DRG-13612: Missing path element in the result set interface

Cause: Path element not specified for the ctx_tree element

Action: add path element for the ctx_tree element

DRG-13613: Missing index name

Cause: index name not specified in the API

Action: specify an index name

DRG-13614: result_set_inteface not supported with security policy

Cause: result set interface not supported with security policies

Action: cannot use result set interface on table with security policy

DRG-13615: Only one snippet element allowed in result set interface

Cause: More than one snippet element specified with result set interface

Action: Specify only one snippet element with result set interface

DRG-13616: Invalid MVDATA group counting topn in result set interface

Cause: Cannot use group values and topn for the same group counting

Action: Use group_values or topn

DRG-13617: Invalid MVDATA value for topn in result set interface

Cause: Cannot use topn less than or equal to zero

Action: Use topn greater than zero

DRG-13618: Error in group counting in result set interface

Cause: Cannot do group count for facets with no data

Action: Check facet name or index needed facet values

DRG-13619: Invalid value for MVDATA sortby in result set interface

Cause: Invalid value provided for sortby criteria in result set interface

Action: Select either count or alpha

DRG-13620: Invalid value for MVDATA order in result set interface

Cause: Invalid value provided for order criteria in result set interface

Action: Select either asc or desc

DRG-13621: Duplicate group count element in result set interface

Cause: Group Count element specified more than once for group

Action: Specify one count element for a group

DRG-13700: Syntax error in the Extraction Rule Descriptor

Cause: The Extraction Rule descriptor has a syntax error

Action: check the syntax of the Extraction rule descriptor

DRG-13701: Invalid rule_id

Cause: rule_id is NULL or rule_id <= 0

Action: rule_id must be number > 0

DRG-13702: Rule not found

Cause: No rule for given rule_id

Action: Specify a valid rule_id

DRG-13703: Invalid Type Specified: *string*

Cause: An invalid entity type was specified

Action: Specify a valid entity type

DRG-13704: Invalid Entity Type List

Cause: An invalid entity type list was specified

Action: Check format and types on entity type list

DRG-13705: Must use an Extract Policy

Cause: Using a non-extraction policy

Action: Use a policy created with ctx_entity.create_extract_policy

DRG-13706: Cannot use Entity Extraction Policy here

Cause: Using an entity extraction policy

Action: Use a policy created with ctx_ddl.create_policy

DRG-13707: Rule Engine Loading Failed

Cause: A user rule has an error

Action: Fix the user rule with the error

DRG-13708: Dictionary Loading Failed

Cause: The user dictionary has an error

Action: Fix the user dictionary

DRG-13709: Unsupported Language Specified: *string*

Cause: Unsupported Language Specified

Action: Specify a supported language

DRG-13710: Syntax Error in Dictionary

Cause: Syntax error in dictionary

Action: Correct syntax error in dictionary

DRG-13711: Stop Entity Not Found

Cause: Tried to remove a non-existent stop entity

Action: Cannot remove non-existent stop entity

DRG-13712: User Dictionary already loaded

Cause: Tried to load a 2nd user dictionary to a policy

Action: Drop the dictionary, and then load

DRG-13713: No User Dictionary loaded

Cause: No user dictionary loaded for this policy

Action: Cannot drop non-existent dictionary

DRG-13714: Duplicate Stop Entity

Cause: Trying to load a duplicate uncompiled stop entity

Action: Stop entity is already present

DRG-13715: Null name and type for Stop entity

Cause: Trying to load a stop entity with null name and type

Action: Stop entity must have at least one parameter non-null

DRG-13716: Entity Extraction not enabled

Cause: Haven't loaded correct event

Action: Must load correct event and level

DRG-13717: Null entry or alternate form in user dict

Cause: A entry or alternate form has null value

Action: Entries or alternate forms must be non-null

DRG-13718: No entity type given in user dict

Cause: An entry was not given an entity type

Action: All entries must have an entity type

DRG-13719: File and Drop are mutually exclusive

Cause: Tried to run ctxload with file and drop

Action: file and drop are mutually exclusive

DRG-13720: Stop entity already marked for deletion

Cause: Tried to re-drop a stop entity

Action: Only drop this stop entity once

DRG-13721: Duplicate Type on Typelist

Cause: Duplicate type on typelist

Action: Typelist must be unique

DRG-13722: Invalid Backreference

Cause: Backreference not between 1 and 10

Action: Backreferences must be between 1 and 10

DRG-13723: Invalid Attribute: *string*

Cause: Unsupported Attribute

Action: Follow correct syntax for rule or dictionary

DRG-13724: Invalid Attribute Value: *string*

Cause: Unsupported attribute value

Action: Follow correct syntax for rule or dictionary

DRG-13725: Type Name Too Long

Cause: Type name more than 30 bytes

Action: Type must be less than 30 bytes

DRG-13726: Invalid Tag: *string*

Cause: Unsupported Tag

Action: Follow correct syntax for rule or dictionary

DRG-13727: Missing Tag: *string*

Cause: Missing Necessary Tag

Action: Add tag for rule or dictionary

DRG-13728: Missing Attribute: *string*

Cause: Missing Necessary Attribute

Action: Add attribute for rule or dictionary

DRG-13800: MVDATA section *string* does not exist

Cause: The given MVDATA section name does not exist in USER_SECTIONS

Action: Rewrite query with valid MVDATA section name

DRG-13801: literal is not compatible with the data type of the MVDATA section

Cause: The given literal is not compatible with the data type of the specified MVDATA section.

Action: Rewrite query with a compatible literal

DRG-13802: MVDATA operand not compatible with the mvdata section *string*

Cause: failed to convert data

Action: check the format of the data

DRG-13803: Illegal MVDATA value

Cause: failed to convert data

Action: check the format of the data

DRG-13804: `ctx_tree.register_index()` not run for index *string* and mvdata section *string*

Cause: failed to create data

Action: create the data (trees) first

DRG-13805: Invalid character in node name *string*

Cause: failed to create data

Action: check the format of the data

DRG-13806: Duplicate path '*string*' in `CTX_TREE.ADD_NODE()`

Cause: The path specified in `ctx_tree.add_node()` adds the node with the same name in the same tree at the same level

Action: change path

DRG-13807: Node *string* does not exist or is deleted

Cause: failed to lookup input node

Action: check if the path exists

DRG-13808: Empty path passed into *string*

Cause: path is empty

Action: pass in a non-empty and valid path

DRG-13809: Index with MVDATA sections must have *big_io* turned on

Cause: *Big_io* option not specified for MVDATA index

Action: turn on *big_io* for the index

DRG-13810: Index with *support_ctx_tree* must have atleast one MVDATA section

Cause: MVDATA section not specified for *ctx_tree* usage

Action: add one MVDATA section for the index

DRG-13811: Invalid path '*string*' in CTX_TREE.ADD_NODE()

Cause: The path specified in *ctx_tree.add_node()* is invalid.

Action: change path

DRG-13812: Partitioned Index with MVDATA must have index-level *big_io*

Cause: Index-level *big_io* was not specified

Action: turn on *big_io* at index level

DRG-13900: Auto_Optimize Process is already started

Cause: Auto_Optimize Process is already started

Action: Can't start auto_optimize when it's already running

DRG-13901: Index must have *stage_itab*

Cause: Auto_Optimize works on indexes with *stage_itab*

Action: Use an index with *stage_itab* for auto_optimize

DRG-13902: Index/Partition already added to auto_optimize list

Cause: Index/Partition already added to auto_optimize list

Action: Can't add index/partition to list twice

DRG-13903: Index/Partition not on the auto_optimize list

Cause: Index/Partition not on the auto_optimize list

Action: Can't remove index/partition from list

DRG-50000: requested size larger than pagesize

Cause: The requested memoery size is larger than page size,

Action: Contact support

DRG-50100: CORE LSF error: *string*

Cause: detect a CORE LSF error

Action: look up the core error and take appropriate action

DRG-50101: CORE LEM error: *string*

Cause: detect a CORE LEM error while reading the error stack

Action: Contact support

DRG-50200: Third-party filter internal error

Cause: Third-party filter could not filter this document because of an internal error.

Action: Contact Oracle Support.

DRG-50300: error sending message from server to client

Cause: internal database error or internal Text error

Action: Call customer support

DRG-50301: server error reading request queue

Cause: database error or internal Text error

Action: Call customer support

DRG-50302: server error reading OOB break queue; cannot detect interrupts

Cause: database error or internal Text error

Action: Call customer support

DRG-50303: error in bufout

Cause: This is an internal error

Action: Contact Oracle Support

DRG-50304: error in execute()

Cause: This is an internal error

Action: Contact Oracle Support

DRG-50305: getcmd() called when one of the queue names is NULL

Cause: This is an internal error

Action: Contact Oracle Support

DRG-50400: maximum number of fuzzy match candidates exceeded: *string*

Cause: Internal error, probably result of large number of indexed words

Action: Contact Oracle support

DRG-50401: failed to retrieve fuzzy match candidates from db: *string*

Cause: Internal error

Action: Contact Oracle support

DRG-50402: Index validation failed for one or more tokens

Cause: Index validation generated an error for one or more tokens

Action: Check the ctx log for the detailed errors

DRG-50403: Invalid MVDATA entries exist in the index

Cause: Index validation generated an error for one or more tokens

Action: Check the ctx log for the detailed errors

DRG-50500: only RULE_CLASSIFIER is accepted in this API

Cause: you specified an illegal classifier

Action: use RULE_CLASSIFIER

DRG-50501: classifier preference not specified

Cause: the classifier preference is not specified

Action: specify a classifier preference

DRG-50502: cannot use RULE_CLASSIFIER in this API

Cause: you specified RULE_CLASSIFIER

Action: use a different classifier

DRG-50503: unsupported classification method

Cause: you specified an unsupported classification method

Action: use a different classifier

DRG-50504: invalid column datatype for *string* table

Cause: the column datatype is invalid

Action: specify a different datatype

DRG-50600: assertion failed

Cause: An internal check-condition has been violated

Action: Contact Oracle support for assistance

DRG-50601: fatal error

Cause: A fatal error has occurred

Action: Contact Oracle support for assistance

DRG-50603: unrecognized operation code *string*

Cause: Bad operation code was encountered (reached switch default:)

Action: check .h files versions

DRG-50607: failed to obtain column info for cid *string*

Cause: internal error, probably a bug

Action: call customer support

DRG-50608: unexpected end of data

Cause: internal error, probably a bug

Action: call customer support

DRG-50609: pipe internal error

Cause: internal error, probably a bug

Action: call customer support

DRG-50610: internal error: *string*

Cause: internal error, probably a bug

Action: call customer support

DRG-50611: Third party lexer internal error: *string*

Cause: internal error from inxight lexer

Action: call customer support

DRG-50612: internal error: you need to call bind first for this insertion mode

Cause: internal error

Action: call customer support

DRG-50613: internal error: model type is not supported in drctrwpf

Cause: internal error

Action: call customer support

DRG-50614: library loading error in *string*

Cause: internal error

Action: call customer support

DRG-50615: Third party lexer timed out

Cause: Third-party auto lexer could not complete tokenization because the lexer timed out.

Action: Increase the value of the TIMEOUT attribute of the auto_lexer and reindex the document. If TIMEOUT is set to 0 and the lexer still hangs contact Oracle Support.

DRG-50616: Stop-Optimize List not found

Cause: internal error

Action: call customer support

DRG-50617: Query string too long: *string*

Cause: internal error

Action: Invalid query string provided

DRG-50700: unknown command (args=queue, command)

Cause: this is an internal error

Action: Contact Oracle support to report a bug

DRG-50701: error in listener.get_cmd()

Cause: this is an internal error

Action: Contact Oracle support to report a bug

DRG-50702: error in drtlsleep()

Cause: this is an internal error in a testing function

Action: Contact Oracle Support

DRG-50703: listener startup error

Cause: this is an internal error

Action: Contact Oracle support to report a bug

DRG-50704: Net8 listener is not running or cannot start external procedures

Cause: Oracle Text needs to call external code to complete your request, and could not start the extproc agent process.

Action: Start listener if it is configured for external procedures and is not running. If your listener is running, configure it for starting external procedures and restart it. Consult Oracle documentation for details.

DRG-50800: failed to open cursor

Cause: Too many cursors open for internal queries

Action: implement cursor cleanup routine

DRG-50801: failed to parse cursor

Cause: parse error on an internal query

Action: check versions of code

DRG-50802: failed to bind input

Cause: bind error on an internal query

Action: check versions of code

DRG-50803: failed to define output

Cause: define error on an internal query

Action: check versions of code

DRG-50804: failed to exec cursor

Cause: exec error on an internal query

Action: debug code

DRG-50805: failed to close cursor

Cause: cursor close error on an internal query

Action: check versions of code

DRG-50806: failed to rollback

Cause: transaction rollback error

Action: contact support

DRG-50807: failed to commit

Cause: internal error

Action: contact support

DRG-50850: *string*

Cause: This is an oracle error

Action: See RDBMS documentation

DRG-50851: SQL execute failed

Cause: failed to execute a sql statement

Action: please report this as a bug

DRG-50852: failed to turn SQL trace on

Cause: internal error,

Action: Please contact Oracle support

DRG-50853: fetch error

Cause: fetch error on an internal query

Action: check versions of code

DRG-50855: logoff fail

Cause: Fail to logoff from the database

Action: check versions of code

DRG-50857: oracle error in *string*

Cause: this is an informational message

Action: See error

DRG-50858: OCI error: *string*

Cause: a generic OCI error occurred

Action: Please contact Oracle support

DRG-50859: failed to allocate statement handle

Cause: This is an internal error

Action: Contact Oracle Support

DRG-50860: failed to prepare statement

Cause: This is an internal error

Action: Contact Oracle Support

DRG-50861: failed to obtain type descriptor

Cause: This is an internal error

Action: Contact Oracle Support

DRG-50862: failed to create new Oracle object

Cause: This is an internal error

Action: Contact Oracle Support

DRG-50863: string assignment failed

Cause: This is an internal error

Action: Contact Oracle Support

DRG-50864: number assignment failed

Cause: This is an internal error

Action: Contact Oracle Support

DRG-50865: failed to append to collection

Cause: This is an internal error

Action: Contact Oracle Support

DRG-50866: failed to resize string

Cause: This is an internal error

Action: Contact Oracle Support

DRG-50867: failed to free Oracle object

Cause: This is an internal error

Action: Contact Oracle Support

DRG-50868: failed to free statement handle

Cause: This is an internal error

Action: Contact Oracle Support

DRG-50900: text query parser error on line *string*, column *string*

Cause: bad query

Action: fix query

DRG-50901: text query parser syntax error on line *string*, column *string*

Cause: bad query

Action: fix query

DRG-50902: unexpected character *string*

Cause: bad query

Action: fix query

DRG-50903: invalid weight *string*

Cause: invalid weight

Action: fix query

DRG-50904: weight *string* outside valid range 0.1 to 10.0

Cause: invalid weight

Action: fix query

DRG-50905: invalid score threshold *string*

Cause: invalid score threshold

Action: fix query

DRG-50906: score threshold *string* is not an integer

Cause: invalid score threshold

Action: fix query

DRG-50907: score threshold *string* outside valid range 1 to 100

Cause: invalid score threshold

Action: fix query

DRG-50908: invalid maximum number of documents *string*

Cause: invalid maximum number of documents

Action: fix query

DRG-50909: maximum number of documents *string* is not an integer

Cause: invalid maximum number of documents

Action: fix query

DRG-50910: max documents requested *string* outside valid range 1 to 65535

Cause: invalid maximum number of documents

Action: fix query

DRG-50911: invalid first document number *string*

Cause: invalid first document number

Action: fix query

DRG-50912: first document number *string* is not an integer

Cause: invalid first document number

Action: fix query

DRG-50913: first document requested *string* is not a positive number

Cause: invalid first document number

Action: fix query

DRG-50914: invalid last document number *string*

Cause: invalid last document number

Action: fix query

DRG-50915: last document number *string* is not an integer

Cause: invalid last document number

Action: fix query

DRG-50916: last document *string* is less than first document

Cause: invalid last document number

Action: fix query

DRG-50917: escape on at end of text query string

Cause: unbalanced escape characters

Action: turn escape off

DRG-50918: mismatched close escape character

Cause: no matching open escape character for close escape

Action: match open and close escapes

DRG-50919: NEAR operand not a phrase, equivalence or another NEAR expression

Cause: invalid operand type for NEAR operator

Action: correct operand type

DRG-50920: part of phrase not itself a phrase or equivalence

Cause: invalid type of expression which is part of phrase

Action: fix query

DRG-50921: EQUIV operand not a word or another EQUIV expression

Cause: invalid operand type for EQUIV operator

Action: correct operand type

DRG-50922: PL/SQL execution failed for *string*

Cause: PL/SQL function may not exist or is returning bad value

Action: PL/SQL may not exist or is returning bad value

DRG-50923: could not rewrite PL/SQL for execution

Cause: parser internal

Action: call support

DRG-50924: PL/SQL inside PL/SQL not supported

Cause: PL/SQL function call returned another PL/SQL call

Action: remove recursive PL/SQL

DRG-50925: could not parse return value of PL/SQL

Cause: string returned by PL/SQL function could not be parsed

Action: fix PL/SQL function being called

DRG-50926: invalid text query string

Cause: query string empty or made up of invalid characters

Action: fix query

DRG-50927: parser failed on line *string* on column *string*

Cause: bug

Action: call support

DRG-50928: reserved failure on line *string* on column *string*

Cause: bug

Action: call support

DRG-50929: parser internal on line *string* on column *string*

Cause: bug

Action: call support

DRG-50930: parser memory failure on line *string* on column *string*

Cause: memory allocation or freeing error

Action: call support

DRG-50931: parser not opened

Cause: bug

Action: call support

DRG-50932: parser preference initialization failed

Cause: bug

Action: call support

DRG-50933: parser hash insert failure

Cause: bug

Action: call support

DRG-50934: parser hash create failure

Cause: bug

Action: call support

DRG-50935: parser component failure

Cause: bug

Action: look for other errors

DRG-50936: query word *string* is too complex for index

Cause: bug

Action: look for other errors

DRG-50937: query too complex

Cause: query is too complex for our query evaluator

Action: make query smaller

DRG-50938: parser already bound

Cause: internal coding mistake

Action: call support

DRG-50939: parser not set

Cause: bug

Action: call support

DRG-50940: parser not parsed

Cause: bug

Action: call support

DRG-50941: PL/SQL function *string* cannot be executed

Cause: PL/SQL function may not exist or cannot be executed by user

Action: rewrite PL/SQL function specified in query

DRG-50942: errors: *stringstring*

Cause: PL/SQL function encountered error -- this is the error message

Action: See error message

DRG-50943: query token too long on line *string* on column *string*

Cause: A query token is longer than 256 bytes

Action: Rewrite query

DRG-50944: NEAR operator not supported for theme index

Cause: NEAR operator used in theme index query

Action: Rewrite query without NEAR operator

DRG-50945: Illegal phrase in query for theme index

Cause: Phrase incorrectly defined in theme index query

Action: Rewrite query

DRG-50946: Invalid unary operator for theme index

Cause: Stemming, fuzzy match and soundex not allowed for theme index

Action: Rewrite query

DRG-50947: ABOUT clause not allowed without a theme index

Cause: The query contains an ABOUT clause, but there is no theme index to support it

Action: Rewrite query

DRG-50948: ABOUT clause required in the absence of a text index

Cause: There is no text index, but the query does not contain any about clause. With only a theme index present, each query term must belong to an ABOUT clause

Action: Rewrite query

DRG-50949: too many SQEs

Cause: Too many SQEs to expand

Action: Rewrite query or SQE

DRG-50950: circular SQE found

Cause: Circular SQE reference is found.

Action: Rewrite query or SQE

DRG-50951: Unable to resolve element name for attribute *string*

Cause: XPATH expression such as A/*/@B or A//@B is not supported.

Action: Rewrite query

DRG-50952: Section is not PATH section group

Cause: XPATH expression has section which is not created using PATH section group.

Action: Rewrite query not to use XPATH expression or create the index with PATH section group

DRG-50953: Unable to determine section name

Cause: XPATH expression should not end with . or *

Action: Rewrite the path expression not to use . or * at the end

DRG-50954: Theme index is required for CTXCAT about queries

Cause: There is no theme index, but the catsearch query contains about clause. You must create a theme index before using ABOUT query against CTXCAT index

Action: create theme index

DRG-50955: Missing comma in transform clause *string*

Cause: A transform clause in a query template is missing a comma

Action: Add the comma in the appropriate position

DRG-50956: Theme index is required for THEMES transform queries

Cause: There is no theme index, but the operator TRANSFORM is used with THEMES as its parameter. You must create a theme index before using THEMES in TRANSFORM operator.

Action: create theme index

DRG-50957: Missing *textquery* element in query template *string*

Cause: The *textquery* tag is missing or misspelled in a query template

Action: Correct the missing tag

DRG-50958: Missing quote in transform clause *string*

Cause: A transform clause in a query template is missing a quote

Action: Add the quote in the appropriate position

DRG-50959: Query length exceeds *string* bytes

Cause: the query length exceeds the maximum allowed length

Action: reduce the length of the query

DRG-50960: Mild not operand not a term or phrase

Cause: invalid operand type for MNOT operator

Action: correct operand type

DRG-50961: Missing *string* for *string* clause

Cause: the specified tag is missing from the specified complex query clause

Action: Add missing clause

DRG-50962: Query operators are not allowed in transform input string

Cause: You specified an operator (such as wildcard) in the input string for the transform operator

Action: Remove or escape the query operator

DRG-51002: unexpected component failure

Cause: Internal error

Action: Contact Oracle support

DRG-51017: unable to open storage buffer for fuzzy match candidates

Cause: Internal error, probably insufficient memory

Action: Contact Oracle support

DRG-51019: unable to open or illegal format for fuzzy match data file: *string*

Cause: Unable to open OS file containing fuzzy matching information or the file was not of the correct format

Action: Consult the documentation for correct location of the fuzzy match information files and check for file damage

DRG-51020: out of memory in fuzzy matcher

Cause: Cannot allocate more memory

Action: Contact your system administrator

DRG-51021: undefined error in fuzzy matcher

Cause: Internal error

Action: Contact Oracle support

DRG-51022: undefined error in stemmer

Cause: Internal error

Action: Contact Oracle support

DRG-51023: stemmer file cannot be opened

Cause: Unable to open OS file containing stemmer lexicon, or the file contents were not correct

Action: Consult documentation for for correct location of the stemmer lexicons and check for file damage

DRG-51024: out of memory in stemmer

Cause: Cannot allocate more memory

Action: Contact your system administrator

DRG-51025: an invalid character was passed to the stemmer

Cause: Invalid character in word input to the stemmer

Action: Remove invalid character from word to be stemmed

DRG-51028: unexpected error in fuzzy match expansion: %(1)

Cause: Internal error

Action: Contact Oracle support

DRG-51029: unexpected error in stemmer expansion: %(1)

Cause: Internal error

Action: Contact Oracle support

DRG-51030: wildcard query expansion resulted in too many terms

Cause: User error

Action: Make wildcard query narrower

DRG-51100: invalid program argument index

Cause: This is an internal error

Action: Contact Oracle Support to report a bug

DRG-51101: argument processing callback failed

Cause: this is an internal error

Action: Contact Oracle support to report a bug

DRG-51200: open keymap failed for index id = *string*

Cause: Failed to initialize the keymap for the column id specified.

Action: Check index ID. Contact support if caused by internal errors

DRG-51201: failed to perform DDL operation: database object *string*

Cause: Textkey mapping service failed on DDL operation

Action: Check Oracle error and take corrective action

DRG-51202: invalid key mapping operation mode : *string*

Cause: invalid keymap mode value found. This is an internal error

Action: Contact Oracle support

DRG-51203: found doc ids without mappings during get maps

Cause: found doc ids without mappings during get mapping by doc ids, the index data and keymap service are out of synch.

Action: Contact Oracle support

DRG-51300: error getting dml Queue lock

Cause: a server must have hung while processing the dml Queue, leaving it locked

Action: Contact Oracle support

DRG-51301: error releasing dml Queue lock

Cause: internal database error, or perhaps someone dropped the lock while we were using it

Action: Contact Oracle support

DRG-51311: DML lock handle previously allocated

Cause: internal error

Action: Contact Oracle support

DRG-51312: DML lock internal error *string*

Cause: internal error

Action: Contact Oracle support

DRG-51313: timeout while waiting for lock

Cause: most likely an internal error

Action: Contact Oracle support

DRG-51314: index is not empty

Cause: you attempted to invoke populate_pending against an index which already has or has had indexed documents.

Action: populate pending manually, or recreate the index NOPOPULATE

DRG-51403: New index name not provided by kernel

Cause: this is an internal error

Action: Contact Oracle support

DRG-51801: failed to seek in file: %(1)

Cause: this is an internal error

Action: Contact Oracle support

DRG-51802: failed to read from file: %(1)

Cause: this is an internal error

Action: Contact Oracle support

DRG-51803: failed to open file: %(1)

Cause: this is an internal error

Action: Contact Oracle support

DRG-51804: failed to write to file: %(1)

Cause: this is an internal error

Action: Contact Oracle support

DRG-52100: *string* returned internal error code *string*

Cause: this is an internal error

Action: Contact Oracle support

DRG-52101: an invalid session handle was passed to Oracle Text

Cause: this is an internal error

Action: Contact Oracle support

DRG-52102: an invalid transaction handle was passed to Oracle Text

Cause: this is an internal error

Action: Contact Oracle support

DRG-52103: the Oracle Text environment could not reset

Cause: this is an internal error

Action: Contact Oracle support

DRG-52104: the Oracle Text environment could not initialize

Cause: this is an internal error

Action: Contact Oracle support

DRG-52112: improper Chinese string *string* of length *number*

Cause: this is an internal error

Action: n/a

DRG-52113: improper Japanese string *string* of length *number*

Cause: this is an internal error

Action: n/a

DRG-52200: invalid state during export

Cause: this is an internal error

Action: Contact Oracle support

DRG-52201: incompatible Oracle Text versions

Cause: attempting to import an incompatible version of Oracle Text data

Action: make sure source and target Oracle Text versions are compatible

DRG-52202: invalid class name: *string*

Cause: the specified class name is not valid

Action: Contact Oracle Support

DRG-52203: invalid object name: *string*

Cause: the specified object name is not valid

Action: Contact Oracle Support

DRG-52204: error while registering index

Cause: this is an internal error

Action: Contact Oracle support

DRG-52205: class *string* and object *string* already exists for this index

Cause: duplicate entry of class and object

Action: Contact Oracle support

DRG-52206: error while registering index object

Cause: this is an internal error

Action: Contact Oracle support

DRG-52207: the specified attribute does not exist: *string*

Cause: This is an internal error

Action: Contact Oracle Support

DRG-52208: the specified attribute already exist: *string*

Cause: This is an internal error

Action: Contact Oracle Support

DRG-52210: error while registering value for attribute: *string*

Cause: This is an internal error

Action: Contact Oracle Support

DRG-52211: error while registering partition

Cause: this is an internal error

Action: Contact Oracle support

DRG-52212: error while registering cdi columns

Cause: this is an internal error

Action: Contact Oracle support

DRG-52300: Index *string.string* does not exist

Cause: The given index does not exist for the current user

Action: Give a valid index name

DRG-52301: Query Stats is already enabled for this index

Cause: attempting to enable the query stats for an index for which it is already enabled

Action: None. No need to enable again

DRG-52302: Query Stats is not enabled for this index

Cause: attempting to disable the query stats for an index for which it is not enabled

Action: None. No need to disable if it is not already enabled

DRG-52303: Option String is full

Cause: Index option string is full

Action: None

DRG-52304: This operation requires Query Stats to be enabled for the index

Cause: attempting to do an operation which required query stats option for the index to be enabled

Action: Enable query stats option for the index using `ctx_output.enable_query_stats()`

DRG-52305: Unknown value, *string*, passed in to *stat_type*

Cause: An invalid value is passed in to the parameter `stat_type`

Action: Give a valid value

DRG-52400: Dictionary *string* already exists

Cause: The specified dictionary already exists

Action: Must drop the dictionary if you want to re-create it.

DRG-52401: Invalid language *string* specified

Cause: Language specified is invalid

Action: Must specify a valid language

DRG-52402: Dictionary name is invalid

Cause: The specified dictionary name is invalid

Action: Must provide valid dictionary name

DRG-52403: Dictionary *string* does not exist

Cause: The specified dictionary does not exist

Action: Retry with the correct dictionary name

EVM-00001 to EVM-00901

EVM-00001: Cannot write raw events to a terminal

Cause: Attempted to redirect binary events to a terminal.

Action: Use `evmshow` to format events for display.

EVM-00002: Use `evmshow` to format events for display

Cause: Attempted to redirect binary events to a terminal.

Action: Use `evmshow` instead.

EVM-00003: Failed to open file "*string*": *string*

Cause: Filename, path or the permissions were not valid.

Action: Use a valid path and filename, check permissions. Otherwise contact Oracle Customer Support.

EVM-00004: Failed to open channel config file "*string*"

Cause: Configuration file name, the path or the permissions were not valid.

Action: Use a valid path and filename, check permissions. Otherwise contact Oracle Customer Support.

EVM-00006: Failed to create temporary file

Cause: The file being used as a temporary file for `evmsort` had one of the following issues; filename, path or the permissions were not valid.

Action: Use a valid path and filename, check permissions. Otherwise contact Oracle Customer Support.

EVM-00007: Failed to write to temporary file

Cause: The file being used as a temporary file for `evmsort` had one of the following issues; filename, path or the permissions were not valid.

Action: Use a valid path and filename, check permissions. Otherwise contact Oracle Customer Support.

EVM-00008: Failed to read from temporary file

Cause: The file being used as a temporary file for `evmsort` had one of the following issues; filename, path or the permissions were not valid.

Action: Use a valid path and filename, check permissions. Otherwise contact Oracle Customer Support.

EVM-00009: Failed to create EVM posting connection

Cause: Error occurred while communicating with the EVM daemon.

Action: Check log and status of the EVM daemon.

EVM-00010: Failed to read from EVM posting connection

Cause: Error occurred while communicating with the EVM daemon.

Action: Check log and status of the EVM daemon.

EVM-00011: Failed to write to EVM posting connection

Cause: Error occurred while communicating with the EVM daemon.

Action: Check log and status of the EVM daemon.

EVM-00012: Failed to create EVM listening connection

Cause: Error occurred while communicating with the EVM daemon.

Action: Check log and status of the EVM daemon.

EVM-00013: Failed to read from EVM listening connection

Cause: Error occurred while communicating with the EVM daemon.

Action: Check log and status of the EVM daemon.

EVM-00014: Failed to write to EVM listening connection

Cause: Error occurred while communicating with the EVM daemon.

Action: Check log and status of the EVM daemon.

EVM-00015: Failed to create EVM service connection

Cause: Error occurred while communicating with the EVM daemon.

Action: Check log and status of the EVM daemon.

EVM-00016: Failed to read from EVM service connection

Cause: Error occurred while communicating with the EVM daemon.

Action: Check log and status of the EVM daemon.

EVM-00017: Failed to start EVM service "*string*"

Cause: EVM daemon failed to start.

Action: Check log for the EVM daemon.

EVM-00018: Failed to write to output stream

Cause: Failed to write to standard output.

Action: Contact Oracle Customer Support.

EVM-00019: Failed to read event from input stream

Cause: Bad input file for evmshow/evmsort EOF missing.

Action: Check the input file.

EVM-00020: Failed to create event subscription

Cause: Bad network connection between subscriber and EVM daemon.

Action: Check the network connection and filter string.

EVM-00021: Failed to create filter

Cause: Used a null filter string or memory allocation failed.

Action: Use a non null filter string.

EVM-00022: Invalid filter string

Cause: Used a null or invalid filter string.

Action: Contact Oracle Customer Support.

EVM-00023: Filter test operation failed

Cause: Used a null or invalid filter string.

Action: Use a non null filter string. Otherwise contact Oracle Customer Support.

EVM-00024: Lost connection to EVM daemon

Cause: Evmlogger lost connection to evmdaemon.

Action: Check status of evmlogger, evmd daemons and logs.

EVM-00025: Authorization database error

Cause: Not authorized to post/listen for certain events.

Action: Check evm.auth file to ensure the current user is authorized to post/listen for specific events.

EVM-00026: Failed to post event "*string*"

Cause: Evmpost failed to post an event.

Action: Check the status and log for EVM daemon.

EVM-00027: Memory allocation failure

Cause: The system is running low on memory.

Action: Check the availability of memory in the system.

EVM-00029: Event contains invalid values

Cause: Invalid syntax for an event was used.

Action: Use a valid syntax for an event.

EVM-00030: Event name is missing

Cause: Name of the event was missing.

Action: Use a valid syntax for an event.

EVM-00031: Event name has too few components

Cause: Invalid syntax for an event was used.

Action: Use a valid syntax for an event.

EVM-00032: Failed to write event

Cause: Failed to write event to output file.

Action: Check the permissions of the file. Otherwise contact Oracle Customer Support.

EVM-00033: Error in input file "*string*", line *number*

Cause: Failed to parse input file.

Action: Check input file and the line for possible errors. Otherwise contact Oracle Customer Support.

EVM-00034: Error: *string*

Cause: Error Occured.

Action: Look at the error message for details.

EVM-00035: EVM service "*string*" terminated with exit code *number*

Cause: EVM daemon died.

Action: Check the EVM daemon log.

EVM-00036: Host "*string*" is unknown

Cause: Invalid hostname discovered while trying to create a connection to the EVM daemon.

Action: Check the hostname, on which EVM daemon is running. Otherwise contact Oracle Customer Support.

EVM-00037: Failed to connect to EVM daemon on "*string*"

Cause: EVM daemon is dead or is not responding.

Action: Check the status of EVM daemon and logs.

EVM-00038: Failed to create an EVM event

Cause: Failed to create an EVM event.

Action: Check the EVM daemon log.

EVM-00039: Invalid port number in host name "*string*"

Cause: Used an invalid port number.

Action: Use a valid or a different port number.

EVM-00040: Error occurred while reading from "*string*"

Cause: Error occurred when evmshow was reading from an input file.

Action: Check the input file.

EVM-00042: Use "*string -A*" to format events, or pipe output to evmshow

Cause: Invalid use of evmshow command.

Action: Use evmshow command as instructed.

EVM-00043: Attempting to reconnect to the EVM daemon...

Cause: Evmwatch trying to reconnect to the evm daemon.

Action: Not an error message.

EVM-00044: Attempting to reconnect to the EVM daemon on "*string*"...

Cause: Evmwatch trying to reconnect to the evm daemon on this host.

Action: Not an error message.

EVM-00045: EVM connection re-established

Cause: Evmwatch was able to reconnect to the evm daemon.

Action: Not an error message.

EVM-00104: End of file reached unexpectedly

Cause: End of event template file reached unexpectedly.

Action: Check the event template file in evm/admin.

EVM-00105: Missing end-of-group character

Cause: end-of-group character missing in event template file.

Action: Check the event template file in evm/admin.

EVM-00106: Missing end-of-string character

Cause: end-of-string character missing in event template file.

Action: Check the event template file in evm/admin.

EVM-00107: Value "*string*" is not valid

Cause: Invalid value found in the event template file.

Action: Check the event template file in evm/admin.

EVM-00108: Keyword "*string*" is not valid

Cause: Invalid keyword found in the event template file.

Action: Check the event template file in evm/admin.

EVM-00201: Failed to allocate space for application object

Cause: The system is running low on memory.

Action: Check the availability of memory in the system.

EVM-00202: Failed to allocate space for local lock pathname

Cause: The system is running low on memory.

Action: Check the availability of memory in the system.

EVM-00301: Failed to open logger config file "*string*"

Cause: Configuration file had one of the following problems; filename, path or permissions were not valid.

Action: Check whether path and permissions are valid. Otherwise contact Oracle Customer Support.

EVM-00302: Configuration error - using default configuration

Cause: Configuration file had invalid configuration details

Action: Check the configuration file.

EVM-00303: Keyword "*string*" is invalid in this position

Cause: Valid Keyword was used in an invalid position in configuration file.

Action: Use the correct syntax.

EVM-00304: Configuration error in file *string*, line *number*

Cause: Configuration error in configuration file.

Action: Check the configuration file.

EVM-00305: Memory allocation failure for "*string*"

Cause: The system is running low on memory.

Action: Check the availability of memory in the system.

EVM-00306: Failed to create filter for "*string*"

Cause: Failed to create a filter for events for evmlogger.

Action: Check the availability of memory.

EVM-00307: Filter string invalid for "*string*"

Cause: Used a null filter string or memory allocation failed.

Action: Use a non null filter string.

EVM-00308: Failed to open eventlog "*string*": *string*

Cause: Eventlog file had one of the following problems; filename, path or permissions were not valid.

Action: Check whether path and permissions are valid. Otherwise contact Oracle Customer Support.

EVM-00309: Failed to write to eventlog "*string*"

Cause: Eventlog had one of the following problems; size or permissions were not valid.

Action: Check the permissions and the size of the eventlog file. Otherwise contact Oracle Customer Support.

EVM-00310: Invalid suppression filter for eventlog "*string*"

Cause: Invalid filter was used.

Action: Use a non null filter. Otherwise contact Oracle Customer Support.

EVM-00311: Invalid entry in eventlog "*string*" (*number events OK*)

Cause: Evmlogger found an invalid entry in eventlog.

Action: Check the eventlog file.

EVM-00312: Eventlog "*string*" disabled

Cause: Events could not be written to the eventlog file.

Action: Check the permissions,max size of the logfile.

EVM-00313: Eventlog "*string*" re-enabled

Cause: Events logging is reenabled.

Action: Not an error message.

EVM-00314: Forwarder "*string*" disabled

Cause: Forwarding is disabled by the evmlogger.

Action: Not an error message.

EVM-00315: Forwarder "*string*" re-enabled

Cause: Forwarding is disabled by the evmlogger.

Action: Not an error message.

EVM-00316: Suppression disabled for "*string*"

Cause: Error message filtering suppression disabled for this string.

Action: Not an error message.

EVM-00317: Suppression re-enabled for "*string*"

Cause: Error message filtering suppression reenabled for this string.

Action: Not an error message.

EVM-00318: Failed to open config info file "*string*"

Cause: Configuration file had one of the following problems; filename, path or permissions were not valid.

Action: Check whether path and permissions are valid. Otherwise contact Oracle Customer Support.

EVM-00319: Keyword "*string*" is not allowed in a secondary config file

Cause: Invalid Keyword was used.

Action: Use a valid Keyword.

EVM-00323: Config file "*string*" has insecure write permission

Cause: The configuration file had write permissions for the group 'other'.

Action: Change the write permissions for the configuration file

EVM-00324: Config file "*string*" has incorrect ownership

Cause: Configuration file should be owned by root or bin.

Action: Change the owner of configuration file to root or bin.

EVM-00325: Config file "*string*" is not a regular file

Cause: Configuration file is not a regular file.

Action: Check the configuration file.

EVM-00401: Failed to open binary event library file

Cause: Binary event file had one of the following problems; filename, path or permissions were not valid.

Action: Check whether path and permissions are valid. Otherwise contact Oracle Customer Support.

EVM-00601: Data read from the input stream is not a valid EVM event

Cause: evmshow tried to read an invalid EVM event.

Action: Check the logs for the evm daemon.

EVM-00701: Check that the event is registered and you are authorized to post it

Cause: Not authorized to post for certain events.

Action: Check evm.auth file to ensure the current user is authorized to post the specific event.

EVM-00702: Priority must be an integer in the range 0-*number*

Cause: Used an integer out of the range for priority.

Action: Use a valid integer.

EVM-00801: Missed *number* subscribed-to event(s)

Cause: Missed some events during the connection setup phase.

Action: Not an error message.

EVM-00802: Failed to reconnect within *number* seconds - terminating

Cause: Failed to establish a connection with EVM daemon.

Action: Check the logs for EVM daemon.

EVM-00901: Invalid sort specification "*string*"

Cause: Invalid sort specification used for evmsort.

Action: Use a valid sort specification. Look at documentation for evmsort using evmsort -h.

EXP-00000 to EXP-00114

EXP-00000: Export terminated unsuccessfully

Cause: Export encountered an Oracle error.

Action: Look up the accompanying Oracle message in the ORA message chapters of this manual, and take appropriate action.

EXP-00001: data field truncation - column length=*number*, buffer size=*number* actual size=*number*

Cause: Export could not fit a column in the data buffer.

Action: Record the given size parameters and the accompanying messages and report this as an Export internal error to customer support. (Part of the table has been exported. Export will continue with the next table.)

EXP-00002: error in writing to export file

Cause: Export could not write to the export file, probably because of a device error. This message is usually followed by a device message from the operating system.

Action: Take appropriate action to restore the device.

EXP-00003: no storage definition found for segment(*number*, *number*)

Cause: Export could not find the storage definitions for a cluster, index, or table.

Action: Record the accompanying messages and report this as an Export internal error to customer support.

EXP-00004: invalid username or password

Cause: An invalid username or password was specified.

Action: Retry with a valid username and password.

EXP-00005: all allowable logon attempts failed

Cause: Attempts were repeatedly made to log on with an invalid username or password.

Action: Shut down the utility, then restart and retry with a valid username and password.

EXP-00006: internal inconsistency error

Cause: Export's data structure was corrupted.

Action: Record the accompanying messages and report this as an Export internal error to customer support.

EXP-00007: dictionary shows no columns for *string.string*

Cause: Export failed to gather column information from the data dictionary. The table may have been dropped.

Action: Retry the export and, if this error recurs, report it as an Export internal error to customer support.

EXP-00008: ORACLE error *number* encountered

Cause: Export encountered the referenced Oracle error.

Action: Look up the Oracle message in the ORA message chapters of this manual and take appropriate action.

EXP-00009: no privilege to export *string's* table *string*

Cause: An attempt was made to export another user's table. Only a database administrator can export another user's tables.

Action: Ask your database administrator to do the export.

EXP-00010: *string* is not a valid username

Cause: An invalid username was specified.

Action: Shut down the utility, then restart and retry with a valid username.

EXP-00011: *string.string* does not exist

Cause: Export could not find the specified table.

Action: Retry with the correct table name.

EXP-00012: *string* is not a valid export mode

Cause: An invalid export mode was specified.

Action: Retry with a valid export mode.

EXP-00013: respond with either 'Y', 'N', RETURN or '.' to quit

Cause: An invalid response was entered.

Action: Enter any of the responses shown in the message.

EXP-00014: error on row *number* of table *string*\n

Cause: Export encountered an Oracle error while fetching rows.

Action: Look up the accompanying Oracle message in the ORA message chapters of this manual and take appropriate action.

EXP-00015: error on row *number* of table *string*, column *string*, datatype *number*

Cause: Export encountered an error while fetching or writing the column. An accompanying message gives more information.

Action: Correct the error and try again.

EXP-00016: ORACLE error encountered while reading default auditing options

Cause: Export encountered an Oracle error while reading the default auditing options (those for updates, deletes, and so on).

Action: Look up the accompanying Oracle message in the ORA message chapters of this manual and take appropriate action.

EXP-00017: feature "*string*" is needed, but not present in database

Cause: The command entered requires the specified feature. Either that feature is not installed, or the row describing the feature is missing from table V\$OPTION

Action: Reinstall Oracle with the feature specified in the message.

EXP-00018: datatype (*number*) for column *string*, table *string.string* is not supported

Cause: Export does not support the referenced datatype.

Action: Retry with an acceptable datatype (CHAR, NUMBER, DATE, LONG, or RAW).

EXP-00019: failed to process parameters, type 'EXP HELP=Y' for help

Cause: Invalid command-line parameters were specified.

Action: Check the online help screen for the set of valid parameters, then retry.

EXP-00020: failed to allocate memory of size *number*

Cause: Export failed to allocate the necessary memory.

Action: Decrease the export buffer size so that less memory is required, or increase the runtime memory size for Export.

EXP-00021: can only perform incremental export in Full Database mode

Cause: USER or TABLE mode was specified when doing an incremental export.

Action: Specify FULL database mode (FULL=Y) and retry.

EXP-00022: must be SYS or SYSTEM to do incremental export

Cause: The privileges needed to do an incremental export do not exist. Only a database administrator can do incremental exports.

Action: Ask the database administrator to do the incremental export.

EXP-00023: must be a DBA to do Full Database or Tablespace export

Cause: The privileges needed to do a FULL database export do not exist. Only a database administrator can do a FULL database export.

Action: Ask the database administrator to do the FULL database export.

EXP-00024: Export views not installed, please notify your DBA

Cause: The necessary Export views were not installed.

Action: Ask the database administrator to install the required Export views.

EXP-00025: dictionary shows no column for constraint *string.number*

Cause: Export failed to gather column information about the referenced constraint from the data dictionary. The constraint may have been altered.

Action: Retry the export and, if this error recurs, report it as an Export internal error to customer support.

EXP-00026: conflicting modes specified

Cause: Conflicting export modes were specified.

Action: Specify only one parameter and retry.

EXP-00027: failed to calculate ORACLE block size

Cause: Export failed to calculate the Oracle block size.

Action: Report this as an Export internal error to customer support.

EXP-00028: failed to open *string* for write

Cause: Export failed to open the export file for writing. This message is usually followed by device messages from the operating system.

Action: Take appropriate action to restore the device.

EXP-00029: Incremental export mode and consistent mode are not compatible

Cause: Both consistent and incremental exports were specified.

Action: None. Consistent mode is turned off.

EXP-00030: Unexpected End-Of-File encountered while reading input

Cause: Encountered an End-Of-File while reading the user input.

Action: If input to export is being redirected, check the file for errors.

EXP-00031: Arraysize not in valid range. Using arraysize=*number*

Cause: The arraysize value specified is not in the valid range.

Action: None

EXP-00032: Non-DBAs may not export other users

Cause: Only database administrators can export to other users. A non- database administrator attempted to specify owner=user where exporter is not the user.

Action: Request that this operation be performed by the database administrator.

EXP-00033: Could not find environment character set

Cause: The environment character set is missing or incorrectly specified.

Action: Ensure that the environment character set is correctly specified and is present.

EXP-00034: error on rowid: file# *number* block# *number* slot# *number*

Cause: Identifies the rowid on which an error occurred.

Action: This is an information message. No action is required.

EXP-00035: QUERY parameter valid only for table mode exports

Cause: You specified the QUERY parameter in an export command, but you are not performing a table mode export. The QUERY parameter cannot be used for a user mode export, a full export, nor a point in time recovery export.

Action: If you want to select a subset of rows for a table, you must export the table independently with a table mode export. Issue a table mode export command that specifies the table name and the query you want to execute during export.

EXP-00036: Object *number* non-existent in dictionary

Cause: The specified object could not be found in the dictionary. The object might have been dropped during the export

Action: The object no longer exists; no action is needed.

EXP-00037: Export views not compatible with database version

Cause: The Export utility is at a higher version than the database version and is thereby incompatible.

Action: Use the same version of Export utility as the database.

EXP-00038: Bad Hash cluster id in clu\$

Cause: The function id in clu\$ is not a legal number. Clu\$ has become corrupted.

Action: Contact Worldwide Support

EXP-00039: export file *string* must be on a disk

Cause: On some platforms, export can read files from tape. This message is displayed if the first file in an export file set was on disk and you specified a tape device for a second or subsequent file.

Action: Verify that you have specified the correct file name for the export file. Remember that all export files can be either on disk or all files can be on tape, but not mixed both tape and disk.

EXP-00040: Dump file and log file must be different

Cause: The dump file and log file cannot be the same file.

Action: Specify different file names for the dump file and the log file, then retry the operation.

EXP-00041: INCTYPE parameter is obsolete

Cause: Export encountered the INCTYPE parameter when parsing Export options. Incremental Exports are no longer supported.

Action: Consult the Oracle Backup and Recovery guide. Export will attempt to continue.

EXP-00042: Missing NLS_CHARACTERSET/NLS_NCHAR_CHARACTERSET in props\$

Cause: A value for NLS_CHARACTERSET/NLS_NCHAR_CHARACTERSET was not entered in the props\$ table"

Action: internal error.

EXP-00043: Invalid data dictionary information in the row where column "string" is "string" in table string

Cause: The export utility retrieved invalid data from the data dictionary.

Action: Contact Oracle Worldwide Support.

EXP-00044: must be connected 'AS SYSDBA' to do Point-in-time Recovery or Transportable Tablespace import

Cause: The user must log in 'as SYSDBA' to perform transportable tablespace imports or Point-In-Time Recovery imports.

Action: Ask your database administrator to perform the Transportable Tablespace import or the Tablespace Point-in-time Recovery import.

EXP-00045: Cannot export SYSTEM Tablespace for Point-in-time Recovery or Transportable Tablespace

Cause: SYSTEM tablespace cannot be part of recovery set or transportable tablespace set.

Action: Contact Oracle Worldwide Support.

EXP-00046: Tablespace named string does not exist

Cause: The specified tablespace does not exist in dictionary.

Action: Contact Oracle Worldwide Support.

EXP-00047: Missing tablespace name(s)

Cause: Tablespace name(s) were not supplied

Action: Provide tablespace name(s)

EXP-00048: Cannot export SYSAUX Tablespace for Point-in-time Recovery or Transportable Tablespace

Cause: SYSAUX tablespace cannot be part of recovery set or transportable tablespace set.

Action: Contact Oracle Worldwide Support.

EXP-00049: *string* option is not compatible with Point-in-time Recovery or Transportable Tablespace Export

Cause: An option was specified incompatible with Point-in-time Recovery or Transportable Tablespace Export.

Action: Retry the Export without the displayed option.

EXP-00050: Cannot perform Partition Export "*string*" on non-partitioned table "*string*"

Cause: The table specified in this Partition Export is not a partitioned table.

Action: Use Table mode, or specify a non-partitioned table.

EXP-00051: "*string*" - given partition or subpartition name is not part of "*string*" table

Cause: The specified partition or subpartition name is not in the specified table.

Action: Check if the correct table, partition or subpartition name was specified.

EXP-00052: error on row *number* of partition *string*\n

Cause: Export encountered the referenced Oracle error while fetching rows.

Action: Look up the Oracle message in the ORA message chapters of this manual and take appropriate action.

EXP-00053: unable to execute QUERY on table *string* because the table has inner nested tables

Cause: You specified the QUERY parameter on a table that has one or more inner nested tables. The QUERY parameter cannot be specified on tables that have inner nested tables.

Action: Export the entire table by omitting the QUERY parameter.

EXP-00054: error on row *number* of subpartition *string*\n

Cause: Export encountered the referenced Oracle error while fetching rows.

Action: Look up the Oracle message in the ORA message chapters of this manual and take appropriate action.

EXP-00055: *string.string* is marked not exportable

Cause: An object was marked as non-exportable in the NOEXP\$ table.

Action: Consult your database administrator.

EXP-00057: Failure to initialize parameter manager

Cause: The parameter manager failed in initialization.

Action: Record the messages that follow and report this to Oracle Worldwide Support as an Export internal bug.

EXP-00058: Password Verify Function for *string* profile does not exist

Cause: Cannot find the function for the profile.

Action: Check if the profile was created properly.

EXP-00059: error converting an object type's identifier to characters

Cause: An invalid length of an object type identifier prevented its conversion.

Action: Contact Oracle Worldwide Support

EXP-00060: an object type had multiple TYPE BODYs

Cause: More than one TYPE BODY was found for an object type.

Action: Try dropping the TYPE BODY, if that is not successful, contact Oracle Worldwide Support

EXP-00061: unable to find the outer table name of a nested table

Cause: While exporting a bitmap index or posttable action on an inner nested table, the name of the outer table could not be located, using the NTAB\$ table.

Action: Verify the table is properly defined.

EXP-00062: invalid source statements for an object type

Cause: TYPE was not found in the statements in SOURCE\$ for an Object Type

Action: Contact Oracle Worldwide Support.

EXP-00063: error in changing language handle

Cause: Unable to change language handle.

Action: Contact Oracle Worldwide Support.

EXP-00064: *string* is an inner nested table and cannot be exported.

Cause: An attempt was made to export an inner nested table without its parent table.

Action: Export the parent of the inner nested table.

EXP-00065: Error writing lob to the dump file.

Cause: The current LOB could not be written to the dump file.

Action: Identify the cause of the write failure and fix it.

EXP-00066: Object table *string* is missing its object identifier index

Cause: All object tables must have an object identifier index, but the specified table was missing an index on its object identifier column.

Action: Recreate the type table and retry the operation.

EXP-00068: tablespace *string* is offline

Cause: Export failed to export tablespace (tablespace being offline).

Action: Make tablespace online and re export.

EXP-00070: attempt to free unallocated memory

Cause: An attempt was made to free memory that was not allocated.

Action: Contact Oracle Worldwide Support

EXP-00071: QUERY parameter not compatible with Direct Path export

Cause: You specified a value for the QUERY parameter for a direct path export. The QUERY parameter cannot be used with a direct path export.

Action: Re-issue the export command with DIRECT=N or omit the DIRECT parameter from the command line.

EXP-00072: error closing export file *string*

Cause: An error occurred while trying to close the export file.

Action: Contact Oracle Worldwide Support.

EXP-00073: dump file size too small

Cause: You specified either the FILESIZE parameter or the VOLSIZE parameter (if your platform supports it), and the value of the parameter is too small to hold the header information for the export file, plus any data.

Action: Increase the value of the FILESIZE or VOLSIZE parameter.

EXP-00074: rounding VOLSIZE down, new value is *string*

Cause: The VOLSIZE parameter must be a multiple of the RECORDLENGTH, but the value you specified for VOLSIZE does not meet this requirement. The value of VOLSIZE has been rounded down to be a multiple of the RECORDLENGTH used for the dump file.

Action: No action is required. You can adjust the VOLSIZE or RECORDLENGTH parameter to avoid this message. When importing this file, you must specify the VOLSIZE value reported by this message.

EXP-00075: rounding FILESIZE down, new value is *string*

Cause: The FILESIZE parameter must be a multiple of the RECORDLENGTH, but the value you specified for FILESIZE does not meet this requirement. The value of FILESIZE has been rounded down to be a multiple of the RECORDLENGTH used for the dump file.

Action: No action is required. You can adjust the FILESIZE or RECORDLENGTH parameter to avoid this message. When importing this file, you must specify the FILESIZE value reported by this message.

EXP-00076: multiple devices specified for tape output

Cause: You specified multiple file names when doing an export to a tape device. EXPORT uses the same device for writing all files, of the number of tape volumes required. For this reason, export will accept only one value for the FILE parameter when writing to tape.

Action: Reenter the EXPORT command, but specify only one tape device in the FILE parameter.

EXP-00077: multiple output files specified for unbounded export file

Cause: You specified multiple file names when doing an export and you also specified a value of 0 for the FILESIZE parameter. Note that 0 is the value used if FILESIZE is not specified on the command line. Since a value of 0 for FILESIZE means that only one file will be written and there is no size limit for that file, the other files you specified in the FILE parameter can never be used.

Action: If you intended to write multiple files, respecify the command but use the FILESIZE to specify the maximum number of bytes that EXPORT should write to each file. If you intended to write only one file with no limits on its size, reissue the EXPORT command but specify only one file name for the FILE parameter.

EXP-00078: Error exporting metadata for index *string*. Index creation will be skipped

Cause: Domain indexes export private metadata via anonymous PL/SQL blocks prior to the CREATE INDEX statement. Export does this by calling the ODCIIndexGetMetadata method on the implementation type associated with the index. A problem occurred inside this routine. Because the metadata is considered an integral part of the index, the CREATE INDEX statement was not written to the dump file.

Action: Contact the developer of the index's implementation type. If this is an Oracle-supplied index (perhaps via a data cartridge), contact Oracle Worldwide Support.

EXP-00079: Data in table "*string*" is protected. Conventional path may only be exporting partial table.

Cause: User without the execute privilege on DBMS_RLS, the access control package, tries to export a table that has access control. Since table owner is also subjected to access control, the owner may not be able to export all rows in the table, but only the ones he can see. Also, to preserve integrity of the table, user exporting the table should have enough privilege to recreate the table with the security policies at import time. Therefore, it is strongly recommended the database administrator should be handling exporting of this table. Granting the table owner execute privilege would also satisfy this security check, though it might have other security implications. If the table does not have objects, can use direct mode.

Action: Ask the database administrator to export/import this table/view.

EXP-00080: Data in table "*string*" is protected. Using conventional mode.

Cause: User without the execute privilege on DBMS_RLS, the access control package, tries to direct export a table that has access control enabled. Using conventional export mode instead. Note that because of access control, only a partial table may be exported.

Action: Ask the database administrator to export/import this table/view.

EXP-00081: Exporting access control for table/view "*string*" as non-DBA.

Cause: A non-DBA user tries to export table/view and the associated fine grain access control policies. The user may not have enough privilege to recreate the access control policies when importing the table/view. And such an event may cause inconsistency in the security model of the table/view.

Action: Ask the database administrator to export/import this table/view.

EXP-00082: Invalid function name passed to procedural object support: *string*

Cause: Internal inconsistency error: The listed function is not a method on export's procedural object interface specification.

Action: Contact Oracle Worldwide Support

EXP-00083: The previous problem occurred when calling *string.string.string*

Cause: The listed package provides export/import support for procedural actions. The previously listed error occurred while calling the specified function.

Action: Contact Oracle Worldwide Support. Most packages are supplied by Oracle internal cartridge or server development groups. The package name will help Support determine the correct owner of the problem.

EXP-00084: Unexpected DbmsJava error *number* at step *number*

Cause: The error was returned from a call to a DbmsJava procedure.

Action: Record the accompanying messages and report this as an Export internal error to customer support.

EXP-00085: The previous problem occurred when calling *string.string.string* for object *number*

Cause: The listed package provides export/import support for procedural objects, i.e., those whose DDL is supplied by stored procedures. The previously listed error occurred while calling the specified function.

Action: Contact Oracle Worldwide Support. Most packages are supplied by Oracle internal cartridge or server development groups. The package name will help Support determine the correct owner of the problem.

EXP-00086: Primary key REFs in table "*string*" may not be valid on import

Cause: The specified table contains primary key REFs which may not be valid in the import database.

Action: Do not use Export/Import to move Primary key REFs between databases having differing character sets.

EXP-00087: Problem with internal hash table of schema/table names

Cause: Most likely a problem with allocating memory for the hash table entries.

Action: Contact Oracle Worldwide Support

EXP-00089: invalid FILE_FORMAT specification

Cause: The FILE_FORMAT specification did not contain an instance of "%s". This wildcard string must be present.

Action: Correct the error and reenter the EXPORT command.

EXP-00090: cannot pin type "*string*"."*string*"

Cause: Export was unable to pin the specified type in the object cache. This is typically caused because a type could not be made valid (for example because of authorization violations in accessing subtypes).

Action: Fix the problem with the offending type until the type can be successfully compiled.

EXP-00091: Exporting questionable statistics.

Cause: Export was able export statistics, but the statistics may not be usable. The statistics are questionable because one or more of the following happened during export: a row error occurred, client character set or NCHARSET does not match with the server, a query clause was specified on export, only certain partitions or subpartitions were exported, or a fatal error occurred while processing a table.

Action: To export non-questionable statistics, change the client character set or NCHARSET to match the server, export with no query clause, export complete tables. If desired, import parameters can be supplied so that only non-questionable statistics will be imported, and all questionable statistics will be recalculated.

EXP-00092: Unable to set NLS_NUMERIC_CHARACTERS to required defaults.

Cause: Export was unable to set NLS_NUMERIC_CHARACTERS to '.,'

Action: Record the accompanying messages and report this as an Export internal error to customer support.

EXP-00093: Could not convert to server character set's handle

Cause: Internal error.

Action: Contact Worldwide support.

EXP-00094: Could not convert to server national character set's handle

Cause: Internal error.

Action: Contact Worldwide support.

EXP-00095: Flashback_time and Flashback_scn are not compatible

Cause: Both flashback_time and flashback_scn parameters were specified.

Action: Reissue command with only one flashback parameter.

EXP-00097: Object type "*string*".*string*" is not in a valid state, type will not be exported

Cause: The object type's status is invalid which may be caused by a dependant type's modification (or removal) without cascading the change.

Action: The type must be recompiled using ALTER TYPE COMPILE.

EXP-00098: Data in table has not been upgraded, table will not be exported

Cause: Export is attempting to process a table containing references to a type which has evolved. In order for Export to process the table successfully, all data within each table must be upgraded to the latest revision of each referenced type.

Action: The table must be updated using ALTER TABLE UPGRADE DATA.

EXP-00099: Table "*string*".*string*" is not in a valid state, table will not be exported

Cause: A table or one of its dependant types has modified without cascading the change. This left the table in an INVALID state.

Action: The table must be updated using ALTER TABLE UPDATE.

EXP-00100: error converting an object type's hashcode to characters

Cause: An invalid length of an object type identifier prevented its conversion.

Action: Contact Oracle Worldwide Support

EXP-00101: Version 1 extensible index "*string*".*string*" can not be included in Transportable Tablespace Export

Cause: Transportable Tablespace extensible indexes must be at least version 2.

Action: Upgrade extensible index implementation to version 2 specifications.

EXP-00102: Resumable parameters ignored -- current session not resumable

Cause: Current session is not resumable.

Action: Must specify RESUMABLE=Y to enable resumable session in order for the RESUMABLE_NAME and RESUMABLE_TIMEOUT parameters to take effect.

EXP-00103: The FLASHBACK_TIME parameter was invalid

Cause: FLASHBACK_TIME did not contain a valid timestamp or an expression that yields a valid timestamp.

Action: Specify a timestamp value in the format of YYYY-MM-DD HH24:MI:SS or an expression that evaluates to a valid timestamp.

EXP-00104: datatype (*string*) of column *string* in table *string.string* is not supported, table will not be exported

Cause: The column is of a datatype which does not contain the required support. The table will not be exported.

Action: Use the Data Pump version of Export to export this table.

EXP-00105: parameter *string* is not supported for this user

Cause: The user attempted to specify either CONSISTENT or OBJECT_CONSISTENT when connected as sysdba.

Action: If a consistent export is needed, then connect as another user.

EXP-00106: Invalid Database Link Passwords

Cause: Invalid Encoded Password for Database Link

Action: Please drop the Database Link and recreate it after import.

EXP-00107: Feature (*string*) of column *string* in table *string.string* is not supported. The table will not be exported.

Cause: Export does not contain the required support for this feature. The table will not be exported.

Action: Use the Data Pump version of Export to export this table.

EXP-00108: NULL lob fetched

Cause: Internal error

Action: Contact Oracle Worldwide Support.

EXP-00109: XSL delimiter not found

Cause: Internal error

Action: Contact Oracle Worldwide Support.

EXP-00110: Tablespace *string* is encrypted and will not be exported

Cause: Encrypted Tablespace feature is not supported by classic export

Action: Use DATAPUMP Utility to export this tablespace.

EXP-00111: Table *string* resides in an Encrypted Tablespace *string* and will not be exported

Cause: Encrypted Tablespace feature is not supported by classic export

Action: Use DATAPUMP Utility to export this table.

EXP-00112: Index *string* is of XMLType and could not be exported

Cause: Export does not contain the required support for this feature. The index could not be exported.

Action: Use Oracle Data Pump Utility to export this index.

EXP-00113: Feature *string* is unsupported. *string string.string* could not be exported

Cause: Export does not contain the required support for this feature.

Action: Use Oracle Data Pump Utility

EXP-00114: Length of *string string* is exceeding the maximum limit

Cause: Provided length was more than the maximum limit allowed.

Action: Check the input value and provide the correct value.

GIPC-00000 to GIPC-00020

GIPC-00000: general success.

Cause: The operation succeeded.

Action: No action is required.

GIPC-00001: general failure.

Cause: A GIPC operation failed.

Action: Examine the trace and log files for the specific cause.

GIPC-00002: GIPC needs to be initialized.

Cause: The application failed to initialize GIPC prior to performing an operation.

Action: Initialize GIPC.

GIPC-00014: buffer not large enough to hold data.

Cause: The buffer provided by the application was not big enough to hold the data received.

Action: Use a larger buffer.

GIPC-00016: timeout waiting on request.

Cause: A wait call returned because the time expired.

Action: This error happens normally in most cases. If this error was not expected, examine the trace and log files for the reason.

GIPC-00017: waiting call has been posted.

Cause: A wait was interrupted by another thread posting it.

Action: This error happens normally in most cases. If this error was not expected, examine the trace and log files for the reason.

GIPC-00020: bind address already in use.

Cause: The application attempt to bind an endpoint to an address which has already been bound.

Action: Specify another address.

IMG-00001 to IMG-02014

IMG-00001: unable to initialize Oracle Multimedia environment

Cause: The image processing external procedure initialization process failed.

Action: Contact Oracle Support Services.

IMG-00002: unrecoverable error

Cause: This is an internal error.

Action: Contact Oracle Support Services.

IMG-00003: exhausted memory while processing image

Cause: Oracle Multimedia exhausted available Java memory during processing.

Action: Increase the JAVA_POOL_SIZE initialization parameter setting.

IMG-00201: unsupported metadata type

Cause: The requested metadata type could not be read from or written to this image format.

Action: Refer to the Oracle Multimedia documentation to select the proper metadata type for this image.

IMG-00202: unsupported character encoding

Cause: The character encoding was not supported for this image format.

Action: Refer to the Oracle Multimedia documentation to select the proper encoding for this image.

IMG-00203: xmlData is invalid

Cause: The XML document was NULL or not schema valid.

Action: Create a schema valid document for input.

IMG-00204: input metadata too long

Cause: The metadata was too long to embed in this image format.

Action: Trim the metadata, or use a different image format.

IMG-00205: cannot add a TIFF directory entry

Cause: No new entries could be added to this directory.

Action: Use a different image format.

IMG-00206: unsupported image format for putMetadata

Cause: Metadata could not be written to this image format.

Action: Use a different image format.

IMG-00207: input parameter is not valid

Cause: The input parameter value contained an invalid value.

Action: Correct the input parameter value.

IMG-00208: metadata format parse error

Cause: The parser detected an error in the embedded metadata.

Action: Verify that the metadata conforms to proper standards.

IMG-00209: error parsing metadata

Cause: There was an internal error while parsing the metadata.

Action: Contact Oracle Support Services.

IMG-00210: unable to get metadata from an empty image

Cause: There was no data in the input image.

Action: Refer to the Oracle Multimedia documentation for information on how to populate image data into the image object.

IMG-00211: metadataType value "string" is invalid

Cause: The metadataType parameter value was NULL or invalid.

Action: Correct the metadataType parameter value.

IMG-00212: encoding value "string" is invalid

Cause: The encoding parameter value was NULL or invalid.

Action: Correct the encoding parameter value.

IMG-00213: xmlData does not contain an RDF element

Cause: The XML document did not contain an *RDF* element as a child of *xmpMetadata*.

Action: Create a schema valid document with an *RDF* element.

IMG-00502: invalid scale value

Cause: An invalid scale value was found while parsing the parameters for the image process function.

Action: Correct the statement by using a valid scale value. Refer to the Oracle Multimedia documentation for a description of the correct usage and syntax for the image processing command string.

IMG-00505: missing value in CUT rectangle

Cause: An incorrect number of values was used to specify a rectangle.

Action: Use exactly four integer values for the lower-left and upper-right vertices.

IMG-00506: extra value in CUT rectangle

Cause: An incorrect number of values was used to specify a rectangle.

Action: Use exactly four integer values for the lower left and upper right vertices.

IMG-00510: string

Cause: A syntax error was found while parsing the parameters for the image process function.

Action: Correct the statement by using valid parameter values. Refer to the Oracle Multimedia documentation for a description of the correct usage and syntax for the image processing command string.

IMG-00511: *string*

Cause: An error was found while accessing image data.

Action: Contact Oracle Support Services.

IMG-00512: multiple incompatible scaling parameters found

Cause: Multiple incompatible scaling parameters were found in the image process command string. With the exception of XSCALE and YSCALE, which can be used together in a process command string, scaling functions are mutually exclusive and cannot be combined.

Action: Remove scaling functions until only one remains (or two, if they are XSCALE and YSCALE).

IMG-00513: missing value in scaling operation

Cause: An incorrect number of values was used to specify image dimensions. fixedScale and maxScale require exactly two integer values for the X and Y dimensions of the desired image.

Action: Use two values for fixedScale and maxScale.

IMG-00514: extra value in scaling operation

Cause: An incorrect number of values was used to specify image dimensions. fixedScale and maxScale require exactly two integer values for the X and Y dimensions of the desired image.

Action: Use two values for fixedScale and maxScale.

IMG-00515: incorrect number of input channels

Cause: An incorrect number of values was used to specify input channels. InputChannels requires either one or three channels numbers for the gray or red, green, and blue channel assignments.

Action: Use either one or three values to specify the input channels.

IMG-00516: default channel out of range

Cause: An incorrect value was used to specify the default channel selection.

Action: Use a channel number which is less than or equal to the number of bands and greater than zero.

IMG-00517: height or width not present in parameter string

Cause: Height and/or width were not specified in the setProperties parameter string.

Action: Specify both the height and width.

IMG-00518: invalid value for height or width

Cause: Height and/or width were not positive integers"

Action: Specify both the height and width as positive integers"

IMG-00519: illegal combination of parameters

Cause: Other than height, width, dataOffset, and userString no other parameters may be specified in the setProperties parameter string when CCITTG3 or CCITTG4 is used as the compressionFormat.

Action: Supply only the height and width when compressionFormat is either CCITTG3 or CCITTG4. The dataOffset and userString may optionally be supplied as well.

IMG-00520: invalid value for numberOfBands

Cause: NumberOfBands was not a positive integer"

Action: Specify numberOfBands as a positive integer"

IMG-00521: invalid value for dataOffset

Cause: DataOffset was not a positive integer"

Action: Specify dataOffset as a positive integer"

IMG-00522: invalid format for parameter value

Cause: A floating point value was specified where an integer is required, or a character value was specified where a numeric value is required.

Action: Specify the correct type of values for process parameters.

IMG-00523: invalid process verb

Cause: A process verb was specified that is not understood by Oracle Multimedia.

Action: Refer to the Oracle Multimedia documentation for a description of valid process verbs.

IMG-00524: mismatched quotes

Cause: Quotation marks used within a process command string were not matched.

Action: Ensure that quotation marks occur in pairs.

IMG-00525: locale error

Cause: This is an internal error.

Action: Contact Oracle Support Services.

IMG-00526: error parsing foreign image description

Cause: An internal error occurred while processing a foreign image.

Action: Contact Oracle Support Services.

IMG-00527: invalid deletePages specified

Cause: The specified value for the deletePages parameter was not valid.

Action: See the Oracle Multimedia documentation for reference information about valid values for deletePages parameter.

IMG-00528: invalid movePages specified

Cause: The specified value for the movePages parameter was not valid.

Action: See the Oracle Multimedia documentation for reference information about valid values for movePages parameter.

IMG-00529: invalid combination of TIFF page operations

Cause: The specified TIFF page operations were not valid.

Action: See the Oracle Multimedia documentation for reference information about valid values for TIFF page operations.

IMG-00530: internal error while parsing command

Cause: An internal error occurred while parsing the command passed to the image processing function or the foreign image setProperties function.

Action: Check the command passed to the function. Refer to the Oracle Multimedia documentation for a description of the correct usage and syntax for the image

processing command string or the foreign image setproperties function. If you are certain that your command is correct, then contact Oracle Support Services.

IMG-00531: empty or null image processing command

Cause: An empty or null image processing command was passed to the image process function.

Action: Refer to the Oracle Multimedia documentation for a description of the correct usage and syntax for the image processing command string.

IMG-00540: contentFormat and interleave conflict

Cause: Interleave values were specified using both the contentformat and interleave verbs.

Action: Specify interleave using either contentformat or interleave, but not both.

IMG-00541: invalid contentFormat specified

Cause: The specified contentFormat was not valid.

Action: Refer to the Oracle Multimedia documentation for a description of valid contentFormat specifications.

IMG-00542: contentFormat includes invalid extra information

Cause: The specified contentFormat included invalid characters at the end of the parameter string.

Action: Refer to the Oracle Multimedia documentation for a description of valid contentFormat specifications.

IMG-00543: invalid compressionFormat specified

Cause: The specified compressionFormat was not valid.

Action: Refer to the Oracle Multimedia documentation for a description of valid compressionFormat specifications.

IMG-00544: invalid compressionQuality specified

Cause: The specified compressionQuality was not valid.

Action: Refer to the Oracle Multimedia documentation for a description of valid compressionQuality specifications.

IMG-00545: invalid cut values specified

Cause: An invalid value was found while parsing the parameters for the cut operation.

Action: Correct the statement by specifying values for the cut operation that are not negative. Refer to the Oracle Multimedia documentation for a description of the correct usage and syntax for the image processing command string.

IMG-00546: invalid page number specified

Cause: An invalid page number was specified.

Action: Specify page numbers that are not negative.

IMG-00547: invalid channelOrder specified

Cause: The specified channelOrder was not valid.

Action: Refer to the Oracle Multimedia documentation for a description of valid channelOrder specifications.

IMG-00548: invalid interleave specified

Cause: The specified interleave was not valid.

Action: Refer to the Oracle Multimedia documentation for a description of valid interleave specifications.

IMG-00549: invalid pixelOrder specified

Cause: The specified pixelOrder was not valid.

Action: Refer to the Oracle Multimedia documentation for a description of valid pixelOrder specifications.

IMG-00550: invalid scanlineOrder specified

Cause: The specified scanline order was not valid.

Action: Refer to the Oracle Multimedia documentation for a description of valid scanlineOrder specifications.

IMG-00551: invalid quantize method specified

Cause: The specified quantization method was not valid.

Action: Refer to the Oracle Multimedia documentation for a description of valid quantization method specifications.

IMG-00552: invalid inputChannels specified

Cause: An invalid value was specified for the inputChannels verb.

Action: Specify non-negative values for inputChannels. Refer to the Oracle Multimedia documentation for a description of the correct usage and syntax for the image processing command string.

IMG-00553: invalid rotate value

Cause: An invalid value was specified for image rotation. Rotation values must be a floating point number.

Action: Correct the statement by providing a valid rotation value.

IMG-00554: extra value in rotate operation

Cause: Multiple arguments were used to specify image rotation. The rotate operation accepts only a single value.

Action: Provide a single value for the rotate operation.

IMG-00555: invalid value for gamma correction

Cause: An invalid value was specified for gamma correction. Gamma values must be positive.

Action: Correct the statement by providing a positive gamma value.

IMG-00556: incorrect number of gamma values

Cause: An incorrect number of values were used to specify gamma correction. Gamma correction requires either one or three gamma values.

Action: Provide either one or three values to specify the gamma correction.

IMG-00557: invalid value for contrast enhancement

Cause: An invalid value was used to specify contrast enhancement.

Action: To specify contrast enhancement using percentages, provide values between 0 and 100. To specify contrast enhancement using bounds, provide values greater than 0.

IMG-00558: incorrect number of contrast values

Cause: An incorrect number of values were used to specify contrast enhancement. Contrast enhancement requires one, two, three, or six contrast values.

Action: Provide one or three values to specify contrast enhancement using percentages; provide two or six values to specify contrast enhancement using contrast bounds.

IMG-00559: invalid frame number

Cause: An incorrect number was used to specify frame in Dicom image. The number should be greater than 0 and less than total frames in Dicom image.

Action: Provide one number greater than 0 and less than total frames in Dicom image.

IMG-00560: input format does not support page selection

Cause: The page verb was specified for an input format that does not support selecting pages.

Action: Remove the page selection verb. Refer to the Oracle Multimedia documentation for a description of which image formats support page selection.

IMG-00561: input format does not support channel selection

Cause: The inputChannels verb was specified for an input format that does not support selecting channels.

Action: Remove the inputChannels verb. Refer to the Oracle Multimedia documentation for a description of which image formats support input channel selection.

IMG-00577: invalid quantize argument

Cause: A quantize value was specified that accepts an argument, but the argument provided was not valid.

Action: Provide a valid, non-negative argument for the quantize value.

IMG-00578: missing quantize argument

Cause: A quantize value was specified that requires an argument, but no argument was provided.

Action: Provide an argument for the quantize value.

IMG-00579: extra quantize argument

Cause: An extra argument was provided for a quantize value. Some quantize values accept no arguments, while others accept a single argument.

Action: Provide an argument only for quantize values that accept an argument.

IMG-00580: specified format does not support output

Cause: The output format specified by fileFormat does support output.

Action: Change the specified fileFormat to one that supports output. Refer to the Oracle Multimedia documentation for a description of which formats support output.

IMG-00581: output format does not support the specified contentFormat

Cause: The specified contentFormat is not supported by the explicitly or implicitly specified output format.

Action: Refer to the Oracle Multimedia documentation for a description of which contentFormat values are supported for each output format.

IMG-00582: output format does not support the specified interleave

Cause: The specified interleave is not supported by the explicitly or implicitly specified output format.

Action: Refer to the Oracle Multimedia documentation for a description of which interleave values are supported for each output format.

IMG-00583: output format does not support the specified compressionFormat

Cause: The specified compressionFormat is not supported by the explicitly or implicitly specified output format.

Action: Refer to the Oracle Multimedia documentation for a description of which compressionFormat values are supported for each output format.

IMG-00584: output format does not support the specified compressionQuality

Cause: The specified compressionQuality is not supported by the explicitly or implicitly specified output format.

Action: Refer to the Oracle Multimedia documentation for a description of which compressionQuality values are supported for each output format.

IMG-00585: output format does not support the specified channelOrder

Cause: The specified channelOrder is not supported by the explicitly or implicitly specified output format.

Action: Refer to the Oracle Multimedia documentation for a description of which channelOrder values are supported for each output format.

IMG-00586: output format does not support the specified pixelOrder

Cause: The specified pixelOrder is not supported by the explicitly or implicitly specified output format.

Action: Refer to the Oracle Multimedia documentation for a description of which pixelOrder values are supported for each output format.

IMG-00587: output format does not support the specified scanlineOrder

Cause: The specified scanlineOrder is not supported by the explicitly or implicitly specified output format.

Action: Refer to the Oracle Multimedia documentation for a description of which scanlineOrder values are supported for each output format.

IMG-00599: internal error

Cause: An internal error has occurred.

Action: Contact Oracle Support Services.

IMG-00601: out of memory while copying image

Cause: Operating system process memory has been exhausted while copying the image.

Action: See the database administrator or operating system administrator to increase process memory quota.

IMG-00602: unable to access image data

Cause: An error occurred while reading or writing image data.

Action: Ensure that the source image can be read from and the destination can be written to.

IMG-00603: unable to access source image data

Cause: The source image SOURCE attribute is invalid.

Action: Ensure that the SOURCE attribute of the source image is populated with image data.

IMG-00604: unable to access destination image data

Cause: The destination image SOURCE attribute is invalid.

Action: Ensure that the SOURCE attribute of the destination image is populated with image data.

IMG-00606: unable to access image data

Cause: An attempt was made to access an invalid image.

Action: Ensure that the SOURCE attribute of the image is populated with image data.

IMG-00607: unable to write to destination image

Cause: The destination image SOURCE attribute is invalid.

Action: Ensure that the SOURCE attribute of the destination image is initialized correctly and that you have sufficient tablespace.

IMG-00609: unable to read image stored in a BFILE

Cause: The image stored in a BFILE cannot be opened for reading.

Action: Ensure that the access privileges of the image file and the image file's directory allow read access.

IMG-00611: unable to access the BLOB for reading

Cause: The BLOB could not be opened for reading.

Action: Contact Oracle Support Services.

IMG-00612: unable to open export destination file

Cause: The file could not be created or opened.

Action: Check that the file does not refer to an existing directory. Check that the file is not locked by another application.

IMG-00613: export destination access denied

Cause: Permission to write to destination file was denied.

Action: Refer to the Oracle Multimedia documentation for information on granting privileges for the export() method.

IMG-00614: I/O error during export

Cause: The export operation failed because of an I/O error.

Action: Check OS logs and contact Oracle Support Services.

IMG-00701: unable to set the properties of an empty image

Cause: There is no data in the image object.

Action: Refer to the Oracle Multimedia documentation for information on how to populate image data into the image object.

IMG-00702: unable to initialize image processing environment

Cause: The image processing external procedure initialization process failed.

Action: Contact Oracle Support Services.

IMG-00703: unable to read image data

Cause: There is no image data in the image object.

Action: Refer to the Oracle Multimedia documentation for information on how to populate image data into the image object.

IMG-00704: unable to read image data

Cause: There is no image data in the image object.

Action: Refer to the Oracle Multimedia documentation for information on how to populate image data into the image object.

IMG-00705: unsupported or corrupted input format

Cause: This is an internal error.

Action: Contact Oracle Support Services.

IMG-00706: unsupported or corrupted output format

Cause: This is an internal error.

Action: Contact Oracle Support Services.

IMG-00707: unable to access image data

Cause: An error occurred while reading or writing image data.

Action: Contact your system administrator.

IMG-00710: unable to write to destination image

Cause: The destination image is invalid.

Action: Ensure that the SOURCE attribute of the destination image is initialized and that you have sufficient tablespace.

IMG-00711: unable to set properties of destination image

Cause: This is an internal error.

Action: Contact Oracle Support Services.

IMG-00712: unable to write to destination image

Cause: The destination image is invalid.

Action: Ensure that the SOURCE attribute of the destination image is initialized and that you have sufficient tablespace. Ensure the row containing the destination image has been locked (this does not apply to temporary BLOBs).

IMG-00713: unsupported destination image format

Cause: A request was made to convert an image to a format that is not supported.

Action: Refer to the Oracle Multimedia Documentation for supported formats.

IMG-00714: internal error

Cause: This is an internal error.

Action: Contact Oracle Support Services.

IMG-00715: unable to open image stored in a BFILE

Cause: The image stored in a BFILE could not be opened for reading.

Action: Ensure that the access privileges of the image file and the image file's directory allow read access.

IMG-00716: source image format does not support process options

Cause: A request was made to apply a processing option not supported by the source image format.

Action: Refer to the Oracle Multimedia Documentation for a discussion of supported processing options.

IMG-00717: destination image format does not support process options

Cause: A request was made to apply a processing option not supported by the destination image format.

Action: Refer to the Oracle Multimedia Documentation for a discussion of supported processing options.

IMG-00718: the same Temporary LOB cannot be used as both source and destination

Cause: A call was made to processCopy with the same Temporary LOB being specified as both the source and destination.

Action: Specify a different LOB for parameter "dest".

IMG-00719: image processing internal error

Cause: This is an internal error.

Action: Contact Oracle Support Services.

IMG-00720: image processing internal error

Cause: This is an internal error.

Action: Contact Oracle Support Services.

**IMG-00721: unable to find source plug-in package
ORDPLUGINS.ORDX_string_SOURCE**

Cause: Custom source plug-in for user-specified source type was not found.

Action: Ensure correct source type is specified or proper custom source plug-in package is installed.

IMG-00722: incorrect value of bitsAllocated, bitsStored or highBit for output Dicom image

Cause: incorrect value of bitsAllocated, bitsStored or highBit for output Dicom image.

Action: Ensure correct value of bitsAllocated, bitsStored or highBit for output Dicom image.

IMG-00723: missing value in SHARPEN operation

Cause: An incorrect number of values was used to specify the sharpen parameters.

Action: Use one integer value to specify the kernel type and one float value to specify the gain factor.

IMG-00724: extra value in SHARPEN operation

Cause: An incorrect number of values was used to specify the sharpen parameters.

Action: Use one integer value to specify the kernel type and one float value to specify the gain factor.

IMG-00725: output image will be empty

Cause: The processing commands resulted in an empty output image.

Action: Ensure the resulting output image will not be empty.

IMG-00726: invalid value for the AVI framerate

Cause: An invalid value was used to specify the AVI framerate parameter.

Action: Use a floating-point value to specify the AVI framerate parameter.

IMG-00727: invalid value for the AVI frametime

Cause: An invalid value was used to specify the AVI frametime parameter.

Action: Use a floating-point value to specify the AVI frametime parameter.

IMG-00728: multiple incompatible AVI frame parameters found

Cause: Multiple incompatible AVI frame parameters were found.

Action: Use only one AVI frame parameter.

IMG-00729: output format does not support the specified frame parameters

Cause: The specified frame parameter is not supported by the explicitly or implicitly specified output format.

Action: Specify AVI as the output format in the process command string.

IMG-00730: unable to process empty image

Cause: There is no data in the input image object.

Action: Refer to the Oracle Multimedia documentation for information on how to put image data into the image object.

IMG-00731: specified page could be found in input image

Cause: The specified page does not exist in the input image.

Action: Restrict the value of the page parameter to values specifying pages that exist within the input image object.

IMG-00732: specified inputChannels could not be found in input image

Cause: The specified inputChannel parameter does not exist in the input image.

Action: Restrict the value of the inputChannels parameter to values specifying channels that exist within the input image object.

IMG-00733: invalid watermark property setting

Cause: The specified watermark property setting is not supported by Oracle Multimedia.

Action: See the Oracle Multimedia documentation for a description of valid watermark property settings.

IMG-00734: invalid deflateLevel value

Cause: The specified value for the deflateLevel parameter was not supported by Oracle Multimedia.

Action: See the Oracle Multimedia documentation for a description of the valid values for the deflateLevel parameter.

IMG-00735: incorrect transparencyFillColor values

Cause: The specified value for the transparencyFillColor parameter was not supported by Oracle Multimedia.

Action: See the Oracle Multimedia documentation for a description of the valid values for the transparencyFillColor parameter.

IMG-00800: internal error while parsing attribute string

Cause: An internal error occurred while parsing the attribute string containing the weights of the attributes.

Action: Check the command passed to the function. Refer to the Oracle Multimedia documentation for a description of the correct usage and syntax for the attributes string for image matching. If you are certain that your command is correct, then contact Oracle Support Services.

IMG-00801: cannot extract height and width

Cause: Height and width are not set in the image object.

Action: Set the properties of the image object by calling `setProperties` and then `generateSignature`.

IMG-00802: empty or null attribute string

Cause: An empty or null attributes string was passed to the image matching operators.

Action: Refer to the Oracle Multimedia documentation for a description of the correct usage and syntax of the attributes string.

IMG-00803: invalid attribute value

Cause: An invalid value was found while parsing the attribute string for the image matching operators.

Action: Refer to the Oracle Multimedia documentation for a description of the correct usage and syntax for the attributes string. The weight values should be between 0.0 and 1.0.

IMG-00804: Syntax error in attribute string

Cause: A syntax error was found while parsing the attribute string for the image matching operators.

Action: Refer to the Oracle Multimedia documentation for a description of the correct usage and syntax of the attributes string.

IMG-00805: SIGNATURE data has been corrupted or is invalid

Cause: The data in the signature is not a valid signature.

Action: Re-create the signature using the `generateSignature` method.

IMG-00806: invalid input image

Cause: The image data is either corrupt or is in an unsupported format.

Action: Repopulate the image object, set properties of the image, and generate the signature.

IMG-00807: no weights specified in weight string

Cause: All weights passed were zero. At least one attribute must be weighted.

Action: Specify a non-zero weight for at least one attribute

IMG-00808: unable to read an empty image

Cause: There is no data in the image object.

Action: Refer to the Oracle Multimedia documentation for information on how to populate the image object with image data.

IMG-00809: usage of IMGSimilar is incorrect

Cause: Syntax error while using IMGSimilar

Action: Refer to the Oracle Multimedia documentation for information on how to use the IMGSimilar operator. Check whether the value returned by IMGSimilar is compared to the value 1.

IMG-00810: boundary queue initialization failed

Cause: Operating system process memory has been exhausted while initializing the boundary queue.

Action: See the database administrator or operating system administrator to increase process memory quota.

IMG-00811: fail queue initialization failed

Cause: Operating system process memory has been exhausted while initializin the fail queue.

Action: See the database administrator or operating system administrator to increase process memory quota.

IMG-00812: merged area queue initialization failed

Cause: Operating system process memory has been exhausted while initializing the merged area queue.

Action: See the database administrator or operating system administrator to increase process memory quota.

IMG-00813: boundary queue free failed

Cause: An internal error has occurred.

Action: Contact Oracle Support Services with the error number.

IMG-00814: fail queue free failed

Cause: An internal error has occurred.

Action: Contact Oracle Support Services with the error number.

IMG-00815: merged area queue free failed

Cause: An internal error has occurred.

Action: Contact Oracle Support Services with the error number.

IMG-00820: area 0 queue clear failed

Cause: An internal error has occurred.

Action: Contact Oracle Support Services with the error number.

IMG-00821: area N queue clear failed

Cause: An internal error has occurred.

Action: Contact Oracle Support Services with the error number.

IMG-00822: area queue reset failed

Cause: An internal error has occurred.

Action: Contact Oracle Support Services with the error number.

IMG-00823: boundary queue pop failed

Cause: An internal error has occurred.

Action: Contact Oracle Support Services with the error number.

IMG-00824: fail queue pop failed

Cause: An internal error has occurred.

Action: Contact Oracle Support Services with the error number.

IMG-00825: merged area queue pop failed

Cause: An internal error has occurred.

Action: Contact Oracle Support Services with the error number.

IMG-00830: boundary queue is full

Cause: An internal error has occurred.

Action: Contact Oracle Support Services with the error number and the image causing this problem.

IMG-00831: boundary queue size exceeds expected size

Cause: An internal error has occurred.

Action: Contact Oracle Support Services with the error number and the image causing this problem.

IMG-00832: fail queue is full

Cause: An internal error has occurred.

Action: Contact Oracle Support Services with the error number and the image causing this problem.

IMG-00833: boundary queue size exceeds expected size

Cause: An internal error has occurred.

Action: Contact Oracle Support Services with the error number and the image causing this problem.

IMG-00834: merged area queue is full

Cause: An internal error has occurred.

Action: Contact Oracle Support Services with the error number and the image causing this problem.

IMG-00835: merged area queue size exceeds expected size

Cause: An internal error has occurred.

Action: Contact Oracle Support Services with the error number and the image causing this problem.

IMG-00836: area queue merge failed

Cause: An internal error has occurred.

Action: Contact Oracle Support Services with the error number and the image causing this problem.

IMG-00840: image structure allocation failed

Cause: Operating system process memory has been exhausted while initializing the image structure.

Action: See the database administrator or operating system administrator to increase process memory quota.

IMG-00841: image data allocation failed

Cause: Operating system process memory has been exhausted while initializing the image data.

Action: See the database administrator or operating system administrator to increase process memory quota.

IMG-00842: image index allocation failed

Cause: Operating system process memory has been exhausted while initializing the image index.

Action: See the database administrator or operating system administrator to increase process memory quota.

IMG-00843: internal image structure allocation failed

Cause: Operating system process memory has been exhausted while initializing the internal image structure.

Action: See the database administrator or operating system administrator to increase process memory quota.

IMG-00844: internal image data allocation failed

Cause: Operating system process memory has been exhausted while initializing the internal image data.

Action: See the database administrator or operating system administrator to increase process memory quota.

IMG-00845: internal image index allocation failed

Cause: Operating system process memory has been exhausted while initializing the internal image index.

Action: See the database administrator or operating system administrator to increase process memory quota.

IMG-00846: adjacency matrix allocation failed

Cause: Operating system process memory has been exhausted while initializing the adjacency matrix.

Action: See the database administrator or operating system administrator to increase process memory quota.

IMG-00847: area list allocation failed

Cause: Operating system process memory has been exhausted while initializing the area list.

Action: See the database administrator or operating system administrator to increase process memory quota.

IMG-00850: image structure free failed

Cause: An internal error has occurred.

Action: Contact Oracle Support Services with the error number.

IMG-00851: image data free failed

Cause: An internal error has occurred.

Action: Contact Oracle Support Services with the error number.

IMG-00852: image index free failed

Cause: An internal error has occurred.

Action: Contact Oracle Support Services with the error number.

IMG-00853: internal image structure free failed

Cause: An internal error has occurred.

Action: Contact Oracle Support Services with the error number.

IMG-00854: internal image data free failed

Cause: An internal error has occurred.

Action: Contact Oracle Support Services with the error number.

IMG-00855: internal image index free failed

Cause: An internal error has occurred.

Action: Contact Oracle Support Services with the error number.

IMG-00856: adjacency matrix free failed

Cause: An internal error has occurred.

Action: Contact Oracle Support Services with the error number.

IMG-00857: area list free failed

Cause: An internal error has occurred.

Action: Contact Oracle Support Services with the error number.

IMG-00860: assert failure, number of region exceeds allocated

Cause: An internal error has occurred.

Action: Contact Oracle Support Services with the error number and the image causing this problem.

IMG-00861: assert failure, inconsistency in area merge operation

Cause: An internal error has occurred.

Action: Contact Oracle Support Services with the error number and the image causing this problem.

IMG-00862: assert failure, inconsistency in merged area labels

Cause: An internal error has occurred.

Action: Contact Oracle Support Services with the error number and the image causing this problem.

IMG-00870: unsupported aspect ratio or image size

Cause: Signature generation was attempted on an image smaller than the supported size.

