpoint mode (Capture *string*)

Cause: Switch to apply-state checkpoint mode was prevented by a previous error.

Action: See the previous error for the appropriate action.

ORA-23645: Cannot switch to checkpoints (Capture *string*)

Cause: Switch to checkpoints was prevented by a previous error.

Action: See the previous error for the appropriate action.

ORA-23646: *string string process string* does not exist

Cause: Capture or Apply did not exist.

Action: Create a Capture or Apply process, then try again.

ORA-23647: *string string process string* is not running

Cause: Capture or Apply were not running.

Action: Start Capture or Apply process, then try again

ORA-23648: Capture *string* is for Change Data Capture

Cause: Capture was for Change Data Capture, and checkpoints were required.

Action: None

ORA-23649: Capture *string* is for Audit Vault

Cause: Capture was for Audit Vault, and checkpoints were required.

Action: None

ORA-23650: No progress Capture *string*

Cause: Capture was not capturing changes.

Action: Make sure Capture is running and capturing changes.

ORA-23651: Capture *string* is already in *string* mode

Cause: Capture was already in the desired mode.

Action: None

ORA-23652: The oldest SCN could not be updated at Apply *string*

Cause: The oldest SCN was not updated before the switch was performed.

Action: Make sure Apply is running and the switch package version is the same at both databases.

ORA-23653: LogMiner session does not exist

Cause: LogMiner session did not exist.

Action: Make sure the Capture process exists.

ORA-23654: Attempting to set the oldest SCN to a greater value (*string*) than the current one (*string*) at Apply *string*

Cause: The new value for the oldest SCN was not computed correctly.

Action: Make sure Capture and Apply are running, and Capture is making progress.

ORA-23655: The SCN range cannot be smaller than 0, (SCN range = *string*)

Cause: The function was invoked with a negative SCN range.

Action: Use a positive SCN range.

ORA-23656: Timeout occurred while *string string process string*

Cause: The GoldenGate, XStream or Streams process could not be stopped or started.

Action: Call the switch procedure again.

ORA-23657: the converted file *string* already exists

Cause: The converted file was already in existence. CONVERT FILE call does not overwrite the existing file.

Action: Check whether the existing file can be deleted. If the existing file can be deleted, delete it. Otherwise, specify a different directory or file extension.

ORA-23658: Invalid character set specified when converting column '*string*' in '*string.string*'

Cause: The conversion between two character sets for the column in the given table is not supported.

Action: Check if the implicit conversion between source and destination column is supported.

ORA-23659: Destination buffer is not large enough when converting column '*string*' in '*string.string*' (actual length: *string*; maximum length: *string*)

Cause: The conversion between two character sets failed because a source column value is too large for the destination column.

Action: Check if size of the source and destination column matches.

ORA-23660: Unable to load NLS data object when converting column '*string*' in '*string.string*'

Cause: It may be caused by invalid NLS environment setting.

Action: Check your NLS environment setting.

ORA-23661: Canon capture name "*string*" not found

Cause: There's no such capture process

Action: Pass the right parameter to the function

ORA-23662: subset rule length exceeds maximum allowed value

Cause: The length of an insert, update, or delete subset rule computed from the DML condition input exceeded the maximum allowed length.

Action: Make the DML condition shorter.

ORA-23663: local object *string.string* is not a single table view

Cause: The view was based either on another view or multiple tables or views.

Action: For comparison, specify a view based on a single table.

ORA-23664: remote object *string.string* is not a single table view

Cause: The view was based either on another view or multiple tables or views.

Action: For comparison, specify a view based on a single table.

ORA-23665: DML conflict handler "*string*" not found

Cause: The DML conflict handler was not found for modification or removal.

Action: Make sure the name of the conflict handler is correct and that it exists.

ORA-23666: Default column group in use by DML conflict handler "*string*"

Cause: A default column group was found for the specified Apply name, operation name, and conflict type.

Action: Remove the existing default column group and retry.

ORA-23667: Column "*string*" already used by conflict handler "*string*"

Cause: The column was already in the column group of another conflict handler for the specified Apply name, operation name, and conflict type.

Action: Remove the column from the other conflict handler or specify a different column.

ORA-23668: Column "*string*" does not have a numeric data type.

Cause: The specified column did not have a numeric data type. Delta conflict resolution requires numeric columns.

Action: Check the data type of the column and specify only numeric columns.

ORA-23669: Duplicate conflict handler name

Cause: A DML conflict handler with the specified name was found.

Action: Remove the current DML conflict handler or specify a different name.

ORA-23670: Duplicate column name "*string*"

Cause: The specified value was duplicated in the column group list.

Action: Remove duplicated entries from the column group list.

ORA-23671: Default column group required

Cause: A default column group was not specified. The specified Apply name, operation name, and conflict type is only supported on default column groups.

Action: Specify a default column group.

ORA-23672: Column not specified in column group for DML conflict handling for table "*string*".*string*"

Cause: The specified table contained a column that was not specified as part of a column group.

Action: Add the column to a column group.

ORA-23673: Invalid resolution column "*string*" for table "*string*".*string*"

Cause: The specified resolution column was not valid.

Action: Set the resolution column to a valid column.

ORA-23674: Unable to handle delta conflict resolution for table "*string*".*string*"

Cause: The specified table or the LCR contained a null value in one of the columns belonging to a delta conflict group.

Action: Correct each delta column in the table or the error LCR if it currently has a null value.

ORA-23675: Unsupported OPERATION_NAME, CONFLICT_TYPE, and METHOD_NAME

Cause: The specified OPERATION_NAME, CONFLICT_TYPE, and METHOD_NAME was not a valid set of parameters.

Action: Retry with a valid set of parameters.

ORA-23676: no eligible index on local table "*string*"."*string*"

Cause: The local table did not have an eligible index to use for comparison.

Action: For a table to be compared using DBMS_COMPARISON, the table must have an appropriate index on a column of certain data types. Check the documentation for supported data types.

ORA-23677: no eligible index on remote table "*string*"."*string*"

Cause: The remote table did not have an eligible index to use for comparison.

Action: For a table to be compared using DBMS_COMPARISON, the table must have an appropriate index on a column of certain data types. Check the documentation for supported data types.

ORA-23678: index "*string*"."*string*" on local table "*string*"."*string*" is not eligible for comparison

Cause: The specified index was not eligible for comparison.

Action: For a table to be compared using DBMS_COMPARISON, the table must have an appropriate index. Specify an eligible index for the table to be compared.

ORA-23679: index "*string*"."*string*" on remote table "*string*"."*string*" is not eligible for comparison

Cause: The specified index was not eligible for comparison.

Action: For a table to be compared using DBMS_COMPARISON, the table must have an appropriate index. Specify an eligible index for the table to be compared.

ORA-24000: invalid value *string*, *string* should be of the form [SCHEMA.]NAME

Cause: An invalid value was specified for the parameter.

Action: Specify a string of the form [SCHEMA.]NAME .

ORA-24001: cannot create QUEUE_TABLE, *string* already exists

Cause: The queue table already exists in the queueing system.

Action: Drop the table first using the DROP_QUEUE_TABLE() command or specify another table.

ORA-24002: QUEUE_TABLE *string* does not exist

Cause: Queue_table not exist.

Action: Query on the user view USER_QUEUE_TABLES to find out existing queue tables.

ORA-24003: Queue table index *string* inconsistent with queue table *string*

Cause: The queue table index has not yet been successfully imported.

Action: Import the queue table index before attempting to use the queue table. If the import failed, correct the problem and try to import the queue table index again.

ORA-24004: invalid column name *string* in SORT_LIST, should be ENQ_TIME or PRIORITY

Cause: Invalid column name was specified in the SORT_LIST.

Action: The valid column names are ENQ_TIME and PRIORITY.

ORA-24005: Inappropriate utilities used to perform DDL on AQ table *string.string*

Cause: An attempt was made to use the SQL command DROP TABLE or TRUNCATE TABLE or ALTER TABLE on queue metadata or tables.

Action: Use the DBMS_AQADM.DROP_QUEUE_TABLE to DROP TABLE, DBMS_AQADM.PURGE_QUEUE_TABLE to TRUNCATE TABLE. ALTER TABLE redefinition based on only ALTER_TABLE_PROPERTIES and ALTER_TABLE_PARTITIONING clauses are allowed.

ORA-24006: cannot create QUEUE, *string* already exists

Cause: The queue requested to be created already exists.

Action: Specify another queue name. Query USER_QUEUES for all the existing queues in the users's schema.

ORA-24007: invalid value *string*, MAX_RETRIES should be non-negative integer

Cause: An invalid value was specified for MAX_RETRIES.

Action: Specify a non-negative integer.

ORA-24008: queue table *string.string* must be dropped first

Cause: An error was detected when dropping a queue table in a cluster, tablespace, or schema.

Action: Use the DBMS_AQADM.DROP_QUEUE_TABLE procedure to drop the specified queue table first; then, retry the operation.

ORA-24009: invalid value *string*, QUEUE_TYPE should be NORMAL_QUEUE or EXCEPTION_QUEUE

Cause: Invalid queue type parameter

Action: Valid values are NORMAL_QUEUE for normal queue and EXCEPTION_QUEUE for exception queue.

ORA-24010: QUEUE *string* does not exist

Cause: The specified queue does not exist.

Action: Specify a valid queue. Query USER_QUEUES for all the valid queues.

ORA-24011: cannot drop QUEUE, *string* should be stopped first

Cause: The queue has not been stopped i.e. either enqueue or dequeue is still enabled.

Action: Stop the queue first using the STOP_QUEUE command and disable it from both enqueueing and dequeueing.

ORA-24012: cannot drop QUEUE_TABLE, some queues in *string* have not been dropped

Cause: A queue exists in the queue table which has not been dropped. All queues need to be dropped first.

Action: Drop all queues belonging to this queue table using the drop_queue() command. Be sure to stop the queues appropriately before dropping them. Alternately, use the force option in drop_queueable.

ORA-24013: invalid value *string*, RETRY_DELAY should be non-negative

Cause: A negative value was specified for RETRY_DELAY.

Action: Specify a non-negative value for RETRY_DELAY.

ORA-24014: invalid value *string*, RETENTION_TIME should be FOREVER or non-negative

Cause: Queue retention was specified, but the retention time was specified to be less than zero.

Action: Specify the retention time to be non-negative or FOREVER. Alternately don't specify retention.

ORA-24015: cannot create QUEUE_TABLE, QUEUE_PAYLOAD_TYPE *string.string* does not exist

Cause: An invalid QUEUE_PAYLOAD_TYPE specified during create_queue_table.

Action: The QUEUE_PAYLOAD_TYPE should be RAW or an object type that already exists in the database.

ORA-24016: cannot create QUEUE_TABLE, user *string* does not have execute privileges on QUEUE_PAYLOAD_TYPE *string.string*

Cause: An invalid object type specified for QUEUE_PAYLOAD_TYPE during create_queue_table.

Action: The user should have execute privileges on the object type specified for the queue.

ORA-24017: cannot enable enqueue on QUEUE, *string* is an exception queue

Cause: User tried to enable enqueueing to an exception queue.

Action: None

ORA-24018: STOP_QUEUE on *string* failed, outstanding transactions found

Cause: There were outstanding transactions on the queue, and WAIT was set to false, so STOP_QUEUE was unsuccessful in stopping the queue.

Action: Set WAIT to TRUE and try STOP_QUEUE again. It will hang till all outstanding transactions are completed.

ORA-24019: identifier for *string* too long, should not be greater than *string* characters

Cause: The identifier specified is too long.

Action: Try again with a shorter identifier.

ORA-24020: Internal error in DBMS_AQ_IMPORT_INTERNAL, *string*

Cause: Internal Error occurred in the package DBMS_AQ_IMPORT_INTERNAL.

Action: Internal error, call Oracle Support.

ORA-24021: queue table definition not imported for *string.string*

Cause: The queue definition is not updated because the queue table was not imported properly

Action: Import the queue table again.

ORA-24022: the specified parameters has no effect on the queue

Cause: The parameter combination will not cause the queue to be started or stopped.

Action: None. This is just a warning.

ORA-24023: Internal error in DBMS_AQ_EXP_INTERNAL.*string* [*string*] [*string*]

Cause: Internal Error occurred in the package DBMS_AQ_EXP_INTERNAL.

Action: Internal error, call Oracle Support.

ORA-24024: Internal error in DBMS_AQ_IMP_INTERNAL.*string* [*string*] [*string*]

Cause: Internal Error occurred in the package DBMS_AQ_IMP_INTERNAL.

Action: Internal error, call Oracle Support.

ORA-24025: invalid value *string*, QUEUE_PAYLOAD_TYPE should be RAW or an object type

Cause: Parameter queue_payload_type has invalid value.

Action: Specify a valid object type or RAW.

ORA-24026: operation failed, queue *string.string* has errors

Cause: An attempt was made to enqueue, dequeue or administer a queue which has errors.

Action: Drop the queue table setting the force option to true.

ORA-24027: AQ HTTP propagation encountered error, status-code *string*, *string*

Cause: AQ propagation's HTTP request to the propagation servlet at the specified address encountered an error

Action: Specify a valid address in the connect string of the propagation destination dblink, the dblink user has the correct permissions, check if the AQ propagation servlet was properly installed.

ORA-24028: cannot create a reciever non-repudiable single consumer queue

Cause: Tried to create a reciever non-repudiable single consumer queue

Action: This feature is not supported

ORA-24029: operation not allowed on a single-consumer queue

Cause: Tried an operation not allowed on a single-consumer queue.

Action: Specify the operation on a multi-consumer queue.

ORA-24030: Only one of rule or rule-set must be specified

Cause: Specified both a rule and rule-set for the operation.

Action: Specify only one of rule or rule-set.

ORA-24031: invalid value, *string* should be non-NULL

Cause: Parameter is NULL.

Action: Specify a non NULL value for the parameter.

ORA-24032: object *string* exists, index could not be created for queue table *string*

Cause: Oracle AQ tried to create an index with the name specified in the error message. The index could not be created for the specified queue table because a object exists with the same name.

Action: Drop the object specified in the error message and retry the command. You can also choose a different name for the queue table.

ORA-24033: no recipients for message

Cause: An enqueue was performed on a queue that has been set up for multiple dequeuers but there were neither explicit recipients specified in the call nor were any queue subscribers determined to be recipients for this message.

Action: Either pass a list of recipients in the enqueue call or add subscribers to the queue for receiving this message.

ORA-24034: application *string* is already a subscriber for queue *string*

Cause: An application name that was already a subscriber for the queue was specified in the dbms_aq.subscribe call.

Action: n/a

ORA-24035: AQ agent *string* is not a subscriber for queue *string*

Cause: An AQ agent that was not a subscriber for the queue was specified.

Action: Check the name and/or address of the agent and retry the call.

ORA-24036: invalid SORT_ORDER column *string* specified for queue table

Cause: The create queue table command was issued with message_grouping set to TRANSACTIONAL and a sort order column other than priority. Only the priority column can be specified in the sort order for queue tables with transactional grouping.

Action: Change the sort order list in the create queue table command and retry the call.

ORA-24037: schema *string* in QUEUE_NAME is not same as schema *string* in QUEUE_TABLE

Cause: The schema specified in the QUEUE_NAME parameter of CREATE_QUEUE is not the same as the schema specified in the QUEUE_TABLE parameter.

Action: Use the same schema name for both the QUEUE_NAME and QUEUE_TABLE parameters and retry the command.

ORA-24038: RETRY_DELAY and MAX_RETRIES cannot be used for a 8.0 compatible multiple consumer queue

Cause: The CREATE_QUEUE or ALTER_QUEUE command was issued with a non-zero RETRY_DELAY and a QUEUE_TABLE that was created for multiple consumers and with COMPATIBLE parameter set to '8.0'.

Action: Either set the RETRY_DELAY to zero or upgrade the queue table to 8.1 compatible using the DBMS_AQADM.MIGRATE_QUEUE_TABLE procedure.

ORA-24039: Queue *string* not created in queue table for multiple consumers

Cause: Either an ADD_SUBSCRIBER, ALTER_SUBSCRIBER, or REMOVE_SUBSCRIBER procedure, or an ENQUEUE with a non-empty recipient list, was issued on a queue that was not created for multiple consumers.

Action: Create the queue in a queue table that was created for multiple consumers and retry the call.

ORA-24041: propagation schedule exists for QUEUE *string* and DESTINATION *string*

Cause: A SCHEDULE_PROPAGATION was issued for a queue and destination pair which has an existing propagation schedule.

Action: Issue UNSCHEDULE_PROPAGATION to remove the existing schedule and then reissue the SCHEDULE_PROPAGATION call.

ORA-24042: no propagation schedule exists for QUEUE *string* and DESTINATION *string*

Cause: AN UNSCHEDULE_PROPAGATION was issued for a queue and destination pair which has no existing propagation schedule.

Action: Verify the spelling of the specified QUEUE and DESTINATION and then reissue the call with the correct spelling.

ORA-24043: destination *string* uses a reserved name, names with AQ\$_ prefix are not valid

Cause: An attempt was made to specify a reserved name for a destination.

Action: Enter a different value or NULL for the local destination. Then retry the operation.

ORA-24044: source *string* and destination *string* object types do not match

Cause: A message recipient's queue has a different object structure than the sender's queue. The message cannot be propagated.

Action: Either remove the recipient from the subscriber's list for the sender's queue or create the destination queue with an object type that matches the source queue's object type.

ORA-24045: invalid agent address *string*, agent address should be of the form [SCHEMA.]NAME[@DATABASE LINK]

Cause: An invalid value was specified for the agent address parameter.

Action: Specify a string of the form [SCHEMA.]NAME[@DATABASE LINK].

ORA-24046: protocol attribute reserved for future use

Cause: The protocol attribute of the AQ agent object type is reserved for future use.

Action: Do not specify the protocol attribute in the agent object type.

ORA-24047: invalid agent name *string*, agent name should be of the form NAME

Cause: An invalid value was specified for the agent name parameter.

Action: Specify a string of the form NAME. Then retry the operation.

ORA-24048: cannot create QUEUE_TABLE, user does not have access to AQ object types

Cause: An attempt was made to issue the CREATE_QUEUE_TABLE command, but the user who issued the command does not have access to internal AQ object types.

Action: Use the DBMS_AQADM.GRANT_TYPE_ACCESS procedure to grant the user access to the AQ object types.

ORA-24049: invalid agent name *string*, names with AQ\$_ prefix are not valid

Cause: An attempt was made to use a reserved prefix in the agent name.

Action: Enter a different value for the agent name. Then, retry the operation.

ORA-24050: subscribers are not supported for exception queue *string*

Cause: An ADD_SUBSCRIBER, ALTER_SUBSCRIBER, or REMOVE_SUBSCRIBER procedure was issued on a queue that was created as an EXCEPTION_QUEUE.

Action: Specify a NORMAL_QUEUE in the procedure.

ORA-24051: cannot propagate object type payloads that have a REF attribute

Cause: An ADD_SUBSCRIBER or ENQUEUE procedure with a non-NULL address field in the agent type was issued on a queue whose payload has a REF attribute. Propagation of object type payloads that have a REF attribute currently is not supported.

Action: Specify an agent with a NULL address field so that the agent can dequeue from the same queue. Or, change the object type definition to one that does not use REF attributes.

ORA-24052: cannot propagate object type payloads with LOB attributes to an 8.0 release

Cause: The recipient of a message with LOB attributes was using an Oracle 8.0 release. Propagation of LOB attributes is supported only in Oracle 8.1 and higher releases.

Action: Upgrade the target release to Oracle 8.1 and retry. Or, change the object type definition to one that does not use LOBs.

ORA-24053: PRIMARY_INSTANCE and SECONDARY_INSTANCE must be non-negative

Cause: One of PRIMARY_INSTANCE or SECONDARY_INSTANCE was negative.

Action: Specify non-negative integers for PRIMARY_INSTANCE and SECONDARY_INSTANCE.

ORA-24054: cannot propagate to an Oracle 8.0.3 release or lower release

Cause: The recipient of a message was using an Oracle 8.0.3 release or lower release. Propagation is supported only in Oracle 8.0.4 and higher releases.

Action: Upgrade the target release to Oracle 8.0.4 or higher and retry.

ORA-24055: cannot delete propagation status rows that are in prepared state

Cause: An attempt was made to use the internal administration procedure to delete status rows from the SYS.AQ\$_PROPAGATION_STATUS table that were in the prepared state.

Action: Wait for the propagation to complete successfully before retrying the operation.

ORA-24056: internal inconsistency for QUEUE *string* and destination *string*

Cause: The sequence numbers used in the SYS.AQ\$_PROPAGATION_STATUS table were inconsistent for the given queue and destination.

Action: Contact Oracle Worldwide Support.

ORA-24057: cannot define subscriber with rule for queue *string*

Cause: An ADD_SUBSCRIBER or ALTER_SUBSCRIBER procedure with a rule was issued on a queue for which rule based subscribers are not supported. Rule based subscribers currently are supported only for NORMAL (persistent) multi-consumer queues created using an Oracle release 8.1.0 or higher compatible queue table.

Action: Create a NORMAL multi-consumer queue in an Oracle release 8.1.0 or higher compatible queue table, and retry the call. Or, if the queue is a normal (persistent) multi-consumer queue, convert the queue table to Oracle 8.1.0 or higher compatibility and retry.

ORA-24058: cannot downgrade QUEUE_TABLE that has propagation in a prepared state

Cause: An attempt was made to downgrade the queue table when there were messages being propagated that were in the prepared state.

Action: Wait for the propagation to complete before retrying the operation.

ORA-24059: invalid COMPATIBLE parameter setting *string* specified in DBMS_AQADM.*string*

Cause: An invalid compatible parameter was specified in the DBMS_AQADM procedure. The parameter setting must be of the form '8.x.y' where x is the release number and y is the update number.

Action: Specify a valid COMPATIBLE parameter setting, and retry the operation.

ORA-24060: cannot convert QUEUE_TABLE, *string* already is compatible with release *string*

Cause: The source queue table in the DBMS_AQADM procedure is compatible with the specified COMPATIBLE parameter setting.

Action: Choose a different COMPATIBLE parameter setting to convert the queue table to the desired compatibility.

ORA-24061: cannot specify non-zero SECONDARY_INSTANCE if PRIMARY_INSTANCE was zero

Cause: A non-zero value was specified for SECONDARY_INSTANCE when PRIMARY_INSTANCE was zero.

Action: Specify a non-zero primary instance before you specify a non-zero secondary instance.

ORA-24062: Subscriber table *string* inconsistent with queue table *string*

Cause: The subscriber table has not yet been successfully imported.

Action: Import the subscriber table before attempting to use the queue table. If the import failed, correct the problem and try to import the subscriber table again.

ORA-24063: cannot downgrade QUEUE_TABLE that has queues with rule-based subscribers

Cause: An attempt was made to downgrade the queue table when there were queues on which rule based subscribers are defined.

Action: Remove the rule based subscribers for all queues in this queue table and retry.

ORA-24064: propagation for QUEUE *string* and DESTINATION *string* already enabled

Cause: An ENABLE_SCHEDULE_PROPAGATION command was issued for a queue and destination pair whose propagation schedule already was enabled.

Action: Make sure the QUEUE and DESTINATION are correct when you issue the ENABLE_SCHEDULE_PROPAGATION command.

ORA-24065: propagation for QUEUE *string* and DESTINATION *string* already disabled

Cause: A DISABLE_SCHEDULE_PROPAGATION command was issued for a queue and destination pair whose propagation schedule already was disabled.

Action: Make sure the QUEUE and DESTINATION are correct when you issue the DISABLE_SCHEDULE_PROPAGATION command.

ORA-24066: invalid privilege specified

Cause: An invalid privilege is specified for granting or revoking privilege

Action: Specify a valid privilege.

ORA-24067: exceeded maximum number of subscribers for queue *string*

Cause: An attempt was made to add new subscribers to the specified, but the number of subscribers for this queue has exceeded the maximum number (1024) of subscribers allowed per queue.

Action: Remove existing subscribers before trying to add new subscribers.

ORA-24068: cannot start queue *string*, queue table *string* is being migrated

Cause: An attempt was made to start a queue in a queue table that is being migrated.

Action: Complete the queue table migration, and retry the operation.

ORA-24069: cannot downgrade queue table *string* while it is being upgraded

Cause: An attempt was made to downgrade a queue table, but a previous command to upgrade the queue table has not yet completed successfully.

Action: Complete the upgrade of the queue table by re-executing the DBMS_AQADM.MIGRATE_QUEUE_TABLE procedure. Then, downgrade the queue table.

ORA-24070: cannot upgrade queue table *string* while it is being downgraded

Cause: An attempt was made to upgrade a queue table, but a previous command to downgrade the queue table has not yet completed successfully.

Action: Complete the downgrade of the queue table by re-executing the DBMS_AQADM.MIGRATE_QUEUE_TABLE procedure. Then, upgrade the queue table.

ORA-24071: cannot perform operation *string*, queue table *string* is being migrated

Cause: An attempt was made to perform an operation on a queue in a queue table that is being migrated.

Action: Complete the queue table migration, and retry the operation.

ORA-24072: cannot execute MIGRATE_QUEUE_TABLE procedure; must own queue table

Cause: An attempt was made to upgrade or downgrade a queue table using the DBMS_AQADM.MIGRATE_QUEUE_TABLE procedure, but the user who executed the procedure does not own the queue.

Action: Reconnect as the owner of the queue table, and then execute the DBMS_AQADM.MIGRATE_QUEUE_TABLE procedure.

ORA-24073: cannot specify RETENTION_TIME on exception queue *string.string*

Cause: An attempt was made to create or alter an exception queue by specifying a non-zero RETENTION_TIME.

Action: Use the default RETENTION_TIME parameter value for exception queues.

ORA-24074: RETRY_DELAY and MAX_RETRIES cannot be used for exception queue *%.string*

Cause: The CREATE_QUEUE or ALTER_QUEUE command was issued with a non-zero RETRY_DELAY and an exception queue.

Action: Do not specify RETRY_DELAY or MAX_RETRIES for exception queues.

ORA-24075: cannot specify agent with NULL address and non-NULL protocol

Cause: An ADD_SUBSCRIBER or enqueue was attempted with an agent that had a NULL address and a non-NULL protocol.

Action: Either specify a non-NULL address or set the protocol to NULL.

ORA-24076: cannot perform operation *string* for NON_PERSISTENT queue *string.string*

Cause: One of the operations, SCHEDULE_PROPAGATION, ALTER_QUEUE, LISTEN, DEQUEUE was issued for a NON_PERSISTENT queue.

Action: Do not specify a NON_PERSISTENT queue for these operations.

ORA-24077: cannot create propagation schedule for EXCEPTION queue *string.string*

Cause: A SCHEDULE_PROPAGATION was issued for an EXCEPTION queue. Propagation schedules can be created only for NORMAL queues.

Action: To propagate messages from a queue specify the queue type as NORMAL.

ORA-24078: cannot specify a non-NULL SECONDARY_INSTANCE if PRIMARY_INSTANCE was NULL

Cause: A non-NULL value was specified for SECONDARY_INSTANCE when PRIMARY_INSTANCE was NULL.

Action: Specify a non-NULL primary instance before you specify a non-NULL secondary instance.

ORA-24079: invalid name *string*, names with AQ\$_ prefix are not valid for *string*

Cause: An attempt was made to use a reserved prefix for the object name.

Action: Enter a different name for this object. Then, retry the operation.

ORA-24080: unschedule_propagation pending for QUEUE *string* and DESTINATION *string*

Cause: A propagation administration command was issued for a queue and destination pair whose propagation is being unscheduled.

Action: Do not issue propagation administration commands for a propagation schedule on which there is a pending unschedule request.

ORA-24081: compatible parameter needs to be *string* or greater

Cause: The compatible parameter was not high enough to allow the operation.

Action: Shutdown and restart with a higher compatibility setting.

ORA-24082: propagation may still be happening for the schedule for QUEUE *string* and DESTINATION *string*

Cause: The snapshot process executing the propagation schedule did not respond to the disable propagation command.

Action: Make sure that the job for the propagation schedule has been ended.

ORA-24083: cannot specify remote subscribers for *string* QUEUE *string*

Cause: An add_subscriber call with a non-null address field was issued on a queue which does not support remote subscribers. Remote subscribers are not supported for NON_PERSISTENT QUEUES.

Action: Specify a null address field and retry the call.

ORA-24084: DBLINK name in address field of agent *string* is not unique within the first 24 bytes

Cause: Advanced Queuing requires that the agent's dblink name should be unique within the first 24 bytes (for 8.0 compatible queuetables)

Action: Specify a dblink name that is unique within the first 24 bytes or migrate to 8.1 compatible queuetables where this restriction is not there.

ORA-24085: operation failed, queue *string* is invalid

Cause: An attempt was made to enqueue, dequeue or administer a queue which is invalid. This could have occurred because the payload type of the queue's queue table was dropped or rules associated with queue subscribers got altered or dropped.

Action: Drop the queue table setting the force option to true.

ORA-24086: cannot create a 8.0 compatible *string* queue

Cause: An attempt was made to create a 8.0 compatible queue table and enable a feature that is supported only on 8.1 style queue tables

Action: This feature is not supported

ORA-24087: Invalid database user *string*

Cause: An invalid database username was specified

Action: Specify a valid database user

ORA-24088: AQ Agent *string* does not exist

Cause: This AQ Agent does not exist

Action: Specify a valid AQ agent. Check the DBA_AQ_AGENTS view for a list of valid aq agents

ORA-24089: AQ Agent *string* already exists

Cause: This AQ agent has already been created

Action: Specify another agent name or use the ALTER api to modify the agent information.

ORA-24090: at least one protocol must be enabled

Cause: No protocol was enabled for aq agent

Action: Enable one of the protocols by setting one of the enable parameters to true.

ORA-24091: Destination queue *string* is the same as the source queue

Cause: Propagation cannot be scheduled when the destination queue is the same as the source queue.

Action: Specify a different destination queue.

ORA-24092: invalid value *string* specified

Cause: A queue, queue table, rule, or ruleset name that requires double quotes was specified when the database compatibility was less than 10.0.

Action: Specify a value that does not require double quotes and retry the operation.

ORA-24093: AQ agent *string* not granted privileges of database user *string*

Cause: The specified AQ agent does not have privileges of the specified database user

Action: Specify a valid combination of AQ agent and database user. Check the DBA_AQ_AGENT_PRIVS or USER_AQ_AGENT_PRIVS view for user/agent mappings

ORA-24094: invalid transformation, target type does not match that of the queue

Cause: The target type of the transformation specified was different from the type of the queue.

Action: Provide a valid transformation whose target type is the same as the queue type.

ORA-24095: invalid transformation, source type does not match that of the queue
Cause: The source type of the transformation specified was different from the type of the queue.

Action: Provide valid transformation whose source type is the same as the queue type.

ORA-24096: invalid message state specified

Cause: Invalid value is specified for message state

Action: Provide a valid message state as specified in the documentation

ORA-24097: Invalid value *string*, *string* should be non-negative

Cause: A negative value or NULL was specified for the parameter.

Action: Specify a non negative integer.

ORA-24098: invalid value *string* for *string*

Cause: An Invalid value or NULL was specified for the parameter.

Action: Check the documentation for valid values.

ORA-24099: operation not allowed for 8.0 compatible queues

Cause: The specified operation is only supported for queues with compatibility 8.1 or greater

Action: Upgrade the 8.0 compatible queue to release 8.1 using DBMS_AQADM.MIGRATE_QUEUE_TABLE or specify a queue with compatibility 8.1

ORA-24100: error in ktz testing layer

Cause: There is an error in the Transaction layer test ICDs

Action: n/a

ORA-24101: stopped processing the argument list at: *string*

Cause: One of the arguments of the requested operation contained a list of scheduler objects. While processing this list an error was encountered with the specified item.

Action: Resolve the error for this element of the list and then re-issue the command with the remainder of the argument list. See the rest of the error stack to find out what the exact error is.

ORA-24102: invalid prefix for generate_job_name

Cause: generate_job_name was called with a prefix longer than 18 characters or a prefix ending in a digit.

Action: Re-issue the command using a prefix no longer than 18 characters and not ending in a digit.

ORA-24103: job "*string*"."*string*" failed to be enabled after creation

Cause: The job failed to be enabled after creation.

Action: Review the reason for the failure, correct it if possible and re-create the job.

ORA-24120: invalid *string* parameter passed to DBMS_REPAIR.*string* procedure

Cause: An invalid parameter was passed to the specified DBMS_REPAIR procedure.

Action: Specify a valid parameter value or use the parameter's default.

ORA-24121: both cascade and a block range passed to DBMS_REPAIR.CHECK_OBJECT procedure

Cause: Both cascade and a block range were specified in a call to DBMS_REPAIR.CHECK_OBJECT.

Action: Use either cascade or a block range, or do not use either one.

ORA-24122: invalid block range specification

Cause: An incorrect block range was specified.

Action: Specify correct values for the BLOCK_START and BLOCK_END parameters.

ORA-24123: feature *string* is not yet implemented

Cause: An attempt was made to use the specified feature, but the feature is not yet implemented.

Action: Do not attempt to use the feature.

ORA-24124: invalid ACTION parameter passed to DBMS_REPAIR.*string* procedure

Cause: An invalid ACTION parameter was specified.

Action: Specify CREATE_ACTION, PURGE_ACTION or DROP_ACTION for the ACTION parameter.

ORA-24125: Object *string.string* has changed

Cause: An attempt was made to fix corrupt blocks on an object that has been dropped or truncated since DBMS_REPAIR.CHECK_OBJECT was run.

Action: Use DBMS_REPAIR.ADMIN_TABLES to purge the repair table and run DBMS_REPAIR.CHECK_OBJECT to determine whether there are any corrupt blocks to be fixed.

ORA-24126: invalid CASCADE_FLAG passed to DBMS_REPAIR.*string* procedure

Cause: CASCADE_FLAG was specified for an object that is not a table.

Action: Use CASCADE_FLAG only for tables.

ORA-24127: TABLESPACE parameter specified with an ACTION other than CREATE_ACTION

Cause: The TABLESPACE parameter can only be used with CREATE_ACTION.

Action: Do not specify TABLESPACE when performing actions other than CREATE_ACTION.

ORA-24128: partition name specified for a non-partitioned object

Cause: A partition name was specified for an object that is not partitioned.

Action: Specify a partition name only if the object is partitioned.

ORA-24129: table name *string* does not start with *string* prefix

Cause: An attempt was made to pass a table name parameter without the specified prefix.

Action: Pass a valid table name parameter.

ORA-24130: table *string* does not exist

Cause: An attempt was made to specify a map, repair, or sync table that does not exist.

Action: Specify a valid table name parameter.

ORA-24131: table *string* has incorrect columns

Cause: An attempt was made to specify a map, repair, or sync table that does not have a correct definition.

Action: Specify a table name that refers to a properly created table.

ORA-24132: table name *string* is too long

Cause: An attempt was made to specify a table name is greater than 30 characters long"

Action: Specify a valid table name parameter.

ORA-24141: rule set *string.string* does not exist

Cause: An attempt to access or modify a ruleset was made, which failed because the ruleset does not exist.

Action: Only access or modify existing rulesets.

ORA-24142: invalid ruleset name

Cause: An attempt to create a ruleset with an invalid name was made. The ruleset name can not be NULL, and can not be more than 26 characters, unless a rules_table_name is also specified, in which case the ruleset name may be up to 30 characters.

Action: Retry the create with a valid ruleset name.

ORA-24143: invalid evaluation context name

Cause: An attempt to create a rule/ruleset on an invalid evaluation name was made. The evaluation_context can not be more than 30 characters. The evaluation context with the name specified must exist.

Action: Retry the create with a valid evaluation context name.

ORA-24144: rules engine internal error, arguments: [*string*], [*string*]

Cause: An internal error occurred in the rules engine. This indicates that the rules engine has encountered an exception condition.

Action: Please report this error as a bug. The first argument is the error and the second argument is the package.

ORA-24145: evaluation context *string.string* already exists

Cause: An evaluation context of the given name already exists

Action: Specify another name for the evaluation context being created

ORA-24146: rule *string.string* already exists

Cause: A rule of the given name already exists

Action: Specify another name for the rule being created.

ORA-24147: rule *string.string* does not exist

Cause: The rule of the given name does not exist

Action: create the rule or specify one that exists

ORA-24148: cannot drop rule *string.string* with dependents

Cause: The rule still belongs to some rulesets, cannot be dropped

Action: do not drop a rule that belongs to rulesets without force option

ORA-24149: invalid rule name

Cause: An attempt to create a rule with an invalid name was made. The rule name can not be NULL, and can not be more than 30 characters

Action: n/a

ORA-24150: evaluation context *string.string* does not exist

Cause: The evaluation context of the given name does not exist

Action: create the evaluation context or specify one that exists

ORA-24151: no evaluation context is associated with rule *string.string* or rule set *string.string*

Cause: When adding a rule to a rule set, either the rule or the rule set must have an evaluation context associated with it

Action: do not add a rule without an evaluation context to a ruleset that does not have a default evaluation context

ORA-24152: cannot drop evaluation context *string.string* with dependents

Cause: The evaluation context still belongs to some rules or rule sets, cannot be dropped

Action: do not drop an evaluation context with dependents without force option

ORA-24153: rule set *string.string* already exists

Cause: A rule set of the given name already exists

Action: Specify another name for the rule set being created.

ORA-24154: rule *string.string* already in rule set *string.string*

Cause: a rule can be added to a rule set only once

Action: do not add a rule to a rule set that already contains this rule

ORA-24155: rule *string.string* not in rule set *string.string*

Cause: the rule to be removed from the rule set is not in the rule set

Action: do not remove a rule from a rule set that does not contain the rule

ORA-24156: duplicate table alias *string*

Cause: there is a table alias of the same name in the evaluation context

Action: do not add two table aliases of the same name to an evaluation context

ORA-24157: duplicate variable name *string*

Cause: there is a variable of the same name in the evaluation context

Action: do not add two variables of the same name to an evaluation context

ORA-24158: invalid table alias

Cause: table alias name or base table name is not specified in the table alias definition

Action: specify both alias name and alias base table in the table alias structure

ORA-24159: invalid variable definition

Cause: variable name or variable type is not specified in the variable definition

Action: specify both variable name and variable type in the variable definition structure

ORA-24160: name *string* already exists in the name value pair list

Cause: there is already a name-value pair with the same name in the NVlist

Action: try another name.

ORA-24161: name *string* does not exist in the name value pair list

Cause: there is not such a name-value pair in the NVlist

Action: check the name-value pair exists in the NVList.

ORA-24162: name value pair list is full, cannot add another entry

Cause: The NVList is full (1024 elements) and cannot hold more elements

Action: do not add elements to a full list.

ORA-24163: dblink is not supported in rules engine DDLs

Cause: the object name has a database link in it, which is not supported

Action: Do not specify remote objects in rules engine DDLs.

ORA-24164: invalid rule engine system privilege: *string*

Cause: no such system privilege number for rule engine objects

Action: check specification of dbms_rule_adm for valid system privilege numbers

ORA-24165: invalid rule engine object privilege: *string*

Cause: no such object privilege number for rule engine objects

Action: check specification of dbms_rule_adm for valid object privilege numbers

ORA-24166: evaluation context *string.string* has errors

Cause: The table aliases and the variable types specified in the evaluation context could not be resolved.

Action: Make sure that all base tables exist and that all variable types are correct. Also, make sure that tables are not composite partitioned or clustered partitioned.

ORA-24167: incompatible rule engine objects, cannot downgrade

Cause: there are rule engine objects in the database that cannot be downgraded.

Action: check utlincmp.sql and remove all incompatible rules engine objects before downgrade.

ORA-24168: rule *string.string* cannot have default evaluation context

Cause: If a rule is added to a rule set with more than one evaluation contexts, it must not have an evaluation context itself.

Action: Do not set the evaluation context of such rules to a not-null value

ORA-24169: rule condition has unrecognized variables

Cause: The rule references variables not in the evaluation context.

Action: Modify the rule condition to remove illegal reference.

ORA-24170: *string.string* is created by AQ, cannot be dropped directly

Cause: This object is created by AQ, thus cannot be dropped directly

Action: use dbms_aqadm.drop_subscriber to drop the object

ORA-24171: creation properties are only for internal use

Cause: user specified not null creation properties when creating rules engine objects, which are not for external use

Action: do not set creation properties when creating rules engine objects

ORA-24172: rule set *string.string* has errors

Cause: The rule references variables not in the evaluation context.

Action: Modify the rule condition to remove illegal reference.

ORA-24173: nested query not supported for rule condition

Cause: user specified nested query in rule condition.

Action: do not use nested query in rule condition.

ORA-24174: The number of *string* per evaluation context is more than *string*

Cause: Number of tables or variables were more than the defined upper limit.

Action: Reduce the number of tables or variables per evaluation context.

ORA-24175: The number of *string* exceeds limit *string* as there exists at least one nonsimple rule condition

Cause: Upper limit of tables or variable per evaluation context exceeded as there exists at least one nonsimple rule condition.

Action: Reduce the number of tables or variables per evaluation context.

ORA-24180: invalid transformation expression, the transformation expression does not evaluate to the target type/attribute

Cause: The transformation expression does not evaluate to the target type or the target type's specified attribute.

Action: Provide valid transformation expression which evaluates to the target type or the target type's specified attribute.

ORA-24181: The type *string* does not exist

Cause: The source or destination type for the transformation does not exist

Action: Create the type or specify one that exists

ORA-24182: attribute number specified does not exist

Cause: The target type of the transformation does not have the attribute number specified in the ADD_ATTRIBUTE_TRANSFORMATION command

Action: check the target type definition and specify a valid attribute number

ORA-24183: invalid transformation

Cause: The transformation specified is invalid because the source or the target type have been dropped/modified.

Action: Drop and recreate the transformation

ORA-24184: transformation *string.string* already exists

Cause: The named transformation already exists.

Action: Specify another name for the transformation being created.

ORA-24185: transformation *string.string* does not exist

Cause: The specified transformation does not exist.

Action: Create the transformation before using it or specify an existing transformation.

ORA-24186: wrong object type, could not transform message

Cause: The object type of the message to be transformed does not match the source type of the specified transformation.

Action: Specify another transformation, or specify a message of the correct type.

ORA-24190: length of payload exceeds *string*

Cause: the length of payload being taken exceeds the limit of varchar2 or raw.

Action: use clob type or blob type to call get_text or get_bytes.

ORA-24191: the property name *string* has existed

Cause: the property name being set has existed.

Action: use another property name.

ORA-24192: the property name cannot be null

Cause: the property name cannot be null.

Action: make sure the property name not null.

ORA-24193: the property value exceeds the valid range *string*

Cause: the property value being set exceeds the valid range.

Action: make sure the property value is within the valid range.

ORA-24194: attempt to read data in a message as the wrong type

Cause: According to JMS specification, some type conversions were not allowed.

Action: Make sure to use the correct READ function to retrieve message data.

ORA-24195: attempt to retrieve the name list of a map message with size exceeding 1024

Cause: The GET_NAMES function returns the names in a varray with a size limit of 1024.

Action: Retrieve in several smaller steps using the GET_NAMES function with OFFSET and LENGTH parameters.

ORA-24196: access the message in a wrong access mode

Cause: StreamMessage and BytesMessage could not be read when they were in write only mode and vice versa.

Action: Change the access mode using PREPARE, CLEAR_BODY and RESET procedures.

ORA-24197: JAVA stored procedure throws JAVA exceptions

Cause: The JAVA stored procedure threw some exceptions that could not be categorized.

Action: Use GET_EXCEPTION procedure to see what the exception is about.

ORA-24198: attempt to use an invalid operation ID

Cause: An attempt was made to use an invalid operation ID to access messages.

Action: Use the correct operation ID returned by PREPARE or CLEAR_BODY procedure.

ORA-24199: message store is overflow

Cause: An attempt was made to access too many messages at the same time.

Action: Use the CLEAN procedure to clean up some of the messages.

ORA-24201: duplicate publisher, publisher already added to the queue

Cause: Attempted to add a publisher to the queue again.

Action: Specify another publisher or user DBMS_AQADM.ALTER_PUBLISHER to alter the publisher's properties.

ORA-24202: publisher does not exist for the queue

Cause: Attempted to alter or drop a non-existent publisher from a queue.

Action: Specify another publisher.

ORA-24203: operation failed, queue table *string.string* has errors

Cause: An operation attempt was made to a queue table which has errors.

Action: Drop the queue table setting the force option to true.

ORA-24204: existing *string* propagation schedules

Cause: A propagation administrative interface was called when the existing propagation schedules were running in different mode (10.2/11g).

Action: Set appropriate internal parameter and unschedule existing schedules if required.

ORA-24205: feature *string* not supported for sharded queues

Cause: An attempt was made to use a feature that is not supported for sharded queues.

Action: Specify only supported features and try again.

ORA-24206: maximum limit of *string* nondurable subscribers reached for queue *string.string*

Cause: An attempt to add a new nondurable subscriber to the queue failed because the number of nondurable subscribers has exceeded the maximum limit.

Action: Remove existing subscribers and then attempt to add a new subscriber.

ORA-24207: addition of a nondurable subscriber for queue *string.string* aborted due to low SGA

Cause: An attempt to add a new nondurable subscriber on the specified queue was aborted because of memory constraints.

Action: Increase the shared pool size by increasing the value of the SHARED_POOL_SIZE parameter.

ORA-24208: API not supported for non-sharded queues

Cause: An attempt was made to use a sharded queue API on a non-sharded queue.

Action: Use non-sharded queue APIs.

ORA-24209: nondurable subscriber rule has errors for queue *string*

Cause: An attempt was made to create a nondurable subscriber with a rule condition, but the condition had compilation errors.

Action: Correct the condition statement based on the error stack.

ORA-24210: attempt to *string string* on queue *string.string*, *string* already *string*

Cause: An attempt was made to start or stop a queue operation on a queue which is already enabled or disabled for that operation.

Action: Make only one attempt to start or stop the queue operation.

ORA-24230: input to DBMS_DDL.WRAP is not a legal PL/SQL unit

Cause: The input supplied to DBMS_DDL.WRAP or DBMS_DDL.CREATE_WRAPPED did not specify a legal PL/SQL package specification, package body, type specification, type body, function or procedure. This error can occur if you used incorrect syntax in the CREATE OR REPLACE statement or specified a unit that cannot be wrapped (e.g., a trigger or anonymous block).

Action: Provide a legal PL/SQL unit as input.

ORA-24231: database access descriptor (DAD) *string* not found

Cause: The specified Database Access Descriptor (DAD) did not exist.

Action: Make sure the name of the Database Access Descriptor (DAD) is correct and the DAD exists.

ORA-24232: unknown Embedded PL/SQL Gateway attribute *string*

Cause: The specified Embedded PL/SQL Gateway attribute was not known.

Action: Make sure the name of the Embedded PL/SQL Gateway attribute is correct.

ORA-24233: argument passed to DBMS_UTILITY.VALIDATE is not legal

Cause: One or more input arguments to the DBMS_UTILITY.VALIDATE routine was not legal. This error occurred because the object name or owner or namespace arguments (if specified) were NULL or illegal.

Action: Identify and correct the illegal argument.

ORA-24234: unable to get source of *string "string"."string"*, insufficient privileges or does not exist

Cause: The specified PL/SQL object in a DBMS_PREPROCESSOR subprogram did not exist or you did not have the privileges necessary to view its source.

Action: Make sure the specified object exists and you have the privileges necessary to view its source.

ORA-24235: bad value for object type: *string*

Cause: The specified object type was not appropriate.

Action: Make sure the specified object type is one of the following: package, package body, procedure, function, trigger, type, and type body.

ORA-24236: source text is empty

Cause: The input source text supplied to a DBMS_PREPROCESSOR subprogram was empty.

Action: Pass a non-empty input source text as the input.

ORA-24237: object id argument passed to DBMS_UTILITY.INVALIDATE is not legal

Cause: This error occurred because the p_object_id argument passed to the DBMS_UTILITY.INVALIDATE routine was NULL, there was no object with the specified object id, or the user calling the routine did not have sufficient privileges to invalidate the object.

Action: Correct the illegal argument.

ORA-24238: object settings argument passed to DBMS_UTILITY.INVALIDATE is not legal

Cause: This error occurred because the p_plsql_object_settings argument passed to the DBMS_UTILITY.INVALIDATE routine was NULL or malformed.

Action: Correct the illegal argument.

ORA-24239: object could not be invalidated

Cause: A call to the DBMS_UTILITY.INVALIDATE routine failed. This error occurred because the object type of the object specified by the p_object_id argument is not one of the types that can be handled by this routine. Alternately, the object was an object type specification with table dependents, or the object was the specification of the STANDARD, DBMS_STANDARD, DBMS_UTILITY package, or the body of the DBMS_UTILITY package.

Action: Call DBMS_UTILITY.INVALIDATE only on supported object types.

ORA-24240: invalid database access descriptor (DAD) name

Cause: The specified Database Access Descriptor (DAD) name was invalid.

Action: Make sure the name of the Database Access Descriptor (DAD) is valid and its length does not exceed its limit.

ORA-24241: source text is in wrapped format

Cause: The input source text supplied to a DBMS_PREPROCESSOR subprogram was in wrapped format.

Action: Pass a nonwrapped source text as the input.

ORA-24242: anonymous access through a dynamically authenticated Database Access Descriptor (DAD) prohibited

Cause: An attempt to allow anonymous access through a dynamically authenticated Database Access Descriptor (DAD) was prohibited.

Action: Make sure the Database Access Descriptor (DAD) is not dynamically authenticated before allowing anonymous access through it.

ORA-24243: access control entry (ACE) already exists

Cause: An access control entry (ACE) for the principal with the same grant or deny attribute in the IS_GRANT argument already existed.

Action: Add the privilege to the existing access control entry (ACE) instead.

ORA-24244: invalid host or port for access control list (ACL) assignment

Cause: The host or port to which the access control list (ACL) was assigned was invalid.

Action: Ensure the host and port to which you are assigning the access control list (ACL) are valid.

ORA-24245: invalid network privilege

Cause: The network privilege being added to the access control list (ACL) was invalid.

Action: Ensure the network privilege that you are adding to the access control list (ACL) is valid.

ORA-24246: empty access control list (ACL) not allowed

Cause: An attempt was made to store an empty access control list (ACL).

Action: Ensure that the access control list (ACL) has at least one

ORA-24247: network access denied by access control list (ACL)

Cause: No access control list (ACL) has been assigned to the target host or the privilege necessary to access the target host has not been granted to the user in the access control list.

Action: Ensure that an access control list (ACL) has been assigned to the target host and the privilege necessary to access the target host has been granted to the user.

ORA-24248: XML DB extensible security not installed

Cause: XML DB extensible security necessary for this operation has not been installed.

Action: Ensure that XML DB has been installed.

ORA-24249: Authentication scheme "string" not supported

Cause: An unsupported authentication scheme was used.

Action: Retry with a supported authentication scheme.

ORA-24250: No supported authentication scheme found

Cause: A supported authentication scheme was not found.

Action: Retry with a supported authentication scheme.

ORA-24251: This statement is not supported by EXPAND_SQL_TEXT.

Cause: EXPAND_SQL_TEXT supports only SELECT statements.

Action: Submit only a SELECT statement.

ORA-24252: SQL translation profile does not exist

Cause: An attempt was made to access a SQL translation profile that either did not exist or for which the current user did not have privileges on.

Action: Check the SQL translation profile name and verify that the current user has appropriate privileges on the SQL translation profile.

ORA-24253: translation of SQL statement or error code not found

Cause: An attempt to translate a SQL statement or error code or to change a SQL or error code translation failed because the translation was not found.

Action: Verify that the SQL statement or error code is valid and either a custom translation is registered or the translator package in the SQL translation profile can translate it.

ORA-24254: appropriate SQL translation profile not set

Cause: An attempt to translate a SQL statement or error code failed because either a SQL translation profile was not set or the profile could not translate the given SQL syntax.

Action: Set an appropriate SQL translation profile before attempting to translate a SQL statement or error code.

ORA-24255: Implementation restriction: bind variables cannot change in the translated SQL statement

Cause: An attempt to register or use a translated SQL statement failed because the number or the order of bind variables were changed in the statement.

Action: Do not change the number or the order of bind variables in the translated SQL statement.

ORA-24256: EXPAND_SQL_TEXT failed with *string*

Cause: See the string parameter at the end of the message.

Action: See the string parameter at the end of the message and take corrective action.

ORA-24265: Insufficient privileges for SQL profile operation

Cause: A DDL operation was attempted on a SQL profile by a session without the proper privileges.

Action: Grant the user the appropriate privilege.

ORA-24270: a row already exists in the *string* table for these parameters

Cause: A call was made to create a new row in the specified table. A row already exists in the table with the specified values.

Action: Delete the existing row using the appropriate API or check the parameters used to create the row.

ORA-24271: translation type must be either T, S or M

Cause: The translation type parameter is not a T, S or an M. A value other than T, S or M was specified.

Action: Correct the translation type and reexecute the API call.

ORA-24272: initialization value must be either F or T

Cause: The initialization value must be either F or T. A value other than F or T was specified.

Action: Correct the initialization value and reexecute the API call.

ORA-24273: translation text is required if translation type is T or S

Cause: If a translation type of T or S is specified, translation text must be supplied.

Action: Provide translation text and reexecute the API call.

ORA-24274: no row exists in the *string* table for these parameters

Cause: A call was made to update a row that does not exist or a foreign key value supplied to create a table does not exist.

Action: Create the row using the appropriate API or check the parameters used to create the new row to ensure that all specified values exist.

ORA-24275: function '*string*' parameter '*string*' missing or invalid

Cause: The function <pkgrname.funcname> was called with a parameter *parmname* that was null, 0 length, or had an invalid value.

Action: Correct the parameter to supply values that comply with its datatype and limits as specified in the documentation.

ORA-24276: function '*string*' output '*string*' maximum value exceeded

Cause: The function <pkgrname.funcname> computed a value for the output *parmname* that exceeded the maximum allowed. This can occur when multiple input parameters, each valid separately, combine to specify an invalid result. For example, when a length parameter multiplied by a copies parameter yields a total length exceeding the maximum for the output datatype.

Action: Correct the input values to produce a result that will comply with the limits as specified in the documentation.

ORA-24277: invalid database link *string*

Cause: The database link did not exist.

Action: Make sure the database link name is correct.

ORA-24278: remote table *string* not found

Cause: The table did not exist in the remote database.

Action: Make sure the remote table name is correct.

ORA-24279: view *string* is not a parallel access view

Cause: The view was not created by CREATE_OR_REPLACE_VIEW API.

Action: Provide the correct view name that was created by CREATE_OR_REPLACE_VIEW API.

ORA-24280 to ORA-28709

ORA-24280: invalid input value for parameter *string*

Cause: The parameter has been provided a negative, out of range, or NULL input value.

Action: Correct the input value such that it is valid, and is within the range as specified in the documentation.

ORA-24281: invalid access past the maximum size of LOB parameter *string*

Cause: The value of positional or size parameters exceeds the maximum allowed LOB size of 4 Gigabytes.

Action: Correct the input values for amount and offset such that their sum is less than or equal to 4 Gigabytes. If error occurs in a read or write loop, check the looping conditions and/or offset increments.

ORA-24291: Sort Hash Cluster error *string***ORA-24292: no more tables permitted in this sorted hash cluster**

Cause: A sorted hash cluster only supports a maximum of 2 tables

Action: n/a

ORA-24295: max key length (*string*) for sorted hash cluster exceeded

Cause: Sorted hash clusters have a maximum key size

Action: n/a

ORA-24296: error in processing the XML configuration file *string*

Cause: Parameters or their values were specified incorrectly in the configuration file.

Action: Check and correct the configuration parameters or their values.

ORA-24300: bad value for mode

Cause: An undefined mode value was specified.

Action: Check that the correct mode is selected and that an allowed value for that mode is specified.

ORA-24301: null host specified in thread-safe logon

Cause: An HDA was not specified in the logon call while running in a thread safe environment.

Action: Make sure that HDA is not NULL when calling the logon routine.

ORA-24302: host connection in use by another thread

Cause: An attempt was made to use the host connection while it was in use by another thread.

Action: Wait for another thread to finish before using this connection.

ORA-24303: call not supported in non-deferred linkage

Cause: One of the calls that is supported in deferred mode linkage exclusively was invoked when the client was linked non-deferred.

Action: Use this call in deferred mode of linkage.

ORA-24304: datatype not allowed for this call

Cause: Data of this datatype cannot be sent or fetched in pieces.

Action: Use other bind or define calls for this datatype.

ORA-24305: bad bind or define context

Cause: The call was executed on a cursor for which this is invalid.

Action: Verify that this call is valid for this cursor. For example, Get piece information and set piece information are valid on a cursor if appropriate binds and defines have been done on this cursor.

ORA-24306: bad buffer for piece

Cause: A zero length buffer or a null buffer pointer was provided.

Action: Verify that the buffer pointing to this piece or its length is non-zero. The buffer pointer for the next piece or its length can be zero if it is the last piece to be inserted and there are no more data for the column.

ORA-24307: invalid length for piece

Cause: The length of the piece exceeded the maximum possible size.

Action: Verify that the length of this piece and the cumulative length of all the previous pieces is not more than the desired value supplied by the application.

ORA-24308: illegal define position

Cause: Call to modify attributes was done for a non-existent position

Action: Verify that a define has been done for this position

ORA-24309: already connected to a server

Cause: This server handle is already attached to a server.

Action: Disconnect from the server and then retry the call to establish a connection.

ORA-24310: length specified for null connect string

Cause: The connect string is null, but a length was specified for it.

Action: Set length to zero if connect string is null.

ORA-24311: memory initialization failed

Cause: Cannot initialize user memory.

Action: Contact customer support.

ORA-24312: illegal parameters specified for allocating user memory

Cause: An illegal size or null pointer was specified for user memory.

Action: Specify a legal size and a valid pointer for user memory.

ORA-24313: user already authenticated

Cause: A user has already been authenticated on this service handle.

Action: Terminate the service context before using it for another user.

ORA-24314: service handle not initialized

Cause: The server context does not exist.

Action: Establish the server context in the service context.

ORA-24315: illegal attribute type

Cause: An illegal attribute type was specified for the handle.

Action: Consult user manual to specify an attribute valid for this handle.

ORA-24316: illegal handle type

Cause: An illegal handle type was specified.

Action: Consult user manual to specify a valid handle type.

ORA-24317: define handle used in a different position

Cause: A define was done with an existing handle on a different position.

Action: Specify the same position as before on a re-define.

ORA-24318: call not allowed for scalar data types

Cause: This call is valid only for object types.

Action: Verify that the data-type for this variable is an object type

ORA-24319: unable to allocate memory

Cause: Process was unable to allocate memory to store diagnostics.

Action: Terminate other processes in order to reclaim needed memory.

ORA-24320: unable to initialize a mutex

Cause: An attempt to initialize a mutex failed.

Action: Contact customer support.

ORA-24321: inconsistent parameters passed

Cause: One of the three memory function pointers is null or non-null.

Action: Verify that either all the memory functions are null or non-null.

ORA-24322: unable to delete an initialized mutex

Cause: An attempt to delete an initialized mutex failed.

Action: Contact customer support.

ORA-24323: value not allowed

Cause: A null value or a bogus value was passed in for a mandatory parameter.

Action: Verify that all mandatory parameters are properly initialized.

ORA-24324: service handle not initialized

Cause: An attempt was made to use an improper service context handle.

Action: Verify that the service context handle has all the parameters initialized prior to this call.

ORA-24325: this OCI operation is not currently allowed

Cause: An attempt was made to use a context handle outside its scope.

Action: Verify that the context handle is set to a service context handle that has been converted to a logon data area for other OCI calls. The logon data area must be converted back to a service context before it can be used.

ORA-24326: handle passed in is already initialized

Cause: An attempt was made to pass an initialized handle.

Action: Verify that the parameter passed in to retrieve a handle does not already point to a handle.

ORA-24327: need explicit attach before authenticating a user

Cause: A server context must be initialized before creating a session.

Action: Create and initialize a server handle.

ORA-24328: illegal attribute value

Cause: The attribute value passed in is illegal.

Action: Consult the users manual and specify a legal attribute value for the handle.

ORA-24329: invalid character set identifier

Cause: The character set identifier specified is invalid

Action: Specify a valid character set identifier in the OCI call.

ORA-24330: internal OCI error

Cause: An internal OCI error has occurred.

Action: Please contact Oracle customer support.

ORA-24331: user buffer too small

Cause: The user buffer to contain the output data is too small.

Action: Specify a bigger buffer.

ORA-24332: invalid object type

Cause: An invalid object type is requested for the describe call.

Action: Specify a valid object type to the describe call.

ORA-24333: zero iteration count

Cause: An iteration count of zero was specified for the statement

Action: Specify the number of times this statement must be executed

ORA-24334: no descriptor for this position

Cause: The application is trying to get a descriptor from a handle for an illegal position.

Action: Check the position number.

ORA-24335: cannot support more than 1000 columns

Cause: The number of columns exceeds the maximum number supported.

Action: n/a

ORA-24336: invalid result set descriptor

Cause: The result set descriptor should have valid data fetched into it before it can be converted to a statement handle

Action: Fetch valid data into the descriptor before attempting to convert it into a statement handle

ORA-24337: statement handle not prepared

Cause: A statement cannot be executed before making preparing a request.

Action: Prepare a statement before attempting to execute it.

ORA-24338: statement handle not executed

Cause: A fetch or describe was attempted before executing a statement handle.

Action: Execute a statement and then fetch or describe the data.

ORA-24339: cannot set server group name after connecting to server

Cause: An attempt was made to set the server group in a server handle after connecting to the server. However, once the connection is established to a server, the server group name cannot be set anymore.

Action: Attach to the server after setting the server group name in the server handle.

ORA-24340: cannot support more than 255 columns

Cause: The number of columns exceeds maximum supported by the server.

Action: Limit your operation to 255 columns.

ORA-24341: bad mode specified

Cause: OCI_ENV_NO_MUTEX mode was specified for a non-threaded client.

Action: OCI_ENV_NO_MUTEX may be specified when OCI_THREADED had been specified at process initialization.

ORA-24342: unable to destroy a mutex

Cause: An attempt to destroy a mutex failed.

Action: n/a

ORA-24343: user defined callback error

Cause: The only valid return value for a user defined callback function is OCI_CONTINUE or OCI_ROWCBK_DONE. Any other value will cause this error.

Action: Please insure that OCI_CONTINUE or OCI_ROWCBK_DONE is returned from the user defined callback function.

ORA-24344: success with compilation error

Cause: A sql/plsql compilation error occurred.

Action: Return OCI_SUCCESS_WITH_INFO along with the error code

ORA-24345: A Truncation or null fetch error occurred

Cause: A truncation or a null fetch error"

Action: Please ensure that the buffer size is long enough to store the returned data.

ORA-24346: cannot execute without binding variables

Cause: None of the bind variables in the SQL statement are bound.

Action: Please bind all the variables before the execute is done.

ORA-24347: Warning of a NULL column in an aggregate function

Cause: A null column was processed by an aggregate function

Action: An OCI_SUCCESS_WITH_INFO is returned.

ORA-24348: Update or Delete without Where

Cause: An update or delete was executed without where clause

Action: An OCI_SUCCESS_WITH_INFO is returned.

ORA-24349: Array DML row counts not available

Cause: One of the following occurred: -The attribute in OCIAttrGet was used incorrectly. -The version of the database used does not support this feature -There was an error in the array DML for all of the iterations.

Action: Ensure that the statement is an array DML and also ensure that the database version is Oracle 12 or higher and the correct mode is used.

ORA-24350: OCI call not allowed

Cause: OCI used is not permitted from external procedures.

Action: Refer to user manual for usage restrictions.

ORA-24351: invalid date passed into OCI call

Cause: A bad date was passed into one of the OCI calls.

Action: Check your date bind values and correct them.

ORA-24352: invalid COBOL display type passed into OCI call

Cause: A bad COBOL display type was passed into one of the OCI calls.

Action: Check your COBOL display type bind values and correct them.

ORA-24353: user buffer too small to accommodate COBOL display type

Cause: User supplied buffer for a COBOL display type was too small to accommodate fetched number.

Action: Increase the allocation for COBOL display type buffer.

ORA-24354: number fetched too large to fit in COBOL display type buffer.

Cause: The number fetched was beyond the range that can be displayed.

Action: Please check the number in the database.

ORA-24355: attempt to store a negative number in an Unsigned Display type.

Cause: An attempt was made to convert a negative number into an unsigned display type.

Action: Please check the number in the database or change the defined datatype.

ORA-24356: internal error while converting from to COBOL display type.

Cause: An internal error was encountered during conversion to COBOL display type.

Action: Contact customer support.

ORA-24357: internal error while converting from to OCIDate.

Cause: An internal error was encountered during conversion to OCIDate type.

Action: Contact customer support.

ORA-24358: OCIBindObject not invoked for a Object type or Reference

Cause: OCIBindObject was not invoked resulting in an incomplete bind specification for a Object Type or Reference.

Action: Please invoke the OCIBindObject call for all Object Types and References.

ORA-24359: OCIDefineObject not invoked for a Object type or Reference

Cause: OCIDefineObject was not invoked resulting in an incomplete bind specification for a Object Type or Reference.

Action: Please invoke the OCIDefineObject call for all Object Types and References.

ORA-24360: Type Descriptor Object not specified for Object Bind/Define

Cause: Type Descriptor Object is a mandatory parameter for Object Types Binds and Defines.

Action: Please invoke the OCIBindObject() or OCIDefineObject() call with a valid Type Descriptor Object.

ORA-24361: basic bind call not invoked before invoking advanced bind call

Cause: One of the basic bind calls was not invoked on this bind handle before performing an advanced bind call.

Action: Please invoke the advanced bind call on this bind handle only after performing a basic bind call.

ORA-24362: improper use of the character count flag

Cause: When the character count flag is set, then the maximum size of the buffer in the server should be specified as a non-zero value.

Action: Please use a non-zero value for the maximum size of the buffer in the server.

ORA-24363: measurements in characters illegal here

Cause: Measurements in characters instead of bytes are illegal if either the server's or client's character set is varying width.

Action: If either the client's or server's character set is varying width then do not use the OCI_ATTR_CHAR_COUNT attribute for the bind handle. Use OCI_ATTR_MAXDATA_SIZE instead.

ORA-24364: internal error while padding blanks

Cause: An internal error has occurred while attempting to blank pad string data. This error should not occur normally.

Action: Contact customer support.

ORA-24365: error in character conversion

Cause: This usually occurs during conversion of a multibyte character data when the source data is abnormally terminated in the middle of a multibyte character.

Action: Make sure that all multibyte character data is properly terminated.

ORA-24366: migratable user handle is set in service handle

Cause: This occurs during user authentication, a migratable user handle has been set in the service handle.

Action: Service handle must not be set with migratable user handle when it is used to authenticate another user.

ORA-24367: user handle has not been set in service handle

Cause: This occurs during authentication of a migratable user. the service handle has not been set with non-migratable user handle.

Action: Service handle must be set with non-migratable user handle when it is used to authenticate a migratable user.

ORA-24368: OCI mutex counter non-zero when freeing a handle

Cause: This is an internal OCI error.

Action: Contact customer support.

ORA-24369: required callbacks not registered for one or more bind handles

Cause: No callbacks have been registered for one or more of the bind handles which are part of the RETURNING clause.

Action: The bind handles which are to receive data in a DML statement with a RETURNING clause must have their mode set as DATA_AT_EXEC and callback functions must be registered for these bind handles using OCIBindDynamic.

ORA-24370: illegal piecewise operation attempted

Cause: Data of a certain datatype that does not support piecewise operation is being sent or fetched in pieces.

Action: Always set the piece value to OCI_ONE_PIECE for datatypes that does not support piecewise operation.

ORA-24371: data would not fit in current prefetch buffer

Cause: An internal OCI error has occurred.

Action: Please contact Oracle customer support.

ORA-24372: invalid object for describe

Cause: The object to be described is not valid. It either has compilation or authorization errors.

Action: The object to be described must be valid.

ORA-24373: invalid length specified for statement

Cause: The length specified for the statement is either 0 or too large.

Action: Specify a valid length for the statement.

ORA-24374: define not done before fetch or execute and fetch

Cause: The application did not define output variables for data being fetched before issuing a fetch call or invoking a fetch by specifying a non-zero row count in an execute call.

Action: Issue OCI define calls for the columns to be fetched.

ORA-24375: Cannot use V6 syntax when talking to a V8 server

Cause: V6 syntax is no longer supported in V8 server.

Action: Change syntax to V7 syntax or higher.

ORA-24376: cannot register/get user callback for non-environment handle

Cause: A user callback registration or get was attempted on a handle which is not an environment handle.

Action: Pass the environment handle to register/get user callback.

ORA-24377: invalid OCI function code

Cause: An invalid function code was used to register or get user callback"

Action: Use a valid OCI function code.

ORA-24378: user callbacks not allowed for this call

Cause: An attempt was made to register a user callback for an OCI call for which it not allowed to register user callbacks.

Action: Do not register user callback for this OCI call.

ORA-24379: invalid user callback type

Cause: An invalid type of user callback was specified.

Action: Specify a valid user callback type.

ORA-24380: invalid mode specification

Cause: The mode parameter in an OCI call is invalid

Action: Use only valid mode parameter

ORA-24381: error(s) in array DML

Cause: One or more rows failed in the DML.

Action: Refer to the error stack in the error handle.

ORA-24382: statement handled already executed or described

Cause: The Statement handle was executed or described successfully before.

Action: Perform a OCISstmtPrepare again before OCI_PARSE_ONLY.

ORA-24383: Overflow segment of an IOT cannot be described

Cause: The name specified in the OCIDescribeAny call referred to an IOT overflow segment.

Action: Use OCIDescribeAny to describe only documented objects.

ORA-24384: Application context size is not initialized

Cause: The size of the application context must be initialized before populating each context element.

Action: Issue OCIAttrSet with OCI_ATTR_CTX_SIZE to initialize context size

ORA-24385: Application context size or index is not valid

Cause: The size or index of the application context must be non-zero and non-negative.

Action: Use an appropriate value for the size.

ORA-24386: statement/server handle is in use when being freed

Cause: This is an internal OCI error.

Action: The user should reset in-use flag in statement handle before freeing the handle.

ORA-24387: Invalid attach driver

Cause: Trying to attach using the wrong driver

Action: Relink the application in the right mode

ORA-24388: Unsupported functionality in fast path mode

Cause: Feature not supported in fast path mode

Action: Avoid using the functionality in this mode

ORA-24389: Invalid scrollable fetch parameters

Cause: All the requested rows in this fetch could not be received.

Action: Check the fetch orientation, scroll offset, OCI_ATTR_CURRENT_POSITION and number of rows in OCISstmtFetch2 call. If required, change some of above parameters and fetch again.

ORA-24390: Unsupported scrollable cursor operation

Cause: The scrollable cursor execute or fetch has failed.

Action: Check the documentation for supported types, and other restrictions while using scrollable cursors.

ORA-24391: invalid fetch operation

Cause: Scrollable cursor operation requested with non-scrollable cursor.

Action: Check if the statement was executed in the scrollable mode. Else the only acceptable orientation is OCI_FETCH_NEXT that ignores the scroll offset parameter.

ORA-24392: no connection pool to associate server handle

Cause: OCIServerAttach called in OCI_POOL mode but no connection pool found to associate the server handle.

Action: 1) Verify that OCIConnectionPoolCreate is called before calling OCIServerAttach. 2) Verify that the database link specified in OCIServerAttach matches with that of the connection pool database link.

ORA-24393: invalid mode for creating connection pool

Cause: Mode specified in OCIConnectionPoolCreate is invalid.

Action: Use a valid mode.

ORA-24394: invalid mode for destroying connection pool

Cause: Mode specified in OCIConnectionPoolDestroy is invalid.

Action: Use a valid mode.

ORA-24395: cannot reinitialize non-existent pool

Cause: OCIConnectionPoolCreate was not called in OCI_DEFAULT mode for this pool handle.

Action: Create a connection pool prior to reinitializing it.

ORA-24396: invalid attribute set in server handle

Cause: Attribute OCI_ATTR_NONBLOCKING_MODE has been set on the server handle and attached in OCI_POOL mode. Connection pooling does not support non blocking mode.

Action: Do not set the OCI_ATTR_NONBLOCKING_MODE attribute on the server handle while attaching in OCI_POOL mode.

ORA-24397: error occurred while trying to free connections

Cause: An internal error occurred while trying to free connections.

Action: Contact customer support.

ORA-24398: connection pool already exists

Cause: A connection pool has already been created for the specified pool handle.

Action: 1) Specify a different pool handle to create a new connection pool. 2) If you wish to modify the pool parameters, call OCIConnectionPoolCreate in OCI_CPOOL_REINITIALIZE mode.

ORA-24399: invalid number of connections specified

Cause: An invalid combination of minimum, maximum and increment number of connections was specified in the OCIConnectionPoolCreate call.

Action: Specify a valid combination of parameters.

ORA-24400: error occurred while creating connections in the pool

Cause: The database link specified in OCICreationPoolCreate might be an invalid one.

Action: Specify a valid database link.

ORA-24401: cannot open further connections

Cause: Sufficient number of connections are not present in the pool to execute the call. No new connections can be opened as the connMax parameter supplied in OCICreationPoolCreate has been reached.

Action: Call OCICreationPoolCreate in OCI_CPOOL_REINITIALIZE mode and increase the value of the connMax parameter.

ORA-24402: error occurred while creating connections in the pool

Cause: The username and password specified in OCICreationPoolCreate might be invalid.

Action: Specify a valid username and password.

ORA-24403: error occurred while trying to destroy the connection pool

Cause: Some connections in the pool were busy when an attempt to destroy the connection pool was made.

Action: Ensure no connections from the pool are being used.

ORA-24404: connection pool does not exist

Cause: An attempt was made to use the connection pool before creating it.

Action: Create the connection pool.

ORA-24405: error occurred while trying to create connections in the pool

Cause: An internal error occurred while creating connections in the pool.

Action: Contact customer support.

ORA-24406: API mode switch is disallowed when a call is in progress.

Cause: A mode switch from OCI8 to OCI7 was attempted in a callback.

Action: The user should perform the API mode switch either prior to initiating the top call or after the main call is done.

ORA-24407: connection pool already exists

Cause: A connection pool has already been created for the specified pool name.

Action: Specify a different pool name to create a new connection pool.

ORA-24408: could not generate unique server group name

Cause: An internal error occurred while generating unique server group name.

Action: Contact customer support.

ORA-24409: client cannot understand the object

Cause: The client cannot process all the new features in the object.

Action: Upgrade the client so that features like inheritance and SQLJ objects can be used.

ORA-24410: scrollable cursor max size exceeded

Cause: Result set size exceeded the max limits.

Action: Check the documentation for allowable maximum result set size for scrollable cursors. Re-execute with a smaller expected result set size or make the cursor non-scrollable.

ORA-24411: Session pool already exists.

Cause: A session pool has already been created for the specified pool handle.

Action: 1) Specify a different pool handle to create a new session pool. 2) If you wish to modify the pool parameters, call OCISessionPoolCreate in OCI_SPOOL_REINITIALIZE mode.

ORA-24412: Cannot reinitialize non-existent pool

Cause: OCISessionPoolCreate was not called in OCI_DEFAULT mode for this pool handle.

Action: Create a session pool prior to reinitializing it.

ORA-24413: Invalid number of sessions specified

Cause: An invalid combination of minimum, maximum and increment number of sessions was specified in the OCISessionPoolCreate call.

Action: Specify a valid combination of parameters.

ORA-24414: Only *number* sessions could be started.

Cause: The number of sessions specified by the minSess parameter of OCISessionPoolCreate could not be started, possibly because the value supplied was larger than that supported by the server."

Action: This is a warning. Check the maximum number of sessions allowed on the server.

ORA-24415: Missing or null username.

Cause: Username and password must be specified when pool is created in this mode.

Action: Specify a valid username and password.

ORA-24416: Invalid session Poolname was specified.

Cause: An attempt was made to use a Session Pool that does not exist.

Action: Create a Session Pool before using it.

ORA-24417: Session pool size has exceeded the maximum limit

Cause: The number of sessions has exceeded the maximum size of the Session Pool.

Action: This is a warning. You can tune the session pool with appropriate minimum and maximum parameters.

ORA-24418: Cannot open further sessions.

Cause: Sufficient number of sessions are not present in the pool to execute the call. No new sessions can be opened as the sessMax parameter supplied in OCISessionPoolCreate has been reached.

Action: Call OCISessionPoolCreate in OCI_SPOOL_REINITIALIZE mode and increase the value of the sessMax parameter.

ORA-24419: Proxy sessions are not supported in this mode.

Cause: A proxy session was requested for from a Session Pool which does not support proxy sessions.

Action: Do not specify mode OCI_CRED_PROXY.

ORA-24420: OCISessionRelease must be used to release this session.

Cause: The session was retrieved using OCISessionGet, and an attempt has been made to release it using a call other than OCISessionRelease.

Action: Call OCISessionRelease.

ORA-24421: OCISessionRelease cannot be used to release this session.

Cause: The session was not retrieved using OCISessionGet, and an attempt has been made to release it using OCISessionRelease.

Action: Release the session using an appropriate call.

ORA-24422: error occurred while trying to destroy the Session Pool

Cause: An attempt was made to destroy the session pool while some sessions in the pool were busy.

Action: Ensure that no sessions from the pool are being used OR call OCISessionPoolDestroy with mode set to OCI_SPD_FORCE.

ORA-24423: Cannot set the ROWID attribute - OCI_ATTR_FETCH_ROWID

Cause: An attempt was made to set the implicit ROWID attribute.

Action: Use a SELECT ... FOR UPDATE statement that has not previously been described or executed before setting this ROWID attribute.

ORA-24424: Invalid attempt to define at position 0

Cause: An invalid attempt was made to call OCIDefineByPos for position 0.

Action: Ensure that the implicit ROWID attribute, OCI_ATTR_FETCH_ROWID, is set on the statement handle before doing the execute.

ORA-24425: Invalid mode passed when defining at position 0

Cause: An invalid mode was passed to OCIDefineByPos.

Action: Ensure a valid mode is passed to OCIDefineByPos when defining at position 0.

ORA-24427: Invalid attributes on user handle

Cause: Some of the attributes set on the user handle were not allowed in pooled mode.

Action: Unset the attributes on the user handle and call OCISessionGet or use sessions that are not pooled.

ORA-24428: Sessions with SYSDBA privileges are not supported in this mode.

Cause: A session with SYSDBA privileges was requested from a Session Pool which does not support sessions with SYSDBA privileges.

Action: Do not specify mode OCI_SESSGET_SYSDBA.

ORA-24429: External authentication is not supported in this mode.

Cause: An externally authenticated session was requested from a Session Pool which does not support external authentication.

Action: Do not specify mode OCI_SESSGET_CREDEXT.

ORA-24430: Null values for sqltext and key were specified.

Cause: An attempt was made to call OCISmtPrepare2 and neither sqltext nor key were specified.

Action: Specify valid values for sqltext or key or both.

ORA-24431: Statement does not exist in the cache

Cause: The statement that was requested for does not exist in the statement cache.

Action: Please request for a valid statement.

ORA-24432: The statement that was returned is not tagged.

Cause: A tagged statement was requested for, but an untagged statement has been returned.

Action: This is a warning. Please modify and tag the statement as desired.

ORA-24433: This statement has already been prepared using OCISstmtPrepare2.

Cause: A statement that was earlier prepared using OCISstmtPrepare2 is now being reprepared using OCISstmtPrepare."

Action: Please use a different statement handle.

ORA-24434: OCISstmtRelease called before OCISstmtPrepare2.

Cause: An attempt was made to release a statement without first preparing it using OCISstmtPrepare2.

Action: Call OCISstmtPrepare2 before OCISstmtRelease.

ORA-24435: Invalid Service Context specified.

Cause: The statement was prepared using a service context that is different from the one specified in OCISstmtExecute.

Action: Please specify the same service context that the statement was prepared with.

ORA-24436: Invalid statement Handle.

Cause: OCIHandleFree called on a statement that was prepared using OCISstmtPrepare2.

Action: Release the statement using OCISstmtRelease.

ORA-24437: OCISstmtExecute called before OCISstmtPrepare2.

Cause: An attempt was made to execute a statement without first preparing it using OCISstmtPrepare2.

Action: Call OCISstmtPrepare2 before OCISstmtExecute.

ORA-24438: Invalid Authentication Handle specified.

Cause: The statement was prepared using an authentication handle that is different from the one specified in OCISstmtExecute.

Action: n/a

ORA-24439: success with PLSQL compilation warning

Cause: A plsql compilation warning occurred.

Action: Return OCI_SUCCESS_WITH_INFO along with the error code.

ORA-24440: OCI Easy Install mode cannot be initialized

Cause: An internal OCI error has occurred.

Action: Please contact Oracle customer support.

ORA-24441: Invalid cookie, resend sql text

Cause: An internal OCI error has occurred.

Action: Please contact Oracle customer support.

ORA-24450: Cannot pre-process OCI statement

Cause: An error occurred during statement pre-processing. E.g., SQL statement has invalid usage of N' or Q' literals.

Action: Correct the SQL statement.

ORA-24451: *string*, Maximum call depth exceeded

Cause: Your program has too many levels of recursion.

Action: Restructure your program to eliminate some levels of recursion.

ORA-24452: *value_sz* exceeding SB4MAXVAL is not supported

Cause: *value_sz* specified in OCIBindByPos2, OCIBindByName2 or OCIDefineByPos2 exceeds SB4MAXVAL and is not supported in this release.

Action: Specify a value less than or equal to SB4MAXVAL for *value_sz* in OCIBindByPos2, OCIBindByName2 or OCIDefineByPos2.

ORA-24453: number of application context settings supplied during authentication has exceeded the supported limit of *number* settings

Cause: The number of application context settings supplied during authentication exceeded the specified limit.

Action: Reduce the number of application context settings that are passed during authentication.

ORA-24460: Native Net Internal Error

Cause: Internal error .

Action: This error should not normally occur. If it persists, please contact your customer service representative.

ORA-24480: invalid OCI mode

Cause: An attempt was made to invoke OCI API with an invalid mode.

Action: Provide the OCI API with legitimate mode.

ORA-24481: Failed to initialize multithreaded environment

Cause: Operating system did not support multithreaded mode.

Action: Use single thread mode instead.

ORA-24482: Pool size was less than 1 in shared mode

Cause: Pool size must be positive in shared mode.

Action: Set a positive pool size.

ORA-24483: Invalid parameters were passed into environment creation call

Cause: Invalid parameters were passed into the environment creation call. Check the passed in parameters for the following conditions: -envp should not be NULL - xtrmem_sz should not be negative -Either both xtrmem_sz and usrmempp have to be provided. Or, neither should be provided.

Action: Pass in legitimate parameters.

ORA-24484: Setting authentication handle not allowed after pool create

Cause: An attempt was made to set the authentication handle on session pool handle after OCISessionPoolCreate.

Action: Set the authentication handle on session pool handle before calling OCISessionPoolCreate.

ORA-24485: Invalid attributes in session pool authentication handle

Cause: Some of the attributes set on the authentication handle being set on the session pool handle are invalid.

Action: Unset the illegal attributes on the authentication handle being set on session pool handle and then call OCIAttrSet. Refer to OCI documentation for details.

ORA-24486: Conflicting attributes in session pool authentication handle

Cause: Some attributes could not be set both on the authentication handle passed to OCISessionGet and the authentication handle set on session pool handle.

Action: Unset the conflicting attributes on the authentication handle and call OCISessionGet.

ORA-24500: invalid UTF16 mode

Cause: UTF16 mode is allowed only at environment handle creation time.

Action: Remove UTF16 mode for functions other than OCIEnvCreate()

ORA-24501: invalid UTF16 string passed in

Cause: Non-UTF16 string is passed in while UTF16 string is expected

Action: Check the parameter which is actually a string

ORA-24502: codepoint length overflows

Cause: Returned buffer has more codepoints than allowed

Action: Set OCI_MAXCHAR_SIZE large enough to accommodate

ORA-24503: codepoint length overflows for piecewise operation

Cause: Accumulated codepoint length exceeds allowed codepoint length

Action: Set OCI_MAXCHAR_SIZE large enough to accommodate

ORA-24504: data length larger than expected

Cause: Incoming data larger than receiving buffer

Action: Set OCI_MAXDATA/MAXCHAR_SIZE appropriately or remove the setting

ORA-24505: cannot change character set id on the handle

Cause: Attempts to change character set id on non-environment handles

Action: Only try to change character set id on environment handles

ORA-24506: invalid attempt to change character set id on env handle

Cause: Attempts to change character set id after other handles have been allocated from the env handle

Action: Change character set id after creating environment handle but before allocating any handles from it.

ORA-24507: invalid combination of character set ids

Cause: Attempts to set one character set id as zero

Action: Set both charset and ncharset as zero or non-zero in OCIEnvNlsCreate()

ORA-24508: Buffer is not aligned correctly.

Cause: Alignment error occurred in buffer when converting between character sets.

Action: Align buffer appropriately. For UTF16 buffer, pass a ub2 pointer.

ORA-24509: OCI function currently not supported in UTF16 mode.

Cause: Attempt to call an OCI function that was not supported in OCI_UTF16ID mode.

Action: Remove the offending function or do not create an OCI environment with OCI_UTF16ID mode or OCI_UTF16ID character set ID.

ORA-24530: User not authorized to access column value.

Cause: Column security is enabled and column value is not authorized.

Action: The program needs to handle this error and take appropriate action.

ORA-24531: Column value authorization is unknown.

Cause: Column security is unknown for the column.

Action: Verify the fetched data. It may or may not contain a meaningful value because it is probably the result of an expression that operated on unauthorized values.

ORA-24536: Warning - column authorization unknown.

Cause: Column security is unknown for one or more columns.

Action: Verify the fetched data. It may or may not contain a meaningful value because it is probably the result of an expression that operated on unauthorized values.

ORA-24542: PRELIM mode logon not allowed to a pluggable database

Cause: PRELIM mode logon was attempted to a pluggable database.

Action: Create PRELIM mode connections to CDB\$ROOT only.

ORA-24543: instance startup or shutdown not allowed in pluggable database

Cause: An instance startup or shutdown operation was attempted when connected to a pluggable database.

Action: Perform instance startup or shutdown operations by connecting to CDB\$ROOT.

ORA-24544: Oracle RAC One Node instance is already running.

Cause: An instance startup failed because an instance of the Oracle RAC One Node database was already running on one of the cluster nodes.

Action: In Oracle RAC One Node, avoid any attempt to start a second instance by any means while the instance is already running.

ORA-24550: unhandled signal #number received. string

Cause: Serious error: signal received

Action: Refer to the platform-specific signal code, and see if the application code caused the error. Otherwise, record all error state and notify Oracle Support Services.

ORA-24557: error string encountered while handling error string; exiting server process

Cause: A second-level error occurred in an Oracle server process that required that process to exit.

Action: None. If an excessive number of incidents are dumped, contact Oracle Support Services.

ORA-24600: could not create OCI environment

Cause: The Oracle Client library used to communicate with the database failed to initialize correctly.

Action: Check that the Oracle environment or registry entries are consistent and correct. If using the Oracle Instant Client, make sure the Oracle driver for MySQL and Oracle libraries are from the same release. Make sure you have read access to the libraries.

ORA-24601: bind buffer not allocated by caller

Cause: A valid buffer was not provided for the bind call.

Action: Provide a non-NULL pointer for the bind call and a valid length for the buffer.

ORA-24602: attempting to read with no fetch

Cause: A column was being fetched while not in fetch state.

Action: Fetch the column after fetching of the result set has started.

ORA-24750: incorrect size of attribute

Cause: Transaction ID attribute size is incorrect.

Action: Verify that the size parameter is correct.

ORA-24752: OCI_TRANS_NEW flag must be specified for local transactions

Cause: Application attempted to start a local transaction without using OCI_TRANS_NEW.

Action: Use OCI_TRANS_NEW when starting local transactions.

ORA-24753: local transactions cannot be detached

Cause: An attempt to detach a local transaction was made.

Action: Local transactions may only be committed or rolled back.

ORA-24754: cannot start new transaction with an active transaction

Cause: An attempt to start a new transaction was made when there was an active transaction.

Action: Commit, rollback or detach the existing transaction before starting a new transaction.

ORA-24755: OCI_TRANS_NOMIGRATE, OCI_TRANS_JOIN options are not supported

Cause: These flags are currently not supported.

Action: n/a

ORA-24756: transaction does not exist

Cause: An invalid transaction identifier or context was used or the transaction has completed.

Action: Supply a valid identifier if the transaction has not completed and retry the call.

ORA-24757: duplicate transaction identifier

Cause: An attempt was made to start a new transaction with an identifier already in use by an existing transaction.

Action: Verify that the identifier is not in use.

ORA-24758: not attached to the requested transaction

Cause: An attempt was made to detach or complete a transaction that is not the current transaction.

Action: Verify that the transaction context refers to the current transaction.

ORA-24759: invalid transaction start flags

Cause: An invalid transaction start flag was passed.

Action: Verify that only one of the following values is specified: OCI_TRANS_NEW, OCI_TRANS_JOIN, OCI_TRANS_RESUME, or OCI_TRANS_PROMOTE.

ORA-24760: invalid isolation level flags

Cause: An invalid isolation level flag was passed.

Action: Verify that only one of following values - OCI_TRANS_READONLY, OCI_TRANS_READWRITE, OCI_TRANS_SERIALIZABLE is used.

ORA-24761: transaction rolled back

ORA-24762: server failed due to unspecified error

Cause: An internal error has occurred in the server commit protocol.

Action: Contact customer support.

ORA-24763: transaction operation cannot be completed now

Cause: The commit or rollback cannot be performed now because the session cannot switch to the specified transaction.

Action: Retry the operation later.

ORA-24764: transaction branch has been heuristically committed

ORA-24765: transaction branch has been heuristically rolled back

ORA-24766: transaction branch has been partly committed and aborted

ORA-24767: transaction branch prepare returns read-only

Cause: The transaction is read-only, or this is the outcome of an optimization for two-phase commit protocol.

Action: None. Informational only.

ORA-24768: commit protocol error occurred in the server

ORA-24769: cannot forget an active transaction

Cause: Transaction identifier refers to an active transaction.

Action: Verify that the identifier of an active transaction was not passed as an argument.

ORA-24770: cannot forget a prepared transaction

Cause: Transaction identifier refers to a prepared transaction.

Action: Verify that the identifier of a prepared transaction was not passed as an argument.

ORA-24771: cannot detach, prepare or forget a local transaction

Cause: Service handle contains a local transaction context.

Action: Verify that the transaction context does not refer to a local transaction.

ORA-24772: Cannot mix tightly-coupled and loosely-coupled branches

Cause: Application attempted to start a transaction with a global transaction identifier and a wrong option.

Action: Verify that all branches of a global transaction are started with either OCI_TRANS_TIGHT or OCI_TRANS_LOOSE option. If the application is correct and uses distributed updates, contact customer support.

ORA-24773: invalid transaction type flags

Cause: OCI_TRANS_TIGHT or OCI_TRANS_LOOSE mode was not specified.

Action: Verify that the right parameters are being used.

ORA-24774: cannot switch to specified transaction

Cause: The transaction specified in the call refers to a transaction created by a different user.

Action: Create transactions with the same authentication so that they can be switched.

ORA-24775: cannot prepare or commit transaction with non-zero lock value

Cause: An attempt was made to detach the transaction with a non-zero lock value.

Action: Detach the transaction with lock value set to zero and then try to prepare or commit the transaction.

ORA-24776: cannot start a new transaction

Cause: An attempt was made to start a new transaction when session was already attached to an existing transaction.

Action: End the current transaction before creating a new transaction.

ORA-24777: use of non-migratable database link not allowed

Cause: The transaction, which needs to be migratable between sessions, tried to access a remote database from a non-multi threaded server process.

Action: Perform the work in the local database or open a connection to the remote database from the client. If multi threaded server option is installed, connect to the Oracle instance through the dispatcher.

ORA-24778: cannot open connections

Cause: The migratable transaction tried to access a remote database when the session itself had opened connections to remote database(s).

Action: Close the connection(s) in the session and then try to access the remote database from the migratable transaction. If the error still occurs, contact Oracle customer support.

ORA-24779: detach not allowed with open remote cursor

Cause: The migratable transaction tried to detach from the current session while having an open remote cursor.

Action: Close any open remote cursor prior to detach.

ORA-24780: cannot recover a transaction while in an existing transaction

Cause: An attempt was made to commit or roll back a transaction while in a different transaction, and the transaction for which the action is requested is in a recovery state (this happens if it is idle too long).

Action: Detach from the current transaction and retry the operation.

ORA-24781: branches don't belong to the same global transaction

Cause: The list of xids passed into kpotxmp() don't have the same gtrid

Action: n/a

ORA-24782: Cannot detach from a non-migratable transaction

Cause: An attempt was made to detach from a non-migrateable transaction.

Action: Either commit or rollback the transaction.

ORA-24783: Cannot switch non-migratable transactions

Cause: An attempt was made to prepare/commit a txn different from current.

Action: n/a

ORA-24784: Transaction exists

Cause: An attempt was made to start a transaction, while attached to a non-migrateable transaction

Action: n/a

ORA-24785: Cannot resume a non-migratable transaction

Cause: An attempt was made to resume a non-migrateable transaction.

Action: n/a

ORA-24786: separated transaction has been completed

Cause: The current transaction has been completed by another process.

Action: Start a new transaction

ORA-24787: remote cursors must be closed before a call completes

Cause: The previous operation did not close all the remote cursors it opened. Since separated transactions are enabled, this is not allowed.

Action: Close all remote cursors in each call, or start a regular (non-separated) transaction.

ORA-24788: cannot switch to specified transaction (server type)

Cause: The transaction specified was created by a shared server and the requestor is a dedicated server, or the transaction was created by a dedicated server and the requestor is a shared server.

Action: All parts of this application should connect as dedicated or as shared.

ORA-24789: start not allowed in recursive call

Cause: Oracle RM will not start/resume a branch in a recursive call

Action: Reconsider your application stack design

ORA-24790: cannot mix OCI_TRANS_RESUME and transaction isolation flags

Cause: An attempt was made to change the isolation level of an existing transaction.

Action: No action required

ORA-24791: invalid transaction start flags

Cause: An invalid transaction start flag was passed.

Action: Verify that OCI_TRANS_LOOSE was not passed along with OCI_TRANS_JOIN, OCI_TRANS_RESUME. Also, verify that other flags (such as OCI_TRANS_SEPARABLE) passed by the client are supported by the version of the Oracle server.

ORA-24792: cannot mix services in a single global transaction

Cause: Oracle RM will not serve global (distributed) transaction requests if branches are created using different services

Action: Configure clients such that those participating in the same distributed transaction use the same service name.

ORA-24794: no active DTP service found

Cause: Oracle RM will not serve global (distributed) transaction requests until DTP services are configured in RAC. It is possible that a service was stopped while transactions were in-flight.

Action: Provision/Start DTP services first.

ORA-24795: Illegal *string* attempt made

Cause: An illegal attempt was made to commit/rollback current transaction

Action: Use appropriate commit/rollback mechanism

ORA-24796: operation completed; resume of original transaction rolled back

Cause: The commit, rollback, or prepare completed successfully, but the current transaction for this thread was rolled back.

Action: If desired, retry the current transaction. If the operation was prepare, then end transaction appropriately with a commit or rollback operation.

ORA-24797: cannot promote the current transaction to a distributed transaction

Cause: An illegal attempt was made to promote the current transaction.

Action: Verify that OCI_ATTR_XID, OCI_ATTR_INTERNAL_NAME, and OCI_ATTR_EXTERNAL_NAME attributes have been set properly, and verify that the current transaction has neither performed IDL or PDML operations, nor already been a distributed transaction. Also, verify that the local transaction is in the same isolation level if the isolation flag value is set.

ORA-24798: cannot resume the distributed transaction branch on another instance

Cause: An attempt was made to resume a distributed transaction branch that is physically located on another RAC instance.

Action: Get a connection to the instance where the transaction branch is located.

ORA-24801: illegal parameter value in OCI lob function

Cause: One of the parameter values in the OCI lob function is illegal.

Action: Check every parameter in the OCI Lob function call to make sure they are correct. Offsets should be greater than or equal to one.

ORA-24802: user defined lob read callback error

Cause: The only valid return value for a user defined lob read callback function is OCI_CONTINUE. Any other value will cause this error.

Action: Verify that OCI_CONTINUE is returned from the user defined lob read callback function.

ORA-24803: illegal parameter value in lob read function

Cause: Internal error .

Action: This error should not normally occur. If it persists, please contact your customer service representative.

ORA-24804: Lob read/write functions called while another OCI LOB read/write streaming is in progress

Cause: Internal error.

Action: Wait for the ongoing LOB streaming call to finish before issuing the next server call, or use OCIBreak() abort the current LOB streaming call.

ORA-24805: LOB type mismatch

Cause: When copying or appending LOB locators, both source and destination LOB locators should be of the same type.

Action: Pass the same type of LOB locators for copying or appending.

ORA-24806: LOB form mismatch

Cause: When reading from or writing into LOBs, the character set form of the user buffer should be same as that of the LOB.

Action: Make sure that the buffer you are using to read or write has the same form as that of the LOB.

ORA-24807: LOB form mismatch

Cause: When copying or appending LOBs, both source and destination LOB locators should have the same character set form.

Action: Pass locators of the same character set form for copying or appending LOBs.

ORA-24808: streaming of lob data is not allowed when using lob buffering

Cause: Attempted to stream lob data via the polling mode or a callback when lob buffering was enabled for the input lob locator.

Action: Lob buffering is useful when reading/writing small amounts of lob data so streaming should not be necessary. Rewrite the OCILobRead/OCILobWrite call so that it does not use streaming. If streaming of data is required, lob buffering should not be used. In this case, flush buffers associated with the input lob locator as necessary, disable buffering on the input lob locator and reissue the OCILobRead/OCILobWrite call.

ORA-24809: amount specified will not fit in the lob buffers

Cause: LOB buffering is enabled for the input lob locator so buffering will be used. However, the amount of lob data to read or write is larger than what the lob buffers can hold.

Action: Either disable buffering on the input lob locator and reissue the command or pass a smaller amount.

ORA-24810: attempting to write more data than indicated

Cause: While writing into a LOB, more data was supplied than indicated.

Action: If data is written in pieces, then make sure that you do not provide more data in the pieces (cumulatively), than you indicated.

ORA-24811: less data provided for writing than indicated

Cause: While writing into a LOB, less data was provided than indicated.

Action: If writing data in single pieces, then make sure that the buffer length specified is big enough to accommodate the data being provided. If data is written in pieces, then make sure that all the data has been provided before specifying OCI_LAST_PIECE.

ORA-24812: character set conversion to or from UCS2 failed

Cause: If the database character set is varying-width, the CLOB/NCLOB value is implicitly converted to or from UCS2. This implicit conversion failed.

Action: Contact Oracle Worldwide Support.

ORA-24813: cannot send or receive an unsupported LOB

Cause: An attempt was made to send a LOB across the network, but either the server does not support the LOB sent by the client, or the client does not support the LOB sent by the server. This error usually occurs when the client and server are running different versions of Oracle.

Action: Use a version of the Oracle that supports the LOB on both the client and the server.

ORA-24814: operation not allowed for temporary LOBs

Cause: Temporary LOB locators are not allowed in the operation. For example: OCILobAssign only takes persistent LOB locators as parameters, not temporary LOBs.

Action: Use OCILobLocatorAssign for temporary LOBs instead. Note that OCILobLocatorAssign can also be used for persistent LOBs, in which case it will behave the same as OCILobAssign.

ORA-24815: Invalid character set form

Cause: An invalid character set form was passed into an OCI LOB function. For example, the only valid cs form for OCILobCreateTemporary() is OCI_DEFAULT(0), SQLCS_IMPLICIT(1) or SQLCS_NCHAR(2).

Action: Specify a valid character set form.

ORA-24816: Expanded non LONG bind data supplied after actual LONG or LOB column

Cause: A Bind value of length potentially > 4000 bytes follows binding for LOB or LONG.

Action: Re-order the binds so that the LONG bind or LOB binds are all at the end of the bind list.

ORA-24817: Unable to allocate the given chunk for current lob operation

Cause: The given size is increased to accommodate the number of bytes from server due to varying width db char/nchar set.

Action: Use smaller chunk sizes when you have character set conversion between client/server or perform piece-wise read or write.

ORA-24818: Operation not permitted on Abstract LOBs

Cause: Abstract LOB locators were not allowed in the operation. For example, OCILobAssign only takes persistent LOB locators as parameters, not Abstract (i.e., client-side created) LOBs.

Action: Avoid the operation on Abstract LOBs.

ORA-24819: Illegal reference count encountered for a temporary LOB

Cause: Internal error.

Action: This error should not normally occur. If it persists, contact Oracle Support Services.

ORA-24820: Different LOB function called while another OCI LOB call is in progress

Cause: An attempt was made to execute a new OCI LOB call while another OCI LOB call was in progress.

Action: Wait for the ongoing LOB streaming call to finish before issuing the next server call, or use OCIBreak() to abort the current LOB streaming call.

ORA-24850: failed to startup shared subsystem

Cause: While attempting to initialize OCI in shared mode, a problem was encountered in starting up the shared subsystem.

Action: Contact Oracle Customer support.

ORA-24851: failed to connect to shared subsystem

Cause: While attempting to initialize OCI in shared mode, a problem was encountered in connecting the process to the shared subsystem.

Action: Contact Oracle Customer Support.

ORA-24852: protocol error during statement execution

Cause: An internal protocol error occurred while receiving describe data from the server during execution of a statement.

Action: Contact Oracle Customer Support.

ORA-24853: failed to connect thread to shared subsystem

Cause: While attempting to initialize OCI in shared mode, a problem was encountered in connecting the thread to the shared subsystem.

Action: Contact Oracle Customer Support.

ORA-24854: invalid pieceinfo provided

Cause: While making the first call to write LOB data, an invalid pieceinfo value provided.

Action: Correct the call to use OCI_ONE_PIECE or OCI_FIRST_PIECE. If using OCCL, make sure to call writeBuffer before calling writeLastBuffer.

ORA-24900: invalid or unsupported mode parameter passed in call

Cause: The mode parameter passed into the OCI Client Notification call is incorrect.

Action: Please correct the mode parameter passed into OCI.

ORA-24901: handles belonging to different environments passed into an OCI call

Cause: All handles passed into an OCI call should belong to the same environment. In the call that returned this error, handles belonging to different environments were passed in.

Action: Please ensure that the handle parameters in the call to come from the same OCI Environment.

ORA-24902: invalid subscription name or name-length in subscription handle

Cause: The subscription handle passed into the OCI call does not have a proper name or name-length attribute.

Action: Please set the name and name-length attributes using the OCIAttrSet() call.

ORA-24903: invalid namespace attribute passed into OCI call

Cause: The subscription handle passed into the OCI call does not have a proper namespace attribute.

Action: Please set the namespace attribute using the OCIAttrSet() call.

ORA-24904: invalid callback attribute passed into OCI call

Cause: The subscription handle passed into the OCI call does not have a proper callback attribute.

Action: Please set the callback attribute using the OCIAttrSet() call.

ORA-24905: invalid recipient protocol attribute passed into OCI call

Cause: The subscription handle passed into the OCI call did not have a proper recipient protocol attribute.

Action: Please set the recipient protocol attribute using the OCIAttrSet() call.

ORA-24906: invalid recipient attribute passed into OCI call

Cause: The subscription handle passed into the OCI call did not have a proper recipient attribute.

Action: Please set the recipient attribute using the OCIAttrSet() call.

ORA-24907: invalid pair of callback and recipient protocol attributes

Cause: The subscription handle passed into the OCI call can't have both the callback defined and a recipient protocol other than OCI_SUBSCR_PROTO_OCI at the same time.

Action: Please set the appropriate callback and recipient protocol attributes using the OCIAttrSet() call.

ORA-24908: invalid recipient presentation attribute

Cause: The subscription handle passed into the OCI call does not have a valid recipient presentation attribute.

Action: Set the recipient presentation attribute using the OCIAttrSet() call

ORA-24909: call in progress. Current operation cancelled

Cause: The OCI call was invoked when another call on the connection was in progress.

Action: Check if the OCI call is supported when the call is in progress under special conditions; for example, if it is being used by a signal handler.

ORA-24911: Cannot start listener thread at specified port

Cause: Thread already running at a different port.

Action: Set the correct port in the environment handle or let the system choose the port.

ORA-24912: Listener thread failed. *string*

Cause: Thread listening for event notification exited because of an error. The error encountered is appended to the error message.

Action: The client needs to be restarted.

ORA-24913: Event to enable NLS validation

Cause: N/A

Action: Set this event in your environment to enable NLS character validation even when character sets are the same for client/server.

ORA-24915: Cannot start Listener at specified IP address

Cause: Thread was already listening at a different IP address.

Action: Set the correct IP address in the environment handle or let the system choose the correct IP address.

ORA-24916: cannot use IP address attribute before release 11.2 compatible notifications

Cause: An attempt was made to use OCI_ATTR_SUBSCR_IPADDR attribute before release 11.2 compatible notifications.

Action: Change the compatibility to 11.2.

ORA-24918: secure notification mode not supported

Cause: An attempt was made to use OCI_SECURE_NOTIFICATION before release 12.0 compatible notifications.

Action: Change the compatibility to 12.0.

ORA-24919: subscription to Fast Application Notification failed

Cause: An error occurred while subscribing to Fast Application Notification. This could be due to problems in the Oracle clusterware configuration.

Action: Look at the client trace files for additional information. Ensure that the Oracle clusterware is properly configured.

ORA-24920: column size too large for client

Cause: Client attempted to fetch a column whose size is larger than the maximum size that can be handled by the client.

Action: Upgrade the client stack to Oracle 12c or higher.

ORA-24940: invalid combination of *string* namespace, *string* presentation and *string* receive protocol

Cause: An invalid combination of namespace, presentation and receive protocol was specified during notification registration. Currently, only AQ namespace is supported with XML presentation. Non-AQ namespace is not supported for e-mail and HTTP receive protocols.

Action: Please change the register call appropriately.

ORA-24941: invalid combination of notification grouping attributes

Cause: An invalid combination of notification grouping attributes was specified. Currently, only TIME notification grouping class is supported. If notification grouping class is zero, all other notification grouping attributes must be zero.

Action: Refer to documentation and change the attributes appropriately.

ORA-24942: cannot use ntfn grouping attributes on before release 11.0 compatible ntfns

Cause: An attempt was made to use notification grouping on before release 11.0 compatible notifications.

Action: Change the compatibility to 11.0.

ORA-24943: cannot use ntnf grouping with this receive protocol, presentation and/or QoS

Cause: An attempt was made to use notification grouping with e-mail or HTTP receive protocol or XML presentation or payload delivery or reliable QoS. Currently, only OCI and PLSQL receive protocols and default presentation are supported with notification grouping.

Action: Refer to documentation and change the call appropriately.

ORA-24944: cannot use timeout or grouping with ANONYMOUS namespace

Cause: An attempt was made to use timeout or grouping with ANONYMOUS namespace. Currently, timeout and grouping are supported only with AQ and DBCHANGE namespaces.

Action: Refer to documentation and change the call appropriately.

ORA-24945: cannot use context, QOS and timeout attributes of notification on lower than 10.2 compatible notifications

Cause: An attempt was made to use context, QOS and timeout attributes of notification on lower than 10.2 compatible notifications.

Action: Change the database compatibility to 10.2.

ORA-24946: invalid registration callback

Cause: An attempt was made to use a reserved callback for notification registration.

Action: Choose a different name for the notification callback and change the register call appropriately.

ORA-24947: Invalid namespace attribute specified for the subscription *string*

Cause: An attempt was made to register with invalid namespace attribute.

Action: Refer to documentation and change the namespace appropriately.

ORA-24950: unregister failed, registration not found

Cause: The registration that was asked to be unregistered could not be found.

Action: Please check the callback function name and the subscription name in the unregister call.

ORA-24952: register, unregister or post has incorrect collection count

Cause: The register, unregister or post function was invoked with a collection that was smaller than the size specified by the parameter to the function.

Action: Please check the function's use and ensure that the size parameter is correct.

ORA-24960: the attribute *string* is greater than the maximum allowable length of *number*

Cause: The user attempted to pass an attribute that is too long

Action: Shorten the specified attribute and retry the operation.

ORA-24962: connect string could not be parsed, error = *string*

Cause: The address portion of the connect string could not be parsed. The client may be using a format of the connect string that the server does not understand.

Action: Correct the connect string.

ORA-24981: deferred SGA thread spawn failed

Cause: This is an internal error.

Action: None

ORA-24982: deferred SGA segment allocation failed, index = *string* location = *string*

Cause: System-defined shared memory limits are inadequate for Oracle.

Action: Consult the alert file for details.

ORA-24983: defer SGA thread memory allocation failed

Cause: This is an internal error.

Action: None

ORA-24984: SGA allocation slaves termination failed

Cause: This is an internal error.

Action: None

ORA-25000: invalid use of bind variable in trigger WHEN clause

Cause: A bind variable was used in the when clause of a trigger.

Action: Remove the bind variable. To access the table columns use (new/old).column_name.

ORA-25001: cannot create this trigger type on this type of view

Cause: INSTEAD OF triggers can be created on any view which is not an Editioning View, while BEFORE and AFTER triggers may only be created on Editioning Views.

Action: Change the trigger type to INSTEAD OF or change the view on which you are attempting to create a DML trigger.

ORA-25002: cannot create INSTEAD OF triggers on tables

Cause: Only BEFORE or AFTER triggers can be created on a table.

Action: Change the trigger type to BEFORE or AFTER.

ORA-25003: cannot change NEW values for this column type in trigger

Cause: Attempt to change NEW trigger variables of datatype object, REF, nested table, VARRAY or LOB datatype which is not supported.

Action: Do not change the NEW trigger variables in the trigger body.

ORA-25004: WHEN clause is not allowed in INSTEAD OF triggers

Cause: WHEN clause is specified in an INSTEAD OF trigger.

Action: Remove the WHEN clause when creating an INSTEAD OF trigger.

ORA-25005: cannot CREATE INSTEAD OF trigger on a read-only view

Cause: attempt to create an INSTEAD OF trigger on a view created with read-only option. The view cannot be updated using INSTEAD OF triggers.

Action: Do not create the trigger.

ORA-25006: cannot specify this column in UPDATE OF clause

Cause: Attempt to create a trigger on update of a column whose datatype is disallowed in the clause, such as LOB and nested table.

Action: Remove the UPDATE OF clause.

ORA-25007: functions or methods not allowed in WHEN clause

Cause: PLSQL function call or method invocation is not allowed in the WHEN clause when creating a trigger.

Action: Remove the function call or method invocation from the WHEN clause.

ORA-25008: no implicit conversion to LOB datatype in instead-of trigger

Cause: When inserting or updating a view using instead-of trigger, the new value for a LOB view column is of a different datatype.

Action: Specified a LOB value as the new value for the LOB view column.

ORA-25009: Nested table clause allowed only for INSTEAD OF triggers

Cause: Triggers on nested tables can only be created on view columns using INSTEAD OF triggers.

Action: Use view nested table columns for defining nested table triggers.

ORA-25010: Invalid nested table column name in nested table clause

Cause: The column name specified in the nested table clause of an INSTEAD OF trigger does not correspond to a nested table column.

Action: Specify a nested table column on which the trigger is to be defined.

ORA-25011: cannot create trigger on internal AQ table

Cause: An attempt was made to try to create a trigger on a table that is used internally to support the Advanced Queueing (AQ) feature.

Action: Do not create the trigger.

ORA-25012: PARENT and NEW values cannot be identical

Cause: The referencing clause specifies identical values for PARENT and OLD.

Action: Re-specify either the PARENT or NEW referencing value.

ORA-25013: OLD and PARENT values cannot be identical

Cause: The referencing clause specifies identical values for OLD and PARENT.

Action: Re-specify either the OLD or PARENT referencing value.

ORA-25014: cannot change the value of a PARENT reference variable

Cause: Parent values can only be read and not changed.

Action: Do not attempt to change a Parent variable.

ORA-25015: cannot perform DML on this nested table view column

Cause: DML cannot be performed on a nested table view column except through an INSTEAD OF trigger

Action: Create an INSTEAD OF trigger over the nested table view column and then perform the DML.

ORA-25016: cannot specify column list for insert into nested table view column

Cause: A column list cannot be specified for inserts into the nested table view column.

Action: Specify all the columns for insert into the nested table.

ORA-25017: cannot reference NEW ROWID for movable rows in before triggers

Cause: NEW ROWID was referenced in a before row trigger which is defined on an index-organized table, or a partitioned table with enabled movement of rows. The

ROWID cannot be computed in a before row update trigger because it depends on the actual values of the row

Action: Remove references to NEW ROWID from the trigger definition.

ORA-25018: conflicting trigger *string* already exists

Cause: Conflicting instead of DDL trigger on schema/database already exists.

Action: Remove the old trigger

ORA-25019: too much concurrency

Cause: cannot pin the database/schema because of too much concurrency

Action: try the operation later

ORA-25020: renaming system triggers is not allowed

Cause: renaming system triggers is not allowed

Action: Drop the trigger, and create a new one for the same

ORA-25021: cannot reference a trigger defined on another table

Cause: Referenced trigger in the FOLLOWS clause was defined on another table.

Action: Create the referenced trigger on the same table

ORA-25022: cannot reference a trigger of a different type

Cause: Referenced trigger in the FOLLOWS or PRECEDES clause was either a different type or not a compound trigger.

Action: Create the referenced trigger as the same type or a compound trigger.

ORA-25023: Cyclic trigger dependency is not allowed

Cause: A cycle of trigger dependency can be formed.

Action: Do not create a trigger that can formed a cyclic dependency.

ORA-25024: cannot specify FOLLOWS for a REVERSE CROSSSESSION trigger

Cause: The FOLLOWS clause was specified when creating the REVERSE CROSSSESSION trigger.

Action: Do not create a REVERSE CROSSSESSION trigger with a FOLLOWS clause.

ORA-25025: cannot specify PRECEDES clause

Cause: The PRECEDES clause was specified when creating a FORWARD CROSSSESSION trigger or a regular trigger.

Action: Do not create a FORWARD CROSSSESSION or a regular trigger with a PRECEDES clause.

ORA-25026: FOR EACH ROW was specified with compound triggers

Cause: FOR EACH ROW is not allowed with compound triggers.

Action: Remove the FOR EACH ROW clause.

ORA-25027: compound triggers cannot be used as system triggers

Cause: Compound trigger was defined as system trigger.

Action: Do not use compound trigger as system trigger.

ORA-25028: regular trigger body can not start with keyword COMPOUND

Cause: Regular triggers body should start with BEGIN/DECLARE etc .

Action: Fix the syntax and recompile.

ORA-25029: compound triggers should always start with keyword COMPOUND

Cause: Compound trigger body was started with incorrect keyword.

Action: Fix the syntax and recreate.

ORA-25030: crossedition trigger cannot be owned by a non-editioned user

Cause: An attempt was made to create a crossedition trigger in a schema where triggers were not editionable.

Action: Enable editions for the user for triggers and then create the crossedition trigger.

ORA-25031: only a crossedition trigger may be specified

Cause: The trigger specified was not a crossedition trigger.

Action: Specify a crossedition trigger.

ORA-25032: crossedition trigger cannot be created in ORA\$BASE

Cause: An attempt was made to create crossedition trigger in the ORA\$BASE edition.

Action: Do not create a crossedition trigger in the ORA\$BASE edition.

ORA-25033: triggers cannot be executed at this time

Cause: An attempt was made to execute a trigger when the session was almost finished.

Action: Do not attempt to DML with triggers that are expected to execute when session has almost ended.

ORA-25034: cannot bypass trigger owned by another user

Cause: An attempt was made to do DML from a crossedition trigger on an object that has a non-crossedition trigger owned by another user. DML from a crossedition trigger bypasses the running of non-crossedition triggers; this cannot be allowed for triggers owned by other users.

Action: Permit the non-crossedition trigger to be bypassed by attaching it to the editioning view rather than the table, moving one of the triggers to be in the same schema as the other, or explicitly disabling the non-crossedition trigger.

ORA-25035: cannot perform DML on remote object from a crossedition trigger

Cause: An attempt was made to do DML from a crossedition trigger that would modify data in a remote database. DML from a crossedition trigger has special rules applied regarding what triggers will fire as part of that DML; these special rules cannot be applied across database links and therefore the DML cannot be allowed.

Action: Perform the DML in a helper function separate from the crossedition trigger itself; the special rules are not applied when the DML is not issued from within the crossedition trigger itself.

ORA-25100: TABLESPACE option can only be used with ALTER INDEX REBUILD

Cause: The TABLESPACE option to ALTER INDEX was used without the REBUILD option.

Action: Use ALTER INDEX REBUILD TABLESPACE tablespace name.

ORA-25101: duplicate REBUILD option specification

Cause: The REBUILD option to ALTER INDEX is specified more than once.

Action: Specify the option at most once.

ORA-25102: PARALLEL option can only be used with ALTER INDEX REBUILD

Cause: The PARALLEL option to ALTER INDEX was used without the REBUILD option.

Action: Use ALTER INDEX REBUILD.

ORA-25103: NOPARALLEL option can only be used with ALTER INDEX REBUILD

Cause: The NOPARALLEL option to ALTER INDEX was used without the REBUILD option.

Action: Use ALTER INDEX REBUILD.

ORA-25104: UNRECOVERABLE option can only be used with ALTER INDEX REBUILD

Cause: The UNRECOVERABLE option to ALTER INDEX was used without the REBUILD option.

Action: Use ALTER INDEX REBUILD.

ORA-25105: RECOVERABLE option can only be used with ALTER INDEX REBUILD

Cause: The RECOVERABLE option to ALTER INDEX was used without the REBUILD option.

Action: Use ALTER INDEX REBUILD.

ORA-25106: only one of PARALLEL or NOPARALLEL clause may be specified

Cause: PARALLEL was specified more than once, NOPARALLEL was specified more than once, or both PARALLEL and NOPARALLEL were specified in an ALTER INDEX REBUILD statement.

Action: Remove all but one of the PARALLEL or NOPARALLEL clauses.

ORA-25107: duplicate TABLESPACE option specification

Cause: the TABLESPACE was specified more than once in an ALTER INDEX REBUILD statement.

Action: Remove all but one of the TABLESPACE clauses.

ORA-25108: standby lock name space exceeds size limit of *string* characters

Cause: The lock name space for the standby database exceeded the maximum string length.

Action: Change initialization parameter `_STANDBY_LOCK_NAME_SPACE` to a character string of less than the specified characters.

ORA-25109: standby lock name space has illegal character '*string*'

Cause: An invalid lock name space was specified for the standby database. The lock name space for the standby database can only contain A-Z, 0-9, '_', '#', '\$', '.' and '@' characters.

Action: Change initialization parameter `_STANDBY_LOCK_NAME_SPACE` to a valid character string.

ORA-25110: NOSORT may not be used with a bitmap index

Cause: An attempt was made to create a bitmap index using the NOSORT option.

Action: Remove NOSORT from the CREATE BITMAP INDEX statement.

ORA-25111: creation of BITMAP cluster indices is not supported

Cause: An attempt was made to create a cluster index with the BITMAP attribute.

Action: Remove BITMAP from the CREATE INDEX statement.

ORA-25112: maximum number of BITMAP index columns is 30

Cause: Too many columns were specified for the index.

Action: Create an index on fewer columns.

ORA-25113: GLOBAL may not be used with a bitmap index

Cause: An attempt was made to create a bitmap index using the GLOBAL option.

Action: Remove GLOBAL from the CREATE BITMAP INDEX statement, and/or add a LOCAL partition descriptor if the table is partitioned.

ORA-25114: invalid file number specified in the DUMP DATAFILE/TEMPFILE command

Cause: An invalid file number was used in dumping a datafile or tempfile.

Action: Specify a valid file number.

ORA-25115: duplicate BLOCK option specification

Cause: BLOCK (MIN/MAX) was specified more than once in the DUMP DATAFILE/TEMPFILE command.

Action: Specify only one BLOCK option.

ORA-25116: invalid block number specified in the DUMP DATAFILE/TEMPFILE command

Cause: An invalid block number was used in dumping a datafile or tempfile.

Action: Specify a valid block number.