Action: Try scaling the image up to have a larger height and width, the suggested size is greater than 21 pixels each. If signature generation still fails, contact Oracle Support Services with the error number and the image causing this problem.

IMG-00871: unexpected number of seeds

Cause: An internal error has occurred.

Action: Contact Oracle Support Services with the error number and the image causing this problem.

IMG-00872: unsupported image model

Cause: Signature generation was attempted on an image with an image model that Oracle Multimedia is unable to support.

Action: Try scaling the image down. If signature generation still fails, contact Oracle Support Services with the error number and the image causing this problem.

IMG-00899: signature cannot be generated

Cause: generateSignature could not generate the signature.

Action: Verify that the input image is a format supported by Oracle Multimedia.

IMG-00901: VIR signature version mismatch

Cause: Two signatures to be compared have different versions.

Action: Recompute signatures on the same platform and repeat signature comparison.

IMG-00902: VIR signature free failed

Cause: An internal error has occurred.

Action: Contact Oracle Support Services.

IMG-00910: allocation of basic data structure failed

Cause: Operating system process memory has been exhausted while copying the image.

Action: See the database administrator or operating system administrator to increase process memory quota.

IMG-00911: free basic data structure failed

Cause: Operating system process memory has been exhausted while copying the image.

Action: Contact Oracle Support Services.

IMG-00921: threshold out of range

Cause: Threshold is not between 0 and 100

Action: Use a threshold between 0 and 100 and retry query.

IMG-00922: location specified without feature

Cause: only location was specified.

Action: Specify at least one other parameter (color, texture or shape) along with location. Refer to the Oracle Multimedia documentation for more details.

IMG-00923: signature is empty

Cause: Signature has not been generated.

Action: Generate the signature for the image by calling the generateSignature method.

IMG-00924: Incorrect parameter specification during CREATE INDEX

Cause: There is a spelling error, or duplicate parameter specification, or incorrect specification of parameters while creating an index of type ORDIMAGEINDEX.

Action: Refer to the Oracle Multimedia documentation for correct specification of CREATE INDEX parameters.

IMG-00925: unable to write to the ORDIImageSignature object

Cause: The signature object was not valid and therefore the write operation failed. This problem is commonly caused by an attempt to invoke the generateSignature method on an uninitialized ORDIImageSignature object.

Action: Ensure that the ORDIImageSignature object has been initialized and inserted into a table. Also ensure that the row containing the signature object is locked. (The two previous actions do not apply to signature objects created using temporary BLOBs). Ensure that there is sufficient tablespace to contain the signature.

IMG-00926: tablespace specified during CREATE INDEX is not valid

Cause: A tablespace specified in the parameter string of a CREATE INDEX operation did not exist or the current user did not have sufficient privileges on the tablespace.

Action: Create the tablespace, grant appropriate privileges on the tablespace to the current user, or choose a different tablespace.

IMG-01000: unsupported option string

Cause: The function was invoked with an invalid option string.

Action: Ensure that correct option string is passed to the PL/SQL function. Refer to the Oracle Multimedia documentation for more information.

IMG-01001: not a DICOM object

Cause: The input was not a valid DICOM standalone object.

Action: Use an object that conforms to the DICOM standard. Refer to the Oracle Multimedia documentation for more information.

IMG-01002: unsupported DICOM version

Cause: The object header could not be parsed, possibly because the object header did not conform to the DICOM standard release 2003.

Action: Use an object that conforms to the DICOM standard release 2003. Refer to the Oracle Multimedia documentation for more information.

IMG-01003: unsupported DICOM object type

Cause: The category of DICOM objects is not supported by Oracle Multimedia.

Action: Use a DICOM image is supported by Oracle Multimedia. Oracle Multimedia supports image types defined in the DICOM standard release 2003. Refer to the Oracle Multimedia documentation for more details.

IMG-01004: input DICOM object is not an image

Cause: The DICOM object was not a DICOM image. DICOM object types such as structured reporting are not allowed by this function.

Action: Invoke this function with a DICOM image. Refer to the Oracle Multimedia documentation for more details.

IMG-01005: unsupported DICOM transfer syntax

Cause: The operation failed because the transfer syntax in the DICOM object, which describes the binary encoding of the DICOM object, was not supported by Oracle Multimedia.

Action: Use a DICOM object with a transfer syntax supported by Oracle Multimedia. Refer to the Oracle Multimedia documentation for more details.

IMG-01006: DICOM object cannot be parsed

Cause: The DICOM object could not be parsed by Oracle Multimedia, possibly due to an incorrect format or corrupted object.

Action: Verify that the DICOM object is not corrupted. If the DICOM object is valid, contact Oracle Support Services.

IMG-02001: 2FF01 - incorrect image format

Cause: There was a SQL/MM Still Image exception. Either the supplied image BLOB format did not match the image format or the image format is unsupported.

Action: For supported image formats, specify an input BLOB that has the same format as the image. For unsupported image formats, this method is not supported. Refer to the Oracle Multimedia documentation for more information.

IMG-02002: 2FF02 - incorrect average color feature specification

Cause: There was a SQL/MM Still Image exception. The specified average color value was not a valid SI_Color value.

Action: Specify an average color value that is not null and contains valid SI_Color values. SI_Color attribute values must be integers from 0 to 255. Refer to the Oracle Multimedia documentation for more information on constructing valid SI_Color objects.

IMG-02003: 2FF03 - incorrect color histogram feature specification

Cause: There was a SQL/MM Still Image exception. This exception was caused by one of the following. - The specified color value was null or invalid. - The specified frequency value was null or invalid. - The input color and frequency arrays were not equal in size. - The SI_ColorList array attribute had reached the maximum size.

Action: Ensure that the following are true(as applicable to your case): - The color and frequency values are not null. - The SI_Color attribute values are integers from 0 to 255. - The frequency value is a double precision number from 0 to 100. - The color and frequency arrays are equal in size and the size of the arrays is less than the SI_MaxHistogramLength value listed in the SI_VALUES view in the SI_INFORMTN_SCHEMA. Refer to the Oracle Multimedia documentation for more information on constructing SI_ColorHistogram objects.

IMG-02004: 2FF04 - incorrect feature list specification

Cause: There was a SQL/MM Still Image exception. Either the specified feature values were invalid or the specified feature weights were invalid.

Action: Check the values of feature and featureweight pairs. For a non null feature value, the corresponding feature weight value must be a double precision number greater than 0.0. Refer to the Oracle Multimedia documentation for more information on the SI_FeatureList object type and its methods.

IMG-02005: 2FF05 - incorrect color specification

Cause: There was a SQL/MM Still Image exception. The specified red/green/blue value was null or invalid.

Action: Specify red, green and blue values as integers from 0 to 255.

IMG-02006: 2FF06 - average color feature cannot be determined

Cause: There was a SQL/MM Still Image exception. Either the specified image was null, the image data in the specified image was null, or the average color feature was not supported by the specified image format

Action: Specify an image with non null image data and a supported format. Refer to the SI_INFORMTN_SCHEMA views and the Oracle Multimedia documentation for a list of supported image formats and image features.

IMG-02007: 2FF07 - positional color feature cannot be determined

Cause: There was a SQL/MM Still Image exception. Either the specified image was null, the image data in the specified image was null, or the positional color feature was not supported by the specified image format.

Action: Specify an image with non null image data and a supported format. Refer to the SI_INFORMTN_SCHEMA views and the Oracle Multimedia documentation for a list of supported image features and formats.

IMG-02008: 2FF08 - color histogram feature cannot be determined

Cause: There was a SQL/MM Still Image exception. Either the specified image was null, the image data in the specified image was null, or the color histogram feature was not supported by the specified image format.

Action: Specify an image with non null image data and a supported format. Refer to the SI_INFORMTN_SCHEMA views and the Oracle Multimedia documentation for a list of supported image features and formats.

IMG-02009: 2FF09 - texture feature cannot be determined

Cause: There was a SQL/MM Still Image exception. Either the specified image was null, the image data in the specified image was null, or the texture feature was not supported by the specified image format.

Action: Specify an image with non null image data and a supported format. Refer to the SI_INFORMTN_SCHEMA views and the Oracle Multimedia documentation for a list of supported image features and formats.

IMG-02010: 2FF10 - illegal image format specification

Cause: There was a SQL/MM Still Image exception. The specified format name was null or invalid.

Action: Specify a format name that is not null. For supported image formats, specify a format name that matches the image BLOB format. For unsupported image formats, specify a format name that is not listed as supported image format. Refer to the SI_INFORMTN_SCHEMA views and the Oracle Multimedia documentation for a list of supported image formats.

IMG-02011: 2FF11 - unsupported image format conversion specified

Cause: There was a SQL/MM Still Image exception. Either the specified target format value was null, the specified image had a null format value, or the conversion from the specified image format to the specified target format was not supported.

Action: Specify an image with a supported image format and specify a target format value that is supported for conversion. Refer to the SI_INFORMTN_SCHEMA views and the Oracle Multimedia documentation for a list of supported image format conversions.

IMG-02012: 2FF12 - illegal specification for thumbnail generation

Cause: There was a SQL/MM Still Image exception. Either the specified image format did not support thumbnail generation, the specified thumbnail height or width was greater than the image height or width respectively, or the default thumbnail size 80 X 80 was greater than the image height or width respectively.

Action: Specify an image for which thumbnail generation is supported and specify thumbnail height and width values that are less than the image height and width

values. Refer to the `SI_INFORMTN_SCHEMA` views and the Oracle Multimedia documentation for a list of supported thumbnail formats.

IMG-02014: 2202D Data exception - Null image value

Cause: There was a SQL/MM Still Image exception. The function was invoked using a null image value.

Action: Specify an image whose image data is not null. Refer to the Oracle Multimedia documentation for more information on constructing `SI_StillImage` objects.

IMP-00000 to IMP-00402

IMP-00000: Import terminated unsuccessfully

Cause: Import encountered an Oracle error.

Action: Look up the accompanying Oracle message in the ORA message chapters of this manual, and take appropriate action.

IMP-00001: respond with either *string*, *string*, RETURN or '!' to quit

Cause: An invalid response was entered.

Action: Enter any of the responses shown in the message.

IMP-00002: failed to open *string* for read

Cause: Import failed to open the export file for reading. This message is usually followed by a device message from the operating system.

Action: Take appropriate action to restore the device.

IMP-00003: ORACLE error *number* encountered

Cause: Import encountered the referenced Oracle error.

Action: Look up the Oracle message in the ORA message chapters of this manual, and take appropriate action.

IMP-00004: invalid username or password

Cause: An invalid username or password was specified.

Action: Retry with a valid username and password.

IMP-00005: all allowable logon attempts failed

Cause: An attempt was repeatedly made to log on with an invalid username or password.

Action: Retry with valid username and password.

IMP-00006: failed to allocate memory of size *number*

Cause: Import failed to allocate the necessary memory.

Action: Decrease the import buffer size so that less memory is required, or increase the runtime memory size for Import.

IMP-00007: must be a DBA to import objects to another user's account

Cause: The privileges needed to import into another user's account do not exist. Only a database administrator can import into another user's account.

Action: Ask the database administrator to do the import.

IMP-00008: unrecognized statement in the export file: \n *string*

Cause: Import did not recognize a statement in the export file. Either the export file was corrupted, or an Import internal error has occurred.

Action: If the export file was corrupted, retry with a new export file. Otherwise, report this as an Import internal error and submit the export file to customer support.

IMP-00009: abnormal end of export file

Cause: The export file is probably from an aborted Export session.

Action: If so, retry the export and import. Otherwise, report this as an Import bug and submit the export file that caused this error to customer support.

IMP-00010: not a valid export file, header failed verification

Cause: Either the file was not generated by Export or it was corrupted.

Action: If the file was indeed generated by Export, report this an Import bug and submit the export file to customer support.

IMP-00011: formatted table data not currently supported

Cause: You tried to import an export file that contains formatted table data. Import only supports export files containing binary table data. wher

Action: Retry using an export file that contains only binary table data.

IMP-00012: invalid export mode (*character*) in header

Cause: The Export mode specified in the export file header is invalid.

Action: Check the export file to see if it was corrupted. If it was not, report this as an Import bug and submit the export file to customer support.

IMP-00013: only a DBA can import a file exported by another DBA

Cause: The privileges needed to Import an export file generated by a database administrator do not exist. Only a database administrator can import such files.

Action: Ask the database administrator to do the import.

IMP-00014: option "*string*" is needed, but not present in database

Cause: The command entered requires the specified option. Either that option is not installed, or the row describing the option is missing from table V\$OPTION

Action: Reinstall Oracle with the option specified by the message.

IMP-00015: following statement failed because the object already exists:

Cause: Import failed to create an object because it already exists.

Action: Specify IGNORE=Y to ignore such errors and import rows even when tables are not created because they already exist.

IMP-00016: required character set conversion (type *number to number*) not supported

Cause: Import could not convert the character format of the export file into the native character format.

Action: Change the user character set by setting the NLS_LANG environment variable to match the character set of the export file.

IMP-00017: following statement failed with ORACLE error *number*:

Cause: Import failed to execute the statement from the export file because of an Oracle error.

Action: Look up the accompanying Oracle message in the ORA message chapters of this manual and take appropriate action.

IMP-00018: partial import of previous table completed: *number* rows imported

Cause: A table was only partially imported because of an Oracle error.

Action: Look up the accompanying Oracle message in the ORA message chapters of this manual and take appropriate action.

IMP-00019: row rejected due to ORACLE error *number*

Cause: Import encountered the referenced Oracle error while trying to import a row.

Action: Look up the accompanying Oracle message in the ORA message chapters of this manual and take appropriate action.

IMP-00020: long column too large for column buffer size (*number*)

Cause: The column buffer is too small. This usually occurs when importing LONG data.

Action: Increase the insert buffer size 10,000 bytes at a time (for example). Use this step-by-step approach because a buffer size that is too large may cause a similar problem.

IMP-00021: INCTYPE parameter is obsolete

Cause: Import encountered the INCTYPE parameter when parsing Import options. Incremental Imports are no longer supported.

Action: Consult the Oracle Backup and Recovery guide. Import will attempt to continue.

IMP-00022: failed to process parameters, type 'IMP HELP=Y' for help

Cause: Invalid command-line parameters were specified.

Action: Check the online help screen for the set of valid parameters, then retry.

IMP-00023: Import views not installed, please notify your DBA

Cause: The necessary Import views were not installed.

Action: Ask your database administrator to install the required Import views.

IMP-00024: Only one mode (TABLES, FROMUSER, or FULL) can be specified

Cause: Parameters were specified that conflict with the import specification FULL=Y.

Action: Retry, making sure not to specify FULL=Y.

IMP-00025: for DBA export files, FROMUSER must be specified with TOUSER option

Cause: When importing a database administrator export file, you specified the TOUSER parameter but not the FROMUSER parameter.

Action: Specify the FROMUSER parameter so that Import knows which user's objects to import.

IMP-00027: failed to rollback partial import of previous table

Cause: Import encountered an Oracle error while trying to roll back a partial import.

Action: Look up the accompanying Oracle message in the ORA message chapters of this manual and take appropriate action. Then, log on to Oracle and check that the partial import was not committed.

IMP-00028: partial import of previous table rolled back: *number* rows rolled back

Cause: Import encountered an Oracle error while trying to import a table.

Action: Look up the accompanying Oracle message in the ORA message chapters of this manual and take appropriate action. Then, if necessary, re-import the table.

IMP-00029: cannot qualify table name by owner (*string*), use FROMUSER parameter

Cause: A table name was qualified with the name of its owner, as shown in the following example. This is not allowed. IMP SYSTEM/MANAGER TABLES=(SCOTT.EMP)

Action: Use the FROMUSER parameter to specify the table's owner, as shown in the following example: IMP SYSTEM/MANAGER FROMUSER=SCOTT TABLES=(EMP, DEPT)

IMP-00030: failed to create file *string* for write

Cause: Import was unable to create the specified file with write enabled.

Action: Check the file name and file system for the source of the error.

IMP-00031: Must specify FULL=Y or provide FROMUSER/TOUSER or TABLES arguments

Cause: The database administrator did not specify full or partial import.

Action: The database administrator must specify FROMUSER/TOUSER or table arguments if not a full import.

IMP-00032: SQL statement exceeded buffer length

Cause: The buffer was too small for the SQL statement being read.

Action: Rerun with a larger buffer. This can also be an indication of a corruption in the import datafile.

IMP-00033: Warning: Table "*string*" not found in export file

Cause: A table name was specified that does not exist in export file.

Action: Correct the table specification.

IMP-00034: Warning: FromUser "*string*" not found in export file

Cause: The user specified a FROMUSER name that does not exist in export file.

Action: Correct the FROMUSER specification.

IMP-00035: input file *string* must be on a disk

Cause: On some platforms, import can read files from tape. This message is displayed if the first file in an export file set was on disk and you specified a tape device for a second or subsequent file.

Action: Verify that you have specified the correct file name for the import file. Remember that all input files can be either on disk or all files can be on tape, but not mixed both tape and disk.

IMP-00036: Could not find environment character set

Cause: An environment character set was specified that was not recognized by the Import utility.

Action: Ensure that the spelling of the character set specified in the command line parameter CHARSET (for Release 6 only) or the environment variable NLS_LANG is correct.

IMP-00037: Character set marker unknown

Cause: The export file is corrupted.

Action: Try to obtain an uncorrupted version of the export file. If the export file is not corrupted, report this as an Import internal error and submit the export file to customer support.

IMP-00038: Could not convert to environment character set's handle

Cause: Internal error.

Action: Contact Worldwide Support.

IMP-00039: VOLSIZ does not match the value used for export: *string*

Cause: The value specified for VOLSIZ does not match the value specified during the creation of the export file.

Action: If you believe that the specified VOLSIZ value is correct, verify that you specified the correct file for import. If you specified the correct file but are unsure about the correct value, re-execute the import command but specify VOLSIZ=0.

IMP-00040: FILESIZE does not match the value used for export: *string*

Cause: The value specified for FILESIZE does not match the value specified during the creation of the export file.

Action: If you believe the specified FILESIZE value is correct, verify that you specified the correct file for import. If you specified the correct file but are unsure about the correct value, re-execute the import command but specify FILESIZE=0.

IMP-00041: Warning: object created with compilation warnings

Cause: The object in the SQL statement following this error was created with compilation errors. If this error occurred for a view, it is possible that the base table of the view was missing.

Action: This is a warning. The object may have to be recompiled before being used.

IMP-00042: CHARSET used, but the export file has specific character set

Cause: The user requested that a specific character set be used to process an export file that has a specific embedded character set ID. The ID in the export file is accurate and should be used.

Action: Remove the CHARSET keyword from the command line.

IMP-00043: export file character set inconsistent

Cause: The character set of the export file and the environment character set (or the character set specified with the CHARSET keyword) are inconsistent. One character set is ASCII-based while the other is EBCDIC based.

Action: Specify the correct character set with the CHARSET keyword.

IMP-00044: unable to allocate enough memory for statement

Cause: Import was unable to allocate sufficient memory to read in the specified statement and execute it.

Action: Increase the allocation for database buffers, restart the instance, and reexecute the Import command.

IMP-00045: using VOLSIZ value from export file of *string*

Cause: Either you did not specify the VOLSIZ parameter in your IMPORT command, or you specified VOLSIZ=0 and the export was created with a non-zero value for VOLSIZ. Import will use the value specified in the export file.

Action: None required.

IMP-00046: using FILESIZE value from export file of *string*

Cause: Either you did not specify the FILESIZE parameter in your IMPORT command, or you specified FILESIZE=0 and the export file was created with a non-zero value for FILESIZE. Import will use the value specified in the export file.

Action: None required.

IMP-00047: unexpected file sequence number; expected *number* but found *number*

Cause: The header in the export file contains a sequence number that is used to track the order in which multiple export files are written. The first export file is assigned sequence number one, the second file is assigned sequence number two and so on. This message is displayed when a number other than the expected sequence number is found in the file header

Action: Execute the import command again, but specify the files in the order in which Export wrote them.

IMP-00048: mismatched file header

Cause: During verification of the 2nd or subsequent file in a multi-file export, Import found header fields in the file that did not match values in the first file.

Action: Check the names of the files created by Export and verify that you specified them correctly for the import operation.

IMP-00049: Unknown language specified in CHARSET

Cause: An unknown language was listed in the CHARSET option.

Action: Use a known character set.

IMP-00050: Dump file and log file cannot be identical

Cause: Identical names were given to the dump file and log file.

Action: Specify different names for the dump file and log file and retry the operation.

IMP-00051: Direct path exported dump file contains illegal column length

Cause: An invalid column length was encountered while processing column pieces."

Action: Check to make sure the export file is not corrupted, or else report this to Oracle Worldwide Support as an Import/Export internal bug and submit the export file.

IMP-00052: Warning: Unable to set event for freelist communication with server

Cause: An event could not be set for current the session.

Action: If Import fails, give the Import user ALTER SESSION PRIV and retry the operation.

IMP-00053: Import mode incompatible with Export dump file

Cause: The specified import option is incompatible with point-in-time- recovery dump file.

Action: Generate a proper dump file or use point-in-time-recovery import mode.

IMP-00054: must be connected 'AS SYSDBA' to do Point-in-time Recovery or Transportable Tablespace import

Cause: The user must log in 'as SYSDBA' to perform transportable tablespace imports or Point-In-Time Recovery imports.

Action: Ask your database administrator to perform the Transportable Tablespace import or the Tablespace Point-in-time Recovery import.

IMP-00055: Warning: partition or subpartition "*string*":"*string*" not found in export file

Cause: A partition or subpartition name was specified that does not exist in export file.

Action: Check to make sure the partition or subpartition name belongs to the table.

IMP-00056: multiple devices specified for tape input

Cause: You specified multiple file names when doing an import from a tape device. Import uses the same device for reading all tapes, regardless of the number of tape volumes required. For this reason, export will accept only one value for the FILE parameter when writing to tape.

Action: Reenter the IMPORT command, but specify only one tape device in the FILE parameter.

IMP-00057: Warning: Dump file may not contain data of all partitions of this table

Cause: The dump file used for this Table Import might not contain all of the data belonging to the exported table.

Action: Check to see if the export was done as intended, or try performing a Partition Import.

IMP-00059: Failure to initialize parameter manager

Cause: Parameter manager failed in initialization.

Action: Report this to Oracle Worldwide Support as an Import internal bug.

IMP-00060: Warning: Skipping table "*string*."*string*" because object type "*string*."*string*" does not exist or has different identifier

Cause: An object type needed by the table, either does not exist on the * target system or, if it does exist, it has a different object identifier.

Action: Create the object type on the target system with a valid * identifier.

IMP-00061: Warning: Object type "*string*."*string*" already exists with a different identifier

Cause: An object type cannot be created because it already exists on the * target system, but with a different identifier

Action: Drop the object type from the target system and retry the operation.

IMP-00062: Warning: The identifier on the dump file for object type "*string*."*string*" is invalid

Cause: The character string representing the object type's identifier * could not be converted to an object identifier.

Action: Internal error.

IMP-00063: Warning: Skipping table "string"."string" because object type "string"."string" cannot be created or has different identifier

Cause: An error occurred creating an object type that is used by the * table.

Action: Examine the import log to determine why the object type could not * be created. If the object type already existed, with a * different object identifier, then drop the object type and * retry the import.

IMP-00064: Definition of LOB was truncated by export

Cause: While producing the dump file, Export was unable to write the * entire contents of a LOB. Import is therefore unable to * reconstruct the contents of the LOB. The remainder of the * import of the current table will be skipped.

Action: Delete the offending row in the exported database and retry the * export.

IMP-00065: Import is unable to recreate lobes within objects.

Cause: An error occurred recreating a LOB within an imported object.

Action: Report this to Oracle Worldwide Support as an Import internal error.

IMP-00066: Missing NLS_CHARACTERSET in props\$

Cause: No value for NLS_CHARACTERSET in props\$.

Action: Contact Worldwide support.

IMP-00067: Could not convert to server character set's handle

Cause: Internal error.

Action: Contact Worldwide support.

IMP-00068: Could not find environment national character set

Cause: An environment national character set was specified that was not recognized by the Import utility.

Action: Ensure that the spelling of the national character set specified in the environment variable NLS_NCHAR is correct.

IMP-00069: Could not convert to environment national character set's handle

Cause: Internal error..

Action: Contact Worldwide support.

IMP-00070: Lob definitions in dump file are inconsistent with database.

Cause: The number of LOBS per row in the dump file is different than the * number of LOBS per row in the table being populated.

Action: Modify the table being imported so that it matches the column * attribute layout of the table that was exported.

IMP-00071: Object identifier of imported table mismatches object identifier of existing table

Cause: An attempt was made to import data into a table that was recreated under a different object identifier than the object identifier used for the exported object table. Under this situation, REF's to this table that are contained within the dump file will also be invalid.

Action: Drop the offending object table prior to import.

IMP-00072: Warning: The object table's object identifier is invalid.

Cause: The character string representing the table's object identifier could not be converted to an internal object identifier.

Action: Internal error.

IMP-00073: FILE locator "string" "string" is truncated to "string" "string" in server character set

Cause: The conversion of the specified directory and name strings for a file attribute or column from the export server's character set into the import server's character set exceeded the maximum string lengths allowed within FILE descriptors. The strings will be truncated to the maximum supported lengths.

Action: Rename the directory aliases and external filenames to match the truncated names in the specified FILE column or attribute.

IMP-00074: The constraints flagged by ALL_CONSTRAINTS.BAD will break in 2000 A.D.

Cause: Constraints exist in the data base that specify date values without fully specifying the year. These constraints could break in the year 2000 A.D.

Action: Query ALL_CONSTRAINTS and correct those constraints marked as bad.

IMP-00075: Warning: The nested table may contain partial rows or duplicate rows

Cause: An error occurred inserting data into an outer or inner nested table. If the error occurred in the outer table, rows are still inserted into the inner tables. If the error occurred in an inner table, data is still inserted into the outer table and other inner tables. This can result in duplicate inner table rows or partial logical rows.

Action: Examine the data in the tables. Delete the incorrect rows or drop the entire table and perform the import again.

IMP-00076: Missing NLS_NCHAR_CHARACTERSET in props\$

Cause: No value for NLS_NCHAR_CHARACTERSET in props\$.

Action: Contact Worldwide support.

IMP-00077: Could not convert to server national character set's handle

Cause: Internal error.

Action: Contact Worldwide support.

IMP-00078: Cannot translate FILE locator to "string" "string" in server character set

Cause: (1) The current export dump file was generated using Beta-2 of Oracle8.0 AND (2) there was a File that appeared as an attribute of an ADT within a table's column AND (3) the character set of the export server's database was different than the character set of the import server's database AND (4) when the filename or the aliasname of the File increased in size when it was translated to the character set of the import server. When all of these conditions are true, translation of the strings could yield corruption of the data in the column. Rather than proceeding with the translation, import will leave the character strings in the File in the old character set.

Action: After import completes, rename the directory aliases and external filenames to match the real names used for the target database.

IMP-00079: Warning: National character set data in this table may be incorrect

Cause: Due to a problem in 8.0.2 Export, national character data in NCHAR and NVARCHAR2 columns was incorrectly assumed to be in the export server's data base character set and was converted to the export client's data base character set. This

conversion would only be correct if the export server's data base character set was the same as the export server's national character set and the export client's data base character set was the same as the export client's national character set. All other combinations would likely be incorrect. This export dump file was generated by 8.0.2 Export and the export client and server character sets did not fit that criteria.

Action: Examine the national character data. If incorrect, update the data with correct data.

IMP-00080: Error during character conversion of long column or long command

Cause: During piecewise character conversion of the data in a long column or of a long command, a fatal conversion error occurred. Either character truncation occurred or an invalid character set handle was used.

Action: Retry the import with a different character set.

IMP-00081: attempt to free unallocated memory

Cause: An attempt was made to free memory that was not allocated.

Action: Contact Oracle Worldwide Support

IMP-00082: Error during conversion ROWID from string format to internal

Cause: An error occurred while attempting to convert a ROWID from an export dump file into an internal format.

Action: Report this to Oracle Worldwide Support as an Import internal error.

IMP-00083: dump file does not contain an incremental export

Cause: An incremental import was requested and the dump file specified for the import command is either a user or table export.

Action: Reissue the command import command but specify the name of a dump file containing an incremental export.

IMP-00084: attempt to mix incremental import with user or table import

Cause: An incremental import was requested along with the FROMUSER, TOUSER, or TABLE qualifier. An incremental import cannot be done if any of these other qualifiers are also specified.

Action: Determine whether you want to do an incremental import, full import, user import or table import and reissue the import command with the appropriate qualifiers.

IMP-00085: multiple input files specified for unbounded export file

Cause: You specified multiple file names for the FILE parameter when doing an import, but the header in the export file indicates that that the export operation could create only one file. Specifying multiple file names is valid for an import operation only if the export files were created by an export operation in which the user specified a non-zero value for the FILESIZE parameter.

Action: If you believe the export contains multiple files, verify that you have specified the correct files. If you believe the export should be in only one file then try the import operation again, but specify only one value for the FILE parameter.

IMP-00086: TOID "*string*" not found in export file

Cause: Import did not find the type identification specified in the TOID_NOVALIDATE parameter. The specified type identification does not exist in export file.

Action: Correct or omit the TOID_NOVALIDATE parameter.

IMP-00087: Problem with internal hash table of schema/table names

Cause: Most likely a problem with allocating memory for the hash table entries.

Action: Contact Oracle Worldwide Support

IMP-00088: Problem importing metadata for index *string*. Index creation will be skipped

Cause: Domain indexes import private metadata via anonymous PL/SQL blocks prior to the CREATE INDEX statement. The execution of one of these PL/SQL blocks failed. Because the metadata is considered an integral part of the index, the subsequent CREATE INDEX statement was skipped.

Action: Contact the developer of the index's implementation type. If this is an Oracle-supplied index (perhaps via a data cartridge), contact Oracle Worldwide Support.

IMP-00089: Fine grain policy "*string*" not recreated on table/view "*string*"

Cause: Import user fails to recreate fine grained policies of the table/view being imported. To recreate the policy, the user doing the import needs execute privilege on the package DBMS_RLS for access policies or DBMS_FGA for audit policies.

Action: Ask the database administrator to perform the export/import of this table/view.

IMP-00090: Unexpected DbmsJava error *number* at step *number* while creating *string*

Cause: The error was returned from a call to a DbmsJava procedure.

Action: Record the accompanying messages and report this as an Import internal error to customer support.

IMP-00091: Above error occurred on the following function and object: *string*. Remaining PL/SQL blocks for this object will be skipped.

Cause: An error occurred while executing a PL/SQL block that implements the DDL for the named function and procedural object. A procedural object is one whose DDL is implemented as stored procedures rather than as standard SQL statements.

Action: Contact Oracle Worldwide Support so they may determine the development group responsible for the package that failed.

IMP-00092: Java object "*string*".*string*" already exists, cannot be created

Cause: Import failed to create the Java source, class or resource object because it already exists.

Action: Drop the object type from the target system and retry the operation.

IMP-00093: Inconsistency between dumpfile constraint definition for table *string* with columns (*string*)

Cause: Import failed to locate a base table for a constraint that was defined in the dump file and statistics were not imported.

Action: Check to see if the table and constraint exist. If the table and constraint exist, then report this to Oracle Support Services as an Import internal error.

IMP-00094: Warning: The identifier on the dump file for object type "*string*".*string*" is invalid

Cause: The character string representing the object type's identifier * could not be converted.

Action: Contact Oracle Worldwide Support.

IMP-00095: Resumable parameters ignored -- current session not resumable

Cause: Current session is not resumable.

Action: Must specify RESUMABLE=Y to enable resumable session in order for the RESUMABLE_NAME and RESUMABLE_TIMEOUT parameters to take effect.

IMP-00096: Warning: Skipping table "*string*".*string*" because type synonym "*string*".*string*" cannot be created

Cause: An error occurred creating a synonym for a type that is used by the * table.

Action: Examine the import log to determine why the type synonym could * not be created. If the synonym already existed, but is not * needed, then drop the synonym and retry the import. If the * synonym is PUBLIC but the importer does not have the * CREATE PUBLIC SYNONYM system privilege, then the import must * be done by someone possessing that privilege, or the importer * must be granted the privilege.

IMP-00097: \nSTREAMS_CONFIGURATION=Y ignored, only valid with FULL=Y

Cause: STREAMS_CONFIGURATION=Y can only be used * when FULL=Y is present on the command line

Action: Remove conflicting command arguments

IMP-00098: INTERNAL ERROR: *string*

Cause: An INTERNAL error occurred.

Action: Contact Oracle Worldwide Support.

IMP-00099: Warning: The typeid in the dump file for object type "*string*".*string*" is invalid

Cause: The character string representing the object type's identifier * could not be converted.

Action: Contact Oracle Worldwide Support.

IMP-00400: Warning: Object type "*string*".*string*" already exists with a different typeid

Cause: An object type could not be created because it already existed on the * target system, but with a different typeid

Action: Drop the object type from the target system and retry the operation.

IMP-00401: dump file "*string*" may be an Data Pump export dump file

Cause: A dump file was specified for an import operation which appears to have been created using the Data Pump export utility. These dump files cannot be processed by the original import utility.

Action: Try using the Data Pump import utility to process this dump file.

IMP-00402: Invalid parameter "*string*" with data_only mode

Cause: Parameter provided along data_only is invalid.

Action: Remove the invalid parameter from command line.

JMS-00101 to JMS-00256

JMS-00101: Invalid delivery mode {0}

Cause: The delivery mode is not supported

Action: The valid delivery mode is `AQjmsConstants.PERSISTENT` or `AQjmsConstants.NON_PERSISTENT`

JMS-00102: Feature not supported {0}

Cause: This feature is not supported in the current release

Action: n/a

JMS-00104: Message Payload must be specified

Cause: The message payload was null

Action: Specify a non-null payload for the message

JMS-00105: Agent must be specified

Cause: `AQjmsAgent` object was null

Action: Specify a valid `AQjmsAgent` representing the remote subscriber

JMS-00106: Cannot have more than one open Session on a JMSConnection

Cause: There is already one open `jms` session on the connection Cannot have more than one open session on a connection

Action: Close the open session and then open a new one

JMS-00107: Operation not allowed on {0}

Cause: The specified operation is not allowed on this object

Action: n/a

JMS-00108: Messages of type {0} not allowed with Destinations containing payload of type {1}

Cause: There was a mismatch between the message type being used and the payload type specified for the destination

Action: Use the message type that maps to the payload specified for the queue table that contains this destination

JMS-00109: Class not found: {0}

Cause: The specified class was not found

Action: Make sure your `CLASSPATH` contains the class

JMS-00110: Property {0} not writeable

Cause: An attempt was made to update a read-only message header field or property

Action: n/a

JMS-00111: Connection must be specified

Cause: The connection object was null

Action: Specify a non-null jdbc connection

JMS-00112: Connection is invalid

Cause: The jdbc connection is invalid

Action: Specify a non-null oracle jdbc connection

JMS-00113: Connection is in stopped state

Cause: An attempt was made to receive messages on a connection that is in stopped state

Action: Start the connection

JMS-00114: Connection is closed

Cause: An attempt was made to use a Connection that has been closed

Action: Create a new connection

JMS-00115: Consumer is closed

Cause: An attempt was made to use a Consumer that has been closed

Action: Create a new Message Consumer

JMS-00116: Subscriber name must be specified

Cause: Subscriber name was null

Action: Specify a non-null subscription name

JMS-00117: Conversion failed - invalid property type

Cause: An error occurred while converting the property to the requested type

Action: Use the method corresponding to the property data type to retrieve it

JMS-00119: Invalid Property value

Cause: The property value specified is invalid

Action: Use an appropriate type of value for the property being set

JMS-00120: Dequeue failed

Cause: An error occurred while receiving the message

Action: See message inside the JMSEException and linked SQLException for more information

JMS-00121: DestinationProperty must be specified

Cause: A null AQjmsDestinationProperty was specified while creating a queue/topic

Action: Specify a non-null AQjmsDestinationProperty for the destination

JMS-00123: Interval must be at least {0} seconds

Cause: An invalid interval was specified

Action: Specify an interval value that is greater than or equal to 1 second

JMS-00124: Invalid Dequeue mode

Cause: Invalid dequeue mode was specified

Action: Valid Dequeue modes are AQConstants.DEQUEUE_BROWSE, AQConstants.DEQUEUE_REMOVE, AQConstants.DEQUEUE_LOCKED, AQConstants.DEQUEUE_REMOVE_NODATA

JMS-00125: Invalid Queue specified

Cause: An invalid Queue object was specified

Action: Specify a valid Queue handle

JMS-00126: Invalid Topic specified

Cause: An invalid Topic object was specified

Action: Specify a valid Topic handle

JMS-00127: Invalid Destination

Cause: An invalid destination object was specified

Action: Specify a valid destination (Queue/Topic) object

JMS-00128: Invalid Navigation mode

Cause: An invalid navigation mode was specified

Action: The valid navigation modes are

AQjmsConstants.NAVIGATION_FIRST_MESSAGE,

AQjmsConstants.NAVIGATION_NEXT_MESSAGE,

AQjmsConstants.NAVIGATION_NEXT_TRANSACTION

JMS-00129: Invalid Payload type

Cause: There was a mismatch between the message type being used and the payload type specified for the destination

Action: Use the message type that maps to the payload specified for the queue table that contains this destination. For ADT messages, use the appropriate CustomDatum/ORADData factory to create the message consumer

JMS-00130: JMS queue cannot be multi-consumer enabled

Cause: An attempt was made to get an AQ multi-consumer queue as a JMS queue

Action: JMS queues cannot be multi-consumer enabled

JMS-00131: Session is closed

Cause: An attempt was made to use a session that has been closed

Action: Open a new session

JMS-00132: Maximum number of properties (100) exceeded, message has {0} properties

Cause: Maximum number of properties (100), including provider-specific properties, for the message has been exceeded

Action: Reduce the number of user defined properties

JMS-00133: Message must be specified

Cause: Message specified was null

Action: Specify a non-null message

JMS-00134: Name must be specified

Cause: Queue or Queue table Name specified was null

Action: Specify a non-null name

JMS-00135: Driver {0} not supported

Cause: The specified driver is not supported

Action: Valid drivers are oci8 and thin. To use the kprb driver get the kprb connection using getDefaultConnection() and use the static createTopicConnection and createQueueConnection methods

JMS-00136: Payload factory can only be specified for destinations with ADT payloads

Cause: A CustomDatumFactory/ORADDataFactory was specified for consumers on destinations not containing ADT payloads

Action: This field must be set to null for destinations containing payloads of type SYS.AQ\$_JMS_TEXT_MESSAGE, SYS.AQ\$_JMS_BYTES_MESSAGE, SYS.AQ\$_JMS_MAP_MESSAGE, SYS.AQ\$_JMS_OBJECT_MESSAGE, SYS.AQ\$_JMS_STREAM_MESSAGE

JMS-00137: Payload factory must be specified for destinations with ADT payloads

Cause: CustomDatumFactory/ORADDataFactory was not specified for destinations containing ADT payloads

Action: For destinations containing ADT messages, a CustomDatumFactory/ORADDataFactory for a java class that maps to the SQL ADT type of the destination must be specified

JMS-00138: Producer is closed

Cause: An attempt was made to use a producer that has been closed

Action: Create a new Message Producer

JMS-00139: Property name must be specified

Cause: Property name was null

Action: Specify a non-null property name

JMS-00140: Invalid System property

Cause: Invalid system property name specified.

Action: Specify one of the valid JMS system properties

JMS-00142: JMS topic must be created in multi-consumer enabled queue tables

Cause: An attempt was made to create a JMS topic in a single-consumer queue table

Action: JMS topics can only be created in queue tables that are multi-consumer enabled

JMS-00143: Queue must be specified

Cause: Null queue was specified

Action: Specify a non-null queue

JMS-00144: JMS queue cannot be created in multi-consumer enabled queue tables

Cause: An attempt was made to create a JMS queue in a multi-consumer queue table

Action: JMS queues can only be created in queue tables that are not multi-consumer enabled

JMS-00145: Invalid recipient list

Cause: The recipient list specified was empty

Action: Specify a recipient list with at least one recipient

JMS-00146: Registration failed

Cause: An error occurred while registering the type in the type map

Action: n/a

JMS-00147: Invalid ReplyTo destination type,

Cause: The ReplyTo destination object is invalid

Action: The ReplyTo destination must be of type AQjmsAgent, or AQjmsDestination. If AQjmsAgent is used, its "name" must not be "JMSReplyTo" (which is considered a reserved name to be used for AQjmsDestination objects). If AQjmsDestination is used, it must be serializable into a string (and vice-versa).

JMS-00148: Property name size exceeded

Cause: The property name is greater than the maximum size allowed

Action: Specify a property name that is less than 100 characters

JMS-00149: Subscriber must be specified

Cause: Subscriber specified was null

Action: Specify a non-null subscriber

JMS-00150: Property not supported

Cause: An attempt was made to use a property that is not supported

Action: n/a

JMS-00151: Topics cannot be of type EXCEPTION

Cause: Topics cannot be of type AQjmsConstants.EXCEPTION

Action: Specify topics to be of type AQjmsConstants.NORMAL

JMS-00153: Invalid System property type

Cause: The type of the value specified does not match the type defined for the system property being set

Action: Use the correct type for the setting the system property

JMS-00154: Invalid value for sequence deviation

Cause: The sequence deviation is invalid

Action: Valid values are AQEnqueueOption.DEVIATION_BEFORE, AQEnqueueOption.DEVIATION_TOP

JMS-00155: AQ Exception {0}

Cause: An error occurred in the AQ java layer

Action: See the message inside the JMSEException and the linked exception for more information

JMS-00156: Invalid Class {0}

Cause: Class specified is invalid

Action: make sure your CLASSPATH has the specified class

JMS-00157: IO Exception {0}

Cause: IO exception

Action: See message is JMSEException for details

JMS-00158: SQL Exception {0}

Cause: SQL Exception

Action: See message inside linked SQLException for details

JMS-00159: Invalid selector {0}

Cause: The selector specified is either invalid or too long

Action: Check the syntax of the selector

JMS-00160: EOF Exception {0}

Cause: EOF exception occurred while reading the byte stream

Action: n/a

JMS-00161: MessageFormat Exception: {0}

Cause: An error occurred while converting the stream data to specified type

Action: check the type of data expected on the stream and use the appropriate read method

JMS-00162: Message not Readable

Cause: Message is in write-only mode

Action: Call the reset method to make the message readable

JMS-00163: Message not Writeable

Cause: Message is in read-only mode

Action: Use the clearBody method to make the message writeable

JMS-00164: No such element

Cause: Element with specified name was not found in the map message

Action: n/a

JMS-00165: Maximum size of property value exceeded

Cause: The property value exceeded the maximum length allowed

Action: Value for JMS defined properties can have a maximum length of 100, value for User defined properties can have a maximum length of 2000

JMS-00166: Topic must be specified

Cause: Topic specified was null

Action: Specify a non-null topic

JMS-00167: Payload factory or Sql_data_class must be specified

Cause: Payload factory or Sql_data_class not specified for queues containing object payloads

Action: Specify a CustomDatumFactory/ORADDataFactory or the SQLData class of the java object that maps to the ADT type defined for the queue.

JMS-00168: Cannot specify both payload factory and sql_data_class

Cause: Both CustomDatumFactory/ORADDataFactory and SQLData class were specified during dequeue

Action: Specify either the CustomDatumFactory/ORADDataFactory or the SQLData class of the java object that maps to the ADT type defined for the queue.

JMS-00169: Sql_data_class cannot be null

Cause: SQLData class specified is null

Action: Specify the SQLData class that maps to the ADT type defined for the queue

JMS-00171: Message is not defined to contain {0}

Cause: Invalid payload type in message

Action: Check if the queue is defined to contain RAW or OBJECT payloads and use the appropriate payload type in the message

JMS-00172: More than one queue table matches query {0}

Cause: More than one queue table matches the query

Action: Specify both owner and queue table name

JMS-00173: Queue Table {0} not found

Cause: The specified queue table was not found

Action: Specify a valid queue table

JMS-00174: Class must be specified for queues with object payloads\n Use dequeue(deq_option, payload_fact) or dequeue(deq_option, sql_data_cl)

Cause: This dequeue method cannot be used to dequeue from queues with OBJECT payloads

Action: use the either dequeue(deq_option, payload_fact) or dequeue(deq_option, sql_data_cl)

JMS-00175: DequeueOption must be specified

Cause: DequeueOption specified is null

Action: Specify a non-null dequeue option

JMS-00176: EnqueueOption must be specified

Cause: EnqueueOption specified is null

Action: Specify a non-null enqueue option

JMS-00177: Invalid payload type: Use dequeue(deq_option) for raw payload queues

Cause: This method cannot be used to dequeue from queues with RAW payload

Action: use the dequeue(deq_option) method

JMS-00178: Invalid Queue name - {0}

Cause: The queue name specified is null or invalid

Action: Specify a queue name that is not null. The queue name must not be qualified with the schema name. The schema name must be specified as the value of the owner parameter

JMS-00179: Invalid Queue Table name - {0}

Cause: The queue table name specified is null or invalid

Action: Specify a queue table name that is not null. The queue table name must not be qualified with the schema name. The schema name must be specified as the value of the owner parameter

JMS-00180: Invalid Queue Type

Cause: Queue type is invalid

Action: Valid types are AQConstants.NORMAL or AQConstants.EXCEPTION

JMS-00181: Invalid value for wait_time

Cause: Invalid value for wait type

Action: Wait time can be `AQDequeueOption.WAIT_FOREVER`, `AQDequeueOption.WAIT_NONE` or any value greater than 0

JMS-00182: More than one queue matches query

Cause: More than one queue matches query

Action: Specify both the owner and name of the queue

JMS-00183: No AQ driver registered

Cause: No `AQDriver` registered

Action: Make sure that the AQ java driver is registered. Use `Class.forName("oracle.AQ.AQOracleDriver")`

JMS-00184: Queue object is invalid

Cause: The queue object is invalid

Action: The underlying JDBC connection may have been closed. Get the queue handle again

JMS-00185: QueueProperty must be specified

Cause: `AQQueueProperty` specified is null

Action: Specify a non-null `AQQueueProperty`

JMS-00186: QueueTableProperty must be specified

Cause: `QueueTableProperty` specified is null

Action: Specify a non-null `AQQueueTableProperty`

JMS-00187: Queue Table must be specified

Cause: Queue Table specified is null

Action: Specify a non-null queue table

JMS-00188: QueueTable object is invalid

Cause: The queue table object is invalid

Action: The underlying JDBC connection may have been closed. Get the queue table handle again

JMS-00189: Byte array too small

Cause: The byte array given is too small to hold the data requested

Action: Specify a byte array that is large enough to hold the data requested or reduce the length requested

JMS-00190: Queue {0} not found

Cause: The specified queue was not found

Action: Specify a valid queue

JMS-00191: sql_data_cl must be a class that implements SQLData interface

Cause: The class specified does not support the `java.sql.SQLData` interface

Action: n/a

JMS-00192: Invalid Visibility value

Cause: Visibility value specified is invalid

Action: Valid values are `AQConstants.VISIBILITY_ONCOMMIT`, `AQConstants.VISIBILITY_IMMEDIATE`

JMS-00193: JMS queues cannot contain payload of type RAW

Cause: An attempt was made to create a JMS queue with RAW payload

Action: JMS queues/topics cannot contain RAW payload

JMS-00194: Session object is invalid

Cause: Session object is invalid

Action: The underlying JDBC connection may have been closed. Create a new session

JMS-00195: Invalid object type: object must implement CustomDatum/ORADData or SQLData interface

Cause: Invalid object type specified

Action: object must implement CustomDatum/ORADData or SQLData interface

JMS-00196: Cannot have more than one open QueueBrowser for the same destination on a JMS Session

Cause: There is already one open QueueBrowser for this queue on this session

Action: There cannot be more than one queue browser for the same queue in a particular session. Close the existing QueueBrowser and then open a new one

JMS-00197: Agent address must be specified for remote subscriber

Cause: Address field is null for remote subscriber

Action: The address field must contain the fully qualified name of the remote topic

JMS-00199: Registration for asynchronous receipt of messages failed

Cause: Registration with the database for asynchronous receipt of messages for the consumer failed

Action: See error message in linked Exception for details

JMS-00200: Destination must be specified

Cause: Destination is null

Action: Specify a non-null destination

JMS-00201: All Recipients in recipient_list must be specified

Cause: One or more elements in the recipient list are null

Action: All AQjmsAgents in the recipient list must be specified

JMS-00202: Unregister for asynchronous receipt of messages failed

Cause: An error occurred while removing the registration of the consumer with the database for asynchronous receipt

Action: n/a

JMS-00203: Payload Factory must be specified

Cause: Null Payload Factory was specified

Action: n/a

JMS-00204: An error occurred in the AQ JNI layer

Cause: JNI Error

Action: Check error message in linked exception for details

JMS-00205: Naming Exception

Cause: Naming exception

Action: n/a

JMS-00207: JMS Exception {0}

Cause: An error occurred in the JMS layer

Action: See the message inside the linked JMSException for more information

JMS-00208: XML SQL Exception

Cause: An error occurred in the XML SQL layer

Action: See the message inside the linked AQxmlException for more information

JMS-00209: XML SAX Exception

Cause: An error occurred in the XML SAX layer

Action: See the message inside the linked AQxmlException for more information

JMS-00210: XML Parse Exception

Cause: An error occurred in the XML Parser layer

Action: See the message inside the linked AQxmlException for more information

JMS-00220: Connection no longer available

Cause: Connection to the database no longer available.

Action: n/a

JMS-00221: Free physical database connection unavailable in connection pool

Cause: A free physical database connection was not available in the OCI connection pool in order to perform the specified operation.

Action: Try performing the operation later

JMS-00222: Invalid Payload factory type

Cause: Payload factory should be of CustomDatumFactory or ORADDataFactory type.

Action: Use one of CustomDatumFactory/ORADDataFactory types.

JMS-00223: Payload factory must be null for destinations with Sys.AnyData payload - use typemap instead

Cause: A CustomDatumFactory/ORADDataFactory was specified for consumers on destinations containing SYS.ANYDATA payloads

Action: This field must be set to null for destinations containing payloads of type Sys.AnyData. The ORADDataFactory(s) must be registered in the session's typemap

JMS-00224: Typemap is invalid - must be populated with SQLType/OraDataFactory mappings to receive messages from Sys.AnyData destinations

Cause: The typemap of the session is null or empty. For destinations of type Sys.AnyData, the typemap must contain OraDataFactory objects for all possible types that may be stored in the queue/topic

Action: Use the AQjmsSession.getTypeMap() method get the typemap. Then use the put() method to register SQLType names and their corresponding OraDataFactory objects

JMS-00225: Invalid JDBC driver - OCI driver must be used for this operation

Cause: Operations on Sys.AnyData queues/topics are not supported using this JDBC driver

Action: Use the JDBC OCI driver to receive messages from Sys.AnyData queues/topics

JMS-00226: Header-only Message does not have a body

Cause: Header-only message does not have a body; the body cannot be cleared, changed, or queried.

Action: Do not access or modify the body of a read-only message.

JMS-00227: Illegal attempt to commit on a non transacted JMS Session

Cause: Illegal attempt to invoke the commit method on a non transacted JMS Session

Action: Remove invocation of the commit method on the current JMS Session

JMS-00228: Illegal attempt to rollback on a non transacted JMS Session

Cause: Illegal attempt to invoke the rollback method on a non transacted JMS Session

Action: Remove invocation of the rollback method on the current JMS Session

JMS-00229: {0} must be specified

Cause: The specified parameter was null

Action: Specify a non-null value for the parameter

JMS-00230: Illegal operation on durable subscription with active TopicSubscriber

Cause: Try to unsubscribe, change or create durable subscription while it has an active TopicSubscriber.

Action: Close the active TopicSubscriber and try again.

JMS-00231: Consumers on temporary destination must belong to the same

Cause: The specified parameter was null

Action: Specify a non-null value for the parameter

JMS-00232: An invalid user/password was specified for the JMS connection

Cause: Invalid user/password specified for connection

Action: Specify valid user/password for connection

JMS-00233: The required subscriber information is not available

Cause: Try to retrieve subscriber information from a subscriber which was obtained with getDurableSubscriber method and had no corresponding information in the in-memory map.

Action: Do not retrieve subscriber information from such a subscriber

JMS-00234: This operation is not allowed in the current messaging domain

Cause: Perform an operation that is not allowed in the current messaging domain

Action: Do not perform the operation in the current messaging domain

JMS-00235: Can not link the durable subscriber name with a topic in unsubscribe method.

Cause: OJMS is unable to link the supplied durable subscriber name with a topic. This causes unsubscribe method to fail.

Action: Use other unsubscribe methods which the user can provide topic name.

JMS-00236: OJMS encountered invalid OCI handles.

Cause: OJMS encountered invalid OCI handles when using JDBC OCI driver .

Action: Make sure the underlying JDBC connection is not closed while OJMS is still operating.

JMS-00237: Can not start thread for message listener.

Cause: OJMS is unable to start a new thread for message listener.

Action: Check the thread proxy code if the thread was started by a user provided thread proxy.

JMS-00238: Illegal attempt to recover on a transacted JMS Session

Cause: Illegal attempt to invoke the recover method on a transacted JMS Session

Action: Use rollback method instead of recover method on transacted JMS session.

JMS-00239: Illegal attempt to call {0} method on a XASession.

Cause: Illegal attempt to invoke the commit or rollback method on a XASession

Action: Use JTA to commit or rollback a distributed transaction

JMS-00240: Illegal attempt to call setClientID after other actions.

Cause: Illegal attempt to call Connection.setClientID method after other actions has been taken on this Connection

Action: set client ID before any other action on the Connection

JMS-00241: Illegal attempt to delete temporary destination when there are consumers using it.

Cause: Illegal attempt to delete temporary destination while there are existing consumers still using it.

Action: close the consumers before deleting the temporary destination

JMS-00242: Illegal attempt to enqueue message with both immediate visibility and three phase enqueue process.

Cause: Illegal attempt to enqueue message with both immediate visibility and three phase enqueue process.

Action: turn on the system property oracle.jms.useTemplobsForEnqueue

JMS-00243: Topic {0} not found

Cause: The specified topic was not found

Action: Specify a valid topic

JMS-00244: {0} is an invalid operation with the Sharded Queue.

Cause: The operation is not valid with the Sharded Queue

Action: Specify a valid operation for the Sharded Queue

JMS-00245: JMS Streaming support is available only for Sharded Queues.

Cause: JMS Streaming is supported with Sharded Queues only

Action: Use JMS Streaming APIs with Sharded Queue

JMS-00246: JMS Streaming support is not available for {0} driver.

Cause: JMS Streaming is supported with thin driver only

Action: Use JMS Streaming APIs with thin driver

JMS-00247: NON_PERSISTENT message delivery is not supported with JMS Streaming.

Cause: The NON_PERSISTENT delivery mode is not supported with JMS Streaming

Action: Specify PERSISTENT message delivery mode

JMS-00248: Illegal attempt to use JMS Streaming API when streaming is disabled.

Cause: Illegal attempt to use JMS Streaming API when streaming is disabled

Action: Turn on the system property oracle.jms.useJmsStreaming

JMS-00249: InputStream representing the message data must be specified.

Cause: InputStream is null

Action: Specify a valid InputStream representing the message data

JMS-00250: OutputStream must be specified to write the message data.

Cause: OutputStream is null

Action: Specify a valid OutputStream to write the data from the received message

JMS-00251: Illegal attempt to set message data using both write method(s) and Streaming API.

Cause: Illegal attempt to set message data using both write methods and Streaming API

Action: Specify either an InputStream or write method to set the message data

JMS-00252: Illegal attempt to read the data using {0} when the streaming is used with dequeue.

Cause: Illegal attempt to read the message data using read methods when the dequeue used streaming

Action: Call receiveData() to read the message data

JMS-00253: Operation {0} not allowed on a Message with null JMSMessageID.

Cause: The operation is not allowed on a Message with null JMSMessageID

Action: Use this operation on a Message with valid JMSMessageID

JMS-00254: Streaming is not used with dequeue, please use standard JMS API to read the message data.

Cause: Streaming is not used with dequeue operation

Action: Use standard JMS API to read the message data

JMS-00255: JMS Streaming support is available in a Session with acknowledge mode +

Cause: Invalid acknowledgement mode used with JMS Streaming

Action: Valid acknowledgement modes are Session.CLIENT_ACKNOWLEDGE and Session.SESSION_TRANSACTED

JMS-00256: stop() of javax.jms.Connection timed out.

Cause: stop() of javax.jms.Connection timed out

Action: A default timeout of 10 minutes is set to disable the registrations, and allow the onMessage() to process the message. Set a higher value in milli seconds for this timeout using the system property oracle.jms.notificationTimeout

JMS-00400 to JMS-00448

JMS-00400: Destination name must be specified

Cause: A null Destination name was specified

Action: Specify a non-null destination name

JMS-00402: Class not found: {0}

Cause: The specified class was not found

Action: Make sure your CLASSPATH contains the class

JMS-00403: IO Exception {0}

Cause: IO exception

Action: See message is AQxmlException for details

JMS-00404: XML Parse Exception

Cause: An error occurred in the XML Parser layer

Action: See the message inside the linked AQxmlException for more information

JMS-00405: XML SAX Exception

Cause: An error occurred in the XML SAX layer

Action: See the message inside the linked AQxmlException for more information

JMS-00406: JMS Exception {0}

Cause: An error occurred in the JMS layer

Action: See the message inside the linked JMSEException for more information

JMS-00407: Operation not allowed on {0}

Cause: The specified operation is not allowed on this object

Action: n/a

JMS-00408: Conversion failed - invalid property type

Cause: An error occurred while converting the property to the requested type

Action: Use the method corresponding to the property data type to retrieve it

JMS-00409: No such element

Cause: Element with specified name was not found in the map message

Action: n/a

JMS-00410: XML SQL Exception

Cause: An error occurred in the JDBC SQL layer

Action: See the message inside the linked SQLException for more information

JMS-00411: Payload body cannot be null

Cause: An invalid body string or document was specified

Action: Specify a non-null body string or document

JMS-00412: Byte conversion failed

Cause: An invalid username/password was specified

Action: Specify a non-null username and password

JMS-00413: Autocommit not allowed for operation

Cause: The autocommit flag cannot be set for this operation

Action: Do not set the autocommit flag

JMS-00414: Destination owner must be specified

Cause: A null Destination owner was specified

Action: Specify a non-null destination name

JMS-00415: Invalid Visibility value

Cause: Visibility value specified is invalid

Action: Valid values are `AQxmlConstants.VISIBILITY_ONCOMMIT`,
`AQxmlConstants.VISIBILITY_IMMEDIATE`

JMS-00416: Invalid Dequeue mode

Cause: Invalid dequeue mode was specified

Action: Valid Dequeue modes are `AQxmlConstants.DEQUEUE_BROWSE`,
`AQxmlConstants.DEQUEUE_REMOVE`, `AQxmlConstants.DEQUEUE_LOCKED`,
`AQxmlConstants.DEQUEUE_REMOVE_NODATA`

JMS-00417: Invalid Navigation mode

Cause: An invalid navigation mode was specified

Action: The valid navigation modes are
`AQxmlConstants.NAVIGATION_FIRST_MESSAGE`,
`AQxmlConstants.NAVIGATION_NEXT_MESSAGE`,
`AQxmlConstants.NAVIGATION_NEXT_TRANSACTION`

JMS-00418: Invalid value for wait_time

Cause: Invalid value for wait type

Action: Wait time can be `AQDequeueOption.WAIT_FOREVER`,
`AQDequeueOption.WAIT_NONE` or any value greater than 0

JMS-00419: invalid ConnectionPoolDataSource

Cause: A null or invalid ConnectionPoolDataSource was specified

Action: Specify a valid OracleConnectionPoolDataSource object with the correct url
and user/password

JMS-00420: Invalid value for cache_size

Cause: An invalid cache_size was specified

Action: Cache size must be greater than 0

JMS-00421: Invalid value for cache_scheme

Cause: An invalid cache scheme was specified

Action: The valid cache schemes are
OracleConnectionCacheImpl.DYNAMIC_SCHEME
OracleConnectionCacheImpl.FIXED_WAIT_SCHEME

JMS-00422: Invalid tag - {0}

Cause: An invalid tag was encountered in the XML document

Action: Verify that the XML document conforms to the AQ schema

JMS-00423: Invalid value

Cause: An invalid value was specified

Action: Verify that the value specified in the XML document conforms to those specified in the AQ schema

JMS-00424: Invalid message header

Cause: The message header specified is null or invalid

Action: Specify a valid message header

JMS-00425: Property name must be specified

Cause: Property name was null

Action: Specify a non-null property name

JMS-00426: Property does not exist

Cause: Invalid property name specified. The property does not exist

Action: The property does not exist

JMS-00427: Subscriber name must be specified

Cause: Subscriber name was null

Action: Specify a non-null subscription name

JMS-00428: Valid message must be specified

Cause: message was null

Action: Specify a non-null message

JMS-00429: Register Option must be specified

Cause: Register option is null

Action: Specify a non-null Register Option

JMS-00430: Database Link must be specified

Cause: DB Link is null

Action: Specify a non-null Register Option

JMS-00431: Sequence Number must be specified

Cause: Register option is null

Action: Specify a non-null Register Option

JMS-00432: Status must be specified

Cause: status option is null

Action: Specify a non-null Register Option

JMS-00433: User not authenticated

Cause: User is not authenticated

Action: Specify an authenticated user

JMS-00434: Invalid data source

Cause: Data source is null or invalid

Action: Specify a valid data source

JMS-00435: Invalid schema location

Cause: Schema location is null or invalid

Action: Specify a valid URL for the schema

JMS-00436: AQ Exception

Cause: An error occurred in the AQ java layer

Action: See the message inside the AQxmlException and the linked exception for more information

JMS-00437: Invalid Destination

Cause: An invalid destination object was specified

Action: Specify a valid destination (Queue/Topic) object

JMS-00438: AQ agent {0} not mapped to a valid database user

Cause: The AQ agent specified does not map to a database user which has privileges to perform the requested operation

Action: Use dbms_aqadm.enable_db_access to map the agent to a database user with the required queue privileges

JMS-00439: Invalid schema document

Cause: The schema document specified is not valid

Action: Specify a valid URL for the schema document

JMS-00440: Invalid operations - agent {0} maps to more than one database user

Cause: The aq agent mapped to more than one database user in the the same session

Action: Map the aq agent to only one database user Check the aq\$internet_users view for database users that map to this agent

JMS-00441: {0} cannot be null

Cause: The specified parameter was null

Action: Specify a non-null value

JMS-00442: Name and Address for Agent cannot be null

Cause: Both the name and address parameters were specified as null

Action: Specify a non-null value for the name or address

JMS-00443: IMMEDIATE visibility mode not supported for this queue/topic

Cause: IMMEDIATE visibility mode not supported for JMS type queue/topic

Action: Use ON_COMMIT or the default visibility mode for JMS type queue/topic

JMS-00444: This feature is not supported yet

Cause: The requested feature is not yet supported

Action: wait for future releases that support the feature.

JMS-00445: Destination alias must be specified

Cause: A null Destination alias was specified

Action: Specify a non-null destination alias

JMS-00446: Agent alias must be specified

Cause: A null Agent alias was specified

Action: Specify a non-null agent alias

JMS-00447: error in accessing LDAP server

Cause: error in accessing the LDAP server

Action: check the LDAP server is up and the environment parameters provided to the servlet are correct

JMS-00448: Invalid Content-Type

Cause: Invalid Content-Type

Action: Content-Type must be "text/xml" or "application/x-www-form-urlencoded" with parameter name "aqxmldoc"

KFED-00400 to KFED-00403

KFED-00400: Operating system dependent operation: *string* failed with status: *string*

Cause: There was an operating system call error.

Action: Contact Oracle Support Services.

KFED-00401: Operating system failure message: *string*

Cause: There was an operating system call error.

Action: Contact Oracle Support Services.

KFED-00402: failure occurred at: *string*

Cause: There was an operating system call error.

Action: Contact Oracle Support Services.

KFED-00403: additional information: *string*

Cause: There was an operating system call error.

Action: Contact Oracle Support Services.

KFNDG-00200 to KFNDG-00701

KFNDG-00200: invalid syntax

Cause: Invalid syntax for renamedg was specified.

Action: Try renamedg -help for more information.

KFNDG-00201: invalid arguments

Cause: Invalid key or value was specified for renamedg.

Action: Try renamedg -help for more information.

KFNDG-00202: invalid value (*string*) for parameter phase

Cause: Incorrect value for parameter PHASE was specified.

Action: Valid values for parameter PHASE are ONE, TWO, BOTH. Retry with correct values.

KFNDG-00203: disk group name (*string*) exceeds maximum allowed length *number*

Cause: Invalid disk group name was specified.

Action: Disk group name can be a maximum of 32 characters.

KFNDG-00204: disk group name *string* has invalid characters

Cause: Invalid disk group name was specified.

Action: Disk group name can only contain alphabetic, numeric and the underscore (_) characters.

KFNDG-00205: failed to interpret configuration file name

Cause: Invalid configuration file name was specified.

Action: Verify configuration file name and folder permissions and retry renamedg.

KFNDG-00301: new disk group (*string*) already exists, ignoring renamedg

Cause: disk group specified in NEWDGNAME already exists.

Action: None

KFNDG-00302: disk (*string:string*) does not contain a valid header

Cause: Device header could not be located or corrupt.

Action: Verify if the device mentioned is an ASM disk device.

KFNDG-00303: failed to update disk group name for *string*

Cause: Insufficient privileges or write error in disk.

Action: Verify disk permissions and retry renamedg. Also, see log for additional information.

KFNDG-00304: unable to access heartbeat block of the device *string:string*

Cause: Heartbeat block of the disk was corrupt.

Action: Verify disk header with ASM utilities, retry renamedg.

KFNDG-00305: failed to create configuration file

Cause: Insufficient privileges or invalid path.

Action: Verify folder permissions and retry the command.

KFNDG-00306: unable to write to configuration file

Cause: Insufficient privileges.

Action: Check file permissions and retry renamedg.

KFNDG-00307: unable to read configuration file

Cause: Insufficient privileges or disk read error.

Action: Check file permissions and retry renamedg.

KFNDG-00308: failed to process configuration file entry: *string*

Cause: Configuration file was corrupt.

Action: Check file information and retry renamedg.

KFNDG-00401: allocation unit size conflict (*number, number*)

Cause: Allocation unit size of disk group and the disk did not match.

Action: Verify that the device is not corrupt and retry renamedg.

KFNDG-00402: ASM metadata block size conflict (*number, number*)

Cause: Metadata block size of the disk group and disk did not match.

Action: Verify if the device is not corrupt and retry renamedg.

KFNDG-00403: not all disks of disk group *string* were discovered

Cause: Offline disks were present in the specified disk group.

Action: Refer to Oracle Database Storage Administrator's Guide for more details.

KFNDG-00404: disk group *string* contains offline disks, ignoring renamedg

Cause: Disk group with offline disks could not be renamed.

Action: Refer to Oracle Database Storage Administrator's Guide for more details.

KFNDG-00405: specified disk group *string* appears to be mounted

Cause: Disk group was mounted.

Action: Unmount the disk group and retry renamedg.

KFNDG-00406: disk group (*string*) is in use by CSS

Cause: Cluster Synchronization Service(CSS) was using the disk group to be renamed.

Action: Refer to crsctl command to relocate voting disks from disk group.

KFNDG-00407: Could not find disks for disk group *string*

Cause: No disks were discovered for disk group.

Action: Try renamedg with a different discovery string.

KFNDG-00408: disk (*string:string*) could not be discovered

Cause: Disk was either deleted or moved.

Action: None

KFNDG-00409: disk (*string*) doesn't belong to disk group (*string*)

Cause: Disk is not part of the specified disk group.

Action: None

KFNDG-00410: failed to discover devices in folder *string*

Cause: Insufficient privileges or invalid discovery string.

Action: See log for additional details.

KFNDG-00600: internal error *string*

Cause: An internal error occurred while executing renamedg.

Action: Contact Oracle Support Services.

KFNDG-00601: fatal error *string*

Cause: A fatal error occurred while executing renamedg.

Action: Contact Oracle Support Services.

KFNDG-00603: failed to initialize device discovery

Cause: Error occurred while communicating with generic services layer.

Action: Contact Oracle Support Services.

KFNDG-00700: system dependent error (*number, string, string, string*) occurred

Cause: Internal system error occurred.

Action: Contact Oracle Support Services.

KFNDG-00701: Error *number* while performing I/O

Cause: I/O failure.

Action: Contact Oracle Support Services.

KFOD-00316 to KFOD-00403

KFOD-00316: Error acquiring ASM discovery string: *string*

Cause: Call to the Grid Plug and Play service to request disk discovery string failed.

Action: Ensure that the Grid Plug and Play component of Cluster Ready Services is available. If Grid Plug and Play is operational and command still fails, contact Oracle Support Services.

KFOD-00317: error returned from Patch Query API: *string*

Cause: A call to the Patch Query API returned unsuccessfully.

Action: See the returned error message for details.

KFOD-00318: unable to retrieve error message from Patch Query API: *string*

Cause: A call to the Patch Query API returned unsuccessfully.

Action: See the returned error message for details.

KFOD-00320: Invalid operation or option for this cluster type

Cause: This operation is invalid for this cluster type

Action: Retry the operation with cluster=true

KFOD-00321: failed to read the credential file *string*

Cause: The credential file was not valid.

Action: Verify that the credential file is valid and accessible. Ensure that the user has read access permission on the credential file. Rerun the command.

KFOD-00322: credential file not specified

Cause: The previous 'kfod' command was rejected because it did not include a valid credential file name.

Action: Reexecute the 'kfod' command providing a valid credential file name. Refer to the command line help for information.

KFOD-00323: Client Cluster version '*string*' in the credential file does not match software version '*string*'

Cause: There was a version mismatch between the Client Cluster version in the credential file and the software version.

Action: Install a version of the Client Cluster that matches the version in the credential file.

KFOD-00324: The Client Cluster version '*string*' is incompatible with the Storage Server version '*string*'.

Cause: The Client Cluster installation or upgrade was not supported by the Storage Server configured at the version listed in the message.

Action: Install or upgrade the Client Cluster to a version that is compatible with the Storage Server. Refer to the product documentation for information.

KFOD-00325: failed to verify Client Cluster '*string*'\n*nstring*

Cause: The Client Cluster installation verification failed. The possible causes are: - A Client Cluster with the same name was already configured. - A Client Cluster with the same name was deinstalled, but the Client Cluster's configuration was not removed at the Storage Server.

Action: Verify if there is already a Client Cluster with the name listed in the message by executing the 'asmcmd lsc' command on the Storage Server. If the Client Cluster is configured and in use, execute the 'asmcmd mkcc' command on the Storage Server, and provide an unused Client Cluster name to generate a new credential file. Retry the Grid Infrastructure installation using the new credential file. If the Client Cluster is configured and not in use, deinstall the existing Client Cluster. Execute the 'asmcmd rmcc' command on the Storage Server to delete the Client Cluster configuration. Retry the Grid Infrastructure installation. If the Client Cluster is not configured or if the error persists, contact Oracle Support Services.

KFOD-00326: Client Cluster(s) '*string*' will be incompatible if the Storage Server is upgraded to version '*string*'.

Cause: Storage Server upgrade to the listed version failed because the listed Client Cluster will become incompatible.

Action: Upgrade the Storage Server to a version that is compatible with all of the configured Client Clusters. If the Storage Server could not be upgraded to a compatible version, forcibly upgrade the Storage Server using the procedure documented in the product documentation.

KFOD-00327: failed to delete Client Cluster '*string*'\n*nstring*

Cause: There was a failure in deleting the Client Cluster configuration. The accompanying error message provides the details.

Action: Examine the accompanying error message, address the reported issue and retry the operation.

KFOD-00328: Client Cluster installation or upgrade failed because the Storage Server is in the 'In Rolling Upgrade' or the 'In Rolling Patch' state.

Cause: The Client Cluster installation or upgrade was rejected because the Storage Server was in the 'In Rolling Upgrade' or the 'In Rolling Patch' state.

Action: Retry the installation or upgrade procedure after the Storage Server upgrade or patching has completed.

KFOD-00329: no cluster name specified

Cause: The previous 'kfod' command was rejected because it did not include a cluster name.

Action: Reexecute the 'kfod' command providing a valid cluster name. Refer to the command line help for information.

KFOD-00330: invalid cluster name '*string*' specified

Cause: An invalid cluster name was supplied to the 'kfod' utility.

Action: Specify a cluster name which is at least one character but no more than 15 characters in length. The cluster name must be alphanumeric, it cannot begin with a numeric character, and it may contain hyphen (-) characters. However, it cannot end with a hyphen (-) character.

KFOD-00331: forcibly deleted Client Cluster '*string*'

Cause: The configuration for the Client Cluster listed in the message was forcibly deleted.

Action: The Client Cluster listed in the message will no longer be able to access the Storage Server. Follow the steps to enable access from the Client Cluster. - Delete all the Oracle Clusterware files in the '+<diskgroup_name>/<client_cluster_name>/' directory in all disk groups. - Deinstall the Client Cluster. - Install the Client Cluster.

KFOD-00334: failed to list the configured Client Clusters*nstring*

Cause: A failure occurred while attempting to display the Client Cluster configuration. The accompanying error message provides the details.

Action: Examine the accompanying error message, address the reported issue and retry the operation.

KFOD-00400: OS system dependent operation: *string* failed with status: *string*

Cause: OS system call error

Action: contact Oracle Support

KFOD-00401: OS failure message: *string*

Cause: OS system call error

Action: contact Oracle Support

KFOD-00402: failure occurred at: *string*

Cause: OS system call error

Action: contact Oracle Support

KFOD-00403: additional information: *string*

Cause: OS system call error

Action: contact Oracle Support

KUP-00552 to KUP-11602

KUP-00552: internal XAD package failed to load

Cause: An error was encountered while attempting to initialize the XAD package.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

KUP-00554: error encountered while parsing access parameters

Cause: The parser detected a syntax error.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

KUP-00561: invalid length for binary integer field *string*\n

Cause: An integer field was specified with an invalid length. The only supported lengths for binary integer fields are 1, 2, 4, and 8.

Action: n/a

KUP-00562: unknown escape sequence\n

Cause: An unknown escape sequence was specified to the parser. An escape sequence is a backslash followed by a character.

Action: Consult documentation for list of allowable control characters.

KUP-00600: internal error, arguments [*string*] [*string*] [*string*] [*string*] [*string*]

Cause: An internal XAD error occurred.

Action: Contact Oracle Support.

KUP-00601: fatal XAD error

Cause: A fatal error has occurred.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

KUP-01006: error signalled during parse of access parameters

Cause: An error was signalled during parsing of the access parameters.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

KUP-01007: at line *number* column *number*

Cause: This is an informational message indicating the line and column where a syntax error was detected.

Action: n/a

KUP-01008: the bad identifier was: *string*

Cause: This is an informational message indicating the identifier token that caused a syntax error.

Action: n/a

KUP-02000: wrong message file version (msg *number* not found)

Cause: The kupxx.msb file is not the correct version.

Action: Check that the installation was done correctly.

KUP-02001: unrecognized punctuation symbol "*string*"

Cause: An illegal punctuation character was encountered.

Action: Remove the illegal character.

KUP-02002: unexpected end of input file reached

Cause: This is probably caused by failure to supply the closing quote for a quoted string.

Action: Correct the input.

KUP-02003: unrecognized character: *string*

Cause: An input character that is neither an alpha, digit, or punctuation was encountered.

Action: Remove the character.

KUP-02004: quoted string too big

Cause: A quoted string longer than 2000 bytes was encountered.

Action: This may be caused by a missing close quote. If so, add the missing quote, otherwise shorten the string.

KUP-02005: token too big

Cause: A token longer than 1000 bytes was encountered

Action: Tokens must be separated by whitespace or punctuation. Either add the missing whitespace or punctuation, or shorten the token.

KUP-02006: script line too long

Cause: a line longer than 500 bytes was encountered

Action: break the line up into shorter lines

KUP-03001: fatal error during library cache pre-loading

Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

KUP-03002: end position (*number*) <= start position (*number*) for field: *string*

Cause: Error in specifying position for the specified field in the access parameters."

Action: Check that the specified end position is greater than the specified start position.

KUP-03003: absolute end(*number*) - start(*number*) != fieldlength (*number*) for field *string*

Cause: The number of bytes occupied by the field as specified by the starting offset and ending offset of the field is not the same as the number of bytes specified for the datatype of the field.

Action: Verify the absolute begin/end position(s) specified match the length of the field.

KUP-03004: absolute end (*number*) specified with relative start (*number*) for field *string*

Cause: The position of field was specified with a relative start and an absolute end.

Action: Use relative end with relative start

KUP-03005: relative end (*number*) specified does not match fieldlen(*number*) for field *string*

Cause: The number of bytes specified by the relative end position for the field does not match the number of bytes in the datatype.

Action: Correct either the datatype length or the relative end position.

KUP-03006: error initializing handle for character set *string*

Cause: Error attempting to retrieve information for the character set.

Action: Verify that the character set name is valid.

KUP-03007: end position (*number*) is less than start position (*number*) for range

Cause: A byte range specified a start position that comes after the end position.

Action: Verify the start and end positions are correctly specified.

KUP-03008: OCI error getting column parameters.

Cause: An error occurred while trying to obtain column parameters.

Action: Contact Oracle Support.

KUP-03009: OCI error getting column name.

Cause: An error occurred while trying to obtain column name.

Action: Contact Oracle Support.

KUP-03010: OCI error getting database column type.

Cause: An error occurred while trying to obtain database column type.

Action: Contact Oracle Support.

KUP-03011: OCI error getting database column size.

Cause: An error occurred while trying to obtain database column size.

Action: Contact Oracle Support.

KUP-03012: OCI error getting database column precision.

Cause: An error occurred while trying to obtain database column precision.

Action: Contact Oracle Support.

KUP-03013: OCI error getting database column scale.

Cause: An error occurred while trying to obtain database column scale.

Action: Contact Oracle Support.

KUP-03014: OCI error getting datetime fsprecision.

Cause: An error occurred while trying to obtain a datetime column precision value."

Action: Contact Oracle Support.

KUP-03015: OCI error getting datetime lfpresicion.

Cause: An error occurred while trying to obtain database column precision.

Action: Contact Oracle Support.

KUP-03016: length specified for FIXED records must be greater than 0\n

Cause: A record format of FIXED was specified with a length of 0.

Action: n/a

KUP-03017: length specified for VARIABLE records must be greater than 0\n

Cause: A record format of VARIABLE was specified with a length of 0.

Action: n/a

KUP-03018: invalid date mask "string" specified for column string\n

Cause: The date mask for the specified column is invalid.

Action: n/a

KUP-03019: directory object not specified in LOBFILE clause for field string\n

Cause: A LOBFILE clause was specified for the field, but no directory object was specified. When no directory object is specified, then the default directory specified for the external table is used, but no default directory was specified.

Action: Specify a directory object in the LOBFILE clause or specify a default directory for the external table.

KUP-03020: empty delimiter specified for record\n

Cause: An empty delimiter string was specified for a record delimiter.

Action: Specify the string used to delimiter records.

KUP-03021: clause references unknown field string\n

Cause: A WHEN, NULLIF or DEFAULTIF clause referenced a field that doesn't exist in the data file.

Action: n/a

KUP-03022: lob data could not be found for field string\n

Cause: The field specified in the data source that contains the name of the lob file for the record could not be identified.

Action: n/a

KUP-03023: string for TERMINATED BY or ENCLOSED BY clause for record is longer than maximum number\n

Cause: The string value for a TERMINATED BY or ENCLOSED BY clause is longer than the maximum number of bytes allowed. If the character set of the data file is different than the character set of the database, the string will be converted to the character set of the data file. If the length of the converted string is too large, then this error will also be returned.

Action: Use shorter delimiters in the data file and the access parameters.

KUP-03024: string for TERMINATED BY or ENCLOSED BY clause for column *string* is longer than maximum *number*\n

Cause: The string value for a TERMINATED BY or ENCLOSED BY clause for the columns is longer than the maximum number of bytes allowed. If the character set of the data file is different than the character set of the database, the string will be converted to the character set of the data file. If the length of the converted string is too large, then this error will also be returned.

Action: Use shorter delimiters in the data file and the access parameters.

KUP-03025: For CSV format files, field *string* is not delimited.\n

Cause: The comma-delimited value (CSV) format files did not have all delimited fields. CSV format files must have all delimited fields so that the access driver can process the fields.

Action: Make all of the fields delimited or remove the CSV specification and retry.

KUP-03026: For FIELD NAMES, field *string* is not delimited.\n

Cause: The data files with a FIELD NAMES record did not have all delimited fields. Data files with a FIELD NAMES record must have all delimited fields so that the access driver can process the field names.

Action: Make all of the fields delimited and retry.

KUP-03027: NULLIF at field level not allowed with NO NULLIF for field *string*.\n

Cause: The field had both NULLIF and NO NULLIF specified. You must specify one or the other.

Action: Remove one of the specifications and retry.

KUP-03028: Field name *string* in field list does not match the name of any table column.\n

Cause: The ALL FIELDS OVERRIDE THESE clause was specified and there was a field name in the field list in the access parameters that did not match the name of a column in the table definition. Only names that match the name of columns in the table may be specified in the field list.

Action: Verify that the correct names are used for the columns in the table and for the fields in the field list.

KUP-03029: Invalid value specified for parameter *string*.

Cause: The access parameter contained an invalid value for the parameter specified in the error message.

Action: Update the access parameters to have a valid value.

KUP-03995: LOCAL TIME ZONE not allowed with DATE_FORMAT TIME\n

Cause: LOCAL can only be specified with TIMESTAMP, not with TIME.

Action: Remove LOCAL or change TIME to TIMESTAMP and try the operation again.

KUP-03996: multiple DATE_FORMAT *string* masks specified at table level for table *string*\n

Cause: Multiple date format masks were specified for the listed datetime or interval data type at the table level for the listed table.

Action: Remove one of the datetime mask specifications and try the operation again.

KUP-03997: invalid DATE_FORMAT *string* mask ("*string*") specified for table *string*\n

Cause: The date format mask for listed datatype type for the specified table was invalid.

Action: Fix the mask and try the operation again.

KUP-03998: error *number* formatting KUP message *number*\n

Cause: error occurred while attempting to format a KUP message.

Action: contact Oracle support.

KUP-03999: error occurred while processing a date format: ORA-*number*: *string*

Cause: Error converting a date format string into an internal representation.

Action: Verify that the date format strings specified in the access parameters are valid.

KUP-04000: error initializing I/O state for file *string*\n

Cause: An unexpected error occurred while preparing the file.

Action: Contact Oracle Support Services.

KUP-04001: error opening file *string*\n

Cause: An error occurred while attempting to open the specified file. This message should be followed by another message with more information about the error.

Action: See the error that follows to determine the action to be taken.

KUP-04002: error getting file size for file *string*\n

Cause: An error occurred while retrieving the number of bytes in the specified file.

Action: See the error that follows to determine the action to be taken.

KUP-04003: error while closing file *string*\n

Cause: An error occurred while closing the specified file.

Action: See the error that follows to determine the action to be taken.

KUP-04004: error while reading file *string*\n

Cause: An error occurred while reading the specified file.

Action: See the error that follows to determine the action to be taken.

KUP-04017: OS message: *string*\n

Cause: An error occurred. This message contains the message associated with this error that was returned by the operating system. The message displayed before this one should indicate the operation that failed.

Action: n/a

KUP-04018: partial record at end of file *string*\n

Cause: An incomplete record was found at the end of the file.

Action: Verify the file is not corrupt or missing data.

KUP-04019: illegal length found for VAR record in file *string*\n

Cause: A record in a VAR file has an length field with either no numeric characters in it or with non numeric characters in it.

Action: Verify the records in the file have the correct length specified for them.

KUP-04020: found record longer than buffer size supported, *number*, in *string* (offset=*number*)\n

Cause: a record in the data source was longer than the maximum data size supported. The number reported is the maximum supported size of a record.

Action: n/a

KUP-04021: field formatting error for field *string*\n

Cause: There was an error trying to find the contents of the specified field in a record.

Action: This message should be followed by another message containing more specific information about the cause of the error.

KUP-04022: field start is before start of record\n

Cause: The position of the start of a field is before the start of a record. This can occur if a negative number is used to indicate the relative start of a field.

Action: Verify that the definition of the layout of fields in the data file is correct.

KUP-04023: field start is after end of record\n

Cause: This can happen when specifying either absolute or relative positioning for a field.

Action: Verify that the definition of the layout of fields in the data file is correct. If it is valid for fields at the end of the record to be missing, use the MISSING FIELD VALUES ARE NULL clause in the access parameters.

KUP-04024: field end is before field start\n

Cause: The end of the field comes after the start of the field. This can happen if the field is defined with a relative start position and an absolute end position.

Action: Verify that the definition of the layout of fields in the data file is correct.

KUP-04025: field extends beyond end of record\n

Cause: This can happen when specifying either absolute or relative positioning for a field.

Action: Verify that the definition of the layout of fields in the data file is correct.

KUP-04026: field too long for datatype\n

Cause: The character field in the record is larger than the maximum length specified.

Action: Make sure the definition of the layout of the fields in the data file is correct. Also make sure the correct maximum size was specified for a character datatype.

KUP-04027: file name check failed: *string*\n

Cause: The check of the filename failed. These checks are platform specific, but they can include verifying that there are no hard links in the file path, the file is not a soft link, the file specification includes a parent reference ("../" on Unix), or the file was modified between the time the check was made and the file was opened.

Action: Use a file location that does not violate any of the checks.

KUP-04028: conversion of character length to a number failed\n

Cause: The character length portion of the field could not be converted to a number. This message is followed by another message with information on why the conversion failed.

Action: Make sure the data is correct. Also verify the datatypes specified for the fields are correct.

KUP-04029: numeric field overflowed\n

Cause: An attempt to convert a character string to number failed because the value of the number in the string was too large.

Action: n/a

KUP-04030: invalid numeric data\n

Cause: An attempt to convert a character string to a number failed because non-numeric characters were found.

Action: n/a

KUP-04031: empty filename specified for LOB file in column *string*\n

Cause: The field in the data file that was supposed to contain the name of a LOB file was empty.

Action: Correct the data so that it contains a valid file name.

KUP-04032: internal error *string* while parsing field *string*:\n

Cause: An internal error occurred while parsing a field.

Action: Contact Oracle support.

KUP-04035: beginning enclosing delimiter not found\n

Cause: The beginning enclosure was not found for a field that is enclosed by delimiters.

Action: Verify that the data is correct. Also verify that the correct enclosing delimiters were specified and whether the enclosing delimiter should be optional.

KUP-04037: terminator not found\n

Cause: The terminator for the field is missing.

Action: Verify that the records are formatted correctly.

KUP-04038: internal error: *string*\n

Cause: an unexpected error condition was detected.

Action: contact Oracle customer support

KUP-04039: unexpected error while trying to find file *string* in *string*\n

Cause: An error occurred while trying to find path containing the file.

Action: This message should be followed by another message with more information about the error.

KUP-04040: file *string* in *string* not found\n

Cause: The file was not found in the directory specified

Action: Verify the correct file and directory names were specified.

KUP-04041: error generating full file name for *string* in *string*\n

Cause: Unexpected error occurred while trying to form a file name.

Action: n/a

KUP-04043: table column not found in external source: *string*\n

Cause: A column in the external table was not found in the access parameters that define the contents of the data source.

Action: Verify that the external table is defined correctly and that the access parameters are also correct.

KUP-04044: error positioning file *string*\n

Cause: An attempt to position a file to an absolute file offset failed.

Action: See messages that follow for more information.

KUP-04045: unexpected OCI status *string*

Cause: An OCI call returned a status that cannot be handled.

Action: Contact Oracle support.

KUP-04047: error parsing record from external data source\n

Cause: An error occurred while trying to extract a record from the data source.

Action: Look in the log file for more messages about the error.

KUP-04048: internal error parsing record from external data source\n

Cause: An unexpected or unhandled error occurred while getting a record from the data source

Action: Contact Oracle support.

KUP-04049: record *number* discarded from file *string*\n

Cause: Informational message displayed whenever the WHEN clause has been satisfied. If a DISCARD file has been specified for the operation, the record will be written to that file.

Action: None

KUP-04050: error while attempting to allocate *number* bytes of memory\n

Cause: An error occurred while trying to allocate memory. This is likely caused by insufficient memory.

Action: Reconnect to the instance and retry the operation.

KUP-04051: error processing column *string* in row *number* for datafile *string*\n

Cause: an error occurred while trying to convert the data from the data file into the type of a column in the external table.

Action: See messages that follow for more details.

KUP-04052: \nerror processing column *string* in a row for datafile *string*\n

Cause: an error occurred while trying to convert the data from the data file into the type of a column in the external table.

Action: See messages that follow for more details.

KUP-04053: record number *number*\n

Cause: This message identifies a record number in a file for a record that had an error. The message preceding this one contains information about the error and the name of the file.

Action: n/a

KUP-04054: internal error: invalid bad row *number* identified for bad column *number*\n

Cause: This is an internal error.

Action: Contact Oracle support.

KUP-04055: column *string* is both a field in the data file and a column transform

Cause: The specified column was in the list of fields in the data file and in the list of column transforms. The column should be in one list or the other, but not both.

Action: Determine whether the value for the field in the data file or the value for the field in the column transform should be loaded in to the table. If the value for the data file is to be loaded, then remove the column transform. If the value for the column transform is to be loaded, then rename the field in the data file so that it does not match the name of a field in the table.

KUP-04056: internal error: OCI error while fetching record: *number*

Cause: An OCI error occurred while processing the granule.

Action: Contact Oracle support.

KUP-04057: internal error: OCI error while fetching record.

Cause: An OCI error occurred while processing the granule.

Action: Contact Oracle support.

KUP-04058: unrecoverable error occurred, operation aborted.

Cause: An unrecoverable error occurred during processing.

Action: See preceding error messages for more information.

KUP-04059: found EOF in length portion of VARIABLE record in file *string*

Cause: The record parser was looking for the size portion of a file a record format of VARIABLE. It found EOF before finding all the bytes for the length.

Action: Correct the corruption in the file.

KUP-04060: field *string* referenced by lobfile column *string* not found

Cause: The LOBFILE transform for the named column referenced a field for either the directory object portion or the name portion of the LOBFILE. However, that field did not exist anywhere in the definition of the data file.

Action: Verify that the LOBFILE clause is specified correctly. Also verify that the field definitions for the data file are correct.

KUP-04061: directory object *string* specified for LOBFILE column *string* is not valid

Cause: The column being loaded from a LOBFILE specified the directory object containing the LOBFILE through another field in the data file. In this case, the LOBFILE clause in the access parameters must specify a list of all directory objects that will be used for this field. This error occurs because a field contains the name of a directory object that is not in this list.

Action: Verify that the data file contains the correct directory object and verify that the list of valid directory objects in the LOBFILE clause for this column is complete.

KUP-04062: no data source specified

Cause: No location for the data source of the external table was specified when the external table was created. An empty string is not valid.

Action: Specify the name of the data source in the LOCATION clause when creating an external table.

KUP-04063: unable to open log file *string* OS error *string*

Cause: An attempt to open the log file failed.

Action: Specify a different log file or use NO LOGFILE to disable logging.

KUP-04064: fatal error during initialization\n

Cause: An unexpected error occurred while initializing access to an external table.

Action: Contact Oracle support.

KUP-04065: error processing LOBFILE for field *string*\n

Cause: An error occurred while opening or reading a LOBFILE for a column in a row.

Action: See message in log file for more information about the error.

KUP-04066: error initializing access to external table source\n

Cause: An error occurred while attempting to retrieve information about a data source.

Action: See messages preceding this one for more information about the error.

KUP-04067: internal error allocating handle type *string*\n

Cause: An attempt to create an internal object failed.

Action: Contact Oracle support.

KUP-04068: internal error fetching attribute *string*\n

Cause: An attempt to fetch information about an internal object failed.

Action: Contact Oracle support.

KUP-04069: error fetching data for external table\n

Cause: An error occurred while attempting to fetch data from an external table.

Action: See messages that precede this one for more information.

KUP-04070: field *string* referenced by column transform *string* not found\n

Cause: The column transform for the named column references a field that did not exist anywhere in the definition of the data file.

Action: Verify that the column transform clause is specified correctly. Also verify that the field definitions for the data file are correct.

KUP-04071: record discarded from file *string*\n

Cause: Informational message displayed whenever the WHEN clause has been satisfied. If a DISCARD file has been specified for the operation, the record will be written to that file. The record number in the source data file is not known because multiple servers are loading from the file.

Action: n/a

KUP-04072: error writing to file *string*\n

Cause: An error occurred while attempting to write to the named file.

Action: See messages that follow this message for more information about the error.

KUP-04073: record ignored because all referenced fields are null for a record\n

Cause: A record was rejected because all fields in the data file referenced by the query were NULL.

Action: n/a

KUP-04074: no write access to directory object *string*\n

Cause: The user does not have write access to the directory object used for a log, bad or reject file.

Action: n/a

KUP-04075: no read access to directory object *string*\n

Cause: The user does not have read access to the directory object used for a data file.

Action: n/a

KUP-04076: file name cannot contain a path specification: *string*\n

Cause: The name of a data file, log file, bad file or reject file contains a path specification.

Action: Use the name of a directory object to indicate where the file should be stored.

KUP-04077: unknown format specifier in file name *string*\n

Cause: A format specifier is a percent sign followed by a character. The percent sign and character are replaced by a value depending on the character. This error occurs when the character following the percent sign is not defined to have a value.

Action: See the documentation for information on valid format specifiers. If the file to be opened needs to have a percent sign in its name then use two percent signs. They will get replaced by a single percent sign in the resulting file name.

KUP-04078: invalid file name specified: *string*

Cause: Attempt to parse the file name failed.

Action: Specify a valid file name.

KUP-04079: error fetching list of valid directories\n

Cause: An attempt to retrieve a list of valid directories that can be used by the user to open files failed. See messages that follow for more information.

Action: Contact Oracle support. As a workaround try specifying no log file, no discard files and no bad files.

KUP-04080: directory object *string* not found\n

Cause: The directory object specified for an input file or a log, bad or discard file does not exist in the database or the user has no privileges to access this directory.

Action: n/a

KUP-04081: field *string* used in concatenation for column *string* is not a character type\n

Cause: The specified field was part of a concatenation of strings used to create the value for the names column. However, the field was not of a character datatype. Only character fields may be used as part of concatenating fields.

Action: Verify the correct field was used in the CONCAT clause. Also verify that the correct datatype is specified for the field in the field list.

KUP-04082: error converting field *string* for LOBFILE column *string*\n

Cause: The LOBFILE column had either its directory object name or filename specified by a field in the data file and that field needed to be converted to the server's character set before it could be used. This message indicates that an attempt to convert the field failed.

Action: Verify that the data file has the correct value for the fields. Also verify that the correct character set was specified for the data file.

KUP-04083: no directory object specified in LOBFILE clause for column *string*

Cause: There was no directory object specified for the LOB files used to populate the named column and no default directory was specified for the external table.

Action: Either specify a directory name, or the name of a data field containing the name of the directory object that contains the files.

KUP-04084: The ORACLE_DATAPUMP access driver does not support the ROWID column.

Cause: A query of an external table of type ORACLE_DATAPUMP tried to reference the ROWID column. The ORACLE_DATAPUMP access driver does not support ROWIDs.

Action: Remove the ROWID from the query. If that is not possible, create a table in the database with the same columns as the external table, copy the data from the external table into the newly created table, and use that new table for the query.

KUP-04085: duplicate directory object *string* and file *string* specified for unload

Cause: A CREATE TABLE AS SELECT statement was executed for an external table of type ORACLE_DATAPUMP and the same directory object and filename combination was specified multiple times.

Action: Issue the CREATE TABLE AS SELECT command again but make sure the combination of directory objects and filenames is unique.

KUP-04086: length of file name exceeds platform maximum of *number*

Cause: The length of a filename is longer than the maximum length supported by Oracle on the server platform.

Action: Verify that the name is correct. If so, use a shorter file name.

KUP-04087: no execute access to directory object *string*

Cause: Execute access to the directory object used for a preprocessor file was not granted.

Action: Grant execute privilege on the directory object or specify a different directory which already has execute privilege enabled.

KUP-04088: data sampling is not supported by this access driver

Cause: A query of an external table requested a sample of the data returned. The access driver for the external table does not support sampling.

Action: Do not try to use sampling for this external table.

KUP-04089: column transform *string* is not the name of a table column

Cause: The specified column was in the list of column transforms but a column by that name does not exist in the table

Action: Verify that the correct name was specified in the column transform.

KUP-04090: big endian byte order mark found when little endian expected in *string*

Cause: A big endian byte order mark was found at the beginning of the specified file and either the access parameters specified the data was in little endian order or the byte order mark for a previous file was little endian.

Action: The file needs to be loaded separately. If a byte order was specified in the access parameters, make sure it is changed to be big endian.

KUP-04091: little endian byte order mark found when big endian expected in *string*\n

Cause: A little endian byte order mark was found at the beginning of the specified file and either the access parameters specified the data was in big endian order or the byte order mark for a previous file was big endian.

Action: The file needs to be loaded separately. If a byte order was specified in the access parameters, make sure it is changed to be little endian.

KUP-04092: attempt to audit directory object *string* returned internal error *number*\n

Cause: An error occurred while attempting to enable auditing for the specified directory object.

Action: Contact Oracle Support Services.

KUP-04093: error processing the FIELD NAMES record in data file *string*\n

Cause: An error occurred while processing the FIELD NAMES record for the data file.

Action: See the messages that precede this one for more details. Fix the error and retry the operation.

KUP-04094: preprocessing cannot be performed if Database Vault is installed\n

Cause: The Database Vault option did not permit the execution a program from an Oracle directory object.

Action: If preprocessing must be performed, then the Database Vault option must not be installed.

KUP-04095: preprocessor command *string* encountered error "*string*"\n

Cause: The specified preprocessor command encountered an error during execution.

Action: Verify that the preprocessor command along with any arguments are correct.

KUP-04096: Warning: lobfile column transform ignored with PREPROCESSOR option.\n

Cause: The specified column was in the list of lobfile column transforms but the PREPROCESSOR option was also specified. The PREPROCESSOR option does not work in conjunction with lobfile column transforms.

Action: Do not use column transforms with the PREPROCESSOR option.

KUP-04097: RECORDS clause specified without a record format\n

Cause: The RECORDS clause was part of the external table access parameters but no record format type was provided.

Action: If the RECORDS clause is used, then it must be followed by one of the VARIABLE, FIXED, or DELIMITED BY clauses.

KUP-04098: empty field name for field *number* in the FIELD NAMES record in data file\n

Cause: The field name for the listed field number in the FIELD NAMES record was empty.

Action: Specify a valid field name in the data file and retry the operation.

KUP-04099: Missing one or more field names in the FIELD NAMES record in the data file. Found *number* fields, there should be *number* fields.\n

Cause: One or more field names was not listed in the FIELD NAMES record. However, it was listed in the access parameter list for the external table.

Action: Include all field names in the data file and retry the operation.

KUP-04100: record rejected in file *string*\n

Cause: A record in the data file was not loaded into the table because of an error while finding fields in the record. See the previous error for more information. The record will be written to the BAD file, if one is being used. The record number in the source data file is not known because multiple servers are loading from the file.

Action: n/a

KUP-04101: record *number* rejected in file *string*\n

Cause: A record in the data file was not loaded into the table because of an error while finding fields in the record. See the previous error for more information. The record will be written to the BAD file, if one is being used.

Action: n/a

KUP-04102: record *number* discarded from file *string*\n

Cause: Informational message displayed whenever the WHEN clause has been satisfied. If a DISCARD file has been specified for the operation, the record will be written to that file.

Action: n/a

KUP-04103: error converting zoned decimal field to number for *string*\n

Cause: An error occurred converting a zoned decimal number to an Oracle number.

Action: Verify that the zoned decimal number is formatted correctly.

KUP-04104: zoned decimal field has bad values for *string*\n

Cause: A zoned decimal number has an invalid format.

Action: Verify that the zoned decimal number is formatted correctly.

KUP-04105: zoned decimal to number conversion caused overflow for *string*\n

Cause: A zoned decimal number could not be converted to an Oracle number because the number is too big for an oracle number.

Action: Verify that the zoned decimal number is formatted correctly.

KUP-04106: precision for zoned decimal number is too large for *string*\n

Cause: The precision of a zoned decimal number is larger than the precision that can be stored in an Oracle number.

Action: Verify that the zoned decimal number is formatted correctly.

KUP-04107: substring of field *string* for column *string* is not a character type\n

Cause: A substring was specified for a field that which is not a character datatype. Only character fields may be used when specifying the substring transform.

Action: Verify the correct field was used in the STARTOF clause. Also verify that the correct datatype is specified for the field in the field list.

KUP-04108: unable to reread file *string*\n

Cause: The query that is executing requires that a data source for an external table be read multiple times. However, the data source is a sequential device that cannot be reread. Examples of this type of data source is a tape or pipe.

Action: There are a few ways around this problem. One is to rewrite the query so that the external table is referenced only once. Another option is to move the data source to a rereadable device such as a disk file. A third option is to load the data for the external table into a temporary table and change the query to reference the temporary table.

KUP-04109: specified path for directory object "*string*" is invalid\n

Cause: The default directory or a directory object specified for an input data file or an output dump, log, bad or discard file contains an invalid path name.

Action: Specify a valid path name for the directory object.

KUP-04116: Field name *stringstringstring* in the FIELD NAMES record in the data file is too long.\n

Cause: The field name exceeded the maximum of 30 characters.

Action: Specify at most 30 characters.

KUP-04117: Field name *stringstringstring* was not found in the access parameter field list or table.\n

Cause: The listed field name in the FIELD NAMES record of the data file was not found in the access parameter field list or in the table columns. The next error message, if any, lists the name of the data file where the error was found.

Action: Verify that the field name in the FIELD NAMES record is correct. If that is correct, verify that the external table is defined correctly and that the access parameter field list is also correct.

KUP-04118: operation "*string*", location "*string*"\n

Cause: This message provides information about the previous messages.

Action: Refer to the help for the previous message for more information.

KUP-04119: Error *number* opening directory for wild card search: *string*\n

Cause: An error occurred while trying to open a directory to look for files that match a wild card specification.

Action: See messages that follow for more details.

KUP-04120: Error *number* fetching count of files for wild card search in directory *string*\n

Cause: An error occurred while trying to retrieve the count of files matching a wild card specification in the directory

Action: See messages that follow for more details.

KUP-04121: Error *number* fetching file names for wild card search in directory *string*\n

Cause: An error occurred while trying to retrieve the names of files matching a wild card specification in the directory

Action: See messages that follow for more details.

KUP-04122: Error *number* finishing wild card search in directory *string*\n

Cause: An error occurred while trying to finish a search for files that match a wild card specification the directory. matching a wild card specification in the directory

Action: See messages that follow for more details.

KUP-05001: Shift based character sets not supported with CSV format files\n

Cause: CSV is being used with a shift based character set.

Action: Either use a non-shift based character set or do not use CSV format files.

KUP-05002: There are no matching files for any file specification in the LOCATION clause.

Cause: One or more file specifications including wild cards were specified in the LOCATION clause, but none of the files matched any of the specifications.

Action: Check to make sure that the file specifications are correct and that one or more files match the file specifications and then try the operation again.

KUP-05003: Warning: There are no matching files for this specification.\n

Cause: No matching files were found for the LOCATION clause specification listed in the previous error message.

Action: No action is required. However, if you expected the LOCATION clause specification to match one or more files, check the specification and the files in the directory to make sure that they are correct. If needed, try the operation again.

KUP-05004: Warning: Intra source concurrency disabled because parallel select was not requested.\n\n

Cause: Intra source concurrency can only be used when parallel select has been requested.

Action: No action is required this message is informational.

KUP-05005: Warning: Intra source concurrency disabled because a field of type RECNUM exists.\n\n

Cause: Intra source concurrency cannot be used with RECNUM fields.

Action: No action is required this message is informational.

KUP-05006: Warning: Intra source concurrency disabled because a complex terminator string is being used.\n\n

Cause: Intra source concurrency cannot be used with terminators where replicated substrings in the terminator could cause ambiguity during record parsing.\n\n"

Action: No action is required this message is informational.

KUP-05007: Warning: Intra source concurrency disabled because the preprocessor option is being used.\n\n

Cause: Intra source concurrency cannot be used with the PREPROCESSOR option.

Action: No action is required this message is informational.

KUP-05008: Warning: Intra source concurrency disabled because the input data is in DELIMITED record format and the character set is neither fixed width nor UTF8.\n\n

Cause: Intra source concurrency cannot be used with the DELIMITED record format if the character set is neither fixed width or UTF8.

Action: No action is required this message is informational.

KUP-05009: Warning: Intra source concurrency disabled because the input data is in VARIABLE record format.\n\n

Cause: Intra source concurrency cannot be used with the VARIABLE record format.

Action: No action is required this message is informational.

KUP-05010: Warning: Intra source concurrency disabled because the input data is in CSV format with embedded record delimiters/terminators.\n\n

Cause: Intra source concurrency cannot be used with the CSV record format that has embedded record delimiters/terminators.

Action: No action is required this message is informational.

KUP-11000: file truncated error\n

Cause: A truncated file was used for the load operation.

Action: Verify unload operation completed successfully.

KUP-11001: files not from the same unload operation\n

Cause: Files used for the load operation were not from the same unload operation.

Action: Verify the files used are from the same unload operation.

KUP-11002: unable to read data chunk *string*\n

Cause: A read or seek to this data chunk was not possible. This chunk may not have existed.

Action: Verify the files used for the load operation are correct.

KUP-11003: bad data encountered while reading from file *string*\n

Cause: There was a datatype conversion error while attempting to convert the data in the data file to match the datatype of a column in the external table. The message that follows this one displays the name of the column and the start of the data for the column that could not be converted. The row containing the bad data is rejected and not included as a row in the external table.

Action: If the row containing the bad data should not be filtered out, then modify the definition of the external table so that the datatypes of the columns match the datatypes of the fields in the data file.

KUP-11004: requested version *string* not supported by ORACLE_DATAPUMP\n

Cause: This database version (defaulted to COMPATIBLE if not user-specified) was not supported by ORACLE_DATAPUMP external table access driver. Note: Database versions before 9.2 were not supported.

Action: Specify a supported version and rerun the operation.

KUP-11005: error seeking in file: *string*\n

Cause: An attempt to seek to the specified position in file failed.

Action: Review the error message. Resolve the problem and retry the the operation. Contact Oracle Support Services if the problem cannot be resolved.

KUP-11006: file truncated error in *string*\n

Cause: A truncated or incomplete file was used for the load operation.

Action: Verify unload operation completed successfully.

KUP-11007: conversion error loading table *string.string*

Cause: A row could not be loaded into the table because there was a conversion error for one or more columns in a row.

Action: See the message that follows for more information about the row that could not be loaded. To avoid this error, make sure the definition of the table being loaded matches the definition of the table being unloaded.

KUP-11008: conversion error loading table *string.string* partition *string*

Cause: A row could not be loaded into the table because there was a conversion error for one or more columns in a row.

Action: See the message that follows for more information about the row that could not be loaded. To avoid this error, make sure the definition of the table being loaded matches the definition of the table being unloaded.

KUP-11009: data for row: *string* \n

Cause: A conversion error occurred while loading data into a table. The message shows values for the field in the row that had the conversion error.

Action: None. This is only an informational message.

KUP-11010: unable to open at least one dump file for fetch\n

Cause: None of the files in the LOCATION clause can be opened for a fetch on an external table.

Action: A fetch operation on an external table in SQL mode requires that at least one file could be opened. Check that the directory object and file names to the dump files are correct.

KUP-11011: the following file is not valid for this load operation\n

Cause: This file could not be used for this load operation. See the following message for more information.

Action: Verify all the files in the LOCATION clause are from the same unload operation and that the unload was successful.

KUP-11012: file *string* in *string* already exists\n

Cause: The specified file could not be used for this unload because that would mean overwriting an existing file.

Action: Specify a file that does not currently exist.

KUP-11013: internal number in header in file *string* is not valid\n

Cause: The specified file could not be used for this operation because the internal number in the header was not valid.

Action: If the dump files were transferred over, verify the transfer operation was done correctly.

KUP-11014: internal metadata in file *string* is not valid\n

Cause: The specified file could not be used for this operation because the internal metadata stored in this file does not match the metadata stored in the first file piece set.

Action: Verify all the files in the LOCATION clause are the correct dump files to use.

KUP-11015: error in unloading or loading data\n

Cause: An error has occurred in a stream unload or load operation.

Action: Contact Oracle Support Services.

KUP-11016: database version in file *string* is not valid\n

Cause: The specified file could not be used for this fetch because its database version was not compatible with the database version in the other files in the LOCATION clause.

Action: Verify all the files in the LOCATION clause were populated with compatible database versions.

KUP-11017: file *string* not found\n

Cause: The file was not found.

Action: Verify the correct file (path and file name) was specified.

KUP-11018: file *string* not a valid dump file\n

Cause: This file did not have the correct file format. It could not be used for an external table fetch operation.

Action: Verify this file is from a SQL mode external table populate operation and that the operation was successful.

KUP-11019: the following file is not valid for this fetch operation\n

Cause: A file could not be used for this fetch. See the following message for more information.

Action: Verify all the files in the LOCATION clause are from successful populate operations. If the files were generated from various populate operations, then verify that those were done with common attributes such as with the same tables and compatible database versions.

KUP-11020: header in file *string* may not contain correct information\n

Cause: The header may be corrupted.

Action: Contact Oracle Support Services.

KUP-11021: header in file *string* has an incompatible version number\n

Cause: A dump file was specified for a load operation whose version number is incompatible with the dump file version currently produced by the Oracle server on the system. Usually this message indicates that the dump file was produced by a newer version of the Oracle server.

Action: Load this dump file using the same version of the Oracle server that created the file.

KUP-11022: specified file name "*string*" is invalid\n

Cause: The file name specified for a dump or log file was invalid or null.

Action: Specify a valid file name for the dump or log file.

KUP-11023: specified path for directory object "*string*" is invalid\n

Cause: The default directory or a directory object specified for a dump or log file contained an invalid path name or was null.

Action: Specify a valid path name for the directory object.

KUP-11024: This external table can only be accessed from within a Data Pump job.

Cause: An attempt was made to access a temporary external table that was created by Data Pump to be used internally during the execution of an export or import job.

Action: None

KUP-11025: LOCATION clause is not allowed for ORACLE_HIVE external tables.
\n

Cause: The LOCATION clause was specified for an ORACLE_HIVE access driver. The ORACLE_HIVE access driver gets LOCATION information from the metadata in the Hive catalog.

Action: Omit the LOCATION clause when creating an external table using the ORACLE_HIVE access driver.

KUP-11502: unexpected error loading Java Virtual Machine\n

Cause: The external procedure agent for the external table access driver was unable to load the Java Virtual Machine.

Action: Contact Oracle Support Services.

KUP-11503: cannot access cluster\n

Cause: An attempt was made to access table data in an ORACLE_HIVE or an ORACLE_HDFS external data source.

Action: Contact the database administrator about gaining access to ORACLE_HIVE and ORACLE_HDFS external data sources.

KUP-11504: error from external driver: *string*\n

Cause: An error occurred while attempting to access data in an ORACLE_HIVE or an ORACLE_HDFS external data source.

Action: Correct the problem as suggested by the error message and retry the operation.

KUP-11505: invalid value "*string*" specified for access parameter "*string*"\n

Cause: A NULL or invalid value was supplied for the access parameter.

Action: Correct the invalid value and retry the operation.

KUP-11506: cannot change cluster in the same session\n

Cause: The first access to an Oracle BigData external table within a database session establishes the cluster for that session. This is determined by the cluster specified in the table's access parameters or, if no cluster was specified in the table's access parameters, by the default cluster set in the Oracle Big Data configuration file. Accessing an Oracle BigData external table in a different cluster within the same database session is not allowed.

Action: Establish a new database session and retry the operation.

KUP-11507: missing separator at offset *string* in line "*string*"\n

Cause: Access parameters in an Oracle Big Data external table as well as entries in the Oracle Big Data configuration file were lists of one or more property name or value pairs. In some cases, the property name does not require a value. In other cases where a value must be supplied with the property name, the two must be separated by an equal sign (=) or a colon (:).

Action: Correct the problem as suggested by the error message and retry the operation.

KUP-11508: invalid character at offset *string* in line "*string*"\n

Cause: An invalid multibyte UTF character was encountered in the access parameters of an Oracle Big Data external table.

Action: Contact Oracle Support Services.

KUP-11509: invalid escape sequence at offset *string* in line "*string*"\n

Cause: An invalid escape sequence was encountered in the access parameters of an Oracle Big Data external table. This may be caused by \unnnn Unicode code point that does not generate a valid Unicode character.

Action: Correct the problem as suggested by the error message and retry the operation.

KUP-11510: missing value at offset *string* in line "*string*"\n

Cause: Access parameters in an Oracle Big Data external table as well as entries in the Oracle Big Data configuration file were lists of one or more property name or value pairs. In some cases, the property name does not require a value. In other cases, where a value must be supplied with the property name, the two must be separated by an equal sign ('=') or a colon (:). In this instance, a property name and a separator were found without a corresponding value.

Action: Correct the problem as suggested by the error message and retry the operation. Supply a value if the property name requires one. Otherwise, remove the separator and supply only the property name.

KUP-11511: failed to initialize logging in external driver\n

Cause: The external driver code could not initialize a context for logging messages. This usually indicates a problem with the value of the Java classpath used by the external driver.

Action: Contact your system administrator to examine the contents of both the Oracle Big Data configuration file and the Oracle Big Data log4j configuration file to ensure that the entries in these files contain correct information.

KUP-11516: memory allocation error while initializing the Java Virtual Machine\n

Cause: An error occurred while trying to allocate memory in order to initialize the Java Virtual Machine in the external driver.

Action: Contact your system administrator.

KUP-11523: external driver failed with unexpected error: *string*\n

Cause: The ORACLE_HIVE or ORACLE_HDFS external driver encountered an unexpected error condition.

Action: Contact Oracle Support Services.

KUP-11524: initialization failure for Java Native Interface (JNI) call\n

Cause: The external driver encountered an unexpected error while trying to initialize its internal context for call the Java Native Interface (JNI). This may indicate a classpath problem in the Oracle Big Data configuration file or a problem in the Oracle Big Data log4j configuration file.

Action: Contact your system administrator to examine the contents of both the Oracle Big Data configuration file and the Oracle Big Data log4j configuration file to ensure that the entries in these files contain correct information.

KUP-11525: The external driver was unable to attach to the Java Virtual Machine.\n

Cause: The external driver encountered an unexpected error while trying to attach a thread to the Java Virtual Machine.

Action: Contact Oracle Support Services.

KUP-11526: memory allocation failure for Java Native Interface (JNI) call

Cause: An error occurred while trying to allocate memory in order to make a Java Native Interface (JNI) call in the external driver.

Action: Contact your system administrator.

KUP-11527: The external driver was unable to attach to shared memory.

Cause: The external driver encountered an unexpected error while trying to attach to a shared memory segment.

Action: Contact Oracle Support Services.

KUP-11530: value for com.oracle.bigdata.bufferize larger than maximum allowed value *number*

Cause: The com.oracle.bigdata.bufferize was specified for the external table and the value specified was larger than the maximum allowed value.

Action: Change the value specified for com.oracle.bigdata.bufferize to be smaller than the maximum value reported in the message.

KUP-11531: missing mandatory property "*string*" in the Oracle Big Data configuration file

Cause: A mandatory property was not found in the Oracle Big Data configuration file.

Action: Contact your system administrator to modify the Oracle Big Data configuration file so that it contains all of the required information.

KUP-11532: duplicate property "*string*" in the Oracle Big Data configuration file

Cause: A duplicate property was found in the Oracle Big Data configuration file.

Action: Contact your system administrator to remove all duplicate properties from the Oracle Big Data configuration file.

KUP-11533: error collecting JVM information: *string*

Cause: The ORACLE_HIVE or ORACLE_HDFS external driver encountered an unexpected error while trying to collect information such as memory usage from the Java Virtual Machine (JVM).

Action: Contact your system administrator.

KUP-11534: external driver JNI initialization failure: *string*

Cause: The ORACLE_HIVE or ORACLE_HDFS external driver encountered an unexpected error while trying to initialize its internal context for calling the Java Native Interface (JNI). This may indicate a classpath problem in the Oracle Big Data configuration file or a problem in the Oracle Big Data log4j configuration file.

Action: Contact your system administrator.

KUP-11535: XAD version "*string*" incompatible with JXADProvider version "*string*"

Cause: A version mismatch between the ORACLE_HIVE or ORACLE_HDFS access driver and the external driver Java components has been detected.

Action: Contact your system administrator.

KUP-11536: external driver MTA initialization failure: *string*

Cause: The ORACLE_HIVE or ORACLE_HDFS multithreaded external agent encountered an initialization failure that prevented it from starting.

Action: Contact your system administrator.

KUP-11542: error initializing dynamic-link librarian: *string*\n

Cause: An error occurred while trying to initialize the dynamic-link librarian needed to access the Java Virtual Machine library.

Action: Contact Oracle Support Services.

KUP-11543: error accessing the Java Virtual Machine library: *string*\n

Cause: An error occurred while trying to open the Java Virtual Machine library in the external driver.

Action: Contact your system administrator.

KUP-11544: error locating symbol address in the Java Virtual Machine library: *string*\n

Cause: An error occurred while trying to locate a symbol address in the Java Virtual Machine library.

Action: Contact your system administrator.

KUP-11545: Cannot set the NLS parameter *string* to the required value *string*.

Cause: An error occurred while the ORACLE_HIVE or the ORACLE_HDFS external agent was trying to set up its NLS environment.

Action: Contact Oracle Support Services.

KUP-11546: external driver unable to attach to shared memory: [*string*] [*string*] [*string*] [*string*] [*string*][*string*]\n

Cause: The ORACLE_HIVE or ORACLE_HDFS external driver encountered an unexpected error while trying to attach to a shared memory segment.

Action: Contact Oracle Support Services.

KUP-11547: external driver unable to detach from shared memory: [*string*] [*string*] [*string*] [*string*][*string*]\n

Cause: The ORACLE_HIVE or ORACLE_HDFS external driver encountered an unexpected error while trying to detach from a shared memory segment.

Action: Contact Oracle Support Services.

KUP-11548: error encountered creating shared memory: [*string*] [*string*] [*string*] [*string*] [*string*][*string*]\n

Cause: The ORACLE_HIVE or ORACLE_HDFS access driver encountered an unexpected error while trying to create a shared memory segment.

Action: Contact Oracle Support Services.

KUP-11549: error encountered destroying shared memory: [*string*] [*string*] [*string*] [*string*] [*string*][*string*]\n

Cause: The ORACLE_HIVE or ORACLE_HDFS access driver encountered an unexpected error while trying to destroy a shared memory segment.

Action: Contact Oracle Support Services.

KUP-11550: invalid JNI version "*string*" encountered while initializing the Java Virtual Machine\n

Cause: A Java Native Interface JNI version error occurred while trying to create and initialize the Java Virtual Machine in the external agent.

Action: Contact your system administrator.

KUP-11551: error generating file name for file "*string*" in directory "*string*": *string*\n

Cause: An error occurred while trying to generate a full file name specification.

Action: Contact your system administrator.

KUP-11552: error initializing the Java Virtual Machine: *string*\n

Cause: An error occurred while trying to create and initialize the Java Virtual Machine in the external agent.

Action: Contact your system administrator.

KUP-11553: The Oracle Big Data configuration file "*string*" is empty.\n

Cause: There was no content in the Oracle Big Data configuration file.

Action: Contact your system administrator to correct the configuration files for the Hadoop cluster.

KUP-11554: error accessing the Oracle Big Data configuration file "*string*": *string*\n

Cause: A file I/O error occurred while attempting to access the Oracle Big Data configuration file.

Action: Contact your system administrator to correct the configuration files for the Hadoop cluster.

KUP-11555: error opening the Oracle Big Data configuration file "*string*": *string*\n

Cause: A file I/O error occurred while trying to open the Oracle Big Data configuration file.

Action: Contact your system administrator to correct the configuration files for the Hadoop cluster.

KUP-11556: error reading the Oracle Big Data configuration file "*string*": *string*\n

Cause: A file I/O error occurred while trying to read from the Oracle Big Data configuration file.

Action: Contact your system administrator to correct the configuration files for the Hadoop cluster.

KUP-11557: error closing the Oracle Big Data configuration file "*string*": *string*\n

Cause: A file I/O error occurred while trying to close the Oracle Big Data configuration file.

Action: Contact your system administrator to correct the configuration files for the Hadoop cluster.

KUP-11558: invalid cluster name "*string*"\n

Cause: An invalid cluster name was specified for the external table in the com.oracle.bigdata.cluster access parameter. The name must contain only alphanumeric characters or the underscore character. In Oracle release 12.1.0.2, the cluster name is limited to 15 bytes. In Oracle release 12.2 and higher, the cluster name is limited to 113 bytes.

Action: Correct the cluster name for the external table and retry the operation.

KUP-11559: invalid default cluster name "*string*"\n

Cause: An invalid cluster name was specified for the bigdata.cluster.default property in the Oracle Big Data configuration file. The name must contain only alphanumeric characters, the hyphen or underscore character. In Oracle release 12.1.0.2, the cluster

name is limited to 15 bytes. In Oracle release 12.2 and higher, the cluster name is limited to 113 bytes.

Action: Contact your system administrator to correct the value of the `bigdata.cluster.default` property in the Oracle Big Data Configuration file and retry the operation.

KUP-11560: error accessing the Oracle Big Data cluster directory "*string*": *string*\n

Cause: A file I/O error occurred while attempting to access the Oracle Big Data cluster directory file.

Action: Contact your system administrator to correct the configuration files for the Hadoop cluster.

KUP-11600: unable to find first record in a split with I/O buffer size of *number* kilobytes\n

Cause: The access driver was unable to find the first record in the split for a Hadoop Distributed File System (HDFS) file.

Action: The access driver requires that the size of records in the file are not larger than the size of the I/O buffers. Try increasing the size of the I/O buffers with the access parameter `com.oracle.bigdata.fieldmode.buffersize`.

KUP-11601: record exceeded the maximum record size of *number* kilobytes\n

Cause: The access driver found a record in a Hadoop Distributed File System (HDFS) file that is longer than the largest size allowed for this table.

Action: The access driver requires that the size of records in the file are not larger than the size of the I/O buffers. Try increasing the size of the I/O buffers with the access parameter `com.oracle.bigdata.fieldmode.buffersize`.

KUP-11602: conversion error for column *string* in column array row *number*\n

Cause: There was a datatype conversion error while attempting to convert the data in the data file to match the datatype of a column in the external table.

Action: Make sure the data is correct. Also verify that the data types specified for the fields are correct.

LCD-00100 to LCD-00219

LCD-00100: internal error, argument [*number*]

Cause: An internal error has occurred

Action: Report it to your System Administrator immediately

LCD-00111: value not in legal range [*string*]

Cause: The value of the parameter is outside bounds

Action: Refer to the manual for the bounds on the parameter

LCD-00112: illegal integer radix specification [*string*]

Cause: Self Explanatory

Action: valid characters are 'd', 'h', 'D' and 'H'

LCD-00113: integer conversion error or negative integer [*string*]

Cause: A bad or negative integer was assigned to an integer parameter

Action: Self explanatory

LCD-00114: illegal boolean response [*string*]

Cause: You a value than TRUE or FALSE to a boolean parameter

Action: Boolean parameters only take TRUE or FALSE

LCD-00122: unrecognized keyword [*string*]

Cause: You have misspelled the parameter name

Action: Spell the parameter name correctly

LCD-00128: invalid positional parameter value [*string*]

Cause: An invalid positional parameter value has been entered

Action: Remove the invalid positional parameter

LCD-00161: ORACLE error (possible syntax error) parameter [*string*]

Cause: Possible syntax error. Additional messages follow.

Action: Correct the parameter in error.

LCD-00201: could not open specified filename [*string*]

Cause: The file specified does not exist

Action: Create an appropriate parameter file

LCD-00203: missing keyword [*string*]

Cause: A keyword is expected but none was found

Action: Add a keyword followed by an '=' sign and a parameter value

LCD-00204: left parenth and no parameter specified [*string*]

Cause: A parameter list was started but no parameter was specified

Action: Add an appropriate list of values and close the parameter list

LCD-00205: unbalanced parentheses [*string*]

Cause: Self explanatory

Action: Balance the parentheses

LCD-00206: positional parameter entered after keyword [*string*]

Cause: An '=' sign is missing

Action: All keywords must be followed by '=' signs

LCD-00207: nested parentheses encountered [*string*]

Cause: Only one set of parentheses is permitted

Action: Remove the nested parentheses

LCD-00208: unexpected keyword in value list [*string*]

Cause: A keyword was found instead of a value

Action: Insert an appropriate value for the given parameter

LCD-00209: missing value for keyword at end of string [*string*]

Cause: A keyword is specified with no value

Action: Specify a valid value for the keyword

LCD-00210: illegal assignment operator [*string*]

Cause: You used a sign other than '=' to assign a keyword a value

Action: Use only the '=' sign

LCD-00211: unexpected delimiter [*string*]

Cause: An invalid delimiter was found between values

Action: A comma or a space is a valid delimiter

LCD-00212: runaway quoted string [*string*]

Cause: The parameter value was quoted on the left side but not on the right

Action: Quote the parameter value on both sides

LCD-00215: parameter files nested too deep [*string*]

Cause: Too many levels of indirection of file parameters. Maximum is 3.

Action: Reduce the level of indirection to less than 3

LCD-00217: failure while processing file parameter [*string*]

Cause: An error occurred while processing the specified file parameter

Action: Specific details will appear in other messages

LCD-00218: error in file [*string*]

Cause: An error occurred in the particular file.

Action: Refer to the other messages for the specific error.

LCD-00219: nested include file [*string*] is too large

Cause: There is a limit on the size of a parameter file, and it was exceeded. This limit is now 8192 bytes.

Action: Remove characters from the file to make it smaller, or use another level of nesting.

LFI-00002 to LFI-01525

LFI-00002: Out of memory. *string*

Cause: The File IO package failed in trying to dynamically allocate memory. function name is used for additional comments to indicate where, when and why the error occurred.

Action: Perform whatever actions necessary to make more memory available to the executing program.

LFI-00003: Internal exception code. icode = [*string*], [*string*].

Cause: Unknown - indicated by parameters. The first '%s' gives the internal exception code; the second is for any other additional comments.

Action: Report to the appropriate development group

LFI-00004: Call to *string* failed.

Cause: A function call has failed. This error is a generic message to show that the exception has occurred in a particular function function name. This allows the client to know the trace runtime calling sequence by examining the exception stack.

Action: See the accompanying error messages for more information.

LFI-00005: Free some memory failed in *string*.

Cause: A call to free some memory in function function name has failed.

Action: See the accompanying error messages for more information and contact Oracle Worldwide Support immediately.

LFI-00006: Invalid parameter to function *string*.

Cause: The function was called with an invalid parameter.

Action: Check the function call to make sure that the correct parameters are being passed.

LFI-00007: NLSRTL's call failed. *string*.

Cause: LX calls return failure

Action: Check if our parameters are correct. Contact the appropriate group immediately if we parameters are valid.

LFI-00008: SLTS's initializing/terminating mutex failed for *string*.

Cause: SLTS's call return failure in function '%s'.

Action: Contact the appropriate development group.

LFI-00100: Unable to perform operation, file not opened in *string*.

Cause: The file has not been successfully opened at the time the operation is attempted.

Action: Check to make sure that the file exists (for read) or that the program has access to the write a file (for write). It is also possible that the file was just never opened

LFI-00101: Write failed, file cannot be written to.

Cause: The buffer write operation failed. Possibly due to incorrect parameters being passed in.

Action: Check the underlying error for more information.

LFI-00102: Unable to seek in sequentially accessed file.

Cause: The file was opened with the flag `LFILFA_SEQ` for sequential file operations. Use seek only on files that are opened with the `LFILFA_RANDOM` flag for random access.

Action: Check to see how the file is being opened and accessed and make the two operations consistent (that is, make them both operations either sequential or random).

LFI-00103: Seek operation failed.

Cause: The buffer seek operation failed. Probably due to incorrect parameters or flags.

Action: Check syntax of the seek command and retry the operation.

LFI-00104: Read operation failed.

Cause: The buffer read operation failed. Probably due to incorrect parameters or flags.

Action: Check syntax of the read command and retry the operation.

LFI-00105: Unable to add path.

Cause: One of the following might have caused the error: the current path might not be in the proper format the directory might not be in the proper format the name object might not have been initialized properly

Action: Check the format of the current path and the new directory; check that the name object was initialized properly.

LFI-00106: Path object holds more than one path.

Cause: The path object passed to `lfippth()` holds more than one path.

Action: Make sure that the path object used in `lfippth()` holds only one path.

LFI-00107: Open does not expect the file *[string][string]* to exist.

Cause: The flags specified for the open indicate that the file does not exist. However, the file does exist.

Action: Check to make sure that the options that were specified for the file are correct and that you do not expect that the file should exist. If so then find out why the file does exist.

LFI-00108: Open expect the file *[string][string]* to exist.

Cause: The flags specified for the open indicate that the file the file to exist and it does not.

Action: Check to make sure that the options that were specified for the file are correct and that you expect that the file should exist. If so then find out why the file doesn't.

LFI-00109: Unable to open file *[string][string]. string*.

Cause: Either: the process does not have the proper access rights to open the file the file is already open

Action: Check to make sure the proper access permissions are assigned. If they are and the file still cannot be opened, then contact Oracle Worldwide Support.

LFI-00110: Unable to initialize the Buffer Manager.

Cause: The Buffer Manager initialization routine failed; probably because memory was exhausted.

Action: See the accompanying error messages for more information.

LFI-00111: No other flags allowed in fixed length format.

Cause: The function lfigfo() was called with an invalid File ID Descriptor. The valid File ID Descriptors are LFISTDIN, LFISTDOUT, and LFISTDERR.

Action: Check the call to lfigfo() to make sure it is correct.

LFI-00113: Unable to initialize the Standard File object *string*.

Cause: The call to open the standard file object failed.

Action: Check the underlying errors for more information.

LFI-00114: Append is not allowed with *string*.

Cause: Attempting to append using certain options.

Action: Check the flag options to verify its usage.

LFI-00115: Buffer free failed.

Cause: Probably do to the buffer flush failing.

Action: See the accompanying error messages for more information.

LFI-00116: Unable to close file in operation *string*.

Cause: The file close operation failed.

Action: See the accompanying error messages for more information.

LFI-00117: Unable to rename file.

Cause: The rename operation failed. Rename is called when we are protecting a file by operating on a temp file.

Action: Check to make sure that the process has the correct access rights to perform a rename.

LFI-00118: Unable to change type to Unknown.

Cause: The function lfichty() was called to change the file extension to LFIEXUNK (Unknown). This is not a valid operation.

Action: Check why you are doing this. If the extension is already unknown then you do not need to do this. If you just want no extension then use the extension type LFIEXNONE.

LFI-00119: Unable to Abort an Unprotected file.

Cause: The Abort function lfiabt() was called on a file that was not opened as a protected file. As such the abort operation is not valid.

Action: Check to see if you intended to open the file as a protected file.

LFI-00120: Unable to parse root filename *string*.

Cause: The root filename that was given to lfimknam() is not in a format that this platform understands.

Action: Check the format of the filename and retry the operation.

LFI-00121: Only one of REPLACE, or PROT allowed for opty.

Cause: Two or more of the following open type options were specified for the `lfini()` function: `LFILOPTY_REPLACE`, or `LFILOPTY_PROT`.

Action: Remove one or more the of options such that you are only passing in one of the three.

LFI-00122: Can only delete a file if we create it.

Cause: The delete file flag was specified for a file that was not created by this file operation. The ability to delete a file is not portable. As such the only deletion that is allowed by this package is if we know we want to delete the file when we create it.

Action: You can only delete a file that you create. If you need to delete a file that you do not create then you will have to find another means of doing so.

LFI-00123: Cannot access file Sequentially and Randomly.

Cause: Both the `LFILFA_SEQ` (sequential) and `LFILFA_RANDOM` (random) flags were specified during the file object creation. This is not allowed. Only one of the two may be specified.

Action: Choose how you wish to access the file. If you choose random you can still access sequentially by just not using the repositioning functions.

LFI-00124: No access mode was specified, default is sequential.

Cause: Neither `LFILFA_SEQ` (sequential) or `LFILFA_RANDOM` (random) were specified during file object creation.

Action: The default is sequential but this should be explicitly set.

LFI-00125: Random access only allowed on fixed length record files.

Cause: The `LFILFA_RANDOM` flag was specified on a file that was not organized into fixed-length records. Random access is only allowed on fixed-length record files.

Action: Determine if the organization of your data needs to be in variable-length records and if you need to have random access to the file. If both conditions are true then you might need to buffer the entire file or enough of it to remove your need for random access. Another option is to close and rescan the file although this is not the optimal solution.

LFI-00126: Record format can only be one of Fixed or Variable.

Cause: Both `LFILRF_FIXED` (fixed) and `LFILRF_VAR` (variable) were specified during file object creation. Only one of the two is allowed for a given file.

Action: Determine how the file is organized and choose the option that matches.

LFI-00127: No Record Format was specified, default is variable.

Cause: Neither `LFILRF_FIXED` (fixed) or `LFILRF_VAR` (variable) were specified for record format. One of the two must be specified for each file.

Action: The default is `LFILRF_VAR`, but this should be explicitly set during file object creation.

LFI-00128: Carriage Control is only valid for Standard file objects.

Cause: The Carriage Control option is only valid for the standard file objects (`LFISTDIN`, `LFISTDOUT`, `LFISTDERR`). You may not specify this option for any other type of file.

Action: Choose between `LFILRF_FIXED` and `LFILRF_VAR` for the record format.

LFI-00129: Invalid option *string* were specified on an input only file.

Cause: The file was opened as input only but the output mode option LFILRF_WR_ASIS or delete option LFLOPTY_DELETE was specified.

Action: Check to see how you intend to open this file and make the necessary changes.

LFI-00130: Input option specified on output only file.

Cause: The file was opened as output only but one of the input mode options (LFILRF_READ_NL or LFILRF_FORCE_NL) or was specified.

Action: Check to see how you intend to open this file and make the necessary changes.

LFI-00131: No open type specified.

Cause: The file object was created without an open type (that is, LFILOPTY_INPUT, LFILOPTY_OUTPUT, etc.).

Action: Decide how the file should be accessed and specify one of the open types.

LFI-00132: Record length *string* is greater than max length of *string*.

Cause: The record length specified for the file is greater than the max supported by this platform.

Action: Decrease the record length.

LFI-00133: Trying to create file *string* that already exists.

Cause: The file object was initialized with LFILOPTY_OUTPUT and without LFILOPTY_REPLACE and yet a file by this name already exists.

Action: Check to make sure that you are creating the right file. If you intend to overwrite the file if it exists that specify the replace option LFILOPTY_REPLACE when initializing the file object.

LFI-00134: Unable to protect a file for an append operation.

Cause: The LFILOPTY_APPEND and LFILOPTY_PROT options were both specified for the file. This is currently not allowed because it would require copying the entire file at open time.

Action: Decide if you really need to protect the file for append. If so then think about making a copy of it before appending.

LFI-00135: Unable to remove temporary file.

Cause: A temporary file was created to protect a file and when the the tempfile was nolonger needed it LFI attempted to remove it and was unable to do so.

Action: Check the permissions and where the temp files are being created.

LFI-00136: Unable to change type of open file.

Cause: The function lfichty() was called on an opened file.

Action: This is a bug in the client code. lfichty() cannot be used in this case.

LFI-00137: Unable to perform *string* on a file object that is *string*.

Cause: Unable to perform an LFI operation on a file object for the given reason.

Action: Take the appropriate corrective measure. For example if a file is supposed to be opened before the operation can be performed, client code will need to open the file first.

LFI-00138: Unable to perform *string* on a name object that is *string*.

Cause: Unable to perform an LFI operation on a name object for the given reason.

Action: Take the appropriate corrective measure.

LFI-00139: Option *string* cannot be used with option *string* in calling *string*.

Cause: First option cannot be used with second option in such a function call.

Action: Re-examine code to determine which option is needed.

LFI-00140: Invalid option *string* were specified on input-output file.

Cause: The file was opened as input-output and one of the mode options (LFIOPTY_DELETE or non-LFIOPTY_RANDOM) was specified.

Action: Check to see how you intend to open this file and make the necessary changes.

LFI-00141: Unable to abort file in operation *string*.

Cause: The abort operation failed.

Action: Check the underlying errors for more information.

LFI-00142: Unable to delete an existing file [*string*][*string*] not owned by Oracle.

Cause: The file was not created by Oracle.

Action: Change owner of file to Oracle or give Oracle access privileges to delete it.

LFI-00143: Unable to delete non-existent file *string*.

Cause: The file to be deleted does not exist.

Action: Check the underlying errors for more information.

LFI-00144: File [*string*][*string*] does not exist

Cause: The file does not exist.

Action: Check to make sure the file exists and retry the operation.

LFI-00145: User buffer too short.

Cause: The buffer that was passed is not large enough.

Action: Allocate a larger buffer and retry the operation.

LFI-00146: copy does not expect the file *string.string* to exist

Cause: We are expecting the destination file not to exist and it does.

Action: Find out why the file does exist.

LFI-00147: File *string.string* does not exist

Cause: The file does not exist.

Action: Check to make sure the file exists and retry the operation.

LFI-00148: *string* can be called only on files opened in byte mode

Cause: A routine that should be used only for files in byte mode was called for a file that was opened in record mode

Action: In order to use this function, the file should be opened in byte mode.

LFI-00149: Error on destroying hash table in function *string*

Cause: We were expecting the cache path object and it does not.

Action: In order to use this function, the path object should be cache path object.

LFI-00150: Error on creating hash table in function *string*

Cause: routine failed to create path object hash table

Action: make sure that `startsize <= LHTQMAXSLOTS`

LFI-00151: Error on inserting into hash table in function *string*

Cause: routine failed to insert into hash table

Action: make sure there is enough memory for allocation and that the hash table exists.

LFI-00152: Read operation (byte mode) failed.

Cause: Byte mode read operation failed. Probably due to incorrect parameters or flags, or trying to read beyond end of file.

Action: Check syntax of the read command and size of file.

LFI-01000: Unable to write line to file.

Cause: The file being written to may no longer be open or we may have reached the end of the file.

Action: Examine underlying errors for more information.

LFI-01001: Unable to write *string* bytes to file.

Cause: The file being written to may no longer be open or we may have reached the end of the file.

Action: Examine underlying errors for more information.

LFI-01002: Unable to read line from file.

Cause: The file being read from may no longer be open.

Action: Examine underlying errors for more information.

LFI-01003: Unable to read *string* bytes from file.

Cause: The file being read from may no longer be open.

Action: See the accompanying error messages for more information.

LFI-01004: Unable to empty buffer.

Cause: The buffer manager is probably unable to write to the underlying file.

Action: Examine underlying errors for more information.

LFI-01005: Unable to fill buffer.

Cause: The buffer manager is probably unable to read from the underlying file.

Action: See the accompanying error messages for more information.

LFI-01006: File ends in partial character in *string*.

Cause: A line ends in a partial character.

Action: Examine underlying errors for more information.

LFI-01007: Line is too long; encountered in function *string*.

Cause: The length of the line exceeds the maximum length.

Action: Examine underlying errors for more information.

LFI-01500: Error condition on call to OSD function *string*.

Cause: An error condition arises in calling an OSD function. This message occurs if calls to malloc or free functions failed.

Action: Contact Oracle Worldwide Support.

LFI-01501: tmpnam() fails to generate temporary file name.

Cause: Operating system was unable to create temporary file name.

Action: Contact the development organization.

LFI-01502: Base filename does not exist.

Cause: The filename that was parsed had no base file. It was either all path or extension.

Action: Check the filename being passed in to make sure it is correct.

LFI-01503: Max filename size exceeded generating filename.

Cause: While building a filename we exceeded the buffer allocated to hold the new filename.

Action: Contact the development organization.

LFI-01504: fseek() failed(OSD return value = *string*) in *string*.

Cause: The function fseek() returned an error condition.

Action: Contact Oracle Worldwide Support.

LFI-01505: fclose() failed(OSD return value = *string*) in *string*.

Cause: The function fclose() returned an error condition.

Action: Contact Oracle Worldwide Support.

LFI-01506: fflush() failed(OSD return value = *string*).

Cause: The function fflush() returned an error condition.

Action: Contact the development organization.

LFI-01507: fwrite() failed(OSD return value = *string*) in *string*.

Cause: File pointer may be null or may not be opened for write.

Action: Contact the development organization.

LFI-01508: access() failed.

Cause: Call to access() failed.

Action: Contact the development organization.

LFI-01509: fopen() failed(OSD return value = *string*).

Cause: Call to fopen() failed.

Action: Contact Oracle Worldwide Support.

LFI-01510: fread() failed(OSD return value = *string*) in *string*.

Cause: Call to fread() failed.

Action: Contact Oracle Worldwide Support.

LFI-01511: unlink() failed(OSD errno = *string*) in *string*.

Cause: Call to unlink() failed.

Action: Contact the development organization.

LFI-01512: stat() failed

Cause: Call to stat() failed.

Action: Contact Oracle Worldwide Support.

LFI-01514: ftell() failed in *string*

Cause: The ftell() function returned an error.

Action: Contact Oracle Worldwide Support.

LFI-01515: truncate() failed.

Cause: The function truncate() returned an error condition.

Action: Contact the development organization.

LFI-01516: read() failed (OSD return value = *string*) in *string*.

Cause: Call to read() failed.

Action: Contact the development organization.

LFI-01517: open() failed(OSD return value = *string*).

Cause: Call to open() failed.

Action: Contact the development organization.

LFI-01518: write() failed(OSD return value = *string*) in *string*.

Cause: Call to write() failed.

Action: Contact the development organization.

LFI-01519: lseek() failed(OSD return value = *string*) in *string*.

Cause: The lseek() function returned an error.

Action: Contact Oracle Worldwide Support.

LFI-01520: close() failed(OSD return value = *string*) in *string*.

Cause: The function close() returned an error condition.

Action: Contact the development organization.

LFI-01521: fsync() failed(OSD return value = *string*) in *string*.

Cause: The function fsync() returned an error condition.

Action: Contact the development organization.

LFI-01522: opendir() failed.

Cause: The function opendir() returned an error condition.

Action: Contact the development organization.

LFI-01523: rename() failed.

Cause: The function rename() returned an error condition.

Action: Contact the development organization.

LFI-01524: fdopen() failed(OSD return value = *string*).

Cause: Call to fdopen() failed.

Action: Contact the development organization.

LFI-01525: setvbuf() failed.

Cause: A call to lfcstd() had failed.

Action: Contact development service

LPX-00000 to LPX-01160

LPX-00000: normal, successful completion

Cause: Normal exit

Action: No action required.

LPX-00001: NULL pointer

Cause: A NULL pointer was detected as an internal error condition.

Action: This is a programming error by the caller of the XML parser. Please contact someone who can fix the problem.

LPX-00002: out of memory

Cause: The operating system has run out of memory.

Action: Make more memory available to the program.

LPX-00003: duplicate entry in hash table

Cause: An internal error has occurred (a key was requested to be placed in a hash table but was already there).

Action: Contact Oracle Support Services and report the error.

LPX-00004: internal error "~s"

Cause: An internal error has occurred.

Action: Contact Oracle Support Services and report the error.

LPX-00005: ~1s buffer overflow, maximum size is ~2u bytes

Cause: A name, quoted string, URL, or other document component was too long.

Action: Restrict the component to the maximum size shown.

LPX-00006: invalid child type for parent node

Cause: An attempt was made to add an invalid node-type to a parent node.

Action: Correct the code.

LPX-00007: unexpected end-of-file encountered

Cause: The document ended unexpectedly, perhaps due to truncation.

Action: Verify that the document is complete.

LPX-00008: invalid memory callback

Cause: The memory callback structure passed to xmlinit was missing the allocate or free functions (or both).

Action: Provide both functions in the callback structure.

LPX-00011: In line ~1u of ~2s [general entity ~3S]:

Cause: Error message prefixes, not errors themselves. These are the possible banner messages which appear before an XML error to describe the position (line#) and source (buffer or URI) in which the error occurred, as well as the entity's name (if the source is an entity). Parameter entity banner must be at +1 to non-entity banner, general entity at +2 (see lpxerr.c).

Action: No action required. This is not an error message.

LPX-00012: Unicode data alignment error

Cause: An input Unicode (UCS2) datum was not aligned properly.

Action: UCS2 data consists of an array of shorts (ub2) which must be aligned on an even-byte boundary.

LPX-00013: wrong node type

Cause: The wrong node type was given as argument to a DOM call.

Action: Review the failing function call, consult the documentation, and make sure the node types passed as correct.

LPX-00014: context is not clean

Cause: An operation was performed on a context that has already been used (so is not "clean").

Action: Some functions must be performed on a newly initialized context before being used for parsing. For example, setting a shared DTD. Change the code and do the call before parsing.

LPX-00017: ~1snodeName: <~2S>

Cause: More error message boilerplate.

Action: No action required. This is not an error message.

LPX-00018: internal error "nested open strings"

Cause: An internal error has occurred.

Action: Contact Oracle Support Services and report the error.

LPX-00019: property "~s" unknown

Cause: An unexpected error has occurred in a subsystem used by XML. Subcode is the error code returned by that failing subsystem.

Action: Contact Oracle Support Services and report the error and subcode.

LPX-00050: initialization error: NLS mismatch

Cause: A language ID was specified without the matching global area.

Action: Internal error, contact Oracle Support Services and report the error.

LPX-00051: NLS initialization failed

Cause: The NLS (National Language Support) package initialization failed.

Action: Internal error, contact Oracle Support Services and report the error.

LPX-00052: LEH initialization failed

Cause: The LEH (Library Exception Handling) package initialization failed.

Action: Internal error, contact Oracle Support Services and report the error.

LPX-00053: LML initialization failed

Cause: The LML (Low-Level Memory manager) package initialization failed.

Action: Internal error, contact Oracle Support Services and report the error.

LPX-00054: LPU initialization failed, error ~u

Cause: The LPU (URL Parser/Loader) package initialization failed.

Action: Internal error, contact Oracle Support Services and report the error.

LPX-00100: root element "~1S" does not match DTD root "~2S"

Cause: Validity Constraint 2.8 failed: "The Name in the document type declaration must match the element type of the root element." *Example: <?xml version="1.0"?><!DOCTYPE greeting [<!ELEMENT greeting (#PCDATA)>]> *salutation*Hello!/*salutation* *Explanation: The document's root element, *salutation*, does not match the root element declared in the DTD (*greeting*).

Action: Correct the document.

LPX-00101: parameter-entity markup cannot be split up

Cause: Validity Constraint 2.8 failed: "Parameter-entity replacement text must be properly nested with markup declarations." *Example: <?xml version="1.0"?><!DOCTYPE greeting [<!ENTITY % e "<!ELEMENT "> %e; greeting (#PCDATA)>]> *greeting*Hello!/*greeting* *Explanation: The parameter entity 'e' contains markup which may not be split up; the entire ELEMENT (or ATTLIST or ENTITY) definition must be present in one piece.

Action: Correct the document.

LPX-00102: standalone document declaration should be "no"

Cause: Validity Constraint 2.9 failed: "Standalone document declaration must have the value 'no' if any external markup declarations contain declarations of: * attributes with default values - or - * entities - or - * attributes with values subject to normalization - or - * element types with element content"

Action: Correct the document.

LPX-00103: document structure does not match DTD

Cause: Validity Constraint 3 failed: "An element is valid if there is a declaration matching elementdecl where the Name matches the element type, and one of the following holds: * The declaration matches EMPTY and the element has no content * The declaration matches children and the sequence of child elements belongs to the language generated by the regular expression in the content model, with optional white space (characters matching the nonterminal S) between each pair of child elements. * The declaration matches Mixed and the content consists of character data and child elements whose types match names in the content model. * The declaration matches ANY, and the types of any child elements have been declared."

Action: Correct the document.

LPX-00104: element "~S" is not declared in the DTD

Cause: Validity Constraint 3 failed: The named element has no matching elementdecl in the DTD

Action: Correct the document.

LPX-00105: element "~S" is not empty as required by the DTD

Cause: Validity Constraint 3 failed: The named element is declared as EMPTY in the DTD but contains sub-elements in the document.

Action: Correct the document.

LPX-00106: attribute "~1S" of element "~2S" is undefined

Cause: Validity Constraint 3.1 failed:

Action: Correct the document.

LPX-00107: element "~S" has multiple declarations

Cause: Validity Constraint 3.2 failed: "No element type may be declared more than once."

Action: Correct the DTD.

LPX-00108: parameter-entity parenthetical cannot be split up

Cause: Validity Constraint 3.2.1 failed: "Parameter-entity replacement text must be properly nested with parenthesized groups. For interoperability, if a parameter-entity reference appears in a choice, seq, or Mixed construct, its replacement text should not be empty, and neither the first nor last non-blank character of the replacement text should be a connector (| or ,). *Example: <?xml version="1.0"?> <!DOCTYPE foo [<!ELEMENT greeting (#PCDATA)> <!ENTITY % e "(#PCDATA | "> <!ELEMENT foo %e; greeting)>]> *greeting*Hello!*greeting* *Explanation: The parenthetical content of the 'e' entity may not be split up into sections: both open and close parentheses must be in the same declaration.

Action: Correct the DTD.

LPX-00109: duplicate name "~S" in mixed-content declaration

Cause: Validity Constraint 3.2.2 failed: "The same name must not appear more than once in a single mixed-content declaration." *Example: <!ELEMENT p (#PCDATA | a | b | c | d | a)> *Explanation: 'a' occurs more than once in the mixed-content declaration.

Action: Correct the DTD.

LPX-00110: invalid ~1s "~2S" (not a Name)

Cause: Validity Constraint 3.3.1 failed: Given thing is not a Name

Action: Correct the document.

LPX-00111: invalid ~1s "~2S" (not a Nmtoken)

Cause: Validity Constraint 3.3.1 failed: Given thing is not a Nmtoken

Action: Correct the document.

LPX-00112: element "~S" has multiple ID attributes

Cause: Validity Constraint 3.3.1 failed: "No element type may have more than one ID attribute specified."

Action: Correct the document.

LPX-00113: element "~1S" ID attribute "~2S" must be #IMPLIED or #REQUIRED

Cause: Validity Constraint 3.3.1 failed: "An ID attribute must have a declared default of #IMPLIED or #REQUIRED."

Action: Correct the document.

LPX-00114: element "~1S" attribute "~2S" has invalid enumeration value "~3S"

Cause: Validity Constraint 3.3.1 failed: "Values of this type must match one of the Nmtoken tokens in the declaration."

Action: Correct the document.

LPX-00115: element "~1S" is missing required attribute "~2S"

Cause: Validity Constraint 3.3.2 failed: "If the default declaration is the keyword #REQUIRED, then the attribute must be specified for all elements of the type in the attribute-list declaration."

Action: Correct the document.

LPX-00116: element "~1S" attribute "~2S" has invalid value "~3S", must be "~4S"

Cause: Validity Constraint 3.3.2 failed: "If an attribute has a default value declared with the #FIXED keyword, instances of that attribute must match the default value."

Action: Correct the document.

LPX-00118: undefined entity "~S"

Cause: Validity Constraint 4.1 failed: "In a document with an external subset or external parameter entities with "standalone='no'", the Name given in the entity reference must match that in an entity declaration."

Action: Correct the document.

LPX-00119: element "~1S" attribute "~2S" must be an unparsed entity

Cause: The attribute value must be an unparsed entity.

Action: Correct the document.

LPX-00120: entity "~1S" NDATA (notation) "~2S" is undefined

Cause: Entity's NDATA (notation) is undefined

Action: Correct the document.

LPX-00121: undefined notation "~S"

Cause: Notation is not known.

Action: Correct the document.

LPX-00122: undefined ID "~S" in IDREF

Cause: Validity Constraint 3.3.1 failed: "A name must not appear more than once in an XML document as a value of this type; i.e., ID values must uniquely identify the elements which bear them."

Action: Correct the document.

LPX-00123: duplicate ID "~S"

Cause: An ID was used twice, they must be unique.

Action: Correct the document.

LPX-00124: attribute value should be one or more tokens

Cause: An attribute with tokenized type (IDREFS, ENTITIES, NMTOKENS) did not contain any tokens.

Action: Value must contain one or more tokens, separated by spaces.

LPX-00125: duplicate entity "~S" (ignored)

Cause: Warning returned by XmlDomGetDecl when original document did not contain an XMLDecl

Action: This is a warning, not an error. The value XMLERR_NO_DECL is used by the programmer to detect whether a document had an XMLDecl or not. It does not indicate a problem.

LPX-00200: could not convert from encoding ~1s to ~2s

Cause: The conversion cannot be made between the specified encodings.

Action: Choose a data encoding which can represent all expected input encoding (such as a Unicode-based encoding, UTF-8 or UTF-16).

LPX-00201: unknown encoding "~s"

Cause: The specified encoding was not known. It should be an IANA or Oracle encoding name.

Action: Use an appropriate encoding.

LPX-00202: could not open "~s" (error ~u)

Cause: The named input (file, URL, etc) does not exist.

Action: Make sure the named input is available and can be opened.

LPX-00203: could not read from "~s" (error ~u)

Cause: Data could not be read from the named input.

Action: Take appropriate action to allow data to be read.

LPX-00204: syntax error

Cause: A syntax error was found.

Action: Check the XML document line and correct it.

LPX-00205: expected "<!--" at the start of comment

Cause: Bad syntax detected when processing a comment.

Action: Fix the comment syntax.

LPX-00206: invalid CDATA section

Cause: Bad syntax detected when processing CDATA. Proper format is '<![CDATA[data]]>'.
Action: Correct the CDATA syntax.

LPX-00207: expected "[" at the start of conditional section

Cause: Bad syntax detected when processing a conditional section.

Action: Fix the conditional section syntax.

LPX-00208: unknown DTD keyword "~s"

Cause: An unknown keyword was found in the DTD.

Action: Use a proper keyword.

LPX-00209: PI names starting with XML are reserved

Cause: Processing instruction starting with XML was found.

Action: Use another name for the processing instruction.

LPX-00210: expected '~1c' instead of '~2c'

Cause: A syntax error was detected.

Action: Use proper syntax.

LPX-00211: attribute default must be REQUIRED, IMPLIED, or FIXED

Cause: Attribute default was invalid.

Action: Default must be REQUIRED, IMPLIED, or FIXED.

LPX-00212: comment must not contain "--"

Cause: A syntax error was detected in the comment.

Action: Use '--' only when specifying the end of the comment.

LPX-00213: comment did not end in "-->"

Cause: A syntax error was detected in the comment.

Action: Be sure to end the comment with '-->'.

LPX-00214: CDATA section did not end in "]]>"

Cause: A syntax error was detected in the CDATA section.

Action: Be sure to end the CDATA section with ']]>'.

LPX-00215: processing instruction did not end in "?>"

Cause: A syntax error was detected in the PI section.

Action: Be sure to end the PI with '?>'.

LPX-00216: invalid character ~1u (~2X)

Cause: An invalid multibyte character was found.

Action: Use only characters allowed by the XML specification.

LPX-00217: invalid character ~1u (~2x)

Cause: An invalid Unicode character was found.

Action: Use only characters allowed by the XML specification.

LPX-00218: invalid character ~1u ('~2c')

Cause: An invalid native (ASCII/EBCDIC) character was found.

Action: Use only characters allowed by the XML specification.

LPX-00219: invalid digit '~c' in character reference

Cause: An invalid digit was found in a character reference.

Action: Character references are either &#DDD; where D's are decimal digits, or &#xHHH; where H's are hexadecimal digits.

LPX-00220: the string "]]>" cannot occur in character data

Cause: Found ']]>' in character data.

Action: Do not use ']]>' in character data.

LPX-00221: the character "<" cannot occur in attribute values

Cause: Found '<' in an attribute value.

Action: Do not use '<' in attribute values.

LPX-00222: error received from SAX callback function

Cause: An error was received from the SAX callback function.

Action: Examine the additional error messages and take corrective action.

LPX-00223: external entity "~s" found in an attribute value

Cause: An external entity reference was found in an attribute value.

Action: Use only references to internal or character entities in attribute values.

LPX-00224: multiple occurrences of attribute "~S" found

Cause: An attribute occurred multiple times in the same start-tag or empty-element tag.

Action: Make sure that the attributes are unique.

LPX-00225: end-element tag "~1S" does not match start-element tag "~2S"

Cause: An element tag was not ended properly.

Action: Make sure that the correct end element tag is used.

LPX-00226: entity "~S" is not declared

Cause: An entity is not declared.

Action: Declare the entity before referencing it.

LPX-00227: entity "~S" is not a parsed entity

Cause: An entity reference contained the name of an unparsed entity.

Action: Only reference parsed entities.

LPX-00228: entity reference "~S" refers to itself

Cause: An entity reference contains a recursive reference to itself.

Action: Modify the contents of the entity reference to remove this recursion.

LPX-00229: input source is empty

Cause: An XML input file has no contents.

Action: The XML file representing a document must contain at least one element.

LPX-00230: invalid character ~1u (~2x) found in a Name or Nmtoken

Cause: An invalid character was found in a NAME or NMTOKEN.

Action: Use only the characters allowed for NAMES and NMTOKENS by the XML specification.

LPX-00231: invalid character ~1u (~2c') found in a Name or Nmtoken

Cause: An invalid character was found in a NAME or NMTOKEN.

Action: Use only the characters allowed for NAMES and NMTOKENS by the XML specification.

LPX-00232: invalid use of a parameter entity reference

Cause: A parameter entity reference was found in an improper location in the internal DTD subset.

Action: Use a parameter entity reference only where markup declarations can occur in the internal DTD subset, in the external DTD subset, or in an external entity.

LPX-00233: namespace prefixes starting with "xml" are reserved

Cause: Namespace prefix starting with XML was found.

Action: Use another name for the namespace prefix.

LPX-00234: namespace prefix "~S" is not declared

Cause: Namespace prefix is not declared.

Action: Declare the prefix in an attribute list.

LPX-00235: invalid XML version, must be 1.0 or 1.1

Cause: An invalid XML version was specified. Only version 1.0 of the XML specification is supported. Version 1.1 may be specified but will be treated as version 1.0.

Action: Use the 1.0 or 1.1 specification and set the version number accordingly.

LPX-00236: invalid character ~1u (~2c') found in public identifier

Cause: An invalid character was found in a public identifier.

Action: Use only the characters allowed for public identifiers by the XML specification.

LPX-00237: invalid condition section keyword, must be INCLUDE or IGNORE

Cause: A conditional section <![keyword [markup]]> had invalid keyword, must be either "IGNORE" or "INCLUDE"

Action: Correct condition section usage in document.

LPX-00238: unterminated conditional section

Cause: A conditional section was not properly terminated with]>.

Action: Verify conditional nesting in document and correct.

LPX-00239: invalid attribute type "~s"

Cause: The attribute type is not valid. Options are CDATA, ID, IDREF, IDREFS, ENTITY, ENTITIES, NMTOKEN, or NMTOKENS.

Action: Check and correct attribute declaration.

LPX-00240: element-start tag is not well formed

Cause: A start-element tag was improperly formed.

Action: Check and correct the start-element syntax.

LPX-00241: entity reference is not well formed

Cause: An entity reference (general or parameter) was not formed properly.

Action: Form entity reference correctly as "&name;" or "%name;".

LPX-00242: invalid use of ampersand ('&') character (use &)

Cause: The ampersand character is used only to start entity or character references.

Action: To include an ampersand character as data, use the built-in & general entity.

LPX-00243: element attribute value must be enclosed in quotes

Cause: An attribute defined in an element's start-tag must be enclosed in single (") or double (") quotes.

Action: Enclose the attribute value in quotes.

LPX-00244: invalid use of less-than ('<') character (use <)

Cause: The less-than character ('<') is not permitted as data.

Action: Use the built-in entity < instead. Check for mismatched quotes (") in case the '<' is part of subsequent markup.

LPX-00245: extra data after end of document

Cause: After the close of the top-level element, more data was found.

Action: The end-element tag for the top-level element must be the last thing in the document.

LPX-00246: missing system ID after public ID

Cause: In an external ID declaration, the public ID literal was not followed by the system ID literal as required.

Action: Provide with public **and** system IDs for 'PUBLIC' type.

LPX-00247: invalid Document Type Declaration (DTD)

Cause: Problems were encountered in the DTD declaration.

Action: Review the DTD and correct the problems.

LPX-00248: invalid entity declaration

Cause: Problems were encountered parsing an entity declaration.

Action: Check and correct the declaration syntax.

LPX-00249: invalid external ID declaration

Cause: Problems were encountered parsing an external ID declaration.

Action: Check and correct the declaration syntax.

LPX-00250: invalid attribute declaration

Cause: Problems were encountered parsing an attribute declaration.

Action: Check and correct the declaration syntax.

LPX-00251: conditional sections are valid only in external DTDs

Cause: A condition section is not permitted in internal DTDs.

Action: Remove the condition section.

LPX-00252: invalid entity replacement-text nesting

Cause: Markup included from an entity must nest/group properly. That is, open/close markup must occur within the same entity. For example, `<!DOCTYPE doc [<!ENTITY e "/foofoo">]> docfoo&e;/foo/doc` Is invalid since foo's start-tag occurs in the top-level document, but the close-tag is provided by the "e" entity. Both start and end must be provided by the same source.

Action: Examples, such as the ones above, are not permitted.

LPX-00253: missing required version number in XML declaration

Cause: An XML declaration was missing the required version#.

Action: Always provide a version#, which must come first in the declaration. XML is case sensitive, so only "version" (not "Version", and so on) is valid.

LPX-00254: invalid XML declaration

Cause: Problems were encountered parsing an XML declaration.

Action: Check and correct the declaration syntax.

LPX-00255: XML standalone declaration must be "yes" or "no"

Cause: The "standalone" parameter in the XML declaration had an invalid value.

Action: standalone must be set to either "yes" or "no". Case is sensitive, so "Yes", "YES", and so on, are invalid.

LPX-00256: invalid element declaration

Cause: Problems were encountered parsing an element declaration.

Action: Check and correct the declaration.

LPX-00257: invalid children specification in element declaration

Cause: The 'children' specification in an element declaration was invalid.

Action: Check and correct the declaration.

LPX-00258: invalid "Mixed" specification in element declaration

Cause: The 'Mixed' specification in an element declaration was invalid.

Action: Check and correct the declaration.

LPX-00259: invalid notation declaration

Cause: Problems were encountered parsing a notation declaration.

Action: Check and correct the declaration syntax.

LPX-00260: invalid xml:space attribute declaration

Cause: The xml:space attribute must be declared as an enumeration with choices "default" and "preserve". For example, <!ATTLIST foo xml:space (default | preserve) 'preserve').

Action: Declare the special attribute as above.

LPX-00261: invalid URL ~s

Cause: The specified URL was invalid and could not be parsed.

Action: Correct the URL; consult RFC-2396.

LPX-00262: unsupported protocol ~s

Cause: An URL was encountered which requested a protocol not supported by the XML parser. Only HTTP and file are currently allowed.

Action: Make the data available through the filesystem or HTTP.

LPX-00263: couldn't connect to host ~s port ~d

Cause: A TCP connection couldn't be opened to the named host.

Action: Verify the hostname and connectivity to the host.

LPX-00264: send failed to host ~s

Cause: An error occurred trying to send data over a TCP connection.

Action: Verify network connectivity, and so on.

LPX-00265: read failed from to host ~s

Cause: An error occurred trying to read data from a TCP connection.

Action: Verify network connectivity, and so on.

LPX-00266: invalid language specification ~s

Cause: The given language specification was invalid.

Action: Language specification has the format *language_territory.character set*. For example, "French_France".

LPX-00267: could not resolve relative URL ~s

Cause: The named relative URL couldn't be resolved against its parent.

Action: Make sure the relative makes sense in relation to its parent URL; see RFC-2396 sections 4, 5, and appendix C.

LPX-00268: invalid access method ~1d, must be 0 to ~2d

Cause: The provided access code was not in the valid range.

Action: The code should be one of the XMLACCESS_XXX codes defined in oraxml.h, in the range shown in the error message.

LPX-00269: all three access functions (open/close/read) must be provided

Cause: An attempt was made to set the access method callbacks, but all three functions were not provided.

Action: All three callback functions (open, close, and read) are required. They must all be provided, even if they are stub functions which do nothing.

LPX-00270: FTP error: ~s

Cause: An error was returned from the FTP server while trying to retrieve a file. See the specific message for details.

Action: Corrective action depends on the error.

LPX-00271: FTP login failed: ~s

Cause: The username/password combination was invalid for FTP login.

Action: Specify a valid pair.

LPX-00272: FTP server unavailable: ~s

Cause: The FTP server is unavailable for use.

Action: No action is possible from the client side. See server's error message.

LPX-00273: failed to initialize TCP/IP

Cause: The TCP/IP package could not be initialized.

Action: Check with system administrator to see if this is a configuration problem or a connectivity problem.

LPX-00274: can't import node type

Cause: Some node types (DOCUMENT_NODE & DOCUMENT_TYPE_NODE) cannot be imported with importNode().

Action: No action required.

LPX-00275: can't set output/data encoding AFTER parsing

Cause: Output/data encoding must be set after initialization but BEFORE any parsing has taken place.

Action: Set encoding before parsing any documents.

LPX-00276: bad HTTP/Mime header

Cause: An HTTP reply contained an invalid Mime header.

Action: Verify HTTP reply for accuracy. See RFC 2616.

LPX-00277: no closing quote was seen

Cause: A quoted string was started but not finished.

Action: Put a closing quote in the proper location.

LPX-00278: invalid ~s proxy "~s"

Cause: The proxy specification for the given protocol was invalid.

Action: Check and correct the proxy specification. For HTTP, this is the environment variable "http_proxy".

LPX-00279: invalid no_proxy "~s"

Cause: The no_proxy specification was invalid.

Action: Check and correct it. no_proxy is a comma- or space-separated list of machine or domain names, with an optional port part. If no port part is present, then it applies to all ports on that domain.

LPX-00280: HTTP error ~s

Cause: An HTTP protocol error occurred.

Action: Corrective action depends on the error..

LPX-00281: unsupported encoding "~s"

Cause: The specified encoding is known but not supported by the parser.

Action: Try a different encoding.

LPX-00282: document cannot have both internal/external and shared DTDs

Cause: A parser context which had a shared DTD set was used to parse a document which also contained a DTD. You cannot use both a shared DTD and an internal/external one.

Action: If a shared DTD is to be used, then the documents parsed must not contain or reference a DTD.

LPX-00283: document encoding is ~s-based but default input encoding is not

Cause: The input document was detected to be ASCII (or EBCDIC) based, but no encoding was specified in the XMLDecl and the default input coding was not ASCII (or EBCDIC) based, so could not be applied.

Action: Add an explicit encoding specification to the XMLDecl so the default input encoding is not needed, or pick a default encoding which matches the input document.

LPX-00284: namespace prefix to NULL URI is not allowed

Cause: An element's namespace prefix declarations was for a NULL URI, e.g. <foo xmlns:bar="" /> This is illegal presently in XML 1.0, but will be legal in XML 1.1

Action: Remove erroneous prefix definition.

LPX-00285: invalid Unicode surrogate ~X ~X

Cause: A Unicode document contained an invalid surrogate. If the first (high) surrogate is in the correct range 0xD800 to 0xDBFF, then the second (low) surrogate must be in the range 0xDC00 to 0xDFFF.

Action: Correct the document.

LPX-00286: Exceeded max depth for recursion

Cause: The depth of embedded elements in the document exceeded the limit of 2000.

Action: Correct the document.

LPX-00287: Max limit of ~1d exceeded for ~s

Cause: Max limit exceeded

Action: Correct the document.

LPX-00288: CDATA-section-close delimiter is prohibited in element content

Cause: Element content contained CDATA-section-close delimiter.

Action: Correct the document.

LPX-00289: invalid redefinition of xmlns URI

Cause: The XML namespace Uniform Resource Identifier 'http://www.w3.org/2000/xmlns/' must not be assigned a prefix.

Action: Correct the document.

LPX-00290: invalid use of xmlns as a prefix

Cause: The prefix 'xmlns' was reserved and could not be used as a prefix.

Action: Correct the document.

LPX-00300: no name in attribute set

Cause: The name attribute was not found in the attribute-set element.

Action: Add a name attribute for this element.

LPX-00301: error in XPATH evaluation

Cause: The XPATH evaluation returns an error.

Action: Check specified XPATH expression to determine the error.

LPX-00302: Incorrect stylesheet. The node is not valid.

Cause: The child node is of invalid type or has invalid name for this particular location in stylesheet, rendering the stylesheet as invalid XSLT.

Action: Fix the stylesheet by using valid nodes only.

LPX-00303: attribute value "~S" not expected for ~S

Cause: Attribute is found but its value is not the expected value.

Action: Set the attribute value to the correct value.

LPX-00304: input parameter to function is null

Cause: An input parameter passed into this function is null when it is not supposed to.

Action: Make sure the caller function is not passing null for this parameter.

LPX-00305: missing token

Cause: An expected token is not found.

Action: Check the input string to make sure the expected token is present.

LPX-00306: input string ended with no corresponding closing '}'

Cause: A closing '}' is expected.

Action: Add the closing '}' to the input string or remove the extra opening '{'.

LPX-00307: namespace prefix ~S used but not declared

Cause: Namespace prefix is used but not declared.

Action: Either declare the namespace or don't use this namespace prefix.

LPX-00308: attribute ~S not found in ~S

Cause: The expected attribute for this node is not found.

Action: Need to add this attribute to the node.

LPX-00309: cannot initialize XPATH

Cause: XPATH context could not be initialized.

Action: Check the initialization function LpxsutInitXpathCtx().

LPX-00310: element ~S not found in ~S

Cause: The expected element is not found.

Action: Check the initialization function LpxsutInitXpathCtx().

LPX-00311: unsupported feature: ~s

Cause: This feature is not supported.

Action: Do not use this feature.

LPX-00312: cannot construct XML PI with content: ~S

Cause: The content of XML PI node might be invalid.

Action: Make necessary changes to make the node valid according to spec.

LPX-00313: cannot construct XML comment with content: ~S

Cause: The content of XML comment node might be invalid.

Action: Make necessary changes to make the node valid according to spec.

LPX-00314: an internal failure occurred

Cause: An internal error occurred in the code.

Action: Contact appropriate developer.

LPX-00315: extension function ~S not supported

Cause: This extension function is not supported.

Action: Either contact appropriate developer for more information or don't use this extension function.

LPX-00316: invalid value ~S for ~S attribute ~S

Cause: The value for the specified attribute is invalid.

Action: Consult the XSL spec, use only legal values.

LPX-00317: undefined decimal-format "~S"

Cause: The named decimal-format is undefined (the name "#default" means the default format).

Action: Define the desired decimal-format before trying to use it.

LPX-00318: duplicate xsl:decimal-format "~S"

Cause: The named decimal-format was declared more than once.

Action: Make sure there is only a single declaration.

LPX-00319: The node specified is not valid

Cause: The node specified is not of expected type.

Action: Use only the nodes of legal type.

LPX-00320: No more attributes can be added to a non empty element

Cause: The element to which an attribute was being added is non empty and hence can not add anymore attributes to it.

Action: Modify the XSLT stylesheet so that all the attributes are added to an element before anything else is added to it. If you absolutely can not do that then select your output method to be DOM based rather than a stream or SAX based output which you are using presently.

LPX-00321: None of the output method (DOM, SAX, Stream) is selected

Cause: User is trying to process an XML file with out selecting any mechanism for output.

Action: User must select one of the output mechanisms (SAX/DOM/Stream) before attempting to process the XML file.

LPX-00322: A doc referred by XSLT stylesheet could not be opened : ~s

Cause: Either an import,include or document() function tried to open a document and failed.

Action: Make sure that document is present and can be opened.

LPX-00323: illegal apply-imports because of no current template: ~s

Cause: apply-imports was used even when there was no current template possibly with in for-each.

Action: Make sure that apply-imports are invoked only if there is a current template and it is not in a xsl:for-each.

LPX-00324: "~S" is not a valid value for the lang attribute of xsl:sort

Cause: An invalid language name was specified for sorting.

Action: Provide a valid value for the lang attribute of xsl:sort.

LPX-00400: an internal error has occurred in XPATH

Cause: An internal error has occurred in XPATH.

Action: Contact the appropriate developer.

LPX-00401: invalid QName in the XSL file

Cause: An invalid QName was passed to the XPATH parser.

Action: See whether there are any invalid QNames in the XSL file.

LPX-00402: invalid axisname in the XSL file

Cause: An invalid axis name was passed to the XPATH parser.

Action: See whether all axis names in the XSL file are correct.

LPX-00403: unmatched quote in the XSL file

Cause: An unmatched quote was found in the XSL file.

Action: Check for unmatched quotes in the XSL file.

LPX-00404: unable to resolve namespace URI

Cause: The namespace URI may not be valid.

Action: Make sure that the name space URIs are valid.

LPX-00405: unable to allocate memory

Cause: May be out of memory.

Action: Try increasing virtual memory.

LPX-00406: object of incorrect type passed to the function

Cause: An object of incorrect type was passed to the XPATH/XSL function.

Action: Do the required conversion before passing in an object of type which is different from the expected type.

LPX-00407: right square bracket missing in the XSL file

Cause: Right square bracket missing in the XSL file.

Action: Check for unmatched square bracket in the XSL file.

LPX-00408: right parenthesis missing in the XSL file

Cause: Right parenthesis missing in the XSL file.

Action: Check for unmatched parenthesis in the XSL file.

LPX-00409: incorrect token encountered while parsing

Cause: An unexpected token encountered while parsing the expression/ pattern.

Action: Check the syntax of the expressions/patterns.

LPX-00410: unable to resolve the variable reference

Cause: Variable reference may not be valid.

Action: Check whether the variable references are valid.

LPX-00411: unknown function name encountered

Cause: The function is not supported at this time or the name is invalid.

Action: Check the function names. If valid and this error occurs, then avoid using them at this time.

LPX-00413: loss of precision due to excessively large numerical constant

Cause: The numerical constant in the XPath expression is too big.

Action: n/a

LPX-00601: Invalid token in: '~S'

Cause: Invalid token in XPath expression.

Action: Check the expression.

LPX-00602: Invalid child element '~1S' of element '~2S'.

Cause: Invalid child element in this stylesheet context.

Action: Check the stylesheet.

LPX-00603: Invalid attribute value '~1S': {element '~2S', attribute '~3S'}.

Cause: Invalid attribute value in this stylesheet context.

Action: Check the stylesheet.

LPX-00604: Invalid attribute value '~1S', for attribute '~2s'.

Cause: Invalid attribute value for this attribute.

Action: Check the stylesheet.

LPX-00605: Invalid attribute '~1S' in element '~2S'.

Cause: Invalid attribute for this element.

Action: Check the stylesheet.

LPX-00606: Missing attribute '~1s' in element '~2S'.

Cause: Missing attribute for this element.

Action: Check the stylesheet.

LPX-00607: Invalid reference: '~S'.

Cause: Invalid variable or parameter or template reference.

Action: Check the stylesheet.

LPX-00608: Repeated declaration of '~1S' in element '~2S'.

Cause: Only one declaration is allowed at this level.

Action: Check the stylesheet.

LPX-00609: Function call with invalid number of arguments in '~1S'.

Cause: Invalid number of arguments.

Action: Check the function signature.

LPX-00651: VM Stack overflow.

Cause: The XML data is too large.

Action: Increase the size of VM stacks in XmlXslVMCreate().

LPX-00652: SAX callback returns with error.

Cause: SAX callback returns an error.

Action: Check the callback function.

LPX-00653: Output attribute '~S' doesn't have a parent element.

Cause: Attribute is generated in a wrong context.

Action: Check the XSLT stylesheet.

LPX-00654: Output namespace attribute '~S' doesn't have a parent element.

Cause: Attribute generated in the wrong context.

Action: Check the XSLT stylesheet.

LPX-00655: Invalid output comment '~S'.

Cause: Invalid comment node.

Action: Check the XSLT stylesheet.

LPX-00656: XSLTVM terminate.

Cause: VM terminates.

Action: No action.

LPX-00657: Invalid output PI '~S'.

Cause: Invalid PI node.

Action: Check the XSLT stylesheet.

LPX-00658: Invalid XSLT object type.

Cause: Invalid object type in XPath evaluation.

Action: Check the XSLT stylesheet.

LPX-00659: Output write failed.

Cause: Write operation failed.

Action: Check the write method.

LPX-00660: Not a well-formed document or external entity.

Cause: The generated document is not well-formed.

Action: Check the XSLT stylesheet.

LPX-00661: Failed to load: '~s'.

Cause: Failed to load a document.

Action: Check the XSLT stylesheet.

LPX-00662: Invalid encoding.

Cause: Invalid encoding specified.

Action: Check the encoding string.

LPX-00663: VM String-Stack overflow.

Cause: The string data is too large.

Action: Increase the size of VM StringStack in XmlXslVMCreate().

LPX-00664: VM Node-Stack overflow.

Cause: Too many XML nodes.

Action: Increase the size of VM NodeStack in XmlXslVMCreate().

LPX-00690: Invalid argument.

Cause: Invalid or missing argument.

Action: Check the function signature.

LPX-00700: invalid SOAP context

Cause: The SOAP context passed to an XmlSoap function was invalid.

Action: Make sure the context passed is an xmlsoapctx and is still valid (has not been destroyed).

LPX-00701: invalid SOAP role

Cause: An invalid SOAP role was specified.

Action: Only xmlsoaprole enum values should be used (see xml.h).

LPX-00702: invalid SOAP connection binding

Cause: An invalid SOAP connection binding was specified.

Action: Only xmlsoapbind enum values should be used (see xml.h).

LPX-00703: SOAP POST failed

Cause: A SOAP message sent with an HTTP binding failed.

Action: See the returned HTTP error to determine the problem.

LPX-00704: elem has no mustUnderstand

Cause: Header block does not have a mustUnderstand attribute.

Action: This is legal, no action required.

LPX-00705: elem has no role

Cause: Header block does not have a role attribute.

Action: This is legal, no action required.

LPX-00706: message has no fault

Cause: Message body has no Fault child.

Action: This is legal, no action required.

LPX-00707: no Fault reason w/given language

Cause: Fault element does not have a reason with given language.

Action: This is legal, no action required.

LPX-00708: SOAP failed to make HTTP connection

Cause: SOAP failed to make an HTTP connection to the given URL.

Action: Possible cause is invalid URL or memory exhaustion.

LPX-00709: SOAP reply not valid XML

Cause: The reply to a SOAP call was not a valid XML document.

Action: Check the calling URL for validity; otherwise the problem is likely to be on the reply side.

LPX-00711: invalid SOAP version

Cause: The version string specified at SOAP creation time was invalid.

Action: Specify a valid version string, either '1.1' or '1.2'.

LPX-00712: failed to set HTTP header

Cause: Connection does not exist, or header is badly formed, or maximum number of headers is exceeded.

Action: Check that connection exists, header has ':', decrease number of headers.

LPX-00713: body has more than one fault

Cause: Message body has multiple Fault children.

Action: Most likely bug in the server.

LPX-00714: fault is not a single child

Cause: Message body has additional children besides Fault.

Action: Most likely bug in the server.

LPX-00715: badly formed fault element

Cause: Fault element does not have one of mandatory children or has children, which are not allowed.

Action: Most likely bug in the server.

LPX-00716: badly formed Text subelement

Cause: Mandatory text child is missing from the requested message subelement.

Action: Most likely bug in the server.

LPX-00717: badly formed Value subelement

Cause: Mandatory Value child of the Code child of the Fault badly formed or absent.

Action: Most likely bug in the server.

LPX-00718: message has no envelope

Cause: The message has no envelope element child.

Action: Most likely bug in the server.

LPX-00719: prefix too long

Cause: The maximum size of encoded namespace attribute name is 1022.

Action: Use shorter prefix.

LPX-00720: envelope has no header

Cause: The message envelope does not have header.

Action: This is legal, no action required

LPX-00721: envelope has no body

Cause: The message envelope does not have body.

Action: Most likely bug in the server.

LPX-00722: elem has no relay

Cause: Header block does not have a relay attribute.

Action: This is legal, no action required.

LPX-00723: no such element

Cause: The element with requested namespace name and local part does not exist.

Action: This is legal, no action required.

LPX-00750: arguments "~1s" to function "~2s" are null

Cause: Input arguments passed into this function are null when it is not supposed to.

Action: Make sure the caller function is not passing null for this parameter.

LPX-00751: arguments "~s" are exclusive

Cause: Input arguments passed into this function are exclusive. Specify only one of them.

Action: Specify only one of the exclusive arguments.

LPX-00752: invalid ~1s, must be ~2s

Cause: Invalid value was specified for attribute.

Action: Correct the value with one of the suggested values.

LPX-00753: invalid proxy "~s"

Cause: The proxy specification for the given protocol was invalid.

Action: Check and correct the proxy specification. For HTTP, this is the environment variable "http_proxy".

LPX-00754: invalid no_proxy "~s"

Cause: The no_proxy specification was invalid.

Action: Check and correct the specification. no_proxy is a comma- or space-separated list of machine or domain names, with an optional port part. If no port part is present, then it applies to all ports on that domain.

LPX-00755: missing required argument "~s"

Cause: A required argument was missing.

Action: Provide the missing argument to the function.

LPX-00756: Etags and tokens must be either all tagged or all untagged

Cause: The list of condition factors need to be either all tagged with absoluteURI's or all untagged with absoluteURI's.

Action: If all condition factors were applied to the resource receiving the request, make them all untagged. Otherwise, make them all tagged with appropriate resource's URI's.

LPX-00757: maximum XML document size (~s bytes) exceeded

Cause: The input XML document's size exceeded the limit set by "max_xml_size" attribute set in XmlDavCreate().

Action: Raise the value set for max_xml_size attribute in XmlDavCreate() if this does not create problems with security.

LPX-00758: user-provided callback returns null

Cause: Null was returned from user-provided callback function.

Action: Check error(s) encountered within the callback function.

LPX-00759: failed to initialize TCP/IP

Cause: The TCP/IP package could not be initialized.

Action: Check with your system administrator to see if this is a configuration problem or a connectivity problem.

LPX-00760: couldn't connect to host ~s port ~u

Cause: A TCP connection couldn't be opened to the named host.

Action: Verify the hostname and connectivity to the host.

LPX-00761: send failed to host ~s

Cause: An error occurred trying to send data over a TCP connection.

Action: Verify network connectivity.

LPX-00762: read failed from host ~s

Cause: An error occurred trying to read data from a TCP connection.

Action: Verify network connectivity.

LPX-00763: exceeded maximum TCP connections

Cause: The maximum allowable number of TCP connections were exceeded. This happens only if too many pending HTTP responses have not been properly ended or destroyed.

Action: End a pending response session or destroy response objects that have been processed.

LPX-00764: TCP connection was broken

Cause: Either the server terminated the TCP connection or the TCP connection is in a bad state.

Action: Analyze the error. After cleanup, retry the method.

LPX-00765: HTTP error ~s

Cause: An HTTP protocol error occurred.

Action: Corrective action depends on the error.

LPX-00766: unsupported transfer-coding values: ~s

Cause: Only "chunked" and "identity" transfer-coding values are supported.

Action: This is WebDAV implementation's shortfall. There is no workaround for this problem.

LPX-00767: not a text media type

Cause: A text media type was expected. But other media types were found.

Action: Since this data cannot be read as a text type, use another routine to read it.

LPX-00768: no entity body found

Cause: No entity body was found when it was read.

Action: Check the HTTP status code and headers to see why the entity body was not found.

LPX-00769: not xml media type

Cause: An XML media type was expected. But other media types were found.

Action: Since this data cannot be read as an XML type, use another routine to read it.

LPX-00770: missing lock token in lock refresh request

Cause: A LOCK request to refresh a lock had no lock token header specified.

Action: Use XmlDavUpdResDesc to set a lock token in the resource

LPX-00771: missing lock token in UNLOCK request

Cause: An UNLOCK request to remove a lock had no lock token header specified.

Action: Use XmlDavUpdResDesc to set a lock token in the resource

LPX-00772: wrong object type

Cause: The wrong object type was given as argument to a WebDAV call.

Action: Review the failing function call, consult the documentation, and make sure the object types pass as correct.

LPX-00773: protocol violation: ~s

Cause: The entity body sent by the server in Chunked Transfer Encoding violated protocol.

Action: Either this is an internal implementation error or a server implementation error. Users should file a bug against either the server's or the client's implementation.

LPX-00800: XQuery invalid token

Cause: Invalid XQuery query.

Action: Correct the query.

LPX-00801: XQuery syntax error at

Cause: Invalid XQuery query.

Action: Correct the query.

LPX-00802: Too many arguments

Cause: Invalid XQuery query.

Action: Correct the query.

LPX-00803: Too few arguments

Cause: Invalid XQuery query.

Action: Correct the query.

LPX-00804: Invalid token: '~S'

Cause: Invalid program.

Action: Correct the program.

LPX-00805: Syntax error at '~S'

Cause: Invalid program.

Action: Correct the program.

LPX-00806: Invalid token in the pattern

Cause: The program was invalid.

Action: Correct the program.