ORA-25117: MIN/MAX/Block Number expected

Cause: A value other than MIN/MAX, or a block number was entered in the DUMP DATAFILE/TEMPFILE command.

Action: Correct the syntax.

ORA-25118: invalid DUMP DATAFILE/TEMPFILE option

Cause: An invalid option was specified for the DUMP DATAFILE/TEMPFILE command.

Action: Correct the syntax.

ORA-25119: LOGGING/NOLOGGING option already specified

Cause: In CREATE TABLESPACE, the LOGGING and/or NOLOGGING options were specified more than once.

Action: Remove all but one of the logging specifications.

ORA-25120: MINIMUM EXTENT option already specified

Cause: In CREATE TABLESPACE, the MINIMUM EXTENT option was specified more than once.

Action: Remove all but one of the MINIMUM EXTENT specifications.

ORA-25121: MINIMUM EXTENT value greater than maximum extent size

Cause: In CREATE/ALTER TABLESPACE, the value specified for the MINIMUM EXTENT option was greater than the maximum extent size.

Action: Choose a lower value for the MINIMUM EXTENT option.

ORA-25122: Only LOCAL bitmap indexes are permitted on partitioned tables

Cause: An attempt was made to create a global bitmap index on a partitioned table.

Action: create a local bitmap index instead.

ORA-25123: Too many components specified in the name.

Cause: Specifying more components to a name than allowed.

Action: Check the name specified for the operation.

ORA-25124: Database link name not allowed.

Cause: Specifying a database link name when it is not permitted.

Action: Check the name specified for the operation.

ORA-25125: BUFFER_POOL/FLASH_CACHE/CELL_FLASH_CACHE storage option not allowed

Cause: An attempt was made to specify the BUFFER_POOL, FLASH_CACHE, or CELL_FLASH_CACHE storage option. This option may only be specified during - CREATE or ALTER TABLE - CREATE or ALTER CLUSTER - CREATE or ALTER INDEX

Action: Remove this option and retry the statement.

ORA-25126: Invalid name specified for BUFFER_POOL/FLASH_CACHE/CELL_FLASH_CACHE

Cause: The name of the cache hints specified by was invalid. The only valid names for BUFFER_POOL are KEEP, RECYCLE and DEFAULT. The only valid names for FLASH_CACHE and CELL_FLASH_CACHE are KEEP, NONE and DEFAULT.

Action: Use a valid name or remove the BUFFER_POOL, FLASH_CACHE, or CELL_FLASH_CACHE clause.

ORA-25127: RELY not allowed in NOT NULL constraint

Cause: An attempt to set RELY on for NOT NULL constraint.

Action: only NORELY may be specified for a NOT NULL constraint.

ORA-25128: No insert/update/delete on table with constraint (*string.string*) disabled and validated

Cause: Try to insert/update/delete on table with DISABLE VALIDATE constraint.

Action: Change the constraint's states.

ORA-25129: cannot modify constraint (*string*) - no such constraint

Cause: the named constraint does not exist for this table.

Action: Obvious

ORA-25130: cannot modify primary key - primary key not defined for table

Cause: Attempted to modify a primary key that is not defined for the table.

Action: None

ORA-25131: cannot modify unique(*string*) - unique key not defined for table

Cause: attempted to modify a unique key that is not defined for the table.

Action: None

ORA-25132: UNIQUE constraint (*string.string*) disabled and validated in ALTER TABLE EXCHANGE PARTITION

Cause: cannot ALTER TABLE EXCHANGE PARTITION when the partition and the table have a disabled and validated unique constraints AND the unique keys in the partion is not mutually exclusive from the rest of the table.

Action: Change the constraint's status.

ORA-25133: duplicate SINGLE TABLE option specified

Cause: The SINGLE TABLE option was specified more than once.

Action: Specify the SINGLE TABLE option only once.

ORA-25134: keyword TABLE expected

Cause: The keyword TABLE is missing from the SINGLE TABLE option.

Action: Place the keyword TABLE after the keyword SINGLE in the command.

ORA-25135: cannot use the SINGLE TABLE option

Cause: The SINGLE TABLE option is only valid for hash clusters.

Action: Do not specify the SINGLE TABLE option.

ORA-25136: this cluster can contain only one table

Cause: An attempt was made to store more than one table in a cluster that was created with the SINGLE TABLE option.

Action: Do not attempt to store more than one table in the cluster.

ORA-25137: Data value out of range

Cause: Value from cast operand is larger than cast target size.

Action: Increase size of cast target.

ORA-25138: *string* initialization parameter has been made obsolete

Cause: An obsolete initialization parameter has been specified

Action: The system will come up, but parameters must be examined

ORA-25139: invalid option for CREATE TEMPORARY TABLESPACE

Cause: An invalid option appears.

Action: Specify one of the valid options: TEMPFILE, EXTENT MANAGEMENT LOCAL, UNIFORM

ORA-25140: *string* space policy cannot be specified for the *string* extent management

Cause: An invalid option appears.

Action: Make sure that for LOCAL extent management UNIFORM or AUTOALLOCATE is specified, and for DICTIONARY extent management UNIFORM or AUTOALLOCATE are not specified

ORA-25141: invalid EXTENT MANAGEMENT clause

Cause: An invalid option appears for EXTENT MANAGEMENT clause

Action: Specify one of the valid options: UNIFORM SIZE, AUTOALLOCATE

ORA-25142: default storage clause specified twice

Cause: default storage clause was specified twice for create tablespace

Action: Specify it once.

ORA-25143: default storage clause is not compatible with allocation policy

Cause: default storage clause was specified for a tablespace with AUTOALLOCATE or UNIFORM policy

Action: Omit the storage clause

ORA-25144: invalid option for CREATE TABLESPACE with TEMPORARY contents

Cause: An invalid option appears.

Action: Specify one of the valid options: EXTENT MANAGEMENT DICTIONARY, USER

ORA-25145: allocation policy already specified

Cause: In CREATE TABLESPACE, the allocation policy was specified more than once, for example, AUTOALLOCATE and UNIFORM.

Action: Remove all but one of the allocation policy specifications.

ORA-25146: EXTENT MANAGEMENT option already specified

Cause: In CREATE TABLESPACE, the EXTENT MANAGEMENT option was specified more than once.

Action: Remove all but one of the EXTENT MANAGEMENT specifications.

ORA-25147: UNIFORM SIZE value greater than maximum extent size

Cause: In CREATE/ALTER TABLESPACE, the value specified for the UNIFORM SIZE option was greater than the maximum extent size.

Action: Choose a lower value for the UNIFORM SIZE option.

ORA-25148: ONLINE option not permitted

Cause: An attempt was made to specify ONLINE for ALTER TABLE MOVE on a table that is not index-organized. The ONLINE option is currently supported only for index-organized tables.

Action: Remove the ONLINE option from the command.

ORA-25149: Columns of UROWID type may not be indexed

Cause: An attempt was made to create an index on a column of UROWID type

Action: Remove the column from the list of indexed columns

ORA-25150: ALTERING of extent parameters not permitted

Cause: An attempt was made to alter the extent parameters for a segment in a tablespace with autoallocate or uniform extent allocation policy.

Action: Remove the appropriate extent parameters from the command.

ORA-25151: Rollback Segment cannot be created in this tablespace

Cause: An attempt was made to create a rollback segment in a tablespace with autoallocate extent allocation policy.

Action: Specify a different tablespace for the rollback segment

ORA-25152: TEMPFILE cannot be dropped at this time

Cause: An attempt was made to drop a TEMPFILE being used by online users

Action: The TEMPFILE has been taken offline. Try again, later.

ORA-25153: Temporary Tablespace is Empty

Cause: An attempt was made to use space in a temporary tablespace with no files.

Action: Add files to the tablespace using ADD TEMPFILE command.

ORA-25154: column part of USING clause cannot have qualifier

Cause: Columns that are used for a named-join (either a NATURAL join or a join with a USING clause) cannot have an explicit qualifier.

Action: Remove the qualifier.

ORA-25155: column used in NATURAL join cannot have qualifier

Cause: Columns that are used for a named-join (either a NATURAL join or a join with a USING clause) cannot have an explicit qualifier.

Action: Remove the qualifier.

ORA-25156: old style outer join (+) cannot be used with ANSI joins

Cause: When a query block uses ANSI style joins, the old notation for specifying outer joins (+) cannot be used.

Action: Use ANSI style for specifying outer joins also.

ORA-25157: Specified block size *string* is not valid

Cause: An attempt was made to create a tablespace with a block size which is not supported.

Action: Specify one of the valid block sizes i.e the standard blocksize or one of (2k, 4k, 8k, 16k, 32k) subject to the maximum and minimum block sizes supported by the platform.

ORA-25158: Cannot specify RELY for foreign key if the associated primary key is NORELY

Cause: RELY is specified for the foreign key constraint, when the associated primary key constraint is NORELY.

Action: Change the option of the primary key also to RELY.

ORA-25159: Must specify a valid tablespace number

Cause: A valid tablespace number was missing.

Action: Specify a valid tablespace number.

ORA-25160: Must specify a valid relative data block address

Cause: A valid relative data block address was missing.

Action: Specify a valid relative data block address.

ORA-25161: Cannot have both DBA and RDBA options

Cause: Both the DBA and RDBA options were passed to ALTER SYSTEM DUMP REDO.

Action: Use either the DBA option or the RDBA option but not both.

ORA-25162: Must specify both RDBA MIN and RDBA MAX options

Cause: Only one RDBA option was passed to ALTER SYSTEM DUMP REDO.

Action: Specify both RDBA MIN and RDBA MAX.

ORA-25163: Invalid tablespace number or relative data block address

Cause: The relative data block address is invalid for the given tablespace number or the table space number is invalid.

Action: Specify a valid tablespace number or relative data block address.

ORA-25164: The tag expression is too complex.

Cause: The statement tag value was not specified using a simple expression.

Action: Reduce the complexity of the statement tag expression. For example, assign the tag expression to a variable and reference the variable in the error logging clause.

ORA-25165: number of passwords in statement exceeds maximum limit of *string*

Cause: The SQL statement had more passwords than the maximum limit allowed.

Action: Reconstruct the SQL statement to have a number of passwords less than or equal to the maximum allowed.

ORA-25175: no PRIMARY KEY constraint found

Cause: A PRIMARY KEY constraint must be defined for a table with this organization

Action: Define a PRIMARY KEY

ORA-25176: storage specification not permitted for primary key

Cause: Storage parameters cannot be defined for a PRIMARY KEY constraint for a table with this organization

Action: Remove storage specification for primary key

ORA-25177: UNRECOVERABLE option not permitted

Cause: The UNRECOVERABLE option may not be specified for a primary key for a table with this organization

Action: Remove UNRECOVERABLE option for primary key

ORA-25178: duplicate PCTTHRESHOLD storage option specification

Cause: The storage option PCTTHRESHOLD is specified more than once.

Action: Specify storage options at most once.

ORA-25179: invalid PCTTHRESHOLD storage option value

Cause: The specified value must be a positive integer.

Action: Specify an appropriate value.

ORA-25180: PCTTHRESHOLD only valid for certain table organizations

Cause: PCTTHRESHOLD can only be specified for tables with certain organizations.

Action: Remove the PCTTHRESHOLD option.

ORA-25181: missing ON keyword for NESTED INDEX

Cause: ON keyword required to specify nested index column nest

Action: Add ON keyword

ORA-25182: feature not currently available for index-organized tables

Cause: An attempt was made to use one or more of the following feature(s) not currently supported for index-organized tables: CREATE TABLE with LOB/BFILE/VARRAY columns, partitioning/PARALLEL/CREATE TABLE AS SELECT options, ALTER TABLE with ADD/MODIFY column options, CREATE INDEX

Action: Do not use the disallowed feature(s) in this release.

ORA-25183: index-organized table top index segment is in a different tablespace

Cause: An attempt was made to drop a tablespace which contains an index only table's overflow segment but not the top index segment"

Action: find index-organized tables which span the tablespace being dropped and some other tablespace(s). Drop these tables.

ORA-25184: column name expected

Cause: A column name is not present where required by the CREATE TABLE for specifying last column to be included in the index segment of the index-organized table

Action: Specify a column name where required by the syntax.

ORA-25185: index column other than last can not be specified for INCLUDE clause

Cause: An index column name other than the last is specified as including column

Action: Specify either a column name which is not part of index-organized table primary key index , or the last key column of the primary key for the INCLUDING clause.

ORA-25186: INCLUDING clause specified for index-organized table without OVERFLOW

Cause: INCLUDING clause of a CREATE TABLE is an valid option only for index-organized tables with OVERFLOW clause (at creation time) or if an OVERFLOW segment already exists (at ALTER time).

Action: Specify OVERFLOW clause for the index-organized table : For ALTER, perform ADD OVERFLOW first.

ORA-25187: specified exceptions table form incorrect

Cause: The specified table does not have the proper field definitions.

Action: Specify the correct table to use.

ORA-25188: cannot drop/disable/defer the primary key constraint for index-organized tables or sorted hash cluster

ORA-25189: illegal ALTER TABLE option for an index-organized table

Cause: During ALTER of a index-organized table, the user attempted to enter one or more of the following options: TABLESPACE, ALLOCATE/DEALLOCATE EXTENT, PCTFREE/PCTUSED for IOT top index segment

Action: Remove the illegal option(s).

ORA-25190: an index-organized table maintenance operation may not be combined with other operations

Cause: ALTER TABLE statement attempted to combine an index-organized table maintenance operation (e.g. changing physical attributes) with some other operation (e.g. ADD constraint) which is illegal

Action: Ensure that a index-organized table maintenance operation is the sole operation specified in ALTER TABLE statement;

ORA-25191: cannot reference overflow table of an index-organized table

Cause: An attempt to directly access the overflow table of an index-organized table

Action: Issue the statement against the parent index-organized table containing the specified overflow table.

ORA-25192: invalid option for an index-organized table

Cause: An attempt to specify one or more of the following options for an index-organized table: [NO]CACHE, NO LOGGING, CLUSTER

Action: Remove the illegal option(s)

ORA-25193: cannot use COMPRESS option for a single column key

Cause: An attempt to use COMPRESS option on single column key

Action: Remove the COMPRESS option.

ORA-25194: invalid COMPRESS prefix length value

Cause: The specified value must be a positive integer less than the number of key columns

Action: Specify an appropriate value.

ORA-25195: invalid option for index on an index-organized table

Cause: An attempt to specify one or more of the following options for index on an IOT: BITMAP, REVERSE, PCTUSED

Action: n/a

ORA-25196: keyword MOVE in ALTER TABLE MOVE must immediately follow table name

Cause: MOVE specified after one/more other ALTER options

Action: Change order of options, MOVE should be first Remove the illegal option(s)

ORA-25197: an overflow segment already exists for the indexed-organized table

Cause: An attempt was made to ADD OVERFLOW segment on an index-organized table that already has an overflow segment

Action: n/a

ORA-25198: only range, list, and hash partitioning are supported for index-organized table

Cause: System, or Composite partitioning schemes are not supported yet

Action: Select a different partitioning scheme

ORA-25199: partitioning key of a index-organized table must be a subset of the primary key

Cause: An attempt to specify a partitioning key which is not a prefix of the primary key of the index-organized table

Action: Select a different partitioning key

ORA-25200: invalid value *string*, QUEUE_NAME should be [SCHEMA.]NAME

Cause: A NULL parameter was specified for QUEUE_NAME.

Action: Specify a non-NULL queue name.

ORA-25201: invalid value, VISIBILITY should be ON_COMMIT or IMMEDIATE

Cause: An invalid value specified for parameter VISIBILITY.

Action: Specify either ON_COMMIT or IMMEDIATE.

ORA-25202: invalid value NULL, *string* should be non-NULL

Cause: A NULL value was specified for the parameter.

Action: Specify a non-NULL value.

ORA-25203: invalid value *string*, DELAY should be non-negative

Cause: A negative value or NULL was specified for DELAY.

Action: Specify a non negative integer for DELAY.

ORA-25204: invalid value, SEQUENCE_DEVIATION should be BEFORE or TOP

Cause: An invalid SEQUENCE_DEVIATION was specified.

Action: Specify either the option 'BEFORE' or 'TOP'.

ORA-25205: the QUEUE *string.string* does not exist

Cause: The specified queue does not exist.

Action: Create the queue first before specifying it for enqueue or dequeue.

ORA-25206: enqueue failed, enqueue to exception queue *string.string* not permitted

Cause: An attempt was made to enqueue to an exception queue.

Action: Try enqueueing to another queue.

ORA-25207: enqueue failed, queue *string.string* is disabled from enqueueing

Cause: The queue has been stopped to prevent any further enqueueing.

Action: Enable the queue first by using an administrative operation.

ORA-25208: RELATIVE_MSGID must be specified if SEQUENCE_DEVIATION is BEFORE

Cause: A relative message identifier should be specified if sequence deviation is specified as BEFORE.

Action: Either specify an existing relative message identifier or don't specify sequence deviation as BEFORE.

ORA-25209: invalid value *string*, EXPIRATION should be non-negative or NEVER

Cause: The expiration is less than zero or NULL.

Action: Specify a valid value for expire_after which should be greater than or equal to zero or NEVER.

ORA-25210: invalid value for RELATIVE_MSGID, no message in queue with that msgid

Cause: No message in the queue with the msgid equal to the specified RELATIVE_MSGID.

Action: Try again with a valid RELATIVE_MSGID.

ORA-25211: invalid DELAY specified when using sequence deviation

Cause: The DELAY specified in the enqueue is greater than the delay of the message with the given relative message id.

Action: Set the DELAY to be less than or equal to the delay of the message with the given relative message id. If the TOP option is used the delay must be less than or equal to the delay of all the messages in the queue.

ORA-25212: invalid PRIORITY specified when using sequence deviation

Cause: The PRIORITY specified in the enqueue is less than the priority of the message with the given relative message id.

Action: Set the PRIORITY to be less than the delay of the message with the given relative message id. If the TOP option is used the priority must be greater than or equal to the priority of all the messages in the queue.

ORA-25213: message with specified RELATIVE_MSGID has been dequeued

Cause: The message specified by the RELATIVE_MSGID field in the sequence deviation BEFORE option has been dequeued.

Action: n/a

ORA-25214: cannot specify delay or expiration for enqueue to exception queue

Cause: A message was enqueued to the exception queue with either delay or expiration specified.

Action: Enqueue a message without delay or expiration.

ORA-25215: user_data type and queue type do not match

Cause: A user tries to enqueue an object to a queue that was created for objects of different type.

Action: Try enqueue again with an object of the right type.

ORA-25216: invalid recipient, either NAME or ADDRESS must be specified

Cause: Both attributes, NAME and ADDRESS, were specified null for one of the recipients in the recipient list.

Action: Specify a non-null NAME or ADDRESS for the recipient.

ORA-25217: enqueue failed, visibility must be IMMEDIATE for queue *string.string*

Cause: An attempt was made to enqueue to a non-persistent queue without setting visibility to IMMEDIATE.

Action: Set visibility to IMMEDIATE.

ORA-25218: enqueue failed, delay must be zero for queue *string.string*

Cause: An attempt was made to enqueue to a non-persistent queue with delay greater than zero seconds.

Action: Set delay to zero.

ORA-25219: enqueue failed, sequence deviation not allowed for queue *string.string*

Cause: An attempt was made to enqueue to a non-persistent queue with sequence deviation specified.

Action: Do not specify sequence deviation.

ORA-25220: enqueue failed, signature not specified for a non-repudiable queue

Cause: An attempt was made to enqueue to a non-repudiable queue without specifying the signature

Action: Give the signature

ORA-25221: enqueue failed, signature specified queue not supporting non-repudiation

Cause: An attempt was made to enqueue to a queue specifying the signature for a queue not supporting non-repudiation

Action: Remove the signature

ORA-25222: enqueue failed, complete sender info. not provided for a queue supporting non-repudiation

Cause: An attempt was made to enqueue to a queue without giving the complete sender information (name) for a queue supporting non-repudiation

Action: Provide the sender information

ORA-25223: user_data type used is not supported

Cause: An attempt was made to enqueue data into a non persistent queue that is of a type other than the supported raw or object type.

Action: Enqueue the message again with data of raw or object type.

ORA-25224: sender name must be specified for enqueue into secure queues

Cause: An attempt was made to enqueue into a secure queue without specifying a sender name.

Action: Enqueue the message with sender name specified.

ORA-25225: invalid value *string*, DEQUEUE_MODE should be REMOVE or BROWSE or LOCKED

Cause: An invalid parameter has been specified for DEQUEUE_MODE.

Action: Specify either REMOVE, BROWSE or LOCKED.

ORA-25226: dequeue failed, queue *string.string* is not enabled for dequeue

Cause: The queue has not been enabled for dequeue.

Action: Enable the queue using START_QUEUE.

ORA-25227: Propagation job *string* doesn't exist

Cause: The job doesn't exist in AQ\$_SCHEDULES or cache.

Action: n/a

ORA-25228: timeout or end-of-fetch during message dequeue from *string.string*

Cause: User-specified dequeue wait time has passed or the end of the queue has been reached but no message has been retrieved.

Action: Try dequeue again with the appropriate WAIT_TIME or the FIRST_MESSAGE option.

ORA-25229: error on transformation of message *string string*

Cause: There was an error when transforming a message at enqueue, dequeue or propagation time.

Action: Correct the transformation function.

ORA-25230: invalid value *string*, WAIT should be non-negative

Cause: A negative value has been specified for WAIT.

Action: specify a non negative value or FOREVER.

ORA-25231: cannot dequeue because CONSUMER_NAME not specified

Cause: A user tried to dequeue from a queue that has been created for multiple consumers but a CONSUMER_NAME was not been specified in the dequeue options.

Action: Specify the CONSUMER_NAME in the dequeue options.

ORA-25232: duplicate recipients specified for message

Cause: An enqueue was performed with duplicate queue agents in the recipients parameter.

Action: Remove the duplicate queue agent and retry the call.

ORA-25233: invalid parameter specified for NAVIGATION

Cause: An invalid parameter has been specified for NAVIGATION.

Action: Choose one of FIRST_MESSAGE, NEXT_MESSAGE or NEXT_TRANSACTION. Use FIRST_MESSAGE for dequeuing the first message that satisfies the criterion, NEXT_MESSAGE for dequeuing the next message that satisfies the criterion and NEXT_TRANSACTION for moving to a set of messages enqueued by another transaction.

ORA-25234: NEXT_TRANSACTION navigation option invalid for queue table *string.string*

Cause: The NEXT_TRANSACTION navigation option was used in a dequeue from a queue in a queue table that was not created for transactional grouping.

Action: Specify either FIRST_MESSAGE or NEXT_MESSAGE as the navigation option. If you want to dequeue messages using transactional grouping create the queue in a queue table that has transactional grouping enabled.

ORA-25235: fetched all messages in current transaction from *string.string*

Cause: The NEXT_TRANSACTION navigation option was used in a dequeue when there were no more messages that belong to the same transaction.

Action: Use the NEXT_TRANSACTION navigation option to move to the next also use the FIRST_MESSAGE option to start from the head of the queue again.

ORA-25236: buffer too small for user data

Cause: The variable or buffer used for the out parameter payload is too small for the user data dequeued.

Action: Increase the size of the buffer or the size of the variable. Maximum size allowed is 32K.

ORA-25237: navigation option used out of sequence

Cause: The NEXT_MESSAGE or NEXT_TRANSACTION option was specified after dequeuing all the messages.

Action: Reset the dequeuing position using the FIRST_MESSAGE navigation option and then specify the NEXT_MESSAGE or NEXT_TRANSACTION option.

ORA-25238: too many recipients specified for message destination *string*

Cause: An ENQUEUE was performed with more than 32 recipients for the given destination (address).

Action: Reduce the number of recipients to 32 or less, and retry the call.

ORA-25239: message ID not supplied when dequeuing from exception queue *string.string*

Cause: An attempt was made to dequeue from a release 8.0-compatible exception queue without including a message ID in the dequeue options.

Action: Check the application to ensure that the queue name has been specified correctly. If the queue name is correct supply a message ID when dequeuing from a release 8.0-compatible exception queue. Otherwise, upgrade the queue_table containing the queue to release 8.1-compatible using the DBMS_AQADM.MIGRATE_QUEUE_TABLE procedure.

ORA-25240: message ID and dequeue condition/correlation ID specified in dequeue options

Cause: An attempt was made to dequeue by including both a message ID and a dequeue condition/correlation ID in the dequeue options. In the dequeue options, you are permitted to specify either message ID or dequeue condition/correlation ID, or neither.

Action: To dequeue a message, specify a message ID or a dequeue condition/correlation ID in the dequeue options, but do not specify both. If you want to dequeue in the queue's sort order, then do not specify either the message ID or dequeue condition/correlation ID in the dequeue options.

ORA-25241: cannot change correlation ID from *string* to *string* without FIRST_MESSAGE option

Cause: An attempt was made to change the correlation ID while using the NEXT_MESSAGE or NEXT_TRANSACTION option for dequeuing.

Action: To use a correlation ID that is different from the previous dequeue call, reset the dequeuing position by using the FIRST_MESSAGE navigation option.

ORA-25242: cannot change subscriber name from *string* to *string* without FIRST_MESSAGE option

Cause: An attempt was made to change the subscriber name while using the NEXT_MESSAGE or NEXT_TRANSACTION option for dequeuing.

Action: To use a subscriber name that is different from the previous dequeue call, reset the dequeuing position by using the FIRST_MESSAGE navigation option.

ORA-25243: CONSUMER_NAME cannot be specified when dequeuing from exception queue *string.string*

Cause: An attempt was made to dequeue from an exception queue by specifying the CONSUMER_NAME in the dequeue options. CONSUMER_NAME can only be specified when dequeuing from a normal queue created for multiple consumers.

Action: Specify only the message id in the dequeue options to dequeue a message from an exception queue.

ORA-25244: dequeue index key not found, QUEUE *string*, rowid *string*

Cause: An internal error was encountered. There may be an inconsistency in the queue table index.

Action: Contact your Oracle customer support representative. You may need to provide the trace file and information about reproducing the error.

ORA-25245: agent name cannot be specified if address is a single-consumer queue or an exception queue

Cause: The agent name for the agent in the LISTEN call was specified when the agent address was a single-consumer queue or an exception queue.

Action: Do not specify the agent name.

ORA-25246: listen failed, the address *string* is an 8.0 style exception queue

Cause: An 8.0 style exception queue was specified in the agent-list for the LISTEN call.

Action: Specify a normal 8.0 style queue or an 8.1 style queue in the agent-list.

ORA-25247: *string* is not a recipient of specified message

Cause: The consumer name specified in the dequeue options is not a recipient of the message specified by the message id.

Action: Ensure that the agent specified by the consumer name is a recipient of the message specified by the message id.

ORA-25248: duplicate agent specified in the agent list

Cause: An agent was specified more than once in the agent list of the LISTEN call.

Action: Remove the duplicate agent specification(s), and retry the call.

ORA-25249: dequeue failed, dequeue not allowed for queue *string.string*

Cause: An attempt was made to dequeue from a non-persistent queue.

Action: Dequeue from a different queue.

ORA-25250: Cannot specify a remote recipient for the message

Cause: A recipient for the message enqueued to a non-persistent queue had a non-local address.

Action: Do not specify the address field or specify the queue which is the target of the enqueue

ORA-25251: exceeded maximum number of recipients for message

Cause: An attempt was made to issue an ENQUEUE call that exceeded the the maximum number (1024) of recipients per message.

Action: Reduce the number of recipients to 1024 or less, and retry the call.

ORA-25252: listen failed, the address *string* is a non-persistent queue

Cause: A non-persistent queue was specified as an address for an agent in the LISTEN call.

Action: Specify a normal queue as address for the agent, and retry the the LISTEN call.

ORA-25253: listen failed, queue *string.string* is not enabled for dequeue

Cause: An attempt was made to specify a queue that is not enabled for dequeue in a LISTEN call.

Action: Enable the queue for dequeue using START_QUEUE, and retry the LISTEN call.

ORA-25254: time-out in LISTEN while waiting for a message

Cause: The specified wait time has elapsed and there were no messages for any of the agents in the agent-list.

Action: Try the LISTEN call with an appropriate time-out.

ORA-25255: incorrect subscription string *string*

Cause: An incorrect subscription string was specified with OCIRegister.

Action: Specify a subscription string using the [CONSUMER:]SCHEMA.QUEUE form.

ORA-25256: consumer cannot be specified with a single-consumer queue or an exception queue

Cause: An attempt was made to specify a consumer in the subscription string when registering for notification on a single-consumer queue or an exception queue.

Action: Do not specify the consumer in the subscription string.

ORA-25257: consumer must be specified with a multi-consumer queue

Cause: An attempt was made to register on a multi-consumer queue without specifying a consumer in the subscription string.

Action: Specify a consumer in the subscription string.

ORA-25258: cannot register for notifications on an 8.0 style exception queue

Cause: An attempt was made to specify an 8.0 style exception queue in the subscription string of OCIRegister.

Action: Specify a normal queue or a non-persistent queue.

ORA-25259: cannot specify protocol for agent

Cause: The user specified the protocol attribute for an agent in the agent list.

Action: Do not specify the protocol attribute of the agent object type.

ORA-25260: AQ latch cleanup testing event

Cause: N/A.

Action: event used for AQ statistics latch cleanup testing.

ORA-25261: JOB_QUEUE_PROCESSES must be at least 2 for AQ propagation

Cause: AQ Propagator encountered a setting for JOB_QUEUE_PROCESSES that is insufficient for AQ propagation.

Action: Set the number of JOB_QUEUE_PROCESSES to at least 2 for AQ propagation.

ORA-25262: agent name cannot be NULL if address is a multi-consumer queue

Cause: The name for the agent in the LISTEN call was not specified when the agent address was a multi-consumer queue.

Action: Specify a non-NULL name for the agent.

ORA-25263: no message in queue *string.string* with message ID *string*

Cause: An attempt was made to dequeue a message with a specific message ID, but no such message exists in the queue.

Action: Try dequeue again with a valid message ID.

ORA-25264: cant get signature for this queue

Cause: An attempt was made to dequeue the signature from this queue, which is not receiver non-repudiable.

Action: Try dequeue again without the get signature option

ORA-25265: specified signature for a queue which does not support receiver non-repudiation

Cause: An attempt was made to dequeue the message from a queue which does not support receiver non-repudiation, but the signature was specified for verification

Action: Try dequeue again without the signature

ORA-25266: didnt try to dequeue by message id. with the signature

Cause: The signature was specified for a queue, but the dequeue was not done by message id.

Action: Try dequeue again by message id.

ORA-25267: didnt specify the signature for a receiver non-repudiable queue

Cause: The signature was not specified for a receiver non-repudiable queue

Action: Try dequeue again along with the signature

ORA-25268: didnt dequeue in browse mode with get signature option

Cause: The dequeue was not performed in browse mode with get signature option

Action: Try dequeue again in browse mode

ORA-25269: cant specify sognature with get signature option

Cause: The signature is not required for the dequeue with get signature option

Action: Try dequeue again without the signature in dequeue options

ORA-25270: sender info does not match with the actual sender of the message

Cause: The sender info. and the message id. do not match

Action: Provide the right sender info. Try dequeue again without the signature in dequeue options

ORA-25271: queue table not found for the given queue

Cause: The queue table does not exist for the given queue

Action: Provide the right queue name

ORA-25272: Signature does not exist for the given reciever and message id.

Cause: Signature does not exist for the given reciever and message id.

Action: Check the message id. and the reciever's information

ORA-25273: AQ QMN process alternate cleanup event

Cause: N/A.

Action: event used for AQ QMN alternate cleanup mode.

ORA-25274: AQ Buffered Queue event

Cause: N/A.

Action: event used for AQ Buffered Queue mode.

ORA-25276: table specified is not a queue table

Cause: An invalid queue table name is specified.

Action: Check the dictionary views to see if the table is a queue table.

ORA-25277: cannot grant or revoke object privilege on release 8.0 compatible queues

Cause: An attempt was made to grant or revoke object privilege on release 8.0 style queues.

Action: Convert the release 8.0 compatible queue table to release 8.1 compatible using DBMS_AQADM.MIGRATE_QUEUE_TABLE before granting or revoking object privilege.

ORA-25278: grantee name cannot be NULL

Cause: An attempt was made to specify NULL for the grantee parameter.

Action: Specify a valid grantee parameter.

ORA-25279: dequeue as select not supported before 8.2

Cause: Dequeue as select not supported before 8.2.

Action: Dont use select condition while dequeuing

ORA-25280: complete sender information not provided to non-repudiate sender

Cause: complete sender information not provided to non-repudiate sender

Action: Provide the complete sender information

ORA-25281: complete reciever information not provided to non-repudiate reciever

Cause: complete reciever information not provided to non-repudiate reciever

Action: Provide the complete receiver information

ORA-25282: message id. not provided for non-repudiation

Cause: message id. was not provided

Action: Provide the message id.

ORA-25283: either agent's name or address needed for non-repudiation

Cause: neither agent's name nor address provided for non-repudiation"

Action: Provide the agent info.

ORA-25284: Invalid value *string* for *string*

Cause: An Invalid value or NULL was specified for the parameter.

Action: Check the documentation for valid values.

ORA-25285: Invalid value *string* for *array_mode*

Cause: An Invalid value or NULL was specified for the *array_mode*.

Action: Check the documentation for valid values.

ORA-25286: Invalid number of elements in the message properties array

Cause: Number of elements in the message properties array do not match the number of elements in the payload array.

Action: Create a message property array with one element (that applies for all the elements in the payload array) or create a message property array with the same number of elements as there are in the payload array.

ORA-25287: Invalid value *string*, *string* should be non-negative

Cause: An Invalid value or NULL was specified for the parameter.

Action: Specify a non negative integer.

ORA-25288: AQ HTTP propagation encountered error, status-code *number*, *string*

Cause: AQ propagation's HTTP request to the propagation servlet at the specified address encountered an error

Action: Specify a valid address in the connect string of the propagation destination dblink, the dblink user has the correct permissions, check if the AQ propagation servlet was properly installed.

ORA-25289: Buffer Already Exists

Cause: Buffer already exists for the specified queue.

Action: None

ORA-25290: Cannot complete operation on queue *string* with existing messages

Cause: Queue already has messages. Cannot complete operation

Action: Truncate the queue before adding/dropping a buffer

ORA-25291: Buffer does not exist for the specified queue

Cause: Buffer does not exist for the specified queue

Action: Operation on the buffer cannot be performed. create the buffer

ORA-25292: Buffer operations are not supported on the queue

Cause: Buffer operations are not supported on the specified queue type

Action: Buffered operations are only supported on to 8.1 style queues, which do not have transaction grouping.

ORA-25293: Lob attributes must be null for buffered operations

Cause: Enqueue of a buffered message with a non-null lob attribute was attempted

Action: Set the lob attributes to null before enqueueing the buffered message

ORA-25294: Cannot propagate user buffered messages to a database with version lower than 10.2

Cause: Propagation of user buffered messages was attempted to a database with version lower than 10.2.

Action: Do not propagate buffered messages to the database.

ORA-25295: Subscriber is not allowed to dequeue buffered messages

Cause: Subscriber is only allowed to dequeue persistent messages

Action: Drop the subscriber and re-create it, or dequeue only persistent messages for the subscriber

ORA-25296: Queue Table *string* has a buffered queue *string*

Cause: Buffered message was enqueueued by specifying delay or sequence deviation.

Action: Do not specify delay of sequence deviation when enqueueing buffered messages.

ORA-25298: Only immediate visibility mode supported for buffered message enqueue or dequeue

Cause: A visibility of dbms_aq.ON_COMMIT was supplied with the buffered message enqueue or dequeue

Action: Supply a visibility of dbms_aq.IMMEDIATE

ORA-25299: Invalid message delivery_mode

Cause: Invalid value was specified for delivery mode

Action: Specify dbms_aq.BUFFERED or dbms_aq.PERSISTENT during Enqueue or dbms_aq.BUFFERED, dbms_aq.PERSISTENT or dbms_aq.PERSISTENT_OR_BUFFERED during Dequeue and Listen.

ORA-25300: Cannot drop buffer for queue with buffered subscribers

Cause: Cannot drop buffer for queue with buffered subscribers

Action: Either drop buffered subscribers or forcibly drop the buffer

ORA-25301: Cannot enqueue or dequeue user buffered messages to a database with version lower than 10.2

Cause: Enqueue or dequeue of user buffered messages was attempted to queues in a database with version lower than 10.2.

Action: Do not attempt to enqueue or dequeue user buffered messages.

ORA-25302: Operation not possible for non-buffered queue *string*

Cause: Last enqd/ackd message is only supported for buffered queues

Action: The operation is not supported.

ORA-25303: Buffered operation allowed only on the owner instance

Cause: Operation was not performed on the owner instance.

Action: Perform operation on the owner instance.

ORA-25304: Cannot use priority order queues for capture LCRs

Cause: Capture LCRs can only use commit time or enqueue time ordered queues.

Action: Use the appropriate type of queue for captured LCRs.

ORA-25305: enqueue failed, expiration must be zero for queue *string.string*

Cause: An attempt was made to enqueue to a buffered queue with expiration greater than zero seconds.

Action: Set expiration to zero.

ORA-25306: Cannot connect to buffered queue's owner instance

Cause: cannot connect to the owner instance of the buffered queue

Action: set listener information in REMOTE_LISTENERS or LOCAL_LISTENERS initialization parameter.

ORA-25307: Enqueue rate too high, flow control enabled

Cause: Subscribers could not keep pace with the enqueue rate.

Action: Try enqueue after waiting for some time.

ORA-25310: Subscriber is Notification only; dequeue not supported

Cause: Notification only subscribers are not allowed to dequeue.

Action: Recreate subscriber if necessary.

ORA-25311: *string* not supported for non-persistent queue

Cause: Specified QOS is not supported for non-persistent queues.

Action: Specify the right QOS.

ORA-25312: Cannot specify nonzero sender protocol

Cause: Sender protocol was specified during an enqueue operation.

Action: Specify the enqueue sender protocol as null or zero.

ORA-25313: a queue may not subscribe to itself for propagation

Cause: The specified subscriber had a NULL name and an address equal to the queue name.

Action: Provide a valid subscriber and retry the operation.

ORA-25314: a commit-time queue table cannot be migrated to 8.0

Cause: An attempt was made to migrate a commit-time queue table to an unsupported compatibility level.

Action: Provide an appropriate compatibility level, and retry the operation.

ORA-25315: unsupported configuration for propagation of buffered messages

Cause: An attempt was made to propagate buffered messages with the database link pointing to an instance in the destination database which is not the owner instance of the destination queue.

Action: Use queue to queue propagation for buffered messages.

ORA-25316: Late in the current transaction to begin an Enqueue/Dequeue operation

Cause: Check if the Enqueue/Dequeue operation is performed via triggers on Materialized Views which isn't supported.

Action: Triggers on materialized views aren't supported. Workarounds are on-demand materialized views or execution of trigger code within an autonomous txn.

ORA-25317: Propagation stopped because of instance shutdown

Cause: A propagation job has stopped because the instance is shutting down.

Action: No user action is required.

ORA-25318: Propagation stopped because of instance affinity change

Cause: A propagation job has stopped because its instance affinity has changed.

Action: No user action is required. The job will restart on the appropriate instance.

ORA-25319: Queue table repartitioning aborted

Cause: During instance restart in an Oracle RAC environment, queue table repartitioning aborted due to errors.

Action: Look at the incident generated for this error and report the problem to Oracle Support Services.

ORA-25320: Failed to create, alter, or remove Subscriber

Cause: There is a pending enqueue or dequeue operation on this queue from the same session.

Action: Either COMMIT or ROLLBACK pending enqueue or dequeue operation before attempting to create, alter, or remove the subscriber.

ORA-25321: enqueue failed, user property specified but queue *string.string* is not an 8.1 style queue

Cause: user properties can only be specified when enqueueing into 8.1 style queues.

Action: Specify an 8.1 style queue or pass user property as NULL.

ORA-25322: message priority is out of range

Cause: The message priority range of 0 to 9 was exceeded.

Action: Set the message priority in the range of 0 to 9.

ORA-25326: Array *string* operation failed for message at index *string*

Cause: Array operation fails for the message at specified index. Look at the remainder of the error stack to see what the problem was.

Action: Fix cause of error and retry array operation.

ORA-25327: Array size is invalid

Cause: Array size must be a positive, non-zero integer.

Action: Use corrected array size and retry array operation.

ORA-25328: *string* argument size *string* is smaller than array size

Cause: The size of the argument is smaller than the given array size.

Action: Lower array size or use a larger sized input argument.

ORA-25329: AQ array operations not allowed on 8.0 queues

Cause: An array enqueue/dequeue was attempted on an 8.0 queue.

Action: Use single enqueue/dequeue with this queue.

ORA-25330: PL/SQL associative arrays may not be used with AQ array operations

Cause: A PL/SQL associative array was provided for the payload parameter in an enqueue/dequeue array operation.

Action: Use VARRAY or NESTED TABLE types with AQ array operations.

ORA-25331: cannot downgrade because there are commit-time queue tables

Cause: An attempt was made to downgrade a database that has commit-time queue tables.

Action: Drop all commit-time queue tables before attempting the downgrade.

ORA-25332: Invalid release value *string* for queue table compatible parameter

Cause: The release level given for the queue table compatible parameter is invalid

Action: Specify a valid release value for the queue table compatible parameter

ORA-25333: Buffered Queue to Queue propagation did not connect to the correct instance

Cause: Queue to Queue propagation for buffered messages didn't connect to the correct instance, most likely because service was not started for the destination queue.

Action: No user action is required. Propagation will start the service for the destination queue and retry.

ORA-25334: Buffered propagation must restart as the destination queue was recreated/moved

Cause: Buffered propagation destination queue was recreated or its ownership was moved to another instance during propagation.

Action: No user action is required. Propagation will reinitialize its metadata and retry.

ORA-25335: AQ array operations not allowed for buffered messages

Cause: An array enqueue/dequeue was attempted for buffered messages

Action: Use single enqueue/dequeue for buffered messages or an array size of one.

ORA-25336: Cannot contact instance *string* during Streams AQ operation

Cause: The specified instance was not responding to AQ requests.

Action: Set parameter `aq_tm_processes` to a non-zero value. If the problem persists, contact Oracle Support Services.

ORA-25337: Cannot propagate in queue-to-queue mode to a database with version lower than 10.2

Cause: Remote subscriber with `queue_to_queue` mode set to TRUE was added. The remote subscriber is on a database version lower than 10.2. Propagation was scheduled to a destination database with version lower than 10.2.

Action: Remove the remote subscriber with `queue_to_queue` mode and add the subscriber back with `queue_to_queue` set to FALSE. Unschedule the queue-to-queue propagation and schedule propagation in queue-to-dblink mode.

ORA-25338: operation '*string*' is not allowed for sync_capture '*string*'

Cause: An attempt was made to execute the specified operation for a `sync_capture` process.

Action: Remove the offending call.

ORA-25339: STREAMS '*string*' must be sync_capture

Cause: The specified capture STREAMS did not exist or was not a `sync_capture` process.

Action: Remove the offending call.

ORA-25340: must use commit-time queue for sync_capture

Cause: An attempt was made to create a sync_capture without using a commit-time queue.

Action: Rerun statement with a commit-time queue.

ORA-25341: sync_capture does not support "string"."string" because of the following reason:

Cause: sync_capture encountered a table with an unsupported property. The most common reason is an unsupported column data type.

Action: Revise the Capture rules to skip over the table in question. One option is to remove the rule that captures changes from the unsupported table. Check DBA_STREAMS_TABLE_RULES to determine the rule on the table specified in the error. Also query the DBA_STREAMS_UNSUPPORTED view to determine which tables are not supported by STREAMS and for what reason. For potential workarounds to certain unsupported properties, see Metalink.

ORA-25342: cannot downgrade because there are apply processes for user buffered messages

Cause: An attempt was made to downgrade a database that has apply process for user-buffered messages.

Action: Drop all the apply processes for user-buffered messages before attempting the downgrade.

ORA-25343: Streams error queue cannot be exported

Cause: An attempt was made to export a database that has apply errors.

Action: Delete or reexecute errors before attempting the export.

ORA-25344: statement has bind variables

Cause: Current API could not handle a statement with bind variables.

Action: Use alternative API which handles bind variables.

ORA-25345: requested AQ minimum Oracle Streams Pool size *string* greater than Oracle Streams Pool size *string*

Cause: The minimum value requested for the Oracle Streams Advanced Queuing (AQ) pool size was greater than the Oracle Streams pool size.

Action: Set the minimum value for the Oracle Streams AQ pool size to less than or equal to the Oracle Streams pool size.

ORA-25346: requested AQ maximum Oracle Streams Pool size *string* less than AQ minimum Oracle Streams Pool size *string*

Cause: The maximum value requested for the Oracle Streams Advanced Queuing (AQ) pool size was less than the minimum value of the Oracle Streams (AQ) pool size.

Action: Set the maximum value for the Oracle Streams AQ pool size to greater than or equal to the minimum value of the Oracle Streams AQ pool size.

ORA-25350: maximum number of concurrent transaction branches exceeded

Cause: the limit on the number of concurrent transaction branches has been reached

Action: Increase the INIT.ORA parameter 'transactions' and restart the system.

ORA-25351: transaction is currently in use

Cause: The transaction is currently used by a different session.

Action: Do not switch to a transaction attached to some other session.

ORA-25352: no current transaction

Cause: The user session is not attached to any transaction.

Action: Do not attempt to detach when there is no current transaction.

ORA-25353: branch marked for deletion

Cause: The branch specified cannot be killed immediately because another session is using the branch, but it has been marked for kill. This means it will be deleted as soon as possible after the current uninterruptable operation is completed.

Action: No action is required for the branch to be deleted.

ORA-25401: can not continue fetches

Cause: A failure occurred since the last fetch on this statement. Failover was unable to bring the statement to its original state to allow continued fetches.

Action: Reexecute the statement and start fetching from the beginning

ORA-25402: transaction must roll back

Cause: A failure occurred while a transaction was active on this connection.

Action: The client must roll back.

ORA-25403: could not reconnect

Cause: The connection to the database has been lost, and attempts to reconnect have failed.

Action: Manually reconnect.

ORA-25405: transaction status unknown

Cause: A failure occurred while a transaction was attempting to commit. Failover could not automatically determine instance status.

Action: The user must determine the transaction's status manually.

ORA-25406: could not generate a connect address

Cause: Failover was unable to generate an address for a backup instance.

Action: Contact Oracle customer support.

ORA-25408: can not safely replay call

Cause: The connection was lost while doing this call. It may not be safe to replay it after failover.

Action: Check to see if the results of the call have taken place, and then replay it if desired.

ORA-25409: failover happened during the network operation, cannot continue

Cause: The connection was lost when fetching a LOB column.

Action: Failover happened when fetching LOB data directly or indirectly. Please replay the top level statement.

ORA-25411: transaction replay was not successful

Cause: Replay was not able to restore the transaction state to match the pre-failover state.

Action: Manually determine if it is safe to resubmit the transaction.

ORA-25412: transaction replay disabled by call to *string*

Cause: The application called an Oracle Call Interface (OCI) function that was not supported with transactional failover.

Action: Set OCI_ATTR_TRANSACTIONAL_TAF to FALSE to turn off transactional

ORA-25413: transaction replay disabled by user request

Cause: The application explicitly disabled transaction replay by setting attribute OCI_ATTR_TRANSACTIONAL_TAF=FALSE.

Action: This message is informational only.

ORA-25414: Uncommitted transaction detected after TAF callback.

Cause: The Transparent Application Failover (TAF) callback started a transaction and did not commit or rollback prior to exiting.

Action: End the transaction with a COMMIT or a ROLLBACK prior to exiting the TAF callback.

ORA-25415: OCI Transaction TAF replay initiation timeout exceeded.

Cause: Oracle Call Interface (OCI) Transaction TAF replay was attempted after REPLAY_INITIATION_TIMEOUT expired. The value for REPLAY_INITIATION_TIMEOUT is configured for the service to which the application is connected.

Action: Manually recover the pending transaction.

ORA-25416: Retry current call

Cause: Failover successfully recovered an in-flight transaction

Action: Re-execute the current call

ORA-25425: connection lost during rollback

Cause: The connection was lost while issuing a rollback and the application failed over.

Action: The connection was lost and failover happened during rollback. If the transaction is not externally coordinated, then Oracle implicitly rolled back, so no action is required. Otherwise examine pending_trans\$ to determine if "rollback force" is required.

ORA-25426: remote instance does not support shared dblinks

Cause: A shared dblink is being used to connect to a remote instance that does not support this feature because it is an older version.

Action: Use a normal dblink if you need to connect to this instance.

ORA-25427: cannot downgrade database links after database link data dictionary has been upgraded

Cause: An attempt was made to downgrade after the upgrade of the database link data dictionary.

Action: Drop the database links before attempting the downgrade.

ORA-25428: authentication failure while connecting through database link

Cause: An attempt to connect using the database link failed.

Action: Ensure connection details for the database link are correct.

ORA-25429: Break request cannot be propagated over shared database link.

Cause: No call in progress over shared database link.

Action: No action required. This is an informational message only.

ORA-25430: connected user database links are not supported in proxy session

Cause: A connected user database link is being used to connect to a remote database from a proxy user session.

Action: No action required. This was an informational message only.

ORA-25436: invalid table alias: *string*

Cause: An attempt to evaluate was made, which failed because one of the table values specified had an invalid alias.

Action: Check the valid table aliases in the evaluation context, and try again with a valid alias.

ORA-25437: duplicate table value for table alias: *string*

Cause: An attempt to evaluate was made, which failed because some of the table values specified had the same table alias.

Action: Check the table values specified, and try again with only one value per table.

ORA-25438: invalid variable name: *string*

Cause: An attempt to evaluate was made, which failed because one of the variable values specified had an invalid name.

Action: Check the valid variable names in the evaluation context, and try again with a valid name.

ORA-25439: duplicate variable value for variable: *string*

Cause: An attempt to evaluate was made, which failed because some of the variable values specified had the same variable name.

Action: Check the variable names specified, and try again with only one value per variable.

ORA-25440: invalid table alias: *string*

Cause: An attempt to evaluate was made, which failed because one of the column values specified had an invalid table alias.

Action: Check the valid table aliases in the evaluation context, and try again with a valid name.

ORA-25441: duplicate column value for table alias: *string*

Cause: An attempt to evaluate was made, which failed because one of the column values supplied a value for a table alias, which already had a table value supplied.

Action: Check the table and column values specified, and try again with either a table value or column values for each table alias.

ORA-25442: too many column values for table alias: *string*

Cause: An attempt to evaluate was made, which failed because too many column values were supplied for the specified table alias.

Action: Check the column values specified, and try again with the right number of column values.

ORA-25443: duplicate column value for table alias: *string*, column number: *string*

Cause: An attempt to evaluate was made, which failed because duplicate column values were supplied for the specified table alias and column number.

Action: Check the column values specified, and try again with only one column value for each table alias, and column number.

ORA-25444: invalid ROWID: *string* for table alias: *string*

Cause: An attempt to evaluate was made, which failed because an invalid ROWID was supplied for the specified table alias.

Action: Check the column values specified, and try again with only one column value for each table alias, and column number.

ORA-25445: invalid column number: *string* for table alias: *string*

Cause: An attempt to evaluate was made, which failed because an invalid column number was supplied for the specified table alias as a part of a column value.

Action: Check the column values specified, and try again with a valid column number.

ORA-25446: duplicate column value for table alias: *string*, column: *string*

Cause: An attempt to evaluate was made, which failed because duplicate column values were supplied for the specified table alias and column name.

Action: Check the column values specified, and try again with only one column value for each table alias, and column name.

ORA-25447: encountered errors during evaluation of rule *string.string*

Cause: An attempt to evaluate was made, which failed during the evaluation of the specified rule.

Action: Check the rule and the values passed to evaluate, and try again with valid values.

ORA-25448: The *string string.string* has errors.

Cause: An attempt to load the specified rule or expression failed due to errors in the rule or expression.

Action: Check the rule or expression and retry the operation.

ORA-25449: invalid variable name: *string*

Cause: An attempt to evaluate was made, which failed because one of the attribute values specified had an invalid variable name.

Action: Check the valid variable names in the evaluation context, and try again with a valid name.

ORA-25450: error *string* during evaluation of rule set *string.string*

Cause: The specified error occurred during evaluation of the rule set.

Action: Check the error and take appropriate action.

ORA-25451: too many attribute values for variable: *string*

Cause: An attempt to evaluate was made, which failed because too many attribute values were supplied for the specified variable.

Action: Check the attribute values specified, and try again with the right number of attribute values.

ORA-25452: duplicate attribute value for variable: *string*, attribute: *string*

Cause: An attempt to evaluate was made, which failed because duplicate attribute values were supplied for the specified variable and attribute name.

Action: Check the attribute values specified, and try again with only one attribute value for each variable, and attribute name.

ORA-25453: invalid iterator: *string*

Cause: An attempt to get rule hits or to close an iterator was made, which failed because an invalid iterator was passed in.

Action: Check the iterator, and try again with a valid iterator.

ORA-25454: error during evaluation of rule set: *string.string* for iterator: *string*

Cause: An attempt to get rule hits for an iterator was made, which failed because of an error in evaluation of the specified rule set.

Action: Check the validity of the rule set and try again.

ORA-25455: evaluation error for rule set: *string.string*, evaluation context: *string.string*

Cause: An attempt to evaluate the specified rule set using the evaluation context specified failed due to some errors.

Action: Check additional errors signalled to determine the problem.

ORA-25456: rule set was modified or evaluation terminated for iterator: *string*

Cause: An attempt to get rule hits was made, which failed because the underlying rule set was modified after the iterator was returned.

Action: Try again after re-evaluating the rule set.

ORA-25457: evaluation function *string* returns failure

Cause: The specified evaluation function returned a failure during evaluation, causing evaluation to terminate.

Action: Check arguments to evaluate and retry.

ORA-25458: Value not supplied for *string string*

Cause: Variable or table column values were not supplied for evaluation.

Action: Supply all the required variable and column data points for Independent Expression Evaluation.

ORA-25459: Data conversion for *string string* failed

Cause: The attempt to convert data to the data type of the variable or column failed.

Action: Supply the correct data for variable or column.

ORA-25461: rule set not specified

Cause: An attempt to evaluate was made, which failed because the ruleset name specified was null.

Action: Check the rule set name, and try again with a valid name.

ORA-25462: evaluation context not specified

Cause: An attempt to evaluate was made, which failed because the evaluation context specified was null.

Action: Check the evaluation context name, and try again with a valid name.

ORA-25463: table alias not specified

Cause: An attempt to evaluate was made, which failed because one of the table values specified had a NULL alias name.

Action: Check the list of table values, and try again with a valid alias name.

ORA-25464: ROWID not specified for table alias: *string*

Cause: An attempt to evaluate was made, which failed because the table value for the specified table alias had a NULL ROWID.

Action: Check the list of table values, and try again with a valid ROWID.

ORA-25465: variable name not specified

Cause: An attempt to evaluate was made, which failed because one of the variable values specified had a NULL variable name.

Action: Check the list of variable values, and try again with a valid variable name.

ORA-25466: data not specified for variable name: *string*

Cause: An attempt to evaluate was made, which failed because the variable value for the specified variable name had NULL data.

Action: Check the list of variable values, and try again with valid data.

ORA-25467: table alias not specified

Cause: An attempt to evaluate was made, which failed because one of the column values specified had a NULL alias name.

Action: Check the list of column values, and try again with a valid alias name.

ORA-25468: column name not specified for alias: *string*

Cause: An attempt to evaluate was made, which failed because one of the column values for the specified alias name had a NULL column name.

Action: Check the list of column values, and try again with a valid column name.

ORA-25469: data not specified for alias: *string* column name: *string*

Cause: An attempt to evaluate was made, which failed because the column value for the specified alias and column name had NULL data.

Action: Check the list of column values, and try again with valid data.

ORA-25470: duplicate attribute value for variable: *string*

Cause: An attempt to evaluate was made, which failed because one of the attribute values supplied a value for a variable, which already had a variable value supplied.

Action: Check the variable and attribute values specified, and try again with either a variable value or attribute values for each variable.

ORA-25471: attribute name not specified for variable: *string*

Cause: An attempt to evaluate was made, which failed because one of the attribute values for the specified variable had a NULL attribute name.

Action: Check the list of attribute values, and try again with a valid attribute name.

ORA-25472: maximum open iterators exceeded

Cause: The open rule hit iterators in the session exceeded $2 * OPEN_CURSORS$.

Action: Close some rule hit iterators.

ORA-25473: cannot store *string* in rule action context

Cause: The user attempted to put unsupported data types, such as LOBs and evolved ADTs, into the rule action context.

Action: Use only supported data types in rule action context.

ORA-25476: use pre-5523578 behaviour when looking up enabled roles

Cause: N/A

Action: Derive the enabled roles under the rules engine using the old method that existed before the fix to bug 5523578.

ORA-25500: database is not open

Cause: Database must be open to perform ALTER SYSTEM QUIESCE RESTRICTED command.

Action: Open the database and retry this command.

ORA-25501: ALTER SYSTEM QUIESCE RESTRICTED command failed

Cause: Database resource manager failed to change plan.

Action: Look at the alert logs to see detailed description of the error.

ORA-25502: concurrent ALTER SYSTEM QUIESCE/UNQUIESCE command is running

Cause: There is a concurrent ALTER SYSTEM QUIESCE RESTRICTED or ALTER SYSTEM UNQUIESCE command running in the system.

Action: Contact the database administrator who is responsible for the concurrent command.

ORA-25503: cannot open database because the database is being quiesced

Cause: Database cannot be opened because the system is being or has been quiesced.

Action: Open the database after the system has been quiesced.

ORA-25504: the system is already in quiesced state

Cause: Cannot quiesce the system because the system is already quiesced.

Action: n/a

ORA-25505: the system is not in quiesced state

Cause: Cannot unquiesce the system because the system is not in quiesced state.

Action: n/a

ORA-25506: resource manager has not been continuously on in some instances

Cause: Cannot quiesce the system because resource manager has not been continuously on since startup in this or some other instances.

Action: n/a

ORA-25507: resource manager has not been continuously on

Cause: Cannot quiesce the system because resource manager has not been continuously on since startup.

Action: n/a

ORA-25508: database is not mounted

Cause: Database must be mounted to perform ALTER SYSTEM UNQUIESCE command.

Action: Mount the database and retry this command.

ORA-25509: operation on "*string*"."*string*".*string* not allowed

Cause: A column has been added to a replicated table, but replication support processing has not completed.

Action: Wait until replication support processing has completed before updating the column

ORA-25510: quiesce not supported for the root container

Cause: Could not quiesce the root container.

Action: This operation is not supported for the root container.

ORA-25511: quiesce not supported for pluggable databases

Cause: Could not quiesce the pluggable database.

Action: This operation is not supported for pluggable databases.

ORA-25526: bad format of `_DB_MTTR_SIM_TARGET`: *string*

Cause: One value in `_DB_MTTR_SIM_TARGET` is not a valid MTTR.

Action: Alter the value of `_DB_MTTR_SIM_TARGET`.

ORA-25527: bad format of `_DB_MTTR_SIM_TARGET`

Cause: One value in `_DB_MTTR_SIM_TARGET` is empty.

Action: Set the value of `_DB_MTTR_SIM_TARGET` properly.

ORA-25528: too many candidate MTTRs are specified in `_DB_MTTR_SIM_TARGET`

Cause: Too many candidate MTTRs are specified in `_DB_MTTR_SIM_TARGET`.

Action: Alter the value of `_DB_MTTR_SIM_TARGET`.

ORA-25530: `FAST_START_MTTR_TARGET` is not specified

Cause: An attempt to start MTTR advisory was made, which failed because `FAST_START_MTTR_TARGET` was not specified.

Action: Set `FAST_START_MTTR_TARGET`.

ORA-25531: MTTR specified is too small: *string*

Cause: The current `FAST_START_MTTR_TARGET` setting or a candidate MTTR setting is too small for MTTR advisory.

Action: Set a larger `FAST_START_MTTR_TARGET` or candidate MTTR.

ORA-25532: MTTR specified is too large: *string*

Cause: The current `FAST_START_MTTR_TARGET` setting or a candidate MTTR setting is too large for MTTR advisory.

Action: Set a smaller `FAST_START_MTTR_TARGET` or candidate MTTR.

ORA-25533: `FAST_START_IO_TARGET` or `LOG_CHECKPOINT_INTERVAL` is specified

Cause: An attempt to start MTTR advisory was made, which failed because either `FAST_START_IO_TARGET` or `LOG_CHECKPOINT_INTERVAL` was specified.

Action: Set `FAST_START_IO_TARGET` and `LOG_CHECKPOINT_INTERVAL` to 0.

ORA-25950: missing where clause in join index specification

Cause: An attempt to create a join index was made, which failed because no valid where clause was found.

Action: Ensure that a where clause with valid join conditions is specified in the create index statement.

ORA-25951: join index where clause cannot contain OR condition

Cause: An attempt to create a join index was made, which failed because there was an OR branch in the where clause.

Action: Reformulate the where clause without using ORs.

ORA-25952: join index must only contain inner equi-joins

Cause: An attempt to create a join index was made, which failed because it included a predicate which wasn't an equi-inner join.

Action: Remove the inappropriate predicate.

ORA-25953: join index cannot be a functional index

Cause: An attempt to create a join index was made, which failed because a functional index was requested or necessary (such as is the case for indexing columns using timezone).

Action: Remove any functional indexing columns.

ORA-25954: missing primary key or unique constraint on dimension

Cause: An attempt to create a join index was made, which failed because one or more dimensions did not have an appropriate constraint matching the join conditions.

Action: Ensure that the where clause is correct (contains all of the constraint columns) and that an enforced constraint is on each dimension table.

ORA-25955: all tables must be joined in the where clause

Cause: An attempt to create a join index was made, which failed because one of the tables in the from clause did not appear in the where clause.

Action: Ensure that the where clause contains all from clause tables.

ORA-25956: join index cannot be created on tables owned by SYS

Cause: An attempt to create a join index was made, which failed because one of the tables was owned by SYS.

Action: Ensure that no join index related table is owned by SYS.

ORA-25957: join index where clause cannot contain cycles

Cause: An attempt to create a join index was made, which failed because the where clause contains a cycle.

Action: Ensure that the where clause is in the form of a star or snowflake schema.

ORA-25958: join index where clause predicate may only contain column references

Cause: An attempt to create a join index was made, which failed because a predicate in the where clause contained something other than a simple column.

Action: Ensure that the where clause only contains columns.

ORA-25959: join index must be of the bitmap type

Cause: An attempt to create a join index was made, which failed because no bitmap keyword was used.

Action: Make the index a bitmap index.

ORA-25960: join index cannot be based on a temporary table

Cause: An attempt to create a join index was made, which failed because one of the tables was temporary.

Action: Ensure no underlying tables are temporary.

ORA-25961: join index prevents dml cascade constraint operation

Cause: An attempt to execute dml resulted in the need to perform dml on another table because of a cascade constraint. The join index only allows one of its underlying tables to be modified at a time.

Action: Drop the join index or remove the constraint.

ORA-25962: join index prevents multitable insert or merge

Cause: An attempt to execute an merge or multitable insert on a table that was used to create a bitmap join index was made. Merge and multitable inserts are not supported on tables that were used to create a bitmap join index.

Action: Drop the join index.

ORA-25963: join index must be created on tables

Cause: An attempt to create a join index was made, which failed because the from clause contains non table object.

Action: Ensure that the from clause only contains tables.

ORA-25964: column type incompatible with join column type

Cause: The datatype of the join column is incompatible with the datatype of the joined column.

Action: Select a compatible datatype for the join column.

ORA-25965: fact table must be included in the from clause

Cause: An attempt to create a join index was made, which failed because the from clause does not contain the fact table.

Action: Ensure that the from clause contains the fact table.

ORA-25966: join index cannot be based on an index organized table

Cause: An attempt to create a join index was made, which failed because one of the tables was an index organized table.

Action: Ensure no underlying tables are index organized.

ORA-26000: partition load specified but table *string* is not partitioned

Cause: The Loader control file contains a PARTITION clause but the table being loaded is not partitioned.

Action: Remove the partition specification from the SQL*Loader control file and retry the load.

ORA-26001: Index *string* specified in SORTED INDEXES does not exist on table *string*

Cause: A nonexistent index was specified in the SORTED INDEXES clause.

Action: Do not specify as a SORTED INDEX.

ORA-26002: Table *string* has index defined upon it.\n

Cause: Parallel load was specified into a table which has index defined upon it.

Action: Drop index(es) defined upon table, or don't use parallel load, or use SKIP_INDEX_MAINTENANCE option.

ORA-26003: parallel load not supported for index-organized table *string*.\n

Cause: Parallel load is not supported for index-organized tables.

Action: load the index-organized table without the PARALLEL option.

ORA-26004: Tables loaded through the direct path may not be clustered\n

Cause: User attempted to load a clustered table via the direct path.

Action: Use the conventional path.

ORA-26005: Invalid handle for direct path load\n

Cause: In direct path load, the handle passed in does not match the type listed.

Action: Verify the handle and type are correct.

ORA-26006: Incorrect bind variable in column *string*'s sql expression - *string*\n

Cause: In direct path load, the bind variables listed in the sql expression do not match the input argument column names.

Action: Verify all the input arguments are listed in the expression as bind variables, and all the bind variables are listed as input arguments to the expression. Or verify that there were no errors in executing the OCI statements when getting the bind variable list.

ORA-26007: invalid value for SETID or OID column\n

Cause: The value passed in a Direct Path API stream for a column containing a SETID or OID has an invalid value. SETIDs and Object IDs must be either 16 bytes of RAW data or 32 bytes of hexadecimal characters.

Action: Regenerate the Direct Path API stream with a valid value for the SETID column.

ORA-26008: Invalid syntax or bind variable in SQL string for column *string*.\n*string*\n

Cause: See following error message for more information. A SQL string cannot have quoted strings improperly terminated. A bind variable in a SQL string cannot have a length of 0, cannot exceed maximum length of 30 characters, and cannot be missing a double quote.

Action: Fix the SQL string. See following error for more information.

ORA-26009: stream verification error: *string*\n

Cause: An error has occurred in a Data Pump stream verification operation.

Action: Contact Oracle Support Services.

ORA-26010: Column *string* in table *string* is NOT NULL and is not being loaded\n

Cause: A column which is NOT NULL in the database is not being loaded and will cause every row to be rejected.

Action: Load the column by specifying the NOT NULL column in the INTO TABLE clause in the SQL*Loader control file.

ORA-26011: Cannot load type *string* into column *string* in table *string*\n

Cause: A column can only store data of type declared for that column. And a substitutable column can only store data of valid subtypes of the supertype declared for that column.

Action: Check that the type or subtype specified is valid for that column.

ORA-26012: header in file *string* has an incompatible version number\n

Cause: A dump file was specified for a load operation whose version number is incompatible with the dump file version currently produced by the Oracle server on the system. Usually this message indicates that the dump file was produced by a newer version of the Oracle server.

Action: Load this dump file using the same version of the Oracle server that created the file.

ORA-26013: List allocated may not be big enough\n

Cause: There seems to be a discrepancy between the size for a list or buffer allocated by direct path api and the size needed.

Action: Contact Oracle Customer Support.

ORA-26014: unexpected error on *string string* while retrieving *string\nstring*

Cause: The SQL error was returned from an OCISmtExecute call.

Action: Correct the SQL error that was returned.

ORA-26015: Array column *string* in table *string* is not supported by direct path\n

Cause: User attempted to load an array column via the direct path.

Action: Use the conventional path.

ORA-26016: Virtual column *string* in table *string.string* cannot be loaded by direct path\n

Cause: You attempted to load an virtual column using the direct path.

Action: Virtual columns cannot be loaded using the direct path.

ORA-26017: global indexes not allowed for direct path load of table partition *string*

Cause: Global indexes are defined on a table when direct path loading a single partition of the table.

Action: n/a

ORA-26018: Column *string* in table *string* does not exist\n

Cause: Column specified in the loader control file does not exist.

Action: Make sure the column exists and that you have privileges on it. Correct the loader control file if it is wrong.

ORA-26019: Column *string* in table *string* of type *string* not supported by direct path\n

Cause: The Specified column of SQL column type %s is not supported by the direct path loader.

Action: If the column is NULLable, remove it from the control file description. Then it will be loaded as a NULL.

ORA-26020: index *string.string* loaded successfully with *string* keys

Cause: Non-partitioned index information put to loader log file.

Action: None. Informational only.

ORA-26021: index *string.string* partition *string* loaded successfully with *string* keys

Cause: Partitioned index information put to loader log file.

Action: None. Informational only.

ORA-26022: index *string.string* was made unusable due to:

Cause: A Non-partitioned index was made index unusable due to the error displayed below this error.

Action: Depending on the error, either rebuild the index, or drop and re-create it.

ORA-26023: index *string.string* partition *string* was made unusable due to:

Cause: A partition of a partitioned index was made index unusable due to error displayed below this error.

Action: Depending on the error, either rebuild the index partition, or drop and re-create the entire index.

ORA-26024: SKIP_UNUSABLE_INDEXES requested and index segment was initially unusable

Cause: User requested SKIP_UNUSABLE_INDEXES option, and the index segment * was in unusable state prior to the beginning of the load.

Action: Informational only. User will need to either rebuild the index * or index partition, or re-create the index.

ORA-26025: SKIP_INDEX_MAINTENANCE option requested

Cause: User requested that index maintenance be skipped on a direct path load.

Action: The listed index was put into Index Unusable state due to the user requesting that index maintenance be skipped. Either rebuild the index or index partitions, or drop and re-create the index.

ORA-26026: unique index *string.string* initially in unusable state

Cause: A unique index is in IU state (a unique index cannot have * index maintenance skipped via SKIP_UNUSABLE_INDEXES).

Action: Either rebuild the index or index partition, or use * SKIP_INDEX_MAINTENANCE if the client is SQL*Loader.

ORA-26027: unique index *string.string* partition *string* initially in unusable state

Cause: A partition of a unique index is in IU state (a unique index * cannot have index maintenance skipped via SKIP_UNUSABLE_INDEXES).

Action: Either rebuild the index or index partition, or use * SKIP_INDEX_MAINTENANCE if the client is SQL*Loader.

ORA-26028: index *string.string* initially in unusable state

Cause: An index is in IU state prior to the beginning of a direct * path load, it cannot be maintained by the loader.

Action: Either rebuild the index, re-create the index, or use either * SKIP_UNUSABLE_INDEXES or SKIP_INDEX_MAINTENANCE (Sql*Loader only).

ORA-26029: index *string.string* partition *string* initially in unusable state

Cause: A partition of an index is in IU state prior to the beginning * of a direct path load, it cannot be maintained by the loader.

Action: Either rebuild index partition, re-create the index, or use either * SKIP_UNUSABLE_INDEXES or SKIP_INDEX_MAINTENANCE (Sql*Loader only).

ORA-26030: index *string.string* had *string* partitions made unusable due to:

Cause: A logical index error occurred on a partitioned index which * affected one or more index partitions, which are listed below * this message.

Action: The affected index partitions will have to be re-built, or, the * entire index dropped and re-created.

ORA-26031: index maintenance error, the load cannot continue

Cause: A index error occurred during the index maintenance phase of * a direct path load. The load cannot continue. See error message * below this message.

Action: See action for the error message which follows this one.

ORA-26032: index *string.string* loading aborted after *string* keys

Cause: An index error occurred during direct-load of an index-organized table. * Loading had to be aborted. No rows were loaded.

Action: Check the key just following the number of keys mentioned above. * This key caused the index problem mentioned in an earlier message. *

ORA-26033: column *string.string* encryption properties differ for source or target table

Cause: The source and destination columns did not have the same * encryption properties.

Action: For security reasons, check that the source and target table have * the same encryption properties. *

ORA-26034: Column *string* does not exist in stream\n

Cause: Column specified in the column list does not exist in the stream.

Action: Make sure the column exists or remove it from the list.

ORA-26035: Error attempting to encrypt or decrypt column

Cause: An error occurred while attempting to encrypt or decrypt * a database column.

Action: Verify correct encryption key was specified. *

ORA-26036: subpartition load specified but table *string* is not subpartitioned\n

Cause: The Loader control file contains a PARTITION clause but the table being loaded is not subpartitioned.

Action: Remove the subpartition specification from the SQL*Loader control file and retry the load.

ORA-26037: must specify partition name(s) for system partitioned table *string*\n

Cause: An attempt was made to load a system partitioned table with no partition name(s) specified.

Action: Specify the partition name(s) explicitly.

ORA-26038: attempt to write audit record for SQL*Loader direct path load of *string.string* failed with error code: *number*\n

Cause: An attempt to write an audit record during a SQL*Loader direct path load failed.

Action: Contact Oracle Support Services.

ORA-26040: Data block was loaded using the NOLOGGING option

Cause: Trying to access data in block that was loaded without * redo generation using the NOLOGGING/UNRECOVERABLE option

Action: Drop the object containing the block.

ORA-26041: DATETIME/INTERVAL datatype conversion error

Cause: The column could not be converted from DATETIME * datatype to internal DATETIME/CHARACTER datatype.

Action: Contact Oracle Customer Support.

ORA-26045: REF column *string* expects *string* arguments; found *string*.

Cause: The number of arguments for the REF column is incorrect.

Action: Specify the correct number of input arguments for REFs. 1. Unscoped system-generated REFs can have exactly 1 or 2 input arguments. a) It has exactly 1 input argument (one for the OID value) if a fixed table name was specified through OCI_DIRPATH_EXPR_REF_TBLNAME. b) It has exactly 2 input arguments (one for the table name and one for the OID value) if a fixed table name was not specified through OCI_DIRPATH_EXPR_REF_TBLNAME. 2. Scoped system-generated REFs can have 1 or 2 input arguments. Because a table name argument is not needed for a scoped ref, only 1 argument (OID value) is expected. But if the table name argument is given, it's still accepted. 3. Scoped primary-key REFs with N columns in its primary-key OID can have N or N+1 input arguments. Because a table name argument is not needed for a scoped ref, only N arguments (making up the OID value) is expected. But if the table name argument is given, it's still accepted.

ORA-26046: REF column *string* expects scoped table name *string*; user passed in *string*.

Cause: The scoped table name passed in by the user does not match the name in the schema.

Action: Specify the correct table name for the scoped REF column.

ORA-26048: Scoped REF column has wrong table name.

Cause: The scoped table name passed in by the user does not match the name in the schema.

Action: Specify the correct table name for the scoped REF column.

ORA-26049: Unscoped REF column has non-existent table name.

Cause: The table name passed in by the user does not exist in the schema.

Action: Specify a valid table name for the unscoped REF column.

ORA-26050: Direct path load of domain index is not supported for this column type.

Cause: Direct path can not load a domain index of that column type.

Action: Drop the index and try again or load using conventional path.

ORA-26051: internal error parsing packed decimal format string

Cause: A packed decimal field with a non-zero scale factor is mapped to a character column. In order to perform the datatype conversion, a numeric format string must be created based on the input field's precision and scale specifications. Direct path loader encountered an error in creating this format string.

Action: Examine the packed decimal field's precision and scale specifications and make sure that they contain valid values.

ORA-26052: Unsupported type *number* for SQL expression on column *string*.\n
Cause: The direct path api does not support a SQL expression on a column of that type.

Action: Make sure the types are correct.

ORA-26053: Row was not loaded due to conversion error.\n

Cause: The current row was not loaded due to a conversion error.

Action: Continue with the load anyways. 260xx - 260xx Direct Path API

ORA-26054: Direct Path Context prepared for a different mode than operation requested.\n

Cause: The user prepared the direct path context for one operation (Load, Unload, Convert), but then tried to perform a different operation.

Action: Make sure the direct path context mode and operation matches.

ORA-26055: Invalid buffer specified for direct path unload\n

Cause: The user specified a zero length or null buffer to be used for the Direct Path Unload operation.

Action: Specify a valid buffer and length.

ORA-26056: Requested direct path operation on a view is not supported.\n

Cause: An attempt was made to load into a view using direct path that has user-defined types, XML data, object type table or SQL expressions.

Action: Do not attempt to use direct path when loading a view that has nonscalar columns or when using SQL expressions on input columns.

ORA-26057: Conversion is not necessary for this direct path stream.\n

Cause: User attempted to convert a direct path stream that does not require conversion.

Action: Load the stream without conversion it.

ORA-26058: unexpected error fetching metadata for column *string* in table *string*\n

Cause: The direct path API encountered an unexpected error while retrieving metadata for a column.

Action: Contact Oracle support.

ORA-26059: Data is too large for column *string*\n

Cause: The direct path API encountered a column that can not be loaded because the input data is too large for a column.

Action: Make the target column larger.

ORA-26060: Can not convert type identifier for column *string*\n

Cause: The direct path API encountered a type identifier for a column that can not be loaded because a mapping can not be found for the input value.

Action: Verify the input data.

ORA-26061: Concurrent direct unloads is not allowed.\n

Cause: User attempted a direct unload when another is still in progress.

Action: Complete the current direct unload before starting another.

ORA-26062: Can not continue from previous errors.\n

Cause: User attempted to continue a direct path load after receiving an error which indicates the load can not continue.

Action: Address the original error that was returned.

ORA-26063: Can not flashback to specified SCN value - Wrap: *string* Base: *string*.\n

Cause: User specified an SCN which occurs before the last time the table definition was modified.

Action: Specify a more recent SCN.

ORA-26064: Invalid SCN specified - Wrap: *string* Base: *string*.\n

Cause: User specified an invalid SCN.

Action: Specify a valid SCN.

ORA-26065: check constraint cannot reference column, *string*, in direct path load\n

Cause: An enabled check constraint was found on a column stored as a lob.

Action: Either disable the check constraint before loading the table data * using the direct path mode, or use the conventional path mode * instead.

ORA-26076: cannot set or reset value after direct path structure is allocated

Cause: Client attempted to set or reset the number of rows in a direct path * structure after it has already been allocated and initialized. * Attributes used is one of the following: * - OCI_ATTR_NUM_ROWS: to set # of rows in a direct path column array * - OCI_ATTR_DIRPATH_DCACHE_SIZE: to set size of a date cache * (default is 0) * - OCI_ATTR_DIRPATH_DCACHE_DISABLE: to set whether date cache will be * disabled on overflow (default is FALSE)

Action: Set the following attributes before: * - OCI_ATTR_NUM_ROWS: before calling OCIHandleAlloc for column array * - OCI_ATTR_DIRPATH_DCACHE_SIZE: before calling OCIDirPathPrepare * - OCI_ATTR_DIRPATH_DCACHE_DISABLE: before calling OCIDirPathPrepare

ORA-26077: direct path column array is not initialized

Cause: Client attempted to allocate a column array for a direct path * function context before allocating a column array for the * table-level direct path context.

Action: Allocate the table-level direct path context's column array * via OCIHandleAlloc before allocating column arrays for * direct path function contexts.

ORA-26078: file "*string*" is not part of database being loaded\n

Cause: A parallel load file was specified which is not part * of the database.

Action: Check filename and pathname for correctness.

ORA-26079: file "*string*" is not part of table *string.string*\n

Cause: A parallel load file was specified which is not in the * tablespace of the table being loaded.

Action: Check to make sure that the specified parallel load file * is in the tablespace of the table being loaded.

ORA-26080: file "*string*" is not part of table *string.string* partition *string*\n

Cause: A parallel load file was specified which is not in the * tablespace of the table (partition, subpartition) being loaded. * When a partitioned table is being loaded, the

file must be * in the tablespace of every partition or subpartition * (i.e. each (sub)partition must be in the same tablespace).

Action: Specify a different parallel load file, or no file at all.

ORA-26082: load of overlapping segments on table *string.string* is not allowed

Cause: Client application is attempting to do multiple direct path load * operations on the same table, but the segments overlap.

Action: Check the partition names (subname attribute of the direct path * context) being loaded. Make sure you are not loading a table, *, and a partition of the same table. Make sure you are not * loading a partition, and a sub-partition within the same * partition.

ORA-26083: unsupported direct path stream version *string*

Cause: The stream version requested is not supported by the server.

Action: Check to make sure that the VERSION attribute of the direct * stream is not being set to an invalid value.

ORA-26084: direct path context already finished

Cause: An OCIDirPathLoadStream operation was attempted after * OCIDirPathFinish was called. Once a direct path operation * has been finished, no more data can be loaded.

Action: Check program logic to make sure OCIDirPathLoadStream is * not called after OCIDirPathFinish.

ORA-26085: direct path operation must start its own transaction

Cause: A direct path operation is being attempted within a transaction * that has already been started.

Action: Commit the transaction and Prepare the direct path operation again.

ORA-26086: direct path does not support triggers

Cause: A direct path operation is being attempted on a table which * has enabled triggers.

Action: Disable the triggers on the table and try again.

ORA-26088: scalar column "*string*" must be specified prior to LOB columns

Cause: All scalar columns (i.e. non-LOB and non-LONG columns) must be * specified by the client of the direct path API prior to * specifying any LOB columns.

Action: Specify all scalar columns prior to specifying any LOB columns.

ORA-26089: LONG column "*string*" must be specified last

Cause: A client of the direct path API specified a LONG column to be * loaded, but the LONG column was not the last column to be * specified.

Action: Specify the LONG column last.

ORA-26090: row is in partial state

Cause: A direct path operation is being finished or a data save request * has been made, but the table for which the request is being made * on has a row in partial state. The row must be completed before * the segment high water marks can be moved.

Action: Either complete the row, or abort the direct path operation.

ORA-26091: requested direct path operation not supported

Cause: A direct path operation was requested that is not supported

Action: Do not use that operation. Currently, UNLOAD is not supported.

ORA-26092: only LONG or LOB types can be partial

Cause: A column which is not a LONG or LOB had the * OCI_DIRPATH_COL_PARTIAL flag associated with it. * Only LONG or LOB type columns can be loaded in pieces.

Action: Do not use the OCI_DIRPATH_COL_PARTIAL flag for the column.

ORA-26093: input data column size (*number*) exceeds the maximum input size (*number*)

Cause: The user attempted to specify a column size (%d) that exceeded * the maximum allowable input size (%d)."

Action: Make sure the input column metadata matches the column definition.

ORA-26094: stream format error: input column overflow

Cause: An input stream contained data for more input columns * than specified by the client of the direct path API.

Action: Make sure that the stream being loaded is for the * correct table. Check initialization sequence.

ORA-26095: unprocessed stream data exists

Cause: Either a OCIDirPathLoadStream call was made which provided * more stream data prior to the server being able to fully * process the stream data that it already has, or a * OCIDirPathFinish call was made when the server had * unprocessed stream data.

Action: Most likely an application mis-use of the direct path API. * Make sure that the stream is not being reset inadvertently * prior to any previous stream data being processed, or, that * OCIDirPathFinish is not being called prematurely (i.e. stream * pushed, error encountered and LoadStream not called to process * the remainder of the stream before Finish is called.)

ORA-26096: transfer size too small for row data (*number* bytes required)

Cause: Either the transfer buffer size specified, or the default * transfer buffer size (if you did not specify a size), is * too small to contain a single row of the converted row data.

Action: Set the transfer buffer size attribute of the direct path * context to be larger.

ORA-26097: unsupported conversion for column *string* (from type *number* to type *number*)

Cause: The direct path api does not support the required conversion.

Action: Make sure the types are correct. *

ORA-26098: direct path context is not prepared

Cause: A direct path api function was called with a direct path * context which has not been prepared.

Action: Make sure all necessary attributes in the direct path * context have been set, and the context is prepared via * OCIDirPathPrepare.

ORA-26099: direct path context is already prepared

Cause: OCIDirPathPrepare was called with a context that has already * been prepared.

Action: Free the direct path context, set necessary attributes, and * call OCIDirPathPrepare.

ORA-26100: unused error

ORA-26101: tablespace # in file header is *string* rather than *string* for file *string*

Cause: The tablespace number in the file header is inconsistent with that in the control file.

Action: Check if the control file has been migrated correctly. Retry with the correct control file and data file.

ORA-26102: relative file # in file header is *string* rather than *string* for file *string*

Cause: The relative file number in the file header is inconsistent with that in the control file.

Action: Check if the control file has been migrated correctly. Retry with the correct control file and data file.

ORA-26103: V6 or V7 data file used to create control file

Cause: The file header of the referenced file is in V6 or V7 format.

Action: Either remove the file from the create control file command, or somehow migrate the file header to V8 format.

ORA-26500: error on caching "*string*".*string*"

Cause: Attempt to cache the replication information which is unavailable in the catalog for the object.

Action: Use dbms_reputil.sync_up_rep to validate the replication catalog, or use dbms_reputil.make_internal_pkg to validate internal package.

ORA-26501: RepAPI operation failure

Cause: An external RepAPI operation failed.

Action: consult detail error message.

ORA-26502: error resignal

Cause: An internal service failed and signalled an error"

Action: consult detail error message.

ORA-26503: internal RepAPI operation failure on object *string.string*

Cause: An unexpected internal RepAPI failure was detected

Action: Contact Oracle support.

ORA-26504: operation not implemented

Cause: The caller requested a RepAPI operation that was not implemented

Action: Do not issue this call.

ORA-26505: unexpected internal null

Cause: An internal buffer control structure was NULL

Action: Verify that sufficient memory resources are available to RepAPI.

ORA-26506: null global context

Cause: An internal buffer control structure was NULL

Action: Verify that sufficient memory resources are available to RepAPI.

ORA-26507: null master connection

Cause: The master connection handle was or became invalid.

Action: Verify that the master connection is valid.

ORA-26508: null materialized view connection

Cause: The client connection handle was or became invalid.

Action: Verify that the client connection is valid.

ORA-26509: null materialized view control structure

Cause: An internal materialized view control structure could not be obtained.

Action: Check that the owner and users provided are correct.

ORA-26510: materialized view name: '*string*' is greater than max. allowed length of *string* bytes

Cause: The specified materialized view name was too long.

Action: Shorten the materialized view name.

ORA-26511: master table '*string.string*' not found

Cause: A RepAPI operation was attempted against a non-existent or invalid master table

Action: Verify that the master table object exists.

ORA-26512: error pushing transaction to def\$error

Cause: An unexpected error occurred while sending an def\$error rpc to the master site

Action: Verify that the DBMS_DEFER package is valid and executable by the RepAPI client. Contact the local or master site administrator, if necessary.

ORA-26513: push error: master proc. *string*\$RP.*string* failed for trans:*string* seq:*string*

Cause: A conflict/error occurred at the master site while executing a \$RP.rep_insert(), rep_update(), or rep_delete() function which was not handled by conflict resolution logic at the master.

Action: Notify master site system administrator or DBA.

ORA-26514: object '*string.string*' not found

Cause: The specified object was expected but not found.

Action: Verify that the specified object exists and is valid.

ORA-26515: no master log available for '*string.string*'

Cause: The specified master log was not found or available for the named table.

Action: Create the master log at the master site or correct any problems that may exist with the log.

ORA-26516: no push transaction acknowledgement

Cause: RepAPI was unable to confirm that the last pushed transaction was successfully committed by the master site.

Action: Verify that the communications link between the local site and the master site is still valid. If the transaction has not been committed at the master, repush the transaction.

ORA-26517: materialized view control entry for '*string.string*' was not found

Cause: The specified materialized view catalog control record was not found.

Action: Verify that the local materialized view catalog is valid and that the local materialized view is properly defined.

ORA-26518: push queue synchronization error detected

Cause: Client tried to repush a transaction that has already been committed at the master site. A common cause of this problem is an error at the local site in initializing or updating the local site transaction sequence mechanism.

Action: Verify that transaction data that RepAPI was attempting to repush to the master site exists at the master table and is valid and consistent with the local site. If this error occurs, redundantly identified transactions are ignored and then purged from the local updatable materialized view logs. Check that the local site is correctly assigning new transaction IDs and is not accidentally generating non-unique values.

ORA-26519: no memory available to allocate

Cause: There was no memory left for the RepAPI process. This error may occur when RepAPI is trying to allocate a new table buffer area.

Action: Shutdown one or more local applications to attempt to free heap memory and retry the RepAPI operation.

ORA-26520: internal memory failure

Cause: An internal memory error was detected.

Action: Check if other errors have occurred or determine if any local application may have corrupted the memory subsystem.

ORA-26521: rpc initialization error

Cause: An error occurred during the initialization of a PL/SQL rpc.

Action: Verify that the procedure to be invoked exists and is valid at the master site and is executable by the RepAPI user.

ORA-26522: rpc execution error

Cause: An error occurred during the execution of a PL/SQL rpc.

Action: Check the error messages from the remote procedure and fix any remote site problems that may be preventing the execution of the invoked rpc.

ORA-26523: rpc termination error

Cause: An error occurred during the termination of a PL/SQL rpc. This is usually caused by master site being unable to close an opened cursor or if RepAPI cannot deallocate internal memory.

Action: Fix any server side problems first, determine if the RepAPI memory subsystem has been corrupted.

ORA-26524: nls subsystem initialization failure for product=*string*, facility=*string*

Cause: The NLS product/facility error message file could not be located or properly initialized.

Action: Check that the error message directory and file(s) have been properly installed.

ORA-26525: session connection attempt failed for *string* (@*string*)

Cause: A connection could not be established to the specified database using the provided connection string.

Action: Check that the user, password, connect string, names services, network, and any remote site listener process are properly installed and working.

ORA-26526: materialized view sql ddl parse/expansion failed for *string.string*

Cause: The client sql materialized view definition query could not be properly parsed by the master Oracle site.

Action: Check that materialized view ddl sql is compatible with the currently connected version of Oracle and does not violate any of the RepAPI sql limitations or restrictions.

ORA-26527: local store callback init phase failed for '*string.string*'

Cause: The client callback failed during its INIT phase for the named object.

Action: Verify that the objects referenced by the client callback exist and are valid. Refer to the vendor-specific callback error code reference to diagnose the local problem. Record all error state and notify Oracle support.

ORA-26528: local store callback proc phase failed for '*string.string*'

Cause: The client callback failed during its PROC phase for the named object.

Action: Refer to the vendor-specific callback error code reference to diagnose the local problem. Record all error state and notify Oracle support.

ORA-26529: local store callback term phase failed for '*string.string*'

Cause: The client callback failed during its TERM phase for the named object.

Action: Refer to the vendor-specific callback error code reference to diagnose the local problem. Record all error state and notify Oracle support.

ORA-26530: unable to build materialized view refresh control list

Cause: The materialized view control list could not be constructed. This is generally the result of an error while accessing the local materialized view catalog.

Action: Verify that the named materialized view(s) are properly defined and valid.

ORA-26532: replication parallel push simulated site failure

Cause: A parallel push executed with event 26531 enabled raises this error to simulation failure of network or destination site.

Action: Do not enable the event for normal operation.

ORA-26534: collision: tranID *number* ignored and purged

Cause: A transaction that was pushed had a transaction ID that collided with a transaction that was previously pushed and committed at the master site.

Action: See the action section for E_QUEUESYNC (26518).

ORA-26535: *number* byte row cache insufficient for table with rowsize=*number*

Cause: A transaction that was pushed had a transaction ID that collided with a transaction that was previously pushed and committed at the master site.

Action: Increase the RepAPI row buffer size or reduce the width of the replicated tables.

ORA-26536: refresh was aborted because of conflicts caused by deferred transactions

Cause: There are outstanding conflicts logged in the DEFERROR table at the materialized view's master site.

Action: Resolve the conflicts in the master DEFERROR table and refresh again after the table is empty. Alternatively, refresh with REFRESH_AFTER_ERRORS, even if there are conflicts in the master's DEFERROR table. Proceeding despite conflicts can result in an updatable materialized view's changes appearing to be temporarily lost, until a refresh succeeds after the conflicts are resolved.

ORA-26562: last RepAPI error

ORA-26563: renaming this table is not allowed

Cause: Attempt to rename a replicated table, an updatable materialized view table or the master table of a materialized view for which a materialized view log has been created.

Action: If desired, unregister the replicated table with `dbms_repcat.drop_master_reobject`, or use the recommended procedure to rename the master table of a materialized view.

ORA-26564: *string* argument is not of specified type

Cause: User passed type of the given argument number doesn't match with the type of the argument in the stored arguments.

Action: Invoke correct type procedure (i.e. `get_XXX_arg`)

ORA-26565: Call to *type_arg* made before calling `dbms_defer.call`

Cause: User invoked *type_arg* procedure before starting a deferred call

Action: Invoke various procedures in the correct order.

ORA-26566: Couldn't open connect to *string*

Cause: Failed to open connection using given dblink

Action: Make sure that the dblink is valid and remote m/c is up.

ORA-26571: *string.string.string*: number of arguments (*string*) does not match replication catalog

Cause: number of arguments does not match replication catalog

Action: examine total number of arguments for the rpc call

ORA-26572: *string.string.string*: argument *string* does not match replication catalog

Cause: the (rpc) call is corrupted

Action: examine total number of arguments and each argument for the rpc call

ORA-26575: remote database does not support replication parallel propagation

Cause: The remote database has a version lower than Oracle 8.0 and hence does not understand replication parallel propagation.

Action: Use serial propagation or upgrade the remote database to Oracle 8.0 or above.

ORA-26576: cannot acquire SR enqueue

Cause: An attempt to acquire the SR enqueue in exclusive mode failed.

Action: n/a

ORA-26577: PRESERVE TABLE can not be used when dropping old style materialized view *string.string*\n

Cause: The materialized view consists of a view and a container table.

Action: Drop the materialized view without PRESERVE TABLE option.

ORA-26578: No capture in this multitenant container database associated with queue "*string*".

Cause: An outbound server's queue was not associated with a capture from the same multitenant container database (CDB) before adding or starting an outbound server.

Action: Execute the DBMS_STREAMS_ADM.CREATE_CAPTURE procedure to create a capture before adding or starting an outbound server.

ORA-26650: *string string* background process *string* might not be started successfully

Cause: An error occurred during creation of a capture or apply background process.

Action: Review V\$STREAMS_CAPTURE and V\$STREAMS_APPLY_COORDINATOR views for the status of these processes. Also check the trace file for more information.

ORA-26651: Unable to start or stop capture process *string*

Cause: An attempt was made to start or stop a capture process while another capture process was concurrently starting or stopping.

Action: You cannot concurrently start or stop capture processes. Wait before attempting to start or stop additional capture processes.

ORA-26652: Capture *string* did not start properly and is currently in state *string*

Cause: An attempt to restart a capture process failed.

Action: Review V\$STREAMS_CAPTURE view for the state of the capture process. Also check the trace files for more information.

ORA-26653: Apply *string* did not start properly and is currently in state *string*

Cause: An attempt to restart an apply process failed.

Action: Streams: Review V\$STREAMS_APPLY% views for the state of the apply process. Also check the trace files for more information. XStream: Review V\$XSTREAM_APPLY% views for the state of the apply process. Also check the trace files for more information. GoldenGate: Review V\$GG_APPLY% views for the state of the apply process. Also check the trace files for more information.

ORA-26654: Capture *string* attempted to connect to apply *string* already configured for *string*

Cause: An attempt was made by a GoldenGate, XStream or Streams Capture or XStream In to connect to an Apply that is already connected in the other mode.

Action: You cannot connect a capture to an apply already configured for another apply mode. Create or connect to another apply.

ORA-26655: Invalid *string* specified for *string* procedure

Cause: An attempt was made to execute the specified procedure with an invalid SCN value.

Action: Resubmit procedure with a valid SCN value.

ORA-26656: supplemental logging version error: *string*

Cause: The supplemental logging versions of capture side and apply side are incompatible.

Action: For incompatibility caused by a newer apply side, please bypass or migrate the incompatible logs manually and consider upgrading or patching the capture side. For incompatibility caused by an unrecognizable version group or an older apply side, please upgrade or patch the apply side. For invalid versions, the logs might have been corrupted; please verify the integrity of the supplemental logging data on the capture side.

ORA-26660: Invalid action context value for *string*

Cause: The value specified in the action context is invalid for use in GoldenGate, XStream or Streams.

Action: Check that the type and value are correct.

ORA-26662: unable to process *string* Data Dictionary information for object

Cause: The database is unable to process GoldenGate, XStream or Streams Data Dictionary for this object.

Action: Check that the compatibility for the database supports the object, and check the trace file for information about the object.

ORA-26663: error queue for apply process *string* must be empty

Cause: The error queue for this apply process contains error entries.

Action: Execute or delete errors in the error queue.

ORA-26664: cannot create *string* process *string*

Cause: An attempt was made to create a GoldenGate, XStream or Streams process when another was being created concurrently.

Action: Wait for the creation of the other GoldenGate, XStream or Streams process to finish before attempting to create the process.

ORA-26665: *string* process *string* already exists

Cause: An attempt was made to create a GoldenGate, XStream or Streams process that already exists.

Action: Either specify another process or remove the existing GoldenGate, XStream or Streams process.

ORA-26666: cannot alter *string* process *string*

Cause: An attempt was made to alter a GoldenGate, XStream or Streams process that is currently running.

Action: Stop the GoldenGate, XStream or Streams process with FORCE parameter set to TRUE and reissue the command.

ORA-26667: invalid *string* parameter *string*

Cause: An attempt was made to specify an invalid parameter.

Action: Check the documentation for valid parameters.

ORA-26668: *string* process *string* exists

Cause: An attempt to remove the component failed because it is associated with the GoldenGate, XStream or Streams process.

Action: Either remove the process manually or specify the "cascade" option in `dbms_streams_adm.remove_queue`.

ORA-26669: parameter *string* inconsistent with parameter *string*

Cause: An attempt was made to specify a subprogram parameter value that is inconsistent with another parameter value.

Action: Check the documentation for valid parameter values.

ORA-26670: No capture is found for queue '*string*'

Cause: An attempt was made to add an XStream outbound server to a queue using uncommitted data mode when no co-located XStream capture was configured for that queue.

Action: Change to committed data mode or configure a local XStream capture for the specified queue then retry the operation.

ORA-26671: maximum number of *string* processes exceeded

Cause: Cannot create additional GoldenGate, XStream or Streams processes since the maximum number of processes has been reached.

Action: Remove existing GoldenGate, XStream or Streams processes and retry the operation.

ORA-26672: timeout occurred while stopping *string* process *string*

Cause: Timeout occurred while waiting for a GoldenGate, XStream or Streams process to shut down.

Action: Retry the operation. If the error persists, try stopping the process with the FORCE option, or contact Oracle Support Services.

ORA-26673: duplicate column name *string*

Cause: An attempt was made to specify a duplicate column name in an LCR.

Action: Remove the duplicate column and retry the operation.

ORA-26674: Column mismatch in '*string.string*' (LCR: *string* type=*string*; DB: *string* type=*string*)

Cause: The columns in the LCR were not the same or not found in the database table.

Action: Alter the database table.

ORA-26675: cannot create *string* capture process *string*

Cause: GoldenGate, XStream or Streams capture process could not be created because one or more parameters contain invalid value.

Action: Refer to trace file for more details.

ORA-26676: Table '*string.string*' has *string* columns in the LCR and *string* columns in the replicated site

Cause: The number of columns in the LCR was not the same as the the replicated site.

Action: Alter the table structure

ORA-26677: *string* downstream capture process *string* cannot proceed

Cause: Database global name has been set to a value which is same as the source database name of the downstream capture process.

Action: Change database global name to a value other than the source database name for the downstream capture.

ORA-26678: *string* downstream capture process for source database *string* must be created at database *string* first

Cause: A GoldenGate, XStream or Streams downstream capture process was nonexistent when this operation was attempted.

Action: Create a GoldenGate, XStream or Streams downstream capture process, then retry the operation.

ORA-26679: operation not allowed on LOB or LONG columns in LCR

Cause: Certain operations on LOB/LONG columns of the LCR through rule-based transformations, DML handlers, or error handlers were not allowed.

Action: Do not perform restricted operations on LOB or LONG columns in LCRs. See the documentation for operations that are restricted on LOB/LONG columns in LCRs.

ORA-26680: object type not supported

Cause: The specified object type is not supported.

Action: Retry with a supported object type.

ORA-26681: command type not supported

Cause: The specified command type is not supported.

Action: Retry with a supported command type.

ORA-26682: invalid value for publication_on

Cause: The publication_on parameter should be either 'Y' or 'N'

Action: Retry with a proper value for publication_on.

ORA-26683: invalid value for value_type

Cause: The value_type parameter should be either 'OLD' or 'NEW'

Action: Retry with proper value_type.

ORA-26684: invalid value for value_type

Cause: The value_type parameter should be one of 'OLD', 'NEW' or '*'

Action: Retry with proper value_type.

ORA-26685: cannot apply transactions from multiple sources

Cause: Transactions from multiple sources were sent to the same apply process.

Action: Create multiple apply processes and create appropriate rules so that transactions from only one source reach an apply process.

ORA-26686: cannot capture from specified SCN

Cause: An attempt was made to specify an invalid SCN.

Action: Retry with a valid SCN.

ORA-26687: no instantiation SCN provided for "*string*".*string*" in source database "*string*"

Cause: Object SCN was not set. If the object is a table, then both fields will be filled, for example "SCOTT"."EMP". If the object is a schema, only one field will be set, for example "SCOTT"."". And if the object is the entire database, no fields will be set, for example ""."".

Action: Set the SCN by calling DBMS_APPLY_ADM.SET_%_INSTANTIATION_SCN

ORA-26688: missing key in LCR

Cause: Metadata mismatch, or not enough information in the user generated LCR.

Action: Alter the database object, or provide all defined keys in the LCR.

ORA-26689: column datatype mismatch in LCR

Cause: The datatypes of columns in the LCR are not the same as the datatypes in the database object.

Action: Alter the database object.

ORA-26690: datatype not supported at non-Oracle system

Cause: One of the columns of the LCR being applied was of a datatype not supported by either the target non-Oracle system or by the Oracle transparent gateway through which the apply is being done.

Action: Do not apply data of this type. If possible, filter out columns containing such datatypes before applying.

ORA-26691: operation not supported at non-Oracle system

Cause: The apply process attempted an operation that is either not supported by the non-Oracle system or by the Oracle transparent gateway through which the apply is being done. Some kinds of DML (like procedure and function calls) and all DDL will cause this error to be raised.

Action: Do not attempt to apply such LCRs to non-Oracle systems. If possible, filter out such LCRs before applying.

ORA-26692: invalid value *string*, *string* should be in *string* format

Cause: The parameter specified was not in the correct format.

Action: Specify the parameter value in the correct format.

ORA-26693: *string string* process dropped successfully, but error occurred while dropping rule set *string*

Cause: An attempt to drop an unused rule set failed after dropping the GoldenGate, XStream or Streams process successfully.

Action: Check existence of rule set and manually drop if necessary.

ORA-26694: error while enqueueing into queue *string.string*

Cause: An error occurred while enqueueing a message.

Action: If the situation described in the next error on the stack can be corrected, do so.

ORA-26695: error on call to *string*: return code *string*

Cause: A locking related call failed.

Action: Try the call again after fixing the condition indicated by the return code.

ORA-26696: no *string* data dictionary for object with number *string* and version number *string* from source database *string*

Cause: An attempt to access the database object failed because the data dictionary for the object was either never populated or it was purged.

Action: Make sure the GoldenGate, XStream or Streams data dictionary is created by calling DBMS_CAPTURE_ADM.PREPARE_%_INSTANTIATION.

ORA-26697: LCR contains extra column '*string*'

Cause: The LCR contained more columns than the replicated table.

Action: Alter the database object.

ORA-26698: *string* did not have a *string* rule set

Cause: The GoldenGate, XStream or Streams client does not have a rule set of the indicated type.

Action: Verify that the GoldenGate, XStream or Streams client has a rule set of the specified type, and retry the operation.

ORA-26699: *string* message consumer *string* already exists

Cause: An attempt was made to create a GoldenGate, XStream or Streams message consumer that already exists.

Action: Either specify another message consumer or remove the existing GoldenGate, XStream or Streams message consumer.

ORA-26701: *string* process *string* does not exist

Cause: An attempt was made to access a GoldenGate, XStream or Streams process which does not exist.

Action: Check with the relevant security views for the correct name of the object.

ORA-26704: The Owner instance *string* of the queue table is not up or the QMN0 process is down.

ORA-26705: cannot downgrade capture process after Streams data dictionary has been upgraded

Cause: An attempt was made to downgrade a capture process after it has upgraded the GoldenGate, XStream or Streams data dictionary.

Action: Drop the capture process before attempting the downgrade.

ORA-26706: cannot downgrade capture process

Cause: An attempt was made to downgrade a capture process that has a higher version than the downgrade release version.

Action: Drop the capture process after capture has finished consuming all the redo logs before attempting the downgrade.

ORA-26708: remote DDL not supported by STREAMS : *dblink string*

Cause: The apply process attempted to apply a DDL LCR via a *dblink*. This is not supported.

Action: Do not attempt to apply DDL LCRs via a *dblink*. If possible, filter out DDL LCRs before applying.

ORA-26709: Downstream Capture RFS restart

Cause: Remote file server (RFS) process was restarted to reflect a change in DOWNSTREAM_REAL_TIME_MINE option of the GoldenGate, XStream or Streams capture process.

Action: No action required. This is an informational message only.

ORA-26710: incompatible version marker encountered during Capture

Cause: Capture process cannot mine redo from a version higher than the current software release version.

Action: Drop and recreate the capture process.

ORA-26711: remote table does not contain a primary key constraint

Cause: The master table for remote apply does not contain a primary key constraint or the primary key constraint has been disabled.

Action: Create a primary key constraint on the master table or enable the existing constraint.

ORA-26712: remote object is "string"."string"\@"string"

Cause: See the preceding error message to identify the cause. This message names the remote object, usually a table or view, for which an error occurred when GoldenGate, XStream or Streams tried to access it for remote apply.

Action: See the preceding error message.

ORA-26713: remote object does not exist or is inaccessible

Cause: GoldenGate, XStream or Streams replication could not access the named table or view at a remote database to apply changes.

Action: Confirm that the given remote table or view exists and is accessible through the given database link. When using a Heterogeneous Services database link to access a non-Oracle system, it may be necessary to check administration details for network connections at the non-Oracle system.

ORA-26714: User Error *string* encountered during apply process

Cause: An error was encountered during an apply process.

Action: Query the DBA_APPLY_ERROR view to determine the error and take the appropriate action.

ORA-26715: time limit reached

Cause: The specified time limit was reached for the GoldenGate, XStream or Streams process.

Action: Restart the GoldenGate, XStream or Streams process, increasing the TIME_LIMIT parameter if necessary.

ORA-26716: message limit reached

Cause: The specified message limit was reached for the Capture process.

Action: Restart the Capture process, increasing the MESSAGE_LIMIT parameter if necessary.

ORA-26717: SCN limit reached

Cause: The specified SCN limit was reached for the GoldenGate, XStream or Streams process.

Action: Change the MAXIMUM_SCN parameter, then restart the GoldenGate, XStream or Streams process.

ORA-26718: transaction limit reached

Cause: The specified transaction limit was reached for the Apply process.

Action: Restart the Apply process, increasing the TRANSACTION_LIMIT parameter if necessary.

ORA-26721: enqueue of the LCR not allowed

Cause: An apply process attempted to enqueue an LCR with a LONG column. This is not supported.

Action: Modify rules or unset the enqueue destination to prevent LCRs with LONG columns from being enqueued by the apply process.

ORA-26723: user "*string*" requires the role "*string*"

Cause: The caller did not have the specified role or called the procedure from a definer's rights package or procedure.

Action: Grant the specified role to the caller. If the procedure is called from a definer's rights package or procedure, change the definer's rights package or procedure to an invoker's rights package or procedure. Or grant all the privileges for the specified role explicitly.

ORA-26724: only SYS is allowed to set the Capture or Apply user to SYS.

Cause: The Capture or Apply user was specified as SYS by a user other than SYS.

Action: Set SYS as the Capture or Apply user while logged in as SYS.

ORA-26725: cannot downgrade apply handlers

Cause: An attempt was made to downgrade apply handlers that are not associated with a local database object, or the apply handlers are associated with a specific apply process.

Action: Drop the associated apply handlers before attempting the downgrade.

ORA-26726: standby and DOWNSTREAM_REAL_TIME_MINE are incompatible

Cause: An attempt was made to set the standby database and DOWNSTREAM_REAL_TIME_MINE option of the Oracle GoldenGate, XStream or Oracle Streams capture process on the same database.

Action: Do not attempt to set the DOWNSTREAM_REAL_TIME_MINE option for a Oracle GoldenGate, XStream or Oracle Streams capture process on a standby database. Do not attempt to change a database role to standby if there exists a capture process with the DOWNSTREAM_REAL_TIME_MINE parameter set to Y.

ORA-26727: Cannot alter queue_to_queue property of existing propagation.

Cause: The queue_to_queue property was specified for an existing propagation.

Action: Pass NULL for the queue_to_queue argument.

ORA-26730: *string* '*string*' already exists

Cause: An attempt to use FILE GROUP, FILE GROUP VERSION, or FILE GROUP FILE failed because the item in question already exists.

Action: Remove the object if appropriate and re-attempt the operation.

ORA-26731: *string* '*string*' does not exist

Cause: A FILE GROUP, FILE GROUP VERSION, or FILE GROUP FILE was specified that does not exist.

Action: Make sure the object exists and re-attempt the operation.

ORA-26732: invalid file group *string* privilege

Cause: The specified privilege number that was specified is invalid.

Action: Check specification of dbms_file_group for valid privileges.

ORA-26733: timed-out waiting for file group lock

Cause: The procedure waited too long while getting a lock to perform a file group repository operation.

Action: Retry the operation.

ORA-26734: different datafiles_directory_object parameter must be specified

Cause: The attempted operation involved datafiles platform conversion which required the datafiles_directory_object parameter to be specified for placing the converted data files.

Action: Retry the operation after specifying a valid datafiles_directory_object parameter. This directory must be different from the directory objects for any of the datafiles for the specified file group version.

ORA-26735: operation not allowed on the specified file group version

Cause: One or more datafiles or export dump file(s) were missing from the specified file group version.

Action: Retry the operation after adding all the data files and Data Pump dump file(s) to the specified version.

ORA-26736: Data Pump error

Cause: A Data Pump error occurred when the procedure performed a File Group Repository operation.

Action: Check the error stack and trace file for error details.

ORA-26737: version *string* already has an export dump file

Cause: A Data Pump dump file was added to a file group version that already has a dump file.

Action: Remove the existing dump file if appropriate, and retry the operation.

ORA-26738: *string 'string'* is not empty

Cause: The FILE GROUP or FILE GROUP VERSION being dropped contained objects.

Action: Remove the child objects, then retry the operation.

ORA-26740: cannot downgrade because there are file groups

Cause: An attempt was made to downgrade a database that has file groups.

Action: Drop all file groups before attempting the downgrade.

ORA-26741: cannot assemble lobs

Cause: An attempt was made to assemble lobs, but the compatibility of the source database for the LOB information is lower than 10.2.0.

Action: Set ASSEMBLE_LOBS to FALSE in the DML or error handler while this handler is processing LOB information from a source database with a compatibility level lower than 10.2.0.

ORA-26742: Maximum number of ignored transactions exceeded

Cause: An attempt was made to add more than the allowed number of ignored transactions.

Action: Please clear the current list of ignored transactions.

ORA-26744: *string* capture process "*string*" does not support "*string*".*string*" because of the following reason: *string*

Cause: GoldenGate, XStream or Streams capture encountered a table with an unsupported property. The most common reason is an unsupported column data type.

Action: Revise the Capture rules to skip over the table in question. One way might be to add a negative rule excluding changes from the unsupported table from being captured. Streams: Also query the DBA_STREAMS_UNSUPPORTED view to determine which tables are not supported by Streams and for what reason. Consider adding negative rules for any tables that may be captured, but are present in this view. XStream: Also query the DBA_XSTREAM_OUT_SUPPORT_MODE view to determine which tables are not supported by XStream and for what reason. Consider adding negative rules for any tables that may be captured, but are present in this view. GoldenGate: Also query the DBA_GOLDENGATE_SUPPORT_MODE view to determine which tables are not supported by GoldenGate and for what reason. Consider adding EXCLUDETABLE statements for any tables that may be captured, but are present in this view. For potential workarounds to certain unsupported properties, see Metalink.

ORA-26745: cursors (*string*) are not sufficient

Cause: The maximum number of open cursors was too small for GoldenGate, XStream or Streams Apply.

Action: Increase the value of open_cursors.

ORA-26746: DDL rule "*string*."*string*" not allowed for this operation

Cause: A DDL rule was specified for this operation.

Action: Specify a non-DDL rule for this operation.

ORA-26747: The one-to-many transformation function *string* encountered the following error: *string*

Cause: The specified transformation function encountered an error.

Action: Ensure that the function does not process or return DDL LCRs. Also ensure that the function does not return NULL.

ORA-26748: The one-to-one transformation function *string* encountered the following error: *string*

Cause: The specified transformation function encountered an error.

Action: Ensure that the function does not return an LCR that has a different type from the LCR which was passed to the function. Also ensure that the function does not return NULL. For DDL transformation functions, creating and returning a new DDL LCR is not allowed.

ORA-26752: Unsupported LCR received for "*string*."*string*"

Cause: GoldenGate, XStream or Streams capture process received an LCR with unsupported operation from LogMiner.

Action: Stream: If this object is listed in DBA_STREAMS_UNSUPPORTED view, modify rules to prevent changes made to this object from getting captured. XStream: If this object is listed in DBA_XSTREAM_OUT_SUPPORT_MODE view, modify rules to prevent changes made to this object from getting captured. GoldenGate: If this object is listed in DBA_GOLDENGATE_SUPPORT_MODE view, modify rules to prevent changes made to this object from getting captured.

ORA-26753: Mismatched columns found in '*string.string*'

Cause: The columns in the LCR were not the same as the table in the database.

Action: Alter the database table.

ORA-26754: cannot specify both one-to-one transformation function *string* and one-to-many transformation function *string*

Cause: Both a one-to-one transformation function and a one-to-many transformation function were specified for a rule.

Action: Remove either the one-to-one transformation function, or the one-to-many transformation function.

ORA-26757: Timed out waiting for remote operation on instance *string* to finish

ORA-26760: Could not find message number *string* for transaction with id *string*

Cause: Error

Action: Contact Oracle support"

ORA-26761: Standby Redo Logs not available for real time mining

Cause: Standby Redo Logs required for real time mining by downstream capture process were not available.

Action: Check the configuration of Standby Redo Logs and retry the operation at a later time. To start the capture process without real time mining property, reset `DOWNSTREAM_REAL_TIME_MINE` parameter of the capture process and retry the operation.

ORA-26762: Cannot autogenerate name for parameter *string* because of the following reason: *string*

Cause: An error was encountered while attempting to generate a name for a parameter which was passed a NULL value.

Action: If possible, fix the error, otherwise specify the parameter name explicitly.

ORA-26763: invalid file type "*string*"

Cause: An invalid file type was specified for the ASM file.

Action: Check documentation for valid ASM file types.

ORA-26764: invalid parameter "*string*" for local capture "*string*"

Cause: An invalid parameter was specified for the local capture process.

Action: Check documentation for valid parameters.

ORA-26765: invalid parameter "*string*" for downstream capture "*string*"

Cause: An invalid parameter was specified for the downstream capture process.

Action: Check documentation for valid parameters.

ORA-26766: Unexpected redo pattern encountered by LogMiner

Cause: LogMiner encountered an unexpected redo pattern. This is usually caused by tables with unsupported data types or newer table features.

Action: Remove the capture rule for the table and restart capture.

ORA-26767: Not enough redo log information for LogMiner

Cause: Direct-path SQL with NOLOGGING option or a SQL*Loader operation with UNRECOVERABLE clause was specified for the table.

Action: Remove the capture rule for the table and restart capture.

ORA-26768: Maximum number of unsupported tables exceeded

Cause: An attempt was made to add more than the allowed number of unsupported tables.

Action: Clear the current list of unsupported tables.

ORA-26770: Index-organized table not supported

ORA-26771: User-defined column type not supported

ORA-26772: Encrypted column not supported

ORA-26773: Invalid data type for column "*string*"

ORA-26774: Queue table not supported

ORA-26775: Temporary table not supported

ORA-26776: Subordinate object not supported

ORA-26777: External table not supported

ORA-26778: File column not supported

ORA-26779: Materialized view not supported

ORA-26780: Object table not supported

ORA-26781: Nested table not supported

ORA-26782: Function-based index not supported

ORA-26783: Column data type not supported

ORA-26785: Object has a NULL value

Cause: A method was invoked on a NULL object.

Action: Initialize the object with a non-NULL value.

ORA-26786: A row with key *string* exists but has conflicting column(s) *string* in table *string*

Cause: The row to update or delete exists in the table but had conflicting value for some columns.

Action: For Streams and XStream, please define a conflict resolution, or resolve the conflict and execute the error transaction using DBMS_APPLY_ADM.EXECUTE_ERROR. For logical standby, please verify the status of the database guard to ensure local modifications are not allowed, then re-instantiate the table and contact support if the problem persists. For GoldenGate, configure Conflict Resolution (CDR) or REPEROR handler for the table and restart replicat.

ORA-26787: The row with key *string* does not exist in table *string*

Cause: The row to update or delete does not exist in the table.

Action: For Streams and XStream, please define a conflict resolution, or resolve the conflict and execute the error transaction using DBMS_APPLY_ADM.EXECUTE_ERROR. For logical standby, please verify the status

of the database guard to ensure local modifications are not allowed, then re-instantiate the table and contact support if the problem persists. For GoldenGate, configure Conflict Resolution (CDR) or REPERROR handler for the table and restart replicat.

ORA-26788: The column *string* is not encrypted in the local database.

Cause: The column in the destination database is NOT encrypted while it is encrypted in the source database.

Action: Set the corresponding column property in the destination database to 'encrypted' or change the apply parameter, PRESERVE_ENCRYPTED_COLS, to 'N' to suppress the error.

ORA-26789: Cannot split propagation *string* because only one propagation originates from its source queue "*string*".*string*"

Cause: Only one propagation originated from the propagation source queue.

Action: Please do not split this propagation.

ORA-26790: Requesting a lock on *string* "*string*" timed out

Cause: Could not get a lock on the object because another process was holding the lock.

Action: Please try later.

ORA-26791: Cannot split or merge propagation "*string*"

Cause: A process tried to split or merge this propagation, but failed and left STREAMS in an inconsistent state.

Action: Query DBA_RECOVERABLE_SCRIPT_BLOCKS view, and roll back the script which tried to split or merge this propagation.

ORA-26792: Invalid source database name *string*

Cause: The value for the source database global name was not valid.

Action: Specify a valid database global name. If the source database is not the local database, check the listener is up and running.

ORA-26793: Number of capture processes that enqueued message to queue "*string*".*string*" not equal to one

Cause: Split-merge API requires only one capture process enqueued message to the queue where the propagation originated

Action: Please drop one capture, or split or merge another propagation.

ORA-26794: Hierarchically enabled tables not supported

Cause: Hierarchically enabled tables are not supported.

Action: Disable hierarchy for the table.

ORA-26795: Cannot modify an LCR received from an XStream outbound server

Cause: An attempt was made to modify an LCR generated by an XStream outbound server.

Action: Clone the LCR generated by the XStream outbound server by using the provided OCILCR* functions, such as OCILCRNew, OCILCRHeaderSet, and OCILCRRowColumnInfoSet. Then modify the cloned LCR.

ORA-26798: LOB logical change record (LCR) missing LOB column in table "string"."string"

Cause: The apply slave could not fill update LOB because of missing LOB column.

Action: Check that all LOB columns have been sent correctly.

ORA-26799: unique constraint string.string violated for table string.string with column values string

Cause: The row to update or insert violated the unique constraint.

Action: For XStreams, define a conflict resolution, or resolve the conflict and execute the error transaction using DBMS_APPLY_ADM.EXECUTE_ERROR.

ORA-26800: Apply not the only subscriber for "string"."string".

Cause: The combined capture and apply optimization could not be used since Apply was not the lone subscriber to the queue.

Action: Apply has to be the only subscriber to the queue.

ORA-26801: More than one subscriber for "string"."string".

Cause: Multiple subscribers were found when the combined capture and apply optimization was configured to only work for one subscriber.

Action: Configure a single subscriber, apply or propagation for the queue, or enable the optimization for multiple subscribers.

ORA-26802: Queue "string"."string" has messages.

Cause: The combined capture and apply optimization could not be used since the queue had messages.