LPX-00807: Invalid range

Cause: The program was invalid.

Action: Correct the program.

LPX-00808: internal error, invalid OPCODE

Cause: An internal error has occurred.

Action: Contact Oracle Support Services and report the error.

LPX-00809: Invalid subexpression reference

Cause: The replacement string was invalid.

Action: Correct the replacement string.

LPX-00825: Can't compile the element:

Cause: XSLT Stylesheet can't be compiled to XQuery query.

Action: Correct the the stylesheet.

LPX-00826: Can't compile the attribute:

Cause: XSLT Stylesheet can't be compiled to XQuery query.

Action: Correct the the stylesheet.

LPX-00827: Namespace conflict for prefix:

Cause: XSLT Stylesheet can't be compiled to XQuery query.

Action: Correct the the stylesheet.

LPX-00903: Invalid flags specified for XmlDiff or XmlPatch

Cause: Invalid value supplied to flags parameter for XmlDiff or XmlPatch functions.

Action: Specify valid flags (see xmldf.h).

LPX-00904: Invalid inputs were supplied to XmlDiff or XmlPatch

Cause: Data could not be read from inputs to XmlDiff or XmlPatch functions.

Action: Specify valid inputs (see xmldf.h).

LPX-00910: The root nodes in input documents to XmlDiff did not match

Cause: The root nodes in input documents do not match.

Action: Make sure the root nodes have same qualified name in both input documents. XmlDiff can be called only if the root nodes are same in input documents.

LPX-00913: XmlPatch could not process the XML PI oracle-xmldiff

Cause: The diff document either did not specify the XML Processing Instruction "oracle-xmldiff" or did not specify all data required by XmlPatch. The PI should be the first child of the top-level xdiff element. This error is also thrown when the output-model is 'snapshot' and operations-in-docorder is 'false'.

Action: Specify the "oracle-xmldiff" PI correctly. See documentation for XmlPatch C function in xmldf.h.

LPX-00918: XmlPatch encountered an error in translating XPATH using XmlXVM

Cause: XmlPatch encountered an invalid XPATH in the diff document.

Action: If you handcoded the diff document, make sure all the XPATHs in the diff document are valid.

LPX-00950: JSON path processing error

Cause: The JavaScript Object Notation (JSON) path engine encountered a fatal condition.

Action: Contact Oracle Support Services and report the error.

LPX-01001: [XPST0001] Static context component '~S' has no value

Cause: It is a static error if analysis of an expression relies on some component of the static context that has not been assigned a value.

Action: n/a

LPX-01002: [XPDY0002] Dynamic context component '~S' has no value

Cause: It is a dynamic error if evaluation of an expression relies on some// part of the dynamic context that has not been assigned a value.

Action: n/a

LPX-01003: [XPST0003] Syntax error at '~s'

Cause: It is a static error if an expression is not a valid instance of the grammar defined in A.1 EBNF

Action: n/a

LPX-01004: [XPTY0004] Expression type does not match a required type

Cause: It is a type error if, during the static analysis phase, an expression is found to have a static type that is not appropriate for the context in which the expression occurs, or during the dynamic evaluation phase, the dynamic type of a value does not match a required type as specified by the matching rules in 2.5.4 SequenceType Matching.

Action: Check the expression type.

LPX-01005: [XPST0005] Invalid empty-sequence() expression

Cause: During the analysis phase, it is a static error if the static type assigned to an expression other than the expression () or data() is empty-sequence().

Action: n/a

LPX-01006: [XPTY0006]

Cause: Not currently used.

Action: n/a

LPX-01007: [XPTY0007]

Cause: Not currently used.

Action: n/a

LPX-01008: [XPST0008] Invalid reference

Cause: It is a static error if an expression refers to an element name, attribute name, schema type name, namespace prefix, or variable name that is not defined in the static

context, except for an ElementName in an ElementTest or an AttributeName in an AttributeTest.

Action: n/a

LPX-01009: [XQST0009] Schema Import Feature not supported

Cause: An implementation that does not support the Schema Import Feature must raise a static error if a Prolog contains a schema import.

Action: n/a

LPX-01010: [XPST0010] Axis '~S' not supported

Cause: An implementation must raise a static error if it encounters a reference to an axis that it does not support.

Action: n/a

LPX-01012: [XQST0012] Invalid XML schema

Cause: It is a static error if the set of definitions contained in all schemas imported by a Prolog do not satisfy the conditions for schema validity specified in Sections 3 and 5 of [XMLSchema] Part 1 i.e., each definition must be valid, complete, and unique

Action: n/a

LPX-01013: [XQST0013] Invalid pragma content

Cause: It is a static error if an implementation recognizes a pragma but determines that its content is invalid.

Action: n/a

LPX-01014: [XQST0014]

Cause: Not currently used.

Action: n/a

LPX-01015: [XQST0015]

Cause: Not currently used.

Action: n/a

LPX-01016: [XQST0016] Module Feature not supported

Cause: An implementation that does not support the Module Feature raises a static error if it encounters a module declaration or a module import.

Action: n/a

LPX-01017: [XPST0017] Invalid function call

Cause: It is a static error if the expanded QName and number of arguments in a function call do not match the name and arity of a function signature in the static context.

Action: n/a

LPX-01018: [XPTY0018] Path last step contains both nodes and atomic values

Cause: It is a type error if the result of the last step in a path expression contains both nodes and atomic values.

Action: n/a

LPX-01019: [XPTY0019] Path step contains atomic values

Cause: It is a type error if the result of a step (other than the last step) in a path expression contains an atomic value.

Action: n/a

LPX-01020: [XPTY0020] The path step context item is not a node

Cause: It is a type error if, in an axis step, the context item is not a node.

Action: n/a

LPX-01021: [XPDY0021]

Cause: Not currently used.

Action: n/a

LPX-01022: [XQST0022] The value of a namespace must be a URILiteral.

Cause: It is a static error if the value of a namespace declaration attribute is not a URILiteral.

Action: n/a

LPX-01023: [XPDY0023]

Cause: Not currently used.

Action: n/a

LPX-01024: [XQTY0024] Attribute node out of context

Cause: It is a type error if the content sequence in an element constructor contains an attribute node following a node that is not an attribute node.

Action: n/a

LPX-01025: [XQDY0025] Repeated attribute name

Cause: It is a dynamic error if any attribute of a constructed element does not have a name that is distinct from the names of all other attributes of the constructed element.

Action: n/a

LPX-01026: [XQDY0026] Processing instruction content contains '?>'

Cause: It is a dynamic error if the result of the content expression of a computed processing instruction constructor contains the string '?>'.
Action: n/a

Action: n/a

LPX-01027: [XQDY0027] Invalid PSVI validity property of the root element

Cause: In a validate expression, it is a dynamic error if the root element information item in the PSVI resulting from validation does not have the expected validity property: valid if validation mode is strict, or either valid or notKnown if validation mode is lax.

Action: n/a

LPX-01028: [XQDY0028]

Cause: Not currently used

Action: n/a

LPX-01029: [XQDY0029]

Cause: Not currently used

Action: n/a

LPX-01030: [XQTY0030] Expression should evaluate to exactly one node

Cause: It is a type error if the argument of a validate expression does not evaluate to exactly one document or element node.

Action: n/a

LPX-01031: [XQST0031] Version not supported by the implementation

Cause: It is a static error if the version number specified in a version declaration is not supported by the implementation.

Action: n/a

LPX-01032: [XQST0032] Repeated base URI declaration

Cause: A static error is raised if a Prolog contains more than one base URI declaration.

Action: n/a

LPX-01033: [XQST0033] Multiple bindings for the namespace prefix '~s'

Cause: It is a static error if a module contains multiple bindings for the same namespace prefix.

Action: n/a

LPX-01034: [XQST0034] Repeated function declaration

Cause: It is a static error if multiple functions declared or imported by a module have the number of arguments and their expanded QNames are equal (as defined by the eq operator).

Action: n/a

LPX-01035: [XQST0035] Repeated schema components

Cause: It is a static error to import two schema components that both define the same name in the same symbol space and in the same scope.

Action: n/a

LPX-01036: [XQST0036] Importing module should import schema '~s'

Cause: It is a static error to import a module if the importing module's in-scope schema types do not include definitions for the schema type names that appear in the declarations of variables and functions (whether in an argument type or return type) that are present in the imported module and are referenced in the importing module.

Action: n/a

LPX-01037: [XQST0037]

Cause: Not currently used

Action: n/a

LPX-01038: [XQST0038] Invalid collation

Cause: It is a static error if a Prolog contains more than one default collation declaration, or the value specified by a default collation declaration is not present in statically known collations.

Action: n/a

LPX-01039: [XQST0039] Repeated parameter name

Cause: It is a static error for a function declaration to have more than one parameter with the same name.

Action: n/a

LPX-01040: [XQST0040] Repeated attribute name

Cause: It is a static error if the attributes specified by a direct element constructor do not have distinct expanded QNames.

Action: n/a

LPX-01041: [XQDY0041] Expression can't be cast to the type xs:NCName

Cause: It is a dynamic error if the value of the name expression in a computed processing instruction constructor cannot be cast to the type xs:NCName.

Action: n/a

LPX-01042: [XQST0042]

Cause: Not currently used.

Action: n/a

LPX-01043: [XQST0043]

Cause: Not currently used.

Action: n/a

LPX-01044: [XQDY0044] Invalid attribute namespace

Cause: It is a dynamic error if the node-name property of the node constructed by a computed attribute constructor is in the namespace <http://www.w3.org/2000/xmlns/> (corresponding to namespace prefix `xmlns`), or is in no namespace and has local name `xmlns`.

Action: n/a

LPX-01045: [XQST0045] Invalid function namespace

Cause: It is a static error if the function name in a function declaration is in one of the following namespaces: <http://www.w3.org/XML/1998/namespace>, <http://www.w3.org/2001/XMLSchema>, <http://www.w3.org/2001/XMLSchema-instance>, <http://www.w3.org/2005/xpath-functions>.

Action: n/a

LPX-01046: [XQST0046] Invalid URILiteral

Cause: An implementation MAY raise a static error if the value of a URILiteral is of nonzero length and is not in the lexical space of `xs:anyURI`.

Action: n/a

LPX-01047: [XQST0047] Repeated import module target namespace

Cause: It is a static error if multiple module imports in the same Prolog specify the same target namespace.

Action: n/a

LPX-01048: [XQST0048] Namespace should be as the module target namespace

Cause: It is a static error if a function or variable declared in a library module is not in the target namespace of the library module.

Action: n/a

LPX-01049: [XQST0049] Repeated variable declaration

Cause: It is a static error if two or more variables declared or imported by a module have equal expanded QNames (as defined by the `eq` operator.)

Action: n/a

LPX-01050: [XPDY0050] Invalid dynamic type

Cause: It is a dynamic error if the dynamic type of the operand of a treat expression does not match the sequence type specified by the treat expression. This error might also be raised by a path expression beginning with "/" or "/" if the context node is not in a tree that is rooted at a document node. This is because a leading "/" or "/" in a path expression is an abbreviation for an initial step that includes the clause treat as document-node().

Action: n/a

LPX-01051: [XPST0051] AtomicType not defined

Cause: It is a static error if a QName that is used as an AtomicType in a SequenceType is not defined in the in-scope schema types as an atomic type.

Action: n/a

LPX-01052: [XQDY0052]

Cause: Not currently used.

Action: n/a

LPX-01053: [XQDY0053]

Cause: Not currently used.

Action: n/a

LPX-01054: [XQST0054] The variable depends on itself

Cause: It is a static error if a variable depends on itself.

Action: n/a

LPX-01055: [XQST0055] Repeated copy-namespaces declaration

Cause: It is a static error if a Prolog contains more than one copy-namespaces declaration.

Action: n/a

LPX-01056: [XQST0056]

Cause: Not currently used.

Action: n/a

LPX-01057: [XQST0057] Missing schema import target namespace

Cause: It is a static error if a schema import binds a namespace prefix but does not specify a target namespace other than a zero-length string.

Action: n/a

LPX-01058: [XQST0058] Repeated schema import target namespace

Cause: It is a static error if multiple schema imports specify the same target namespace.

Action: n/a

LPX-01059: [XQST0059] Can't find schema or module with namespace '~s'

Cause: It is a static error if an implementation is unable to process a schema or module import by finding a schema or module with the specified target namespace.

Action: n/a

LPX-01060: [XQST0060] Function name should have a namespace

Cause: It is a static error if the name of a function in a function declaration is not in a namespace (expanded QName has a null namespace URI).

Action: n/a

LPX-01061: [XQDY0061] Invalid document node

Cause: It is a dynamic error if the operand of a validate expression is a document node whose children do not consist of exactly one element node and zero or more comment and processing instruction nodes, in any order.

Action: n/a

LPX-01062: [XQDY0062]

Cause: Not currently used.

Action: n/a

LPX-01063: [XQST0063]

Cause: Not currently used.

Action: n/a

LPX-01064: [XQDY0064] Processing instruction name contains 'XML'

Cause: It is a dynamic error if the value of the name expression in a computed processing instruction constructor is equal to "XML" (in any combination of upper and lower case).

Action: n/a

LPX-01065: [XQST0065] Repeated ordering mode declaration

Cause: A static error is raised if a Prolog contains more than one ordering mode declaration.

Action: n/a

LPX-01066: [XQST0066] Repeated default declaration

Cause: A static error is raised if a Prolog contains more than one default element/type namespace declaration, or more than one default function namespace declaration.

Action: n/a

LPX-01067: [XQST0067] Repeated construction declaration

Cause: A static error is raised if a Prolog contains more than one construction declaration.

Action: n/a

LPX-01068: [XQST0068] Repeated boundary-space declaration

Cause: A static error is raised if a Prolog contains more than one boundary-space declaration.

Action: n/a

LPX-01069: [XQST0069] Repeated empty order declaration

Cause: A static error is raised if a Prolog contains more than one empty order declaration.

Action: n/a

LPX-01070: [XQST0070] Invalid (prefix, URI) combination

Cause: A static error is raised if a namespace URI is bound to the predefined prefix xmlns, or if a namespace URI other than http://www.w3.org/XML/1998/namespace is bound to the prefix xml, or if the prefix xml is bound to a namespace URI other than http://www.w3.org/XML/1998/namespace.

Action: n/a

LPX-01071: [XQST0071] Repeated namespace attribute

Cause: A static error is raised if the namespace declaration attributes of a direct element constructor do not have distinct names.

Action: n/a

LPX-01072: [XQDY0072] Element content contains invalid hyphens combination

Cause: It is a dynamic error if the result of the content expression of a computed comment constructor contains two adjacent hyphens or ends with a hyphen.

Action: n/a

LPX-01073: [XQST0073] Cyclic import sequence

Cause: It is a static error if the graph of module imports contains a cycle (that is, if there exists a sequence of modules M1 ... Mn such that each Mi imports Mi+1 and Mn imports M1), unless all the modules in the cycle share a common namespace.

Action: n/a

LPX-01074: [XQDY0074] Invalid element or attribute QName

Cause: It is a dynamic error if the value of the name expression in a computed element or attribute constructor cannot be converted to an expanded QName (for example, because it contains a namespace prefix not found in statically known namespaces.)

Action: n/a

LPX-01075: [XQST0075] Validate expression not supported

Cause: An implementation that does not support the Validation Feature must raise a static error if it encounters a validate expression.

Action: n/a

LPX-01076: [XQST0076] Invalid collation

Cause: It is a static error if a collation subclause in an order by clause of a FLWOR expression does not identify a collation that is present in statically known collations.

Action: n/a

LPX-01077: [XQST0077]

Cause: Not currently used.

Action: n/a

LPX-01078: [XQST0078]

Cause: Not currently used.

Action: n/a

LPX-01079: [XQST0079] Invalid extension expression

Cause: It is a static error if an extension expression contains neither a pragma that is recognized by the implementation nor an expression enclosed in curly braces.

Action: n/a

LPX-01080: [XPST0080] Invalid target type

Cause: It is a static error if the target type of a cast or castable expression is xs:NOTATION or xs:anyAtomicType.

Action: n/a

LPX-01081: [XPST0081] Invalid prefix

Cause: It is a static error if a QName used in a query contains a namespace prefix that cannot be expanded into a namespace URI by using the statically known namespaces.

Action: n/a

LPX-01082: [XQST0082]

Cause: Not currently used.

Action: n/a

LPX-01083: [XQST0083]

Cause: Not currently used.

Action: n/a

LPX-01084: [XQDY0084] Missing top-level element declaration

Cause: It is a dynamic error if the element validated by a validate statement does not have a top-level element declaration in the in-scope element declarations, if validation mode is strict.

Action: n/a

LPX-01085: [XQST0085] The namespace URI shouldn't be a zero-length string

Cause: It is a static error if the namespace URI in a namespace declaration attribute is a zero-length string, and the implementation does not support [XML Names 1.1].

Action: n/a

LPX-01086: [XQTY0086] No-preserve mode conflict

Cause: It is a type error if the typed value of a copied element or attribute node is namespace-sensitive when construction mode is preserve and copy-namespaces mode is no-preserve.

Action: n/a

LPX-01087: [XQST0087] Invalid encoding

Cause: It is a static error if the encoding specified in a Version Declaration does not conform to the definition of EncName specified in [XML 1.0].

Action: n/a

LPX-01088: [XQST0088] Target namespace string shouldn't be of zero length

Cause: It is a static error if the literal that specifies the target namespace in a module import or a module declaration is of zero length.

Action: n/a

LPX-01089: [XQST0089] Repeated variable name

Cause: It is a static error if a variable bound in a for clause of a FLWOR expression, and its associated positional variable, do not have distinct names (expanded QNames).

Action: n/a

LPX-01090: [XQST0090] Invalid character reference

Cause: It is a static error if a character reference does not identify a valid character in the version of XML that is in use.

Action: n/a

LPX-01091: [XQDY0091] Invalid xml:id

Cause: An implementation MAY raise a dynamic error if an xml:id error, as defined in [XML ID], is encountered during construction of an attribute named xml:id.

Action: n/a

LPX-01092: [XQDY0092] Invalid xml:space value

Cause: An implementation MAY raise a dynamic error if a constructed attribute named xml:space has a value other than preserve or default.

Action: n/a

LPX-01093: [XQST0093] Module depends on itself

Cause: It is a static error to import a module M1 if there exists a sequence of modules M1 ... Mi ... M1 such that each module directly depends on the next module in the sequence (informally, if M1 depends on itself through some chain of module dependencies.)

Action: n/a

LPX-01094: [FORG0003] fn:zero-or-one called with a sequence containing more than one item

Cause: It is a dynamic error if fn:zero-or-one is called with a sequence containing more than one item

Action: n/a

LPX-01095: [FORG0004] fn:one-or-more called with a sequence containing no items

Cause: It is a dynamic error if fn:one-or-more is called with a sequence containing no items

Action: n/a

LPX-01096: [FORG0005] fn:exactly-one called with a sequence containing zero or more than one item

Cause: It is a dynamic error if fn:exactly-one is called with a sequence containing zero or more than one item

Action: n/a

LPX-01097: [FORG0006] Invalid argument type

Cause: It is a dynamic error if an XQuery F&O is called with wrong argument type.

Action: n/a

LPX-01098: [FOCA0002] Invalid lexical value

Cause: It is a dynamic error if an XQuery F&O is called with wrong argument value.

Action: n/a

LPX-01099: [FOCA0001] Input value too large for decimal

Cause: It is a dynamic error if the Input value too large for decimal

Action: n/a

LPX-01100: [FOCA0003] Input value too large for integer
Cause: It is a dynamic error if the Input value too large for integer
Action: n/a

LPX-01101: External Error '~s' occurs
Cause: An error occurred during the processing of the XQuery expression.
Action: Check the detailed error message for the possible causes.

LPX-01102: [FORG0008] both arguments to fn:dateTime have a specified timezone
Cause: It is an error to pass arguments to fn:dateTime having a specified timezone
Action: n/a

LPX-01105: [FOAR0001] Division by zero
Cause: It is an error to divide by zero
Action: n/a

LPX-01106: [FOAR0002] Numeric operation overflow/underflow
Cause: Numeric operations causes overflow / underflow
Action: n/a

LPX-01107: [FORG0002] invalid argument to fn:resolve-uri()
Cause: Wrong argument to fn:resolve-uri() function
Action: n/a

LPX-01108: [FORG0009] error in resolving a relative URI against a base URI in fn:resolve-uri()
Cause: Error resolving relative URI in fn:resolve-uri() function
Action: n/a

LPX-01109: [FOCA0005] NaN supplied as float/double value
Cause: NaN supplied as float/double value
Action: n/a

LPX-01110: [FOCA0006] String to be cast to decimal has too many digits of precision
Cause: String to be cast to decimal has too many digits of precision
Action: n/a

LPX-01111: [FOCH0002] Unsupported collation
Cause: Unsupported collation
Action: n/a

LPX-01112: [FOCH0003] Unsupported normalization form
Cause: Unsupported normalization form
Action: n/a

LPX-01113: [FOCH0004] Collation does not support collation units
Cause: Collation does not support collation units
Action: n/a

LPX-01114: [FODC0001] No context document

Cause: No context document

Action: n/a

LPX-01115: [FODC0002] Error retrieving resource

Cause: Error retrieving resource

Action: n/a

LPX-01116: [FODC0003]

Cause: Function stability not defined

Action: Function stability not defined

LPX-01117: [FODC0004] Invalid argument to fn:collection

Cause: Invalid argument to fn:collection

Action: n/a

LPX-01118: [FODC0005] Invalid argument to fn:doc or fn:doc-available

Cause: Invalid argument to fn:doc or fn:doc-available

Action: n/a

LPX-01119: [FODT0001] Overflow/underflow in date/time operation

Cause: Overflow/underflow in date/time operation

Action: n/a

LPX-01120: [FODT0002] Overflow/underflow in duration operation

Cause: Overflow/underflow in duration operation

Action: n/a

LPX-01121: [FODT0003] Invalid timezone value

Cause: Invalid timezone value

Action: n/a

LPX-01122: [FONS0005] Base-uri not defined in the static context

Cause: Base-uri not defined in the static context

Action: n/a

LPX-01123: [FORG0001] Invalid value for cast/constructor

Cause: Invalid value for cast/constructor

Action: n/a

LPX-01124: [FORX0001] Invalid regular expression flags

Cause: Invalid regular expression flags

Action: n/a

LPX-01125: [FORX0002] Invalid regular expression

Cause: Invalid regular expression

Action: n/a

LPX-01126: [FORX0003] Regular expression matches zero-length string

Cause: Regular expression matches zero-length string

Action: n/a

LPX-01127: [FORX0004] Invalid replacement string

Cause: Invalid replacement string

Action: n/a

LPX-01128: [FOTY0012] Argument node does not have a typed value

Cause: Argument node does not have a typed value

Action: n/a

LPX-01129: [XUST0001] Updating expression in a wrong position

Cause: It is a static error if an updating expression is used in any position other than one of the following: 1. The topmost expression in the body of a query. 2. The modify clause of a transform expression. 3. The return clause of a FLWOR expression. 4. The return clauses of a typeswitch expression in which every return clause contains an updating expression, an empty expression (), or a call to the fn:error function. 5. The then and else clauses of a conditional statement in which both the then and else clauses contain either an updating expression, an empty expression (), or a call to the fn:error function. 6. An operand of a comma expression in which each operand is either an updating expression, an empty expression (), or a call to the fn:error function. 7. The content of a parenthesized expression. 8. The body of a function declaration in which the keyword updating is specified.

Action: n/a

LPX-01130: [XUST0002] Non-updating expression in a wrong position

Cause: It is a static error if a non-updating expression other than an empty expression () or a call to the fn:error function is used in one of the following positions: 1. The modify clause of a transform expression. 2. The top-level expression in the body of a function declaration in which the keyword updating is specified.

Action: n/a

LPX-01131: [XUST0003] Repeated revalidation declaration

Cause: It is a static error if a Prolog contains more than one revalidation declaration.

Action: n/a

LPX-01132: [XUTY0004] Invalid attribute node in the insertion sequence

Cause: It is a type error if the insertion sequence of an insert expression contains an attribute node following a node that is not an attribute node.

Action: n/a

LPX-01133: [XUTY0005] Invalid target expression for 'insert'

Cause: In an insert expression where into, as first into, or as last into is specified, it is a type error if the target expression returns a non-empty result that does not consist of a single element or document node.

Action: n/a

LPX-01134: [XUTY0006] Invalid target expression for 'insert'

Cause: In an insert expression where before or after is specified, it is a type error if the target expression returns a non-empty result that does not consist of a single element, text, comment, or processing instruction node.

Action: n/a

LPX-01135: [XUTY0007] Invalid target expression for 'delete'

Cause: It is a type error if the target expression of a delete expression does not return a sequence of zero or more nodes.

Action: n/a

LPX-01136: [XUTY0008] Invalid target expression for 'replace'

Cause: In a replace expression, it is a type error if the target expression returns a non-empty result that does not consist of a single element, attribute, text, comment, or processing instruction node.

Action: n/a

LPX-01137: [XUDY0009] Invalid target expression for 'replace'

Cause: In a replace expression where value of is not specified, it is a dynamic error if the node returned by the target expression does not have a parent.

Action: n/a

LPX-01138: [XUTY0010] Invalid replacement sequence for 'replace'

Cause: In a replace expression where value of is not specified and the target is an element, text, comment, or processing instruction node, it is a type error if the replacement sequence does not consist of zero or more element, text, comment, or processing instruction nodes.

Action: n/a

LPX-01139: [XUTY0011] Invalid replacement sequence for 'replace'

Cause: In a replace expression where value of is not specified and the target is an attribute node, it is a type error if the replacement sequence does not consist of zero or more attribute nodes.

Action: n/a

LPX-01140: [XUTY0012] Invalid target expression for 'rename'

Cause: In a rename expression, it is a type error if the target expression returns a non-empty result that does not consist of a single element, attribute, or processing instruction node.

Action: n/a

LPX-01141: [XUTY0013] Invalid copy expression for transform

Cause: In a transform expression, it is a type error if a source expression in the copy clause does not return a single node.

Action: n/a

LPX-01142: [XUDY0014] Modified node was not created by the copy clause

Cause: In a transform expression, it is a dynamic error if the modify clause modifies any node that was not created by the copy clause.

Action: n/a

LPX-01143: [XUDY0015] Duplicate 'rename' for the same target node

Cause: It is a dynamic error if any node is the target of more than one rename expression within the same query.

Action: n/a

LPX-01144: [XUDY0016] Duplicate 'replace' for the same target node

Cause: It is a dynamic error if any node is the target of more than one replace expression (without value of being specified) within the same query.

Action: n/a

LPX-01145: [XUDY0017] Duplicate 'replace' for the same target node

Cause: It is a dynamic error if any node is the target of more than one replace value of expression within the same query.

Action: n/a

LPX-01146: [XUDY0018] External not updating function returns an updated value

Cause: It is a dynamic error if a function that was declared to be external but not updating returns a non-empty pending update list.

Action: n/a

LPX-01147: [XUDY0019] External updating function returns an invalid value

Cause: It is a dynamic error if a function that was declared to be both external and updating returns a non-empty data model instance.

Action: n/a

LPX-01148: [XUDY0020] Deleted node has no parent

Cause: An implementation may (but is not required to) raise a dynamic error if a node is deleted that had no parent before execution of the query began.

Action: n/a

LPX-01149: [XUDY0021] The result XDM instance violates XDM constraints

Cause: It is a dynamic error if the XDM instance that would result from applying all the updates in a query violates any constraint specified in [XQuery/XPath Data Model (XDM)]. In this case, none of the updates in the query are made effective.

Action: n/a

LPX-01150: [XUTY0022] Invalid attribute insertion into a document node

Cause: It is a type error if an insert expression specifies the insertion of an attribute node into a document node.

Action: n/a

LPX-01151: [XUDY0023] Updating expression introduces a namespace conflict

Cause: It is a dynamic error if an insert, replace, or rename expression affects an element node by introducing a new namespace binding that conflicts with one of its existing namespace bindings.

Action: n/a

LPX-01152: [XUDY0024] Updating expression introduces a namespace conflict

Cause: It is a dynamic error if the effect of a set of updating expressions is to introduce conflicting namespace bindings into an element node.

Action: n/a

LPX-01153: [XUDY0025] Invalid QName for processing instruction rename

Cause: It is a dynamic error if the target of a rename expression is a processing instruction node, and the new name expression returns a QName with a non-empty namespace prefix.

Action: n/a

LPX-01154: [XUST0026] Revalidation mode '~s' is not supported

Cause: It is a static error if a revalidation declaration in a Prolog specifies a revalidation mode that is not supported by the current implementation.

Action: n/a

LPX-01155: [XUDY0027] Invalid target expression

Cause: It is a dynamic error if the target expression of an insert, replace, or rename expression evaluates to an empty sequence.

Action: n/a

LPX-01156: [XUST0028] Updating function should not have a return type

Cause: It is a static error if a function declaration specifies both updating and a return type.

Action: n/a

LPX-01157: [XUDY0029] Insert expression target node doesn't have a parent

Cause: In an insert expression where before or after is specified, it is a dynamic error if node returned by the target expression does not have a parent.

Action: n/a

LPX-01158: [XUDY0030] Invalid insertion of an attribute node

Cause: It is a dynamic error if an insert expression specifies the insertion of an attribute node before or after a child of a document node.

Action: n/a

LPX-01159: [FOUP0001] Invalid 'fn:put' first operand

Cause: It is a dynamic error if the first operand of fn:put is not a node of a supported kind.

Action: n/a

LPX-01160: [FOUP0002] Invalid 'fn:put' second operand

Cause: It is a dynamic error if the second operand of fn:put is not a valid lexical representation of the xs:anyURI type.

Action: n/a

LRM-00100 to LRM-00123

LRM-00100: internal error [number]

Cause: An internal error has occurred.

Action: Contact Oracle Support Services and report the error.

LRM-00101: unknown parameter name 'string'

Cause: The parameter name was misspelled.

Action: Spell the parameter name correctly.

LRM-00102: 'string' is not in the legal range for 'string'

Cause: The value of the parameter is not within the legal range.

Action: Refer to the manual for the allowable values for this parameter.

LRM-00103: 'string' contains an illegal integer radix for 'string'

Cause: An illegal integer radix specification was found.

Action: Only 'd', 'h', 'D', and 'H' may be used as radix specifications.

LRM-00104: 'string' is not a legal integer for 'string'

Cause: The value is not a valid integer.

Action: Specify only valid integers for this parameter.

LRM-00105: 'string' is not a legal Boolean for 'string'

Cause: The value is not a valid Boolean.

Action: Refer to the manual for allowable Boolean values.

LRM-00106: out of memory

Cause: The operating system has run out of memory.

Action: Take action to make more memory available to the program.

LRM-00107: parameter name abbreviation 'string' is not unique

Cause: The given abbreviation was not unique.

Action: Use a longer abbreviation to make the parameter name unique.

LRM-00108: invalid positional parameter value 'string'

Cause: An invalid positional parameter value has been entered.

Action: Remove the invalid positional parameter.

LRM-00109: could not open parameter file 'string'

Cause: The parameter file does not exist.

Action: Create an appropriate parameter file.

LRM-00110: syntax error at '*string*'

Cause: A syntax error was detected.

Action: Change the input so that the correct syntax is used.

LRM-00111: no closing quote for value '*string*'

Cause: A quoted string was started but not finished.

Action: Put a closing quote in the proper location.

LRM-00112: multiple values not allowed for parameter '*string*'

Cause: An attempt was made to specify multiple values for a parameter which can take only one value.

Action: Do not specify more than one value for this parameter.

LRM-00113: error when processing file '*string*'

Cause: A problem occurred when processing this file.

Action: Examine the additional error messages and correct the problem.

LRM-00114: error when processing from command line

Cause: A problem occurred when processing the command line.

Action: Examine the additional error messages and correct the problem.

LRM-00115: error when processing an environment variable

Cause: A problem occurred when processing an environment variable.

Action: Examine the additional error messages and correct the problem.

LRM-00116: syntax error at '*string*' following '*string*'

Cause: A syntax error was detected.

Action: Change the input so that the correct syntax is used.

LRM-00117: syntax error at '*string*' at the start of input

Cause: A syntax error was detected.

Action: Change the input so that the correct syntax is used.

LRM-00118: syntax error at '*string*' at the end of input

Cause: A syntax error was detected.

Action: Change the input so that the correct syntax is used.

LRM-00119: unable to obtain a valid value for '*string*'

Cause: No valid value was obtained for this parameter.

Action: Rerun the application and enter a valid value.

LRM-00120: '*string*' is not a legal Oracle number for '*string*'

Cause: The value is not a valid Oracle number.

Action: Refer to the manual for allowable Oracle number values.

LRM-00121: '*string*' is not an allowable value for '*string*'

Cause: The value is not a legal value for this parameter.

Action: Refer to the manual for allowable values.

LRM-00122: value '*string*' for '*string*' must be between '*number*' and '*number*'

Cause: The value of the parameter is not within the legal range.

Action: Specify a value that is within the legal range.

LRM-00123: invalid character *number* found in the input file

Cause: A character that is invalid was found in the input file.

Action: Specify an input file that contains only valid characters.

LSX-00001 to LSX-00345

LSX-00001: NULL pointer

Cause: A NULL pointer was detected as an internal error condition.

Action: This is a programming error by the caller of the Schema processor. Contact someone who can fix the problem.

LSX-00002: root element is not *schema*

Cause: The top-level element of an XML Schema must be *schema*.

Action: Correct the Schema; consult the Schema specification.

LSX-00003: invalid attribute "~1S" for element "~2S"

Cause: The named Schema element had an invalid attribute.

Action: Correct the Schema; consult the Schema specification.

LSX-00004: unexpected XML node type

Cause: Schema contains an XML node other than element, text (or CDATA),

Action: Other node types are not permitted; remove them.

LSX-00008: feature "~s" is not implemented

Cause: An attempt was made to use a feature that is not yet implemented.

Action: Make an enhancement request for the feature.

LSX-00009: data missing for type "~S"

Cause: Data is missing for an element or attribute of a simple type.

Action: Add data in the element or attribute.

LSX-00010: extra element(s) at end of "~S"

Cause: Extra elements exist at the end of schema component declarations.

Action: Remove the extra elements.

LSX-00011: internal error: ~s\n

Cause: Implementation error.

Action: File a bug.

LSX-00013: element "~S" not from Schema of Schemas

Cause: Bogus element exists in the schema file. Its name is not from Schema of Schemas.

Action: Remove the bogus element.

LSX-00014: empty instance document

Cause: Instance document to be Schema validated was empty (no top-level element).

Action: Provide a complete XML instance document.

LSX-00015: failed to parse document

Cause: Failed to parse the schema document using the given URI.

Action: Provide the correct URI and make sure that the schema document is valid.

LSX-00016: schema and instance document have incompatible character sets

Cause: Parsed schema components were in a simple-type character set while the parsed instance document data was not. A simple-type character set is single-byte, not shift sensitive, and has no linguistic specials in use.

Action: Reinitialize the schema global context with appropriate parser context settings, i.e. pass a parser context with its output encoding set to be a multibyte or Unicode character set.

LSX-00018: invalid schema context

Cause: An invalid schema context was provided to the processor. Multiple schema documents were loaded and assembled into the schema context. At least one of them is not fully valid with respect to a schema corresponding to the Schema for Schemas.

Action: Check the errors reported when schema documents were loaded, mapped, or validated. Correct errors found in the identified schema documents and reload them into a new schema context. Then provide the new schema context to the processor.

LSX-00020: unknown type "~S"

Cause: A specified type was unknown (not defined in any loaded Schemas).

Action: Make sure the type was defined and that the type usage referenced the correct Schema.

LSX-00021: undefined element "~S"

Cause: Element is undefined in the specified namespace.

Action: If the element name is misspelled, correct the spelling.

LSX-00022: unknown namespace prefix "~S"

Cause: Prefix in a QName is undefined in the current scope.

Action: Correct the prefix name if it's misspelled.

LSX-00023: unknown namespace URI "~S"

Cause: Namespace URI is unknown to the schema processor.

Action: Correct the namespace URI if it's misspelled.

LSX-00024: unknown attribute group "~S"

Cause: The name of attribute group is unknown to the schema processor in the current scope.

Action: Correct the name of attribute group if it's misspelled.

LSX-00025: unknown group "~S"

Cause: The name of group is unknown to the schema processor in the current scope.

Action: Correct the name of group if it's misspelled.

LSX-00026: unknown attribute "~S"

Cause: The name of attribute is unknown to the schema processor in the current scope.

Action: Correct the name of attribute if it's misspelled.

LSX-00027: property "~s" unknown

Cause: The named validation property was unknown.

Action: Refer to the documentation for the complete list of validation properties.

LSX-00102: duplicate element "~S"

Cause: Element declaration is not unique within its scope.

Action: Rename the element.

LSX-00103: duplicate group "~S"

Cause: Group declaration is not unique within its scope.

Action: Rename the group.

LSX-00104: duplicate type "~S"

Cause: Type definition is not unique within its scope.

Action: Rename the type.

LSX-00105: duplicate attribute group "~S"

Cause: Attribute group declaration is not unique within its scope.

Action: Rename the attribute group.

LSX-00106: duplicate attribute "~S"

Cause: Attribute declaration is not unique within its scope.

Action: Rename the attribute.

LSX-00110: facet "~S" should have single value attribute

Cause: A facet declaration did not have a value attribute.

Action: Each facet declaration must contain one and only one value attribute.

LSX-00111: type "~S" contains invalid facets

Cause: A specified facet was invalid for a type. Each datatype has a different set of facets which may apply.

Action: Use only applicable facets for the type.

LSX-00112: facet "~S" duplicated

Cause: A facet (other than "enumeration") was specified more than once.

Action: Only the enumeration facet may be used more than once for a type.

LSX-00113: facet "~1S" has invalid value "~2S"

Cause: Facet value contained illegal characters or its value was out of range.

Action: Remove illegal characters.

LSX-00114: facet "~S" not in schema namespace

Cause: Facets are not defined in the XMLSchema namespace.

Action: Remove illegal facet declarations.

LSX-00116: mutually exclusive facets are not allowed

Cause: Mutual exclusiveness violations were found for facets. For example, both "length" and either "minLength" or "maxLength" are not allowed to be facets.

Action: Remove the facets that are at fault.

LSX-00117: "minLength" should not be greater than "maxLength"

Cause: The value of "minLength" must be less than or equal to the value of "maxLength".

Action: Correct either "minLength" or "maxLength".

LSX-00118: fixed facet value cannot be changed

Cause: The value of a fixed facet in the base type definition should remain the same.

Action: Remove the fixed facet specification in the parent's type for the erroneous facet component.

LSX-00119: value is not valid restriction of parent's minLength

Cause: There was an error in that minLength was among the members of {facets} of {base type definition} and {value} was less than the {value} of the parent minLength.

Action: Increase the {value} of minLength.

LSX-00120: value is not valid restriction of parent's maxLength

Cause: There was an error in that maxLength was among the members of {facets} of {base type definition} and {value} was greater than the {value} of the parent maxLength.

Action: Increase the {value} of maxLength.

LSX-00121: value is not valid restriction of parent's length

Cause: There was an error in that length was among the members of {facets} of {base type definition} and {value} was not equal to the {value} of the parent length.

Action: Make {value} the same as parent's.

LSX-00122: value is not valid restriction of parent's whiteSpace

Cause: There was an error in that whiteSpace was among the members of {facets} of {base type definition} and at least one of the following conditions was true: 1 {value} is replace or preserve and {value} of the parent whiteSpace is collapse 2 {value} is preserve and the {value} of the parent whiteSpace is replace

Action: Change the {value} of whiteSpace.

LSX-00123: base type is required

Cause: Missing base type declaration in the type definition.

Action: Define a base type.

LSX-00124: "list" element is improperly defined

Cause: A "list" element either must have its "itemType" attribute set or have one of its children be a "simpleType" element, but both conditions cannot exist.

Action: Remove the erroneous condition.

LSX-00125: "restriction" element is improperly defined

Cause: A "restriction" element either must have its "base" attribute set or have one of its children be a "simpleType" element, but both conditions cannot exist.

Action: Remove the erroneous condition.

LSX-00126: facet "~1S" has invalid value "~u"

Cause: Facet value contained illegal characters or its value was out of range.

Action: Remove illegal characters.

LSX-00127: totalDigits must be greater than or equal to fractionDigits

Cause: The value of the facet totalDigits is less than the value of the facet fractionDigits.

Action: Ensure that totalDigits is greater than or equal to fractionDigits.

LSX-00130: attribute "processContents" has invalid value "~S"

Cause: Attribute "processContents" in the "any" element or "anyAttribute" declaration has an invalid value.

Action: Specify one of the following values: lax, skip, or strict.

LSX-00132: attribute "~1S" has invalid occurrences value "~2S"

Cause: A minOccurs or maxOccurs attribute had an invalid value (not an integer or less than zero).

Action: Use a legal "occurs" value.

LSX-00133: attribute "use" has invalid value "~S"

Cause: A "use" attribute had an invalid value. Choices for "use" are "default", "fixed", "optional", "prohibited", or "required".

Action: Change the attribute to one of the above values.

LSX-00134: attribute "~1S" has invalid qualification "~2S"

Cause: An attribute that specifies qualification (form, attributeFormDefault, elementFormDefault) was invalid; it must be one of "qualified" or "unqualified".

Action: Change the attribute to one of the above values.

LSX-00135: invalid min/max Occurs for *all* element, must be 0/1

Cause: "minOccurs" has a value other than 0/1 or "maxOccurs" has a value other than 1.

Action: Specify 0/1 for "minOccurs" or "maxOccurs".

LSX-00136: "maxOccurs" is less than "minOccurs"

Cause: The value of the "maxOccurs" specification is less than the value of the "minOccurs" specification.

Action: Correct "minOccurs" or "maxOccurs".

LSX-00141: ID type may only be used in attributes

Cause: For backward compatibility with DTD, ID type may only be used in attributes.

Action: Remove the ID type.

LSX-00142: invalid sub-element "~1S" for element "~2S"

Cause: There was an invalid sub-element in the content of either the attribute or the element declaration. This was because the sub-element was either at the wrong position or out of context.

Action: Remove the sub-element or move it to the correct position.

LSX-00143: element "~S" must have type or ref

Cause: A Schema element was declared but was neither type or reference.

Action: One of type or reference must be specified.

LSX-00144: attribute "~1S" invalid derivation-restriction value "~2S"

Cause: An attribute which specifies a derivation-restriction setting (block, content, final) had an invalid value. Choices are "#all", "extension", or "restriction".

Action: Change the attribute to one of the above values.

LSX-00145: attribute "~1S" invalid derived value "~2S"

Cause: A derivedBy attribute had an invalid value. Choices are "extension" or "restriction".

Action: Change the attribute to one of the above values.

LSX-00146: element or attribute is improperly defined

Cause: An element or attribute definition must have either its "type" attribute set or must have one of its children be a "simpleType" or "complexType" element but both conditions cannot exist.

Action: Remove the erroneous condition.

LSX-00147: "~1S" cannot contain "~2S"

Cause: An invalid schema component exists in the current declaration.

Action: Remove the schema component.

LSX-00148: annotation must come first in "~S"

Cause: "annotation" element must be the first in the content.

Action: Make "annotation" the first element.

LSX-00149: duplicated ID specified in "~S"

Cause: An attempt was made to specify two distinct members of {attribute uses} with {attribute declaration}s, both of whose {type definition}s are from ID or are derived from ID.

Action: Declare only one member of the {attribute uses} whose {type definition} is from ID or will be derived from ID.

LSX-00150: attributeGroup reference shouldn't have children

Cause: A reference-to-attributeGroup element has children. It is suppose to be empty except for annotations.

Action: Remove the children.

LSX-00151: invalid combination of attributes "ref" and "name"

Cause: If the item's parent is not *schema*, then either the "ref" or the "name" attribute must be present, but not both. Top-level elements or attributes must have a name.

Action: Specify either the "ref" or "name" attribute.

LSX-00152: only "minOccurs", "maxOccurs", or "id" is allowed

Cause: If the item's parent is not *schema* and "ref" is present, then "complexType", "simpleType", "key", "keyref", "unique", "nillable", "default", "fixed", "form", "block", and "type" must be absent.

Action: Remove the prohibited attribute.

LSX-00153: invalid combination of default and fixed attributes

Cause: It is an error for a declaration to contain both fixed and default attributes.

Action: Remove either the default or the fixed attributes.

LSX-00154: attribute "use" must have its value set to "optional"

Cause: If "default" and "use" are both present, use must have its value set to "optional".

Action: Remove the default attribute or change the value of the "use" attribute.

LSX-00155: invalid use of attribute "ref"

Cause: If the item's parent is not *schema* and the attribute "ref" is present, then the element "simpleType" and the attributes "form" and "type" must be absent.

Action: Remove the prohibited items.

LSX-00156: type is final and no derivations are allowed

Cause: Derivation from a type that is declared to be final occurred.

Action: Remove the final declaration from the base type.

LSX-00157: "~S" is abstract and cannot be used in an instance document

Cause: The element declaration or the type definition was abstract.

Action: When an element is declared to be abstract, a member of that element's substitution group must appear in the instance document. When an element's corresponding type definition is declared as abstract, all instances of that element must use `xsi:type` to indicate a derived type that is not abstract.

LSX-00158: base type of "~S" must be simple type or primitive datatype

Cause: The derivation constraint was violated.

Action: Use `complexType` instead of `simpleType`.

LSX-00159: list content of multiple simple types is not allowed

Cause: Two or more simple types were specified within the list content .

Action: Specify only one simple type.

LSX-00160: invalid substitution group affiliation between "~S" and "~S"

Cause: There was an error in that {substitution group exclusions} prevented substitution group affiliation by type restriction or type extension.

Action: Remove the offending deriving method from the {substitution group exclusions} list.

LSX-00161: disallowed type substitution between "~S" and "~S"

Cause: There was a substituted type whose deriving method falls in the union of the {disallowed substitutions} and the {type definition}'s {prohibited substitutions}.

Action: Remove the offending deriving method from the element's {disallowed substitutions} list or the {type definition}'s {prohibited substitutions} list.

LSX-00162: string "~S" is an invalid default for the complex type

Cause: If the {content type} is a simple type definition, then the string must be valid with regard to the simple type definition as defined by String Valid (3.14.4). If the {content type} is mixed, then the {content type}'s particle must be empty as defined by Particle Emptyable (3.9.6). However, one of these conditions was not met, resulting in this error.

Action: Make the default string a valid default with regard to the complex type definition.

LSX-00163: duplicated content specification in "~S"

Cause: There was a duplicate content specification in the children of complexType.

Action: Remove the duplicate content specification.

LSX-00164: no content specified in "~S"

Cause: In a simpleContent specification, either "restriction" or "extension" was not specified as a child.

Action: Add either a "restriction" or an "extension" element information item.

LSX-00165: content type of "~S" must be simple type

Cause: The content type of the type definition was not a simple type definition.

Action: Use complexContent instead of simpleContent .

LSX-00166: both content types must be mixed or both must be element-only

Cause: If the content types of the derived type and base type are not the same simple type definition and the content type of the base type is not empty, then both content types must be mixed or both must be element-only. This was not the case, resulting in this error.

Action: Add attribute mixed="true" or remove it.

LSX-00167: defining form of "~S" must occur at the top level

Cause: The defining form did not occur at the top level of a schema.

Action: Move attributeGroup or group definition to the top level of the schema.

LSX-00168: referring form of "~S" must NOT occur at the top level

Cause: The referring form did not occur within a complex type definition or an attribute group definition.

Action: Move the attributeGroup definition to within a complex type definition or an attribute group definition. Or, move the group definition to within a complex type, restriction, extension, choice, or sequence.

LSX-00169: circular group reference is disallowed outside *redefine*

Cause: There was a circular group reference.

Action: One of the group references needs to be changed to a group definition.

LSX-00170: union must have memberTypes attribute or some simpleType children

Cause: There was no member type definition for the union declaration.

Action: Add memberTypes attribute or simpleType children.

LSX-00171: missing required sub-element "~S"

Cause: The sub-element specified in the error message was required.

Action: Add the required sub-element.

LSX-00172: "~S" is not a valid restriction of "~S"

Cause: The schema component constraint, Derivation Valid (Restriction, Complex) or Particle Valid (Restriction), was violated.

Action: Modify the base type (particle) or the restricted type (particle) definition.

LSX-00173: ~S of ~S type is not a valid restriction of ~S of ~S type

Cause: The schema component constraint, Particle Restriction OK (Elt:Elt -- NameAndTypeOK), was violated.

Action: Modify either or both element declaration particles.

LSX-00174: "~S" is not a valid derivation of "~S"

Cause: The schema component constraint, Derivation Valid (Restriction, simple), (Restriction, complex) or (Extension), was violated.

Action: Modify the base type or the derived type definition.

LSX-00175: a complex base within "simpleContent" must have simple content

Cause: A complex base within "simpleContent" was not restricted to contain only simple content.

Action: Modify the base type or the derived type definition.

LSX-00176: circular reference detected in schema component named "~S"

Cause: An attempt was made to use a circular reference. This is not allowed. For example, it is not possible to return to an element declaration by repeatedly following the {substitution group affiliation} property. Or, within the {particles} of a group there must not be at any depth a particle whose {term} is the group itself.

Action: Modify one of the schema components in the loop.

LSX-00200: element "~S" not empty

Cause: Content of the element must be empty.

Action: Remove any schema components in the content.

LSX-00201: contents of "~S" should be elements only

Cause: Node with type other than "element", "processing instruction", or "comment" exists in the content of the violating element.

Action: Remove the offending nodes.

LSX-00202: contents of "~S" should be text only

Cause: Node with type other than "text", "processing instruction", or "comment" exists in the content of the violating element.

Action: Remove the offending nodes.

LSX-00204: extra data at end of complex element

Cause: Extra nodes exist at the end of an element with a complex type definition.

Action: Remove the offending nodes or check the definition of the complex type.

LSX-00205: element "~1S" value "~2S" is wrong (must be "~3S")

Cause: The element had a value other than its fixed value.

Action: Use the fixed value as its value.

LSX-00206: substitution for element "~S" is disallowed

Cause: An attempt was made to substitute an element that violated a constraint.

Action: Change to a valid new element that can be substituted for the headElement.

LSX-00207: empty list is disallowed

Cause: An empty list was supplied where at least one value is required.

Action: Specify at least one valid list item.

LSX-00208: circular type reference disallowed

Cause: A type referenced itself as a member type, either directly or indirectly using other types.

Action: Remove the circular type dependency.

LSX-00209: fixed or default not allowed on ID-based type

Cause: A type derived from the ID type specified a fixed value or a default value.

Action: Remove the fixed or default value from the type.

LSX-00210: value "~1S" out of range for type "~2S"

Cause: Value is out of range for the data with a specific type.

Action: Fix the value.

LSX-00211: value "~1S" whose fractional digits exceeds ~2d

Cause: Too many fractional digits after the decimal point.

Action: Remove the extra fractional digits.

LSX-00212: value "~1s" whose total digits exceeds ~2d

Cause: Too many digits in the decimal data.

Action: Remove the extra digits.

LSX-00213: only ~1d occurrences of particle "~2S", minimum is ~3d

Cause: Too few occurrences of particles in the node.

Action: Specify more particles.

LSX-00214: too many occurrences of particle "~1S", maximum is ~2d

Cause: Too many occurrences of particles in the node.

Action: Remove extra ones.

LSX-00215: value "~1S" whose total digits exceeds ~2d

Cause: There were too many digits in the decimal data.

Action: Remove the extra digits.

LSX-00220: "~1S" is wrong length, should be ~2d

Cause: Data of simple type has invalid length.

Action: Fix the length of the data.

LSX-00221: "~1S" is too short (minimum length is ~2d)

Cause: The length of the data is too short.

Action: Prepend extra characters (such as zeros or blank characters) to make the data longer.

LSX-00222: "~1S" is too long (maximum length is ~2d)

Cause: The length of the data is too long.

Action: Remove extra characters from the data.

LSX-00229: item type is not a valid type for a list simple type

Cause: The specified item type must not itself be a list type, and must be one of the types identified in [XML Schemas: Datatypes] as a suitable item type for a list simple type.

Action: Change the list schema component's declaration.

LSX-00230: invalid integer "~S"

Cause: Illegal characters exist in the "integer" or its derivative type declarations.

Action: Remove illegal characters.

LSX-00231: invalid unsigned integer "~S"

Cause: Illegal characters exist in the "unsignedLong", "unsignedInt", "unsignedShort", or "unsignedByte" declarations.

Action: Remove illegal characters.

LSX-00232: invalid unsigned long "~S"

Cause: Illegal characters exist in the "unsignedLong" declaration.

Action: Remove illegal characters.

LSX-00233: invalid long "~S"

Cause: Illegal characters exist in the "long" declaration.

Action: Remove illegal characters.

LSX-00234: invalid decimal "~S"

Cause: Illegal characters exist in the "decimal" declaration.

Action: Remove illegal characters.

LSX-00235: invalid URI "~S"

Cause: Invalid URI specification for data of "anyURI" type.

Action: Remove illegal characters.

LSX-00237: invalid Name "~S"

Cause: Invalid XML name.

Action: Remove illegal characters.

LSX-00238: invalid Nmtoken "~S"

Cause: Invalid Nmtoken.

Action: Remove illegal characters.

LSX-00240: bad float "~S"

Cause: Invalid value for "float" type data.

Action: Remove illegal characters.

LSX-00241: bad double "~S"

Cause: Invalid value for "double" type data.

Action: Remove illegal characters.

LSX-00242: bad Boolean "~S"

Cause: Boolean data must have a value from the following set: "1", "0", "true", or "false".

Action: Specify one of "1", "0", "true", or "false".

LSX-00243: invalid date "~S"

Cause: Invalid value for data of "date" type.

Action: Remove illegal characters.

LSX-00244: invalid NCName "~S"

Cause: Invalid value for data of "NCName" type.

Action: Remove illegal characters.

LSX-00245: invalid ID "~S"

Cause: Data specified is not of "NCName" type.

Action: Remove illegal characters.

LSX-00246: invalid QName "~S"

Cause: Invalid value for data of "QName" type.

Action: Remove illegal characters.

LSX-00247: invalid language specification "~S"

Cause: Invalid value for data of "language" type.

Action: Remove illegal characters.

LSX-00248: invalid duration "~S"

Cause: Invalid value for data of "duration" type.

Action: Remove illegal characters.

LSX-00249: invalid date or time "~S"

Cause: Invalid value for data of "dateTime", "time", "gYearMonth", "gYear", "gMonthDay", "gDay", or "gMonth" type.

Action: Remove illegal characters.

LSX-00250: invalid normalizedString "~S"

Cause: Invalid value for data of "normalizedString" type.

Action: Remove illegal characters.

LSX-00251: invalid token "~S"

Cause: Invalid value for data of "token" type.

Action: Remove illegal characters.

LSX-00252: invalid union "~S"

Cause: Data of simple type is not one of the union type.

Action: Use one of the union type as its type.

LSX-00253: branch is empty

Cause: The pattern specification "branch1 | branch2" has either "branch1" or "branch2" missing.

Action: Remove '|' or add either "branch1" or "branch2".

LSX-00255: mismatched parentheses

Cause: ")" found without a matching "(" in a pattern specification.

Action: Add "(" to the pattern specification.

LSX-00256: empty character class expression

Cause: "[]" found when processing a character class expression.

Action: Specify the character group within the brackets.

LSX-00257: atom specification is missing

Cause: A quantifier was found without an atom specification.

Action: Add an atom specification in front of the quantifier.

LSX-00258: invalid escape character

Cause: "x" in "\x" is not a valid escape character.

Action: Change "x" to a valid escape character.

LSX-00259: invalid character found in the pattern

Cause: An unexpected character was found in the pattern.

Action: Fix the pattern.

LSX-00260: unexpected end of pattern

Cause: Something is missing at the end of the pattern.

Action: Fix the pattern.

LSX-00261: invalid character property

Cause: An error occurred when processing the character property. For example, "{" is missing after "\p" or "\P".

Action: Fix the character property.

LSX-00262: attribute "~1S" cannot have complex type "~2S"

Cause: The type of the attribute is "complex".

Action: Specify the type of the attribute to be "simple".

LSX-00263: undefined attribute "~S"

Cause: Violating attribute is not defined in the current scope.

Action: Correct the attribute name if it's misspelled.

LSX-00264: attribute "~S" is prohibited (may not occur)

Cause: Global declarations cannot contain the attributes "ref", "minOccurs", or "maxOccurs", or the use of this attribute is explicitly declared as "prohibited" by the schema.

Action: Remove the attribute.

LSX-00265: attribute "~1S" value "~2S" is wrong (must be "~3S")

Cause: Attribute has a value other than its fixed value.

Action: Use fixed value as its value.

LSX-00266: missing required attribute "~S"

Cause: A required attribute is missing.

Action: Add the required attribute.

LSX-00270: hex-encoded binary has odd length

Cause: Data of "hexBinary" type has odd number of digits.

Action: Add missing digits as appropriate.

LSX-00271: invalid character "~c" in hex-encoded binary

Cause: Data of "hexBinary" type has invalid characters.

Action: Remove illegal characters.

LSX-00272: BASE64-encoded binary grouped improperly (not 4's)

Cause: Number of digits is not a multiple of four.

Action: Add missing digits as appropriate.

LSX-00273: invalid character "~c" in base64-encoded binary

Cause: Data of "base64Binary" type has invalid characters.

Action: Remove illegal characters.

LSX-00274: invalid padding in base64-encoded binary

Cause: Invalid padding characters at the end of data.

Action: Use "=" as the padding characters.

LSX-00280: duplicate ID "~S"

Cause: ID name is not unique within the schema scope.

Action: Rename the ID.

LSX-00281: referenced ID "~S" is not defined

Cause: Referenced ID name is not defined within the schema scope.

Action: Define the ID.

LSX-00282: duplicate notation name "~S"

Cause: The name of the "notation" element is not unique within the schema scope.

Action: Rename the element.

LSX-00283: referenced notation "~S" is not defined

Cause: Referenced notation name is not defined within the schema scope.

Action: Define the element.

LSX-00284: duplicate constraint name "~S"

Cause: Each constraint declaration has a name which exists in a single symbol space for constraints.

Action: Choose a different name.

LSX-00285: referenced key "~S" is not defined

Cause: Referenced key name is not defined within the schema scope.

Action: Define the key.

LSX-00286: duplicate key "~S" for {"~S"}~S"

Cause: The key value was not unique within its scope.

Action: Change the key value.

LSX-00287: duplicate key "~S"

Cause: The key value was not unique within its scope.

Action: Change the key value.

LSX-00290: invalid enumeration choice "~S"

Cause: The value of the data is not one of the enumeration choice.

Action: Select one of the enumeration choice as its value.

LSX-00291: value "~1S" is less than minimum "~2S" (~3S)

Cause: Data has a value less than required minimum.

Action: Increase the value.

LSX-00292: value "~1S" is greater than maximum "~2S" (~3S)

Cause: Data has a value greater than maximum.

Action: Decrease the value.

LSX-00293: missing one or more fields from element "~S"

Cause: The required fields were missing from the content of the element.

Action: Add the fields.

LSX-00294: field "~S" produced multiple hits

Cause: XPath expressions relative to each element selected by a {selector} are specified by {fields}. These XPath expressions must identify a single node (element or attribute) whose content or value was used in the constraint. This content or value must be of a simple type.

Action: Remove duplicate elements or attributes.

LSX-00295: field element "~S" is not a simple type

Cause: The field element evaluated to a node-set with a member that was not a simple type.

Action: Change the field element's type.

LSX-00296: field value "~S" could not be compared to facet

Cause: The value of the data could not be compared to the facet value because one value had a time zone while the other did not.

Action: Correct the data to add the necessary time zone or to remove the unnecessary time zone.

LSX-00300: group must have name or ref but not both

Cause: "ref" or "name" attributes are either both missing or have both been specified.

Action: Specify either "ref", "name", but not both.

LSX-00310: local element or attribute should be namespace qualified

Cause: Element or attribute name is not namespace qualified.

Action: Add prefix or default namespace URI declaration.

LSX-00311: local element or attribute shouldn't be namespace qualified

Cause: Element or attribute name is namespace qualified.

Action: Remove prefix or default namespace URI declaration from itself or ancestors.

LSX-00320: missing required elements in *all*

Cause: Some required elements in "all" particle are missing.

Action: Add the missing elements.

LSX-00330: missing range start character

Cause: Missing range start character in a character range specification.

Action: Add the missing characters.

LSX-00331: missing comma

Cause: A comma is missing in a range specification.

Action: Add the missing characters.

LSX-00332: bad decimal digits in a quantifier specification

Cause: Quantifier has invalid characters.

Action: Remove illegal characters.

LSX-00333: literal "~S" is not valid with respect to the pattern

Cause: Literal is not valid with respect to the pattern.

Action: Choose correct characters in the literal.

LSX-00340: improper namespace value for the imported element

Cause: If the namespace attribute is present, then its actual value must not match the actual value of the enclosing schema's targetNamespace attribute. If the namespace attribute is not present, then the enclosing schema must have a targetNamespace attribute.

Action: Match namespace value.

LSX-00341: ENTITY or ENTITIES type may only be used in attributes

Cause: For compatibility, ENTITY or ENTITIES should be used only on attributes.

Action: Remove the ENTITY or ENTITIES.

LSX-00342: value of attribute "base" must be a complex type definition

Cause: If the "complexContent" alternative is chosen, then the type definition resolved to by the actual value of the attribute "base" must be a complex type definition.

Action: Choose a complex type definition as its base type.

LSX-00343: "~S" is not nillable

Cause: Attribute nillable was set to be "false" in element's declaration.

Action: Remove attribute xsi:nil from the instance document.

LSX-00344: namespace values "~1S" and "~2S" differ

Cause: The targetNamespace specified in the schema document differed from either:
a) the value of the enclosing schema's namespace attribute, or b) the value of the namespace attribute identified in the import element information item.

Action: Match the namespace value to the enclosing schema's targetNamespace attribute or the actual value of the namespace attribute identified in the import element information item.

LSX-00345: Element ("~1S") from "~2S" namespace is unexpected. Expecting element from "~3S" namespace

Cause: The namespace of the Xml Node in the instance document does not match with the expected element definition namespace

Action: n/a

MGTCA-01001 to MGTCA-01117

MGTCA-01001: clusterware stack did not respond

Cause: A wallet operation was requested when the Oracle Clusterware stack was down.

Action: Contact Oracle Support Services.

MGTCA-01002: clusterware stack did not respond to wallet operation

Cause: User attributes could not be read because the Grid Infrastructure Management Repository wallet location was not accessible.

Action: Contact Oracle Support Services.

MGTCA-01003: wallet access denied

Cause: An attempt to access the wallet was denied because the user does not have the required permissions.

Action: Contact Oracle Support Services.

MGTCA-01004: clusterware wallet internal error

Cause: An invalid wallet operation was performed or Oracle Cluster Registry storage for wallet was not present.

Action: Contact Oracle Support Services.

MGTCA-01005: cannot perform database operation while setting Grid Infrastructure Management Repository users

Cause: Failed to connect to Grid Infrastructure Management Repository using JDBC during new user setup.

Action: Contact Oracle Support Services.

MGTCA-01006: could not change user credentials for Grid Infrastructure Management Repository

Cause: SQL execute query failed.

Action: Contact Oracle Support Services.

MGTCA-01007: Grid Infrastructure Management Repository is not running on this node

Cause: During the execution of 'mgmtca', no running instance of the Grid Infrastructure Management Repository was found on the node.

Action: Run 'mgmtca' on the node having Grid Infrastructure Management Repository.

MGTCA-01100: An internal error occurred while querying for the node running Grid Infrastructure Management Repository

Cause: During the execution of 'mgmtca', an internal error occurred while querying for the node running Grid Infrastructure Management Repository.

Action: Contact Oracle Support Services.

MGTCA-01100: This utility is used to configure the Grid Infrastructure Management Repository.
Usage: mgmtca *[-em passwd] | [-gridhome] |*
[[setpasswd -user user-1 [passwd-1] [, user-n passwd-n]]]

Cause: None

Action: None

MGTCA-01101: failure in Oracle Grid Infrastructure Management Repository operation

Cause: A SQL request to the Oracle Grid Infrastructure Management Repository encountered an error.

Action: Contact Oracle Support Services

MGTCA-01102: failure in performing database operation to retrieve the name of the Pluggable Database in the Oracle Grid Infrastructure Management Repository

Cause: An attempt to retrieve the name of the Pluggable Database in Oracle Grid Infrastructure Management Repository failed.

Action: Contact Oracle Support Services

MGTCA-01103: failure in performing database operation to unlock the user of Oracle Grid Infrastructure Management Database

Cause: The user account to be unlocked did not exist.

Action: Contact Oracle Support Services

MGTCA-01104: An internal error occurred during the remote execution of 'mgmtca' on the node running the Grid Infrastructure Management Repository.

Cause: During the execution of 'mgmtca', an internal error occurred while remotely executing the operation of the node running the Grid Infrastructure Management Repository.

Action: Contact Oracle Support Services.

MGTCA-01105: Grid Infrastructure Management Repository is not running in the cluster.

Cause: The execution of 'mgmtca' could not complete because the Grid Infrastructure Management Repository was not running in the cluster.

Action: Contact Oracle Support Services.

MGTCA-01106: An internal error occurred while querying the state of the Grid Infrastructure Management Repository.

Cause: During the execution of 'mgmtca', an internal error occurred while querying the state of the Grid Infrastructure Management Repository.

Action: Contact Oracle Support Services.

MGTCA-01107: The resource for the Grid Infrastructure Management Repository does not exist.

Cause: The execution of 'mgmtca' could not complete because the resource for the Grid Infrastructure Management Repository did not exist.

Action: Contact Oracle Support Services.

MGTCA-01108: failed to determine CRS Home location

Cause: Execution of 'mgmtca' to retrieve the CRS Home location failed. This is an internal error.

Action: Contact Oracle Support Services.

MGTCA-01109: failed to determine Oracle Base location

Cause: Execution of 'mgmtca' to retrieve the Oracle Base location failed. This is an internal error.

Action: Contact Oracle Support Services.

MGTCA-01110: An internal error occurred while querying the state of the Grid Infrastructure Management Repository during reconfiguration.

Cause: The execution of 'mgmtca' could not complete because an internal error occurred while querying the state of the Grid Infrastructure Management Repository during reconfiguration.

Action: Contact Oracle Support Services.

MGTCA-01111: An internal error occurred while stopping the existing instance of the Grid Infrastructure Management Repository during reconfiguration.

Cause: The execution of 'mgmtca' could not complete because an internal error occurred while stopping the existing instance of the Grid Infrastructure Management Repository during reconfiguration.

Action: Contact Oracle Support Services.

MGTCA-01112: An internal error occurred while removing the existing instance of the Grid Infrastructure Management Repository during reconfiguration.

Cause: The execution of 'mgmtca' could not complete because an internal error occurred while removing the existing instance of the Grid Infrastructure Management Repository during reconfiguration.

Action: Contact Oracle Support Services.

MGTCA-01113: The reconfigure operation for the Grid Infrastructure Management Repository could not complete because there was already an instance running on the cluster.

Cause: The reconfigure operation for the Grid Infrastructure Management Repository could not complete because there was already an instance running on the cluster.

Action: Contact Oracle Support Services.

MGTCA-01114: An internal error occurred while creating the Grid Infrastructure Management Repository during reconfiguration.

Cause: The execution of 'mgmtca' could not complete because an internal error occurred while creating the Grid Infrastructure Management Repository during reconfiguration.

Action: Contact Oracle Support Services.

MGTCA-01115: An internal error occurred while starting the resource for the Grid Infrastructure Management Repository during reconfiguration.

Cause: The execution of 'mgmtca' could not complete because an internal error occurred while starting the resource for the Grid Infrastructure Management Repository during reconfiguration.

Action: Contact Oracle Support Services.

MGTCA-01116: The syntax of the 'mgmtca' command is incorrect.

Cause: The 'mgmtca' command was rejected because the syntax as entered was incorrect.

Action: Reenter the 'mgmtca' command with the correct syntax. Enter 'mgmtca -h' to display usage.

MGTCA-01117: The username specified in the 'mgmtca' command is incorrect.

Cause: The 'mgmtca' command was rejected because the syntax as entered was incorrect.

Action: Provide correct username for the 'mgmtca' command.

NCR-00001 to NCR-04028

NCR-00001: NCR: Could not allocate memory

Cause: Insufficient swap space or system memory.

Action: Increase swap space or system memory.

NCR-00002: NCR: Invalid usage

Cause: Bad function parameter.

Action: Check function call.

NCR-00003: NCR: Initialization failure

Cause: Usually insufficient swap space or system memory.

Action: Increase swap space or system memory.

NCR-01003: NCRS: Read error.

Cause: Failed to read data from an input device.

Action: Check the input device driver return code for further information.

NCR-01004: NCRS: Write error.

Cause: Failed to write data to an output device.

Action: Check the output device driver return code for further information.

NCR-01005: NCRS: Failed to flush the output buffer.

Cause: Failed to write data in the output buffer to an output device.

Action: Check the output device driver return code for further information.

NCR-01006: NCRS: Data buffer overflow.

Cause: An attempt to read or write data outside of a given data buffer.

Action: Check data buffer size.

NCR-01007: NCRS: Operation is not supported in a given mode.

Cause: Attempt to perform an operation which is not supported for the current mode.

Action: See documentation for a list of work modes and supported operations.

NCR-01008: NCRS: Failed to obtain transport parameters.

Cause: Could not identify transport layer parameters.

Action: Check the transport layer return code for further information.

NCR-01009: NCRS: Record handling error.

Cause: Encountered an invalid record or an attempt to read beyond last record.

Action: See documentation for description of record handling methods.

NCR-01010: NCRS: Invalid network address length.

Cause: Network address size is set to 0.

Action: See documentation for valid network address sizes.

NCR-01011: NCRS: Send message failure.

Cause: Failed to send a message over network.

Action: Check the network interface return code for further information.

NCR-01012: NCRS: Receive message failure.

Cause: Failed to receive a network message.

Action: Check the network interface return code for further information.

NCR-01013: NCRS: Unvalid connection type.

Cause: Connection type is other than stream or message.

Action: See documentation for description of connection types.

NCR-01018: NCRS: Encryption failure.

Cause: Can not do the encryption for the data.

Action: See the SNS documentation for more information.

NCR-01019: NCRS: Checksumming failure.

Cause: Can not add the checksumming for the data.

Action: See the SNS documentation for more information.

NCR-01020: NCRS: Operation would block.

Cause: An I/O operation returned with no data read/written because the transport connection is "non-blocking" and, to succeed, the operation would have needed to block.

Action: This is a soft error; retry the operation.

NCR-02003: NCRF: Invalid type passed to format interpreter.

Cause: The format interpreter was given a data type it did not recognize.

Action: Check the types returned to the interpreter from either the type callback routine or from the type context structure.

NCR-02004: NCRF: Invalid format interpreter type context

Cause: The format interpreter was given an invalid type context.

Action: This error usually happens due to an improperly described aggregate. For example, declaring NCRF_END_STRUCT_DATA_TYPE within a context, without a complementary NCRF_STRUCT_DATA_TYPE, is invalid.

NCR-02005: NCRF: Invalid session mode

Cause: The data format layer received a session mode other than GET,PUT or FREE.

Action: None

NCR-02006: NCRF: Invalid floating point representation received

Cause: The data format layer received a floating point representation it did not recognize.

Action: Check incoming format descriptor for errors.

NCR-02007: NCRF: Invalid format descriptor received

Cause: The data format layer received an improperly formed format descriptor. Subsequent data could not be formatted.

Action: Check for data integrity on receipt from remote host.

NCR-02008: NCRF: Error within stream processing in format interpreter

Cause: An error occurred while the interpreter was processing an NCRF_STREAM_DATA_TYPE.

Action: Check for data integrity, or for stream existence.

NCR-02009: NCRF: Unable to open trace file

Cause: Failure to open tracing file.

Action: Make sure that this is a legal file name and that the user has write access.

NCR-02010: NCRF: Call context is not available

Cause: Call context not passed to format context.

Action: Make sure that create call context has been called.

NCR-02011: NCRF: Exceeded maximum number of rfids.

Cause: Exceeded maximum number of rfids.

Action: Call Oracle Support.

NCR-03002: NCRO: Maximum number of contexts has been reached

Cause: An attempt to create either a call context or a service context has failed because all context slots are in use.

Action: Free-up context slots by destroying those contexts no longer required, or, reconfigure NCRO with more context slots.

NCR-03003: NCRO: Unexpected message

Cause: Message read from service connection is not of the expected type.

Action: Application error - debug and fix.

NCR-03004: NCRO: Unknown message

Cause: Message read from service connection is of unknown type.

Action: Internal error - contact customer support.

NCR-03005: NCRO: Orphan message

Cause: Message read from service connection is for a call context that no longer exists.

Action: Application error - debug and fix.

NCR-03006: NCRO: Invalid operation

Cause: Attempted operation over call context is invalid. For example, attempting to send IN args for a procedure which is defined to have none.

Action: Application error - debug and fix.

NCR-03007: NCRO: Context is busy

Cause: Attempted operation failed because service/call context is busy performing a previous operation.

Action: Application error - debug and fix.

NCR-03008: NCRO: Call rejected

Cause: An attempt to execute a remote procedure has failed because the server has rejected the procedure id.

Action: If wrong procedure id, send the correct one. If wrong server was contacted, then contact the right one.

NCR-03009: NCRO: Protocol version mismatch

Cause: Client and server NCRO layers are at incompatible versions levels.

Action: Upgrade to latest NCRO version.

NCR-03010: NCRO: Transfer callback error

Cause: Application transfer callback function has returned a "FAILED" status.

Action: Debug the transfer callback function.

NCR-03012: NCRO: Invalid session mode

Cause: Attempted operation has failed because the session context is in an invalid state.

Action: Internal error - contact customer support.

NCR-03013: NCRO: Operation not supported

Cause: Attempted operation is not supported on this service connection because it is incompatible with the NCRO version level of the remote application.

Action: Link remote application with latest NCR library.

NCR-03014: NCRO: Bad transport address

Cause: A service context cannot be created because the transport address descriptor (contained in the binding context) is invalid.

Action: Application error - initialize the transport address descriptor correctly.

NCR-03015: NCRO: No transport address

Cause: A service context cannot be created because no transport address was provided (in the binding context) and the transport protocol uses datagrams.

Action: Application error - provide a transport address.

NCR-03016: NCRO: Message has bad address

Cause: Message read from service connection has bad address information.

Action: Internal error - contact customer support.

NCR-03017: NCRO: Transport type RSLV not supported

Cause: Support for transport type RSLV has not been built.

Action: Re-compile NCR library with NCR_USE_RSLV defined.

NCR-03018: NCRO: Failed to make RSLV connection

Cause: Failure to make RSLV connection usually means that the name resolution failed or the resolved TNS address is bad.

Action: Make sure that the name is in TNSNAMES.ORA and that it is set to the correct TNS address.

NCR-03019: NCRO: Unable to initialize thread support

Cause: Attempt to initialize the Core thread package has failed.

Action: Internal error - contact customer support.

NCR-03020: NCRO: Invalid call context

Cause: The call context is not an valid call context.

Action: Call context was destroyed, probably because the Break was received

NCR-03021: NCRO: Reset the in-band line

Cause: Our parnter is asking to reset the in-band line, after receiving a break

Action: The in-band line is required to be reset

NCR-03022: NCRO: Cannot send the break

Cause: There is an error occur when sending the break using the side-band channel

Action: Read the documentation regarding to side-band break support issues

NCR-03023: NCRO: Cannot receive the break

Cause: There is an error occur when receiving the break using the side-band channel

Action: Read the documentation regarding to side-band break support issues

NCR-03024: NCRO: Transport type LIST not supported

Cause: Support for transport type LIST has not been built.

Action: Re-compile NCR library with NCR_USE_LIST defined.

NCR-03025: NCRO: Failed to make LIST connection(s)

Cause: Failure to make LIST connection(s) usually means one of two things: (1)

Address list syntax error, (2) Could not connect with supplied addresses

Action: Check address list syntax and make sure that there is a 'listener' process for each (or some) of the supplied addresses.

NCR-03026: NCRO: The result buffer has overflowed

Cause: The result buffer for holding the pickling result is too small.

Action: Please enlarge the result buffer and try again.

NCR-03027: NCRO: No remote service session set up yet.

Cause: Sender-makes-right needs the remote FID.

Action: Please set up the remote session before using the Send Make's Right option.

NCR-03028: NCRO: Partner refused request for sender-makes-right.

Cause: Sender-makes-right was requested by the current side, yet refused by the server.

Action: Check the server side to see why it refused SMR.

NCR-04002: NCRR: Invalid interface descriptor

Cause: An attempt to register an interface has failed because of an invalid interface descriptor.

Action: Check interface descriptor passed into the nccrri_register_interface call.

NCR-04003: NCRR: Interface exists

Cause: An attempt to register an interface has failed because an interface already exists.

Action: Application error - register a new interface, destroy the old one, or indicate that the old one must be replaced.

NCR-04004: NCRR: Invalid interface instance handle

Cause: A service registration API call has failed because of an invalid instance handle.

Action: Application error - debug and fix.

NCR-04005: NCRR: Invalid procedure handle

Cause: A procedure/object registration has failed because of an invalid procedural handle.

Action: Application error - debug and fix.

NCR-04006: NCRR: Invalid argument descriptor

Cause: A procedure registration has failed because of an invalid argument descriptor.

Action: Application error - debug and fix.

NCR-04007: NCRR: Invalid object handle

Cause: A service registration API call failed because of an invalid object handle, for example, one that does not exist.

Action: Application error - debug and fix.

NCR-04008: NCRR: Procedure exists

Cause: An attempt to register a remote procedure has failed because the procedure already exists in this interface.

Action: Application error - register a new procedure, destroy the old one, or indicate that the old one must be replaced.

NCR-04009: NCRR: Object exists

Cause: An attempt to register an object has failed because the object already exists in this interface.

Action: Application error - register a new object, destroy the old one, or indicate that the old one must be replaced.

NCR-04010: NCRR: Unable to contact Oracle Internet Directory Server

Cause: Service export or import failed to contact Oracle Internet Directory Server.

Action: Ensure Oracle Internet Directory configuration is correct. Otherwise, turn on tracing and/or contact customer support.

NCR-04011: NCRR: Oracle Internet Directory error

Cause: Service export or import failed during interaction with Oracle Internet Directory Server.

Action: Either wrong parameters with respect to the Remote Operations Service Registration Schema were passed in and/or the Oracle Internet Directory server refused to perform the requested operation. Refer the Remote Operations Service Registration Schema and/or turn on Oracle Internet Directory tracing and/or contact customer support.

NCR-04012: NCRR: Invalid address descriptor

Cause: An `ncrrei_export_interface` call failed because of an invalid address descriptor.

Action: Application error - debug and fix.

NCR-04013: NCRR: Insufficient authorization

Cause: Attempted Oracle Internet Directory Server operation has failed because of insufficient authorization.

Action: Contact customer support.

NCR-04014: NCRR: Invalid instance name

Cause: Service export or import failed because of an invalid instance name

Action: Application error - debug and fix.

NCR-04015: NCRR: Invalid interface name

Cause: Service export or import failed because of an invalid interface name

Action: Application error - debug and fix.

NCR-04016: NCRR: Last interface instance handle

Cause: The instance handle passed in is the last instance handle in the list.

Action: Not an error - means reaching the end of the list.

NCR-04017: NCRR: Unable to find the interface instance handle

Cause: The instance handle corresponding to the instance name was not found.

Action: Application error - debug and fix.

NCR-04018: NCRR: Unable to create the TNS address list

Cause: Unable to create the TNS address list from the interface instance list.

Action: Application error - debug and fix.

NCR-04019: NCRR: Interface or instance name already exists

Cause: Service export failed because the name already exists with the Oracle Internet Directory server

Action: Application error - debug and fix.

NCR-04020: NCRR: Interface or instance name does not exist

Cause: Service expunge/query failed because the name does not exist with the Oracle Internet Directory server

Action: Use Oracle Internet Directory tools on the relevant Oracle Internet Directory instance to verify the same. Otherwise turn on tracing and/or contact customer support

NCR-04021: NCRR: Pickler errors

Cause: Service export/query failed because of pickler errors

Action: Contact customer support

NCR-04022: NCRR: Invalid procedure descriptor

Cause: A procedure registration has failed because of an invalid procedural descriptor.

Action: Application error - debug and fix.

NCR-04023: NCRR: Invalid object descriptor

Cause: An object registration has failed because of an invalid object descriptor.

Action: Application error - debug and fix.

NCR-04024: NCRR: Maximum number of procedures reached

Cause: A procedure registration has failed because the procedures array is filled up.

Action: Re-register the interface increasing the maximum # of procedures.

NCR-04025: NCRR: Operation timed out

Cause: An operation for the Oracle Internet Directory server failed because it exceeded the timeout period.

Action: Retry the operation and/or turn on Oracle Internet Directory tracing.

NCR-04026: NCRR: Operation not supported

Cause: An operation for the Oracle Internet Directory server failed because it met with a server referral to another instance.

Action: Unify the Remote Ops registration entries into the Oracle Internet Directory instance and/or turn on Oracle Internet Directory tracing.

NCR-04027: NCRR: Operation failed

Cause: An operation for the Oracle Internet Directory server failed because the Service Registration interfaces met with invalid parameters.

Action: Contact customer support.

NCR-04028: NCRR: Operation failed

Cause: An operation for the Oracle Internet Directory server failed because the data involved exceeds the maximum allowed size.

Action: Check the entries in the Oracle Internet Directory instance with tools available from Oracle Internet Directory and/or turn on Oracle Internet Directory tracing.

NID-00001 to NID-00604

NID-00001: Illegal command line syntax - parse error = (*number*)

Cause: Illegal operand on command line.

Action: Remove illegal operand.

NID-00002: Parse error: *string*

Cause: An error was encountered while parsing the command line.

Action: Remove offending operand.

NID-00010: Password:

Cause: Password was not specified in command line.

Action: Type password at this prompt.

NID-00100: Cannot open datafile "*string*"

Cause: The specified datafile could not be opened.

Action: Ensure that the specified datafile exists and is writable.

NID-00101: LOGFILE (*string*) not accessible

Cause: The specified log file could not be opened.

Action: Specify a log file that is writable.

NID-00102: Garbled target string

Cause: The supplied connect string could not be parsed. The connect string does not have the correct format.

Action: Refer to Oracle9i Database Concepts.

NID-00103: Missing password in connect string "*string*"

Cause: Could not find the password in the supplied connect string. The connect string does not have the correct format.

Action: Refer to Oracle9i Database Concepts.

NID-00104: Need to specify TARGET connection parameter in command line

Cause: The mandatory parameter TARGET was not specified.

Action: Specify TARGET=*username/password* when invoking this utility.

NID-00105: Need to specify "LOGFILE=*logfile*" when using APPEND=YES option

Cause: The APPEND parameter was specified without a LOGFILE.

Action: Specify APPEND=YES only when LOGFILE is also specified.

NID-00106: LOGIN to target database failed with Oracle error:\n*string*

Cause: An Oracle error was reported while attempting to log in to the target database.

Action: Follow the actions for the specified Oracle error.

NID-00107: File I/O error on datafile "*string*" during *string* operation (*number*/*string*)

Cause: An operating system error was reported while performing the specified operation in the specified file.

Action: Verify the datafile and check for operating system errors.

NID-00109: DBNAME string length *number* exceeds maximum length of *number*

Cause: The specified new database name exceeded the maximum size.

Action: Specify a shorter, valid name.

NID-00110: Cannot use REVERT and specify a database name at the same time

Cause: Conflicting options were specified in the command line.

Action: Choose only one of the options.

NID-00111: Oracle error reported from target database while executing \nstring \nstring

Cause: An Oracle error was reported when executing an OCI operation.

Action: Follow the actions for the specified Oracle error.

NID-00112: unsupported connection mode

Cause: A mode different than SYSDBA or SYSBACKUP was specified for the connection to the target.

Action: Specify only AS SYSDBA or AS SYSBACKUP.

NID-00113: Error reading answer - aborting

Cause: Response caused an error.

Action: Retry the operation.

NID-00114: Must specify new database name when SETNAME is used

Cause: SETNAME=YES was specified but no DBNAME was provided.

Action: Specify DBNAME or remove the SETNAME=YES option.

NID-00115: Database should be mounted

Cause: The database was not mounted.

Action: Mount the database.

NID-00120: Database should be mounted exclusively

Cause: The database was started in parallel mode. To change the DBID, the database must be mounted exclusively.

Action: Shut down the database and start it in exclusive mode.

NID-00121: Database should not be open

Cause: The database was open. To change the DBID, the database must be mounted exclusively.

Action: Shutdown the database and mount it in exclusive mode.

NID-00122: Database should have no offline immediate datafiles

Cause: The database has one or more datafiles that are in OFFLINE IMMEDIATE mode.

Action: Drop the datafiles or recover them and bring them online.

NID-00123: Magic number for datafile "*string*" is incorrect

Cause: Block 0 header has an incorrect magic number for the specified datafile.

Action: Verify that the datafile is correct and retry the operation.

NID-00124: Mismatched dbid for datafile *string*, expected *number*, found *number*

Cause: The dbid of the datafile does not match the 'old' DBID or the 'new' DBID.

Action: Verify that this datafile belongs to the database. You may need to restore a backup of the datafile.

NID-00125: Database should have no disabled datafiles

Cause: The database has one or more datafiles that are disabled.

Action: Drop the datafiles or recover them and bring them online.

NID-00126: Database should have no datafiles in unknown state

Cause: The database has one or more datafiles that are in an unknown state.

Action: Drop the datafiles or recover them and bring them online.

NID-00127: All online files in the database must have the same checkpoint SCN

Cause: The database has one or more datafiles that have a checkpoint SCN that does not match the database checkpoint SCN.

Action: Restart the database and shut it down cleanly, then retry the operation.

NID-00128: Cannot revert change of database, change not in progress

Cause: The REVERT option was used, but the control file does not show that a change of DBID was in progress.

Action: Do not use the REVERT option, or possibly restore the control file that was in place when the utility was started.

NID-00129: Invalid DBID for datafile "*string*", expecting *number*, found *number*

Cause: A datafile header shows a different DBID from the rest of the database files.

Action: Ensure that the file belongs to this database.

NID-00130: Mismatched CHECKPOINT_CHANGE# in datafile "*string*", expecting *string*, found *string*

Cause: The datafile header does not match information in the control file.

Action: Revert the change, open the database, and verify that all datafiles are consistent. Then, shut down the database and retry the operation.

NID-00131: Control file is not current

Cause: A non-current control file is currently mounted.

Action: Perform necessary actions to make the control file current and retry.

NID-00132: CHECKPOINT_CHANGE# in datafile "*string*": *string* in the future of controlfile: *string*

Cause: The checkpoint in the datafile header is ahead of the checkpoint in the control file.

Action: Make the database consistent and retry.

NID-00133: Database should have only consistent datafiles

Cause: The database has one or more datafiles that are marked FUZZY in the control file.

Action: Restart the database and shut down consistently, then retry the operation.

NID-00134: Datafile "*string*" is not consistent

Cause: The datafile is marked as fuzzy in its header.

Action: Restart the database and shut down cleanly, then retry the operation.

NID-00135: There are *number* active threads

Cause: There are active threads in the database. The most likely cause is that the database crashed the last time it was shut down.

Action: Ensure that all threads are closed before retrying the operation. Start and open the database to perform crash recovery, then shut down with the NORMAL or IMMEDIATE options to close it cleanly. Finally, try running the utility again.

NID-00137: All datafiles that are not dropped should be readable

Cause: The database had one or more files that could not be read.

Action: Restore the missing files and retry the operation.

NID-00138: Block verification failed for datafile *string* (*number*)

Cause: Block header checksum yields a nonzero value for the specified datafile.

Action: Verify that the datafile is correct and retry the operation.

NID-00139: Mismatched dbname for datafile *string*, expected *string*, found *string*

Cause: The dbname of the datafile does not match the 'old' dbname or the 'new' dbname.

Action: Verify that this datafile belongs to the database. You may need to restore a backup of the datafile.

NID-00140: Specified database name *string* does not match previous name used *string*

Cause: This is a continuation of a failed attempt. However in the failed attempt, the database name is different than the one used in the last attempt.

Action: Retry the command using the original database name.

NID-00141: No database name specified, previous attempt used *string*

Cause: This is a continuation of a failed attempt. However, in the failed attempt, a database name was provided.

Action: Retry the command using the original database name.

NID-00142: Only changing database name, previous attempt changed dbid to *number*

Cause: This is a continuation of a failed attempt. However, in the failed attempt, the database id was also being changed.

Action: Retry the command removing SETNAME=YES.

NID-00143: Mismatched controlfile *string*

Cause: A controlfile did not have the correct status.

Action: Shutdown the database, remove the mismatched controlfile, mount the database, and retry the operation.

NID-00144: New name for database *string* is the same as current name *string*

Cause: The specified name is the same as the current name of the database.

Action: Specify a different name or do not use the DBNAME option.

NID-00145: nls subsystem initialization failure for product=*string*, facility=*string*

Cause: The NLS product/facility error message file could not be located or properly initialized.

Action: Check that the error message directory and file(s) have been properly installed.

NID-00300: Connected to database *string* (DBID=*number*)

Cause: Informational message.

Action: No action required.

NID-00301: Datafile *string* - dbid changed, wrote new name

Cause: Informational message.

Action: No action required.

NID-00302: Datafile *string* - dbid changed

Cause: Informational message.

Action: No action required.

NID-00303: Datafile *string* - wrote new name

Cause: Informational message.

Action: No action required.

NID-00304: Datafile *string* - reverted

Cause: Informational message.

Action: No action required.

NID-00305: Datafile *string* - already changed

Cause: Informational message.

Action: No action required.

NID-00306: Datafile *string* - no revert needed

Cause: Informational message.

Action: No action required.

NID-00307: Control File *string* - dbid changed, wrote new name

Cause: Informational message.

Action: No action required.

NID-00308: Control File *string* - dbid changed

Cause: Informational message.

Action: No action required.

NID-00309: Control File *string* - wrote new name

Cause: Informational message.

Action: No action required.

NID-00310: Control File *string* - reverted

Cause: Informational message.

Action: No action required.

NID-00311: Control File *string* - modified

Cause: Informational message.

Action: No action required.

NID-00312: Connected to server version *string*

Cause: Informational message.

Action: No action required.

Cause: Informational message.

Action: No action required.

NID-00370: Change database ID of database *string*? (Y/[N]) =>

Cause: Informational message.

Action: No action required.

NID-00371: Change database name of database *string* to *string*? (Y/[N]) =>

Cause: Informational message.

Action: No action required.

NID-00372: Change database ID and database name *string* to *string*? (Y/[N]) =>

Cause: Informational message.

Action: No action required.

NID-00373: Revert changes for database *string* (Y/[N]) =>

Cause: Informational message.

Action: No action required.

NID-00390: These files must be writable by this utility.

Cause: Informational message.

Action: No action required.

NID-00395: Reverting database name from *string* to *string*

Cause: Informational message.

Action: No action required.

NID-00396: Reverting database ID from *number* to *number*

Cause: Informational message.

Action: No action required.

NID-00397: Changing database name from *string* to *string*

Cause: Informational message.

Action: No action required.

NID-00398: Changing database ID from *number* to *number*

Cause: Informational message.

Action: No action required.

NID-00400: DBNEWID - Completed with errors.

Cause: Informational message.

Action: No action required.

NID-00401: Must finish REVERT changes before attempting any database operation.

Cause: Informational message.

Action: No action required.

NID-00402: Must finish change or REVERT changes before attempting any database operation.

Cause: Informational message.

Action: No action required.

NID-00403: DBNEWID - Completed with validation errors.

Cause: Informational message.

Action: No action required.

NID-00404: DBNEWID - Completed successfully.

Cause: Informational message.

Action: No action required.

NID-00405: Reversion of database name and database ID failed.

Cause: Informational message.

Action: No action required.

NID-00406: Reversion of database name failed.

Cause: Informational message.

Action: No action required.

NID-00407: Reversion of database ID failed.

Cause: Informational message.

Action: No action required.

NID-00410: Reversion of database changes failed during validation - database is intact.

Cause: Informational message.

Action: No action required.

NID-00415: Change of database name and database ID failed.

Cause: Informational message.

Action: No action required.

NID-00416: Change of database name failed.

Cause: Informational message.

Action: No action required.

NID-00417: Change of database ID failed.

Cause: Informational message.

Action: No action required.

NID-00420: Change of database name and ID failed during validation - database is intact.

Cause: Informational message.

Action: No action required.

NID-00421: Change of database name failed during validation - database is intact.

Cause: Informational message.

Action: No action required.

NID-00422: Change of database ID failed during validation - database is intact.

Cause: Informational message.

Action: No action required.

NID-00425: Database name restored to *string*.

Cause: Informational message.

Action: No action required.

NID-00426: Database ID for database *string* restored to *number*.

Cause: Informational message.

Action: No action required.

NID-00430: Database is ready to be open or shut down.

Cause: Informational message.

Action: No action required.

NID-00431: DBNEWID - Reversion completed.

Cause: Informational message.

Action: No action required.

NID-00435: Database name changed to *string*.

Cause: Informational message.

Action: No action required.

NID-00436: Modify parameter file and generate a new password file before restarting.

Cause: Informational message.

Action: No action required.

NID-00440: Database ID for database *string* changed to *number*.

Cause: Informational message.

Action: No action required.

NID-00441: All previous backups and archived redo logs for this database are unusable.

Cause: Informational message.

Action: No action required.

NID-00442: Database has been shutdown, open database with RESETLOGS option.

Cause: Informational message.

Action: No action required.

NID-00450: Successfully changed database name and ID.

Cause: Informational message.

Action: No action required.

NID-00451: Successfully changed database name.

Cause: Informational message.

Action: No action required.

NID-00452: Successfully changed database ID.

Cause: Informational message.

Action: No action required.

NID-00480: Database is intact - database is ready to be open or shut down.

Cause: Informational message.

Action: No action required.

NID-00481: DBNEWID - Cancelled.

Cause: Informational message.

Action: No action required.

NID-00482: Database is not aware of previous backups and archived logs in Recovery Area.

Cause: Because the database id was changed, previous backups and archived redo logs in recovery area are not managed by this database.

Action: This is the informational message only.

NID-00490: LOG being redirected to STDERR due to errors.

Cause: Could no write message to log file.

Action: None

NID-00500: Keyword Description (Default)

Cause: Informational message.

Action: No action required.

NID-00501: -----

Cause: Informational message.

Action: No action required.

NID-00502: TARGET Username/Password (NONE)

Cause: Informational message.

Action: No action required.

NID-00503: DBNAME New database name (NONE)

Cause: Informational message.

Action: No action required.

NID-00504: LOGFILE Output Log (NONE)

Cause: Informational message.

Action: No action required.

NID-00505: REVERT Revert failed change NO

Cause: Informational message.

Action: No action required.

NID-00506: SETNAME Set a new database name only NO

Cause: Informational message.

Action: No action required.

NID-00507: APPEND Append to output log NO

Cause: Informational message.

Action: No action required.

NID-00508: HELP Displays these messages NO

Cause: Informational message.

Action: No action required.

NID-00600: Internal Error - [number] [number] [number] [number]

Cause: This is the generic internal error number for program exceptions. This indicates that the program has encountered an exceptional condition.

Action: Report as a bug - the first argument is the internal error number

NID-00601: Internal Error - [number] [string] [number] [number]

Cause: This is the generic internal error number for program exceptions. This indicates that the program has encountered an exceptional condition.

Action: Report as a bug - the first argument is the internal error number

NID-00602: Could not allocate number bytes for "string"

Cause: Memory allocation failed.

Action: Free memory at the operating system level and retry operation.

NID-00603: No datafiles found in database

Cause: Controlfile has not datafiles recorded

Action: Report as a bug - the first argument is the internal error number

NID-00604: No control files found in database

Cause: Instance has no control files recorded

Action: Report as a bug - the first argument is the internal error number

NDFN-00020 to NDFN-00025

NDFN-00020: missing IPMI userid

Cause: Required user name argument was not specified.

Action: Reissue command with correct arguments.

NDFN-00021: missing node list

Cause: Required node list was not supplied.

Action: Re-issue command with correct arguments.

NDFN-00022: unrecognized command option: '*string*'

Cause: Operation type missing or mis-spelled.

Action: Re-issue command with correct arguments.

NDFN-00023: no password read. Re-issue request

Cause: Required administrator password was not read in response to the password prompt before finding end-of-line.

Action: Re-issue command and be sure to type the password immediately following the prompt.

NDFN-00024: caught I/O exception: *string*

Cause: Unexpected I/O exception was encountered while attempting to read the password. Exception string should indicate the precise cause.

Action: Re-issue command after repairing root cause.

NDFN-00025: *string* failed for node *string*

Cause: The indicated operation could not be completed for the specified node. The lower-level error messages attached should indicate the root cause.

Action: Re-issue command after repairing the condition indicated.

NMP-00001 to NMP-00011

NMP-00001: value too big

Cause: The SNMP program interface received a value too large for it to process. This error is usually displayed underneath an error which describes in more detail the value which caused the problem.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NMP-00002: no such SNMP variable name

Cause: An SNMP request was not processed because the one or more of the variable names in the request does not exist. This error is not normally visible to the user except in a trace file, where it is usually part of a "soft" error condition which is normal.

Action: The error may indicate that a managed server does not support an operation requested by its control program, perhaps because of version incompatibility. For further details, turn on tracing and re-execute the failing operation. If the error persists, and does not occur as part of a "soft" error condition as noted in the trace file, contact Worldwide Customer Support.

NMP-00003: bad SNMP variable value

Cause: The SNMP program interface received a variable value which has an unsupported data type. This error may occur if a standard SNMP network monitor is sending requests to an Oracle service through an SNMP-to-TNS gateway, and that service cannot understand the requests.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, and occurs when an Oracle control program sends requests to an Oracle service, contact Worldwide Customer Support.

NMP-00004: SNMP variable is read only

Cause: The user attempted to change a variable value at a remote server, and that variable is read-only. This error is usually displayed underneath an error which describes the problem in more detail.

Action: Read-only variables may never be modified.

NMP-00005: general SNMP error

Cause: an SNMP error occurred which did not fall under the heading of any other more specific error condition. This error may occur if a standard SNMP network monitor is sending requests to an Oracle service through an SNMP-to-TNS gateway, and that service cannot understand the requests.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, and occurs when an Oracle control program sends requests to an Oracle service, contact Worldwide Customer Support.

NMP-00006: uninitialized SNMP context

Cause: An internal function attempted to use an uninitialized SNMP handle.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NMP-00007: I/O failure

Cause: The SNMP program interface attempted to send or receive an SNMP request and was unable to do so because of a network failure of some sort. This error is usually displayed underneath an error which describes the problem in more detail. The problem typically occurs when a control program is attempting to communicate with a service and either that service has unexpectedly terminated or the network path between the control program and the service has been interrupted.

Action: n/a

NMP-00008: SNMP message has incorrect version, version 0 is required

Cause: The SNMP program interface received a protocol request with an illegal version number. This error may occur if a standard SNMP network monitor is sending malformed requests to an Oracle service through an SNMP-to-TNS gateway.

Action: Ensure that the management platform in question is sending SNMP requests with the correct version number. If the error persists, and occurs when an Oracle control program sends requests to an Oracle service, contact Worldwide Customer Support.

NMP-00009: SNMP initialization failure

Cause: The SNMP program interface could not be initialized, either because its error message file could not be found, or because there is a malformed snmp.communities parameter value in the parameter table.

Action: Check that SQL*Net has been installed properly and that all message files are in their proper locations. Turn on tracing and look for parameter table load errors.

NMP-00010: memory exhausted

Cause: The program interface has run out of memory.

Action: Add more memory or run fewer processes.

NMP-00011: internal SNMP program interface error

Cause: An internal error occurred inside the SNMP program interface. This error is usually displayed underneath an error which describes the problem in more detail.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00001 to NNC-00501

NNC-00001: maximum number of connections already open

Cause: All available name service connections are handling requests.

Action: If the problem occurs when running a name server, increase the values of `names.max_open_connections`. If the problem occurs in a client program, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00002: error listening on stream *string*

Cause: The name server was asked to listen on the specified address, and failed, probably because the address is malformed, or because it uses a SQL*Net protocol adaptor which has not been installed.

Action: Make sure the address is properly formed, and that it uses a protocol adaptor which has been installed on your system.

NNC-00003: error opening stream *string*

Cause: A name server or client program attempted to open a connection to another server and failed, either because the server is down, or because the network path to that server is not working. This error is usually displayed underneath an error which describes the problem in more detail.

Action: Make sure that the server being connected to is listening on the address used, and that there is network connectivity between the two end-points.

NNC-00004: connection is broken

Cause: The connection from a name server or client program to another server has been broken, either because that server has shut down, or because the network path to the server has stopped working. This error is usually displayed underneath an error which describes the problem in more detail.

Action: Make sure that the server being connected to is running and listening on the address used, and that there is network connectivity between the two end-points.

NNC-00005: cannot initialization stream subsystem

Cause: The name service stream subsystem could not be started, probably because of a missing TNS error message file.

Action: Check that SQL*Net has been installed properly and that all message files are in their proper locations.

NNC-00050: message format error

Cause: A corrupted name server message was received by a name server or the name server program interface.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00051: message content error

Cause: A corrupted name server message was received by a name server or the name server program interface.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00052: client and server protocol versions are incompatible

Cause: A name server message with an incompatible protocol version was received by a name server or the name server program interface. This problem will occur when there are clients and servers with widely varying protocol versions that are trying to communicate.

Action: upgrade older client and server software so it is compatible with newer software.

NNC-00053: ASN.1 error encountered while sending or receiving message

Cause: The name server or the name server program interface attempted to send or receive a message and failed because of an ASN.1 error.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00400: memory exhausted

Cause: The program interface has run out of memory.

Action: Add more memory or run fewer processes.

NNC-00401: program interface initialization failed

Cause: The name server program interface could not be initialised, probably because of a missing TNS or name server error message file.

Action: Check that SQL*Net has been installed properly and that all message files are in their proper locations.

NNC-00402: program interface de-initialization failed

Cause: An internal error occurred while the name server program interface was being de-initialised by an internal function.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00403: program interface has not been initialised

Cause: An internal function has attempted to de-initialise the name service program interface when it has not yet been initialised.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00404: supplied buffer of size *string* is smaller than minimum size *string*

Cause: A caller supplied the name server program interface with a memory buffer too small for the interface's requirements. This error is usually displayed underneath an error which describes the problem in more detail.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00405: network failure

Cause: The network connection between the client program and the name server has failed, either because the server has shut down, or because the network path to the server has stopped working. This error is usually displayed underneath an error which describes the problem in more detail.

Action: Contact your name server administrator to make sure that the server being connected to is running and listening on the address used, and that there is network connectivity between the two end-points.

NNC-00406: name "*string*" does not exist

Cause: The user asked for information associated with a global name that does not exist.

Action: Re-try the failing operation with a global name that exists.

NNC-00407: alias loop in name request

Cause: The name service detected an "alias loop" when trying to retrieve information associated with a global name. An alias loop occurs when an alias name X points to another alias name Y, which in turn points back to X, rather than eventually to a global name which contains data.

Action: Contact your name server administrator to have the alias loop investigated and fixed.

NNC-00408: name "*string*" exists but desired data does not

Cause: The user asked for information associated with a global name. The name in question exists, but does not contain the desired type of information.

Action: Re-try the failing operation with a type which the desired name does contain.

NNC-00409: temporary name service failure

Cause: There are no name servers available to handle a client request, or a name server was temporarily unable to handle a client request. This situation is almost always temporary, and occurs when the program interface has issued a name server request and not received a timely response from any of its preferred servers. Such delays can occur due to transient network or name server outages or heavy load.

Action: Re-try the failing operation. If the error persists, make sure there is network connectivity between the client and its preferred name servers, and contact your name server administrator to make sure that those name servers are running.

NNC-00410: invalid preferred server address list

Cause: The names.preferred_servers parameter in sqlnet.ora is malformed.

Action: Make sure the address list is properly formatted.

NNC-00411: invalid default domain name "*string*"

Cause: The names.default_domain parameter in sqlnet.ora is invalid.

Action: Make sure the parameter value is a valid global name. See your documentation for the characters which may be used in a global name.

NNC-00412: invalid name "*string*"

Cause: The name server program interface was given an invalid global name to process.

Action: Supply a valid domain name. If the error is caused by an internal function, contact Worldwide Customer Support.

NNC-00413: general failure

Cause: A name server program interface error occurred which did not fall under the heading of any other more specific error condition. The error will usually be followed by more specific lower-level information.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00414: invalid name-value binding string "*string*"

Cause: A caller provided the name server program interface with an invalid name-value binding string value.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, retry the failing operation with a valid name-value binding string argument. Otherwise, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00415: section identifier *string* is invalid, must be between *string* and *string*

Cause: An internal function has called the name server program interface with illegal arguments.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00416: user callback function returned error number *string*

Cause: An internal function has called the name server program interface with illegal arguments.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00417: name "*string*" already exists

Cause: A caller has attempted to create a new global name, and that name already exists.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, retry the failing operation with a name that does not already exist. Otherwise, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00418: name "*string*" cannot be modified because it has children

Cause: A caller has attempted to delete or rename a global name, and that name cannot be modified because it has child names underneath it in the name space.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, retry the failing operation with a name that is a leaf node. Otherwise, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00419: authoritative server is unreachable

Cause: A name server request cannot be processed because the server which received the operation does not own the name specified in the request and cannot locate the server which does own the name. The error is almost always transient, and occurs either because the path between the server receiving the request and the request's final destination has been interrupted, or because the final destination is down.

Action: Not normally visible to the user, except when using the name server control program. Because the error is typically a transient one, retrying the failing operation will usually work. If the failure persists, the name server which is allowed to process the failing operation is probably shut down or unreachable. Contact your name server administrator to make sure that your site's name servers are running, and are properly configured.

NNC-00420: operation not allowed

Cause: A name server request cannot be processed because the server which received the operation is not allowed to process it. The problem typically occurs when an administrator has disabled request processing at a particular server for some reason.

Action: Contact your name server administrator to determine why server request processing has been disabled.

NNC-00421: invalid modification directive *string*, must be between *string* and *string*

Cause: An internal function has called the name server program interface with illegal arguments.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00422: invalid data type name "*string*"

Cause: A caller has provided an invalid data type name to the name server program interface.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, retry the failing operation with a valid type name. Otherwise, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00423: invalid data item syntax code *string*

Cause: A caller has provided an invalid data type code to the name server program interface.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, retry the failing operation with a valid type name. Otherwise, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00424: invalid address "*string*"

Cause: A caller provided the name server program interface with an invalid address value.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, retry the failing operation with a valid address argument. Otherwise, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00425: meta-data violation

Cause: A caller issued a name server modification request and that request cannot be processed because it would violate data type meta-data constraints.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, examine the meta-data constraints for the data type being operated upon and don't violate them. Examples of typical constraint violations are attempts to add a new data item to a name which already contains alias information, or attempts to add alias information to a name which already contains other data, or attempts to replace a data item with another item that has the wrong syntax. If the error occurs outside the control program, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00426: no such data type

Cause: A caller attempted to create a data item, and could not because the data item's type does not exist.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, retry the operation with an existent data type. Otherwise, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00427: server does not support this version of the protocol

Cause: A name server message with an incompatible protocol version was received by a name server or the name server program interface. This problem will occur when there are clients and servers with widely varying protocol versions that are trying to communicate.

Action: upgrade older client and server software so it is compatible with newer software.

NNC-00428: invalid meta-data data item

Cause: A caller provided the name server program interface with an invalid meta-data data item.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, retry the failing operation with a valid meta-data argument. Otherwise, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00429: invalid octet string literal "string"

Cause: A caller provided the name server program interface with an invalid octet string string value.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, retry the failing operation with a valid octet string argument. Otherwise, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNC-00430: Database not accessible

Cause: When a database is used for consistency between different nameservers, any modify operation should not only modify the cache but also the database. And if the database is not accessible, this error occurs.

Action: Not normally visible to the user, except when using the name server control program. If the error occurs when using the control program, make sure database is available and then re-execute the operation. If error persists, contact Worldwide Customer Support.

NNC-00431: NS address does not match any of the current addresses

Cause: When delegating a domain, the address of the Nameserver is provided by the client. If the nameserver already exists, then it already has address(es) associated with it. So, the address supplied by the client must match one of them. Otherwise, this error occurs.

Action: Not normally visible to the user, except when using name server control program. If the error occurs when using the control program, either provide an one of the existing addresses of the name server or delegate the domain to a new nameserver.

NNC-00500: warning: "string" parameter value is illegal, setting to *string*

Cause: The named parameter value is invalid.

Action: Make sure the parameter value is formatted correctly. Valid choices for boolean parameter values are TRUE, FALSE, YES, NO, ON, and OFF.

NNC-00501: warning: "string" parameter value must be between *number* and *number*, setting to *number*

Cause: The named parameter value is invalid or outside legal boundary values.

Action: Make sure the parameter value is a number, and falls between valid minimum and maximum values, as specified in the error text.

NNF-00001 to NNF-04009

NNF-00001: Not a TNS address

Cause: While asking to read an address the name service returned a record which was not an address.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNF-00002: Invalid value passed to function call

Cause: An invalid value was passed to an interface function.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNF-00003: Naming adapter *string* does not exist

Cause: The requested name service adapter was not found in the current adapter table.

Action: Check the spelling of the adapter requested. Verify that the adapter runs on this platform, and the adapter is compiled into the adapter table linked into the executable.

NNF-00004: Operation not supported in *string*

Cause: The operation requested is not supported under this adapter.

Action: Verify that the operation being performed is not under restriction, such as writing to read-only name service. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNF-00005: Functionality not implemented

Cause: The operation requested is not supported in this implementation.

Action: If this is retrieved from a production release, contact Worldwide Customer Support. Otherwise, check the release notes as to the restrictions in this release.

NNF-00110: no values exist

Cause: Test program help text.

Action: None

NNF-00540: Failed to insert name: *string*

Cause: Failed to insert name into the native service.

Action: Verify that the name is not already in the native namespace and the appropriate access permissions are set for the namespace.

NNF-01001: ds_initialize: workspace initialization failed

Cause: The DCE workspace as setup by ds_initialize() failed to initialize.

Action: Verify that conditions necessary for a successful ds_initialize() call are present on this platform (e.g is there enough memory?). Check that there is not another workspace user in this program. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNF-01002: DCE could not open configuration file

Cause: A DCE call returned an error that it could not access its configuration file.

Action: Check that the DCE configuration file for this platform is present, and accessible. On Unix this file is dce_cf.db. Check if a simple call to dce_cf_get_cell_name() succeeds.

NNF-01003: DCE could not find cell name

Cause: A DCE call returned an error that it could not find the cell name in its configuration file.

Action: Check that this machine has been configured for a DCE cell. Check that the DCE configuration file is not corrupted. On Unix, this file is dce_cf.db. Check if a simple call to dce_cf_get_cell_name() succeeds.

NNF-01004: DCE returned unspecified error *string*

Cause: A DCE call returned a status that was not in this implementation's list of possible status values for this DCE call.

Action: Verify that this platform's DCE release is not beyond those supported by this Oracle application. If the error persists, contact Worldwide Customer Support.

NNF-01005: Internal XOM class violation

Cause: A DCE XOM call returned statuses inconsistent with the class definitions in the DCE documentation.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNF-01006: Attribute *string* not available

Cause: A insertion call attempted to use an attribute which did not have a translation to a DCE attribute.

Action: Use another attribute, or insert the translation into DCE.

NNF-01007: DCE long strings are not supported

Cause: A query returned a object which has a XOM OM_S_LONG_STRING. The current implementation does not support such objects.

Action: For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNF-01008: XDS attribute syntax *string* incorrect for Oracle Names syntax *string*

Cause: The syntax as specified in the XDS object is different than that which is expected for the given Oracle names syntax.

Action: For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNF-02001: NIS client error string: *string*

Cause: A call to an NIS (YP) function failed. This message contains the text of the NIS error code returned.

Action: Should only be visible when returned as part of another error. If the error persists, contact Worldwide Customer Support.

NNF-02002: NIS value does not conform to adapter schema: *string*

Cause: The values in the maps used by the NIS adapter must conform to a specific set of internal formatting rules. This value returned did not conform to those rules.

Action: Should not be visible, unless you are attempting to create your own maps. If the error persists, contact Worldwide Customer Support.

NNF-02003: Unknown NIS error code: *string*

Cause: An error code returned by a NIS (YP) function was not in the list expected by this program.

Action: Verify that the error is generated by the YP functions on this platform. Notify Worldwide Customer Support of the error.

NNF-02004: NIS map *string* does not exist

Cause: The requested attribute does not exist.

Action: For an unused attribute, no action is required, as this is the expected error. Otherwise, add the attribute and reload the NIS (YP) maps.

NNF-02005: NIS key *string* does not exist in map *string*

Cause: The requested name was not found.

Action: For an unused name, no action is required, as this is the expected error. Otherwise, add the name to the map and reload the NIS (YP) maps.

NNF-03002: Unknown BIND error code: *string*

Cause: The return code in the BIND (DNS) query response did not conform to those values listed in RFC 1035.

Action: Verify that the error is generated by the BIND functions on this platform. Notify Worldwide Customer Support of the error.

NNF-03003: Format error parsing server response

Cause: The query response packet returned from the BIND (DNS) API did not conform to the format listed in RFC 1035.

Action: Verify that the error is generated by the BIND functions on this platform. Notify Worldwide Customer Support of the error.

NNF-03004: DNS Class mismatch (*string*)

Cause: The query response packet returned a class different from the ones expected by the interface.

Action: Verify that the error is generated by the BIND functions on this platform. Notify Worldwide Customer Support of the error.

NNF-04000: File successfully converted

Cause: The requested conversion is performed.

Action: Normal condition, no action necessary.

NNF-04001: Error converting input file

Cause: The input file contains lines that cannot be converted by the conversion program.

Action: Check that the syntax of the input file is correct.

NNF-04002: Outputfile already exists

Cause: An old output file already exists in the current directory

Action: Remove the existing file, and restart the conversion tool

NNF-04003: Entry in inputfile is too long

Cause: The makedbm program, limits entries in mapfiles to 1017 characters. Therefore, the conversion tool will not process TNS addresses which are longer than 1017 characters.

Action: Shorten the offending entry.

NNF-04004: Invalid string in inputfile

Cause: the input file contains invalid lines.

Action: Check that the syntax of the input file is correct.

NNF-04005: Cannot open inputfile

Cause: The specified input file could not be found.

Action: restart the conversion tool with the correct input file.

NNF-04006: Could not create outputfile

Cause: An output file could not be created in the current working directory

Action: Change the permissions of the current directory and restart the conversion tool.

NNF-04007: Error reading input file

Cause: A problem while reading the input file. This could be caused by an unexpected end of file in the input file.

Action: Check that the file is intact and that the syntax of the input file is correct.

NNF-04008: Error writing outputfile

Cause: An error occurred while writing to the output file.

Action: Check available disk space. If the error persists, contact Worldwide Customer Support.

NNF-04009: Usage: tns2nis filename

Cause: The conversion tool was not invoked properly. The filename should either be tnsnames.ora or native.ora

Action: Restart the conversion tool with the proper parameter.

NNL-00001 to NNL-01078

NNL-00001: request argument "*string*" is invalid

Cause: The user entered an invalid request command argument.

Action: Supply a valid argument.

NNL-00002: request argument "*string*" is not allowed with this operation

Cause: The user entered a request command argument which is not valid with the particular request command.

Action: Supply a valid argument.

NNL-00003: memory exhausted

Cause: The program has run out of memory

Action: Check the amount of available memory on your machine to ensure that there is enough memory to run this executable. If necessary, free up memory by running fewer programs, then try again.

NNL-00004: invalid command argument "*string*"

Cause: The user entered an invalid command argument.

Action: Supply a valid argument.

NNL-00005: no server has been set. Use the "SET SERVER" command first

Cause: The user attempted to issue a command which requires that a default managed Oracle Names server be set first.

Action: Use the SET SERVER command to set your default server, then reissue the command. Alternatively, if the command allows, re-issue it with a specific server name so the control program does not need to use the default.

NNL-00006: timeout, server is not responding

Cause: The control program issued a request to an Oracle Names server and no response arrived in a timely fashion. The network connection between the control program and the server may be faulty, the server may be very heavily loaded, or there may be substantial network delays between the control program and the server. The latter is especially true for WAN links.

Action: Reissue the command; if it continues to fail, check to see that the server being managed is running correctly and that the network connection between the server and the control program is working correctly.

NNL-00007: server responded with an error

Cause: The control program issued a request to an Oracle Names server and the server responded with an error.

Action: For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNL-00008: request not understood by server

Cause: The control program issued a request to an Oracle Names server and the server did not understand the request.

Action: If the server and the control program have different versions, they may be unable to communicate. Check your documentation for version compatibility constraints. If the server and control program are compatible, turn on tracing for further details, and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNL-00009: encryption of server password failed

Cause: The control program attempted and failed to encrypt a server password, supplied either through the SET PASSWORD command or the namesctl.server_password configuration parameter.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNL-00010: error getting address for server "*string*"

Cause: The control program attempted to translate a server name to its corresponding address, and failed. There are a large number of possible causes for the failure. The control program's SQLNET.ORA file must exist in the correct system-specific location, and must be readable by the control program. The file must contain a names.preferred_servers entry with valid name server addresses. If the user has changed managed servers with the SET SERVER command, the new server must be running, and must be able to resolve the address or forward the request to another server which can resolve the address. Alternatively, a TNSNAMES.ORA file with valid name server names and addresses must exist in the correct system-specific location.

Action: For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NNL-00011: no server with name "*string*" exists

Cause: The user issued a SET SERVER request and the current managed Oracle Names server was unable to translate that name into an address. Alternatively, the user issued a control program request to a specific server, and that server's name could not be translated into an address. Both problems are almost always caused by mis-typing the server name.

Action: Re-issue the request with a valid server name.

NNL-00012: invalid "*string*" value "*string*"

Cause: The first argument is a data type, the second is a value. The user supplied an invalid data value of the specified type.

Action: Re-issue the failing operation with correct data.

NNL-00013: not performed, permission denied for supplied password

Cause: The user issued a request to an Oracle Names server, and the password supplied with the request was incorrect.

Action: Check to see that the password sent by the control program to the server is correct for that server. You can set a new password with the SET PASSWORD control program command.

NNL-00014: unknown data type "string"

Cause: The user issued a name server request which contained an unknown data type.

Action: It is possible that the server had no information on the type, but automatically fetched it in response to the failing request. Re-issue the failing request; if the server has in the meantime fetched the appropriate data type information, the error will go away. If the error persists, the data type is probably invalid.

NNL-00015: type "string" has "string" syntax, which has no textual representation

Cause: Not all data type syntaxes can be represented as text. This message indicates that the user issued a name server request for a type with a non-textual representation.

Action: Re-issue the operation with a data type that has a syntax with a textual representation.

NNL-00016: cannot start server, error getting program directory's name

Cause: The user issued a STARTUP request, but the control program was unable to start the server because it was unable to find the name of the directory where the server executable resides.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNL-00017: cannot start server, program "string" does not exist

Cause: The user issued a STARTUP request, but the control program was unable to start the server because it was unable to find the server executable.

Action: Make sure that a copy of the server executable exists in your system's oracle executable directory.

NNL-00018: warning: could not contact default name server

Cause: The control program was unable to contact its default name server during startup. There are a number of possible causes for this error. The control program's SQLNET.ORA file must exist in the correct system-specific location, and must be readable by the control program. The file must contain a names.preferred_servers entry with valid name server addresses. The first server in the preferred-server list must be running, and there must be network connectivity between the control program and that server.

Action: Check to see that all of the above are true. If the control program is still unable to contact its default server, turn on tracing and restart the control program. If the error persists, contact Worldwide Customer Support.

NNL-00019: warning: server either changed or ignored your request

Cause: The user issued a request to an Oracle Names server and that request was altered in some way. Typically the user specified an invalid argument of some sort, and the server either ignored the request, or replaced the invalid argument with a reasonable default.

Action: Use the control program to check the current state of the value that you attempted to change. The server's log file may also contain information about the exact cause of the problem. Re-issue the operation with correct arguments.

NNL-00020: warning: no TNSNAMES.ORA file and no preferred name servers in SQLNET.ORA

Cause: The control program was unable to find a TNSNAMES.ORA file and was unable to find a default name server in SQLNET.ORA. The control program will operate in this state, but will be unable to resolve any names until a default server has been set, and that server must be set using its raw TNS address.

Action: The control program's SQLNET.ORA file must exist in the correct system-specific location, and must be readable by the control program. The file must contain a names.preferred_servers entry with valid name server addresses. The first server in the preferred-server list must be running, and there must be network connectivity between the control program and that server. Alternatively, a TNSNAMES.ORA file with valid name server information must exist in the correct system-specific location.

NNL-00022: error changing trace level from *string* to *string*, level change ignored

Cause: The user attempted to change the control program's local trace level, and the program encountered an error while changing the level. Usually the problem is that tracing was enabled for the first time (by changing the trace level from OFF to something else) and the trace file is not writeable by the control program.

Action: Check to see that the trace file is writeable. Your documentation will tell you the name of the trace file.

NNL-00023: SET command is missing an argument

Cause: The user attempted to issue a SET command with no argument.

Action: Supply a valid argument to the SET command.

NNL-00024: warning: no preferred name servers in SQLNET.ORA

Cause: The control program was unable to find any preferred name servers in SQLNET.ORA, and will therefore not connect to a default server.

Action: Make sure that the SQLNET.ORA file contains a valid names.preferred_servers entry.

NNL-00035: File *string* or nested IFILEs not found.

Cause: Error in loading from the tnsfile.

Action: None

NNL-00036: No records loaded

Cause: No loadable data.

Action: None

NNL-00037: Error *number* while sequencing through parameter table.

Cause: The NL Parameter system reported an error while retrieving the next name from the table.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNL-00038: Distinguished Name syntax error

Cause: Distinguished Name incorrectly specified.

Action: Supply a valid DN.

NNL-00039: no RRs

Cause: Object has no relevant RRs to be mapped to LDAP objects.

Action: None

NNL-00040: Distinguished Name exceeds buffer length: *string*

Cause: Distinguished Name derived from Domain Name is too long.

Action: Either move the object to a domain whose name is shorter or manually update the LDAP object.

NNL-00041: Object *string* not in domain *string*

Cause: Object has no relevant RRs to be mapped to LDAP objects.

Action: None

NNL-00042: LDAP bind failure: *number, string*

Cause: Call to ldap_bind failed with return set to given number.

Action: Correct user/pwd parameters or definitions.

NNL-00043: LDAP open failure

Cause: LDAP server could not be contacted.

Action: Correct connect info or server unavailability.

NNL-00044: Unsupported data type *string* not mapped

Cause: ONames data type could not be mapped to LDAP attributes

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNL-00045: No host given for LDAP server

Cause: LDAP open will dump core without a host.

Action: Provide appropriate host with '-h' option.

NNL-00046: Name *string* exceeds DN template depth

Cause: There are more domains in the name than are specified in the DN template.

Action: Add fields to the template or migrate subdomains with separate dump operations.

NNL-00047: LDAP modify returned error: *0xnumber, string*

Cause: LDAP failed with the return code shown.

Action: Refer to LDAP documentation for the meaning of the error.

NNL-00048: Error opening file: *string*

Cause: Named file cannot be opened.

Action: Provide for access to file.

NNL-00049: Output in *string* cannot be renamed to *string*

Cause: The given file cannot be created.

Action: Insure that the file specified can be created before running the command. Or use the temporary file itself.

NNL-00201: Shutdown occurs in *string*

Cause: Control program general message.

Action: None

NNL-00202: No shutdown currently scheduled

Cause: Control program general message.

Action: None

NNL-00203: Scheduled shutdown to occur in *string*

Cause: Control program general message.

Action: None

NNL-00204: Cancelled shutdown

Cause: Control program general message.

Action: None

NNL-00205: Reload check occurs in *string*

Cause: Control program general message.

Action: None

NNL-00206: No reload check currently scheduled

Cause: Control program general message.

Action: None

NNL-00207: Scheduled reload check to occur in *string*

Cause: Control program general message.

Action: None

NNL-00208: Cancelled reload check

Cause: Control program general message.

Action: None

NNL-00209: Cache checkpoint interval is currently *string*

Cause: Control program general message.

Action: None

NNL-00210: Cache checkpointing is currently disabled

Cause: Control program general message.

Action: None

NNL-00211: Cache checkpoint interval is now *string*

Cause: Control program general message.

Action: None

NNL-00212: Cache checkpointing is now disabled

Cause: Control program general message.

Action: None

NNL-00213: No entry with specified index number, try "SHOW SYSTEM_QUERIES"

Cause: Control program general message.

Action: None

NNL-00214: Next auto-refresh for specified index number occurs in *string*

Cause: Control program general message.

Action: None

NNL-00215: Scheduled specified index number's next auto-refresh to occur in *string*

Cause: Control program general message.

Action: None

NNL-00216: Disabled auto-refresh for specified index number

Cause: Control program general message.

Action: None

NNL-00217: Controller is sleeping for *number* seconds

Cause: Control program general message.

Action: None

NNL-00218: Ignoring spurious trailing text "*string*"

Cause: Control program general message.

Action: None

NNL-00219: Statistic counter logging interval is currently *string*

Cause: Control program general message.

Action: None

NNL-00220: Statistic counter logging is currently disabled

Cause: Control program general message.

Action: None

NNL-00221: Statistic counter logging interval is now *string*

Cause: Control program general message.

Action: None

NNL-00222: Statistic counter logging is now disabled

Cause: Control program general message.

Action: None

NNL-00509: set | show cache_checkpoint_interval [*seconds*] [<server_list>] : \nset | show the server's cache checkpoint interval

Cause: Control program help text.

Action: None

NNL-00510: Adds a data record to an existing name

Cause: Control program help text.

Action: None

NNL-00511: Shows or sets the server's system query authority requirements

Cause: Control program help text.

Action: None

NNL-00512: Shows or sets the server's auto-refresh expiration period

Cause: Control program help text.

Action: None

NNL-00513: Shows or sets the server's auto-refresh failure retry interval

Cause: Control program help text.

Action: None

NNL-00514: Creates a new name with a default TTL

Cause: Control program help text.

Action: None

NNL-00515: Deletes a name and its data

Cause: Control program help text.

Action: None

NNL-00516: Displays complete server status

Cause: Control program help text.

Action: None

NNL-00517: Insert-replaces a data item under an existing name

Cause: Control program help text.

Action: None

NNL-00518: Shows or sets the maximum number of times a server can reforward a request

Cause: Control program help text.

Action: None

NNL-00519: Shows, enables, or disables modification request processing

Cause: Control program help text.

Action: None

NNL-00520: Changes an existing name's TTL

Cause: Control program help text.

Action: None

NNL-00521: Shows or sets the server's system query forwarding requirements

Cause: Control program help text.

Action: None

NNL-00522: Removes a data item from a name by value or by type

Cause: Control program help text.

Action: None

NNL-00523: Renames an existing name

Cause: Control program help text.

Action: None

NNL-00524: Replaces a data item with another data item

Cause: Control program help text.

Action: None

NNL-00525: Shows or sets the server's default-forwarding status

Cause: Control program help text.

Action: None

NNL-00526: Starts a server using a non-standard executable and optional arguments

Cause: Control program help text.

Action: None

NNL-00527: Shows, sets, or cancels the time when the server next checkpoints its cache

Cause: Control program help text.

Action: None

NNL-00528: [set] password *password* : set the password for subsequent calls

Cause: Control program help text.

Action: None

NNL-00529: set | show default_domain [<domain_name>] : set | show the current default domain

Cause: Control program help text.

Action: None

NNL-00530: quit | exit : exit the names control program

Cause: Control program help text.

Action: None

NNL-00531: flush_name *name* : \nremoves a name from caches along a route to an authoritative server

Cause: Control program help text.

Action: None

NNL-00532: set | show forwarding_available [<on | off>] [<server_list>] : \nenable, disable or show server request forwarding

Cause: Control program help text.

Action: None

NNL-00533: ping [<server_list>] : ping one or more Names servers

Cause: Control program help text.

Action: None

NNL-00534: query name [type] : query for a desired name and RR type

Cause: Control program help text.

Action: None

NNL-00535: reload [<server_list>] : reload server cache data if there are changes

Cause: Control program help text.

Action: None

NNL-00536: set | show requests_enabled [<on | off>] [<server_list>] : \nenable, disable or show server request processing

Cause: Control program help text.

Action: None

NNL-00537: set | show server [<server_name>] : set | show the currently managed server

Cause: Control program help text.

Action: None

NNL-00538: stop | shutdown [<server_list>] : stop one or more Names servers

Cause: Control program help text.

Action: None

NNL-00539: start | startup [args] : start the Names server with optional arguments

Cause: Control program help text.

Action: None

NNL-00540: [show] status [<server_list>] : display server status summary

Cause: Control program help text.

Action: None

NNL-00541: set | show trace_level [level] [<server_list>] : \nset | show the server's tracing level

Cause: Control program help text.

Action: None

NNL-00542: restart [<server_list>] : restart one or more Names servers

Cause: Control program help text.

Action: None

NNL-00543: [show] version [<server_list>] : \nshow the name and version of one or more Names servers

Cause: Control program help text.

Cause: Failed to access/create named file or its backup File due to incorrect permissions

Action: Provide correct access to file.

NNO-00050 to NNO-00854

NNO-00050: serious errors in configuration data, server cannot run

Cause: The server's configuration data has a problem of some sort which prevents the server from starting.

Action: Previous error messages in the log file will specify the exact problems leading to the shutdown. The problem most frequently occurs when the network is broken up into multiple administrative regions and the delegation points are incorrect. Read the Oracle Names documentation sections on region delegation and ensure that their directions are being followed correctly.

NNO-00051: domain count *number* exceeds maximum of *number*, first *number* will be loaded

Cause: The server's configuration contains more domains than the server can support.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00052: invalid domain description list

Cause: The server's configuration contains an invalid domain description list.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00053: duplicate domain description for domain "*string*"

Cause: The server's configuration contains duplicate domain descriptions in the domain description list.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00054: invalid domain name "*string*"

Cause: The server's configuration contains a domain description with an invalid name.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00055: invalid domain minimum TTL "*string*"

Cause: The server's configuration contains a domain description with an invalid minimum TTL.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00056: warning: domain minimum TTL must be between *number* and *number*, set to *number* seconds

Cause: The server's configuration contains a domain description with an invalid minimum TTL. This error is not fatal; the server will automatically set the TTL to a default value which is suitable for most uses.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00057: loading and verifying topology data

Cause: An informational message written to the log file during normal server startup.

Action: None

NNO-00058: cannot load topology data from configuration database

Cause: An error was encountered while trying to load the server's topology data from the configuration database. If more information is available, it will appear under this error. This error will cause the server to shut down.

Action: Make sure that the database is running, that its name and password as specified in the Oracle Network Manager are accurate, and that there is SQL*Net connectivity between the Oracle Names server and the database. To force the server to start up anyway, using its checkpoint data, start the server with the `names.no_region_database` parameter set to TRUE. If no checkpoint data is available, the server will shut down.

NNO-00059: cannot construct topology checkpoint file name

Cause: the server could not construct a system-dependent file name.

Action: An internal error not normally visible to the user. For further details, turn on tracing and restart the server. If the error persists, contact Worldwide Customer Support.

NNO-00060: loading server topology from checkpoint file "*string*"

Cause: An informational message written to the log file when the server has been forced to load from its most recent topology checkpoint file, by setting the `names.no_region_database` parameter to TRUE.

Action: None

NNO-00061: loading data for domain "*string*"

Cause: An informational message written to the log file during normal server startup.

Action: None

NNO-00062: cannot load domain data from configuration database

Cause: An error was encountered while trying to load the server's domain data from the configuration database. If more information is available, it will appear under this error. This error will cause the server to shut down.

Action: Make sure that the database is running, that its name and password as specified in the Oracle Network Manager are accurate, and that there is SQL*Net connectivity between the Oracle Names server and the database. To force the server to start up anyway, using its checkpoint data, start the server with the `names.no_region_database` parameter set to TRUE. If no checkpoint data is available, the server will shut down.

NNO-00063: cannot construct domain checkpoint file name

Cause: the server could not construct a system-dependent file name.

Action: An internal error not normally visible to the user. For further details, turn on tracing and restart the server. If the error persists, contact Worldwide Customer Support.

NNO-00064: loading domain data from checkpoint file "*string*"

Cause: An informational message written to the log file when the server has been forced to load from its most recent domain checkpoint file, by setting the `names.no_region_database` parameter to TRUE.

Action: None

NNO-00065: loading cached data from checkpoint file "*string*"

Cause: An informational message written to the log file during normal server startup.

Action: None

NNO-00066: server will perform reload check of administrative region in *number* seconds

Cause: An informational message written to the log file whenever the Oracle Network Manager or the Oracle Names control program send a reload request to the server.

Action: None

NNO-00067: server reload check countdown aborted

Cause: An informational message written to the log file whenever the Oracle Names control program halts a reload request previously sent to the server

Action: None

NNO-00068: warning: administrative region check failed, next check in *number* seconds

Cause: this warning is issued whenever the server fails to connect to the configuration database to see if any configuration data has changed. The server will automatically begin reissuing reload checks more frequently, and will eventually give up if connections fail continuously for three days.

Action: Make sure that the database is running, that its name and password as specified in the Oracle Network Manager are accurate, and that there is SQL*Net connectivity between the Oracle Names server and the database.

NNO-00069: warning: too many administrative region check failures, checking disabled

Cause: a warning issued whenever the server has continuously failed for three days in its attempts to connect to the configuration database. The server disables reload checking. Reload checking can later be re-enabled from the Oracle Network Manager or the Oracle Names control program.

Action: Make sure that the database is running, that its name and password as specified in the Oracle Network Manager are accurate, and that there is SQL*Net connectivity between the Oracle Names server and the database. To force the server to start up anyway, using its checkpoint data, start the server with the `names.no_region_database` parameter set to TRUE. If no checkpoint data is available, the server will shut down.

NNO-00070: administrative region has changed, reloading domain data

Cause: An informational message written to the log file whenever the server's configuration has changed, and the server is reloading the new configuration from the configuration database.

Action: None

NNO-00071: cannot construct cache checkpoint file name

Cause: the server could not construct a system-dependent file name.

Action: An internal error not normally visible to the user. For further details, turn on tracing and restart the server. If the error persists, contact Worldwide Customer Support.

NNO-00072: loading from region database

Cause: normal

Action: An internal error not normally visible to the user. For further details, turn on tracing and restart the server. If the error persists, contact Worldwide Customer Support.

NNO-00073: loading server config from region database

Cause: An informational message written to the log file during normal server startup.

Action: None

NNO-00074: downloading region from server *string*

Cause: An informational message written to the log file during normal server startup.

Action: None

NNO-00080: domain "*string*" cannot be delegated because its parent is already delegated

Cause: an internal delegation error has occurred. Delegation is controlled by the Oracle Network Manager, which enforces correct delegation rules.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00081: domain "*string*" has no name servers

Cause: an internal configuration error has occurred. The Oracle Network Manager is responsible for configuring Oracle Names servers correctly.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00082: domain "*string*" is missing my name "*string*" as a name server

Cause: an internal configuration error has occurred. The Oracle Network Manager is responsible for configuring Oracle Names servers correctly.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00083: domain "*string*" server "*string*" has no addresses

Cause: an internal configuration error has occurred. The Oracle Network Manager is responsible for configuring Oracle Names servers correctly.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00084: domain "*string*" is not in the authoritative domain list

Cause: an internal configuration error has occurred. The Oracle Network Manager is responsible for configuring Oracle Names servers correctly.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00104: line *string*: syntax error, data ignored

Cause: the server found a syntax error its domain data. This message will also appear if the server's internal checkpoint files become corrupted. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00105: line *string*: invalid name "*string*", data ignored

Cause: the server found an invalid global name in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00106: line *string*: invalid TTL "*string*", data ignored

Cause: the server found an invalid TTL in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00107: line *string*: ignoring stale checkpoint data

Cause: an informational message which appears during server startup when the server detects out-of-date cached data in its cache checkpoint file. The message is part of normal server startup.

Action: None

NNO-00108: line *number*: TTL of *number* seconds below domain minimum *number*, using minimum

Cause: the server found an invalid TTL value in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00109: line *string*: invalid data type name "*string*", data ignored

Cause: the server found an invalid data type name in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00110: line *string*: unknown data type "*string*", data ignored

Cause: the server found an unknown data type in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00111: line *string*: data type "*string*" has syntax "*string*", should be "*string*", data ignored

Cause: the server found an invalid data type syntax in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00112: line *string*: ignored duplicate data of type "*string*"

Cause: the server found a duplicate record in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00113: line *string*: alias data already exists, all other data ignored

Cause: the server found a alias and non-alias data with the same global name in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00114: line *string*: other data exists, alias data ignored

Cause: the server found a alias and non-alias data with the same global name in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00115: line *string*: single-value data type "*string*", other instances ignored

Cause: the server found more than one record with the same name and type, when the type allows only a single record with a particular name. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00116: warning: data type "*string*" in *string* load

Cause: the server found a record with an invalid data type in its domain data.

Action: No action required; adjustments to data will eliminate warning.

NNO-00117: line *string*: missing data type, data ignored

Cause: the server found a record with a missing data type in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00118: line *string*: data length *string* exceeds maximum of *string*, data ignored

Cause: the server found a record whose length exceeds an internal limit. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00119: line *string*: server not authoritative for name "*string*", data ignored

Cause: the server found a global name in its domain data for which it is not authoritative. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00120: line *string*: topology name "*string*" not allowed here

Cause: the server found an invalid record in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00121: LDIF file *string* open failed: error = *number*

Cause: the server found an invalid record in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00122: invalid name, data ignored: entry:\n*string*

Cause: the server found an invalid global name in its domain data. The record in question is not loaded, but the server continues to load data.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00123: node "*string*" has no authoritative parent, data ignored

Cause: an object in the domain data is apparently not in the domain(s) which the server is authoritative for. The record in question is not loaded, but the server continues to load data.

Action: Check for inconsistencies in the data and correct any errors in topology definition or domain data outside of authoritative domains.

NNO-00150: warning: invalid hint list, no hints loaded

Cause: The server's configuration contains an invalid hint description list. The server will continue to run, but will not load any hints.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00151: warning: ignoring hint for domain "*string*", server is authoritative

Cause: the server's configuration contained a hint for a domain in the server's administrative region. The hint is ignored and the server continues to run.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00152: warning: hint count *number* exceeds maximum of *number*, first *number* will be loaded

Cause: There are too many hints in the server's hint list. The server will load a specified maximum number of hints, ignore the rest, and continue running.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00153: warning: hint domain *number* has invalid name "*string*", hint domain ignored

Cause: The server's configuration contains a hint domain with an invalid name. The domain is ignored and the server continues to run.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00154: warning: hint *number* has invalid server name "*string*", hint ignored

Cause: The server's configuration contains a hint with an invalid server name. The hint is ignored and the server continues to run.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00155: warning: hint *number* has missing address, hint ignored

Cause: The server's configuration contains a hint with no server address. The hint is ignored and the server continues to run.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00156: warning: hint *number* address length *number* exceeds maximum of *number*, hint ignored

Cause: The server's configuration contains a hint whose address length exceeds an internal limit. The hint is ignored and the server continues to run.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00157: warning: hint *number* has invalid address, hint ignored

Cause: The server's configuration contains a hint with an invalid address. The hint is ignored and the server continues to run.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00158: warning: hint domain count *number* exceeds maximum of *number*, first *number* will be loaded

Cause: The server's hint domain list is too long. The server will load a specified maximum number of hint domains, ignore the rest, and continue running.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00159: warning: ignoring duplicate hint domain *number* name "*string*"

Cause: The server's hint domain list contains a duplicate domain. The duplicate is ignored and the server continues running.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00160: warning: ignoring duplicate hint server "*string*"

Cause: The server's hint server list contains a duplicate server. The duplicate is ignored and the server continues running.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00250: invalid administrative region description

Cause: The server encountered an invalid administrative region description during startup. This error will prevent the server from starting. The administrative region description is stored in the server's names.ora configuration file.

Action: Make sure that the names.admin_region parameter in names.ora is correct. The names.ora file is automatically generated by the Oracle Network Manager, but administrators can edit the file at any time, introducing errors. If the file was never changed, contact Worldwide Customer Support.

NNO-00251: missing administrative region parameter *string*

Cause: The server's administrative region description is missing a required parameter. This error will prevent the server from starting. The administrative region description is stored in the server's names.ora configuration file.

Action: Make sure that the names.admin_region parameter in names.ora is correct. The names.ora file is automatically generated by the Oracle Network Manager, but administrators can edit the file at any time, introducing errors. If the file was never changed, contact Worldwide Customer Support.

NNO-00252: invalid administrative region parameter *string* value "*string*"

Cause: The server encountered an invalid administrative region parameter. This error will prevent the server from starting. The administrative region description is stored in the server's names.ora configuration file.

Action: Make sure that the names.admin_region parameter in names.ora is correct. The names.ora file is automatically generated by the Oracle Network Manager, but administrators can edit the file at any time, introducing errors. If the file was never changed, contact Worldwide Customer Support.

NNO-00253: administrative region parameter *string* length *string* exceeds maximum of *string*

Cause: The server encountered an administrative region parameter whose length exceeds an internal limit. This error will prevent the server from starting. The administrative region description is stored in the server's names.ora configuration file.

Action: Make sure that the names.admin_region parameter in names.ora is correct. The names.ora file is automatically generated by the Oracle Network Manager, but administrators can edit the file at any time, introducing errors. If the file was never changed, contact Worldwide Customer Support.

NNO-00254: warning: parameter *string* value must be between *number* and *number*, set to *number* seconds

Cause: The server encountered an administrative region parameter with an invalid value. The value is set to a default suitable for most applications, and the server continues running. The administrative region description is stored in the server's names.ora configuration file.

Action: Make sure that the names.admin_region parameter in names.ora is correct. The names.ora file is automatically generated by the Oracle Network Manager, but administrators can edit the file at any time, introducing errors. If the file was never changed, contact Worldwide Customer Support.

NNO-00255: cannot initialize ROS

Cause: The server was unable to initialize ROS during startup. The error prevents the server from running.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00256: using administrative region "*string*"

Cause: an informational message which appears during server startup, and notes the name of the administrative region for future diagnostic use by administrators. The message is part of normal server startup.

Action: None

NNO-00257: warning: cannot get serial number from region store

Cause: The server encountered an error while trying to get the configuration database's serial number. The error occurs almost always because time the server is unable to access the configuration database. If the error occurs during server startup, the server will shut down. If the error occurs during server operation (the server checks the serial number periodically to see if it should reload itself), then the server assumes a transient failure has occurred and repeats the operation a short while later. If the repetitions continue to fail for three days, the server will log another error and stop issuing the serial number load operation.

Action: First make sure that the Netadmin program has exported a server configuration for this name server. Next, make sure that the database is running, that its name and password as specified in the Oracle Network Manager are accurate, and that there is SQL*Net connectivity between the Oracle Names server and the database. If the error occurs during server startup, you can force startup anyway, with checkpoint data, by starting the server with the `names.no_region_database` parameter set to TRUE. If no checkpoint data is available, the server will shut down.

NNO-00258: cannot load configuration from configuration database

Cause: An error was encountered while trying to load the server's configuration from the configuration database. If more information is available, it will appear under this error. This error will cause the server to shut down.

Action: Make sure that the database is running, that its name and password as specified in the Oracle Network Manager are accurate, and that there is SQL*Net connectivity between the Oracle Names server and the database. To force the server to start up anyway, using its checkpoint data, start the server with the `names.no_region_database` parameter set to TRUE. If no checkpoint data is available, the server will shut down.

NNO-00259: configuration tables have not been installed or are inaccessible

Cause: The configuration database has not been properly installed.

Action: Make sure the Oracle Network Manager and its database have been properly installed

NNO-00260: loading configuration data from checkpoint file "*string*"

Cause: An informational message written to the log file when the server has been forced to load from its most recent configuration checkpoint file, by setting the `names.no_region_database` parameter to TRUE.

Action: None

NNO-00261: cannot construct configuration checkpoint file name

Cause: the server could not construct a system-dependent file name.

Action: An internal error not normally visible to the user. For further details, turn on tracing and restart the server. If the error persists, contact Worldwide Customer Support.

NNO-00262: warning: cannot write checkpoint file "*string*"

Cause: the server was unable to write the named checkpoint file. This problem is typically due to the file system's protection settings. The error is not fatal; it simply means the server will not create any checkpoint data. Note, however, that if the configuration database is ever unavailable during a future server startup, the lack of checkpoint data means you will be unable to force a startup from checkpoint data with the `names.no_region_database` parameter.

Action: Check to see that the server has permission to write the file named in the error message.

NNO-00263: error from configuration database

Cause: the server encountered an error while accessing the configuration database. The error can occur when the database is unavailable, or SQL*Net connectivity to the database is interrupted.

Action: Make sure that the database is running, that its name and password as specified in the Oracle Network Manager are accurate, and that there is SQL*Net connectivity between the Oracle Names server and the database. To force the server to start up anyway, using its checkpoint data, start the server with the names.no_region_database parameter set to TRUE. If no checkpoint data is available, the server will shut down.

NNO-00264: configuration database query returned no data

Cause: the server attempted to fetch data from the configuration database and no data was found.

Action: The error generally appears underneath a more specific error which will tell you the exact nature of the problem.

NNO-00265: warning: cannot load data from checkpoint file

Cause: the server was started using checkpoint data, and was unable to read that data. The remaining errors below this one on the error stack provide more specific information about the problem.

Action: Check to see that the named file exists and that the server has permission to read it.

NNO-00266: cannot find document "string" in configuration database

Cause: The server encountered an error while trying to get its configuration ID from the configuration database. The error can occur any time the server is unable to access the configuration database. This error will cause the server to shut down.

Action: Make sure that the database is running, that its name and password as specified in the Oracle Network Manager are accurate, and that there is SQL*Net connectivity between the Oracle Names server and the database. To force the server to start up anyway, using its checkpoint data, start the server with the names.no_region_database parameter set to TRUE. If no checkpoint data is available, the server will shut down.

NNO-00267: warning: configuration database contains no data for server "string"

Cause: the server successfully contacted the configuration database, but was unable to find any configuration information associated with the server's name. The name is specified in the server's names.ora configuration file. The error occurs almost always because the server configuration has not been exported from the Netadmin program.

Action: Make sure that the Netadmin program has exported a server configuration for this name server.

NNO-00268: warning: configuration database is not used, using checkpoint data instead

Cause: An informational message indicating that the server has been started with the names.no_region_database parameter set to TRUE, and that it will use checkpoint data rather than attempting to contact the configuration database.

Action: None

NNO-00269: configuration database is version *string*, server requires at least version *string*

Cause: The server cannot use the specified configuration database because it is of an incorrect version.

Action: Run the document conversion utility supplied with the Network Manager and re-export your network. The conversion utility will upgrade old documents to a version which can be understood by the name server.

NNO-00270: ORACLE error *string*

Cause: An ORACLE error was encountered while accessing the configuration database. The error can occur when the database is unavailable, or SQL*Net connectivity to the database is interrupted.

Action: Make sure that the database is running, that its name and password as specified in the Oracle Network Manager are accurate, and that there is SQL*Net connectivity between the Oracle Names server and the database. To force the server to start up anyway, using its checkpoint data, start the server with the names.no_region_database parameter set to TRUE. If no checkpoint data is available, the server will shut down.

NNO-00271: warning: names.ora region is version *string*, network definition is version *string*

Cause: The region description in names.ora is out of synch with the network definition.

Action: No action is required unless the name server cannot run with the network definition. To be safe names.ora should be updated with one which is consistent with the network definition.

NNO-00272: line *string*; invalid DIT/DN

Cause: There is a syntax error in the DIT/DN provided in the region description.

Action: Correct the error and restart the server.

NNO-00300: no listen addresses specified, at least one is required

Cause: the server's configuration is missing addresses on which to listen.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00301: server will shut down in *number* seconds

Cause: An informational message written to the log file when the server receives a shutdown request from the Oracle Names control program.

Action: None

NNO-00302: server stopped

Cause: An informational message written to the log file when the server shuts down.

Action: None

NNO-00303: server "*string*" started with process ID *number*

Cause: An informational message written to the log file when the server successfully starts up.

Action: None

NNO-00304: listen address *string* length *string* exceeds maximum of *string*
Cause: the length of one of the server's listen addresses exceeds an internal limit.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00305: trace level changed from *number* to *number*

Cause: An informational message written to the log file when the server changes its trace level in response to a request from the Oracle Names control program.

Action: None

NNO-00306: server shutdown countdown aborted

Cause: An informational message written to the log file whenever the Oracle Names control program halts a shutdown request previously sent to the server

Action: None

NNO-00307: invalid server name "*string*"

Cause: the server's name is invalid. The name is specified in the server's names.ora configuration file.

Action: Make sure that the names.server_name parameter in names.ora is correct. The names.ora file is automatically generated by the Oracle Network Manager, but administrators can edit the file at any time, introducing errors. If the file was never changed, contact Worldwide Customer Support.

NNO-00308: server will restart in *number* seconds

Cause: An informational message written to the log file when the server receives a restart request from the Oracle Names control program.

Action: None

NNO-00309: server restarting

Cause: An informational message written to the log file when the server restarts.

Action: None

NNO-00310: server restart countdown aborted

Cause: An informational message written to the log file whenever the Oracle Names control program halts a restart request previously sent to the server

Action: None

NNO-00311: invalid listen address list

Cause: the server's configuration contains an invalid listen address list.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00312: listen address *string* is invalid

Cause: the server's configuration contains an invalid listen address.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00313: server password length *string* exceeds maximum of *string*

Cause: the server's password length exceeds an internal limit.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00314: error changing trace level from *number* to *number*, level change ignored

Cause: the server encountered an error while changing its trace level in response to a request from the Oracle Names control program.

Action: An internal error not normally visible to the user. For further details, turn on tracing and restart the server. If the error persists, contact Worldwide Customer Support.

NNO-00315: server is listening on address *string*

Cause: An informational message written to the log file during server startup.

Action: None

NNO-00316: statistic counter reset disabled

Cause: An informational message written to the log file when the server disables statistic counter resetting in response to a request from the Oracle Names control program.

Action: None

NNO-00317: statistic counter reset interval changed to *number* seconds

Cause: An informational message written to the log file when the server changes its statistic counter reset interval in response to a request from the Oracle Names control program.

Action: None

NNO-00318: overriding next statistic counter reset, resetting in *number* seconds

Cause: An informational message written to the log file when the server resets its statistic counters in response to a request from the Oracle Names control program.

Action: None

NNO-00320: missing server name parameter

Cause: the server could not find a names.server_name parameter. The name is specified in the server's names.ora configuration file.

Action: Make sure that the names.server_name parameter in names.ora is correct. The names.ora file is automatically generated by the Oracle Network Manager, but administrators can edit the file at any time, introducing errors. If the file was never changed, contact Worldwide Customer Support.

NNO-00321: statistic counter dump disabled

Cause: An informational message written to the log file when the server disables statistics dumping in response to a request from the Oracle Names control program.

Action: None

NNO-00322: statistic counter dump interval changed to *number* seconds

Cause: An informational message written to the log file when the server changes its statistic dump interval in response to a request from the Oracle Names control program.

Action: None

NNO-00323: overriding next statistic counter dump, dumping in *number* seconds

Cause: An informational message written to the log file when the server dumps its statistic counters in response to a request from the Oracle Names control program.

Action: None

NNO-00326: server statistic counter dump follows

Cause: An informational message written to the log file at the beginning of a statistic dump. The message is followed by a set of server statistics, and ends with another informational message indicating the dump has finished.

Action: None

NNO-00327: server statistic counter dump ends

Cause: An informational message written to the log file at the end of a statistic dump. The message is preceded by a set of server statistics.

Action: None

NNO-00328: server has reset statistic counters to zero

Cause: An informational message written to the log file when the server resets its statistic counters to zero in response to a request from the Oracle Names control program.

Action: None

NNO-00329: server will save the config file in *number* seconds

Cause: An informational message written to the log file when the server saves the config to config file in response to a request from the Oracle Names control program.

Action: None

NNO-00330: server saved the config file "*string*".

Cause: An informational message written to the log file when the server saves the config to config file in response to a request from the Oracle Names control program.

Action: None

NNO-00331: error saving new value *string* of *string* to the save config table.

Cause: An informational message written to the log file when the a set operation is performed and the change cannot be saved in the save config ptable, but should be.

Action: None

NNO-00332: warning: region store serial number reduced from *number* to *number*

Cause: An informational message written to the log file when the server finds the region database has its serial number set lower than it was when the server previously loaded the region data. This is an unnatural condition- every update to the region should increment the serial number so a reduction of the serial number might reflect tampering or accidental manual alteration this and possibly other region tables.

Action: Administrators should find out how/why the serial number decreased.

NNO-00333: warning: ROS admin_region types obsolete; using SQL

Cause: the value set in names.admin_region is an obsolete ROS type

Action: No action is necessary; administrators should set the value to the correct type- probably SQL, possibly LDAP or LDIF

NNO-00334: region load failure: ROS admin_region type *number* unsupported

Cause: the value set in names.admin_region is an obsolete ROS type

Action: No action is necessary; administrators should set the value to the correct type- probably SQL, possibly LDAP or LDIF

NNO-00600: warning: forwarder count *number* exceeds maximum of *number*, first *number* will be loaded

Cause: the server's configuration contains too many default forwarders. The server loads a specified maximum number of forwarders, ignores the rest, and continues running.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00601: warning: no forwarders, DEFAULT-FORWARDERS-ONLY mode ignored

Cause: the server's configuration enables DEFAULT-FORWARDERS-ONLY mode but the configuration contains no default forwarders. The server ignores the request and continues running.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00602: warning: forwarder *number* has invalid address, forwarder ignored

Cause: One of the forwarders in the default forwarder list has an invalid address. The forwarder definition is ignored and the server continues running.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00603: enabling all request processing

Cause: An informational message written to the log file when the server enables request processing in response to a request from the Oracle Names control program.

Action: None

NNO-00604: disabling all request processing

Cause: An informational message written to the log file when the server disables request processing in response to a request from the Oracle Names control program.

Action: None

NNO-00605: enabling modification requests

Cause: An informational message written to the log file when the server enables modification-request processing in response to a request from the Oracle Names control program.

Action: None

NNO-00606: disabling modification requests

Cause: An informational message written to the log file when the server disables modification-request processing in response to a request from the Oracle Names control program.

Action: None

NNO-00607: server will forward to default forwarders only

Cause: An informational message written to the log file when the server's configuration enables DEFAULT-FORWARDERS-ONLY mode.

Action: None

NNO-00608: received corrupted message

Cause: The server received a corrupted request. The request is ignored.

Action: corrupted requests are usually caused by transient network problems. If many corrupted messages are received, turn on tracing for further information. If the errors persist, contact Worldwide Customer Support.

NNO-00609: warning: forwarder *number* address length *number* exceeds maximum of *number*, ignored

Cause: the server's configuration contains a forwarder address whose length exceeds an internal limit.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00610: detected possible alias loop involving name "*string*"

Cause: the server detected an alias loop involving the specified name. An alias loop occurs when an alias "X" points to another alias "Y", which points back to "X" rather than to an address or other name server data. The loop can contain more hops but the basic idea remains the same. Loops occur when administrators mis-enter network data, particularly when an alias in one administrative region points to data in another administrative region.

Action: Use the Oracle Names control program to query for the specified name. The control program will describe the alias path, and you can use that information to find which names are incorrect and what administrative regions the incorrect data belongs to.

NNO-00611: disabling request forwarding

Cause: An informational message written to the log file when the server disables request forwarding in response to a request from the Oracle Names control program.

Action: None

NNO-00612: enabling request forwarding

Cause: An informational message written to the log file when the server enables request forwarding in response to a request from the Oracle Names control program.

Action: None

NNO-00613: disabling FORWARDING-DESIRED on system queries

Cause: An informational message written to the log file when the server disables the FORWARDING-DESIRED attribute on queries that it generates. The message comes in response to a request from the Oracle Names control program.

Action: None

NNO-00614: enabling FORWARDING-DESIRED on system queries

Cause: An informational message written to the log file when the server enables the FORWARDING-DESIRED attribute on queries that it generates. The message comes in response to a request from the Oracle Names control program.

Action: None

NNO-00615: disabling DEFAULT-FORWARDERS-ONLY mode

Cause: An informational message written to the log file when the server disables DEFAULT-FORWARDERS-ONLY mode in response to a request from the Oracle Names control program.

Action: None

NNO-00616: enabling DEFAULT-FORWARDERS-ONLY mode

Cause: An informational message written to the log file when the server enables DEFAULT-FORWARDERS-ONLY mode in response to a request from the Oracle Names control program.

Action: None

NNO-00617: enabling AUTHORITY-REQUIRED on system queries

Cause: An informational message written to the log file when the server enables the AUTHORITY-REQUIRED attribute on queries that it generates. The message comes in response to a request from the Oracle Names control program.

Action: None

NNO-00618: disabling AUTHORITY-REQUIRED on system queries

Cause: An informational message written to the log file when the server disables the AUTHORITY-REQUIRED attribute on queries that it generates. The message comes in response to a request from the Oracle Names control program.

Action: None

NNO-00622: warning: too many auto-refresh failures for name "*string*", query expired

Cause: If an auto-refresh query is issued and continuously returns an error for three days, the query is removed from the auto-refresh queue and a warning logged. The query can be restarted from the Oracle Names control program.

Action: this message will be preceded by numerous warnings that the query in question is failing. Use the Oracle Names control program to describe the failing query. Make sure the server being queried is running and that there is network connectivity between the querying server and the server being queried.

NNO-00623: setting auto-refresh retry interval to *number* seconds

Cause: An informational message written to the log file when the server changes its auto-refresh retry interval in response to a request from the Oracle Names control program.

Action: None

NNO-00624: setting auto-refresh expiration period to *number* seconds

Cause: An informational message written to the log file when the server changes its auto-refresh expiration period in response to a request from the Oracle Names control program.

Action: None

NNO-00625: overriding auto-refresh of name "*string*", type "*string*", refresh in *number* seconds

Cause: An informational message written to the log file when the server changes the time when an auto-refresh query is next issued. The message comes in response to a request from the Oracle Names control program.

Action: None

NNO-00626: cannot enable DEFAULT-FORWARDERS-ONLY mode, no default forwarders exist

Cause: the Oracle Names control program issued a request to enable DEFAULT-FORWARDERS-ONLY mode, and the request was ignored because the server has no default forwarders.

Action: None

NNO-00627: cancelling auto-refresh of name "*string*", type "*string*"

Cause: An informational message written to the log file when the server removes a query from the auto-refresh queue in response to a request from the Oracle Names control program.

Action: None

NNO-00628: setting maximum reforward per query to *number*

Cause: An informational message written to the log file when the server changes its maximum-reforward count in response to a request from the Oracle Names control program.

Action: None

NNO-00629: warning: invalid forwarder list, no default forwarders loaded

Cause: The server's configuration contains an invalid forwarder description list.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00630: setting request-processing delay to *number* seconds

Cause: An informational message written to the log file when the server sets an artificial request-processing delay in response to a request from the Oracle Names control program.

Action: None

NNO-00631: warning: forwarder *number* has invalid name "*string*", forwarder ignored

Cause: The server's configuration contains a forwarder description with an invalid server name.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00632: warning: forwarder *number* has missing address, forwarder ignored

Cause: The server's configuration contains a forwarder description with a missing address.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00633: detected fatal delegation loop involving server "*string*"

Cause: the server detected a fatal delegation loop while forwarding a request. A loop occurs when the server's topology data indicates that it should forward a request to itself. The server immediately shuts down in response to this error.

Action: An internal error not normally visible to the user. For further details, turn on tracing and restart the server. If the error persists, contact Worldwide Customer Support.

NNO-00634: received authoritative name "*string*" when we are its authority

Cause: a server "X" received authoritative data from another server "Y" when server "X" is also authoritative for the data. Such situations should never arise because if server "X" is authoritative for the requested data, it should never forward the request to another server.

Action: An internal error not normally visible to the user. For further details, turn on tracing and restart the server. If the error persists, contact Worldwide Customer Support.

NNO-00635: warning: ignoring duplicate forwarder "*string*"

Cause: The server's default forwarder list contains a duplicate server. The duplicate is ignored and the server continues running.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00700: warning: cannot checkpoint the cache, trying again in *number* seconds

Cause: The server was unable to perform its normal periodic cache checkpointing, typically because the cache checkpoint file could not be written. The cache checkpoint file name appears as an informational message during server startup.

Action: Check to see that the server has permission to write the cache checkpoint file, and that there is sufficient disk space for the file to be written.

NNO-00701: warning: cannot construct checkpoint file name, checkpointing disabled

Cause: the server could not construct a system-dependent file name.

Action: An internal error not normally visible to the user. For further details, turn on tracing and restart the server. If the error persists, contact Worldwide Customer Support.

NNO-00702: cache checkpointing disabled

Cause: An informational message written to the log file when the server disables cache checkpointing in response to a request from the Oracle Names control program.

Action: None

NNO-00703: checkpoint interval changed to *number* seconds

Cause: An informational message written to the log file when the server changes its cache checkpoint interval in response to a request from the Oracle Names control program.

Action: None

NNO-00705: warning: cannot open checkpoint file "*string*", checkpointing disabled

Cause: the server was unable to open the named checkpoint file for writing. This problem is typically due to the file system's protection settings. The error is not fatal; it simply means the server will not checkpoint its cache.

Action: Check to see that the server has permission to write the file named in the error message.

NNO-00706: overriding next cache checkpoint, checking in *number* seconds

Cause: An informational message written to the log file when the server checkpoints its cache in response to a request from the Oracle Names control program.

Action: None

NNO-00707: server's cache will be flushed in *number* seconds

Cause: An informational message written to the log file when the server flushes its cache in response to a request from the Oracle Names control program.

Action: None

NNO-00708: cache flush countdown aborted

Cause: An informational message written to the log file whenever the Oracle Names control program halts a cache flush request previously sent to the server

Action: None

NNO-00709: failed delete of cache checkpoint file "*string*", cache flush may not work

Cause: the server attempted to flush its cache, which also deletes the cache checkpoint file. The file deletion failed, although the rest of the cache flush succeeded. Succeeding errors describe the reason for the deletion failure.

Action: This error typically occurs when two cache-flush operations are issued in succession without an intervening cache checkpoint operation (which would recreate the file). The first deletes the cache file, the second attempts to do so, but fails since the file has already been deleted. In such cases, the message is harmless and can be ignored. If, however, the error occurs because the server lacks permission to delete the file, then you must change the file system permissions so the server is allowed to delete the file.

NNO-00710: server's cache will be dumped to the trace file in *number* seconds

Cause: An informational message written to the log file when the server dumps its cache to the trace file in response to a request from the Oracle Names control program.

Action: None

NNO-00711: cache dump countdown aborted

Cause: An informational message written to the log file whenever the Oracle Names control program halts a cache dump request previously sent to the server

Action: None

NNO-00712: warning: group *string* cache checkpoint failed

Cause: The server was unable to perform its normal periodic cache checkpointing, typically because the cache checkpoint file could not be written. The cache checkpoint file name appears as an informational message during server startup.

Action: Check to see that the server has permission to write the cache checkpoint file, and that there is sufficient disk space for the file to be written.

NNO-00800: Error: cannot read version from config database

Cause: The query for the region database version failed. The database may be shut down, or the tables may not exist in the schema specified in names.ora.

Action: Correct any access problems accordingly.

NNO-00801: Error: OCI_SUCCESS_WITH_INFO: *string*

Cause: Diagnostic information was returned from OCI during region database access.

Action: None

NNO-00802: Error: OCI_NEED_DATA

Cause: The server did not provide sufficient data to the OCI interface while accessing the region database.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00803: Error: OCI_INVALID_HANDLE

Cause: The server called OCI with an invalid handle while accessing the region database.

Action: An internal error not normally visible to the user. Contact Worldwide Customer Support.

NNO-00804: Error: OCI_STILL_EXECUTE

Cause: An OCI operation between the server and the database is still in progress.

Action: None

NNO-00805: Error: OCI_CONTINUE

Cause: Not possible.

Action: None

NNO-00806: Error: OCI_ERROR: *string*

Cause: An OCI occurred accessing the region database. More specific details will be written to the log file.

Action: Find the appropriate entry in the log file and correct the cause of the failure if possible. Otherwise contact Worldwide Customer Support.

NNO-00807: End of Fetch: OCI_NO_DATA

Cause: All rows have been returned from the region table.

Action: None

NNO-00808: Error connecting to region database

Cause: Not possible.

Action: None

NNO-00809: Unknown OCI error: *number*

Cause: Not possible.

Action: None

NNO-00850: Error: LDAP query returns *string*

Cause: The LDAP API returned an error. More specific details will be written to the log file.

Action: Find the appropriate entry in the log file and correct the cause of the failure if possible. Otherwise contact Worldwide Customer Support.

NNO-00851: LDAP open/bind failed: error = *number*

Cause: the server failed to connect to the LDAP directory.

Action: Find the cause of the error and correct it and restart the server.

NNO-00852: failed to get LDAP entry: error = *number*

Cause: the server could not retrieve query entries from the LDAP API.

Action: Find the cause of the error and correct it and restart the server.

NNO-00853: failed to get LDAP attribute/value: error = *number*

Cause: the server failed to connect to the LDAP directory.

Action: Find the cause of the error and correct it and restart the server.

NNO-00854: error unbinding LDAP: error = *number*

Cause: the server failed to connect to the LDAP directory.

Action: Find the cause of the error and correct it and restart the server.

NPL-00100 to NPL-00420

NPL-00100: cannot initialize ASN.1 context

Cause: The ASN.1 program interface could not be initialized, probably because its error message file could not be found.

Action: Check that SQL*Net has been installed properly and that all message files are in their proper locations.

NPL-00101: uninitialized ASN.1 context

Cause: The ASN.1 program interface received an uninitialized ASN.1 handle.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00102: missing stream functions in ASN.1 context initialization

Cause: An internal function improperly attempted to initialize an ASN.1 handle.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00103: unusable ASN.1 context

Cause: The ASN.1 program interface received an unusable ASN.1 handle.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00300: maximum ASN.1 element nesting depth *string* exceeded on read

Cause: An ASN.1 construct is too complex for the program interface to read.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00301: maximum ASN.1 element nesting depth *string* exceeded on write

Cause: An ASN.1 construct is too complex for the program interface to write.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00302: ASN.1 type tag is greater than maximum of 16383

Cause: An internal function attempted to create an illegal ASN.1 construct

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00303: uninitialized ASN.1 class attribute

Cause: An internal function attempted to create an illegal ASN.1 construct

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00304: uninitialized ASN.1 tag attribute

Cause: An internal function attempted to create an illegal ASN.1 construct

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00305: unsupported ASN.1 "UNIV" type *string*

Cause: An internal function attempted to create an illegal ASN.1 construct

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00307: ASN.1 sequence has already been ended on write

Cause: An internal function attempted to end an ASN.1 construct prematurely.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00308: requested ASN.1 class *string* does not match received class *string*

Cause: An internal function requested an ASN.1 construct different from that received by the ASN.1 protocol engine.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00309: requested ASN.1 type tag *string* does not match received type tag *string*

Cause: An internal function requested an ASN.1 construct different from that received by the ASN.1 protocol engine.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00310: ASN.1 sequence has already been ended on read

Cause: An internal function attempted to finish reading an ASN.1 construct which has already been completely read.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00311: cannot end constructed ASN.1 encoding, *string* encoding octets unread

Cause: An internal function attempted to finish reading an ASN.1 construct prematurely.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00312: attempt to put ASN.1 "UNIV" type with illegal tag *string*

Cause: An internal function attempted to create an illegal ASN.1 construct.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00313: requested form *string* does not match actual form *string*

Cause: An internal function received an ASN.1 construct different from that expected.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00410: incoming ASN.1 value too large (*string* octets) to store locally

Cause: The ASN.1 protocol engine was unable to translate an ASN.1 construct to its host representation because the construct was too big.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00411: incoming ASN.1 NULL encoding has nonzero length of *string*

Cause: The ASN.1 protocol engine received a corrupted ASN.1 construct.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00412: incoming ASN.1 BOOLEAN encoding has incorrect length of *string*

Cause: The ASN.1 protocol engine received a corrupted ASN.1 construct.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00413: incoming ASN.1 encoding has length *string*, maximum allowed is *string*

Cause: The ASN.1 protocol engine received an ASN.1 construct too large for it to process.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00414: incoming ASN.1 type tag is greater than maximum of 16383

Cause: The ASN.1 protocol engine received an illegal ASN.1 construct.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00415: received unsupported ASN.1 INDEFINITE-LENGTH encoding

Cause: The ASN.1 protocol engine received an ASN.1 encoding which it could not process because its implementation does not support it.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00416: received illegal ASN.1 encoding length of *string*

Cause: The ASN.1 protocol engine received a corrupted ASN.1 construct.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00417: received ASN.1 length octet count greater than maximum of *string*

Cause: The ASN.1 protocol engine received an ASN.1 encoding which it could not process because its implementation does not support it..

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00418: received malformed ASN.1 object identifier

Cause: The ASN.1 protocol engine received a corrupted ASN.1 construct.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00419: received ASN.1 object identifier with sub-identifier that is too large

Cause: The ASN.1 protocol engine received an ASN.1 encoding which it could not process because its implementation does not support it.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NPL-00420: received ASN.1 object identifier with more than 256 sub-identifiers

Cause: The ASN.1 protocol engine received an ASN.1 encoding which it could not process because its implementation does not support it.

Action: Not normally visible to the user. For further details, turn on tracing and re-execute the failing operation. If the error persists, contact Worldwide Customer Support.

NZE-28750 to NZE-29249

NZE-28750: unknown error

Cause: An Oracle Security Server error of an unspecified type occurred.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28751: memory allocation failure

Cause: The allocation of memory failed due to insufficient system memory.

Action: Terminate other processes to free up memory or add memory to the system.

NZE-28752: data source initialization failure

Cause: A data source failed to initialize. Frequently, this error is caused by insufficient system resources.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28753: failure to terminate use of data source

Cause: The system failed to terminate its use of a data source. This error may have been caused by memory or disk corruption, among other things.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28755: object retrieval failure

Cause: The system failed to retrieve information from a file or a database.

Action: Check if the data source exists, or check to ensure that the correct information exists.

NZE-28756: callback failure to allocate memory

Cause: A function supplied by the caller failed to allocate memory. This error could have been caused by system memory exhaustion.

Action: Terminate other processes to free up memory or add memory to the system.

NZE-28757: system attempt to allocate 0 bytes of memory

Cause: The system attempted to allocate 0 bytes of memory because there was no available memory left to allocate. This error could have been caused by insufficient system memory.

Action: Terminate other processes to free up memory or add memory to the system.

NZE-28758: memory release failure

Cause: The release of a memory fragment failed. This may be due to memory corruption either within the application or in the Oracle Security Server library.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28759: failure to open file

Cause: The system could not open the specified file.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28763: Invalid parameter type found in configuration file.

Cause: A parameter in the sqlnet.ora file may have been specified incorrectly.

Action: Check the sqlnet.ora file for this parameter value.

NZE-28764: failure to retrieve a configuration parameter

Cause: The system failed to retrieve a configuration parameter from the sqlnet.ora file. This error may have occurred because a necessary configuration parameter was not specified in the sqlnet.ora file.

Action: Supply the needed configuration parameter in the sqlnet.ora file.

NZE-28766: failure to terminate use of data source

Cause: The system failed to terminate its use of a data source. This error may have been caused by memory or disk corruption, or a system error.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28767: invalid version number

Cause: Version number of the wallet was incorrect. A corrupt wallet or an incompatible wallet was provided.

Action: Ensure that proper wallet is being used.

NZE-28768: bad magic number

Cause: An invalid magic number was specified in a data file. This could have been caused by a corrupted disk or by some other process overwriting the file.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28769: Specified method does not exist.

Cause: The data access method that was specified in the configuration file is not supported.

Action: Specify a supported method. Consult the Oracle Security Server documentation to determine the supported types.

NZE-28770: Data source is already initialized.

Cause: The caller attempted to initialize a data source which was already initialized.

Action: This is a programming error. An application should not attempt to initialize a data source more than once.

NZE-28771: Data source is not yet initialized.

Cause: The caller attempted to use a data source which had not yet been initialized.

Action: This is a programming error. The application must always initialize the data source before it can be used.

NZE-28773: failure to write magic and version numbers

Cause: Both the magic and version numbers failed to write. This usually occurs because of insufficient disk space.

Action: Delete unnecessary files to free up disk space or add disk space to the system.

NZE-28774: file cannot write to disk

Cause: The output of a file failed. This error usually occurs because of insufficient disk space.

Action: Delete unnecessary files to free up disk space or add disk space to the system.

NZE-28775: file cannot close

Cause: Failed to close a file which is used by a data access method. This error usually indicates memory corruption or a system error.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28776: Output buffer supplied is too small.

Cause: The data returned by a function was too large for the supplied buffer.

Action: Call the routine again with a larger buffer.

NZE-28777: binding creation failure

Cause: Failed to create a binding for use in the parsing of a parameter value. This error can be caused by the parameter value being in an incorrect format, such as a right parenthesis was not supplied where expected, or due to insufficient system memory.

Action: Make sure that the parameter is specified in the correct format. If the format is correct, free up system memory by terminating processes or adding more memory.

NZE-28778: Configuration parameter is not specified in the proper format.

Cause: The configuration parameter was not specified in the proper format.

Action: Consult the Oracle Security Server documentation for a description of the proper format for this parameter.

NZE-28779: no data access method specified in parameter

Cause: No method for data access was specified in the parameter value.

Action: Specify a method for data access in the parameter. Consult the Oracle Security Server documentation for the supported data access methods for this data type.

NZE-28780: invalid data access method specified by the parameter

Cause: The data access method specified by the parameter value is not supported.

Action: Specify a supported data access method. Consult the Oracle Security Server documentation for the supported data access methods for this data data type.

NZE-28781: No data for the access method is specified in the parameter.

Cause: No data was specified in the parameter for use with the specified access method.

Action: Consult the Oracle Security Server documentation for the data that must be specified for the access method.

NZE-28782: data source is not allocated

Cause: No memory was allocated for a data source.

Action: Ensure that the application calls in the data source initialization function.

NZE-28783: invalid parameter

Cause: There was no match for the parameter name that was used in the configuration file.

Action: Check your sqlnet.ora file for the correct parameter name.

NZE-28784: file name translation failure

Cause: The translation of a file name from Oracle format to native format has failed.

Action: Specify a correct file name. Consult your Oracle documentation for the correct file name format.

NZE-28785: parameter does not exist

Cause: A necessary configuration parameter was not found in the parameter file.

Action: Supply the required parameter.

NZE-28786: decryption of encrypted private key failure

Cause: An incorrect password was used to decrypt an encrypted private key.

Action: Enter the correct password.

NZE-28787: private key encryption failure

Cause: This may have been caused by an error in the mkwallet parameter of the sqlnet.ora file.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28788: user provided invalid information, or an unknown error

Cause: User may have responded to a prompt with unexpected input, or an unknown error occurred.

Action: Enter correct input, or enable tracing to check the trace file for errors.

NZE-28790: NLS string open failure

Cause: The opening of a string for use by the NLS subsystem failed.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28791: certificate verification failure

Cause: Verification of the certificate, which the user supplied, failed.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28794: data type attribute did not initialize

Cause: The initialization of the attribute data type failed. This error may be due to insufficient system resources.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28795: data type attribute did not terminate

Cause: The termination of the use of the attribute data type subsystem failed.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28796: access method is not supported

Cause: The method specified to access data is not supported.

Action: Use a supported access method. Consult your Oracle documentation to determine which access methods are supported.

NZE-28797: invalid key data type

Cause: The type specified for a key is not supported.

Action: Correct the key type. Consult your Oracle documentation to determine which key types are supported.

NZE-28800: data source failed to open

Cause: A data source (a file or a database) failed to open.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28802: invalid mode or data source in configuration file

Cause: An invalid mode or data source has been specified in the configuration file (sqlnet.ora).

Action: Check the method parameter in the sqlnet.ora file. If the parameter value is correct, then enable tracing to determine the exact error.

NZE-28803: I/O operation failure

Cause: The system or application failed to access a data source (file or database).

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28804: Data source cannot close.

Cause: The data source, which could be either a file or a database), failed to close.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28805: Cannot retrieve information from the data source.

Cause: The system or application failed to retrieve information from the data source (file or database).

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28806: Cannot write to the data source.

Cause: The system or application failed to write to the data source (file or database).

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28807: Cannot update the data source.

Cause: The system or application failed to update the data source (file or database).

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28808: Cannot retrieve method information from the configuration file.

Cause: The system or application failed to retrieve method information from the sqlnet.ora configuration file.

Action: Check the method configuration parameters in the sqlnet.ora file. If the method configuration parameters are correct, then enable tracing to determine the exact error.

NZE-28809: Cannot delete information from the data source.

Cause: The system or application failed to delete information from the data source (file or database).

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28810: Cannot create key descriptor.

Cause: The system failed to create a key descriptor.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28814: Cannot convert a number in Oracle format to native format.

Cause: Failed to convert a number from Oracle format to native format.

Action: This is an internal programming exception. Enable tracing to try and reproduce the problem. Contact Oracle customer support and supply the trace file.

NZE-28815: Cannot convert a number in native format to Oracle format.

Cause: Failed to convert a number from native format to Oracle portable format failed.

Action: This is an internal programming exception. Enable tracing to try and reproduce the problem. Contact Oracle customer support and supply the trace file.

NZE-28818: No package context provided.

Cause: The context that holds the state of the security package was not passed to a function or procedure that was expecting it.

Action: This is an internal error. Enable tracing to find more information. Contact Oracle customer support if needed.

NZE-28836: Wallet is not open.

Cause: The wallet to be used has not yet been opened.

Action: Call the function that opens the wallet.

NZE-28840: Wallet is already open.

Cause: An attempt was made to open a wallet that was already open.

Action: This is a programming error. A wallet should only be opened once.

NZE-28841: Operation is not supported.

Cause: An attempt was made to perform an operation that is not supported.

Action: This is a programming error. Please refer to Oracle documentation to determine which operations are supported.

NZE-28842: Incorrect file permissions

Cause: The subject file did not have the correct permissions for the operation.

Action: Ensure that the file permissions allow the current operation.

NZE-28843: Operating system error while creating/opening file

Cause: An operating system dependent error occurred while trying to create/ open the file or while trying to set the appropriate permissions on the file.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28844: No wallet present

Cause: There was no wallet in the location specified.

Action: Check to ensure that the wallet is in the correct directory location.

NZE-28845: No certificate

Cause: Either there is no certificate or the system cannot find it.

Action: Check to ensure that the certificate is in the specified wallet.

NZE-28846: No private key

Cause: Either there is no private key or the system cannot find it.

Action: Check to ensure that the private key is in the specified wallet.

NZE-28847: No clear private key file

Cause: Failed to retrieve private key from SSO wallet

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28848: No encrypted private key file

Cause: Failed to retrieve private key from the wallet

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28849: No Trustpoints

Cause: The wallet does not have any trusted certificates

Action: Ensure that the wallet/keystore has trusted certificates.

NZE-28853: Initialization failure

Cause: Either initialization or module loading has failed.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28854: Memory allocation failure

Cause: The allocation of memory failed due to insufficient system memory.

Action: Terminate other processes to free up memory or add memory to the system.

NZE-28855: Unsupported SSL operation

Cause: An unsupported operation was attempted, for example, an attempt was made to select a mode of operation that is not allowed.

Action: Refer to the SSL chapter in the product's documentation.

NZE-28857: Unknown SSL error

Cause: An unknown SSL error occurred.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28858: SSL protocol error

Cause: An error occurred while negotiating the SSL handshake between two processes.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28859: SSL negotiation failure

Cause: An error occurred during negotiation between two processes as part of the SSL protocol. This error will occur if the two sides to the connection do not support a common cipher suite.

Action: Configure each process so they support a common cipher suite. Then attempt the connection again. If error occurs again, enable tracing and retry the connection. Then contact Oracle customer support with the trace output.

NZE-28860: Fatal SSL error

Cause: An error occurred during the SSL connection to the peer. It is likely that this side sent data which the peer rejected.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28861: SSL connection would block

Cause: This error is informational. It should never be communicated to the user.

Action: Enable tracing and retry the connection to determine the exact cause of the error. Contact Oracle customer support if needed.

NZE-28862: SSL connection failed

Cause: This error occurred because the peer closed the connection.

Action: Enable tracing on both sides and examine the trace output. Contact Oracle Customer support with the trace output.

NZE-28863: SSL session not found

Cause: This error is informational. It indicates that a specified session does not exist.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-28864: SSL connection closed gracefully

Cause: This error is informational. It indicates that the connection closed without error.

Action: This error is not normally visible to the user. Enable tracing and retry the connection. If the error persists, contact Oracle customer support.

NZE-28865: SSL connection closed

Cause: The SSL connection closed because of an error in the underlying transport or because the peer process quit unexpectedly.

Action: Enable tracing and retry the connection. The trace output should indicate how the failure occurred.

NZE-28866: Invalid peer certificate encoding

Cause: A field from a certificate in the peer's certificate chain could not be recognized.

Action: Refer to Oracle Wallet Manager documentation to find out how to obtain the peer's certificate. Then contact Oracle customer support with the peer's certificate chain.

NZE-28867: Integer value is too big.

Cause: The certificate presented had an integer field whose value was too large.

Action: Refer to Oracle Wallet Manager documentation to find out how to obtain the peer's certificate. Then contact Oracle customer support with the peer's certificate chain.

NZE-28868: Peer certificate chain check failed.

Cause: The check of the certificate list presented by the peer failed. Possible causes include: 1. the expiration of one of the certificates; 2. a certificate authority in a certificate was not recognized as a trust point; 3. the signature in a certificate could not be verified.

Action: Refer to Oracle Wallet Manager documentation to find out how to open your wallet and ensure that: 1. all of the certificates installed in your wallet are current 2. a certificate authority's certificate from your peer's certificate chain is added as a trusted certificate in your wallet

NZE-28869: Peer's certificate is expired.

Cause: The certificate being used to authenticate a client or server has expired.

Action: Obtain a new certificate, which is unexpired, and attempt the connection again.

NZE-28870: Name comparison failure

Cause: A comparison of the names contained in two certificates failed.

Action: This error is not normally visible to the user. Enable tracing and retry the connection. If the error persists, contact Oracle customer support.

NZE-28871: Peer certificate chain is incomplete.

Cause: The peer certificate chain presented was incomplete because it did not end with a self-signed root certificate.

Action: Refer to Oracle Wallet Manager documentation to find out how to open your wallet and ensure that: 1. the certificate authority's root certificate is self-signed. 2. a certificate authority's certificate from your peer's certificate chain is added as a trusted certificate in your wallet

NZE-28872: Invalid peer certificate format

Cause: The peer certificate does not conform to the X.509v3 standard.

Action: Refer to Oracle Wallet Manager documentation to find out how to get the peer certificate. Then contact Oracle customer support with the peer's certificate.

NZE-28874: SSL: I/O closed - override goodbye kiss

Cause: This error is informational. It indicates that the connection closed without error.

Action: This error is not normally visible to the user. Enable tracing and retry the connection. If the error persists, contact Oracle customer support.

NZE-28875: SSL: use server-gated cryptographic suites

Cause: This is used as an internal status indicator and not really an error.

Action: This message is not normally visible to the user. Enable tracing and retry the connection. If the error persists, contact Oracle customer support.

NZE-28884: invalid cipher suite

Cause: An invalid cipher suite string has been specified in the product's configuration file.

Action: Refer to the product documentation for information about supported cipher suites.

NZE-28885: No certificate with the required key usage found.

Cause: Certificate not created with the appropriate X509v3 key usage extension.

Action: Refer to Oracle Wallet Manager documentation to find out the supported key usages.

NZE-28890: Entrust Login Failed

Cause: An application failed to log in to an Entrust Profile. Possible causes include: 1. Entrust Admin/Authority was not online. 2. Invalid password for Entrust profile was specified. 3. Invalid path to Entrust profile was specified 4. Invalid Entrust initialization file was specified. 5. Entrust Server Login program was not executed (server-side only).

Action: Make sure that: 1. Entrust Authority is online; 2. Password for Entrust profile is specified correctly; 3. Path to Entrust profile is specified correctly; 4. A valid Entrust initialization file is provided; 5. Entrust Server Login program is run before the database startup. For more information, enable tracing and examine the trace output to get exact the Entrust failure codes.

NZE-29000: Certificate not installed

Cause: Trying to delete a certificate which has not been installed.

Action: Refer to the Oracle Wallet Manager documentation for information about delete option.

NZE-29002: SSL transport detected invalid or obsolete server certificate.

Cause: The client detected a mismatch between the server's distinguished name specified on the server's certificate and the server's SID or service name.

Action: Refer to the SSL chapter in Oracle Advanced Security Administrator's Guide for information about enabling server distinguished name matching. Contact your administrator to perform the appropriate action.

NZE-29003: SSL transport detected mismatched server certificate.

Cause: The client detected a mismatch between the server's distinguished name specified on the server's certificate and the server's SID or service name.

Action: Refer to the SSL chapter in Oracle Advanced Security Administrator's Guide for information about enabling server distinguished name matching. Contact your administrator to perform the appropriate action.