Action: Make sure queue is empty before starting apply and capture.

ORA-26803: Subscribers have changed for queue "string"."string".

Cause: The combined capture and apply optimization could not be used since the subscribers had changed.

Action: Optimization can be used only if the queue has a single subscriber.

ORA-26804: Apply "string" is disabled.

Cause: The apply process was disabled or aborted.

Action: Start the apply process.

ORA-26805: Queue "string"."string" has rule based subscribers.

Cause: The combined capture and apply optimization could not be used since the queue had rule based subscribers.

Action: Make sure queue has no rule based subscribers before starting apply and capture.

ORA-26806: Remote database could not support combined capture and apply optimization.

Cause: The remote database has a version lower than Oracle 11.0 and hence does not understand combined capture and apply optimization.

Action: Upgrade the remote database to Oracle 11.0 or above in order to use the combined capture and apply optimization.

ORA-26807: Database link is not NULL for Apply with the name "*string*".

Cause: The combined capture and apply optimization could not be used since `apply_database_link` was not NULL.

Action: Drop and recreate the apply with NULL value for `apply_database_link`.

ORA-26808: Apply process *string* died unexpectedly.

Cause: Apply process died unexpectedly.

Action: Check your system for anomalies and restart apply. If this error persists, contact Oracle Support Services. See trace file for more details.

ORA-26809: Capture aborted: checkpoint-free mode requires combined capture and apply mode.

Cause: The requirements for combined capture and apply mode were broken.

Action: Restore the combined capture and apply mode and then restart the capture. If combined capture and apply mode is no longer desired, drop the existing checkpoint-free capture and create another one that will take checkpoints.

ORA-26810: Apply "*string*" on database "*string*" is in the mode of combined capture and apply.

Cause: The combined capture and apply optimization could not be used because Apply was already in the mode of combined capture and apply.

Action: Do not configure two captures for one apply.

ORA-26811: Client has already attached to *string* apply "*string*".

Cause: The client has already attached to the specified apply process.

Action: Detach apply process before reattach.

ORA-26812: An active session currently attached to XStream server "*string*".

Cause: An attempt was made to attach to the specified XStream server while another session was attached to it.

Action: Retry when there is no session attaching to the specified XStream server.

ORA-26813: The value for argument "ARRAY_SIZE" is too small

Cause: The value for argument "ARRAY_SIZE" was less than the number of columns in the requested column list.

Action: Check the return value for "NUM_COLUMNS" parameter then allocate all input arrays to at least that size and invoke the same OCI function again.

ORA-26814: The value for argument *string* exceeds maximum *string*

Cause: The value for specified value exceeded the maximum allowed.

Action: Correct the value of specified argument.

ORA-26815: Error from Apply Network Receiver for Apply "*string*" and Capture "*string*".

Cause: The Apply Network Receiver aborted due to an unexpected error.

Action: Query `DBA_APPLY_ERROR` to determine the error and then restart the Capture and Apply.

ORA-26816: *string* apply process "*string*" (OS id *string*) is exiting due to ORA-*string*.

Cause: An apply process encountered an unexpected error.

Action: Query DBA_APPLY to examine the status of Apply and restart Apply if needed.

ORA-26817: *string* capture process "*string*" is unable to communicate with capture server *string* during initialization.

Cause: Capture server might not be started properly

Action: Fix any errors during capture server creation and re-start capture process

ORA-26818: *string* capture process *string* receives an error from capture server.

Cause: Capture server received an error.

Action: Check log for error details.

ORA-26819: *string* capture server for apply "*string*" and capture "*string*" encounters disabled or aborted propagation "*string*".

Cause: Propagation was disabled or aborted.

Action: Start propagation.

ORA-26820: *string* capture server for apply "*string*" and propagation "*string*" becomes active and needs join capture process "*string*".

Cause: Capture server was waiting for propagation or apply to start

Action: Capture process needs restart (done automatically).

ORA-26821: No propagation process found between source queue "*string*".*string*" and destination queue "*string*".*string*".

Cause: Propagation has not been configured.

Action: Configure a propagation between specified queues and restart capture.

ORA-26822: Failure in creating capture servers (ksv error code *string*).

Cause: Failure in ksv slave creation.

Action: Identify the actual ksv error and act accordingly.

ORA-26823: *string* capture server *string* is unable to communicate with capture process "*string*".

Cause: Capture process was not started properly or was aborted.

Action: If Oracle GoldenGate, XStream or Streams capture process was stopped, then restart the capture process. Otherwise, fix any errors during the capture process creation and restart the capture process.

ORA-26824: user-defined XStream callback error

Cause: A value other than OCI_CONTINUE or OCI_SUCCESS was returned for the user-defined XStream callback function. Any returned value other than OCI_CONTINUE or OCI_SUCCESS is invalid.

Action: Verify that either OCI_CONTINUE or OCI_SUCCESS is returned from the user-defined XStream callback function.

ORA-26825: STREAMS process "*string*" is not configured as an XStream outbound server.

Cause: An attempt was made to attach to a STREAMS apply process, which was not configured as an XStream outbound server.

Action: Check the apply name or re-create the apply process as an XStream outbound server.

ORA-26826: *string* apply coordinator and apply slave are unable to communicate.
Cause: GoldenGate, XStream or Streams Apply process may have died unexpectedly.
Action: Check your system for anomalies and restart apply. If this error persists, contact Oracle Support Services. See trace file for more details.

ORA-26827: Insufficient privileges to attach to XStream outbound server "*string*".
Cause: Sufficient privileges were not granted to attach to the specified XStream outbound server.
Action: Query DBA_XSTREAM_OUTBOUND view to get the connect_user value for the specified outbound server. Then modify the application to connect to the outbound server's database using this value.

ORA-26828: XStream outbound server "*string*" requires combined capture and apply mode.
Cause: The specified XStream outbound server was not in combined capture and apply mode.
Action: Restore the combined capture and apply mode and then restart the capture.

ORA-26829: Cannot set "DISABLE_ON_ERROR" parameter to 'N'.
Cause: An attempt was made to change the "DISABLE_ON_ERROR" parameter for an XStream outbound server to 'N'.
Action: Remove invalid statement.

ORA-26830: Cannot define handler for an XStream outbound server.
Cause: An attempt was made to define a handler for an XStream outbound server.
Action: Remove invalid statement.

ORA-26831: Cannot delete or execute error transaction from XStream outbound server "*string*".
Cause: An attempt was made to delete or execute an error transaction from the specified XStream outbound server.
Action: Remove invalid statement.

ORA-26832: Unable to create XStream outbound server "*string*" due to existing handler.
Cause: An attempt was made to create the specified XStream outbound server while there was a handler defined for the specified server.
Action: Use DBMS_APPLY_ADM.SET_DML_HANDLER procedure to remove all handlers defined on the specified server then retry statement.

ORA-26833: *string* failed to update acknowledgment SCN for propagation "*string*" from capture "*string*" to apply "*string*".
Cause: propagation might have been modified after GoldenGate, XStream or Streams was started.
Action: Ensure propagation is configured properly and restart GoldenGate, XStream or Streams.

ORA-26834: Unable to alter parameter '*string*' because *string* capture process is not configured to run locally

Cause: An attempt was made to alter the specified capture parameter when the GoldenGate, XStream or Streams capture process was not configured to run on the local database.

Action: Remove the invalid parameter or use DBMS_CAPTURE_ADM.ALTER_CAPTURE procedure to alter the parameter.

ORA-26835: The source database for XStream outbound server "*string*" is invalid

Cause: An attempt was made to add an XStream outbound server with a source database that was different from the associated capture's source database.

Action: Correct the value for the 'source_database' parameter in the call.

ORA-26836: The specified rules must be created from the same subsetting condition

Cause: An attempt was made to remove an outbound server's subset rules when the specified INSERT, UPDATE, and DELETE rules were not created from the same subsetting condition.

Action: Correct the rules in the statement.

ORA-26837: Server "*string*" is not an XStream inbound server

Cause: An attempt was made to execute a procedure not appropriate on an XStream inbound server.

Action: Replace with a procedure appropriate for an XStream inbound server and resubmit.

ORA-26838: Setting apply parameter "*string*" is not permitted for XStream Outbound Server

Cause: An attempt was made to set an apply parameter that was not applicable for XStream Outbound Server.

Action: Configure XStream Outbound Server using valid parameters. Check the documentation for valid parameter values.

ORA-26839: Apply tag for apply "*string*" is not permitted for XStream Outbound Server

Cause: An attempt was made to set an apply tag that was not applicable for XStream Outbound Server.

Action: Do not set the apply tag when using XStream Outbound Server.

ORA-26840: Combined capture and apply optimization is disabled because *string* is unable to identify an apply for the source database "*string*".

Cause: There were multiple Streams apply processes using the same queue which made combined capture and apply (CCA) optimization not possible.

Action: If Streams performance is an issue, check the "Combined Capture and Apply Optimization" chapter in the "Oracle Streams Concepts and Administration" book. Then reconfigure the Streams processes to meet this optimization's requirements.

ORA-26841: No subscribers are found for queue "*string*". "*string*".

Cause: No propagation or apply was configured for the specified queue.

Action: Configure propagation or apply for the specified queue.

ORA-26842: Setting apply directive "*string*" is not permitted for XStream Outbound Server

Cause: An attempt was made to set an apply directive that was not applicable for XStream Outbound Server.

Action: Configure XStream Outbound Server using valid directives. Check the documentation for valid directives.

ORA-26843: Local propagation "*string*" found for capture queue "*string*".*string*".

Cause: The combined capture and apply optimization could not be used because a local propagation was attached to the capture queue.

Action: Remove the local propagation and restart capture.

ORA-26844: Found "*string*" active automatic split jobs for *string* Capture "*string*" in DBA_STREAMS_SPLIT_MERGE

Cause: Only one active split job is allowed for each GoldenGate, XStream or Streams Capture, but multiple active automatic split jobs were found in DBA_STREAMS_SPLIT_MERGE.

Action: Check trace to see how the jobs were submitted and drop them.

ORA-26845: Found "*string*" active split rows with the same cloned *string* Capture "*string*" in DBA_STREAMS_SPLIT_MERGE

Cause: In DBA_STREAMS_SPLIT_MERGE, for active split rows, the column CLONED_CAPTURE_NAME should be unique. However, multiple rows were found whose ACTION_TYPE column is 'SPLIT', ACTIVE column is 'ACTIVE' and have the same CLONED_CAPTURE_NAME.

Action: Check trace to see how the rows were inserted and call DBMS_STREAMS_ADM.RECOVER_OPERATION() for error recovery.

ORA-26846: Found "*string*" active automatic merge jobs for cloned *string* Capture "*string*" in DBA_STREAMS_SPLIT_MERGE

Cause: Only one active merge job is allowed for each cloned GoldenGate, XStream or Streams Capture, but multiple active automatic merge jobs were found in DBA_STREAMS_SPLIT_MERGE.

Action: Check trace to see how the jobs were submitted and drop them.

ORA-26847: Found invalid *string* type: "*string*"

Cause: Invalid GoldenGate, XStream or Streams type to split off was found. Type should only be 'PROPAGATION'(1) or 'APPLY'(2).

Action: Check trace to see how the invalid GoldenGate, XStream or Streams type was created and correct it.

ORA-26848: Split a nonexistent Streams Capture process "*string*" in job "*string*"

Cause: The job attempted to split a non-existent original Streams Capture.

Action: Drop the split job, or wait until the Streams Capture comes to existence.

ORA-26849: Split a nonsplittable *string* Capture process "*string*" in job "*string*"

Cause: The job tried to split a GoldenGate, XStream or Streams Capture that was not splittable. That is, the Capture either had less than two subscribers, or it was not the only Capture of its queue.

Action: Drop the split job, or wait until the GoldenGate, XStream or Streams Capture becomes splittable.

ORA-26850: Changes to queue subscribers were detected by *string* capture process.

Cause: The subscribers for capture queue might have changed.

Action: Capture process will restart automatically.

ORA-26851: Unable to connect to apply "*string*" because it has connected to another capture.

Cause: Another capture process is already connected to apply.

Action: Wait for the connected capture process to terminate or abort the connected capture process.

ORA-26852: Invalid NULL value for column_value parameter.

Cause: NULL is not allowed to be passed as the column value.

Action: Replace NULL with a proper AnyData instance containing NULL, e.g., `sys.AnyData.ConvertVarchar2(NULL)`, as the column value if the column value is NULL.

ORA-26853: invalid cca maximum percentage *string*

Cause: Specified percentage value was not in range 0 - 100.

Action: Specify a percentage value in the range 0 - 100.

ORA-26854: *string string* has no enqueue or dequeue privileges to the queue.

Cause: The GoldenGate, XStream or Streams user did not have enqueue or dequeue privilege to the queue.

Action: Grant GoldenGate, XStream or Streams user enqueue or dequeue privileges to the queue.

ORA-26855: *string string* has insufficient database privilege to access the queue.

Cause: The GoldenGate, XStream or Streams user did not have sufficient database privilege to access the queue.

Action: Grant GoldenGate, XStream or Streams user database privileges to access the queue.

ORA-26856: STREAMS *string* has insufficient database privilege to access the queue.

Cause: The GoldenGate, XStream or Streams user did not have sufficient database privilege to access the queue.

Action: Grant GoldenGate, XStream or Streams user database privileges to access the queue.

ORA-26857: LCR position cannot be null (XID=*string*).

Cause: The position of an LCR in the specified transaction was null.

Action: Use `OCILCRHeaderSet` to define the LCR position.

ORA-26858: LCR position must be strictly increasing (XID='*string*', LCR position='*string*', previous position='*string*').

Cause: The position of an LCR in the specified transaction was less than or equal to the previous LCR in transaction.

Action: Use `OCILCRHeaderSet` to correct the LCR position.

ORA-26859: Server "*string*" is not an XStream outbound server

Cause: An attempt was made to execute a procedure not appropriate on an XStream outbound server.

Action: Replace with a procedure appropriate for an XStream outbound server and resubmit.

ORA-26860: Different transactions must have different transaction IDs (XID=*string*, LCR position=*string*, previous commit position=*string*).

Cause: The position of an LCR in the specified transaction was greater than the position of the previous commit LCR in transaction with same transaction ID.

Action: Use different transaction IDs for different transactions.

ORA-26862: LCR position must be greater than the processed low position of the XStream inbound server (XID=*string*, LCR position=*string*).

Cause: The position of an LCR in the specified transaction was less than or equal to the processed low position of the XStream inbound server.

Action: Use OCILCRHeaderSet to correct the LCR position.

ORA-26863: Job "*string*" showing as an active job in DBA_STREAMS_SPLIT_MERGE does not exist in DBA_SCHEDULER_JOBS.

Cause: An active job showing in DBA_STREAMS_SPLIT_MERGE did not exist. It may have been dropped accidentally or something was wrong with it.

Action: Check trace to identify the problem and call DBMS_STREAMS_ADM.RECOVER_OPERATION() for error recovery.

ORA-26864: Error occurred in *string* automatic job: "*string*"

Cause: An error has happened inside GoldenGate, XStream or Streams automatic job.

Action: Check trace for more detail.

ORA-26865: must send a COMMIT LCR to end transaction '*string*' before sending another transaction

Cause: An attempt was made by a client application to send LCRs for a new transaction before sending a COMMIT LCR for the specified transaction.

Action: Modify the client application to send a COMMIT LCR at the end of the specified transaction.

ORA-26866: The Queue of *string* Apply process "*string*" is not changeable.

Cause: Not all of the conditions for the Queue of a GoldenGate, XStream or Streams Apply process to be changeable were met. Conditions are: -The Apply process is not running. -The Apply process has no error. -The Apply process has no spilling. -The Apply process is not used for XStream Outbound or Inbound Servers. -The Apply process is a local Apply process. -The corresponding GoldenGate, XStream or Streams Capture process should be stopped.

Action: Make sure all of the conditions are met.

ORA-26867: *string* must be called during OCIXStreamOutLCRReceive execution

Cause: An attempt was made to execute the specified function while OCIXStreamOutLCRReceive call was not in progress.

Action: Check your program and make sure the specified call is invoked during OCIXStreamOutLCRReceive callback function.

ORA-26868: *string* must be called during OCIXStreamInLCRSend execution

Cause: An attempt was made to execute the specified function while OCIXStreamInLCRSend call was not in progress.

Action: Check your program and make sure the specified call is invoked during OCIXStreamInLCRSend callback function.

ORA-26869: must attach to an XStream inbound server before executing *string* function

Cause: An attempt was made to invoke the specified function before executing OCIXStreamInAttach call.

Action: Add OCIXStreamInAttach call before the specified function.

ORA-26870: cannot call *string* while OCIXStreamInLCRCallbackSend call is still executing.

Cause: An attempt was made to invoke the specified call while OCIXStreamInLCRCallbackSend call was executing.

Action: Check your program and remove the specified call when there is an OCIXStreamInLCRCallbackSend call in progress.

ORA-26871: unexpected *string* call (expecting *string*)

Cause: Could be one of the following reasons: 1) An attempt was made to invoke OCIXStreamInChunkSend when the most recent LCR or chunk sent did not have the OCI_XSTREAM_MORE_ROW_DATA flag set; 2) An attempt was made to invoke OCIXStreamInLCRSend when the most recent LCR or chunk sent had OCI_XSTREAM_MORE_ROW_DATA flag set.

Action: n/a

ORA-26872: must attach to an XStream outbound server before executing *string* function

Cause: An attempt was made to invoke the specified function before executing OCIXStreamOutAttach call.

Action: Add OCIXStreamOutAttach call before the specified function.

ORA-26873: cannot call *string* while OCIXStreamOutLCRCallbackReceive call is still executing.

Cause: An attempt was made to invoke the specified call while OCIXStreamOutLCRCallbackReceive call was executing.

Action: Check your program and remove the specified call when there is an OCIXStreamOutLCRCallbackReceive call in progress.

ORA-26874: *string* Capture process "*string*" cannot be split.

Cause: An attempt was made to split a GoldenGate, XStream or Streams Capture process that could not be split. That is, the Capture process either had less than two subscribers, or it was not the only Capture process of its queue.

Action: Wait until the GoldenGate, XStream or Streams Capture process can be split.

ORA-26875: Timeout while *string* automatic split job "*string*" waits for the subscriber "*string*" of Capture process "*string*" to acknowledge split

Cause: To split a subscriber of a GoldenGate, XStream or Streams Capture process, an automatic split job needs to wait until the subscriber acknowledges the split. The wait timed out.

Action: n/a

ORA-26876: invalid processed low-watermark (current position=*string*; new position=*string*)

Cause: An attempt was made to set the processed low-watermark to a value that was less than the current processed low-watermark.

Action: Correct the processed low-watermark in OCIXStreamOutProcessedLWMSet call.

ORA-26877: must reattach after an OCIXStreamOut call was interrupted

Cause: An attempt was made to execute another OCIXStreamOut API when an earlier call was interrupted because the XStream outbound server was disabled or the client requested cancellation of the operation.

Action: Execute OCIXStreamOutAttach call to reattach to the same XStream outbound server.

ORA-26878: inconsistent input LCR (LCR is '*string*' type, expecting '*string*')

Cause: An attempt was made to send an LCR that was not consistent with the specified LCR type.

Action: Correct your application to specify an LCR type that agrees with the LCR to be sent.

ORA-26879: "SET_ENQUEUE_DESTINATION" directive is not permitted on rules used by XStream outbound server "*string*"

Cause: One or more rules, used by the specified XStream outbound server, had SET_ENQUEUE_DESTINATION directive defined.

Action: Execute the following: 1) Execute query SELECT xr.rule_owner, xr.rule_name, xr.rule_set_owner, xr.rule_set_name FROM dba_apply_enqueue e, dba_xstream_rules xr WHERE e.rule_owner = xr.rule_owner AND e.rule_name = xr.rule_name AND xr.streams_name = *specified outbound server*; 2) For each rule returned, execute DBMS_APPLY_ADM.SET_ENQUEUE_DESTINATION procedure to set the destination queue to null, or execute DBMS_RULE_ADM.REMOVE_RULE to remove that rule from its associated rule set.

ORA-26880: "SET_EXECUTE" directive is not permitted on rules used by XStream outbound server "*string*"

Cause: One or more rules, used by the specified XStream outbound server, had SET_EXECUTE directive defined.

Action: Execute the following: 1) Execute query SELECT xr.rule_owner, xr.rule_name, xr.rule_set_owner, xr.rule_set_name FROM dba_apply_execute e, dba_xstream_rules xr WHERE e.rule_owner = xr.rule_owner AND e.rule_name = xr.rule_name AND xr.streams_name = *specified outbound server*; 2) For each rule returned, use DBMS_APPLY_ADM.SET_EXECUTE procedure to set the EXECUTE parameter to TRUE, or use DBMS_RULE_ADM.REMOVE_RULE to remove that rule from its associated rule set.

ORA-26881: ORA-*string*: *string* raised in *string* automatic *string* job:"*string*"."*string*" for Capture process "*string*" and cloned Capture process "*string*".

Cause: An error was raised in a GoldenGate, XStream or Streams automatic split/merge job for the given original and cloned Capture processes.

Action: Check the corresponding split/merge row in DBA_STREAMS_SPLIT_MERGE view, alert log and trace file for details.

ORA-26882: Timeout while *string* automatic split/merge job:"string"."string" tried to lock Capture process "string".

Cause: The GoldenGate, XStream or Streams Capture process could be locked by other automatic split/merge jobs.

Action: No action required. The GoldenGate, XStream or Streams automatic split/merge job will retry automatically.

ORA-26883: Timeout due to *string* Apply process "string" while merge original Capture process "string" and cloned Capture process "string".

Cause: When merging two GoldenGate, XStream or Streams Capture processes, the merge needs to wait until the Apply process of the cloned Capture process goes ahead of the slowest subscriber of the original Capture process. This wait timed out.

Action: Make sure the GoldenGate, XStream or Streams Apply process still works properly.

ORA-26884: Not allowed to specify OCI_LCR_ROW_COLVAL_OLD with OCILCR_NEW_ONLY_MODE.

Cause: An attempt was made to call OCILCRRowColumnInfoGet function with OCI_LCR_ROW_COLVAL_OLD and OCILCR_NEW_ONLY_MODE.

Action: Change OCI_LCR_ROW_COLVAL_OLD to OCI_LCR_ROW_COLVAL_NEW or remove OCILCR_NEW_ONLY_MODE argument.

ORA-26885: OCIXStreamInCommit called before OCIXStreamInFlush

Cause: An attempt was made to call OCIXStreamInCommit before calling OCIXStreamInFlush.

Action: Call OCIXStreamInFlush prior to calling OCIXStreamInCommit.

ORA-26886: LCR commit position ('string') must be greater than the applied high position of the XStream inbound server (position='string').

Cause: The position of the commit LCR was less than or equal to the applied high position of the XStream inbound server.

Action: Set the commit position higher than the applied high position.

ORA-26887: Insufficient privileges to attach to XStream inbound server "string".

Cause: Sufficient privileges were not granted to attach to the specified XStream inbound server.

Action: Query DBA_XSTREAM_INBOUND view to get the apply_user value for the specified XStream outbound server. Then, modify the application to connect to the inbound server's database using this value.

ORA-26888: Redo compatibilty must be 10.2 or greater

Cause: XStream Out requires redo comptibility to be 10.2 or greater.

Action: Drop the outbound server.

ORA-26889: LOB assembly not supported for PDML parent transaction *string*, child transaction *string*.

Cause: LOB assembly is not supported for PDML transactions.

Action: Disable LOB assembly, or filter out the PDML transaction.

ORA-26890: Invalid update LCR on Oracle Sequence "*string*"."*string*"

Cause: The new value column list of an update LCR on an Oracle Sequence did not have non-null columns "CYCLE#", "INCREMENT\$", "CACHE" and "HIGHWATER".

Action: Make sure the new value column list has all the required columns. This might be a user error if the LCR is from an XStream In client.

ORA-26891: Target Oracle Sequence "*string*"."*string*" has inconsistent parameters with the source.

Cause: The source and target Oracle Sequences did not have the identical cache size, increment value, and cycle flag needed for replication purposes.

Action: Make sure the source and target Oracle Sequences have identical parameters. This might be a user error if the LCR is from an XStream In client.

ORA-26892: XStream feature not supported

Cause: The XStream feature was not supported.

Action: No action necessary.

ORA-26893: Input LCR must be a commit LCR

Cause: The input LCR was not a commit LCR.

Action: Make sure the input LCR is a commit LCR.

ORA-26894: Invalid "*string*" in Apply Progress redo

Cause: The value of the field reported was possibly corrupted.

Action: Contact Oracle Support Services.

ORA-26895: Setting parameter "*string*" of Streams process "*string*" is only permitted for Oracle GoldenGate or XStream.

Cause: An attempt was made to set a parameter that is only allowed for XStream.

Action: Oracle GoldenGate license is needed to use this parameter.

ORA-26896: Attempted to connect multiple Oracle GoldenGate Capture processes, including "*string*", with XStream outbound server "*string*" through queue "*string*"."*string*"

Cause: An attempt was made to connect multiple Oracle GoldenGate Capture processes through a queue with the XStream outbound server.

Action: Each XStream outbound server can only connect with one co-located Capture process. Remove extra Capture processes.

ORA-26897: Unable to start *string* capture "*string*" because its subscribers "*string*" and "*string*" have different purpose

Cause: An attempt was made to start an Oracle Capture process but it failed to start because its subscribers had conflicting purpose.

Action: Remove one of the specified subscribers from the capture queue.

ORA-26898: Unable to create "*string*" because there is an Oracle Capture process using the same queue "*string*"."*string*"

Cause: An attempt was made to create an inbound server using the same queue that was used by an Oracle Capture process.

Action: Resubmit the statement using another queue name.

ORA-26899: internal *string* error

Cause: An internal Streams, XStream or GoldenGate error has occurred.

Action: Please contact Oracle customer support.

ORA-26900: Streams failed to update data dictionary table for propagation "*string*" from capture "*string*" to apply "*string*".

Cause: The data dictionary table was corrupted.

Action: Validate the data dictionary table to restart GoldenGate, XStream or Streams capture process.

ORA-26901: *string* propagation sender in the combined capture and apply mode is to be suspended while apply is disabled.

Cause: The corresponding subscriber was dropped or split.

Action: No action necessary.

ORA-26902: *string* propagation sender in the combined capture and apply mode is to be suspended while apply is enabled.

Cause: The corresponding subscriber was dropped or split.

Action: No action necessary.

ORA-26903: Invalid edition name "*string*"

Cause: The edition associated with the LCR did not exist in the destination database.

Action: Check if the edition needs to be created manually on the destination database or if the CREATE EDITION statement for this edition has been applied properly on the destination database.

ORA-26904: Invalid bind variable "*string*" in LCR field expression.

Cause: In the statement handler, the bind variables listed in the SQL expression did not match the allowed Logical Change Record field names.

Action: Verify that all the bind variables listed in the expression are legal Logical Change Record fields.

ORA-26905: Invalid LCR method expression "*string*" in statement handler.

Cause: The Logical Change Record method listed was not allowed in the statement handler.

Action: Verify that the Logical Change Record method listed in the expression is a legal DBMS_LCR method.

ORA-26906: No change handler exists.

Cause: There was no change handler for the specified apply, operation, source table, change table, and capture values.

Action: Query DBA_APPLY_CHANGE_HANDLERS view to find the correct change handler.

ORA-26907: Insufficient privileges to set converge tag

Cause: Privileges were insufficient to set converge tag.

Action: The invoker needs EXECUTE_CATALOG_ROLE or execute privilege on DBMS_STREAMS_ADM to set converge tag. Grant appropriate privileges to the invoker.

ORA-26908: XStream API must be executed using a dedicated server process.

Cause: An attempt was made to execute XStream API using a shared server process.

Action: Replace the connect string in the client application to use a dedicated server process.

ORA-26909: cannot reexecute an eager error

Cause: An attempt was made to reexecute an eager error transaction. An eager transaction is applied before the apply process sees the commit or rollback for the transaction.

Action: Fix the cause of the eager error and restart the apply process. When apply is restarted, capture will automatically resend the transaction, and the transaction will be applied by the apply process.

ORA-26910: user error *string* encountered in eager mode

Cause: An error was encountered during eager apply. An eager transaction is applied before the apply process sees the commit or rollback for the transaction. If an error occurs during an eager transaction, the transaction will be rolled back.

Action: Query the DBA_APPLY_ERROR view to determine the error and take the appropriate action. The apply process will need to be restarted to apply the transaction that had the error. When apply is restarted, capture will automatically resend the transaction, and the transaction will be applied by the apply process.

ORA-26911: invalid oldest position (current position=*string*; new position=*string*)

Cause: An attempt was made to set the oldest position to a value that was less than the current value.

Action: Correct the oldest_position argument in OCIXStreamOutProcessedLWMSet2 call.

ORA-26912: not allowed to invoke '*string*' while in committed data-only mode

Cause: An attempt was made to call the specified API while the attached XStream server was in committed data-only mode.

Action: Perform one of the following: 1) If the invalid call is OCIXStreamOutProcessedLWMSet2, then change it to OCIXStreamOutProcessedLWMSet or pass a null oldest_position to OCIXStreamOutProcessedLWMSet2 call. 2) If the invalid call is OCIXStreamInProcessedLWMGet2, then change it to OCIXStreamInProcessedLWMGet or pass a null oldest_position to OCIXStreamInProcessedLWMGet2 call.

ORA-26913: must connect to instance *string* where *string string* server "*string*" is running

Cause: The client application was not connected to the same Oracle RAC instance as the specified Oracle GoldenGate or XStream server.

Action: Connect to the specified instance using the network service name obtained from the following query: SELECT network_name FROM all_queues q, all_xstream_outbound ob WHERE q.owner = ob.queue_owner AND q.name = ob.queue_name AND server_name = '<server_name>';

ORA-26914: Unable to communicate with *string* capture process "*string*" from outbound server "*string*".

Cause: Capture process might not have been started properly or was aborted.

Action: If Oracle GoldenGate or XStream capture process was stopped, then restart the capture process. Otherwise, query the DBA_CAPTURE view to determine the reason and take the appropriate action. If the error is ORA-4031, either increase the initialization parameter STREAMS_POOL_SIZE or increase the capture parameter MAX_SGA_SIZE or increase both. Refer to the XStream documentation for additional information on these parameters.

ORA-26915: Unable to return Logical Change Record (LCR) information due to missing data dictionary.

Cause: The current session was unable to return the requested information on the given LCR due to missing dictionary data on that LCR.

Action: Detach and reattach the XStream outbound server. Then retry the current call.

ORA-26916: Must call OCIPOGGRedoLogOpen function before OCIPOGGRedoLogRead

Cause: An attempt was made to call OCIPOGGRedoLogRead before calling OCIPOGGRedoLogOpen.

Action: Add OCIPOGGRedoLogOpen call before OCIPOGGRedoLogRead.

ORA-26917: OCIPOGG API must be executed using a dedicated server process.

Cause: An attempt was made to execute OCIPOGG API using a shared server process.

Action: Replace the connect string in the client application to use a dedicated server process.

ORA-26918: Must use 'string' procedure for outbound server "string".

Cause: An attempt was made to execute START_APPLY on an outbound server that uses uncommitted data mode.

Action: Use the specified procedure instead.

ORA-26919: Capture "string" is not associated with queue "string"."string".

Cause: The capture specified in the ADD_OUTBOUND procedure was not associated with the specified queue.

Action: Resubmit the ADD_OUTBOUND procedure after removing either the capture_name or the queue_name argument.

ORA-26920: string outbound server "string" has been stopped.

Cause: The specified outbound server was stopped.

Action: Execute START_OUTBOUND procedure to restart the outbound server or execute OCIXStreamOutAttach function to reattach to the outbound server.

ORA-26921: Cannot alter the start SCN or time of string Capture "string".

Cause: An attempt was made to alter the start SCN or time for a capture while other outbound servers were still attached to it.

Action: Execute the following: 1) Get the names of other outbound servers currently attached to the specified Capture using the query: SELECT server_name FROM dba_xstream_outbound WHERE (status = 'ATTACHED') AND (server_name '<altered_server>') AND (capture_name = '<specified_capture_name>'); 2) Detach the client application from each server_name returned. 3) Retry the operation.

ORA-26922: user *string* does not have LOGMINING privilege

Cause: An attempt was made to start the capture process or attach to an outbound server when the specified user did not have LOGMINING privilege.

Action: Grant LOGMINING privilege to the specified user and resubmit the failed operation.

ORA-26923: cannot configure *string* outbound server "*string*" with *string* capture "*string*" due to different purpose

Cause: An attempt was made to configure an outbound server with a capture used for different purpose.

Action: Execute the following: 1) Get the purpose of each capture and its associated queue: SELECT capture_name, queue_owner, queue_name, purpose FROM dba_capture; 2) Resubmit the statement using a queue or capture with the same purpose.

ORA-26924: cannot configure *string* using "*string*".*string*" queue because it is used by "*string*" for *string* purpose

Cause: An attempt was made to configure the specified process using a queue already used by another process for different purpose.

Action: Resubmit the statement using another queue of the same purpose.

ORA-26925: cannot configure outbound server "*string*" with capture "*string*" because it is not using apply-state checkpoint

Cause: An attempt was made to configure an outbound server with a capture not using apply-state checkpoint.

Action: Specify a different capture in the ADD_OUTBOUND procedure or re-create the capture and resubmit the statement.

ORA-26926: Unable to attach because capture "*string*" is missing dictionary redo logs

Cause: The specified capture was unable to locate the dictionary redo log.

Action: Check the state of the specified capture from gv\$streams_capture to determine the SCN or filename of the missing log file. Confirm that the filename exists and is accessible online and also in the DBA_REGISTERED_ARCHIVED_LOG view. In addition, for local capture, confirm that an entry exists for the file in the V\$ARCHIVED_LOG view. If an entry is missing, it can be added using the ALTER DATABASE REGISTER ... LOGFILE command, specifying the keyword LOGICAL LOGFILE or PHYSICAL LOGFILE as appropriate.

ORA-26927: Unable to communicate with *string* capture process "*string*" from outbound server "*string*".

Cause: A timeout occurred while waiting for capture to respond.

Action: Check the state of the specified capture from GV\$XSTREAM_CAPTURE view. Determine the reason for capture's unresponsiveness. If streams_pool_size is not set or set with an inadequate value, consider setting or increasing the value of this parameter.

ORA-26928: Unable to communicate with *string* apply coordinator process "*string*" from outbound server "*string*".

Cause: A timeout occurred while waiting for apply coordinator to respond.

Action: Check the state of the specified apply coordinator from GV\$STREAMS_APPLY_COORDINATOR view. Determine the reason for apply

coordinator's unresponsiveness. If `streams_pool_size` is not set or set with an inadequate value, consider setting or increasing the value of this parameter.

ORA-26929: altering an outbound server with a remote capture is not allowed

Cause: An attempt was made to alter an outbound server with a remote capture.

Action: None

ORA-26930: User "*string*" does not have privileges to perform this operation

Cause: An attempt was made to create, alter, or drop a process that has a different user (such as capture user or apply user) than the invoking user.

Action: Use the `DBMS_XSTREAM_AUTH.GRANT_ADMIN_PRIVILEGE` or `DBMS_GOLDENGATE_AUTH.GRANT_ADMIN_PRIVILEGE` procedures to grant the invoking user proper privileges.

ORA-26931: This procedure can only be invoked from the root container.

Cause: An attempt was made to create an outbound server in non-root PDB.

Action: Create the outbound server from the root container.

ORA-26932: Streams configuration is not allowed in a container database.

Cause: An attempt was made to configure a Streams environment in a container database.

Action: None

ORA-26933: Cannot start Streams process "*string*" while in a container database.

Cause: An attempt was made to start the specified Streams process while in a container database.

Action: None

ORA-26934: Streams synchronous capture is not supported in a container database.

Cause: An attempt was made to perform a DML operation on a table being captured by a Streams synchronous capture in a container database.

Action: Remove all Streams synchronous captures then reexecute the DML operation.

ORA-26935: Unsupported type *string.string* for parameter for procedure *string.string.string*.\n

Cause: Apply encountered a procedure call with a parameter with an unsupported type.

Action: Modify the rules to filter out the procedure call.

ORA-26936: must execute OCIPOGGCaptureAttach before invoking *string* function

Cause: An attempt was made to invoke the specified function before executing OCIPOGGCaptureAttach call.

Action: Add OCIPOGGCaptureAttach call before the specified function.

ORA-26937: client has already attached to *string* capture "*string*".

Cause: The client was already attached to the specified capture.

Action: Detach from the specified capture before reattaching.

ORA-26938: cannot pack LCR into LCR buffer (buffer size is *string*, LCR size is *string*)

Cause: The logical change record (LCR) buffer was not large enough to store the current LCR.

Action: Increase the buffer size in the OCIPOGGCaptureAttach call.

ORA-26939: *string* capture "*string*" is disabled.

Cause: The capture process was disabled or aborted.

Action: Start the capture process.

ORA-26940: OCIPOGGCapture API must be executed using a dedicated server process.

Cause: An attempt was made to execute OCIPOGGCapture API using a shared server process.

Action: Replace the connect string in the client application to use a dedicated server process.

ORA-26941: unable to perform LOB assembly for table *string.string*

Cause: The apply process was unable to perform the LOB assembly for a DML for the specified table.

Action: Verify that the storage type for the columns are compatible at the source and destination.

ORA-26942: LCR should not contain old value for column *string* in table *string.string*

Cause: The LCR contained old values for LOB, XMLType and object columns.

Action: Remove old values for any LOB, XMLType and object columns in the LCR.

ORA-26943: cross PDB operation not allowed

Cause: An attempt was made to perform an operation on a container database different from the container database where the call was made.

Action: Log into the root container or into the container where you want to perform the requested action.

ORA-26944: User "*string*" attempted to invoke a procedure without proper permissions.

Cause: An attempt was made to invoke a procedure without proper permissions.

Action: Use the DBMS_GOLDENGATE_AUTH.GRANT_ADMIN_PRIVILEGE to grant the invoking user proper privileges.

ORA-26945: unsupported hint *string*

Cause: The specified hint was not supported.

Action: Remove the hint from the SQL statement.

ORA-26946: OCIPOGGRedoLog API not supported in CDB.

Cause: An attempt was made to call an OCIPOGGRedoLog API in a multitenant container database (CDB).

Action: Do not call the OCIPOGGRedoLog API in a CDB.

ORA-26947: Oracle GoldenGate replication is not enabled.

Cause: The 'enable_goldengate_replication' parameter was not set to 'true'.

Action: Set the 'enable_goldengate_replication' parameter to 'true' and retry the operation. Oracle GoldenGate license is needed to use this parameter.

ORA-26948: Streams API must be executed using a dedicated server process.

Cause: The dblink configured for the propagation from the capture queue to the apply queue is using a shared server connection.

Action: Modify the dblink for this propagation to use a dedicated server connection.

ORA-26949: Advanced Replication is not allowed in a container database.

Cause: An attempt was made to configure an advanced replication in a multitenant container database (CDB).

Action: Do not call the Advanced Replication API in a CDB.

ORA-26951: table "*string*"."*string*" has column data type not supported by conflict resolution

Cause: A conflict was detected, but unsupported columns prevented resolving the conflict.

Action: Remove conflict resolution configuration for tables with LOB, LONG, XML, object, or extended types.

ORA-26952: could not clone from the specified clone_capture_name *string* while creating capture process *string*

Cause: The specified clone_capture_name could not be used as a clone candidate while creating the capture process.

Action: Re-create the capture without setting clone_capture_name.

ORA-27000: skgfsbi: failed to initialize storage subsystem (SBT) layer

Cause: sbtinit returned an error, additional information indicates error

Action: verify that vendor's storage subsystem product is operating correctly

ORA-27001: unsupported device type

Cause: the specified device type is supported on this platform

Action: check V\$BACKUP_DEVICE for supported device types

ORA-27002: function called with invalid device structure

Cause: internal error, additional information indicates which function encountered error

Action: check for trace file and contact Oracle Support

ORA-27003: cannot open file on device allocated with NOIO option

Cause: internal error, a file is being created/retrieved on a device allocated with NOIO option, additional information indicates which function encountered error

Action: check for trace file and contact Oracle Support

ORA-27004: invalid blocksize specified

Cause: internal error, blocksize specified is incorrect for the device on which file is being created, additional information indicates blocksize specified, and the function that encountered the error

Action: check for trace file and contact Oracle Support

ORA-27005: cannot open file for async I/O on device not supporting async

Cause: internal error, a file is being opened for async I/O on a device that does not support async I/O, additional information indicates which function encountered error

Action: check for trace file and contact Oracle Support

ORA-27006: sbtremove returned error

Cause: additional information indicates error returned by sbtremove, and the function that encountered the error

Action: verify that vendor's storage subsystem product is operating correctly

ORA-27007: failed to open file

Cause: sbtopen returned error, additional information indicates error returned from sbtopen, and the function that encountered the error

Action: verify that vendor's storage subsystem product is operating correctly

ORA-27008: function called with invalid file structure

Cause: internal error, additional information indicates which function encountered error

Action: check for trace file and contact Oracle Support

ORA-27009: cannot write to file opened for read

Cause: internal error

Action: check for trace file and contact Oracle Support

ORA-27010: skgfwrt: write to file failed

Cause: sbtwrite returned error, additional information indicates error returned from sbtwrite

Action: verify that vendor's storage subsystem product is operating correctly

ORA-27011: skgfrd: cannot read from file opened for write

Cause: internal error

Action: check for trace file and contact Oracle Support

ORA-27012: skgfrd: read from file failed

Cause: sbtread returned error, additional information indicates error returned from sbtread

Action: verify that vendor's storage subsystem product is operating correctly

ORA-27013: skgfdel: cannot delete an open file

Cause: internal error

Action: check for trace file and contact Oracle Support

ORA-27014: skgfpini: translation error while expanding SS_UDMPDIR

Cause: Failure of sltln in skgfpini

Action: Check additional return error for more information.

ORA-27015: skgfcls: failed to close the file

Cause: sbtclose returned error, additional information indicates error returned from sbtclose

Action: verify that vendor's storage subsystem product is operating correctly

ORA-27016: skgfcls: sbtinfo returned error

Cause: additional information indicates error returned from sbtinfo

Action: verify that vendor's storage subsystem product is operating correctly

ORA-27017: skgfcls: media handle returned by sbtinfo exceeds max length(SSTMXQMH)

Cause: media handle string length exceeds SSTMXQMH

Action: verify that vendor's storage subsystem product is operating correctly, and that the platform limit (SSTMXQMH) is atleast 64 (the limit specified for sbtinfo). additional information indicates the media handle string length returned by sbtinfo, and the limit (SSTMXQMH)

ORA-27018: BLKSIZE is not a multiple of the minimum physical block size

Cause: User-specified BLKSIZE (blocking factor) is not a multiple of the minimum block size that is permitted on this platform.

Action: Two ADDITIONAL INFORMATION messages are displayed which show the blocking factor provided by the user and the minimum physical block size. Specify a BLKSIZE that is an integral multiple of the minimum block size.

ORA-27019: tape filename length exceeds limit (SBTOPMXF)

Cause: length of tape filename provided to sequential I/O OSD functions is too long

Action: additional information indicates in which function this error is encountered, the length of filename provided, and the limit on filename

ORA-27020: named devices not supported

Cause: the platform or the specified device type does not support named devices

Action: do not specify device name or use a device type that supports named devices. Use V\$BACKUP_DEVICE view to see what device types and names (if any) are available.

ORA-27021: sequential file handle must be specified

Cause: The filename which will be passed to sbtopen was not specified.

Action: Specify a filename and continue. If this is a backup set being created via Recovery Manager, use the 'format' option to specify the backup piece handle name.

ORA-27022: skgfqsbi: could not allocate memory for media manager

Cause: Oracle could not allocate memory required by the media management software which is linked with Oracle to provide backup/restore services.

Action: Increase the amount of memory available to the Oracle process and retry the backup/restore.

ORA-27023: skgfqsbi: media manager protocol error

Cause: The media management software which is linked with Oracle to provide backup/restore services did not provide its function pointer structure to Oracle.

Action: This is an internal error in the media management product. Contact the media management vendor.

ORA-27024: skgfqsbi: sbtinit2 returned error

Cause: sbtinit2 returned an error. This happens during a backup or restore operation.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27025: skgfsbi: invalid media manager context area size

Cause: The media management software requested a context area size which is greater than the maximum allowable size.

Action: This is an internal error in the media management product. Contact the media management vendor.

ORA-27026: skgfrls: sbtend returned error

Cause: sbtend returned an error. This happens during a backup or restore operation.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27027: sbtremove2 returned error

Cause: sbtremove2 returned an error. This happens when deleting a backup file.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27028: skgfcrc: sbtbackup returned error

Cause: sbtbackup returned an error. This happens when creating a backup file during a backup operation.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27029: skgfrtrv: sbtrestore returned error

Cause: sbtrestore returned an error. This happens when retrieving a backup file during a restore operation.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27030: skgfwrt: sbtwrite2 returned error

Cause: sbtwrite2 returned an error. This happens while writing a backup file during a backup operation.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27031: mirror resilvering functions not supported

Cause: internal error

Action: check for trace file and contact Oracle Support

ORA-27032: failed to obtain file size limit

Cause: getrlimit system call returned an error

Action: check errno

ORA-27033: failed to obtain file size limit

Cause: ulimit system call returned an error

Action: check errno

ORA-27034: maximum length of ORACLE_SID exceeded

Cause: too many characters in the ORACLE_SID string

Action: rename the ORACLE_SID to a string of up to the maximum number of characters specified for your system

ORA-27035: logical block size is invalid

Cause: logical block size for oracle files must be a multiple of the physical block size, and less than the maximum

Action: block size specified is returned as additional information, check init.ora parameters, additional information also indicates which function encountered the error

ORA-27036: translation error, unable to expand file name

Cause: additional information indicates sltn/slnrm error, and also indicates which function encountered the error

Action: check additional information

ORA-27037: unable to obtain file status

Cause: stat system call returned an error, additional information indicates which function encountered the error

Action: check errno

ORA-27038: created file already exists

Cause: trying to create a database file, but file by that name already exists

Action: verify that name is correct, specify reuse if necessary

ORA-27039: create file failed, file size limit reached

Cause: an attempt was made to create a file that exceeds the process's file size limit, additional information indicates which function encountered the error

Action: raise the file size limit

ORA-27040: file create error, unable to create file

Cause: create system call returned an error, unable to create file

Action: verify filename, and permissions

ORA-27041: unable to open file

Cause: open system call returned an error, additional information indicates which function encountered the error

Action: check errno

ORA-27042: not enough space on raw partition to fulfill request

Cause: internal error, file too large for raw partition, additional information indicates which function encountered the error

Action: check for trace file and contact Oracle Support

ORA-27043: unable to seek to beginning of file

Cause: seek system call failed, additional information indicates which function encountered the error

Action: check errno

ORA-27044: unable to write the header block of file

Cause: write system call failed, additional information indicates which function encountered the error

Action: check errno

ORA-27045: unable to close the file

Cause: close system call failed, additional information indicates which function encountered the error

Action: check errno

ORA-27046: file size is not a multiple of logical block size

Cause: file size as indicated by stat is not correct, additional information indicates which function encountered the error

Action: verify that the file has not been overwritten or truncated

ORA-27047: unable to read the header block of file

Cause: read system call failed, additional information indicates which function encountered the error

Action: check errno

ORA-27048: skgfifi: file header information is invalid

Cause: possibly trying to use a non-database file as a database file

Action: verify that file is a database file

ORA-27049: unable to seek to and read the last block

Cause: an attempt was made to seek to and read the last block in file, additional information indicates which function encountered error

Action: check errno

ORA-27050: function called with invalid FIB/IOV structure

Cause: internal error, additional information indicates which function encountered error

Action: check for trace file and contact Oracle Support

ORA-27052: unable to flush file data

Cause: fsync system call returned error, additional information indicates which function encountered the error

Action: check errno

ORA-27053: blocksize in file header not a multiple of logical block size

Cause: the logical block size is invalid, additional information indicates the logical block size and the blocksize in the file header

Action: use a different logical block size, or do not reuse file

ORA-27054: NFS file system where the file is created or resides is not mounted with correct options

Cause: The file was on an NFS partition and either reading the mount tab file failed or the partition was not mounted with the correct mount option.

Action: Make sure mount tab file has read access for Oracle user and the NFS partition where the file resides is mounted correctly. For the list of mount options to use refer to your platform specific documentation.

ORA-27056: could not delete file

Cause: unlink system call returned error

Action: check errno

ORA-27057: cannot perform async I/O to file

Cause: internal error, query is being asked about async vector I/O when the file does not support async I/O

Action: check for trace file and contact Oracle Support

ORA-27058: file I/O question parameter is invalid

Cause: internal error, invalid query is being asked

Action: check for trace file and contact Oracle Support

ORA-27059: could not reduce file size

Cause: ftruncate system call returned error

Action: check errno

ORA-27060: could not set close-on-exec bit on file

Cause: fcntl system call returned error

Action: check errno

ORA-27061: waiting for async I/Os failed

Cause: aiowait function returned error

Action: check errno

ORA-27062: could not find pending async I/Os

Cause: There should have been some async I/Os in the system but a blocking aiowait indicates that there are no more I/Os. It could be either because of an Oracle bug or the vendor OS bug or due to a NFS server not responding

Action: check Oracle trace file, OS message files and contact Oracle Support

ORA-27063: number of bytes read/written is incorrect

Cause: the number of bytes read/written as returned by aiowait does not match the original number, additional information indicates both these numbers

Action: check errno

ORA-27064: cannot perform async I/O to file

Cause: internal error, asked to perform async I/O when IOV indicates that it cannot be performed on the file

Action: check for trace file and contact Oracle Support

ORA-27065: cannot perform async vector I/O to file

Cause: internal error, asked to perform async vector I/O when it cannot be performed on the file

Action: check for trace file and contact Oracle Support

ORA-27066: number of buffers in vector I/O exceeds maximum

Cause: internal error, number of buffers in vector I/O exceeds maximum allowed by the OSD, additional information indicates both these numbers

Action: check for trace file and contact Oracle Support

ORA-27067: size of I/O buffer is invalid

Cause: internal error, buffer size is either 0, or greater than SSTIOMAX or not a multiple of logical block size, additional information indicates where in function the error was encountered and the buffer size

Action: check for trace file and contact Oracle Support

ORA-27068: I/O buffer is not aligned properly

Cause: internal error, buffer is not aligned to SSIOALIGN boundary, additional information indicates where in function the error was encountered and the buffer pointer

Action: check for trace file and contact Oracle Support

ORA-27069: attempt to do I/O beyond the range of the file

Cause: internal error, the range of blocks being read or written is outside the range of the file, additional information indicates the starting block number, number of blocks in I/O, and the last valid block in the file

Action: check for trace file and contact Oracle Support

ORA-27070: async read/write failed

Cause: aioread/aiowrite system call returned error, additional information indicates starting block number of I/O

Action: check errno

ORA-27071: unable to seek to desired position in file

Cause: lseek system call returned error, additional information indicates block number in file to which seek was attempted

Action: check errno

ORA-27072: File I/O error

Cause: read/write/readv/writev system call returned error, additional information indicates starting block number of I/O

Action: check errno

ORA-27073: Trying to close a file which has async I/Os pending to be dequeued

Cause: internal error, the file is being closed but not all async I/Os to the file have been dequeued, additional information indicates number of I/Os pending on the file

Action: check for trace file and contact Oracle Support

ORA-27074: unable to determine limit for open files

Cause: The getrlimit() system call returned an error.

Action: Check errno.

ORA-27075: SSTMOFRC constant too large

Cause: internal error

Action: check for trace file and contact Oracle Support

ORA-27076: unable to set limit for open files

Cause: The setrlimit() system call returned an error.

Action: Check errno.

ORA-27077: too many files open

Cause: internal error, the number of files opened through skgfofi has reached the limit

Action: Check for trace file and contact Oracle Support.

ORA-27078: unable to determine limit for open files

Cause: The getrlimit() system call returned an error.

Action: Check errno.

ORA-27079: unable to set async IO limit

Cause: The setting of the limit for async I/O has failed.

Action: Check errno.

ORA-27080: too many files open

Cause: The number of files opened has reached the system limit.

Action: Check the error, and set system configuration values.

ORA-27081: unable to close the file

Cause: The close() system call failed.

Action: Check errno.

ORA-27083: waiting for async I/Os failed

Cause: The aio_waitn() library call returned an error.

Action: Check errno.

ORA-27084: unable to get/set file status flags

Cause: The fcntl() system call with F_GETFL/F_SETFL flag returned an error.

Action: Check errno.

ORA-27086: unable to lock file - already in use

Cause: the file is locked by another process, indicating that it is currently in use by a database instance.

Action: determine which database instance legitimately owns this file.

ORA-27087: unable to get share lock - file not readable

Cause: share lock request was made on a file not open for read access.

Action: file must be open read-only or read-write to get a share lock.

ORA-27088: unable to get file status

Cause: file not open or file descriptor is invalid.

Action: n/a

ORA-27089: unable to release advisory lock

Cause: release of file lock failed

Action: see errno

ORA-27090: Unable to reserve kernel resources for asynchronous disk I/O

Cause: The system call to reserve kernel resources for asynchronous I/O has failed.

Action: Check errno

ORA-27091: unable to queue I/O

Cause: read/write/readv/writev system call returned error, additional information indicates starting block number of I/O

Action: check errno

ORA-27092: size of file exceeds file size limit of the process

Cause: an attempt was made to open a file that exceeds the process's file size limit (ulimit), additional information shows the current limit (logical blocks) and the size of the file (logical blocks)

Action: increase the processes file size limit (ulimit) and retry

ORA-27093: could not delete directory

Cause: rmdir system call returned error

Action: check errno

ORA-27094: raw volume used can damage partition table

Cause: A raw device with VTOC information was provided as a database file.

Action: Make sure the disk partition that is provided to Oracle does not start at sector 0

ORA-27095: fail to get the disk sector size

Cause: The system call to get the sector size failed. Additional information indicates which function encountered the error.

Action: Check error number.

ORA-27096: fail to get file size

Cause: The system call to get file size failed. Additional information indicates which function encountered the error.

Action: Check error number.

ORA-27097: failed to set Access Control List ownership for ASM devices

Cause: The system call to set ACL ownership for ASM devices failed. Additional information indicates which function encountered the error.

Action: Refer to Microsoft documentation for an explanation of the accompanying error code and text.

ORA-27098: failed to rename file

Cause: The system call to change the file name failed. Additional information indicates which function encountered the error.

Action: Check the Oracle trace file for additional information on file name and reason for failure.

ORA-27099: failed to create file

Cause: The system call to create this file type in this file system failed. Check if the creation of this file type is supported in this file system. Additional information indicates which function encountered the error.

Action: Refer to Oracle documentation for additional details.

ORA-27100: shared memory realm already exists

Cause: Tried to start duplicate instances, or tried to restart an instance that had not been properly shutdown

Action: Use a different instance name, or cleanup the failed instance's SGA

ORA-27101: shared memory realm does not exist

Cause: Unable to locate shared memory realm

Action: Verify that the realm is accessible

ORA-27102: out of memory

Cause: Out of memory

Action: Consult the trace file for details

ORA-27103: internal error

Cause: internal error

Action: contact Oracle support

ORA-27104: system-defined limits for shared memory was misconfigured

Cause: System-defined shared memory limits were inadequate for Oracle.

Action: Consult the alert file for details.

ORA-27105: unable to support any system page size for shared memory allocation

Cause: Current configuration was not supported by any system page size.

Action: Consult the alert file for details.

ORA-27106: system pages not available to allocate memory

Cause: System page count for supported page sizes was misconfigured.

Action: Configure system page count as recommended in the alert file.

ORA-27107: AUTO value for USE_LARGE_PAGES parameter is no longer supported

Cause: The USE_LARGE_PAGES configuration parameter was set to AUTO.

Action: Consult the alert file for details.

ORA-27120: unable to remove shared memory segment

Cause: shmctl() call failed

Action: check permissions on segment, contact Oracle support

ORA-27121: unable to determine size of shared memory segment

Cause: shmctl() call failed

Action: check permissions on segment, contact Oracle support

ORA-27122: unable to protect memory

Cause: mprotect() call failed

Action: contact Oracle support

ORA-27123: unable to attach to shared memory segment

Cause: shmat() call failed

Action: check permissions on segment, contact Oracle support

ORA-27124: unable to detach from shared memory segment

Cause: shmdt() call failed

Action: contact Oracle support

ORA-27125: unable to create shared memory segment

Cause: shmget() call failed

Action: contact Oracle support

ORA-27126: unable to lock shared memory segment in core

Cause: insufficient privileges to lock shared memory segment in core

Action: make sure process is running with necessary privileges.

ORA-27127: unable to unlock shared memory segment

Cause: insufficient privileges to unlock shared memory segment

Action: make sure process is running with necessary privileges.

ORA-27128: unable to determine pagesize

Cause: sysconf() call failed

Action: contact Oracle support

ORA-27133: unable to determine stacksize

Cause: getrlimit() call failed

Action: Contact Oracle Support Services.

ORA-27134: unable to set stacksize

Cause: setrlimit() call failed

Action: Contact Oracle Support Services.

ORA-27135: Operating System hard stack limit is set too low

Cause: Operating System hard stack limit was set too low.

Action: Check additional information for current and minimum limit. Increase the Operating System hard stack limit and retry.

ORA-27136: MPMT and VLM are both enabled

Cause: When the `_mpmt_enabled` parameter is set to TRUE, none of the following parameters should be set to TRUE: `* use_indirect_buffers` `* _db_block_cache_protect` `* _db_block_cache_clone`

Action: Either turn off Multi Process Multi Threads (MPMT) or turn off all the other parameters.

ORA-27137: unable to allocate large pages to create a shared memory segment

Cause: Parameter `USE_LARGE_PAGES` set to only, but large pages were not configured properly

Action: Check alert file for more information

ORA-27138: unable to allocate large pages with current parameter setting

Cause: With parameter `USE_LARGE_PAGES` set to only, none of the following parameters can be set: `* memory_target/memory_max_target` `* _db_block_cache_protect` `* use_indirect_data_buffers`

Action: Either turn off the `USE_LARGE_PAGES` parameter setting, or turn off all the other parameters. Large pages are compatible with `sga_target`, `sga_max_size` and `shared_pool_size`.

ORA-27139: unable to reserve Oracle VM mapping in process address space

Cause: The address space region was already mapped.

Action: Contact Oracle Support Services.

ORA-27140: attach to post/wait facility failed

Cause: The program attempted to initialize the post/wait facility, but the facility could not be attached.

Action: Check for additional errors and contact Oracle Support.

ORA-27141: invalid process ID

Cause: process operation attempted using invalid process ID

Action: contact Oracle Support

ORA-27142: could not create new process

Cause: OS system call

Action: check errno and if possible increase the number of processes

ORA-27143: OS system call failure

Cause: OS system call failed

Action: check errno and contact Oracle support

ORA-27144: attempt to kill process failed

Cause: OS system call error

Action: check errno and contact Oracle Support

ORA-27145: insufficient resources for requested number of processes

Cause: OS system call error

Action: check errno and contact Oracle Support

ORA-27146: post/wait initialization failed

Cause: OS system call failed

Action: check errno and contact Oracle Support

ORA-27147: post/wait reset failed

Cause: OS system call failed

Action: check errno and contact Oracle Support

ORA-27148: spawn wait error

Cause: OS system call failed

Action: check errno and contact Oracle Support

ORA-27149: assignment out of range

Cause: internal error, requested conversion too large for type

Action: contact Oracle Support

ORA-27150: attempt to notify process of pending oradebug call failed

Cause: OS system call

Action: check errno contact Oracle Support

ORA-27151: buffer not large enough to hold process ID string

Cause: internal error

Action: contact Oracle Support

ORA-27152: attempt to post process failed

Cause: OS system call failed

Action: check errno and contact Oracle Support

ORA-27153: wait operation failed

Cause: OS system called failed

Action: check errno contact Oracle Support

ORA-27154: post/wait create failed

Cause: internal error, multiple post/wait creates attempted simultaneously

Action: check errno and contact Oracle Support

ORA-27155: could not execute file

Cause: OS system call failed

Action: check errno and contact Oracle Support

ORA-27156: request for process information failed

Cause: internal error

Action: contact Oracle Support

ORA-27157: OS post/wait facility removed

Cause: the post/wait facility for which the calling process is awaiting action is removed from the system

Action: check errno and contact Oracle Support

ORA-27158: process control failure

Cause: Oracle was unable to set the specified process control.

Action: Consult the Oracle Administrator's Guide.

ORA-27159: failure setting process scheduling priority

Cause: Oracle was unable to set the scheduling priority desired.

Action: Consult the Oracle Administrator's Guide.

ORA-27160: process requested to perform operation

Cause: The current process was requested to perform an operation by another process.

Action: This is used internally; no action is required.

ORA-27161: request for Oracle binary information failed

Cause: The program was unable to get information about the Oracle binary.

Action: Check for additional errors and contact Oracle support.

ORA-27162: thread creation failed

Cause: The program was unable to create a thread.

Action: Check errno and contact Oracle support.

ORA-27163: out of memory

Cause: The program ran out of memory when allocating a temporary data structure.

Action: Increase the amount of memory on the system.

ORA-27164: tried to join detached thread

Cause: The program tried to join a detached thread.

Action: This is an internal error; contact Oracle support.

ORA-27165: tried to join thread that does not exist

Cause: The program tried to join a thread that does not exist.

Action: This is an internal error; contact Oracle support.

ORA-27166: tried to join current thread

Cause: A thread in the program tried to join itself.

Action: This is an internal error; contact Oracle support.

ORA-27168: Translation from hostname to network address failed

Cause: Internal error

Action: Contact Oracle Support Services.

ORA-27170: Oracle RAC option of current Oracle binary differs from running instance

Cause: The Oracle installation environment may have been modified while the instance was running.

Action: Restore the environment to its original state when the instance was started or shutdown (abort) and restart the instance.

ORA-27190: skgfrd: sbtread2 returned error

Cause: sbtread returned an error. This happens while reading a backup file during a restore operation.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27191: sbtinfo2 returned error

Cause: sbtinfo2 returned an error. This happens while retrieving backup file information from the media manager's catalog.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27192: skgfcls: sbtclose2 returned error - failed to close file

Cause: sbtclose2 returned an error. This happens while closing a backup file during a backup or restore operation.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27193: sbtinfo2 did not return volume label

Cause: sbtinfo2 did not return the volume label information for the backup file that was just created.

Action: This is an internal error in the media management product. Contact the media management vendor.

ORA-27194: skgfdvcmd: sbtcommand returned error

Cause: sbtcommand returned an error. This happens when an rman SEND command is issued.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27195: proxy copy not supported

Cause: An attempt was made to do a proxy backup or restore, but the media management software installed with Oracle does not support proxy copy.

Action: Re-run the backup in non-proxy mode, or contact the media management vendor if the software is supposed to support proxy copy.

ORA-27196: skgfpbk: sbtpcbbackup returned error

Cause: sbtpcbbackup returned an error. This happens when a proxy backup is begun.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27197: skgfprs: sbtpcrestore returned error

Cause: sbtpcrestore returned an error. This happens when a proxy restore is begun.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27198: skgfpvl: sbtpcvalidate returned error

Cause: sbtpcvalidate returned an error. This happens during a proxy backup or restore.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27199: skgfpst: sbtpcstatus returned error

Cause: sbtpcstatus returned an error. This happens during a proxy backup or restore.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27200: skgfpgo: sbtpcstart returned error

Cause: sbtpcstart returned an error. This happens during a proxy backup or restore.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27201: skgfpcm: sbtpccommit returned error

Cause: sbtpccommit returned an error. This happens during a proxy backup or restore.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27202: skgfpn: sbtpcend returned error

Cause: sbtpcend returned an error. This happens during a proxy backup or restore.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27203: skgfpqb: sbtpcquerybackup returned error

Cause: sbtpcquerybackup returned an error. This happens during a proxy backup.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27204: skgfpqr: sbtpcqueryrestore returned error

Cause: sbtpcqueryrestore returned an error. This happens during a proxy restore.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27205: skgfpcn: sbtpccancel returned error

Cause: sbtpccancel returned an error. This happens during a proxy restore.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27206: requested file not found in media management catalog

Cause: A backup file used in a recovery manager catalog maintenance command was not found in the media management catalog.

Action: Retry the command with a different file.

ORA-27207: syntax error in device PARMS - parentheses mismatch or missing

Cause: User-supplied PARMS value has incorrect syntax.

Action: Retry the command with correct syntax: ENV=(..) BLKSIZE=nnnn

ORA-27208: syntax error in device PARMS - environment variable value missing

Cause: User-supplied PARMS value has incorrect syntax.

Action: Retry the command with correct syntax: ENV=(var1=val1,var2=val2,..)

ORA-27209: syntax error in device PARMS - unknown keyword or missing =

Cause: User-supplied PARMS value has incorrect syntax. The server expected to find ENV or BLKSIZE, but found an unknown keyword.

Action: Retry the command with correct syntax: ENV=(..) BLKSIZE=nnnn

ORA-27210: syntax error in device PARMS

Cause: User-supplied PARMS value has incorrect syntax.

Action: Retry the command with correct syntax: ENV=(..) BLKSIZE=nnnn

ORA-27211: Failed to load Media Management Library

Cause: User-supplied SBT_LIBRARY or libobk.so could not be loaded. Call to dlopen for media library returned error. See Additional information for error code.

Action: Retry the command with proper media library. Or re-install Media management module for Oracle.

ORA-27212: some entrypoints in Media Management Library are missing

Cause: media library does not have one of the following entrypoints : sbtinfo, sbtread, sbtwrite, sbtremove, sbtopen, sbtclose, sbtinit

Action: Retry the command with proper media library.

ORA-27213: failed to unload Media Management Library

Cause: dlclose for media library returned error. See Additional Additional information for error code.

Action: contact Oracle Support.

ORA-27214: skgfrsfe: file search failed

Cause: The FindNextFile function returned unexpected error.

Action: Check errors on the error stack for an explanation why the search for files could not be successfully executed.

ORA-27215: skgfgsmcs: sbtinfo2 returned unknown file

Cause: During an sbtinfo2() call, the media management software returned information about an unknown backup file.

Action: Contact the media management vendor.

ORA-27216: skgfgsmcs: sbtinfo2 returned a malformed response

Cause: The media management software returned a malformed response during an sbtinfo2() call.

Action: Contact the media management vendor.

ORA-27217: failed to load Media Management Library from secure location

Cause: SBT libraries were not installed in a secure location.

Action: Remove SBT_SECURE parameter or Request third party vendors to provide patch that installs SBT libraries in secured locations as mandated by Oracle.

ORA-27218: failed to read ACFS mirror

Cause: An attempt to communicate with the Oracle Automatic Storage Management Cluster File System (Oracle ACFS) kernel driver failed.

Action: Check errors on the error stack for an explanation of why communication with ACFS was not successful.

ORA-27230: OS system call failure

Cause: OS system call failed

Action: check errno and contact Oracle support

ORA-27231: unable to close file

Cause: A file could not be closed.

Action: See accompanying errors.

ORA-27232: unable to get file information

Cause: Information about the file could not be obtained.

Action: See accompanying errors.

ORA-27233: file is not an ELF file

Cause: A file was not an ELF file.

Action: Check for file corruption and contact Oracle Support Services.

ORA-27234: unable to read file

Cause: A file could not be read.

Action: See accompanying errors.

ORA-27235: unable to map file region into memory

Cause: A file region could not be mapped into memory.

Action: See accompanying errors.

ORA-27236: unable to unmap file from memory

Cause: A file region could not be unmapped from memory.

Action: See accompanying errors.

ORA-27237: ELF file is not a relocatable object file

Cause: An ELF file was not the expected type.

Action: Supply the expected type of file.

ORA-27238: ELF file is not an executable

Cause: An ELF file was not the expected type.

Action: Supply the expected type of file.

ORA-27239: ELF file is not a shared object file

Cause: An ELF file was not the expected type.

Action: Supply the expected type of file.

ORA-27240: ELF file does not have a required section

Cause: An ELF file did not have a required section.

Action: Contact Oracle Support Services.

ORA-27241: ELF-shared library has multiple sections of the same type

Cause: An ELF-shared library had multiple sections of the same type.

Action: Contact Oracle Support Services.

ORA-27242: ELF file has invalid hash table entry size

Cause: An ELF file had an invalid hash table entry size.

Action: Contact Oracle Support Services.

ORA-27243: ELF file has too many relocation sections

Cause: An ELF file had too many relocation sections.

Action: Contact Oracle Support Services.

ORA-27244: unable to determine base value for data relocation from ELF file

Cause: An ELF file was missing important information.

Action: Contact Oracle Support Services.

ORA-27245: unable to dlopen() binary image

Cause: A file could not be accessed via dlopen().

Action: See accompanying errors and make file available.

ORA-27246: unable to open file

Cause: A file could not be opened.

Action: See accompanying errors and make file available.

ORA-27250: OS system call failure

Cause: OS system call failed

Action: check errno and contact Oracle support

ORA-27270: szingroup: malloc failed

Cause: The malloc library call failed to allocate space for a group list.

Action: This is possibly an operating system error. Contact Oracle Support Services.

ORA-27271: szingroup: group lookup failure

Cause: The 'getgrnam_r' library call failed to determine the members of a UNIX group.

Action: This is an internal error. Contact Oracle Support Services.

ORA-27300: OS system dependent operation: *string* failed with status: *string*

Cause: OS system call error

Action: contact Oracle Support

ORA-27301: OS failure message: *string*

Cause: OS system call error

Action: contact Oracle Support

ORA-27302: failure occurred at: *string*

Cause: OS system call error

Action: contact Oracle Support

ORA-27303: additional information: *string*

Cause: OS system call error

Action: contact Oracle Support

ORA-27351: conflicting values of job attributes *string* and *string*

Cause: The values of two attributes passed in to the CREATE_JOBS call or the JOB object constructor conflicted with each other. This is usually because both attributes cannot be non-NULL at the same time.

Action: Resolve the conflict by changing the value of one of the attributes and issue the call again.

ORA-27353: job attribute *string* is missing

Cause: An attribute needed to fully specify a job was not passed in to a call to CREATE_JOBS or the JOB object constructor.

Action: Issue the call again with the required attribute set.

ORA-27354: attribute *string* cannot be set for lightweight jobs

Cause: The CREATE_JOBS call or the JOB object constructor was called with an argument that is illegal in the case of lightweight jobs.

Action: Set the argument to the default value and issue the call again.

ORA-27356: invalid job argument

Cause: An invalid job argument was passed into either the CREATE_JOBS call or the JOB object constructor.

Action: Correct the argument value and issue the call again.

ORA-27357: duplicate reference to job object *string*

Cause: The scheduler CREATE_JOBS call had two or more references to the same job.

Action: Eliminate the duplicate references and issue the call again.

ORA-27359: duplicate reference to attribute *string* of job *string*

Cause: The scheduler SET_JOB_ATTRIBUTES call had two or more references to a specific attribute of a job.

Action: Eliminate the duplicate references and issue the call again.

ORA-27361: scheduler API invoked with illegal or inconsistent arguments

Cause: A DBMS_SCHEDULER API call was invoked with either illegal or inconsistent arguments.

Action: Refer to scheduler documentation for the call, make the necessary changes and issue the call again.

ORA-27362: batch API call completed with errors

Cause: Some of the commands submitted to a scheduler batch API call could not be successfully carried out because of errors. Other commands in the batch may have completed successfully.

Action: Check the view SCHEDULER_JOB_ERRORS to see which commands failed and why. Make the appropriate corrections and submit the failed commands again.

ORA-27363: invalid program for lightweight job

Cause: You tried to create a lightweight job using an invalid program. A program used in a lightweight job has to be enabled, has to be in the same schema as the job, and the program action has to be either a PL/SQL block or a stored procedure.

Action: Use a valid program for the lightweight job.

ORA-27364: remote database "*string*" already registered as *string*

Cause: The user attempted to register a remote database that was already registered.

Action: To update the registration information, the REPLACE argument of the REGISTER_REMOTE_DATABASE procedure should be set to TRUE. If the registration information is already current, no further action is needed.

ORA-27365: job has been notified to stop, but failed to do so immediately

Cause: The job specified in the stop_job command cannot be stopped immediately (because it is rolling back or blocked on a network operation), but it has been notified to stop. This means it will be stopped as soon as possible after its current uninterruptable operation is done.

Action: No action is required for the job to be stopped, but calling stop_job with force (if you have the privilege) may cause the job to be stopped sooner.

ORA-27366: job "*string*"."*string*" is not running

Cause: An attempt was made to stop a job that was not running.

Action: Verify the status of the job. If the job is running but this message is still being returned, contact Oracle support.

ORA-27367: program "*string*"."*string*" associated with this job is disabled

Cause: An attempt was made to run a job whose program has been disabled.

Action: Reenable the program before running the job.

ORA-27369: job of type EXECUTABLE failed with exit code: *string*

Cause: A problem was encountered while running a job of type EXECUTABLE. The cause of the actual problem is identified by the exit code.

Action: Correct the cause of the exit code and reschedule the job.

ORA-27370: job slave failed to launch a job of type EXECUTABLE

Cause: The scheduler ran into an error when the job slave tried to start a job of type EXECUTABLE. The rest of the error stack will provide more detailed information on what the exact problem was.

Action: Correct the problem specified in the error stack and reschedule the job.

ORA-27371: jobs of type EXECUTABLE are not supported on this platform

Cause: The user tried to create a job or program of type EXECUTABLE on a platform where such jobs are not supported.

Action: Switch to a different platform or create a different type of job or program.

ORA-27372: length of action and arguments exceeds platform limit *string*

Cause: The total length of the job or program action and the arguments exceeds the platform limit specified.

Action: Reduce the total length by specifying fewer and/or shorter arguments

ORA-27373: unknown or illegal event source queue

Cause: The source queue specified for the event based job or event based schedule was either not found or was of the wrong type.

Action: Check if the queue exists. If it does make sure it is a multiple consumer queue and it is a post 8.1 compatible queue. Single consumer queues and old-style queues cannot be used as event source queues.

ORA-27374: insufficient privileges on event source queue

Cause: The job owner had insufficient privileges on the event source queue that was specified for the job.

Action: The job owner has to have dequeue privileges on event source queue or he has to have manage queue or dequeue any queue system privileges. Make sure one of these privileges is granted.

ORA-27375: valid agent name must be specified for secure queues

Cause: The queue specified for the event based job or schedule was a secure queue and either no agent name was specified or an invalid agent name was specified.

Action: If no agent name was specified, retry the call with a valid agent name. If the agent name was valid, check if the agent is currently subscribed to the queue and, in the case of jobs, check if the agent has been authorized to act as the job owner.

ORA-27376: event condition cannot be NULL

Cause: A null event condition was passed in for an event based job or schedule. This is not allowed.

Action: Pass in a legal event condition.

ORA-27377: windows cannot have event based schedules

Cause: Event based schedules for windows are currently not supported.

Action: Use a time-based schedule instead.

ORA-27378: cannot stop jobs of type EXECUTABLE on this platform

Cause: An attempt was made to stop a job of type EXECUTABLE on a platform where the stop operation was not supported.

Action: If the attempt to stop the job was made with the FORCE option set to FALSE, try again but change the FORCE option to TRUE.

ORA-27379: INSTANCE_ID attribute conflicts with job class settings

Cause: The value of the INSTANCE_ID attribute of the job conflicted with the value of the SERVICE attribute of its job class.

Action: Change the value of the INSTANCE_ID attribute or place the job in a job class whose settings do not conflict with the INSTANCE_ID attribute. Then re-enable the job.

ORA-27399: job type EXECUTABLE requires the CREATE EXTERNAL JOB privilege

Cause: The owner of a job of type EXECUTABLE does not have the CREATE EXTERNAL JOB system privilege.

Action: Grant the CREATE EXTERNAL JOB system privilege to the job owner or create another job in a schema which does have the CREATE EXTERNAL JOB system privilege.

ORA-27411: empty string is not a valid repeat interval.

Cause: An empty string " was provided as a repeat interval for a window or a schedule.

Action: Specify a valid repeat interval, e.g., 'FREQ=DAILY;BYHOUR=8;BYMINUTE=0;BYSECOND=0' for a job that executes daily at 8am.

ORA-27412: repeat interval or calendar contains invalid identifier: *string*

Cause: The calendar string or calendar definition for the repeat interval of a job, schedule or window contained an unsupported keyword or reference to an undefined calendar.

Action: Correct the repeat interval such that it no longer contains the invalid keyword.

ORA-27413: repeat interval is too long

Cause: The repeat interval consisted of a calendar string larger than the maximum size allowed.

Action: Use a shorter calendar string for the repeat interval.

ORA-27414: Invalid *string* clause value

Cause: The BY clause value was not recognized or was out-of-range for the frequency specified.

Action: Specify a valid BY clause value.

ORA-27415: repeat interval or calendar must start with a frequency clause

Cause: The specified calendar string for the repeat interval did not start with a frequency clause.

Action: Create a repeat interval that starts with a frequency clause, for example 'FREQ=YEARLY;BYMONTH=FEB'

ORA-27416: BYDAY clause in repeat interval or calendar contains an invalid weekday

Cause: The BYDAY clause of the repeat interval contained a value that did not represent a weekday.

Action: Use the correct three letter abbreviations for weekdays, for example MON for Monday and FRI for Friday.

ORA-27417: BYWEEKNO clause requires YEARLY clause

Cause: A repeat interval or calendar contained a BYWEEKNO clause with a frequency other than yearly.

Action: Remove the BYWEEKNO clause or change the frequency to YEARLY.

ORA-27418: syntax error in repeat interval or calendar

Cause: The repeat interval or calendar definition was not recognized as valid syntax.

Action: Specify a valid repeat interval.

ORA-27419: unable to determine valid execution date from repeat interval

Cause: The specified repeat interval contained conflicting clauses that made it impossible to ever find a matching date, e.g., 'FREQ=YEARLY;BYMONTH=FEB;BYMONTHDAY=31'. Alternatively, the scheduler reached its maximum number of attempts to try to find a valid execution date. This occurs when theoretically there is a valid execution date far in the future, but the scheduler took too many attempts to determine this date.

Action: Remove the conflicting clauses, or simplify the repeat interval so that it is easier to determine the next execution date.

ORA-27420: Following message from *string* interval interpreter

Cause: The repeat interval or calendar definition was not recognized as valid syntax.

Action: Specify a valid repeat interval.

ORA-27421: calendar expression restriction *string* encountered

Cause: The calendar expression was not valid because a limit test failed. For example, the maximum value of the interval that can be specified in the INTERVAL clause is limited to a value derived from the frequency clause.

Action: Specify a valid calendar definition.

ORA-27422: usage of *string* not supported in embedded calendar application "*string*".*string*"

Cause: The main calendar definition used an embedded calendar in an INCLUDE, EXCLUDE, INTERSECT, or FREQ clause for which extra limitations apply.

Action: Remove the specific clause from the calendar definition.

ORA-27423: calendar clause *string* specified more than once

Cause: The calendar definition contained a clause that was specified twice or more times.

Action: Append the values in the second clause to the first clause and remove the second clause.

ORA-27424: calendar clauses *string* and *string* are incompatible

Cause: The calendar definition contained clauses that were incompatible.

Action: Change or remove either clause.

ORA-27431: chain "*string*"."*string*" has a user-managed rule set

Cause: An attempt was made to modify a rule set that is not managed by the Scheduler.

Action: Modify the rule set directly using the `dbms_rule_adm` package or create another chain without specifying a rule set.

ORA-27432: step "*string*" does not exist for chain "*string*"."*string*"

Cause: The step specified does not exist for the given chain.

Action: Reissue the command using a step that exists for this chain.

ORA-27433: cannot alter state of step "*string*" for job "*string*"."*string*" to *string*

Cause: The step cannot be changed to the requested state. The state of a running step cannot be changed. A step which is running or has already run cannot be run again.

Action: Wait until the step has finished running.

ORA-27434: cannot alter chain step job "*string*"."*string*"."*string*"

Cause: A step job of a running chain cannot be altered, only stopped or dropped.

Action: Stop or drop the chain step job or alter the running chain step instead.

ORA-27435: chain job terminated abnormally

Cause: A chain job has ended abnormally. The error code for the running chain could not be retrieved.

Action: No action necessary. The job will run again when it is scheduled to.

ORA-27451: *string* cannot be NULL

Cause: An attempt was made to set a NOT NULL scheduler attribute to NULL.

Action: Reissue the command using a non-NULL value for the specified attribute.

ORA-27452: "*string*" is an invalid name for a database object.

Cause: An invalid name was used to identify a database object.

Action: Reissue the command using a valid name.

ORA-27453: "*string*" is an invalid job or program argument name.

Cause: An invalid job or program argument name was specified.

Action: Reissue the command using a valid name for this argument.

ORA-27454: argument name and position cannot be NULL

Cause: The name or position of a program or job argument was defined as NULL.

Action: Reissue the command providing either a valid argument name or valid argument position.

ORA-27455: Only "SYS" is a valid schema for a *string*.

Cause: A non-SYS schema was specified for an object that must be in the SYS schema.

Action: Reissue the command, leaving out the schema name or using the schema name of SYS.

ORA-27456: not all arguments of program "*string*"."*string*" have been defined

Cause: The `number_of_arguments` attribute of the named program did not match the actual number of arguments that have been defined.

Action: Define as many arguments as the number of arguments, or change the number of arguments.

ORA-27457: argument *string* of job "*string*"."*string*" has no value

Cause: No value was provided for the job argument with the specified position.

Action: Provide a value for the job argument using any of the `set_job_xxxx_value()` routines. Or, when using a named program, specify a default value for the corresponding argument of the program.

ORA-27458: A program of type PLSQL_BLOCK cannot have any arguments.

Cause: An attempt was made to create or enable a program of type PLSQL_BLOCK with arguments. This is not allowed.

Action: Change the number of arguments to zero, or change the type of the program.

ORA-27459: A program of type EXECUTABLE must have character-only arguments.

Cause: A program of type EXECUTABLE was created or enabled with one or more arguments of non-character datatypes.

Action: Change the arguments to be of character-only datatypes.

ORA-27460: cannot execute disabled job "*string*"."*string*"

Cause: An attempt was made to run a job that is disabled.

Action: Enable the job and then reschedule the job.

ORA-27461: The value for attribute *string* is too large.

Cause: The value that was provided for the specified attribute was too large.

Action: Reissue the command using a smaller or shorter value.

ORA-27463: invalid program type *string*

Cause: An invalid program type was specified.

Action: Reissue the command using a valid program type.

ORA-27464: invalid schedule type *string*

Cause: An invalid schedule type was specified.

Action: Reissue the command using a valid schedule type.

ORA-27465: invalid value *string* for attribute *string*

Cause: An invalid value was provided for the specified attribute.

Action: Reissue the command using a valid value for this attribute.

ORA-27467: invalid datatype for *string* value

Cause: The value provided for the named scheduler attribute was of an invalid datatype.

Action: Reissue the command using a value of the correct datatype.

ORA-27468: "*string*"."*string*" is locked by another process

Cause: An attempt was made to read or modify the state of the named scheduler object when another process was also updating the same object and held the lock.

Action: Retry the operation. Scheduler locks are held for a very short duration. If the error persists, contact Oracle Support.

ORA-27469: *string* is not a valid *string* attribute

Cause: A non-existent attribute was specified.

Action: Reissue the command using a valid attribute for that specific scheduler object.

ORA-27470: failed to re-enable "*string*"."*string*" after making requested change
Cause: A change was made to an enabled scheduler object that caused it to become disabled.

Action: Alter the object so that it becomes valid and then enable it.

ORA-27471: window "*string*"."*string*" is already closed

Cause: An attempt was made to close a window that was not open.

Action: No action required.

ORA-27472: invalid metadata attribute *string*

Cause: An invalid metadata attribute was specified.

Action: Reissue the command using a valid metadata attribute.

ORA-27473: argument *string* does not exist

Cause: An argument which was specified does not exist.

Action: Reissue the command using an argument name defined by the program or using a valid argument position.

ORA-27474: cannot give both an argument name and an argument position

Cause: An argument was specified using both a name and a position.

Action: Reissue the command using either the argument name or the argument position but not both.

ORA-27475: unknown *string* "*string*"."*string*"

Cause: The specified object did not exist, privileges were not granted, or the object was of the wrong type.

Action: Specify an object of the correct type on which you have privileges.

ORA-27476: "*string*"."*string*" does not exist

Cause: A database object was specified that does not exist.

Action: Reissue the command using an object that exists or create a new object and then reissue this command.

ORA-27477: "*string*"."*string*" already exists

Cause: An attempt was made to create an object with a name that has already been used by another object in the same schema.

Action: Reissue the command using a different name or schema.

ORA-27478: job "*string*"."*string*" is running

Cause: An attempt was made to drop a job that is currently running.

Action: Stop the job and then reissue the command, or reissue the command specifying the force option to stop the job first.

ORA-27479: Cannot *string* "*string*"."*string*" because other objects depend on it

Cause: An attempt was made to drop or disable a scheduler object that has jobs associated with it without specifying the force option.

Action: Alter the associated jobs so they do not point to the scheduler object being dropped or disabled and then reissue the command. Alternatively reissue the command specifying the force option. If the force option is specified and a scheduler object is being dropped, all associated jobs will be disabled.

ORA-27480: window "*string*" is currently open

Cause: An attempt was made to drop a window that is currently open, or to manually open a window while another window is already open.

Action: Close the window that is open and then reissue the command, or reissue the command while setting the force option to TRUE.

ORA-27481: "*string*"."*string*" has an invalid schedule

Cause: An attempt was made to enable a job or window that has an invalid schedule.

Action: Alter the schedule of the job or window so that it is valid and then reissue the enable command.

ORA-27483: "*string*"."*string*" has an invalid END_DATE

Cause: An attempt was made to enable a job or window that has an invalid end_date. Either the end_date is before the start_date or the end_date is in the past.

Action: Alter the job or window so that the end date becomes valid (possibly null) and then reissue the command.

ORA-27484: Argument names are not supported for jobs without a program.

Cause: An attempt was made to set or reset a job argument by using the name of the argument. Identifying job arguments by their name is only supported in combination with jobs that are based on programs. Jobs that are not using a program cannot have named arguments.

Action: Use argument position instead of name and then issue the command again.

ORA-27485: argument "*string*" already exists at a different position

Cause: An attempt was made to create or replace an argument with a name that is already used by an argument at a different position.

Action: Use a different name for the argument or drop or alter the argument which already exists with this name and then reissue the command.

ORA-27486: insufficient privileges

Cause: An attempt was made to perform a scheduler operation without the required privileges.

Action: Ask a sufficiently privileged user to perform the requested operation, or grant the required privileges to the proper user(s).

ORA-27487: invalid object privilege for a *string*

Cause: The granted object privilege is not valid for the specified scheduler object.

Action: Check the scheduler documentation to verify which object privileges can be granted on which scheduler objects.

ORA-27488: unable to set *string* because *string* was/were already set

Cause: An attempt was made to set an object's attribute even though one or more conflicting attributes of the same object had already been set.

Action: Set the other conflicting attributes to NULL and then reissue the command.

ORA-27489: unable to process job "*string*"."*string*" from job class "*string*"

Cause: An error was encountered while processing the named job from the specified job class.

Action: Resolve the error for this job and then reissue the command. See the next error message on the stack to find out what the error for the job is.

ORA-27490: cannot open disabled window "*string*"."*string*"

Cause: The user tried to open a disabled window.

Action: Enable the window and then try to open it again.

ORA-27491: repeat_interval and start_date cannot both be NULL

Cause: An attempt was made to set both repeat_interval and start_date to equal NULL for a Scheduler window or schedule.

Action: If either repeat_interval or start_date is set to equal NULL, the other should be set to a non-NULL value.

ORA-27492: unable to run job "*string*"."*string*": scheduler unavailable

Cause: A job run with current_session set to false can not be issued if the scheduler is not active. Check value of job_queue_processes parameter, issue dbms_job.set_enabled(true), database is in upgrade/migrate mode, database is in data guard mode, or scheduler attribute SCHEDULER_DISABLED is set to TRUE

Action: Run the job in the current session or activate the scheduler

ORA-27493: In-memory job "*string.string*" cannot be modified

Cause: Once enabled, the full in-memory job could not be further modified.

Action: The only actions that can be taken now are to stop or drop the job.

ORA-27494: operation not permitted on in-memory job

Cause: An attempt was made to perform an action that was not permitted on an in-memory job.

Action: Check Oracle Scheduler documentation to see which actions can be performed on in-memory jobs.

ORA-27495: attribute *string* cannot be set for in-memory jobs

Cause: An attempt was made in a CREATE or SET_ATTRIBUTE call to set an attribute that could not be set for run-time in-memory jobs.

Action: If you need to set this attribute, use either regular or lightweight jobs.

ORA-27496: credential "*string*"."*string*" is disabled

Cause: An attempt was made to run a job, file watcher or external procedure whose credential was disabled.

Action: Reenable the credential before running the job, file watcher or external procedure.

ORA-27497: operation is not permitted inside a pluggable database

Cause: This operation was not permitted in a pluggable database.

Action: Log into the root database and retry the operation.

ORA-27498: resource constraint object type mismatch

Cause: all resource constraints of a resource must be of the same type

Action: Delete existing constraints for the resource

ORA-27499: in-memory job metadata is too large

Cause: The in-memory job was too large. Due to the need to keep in-memory jobs efficient and performing well, we limit the size of in-memory job metadata to 8 kilobytes. This includes the space used for job argument values.

Action: Reduce the size of the job metadata and try again. If all the metadata is needed, then you should create some other type of job.

ORA-27500: inter-instance IPC error

Cause: This is an operating system/cluster interconnect error.

Action: Check the extra information and contact Oracle Support Services.

ORA-27501: IPC error creating a port

Cause: This is an operating system/cluster interconnect error.

Action: Check the value of errno and contact Oracle Support Services.

ORA-27502: IPC error deleting OSD context

Cause: This is an operating system/cluster interconnect error.

Action: Check the value of errno and contact Oracle Support Services.

ORA-27503: IPC error attempting to cancel request

Cause: This is an operating system/cluster interconnect error.

Action: Check the value of errno and contact Oracle Support Services.

ORA-27504: IPC error creating OSD context

Cause: This is an operating system/cluster interconnect error.

Action: Check the value of errno and contact Oracle Support Services.

ORA-27505: IPC error destroying a port

Cause: This is an operating system/cluster interconnect error.

Action: Check the value of errno and contact Oracle Support Services.

ORA-27506: IPC error connecting to a port

Cause: This is an operating system/cluster interconnect error.

Action: Check the value of errno and contact Oracle Support Services.

ORA-27507: IPC error disconnecting from a port

Cause: This is an operating system/cluster interconnect error.

Action: Check the value of errno and contact Oracle Support Services.

ORA-27508: IPC error sending a message

Cause: This is an operating system/cluster interconnect error.

Action: Check the value of errno and contact Oracle Support Services.

ORA-27509: IPC error receiving a message

Cause: This is an operating system/cluster interconnect error.

Action: Check the value of errno and contact Oracle Support Services.

ORA-27510: IPC error waiting for a request to complete

Cause: This is an operating system/cluster interconnect error.

Action: Check the value of errno and contact Oracle Support Services.

ORA-27512: IPC error posting a process

Cause: This is an operating system/cluster interconnect error.

Action: Check the value of errno and contact Oracle Support Services.

ORA-27513: parameter *string* contains invalid value *string*

Cause: The program could not identify the value as an IP address.

Action: Change the value to be a valid IP address.

ORA-27514: IPC error copying memory to remote process

ORA-27532: IPC global name service error

ORA-27542: Failed to unprepare a buffer prepared for remote update

Cause: This is an operating system/cluster interconnect error.

Action: Check the value of errno and contact Oracle Support Services.

ORA-27543: Failed to cancel outstanding IPC request

Cause: This is an operating system/cluster interconnect error.

Action: Check the value of errno and contact Oracle Support Services.

ORA-27544: Failed to map memory region for export

Cause: This is an operating system/cluster interconnect error.

Action: Check the value of errno and contact Oracle Support Services.

ORA-27545: Fail to prepare buffer for remote update

Cause: This is an operating system/cluster interconnect error.

Action: Check the value of errno and contact Oracle Support Services.

ORA-27546: Oracle compiled against IPC interface version *string.string* found version *string.string*

Cause: A misconfiguration or installation error occurred.

Action: Install the IPC library for this release of Oracle.

ORA-27547: Unable to query IPC OSD attribute *string*

Cause: This is an operating system-dependent IPC error.

Action: Contact Oracle support Services.

ORA-27548: Unable to unprepare IPC buffer

Cause: This is an operating system-dependent IPC error.

Action: Contact Oracle support Services.

ORA-27550: Target ID protocol check failed. tid vers=*string*, type=*string*, remote instance number=*string*, local instance number=*string*

Cause: The local Oracle Real Application Cluster instance and remote instance are running with incompatible implementation of the inter-instance IPC protocol library. A misconfiguration or installation error occurred.

Action: Check additional error messages in the alert log and the process trace file.

ORA-27601: Cell storage initialization failed, cell library error code [*string*]

Cause: Cell storage client did not succeed in initializing.

Action: Check the value of errno and contact Oracle Support Services.

ORA-27602: Failure to publish network status information, cell library error code [*string*]

Cause: Network status information publishing failed.

Action: Check the value of `errno` and contact Oracle Support Services.

ORA-27603: Cell storage I/O error, I/O failed on disk *string* at offset *string* for data length *string*

Cause: Cell storage I/O read or write failed, possibly due to a configuration problem or a hardware failure.

Action: Check the value of `errno` and contact Oracle Support Services.

ORA-27604: Cell storage ioctl error, ioctl failed on disk *string*

Cause: Ioctl operation on a cell storage disk failed.

Action: Check the value of `errno` and contact Oracle Support Services.

ORA-27605: Smart I/O failed as a handle could not be obtained to the cell "*string*" as the cell is not accessible.

Cause: The cell could have been unavailable.

Action: Ensure the cell is available. Check the network connectivity.

ORA-27606: Smart I/O failed because the diskgroup was found to be unmounted. tablespace number: "*string*", file number: "*string*"

Cause: The diskgroup to which the specified file belongs was found to be unmounted.

Action: Ensure that the diskgroup to which the specified file belongs is mounted.

ORA-27607: Smart I/O failed because there were no online disks. tablespace number: "*string*", file number: "*string*"

Cause: There were no online disks found for the specified file.

Action: Ensure the diskgroup to which the specified file belongs to is mounted. Ensure that the disks are online. Check the availability of cells and check the network.

ORA-27608: Smart I/O failed because the disk "*string*" on the cell "*string*" was not open. error code: "*string*", "*string*"

Cause: The specified disk on the specified cell could not be opened.

Action: Ensure the cell is available. Check the network.

ORA-27609: Smart I/O failed due to a network error to the cell "*string*". error code "*string*", "*string*"

Cause: The specified cell could not be connected to.

Action: Ensure that the cell is available. Check the network.

ORA-27610: Smart I/O failed due to shortage of memory on the cell "*string*"

Cause: The specified cell had a shortage of memory to perform smart I/O.

Action: Reduce the parallel degree or number of Oracle sessions executing smart I/O.

ORA-27611: Smart I/O failed due to a block corruption detected on the host. The block was received from cell "*string*". disk: "*string*", block: "*string*", disk offset: "*string*"

Cause: The data block indicated was corrupted on the host, but a corruption was not found on the cell.

Action: This may be due to a transient network error or a real block corruption. Check your network for any errors. Analyze the segment to which the file belongs. If there is indeed a corruption, try to restore the block using RMAN block recovery. If there is a trace file, report the errors in it to Oracle Support Services. If analyze did not report

an error and network did not have any error, report the problem to Oracle Support Services as this appears to be a software error.

ORA-27612: Smart I/O failed due to a block corruption detected on the cell "*string*". disk: "*string*", block: "*string*", disk offset: "*string*"

Cause: The data block indicated was found to be corrupted on the cell.

Action: This may be due to a software error or a real data corruption. Analyze the segment. If there is indeed a block corruption, try to restore the block using RMAN block level recovery. If there is a trace file, report the errors in it to Oracle Support Services. If analyze did not report an error, report the problem to Oracle Support Services as this appears to be a software error.

ORA-27613: Smart I/O failed due to an I/O error on the cell "*string*". disk: "*string*", block: "*string*", disk offset: "*string*" I/O size: "*string*"

Cause: An I/O request failed on the specified cell and disk.

Action: Check the specified disk on the cell.

ORA-27614: Smart I/O failed due to an error "*string, string*" from the cell "*string*". disk: "*string*", block: "*string*", disk offset: "*string*" I/O size: "*string*"

Cause: An I/O request failed, due to an internal error on the specified cell and disk.

Action: Report the problem to Oracle Support Services along with the process trace file and alert log.

ORA-27615: Smart I/O file to ASM disk translation failed with error: *string*.

Cause: An internal error caused a smart I/O operation to fail.

Action: Report the problem to Oracle Support Services along with the process trace file and alert log.

ORA-27616: ASM Allocation Unit: *string*

Cause: This error message is usually accompanied by another message, indicating the real problem. This message exists to provide additional information to Oracle Support Services.

Action: Check the next error message.

ORA-27617: Smart I/O failed because of an internal error. Cell "*string*", disk "*string*", cell library error code "*string, string*", error information "*string*"

Cause: An internal error caused a smart I/O operation to fail.

Action: Report the problem to Oracle Support Services along with the process trace file and alert log.

ORA-27618: Smart I/O failed because of an internal error. Cell "*string*", cell library error code "*string, string*", error information "*string*"

Cause: An internal error caused a smart I/O operation to fail.

Action: Report the problem to Oracle Support Services along with the process trace file and alert log.

ORA-27619: Smart I/O failed because of an internal error when determining the time zone file version. Error code "*string*"

Cause: An internal error caused a smart I/O operation to fail.

Action: Report the problem to Oracle Support Services along with the process trace file and alert log.

ORA-27621: The value of *string* is not valid for parameter *string*

Cause: Incorrect value is specified for an internal parameter.

Action: This parameter should only be set by Oracle Support Services. Check the additional diagnostic information in the trace file and contact Oracle Support Services for recommendations on setting this parameter.

ORA-27623: Cell automation SQL action failed

Cause: Cell automation manager or worker process failed to execute SQL action through OCI recursive call.

Action: Check the alert log and process trace file for additional information. Contact Oracle Support Services if the errors specified in the trace file cannot be corrected.

ORA-27624: Smart I/O failed because the number of reconnects to the cell "*string*" exceeded the maximum allowed "*string*".

Cause: The number of reconnects to a cell exceeded the maximum allowed. This problem indicates a possible network problem or a software problem on the cell.

Action: If the cellsrv is being restarted repeatedly, in a short interval, check the system load. The problem may be corrected by rebooting the cell. If the system is not overloaded, the repeated restarts are likely due to software problem. Report the problem to Oracle Support Services along with alert log and trace files. If the cellsrv is not restarting, the problem may be in the IB network. Check the network between the host and all the cells.

ORA-27625: Exadata configuration failed.

Cause: One or both of the files, cellinit.ora and cellip.ora, were either invalid or missing.

Action: Check if the files, cellinit.ora and cellip.ora, are both present. They can be found in the \$OSSCONF directory. If both are present, check if their contents are valid and correct. If the files are invalid or missing, produce files with valid information in the \$OSSCONF directory. For information on how to set up these files, see the Exadata Users Guide.

ORA-27626: Exadata error: *string* (*string*)

Cause: The cause of this error is dependent on the context in which this error is reported.

Action: See the primary error reported with this error.

ORA-27627: Software edition incompatible with Exadata storage.

Cause: Oracle Exadata can be used only with Oracle Database Enterprise Edition.

Action: Check if Oracle is linked with the Enterprise Edition options.

ORA-27628: An invalid value was specified for the parameter *string*.

Cause: An invalid value was specified for a parameter.

Action: Check the additional diagnostic information in the trace file and contact Oracle Support Services if further help is required.

ORA-27629: External table smart I/O failed because cell is not accessible.

Cause: The cell was unavailable.

Action: Ensure the cell is available.

ORA-27631: External encryption or decryption is disabled.

Cause: Either decryption was disabled in the cellinit.ora initialization parameter file, or the cryptography mode requested by the database was incompatible with what was available on the cell.

Action: No action is necessary. The Exadata cell returns data in pass-through mode when encryption or decryption is required.

ORA-28000: the account is locked

Cause: The user has entered wrong password consequently for maximum number of times specified by the user's profile parameter FAILED_LOGIN_ATTEMPTS, or the DBA has locked the account

Action: Wait for PASSWORD_LOCK_TIME or contact DBA

ORA-28001: the password has expired

Cause: The user's account has expired and the password needs to be changed

Action: change the password or contact the DBA

ORA-28002: the password will expire within *string* days

Cause: The user's account is about to expire and the password needs to be changed

Action: change the password or contact the DBA

ORA-28003: password verification for the specified password failed

Cause: The new password did not meet the necessary complexity specifications and the password_verify_function failed

Action: Enter a different password. Contact the DBA to know the rules for choosing the new password

**ORA-28004: invalid argument for function specified in
PASSWORD_VERIFY_FUNCTION *string***

Cause: The password verification function does not have the required number and type of input/output arguments and/or the return argument

Action: Check the manual to find out the format of the password verification function

ORA-28005: invalid logon flags

Cause: The flags are not properly set or conflicting flags are set in making calls

Action: Call the function with appropriate flags set.

ORA-28006: conflicting values for parameters *string* and *string*

Cause: The parameters PASSWORD_REUSE_TIME and PASSWORD_REUSE_MAX cannot both be set. One parameter should be unlimited while other is set

Action: Set one value to UNLIMITED explicitly

ORA-28007: the password cannot be reused

Cause: The password cannot be reused for the specified number of days or for the specified number of password changes

Action: Try the password that you have not used for the specified number of days or the specified number of password changes Refer to the password parameters in the CREATE PROFILE statement

ORA-28008: invalid old password

Cause: old password supplied is wrong; Hence user cannot be authenticated using old password

Action: Supply the correct old password for authentication

ORA-28009: connection as SYS should be as SYSDBA or SYSOPER

Cause: connect SYS/*password* is no longer a valid syntax

Action: Try connect SYS/*password* as SYSDBA or connect SYS/*password* as SYSOPER

ORA-28010: cannot expire external or global accounts

Cause: If a user account is created as IDENTIFIED EXTERNALLY, or IDENTIFIED GLOBALLY, this account cannot be expired

Action: Try to expire the password of the user that has database password

ORA-28011: the account will expire soon; change your password now

Cause: The user's account is marked for expiry; the expiry period is unlimited.

Action: Change the password or contact the DBA.

ORA-28012: connection as *string* should use AS *string*

Cause: An attempt was made to connect as an administrative user without using AS SYSBACKUP, AS SYSDG, or AS SYSKM.

Action: Try connecting with AS SYSBACKUP, AS SYSDG, or AS SYSKM.

ORA-28013: the password has expired

Cause: The password of the proxy user expired.

Action: Connect directly as proxy user to change the password or contact the DBA.

ORA-28014: cannot drop administrative users

Cause: An attempt was made to drop administrative users. Administrative users can be dropped only by SYS during migration mode.

Action: Try dropping administrative users during migration mode.

ORA-28015: account unlock attempted on read-only database but a conflicting account lockout on the primary exists

Cause: An attempt to unlock an account on a read-only database was prevented, because the account was previously marked as locked on the primary database. All attempts to unlock the account on the read-only database will be prevented as long as the overriding "account locked" condition exists at the primary database.

Action: If this database is part of a Data Guard configuration, perform the account unlock action on the primary database. If this database is read-only, then set the database to read/write and perform the account unlock action.

ORA-28016: Privilege *string* cannot be granted to SYS.

Cause: An attempt was made to grant SYSBACKUP, SYSDG or SYSKM to the SYS user. These administrative privileges cannot be granted to SYS.

Action: Try granting the administrative privilege to other users.

ORA-28017: The password file is in the legacy format.

Cause: There are multiple possibilities for the cause of the error: * An attempt was made to grant SYSBACKUP, SYSDG or SYSKM. * These administrative privileges could not be granted unless the password file used a newer format ("12" or higher). *

An attempt was made to grant a privilege to a user who has a large password hash which cannot be stored in the password file unless the password file uses a newer format ("12" or higher). * An attempt was made to grant or revoke a common administrative privilege in a CDB

Action: Regenerate the password file in the newer format ("12" or higher). Use the newer password file format ("12" or higher) if you need to grant a user the SYSBACKUP, SYSDG or SYSKM administrative privileges, or if you need to grant a privilege to a user who has a large password hash value.

ORA-28018: This operation requires connection as SYS or SYSBACKUP.

Cause: An attempt was made to execute a command even though the user was not connected as SYS or SYSBACKUP.

Action: Connect as SYS or SYSBACKUP and retry this command.

ORA-28019: audit cannot be configured on administrative privileges

Cause: An attempt was made to configure audit on an administrative privilege using either the AUDIT, NOAUDIT, CREATE AUDIT POLICY, or ALTER AUDIT POLICY command.

Action: For traditional audit, use AUDIT_SYS_OPERATIONS to audit administrative privileges. If this is a unified audit, use action-based auditing to audit administrative users.

ORA-28020: IDENTIFIED GLOBALLY already specified

Cause: The IDENTIFIED GLOBALLY clause was specified twice.

Action: Use only one IDENTIFIED GLOBALLY clause.

ORA-28021: cannot grant global roles

Cause: The role granted was IDENTIFIED GLOBALLY. Global roles can only be granted via a central authority for the domain.

Action: Use ALTER ROLE to change the type of role (from IDENTIFIED GLOBALLY to other, such as IDENTIFIED BY password), or allocate it to a global user via the central authority.

ORA-28022: cannot grant external roles to global user or role

Cause: The role granted was IDENTIFIED EXTERNALLY. External roles cannot be granted to global users, to global roles or to any other roles.

Action: Use ALTER ROLE to change the type of the role being granted (from IDENTIFIED EXTERNALLY to other, such as NOT IDENTIFIED) or use ALTER USER to change the type of the user that is the grantee.

ORA-28023: must revoke grants of this role to other user(s) first

Cause: The role altered to IDENTIFIED GLOBALLY was granted to one or more other users and/or roles. Global roles cannot be granted to any user or role.

Action: Use REVOKE to revoke the role from other users or roles first.

ORA-28024: must revoke grants of external roles to this role/user

Cause: The user or role altered to IDENTIFIED GLOBALLY has external roles directly granted - these must be revoked, since external roles cannot be granted to global users or roles.

Action: Use REVOKE to revoke the external roles from the user or role to be ALTERed.

ORA-28025: missing or null external name

Cause: The IDENTIFIED EXTERNALLY AS or IDENTIFIED GLOBALLY AS clause was specified with a valid external name.

Action: Provide a valid external name.

ORA-28026: user with same external name already exists

Cause: The external name specified for the user being created or altered already exists for another user.

Action: External names must be unique among users. Specify another.

ORA-28027: privileged database links may be used by global users

Cause: Only users IDENTIFIED GLOBALLY may use a privileged database link.

Action: Either change the user to a global user or try to use a different database link.

ORA-28028: could not authenticate remote server

Cause: During the course of opening a privileged database link, the remote server was not securely identified using the network security service. Additional errors should follow.

Action: Consult the network security service documentation on how to properly configure the remote server.

ORA-28029: could not authorize remote server for user *string*

Cause: During the course of opening a privileged database link, the remote server was found to lack the necessary authorizations to connect as the current global user. This may be because the server was not authorized by the network security service. Or it may be because the local server is restricting access by the remote server using the DBMS_SECURITY_DOMAINS_ADMIN package.

Action: Grant the remote server the proper authorization to connect as the given global user, and check that the local server is not restricting access.

ORA-28030: Server encountered problems accessing LDAP directory service

Cause: Unable to access LDAP directory service

Action: Please contact your system administrator

ORA-28031: maximum of *string* enabled roles exceeded

Cause: The user attempted to enable too many roles.

Action: Enable fewer roles.

ORA-28032: Your password has expired and the database is set to read-only

Cause: Your password expired and needs to be changed before your login request can be processed. Because the database is currently open in read-only mode, the password change operation cannot be performed on this database.

Action: Log in to the primary database to change your password, then retry your login request at the standby database.

ORA-28034: cannot grant *string* to an Oracle supplied user

Cause: The KEEP DATE TIME, KEEP SYSGUID or KEEP SEQUENCE privilege could not be granted to an Oracle supplied user.

Action: Grant privilege directly to the application user.

ORA-28035: Cannot Get Session Key for Authentication

Cause: Client and server cannot negotiate shared secret during logon

Action: User should not see this error. Please contact your system administrator

ORA-28037: Cannot Get Session Key for RACF Authentication

Cause: Client and server cannot negotiate shared secret during logon

Action: User should not see this error. Please contact your system administrator

ORA-28038: disallow O2LOGON

Cause: turn off O2LOGON

Action: n/a

ORA-28039: cannot validate Kerberos service ticket

Cause: The Kerberos service ticket provided was invalid or expired

Action: Provide a valid, unexpired service ticket.

ORA-28040: No matching authentication protocol

Cause: There was no acceptable authentication protocol for either client or server.

Action: The administrator should set the values of the SQLNET.ALLOWED_LOGON_VERSION_SERVER and SQLNET.ALLOWED_LOGON_VERSION_CLIENT parameters, on both the client and on the server, to values that match the minimum version software supported in the system. This error is also raised when the client is authenticating to a user account which was created without a verifier suitable for the client software version. In this situation, that account's password must be reset, in order for the required verifier to be generated and allow authentication to proceed successfully.

ORA-28041: Authentication protocol internal error

Cause: Authentication protocol failed with an internal error

Action: n/a

ORA-28042: Server authentication failed

Cause: Server failed to authenticate itself to the client

Action: Confirm that the server is a valid database server.

ORA-28043: invalid bind credentials for DB-OID connection

Cause: The Database password stored in the wallet did not match the one in OID .

Action: Use DBCA to reset the database password so that it is the same in database wallet and in OID.

ORA-28044: unsupported directory type

Cause: The database tried to work with a directory which is not OID.

Action: Enterprise User Security works only with Oracle Internet Directory. Update the ldap.ora file to reflect an appropriate OID.

ORA-28045: SSL authentication between database and OID failed

Cause: Server failed to authenticate itself to the Directory.

Action: Make sure the sqlnet.ora used is pointing to the wallet with the right certificate.

ORA-28046: Password change for SYS disallowed

Cause: REMOTE_LOGIN_PASSWORDFILE is set to SHARED, prohibiting SYS password changes.

Action: Change setting of REMOTE_LOGIN_PASSWORDFILE to EXCLUSIVE or NONE.

ORA-28047: database is not a member of any enterprise domain in OID

Cause: An enterprise user login was attempted on a database that is not a member of any enterprise domain in OID.

Action: An administrator should put the database into an enterprise domain in OID, and then the user should reconnect.

ORA-28048: database is a member of multiple enterprise domains in OID

Cause: An enterprise user login was attempted on a database that is a member of multiple enterprise domains in OID.

Action: An administrator should put the database into only one enterprise domain in OID, and then the user should reconnect.

ORA-28049: the password has expired

Cause: The enterprise user's password has expired and the password needs to be changed.

Action: change the password in the directory or contact the directory administrator.

ORA-28050: specified user or role cannot be dropped

Cause: The user or role specified in the DROP statement was a reserved Oracle object that could not be dropped.

Action: None

ORA-28051: the account is locked

Cause: The enterprise user has consecutively entered the wrong password for maximum number of times specified in the realm's password policy profile.

Action: Contact the directory administrator.

ORA-28052: the account is disabled

Cause: The enterprise user's account in the directory has been disabled.

Action: Contact the directory administrator.

ORA-28053: the account is inactive

Cause: The enterprise user's account in the directory is currently not active.

Action: Contact the directory administrator.

ORA-28054: the password has expired. *string* Grace logins are left

Cause: The enterprise user's password has expired. The user is able to login because he has gracelogins left.

Action: change the password in the directory or contact the directory administrator.

ORA-28055: the password will expire within *string* days

Cause: The enterprise user's password is about to expire.

Action: Change the password in the directory or contact the directory administrator.

ORA-28056: Writing audit records to Windows Event Log failed

Cause: Unable to write an audit entry to the Windows event log used as the audit trail.

Action: Check the error number for a possible operating system error. If there is no error, contact Oracle Support Services.

ORA-28057: name of the password file could not be constructed

Cause: Possibly environment variable ORACLE_SID was not set.

Action: Set value for the ORACLE_SID environment variable.

ORA-28058: login is allowed only through a proxy

Cause: This account is marked "proxy only connect".

Action: Connect through a proxy user.

ORA-28059: Cross-instance call failed

Cause: An attempt to inform other Oracle RAC instances of a security event failed.

Action: Log into each instance to perform the administrative action.

ORA-28060: A data redaction policy already exists on this column.

Cause: A data redaction policy was already in existence on this column.

Action: Specify a column which does not already have a redaction policy defined on it, or use DBMS_REDACT.ALTER_POLICY to alter the existing redaction policy for this column.

ORA-28061: This object cannot have a data redaction policy defined on it.

Cause: An attempt was made to define a data redaction policy on an object other than a table or view. Note that a data redaction policy cannot be defined on an editioned view, or on specialized tables created internally by the server in conjunction with various features such as materialized view.

Action: Specify the name of a table or view.

ORA-28062: The policy expression is too long.

Cause: The policy expression was longer than 4000 characters.

Action: Specify a policy expression of at most 4000 characters.

ORA-28063: The policy expression is empty.

Cause: The EXPRESSION parameter to DBMS_REDACT.ADD_POLICY was empty.

Action: A nonempty policy expression must be specified in the EXPRESSION parameter to DBMS_REDACT.ADD_POLICY.

ORA-28064: The redaction function is not valid.

Cause: The FUNCTION_TYPE parameter to DBMS_REDACT.ADD_POLICY was invalid.

Action: Specify the FUNCTION_TYPE parameter to DBMS_REDACT.ADD_POLICY as one of the following: DBMS_REDACT.NONE, DBMS_REDACT.FULL, DBMS_REDACT.RANDOM, DBMS_REDACT.PARTIAL, DBMS_REDACT.REGEXP, or NULL. Note that only full redaction may be applied to columns of type BLOB, CLOB, or NCLOB.

ORA-28066: invalid column "*string*"

Cause: An invalid column was specified in the COLUMN_NAME parameter.

Action: Check the columns in the object and specify the right column name.

ORA-28067: missing or invalid column name

Cause: A valid column name was not specified in the COLUMN_NAME parameter when a column name was required. Note that when using DBMS_REDACT.ALTER_POLICY, the default action is DBMS_REDACT.ADD_COLUMN

Action: Specify the name of a column.

ORA-28068: The object "*string*" does not have a data redaction policy.

Cause: The specified object did not have a data redaction policy defined on it.

Action: Specify the name of an object which has a data redaction policy, or use DBMS_REDACT.ADD_POLICY to add a data redaction policy.

ORA-28069: A data redaction policy already exists on this object.

Cause: A data redaction policy was already in existence on this object.

Action: Specify a table or view which does not already have a redaction policy defined on it, or use DBMS_REDACT.ALTER_POLICY to alter the existing redaction policy for this object.

ORA-28070: The column "*string*" does not have a data redaction policy.

Cause: The specified column did not have a data redaction policy defined on it.

Action: Specify the name of a column which has a data redaction policy.

ORA-28071: The action is not valid.

Cause: The ACTION parameter to DBMS_REDACT.ALTER_POLICY was invalid.

Action: Specify the ACTION parameter to DBMS_REDACT.ALTER_POLICY as one of the following values: DBMS_REDACT.MODIFY_EXPRESSION, DBMS_REDACT.MODIFY_COLUMN, DBMS_REDACT.ADD_COLUMN, or DBMS_REDACT.DROP_COLUMN.

ORA-28072: The specified policy name is incorrect.

Cause: The POLICY_NAME parameter was incorrect.

Action: Specify the POLICY_NAME parameter with the name of the redaction policy currently defined on the object.

ORA-28073: The column "*string*" has an unsupported data type.

Cause: The column had a data type which is not supported by data redaction. The supported data types are CHAR, NCHAR, VARCHAR2, NVARCHAR2, NUMBER types, BINARY_FLOAT, BINARY_DOUBLE, DATE, and TIMESTAMP. For regular expression-based redaction, with FUNCTION_TYPE of DBMS_REDACT.REGEXP, only the string data types (VARCHAR2, NVARCHAR2, CHAR, and NCHAR) are supported by data redaction. Virtual columns are not supported by data redaction.

Action: Specify the name of a column which has a supported data type.

ORA-28074: The "*string*" field of the redaction parameters is not valid.

Cause: The redaction parameters specified had one or more fields that were invalid.

Action: Specify the redaction parameters according to Oracle documentation.

ORA-28075: The data redaction policy expression has an error.

Cause: The data redaction policy expression had an error.

Action: Contact the data redaction policy administrator. To correct this error, when invoking the ADD_POLICY and ALTER_POLICY procedures of the data redaction DBMS_REDACT package, the policy administrator must specify a valid policy expression for the EXPRESSION parameter. Check the trace file for the name of the affected policy and the error, and correct the data redaction policy expression.

ORA-28076: An attribute was not specified for SYS_SESSION_ROLES.

Cause: An attribute was not specified for the SYS_SESSION_ROLES namespace in the policy expression.

Action: Specify an attribute for SYS_SESSION_ROLES in the policy expression.

ORA-28077: The attribute specified (*string*) exceeds the maximum length.

Cause: The attribute specified in the policy expression for the SYS_SESSION_ROLES namespace exceeded the maximum length.

Action: Change the policy expression to use a valid attribute for SYS_SESSION_ROLES namespace.

ORA-28078: A regular expression parameter is missing or invalid.

Cause: The FUNCTION_TYPE was DBMS_REDACT.REGEXP, but one or more of the regular expression parameters were missing or invalid, the REGEXP_PATTERN failed to compile properly, or the regular expression replacement operation failed.

Action: Specify the regular expression parameters according to Oracle documentation. At a minimum, the REGEXP_PATTERN and the REGEXP_REPLACE_STRING must be specified. Ensure that the REGEXP_PATTERN can compile properly as a regular expression, for example by testing it with REGEXP_REPLACE in a SQL query against a column containing some of the data to be redacted.

ORA-28079: The policy was already enabled.

Cause: The redaction policy specified has already been enabled.

Action: Only disabled redaction policies can be enabled.

ORA-28080: The policy was already disabled.

Cause: The redaction policy specified has already been disabled.

Action: Only enabled redaction policies can be disabled.

ORA-28081: Insufficient privileges - the command references a redacted object.

Cause: The command referenced a redacted column in an object protected by a data redaction policy.

Action: If possible, modify the command to avoid referencing any redacted columns. Otherwise, drop the data redaction policies that protect the referenced tables and views, or ensure that the user issuing the command has the EXEMPT REDACTION POLICY system privilege, then retry the operation. The EXEMPT REDACTION POLICY system privilege is required for creating or refreshing a materialized view when the materialized view is based on an object protected by a data redaction policy. The EXEMPT REDACTION POLICY system privilege is required for performing a data pump schema-level export including any object protected by a data redaction policy. All data redaction policies are listed in the REDACTION_COLUMNS catalog view.

ORA-28082: The parameter *string* is invalid.

Cause: The specified parameter was either empty or too long.

Action: Specify a parameter of correct length. See the documentation for length requirements.

ORA-28083: A redacted column was referenced in a virtual column expression.

Cause: This redacted column was referenced in a virtual column expression.

Action: Ensure the column expression definition for any virtual column does not refer to any redacted columns. To check for columns with redaction policies, use the REDACTION_COLUMNS catalog view which lists all data redaction policies.

ORA-28085: The input and output lengths of the redaction do not match.

Cause: As specified, the redaction parameters produced an output with a length different to that of the input.

Action: Use regular expression redaction instead of partial redaction.

ORA-28086: The data redaction policy expression has an error.\nstring

Cause: The data redaction policy expression had an error.

Action: Specify a valid policy expression. The data redaction policy expression must be written in SQL, and must be a valid predicate to use in the following SQL query.
SELECT 1 FROM DUAL WHERE policy_expression;

ORA-28087: The policy expression has an unsupported (use of) operator 'string'.

Cause: The policy expression used an unsupported operator, or used an operator in an unsupported way.