NZE-29005: The certificate is invalid.

Cause: The peer certificate encoding is invalid when using SSL 2.0.

Action: Refer to Oracle Wallet Manager documentation to find out how to obtain the peer's certificate. Then contact Oracle customer support with the peer's certificate chain.

NZE-29006: The certificate request message is invalid when using SSL 2.0.

Cause: There is an error processing the SSL 2.0 REQUEST-CERTIFICATE message.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29007: Bad Clear Key Length when using SSL 2.0

Cause: The clear key length of an SSL 2.0 Client Master key handshake message is invalid.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29008: Bad DH Param key length

Cause: The length of the Diffie-Hellman params exceeds export restrictions.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29009: Bad encrypted key length when using SSL 2.0

Cause: The encrypted key length of an SSL 2.0 Client Master key handshake message is invalid.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29010: Export key length does not meet export restrictions.

Cause: The server sent a ServerKeyExchange message with an export key which does not meet export restrictions. For RSA, the export key must be exactly 512 bits.

Action: Obtain a certificate with the appropriate key length.

NZE-29011: Finished message is incorrect.

Cause: The FINISHED message data verification failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29012: Bad key argument length when using SSL 2.0

Cause: The key argument length of an SSL 2.0 Client Master Key handshake message is invalid.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29013: SSL MAC verification failure

Cause: Verification of SSL Record MAC failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29014: Maximum fragment length extension is incorrect.

Cause: The maximum fragment length extension specified is incorrect.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29015: incorrect message length

Cause: The message length is not correct.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29016: inadequate PKCS1 message padding

Cause: The message was not properly padded before encryption.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29017: The premaster secret length is incorrect.

Cause: The premaster secret sent by the peer has an incorrect length.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29018: The premaster secret contains an incorrect version number.

Cause: The premaster secret must contain the same version number as the ClientHello. The version sent by the client was incorrect.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29019: The protocol version is incorrect.

Cause: There is a protocol version mismatch between the two peers.

Action: Specify the correct protocol version in the product's configuration file.

NZE-29020: The handshake record length is too long.

Cause: The handshake record length exceeds the maximum that is allowed by the SSL specification.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29021: Secret key length is incorrect when using SSL 2.0.

Cause: The length of the decrypted ENCRYPTED-KEY is incorrect.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29022: Operation is being attempted on the wrong side of the client/server connection.

Cause: The SSL network layer has detected that the operation has been attempted on the wrong side of the client/server connection.

Action: Select the protocol side (of this protocol) to be the same as the one selected with a previous protocol.

NZE-29023: The buffers are not empty.

Cause: Trying to free buffers that are not empty.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29024: Certificate validation failure

Cause: The certificate sent by the other side could not be validated. This may occur if the certificate has expired, has been revoked, or is invalid for another reason.

Action: Check the certificate to determine whether it is valid. Obtain a new certificate, alert the sender that the certificate has failed, or resend.

NZE-29025: Error found in certificate check callback.

Cause: The application callback failed during additional certificate validation. Additional checks include CRL validation and extension checking.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29026: Decryption failure

Cause: SSL record decryption failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29027: Error in entropy collection

Cause: The internal entropy collection failed to generate enough seed data.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29028: Server verification failure when using SSL 2.0

Cause: Processing of an SSL 2.0 SERVER-VERIFY message failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29029: SSL handshake already completed

Cause: The system is trying to initiate a handshake when it has already been completed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29030: SSL handshake is requested.

Cause: The peer sends this message if it wishes to renegotiate. The application can either proceed with the renegotiation or reject the request.

Action: This is not an error. To find out more details enable tracing and retry the connection. Contact Oracle customer support with the trace output.

NZE-29031: SSL handshake is required.

Cause: Renegotiation cannot proceed before the SSL handshake is completed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29032: The given identity is not complete.

Cause: The certificate list does not contain both private key and certificate.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29034: Correct cipher suite or client authentication is needed.

Cause: Before installing a private key, a cipher suite or client authentication suite using the same key exchange algorithm must be installed first. This has not been done.

Action: Install a cipher suite or client authentication suite that uses the same key exchange algorithm as the private key before re-installing the private key.

NZE-29036: This feature is not supported

Cause: Operation is not supported by the current connection parameters.

Action: Check the Oracle documentation to determine the appropriate connection parameters required for this operation.

NZE-29037: No certificate is present

Cause: The other client or server sent a certificate message that contained no certificates.

Action: Check the other side (client or server) to ensure they have appropriate credentials.

NZE-29038: There are no matching certificates.

Cause: The other client or server sent a certificate message that contained a certificate which was not signed by a trusted certificate authority (CA).

Action: Check to ensure that the other client or server sends a certificate which is signed by a CA that is in your trusted list. Or, include the CA certificate for the other client or server's certificate as a trustpoint in your wallet.

NZE-29039: There are no matching cipher suites.

Cause: Neither end of the handshake can agree on a cipher suite.

Action: Check to ensure that both sides of the handshake select cipher suites that are supported.

NZE-29040: There are no supported cipher suites.

Cause: This end of the handshake cannot support any cipher suites. This connection and the peer have some matching cipher suites, however, these cipher suites cannot be negotiated because they cannot be supported by the connection.

Action: Check to ensure that both sides of the handshake select cipher suites that are supported by the connection. Refer to Oracle documentation for supported cipher suites.

NZE-29043: Read is required.

Cause: Renegotiation with the peer has not yet started. There is application data which must be processed before the handshake can proceed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29044: Renegotiation has already been requested.

Cause: Renegotiation has already been requested.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29045: Renegotiation request has been refused.

Cause: A renegotiated handshake has been refused by the peer.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29046: Session is resumable.

Cause: Server is trying to resume a session with different session parameters.

Action: Server should resume the session with the correct session parameters.

NZE-29047: Mismatch in Transport Layer Security extension

Cause: Neither side can agree on a TLS extension.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29048: Unexpected message received.

Cause: An unexpected message has been received.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29049: Unknown record

Cause: The record type is unknown.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29050: Installed client authentication mode is not supported.

Cause: The enabled client authentication mode(s) cannot be used within the selected cipher suite.

Action: Enable a client authentication mode that can be used within the selected cipher suite.

NZE-29051: The given public key type is not supported.

Cause: The public key in the first certificate is not supported.

Action: Check to ensure that the certificate complies with the X.509v3 standard.

NZE-29052: Write buffer is not empty.

Cause: There is an attempt to free a write buffer that is not empty.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29084: The parameter specified is illegal.

Cause: The parameter is not correct. For example, it could be bad input, or an invalid message.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29095: Index is not correct.

Cause: The instance identified by the index parameter doesn't exist.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29096: The given length is incorrect.

Cause: The specified length is too small or is invalid.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29100: Cannot create local key ID.

Cause: Creation of local key identifier for the certificate or the private key failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29101: Cannot add private key bag.

Cause: The private key could not be added to the PKCS#12 object. Possible reasons are: (i) A required parameter is NULL (ii) The PKCS#12 construct is not supported (iii) An ASN.1 encoding error occurred in the certificate.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29102: Cannot add certificate bag.

Cause: Creation of certificate bag failed. The application could have run out of memory.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29103: Cannot create PKCS #12 wallet.

Cause: Creation of PKCS#12 wallet failed possibly due to memory allocation failure.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29104: Cannot add certificate request.

Cause: Adding certificate request to the PKCS#12 wallet failed.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29105: Cannot export PKCS #12 wallet.

Cause: A required parameter is NULL or the PKCS#12 construct is not supported.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29106: Cannot import PKCS #12 wallet.

Cause: A required parameter is NULL or the BER-encoding is malformed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29107: Cannot create PKCS #12 wallet.

Cause: PKCS#12 wallet creation failed. The application may have run out of memory.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29108: Cannot initialize random object.

Cause: The random object could not be initialized or seeded. Either memory allocation has failed or the pseudo random number generator module has not been installed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29109: Cannot create private key object.

Cause: The private key object could not be created. Memory allocation may have failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29110: Invalid PKCS #12 bag type

Cause: The PKCS #12 bag type is invalid. Either one of the required parameters is NULL or the requested OID is not in the list.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29111: Invalid index

Cause: The index passed for getting the bag type is less than 1.

Action: Check to ensure that the index is greater than 1.

NZE-29112: Cannot access attributes from a PKCS #12 certificate bag.

Cause: The certificate cannot be accessed. One of the required parameters is probably NULL, or the index specified by the application does not contain a certbag, or the certificate could be malformed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29113: Cannot access attributes from a PKCS #12 key bag.

Cause: Retrieval of the private key failed. One of the required parameters is probably NULL or the index specified by the application does not contain a key bag.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29114: Cannot import private key.

Cause: The private key could not be imported. One of the required parameters could be NULL or the encoded private key could be malformed.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29115: Cannot export private key.

Cause: The private key could not be exported. Either the application ran out of memory or the key type is not valid.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29116: Cannot get PKCS #12 attributes.

Cause: Retrieval of an attribute failed. One of the required parameters could be NULL.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29117: Cannot add PKCS #12 attributes.

Cause: Could not add an attribute. The attribute parameter could be NULL.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29118: Cannot create PKCS #12 attributes.

Cause: Creation of the attributes failed, possibly due to a memory allocation error.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29119: Cannot import certificate.

Cause: The certificate cannot be imported. One of the required parameters could be NULL or the certificate has an invalid X.509 BER or DER encoding.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29120: Cannot export certificate.

Cause: The certificate cannot be exported. One of the required parameters could be NULL.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29122: could not add pkcs11 info to the pkcs12 wallet

Cause: Failed while adding pkcs11 information into a pkcs12 wallet.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29123: could not get pkcs11 info from the pkcs12 wallet

Cause: An error was encountered while retrieving pkcs11 information from the wallet.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29124: pkcs11 library name already set

Cause: pkcs11 library information was already set in the wallet.

Action: Use a different wallet that does not have this information. If issue persists, enable tracing to determine the exact cause of the error. Contact Oracle customer support if needed.

NZE-29125: pkcs11 token label already set

Cause: pkcs11 token label information was already set in the wallet.

Action: Use a different wallet that does not have this information. If issue persists, enable tracing to determine the exact cause of the error. Contact Oracle customer support if needed.

NZE-29126: pkcs11 token passphrase already set

Cause: The pkcs11 token passphrase can be set only once in the wallet.

Action: Use a different wallet that does not have this information. If issue persists, enable tracing to determine the exact cause of the error. Contact Oracle customer support if needed.

NZE-29127: unknown pkcs11 information

Cause: An unknown pkcs11 information type was encountered. The wallet may have been corrupted due to a system error or memory corruption.

Action: Enable tracing and retry the failed operation. Contact Oracle customer support with the trace output.

NZE-29128: pkcs11 library name not set

Cause: The wallet does not have pkcs11 library information.

Action: Ensure that the wallet was created with valid library location or update the wallet with this information.

NZE-29129: pkcs11 token label not set

Cause: The wallet does not have pkcs11 token label information.

Action: Ensure that the wallet was created with valid token label information or update the wallet with this information.

NZE-29130: pkcs11 token passphrase not set

Cause: The wallet does not have pkcs11 token passphrase.

Action: Ensure that the wallet was created with valid token passphrase information or update the wallet with this information.

NZE-29131: pkcs11 certificate label already set in wallet

Cause: The pkcs11 certificate label was already set in the wallet.

Action: Use an empty wallet (created with orapki).

NZE-29135: Seed generation for Random Number Generator failed.

Cause: Generation of seed for random number generator failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29136: The allocated buffer is too small.

Cause: The output buffer is too small.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29137: The global context is incorrect.

Cause: The global context is incorrectly configured or invalid.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29140: Cannot create certificate object.

Cause: Creation of the certificate object failed. The application could have run out of memory.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29141: Cannot import in the der format.

Cause: Cannot import the certificate into the certificate object. The reason could be a malformed certificate.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29150: DES self-test failure

Cause: DES power up self-test has failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29151: 3DES self-test failure

Cause: 3DES power up self-test has failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29152: SHA-1 self-test failure

Cause: The SHA-1 power up self-test has failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29153: RSA self-test failure

Cause: The RSA power up self-test has failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29154: deterministic RNG self-test failure

Cause: The deterministic Random Number Generator power up self-test has failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29155: continuous key pair consistency check self-test failure

Cause: The public-private key pair check test failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29156: conditional RNG self-test failure

Cause: Continuous Random Number Generator test, which is needed in FIPS mode, has failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29157: Unable to build an absolute path to the library.

Cause: Not able to construct an absolute path to the location of the library.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29158: Unable to open library.

Cause: Opening of the library failed.

Action: Check to ensure that the library is present in the location specified, and that it has the appropriate file permissions.

NZE-29159: Unable to read library.

Cause: Not able to read the library on which the DAC check has to be performed. Read call failed.

Action: Check if the library has the appropriate file permissions.

NZE-29160: NZ library being used is different.

Cause: The NZ library being used at runtime is not the same one on which the digest was computed for the software integrity check.

Action: Check to ensure that the library being used is the same as the one on which the digest was pre-computed.

NZE-29161: software integrity self-test failure

Cause: The software integrity check test on the NZ shared library has failed.

Action: Check to ensure that the library being used is the same as the one on which the digest was pre-computed.

NZE-29162: Non-FIPS cipher suites being used in FIPS mode.

Cause: The cipher suite being used does not contain FIPS-approved algorithms.

Action: Use cipher suites that contain FIPS-approved algorithms.

NZE-29163: Third party PKI vendor is not supported in FIPS mode.

Cause: Third party PKI vendors like Entrust and MCS are not supported in FIPS mode.

Action: Use only Oracle PKI when running in FIPS mode.

NZE-29164: External PKCS #12 wallet is not supported in FIPS mode.

Cause: PKCS #12 wallets created using third party software cannot be used in FIPS mode.

Action: Use only PKCS #12 wallets created by Oracle Wallet Manager when running in FIPS mode.

NZE-29166: Bad key size in FIPS mode.

Cause: User attempted to use a key size that is not allowed in FIPS mode

Action: Ensure that the key size meets FIPS usage requirement. For example, RSA key modulus cannot be less than 1024 bits in FIPS mode.

NZE-29176: CRL signature verification failed

Cause: A CRL is verified before being used. CRL signature cannot be verified.

Action: Get a new CRL from CA

NZE-29177: certificate serial number is not in CRL

Cause: Cert is not revoked

Action: n/a

NZE-29178: certificate serial number is in CRL

Cause: Cert has been revoked

Action: Reject the certificate

NZE-29179: certificate validation check failed

Cause: Could not complete checking certificate status with a CRL.

Action: Enable tracing to find more information on this error. Contact Oracle customer support if needed.

NZE-29180: Unsupported validation protocol

Cause: The certificate validation protocol is not supported

Action: Make sure a supported certificate validation protocol is specified

NZE-29181: ldap_open failed

Cause: Could not connect to the LDAP server

Action: Ensure that correct LDAP information was provided. Enable tracing to find more information. Contact Oracle customer support if needed.

NZE-29182: ldap_bind failed

Cause: Could not log in to the LDAP server

Action: Ensure that correct LDAP credentials were provided. Enable tracing to find more information. Contact Oracle customer support if needed.

NZE-29183: ldap_search failed

Cause: Failed to complete search operation in LDAP server

Action: Enable tracing to find more information on this error. Contact Oracle customer support if needed.

NZE-29184: ldap_result failed

Cause: Failed to retrieve results from LDAP operation

Action: Enable tracing to find more information on this error. Contact Oracle customer support if needed.

NZE-29185: ldap_first_attribute failed

Cause: Could not get the first attribute from LDAP entry.

Action: Enable tracing to find more information on this error. Contact Oracle customer support if needed.

NZE-29186: ldap_get_values_len failed

Cause: Failed to retrieve attribute values from LDAP entry

Action: Enable tracing to find more information on this error. Contact Oracle customer support if needed.

NZE-29187: unsupported validation mechanism

Cause: The validation mechanism specified in OID is not supported

Action: Make sure a supported validation mechanism is set in OID

NZE-29188: ldap_count_entries failed

Cause: Failed to get count of entries from a search result chain.

Action: Enable tracing to find more information on this error. Contact Oracle customer support if needed.

NZE-29189: No entry found in OID

Cause: CRL not found in OID

Action: Upload the CRL to OID

NZE-29190: Multiple entries in OID

Cause: For a given issuer name there should be only one CRL in OID

Action: Make sure there is only one CRL for a given issuer name in OID

NZE-29191: OID connection information not set

Cause: To connect to OID the connection information must be available

Action: Set the OID connection information.

NZE-29192: Validation mechanism not set in OID

Cause: The validation mechanism to be used is not set in OID

Action: Set validation mechanism to be used in OID at cn=ValidationMechanism, cn=Validation, cn=PKI, cn=Products, cn=OracleContext

NZE-29193: no CRL found using CRLDP mechanism

Cause: A CRL could not be fetched using CRL Distribution point (CRLDP)

Action: Contact the CA

NZE-29194: no CRL found in cache

Cause: CRL not in cache

Action: n/a

NZE-29195: CRL is expired

Cause: CRL nextUpdate time is in the past

Action: Get a new CRL from the CA

NZE-29222: Distinguished name does not match.

Cause: Distinguished name (DN) on certificate doesn't match user.

Action: Create the global user in the database with the DN that matches with the one in the user certificate on the client side.

NZE-29223: Cannot create certificate chain.

Cause: Unable to create a certificate chain with the existing trust points for the certificate that is to be installed.

Action: Install the trust point that signed the certificate.

NZE-29224: Cannot locate matching certificate request.

Cause: No matching certificate request for the certificate was found.

Action: Install the correct certificate.

NZE-29225: Certificate already installed.

Cause: Attempting to install a certificate into a persona which already has it.

Action: Do not install the certificate.

NZE-29226: No matching private key found.

Cause: Could not locate a matching private key in the persona for the given certificate (public key).

Action: n/a

NZE-29227: Certificate is expired.

Cause: Certificate is no longer valid..

Action: Obtain another certificate or renew this certificate.

NZE-29228: Cannot calculate the number of bytes for output.

Cause: The cryptographic engine is confused about the algorithm.

Action: Check the parameters being used with the cryptographic functions.

NZE-29229: the magic number found in the header does not match expected

Cause: The input TDU has either been corrupted or is not being used correctly.

Action: Check that the TDU is being used from the beginning. If possible, compare the size of the TDU upon generation to the size being used.

NZE-29230: the header length is not sufficient for message header

Cause: The input TDU has either been corrupted or it is not being used correctly.

Action: Check that the TDU is being used from the beginning. If possible, compare the size of the TDU upon generation to the size being used.

NZE-29231: the cryptographic engine failed to initialize

Cause: During initialization of the cryptographic engine, some failure occurred. Possible causes include running out of memory and trying to seed the random number generator.

Action: Make sure the executable has been linked with compatible library versions, and that you are not running out of swap space.

NZE-29232: the cryptographic engine key initialization failed

Cause: During initialization of a key for cryptography, some failure occurred. This includes running out of memory and passing illegal arguments.

Action: Make sure the executable has been linked with compatible library versions, and that the correct parameters are being used for the cryptographic functions.

NZE-29233: the key object could not be encoded

Cause: The key object may be corrupted or may be an unsupported type.

Action: Check the key object being passed to the encoding routine.

NZE-29234: a key object was not extracted from encoding

Cause: The encoding may be corrupted or may not be a key object at all.

Action: Check the encoding and parameters passed to decoding routine.

NZE-29235: the key information could not be retrieved

Cause: The key may be corrupted or may be an unsupported type.

Action: Check the parameters being used with the cryptographic functions.

NZE-29236: the random number generator will not accept seed

Cause: The cryptographic engine may have run out of memory.

Action: Make sure the executable has been linked with compatible library versions.

NZE-29237: the cryptographic engine could not finish the algorithm

Cause: The cryptographic engine does not have enough information to correctly finish applying the algorithm.

Action: Check the parameters being used with the cryptographic functions.

NZE-29238: the cryptographic engine could not apply the algorithm

Cause: The cryptographic engine does not have enough information to correctly apply the algorithm.

Action: Check the parameters being used with the cryptographic functions.

NZE-29239: the cryptographic engine could not initialize the algorithm

Cause: The cryptographic engine does not have enough information to correctly initialize the algorithm.

Action: Check the parameters being used with the cryptographic functions.

NZE-29240: the cryptographic engine does not recognize the algorithm

Cause: The application may be passing wrong parameters.

Action: Check the parameters being used with the cryptographic functions.

NZE-29241: a buffer block needs more space but its length is fixed

Cause: The application has preallocated an output buffer that is too short for the operation and has specified that the buffer should not grow as needed.

Action: Either preallocate a larger buffer or allow the toolkit to grow the output buffer as needed.

NZE-29242: the asymmetric key is too short to be used with the data.

Cause: An asymmetric key must be at least 11 bytes longer than the data it is being used to encrypt.

Action: Use an asymmetric key with more bits or break the data into smaller pieces.

NZE-29243: the toolkit does not recognize the type of key being used

Cause: The application may be passing wrong parameters.

Action: Check the parameters being used with the toolkit functions.

NZE-29245: the toolkit does not recognize the function being used

Cause: The application is probably passing the wrong parameters.

Action: Check the parameters being used with the toolkit functions.

NZE-29246: the toolkit could not parse the tdu

Cause: The TDU could be corrupted.

Action: Check the parameters being used with the toolkit functions.

NZE-29247: an unopen toolkit object was used before it was opened

Cause: Some toolkit objects must be opened before they can be used.

Action: Check the parameters being used with the toolkit functions.

NZE-29248: an unrecognized WRL was used to open a wallet

Cause: WRL's have a specific set of types and must be formatted correctly.

Action: Check the parameters being used with the toolkit functions.

NZE-29249: an unrecognized state was passed to a cryptographic function

Cause: The application is probably passing the wrong parameters.

Action: Check the parameters being used with the toolkit functions.

NZE-43000 to NZE-43021

NZE-43000: pkcs11 library not found

Cause: The PKCS11 library could not be found.

Action: Make sure that the pkcs11 library is at the location specified in the wallet.

NZE-43001: pkcs11 token not found

Cause: The PKCS11 token could not be found.

Action: Make sure that a token with correct label is present in slot.

NZE-43002: pkcs11 passphrase is wrong

Cause: The PKCS11 passphrase is wrong.

Action: Make sure that the token passphrase specified is correct.

NZE-43005: pkcs11: No tokens present

Cause: a token is not present in the slot

Action: Place a pkcs11 token in the slot

NZE-43011: pkcs11: Token login failed

Cause: To login to the pkcs11 token a correct passphrase is needed

Action: Check the token passphrase.

NZE-43014: pkcs11: finding private key on token error

Cause: error occurred while finding private key on token

Action: Make sure the private key corresponding to the certificate in wallet is on the token. Check trace message

NZE-43015: pkcs11: key pair gen error

Cause: error occurred while generating key pair using HSM

Action: Check trace message

NZE-43017: pkcs11: No certificate found on the smart card/HSM

Cause: No certificate was found on the smart card/HSM.

Action: Follow smart card/HSM vendor documentation to populate the smart card/HSM with certificate.

NZE-43018: pkcs11: No user certificate found on the smart card/HSM

Cause: No user certificate was found on the smart card/HSM.

Action: Follow smart card/HSM vendor documentation to populate the smart card/HSM with certificate and private key.

NZE-43019: pkcs11: No certificate found on smart card/HSM label with given cert label

Cause: There were no certificate labels on the smart card/HSM that matched the certificate label specified in the wallet.

Action: Follow smart card/HSM vendor documentation to set certificate label in smart card/HSM.

NZE-43020: pkcs11: Multiple certificates found on smart card/HSM with given cert label

Cause: Certificates with identical labels were found in the smart card/HSM.

Action: Follow smart card/HSM vendor documentation to assign unique certificate labels to certificates.

NZE-43021: pkcs11: Certificate with given cert label is not a user cert

Cause: The certificate with the specified certificate label did not have a matching private key in the smart card/HSM.

Action: Follow smart card/HSM vendor instructions to create credentials (certificate/private key) in smart card/HSM.

O2F-00301 to O2F-00341

O2F-00301: Error attempting to read from the INTYPE file

Cause: An operating system error occurred while attempting to read from the INTYPE file.

Action: Try opening the INTYPE file with an editor to make sure you are able to access the file.

O2F-00302: Unable to allocate memory

Cause: OTT was unable to allocate memory.

Action: Contact ORACLE customer support.

O2F-00303: No INTYPE file was specified

Cause: The required option INTYPE was not specified.

Action: Set the INTYPE option to the name of the file containing names of types for OTT to translate. The INTYPE option may be specified on the command line or in a CONFIG file.

O2F-00304: Invalid filename for the INTYPE file

Cause: The filename specified for the INTYPE file is not syntactically correct.

Action: Make sure you spelled the filename of the INTYPE file correctly.

O2F-00305: Error opening the INTYPE file for reading

Cause: An operating system error occurred while attempting to open the INTYPE file.

Action: Make sure you spelled the filename of the INTYPE file correctly. Try opening the INTYPE file with an editor to make sure you have access to the file.

O2F-00306: Unable to close the INTYPE file

Cause: An operating system error occurred while attempting to close the INTYPE file.

Action: Try opening the INTYPE file with an editor to make sure you are able to access the file.

O2F-00307: Unable to read the INTYPE file

Cause: The first token of the INTYPE file was not read. Either an operating system error occurred while attempting to read from the INTYPE file, or all lines of the INTYPE file are blank lines or comment lines.

Action: Try opening the INTYPE file with an editor to make sure you are able to access the file. Make sure the INTYPE file contains one or more type specifications.

O2F-00308: No type specifications were seen in the INTYPE file

Cause: Either there are no type specifications in the INTYPE file, or the first type specification could not be read due to a previously reported error.

Action: Fix any previously reported errors. Make sure there are one or more type specifications in the INTYPE file.

O2F-00309: Name of user-defined type is illegal or missing

Cause: The name of a user-defined type is expected following the keyword TYPE at the beginning of a type specification. No legal type name was seen.

Action: Make sure that the type specification is syntactically correct, and that the type name is spelled correctly.

O2F-00310: Illegal or missing identifier name

Cause: A legal C or C++ identifier was expected following AS, but was not seen.

Action: Use a legal C or C++ identifier, consisting of letters, digits, and underscores not beginning with a digit.

O2F-00311: Illegal or missing file name

Cause: A legal file name was expected, but was not seen.

Action: Make sure your TYPE file syntax is correct. Use a correct file name.

O2F-00312: Illegal or missing type version string

Cause: A type version name was expected, but was not seen.

Action: Make sure your TYPE file syntax is correct. Use a correct version name.

O2F-00313: Illegal or missing attribute name

Cause: An attribute name was expected in the INTYPE file, but was not seen.

Action: Make sure your TYPE file syntax is correct. Use a correct attribute name.

O2F-00314: AS expected but not seen in the INTYPE file

Cause: Incorrect syntax in the INTYPE file.

Action: Make sure your TYPE file syntax is correct.

O2F-00315: An attribute of a type is listed twice in a type specification

Cause: An attribute of a user-defined type is listed twice in a type specification in the INTYPE file. The second occurrence is ignored.

Action: Remove one of the two occurrences of the attribute.

O2F-00316: An unexpected token was seen at the end of a type specification

Cause: There is a syntax error in the INTYPE file.

Action: Check your documentation to make sure the type specifications in the INTYPE file are syntactically correct. Check your documentation to make sure the type specifications

O2F-00317: Error opening the ERRTYPE file for writing

Cause: An operating system error occurred while attempting to open the ERRTYPE file for writing.

Action: Make sure you spelled the ERRTYPE filename correctly. Try creating or modifying the ERRTYPE file to make sure you have write access to the file.

O2F-00318: Error writing to the OUTTYPE file

Cause: An operating system error occurred when attempting to write to the OUTTYPE file.

Action: Make sure you have operating system permission to write to the file. Also, make sure disk space is available.

O2F-00319: No OUTTYPE file specified

Cause: The required option OUTTYPE was not specified.

Action: Set the OUTTYPE option to the name of the file to which the TYPE file produced by OTT should be written. The OUTTYPE option may be specified on the command line or in a CONFIG file.

O2F-00320: Invalid filename for the OUTTYPE file

Cause: The filename specified for the OUTTYPE file is not syntactically correct.

Action: Make sure you spelled the filename of the OUTTYPE file correctly.

O2F-00321: Error opening the OUTTYPE file for writing

Cause: An operating system error occurred while attempting to open the OUTTYPE file.

Action: Make sure you spelled the filename of the OUTTYPE file correctly. Make sure you have operating system permission to open the the file.

O2F-00322: Unable to close the OUTTYPE file

Cause: An operating system error occurred while attempting to close the OUTTYPE file.

Action: Try opening the OUTTYPE file with an editor to make sure you are able to access the file.

O2F-00323: Internal error in OTT facility O2F

Cause: An internal OTT error occurred in the O2F component of OTT.

Action: Contact ORACLE customer support.

O2F-00324: Unable to convert from the database character set to the compiler character set

Cause: The name of a type, attribute, or method cannot be converted from the client character set in effect when OTT was invoked to the compiler character set (typically ASCII or EBCDIC).

Action: A name is translated first from the database character set to the client character set, and then from the client character set to the compiler character set. The client character set is specified in a platform-dependent manner (On UNIX platforms, the client character set is specified by setting the NLS_LANG environment variable). Use a client character set that can be translated to the compiler character set. The compiler character set itself is one such character set. Specify synonyms in the INTYPE file for any names of database objects that cannot be successfully translated to the client character set.

O2F-00325: None of the characters in a name were legal identifier characters

Cause: None of the characters in the name of a database entity could be translated to a character that may begin a C or C++ identifier, such as a letter or an underscore.

Action: Specify an explicit translation for the name in the INTYPE file.

O2F-00326: Some characters in this name were not legal identifier characters

Cause: One or more characters in the name of a database entity could not be translated to a character that may appear in a C or C++ identifier, such as a letter, an underscore, or a digit. The characters that could not be translated were replaced with underscores.

Action: Make sure that the name is spelled correctly, and that it is terminated by a blank, the end of a line, or an equals sign ("="). You may use the translated name with added underscores, or you may specify an explicit translation for the name in the INTYPE file.

O2F-00327: CASE option has an illegal value

Cause: The value given for the CASE option in the INTYPE file is not legal.

Action: Change the value given for the CASE option to one of the following legal values: SAME, LOWER, UPPER, or OPPOSITE.

O2F-00328: Illegal INITFUNC name

Cause: The function name given for the INITFUNC option in the INTYPE file is not a legal C or C++ identifier.

Action: Specify the name of the INITFUNC function as a legal C or C++ identifier. This name can be given in the INTYPE file, given on the command line, or derived from the INITFILE name.

O2F-00329: Type or option specification expected

Cause: A type or option specification was expected in the INTYPE file, but was not seen.

Action: Check the INTYPE file for syntax errors. Supply a type or option specification. A type specification begins with the word TYPE. An option specification begins with the word CASE, INITFILE, or INITFUNC.

O2F-00330: Name exceeds 265 bytes in length

Cause: A name seen in the INTYPE file exceeds 265 bytes in length.

Action: Choose a shorter name.

O2F-00331: A syntactically illegal name was seen in the INTYPE file

Cause: A syntax error occurred in a name used in the INTYPE file.

Action: If the name is quoted, make sure that the quotes are at the beginning and at the end of the name. If a period (which separates a schema name from a type name) appears, make sure that the schema name and the type name are both present.

O2F-00332: A database link may not appear in the name of a user-defined type

Cause: A database link was seen in the name of a user-defined type. This feature is not yet supported.

Action: Declare the user-defined type in the database to which OTT connects.

O2F-00333: An unexpected token appeared where a keyword was expected in the INTYPE file

Cause: A keyword such as TYPE was expected in the INTYPE file, but an incorrect or misspelled keyword was seen.

Action: Verify that your TYPE specification obeys the syntax described in your documentation. Verify that your keyword is spelled correctly.

O2F-00334: A user-defined type is listed more than once in the INTYPE file

Cause: The same name of a user-defined type appears in more than one type specification. The duplicate specifications of the type name will be ignored.

Action: Put all of the information about the type, including all type name and attribute name translations, in a single TYPE specification, and eliminate the duplicate TYPE specifications.

O2F-00335: Internal error in O2F component of OTT

Cause: A request was made that all types in the database schema are to database.

Action: List the types to be processed in an INTYPE file. Contact ORACLE customer support.

O2F-00336: Error reported by subsystem:\n

Cause: A request was made to generate declarations for all the types in a database schema. An error occurred in a subsystem when accessing the database.

Action: Examine the error message reported by the subsystem to determine its cause. List the types to be processed in an INTYPE file.

O2F-00337: Schema not found, or no types found in schema

Cause: A request was made to generate declarations for all the types in a database schema. Either the schema was not found, no user-declared types were found in the schema, or unable to connect to Oracle.

Action: Ensure that a login/password string was specified for OTT and that the Oracle database can be accessed with it. Ensure that the USER_TYPES table contains at least one row.

O2F-00338: Illegal or missing package name

Cause: A legal Java package name was expected following IN or PACKAGE or IN PACKAGE, but was not seen.

Action: Use a legal Java package name.

O2F-00339: CODE option has an illegal value

Cause: The value given for the CODE option in the INTYPE file is not legal.

Action: Change the value given for the CODE option to one of the following legal values: C, ANSI_C, KR_C, JAVA, NATIVE_JAVA, ORACLE_JAVA.

O2F-00340: Name was null

Cause: A name had a length of 0 characters.

Action: This error should never be reported to the user. Contact ORACLE customer support.

O2F-00341: An error occurred for which no message is available

Cause: The cause of this error was not reported.

Action: Contact ORACLE customer support.

O2I-00101 to O2I-00133

O2I-00101: Invalid value for the USERID parameter

Cause: The value supplied for the USERID parameter is not a legal *username/password[@databasename]* string.

Action: Set the USERID option to the correct *username/password* or *username/password@databasename* combination to use when connecting to the database. If you have an OPS\$ account, you may instead omit the USERID option, in which case OTT will attempt to connect to the database using the userid OPS\$*username*. The USERID option may be specified on the command line or in a CONFIG file.

O2I-00102: Unable to connect to Oracle

Cause: OTT could not connect to Oracle with the username, password, and, if applicable, database link that was supplied. Either the USERID option value was incorrect, or, if the USERID was not supplied, the userid OPS\$*username* was not accepted.

Action: Check that the username and password are current and correct. Run another program that connects to Oracle to verify that you can connect using that username and password.

O2I-00103: Two file names refer to the same HFILE file in the INTYPE file

Cause: Two different file names have been used in the INTYPE file to refer to the same HFILE file, or different file names have been used to refer to the same HFILE file on the command line and in the INTYPE file.

Action: Consistently refer to each HFILE file using the same file name.

O2I-00110: Internal error in OTT component O2I

Cause: An internal OTT error occurred in the O2I component of OTT.

Action: Contact ORACLE customer support.

O2I-00111: Unable to allocate memory

Cause: OTT was unable to allocate memory.

Action: Contact ORACLE customer support.

O2I-00112: Unable to write to the HFILE file

Cause: An operating system error occurred when attempting to write to the HFILE file.

Action: Make sure you have operating system permission to write to the file. Also, make sure disk space is available.

O2I-00113: No HFILE specified

Cause: The HFILE file to which C declarations generated by OTT are written was not specified.

Action: Specify the global HFILE option on the command line or in a CONFIG file. You may choose a different HFILE for a particular type by specifying a different HFILE in the INTYPE file entry describing the type. If every INTYPE file entry specifies an HFILE, and if none of the types in the HFILE require declarations of types not mentioned there, the global HFILE option may be omitted. An INTYPE file generated by a previous invocation of OTT satisfies these conditions.

O2I-00114: Invalid HFILE file name

Cause: An HFILE file name was specified that is not syntactically correct.

Action: Make sure the HFILE filename is spelled correctly.

O2I-00115: Error opening the HFILE file

Cause: An operating system error occurred while attempting to open the HFILE file for writing.

Action: Make sure the HFILE filename is spelled correctly. Try creating or modifying the HFILE to make sure you have write access to the file.

O2I-00116: Unable to close the HFILE file

Cause: An operating system error occurred while attempting to close the HFILE file.

Action: Try creating or modifying the HFILE file to make sure you are able to access the file.

O2I-00117: Internal error: No message file for component O2U

Cause: The message file for the internal OTT component O2U was not found. OTT may not be correctly installed.

Action: Contact ORACLE customer support.

O2I-00118: This user-defined type was not found in the database

Cause: A user-defined type specified in the INTYPE file was not found in the database.

Action: Make sure the name of the type is spelled correctly. Make sure the type is actually declared in the database.

O2I-00119: Warning reported by subsystem:\n

Cause: A subsystem invoked by OTT reported a warning. This warning immediately follows the "Warning reported by subsystem" message.

Action: Examine the warning reported by the subsystem to determine its cause.

O2I-00120: Error reported by subsystem:\n

Cause: A subsystem invoked by OTT reported an error. This error immediately follows the "Error reported by subsystem" message.

Action: Examine the error message reported by the subsystem to determine its cause.

O2I-00121: No value was specified for the CODE option

Cause: The required CODE option was not specified on the command line or in a configuration file.

Action: Specify the CODE option on the command line or in a configuration file. Currently, the following values of the CODE option are supported: CODE=ANSI_C, CODE=KR_C, CODE=C

O2I-00122: Invalid filename for the INITFILE file

Cause: The filename specified for the INITFILE file is not syntactically correct.

Action: Make sure the filename of the INITFILE file is spelled correctly.

O2I-00123: Unable to close the INITFILE file

Cause: An operating system error occurred while attempting to close the INITFILE file.

Action: Try opening the INITFILE file with an editor to make sure the file can be accessed.

O2I-00124: Error opening the INITFILE file for writing

Cause: An operating system error occurred while attempting to open the INITFILE file for writing.

Action: Make sure the INITFILE filename is spelled correctly. Try creating or modifying the INITFILE file to make sure you have write access to the file.

O2I-00125: Error writing to the INITFILE file

Cause: An operating system error occurred when attempting to write to the INITFILE file.

Action: Make sure you have operating system permission to write to the file. Also, make sure disk space is available.

O2I-00126: You must specify an INTYPE file with SCHEMA_NAMES=FROM_INTYPE

Cause: The option SCHEMA_NAMES=FROM_INTYPE requests that schema names be written to the OUTTYPE file as given in the INTYPE file. However, an INTYPE file was not specified.

Action: Either supply the name of an INTYPE file, or specify the SCHEMA_NAMES option ALWAYS or IF_NEEDED.

O2I-00127: Illegal INITFUNC name

Cause: The name of the INITFUNC function is not a legal C or C++ identifier.

Action: Specify the name of the INITFUNC function as a legal C or C++ identifier. This name may be given in the INTYPE file, given on the command line, or derived from the INITFILE name.

O2I-00128: Unable to write to the Java file

Cause: An operating system error occurred when attempting to write to a Java source file.

Action: Make sure you have operating system permission to write to the file. Also, make sure disk space is available.

O2I-00129: No Java file specified

Cause: The file to which Java declarations generated by OTT are written was not specified.

Action: This message should never be seen, because Java files are named after the classes declared within them. Contact ORACLE customer support.

O2I-00130: Invalid Java file name

Cause: A Java file name was specified that is not syntactically correct.

Action: Make sure the Java filename is spelled correctly.

O2I-00131: Error opening a Java file

Cause: An operating system error occurred while attempting to open a Java file for writing.

Action: Make sure the filename is spelled correctly. Try creating or modifying the file to make sure you have write access to the file.

O2I-00132: Unable to close a Java file

Cause: An operating system error occurred while attempting to close a Java file.

Action: Try creating or modifying the Java file to make sure you are able to access the file.

O2I-00133: An error occurred for which no message is available

Cause: The cause of this error was not reported.

Action: Contact ORACLE customer support.

O2U-00200 to O2U-00212

O2U-00200: Internal error in OTT facility O2U

Cause: An internal OTT error occurred in the O2U facility of OTT.

Action: Contact ORACLE customer support.

O2U-00201: Illegal arguments to function o2upt()

Cause: Illegal arguments were passed to the function o2upt(). This is an internal error that should not be encountered by an end user.

Action: Contact ORACLE customer support.

O2U-00202: Invalid data passed to function

Cause: Arguments with incorrect values were passed to the function o2upt(). This is an internal error that should not be encountered by the end user.

Action: Contact ORACLE customer support.

O2U-00203: Type to be declared must be an object type or a named collection type

Cause: You have asked OTT to generate code for a type it does not support. When generating Java code, OTT will only generate code for object types. When generating C declarations, OTT will only generate declarations for object types and named collection types.

Action: You are probably asking OTT to declare a built-in type, or, if you are generating Java code, a named collection type. Do not ask OTT to generate a declaration for this type.

O2U-00204: Unable to convert from the database character set to the compiler character set

Cause: The name of a type, attribute, or method cannot be converted from the client character set in effect when OTT was invoked to the compiler character set (typically ASCII or EBCDIC).

Action: A name is translated first from the database character set to the client character set, and then from the client character set to the compiler character set. The client character set is specified in a platform-dependent manner (On UNIX platforms, the client character set is specified by setting the NLS_LANG environment variable.) Use a client character set that includes the character set of the INTYPE file and can be translated to the compiler character set. The database character set is one such character set. Specify synonyms in the INTYPE file for any names of database objects that cannot be successfully translated to the client character set.

O2U-00205: None of the characters in a type name were legal identifier characters

Cause: None of the characters in the name of a user-defined type could be translated to a character that can begin a C or C++ identifier, such as a letter or an underscore.

Action: Specify an explicit translation for the type name in the INTYPE file.

O2U-00206: Some characters in a type name were not legal identifier characters

Cause: One or more characters in the name of a user-define type could not be translated to a character that can appear in a C or C++ identifier, such as a letter, an underscore, or a digit. The characters that could not be translated were replaced with underscores.

Action: Specify an explicit translation for the type name in the INTYPE file, or just use the translated type name with added underscores.

O2U-00207: None of the characters in an attribute name were legal identifier characters

Cause: None of the characters in the name of an attribute of a type could be translated to a character that can begin a C or C++ identifier, such as a letter or an underscore. To find the affected attribute, look in the declaration generated for this type for data member names that are obviously incorrect.

Action: Specify an explicit translation for the attribute name in the INTYPE file.

O2U-00208: One or more characters in an attribute name were not legal identifier characters

Cause: If an attribute name contains one or more characters that can not be translated to a legal C or C++ identifier character, the characters that can not be translated are replaced with underscores. To find the affected attribute or attributes, look in the declaration generated for this type for data member names that have extra underscores not present in the original attribute names.

Action: Specify explicit translations for the affected attribute names in the INTYPE file, or just use the translated attribute names with added underscores.

O2U-00209: Attribute or function name to be translated was not found

Cause: This name, for which a translation was requested, is not the name of an attribute or a function of the current type.

Action: Make sure that the name is spelled correctly, and is the name of an attribute or function defined in the current type.

O2U-00210: Unable to allocate memory

Cause: OTT was unable to allocate memory.

Action: Contact ORACLE customer support.

O2U-00211: A type without attributes was translated

Cause: OTT translated a type without attributes. The corresponding C-type will be a struct without any components, which is not legal C. The empty type in the database may be the result of an error during type creation. Additionally, incomplete types may be used temporarily in the creation of types that reference one another.

Action: Re-create a full version of the type in the database and then re-run OTT.

O2U-00212: An error occurred for which no message is available

Cause: The cause of this error was not reported.

Action: Contact ORACLE customer support.

OCI-00601 to OCI-31199

OCI-00601: cleanup lock conflict

Cause: PMON process runs into lock conflict trying to recover processes.

Action: This is trapped internally, no action necessary.

OCI-00602: internal programming exception

Cause: Internal programming exception.

Action: Report as a bug. Caution: The following error code is not relocatable.

OCI-00972: identifier is too long

Cause: An identifier with more than 30 characters was specified.

Action: Specify at most 30 characters.

OCI-01841: (full) year must be between -4713 and +9999, and not be 0

Cause: Illegal year entered

Action: Input year in the specified range

OCI-01854: julian date must be between 1 and 5373484

Cause: An invalid Julian date was entered.

Action: Enter a valid Julian date between 1 and 5373484.

OCI-01858: a non-numeric character was found where a numeric was expected

Cause: The input data to be converted using a date format model was incorrect. The input data did not contain a number where a number was required by the format model.

Action: Fix the input data or the date format model to make sure the elements match in number and type. Then retry the operation.

OCI-01859: a non-alphabetic character was found where an alphabetic was expected

Cause: The input data to be converted using a date format model was incorrect. The input data did not contain a letter where a letter was required by the format model.

Action: Fix the input data or the date format model to make sure the elements match in number and type. Then retry the operation.

OCI-01861: literal does not match format string

Cause: Literals in the input must be the same length as literals in the format string (with the exception of leading whitespace). If the "FX" modifier has been toggled on, the literal must match exactly, with no extra whitespace.

Action: Correct the format string to match the literal.

OCI-01862: wrong number of digits for this format item

Cause: The number of digits used for this format item is not equal to the number necessary for this format when specifying Format eXact ("FX") for this item.

Action: Fill out this format item with leading zeros to the number necessary for this format. (This is generally the number of characters in the format code--DD needs 2 digits, for example. The exceptions are HH24 & HH12, which both need 2, and J, which needs 9.)

OCI-01864: the date is out of range for the current calendar

Cause: Your calendar doesn't extend to the specified date.

Action: Specify a date which is legal for this calendar.

OCI-01865: not a valid era

Cause: Era input does not match a known era.

Action: Provide a valid era on input.

OCI-01867: the interval was invalid

Cause: The character string you specified is not a valid interval.

Action: Please specify a valid interval.

OCI-01868: the leading precision of the interval was too small

Cause: The leading precision of the interval is too small to store the specified interval.

Action: Increase the leading precision of the interval or specify an interval with a smaller leading precision.

OCI-01870: the intervals or datetimes were not mutually comparable

Cause: The intervals or datetimes are not mutually comparable.

Action: Specify a pair of intervals or datetimes that are mutually comparable.

OCI-01871: the number of seconds must be less than 60

Cause: The number of seconds specified was greater than 59.

Action: Specify a value for seconds that is 59 or smaller.

OCI-01873: the leading precision of the interval was too small

Cause: The leading precision of the interval is too small to store the specified interval.

Action: Increase the leading precision of the interval or specify an interval with a smaller leading precision.

OCI-01874: time zone hour must be between -12 and 14

Cause: The time zone hour specified was not in the valid range.

Action: Specify a time zone hour between -12 and 14.

OCI-01875: time zone minute must be between -59 and 59

Cause: The time zone minute specified was not in the valid range.

Action: Specify a time zone minute between -59 and 59.

OCI-01876: year must be at least -4713

Cause: The specified year was not in range.

Action: Specify a year that is greater than or equal to -4713.

OCI-01878: specified field not found in datetime or interval

Cause: The specified field was not found in the datetime or interval.

Action: Make sure that the specified field is in the datetime or interval.

OCI-01879: the hh25 field must be between 0 and 24

Cause: The specified hh25 field was not in the valid range.

Action: Specify an hh25 field between 0 and 24.

OCI-01880: the fractional seconds must be between 0 and 999999999

Cause: The specified fractional seconds were not in the valid range.

Action: Specify a value for fractional seconds between 0 and 999999999.

OCI-01881: time zone region ID is invalid

Cause: The region ID referenced an invalid region.

Action: Contact Oracle Support Services.

OCI-01882: time zone region not found

Cause: The specified region name was not found.

Action: Contact Oracle Support Services.

OCI-01883: overlap was disabled during a region transition

Cause: The region was changing state and the overlap flag was disabled.

Action: Contact Oracle Support Services.

OCI-01884: divisor is equal to zero

Cause: An attempt was made to divide by zero.

Action: Avoid zero divisor.

OCI-01890: NLS error detected

Cause: An NLS error was detected.

Action: Look for additional error messages and take appropriate action. If there are no additional errors, call Oracle Support Services.

OCI-01898: too many precision specifiers

Cause: While trying to truncate or round dates, extra data was found in the date format picture

Action: Check the syntax of the date format picture and retry.

OCI-02083: database name has illegal character '*string*'

Cause: Supplied database name can contain only A-Z, 0-9, '_', '#', '\$', '.' and '@' characters.

Action: n/a

OCI-02084: database name is missing a component

Cause: Supplied database name cannot contain a leading '.', trailing '.' or '@', or two '.' or '@' in a row.

Action: n/a

OCI-04020: deadlock detected while trying to lock object

stringstringstringstringstring

Cause: While trying to lock a library object, a deadlock is detected.

Action: Retry the operation later.

OCI-04021: timeout occurred while waiting to lock object

stringstringstringstringstring

Cause: While waiting to lock a library object, a timeout is occurred.

Action: Retry the operation later.

OCI-04022: nowait requested, but had to wait to lock dictionary object

Cause: Had to wait to lock a library object during a nowait request.

Action: Retry the operation later.

OCI-04028: cannot generate diana for object *stringstringstringstringstring*

Cause: Cannot generate diana for an object because of lock conflict.

Action: Please report this error to your support representative.

OCI-04029: error ORA-*string* occurred when querying *stringstringstring*

Cause: The table or view being queried might be missing. The error number indicates the error.

Action: Fix the error.

OCI-04030: out of process memory when trying to allocate *string* bytes (*string,string*)

Cause: Operating system process private memory has been exhausted

Action: n/a

OCI-04031: unable to allocate *string* bytes of shared memory ("*string*","*string*","*string*")

Cause: More shared memory is needed than was allocated in the shared pool.

Action: Either use the `dbms_shared_pool` package to pin large packages, reduce your use of shared memory, or increase the amount of available shared memory by increasing the value of the `init.ora` parameter "`shared_pool_size`".

OCI-04054: database link *string* does not exist

Cause: During compilation of a PL/SQL block, an attempt was made to use a non-existent database link.

Action: Either use a different database link or create the database link.

OCI-04060: insufficient privileges to execute *string*

Cause: Attempt to execute a stored procedure without sufficient privileges.

Action: Get necessary privileges.

OCI-04061: existing state of *string* has been invalidated

Cause: Attempt to resume the execution of a stored procedure using the existing state which has become invalid or inconsistent with the stored procedure because the procedure has been altered or dropped.

Action: Try again; this error should have caused the existing state of all packages to be re-initialized.

OCI-04062: timestamp of *string* has been changed

Cause: Attempt to execute a stored procedure to serve an RPC stub which specifies a timestamp that is different from the current timestamp of the procedure.

Action: Recompile the caller in order to pick up the new timestamp.

OCI-04063: *string* has errors

Cause: Attempt to execute a stored procedure or use a view that has errors. For stored procedures, the problem could be syntax errors or references to other, non-existent procedures. For views, the problem could be a reference in the view's defining query to a non-existent table.

Action: Fix the errors and/or create referenced objects as necessary.

OCI-04064: not executed, invalidated *string*

Cause: Attempt to execute a stored procedure that has been invalidated.

Action: Recompile it.

OCI-04065: not executed, altered or dropped *string*

Cause: Attempt to execute a stored procedure that has been altered or dropped thus making it not callable from the calling procedure.

Action: Recompile its dependents.

OCI-04066: non-executable object, *string*

Cause: Attempt to execute a non-procedure.

Action: Make sure that a correct name is given.

OCI-04067: not executed, *string* does not exist

Cause: Attempt to execute a non-existent stored procedure.

Action: Make sure that a correct name is given.

OCI-04068: existing state of *packagesstringstringstring* has been discarded

Cause: One of errors 4060 - 4067 when attempt to execute a stored procedure.

Action: Try again after proper re-initialization of any application's state.

OCI-19200: Invalid column specification

Cause: All input arguments must be valid columns

Action: Specify a valid list of columns

OCI-19201: Datatype not supported

Cause: The particular datatype is not supported in the XMLGEN operator

Action: Specify only supported datatypes as arguments to the XMLGEN operator

OCI-19202: Error occurred in XML processing*string*

Cause: An error occurred when processing the XML function

Action: Check the given error message and fix the appropriate problem

OCI-19203: Error occurred in DBMS_XMLGEN processing*string*

Cause: An error occurred when processing the DBMS_XMLGEN functions

Action: Check the given error message and fix the appropriate problem

OCI-19204: Non-scalar value '*string*' is marked as XML attribute

Cause: Only scalar values (i.e. values which are not of object or collection type) can be marked as XML attribute, i.e. is prefixed by '@'. In this case, a non-scalar value was prefixed with '@'

Action: Remove the '@' sign, or make the value a scalar.

OCI-19205: Attribute '*string*' qualifies a non-scalar value in the select list

Cause: The attribute immediately follows a value of object or collection type in the select list or type definition.

Action: Remove the '@' sign, or make the previous value a scalar.

OCI-19206: Invalid value for query or REF CURSOR parameter

Cause: The queryString argument passed to DBMS_XMLGEN.newContext was not a valid query, or REF CURSOR.

Action: Rewrite the query so that the queryString argument is a valid query or REF CURSOR.

OCI-19207: scalar parameter *string* of XMLELEMENT cannot have an alias.

Cause: The scalar parameter to XMLELEMENT has been qualified with an alias.

Action: Remove the AS clause of the scalar element.

OCI-19208: parameter *string* of function *string* must be aliased

Cause: The indicated parameter of the XML generation function has not been aliased, although it is an expression.

Action: Specify an alias for the expression using the AS clause.

OCI-19209: invalid or unsupported formatting argument

Cause: An invalid or unsupported formatting argument was supplied

Action: Change the formatting argument to legal supported values

OCI-19210: column '*string*', specified to be a key or update column for DBMS_XMLSTORE, does not exist in table '*string*'

Cause: The column specified using setKeyColumn()/setUpdateColumn() did not exist in the table.

Action: Change the column specified to be a column in the table

OCI-19211: column '*string*', specified as key using DBMS_XMLSTORE.setKeyColumn() , must be of scalar type

Cause: The column specified using setKeyColumn() was a non-scalar type column.

Action: Change the column specified to be a scalar column in the table

OCI-19212: no key columns specified before call to DBMS_XMLSTORE.updateXML()

Cause: No columns were specified as key columns before the call to DBMS_XMLSTORE.updateXML.

Action: Use DBMS_XMLSTORE.setKeyColumn() to specify key columns

OCI-21300: objects option not installed

Cause: The objects option is not installed at this site. Object types and other object features are, therefore, unavailable.

Action: Install the objects option. The objects option is not part of the Oracle Server product and must be purchased separately. Contact an Oracle sales representative if the objects option needs to be purchased.

OCI-21301: not initialized in object mode

Cause: This function requires the oci process to be initialized in object mode.

Action: Specify OCI_OBJECT mode when calling OCIInitialize().

OCI-21500: internal error code, arguments: [string], [string], [string], [string], [string], [string], [string], [string]

Cause: This is the generic error number for the OCI environment (client-side) internal errors. This indicates that the OCI environment has encountered an exceptional condition.

Action: Report as a bug - the first argument is the internal error number.

OCI-21501: program could not allocate memory

Cause: The operating system has run out of memory.

Action: Take action to make more memory available to the program.

OCI-21503: program terminated by fatal error

Cause: A program is in an unrecoverable error state.

Action: Report as a bug.

OCI-21520: database server driver not installed

Cause: User attempted to access a database server through an object-mode OCI environment but the necessary driver for supporting such access to the database server is not installed or linked in.

Action: Check if the driver corresponding to the database server has been installed/linked in and entered in the server driver table.

OCI-21521: exceeded maximum number of connections in OCI (object mode only)

Cause: User exceeded the maximum number of connections (255) that can be supported by an OCI environment in object mode.

Action: Close some of existing and unused connections before opening more connections.

OCI-21522: attempted to use an invalid connection in OCI (object mode only)

Cause: User attempted to use an invalid connection or a connection that has been terminated in an OCI environment (object mode), or user attempted to dereference a REF obtained from a connection which has been terminated.

Action: Ensure that the connection exists and is still valid.

OCI-21523: functionality not supported by the server (object mode only)

Cause: User attempted to use a functionality that the server does not support.

Action: Upgrade the server

OCI-21524: object type mismatch

Cause: The object type of the object is different from what is specified.

Action: Check the type of the object and correct it.

OCI-21525: attribute number (or collection element at index) *string* violated its constraints

Cause: Attribute value or collection element value violated its constraint.

Action: Change the value of the attribute or collection element such that it meets its constraints. The constraints are specified as part of the attribute or collection element's schema information.

OCI-21526: initialization failed

Cause: The initialization sequence failed. This can happen, for example, if an environment variable such as NLS_DATE_FORMAT is set to an invalid value.

Action: Check that all NLS environment variables are well-formed.

OCI-21527: internal OMS driver error

Cause: A process has encountered an exceptional condition. This is the generic internal error number for Oracle object management services exceptions.

Action: Report this as a bug to Oracle Support Services.

OCI-21560: argument *string* is null, invalid, or out of range

Cause: The argument is expecting a non-null, valid value but the argument value passed in is null, invalid, or out of range. Examples include when the LOB/FILE positional or size argument has a value outside the range 1 through (4GB - 1), or when an invalid open mode is used to open a file, etc.

Action: Check your program and correct the caller of the routine to not pass a null, invalid or out-of-range argument value.

OCI-21562: column *string* has unsupported data type *string*

Cause: A data type was specified which is currently unsupported.

Action: Choose another data type which is supported.

OCI-21563: Error *string* while calling *string* for column *string* with datatype *string*

Cause: OCI Error encountered while performing data type conversion.

Action: Check the OCI Error code

OCI-21570: current *string* LCR has unreceived chunk data

Cause: The client did not receive all the chunk data for the current LCR.

Action: If OCIXStreamOutLCRCallbackReceive is used in your program then modify your callback functions to return OCI_CONTINUE while OCI_XSTREAM_MORE_ROW_DATA flag is set; otherwise, modify your program to call OCIXStreamOutChunkReceive until all the chunks are received (that is, the flag returned by OCIXStreamOutChunkReceive API does not have OCI_XSTREAM_MORE_ROW_DATA bit set).

OCI-21571: must provide a LOB WRITE, LOB TRIM or LOB ERASE LCR in *string* call (input LCR=*string*)

Cause: An attempt was made to invoke the specified function without providing a piece-wise LOB LCR (for example, LOB WRITE, LOB TRIM or LOB ERASE LCR).

Action: Correct the 'row_lcrp' argument in the call.

OCI-21572: Invalid LCR type (*string*) in *string* call

Cause: An attempt was made to invoke the specified function with an incorrect logical change record (LCR) type.

Action: Provide an LCR of the correct type.

OCI-21573: Invalid command type (*string*) when sending a chunk.

Cause: An attempt was made to send a chunk when the command type for the current LCR was not INSERT, UPDATE, or LOB WRITE.

Action: Check your program and provide an LCR with a valid command type to OCIXStreamInChunkSend call or to OCICallbackXStreamInChunkCreate callback.

OCI-21574: Invalid data type (*string*) specified for LOB chunk.

Cause: Invalid data type specified for LOB chunk in OCIXStreamInChunkSend call.

Action: Check your program and provide either SQLT_CHR or SQLT_BIN for 'coldty' argument to OCIXStreamInChunkSend call.

OCI-21577: Input *string* LCR has no LOB column.

Cause: An attempt was made to invoke OCILCRlobInfoGet call with an LCR that had no LOB column.

Action: Replace the input LCR to OCILCRlobInfoGet call.

OCI-21578: Only one LOB column allowed per *string* LCR.

Cause: An attempt was made to set multiple LOB columns on a piece-wise LOB LCR.

Action: Check your program and make sure OCIXStreamInChunkSend is called for only one column per piece-wise LOB LCR.

OCI-21579: Input LCR must have at least one old or new column.

Cause: An attempt was made to call OCIXStreamInChunkSend with an LCR that had empty column lists.

Action: Use OCILCRRowColumnInfoSet to add one or more columns to the input LCR before calling OCIXStreamInChunkSend.

OCI-21580: The LOB operation length (value=*string*) for column (*string*) must be an even number of bytes.

Cause: An attempt was made to call OCIXStreamInChunkSend with an odd number of bytes for a column flagged as AL16UTF16 or NCLOB.

Action: Correct either the LOB column length or 'column_flag' argument to OCIXStreamInChunkSend call.

OCI-21583: invalid XStream server name '*string*'

Cause: An attempt was made to attach to an XStream server with a nonexistent server name.

Action: Correct the server name in the attach call.

OCI-21600: path expression too long

Cause: The path expression that is supplied by the user is too long. The path expression is used to specify the position of an attribute in an object. This error occurs when one of the intermediate elements in the path expression refers to an attribute of a built-in type. Thus, the OCI function cannot proceed on to process the rest of the elements in the path expression.

Action: User should pass in the correct path expression to locate the attribute.

OCI-21601: attribute is not an object

Cause: The user attempts to perform an operation (that is valid only for an object) to an attribute of a built-in type. An example of such an illegal operation is to dynamically set a null structure to an attribute of a built-in type.

Action: User should avoid performing such operation to an attribute of built-in type.

OCI-21602: operation does not support the specified typecode

Cause: The user attempts to perform an operation that does not support the specified typecode.

Action: User should use the range of valid typecodes that are supported by this operation.

OCI-21603: property id [*string*] is invalid

Cause: The specified property id is invalid.

Action: User should specify a valid property id. Valid property ids are enumerated by OCIObjectPropId.

OCI-21604: property [*string*] is not a property of transient or value instances

Cause: Trying to get a property which applies only to persistent objects.

Action: User should check the lifetime and only get this property for persistent objects.

OCI-21605: property [*string*] is not a property of value instances

Cause: Trying to get a property which applies only to persistent and transient objects.

Action: User should check the lifetime and only get this property for persistent and transient objects.

OCI-21606: can not free this object

Cause: Trying to free an object that is persistent and dirty and the OCI_OBJECTFREE_FORCE flag is not specified.

Action: Either flush the persistent object or set the flag to OCI_OBJECTFREE_FORCE

OCI-21607: memory cartridge service handle not initialized

Cause: Attempt to use the handle without initializing it.

Action: Initialize the memory cartridge service handle.

OCI-21608: duration is invalid for this function

Cause: Attempt to use a duration not valid for this function.

Action: Use a valid duration - a previously created user duration or OCI_DURATION_STATEMENT or OCI_DURATION_SESSION. For callout duration or external procedure duration, use OCIExtProcAllocCallMemory.

OCI-21609: memory being resized without being allocated first

Cause: Attempt to resize memory without allocating it first.

Action: Allocate the memory first before resizing it.

OCI-21610: size [*string*] is invalid

Cause: Attempt to resize memory with invalid size.

Action: Pass in a valid size (must be a positive integer).

OCI-21611: key length [*string*] is invalid

Cause: Attempt to use an invalid key length.

Action: Key length is invalid and valid range is 0 to 64

OCI-21612: key is already being used

Cause: Attempt to use a key that is already used.

Action: Use a new key that is not yet being used.

OCI-21613: key does not exist

Cause: Attempt to use a non-existent key

Action: Use a key that already exists.

OCI-21700: object does not exist or is marked for delete

Cause: User attempted to perform an inappropriate operation to an object that is non-existent or marked for delete. Operations such as pinning, deleting and updating cannot be applied to an object that is non-existent or marked for delete.

Action: User needs to re-initialize the reference to reference an existent object or the user needs to unmark the object.

OCI-21701: attempt to flush objects to different servers

Cause: User attempted to flush objects to different servers in one function call. These objects are obtained by calling a callback functions provided by the program.

Action: User should avoid performing such operation.

OCI-21702: object is not instantiated or has been de-instantiated in cache

Cause: User attempted to perform an inappropriate operation to a transient object that is not instantiated in the object cache. Operations that cannot be applied to a not-instantiated transient object include deleting or pinning such an object.

Action: User should check their code to see if they are performing such an operation without instantiating the object first, or performing such an operation after the allocation duration of the object has expired.

OCI-21703: cannot flush an object that is not modified

Cause: See the error message.

Action: The object should not be flushed.

OCI-21704: cannot terminate cache or connection without flushing first

Cause: See the error message.

Action: The transaction should be aborted or committed before terminating the cache or connection.

OCI-21705: service context is invalid

Cause: The service context that is supplied by the user is not valid.

Action: User needs to establish the service context.

OCI-21706: duration does not exist or is invalid

Cause: The duration number that is supplied by the user is not valid.

Action: User needs to establish the duration or use a correct predefined duration.

OCI-21707: pin duration is longer than allocation duration

Cause: The pin duration supplied by the user is longer than the allocation duration. This affects operations such as pinning and setting default parameters.

Action: User should use a shorter pin duration or use the null duration.

OCI-21708: inappropriate operation on a transient object

Cause: User attempted to perform an inappropriate operation on a transient object. Operations that cannot be applied to a transient object include flushing and locking.

Action: User should avoid performing such operation on a transient object.

OCI-21709: cannot refresh an object that has been modified

Cause: User attempted to refresh an object that has been marked for delete, update or insert (new).

Action: User should unmark the object before refreshing it.

OCI-21710: argument is expecting a valid memory address of an object

Cause: The object memory address that is supplied by the user is invalid. The user may have passed in a bad memory address to a function that is expecting a valid memory address of an object.

Action: User should pass in a valid memory address of an object to the function.

OCI-21779: duration not active

Cause: User is trying to use a duration that has been terminated.

Action: User should avoid performing such operation.

OCI-22053: overflow error

Cause: This operation's result is above the range of Oracle number.

Action: Decrease the input value(s) so that the result is in the range of Oracle number.

OCI-22054: underflow error

Cause: This operation's result is below the range of Oracle number.

Action: Increase the input value(s) so that the result is in the range of Oracle number.

OCI-22055: unknown sign flag value [*string*]

Cause: Signed flag used is not OCI_NUMBER_SIGNED or OCI_NUMBER_UNSIGNED.

Action: Use either OCI_NUMBER_SIGNED or OCI_NUMBER_UNSIGNED as sign flag.

OCI-22056: value [*string*] is divided by zero

Cause: Given value is divided by zero.

Action: Modify divisor value to be non-zero.

OCI-22057: bad integer length [*string*]

Cause: The length of the integer (ie number of bytes) to be converted to or from an Oracle number is invalid.

Action: Use integer length 1, 2, 4 or 8 bytes only.

OCI-22059: buffer size [*string*] is too small - [*string*] is needed

Cause: The buffer to hold the resulting text string is too small.

Action: Provide a buffer of the required size.

OCI-22060: argument [*string*] is an invalid or uninitialized number

Cause: An invalid or uninitialized number is passed in.

Action: Use a valid number. To initialize number call OCINumberSetZero().

OCI-22061: invalid format text [*string*]

Cause: The numeric format string for converting characters to or from an Oracle number is invalid.

Action: Use valid format string as documented in OCI Programmer's Guide.

OCI-22062: invalid input string [*string*]

Cause: The text string for converting to numbers is invalid.

Action: Use a valid input string as documented in OCI Programmer's Guide.

OCI-22063: reading negative value [*string*] as unsigned

Cause: Attempt to convert a negative number to an unsigned integer.

Action: Use the sign flag ORLTSB to convert a signed number.

OCI-22064: invalid NLS parameter string [*string*]

Cause: The NLS parameter string for converting characters to or from an Oracle number is invalid.

Action: Use valid format string as documented in OCI Programmer's Guide.

OCI-22065: number to text translation for the given format causes overflow

Cause: Rounding done due to the given string format causes overflow.

Action: Change the format such that overflow does not occur.

OCI-22130: buffer size [*string*] is less than the required size [*string*]

Cause: The size of the buffer into which the hexadecimal REF string is to be written is too small.

Action: Provide a buffer of the required size.

OCI-22131: hexadecimal string length is zero

Cause: The given hexadecimal string length must be greater than zero.

Action: Specify a length greater than zero.

OCI-22132: hexadecimal string does not correspond to a valid REF

Cause: The given hexadecimal string is invalid.

Action: Provide a valid hexadecimal string which was previously returned by a call to OCIRefToHex().

OCI-22140: given size [*string*] must be in the range of 0 to [*string*]

Cause: The given resize size is invalid.

Action: Ensure that the given size is in the required range.

OCI-22141: given size [*string*] must be even in UTF-16 environment

Cause: The given resize size is odd. In a UTF-16 environment, all characters are 2 bytes in length.

Action: Ensure that the given size is even.

OCI-22150: variable-length array has not been initialized

Cause: An un-initialized variable-length array is being operated upon.

Action: Initialize the variable-length array prior to calling this function.

OCI-22151: cannot resize non-zero variable-length array to zero elements

Cause: Trying to resize a non-zero variable-length array to 0 elements.

Action: Specify a non-zero size.

OCI-22152: destination variable-length array is not initialized

Cause: The variable-length array on the right-hand-side of an assignment or the destination array of an append is not initialized.

Action: Initialize the destination variable-length array prior to calling this function.

OCI-22153: source variable-length array is not initialized

Cause: The variable-length array on the left-hand-side of an assignment or the source array of an append is not initialized.

Action: Initialize the destination variable-length array prior to calling this function.

OCI-22160: element at index [*string*] does not exist

Cause: Collection element at the given index does not exist.

Action: Specify the index of an element which exists.

OCI-22161: type code [*string*] is not valid

Cause: Given type code is not valid.

Action: Use one of the typecodes enumerated in OCITypeCode.

OCI-22162: element at index [*string*] has been previously deleted

Cause: Trying to delete a non-existent collection element.

Action: Check for the existence of the element prior to calling this function.

OCI-22163: left hand and right hand side collections are not of same type

Cause: Left hand and right side collections are not of same type.

Action: Ensure that the same collection type is passed for both left hand and right hand side of this function.

OCI-22164: delete element operation is not allowed for variable-length array

Cause: Trying to delete an element of a variable-length array.

Action: Ensure that the collection is not a variable-length array prior to calling this function.

OCI-22165: given index [*string*] must be in the range of [*string*] to [*string*]

Cause: Given index is not in the required range.

Action: Ensure that the given index is in the required range.

OCI-22166: collection is empty

Cause: Given collection is empty.

Action: Test if collection is empty prior to invoking this function.

OCI-22167: given trim size [*string*] must be less than or equal to [*string*]

Cause: Given trim size is greater than the current collection size.

Action: Ensure that the given size is less than or equal to the collection size prior to calling this function.

OCI-22275: invalid LOB locator specified

Cause: There are several causes: (1) the LOB locator was never initialized; (2) the locator is for a BFILE and the routine expects a BLOB/CLOB/NCLOB locator; (3) the locator is for a BLOB/CLOB/NCLOB and the routine expects a BFILE locator; (4) trying to update the LOB in a trigger body -- LOBs in trigger bodies are read only.

Action: For (1), initialize the LOB locator by selecting into the locator variable or by setting the LOB locator to empty. For (2) and (3), pass the correct type of locator into the routine. For (4), remove the trigger body code that updates the LOB value.

OCI-22276: invalid locator for LOB buffering

Cause: There are several causes: (1) the locator was never enabled for buffering (2) it is not an updated locator but is being used for a write/flush operation

Action: For (1) enable the locator for buffering; (2) ensure that only an updated locator is used for a LOB update operation

OCI-22277: cannot use two different locators to modify the same LOB

Cause: LOB buffering is enabled and an attempt was made to modify the LOB using two different LOB locators.

Action: When using LOB buffering, modify the LOB through one LOB locator only.

OCI-22278: must update the LOB only through the LOB buffers

Cause: LOB buffering is enabled for this LOB and there are buffers for this LOB in the buffer pool. Thus, updating the LOB through means other than the LOB buffers is not allowed.

Action: Update the LOB through the LOB buffers using the locator that has LOB buffering enabled. If this operation is required, buffers associated with this LOB should either be flushed as necessary or buffering should be disabled. Once this is done, reissue the command.

OCI-22279: cannot perform operation with LOB buffering enabled

Cause: The operation attempted is not allowed when LOB buffering is enabled.

Action: If the operation is required, LOB buffering should not be used. In this case, flush buffers associated with the input LOB locator as necessary, disable buffering on the input LOB locator and reissue the command.

OCI-22280: no more buffers available for operation

Cause: There are two causes: (1) All buffers in the buffer pool have been used up by previous operations (2) Attempt to flush a LOB without any previous buffered update operations.

Action: For (1), flush the LOB(s) through the locator that is being used to update the LOB. For (2), write to the LOB through a locator enabled for buffering before attempting to flush buffers.

OCI-22281: cannot perform operation with an updated locator

Cause: The input locator has buffering enabled and was used to update the LOB value through the LOB buffering subsystem. The modified buffer has not been flushed since the write that was performed by the the input locator; thus, the input locator is considered an updated locator. Updated locators cannot be the source of a copy operation. Only one locator per LOB may be used to modify the LOB value through the LOB buffering subsystem.

Action: Depending on whether the modifications made through the input locator to the LOB buffering subsystem should be written to the server, either flush the buffer to write the modifications, or, disable buffering on the locator to discard the modifications. Then, reissue the command.

OCI-22282: non-contiguous append to a buffering enabled LOB not allowed

Cause: The buffered write operation has an input offset value more than one byte or character past the end of the LOB.

Action: Specify an input offset value which is exactly one character or byte greater than the length of the LOB that you are attempting to update through a buffered write operation.

OCI-22285: non-existent directory or file for *string* operation

Cause: Attempted to access a directory that does not exist, or attempted to access a file in a directory that does not exist.

Action: Ensure that a system object corresponding to the specified directory exists in the database dictionary, or make sure the name is correct.

OCI-22286: insufficient privileges on directory or file to perform *string* operation

Cause: The user does not have the necessary access privileges on the directory alias and/or the file for the operation.

Action: Ask the database/system administrator to grant the required privileges on the directory alias and/or the file.

OCI-22287: invalid or modified directory occurred during *string* operation

Cause: The directory alias used for the current operation is not valid if being accessed for the first time, or has been modified by the DBA since the last access.

Action: If you are accessing this directory for the first time, provide a valid directory name. If you have been already successful in opening a file under this directory before this error occurred, then close the file and retry the operation with a valid directory alias as modified by your DBA. Oracle recommends that directories should be modified only during quiescent periods.

OCI-22288: file operation *string* failed\n*nstring*

Cause: The operation attempted on the file failed.

Action: See the next error message for more detailed information. Also, verify that the file exists and that the necessary privileges are set for the specified operation. If the error still persists, report the error to the DBA.

OCI-22289: cannot perform *string* operation on an unopened file

Cause: The file is not open for the required operation to be performed.

Action: Check that the current operation is preceded by a successful file open operation.

OCI-22290: operation would exceed the maximum number of opened files

Cause: The number of open files has reached the maximum limit.

Action: Close some of the opened files and retry the operation.

OCI-22303: type "*string*"."*string*" not found

Cause: The user is trying to obtain information for a type that cannot be found.

Action: Check that the schema is correct and that the type has been created correctly.

OCI-22305: attribute/method/parameter "string" not found

Cause: Type element with the given name is not found in the type.

Action: Check to make sure that the type element exists.

OCI-22306: type "string"."string" already exists

Cause: The user is trying to create a type that already exists.

Action: Check to make sure that the type has not been created prior to this.

OCI-22307: type to alter is not a user-defined type

Cause: The user is trying to alter a built-in type.

Action: Check to make sure that only user-defined types are being altered.

OCI-22309: attribute with name "string" already exists

Cause: The user is attempting to create an object type where more than one attributes have the same name.

Action: Check to make sure that all attribute names are unique.

OCI-22311: type for attribute "string" does not exist

Cause: The type of the attribute does not exist.

Action: No types were created/modified for this DDL transaction. Redo the DDL transaction and add the creation of the attribute's type in the DDL transaction.

OCI-22313: cannot use two versions of the same type "string"

Cause: The version of this type conflicts with the version of this type used by another library that was linked in with the application. An application may only use one version of a type.

Action: Check that the libraries being linked with this application and use the same versions of the type.

OCI-22314: method information mismatch in ALTER TYPE

Cause: The number of methods or the method signature do not match that of the original type declaration. This is not supported.

Action: Make sure the method signature stay identical for the previously declared method. Do not drop existing methods.

OCI-22315: type "string" does not contain a map or order function

Cause: The input type does not contain a map or order function so one cannot be returned.

Action: Add a map or order function to the type or catch this error.

OCI-22316: input type is not a collection type

Cause: The user is trying to obtain information for collection types on a non-named collection type.

Action: Use a named collection type for the function.

OCI-22317: typecode *number* is not legal as a number type

Cause: The user is trying to use a number typecode that is not valid.

Action: Use only OCI_TYPECODE_SMALLINT, OCI_TYPECODE_INTEGER, OCI_TYPECODE_REAL, OCI_TYPECODE_DOUBLE, OCI_TYPECODE_FLOAT, OCI_TYPECODE_NUMBER, or OCI_TYPECODE_DECIMAL.

OCI-22318: input type is not an array type

Cause: The user is trying to obtain the number of elements for a non-array type.

Action: Pass in only a named collection type which is an array.

OCI-22319: type attribute information altered in ALTER TYPE

Cause: The type attribute information does not match that of the original type declaration when altering type. Attributes cannot be altered during ALTER TYPE. Only new methods can be added.

Action: Check that all type alterations are legal.

OCI-22321: method does not return any result

Cause: OCITypeResult() was called on a method that does not return any results.

Action: Check that you are passing in the correct method descriptor, or that your method creation was done correctly.

OCI-22337: the type of accessed object has been evolved

Cause: The type of the accessed object has been altered and the client's object is based on an earlier type definition.

Action: The user needs to exit application and modify application to accommodate the type change. From SQL/PLUS, reconnect and resubmit statement.

OCI-22351: This API is not supported by the ORACLE server.

Cause: An attempt was made to call an API which is not supported by the Oracle server.

Action: Do not call the unsupported API when connected to this Oracle server.

OCI-22352: Type is unsupported or contains an unsupported attribute or element.

Cause: A PL/SQL package type was not supported on the client or contained an attribute or element that was not supported on the client. Unsupported types include index by VARCHAR2 collections, remote types and MLSLABELs.

Action: Do not attempt to use unsupported PL/SQL package types or types that contain unsupported attributes or elements on the client.

OCI-22369: invalid parameter encountered in method *string*

Cause: An invalid parameter is being passed to this method of SYS.RowType or SYS.RowSet.

Action: Check the parameters being passed to this method and make sure that the parameters are allowed.

OCI-22370: incorrect usage of method *string*

Cause: This method of SYS.RowType or SYS.RowSet is being used inappropriately.

Action: Check the documentation for correct usage.

OCI-22600: encountered 8.0.2 (Beta) VARRAY data that cannot be processed

Cause: Production Oracle8 (8.0.3 and beyond) encounters some VARRAY data which was created and stored by Oracle8 8.0.2 (Beta 2). Production Oracle8 cannot understand or process such VARRAY data.

Action: Delete the VARRAY data from the table by dropping the table, deleting the rows, or nulling out the VARRAY columns, and then re-insert the VARRAY data. There is no provided script or tool to help automate this conversion.

OCI-22601: pickler TDS context [*string*] is not initialized

Cause: Attempt to use the pickler TDS context without initializing it.

Action: Use OCIPicklerTdsCtxInit to initialize the context.

OCI-22602: pickler TDS handle [*string*] is not well-formed

Cause: Attempt to use the pickler TDS handle without initializing/ constructing it.

Action: Use OCIPicklerTdsInit to initialize the handle before it is constructed. Use OCIPicklerTdsGenerate to generate the TDS before its attributes can be accessed.

OCI-22603: cannot add an attribute to the already generated TDS handle

Cause: Attempt to add an attribute to the already constructed TDS.

Action: Use a TDS handle that is initialized but not yet constructed.

OCI-22604: TDS handle already generated

Cause: Attempt to generate TDS that is already generated.

Action: Use a TDS handle that is initialized but not yet generated.

OCI-22605: FDO handle [*string*] is not initialized

Cause: Attempt to use an uninitialized FDO handle.

Action: Use OCIPicklerFdoInit to initialize FDO handle".

OCI-22606: pickler image handle [*string*] is not well-formed

Cause: Attempt to use the image handle without initializing/ constructing it.

Action: Use OCIPicklerImageInit to initialize the handle before it is constructed. Use OCIPicklerImageGenerate to generate the image before its attributes can be accessed.

OCI-22607: image handle already generated

Cause: Attempt to generate image that is already generated.

Action: Use a image handle that is initialized but not yet generated.

OCI-22608: cannot add an attribute to the already generated image handle

Cause: Attempt to add an attribute to the already constructed image.

Action: Use an image handle that is initialized but not yet constructed.

OCI-22609: error *string* during initialization of FDO

Cause: Error during FDO initialization.

Action: Take an action based on the specified error.

OCI-22626: Type Mismatch while constructing or accessing OCIAnyData

Cause: Type supplied is not matching the type of the AnyData. If piece wise construction or access is being attempted, the type supplied is not matching the type of the current attribute.

Action: Make sure the type supplied matches the type of object to to be constructed or accessed.

OCI-22975: cannot create a PRIMARY KEY-based REF to this object view

Cause: The object view specified in the MAKE_REF function does not have a PRIMARY KEY-based object identifier. A PRIMARY KEY-based REF cannot be created for such a view.

Action: Specify an object view that has a PRIMARY KEY-based object identifier in the MAKE_REF function.

OCI-22976: incorrect number of arguments to MAKE_REF

Cause: Number of arguments for MAKE_REF is different from the number of PRIMARY KEY attributes of the object view.

Action: Specify all the necessary arguments for MAKE_REF.

OCI-29783: GPnP attribute SET failed with error [*string*]

Cause: An attempt to set the Grid Plug and Play (GPnP) attribute failed. See the brackets for the reason.

Action: Resolve the problem in the included message and retry the request.

OCI-29785: GPnP attribute GET failed with error [*string*]

Cause: An attempt to get the Grid Plug and Play (GPnP) attribute failed. See the brackets for the reason.

Action: Resolve the problem in the included message and retry the request.

OCI-29786: SIHA attribute GET failed with error [*string*]

Cause: An attempt to get the Single-Instance High Availability (SIHA) attribute failed. See the brackets for the reason.

Action: Resolve the problem in the included message and retry the request.

OCI-29787: SIHA attribute SET failed with error [*string*]

Cause: An attempt to set the Single-Instance High Availability (SIHA) attribute failed. See the brackets for the reason.

Action: Resolve the problem in the included message and retry the request.

OCI-30100: internal error [*number*]

Cause: An internal error has occurred.

Action: Contact Oracle Worldwide Support and report the error.

OCI-30101: unknown parameter name '*string*'

Cause: You have misspelled the parameter name.

Action: Spell the parameter name correctly.

OCI-30102: '*string*' is not in the legal range for '*string*'

Cause: The value of the parameter is not within the legal range.

Action: Refer to the manual for the allowable values for this parameter.

OCI-30103: '*string*' contains an illegal integer radix for '*string*'

Cause: An illegal integer radix specification was found.

Action: Only 'd', 'h', 'D', and 'H' may be used as radix specifications.

OCI-30104: '*string*' is not a legal integer for '*string*'

Cause: The value is not a valid integer.

Action: Specify only valid integers for this parameter.

OCI-30105: '*string*' is not a legal boolean for '*string*'

Cause: The value is not a valid boolean.

Action: Refer to the manual for allowable boolean values.

OCI-30106: reserved for future use

Cause: None.

Action: None

OCI-30107: parameter name abbreviation '*string*' is not unique

Cause: The abbreviation given was not unique.

Action: Use a longer abbreviation to make the parameter name unique.

OCI-30108: invalid positional parameter value '*string*'

Cause: An invalid positional parameter value has been entered.

Action: Remove the invalid positional parameter.

OCI-30109: could not open parameter file '*string*'

Cause: The parameter file does not exist.

Action: Create an appropriate parameter file.

OCI-30110: syntax error at '*string*'

Cause: A syntax error was detected.

Action: Change the input so that the correct syntax is used.

OCI-30111: no closing quote for value '*string*'

Cause: A quoted string was begun but not finished.

Action: Put a closing quote in the proper location.

OCI-30112: multiple values not allowed for parameter '*string*'

Cause: You attempted to specify multiple values for a parameter which can take only one value.

Action: Do not specify more than one value for this parameter.

OCI-30113: error when processing file '*string*'

Cause: A problem occurred when processing this file.

Action: Examine the additional error messages and correct the problem.

OCI-30114: error when processing from command line

Cause: A problem occurred when processing the command line.

Action: Examine the additional error messages and correct the problem.

OCI-30115: error when processing an environment variable

Cause: A problem occurred when processing an environment variable.

Action: Examine the additional error messages and correct the problem.

OCI-30116: syntax error at '*string*' following '*string*'

Cause: A syntax error was detected.

Action: Change the input so that the correct syntax is used.

OCI-30117: syntax error at '*string*' at the start of input

Cause: A syntax error was detected.

Action: Change the input so that the correct syntax is used.

OCI-30118: syntax error at '*string*' at the end of input

Cause: A syntax error was detected.

Action: Change the input so that the correct syntax is used.

OCI-30119: unable to obtain a valid value for '*string*'

Cause: No valid value was obtained for this parameter.

Action: Rerun the application and enter a valid value.

OCI-30120: '*string*' is not a legal oracle number for '*string*'

Cause: The value is not a valid oracle number.

Action: Refer to the manual for allowable oracle number values.

OCI-30121: '*string*' is not an allowable value for '*string*'

Cause: The value is not a legal value for this parameter.

Action: Refer to the manual for allowable values.

OCI-30122: value '*string*' for '*string*' must be between '*number*' and '*number*'

Cause: The value of the parameter is not within the legal range.

Action: Specify a value that is within the legal range.

OCI-30129: invalid function argument received

Cause: A function received an invalid argument

Action: Check function calls, make sure correct arguments are being passed.

OCI-30130: invalid parameter key type received

Cause: A function received an invalid parameter key type

Action: Check parameter key types in function calls

OCI-30131: number of keys being set exceeds allocation

Cause: Number of parameter keys being set exceeds allocation

Action: Reduce the number of keys being set or increase allocation

OCI-30132: invalid key index supplied

Cause: The key index specified was not within bounds

Action: Change key index to ensure it lies within bounds

OCI-30133: reserved for future use

Cause: None.

Action: None

OCI-30134: reserved for future use

Cause: None.

Action: None

OCI-30135: OCI Thread operation fails

Cause: An OCI Thread function call has failed.

Action: Check the function call to make sure that the correct parameters are being passed and take the appropriate action.

OCI-30150: Invalid argument passed to OCIFile function

Cause: An invalid argument is passed to the OCIFile function. The most common cause is that a NULL pointer is passed where a non-NULL pointer is expected.

Action: Make sure that the values passed as arguments are valid. Esp check for NULL pointers.

OCI-30151: File already exists

Cause: Tried to open a file with OCI_FILE_EXCL flag and the file already exists.

Action: OCIFile is supposed throw this exception in this case.

OCI-30152: File does not exist

Cause: The OCIFile function requires the file to exist, but it does not.

Action: Make sure that the file exists.

OCI-30153: An invalid File Object is passed to the OCIFile function

Cause: An invalid File Object is passed to the OCIFile function.

Action: Make sure that the file object is a valid one. Create a new file object by calling OCIFileOpen if needed.

OCI-30154: The memory address given as buffer for OCIFileRead/Write is invalid

Cause: An invalid memory address is given as the buffer pointer for OCIFileRead/Write.

Action: Make sure that the required memory is allocated and pass a valid memory address as buffer pointer.

OCI-30155: An I/O Error occured during an OCIFile function call

Cause: An I/O error occurred at the system level.

Action: This is a system error and the action will depnd on the error.

OCI-30156: Out of disk space

Cause: The disks associated with the underlying file system are full.

Action: Create more disk space.

OCI-30157: An invalid argument was given to operating system call

Cause: The OS call was called with an invalid argument.

Action: Check the values passed. If unsuccessful to solve the problem contact ORACLE support.

OCI-30158: The OCIFileWrite causes the file to exceed the maximum allowed size

Cause: There is no space to write to the file. Its size is at the maximum limit.

Action: Up to the user.

OCI-30159: OCIFileOpen: Cannot create the file or cannot open in the requested mode

Cause: The create flag was specified in OCIFileOpen such that the file was to be created. But unable to do so. Or the file already exists and the permissions on it doesn't allow the file to be opened in in the requested open mode

Action: Check whether the user has permissions to create the specified file or if the file exists whether the permissions on it allow the requested open mode.

OCI-30160: Unable to access the file

Cause: The function was unable to access the existing the file.

Action: Check if the user has the required permissions on the file.

OCI-30161: A system error occurred during the OCIFile function call

Cause: A system error occurred while executing the OCIFile function.

Action: Depend on the error.

OCI-30162: The OCIFile context is not initialized

Cause: The function OCIFileInit need to be called before calling any other OCIFile function to initialize the OCIFile context.

Action: Call the function OCIFileInit need to be called before calling any other OCIFile function.

OCI-30163: The thread safety initialization failed

Cause: The call to SlgInit failed in OCIFileInit.

Action: Contact support

OCI-30175: invalid type given for an argument

Cause: There is an argument with an invalid type in the argument list.

Action: Use the correct type wrapper for the argument.

OCI-30176: invalid format code used in the format string

Cause: There is an invalid format code in the format string.

Action: Replace the invalid format code with a valid one.

OCI-30177: invalid flag used in a format specification

Cause: There is an invalid flag in a format specification.

Action: Replace the invalid flag with a valid one.

OCI-30178: duplicate flag used in a format specification

Cause: There is a duplicate flag in a format specification.

Action: Remove the duplicate flag.

OCI-30179: invalid argument index used in a format code

Cause: Zero or negative argument index or index not following (."

Action: Replace the invalid argument index with a valid one.

OCI-30180: argument index is too large

Cause: An argument index exceeds actual number of arguments supplied.

Action: Fix format string or pass additional arguments.

OCI-30181: integer in argument index is not immediately followed by)

Cause: Missing closing parenthesis in argument index.

Action: Fix the format specification.

OCI-30182: invalid precision specifier

Cause: Period in format specification not followed by valid format.

Action: Replace the invalid precision specifier with a valid one.

OCI-30183: invalid field width specifier

Cause: Invalid field width supplied.

Action: Replace the invalid field width with a valid one.

OCI-30184: argument type not compatible with a format code

Cause: Bad argument type given for a format code.

Action: Make format and arguments be compatible.

OCI-30185: output too large to fit in the buffer

Cause: The buffer is not large enough to hold the entire output string.

Action: Fix the buffer size and length passed in.

OCI-30186: reserved for future use

Cause: None.

Action: None

OCI-30187: reserved for future use

Cause: None.

Action: None

OCI-30188: reserved for future use

Cause: None.

Action: None

OCI-30189: reserved for future use

Cause: None.

Action: None

OCI-30190: reserved for future use

Cause: None.

Action: None

OCI-30191: missing argument list

Cause: No argument list supplied.

Action: Modify the argument list to have at least OCIFormatEnd in it.

OCI-30192: reserved for future use

Cause: None.

Action: None

OCI-30193: reserved for future use

Cause: None.

Action: None

OCI-30194: reserved for future use

Cause: None.

Action: None

OCI-30195: reserved for future use

Cause: None.

Action: None

OCI-30196: reserved for future use

Cause: None.

Action: None

OCI-30197: reserved for future use

Cause: None.

Action: None

OCI-30198: reserved for future use

Cause: None.

Action: None

OCI-30199: reserved for future use

Cause: None.

Action: None

OCI-30930: XML node '*string*' (type=*string*) does not support this operation

Cause: The given node's type is not supported for this operation. For example, trying to add children to an attribute node, or passing in a document node as a child, are unsupported operations.

Action: Use a valid node type for the operation.

OCI-30931: Element '*string*' cannot contain mixed text

Cause: XML elements must be declared mixed to contain multiple text nodes

Action: Declare this element type as mixed in its schema

OCI-30932: Reference node '*string*' not contained in specified parent node '*string*'

Cause: When using a reference node, it must have the specified parent node

Action: Use a node in the specified parent as the reference

OCI-30933: Element '*string*' may not appear at this point within parent '*string*'

Cause: The ordering specified by the content model of the parent does not allow for this element to occur at this position.

Action: Reorder the child elements to conform with the content model of the parent element

OCI-30934: '*string*' (*string* node) cannot be inserted in parent '*string*' (*string* node)

Cause: The schema does not allow a child node of this type to be inserted into a parent node of this type. For example, only element nodes may only be inserted into a document

Action: Insert only child nodes that make sense for this node type

OCI-30935: XML maxoccurs value (*string*) exceeded

Cause: An attempt was made to insert more than maxoccurs values into a schema-based XML document.

Action: Do not insert more than maxoccurs values into the document.

OCI-30936: Maximum number (*string*) of '*string*' XML node elements exceeded

Cause: An attempt was made to insert more than the allowed number of elements (specified by the maxoccurs facet) into an XML document.

Action: Do not attempt to add more than the maximum number of elements to XML documents.

OCI-30937: No schema definition for '*string*' (namespace '*string*') in parent '*string*'

Cause: The schema definition for the parent node being processed does not allow for the specified child node in its content model. Note that any typecasting via xsi:type must occur before the schema definitions for the new type can be used.

Action: Only insert elements and attributes declared in the schema. Check to make sure that xsi:type (if used) is specified first.

OCI-30938: No prefix defined for namespace '*string*' (particle *string*)

Cause: An XML namespace mapping (xmlns:prefix=namespace URL) must be defined for each particle (element or attribute) stored in an schema-constrained XMLType document.

Action: Add an xmlns attribute definition (attribute name="xmlns:prefix" and value="namespace URL") to the current XMLType document. The safest place to add this attribute is in the root node of the document to ensure that the mapping will be in scope.

OCI-30939: Order violation: Element '*string*' may not follow element '*string*'

Cause: The XML schema specifies a content model that is sequential, where the order of nodes in the instance must follow the order specified by the schema, and this instance relies on the schema validity to avoid maintaining instance order information

Action: Insert elements only in the order specified in the schema

OCI-30940: Cannot resolve prefix '*string*' for QName node '*string*'

Cause: An attempt was made to store a QName value without having a valid namespace in scope for that prefix.

Action: Declare the namespace for the prefix used

OCI-30941: Cannot specify empty URI for non-default namespace '*string*'

Cause: An attempt was made to insert a namespace declaration for a non-default namespace using an empty URI string.

Action: Specify a non-empty URI for namespace declarations other than the default namespace.

OCI-30942: XML Schema Evolution error for schema '*string*' table *string* column '*string*'

Cause: The given XMLType table/column which conforms to the given schema had errors during evolution. For more information, see the more specific error below this one

Action: Based on the schema, table and column information in this error and the more specific error below, take corrective action

OCI-30943: XML Schema '*string*' is dependent on XML schema '*string*'

Cause: Not all dependent schemas were specified and/or the schemas were not specified in dependency order, i.e., if schema S1 is dependent on schema S, S must appear before S1.

Action: Include the previously unspecified schema in the list of schemas and/or correct the order in which the schemas are specified. Then retry the operation.

OCI-30944: Error during rollback for XML schema '*string*' table *string* column '*string*'

Cause: The given XMLType table/column which conforms to the given schema had errors during a rollback of XML schema evolution. For more information, see the more specific error below this one

Action: Based on the schema, table and column information in this error and the more specific error below, take corrective action

OCI-30945: Could not create mapping table '*string*'

Cause: A mapping table could not be created during XML schema evolution. For more information, see the more specific error below this one

Action: Ensure that a table with the given name does not exist and retry the operation

OCI-30946: XML Schema Evolution warning: temporary tables not cleaned up

Cause: An error occurred after the schema was evolved while cleaning up temporary tables. The schema evolution was successful

Action: If the user needs to remove the temporary tables, use the mapping table to get the temporary table names and drop them.

OCI-30951: Element or attribute at Xpath *string* exceeds maximum length

Cause: An attempt was made to insert a node of length exceeding the maximum length (specified by the maxLength facet) into an XML document.

Action: Do not attempt to add a node exceeding the maximum length to XML documents.

OCI-30990: insufficient privileges to change owner of resource *string*

Cause: An attempt was made to change the *Owner* field of an XML DB resource without sufficient privileges to do so.

Action: Switch to SYS before performing the ownership change, or have the intended recipient of the resource perform the transfer.

OCI-30991: cannot use DOM to add special attribute to schema-based parent

Cause: An attempt was made to add or remove an xsi:schemaLocation, xsi:noNamespaceSchemaLocation, xsi:type, or xsi:nil attribute to or from a schema-based XML node using DOM.

Action: Use the updateXML operator instead of DOM.

OCI-31000: Resource '*string*' is not an XDB schema document

Cause: The given schema URL does not refer to a registered XDB schema

Action: Make sure the specified schema has been registered in XDB

OCI-31001: Invalid resource handle or path name "*string*"

Cause: An invalid resource handle or path name was passed to the XDB hierarchical resolver.

Action: Pass a valid resource handle or path name to the hierarchical resolver.

OCI-31002: Path name *string* is not a container

Cause: XDB expected the given path name to represent a container.

Action: Pass a path name or resource handle that represents a container.

OCI-31003: Parent *string* already contains child entry *string*

Cause: An attempt was made to insert a duplicate child into the XDB hierarchical resolver.

Action: Insert a unique name into the container.

OCI-31004: Length *string* of the BLOB in XDB\$H_INDEX is below the minimum *string*

Cause: In the XDB\$H_INDEX table, the CHILDREN column, a BLOB, must have a certain minimum length without being chained. The calculated length of the LOB was less than the stated minimum.

Action: Set the value of the init.ora parameter db_block_size to at least 2K. For XDB to run at its fastest, set db_block_size to 8K.

OCI-31005: Path name length *string* exceeds maximum length *string*

Cause: The length of a path name passed to the XDB hierarchical resolver exceeded the maximum length.

Action: Choose a shorter path name.

OCI-31006: Path name segment length *string* exceeds maximum length *string*

Cause: The length of a path name segment passed to the XDB hierarchical resolver exceeded the maximum length of a path name segment.

Action: Choose a shorter path name segment.

OCI-31007: Attempted to delete non-empty container *string/string*

Cause: An attempt was made to delete a non-empty container in the XDB hierarchical resolver.

Action: Either perform a recursive deletion, or first delete the contents of the container.

OCI-31009: Access denied for property *string*

Cause: An attempt was made to access a property you don't have access to

Action: Check the ACL to see what privileges you have for this property

OCI-31010: XML element index *string* exceeds maximum insertion index *string*

Cause: An attempt was made to insert an XML element at an invalid index location in the node.

Action: Choose a new index that falls within the allowed range.

OCI-31011: XML parsing failed

Cause: XML parser returned an error while trying to parse the document.

Action: Check if the document to be parsed is valid.

OCI-31012: Given XPATH expression not supported

Cause: XPATH expression passed to the function is currently unsupported.

Action: Check the xpath expression and change it to use a supported expression.

OCI-31013: Invalid XPATH expression

Cause: XPATH expression passed to the function is invalid.

Action: Check the xpath expression for possible syntax errors.

OCI-31014: Attempted to delete the root container

Cause: An attempt was made to delete the root container in the hierarchical index.

Action: Do not delete the root container.

OCI-31015: Attempted to insert entry without name

Cause: An attempt was made to insert an entry into the hierarchical resolver without a child name.

Action: Supply a child name and try inserting again.

OCI-31016: Attempted to delete entry without name

Cause: An attempt was made to delete an entry from the hierarchical resolver without a child name.

Action: Supply a child name and try deleting again.

OCI-31017: Error generating unique OID for XML document

Cause: An error occurred while generating a globally unique OID for storing an XML document.

Action: n/a

OCI-31018: Error deleting XML document

Cause: The XMLType object pointed to by the given REF could not be deleted because either the REF was invalid or it pointed to a non-existent table.

Action: Either use FORCE deletion or supply a valid REF.

OCI-31019: Recursive deletion snapshot too old for *string/string*

Cause: Changes were made to the structure of a directory while it was being recursively deleted.

Action: Try deleting the directory again.

OCI-31020: The operation is not allowed, Reason: *string*

Cause: The operation attempted is not allowed

Action: See reason and change to a valid operation.

OCI-31021: Element definition not found

Cause: The element definition was not found.

Action: Supply the definition for the element or use a defined element.

OCI-31022: Element not found

Cause: The element was not found.

Action: Make sure the specified element exists.

OCI-31023: Index size error

Cause: The index is greater than the allowed value.

Action: Make sure the index is less than allowed value.

OCI-31025: Invalid document element

Cause: An attempt was made to replace the data at an invalid index number in the XML document

Action: Supply a correct occurrence number and try again.

OCI-31027: Path name or handle *string* does not point to a resource

Cause: An attempt was made to retrieve a resource based on a path name or resource handle that points to an entity other than a resource.

Action: Do not attempt to retrieve a resource based on that path name or resource handle.

OCI-31028: Resource metadata length *string* exceeded maximum length *string*

Cause: An attempt was made to insert resource metadata that exceeded the maximum length of that type of metadata.

Action: Keep resource metadata within its allowed length.

OCI-31029: Cannot bind to unsaved resource

Cause: An attempt was made to bind to a resource that had not been saved to disk.

Action: Bind only to saved resources.

OCI-31030: Unable to retrieve XML document

Cause: The resource had an invalid (dangling) REF to an XML document.

Action: Rebind the resource using a valid XMLType REF.

OCI-31033: Requested number of XML children *string* exceeds maximum *string*

Cause: An attempt was made to add more than the maximum number of allowable children in an XML element.

Action: Redefine the schema to allow breaking up of the children among siblings.

OCI-31035: Could not bind locked resource to path *string/string*

Cause: An attempt was made to bind an existing resource to a new location in the hierarchy, but a lock could not be obtained on the resource.

Action: Commit or roll back the transaction that has the lock on the resource.

OCI-31037: Invalid XML attribute name *string*

Cause: The attribute name in the XML document did not match anything in the associated schema.

Action: Supply only schema-defined or XML standard attributes.

OCI-31038: Invalid *string* value: "*string*"

Cause: The text in the XML document did not represent a valid value given the datatype and other constraints in the schema.

Action: Ensure that the specified value in XML documents is valid with respect to the datatype and other constraints in the schema.

OCI-31039: XML namespace length *string* exceeds maximum *string*

Cause: The length of the disk-formatted XML namespace exceeded the maximum.

Action: Keep XML namespace declarations below the maximum length.

OCI-31040: Property *string*: XML type (*string*) not compatible with internal memory type (*string*)

Cause: The XML datatype given is inconsistent with the database datatype, and a conversion cannot be made.

Action: This is an internal error, generally resulting from corruption of the compiled XML schema. Re-register schemas, or contact Oracle support.

OCI-31041: Property *string*: Memory type (*string*) not compatible with database type (*string*)

Cause: The memory type associated with this property is mapped to an incompatible database type, and a conversion cannot be made.

Action: This is an internal error, generally resulting from corruption of the compiled XML schema. Re-register schemas, or contact Oracle support.

OCI-31042: Too many properties in type '*string*'

Cause: The type can only have the same number of properties (elements and attributes) as a table can have columns.

Action: Modify the XML schema to move properties into subelements that are not inlined.

OCI-31043: Element '*string*' not globally defined in schema '*string*'

Cause: The specified element name has not been defined at the top level of the XML schema (i.e. globally). Elements must be defined globally to be the root of an XMLType object.

Action: Check the XML schema definition to make sure the specified element name has been defined at the top level.

OCI-31044: Top-level prefix length *string* exceeds maximum *string*

Cause: An attempt was made to save to disk a top-level XML namespace prefix whose length exceeded the maximum.

Action: Do not define XML namespace prefixes that exceed the maximum length.

OCI-31045: Cannot store more than *string* extras outside the root XML node

Cause: An attempt was made to store more than the maximum number of XML extras (e.g. comments and processing instructions) either before or after the document's root node.

Action: Keep the number of extras outside the root node below the maximum.

OCI-31046: Incorrect argument(s) specified in the operator

Cause: One or more of the arguments specified in the operator in the query are incorrect

Action: Correct the arguments specified in the operator

OCI-31047: Could not retrieve resource data at path *string*

Cause: An error occurred while retrieving the contents and/or metadata of a resource.

Action: Contact Oracle customer support.

OCI-31048: Unsaved resources cannot be updated

Cause: An attempt was made to update a resource that was never saved to disk.

Action: Perform a resource insertion instead.

OCI-31050: Access denied

Cause: The requested access privileges have not been granted to the current user. User must be granted privileges prior to resource access.

Action: Check the set of requested access privileges to make sure that they are included in the set of access privileges granted to the user.

OCI-31051: Requested access privileges not supported

Cause: The requested access privileges are not supported for the specified resource.

Action: Ensure that the set of requested access privileges are valid access privileges for the specified resource.

OCI-31052: Cannot delete ACL with other references

Cause: The requested deletion of an ACL resource cannot proceed. The ACL is in use by other resources.

Action: Remove the resources that are making reference to the ACL in question and try again.

OCI-31053: The value of the depth argument in the operator cannot be negative

Cause: The value of the depth argument passed to the primary operator is not a positive integer

Action: Pass a positive value of the depth argument

OCI-31054: The *string* operator cannot have an ancillary operator

Cause: An ancillary operator was used with an operator which does not support ancillary operators

Action: Remove the ancillary operator in the query

OCI-31055: A null XMLType element cannot be inserted into RESOURCE_VIEW

Cause: The element which is being inserted into the RESOURCE_VIEW is NULL

Action: Specify a non-null XMLType element to insert into RESOURCE_VIEW

OCI-31056: The document being inserted does not conform to *string*

Cause: The XMLType element being inserted into the RESOURCE_VIEW does not conform to the specified Schema

Action: Insert an element which conforms to the specified Schema

OCI-31057: Display Name of the element being inserted is null

Cause: The Display Name of the element which is being inserted into the RESOURCE_VIEW is null

Action: Specify the Display Name and insert the element into RESOURCE_VIEW

OCI-31058: cannot modify read-only XOBs

Cause: Read-Only XOBs cannot be modified.

Action: Use only read operations on such a XOB.

OCI-31059: Cannot insert root XML document node if it already exists

Cause: An attempt was made to insert a root node into an XML document that already had a root node.

Action: Call the appropriate replace function to replace the node instead of inserting it anew.

OCI-31060: Resource at path *string* could not be deleted

Cause: An error occurred while deleting the named resource. The specific error can be found one lower on the error stack.

Action: Look at the next error on the stack and take appropriate action.

OCI-31061: XML event error

Cause: The specified error occurred in XDB.

Action: Correct the error or contact Oracle Support Services.

OCI-31062: Cannot delete an unsaved resource

Cause: An attempt was made to delete a resource that had not been saved to disk.

Action: Delete only saved resources.

OCI-31065: Cannot modify read-only property [*string*]

Cause: An attempt was made to modify an immutable XML node.

Action: Use only read operations on such properties.

OCI-31066: Insertion of *string* into *string* creates a cycle

Cause: An attempt was made to insert a link into the XDB hierarchy that would create a cycle in the tree.

Action: Ensure that links to existing resources do not cause cycles.

OCI-31067: XML nodes must be updated with nodes of the same type

Cause: An attempt was made to use updateXML to update an XML node with a node of another type.

Action: Ensure that the node specified by the XPath matches the type of new data provided.

OCI-31068: updateXML expected data format [*string*] instead of [*string*]

Cause: An attempt was made to use updateXML to update data with a node of the incorrect type. Text and attribute nodes must be updated with string data, whereas element nodes must be updated with XMLType data.

Action: Use CREATEXML or getStringVal to coerce the new data to the proper format.

OCI-31069: Cannot apply typed changes to non-schema-based XMLType nodes

Cause: An attempt was made to insert, delete, or update a non-schema-based XMLType node using an XML schema definition.

Action: Make changes to non-typed nodes only by referencing their tag names.

OCI-31070: Invalid database user ID *string*

Cause: An attempt was made set an invalid user ID into an XDB resource metadata property.

Action: Verify the validity of the user ID and try again.

OCI-31071: Invalid database username or GUID *string*

Cause: An attempt was made to set an invalid username or GUID into an XDB resource metadata property.

Action: Verify the validity of the username or GUID and try again.

OCI-31072: Too many child nodes in XMLType fragment for updateXML

Cause: An attempt was made to pass an XMLType fragment with multiple children as new data for the updateXML operator.

Action: Extract the desired child from the XMLType before passing it to updateXML as the desired new XML node.

OCI-31073: Resource not retrieved using path name

Cause: An attempt was made to access the path name of a resource that was either never saved to disk or was loaded using a method other than with its path name.

Action: Perform path name operations only on resources obtained using a path name.

OCI-31075: invalid *string* declaration in XML Schema

Cause: The XML schema contains an invalid declaration identified by the message.

Action: Fix the identified error and try again.

OCI-31076: required attribute "*string*" not specified

Cause: The XML schema does not specify a required attribute.

Action: Specify a value for the required attribute.

OCI-31077: invalid attribute "*string*" specified

Cause: The XML schema specifies an invalid attribute.

Action: Remove specification of the invalid attribute.

OCI-31078: error in SQL mapping information

Cause: There is an error in the SQL type and table specification within the XML Schema.

Action: Ensure that all specified SQL types and tables are valid and compatible with the corresponding XML types.

OCI-31079: unable to resolve reference to *string* "*string*"

Cause: The identified type or attribute or element could not be resolved.

Action: Make sure that the name corresponds to a valid XML (simple/complex) type or attribute or element and try again.

OCI-31080: type not specified for attribute or element "*string*"

Cause: The identified attribute or element does not have a type.

Action: Make sure that every attribute and element has a valid type specification.

OCI-31081: name not specified for global declaration

Cause: The XML schema does not specify the name for the global declaration of attribute or element or simpleType or complexType.

Action: Specify names for all global declarations.

OCI-31082: invalid attribute "*string*" specified in declaration of "*string*"

Cause: The XML schema specifies an invalid attribute.

Action: Remove specification of the invalid attribute.

OCI-31083: error while creating SQL type "*string*"."*string*"

Cause: An error occurred while trying to create the SQL type based on the specification of a complex type.

Action: Fix the identified error and try again.

OCI-31084: error while creating table "*string*"."*string*" for element "*string*"

Cause: An error occurred while trying to create the table based on the declaration for the identified element.

Action: Fix the identified error and try again.

OCI-31085: schema "string" already registered

Cause: An attempt was made to register a schema with the same URL as a previously registered schema.

Action: Register the schema with a different URL.

OCI-31086: insufficient privileges to register global schema "string"

Cause: An attempt was made to register a global schema without sufficient privileges.

Action: Make sure that the user has sufficient privileges to register a global schema.

OCI-31087: insufficient privileges to delete schema "string"

Cause: An attempt was made to delete a schema resource without sufficient privileges.

Action: Make sure that the user has sufficient privileges to delete the schema.

OCI-31088: object "string"."string" depends on the schema

Cause: An attempt was made to delete a schema which has dependent objects.

Action: Either drop the dependent objects prior to deleting the schema or use the CASCADE or FORCE options.

OCI-31089: schema "string" does not target namespace "string"

Cause: The schema document contains references (via include and import definitions) to other schemas that do not belong to valid namespaces.

Action: Make sure that all schemas referenced via include definitions target the same namespace as the parent schema. Further make sure that the namespace specified in the import definition matches the actual target namespace of the specified schema.

OCI-31090: invalid database schema name "string"

Cause: The XML schema document contains an invalid database schema name. For example, the value of attribute SQLSchema

Action: Make sure that all database user/schema names specified in the XML schema document refer to existing database users/schemas.

OCI-31091: empty string specified as a SQL name

Cause: The XML schema document contains a null SQL name. For example, the values of attributes SQLName, SQLType, defaultTable.

Action: Make sure that all names of SQL schema objects specified in the XML schema document are valid SQL names. Otherwise, remove such attributes from the schema and try again.

OCI-31092: invalid SQL name "string"

Cause: The XML schema document contains an invalid SQL name. For example, the values of attributes SQLName, SQLType, defaultTable.

Action: Make sure that all names of SQL schema objects specified in the XML schema document are valid SQL names. This implies that the database length and other restrictions on names be satisfied.

OCI-31093: null or invalid value specified for parameter : string

Cause: The argument value passed for the given parameter is null or invalid.

Action: Make sure that all the input argument values are valid.

OCI-31094: incompatible SQL type "string" for attribute or element "string"

Cause: The SQL type information provided in the XML schema is not compatible with the XML datatype for the specified attribute or element.

Action: Make sure that the specified SQL types are compatible with the declared XML datatypes.

OCI-31095: cannot generate string : "string.string" already exists

Cause: The type/table name specified in the XML schema document cannot be generated because it is already being used.

Action: Use different names for types/tables or use the NOGEN mode so that schema compiler does not generate new types/tables.

OCI-31096: validation failed for schema

Cause: The XML Schema could not be validated.

Action: Make sure that the SQLType and other datatype mapping is valid.

OCI-31097: Hierarchical Index not empty

Cause: An attempt was made to rebuild the hierarchical index which is not empty.

Action: Delete all rows in the hierarchical index and then rebuild it.

OCI-31099: XDB Security Internal Error

Cause: An XDB Security internal error has occurred.

Action: Contact Oracle Support.

OCI-31100: XDB Locking Internal Error

Cause: An XDB Locking Internal error has occurred.

Action: Contact Oracle Support.

OCI-31101: Token "string" not given while locking resource "string"

Cause: Locking attempted on resource when the principal already owns a lock given by the token above.

Action: Reattempt the lock with the token.

OCI-31102: Already locked in exclusive mode. Cannot add lock.

Cause: The resource is already locked in exclusive mode. Cannot add another lock.

Action: Unlock the existing lock.

OCI-31103: Resource locked in shared mode. Cannot add exclusive lock

Cause: The resource is locked in shared mode. Cannot add a shared lock.

Action: Try locking in shared mode or unlocking the existing lock.

OCI-31104: Cannot find lock with token "string" on "string" for unlock

Cause: The lock may have been unlock or it may have expired.

Action: No action needed. Unlock already successful.

OCI-31105: User does not own lock "string"

Cause: The lock to be unlocked is not owned by the user.

Action: n/a

OCI-31107: Action failed as resource "*string*" is locked by name lock

Cause: Lock requests cause the whole request URI to be locked

Action: Supply lock token or unlock the lock

OCI-31108: Action failed as resource *string* is locked

Cause: Delete/Rename failed because of an existing lock

Action: Do lockdiscovery to find the lock and delete it.

OCI-31109: Action failed as parent resource *string* is locked

Cause: Delete/Rename failed because of a lock on parent resource

Action: Do lockdiscovery to find the lock and delete it.

OCI-31110: Action failed as resource *string* is locked by name

Cause: Delete/Rename failed because one of the children is locked.

Action: Do lockdiscovery to find the lock and delete it.

OCI-31111: table *string* cannot be hierarchically enabled

Cause: Trigger *tablename_xdb_pittrigger* already exists

Action: Either the table is already hierarchically enabled or the user trigger *tablename_xdb_pittrigger* needs to be dropped. Delete all rows in the hierarchical index and then rebuild it.

OCI-31112: fail to *string* for *string* port using xdb configuration

Cause: port number for the defined presentation is not valid

Action: Either the port number is already in use or it is protected. Specify another port number.

OCI-31113: XDB configuration may not be updated with non-schema compliant data

Cause: An attempt was made to update the XDB configuration resource with non-schema or non-schema compliant data.

Action: Check the document to make sure it is schema based and schema compliant.

OCI-31114: XDB configuration has been deleted or is corrupted

Cause: The XDB configuration resource has been deleted or corrupted.

Action: Reinstall XDB, or reinsert a valid configuration document.

OCI-31115: XDB configuration error: *string*

Cause: An error related to XDB configuration has occurred.

Action: Make sure the configuration resource contains valid data.

OCI-31116: Tablespace not specified correctly

Cause: XDB cannot be moved to the specified tablespace.

Action: Specify a valid tablespace.

OCI-31121: The *string* operator can not be FALSE

Cause: The value of the operator that is specified is FALSE

Action: Specify an operator that evaluates to TRUE

OCI-31122: The *string* operator has incorrect RHS value

Cause: The right hand side value that has been specified for the operator does not evaluate to TRUE

Action: Specify value on the right hand side that evaluate to TRUE

OCI-31151: Cyclic definition encountered for *string*: "*string*"

Cause: The schema definition for this type has cycles.

Action: Remove cyclic definition and re-compile schema.

OCI-31153: Cannot create schema URL with reserved prefix "<http://xmlns.oracle.com/xdbschemas/>"

Cause: This prefix is reserved for XDB extended schema URLs and cannot be used in a user specified URL.

Action: Modify the prefix to a different one.

OCI-31154: invalid XML document

Cause: The XML document is invalid with respect to its XML Schema.

Action: Fix the errors identified and try again.

OCI-31155: attribute *string* not in XDB namespace

Cause: The specified attribute should be prefixed with XDB's namespace.

Action: Ensure that all XDB specified attributes are prefixed with XDB's namespace and try again.

OCI-31157: Invalid Content-Type charset

Cause: HTTP Content-Type header had a charset that Oracle does not understand.

Action: Fix the Content-Type header in the HTTP request.

OCI-31158: schema "*string*" currently being referenced

Cause: The specified schema URL is currently being referenced by the same session. This could happen because of PLSQL XMLType variables still in scope.

Action: Ensure all references to this schema in this session are released and try the operation again.

OCI-31159: XML DB is in an invalid state

Cause: XML DB's internal tables are in an invalid state, probably because the database was not upgraded or the upgrade was not successful

Action: Ensure that the database is upgraded successfully. If the problem persists, contact Oracle Support

OCI-31160: max substitution group size *string* exceeded by "*string*" (*string*) for head element "*string*" (*string*)

Cause: The maximum limit on nested substitution groups has been exceeded by an element.

Action: Delete specified schema and re-register it after removing the offending substitution element.

OCI-31161: element or attribute "*string*" cannot be stored out of line

Cause: An element or attribute of a simple type has SQLInline=false

Action: Remove the SQLInline=false qualification for the offending element or attribute

OCI-31162: element or attribute "string" has no SQLType specified

Cause: Schema registration was invoked with GENTYPES=false without specifying a SQLType for some element or attribute

Action: Specify a SQLType for the offending element or attribute and register the schema again

OCI-31163: element or attribute "string" has invalid attribute value "string" (should be "string")

Cause: An element or attribute for a complex type derived by restriction has an attribute whose value is different from that in the base type

Action: Remove the mismatched attribute values from the offending element or attribute

OCI-31164: cannot load object-relational XML attribute using direct path \n

Cause: The table being loaded contains a xml column with object-relational storage. The xmltype column contains a type with subtypes. This type of attribute cannot be loaded with direct path.

Action: Perform the load with conventional path mode.

OCI-31165: cannot load object-relational XML attribute using direct path \n

Cause: The table being loaded contains a xml column with object-relational storage. The xmltype column either contains an out-of-line partitioned table or the table itself is partitioned by one of the attributes of xmltype. This type of table cannot be loaded with direct path.

Action: Perform the load with conventional path mode.

OCI-31167: XML nodes over 64K in size cannot be inserted

Cause: An attempt was made to insert an XML Text Node with a size greater than 64K. This is not supported.

Action: Create text nodes under 64K.

OCI-31168: Node localname and namespace values should be less than 64K

Cause: An attempt was made to specify an XML Node with localname or namespace value greater than or equal to 64K. This is not supported.

Action: Node localnames and namespace values should be under 64K.

OCI-31180: DOM Type mismatch in invalid PL/SQL DOM handle

Cause: The specified PL/SQL DOM handle is referencing a DOM Node whose DOM Type that does not match the one available in the session. This could happen because the pl/sql handle was reused, or the original document is no longer available.

Action: Ensure that the pl/sql handle for the target node is valid and try the operation again.

OCI-31181: PL/SQL DOM handle accesses node that is no longer available

Cause: The specified pl/sql handle is referencing a node in a DOM Document that is no longer available.

Action: Ensure that the pl/sql handle for the target node is valid and try the operation again.

OCI-31182: Too many PL/SQL DOM handles specified

Cause: An attempt was made to create a PL/SQL DOM handle that exceeded the maximum allowable number of PL/SQL DOM handles.

Action: Free PL/SQL DOM handles and try the operation again.

OCI-31185: DOM Nodes do not belong to the same DOM Document

Cause: The specified PL/SQL DOM Node does not belong to the parent DOM Document of the referring DOM Node.

Action: Ensure that both the DOM Nodes are part of the same DOM Document.

OCI-31190: Resource *string* is not a version-controlled resource

Cause: Either one of the following is the cause: - Checkout is requested for a resource that isn't under version control". Only version-controlled resource can be checked out. - Checkout is requested for a row of a non-versioned table.

Action: put the resource under version-control before checking out.

OCI-31191: Resource *string* is already checked out

Cause: Either one of the following is the cause: - Checkout is requested for a resource that is already checked out to the workspace by the same or different user.

Action: checked in the resource from the workspace before checking out

OCI-31192: Resource *string* has not been checked out

Cause: Either one of the following is the cause: - Checkin or uncheckout is requested for a resource that has not been checked out to the workspace by any user in a workspace

Action: checked in the resource from the workspace before checking out

OCI-31193: This versioning feature isn't supported for resource *string*

Cause: Either one of the following is the cause: - Container cannot be put under version-controlled.

Action: Avoid using these features.

OCI-31194: Resource *string* is already deleted

Cause: Access a version-controlled resource that is already deleted.

Action: Recreate the resource. Remove the cyclic definitions in the type and retry compilation.

OCI-31195: XML node '*string*' (type=*string*) does not support this operation

Cause: The given node's type is not supported for this operation. For example, trying to add children to an attribute node, or passing in a document node as a child, are unsupported operations.

Action: Use a valid node type for the operation.

OCI-31196: XML nodes over *string* in size cannot be printed

Cause: An attempt was made to use an XML Text Node with a size greater than 64K, or an XML Comment Node with a size greater than 4K. These cannot be printed. For example, trying to add children to an attribute node, or passing in a document node as a child, are unsupported operations.

Action: Use getClobVal() or getStringVal() to print the Document.

OCI-31197: Error in processing file *string*

Cause: An error occurred while operating on the specified file. The possible causes are the file header is corrupt or check the next error on stack

Action: Ensure that the specified file is correct. Look at the next error on the stack and take appropriate action.

OCI-31198: Mismatch in number of bytes transferred due to non-binary mode

Cause: An error occurred while reading the specified file. The most probable cause is that the transfer was initiated in ASCII mode.

Action: Ensure that the transfer mode is set to BINARY

OCI-31199: Warning in processing file *string*

Cause: A warning was raised while operating on the specified file. However, the current operation was completed successfully.

Action: This is primarily an informational message. Look at the next error on the stack to obtain further information.

OKSK-00000 to OKSK-00029

OKSK-00000: %2 %3

Cause: Informational.

Action: None

OKSK-00001: %2 %3

Cause: Informational.

Action: None

OKSK-00002: %2 %3

Cause: Informational.

Action: None

OKSK-00003: %2 %3

Cause: Informational.

Action: None

OKSK-00004: Module load succeeded. Build information: %2 %3 %4

Cause: Informational.

Action: None

OKSK-00005: Module failed to load and start with status %2. Build information: %3 %4 %5

Cause: Informational.

Action: None

OKSK-00006: Module unloaded.

Cause: Informational.

Action: None

OKSK-00007: Information has been saved in the file %2 . Include the contents of this file if reporting a problem to Oracle.

Cause: Informational.

Action: None

OKSK-00008: Cluster Membership Change starting - Incarnation %2.

Cause: Informational.

Action: None

OKSK-00009: Cluster Membership Change complete.

Cause: Informational.

Action: n/a

OKSK-00010: Persistent OKS log opened at %2.

Cause: Informational.

Action: None

OKSK-00011: Failed to allocate kernel memory for %2.

Cause: Unable to allocate memory for a required function.

Action: Contact Oracle Support Services.

OKSK-00012: Failed to open %2.

Cause: Unable to open a persistent OKS log file. Likely an invalid file path was specified or there was an internal error.

Action: Ensure that the file or directory exists else. If it does, contact Oracle Support Services.

OKSK-00013: Terminating Persistent OKS log.

Cause: Persistent OKS logging terminated due to the previous message.

Action: Informational.

OKSK-00014: Unable to generate an persistent OKS log file name.

Cause: Failed to generate an persistent OKS log file name.

Action: Internal error.

OKSK-00015: Persistent log thread creation failed.

Cause: Failed to create a kernel thread.

Action: Internal error.

OKSK-00016: Configuration error: buffer size %2 bytes is out of range.

Cause: The user selected an invalid buffer size.

Action: Select a different buffer size.

OKSK-00017: Configuration error: interval timer of %2 ms is out of range.

Cause: The user selected an invalid timer interval.

Action: Select a different timer value.

OKSK-00018: Configuration error: low water level of %2 bytes is out of range.

Cause: The user selected an invalid low water value.

Action: Select a different low water value.

OKSK-00019: Configuration error: high water level of %2 bytes is out of range.

Cause: The user selected an invalid high water value.

Action: Select a different high water value.

OKSK-00020: Configuration error: maximum number of log files (%2) is out of range.

Cause: The user selected an invalid maximum file number value.

Action: Select a different file number value.

OKSK-00021: Configuration error: The maximum file size of %2 bytes is out of range.

Cause: The user selected an invalid maximum log file size value.

Action: Select a different maximum log file size value.

OKSK-00022: File write error: File name '*string*'.

Cause: A write to the persistent OKS log file failed - possibly due to a full file system. Otherwise, it is an internal error. The in-memory OKS log will contain details regarding the error.

Action: Free up file systems space and restart the OKS persistent log ('acfsutil plogconfig -d *dir*'). If freeing up file system space does not resolve the problem, contact Oracle Support Services.

OKSK-00023: Cluster membership node list:

Cause: Informational.

Action: None

OKSK-00024: Node %2 (Interconnect address: %3.%4.%5.%6)

Cause: Informational.

Action: None

OKSK-00025: Cluster membership node count: %2, Local Node Number: %3.

Cause: Informational.

Action: None

OKSK-00026: Cluster membership rebuild manager failed to initialize.

Cause: Informational.

Action: Contact Oracle Support.

OKSK-00027: Oracle kernel distributed lock manager hash size is %2

Cause: Informational.

Action: None

OKSK-00028: In memory kernel log buffer address: %2, size: %3

Cause: Informational.

Action: None

OKSK-00029: Unable to %2 the log buffer.

Cause: Informational.

Action: None

ORA-00000 to ORA-00877

ORA-00000: normal, successful completion

Cause: Normal exit.

Action: None

ORA-00001: unique constraint (*string.string*) violated

Cause: An UPDATE or INSERT statement attempted to insert a duplicate key. For Trusted Oracle configured in DBMS MAC mode, you may see this message if a duplicate entry exists at a different level.

Action: Either remove the unique restriction or do not insert the key.

ORA-00017: session requested to set trace event

Cause: The current session was requested to set a trace event by another session.

Action: This is used internally; no action is required.

ORA-00018: maximum number of sessions exceeded

Cause: All session state objects are in use.

Action: Increase the value of the SESSIONS initialization parameter.

ORA-00019: maximum number of session licenses exceeded

Cause: All licenses are in use.

Action: Increase the value of the LICENSE MAX SESSIONS initialization parameter.

ORA-00020: maximum number of processes (*string*) exceeded

Cause: All process state objects are in use.

Action: Increase the value of the PROCESSES initialization parameter.

ORA-00021: session attached to some other process; cannot switch session

Cause: The user session is currently used by others.

Action: Do not switch to a session attached to some other process.

ORA-00022: invalid session ID; access denied

Cause: Either the session specified does not exist or the caller does not have the privilege to access it.

Action: Specify a valid session ID that you have privilege to access, that is either you own it or you have the CHANGE_USER privilege.

ORA-00023: session references process private memory; cannot detach session

Cause: An attempt was made to detach the current session when it contains references to process private memory.

Action: A session may contain references to process memory (PGA) if it has an open network connection, a very large context area, or operating system privileges. To allow the detach, it may be necessary to close the session's database links and/or cursors. Detaching a session with operating system privileges is always disallowed.

ORA-00024: logins from more than one process not allowed in single-process mode

Cause: Trying to login more than once from different processes for ORACLE started in single-process mode.

Action: Logoff from the other process.

ORA-00025: failed to allocate *string*

Cause: Out of memory.

Action: Restart with larger sga heap.

ORA-00026: missing or invalid session ID

Cause: Missing or invalid session ID string for ALTER SYSTEM KILL SESSION.

Action: Retry with a valid session ID.

ORA-00027: cannot kill current session

Cause: Attempted to use ALTER SYSTEM KILL SESSION to kill the current session.

Action: None

ORA-00028: your session has been killed

Cause: A privileged user has killed your session and you are no longer logged on to the database.

Action: Login again if you wish to continue working.

ORA-00029: session is not a user session

Cause: The session ID specified in an ALTER SYSTEM KILL SESSION command was not a user session (for example, recursive, etc.).

Action: Retry with a user session ID.

ORA-00030: User session ID does not exist.

Cause: The user session ID no longer exists, probably because the session was logged out.

Action: Use a valid session ID.

ORA-00031: session marked for kill

Cause: The session specified in an ALTER SYSTEM KILL SESSION command cannot be killed immediately (because it is rolling back or blocked on a network operation), but it has been marked for kill. This means it will be killed as soon as possible after its current uninterruptable operation is done.

Action: No action is required for the session to be killed, but further executions of the ALTER SYSTEM KILL SESSION command on this session may cause the session to be killed sooner.

ORA-00032: invalid session migration password

Cause: The session migration password specified in a session creation call was invalid (probably too long).

Action: Retry with a valid password (less than 30 chars).

ORA-00033: current session has empty migration password

Cause: An attempt was made to detach or clone the current session and it has an empty migration password. This is not allowed.

Action: Create the session with a non-empty migration password.

ORA-00034: cannot *string* in current PL/SQL session

Cause: An attempt was made to issue a commit or rollback from a PL/SQL object (procedure, function, package) in a session that has this disabled (by 'alter session disable commit in procedure')

Action: Enable commits from PL/SQL in this session, or do not attempt to use commit or rollback in PL/SQL when they are disabled in the current session.

ORA-00035: LICENSE_MAX_USERS cannot be less than current number of users

ORA-00036: maximum number of recursive SQL levels (*string*) exceeded

Cause: An attempt was made to go more than the specified number of recursive SQL levels.

Action: Remove the recursive SQL, possibly a recursive trigger.

ORA-00037: cannot switch to a session belonging to a different server group

Cause: An attempt was made to switch to a session in a different server group. This is not allowed.

Action: Make sure the server switches to a session that belongs to its server group.

ORA-00038: Cannot create session: server group belongs to another user

Cause: An attempt was made to create a non-migratable session in a server group that is owned by a different user.

Action: A server group is owned by the first user who logs into a server in the server group in non-migratable mode. All subsequent non-migratable mode logins must be made by the user who owns the server group. To have a different user login in non-migratable mode, the ownership of the server group will have to be changed. This can be done by logging off all current sessions and detaching from all existing servers in the server group and then having the new user login to become the new owner.

ORA-00039: error during periodic action

Cause: An unexpected error occurred while executing a periodically invoked action.

Action: Check the error stack for detailed error information.

ORA-00040: active time limit exceeded - call aborted

Cause: The Resource Manager SWITCH_TIME limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

ORA-00041: active time limit exceeded - session terminated

Cause: The Resource Manager SWITCH_TIME limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

ORA-00042: Unknown Service name *string*

Cause: An attempt was made to use an invalid application service.

Action: Use a valid service name from SERVICE\$ or add a new service using the DBMS_SERVICE package.

ORA-00043: remote operation failed

Cause: Execution of the inter-instance operation failed.

Action: Check the status of the target instance. The operation may have partially executed. Verify the result of the intended operation.

ORA-00044: timed_statistics must be TRUE when statistics_level is not BASIC

Cause: The user attempted to set `timed_statistics` to `FALSE` when `statistics_level` was not `BASIC`. `timed_statistics` is required to be `TRUE` to collect meaningful statistics when `statistics_level` is set to `TYPICAL` or `ALL`.

Action: Either set `timed_statistics` to `TRUE` or set `statistics_level` to `BASIC`.

ORA-00045: Your session has been terminated with no replay.

Cause: A privileged user terminated your session and you were no longer logged on to the database. Your session will not be replayed by Application Continuity or Transparent Application Failover (TAF).

Action: Log in again if you wish to continue working.

ORA-00046: cannot modify sessions parameter

Cause: An attempt was made to alter the `sessions` parameter in the root container or non-consolidated database.

Action: The `sessions` parameter behaves like a static parameter in root containers and non-consolidated databases and hence cannot be altered. It can only be altered from a pluggable database.

ORA-00047: cannot set sessions parameter to this value

Cause: An attempt was made to alter the `sessions` parameter to a value greater than the root container's session value.

Action: The `sessions` parameter can only be set to a value less than or equal to the root container's session value.

ORA-00050: operating system error occurred while obtaining an enqueue

Cause: Could not obtain the operating system resources necessary to cover an oracle enqueue. This is normally the result of an operating system user quota that is too low.

Action: Look up the operating system error in your system documentation and perform the needed action.

ORA-00051: timeout occurred while waiting for a resource

Cause: Usually due to a dead instance.

Action: Check for any dead, unrecovered instances and recover them.

ORA-00052: maximum number of enqueue resources (*string*) exceeded

Cause: Ran out of enqueue resources.

Action: Increase the value of the `ENQUEUE_RESOURCES` initialization parameter.

ORA-00053: maximum number of enqueues exceeded

Cause: Ran out of enqueue state objects.

Action: Increase the value of the `ENQUEUEES` initialization parameter.

ORA-00054: resource busy and acquire with NOWAIT specified or timeout expired

Cause: Interested resource is busy.

Action: Retry if necessary or increase timeout.

ORA-00055: maximum number of DML locks exceeded

Cause: Ran out of DML lock state objects.

Action: Increase the value of the DML_LOCKS initialization parameter and warm start.

ORA-00056: DDL lock on object '*string.string*' is already held in an incompatible mode

Cause: An attempt was made to acquire a DDL lock that is already locked.

Action: This happens if you attempt to drop a table that has parse locks on it.

ORA-00057: maximum number of temporary table locks exceeded

Cause: The number of temporary tables equals or exceeds the number of temporary table locks. Temporary tables are often created by large sorts.

Action: Increase the value of the TEMPORARY_TABLE_LOCKS initialization parameter and warm start.

ORA-00058: DB_BLOCK_SIZE must be *string* to mount this database (not *string*)

Cause: DB_BLOCK_SIZE initialization parameter is wrong for the database being mounted. It does not match the value used to create the database.

Action: Fix the value of the DB_BLOCK_SIZE parameter or mount a database that matches the value.

ORA-00059: maximum number of DB_FILES exceeded

Cause: The value of the DB_FILES initialization parameter was exceeded.

Action: Increase the value of the DB_FILES parameter and warm start.

ORA-00060: deadlock detected while waiting for resource

Cause: Transactions deadlocked one another while waiting for resources.

Action: Look at the trace file to see the transactions and resources involved. Retry if necessary.

ORA-00061: another instance has a different DML_LOCKS setting

Cause: The shared instance being started is using DML locks, and the running instances are not, or vice-versa.

Action: Ensure that all instances' INIT.ORA files specify the DML_LOCKS parameter as 0 or all as non-zero.

ORA-00062: DML full-table lock cannot be acquired; DML_LOCKS is 0

Cause: The instance was started with DML_LOCKS = 0, and the statement being executed needs a full-table lock (S, X, or SSX).

Action: Restart the instance with DML_LOCKS not equal to zero, and reexecute the statement.

ORA-00063: maximum number of log files exceeded *string*

Cause: The number of log files specified exceeded the maximum number of log files supported in this release.

Action: Re-create the control file with the highest number of log files no greater than the maximum supported in this release.

ORA-00064: object is too large to allocate on this O/S (*string,string,string*)

Cause: An initialization parameter was set to a value that required allocating more contiguous space than can be allocated on this operating system.

Action: Reduce the value of the initialization parameter.

ORA-00065: initialization of FIXED_DATE failed

Cause: The FIXED_DATE string was not in date format yyyy-mm-dd:hh24:mi:ss.

Action: Make sure the initialization parameter is in the correct date format.

ORA-00066: SID '*string*' contains an illegal character or is too long

Cause: The specified SID contained an illegal character or the SID specified was too long, which cannot occur in an SPFILE setting. Illegal characters include ,#"=() and whitespace.

Action: Use a SID that does not contain a special character or whitespace. Check platform specific documentation for the maximum length of SID.

ORA-00067: invalid value *string* for parameter *string*; must be at least *string*

Cause: The value for the initialization parameter is invalid.

Action: Choose a value as indicated by the message.

ORA-00068: invalid value *string* for parameter *string*, must be between *string* and *string*

Cause: The value for the initialization parameter is invalid.

Action: Choose a value as indicated by the message.

ORA-00069: cannot acquire lock -- table locks disabled for *string*

Cause: A command was issued that tried to lock the table indicated in the message. Examples of commands that can lock tables are: LOCK TABLE, ALTER TABLE ... ADD (...), and so on.

Action: Use the ALTER TABLE ... ENABLE TABLE LOCK command, and retry the command.

ORA-00070: command *string* is not valid

Cause: An invalid debugger command was specified.

Action: Type HELP to see the list of available commands.

ORA-00071: process number must be between 1 and *string*

Cause: An invalid process number was specified.

Action: Specify a valid process number.

ORA-00072: process "*string*" is not active

Cause: An invalid process was specified.

Action: Specify a valid process.

ORA-00073: command *string* takes between *string* and *string* argument(s)

Cause: An incorrect number of arguments was specified.

Action: Specify the correct number of arguments. Type HELP to see the list of commands and their syntax.

ORA-00074: no process has been specified

Cause: No debug process has been specified.

Action: Specify a valid process.

ORA-00075: process "*string*" not found in this instance

Cause: The specified process was not logged on to the current instance.

Action: Specify a valid process.

ORA-00076: dump *string* not found

Cause: An attempt was made to invoke a dump that does not exist.

Action: Type DUMPLIST to see the list of available dumps.

ORA-00077: dump *string* is not valid

Cause: An attempt was made to invoke an invalid dump.

Action: Try another dump.

ORA-00078: cannot dump variables by name

Cause: An attempt was made to dump a variable by name on a system that does not support this feature.

Action: Try the PEEK command.

ORA-00079: variable *string* not found

Cause: An attempt was made to dump a variable that does not exist.

Action: Use a valid variable name.

ORA-00080: invalid global area specified by level *string*

Cause: An attempt was made to dump an invalid global area.

Action: Use level 1 for the PGA, 2 for the SGA, and 3 for the UGA. Use <extra + level> to dump global area *level* as well as *extra* bytes for every pointer; *extra* must be a multiple of 4.

ORA-00081: address range [*string*, *string*] is not readable

Cause: An attempt was made to read/write an invalid memory address range.

Action: Try another address or length.

ORA-00082: memory size of *string* is not in valid set of [1], [2], [4]*stringstringstringstring*

Cause: An invalid length was specified for the POKE command.

Action: Use a valid length (either 1, 2, 4, or possibly 8).

ORA-00083: warning: possibly corrupt SGA mapped

Cause: Even though there may be SGA corruptions, the SGA was mapped.

Action: Use the DUMPSGA command to dump the SGA.

ORA-00084: global area must be PGA, SGA, or UGA

Cause: An attempt was made to dump an invalid global area.

Action: Specify either PGA, SGA, or UGA.

ORA-00085: current call does not exist

Cause: An invalid attempt was made to dump the current call heap.

Action: Wait until the process starts a call.

ORA-00086: user call does not exist

Cause: An invalid attempt was made to dump the user call heap.

Action: Wait until the process starts a call.

ORA-00087: command cannot be executed on remote instance

Cause: Cluster database command issued for non cluster database ORADEBUG command.

Action: Issue the command without the cluster database syntax.

ORA-00088: command cannot be executed by shared server

Cause: Debug command issued on shared server.

Action: Reissue the command using a dedicated server.

ORA-00089: invalid instance number in ORADEBUG command

Cause: An invalid instance number was specified in a cluster database ORADEBUG command.

Action: Reissue the command with valid instance numbers.

ORA-00090: failed to allocate memory for cluster database ORADEBUG command

Cause: Could not allocate memory needed to execute cluster database oradebug.

Action: Reissue the command on each instance with single-instance oradebug.

ORA-00091: LARGE_POOL_SIZE must be at least *string*

Cause: The value of LARGE_POOL_SIZE is below the minimum size.

Action: Increase the value of LARGE_POOL_SIZE past the minimum size.

**ORA-00092: LARGE_POOL_SIZE must be greater than
LARGE_POOL_MIN_ALLOC**

Cause: The value of LARGE_POOL_SIZE is less than the value of LARGE_POOL_MIN_ALLOC.

Action: Increase the value of LARGE_POOL_SIZE past the value of LARGE_POOL_MIN_ALLOC.

ORA-00093: *string* must be between *string* and *string*

Cause: The parameter value is not in a valid range.

Action: Modify the parameter value to be within the specified range.

ORA-00094: *string* requires an integer value

Cause: The parameter value is not an integer.

Action: Modify the parameter value to be an integer.

ORA-00096: invalid value *string* for parameter *string*, must be from among *string*

Cause: The value for the initialization parameter is invalid.

Action: Choose a value as indicated by the message.

ORA-00097: use of Oracle SQL feature not in SQL92 *string* Level

Cause: Usage of Oracle's SQL extensions.

Action: n/a

ORA-00098: creating or mounting the database requires a parameter file

Cause: An attempt was made to create or mount the database when the instance was started without a parameter file.

Action: Restart the instance with a parameter file.

ORA-00099: warning: no parameter file specified for *string* instance

Cause: Even though no parameter file was specified, the instance was started with all default values.

Action: None

ORA-00100: no data found

Cause: An application made reference to unknown or inaccessible data.

Action: Handle this condition within the application or make appropriate modifications to the application code. NOTE: If the application uses Oracle-mode SQL instead of ANSI-mode SQL, ORA-01403 will be generated instead of ORA-00100.

ORA-00101: invalid specification for system parameter DISPATCHERS

Cause: The syntax for the DISPATCHERS parameter is incorrect.

Action: Refer to the manual for correct syntax.

ORA-00102: network protocol *string* cannot be used by dispatchers

Cause: The network specified in DISPATCHERS does not have the functionality required by the dispatchers.

Action: Refer to the manual on network protocols supported by the dispatchers.

ORA-00103: invalid network protocol; reserved for use by dispatchers

Cause: The network specified in the SQL*Net connect string is reserved for use by the dispatchers.

Action: Specify other network protocols in the connection string.

ORA-00104: deadlock detected; all public servers blocked waiting for resources

Cause: All available public servers are servicing requests that require resources locked by a client which is unable to get a public server to release the resources.

Action: Increase the limit for the system parameter MAX_SHARED_SERVERS as the system will automatically start up new servers to break the deadlock until the number of servers reaches the value specified in MAX_SHARED_SERVERS.

ORA-00105: too many dispatcher configurations

Cause: Too many dispatcher configurations have been specified. No more can be added.

Action: Consolidate the dispatcher configurations if possible.

ORA-00106: cannot startup/shutdown database when connected to a dispatcher

Cause: An attempt was made to startup/shutdown database when connected to a shared server via a dispatcher.

Action: Re-connect as user INTERNAL without going through the dispatcher. For most cases, this can be done by connect to INTERNAL without specifying a network connect string.

ORA-00107: failed to connect to ORACLE listener process

Cause: Most likely due to the fact that ORACLE listener has not been started.

Action: Start ORACLE listener if it has not been started. Or else contact your ORACLE representative.

ORA-00108: failed to set up dispatcher to accept connection asynchronously

Cause: Most likely due to the fact that the network protocol used by the the dispatcher does not support asynchronous operations.

Action: Contact your ORACLE representative.

ORA-00109: invalid value for attribute *string*: *string*

Cause: The value specified for the attribute was incorrect.

Action: Refer to the manual for the proper values.

ORA-00110: invalid value *string* for attribute *string*, must be between *string* and *string*

Cause: The value specified for the attribute was incorrect.

Action: Specify a value within the range allowed.

ORA-00111: invalid attribute *string*

Cause: The specified attribute was not recognized.

Action: Refer to the manual for the proper keyword to use to specify a dispatcher attribute.

ORA-00112: value of *string* is null

Cause: The attribute was specified with no value.

Action: Specify a non-null value.

ORA-00113: protocol name *string* is too long

Cause: A protocol name specified in the DISPATCHERS system parameter is too long.

Action: Use a valid protocol name for the DISPATCHERS value.

ORA-00114: missing value for system parameter SERVICE_NAMES

Cause: No value was specified for the SERVICE_NAMES system parameter, nor for the DB_NAME parameter.

Action: Add an SERVICE_NAMES or DB_NAME definition to the INIT.ORA file. By default, SERVICE_NAMES is the value of DB_NAME unless SERVICE_NAMES is explicitly specified.

ORA-00115: connection refused; dispatcher connection table is full

Cause: A connection request was refused by a dispatcher because the dispatcher cannot support any more connections.

Action: Connect to a different dispatcher, or use a dedicated server.

ORA-00116: SERVICE_NAMES name is too long

Cause: A service name specified in the SERVICE_NAMES system parameter is too long.

Action: Use a shorter name in the SERVICE_NAMES value (<= 255 chars).

ORA-00117: PROTOCOL, ADDRESS or DESCRIPTION must be specified

Cause: PROTOCOL, ADDRESS or DESCRIPTION was not specified.

Action: Use one of the attributes: PROTOCOL, ADDRESS or DESCRIPTION to specify the listening address for dispatchers.

ORA-00118: Only one of PROTOCOL, ADDRESS or DESCRIPTION may be specified

Cause: More than one of PROTOCOL, ADDRESS or DESCRIPTION was specified.

Action: Use only one of the attributes: PROTOCOL, ADDRESS or DESCRIPTION to specify the listening address for dispatchers.

ORA-00119: invalid specification for system parameter *string*

Cause: The syntax for the specified parameter is incorrect.

Action: Refer to the Oracle Reference Manual for the correct syntax.

ORA-00120: invalid 'shared_servers' value for the PDB

Cause: 'shared_servers' cannot be set to a non-zero value in a non-ROOT pluggable database (PDB).

Action: In a multitenant container database (CDB) setup, shared servers can be configured only in ROOT. A non-ROOT PDB can disable shared servers for the PDB by setting 'shared_servers' to 0. No other values are allowed. To reenable within the PDB, use 'alter system reset shared_servers'.

ORA-00122: cannot initialize network configuration

Cause: ORACLE could not initialize SQL*Net version 2.

Action: Check the error stack for detailed information.

ORA-00123: idle public server terminating

Cause: Too many idle servers were waiting on the common queue.

Action: This error is used internally, no action is required.

ORA-00125: connection refused; invalid presentation

Cause: The PRESENTATION in the CONNECT_DATA of the TNS address DESCRIPTION is not correct or is not supported.

Action: Correct the PRESENTATION specified in the TNS address.

ORA-00126: connection refused; invalid duplicity

Cause: The DUPLICITY in the CONNECT_DATA of the TNS address DESCRIPTION is not correct or is not supported.

Action: Correct the DUPLICITY specified in the TNS address.

ORA-00127: dispatcher *string* does not exist

Cause: There is currently no dispatcher running with the specified name.

Action: Retry with a name of the form "D####" denoting an existing dispatcher process.

ORA-00128: this command requires a dispatcher name

Cause: Wrong syntax for ALTER SYSTEM SHUTDOWN

Action: Use correct syntax: ALTER SYSTEM SHUTDOWN [IMMEDIATE] 'dispatcher name'

ORA-00129: listener address validation failed '*string*'

Cause: An error was encountered while validating the listener address.

Action: Resolve error or contact your ORACLE representative.

ORA-00130: invalid listener address '*string*'

Cause: The listener address specification is not valid.

Action: Make sure that all fields in the listener address (protocol, port, host, key, ...) are correct.

ORA-00131: network protocol does not support registration '*string*'

Cause: The specified protocol does not support async notification.

Action: Refer to the manual for information on supported network protocols.

ORA-00132: syntax error or unresolved network name '*string*'

Cause: Listener address has syntax error or cannot be resolved.

Action: If a network name is specified, check that it corresponds to an entry in TNSNAMES.ORA or other address repository as configured for your system. Make sure that the entry is syntactically correct.

ORA-00133: value of *string* is too long

Cause: The value specified for the attribute was too long.

Action: Use shorter names and keywords or remove unneeded blanks.

ORA-00134: invalid DISPATCHERS specification #*string*

Cause: The syntax for the n-th DISPATCHERS specification was incorrect.

Action: Refer to the Oracle Reference Manual for the correct syntax.

ORA-00135: missing attribute *string*

Cause: The indicated mandatory attribute was not specified.

Action: Specify a non-null value for the attribute.

ORA-00136: invalid LISTENER_NETWORKS specification #*string*

Cause: The syntax for the nth LISTENER_NETWORKS specification was invalid.

Action: Refer to the Oracle Reference Manual for the correct syntax.

ORA-00137: invalid LISTENER_NETWORKS specification with NAME=*string*

Cause: The syntax for the LISTENER_NETWORKS specification with the indicated NAME was invalid.

Action: Refer to the Oracle Reference Manual for the correct syntax.

ORA-00138: all addresses specified for attribute *string* are invalid

Cause: All of the specified addresses or aliases for the attribute were invalid.

Action: Specify at least one valid address or alias.

ORA-00139: duplicate attribute *string*

Cause: The indicated attribute was specified more than once.

Action: Specify the attribute at most once.

ORA-00150: duplicate transaction ID

Cause: Attempted to start a new transaction with an ID already in use by an existing transaction.

Action: Check your application.

ORA-00151: invalid transaction ID

Cause: The specified transaction ID does not correspond to an existing valid transaction.

Action: Check your application.

ORA-00152: current session does not match requested session

Cause: The current session is not the same as the session that was passed into a `upixado()` call.

Action: Check your application.

ORA-00153: internal error in XA library

Cause: The XA library could not access thread-specific pointers.

Action: Contact customer support.

ORA-00154: protocol error in transaction monitor

Cause: The transaction monitor returned `TMJOIN` on an `AX_REG` call but the transaction was locally suspended.

Action: Contact the transaction monitor customer support.

ORA-00155: cannot perform work outside of global transaction

Cause: The application tried to perform some work on either an Oracle 7.3 server or an Oracle8 server with local transactions disabled while outside of a global transaction.

Action: Check if the application is connected to an Oracle 7.3 server. The Transaction monitor must not return a `NULL` `XID` on an `AX_REG` call when the resource manager is Oracle 7.3. If the application is connected to an Oracle8 server, either set `nolocal=f` in the `xa_open` string or start a global transaction prior to attempting the work.

ORA-00160: global transaction length *string* is greater than maximum (*string*)

Cause: An external global transaction ID with a too large length field was passed in.

Action: Report the problem to your external transaction coordinator vendor.

ORA-00161: transaction branch length *string* is illegal (maximum allowed *string*)

Cause: An external transaction branch ID with a length either too large or 0 was passed in.

Action: Report the problem to your external transaction coordinator vendor.

ORA-00162: external dbid length *string* is greater than maximum (*string*)

Cause: An external database name with too large a length field was passed in.

Action: Report the problem to your external transaction coordinator vendor.

ORA-00163: internal database name length *string* is greater than maximum (*string*)

Cause: An internal database name with a too large length field was passed in.

Action: Report the problem to your external transaction coordinator vendor.

ORA-00164: distributed autonomous transaction disallowed within migratable distributed transaction

Cause: A request was made by the application to start a distributed autonomous transaction when the application was in a migratable distributed transaction.

Action: Roll back or commit the current distributed transaction first.

ORA-00165: migratable distributed autonomous transaction with remote operation is not allowed

Cause: A request was made by the application to start a migratable distributed autonomous transaction with remote operation.

Action: n/a

ORA-00166: remote/local nesting level is too deep

Cause: Too many remote table operations required a reverse trip back to the local site, for example to execute a local function on a remote table.

Action: Rearrange the query or co-locate the functions with the tables.

ORA-00200: control file could not be created

Cause: It was not possible to create the control file.

Action: Check that there is sufficient disk space and no conflicts in filenames and try to create the control file again.

ORA-00201: control file version *string* incompatible with ORACLE version *string*

Cause: The control file was created by incompatible software.

Action: Either restart with a compatible software release or use CREATE CONTROLFILE to create a new control file that is compatible with this release.

ORA-00202: control file: '*string*'

Cause: This message reports the name file involved in other messages.

Action: See associated error messages for a description of the problem.

ORA-00203: using the wrong control files

Cause: The mount ID in the control file is not the same as the mount ID in the control file used by the first instance to mount this database. The control files are for the same database but they are not the same files. Most likely one instance is using a backup control file.

Action: Check that the correct control files were specified.

ORA-00204: error in reading (block *string*, # blocks *string*) of control file

Cause: A disk I/O failure was detected on reading the control file.

Action: Check if the disk is online, if it is not, bring it online and try a warm start again. If it is online, then you need to recover the disk.

ORA-00205: error in identifying control file, check alert log for more info

Cause: The system could not find a control file of the specified name and size.

Action: Check that ALL control files are online and that they are the same files that the system created at cold start time.

ORA-00206: error in writing (block *string*, # blocks *string*) of control file

Cause: A disk I/O failure was detected on writing the control file.

Action: Check if the disk is online, if it is not, bring it online and try a warm start again. If it is online, then you need to recover the disk.

ORA-00207: control files are not for the same database

Cause: The database ID in the control file is not the same as the database ID in the control file used by the first instance to mount this database. Most likely one of the mounts used the wrong control file or there are two databases with the same name.

Action: Check that the control file is for the correct database and is not an old version.

ORA-00208: number of control file names exceeds limit of *string*

Cause: An attempt was made to use more control files than Oracle supports.

Action: Shut down Oracle. Reduce the number of control files specified in the CONTROL_FILES parameter in the initialization parameter file, and restart Oracle. Delete unused files.

ORA-00209: control file blocksize mismatch, check alert log for more info

Cause: The block size in the control file header does not match the size specified in the DB_BLOCK_SIZE parameter.

Action: Look at the alert log for more information.

ORA-00210: cannot open the specified control file

Cause: Cannot open the control file.

Action: Check to make sure the control file exists and is not locked by some other program.

ORA-00211: control file does not match previous control files

Cause: A control file was specified that belongs to another database.

Action: Find and install the correct control file.

ORA-00212: block size *string* below minimum required size of *string* bytes

Cause: The block size specified was too small. Space for the system overhead is required.

Action: Specify a larger block size and retry the operation.

ORA-00213: cannot reuse control file; old file size *string*, *string* required

Cause: To reuse a control file, it must be the same size as the one previously used.

Action: Either do not specify REUSE, or specify a matching combination of MAXDATAFILES, MAXLOGFILES, MAXLOGMEMBERS, MAXLOGHISTORY, and MAXINSTANCES clauses in the CREATE DATABASE or CREATE CONTROLFILE statement.

ORA-00214: control file '*string*' version *string* inconsistent with file '*string*' version *string*

Cause: An inconsistent set of control files, datafiles/logfiles, and redo files was used.

Action: Use a consistent set of control files, datafiles/logfiles, and redo log files. That is, all the files must be for the same database and from the same time period.

ORA-00215: must be at least one control file

Cause: No control file is specified or the control file specified does not exist.

Action: Specify at least one valid control file and retry the operation.

ORA-00216: control file could not be resized for migration from 8.0.2

Cause: The control file created by release 8.0.2 was missing some record types. These record types are automatically added by resizing the control file during mount. The resize has failed.

Action: Look in the alert log for the reason that the resize has failed. If indicated in the alert log, give the control file more space. Otherwise, use the CREATE CONTROLFILE script dumped to the trace file to create a new control file.

ORA-00217: control file could not be resized for new record types

Cause: The control file was missing some new record types supported by this release. These record types are automatically added by resizing the control file during mount. The resize has failed.

Action: Look in the alert log for the reason that the resize has failed. If indicated in the alert log, give the control file more space. Otherwise, use the CREATE CONTROLFILE script dumped to the trace file to create a new control file.

ORA-00218: block size *string* of control file '*string*' does not match DB_BLOCK_SIZE (*string*)

Cause: The block size as stored in the control file header is different from the value of the initialization parameter DB_BLOCK_SIZE. This might be due to an incorrect setting of DB_BLOCK_SIZE, or else might indicate that the control file has either been corrupted or belongs to a different database.

Action: Restore a good copy of the control file. If the control file is known to be clean set the DB_BLOCK_SIZE to match control file headers block size value.

ORA-00219: required control file size (*string* logical blocks) exceeds maximum allowable size (*string* logical blocks)

Cause: An invocation of CREATE DATABASE or CREATE CONTROLFILE was executed specifying a combination of parameters that would require the control file size in blocks to exceed the maximum allowable value.

Action: In the case of CREATE DATABASE or CREATE CONTROLFILE, use a different combination of MAXDATAFILES, MAXLOGFILES, MAXLOGMEMBERS, MAXLOGHISTORY, and MAXINSTANCES clauses.

ORA-00220: control file not mounted by first instance, check alert log for more info

Cause: The specified control file has a different mount ID than the other control files that are being mounted. This means that the first instance to mount the database did not use this control file.

Action: Find and install the correct control file.

ORA-00221: error on write to control file

Cause: An error occurred when writing to one or more of the control files.

Action: See accompanying messages.

ORA-00222: operation would reuse name of a currently mounted control file

Cause: The filename supplied as a parameter to the ALTER DATABASE BACKUP CONTROLFILE command or to cfileSetSnapshotName matches the name of the specified currently mounted control file.

Action: Retry the operation with a different filename.

ORA-00223: convert file is invalid or incorrect version

Cause: An Oracle7 to Oracle8 convert file contains invalid data or was created with an different version of the migration utility. This error can also be caused by incorrect ORACLE_HOME environment variable when ALTER DATABASE CONVERT command is issued.

Action: Use a correct version of the convert file or regenerate it with the migration utility. Make sure that the migration utility is the same version as the Oracle8 RDBMS executable and that the ORACLE_HOME environment variable is properly set.

ORA-00224: control file resize attempted with illegal record type (*string*)

Cause: An attempt was made to expand or shrink the control file by calling cfileResizeSection using an invalid value for the RECORD_TYPE parameter.

Action: Use a value for the RECORD_TYPE parameter that specifies a valid record type other than type 0 (valid range is 1-16).

ORA-00225: expected size *string* of control file differs from actual size *string*

Cause: The expected size of the control file as stored in its header was different than the actual operating system file size. This usually indicates that the control file was corrupted.

Action: Restore a good copy of the control file.

ORA-00226: operation disallowed while alternate control file open

Cause: The attempted operation could not be executed at this time because this process had an alternate control file open for fixed table access.

Action: Retry the operation after calling `cfileUseCurrent`.

ORA-00227: corrupt block detected in control file: (block *string*, # blocks *string*)

Cause: A block header corruption or checksum error was detected on reading the control file.

Action: Use the `CREATE CONTROLFILE` or `RECOVER DATABASE USING BACKUP CONTROLFILE` command.

ORA-00228: length of alternate control file name exceeds maximum of *string*

Cause: The specified filename, which was supplied as a parameter to `cfileSetSnapshotName` or `cfileUseCopy`, exceeds the maximum filename length for this operating system.

Action: Retry the operation with a shorter filename.

ORA-00229: operation disallowed: already hold snapshot control file enqueue

Cause: The attempted operation cannot be executed at this time because this process currently holds the snapshot control file enqueue.

Action: Retry the operation after calling `cfileUseCurrent` to release the snapshot control file enqueue.

ORA-00230: operation disallowed: snapshot control file enqueue unavailable

Cause: The attempted operation cannot be executed at this time because another process currently holds the snapshot control file enqueue.

Action: Retry the operation after the concurrent operation that is holding the snapshot control file enqueue terminates.

ORA-00231: snapshot control file has not been named

Cause: During an invocation of `cfileMakeAndUseSnapshot` or `cfileUseSnapshot` it was detected that no filename for the snapshot control file had previously been specified.

Action: Specify a name for the snapshot control file by calling `cfileSetSnapshotName`.

ORA-00232: snapshot control file is nonexistent, corrupt, or unreadable

Cause: The snapshot control file was found to be nonexistent, corrupt, or unreadable during an invocation of `cfileUseSnapshot`.

Action: Call `cfileMakeAndUseSnapshot` again (or for the first time).

ORA-00233: copy control file is corrupt or unreadable

Cause: The specified copy control file was found to be corrupt or unreadable during an invocation of `cfileUseCopy`.

Action: Before retrying `cfileUseCopy`, use the `ALTER DATABASE BACKUP CONTROLFILE` command and specify the same filename that was specified for `cfileUseCopy`.

ORA-00234: error in identifying or opening snapshot or copy control file

Cause: A snapshot or copy control file of the specified name could not be found or opened during an invocation of `cfileUseSnapshot`, `cfileMakeAndUseSnapshot`, or `cfileUseCopy`.

Action: Re-create the snapshot or copy control file using `cfileMakeAndUseSnapshot` or `ALTER DATABASE BACKUP CONTROLFILE`, respectively.

ORA-00235: control file read without a lock inconsistent due to concurrent update

Cause: Concurrent update activity on a control file caused a process to read inconsistent information from the control file without a lock.

Action: Retry the operation.

ORA-00236: snapshot operation disallowed: mounted control file is a backup

Cause: Attempting to invoke `cfileSetSnapshotName`, `cfileMakeAndUseSnapshot`, or `cfileUseSnapshot` when the currently mounted control file is a backup control file.

Action: Mount a current control file and retry the operation.

ORA-00237: snapshot operation disallowed: control file newly created

Cause: An attempt to invoke `cfileMakeAndUseSnapshot` with a currently mounted control file that was newly created with `CREATE CONTROLFILE` was made.

Action: Mount a current control file and retry the operation.

ORA-00238: operation would reuse a filename that is part of the database

Cause: The filename supplied as a parameter to the `ALTER DATABASE BACKUP CONTROLFILE` command or to `cfileSetSnapshotName` matches the name of a file that is currently part of the database.

Action: Retry the operation with a different filename.

ORA-00239: timeout waiting for control file enqueue: held by '*string*' for more than *string* seconds

Cause: The specified process waited the maximum allowed time for the control file enqueue.

Action: Restart the blocking instance indicated in the incident trace file or reboot the blocking node.

ORA-00240: control file enqueue held for more than *string* seconds

Cause: The current process did not release the control file enqueue within the maximum allowed time.

Action: Reissue any commands that failed and contact Oracle Support Services with the incident information.

ORA-00241: operation disallowed: control file inconsistent with data dictionary

Cause: The control file was either recently created via `CREATE CONTROLFILE` or an incomplete recovery has been done. Thus, the datafiles in the control file and the ones in the data dictionary may not match.

Action: Open the database, then retry the operation.

ORA-00242: maximum allowed filename records used up in control file

Cause: Failed to create a new filename record entry in the control file because the maximum allowed filename records have been allocated and are in use.

Action: Free up controlfile filename section entries by dropping unwanted tablespaces/datafiles/redofiles.

ORA-00243: failed to expand control file filename section by *string* records

Cause: Failed to expand control file filename section. See alert log for more details.

Action: Retry the operation after increasing disk space for controlfile expansion.

ORA-00244: concurrent control file backup operation in progress

Cause: Failed to create a control file backup because concurrent control file backup operation was in progress.

Action: Retry backup creation later.

ORA-00245: control file backup failed; in Oracle RAC, target might not be on shared storage

Cause: Failed to create a control file backup because some process signaled an error during backup creation. This is likely caused by the backup target (i.e., RMAN snapshot controlfile) being on a local file system so it could not be accessed by other instances. It can also be caused by other I/O errors to the backup target. Any process of any instance that starts a read/write control file transaction must have access to the backup control file during backup creation.

Action: Check whether RMAN snapshot controlfile is on shared storage. Also, check alert files of all instances for further information.

ORA-00246: control file backup failed; error accessing backup target

Cause: An attempt to create a control file backup failed because some process signaled an I/O error when accessing the backup target.

Action: Check alert and trace files for further information.

ORA-00250: archiver not started

Cause: An attempt was made to stop automatic archiving, but the archiver process was not running.

Action: No action required.

ORA-00251: LOG_ARCHIVE_DUPLEX_DEST cannot be the same destination as *string string*

Cause: The destination specified by the LOG_ARCHIVE_DUPLEX_DEST parameter is the same as the destination specified by an ALTER SYSTEM ARCHIVE LOG START TO command.

Action: Specify a different destination for parameter LOG_ARCHIVE_DUPLEX_DEST, or specify a different destination with the ALTER SYSTEM command.

ORA-00252: log *string* of thread *string* is empty, cannot archive

Cause: A log must be used for redo generation before it can be archived. The specified redo log was not been used since it was introduced to the database. However it is possible that instance death during a log switch left the log empty.

Action: Empty logs do not need to be archived. Do not attempt to archive the redo log file.

ORA-00253: character limit *string* exceeded by archive destination *string string*

Cause: The destination specified by an ALTER SYSTEM ARCHIVE LOG START TO command was too long.

Action: Retry the ALTER SYSTEM command using a string shorter than the limit specified in the error message.

ORA-00254: error in archive control string '*string*'

Cause: The specified archive log location is invalid in the archive command or the LOG_ARCHIVE_DEST initialization parameter.

Action: Check the archive string used to make sure it refers to a valid online device.

ORA-00255: error archiving log *string* of thread *string*, sequence # *string*

Cause: An error occurred during archiving.

Action: Check the accompanying message stack for more detailed information. If the online log is corrupted, then the log can be cleared using the UNARCHIVED option. This will make any existing backups useless for recovery to any time after the log was created, but will allow the database to generate redo.

ORA-00256: cannot translate archive destination string *string*

Cause: The destination specified by an ALTER SYSTEM ARCHIVE LOG START TO command could not be translated.

Action: Check the accompanying message stack for more detailed information. Then, retry the ALTER SYSTEM command using a different string.

ORA-00257: Archiver error. Connect AS SYSDBA only until resolved.

Cause: The archiver process received an error while trying to archive a redo log. If the problem is not resolved soon, the database will stop executing transactions. The most likely cause of this message is that the destination device is out of space to store the redo log file. Another possible cause is that a destination marked as MANDATORY has failed.

Action: Check the alert log and trace files for detailed error information.

ORA-00258: manual archiving in NOARCHIVELOG mode must identify log

Cause: The database is in NOARCHIVELOG mode and a command to manually archive a log did not specify the log explicitly by sequence number, group number or filename.

Action: Specify log by filename, by group number or by thread and sequence number.

ORA-00259: log *string* of open instance *string* (thread *string*) is the current log, cannot archive

Cause: An attempt was made to archive the current log of an open thread. This is not allowed because the redo log file may still be in use for the generation of redo entries.

Action: Force a log switch in the instance where the thread is open. If no instances are open, open the database so that instance recovery can recover the thread.

ORA-00260: cannot find online log sequence *string* for thread *string*

Cause: The log sequence number supplied to the archival command does not match any of the online logs for the thread. The log might have been reused for another sequence number, it might have been dropped, the sequence number might be greater than the current log sequence number, or the thread might not have any logs.

Action: Check the ARCHIVE statement, then specify a valid log sequence number. Specify a valid log sequence number.

ORA-00261: log *string* of thread *string* is being archived or modified

Cause: The log is either being archived by another process or an administrative command is modifying the log. Operations that modify the log include clearing, adding a member, dropping a member, renaming a member, and dropping the log.

Action: Wait for the current operation to complete and try again.

ORA-00262: current log *string* of closed thread *string* cannot switch

Cause: The log cannot be cleared or manually archived because it is the current log of a closed thread, and it is not possible to switch logs so another log is current. All other logs for the thread need to be archived, or cleared, and cannot be reused.

Action: Archive another log in the same thread first, or complete the clearing. See attached errors for the reason the switch cannot be completed.

ORA-00263: there are no logs that need archiving for thread *string*

Cause: An attempt was made to manually archive the unarchived logs in this thread but no logs needed archiving.

Action: No action required.

ORA-00264: no recovery required

Cause: An attempt was made to perform media recovery on files that do not // need any type of recovery.

Action: Do not attempt to perform media recovery on the selected files. Check to see that the filenames were entered properly. If not, retry the command with the proper filenames.

ORA-00265: instance recovery required, cannot set ARCHIVELOG mode

Cause: The database either crashed or was shutdown with the ABORT option. Media recovery cannot be enabled because the online logs may not be sufficient to recover the current datafiles.

Action: Open the database and then enter the SHUTDOWN command with the NORMAL or IMMEDIATE option.

ORA-00266: name of archived log file needed

Cause: During media recovery, the name of an archived redo log file was requested, but no name was entered.

Action: Mount the correct redo log file and enter its name when it is requested.

ORA-00267: name of archived log file not needed

Cause: During media recovery, the name of an archived redo log file was entered, but no name was requested.

Action: Continue media recovery, but do not enter a new log name.

ORA-00268: specified log file does not exist '*string*'

Cause: The given redo log file does not exist.

Action: Check the spelling and capitalization of the filename and retry the command.

ORA-00269: specified log file is part of thread *string* not *string*

Cause: The given redo log file is not part of the given thread

Action: Check that the thread of the redo log file matches the thread on the command line. If not, use a redo log file from the appropriate thread. Retry the command after correcting the error.

ORA-00270: error creating archive log *string*

Cause: An error was encountered when either creating or opening the destination file for archiving.

Action: Check that the archive destination is valid and that there is sufficient space on the destination device.

ORA-00271: there are no logs that need archiving

Cause: An attempt was made to archive the unarchived redo log files manually, but there are no files that need to be archived.

Action: No action required.

ORA-00272: error writing archive log *string*

Cause: An I/O error occurred while archiving a redo log file.

Action: Check that the output device is still available and correct any device errors that may have occurred. Also, make certain that sufficient space for archiving is available on the output device.

ORA-00273: media recovery of direct load data that was not logged

Cause: A media recovery session encountered a table that was loaded by the direct loader without logging any redo information. Some or all of the blocks in this table are now marked as corrupt.

Action: The table must be dropped or truncated so that the corrupted blocks can be reused. If a more recent backup of the file is available, try to recover this file to eliminate this error.

ORA-00274: illegal recovery option *string*

Cause: An illegal option was specified for a recovery command.

Action: Correct the syntax and retry the command.

ORA-00275: media recovery has already been started

Cause: An attempt was made to start a second media recovery operation in the same session.

Action: Complete or cancel the first media recovery session or start another session to perform media recovery.

ORA-00276: CHANGE keyword specified but no change number given

Cause: The CHANGE keyword was specified on the command line, but no change number was given.

Action: Retry the command using a valid change number after the CHANGE keyword.

ORA-00277: illegal option to the UNTIL recovery flag *string*

Cause: Only CANCEL, CHANGE, CONSISTENT and TIME can be used with the UNTIL keyword.

Action: Correct the syntax.

ORA-00278: log file '*string*' no longer needed for this recovery

Cause: The specified redo log file is no longer needed for the current recovery.

Action: No action required. The archived redo log file may be removed from its current location to conserve disk space, if needed. However, the redo log file may still be required for another recovery session in the future.

ORA-00279: change *string* generated at *string* needed for thread *string*

Cause: The requested log is required to proceed with recovery.

Action: Please supply the requested log with "ALTER DATABASE RECOVER LOGFILE <file_name>" or cancel recovery with "ALTER DATABASE RECOVER CANCEL".

ORA-00280: change *string* for thread *string* is in sequence #*string*

Cause: This message helps to locate the redo log file with the specified change number requested by other messages.

Action: Use the information provided in this message to specify the required archived redo log files for other errors.

ORA-00281: media recovery may not be performed using dispatcher

Cause: An attempt was made to use a dispatcher process for media recovery. Memory requirements disallow this recovery method.

Action: Connect to the instance via a dedicated server process to perform media recovery.

ORA-00282: UPI *string* call not supported, use ALTER DATABASE RECOVER

Cause: The given UPI call is no longer supported.

Action: Use the ALTER DATABASE RECOVER command for all recovery actions.

ORA-00283: recovery session canceled due to errors

Cause: An error during recovery was determined to be fatal enough to end the current recovery session.

Action: More specific messages will accompany this message. Refer to the other messages for the appropriate action.

ORA-00284: recovery session still in progress

Cause: An error during recovery was determined to be minor enough to allow the current recovery session to continue.

Action: More specific messages will accompany this message. Refer to the other messages for the appropriate action.

ORA-00285: TIME not given as a string constant

Cause: TIME was not followed by a string constant for the time.

Action: Enter the time enclosed in single quotation marks.

ORA-00286: no members available, or no member contains valid data

Cause: None of the members of a redo log file group are available, or the available members do not contain complete data.

Action: If a member is temporarily offline, attempt to make it available. Make sure that the correct filenames are being used, especially if the redo log file is being accessed from a remote location.

ORA-00287: specified change number *string* not found in thread *string*

Cause: The given change number does not appear in any of the online redo logs for the given thread.

Action: Check the statement to make certain a valid change number is given. Perhaps try to use the NEXT option for archiving logs.

ORA-00288: to continue recovery type ALTER DATABASE RECOVER CONTINUE

Cause: During media recovery, a new log is not required but the continuation command is necessary to do a checkpoint and report errors.

Action: Type ALTER DATABASE RECOVER CONTINUE and recovery will resume.

ORA-00289: suggestion : *string*

Cause: This message reports the next redo log filename that is needed, according to the initialization parameters LOG_ARCHIVE_DEST and LOG_ARCHIVE_FORMAT. This message assumes that LOG_ARCHIVE_DEST and LOG_ARCHIVE_FORMAT are the same now as when the required redo log file was archived.

Action: Consider using this filename for the next log needed for recovery.

ORA-00290: operating system archival error occurred. See error below

Cause: While attempting to archive to a redo log file, the server encountered an unexpected operating system error.

Action: Correct the operating system error given in the messages and retry the operation. See also your operating system-specific Oracle documentation.

ORA-00291: numeric value required for PARALLEL option

Cause: A recovery command was specified incorrectly. The PARALLEL option must be followed by a numeric argument that specifies the degree of parallelism.

Action: Re-enter the command with a numeric argument specifying the degree of parallelism desired.

ORA-00292: parallel recovery feature not installed

Cause: A parallel recovery was requested when the parallel recovery option is not installed.

Action: Delete the PARALLEL clause from the RECOVER command. Also, delete the RECOVERY_PARALLELISM parameter in the initialization file.

ORA-00293: control file out of sync with redo log

Cause: The redo log file and control file are out of sync because a non-current control file was specified when the instance was started.

Action: Retry the RECOVER command using the current control file, or retry the RECOVER command using the USING BACKUP CONTROLFILE clause.

ORA-00294: invalid archive log format specifier '*string*'

Cause: An invalid format specifier was found in the LOG_ARCHIVE_FORMAT initialization parameter. The only characters permitted following the % symbol are s, S, t, and T.

Action: Correct the initialization file and re-start the instance.

ORA-00295: datafile/tempfile number *string* is invalid, must be between 1 and *string*

Cause: An invalid file number was specified.

Action: Specify a valid datafile or tempfile number and retry the operation.

ORA-00296: maximum number of files (*string*) exceeded for RECOVER DATAFILE LIST

Cause: The RECOVER DATAFILE LIST command specified more datafiles than are allowed by the DB_FILES initialization parameter. This error occurs when doing

recovery with Recovery Manager, and the instance has been started with a DB_FILES parameter specifying fewer datafiles than recovery manager needs to recover to satisfy the user's RECOVER command.

Action: Re-start the instance with a higher value for DB_FILES.

ORA-00297: must specify RECOVER DATAFILE LIST before RECOVER DATAFILE START

Cause: The RECOVER DATAFILE START command was issued, but no RECOVER DATAFILE LIST commands had been issued. This only happens when doing recovery with Recovery Manager, and is an internal error in Recovery Manager, because Recovery Manager should always issue RECOVER DATAFILE LIST before RECOVER DATAFILE START.

Action: Contact customer support

ORA-00298: Missing or invalid attribute value

Cause: A non-zero integer value is required when the following keyword attributes are specified: TIMEOUT, EXPIRE, DELAY, NEXT

Action: Correct the syntax and retry the command.

ORA-00299: must use file-level media recovery on data file *string*

Cause: The control file does not contain an entry for this file, so block media recovery cannot be done.

Action: Restore the data file and perform file-level media recovery.

ORA-00300: illegal redo log block size *string* specified - exceeds limit of *string*

Cause: The specified block size of the redo log is greater than the maximum block size for the operating system.

Action: Create the redo log on a device with a smaller block size

ORA-00301: error in adding log file '*string*' - file cannot be created

Cause: The creation of the redo log file failed

Action: Check: 1) there is enough storage space on the device 2) the name of the file is valid 3) the device is online 4) an IO error occurred Also, it is possible REUSE was specified on the command line and a file of the incorrect size exists. Either do not specify REUSE or use a file of the correct size.

ORA-00302: limit of *string* logs exceeded

Cause: The maximum number of redo log files has been exceeded.

Action: Use the CREATE CONTROLFILE command with a larger value for MAXLOGFILES if the compatibility is lower than 10.2.0. Otherwise, allocate more storage space for the control file.

ORA-00303: cannot process Parallel Redo

Cause: A redo log containing Parallel Redo has been detected. The current Oracle release cannot process this format of redo.

Action: Use a later release that supports Parallel Redo. to process this log.

ORA-00304: requested INSTANCE_NUMBER is busy

Cause: An instance tried to start by using a value of the initialization parameter INSTANCE_NUMBER that is already in use.

Action: Either a) specify another INSTANCE_NUMBER, b) shut down the running instance with this number c) wait for instance recovery to complete on the instance with this number.

ORA-00305: log *string* of thread *string* inconsistent; belongs to another database

Cause: The database ID in the redo log file does not match the database ID in the control file. This redo log file is not from the current database.

Action: Specify the correct redo log file, then retry the operation.

ORA-00306: limit of *string* instances in this database

Cause: Starting this instance would exceed the maximum number of instances allowed for this database. This message occurs only with STARTUP shared and multiple instances.

Action: You cannot start more than the lower of a) port-specific limit as to the number of instances b) the number of instances specified at create-database time

ORA-00307: requested INSTANCE_NUMBER out of range, maximum is *string*

Cause: The initialization parameter INSTANCE_NUMBER specified a number that was out of range.

Action: Change INSTANCE_NUMBER to a valid range and restart the instance. The minimum value is one and the maximum value is the lower of the operating system-specific maximum or the MAXINSTANCES option specified in the CREATE DATABASE statement. See also your operating system-specific Oracle documentation.

ORA-00308: cannot open archived log '*string*'

Cause: The system cannot access a required archived redo log file.

Action: Check that the off line log exists, the storage device is online, and the archived file is in the correct location. Then attempt to continue recovery or restart the recovery session.

ORA-00309: log belongs to wrong database

Cause: The system cannot access the archived redo log because it belongs to another database.

Action: Specify the correct redo log file, then retry the operation.

ORA-00310: archived log contains sequence *string*; sequence *string* required

Cause: The archived log was out of sequence, probably because it was corrupt or the wrong redo log file name was specified during recovery.

Action: Specify the correct redo log file; then retry the operation.

ORA-00311: cannot read header from archived log

Cause: An I/O error occurred when attempting to read the log file header from the specified archived redo log file.

Action: Other messages will accompany this message. See the associated messages for the appropriate action to take.

ORA-00312: online log *string* thread *string*: '*string*'

Cause: This message reports the filename for details of another message.

Action: Other messages will accompany this message. See the associated messages for the appropriate action to take.

ORA-00313: open failed for members of log group *string* of thread *string*

Cause: The online log cannot be opened. May not be able to find file.

Action: See accompanying errors and make log available.

ORA-00314: log *string* of thread *string*, expected sequence# *string* doesn't match *string*

Cause: The online log is corrupted or is an old version.

Action: Find and install correct version of log or reset logs.

ORA-00315: log *string* of thread *string*, wrong thread # *string* in header

Cause: The online log is corrupted or is an old version.

Action: Find and install correct version of log or reset logs.

ORA-00316: log *string* of thread *string*, type *string* in header is not log file

Cause: The online log is corrupted or is an old version.

Action: Find and install correct version of log or reset logs.

ORA-00317: file type *string* in header is not log file

Cause: This is not an archived log file.

Action: Find the correct file and try again.

ORA-00318: log *string* of thread *string*, expected file size *string* doesn't match *string*

Cause: On header read the file size indicated in the control file did not match the file size contained in the log file.

Action: Restore correct file or reset logs.

ORA-00319: log *string* of thread *string* has incorrect log reset status

Cause: Check of log file header at database open found that an online log has log reset data that is different from the control file. The log is probably an incorrectly restored backup.

Action: Restore correct file or reset logs.

ORA-00320: cannot read file header from log *string* of thread *string*

Cause: The file is not available.

Action: Restore the log file.

ORA-00321: log *string* of thread *string*, cannot update log file header

Cause: Cannot write to the log file.

Action: Restore the access to the file.

ORA-00322: log *string* of thread *string* is not current copy

Cause: Check of log file header at database open found that an online log appears to be an incorrectly restored backup.

Action: Restore correct file or reset logs.

ORA-00323: Current log of thread *string* not useable and all others need archiving

Cause: Attempt to open thread failed because it is necessary to switch redo generation to another online log, but all the other logs need to be archived before they can be used.

Action: Archive the logs for the thread then retry open.

ORA-00324: log file '*string*' translated name '*string*' too long, *string* characters exceeds *string* limit

Cause: the translated name for a log file is too long.

Action: Choose a untranslated name that yields a shorter translated name.

ORA-00325: archived log for thread *string*, wrong thread # *string* in header

Cause: The archived log is corrupted or for another thread. Can not use the log for applying redo.

Action: Find correct archived log.

ORA-00326: log begins at change *string*, need earlier change *string*

Cause: The archived log supplied for recovery was generated after the log that is needed. Can not yet use the log for applying redo.

Action: Find correct archived log.

ORA-00327: log *string* of thread *string*, physical size *string* less than needed *string*

Cause: A log file has shrunk in size. This is likely to have been caused by operator or operating system error.

Action: Restore the log file from backup. If backup is not available, drop this log and re-create. If the database was shut down cleanly, no further action should be required; otherwise incomplete recovery may be required.

ORA-00328: archived log ends at change *string*, need later change *string*

Cause: The archived log supplied for recovery was generated before the log that is needed. Can not use the log for applying redo.

Action: Find correct archived log.

ORA-00329: archived log begins at change *string*, need change *string*

Cause: The archived log is not the correct log. An earlier log is needed.

Action: Restore the correct log file.

ORA-00330: archived log ends at change *string*, need change *string*

Cause: The archived log is not the correct log. A later log is needed.

Action: Restore the correct log file.

ORA-00331: log version *string* incompatible with ORACLE version *string*

Cause: The log was written by incompatible version of Oracle.

Action: Recover the database with the compatible software, shut it down cleanly, then restart with current software.

ORA-00332: archived log is too small - may be incompletely archived

Cause: The log is smaller than the space allocated in it. May be the result of a shutdown abort while it was being written by the archiver.

Action: Get a complete version of this log and use it for recovery. There should either be an online version of it or a copy that was successfully archived.

ORA-00333: redo log read error block *string* count *string*

Cause: An IO error occurred while reading the log described in the accompanying error.

Action: Restore accessibility to file, or get another copy of the file.

ORA-00334: archived log: 'string'

Cause: Reporting filename for details of another error

Action: See associated error messages

ORA-00335: online log string: No log with this number, log does not exist

Cause: Reporting filename for details of another error

Action: See associated error messages

ORA-00336: log file size string blocks is less than minimum string blocks

Cause: The log file size as specified in create database is too small.

Action: Increase the log file size.

ORA-00337: log file 'string' does not exist and no size specified

Cause: An attempt to add a log found neither an existing file nor a size for creating the file.

Action: Specify a size for the log file.

ORA-00338: log string of thread string is more recent than control file

Cause: The control file change sequence number in the log file is greater than the number in the control file. This implies that the wrong control file is being used. Note that repeatedly causing this error can make it stop happening without correcting the real problem. Every attempt to open the database will advance the control file change sequence number until it is great enough.

Action: Use the current control file or do backup control file recovery to make the control file current. Be sure to follow all restrictions on doing a backup control file recovery.

ORA-00339: archived log does not contain any redo

Cause: The archived log is not the correct log. It is a copy of a log file that has never been used for redo generation, or was an online log being prepared to be the current log.

Action: Restore the correct log file.

ORA-00340: IO error processing online log string of thread string

Cause: An IO error occurred on the named online log.

Action: Restore accessibility to file, or restore file from backup.

ORA-00341: log string of thread string, wrong log # string in header

Cause: The internal information in an online log file does not match the control file.

Action: Restore correct file or reset logs.

ORA-00342: archived log does not have expected resetlogs SCN string

Cause: Recovery was given a log that does not belong to current incarnation or one of the parent incarnation. There should be another log that contains the correct redo.

Action: Supply the correct log file.

ORA-00344: unable to re-create online log 'string'

Cause: An I/O failure occurred when attempting to re-create an online as part of either ALTER DATABASE OPEN RESETLOGS or ALTER DATABASE CLEAR LOGFILE command.

Action: Correct the file/device as indicated by accompanying errors.

ORA-00345: redo log write error block *string* count *string*

Cause: An IO error has occurred while writing the log

Action: Correct the cause of the error, and then restart the system. If the log is lost, apply media/incomplete recovery.

ORA-00346: log member marked as STALE and closed

Cause: A log file member was no longer complete.

Action: Correct the underlying problem by referring to the other error messages found with this one.

ORA-00347: log *string* of thread *string*, expected block size *string* doesn't match *string*

Cause: On header read the blocksize indicated in the control file did not match the blocksize contained in the log file.

Action: Restore correct file or reset logs.