Action: Modify the policy expression to use only the supported operators in a supported way. Supported operators include "=", "!=" , ">" , "<" , ">=" , "<=" , the length operators, the substring operators, and the context operators (SYS_CONTEXT and XS_SYS_CONTEXT). For a complete list of the supported operators, and the supported ways the allowed operators can be used, refer to the section on data redaction policy expressions in the Oracle documentation.

ORA-28088: The policy expression has an unsupported PL/SQL function string.string.string.

Cause: The policy expression had an unsupported PL/SQL function.

Action: Modify the policy expression to use a supported PL/SQL function. Supported PL/SQL functions include the Oracle Label Security dominates functions, and the Oracle Apex session state functions (V and NV). For a complete list of the supported PL/SQL functions, refer to data redaction in the Oracle documentation.

ORA-28089: invalid SYS_CONTEXT namespace string in policy expression

Cause: The SYS_CONTEXT (or XS_SYS_CONTEXT) namespace used in the policy expression was not valid.

Action: Modify the policy expression to use a valid namespace. Supported namespaces include USERENV, SYS_SESSION_ROLES, XS\$SESSION and the namespaces listed in the DBA_CONTEXT catalog view.

ORA-28090: unsupported nesting of function string.string.string within function string.string.string in policy expression

Cause: The policy expression had an unsupported PL/SQL function nesting.

Action: Modify the policy expression to use only supported PL/SQL function nesting. The Oracle Label Security functions NUMERIC_LABEL, CHAR_TO_LABEL, and SA_SESSION can only be used from within the Label Security dominates functions. For a complete list of supported PL/SQL function nesting, refer to the section on writing policy expressions in the Oracle documentation for data redaction.

ORA-28091: unsupported use of PL/SQL function *string.string.string* in policy expression

Cause: The policy expression used a PL/SQL function in an unsupported way.

Action: Modify the policy expression to use the PL/SQL function properly. The parameters to the Oracle Label Security functions NUMERIC_LABEL, CHAR_TO_LABEL, and SA_SESSION must be constants. For a complete list of the supported ways PL/SQL functions can be used in a policy expression, refer to the section on writing policy expressions in the Oracle documentation for data redaction.

ORA-28100: policy function schema *string* is invalid

Cause: The schema was dropped after the policy associated with the function had been added to the object.

Action: Drop the policy and re-create it with a policy function owned by a valid user. Or re-create the user and the policy function under the new user.

ORA-28101: policy already exists

Cause: A policy with the same name for the same object already exists.

Action: Check if the policy has already been added or use a different policy name.

ORA-28102: policy does not exist

Cause: Try to drop/enable/refresh a non-existent policy.

Action: Correct the policy name argument.

ORA-28103: adding a policy to an object owned by SYS is not allowed

Cause: Try to add a policy to a table or a view owned by SYS.

Action: You can not perform this operation.

ORA-28104: input value for *string* is not valid

Cause: Input value for the argument is not valid

Action: specify a valid argument value.

ORA-28105: cannot create security relevant column policy in an object view

Cause: Security relevant column argument is not null in policy creation for an object view

Action: n/a

ORA-28106: input value for argument #*string* is not valid

Cause: Input values for the argument is missing or invalid.

Action: Correct the input values.

ORA-28107: policy was disabled

Cause: Try to flush a disabled policy.

Action: If the policy is supposed to be enforced, it must be enabled.

ORA-28108: circular security policies detected

Cause: Policies for the same object reference each other.

Action: Drop the policies

ORA-28109: the number of related policies has exceeded the limit of 16

Cause: Too many policies are involved in the same objects.

Action: Drop one or more policies. Or combine a few of them into one.

ORA-28110: policy function or package *string.string* has error

Cause: The policy function may have been dropped, or is no longer valid.

Action: Check the status of the function and correct the problem. Or re-create the policy with a valid function.

ORA-28111: insufficient privilege to evaluate policy predicate

Cause: Predicate has a subquery which contains objects that the owner of policy function does not have privilege to access.

Action: Grant appropriate privileges to the policy function owner.

ORA-28112: failed to execute policy function

Cause: The policy function has one or more error during execution.

Action: Check the trace file and correct the errors.

ORA-28113: policy predicate has error

Cause: Policy function generates invalid predicate.

Action: Review the trace file for detailed error information.

ORA-28115: policy with check option violation

Cause: Policy predicate was evaluated to FALSE with the updated values.

Action: n/a

ORA-28116: insufficient privileges to do direct path access

Cause: Users with insufficient privileges attempting to do direct path access of tables with fine grain access control policies.

Action: Ask the database administrator to do the operation. Note that users can work with security administrator to temporarily drop/disable the policies at time of export, import, or load, but this has security implication, and thus access of the database must be controlled carefully.

ORA-28117: integrity constraint violated - parent record not found

Cause: try to update/insert a child record with new foreign key values, but the corresponding parent row is not visible because of fine-grained security in the parent.

Action: make sure that the updated foreign key values must also visible in the parent

ORA-28118: policy group already exists

Cause: try to create a policy group that already exists

Action: n/a

ORA-28119: policy group does not exist

Cause: try to drop a policy group that does not exist

Action: n/a

ORA-28120: driving context already exists

Cause: try to create a driving context that already exists

Action: n/a

ORA-28121: driving context does not exist

Cause: try to drop a driving context that does not exist

Action: n/a

ORA-28122: can not update SYS_DEFAULT policy group

Cause: An attempt was made to execute either DBMS_RLS.CREATE_POLICY_GROUP or DBMS_RLS.DELETE_POLICY_GROUP using SYS_DEFAULT as the policy group name.

Action: Do not attempt to CREATE or DELETE the SYS_DEFAULT policy group. This action is not permitted.

ORA-28123: Driving context 'string,string' contains invalid group 'string'

Cause: A previous call to DBMS_SESSION.SET_CONTEXT specified an invalid policy group.

Action: Ensure that a valid policy group is passed to DBMS_SESSION.SET_CONTEXT when initializing a policy driving context.

ORA-28124: Column *string* in sec_relevant_cols cannot be of an object data type

Cause: A column specified in sec_relevant_cols was of an object data type.

Action: Ensure that none of the columns specified in sec_relevant_cols is of an object data type or XMLType.

ORA-28132: The MERGE INTO syntax does not support the security policy.

Cause: The MERGE INTO syntax did not support a security policy on the destination table, because the policy's statement_types did not include each of INSERT, UPDATE and DELETE.

Action: If you do not have the privilege to modify the security policy, then instead of MERGE INTO, use the INSERT, UPDATE and DELETE DML statements on the table that has a security policy defined on it. If you have the privilege to modify the security policy, then redefine it in such a way that statement_types includes all of the DML statement types (INSERT, UPDATE and DELETE).

ORA-28134: object cannot have fine-grained access control policy

Cause: Only tables, views, or synonyms of tables or views may have VPD policies

Action: n/a

ORA-28135: VPD check option silent error event

ORA-28136: Ignore check option error

ORA-28137: Invalid FGA audit Handler

Cause: An invalid audit handler was specified.

Action: Specify a valid audit handler.

ORA-28138: Error in Policy Predicate

Cause: An invalid policy predicate was specified.

Action: Please specify a valide policy Predicate for the FGA policy

ORA-28139: Maximum allowed Fine Grain Audit Policies Exceeded

Cause: A maximum of 256 policies can be enabled on an object

Action: Drop or disable an existing policy before creating more

ORA-28140: Invalid column specified

Cause: Column name specified during policy creation is invalid

Action: Please specify a valid column name. Object columns are not supported

ORA-28141: error in creating audit index file

Cause: ORACLE was not able to create the file being used to hold audit file names.

Action: Examine the directory pointed to by the initialization parameter "audit_file_dest." Make sure that all of the following is true: 1. The directory exists. 2. The name indeed points to a directory and not a file. 3. The directory is accessible and writable to the ORACLE user.

ORA-28142: error in accessing audit index file

Cause: ORACLE was not able to access the file being used to hold audit file names.

Action: Make sure the file exists in the directory pointed to by the initialization parameter "audit_file_dest" and is readable by the ORACLE user.

ORA-28143: Invalid argument passed to FGA ADD_POLICY procedure

Cause: Invalid input argument was specified for FGA ADD_POLICY procedure.

Action: Specify correct type and number of arguments to FGA ADD_POLICY procedure.

ORA-28144: Failed to execute fine-grained audit handler

Cause: An error was encountered while executing fine-grained audit handler.

Action: Refer to the trace file for details.

ORA-28145: XDS policy already exists for *string*

Cause: An XDS policy was enabled for an object that already has an associated XDS policy.

Action: Specify a different policy name or call enable_xds with the overwrite paramter set to TRUE.

ORA-28146: invalid operation for policy "*string*"

Cause: Attribute association (NAMESPACE, ATTRIBUTE) was specified for an invalid policy type. Attribute association can be specified only for context-sensitive and shared context-sensitive policy types.

Action: Do not perform any unsupported operation.

ORA-28147: The specified attribute association ("*string*", "*string*") is already attached to policy "*string*".

Cause: An attempt was made to create the attribute association using names that were already used by existing attribute association of the policy.

Action: Adjust the names and retry the operation.

ORA-28148: The specified attribute association ("*string*", "*string*") is not attached to policy "*string*".

Cause: An attempt was made to drop the attribute association that was not attached to the policy.

Action: Adjust the names and retry the operation.

ORA-28149: input value for argument "*string*" is missing

Cause: Only one input value was specified for the (NAMESPACE, ATTRIBUTE) arguments.

Action: Specify an input value for both (NAMESPACE, ATTRIBUTE) arguments.

ORA-28150: proxy not authorized to connect as client

Cause: A proxy user attempted to connect as a client, but the proxy was not authorized to act on behalf of the client.

Action: Grant the proxy user permission to perform actions on behalf of the client by using the ALTER USER ... GRANT CONNECT command.

ORA-28151: more than one user name specified for command

Cause: More than one user name was specified for an ALTER USER command.

Action: Try the command again with only one user name.

ORA-28152: proxy user '*string*' may not specify initial role '*string*' on behalf of client '*string*'

Cause: A proxy user attempted to specify an initial role for a client, but the client does not possess the role.

Action: Change the proxy user so that it does not specify the role or grant the role to the client.

ORA-28153: Invalid client initial role specified: '*string*'

Cause: A role specified by a proxy user as an initial role to be activated upon connecting on behalf of a client is invalid.

Action: Connect again as the client specifying a valid role.

ORA-28154: Proxy user may not act as client '*string*'

Cause: A proxy user may not assume the identity of a privileged user in order to limit the privileges that a proxy may possess.

Action: Execute the statement again specify a client other than a privileged user.

ORA-28155: user '*string*' specified as a proxy is actually a role

Cause: A user specified in an AUDIT *operation* BY *proxy* ON BEHALF OF *client* is actually a role.

Action: Execute the statement again with a valid proxy user.

ORA-28156: Proxy user '*string*' not authorized to set role '*string*' for client '*string*'

Cause: A proxy user has not been granted the right to use a role on behalf of a client.

Action: Execute the command ALTER USER *client* GRANT CONNECT THROUGH PROXY *proxy* to grant the needed role.

ORA-28157: Proxy user '*string*' forbidden to set role '*string*' for client '*string*'

Cause: A proxy user was forbidden to use a role on behalf of a client through the command ALTER USER *client* GRANT CONNECT THROUGH *proxy* WITH ALL ROLES EXCEPT *role*

Action: Execute the command ALTER USER *client* GRANT CONNECT THROUGH PROXY *proxy* to grant the needed role.

ORA-28158: missing ALL keyword

ORA-28159: missing BEHALF keyword

ORA-28160: missing EXCEPT keyword

ORA-28161: missing ROLES keyword

ORA-28162: missing THROUGH keyword

ORA-28163: GRANT already specified

Cause: The GRANT clause was specified twice.

Action: Use only one GRANT clause.

ORA-28164: REVOKE already specified

Cause: The REVOKE clause was specified twice.

Action: Use only one REVOKE clause.

ORA-28165: proxy 'string' may not specify password-protected role 'string' for client 'string'

Cause: A proxy user attempted to activate a role on behalf of a client which has a password associated with it. Since the proxy does not have a password, this activation cannot be allowed.

Action: Attempt to activate a different role or change the role administratively so that there is no password.

ORA-28166: duplicate rolename in list

Cause: The name of a role was specified more than once in a list.

Action: Repeat the command specifying the role once.

ORA-28168: attempted to grant password-protected role

Cause: An ALTER USER ... GRANT CONNECT command was attempted specifying a role that is protected by a password as a role which the proxy may execute on behalf of a client.

Action: Either specify a role that does not have a password or alter the role so that a password is not required.

ORA-28169: unsupported certificate type

Cause: The type of certificate from which the server is to extract the credentials of the client is not supported.

Action: Specify a supported type.

ORA-28170: unsupported certificate version

Cause: The version of the certificate from which the server is to extract the credentials of the client is not supported.

Action: Specify a supported version.

ORA-28171: unsupported Kerberos version

Cause: the version the Kerberos ticket which the server is to use to validate the identity of the client is not supported.

Action: Specify a supported version.

ORA-28172: distinguished name not provided by proxy

Cause: A client user is to be identified using a distinguished name, but none was provided by the proxy user.

Action: Provide a distinguished name.

ORA-28173: certificate not provided by proxy

Cause: A client user is to be identified using a certificate but none was provided by the proxy user.

Action: Provide a certificate.

ORA-28174: Kerberos ticket not provided by proxy

Cause: A client user is to be authenticated using a Kerberos ticket but none was provided by the proxy user.

Action: Provide a Kerberos ticket.

ORA-28175: incorrect certificate type

Cause: the type of certificate provided by the proxy user to identify a client user does not match the type that is required.

Action: Provide a certificate of the correct type.

ORA-28176: incorrect certificate version

Cause: the version of certificate provided by the proxy user to identify a client user does not match the version that is required.

Action: Provide a certificate of the correct version.

ORA-28177: incorrect Kerberos ticket version

Cause: the version of Kerberos ticket provided by the proxy user to authenticate a client user does not match the version that is required.

Action: Provide a Kerberos ticket of the correct version.

ORA-28178: password not provided by proxy

Cause: A client user is to be authenticated using a database password but none was provided by the proxy user.

Action: Provide a password.

ORA-28179: client user name not provided by proxy

Cause: No user name was provided by the proxy user for the client user.

Action: Either specify a client database user name, a distinguished name or an X.509 certificate.

ORA-28180: multiple authentication methods provided by proxy

Cause: More than one authentication method was specified by the proxy user for the client user.

Action: Specify only one of the following: a client database user name, a distinguished name or an X.509 certificate.

ORA-28181: proxy '*string*' failed to enable one or more of the specified initial roles for client '*string*'

Cause: Attempt to enable specified initial roles after logon resulted in failure.

Action: Check that the initial roles are valid, granted to client, and not password protected.

ORA-28182: cannot acquire Kerberos service ticket for client

Cause: An attempt to use a Kerberos forwardable ticket granting ticket to obtain a Kerberos service ticket failed.

Action: Check that the Kerberos forwardable ticket granting ticket belongs to the client, is valid, and that the key distribution center is available.

ORA-28183: proper authentication not provided by proxy

Cause: A client user must be authenticated but no authentication credentials were provided by the proxy user.

Action: Provide some form of authentication credentials.

ORA-28184: global user cannot have proxy permissions managed in the directory

Cause: The client name specified was a global user.

Action: Use ALTER USER to change the type of user (from IDENTIFIED GLOBALLY to something else, such as IDENTIFIED BY password or IDENTIFIED EXTERNALLY).

ORA-28185: cannot alter user with administrative privilege to proxy-only connect user

Cause: An attempt was made to alter a user with administrative privilege to a proxy-only connect user.

Action: This user cannot be altered to proxy-only connect user.

ORA-28186: cannot grant *string* to a proxy-only connect user

Cause: SYSDBA, SYSOPER, SYSASM, SYSBACKUP, SYSDG or SYSKM privilege could not be granted to a proxy-only connect user.

Action: None

ORA-28187: cannot alter global user to proxy-only connect user

Cause: An attempt was made to alter global user to proxy-only connect.

Action: None

ORA-28188: cannot alter user SYS/SYSBACKUP/SYSDG/SYSKM to be identified as externally or as globally

Cause: An attempt was made to alter SYS/SYSBACKUP/SYSDG/SYSKM to be identified as externally or as globally.

Action: None

ORA-28200: IDENTIFIED USING already specified

Cause: The IDENTIFIED USING clause was specified twice.

Action: Use only one IDENTIFIED USING clause.

ORA-28221: REPLACE not specified

Cause: User is changing password but password verification function is turned on and the original password is not specified and the user does not have the alter user system privilege.

Action: Supply the original password.

ORA-28222: may not modify reserved user

Cause: An attempt was made to change or grant to a reserved user account.

Action: None

ORA-28223: first login requires password change

Cause: This user was globally authenticated. Password policy settings in Oracle Internet Directory (OID) requires the password to be changed for the first connection.

Further connections to the database will be denied if the password in OID is not changed.

Action: Connect to the OID to change the password.

ORA-28231: no data passed to obfuscation toolkit

Cause: A NULL value was passed to a function or procedure.

Action: Make sure that the data passed is not empty.

ORA-28232: invalid input length for obfuscation toolkit

Cause: Length of data submitted for encryption or decryption is not a multiple of 8 bytes.

Action: Make sure that the length of the data to be encrypted or decrypted is a multiple of 8 bytes.

ORA-28233: double encryption not supported

Cause: The obfuscation toolkit does not support the encryption of already-encrypted data.

Action: Do not attempt to encrypt already-encrypted data.

ORA-28234: key length too short

Cause: The key specified is too short for the algorithm. DES requires a key of at least 8 bytes. Triple DES requires a key of least 16 bytes in two-key mode and 24 bytes in three-key mode.

Action: Specify a longer key.

ORA-28235: algorithm not available

Cause: The encryption algorithm desired is not available.

Action: Run the installer to install the needed algorithm in Oracle Advanced Security.

ORA-28236: invalid Triple DES mode

Cause: An unknown value was specified for the mode in which triple DES encryption is to run.

Action: Specify a valid value. See the package declaration for a list of valid values.

ORA-28237: seed length too short

Cause: The seed specified for the key generation routine must be at least 80 characters.

Action: Specify a longer seed.

ORA-28238: no seed provided

Cause: A NULL value was passed in as the seed to be used in generating a key.

Action: Provide a non-NULL value for the seed.

ORA-28239: no key provided

Cause: A NULL value was passed in as an encryption or decryption key.

Action: Provide a non-NULL value for the key.

ORA-28261: CURRENT_USER can not be used in PLSQL Definer's Right procedure.

Cause: An attempt to retrieve CURRENT_USER using SYS_CONTEXT PLSQL interface.

Action: Use a SQL statement to query CURRENT_USER inside a DR procedure.

ORA-28262: global_context_pool_size has invalid value.

Cause: Parameter global_context_pool_size has a value less than the minimum required value (10K).

Action: Please specify a value for the init.ora parameter global_context_pool_size which is atleast 10k.

ORA-28263: Insufficient memory in global context pool

Cause: Allocations for the global context heap exceeded the value set in init.ora.

Action: Increase the value of global_context_pool_size parameter in init.ora or clear unused global context.

ORA-28264: Client identifier is too long

Cause: The length of the client identifier is longer than 64

Action: Set a client identifier whose length is less than 64.

ORA-28265: NameSpace beginning with 'sys_' is not allowed

Cause: Namespace beginning with 'sys_' is not allowed.

Action: Use a namespace that does not begin with 'sys_'.

ORA-28267: Invalid NameSpace Value

Cause: Context NameSpace conflicts with reserved key words or a secure Namespace is not allowed for this type of Application Context.

Action: Use a valid namespace.

ORA-28268: Exceeded the maximum allowed size for Context information in a session

Cause: The maximum size specified by the _session_context_size init.ora parameter was exceeded.

Action: Please change the value for _session_context_size in the init.ora file.

ORA-28270: Malformed user nickname for password authenticated global user.

Cause: An attempt to login as password-authenticated global user with a malformed user nickname.

Action: Make sure the nickname is valid and re-login.

ORA-28271: No permission to read user entry in LDAP directory service.

Cause: ORACLE server does not have read permission on user nickname's X.500 user entry.

Action: Make sure ORACLE server is using right SSL credentials to connect to LDAP directory services. Make sure permissions for LDAP user entries are right.

ORA-28272: Domain policy restricts password based GLOBAL user authentication.

Cause: Domain policy does not allow password-authenticated GLOBAL users.

Action: Make sure ORACLE server is using right SSL credentials to connect to LDAP directory services. Make sure orclDBAuthTypes attributes within Oracle enterprise domain object is either set to PWD or ALL.

ORA-28273: No mapping for user nickname to LDAP distinguished name exists.

Cause: ORACLE server cannot map the given user nickname to LDAP distinguished name.

Action: Make sure user entries in LDAP are correctly provisioned with correct user nickname attribute values.

ORA-28274: No ORACLE password attribute corresponding to user nickname exists.

Cause: LDAP user entry corresponding to user nickname does not have a ORACLE password attribute or the attribute is not initialized.

Action: Make sure user entries in LDAP are correctly provisioned with correct ORACLE password attribute values.

ORA-28275: Multiple mappings for user nickname to LDAP distinguished name exist.

Cause: The given user nickname maps to more than one LDAP distinguished name.

Action: Make sure user nickname is unique within the enterprise.

ORA-28276: Invalid ORACLE password attribute.

Cause: The ORACLE password attribute of a user entry has an invalid format.

Action: Make sure ORACLE password attribute value is RFC-2307 compliant.

ORA-28277: LDAP search, while authenticating global user with passwords, failed.

Cause: The LDAP search for finding the appropriate user entry and ORACLE password failed.

Action: Make sure LDAP directory service is up and running.

ORA-28278: No domain policy registered for password based GLOBAL users.

Cause: No policy about password authenticated GLOBAL users has been registered.

Action: Add attribute orclDBAuthTypes to the database server's Enterprise domain.

ORA-28279: Error reading ldap_directory_access init parameter.

Cause: ldap_directory_access parameter is not specified correctly.

Action: Make sure spfile.ora has ldap_directory_access set correctly. Possible correct values are PASSWORD, SSL and NONE.

ORA-28280: Multiple entries for ORACLE database password exist.

Cause: The ORACLE password attribute of a user entry has multiple entries of ORACLE database password.

Action: Make sure ORACLE password attribute has one entry for ORACLE Database password.

ORA-28281: Global application context is not updated on one or more Oracle RAC instances

Cause: While updating global application context across Oracle RAC instances, the background process errored out or the timeout expired due to some failure.

Action: Ensure every instance in Oracle RAC is operational and retry the operation.

ORA-28290: Multiple entries found for the same Kerberos Principal Name

Cause: Multiple user entries has been configured with the same krbPrincipalName

Action: Modify enterprise user's entry to assign its Kerberos principal name Make sure the user entries in LDAP are provisioned correctly.

ORA-28291: No Kerberos Principal Value found.

Cause: Oracle server fails to get value of krbPrincipalName attribute

Action: Make sure user entries are correctly provisioned with correct Kerberos principal value

ORA-28292: No Domain Policy registered for Kerberos based authentication

Cause: The enterprise domain entry is not configured for Kerberos based global authentication.

Action: Modify orclDBAuthType of the database server's enterprise domain entry and assign it "ALL" or "KRB5"

ORA-28293: No matched Kerberos Principal found in any user entry

Cause: Oracle server fails to find the principal in the user search base

Action: Make sure the user search base is correct. Use ESM to configure the enterprise user its Kerberos principal name

ORA-28300: No permission to read user entry in LDAP directory service.

Cause: ORACLE server does not have read permission on user entries.

Action: Make sure ORACLE server is using right credentials to connect to LDAP directory services. Make sure permissions for LDAP user entries are configured correctly.

ORA-28301: Domain Policy hasn't been registered for SSL authentication.

Cause: An attempt was made to authenticate with SSL, but the database enterprise domain was not configured for SSL authentication.

Action: Modify orclDBAuthType of the server's enterprise domain entry and assign it "ALL" or "SSL".

ORA-28302: User does not exist in the LDAP directory service.

Cause: An attempt was made to authenticate with SSL using the user's certificate, but there was no user entry in the LDAP server that matched the user's Distinguished Name.

Action: Add an user entry whose DN matches the user's PKI DN in the LDAP directory.

ORA-28303: Distinguished name for user exceeds maximum supported length

Cause: The user's distinguished name (DN) exceeded the maximum supported length.

Action: Shorten the user's distinguished name (DN) and retry.

ORA-28304: Oracle encrypted block is corrupt (file # *string*, block # *string*)

Cause: The indicated encrypted block was corrupt. This was an in-memory corruption. The exact cause is unknown. Possible causes could be: - the encryption wallet is incorrect or corrupted - the tablespace encryption key is incorrect or corrupted - decryption engine failure - actual logical error exists in decrypted block

Action: Review the encryption wallet and the keys stored in it to ensure they are valid and correct.

ORA-28305: WALLET_LOCATION in sqlnet.ora file for container database is not supported.

Cause: WALLET_LOCATION was specified in sqlnet.ora file.

Action: Remove WALLET_LOCATION from sqlnet.ora file. Place the wallet in the pluggable database-specific default location.

ORA-28330: encryption is not allowed for this data type

Cause: Data type was not supported for column encryption.

Action: n/a

ORA-28331: encrypted column size too long for its data type

Cause: The column was both encrypted and one of the following: -for VARCHAR2 when extended character data types were disabled, the length specified was > 3932; -for VARCHAR2 when extended character data types were enabled, the length specified was > 32699; -for CHAR, the length specified was > 1932; -for NVARCHAR2 when extended character data types were disabled, the length specified was > 1966; -for NVARCHAR2 when extended character data types were enabled, the length specified was > 16349; -for NCHAR, the length specified was > 966; -for RAW when extended character data types were disabled, the length specified was > 3932; -for RAW when extended character data types were enabled, the length specified was > 32699;

Action: Reduce the column size.

ORA-28332: cannot have more than one password for the encryption key

Cause: More than one password was specified in the user command.

Action: n/a

ORA-28333: column is not encrypted

Cause: An attempt was made to rekey or decrypt an unencrypted column.

Action: n/a

ORA-28334: column is already encrypted

Cause: An attempt was made to encrypt an encrypted column.

Action: n/a

ORA-28335: referenced or referencing FK constraint column cannot be encrypted

Cause: encrypted columns were involved in the referential constraint

Action: n/a

ORA-28336: cannot encrypt SYS owned objects

Cause: An attempt was made to encrypt columns in a table owned by SYS.

Action: n/a

ORA-28337: the specified index may not be defined on an encrypted column

Cause: Index column was either a functional, domain, or join index.

Action: n/a

ORA-28338: Column(s) cannot be both indexed and encrypted with salt

Cause: An attempt was made to encrypt index column with salt or an attempt was made to create an index on encrypted column with salt.

Action: Alter the table and specify column encrypting without salt.

ORA-28339: missing or invalid encryption algorithm

Cause: Encryption algorithm was missing or invalid in the user command.

Action: Must specify a valid algorithm.

ORA-28340: a different encryption algorithm has been chosen for the table

Cause: Existing encrypted columns were associated with a different algorithm.

Action: No need to specify an algorithm, or specify the same one for the existing encrypted columns.

ORA-28341: cannot encrypt constraint column(s) with salt

Cause: An attempt was made to encrypt constraint columns with salt.

Action: Encrypt the constraint columns without salt.

ORA-28342: integrity check fails on column key

Cause: Encryption metadata may have been improperly altered.

Action: n/a

ORA-28343: fails to encrypt data

Cause: data or encryption metadata may have been improperly altered or the security module may not have been properly setup

Action: n/a

ORA-28344: fails to decrypt data

Cause: data or encryption metadata may have been improperly altered or the security module may not have been properly setup

Action: n/a

ORA-28345: cannot downgrade because there exists encrypted column

Cause: An attempt was made to downgrade when there was an encrypted column in the system.

Action: Decrypt these columns before attempting to downgrade.

ORA-28346: an encrypted column cannot serve as a partitioning column

Cause: An attempt was made to encrypt a partitioning key column or create partitioning index with encrypted columns.

Action: The column must be decrypted.

ORA-28347: encryption properties mismatch

Cause: An attempt was made to issue an ALTER TABLE EXCHANGE PARTITION | SUBPARTITION command, but encryption properties were mismatched.

Action: Make sure encryption algorithms and columns keys are identical. The corresponding columns must be encrypted on both tables with the same salt and non-salt flavor.

ORA-28348: index defined on the specified column cannot be encrypted

Cause: An attempt was made to encrypt a column which is in a functional index, domain index, or join index.

Action: drop the index

ORA-28349: cannot encrypt the specified column recorded in the materialized view log

Cause: An attempt was made to encrypt a column which is already recorded in the materialized view log.

Action: drop the materialized view log

ORA-28350: cannot encrypt the specified column recorded in CDC synchronized change table

Cause: An attempt was made to encrypt a column which is already recorded in CDC synchronized change table.

Action: drop the synchronized change table

ORA-28351: cannot encrypt the column of a cluster key

Cause: An attempt was made to encrypt a column of the cluster key. A column of the cluster key in a clustered table cannot be encrypted.

Action: None

ORA-28353: failed to open wallet

Cause: The database was unable to open the security module wallet due to an incorrect wallet path or password. It is also possible that a wallet has not been created. Type mkwallet from command line for instructions.

Action: Execute the command again using the correct wallet password or verifying a wallet exists in the specified directory. If necessary, create a new wallet and initialize it.

ORA-28354: Encryption wallet, auto login wallet, or HSM is already open

Cause: Encryption wallet, auto login wallet, or HSM was already opened.

Action: None

ORA-28355: failed to initialize security module

ORA-28356: invalid open wallet syntax

Cause: The command to open the wallet contained improper spelling or syntax.

Action: If attempting to open the wallet, verify the spelling and syntax and execute the command again.

ORA-28357: password required to open the wallet

Cause: A password was not provided when executing the open wallet command.

Action: Retry the command with a valid password.

ORA-28358: improper set key syntax

Cause: The command to set the master key contained improper spelling or syntax.

Action: If attempting to set the master key for Transparent Database Encryption, verify the spelling and syntax and execute the command again.

ORA-28359: invalid certificate identifier

Cause: The certificate specified did not exist in the wallet.

Action: Query the V\$WALLET fixed view to find the proper certificate identifier for certificate to be used.

ORA-28360: security module internal error

ORA-28361: master key not yet set

Cause: The master key for the instance was not set.

Action: Execute the ALTER SYSTEM SET KEY command to set a master key for the database instance.

ORA-28362: master key not found

Cause: The required master key required could not be located. This may be caused by the use of an invalid or incorrect wallet.

Action: Check wallet location parameters to see if they specify the correct wallet. Also, verify that an SSO wallet is not being used when an encrypted wallet is intended.

ORA-28363: buffer provided not large enough for output

Cause: A provided output buffer is too small to contain the output.

Action: Check the size of the output buffer to make sure it is initialized to the proper size.

ORA-28364: invalid wallet operation

Cause: The command to operate the wallet contained improper spelling or syntax.

Action: Verify the spelling and syntax and execute the command again.

ORA-28365: wallet is not open

Cause: The security module wallet has not been opened.

Action: Open the wallet.

ORA-28366: invalid database encryption operation

Cause: The command for database encryption contained improper spelling or syntax.

Action: Verify the spelling and syntax and execute the command again.

ORA-28367: wallet does not exist

Cause: The Oracle wallet has not been created or the wallet location parameters in sqlnet.ora specifies an invalid wallet path.

Action: Verify that the WALLET_LOCATION or the ENCRYPTION_WALLET_LOCATION parameter is correct and that a valid wallet exists in the path specified.

ORA-28368: cannot auto-create wallet

Cause: The database failed to auto create an Oracle wallet. The Oracle process may not have proper file permissions or a wallet may already exist.

Action: Confirm that proper directory permissions are granted to the Oracle user and that neither an encrypted or obfuscated wallet exists in the specified wallet location and try again.

ORA-28369: cannot add files to encryption-ready tablespace when offline

Cause: You attempted to add files to an encryption-ready tablespace when all the files in the tablespace were offline.

Action: Bring the tablespace online and try again

ORA-28370: ENCRYPT storage option not allowed

Cause: You attempted to specify the ENCRYPT storage option. This option may only be specified during CREATE TABLESPACE.

Action: Remove this option and retry the statement.

ORA-28371: ENCRYPTION clause and/or ENCRYPT storage option not allowed

Cause: You attempted to specify the ENCRYPTION clause or ENCRYPT storage option for creating TEMP or UNDO tablespaces.

Action: Remove these options and retry the statement.

ORA-28372: missing ENCRYPT storage option for encrypted tablespace

Cause: You attempted to specify ENCRYPTION property for CREATE TABLESPACE without specifying ENCRYPT storage option to encrypt the tablespace.

Action: Add ENCRYPT storage option and retry the statement.

ORA-28373: missing ENCRYPTION clause for encrypted tablespace

Cause: You attempted to specify storage option ENCRYPT in CREATE TABLESPACE without specifying ENCRYPTION property to encrypt the tablespace.

Action: Add ENCRYPTION clause and retry the statement.

ORA-28374: typed master key not found in wallet

Cause: You attempted to access encrypted tablespace or redo logs with a typed master key not existing in the wallet.

Action: Copy the correct Oracle Wallet from the instance where the tablespace was created.

ORA-28375: cannot perform cross-endianism conversion on encrypted tablespace

Cause: You attempted to perform cross-endianism conversion on encrypted tablespace.

Action: Cross-endianism conversion on encrypted tablespace is not supported.

ORA-28376: cannot find PKCS11 library

Cause: The HSM vendor's library cannot be found.

Action: Place the HSM vendor's library in the following directory structure: For Unix like system: /opt/oracle/extapi/[32,64]/hsm/{VENDOR}/{VERSION}/libapiname.ext For Windows systems: %SYSTEM_DRIVE%\oracle\extapi\[32,64]\hsm\{VENDOR}\{VERSION}\libapin//ame.ext [32, 64] - refers to 32bit or 64bit binary. {VENDOR} - The name of the vendor supplying the library. {VERSION} - Version of the library, preferably in num#.num#.num# for // mat.

ORA-28377: No need to migrate from wallet to HSM

Cause: There are either no encrypted columns or all column keys are already encrypted with the HSM master key.

Action: No action required.

ORA-28378: Wallet not open after setting the Master Key

Cause: The Master Key has been set or reset. However, wallet could not be reopened successfully.

Action: Reopen the wallet.

ORA-28379: a different integrity algorithm has been chosen for the table

Cause: Encrypted columns were associated with a different algorithm.

Action: You do not need to specify an algorithm, or specify the same one for the existing encrypted columns.

ORA-28382: Global wallet operation in RAC failed

Cause: Wallet operation in RAC failed.

Action: Check V\$WALLET_ENCRYPTION table to verify if the wallet operation succeeded on any instance. Retry the operation.

ORA-28383: cannot do a PKI certificate-based Master Key migration

Cause: A PKI certificate-based Master Key migration was not allowed.

Action: Execute a symmetric Master Key migration.

ORA-28384: cannot perform Tablespace Encryption

Cause: Tablespace Encryption was attempted when PKI certificate-based Master Key was in use.

Action: Perform a symmetric Master Key Rekey.

ORA-28385: cannot perform a PKI certificate-based migration

Cause: A PKI certificate-based migration to HSM was attempted.

Action: Perform a symmetric Master Key migration.

ORA-28386: cannot perform a PKI certificate-based Master Key Rekey

Cause: A PKI certificate-based Master Key Rekey was attempted when Tablespace Encryption or HSM was in use.

Action: Perform a symmetric Master Key Rekey or disable Tablespace Encryption for all tablespaces.

ORA-28387: Could not acquire an enqueue for wallet operation in Oracle RAC

Cause: Enqueue to block TDE operations in Oracle RAC database could not be obtained.

Action: Retry the wallet operation.

ORA-28388: database is not open in read/write mode

Cause: Database was not open in read/write mode and could not perform these wallet operations.

Action: Open the database in read/write mode and retry this command.

ORA-28389: cannot close auto login wallet

Cause: Auto login wallet could not be closed because it was opened with another wallet or HSM requiring a password.

Action: Close the wallet or HSM with a password.

ORA-28390: auto login wallet not open but encryption wallet may be open

Cause: Auto login wallet was not open. But, the encryption wallet may still be open and subsequent TDE operations might succeed.

Action: If auto login wallet is closed but TDE operations succeed, check the status of the encryption wallet and close that if required.

ORA-28391: cannot close wallet or HSM, password mismatch

Cause: Password provided did not match the password of the open wallet or HSM.

Action: Provide the correct password for wallet or HSM to close the wallet or HSM.

ORA-28392: invalid close wallet syntax

Cause: The command to close the wallet contained improper spelling or syntax.

Action: If attempting to close the wallet, verify the spelling and syntax and execute the command again.

ORA-28393: password required to close the wallet

Cause: A password was not provided when executing the close wallet command.

Action: Retry the command with a valid password.

ORA-28394: decryption of data of length *string* failed

Cause: Decryption of data failed. Error may be due to plain text data in an external file being submitted for decryption, data encrypted with a different key or a utility being submitted for decryption, or TDE encrypted data in data files being corrupted.

Action: Verify that the correct external file is being specified or contact Oracle Support Services.

ORA-28395: could not write the new master key to the wallet

Cause: An attempt was made to write the new master key to the wallet. The wallet or the parent directory may not have the proper file permissions to write the master key in the wallet.

Action: Check the password-based wallet, auto login wallet, the parent directory permissions and disk space availability on the file system. Make sure that the Oracle processes have read/write permissions on the password-based and auto login wallets. Retry the command.

ORA-28396: rekey of enc\$ dictionary table failed

Cause: One or more master keys required for the rekey operation could not be found in the wallet. Either incorrect master key identifiers were inserted into the enc\$ dictionary table or the wallet containing the referenced master keys were improperly modified or deleted.

Action: Restore the most recent copy of the wallet and try again.

ORA-28397: cannot bring file *string* online since it has a passphrase-wrapped key

Cause: The encrypted tablespace file was rewrapped using passphrase through the DBMS_TTS.PASSPHRASE_REWRAP_KEY procedure. Therefore it cannot be part of the database until it is converted by RMAN.

Action: Do not attempt to bring files with passphrase-wrapped keys online.

ORA-28398: cannot rewrap encryption key for this file

Cause: Cannot rewrap encryption key for this file because it was not from an encrypted tablespace, or it had already been rewrapped.

Action: Verify that the file is a copy of a file from an encrypted tablespace.

ORA-28403: file *string* cannot be modified because it is an online data file

Cause: An attempt was made to modify an online data file when the file was not expected to be part of the database.

Action: Check the status of the file and its tablespace and make sure it is offline or is a copy of a data file

ORA-28404: role cannot be altered

Cause: An attempt was made to alter the role to become a global, external, password protected, or secure application role. The role could not be altered because it was already granted to one or more other roles.

Action: Use REVOKE to revoke the role from other roles first.

ORA-28405: cannot grant secure role to a role

Cause: Role granted was a password protected or secure application role. This role can only be granted directly to a user.

Action: Grant the role directly to a user.

ORA-28407: Hardware Security Module failed with PKCS#11 error *string(number)*

Cause: The Hardware Security Module (HSM) connection may have been lost or another internal HSM error was reached.

Action: Check the error. For more information on the error, check the trace files and try the following: 1) Retry the command. If the error repeats, go to step 2. 2) Verify that the HSM is configured correctly and connected. Retry the command. If the error repeats, go to step 3. 3) Ask your Security Officer to close and open the security module. Retry the command. If the error repeats, go to step 4. 4) Bounce the database if possible. Retry the command. If the error repeats, contact Oracle Support Services or your HSM vendor's support.

ORA-28408: encryption using passphrase failed

Cause: Encryption with the passphrase failed which was likely due to an invalid or missing passphrase or due to an internal error.

Action: Verify that the passphrase is provided and try the operation again. If the problem persists contact Oracle Support Services.

ORA-28409: decryption using passphrase failed

Cause: Decryption with the passphrase failed which was likely due to an invalid or missing passphrase or due to an internal error.

Action: Verify that the passphrase is provided and try the operation again. If the problem persists contact Oracle Support Services.

ORA-28410: No need to migrate from HSM to wallet.

Cause: There were either no encrypted columns or all column keys were already encrypted with the wallet master key.

Action: No action required.

ORA-28411: auto login wallet cannot be open during migration

Cause: Auto login wallet could not be opened during migration.

Action: Close the auto login wallet and try the migration again.

ORA-28412: cannot determine the database migration status

Cause: The migration status of the database could not be determined.

Action: Verify if the migration status is correct in props\$ and, if not, correct it. Shutdown and startup the database.

ORA-28414: specified keys are in HSM

Cause: Master key rekey or activation failed because the keys were in Hardware Security Module(HSM) but the configuration indicated that the keys were in wallet.

Action: Correct the sqlnet.ora configuration to HSM or migrate to wallet.

ORA-28415: specified keys are in wallet

Cause: Master key rekey or activation failed because the keys were in wallet but the configuration indicated that the keys were in Hardware Security Module(HSM).

Action: Correct the sqlnet.ora file configuration to wallet or migrate to HSM.

ORA-28416: specify the correct keystore in the sqlnet.ora file

Cause: The keystore specified in the sqlnet.ora file was incorrect.

Action: When migrating to HSM, the keystore specified in sqlnet.ora file should be HSM and similarly when migrating to wallet, the keystore specified in sqlnet.ora

should be wallet. Check if the sqlnet.ora file configuration is correct and, if not, correct it.

ORA-28417: password-based keystore is not open

Cause: Password-based keystore was not opened.

Action: Close the auto login keystore, if required, and open a password-based keystore.

ORA-28418: password-based HSM is not open

Cause: Password-based HSM was not opened.

Action: Close the auto login keystore, if required, and open a password-based HSM.

ORA-28419: migration from wallet to Hardware Security Module (HSM) failed

Cause: The TDE_MASTER_KEY_ID entry did not exist in props\$ table. A subsequent attempt to add TDE_MASTER_KEY_ID entry into props\$ failed.

Action: Verify why the TDE_MASTER_KEY_ID entry was deleted from the props\$ table. Retry the command.

ORA-28420: cannot open resetlogs from a restore point prior to wallet creation

Cause: The open resetlogs, open read-only, or standby activation operation failed because the restore point is prior to the wallet creation, and the data file does not contain the database key information as stored in the control file.

Action: Restore to a restore point after the wallet creation, or rebuild the control file with existing data files.

ORA-28422: operation not allowed: concurrent master key rekey

Cause: A concurrent master key rekey was detected.

Action: Wait for the master key rekey operation to complete and retry the command.

ORA-28428: cannot encrypt or decrypt a data file in mount mode when the database is open elsewhere

Cause: An attempt was made to encrypt or decrypt a data file in mount mode when the database was already opened by another Oracle RAC instance.

Action: Ensure that the database is not open anywhere and retry the command.

ORA-28429: cannot encrypt or decrypt a data file on standby when it is open read-only

Cause: An attempt was made to encrypt or decrypt a data file on a standby database when it was already opened in read-only mode.

Action: Restart the standby instance in mount mode and retry the command.

ORA-28430: cannot encrypt or decrypt a data file for online tablespace *string*

Cause: An attempt was made to encrypt or decrypt a data file for an online tablespace.

Action: Bring the tablespace offline and retry the command.

ORA-28431: cannot encrypt an already encrypted data file *string*

Cause: An attempt was made to encrypt a data file that was already encrypted in an encrypted tablespace.

Action: Check if the data file belongs to an encrypted tablespace.

ORA-28432: cannot encrypt data file *string* in seed pluggable database

Cause: An attempt was made to encrypt a data file that was part of a seed pluggable database, which is not allowed.

Action: Check if the data file belongs to a seed pluggable database.

ORA-28433: mismatched encryption property between data file *string* and tablespace *string*

Cause: Either an unencrypted data file in an encrypted tablespace or an encrypted data file in an unencrypted tablespace was found. When bringing a tablespace online or opening the database, all data files in an encrypted tablespace must be encrypted, and all data files in an unencrypted tablespace must be unencrypted.

Action: Encrypt all of the data files in the tablespace before resuming the operation.

ORA-28434: cannot decrypt an unencrypted data file *string*

Cause: An attempt was made to decrypt a data file that was unencrypted.

Action: Check if the data file belongs to an encrypted tablespace.

ORA-28435: cannot decrypt data file *string* which is not encrypted with the database key

Cause: An attempt was made to decrypt a data file that was not encrypted with the database key. Only data files encrypted with the ALTER DATABASE DATAFILE ENCRYPT ENCRYPT statement are encrypted with the database key.

Action: Check if the data file belongs to an encrypted tablespace with a different key from the database key in the V\$DATABASE_KEY_INFO view.

ORA-28436: cannot encrypt data file *string* in SYSTEM or SYSAUX tablespace

Cause: An attempt was made to encrypt a data file that was part of SYSTEM or SYSAUX tablespace, which is not allowed.

Action: Check if the data file belongs to SYSTEM or SYSAUX tablespace.

ORA-28500: connection from ORACLE to a non-Oracle system returned this message:

Cause: The cause is explained in the forwarded message.

Action: See the non-Oracle system's documentation of the forwarded message.

ORA-28501: communication error on heterogeneous database link

Cause: An unexpected communication failure occurred on a heterogeneous database link to a non-Oracle system. The message above will be followed by a second message generated by the connected non-Oracle system.

Action: See the documentation for the non-Oracle system for an explanation of the second error message.

ORA-28502: internal communication error on heterogeneous database link

Cause: A communication error internal to ORACLE's heterogeneous services has occurred.

Action: Contact Oracle customer support.

ORA-28503: bind value cannot be translated into SQL text for non-Oracle system

Cause: A SQL statement used bind variables on a Heterogenous Services database link to a non-Oracle system, but the non-Oracle system does not support bind variables.

Action: Change your SQL statement so that it does not use bind variables.

ORA-28504: ROWID not found in ROWID cache for heterogeneous database link

Cause: The ROWID cache for Heterogeneous Services held no entry that corresponds to the specified ROWID. The ROWID entry may have been overwritten in the ROWID cache.

Action: Enlarge the Heterogeneous Services ROWID cache size by increasing the value of the Heterogeneous Services initialization parameter HS_ROWID_CACHE_SIZE.

ORA-28505: cannot get non-Oracle system capabilities from *string*

Cause: ORACLE was unable to retrieve capability information for the non-Oracle system connected through a heterogeneous database link. This capability information should be stored in data dictionary tables viewable with the HS_CLASS_CAPS or HS_INST_CAPS data dictionary views.

Action: Contact the DBA to check the server data dictionary table named in the error message. If table contents are incorrect, the DBA should restore all data dictionary content for this FDS_CLASS_NAME and/or FDS_INST_NAME. It usually is sufficient to delete all current data dictionary content for this class and/or instance and initiate a new connection to let the connected agent upload new data dictionary content to the server.

ORA-28506: parse error in data dictionary translation for *string* stored in *string*

Cause: A reference to an ORACLE data dictionary table or view name on a heterogeneous database link to a non-Oracle system could not be translated. The ORACLE data dictionary tables shown with view HS_CLASS_DD contain invalid SQL for the data dictionary translation.

Action: Contact customer support of the agent vendor.

ORA-28507: error in data dictionary view *string*

Cause: The initialization parameter table for the Heterogeneous Services was not available, or its structure (number of columns or column types) was incorrect.

Action: Verify correct installation of the following Heterogeneous Services' initialization parameter views: HS_CLASS_INIT and HS_INST_INIT. If these views are not available, make sure you ran the script CATHS.SQL in the \$ORACLE_HOME/rdbms/admin directory.

ORA-28508: invalid value *string* for Heterogeneous Services initialization parameter *string*

Cause: The specified Heterogeneous Services initialization parameter had an invalid value when attempting to connect to a non-Oracle system.

Action: Check the Heterogeneous Services and agent documentation to determine acceptable values

ORA-28509: unable to establish a connection to non-Oracle system

Cause: Initialization of a database link to a non-Oracle system failed to connect to the Heterogeneous Services agent process for this non-Oracle system.

Action: Check the Net8 service name definition in the following places: -- the USING clause of the CREATE DATABASE LINK statement -- the TNSNAMES.ORA file -- the Oracle Names Server The following are possible reasons for name mismatches: -- The USING clause in the CREATE DATABASE LINK statement has to match the service name defined in the TNSNAMES.ORA file or in the Oracle Names Server. -- The

protocol-specific information in the service name definition must match the protocol-specific definition of the responding listener. -- The `SID=name` in the service name definition (in the `TNSNAMES.ORA` file or in Oracle Names Server) must match the value in the `LISTENER.ORA` file for the responding listener.

ORA-28510: heterogeneous database link initialization failed

Cause: Initialization of a heterogeneous database link to a non-Oracle system failed due to an error identified by the agent for this non-Oracle system.

Action: Make sure the non-Oracle system is up and running and that all of the environment and initialization values for the agent are set correctly.

ORA-28511: lost RPC connection to heterogeneous remote agent using `SID=string`

Cause: A fatal error occurred in one of the following places: -- the connection between the ORACLE server and the agent -- the heterogeneous services remote agent itself -- the connection to the non-Oracle system This error occurred after communication had been established successfully.

Action: Check for network problems and remote host crashes. The problem is probably in the agent software. If so, contact a customer support representative of the agent vendor.

ORA-28512: cannot get data dictionary translations from `string`

Cause: ORACLE was unable to retrieve data dictionary translation information for the non-Oracle system connected through a heterogeneous database link. This data dictionary translation information should be stored in data dictionary tables viewable with the `HS_CLASS_DD` or `HS_INST_DD` data dictionary views.

Action: Ask your DBA to check the server data dictionary table named in the error message. If table contents are incorrect, the DBA should restore all data dictionary content for this `FDS_CLASS_NAME` and/or `FDS_INST_NAME`. It usually is sufficient to delete all current data dictionary content for this class and/or instance and initiate a new connection to let the connected agent upload new data dictionary content to the server.

ORA-28513: internal error in heterogeneous remote agent

Cause: An internal error has occurred in the Oracle remote agent supporting a heterogeneous database link.

Action: Make a note of how the error was produced and contact the customer support representative of the agent vendor.

ORA-28514: heterogeneous database link initialization could not convert system date

Cause: The system date was not retrievable.

Action: Verify that the ORACLE server's host machine and operating system are operational. This error should not occur unless low level system functions are failing.

ORA-28515: cannot get external object definitions from `string`

Cause: ORACLE was unable to retrieve definitions of distributed external procedures or remote libraries registered for the non-Oracle system instance, probably because the underlying data dictionary table does not exist or is malformed.

Action: Verify that the ORACLE server's Heterogeneous Services data dictionary was installed correctly. If the Heterogeneous Services data dictionary is not installed, execute the `CATHS.SQL` script in the `$ORACLE_HOME/rdbms/admin` directory.

ORA-28518: data dictionary translation has illegal translation type

Cause: A data dictionary translation definition, either in the ORACLE server data dictionary or in data dictionary content uploaded from a Heterogeneous Services agent, specified an illegal translation type code. Legal values are 'T' or 't' for 'translate', 'M' or 'm' for 'mimic'. Information on the exact data dictionary translation causing the error is written to a trace (*.TRC) file for the ORACLE instance and to the ORACLE instance's alert log. This error occurs when a Heterogeneous Services agent uploads data dictionary content to an ORACLE server on the first connection from the server to the agent.

Action: Contact the customer support of the agent vendor.

ORA-28519: no heterogeneous data dictionary translations available

Cause: The ORACLE server's data dictionary did not define data dictionary translations for the connected non-Oracle system, and automatic self-registration (data dictionary upload) was disabled.

Action: Ask a DBA to resolve this problem. The easiest solution is to enable automatic self-registration by setting the ORACLE server's HS_AUTO_REGISTER initialization parameter to TRUE. An alternative is to load the Heterogeneous Services data dictionary with information specific for the non-Oracle system by executing a SQL script supplied by the agent vendor. If the script is run and the error persists, contact the customer support representative of the agent vendor.

ORA-28520: error initializing heterogeneous data dictionary translations

Cause: ORACLE was unable to retrieve data dictionary translations for the non-Oracle system instance, probably because the underlying data dictionary table does not exist or is formed incorrectly.

Action: Verify that the ORACLE server's Heterogeneous Services data dictionary was installed correctly. If the Heterogeneous Services data dictionary is not installed, execute the CATHS.SQL script in the \$ORACLE_HOME/rdbms/admin directory. If the connected agent, identified by FDS_CLASS_NAME, requires a custom installation script for the ORACLE server, verify that the script has been run. If both scripts were executed and the error persists, contact the customer support representative of the agent vendor.

ORA-28521: no heterogeneous capability information available

Cause: The ORACLE server's data dictionary did not contain capability definitions for the connected non-Oracle system, and automatic self-registration (data dictionary upload) was disabled.

Action: Ask a DBA to resolve this problem. The easiest resolution is to enable automatic self-registration by setting the ORACLE server's HS_AUTO_REGISTER initialization parameter to TRUE. An alternative is to load the Heterogeneous Services data dictionary with information specific for the non-Oracle system by executing a SQL script supplied by the agent vendor. If the script is run and the error persists, contact the customer support representative of the agent vendor.

ORA-28522: error initializing heterogeneous capabilities

Cause: ORACLE was unable to retrieve capability definitions for the non-Oracle system instance, probably because the underlying data dictionary table does not exist or is formed incorrectly.

Action: Verify that the ORACLE server's Heterogeneous Services data dictionary was installed correctly. If the Heterogeneous Services data dictionary is not installed, execute the CATHS.SQL script in the \$ORACLE_HOME/rdbms/admin directory. If

the connected agent, identified by `FDS_CLASS_NAME`, requires a custom installation script for the ORACLE server, verify that the script has been run. If both scripts were executed and the error persists, contact the customer support representative of the agent vendor.

ORA-28523: ORACLE and heterogeneous agent are incompatible versions

Cause: An operation on a database link attempted to connect to a non-Oracle system, but the ORACLE instance and the agent process for the non-Oracle system are incompatible.

Action: Ask your DBA to confirm configuration of both the ORACLE instance and the agent. Additional information on the version incompatibility is logged in trace (*.TRC) files, the ORACLE instance and the agent, and in the ORACLE instance's alert log. Check the documentation for your agent to find out which releases of the Oracle Server are supported.

ORA-28525: unable to create Heterogeneous Services error message text

Cause: Incorrect arguments were passed into the error message creation routine.

Action: Contact Oracle customer support.

ORA-28526: invalid describe information returned to Heterogeneous Services

Cause: The Heterogeneous Services received invalid describe information for a select list, bind list, or stored procedure from the Heterogeneous Services agent. This indicates a problem with the Heterogeneous Services' non-Oracle system agent.

Action: Contact customer support of the agent vendor.

ORA-28527: Heterogeneous Services datatype mapping error

Cause: Either an Oracle datatype could not be mapped to a non-Oracle datatype, or a non-Oracle datatype could not be mapped to an Oracle datatype. These mappings are defined as capability definitions in the ORACLE server's data dictionary.

Action: Verify that the ORACLE server's data dictionary has been initialized with correct capability definitions for the connected `FDS_CLASS_NAME` and `FDS_INST_NAME`. If table contents are incorrect, a DBA should restore all data dictionary content for this `FDS_CLASS_NAME` and/or `FDS_INST_NAME`. It usually is sufficient to delete all current data dictionary content for this class and/or instance and initiate a new connection to let the connected agent upload new data dictionary content to the server. If the error persists contact the customer support representative of the agent vendor.

ORA-28528: Heterogeneous Services datatype conversion error

Cause: Either an Oracle datatype could not be converted to a non-Oracle datatype, or a non-Oracle datatype could not be converted to an Oracle datatype. The following are possible reasons for for the conversion failure: -- overflow problems (in the case of numbers) -- length limitations (in the case of character strings) -- invalid values passed into the conversion routines

Action: Contact customer support of the agent vendor. If the problem is due to size discrepancies between Oracle and the non-Oracle system, it may not be possible to convert the value.

ORA-28529: invalid or missing parameter in Net8 service name definition

Cause: There was an invalid or missing Heterogeneous Services parameter in the Net8 service name definition stored in either the `TNSNAMES.ORA` file or in the Oracle Names Server.

Action: Ask your DBA to make sure the information in the Net8 service definition is correct and complete. The correct information that should be included in the Net8 service definition can be found in the agent's documentation.

ORA-28530: Heterogeneous Services initialization error in NLS language ID

Cause: Heterogeneous Services was unable to initialize an NLS language ID. Both the ORACLE server and the Heterogeneous Services agent for the connected non-Oracle system must have language IDs.

Action: Contact Oracle customer support.

ORA-28533: Heterogeneous Services coercion handling error

Cause: The Heterogeneous Services encountered an error in coercion handling. The HS can, if the agent vendor so chooses, perform extra processing on SQL statements that contain implicit coercions or that contain coercion functions such as TO_CHAR, TO_NUMBER or TO_DATE. This functionality is controlled by coercion-related capabilities. HS logic reports this error when it encounters an error in one of these capability definitions.

Action: The capability table settings are controlled by the agent vendor and can be modified by the DBA. Contact your DBA and agent vendor and get the correct set of capabilities installed.

ORA-28534: Heterogeneous Services preprocessing error

Cause: One of the things that the Heterogeneous Services can do is to preprocess parts of SQL statements that contain implicit coercions or calls to explicit coercion functions like TO_CHAR TO_NUMBER or TO_DATE. For example, it could convert a call to TO_DATE to a bind variable, pre-evaluate the TO_DATE function call and pass the resulting value to the non-Oracle system as the bind value. This behavior is controlled by some coercion related capabilities. If the capabilities are set incorrectly, the HS could encounter errors when it attempts to do the preprocessing. If it does then this error will be signaled.

Action: The capability table settings are controlled by the agent vendor and can be modified by the DBA. Contact your DBA and agent vendor and get the correct set of capabilities installed.

ORA-28535: invalid Heterogeneous Services context

Cause: A Heterogeneous Services agent's driver module called an HS service routine with an invalid HS context value. This probably is a logic error in the driver.

Action: Contact Oracle customer support or your agent vendor.

ORA-28536: error in processing Heterogeneous Services initialization parameters

Cause: An error described by a subsequent error message prevented successful processing of Heterogeneous Services initialization parameters from the ORACLE server data dictionary.

Action: Check server data dictionary views HS_CLASS_INIT, HS_INST_INIT, and HS_ALL_INITS. Look for conditions which could produce the error identified in the error message immediately following this one.

ORA-28537: no more result sets

Cause: This error code was used internally within Oracle Database Gateway and Heterogeneous Services code and should not be reported to a client program.

Action: Contact Oracle customer support.

ORA-28538: result set not found

Cause: The client program tried fetching from a result set that is not open anymore. Many gateways will, on execution of a stored procedure, automatically close all result sets that were returned by any previously executed stored procedure.

Action: Check the documentation for the gateway that you are using and see if it will automatically close currently open result sets each time a stored procedure is executed. Then check if your client program is doing anything that violates this rule. If it is, fix your program. If it is not then contact Oracle customer support.

ORA-28539: gateway does not support result sets

Cause: The client program tried executing a stored procedure that returns one or more result sets through a gateway that does not have result set support.

Action: Check the documentation for the gateway that you are using and see if it supports result sets returned from stored procedures. If it does not, then the only way of accessing such stored procedures is to upgrade to a version of the gateway that does support result sets (if such a version exists). If the gateway does have result set support and you are still seeing this error then contact Oracle customer support.

ORA-28540: internal result set error

Cause: A protocol error internal to Heterogeneous Services or Oracle Database Gateway code has occurred.

Action: Contact Oracle customer support.

ORA-28541: Error in HS init file on line *number*.\n

Cause: A syntax error occurred in the gateway initialization file.

Action: Check gateway init file to correct the syntax error. For further information, check the error message in the gateway trace file.

ORA-28542: Error in reading HS init file \n

Cause: Reading the gateway init file generated an error.

Action: Check the gateway initialization file name to see that the gateway initialization file actually exists. Check the ifile parameter to see that it points to the correct location.

ORA-28543: Error initializing apply connection to non-Oracle system

Cause: Attempt to initialize connection to non-Oracle for heterogeneous replication failed.

Action: Check if the listener used to connect to the gateway is up and is correctly configured. Make sure that the database link used has been configured correctly and, if a tnsnames alias has been used in the database link definition, make sure that the configuration of the entry in tnsnames.ora has been done correctly.

ORA-28544: connect to agent failed, probable Net8 administration error

Cause: Net8 reported a failure to make a RSLV connection or a protocol mode error when the Oracle server attempted to establish communication with a Heterogeneous Services agent or an external procedure agent. This usually is due to an administration error in setting up Net8 service definitions in TNSNAMES.ORA or LISTENER.ORA: A basic network connection is opened, but it connects to a program which does not use the appropriate protocol. This often is a sign that the connection goes to the wrong program.

Action: Check Net8 administration in the following ways: -- When using TNSNAMES.ORA or an Oracle Names server, make sure that the connection from the

ORACLE server uses the correct service name or SID. -- Check LISTENER.ORA on the agent's host machine to assure that the service name or SID refers to the correct agent executable in its (PROGRAM=...) clause. -- Confirm in TNSNAMES.ORA or the equivalent service definition that service 'extproc_connection_data' does NOT contain (HS=), or that the service definition used by a Heterogeneous Services database link DOES contain (HS=).

ORA-28545: error diagnosed by Net8 when connecting to an agent

Cause: An attempt to call an external procedure or to issue SQL to a non-Oracle system on a Heterogeneous Services database link failed at connection initialization. The error diagnosed by Net8 NCR software is reported separately.

Action: Refer to the Net8 NCRO error message. If this isn't clear, check connection administrative setup in tnsnames.ora and listener.ora for the service associated with the Heterogeneous Services database link being used, or with 'extproc_connection_data' for an external procedure call.

ORA-28546: connection initialization failed, probable Net8 admin error

Cause: A failure occurred during initialization of a network connection from the Oracle server to a second process: The connection was completed but a disconnect occurred while trying to perform protocol-specific initialization, usually due to use of different network protocols by opposite sides of the connection. This usually is caused by incorrect Net8 administrative setup for database links or external procedure calls. The most frequent specific causes are: -- Database link setup for an Oracle-to-Oracle connection instead connects to a Heterogeneous Services agent or an external procedure agent. -- Database link setup for a Heterogeneous Services connection instead connects directly to an Oracle server. -- The extproc_connection_data definition in tnsnames.ora connects to an Oracle instance instead of an external procedure agent. -- Connect data for a Heterogeneous Services database link, usually defined in tnsnames.ora, does not specify (HS=). -- Connect data for an Oracle-to-Oracle database link, usually defined in tnsnames.ora, specifies (HS=).

Action: Check Net8 administration in the following ways: -- When using TNSNAMES.ORA or an Oracle Names server, make sure that the connection from the ORACLE server uses the correct service name or SID. -- Check LISTENER.ORA on the connection end point's host machine to assure that this service name or SID connects to the correct program. -- Confirm in TNSNAMES.ORA or the equivalent service definition that service 'extproc_connection_data' does NOT contain (HS=), or that the service definition used by a Heterogeneous Services database link DOES contain (HS=).

ORA-28547: connection to server failed, probable Oracle Net admin error

Cause: A failure occurred during initialization of a network connection from a client process to the Oracle server. The connection was completed but a disconnect occurred while trying to perform protocol-specific initialization, usually due to use of different network protocols by opposite sides of the connection. This usually is caused by incorrect Oracle Net administrative setup for database links or external procedure calls. The most frequent specific causes are: -- The connection uses a connect string which refers to a Heterogeneous Services agent instead of an Oracle server. -- The connection uses a connect string which includes an (HS=) specification. -- Hitting Ctrl +C before connection initialization is complete. -- Using DRCP on Windows with SQLNET.AUTHENTICATION_SERVICES set to NTS. -- Connection timeout due to SQLNET.INBOUND_CONNECT_TIMEOUT parameter when all shared servers are busy in shared server configuration.

Action: Check Oracle Net administration in the following ways: -- When using TNSNAMES.ORA or an Oracle Names server, make sure that the client connection to the Oracle server uses the correct service name or SID. -- Check LISTENER.ORA on the connection end point's host machine to assure that this service name or SID refers to the correct server. -- Confirm in TNSNAMES.ORA or the equivalent service definition that the connect string does not contain (HS=). -- Set SQLNET.AUTHENTICATION_SERVICES to NONE when using DRCP on Windows.

ORA-28550: pass-through SQL: cursor not found

Cause: A value passed to a pass-through SQL function or procedure call as a cursor does not identify a currently open cursor.

Action: Use a cursor number returned by the pass-through SQL OPEN_CURSOR call.

ORA-28551: pass-through SQL: SQL parse error

Cause: A non-Oracle system rejected text supplied as a pass-through SQL statement.

Action: Ensure that the SQL supplied to the pass-through SQL PARSE call is legal for the non-Oracle system.

ORA-28552: pass-through SQL: call flow error

Cause: A pass-through SQL function was called in an invalid order.

Action: Correct program flow by changing the order of API calls to match the flow described in the manual.

ORA-28553: pass-through SQL: invalid bind-variable position

Cause: A pass-through SQL function referring to the position of a bind variable in the currently-parsed SQL statement supplied an invalid bind-variable position. Valid values are 1 through n, where n is the number of bind-variable place-holders in the SQL text.

Action: Verify that the bind-variable position parameter is in the correct range to represent a place-holder in the SQL text. Confirm that the SQL text uses the correct syntax for a bind-variable place-holder, as required by the non-Oracle system.

ORA-28554: pass-through SQL: out of cursors

Cause: The maximum number of open cursors has been exceeded.

Action: Close open cursors by using the pass-through SQL CLOSE_CURSOR function.

ORA-28555: pass-through SQL: required parameter missing or NULL

Cause: An attempt was made to pass a NULL value to a non-NULL parameter.

Action: Use a non-NULL value for the parameter.

ORA-28556: authorization insufficient to access table

Cause: A query attempted to access a table in the non-Oracle system that is either privileged or has privileged columns.

Action: Contact the DBA for the non-Oracle system. The DBA can grant permission to access the privileged table or columns.

ORA-28557: unknown string for database link to non-Oracle system

Cause: When attempting to connect to a non-Oracle system through a Heterogeneous Services database link, the agent supporting this non-Oracle system failed to return FDS_CLASS_NAME and/or FDS_INST_NAME. ORACLE requires these names to configure the heterogeneous database link.

Action: Contact the DBA to check setup of the connection and the Heterogeneous Services agent.

ORA-28558: HS_FDS_CONNECT_STRING undefined for non-Oracle system

Cause: A database link to a non-Oracle system had no HS_FDS_CONNECT_STRING initialization parameter in the ORACLE server's data dictionary for Heterogeneous Services. Without this parameter, the connection could not be completed.

Action: Contact your DBA to verify correct setup of an HS_FDS_CONNECT_STRING entry in the ORACLE Heterogeneous Services data dictionary.

ORA-28559: FDS_CLASS_NAME is *string*, FDS_INST_NAME is *string*

Cause: An associated error was reported in another message, and this message supplies supplementary information to assist diagnosis of that error.

FDS_CLASS_NAME and FDS_INST_NAME are used to access information in tables and views of the ORACLE data dictionary that direct operation of Heterogeneous Services on a database link to a non-Oracle data store.

Action: Use the FDS_CLASS_NAME and FDS_INST_NAME values to check ORACLE data dictionary contents when necessary to diagnose the cause of the associated error.

ORA-28560: error in configuration of agent process

Cause: An ORACLE server invoked a function not supported by the connected agent (Heterogeneous Services or external procedures). The most probable cause is incorrect Net8 setup, resulting in use of the wrong agent executable.

Action: Check Net8 administration in the following ways: -- When using TNSNAMES.ORA or an Oracle Names server, make sure that the connection from the ORACLE server uses the correct SID. -- Check LISTENER.ORA on the agent's host machine to assure that this SID refers to the correct agent executable in its (PROGRAM=...) clause.

ORA-28561: unable to set date format on non-Oracle system

Cause: Initialization of a Heterogeneous Services connection to set the date format to be used on the connected non-Oracle system.

Action: If the Oracle data dictionary supplies a value for the HS_NLS_DATE_FORMAT parameter, confirm that this value is formatted correctly by the rules of the non-Oracle system. Also check for additional information in log and trace files generated by the Heterogeneous Services agent.

ORA-28562: Heterogeneous Services data truncation error

Cause: A select operation was attempted with an insufficient data buffer to satisfy the request.

Action: Contact your DBA to verify whether your gateway initialization parameter HS_KEEP_REMOTE_COLUMN_SIZE is set appropriately based on your requirement. If it is, make sure the sizes of bind parameters are sufficient. If the problem persists, contact Oracle Support Services.

ORA-28575: unable to open RPC connection to external procedure agent

Cause: Initialization of a network connection to the extproc agent did not succeed. This problem can be caused by network problems, incorrect listener configuration, or incorrect transfer code.

Action: Check listener configuration in LISTENER.ORA and TNSNAMES.ORA, or check Oracle Names Server.

ORA-28576: lost RPC connection to external procedure agent

Cause: A fatal error occurred in either an RPC network connection, the extproc agent, or the invoked 3GL after communication had been established successfully.

Action: First check the 3GL code you are invoking; the most likely cause of this error is abnormal termination of the invoked "C" routine. If this is not the case, check for network problems. Correct the problem if you find it. If all components appear to be normal but the problem persists, the problem could be an internal logic error in the RPC transfer code. Contact your customer support representative.

ORA-28577: argument *string* of external procedure *string* has unsupported datatype *string*

Cause: While transferring external procedure arguments to the agent, an unsupported datatype was detected.

Action: Check your documentation for the supported datatypes of external procedure arguments.

ORA-28578: protocol error during callback from an external procedure

Cause: An internal protocol error occurred while trying to execute a callback to the Oracle server from the user's 3GL routine.

Action: Contact Oracle customer support.

ORA-28579: network error during callback from external procedure agent

Cause: An internal network error occurred while trying to execute a callback to the Oracle server from the user's 3GL routine.

Action: Contact Oracle customer support.

ORA-28580: recursive external procedures are not supported

Cause: A callback from within a user's 3GL routine resulted in the invocation of another external procedure.

Action: Make sure that the SQL code executed in a callback does not directly call another external procedure, or indirectly results in another external procedure, such as triggers calling external procedures, PL/SQL procedures calling external procedures, etc.

ORA-28581: protocol error while executing recursive external procedure

Cause: An internal protocol error occurred while trying to execute an external procedure resulting from a callback in another external procedure.

Action: Contact Oracle customer support.

ORA-28582: a direct connection to this agent is not allowed

Cause: A user or a tool tried to establish a direct connection to either an external procedure agent or a Heterogeneous Services agent, for example: "SVRMGR> CONNECT SCOTT/TIGER@NETWORK_ALIAS". This type of connection is not allowed.

Action: When executing the CONNECT statement, make sure your database link or network alias is not pointing to a Heterogeneous Option agent or an external procedure agent.

ORA-28583: remote references are not permitted during agent callbacks

Cause: A Heterogeneous Services agent issued a callback to the Oracle server which attempted to access a remote system. This is not supported.

Action: Make sure that SQL code issued by Heterogeneous Services agents does not reference a database link.

ORA-28584: heterogeneous apply internal error

Cause: The apply slave process encountered an error while trying to apply changes through a gateway to a non-Oracle system.

Action: Make sure that the apply database link is correctly configured and that the gateway listener and the non-Oracle system are correctly set up and are up and running. If everything is configured correctly and the problem still occurs, contact Oracle customer support. errors 28590 - 28599 are reserved for the HS agent control utility

ORA-28590: agent control utility: illegal or badly formed command

Cause: The user has issued an unrecognized or syntactically incorrect command.

Action: Refer to documentation and correct the syntax of the command.

ORA-28591: agent control utility: unable to access parameter file

Cause: The agent control utility was unable to access its parameter file. This could be because it could not find its admin directory or because permissions on directory were not correctly set.

Action: The agent control utility puts its parameter file in either the directory pointed to by the environment variable AGTCTL_ADMIN or in the directory pointed to by the environment variable TNS_ADMIN. Make sure that at least one of these environment variables is set and that it points to a directory that the agent has access to.

ORA-28592: agent control utility: agent SID not set

Cause: The agent needs to know the value of the AGENT_SID parameter before it can process any commands. If it does not have a value for AGENT_SID then all commands will fail.

Action: Issue the command SET AGENT_SID *value* and then retry the command that failed.

ORA-28593: agent control utility: command terminated with error

Cause: An error occurred during the processing of the command. There could be several causes. A SET or an UNSET command could have been issued after the agent was started. This is illegal. The user may have attempted to start two agents with the same SID value or the user could have attempted to shutdown an agent that is no longer running.

Action: If the user wishes to issue a SET or an UNSET command, he should make sure the agent is shutdown first by issuing the SHUTDOWN command.

ORA-28594: agent control utility: invalid parameter name

Cause: The user tried to set or unset an invalid agent parameter.

Action: Refer to documentation and correct the parameter name.

ORA-28595: Extproc agent : Invalid DLL Path

Cause: The path of DLL supplied for the extproc execution is invalid.

Action: Check if the DLL path is set properly using the EXTPROC_DLLS environment variable.

ORA-28596: Extproc agent : Invalid or disabled credential *string*

Cause: The credential of the PL/SQL library supplied for the extproc execution is invalid.

Action: Check if the credential of the PL/SQL library is valid and enabled. errors 28600 - 28620 are reserved for bitmap indexes

ORA-28601: invalid [no]MINIMIZE option

Cause: user didn't type this alter table <table_name> MINIMIZE RECORDS_PER_BLOCK or alter table <table_name> NOMINIMIZE RECORDS_PER_BLOCK

Action: reenter correct sql command

ORA-28602: statement not permitted on tables containing bitmap indexes

Cause: table has bitmap indexes and user is minimizing or nominimizing records_per_block

Action: drop all bitmap indexes before changing records_per_block

ORA-28603: statement not permitted on empty tables

Cause: table is empty and statement does not work on empty tables

Action: try statement after loading your data

ORA-28604: table too fragmented to build bitmap index (*string,string,string*)

Cause: The table has one or more blocks that exceed the maximum number of rows expected when creating a bitmap index. This is probably due to deleted rows. The values in the message are: (data block address, slot number found, maximum slot allowed)

Action: Defragment the table or block(s). Use the values in the message to determine the FIRST block affected. (There may be others).

ORA-28605: bitmap indexes cannot be reversed

Cause: user tried to create reverse bitmap index

Action: don't do this; it is not supported

ORA-28606: block too fragmented to build bitmap index (*string,string*)

Cause: The block(s) exceed the maximum number of rows expected when creating a bitmap index. This is probably due to maximum slot allowed set too low. The values in the message are: (slot number found, maximum slot allowed)

Action: alter system flush shared_pool; update tab\$ set spare1 = 8192 where obj# = (select obj# from obj\$ where NAME=<table_name> AND owner# = <table_owner>); commit;

ORA-28611: bitmap index is corrupted - see trace file for diagnostics

Cause: Validate Index detected bitmap corruption in its argument index

Action: Drop this bitmap index and create a new one.

ORA-28650: Primary index on an IOT cannot be rebuilt

Cause: An attempt is made to issue alter index rebuild on IOT-TOP

Action: Use Alter table MOVE to reorganize the table(IOT)

ORA-28651: Primary index on IOTs can not be marked unusable

Cause: An attempt is made to mark IOT-TOP unusable thru ALTER INDEX

Action: Remove the option UNUSABLE

ORA-28652: overflow segment attributes cannot be specified

Cause: During ALTER MOVE ONLINE of a index-organized table, the user attempted to enter one or more of the following options: OVERFLOW, PCTTHRESHOLD,INCLUDING.

Action: Remove the illegal option(s).

ORA-28653: tables must both be index-organized

Cause: Attempt to exchange a non IOT table/partition with a partition/table respectively

Action: Ensure that non-partitioned and partitioned tables are both index-organized.

ORA-28654: table and partition not overflow compatible

Cause: If one of the tables (partitioned/non-partitioned) has overflow data segment and the other one doesn't.

Action: Ensure that non-partitioned and partitioned tables both have overflow data segment or neither one does.

ORA-28655: Alter table add overflow syntax error

Cause: Syntax error

Action: Check the syntax.

ORA-28656: incomplete attribute specification

Cause: The attribute specification is not done for all partitions"

Action: Specify the storage attributes either for ALL partitions or NONE

ORA-28658: This operation is supported only for Index-Organized tables

Cause: Attempt to perform some IOT specific operation on a non-IOT

Action: don't do this. This is not supported

ORA-28659: COMPRESS must be specified at object level first

Cause: Attempt to specify COMPRESS at partition level without first specifying at the table level

Action: Specify COMPRESS at table level. Use ALTER TABLE xxx MODIFY DEFAULT ATTRIBUTES COMPRESS ...

ORA-28660: Partitioned Index-Organized table may not be MOVEd as a whole

Cause: Attempt to MOVE partitioned IOT as a whole

Action: don't do this. This is not supported

ORA-28661: Object already has COMPRESS clause specified

Cause: Attempt to specify compress for iot/index which already has a compression clause.

Action: This is a 'create time only' attribute

ORA-28662: IOT index and overflow segments must share the same LOGGING attribute

Cause: Attempt to specify LOGGING for one segment and NOLOGGING for the other segment.

Action: don't do that

ORA-28663: Logging/Nologging attribute can not be specified in the statement ALTER TABLE ADD OVERFLOW

Cause: Attempt to specify LOGGING for a Alter Table Add Overflow.

Action: don't do that

ORA-28664: a partitioned table may not be coalesced as a whole

Cause: User attempted to coalesce a partitioned IOT using ALTER TABLE COALESCE statement, which is illegal

Action: Coalesce the table a partition at a time (using ALTER TABLE MODIFY PARTITION COALESCE)

ORA-28665: table and partition must have same compression attribute

Cause: User attempted to EXCHANGE a compression enabled partition with a compression disabled table or vice versa OR the # of columns compressed is different for table and partition

Action: Make sure the compression attributes match If they don't, fix it using ALTER TABLE MOVE [PARTITION] COMPRESS

ORA-28666: option not allowed for an index on UROWID column(s)

Cause: User attempted to build a REVERSE or COMPRESSED or GLOBAL partitioned index on UROWID column(s)

Action: Build the index without these options

ORA-28667: USING INDEX option not allowed for the primary key of an IOT

Cause: User attempted to define storage attributes for the primary key index of an Index-Organized table with USING INDEX clause. All the storage attribute defined for the (IOT)table applies to the primary key index and a separate USING INDEX clause is not required.

Action: Remove the USING INDEX clause and specify all attributes directly for the table

ORA-28668: cannot reference mapping table of an index-organized table

Cause: An attempt to directly access the mapping table of an index-organized table

Action: Issue the statement against the parent index-organized table containing the specified mapping table.

ORA-28669: bitmap index can not be created on an IOT with no mapping table

Cause: User attempted to create a bitmap index on an index-organized table without a mapping table.

Action: Enable bitmap indexes on the Index-organized table by creating a mapping table using 'ALTER TABLE .. MOVE MAPPING TABLE'.

ORA-28670: mapping table cannot be dropped due to an existing bitmap index

Cause: User attempted to drop the mapping table with NOMAPPING option when the IOT has one or more bitmap indexed.

Action: Drop the bitmap index(es) before dropping the mapping table.

ORA-28671: UPDATE BLOCK REFERENCES may not be used on a partitioned index as a whole

Cause: User attempted to UPDATE BLOCK REFERENCES on a partitioned index using ALTER INDEX UPDATE BLOCK REFERENCES statement, which is illegal.

Action: Issue a partition level operation with ALTER INDEX .. PARTITION .. UPDATE BLOCK REFERENCES

ORA-28672: UPDATE BLOCK REFERENCES may not be used on a global index

Cause: User attempted to UPDATE BLOCK REFERENCES on a global partitioned or non-partitioned index. This feature is not supported for non-partitioned or global partitioned index on a partitioned IOT and a global partitioned index on a non-partitioned IOT.

Action: Use online index [partition] rebuild to fix the block references

ORA-28673: Merge operation not allowed on an index-organized table

Cause: User attempted merge operation on an index-organized table. Merge is not supported on a IOT .

Action: Use updates and inserts on index-organized table .

ORA-28674: cannot reference transient index-organized table

Cause: An attempt was made to directly access a transient table created created on behalf of a index-organized table partition maintenance operation.

Action: Issue the statement against the associated permanent index-organized table.

ORA-28700: Only roles can be attached to or detached from program units.

Cause: An attempt was made to grant object privileges or system privileges to program units.

Action: Grant the privileges to a role first, and then grant the role to the program units.

ORA-28701: Keyword PROCEDURE, FUNCTION, or PACKAGE is either missing or not correct.

Cause: The keyword PROCEDURE, FUNCTION, or PACKAGE was either missing before the program unit, or it was not consistent with the type of the program unit.

Action: Include the correct keyword PROCEDURE, FUNCTION or PACKAGE right before each program unit according to its type.

ORA-28702: Program unit *string* is not owned by the grantor.

Cause: An attempt was made to attach roles to or detach roles from one or more program units by someone other than the owner or SYS. Only a program unit owner or SYS can attach roles to or detach roles from a program unit.

Action: Specify only the program units owned by the grantor in the command.

ORA-28703: Only regular database roles can be attached to or detached from program units.

Cause: An attempt was made to attach non-supported types of roles to or detach them from program units. Application roles, secure application roles, external roles, global roles, and light-weight roles cannot be attached to or detached from program units.

Action: Remove any application role, secure application role, external role, global role, and light-weight role from the command.

ORA-28704: Role *string* is not directly granted to the owner of the program units.

Cause: An attempt was made to attach roles that were not directly granted to the owner of the program units. The roles must be granted to the owner directly in order to attach them to the owner's program units.

Action: Grant the role to the owner of the program unit first.

ORA-28705: The grantor does not have privileges to grant the role *string* to the program units.

Cause: Privileges to grant a role to a program unit were insufficient. The grantor must have the GRANT ANY ROLE privilege or the ADMIN option or the DELEGATE option for the role to do the operation.

Action: Obtain the required privilege and retry.

ORA-28706: duplicate program unit *string* found in list

Cause: A duplicate program unit was found in the GRANTEE clause.

Action: Specify each program unit only once.

ORA-28707: Reserved word ALL was used with roles in the REVOKE command to detach roles from program units.

Cause: An attempt was made to use reserved word ALL jointly with roles in a REVOKE command to detach roles from program units.

Action: Do not specify roles in the privilege clause except for the reserved word ALL.

ORA-28708: More than *string* roles were attached to the program unit.

Cause: Too many roles were currently attached to the program unit.

Action: Detach some roles from the program unit.

ORA-28709: Roles with DELEGATE option can only be granted to users.

Cause: One of the grantees was not a user when trying to grant roles with the DELEGATE option.

Action: Verify that the grantees are users and try the operation again.

ORA-29250 to ORA-32799

ORA-29250: Invalid index specified in call to dbms_sql.bind_array

Cause: An invalid index was specified in a call to bind_array of dbms_sql. The index may have been null or of an improper value.

Action: Correct the index value by modifying your PL/SQL program and try the bind_array call again.

ORA-29251: Index1 is greater than Index2 in call to dbms_sql.bind_array

Cause: The value of index1 was greater than the value for index2 in the call to bind_array. This is illegal since the elements of the table that will be bound are those with indexes greater than or equal to index1 and less than or equal to index2.

Action: Correct the value of the two indexes and try the call to again bind_array.

ORA-29252: collection does not contain elements at index locations in call to dbms_sql.bind_array

Cause: The bound table does not contain elements at both index locations in call to bind_array of dbms_sql. This is illegal. Both index locations must contain elements. In other words tab.exists(index1) and tab.exists(index2) must both return true.

Action: Either modify the two indexes or the contents of the table and try the call again.

ORA-29253: Invalid count argument passed to procedure dbms_sql.define_array

Cause: The count argument specified in the call to procedure define_array of package dbms_sql had an invalid value. Invalid values are negative numbers and nulls. The argument must be a positive integer.

Action: Correct your PL/SQL program so that only valid arguments are passed to define_array and try again.

ORA-29254: Invalid lower_bound argument passed to procedure dbms_sql.define_array

Cause: The lower_bound argument specified in the call to procedure define_array had an invalid value. Legal values are all integers (both positive and negative) including zero. The null value is illegal.

Action: Correct your PL/SQL program so that only valid arguments are passed to define_array and try again.

ORA-29255: Cursor contains both bind and define arrays which is not permissible

Cause: Both define_array and bind_array have been called on this cursor. This is illegal. It is not possible for a cursor to both contain array binds and array defines. The semantics of this setting are nonsensical. Array defines are used to move data from select queries into PL/SQL tables and array binds to bind PL/SQL tables to non-select queries.

Action: Modify your PL/SQL program to only perform calls to one of the two functions depending on the kind of cursor at hand.

ORA-29256: Cursor contains both regular and array defines which is illegal

Cause: Both `define_array` and `define_column` have been called on this cursor. This is illegal. It is not possible for a cursor to both contain regular and array defines. The semantics of this setting are nonsensical. Array defines are used to move data from select queries into PL/SQL tables and regular defines to move data from select queries into PL/SQL variables.

Action: Modify your PL/SQL program to only perform calls to one of the two functions depending on the situation at hand.

ORA-29257: host *string* unknown

Cause: The specified host was unknown.

Action: Check the spelling of the host name or the IP address. Make sure that the host name or the IP address is valid.

ORA-29258: buffer too small

Cause: The input or output buffer was too small for the operation.

Action: Increase the size of the buffer and retry the operation.

ORA-29259: end-of-input reached

Cause: The end of the input was reached.

Action: If the end of the input is reached prematurely, check if the input source terminates prematurely. Otherwise, close the connection to the input.

ORA-29260: network error: *string*

Cause: A network error occurred.

Action: Fix the network error and retry the operation.

ORA-29261: bad argument

Cause: A bad argument was passed to the PL/SQL API.

Action: Check the arguments passed to the PL/SQL API and retry the call.

ORA-29262: bad URL

Cause: An improperly formed URL was passed to the PL/SQL API.

Action: Check the URL and retry the call.

ORA-29263: HTTP protocol error

Cause: A HTTP protocol error occurred during the HTTP operation.

Action: Check the HTTP server that the HTTP operation was performed to make sure that it follows the HTTP protocol standard.

ORA-29264: unknown or unsupported URL scheme

Cause: The URL scheme was unknown or unsupported.

Action: Check the URL to make sure that the scheme is valid and supported.

ORA-29265: HTTP header not found

Cause: The requested HTTP header was not found.

Action: Check to make sure that the requested HTTP header is present.

ORA-29266: end-of-body reached

Cause: The end of the HTTP response body was reached.

Action: If the end of the HTTP response is reached prematurely, check if the HTTP response terminates prematurely. Otherwise, end the HTTP response.

ORA-29267: illegal call

Cause: The call to the PL/SQL API was illegal at the current stage of the operation.

Action: Retry the call at a different stage of the operation.

ORA-29268: HTTP client error *string*

Cause: The HTTP response indicated that the HTTP client error occurred.

Action: Fix the HTTP client error and retry the HTTP request.

ORA-29269: HTTP server error *string*

Cause: The HTTP response indicated that the HTTP server error occurred.

Action: Fix the HTTP server error and retry the HTTP request. Contact the administrator of the HTTP server when necessary.

ORA-29270: too many open HTTP requests

Cause: Too many HTTP requests were opened.

Action: End some HTTP requests and retry the HTTP request.

ORA-29271: not connected

Cause: The network connection was not made while the network operation was attempted.

Action: Retry the network operation after the network connection is made successfully.

ORA-29272: initialization failed

Cause: The UTL_HTTP package failed to initialize.

Action: Free up some memory or other system resources and retry the operation.

ORA-29273: HTTP request failed

Cause: The UTL_HTTP package failed to execute the HTTP request.

Action: Use `get_detailed_sqlerrm` to check the detailed error message. Fix the error and retry the HTTP request.

ORA-29274: fixed-width multibyte character set not allowed for a URL

Cause: The character set used as an encoding of the URL is a fixed-width multibyte character set and is not allowed for a URL.

Action: Use the corresponding variable-width multibyte character set for the URL instead.

ORA-29275: partial multibyte character

Cause: The requested read operation could not complete because a partial multibyte character was found at the end of the input.

Action: Ensure that the complete multibyte character is sent from the remote server and retry the operation. Or read the partial multibyte character as RAW.

ORA-29276: transfer timeout

Cause: Timeout occurred while reading from or writing to a network connection.

Action: Check the remote server or the network to ensure that it responds within the timeout limit. Or increase the timeout value.

ORA-29277: invalid SMTP operation

Cause: The SMTP operation was invalid at the current stage of the SMTP transaction.

Action: Retry the SMTP operation at the appropriate stage of the SMTP transaction.

ORA-29278: SMTP transient error: *string*

Cause: A SMTP transient error occurred.

Action: Correct the error and retry the SMTP operation.

ORA-29279: SMTP permanent error: *string*

Cause: A SMTP permanent error occurred.

Action: Correct the error and retry the SMTP operation.

ORA-29280: invalid directory path

Cause: A corresponding directory object does not exist.

Action: Correct the directory object parameter, or create a corresponding directory object with the CREATE DIRECTORY command.

ORA-29281: invalid mode

Cause: An invalid value was specified for file open mode.

Action: Correct the mode to be one of the values: 'r','a', or 'w'.

ORA-29282: invalid file ID

Cause: A file ID handle was specified for which no corresponding open file exists.

Action: Verify that the file ID handle is a value returned from a call to UTL_FILE.FOPEN.

ORA-29283: invalid file operation

Cause: An attempt was made to read from a file or directory that does not exist, or file or directory access was denied by the operating system.

Action: Verify file and directory access privileges on the file system, and if reading, verify that the file exists.

ORA-29284: file read error

Cause: An attempt to read from a file failed.

Action: Verify that the file exists, and that it is accessible, and that it is open in read mode.

ORA-29285: file write error

Cause: Failed to write to, flush, or close a file.

Action: Verify that the file exists, that it is accessible, and that it is open in write or append mode.

ORA-29286: internal error

Cause: A fatal error occurred while allocating PL/SQL session memory.

Action: Verify that the PL/SQL session is connected and that adequate memory resources are available.

ORA-29287: invalid maximum line size

Cause: An invalid maximum line size value was specified.

Action: Correct the maximum line size to be in the range [1, 32767].

ORA-29288: invalid file name

Cause: A NULL or zero length file name was specified.

Action: Correct the file name to be a nonzero length string.

ORA-29289: directory access denied

Cause: A directory object was specified for which no access is granted.

Action: Grant access to the directory object using the command GRANT READ ON DIRECTORY [object] TO [username];

ORA-29290: invalid offset specified for seek

Cause: An attempt was made to seek past the end of the file, or both the absolute and relative offsets were NULL, or absolute offset was less than zero.

Action: If specifying an absolute offset, ensure it is in the range [0, *total number of bytes in the file*], or if specifying a relative offset, ensure it is no greater than the current byte position plus the number of bytes remaining in the file.

ORA-29291: file remove operation failed

Cause: A file deletion attempt was refused by the operating system.

Action: Verify that the file exists and delete privileges granted on the directory and the file.

ORA-29292: file rename operation failed

Cause: A file rename attempt was refused by the operating system either because the source or destination directory does not exist or is inaccessible, or the source file isn't accessible, or the destination file exists.

Action: Verify that the source file, source directory, and destination directory exist and are accessible, and that the destination file does not already exist.

ORA-29293: A stream error occurred during compression or uncompression.

Cause: The stream state was discovered to be invalid during compression or uncompression, or an invalid compression quality was requested or a NULL or invalid compression parameter was detected.

Action: Verify that quality is within the range [0,9] and that valid input source data exists.

ORA-29294: A data error occurred during compression or uncompression.

Cause: An error occurred while compressing or uncompressing input source.

Action: Verify that source data is a valid compressed or uncompressed data set.

ORA-29295: invalid mime header tag

Cause: An error occurred while scanning string for mime header tag

Action: Verify that source data is a valid mime header string, in the format: *=?charset?encoding?encoded string?=*

ORA-29296: invalid encoded string

Cause: An error occurred while decoding the input string

Action: Verify that source data is a valid encoded string.

ORA-29297: The compressed representation is too big

Cause: The compressed output is too big to return.

Action: Do not attempt to compress source data.

ORA-29298: Character set mismatch

Cause: The character set mode in which the file was opened did not match the character set of the read or write operation.

Action: Use the correct UTL_FILE read and write procedures which correspond to the character set mode in which the file was opened.

ORA-29299: Invalid handle for piecewise compress or uncompress

Cause: The process program opened too many handles, and the specified handle was either uninitialized or outside a valid range.

Action: Close some handles and verify that the specified handle is opened or within a valid range.

ORA-29300: ORACLE error, tablespace point-in-time recovery

Cause: Another ORACLE error occurred in the DBMS_PITR package.

Action: See the text of the error message for a description of the error.

ORA-29301: wrong DBMS_PITR package function/procedure order

Cause: The DBMS_PITR package function/procedure was called in an incorrect order.

Action: Restart tablespace point-in-time recovery with a correct procedure.

ORA-29302: database is not open clone

Cause: The database was not opened as a clone database.

Action: Mount the database clone and open the database.

ORA-29303: user does not login as SYS

Cause: The user did not log in as SYS to perform tablespace point-in-time recovery in a clone database.

Action: Log in as SYS and restart tablespace point-in-time recovery.

ORA-29304: tablespace '*string*' does not exist

Cause: The selected tablespace does not exist in the database.

Action: Check the list of tablespaces in V\$TABLESPACE and select a valid tablespace.

ORA-29305: cannot point-in-time recover tablespace '*string*'

Cause: An attempt was made to ALTER the tablespace to be read only.

Action: Check if the tablespace is SYSTEM or with online rollback segment.

ORA-29306: datafile *string* is not online

Cause: The selected datafile was not online.

Action: Bring the the datafile online and rename it if necessary.

ORA-29307: datafile *string* error, *string*

Cause: The datafile is not ready for tablespace point-in-time recovery.

Action: Check the correct tablespace point-in-time recovery procedure.

ORA-29308: view TS_PITR_CHECK failure

Cause: Some objects which crossed the boundary of the recovery set were not allowed in the tablespace point-in-time recovery.

Action: Query TS_PITR_CHECK and resolve the boundary crossing objects.

ORA-29309: export dump file was generated by different version of DBMS_PITR package

Cause: The version of DBMS_PITR is different from the version of the cloned database.

Action: Load the version of DBMS_PITR which matches the version of the cloned database.

ORA-29310: database is not open, or opened as a clone

Cause: Either the database was not open, or an attempt was made to open it as a cloned database.

Action: Open the production database instead.

ORA-29311: export dump file was not generated by this database, *string* does not match

Cause: The export dump files were imported to an incorrect database.

Action: Open the correct production database and try the import again.

ORA-29313: tablespace '*string*' cannot be imported twice

Cause: This is an internal error.

Action: Contact your database administrator.

ORA-29314: tablespace '*string*' is not OFFLINE FOR RECOVER nor READ ONLY

Cause: Tablespace clean SCN is either 0 or invalid.

Action: ALTER the tablespace OFFLINE FOR RECOVER.

ORA-29315: tablespace '*string*' has been recreated

Cause: An attempt was made to recover a tablespace to a point-in-time before it was recreated.

Action: Choose a different point in time for recovery.

ORA-29316: datafile *string* been imported twice

Cause: This is an internal error.

Action: Contact your database administrator.

ORA-29317: datafile *string* does not exist

Cause: The specified datafile could not be found in the production database.

Action: Copy the datafile from the clone database.

ORA-29318: datafile *string* is online

Cause: The datafile is online.

Action: Take the datafile offline.

ORA-29319: datafile *string* is not correct

Cause: An incorrect datafile was copied to the production database. The datafile information in the export dump file differs with the information in the datafile in the production database.

Action: Copy the datafile from the clone database to the production database.

ORA-29320: datafile header error

Cause: An error occurred during reading datafile header.

Action: Copy the correct datafile from the clone database to the production database, then retry the operation.

ORA-29321: too many datafiles added since the point-in-time

Cause: Too many datafiles were added to the recovery set since the point-in-time recovery.

Action: Divide the recovery set into smaller subsets and retry.

ORA-29322: SCN string size too long -- maximum size 58 bytes/characters

Cause: Too many characters in specifying the SCN string

Action: Remove all unnecessary characters. Only 15 characters are required for both the hex and decimal representation of the 48 bit SCN.

ORA-29323: ALTER DATABASE SET COMPATIBILITY command not supported by *string*

Cause: The ALTER DATABASE SET COMPATIBILITY command failed because one or more instances do not support dynamic compatible setting change.

Action: No action required.

ORA-29324: SET COMPATIBILITY release string format is wrong

Cause: It should be of the form x.x.x

Action: Use the correct format.

ORA-29325: SET COMPATIBILITY release number lower than *string*

Cause: The SET COMPATIBILITY release compatibility release number was lower than the current compatible setting.

Action: Specify a higher release number.

ORA-29326: SET COMPATIBILITY release number higher than *string*

Cause: The ALTER DATABASE SET COMPATIBILITY command failed because one or more instances had a lower release number.

Action: Specify a lower release number.

ORA-29327: unsupported client compatibility mode used when talking to the server

Cause: The client compatibility mode is higher than the version of the server.

Action: Using SET COMPATIBILITY command, specify the same release number as the server.

ORA-29328: too many datafiles in this tablespace '*string*'

Cause: Too many datafiles in this bitmap tablespace. ORACLE does not support at this moment.

Action: Call Oracle Support.

ORA-29329: Table not of type XMLType

Cause: Table is not XMLType table

Action: Ensure table is a XMLType table

ORA-29330: Source script length too big

Cause: Source script length exceeded the maximum size of 4 Gigabytes.

Action: Make sure source script length is not greater than 4 Gigabytes.

ORA-29335: tablespace '*string*' is not read only

Cause: The tablespace is not read only.

Action: Make the tablespace read only and retry the operation.

ORA-29336: Internal error [*string*] [*string*] from DBMS_PLUGTS

Cause: Internal error from package DBMS_PLUGTS.

Action: Call Oracle Support.

ORA-29337: tablespace '*string*' has a non-standard block size (*string*)

Cause: The tablespace has a non-standard block size and making such a tablespace read-write is not permitted.

Action: Use some other mechanism to import the data

ORA-29338: datafile *string* is in an undesired state (*string*, *string*)

Cause: The referred datafile is not in a state ready for tablespace copy operation. For example, the datafile may be offline. The datafile needs to be ONLINE, and either READ ONLY or READ WRITE.

Action: Put the datafile into the desired state.

ORA-29339: tablespace block size *string* does not match configured block sizes

Cause: The block size of the tablespace to be plugged in or created does not match the block sizes configured in the database.

Action: Configure the appropriate cache for the block size of this tablespace using one of the various (db_2k_cache_size, db_4k_cache_size, db_8k_cache_size, db_16k_cache_size, db_32K_cache_size) parameters.

ORA-29340: export file appears to be corrupted: [*string*] [*string*] [*string*]

Cause: This is caused either by a corrupted export file or by an Oracle internal error.

Action: Make sure the export file used for transportable tablespace is not corrupted. If the error still occurs, call Oracle support.

ORA-29341: The transportable set is not self-contained

Cause: The set of objects in the set of tablespaces selected are not self-contained.

Action: Consider using different export options, or removing some of the pointers that caused the violation, or selecting a different set of tablespaces.

ORA-29342: user *string* does not exist in the database

Cause: The referred user is one of the owners of data in the pluggable set. This user does not exist in the database.

Action: Consider either creating the user in the database or map the user to a different user via FROM_USER and TO_USER import options.

ORA-29343: user *string* (mapped from user *string*) does not exist in the database

Cause: The referred user is one of the owners of data in the pluggable set. This user does not exist in the database.

Action: Consider either creating the user or map the original user to a different user.

ORA-29344: Owner validation failed - failed to match owner '*string*'

Cause: The system failed to match the referred owner. There are two cases that this may occur. (1) This user owns data in the transportable set, but this user is not specified in the TTS_OWNERS list of the import command line option, assuming that TTS_OWNERS is specified. (2) This user is specified in the TTS_OWNER list, but this user does not own any data in the transportable set.

Action: Retry import with a different OWNER list.

ORA-29345: cannot plug a tablespace into a database using an incompatible character set

Cause: Oracle does not support plugging a tablespace into a database using an incompatible character set.

Action: Use import/export or unload/load to move data instead.

ORA-29346: invalid tablespace list

Cause: the tablespace list supplied to dbms_tts.transport_set_check PL/SQL routine is in an incorrect format.

Action: Check the manual and use the correct format.

ORA-29347: Tablespace name validation failed - failed to match tablespace '*string*'

Cause: The system failed to match the referred tablespace. There are 2 cases that this may happen. (1) This tablespace is in the transportable set, but it is not specified in the TABLESPACES list of the import command line option, assuming that TABLESPACES is specified. (2) This tablespace is in the TABLESPACES list, but it is not in the transportable set.

Action: Retry the operation with the correct TABLESPACES list.

ORA-29348: You must specify the datafiles to be plugged in

Cause: The datafiles to be plugged in are not specified.

Action: Specify the datafiles via the import DATAFILES command line option.

ORA-29349: tablespace '*string*' already exists

Cause: Tried to plug-in a tablespace which already exists.

Action: Drop the offending tablespace if possible. Otherwise use a different method (e.g., import/export) to move data.

ORA-29350: server version *string* incompatible with package *string* version *string*

ORA-29351: can not transport system, sysaux, or temporary tablespace '*string*'

Cause: The referred tablespace is either the system tablespace, the sysaux tablespace, or a temporary tablespace.

Action: Do not include this tablespace in the transportable set.

ORA-29352: event '*string*' is not an internal event

Cause: The DBMS_SYSTEM.WAIT_FOR_EVENT procedure was called with an event name that is not an internal event.

Action: Check the list of events from X\$KSLED and verify the event name parameter passed to the WAIT_FOR_EVENT procedure.

ORA-29353: The transportable list is too long.

Cause: The transportable list exceeds the buffer size of 32767.

Action: Reduce the list of tablespaces to transport.

ORA-29355: NULL or invalid *string* argument specified

Cause: The named argument was either invalid or specified as a NULL

Action: Specify non-null, valid arguments.

ORA-29356: These parameters can be specified only for directives that refer to consumer groups.

Cause: A parameter was specified as an argument to procedure CREATE_PLAN_DIRECTIVE or UPDATE_PLAN_DIRECTIVE of package DBMS_RESOURCE_MANAGER that is not allowed when the GROUP_OR_SUBPLAN is a plan. Only the following parameters are allowed when GROUP_OR_SUBPLAN is a plan: - MGMT_P1, MGMT_P2, MGMT_P3, MGMT_P4, MGMT_P5, MGMT_P6, MGMT_P7, MGMT_P8 - UTILIZATION_LIMIT

Action: Specify only these parameters when GROUP_OR_SUBPLAN is a plan.

ORA-29357: object *string* already exists

Cause: The name specified as an argument to procedure CREATE_PLAN, CREATE_CDB_PLAN, CREATE_CONSUMER_GROUP, or CREATE_CATEGORY of package DBMS_RESOURCE_MANAGER was already in use.

Action: Specify an unused name.

ORA-29358: resource plan *string* does not exist

Cause: An invalid plan name was specified as an argument to procedure UPDATE_PLAN or UPDATE_CDB_PLAN of package DBMS_RESOURCE_MANAGER.

Action: Specify an existing plan name.

ORA-29359: invalid method name *string* specified for resource plan *string*

Cause: An invalid method was specified as an argument to procedure CREATE_PLAN or UPDATE_PLAN of package DBMS_RESOURCE_MANAGER.

Action: Specify a valid method name.

ORA-29360: resource plan *string* contains multiple directives for subplan *string*

Cause: A resource plan and its subplans had more than one directive for a particular subplan.

Action: Modify the resource plan or its subplans so that there is at most one directive for this subplan.

ORA-29361: value *string* for *string* is outside valid range of 0 to 100

Cause: An invalid value was specified for a plan directive parameter.

Action: Specify a value between 0 and 100 inclusive.

ORA-29362: plan directive *string*, *string* does not exist

Cause: A nonexistent plan directive was specified for procedure UPDATE_PLAN_DIRECTIVE or UPDATE_CDB_PLAN_DIRECTIVE of package DBMS_RESOURCE_MANAGER.

Action: Specify an existing plan directive for update.

ORA-29363: plan directive *string*, *string* is mandatory and cannot be modified or deleted

Cause: An attempt was made to modify a mandatory plan directive.

Action: Do not attempt to modify mandatory plan directives because they are required by the Resource Manager and cannot be modified.

ORA-29364: plan directive *string*, *string* already exists

Cause: An attempt was made to create a plan directive that already exists.

Action: Retry the create operation using different values.

ORA-29365: parameters *string* and *string* cannot both be set

Cause: An attempt was made to set both parameters.

Action: Only set one of parameters or neither of them.

ORA-29366: invalid CONSUMER_GROUP argument specified

Cause: An invalid consumer group name was specified.

Action: Specify a non-NULL, valid consumer group name.

ORA-29367: object *string* does not exist

Cause: A non-existent object name was specified as an argument to procedure CREATE_PLAN_DIRECTIVE of package DBMS_RESOURCE_MANAGER.

Action: Specify a valid plan or consumer group name.

ORA-29368: consumer group *string* does not exist

Cause: An non-existent consumer group was specified.

Action: Specify an existing consumer group.

ORA-29369: invalid method name *string* specified for consumer group *string*

Cause: An invalid method name was specified as an argument to procedure CREATE_CONSUMER_GROUP or UPDATE_CONSUMER_GROUP of package DBMS_RESOURCE_MANAGER.

Action: Specify a valid method name.

ORA-29370: pending area is already active

Cause: An attempt was made to activate a pending area that is already active.

Action: Wait until the pending area is no longer active; then, retry the operation.

ORA-29371: pending area is not active

Cause: An attempt was made to make changes without creating a pending area.

Action: Invoke procedure CREATE_PENDING_AREA before making any changes.

ORA-29372: value for argument *string* is too long; it must be less than *string* characters

Cause: An attempt was made to specify a string that exceeds the maximum length for that parameter.

Action: Use a value that fits within the specified limit.

ORA-29373: resource manager is not on

Cause: An attempt was made to execute an operation that cannot be executed with the resource manager being off

Action: Turn on the resource manager and try again.

ORA-29374: resource plan *string* in top-plan *string* has no plan directives

Cause: A plan was created in the pending area that is an orphan or stand-alone.

Action: Create plan directives if needed. Otherwise, delete the plan.

ORA-29375: sum of values *string* for level *string*, plan *string* exceeds *string*

Cause: The sum of plan directive parameter values for the specified plan level exceeded the limit specified.

Action: Alter the values for the level so that the sum is less than the limit specified.

ORA-29376: number of consumer groups *string* in plan *string* exceeds *string*

Cause: The number of consumer groups in the specified plan was more than the limit specified.

Action: Change the plan so that the number of consumer groups is less than the limit specified.

ORA-29377: consumer group *string* is not part of top-plan *string*

Cause: OTHER_GROUPS was not included as part of the specified top-plan. Each top plan must include the built-in consumer group OTHER_GROUPS.

Action: Create a plan directive with the argument GROUP_OR_SUBPLAN being OTHER_GROUPS somewhere in the top-plan.

ORA-29378: invalid consumer group mapping priorities

Cause: The mapping priorities were not unique integers within the valid range.

Action: Set the mapping priorities to unique integers within the documented range.

ORA-29379: resource plan *string* is involved in a loop in top-plan *string*

Cause: A loop was discovered while validating a top-plan.

Action: Check the plans that have the specified plan as a GROUP_OR_SUBPLAN, and remove the plan directive that causes the loop.

ORA-29380: resource plan *string* is currently active and cannot be deleted

Cause: An attempt was made to delete an active plan in the pending area. No changes can be made to active plans.

Action: Delete the plan when it is not in use.

ORA-29381: plan/consumer_group *string* referred to by another plan and cannot be deleted

Cause: An attempt was made to delete a plan or consumer group that is referred to by another plan.

Action: Remove all plan directives that have the plan or consumer group as GROUP_OR_SUBPLAN; then delete the plan or consumer group.

ORA-29382: validation of pending area failed

Cause: Invalid changes were attempted in the pending area.

Action: See documentation and the error messages that follow this one.

ORA-29383: all leaves of top-plan *string* must be consumer groups

Cause: An attempt was made to create or modify the specified top-plan but it has some plans as leaves.

Action: To identify which plans and/or plan directives need to be modified, look at all plans that have no plan directives. Then, alter the top-plan so that all its leaves are consumer groups.

ORA-29384: number of consumer groups and subplans for plan *string* exceeds *string*

Cause: An attempt was made to create or modify the specified plan, but the plan has more than 28 consumer groups or subplans.

Action: Make sure the specified plan points to no more than 28 distinct consumer groups or subplans.

ORA-29385: cannot create plan directive from *string* to *string*

Cause: An attempt was made to create a plan directive from a plan to itself.

Action: Make sure the arguments PLAN and GROUP_OR_SUBPLAN to procedure CREATE_PLAN_DIRECTIVE of package DBMS_RESOURCE_MANAGER are different.

ORA-29386: plan or consumer group *string* is mandatory and cannot be deleted or modified

Cause: An attempt was made to delete or modify the specified mandatory plan or consumer group.

Action: Do not attempt to delete or modify mandatory plans and consumer groups.

ORA-29387: no top-plans found in the pending area

Cause: The VALIDATE_PENDING_AREA procedure found that either the intended top-plan(s) are involved in a loop or there are no top-plans.

Action: Check all edges going from a subplan to the intended top-plan. Make sure the top plan does not have any plan referring to it.

ORA-29388: plan/consumer_group *string* is part of more than one top-plan

Cause: An attempt was made to delete a subtree that includes a plan or consumer group that is part of more than one top-plan as part of procedure DELETE_PLAN_CASCADE or package DBMS_RESOURCE_MANAGER. Such a plan or consumer group cannot be deleted.

Action: Check the ancestors of the plan or consumer group and make sure it is only part of the top-plan that includes the subtree being deleted.

ORA-29389: too many errors during validation

Cause: The number of errors detected during validation is too high.

Action: Perform the necessary actions to remove some errors, and retry validation.

ORA-29390: some resource plans are not part of any top-plan

Cause: An attempt was made to create or modify some plans in the pending area that are not part of any top-plan

Action: Remove these plans and try validation again.

ORA-29391: *string* and *string* must be mandatory to create a mandatory plan directive

Cause: An attempt was made to create a mandatory plan directive where either PLAN or GROUP_OR_SUBPLAN or both were not mandatory

Action: Recreate these objects as mandatory and then create the plan directive.

ORA-29392: cpu parameters for level *string* for plan *string* must be zero

Cause: The cpu parameters for the specified level had a non-zero value, which is not a valid value for the plan's current cpu policy.

Action: Change the cpu level parameters for the specified level to zero or change the plan cpu policy.

ORA-29393: user *string* does not exist or is not logged on

Cause: An invalid user name was specified as argument to procedure SET_INITIAL_CONSUMER_GROUP of package DBMS_RESOURCE_MANAGER or SWITCH_CONSUMER_GROUP_FOR_USER of package DBMS_SYSTEM or the specified user was not logged on.

Action: Specify a valid user name.

ORA-29394: session id *string* and serial# *string* do not exist

Cause: Invalid session id and serial# were specified as arguments to procedure SWITCH_CONSUMER_GROUP_FOR_SESS of package DBMS_SYSTEM.

Action: Specify valid values from the view V\$SESSION.

ORA-29395: cannot set the initial consumer group to *string*

Cause: An attempt was made to set the initial consumer group of a user to OTHER_GROUPS or an INTERNAL_USE group.

Action: Certain groups are only for the resource manager's internal use. Specify another consumer group.

ORA-29396: cannot switch group to *string*

Cause: An attempt was made to switch the consumer group of a user or a session to OTHER_GROUPS or an INTERNAL_USE group.

Action: Certain groups are only for the resource manager's internal use. Specify another consumer group.

ORA-29397: cannot grant/revoke switch privilege for *string*

Cause: An attempt was made to grant or revoke the privilege to switch to OTHER_GROUPS or an INTERNAL_USE group.

Action: Certain groups are only for the resource manager's internal use. Specify another consumer group.

ORA-29398: invalid privilege name specified

Cause: An invalid privilege name was specified as an argument to procedure GRANT_SYSTEM_PRIVILEGE or REVOKE_SYSTEM_PRIVILEGE of package DBMS_RESOURCE_MANAGER_PRIVS.

Action: Specify a valid privilege name.

ORA-29399: user *string* does not have privilege to switch to consumer group *string*

Cause: An attempt was made to set the initial consumer group of the specified user but the user does not have the privilege to switch to that group.

Action: Grant the privilege to switch to the consumer group to the user and then set the initial group.

ORA-29400: data cartridge error*nstring*

Cause: An error has occurred in a data cartridge external procedure. This message will be followed by a second message giving more details about the data cartridge error.

Action: See the data cartridge documentation for an explanation of the second error message.

ORA-29401: data cartridge internal error [*string*]

Cause: The data cartridge encountered an unexpected condition. The argument is a string that identifies the internal error to Oracle development. This argument and the database version number are critical in identifying the root cause.

Action: Contact Oracle Support Services.

ORA-29470: Effective userid or roles are not the same as when cursor was parsed

Cause: The effective userid or roles on this call to DBMS_SQL are not the same as those at the time the cursor was parsed.

Action: Make sure the effective userid and roles are the same as when cursor was parsed.

ORA-29471: DBMS_SQL access denied

Cause: DBMS_SQL access was denied due to security concerns.

Action: Check the alert log and trace file for more information.

ORA-29472: DBMS_SQL.OPEN_CURSOR failed. security_level is outside the valid range of 0 to 2

Cause: An invalid security_level value was specified.

Action: Specify a valid range of 0 to 2.

ORA-29473: privilege checking level specified for '*string*' must be between 0 and 2

Cause: Invalid privilege checking level specified.

Action: Correct the privilege checking level specified.

ORA-29474: DBMS_SQL.OPEN_CURSOR failed. security_level of 0 is not allowed

Cause: Security level of 0 is specified with DBMS_SQL.OPEN_CURSOR.

Action: Specify a valid security level.

ORA-29475: useLogonRoles=>TRUE not permitted with userid=>NULL

Cause: An unsupported combination of argument values was present in a call to DBMS_SYS_SQL.PARSE_AS_USER.

Action: Specify a valid combination of argument values.

ORA-29476: DBMS_SQL.CLOSE_CURSOR failed

Cause: An attempt was made to close a DBMS_SQL cursor while it was executing under its own context.

Action: Rewrite the program so that it does not attempt to close a DBMS_SQL cursor while it is executing under its own context.

ORA-29477: SQL statement size in bytes is too big

Cause: The size of the SQL statement exceeded 4 gigabytes -1.

Action: Reduce the size of the SQL statement.

ORA-29478: Implicit result cannot be returned through this statement.

Cause: An attempt was made to return an implicit result through a statement type other than a PL/SQL or DML statement.

Action: Implicit results can only be returned through a PL/SQL or DML statement.

ORA-29479: Cannot return any more implicit results, limit 2,147,483,647 reached.
Cause: An attempt was made to return more than the maximum number of implicit results permitted.

Action: Ensure the number of implicit results does not exceed 2,147,483,647.

ORA-29480: No more implicit results to retrieve.

Cause: An attempt was made to retrieve implicit results when none were available.

Action: This is an internal error.

ORA-29481: Implicit results cannot be returned to client.

Cause: An attempt was made to return implicit results to an older version client that is not capable of receiving these implicit results.

Action: Upgrade the Oracle Database Client software.

ORA-29482: Cannot specify both userid or username and xs_sessionid

Cause: An unsupported combination of argument values was present in a call to DBMS_SYS_SQL.PARSE_AS_USER.

Action: Specify a valid combination of argument values.

ORA-29483: Cannot specify both userid and username

Cause: An unsupported combination of argument values was present in a call to DBMS_SYS_SQL.PARSE_AS_USER.

Action: Specify a valid combination of argument values.

ORA-29484: Cannot specify both xs_sessionid and useLogonRoles=>TRUE

Cause: An unsupported combination of argument values was present in a call to DBMS_SYS_SQL.PARSE_AS_USER.

Action: Specify a valid combination of argument values.

ORA-29490: insufficient privilege

Cause: The ADM_PARALLEL_EXECUTE role needed to execute the subprogram was not granted.

Action: Obtain ADM_PARALLEL_EXECUTE role and try again.

ORA-29491: invalid table for chunking

Cause: An attempt was made to chunk a table by ROWID, but the table was not a physical table or the table was an IOT. physical table or the table is an IOT.

Action: Use a table which has physical ROWID.

ORA-29492: invalid state for create chunk

Cause: An attempt was made to create chunks on a task which was not in the CREATED state.

Action: Make sure that the task is in the CREATED state.

ORA-29493: invalid status

Cause: An attempt was made to set an invalid value to the chunk status.

Action: Make sure that the status value is valid.

ORA-29494: invalid state for run task

Cause: An attempt was made to execute the task which was not in the CHUNKED state.

Action: Make sure that the task is in the CHUNKED state.

ORA-29495: invalid state for resume task

Cause: An attempt was made to resume execution but the task was not the FINISHED_WITH_ERROR or CRASHED state.

Action: Make sure that the task is in the FINISHED_WITH_ERROR or CRASHED state.

ORA-29496: Parameter [*string*] is null or its value length exceeds the maximum limit [*string*]

Cause: The input argument was null, or it exceeded the maximum length limit.

Action: Make sure that the argument is not null, and its length is within the limit.

ORA-29497: duplicate task name

Cause: A task with the same name was already in existence.

Action: Use another name.

ORA-29498: task not found

Cause: The task did not exist.

Action: Use an existing task.

ORA-29499: chunk not found

Cause: The specified chunk did not exist.

Action: Specify an existing chunk.

ORA-29500: NAMED keyword is invalid in CREATE JAVA CLASS

Cause: A NAMED keyword was specified in the CREATE JAVA CLASS statement. NAMED keywords are valid only in CREATE JAVA SOURCE or RESOURCE statements.

Action: Remove the NAMED keyword from the CREATE JAVA CLASS statement.

ORA-29501: invalid or missing Java source, class, or resource name

Cause: The required name for a Java source, class, or resource was invalid or missing.

Action: Specify a valid name.

ORA-29502: NAMED keyword required in CREATE JAVA RESOURCE

Cause: The name for a Java resource was not specified. The name must be specified with the NAMED keyword.

Action: Specify a valid name with the NAMED keyword.

ORA-29503: SCHEMA keyword not valid with NAMED keyword

Cause: SCHEMA and NAMED keywords were used together in the same CREATE JAVA command, but only one may be used in a CREATE JAVA command.

Action: Remove either the NAMED or the SCHEMA keyword.

ORA-29504: invalid or missing schema name

Cause: The required schema name was invalid or missing.

Action: Specify a valid schema name.

ORA-29505: AS keyword is invalid in CREATE JAVA CLASS or RESOURCE

Cause: The AS keyword was used in CREATE JAVA CLASS or RESOURCE. The AS keyword is valid only in CREATE JAVA SOURCE.

Action: Use the USING keyword in CREATE JAVA CLASS or RESOURCE.

ORA-29506: invalid query derived from USING clause

Cause: The USING clause did not form a valid query.

Action: Correct the USING clause.

ORA-29507: query derived from USING clause found zero or many rows

Cause: The USING clause defined a query that either did not return any values, or returned more than one value.

Action: Correct the USING clause.

ORA-29508: query derived from USING clause did not select a value of type *string*

Cause: The USING clause did not form a query that selects a value of the type specified by the term following the USING keyword.

Action: Correct the USING clause.

ORA-29509: incorrectly formed Java binary class definition

Cause: An attempt was made to create a Java class using data expected to be in binary (Java .class) format. The data was found not to be in this format, or to be incorrectly formed.

Action: Correct the definition data.

ORA-29510: name, *string.string*, already used by an existing object

Cause: A CREATE JAVA command attempted to create a source, class, or resource object with a name that is already in use.

Action: Drop the existing object that is using the desired name, or use a different name for the new object.

ORA-29511: could not resolve Java class

Cause: A CREATE AND RESOLVE NOFORCE JAVA CLASS command specified definition data that could not be resolved, or resolution failed for some referenced class.

Action: Remove the NOFORCE option or remove impediments to resolution.

ORA-29512: incorrectly formed name resolver specification

Cause: A name resolver was not specified in the required form: ((*name pattern* , *schema name*) ...)

Action: Correct the specification.

ORA-29513: referenced class name too long

Cause: An attempt was made to import a .class file containing a class name of length greater than %d. The .class file could not be imported because the referenced class name was too long.

Action: Shorten the referenced class name in the .class file.

ORA-29514: class name contains illegal character

Cause: An attempt was made to import a .class file containing a character that cannot be converted to the server character set. The .class file could not be imported because of the illegal character.

Action: Correct the illegal character in the .class file.

ORA-29515: exit called from Java code with status *string*

Cause: Java code included a call to java.lang.Runtime.exitInternal.

Action: Do not include this call unless non-local exit is desired.

ORA-29516: Aurora assertion failure: *string*

Cause: An internal error occurred in the Aurora module.

Action: Contact Oracle Worldwide Support.

ORA-29517: recursive resolution failed for a referenced class

Cause: An attempt to resolve a referenced class failed.

Action: Review the errors for referenced classes and complete the necessary actions to correct them.

ORA-29518: name *string* resolved to an object in schema *string* that is not a Java class

Cause: A referenced name was resolved to an object that is not a Java class.

Action: Adjust name resolver or add missing Java class.

ORA-29519: name *string* resolved via a synonym in schema *string* to a class with a different name

Cause: A referenced name was resolved to a synonym, which translated to a class whose name does not match the referenced name.

Action: Adjust name resolver or add missing Java class.

ORA-29520: name *string* resolved to a class in schema *string* that could not be accessed

Cause: An attempt to access a referenced class failed.

Action: Adjust authorizations or name resolution.

ORA-29521: referenced name *string* could not be found

Cause: Name resolution failed to find an object with the indicated name.

Action: Adjust name resolver or add missing Java class.

ORA-29522: authorization error for referenced name *string.string*

Cause: An attempt was made to resolve a class that is not authorized to use the indicated referenced class.

Action: Adjust authorizations or name resolution.

ORA-29523: authorization error for unknown referenced name

Cause: An attempt was made to resolve a class that is not authorized to use a referenced class. The name of the referenced class could not be determined.

Action: Adjust authorizations or name resolution.

ORA-29524: wrong types of arguments in call to '*string*'

Cause: A method was called with argument(s) of incompatible type(s).

Action: Adjust caller.

ORA-29525: referenced name is too long: 'string'

Cause: An attempt was made to create a class that references a name longer than 4000 characters. The class could not be created because the name is too long.

Action: Adjust the definition.

ORA-29526: created Java class *string*"*string*"

Cause: An informational message, not an error.

Action: None

ORA-29527: created Java source *string*"*string*"

Cause: An informational message, not an error.

Action: None

ORA-29528: invalid Java call in trigger *string*

Cause: The Java method specified in trigger does not exist or cannot be called as used.

Action: Adjust trigger definition.

ORA-29529: invalid function or method call *string* in trigger *string*

Cause: The function or method specified in Java trigger call expression could not be resolved.

Action: Adjust trigger definition.

ORA-29530: could not create shortened name for *string*

Cause: Insert into shortened name translation table failed.

Action: Retry the insert.

ORA-29531: no method *string* in class *string*

Cause: An attempt was made to execute a non-existent method in a Java class.

Action: Adjust the call or create the specified method.

ORA-29532: Java call terminated by uncaught Java exception: *string*

Cause: A Java exception or error was signaled and could not be resolved by the Java code.

Action: Modify Java code, if this behavior is not intended.

ORA-29533: attempt to overwrite class or resource *string* while defining or compiling *string.string*

Cause: A class or resource defined by a SQLJ source conflicted with an existing object.

Action: Remove existing object, or modify SQLJ source.

ORA-29534: referenced object *string.string* could not be resolved

Cause: Name resolution determined that the indicated object is referenced but could not be resolved.

Action: Correct name resolver or address resolution problems in the referenced class, or correct compilation problems in its source.

ORA-29535: source requires recompilation

Cause: The reason the current class object was invalid is recorded with the source object from which it was compiled.

Action: Inspect errors in the source object and take the necessary corrective actions.

ORA-29536: badly formed source: *string*

Cause: An attempt was made to create a Java source object with text that could not be parsed adequately to determine the class(es) defined by it.

Action: Correct errors in source.

ORA-29537: class or resource cannot be created or dropped directly

Cause: An attempt was made to create or drop a Java class or resource that is known to result from compilation of an existing Java source object.

Action: Act on the class or resource by acting on the source, or change the source so that it no longer defines the class or resource.

ORA-29538: Java not installed

Cause: An attempt was made to use a Java command when Java is not installed.

Action: Install Java, or do not use the command.

ORA-29539: Java system classes already installed

Cause: An attempt was made to use the CREATE JAVA SYSTEM command in a database where the Java system classes already are installed.

Action: Use CREATE OR REPLACE JAVA SYSTEM.

ORA-29540: class *string* does not exist

Cause: Java method execution failed to find a class with the indicated name.

Action: Correct the name or add the missing Java class.

ORA-29541: class *string.string* could not be resolved

Cause: An attempt was made to execute a method in a Java class that had not been previously and cannot now be compiled or resolved successfully.

Action: Adjust the call or make the class resolvable.

ORA-29542: class *string* already defined by source *string*

Cause: An attempt was made to create a Java source object that would define a class that is already defined by a different Java source object.

Action: Either drop the old source or modify the new source.

ORA-29543: Java command *string* not yet implemented

Cause: An attempt was made to use a Java command that is not yet implemented.

Action: Do not use the command.

ORA-29544: invalid type

Cause: The type argument in a call to a Java export or import command did not have a recognized value.

Action: Correct the value.

ORA-29545: badly formed class: *string*

Cause: An attempt was made to create a Java class object with bytecodes that were rejected by the Java verifier.

Action: It is possible that an attempt was made to create the Java class from a damaged class file, in which case the CREATE should be reattempted with a correct class file. It is also possible that the message is the result of using "-" in the resolver so

that the verifier could not check the correctness of some code. In that case, the class needs to be created with a resolver.

ORA-29546: badly formed resource: *string*

Cause: An attempt was made to create a Java resource object with data that was rejected by the Java verifier.

Action: Correct the data.

ORA-29547: Java system class not available: *string*

Cause: An attempt was made to use a command that requires a Java system class that was not yet present or was invalid.

Action: Load the system classes, or do not use the command.

ORA-29548: Java system class reported: *string*

Cause: A command that uses a Java system class was aborted due to an error reported by the Java system class.

Action: Correct the error that was reported.

ORA-29549: class *string.string* has changed, Java session state cleared

Cause: A class in use by the current session was redefined or dropped, invalidating the current Java session state and requiring that it be cleared.

Action: No action required.

ORA-29550: Java session state cleared

Cause: The Java state in the current session became inconsistent and was cleared.

Action: No action required.

ORA-29551: could not convert *string* to Unicode

Cause: A string in the database character set could not be converted to Unicode, as required for use by Java.

Action: Correct the string.

ORA-29552: verification warning: *string*

Cause: An attempt was made to create a Java class object with bytecodes that caused the Java verifier to issue a warning.

Action: It is possible that the Java class was created from a damaged class file, in which case the CREATE should be reattempted with a correct class file. It is also possible that the message is the result of using "-" in the resolver so that the verifier could not check the correctness of some code. In that case, the class needs to be created with a resolver.

ORA-29553: class in use: *string.string*

Cause: An attempt was made to modify a Java class that is in use in the current call.

Action: Correct the code in use in this call.

ORA-29554: unhandled Java out of memory condition

Cause: The session encountered an out of memory condition in Java from which it could not recover. Java session state was cleared.

Action: No action required.

ORA-29555: Java source, class or resource is not allowed here

Cause: A Java source, class, or resource was specified in an inappropriate place in a statement.

Action: Make sure the name is correct or remove it.

ORA-29556: object type has changed

Cause: A database object name that named a Java source, class, or resource now names an object of a different type.

Action: No action required.

ORA-29557: Java system class *string* cannot be modified

Cause: A command was attempted that would have modified a Java system class.

Action: No action required.

ORA-29558: JAccelerator (NCOMP) not installed. Refer to Install Guide for instructions.

Cause: JAccelerator (NCOMP) is not installed.

Action: Please refer to the Post-installation Tasks section in the Database Install Guide for instructions on how to install JAccelerator (NCOMP).

ORA-29561: Java VM JIT not supported on this platform.

Cause: Java VM JIT is not supported on this platform.

Action: No action required.

ORA-29655: USING clause is incompatible with its supertype

Cause: The USING clause of a type has to be the same as its supertype or compatible with it.

Action: Make sure the USING clause is compatible with its supertype.

ORA-29656: Invalid option for USING

Cause: The class has to implement the required interface for the value of the option for USING.

Action: Make sure the USING clause is supported.

ORA-29657: class defined in EXTERNAL NAME clause is used in another subtype

Cause: The supertype has an existing type that has the same value for the EXTERNAL NAME.

Action: Make sure the EXTERNAL NAME clause is unique among subtypes.

ORA-29658: EXTERNAL NAME clause is not compatible with its supertype

Cause: The EXTERNAL NAME clause of the type is not a subclass of the supertype EXTERNAL NAME.

Action: Make sure the EXTERNAL NAME clause of the type is a subclass of the EXTERNAL NAME of its supertype.

ORA-29659: SQLJ Object Type validation failed to get default connection

Cause: Unable to connect using the JDBC default connection.

Action: No action required.

ORA-29660: Unable to find the class defined in the EXTERNAL NAME clause

Cause: The class is not loaded in the database.

Action: Make sure the EXTERNAL NAME corresponds to a loaded class in the the database.

ORA-29661: Unable to find the superclass of the defined in the EXTERNAL NAME

Cause: The class is not loaded in the database.

Action: Make sure the superclass of the EXTERNAL NAME is loaded in the the database.

ORA-29662: Unable to find a field that matches one or more of the attributes

Cause: The EXTERNAL NAME option of one or more attributes do not match any fields in the defined class.

Action: Make sure the EXTERNAL NAME option of each attribute matches a field in the defined in the defined class.

ORA-29663: Unable to find a method that matches one or more of the functions

Cause: The EXTERNAL NAME option of one or more functions do not match any method in the defined class.

Action: Make sure the EXTERNAL NAME option of each function matches a method in the defined in the defined class.

ORA-29664: Unable to generate the helper class for the defined type

Cause: The helper class used for supporting SQLJ Object Type is not generated.

Action: No Action is required.

ORA-29665: Java thread deadlock detected

Cause: The Java VM has detected a thread deadlock.

Action: Modify the Java program to avoid the deadlock condition.

ORA-29701: unable to connect to Cluster Synchronization Service

Cause: Connect to CSS failed or timed out.

Action: Verify the state of the CSS. If the CSS was not started, start it and then retry the database startup. If the CSS died or is not responding, check the Oracle and CSS trace files for errors and contact Oracle Support Services.

ORA-29702: error occurred in Cluster Group Service operation

Cause: An unexpected error occurred while performing a CGS operation.

Action: Verify that the LMON process is still active. Check the Oracle LMON trace files for errors. Also, check the related CSS trace file for errors.

ORA-29703: error occurred in global enqueue service operation

Cause: An unexpected error occurred while performing a global enqueue service operation.

Action: Check oracle trace files for errors.

ORA-29704: cannot specify ACTIVE_INSTANCE_COUNT in 8.1.5 or earlier release

Cause: The ACTIVE_INSTANCE_COUNT parameter was specified when one of the instances in the cluster was running Oracle 8.1.5 or an earlier release.

Action: Restart the instance without specifying the ACTIVE_INSTANCE_COUNT parameter. Or, upgrade all instances to Oracle 8.1.6 or later release and then specify the parameter.

ORA-29705: ACTIVE_INSTANCE_COUNT is *string* which is incompatible with the value in other instances

Cause: The value of the ACTIVE_INSTANCE_COUNT parameter must be the same in all Oracle cluster database instances.

Action: Check your initialization parameter files in all instances and ensure that the ACTIVE_INSTANCE_COUNT parameter has the same value. Then restart the instance.

ORA-29706: incorrect value *string* for parameter ACTIVE_INSTANCE_COUNT

Cause: The ACTIVE_INSTANCE_COUNT parameter must be set to 1 in a two node cluster database configuration or unspecified if a secondary instance is not needed.

Action: Check your initialization parameter files and correct the value of the ACTIVE_INSTANCE_COUNT parameter. If you are configuring a two node primary/secondary cluster database, set this value to 1. Otherwise, do not specify any value for the parameter.

ORA-29707: inconsistent value *string* for initialization parameter *string* with other instances

Cause: The value of the initialization parameter in error must be identical on all Oracle cluster database instances and was not.

Action: Check your INIT.ORA files on all instances and ensure that the initialization parameters in error have the same value.

ORA-29708: error occurred in Cluster Synchronization Services

Cause: An unexpected error occurred while performing a CSS operation.

Action: Verify the state of the CSS. If the CSS died or is not responding, check the ORACLE and CSS trace files for errors and contact Oracle Support Services.

ORA-29709: Communication failure with Cluster Synchronization Services

Cause: Could not communicate with CSS to complete the operation.

Action: Verify the state of the CSS. If the CSS died or is not responding, check the ORACLE and CSS trace files for errors and contact Oracle Support Services.

ORA-29710: Current operation aborted by Cluster Synchronization Services

Cause: The operation could not be performed or CSS was shutting down.

Action: Check the log file of Cluster Synchronization Services daemon to verify the state of the service. Start the service if needed; otherwise, contact Oracle Support Services.

ORA-29711: error occurred during registration of Oracle process with CSS

Cause: An unexpected error occurred while performing a Cluster Synchronization Services (CSS) operation.

Action: Confirm that the database, and any ASM instances on which it depends, is operating normally. An outage in one of these can cause this error and it is an expected result. Otherwise, contact Oracle Support Services.

ORA-29735: instance specified no longer exists

Cause: A client of the global enqueue service specified an instance that no longer existed.

Action: Process aborts current operation due to termination of an instance

ORA-29736: Instances running in the cluster are only read-mostly instances.

Cause: The instances that were running were only read-mostly instances which causes the whole cluster to shut down.

Action: Start the regular read/write instances and then restart read-mostly instances.

ORA-29738: This feature is not allowed on read-mostly instances.

Cause: The attempted feature was not allowed on read-mostly instances.

Action: The feature is not supported on read-mostly instances as this can be achieved on the other cluster instances which are not read-mostly.

ORA-29740: evicted by instance number *string*, group incarnation *string*

Cause: This instance was evicted from the group by another instance of the cluster database group for one of several reasons, which may include a communications error in the cluster and failure to issue a heartbeat to the control file.

Action: Check the trace files of other active instances in the cluster group for indications of errors that caused a reconfiguration.

ORA-29741: IMR active for some, but not all members of cluster

Cause: The IMR feature is not active for this instance, but is active for another instance in the cluster database.

Action: Ensure that all instances have the same value for the `_imr_active` init.ora parameter

ORA-29742: incompatible Instance Membership Recovery protocol among instances

Cause: The selected Instance Membership Recovery protocol was not compatible with other running instances in the cluster database.

Action: Check the Instance Membership Recovery initialization parameters of all instances to ensure their consistency.

ORA-29743: exiting from instance membership recovery protocol because this instance is not in good health

Cause: This instance did not participate in the instance membership recovery protocol because it was not in good health. Some or all of its receivers were not making progress. Therefore, this instance terminated itself.

Action: Check the alert log, LMON and LMHB trace files for any errors and contact Oracle Support Services

ORA-29746: Cluster Synchronization Service is being shut down.

Cause: The administrator has shut down the Cluster Synchronization Service daemon. This error message is intended to be informative to users on the status of the service.

Action: Check the log file of the Cluster Synchronization Service daemon to verify the state of the service.

ORA-29760: instance_number parameter not specified

Cause: The init.ora file did not contain a value for the `instance_number` which is required to identify this instance to other instances of the database running on the same cluster

Action: Assign a value to the `instance_number` parameter in the init.ora parameter file

ORA-29770: global enqueue process *string* (OSID *string*) is hung for more than *string* seconds

Cause: The specified process makes no progress within the maximum allowed time.

Action: Check the alert file and relevant trace files and contact Oracle Support Services with the incident information.

ORA-29771: process *string* (OSID *string*) blocks *string* (OSID *string*) for more than *string* seconds

Cause: The specified process blocked a global enqueue process for the maximum allowed time.

Action: Check the alert file and relevant trace files and contact Oracle Support Services with the incident information.

ORA-29780: unable to connect to GPnP daemon [*string*]

Cause: Attempt to connect to the GPnP daemon failed with the error reported.

Action: Take the corrective action to resolve the error reported. Refer to GPnP logs and documentation to figure out why the call failed.

ORA-29783: GPnP attribute SET failed with error [*string*]

Cause: An attempt to set the Grid Plug and Play (GPnP) attribute failed. See the brackets for the reason.

Action: Resolve the problem in the included message and retry the request.

ORA-29784: Attribute update operation not permitted

Cause: The update operation for attributes was not permitted because Cluster Synchronization Services (CSS) was not running on the host.

Action: Start Cluster Synchronization Services (CSS) and retry the operation.

ORA-29785: GPnP attribute GET failed with error [*string*]

Cause: An attempt to get the Grid Plug and Play (GPnP) attribute failed. See the brackets for the reason.

Action: Resolve the problem in the included message and retry the request.

ORA-29786: SIHA attribute GET failed with error [*string*]

Cause: An attempt to get the Single-Instance High Availability (SIHA) attribute failed. See the brackets for the reason.

Action: Resolve the problem in the included message and retry the request.

ORA-29787: SIHA attribute SET failed with error [*string*]

Cause: An attempt to set the Single-Instance High Availability (SIHA) attribute failed. See the brackets for the reason.

Action: Resolve the problem in the included message and retry the request.

ORA-29788: Network interface query failed with error [*string*]

Cause: Attempt to get the network information failed. See the brackets for the reason.

Action: Resolve the problem in the included message and retry the request.

ORA-29790: Cannot change user session parameters for a non-user session

Cause: An attempt was made to change user session parameters for a non-user session.

Action: Execute the operation when connected with a user session

ORA-29791: Transactions cannot be replayed

Cause: The user attempted to replay a transaction.

Action: Reconnect and re-execute the transaction.

ORA-29800: invalid name for operator

Cause: The name specified for the operator is incorrect.

Action: Specify a correct name for the operator.

ORA-29801: missing RETURN keyword

Cause: The RETURN keyword has not been specified.

Action: Specify the RETURN keyword or check the SQL statement.

ORA-29802: missing CONTEXT keyword

Cause: The CONTEXT keyword has not been specified.

Action: Specify the CONTEXT keyword or check the SQL statement.

ORA-29803: missing ANCILLARY keyword

Cause: The ANCILLARY keyword has not been specified.

Action: Specify the ANCILLARY keyword or check the SQL statement.

ORA-29804: missing DATA keyword

Cause: The DATA keyword has not been specified.

Action: Specify the DATA keyword or check the SQL statement.

ORA-29805: missing COLUMN keyword

Cause: Keyword COLUMN is expected .

Action: Either specify the COLUMN keyword or specify another option.

ORA-29806: specified binding does not exist

Cause: The operator binding which has been specified does not exist.

Action: Ensure that the operator binding that has been specified does exist.

ORA-29807: specified operator does not exist

Cause: The operator which has been specified does not exist.

Action: Ensure that the operator that has been specified does exist.

ORA-29808: specified primary operator binding does not exist

Cause: The specified binding for the primary operator does not exist.

Action: Ensure that the specified binding for the primary operator exists.

ORA-29809: cannot drop an operator with dependent objects

Cause: The operator which is being dropped has some dependent objects.

Action: Either drop the dependent objects first and then issue the DROP OPERATOR command or specify the FORCE option with DROP OPERATOR.

ORA-29810: inadequate operator privileges

Cause: The user does not have the appropriate privileges to perform the specified operation on the operator.

Action: Grant the appropriate privileges to the user and then reissue the statement.

ORA-29811: missing STATISTICS keyword

Cause: This is not a valid option with the ASSOCIATE command.

Action: Specify STATISTICS keyword after the ASSOCIATE command.

ORA-29812: incorrect object name specified

Cause: The specified name is not a valid name.

Action: Specify the correct name of the object with for which an association needs to be defined.

ORA-29813: non-supported object type with associate statement

Cause: The type of object specified is not supported with the associate statistics statement.

Action: Use a valid object type with the associate command.

ORA-29814: expecting USING or DEFAULT keyword

Cause: Expecting the USING or DEFAULT keyword after the names of object(s).

Action: Provide the USING or DEFAULT keyword.

ORA-29815: object being associated is not present

Cause: The object for which the association is being defined is not present.

Action: Ensure that all the objects for which the association is being defined are present.

ORA-29816: object being disassociated is not present

Cause: Object which is being disassociated is not present.

Action: Ensure that the object which needs to be disassociated is present.

ORA-29817: non-supported option with disassociate statement

Cause: The type of object specified is not supported with the disassociate statistics statement.

Action: Use a object type which is supported with the disassociate command.

ORA-29818: column name not properly specified

Cause: Name of the column should contain the table and the column name.

Action: Specify a valid column name.

ORA-29819: cannot associate default values with columns

Cause: User tried to associate DEFAULT values with columns which is not a valid option .

Action: Specify a valid option.

ORA-29820: the statistics type is not present

Cause: The statistics type which is being associated with object(s) is not present.

Action: Ensure that the type which contains the statistics functions is present.

ORA-29821: specified primary operator does not exist

Cause: The specified primary operator does not exist.

Action: Check the primary operator and the signature specified.

ORA-29822: selectivity cannot be specified for the type of object

Cause: User tried to associate selectivity with index or indextypes which is not allowed .

Action: Specify a valid option.

ORA-29823: object being analyzed is not a table

Cause: The object being analyzed is not a table and is not supported

Action: Specify only a supported option.

ORA-29824: operator is invalid

Cause: The operator is invalid.

Action: Drop and recreate the operator.

ORA-29825: invalid name for indextype

Cause: Indextype name or Indextype schema name has invalid characters.

Action: Verify that the name has valid characters and it is not a reserved word.

ORA-29826: keyword FOR is missing

Cause: FOR keyword must be provided with Create Indextype statement.

Action: Use FOR keyword and provide relevant operator information.

ORA-29827: keyword USING is missing

Cause: USING keyword and corresponding implementation details must be provided.

Action: Provide USING keyword and relevant implementation details with Create Indextype statement.

ORA-29828: invalid name for implementation type

Cause: Implementation type or Implementation schema name is invalid.

Action: Verify that the name has valid characters and it is not a reserved word.

ORA-29829: implementation type does not exist

Cause: The implementation type specified with USING clause could not be found.

Action: Check to see if the type exists and the user has EXECUTE privilege on this type.

ORA-29830: operator does not exist

Cause: The operator could not be found.

Action: Verify that the operator exists and the user has EXECUTE privilege for this operator.

ORA-29831: operator binding not found

Cause: The specified binding for the operator is not available from the operator schema object.

Action: Verify that the operator with the specified binding exists.

ORA-29832: cannot drop or replace an indextype with dependent indexes

Cause: One or more indexes are dependent upon the indextype.

Action: Drop all the indexes which are dependent upon the indextype before dropping the indextype itself.

ORA-29833: indextype does not exist

Cause: There is no indextype by the specified name.

Action: Use public views for the indextypes to see if an indextype by the specified name has been created.

ORA-29834: REF datatype not supported with operators

Cause: The user specified a REF datatype which is not supported in CREATE OPERATOR.

Action: Reissue the CREATE OPERATOR statement without the REF datatype.

ORA-29835: ODCIGETINTERFACES routine does not return required interface(s)

Cause: The ODCIObjectList returned by the ODCIGetInterfaces routine does not contain the interface(s) required by the current usage.

Action: Ensure that the ODCIGetInterfaces routine returns the name(s) of the required interface(s).

ORA-29836: failed to validate referenced operators

Cause: One of the operators referenced cannot be compiled.

Action: Try to recompile the operators which are referenced by this indextype. Use USER_INDEXTYPE_OPERATORS view to find out the referenced operators.

ORA-29837: insufficient privileges to execute implementation type

Cause: User does not have privileges to execute the implementation type.

Action: The owner of the implementation type must grant appropriate privileges to the user.

ORA-29838: insufficient privileges to execute the operator(s)

Cause: User does not have privileges to execute one of the operators.

Action: The owner of the operators must grant appropriate privileges to the user .

ORA-29839: failed to validate implementation type

Cause: Implementation type cannot be compiled.

Action: Try to compile the implementation type.

ORA-29840: indextype and implementation type are not in same schema

Cause: Indextype and implementation type are in different schema.

Action: Put the indextype and implementation type in the same schema.

ORA-29841: invalid option for ALTER INDEXTYPE

Cause: The user specified an invalid option with the ALTER INDEXTYPE command

Action: Choose a valid option with the ALTER INDEXTYPE command

ORA-29842: option not supported with the version *string* of the indextype interface

Cause: User specified an option which is not supported with the version of the indextype interface provided

Action: User should either not request for this option or should provide an implementation type that implements the correct version of the indextype interface.

ORA-29843: indextype should support atleast one operator

Cause: User attempted to drop all the operators from the indextype

Action: Do not drop all the operators from the indextype

ORA-29844: duplicate operator name specified

Cause: User attempted to add an operator name to an indextype which is already supported by the indextype

Action: Remove the duplicate operator and retry the command

ORA-29845: indextype does not support local domain index on *string* partitioned table

Cause: User specified a create local domain index statement using an indextype that does not support local domain indexes on tables partitioned with the given method

Action: Use a different indextype or build a global domain index

ORA-29846: cannot create a local domain index on a *string* partitioned table

Cause: User specified a create local domain index statement on a table partitioned using a method not supported by domain indexes

Action: Build a global domain index on the partitioned table

ORA-29847: cannot create a local domain index on a partitioned index-organized table

Cause: User specified a create local domain index statement on a partitioned index-organized table

Action: Build a global domain index on the partitioned index-organized table

ORA-29848: error occurred in the execution of ODCIINDEXMERGEPARTITION routine

Cause: Failed to successfully execute the ODCIIndexMergePartition routine.

Action: Check to see if the routine has been coded correctly.

ORA-29849: error occurred in the execution of ODCIINDEXSPLITPARTITION routine

Cause: Failed to successfully execute the ODCIIndexSplitPartition routine.

Action: Check to see if the routine has been coded correctly.

ORA-29850: invalid option for creation of domain indexes

Cause: The user specified an invalid option like ASC, DESC, SORT or a parallel clause, partitioning clause or physical attributes clause.

Action: Choose one of the valid clauses for creation of domain indexes.

ORA-29851: cannot build a domain index on more than one column

Cause: User attempted to build a domain index on more than one column.

Action: Build the domain index only on a single column.

ORA-29852: keyword IS is missing

Cause: IS keyword must be specified with Create Index statement for domain indexes.

Action: Use IS keyword and then specify the indextype name.

ORA-29853: keyword UNIQUE may not be used in creating domain indexes

Cause: An attempt was made to create a domain index with the UNIQUE attribute.

Action: Remove UNIQUE from the CREATE INDEX statement.

ORA-29854: keyword BITMAP may not be used in creating domain indexes
Cause: An attempt was made to create a domain index with the BITMAP attribute.
Action: Remove BITMAP from the CREATE INDEX statement.

ORA-29855: error occurred in the execution of ODCIINDEXCREATE routine
Cause: Failed to successfully execute the ODCIIndexCreate routine.
Action: Check to see if the routine has been coded correctly.

ORA-29856: error occurred in the execution of ODCIINDEXDROP routine
Cause: Failed to successfully execute the ODCIIndexDrop routine.
Action: Check to see if the routine has been coded correctly.

ORA-29857: domain indexes and/or secondary objects exist in the tablespace
Cause: An attempt was made to drop a tablespace which contains secondary objects and/or domain indexes.
Action: Drop the domain indexes in his tablespace. Also, find the domain indexes which created secondary objects in this tablespace and drop them. Then try dropping the tablespace.

ORA-29858: error occurred in the execution of ODCIINDEXALTER routine
Cause: Failed to successfully execute the ODCIIndexAlter routine.
Action: Check to see if the routine has been coded correctly.

ORA-29859: error occurred in the execution of ODCIINDEXTRUNCATE routine
Cause: Failed to successfully execute the ODCIIndexTruncate routine.
Action: Check to see if the routine has been coded correctly.

ORA-29860: cannot truncate a table with domain indexes marked LOADING
Cause: The table has domain indexes defined on it that are marked LOADING.
Action: Wait to see if the ongoing index DDL ends and the index state changes from LOADING state. Else ,drop the domain indexes marked as LOADING with the FORCE option.

ORA-29861: domain index is marked LOADING/FAILED/UNUSABLE
Cause: An attempt has been made to access a domain index that is being built or is marked failed by an unsuccessful DDL or is marked unusable by a DDL operation.
Action: Wait if the specified index is marked LOADING Drop the specified index if it is marked FAILED Drop or rebuild the specified index if it is marked UNUSABLE.

ORA-29862: cannot specify FORCE option for dropping non-domain index
Cause: A DROP INDEX FORCE was issued for a non-domain index.
Action: Reissue the command without the FORCE option.

ORA-29863: warning in the execution of ODCIINDEXCREATE routine
Cause: A warning was returned from the ODCIIndexCreate routine.
Action: Check to see if the routine has been coded correctly Check user specified log tables for greater detail.

ORA-29864: analyzing domain indexes marked LOADING/FAILED not supported
Cause: Tried to analyze a domain index which was marked as LOADING or FAILED.

Action: If the index was marked LOADING, wait till it is marked valid before retrying the analyze. If index was marked FAILED, drop it OR rebuild it and retry the analyze.

ORA-29865: indextype is invalid

Cause: The indextype is invalid.

Action: Drop and recreate the indextype.

ORA-29866: cannot create domain index on a column of index-organized table

Cause: Tried to create a domain index on a column of an index-organized table.

Action: Do not attempt to create a domain index on columns of an index-organized table.

ORA-29867: cannot create a domain index on a LONG column

Cause: The user attempted to create a domain index on a column of LONG datatype.

Action: Do not create a domain index on a LONG column.

ORA-29868: cannot issue DDL on a domain index marked as LOADING

Cause: Tried to issue a DROP/ALTER/TRUNCATE on a domain index in a LOADING state.

Action: Wait till the index operation completes OR issue a DROP INDEX FORCE to drop the index.

ORA-29869: cannot issue ALTER without REBUILD on a domain index marked FAILED

Cause: Tried to issue a DROP/ALTER on a domain index in a FAILED state.

Action: Truncate the table to mark the index as valid OR do ALTER INDEX REBUILD to rebuild the index.

ORA-29870: specified options are only valid for altering a domain index

Cause: Specified the ONLINE or PARAMETERS clause with a non-domain index.

Action: Reissue the statement with the correct syntax for alter.

ORA-29871: invalid alter option for a domain index

Cause: The user specified an invalid option for altering a domain index.

Action: Reissue the alter statement with a valid option.

ORA-29872: parameters clause cannot be combined with the specified options

Cause: The user combined PARAMETERS clause with other alter index options.

Action: Reissue the statement with the correct syntax for alter.

ORA-29873: warning in the execution of ODCIINDEXDROP routine

Cause: A warning was returned from the ODCIIndexDrop routine.

Action: Check to see if the routine has been coded correctly Check the user defined warning log tables for greater details.

ORA-29874: warning in the execution of ODCIINDEXALTER routine

Cause: A warning was returned from the ODCIIndexAlter routine.

Action: Check to see if the routine has been coded correctly Check the user defined warning log tables for greater details.

ORA-29875: failed in the execution of the ODCIINDEXINSERT routine

Cause: Failed to successfully execute the ODCIIndexInsert routine.

Action: Check to see if the routine has been coded correctly.

ORA-29876: failed in the execution of the ODCIINDEXDELETE routine

Cause: Failed to successfully execute the ODCIIndexDelete routine.

Action: Check to see if the routine has been coded correctly.

ORA-29877: failed in the execution of the ODCIINDEXUPDATE routine

Cause: Failed to successfully execute the ODCIIndexUpdate routine.

Action: Check to see if the routine has been coded correctly.

ORA-29878: warning in the execution of ODCIINDEXTRUNCATE routine

Cause: A warning was returned from the ODCIIndexTruncate routine.

Action: Check to see if the routine has been coded correctly. Check the user defined warning log tables for greater details.

ORA-29879: cannot create multiple domain indexes on a column list using same indextype

Cause: An attempt was made to define multiple domain indexes on the same column list using identical indextypes.

Action: Check to see if a different indextype can be used or if the index can be defined on another column list.

ORA-29880: such column list already indexed using another domain index and indextype

Cause: An attempt was made to create multiple domain indexes on a column list using indextypes which do not have disjoint operators.

Action: Check to see if the operator sets for the indextypes can be made disjoint.

ORA-29881: failed to validate indextype

Cause: Indextype cannot be compiled.

Action: Try to compile the indextype which is referenced by the domain index.

ORA-29882: insufficient privileges to execute indextype

Cause: User does not have privileges to execute the indextype.

Action: The owner of the indextype must grant appropriate privileges to the user.

ORA-29883: cannot create a domain index on column expressions

Cause: User specified an expression in the column list.

Action: Specify only simple columns in the column list for domain index.

ORA-29884: domain index is defined on the column to be dropped

Cause: An ALTER TABLE DROP COLUMN was issued on a column on which a domain index exists.

Action: Drop the domain index before attempting to drop the column.

ORA-29885: domain index is defined on the column to be modified

Cause: An ALTER TABLE MODIFY COLUMN was issued on a column on which a domain index exists.

Action: Drop the domain index before attempting to modify the column.

ORA-29886: feature not supported for domain indexes

Cause: Feature is not supported for domain indexes.

Action: No action required.

ORA-29887: cannot support row movement if domain index defined on table

Cause: An ALTER TABLE ENABLE ROW MOVEMENT was issued on a table which has a domain index defined on it.

Action: Drop the domain index if you want to enable row movement and then reissue the command.

ORA-29888: cannot create domain index on a table with row movement enabled

Cause: A create domain index statement was issued on a table that has row movement enabled.

Action: Disable the row movement in the table and then reissue the create domain index statement.

ORA-29890: specified primary operator does not have an index context

Cause: The primary operator does not have an index and scan contexts.

Action: Create the primary operator with a context clause.

ORA-29892: indextypes with array DML do not support the given data type

Cause: The user specified a REF or a LONG datatype which is not supported in CREATE/ALTER INDEXTYPE WITH ARRAY DML (DATA_TYPE, VARRAY_TYPE).

Action: Reissue the CREATE/ALTER INDEXTYPE statement without the REF or LONG datatype.

ORA-29893: indextypes without column data do not need the given data type

Cause: WITH ARRAY DML (DATA_TYPE, VARRAY_TYPE) option and WITHOUT COLUMN DATA option conflicted in an alter indextype statement

Action: Reissue the ALTER INDEXTYPE statement without the conflict.

ORA-29894: base or varray datatype does not exist

Cause: One of the base and varray datatypes specified in WITH ARRAY DML (DATA_TYPE, VARRAY_TYPE) clause could not be found.

Action: Check to see if the datatype exists and the user has EXECUTE privilege on this datatype.

ORA-29895: duplicate base datatype specified

Cause: User attempted to add a base datatype to an indextype with ARRAY DML which is already supported by the indextype

Action: Remove the duplicate base datatype and retry the command

ORA-29896: Length of PARAMETER string longer than *string* characters

Cause: An attempt was made to specify a parameter value that is longer than the allowed maximum.

Action: Reduce the parameter value length.

ORA-29897: invalid domain index "*string*" found on the same column

Cause: An attempt was made to create a domain index on the same column where an invalid domain index exists.

Action: Drop the invalid index and reissue the CREATE INDEX statement.

ORA-29900: operator binding does not exist

Cause: There is no binding for the current usage of the operator.

Action: Change the operator arguments to match any of the existing bindings or add a new binding to the operator.

ORA-29901: function underlying operator binding does not exist

Cause: The function underlying the operator binding does not exist.

Action: Ensure that the function corresponding to the operator invocation exists.

ORA-29902: error in executing ODCIIndexStart() routine

Cause: The execution of ODCIIndexStart routine caused an error.

Action: Examine the error messages produced by the indextype code and take appropriate action.

ORA-29903: error in executing ODCIIndexFetch() routine

Cause: The execution of ODCIIndexFetch routine caused an error.

Action: Examine the error messages produced by the indextype code and take appropriate action.

ORA-29904: error in executing ODCIIndexClose() routine

Cause: The execution of ODCIIndexClose routine caused an error.

Action: Examine the error messages produced by the indextype code and take appropriate action.

ORA-29905: method *string* does not exist in type *string.string*

Cause: A required method with the required signature does not exist in the specified type.

Action: Add the required method to the type.

ORA-29906: indextype *string.string* does not exist

Cause: The indextype does not exist.

Action: Create the indextype.

ORA-29907: found duplicate labels in primary invocations

Cause: There are multiple primary invocations of operators with the same number as the label.

Action: Use distinct labels in primary invocations.

ORA-29908: missing primary invocation for ancillary operator

Cause: The primary invocation corresponding to an ancillary operator is missing.

Action: Add the primary invocation with the same label as the ancillary operator.

ORA-29909: label for the ancillary operator is not a literal number

Cause: The label used for invoking the ancillary operator is not a literal number.

Action: Use a literal number as the label.

ORA-29910: invalid callback operation

Cause: Encountered an invalid callback operation.

Action: Ensure that all the callbacks executed from callouts are valid in the statement context.

ORA-29911: null scan context returned by ODCIIndexStart() routine

Cause: The ODCIIndexStart() routine returned a null scan context

Action: Ensure that the ODCIIndexStart() routine returns a non-null scan context.

ORA-29913: error in executing *string* callout

Cause: The execution of the specified callout caused an error.

Action: Examine the error messages take appropriate action.

ORA-29914: ODCIGETINTERFACES routine does not return required stream version

Cause: The ODCIObjectList returned by the ODCIGetInterfaces routine does not contain the required stream version for external tables.

Action: Ensure that the ODCIGetInterfaces routine returns the required stream version.

ORA-29915: cannot select FOR UPDATE from collection operand

Cause: Collection operands cannot be updated

Action: Remove FOR UPDATE clause

ORA-29917: cannot lock a table which gets its rows from a collection operand

Cause: Tables which gets its rows from a collection operand cannot be locked

Action: Don't lock the table

ORA-29918: cannot create domain indexes on temporary tables

Cause: An attempt was made to create a domain index on a temporary table

Action: Either create another type of index on the temporary table or change the table from temporary to a permanent table

ORA-29919: failed in the execution of the ODCIINDEXUPDPARTMETADATA routine

Cause: Failed to successfully execute the ODCIINDEXUPDPARTMETADATA routine.

Action: Check to see if the routine has been coded correctly.

ORA-29920: failed in the partition maintenance operation of secondary table

Cause: Failed to successfully execute the partition maintenance operation of a secondary table in system managed domain index.

Action: Check to see if the partition of a secondary table exists.

ORA-29921: Ancillary operator not supported with set view query block

Cause: Outer view query block contains ancillary operator and view query block contains union all.

Action: Define the union-all view query to contain the primary and ancillary query terms. i.e. have the operators within the view definition rather than in the query outside the view.

ORA-29922: Invalid rowid returned by the user-defined query methods

Cause: An invalid row identifier was returned by the user-defined query methods.

Action: Check the implementation of the indextype methods to make sure that the index creation and query methods are correct.

ORA-29925: cannot execute *string*

Cause: The specified function does not exist or does not have an appropriate signature.

Action: Implement the function with the appropriate signature.

ORA-29926: association already defined for the object

Cause: The object for which the association is being defined, already has a statistics type associated with it.

Action: Disassociate the object and then associate the object.

ORA-29927: error in executing the ODCIStatsCollect / ODCIStatsDelete routine

Cause: The ODCIStatsCollect / ODCIStatsDelete function is causing an error.

Action: Check the ODCIStatsCollect / ODCIStatsDelete function.

ORA-29928: duplicate default selectivity specified

Cause: The keyword DEFAULT SELECTIVITY can only be specified once.

Action: Remove the duplicate keyword.

ORA-29929: missing SCAN Keyword

Cause: The scan context is not specified.

Action: Supply the SCAN keyword.

ORA-29930: COMPUTE ANCILLARY DATA specified without the INDEX CONTEXT clause

Cause: The COMPUTE ANCILLARY DATA option was specified without the WITH INDEX CONTEXT clause.

Action: Specify the WITH INDEX CONTEXT option.

ORA-29931: specified association does not exist

Cause: One or more of the object(s) that have been specified to be disassociated, do not have an association defined for them.

Action: Verify the objects which have an association defined and issue the disassociate command again.

ORA-29932: the type being dropped is a statistics type

Cause: Some objects have defined their statistics methods in the type being dropped.

Action: First drop the relevant associations using the DISASSOCIATE command and then retry the DROP command, or use the FORCE option with DROP TYPE command.

ORA-29933: object being disassociated has some user defined statistics stored

Cause: There are some user defined statistics collected for the object being disassociated.

Action: First delete the user defined statistics and then reissue the DISASSOCIATE command or specify the FORCE option with DISASSOCIATE.

ORA-29934: index specified for association is not a domain index

Cause: The user issued an ASSOCIATE STATISTICS command with an index which is not a domain index.

Action: Issue an ASSOCIATE STATISTICS WITH INDEXES command on a domain index only

ORA-29935: missing FROM keyword

Cause: The keyword FROM is missing.

Action: Specify the FROM keyword or check the SQL statement.

ORA-29936: NULL association is allowed only with a column or an index

Cause: User tried to use the ASSOCIATE command with a schema object other than a column or an index

Action: Specify the NULL clause only with a column or an index

ORA-29937: domain index cannot be system-managed

Cause: An ASSOCIATE STATISTICS command was issued with a domain index which is system-managed.

Action: Check to see if the domain index has been implemented with system-managed storage tables. To associate statistics with a system-managed domain index, issue ASSOCIATE STATISTICS command with the indextype of this domain index.

ORA-29938: both indextype and statistics type should be system-managed

Cause: Either an ASSOCIATE STATISTICS WITH SYSTEM MANAGED STORAGE TABLES command was issued with an indextype which is not system-managed, or an ASSOCIATE STATISTICS command was issued with an indextype which is system-managed.

Action: Check to see if both indextype and statistics type are implemented with system-managed storage tables.

ORA-29939: could not implicitly transform user-managed domain index to system-managed domain index

Cause: Implicit validation of a user-managed domain index with a system-managed indextype failed.

Action: Issue an ALTER INDEX COMPILE command on the domain index.

ORA-29940: User-managed domain indexes are not allowed on interval-partitioned tables.

Cause: An attempt was made to create a local user-managed domain index on an interval-partitioned table.

Action: Convert the underlying index type to system-managed.

ORA-29941: Cannot convert a table with user-managed local domain indexes to interval partitioning.

Cause: An attempt was made to convert a range-partitioned table with local user-managed domain indexes to interval partitioning.

Action: Either convert the underlying index type to system-managed or drop the local user-managed domain index before converting the table to interval partitioning.

ORA-29950: warning in the execution of ODCIINDEXMERGEPARTITION routine

Cause: A warning was returned from the ODCIIndexMergePartition routine.

Action: Check to see if the routine has been coded correctly Check user specified log tables for greater detail.

ORA-29951: warning in the execution of ODCIINDEXSPLITPARTITION routine

Cause: A warning was returned from the ODCIIndexSplitPartition routine.

Action: Check to see if the routine has been coded correctly Check user specified log tables for greater detail.

ORA-29952: cannot issue DDL on a domain index partition marked as LOADING

Cause: Tried to issue a DROP/ALTER/TRUNCATE on a domain index partition in a LOADING state.

Action: Wait till the index partition operation completes OR issue a DROP INDEX FORCE to drop the index OR issue a ALTER TABLE DROP PARTITION to drop the partition.

ORA-29953: cannot issue DDL on a domain index partition marked as FAILED

Cause: Tried to issue a DROP/ALTER on a domain index partition in a FAILED state.

Action: do ALTER INDEX REBUILD PARTITION to rebuild the index partition OR ALTER TABLE TRUNCATE PARTITION to mark the index partition as valid.

ORA-29954: domain index partition is marked LOADING/FAILED/UNUSABLE

Cause: An attempt has been made to access a domain index that is being built or is marked failed by an unsuccessful DDL or is marked unusable by a DDL operation.

Action: Wait if the specified index partition is marked LOADING Rebuild the specified index partition if it is marked FAILED or UNUSABLE.

ORA-29955: error occurred in the execution of ODCIINDEXEXCHANGEPARTITION routine

Cause: Failed to successfully execute the ODCIIndexExchangePartition routine.

Action: Check to see if the routine has been coded correctly.

ORA-29956: warning in the execution of ODCIINDEXEXCHANGEPARTITION routine

Cause: A warning was returned from the ODCIIndexExchangePartition routine.

Action: Check to see if the routine has been coded correctly Check user specified log tables for greater detail.

ORA-29957: cannot create a function-based domain index on a *string* table

Cause: User specified an unsupported create function-based domain index statement.

Action: Issue the create function-based domain index statement only on supported types of tables.

ORA-29958: fatal error occurred in the execution of ODCIINDEXCREATE routine

Cause: Failed to successfully execute the ODCIIndexCreate routine.

Action: Check to see if the routine has been coded correctly.

ORA-29959: error in the execution of the *string* routine for one or more of the index partitions

Cause: An error occurred during execution of the routine for one or more of the index partitions

Action: Check the *_IND_PARTITIONS view to see which partitions are marked FAILED. Rebuild or Truncate the FAILED index partitions

ORA-29960: line *string*, *string*

Cause: The ODCIIndex DDL routine has put a warning message into table SYS.ODCI_WARNINGS\$

Action: Check the warning message

ORA-29961: too many warnings occurred in the execution of ODCIIndex DDL routine

Cause: The number of warnings during the ODCIIndex DDL routine is too high.

Action: Query table SYS.ODCI_WARNINGS\$ to get more warning messages

ORA-29962: fatal error occurred in the execution of ODCIINDEXALTER routine

Cause: Failed to successfully execute the ODCIIndexAlter routine.

Action: Check to see if the routine has been coded correctly.

ORA-29963: missing BINDING keyword

Cause: Keyword BINDING is expected .

Action: Specify the BINDING keyword or check the SQL statement.

ORA-29964: missing ADD or DROP keyword

Cause: One of the keywords ADD or DROP is expected.

Action: Specify the ADD or DROP keyword or check the SQL statement.

ORA-29965: The specified binding does not exist

Cause: The binding specified in the DROP BINDING clause is not a valid binding for this operator.

Action: Specify an existing binding for this op in DROP BINDING clause.

ORA-29966: The only binding of an operator cannot be dropped

Cause: This operator only has one binding. It cannot be dropped using Alter Operator Drop Binding.

Action: If you wish to drop the entire operator, call Drop Operator.

ORA-29967: Cannot drop an operator binding with dependent objects

Cause: The operator binding that is being dropped has dependent objects.

Action: Either drop the dependent objects first and then issue the ALTER OPERATOR DROP BINDING command or specify the FORCE option with ALTER OPERATOR DROP BINDING.

ORA-29968: No primary operator bindings found for ancillary binding #*string*

Cause: At least one ancillary binding of the specified operator could not be validated because all of its associated primary operator bindings have been dropped.

Action: Either drop the ancillary binding whose primary operators are missing, or drop the entire operator, if this is the only binding. This binding cannot be re-validated.

ORA-29970: Specified registration id does not exist

Cause: An incorrect regid value was passed to dbms_chnf procedure.

Action: pass the correct regid value.

ORA-29971: Specified table name not found or does not have any registrations

Cause: The database could not locate the passed in table name

Action: Check the table name passed in.

ORA-29972: user does not have privilege to change/ create registration

Cause: User passed in an incorrect or someone else's regid/ handle.

Action: Check the passed in regid/ reg handle

ORA-29973: Unsupported query or operation during change notification registration

Cause: The user attempted to register an unsupported query type or an unsupported operation like a DML/DDI for change notification.

Action: Please check the statement being executed and refer to the documentation.

ORA-29974: Internal event for PL/SQL debugging

Cause: None

Action: None

ORA-29975: Cannot register a query in the middle of an active transaction

Cause: User tried to register a query within an uncommitted transaction.

Action: Commit the transaction and retry.

ORA-29976: Unsupported query for registration in guaranteed mode

Cause: An operator or expression in the query was incompatible with query registration in the guaranteed granularity mode.

Action: Check all expressions, clauses and operators in the query and refer to the documentation for supported query types. The application can reattempt the query registration in best effort mode.

ORA-29977: Unsupported column type for query registration in guaranteed mode

Cause: An attempt was made to register a query with an unsupported column type or too many columns.

Action: Examine all column datatypes in the expression and refer to the documentation for supported query types. The application can reattempt the query registration in best effort mode.

ORA-29978: Internal event for tracing Inband Notifications

Cause: None

Action: None

ORA-29981: Cannot register query: conflicting DDL in progress

Cause: A query registration was attempted while there was a concurrent DDL in progress.

Action: Retry the query registration.

ORA-29982: Table type not supported for query registration in guaranteed mode

Cause: The user attempted to register a query involving an unsupported table type.

Action: Examine all tables in the query registration and refer to the documentation for supported table types. The application can reattempt registration in best effort mode.

ORA-29983: Unsupported query for Continuous Query Notification

Cause: The query cannot be registered for Continuous Query Notification.

Action: The query has some constructs that make it incompatible with Continuous Query Notification like synonyms or views. Please check the documentation for complete list.

ORA-29984: Internal event to force CHNF registrations

Cause: None

Action: None

ORA-29985: Query Registration is only supported for automatic undo management

Cause: User is using manual undo management

Action: Switch to using automatic undo management

ORA-30000: missing either trim specification or char expression in TRIM

Cause: Since FROM is specified in TRIM function, either trim specification (TRAILING, LEADING, BOTH) or trim character or both must be specified.

Action: Add either trim specification (TRAILING, LEADING, BOTH) or trim character or both.

ORA-30001: trim set should have only one character

Cause: Trim set contains more or less than 1 character. This is not allowed in TRIM function.

Action: Change trim set to have only 1 character.

ORA-30002: SYS_CONNECT_BY_PATH function is not allowed here

Cause: SYS_CONNECT_BY_PATH function was called at places other than the SELECT list and ORDER BY clause.

Action: Remove calls to SYS_CONNECT_BY_PATH function at places other than the SELECT list and ORDER BY clause.

ORA-30003: illegal parameter in SYS_CONNECT_BY_PATH function

ORA-30004: when using SYS_CONNECT_BY_PATH function, cannot have separator as part of column value

Cause: A column value contained the string that the SYS_CONNECT_BY_PATH function was to use to separate column values.

Action: Specify another separator for the SYS_CONNECT_BY_PATH function to use which does not occur in any column value, then retry.

ORA-30005: missing or invalid WAIT interval

Cause: A non-zero integer must be specified for wait interval (in seconds) after the WAIT keyword.

Action: Correct the syntax and retry.

ORA-30006: resource busy; acquire with WAIT timeout expired

Cause: The requested resource is busy.

Action: Retry the operation later.

ORA-30007: CONNECT BY ROOT operator is not supported in the START WITH or in the CONNECT BY condition

Cause: An attempt was made to use CONNECT BY ROOT operator in the START WITH or in the CONNECT BY condition.

Action: Remove CONNECT BY ROOT operator from the START WITH or from the CONNECT BY condition.

ORA-30008: CONNECT BY clause must reference a PRIOR

Cause: A CONNECT BY clause did not include a predicate referencing a PRIOR so there was no condition connecting a parent row to its child row.

Action: Add a reference to a PRIOR in the CONNECT BY clause.

ORA-30009: Not enough memory for *string* operation

Cause: The memory size was not sufficient to process all the levels of the hierarchy specified by the query.

Action: In WORKAREA_SIZE_POLICY=AUTO mode, set PGA_AGGREGATE_TARGET to a reasonably larger value. Or, in WORKAREA_SIZE_POLICY=MANUAL mode, set SORT_AREA_SIZE to a reasonably larger value.

ORA-30010: Not enough I/O buffers for the sort operation

Cause: The sort was unable to allocate enough I/O buffers.

Action: Increase the amount of memory allowed for the sort or increase the maximum number of I/O buffers allowed in the system and retry the query.

ORA-30011: Error simulated: *psite=string*, *ptype=string*

Cause: error generated for testing purposes.

Action: None

ORA-30012: undo tablespace '*string*' does not exist or of wrong type

Cause: the specified undo tablespace does not exist or of the wrong type.

Action: Correct the tablespace name and reissue the statement.

ORA-30013: undo tablespace '*string*' is currently in use

Cause: the specified undo tablespace is currently used by another instance.

Action: Wait for the undo tablespace to become available or change to another name and reissue the statement.

ORA-30014: operation only supported in Automatic Undo Management mode

Cause: the operation is only supported in automatic undo mode.

Action: restart instance in Automatic Undo Management mode before retrying operation.

ORA-30015: previously offlined undo tablespace '*string*' is still pending

Cause: the current operation is not allowed because an undo tablespace containing active transactions is pending from a previous SWITCH UNDO operation. The operation will be allowed again after all transactions in the previous undo tablespace are committed.

Action: Wait for all previous transactions to commit before reissuing the current statement.

ORA-30016: undo tablespace '*string*' is already in use by this instance

Cause: the specified undo tablespace is currently used by this instance. The operation failed.

Action: If the specified undo tablespace name is wrong, reissue the statement with the correct name.

ORA-30017: segment '*string*' is not supported in *string* Undo Management mode

Cause: the type of the specified undo segment is incompatible with the current undo management mode of the instance.

Action: Check the undo segment name and the undo management mode and reissue statement if necessary.

ORA-30018: Create Rollback Segment failed, USN *string* is out of range

Cause: the system runs out of undo segment number. Too many undo segments exist.

Action: drop some of the unused undo segments and retry operation.

ORA-30019: Illegal rollback Segment operation in Automatic Undo mode

Cause: This operation only allowed in Manual Undo mode.

Action: restart instance in Manual Undo_Management mode and retry operation.

ORA-30021: Operation not allowed on undo tablespace

Cause: This operation is not allowed on undo tablespaces

Action: Check the tablespace name and reissue command if necessary

ORA-30022: Cannot create segments in undo tablespace

Cause: Cannot create segments in undo tablespace

Action: Check the tablespace name and reissue command

ORA-30023: Duplicate undo tablespace specification

Cause: Cannot create more than one undo tablespace during database creation

Action: Modify the command to contain only one undo tablespace

ORA-30024: Invalid specification for CREATE UNDO TABLESPACE

Cause: You have specified an clause that should not used with CREATE UNDO TABLESPACE

Action: Drop the clause from the command and reissue it.

ORA-30025: DROP segment '*string*' (in undo tablespace) not allowed

Cause: Explicit DROP operation is not allowed on undo tablespace segments

Action: Check the undo segment name and reissue statement if necessary.

ORA-30026: Undo tablespace '*string*' has unexpired undo with *string*(sec) left, Undo_Retention=*string*(sec)

Cause: Tried to drop a tablespace that contains unexpired undo information

Action: lower setting of UNDO_RETENTION or wait a while before reissue command to drop undo tablespace

ORA-30027: Undo quota violation - failed to get *string* (bytes)

Cause: the amount of undo assigned to the consumer group of this session has been exceeded.

Action: ask DBA to increase undo quota, or wait until other transactions to commit before proceeding.

ORA-30029: no active undo tablespace assigned to instance

Cause: the current instance does not have an active undo tablespace assigned to execute transactions.

Action: ask DBA to create an undo tablespace, online the undo tablespace and then retry operation.

ORA-30030: suppress resumable related error message

Cause: none

Action: This event is to be used if the errors 30031 and 30032 wish to be suppressed.

ORA-30031: the suspended (resumable) statement has been aborted

Cause: DBA or the user aborted the execution of the suspended statement in the resumable session

Action: None

ORA-30032: the suspended (resumable) statement has timed out

Cause: A correctible error was signaled in the resumable session and the error was not cleared within the timeout interval.

Action: Fix the correctible error within the timeout. Default is 2 hours. Or increase the (resumable) timeout.

ORA-30033: Undo tablespace cannot be specified as default user tablespace

Cause: It is incorrect to specify undo tablespace as default user tablespace

Action: Check the tablespace name and reissue the command

ORA-30034: Undo tablespace cannot be specified as temporary tablespace

Cause: Undo tablespace cannot be specified as default temporary tablespace for the user

Action: Check the tablespace name and reissue the command

ORA-30035: Undo tablespace cannot be specified as default temporary tablespace

Cause: Undo tablespace cannot be specified as default temporary tablespace for the database

Action: Check the tablespace name and reissue the command

ORA-30036: unable to extend segment by *string* in undo tablespace '*string*'

Cause: the specified undo tablespace has no more space available.

Action: Add more space to the undo tablespace before retrying the operation. An alternative is to wait until active transactions to commit.

ORA-30037: Cannot perform parallel DML after a prior DML on the object

Cause: Attempt to perform parallel DML after another DML on the same object in the same transaction.

Action: Use bitmap segments to perform multiple (parallel) DML operations on the same object. Or commit before issuing the DML

ORA-30038: Cannot perform parallel insert on non-partitioned object

Cause: Attempt to perform parallel insert on a non-partitioned object after a previous DML on the object in the same transaction.

Action: Commit before issuing the insert.

ORA-30039: Cannot drop the undo tablespace

Cause: Cannot drop an undo tablespace that is in use

Action: Switch to a different undo tablespace and then try to drop

ORA-30040: Undo tablespace is offline

Cause: Cannot operate on an offlined undo tablespace

Action: Online the undo tablespace and redo the operation

ORA-30041: Cannot grant quota on the tablespace

Cause: User tried to grant quota on an undo or temporary tablespace

Action: Check the tablespace name and reissue the command

ORA-30042: Cannot offline the undo tablespace

Cause: Cannot offline an undo tablespace that is in use

Action: Switch to a different undo tablespace and then try to offline

ORA-30043: Invalid value '*string*' specified for parameter 'Undo_Management'

Cause: the specified undo management mode is invalid

Action: Correct the parameter value in the initialization file and retry the operation.

ORA-30044: 'Retention' can only specified for undo tablespace

Cause: An attempt was made to specify retention for a non-undo tablespace.

Action: Modify the CREATE TABLESPACE statement.

ORA-30045: No undo tablespace name specified

Cause: If Create Database has the datafile clause, then undo tablespace name has to be specified, unless using OMF.

Action: Specify the undo tablespace name.

ORA-30046: Undo tablespace *string* not found in control file.

Cause: The specified undo tablespace is not present in the control file.

Action: Modify the CREATE CONTROLFILE statement that created the current control file to include undo tablespace(s) and reissue the statement.

ORA-30051: VERSIONS clause not allowed here

Cause: A VERSIONS clause was specified when it was not allowed.

Action: Do not use the VERSIONS clause

ORA-30052: invalid lower limit snapshot expression

Cause: The lower limit snapshot expression was below the UNDO_RETENTION limit.

Action: Specify a valid lower limit snapshot expression.

ORA-30053: invalid upper limit snapshot expression

Cause: The upper limit snapshot expression is greater than the SQL statement read snapshot.

Action: Specify a valid upper limit snapshot expression.

ORA-30054: invalid upper limit snapshot expression

Cause: The upper limit snapshot expression is less than the lower limit snapshot expression.

Action: Specify a valid upper limit snapshot expression.

ORA-30055: NULL snapshot expression not allowed here

Cause: The snapshot expression is NULL.

Action: Specify a non-NULL snapshot expression.

ORA-30063: Internal Event to Test NTP

Cause: none

Action: None

ORA-30067: Internal Event to turn on nested debugging info

Cause: none

Action: None

ORA-30068: Internal Event to turn on nested

Cause: none

Action: None

ORA-30071: conversion between datetime/interval and string fail

Cause: An error occurs during a conversion between datetime/interval and string data type due to one of the following reasons: - The buffer is too short to hold the result. - The format string is bad.

Action: n/a

ORA-30072: invalid time zone value

Cause: The value specified for the time zone string, which appears in ALTER SESSION statement, environment variable ORA_SDTZ, or a datetime factor, is not valid.

Action: n/a

ORA-30073: invalid adjustment value

Cause: The value is none of the followings: 'ADJUST', 'NO_ADJUST', 'ANSI_DATE', 'ADJUST_WITH_ANSI_DATE'. 'NO_ADJUST' is the default value.

Action: set it to one of the three values

ORA-30074: GLOBAL partitioned index on TIME/TIMESTAMP WITH TIME ZONE not allowed

Cause: try to GLOBAL partitioned index on TIME/TIMESTAMP WITH TIME ZONE.

Action: Do not GLOBAL partitioned index on TIME/TIMESTAMP WITH TIME ZONE.

ORA-30075: TIME/TIMESTAMP WITH TIME ZONE literal must be specified in CHECK constraint

Cause: User is trying to create a constraint on a time or timestamp with or without time zone column without explicitly specifying the time zone.

Action: Use time or timestamp with time zone literals only.

ORA-30076: invalid extract field for extract source

Cause: The extract source does not contain the specified extract field.

Action: n/a

ORA-30077: illegal casting between specified datetime types

Cause: Cannot cast between the specified datetime types.

Action: n/a

ORA-30078: partition bound must be TIME/TIMESTAMP WITH TIME ZONE literals

Cause: An attempt was made to use a time/timestamp expression whose format does not explicitly have time zone on a TIME/TIMESTAMP or TIME/TIMESTAMP WITH TIME ZONE column.

Action: Explicitly use TIME/TIMESTAMP WITH TIME ZONE literal.

ORA-30079: cannot alter database timezone when database has TIMESTAMP WITH LOCAL TIME ZONE columns

Cause: An attempt was made to alter database timezone with TIMESTAMP WITH LOCAL TIME ZONE column in the database.

Action: Either do not alter database timezone or first drop all the TIMESTAMP WITH LOCAL TIME ZONE columns.

ORA-30081: invalid data type for datetime/interval arithmetic

Cause: The data types of the operands are not valid for datetime/interval arithmetic.

Action: n/a

ORA-30082: datetime/interval column to be modified must be empty to decrease fractional second or leading field precision

Cause: datetime/interval column with existing data is being modified to decrease fractional second or leading field precisions.

Action: Such columns are only allowed to increase the precisions.

ORA-30083: syntax error was found in interval value expression

Cause: A syntax error was found during parsing an interval value value expression.

Action: Correct the syntax.

ORA-30084: invalid data type for datetime primary with time zone modifier

Cause: When a time zone modifier is specified, the data type of datetime primary must be one of the following: TIME, TIME WITH TIME ZONE, TIMESTAMP, TIMESTAMP WITH TIME ZONE.

Action: n/a

ORA-30085: syntax error was found in overlaps predicate

Cause: A syntax error was found during parsing an overlaps predicate.

Action: Correct the syntax.

ORA-30086: interval year-month result not allowed for datetime subtraction

Cause: An attempt was made to specify interval year to month as the result of datetime subtraction.

Action: This is not allowed currently due to unclear specification in SQL Standards for this interval type. Change the interval type to interval day to second and resubmit statement.

ORA-30087: Adding two datetime values is not allowed

Cause: An attempt was made to add two datetime values.

Action: This addition is not allowed.

ORA-30088: datetime/interval precision is out of range

Cause: The specified datetime/interval precision was not between 0 and 9.

Action: Use a value between 0 and 9 for datetime/interval precision.

ORA-30089: missing or invalid *datetime field*

Cause: A *datetime field* (YEAR, MONTH, DAY, HOUR, MINUTE, SECOND) is expected but not found, or a *datetime field* specified the *end field* in an *interval qualifier* is more significant than its *start field*.

Action: n/a

ORA-30091: secondary translation table not loaded

Cause: The secondary translation table for DST patching on TSTZ data was not loaded.

Action: Load the secondary translation table.

ORA-30092: function not allowed at this stage of DST upgrade process

Cause: Query included a function that is not allowed in the current state of DST upgrade process.

Action: This function is not allowed at the current stage of DST upgrade.

ORA-30093: function not allowed until the database is restarted

Cause: Query included a function that is not allowed until the database is restarted.

Action: Shut down and restart the database.

ORA-30094: failed to find the time zone data file for version *string* in \$ORACLE_HOME/oracore/zoneinfo

Cause: There was no corresponding time zone data file in \$ORACLE_HOME/oracore/zoneinfo for the input time zone version.

Action: None

ORA-30100: internal error [*number*]

Cause: An internal error has occurred.

Action: Contact Oracle Worldwide Support and report the error.

ORA-30101: unknown parameter name '*string*'

Cause: You have misspelled the parameter name.

Action: Spell the parameter name correctly.

ORA-30102: '*string*' is not in the legal range for '*string*'

Cause: The value of the parameter is not within the legal range.

Action: Refer to the manual for the allowable values for this parameter.

ORA-30103: '*string*' contains an illegal integer radix for '*string*'

Cause: An illegal integer radix specification was found.

Action: Only 'd', 'h', 'D', and 'H' may be used as radix specifications.

ORA-30104: '*string*' is not a legal integer for '*string*'

Cause: The value is not a valid integer.

Action: Specify only valid integers for this parameter.

ORA-30105: 'string' is not a legal boolean for 'string'

Cause: The value is not a valid boolean.

Action: Refer to the manual for allowable boolean values.

ORA-30106: reserved for future use

Cause: None.

Action: None

ORA-30107: parameter name abbreviation 'string' is not unique

Cause: The abbreviation given was not unique.

Action: Use a longer abbreviation to make the parameter name unique.

ORA-30108: invalid positional parameter value 'string'

Cause: An invalid positional parameter value has been entered.

Action: Remove the invalid positional parameter.

ORA-30109: could not open parameter file 'string'

Cause: The parameter file does not exist.

Action: Create an appropriate parameter file.

ORA-30110: syntax error at 'string'

Cause: A syntax error was detected.

Action: Change the input so that the correct syntax is used.

ORA-30111: no closing quote for value 'string'

Cause: A quoted string was begun but not finished.

Action: Put a closing quote in the proper location.

ORA-30112: multiple values not allowed for parameter 'string'

Cause: You attempted to specify multiple values for a parameter which can take only one value.

Action: Do not specify more than one value for this parameter.

ORA-30113: error when processing file 'string'

Cause: A problem occurred when processing this file.

Action: Examine the additional error messages and correct the problem.

ORA-30114: error when processing from command line

Cause: A problem occurred when processing the command line.

Action: Examine the additional error messages and correct the problem.

ORA-30115: error when processing an environment variable

Cause: A problem occurred when processing an environment variable.

Action: Examine the additional error messages and correct the problem.

ORA-30116: syntax error at 'string' following 'string'

Cause: A syntax error was detected.

Action: Change the input so that the correct syntax is used.

ORA-30117: syntax error at '*string*' at the start of input

Cause: A syntax error was detected.

Action: Change the input so that the correct syntax is used.

ORA-30118: syntax error at '*string*' at the end of input

Cause: A syntax error was detected.

Action: Change the input so that the correct syntax is used.

ORA-30119: unable to obtain a valid value for '*string*'

Cause: No valid value was obtained for this parameter.

Action: Rerun the application and enter a valid value.

ORA-30120: '*string*' is not a legal oracle number for '*string*'

Cause: The value is not a valid oracle number.

Action: Refer to the manual for allowable oracle number values.

ORA-30121: '*string*' is not an allowable value for '*string*'

Cause: The value is not a legal value for this parameter.

Action: Refer to the manual for allowable values.

ORA-30122: value '*string*' for '*string*' must be between '*number*' and '*number*'

Cause: The value of the parameter is not within the legal range.

Action: Specify a value that is within the legal range.

ORA-30129: invalid function argument received

Cause: A function received an invalid argument

Action: Check function calls, make sure correct arguments are being passed.

ORA-30130: invalid parameter key type received

Cause: A function received an invalid parameter key type

Action: Check parameter key types in function calls

ORA-30131: number of keys being set exceeds allocation

Cause: Number of parameter keys being set exceeds allocation

Action: Reduce the number of keys being set or increase allocation

ORA-30132: invalid key index supplied

Cause: The key index specified was not within bounds

Action: Change key index to ensure it lies within bounds

ORA-30133: reserved for future use

Cause: None.

Action: None

ORA-30134: reserved for future use

Cause: None.

Action: None

ORA-30135: OCI Thread operation fails

Cause: An OCI Thread function call has failed.

Action: Check the function call to make sure that the correct parameters are being passed and take the appropriate action.

ORA-30136: Drop-in compatibility is not supported for this application

Cause: The current application is statically linked with defopt.o from an older release, which is incompatible with the current client shared library.

Action: 1) Relink the application against the new release of the client library; or 2) Relink the application against the older release of the client library without statically linking defopt.o.

ORA-30150: Invalid argument passed to OCIFile function

Cause: An invalid argument is passed to the OCIFile function. The most common cause is that a NULL pointer is passed where a non-NULL pointer is expected.

Action: Make sure that the values passed as arguments are valid. Esp check for NULL pointers.

ORA-30151: File already exists

Cause: Tried to open a file with OCI_FILE_EXCL flag and the file already exists.

Action: OCIFile is supposed throw this exception in this case.

ORA-30152: File does not exist

Cause: The OCIFile function requires the file to exist, but it does not.

Action: Make sure that the file exists.

ORA-30153: An invalid File Object is passed to the OCIFile function

Cause: An invalid File Object is passed to the OCIFile function.

Action: Make sure that the file object is a valid one. Create a new file object by calling OCIFileOpen if needed.

ORA-30154: The memory address given as buffer for OCIFileRead/Write is invalid

Cause: An invalid memory address is given as the buffer pointer for OCIFileRead/Write.

Action: Make sure that the required memory is allocated and pass a valid memory address as buffer pointer.

ORA-30155: An I/O Error occurred during an OCIFile function call

Cause: An I/O error occurred at the system level.

Action: This is a system error and the action will depend on the error.

ORA-30156: Out of disk space

Cause: The disks associated with the underlying file system are full.

Action: Create more disk space.

ORA-30157: An invalid argument was given to operating system call

Cause: The OS call was called with an invalid argument.

Action: Check the values passed. If unsuccessful to solve the problem contact ORACLE support.

ORA-30158: The OCIFileWrite causes the file to exceed the maximum allowed size

Cause: There is no space to write to the file. Its size is at the maximum limit.

Action: Up to the user.

ORA-30159: OCIFileOpen: Cannot create the file or cannot open in the requested mode

Cause: The create flag was specified in OCIFileOpen such that the file was to be created. But unable to do so. Or the file already exists and the permissions on it doesn't allow the file to be opened in in the requested open mode

Action: Check whether the user has permissions to create the specified file or if the file exists whether the permissions on it allow the requested open mode.

ORA-30160: Unable to access the file

Cause: The function was unable to access the existing the file.

Action: Check if the user has the required permissions on the file.

ORA-30161: A system error occurred during the OCIFile function call

Cause: A system error occurred while executing the OCIFile function.

Action: Depend on the error.

ORA-30162: The OCIFile context is not initialized

Cause: The function OCIFileInit need to be called before calling any other OCIFile function to initialize the OCIFile context.

Action: Call the function OCIFileInit need to be called before calling any other OCIFile function.

ORA-30163: The thread safety initialization failed

Cause: The call to SlgInit failed in OCIFileInit.

Action: Contact support

ORA-30175: invalid type given for an argument

Cause: There is an argument with an invalid type in the argument list.

Action: Use the correct type wrapper for the argument.

ORA-30176: invalid format code used in the format string

Cause: There is an invalid format code in the format string.

Action: Replace the invalid format code with a valid one.

ORA-30177: invalid flag used in a format specification

Cause: There is an invalid flag in a format specification.

Action: Replace the invalid flag with a valid one.

ORA-30178: duplicate flag used in a format specification

Cause: There is a duplicate flag in a format specification.

Action: Remove the duplicate flag.

ORA-30179: invalid argument index used in a format code

Cause: Zero or negative argument index or index not following (."

Action: Replace the invalid argument index with a valid one.

ORA-30180: argument index is too large

Cause: An argument index exceeds actual number of arguments supplied.

Action: Fix format string or pass additional arguments.

ORA-30181: integer in argument index is not immediately followed by)

Cause: Missing closing parenthesis in argument index.

Action: Fix the format specification.

ORA-30182: invalid precision specifier

Cause: Period in format specification not followed by valid format.

Action: Replace the invalid precision specifier with a valid one.

ORA-30183: invalid field width specifier

Cause: Invalid field width supplied.

Action: Replace the invalid field width with a valid one.

ORA-30184: argument type not compatible with a format code

Cause: Bad argument type given for a format code.

Action: Make format and arguments be compatible.

ORA-30185: output too large to fit in the buffer

Cause: The buffer is not large enough to hold the entire output string.

Action: Fix the buffer size and length passed in.

ORA-30186: " must be followed by four hexadecimal characters or another "

Cause: In the argument of SQL function UNISTR, a " must be followed by four hexadecimal characters or another "

Action: Fix the string format

ORA-30187: Permission denied for 'string' to access procedure GET_KEY.

Cause: The client was unauthorized to invoke the procedure DBMS_INTERNAL_CLKM.GET_KEY.

Action: DBMS_INTERNAL_CLKM.GET_KEY is an Oracle GoldenGate feature and can only be accessed by Oracle GoldenGate.

ORA-30188: reserved for future use

Cause: None.

Action: None

ORA-30189: reserved for future use

Cause: None.

Action: None

ORA-30190: reserved for future use

Cause: None.

Action: None

ORA-30191: missing argument list

Cause: No argument list supplied.

Action: Modify the argument list to have at least OCIFormatEnd in it.

ORA-30192: reserved for future use

Cause: None.

Action: None

ORA-30193: reserved for future use

Cause: None.

Action: None

ORA-30194: reserved for future use

Cause: None.

Action: None

ORA-30195: reserved for future use

Cause: None.

Action: None

ORA-30196: reserved for future use

Cause: None.

Action: None

ORA-30197: reserved for future use

Cause: None.

Action: None

ORA-30198: reserved for future use

Cause: None.

Action: None

ORA-30199: reserved for future use

Cause: None.

Action: None

ORA-30200: Wrong NLS item was passed into OCINlsGetInfo()

Cause: The item is not supported NLS item

Action: Correct the item number passed to OCINlsGetInfo().

ORA-30201: Unable to load NLS data object

Cause: It may be caused by invalid NLS environment setting

Action: Check your NLS environment setting such as ORA_NLS33

ORA-30202: NULL pointer to OCIMsggh was passed to OCIMsg function

Cause: The NULL pointer was passed.

Action: Check your value of OCIMsggh pointer.

ORA-30203: Cannot open message file

Cause: The message may not exist in your system.

Action: Check your message for the given product and facility.

ORA-30204: buffer is not large enough

Cause: The destination buffer is not large enough for storing converted data.

Action: Check the size of the destination buffer.

ORA-30205: invalid Character set

Cause: The specified character set is invalid.

Action: Check if the character set ID is valid.

ORA-30303: Internal error

ORA-30304: Internal error

ORA-30305: Debug mode

ORA-30306: Internal error

ORA-30307: Internal error

ORA-30308: Internal error

ORA-30331: summary does not exist

Cause: A non-existent summary name was specified.

Action: Check the spelling of the summary name.

ORA-30332: container table already in use by other summary

Cause: Another summary is already using this table as a container table.

Action: Select another table or materialized view as the container table for this summary.

ORA-30333: dimension does not exist

Cause: The dimension named in a dimension DDL statement does not exist.

Action: Check the spelling of the dimension name.

ORA-30334: illegal dimension level name

Cause: A level name in a dimension ddl statement did not conform to SQL identifier rules.

Action: Use a level name that begins with a letter, consists of only letters, digits, and underscores and contains no more than 30 characters.

ORA-30335: JOIN KEY clause references a level not in this hierarchy

Cause: The level name specified with the REFERENCES portion of a JOIN KEY clause in a dimension DDL statement does not reference a level in the hierarchy that contains the JOIN KEY clause. *Action: Check the spelling of the level name.

Action: n/a

ORA-30336: no child for specified JOIN KEY

Cause: The level specified in the REFERENCES portion of a JOIN KEY clause in a dimension DDL statement does not have a child level.

Action: Check the spelling of the level name referenced in the JOIN KEY clause. If the referenced level is the first level in the hierarchy, you need not and must not specify a JOIN KEY clause.

ORA-30337: multiple JOIN KEY clauses specified for the same parent level

Cause: Multiple JOIN KEY clauses were specified for a given parent level in a dimension hierarchy.

Action: Match up each JOIN KEY clause with the level it references in the hierarchy. Eliminate the redundant JOIN KEY clause.

ORA-30338: illegal dimension hierachy name

Cause: An illegal dimension hierarchy name was specified in a dimension DDL statement.

Action: Make sure the name begins with a letter, contains only letters, digits and underscore and contains no more than 30 characters. If you qualify the name with the owner name, make sure the owner name conforms with the requirements for an owner name on your system.

ORA-30339: illegal dimension attribute name

Cause: An illegal dimension attribute name was specified in a dimension DDL statement.

Action: Make sure the name begins with a letter, contains only letters, digits and underscore and contains no more than 30 characters. If you qualify the name with the owner name, make sure the owner name conforms with the requirements for an owner name on your system.

ORA-30340: illegal dimension name

Cause: An illegal dimension name was specified in a dimension DDL statement.

Action: Make sure the name begins with a letter, contains only letters, digits and underscore and contains no more than 30 characters. If you qualify the name with the owner name, make sure the owner name conforms with the requirements for an owner name on your system.

ORA-30341: dropped level has references

Cause: An attempt was made to drop a level using the default or RESTRICT option in a dimension while references to that level remain in the dimension. References can occur in hierarchies and attributes within the dimension.

Action: First remove any referenes to the level prior to dropping it, or specify the CASCADE option with the DROP LEVEL clause.

ORA-30342: referenced level is not defined in this dimension

Cause: A reference to a level not defined within the dimension was found.

Action: Check the spelling of the level name.

ORA-30343: level name is not unique within this dimension

Cause: Two or more levels were defined with the same name.

Action: Check the spelling of the level names.

ORA-30344: number of child cols different from number of parent level cols

Cause: The number of child columns specified in a JOIN KEY clause is not the same as the number of columns in the specified parent level.

Action: Check the child columns and the columns in the definition of the referenced parent level and correct the discrepancy.

ORA-30345: circular dimension hierarchy

Cause: A circularity was found the dimension hierarchy.

Action: Check the hierarchy for a level name that occurs more than once.

ORA-30346: hierarchy name must be unique within a dimension

Cause: The same name was used for more than one hierarchy in a dimension.

Action: Check the spelling of the hierarchy name.

ORA-30347: a table name is required to qualify the column specification

Cause: A table name was omitted in a column specification where where the column must be qualified by the table name.

Action: Qualify the column with the table name.

ORA-30348: ADD and DROP cannot both be specified

Cause: One or more ADD clauses were found in the same ALTER DIMENSION statement with one or more DROP clauses.

Action: Separate your ADD operations into one ALTER DIMENSION statement and your DROP operations into another.

ORA-30349: specified dimension hierarchy does not exist

Cause: A hierarchy name was encountered that is not defined within the dimension.

Action: Check the spelling of the hierarchy name.

ORA-30350: specified dimension attribute does not exist

Cause: An attribute name was encountered that is not defined within the dimension.

Action: Check the attribute name spelling.

ORA-30351: query rewrite does not currently support this expression

Cause: A complex expression was specified that is is not currently supported by query rewrite.

Action: Reduce the complexity of the expression.

ORA-30352: inconsistent numeric precision or string length

Cause: The SELECT expression was of a different numeric precision or string length than the corresponding container column. Therefore, query rewrite cannot guarantee results that are identical to the results obtained with the un-rewritten query.

Action: Correct the precision or string length difference, specify the WITH REDUCED PRECISION option, or disable the REWRITE option on the materialized view.

ORA-30353: expression not supported for query rewrite

Cause: The SELECT clause referenced UID, USER, ROWNUM, SYSDATE, CURRENT_TIMESTAMP, MAXVALUE, a sequence number, a bind variable, correlation variable, a set result, a trigger return variable, a parallel table queue column, collection iterator, a non-deterministic date format token RR, etc.

Action: Remove the offending expression or disable the REWRITE option on the materialized view.

ORA-30354: Query rewrite not allowed on SYS relations

Cause: A SYS relation was referenced in the select clause for a materialized view with query rewrite enabled.

Action: Remove the reference to the SYS relation from the select clause or disable the REWRITE option on the materialized view.

ORA-30355: materialized view container does not exist

Cause: A DROP TABLE command was issued directly against the materialized view container table.

Action: Use the DROP MATERIALIZED VIEW command to clean up the residual meta data for the materialized view. Then use the CREATE MATERIALIZED VIEW statement to recreate the materialized view. Thereafter, use the DROP

MATERIALIZED VIEW command rather than the DROP TABLE command to drop a materialized view.

ORA-30356: the specified refresh method is not supported in this context

Cause: The refresh method that was specified is not currently supported.

Action: Specify a different refresh method or change the context to enable support of the chosen refresh method.

ORA-30357: this PL/SQL function cannot be supported for query rewrite

Cause: The statement referenced a PL/SQL function that is not marked DETERMINISTIC.

Action: Perform one of the following actions: - Remove the use of the PL/SQL function. - Mark the PL/SQL function as DETERMINISTIC. - Disable the REWRITE option on the materialized view. The function should be marked DETERMINISTIC only if it always returns the same result value for any given set of input argument values, regardless of any database state or session state. Do not mark the function as DETERMINISTIC if it has any meaningful side-effects.

ORA-30358: summary and materialized view are not in same schema

Cause: An internal Oracle error occurred.

Action: Report the problem through your normal support channels.

ORA-30359: Query rewrite is not supported on SYS materialized views

Cause: An attempt was made to enable the REWRITE option on a materialized view in the SYS schema.

Action: Create the materialized view in a different schema or disable the REWRITE option.

ORA-30360: REF not supported with query rewrite

Cause: The statement contained a REF operator. Repeatable behavior cannot be guaranteed with the REF operator. Therefore, query rewrite cannot support the REF operator.

Action: Remove the reference to the REF operator or disable the REWRITE option on the materialized view.

ORA-30361: unrecognized string type

Cause: An internal Oracle error occurred.

Action: Report the problem through your normal support channels.

ORA-30362: dimension column cannot be a sequence

Cause: The dimension statement referenced a column that is a sequence.

Action: Remove the reference to the sequence.

ORA-30363: columns in a dimension column list must be in the same relation

Cause: The dimension statement contained a column list where the columns are not all from the same relation.

Action: Specify the list of columns using only columns from a single relation.

ORA-30364: this level has the same set of columns as another

Cause: The level definition contained the same set of columns as another level.

Action: Eliminate the redundant level definition.

ORA-30365: left relation in the JOIN KEY clause cannot be same as right

Cause: The relation of the child columns on the left side of the JOIN KEY clause was the same as that of the parent level on the right side.

Action: Remove the JOIN KEY clause. It is not required or allowed when the child and the parent are in the same relation.

ORA-30366: child JOIN KEY columns not in same relation as child level

Cause: The relation of the child columns on the left side of the JOIN KEY clause differed from that of that child level.

Action: Specify the correct child columns in the JOIN KEY clause.

ORA-30367: a JOIN KEY clause is required

Cause: A JOIN KEY clause was omitted in a dimension statement. A JOIN KEY clause is required when the child level and the parent level are not in the same relation.

Action: Specify a JOIN KEY clause to indicate how the relation of the child level joins to the relation of the parent level.

ORA-30368: ATTRIBUTE cannot determine column in a different relation

Cause: An ATTRIBUTE clause in a dimension statement specified a determined column on the right that is in a different relation than that of the level on the left.

Action: Specify attributes only for those dimension levels that functionally determine other columns within the same relation.

ORA-30369: maximum number of columns is 32

Cause: A list of columns was specified using more than 32 columns.

Action: Specify the list using no more than 32 columns.

ORA-30370: set operators are not supported in this context

Cause: A set operator such as UNION, UNION ALL, INTERSECT, or MINUS was encountered in an unsupported context, such as in a materialized view definition.

Action: Re-specify the expression to avoid the use of set operators.

ORA-30371: column cannot define a level in more than one dimension

Cause: A column was used in the definition of a level after it had already been used to define a level in a different dimension.

Action: Reorganize dimension levels and hierarchies into a single dimension such that no column is used to define levels in different dimensions. There is no limit on the number of levels or hierarchies you can place in a dimension. A column can be used to define any number of levels provided all such levels are in the same dimension and provided no two levels contain identical sets of columns.

ORA-30372: fine grain access policy conflicts with materialized view

Cause: A fine grain access control procedure has applied a non-null policy to the query for the materialized view.

Action: In order for the materialized view to work correctly, any fine grain access control procedure in effect for the query must return a null policy when the materialized view is being created or refreshed. This may be done by ensuring that the usernames for the creator, owner, and invoker of refresh procedures for the materialized view all receive a null policy by the user-written fine grain access control procedures.

ORA-30373: object data types are not supported in this context

Cause: An object data type was encountered in an unsupported context.

Action: Re-specify the expression to avoid the use of objects.

ORA-30374: materialized view is already fresh

Cause: If the materialized view is fresh, ORACLE ignores the ALTER MATERIALIZED VIEW *mv* RELY FRESH command, and issues this error message.

Action: None

ORA-30375: materialized view cannot be considered fresh

Cause: If the materialized view is invalid or unusable, it cannot be considered fresh with the ALTER MATERIALIZED VIEW *mv* CONSIDER FRESH command.

Action: None

ORA-30376: prevent sharing of a parsed query of an explain rewrite session

Cause: Explain rewrite generates a shared cursor after parsing the user query. Raising this error will prevent the cursor from being shared.

Action: None

ORA-30377: table *string*.MV_CAPABILITIES_TABLE not found

Cause: You have used the DBMS_MVIEW.EXPLAIN_MVIEW() API before you have defined the MV_CAPABILITIES_TABLE.

Action: Invoke the admin/utlxmv.sql script after connecting to the desired schema.

ORA-30378: MV_CAPABILITIES_TABLE is not compatible with Oracle version

Cause: One or more column definitions in the MV_CAPABILITIES_TABLE is either missing or incompatible with the current Oracle version.

Action: Connect to the appropriate schema, DROP TABLE

MV_CAPABILITIES_TABLE and recreate it by invoking the admin/utlxmv.sql script prior to invoking the DBMS_MVIEW.EXPLAIN_MVIEW() API.

ORA-30379: query txt not specified

Cause: You have attempted use DBMS_MVIEW.EXPLAIN_REWRITE() API using an empty query text argument

Action: Input a valid SQL query

ORA-30380: REWRITE_TABLE does not exist

Cause: You have used the DBMS_MVIEW.EXPLAIN_REWRITE() API before you have created the REWRITE_TABLE.

Action: Create it using the admin/utlxrw.sql script after connecting to the desired schema

ORA-30381: REWRITE_TABLE is not compatible with Oracle version

Cause: One or more column definitions in the REWRITE_TABLE is either missing or incompatible with the current Oracle version.

Action: Connect to the appropriate schema, DROP TABLE REWRITE_TABLE and recreate it by invoking the admin/utlxrw.sql script prior to invoking the DBMS_MVIEW.EXPLAIN_REWRITE() API.

ORA-30382: DROP MATERIALIZED VIEW *string.string* operation is not complete

Cause: The drop materialized view operation got an unexpected error while dropping summary object.

Action: Issue the drop materialized view command again

ORA-30383: specified dimension level does not exist in the attribute

Cause: An attribute level was encountered that is not defined within the attribute.

Action: Check the attribute level name spelling.

ORA-30384: specified column name does not exist in the attribute

Cause: A column was encountered that is not defined within the attribute.

Action: Check the attribute column name spelling.

ORA-30385: specified attribute relationship ('*string*' determines '*string*') exists

Cause: The specified attribute relationship has already been declared in one of the attribute clauses

Action: Remove the duplicate attribute relationship

ORA-30386: invalid SQL statement for DECLARE_REWRITE_EQUIVALENCE

Cause: Either the source or destination statement is NULL

Action: Verify both source and destination statement are valid

ORA-30387: invalid rewrite mode for REWRITE_EQUIVALENCE API

Cause: The specified rewrite mode is not supported by REWRITE_EQUIVALENCE API

Action: Verify the rewrite mode is supported by REWRITE_EQUIVALENCE API

ORA-30388: name of the rewrite equivalence is not specified

Cause: The name of the rewrite equivalence is NULL

Action: Input a valid rewrite equivalence name

ORA-30389: the source statement is not compatible with the destination statement

Cause: The SELECT clause of the source statement is not compatible with the SELECT clause of the destination statement

Action: Verify both SELECT clauses are compatible with each other such as numbers of SELECT list items are the same and the datatype for each SELECT list item is compatible

ORA-30390: the source statement is not equivalent to the destination statement

Cause: the set of rows returned by the source SQL text is not the same as the set of rows returned by the destination SQL text

Action: Make sure both source and destination statement return the same number of rows

ORA-30391: the specified rewrite equivalence does not exist

Cause: the specified rewrite equivalence does not exist

Action: Verify the rewrite equivalence has been created

ORA-30392: the checksum analysis for the rewrite equivalence failed

Cause: the given checksum does not match with that generated from the source and destination statements.

Action: Verify the create safe rewrite equivalence statement to see if it has been modified.

ORA-30393: a query block in the statement did not rewrite

Cause: A query block with a REWRITE_OR_ERROR hint did not rewrite

Action: Verify the rewrite equivalence has been created

ORA-30394: source statement identical to the destination statement

Cause: The source statement was identical to the destination statement

Action: Make sure both source and destination statements are not identical

ORA-30397: multiple JOIN KEY clauses specified for the same child level

Cause: Multiple JOIN KEY clauses were specified for a given child level in a dimension hierarchy.

Action: Eliminate the redundant JOIN KEY clauses.

ORA-30398: illegal JOIN KEY clause

Cause: A JOIN KEY clause was specified that did not conform to certain requirements. A JOIN KEY clause connecting a child level with its non-immediate ancestor level is allowed only when that child level and its ancestor level satisfy the following conditions: 1. The immediate parent of the child level must be a skip level. 2. The child level cannot be a skip level. 3. The ancestor level must be a non-skip level. 4. The ancestor level must be the nearest non-skip level to the child level in the hierarchy.

Action: Modify the JOIN KEY clause so that it satisfies the conditions mentioned above.

ORA-30399: a skip level must have at least one column that allows NULL values

Cause: A SKIP clause cannot be specified with a level when all of the columns that make up the level have NOT NULL constraints.

Action: Drop the SKIP clause.

ORA-30400: identical JOIN KEY clauses

Cause: Two JOIN KEY clauses with identical child keys and parent levels were specified.

Action: Eliminate the redundant JOIN KEY clause.

ORA-30401: JOIN KEY columns must be non-null

Cause: The dimension statement failed because the column(s) in the JOIN KEY clause permitted NULL values. The JOIN KEY columns are related to the columns of the dimension's skip levels in one or both of the following ways: 1. A skip level is defined over one or more of the JOIN KEY columns. 2. The attribute clauses of a skip level determine one or more of the JOIN KEY columns.

Action: Modify the JOIN KEY columns so that they do not allow NULL values.

ORA-30403: Daylight Saving Time (DST) upgrade in progress

Cause: Daylight Saving Time upgrade was in progress on a table in the materialized view.

Action: Wait until all tables in the materialized view have gone through DST upgrade.

ORA-30405: hive_table_name missing

Cause: Hive table name is missing.

Action: Provide the name of the hive table in order to fetch its metadata

ORA-30406: invalid or missing cluster_id and/or hive URI

Cause: Cluster id and/or hive URI (Uniform Resource Identifier) is (are) missing

Action: Provide the missing cluster id and/or hive URI in order to fetch hive metadata

ORA-30420: *string* is not a valid identifier

Cause: All identifiers used in the DBMS_OLAP package must have at most 30 characters, and must start with a letter that is followed by any combination of letters, numerals, and the signs '\$', '_', and '#'. Other characters cannot be used in identifiers. The rules for DBMS_OLAP identifiers are the same as for PL/SQL identifiers.

Action: Rename object to conform to the DBMS_OLAP naming rules and try again.

ORA-30430: list does not contain any valid summaries

Cause: List is empty or does not contain the names of existing summaries

Action: Verify that the list of names passed to refresh contains the name of at least one existing summary object

ORA-30431: refresh method must be ANY or INCREMENTAL or FORCE_FULL, not *string*

Cause: An invalid refresh method was specified

Action: Verify that the refresh method is one of 'ANY' or 'INCREMENTAL' or 'FORCE_FULL'

ORA-30432: summary '*string.string*' is in INVALID state

Cause: The summary is in INVALID state and cannot be refreshed

Action: n/a

ORA-30433: '*string.string*' is not a summary

Cause: There is no such summary, therefore it cannot be refreshed

Action: Verify the correct name of the summary

ORA-30434: refresh method must be one of FC?AN, not '*string*'

Cause: An invalid refresh method was specified

Action: Verify that the refresh method is one of 'FC?AN'

ORA-30435: job_queue_processes must be non-zero in order to refresh summaries

Cause: The server must be started with parameter 'job_queue_processes' greater than zero

Action: Correct the value of job_queue_processes and restart the server instance

ORA-30436: unable to open named pipe '*string*'

Cause: The refresh process was unable to open a named pipe to the job queue process usually because of insufficient system resources

Action: This is an internal error. Notify ORACLE technical support

ORA-30437: all job queue processes have stopped running

Cause: All of the job queue processes used by refresh have stopped for some reason. At least one job queue process must be running in order to refresh summaries.

Action: This is an internal error. Notify ORACLE technical support

ORA-30438: unable to access named pipe '*string*'

Cause: The refresh process was unable to access a named pipe to the job queue process after it successfully opened the pipe. This usually indicates an internal or operating system error condition.

Action: This is an internal error. Notify ORACLE technical support

ORA-30439: refresh of '*string.string*' failed because of *string*

Cause: The refresh job queue process encountered an error and is reporting it. The accompanying text of the message indicates cause of the error

Action: Varies, depending upon the reported cause.

ORA-30440: can't fast refresh;refresh complete or set event 30441 for partial refresh

Cause: Both DML and direct-load are performed against detail tables. Fast refresh can only process direct-load inserts.

Action: Refresh complete or set event 30441 to enable partial refresh with only direct-load inserts

ORA-30441: enable partial refresh when both DML and direct load inserts occur

ORA-30442: can not find the definition for filter *string*

Cause: For the specified filterid parameter, there is no corresponding filter definition found in the advisor repository

Action: Use a valid filterid generated by the create_filter function

ORA-30443: definition for filter *string*'s item *string* is invalid

Cause: The specified filter is invalid. It contains at least one invalid filter item. If a filter item has a string list, it becomes illegal when the string list cannot be successfully parsed. If the filter item contains a range definition, and the lower bound of the range is greater than the higher bound, the item also becomes invalid.

Action: Remove the illegal filter with the purge_filter sub-program and redefine a correct filter

ORA-30444: rewrite terminated by the sql analyzer

Cause: The sql analyzer terminates the rewrite process

Action: This is an internal error. Notify ORACLE technical support

ORA-30445: workload queries not found

Cause: No workload queries in the advisor repository can satisfy the specified filter

Action: Redefine a new filter or load additional workload queries that can satisfy the specified filter

ORA-30446: valid workload queries not found

Cause: None of the specified queries can be successfully parsed. The error may come from many sources: SQL syntax error, the owner specified by the load_workload subprograms do not match the real user who generates the SQL statement

Action: Only load valid SQL statements into the advisor repository. Make sure the statements can be parsed with privilege of the owner as specified in the owner parameter of the load_workload() subprogram.

ORA-30447: internal data for run number *string* is inconsistent

Cause: Users should not explicitly modify summary advisor's internal tables. Such modifications may cause inconsistency in the internal tables and result in this error.

Action: Users can call the DBMS_OLAP.PURGE_RESULTS subprogram to remove the inconsistent data from summary advisor's internal tables

ORA-30448: internal data of the advisor repository is inconsistent

Cause: Users should not explicitly modify summary advisor's internal tables. Such modifications may cause inconsistency in the internal tables and result in this error.

Action: This is an internal error. Notify ORACLE technical support

ORA-30449: syntax error in parameter *string*

Cause: The syntax for the specified parameter is incorrect

Action: Check ORACLE documentation for the correct syntax

ORA-30450: refresh_after_errors was TRUE; The following MVs could not be refreshed: *string*

Cause: One or more errors occurred during a refresh of multiple summaries.

Action: The number_of_failures parameter returns the count of how many failures occurred. The trace logs for each refresh operation describe the each individual failure in more detail

ORA-30451: internal error

Cause: An internal error was detected by the summary refresh subsystem, and aborted the refresh operation

Action: Notify ORACLE support.

ORA-30452: cannot compute AVG(X), VARIANCE(X) or STDDEV(X), without COUNT(X) or SUM(X)

Cause: Incremental refresh of summaries requires a COUNT(X) column in order to incrementally refresh AVG(X). It requires both SUM(X) and COUNT(X) columns in order to in refresh STDDEV(X) or VARIANCE(X)

Action: Make sure that the required columns are part of the summary definition if incremental refresh capability is desired.

ORA-30453: summary contains AVG without corresponding COUNT

Cause: Incremental refresh of summaries with AVG(X) requires a COUNT(X) column to be included in the summary definition

Action: Make sure that the required columns are part of the summary definition if incremental refresh capability is desired.

ORA-30454: summary contains STDDEV without corresponding SUM & COUNT

Cause: Incremental refresh of summaries with STDDEV(X) requires COUNT(X) and SUM(X) columns to be included in the summary definition

Action: Make sure that the required columns are part of the summary definition if incremental refresh capability is desired.

ORA-30455: summary contains VARIANCE without corresponding SUM & COUNT

Cause: Incremental refresh of summaries with VARIANCE(X) requires COUNT(X) and SUM(X) columns to be included in the summary definition

Action: Make sure that the required columns are part of the summary definition if incremental refresh capability is desired.

ORA-30456: '*string.string*' cannot be refreshed because of insufficient privilege

Cause: The user lacks one or more permissions that are required in order to refresh summaries.

Action: Make sure that the user is granted all required privileges.

ORA-30457: '*string.string*' cannot be refreshed because of unmanaged NOT NULL columns in container

Cause: The container object for the summary contains one or more unmanaged columns do not allow nulls, and which do not specify a default value for those columns.

Action: Make sure that default values are specified for all NOT NULL columns that are not part of the summary definition.

ORA-30458: '*string.string*' cannot be refreshed because the refresh mask is *string*

Cause: An attempt was made to incrementally refresh a summary that is not incrementally refreshable.

Action: Do not attempt to incrementally refresh the summary; use full refresh instead.

ORA-30459: '*string.string*' cannot be refreshed because the refresh method is NONE

Cause: An attempt was made to refresh a summary whose refresh method is NONE

Action: Summaries whose refresh method is NONE (NEVER REFRESH) cannot be refreshed. Alter the summary to change the default refresh method from NONE to some other value.

ORA-30460: '*string.string*' cannot be refreshed because it is marked UNUSABLE

Cause: An attempt was made to refresh a summary which is UNUSABLE

Action: Determine why the summary is UNUSABLE, re-enable it, and retry the refresh.

ORA-30461: '*string.string*' cannot be refreshed because it is marked DISABLED

Cause: An attempt was made to refresh a summary which is DISABLED

Action: Determine why the summary is DISABLED, re-enable it, and retry the refresh.

ORA-30462: unsupported operator: *string*

Cause: An attempt was made to refresh a summary containing an unsupported operator

Action: Verify that all columns of the summary contain expressions that are refreshable.

ORA-30463: '*string*' is not a detail table of any summary

Cause: The list of tables passed to refresh_dependent contains at least one invalid table name. That table is not a detail table of any summary and is therefore an invalid input to refresh_dependent

Action: Verify the correct name of all tables in the list

ORA-30464: no summaries exist

Cause: A call was made to refresh_all_mviews, but no summaries exist. At least one summary must exist before calling refresh_all_mviews

Action: Create one or more summaries

ORA-30465: supplied run_id is not valid: *string*

Cause: There are three possible causes: The specified run_id does not exist; the run_id was created by another user other than the current user; the run_id has already been used.

Action: Call DBMS_OLAP.CREATE_ID to create a new id

ORA-30466: can not find the specified workload *string*

Cause: The specified workload_id is not valid

Action: Use a valid workload_id or DBMS_OLAP.WORKLOAD_ALL

ORA-30467: internal data for filter number *string* is inconsistent

Cause: Users should not explicitly modify summary advisor's internal tables. Such modifications may cause inconsistency in the internal tables and result in this error.

Action: Users can call the DBMS_OLAP.PURGE_FILTER subprogram to remove the inconsistent data from summary advisor's internal tables

ORA-30475: feature not enabled: *string*

Cause: The specified feature is not enabled.

Action: Do not attempt to use this feature.

ORA-30476: PLAN_TABLE does not exist in the user's schema

Cause: Estimate_Summary_Size uses Oracle SQL "EXPLAIN PLAN" command to estimate cardinality of the specified select-clause. This requires a table called the PLAN_TABLE in the user's schema. For more information refer to the SQL Reference Manual.

Action: Create the PLAN_TABLE as described for EXPLAIN PLAN. On most systems a script utlxplan.sql will create this table.

ORA-30477: The input select_clause is incorrectly specified

Cause: The input select-clause parameter to Estimate_Summary_Size is incorrectly specified and cannot be compiled.

Action: Check the syntax of the select-clause.

ORA-30478: Specified dimension does not exist

Cause: the specified dimension to be verified does not exist

Action: Check the spelling of the dimension name

ORA-30479: Summary Advisor error\n*string*

Cause: An error has occurred in the Summary Advisor package This message will be followed by a second message giving more details about the nature of the error.

Action: See the Summary Advisor documentation for an explanation of the second error message.

ORA-30480: DISTINCT option not allowed with GROUP BY CUBE or ROLLUP

ORA-30481: GROUPING function only supported with GROUP BY CUBE or ROLLUP

ORA-30482: DISTINCT option not allowed for this function

ORA-30483: window functions are not allowed here

Cause: Window functions are allowed only in the SELECT list of a query. And, window function cannot be an argument to another window or group function.

Action: n/a

ORA-30484: missing window specification for this function

Cause: All window functions should be followed by window specification, like *function(argument list) OVER (window specification)*

Action: n/a

ORA-30485: missing ORDER BY expression in the window specification

Cause: Either the ORDER BY expression is mandatory for this function, or there is an aggregation group without any ORDER by expression.

Action: n/a

ORA-30486: invalid window aggregation group in the window specification

Cause: If the window specification is specified using RANGE option and there are multiple ORDER BY expressions, then the aggregation group cannot contain any expression (It can only have CURRENT ROW, UNBOUNDED PRECEDING, or UNBOUNDED FOLLOWING). First end point (bound) cannot be UNBOUNDED FOLLOWING and second end point cannot be UNBOUNDED PRECEDING. If the first end point is CURRENT ROW, then second end point can only be CURRENT ROW or *expr* /UNBOUNDED FOLLOWING. If the first end point is *expr* FOLLOWING, then second end point can only be *expr*/UNBOUNDED FOLLOWING.

Action: n/a

ORA-30487: ORDER BY not allowed here

Cause: DISTINCT functions and RATIO_TO_REPORT cannot have an ORDER BY

Action: n/a

ORA-30488: argument should be a function of expressions in PARTITION BY

Cause: The argument of the window function should be a constant for a partition.

Action: n/a

ORA-30489: Cannot have more than one rollup/cube expression list

Cause: GROUP BY clause has more than one rollup/cube expression list.

Action: Modify the query such that only one rollup/cube expressions appear per sub-query.

ORA-30490: Ambiguous expression in GROUP BY ROLLUP or CUBE list

Cause: An expression in the GROUP BY ROLLUP or CUBE list matches an expression in the ordinary GROUP BY expression list

Action: Remove the expression from either ordinary GROUP BY expression list or ROLLUP or CUBE expression list

ORA-30491: missing ORDER BY clause

ORA-30492: One of FIRST or LAST keywords is expected.

ORA-30493: The percentile value should be a number between 0 and 1.

Cause: A percentile value for PERCENTILE_CONT or PERCENTILE_DISC function is specified out of range.

Action: Specify a value from [0,1].

ORA-30494: The argument [*string*] of WIDTH_BUCKET function is NULL or invalid.

ORA-30495: The argument should be of numeric or date/datetime type.

ORA-30496: Argument should be a constant.

ORA-30497: Argument should be a constant or a function of expressions in GROUP BY.

ORA-30498: ALL option not allowed for this function

ORA-30500: database open triggers and server error triggers cannot have BEFORE type

Cause: An attempt was made to create a trigger that fires before the database is open or before server errors, but these types of triggers are not supported.

Action: Do not attempt to create a trigger that fires before the database is open or before server errors.

ORA-30501: instance shutdown triggers cannot have AFTER type

Cause: An attempt was made to create a trigger that fires after an instance shutdown, but this type of trigger is not supported.

Action: Do not attempt to create a trigger that fires after an instance shutdown.

ORA-30502: system triggers cannot have INSERT, UPDATE, or DELETE as triggering events

Cause: An attempt was made to create a system trigger with INSERT, UPDATE, or DELETE triggering events, but this type of trigger is not supported because a system trigger does not have a base table.

Action: Do not attempt to create a system trigger with INSERT, UPDATE, or DELETE triggering events.

ORA-30503: system triggers cannot have a REFERENCING clause

Cause: An attempt was made to use a REFERENCING clause with a system trigger, but this type of trigger is not supported because a system triggers does not have a base table.

Action: Do not use a REFERENCING clause with a system trigger.

ORA-30504: system triggers cannot have a FOR EACH ROW clause

Cause: An attempt was made to use a FOR EACH ROW clause with a system trigger, but this type of trigger is not supported because a system triggers does not have a base table.

Action: Do not use a FOR EACH ROW clause with a system trigger.

ORA-30505: system triggers should not reference a column in a WHEN clause

Cause: An attempt was made to use a WHEN clause to reference a column with a system trigger, but this type of trigger is not supported because a system trigger does not have a base table.

Action: Change the WHEN clause to an appropriate clause.

ORA-30506: system triggers cannot be based on tables or views

Cause: An attempt was made to base a system trigger on a table or a view.

Action: Make sure the type of the trigger is compatible with the base object.

ORA-30507: normal triggers cannot be based on a schema, a database, or a pluggable database

Cause: An attempt was made to base a normal trigger on a schema, a database, or a pluggable database, but normal triggers can be based only on tables or views.

Action: Make sure the type of the trigger is compatible with the base object.

ORA-30508: client logon triggers cannot have BEFORE type

Cause: An attempt was made to create a trigger that fires before logon. This type of trigger is not supported.

Action: Do not attempt to create a trigger that fires before logon.

ORA-30509: client logoff triggers cannot have AFTER type

Cause: An attempt was made to create a trigger that fires after logoff. This type of trigger is not supported.

Action: Do not attempt to create a trigger that fires after logoff.

ORA-30510: system triggers cannot be defined on the schema of SYS user

Cause: An attempt was made to define a system trigger on the schema of SYS user. This type of trigger is not supported currently.

Action: Do not attempt to create a system trigger defined on the schema of SYS user.

ORA-30511: invalid DDL operation in system triggers

Cause: An attempt was made to perform an invalid DDL operation in a system trigger. Most DDL operations currently are not supported in system triggers. The only currently supported DDL operations are table operations, pluggable database operations, ALTER COMPILER operations, and ALTER SESSION operations.

Action: Remove invalid DDL operations in system triggers.

ORA-30512: cannot modify *string.string* more than once in a transaction

Cause: An attempt was made to modify an object more than once in a transaction. This error is usually caused by a DDL statement that fires a system trigger that tries to modify the same object. It can also happen when an attempt is made to perform more than one DDL operation on a queue table in the same transaction without issuing a commit between operations.

Action: Do not create system triggers that might modify an already modified object. Also, do not specify more than one DDL operation on a queue table in the same transaction.

ORA-30513: cannot create system triggers of INSTEAD OF type

Cause: Only BEFORE or AFTER triggers can be created on system events.

Action: Change the trigger type to BEFORE or AFTER.

ORA-30514: system trigger cannot modify tablespace being made read only

Cause: A before trigger tries to modify a tablespace which is being made READ ONLY as the part of DDL operation

Action: Modify the trigger to avoid modifications to the objects in the same tablespace as the one which is being made read only, or use autonomous transactions to commit modifications

ORA-30515: suspend triggers cannot have BEFORE type

Cause: An attempt was made to create a trigger that fires before execution suspended. This type of trigger is not supported.

Action: Do not attempt to create a trigger that fires before execution suspended.

ORA-30516: database role change triggers cannot have BEFORE type

Cause: An attempt was made to create a trigger that fires before the role change completed. This type of trigger is not supported.

Action: Do not attempt to create a trigger that fires before the role change completes.

ORA-30550: index depends on a package/function spec/body which is not valid

Cause: the functional indexes depends on some invalid/non-existent package/function spec/body

Action: verify that all the package/functions which the index depends on exist and are valid

ORA-30551: The index depends on a package/type body which does not exist

Cause: the functional indexes depends on a package/type body which does not exist

Action: create the package/type body

ORA-30552: The package/procedure/function cannot be changed

Cause: The package/procedure/function is deterministic and some object depends on it

Action: Drop the other object which depends on the package/function/procedure you are trying to change

ORA-30553: The function is not deterministic

Cause: The function on which the index is defined is not deterministic

Action: If the function is deterministic, mark it DETERMINISTIC. If it is not deterministic (it depends on package state, database state, current time, or anything other than the function inputs) then do not create the index. The values returned by a deterministic function should not change even when the function is rewritten or recompiled.

ORA-30554: function-based index *string.string* is disabled

Cause: An attempt was made to access a function-based index that has been marked disabled because the function on which the index depends has been changed.

Action: Perform one of the following actions: -- drop the specified index using the DROP INDEX command -- rebuild the specified index using the ALTER INDEX REBUILD command -- enable the specified index using the ALTER INDEX ENABLE command -- make the specified index usable using the ALTER INDEX UNUSABLE command

ORA-30555: global index partitioning key is an expression

Cause: An attempt was made to use an expression as a partitioning key in an index.

Action: Do not attempt to use an expression as index partitioning key.

ORA-30556: either functional or bitmap join index is defined on the column to be modified

Cause: An ALTER TABLE MODIFY COLUMN was issued on a column on which either a functional index or bitmap join index exists.

Action: Drop the functional or bitmap join index before attempting to modify the column.

ORA-30557: function based index could not be properly maintained

Cause: The user updated a column on which a function based index is present which was not successfully updated

Action: Determine the error in updating the index and fix the problem

ORA-30558: internal error [*string*] in function based index

Cause: This is an internal error.

Action: Contact Worldwide support with the exact error text.

ORA-30560: SAMPLE clause not allowed

ORA-30561: SAMPLE option not allowed in statement with multiple table references

ORA-30562: SAMPLE percentage must be in the range [0.000001,100)

ORA-30563: outer join operator (+) is not allowed here

Cause: An attempt was made to reference (+) in either the select-list, CONNECT BY clause, START WITH clause, or ORDER BY clause.

Action: Do not use the operator in the select-list, CONNECT BY clause, START WITH clause, or ORDER BY clause.

ORA-30564: Index maintenance clause not allowed for ADD partition to RANGE partitioned tables

Cause: The clause INVALIDATE or UPDATE GLOBAL INDEXES is allowed only for ADD partition to a HASH partitioned table or ADD subpartition to a composite partitioned table.

Action: Remove clause and reissue operation

ORA-30565: Only one INVALIDATE or UPDATE GLOBAL INDEXES clause may be specified

Cause: The clause INVALIDATE or UPDATE GLOBAL INDEXES was specified more than once.

Action: Remove all but one of the INVALIDATE or UPDATE GLOBAL INDEXES clause and reissue the statement

ORA-30566: Index maintenance clause not allowed for this command

Cause: The clause INVALIDATE or UPDATE GLOBAL INDEXES is not allowed for this command

Action: Remove clause and reissue operation

ORA-30567: name already used by an existing log group

Cause: The specified log group name has to be unique.

Action: Specify a unique name for the log group. The name cannot be the same as any other log group, constraint, or cluster hash expression.

ORA-30568: cannot drop log group - nonexistent log group

Cause: The <log_group_name> specified in alter table drop log group is incorrect or nonexistent.

Action: Reenter the statement using the correct log group name.

ORA-30569: data type of given column is not supported in a log group

Cause: An attempt was made to include a column with one of these unsupported data types: LONG, VARRAY, nested table, object, LOB, FILE, or REF in a log group.

Action: Change the column data type or remove the log group. Then retry the operation.

ORA-30570: SEGMENT SPACE MANAGEMENT option already specified

Cause: In CREATE TABLESPACE, the SEGMENT SPACE MANAGEMENT option was specified more than once.

Action: Remove all but one of the SEGMENT SPACE MANAGEMENT specifications.

ORA-30571: invalid SEGMENT SPACE MANAGEMENT clause

Cause: An invalid option appears for SEGMENT SPACE MANAGEMENT clause.

Action: Specify one of the valid options: AUTO, MANUAL.

ORA-30572: AUTO segment space management not valid with DICTIONARY extent management

Cause: in CREATE TABLESPACE, the AUTO SEGMENT SPACE MANAGEMENT was used with a DICTIONARY extent management clause.

Action: Either specify LOCAL extent management or remove the AUTO SEGMENT SPACE MANAGEMENT specification.

ORA-30573: AUTO segment space management not valid for this type of tablespace

Cause: in CREATE TABLESPACE, the AUTO SEGMENT SPACE MANAGEMENT was used while creating an UNDO or TEMPORARY tablespace.

Action: Remove the AUTO SEGMENT SPACE MANAGEMENT clause.

ORA-30574: Cannot create rollback segment in tablespace with AUTO segment space management

Cause: A rollback segment is being created in a tablespace that was created with AUTO segment space management.

Action: Create the rollback segment in a different tablespace.

ORA-30575: ConText Option not installed

Cause: Oracle executable doesn't have ConText Option linked in

Action: get the correct version of Oracle

ORA-30576: ConText Option dictionary loading error

Cause: ConText dictionary tables may be corrupted

Action: not a user error

ORA-30577: SAMPLE group size must be in the range [1,UB4MAXVAL]

ORA-30625: method dispatch on NULL SELF argument is disallowed

Cause: A member method of a type is being invoked with a NULL SELF argument.

Action: Change the method invocation to pass in a valid self argument.

ORA-30626: function/procedure parameters of remote object types are not supported

ORA-30627: Oracle event to pass temp lobbs by ref from sql

ORA-30628: Oracle event to turn off passing temp lobbs by ref

ORA-30645: reject limit out of range

Cause: Reject limit specifies the number of records rejected before terminating a table scan. The range is either a number between 1..100000 or UNLIMITED if no limit is intended.

Action: Change the token representing the reject limit to either a number in the range of 0 and 100000 or the keyword UNLIMITED.

ORA-30646: schema for external table type must be SYS

Cause: A schema other than SYS was specified for the TYPE

Action: For this version of oracle server always use schema name SYS.

ORA-30647: error retrieving access parameters for external table *string.string*

Cause: an error occurred when fetching the access parameters for the specified external table.

Action: If the access parameter is a query which returns a CLOB, check EXTERNAL_TAB\$ to make sure the query is correct.

ORA-30648: missing LOCATION keyword

ORA-30649: missing DIRECTORY keyword

Cause: DEFAULT DIRECTORY clause missing or incorrect.

Action: Provide the DEFAULT DIRECTORY.

ORA-30650: missing PARAMETERS keyword

ORA-30651: missing CLOB keyword

ORA-30652: missing LIMIT keyword

ORA-30653: reject limit reached

Cause: the reject limit has been reached.

Action: Either cleanse the data, or increase the reject limit.

ORA-30654: missing DEFAULT keyword

Cause: DEFAULT DIRECTORY clause not specified or incorrect.

Action: Provide the DEFAULT DIRECTORY.

ORA-30655: cannot select FOR UPDATE from external organized table

Cause: A select for update on an external table was attempted.

Action: Don't do it!

ORA-30656: column type not supported on external organized table

Cause: Attempt to create an external organized table with a column of type LONG, LOB, BFILE, ADT, or VARRAY.

Action: These column types are not supported, change the DDL.

ORA-30657: operation not supported on external organized table

Cause: User attempted on operation on an external table which is not supported.

Action: Don't do that!

ORA-30658: attempt was made to create a temporary table with EXTERNAL organization

Cause: An attempt was made to create an External Organized Temporary table. This is not supported.

Action: Don't do that!

ORA-30659: too many locations specified for external table

Cause: An attempt was made to create an External Organized table with more than the maximum allowable (32767) locations specified.

Action: Don't do that, use fewer location clauses. Either consider concatenating the input files, or, creating two external tables with the input files split between them.

ORA-30665: invalid NOT NULL constraint specified on a DEFAULT ON NULL column

Cause: A NOT NULL constraint was not specified correctly on a DEFAULT ON NULL column.

Action: If a NOT NULL constraint is specified on a DEFAULT ON NULL column, it must be enabled and nondeferrable.

ORA-30666: cannot modify NOT NULL constraint on a DEFAULT ON NULL column

Cause: The NOT NULL constraint on a DEFAULT ON NULL column could not be modified.

Action: Do not modify the NOT NULL constraint on a DEFAULT ON NULL column.

ORA-30667: cannot drop NOT NULL constraint on a DEFAULT ON NULL column

Cause: The NOT NULL constraint on a DEFAULT ON NULL column could not be dropped.

Action: Do not drop the NOT NULL constraint on a DEFAULT ON NULL column. The only way to drop the constraint is to remove the ON NULL property of the column default.

ORA-30668: LATERAL cannot follow CROSS APPLY or OUTER APPLY

Cause: An attempt was made to follow the CROSS APPLY or OUTER APPLY keyword with the LATERAL keyword.

Action: Do not include the LATERAL keyword after CROSS APPLY or OUTER APPLY.

ORA-30669: table can have only one identity column

Cause: An attempt was made to specify more than one identity column on a table.

Action: Specify only one identity column per table.

ORA-30670: invalid NOT NULL constraint specified on an identity column

Cause: A NOT NULL constraint was not specified correctly on an identity column.

Action: If a NOT NULL constraint is specified on an identity column, it must be enabled and nondeferrable.

ORA-30671: cannot modify NOT NULL constraint on an identity column

Cause: The NOT NULL constraint on an identity column could not be modified.

Action: Do not modify the NOT NULL constraint on an identity column.

ORA-30672: cannot drop NOT NULL constraint on an identity column

Cause: The NOT NULL constraint on an identity column could not be dropped.

Action: Do not drop the NOT NULL constraint on an identity column. The only way to drop the constraint is to remove the identity property of the column with ALTER TABLE MODIFY *column* DROP IDENTITY.

ORA-30673: column to be modified is not an identity column

Cause: An attempt was made to modify the identity properties of that is not an identity column.

Action: Modify the identity properties of an identity column.

ORA-30674: identity column cannot have a default value

Cause: An attempt was made to add a default value to an identity column.

Action: Do not modify an identity column with a default value.

ORA-30675: identity column must be a numeric type

Cause: An attempt was made to create or alter an identity column with a non-numeric data type.

Action: Do not assign a non-numeric data type to an identity column.

ORA-30676: socket read or write failed

Cause: A problem kept a socket from reading or writing the expected amount of data. More specific information is not available.

Action: Try re-establishing a connection. You may need to restart whatever program is at the other end of the socket that failed, or you may need to have some problem on your network fixed.

ORA-30677: session is already connected to a debugger

Cause: An attempt to connect a session to a debugger could not proceed because the session is already connected to some debugger.

Action: Either use the option to force a connection or first disconnect the session from its existing debugger.

ORA-30678: too many open connections

Cause: An attempt to open a connection failed because too many are already open by this session. The number of allowed connections varies as some may be in use through other components which share the same pool of allowed connections.

Action: Retry after closing some other connection. The number of connections supported is currently not adjustable.

ORA-30679: JDWP-based debugging not supported in this configuration

Cause: An attempt to open a debugging connection failed because this server configuration cannot support the required asynchronous socket traffic detection.

Action: This feature will not work under this server configuration. Either the feature is not supported on this platform at all, or is available only through use of a protocol=tcp dispatcher in shared-server configurations. Please consult the platform-specific documentation and "readme" material.

ORA-30680: debugger connection handshake failed

Cause: A problem occurred when trying to establish a debugger connection. This might indicate that the port specified as the location of the debugger is actually being used by some other type of application.

Action: Correct the host or port specifications if they are incorrect, and verify that the debugger is properly waiting for a connection.

ORA-30681: improper value for argument EXTENSIONS_CMD_SET

Cause: An improper parameter value was provided in a call to DBMS_DEBUG_JDWP.CONNECT_TCP.

Action: Correct the indicated parameter value and try again.

ORA-30682: improper value for argument OPTION_FLAGS

Cause: An improper parameter value was provided in a call to DBMS_DEBUG_JDWP.CONNECT_TCP.

Action: Correct the indicated parameter value and try again.

ORA-30683: failure establishing connection to debugger

Cause: An error was indicated when trying to establish a connection to a debugger. Usually a TNS error will display along with this message to further explain the problem, although this TNS error will likely be hidden if you choose to trap the error.

Action: Correct the indicated parameter value and try again.

ORA-30685: package version is not compatible with Oracle version

Cause: The installed version of the package from which this error is raised is not compatible with this release of Oracle.

Action: Install a compatible version of the package's spec and body.

ORA-30686: no dispatcher accepted TCP/IP connection request

Cause: A connection had to be routed through a local socket rather than a dispatcher. When this occurs, shared servers are less beneficial because the session that owns the socket cannot relinquish the process until the socket is closed. The most likely cause is that no dispatcher is configured for protocol=tcp.

Action: To improve the scalability of your configuration, configure a dispatcher for protocol=tcp. To route these particular connections through a particular set of dispatchers, you can specify presentation=kgas. However, if you haven't done so, any protocol=tcp dispatcher will be used.

ORA-30687: session terminated by debugger

Cause: Your program's execution has been stopped by the debugger. This can occur because of an explicit request to do so sent by the debugger, or because the debugger disconnected without first telling Oracle to let your program continue to run after the disconnection. To stop your program completely, Oracle needs to fully terminate the process.

Action: This is in response to a debugger request; it is not an error. No action required.

ORA-30688: maximum program calling depth exceeded

Cause: Your program contains a set of calls that are too deep to be handled. Only transitions between the different execution engines (SQL, PL/SQL, and Java) count in reaching this limit; calls within the same engine don't count.

Action: Restructure your program so as to not call so deeply. Perhaps some recursion can be replaced with iteration.

ORA-30689: improper value for ORA_DEBUG_JDWP

Cause: An improper value was used for ORA_DEBUG_JDWP when trying to establish a connection to a debugger. The value either did not conform to the format of ORA_DEBUG_JDWP or was too long.

Action: Correct the value for ORA_DEBUG_JDWP and try again.

ORA-30690: timeout occurred while registering a TCP/IP connection for data traffic detection

Cause: A timeout occurred while registering a TCP/IP connection for data traffic detection.

Action: Retry the operation later.

ORA-30691: failed to allocate system resources while registering a TCP/IP connection for data traffic detection

Cause: System resources ran out while registering a TCP/IP connection for data traffic detection.

Action: Retry the operation later.

ORA-30695: JDWP message format problem

Cause: A message passed from one software subcomponent to another using the JDWP protocol appears invalidly formatted.

Action: This is an internal error. Contact ORACLE Support Services.

ORA-30725: JDWP-based debugging is not yet available

Cause: This feature is not yet available for use.

Action: Please wait for a future release.

ORA-30726: cannot specify referenced column list here

Cause: An attempt was made to specify a referenced column list for a referential constraint involving a REF column.

Action: Remove the referenced column list specification.

ORA-30727: duplicate referential constraint for a REF column

Cause: Multiple referential constraints were specified for a single REF column.

Action: Remove the duplicate referential constraint and retry the operation.

ORA-30728: maximum number of columns exceeded

Cause: Adding referential constraint on a REF column requires the the creation of an additional column.

Action: Drop some columns and retry the operation.

ORA-30729: maximum number of columns exceeded

Cause: Adding scope or referential constraint on a REF column requires the creation of additional columns if the target table's object identifier is primary key based.

Action: Drop some columns and retry the operation.

ORA-30730: referential constraint not allowed on nested table column

Cause: An attempt was made to define a referential constraint on a nested table column.

Action: Do not specify referential constraints on nested table columns.

ORA-30731: scope constraint not allowed on nested table column when the nested table is being created

Cause: An attempt was made to define a scope constraint on a nested table column when the nested table is being created.

Action: Do not specify a scope constraint on a nested table column when creating it. Instead, specify it using the ALTER TABLE statement.

ORA-30732: table contains no user-visible columns

Cause: An attempt was made to query on a system table which has no user-visible columns.

Action: Do not query on a system table that has no user-visible columns.

ORA-30733: cannot specify rowid constraint on scoped ref column

Cause: An attempt was made to specify rowid constraint on a scoped REF column.

Action: Remove the rowid constraint and then retry the operation.

ORA-30734: cannot specify scope constraint on ref column with rowid

Cause: An attempt was made to specify scope constraint on a REF column with the rowid constraint.

Action: Remove the scope constraint and then retry the operation.

ORA-30735: cannot create multiple subtables of the same type under a supertable

Cause: An attempt was made to create under a supertable (superview), a subtable(subview) of the same type as another existing subtable (subview).

Action: Drop the existing subtable(subview) and retry the operation.

ORA-30736: objects in a table or view hierarchy have to be in the same schema

Cause: An attempt was made to create a subtable(subview) under a supertable(superview) located in another schema.

Action: Connect as schema owner of the superobject and retry the operation.

ORA-30737: cannot create subtable of a type which is not a subtype of the type of the supertable

Cause: An attempt was made to create a subtable(subview) of a type which is not a subtype of the type of the super object.

Action: Change the type of the subtable to be a subtype of the superobject's type and then retry the operation.

ORA-30738: object "*string*" does not exist in schema "*string*"

Cause: The specified object does not exist.

Action: Ensure that the specified object exists and retry the operation.

ORA-30739: cannot drop a table that has subtables

Cause: The user tried to drop a table that has subtables defined under it.

Action: Drop all subtables before trying this operation.

ORA-30740: cannot grant UNDER privilege on this object

Cause: The user tried to grant UNDER privilege on an object that is not one of the following : non final object type, object table of non final type, object view of non final type.

Action: Ensure that the UNDER privilege is granted on a valid object.

ORA-30741: WITH HIERARCHY OPTION can be specified only for SELECT or READ privileges

Cause: An attempt was made to specify WITH HIERARCHY OPTION for a privilege other than SELECT or READ.

Action: Ensure that the WITH HIERARCHY OPTION is specified only with the SELECT or READ privilege.

ORA-30742: cannot grant SELECT or READ privilege when WITH HIERARCHY OPTION is specified on the object

Cause: An attempt was made to grant the SELECT or READ privilege when the WITH HIERARCHY OPTION was specified on an object that is not one of the following: - Object table of non-final type - Object view of non-final type

Action: Ensure that the SELECT or READ privilege is granted on a valid object when the WITH HIERARCHY OPTION is specified.

ORA-30743: "string" is not an object view

Cause: The specified object is not an object view.

Action: Specify an object view and retry the operation.

ORA-30744: "string" is not an object table

Cause: The specified object is not an object table.

Action: Specify an object table and retry the operation.

ORA-30745: error occurred while trying to add column "string" in table "string"

Cause: The user tried to add a subtype which tried to alter the tables dependent on the supertype.

Action: Ensure that the table will not exceed the columnlimit on adding this subtype.

ORA-30746: error occurred while trying to drop column "string" in table "string"

Cause: The user tried to drop a subtype with VALIDATE option which tried to check for stored instances of the type in the stated table

Action: Delete all instances of this subtype and then drop the type.

ORA-30747: cannot create substitutable tables or columns of non final type *string.string*

Cause: The user tried to create substitutable table or column of a non final type. This operation is not currently supported.

Action: Change the statement to create a non substitutable table/column.

ORA-30748: column *string* already enabled to store objects of type *string.string*

Cause: The user is trying to enable a column to store instances of a type for which it is already enabled.

Action: None

ORA-30749: column *string* not enabled to store objects of type *string.string*

Cause: The user is trying to disable a column from storing instances of a type for which it is already enabled.

Action: None

ORA-30750: cannot enable column *string* to store objects of type *string.string*

Cause: The user is trying to enable a column to store instances of a subtype. The error is raised due to one of the following :

Action: Fix the cause of the error and retry the operation.

ORA-30751: cannot disable column *string* from storing objects of type *string.string*

Cause: The user is trying to drop a type from being stored in a substitutable column or table. This error is raised due to one of the following reasons : - the column is enabled to store instances of some subtype of the type being dropped. - the column is enabled to store instances of only one type

Action: Fix the cause of the error and retry the operation.

ORA-30752: column or table *string* is not substitutable

Cause: The user is performing an operation that is not allowed on non substitutable column or table.

Action: None

ORA-30753: column or table *string* is substitutable

Cause: The user is performing an operation that is not allowed on substitutable column or table.

Action: None

ORA-30754: column or table *string* stores objects of only one type

Cause: The user is trying to perform an operation that is not allowed on object column or table that is enabled to store instances of a single type.

Action: None

ORA-30755: error during expansion of view hierarchy

Cause: There was an error while trying to expand a view hierarchy. This could be due to invalid subviews (or subviews with errors)

Action: Ensure that all subviews are valid e.g. alter view ... compile and retry the operation.

ORA-30756: cannot create column or table of type that contains a supertype attribute

Cause: The user tried to create a column or table of an object type that contains a supertype attribute. This is not supported because it leads to infinite recursion in our current storage model. Note that creating a column of a type implies that we create columns corresponding to all subtype attributes as well.

Action: Change the type definition to contain a supertype REF attribute instead of the supertype object attribute.

ORA-30757: cannot access type information

Cause: Either a subtype was created and operations performed with this new type while the session was in progress, or the type information was unpinned from the object cache.

Action: Commit necessary changes, end the user session, reconnect again and re-try the object operations. If problem persists, contact your Oracle Support representative.

ORA-30758: cannot specify local on a non-partitioned table

Cause: The user specified local or global for a nested table storage parameter while the base table is non-partitioned.

Action: None

ORA-30759: nested table cannot be partitioned for a composite partitioned base table

Cause: The user specified local or nested table parameters inside partition clause for a composite partitioned table.

Action: Issue the DDL without nested table partition clauses for composite partitioned table.

ORA-30765: cannot modify scope for an unscoped REF column

Cause: An attempt was made to modify the scope for an unscoped REF column.

Action: Use an ALTER TABLE ADD SCOPE FOR command instead.

ORA-30766: cannot modify scope for a REF column with a REFERENCES constraint

Cause: An attempt was made to modify the scope for a REF column with a REFERENCES constraint.

Action: Drop the REFERENCES constraint, and retry the operation.

ORA-30767: OID type mismatch

Cause: An attempt was made to modify the scope for a REF column to a table whose object identifier's type is different from that of the original scoped table.

Action: n/a

ORA-30768: Cannot evaluate pipelined function

Cause: Pipelined functions can only be used in a TABLE expression in the from clause.

Action: Use a non-pipelined function instead.

ORA-30770: Cannot specify storage options for fixed size opaque type

Cause: Storage clause was specified during table creation for a fixed size opaque type.

Action: Do not provide storage option clause.

ORA-30771: Cannot add more than one referential constraint on REF column "string"

Cause: Multiple referential constraints were specified for a single REF column.

Action: Remove the additional referential constraints and retry the operation.

ORA-30772: opaque types do not have default constructors

Cause: Constructor invocation did not succeed, since no user-defined constructors were defined for the opaque type, and since opaque types do not have default constructors.

Action: Add user-defined constructors to opaque type, or specify a member or static method for the opaque type.

ORA-30773: opaque types do not have default constructors

Cause: Constructor invocation did not succeed, since no user-defined constructors were defined for the opaque type, and since opaque types do not have default constructors.

Action: Add user-defined constructors to opaque type, or specify a member or static method for the opaque type.

ORA-30774: Library "string" was erroneously defined as a trusted library for opaque types

Cause: User has defined some library as trusted library for opaque types.

Action: Trusted libraries for opaque types can only be defined in internal code.

ORA-30926: unable to get a stable set of rows in the source tables

Cause: A stable set of rows could not be got because of large dml activity or a non-deterministic where clause.

Action: Remove any non-deterministic where clauses and reissue the dml.

ORA-30927: Unable to complete execution due to failure in temporary table transformation

Cause: In memory temporary tables we create are aged out of shared pool before we are able to grab them again.

Action: Reduce activities that use a lot of shared pool space or wait for a while, then retry.

ORA-30928: Connect by filtering phase runs out of temp tablespace

Cause: It is probably caused by the fact that there is a loop in the data.

Action: Please retry the query with the NO_FILTERING hint. If the same error still occurs, then increase temp tablespace.

ORA-30929: ORDER SIBLINGS BY clause not allowed here

Cause: ORDER SIBLINGS BY clause is specified in a query which doesn't have CONNECT BY clause.

Action: Remove ORDER SIBLINGS BY clause or add CONNECT BY clause.

ORA-30930: NOCYCLE keyword is required with CONNECT_BY_ISCYCLE pseudocolumn

Cause: CONNECT_BY_ISCYCLE was specified in a query which does not have the NOCYCLE keyword.

Action: Remove CONNECT_BY_ISCYCLE or add NOCYCLE.

ORA-30931: Element 'string' cannot contain mixed text

Cause: XML elements must be declared mixed to contain multiple text nodes

Action: Declare this element type as mixed in its schema

ORA-30932: Reference node 'string' not contained in specified parent node 'string'

Cause: When using a reference node, it must have the specified parent node

Action: Use a node in the specified parent as the reference

ORA-30933: Element 'string' may not appear at this point within parent 'string'

Cause: The ordering specified by the content model of the parent does not allow for this element to occur at this position.

Action: Reorder the child elements to conform with the content model of the parent element

ORA-30934: 'string' (string node) cannot be inserted in parent 'string' (string node)

Cause: The schema does not allow a child node of this type to be inserted into a parent node of this type. For example, only element nodes may only be inserted into a document

Action: Insert only child nodes that make sense for this node type

ORA-30935: XML maxoccurs value (string) exceeded

Cause: An attempt was made to insert more than maxoccurs values into a schema-based XML document.

Action: Do not insert more than maxoccurs values into the document.

ORA-30936: Maximum number (string) of 'string' XML node elements exceeded

Cause: An attempt was made to insert more than the allowed number of elements (specified by the maxoccurs facet) into an XML document.

Action: Do not attempt to add more than the maximum number of elements to XML documents.

ORA-30937: No schema definition for 'string' (namespace 'string') in parent 'string'

Cause: The schema definition for the parent node being processed does not allow for the specified child node in its content model. Note that any typecasting via xsi:type must occur before the schema definitions for the new type can be used.

Action: Only insert elements and attributes declared in the schema. Check to make sure that xsi:type (if used) is specified first.

ORA-30938: No prefix defined for namespace 'string' (particle string)

Cause: An XML namespace mapping (`xmlns:prefix=namespace URL`) must be defined for each particle (element or attribute) stored in an schema-constrained XMLType document.

Action: Add an xmlns attribute definition (attribute name="xmlns:prefix" and value="namespace URL") to the current XMLType document. The safest place to add this attribute is in the root node of the document to ensure that the mapping will be in scope.

ORA-30939: Order violation: Element 'string' may not follow element 'string'

Cause: The XML schema specifies a content model that is sequential, where the order of nodes in the instance must follow the order specified by the schema, and this instance relies on the schema validity to avoid maintaining instance order information

Action: Insert elements only in the order specified in the schema

ORA-30940: Cannot resolve prefix 'string' for QName node 'string'

Cause: An attempt was made to store a QName value without having a valid namespace in scope for that prefix.

Action: Declare the namespace for the prefix used

ORA-30941: Cannot specify empty URI for non-default namespace 'string'

Cause: An attempt was made to insert a namespace declaration for a non-default namespace using an empty URI string.

Action: Specify a non-empty URI for namespace declarations other than the default namespace.

ORA-30942: XML Schema Evolution error for schema '*string*' table *string* column '*string*'

Cause: The given XMLType table/column which conforms to the given schema had errors during evolution. For more information, see the more specific error below this one

Action: Based on the schema, table and column information in this error and the more specific error below, take corrective action

ORA-30943: XML Schema '*string*' is dependent on XML schema '*string*'

Cause: Not all dependent schemas were specified and/or the schemas were not specified in dependency order, i.e., if schema S1 is dependent on schema S, S must appear before S1.

Action: Include the previously unspecified schema in the list of schemas and/or correct the order in which the schemas are specified. Then retry the operation.

ORA-30944: Error during rollback for XML schema '*string*' table *string* column '*string*'

Cause: The given XMLType table/column which conforms to the given schema had errors during a rollback of XML schema evolution. For more information, see the more specific error below this one

Action: Based on the schema, table and column information in this error and the more specific error below, take corrective action

ORA-30945: Could not create mapping table '*string*'

Cause: A mapping table could not be created during XML schema evolution. For more information, see the more specific error below this one

Action: Ensure that a table with the given name does not exist and retry the operation

ORA-30946: XML Schema Evolution warning: temporary tables not cleaned up

Cause: An error occurred after the schema was evolved while cleaning up temporary tables. The schema evolution was successful

Action: If the user needs to remove the temporary tables, use the mapping table to get the temporary table names and drop them.

ORA-30947: Dependent table '*string*' of XML schema '*string*' is version-enabled

Cause: An XMLType table that is dependent on an XML schema being evolved is version-enabled.

Action: Disable versioning on the XMLType table

ORA-30948: Illegal in-place XML schema evolution operation: *string*

Cause: An attempt was made to make an XML schema change that is not permitted through in-place XML schema evolution.

Action: Ensure that the XML schema changes specified in the XMLDiff argument to DBMS_XMLSCHEMA.inPlaceEvolve are permitted.

ORA-30951: Element or attribute at Xpath *string* exceeds maximum length

Cause: An attempt was made to insert a node of length exceeding the maximum length (specified by the maxLength facet) into an XML document.

Action: Do not attempt to add a node exceeding the maximum length to XML documents.

ORA-30952: illegal configuration of HTTP/HTTPS in xdbconfig.xml

Cause: An attempt was made to update xdbconfig.xml when either 1) a value was specified for http2-port but not for http2-protocol (or vice versa), OR 2) http-port and http2-port were set to the same value.

Action: Specify values for both elements http2-port and http2-protocol, AND set different values for http-port and http2-port.

ORA-30953: XML minoccurs value (*string*) violated

Cause: An attempt was made to delete more than the required minimum number of elements (specified by the minoccurs facet) from an XML document.

Action: Do not attempt to delete more than the required minimum number of elements that must be present from the XML document.

ORA-30954: char *string* is invalid in *string*

Cause: An invalid XML character was found.

Action: Use only characters allowed by the XML specification.

ORA-30955: The XML Index does not exist or is not asynchronous

Cause: An attempt was made to synchronize a nonexistent XML Index or a synchronous XML Index.

Action: Create the XML Index in asynchronous mode.

ORA-30956: invalid option for XML Index

Cause: Unexpected error.

Action: File a bug.

ORA-30957: cannot downgrade because there are XML indexes

Cause: An attempt was made to downgrade a database that has XML indexes.

Action: Drop all XML indexes before attempting the downgrade.

ORA-30958: operation directly on the Pending Table is disallowed

Cause: An illegal operation was attempted on secondary objects of an XML Index.

Action: Try appropriate operation on the XML Index.

ORA-30959: The indexed column is not stored in CLOB.

Cause: An attempt was made to create an XML Index on an OR-XMLType column.

Action: Re-create the XML Index on a CLOB-XMLType column.

ORA-30960: The entity is neither an XPATH nor a NAMESPACE.

Cause: The given string had invalid syntax.

Action: Check the syntax for XPATH and NAMESPACE.

ORA-30961: internal SQL statement is too long

Cause: unexpected internal error

Action: File a bug and provide the test case.

ORA-30962: inconsistent ODCI input arguments

Cause: unexpected internal error

Action: File a bug and provide the test case.

ORA-30963: The indexed column is not of XMLType.

Cause: An attempt was made to create an XML Index on a non-XMLType column.

Action: Re-create the XML Index on an XMLType column.

ORA-30964: The XML Index was not usable.

Cause: The domain index for XML was not created properly. The Path Table is missing.

Action: Drop and re-create the XML Index.

ORA-30965: fragment does not fit into the VARCHAR2 VALUE column

Cause: The fragment size exceeded the max size.

Action: Re-create the XML Index with values stored in CLOB.

ORA-30966: error detected in the XML Index layer

Cause: Unexpected error.

Action: File a bug.

ORA-30967: operation directly on the Path Table is disallowed

Cause: illegal operation on secondary objects of a domain index

Action: Try appropriate operation on the domain index.

ORA-30968: invalid XPATH or NAMESPACE option for XML Index

Cause: An attempt was made to use an unsupported option.

Action: Use the appropriate option.

ORA-30969: invalid syntax for PARAMETERS

Cause: An attempt was made to specify an invalid option.

Action: Check and use valid options.

ORA-30970: option not supported for XML Index

Cause: An attempt was made to specify an invalid option.

Action: Check and use valid options.

ORA-30971: illegal operation on the Path Table

Cause: An attempt was made to use an unsupported option.

Action: Use the appropriate command on the XML Index.

ORA-30972: invalid ALTER INDEX option for XML Index

Cause: An attempt was made to use an unsupported option.

Action: Use the appropriate option.

ORA-30973: invalid Path Table option for XML Index

Cause: An attempt was made to use an unsupported option.

Action: Use the appropriate option.

ORA-30974: invalid Path Id Index option for XML Index

Cause: An attempt was made to use an unsupported option.

Action: Use the appropriate option.

ORA-30975: invalid Order Key Index option for XML Index

Cause: An attempt was made to use an unsupported option.

Action: Use the appropriate option.

ORA-30976: invalid Parent Order Key Index option for XML Index

Cause: An attempt was made to use an unsupported option.

Action: Use the appropriate option.

ORA-30977: invalid Value Index option for XML Index

Cause: An attempt was made to use an unsupported option.

Action: Use the appropriate option.

ORA-30978: The XML Index is not locally partitioned.

Cause: An attempt was made to create a global partitioned XML Index.

Action: Do not attempt to create global partitioned XML Index or to maintain a non-local partitioned XML Index.

ORA-30979: Partitioned XML Index not yet supported.

Cause: An attempt was made to create a partitioned XML Index.

Action: Do not attempt to create partitioned XML Index.

ORA-30980: Invalid Input.

Cause: The input to the function is not valid.

Action: Make sure the input is valid (both syntactically as well as semantically).

ORA-30982: Invalid option for a partition of an XML Index

Cause: An invalid option was specified at the partition level.

Action: Remove the invalid option.

ORA-30983: Maximum order key depth exceeded

Cause: The document could not be indexed because its nesting depth was more than that allowed by XML Index.

Action: Remove the offending document.

ORA-30984: The XMLType column has to be declared as virtual

Cause: The XMLType column was not declared as virtual when creating a structured XMLIndex.

Action: The XMLType column has to be declared as virtual when creating a structured XMLIndex.

ORA-30985: The virtual XMLType column for chaining is missing

Cause: The virtual XMLType column for chaining was missing when creating a structured XML index.

Action: A virtual XMLType column for chaining has to be specified when creating a structured XML Index.

ORA-30986: XML Index with more than one virtual column is disallowed

Cause: An attempt was made to create an XML Index with more than one virtual column.

Action: Create only one virtual column.

ORA-30987: XML Index on XML DB repository does not exist

Cause: An attempt was made to operate on a non-existent XML Index on XML DB repository.

Action: First create the index using
DBMS_XDB_ADMIN.CREATEREPOSITORYXMLINDEX. Try the operation again.

ORA-30988: Metadata of XML Index corrupted

Cause: An attempt to locate the XML Index failed.

Action: Contact Oracle Support Services.

ORA-30989: XML Index on an Index Organized Table is not yet supported

Cause: XML Index supported only on Heap Organized Table.

Action: Contact Oracle Support Services.

ORA-30990: insufficient privileges to change owner of resource *string*

Cause: An attempt was made to change the *Owner* field of an XML DB resource without sufficient privileges to do so.

Action: Switch to SYS before performing the ownership change, or have the intended recipient of the resource perform the transfer.

ORA-30991: cannot use DOM to add special attribute to schema-based parent

Cause: An attempt was made to add or remove an xsi:schemaLocation, xsi:noNamespaceSchemaLocation, xsi:type, or xsi:nil attribute to or from a schema-based XML node using DOM.

Action: Use the updateXML operator instead of DOM.

ORA-30992: error occurred at Xpath *string*

ORA-30993: complex type *string* is not referred by any global element

ORA-30994: Invalid argument for DOM stream

Cause: Either a null or a nonleaf node was passed.

Action: Use a combination of DOM API and DOM streams to produce desired effect.

ORA-30995: DOM streams operations cannot be performed on null/invalid node

Cause: The node is NULL or inexistent

Action: Check the input parameters.

ORA-30996: Streams operations over non-existent stream

Cause: The stream passed is NULL or invalid.

Action: Check the input parameters.

ORA-30997: XSL processing of XML failed with error LPX-*string*

Cause: An LPX routine (XML/XSL processing) returned an error while transforming an XML doc.

Action: Look up the LPX error and follow its corrective action.

ORA-30998: transformation error: *string*

Cause: Error occurred while transforming an XML doc with an XSL style sheet.

Action: Contact Oracle Support Services.

ORA-30999: XML context creation failed while *string*

Cause: Error occurred while creating XML context.

Action: Contact Oracle Support Services.

ORA-31000: Resource '*string*' is not an XDB schema document

Cause: The given schema URL does not refer to a registered XDB schema

Action: Make sure the specified schema has been registered in XDB

ORA-31001: Invalid resource handle or path name "*string*"

Cause: An invalid resource handle or path name was passed to the XDB hierarchical resolver.

Action: Pass a valid resource handle or path name to the hierarchical resolver.

ORA-31002: Path name *string* is not a container

Cause: XDB expected the given path name to represent a container.

Action: Pass a path name or resource handle that represents a container.

ORA-31003: Parent *string* already contains child entry *string*

Cause: An attempt was made to insert a duplicate child into the XDB hierarchical resolver.

Action: Insert a unique name into the container.

ORA-31004: Length *string* of the BLOB in XDB\$H_INDEX is below the minimum *string*

Cause: In the XDB\$H_INDEX table, the CHILDREN column, a BLOB, must have a certain minimum length without being chained. The calculated length of the LOB was less than the stated minimum.

Action: Set the value of the init.ora parameter db_block_size to at least 2K. For XDB to run at its fastest, set db_block_size to 8K.

ORA-31005: Path name length *string* exceeds maximum length *string*

Cause: The length of a path name passed to the XDB hierarchical resolver exceeded the maximum length.

Action: Choose a shorter path name.

ORA-31006: Path name segment length *string* exceeds maximum length *string*

Cause: The length of a path name segment passed to the XDB hierarchical resolver exceeded the maximum length of a path name segment.

Action: Choose a shorter path name segment.

ORA-31007: Attempted to delete non-empty container *string/string*

Cause: An attempt was made to delete a non-empty container in the XDB hierarchical resolver.

Action: Either perform a recursive deletion, or first delete the contents of the container.

ORA-31008: LPX context creation failed while *string*

Cause: Error occurred while creating LPX context because of an unexpected NULL value.

Action: Contact Oracle Support Services.

ORA-31009: Access denied for property *string*

Cause: An attempt was made to access a property you don't have access to

Action: Check the ACL to see what privileges you have for this property

ORA-31010: XML element index *string* exceeds maximum insertion index *string*

Cause: An attempt was made to insert an XML element at an invalid index location in the node.

Action: Choose a new index that falls within the allowed range.

ORA-31011: XML parsing failed

Cause: XML parser returned an error while trying to parse the document.

Action: Check if the document to be parsed is valid.

ORA-31012: Given XPATH expression not supported

Cause: XPATH expression passed to the function is currently unsupported.

Action: Check the xpath expression and change it to use a supported expression.

ORA-31013: Invalid XPATH expression

Cause: XPATH expression passed to the function is invalid.

Action: Check the xpath expression for possible syntax errors.

ORA-31014: Attempted to delete the root container

Cause: An attempt was made to delete the root container in the hierarchical index.

Action: Do not delete the root container.

ORA-31015: Attempted to insert entry without name

Cause: An attempt was made to insert an entry into the hierarchical resolver without a child name.

Action: Supply a child name and try inserting again.

ORA-31016: Attempted to delete entry without name

Cause: An attempt was made to delete an entry from the hierarchical resolver without a child name.

Action: Supply a child name and try deleting again.

ORA-31017: Error generating unique OID for XML document

Cause: An error occurred while generating a globally unique OID for storing an XML document.

Action: n/a

ORA-31018: Error deleting XML document

Cause: The XMLType object pointed to by the given REF could not be deleted because either the REF was invalid or it pointed to a non-existent table.

Action: Either use FORCE deletion or supply a valid REF.

ORA-31019: Recursive deletion snapshot too old for *string/string*

Cause: Changes were made to the structure of a directory while it was being recursively deleted.

Action: Try deleting the directory again.

ORA-31020: The operation is not allowed, Reason: *string*

Cause: The operation attempted is not allowed

Action: See reason and change to a valid operation.

ORA-31021: Element definition not found

Cause: The element definition was not found.

Action: Supply the definition for the element or use a defined element.

ORA-31022: Element not found

Cause: The element was not found.

Action: Make sure the specified element exists.

ORA-31023: Index size error

Cause: The index is greater than the allowed value.

Action: Make sure the index is less than allowed value.

ORA-31024: Parser initialization failed with LPX-*string* error\nwhile *string*

Cause: Error occurred while initializing a parser.

Action: Contact Oracle Support Services.

ORA-31025: Invalid document element

Cause: An attempt was made to replace the data at an invalid index number in the XML document

Action: Supply a correct occurrence number and try again.

ORA-31026: unable to allocate additional memory while \n*string*

Cause: A dynamic memory allocation failure occurred.

Action: Report this problem to a database administrator.

ORA-31027: Path name or handle *string* does not point to a resource

Cause: An attempt was made to retrieve a resource based on a path name or resource handle that points to an entity other than a resource.

Action: Do not attempt to retrieve a resource based on that path name or resource handle.

ORA-31028: Resource metadata length *string* exceeded maximum length *string*

Cause: An attempt was made to insert resource metadata that exceeded the maximum length of that type of metadata.

Action: Keep resource metadata within its allowed length.

ORA-31029: Cannot bind to unsaved resource

Cause: An attempt was made to bind to a resource that had not been saved to disk.

Action: Bind only to saved resources.

ORA-31030: Unable to retrieve XML document

Cause: The resource had an invalid (dangling) REF to an XML document.

Action: Rebind the resource using a valid XMLType REF.

ORA-31031: cannot create context to parse an XPath\n*string*

Cause: Error occurred while parsing an XPath.

Action: Contact Oracle Support Services.

ORA-31032: XML parsing failed with error LPX-string\nwhile string

Cause: An LPX routine returned an error while transforming an XML doc.

Action: Look up the LPX error and follow its corrective action.

ORA-31033: Requested number of XML children string exceeds maximum string

Cause: An attempt was made to add more than the maximum number of allowable children in an XML element.

Action: Redefine the schema to allow breaking up of the children among siblings.

ORA-31034: invalid node set encountered while executing string

Cause: The given node set was either NULL or has an invalid type associated with it.

Action: Contact Oracle Support Services.

ORA-31035: Could not bind locked resource to path string/string

Cause: An attempt was made to bind an existing resource to a new location in the hierarchy, but a lock could not be obtained on the resource.

Action: Commit or roll back the transaction that has the lock on the resource.

ORA-31036: XSL processing context initialization failed

Cause: A error occurred while creating a XSL context.

Action: Contact Oracle Support Services.

ORA-31037: Invalid XML attribute name string

Cause: The attribute name in the XML document did not match anything in the associated schema.

Action: Supply only schema-defined or XML standard attributes.

ORA-31038: Invalid string value: "string"

Cause: The text in the XML document did not represent a valid value given the datatype and other constraints in the schema.

Action: Ensure that the specified value in XML documents is valid with respect to the datatype and other constraints in the schema.

ORA-31039: XML namespace length string exceeds maximum string

Cause: The length of the disk-formatted XML namespace exceeded the maximum.

Action: Keep XML namespace declarations below the maximum length.

ORA-31040: Property string: XML type (string) not compatible with internal memory type (string)

Cause: The XML datatype given is inconsistent with the database datatype, and a conversion cannot be made.

Action: This is an internal error, generally resulting from corruption of the compiled XML schema. Re-register schemas, or contact Oracle support.

ORA-31041: Property string: Memory type (string) not compatible with database type (string)

Cause: The memory type associated with this property is mapped to an incompatible database type, and a conversion cannot be made.

Action: This is an internal error, generally resulting from corruption of the compiled XML schema. Re-register schemas, or contact Oracle support.

ORA-31042: Too many properties in type '*string*'

Cause: The type can only have the same number of properties (elements and attributes) as a table can have columns.

Action: Modify the XML schema to move properties into subelements that are not inlined.

ORA-31043: Element '*string*' not globally defined in schema '*string*'

Cause: The specified element name has not been defined at the top level of the XML schema (i.e. globally). Elements must be defined globally to be the root of an XMLType object.

Action: Check the XML schema definition to make sure the specified element name has been defined at the top level.

ORA-31044: Top-level prefix length *string* exceeds maximum *string*

Cause: An attempt was made to save to disk a top-level XML namespace prefix whose length exceeded the maximum.

Action: Do not define XML namespace prefixes that exceed the maximum length.

ORA-31045: Cannot store more than *string* extras outside the root XML node

Cause: An attempt was made to store more than the maximum number of XML extras (e.g. comments and processing instructions) either before or after the document's root node.

Action: Keep the number of extras outside the root node below the maximum.

ORA-31046: Incorrect argument(s) specified in the operator

Cause: One or more of the arguments specified in the operator in the query are incorrect

Action: Correct the arguments specified in the operator

ORA-31047: Could not retrieve resource data at path *string*

Cause: An error occurred while retrieving the contents and/or metadata of a resource.

Action: Contact Oracle customer support.

ORA-31048: Unsaved resources cannot be updated

Cause: An attempt was made to update a resource that was never saved to disk.

Action: Perform a resource insertion instead.

ORA-31050: Access denied

Cause: The requested access privileges have not been granted to the current user. User must be granted privileges prior to resource access.

Action: Check the set of requested access privileges to make sure that they are included in the set of access privileges granted to the user.

ORA-31051: Requested access privileges not supported

Cause: The requested access privileges are not supported for the specified resource.

Action: Ensure that the set of requested access privileges are valid access privileges for the specified resource.

ORA-31052: Cannot delete ACL with other references

Cause: The requested deletion of an ACL resource cannot proceed. The ACL is in use by other resources.

Action: Remove the resources that are making reference to the ACL in question and try again.

ORA-31053: The value of the depth argument in the operator cannot be negative

Cause: The value of the depth argument passed to the primary operator is not a positive integer

Action: Pass a positive value of the depth argument

ORA-31054: The *string* operator cannot have an ancillary operator

Cause: An ancillary operator was used with an operator which does not support ancillary operators

Action: Remove the ancillary operator in the query

ORA-31055: A null XMLType element cannot be inserted into RESOURCE_VIEW

Cause: The element which is being inserted into the RESOURCE_VIEW is NULL

Action: Specify a non-null XMLType element to insert into RESOURCE_VIEW

ORA-31056: The document being inserted does not conform to *string*

Cause: The XMLType element being inserted into the RESOURCE_VIEW does not conform to the specified Schema

Action: Insert an element which conforms to the specified Schema

ORA-31057: Display Name of the element being inserted is null

Cause: The Display Name of the element which is being inserted into the RESOURCE_VIEW is null

Action: Specify the Display Name and insert the element into RESOURCE_VIEW

ORA-31058: cannot modify read-only XOBs

Cause: Read-Only XOBs cannot be modified.

Action: Use only read operations on such a XOB.

ORA-31059: Cannot insert root XML document node if it already exists

Cause: An attempt was made to insert a root node into an XML document that already had a root node.

Action: Call the appropriate replace function to replace the node instead of inserting it anew.

ORA-31060: Resource at path *string* could not be deleted

Cause: An error occurred while deleting the named resource. The specific error can be found one lower on the error stack.

Action: Look at the next error on the stack and take appropriate action.

ORA-31061: XDB error: *string*

Cause: The specified error occurred in XDB.

Action: Correct the error or contact Oracle Support Services.

ORA-31062: Cannot delete an unsaved resource

Cause: An attempt was made to delete a resource that had not been saved to disk.

Action: Delete only saved resources.

ORA-31063: XPath compilation failed: *string*.\nstring

Cause: XPath compilation failed for specified reason.

Action: Contact Oracle Support Services.

ORA-31064: Cannot instantiate abstract element or property [*string*]

Cause: An attempt was made instantiate an abstract element.

Action: Use only read operations on such elements.

ORA-31065: Cannot modify read-only property [*string*]

Cause: An attempt was made to modify an immutable XML node.

Action: Use only read operations on such properties.

ORA-31066: Insertion of *string* into *string* creates a cycle

Cause: An attempt was made to insert a link into the XDB hierarchy that would create a cycle in the tree.

Action: Ensure that links to existing resources do not cause cycles.

ORA-31067: XML nodes must be updated with valid nodes and of the same type

Cause: An attempt was made to use updateXML to update an XML node with a node of another type.

Action: Ensure that the node specified by the XPath matches the type of new data provided.

ORA-31068: updateXML expected data format [*string*] instead of [*string*]

Cause: An attempt was made to use updateXML to update data with a node of the incorrect type. Text and attribute nodes must be updated with string data, whereas element nodes must be updated with XMLType data.

Action: Use CREATEXML or getStringVal to coerce the new data to the proper format.

ORA-31069: Cannot apply typed changes to non-schema-based XMLType nodes

Cause: An attempt was made to insert, delete, or update a non-schema-based XMLType node using an XML schema definition.

Action: Make changes to non-typed nodes only by referencing their tag names.

ORA-31070: Invalid database user ID *string*

Cause: An attempt was made set an invalid user ID into an XDB resource metadata property.

Action: Verify the validity of the user ID and try again.

ORA-31071: Invalid database username or GUID *string*

Cause: An attempt was made to set an invalid username or GUID into an XDB resource metadata property.

Action: Verify the validity of the username or GUID and try again.

ORA-31072: Too many child nodes in XMLType fragment for updateXML

Cause: An attempt was made to pass an XMLType fragment with multiple children as new data for the updateXML operator.

Action: Extract the desired child from the XMLType before passing it to updateXML as the desired new XML node.

ORA-31073: Resource not retrieved using path name

Cause: An attempt was made to access the path name of a resource that was either never saved to disk or was loaded using a method other than with its path name.

Action: Perform path name operations only on resources obtained using a path name.

ORA-31074: XML comment length *string* exceeds maximum *string*

Cause: The length of the disk-formatted XML comment exceeded the maximum.

Action: Keep outer XML comments declarations below the maximum length.

ORA-31075: invalid *string* declaration in XML Schema

Cause: The XML schema contains an invalid declaration identified by the message.

Action: Fix the identified error and try again.

ORA-31076: required attribute "*string*" not specified

Cause: The XML schema does not specify a required attribute.

Action: Specify a value for the required attribute.

ORA-31077: invalid attribute "*string*" specified

Cause: The XML schema specifies an invalid attribute.

Action: Remove specification of the invalid attribute.

ORA-31078: error in SQL mapping information

Cause: There is an error in the SQL type and table specification within the XML Schema.

Action: Ensure that all specified SQL types and tables are valid and compatible with the corresponding XML types.

ORA-31079: unable to resolve reference to *string* "*string*"

Cause: The identified type or attribute or element could not be resolved.

Action: Make sure that the name corresponds to a valid XML (simple/complex) type or attribute or element and try again.

ORA-31080: type not specified for attribute or element "*string*"

Cause: The identified attribute or element does not have a type.

Action: Make sure that every attribute and element has a valid type specification.

ORA-31081: name not specified for global declaration

Cause: The XML schema does not specify the name for the global declaration of attribute or element or simpleType or complexType.

Action: Specify names for all global declarations.

ORA-31082: invalid attribute "*string*" specified in declaration of "*string*"

Cause: The XML schema specifies an invalid attribute.

Action: Remove specification of the invalid attribute.

ORA-31083: error while creating SQL type "*string*"."*string*"

Cause: An error occurred while trying to create the SQL type based on the specification of a complex type.

Action: Fix the identified error and try again.

ORA-31084: error while creating table "*string*"."*string*" for element "*string*"

Cause: An error occurred while trying to create the table based on the declaration for the identified element.

Action: Fix the identified error and try again.

ORA-31085: schema "*string*" already registered

Cause: An attempt was made to register a schema with the same URL as a previously registered schema.

Action: Register the schema with a different URL.

ORA-31086: insufficient privileges to register schema "*string*"

Cause: An attempt was made to register a schema without sufficient privileges.

Action: Make sure that the user has sufficient privileges to register the schema.

ORA-31087: insufficient privileges to delete schema "*string*"

Cause: An attempt was made to delete a schema resource without sufficient privileges.

Action: Make sure that the user has sufficient privileges to delete the schema.

ORA-31088: object "*string*"."*string*" depends on the schema

Cause: An attempt was made to delete a schema which has dependent objects.

Action: Either drop the dependent objects prior to deleting the schema or use the CASCADE or FORCE options.

ORA-31089: schema "*string*" does not target namespace "*string*"

Cause: The schema document contains references (via include and import definitions) to other schemas that do not belong to valid namespaces.

Action: Make sure that all schemas referenced via include definitions target the same namespace as the parent schema. Further make sure that the namespace specified in the import definition matches the actual target namespace of the specified schema.

ORA-31090: invalid database schema name "*string*"

Cause: The XML schema document contains an invalid database schema name For example, the value of attribute SQLSchema

Action: Make sure that all database user/schema names specified in the XML schema document refer to existing database users/schemas.

ORA-31091: empty string specified as a SQL name

Cause: The XML schema document contains a null SQL name. For example, the values of attributes SQLName, SQLType, defaultTable.

Action: Make sure that all names of SQL schema objects specified in the XML schema document are valid SQL names. Otherwise, remove such attributes from the schema and try again.

ORA-31092: invalid SQL name "*string*"

Cause: The XML schema document contains an invalid SQL name. For example, the values of attributes SQLName, SQLType, defaultTable.

Action: Make sure that all names of SQL schema objects specified in the XML schema document are valid SQL names. This implies that the database length and other restrictions on names be satisfied.

ORA-31093: null or invalid value specified for parameter : *string*

Cause: The argument value passed for the given parameter is null or invalid.

Action: Make sure that all the input argument values are valid.

ORA-31094: incompatible SQL type "*string*" for attribute or element "*string*"

Cause: The SQL type information provided in the XML schema is not compatible with the XML datatype for the specified attribute or element.

Action: Make sure that the specified SQL types are compatible with the declared XML datatypes.

ORA-31095: cannot generate *string* : "*string.string*" already exists

Cause: The type/table name specified in the XML schema document cannot be generated because it is already being used.

Action: Use different names for types/tables or use the NOGEN mode so that schema compiler does not generate new types/tables.

ORA-31096: validation failed for schema

Cause: The XML Schema could not be validated.

Action: Make sure that the SQLType and other datatype mapping is valid.

ORA-31097: Hierarchical Index not empty

Cause: An attempt was made to rebuild the hierarchical index which is not empty.

Action: Delete all rows in the hierarchical index and then rebuild it.

ORA-31099: XDB Security Internal Error

Cause: An XDB Security internal error has occurred.

Action: Contact Oracle Support.

ORA-31100: XDB Locking Internal Error

Cause: An XDB Locking Internal error has occurred.

Action: Contact Oracle Support.

ORA-31101: Token "*string*" not given while locking resource "*string*"

Cause: Locking attempted on resource when the principal already owns a lock given by the token above.

Action: Reattempt the lock with the token.

ORA-31102: Already locked in exclusive mode. Cannot add lock.

Cause: The resource is already locked in exclusive mode. Cannot add another lock.

Action: Unlock the existing lock.

ORA-31103: Resource locked in shared mode. Cannot add exclusive lock

Cause: The resource is locked in shared mode. Cannot add a shared lock.

Action: Try locking in shared mode or unlocking the existing lock.

ORA-31104: Cannot find lock with token "*string*" on "*string*"

Cause: The lock may have been unlocked or expired. If token was supplied, token may be wrong.

Action: Verify this lock exists. Supply correct token.

ORA-31105: User does not own lock with supplied token "*string*"

Cause: The lock corresponding to the supplied token is not owned by the user.

Action: Log on as correct user. Supply correct token.

ORA-31106: Action failed as the parent container is locked

ORA-31107: Action failed as resource "*string*" is locked by name lock

Cause: Lock requests cause the whole request URI to be locked

Action: Supply lock token or unlock the lock

ORA-31108: Action failed as resource *string* is locked

Cause: Delete/Rename failed because of an existing lock

Action: Do lockdiscovery to find the lock and delete it.

ORA-31109: Action failed as parent resource *string* is locked

Cause: Delete/Rename failed because of an lock on parent resource

Action: Do lockdiscovery to find the lock and delete it.

ORA-31110: Action failed as resource *string* is locked by name

Cause: Delete/Rename failed because one of the children is locked.

Action: Do lockdiscovery to find the lock and delete it.

ORA-31111: table *string* cannot be hierarchically enabled

Cause: Trigger *tablename_xdb_pitrigger* already exists

Action: Either the table is already hierarchically enabled or the user trigger *tablename_xdb_pitrigger* needs to be dropped. Delete all rows in the hierarchical index and then rebuild it.

ORA-31112: fail to *string* for *string* port using xdb configuration

Cause: port number for the defined presentation is not valid

Action: Either the port number is already in use or it is protected. Specify another port number.

ORA-31113: XDB configuration may not be updated with non-schema compliant data

Cause: An attempt was made to update the XDB configuration resource with non-schema or non-schema compliant data.

Action: Check the document to make sure it is schema based and schema compliant.

ORA-31114: XDB configuration has been deleted or is corrupted

Cause: The XDB configuration resource has been deleted or corrupted.

Action: Reinstall XDB, or reinsert a valid configuration document.

ORA-31115: XDB configuration error: *string*

Cause: An error related to XDB configuration has occurred.

Action: Make sure the configuration resource contains valid data.

ORA-31116: Tablespace not specified correctly

Cause: XDB cannot be moved to the specified tablespace.

Action: Specify a valid tablespace.

ORA-31117: Table "*string*"."*string*" is not resource metadata enabled

Cause: This table does not have a RESID column for resource metadata

Action: Use disable/enable_hierarchy to enable resource metadata

ORA-31118: System schema "*string*" already registered

Cause: An attempt was made to register schema with same URL as a system schema.

Action: Change the schema URL to avoid conflicts with system XML schemas.

ORA-31119: XDB configuration cannot be updated on all instances

Cause: An attempt was made to update XDB configuration.

Action: Ensure that each instance is correctly configured with its listener.

ORA-31120: usedPort cannot be invoked in a Pluggable Database

Cause: An attempt was made to invoke 'usedPort' in a Pluggable Database.

Action: Connect to the root container and invoke 'usedPort'.

ORA-31121: The *string* operator cannot be FALSE

Cause: The value of the operator that was specified is FALSE.

Action: Specify an operator that evaluates to TRUE.

ORA-31122: The *string* operator has incorrect RHS value

Cause: The value on the right hand side, that has been specified for the operator did not evaluate to TRUE.

Action: Specify a value on the right hand side that evaluates to TRUE .

ORA-31127: RCList cannot contain noncommitted resource configuration

Cause: A commit was not executed after adding a resource configuration to an RCList by calling DBMS_RESCONFIG.ADDRESCONFIG()

Action: Make sure a commit is executed after calling DBMS_RESCONFIG.ADDRESCONFIG()

ORA-31128: The event handler calls cannot exceed the depth of *string*

Cause: Tried to fire an event with depth exceeding the maximum.

Action: Make sure the event that is being fired does not generate infinitely recursive calls, either to itself or to other functions or procedures.

ORA-31129: Unable to retrieve repository's resource configuration

Cause: Tried to access a resource configuration referenced by the XDB repository that has been deleted.

Action: Disassociate the resource configuration from the repository.

ORA-31130: Specified resource configuration is not associated with given resource

Cause: Tried to delete a nonexistent resource configuration from the configuration list of the target resource.

Action: Make sure that the resource and resource configuration names are specified correctly and the resource configuration belongs to the configuration list of the given resource.

ORA-31131: RCList contains OID that is not a resource configuration OID

Cause: The OID in RCList element was not a resource configuration OID.

Action: Update the RCList element and resubmit statement.

ORA-31132: Cannot validate handler "*string*"."*string*"

Cause: Attempted to invoke an invalid event handler. This can be a result of one of the following reasons: 1) The handler did not exist. 2) The handler could not be compiled successfully.

Action: Verify that the named handler does exist, then recompile and fix all compilation errors that may subsequently arise.

ORA-31133: Cannot execute handler "*string*"."*string*" with invoker rights

Cause: Attempted to invoke an event handler with invoker rights when the SET-INVOKER attribute in the resource configuration that defines the handler was not set to TRUE.

Action: Either redefine the named handler with definer rights or change the SET-INVOKER attribute in the resource configuration that defines the named handler to TRUE.

ORA-31134: Cannot delete a configuration that is referenced by other resources

Cause: Attempted to delete a resource configuration that was referenced by other resources.

Action: Remove all references to the target resource configuration by executing DELETERESCONFIG or DELETEREPOSITORYRESCONFIG procedures in DBMS_RESCONFIG package or specify the DELETE_FORCE option in the DELETERESOURCE statement.

ORA-31135: Resource has already been rendered

Cause: One of the following has occurred: 1) Attempted to invoke setRender* method after the resource was rendered through a setRender* method or after data was written to the output stream. 2) Attempted to access the output stream of the resource after a setRender* method was executed on the resource.

Action: Remove the method causing the problem.

ORA-31136: Resource configuration *string* is already associated with the resource *string*

Cause: The resource configuration already exists in the resource configuration list of the resource or the repository

Action: Check if this resource configuration really needs to be added. If so, remove it from resource and repository lists before adding it.

ORA-31137: Index out of range

Cause: The position specified was not valid.

Action: Check ($0 \leq \text{pos} < \text{size of the configuration list of the target resource}$)

ORA-31138: Resource-configuration is being referenced by one or more resources

Cause: Tried to add a resource configuration to the repository that was being referenced by existing resources.

Action: Remove the resource configuration from other resources before trying to add it to the repository again.

ORA-31139: Invalid resource configuration list

Cause: Attempted to create or update a resource that had duplicate resource configurations or conflicted with the repository configurations.

Action: Correct the resource configuration list and re-submit statement.

ORA-31140: Illegal operation: *string*

Cause: Tried to invoke a method when it was not allowed.

Action: Do not execute the indicated method.

ORA-31141: Must specify a valid path value

Cause: The path specified for the *defaultChildConfig* or *defaultChildACL* element must refer to an existing resource.

Action: Correct problem and resubmit statement.

ORA-31142: Must specify the schema for each listener

Cause: The schema element was not specified.

Action: Correct problem and resubmit statement.

ORA-31143: XDB_SET_INVOKER role is required

Cause: XDB_SET_INVOKER role was required to set the SET-INVOKER attribute to TRUE.

Action: Correct problem and resubmit statement.

ORA-31144: Implementation language for *string* is not specified

Cause: Implementation language for specified listener source was not specified.

Action: Correct problem and resubmit statement.

ORA-31145: Duplicate listener, *string*, found in resource configuration

Cause: Duplicate listener source was found in resource configuration.

Action: Remove duplicates and resubmit statement.

ORA-31146: Invalid listener source *string.string*

Cause: The listener source specified in the resource configuration did not exist or was invalid.

Action: Correct the listener source in the *listener* element and resubmit statement.

ORA-31147: *string* is not an ACL resource

Cause: The specified resource did not conform to acl.xsd schema.

Action: Specify a valid path for the *defaultChildACL* element and resubmit statement.

ORA-31148: *string* is not a valid resource configuration

Cause: The resource specified in the *defaultChildConfig* element while creating a resource configuration or specified as the *rpath* in a call using DBMS_RESCONFIG package did not conform to XDBResConfig.xsd schema.

Action: Specify a valid path and resubmit statement.

ORA-31149: no such schema: *string*

Cause: Nonexistent schema defined in the resource configuration.

Action: Specify a valid schema in the resource configuration and resubmit statement.

ORA-31150: uncaught error in handler *string*

Cause: The named handler raised an exception.

Action: Fix the identified error.

ORA-31151: Cyclic definition encountered for *string*: "string"

Cause: The schema definition for this type has cycles.

Action: Remove cyclic definition and re-compile schema.

ORA-31153: Cannot create schema URL with reserved prefix "http://xmlns.oracle.com/xdb/schemas/"

Cause: This prefix is reserved for XDB extended schema URLs and cannot be used in a user specified URL.

Action: Modify the prefix to a different one.

ORA-31154: invalid XML document

Cause: The XML document is invalid with respect to its XML Schema.

Action: Fix the errors identified and try again.

ORA-31155: attribute *string* not in XDB namespace

Cause: The specified attribute should be prefixed with XDB's namespace.

Action: Ensure that all XDB specified attributes are prefixed with XDB's namespace and try again.

ORA-31157: Invalid Content-Type charset

Cause: HTTP Content-Type header had a charset that Oracle does not understand.

Action: Fix the Content-Type header in the HTTP request.

ORA-31158: schema "*string*" currently being referenced

Cause: The specified schema URL is currently being referenced by the same session. This could happen because of PLSQL XMLType variables still in scope.

Action: Ensure all references to this schema in this session are released and try the operation again.

ORA-31159: XML DB is in an invalid state

Cause: XML DB's internal tables are in an invalid state, probably because the database was not upgraded or the upgrade was not successful

Action: Ensure that the database is upgraded successfully. If the problem persists, contact Oracle Support

ORA-31160: max substitution group size *string* exceeded by "*string*" (*string*) for head element "*string*" (*string*)

Cause: The maximum limit on nested substitution groups has been exceeded by an element.

Action: Delete specified schema and re-register it after removing the offending substitution element.

ORA-31161: element or attribute "*string*" cannot be stored out of line

Cause: An element or attribute of a simple type has SQLInline=false

Action: Remove the SQLInline=false qualification for the offending element or attribute

ORA-31162: element or attribute "*string*" has no SQLType specified

Cause: Schema registration was invoked with GENTYPES=false without specifying a SQLType for some element or attribute

Action: Specify a SQLType for the offending element or attribute and register the schema again

ORA-31163: element or attribute "string" has invalid attribute value "string" (should be "string")

Cause: An element or attribute for a complexType derived by restriction has an attribute whose value is different from that in the base type

Action: Remove the mismatched attribute values from the offending element or attribute

ORA-31164: cannot load object-relational XML attribute using direct path \n

Cause: The table being loaded contains a xml column with object-relational storage. The xmltype column contains a type with subtypes. This type of attribute cannot be loaded with direct path.

Action: Perform the load with conventional path mode.

ORA-31165: cannot load object-relational XML attribute using direct path \n

Cause: The table being loaded contains a xml column with object-relational storage. The xmltype column either contains an out-of-line partitioned table or the table itself is partitioned by one of the attributes of xmltype. This type of table cannot be loaded with direct path.

Action: Perform the load with conventional path mode.

ORA-31167: XML nodes over 64K in size cannot be inserted

Cause: An attempt was made to insert an XML Text Node with a size greater than 64K. This is not supported.

Action: Create text nodes under 64K.

ORA-31168: Node localname and namespace values should be less than 64K

Cause: An attempt was made to specify an XML Node with localname or namespace value greater than or equal to 64K. This is not supported.

Action: Node localnames and namespace values should be under 64K.

ORA-31169: Number of children (string) defined in 'string' exceeds maximum (string)

Cause: An attempt was made to define more than the allowed number of children in a complexType of an XMLSchema document.

Action: Modify the XML Schema to move children of complexType into subelements that are not inlined.

ORA-31170: Cyclic Schema Registration without using FORCE option

Cause: An attempt was made to register cyclic schemas with FORCE = false.

Action: Use FORCE = true when registering cyclic schemas.

ORA-31171: schema processing error LSX-string\nwhile string

Cause: An LSX routine returned an error.

Action: Look up the LSX error and follow its corrective action.

ORA-31172: cannot load ADT column or XMLType column using direct path

Cause: The table being loaded contained an ADT column or XMLType column with object-relational or binary storage and supplemental logging was enabled for the

table. Direct path load is not supported for such tables when supplemental logging is enabled.

Action: Perform the load with conventional path mode.

ORA-31176: API not supported in this release

Cause: This API was not supported.

Action: None

ORA-31180: DOM Type mismatch in invalid PL/SQL DOM handle

Cause: The specified PL/SQL DOM handle is referencing a DOM Node whose DOM Type that does not match the one available in the session. This could happen because the pl/sql handle was reused, or the original document is no longer available.

Action: Ensure that the pl/sql handle for the target node is valid and try the operation again.

ORA-31181: PL/SQL DOM handle accesses node that is no longer available

Cause: The specified pl/sql handle is referencing a node in a DOM Document that is no longer available.

Action: Ensure that the pl/sql handle for the target node is valid and try the operation again.

ORA-31182: Too many PL/SQL DOM handles specified

Cause: An attempt was made to create a PL/SQL DOM handle that exceeded the maximum allowable number of PL/SQL DOM handles.

Action: Free PL/SQL DOM handles and try the operation again.

ORA-31183: Node type *string* cannot be converted to desired type

Cause: The given node's type cannot be converted correctly for this operation. For example, a DOM Element cannot be converted to Document Fragment

Action: Pass a valid node type for the conversion.

ORA-31185: DOM Nodes do not belong to the same DOM Document

Cause: The specified PL/SQL DOM Node does not belong to the parent DOM Document of the referring DOM Node.

Action: Ensure that both the DOM Nodes are part of the same DOM Document.

ORA-31186: Document contains too many nodes

Cause: Unable to load the document because it has exceeded the maximum allocated number of DOM nodes.

Action: Reduces the size of the document.

ORA-31187: Cannot Add Node '*string*' (type='*string*') to Simple Type Node '*string*'

Cause: Trying to add attribute/element nodes to a simple type against the schema definition. Simple types can have only special attribute like namespaces, xsi:nil etc.

Action: Use a valid node for the operation.

ORA-31188: The specified printing option is invalid

Cause: The printing option specified in the operation is invalid.

Action: Use a valid printing option for the operation.

ORA-31190: Resource *string* is not a version-controlled resource

Cause: Either one of the following is the cause: - Checkout is requested for a resource that isn't under version control". Only version-controlled resource can be checked out.
- Checkout is requested for a row of a non-versioned table.

Action: put the resource under version-control before checking out.

ORA-31191: Resource *string* is already checked out

Cause: Either one of the following is the cause: - Checkout is requested for a resource that is already checked out to the workspace by the same or different user.

Action: checked in the resource from the workspace before checking out

ORA-31192: Resource *string* has not been checked out

Cause: Either one of the following is the cause: - Checkin or uncheckout is requested for a resource that has not been checked out to the workspace by any user in a workspace

Action: checked in the resource from the workspace before checking out

ORA-31193: This versioning feature isn't supported for resource *string*

Cause: Either one of the following is the cause: - Container cannot be put under version-controlled.

Action: Avoid using these features.

ORA-31194: Resource *string* is already deleted

Cause: Access a version-controlled resource that is already deleted.

Action: Recreate the resource. Remove the cyclic definitions in the type and retry compilation.

ORA-31195: XML node '*string*' (type=*string*) does not support this operation

Cause: The given node's type is not supported for this operation. For example, trying to add children to an attribute node, or passing in a document node as a child, are unsupported operations.

Action: Use a valid node type for the operation.

ORA-31196: XML nodes over *string* in size cannot be printed

Cause: An attempt was made to use an XML Text Node with a size greater than 64K, or an XML Comment Node with a size greater than 4K. These cannot be printed. For example, trying to add children to an attribute node, or passing in a document node as a child, are unsupported operations.

Action: Use getClobVal() or getStringVal() to print the Document.

ORA-31197: Error in processing file *string*

Cause: An error occurred while operating on the specified file. The possible causes are the file header is corrupt or check the next error on stack

Action: Ensure that the specified file is correct. Look at the next error on the stack and take appropriate action.

ORA-31198: Mismatch in number of bytes transferred due to non-binary mode

Cause: An error occurred while reading the specified file. The most probable cause is that the transfer was initiated in ASCII mode.

Action: Ensure that the transfer mode is set to BINARY

ORA-31199: Warning in processing file *string*

Cause: A warning was raised while operating on the specified file. However, the current operation was completed successfully.

Action: This is primarily an informational message. Look at the next error on the stack to obtain further information.

ORA-31200: Invalid ACL Argument

Cause: A System Constraining ACL was passed as one of the arguments to this function.

Action: Please ensure that none of the aclid arguments are for the System Constraining ACL.

ORA-31201: DBMS_LDAP: generic error: *string*

Cause: There has been an error in the DBMS_LDAP package.

Action: Please report the error number and description to Oracle Support.

ORA-31202: DBMS_LDAP: LDAP client/server error: *string*

Cause: There is a problem either on the LDAP server or on the client.

Action: Please report this error to the LDAP server administrator or your Database administrator.

ORA-31203: DBMS_LDAP: PL/SQL - Init Failed.

Cause: There has been an error in the DBMS_LDAP Init operation.

Action: Please check the host name and port number, or report the error number and description to Oracle Support.

ORA-31204: DBMS_LDAP: PL/SQL - Invalid LDAP Session.

Cause: There has been an error in the DBMS_LDAP bind operation.

Action: Please check the session handler that you use for binding, or report the error number and description to Oracle Support.

ORA-31205: DBMS_LDAP: PL/SQL - Invalid LDAP Auth method.

Cause: There has been an error in the DBMS_LDAP bind operation.

Action: Please check the authentication credentials that you use for binding, or report the error number and description to Oracle Support.

ORA-31206: DBMS_LDAP: PL/SQL - Invalid LDAP search scope.

Cause: There has been an error in the DBMS_LDAP search operation.

Action: Please check the search scope that you use for search, or report the error number and description to Oracle Support.

ORA-31207: DBMS_LDAP: PL/SQL - Invalid LDAP search time value.

Cause: There has been an error in the DBMS_LDAP search operation.

Action: Please check the search time value that you use for search, or report the error number and description to Oracle Support.

ORA-31208: DBMS_LDAP: PL/SQL - Invalid LDAP Message.

Cause: There has been an error in the DBMS_LDAP operation.

Action: Please check the LDAP message that you use for LDAP operation, or report the error number and description to Oracle Support.

ORA-31209: DBMS_LDAP: PL/SQL - LDAP count_entry error.

Cause: There has been an error in the DBMS_LDAP count_entry operation.

Action: Please check the LDAP count_operation, or report the error number and description to Oracle Support.

ORA-31210: DBMS_LDAP: PL/SQL - LDAP get_dn error.

Cause: There has been an error in the DBMS_LDAP get_dn operation.

Action: Please check the LDAP get_dn, or report the error number and description to Oracle Support.

ORA-31211: DBMS_LDAP: PL/SQL - Invalid LDAP entry dn.

Cause: There has been an error in the DBMS_LDAP operation.

Action: Please check the entry dn that you use for LDAP operation, or report the error number and description to Oracle Support.

ORA-31212: DBMS_LDAP: PL/SQL - Invalid LDAP mod_array.

Cause: There has been an error in the DBMS_LDAP operation.

Action: Please check the LDAP mod_array that you use for LDAP operation, or report the error number and description to Oracle Support.

ORA-31213: DBMS_LDAP: PL/SQL - Invalid LDAP mod option.

Cause: There has been an error in the DBMS_LDAP populate_mod_array operation.

Action: Please check the LDAP mod option that you use for LDAP populate_mod_array operation, or report the error number and description to Oracle Support.

ORA-31214: DBMS_LDAP: PL/SQL - Invalid LDAP mod type.

Cause: There has been an error in the DBMS_LDAP populate_mod_array operation.

Action: Please check the LDAP mod type that you use for LDAP populate_mod_array operation, or report the error number and description to Oracle Support.

ORA-31215: DBMS_LDAP: PL/SQL - Invalid LDAP mod value.

Cause: There has been an error in the DBMS_LDAP populate_mod_array operation.

Action: Please check the LDAP mod value that you use for LDAP populate_mod_array operation, or report the error number and description to Oracle Support.

ORA-31216: DBMS_LDAP: PL/SQL - Invalid LDAP rdn.

Cause: There has been an error in the DBMS_LDAP operation.

Action: Please check the LDAP rdn value that you use for LDAP operation, or report the error number and description to Oracle Support.

ORA-31217: DBMS_LDAP: PL/SQL - Invalid LDAP newparent.

Cause: There has been an error in the DBMS_LDAP rename_s operation.

Action: Please check the LDAP newparent value that you use for LDAP rename_s operation, or report the error number and description to Oracle Support.

ORA-31218: DBMS_LDAP: PL/SQL - Invalid LDAP deleteoldrdn.

Cause: There has been an error in the DBMS_LDAP rename_s operation.

Action: Please check the LDAP deleteoldrdn value that you use for LDAP rename_s operation, or report the error number and description to Oracle Support.

ORA-31219: DBMS_LDAP: PL/SQL - Invalid LDAP notypes.

Cause: There has been an error in the DBMS_LDAP explode_dn or explode_rdn operation.

Action: Please check the LDAP notypes value that you use for LDAP explode_dn or explode_rdn operation, or report the error number and description to Oracle Support.

ORA-31220: DBMS_LDAP: PL/SQL - Invalid LDAP SSL wallet location.

Cause: There has been an error in the DBMS_LDAP operation.

Action: Please check the LDAP sslwrl value that you use for LDAP operation, or report the error number and description to Oracle Support.

ORA-31221: DBMS_LDAP: PL/SQL - Invalid LDAP SSL wallet passwd.

Cause: There has been an error in the DBMS_LDAP operation.

Action: Please check the LDAP sslpasswd value that you use for LDAP operation, or report the error number and description to Oracle Support.

ORA-31222: DBMS_LDAP: PL/SQL - Invalid LDAP SSL authentication mode.

Cause: There has been an error in the DBMS_LDAP operation.

Action: Please check the LDAP sslauth value that you use for LDAP operation, or report the error number and description to Oracle Support.

ORA-31223: DBMS_LDAP: cannot open more than *string* LDAP server connections

Cause: An attempt was made to open more than the maximum allowed LDAP server connections.

Action: Free unused connections.

ORA-31224: DBMS_LDAP: invalid LDAP session

Cause: An attempt was made by a PL/SQL module to use an LDAP session which is not valid and might have already been closed.

Action: Check the LDAP session handle in PL/SQL module involving DBMS_LDAP.

ORA-31225: DBMS_LDAP: invalid BER_ELEMENT

Cause: An attempt was made by a PL/SQL module to use a BER_ELEMENT which is not valid and might have already been freed.

Action: Check the BER_ELEMENT in PL/SQL module involving DBMS_LDAP.

ORA-31226: DBMS_LDAP: MOD_ARRAY size limit exceeded

Cause: An attempt was made by a PL/SQL module to add an element beyond the MOD_ARRAY size limit.

Action: Increase the MOD_ARRAY size limit in PL/SQL module involving DBMS_LDAP.

ORA-31227: DBMS_LDAP: invalid LDAP MESSAGE handle

Cause: An attempt was made by a PL/SQL module to use an LDAP MESSAGE handle which is not valid and might have already been freed.

Action: Check the LDAP MESSAGE handle in PL/SQL module involving DBMS_LDAP.

ORA-31228: DBMS_LDAP: invalid MOD_ARRAY

Cause: An attempt was made by a PL/SQL module to use a MOD_ARRAY which is not valid and might have already been freed.

Action: Check the MOD_ARRAY in PL/SQL module involving DBMS_LDAP.

ORA-31229: DBMS_LDAP: invalid input parameter

Cause: An invalid argument has been passed by a PL/SQL module to a DBMS_LDAP subprogram

Action: Check the input argument to the DBMS_LDAP subprogram in PL/SQL module involving DBMS_LDAP.

ORA-31230: DBMS_LDAP: unable to dynamically allocate additional memory

Cause: An error occurred during dynamic memory allocation from session heap.

Action: Verify that adequate memory resources are available.

ORA-31231: DBMS_LDAP: invalid PROPERTY_SET

Cause: An attempt was made by a PL/SQL module to use a PROPERTY_SET which is not valid and might have already been freed.

Action: Check the PROPERTY_SET in PL/SQL module involving DBMS_LDAP.

ORA-31232: DBMS_LDAP: invalid MOD_PROPERTY_SET

Cause: An attempt was made by a PL/SQL module to use a MOD_PROPERTY_SET which is not valid and might have already been freed.

Action: Check the MOD_PROPERTY_SET in PL/SQL module involving DBMS_LDAP.

ORA-31398: DBMS_LDAP: Shared servers are not supported.

Cause: The session executing functions from the DBMS_LDAP package is being handled by a shared server in the Database.

Action: Use dedicated database sessions to execute functions in the DBMS_LDAP package.

ORA-31399: Cannot contact LDAP server *string* at port *number*

Cause: The LDAP server specified could not be contacted. This can happen if the server is down or inaccessible.

Action: Contact the administrator of the LDAP server

ORA-31401: change source *string* is not an existing change source

Cause: The caller did not use the name of an existing change source. The name given does not match the name of any existing change source.

Action: Check the spelling of the change source name. Choose an existing change source.

ORA-31402: unrecognized parameter *string*

Cause: Unrecognized parameter was detected.

Action: Check for too many parameters in the call.

ORA-31403: change table *string* already contains a column *string*

Cause: Issued ALTER_CHANGE_TABLE with an add operation but a column by this name already exists in the specified table.

Action: Check the names and call the procedure again.

ORA-31404: all input parameters are null

Cause: All input parameters are null. At least one property must be altered.

Action: Call the procedure again, making sure that all the required parameters have been specified. Ensure that at least one parameter is not null. Refer to user documentation for the correct way of calling this procedure.

ORA-31405: cannot make changes while change set *string* is advancing

Cause: The change set is currently advancing. Change sources related to an advancing change set cannot be altered. Change tables related to the advancing change set cannot be created, altered or dropped. Some or all the parameters of the change set cannot be altered while the set is advancing.

Action: Wait until the change set has finished advancing, then reissue the command. If altering the change set, only the `advance_enable` parameter can be altered during an advance.

ORA-31406: change source *string* is referenced by a change set

Cause: The operation cannot complete because this change source is referenced by one or more change sets.

Action: Drop the change sets first, then re-issue the command. May have to drop some change tables before the change sets are dropped.

ORA-31407: end_date must be greater than the begin_date

Cause: The end data of the change set is earlier than the begin date. The end date must always be later in time than the begin date, so that the duration between the begin and end dates is a positive amount of time.

Action: Change the begin date and/or the end date, so that the end date is later than the begin date.

ORA-31408: invalid value specified for begin_scn or end_scn

Cause: The `begin_scn` was not greater than zero. The `end_scn` was less than zero. The `end_scn` was less than the `begin_scn`.

Action: Check the values of both `begin_scn` and `end_scn`. Correct them to make sure that they form a legal SCN range. An `end_scn` value of zero indicates an infinite scn range.

ORA-31409: one or more values for input parameters are incorrect

Cause: One or more of the inputs to the procedure had invalid values.

Action: Identify the bad parameter(s) and supply correct values to the procedure.

ORA-31410: change set *string* is not an existing change set

Cause: Could not find an existing change set by this name.

Action: Check the spelling of the change set name. Call the procedure again, passing the correct change set name.

ORA-31411: change set *string* is referenced by a change table

Cause: The operation cannot be performed because the change set contains one or more change tables.

Action: You will need to drop the change table(s) first, then repeat the operation

ORA-31412: change set *string* is disabled and cannot be advanced

Cause: The specified change set is disabled. The change set needs to be enabled for the operation to succeed.

Action: Determine why the change set is disabled and correct this condition. Alter the change set specifying 'y' for `advance_enable` then retry the operation.

ORA-31413: change set *string* is currently being advanced

Cause: An advance operation is in progress for this change set and we only allow one at a time.

Action: Since the change set is currently being advanced, the best action is to wait for it to finish advancing. Only one caller at a time can advance the change set. Check for the cause of long running advance operations.

ORA-31414: error(s) occurred during change table advance

Cause: One or more errors occurred during the advance operation.

Action: Check the log file(s) for a more detailed report of the underlying errors.

ORA-31415: change set *string* does not exist

Cause: Specified change set does not exist or the user does not have access to the publications in that change set. The name specified did not match the name of any existing change set. Certain privileges are required to access the publications within that change set.

Action: Check the name and call the procedure again, with the name of an existing change set. Contact the publisher or database administrator if user privileges are required to access the publications in the change set.

ORA-31416: invalid SOURCE_COLMAP value

Cause: A source_colmap value of 'y' was specified for an asynchronous change table.

Action: Specify a source_colmap parameter value of 'n' and call the procedure again.

ORA-31417: column list contains control column *string*

Cause: Reserved column name was specified in a column list or column type parameter.

Action: Control columns are selected with separate parameters. If you did not want a control column, then change the name of the specified column so that it does not conflict with a reserved column name.

ORA-31418: source schema *string* does not exist

Cause: Trying to create a synchronous change table and the source schema did not match any existing schema names in the database.

Action: Specify the name of an existing schema.

ORA-31419: source table *string* does not exist

Cause: When creating a synchronous change table, the underlying source table must exist when the procedure is called. In this case, the source table did not exist.

Action: Specify the name of an existing table.

ORA-31420: unable to submit the purge job

Cause: When creating the first change table, a purge job is submitted to the job queue. Submission of this purge job failed.

Action: Make sure that job queue processes are enabled and are currently running. If this does not solve the problem, contact Oracle.

ORA-31421: change table does not exist

Cause: Specified change table does not exist.

Action: Recheck the name, and call the procedure again using an existing change table.

ORA-31422: owner schema *string* does not exist

Cause: Value specified for the owner parameter does not contain the name of an existing schema in the database.

Action: Recheck the name, and call the procedure again using an existing schema name.

ORA-31423: change table *string* does not contain column *string*

Cause: Issued ALTER_CHANGE_TABLE with a drop operation and the specified column does not exist in the change table.

Action: Recheck the names, and call the procedure again.

ORA-31424: change table has active subscriptions

Cause: The change table is subscribed to, so it cannot be dropped.

Action: Do not drop a change table while there are active subscribers. If this is an emergency, use the FORCE parameter. This will forcibly drop the change table out from under all subscribers.

ORA-31425: subscription does not exist

Cause: The subscription either did not exist or did not belong to this user.

Action: Call the function again with a valid subscription name.

ORA-31426: cannot modify active subscriptions

Cause: The subscription was already activated so that additional calls to SUBSCRIBE were prohibited.

Action: Subscribe to all the desired tables and columns before activating the subscription. Ensure that the correct subscription name is specified.

ORA-31427: publication *string* already subscribed

Cause: The subscription already contained this publication.

Action: Check the values of subscription_name and publication_id. Check any other subscribe calls to see if they subscribe to columns that are shared among more than one publication on the same source table. Do not attempt to subscribe to the same publication more than once in the same subscription. Use the publication_id variant of the SUBSCRIBE call if needed to specify precise publications.

ORA-31428: no publication contains all the specified columns

Cause: One or more of the specified columns cannot be found in a single publication.

Action: Change the subscription request to select only columns that are in the same publication. Consult the USER_PUBLISHED_COLUMNS view to see current publications.

ORA-31429: subscription has not been activated

Cause: The called procedure required an activated subscription.

Action: Check the subscription name and correct if necessary. Call the ACTIVATE_SUBSCRIPTION procedure for this subscription and then reissue the original command.

ORA-31430: subscriber view exists

Cause: A view that is already in use was specified for the subscriber view.

Action: Call the SUBSCRIBE procedure using a different subscriber view name.

ORA-31431: all source tables must belong to the synchronous change set

Cause: Not all of the source tables belong to the synchronous change set.

Action: Check the spelling of the source tables. Make sure that all of the source tables belong to the synchronous change set.

ORA-31432: invalid source table

Cause: Either the schema_name.source_table did not exist or it did not belong to this subscription.

Action: Check the spelling of the schema_name and source_table. Verify that the specified table exists in the specified schema and is subscribed to by the subscription.

ORA-31433: subscriber view does not exist

Cause: The subscription did not contain this subscriber view.

Action: Recheck the name, and specify the name of an existing subscriber view.

ORA-31434: purge is currently running

Cause: Called the PURGE procedure while a purge job was currently running.

Action: Wait for purge to complete before reissuing this command.

ORA-31435: an error occurred during the purge operation

Cause: An error occurred during the purge operation

Action: Check the logfile for a more detailed report of the underlying errors.

ORA-31436: duplicate change source *string*

Cause: A change source by the specified name already exists.

Action: Recreate the change source with a unique name.

ORA-31437: duplicate change set *string*

Cause: A change set by the specified name already exists.

Action: Recreate the change set with a unique name.

ORA-31438: duplicate change table *string*

Cause: A change table by the specified name already exists.

Action: Recreate the change table with a unique name.

ORA-31439: subscription is already active

Cause: The subscription is already active.

Action: Check name and retry.

ORA-31440: change set *string* is empty and cannot be advanced

Cause: User attempted to advance a change set which does not contain any change tables. Without change tables, a change set cannot be advanced.

Action: Create change tables in the change set, then retry the advance.

ORA-31441: table is not a change table

Cause: User attempted to execute the DROP_CHANGE_TABLE procedure on a table that is not a CHANGE table. This can also occur when a CHANGE table object has been orphaned. CHANGE tables can become orphaned after a CREATE_CHANGE_TABLE failure or an incomplete DROP_CHANGE_TABLE.

Action: Check spelling. If error was due to an incorrect name, then retry the procedure using the correct name. To drop a table that is not a CHANGE table, or an orphaned CHANGE table, use the DROP TABLE DDL command instead.

ORA-31442: operation timed out while acquiring lock on *string*

Cause: CDC attempted to acquire a lock on the resource, but the operation timed out.

Action: Retry the operation later.

ORA-31443: deadlock detected while acquiring lock on *string*

Cause: CDC attempted to acquire a lock on the resource, but encountered a deadlock.

Action: Contact Oracle corporation

ORA-31444: parameter error while acquiring lock on *string*

Cause: CDC attempted to acquire a lock on the resource, but encountered a problem passing parameters to the lock manager.

Action: Contact Oracle corporation

ORA-31445: invalid lock handle while acquiring lock on *string*

Cause: CDC attempted to acquire a lock on the resource, but encountered a invalid lock handle, which did not correspond to any existing handle.

Action: Contact Oracle corporation

ORA-31446: this session does not own the lock handle for *string*

Cause: CDC attempted to acquire a lock on the resource, does not own the the lock associated with the lock. This is an internal error.

Action: Contact Oracle corporation

ORA-31447: cannot create change tables in the SYS schema

Cause: Attempted to create a change table in the SYS schema. This is not allowed.

Action: Use a different existing schema and retry the command.

ORA-31448: invalid value for *change_source*

Cause: The specified value was not a valid name for a Change Source.

Action: Specify a valid name and retry the command.

ORA-31449: invalid value for *change_set_name*

Cause: The specified value was not a valid name for a Change Set.

Action: Specify a valid name and retry the command.

ORA-31450: invalid value for *change_table_name*

Cause: The specified value was not a valid name for a Change Table.

Action: Specify a valid name and retry the command.

ORA-31451: invalid value *string* for *capture_values*, expecting: OLD, NEW, or BOTH

Cause: The specified value was not a valid option for a *capture_values*.

Action: Specify a valid option and retry the command.

ORA-31452: invalid value *string* for parameter, expecting: Y or N

Cause: The specified value was not Y or N.

Action: Specify Y or N for the parameter and retry the command.

ORA-31453: invalid value *string* for parameter, expecting: Y, N, or NULL

Cause: The specified value was not Y, N or NULL.

Action: Specify Y, N or NULL for the parameter and retry the command.

ORA-31454: invalid value *string* for operation parameter, expecting: ADD or DROP

Cause: The specified value was not ADD or DROP.

Action: Specify ADD or DROP and retry the command.

ORA-31455: nothing to ALTER

Cause: The specified column list is NULL and all optional control columns are 'N'.

Action: Specify one or more columns to ALTER.

ORA-31456: error executing a procedure in the DBMS_CDC_UTILITY package

Cause: An internal attempt to invoke a procedure within the DBMS_CDC_UTILITY package failed.

Action: Check the trace logs for more information. Ensure that the package has been installed successfully. Try issuing a DESCRIBE command from SQL on the package. If it fails, then try reinstalling the package. If it succeeds then try invoking one of the procedures from SQL.

ORA-31457: maximum length of description field exceeded

Cause: The maximum number of characters permitted in the description field was exceeded.

Action: The maximum length of the description field is 30 characters. Ensure the length does not exceed this value and retry the command.

ORA-31458: an internal error occurred

Cause: This is an internal error.

Action: Contact Oracle Worldwide Customer Support and report the error.

ORA-31459: system triggers for DBMS_CDC_PUBLISH package are not installed

Cause: One or more required system triggers are not installed. These triggers are required for the proper operation of Change Data Capture. Operations on Change tables cannot continue.

Action: Install or reenable the triggers, or reinstall the package.

ORA-31460: logfile location *string* is not an existing directory

Cause: The directory specification for logfile location for the change source, does not correspond with an existing directory, or the directory was not accessible.

Action: 1. Create the directory if it does not exist. If the directory does exist, change the file system permissions so the directory can be accessed. OR 2. perform ALTER CHANGE SOURCE and change the logfile_location to be an existing directory that contains the logfiles

ORA-31461: logfile location *string* contains no files that match pattern *string*

Cause: The directory specification for logfile location for the change source, does not contain any files whose names pattern-match the logfile_suffix.

Action: 1. Make sure that the logfile location contains logfiles whose names match the logfile_suffix pattern for the change set. OR 2. perform ALTER CHANGE SOURCE and change the logfile_suffix such that it matches the names of existing logfiles in the directory

ORA-31462: internal error while accessing metadata

Cause: An unexpected internal error occurred while CDC was accessing its internal Metadata.

Action: Contact Oracle Corporation

ORA-31463: logfile location *string* is an empty directory

Cause: The directory specification for logfile location for the change source, is an empty directory

Action: 1. Make sure it is the correct location of the logfiles. If it is, make sure the directory contains logfiles. OR 2. perform ALTER CHANGE SOURCE and change the logfile_location to be an existing directory that contains the logfiles

ORA-31464: target table for the change table no longer exists

Cause: User tried to drop a change table but its underlying storage table (that contains the change data) has been dropped.

Action: Contact Oracle Corporation

ORA-31465: cannot obtain a lock on the subscription

Cause: A timeout occurred while trying to place a lock on the subscription. Another session had already acquired the lock on the subscription.

Action: Ensure the subscription name is correct and correct it if necessary. If it is already correct, try the operation again after the session holding the lock has released it.

ORA-31466: no publications found

Cause: Did not find any publications that matched the input parameters or the user does not have the privileges to access the specified publication.

Action: Check the input parameters on the call to SUBSCRIBE. Validate that the proposed source table has been published by checking the USER_PUBLICATIONS view for that source table. Contact the publisher if user privileges are required to access the publication. Retry the command with correct security or publication information.

ORA-31467: no column found in the source table

Cause: The OBJECT_ID flag was set to 'Y' on the call to CREATE_CHANGE_TABLE and change table belongs to the synchronous change set. The corresponding object column was not detected in the source table.

Action: Create the change table with the OBJECT_ID flag set to 'N' or investigate why the object column is not in the source table and add it to the source table.

ORA-31468: cannot process DDL change record

Cause: The change set has stop_on_ddl enabled and was trying to process a DDL change record.

Action: Check the alert log to find out what the DDL record contained. Make any necessary changes to the change tables. Call ALTER_CHANGE_SET with recover_after_error and remove_ddl set to 'Y'.

ORA-31469: cannot enable Change Data Capture for change set *string*

Cause: The change set has reached the specified limit that was set up by the CREATE_CHANGE_SET command.

Action: Check the alert log to find out whether capture, apply or both reached the limit. Once apply reaches its limit, the change set is permanently disabled. Create a new change set with new limits to continue capturing data.

ORA-31470: asynchronous change tables must contain the RSID\$ column

Cause: If creating an asynchronous change table, the RSID was set to 'N'. If altering an asynchronous change table with an operation parameter of 'DROP' RSID was set to 'Y'.

Action: When creating asynchronous change tables, always specify 'Y' for the RSID parameter. When altering asynchronous change tables always specify 'N' for RSID.

ORA-31471: invalid OBJECT_ID value

Cause: An object_id value of 'y' was specified for an asynchronous change table.

Action: Specify an object_id parameter value of 'n' and call the procedure again.

ORA-31472: Importing Change Data Capture version *string.string* is too new

Cause: An attempt was made to Import a file that was exported by a newer version of Oracle than the target instance.

Action: If possible, re-export the file using a version of export that matches the import target. Objects can not be imported into previous versions of Oracle that did not support them.

ORA-31473: date bound out of range

Cause: The upper_bound or lower_bound specified in extend_window or purge_window API is beyond the range of records in the change set.

Action: Either select a bound that is within range or do not select an upper or lower bound at all.

ORA-31474: Invalid change view window

Cause: The specified upper_bound or lower_bound is forcing a condition where the change view window will have nothing in it.

Action: Select a different upper_bound or lower_bound and reissue the API call that produced the error. Alternatively, make the upper_bound or lower_bound parameter NULL and reissue the API call.

ORA-31475: redo log catalog contains no metadata for the source table

Cause: While advancing a change set, an CDC attempted to query the LogMiner dictionary system tables to obtain the columns from the source table. The query returned no rows. This may be because none of the redo logs contains a catalog, or it may be an internal error.

Action: First, verify that the source system contains the source table. execute dbms_logmnr_d.build procedure to populate the redos log with logminer dictionary information. If this has been done and the problem persists, then contact Oracle Corporation

ORA-31476: a change table data column is missing from the source table

Cause: While advancing a change set, an CDC determined that at least one of the data columns in a change table does not match the name of any of the columns in the source table. The source table column list is stored in dictionary table SYSTEM.LOGMNR_OBJ\$

Action: Make sure that all of the data columns of the change table have the same names as the corresponding columns in the source table, and that all the columns exist in the source table.

ORA-31477: could not detach LogMiner session during cleanup

Cause: Failure during detach from a LogMiner session during advance of an asynchronous change set. This is an internal error. This exception is raised when a previous exception occurred during the internal protocol with LogMiner, after which Change Data Capture attempted to detach the LogMiner session as part of recovery. The detach session also failed

Action: Contact Oracle Corporation

ORA-31478: could not detach LogMiner session after change set advance

Cause: Failure during detach from a LogMiner session after successful advance of an asynchronous change set. This is an internal error. This exception is raised when an asynchronous change set has been successfully advanced but CDC was unable to detach from the LogMiner session

Action: Contact Oracle Corporation

ORA-31479: could not create LogMiner session

Cause: Failure during create of a new LogMiner session while advancing an asynchronous change set. This is an internal error.

Action: Contact Oracle Corporation

ORA-31480: staging database and source database cannot be the same

Cause: A CDC API call specified a source database name that matched the staging database on which the CDC API call is being executed.

Action: Make sure that the CDC API call is being executed from the staging database and that the source database is correctly specified. The source database and staging database need to be different databases.

ORA-31481: change source *string* is not a HotLog change source

Cause: A change source was specified that was not a HotLog change source, but a HotLog change source was required.

Action: Correct the call to supply a HotLog change source.

ORA-31482: invalid option for non-distributed Hotlog change source

Cause: A CDC API call specified `enabled_source = 'Y'` on a non-Distributed HotLog change source.

Action: Specify a Distributed HotLog change source.

ORA-31483: cannot have spaces in the parameter *string*

Cause: The specified parameter contained at least 1 space character.

Action: Check the value of the specified parameter. Remove the spaces and reissue the CDC API call.

ORA-31484: source database version must be at least 9.2.0.6 or greater

Cause: The source database is not at version 9.2.0.6 or higher.

Action: Upgrade the source database to 9.2.0.6 or higher.

ORA-31485: invalid database link

Cause: The database link used to connect from a staging database to a source database was invalid. The database link may not exist, may not be accessible to the current user, or may have been redefined since the Distributed HotLog change source was originally created.

Action: Make sure that there is a database link to the source_database for the Distributed HotLog change source. Make sure this database link is accessible to the current user.

ORA-31486: cannot support column *string* in this configuration

Cause: The specified column cannot be used in a Distributed HotLog configuration when the source database version is 9.2.0.6 or 10.1.0.0.

Action: Remove the specified column from the CREATE_CHANGE_TABLE or ALTER_CHANGE_TABLE CDC API call.

ORA-31487: cannot support begin dates or end dates in this configuration

Cause: The specified values cannot be used in a Distributed HotLog configuration.

Action: Remove the specified values from the CREATE_CHANGE_SET CDC API call.

ORA-31488: cannot support change set *string* in this configuration

Cause: Change sources with the hot mine option enabled are limited to 1 change set. The system detected an existing change set so a second one can not be created.

Action: Associate the change set with a different change source.

ORA-31489: invalid DDL_MARKERS value

Cause: A DDL_MARKERS value of 'y' was specified for an synchronous change table.

Action: Specify a DDL_MARKERS parameter value of 'n' and call the procedure again.

ORA-31490: could not attach to LogMiner session

Cause: Failure during attach to a LogMiner session while advancing an asynchronous change set. This is an internal error.

Action: Contact Oracle Corporation

ORA-31491: could not add logfile to LogMiner session

Cause: Failure during add logfile to a LogMiner session while advancing an asynchronous change set. This is an internal error.

Action: Contact Oracle Corporation

ORA-31492: could not set session parameters for LogMiner session

Cause: Failure during set parameters for a LogMiner session while advancing an asynchronous change set. This is an internal error.

Action: Contact Oracle Corporation

ORA-31493: could not prepare session for LogMiner session

Cause: Failure during prepare session for a LogMiner session while advancing an asynchronous change set. This is an internal error.

Action: Contact Oracle Corporation

ORA-31494: could not activate a LogMiner session

Cause: Failure during activation of a LogMiner session while advancing an asynchronous change set. This is an internal error.

Action: Contact Oracle Corporation

ORA-31495: error in synchronous change table on "*string*".*string*"

Cause: There was an error originating from this synchronous change table. One possible cause is that schema redefinition has occurred on the source table and one or

more columns in the change table are now a different type than corresponding source columns. Another possible cause is that there is a problem accessing the synchronous change table.

Action: Check further error messages in stack for more detail about the cause. If there has been schema redefinition, drop and recreate the synchronous change table.

ORA-31496: must use DBMS_CDC_PUBLISH.DROP_CHANGE_TABLE to drop change tables

Cause: An attempt was made to use the SQL command DROP TABLE for change tables, but DROP TABLE is not supported for change tables.

Action: Use the DBMS_CDC_PUBLISH.DROP_CHANGE_TABLE procedure instead of the DROP TABLE command.

ORA-31497: invalid value specified for first_scn

Cause: The first_scn was not greater than zero or was less than the previous value of first_scn.

Action: Check the value of first_scn. Correct it to make sure it is an integer greater than zero and greater than any previous value for this change source.

ORA-31498: description and remove_description cannot both be specified

Cause: The description and remove_description parameters were both specified.

Action: Check the values of description and remove_description. Correct call to only supply one of these values.

ORA-31499: null value specified for required parameter *string*

Cause: A null value was specified for a parameter that requires an explicit value.

Action: Correct call to supply a value for this parameter.

ORA-31500: change source *string* is not a ManualLog change source

Cause: A change source was specified that is not a ManualLog change source, but a ManualLog change source is required.

Action: Correct call to supply a ManualLog change source.

ORA-31501: change source *string* is not an AutoLog change source

Cause: A change source was specified that was not an AutoLog change source, but an AutoLog change source was required.

Action: Correct call to supply an AutoLog change source.

ORA-31502: invalid number supplied for supplemental_processes

Cause: The caller supplied an invalid value for supplemental_processes. The value must be a positive integer.

Action: Correct call to supply a positive integer value for supplemental_processes.

ORA-31503: invalid date supplied for begin_date or end_date

Cause: The caller supplied an invalid value for begin_date or end_date. The value must be a valid date value.

Action: Correct call to supply a valid date value for begin_date and/or end_date.

ORA-31504: cannot alter or drop predefined change source

Cause: The caller attempted to alter or drop one of the predefined change sources HOTLOG_SOURCE or SYNC_SOURCE.

Action: Do not attempt to alter or drop a predefined change source or correct call to supply the name of a user-created change source.

ORA-31505: cannot alter or drop predefined change set

Cause: The caller attempted to alter or drop the predefined change set SYNC_SET.

Action: Do not attempt to alter or drop the predefined change set or correct call to supply the name of a user-created change set.

ORA-31506: duplicate subscription name *string*

Cause: A subscription by the specified name already exists.

Action: Recreate the subscription with a unique name.

ORA-31507: *string* parameter value longer than maximum length *string*

Cause: A value was specified for a parameter that was longer than the maximum permitted length.

Action: Correct the call to supply a shorter value for this parameter that fits within the maximum length.

ORA-31508: invalid parameter value for synchronous change set

Cause: A parameter value was specified that is not supported for synchronous change sets.

Action: Correct the call to supply only valid parameter values for a synchronous change set. Synchronous change sets only support the default values for the following parameters: begin_scn, end_scn, begin_date, end_date, stop_on_ddl, supplemental_processes.

ORA-31509: publication does not exist

Cause: The specified publication did not exist or the specified subscription subscribed to a publication that no longer exists.

Action: Recheck the publication or subscription specified. Either call the procedure again with an existing publication or create a new subscription that only subscribes to existing publications.

ORA-31510: name uses reserved prefix CDC\$

Cause: A name was specified that starts CDC\$. The name prefix CDC\$ is reserved for use by Oracle Corporation.

Action: Change the name so it does not start with characters CDC\$

ORA-31511: name exceeds maximum length of 30 characters

Cause: A name was supplied that exceeds the maximum length of 30 characters.

Action: Change the name so it does not exceed 30 characters

ORA-31512: name cannot contain double quotation marks

Cause: A name containing a double quotation mark was supplied. Subscription names cannot contain the double quotation mark.

Action: Change the name so it has no double quotation marks

ORA-31513: unsupported column type specified in change table

Cause: A source column of an unsupported type was specified for inclusion in a change table. Columns types of LOB or LONG are not currently supported for change capture.

Action: Change the column list so that it does not include columns of LOB or LONG types.

ORA-31514: change set *string* disabled due to capture error

Cause: This change set has encountered a capture error and was disabled.

Action: Contact the change set's publisher to request that the capture error be resolved. Subscriptions using this change set cannot be activated or have their subscription windows extended or purged until the capture error is resolved.

ORA-31515: CDC change source *string* already exists

Cause: A Change Data Capture change source intended for import already existed.

Action: Either verify that the existing change source has the desired characteristics or drop the existing change source and perform the import again.

ORA-31516: CDC change set *string* already exists

Cause: A Change Data Capture change set intended for import already existed.

Action: Either verify that the existing change set has the desired characteristics or drop the existing change set and perform the import again.

ORA-31517: CDC change table *string.string* already exists

Cause: A Change Data Capture change table intended for import already existed.

Action: Either verify that the existing change table has the desired characteristics or drop the existing change table and perform the import again.

ORA-31518: change column *string* already exists in CDC change table *string.string*

Cause: A column in a Change Data Capture change table intended for import was already present in the change table.

Action: Either verify that the change table contains the desired columns or drop the change table and perform the import again.

ORA-31519: CDC subscription *string* already exists

Cause: A Change Data Capture subscription intended for import already existed.

Action: Either verify that the existing subscription has the desired characteristics or drop the existing subscription and perform the import again.

ORA-31520: CDC subscription *string* already subscribes to publication ID *string*

Cause: A Change Data Capture subscription intended for import already subscribed to a publication.

Action: Either verify that the existing subscription has the desired characteristics or drop the existing subscription and perform the import again.

ORA-31521: CDC subscription *string* already subscribes to publication ID *string* column *string*

Cause: A Change Data Capture subscription intended for import already subscribed to a published column.

Action: Either verify that the existing subscription has the desired characteristics or drop the existing subscription and perform the import again.

ORA-31522: could not find Streams object *string* for CDC change set *string*

Cause: An underlying Streams capture, apply, or queue was missing for an imported Change Data Capture change set.

Action: Drop the imported change set because it is invalid. Retry the import, ensuring that STREAMS_CONFIGURATION=y is specified.

ORA-31523: could not find change source *string* for CDC change set *string*

Cause: The change source was missing for an imported Change Data Capture change set.

Action: Drop the imported change set because it is invalid. Verify that the schema containing the missing change source was included in the original export. If needed, perform the export again, including the schema of the missing change source.

ORA-31524: could not find change set *string* for CDC change table *string.string*

Cause: The change set was missing for an imported Change Data Capture change table.

Action: Drop the imported change table because it is invalid. Verify that the schema containing the missing change set was included in the original export. If needed, perform the export again, including the schema of the missing change set.

ORA-31525: could not find column *string* in CDC change table *string.string*

Cause: A column was missing for an imported Change Data Capture change table.

Action: It is likely that this table existed before the import operation and import did not overwrite it. Determine whether the imported change table should supercede the original table. If so, drop the original table and retry the import. If not, the change table must have a different name in order to be imported.

ORA-31526: could not find source table *string.string* for CDC change table *string.string*

Cause: The source table was missing or was not set up correctly for an imported Change Data Capture change table. A synchronous change table requires the source table to exist and have the Change Data Capture trigger defined on it. An asynchronous change table requires table rules to be defined for the source table.

Action: Drop the imported change table because it is invalid. Verify that the schema containing the source table was included in the original export. If needed, perform the export again, including the schema of the source table. If change table is asynchronous, ensure that STREAMS_CONFIGURATION=y is specified for the import.

ORA-31527: could not find source column *string* for CDC change table *string.string*

Cause: A source column was missing for an imported Change Data Capture change table.

Action: Drop the imported change table because it is invalid. Verify that the schema containing the source table was included in the original export. If needed, perform the export again, including the schema of the missing source table.

ORA-31528: could not find change set *string* for CDC subscription *string*

Cause: The change set was missing for an imported Change Data Capture subscription.

Action: Drop the imported subscription because it is invalid. Verify that the schema containing the missing change set was included in the original export. If needed, perform the export again, including the schema of the missing change set.

ORA-31529: could not find publication for CDC subscriber view *string.string*

Cause: A publication was missing for an imported Change Data Capture subscription.

Action: Drop the imported subscription because it is invalid. Verify that the schema containing the missing publication was included in the original export. If needed, perform the export again, including the schema of the missing publication.

ORA-31530: could not find published column *string* for CDC subscriber view *string.string*

Cause: A published column was missing for an imported Change Data Capture subscription.

Action: Drop the imported subscription because it is invalid. Verify that the schema containing the missing published column was included in the original export. If needed, perform the export again, including the schema of the missing published column.

ORA-31531: could not find column *string* in CDC subscriber view *string.string*

Cause: A column was missing in a subscriber view for an imported Change Data Capture subscription.

Action: It is likely that this view existed before the import operation and import did not overwrite it. Determine whether the imported subscriber view should supercede the original view. If so, drop the original view and retry the import. If not, the subscriber view must have a different name in order to be imported.

ORA-31532: cannot enable change source *string*

Cause: The change source cannot be enabled when there is no change table created in any of the change sets associated with the change source.

Action: Add a change table to a change set before enabling the the change source.

ORA-31533: only one change set (*string*) is allowed in change source

Cause: A Distributed HotLog change source can contain at most one change set.

Action: Create a new change source and create the change set in the new change source.

ORA-31534: Change Data Capture *string* publisher *string* is missing DBA role

Cause: The publisher does not have the DBA role, which is required by the Change Data Capture operation.

Action: Grant the DBA role the Change Data Capture publisher.

ORA-31535: cannot support change source *string* in this configuration

Cause: Each database can only have one change source with hot mine option enabled. The system detected an existing hot mine change source in the database, therefore, a second hot mine change source cannot be created.

Action: Remove the existing change source and create this new change source again.

ORA-31536: cannot support encrypted column *string* in the source table

Cause: One of the columns specified in the parameter COLUMN_TYPE_LIST was an encrypted column in the source table

Action: remove the encrypted column in the parameter COLUMN_TYPE_LIST

ORA-31537: specified purge date is invalid

Cause: The purge date specified was an invalid date or was outside of the range of data currently in the change set.

Action: Do not specify purge date or specify a date that is within the range of data in the change set.

ORA-31538: change set *string* disabled

Cause: This change set was disabled.

Action: Contact the change set's publisher to request that the change set be enabled. Subscriptions using this change set cannot be activated or have their subscription windows extended or purged until the change set is enabled.

ORA-31539: no privilege to create job

Cause: This change table could not be created because the create job privilege is needed to submit the default purge job.

Action: Grant the create job privilege and try again

ORA-31540: *string* is not a valid identifier

Cause: All Change Data Capture (CDC) identifiers must have at most 30 characters, and must start with a letter that is followed by any combination of letters, numerals, and the signs '\$', '_', and '#'. Other characters cannot be used in identifiers. The rules for CDC identifiers are the same as for PL/SQL identifiers.

Action: Rename object to conform to CDC naming rules and try again.

ORA-31600: invalid input value *string* for parameter *string* in function *string*

Cause: A NULL or invalid value was supplied for the parameter.

Action: Correct the input value and try the call again.

ORA-31601: Function *string* cannot be called now that fetch has begun.

Cause: The function was called after the first call to FETCH_XXX.

Action: Correct the program.

ORA-31602: parameter *string* value "*string*" in function *string* inconsistent with *string*

Cause: The parameter value is inconsistent with another value specified by the program. It may be inconsistent with the object type associated with the OPEN context, or it may be of the wrong datatype (a boolean rather than a text string or vice versa).

Action: Correct the program

ORA-31603: object "*string*" of type *string* not found in schema "*string*"

Cause: The specified object was not found in the database.

Action: Correct the object specification and try the call again.

ORA-31604: invalid *string* parameter "*string*" for object type *string* in function *string*

Cause: The specified parameter value is not valid for this object type.

Action: Correct the parameter and try the call again.

ORA-31605: the following was returned from *string* in routine *string*:\nLPX-number: *string*

Cause: An LPX routine (XML/XSL processing) returned an internal error number to its PL/SQL wrapper routine in facility KUX which provides the implementation for package UTL_XML.

Action: Look up the LPX error number and follow its corrective action.

ORA-31606: XML context *number* does not match any previously allocated context

Cause: A method in package UTL_XML was called with an invalid XML context handle. All handles must have previously been allocated by UTL_XML.XMLINIT.

Action: Always call XMLINIT before any other methods in pkg. UTL_XML.

ORA-31607: function *string* is inconsistent with transform.

Cause: Either (1) FETCH_XML was called when the "DDL" transform was specified, or (2) FETCH_DDL was called when the "DDL" transform was omitted.

Action: Correct the program.

ORA-31608: specified object of type *string* not found

Cause: The specified object was not found in the database.

Action: Correct the object specification and try the call again.

ORA-31609: error loading file "*string*" from file system directory "*string*"

Cause: The installation script initmeta.sql failed to load the named file from the file system directory into the database.

Action: Examine the directory and see if the file is present and can be read.

ORA-31610: cannot call this function from a non-master process

Cause: Called a Data Pump process model function from a process which is not a master process.

Action: Create a master process first. Then call the function from the master process. If this error occurs from a Data Pump client (e.g. expdp or impdp), try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31612: Allocation of process descriptor failed.

Cause: During creation of a master process or a worker process, a failure occurred allocating a process descriptor for the process.

Action: Try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31613: Master process *string* failed during startup.

Cause: The master process whose name is listed failed during startup.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31614: routine *string* received this error from *string*: \n*string*

Cause: The call to the specified routine failed and the specific error text is included in this error message (the last %s string).

Action: Correct inputs to the specified routine.

ORA-31615: routine *string* received this error: \n*string*

Cause: The specified routine failed and the specific error text is included in this error message (the last %s string).

Action: Correct inputs to the specified routine.

ORA-31616: unable to write to dump file "*string*"

Cause: Export was unable to write to the export file, probably because of a device error. This message is usually followed by a device message from the operating system.

Action: Take appropriate action to restore the device.

ORA-31617: unable to open dump file "*string*" for write

Cause: Export was unable to open the export file for writing. This message is usually followed by device messages from the operating system.

Action: Take appropriate action to restore the device.

ORA-31618: FILESIZE is outside valid range of *string*KB to *string*TB

Cause: The value specified for the FILESIZE parameter was either too small to hold the header information for the export file, plus any data, or exceeded the allowed maximum size for a dump file.

Action: Retry the operation using a value for FILESIZE that falls within the valid range.

ORA-31619: invalid dump file "*string*"

Cause: Either the file was not generated by Export or it was corrupted.

Action: If the file was indeed generated by Export, report this as an Import bug and submit the export file to Oracle Customer Support.

ORA-31620: file or device "*string*" cannot be specified for *string* operation

Cause: There was an inappropriate use of file or device in the current operation.

Action: Correct operation or job setup.

ORA-31621: error creating master process

Cause: Setup to create a master process failed.

Action: Refer to any following error messages for possible actions. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31622: premature end of file at block *string*

Cause: The end of the dump file input was unexpectedly reached. This is caused either by a corrupted Data Pump export dump file or by an Oracle internal error. This message should be preceded by another message identifying the name of the dump file in question.

Action: Retry the Data Pump import operation. Contact Oracle Support Services if the problem persists.

ORA-31623: a job is not attached to this session via the specified handle

Cause: An attempt to reference a job using a handle which is invalid or no longer valid for the current session.

Action: Select a handle corresponding to a valid active job or start a new job.

ORA-31624: A job cannot be modified after it has started.

Cause: The user attempted to change the definition of a Data Pump job through filters, transforms or parameters after it had started. These changes can only be made while defining a job.

Action: Stop the current job and rerun it with the correct definition.

ORA-31625: Schema *string* is needed to import this object, but is inaccessible

Cause: An error occurred when attempting to import objects. The schema specified is needed to import this object, but access to this schema is not available.

Action: Refer to any following error messages for possible actions. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31626: job does not exist

Cause: An invalid reference to a job which is no longer executing, is not executing on the instance where the operation was attempted, or that does not have a valid Master Table. Refer to any following error messages for clarification.

Action: Start a new job, or attach to an existing job that has a valid Master Table.

ORA-31627: API call succeeded but more information is available

Cause: The user specified job parameters that yielded informational messages.

Action: Call DBMS_DATAPUMP.GET_STATUS to retrieve additional information.

ORA-31628: error getting worker process exception

Cause: Attempt to get a worker process exception failed.

Action: Refer to any following error messages for possible actions. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31629: unable to allocate additional memory

Cause: A dynamic memory allocation failure occurred.

Action: Report this problem to a database administrator.

ORA-31630: a job name is required to attach a job for user *string*

Cause: No job name was supplied for an attach and the user has either no jobs executing or multiple jobs executing.

Action: Provide a job name for attach to use in selecting an executing job, or to use for restarting a stopped job.

ORA-31631: privileges are required

Cause: The necessary privileges are not available for operations such as: restarting a job on behalf of another owner, using a device as a member of the dump file set, or omitting a directory object associated with any of the various output files. Refer to any following error messages for additional information.

Action: Select a different job to restart, try a different operation, or contact a database administrator to acquire the needed privileges.

ORA-31632: master table "*string.string*" not found, invalid, or inaccessible

Cause: A Master Table is required but no such table exists, or the content is not consistent with that of a valid Master Table, or the table is not accessible. Refer to any following error messages for clarification.

Action: Make sure a valid Master Table exists, and eliminate any problems indicated by the following error messages.

ORA-31633: unable to create master table "*string.string*"

Cause: Job creation failed because a Master Table and its indexes could not be created, most commonly due to the pre-existence of a table with the same name (job name) in the user schema. Refer to any following error messages for clarification.

Action: Select a different job name, DROP the existing table, or eliminate any problems indicated by the following error messages.

ORA-31634: job already exists

Cause: Job creation or restart failed because a job having the selected name is currently executing. This also generally indicates that a Master Table with that job name exists in the user schema. Refer to any following error messages for clarification.

Action: Select a different job name, or stop the currently executing job and re-try the operation (may require a DROP on the Master Table).

ORA-31635: unable to establish job resource synchronization

Cause: A lock used in synchronizing Data Pump resources during job creation and deletion could not be obtained during job creation. This indicates that a process for some other Data Pump job has not released the lock due to an internal error.

Action: Eliminate the processes for any failed Data Pump job and try to create the new job again. If the error continues to occur, contact Oracle Customer Support and report the error.

ORA-31636: session is already attached to job *string* for user *string*

Cause: The session executing the attach is already attached to the specified job.

Action: Select a different job or create a new session.

ORA-31637: cannot create job *string* for user *string*

Cause: Unable to create or restart a job. Refer to any following or prior error messages for clarification.

Action: Eliminate the problems indicated.

ORA-31638: cannot attach to job *string* for user *string*

Cause: Unable to attach a job to a session. Refer to any following or prior error messages for clarification.

Action: Eliminate the problems indicated.

ORA-31639: unexpected data found

Cause: The Master Table or Data Pump file contents appear invalid. The table or file may not have been produced by a Data Pump job, or they may have been corrupted.

Action: Select a different job name (Master Table) or replace the table or file with one produced by Data Pump.

ORA-31640: unable to open dump file "*string*" for read

Cause: Import was unable to open the export file for reading. This message is usually followed by device messages from the operating system.

Action: Take appropriate action to restore the device.

ORA-31641: unable to create dump file "*string*"

Cause: Export was unable to create the specified file with write enabled.

Action: Check the file name and file system for the source of the error.

ORA-31642: the following SQL statement fails: \nstring

Cause: An internal error was generated from package DBMS_METADATA.

Action: Contact Oracle Customer Support and report the error.

ORA-31643: unable to close dump file "string"

Cause: Export or Import was unable to close the dump file. This message is usually followed by device messages from the operating system.

Action: Take appropriate action to restore the device.

ORA-31644: unable to position to block number string in dump file "string"

Cause: Export or Import was unable to position its file pointer to a specific block within the dump file. This message is usually followed by device messages from the operating system.

Action: Take appropriate action based on the device messages.

ORA-31645: unable to read from dump file "string"

Cause: Import could not read from the dumpfile, probably because of a device error. This message is usually followed by a device message from the operating system.

Action: Take appropriate action to restore the device.

ORA-31648: Timeout before master process string finished initialization.

Cause: The master process whose name is listed started up but did not finish its initialization within the allowed time limit.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31649: Master process string violated startup protocol.

Cause: The master process whose name is listed started up but then exited before notifying the creating process that it was finished with initialization.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31650: timeout waiting for master process response

Cause: After creating the job infrastructure and sending the initial message to the master process, it failed to respond in the allotted time and most likely aborted during startup.

Action: Retry the open or attach request. Contact Oracle Customer Support if the problem persists.

ORA-31651: communication error with master process - detaching job

Cause: Unexpected failure trying to communicate with the master process.

Action: Attach again and retry operation. Contact Oracle Customer Support if the problem persists.

ORA-31652: command response message was invalid type - detaching job

Cause: Something horribly wrong with the command/response protocol.

Action: Reattach and retry operation. Contact Oracle Customer Support if the problem persists.

ORA-31653: unable to determine job operation for privilege check

Cause: Failure trying to determine the operation of the current job in order to test for appropriate privileges.

Action: Retry in case it's an intermittent failure. If it still fails, detach, reattach, and retry the call. Contact Oracle Customer Support if the problem persists.

ORA-31654: unable to convert file or volume size as specified to a number

Cause: File or volume size specification has an error that prevents it from being converted into a numeric value.

Action: Fix the call.

ORA-31655: no data or metadata objects selected for job

Cause: After the job parameters and filters were applied, the job specified by the user did not reference any objects.

Action: Verify that the mode of the job specified objects to be moved. For command line clients, verify that the INCLUDE, EXCLUDE and CONTENT parameters were correctly set. For DBMS_DATAPUMP API users, verify that the metadata filters, data filters, and parameters that were supplied on the job were correctly set.

ORA-31656: cannot use TABLESPACE_EXPR filter with transportable mode

Cause: A TABLESPACE_EXPR metadata filter was supplied for a transportable mode import job. Transportable mode import does not support the subsetting of tablespaces from a dump file set.

Action: Remove the filter expression.

ORA-31657: data filter name can not be defaulted

Cause: A null data filter name was supplied.

Action: Fix the call to specify a data filter name.

ORA-31658: specifying a schema name requires a table name

Cause: The caller specified a schema name but neglected to specify a corresponding table name.

Action: Fix the call to include a table name.

ORA-31659: status message was invalid type - detaching job

Cause: Message from the master process on the status queue had an invalid message type, indicating a failure in the protocol.

Action: Reattach and retry the operation. Contact Oracle Customer Support if the problem persists.

ORA-31660: metadata filter name can not be defaulted

Cause: A null metadata filter name was supplied.

Action: Fix the call to specify a metadata filter name.

ORA-31661: there are no metadata transform values of type VARCHAR2

Cause: The specified metadata transform value was an invalid type.

Action: Fix the call to specify a valid metadata transform value.

ORA-31662: metadata transform name can not be defaulted

Cause: A null metadata transform name was supplied.

Action: Fix the call to specify a metadata transform name.

ORA-31663: metadata remap name can not be defaulted

Cause: A null metadata remap name was supplied.

Action: Fix the call to specify a metadata remap name.

ORA-31664: unable to construct unique job name when defaulted

Cause: The job name was defaulted, and the name creation algorithm was unable to find a unique job name for this schema where the table name (for the master table) didn't already exist.

Action: Specify a job name to use or delete some of the existing tables causing the name conflicts.

ORA-31665: mode can only be defaulted for IMPORT and SQL_FILE operations

Cause: The job mode can not be null except for IMPORT and SQL_FILE operations.

Action: Fix the call to specify the job mode.

ORA-31666: Master process *string* had an unhandled exception.

Cause: A Data Pump process model master process had an unhandled exception condition.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31667: parameter name can not be defaulted

Cause: A null was supplied for the parameter name.

Action: Fix the call by providing a valid parameter name.

ORA-31668: Timeout before worker process *string* finished initialization.

Cause: The worker process whose name is listed started up but did not finish its initialization within the allowed time limit.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31669: Worker process *string* violated startup protocol.

Cause: The worker process whose name is listed started up but then exited before notifying the creating process that it was finished with initialization.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31670: Username argument must be specified and non-null.

Cause: Called change user with a NULL username or a null string.

Action: Specify a valid username argument. If this error occurs from a Data Pump client (e.g. expdp or impdp), try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31671: Worker process *string* had an unhandled exception.

Cause: A Data Pump process model worker process had an unhandled exception condition.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31672: Worker process *string* died unexpectedly.

Cause: A Data Pump process model worker process died unexpectedly, so PMON is cleaning up the process.

Action: Check your system for problems. Check the trace file for the process, if one was created, for any additional information. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31673: worker process interrupt for normal exit by master process

Cause: A worker process was requested to clean up and exit because the master process is doing a normal exit.

Action: If this error occurs from a Data Pump client (e.g. expdp or impdp), it means that the master process for the operation exited prematurely. Try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31674: worker process interrupt for unhandled exception in master process

Cause: A worker process was requested to clean up and exit because an unhandled exception occurred in the master process.

Action: If this error occurs from a Data Pump client (e.g. expdp or impdp), it means that the master process for the operation had an unhandled exception. Check the log file for the operaton and the trace file for the master process for any additional information. Try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31675: worker process interrupt for unexpected death of master process

Cause: A worker process was requested to clean up and exit (signaled by PMON, doing cleanup because the master process died unexpectedly).

Action: If this error occurs from a Data Pump client (e.g. expdp or impdp), it means that the master process for the operation died unexpectedly. Check the log file for the operaton and the trace file for the master process for any additional information. Try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31676: illegal value for number of workers, *string*

Cause: Called create worker processes with an illegal number of workers specified.

Action: Make sure that the number of workers value is greater than 0 and less than the maximum value for the platform (normally 32767). If this error occurs from a Data Pump client (e.g. expdp or impdp) and you specified the parallel parameter, try the operation again with a smaller value for the parallel parameter. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31679: Table data object *string* has long columns, and longs can not be loaded/unloaded using a network link

Cause: Table data objects that contain long columns can not be selected over a network link.

Action: Export this table to a file and then import the same table from the file.

ORA-31686: error creating worker processes

Cause: Setup to create worker processes failed.

Action: Refer to any following error messages for possible actions. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31687: error creating worker process *string* with worker id *string*

Cause: Attempt to create the listed worker process failed.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31688: Worker process *string* failed during startup.

Cause: The worker process whose name is listed failed during startup.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31689: illegal value for base worker id, *string*

Cause: Called create worker processes with an illegal base worker id value specified.

Action: Make sure that the base worker id value is greater than 0 and less than the maximum value for the platform (normally 32767). If this error occurs from a Data Pump client (e.g. expdp or impdp), try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31690: Process name buffer size must be specified and must be greater than 0.

Cause: Called get worker exception and either specified NULL or 0 for the buffer size argument.

Action: Be sure to specify a buffer size that is big enough to hold the worker process name (e.g. 30 bytes). If this error occurs from a Data Pump client (e.g. expdp or impdp), try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31691: The worker received message number *string* from the MCP, which is invalid.

Cause: Bad code.

Action: Fix mcp code and reissue export/import command.

ORA-31692: The following SQL statement failed trying to insert a row into the Master table:\n*string*

Cause: Bad code.

Action: Fix code and reissue export/import command.

ORA-31693: Table data object *string* failed to load/unload and is being skipped due to error:\nstring

Cause: Table failed to load or unload due to some error.

Action: Check load/unload error, correct problem and retry command.

ORA-31694: master table *string* failed to load/unload

Cause: Master table failed to load or unload.

Action: Check load/unload error, correct problem and retry command.

ORA-31695: Inconsistent master table on restart. The following SQL statement returned *string* identical objects.\nstring

Cause: Master table on restart has the same object inserted multiple times.

Action: Restart not possible, reissue original export/import.

ORA-31696: unable to export/import *string* using client specified *string* method

Cause: Table attributes prevent client specified method for exporting or importing data.

Action: Use default 'DATA_ACCESS' parameter value.

ORA-31697: aborting operation at process order number *string*

Cause: User asked for it.

Action: Don't ask for it.

ORA-31698: Error stack buffer size must be specified and must be greater than 0.

Cause: Called get worker exception and either specified NULL or 0 for the error stack size argument.

Action: Be sure to specify an error stack buffer size that is big enough to hold the error stack string (e.g. 4096 bytes). If this error occurs from a Data Pump client (e.g. expdp or impdp), try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31700: Very long string supplied for AUDIT_SYSLOG_LEVEL parameter

Cause: Very long string supplied for AUDIT_SYSLOG_LEVEL in init.ora

Action: Use a valid facility.level such as "local1.notice" as described in syslog's manual pages

ORA-31701: Event to enable xmltype table export/import with schema

Cause: Event to enable xmltype table export/import with schema

Action: Disable the event at level 0x100

ORA-31702: This privilege has already been granted.

Cause: The GRANT statement contained a privilege that was already granted to the user.

Action: Remove the privilege from the statement and retry.

ORA-31703: cannot grant *string* privilege on behalf of other users

Cause: Granting of the privilege was attempted by a user other than SYS or the owner.

Action: Granting of the privilege can only be done by SYS or the owner.

ORA-31704: cannot revoke *string* privilege on behalf of other users

Cause: Revoking of the privilege was attempted by a user other than SYS or the owner.

Action: Revoking of the privilege can only be done by SYS or the owner.

ORA-31705: failed to get library object

Cause: An error occurred while trying to lock the library object.

Action: Retry the operation later.

ORA-31706: role *string* not granted commonly or does not exist

Cause: Either the role was not granted commonly to the user, or the role did not exist.

Action: Create the role or grant the role commonly to the user and retry the operation.

ORA-31901: the current operation was cancelled by the user

Cause: The user requested to cancel current operation

Action: No action is necessary

ORA-31903: cannot unregister materialized view for Synchronous refresh

Cause: One or more materialized views in the materialized views list were not registered for Synchronous refresh.

Action: Check catalog views for which materialized views are registered.

**ORA-31905: Synchronous refresh cannot be used for materialized view
"*string*".*string*"\n*nstring***

Cause: The materialized view did not meet the requirements for Synchronous refresh.

Action: The query defining the materialized view must conform to a star or snowflake schema, the fact-table and materialized view must both be partitioned, and the partition-key of the materialized view must be functionally-dependent on the partition-key of the fact-table. Run CAN_SYNCREF_TABLE to obtain more diagnostics and troubleshoot the problem further.

ORA-31906: Staging log of "*string*".*string*" contains rows which do not belong to any of the table's partitions.

Cause: Synchronous refresh detected this error during PREPARE_REFRESH.

Action: Check the data in the staging log for validity. If the data is valid, create additional partitions,, including a default partition if needed, with the ALTER TABLE command.

ORA-31907: Synchronous refresh of "*string*".*string*" results in rows which do not belong to any of the materialized view's partitions.

Cause: Synchronous refresh detected this error during PREPARE_REFRESH.

Action: Check the data in the staging logs of the materialized view's base tables for validity. If the data is valid, create additional partitions, including a default partition if needed, with the ALTER MATERIALIZED VIEW command.

ORA-31908: cannot modify the contents of a table with a staging log

Cause: An attempt was made to alter the contents of a table with a staging log.

Action: Do not use the following ALTER TABLE statements on a table with a staging log: * ALTER TABLE EXCHANGE PARTITION * ALTER TABLE DROP PARTITION * ALTER TABLE TRUNCATE PARTITION You must use the

REGISTER_PARTITION_OPERATION procedure in the DBMS_SYNC_REFRESH package to perform these operations.

ORA-31909: base table "*string*"."*string*" must have primary key or foreign key when creating a staging log

Cause: The base table did not have a primary or foreign key defined.

Action: Define primary key or foreign key on the base table.

ORA-31910: staging log exists on table "*string*"."*string*"

Cause: Staging log was already generated on the base table.

Action: Do not attempt to create the staging log.

ORA-31911: MV log on table "*string*"."*string*" is not completely consumed.

Cause: Materialized views (MV) referencing the base table were not refreshed.

Action: Refresh all the MVs referencing the base table before altering MV log to staging log.

ORA-31912: Cannot alter MV log. MV log was not created on table "*string*"."*string*"

Cause: Materialized view (MV) log was not created on the base table.

Action: Do not alter the MV log.

ORA-31913: Log is already an MV log on table "*string*"."*string*".

Cause: An attempt was made to alter a staging log to a materialize view (MV) log when it was already an MV log.

Action: Do not alter the MV log.

ORA-31914: Staging log was created on table "*string*"."*string*"

Cause: Staging log was not created on base table.

Action: Do not alter the staging log.

ORA-31915: At least one MV referencing table "*string*"."*string*" is REFRESH ON COMMIT.

Cause: At least one materialize view (MV) referencing a table is defined as REFRESH ON COMMIT.

Action: Do not create or alter to the staging log.

ORA-31916: Staging log on table "*string*"."*string*" cannot be dropped or altered.

Cause: The current group contained a materialize view (MV) referencing the table.

Action: Do not drop or alter the staging log.

ORA-31917: illegal operation on a table which has been locked by synchronous refresh

Cause: DML or DDL was used on a base table that had a staging log or was locked by synchronous refresh. The synchronous refresh operation locks tables related to the refresh group at PREPARE_REFRESH time and unlocks them after the EXECUTE_REFRESH is done to prevent wrong results.

Action: Do not perform DML or DDL on such tables. You cannot modify tables locked by PREPARE_REFRESH until you have done the corresponding EXECUTE_REFRESH.

ORA-31918: The materialized view "*string*".*string*" is registered for synchronous refresh and cannot be altered or dropped.

Cause: The materialized view was registered for synchronous refresh.

Action: Do not drop or alter the materialized view.

ORA-31919: Value of DMLTYPE\$\$ column is not one of ('I','D','UO','UN') in staging log "*string*".*string*".

Cause: Value of DMLTYPE\$\$ column was not one of ('I','D','UO','UN').

Action: Update the staging log.

ORA-31920: 'UO' and 'UN' row counts or key values not matched in the staging log "*string*".*string*".

Cause: 'UO' and 'UN' row counts or key values were not matched in the staging log.

Action: Update the staging log.

**ORA-31921: Staging log rows to be updated, deleted or inserted were invalid.
*nstring***

Cause: The staging log rows to be updated, deleted or inserted were invalid.

Action: Change the staging log key in the staging log table.

ORA-31922: Foreign key must contain partition key in table "*string*".*string*".

Cause: The foreign key did not contain a partition key. If a table does not have a primary key, the foreign key must contain a partition key.

Action: Change the foreign key or partition key in the table.

ORA-31923: must have primary key or partition key in table "*string*".*string*".

Cause: The table did not have a primary key or a partition key.

Action: Add a primary key or partition key to the table.

ORA-31924: must have either primary key or foreign key in table "*string*".*string*".

Cause: The table did not have a primary key or a foreign key.

Action: Add a primary key or foreign key to the table.

ORA-31925: Every row in staging log "*string*".*string*" should contain non-NULL values for all the columns comprising staging log key.

Cause: The staging log contained NULL values in key columns.

Action: Fill in non-NULL values to the staging log key columns.

ORA-31926: Type "*string*" is not supported for synchronous refresh.

Cause: An attempt was made to create a staging log on a base table containing an unsupported data type.

Action: Do not attempt synchronous refresh on this base table. Refer to the documentation.

ORA-31927: Staging log does not exist on table "*string*".*string*".

Cause: An attempt to prepare a staging log that did not exist.

Action: Create a staging log on the table first.

ORA-31928: Synchronous refresh error*nstring*

Cause: An error occurred in the synchronous refresh package (DBMS_SYNC_REFRESH). This message will be followed by a second message giving more details about the nature of the error.

Action: See the synchronous refresh documentation for an explanation of the second error message.

ORA-31930: The table is locked by synchronous refresh and the requested operation cannot be performed.

Cause: An attempt was made to perform a PMOP (partition maintenance operation) or otherwise modify a table that was locked by synchronous refresh. The synchronous refresh operation locks tables related to the refresh group at PREPARE_REFRESH time and unlocks them after the EXECUTE_REFRESH is done to prevent wrong results.

Action: Do not perform PMOPs or modify the table between the execution of PREPARE_REFRESH and EXECUTE_REFRESH. You can do these operations before PREPARE_REFRESH or after EXECUTE_REFRESH.

ORA-31932: cannot allocate memory of *string* bytes for query expression

ORA-31951: invalid SCALE value

Cause: The value was not within the allowable range.

Action: Correct the value and try again.

ORA-31952: invalid second argument

Cause: The second argument was not an integer, bind variable, or the keyword PARTITION.

Action: Specify either the keyword PARTITION or an integer or a bind variable.

ORA-31953: expected MIN or MAX aggregate not found

Cause: Either a matching pair of MIN and MAX aggregates were missing or an aggregate other than MIN or MAX was found.

Action: Specify only matching pairs of MIN and MAX aggregates.

ORA-31954: duplicate MIN or MAX aggregate found

Cause: The same MIN or MAX aggregate was found more than once.

Action: Specify a MIN or MAX aggregate only once.

ORA-31955: incorrect join found

Cause: A join other than equality left outer join was found.

Action: Specify only simple equality left outer joins with the fact table on the left side.

ORA-31956: construct or object '*string*' not allowed for zonemap

Cause: A construct or object not allowed in the zonemap definition was found.

Action: Remove the construct or object that is not allowed in the zonemap definition.

ORA-31957: table *string* not joined

Cause: A table without a join to the fact table was found.

Action: Specify a left outer join between this table and the fact table.

ORA-31958: fact table *string* already has a zonemap *string* on it

Cause: The fact table already had a zonemap.

Action: Drop the existing zonemap and repeat the command.

ORA-31959: internal error during the refresh of zonemap "*string*".*string*"

Cause: An internal error was detected by the zonemap refresh subsystem and the refresh operation was aborted.

Action: Call Oracle Support Services.

ORA-31960: must use DROP MATERIALIZED ZONEMAP to drop "*string*".*string*"

Cause: An attempt was made to drop a zonemap using a command other than DROP MATERIALIZED ZONEMAP.

Action: Use the DROP MATERIALIZED ZONEMAP command.

ORA-31961: must use ALTER MATERIALIZED ZONEMAP to alter "*string*".*string*"

Cause: An attempt was made to alter a zonemap using a command other than ALTER MATERIALIZED ZONEMAP.

Action: Use the ALTER MATERIALIZED ZONEMAP command.

ORA-31962: cannot fast refresh zonemap "*string*".*string*"

Cause: The fast refresh operation was not possible because DML had occurred to one or more dimension tables of the zonemap.

Action: Specify the force ('?') or complete ('C') option.

ORA-31964: matching GROUP BY expression required

Cause: A matching GROUP BY expression was not found in the SELECT list.

Action: Specify an expression in the SELECT list that matches with the GROUP BY expression.

ORA-31965: incorrect predicate found

Cause: A predicate other than simple equality left outer join predicate was found.

Action: Specify only simple equality left outer join predicates with the fact table on the left side.

ORA-31966: invalid option specified to alter "*string*".*string*"

Cause: An invalid option was used to alter a zonemap table.

Action: Choose a valid option with the ALTER TABLE command.

ORA-31967: built-in aggregate function must be named ZONE_ID\$

Cause: The name for built-in aggregate function was not ZONE_ID\$.

Action: Specify zone_id\$ or "ZONE_ID\$" as the name for aggregate built-in function.

ORA-31968: internal error during the staleness tracking of zonemap "*string*".*string*"

Cause: An internal error was detected by the zonemap staleness tracking subsystem and the DML operation on the zonemap fact table was aborted.

Action: Call Oracle Support Services.

ORA-31969: ZONEMAP not supported for table stored in tablespace of this storage type

Cause: An attempt was made to define ZONEMAP on a table stored in non-Oracle Exadata storage.

Action: Create this table in a tablespace residing on Oracle Exadata storage and then define a ZONEMAP on it.

ORA-31970: cannot comment on the materialized zonemap

Cause: An attempt was made to issue a COMMENT ON TABLE statement on a materialized zonemap.

Action: Issue a COMMENT ON MATERIALIZED ZONEMAP statement instead.

ORA-31990: failed to process parameter "*string*" from SPFILE

Cause: An error was encountered while processing parameters from the SPFILE.

Action: Update the parameter value using the ALTER SYSTEM SET statement with scope set to SPFILE, and try opening the pluggable database again.

ORA-31991: error occurred processing parameter '*string*'

Cause: The parameter could not be specified for a pluggable database.

Action: Remove the parameter and try again.

ORA-32000: write to SPFILE requested but SPFILE is not modifiable

Cause: An ALTER SYSTEM command or an internal self-tuning mechanism requested a write to the SPFILE but the SPFILE was not modifiable.

Action: Perform an in-memory parameter update only.

ORA-32001: write to SPFILE requested but no SPFILE is in use

Cause: An ALTER SYSTEM command or an internal self-tuning mechanism requested a write to the SPFILE but no SPFILE was in use.

Action: Re-start the instance using an SPFILE, or execute ALTER SYSTEM SET SPFILE.

ORA-32002: cannot create SPFILE already being used by the instance

Cause: A create spfile command is trying to write to an SPFILE that was used to startup the instance.

Action: Specify a different SPFILE name

ORA-32003: error occurred processing parameter '*string*'

Cause: An error occurred while parsing the parameter file.

Action: See additional errors to determine the root cause.

ORA-32004: obsolete or deprecated parameter(s) specified for *string* instance

Cause: Obsolete or deprecated parameters for this instance type were specified in the SPFILE or the PFILE on the server side.

Action: See alert log for a list of parameters that are obsolete or deprecated. Remove them from the SPFILE or the server side PFILE.

ORA-32005: error while parsing size specification [*string*]

Cause: The value specified for an alter operation on a size parameter is not valid

Action: Correct the value and retry the operation

ORA-32006: *string* initialization parameter has been deprecated

Cause: A deprecated parameter was specified at startup

Action: Consult Oracle documentation to find new parameters to use instead.

ORA-32007: internal

Cause: A parameter error occurred.

Action: Call Oracle support.

ORA-32008: error while processing parameter update at instance *string*

Cause: An error occurred while processing a parameter on a remote instance.

Action: See accompanying error messages.

ORA-32009: cannot reset the memory value for instance *string* from instance *string*

Cause: Memory resets of local parameters are only allowed.

Action: Retry the query for the local instance if needed.

ORA-32010: cannot find entry to delete in SPFILE

Cause: The SPFILE did not contain the sid.parameter entry.

Action: Change the sid and/or the parameter.

ORA-32011: cannot restore SPFILE to location already being used by the instance

Cause: A restore operation trying to write to an SPFILE that was used to startup the instance.

Action: Specify a different SPFILE name

ORA-32013: failure in verifying parameters from the restored SPFILE

Cause: Failure during processing of parameters from restored SPFILE. It could be that restore image of the SPFILE is corrupted.

Action: Further diagnostic information should be in the error stack.

ORA-32014: error processing parameter "*string*" from the SPFILE restore image

Cause: Failure during processing of parameters from restored SPFILE. It could be that restore image of the SPFILE is corrupted.

Action: Further diagnostic information should be in the error stack.

ORA-32015: unable to restore SPFILE

Cause: Failure during SPFILE restore. It could be that the restore destination is not valid.

Action: Further diagnostic information should be in the error stack.

ORA-32016: parameter "*string*" cannot be updated in SPFILE

Cause: Database is mounted.

Action: Unmount the database to update the parameter in the SPFILE

ORA-32017: failure in updating SPFILE

Cause: A failure occurred while updating the SPFILE.

Action: See associated errors.

ORA-32018: parameter cannot be modified in memory on another instance

Cause: Parameter adjustment can take a very long time

Action: Modify the parameter individually on each instance using the SID clause of the alter system command

ORA-32019: The parameter SPFILE cannot be updated in the server parameter file.

Cause: An attempt was made to update the parameter SPFILE in the server parameter file.

Action: Convert the server parameter file into a parameter file and then add the parameters needed and recreate the server parameter file.

ORA-32020: SID='*' clause needed to modify this parameter

Cause: The parameter did not have the same value on all RAC instances.

Action: Retry the command by specifying SID='*'

ORA-32021: parameter value longer than *string* characters

Cause: An attempt was made to alter a parameter value but the number of characters in the parameter value was longer than the allowed maximum. For a list parameter, one of the values in the list was longer than the allowed maximum.

Action: Reduce the parameter value length and retry the command. For the DISPATCHERS parameter, use listener aliases to reduce value length.

ORA-32022: parameter *string* value longer than *string* characters

Cause: The combined length of all the parameter values was more than the allowed maximum.

Action: Reduce the parameter value length and retry the command. For the DISPATCHERS parameter, use listener aliases to reduce value length.

ORA-32024: invalid directory specified for audit_file_dest parameter

Cause: Either the directory does not exist or it is not writable.

Action: Retry the command by specifying a valid directory or granting appropriate directory permissions.

ORA-32025: *string.string* is not a table or view object.

Cause: An attempt was made to set the audit table to a non-table object or a non-view object.

Action: Specify a valid table or view object for the audit table option.

ORA-32026: *string.string* has fewer columns compared to *string* table.

Cause: An attempt was made to set the audit table to a table or view object that has fewer columns compared to the base audit table.

Action: Specify a valid table or view object for the audit table option.

ORA-32027: There is no *string* column with the matching type in *string.string*.

Cause: An attempt was made to set the audit table to a table or view object that does not have a column with the same name and type as the one in the audit table.

Action: Specify a valid table or view object for the audit table option.

ORA-32028: Syslog facility or level not recognized

Cause: Syslog facility or level did not conform to the standard facility or level provided in the syslog.h file

Action: Specify a facility or level such as "LOCAL1.NOTICE" which conforms to the syslog.h file

ORA-32029: resetting with SCOPE=MEMORY or SCOPE=BOTH is currently not supported

Cause: An attempt was made to reset an in-memory parameter value

Action: Specify SCOPE=SPFILE if applicable, or explicitly set the parameter to the desired value

ORA-32030: an SPFILE is already associated with the instance

Cause: An attempt was made to update the parameter SPFILE on an instance that was already associated with an spfile.

Action: Restart the instance with a parameter file.

ORA-32031: illegal reference of a query name in WITH clause

Cause: forward or recursive reference of a query name in WITH clause is not allowed.

Action: Correct query statement, then retry.

ORA-32032: free temporary object number not available

Cause: Too many queries using temp table transformation are currently being run to use up all temporary object numbers.

Action: Turn off temporary table transformation or wait, then retry

ORA-32033: unsupported column aliasing

Cause: column aliasing in WITH clause is not supported yet

Action: specify aliasing in definition subquery and retry

ORA-32034: unsupported use of WITH clause

Cause: Improper use of WITH clause because one of the following two reasons: 1. nesting of WITH clause within WITH clause not supported yet 2. For a set query, WITH clause can't be specified for a branch. 3. WITH clause cannot be specified within parenthesis.

Action: correct query and retry

ORA-32035: unreferenced query name defined in WITH clause

Cause: There is at least one WITH clause query name that is not referenced in any place.

Action: remove the unreferenced query name and retry

ORA-32036: unsupported case for inlining of query name in WITH clause

Cause: There is at least one query name which is inlined more than once because its definition query is too simple and references another query name. This is currently unsupported yet.

Action: remove such query name and retry

ORA-32037: unsupported use of LEVEL in membership condition

Cause: An attempt was made to use LEVEL in membership condition with subquery that is not supported.

Action: Rewrite query to avoid using LEVEL in membership condition

ORA-32038: number of WITH clause column names does not match number of elements in select list

Cause: A list of column aliases or names was specified for a WITH clause query name but the number of elements in the list did not match the number of elements in the select list of the definition query.

Action: Update the column alias list or the select list to ensure they have the same number of elements.

ORA-32039: recursive WITH clause must have column alias list

Cause: A WITH clause query referred to itself (recursive) but did not have a column alias list specified for it.

Action: Add a column alias list for the WITH clause query name.

ORA-32040: recursive WITH clause must use a UNION ALL operation

Cause: A WITH clause query referred to itself (recursive) but did not use a UNION ALL operation in its definition query.

Action: Rewrite the recursive WITH clause query to use a UNION ALL operation.

ORA-32041: UNION ALL operation in recursive WITH clause must have only two branches

Cause: A WITH clause query referred to itself (recursive) but used a UNION ALL operation with more than two branches, which is not currently supported.

Action: Rewrite the recursive WITH clause query to use only two branches in the UNION ALL operation.

ORA-32042: recursive WITH clause must reference itself directly in one of the UNION ALL branches

Cause: A WITH clause query referred to itself (recursive) indirectly, such as through a subquery or view.

Action: Rewrite the recursive WITH clause query to refer to itself directly in the FROM clause of one of the UNION ALL branches.

ORA-32043: recursive WITH clause needs an initialization branch

Cause: A WITH clause query referred to itself (recursive) but did not have a branch in a UNION ALL with no references to itself (the initialization branch or anchor member).

Action: Rewrite the recursive WITH query to have a branch in a UNION ALL operation with no references to itself.

ORA-32044: cycle detected while executing recursive WITH query

Cause: A recursive WITH clause query produced a cycle and was stopped in order to avoid an infinite loop.

Action: Rewrite the recursive WITH query to stop the recursion or use the CYCLE clause.

ORA-32045: maximum level of recursion reached while executing recursive WITH query

Cause: A recursive WITH query reached the maximum level of recursion specified and was stopped.

Action: Increase the maximum level of recursion or use the CYCLE clause.

ORA-32046: sequence column name for SEARCH clause must not be part of the column alias list

Cause: The SEARCH clause for a recursive WITH query specified a sequence column that was already listed in the column alias list for the WITH clause query name.

Action: Specify a different name for the sequence column for the SEARCH clause or remove the name from the column alias list.

ORA-32047: cycle mark value and non-cycle mark value must be one byte character string values

Cause: The cycle mark or the non-cycle mark values specified in the CYCLE clause of a recursive WITH query were not one byte character string values as required.

Action: Specify a one byte character string for the cycle mark and non-cycle mark values of the CYCLE clause for the recursive WITH query.

ORA-32048: cycle mark column name for CYCLE clause must not be part of the column alias list

Cause: The CYCLE clause for a recursive WITH query specified a cycle mark column that was already listed in the column alias list for the WITH clause query name.

Action: Specify a different name for the cycle mark column for the CYCLE clause or remove the name from the column alias list.

ORA-32049: duplicate name found in column alias list for WITH clause

Cause: The column alias list for a WITH clause element contained a name which appeared more than once in the list.

Action: Remove the duplicate name from the column alias list.

ORA-32050: *string* operation failed

Cause: A mapping operation failed.

Action: Check FMON trace files for errors.

ORA-32051: mapping service not available

Cause: The mapping service was never started or previously failed to start properly.

Action: Set FILE_MAPPING to TRUE if it is not currently set. Otherwise, check FMON trace files for an ORA-32052 error.

ORA-32052: failed to start mapping service

Cause: The mapping service failed to start properly.

Action: Check FMON trace files for errors.

ORA-32053: operation not supported

Cause: Mapping libraries do not support operation.

Action: Check whether mapping libraries are available and whether operation is supported by the libraries.

ORA-32054: lost communication with FMPUTL process

Cause: Lost communication with mapping utility.

Action: Check FMON and FMPUTL trace files for errors.

ORA-32055: invalid file type

Cause: Invalid file type used when mapping files.

Action: Specify one of expected file types.

ORA-32056: invalid number of extents

Cause: Invalid number of extents used for map operation.

Action: Specify a non-negative number of extents.

ORA-32057: invalid lock mode

Cause: An invalid mode was used for a lock operation.

Action: Specify one of expected lock modes.

ORA-32058: operation restricted to SYSDBA users

Cause: Operation requires SYSDBA privileges.

Action: Connect to the database as SYSDBA.

ORA-32059: deadlock detected on mapping structures

Cause: Mapping structures already locked by the same session.

Action: Unlock mapping structures before proceeding with current operation.

ORA-32060: channel failure

Cause: Channel failure between foreground and background process.

Action: Check foreground trace files for errors.

ORA-32100: operation invalid on transient object

Cause: Trying to perform an operation on transient object which is valid only on persistent objects

Action: Make sure object is persistent

ORA-32101: cannot create OCI Environment

Cause: An OCI Environment could not be created for OCCI

Action: Insure that the parameters to the creatEnvironment method are valid

ORA-32102: invalid OCI handle

Cause: An invalid OCI handle is passed to an OCI call.

Action: This is an internal OCCI Error. Please contact customer support.

ORA-32103: error from OCI call

Cause: An error code other than OCI_ERROR is returned from an OCI call.

Action: This is an internal OCCI Error. Please contact customer support.

ORA-32104: cannot retrieve OCI error message

Cause: Error message after an OCI call could not be retrieved.

Action: This is an internal OCCI Error. Please contact customer support.

ORA-32106: array fetch not allowed without setBuffer on all columns

Cause: The setBuffer method was not called for all column positions and the next method was called to fetch more than one row.

Action: Call the setBuffer method for all column positions if next is to be called to fetch more than one row.

ORA-32107: internal OCI memory allocation failure

Cause: Memory could not be allocated from an OCI heap.

Action: Increase the process memory size.

ORA-32108: max column or parameter size not specified

Cause: The max column or parameter size is not specified.

Action: Specify the max size by setMaxColumnSize or setMaxParamSize.

ORA-32109: invalid column or parameter position

Cause: An invalid column or parameter position is specified.

Action: Specify a valid column or position number.

ORA-32110: Connection not specified

Cause: A null connection was passed.

Action: Pass a valid, non-null connection.

ORA-32113: Null object passed

Cause: Null object was passed.

Action: Pass a non-null object.

ORA-32114: Cannot perform operation on a null LOB

Cause: The LOB instance on which the operation was attempted was null.

Action: Use a valid, non-null LOB instance to perform this operation.

ORA-32116: Buffer size is less than amount specified

Cause: The buffer size specified for the LOB read or write operation was less than the amount to be read or written.

Action: The buffer size must be equal to or greater than than the amount to be read from or written to the LOB.

ORA-32117: Source LOB is null

Cause: The source LOB instance on which the operation was attempted was null.

Action: Use a valid, non-null source LOB instance for this operation.

ORA-32118: Cannot perform operation on a null FILE

Cause: The FILE instance on which the operation was attempted was null.

Action: Use a valid, non-null FILE instance to perform this operation.

ORA-32120: Buffer size is less than amount specified

Cause: The buffer size specified for the FILE read or write operation was less than the amount to be read or written.

Action: The buffer size must be equal to or greater than than the amount to be read from or written to the FILE.

ORA-32121: Source FILE is null

Cause: The source FILE instance on which the operation was attempted was null.

Action: Use a valid, non-null source FILE instance for this operation.

ORA-32123: Attribute number is out of range

Cause: The attribute number passed is greater than the total number of attributes of the described object.

Action: Pass the attribute number within the allowable range.

ORA-32124: Illegal attribute passed

Cause: The attribute passed is not applicable for the described object.

Action: Pass a valid attribute.

ORA-32125: Attribute type is not appropriate

Cause: The return type of the get method does not match the type of the attribute being passed.

Action: Call the appropriate get method.

ORA-32126: Cannot perform operations on a null REF

Cause: The REF instance on which the operation was attempted was null.

Action: Use a valid, non-null REF instance to perform this operation.

ORA-32127: REFs do not belong to any connection

Cause: Neither of the REFs being compared had associated connection information.

Action: Atleast one of the REFs being compared must be associated with a valid connection.

ORA-32128: setDataBuffer called after fetch has started

Cause: Fetch from result set has already started and the setDataBuffer call was made.

Action: Call the setDataBuffer method before calling the next() method.

ORA-32129: cannot get information about this column

Cause: The setDataBuffer method was called to get information about this column. Therefore, the current method cannot be called.

Action: Use the information from the buffers specified in the setDataBuffer call.

ORA-32130: invalid offset/index referenced in Bytes

Cause: The offset/index is out of range of valid data locations in Bytes offsets.

Action: Insure that offsets or index is within the range of Bytes object.

ORA-32131: bind data type cannot be changed

Cause: The setXXX method is called again with a different data type than originally specified, or the setXXX method is called for a subsequent iteration without being called before the first iteration.

Action: Call the setXXX method with the same data type as done before the first iteration. If no setXXX method was called for this parameter position the first iteration, then make sure that a setXXX method is called before the first addIteration method is called.

ORA-32132: maximum iterations cannot be changed

Cause: The setMaxIterations is called after a setXXX method has been called.

Action: Call the setMaxIterations method before calling any setXXX methods.

ORA-32133: Cannot get stream from LOB/FILE

Cause: An open stream exists on the the LOB/FILE on which the operation was attempted.

Action: Close the stream before getting another.

ORA-32134: Cannot assign LOBs

Cause: An open stream exists on the target LOB.

Action: Close the stream on the target LOB before assigning the LOBs.

ORA-32135: Cannot assign FILEs

Cause: An open stream exists on the target FILE.

Action: Close the stream on the target FILE before assigning the FILEs.

ORA-32136: Cannot perform operation on an invalid stream

Cause: The LOB/FILE from which the stream was obtained had been nullified or destroyed.

Action: Use a valid stream.

ORA-32139: Cannot write to the stream

Cause: A write was performed after the last buffer was written.

Action: Close this stream and get a new stream to perform the write.

ORA-32140: cannot perform this operation on stream

Cause: Either a read is attempted from a stream in write mode, or a write is attempted on a stream in read mode.

Action: Check the status of the stream to find out the valid operations that can be performed.

ORA-32141: get method does not match the type of the parameter

Cause: The getXXX method called on the Statement object does not match the type of the bind parameter.

Action: Call the getXXX method that is the same as the type of the parameter.

ORA-32142: maximum number of iterations exceeded

Cause: The addIteration exceeds the maximum number of iterations set by the the setMaxIterations method.

Action: Increase the maximum number of allowed iterations.

ORA-32143: Environment not specified

Cause: A null environment was passed.

Action: Pass a valid, non-null environment.

ORA-32144: Cannot perform operation on a null interval

Cause: The interval involved in this operation is null.

Action: Use valid, non-null interval instance to perform this operation.

ORA-32145: Environment not specified

Cause: The interval on which the operation was attempted was null and no environment was specified.

Action: Specify non-null environment or perform the operation on a non null instance.

ORA-32146: Cannot perform operation on a null date

Cause: The date involved in this operation is null.

Action: Use valid, non-null date instance to perform this operation.

ORA-32147: Environment not specified

Cause: The date on which the operation was attempted was null and no environment was specified.

Action: Specify non-null environment or perform the operation on a non null instance.

ORA-32150: Cannot perform operation on a null timestamp

Cause: The timestamp involved in this operation is null.

Action: Use valid, non-null timestamp instance to perform this operation.

ORA-32151: Environment not specified

Cause: The timestamp on which the operation was attempted was null and no environment was specified.

Action: Specify non-null environment or perform the operation on a non null instance.

ORA-32152: Cannot perform operation on a null number

Cause: The number involved in this operation is null.

Action: Use valid, non-null number instance to perform this operation.

ORA-32153: Environment not specified

Cause: The number on which the operation was attempted was null and no environment was specified.

Action: Specify non-null environment or perform the operation on a non null instance.

ORA-32154: Anydata context not specified

Cause: A null anydata context was passed.

Action: Pass a valid, non-null anydata context.

ORA-32155: Anydata not specified

Cause: A null anydata was passed.

Action: Pass a valid, non-null anydata.

ORA-32156: Cannot perform operation on stream

Cause: This operation is not applicable to streams obtained from LOBs.

Action: n/a

ORA-32157: Infinity not supported

ORA-32158: Invalid type passed

Cause: An inapplicable type was passed to this call.

Action: Pass an applicable type.

ORA-32159: Cannot set prefetch options for a null Type

Cause: A null Type name was passed.

Action: Pass a non-null Type name.

ORA-32161: Cannot perform piecewise fetch

Cause: Zero amount was passed and buffer size was less than LOB size

Action: Specify a larger buffer or use Stream

ORA-32162: Read/Write SQL method not registered

Cause: readSQL/writeSQL method was NULL or was not registered

Action: Register readSQL/writeSQL by calling put method in Map

ORA-32163: Method called on Invalid Environment type

Cause: A non-XA call made on an XA Environment or XA call made on non-XA Environment

Action: Make sure Environment type is OK

ORA-32164: Method called on Invalid Connection type

Cause: A non-XA call made on an XA Connection or XA call made on non-XA Connection

Action: Make sure Connection type is OK

ORA-32165: Cannot get XA environment

Cause: Incorrect dbname string was passed or the XA connection has not been opened

Action: Pass the correct dbname string or check if the XA connection is open

ORA-32166: Cannot get XA connection

Cause: Incorrect dbname string was passed or the XA connection has not been opened

Action: Pass the correct dbname string or check if the XA connection is open

ORA-32167: No payload set on the Message

Cause: An attempt was made to enqueue a message without setting a payload on it.

Action: Set a payload on the message before calling the send method.

ORA-32168: Cannot perform operation on a null AnyData

Cause: The AnyData instance on which the operation was attempted was null.

Action: Use a valid, non-null AnyData instance to perform this operation.

ORA-32169: Execution completed successfully but the number of rows affected is more than the maximum value of the unsigned integer.

Cause: The row count was larger than the maximum value of the unsigned integer. OCCI clients using 'executeUpdate()' cannot retrieve row counts larger than the maximum value of the unsigned integer.

Action: Use 'getUb8RowCount()' to get the correct row count. Use 'execute()' and 'getUb8RowCount()' for large updates.

ORA-32300: cannot drop a secondary materialized view "*string*".*string*"

Cause: An attempt was made to drop a materialized view of a nested table column's storage table.

Action: Drop the materialized view that contains the nested table column. This will implicitly drop all secondary materialized views.

ORA-32301: object-relational materialized views must be primary key based

Cause: An attempt was made to create an object-relational materialized view that is not primary key based.

Action: Create the materialized view with the PRIMARY KEY keyword.

ORA-32302: object materialized views must be object ID based

Cause: An attempt was made to create an object materialized view that is not object ID based.

Action: Create the materialized view using the OF clause but omit any ROWID or PRIMARY KEY clauses.

ORA-32303: mviews with user-defined types cannot reference multiple master sites

Cause: For materialized views with user-defined types, the definition query cannot reference tables from different master sites.

Action: Do not create materialized views with user-defined types referencing multiple master sites.

ORA-32304: materialized views with user-defined types cannot use prebuilt table

Cause: An attempt was made to create a materialized view with the ON PREBUILT TABLE option.

Action: Do not create the materialized view with the ON PREBUILT TABLE option.

ORA-32305: RepAPI materialized views with user-defined types are not supported

Cause: An attempt was made to create a RepAPI materialized view with user-defined types.

Action: Do not create a RepAPI materialized view with user-defined types.

ORA-32306: updatable materialized views with user-defined types must use SELECT *

Cause: An attempt was made to create an updatable materialized view with user-defined types where the definition query did not use SELECT * at the topmost level.

Action: Rewrite the definition query so that SELECT * is used at the topmost level.

ORA-32307: must use FROM ONLY clause when referencing an object table

Cause: An attempt was made to create a materialized view whose definition query references object tables without the FROM ONLY clause.

Action: Rewrite the definition query to use the FROM ONLY clause for all the object tables in the query.

ORA-32308: object materialized views must use SELECT *

Cause: An attempt was made to create an object materialized view where the definition query did not use SELECT * at the topmost level.

Action: Rewrite the definition query so that SELECT * is used at the topmost level.

ORA-32309: object mview type "string"."string" does not match the master table type

Cause: An attempt was made to create an object materialized view whose type does not match the type of the master object table.

Action: Redefine the type so that it matches the type of the master object table.

ORA-32310: object materialized views must select from an object table

Cause: An attempt was made to create an object materialized view whose definition query did not select from an object table.

Action: Rewrite the definition query to select from an object table.

ORA-32311: materialized view definition query selects an unsupported user-defined type

Cause: An attempt was made in the definition query to select an embedded user-defined type, function returning a user-defined type, or a function whose arguments are user-defined types.

Action: Rewrite the definition query to exclude these unsupported user-defined types.

ORA-32312: cannot refresh a secondary materialized view "*string*".*string*"

Cause: An attempt was made to refresh a materialized view of a nested table column's storage table.

Action: Refresh the materialized view that contains the nested table column. This will implicitly refresh all secondary materialized views.

ORA-32313: REFRESH FAST of "*string*".*string*" unsupported after PMOPs

Cause: A Partition Maintenance Operation (PMOP) has been performed on a detail table, and the specified materialized view does not support fast refresh after PMOPs.

Action: Use REFRESH COMPLETE. Note: you can determine why your materialized view does not support fast refresh after PMOPs using the DBMS_MVIEW.EXPLAIN_MVIEW() API.

ORA-32314: REFRESH FAST of "*string*".*string*" unsupported after deletes/updates

Cause: One or more deletes or updates has been performed on one or more of the detail tables referenced by the specified materialized view. This materialized view does not support fast refresh after deletes or updates.

Action: Use REFRESH COMPLETE. Note: you can determine why your materialized view does not support fast refresh after deletes or updates using the DBMS_MVIEW.EXPLAIN_MVIEW() API.

ORA-32315: REFRESH FAST of "*string*".*string*" unsupported after mixed DML and Direct Load

Cause: One or more of the materialized view logs on the detail tables referenced by the specified materialized view omits the sequence number option. Such a log cannot be used to refresh a materialized view after deletes or updates and direct path insert.

Action: Use REFRESH COMPLETE. Note: you can use the DBMS_MVIEW.EXPLAIN_MVIEW() API to determine which materialized view logs omit the sequence number option.

ORA-32316: REFRESH FAST of "*string*".*string*" unsupported after mixed DML

Cause: One or more of the materialized view logs on the detail tables referenced by the specified materialized view omits the sequence number option. Such a log cannot be used to refresh a materialized view after deletes or updates have been performed on multiple detail tables.

Action: Use REFRESH COMPLETE. Note: you can use the DBMS_MVIEW.EXPLAIN_MVIEW() API to determine which materialized view logs omit the sequence number option.

ORA-32317: cannot run a job from a job

Cause: An attempt was made to execute a job from within another job.

Action: Do not submit jobs that run other jobs.

ORA-32318: cannot rename a materialized view

Cause: Renaming a materialized view or its base table is not supported.

Action: Do not rename the base table of a materialized view.

ORA-32319: Cannot use direct loader log to FAST REFRESH materialized view "*string*".*string*"

Cause: The direct loader log might have been dropped

Action: Need to do complete refresh

ORA-32320: REFRESH FAST of "string"."string" unsupported after container table PMOPs

Cause: A Partition Maintenance Operation (PMOP) has been performed on the materialized view, and no materialized view supports fast refresh after container table PMOPs.

Action: Use REFRESH COMPLETE. Note: you can determine why your materialized view does not support fast refresh after PMOPs using the DBMS_MVIEW.EXPLAIN_MVIEW() API.

ORA-32321: REFRESH FAST of "string"."string" unsupported after detail table TRUNCATE

Cause: A detail table has been truncated and no materialized view supports fast refresh after a detail table has been truncated

Action: Use REFRESH COMPLETE. Note: you can determine why your materialized view does not support fast refresh after TRUNCATE using the DBMS_MVIEW.EXPLAIN_MVIEW() API.

ORA-32322: PCT refresh of "string"."string" not allowed the sequence of DMLs/ PMOPs

Cause: A table join dependent on another table on which PCT refresh is enabled has changed

Action: Use REFRESH FORCE which will pick the best possible refresh method on the materialized view

ORA-32330: invalid operation on online redefinition interim table "string"."string"

Cause: An invalid operation was performed on an interim table which was being used for online redefinition of a table.

Action: Do not perform any unsupported operation on the interim table.

ORA-32331: type "string"."string" is incompatible with the master site

Cause: A type used by the materialized view was found to be incompatible with its corresponding type on the master site. This could be because the type does not exist on the master site or has been evolved to a different version from that on the materialized view site.

Action: Make sure that the types used by the materialized view are the same on both the materialized view and master sites.

ORA-32332: cannot refresh materialized view "string"."string" as type evolution has occurred

Cause: The types used by the materialized view or its master tables have been evolved.

Action: Ensure that the types used by the materialized view have been evolved to the same version at both the master and materialized sites. Then, before refreshing the materialized view, evolve the materialized view using ALTER MATERIALIZED VIEW.

ORA-32333: disable table scn update for Materialized view

Cause: an event is set for disabling table scn update to prevent deadlock situation. (bug 1376209)

Action: disable null refresh and/or base table scn update for Materialized view

ORA-32334: cannot create prebuilt materialized view on a table already referenced by a MV

Cause: the table on which the materialized view is created as prebuilt is already referenced by a materialized view

Action: create the materialized view on a different table

ORA-32335: dimension must have at least one level

Cause: An level-less dimension is not allowed.

Action: Do not drop the only level of a dimension.

ORA-32336: cannot use USING NO INDEX to create materialized view "*string*".*string*"

Cause: The USING NO INDEX option was specified to create an updatable primary key based materialized view, an index-organized materialized view or an object-id materialized view.

Action: Do not use the USING NO INDEX option to create an updatable primary key based materialized view, an index-organized materialized view or an object-id materialized view.

ORA-32337: cannot alter materialized view or zonemap to refresh on commit with pending changes

Cause: There were some pending changes in the detail tables.

Action: Perform on-demand refresh of the materialized view or zonemap to synchronize the data between the materialized view and the detail tables and then issue the ALTER MATERIALIZED VIEW or ALTER MATERIALIZED ZONEMAP statement.

ORA-32338: on commit refresh grab all the detailed tables

Cause: an event is set to let on-commit MV refresh to grab all the detailed tables, no matter whether they have modified or not.

Action: n/a

ORA-32339: cannot alter materialized view with the PMOP

Cause: the materialized view is not allowed to have destructive PMOPS such as DROP, TRUNCATE and EXCHANGE (sub)partition. The UGA flag of `i_am_a_refresh` should be set first.

Action: execute `set_i_am_a_refresh` first before alter materialized view with the PMOP.

ORA-32340: cannot tune the materialized view definition

Cause: Due to constructs in the materialized view definition, it could not be tuned to be fast-refreshable or rewriteable.

Action: Execute `DBMS_MVIEW.EXPLAIN_MVIEW` to determine the cause.

ORA-32341: The EXPLAIN_MVIEW facility failed to explain the materialized view "*string*".*string*"

Cause: The dependent object(s) of the materialized view may have changed. The materialized view may no longer be valid.

Action: Execute `ALTER MATERIALIZED VIEW COMPILE` and to determine the status of the materialized view in catalog views.

ORA-32342: The EXPLAIN_MVIEW facility failed to explain the materialized view statement

Cause: An error exists in the materialized view definition. As a result, the materialized view statement could not be explained.

Action: Check the syntax of the statement. If it is a CREATE MATERIALIZED VIEW statement, then also check the PARAMETERS specified for the materialized view.

ORA-32343: let MVIEW engine know that it is IMPORT from 9i or earlier

Cause: N/A.

Action: Set this event only under the supervision of Oracle development. Not for general purpose use.

ORA-32344: cannot create a secondary materialized view with synonym as base table

Cause: It is not supported to create a secondary materialized view with synonym in the FROM clause.

Action: Removed the synonym(s) from the statement.

ORA-32345: fail to refresh the materialized view *string.string* due to the changed synonym

Cause: The definition of one or more synonyms in the from clause have changed. The structure of the materialized view has become invalid.

Action: Restore the synonym(s) or drop the materialized view and recreate it again.

ORA-32346: ON COMMIT materialized view refresh caused changes to the master table/materialized view

Cause: ON COMMIT refresh of a read-only materialized view changed the master table/materialized view. A trigger on the refreshed materialized view may be the cause.

Action: Do not create triggers on materialized view which update the master table/materialized view.

ORA-32347: NULL capabilities during explain mview

Cause: The supplied defining query did not generate any capabilities information.

Action: Replace the query since it is not suitable for creating a materialized view.

ORA-32348: revalidate summary object based on user input

Cause: An event was set to specify the number of attempts that the system needed to make in order to validate an invalidated summary object.

Action: Revalidate an invalidated summary object based on user input.

ORA-32349: cannot reference prebuilt table in definition query for materialized view

Cause: The prebuilt container table of the materialized view was referenced in the definition query.

Action: Change the definition query to reference a non-prebuilt table.

ORA-32350: ON COMMIT refresh obtain shared lock for all the detailed tables

Cause: An event was set to let ON COMMIT materialized view refresh to obtain a shared lock for all the detailed tables, whether they have been modified or not.

Action: No action necessary.

ORA-32351: database link name cannot start with a number while creating materialized view

Cause: This event was disabled by default. If enabled, the fix for bug 6074902 will be disabled and you will be unable to create database links starting with a number when creating a materialized view on remote tables.

Action: No action necessary.

ORA-32352: cannot refresh materialized view *string.string* using out-of-place fast refresh

Cause: Out-of-place fast refresh was either not enabled on this materialized view or not possible after changes to the base table made since the last refresh.

Action: Specify the FORCE or COMPLETE option for out-of-place refresh.

ORA-32353: cannot refresh materialized view *string.string* using out-of-place PCT refresh

Cause: Out-of-place Partition Change Tracking (PCT) refresh was either not enabled on this materialized view or not possible after changes to the base table made since the last refresh.

Action: Specify the FORCE or COMPLETE option for out-of-place refresh.

ORA-32354: cannot refresh materialized view *string.string* using out-of-place complete refresh

Cause: The materialized view did not qualify for out-of-place complete refresh.

Action: Set the 'out_of_place' parameter to 'false'.

ORA-32355: out-of-place refresh cannot be used in atomic mode

Cause: Both 'atomic_refresh' and 'out_of_place' parameters were set to 'true' in the refresh interface.

Action: Either set the 'atomic_refresh' parameter to 'false' or set the 'out_of_place' parameter to 'false'.

ORA-32400: cannot use object id columns from materialized view log on "*string*".*string*"

Cause: The materialized view log either does not have object id columns logged, or the timestamp associated with the object id columns is more recent than the last refresh time.

Action: A complete refresh is required before the next fast refresh. Add object id columns to the materialized view log, if required.

ORA-32401: materialized view log on "*string*".*string*" does not have new values

Cause: Materialized view log on the indicated table does not have new values information.

Action: Add new values to materialized view log using the ALTER MATERIALIZED VIEW LOG command.

ORA-32403: cannot use new values from mv log on "*string*".*string*"

Cause: The materialized view log either does not have new values logged, or the timestamp associated with the new values columns is more recent than the last refresh time.

Action: Perform a complete refresh is required before the next fast refresh.

ORA-32404: snapshot log uses Change Data Capture which is not enabled for this database

Cause: A snapshot log that utilizes Change Data Capture is being imported to a database where Change Data Capture has not been enabled.

Action: First enable Change Data Capture on the database then retry the import.

ORA-32405: cannot alter tablespace for existing materialized view log

Cause: The tablespace specification for the existing materialized view log cannot be altered or changed.

Action: remove the tablespace clause from the statement.

ORA-32406: cannot alter partitioning for existing materialized view log

Cause: The partitioning specification for the existing materialized view log cannot be altered or changed.

Action: remove the partitioning clause from the statement.

ORA-32407: cannot exclude new values when materialized view log includes new values

Cause: The excluding new values specification for the existing materialized view log cannot be accepted when including new values is the current option.

Action: change excluding new values clause.

ORA-32408: materialized view log on "*string*"."*string*" already has new values

Cause: The materialized view log on the indicated table already has new values.

Action: No action required.

ORA-32409: materialized view log on "*string*"."*string*" already excludes new values

Cause: The materialized view log on the indicated table already excludes new values.

Action: No action required.

ORA-32411: materialized view definition query exceeds the maximum length

Cause: The materialized view definition query exceeds the 64K limit.

Action: Change the materialized view definition query so that it does not exceed the maximum length of 64K.

ORA-32412: encrypted column "*string*" not allowed in the materialized view log

Cause: The materialized view log being created/alterd is to capture an encrypted column of the base table.

Action: Do not capture the encrypted column.

ORA-32413: allow concurrent refresh of materialized view and truncate

Cause: This event is set to allow concurrent refresh of materialized view and truncate of base table; it prevents a deadlock situation. (bug 6710019)

Action: Set this event to allow concurrent refresh of materialized view and truncate of the base table.

ORA-32414: materialized view logs are not compatible with each other for fast refresh

Cause: An attempt was made to create a fast refreshable materialized view on tables which have commit SCN-based materialized view logs and tables which have timestamp-based materialized view logs.

Action: Use COMPLETE REFRESH or change underlying materialized view logs to make them compatible with each other for fast refresh.

ORA-32415: fast refreshable remote materialized view on a detail table with commit SCN-based materialized view log is not supported

Cause: The materialized view creation failed because fast refreshable remote materialized view on a detail table with commit SCN-based materialized view log was not supported.

Action: None

ORA-32416: one or more commit SCN-based materialized view logs are not in consistent state for fast refresh

Cause: Dictionary table "SYS"."SNAP_XCMT\$" is not in consistent state.

Action: No action required.

ORA-32417: must use DROP MATERIALIZED VIEW LOG to drop "string"."string"

Cause: An attempt was made to drop materialized view log using a command other than DROP MATERIALIZED VIEW LOG.

Action: No action required.

ORA-32418: COMMIT SCN keyword only appears in CREATE MATERIALIZED VIEW LOG statement

Cause: An attempt was made to alter an existing materialized view log to have commit SCN.

Action: No action required.

ORA-32419: on commit materialized view is not supported on detail tables with commit SCN-based materialized view logs

Cause: An attempt was made to create an on commit materialized view on detail tables with commit SCN-based materialized view logs.

Action: No action required.

ORA-32420: unsupported fast refreshable materialized view defined on detail tables which have commit SCN-based materialized view logs

Cause: An attempt was made to create an unsupported fast refreshable materialized view on detail tables with commit SCN based materialized view logs.

Action: No action required.

ORA-32421: commit SCN-based materialized view log is not supported on a table with LOB column(s)

Cause: An attempt was made to create a commit SCN-based materialized view log on a table which has LOB column(s).

Action: No action required.

ORA-32422: commit SCN-based materialized view log cannot be created on table "string"."string" when there exist direct load/PMOP log entries for the table

Cause: An attempt was made to create a commit SCN-based materialized view log on a table which had direct load/PMOP log entries in sys.sumdelta\$ and sys.sumpartlog\$.

Action: Refresh the table's dependent materialized views before creating commit SCN-based materialized view log on the table.

ORA-32423: commit SCN-based materialized view log cannot be dropped on table "string"."string" when there exist direct load/PMOP log entries for the table

Cause: An attempt was made to drop a commit SCN-based materialized view log on a table which had direct load/PMOP log entries in sys.sumdelta\$ and sys.sumpartlog\$.

Action: Refresh the table's dependent materialized views before dropping commit SCN-based materialized view log on the table.

ORA-32424: materialized view log on "string"."string" already has this purge option

Cause: Materialized view log on the indicated table already has the purge option specified.

Action: Specify a different purge option or omit the purge option.

ORA-32425: asynchronous and scheduled purge option is not allowed on commit SCN-based materialized view log

Cause: An attempt was made to create or alter a commit SCN-based materialized log with asynchronous and scheduled purge option.

Action: Specify a different purge option or omit the purge option.

ORA-32426: materialized view log on "string"."string" in DST upgrade

Cause: The materialized view log was created or altered on a table that had a Daylight Saving Time upgrade in progress.

Action: Wait until DST upgrade finishes on the master table.

ORA-32427: materialized view contains unsupported NLS transformation

Cause: An attempt was made to create or alter materialized view under NLS settings which transformed the materialized view's defining query in ways not by supported by Oracle.

Action: Contact Oracle support or workaround problem by removing NLS settings or modifying the materialized view's defining query.

ORA-32480: SEARCH and CYCLE clauses can only be specified for recursive WITH clause elements

Cause: A SEARCH or a CYCLE clause was specified for a WITH clause element that was not recursive.

Action: Remove the SEARCH or CYCLE clause, or add recursion to the WITH clause element.

ORA-32481: cycle value for CYCLE clause must be different from the non-cycle value

Cause: A CYCLE clause was specified for a recursive WITH query but the cycle value was the same as the non-cycle or DEFAULT value.

Action: Change either the cycle or the non-cycle values so that they no longer match.

ORA-32482: sequence column for SEARCH clause must be different from the cycle mark column for CYCLE clause

Cause: A SEARCH clause and a CYCLE clause was specified for a recursive WITH query, but the sequence column of the SEARCH clause matched the cycle mark column of the CYCLE clause.

Action: Change either the sequence column or the cycle mark column so that they no longer match.

ORA-32483: duplicate name found in sort specification list for SEARCH clause of WITH clause

Cause: A SEARCH clause was specified for a recursive query with a sort specification list which contained duplicate names.

Action: Remove the duplicate names from the sort specification list of the SEARCH clause.

ORA-32484: duplicate name found in cycle column list for CYCLE clause of WITH clause

Cause: A CYCLE clause was specified for a recursive query with a cycle column list which contained duplicate names.

Action: Remove the duplicate names from the cycle column list of the CYCLE clause.

ORA-32485: element in cycle column list of CYCLE clause must appear in the column alias list of the WITH clause element

Cause: An element in the cycle column list of a CYCLE clause that was specified for a recursive WITH query did not appear in the column alias list of the WITH clause element.

Action: Change the cycle column list to use only names which are listed in the column alias list of the WITH clause element.

ORA-32486: unsupported operation in recursive branch of recursive WITH clause

Cause: The recursive component of the UNION ALL in a recursive WITH clause element used an operation that was currently not supported. The following should not be used in the recursive branch of the UNION ALL operation: GROUP BY, DISTINCT, MODEL, grouping sets, CONNECT BY, window functions, HAVING, aggregate functions.

Action: Rewrite the query without the unsupported operation.

ORA-32487: unsupported join in recursive WITH query

Cause: The recursive component of a recursive WITH clause element contained one of the following: - A LEFT OUTER join where the right side was the recursive query name. - A RIGHT OUTER join where the left side was the recursive query name. - A FULL OUTER join involving the recursive query name.

Action: Rewrite the query without the unsupported join operation.

ORA-32488: WITH clause element did not have a column alias list

Cause: A WITH clause element used the SEARCH clause or CYCLE clause or both but did not have a column alias list specified for it.

Action: Add a column alias list for the WITH clause query name.

ORA-32489: element in sort specification list of SEARCH clause did not appear in the column alias list of the WITH clause element

Cause: An element in the sort specification list of a SEARCH clause that was specified for a recursive WITH query did not appear in the column alias list of the WITH clause element.

Action: Change the sort specification list to use only names which are listed in the column alias list of the WITH clause element.

ORA-32490: recursive query name referenced more than once in recursive branch of recursive WITH clause element

Cause: The recursive component of the UNION ALL in a recursive WITH clause element referenced the recursive query name more than once. Only one reference to the recursive query name is allowed in the recursive branch of a recursive WITH clause element.

Action: Rewrite the query using only one reference to the recursive query name in the recursive branch of the recursive WITH clause element.

ORA-32499: operation not supported with old CONNECT BY clause

Cause: The query used the old CONNECT BY clause on operations that are not supported.

Action: Disable the old CONNECT BY clause by disabling the `_old_connect_by_enabled` parameter.

ORA-32500: Dirname '*string*' cannot exceed '*string*' characters

Cause: Path name too long

Action: Use shorter pathname than maximum specified for dirname.

ORA-32501: Writing SGA to file failed

Cause: Underlying OSDs encountered an error

Action: Check additional information. `slercerrno` contains `errno`.

ORA-32502: Cannot execute command. Flash Freeze is not in effect

Cause: This command can only be issued after a flash freeze

Action: Refer to instructions for flash freeze and Oracle diagnostics.

ORA-32503: Mapping SGA from file failed

Cause: Underlying OSDs encountered an error

Action: Check additional information. `slercerrno` contains `errno`.

ORA-32504: expecting one of *string*, *string*, *string*, or *string* but found *string*

Cause: illegal value specified for create watchpoint mode

Action: specify one of the expected modes

ORA-32505: too many watchpoints

Cause: too many watchpoints created

Action: increase appropriate initialization parameters

ORA-32506: expecting one of *string*, *string*, or *string* but found *string*

Cause: invalid arguments provided

Action: provide one of the expected arguments

ORA-32507: expecting *string* but found *string*

Cause: invalid arguments to command

Action: provide one of the expected arguments

ORA-32508: no such watchpoint id

Cause: invalid watchpoint id

Action: use `oradebug show` to list valid watchpoint ids

ORA-32509: watchpoint was already deleted

Cause: trying to delete an already deleted watchpoint

Action: use `oradebug show` to list valid watchpoint ids

ORA-32510: cannot create watchpoint on unreadable memory

Cause: trying to create watchpoint on invalid address

Action: provide a different valid address

ORA-32511: cannot create watchpoint in memory needed by watchpointing code

Cause: overlap exists between requested memory range to watch and internal memory structures that watchpointing operations need

Action: provide a different address range

ORA-32512: type '*string*' is unknown

Cause: trying to dump an invalid type name

Action: specify a known type

ORA-32514: cannot dump multiple '*string*' types: structure size is unknown

Cause: trying to dump an invalid address

Action: provide a different valid address

ORA-32515: cannot issue ORADEBUG command '*string*' to process '*string*'; prior command execution time exceeds *string* ms

Cause: The process targeted to execute the ORADEBUG command was busy executing another ORADEBUG command for a time greater than the timeout value specified.

Action: Increase the timeout value.

ORA-32516: cannot wait for process '*string*' to finish executing ORADEBUG command '*string*'; wait time exceeds *string* ms

Cause: The execution of the ORADEBUG command took longer than the the timeout value specified.

Action: Increase the timeout value.

ORA-32517: cannot issue ORADEBUG command '*string*' to process '*string*' (prior command execution time exceeds *string* ms); total wait time exceeds *string* ms

Cause: The process targeted to execute the ORADEBUG command was busy executing another ORADEBUG command. But, because the total wait time for all targeted processes exceeded the maximum wait time, the ORADEBUG command was not issued to the target process.

Action: Increase the timeout value.

ORA-32518: cannot wait for process '*string*' to finish executing ORADEBUG command '*string*' (waited *string* ms); total wait time exceeds *string* ms

Cause: The total wait time for all targeted processes exceeded the maximum wait time, therefore the wait for the targeted process to finish executing the ORADEBUG command was aborted.

Action: Increase the timeout value.

ORA-32519: insufficient privileges to execute ORADEBUG command: *string*

Cause: Sufficient privileges were not granted.

Action: Perform the operation using a database session that has the required privileges. See the Oracle ORADEBUG documentation for more details.

ORA-32520: error authenticating credentials

Cause: An error was encountered while authenticating credentials.

Action: Check the other error messages for additional information or contact Oracle Support Services.

ORA-32521: error parsing ORADEBUG command: *string*

Cause: An invalid ORADEBUG command was specified.

Action: Specify the correct ORADEBUG command and arguments.

ORA-32522: restricted heap violation while executing ORADEBUG command: *[string] [string] [string]*

Cause: An invalid memory heap was used in an ORADEBUG command.

Action: Try executing the ORADEBUG command in the current process or contact Oracle Support Services.

ORA-32523: watchpoint cannot be created in dynamic processes

Cause: An attempt was made to create a watchpoint in a process involving threads.

Action: Check the process mode or try creating watchpoints only in the static non-threaded processes.

ORA-32550: Replacement occurred despite hint to the contrary

Cause: This should never be signalled; it's internal.

Action: Report to Oracle support.

ORA-32575: Explicit column default is not supported for modifying views

Cause: Default keyword was used to modify views.

Action: Use implicit default - omitting column-value pair.

ORA-32576: missing TYPE keyword

Cause: keyword TYPE is missing.

Action: Use TYPE keyword.

ORA-32577: username must be SYS or SYSTEM

Cause: A user name of SYS or SYSTEM was not specified when providing a password in the CREATE DATABASE statement.

Action: Only passwords for the SYS and SYSTEM users can be provided in the CREATE DATABASE statement. Re-issue the statement with passwords for users SYS or SYSTEM.

ORA-32578: password for SYS already specified

Cause: A password for the SYS user was specified twice in the CREATE DATABASE statement.

Action: Re-issue the CREATE DATABASE statement with only one password for the SYS user.

ORA-32579: password for SYSTEM already specified

Cause: A password for the SYSTEM user was specified twice in the CREATE DATABASE statement.

Action: Re-issue the CREATE DATABASE statement with only one password for the SYSTEM user.

ORA-32580: both SYS and SYSTEM passwords must be provided

Cause: Passwords for both the SYS and SYSTEM users were not provided in the CREATE DATABASE statement. If one of the passwords was provided, then both should be provided.

Action: Re-issue the CREATE DATABASE statement with a password for both the SYS and SYSTEM users.

ORA-32581: missing or invalid password

Cause: An incorrect password was provided for the SYS or SYSTEM user in the CREATE DATABASE statement.

Action: Re-issue the CREATE DATABASE statement with a valid password.

ORA-32582: table function with left correlation to a table cannot also be left outer-joined to the table

Cause: A table function T2 contains a reference to a table T1. T2 is also left outer-joined to T1. This is not allowed.

Action: Remove the reference to T1 from T2 or remove the left outer-join specification (+).

ORA-32583: query passed to table function has wrong number of elements in select list

Cause: The query used as an input to a table function which takes a ref cursor as argument has wrong number of elements in the select list which does not correspond to the elements in ref cursor. The ref cursor mentioned here refers to the one referenced in order by partition clauses. This is not allowed.

Action: Make sure that the select list of the query matches the ref cursor columns as defined in the function.

ORA-32584: missing LOG keyword

Cause: keyword LOG is missing.

Action: Use LOG keyword.

ORA-32585: duplicate specification of a supplemental log attribute

Cause: In a create/alter DDL a supplemental log attribute is specified more than once.

Action: Rewrite the Create/Alter DDL such that it has a single occurrence of any supplemental log attribute.

ORA-32586: multiple specification of a supplemental logging attribute

Cause: The primary key, unique index, foreign key or all column supplemental logging attribute can be specified at most once in a create/alter ddl.

Action: Rewrite the Create/Alter DDL with single occurrence of the offending supplemental logging attribute.

ORA-32587: Cannot drop nonexistent *string* supplemental logging

Cause: specified supplemental log attribute does not exist.

Action: None

ORA-32588: supplemental logging attribute *string* exists

Cause: specified supplemental logging attribute exists.

Action: retry the alter/create ddl after removing this supplemental logging attribute.

ORA-32589: unable to drop minimal supplemental logging

Cause: Minimal supplemental logging could not be dropped as one of primary key, foreign key, unique or all column supplemental logging is enabled at the database level.

Action: Use V\$DATABASE to determine the databasewide supplemental logging directives. Minimal supplemental logging could be dropped if and only if no other databasewide supplemental logging directives are enabled.

ORA-32590: log group specification not allowed here

Cause: Supplemental log specification is not allowed in the statement.

Action: Remove the supplemental log specification from the statement.

ORA-32591: connect string too long

Cause: The connect string specified for the database link was more than 2000 characters.

Action: Specify a connect string less than 2000 chracters.

ORA-32592: all columns in log group can not be no log columns

Cause: A supplemental log group must have at least one column of scalar type that is not marked as no log.

Action: Redefine the supplemental log group with at least one column of scalar type that is not marked as no log.

ORA-32593: database supplemental logging attributes in flux

Cause: there is another process actively modifying the database wide supplemental logging attributes.

Action: Retry the DDL or the LogMiner dictionary build that raised this error.

ORA-32594: invalid object category for COMMENT command

Cause: The object category specified is not a valid object for which to use the COMMENT command.

Action: Retry the COMMENT command by specifying an accepted object category. (ie, Table, Operator, Indextype, etc.)

ORA-32595: DDL statement cannot be audited with BY SESSION specified

Cause: An attempt was made to audit a DDL statement with BY SESSION clause specified. DDL statements can be audited BY ACCESS only.

Action: Specify BY ACCESS instead of BY SESSION to audit the DDL statement.

ORA-32596: duplicate ALTER USER or CREATE USER option

Cause: An ALTER USER option was duplicated.

Action: Remove the duplicate option.

ORA-32597: database supplemental logging attributes inconsistent

Cause: failed to propogate supplemental logging attributes to all RAC instances. Most likely caused by an instance leaving the RAC while this DDL was in progress.

Action: Retry the DDL or the LogMiner dictionary build that raised this error.

ORA-32598: user names cannot be changed in ALTER DATABASE LINK command

Cause: An attempt was made to change the fixed user name of the database link.

Action: None

ORA-32599: cannot create a view in SYS schema with V\$ or GV\$ name prefix

Cause: An attempt was made to create a view in SYS schema with V\$ or GV\$ name prefix, which is reserved for fixed views.

Action: Provide a different name for the view or use a different schema.

ORA-32600: RETENTION and PCTVERSION cannot be used together

Cause: cannot use both RETENTION and PCTVERSION together.

Action: Use either RETENTION or PCTVERSION.

ORA-32601: value for retention cannot be provided

Cause: cannot give a value for Retention Period.

Action: do not provide the value for parameter.

ORA-32602: FREEPOOLS and FREELIST GROUPS cannot be used together

Cause: cannot use both FREEPOOLS and FREELIST GROUPS together.

Action: Use either FREEPOOLS or FREELIST GROUPS.

ORA-32603: invalid FREEPOOLS LOB storage option value

Cause: The specified FREEPOOLS LOB storage option value must be an integer.

Action: Choose an appropriate integer value and retry the operation.

ORA-32604: invalid REBUILD option

Cause: Keyword FREEPOOLS expected after the REBUILD keyword.

Action: User must specify FREEPOOLS keyword.

ORA-32605: invalid REBUILD option

Cause: cannot rebuild freepools while creating table with lob column.

Action: User must not specify REBUILD... in this context.

ORA-32606: missing NAV keyword in MODEL clause

Cause: The NAV keyword was not specified where it was expected.

Action: Specify the NAV keyword or check the SQL statement.

ORA-32607: invalid ITERATE value in MODEL clause

Cause: The specified ITERATE value must be a 4 byte positive integer.

Action: Choose an appropriate value and retry the operation.

ORA-32608: missing INCREMENT or DECREMENT keyword in FOR loop

Cause: INCREMENT or DECREMENT keyword was not specified where it is expected.

Action: Specify the INCREMENT or DECREMENT keyword or check the SQL statement.

ORA-32609: missing REFERENCE keyword in MODEL clause

Cause: The REFERENCE keyword was not specified where it is expected.

Action: Specify the REFERENCE keyword or check the SQL statement.

ORA-32610: missing SINGLE REFERENCE or DIMENSION keyword in MODEL clause

Cause: SINGLE REFERENCE or DIMENSION keyword was not specified where it is expected.

Action: Specify the applicable keywords or check the SQL statement.

ORA-32611: incorrect use of MODEL CV operator

Cause: CV function was used outside a dimension expression, in UNTIL condition, or with non-dimensional arguments.

Action: Check the SQL statement and rewrite if necessary.

ORA-32612: invalid use of FOR loop

Cause: The MODEL FOR loop was used where it is not allowed. FOR loops are not allowed in complex dimensional predicates, on the right hand side of rules, or in the until condition.

Action: Check the SQL statement and rewrite if necessary.

ORA-32613: not a MODEL cell

Cause: The operator requires a MODEL cell as operand.

Action: Specify MODEL cell as operand, check SQL statement.

ORA-32614: illegal MODEL SELECT expression

Cause: An expression other than MODEL aliases, constants, or expressions of the two is specified in the MODEL SELECT clause.

Action: Reformulate the query, perhaps nesting inside another SELECT.

ORA-32615: incorrect use of MODEL IS ANY predicate

Cause: IS ANY predicate is used outside dimension expression or with non-dimensional or different dimensional arguments.

Action: Check the SQL statement and rewrite if necessary.

ORA-32616: missing DIMENSION BY keyword in MODEL clause

Cause: The DIMENSION keyword was not specified where it is expected.

Action: Specify the DIMENSION keyword or check the SQL statement.

ORA-32617: missing MEASURES keyword in MODEL clause

Cause: The MEASURES keyword was not specified where it is expected.

Action: Specify the MEASURES keyword or check the SQL statement.

ORA-32618: incorrect use of MODEL PREVIOUS function

Cause: The MODEL PREVIOUS function was used outside of MODEL "ITERATE UNTIL" clause, or was nested.

Action: Check the SQL statement and rewrite if necessary.

ORA-32619: incorrect use of MODEL ITERATION_NUMBER

Cause: ITERATION_NUMBER was used outside of an iterated MODEL.

Action: Check the SQL statement and rewrite if necessary.

ORA-32620: illegal subquery within MODEL rules

Cause: A subquery was used illegally within the MODEL rule.

Action: Check the SQL statement and rewrite if necessary.

ORA-32621: illegal aggregation in UNTIL iteration condition

Cause: An aggregate function was used in UNTIL condition.

Action: Check the SQL statement and rewrite if necessary.

ORA-32622: illegal multi-cell reference

Cause: Multi-cell reference was specified on a measure expression without an aggregate function.

Action: Use an aggregate function on the measure expression or qualify the cell reference.

ORA-32623: incorrect use of MODEL PRESENT* functions

Cause: A PRESENT* function (IS PRESENT, PRESENTV, PRESENTNNV) was used in a measure expression.

Action: Check the SQL statement and rewrite if necessary.

ORA-32624: illegal reordering of MODEL dimensions

Cause: The expressions to qualify dimensions were specified in an incorrect order within a cell reference.

Action: Reorder dimension expressions in the cell reference.

ORA-32625: illegal dimension in cell reference predicate

Cause: A non-positional dimension was referenced in the predicate.

Action: Check the SQL statement and rewrite if necessary.

ORA-32626: illegal bounds or increment in MODEL FOR loop

Cause: FOR loop allows only numeric and datetime without timezone type for bounds. Only constants of interval and numeric types are allowed as increment/decrement expressions.

Action: Check the SQL statement and rewrite if necessary.

ORA-32627: illegal pattern in MODEL FOR LIKE loop

Cause: The FOR LIKE pattern had zero or more than one wild characters.

Action: Simplify the pattern to have a single wildcard character.

ORA-32628: invalid nesting of MODEL cell reference

Cause: MODEL cell reference was nested too deeply.

Action: Avoid deep nesting of cell references and rewrite if necessary.

ORA-32629: measure used for referencing cannot be updated

Cause: A measure used in nested referencing is updated by a MODEL rule in the automatic order MODEL.

Action: Modify the SQL statement or use sequential order MODEL.

ORA-32630: multiple assignment in automatic order MODEL

Cause: A MODEL cell was updated on the same measure in multiple MODEL rules. Multiple assignment is not allowed in automatic order MODELS as it causes in ambiguity and nondeterminism.

Action: Use sequential order MODEL or rewrite the rule to avoid this.

ORA-32631: illegal use of objects in MODEL

Cause: An object column was used as a MODEL column. Object types are not allowed as partition by, dimension by or measure expressions.

Action: Check the SQL statement and rewrite if necessary.

ORA-32632: incorrect subquery in MODEL FOR cell index

Cause: An illegal subquery was specified in MODEL FOR cell index. A subquery used in a MODEL FOR cell index can not have subqueries, correlation, binds and references to WITH tables.

Action: Check the SQL statement and rewrite if necessary.

ORA-32633: MODEL subquery FOR cell index returns too many rows

Cause: Subquery in MODEL FOR cell index returned more than the allowed maximum.

Action: Split the rule into multiple ones.

ORA-32634: automatic order MODEL evaluation does not converge

Cause: Evaluation using automatic rule ordering did not reach a convergence point.

Action: Modify the rules or use sequential order instead.

ORA-32635: not a single cell reference predicate

Cause: A predicate that is not a single cell reference predicate was specified where a single cell reference predicate was expected. A single cell reference predicate is either a constant expression or a predicate of the form <dimension_key = constant_expr>

Action: Make sure that the predicate is a proper single cell reference. In some cases, you might have to put explicit type conversion operators (or casts) on the constant expression.

ORA-32636: Too many rules in MODEL

Cause: The number of rules (possibly after rule unfolding) exceeded the maximum number of rules allowed.

Action: Reduce the number of rules.

ORA-32637: Self cyclic rule in sequential order MODEL

Cause: A self-cyclic rule was detected in the sequential order MODEL. Sequential order MODELS cannot have self cyclic rules to guarantee that the results do not depend on the order of evaluation of the cells that are updated or upserted.

Action: Use ordered rule evaluation for this rule.

ORA-32638: Non unique addressing in MODEL dimensions

Cause: The address space defined for the MODEL (partition by and dimension by expressions) do not uniquely identify each cell.

Action: Rewrite the MODEL clause. Using UNIQUE SINGLE REFERENCE option might help.

ORA-32639: Aggregate functions on reference MODELS are not allowed

Cause: An aggregate function was specified on the cells of a reference MODEL.

Action: Check the SQL statement and rewrite if necessary.

ORA-32640: FOR LIKE loops are not allowed for multi-byte character types

Cause: FOR LIKE loops was specified for a multi-byte character type.

Action: Check the SQL statement and rewrite if necessary.

ORA-32641: invalid expression in MODEL rule ORDER BY clause

Cause: An invalid expression was specified in the MODEL rule ORDER BY clause where only expressions of dimension and measure columns and reference MODEL cell references are allowed

Action: Modify the order by clause in the MODEL rule.

ORA-32642: non-unique cell values from the ORDER BY clause

Cause: The MODEL rule ORDER BY clause did not generate unique values for all cells that satisfy the predicates in the left side of the rule.

Action: Modify the rule ORDER BY clause in the MODEL rule.

ORA-32643: invalid use of window function in MODEL rule

Cause: The window functions can not be used in SQL Model rules that have FOR-loops on the left side or aggregates on the right side.

Action: Modify the MODEL rule.

ORA-32644: this function is not allowed outside of MODEL clause

Cause: A function allowed only within the MODEL clause is used outside of MODEL clause.

Action: Rewrite the SQL statement.

ORA-32690: Hash Table Infrastructure ran out of memory

Cause: Not enough memory.

Action: Increase memory.

ORA-32695: HTI: Not enough memory

Cause: Memory is not enough.

Action: Increase memory.

ORA-32696: HTI: No free slot

Cause: There is not enough memory.

Action: Increase memory.

ORA-32700: error occurred in DIAG Group Service

Cause: An unexpected error occurred while performing a DIAG Group Service operation.

Action: Verify that the DIAG process is still active. Also, check the Oracle DIAG trace files for errors.

ORA-32701: Possible hangs up to hang ID=*string* detected

Cause: Hang Manager detected one or more hangs. These could be valid hangs that require action or the system could be overloaded causing very slow progress which can be interpreted as hangs. If hang resolution is enabled, Hang Manager may attempt to resolve the hang by terminating the ultimate blocker.

Action: Check the incident logs associated with this message for diagnostic information.

ORA-32702: Rolling migration is going on

Cause: DIAG detected rolling migration in IPC.

Action: No action needed. DIAG is shutting down for rolling migration. This error number is solely used for internal purposes.

ORA-32703: deadlock detected: *string*

Cause: Oracle sessions waiting for resources were deadlocked.

Action: Reissue any commands that failed and contact Oracle Support Services with the incident information.

ORA-32704: Oracle RAC deadlock detected: *string*

Cause: Oracle sessions or processes using Global Enqueue Service were deadlocked waiting for resources.

Action: Reissue any commands that failed and contact Oracle Support Services with the incident information.

ORA-32730: Command cannot be executed on remote instance

Cause: DIAG is not registered with DIAG Group Service

Action: Issue the command without the cluster database syntax

ORA-32731: Another Parallel Oradebug session is in progress

Cause: Another session for Parallel Oradebug is in progress with the database

Action: Issue the command later when the current session finishes

ORA-32732: Parallel Oradebug session is aborted

Cause: Group reconfiguration is occurring among DIAGs

Action: Issue the command later when group reconfiguration completes

ORA-32733: Error occurred when executing Parallel Oradebug

Cause: Error is encountered during executing command at local node

Action: Check alert log and DIAG trace file for error detail

ORA-32734: Error occurred when sending Oradebug command to remote DIAGs

Cause: IPC communication problem encountered

Action: Check IPC communication between DIAGs and issue the command again

ORA-32735: DIAG process is not running in the instance

Cause: DIAG process is not alive

Action: Check error in DIAG trace file and issue the command again when DIAG is restarted

ORA-32736: Hang analysis aborted due to wrong message type

Cause: DIAG received wrong message.

Action: Check DIAG trace files for errors.

ORA-32737: Hang analysis aborted due to failed memory allocation

Cause: DIAG couldn't allocate buffer for remote copy.

Action: Check DIAG trace files for errors.

ORA-32738: Hang analysis aborted due to failed memory copy

Cause: DIAG couldn't copy buffer to remote node.

Action: Check DIAG trace files for errors.

ORA-32739: Hang analysis aborted due to failed heap re-grow

Cause: DIAG couldn't re-grow the heap for wait-for-graphs.

Action: Check DIAG trace files for errors.

ORA-32740: The requested operation cannot be proceeded

Cause: Operation was aborted because instance termination was in progress.

Action: Retry later after restarting the instance.

ORA-32741: Hang analysis already going on

Cause: Hang analysis was already in process globally or for the instance.

Action: Wait for the current operation to complete and re-run the command.

ORA-32742: Hang analysis initialize failed

Cause: Hang analyzer was not able to allocate memory to initialize.

Action: Check the trace files.

ORA-32743: command cannot be executed on remote instance

Cause: The database was not mounted in SHARED mode.

Action: Mount the database in SHARED mode.

ORA-32761: Turn off Temp LOB Ref Count Feature

Cause: None

Action: Turn off the whole temp lob ref count feature

ORA-32762: Turn on Temp LOB Ref Count Tracing

Cause: None

Action: Check Trace file for debug info

ORA-32763: Turn off N-Pass Temp LOB cleanup

Cause: None

Action: Facilitate debugging and testing

ORA-32766: instr with negative offset: use varchar semantics on LOBs

Cause: The current varchar behavior is different. e.g. `instr('abcd', 'cd', -2, 1)` returns 3, whereas `instr(to_clob('abcd'), 'cd', -2, 1)` returns 0, (i.e. no match), because the reverse search starts from offset -2, which points to 'c' and moving backward, i.e. 'd' is ignored. This is symmetric to `instr('dcba', 'dc', 2, 1)`, which returns 0.

Action: ORACLE uses the same varchar semantics on LOBs (`instr`). Using the same example, `instr(to_clob('abcd'), 'cd', -2, 1)` will return 3 as in the varchar case.

ORA-32767: No server connection for this operation

Cause: The client side sql or plsql function operation requires a connection to the server, but currently no client/server connection existed.

Action: Establish a client/server connection.

ORA-32771: cannot add file to bigfile tablespace

Cause: An attempt was made to add the second file to a bigfile tablespace.

Action: Do not use this command with bigfile tablespace.

ORA-32772: BIGFILE is invalid option for this type of tablespace

Cause: An attempt was made to create a bigfile tablespace that is dictionary managed or locally managed with manual segment-space management.

Action: Either change the tablespace type to locally managed with automatic segment-space management, or create a SMALLFILE tablespace instead.

ORA-32773: operation not supported for smallfile tablespace *string*

Cause: An attempt was made to perform an operation which is supported only for bigfile tablespaces, e.g. resize tablespace.

Action: Use the appropriate clause of the ALTER DATABASE DATAFILE command instead.

ORA-32774: more than one file was specified for bigfile tablespace *string*

Cause: More than one datafile or tempfile was specified in CREATE TABLESPACE command for a bigfile tablespace.

Action: Change command to contain only one file or create a smallfile tablespace instead.

ORA-32775: cannot change size attributes of read only tablespace *string*

Cause: An attempt was made to change size attributes of a tablespace that is read only.

Action: Change the tablespace to read/write and retry the operation.

ORA-32781: Trace event for window functions

Cause: N/A

Action: Set this event only under the supervision of Oracle development. Trace level is a bitfield. LEVEL ACTION -----
0x0001 trace window functions after ordering semantics rewrite 0x0002 trace statistics collected for window functions 0x0004 trace ordering groups generated for window functions 0x0008 trace dynamic sampling statistics expressions 0x0010 trace messages for slave-2-QC communication 0x0020 trace window consolidation rows

ORA-32790: Element '*string*' cannot share the default table '*string*' with element '*string*'

Cause: An element in the restriction shared a default table with the corresponding element in it's supertype.

Action: Change the default table's name for the element in restriction.

ORA-32791: prebuilt table managed column cannot have a default on null

Cause: An attempt was made to create a materialized view on a prebuilt table that has a managed column with a default on null expression.

Action: Either remove the default on null property, or do not include the column in the materialized view definition.

ORA-32792: prebuilt table managed column cannot be an identity column

Cause: An attempt was made to create a materialized view on a prebuilt table that has a managed column that is an identity column.

Action: Either remove the identity property, or do not include the column in the materialized view definition.

ORA-32793: cannot alter a system-generated sequence

Cause: An attempt was made to alter a system-generated sequence.

Action: A system-generated sequence, such as one created for an identity column, cannot be altered.

ORA-32794: cannot drop a system-generated sequence

Cause: An attempt was made to drop a system-generated sequence.

Action: A system-generated sequence, such as one created for an identity column, cannot be dropped.

ORA-32795: cannot insert into a generated always identity column

Cause: An attempt was made to insert a value into an identity column created with GENERATED ALWAYS keywords.

Action: A generated always identity column cannot be directly inserted. Instead, the associated sequence generator must provide the value.

ORA-32796: cannot update a generated always identity column

Cause: An attempt was made to update an identity column created with GENERATED ALWAYS keywords.

Action: A generated always identity column cannot be directly updated.

ORA-32797: identity column sequence mismatch in ALTER TABLE EXCHANGE PARTITION

Cause: The two tables specified in the EXCHANGE have identity columns with sequences that are neither both increasing nor decreasing.

Action: Ensure that the identity columns have sequences with INCREMENT BY having the same sign.

ORA-32798: cannot use ANSI RIGHT or FULL outer join with a left correlation

Cause: An attempt was made to use a lateral view with a left correlation to the first operand of an ANSI RIGHT or FULL outer join.

Action: Rewrite the query without the left correlation.

ORA-32799: cannot rename a system-generated sequence

Cause: An attempt was made to rename a system-generated sequence.

Action: A system-generated sequence, such as one created for an identity column, cannot be renamed.

ORA-32800 to ORA-32857

ORA-32800: internal error *string*

Cause: An unexpected error occurred.

Action: Contact Oracle Support Services.

ORA-32801: invalid value *string* for *string*

Cause: An invalid value was specified for a parameter.

Action: Specify a valid value for the parameter.

ORA-32802: value for *string* must be *string*

Cause: An invalid value was specified for a parameter.

Action: Specify the value as indicated by the message.

ORA-32803: value for *string* cannot be altered

Cause: An attempt was made to alter a value that cannot be altered.

Action: Retry the operation without altering the indicated value.

ORA-32804: invalid value *string*, *string* should have form *string*

Cause: A value specified for a parameter has the incorrect form.

Action: Specify a string of the correct form.

ORA-32805: identifier for *string* too long, maximum length is *string* characters

Cause: An identifier string exceeded the maximum allowed length.

Action: Specify a string whose length is less than the maximum allowed length.

ORA-32806: value for *string* is too long, maximum length is *string*

Cause: A value exceeded its maximum allowed length.

Action: Specify a value whose length is less than the maximum allowed length.

ORA-32807: message system link *string* already exists

Cause: A message system link of the specified name already exists.

Action: Specify a different name.

ORA-32808: message system link *string* does not exist

Cause: A message system link of the specified name does not exist.

Action: Specify a message system link name that already exists.

ORA-32809: foreign queue *string* is already registered

Cause: The foreign queue has already been registered for this message system link (NAME@MSGLINK).

Action: Specify a different name that is not being used for this message system link.

ORA-32810: foreign queue *string* is not registered

Cause: The foreign queue (NAME@MSGLINK) has not been registered for this message system link.

Action: Specify the name of a registered foreign queue.

ORA-32811: subscriber *string* already exists

Cause: The specified subscriber identifier already exists.

Action: Specify a different identifier.

ORA-32812: subscriber *string* does not exist

Cause: The specified subscriber identifier does not exist.

Action: Specify an existing subscriber identifier.

ORA-32813: propagation schedule *string* already exists

Cause: The specified propagation schedule identifier already exists.

Action: Specify a different identifier.

ORA-32814: propagation schedule *string* does not exist

Cause: The specified propagation schedule identifier does not exist.

Action: Specify a schedule identifier that already exists.

ORA-32815: message system link *string* is referenced by a foreign queue

Cause: An attempt was made to remove a message system link currently referenced by one or more registered foreign queues.

Action: Unregister all foreign queues using this message system link and retry the operation.

ORA-32816: foreign queue *string* is referenced by a subscriber or schedule

Cause: An attempt was made to unregister a foreign queue currently referenced by one or more subscribers or propagation schedules.

Action: Remove all subscribers and propagation schedules using this foreign queue and retry the operation.

ORA-32817: message system link *string* is not configured with a log queue for *string*

Cause: An attempt was made to add a propagation subscriber but the message system link was not configured with a log queue for the indicated propagation type.

Action: Alter the message system link to configure the link with a log queue for this propagation type.

ORA-32818: AQ queue *string* does not exist

Cause: An operation was attempted where the specified AQ queue does not exist.

Action: Specify the name of an existing AQ queue.

ORA-32819: AQ queue *string* must be a normal queue

Cause: An operation was attempted where the specified AQ queue exists but is not a normal queue.

Action: Specify the name of an AQ queue which was created as a normal queue (NORMAL_QUEUE).

ORA-32820: subscriber queue and exception queue must use same message system link

Cause: An operation was attempted for INBOUND propagation where the specified subscriber queue and exception queue reference different message system links.

Action: Specify an exception queue that is a registered foreign queue of the same message system link as the subscriber queue.

ORA-32821: subscriber queue and exception queue must have same payload type

Cause: An operation was attempted for OUTBOUND propagation where the AQ queues used for the subscriber queue and exception queue have different payload types.

Action: Specify an exception queue that has the same payload type as the subscriber queue.

ORA-32822: subscriber *string* is marked for removal

Cause: An administration operation was attempted for a subscriber which is marked for removal. If attempting to remove a subscriber, the Messaging Gateway agent is not running or is running but unable to remove the subscriber at this time.

Action: Do not issue propagation administration commands for a subscriber for which removal is pending. Wait for the subscriber to be removed by the agent or issue REMOVE_SUBSCRIBER with the FORCE option to force the subscriber to be removed.

ORA-32823: subscriber exists for queue *string* and destination *string*

Cause: An attempt was made to create a propagation subscriber when one already exists for the specified queue and destination pair.

Action: Specify a different queue and destination pair, or remove the subscriber using that pair and retry the operation.

ORA-32824: schedule exists for source *string* and destination *string*

Cause: An attempt was made to create a propagation schedule when one already exists for the specified source and destination pair.

Action: Specify a different source and destination pair, or remove the schedule using that pair and retry the operation.

ORA-32825: Messaging Gateway agent has not been started

Cause: An attempt was made to shut down the Messaging Gateway agent when it is not started.

Action: No action required.

ORA-32826: Messaging Gateway agent has already been started

Cause: An attempt was made to start the Messaging Gateway agent when it is already started.

Action: No action required.

ORA-32827: Messaging Gateway agent must be shut down

Cause: An operation was attempted that requires the Messaging Gateway agent to be shut down.

Action: Issue SHUTDOWN, wait for MGW_GATEWAY view to show a NOT_STARTED status, and retry the operation. CLEANUP_GATEWAY may need to be issued to reset the gateway state if the agent fails to shut down after a reasonable time period.

ORA-32828: Messaging Gateway agent must be running

Cause: An operation was attempted that requires the Messaging Gateway agent to be started and responsive.

Action: Issue STARTUP, wait for MGW_GATEWAY view to show a RUNNING status, and retry the operation.

ORA-32829: Messaging Gateway agent cannot be shut down while it is starting

Cause: An attempt was made to shut down the Messaging Gateway agent when it is in the process of starting and initializing.

Action: Wait for MGW_GATEWAY view to show a RUNNING status and retry the operation. CLEANUP_GATEWAY may need to be issued to reset the gateway state if the agent fails to start after a reasonable time period.

ORA-32830: result code *string* returned by Messaging Gateway agent

Cause: The Messaging Gateway agent terminated abnormally due to an unexpected error.

Action: Review the Messaging Gateway log file for further information regarding the problem. Resolve the problem and start the Messaging Gateway agent. Contact Oracle Support Services if the problem cannot be resolved.

ORA-32831: timed out trying to acquire administration lock

Cause: A timeout occurred when attempting an administration operation. Either an administration operation was attempted while the Messaging Gateway agent was starting and initializing, or two administration operations were attempted at the same time.

Action: Retry the operation. If the Messaging Gateway agent is starting, wait for MGW_GATEWAY view to show a RUNNING status and retry the operation.

ORA-32832: failure *string* trying to acquire administration lock

Cause: An unexpected error occurred trying to acquire administration lock.

Action: Retry the operation. Contact Oracle Support Services if the error persists.

ORA-32833: failure *string* trying to release administration lock

Cause: An unexpected error occurred trying to release administration lock.

Action: Contact Oracle Support Services if the error persists.

ORA-32834: Messaging Gateway agent user has not been set

Cause: A Messaging Gateway agent user has not been configured.

Action: Create a database user having role MGW_AGENT_ROLE and issue DB_CONNECT_INFO to configure an agent user.

ORA-32835: database user *string* does not exist

Cause: The specified database user does not currently exist.

Action: Create the user and grant all necessary privileges and roles.

ORA-32836: database user *string* must be granted role *string*

Cause: The specified database user does not have a required role.

Action: Grant the user the indicated role.

ORA-32837: invalid configuration state *string*

Cause: The specified configuration state is invalid.

Action: Remove and re-create the configured entities. Contact Oracle Support Services if the problem cannot be identified or resolved.

ORA-32838: exceeded maximum number of properties

Cause: An attempt was made to alter a property list where the number of properties in the resulting list exceeds the maximum allowed.

Action: Order the elements of the alter list differently so the number of elements in the resulting list is less than the maximum.

ORA-32839: property *string* is reserved, names with MGWPROP\$_ prefix are not valid

Cause: An attempt was made to specify a reserved name for a property name.

Action: Use a non-reserved name.

ORA-32840: property name cannot be NULL

Cause: An attempt was made to use NULL for a property name.

Action: Specify a non-NULL name.

ORA-32841: invalid value for property *string*

Cause: An attempt was made to specify an invalid value for a property.

Action: Specify a valid property value.

ORA-32842: value for property *string* cannot be altered

Cause: An attempt was made to alter a property that cannot be altered.

Action: Retry the operation without altering the indicated property.

ORA-32843: value for *string* is outside the valid range of *string* to *string*

Cause: A value was specified that is not in the valid range.

Action: Specify a value within the indicated range.

ORA-32844: exceeded maximum number of *string* values

Cause: An attempt was made to add a value of the specified type but the maximum number of such values has been reached.

Action: No action required.

ORA-32845: Messaging Gateway agent is already running

Cause: An attempt was made to start the Messaging Gateway agent when an agent instance is already running.

Action: Shut down the Messaging Gateway agent currently running, verify the agent process has been terminated, and start the Messaging Gateway agent.

ORA-32846: Messaging Gateway agent cannot be started; status is *string*

Cause: An attempt to start the Messaging Gateway agent failed due to the indicated agent status. A BROKEN status indicates a problem that requires user intervention before the agent can be started.

Action: Review the MGW_GATEWAY view and the Messaging Gateway log file for further information. Resolve the problem and start the Messaging Gateway agent. Contact Oracle Support Services if the problem cannot be resolved.

ORA-32847: operation is not supported on this platform

Cause: An attempt was made to perform an operation that is not supported on this platform.

Action: Switch to a platform on which the operation is supported.

ORA-32848: foreign queue DOMAIN required for JMS unified connections

Cause: A DOMAIN was not specified when registering a foreign queue for a messaging system link that is configured to use the JMS unified messaging model.

Action: Specify a non-NULL value for the DOMAIN parameter.

ORA-32849: *string* cannot be set unless *string* is set

Cause: An attempt was made to specify a value for a parameter that cannot be set unless an associated parameter is also set.

Action: Specify a valid value for both parameters, or, do not specify a value for either parameter.

ORA-32850: agent *string* does not exist

Cause: The specified Messaging Gateway agent name did not exist.

Action: Specify an existing agent name.

ORA-32851: agent *string* already exists

Cause: The specified Messaging Gateway agent name already existed.

Action: Specify a different agent name.

ORA-32852: agent *string* is referenced by a message system link

Cause: An attempt was made to remove a Messaging Gateway agent currently referenced by one or more message system links.

Action: Remove all message system links associated with this agent and retry the operation.

ORA-32853: propagation job *string* does not exist

Cause: The specified propagation job identifier did not exist.

Action: Specify an existing identifier.

ORA-32854: propagation job *string* already exists

Cause: The specified propagation job identifier already existed.

Action: Specify a different identifier.

ORA-32855: propagation job *string* is marked for removal

Cause: An administration operation was attempted for a propagation job which is marked for removal. If attempting to remove a job, the Messaging Gateway agent is not running or is running but unable to remove the job at this time.

Action: Do not issue propagation administration commands for a job for which removal is pending. Wait for the job to be removed by the agent, or, issue REMOVE_JOB with the FORCE option to force the job to be removed.

ORA-32856: operation not supported for propagation job

Cause: An attempt was made to perform an operation that was not supported for a propagation job.

Action: Perform the operation using a propagation job procedure.

ORA-32857: propagation job exists for source *string* and destination *string*

Cause: An attempt was made to create a propagation job, subscriber, or schedule when a propagation job already existed for the specified source and destination pair.

Action: Specify a different source and destination pair, or remove the propagation job using that pair and retry the operation.

ORA-33000 to ORA-37999

ORA-33000: (AGOPEN00) AGGMAP *workspace object* cannot be accessed because it was compiled by a more recent version of *string*.

Cause: The AGGMAP was already compiled by a more recent version of the product than was being used to execute this command.

Action: Recompile the AGGMAP in the current version.

ORA-33002: (XSAGDNGL00) In AGGMAP *workspace object*, the FLOOR argument of *number* must be less than the CEILING argument of *number*.

Cause: The user specified a floor argument greater than the ceiling argument.

Action: Adjust the floor and ceiling arguments so that the floor is less than the ceiling. OBSOLETE, please remove this

ORA-33003: (XSAGDIMDROP) *workspace object*, to be transformed during data load, must be a base dimension and not otherwise referenced in the AGGMAP.

Cause: The user tried to specify a dimension in a dataflow-related clause in an aggmap which is already in another RELATION statement, DIMENSION statement, or possibly dimensioning the AGGMAP, or they specified a composite or conjoint dimension, or an object which is not a dimension

Action: Remove the conflicting reference or specify a valid object

ORA-33004: (XSAGDNGL01) *workspace object* is not a relationship array.

Cause: A RELATION clause in the AGGMAP named a workspace object that is not a relation.

Action: Name a valid self-relation in the RELATION statement.

ORA-33005: (XSAGDIMBREAK) Invalid breakout for dimension *workspace object*.

Cause: The user specified something that was not a valid dimension or relation on a BREAKOUTDIM line in an aggmap. This might be because the object was not a valid relation, was not over the specified dimension or was multidimensional

Action: Use a valid relation instead

ORA-33006: (XSAGDNGL02) The relation *workspace object* is not related to itself.

Cause: A relation was named in a RELATION clause of the AGGMAP that is not a self-relation.

Action: Name a valid self-relation in the RELATION statement.

ORA-33007: (XSAGPVAR) *workspace object* may only be used as one of: an OPERATOR, ARGS, or FROMVAR variable.

ORA-33008: (XSAGDNGL03) The relation *workspace object* is not a relation over a base dimension of AGGMAP *workspace object*.

Cause: A relation was named in a RELATION clause of the AGGMAP that is not a relation for a base dimension of the AGGMAP.

Action: Name a valid self-relation in the RELATION statement, that is, one that has a dimension that dimensions the AGGMAP.

ORA-33009: (XSAGDNGLPREC) In AGGMAP *workspace object*, PRECOMPUTE may only be specified either for the entire AGGMAP or for individual RELATION statements.

Cause: PRECOMPUTE was specified both as a line in the AGGMAP and on at least one of the RELATION lines, or it was specified more than once as a line of the AGGMAP.

Action: Remove either the PRECOMPUTE line, or the PRECOMPUTE specification for all of the RELATION lines.

ORA-33010: (XSAGDNGL04) Relation *workspace object* is duplicated in the AGGMAP *workspace object*.

Cause: Two RELATION statements in the AGGMAP reference the same relation object.

Action: Remove the duplicate RELATION statement.

ORA-33012: (XSAGDNGL05) AGGMAP *workspace object* contains invalid syntax.

Cause: A line in the AGGMAP contains invalid syntax.

Action: Change the line to have valid syntax.

ORA-33014: (XSAGDNGL06) In AGGMAP *workspace object*, variable operator *workspace object* cannot be dimensioned by rollup dimension *workspace object*.

Cause: Operator variables cannot have the rollup dimension as one of their base dimensions.

Action: Modify the definition of the operator variable so that the current rollup dimension is not one of its bases.

ORA-33016: (XSAGDNGL07) In AGGMAP *workspace object*, *workspace object* is not a valid operator or variable name.

Cause: An invalid argument was supplied to the OPERATOR clause in the relation statement.

Action: Fix the OPERATOR clause so that it specifies either a valid variable name or a valid operator.

ORA-33018: (XSAGDNGL08) In AGGMAP *workspace object*, the data type of *workspace object* must be TEXT, not *string*.

Cause: An operator variable was supplied whose data type is not TEXT.

Action: Change the operator clause to reference a TEXT variable.

ORA-33022: (XSAGDNGL10) The measure dimension *workspace object* must be a TEXT or ID base dimension that does not dimension AGGMAP *workspace object*, but is in the same analytic workspace.

Cause: A MEASUREDIM was supplied in the AGGMAP that was not acceptable.

Action: Modify the MEASUREDIM clause to specify a valid dimension.

ORA-33024: (XSAGDNGL11) AGGMAP *workspace object* contains duplicate information.

Cause: The aggmap contains multiple instances of a clause that can only be specified once.

Action: Remove the extra clause.

ORA-33026: (XSAGDNGL12) In AGGMAP *workspace object*, *workspace object* is not a valid valueset.

Cause: A line in the AGGMAP contains an invalid element where a valid valueset is required.

Action: Change the line to have a valid valueset.

ORA-33028: (XSAGDNGL13) In AGGMAP *workspace object*, *workspace object* should be scalar, not a dimensioned valueset.

Cause: A line in the AGGMAP contains a dimensioned valueset where a scalared valueset is required.

Action: Change the line to have a scalar valueset.

ORA-33030: (XSAGDNGL14) In AGGMAP *workspace object*, you can have either a single independent PROTECT statement or PROTECT statements in your RELATION statements.

Cause: The AGGMAP either specified multiple PROTECT statements not on a RELATION line, or specified PROTECT statements both independently and on RELATION lines.

Action: Correct the AGGMAP to have valid syntax.

ORA-33032: (XSAGDNGL15) In AGGMAP *workspace object*, VALUESET *workspace object* must be in extra dimensions of the relation.

Cause: The RELATION phrase contains a VALUESET which is not over the extra dimension of the RELATION.

Action: Correct the RELATION phrase to contain a valueset over the extra dimension or not to contain any valueset.

ORA-33034: (XSAGDNGL16) In AGGMAP *workspace object*, VALUESET *workspace object* in PRECOMPUTE phrase must be in the self dimension of the relation.

Cause: The precompute phrase contains a valueset which is not over the self dimension of the relation.

Action: Correct the relation phrase to contain a valueset over the self dimension or not to contain any valueset.

ORA-33036: (XSAGDNGL17) ARGS option *workspace object* must be a TEXT variable.

Cause: An ARGS value had a non-text data type.

Action: Use a text variable for ARGS.

ORA-33038: (XSAGDNGL18) In AGGMAP *workspace object*, RELATION *workspace object* contains hierarchy dimensions that are also dimensions of the AGGMAP.

Cause: Hierarchy dimensions(extra dimensions) of a RELATION in the AGGMAP are base dimensions of the AGGMAP.

Action: Correct the RELATION not to have hierarchy dimensions(extra dimensions) which are also base dimensions of the AGGMAP.

ORA-33040: (XSAGDNGL19) In AGGMAP *workspace object*, VALUESETS *workspace object* and *workspace object* are both over the same hierarchy dimension.

Cause: Two or more different VALUESETs over the same hierarchy dimension are used in the AGGMAP.

Action: Use the same VALUESET for two RELATION phrases or use two different VALUESETs over two different hierarchy dimensions.

ORA-33042: (XSAGDNGL20) In AGGMAP *workspace object*, VALUESET *workspace object* must qualify all relations dimensioned by *workspace object*.

Cause: A VALUESET over a hierarchy dimension qualifies some RELATIONs but not all RELATIONs dimensioned by the same hierarchy dimension.

Action: Use the same VALUESET to qualify all the RELATIONs dimensioned by the same hierarchy dimension.

ORA-33044: (XSAGDNGL21) AGGREGATE operator *string* requires a WEIGHTBY clause, but the ARGS clause in AGGMAP *workspace object* did not specify one.

Cause: The user used an operator which needs weight values but not provided the weight values.

Action: Provide weight values using a WEIGHTBY clause.

ORA-33045: (XSAGDNGL51) The AGGREGATE operator *string* does not require a weight, but ARGS clause in AGGMAP *workspace object* specified *workspace object* as a weight.

Cause: The ARGS variable specified a weight even though one is not needed.

Action: Modify the ARGS variable so that it does not specify a weight for that operation.

ORA-33046: (XSAGDNGL22) In AGGMAP *workspace object*, you can specify only one SCREENBY clause.

Cause: The AGGMAP contained multiple SCREENBY clauses.

Action: Remove one of the SCREENBY clauses from the AGGMAP.

ORA-33048: (XSAGDNGL23) In AGGMAP *workspace object*, the relation *workspace object* and the relation *workspace object* are both over the same base dimension.

Cause: The AGGMAP contains incompatible RELATION statements.

Action: Remove one of the RELATION statements from the AGGMAP.

ORA-33050: (XSAGDNGL24) AGGMAP *workspace object* cannot be used to aggregate *workspace object*, because it is defined in a different analytic workspace.

Cause: The user attempted to aggregate a variable in another analytic workspace.

Action: Create an AGGMAP in the other analytic workspace to aggregate that variable.

ORA-33052: (XSAGDNGL25) AGGMAP *workspace object* is a dimensioned AGGMAP; it can only be used to aggregate like-dimensioned variables.

Cause: The user attempted to aggregate a variable with different dimensions than the AGGMAP. This is only possible with undimensioned AGGMAPs.

Action: Create a new undimensioned AGGMAP.

ORA-33058: (XSAGDNGL28) In AGGMAP *workspace object*, error code string is greater than the maximum error code of *number*.

Cause: The user specified an invalid ERRORMASK value.

Action: Remove the invalid value from the ERRORMASK list.

ORA-33060: (XSAGDNGL29) In AGGMAP *workspace object*, the value for the ERRORLOG MAX option must be greater than 0.

Cause: The user specified an ERRORLOG MAX of 0 or a negative number.

Action: Adjust the AGGMAP so that it uses a positive number.

ORA-33062: (XSAGDNGL30) In ALLOCMAP *workspace object*, WEIGHTBY option *workspace object* must be a numerical VARIABLE or FORMULA.

Cause: The WEIGHTBY clause requires numerical VARIABLE or FORMULA but the user used invalid objects.

Action: Correct the WEIGHTBY clause to use a valid numerical VARIABLE or FORMULA.

ORA-33064: (XSAGDNGL31) In AGGMAP *workspace object*, the hierarchy dimension QDR *workspace object* cannot refer to the related dimension of the relation.

Cause: The user specified an invalid hierarchy dimension qualified data reference.

Action: Adjust the AGGMAP so that it uses a valid dimension value qualified data reference.

ORA-33066: (XSAGDNGL32) In AGGMAP *workspace object*, the hierarchy dimension QDR *workspace object* must be a hierarchy dimension of the relation.

Cause: The user specified an invalid qualified data reference for the hierarchy dimension.

Action: Adjust the AGGMAP so that it uses a valid dimension value qualified data reference.

ORA-33068: (XSAGDNGL33) In AGGMAP *workspace object*, the hierarchy dimension QDR over dimension *workspace object* must specify a positive dimension offset.

Cause: The user specified an invalid qualified data reference for the hierarchy dimension.

Action: Adjust the AGGMAP so that it uses a valid dimension value qualified data reference.

ORA-33070: (XSAGDNGL34) In AGGMAP *workspace object*, all QDRs of dimension *workspace object* must map to the same dimension position.

Cause: The user specified two conflicting hierarchy dimension qualified data references.

Action: Adjust the AGGMAP so that it uses a consistent qualified data reference.

ORA-33072: (XSAGDNGL35) In AGGMAP *workspace object*, the hierarchy dimension QDR over dimension *workspace object* must be specified for every relation dimensioned by that hierarchy dimension.

Cause: Multiple dimensions share the same hierarchy dimension, but it is only qualified within a subset of the AGGMAP relations.

Action: Adjust the AGGMAP so that it uses consistent qualified data references.

ORA-33074: (XSAGDNGL36) In AGGMAP *workspace object*, the offset number is not a valid offset into dimension *workspace object*.

Cause: The hierarchy dimension offset is an invalid dimension position.

Action: Adjust the AGGMAP so that it uses valid qualified data references.

ORA-33076: (XSAGDNGL37) In AGGMAP *workspace object*, the value 'number' is not a valid value of dimension *workspace object*.

Cause: The hierarchy dimension offset is an invalid dimension position.

Action: Adjust the AGGMAP so that it uses valid qualified data references.

ORA-33078: (XSAGDNGL39) In AGGMAP *workspace object*, the hierarchy dimension QDR *workspace object* must refer to a dimension.

Cause: The user specified an invalid qualified data reference for the hierarchy dimension.

Action: Adjust the AGGMAP so that it uses a valid dimension value qualified data reference.

ORA-33080: (XSAGDNGL40) In AGGMAP *workspace object*, you cannot reference dimension *workspace object* with both a RELATION statement and a DIMENSION statement.

Cause: The user included both RELATION and DIMENSION statements in the AGGMAP referring to the same AGGMAP.

Action: Remove one of the conflicting clauses.

ORA-33082: (XSAGDNGL41) In AGGMAP *workspace object*, the non-dimensioned valueset *workspace object* must have a parent QDR in its VALUESET statement over the VALUESET's base dimension.

Cause: The VALUESET statement specified a scalar valueset but did not include a qualified data reference to specify the parent.

Action: Add a qualified data reference specifying the parent to the VALUESET statement.

ORA-33084: (XSAGDNGL42) In AGGMAP *workspace object*, you cannot qualify the dimensioned valueset *workspace object*.

Cause: The VALUESET line referred to a dimensioned valueset.

Action: Use a non-dimensioned valueset to limit the status of the dimensioned one.

ORA-33086: (XSAGINIT01) AGGMAP *workspace object* cannot be dimensioned by a conjoint dimension.

Cause: The specified AGGMAP was dimensioned by a conjoint dimension.

Action: Use the CHGDFN command to change the conjoint to a composite dimension.

ORA-33088: (XSAGINIT03) You do not have read permission for AGGMAP object *workspace object*.

ORA-33090: (XSAGINIT05) You must have read permission for *workspace object* to use AGGMAP *workspace object*.

ORA-33092: (XSAGCOMP04) *number* is not the name of a MODEL in any attached analytic workspace.

Cause: An invalid model name was attached to an AGGMAP.

Action: Remove the model from the AGGMAP or create a model with that name.

ORA-33094: (XSAGGMAPLIST01) Your expression uses too much execution space. Eliminate recursion or reduce the levels of nesting.

Cause: formulas likely refer to each other recursively or with a great deal of depth.

Action: eliminate recursion and flatten formula trees.

ORA-33098: (APABBR01) A value of '%V' is not valid for the *workspace object* option.

Cause: An inappropriate value was specified for the named option.

Action: Set a legal value for the option.

ORA-33100: (APABBR02) Value '*number*' is not valid for the *workspace object* option.

Cause: An inappropriate value was specified for the named option.

Action: Set a legal value for the option.

ORA-33102: (APEIFV01) EIFVERSION cannot be greater than the current EVERSION, which is *number*.

ORA-33104: (APEIFV02) EIFVERSION cannot be less than 371.

ORA-33106: (APESCBAS01) '*string*' is not a valid value for the ESCAPEBASE option. Valid values are 'd' and 'x'.

ORA-33108: (APFTMAX01) MAXFETCH must be between 1,000 and 2,147,483,647.

ORA-33110: (APXPKTSZ01) XAPIBUFFER must be between 1,000 and 64,512.

ORA-33112: (APFTBUFF01) FETCHBUFFER must be between 1,000 and 64,512.

ORA-33114: (APLIKESC01) *string* is not a valid value for the LIKEESCAPE option because it is more than one character long.

ORA-33116: (APMSTYPE00) MODSIMULTYPE must be either AITKENS or GAUSS.

ORA-33118: (APMTOLER00) Value *number* is out of range for MODTOLERANCE.

ORA-33120: (APMOVFLO00) Value *number* is out of range for MODOVERFLOW.

ORA-33122: (APMGAMMA00) MODGAMMA must be a whole number greater than or equal to zero.

ORA-33124: (APMITERS00) MODMAXITERS must be a whole number greater than zero.

ORA-33126: (APMDAMPF00) MODDAMP must be greater than or equal to zero and less than one.

ORA-33128: (APMERROR00) MODERROR must be either STOP, CONTINUE, or DEBUG.

ORA-33130: (APMERROR01) The current connection type does not support interactive debugging.

ORA-33132: (APPGMGR00) The *workspace object* option value must be between 0 and *number*.

ORA-33134: (APSORTBUFSZ01) The value of SORTBUFFERSIZE must represent a number between 0 and *number*. You supplied *number*.

ORA-33136: (APSPARSX01) The value of SPARSEINDEX cannot be a multi-line string.

ORA-33138: (APSPARSX02) The value '*number*' is not valid for SPARSEINDEX.

ORA-33140: (AUTOCOMP1) *workspace object* is being compiled automatically.

ORA-33141: (XSAWFREEZE1) The analytic workspace *string* is already frozen.

Cause: Attempting to freeze an AW when it is already frozen

Action: Thaw the AW before freezing it again.

ORA-33142: (BADSYN00) The format of the *string* command is incorrect.

ORA-33143: (XSAWFREEZE2) The analytic workspace *string* must be attached RW or RX.

Cause: The AW must be updatable to change the freeze state

Action: Reattach AW before freezing or thawing it again.

ORA-33144: (BADSYN01) The format of the *string* command is incorrect.

ORA-33145: (XSAWFREEZE3) Cannot rollback analytic workspace *string*; generations are in use.

Cause: One or more generations due to be destroyed as part of a rollback to freeze command are currently in use.

Action: Get sessions using those generations to detach the AW.

ORA-33146: (BINENG00) The width argument for binary conversion can only be specified for INTEGER and BOOLEAN data.

ORA-33147: (XSAWFREEZE4) The analytic workspace *string* is not frozen.

Cause: You are attempting to "rollback to freeze" an AW that is not frozen.

Action: Only execute this command on a frozen AW.

ORA-33148: (BINENG01) The width argument for binary conversion must be 1, 2, or 4.

ORA-33150: (BOOLTOK01) *string* is not a Boolean.

ORA-33152: (CDELETE03) The *workspace object* dimension does not have a value at position *number*.

ORA-33154: (CFINDVAL01) The *workspace object* dimension does not have identifiers.

ORA-33156: (CFINDVAL02) exceeds 2^{63} .

ORA-33158: (CGETPOS02) The *workspace object* dimension does not have a value numbered *number*.

ORA-33160: (CGETSEQ02) The *workspace object* dimension does not have a value at position *number*.

ORA-33162: (CGFIN00) principal-value

ORA-33164: (CGFIN01) asset-value

ORA-33166: (CGFIN02) The number of periods of the *string* function cannot be dimensioned by time.

ORA-33168: (CGFIN03) The salvage value argument of the *string* function must be dimensioned by the time dimension.

ORA-33170: (CGFIN04) The decline factor argument of the *string* function cannot be dimensioned by the time dimension.

ORA-33172: (CGFIN05) The portion argument of the *string* function cannot be dimensioned by time.

ORA-33174: (CGFIN06) The switch period argument of the DEPRDECLSW function cannot be dimensioned by time.

ORA-33176: (CGMCALC01) The member list expression in aggregation phrase *number* is multidimensional.

ORA-33178: (CGMCALC02) *workspace object* appears as the dimension of more than one member list expression.

ORA-33180: (CGMCALC03) WEIGHTBY can only be specified for the AVERAGE aggregation method.

ORA-33182: (CGMCALC04) The base measure expression is not dimensioned by *workspace object*.

ORA-33184: (CGMCALC05) A valueset argument to MCALC must have one dimension and be a valueset of the same dimension.

ORA-33186: (CGMODSET01) The ACROSS option is not supported in model equations.

ORA-33188: (CGMODSET02) The left-hand side of an equation involves the *workspace object* dimension, whereas the '*number*' term on the right-hand side involves *workspace object*.

ORA-33190: (CGMODSET03) An internal error caused the model assignment code generator to be called, but no MODEL is currently being compiled.

ORA-33192: (CGTCVT00) TCONVERT requires an argument dimensioned by time.

ORA-33194: (CGTCVT01) The argument to TCONVERT cannot be dimensioned by more than a single time dimension.

ORA-33196: (CGTCVT03) Invalid conversion method for TCONVERT.

ORA-33198: (CGTCVT04) The two conversion methods requested of TCONVERT are incompatible.

ORA-33200: (CGTCVT05) You cannot convert by both DAY and PERIOD. You must use one or the other.

ORA-33202: (CGTCVT06) The breakout dimension *workspace object* is not a time dimension.

ORA-33204: (CGTCVT07) In converting data from time dimension *workspace object* to *workspace object* using TCONVERT, a conversion direction must be given.

ORA-33206: (CGTCVT08) It is not possible to convert data dimensioned by *workspace object* to be dimensioned by *workspace object*.

ORA-33208: (CGTDF00) You can only find the start or end of a time period.

ORA-33210: (CGTDF01) The argument of the BEGINDATE or ENDDATE function must be dimensioned by exactly one time dimension.

ORA-33213: (CINSERT06) The target position for MAINTAIN ADD or MAINTAIN MOVE cannot fall in the range of session-only values.

Cause: The user specified a BEFORE or AFTER clause specifying a position in the range of SESSION dimension values.

Action: Do not use a position clause, or specify a position before the first SESSION value.

ORA-33214: (CINSERT02) The *workspace object* dimension is too large.

Cause: The dimension has too many values.

Action: Deleted values can still take up space in the dimension and cause this error. Try removing the deleted values by exporting the dimension to EIF and reimporting it with the REPLACE DELETE option.

ORA-33215: (CINSERT07) You cannot add session-only values to the *workspace object* dimension.

Cause: The user tried to add a SESSION dimension value while a spreadsheet spreadsheet cursor was open.

Action: Try adding the SESSION value while the cursor is not active.

ORA-33216: (CINSERT03) The *workspace object* dimension does not have a value numbered *number*.

ORA-33217: (CINSERT20) Custom member values cannot be added to concat dimension *workspace object*, or to any of its bases, because it is not defined as UNIQUE.

Cause: Only UNIQUE concat dimensions can have custom member values.

Action: Use the CHGDFN command to change the concat dimension to UNIQUE and retry.

ORA-33218: (CINSERT04) %K is not a valid value for the *workspace object* dimension. Values for this dimension can have at most *number* significant digits after rounding to *number* decimal places.

Cause: The user attempted to insert a value that had too many digits into a NUMBER dimension. For instance, the user might have tried to insert the value 99999 (5 digits) into a dimension with data type NUMBER(4).

Action: Use a smaller number for the dimension value, or define a new dimension with a larger precision and replace the old dimension with the new one.

ORA-33219: (CINSERT05) %K cannot be added to *workspace object* because it is already a value of the dependent UNIQUE concat dimension *workspace object*, from leaf dimension *workspace object*.

Cause: A value cannot be added to a dimension if it conflicts with an existing value in a unique concat dimension containing this dimension.

Action: The concat(s) causing the conflict could be CHGDFNed to NOT UNIQUE, or either of the duplicate values could be renamed to make them UNIQUE.

ORA-33220: (CLOPEN01) The time dimension *workspace object* cannot be accessed because it consists of time periods not recognized in this release of *string*.

ORA-33222: (CLOPEN02) The dimension *workspace object* cannot be accessed because it was created by an incompatible version of *string*.

ORA-33223: (CMOVE03) You cannot move a session-only dimension value.

Cause: The user named a SESSION dimension value in the MAINTAIN MOVE command.

Action: Do not try to MAINTAIN MOVE session-only dimension values.

ORA-33224: (CMOVE02) The *workspace object* dimension does not have a value at position *number*.

ORA-33226: (COLDEL01) The starting column must be between 1 and the maximum width of a text value (*number*). You cannot start removing at column *number*.

ORA-33228: (COLDEL02) The columns to be removed must be between 1 and the maximum width of a text value (*number*). You cannot remove column *number*.

ORA-33230: (COLDEL03) The number of columns to be removed must be greater than zero. You cannot remove *number* columns.

ORA-33232: (COLEXTR01) The starting column must be between 1 and the maximum width of a text value (*number*). *number* is out of range.

ORA-33234: (COLEXTR02) The columns to be extracted must be between 1 and the maximum width of a text value (*number*). You cannot extract column *number*.

ORA-33236: (COLEXTR03) The number of columns to be extracted must be greater than or equal to zero. You cannot extract *number* columns.

ORA-33238: (COLINS01) The starting column must be between 0 and the maximum width of a text value (*number*). You cannot start inserting at column *number*.

ORA-33240: (COLREP01) The starting column must be between 1 and the maximum width of a text value (*number*). You cannot start replacing at column *number*.

ORA-33242: (COMPOSITE01) *workspace object* is a dimension composite and does not have position numbers that can be used in this context.

ORA-33243: (XSDPART51) *workspace object* is a PARTITION TEMPLATE and does not have position numbers that can be used in this context.

ORA-33244: (CRENAME01) The *workspace object* dimension does not have a value at position *number*.

ORA-33246: (CRENAME02) The *workspace object* dimension does not have identifiers that can be renamed.

ORA-33247: (CRENAME03) %K is already a value of the dependent UNIQUE concat dimension *workspace object*, from leaf dimension *workspace object*.
Cause: A value cannot be renamed in a dimension if the new value conflicts with an existing value in a unique concat dimension containing this dimension.

Action: The concat(s) causing the conflict could be CHGDFNed to NOT UNIQUE, or either of the duplicate values could be changed to make them UNIQUE.

ORA-33248: (CTDDEL04) Deletions from time dimension *workspace object* must occur at either end. *number* values were not deleted.

ORA-33250: (CTDINSRT00) You attempted to add a value that was outside the allowable range of dates for time dimension *workspace object*.

ORA-33252: (CTXENG00) The CONTEXT name cannot be NA.

ORA-33254: (CTXENG01) CONTEXT '*number*' already exists.

ORA-33256: (CTXENG02) CONTEXT '*number*' does not exist.

ORA-33258: (CTXENG03) *workspace object* has not been saved in CONTEXT '*number*'.

ORA-33260: (DIMSHOW01) Partition *number* does not exist.

Cause: The DIMSHOW command specified a nonexistent partition.

Action: Specify the name of an existing partition, or remove the PARTITION qualification from the DIMSHOW command.

ORA-33261: (DIMSHOW02) A partition name may be specified only for a partitioned variable.

Cause: A PARTITION qualification was provided for an object other than a partitioned variable.

Action: Remove the PARTITION qualification.

ORA-33262: (DBERR01) Analytic workspace *string* does not exist.

Cause: The analytic workspace requested does not seem to be in the current database

Action: Check that you are in the correct schema and have access to the requested AW.

ORA-33263: Could not create analytic workspace *string*

Cause: A serious error was encountered while trying to set up the tables for the named analytic workspace. Possibilities include a tablespace that can't be written to, corrupted metadata about which AWs exist, bogus tables with names the code expects to be able to use, or the remains of a partially removed AW.

Action: There should be another error on the error stack. Consult it to determine what is causing the problem and remove that table.

ORA-33264: (DBERR02) Analytic workspace *string* cannot be accessed because it has been damaged or belongs to an incompatible version of *string*.

ORA-33265: (DBERRBSZ) Analytic workspace *string* cannot be opened. Tablespace blocksize *number* does not match database cache size *number*.

Cause: The blocksize of the containing tablespace didn't match database cache size.

Action: Change either size to make them consistent, or set `olap_page_pool_size` to 0 to allow automatic OLAP pool management when compatibility is greater than 10.2.

ORA-33266: (DBERR03) Analytic workspace *string* cannot be accessed because it was last modified by an incompatible version of *string*.

ORA-33267: (DBERRRLS) Analytic workspace *string* cannot be accessed because it has fine-grained access control applied to it

Cause: An attempt was made to access the specified analytic workspace's LOB table. The OLAP option detected the table had fine-grained security applied to it. The OLAP option requires full access to this table to operate correctly.

Action: Remove the fine-grained access control.

ORA-33268: (DBERRTHW) Analytic workspace *string* cannot be attached with the THAW option because it was frozen with the NOTHAW option

Cause: An attempt to attach the AW using the thaw option was made; the AW was frozen using the NOTHAW option.

Action: Either attempt the command again without the THAW option.

ORA-33269: while operating on '*string*'

Cause: Error is raised to inform user what object was being worked on when an error occurred during the creation of an AW. It should always be signaled with 33263

Action: See error#33263

ORA-33270: (DBERR05) Analytic workspace *string* already exists.

Cause: The AW CREATE command was passed the name of an analytic workspace that already exists

Action: Specify a different name.

ORA-33271: simulated paging error

Cause: This is an internal error that should never be seen

Action: Contact Oracle technical support

ORA-33272: (DBERR06) Analytic workspace *string* cannot be opened.

ORA-33273: (XSCHKRLS01) Analytic workspace *string* has open cursors and cannot be detached.

Cause: A session attempted to detach an analytic workspace while there are cursors open against it.

Action: Close the open cursor before attempting to close the analytic workspace.

ORA-33274: (DBERR07) Timed out while trying to lock analytic workspace *string* for *string*.

Cause: A lock operation that was supposed to happen very quickly was taking too long. It can be due to another session being stopped while holding that lock, another session crashing while holding that lock, or an internal error.

Action: If another session is stopped, resume that session to let it release the lock. If another session has crashed, wait for a few minutes while PMON or SMON process is recovering that lock. Contact Oracle OLAP Support if none of the situations above apply.

ORA-33275: Autonomous transaction query of an UPDATED analytic workspace is not supported

Cause: The user made attempt to reference an analytic workspace that has uncommitted updates within an autonomous query.

Action: Either COMMIT or ROLLBACK your uncommitted changes, or don't use an autonomous transaction.

ORA-33276: (DBERR08) Another user has analytic workspace *string* attached.

ORA-33278: (DBERR09) Analytic workspace *string* cannot be attached in RW or EXCLUSIVE mode until the changes made and updated in MULTI mode are committed or rolled back.

Cause: There are still changes to this analytic workspace that were updated and not committed when the workspace was attached in MULTI mode.

Action: Either try attaching the workspace in RO or MULTI mode or commit or roll back the transaction before trying to attach the workspace in RW or EXCLUSIVE mode.

ORA-33280: (DBERR10) Analytic workspace *string* cannot be attached in MULTI mode until the changes made and updated in RW or EXCLUSIVE mode are committed or rolled back.

Cause: There are still changes to this analytic workspace that were updated and not committed when the workspace was attached in RW or EXCLUSIVE mode.

Action: Either try attaching the workspace in RO, RW, or EXCLUSIVE mode or commit or roll back the transaction before trying to attach the workspace in MULTI mode.

ORA-33282: (DBERR11) Cannot wait for analytic workspace *string* to become available since doing so would cause a deadlock.

Cause: Trying to wait for the workspace to become available caused a deadlock.

Action: Release an analytic workspace that some other user might be waiting for before proceeding to attach this analytic workspace in this mode.

ORA-33284: (DBERR12) Analytic workspace *string* cannot be opened in MULTI mode before converting it by the latest version of *string*.

Cause: The AW is stored in 9i format.

Action: Convert the AW to a later format

ORA-33286: (DBERR14) The specified access mode for analytic workspace *string* is invalid.

ORA-33288: (DBERR15) Another user has incompatible access to analytic workspace *string*, and the wait timeout has expired.

Cause: An attempt to access an analytic workspace conflicted with another user's access, and the timeout specified has elapsed.

Action: Wait until the conflicting user is done.

ORA-33290: (DBERR17) Analytic workspace *string* cannot be attached in the mode you requested because another user has it attached in an incompatible mode.

Cause: An attempt to access an analytic workspace conflicted with another user's access, and no timeout was specified

Action: Wait until the conflicting user is done.

ORA-33291: (DBERRSYNC) Analytic workspace *string* cannot be attached RW until a RESYNC command has brought it up to the current generation.

Cause: Another session has updated the analytic workspace since it was attached in the current session.

Action: Execute a RESYNC AW command to bring the analytic workspace up to the most recent version.

ORA-33292: (DBERR18) Insufficient permissions to access analytic workspace *string* using the specified access mode.

Cause: You do not have sufficient permissions to access this analytic workspace in the desired mode.

Action: Ask the owner of the schema or OLAP DBA to grant you sufficient permissions to access the {SCHEMA}.AW\${AWNAME} table (for example, SCOTT.AW\$FOO table).

ORA-33293: Please use the OLAP command AW TRUNCATE to truncate this table.

Cause: This table is part of an analytic workspace, and the OLAP option needs to control the truncation of the table.

Action: use the OLAP option to truncate the table.

ORA-33294: (DBERR19) Analytic workspace *string* cannot be created, deleted, or renamed while flashback mode is in effect.

ORA-33295: (DBERR20) An attached analytic workspace is blocking this command.

Cause: A table cannot be dropped because an analytic workspace based on this table is being attached.

Action: Look up the session in question in GV\$AW_OLAP and kill it.

ORA-33296: (DBERR21) Analytic workspace *string* can only be attached RO while tablespace *string* is READONLY.

Cause: The underlying tablespace of the analytic workspace is in READONLY status.

Action: Attach the analytic workspace in RO mode or alter the tablespace.

ORA-33297: (DBERR22) Analytic workspace *string* cannot be opened because it was last modified by an incompatible version of *string*.

Cause: The user attempted to attach an old OLAP Services analytic workspace that cannot be converted by this version of OLAP Services.

Action: Either create a new analytic workspace or try using a version of OLAP Services compatible with the one that created this analytic workspace.

ORA-33298: (AWUPG01) Analytic workspace *string* is already in the newest format allowed by the current compatibility setting

Cause: User ran the DBMS_AW.CONVERT procedure on an analytic workspace that was created in or previously upgraded to the current compatibility mode.

Action: If upgrading the analytic workspace is necessary, upgrade the database instance and then re-run DBMS_AW.CONVERT. If the new features offered by upgrading the analytic workspace are not required, then no action is needed.

ORA-33299: Please use DBMS_AW.AW_RENAME to rename this table.

Cause: This table is part of an analytic workspace, and the OLAP option needs to control the rename of the table.

Action: use the OLAP option to rename the table.

ORA-33302: (DBVALID01) SEVERE ERROR: Record *number* multiply used.

Cause: The AW VALIDATE command has detected an error in the structure of the analytic workspace. This error will result in the corruption of one or more objects

Action: Export what you can of the analytic workspace.

ORA-33304: (DBVALID02) Note: Record *number* was allocated but not used. This can result in wasted space.

Cause: This is a benign message. The AW VALIDATE command found an analytic workspace has some inaccessible space.

Action: Either nothing, or export and recreate the analytic workspace

ORA-33305: (DBVALID06) Note: Record *number* was allocated but not used. This can result in wasted space. (PS *number*)

Cause: This is a benign message. The AW VALIDATE command found an analytic workspace has some inaccessible space.

Action: Either nothing, or export and recreate the analytic workspace

ORA-33306: (DBVALID03) The AW VALIDATE command cannot be used with read-only analytic workspace *string*.

Cause: The AW VALIDATE command does not support read-only access.

Action: Attach the analytic workspace read/write and try again.

ORA-33308: (DBVALID04) SEVERE ERROR: Record *number* used but not allocated

Cause: The AW VALIDATE command has detected a problem that will result in corruption of the analytic workspace. There is no corruption yet.

Action: Export and recreate the analytic workspace.

ORA-33309: (DBVALID05) SEVERE ERROR: Record *number* used but not allocated (PS *number*)

Cause: The AW VALIDATE command has detected a problem that will result in corruption of the analytic workspace. There is no corruption yet.

Action: Export and recreate the analytic workspace.

ORA-33310: (DECIMAL) The number of decimal places must be between *number* and *number*, or *number*. It cannot be *number*.

ORA-33312: (DELDENT01) *workspace object* cannot be deleted while there are objects dimensioned by it, or formulas, programs, valuesets, or relations that use it.

ORA-33313: (DELDENT05) *workspace object* cannot be deleted because it is the target of an external partition of a partitioned variable.

Cause: User attempted to delete a variable, but some partitioned variable was defined to use that variable as the target of one of its external partitions.

Action: DELETE the partitioned variable or CHGDFN DROP PARTITION the the external partition from the partitioned variable, then delete the target variable.

ORA-33314: (DELDENT02) *workspace object* cannot be deleted while it is executing.

ORA-33315: (XSDELDENTANON) You cannot delete *workspace object* while looping over unnamed composite *workspace object*.

Cause: While looping over the named anonymous composite, an attempt was made to delete an object which is dimensioned by it.

Action: Delete the object outside of a loop over the dimension.

ORA-33316: (DELDENT03) You cannot delete *workspace object* because you do not have PERMIT permission for it or it is readonly.

ORA-33318: (DELDENT04) The variable *workspace object* cannot be deleted while its NA trigger is executing.

ORA-33320: (DNAMELEN00) The object name *string* has more than *number* characters.

ORA-33324: (DOSCMD01) The current directory is *string*.

ORA-33325: (DOSCMD02) Current directory alias is not set.

ORA-33332: (DSSEXIST01) Use the AW command to establish a current analytic workspace. Then start your current activity again.

Cause: There is no currently active analytic workspace. The command that generated the error requires an active analytic workspace to operate on.

Action: Execute an AW ATTACH or AW CREATE command to establish an active workspace.

ORA-33334: (DSSEXIST04) Analytic workspace *string* is not attached.

Cause: The specified analytic workspace is currently not attached to the session, or the name is misspelled.

Action: Attach the analytic workspace with the AW ATTACH command, or correct the spelling of the name .

ORA-33336: (DSSEXIST04A) Analytic workspace *string* is not attached.

Cause: The specified analytic workspace is currently not attached to the session, or the name is misspelled.

Action: Attach the analytic workspace with the AW ATTACH command, or correct the spelling of the name .

ORA-33338: (DSSEXIST05) You cannot specify the EXPTEMP analytic workspace.

Cause: The command requires a non-temporary analytic workspace to operate on.

Action: Specify an analytic workspace other than EXPTEMP.

ORA-33339: You cannot detach analytic workspace *string*. It is in use by an API branch.

Cause: The OLAP API is in a branch, and you are not allowed to detach the AW while the branch is active.

Action: End the branch before detaching the AW.

ORA-33340: (DTINFRMT00) A format cannot be an empty string.

ORA-33342: (DTINFRMT01) '*number*' is not a valid format for a *string* value because it has a single angle bracket > that is not part of a field specification.

ORA-33344: (DTINFRMT02) '*number*' is not a valid format for a *string* value because an angle bracket < cannot be the last character.

ORA-33346: (DTINFRMT03) '*number*' is not a valid format for a *string* value because '*string*' is an unrecognized specification.

ORA-33348: (DTINFRMT04) *number* is not a valid format because the B specifier cannot be used with a date.

ORA-33350: (DTINFRMT05) '*number*' is not a valid format because the '*string*' specification cannot be used with a date.

ORA-33352: (DTINFRMT06) '*number*' is not a valid format for a *string* value because the B specifier cannot be used with a period field.

ORA-33354: (DTINFRMT07) '*number*' is not a valid format because the *NAME* specification can only be used once.

ORA-33356: (DTINFRMT08) '*number*' is not a valid VNF format because it contains an ordinal specification.

ORA-33358: (DTINFRMT09) '*number*' is an ambiguous VNF format. The '*string*' specification must be followed by a space or separation character.

ORA-33360: (DTINFRMT10) '*number*' is not a valid VNF format because at least two of the specifications are of the same type.

ORA-33362: (DTINFRMT11) '*number*' is not a valid VNF format because it does not contain enough fields to match one of the defined VNF templates.

ORA-33364: (DTINFRMT12) '*number*' is not a valid VNF format because it contains more information than is allowed.

ORA-33366: (DTINFRMT13) '*number*' is not a valid format for a *string* value because the '*string*' specification has no closing angle bracket >.

ORA-33368: (DTINFRMT14) '*number*' is not a valid format for a *string* value because it contains more than one line of text.

ORA-33370: (DTTOVC01) Unable to print dates longer than *number* characters.

ORA-33372: (DUPCLCHK01) *workspace object* appears more than once in the dimension list.

ORA-33374: (DUPCLCHK02) *workspace object* appears more than once in the dimension list. (It is also a base dimension of *workspace object*.)

ORA-33376: (DUPCLCHK03) *workspace object* and *workspace object* cannot both appear in a dimension list because they share at least one base dimension (*workspace object*).

ORA-33381: (EIFEXPRT20) You cannot EXCLUDE bases from *workspace object*, because it is not a concat dimension.

ORA-33382: (EIFEXPRT01) You cannot export two objects with the same name (*string*).

ORA-33383: (EIFEXPRT21) You cannot EXCLUDE *workspace object* because it is not a base of *workspace object*.

ORA-33384: (EIFEXPRT02) You cannot rename a dimension (*workspace object*) when you export it.

ORA-33385: (EIFEXPRT22) You cannot EXCLUDE *workspace object*, because it is not a dimension.

ORA-33386: (EIFEXPRT03) The expression beginning with *string* has no data type.

ORA-33387: (EIFEXPRT23) EXCLUDE or EXCLUDING can only be used following the name of a concat dimension.

ORA-33388: (EIFEXPRT04) The expression beginning with *string* has too many dimensions.

ORA-33389: (EIFEXPRT24) Concat dimension *workspace object* has *number* bases. You cannot EXCLUDE more than *number* of them.

ORA-33390: (EIFEXPRT05) There are no objects to export.

ORA-33391: (EIFEXPRT25) concat dimension *workspace object* has only 1 base, which cannot be EXCLUDED.

ORA-33392: (EIFEXPRT07) SCATTER name *workspace object* must be a text variable of one dimension shared with the expression.

ORA-33393: (EIFIMPRT01) Object *string* exists in both the EIF file and the current analytic workspace.

Cause: An object with the given name was found in both the EIF file and the current analytic workspace.

Action: Rename the object in the analytic workspace that is causing the name conflict. If the object named in the error message belongs to a cube or a cube dimension, rename that cube or cube dimension.

ORA-33394: (EIFEXPRT08) SCATTER type *workspace object* must be a text variable with the same dimension as the name.

ORA-33396: (EIFEXPRT09) The SCATTER expression must have at least two dimensions and be numeric if TYPE is given.

ORA-33398: (EIFEXPRT10) The SCATTER type value must be INTEGER, SHORTINTEGER, SHORT, or DECIMAL, not *number*.

ORA-33400: (EIFEXPRT11) The scatter name value *number* is not a valid EIF object name.

ORA-33402: (EIFEXPRT12) You cannot export an unnamed dimension composite by itself, but only with an object dimensioned by it.

ORA-33404: (EIFEXPRT13) The format for exporting an expression is:\n EXPORT expression AS name

ORA-33406: (EIFEXPRT14) *workspace object* is not a legal name for an EIF file object.

ORA-33408: (EIFEXPRT15) You cannot use the SCATTER AS syntax because EIFVERSION is set to *number*, and that version cannot import scattered objects.

ORA-33409: (EIFEXPRT16) Cannot use the FULLMAPID or RELATIVEMAPID syntax because NOAPI has been specified.

Cause: An attempt was made to specify FULLMAPID or RELATIVEMAPID syntax with the NOAPI option.

Action: Either specify the API option instead of NOAPI, or remove the FULLMAPID or RELATIVEMAPID option.

ORA-33413: (EIFMAKEF01) You cannot export compressed composite *workspace object* because one of its bases has limited status or a PERMIT READ restriction.

Cause: Export of a compressed composite to an EIF file or lob failed because one or more of the bases had some values that were not in the current status. This can be caused either by a LIMIT command or a PERMIT READ restriction on the dimension.

Action: Either set the base dimensions' statuses to ALL and remove their PERMIT READ programs, or export using the NOAGGR keyword.

ORA-33416: (EIFPATHLIST) You tried to set EIFEXTENSIONPATH to one or more illegal path names.

ORA-33420: (EIFMAKEF03) The EXPORT command has terminated because of insufficient disk space. One or more files could not be created.

ORA-33422: (EIFMAKEF04) CAUTION: Due to insufficient disk space, the extension count of the EIF files(s) could not be recorded. To avoid any potential errors when the file is imported with the IMPORT command, please DO NOT move, delete, or rename any of the EIF extension files. These are files of the form *string.string*, where *string* is the extension number. Please note that there are *number* such files.

ORA-33424: (EIFMAKEF05) *workspace object* cannot be exported because EIFVERSION is set to *number*, and objects cannot have more than 6 dimensions in that version.

ORA-33425: (EIFMAKEF15) CAUTION: Exporting NTEXT objects using *string* for the EIF file character set can cause loss of data. To preserve all NTEXT data, export using the UTF8 character set for the EIF file.

Cause: The user exported an object with data type NTEXT, but the EIF file that will result from the EXPORT command is not written in Unicode. Because no non-Unicode file can represent all possible Unicode data, it is possible that some data will be lost when converting from the Unicode NTEXT object to the EIF file. The EIF file will be written in the character set indicated by the "nls_charset" argument of the EXPORT command, or, if no such argument is present, in the database character set.

Action: If the user is certain that the contents of the NTEXT object can be represented in the specified character set, then no action is necessary. Otherwise, the user can add "nls_charset 'UTF8'" to the EXPORT command string. This will result in the EIF file being written in UTF8 Unicode, which can represent all the data contained in NTEXT objects.

ORA-33426: (EIFMAKEF06) The expression named *string* cannot be exported because EIFVERSION is set to *number*, and objects cannot have more than 6 dimensions in that version.

ORA-33427: (EIFMAKEF16) CAUTION: NTEXT object *workspace object* will be exported with type TEXT.

Cause: User attempted to export an object whose data type is NTEXT, but but the EIFVERSION option indicates a version of Express / Oracle OLAP that does not support the NTEXT data type. The object will be exported as a TEXT object instead.

Action: No action needed.

ORA-33428: (EIFMAKEF07) One or more SCATTER AS expressions cannot be exported because EIFVERSION is set to *number*, and objects cannot have more than 6 dimensions in that version.

ORA-33429: (EIFMAKEF17) CAUTION: NTEXT expression will be exported with type TEXT.

Cause: User attempted to export an expression whose data type is NTEXT, but but the EIFVERSION option indicates a version of Express / Oracle OLAP that does not support the NTEXT data type. The expression will be exported as a TEXT object instead.

Action: No action needed.

ORA-33430: (EIFMAKEF08) *workspace object* cannot be exported because EIFVERSION is set to *number*, and that version does not use *string* objects.

ORA-33432: (EIFMAKEF09) You cannot use the name *string*, because EIFVERSION is set to *number*. That version does not allow object names longer than *number* bytes.

ORA-33434: (EIFMAKEF10) You cannot export the AGGMAP object *workspace object* from this version of *string* to version 6.3. The internal format of an AGGMAP has changed too much.

ORA-33436: (EIFMAKEF11) You cannot write an EIF file using the *string* character set, because EIFVERSION is set to *number*. That version does not support that character set.

ORA-33438: (EIFSPARS00) *number* values of *workspace object* will be exported as NA, because they are not in the current status of its base dimensions.

ORA-33440: (EQUPDATE01) The expression for formula *workspace object* contains invalid syntax.

ORA-33442: (ESDREAD01) Discarding compiled code for *workspace object* because there is no NAME dimension.

ORA-33443: (ESDREAD14) Discarding compiled code for *workspace object* because analytic workspace *string* is not attached.

Cause: A program used an analytic workspace name in a qualified object name. The named analytic workspace is not attached at program run time.

Action: No action necessary. The program will be automatically recompiled. It is likely that the recompile will fail with an appropriate exception code, in which case the signaled condition should be corrected and the program re-run.

ORA-33444: (ESDREAD02) Discarding compiled code for *workspace object* because *number* could not be found.

ORA-33445: (ESDREAD15) Discarding compiled code for *workspace object* because *workspace object* and *workspace object*, which were not partition-dependent when the code was compiled, are now partition-dependent.

Cause: Two variables are "partition-dependent" if they share any external partition target variables, or if one is the target of an external partition of the other. If object names referred to non-partition-dependent variables at compile time but refer to partition-dependent variables in the run-time context, the OLAP DML program, formula, or model will be automatically recompiled.

Action: None needed.

ORA-33446: (ESDREAD03) Discarding compiled code for *workspace object* because *number* is now a *string*. It was another kind of object when the code was compiled.

ORA-33447: (ESDREAD16) Discarding compiled code for *workspace object* because *workspace object* and *workspace object*, which were partition-dependent when the code was compiled, are now not partition-dependent.

Cause: Two variables are "partition-dependent" if they share any external partition target variables, or if one is the target of an external partition of the other. If object names referred to partition-dependent variables at compile time but refer to non-partition-dependent variables in the run-time context, the OLAP DML program, formula, or model will be automatically recompiled.

Action: None needed.

ORA-33448: (ESDREAD04) Discarding compiled code for *workspace object* because *number* now has *string* data, whereas it had *string* data when the code was compiled.

Cause: The datatype of the specified variable has changed.

Action: None needed.

ORA-33449: (ESDREAD17) Discarding compiled code for *workspace object* because the partition method or partition dimension of *number* has changed since it was compiled.

Cause: The partitioning method (LIST, RANGE, or CONCAT) or the partition dimension of the partition template is sufficiently different from what it was when the code was compiled that the code must be recompiled.

Action: None needed.

ORA-33450: (ESDREAD05) Discarding compiled code for *workspace object* because *number* now has more or fewer dimensions than it had when the code was compiled.

Cause: The dimensionality of the specified object has changed.

Action: None needed.

ORA-33452: (ESDREAD06) Discarding compiled code for *workspace object* because *number* is now dimensioned by *workspace object*. It was dimensioned by *workspace object* when the code was compiled.

Cause: The dimensionality of the specified object has changed.

Action: None needed.

ORA-33454: (ESDREAD07) Discarding compiled code for *workspace object* because *number* is now *string workspace object*, whereas it was *string workspace object* when the code was compiled.

Cause: The specified object has changed.

Action: None needed.

ORA-33456: (ESDREAD08) Discarding compiled code for *workspace object* because *number* is a(n) *string*, which *string* did not expect to find in a compiled program.

Cause: The type of the specified object has changed.

Action: None needed.

ORA-33458: (ESDREAD09) Discarding compiled code for *workspace object* because *number* is now type *string*, whereas it was type *string* when the code was compiled.

Cause: The type of the specified object has changed.

Action: None needed.

ORA-33460: (ESDREAD10) Discarding compiled code for *workspace object* because object *workspace object* is not in analytic workspace *string*.

Cause: The specified object is not in the same analytic workspace it was in when the compiled object was compiled.

Action: None needed.

ORA-33462: (ESDREAD10A) Discarding compiled code for *workspace object* because object *number* is not in analytic workspace *string*.

Cause: The specified object was not in the same analytic workspace it was when the compiled object was compiled

Action: None needed.

ORA-33464: (ESDREAD11) Discarding compiled code for *workspace object* because two external objects that were different at compile time are now the same object (*workspace object*).

ORA-33466: (ESDREAD12) Discarding compiled code for *workspace object* because model dimension *number* is not in the same analytic workspace as solution variable *number*.

ORA-33468: (ESDREAD13) Discarding compiled code for *workspace object* because *number* is no longer a surrogate of dimension *workspace object*.

Cause: When the compiled code was saved, the specified object was a surrogate of a certain dimension. Now the specified object is a surrogate of a different dimension.

Action: No action needed; program automatically recompiles.

ORA-33472: (EXPCHECK1) The *workspace object* formula cannot be edited or compiled while it is executing.

ORA-33474: (EXPCOMP01) The calculation expression in formula *workspace object* contains a format error.

ORA-33475: (EXPCOMP02) Invalid expression.

ORA-33476: (EXPORT00) Target file (*string*) already exists. No data is being exported.

ORA-33478: (FCFINI02) Too many NA values exist in the input data; *string* cannot fill them all.

ORA-33480: (FCFINI04) An error occurred while filling in the NA values in the input data.

ORA-33482: (FCFINI05) Calculation of starting values and handling of NA values in the input data require at least two cycles of input data.

ORA-33484: (FCFINI06) An error occurred while calculating starting values for the smooth, trend, and seasonal series.

ORA-33486: (FCFINI07) *string* cannot calculate starting values from this input data.

ORA-33488: (FCFINI08) The forecast input has resulted in a divide-by-zero error in the calculation of the smoothed data series.

ORA-33490: (FCFINI09) The forecast input has resulted in a divide-by-zero error in the calculation of the seasonal index series.

ORA-33492: (FCINFO00) There is no saved forecast calculation for the INFO function to retrieve.

ORA-33494: (FCREATE01) File *string* is already open on file unit number *number*.

ORA-33508: (FILEREAD01) Fileunit *number* is invalid. FILEREAD and FILEVIEW can only access input files opened with the FILEOPEN function.

ORA-33510: (FILEREAD04) Unexpected EOF encountered in string while importing data.

ORA-33512: (FILESET01A) The value of the PAGESIZE option must be greater than the combined values of TMARGIN and BMARGIN.

ORA-33514: (FILESET02) The value of the `TABEXPAND` option must be between 0 and 100 inclusive. You specified *number*.

ORA-33516: (FILESET04) You can set the *string* attribute only if the `fileunit` is used exclusively for output.

ORA-33520: (FINENG01) The number of periods specified in the *string* function must be greater than 0 and less than or equal to *number*.

ORA-33522: (FINENG02) The second argument of the *string* function cannot be `NA` while the corresponding first argument is not `NA`.

ORA-33524: (FINENG03) Both the first and second arguments of the *string* function must be nonnegative.

ORA-33526: (FINENG04) An asset value cannot be `NA` when the corresponding salvage value is not `NA`.

ORA-33528: (FINENG05) The asset value must be greater than the salvage value.

ORA-33530: (FINENG06) The first period depreciation strategy argument of the *string* function cannot be `NA`.

ORA-33532: (FINENG07) The first period depreciation strategy argument of the *string* function must evaluate to the word `FULL` or `HALF`.

ORA-33534: (FINENG08) The rate argument of payment or interest function cannot be `NA` while the corresponding principal argument is not `NA`.

ORA-33536: (FINENG09) Both the principal and rate arguments of the payment and interest functions must be nonnegative.

ORA-33538: (FINENG10) An internal error (*number*) has occurred while evaluating an interest or payment function.

ORA-33540: (FINENG11) The decline-factor argument must be greater than 0.

ORA-33542: (FISOPEN01) A file identifier cannot exceed *number* characters.

ORA-33546: (FNAMEQRY01) You must specify a file unit number for the *string* option of `FILEQUERY`.

ORA-33554: (FORCHECK01) While looping over *workspace object*, you cannot change its status or contents.

ORA-33555: (FORCHECK03) While looping over alias dimension *workspace object*, you cannot change the contents of its base *workspace object*.

ORA-33556: (FORCHECK51) While looping over concat dimension *workspace object*, you cannot change the contents of its leaves.

ORA-33557: (MAINTCHK01) You cannot *string* values of dimension *workspace object* during a loop over it.

Cause: User tried to insert or delete a value of the specified dimension while some loop over that dimension was active. The loop could be an explicit `FOR` or `ACROSS` loop, or a natural expression evaluation or `OLAP_TABLE` loop. Also, it could be a

loop over the dimension itself or over a derived dimension (like a composite or partition template) or dimension alias that includes it. The insert or delete could be explicitly caused by the MAINTAIN command. It is also possible that the user attempted to assign a value to a variable or partition dimensioned by a composite during a loop over that composite using a qualified data reference (QDR), and that the exception was generated by the engine's attempt to insert a new position in the composite to hold the new value.

Action: Move the dimension maintenance or QDR-based variable assignment outside the dimension loop.

ORA-33558: (LOCKCHECK01) The status or contents of the *workspace object* dimension cannot be changed while the LOCK_LANGUAGE_DIMS option is set to *value*.

Cause: A LIMIT or MAINTAIN was attempted on the named language dimension while the boolean option LOCK_LANGUAGE_DIMS was set to YES.

Action: SET LOCK_LANGUAGE_DIMS to NO and retry the MAINTAIN or LIMIT.

ORA-33560: (FORECAST00) The time dimension (*workspace object*) has no values in status. The forecast cannot be calculated.

ORA-33562: (FORECAST01) The forecast LENGTH must be a non-NA value that is greater than or equal to zero.

ORA-33564: (FORECAST02) Sum of forecast LENGTH and number of time dimension values in status equals *number*. The maximum is *number*.

ORA-33566: (FORECAST03) The values of ALPHA, BETA, and GAMMA must be greater than zero and less than or equal to one.

ORA-33568: (FORECAST04) The forecast PERIODICITY must be greater than or equal to 2.

ORA-33570: (FORECAST05) The forecast PERIODICITY must be less than or equal to the number of historical observations in the input data.

ORA-33572: (FORECAST07) In a forecast calculation, the time dimension (*number*) must have consecutive values in status.

ORA-33574: (FORECAST09) The forecast length extends beyond the end of the time dimension (*number*). Only *number* values will be calculated.

ORA-33576: (FORECAST10) The number of non-NA observations must be greater than 1 to calculate a TREND forecast.

ORA-33578: (FORECAST11) The number of positive observations must be greater than 1 to calculate an EXPONENTIAL forecast.

ORA-33580: (FORECAST12) The number of historical periods (*number*) exceeds the number of values in the current status of *workspace object* (*number*).

ORA-33582: (FORECAST13) The number of historical periods must be a non-NA value greater than zero.

ORA-33584: (FORECAST100) Forecasting Analysis

ORA-33586: (FORECAST101) Variable to Forecast:

ORA-33588: (FORECAST102) Forecast Dimension:

ORA-33590: (FORECAST103) Forecast Method:

ORA-33592: (FORECAST104) Mean Absolute Percent Error:

ORA-33594: (FORECAST105) Forecast Equation:

ORA-33596: (FORECAST106) No forecast values can be shown since no FCNAME variable was specified to hold the results of the forecast.

ORA-33598: (FORECAST107) Actual Value

ORA-33600: (FORECAST108) Fitted Value

ORA-33602: (FORECAST109) Alpha:

ORA-33604: (FORECAST110) Beta:

ORA-33606: (FORECAST111) Gamma:

ORA-33608: (FORECAST112) Periodicity:

ORA-33610: (FORSTEP01) Program control transferred into a FOR loop from outside the loop. This transfer is not allowed.

ORA-33612: (FPUTENG01) The file unit operand of the FILEPUT command does not have a value.

ORA-33614: (FPUTENG02) File *string* was opened for input only.

ORA-33616: (FPUTENG04) The FROM file unit operand of the FILEPUT command does not have a value.

ORA-33618: (FPUTENG05) There is not sufficient room on the page to write data. Check your PAGESIZE, TMARGIN, BMARGIN and header values.

ORA-33620: (FRACRPOS01) *string* is not a valid field option for a record in *string* format.

ORA-33622: (FRAPPEND01) You cannot specify a position when appending to an INTEGER dimension.

ORA-33624: (FRASSIGN01) *workspace object* is a WORKSHEET. You cannot use the Data Reader to assign values to it.

ORA-33625: (FRASSIGN02) You cannot use the APPEND keyword with concat dimension *workspace object*.

Cause: User used the APPEND keyword on a CONCAT target in a FILEREAD, SQL FETCH or SQL SELECT command.

Action: APPENDING a value to one of the CONCATs leaves automatically appends to the CONCAT.

ORA-33626: (FRATPUSH01) *string* is not a valid field option for a record in *string* format.

ORA-33628: (FRATPUSH02) Dimension maintenance attributes can only be specified on the left side of the equal sign.

ORA-33630: (FRCBCHEK01) Invalid file unit *number*. Files read by FILEREAD or FILEVIEW must be input files opened via the FILEOPEN function.

ORA-33632: (FRCBCHEK02) No current record is available for file unit *number*.

ORA-33634: (FRCBSET01) *string* is not a valid value for the ORIGIN option of FILESET. Valid values are: *string*.

ORA-33636: (FRERROR01) *number* is not a valid value for *string*. Values for this attribute cannot be less than 1.

ORA-33638: (FRERROR02) *number* is not a valid value for SPACE because it results in a *string* value of *number*.

ORA-33640: (FRERROR03) There is no field of width *number* at column *number*. The current record is only *number* bytes long.

ORA-33642: (FRERROR04) *number* is not a valid width for *string string* data.

ORA-33644: (FRERROR05) NA is not a valid width for *string string* data. There is no default width for this data type.

ORA-33646: (FRERROR06) The string '*string*' is not a valid *string* value.

ORA-33648: (FRERROR07) The current packed field contains the invalid hexadecimal digit "*character*".

ORA-33650: (FRERROR08) The current packed field contains the invalid sign digit "*character*".

ORA-33652: (FRERROR09) *value* is not a valid *workspace object*.

ORA-33654: (FRERROR10) The *workspace object* dimension does not have a value numbered *number*.

ORA-33656: (FRERROR11) The time dimension *workspace object* is empty. You cannot append integer positions to it unless it has at least one value.

ORA-33658: (FRFILPUT01) File *string* is invalid. Source files for FILEPUT must be input files opened via the FILEOPEN function.

ORA-33660: (FRFILPUT02) You cannot write from file *string* to file *string*, because the output file was not opened with the BINARY option.

ORA-33662: (FRFILPUT03) You cannot write from file *string* to file *string*, because the output file was opened with the BINARY option.

ORA-33664: (FRSPARSE01) You cannot specify a dimension list for *workspace object* because it is not a conjoint dimension.

ORA-33666: (FRSTRDLM01) The *string* expression cannot have more than one line.

ORA-33668: (FRSTRDLM02) *number* is not a valid value for the *string* expression.

ORA-33670: (FRSTRDLM03) The *string* and DELIMITER expressions cannot have the same value.

ORA-33672: (FRSTRDLM04) A CSV DELIMITER cannot be set to a double quote or NULL.

ORA-33674: (FTCODE00) Data block size *number* exceeds the maximum size of *number*.

ORA-33678: (GETSCAL00) The text expression specifying a DIMENSION data type cannot evaluate to NA.

ORA-33680: (GETTIMER00) first

ORA-33682: (GETTIMER01) The *number* parameter to *string* is dimensioned by more than one time dimension.

ORA-33684: (GETTIMER02) The *number* parameter to *string* must be dimensioned by a time dimension, or an explicit time dimension must be given.

ORA-33686: (GETTIMER03) The *number* parameter to *string* is not dimensioned by *workspace object*.

ORA-33688: (GETTIMER04) The dimension composite *workspace object* cannot be used as a time dimension.

ORA-33690: (GETXVAL01) The formula *workspace object* cannot be recursively evaluated because the RECURSIVE option is set to NO.

ORA-33692: (GROWENG01) The growrate of an expression must be calculated over a strictly increasing time interval.

ORA-33694: (GROWENG02) The expression in the GROWRATE function must have non-NA values at the beginning and end of the given time interval.

ORA-33696: (GROWENG03) The beginning and ending values of the expression in GROWRATE must both be positive or both be negative.

ORA-33698: (GROWENG04) Cannot calculate the growrate for the values given

ORA-33700: (GROWENG05) The beginning value of the expression in the GROWRATE function must be non zero.

ORA-33704: (ILPCHECK01) *workspace object* is not a program.

ORA-33706: (ILPCHECK12) The *workspace object* program cannot be compiled because it contains structural errors.

ORA-33708: (ILPCHECK13) The *workspace object* program cannot be compiled while it is executing.

ORA-33712: (ILPCHECK22) The *workspace object* program cannot be executed because it contains structural errors.

ORA-33720: (ILPCHECK43) The *workspace object* program cannot be hidden or unhidden while it is executing.

ORA-33722: (ILPCOMP05) All *string* statements must precede the first non-declarative statement.

ORA-33724: (ILPCOMP07) The *workspace object* program could not be compiled because of an unrecoverable error.

ORA-33726: (ILPENG02) *workspace object* cannot be used more than once in simultaneous or nested FOR statements or ACROSS commands.

ORA-33728: (ILPINIT01) You cannot initialize *workspace object* because it is currently running.

ORA-33730: (ILPLNK01) Discarding compiled code for *workspace object* because it was compiled with code version *number*. The current code version is *number*.

ORA-33732: (ILPONLY) The *string* function can only be used in a program.

ORA-33733: (xsILPMLTPreOp01) The analytic workspace *string* cannot be REVERTed or RESYNCD while the *string* program is active.
Cause: The AW REVERT and AW RESYNC commands cannot be used on an analytic workspace that contains a running program.
Action: Execute the command without running the specified program.

ORA-33734: (ILPPUT01) Label *string* conflicts with at least one other label in *workspace object*. Labels must be unique for the first 8 characters.

ORA-33736: (ILPPUT02) The *workspace object* program contains unmatched DO or DOEND statements.

ORA-33738: (ILPPUT03) Program *workspace object* contains unmatched IF, WHILE, TEMPSTAT, FOR, or THEN/ELSE statement, or duplicate labels.

ORA-33740: (ILPPUT04) On the line defining label *string* in the *workspace object* program, text following the label has been ignored.

ORA-33742: (ILPPUT06) The *workspace object* program contains too many source lines. The limit is *number* lines. The program has been truncated.

ORA-33744: (ILPPUT07) IMPORTANT: Program *workspace object* contains text on the same line as a DO or DOEND statement, which will be ignored.

ORA-33746: (ILPPUT08) *number* must be preceded by an IF clause.

ORA-33748: (ILPPUT09) *number* must be preceded by a THEN clause.

ORA-33750: (ILPXEQ01) A referenced object can no longer be located. Execution will continue in interpreted mode.

ORA-33756: (ILTRK01) No data has been recorded by the TRACKPRG command.

ORA-33758: (IMPQUAF0) The EIF file *string* does not have any objects in it.

ORA-33760: (IMPQUAF02) \nThere are *number* objects in the EIF file:

ORA-33762: (XSCHGDIM01) Invalid LIMIT argument starting at *string*.

ORA-33766: (INFOFC00) Invalid second argument to INFO(FORECAST *string*).

ORA-33768: (INFOMOD00) Invalid second argument to INFO(MODEL *string*).

ORA-33770: (INFOPARS01) Invalid second argument to INFO(PARSE *string*).

ORA-33772: (INFOFORG00) Invalid second argument to INFO(REGRESS *string*).

ORA-33774: (INTERP1) *string* is not a command.

ORA-33776: (INTERP1A) *workspace object* is not a command.

ORA-33780: (INTERP3) The *string* command can only be used in a program.

ORA-33782: (INTERP4) The *string* command cannot be executed by ampersand substitution.

ORA-33784: (INTERP5) Ampersand substitution is not permitted in a *string* statement.

ORA-33788: (INTTOK01) *string* is not composed solely of digits.

ORA-33790: (IOERROR01) I/O error on file *string*: *string*.

ORA-33792: (IOERROR02) I/O error on file *string*: Error text not available.

ORA-33796: (IOEXECUT00) The file identifier argument of *string* does not have a value.

ORA-33798: (IOEXECUT01) File *string* is the current OUTFILE or LOG unit, and cannot be closed with the FILECLOSE command.

ORA-33800: (IOEXECUT02A) The LENGTH argument to the FILEGET function (*number*) is negative.

ORA-33802: (IOEXECUT02B) File *string* was opened for writing.

ORA-33804: (IOEXECUT02C) File *string* was opened for binary input. You must use FILEREAD or FILENEXT to read data from this file.

ORA-33806: (IOEXECUT03A) The *string* option of FILEQUERY is not supported in this version of *string*.

ORA-33808: (IOEXECUT03B) You have requested a FILEQUERY option that is not supported in this version of *string*.

ORA-33810: (IOEXECUT04A) The *string* option of FILESET is not supported in this version of *string*.

ORA-33812: (IOEXECUT04B) The *string* option of a file cannot be changed by the FILESET command.

ORA-33814: (IOEXECUT04C) The value to be set for the *string* option cannot be NA.

ORA-33816: (IOEXECUT04D) You have requested a FILESET option that is not supported in this version of *string*.

ORA-33818: (IOEXECUT05) File unit *number* is invalid. *string* can access only input files opened via the FILEOPEN function.

ORA-33820: (IOEXECUT06) The file name argument to *string* cannot be null or blank.

ORA-33822: (IRR01) Time dimension *workspace object* has a range in status of *number* periods. The maximum range allowed by the IRR function is *number* periods.

ORA-33824: (ISDBUILD01) A local scalar named *string* already exists.

ORA-33826: (LINEDEL01) The number of the first line to remove must be between 1 and the expression's total number of lines. *number* is out of range.

ORA-33828: (LINEDEL02) You must remove at least one line. You cannot remove *number* lines.

ORA-33830: (LINEINS01) The line number after which inserting begins (*number*) is negative.

ORA-33832: (LINEREP01) The number of the first line to replace must be between 1 and the expression's total number of lines. *number* is out of range.

ORA-33834: (LINEXTR01) The line number of the first line to extract must be greater than 0. You cannot start extracting at line *number*.

ORA-33836: (LINEXTR02) You must extract at least one line. You cannot extract *number* lines.

ORA-33838: (LLPINIT05) You attempted to loop over the time dimension *workspace object* beyond the allowable range of dates.

ORA-33840: (LOOPCODE01) Multiple relations exist between *workspace object* and the dimensions of the expression to be aggregated. One is *workspace object*, and another is *workspace object*.

ORA-33842: (LOOPCODE02) *workspace object* cannot be used for aggregation. It is unrelated to the data's dimensions, or it is less aggregate than one of them.

ORA-33844: (LOOPCODE03) Time dimensions *workspace object* and *workspace object* are both dimensions of the data. Breaking out the aggregation by time is ambiguous.

ORA-33846: (LXNXTREC00) The input line was terminated by an end-of-file that occurred sooner than expected. The line might be incomplete.

ORA-33848: (LXNXTREC01) The input line was truncated to the maximum allowable size of *number* characters.

ORA-33852: (LXPARSE01) You provided extra input starting at '*string*'.

ORA-33854: (LXTOKEN01) The statement cannot be parsed because it is too long or too complex.

ORA-33856: (LXSUBST01) *string* is not a valid ampersand-substitution expression.

ORA-33858: (LXSUBST02) The value of the ampersand-substitution expression is NA.

ORA-33860: (MAKEDCL01) You have no current analytic workspace. You must attach or create an analytic workspace before defining a new object.

ORA-33862: (MAKEDCL02) You must specify a data type when you define a *string*.

ORA-33864: (MAKEDCL03) You cannot use the data type attribute when you define a *string*.

ORA-33866: (MAKEDCL04) Your current analytic workspace does not contain an object named *workspace object*.

ORA-33868: (MAKEDCL05) You must specify two or more dimensions when you supply a dimension list for a WORKSHEET.

ORA-33870: (MAKEDCL06) You cannot use the *string* attribute when you define a *string*.

ORA-33872: (MAKEDCL07) The *string* DIMENSION must have a data type (ID, NTEXT, TEXT, NUMBER, DATETIME, TIMESTAMP, or INTEGER), a time period, or a list of bases for a conjoint dimension.

ORA-33874: (MAKEDCL08) *string* is not the name of a valid option.

ORA-33876: (MAKEDCL09) *string* must be an INTEGER dimension.

ORA-33878: (MAKEDCL10) Nested composites are not supported when compatability is 11 or greater.

ORA-33880: (MAKEDCL11) Dimensions specified for a WORKSHEET must be INTEGER dimensions.

ORA-33882: (MAKEDCL12) You cannot use the *string* attribute when you define a *string* of type *string*.

ORA-33883: (MAKEDCL36) You cannot use the *string* attribute when you define an EXTERNAL partition with an existing target.

Cause: User gave the TEMPORARY keyword in the definition of an external partition whose target variable was previously defined.

Action: Any storage characteristics of the external partition are determined by the target variable. These attributes should be set when the target is defined, not when the external partition is defined.

ORA-33884: (MAKEDCL13) You can specify the **TEMPORARY** attribute only for a variable, dimension, relation, valueset, or worksheet.

ORA-33886: (MAKEDCL14) You cannot define an object dimensioned by **NAME**, because it is a special reserved dimension used to organize your analytic workspace dictionary.

ORA-33888: (MAKEDCL15) You cannot use the *string* attribute when you define a fixed-width **TEXT** *string*.

ORA-33890: (MAKEDCL16) You cannot use the dimension list attribute when you define a *string*.

ORA-33892: (MAKEDCL17) You cannot use the *string* attribute when you define a scalar *string*.

ORA-33893: (MAKEDCL18) The **TEMPORARY** attribute cannot be specified for this type of dimension

ORA-33894: (MAKEDCL20) The **WIDTH** attribute can only be used with non-scalar **TEXT** and **INTEGER** variables, or with **TEXT** dimensions.

ORA-33895: (MAKEDCL19) You can specify the **SHAREMAP** attribute only for a multiply dimensioned variable, relation, valueset, or worksheet.

ORA-33896: (MAKEDCL21) The **WIDTH** attribute for **TEXT** data must be a number between 1 and 4000.

ORA-33898: (MAKEDCL22) The **WIDTH** attribute for **INTEGER** data must be 1.

ORA-33900: (MAKEDCL23) The **NOHASH** attribute is only valid for conjoint dimensions.

ORA-33902: (MAKEDCL24) The *string* attribute is only valid for conjoint dimensions and dimension composites.

ORA-33904: (MAKEDCL25) *workspace object* is a dimension composite or is dimensioned by a dimension composite. You cannot use it as the type of a *string*.

ORA-33908: (MAKEDCL27) You cannot use the *string* attribute when you define a **DIMENSION ALIAS**, **CONCAT**, or **PARTITION TEMPLATE**.

ORA-33910: (MAKEDCL28) You cannot specify a data type when you define a **DIMENSION ALIAS**, **CONCAT**, or **PARTITION TEMPLATE**.

ORA-33911: (MAKEDCL29) You cannot define a *string* in analytic workspace *string* because it has not been upgraded to version *string*.

Cause: User attempted to define an object that requires a certain compatibility setting in an AW that has not been upgraded to that compatibility level.

Action: Make sure that the database is running in the appropriate compatibility mode, and upgrade the AW.

ORA-33912: (MAKEDCL30) An **AGGMAP** cannot be dimensioned by a conjoint dimension.

ORA-33914: (MAKEDCL31) You cannot define a dimension alias of another dimension alias.

ORA-33916: (MAKEDCL32) The dimension alias target *workspace object* is not a simple dimension.

ORA-33918: (MAKEDCL33) You cannot define a surrogate of dimension *workspace object* because it is a *string*.

Cause: Not all kinds of dimensions can have surrogates. The user attempted to define a surrogate of a prohibited kind of dimension.

Action: Do not attempt to define a surrogate on this dimension.

ORA-33920: (MAKEDCL34) The *string* SURROGATE must have one of the following data types: ID, NTEXT, TEXT, NUMBER, DATETIME, TIMESTAMP, or INTEGER.

Cause: The user attempted to define a surrogate without specifying a valid data type.

Action: Specify the data type (ID, NTEXT, TEXT, NUMBER, or INTEGER) in the definition of the surrogate.

ORA-33922: (MAKEDCL35) You cannot define a surrogate of dimension *workspace object* because it is a time dimension.

Cause: The user attempted to define a surrogate on a dimension that has type DAY, WEEK, MONTH, or YEAR.

Action: Do not attempt to define a surrogate on this dimension.

ORA-33934: (MISCOPTI01) OFF

ORA-33936: (MISCOPTI04) NA

ORA-33938: (MISCOPTI05) Press *Enter* to continue.

ORA-33940: (MISCOPTI06) *DDMTXTYY*

ORA-33942: (MODCALL01) Model *workspace object* cannot be run because another model is already active.

ORA-33944: (MODCALL02) Model *workspace object* needs a solution variable; one was not provided.

ORA-33946: (MODCALL03) Model *workspace object* does not take a solution variable, because it has no model dimensions.

ORA-33948: (MODCALL04) A solution variable must be provided for model *workspace object*; however, *workspace object* is not a variable.

ORA-33950: (MODCALL05) The solution variable specified for the model *workspace object* must be numeric. Variable *workspace object* is type *string*.

ORA-33952: (MODCALL08) A solution variable must be specified for model *workspace object*; however, *workspace object* has no dimensions.

ORA-33954: (MODCALL09) Solution variable *workspace object* is not dimensioned by *workspace object*, which is a dimension of model *workspace object*.

ORA-33956: (MODCALL10) The execution of model *workspace object* cannot be completed due to an internal error (TYPE = *number*).

ORA-33958: (MODCALL11) The syntax for invoking a model is:\n model-name [solution-variable] [NOWARN]

ORA-33960: (MODCALL14) Model *workspace object* contains simultaneous equations.

ORA-33962: (MODCALL15) Model *workspace object* failed to converge after *number* iterations in block *number*.

ORA-33964: (MODCALL16) Model *workspace object* diverged during iteration *number* in block *number* while executing statement *number* of model *workspace object*.

ORA-33966: (MODCALL17) The solution variable *workspace object* is referenced as a variable in model *workspace object*.

ORA-33968: (MODCALL18) Solution variable *workspace object* is dimensioned by *workspace object*, which is not a dimension of model *workspace object* but is a dimension of a model execution block.

ORA-33970: (MODCALL19) Solution variable *workspace object* is not dimensioned by *workspace object*, but model *workspace object* contains dimension-based equations that reference its values.

ORA-33972: (MODCHECK01) *workspace object* is not a model.

ORA-33973: (MODCHECK02) The *workspace object* model cannot be compiled while it is executing.

ORA-33974: (MODCHECK12) The *workspace object* model cannot be compiled because it contains structural errors.

ORA-33975: (MODCHECK13) The *workspace object* model cannot be hidden or unhidden while it is executing.

ORA-33976: (MODCHECK22) The *workspace object* model cannot be executed because it contains structural errors.

ORA-33978: (MODCOMP01) *workspace object* has already been named in a DIMENSION statement in this model.

ORA-33980: (MODCOMP02) DIMENSION statements are not allowed after an equation has appeared.

ORA-33982: (MODCOMP03) DIMENSION statements are not allowed after an INCLUDE statement has appeared.

ORA-33983: (MODCOMP15) The DIMENSION statement must list the dimensions of any included models.

ORA-33984: (MODCOMP04) INCLUDE statements are not allowed after an equation has appeared.

ORA-33986: (MODCOMP05) Only one INCLUDE statement is allowed in a model.

ORA-33988: (MODCOMP06) An INCLUDE statement must refer to another model; *workspace object* is not a model.

ORA-33990: (MODCOMP08) Models cannot be included recursively; *workspace object* has already been included.

ORA-33992: (MODCOMP09) The format of the DIMENSION command is:\n DIMENSION dimension1 [dimension2...]

ORA-33994: (MODCOMP10) The format of the INCLUDE command is:\n INCLUDE model

ORA-33996: (MODCOMP11) *workspace object* is not named in a DIMENSION statement in this model.

ORA-33998: (MODCOMP12) You cannot use both *workspace object* and *workspace object* as model dimensions, because *workspace object* is a surrogate of *workspace object*.

Cause: The user attempted to include both a dimension and its surrogate in the DIMENSION statement of a model.

Action: Use either the dimension or the surrogate in the DIMENSION statement of the model, but not both.

ORA-34000: (MODCOMP13) You cannot use both *workspace object* and *workspace object* as model dimensions, because they are both surrogates of dimension *workspace object*.

Cause: The user attempted to include two dimension surrogates of the same dimension in the DIMENSION statement of a model.

Action: Use either of the two surrogates in the DIMENSION statement of the model, but not both.

ORA-34001: (MODCOMP14) Concat leaf dimension *workspace object* already is used in a DIMENSION statement, either explicitly or as a leaf of another concat dimension.

Cause: Either two concat dimensions which share a common leaf dimension, or a concat and one of its leaves where both specified in the DIMENSION statement(s).

Action: Do not specify overlapping concat dimensions, or any leaves of specified concat dimensions.

ORA-34004: (MODGRAPH01) The model *workspace object* cannot be compiled due to internal error *number*. Contact Oracle OLAP Technical support.

ORA-34006: (MODINFO00) There is no saved model information for the INFO function to retrieve.

ORA-34008: (MODINFO01) Model *workspace object* has not been compiled; the information requested is available only after compilation.

ORA-34010: (MODINFO02) Model *workspace object* has not been executed; the information requested is available only after execution.

ORA-34012: (MODPUT06) The *workspace object* model contains too many source lines. The limit is *number* lines. The model has been truncated.

ORA-34014: (MONITOR01) No data has been recorded by the MONITOR command.

ORA-34016: (MONITOR02) No program name has been supplied for the MONITOR command.

ORA-34018: (MSCGADD01) *workspace object* is an INTEGER dimension. Specify only the number of values to be added, not the specific values themselves.

ORA-34019: (MSCGADD03) *workspace object* is not a LIST PARTITION TEMPLATE.

Cause: User attempted to MAINTAIN ADD or DELETE a list value from a RANGE or CONCAT partition template.

Action: Partitioning in a RANGE or CONCAT partition template cannot be changed using the MAINTAIN command.

ORA-34020: (MSCGADD02) *workspace object* is not a time dimension. You cannot add time periods to it.

ORA-34021: (MSCGADD04) You must specify a partition when maintaining PARTITION TEMPLATE *workspace object*.

Cause: User attempted to MAINTAIN ADD or DELETE a list value from a LIST partition template, but didn't specify which partition to add to or delete from.

Action: Specify the partition: maintain (template) add to partition (partitionname) (values) or maintain (template) delete from partition (partitionname) (values)

ORA-34022: (MSCGDEL02) You can only delete time periods from a time dimension.

ORA-34024: (MSCGMRG01) The RELATE keyword cannot be specified when the MERGE expression has no dimensions.

ORA-34026: (MSCGMRG02) *workspace object* is not a relationship between *workspace object* and the dimensions of the source expression.

ORA-34028: (MSCGMRG03) *workspace object*, the value of the RELATE relation, is not one of the dimensions of the source expression.

ORA-34030: (MSCGPOS00) *workspace object* is a time dimension. You can add values to it only FIRST or LAST.

ORA-34031: (MSCGPOS02) *workspace object* is a datetime dimension. Dimension values are automatically maintained in sorted order.

ORA-34032: (MSCGPOS01) *workspace object* is a dimension composite. You cannot specify a position when adding values to it.

ORA-34034: (MSEXECUT00B) *value* is already a value of *workspace object*.

ORA-34036: (MSEXECUT00C) *number* is already a value of *workspace object*.

ORA-34038: (MSEXECUT01) The expression for the position to add, merge, or delete is NA.

ORA-34039: (TRGPRG02) *workspace object* cannot be deleted while its trigger is executing.

ORA-34040: (TRGSET01) The TRIGGERASSIGN command can only be used in an ASSIGN TRIGGER.

ORA-34041: (TRGPRG01) A TRIGGER cannot be called recursively for the same object and event.

ORA-34042: (MSEXECUT03A) The expression for the position to be renamed is NA.

ORA-34044: (MSEXECUT03B) The expression for the new dimension value is NA.

ORA-34046: (MSEXECUT03C) *value* is already a value of *workspace object*.

ORA-34048: (MSEXECUT04) Time dimension *workspace object* is empty. You must give it a value before you can add periods to its beginning or end.

ORA-34050: (MSEXECUT05) The expression for the argument to BEFORE or AFTER is NA.

ORA-34052: (MSEXECUT06) All dimension values must be single line values.

ORA-34054: (MSEXECUT07) *number* is already a value of *workspace object*.

ORA-34056: (MSEXECUT08) The number of periods to add cannot be negative, zero, or NA.

ORA-34058: (MSEXECUT09) The number of periods to delete cannot be negative, zero, or NA.

ORA-34059: (MSEXECUT12) You cannot delete non session-only dimension values from unique concat dimension *workspace object*.

Cause: The user tried to apply MAINTAIN DELETE to a non-SESSION value.

Action: Only use MAINTAIN DELETE to remove SESSION values from a concat dimension.

ORA-34060: (MSEXECUT10) You do not have permission to maintain *workspace object*.

ORA-34061: (MSEXECUT11) Session-only values cannot be added to non-unique concat dimension *workspace object*, or any of its base dimensions.

Cause: Only UNIQUE concat dimensions can have custom member values.

Action: Use the CHGDFN command to change the concat dimension to UNIQUE and retry.

ORA-34062: (MXARGS01) = Args:

ORA-34064: (MXARGS02) (Relation)

ORA-34066: (MXARGS03) values of

ORA-34068: (MXBREAK01) The BREAK statement can only be used within a FOR or WHILE loop or within a SWITCH statement.

ORA-34070: (MXBREAK02) The CONTINUE statement can only be used within a FOR or WHILE loop.

ORA-34072: (MXCALL01) *workspace object* is not a PROGRAM.

ORA-34074: (MXCGAF01) The *string* function cannot be used with *string* data.

ORA-34076: (MXCGAF02) *workspace object* is neither a dimension nor the name of a relationship array.

ORA-34078: (MXCGAF03) The dimension *workspace object* appears more than once as an argument to *string*.

ORA-34082: (MXCGAF05) Specify the STATUS keyword only if at least one of the breakout dimensions is not a dimension of the expression argument.

ORA-34084: (MXCGAF06) You cannot specify *workspace object* as a breakout dimension because it is a dimension composite.

ORA-34086: (MXCGAF07) You can only specify a qualified data reference to a breakout relation object. *workspace object* is not a relation.

ORA-34088: (MXCGCE04) The THEN and ELSE expressions must evaluate to values of the same dimension.

ORA-34090: (MXCGCHRL01) The expression argument to CHARLIST is not dimensioned by *workspace object*.

ORA-34092: (MXCGCON01) The use of a hexadecimal value (*string*) is not supported.

ORA-34094: (MXCGCUM00) In the CUMSUM function, the relation (*workspace object*) must refer to the accumulation dimension (*workspace object*).

ORA-34096: (MXCGCUM01) The reset parameter '*workspace object*' is neither a RELATION nor a DIMENSION.

ORA-34098: (MXCGCUM02) The STATUS keyword has no effect unless the first argument has more than one dimension.

ORA-34100: (MXCGCVT01) Values of type *string* are expected.

ORA-34102: (MXCGFIOF01) The *string* option of FILEQUERY is not supported in this version of *string*.

ORA-34104: (MXCGGET01) *workspace object* is not a type of object that contains data values.

ORA-34106: (MXCGGET03) FILEREAD attributes can be specified only in the context of a FILEREAD or FILEVIEW command.

ORA-34108: (MXCGGET04) FILEREAD attributes cannot be specified for the NAME dimension.

ORA-34110: (MXCGGET05) FILEREAD attributes cannot be specified for a constant.

ORA-34112: (MXCGGT01) Values of type *string* cannot be read with the MANY option.

ORA-34114: (MXCGGT02) The RAW attribute applies only to TEXT.

ORA-34116: (MXCGHCVT00) To convert TEXT to date use:\n
CONVERT(expression DATE [dateorder])

ORA-34118: (MXCGHCVT01) To convert date to TEXT or ID use:\n
CONVERT(expression {ID | TEXT} [dateformat])

ORA-34120: (MXCGHCVT02) To convert time dimension periods to TEXT or ID use:\n
CONVERT(expression {ID | TEXT} [vnf-format])

ORA-34122: (MXCGHCVT03) To convert NUMBER to TEXT or ID use:\n
CONVERT(expression {ID | TEXT} [output-format])

ORA-34124: (MXCGHCVT04) CONVERT(expression *string*\nTo [format])

ORA-34126: (MXCGKEY01) The first argument to the KEY function must be an expression yielding a dimension value.

ORA-34128: (MXCGKEY02) You cannot apply the KEY function to *workspace object* because it is not a conjoint dimension or composite.

ORA-34130: (MXCGKEY03) *workspace object* is not a component of conjoint dimension *workspace object*.

ORA-34132: (MXCGKEY04) *workspace object* is not a component of composite *workspace object*.

ORA-34134: (MXCGLA01) You are trying to perform an invalid operation. Dates cannot be exponentiated.

ORA-34136: (MXCGMOVE00) The first argument to the *string* function is not dimensioned by *workspace object*.

ORA-34138: (MXCGNPV03) The interest rate expression in the NPV function cannot be dimensioned by *workspace object*.

ORA-34140: (MXCGPFC01) Argument number *number* in the call to *workspace object* is not a simple expression.

ORA-34141: (MXCGPUT00) You cannot use the ASSIGN keyword with DIMENSION *workspace object*.
Cause: User used the ASSIGN keyword on a DIMENSION target in a FILEREAD, SQL FETCH or SQL SELECT command.
Action: To create a new dimension value in a FILEREAD, SQL FETCH or SQL SELECT command, use the APPEND keyword.

ORA-34142: (MXCGPUT01) You cannot assign values to a *string*.

ORA-34143: (MXCGPUT02) You cannot assign values to SURROGATE *workspace object* because it is type INTEGER.

Cause: The user attempted to assign a value to a dimension surrogate whose data type is INTEGER. INTEGER surrogates, like INTEGER dimensions, cannot have values assigned to them. They can only be referenced by position.

Action: Do not attempt to assign values to an INTEGER surrogate. Values will automatically appear and disappear from the INTEGER surrogate as positions are added to or removed from the underlying dimension.

ORA-34144: (MXCGPUT04) A model cannot assign values to a *string*.

ORA-34145: (MXCGPUT03) You cannot use the APPEND keyword with SURROGATE *workspace object*.

Cause: User used the APPEND keyword on a SURROGATE target in a FILEREAD, SQL FETCH or SQL SELECT command.

Action: To assign a value to a SURROGATE in a FILEREAD, SQL FETCH or SQL SELECT command, use the ASSIGN keyword.

ORA-34146: (MXCGQDR01) A qualified data reference (QDR) has this format:\n name(dimension1 dimvalue1 [dimension2 dimvalue2...])

ORA-34148: (MXCGQDR02) *workspace object* cannot be used as a qualifier because it is a COMPOSITE or PARTITION TEMPLATE. You can use its component dimensions instead.

ORA-34150: (MXCGQDR05) A dimension can be named only once in a qualified data reference. *workspace object* has been named more than once.

ORA-34152: (MXCGQDR06) The dimensions named in a qualified data reference must be dimensions of the qualified object. *workspace object* is not dimensioned by *workspace object*.

ORA-34154: (MXCGQDR10) *workspace object* has no dimensions, so it cannot have a qualified data reference.

ORA-34156: (MXCGRA00) You cannot compare time periods of different lengths or phases.

ORA-34158: (MXCGRA01) You cannot subtract time periods of different lengths or phases.

ORA-34160: (MXCGRA02) The format of the IN operator is\n *date* IN *time dimension value*.

ORA-34162: (MXCGRAVL01) The expression to be unraveled is not dimensioned by *workspace object*.

ORA-34164: (MXCGVAR01) A dimension used to define a local *string* variable cannot be located. Execution cannot continue.

Cause: A local relation or valueset has become invalid, most probably because an object used by the currently executing program has been deleted.

Action: This is an internal error that should be referred to Oracle technical support.

ORA-34168: (MXCGVFC01) Invalid context for the VALUE function.

ORA-34170: (MXCGVFC02) Data Reader attributes apply to the VALUE function only when it is used in a FILEREAD or FILEVIEW command.

ORA-34172: (MXCGWKDT01) The argument to the WKSDATA function must be the name of a WORKSHEET.

ORA-34176: (MXCHGDCL01) *workspace object* is not the kind of object whose index type can be changed.

ORA-34177: (MXCHGDCL19) *number* cannot be deleted because one or more partitioned variables instantiate it.

Cause: User attempted to CHGDFN DELETE a partition template, but some partitioned variable had data in the partition specified for deletion.

Action: Drop the partitions that are causing the problem, then retry.

ORA-34178: (MXCHGDCL02) *workspace object* cannot be changed to NOHASH. Only an object that was originally defined as NOHASH can be changed back to NOHASH.

ORA-34179: (MXCHGDCL20) *workspace object* is not a PARTITION TEMPLATE.

Cause: User specified an object that is not a partition template where a partition template is required.

Action: Supply the name of a partition template.

ORA-34180: (MXCHGDCL03) *workspace object* is not a conjoint dimension and cannot be changed in this manner.

ORA-34181: (MXCHGDCL21) *workspace object* is not a partitioned VARIABLE.

Cause: User specified an object that is not a partitioned variable in a place where a partitioned variable is required.

Action: Supply the name of a partitioned variable.

ORA-34182: (MXCHGDCL04) Wrong number of dimensions for *workspace object*; segwidth not changed from: *string*

ORA-34183: (MXCHGDCL22) Partition *number* already exists.

Cause: User attempted to ADD a partition that already existed to a partitioned variable.

Action: None required - the partition already exists.

ORA-34184: (MXCHGDCL05) *string* is not a valid segment width.

ORA-34185: (MXCHGDCL23) Only dimension composites can have optional inversions. *workspace object* is not a dimension composite.

ORA-34186: (MXCHGDCL06) You cannot change *workspace object* to a dimension composite, because it is used as the type of a PROGRAM, RELATION or VALUESET.

ORA-34187: (MXCHGDCL06) REUSE cannot be specified for dimensions that already have deletions.

ORA-34188: (MXCHGDCL07) Only conjoint dimensions can be redefined as composites. *workspace object* is not a conjoint dimension.

ORA-34190: (MXCHGDCL08) You cannot convert the conjoint dimension *workspace object* to a composite because it has the NOHASH attribute.

ORA-34192: (MXCHGDCL09) *workspace object* is a dimension composite and its definition cannot be changed to NOHASH.

ORA-34194: (MXCHGDCL10) You cannot change *workspace object* to a composite while there are permissions applied to it.

ORA-34196: (MXCHGDCL11) Only dimension composites can be redefined as DIMENSIONS. *workspace object* is not a dimension composite.

ORA-34198: (MXCHGDCL12) You cannot change *workspace object* to a composite because its dimension list has one or more duplications.

ORA-34200: (MXCHGDCL13) You cannot change *workspace object* to a dimension composite because there are one or more formulas dimensioned by it.

ORA-34202: (MXCHGDCL14) *workspace object* is not a time dimension.

ORA-34204: (MXCHGDCL15) *workspace object* is not the kind of object to which SEGWIDTH can be applied.

ORA-34206: (MXCHGDCL16) You cannot change *workspace object* to a dimension composite because there are one or more relations dimensioned by it.

ORA-34208: (MXCHGDCL17) You cannot change *workspace object* to a dimension composite because it is used in one or more CONCATENATE or MERGE dimensions.

ORA-34210: (MXCHGDCL18) You cannot change *workspace object* to a dimension composite because one or more surrogates has been defined for it.

Cause: The user attempted to redefine a conjoint dimension as a composite, but the conjoint has one or more surrogates defined. A dimension that has surrogates cannot be redefined as a composite.

Action: Either delete all surrogates for the dimension, or do not attempt to redefine the dimension as a composite.

ORA-34212: (MXCLASS01) An expression was specified where a DIMENSION or a VALUESET was expected.

ORA-34214: (MXCLASS02) *workspace object* is not a dimension.

ORA-34216: (MXCOMP001) *workspace object* cannot be compiled because it is not a PROGRAM, MODEL, AGGMAP, or FORMULA.

ORA-34218: (MXCTX01) *workspace object* cannot be in a CONTEXT because it is not a scalar variable.

ORA-34220: (MXCTX02) *workspace object* cannot be in a CONTEXT because it is not data.

ORA-34222: (MXCTX03) *workspace object* cannot be in a CONTEXT because it is a dimension composite.

ORA-34224: (MXDCL01) Analytic workspace *string* is not attached.

ORA-34226: (MXDCL02) REUSE can only be specified for SIMPLE, COMPOSITE, and CONJOINT dimensions.

ORA-34228: (MXDCL03) Only dimensions can have time periods.

ORA-34230: (MXDCL04) You provided an invalid time period.

ORA-34232: (MXDCL05) A DAY dimension cannot be phased with a BEGINNING or ENDING phrase.

ORA-34234: (MXDCL06) Beginning date translates to an invalid end date.

ORA-34236: (MXDCL07) REUSE cannot be specified in AWs that have not been upgraded to version 12.

ORA-34238: (MXDCL08) A dimension cannot have a data type of DATE.

ORA-34240: (MXDCL09) You cannot specify EXPTEMP as an analytic workspace.

ORA-34242: (MXDCL10) You cannot specify an analytic workspace in this command.

ORA-34243: (MXDCL11) You can only use the *string* keyword when defining a COMPOSITE.

Cause: User supplied the COMPRESSED keyword when defining an object that was not a COMPOSITE.

Action: If the intent is to create a compressed composite, make sure that the object type is COMPOSITE. Otherwise, remove the COMPRESSED keyword from the command string and rerun.

ORA-34246: (MXDCL18) You cannot define an object with a recursive SPARSE dimension list.

ORA-34248: (MXDCL19) You cannot specify a dimension list for the *workspace object* dimension.

ORA-34250: (MXDCL20) The *workspace object* dimension is in the wrong analytic workspace to be used in this DEFINE command.

ORA-34252: (MXDCL21) You have specified the wrong number of dimensions for *workspace object*.

ORA-34254: (MXDCL22) *workspace object* does not belong in the dimension list for composite *workspace object*, or it is in the wrong position.

ORA-34256: (MXDCL23) You must specify a dimension list for *string workspace object* when using it in a definition.

ORA-34258: (MXDCL24) Dimension composite *number* does not exist.

ORA-34260: (MXDCL25) You cannot use *number* to dimension a *string* because it is, or involves, a dimension composite. Use the composite's bases instead.

Cause: The user attempted to use a COMPOSITE in the dimension list of an object that does not allow for such dimensions.

Action: Use the base dimensions of the COMPOSITE in the dimension list.

ORA-34262: (MXDCL26) The object name *string!string* can only be defined in analytic workspace *string*, not in the EXPRESS analytic workspace.

ORA-34264: (MXDCL27) The object name *string!string* can only be defined in analytic workspace *string*, not in analytic workspace *string*.

ORA-34268: (MXDCL29) *string* objects must be type DIMENSION.

ORA-34270: (MXDCL30) You cannot specify a data type when defining a dimension alias.

ORA-34272: (MXDCL31) You cannot specify a dimension list when defining a dimension *string*.

ORA-34274: (MXDCL32) You cannot specify a width when defining a dimension alias.

ORA-34276: (MXDCL33) (Precision, Scale) arguments can only be used with a NUMBER variable or dimension.

Cause: The user attempted to use NUMBER(Precision) or NUMBER(Precision, Scale) as the datatype in a definition for some object other than a DIMENSION or VARIABLE, such as a FORMULA or PROGRAM. This error can also be produced in cases where a NUMBER data type is not allowed at all.

Action: Use the NUMBER type without specifying a precision or scale. If a NUMBER data type is not allowed at all, this fix will only change the exception message to something more specific.

ORA-34279: (MXDCL37) CONCAT can only be used when defining a DIMENSION.

Cause: The CONCAT keyword was used incorrectly.

Action: Retry the command without the CONCAT keyword.

ORA-34280: (MXDCL38) PARTITION BY can only be used when defining a PARTITION TEMPLATE.

ORA-34281: (MXDCL39) A (precision code) argument can only be used with DATETIME or TIMESTAMP dimensions.

ORA-34284: (MXDCL52) A SPARSE dimension cannot be specified in this context.

ORA-34286: (MXDCL53) *workspace object* cannot be used in this context because it is a *string*.

Cause: User specified a dimension composite, conjoint, or partition template in a place where that kind of dimension is not allowed. For instance, a relation cannot be dimensioned by a composite, and only a variable can be dimensioned by a partition template.

Action: Usually, the offending dimension can be replaced with its bases. For instance, a relation cannot be dimensioned by a composite of PRODUCT and GEOG, but it can be dimensioned by both PRODUCT and GEOG instead.

ORA-34298: (MXDCLEQ01) *workspace object* was not defined as a formula, so you cannot use the EQ command to give it a value.

ORA-34300: (MXDCLEQ02) *workspace object* is not a time dimension, so you cannot define a VNF formatting string for it.

ORA-34302: (MXDCLEQ03) *workspace object* is not a DATETIME or TIMESTAMP dimension, formula, program, or variable, so you cannot define a DATE_FORMAT formatting string for it.

ORA-34304: (MXDCLILP01) There is no current program definition. Define a program or use the CONSIDER command before using the PROGRAM command.

ORA-34306: (MXDCLILP02) *workspace object* was not defined as a PROGRAM.

ORA-34308: (MXDCLILP03) Since you have no current program definition, your PROGRAM entries will be discarded. Type END to return to command level.

ORA-34310: (MXDCLILP04) The *workspace object* program cannot be redefined while it is executing.

ORA-34312: (MXDCLMOD01) There is no current model definition. Define a model or use the CONSIDER command before using the MODEL command.

ORA-34314: (MXDCLMOD02) *workspace object* was not defined as a model.

ORA-34316: (MXDCLMOD03) Since there is no current model definition, the MODEL statements will be discarded. Type END to return to the command line.

ORA-34318: (MXDCLAGR01) There is no current aggmap definition. Define an aggmap or use the CONSIDER command before using the AGGMAP command.

ORA-34320: (MXDELETE00) The object *workspace object* is not in the *string* analytic workspace.

ORA-34324: (MXFETCH01) The ACROSS and DOWN keywords cannot be set to NONE at the same time.

ORA-34328: (MXDEBUG01) = Entering *number* from *number*

ORA-34330: (MXDEBUG02) = Entering *number*

ORA-34332: (MXDEBUG03) = Leaving *number*

ORA-34334: (MXDEBUG04) = Leaving *number*, Value = *value*

ORA-34336: (MXGO00) The *string* keyword can only be used for a model.

ORA-34338: (MXDIMEN01) An object cannot have more than *number* dimensions.

ORA-34340: (MXDINSRT01) An object named *number* already exists in analytic workspace *string*.

ORA-34342: (MXDSS01) **IMPORTANT:** Analytic workspace *string* is read-only. Therefore, you will not be able to use the UPDATE command to save changes to it. Cause: This is an informational message that reminds you that you may not save changes to the specified analytic workspace.

Action: None, unless it was desired to save changes to the analytic workspace. In that case, detach and reattach the analytic workspace read-write.

ORA-34343: (MXDSS02) *string* is not a valid analytic workspace name. The name must be one of the following forms: SCHEMA.NAME, NAME, or ALIAS, where NAME is an analytic workspace name, SCHEMA is a schema name, and ALIAS is an analytic workspace alias.

ORA-34344: (MXDSS03) Analytic workspace *string* is not attached.

Cause: The command attempted to operate on an analytic workspace that is not currently attached, or the name of the analytic workspace is misspelled.

Action: Attach the analytic workspace or correct the spelling.

ORA-34346: (MXDSS04) The *string* analytic workspace cannot be detached.

Cause: The specified analytic workspace is an internal workspace and may not be detached by the user.

Action: Specify a different analytic workspace to detach.

ORA-34348: (MXDSS05) *string* is used only for internal purposes and cannot be accessed as an analytic workspace.

Cause: The command attempted to operate on an internal analytic workspace used by the system.

Action: Specify a different analytic workspace.

ORA-34350: (MXDSS06) *string* is an open analytic workspace.

Cause: The specified analytic workspace is currently in use.

Action: The desired action requires an analytic workspace that is not currently in use.

ORA-34352: (MXDSS07) *stringcharacter R/character* CHANGED *string*

ORA-34354: (MXDSS08) *stringcharacter R/character* UNCHANGED *string*

ORA-34356: (MXDSS09) Analytic workspace *string* is attached in read-only mode, therefore you cannot change its *string*.

ORA-34357: (MXDSS10) *string* is not an alias of analytic workspace *string*.

Cause: User attempted to use AW UNALIAS on a non-existent alias.

Action: Make sure that the command specified the correct analytic workspace and alias. The alias must have been assigned (using AW ALIAS) during the current session and must not have been removed by a previous AW UNALIAS or AW DETACH command.

ORA-34358: (MXDSS14) *number* other users reading

Cause: Used for AW LIST output formatting when %d > 1

Action: None

ORA-34359: (MXDSS11) *string* appears twice in the alias list.

Cause: User included the same name twice in the alias list of an AW ALIAS or AW UNALIAS command.

Action: Remove the duplicate name and try again.

ORA-34360: (MXDSS15) *number* other users writing

Cause: Used for AW LIST output formatting when %d > 1

Action: None

ORA-34361: (MXDSS12) *number* other user reading

Cause: Used for AW LIST output formatting when %d == 1

Action: None

ORA-34362: (MXDSS16) Program *number* does not exist.

ORA-34363: (MXDSS13) *number* other user writing

Cause: Used for AW LIST output formatting when %d == 1

Action: None

ORA-34364: (MXDSS17) The read/write status of analytic workspace *string* has not been changed. To change it, detach and re-attach the analytic workspace.

ORA-34366: (MXDSS19) Security override is not allowed on analytic workspace *string*.

ORA-34368: (MXDSS20) Incorrect response. Security override failure.

ORA-34370: (MXDSS21) Permission to attach analytic workspace *string* denied by a PERMIT program.

ORA-34372: (MXDSS26) An analytic workspace named *string* is already attached.

ORA-34374: (MXDSS27) *string* is not a valid analytic workspace name. Analytic workspace names must be 26 characters or less, can contain only letters, digits, and underscores, and cannot begin with a digit.

Cause: a specified AW or ALIAS name was too long or contained invalid characters.

Action: verify that AW name meets the specified criteria.

ORA-34376: (MXDSS28) *string* is not a valid analytic workspace name. Analytic workspace names must be 26 characters or less, can contain only letters, digits, underscores, and dollar signs, and cannot begin with a digit or dollar sign.

Cause: a specified AW or ALIAS name was too long or contained invalid characters.

Action: verify that AW name meets the specified criteria.

ORA-34378: (MXDSS29) *string* is a reserved word and cannot be used as an analytic workspace name.

ORA-34380: (MXEXPORT00) You can only export one worksheet to a spreadsheet file.

ORA-34382: (MXEXPORT01) Worksheets are the only objects you can export to spreadsheet files. *workspace object* is not a worksheet.

ORA-34384: (MXFILEIO01) The *string* option of FILESET is not supported.

ORA-34386: (MXFILEIO02) No more than 9 arguments can be supplied to FILESET.

**ORA-34388: (MXFILERD01) The format of the FILEREAD command is:\n
FILEREAD unit [STOPAFTER n] [STRUCTURED | CSV | RULED] [fieldlist]**

**ORA-34390: (MXFILERD02) The format of the FILEVIEW command is:\n
FILEVIEW unit [STRUCTURED | RULED] [fieldlist]**

ORA-34392: (MXFORCAS00) You cannot calculate a forecast for an expression with no dimensions.

ORA-34394: (MXFORCAS01) You cannot calculate a forecast with an STSEASONAL expression with no dimensions.

ORA-34396: (MXFORCAS02) The expression to be forecast is not dimensioned by *workspace object*.

ORA-34398: (MXFORCAS03) The STSEASONAL expression must be dimensioned by only one dimension.

ORA-34400: (MXFORCAS04) time-series

ORA-34402: (MXFORCAS05) When you specify the forecast LENGTH, you must also specify an FCNAME.

ORA-34404: (MXFORCAS06) When you specify METHOD WINTERS, you must also specify the PERIODICITY.

ORA-34406: (MXFORCAS07) When STSMOOTHED, STTREND, or STSEASONAL is specified, they must all be specified.

ORA-34408: (MXFORCAS08) You specified a forecast phrase that is valid only when METHOD WINTERS is specified.

ORA-34410: (MXFORCAS09) The arguments to FCNAME, FCSMOOTHED, FCTREND, and FCSEASONAL must be numeric. *workspace object* is not numeric.

ORA-34412: (MXFORCAS10) FCNAME, FCSMOOTHED, FCTREND, and FCSEASONAL variables must be dimensioned by time dimension *workspace object*. *workspace object* is not.

ORA-34414: (MXGETFLD01) Your FILEREAD or FILEVIEW statement specifies no width for a *string string* field. There is no default width for this data type.

ORA-34416: (MXGETFLD02) *string* data cannot be read as a *string* value.

ORA-34418: (MXGETFLD03) A STRUCTURED or CSV record cannot contain *string* data.

ORA-34420: (MXGETFLD04) The *string* option of FILEREAD or FILEVIEW cannot be specified for *string* data.

ORA-34422: (MXGETFLD05) The SCALE option of FILEREAD or FILEVIEW cannot be specified for BINARY data other than INTEGER.

ORA-34424: (MXGETFLD06) The *string* option of FILEREAD or FILEVIEW cannot be specified for *string string* data.

ORA-34426: (MXGETFLD07) Values read into the relation *workspace object* must be INTEGER position numbers of its conjoint value dimension.

ORA-34428: (MXGETFLD08) Values read into conjoint dimension *workspace object* must be either INTEGER position numbers or a bracketed list of base dimension values.

ORA-34430: (MXGETFLD09) No data type was specified for one or more of the base dimensions of conjoint dimension *workspace object*.

ORA-34432: (MXGETFLD10) *workspace object* cannot be assigned time dimension data.

ORA-34434: (MXGETFLD11) You cannot read values of a dimension composite directly. You can specify a bracketed list of base dimension values.

ORA-34436: (MXGETFLD12) No data type was specified for one or more of the base dimensions of a dimension composite.

ORA-34438: (MXGETSVN01) A value of the *workspace object* dimension must be a single expression without surrounding angle brackets .

ORA-34440: (MXGETSVN02) A value of the *workspace object* dimension must be a combination of *number* base dimension values surrounded by angle brackets .

ORA-34442: (MXGETSVN03) You cannot use a Qualified Object Name as a value of the NAME dimension.

ORA-34444: (MXGETSVN04) Dimension *workspace object* is not a concatenated dimension.

ORA-34446: (MXGETSVN05) Dimension *workspace object* is not a base of concatenated dimension *workspace object*.

ORA-34448: (MXGOTO01) *string* is not defined as a label.

ORA-34450: (MXIFERR) The IF keyword must be followed by a BOOLEAN expression. The expression starting with *string* is *string*.

ORA-34452: (MXIMPORT01) *string* is a reserved keyword that cannot be used in this context.

ORA-34454: (MXIMPORT02) When importing a spreadsheet, CSV file, or PRN file, the target must be a worksheet. *workspace object* is not a worksheet.

ORA-34456: (MXIMPORT03) The STOPAFTER specification cannot be NA.

ORA-34458: (MXIMPORT04) The RULER expression cannot be missing or NA.

ORA-34460: (MXIMPORT05) The expression identifying the file cannot be NA.

ORA-34462: (MXIMPORT06) The STOPAFTER specification cannot be less than one. The value was *number*.

ORA-34464: (MXIMPORT07) TEXTSTART and TEXTEND are supported only for STRUCTURED PRN files. DELIMITER is supported for STRUCTURED PRN and CSV files.

ORA-34466: (MXIMPORT08) Target *workspace object* is not in analytic workspace *string*.

ORA-34468: (MXIMPORT09) *workspace object* is not a valid target name. You cannot use a Qualified Object Name to specify a target in an EIF import.

ORA-34474: (MXINFILE01) The *string* option of INFILE is not supported by *string*.

ORA-34476: (MXINFO01) The first argument to the *string* function must be FORECAST, PARSE, REGRESS, SEASADJ, or MODEL.

ORA-34478: (MXLOG01) Disk file *string* cannot be opened; it is in use.

ORA-34480: (MXMAINT01) You cannot *string* values of conjoint dimension *workspace object*.

ORA-34481: (MXMAINT07) You cannot *string* values of PARTITION TEMPLATE *workspace object*.

Cause: User attempted to use the MAINTAIN command with some keyword other than ADD or DELETE on a partition template.

Action: It is not possible to MAINTAIN a partition template, except to add or delete values of a partition list.

ORA-34482: (MXMAINT02) You cannot *string* values of time dimension *workspace object*.

ORA-34484: (MXMAINT03) You cannot *string* values of dimension composite *workspace object*.

ORA-34486: (MXMAINT04) You cannot maintain dimension alias *workspace object*.

ORA-34487: (MXMAINT08) You cannot *string* values of non-unique concat dimension *workspace object*.

Cause: The specified MAINTAIN operation can only be applied to UNIQUE concats.

Action: Use the CHGDFN command to change the concat dimension to UNIQUE and retry.

ORA-34488: (MXMAINT05) You cannot *string* values of concat dimension *workspace object*.

ORA-34489: (MXMAINT06) You cannot maintain *workspace object* because it is a SURROGATE.

Cause: The user attempted to use the MAINTAIN command on a dimension surrogate. The MAINTAIN command can only be used with real dimensions, not surrogates.

Action: Use the MAINTAIN command to modify the underlying dimension of the surrogate instead.

ORA-34490: (MXMOVE00) You cannot use Qualified Object Names in the MOVE command except as part of an expression.

ORA-34492: (MXMSERR00) Analytic workspace object *workspace object* does not exist.

ORA-34494: (MXMSERR01) Analytic workspace *string* does not contain an object named *workspace object*.

ORA-34496: (MXNAME01) The NAME dimension is available only when you have an active analytic workspace.

ORA-34498: (MXNAME02) You cannot use the NAME dimension in this context.

ORA-34500: (MXNAME03) *string* is a reserved keyword that cannot be used in this context.

ORA-34502: (MXNAME03A) *number* is a reserved keyword that cannot be used in this context.

ORA-34504: (MXNAME04) You have no current analytic workspace.

ORA-34506: (MXNAME05) *string* is a local variable that cannot be used in this context.

ORA-34508: (MXNAME06) You cannot qualify references to the NAME dimension.

ORA-34512: (MXNEGERR) The NOT operator can only be used with BOOLEAN expressions. The expression at *string* is *string*.

ORA-34514: (MXOPERR) You cannot *string string* data in the expression that begins with '*string*'.

Cause: The user attempted an invalid operation.

Action: n/a

ORA-34516: (MXPROPER01) A property name cannot be NA.

ORA-34518: (MXPROPER02) A property named *string* does not exist.

ORA-34520: (MXPROPER03) A property name cannot be a multi-line text.

ORA-34522: (MXPROPER04) A property name must be between *number* and *number* bytes long. You supplied a name of *number* bytes.

ORA-34524: (MXPROPER05) The object properties in this analytic workspace cannot be read, because they were created by an incompatible version of *string*.

ORA-34526: (MXPSHPOP01) You cannot *string workspace object* because it is not a scalar variable.

ORA-34528: (MXPSHPOP02) You cannot *string workspace object* because it is not data.

ORA-34530: (MXPSHPOP03) You cannot *string workspace object* because it is a *string*.

ORA-34534: (MXPUTQDR01) A FILEREAD attribute list is not valid in this context.

ORA-34536: (MXRECAP00) COMMAND LOG\n -----

ORA-34538: (MXRECAP01) The format of the RECAP command is:\n RECAP
[ALL | n] [string] [FILE pathname]

ORA-34540: (MXRECAP02) RECAP does not support multi-line strings.

ORA-34542: (MXRECAP03) There are no entries in the command log.

ORA-34544: (MXRECAP04) No matching commands were found.

ORA-34546: (MXRECAP05) The format of the REDO command is:\n REDO [n]
[oldtext newtext [option]]

ORA-34548: (MXRECAP06) There is no occurrence *number* of '*number*' in the command.

ORA-34550: (MXRECAP07) Command number *number* is not available.

ORA-34552: (MXRECAP08) Multi-line strings cannot be used in editing the command.

ORA-34554: (MXRECAP09) The string '*number*' does not occur in the command.

ORA-34556: (MXRECAP10) Substituting *number* for *number* would cause the command to exceed the maximum command length (*number*).

ORA-34558: (MXRECAP11) The format of the REEDIT command is:\n REEDIT [n]
oldtext newtext [option]

ORA-34560: (MXRECAP12) The *string* command cannot be saved in the command log by REDO or REEDIT or executed by REDO.

ORA-34562: (MXRENAME02) An object named *number* already exists in analytic workspace *string*.

ORA-34564: (MXRENAME03) The SPARSE keyword changes a named composite to unnamed. You cannot apply it to an unnamed composite.

ORA-34566: (MXRENAME04) Only integer dimensions can be named *string*.

ORA-34568: (MXRENAME05) You cannot rename *workspace object* because you do not have PERMIT rights to do it or it is readonly.

ORA-34570: (MXRENAME06) The dimension composite *workspace object* is not in analytic workspace *string*.

ORA-34572: (MXRENAME07) You cannot change *workspace object* to an unnamed composite because it is not a composite.

ORA-34574: (MXRENAME08) You cannot change *workspace object* to an unnamed composite because it has permissions attached.

ORA-34576: (MXRENAME09) You cannot change *workspace object* to an unnamed composite because there are pushed statuses associated with it.

ORA-34578: (MXRENAME10) You cannot change *workspace object* to an unnamed composite because there are no objects dimensioned by it.

ORA-34580: (MXRENAME11) You cannot change *workspace object* to an unnamed composite because there are properties associated with it.

ORA-34582: (MXRENAME12) You cannot change *workspace object* to an unnamed composite, because there is already an unnamed composite with the same base dimensions.

ORA-34584: (MXRENAME13) You cannot change *workspace object* to an unnamed composite, because it appears in the dimension list of unnamed composite *workspace object*.

ORA-34586: (MXRENAME14) You cannot change *workspace object* to an unnamed composite, because unnamed composite *workspace object* appears in its dimension list.

ORA-34588: (MXRENAME15) The object *workspace object* is not in analytic *workspace string*.

ORA-34592: (MXRENAME17) You cannot change *workspace object* to an unnamed composite, because it would cause the dependent object *workspace object* to exceed the limit for the number of named dimensions.

ORA-34594: (MXROLLUP01) *workspace object* is not a data variable.

ORA-34596: (MXROLLUP02) The data type (*string*) of *workspace object* is not INTEGER, DECIMAL, or SHORTDECIMAL.

ORA-34598: (MXROLLUP03) *workspace object* is not related to itself.

ORA-34600: (MXROLLUP04) *workspace object* is not dimensioned by *workspace object*.

ORA-34602: (MXROLLUP05) You must specify which dimension to roll up, since *workspace object* has more than one dimension.

ORA-34604: (MXROLLUP06) *workspace object* is not a relationship array.

ORA-34606: (MXROLLUP07) *workspace object* does not yield values of *workspace object*.

ORA-34608: (MXROLLUP08) *workspace object* is not dimensioned by *workspace object*.

ORA-34610: (MXROLLUP09) The relationship array *workspace object* shares the *workspace object* dimension with *workspace object*. It can only share the rollup dimension itself.

ORA-34612: (MXSHELL01) Your program or expression uses too much execution space. Eliminate recursion or reduce the levels of nesting.

ORA-34614: (MXSHOWCD00) No command was given. There is nothing to show.

ORA-34616: (MXSHOWCD01) No code is generated for the *string* command.

ORA-34618: (MXSHOWCD02) The compiled code for *workspace object* cannot be displayed because the program has been hidden.

ORA-34620: (MXSHOWCD03) No compiled code exists for *string workspace object*.

ORA-34622: (MXSHOWCD04) No text exists for *string workspace object*.

ORA-34624: (MXSORT01) Sort criterion *number* is not dimensioned by *workspace object*.

ORA-34626: (MXSORT02) You must convert WORKSHEET values to a simple data type before using them as a sort criterion.

ORA-34628: (MXSQL99) The SQL "string" command can only be used in a program, and it must be compiled before it can be executed.

ORA-34630: (MXSQL00) The format of the SQL DECLARE command is:\n SQL DECLARE cursor-name CURSOR FOR select-command

ORA-34632: (MXSQL01) The format of the SQL OPEN command is:\n SQL OPEN cursor-name

ORA-34634: (MXSQL02) The format of the SQL CLOSE command is:\n SQL CLOSE cursor-name

ORA-34636: (MXSQL03) The format of the SQL FETCH command is:\n SQL FETCH cursor-name [LOOP [count]] INTO :host-var [:host-var ...] [THEN filereadactions]

ORA-34637: (MXSQL11) The format of the SQL IMPORT command is:\n SQL IMPORT cursor-name INTO :host-var [:host-var ...]\n [THEN filereadactions]

ORA-34638: (MXSQL04) The format of the SQL CLEANUP command is:\n SQL CLEANUP

ORA-34639: (MXSQL05) The format of the SQL SELECT command is:\n SQL SELECT rest of select statement INTO :host-var [:host-var ...] [THEN filereadactions]

ORA-34642: (MXSQL08) The format of the SQL PREPARE command is:\n SQL PREPARE statement-name FROM non-select-command

ORA-34644: (MXSQL09) The format of the SQL EXECUTE command is:\n SQL EXECUTE statement-name

ORA-34646: (MXSQL10) The format of the SQL PROCEDURE command is:\n SQL PROCEDURE procedure-name [(parameter {, parameter})]

ORA-34647: (MXSQL18) The text expression in a CURSOR FOR TEXT declaration cannot be NA.

Cause: The text for the SELECT expression in a CURSOR FOR TEXT declaration was evaluated at compile time as NA.

Action: Specify a text expression that is not NA at the time the program containing the SQL DECLARE is compiled.

ORA-34648: (MXSQL19) The SQL command is incomplete.

ORA-34650: (MXSQL20) The SELECT command is not supported by *string*. You must declare a cursor to retrieve SQL data.

ORA-34652: (MXSQL21) The SQL command contains a syntax error.

ORA-34654: (MXSQL23) Host variable expected; use :: to escape a colon.

ORA-34656: (MXSQL24) Additional WHERE clause conditions with CURRENT OF cursor name syntax

Cause: A SQL UPDATE or DELETE statement tried to use the CURRENT of *cursor name* syntax with a WHERE clause containing multiple conditions.

Action: When using the CURRENT OF *cursor name* syntax make sure it is the only condition in the WHERE clause.

ORA-34658: (MXSQL25) The words CURSOR FOR TEXT must be followed by a compile-time text expression specifying a SELECT command.

Cause: A SQL DECLARE *csr* CURSOR FOR TEXT command lacked a text expression, or the expression was otherwise invalid.

Action: Specify a single text expression that can be evaluated at compile time to yield a SELECT statement

ORA-34660: (MXSQL26) SQL cursor *string* has already been declared in this compilation.

ORA-34662: (MXSQL27) SQL statement *string* has already been prepared in this compilation.

ORA-34665: (MXSQL30) Concat dimension *workspace object* cannot be used as a target host variable. You must specify one of its leaves, and then set the concat's status from that leaf.

ORA-34666: (MXSWITCH01) Only one DEFAULT label is allowed in a SWITCH.

ORA-34668: (MXSWITCH02) The format of a DEFAULT label statement is:\n DEFAULT:

ORA-34670: (MXSWITCH03) Invalid syntax in case label expression

ORA-34672: (MXSWITCH04) The format of a CASE label statement is:\n CASE case-expression:

ORA-34674: (MXTRACE01) There is no trace in effect.

ORA-34676: (MXTRAP01) *string* is not defined as a label.

ORA-34680: (MXUPDATE03) Analytic workspace *string* is read-only. Therefore, the UPDATE command will not save changes.

ORA-34682: (MXUPDATE04) You have no attached analytic workspaces.

ORA-34684: (MXUPDATE05) All of your attached analytic workspaces are read-only. Therefore, the UPDATE command will not save changes.

ORA-34686: (MXVAR02) *string* is not a valid data type for a declarative statement.

ORA-34688: (MXVAR03) *workspace object* cannot be used as a variable or argument type because it is the name of a dimension composite.

ORA-34690: (MXWATCH01) There are no watchpoints set.

ORA-34692: (MXSEQ01) A division by zero was attempted. Set DIVIDEBYZERO to YES if you want NA to be returned as the result of division by zero.

ORA-34694: (MXSEQ02) Unsupported conversion of RELATION data was attempted.

ORA-34696: (MXSEQ03A) "number" is not a number.

ORA-34698: (MXSEQ03B) "number" is not a Boolean.

ORA-34700: (MXSEQ05) Function calls are too deeply nested to be evaluated.

ORA-34702: (MXSEQ13) "number" is not a valid number format.

ORA-34704: (MXSEQ14) "number" does not match number format "number".

ORA-34706: (MXSEQ35) value is not a valid workspace object.

ORA-34708: (MXSEQ36) value does not exist.

ORA-34710: (MXSEQ37) Positions in the product of breakout dimensions of an aggregation function cannot exceed 263.**

ORA-34712: (NAFILENAME) The expression identifying the file cannot be NA or blank.

ORA-34716: (NLSCHARSET01) The XLTABLE method of character set conversion is no longer supported.

ORA-34718: (NLSCHARSET02) number is not a valid, installed NLS character set.

ORA-34719: (NLSCHARSET03) Character data loss in NTEXT/TEXT conversion
Cause: When character set conversion happens between TEXT and NTEXT either implicitly or explicitly, some characters are lost due to no mapping characters in the destination character set.
Action: Make sure all the characters can be mapped to destination character set or set NLS_NCHAR_CONV_EXCP to be FALSE. Note: This message is the OLAP equivalent of ORA-12713.

ORA-34720: (NLSCHARSET04) An unknown character set conversion error occurred.

ORA-34722: (NLSCHARSET05) CAUTION: Character data loss in character set conversion from string to string
Cause: Some operation required a string to be converted into a different character set, but the string contained characters that didn't exist in the new character set.
Action: Choose different character sets.

ORA-34726: (NLSCHARSET06) CAUTION: String truncated during character set conversion from string to string
Cause: Some operation required a string to be converted into a different character set. The string required more bytes in the new encoding, and exceeded some byte limit on its allowable length, causing some characters to be removed from the end of the string.
Action: If the byte limit is due to using the ID datatype, consider using the CHAR datatype instead. If the byte limit is due to the limit of 4000 bytes per line of CHAR data, break the long line up into multiple lines.

ORA-34730: (NLSCHARSET08) CAUTION: During character set conversion, some of hidden program *workspace object* was truncated or could not be converted.

ORA-34731: (NLSSORT01) '*number*' is not a valid NLS_SORT specification.

Cause: An unrecognized NLS_SORT value was specified in the SORT command or the SORT, SORTLINES or UNIQUELINES function.

Action: Specify a supported NLS_SORT value.

ORA-34732: (NOCONSIDER) You have no current definition. Define an object or use the CONSIDER command before using the *string* command.

ORA-34738: (NOUPDATE) A severe problem has been detected. Analytic workspace operations have been disabled.

Cause: A previous fatal error has marked the session so that it cannot perform any UPDATEs

Action: Start a new session

ORA-34740: (NOUPDATEDB) Because of a previous error, changes made to the *string* analytic workspace will not be saved.

ORA-34744: (NPV01) Time dimension *workspace object* has a range in status of *number* periods. The maximum range allowed for the NPV function is *number* periods.

ORA-34746: (NPV02) The interest rate in the NPV function is *number*. The value must be greater than -1.

ORA-34748: (NUMARGS1) You supplied *number* argument(s) to the *string* function. You must supply at least *number*.

ORA-34750: (NUMARGS2) The *string* function cannot have any arguments.

ORA-34752: (NUMARGS3) You supplied *number* arguments to the *string* function. It can have no more than *number* arguments.

ORA-34754: (NUMARGS4) You supplied *number* argument(s) to a function that requires at least *number*.

ORA-34756: (NUMARGS5) You supplied arguments to a function that does not take arguments.

ORA-34758: (NUMARGS6) You supplied *number* arguments to a function that can have no more than *number* arguments.

ORA-34760: (NXHANDLE01) Decimal overflow in context that is unprotected by the DECIMALOVERFLOW option. Contact Oracle OLAP technical support.

ORA-34761: (NXHANDLEALLO) A decimal overflow occurred during an ALLOCATE operation. The results are not reliable.

Cause: While performing an ALLOCATE, a decimal overflow occurred

Action: Correct the data or use a higher precision datatype

ORA-34762: (NXHANDLE02) A decimal overflow has occurred. Set DECIMALOVERFLOW to YES if you want NA to be returned as the result of a decimal overflow.

ORA-34764: (NXHANDLE03) A decimal overflow occurred during a ROLLUP operation. The results are not reliable.

ORA-34766: (NXHANDLE04) A decimal overflow occurred during an AGGREGATE operation. The results are not reliable.

ORA-34768: (NXHANDLE05) A decimal overflow occurred while parsing the AGGMAP.

ORA-34770: (OBJENG02) The object name argument to the OBJ function cannot be NA.

ORA-34772: (OBJENG03) *number* contains more than one name.

ORA-34774: (OBJENG04) '*number*' is not the name of a dimension or composite.

ORA-34776: (OBJENG05) '*number*' is not the name of an analytic workspace object.

ORA-34778: (OBJENG06) You cannot use the OBJ function on objects in analytic workspace *string*.

ORA-34780: (OBJLIST01) Analytic workspace '*string*' is not attached.

ORA-34782: (OBJSAVE2) Analytic workspace *string* already has the maximum number of objects (65535).

ORA-34786: (OCI02) The total length of all output variables cannot be more than *number* bytes.

ORA-34796: (OCI08) SQL host variable *number* cannot be bound.

Cause: The data type of the host variable is not supported.

Action: Specify only variables of supported types as host variable names.

ORA-34798: (OCI09) OLAP OCI operation canceled.

ORA-34800: (OCI10) OLAP OCI operation returned '*string*'.

ORA-34802: (OCI11) OLAP OCI operation caused ROLLBACK past an UPDATE of an attached analytic workspace. Current operation canceled.

Cause: ROLLBACK past the UPDATE of one of the attached Analytic Workspaces was called. The current operation is aborted, and the Analytic Workspace detached.

Action: Change the called SQL procedure to avoid the ROLLBACK

ORA-34804: (OCI12) The value of SQL host variable *number* is too long. Use the WIDE keyword for columns that may exceed *number* bytes.

Cause: The host variable had a text value longer than the maximum SQL VARCHAR length

Action: Use the WIDE keyword in the host variable specification, e.g. :WIDE
OLAP_object_name

ORA-34805: (OCI13) Statement *number* must have at least one host variable.

Cause: Statements prepared with DIRECT=YES must have at least one host variable.

Action: Add a host variable to the prepared statements declaration.

ORA-34806: (OCI14) Statement *number* can only be executed within an ACROSS command.

Cause: Statements prepared with DIRECT=YES must be executed in an ACROSS command.

Action: Execute the statement within an ACROSS command.

ORA-34828: (OFCENG01) You cannot specify a text dimension value for an INTEGER dimension.

ORA-34830: (OFCENG02) The *string* function cannot be applied to the dimension composite *workspace object*.

ORA-34832: (OFCENG03) *number* is not the name of a dimension or valueset.

ORA-34833: (OFCENG04) The *string* function cannot be applied to the PARTITION TEMPLATE *workspace object*.

ORA-34834: (OKUNDSS01) Analytic workspace *string* must remain current because the *workspace object* program is still executing in it.

ORA-34836: (OKUNDSS03) Analytic workspace *string* cannot be detached because a currently executing command depends upon an object (*workspace object*) it contains.

ORA-34840: (OPCREATE01) The *string* option must be declared with datatype *string*.

Cause: An attempt was made to declare the option with the wrong datatype.

Action: Declare the option with the correct datatype.

ORA-34841: (OPCREATE02) The *string* option must be declared with the READONLY attribute.

Cause: An attempt was made to declare the option without the READONLY attribute.

Action: Declare the option READONLY.

ORA-34842: (OPTWIDTH) *workspace object* must be between *number* and *number*. It cannot be *number*. Its previous value was retained.

ORA-34844: (OPUTNA00) You cannot set an option to NA. The previous value of *workspace object* was retained.

ORA-34846: (OVERRIDE01) *number*

ORA-34848: (PARSE01) The text to be parsed is NA.

ORA-34850: (PARSE02) The expression is not properly constructed.

ORA-34852: (PHASTOVC00) Unsupported type

ORA-34854: (PMTSETUP00) Permission expression for *workspace object* is invalid and will be treated as FALSE.

ORA-34856: (PMTSETUP01) Permission for *workspace object* does not have proper dimensionality of the BY expression.

ORA-34858: (PMTUPDAT01) Permission expression for *workspace object* is invalid and will not be stored.

ORA-34859: (PMTUPDAT07) Permission condition for *workspace object* contains an expression longer than *number* bytes and cannot be stored.

Cause: One of the components of the PERMIT condition was too long.

Action: Rewrite the condition to shorten it.

ORA-34860: (PMTUPDAT02) You do not have PERMIT rights for *workspace object*.

ORA-34862: (PMTUPDAT03) *workspace object* is not a dimension, so you cannot give it MAINTAIN permission.

ORA-34864: (PMTUPDAT04) A BY clause cannot be given with *string* permission for *workspace object*.

ORA-34866: (PMTUPDAT05) You cannot apply permissions to dimension composite *workspace object*. Instead, you can apply permissions to its base dimensions.

ORA-34868: (PMTUPDAT06) You cannot apply permissions to dimension alias *workspace object*. Instead, you can apply permissions to the aliased dimension.

ORA-34870: (PERMIT01) You do not have permission to read this value of *workspace object*.

ORA-34871: (PERMIT06) Session-only value '*value*' of *workspace object* has been deleted because a PERMIT change has revealed a duplicate value.

Cause: Execution of a PERMIT command revealed a permanent dimension or surrogate value having the same name as the SESSION value.

Action: If the SESSION value is still needed, add it with a different name.

ORA-34872: (PERMIT02) You do not have permission to write this value of *workspace object*.

ORA-34873: (PERMIT07) You cannot write this value of *workspace object* since it is readonly.

ORA-34874: (PERMIT03) You do not have permission to run *workspace object*.

ORA-34876: (PERMIT04) You do not have permission to read AGGMAP *workspace object*.

ORA-34877: (PERMIT05) You cannot apply permissions to concat dimension *workspace object*. Instead, you may apply permissions to its leaf dimension(s).

ORA-34880: (PPDTORDR00) DATEORDER must be YMD, YDM, MYD, MDY, DYM, or DMY.

ORA-34882: (PPENG00) The level name for *string* cannot be NA.

ORA-34884: (PPENG01) *number* does not match a PUSHLEVEL command.

ORA-34886: (PPENG02) The option *workspace object* is read-only. Since its value cannot be popped, it cannot be pushed.

ORA-34888: (PPENG03) The status list for *workspace object* is protected by the TEMPSTAT command.

ORA-34892: (PPESCCH01) The ESCAPECHAR option requires a single character.

ORA-34894: (PPESCCH02) The '*string*' character is an invalid choice for the ESCAPECHAR option.

ORA-34896: (PPMONTHS00) At least 12 month names must be given. Only *number* were provided.

Cause: There must be at least one name for each month. Not enough names were provided.

Action: Provide at least 12 names.

ORA-34897: (PPMONTHS01) Blank lines are not allowed in the MONTHNAMES option.

Cause: There is at least one blank line in the string populating the MONTHNAMES option. We do not allow blank month names.

Action: Remove the blank line(s) from the string.

ORA-34900: (PPWKDAYS00) At least 7 day names must be given. Only *number* were provided.

Cause: There must be at least one name for each day. Not enough names were provided.

Action: Make sure there are at least 7 names in the string.

ORA-34901: (PPWKDAYS01) Blank lines are not allowed in the DAYNAMES option.

Cause: There is at least one blank line in the string populating the DAYNAMES option. We do not allow blank day names.

Action: Remove the blank line(s) from the string.

ORA-34902: (PPWKDNY01) The value of WEEKDAYSNEWYEAR must be a number between 1 and 7.

ORA-34904: (VCFMT001) must be multi-line

ORA-34908: (VCFMT003) missing arg

ORA-34910: (VCFMT004) duplicate

ORA-34912: (VCFMT005) error during %%p permutation

ORA-34914: (VCFMT006) non-numeric

ORA-34986: (PRMPINIT215) NOT

ORA-34988: (PRMPINIT216) negate

ORA-34990: (PRNIMPRT01) CAUTION: *number* line(s) in a TEXT PRN file were too long. Each line was truncated to *number* bytes.

ORA-34992: (PRNIMPRT02) CAUTION: *number* field(s) in a STRUCTURED PRN or CSV file were too long. Each field was truncated to *number* bytes.

ORA-34994: (PRNIMPRT03) Unexpected EOF encountered in string while importing data.

ORA-34996: (PRNIMPRT04) Unexpected character '*character*' at end of string.

ORA-35000: (PRNRULER01) The RULER specification does not have any valid field descriptions.

ORA-35002: (PRNRULER02) Zero is not a valid repeat count.

ORA-35004: (PRNRULER03) The repeat count *number* was not followed by a field type.

ORA-35006: (PRNRULER04) The character '*character*' is not a valid field type. The valid types are A, S and T.

ORA-35008: (PRNRULER05) A field description (type *character*) did not include a field width.

ORA-35010: (PRNRULER06) The width (*number*) for an A or T field was too large. The limit is *number*.

ORA-35012: (PRNRULER07) Zero is not a valid width for an S field.

ORA-35014: (PRNRULER08) A repeat count or field width (*string*) was too large. The limit is *number*.

ORA-35016: (QFCHECK00) The analytic workspace and EIF file definitions of *workspace object* have a mismatched type.

Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35017: (QFCHECK06) The Analytic Workspace and EIF file definitions of *workspace object* have different partitioning methods.

Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35018: (QFCHECK01) The analytic workspace and EIF file definitions of *workspace object* have a mismatched data type.

Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35019: (QFCHECK07) The Analytic Workspace and EIF file definitions of *workspace object* have different partition dimensions.

Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35020: (QFCHECK02) The analytic workspace and EIF file definitions of *workspace object* have mismatched dimensioning.

Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35021: (QFCHECK08) The EIF file definition of *workspace object* has some partitions that are not present in the existing Analytic Workspace object.

Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35022: (QFCHECK03) The analytic workspace and EIF file definitions of *workspace object* have a mismatched relation.

Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35023: (QFCHECK09) The analytic workspace and EIF file definitions of *workspace object* have incompatible partition definitions.

Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35024: (QFCHECK04) The analytic workspace and EIF file definitions of *workspace object* have mismatched time dimension attributes.

Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35026: (QFCHECK05) The analytic workspace and EIF file definitions of *workspace object* have a mismatched ALIASOF dimension.

Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35028: (QFASCII00) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35029: (QFPART00) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35030: (QFDATA00) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35031: (QFSVNS00) The IMPORT command has terminated because of a defect in the EIF file.

Cause: The EIF file contains a compressed composite with defective aggregation data.

Action: Recreate the EIF file using the NOAGGR keyword.

ORA-35032: (QFDATA01) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35034: (QFDATA02) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35036: (QFGETBUF00) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35038: (QFGETHDR00) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35040: (QFOBJECT90) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35042: (QFOBJECT92) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35044: (QFOBJECT93) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35046: (QFOBJECT94) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35048: (QFOBJECT97) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35050: (QFPUTILP97) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35052: (QFPUTILP98) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35054: (QFPUTILP99) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35056: (QFSTRING00) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35058: (QFVC00) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35060: (QFVC01) The IMPORT command has terminated because of a defect in the EIF file.

ORA-35062: (QFGET01) Duplicate files found for extension number *number* of EIF file *string*.

Cause: IMPORT searched the directories specified in EIFEXTENSIONPATH and found two EIF extension files with the same name (differing at most by the case used in the final name component).

Action: Delete, rename or move any files that are not to be read by IMPORT.

ORA-35066: (QFGET03) Extension number *number* is missing for EIF file *string*.

Cause: IMPORT searched the directories specified in EIFEXTENSIONPATH and could not find the appropriately numbered extension file.

Action: Move the missing file into one of the searched directories.

ORA-35070: (QFHEAD00) File *string* is not in EIF format, so you cannot import it with the EIF specification.

ORA-35071: (QFHEAD06) EIF file *string* cannot be imported because analytic workspace *string* has not been upgraded to version *string*.

Cause: User attempted to import from an EIF file that was created by a newer version of the product into an AW that was created by an older version of the product.

Action: Make sure that the compatibility mode parameter in the init.ora of the importing instance specifies a version that is at least as high as the parameter was in the exporting instance. Then, convert the AW to the latest storage format and reexecute the import command. Alternatively, change the EIFVERSION option of the exporting instance to a lower number, recreate the EIF file, and import the new file.

ORA-35074: (QFHEAD02) EIF file *string* cannot be read by this version of *string*.

Cause: The EIF file was created with an internal version number indicating it may contain objects that are not compatible with the current Oracle OLAP version, or the EIF file is in an obsolete format.

Action: If possible, set EIFVERSION in the exporting instance to a lower number, recreate the EIF file, and import the new file.

ORA-35076: (QFHEAD04) CAUTION: The textual data in EIF file *string* is encoded in a character set that is not recognized by this version of *string*.

Cause: IMPORT could not recognize the character set specification in the EIF file.

Action: Check the imported text data. If it was not imported correctly, recreate the EIF file with a character set supported by the current Oracle version.

ORA-35078: (QFHEAD05) An EIF extension file header for *string* is not in the correct format.

Cause: An EIF extension file in multi-file IMPORT did not contain correct header information.

Action: Check to be sure that EIFEXTENSIONPATH is set correctly and that all the extension files for the current IMPORT were created by the same EXPORT command as the main EIF file.

ORA-35080: (QFOBJECT01) You cannot rename dimensions when you import them. The *string* dimension cannot be imported as *string*.

ORA-35082: (QFOBJECT02) You cannot import changes to the *workspace object* program now, because it is currently executing.

ORA-35084: (QFOBJECT06) CAUTION: *string* is being imported. However, this is a reserved word, so you must rename the new object before you can use it.

ORA-35086: (QFOBJECT07) " *number* dimension values "

ORA-35087: (QFOBJECT09) *number*\nInvalid

ORA-35088: (QFOBJECT08) " *number* dimension value combinations "

ORA-35090: (QFPARSE00) The object *string* cannot be imported because it does not exist in the EIF file.

ORA-35092: (QFPARSE01) You cannot import the object *string* into both *string* and *string* at the same time. To import an object into two different analytic workspaces, use two separate IMPORT commands with different INTO arguments.

ORA-35094: (QFPARSE02) The object *string* cannot be imported into analytic workspace *string* because an object named *string* already exists in analytic workspace *string*. To force a new *string* to be created, use an INTO argument on the IMPORT command.

ORA-35095: (QFSVNS01) One or more imported values of fixed-width dimension *workspace object* have been truncated.

Cause: The data in the EIF file was exported from a dimension with wider values than the target dimension will accommodate.

Action: Change the definition of the target dimension, or check to be sure that multiple values from the target dimension have not become identical during the import process. This could cause data loss as data from later dimension values overstores data imported earlier.

ORA-35096: (QUAFEOF) An unexpected end-of-file occurred in the EIF file. Check to make sure you have all the imported data that you expected.

ORA-35098: (RDPOW01) You cannot raise zero to a negative power.

ORA-35100: (RDPOW02) You cannot raise a negative number to a non-integer power.

ORA-35102: (READONLY00) The option *workspace object* is read-only. Its previous value was retained.

ORA-35104: (REALD TOK01) "*string*" is not a number.

ORA-35106: (REGRESS00) The regression was not calculated because of a linear relationship between your independent variables.

Cause: The values of the specified independent variables are not independent. For example, one may be a multiple of the other.

Action: Chose independent variables whose values are truly independent of one another.

ORA-35108: (REGRESS01) The number of non-NA observations with weights greater than zero (*number*) is too small to calculate a regression.

ORA-35110: (REGRESS02) The number of independent variables cannot exceed *number*.

ORA-35112: (REGRESS03) Regression Analysis

ORA-35114: (REGRESS04) Dependent Variable:

ORA-35116: (REGRESS05) WEIGHTBY Variable:

ORA-35118: (REGRESS06) Regressor

ORA-35120: (REGRESS07) Coefficient

ORA-35122: (REGRESS08) Std. Error

ORA-35124: (REGRESS09) T-ratio

ORA-35126: (REGRESS10) Corrected R-square

ORA-35128: (REGRESS11) F-Statistic (%1 %2)

ORA-35130: (REGRESS12) Number of observations

ORA-35132: (REGRESS13) Standard error of estimate

ORA-35134: (RGACCUM01) A weighted regression cannot be calculated if any of the weights specified is less than zero.

ORA-35136: (RGINFO00) There is no saved regression information for the INFO function to retrieve.

ORA-35138: (RPACROSS01) You must specify dimension values if you use *string* in an ACROSS phrase.

ORA-35140: (RPACROSS02) ACROSS must be followed by the name of a dimension or an expression with one dimension.

ORA-35142: (RPCOLUMN01) Multiple ACROSS phrases specifying the same dimension (*workspace object*) cannot be given for the same column.

ORA-35144: (RPFOR M AT01) The value of the *string* attribute in column *number* is NA.

ORA-35146: (RPFORMAT02) The value of the *string* attribute in column *number* is negative.

ORA-35148: (RPFORMAT03) The value of the *string* attribute in column *number* is zero.

ORA-35150: (RPFORMAT04) The INDENT value for column *number* equals or exceeds the WIDTH.

ORA-35152: (RPFORMAT05) Column *number* extends past the maximum length (*number*) of a report line.

ORA-35154: (RSEXECUT01) The *string* function can only be used in a ROW or REPORT command.

ORA-35156: (RSEXECUT02) An argument to *string* was NA.

ORA-35158: (RSEXECUT03) Column index *number* in *string* is before the first or after the last report column.

ORA-35160: (RSEXECUT04) Totaling level index *number* in *string* is not between 1 and 256.

ORA-35162: (RSEXECUT05) The column number (*number*) in *string* must be greater than zero.

ORA-35164: (RSEXECUT06) An argument (*number*) to *string* must be zero or greater.

ORA-35166: (SIGENG01) *string*

ORA-35168: (SIGENG02) (*number*) Contact the administrator of your *string* application.

ORA-35170: (SIGENG03) The "errorname" argument to the SIGNAL command is NA.

ORA-35171: you may not signal error number *string* with the SIGNAL command
Cause: The user attempted to explicitly signal an invalid error number with the OLAP DML SIGNAL command

Action: Signal another error number

ORA-35172: (SNCHILD01) There is duplicate information beginning at *string*, or this information conflicts with a keyword.

ORA-35174: (SNSYN100) The word *string* must be followed by a name.

ORA-35176: (SNSYN101) The format of the AGGMAPINFO function is:\n \n AGGMAPINFO(aggmap-name { RELATIONS | NUMRELS | AGGINDEX | STORE | SHARE | FCACHE | MAPTYPE | { RELATION | PRECOMPUTE | STATUS } expression})

ORA-35178: (SNSYN102) The format of the INFILE command is:\n \n INFILE {EOF | filename} [NOW] [NLS_CHARSET name] [TABEXPAND expression]

ORA-35180: (SNSYN103) The format of the OUTFILE command is:\n \n OUTFILE [APPEND] {EOF | TRACEFILE | filename [NOCACHE] [NLS_CHARSET name]}
Cause: The user specified incorrect syntax for the OUTFILE command.

Action: n/a

ORA-35182: (SNSYN104) The format of the WKSDATA function is:\n \n WKSDATA(worksheetname)

ORA-35184: (SNSYN105) The dimension name (*string*) must be followed by one of these keywords: TO, KEEP, ADD, REMOVE, COMPLEMENT, SORT, or INSERT.

ORA-35186: (SNSYN106) The word *string* must be followed by an argument such as a dimension value.

ORA-35188: (SNSYN107) The word *string* must be followed by an expression.

ORA-35190: (SNSYN108) The TOP or BOTTOM value (*string*) must be followed by the keyword BASEDON or PERCENTOF and an expression.

ORA-35192: (SNSYN109) The dimension name must be followed by a sort order (A or D) and a sort criterion expression.

ORA-35194: (SNSYN110) The format of the INFO function is:\n \n INFO({FORECAST | PARSE | REGRESS | MODEL} choice [index1 [index2 ...]])

ORA-35196: (SNSYN111) The format of the CHARLIST function is:\n \n CHARLIST(expression [dimension1 [dimension2 ...]])

ORA-35198: (SNSYN112) The dimension name (*string*) must be followed by one of these keywords: ADD, DELETE, MERGE, MOVE, or RENAME.

ORA-35200: (SNSYN113) An angle bracket (>) is missing after *string*.

ORA-35202: (SNSYN114) A right parenthesis or an operator is expected after *string*.

ORA-35204: (SNSYN115) A label is missing after *string*.

ORA-35206: (SNSYN116) The word UNION must be followed by a parenthesized list of LIST clauses.

ORA-35208: (SNSYN117) An expression, SKIP, <, or ACROSS must follow '*string*', or this expression conflicts with a keyword.

ORA-35210: (SNSYN118) A colon (:) is required after an ACROSS phrase.

ORA-35212: (SNSYN119) The format of the UNRAVEL function is:\n \n UNRAVEL(expression [dimension1 [dimension2 ...]])

ORA-35214: (SNSYN120) The format of the COMPILE command is:\n \n COMPILE name [THREADS #]

ORA-35216: (SNSYN121) The fileunit (*string*) must be followed by an attribute (such as DATE) and a new value for the attribute.