ORA-00348: single-process redo failure. Must abort instance

Cause: A failure occurred during a critical portion of the log code during single process operation. This error does not occur during normal multi-process operation.

Action: Shutdown abort and warmstart the database.

ORA-00349: failure obtaining block size for '*string*'

Cause: The operating system was unable to determine the blocksize for the given filename.

Action: Consult the accompanying error message, and correct the device or specify another filename.

ORA-00350: log *string* of instance *string* (thread *string*) needs to be archived

Cause: The command cannot be done because the log has not been archived, and media recovery has been enabled.

Action: Archive the log or disable media recovery. If the command supports an UNARCHIVED option then it can be used. However this may result in making backups unuseable, and forcing the drop of some offline files.

ORA-00351: recover-to time invalid

Cause: The time specified in a recover-until statement must be after January 1st 1988.

Action: Specify a time after January 1st 1988.

ORA-00352: all logs for thread *string* need to be archived - cannot enable

Cause: Attempting to enable a thread with all logs needing to be archived, and media recovery has been enabled. There is no log that can be made the new current log for the thread.

Action: Archive a log for the thread or disable media recovery.

ORA-00353: log corruption near block *string* change *string* time *string*

Cause: Some type of redo log corruption has been discovered. This error describes the location of the corruption. Accompanying errors describe the type of corruption.

Action: Do recovery with a good version of the log or do incomplete recovery up to the indicated change or time.

ORA-00354: corrupt redo log block header

Cause: The block header on the redo block indicated by the accompanying error, is not reasonable.

Action: Do recovery with a good version of the log or do time based recovery up to the indicated time. If this happens when archiving, archiving of the problem log can be skipped by clearing the log with the UNARCHIVED option. This must be followed by a backup of every datafile to insure recoverability of the database.

ORA-00355: change numbers out of order

Cause: A change number found in the redo log is lower than a previously encountered change number. The log is corrupted in some way. The corruption may be at the earlier change or at this one.

Action: Do recovery with a good version of the log or do time based recovery up to the indicated time.

ORA-00356: inconsistent lengths in change description

Cause: A change record in the redo log contains lengths that do not add up to a consistent value. The log is corrupted in some way.

Action: Do recovery with a good version of the log or do time based recovery up to the indicated time.

ORA-00357: too many members specified for log file, the maximum is *string*

Cause: An add logfile or add logfile member command would result in a log with too many members. The number of members is set when the database is created.

Action: Use fewer log file members.

ORA-00358: Too many file members specified, the maximum is *string*

Cause: A create or alter statement specified too many members in a parenthesised file list.

Action: Specify a number of file members that is within the port-defined limit.

ORA-00359: logfile group *string* does not exist

Cause: An add logfile member or drop logfile request specified a logfile group number that does not exist.

Action: Check the configuration of the log files and reissue the command.

ORA-00360: not a logfile member: *string*

Cause: A filename was given to drop logfile member that is not a part of the database, or which is a data file.

Action: Supply a valid logfile member name.

ORA-00361: cannot remove last log member *string* for group *string*

Cause: An attempt has been made to remove the last member of a log file group.

Action: If desired, delete the entire log, by using DROP LOGFILE.

ORA-00362: member is required to form a valid logfile in group *string*

Cause: A request to drop a logfile member was denied because it would remove data required to form a complete logfile.

Action: If desired, delete the entire log (after archiving if required), by using DROP LOGFILE;

ORA-00363: log is not the archived version

Cause: The log given to recovery is a backup of the online version from the time it was the current log. The archived version of the log would not be marked as end of thread. This error can also be caused by failing to list the current log of an enabled thread in a CREATE CONTROLFILE command.

Action: Find the archived version of the log and supply its name. If this is media recovery immediately following a CREATE CONTROLFILE, be sure the current log for this thread was included.

ORA-00364: cannot write header to new log member

Cause: An i/o error occurred when attempting to write the header to a log member that is being added to an existing group.

Action: See accompanying errors. Fix problem or use another file.

ORA-00365: the specified log is not the correct next log

Cause: The specified log failed to pass checks to ensure it corresponds to the log that was just applied. This is probably the result of using a log that was generated against a cold backup image of the database.

Action: Find the log that was generated by this copy of the database and give that filename to recovery.

ORA-00366: log *string* of thread *string*, checksum error in the file header

Cause: The file header for the redo log contains a checksum that does not match the value calculated from the file header as read from disk. This means the file header is corrupted

Action: Find and install correct version of log or reset logs.

ORA-00367: checksum error in log file header

Cause: The file header for the redo log contains a checksum that does not match the value calculated from the file header as read from disk. This means the file header is corrupted

Action: Find the correct file and try again.

ORA-00368: checksum error in redo log block

Cause: The redo block indicated by the accompanying error, is not valid. It has a checksum that does not match the block contents.

Action: Do recovery with a good version of the log or do time based recovery up to the indicated time. If this happens when archiving, archiving of the problem log can be skipped by clearing the log with the UNARCHIVED option. This must be followed by a backup of every datafile to insure recoverability of the database. Restore correct file or reset logs.

ORA-00369: Current log of thread *string* not useable and other log being cleared

Cause: Attempt to open thread failed because it is necessary to switch redo generation to another online log, but all the other logs are being cleared or need to be archived before they can be used.

Action: If the ALTER DATABASE CLEAR LOGFILE command is still active then wait for it to complete. Otherwise reissue the CLEAR command. If there are other online logs for the thread, that are not being cleared, then archive the logs.

ORA-00370: potential deadlock during kcbchange operation

Cause: Error code used internally by software. Should never be reported

Action: Treat as internal error. See error 600.

ORA-00371: not enough shared pool memory, should be at least *string* bytes

Cause: The SHARED_POOL_SIZE initialization parameter was too small.

Action: Increase the parameter value.

ORA-00372: file *string* cannot be modified at this time

Cause: attempting to modify the contents of a file that cannot be modified. The file is most likely part of a read only tablespace but may be in the process of going offline, or the database may be in the process of closing.

Action: check the status of the file and its tablespace

ORA-00373: online log version *string* incompatible with ORACLE version *string*

Cause: The online log was written by incompatible version of Oracle. Can occur when the log file was created by either a new or older version of Oracle.

Action: Recover the database with the compatible software, shut it down cleanly, then restart with current software.

ORA-00374: parameter db_block_size = *string* invalid ; must be a multiple of *string* in the range [*string*..*string*]

Cause: invalid value for db_block_size parameter

Action: adjust parameter and restart

ORA-00376: file *string* cannot be read at this time

Cause: attempting to read from a file that is not readable. Most likely the file is offline.

Action: Check the state of the file. Bring it online

ORA-00377: Frequent backups of file *string* causing write operation to stall

Cause: Backups are occurring too frequently on this file. Each time a new backup is started for a file, any writes which have been previously issued (but not completed) have to be re-issued. If hot backups are started very, very frequently, it is possible that some writes will be re-issued repeatedly and never complete.

Action: Increase the interval between begin hot-backup commands for this file.

ORA-00378: buffer pools cannot be created as specified

Cause: Either the number of buffers or the number of lru latches is too small to satisfy the specified buffer pool configuration.

Action: Either increase the number of buffers and/or number of lru latches or configure smaller buffer pools.

ORA-00379: no free buffers available in buffer pool *string* for block size *stringK*

Cause: All buffers in the specified buffer pool for the specified block size are in use and no free buffers are available.

Action: Increase the number of buffers in the specified pool for the specified block size

ORA-00380: cannot specify db_stringk_cache_size since *stringK* is the standard block size

Cause: User specified the parameter db_nk_cache_size (where n is one of 2,4,8,16,32), while the standard block size for this database is equal to n Kbytes. This is illegal.

Action: Specify the standard block size cache using `db_cache_size` (DEFAULT pool) (and `db_recycle_cache_size`, `db_keep_cache_size` if additional buffer pools are required). Do NOT use the corresponding `db_nk_cache_size` parameter for the standard block size.

ORA-00381: cannot use both new and old parameters for buffer cache size specification

Cause: User specified one or more of { `db_cache_size` , `db_recycle_cache_size`, `db_keep_cache_size`, `db_nk_cache_size` (where n is one of 2,4,8,16,32), `db_cache_advice` } AND one or more of { `db_block_buffers`, `buffer_pool_keep` , `buffer_pool_recycle` }. This is illegal.

Action: Use EITHER the old (pre-Oracle_8.2) parameters OR the new ones. Don't specify both. If old size parameters are specified in the parameter file, you may want to replace them with new parameters since the new parameters can be modified dynamically and allow you to configure additional caches for additional block sizes. Cache advisory can only be enabled with the new cache parameters.

ORA-00382: *string* not a valid block size, valid range [*string*..*string*]

Cause: User specified a value for `db_nk_cache_size` where n is one of {2, 4, 8, 16, 32}, but nk is not a valid block size for this platform.

Action: Remove corresponding parameter from the "init.ora" file and restart the instance.

ORA-00383: DEFAULT cache for blocksize *string* cannot be reduced to zero

Cause: User attempted to reduce `db_cache_size` to zero, or attempted to to reduce `db_nK_cache_size` to zero while there were still online tablespaces with blocksize `nK`. Note that since the SYSTEM tablespace cannot be taken offline, it is always illegal to set `db_cache_size` to zero.

Action: Offline any tablespaces with the corresponding blocksize and then perform the operation again.

ORA-00384: Insufficient memory to grow cache

Cause: The system could not allocate sufficient memory to grow the cache to the specified size.

Action: Attempt a smaller increase in the value of the parameter.

ORA-00385: cannot enable Very Large Memory with new buffer cache parameters

Cause: User specified one or more of { `db_cache_size` , `db_recycle_cache_size`, `db_keep_cache_size`, `db_nk_cache_size` (where n is one of 2,4,8,16,32) } AND `use_indirect_data_buffers` is set to TRUE. This is illegal.

Action: Very Large Memory can only be enabled with the old (pre-Oracle_8.2) parameters.

ORA-00386: use_indirect_data_buffers not supported

Cause: The system could not allocate sufficient memory to grow the cache to the specified size.

Action: Attempt a smaller increase in the value of the parameter.

ORA-00388: dependent redo for buffers is lost

Cause: The instance contained buffers that had non-durable changes and depended on redo in another thread that was lost because of that thread crash. No data are lost because changes to such buffers cannot be committed while they are non-durable.

Action: Restart the instance.

ORA-00390: log *string* of thread *string* is being cleared, cannot become current log

Cause: An attempt to switch to a new online log for the redo thread failed because no reusable log could be found. This log is being cleared and will be useable when the clearing completes. The command that began the clearing may have terminated without completing the clearing.

Action: If the clear command is still executing then wait for its completion. If it terminated then reissue the clear command, or drop the log.

ORA-00391: All threads must switch to new log format at the same time

Cause: An attempt to switch the current log of a single thread is not allowed because the compatibility requirements force a new log format version number. When changing log formats, all threads must switch to the new format at the same time.

Action: Open the database to cause the coordinated log switch. If that is not possible then return to the same software version and compatibility setting last used to open the database.

ORA-00392: log *string* of thread *string* is being cleared, operation not allowed

Cause: An operation encountered this online log in the middle of being cleared. The command that began the clearing may have terminated without completing the clearing.

Action: If the clear command is still executing then wait for its completion. If it terminated then reissue the clear command, or drop the log.

ORA-00393: log *string* of thread *string* is needed for recovery of offline datafiles

Cause: Log cannot be cleared because the redo in it is needed to recover offline datafiles. It has not been archived so there is no other copy available. If the log is cleared the tablespaces containing the files will have to be dropped.

Action: Archive the log then repeat the clear command. If archiving is not possible, and dropping the tablespaces is acceptable, then add the clause UNRECOVERABLE DATAFILE at the end of the clear command.

ORA-00394: online log reused while attempting to archive it

Cause: It has been detected that an online log that is being archived has been reused

Action: Cannot archive the logfile anymore since it has been overwritten

ORA-00395: online logs for the clone database must be renamed

Cause: A clone database open forces logfile renaming to avoid overwriting the primary logfiles

Action: Rename the logfiles manually or using the log_file_name_convert initialization parameter

ORA-00396: error *string* required fallback to single-pass recovery

Cause: The indicated error caused two-pass instance or crash recovery to fail. Recovery was retried with an alternate (slower) method to avoid the error.

Action: Correct the cause of the indicated error (also recorded) so that future instance or crash recovery can succeed with the two-pass algorithm. This usually requires making more main memory available to the recovery process.

ORA-00397: instance recovery process terminated with error

Cause: The foreground process doing instance recovery died.

Action: Check the foreground trace file for the cause of recovery failure.

ORA-00398: abort thread recovery due to reconfiguration

Cause: Global enqueue service reconfiguration occurred during instance/crash recovery.

Action: This is used internally, no action is required.

ORA-00399: corrupt change description in redo log

Cause: A change vector in the redo log failed validation checks.

Action: Do recovery with a good version of the log or do time based recovery up to the indicated time.

ORA-00400: invalid release value *string* for parameter *string*

Cause: The release level given for the specified init parameter is invalid.

Action: Correct the parameter value in the parameter file and retry.

ORA-00401: the value for parameter *string* is not supported by this release

Cause: The value specified cannot be supported by this release of the software.

Action: Choose an appropriate value, or remove the parameter value to use the default value.

ORA-00402: database changes by release *string* cannot be used by release *string*

Cause: Changes have been made to the database that require a newer software release or that violate the compatibility parameters.

Action: Use a version of the software that can understand the changes or relax the compatibility requirements in the init file.

ORA-00403: *string* (*string*) is not the same as other instances (*string*)

Cause: Another instance has set the compatible or compatible no recovery parameters differently than this instance.

Action: Change the parameters of the current instance to match other instances already running.

ORA-00404: Convert file not found: '*string*'

Cause: The file used for converting the database from V7 to V8 could not be found.

Action: Verify that the migration process has been started on this database and that the convert filename is accessible.

ORA-00405: compatibility type "*string*"

Cause: Reporting a type associated with another error.

Action: See accompanying error

ORA-00406: COMPATIBLE parameter needs to be *string* or greater

Cause: The COMPATIBLE initialization parameter is not high enough to allow the operation. Allowing the command would make the database incompatible with the release specified by the current COMPATIBLE parameter.

Action: Shutdown and startup with a higher compatibility setting.

ORA-00407: rolling upgrade from release *string.string* to *string.string* is not allowed

Cause: Another instance executing software at a different point release already has the database mounted.

Action: Shutdown all instances then startup with the new software.

ORA-00408: parameter *string* is set to TRUE

Cause: Reporting the parameter that resulted in the compatibility error.

Action: Shutdown and startup with a higher compatibility setting.

ORA-00409: COMPATIBLE needs to be *string* or higher to use AUTO SEGMENT SPACE MANAGEMENT

Cause: This is due to migrating from an older release of Oracle with tablespaces created using AUTO SEGMENT SPACE MANAGEMENT. To open the database, the COMPATIBLE parameter needs to be set to the specified value.

Action: Shutdown and startup with the specified compatibility setting.

ORA-00436: ORACLE is not licensed. Contact Oracle Corp. for assistance

ORA-00437: ORACLE feature is not licensed. Contact Oracle Corp. for assistance

Cause: ORACLE feature is not licensed.

Action: Contact ORACLE for assistance.

ORA-00438: *string* Option not installed

Cause: The specified option is not installed.

Action: Purchase and install the option.

ORA-00439: feature not enabled: *string*

Cause: The specified feature is not enabled.

Action: Do not attempt to use this feature.

ORA-00443: background process "*string*" did not start

Cause: The specified process did not start.

Action: Ensure that the executable image is in the correct place with the correct protections, and that there is enough memory.

ORA-00444: background process "*string*" failed while starting

Cause: Usually due to a bad (or non-existent) background process image.

Action: Get a good background process image.

ORA-00445: background process "*string*" did not start after *string* seconds

Cause: The specified process did not start after the specified time.

Action: Ensure that the background did not die and leave a trace file.

ORA-00446: background process started when not expected

Cause: The background process specified started up AFTER the RDBMS was already running.

Action: If nobody at your site started the process, then this is an internal error.

ORA-00447: fatal error in background process

Cause: One of the background processes died unexpectedly.

Action: Warm start the system.

ORA-00448: normal completion of background process

Cause: One of the background processes completed normally (i.e. exited). The background process thinks that somebody asked it to exit.

Action: Warm start the system.

ORA-00449: background process '*string*' unexpectedly terminated with error *string*

Cause: A foreground process needing service from a background process has discovered the process died.

Action: Consult the error code, and the trace file for the process.

ORA-00450: background process '*string*' did not start

Cause: The specified process did not start.

Action: Consult the error code, and the trace file for the process.

ORA-00451: foreground process died unexpectedly

Cause: The foreground process for the new connection did not start.

Action: Reconnect to Oracle.

ORA-00452: foreground process unexpectedly terminated with error *string*

Cause: The foreground process for the new connection did not start.

Action: Reconnect to Oracle.

ORA-00453: background process '*string*' is dead

Cause: The background process that was being messaged was dead or its incarnation was invalid.

Action: Restart the background process.

ORA-00454: The background process '*string*' is running

Cause: An attempt to spawn a background process that was already running failed.

Action: None

ORA-00455: timeout waiting for background process '*string*' cleanup

Cause: The state of the background process was not cleaned up.

Action: None

ORA-00469: CKPT process terminated with error

Cause: The checkpoint process died

Action: Warm start instance

ORA-00470: LGWR process terminated with error

Cause: The log writer process died

Action: Warm start instance

ORA-00471: DBWR process terminated with error

Cause: The database writer process died

Action: Warm start instance

ORA-00472: PMON process terminated with error

Cause: The process cleanup process died

Action: Warm start instance

ORA-00473: ARCH process terminated with error

Cause: The archive process died

Action: Warm start instance

ORA-00474: SMON process terminated with error

Cause: The system cleanup process died

Action: Warm start instance

ORA-00475: TRWR process terminated with error

Cause: The system tracing process died

Action: Warm start instance

ORA-00476: RECO process terminated with error

Cause: The distributed transaction (two-phase commit) recovery process died.

Action: Warm start instance

ORA-00477: SNP* process terminated with error

Cause: A materialized view refresh process died

Action: PMON will restart SNP process shortly. If SNP process does not get started, contact Oracle support.

ORA-00478: SMON process terminated due to error *string*

Cause: SMON was unable to service the requests due to error in cleanup of resources

Action: Warm start instance

ORA-00479: RVWR process terminated with error *string*

Cause: The RVWR process died

Action: Warm start instance

ORA-00480: LCK* process terminated with error

Cause: A system lock process died

Action: Warm start instance

ORA-00481: LMON process terminated with error

Cause: The global enqueue service monitor process died

Action: Warm start instance

ORA-00482: LMD* process terminated with error

Cause: A global enqueue service daemon process died

Action: Warm start instance

ORA-00483: During shutdown a process abnormally terminated

Cause: One of the background processes did not exit normally at or near the time of shutdown.

Action: Use shutdown abort.

ORA-00484: LMS* process terminated with error

Cause: A global cache service process died

Action: Warm start instance

ORA-00485: DIAG process terminated with error *string*

Cause: A global diagnostic process died

Action: Wait for process to restart

ORA-00486: ASMB process terminated with error

Cause: An ASM background process died.

Action: Warm start instance. Also check that ASM Instance is running.

ORA-00487: CTWR process terminated with error

Cause: The change tracking process died

Action: Warm start instance

ORA-00488: RBAL process terminated with error

Cause: The ASM rebalance coordinator process died.

Action: Warm start instance.

ORA-00489: ARB* process terminated with error

Cause: An ASM rebalance worker process died.

Action: Wait for process to restart.

ORA-00490: PSP process terminated with error

Cause: The process spawner died

Action: Warm start instance

ORA-00491: RMS0 process terminated with error

Cause: The RAC Management Process died

Action: n/a

ORA-00492: GTX* process terminated with error

Cause: A global transaction background process died.

Action: Warm start instance

ORA-00493: GMON process terminated with error

Cause: The ASM disk group monitor process died

Action: Warm start instance

ORA-00494: enqueue *string* held for too long (more than *string* seconds) by 'inst *string*, osid *string*'

Cause: The specified process did not release the enqueue within the maximum allowed time.

Action: Reissue any commands that failed and contact Oracle Support Services with the incident information.

ORA-00495: GEN0 process terminated with error

Cause: The generic background processing process died.

Action: Warm start the instance.

ORA-00496: LMHB process terminated with error

Cause: The LM heartbeat monitor process died.

Action: Warm start the instance.

ORA-00497: XDMG process terminated with error

Cause: The Cell automation manager process terminated with error.

Action: PMON will restart XDMG process shortly. If XDMG process does not restart, contact Oracle Support Services.

ORA-00498: XDWK process terminated with error

Cause: The Cell automation worker actions process terminated with error.

Action: PMON will restart XDWK process shortly. If XDWK process does not restart, contact Oracle Support Services.

ORA-00499: XDMG repeatedly failed to initialize terminating the instance.

Cause: The Cell automation manager process repeatedly failed to initialize.

Action: Examine the alert log for the reason prior attempts to start XDMG failed. If it is due to user error or bad configuration, fix it and restart the instance. Otherwise, contact Oracle Support Services.

ORA-00500: Listener registration process terminated with an error.

Cause: The listener registration process died.

Action: Warm start the instance.

ORA-00566: cannot request processor group - NUMA not enabled

Cause: Cannot start process in a requested processor group when the NUMA feature is disabled.

Action: Start the process without requesting a NUMA processor group.

ORA-00567: Requested processor group *string* is too large (maximum *string*)

Cause: The process could not be started in the requested processor group.

Action: Start the process in another processor group.

ORA-00568: Maximum number of interrupt handlers exceeded

Cause: User specified too many ^c handlers

Action: Remove some old handlers.

ORA-00569: Failed to acquire global enqueue.

Cause: A prior error occurred on one of the instances in the cluster. Typically errors are caused by shared pool resource contention.

Action: Check for and resolve prior errors on all instances in the cluster. If there is shared pool resource contention, increase the SHARED_POOL_SIZE, DML_LOCKS, PROCESSES, TRANSACTIONS, CLUSTER_DATABASE_INSTANCES and PARALLEL_MAX_SERVERS initialization parameters.

ORA-00574: osndnt: \$CANCEL failure (break)

ORA-00575: osndnt: \$QIO failure (send out-of-band break)

ORA-00576: in-band break protocol error

ORA-00577: out-of-band break protocol error

ORA-00578: reset protocol error

ORA-00579: osndnt: server received malformed connection request

ORA-00580: protocol versions do not match

ORA-00581: osndnt: cannot allocate context area

ORA-00582: osndnt: cannot deallocate context area

ORA-00583: osndnt: \$TRNLOG failure

ORA-00584: cannot close connection

ORA-00585: host name has incorrect form

ORA-00586: osndnt: LIB\$ASN_WTH_MBX failure

ORA-00587: cannot connect to remote host

ORA-00588: message from host was too short

ORA-00589: message from host had incorrect data length

ORA-00590: message from host had incorrect message type

ORA-00591: incorrect number of bytes written

ORA-00592: osndnt: \$QIO failure (mailbox queue)

ORA-00593: osndnt: \$DASSGN failure (network device)

ORA-00594: osndnt: \$DASSGN failure (mailbox)

ORA-00595: osndnt: \$QIO failure (receive)

ORA-00596: osndnt: \$QIO failure (send)

ORA-00597: osndnt: \$QIO failure (mailbox requeue)

ORA-00598: osndnt: \$QIO failure (mailbox read)

ORA-00600: internal error code, arguments: [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*]

Cause: This is the generic internal error number for Oracle program exceptions. It indicates that a process has encountered a low-level, unexpected condition. The first argument is the internal message number. This argument and the database version number are critical in identifying the root cause and the potential impact to your system.

Action: Visit My Oracle Support to access the ORA-00600 Lookup tool (reference Note 600.1) for more information regarding the specific ORA-00600 error encountered. An Incident has been created for this error in the Automatic Diagnostic Repository (ADR). When logging a service request, use the Incident Packaging Service (IPS) from the Support Workbench or the ADR Command Interpreter (ADRCI) to automatically package the relevant trace information (reference My Oracle Support Note 411.1). The following information should also be gathered to help determine the root cause: - changes leading up to the error - events or unusual circumstances leading up to the error - operations attempted prior to the error - conditions of the operating system and databases at the time of the error Note: The cause of this message may manifest itself as different errors at different times. Be aware of the history of errors that occurred before this internal error.

ORA-00601: cleanup lock conflict

Cause: PMON process runs into lock conflict trying to recovery processes

Action: This is trapped internally, no action necessary

ORA-00602: internal programming exception

Cause: Internal programming exception

Action: Report as bug

ORA-00603: ORACLE server session terminated by fatal error

Cause: An Oracle server session was in an unrecoverable state.

Action: Log in to Oracle again so a new server session will be created automatically.
Examine the session trace file for more information.

ORA-00604: error occurred at recursive SQL level *string*

Cause: An error occurred while processing a recursive SQL statement (a statement applying to internal dictionary tables).

Action: If the situation described in the next error on the stack can be corrected, do so; otherwise contact Oracle Support.

ORA-00606: Internal error code

Cause: A call to deferred upi functions was made in non deferred mode

Action: Report as a bug.

ORA-00607: Internal error occurred while making a change to a data block

Cause: An internal error or memory exception occurred while Oracle was applying redo to a data block.

Action: call Oracle Support

ORA-00608: testing error [*string*] [*string*] [*string*] [*string*] [*string*]

Cause: Internal error reserved for testing.

Action: call Oracle Support

ORA-00609: could not attach to incoming connection

Cause: Oracle process could not answer incoming connection

Action: If the situation described in the next error on the stack can be corrected, do so; otherwise contact Oracle Support.

ORA-00610: Internal error code

Cause: Oracle process started too late

Action: This error should never be seen by the customer. Contact Oracle Support

ORA-00700: soft internal error, arguments: [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*]

Cause: Internal inconsistency that will not crash a process

Action: Report as a bug - the first argument is the internal error.

ORA-00701: object necessary for warmstarting database cannot be altered

Cause: Attempt to alter or drop a database object (table, cluster, or index) which are needed for warmstarting the database.

Action: None

ORA-00702: bootstrap version '*string*' inconsistent with version '*string*'

Cause: The reading version of the bootstrap is incompatible with the current bootstrap version.

Action: Restore a version of the software that is compatible with this bootstrap version.

ORA-00703: maximum number of row cache instance locks exceeded

Cause: There are not enough row cache enqueues.

Action: Increase the row cache enqueue parameter and warm start the system.

ORA-00704: bootstrap process failure

Cause: Failure in processing bootstrap data - see accompanying error.

Action: Contact your customer support representative.

ORA-00705: inconsistent state during start up; shut down the instance, then restart it

Cause: A previous attempt to start an instance was terminated.

Action: Shut down the instance completely, then restart it.

ORA-00706: error changing format of file '*string*'

Cause: An attempt to change the block0 format of the specified file failed because the file is read-only or offline.

Action: Make the file read-write or bring the file online and set the BLK0_FMTCHG event.

ORA-00710: new tablespace name is the same as the old tablespace name

Cause: An attempt to rename a tablespace failed because the new name is the same as the old name.

Action: No action required.

ORA-00711: new tablespace name is invalid

Cause: An attempt to rename a tablespace failed because the new name is invalid.

Action: Choose a valid new name and retry the command.

ORA-00712: cannot rename system tablespace

Cause: An attempt to rename the system tablespace failed.

Action: No action required.

ORA-00720: ALTER DATABASE RESET COMPATIBILITY command has been de-supported

Cause: ALTER DATABASE RESET COMPATIBILITY command has been de-supported since Oracle 10i.

Action: No action required.

ORA-00721: changes by release *string* cannot be used by release *string*

Cause: An attempt to import a tablespace failed because the tablespace contains changes that require a newer software release or that violate the compatibility parameters.

Action: Use a version of the software that can understand the changes or relax the compatibility requirements in the initialization parameter file.

ORA-00722: Feature "*string*"

Cause: Reporting name of the feature for details of another error.

Action: See associated error message.

ORA-00723: Initialization parameter COMPATIBLE must be explicitly set

Cause: Oracle detected that the initialization parameter COMPATIBLE was not explicitly specified, and the compatibility of the database is lower than the default value of the COMPATIBLE parameter. In order to use the new compatible setting, the initialization parameter must be explicitly set by the user.

Action: Explicitly set the value of COMPATIBLE parameter either in PFILE or SPFILE, whichever is used.

ORA-00724: ALTER DATABASE CONVERT command has been de-supported

Cause: ALTER DATABASE CONVERT command has been de-supported since Oracle 10i.

Action: No action required.

ORA-00725: Desupported ALTER DATABASE SET STANDBY clause specified: *string*

Cause: A deprecated ALTER DATABASE SET STANDBY was specified.

Action: No action required.

ORA-00740: datafile size of (*string*) blocks exceeds maximum file size

Cause: The user specified datafile size exceeded maximum file size.

Action: Please check REFERENCE for maximum size. Reduce the size and retry.

ORA-00741: logfile size of (*string*) blocks exceeds maximum logfile size

Cause: The user specified logfile size exceeded maximum logfile size.

Action: Please check REFERENCE for maximum size. Reduce the size and retry.

ORA-00742: Log read detects lost write in thread *string* sequence *string* block *string*

Cause: Either a write issued by Oracle was lost by the underlying operating system or storage system or an Oracle internal error occurred.

Action: The trace file shows the lost write location. Dump the problematic log file to see whether it is a real lost write. Contact Oracle Support Services.

ORA-00750: database has been previously mounted and dismounted

Cause: The instance has already mounted and dismounted the database, which is only allowed once in its lifetime.

Action: Shut down the database.

ORA-00751: could not obtain resilvering status for file

Cause: An error occurred while obtaining the mirror resilvering status of a file.

Action: Refer to other error messages shown for additional details of the problem.

ORA-00752: recovery detected a lost write of a data block

Cause: A data block write to storage was lost during normal database operation on the primary database.

Action: Shutdown the primary database and activate the physical standby database to failover. Call Oracle Support Services. See the Data Guard documentation for details.

ORA-00753: recovery detected a lost write of a data block

Cause: A data block write to storage was lost during normal redo database operation on the standby database or during recovery on a primary database.

Action: Close the database and try the RECOVER MANAGED STANDBY DATABASE (on the standby database) or RECOVER DATABASE ... FORCE START AT (on the primary database) statement starting at the SCN of the bad block that was printed already. See the Administrator's Guide for details.

ORA-00754: recovery detected a data block with invalid SCN

Cause: An error caused a data block mismatch with a log record.

Action: If running on a primary database in recovery mode, you may perform a point-in-time recovery to an earlier time. Otherwise, call Oracle Support Services. See the Administrator's Guide for details.

ORA-00756: recovery detected a lost write of a data block

Cause: A data block write to storage was lost during normal redo database operation on the standby database or during recovery on a primary database.

Action: Close the database and try the RECOVER MANAGED STANDBY DATABASE (on the standby database) or RECOVER DATABASE ... FORCE START AT (on the primary database) statement starting at the SCN of the bad block that was printed already. See the Administrator's Guide for details.

ORA-00758: recovery detected a block with inconsistent flag values set

Cause: An internal error occurred.

Action: If running on a primary database in recovery mode, you may perform a point-in-time recovery to an earlier time. Otherwise, call Oracle Support Services. See the Administrator's Guide for details.

ORA-00816: error message translation failed

ORA-00820: Specified value of sga_max_size is too small, needs to be at least *stringM*

Cause: The specified value of sga_max_size is too small for the SGA to accommodate all of the necessary SGA components such as the log buffer, buffer pools, shared pool, etc.

Action: Set sga_max_size to the recommended value or reduce the values of any SGA component size parameters you have specified.

ORA-00821: Specified value of sga_target *stringM* is too small, needs to be at least *stringM*

Cause: The specified value of sga_target is too small for the SGA to accommodate all of the necessary SGA components such as the log buffer, buffer pools, shared pool, etc.

Action: Set sga_target to the recommended value or reduce the values of any SGA component size parameters you have specified.

ORA-00822: MMAN process terminated with error

Cause: The Memory Management process died.

Action: Warm start instance

ORA-00823: Specified value of sga_target greater than sga_max_size

Cause: The specified value of sga_target is greater than sga_max_size.

Action: Increase `sga_max_size` to match up with `sga_target` or decrease `sga_target` to match up with `sga_maxsize`.

ORA-00824: cannot set SGA_TARGET or MEMORY_TARGET due to existing internal settings

Cause: Could not set `SGA_TARGET` or `MEMORY_TARGET` due to current parameter settings.

Action: Check the other error messages for additional information.

ORA-00825: cannot set DB_BLOCK_BUFFERS if SGA_TARGET or MEMORY_TARGET is set

Cause: `SGA_TARGET` or `MEMORY_TARGET` set with `DB_BLOCK_BUFFERS` set.

Action: Do not set `SGA_TARGET`, `MEMORY_TARGET` or use new cache parameters, and do not use `DB_BLOCK_BUFFERS` which is an old cache parameter.

ORA-00826: cannot set SGA_TARGET or MEMORY_TARGET for an ASM instance

Cause: `SGA_TARGET` or `MEMORY_TARGET` set for an ASM instance.

Action: Do not set `SGA_TARGET` or `MEMORY_TARGET`.

ORA-00827: could not shrink sga_target to specified value

Cause: Attempted to shrink the SGA to the specified value but did not succeed because the SGA components could not be shrunk as they were already at their minimum sizes.

Action: Do not set `sga_target` to a value below the current value without first shrinking the individual SGA components.

ORA-00828: specified value of shared_pool_reserved_size inconsistent with internal settings

Cause: Unable to set `shared_pool_reserved_size` to specified value if `SGA_TARGET` set, either because the specified value is too small, or because it is too large for the current internal size of shared pool. More details can be found in the alert log.

Action: If possible, do not set `shared_pool_reserved_size` without setting `shared_pool_size` if `SGA_TARGET` set. Examine the alert log for information about current internal size of shared pool, and valid range of values for `shared_pool_reserved_size`.

ORA-00830: cannot set statistics_level to BASIC with auto-tune SGA enabled

Cause: The user attempted to set `statistics_level` to `BASIC` with auto-tune SGA enabled which cannot be done because auto-tune SGA cannot work with `statistics_level` set to `BASIC`.

Action: Disable auto-tune SGA and try setting the `statistics_level` to `BASIC` again.

ORA-00832: no streams pool created and cannot automatically create one

Cause: A database feature which needs `STREAMS` SGA was being used, however, the `streams_pool_size` parameter was not defined and the value of `db_cache_size` was too small to permit an automatic transfer of SGA to the streams pool from the buffer cache.

Action: Please set the parameter `streams_pool_size` or set `SGA_TARGET`.

ORA-00837: Specified value of MEMORY_TARGET greater than MEMORY_MAX_TARGET

Cause: The specified value of MEMORY_TARGET was greater than MEMORY_MAX_TARGET.

Action: Set MEMORY_TARGET less than or equal to MEMORY_MAX_TARGET.

ORA-00838: Specified value of MEMORY_TARGET is too small, needs to be at least *string*M

Cause: The specified value of MEMORY_TARGET was less than the sum of the specified values for SGA_TARGET and PGA_AGGREGATE_TARGET.

Action: Set MEMORY_TARGET to at least the recommended value.

ORA-00839: SGA_TARGET cannot be modified to the specified value

Cause: The specified value of SGA_TARGET was not compatible with current settings of PGA_AGGREGATE_TARGET and MEMORY_TARGET/MEMORY_MAX_TARGET.

Action: Set SGA_TARGET to be no more than the difference of MEMORY_TARGET/MEMORY_MAX_TARGET and PGA_AGGREGATE_TARGET. Also ensure that the current PGA memory used for non-auto workareas is low.

ORA-00840: PGA_AGGREGATE_TARGET cannot be modified to the specified value

Cause: The specified value of PGA_AGGREGATE_TARGET was not compatible with current settings of SGA_TARGET and MEMORY_TARGET/MEMORY_MAX_TARGET.

Action: Set PGA_AGGREGATE_TARGET to be no more than the difference of MEMORY_TARGET/MEMORY_MAX_TARGET and SGA_TARGET.

ORA-00841: MEMORY_TARGET not supported on this system

Cause: MEMORY_TARGET parameter was not supported on this system as shmfs was disabled.

Action: Refer to documentation for a list of supported systems.

ORA-00842: DB_BLOCK_BUFFERS cannot be set with SGA_TARGET or MEMORY_TARGET

Cause: DB_BLOCK_BUFFERS was incompatible with SGA_TARGET and MEMORY_TARGET.

Action: Remove the incompatible parameter setting.

ORA-00843: Parameter not taking MEMORY_MAX_TARGET into account

Cause: The parameter was larger than MEMORY_MAX_TARGET.

Action: Check the other error messages for additional information about the parameter. Set the parameter to a lower value than MEMORY_MAX_TARGET.

ORA-00844: Parameter not taking MEMORY_TARGET into account

Cause: The parameter was larger than MEMORY_TARGET.

Action: Check the other error messages for additional information about the parameter. Set the parameter to a lower value than MEMORY_TARGET.

ORA-00845: MEMORY_TARGET not supported on this system

Cause: The MEMORY_TARGET parameter was not supported on this operating system or /dev/shm was not sized correctly on Linux.

Action: Refer to documentation for a list of supported operating systems. Or, size /dev/shm to be at least the SGA_MAX_SIZE on each Oracle instance running on the system.

ORA-00846: could not shrink MEMORY_TARGET to specified value

Cause: Attempted to shrink MEMORY_TARGET to the specified value but did not succeed because the PGA and SGA components could not be shrunk.

Action: Do not set MEMORY_TARGET to a value below the current value without first shrinking the individual memory components.

ORA-00847: MEMORY_TARGET/MEMORY_MAX_TARGET and LOCK_SGA cannot be set together

Cause: MEMORY_TARGET/MEMORY_MAX_TARGET was set to a non-zero value and LOCK_SGA was also set

Action: Do not set MEMORY_TARGET or MEMORY_MAX_TARGET if LOCK_SGA is set to TRUE.

ORA-00848: STATISTICS_LEVEL cannot be set to BASIC with SGA_TARGET or MEMORY_TARGET

Cause: STATISTICS_LEVEL of BASIC was incompatible with SGA_TARGET and MEMORY_TARGET.

Action: Fix the incompatible parameter setting. Set STATISTICS_LEVEL to TYPICAL or ALL to use SGA_TARGET or MEMORY_TARGET.

ORA-00849: SGA_TARGET string cannot be set to more than MEMORY_MAX_TARGET string.

Cause: SGA_TARGET value was more than MEMORY_MAX_TARGET value.

Action: Set SGA_TARGET to be less than MEMORY_MAX_TARGET.

ORA-00850: PGA_AGGREGATE_TARGET string cannot be set to more than MEMORY_MAX_TARGET string.

Cause: PGA_AGGREGATE_TARGET value was more than MEMORY_MAX_TARGET value.

Action: Set PGA_AGGREGATE_TARGET to be less than MEMORY_MAX_TARGET.

ORA-00851: SGA_MAX_SIZE string cannot be set to more than MEMORY_TARGET string.

Cause: SGA_MAX_SIZE value was more than MEMORY_TARGET value.

Action: Set SGA_MAX_SIZE to be less than MEMORY_TARGET.

ORA-00852: Rolling migration monitor process terminated.

Cause: The ASM rolling migration monitor process died.

Action: Warm start the instance.

ORA-00853: SGA_MAX_SIZE string cannot be set to more than MEMORY_MAX_TARGET string.

Cause: SGA_MAX_SIZE value was more than MEMORY_MAX_TARGET value.

Action: Set SGA_MAX_SIZE to be less than MEMORY_MAX_TARGET.

ORA-00854: ASM IO Server Instance Fence monitor process terminated.

Cause: The ASM IO Server Fence monitor process died.

Action: Warm start the instance.

ORA-00875: failed to *string* the dedicated connection broker

Cause: The dedicated connection broker could not be enabled or disabled.

Action: Check the process trace file for the reason for failure.

ORA-00876: invalid CONNECTION_BROKERS specification #*string*

Cause: The syntax for the nth CONNECTION_BROKERS specification was invalid.

Action: See the additional errors that were reported. Refer to the Oracle Database Reference manual for the correct syntax.

ORA-00877: TYPE=*string* appears in multiple CONNECTION_BROKERS specifications

Cause: Multiple CONNECTION_BROKER specifications contained the same TYPE.

Action: Specify only one specification for each TYPE.

ORA-00900 to ORA-01499

ORA-00900: invalid SQL statement

ORA-00901: invalid CREATE command

ORA-00902: invalid datatype

ORA-00903: invalid table name

ORA-00904: *string*: invalid identifier

ORA-00905: missing keyword

ORA-00906: missing left parenthesis

ORA-00907: missing right parenthesis

ORA-00908: missing NULL keyword

ORA-00909: invalid number of arguments

ORA-00910: specified length too long for its datatype

Cause: for datatypes CHAR and RAW, the length specified was > 2000; otherwise, the length specified was > 4000.

Action: use a shorter length or switch to a datatype permitting a longer length such as a VARCHAR2, LONG CHAR, or LONG RAW

ORA-00911: invalid character

Cause: identifiers may not start with any ASCII character other than letters and numbers. \$#_ are also allowed after the first character. Identifiers enclosed by doublequotes may contain any character other than a doublequote. Alternative quotes (q'...#') cannot use spaces, tabs, or carriage returns as delimiters. For all other contexts, consult the SQL Language Reference Manual.

Action: n/a

ORA-00912: input parameter too long

Cause: one of your input strings was too long

Action: shorten the input parameter length

ORA-00913: too many values

ORA-00914: missing ADD keyword

ORA-00915: network access of dictionary table not currently allowed

ORA-00917: missing comma

ORA-00918: column ambiguously defined

ORA-00919: invalid function

ORA-00920: invalid relational operator

ORA-00921: unexpected end of SQL command

ORA-00922: missing or invalid option

ORA-00923: FROM keyword not found where expected

ORA-00924: missing BY keyword

ORA-00925: missing INTO keyword

ORA-00926: missing VALUES keyword

ORA-00927: missing equal sign

ORA-00928: missing SELECT keyword

ORA-00929: missing period

ORA-00930: missing asterisk

ORA-00931: missing identifier

ORA-00932: inconsistent datatypes: expected *string* got *string*

ORA-00933: SQL command not properly ended

ORA-00934: group function is not allowed here

ORA-00935: group function is nested too deeply

ORA-00936: missing expression

ORA-00937: not a single-group group function

ORA-00938: not enough arguments for function

ORA-00939: too many arguments for function

ORA-00940: invalid ALTER command

ORA-00941: missing cluster name

ORA-00942: table or view does not exist

ORA-00943: cluster does not exist

ORA-00944: insufficient number of clustered columns

ORA-00945: specified clustered column does not exist

ORA-00946: missing TO keyword

ORA-00947: not enough values

ORA-00948: ALTER CLUSTER statement no longer supported

ORA-00949: illegal reference to remote database

ORA-00950: invalid DROP option

ORA-00951: cluster not empty

ORA-00952: missing GROUP keyword

ORA-00953: missing or invalid index name

Cause: An index name of the form [*identifier* .] *identifier* is expected but not present. If OIDINDEX clause, index name must be *identifier*

Action: Enter an appropriate index name.

ORA-00954: missing IDENTIFIED keyword

ORA-00955: name is already used by an existing object

ORA-00956: missing or invalid auditing option

Cause: AUDIT or NOAUDIT statement contains an invalid auditing option.

Action: Use a valid option.

ORA-00957: duplicate column name

ORA-00958: missing CHECK keyword

ORA-00959: tablespace '*string*' does not exist

ORA-00960: ambiguous column naming in select list

Cause: A column name in the order-by list matches more than one select list columns.

Action: Remove duplicate column naming in select list.

ORA-00961: bad datetime/interval value

ORA-00962: too many group-by / order-by expressions

Cause: The group-by or order-by column list contain more than 1000 expressions.

Action: Use 1000 or less expressions in the group-by or order-by list.

ORA-00963: unsupported interval type

ORA-00964: table name not in FROM list

Cause: The table name referred in the select list is not specified in the from list.

Action: Make sure the name is correctly specified and matches one of the names in the from list.

ORA-00965: column aliases not allowed for '*'

Cause: The statement is trying to alias the * expression in the select list which is not legal.

Action: Remove the alias.

ORA-00966: missing TABLE keyword

ORA-00967: missing WHERE keyword

ORA-00968: missing INDEX keyword

ORA-00969: missing ON keyword

ORA-00970: missing WITH keyword

ORA-00971: missing SET keyword

ORA-00972: identifier is too long

Cause: An identifier with more than 30 characters was specified.

Action: Specify at most 30 characters.

ORA-00973: invalid row count estimate

ORA-00974: invalid PCTFREE value (percentage)

ORA-00975: date + date not allowed

ORA-00976: Specified pseudocolumn or operator not allowed here.

Cause: LEVEL, PRIOR, ROWNUM, CONNECT_BY_ROOT, CONNECT_BY_ISLEAF or CONNECT_BY_ISCYCLE was specified at an illegal location.

Action: Remove LEVEL, PRIOR, ROWNUM, CONNECT_BY_ROOT, CONNECT_BY_ISLEAF or CONNECT_BY_ISCYCLE.

ORA-00977: duplicate auditing option

Cause: AUDIT or NOAUDIT statement specifies an option more than once

Action: Either use ALL with no other auditing options or make sure no option is listed more than once.

ORA-00978: nested group function without GROUP BY

ORA-00979: not a GROUP BY expression

ORA-00980: synonym translation is no longer valid

Cause: A synonym did not translate to a legal target object. This could happen for one of the following reasons: 1. The target schema does not exist. 2. The target object does not exist. 3. The synonym specifies an incorrect database link. 4. The synonym is not versioned but specifies a versioned target object.

Action: Change the synonym definition so that the synonym points at a legal target object.

ORA-00981: cannot mix table and system auditing options

Cause: Table and system-wide auditing options were specified in the same AUDIT or NOAUDIT statement.

Action: You must issue table and system options in separate statements.

ORA-00982: missing plus sign

ORA-00983: cannot audit or noaudit SYS user actions

Cause: An attempt was made to AUDIT or NOAUDIT SYS user actions.

Action: Execute the statement again with a valid user.

ORA-00984: column not allowed here

ORA-00985: invalid program name

ORA-00986: missing or invalid group name(s)

ORA-00987: missing or invalid username(s)

ORA-00988: missing or invalid password(s)

ORA-00989: too many passwords for usernames given

ORA-00990: missing or invalid privilege

ORA-00991: only MAC privileges may be granted to procedures

Cause: Object privileges or non-MAC system privileges were granted to the procedure.

Action: Only grant MAC privileges using the PROCEDURE clause.

ORA-00992: invalid format for REVOKE command

ORA-00993: missing GRANT keyword

ORA-00994: missing OPTION keyword

ORA-00995: missing or invalid synonym identifier

ORA-00996: the concatenate operator is ||, not |

ORA-00997: illegal use of LONG datatype

ORA-00998: must name this expression with a column alias

ORA-00999: invalid view name

ORA-01000: maximum open cursors exceeded

ORA-01001: invalid cursor

ORA-01002: fetch out of sequence

Cause: This error means that a fetch has been attempted from a cursor which is no longer valid. Note that a PL/SQL cursor loop implicitly does fetches, and thus may also cause this error. There are a number of possible causes for this error, including: 1) Fetching from a cursor after the last row has been retrieved and the ORA-1403 error returned. 2) If the cursor has been opened with the FOR UPDATE clause, fetching after a COMMIT has been issued will return the error. 3) Rebinding any placeholders in the SQL statement, then issuing a fetch before reexecuting the statement.

Action: 1) Do not issue a fetch statement after the last row has been retrieved - there are no more rows to fetch. 2) Do not issue a COMMIT inside a fetch loop for a cursor that has been opened FOR UPDATE. 3) Reexecute the statement after rebinding, then attempt to fetch again.

ORA-01003: no statement parsed

ORA-01004: default username feature not supported; logon denied

ORA-01005: null password given; logon denied

ORA-01006: bind variable does not exist

ORA-01007: variable not in select list

ORA-01008: not all variables bound

ORA-01009: missing mandatory parameter

ORA-01010: invalid OCI operation

Cause: One of the following: 1) You attempted an invalid OCI operation. 2) You are using an Oracle client application linked with version 7.1 (or higher) libraries, the environment variable `ORA_ENCRYPT_LOGIN` is set to `TRUE`, and you attempted to connect to a version 7.0 (or lower) Oracle Server. 3) You are connected to a version 7.1 (or higher) Oracle Server, the initialization parameter `DBLINK_ENCRYPT_LOGIN` is set to `TRUE`, and you attempted to use a database link pointing to a version 7.0 (or lower) Oracle Server. 4) You are connected to a version 9.0.2(or higher) Oracle Server and you attempted to use a database link pointing to a version 9.0.1(or lower) Oracle Server for distributed autonomous transaction.

Action: For the above causes: 1) Do not use the invalid OCI operation. 2) If you do not wish to use encrypted connect passwords in your distributed database, set `ORA_ENCRYPT_LOGIN` to `FALSE`. If you wish to use encrypted connect passwords, you must upgrade all Oracle Servers to version 7.1 (or higher). 3) If you do not wish to use encrypted database links in your distributed database, set `DBLINK_ENCRYPT_LOGIN` to `FALSE`. If you wish to use encrypted database links, you must upgrade all Oracle Servers to version 7.1 (or higher). 4) Do not attempt distributed autonomous transaction on version 9.0.1(or lower) Oracle Server.

ORA-01011: Cannot use v7 compatibility mode when talking to v6 server

ORA-01012: not logged on

ORA-01013: user requested cancel of current operation

ORA-01014: ORACLE shutdown in progress

ORA-01015: logon called recursively

ORA-01016: This function can be called only after a fetch

Cause: Cursor in an invalid state.

Action: Make sure that the `oci/upi` function is called after `fetch`.

ORA-01017: invalid username/password; logon denied

ORA-01018: column does not have a LONG datatype

ORA-01019: unable to allocate memory in the user side

Cause: The user side memory allocator returned error.

Action: Increase the processes heap size or switch to the old set of calls.

ORA-01020: unknown context state

ORA-01021: invalid context size specified

ORA-01022: database operation not supported in this configuration

Cause: The attempted database operation does not conform to the user programming interface (UPI) for the two communicating ORACLE servers.

Action: You may need to upgrade one or more of your ORACLE servers or re-link your user side application with new libraries. Report the problem to Worldwide Customer Support.

ORA-01023: Cursor context not found (Invalid cursor number)

Cause: The cursor number is not a valid open cursor.

Action: Make sure that the cursor is open.

ORA-01024: invalid datatype in OCI call

ORA-01025: UPI parameter out of range

Cause: An integer parameter to a upi function is out of range.

Action: This usually indicates an error in a tool built on top of the oracle dbms. Report the error to your customer support representative.

ORA-01026: multiple buffers of size > 4000 in the bind list

Cause: More than one long buffer in the bind list.

Action: Change the buffer size to be less than 4000 for the bind variable bound to a normal column.

ORA-01027: bind variables not allowed for data definition operations

Cause: An attempt was made to use a bind variable in a SQL data definition operation.

Action: Such bind variables are not allowed.

ORA-01028: internal two task error

Cause: Received send long message but don't have the cursor context.

Action: Report as a bug.

ORA-01029: internal two task error

Cause: Received a request to send the long again when there is no long

Action: Report as a bug

ORA-01030: SELECT ... INTO variable does not exist

Cause: The SELECT... INTO specified in the bind call does not correspond to a variable in the SQL statement.

Action: If it is not possible to correct the statement, call customer support.

ORA-01031: insufficient privileges

Cause: An attempt was made to perform a database operation without the necessary privileges.

Action: Ask your database administrator or designated security administrator to grant you the necessary privileges

ORA-01032: no such userid

Cause: This is an internal error message related to Export/Import.

Action: Contact customer support.

ORA-01033: ORACLE initialization or shutdown in progress

Cause: An attempt was made to log on while Oracle is being started up or shutdown.

Action: Wait a few minutes. Then retry the operation.

ORA-01034: ORACLE not available

Cause: Oracle was not started up. Possible causes include the following: - The SGA requires more space than was allocated for it. - The operating-system variable pointing to the instance is improperly defined.

Action: Refer to accompanying messages for possible causes and correct the problem mentioned in the other messages. If Oracle has been initialized, then on some operating systems, verify that Oracle was linked correctly. See the platform specific Oracle documentation.

ORA-01035: ORACLE only available to users with RESTRICTED SESSION privilege

Cause: Logins are disallowed because an instance started in restricted mode. Only users with RESTRICTED SESSION system privilege can log on.

Action: Request that Oracle be restarted without the restricted option or obtain the RESTRICTED SESSION system privilege.

ORA-01036: illegal variable name/number

Cause: Unable to find bind context on user side

Action: Make sure that the variable being bound is in the sql statement.

ORA-01037: maximum cursor memory exceeded

Cause: Attempting to process a complex sql statement which consumed all available memory of the cursor.

Action: Simplify the complex sql statement.

ORA-01038: cannot write database file version *string* with ORACLE version *string*

Cause: Attempting to write datafile headers in an old format. The new format can not be used until after the database has been verified as being compatible with this software version.

Action: Open the database to advance to the new file formats, then repeat the operation. If the operation is required before the database can be opened, then use the previous software release to do the operation.

ORA-01039: insufficient privileges on underlying objects of the view

Cause: Attempting to explain plan on other people's view without the necessary privileges on the underlying objects of the view.

Action: Get necessary privileges or do not perform the offending operation.

ORA-01040: invalid character in password; logon denied

Cause: There are multibyte characters in the password or some characters in the password are not in US7ASCII range.

Action: Resubmit password with valid characters.

ORA-01041: internal error. hostdef extension doesn't exist

Cause: Pointer to hstdef extension in hstdef is null.

Action: Report as a bug

ORA-01042: detaching a session with open cursors not allowed

Cause: An attempt was made to detach a session which had open cursors.

Action: Close all the cursors before detaching the session.

ORA-01043: user side memory corruption [string], [string], [string], [string]

Cause: The application code corrupted some of the user memory used by Oracle.

Action: Make sure that the application code is not overwriting memory.

ORA-01044: size string of buffer bound to variable exceeds maximum string

Cause: An attempt was made to bind a buffer whose total size would exceed the maximum size allowed. Total array size for arrays is calculated as:
(element_size)*(number of elements)

Action: Reduce buffer size.

ORA-01045: user string lacks CREATE SESSION privilege; logon denied

Cause: A connect was attempted to a user who does not have create session privilege.

Action: Grant the user CREATE SESSION privilege.

ORA-01046: cannot acquire space to extend context area

ORA-01047: The above error occurred in schema=string, package=string, procedure=string

ORA-01048: Couldn't find the specified procedure in the given context

Cause: The procedure user specified in deferred RPC doesn't exist.

Action: Check to make sure that the procedure exists and is visible to the replication process.

ORA-01049: Bind by name is not supported in streamed RPC

Cause: A newer version of server is talking with this version requesting an operation not supported in this version.

Action: n/a

ORA-01050: cannot acquire space to open context area

ORA-01051: deferred rpc buffer format invalid

Cause: The deferred rpc data in sys.def\$_call is corrupted.

Action: Contact your customer support representative.

ORA-01052: required destination LOG_ARCHIVE_DUPLEX_DEST is not specified

Cause: A valid destination for parameter LOG_ARCHIVE_DUPLEX_DEST was not specified when parameter LOG_ARCHIVE_MIN_SUCCEED_DEST was set to two.

Action: Either specify a value for parameter LOG_ARCHIVE_DUPLEX_DEST, or reduce the value for parameter LOG_ARCHIVE_MIN_SUCCEED_DEST to one.

ORA-01053: user storage address cannot be read

ORA-01054: user storage address cannot be written

ORA-01055: Object datatypes not supported for bind or define in this mode

Cause: Bind or Define used for objects with an invalid mode

Action: Change the mode.

ORA-01057: invalid or ambiguous block.field reference in user exit

ORA-01058: internal New Upi interface error

Cause: Attempt to delete non existant hstdef extension.

Action: Report as a bug.

ORA-01059: parse expected before a bind or execute

Cause: The client application attempted to bind a variable or execute a cursor opened in a PL/SQL block before the statement was parsed.

Action: Ensure the statement is parsed before a bind or execute.

ORA-01060: array binds or executes not allowed

Cause: The client application attempted to bind an array of cursors or attempted to repeatedly execute against a PL/SQL block with a bind variable of type cursor.

Action: Bind a single cursor or execute the PL/SQL block once.

ORA-01061: cannot start up a V8 server using a V7 client application

Cause: You are using an Oracle client application linked with version 7 (or lower) libraries and you attempted to start up a V8 (or higher) server.

Action: Use a client application linked with V8 (or higher) libraries.60

ORA-01062: unable to allocate memory for define buffer

Cause: Exceeded the maximum buffer size for current plaform

Action: Use piecewise fetch with a smaller buffer size

ORA-01070: Using an old version of Oracle for the server

Cause: Using pre 7.0.10.1 version of oracle for server

Action: Upgrade server to post 7.0.10.1 version

ORA-01071: cannot perform operation without starting up ORACLE

Cause: Obvious

Action: n/a

ORA-01072: cannot stop ORACLE; ORACLE not running

Cause: Obvious

Action: n/a

ORA-01073: fatal connection error: unrecognized call type

Cause: An illegal internal operation was attempted.

Action: Contact your customer support representative.

ORA-01074: cannot shut down ORACLE; inside a login session - log off first

Cause: Obvious

Action: n/a

ORA-01075: you are currently logged on

Cause: Attempt to login while logged in.

Action: n/a

ORA-01076: multiple logons per process not yet supported

Cause: Obvious

Action: n/a

ORA-01077: background process initialization failure

Cause: Failure during initialization of ORACLE background processes.

Action: Further diagnostic information should be in the error stack or in the trace file.

ORA-01078: failure in processing system parameters

Cause: Failure during processing of INIT.ORA parameters during system startup.

Action: Further diagnostic information should be in the error stack.

ORA-01079: ORACLE database was not properly created, operation aborted

Cause: There was an error when the database or control file was created.

Action: Check what error was signaled when the database was first created or when the control file was recreated. Take appropriate actions to recreate the database or a new control file.

ORA-01080: error in shutting down ORACLE

Cause: Failure during system shutdown.

Action: Further diagnostic information should be in the error stack.

ORA-01081: cannot start already-running ORACLE - shut it down first

Cause: Obvious

Action: n/a

ORA-01082: 'row_locking = always' requires the transaction processing option

Cause: "row_locking = always" is specified in INIT.ORA file. This feature is not supported by ORACLE without the transaction processing option.

Action: Remove it from INIT.ORA file or set it to "default" or "intent".

ORA-01083: value of parameter "*string*" is inconsistent with that of other instances

Cause: The value of the given parameter is required to be the same for all instances in the cluster database configuration. ROW_LOCKING and SERIALIZABLE are 2 examples.

Action: Change the value of the parameter in INIT.ORA file to match that of other cluster database instances.

ORA-01084: invalid argument in OCI call

Cause: The failing OCI call contains an argument with an invalid value.

Action: Use valid argument values. For more information, see the Programmer's Guide to the Oracle Call Interfaces and the appropriate programming language supplement.

ORA-01085: preceding errors in deferred rpc to "*string.string.string*"

Cause: Errors were encountered when the named procedure was executed as a deferred remoted procedure call.

Action: Correct the cause of the preceding errors.

ORA-01086: savepoint '*string*' never established in this session or is invalid

Cause: An attempt was made to roll back to a savepoint that was never established in this session, or was invalid.

Action: Try rolling back to the savepoint from the session where it is established.

ORA-01087: cannot start up ORACLE - currently logged on

ORA-01088: shutdown in progress - operation not permitted until restart

Cause: The SHUTDOWN command was used to shut down a running Oracle instance but the shutdown operation was not complete.

Action: Wait for the instance to be restarted or contact your database administrator.

ORA-01089: immediate shutdown or close in progress - no operations are permitted

Cause: The SHUTDOWN IMMEDIATE command was used to shut down a running Oracle instance, or CLOSE IMMEDIATE was used to shut down a pluggable database, so your operations have been terminated.

Action: Wait for the instance to be restarted, or contact your DBA.

ORA-01090: shutdown in progress - connection is not permitted

Cause: The SHUTDOWN command was used to shut down a running ORACLE instance, so you cannot connect to ORACLE.

Action: Wait for the instance to be restarted, or contact your DBA.

ORA-01091: failure during startup force

Cause: Unable to destroy the old SGA.

Action: Manually remove the old SGA and reissue the STARTUP command

ORA-01092: ORACLE instance terminated. Disconnection forced

Cause: The instance this process was connected to was terminated abnormally, probably via a shutdown abort. This process was forced to disconnect from the instance.

Action: Examine the alert log for more details. When the instance has been restarted, retry action.

ORA-01093: ALTER DATABASE CLOSE only permitted with no sessions connected

Cause: There is at least one more session other than the current one logged into the instance. ALTER DATABASE CLOSE is not permitted.

Action: Find the other sessions and log them out and resubmit the command

ORA-01094: ALTER DATABASE or ALTER PLUGGABLE DATABASE CLOSE in progress. Connections not permitted

ORA-01095: DML statement processed zero rows

Cause: During a call to OTEX, an update, delete, or insert statement being executed processed zero rows. The execution of statements by OTEX was halted at this point.

Action: n/a

ORA-01096: program version (*string*) incompatible with instance (*string*)

Cause: A program is trying to connect to an instance using a different version of code than the database was started with. This is not allowed.

Action: Either relink the program with the same version as the database or restart the database using the old version of code.

ORA-01097: cannot shutdown while in a transaction - commit or rollback first

Cause: Obvious

Action: n/a

ORA-01098: program Interface error during Long Insert

ORA-01099: cannot mount database in SHARED mode if started in single process mode

Cause: Obvious

Action: n/a

ORA-01100: database already mounted

Cause: A database is already mounted in this instance.

Action: n/a

ORA-01101: database being created currently mounted by some other instance

Cause: Some other instance has the database of same name currently mounted and you are trying to create it.

Action: Either change the database name or shutdown the other instance.

ORA-01102: cannot mount database in EXCLUSIVE mode

Cause: Some other instance has the database mounted exclusive or shared.

Action: Shutdown other instance or mount in a compatible mode.

ORA-01103: database name '*string*' in control file is not '*string*'

Cause: The database name in the control file does not match your database name.

Action: Either find the correct control file or change your database name.

ORA-01104: number of control files (*string*) does not equal *string*

Cause: The number of control files used by this instance disagrees with the number of control files in an existing instance.

Action: Check to make sure that all control files are listed.

ORA-01105: mount is incompatible with mounts by other instances

Cause: An attempt to mount the database discovered that another instance mounted a database by the same name, but the mount is not compatible. Additional errors are reported explaining why.

Action: See accompanying errors.

ORA-01106: database must be closed before dismounting

Cause: Obvious

Action: n/a

ORA-01107: database must be mounted for media recovery

Cause: An attempt to perform media recovery was made but the database is not mounted.

Action: Mount the database.

ORA-01108: file *string* is in backup or media recovery

Cause: Either media recovery is actively being applied to the file, or it is being backed up while the database is in NOARCHIVELOG mode. It cannot be used for normal database access or crash recovery.

Action: Complete or cancel the media recovery session or backup.

ORA-01109: database not open

Cause: A command was attempted that requires the database to be open.

Action: Open the database and try the command again

ORA-01110: data file *string*: '*string*'

Cause: Reporting file name for details of another error. The reported name can be of the old file if a data file move operation is in progress.

Action: See associated error message.

ORA-01111: name for data file *string* is unknown - rename to correct file

Cause: The data file was missing from a CREATE CONTROLFILE command or backup control file recovery was done with a control file that was saved before the file was created.

Action: Rename the MISSING file to the name of the real file.

ORA-01112: media recovery not started

Cause: An attempt to continue media recovery is being made but media recovery was not started.

Action: None

ORA-01113: file *string* needs media recovery

Cause: An attempt was made to online or open a database with a file that is in need of media recovery.

Action: First apply media recovery to the file.

ORA-01114: IO error writing block to file *string* (block # *string*)

Cause: The device on which the file resides is probably offline. If the file is a temporary file, then it is also possible that the device has run out of space. This could happen because disk space of temporary files is not necessarily allocated at file creation time.

Action: Restore access to the device or remove unnecessary files to free up space.

ORA-01115: IO error reading block from file *string* (block # *string*)

Cause: Device on which the file resides is probably offline

Action: Restore access to the device

ORA-01116: error in opening database file *string*

Cause: Usually the file is not accessible.

Action: Restore the database file.

ORA-01117: adding file '*string*' with illegal block size: *string*; limit is *string*

Cause: An attempt was made to add a database file with a block size that is greater than the maximum block size allowed.

Action: Retry the DDL command with a smaller block size.

ORA-01118: cannot add any more database files: limit of *string* exceeded

Cause: There is no more room in the control file for adding database files.

Action: Resize the control file or drop other tablespaces.

ORA-01119: error in creating database file '*string*'

Cause: Usually due to not having enough space on the device.

Action: n/a

ORA-01120: cannot remove online database file *string*

Cause: Attempting to drop a datafile when it is online

Action: Take file offline before dropping.

ORA-01121: cannot rename database file *string* - file is in use or recovery

Cause: Attempted to use ALTER DATABASE RENAME to rename a datafile that is online in an open instance or is being recovered.

Action: Close database in all instances and end all recovery sessions.

ORA-01122: database file *string* failed verification check

Cause: The information in this file is inconsistent with information from the control file. See accompanying message for reason.

Action: Make certain that the db files and control files are the correct files for this database.

ORA-01123: cannot start online backup; media recovery not enabled

Cause: An attempt to start backup of an on-line tablespace failed because media recovery is not enabled.

Action: Enable media recovery and retry this operation.

ORA-01124: cannot recover data file *string* - file is in use or recovery

Cause: An attempt to do media recovery found that the file was not available for recovery. Either it is online and the database is open in some instance, or another process is currently doing media recovery on the file.

Action: Do not do media recovery.

ORA-01125: cannot disable media recovery - file *string* has online backup set

Cause: An attempt to disable media recovery found that an online backup is still in progress.

Action: End the backup of the offending tablespace and retry this command.

ORA-01126: database must be mounted in this instance and not open in any instance

Cause: Obvious

Action: n/a

ORA-01127: database name '*string*' exceeds size limit of *string* characters

Cause: Obvious

Action: n/a

ORA-01128: cannot start online backup - file *string* is offline

Cause: An attempt to start an online backup found that one of the files is offline.

Action: Bring the offending files online and retry this command or do a cold backup.

ORA-01129: user's default or temporary tablespace does not exist

Cause: The user's default or temporary tablespace was dropped.

Action: Reassign the default or temporary tablespace.

ORA-01130: database file version *string* incompatible with ORACLE version *string*

ORA-01131: DB_FILES system parameter value *string* exceeds limit of *string*

ORA-01132: length of database file name '*string*' exceeds limit of *string* characters

ORA-01133: length of log file name '*string*' exceeds limit of *string* characters

ORA-01134: database mounted exclusive by another instance

ORA-01135: file *string* accessed for DML/query is offline

Cause: Attempted to access a data file that is offline

Action: Bring the data file back online

ORA-01136: specified size of file *string* (*string* blocks) is less than original size of *string* blocks

Cause: A file size was specified in the AS clause of ALTER DATABASE CREATE DATAFILE, and the size was smaller than the size needed

Action: Create the file with a larger size.

ORA-01137: data file *string* is still in the middle of going offline

Cause: It was not possible to get the lock for a file that is offline when attempting to bring it online. The most likely cause is that the lock is still held by the instance that is taking it offline.

Action: Wait a bit and try to online the file again.

ORA-01138: database must either be open in this instance or not at all

Cause: The requested operation can not be done when the database is mounted but not open in this instance, and another instance has the database open.

Action: Execute the operation in an open instance, open the database in this instance, or close the database in the other instances.

ORA-01139: RESETLOGS option only valid after an incomplete database recovery

Cause: The RESETLOGS option was given in ALTER DATABASE OPEN, but there has been no incomplete recovery session.

Action: Retry the ALTER DATABASE OPEN without specifying RESETLOGS

ORA-01140: cannot end online backup - all files are offline or readonly

Cause: All the files were found to be offline or readonly when attempting to end an online backup.

Action: None. Online backup does not need to be ended for this tablespace.

ORA-01141: error renaming data file *string* - new file '*string*' not found

Cause: An attempt to change a data file's name in the control file failed because no file was found with the new name.

Action: Make sure that the data file has been properly renamed by the operating system and retry.

ORA-01142: cannot end online backup - none of the files are in backup

Cause: None of the files were found to be in online backup when attempting to end an online backup.

Action: None. Online backup does not need to be ended for this tablespace.

ORA-01143: cannot disable media recovery - file *string* needs media recovery

Cause: An attempt to disable media recovery found a file that needs media recovery, thus media recovery cannot be disabled.

Action: Recover the offending file or drop the tablespace it belongs to and retry this command.

ORA-01144: File size (*string* blocks) exceeds maximum of *string* blocks

Cause: Specified file size is larger than maximum allowable size value.

Action: Specify a smaller size.

ORA-01145: offline immediate disallowed unless media recovery enabled

Cause: ALTER TABLESPACE ... OFFLINE IMMEDIATE or ALTER DATABASE DATAFILE ... OFFLINE is only allowed if database is in ARCHIVELOG mode.

Action: Take tablespace offline normally or shutdown abort. Reconsider your backup strategy. You could do this if you were archiving your logs.

ORA-01146: cannot start online backup - file *string* is already in backup

Cause: When starting an online backup it was noticed that an online backup was already started for one of the data files.

Action: End the first backup before beginning another.

ORA-01147: SYSTEM tablespace file *string* is offline

Cause: A file belonging to the SYSTEM tablespace has been marked offline by the DBA. The database cannot be started until all SYSTEM tablespace files are online and openable.

Action: Bring the file online.

ORA-01148: cannot refresh file size for datafile *string*

Cause: An operating system or device error occurred when retrieving the file's size. The device on which the file resides may have been offline.

Action: Restore access to the device.

ORA-01149: cannot shutdown - file *string* has online backup set

Cause: An attempt to shutdown normally found that an online backup is still in progress.

Action: End the backup of the offending tablespace and retry this command.

ORA-01150: cannot prevent writes - file *string* has online backup set

Cause: An attempt to make a tablespace read only or offline normal found that an online backup is still in progress. It will be necessary to write the file header to end the backup, but that would not be allowed if this command succeeded.

Action: End the backup of the offending tablespace and retry this command.

ORA-01151: use media recovery to recover block, restore backup if needed

Cause: Error 1172 occurred.

Action: This is additional information for error 1172.

ORA-01152: file *string* was not restored from a sufficiently old backup

Cause: An incomplete recovery session was started, but an insufficient number of logs were applied to make the database consistent. This file is still in the future of the last log applied. The most likely cause of this error is forgetting to restore the file from a backup before doing incomplete recovery.

Action: Either apply more logs until the database is consistent or restore the database file from an older backup and repeat recovery.

ORA-01153: an incompatible media recovery is active

Cause: Attempted to start an incompatible media recovery or open resetlogs during media recovery or RMAN backup . Media recovery sessions are incompatible if they attempt to recover the same data file. Incomplete media recovery or open resetlogs is incompatible with any media recovery. Backup or restore by RMAN is incompatible with open resetlogs

Action: Complete or cancel the other media recovery session or RMAN backup

ORA-01154: database busy. Open, close, mount, and dismount not allowed now

Cause: Some operation is in progress that expects the opened/mounted state of this instance to remain the same.

Action: Wait for the operation to complete then retry. If attempting to do a shutdown, SHUTDOWN ABORT will work. If this is a shutdown of a standby database that is operating in NO DATA LOSS mode, you must shutdown the primary database first.

ORA-01155: the database is being opened, closed, mounted or dismounted

Cause: The requested operation needs the instance to be in a particular state but the state is being changed.

Action: Wait for the open, close, mount, or dismount to complete then retry the operation. If necessary, a SHUTDOWN ABORT will always work.

ORA-01156: recovery or flashback in progress may need access to files

Cause: Either media recovery, instance recovery, or flashback was in progress. The recovery or flashback in progress may need the files to which this operation is being applied.

Action: Wait for recovery or flashback to complete.

ORA-01157: cannot identify/lock data file *string* - see DBWR trace file

Cause: The background process was either unable to find one of the data files or failed to lock it because the file was already in use. The database will prohibit access to this file but other files will be unaffected. However the first instance to open the database will need to access all online data files. Accompanying error from the operating system describes why the file could not be identified.

Action: Have operating system make file available to database. Then either open the database or do ALTER SYSTEM CHECK DATAFILES.

ORA-01158: database *string* already mounted

Cause: Another instance has a database by this name mounted.

Action: Find which instance is still running. Perhaps you have not lost the control files after all.

ORA-01159: file is not from same database as previous files - wrong database id

Cause: Not all of the files specified in CREATE CONTROLFILE are from the same database. The database ID of this file does not match that from the first file specified.

Action: Please double check the list of files provided to the CREATE

ORA-01160: file is not a *string*

Cause: The named file in the DATAFILE or LOGFILE section of the CREATE CONTROLFILE command does not appear to be as stated.

Action: Please double check the mentioned file.

ORA-01161: Database name *string* in the file header does not match *string* in the DATABASE clause.

Cause: The database name provided in the DATABASE clause did not match the database name found in the file header.

Action: Ensure consistency of database names. Use the SET DATABASE clause if you are renaming the database.

ORA-01162: block size *string* in file header does not match configured block sizes

Cause: CREATE CONTROLFILE discovered that the block size for this file is incompatible with any of the configured cache block sizes in the INIT.ORA file.

Action: Configure the appropriate cache for this block size using one of the various (db_2k_cache_size, db_4k_cache_size, db_8k_cache_size, db_16k_cache_size, db_32K_cache_size) parameters.

ORA-01163: SIZE clause indicates *string* (blocks), but should match header *string*

Cause: The size specified in bytes in the SIZE clause of the CREATE CONTROLFILE statement does not equate to the number of blocks recorded in the header.

Action: Specify the correct filename and size (in bytes).

ORA-01164: MAXLOGFILES may not exceed *string*

Cause: MAXLOGFILES specified on the command line too large.

Action: Resubmit the command with a smaller MAXLOGFILES

ORA-01165: MAXDATAFILES may not exceed *string*

Cause: MAXDATAFILES specified on the command line too large.

Action: Resubmit the command with a smaller MAXDATAFILES

ORA-01166: file number *string* is larger than *string* (*string*)

Cause: File mentioned in CREATE CONTROLFILE has a file number which is larger than that specified for MAXDATAFILES or MAXLOGFILES.

Action: Increase the maximum specified on the command line.

ORA-01167: two files are the same file/group number or the same file

Cause: There is an overlap of file numbers in the files specified on the command line or the same file is specified twice. If they are not the exact same file then one is likely to be a backup of the other. If they are two members of the same log they must be specified together in a group file spec. This message will also appear if the same control file appears more than once in the control_files parameter in the init.ora file. If this happens, check for additional error messages.

Action: Confirm that the file mentioned is not a repeat of a file already mentioned in the command. If they are different files then omit the earlier backup. If they are members of the same log, insure they are in the same group file specification. If this message appears because of a duplicate control file, check the control_files parameter in the init.ora file and see if a file is specified more than once. If all files names appear to be unique, check to make sure that the actual control files themselves are unique.

For example, in UNIX check for a symbolic or a hard link to another control file in the list.

ORA-01168: physical block size *string* does not match size *string* of other members

Cause: The file is located on a device with a different physical block size than the other members in the group

Action: Use a physical device with matching block size.

ORA-01169: DATAFILE number 1 not found. Must be present

Cause: Datafile number 1 was not specified in a CREATE CONTROLFILE command.

Action: Locate datafile number 1 and resubmit the CREATE CONTROLFILE command.

ORA-01170: file not found '*string*'

Cause: ALL datafiles and, if NORESETLOGS, ALL logfiles MUST be accessible by the process for CREATE CONTROLFILE.

Action: The file specified probably contains a typing error. Double check command and the existence of all files and then resubmit.

ORA-01171: datafile *string* going offline due to error advancing checkpoint

Cause: The checkpoint in the file header could not be advanced. See accompanying errors for the reason. The datafile will be taken offline the same as for a write error of a data block.

Action: See accompanying errors for details. Restore access to the file, do media recovery, and bring it back online.

ORA-01172: recovery of thread *string* stuck at block *string* of file *string*

Cause: Crash recovery or instance recovery could not apply a change to a block because it was not the next change. This can happen if the block was corrupted and then repaired during recovery.

Action: Do a RECOVER DATAFILE for the file containing the block. If this does not resolve the problem then restore the file from a backup and recover it.

ORA-01173: data dictionary indicates missing data file from system tablespace

Cause: Either the database has been recovered to a point in time in the future of the control file or a datafile from the system tablespace was omitted from the create control file command previously issued.

Action: For the former problem you need to recover the database from a more recent control file. For the latter problem, simply recreate the control file checking to be sure that you include all the datafiles in the system tablespace.

ORA-01174: DB_FILES is *string* but needs to be *string* to be compatible

Cause: The maximum number of database files supported by this instance is not the same as for the other instances. All instances must be able to open all the files any instance can open.

Action: Change the value of the DB_FILES parameter to be compatible

ORA-01175: data dictionary has more than the *string* files allowed by the instance

Cause: The data dictionary is found to have more files than that which can be supported by this instance.

Action: Shutdown the instance and restart with a larger number of db_files

ORA-01176: data dictionary has more than the *string* files allowed by the controlfile

Cause: After a CREATE CONTROLFILE, the data dictionary was found to have more data files than that supported by the control file.

Action: Re-create the control file with a larger MAXDATAFILES.

ORA-01177: data file does not match dictionary - probably old incarnation

Cause: When comparing the control file with the data dictionary after a CREATE CONTROLFILE or OPEN RESETLOGS, it was noted that this datafile was inconsistent with the dictionary. Most likely the file is a backup of a file that was dropped from the database, and the same file number was reused for a new file. It may also be that an incomplete recovery stopped at a time when this file number was used for another datafile.

Action: Do a CREATE CONTROLFILE with the correct file or none at all.

ORA-01178: file *string* created before last CREATE CONTROLFILE, cannot recreate

Cause: Attempted to use ALTER DATABASE CREATE DATAFILE to recreate a datafile that existed at the last CREATE CONTROLFILE command. The information needed to recreate the file was lost with the control file that existed when the file was added to the database.

Action: Find a backup of the file, and recover it. Do incomplete recovery to time before file was originally created.

ORA-01179: file *string* does not exist

Cause: During datafile recovery, a file was listed which was not part for the database.

Action: Recheck the datafile name. Remember to use double quotes at the SQLDBA command line and remember that the file name is translated in the environment of the SQLDBA.

ORA-01180: can not create datafile 1

Cause: Attempting to create datafile 1 using ALTER DATABASE CREATE DATAFILE.

Action: Recover file from a backup or recreate database.

ORA-01181: file *string* created before last known RESETLOGS, cannot recreate

Cause: Attempted to use ALTER DATABASE CREATE DATAFILE to recreate a datafile that existed before the last known RESETLOGS.

Action: Find a backup of the file, and recover it. Do incomplete recovery to time before file was originally created.

ORA-01182: cannot create database file *string* - file is in use or recovery

Cause: Attempted to use ALTER DATABASE CREATE DATAFILE to recreate a datafile that is online in an open instance or is being recovered.

Action: Close database in all instances and end all recovery sessions

ORA-01183: cannot mount database in SHARED mode

Cause: Some other instance has the database mounted exclusive.

Action: Shutdown other instance then mount shared.

ORA-01184: logfile group *string* already exists

Cause: An ALTER DATABASE ADD LOGFILE command specified a log number for the new log which is already in use.

Action: Specify a different logfile number, or let the database choose an unused value.

ORA-01185: logfile group number *string* is invalid

Cause: An ALTER DATABASE ADD LOGFILE command specified a log number for the new log which is too large.

Action: Specify a correct logfile number.

ORA-01186: file *string* failed verification tests

Cause: The data file did not pass the checks to insure it is part of the database. See the accompanying error messages for the reason the verification failed.

Action: Make the correct file available to the database. Then, either open the database, or execute ALTER SYSTEM CHECK DATAFILES.

ORA-01187: cannot read from file *string* because it failed verification tests

Cause: The data file did not pass the checks to insure it is part of the database. Reads are not allowed until it is verified.

Action: Make the correct file available to the database. Then, either open the database, or execute ALTER SYSTEM CHECK DATAFILES.

ORA-01188: The block size specified *string* does not match header block size *string*

Cause: The block size specified in the BLOCKSIZE clause of the CREATE CONTROLFILE statement does not equate to the block size recorded in the log file header.

Action: Specify the correct block size.

ORA-01189: file is from a different RESETLOGS than previous files

Cause: In a CREATE CONTROLFILE command either this file or all previous files were backups from before the last RESETLOGS. This may also occur if this is a file that is offline and has been offline since before the last RESETLOGS.

Action: If the file was taken offline normal before the last RESETLOGS, and is still offline, omit it from the CREATE CONTROLFILE command. Rename and online the file after the database is open. Otherwise find the version of the mentioned file consistent with the rest of the datafiles and resubmit the command.

ORA-01190: control file or data file *string* is from before the last RESETLOGS

Cause: Attempting to use a data file when the log reset information in the file does not match the control file. Either the data file or the control file is a backup that was made before the most recent ALTER DATABASE OPEN RESETLOGS.

Action: Restore file from a more recent backup.

ORA-01191: file *string* is already offline - cannot do a normal offline

Cause: When attempting to do a normal tablespace offline it was discovered that one of the files in the tablespace was already offline.

Action: Either bring the datafile online first, or use another tablespace offline option.

ORA-01192: must have at least one enabled thread

Cause: You must specify at least two logfiles from at least one thread at the create controlfile command line.

Action: Find the missing logfiles and resubmit the command with the newly found logfiles included in the command line.

ORA-01193: file *string* is not the same file seen at start of recovery

Cause: A different copy of the file was accessed the last time media recovery looked at the file header. A backup of the file was restored or the meaning of the file name changed during recovery.

Action: Ensure the correct file is available, then retry recovery.

ORA-01194: file *string* needs more recovery to be consistent

Cause: An incomplete recovery session was started, but an insufficient number of logs were applied to make the file consistent. The reported file was not closed cleanly when it was last opened by the database. It must be recovered to a time when it was not being updated. The most likely cause of this error is forgetting to restore the file from a backup before doing incomplete recovery.

Action: Either apply more logs until the file is consistent or restore the file from an older backup and repeat recovery.

ORA-01195: online backup of file *string* needs more recovery to be consistent

Cause: An incomplete recovery session was started, but an insufficient number of logs were applied to make the file consistent. The reported file is an online backup which must be recovered to the time the backup ended.

Action: Either apply more logs until the file is consistent or restore the database files from an older backup and repeat recovery.

ORA-01196: file *string* is inconsistent due to a failed media recovery session

Cause: The file was being recovered but the recovery did not terminate normally. This left the file in an inconsistent state. No more recovery was successfully completed on this file.

Action: Either apply more logs until the file is consistent or restore the backup again and repeat recovery.

ORA-01197: thread *string* only contains one log

Cause: During CREATE CONTROLFILE all threads represented in the logs must be represented by at least two logs. A "last log" and a second log. The named thread does not contain two such logs.

Action: Either find more logs from the named thread. Or use the RESETLOGS option to CREATE CONTROLFILE.

ORA-01198: must specify size for log file if RESETLOGS

Cause: File sizes must be given for all logfiles if doing a CREATE CONTROLFILE with the RESETLOGS option.

Action: Resubmit the command with the appropriate logfile size.

ORA-01199: file *string* is not in online backup mode

Cause: Attempting to end an online backup for a file that is not in online backup.

Action: Do not enter command since it is not needed.

ORA-01200: actual file size of *string* is smaller than correct size of *string* blocks

Cause: The size of the file as returned by the operating system is smaller than the size of the file as indicated in the file header and the control file. Somehow the file has been truncated. Maybe it is the result of a half completed copy.

Action: Restore a good copy of the data file and do recovery as needed.

ORA-01201: file *string* header failed to write correctly

Cause: An I/O error was reported for the file header. The error was trapped and a second attempt will be made.

Action: The file probably will require recovery. Further error messages will indicate what is needed.

ORA-01202: wrong incarnation of this file - wrong creation time

Cause: The creation time in the file header is not the same as the creation time in the control file. This is probably a copy of a file that was dropped.

Action: Restore a current copy of the data file and do recovery as needed.

ORA-01203: wrong incarnation of this file - wrong creation SCN

Cause: The creation SCN in the file header is not the same as the creation SCN in the control file. This is probably a copy of a file that was dropped.

Action: Restore a current copy of the data file and do recovery as needed.

ORA-01204: file number is *string* rather than *string* - wrong file

Cause: The file number in the file header is not correct. This is probably a restored backup of the wrong file, but from the same database.

Action: Restore a copy of the correct data file and do recovery as needed.

ORA-01205: not a data file - type number in header is *string*

Cause: The file type in the header is not correct for a data file. This is probably a log file or control file. If the type is not a small non-zero positive number then the header is corrupted.

Action: Restore a copy of the correct data file and do recovery as needed.

ORA-01206: file is not part of this database - wrong database id

Cause: The database ID in the file header does not match the database id in the control file. The file may be from a different database, or it may not be a database file at all. If the database was rebuilt, this may be a file from before the rebuild. Note that if you see this error when the file is supposed to be plugged in from another database via the Transportable Tablespace feature, it means the database ID in the file header does not match the one expected.

Action: Restore a copy of the correct data file and do recovery as needed.

ORA-01207: file is more recent than control file - old control file

Cause: The control file change sequence number in the data file is greater than the number in the control file. This implies that the wrong control file is being used. Note that repeatedly causing this error can make it stop happening without correcting the real problem. Every attempt to open the database will advance the control file change sequence number until it is great enough.

Action: Use the current control file or do backup control file recovery to make the control file current. Be sure to follow all restrictions on doing a backup control file recovery.

ORA-01208: data file is an old version - not accessing current version

Cause: The checkpoint in the file header is less recent than in the control file. If opening a database that is already open by another instance, or if another instance just brought this file online, the file accessed by this instance is probably a different version. Otherwise, a backup of the file probably was restored while the file was in use.

Action: Make the correct file available to the database. Then, either open the database, or execute ALTER SYSTEM CHECK DATAFILES.

ORA-01209: data file is from before the last RESETLOGS

Cause: The reset log data in the file header does not match the control file. If the database is closed or the file is offline, the backup is old because it was taken before the last ALTER DATABASE OPEN RESETLOGS command. If opening a database that is open already by another instance, or if another instance just brought this file online, the file accessed by this instance is probably a different version. Otherwise, a backup of the file probably was restored while the file was in use.

Action: Make the correct file available to the database. Then, either open the database, or execute ALTER SYSTEM CHECK DATAFILES.

ORA-01210: data file header is media corrupt

Cause: The file header block is internally inconsistent. The beginning of the block has a header with a checksum and other data for insuring the consistency of the block. It is possible that the last disk write did not operate correctly. The most likely problem is that this is not a datafile for any database.

Action: Have operating system make correct file available to database. If the trace file dump indicates that only the checksum is wrong, restore from a backup and do media recovery.

ORA-01211: Oracle7 data file is not from migration to Oracle8

Cause: The file is not a copy of the file LAST used under Oracle7. This datafile is either a backup taken from before the migration, or the database was opened by Oracle7 after the migration utility was run. When converting a database from Oracle7 to Oracle8, the migration program MUST be the LAST utility to access the database under Oracle7. Only the datafiles that were current when the migration was done may be accessed by Oracle8.

Action: Have operating system make correct data file available to database, or repeat the Oracle7 to Oracle8 migration. Make sure that database is NOT opened after migration utility is run.

ORA-01212: MAXLOGMEMBERS may not exceed *string*

Cause: MAXLOGMEMBERS specified on the command line too large.

Action: Resubmit the command with a smaller MAXLOGMEMBERS

ORA-01213: MAXINSTANCES may not exceed *string*

Cause: MAXINSTANCES specified on the command line too large.

Action: Resubmit the command with a smaller MAXINSTANCES

ORA-01214: MAXLOGHISTORY may not exceed *string*

Cause: MAXLOGHISTORY specified on the command line too large.

Action: Resubmit the command with a smaller MAXLOGHISTORY

ORA-01215: enabled thread *string* is missing after CREATE CONTROLFILE

Cause: A CREATE CONTROLFILE statement was given which did not list all the enabled threads for the database.

Action: Reissue the CREATE CONTROLFILE statement, including all enabled threads.

ORA-01216: thread *string* is expected to be disabled after CREATE CONTROLFILE

Cause: A thread that was given during CREATE CONTROLFILE is enabled, but the datafiles indicate that it should be disabled. This is probably because the logs supplied to the CREATE CONTROLFILE are old (from before the disabling of the thread).

Action: This thread is not required to run the database. The CREATE CONTROLFILE statement can be reissued without the problem thread, and, if desired, the thread can be recreated after the database is open.

ORA-01217: logfile member belongs to a different logfile group

Cause: A member of a multiple-member logfile group specified in a CREATE CONTROLFILE is not part of the same group as previous members.

Action: Group together the correct members for the CREATE CONTROLFILE command.

ORA-01218: logfile member is not from the same point-in-time

Cause: A member of a multiple-member logfile group is from a different point in time. One of the members specified may be an older (backup) copy of the log.

Action: Find the correct version of the log, or leave it out of the CREATE CONTROLFILE command.

ORA-01219: database or pluggable database not open: queries allowed on fixed tables or views only

Cause: A query was issued against an object not recognized as a fixed table or fixed view before the database or pluggable database has been opened.

Action: Re-phrase the query to include only fixed objects, or open the database or pluggable database.

ORA-01220: file based sort illegal before database is open

Cause: A query issued against a fixed table or view required a temporary segment for sorting before the database was open. Only in-memory sorts are supported before the database is open.

Action: Re-phrase the query to avoid a large sort, increase the values of the SORT_AREA_SIZE and/or SORT_AREA_RETAINED_SIZE initialization parameters to enable the sort to be done in memory.

ORA-01221: data file *string* is not the same file to a background process

Cause: When the database writer opens the data file, it is accessing a different physical file than the foreground doing the recovery. The timestamp set in the file header by the foreground was not found by the background. It may be that the background process could not read the file at all.

Action: Look in the DBWR trace file for the error it received when attempting to read the file header. Reconfigure the operating system as needed to have the file name successfully access the same file when opened by a background process.

ORA-01222: MAXINSTANCES of *string* requires MAXLOGFILES be at least *string*, not *string*

Cause: Attempting to create a database or control file that does not have room for at least two logs per thread of redo. A thread of redo must have two online logs in order to be enabled. It does not make sense to allow more redo threads than can be supported by the logs.

Action: Either reduce the MAXINSTANCES argument or increase MAXLOGFILES.

ORA-01223: RESETLOGS must be specified to set a new database name

Cause: The SET database name option was specified to CREATE CONTROLFILE, but RESETLOGS was not specified. The database name can only be changed when opening the database with RESETLOGS.

Action: Either add the RESETLOGS option or drop the SET option to CREATE CONTROLFILE.

ORA-01224: group number in header *string* does not match GROUP *string*

Cause: Group number specified at CREATE CONTROLFILE does not match the group number stored in the header. Most likely the specification is wrong.

Action: Omit the GROUP option or give the correct one.

ORA-01225: thread number *string* is greater than MAXINSTANCES *string*

Cause: The log is for a thread greater than the MAXINSTANCES argument.

Action: Increase the value for MAXINSTANCES and resubmit the command.

ORA-01226: file header of log member is inconsistent with other members

Cause: The log file member in the accompanying error is for the same group as the previous members, but other fields in the header are different. Either a file header is corrupted, or some file is a member of a deleted log.

Action: Find the correct log member or omit this member from the command.

ORA-01227: log *string* is inconsistent with other logs

Cause: The log file in the accompanying error is inconsistent with the contents of other logs given in the CREATE CONTROLFILE command. Either a file header is corrupted, or some file is an old copy rather than the current version. The problem may not be with the log listed since all that can be detected is that there is an inconsistency. All log files listed in the command must be the current versions of the online logs.

Action: Find the correct online logs or use the RESETLOGS option.

ORA-01228: SET DATABASE option required to install seed database

Cause: The SET DATABASE option was not included in the CREATE CONTROLFILE command when installing a seed database. The database does not have a database ID because it is intended to be installed at multiple sites, and each site needs to be a different database with its own database id. Both the SET DATABASE and RESETLOGS options must be specified to create the control file for this database.

Action: Resubmit command with the SET DATABASE and RESETLOGS options.

ORA-01229: data file *string* is inconsistent with logs

Cause: The data file in the accompanying error is inconsistent with the contents of the logs given in the CREATE CONTROLFILE command. The most likely cause is that one or more of the online logs was missing from the command. It is also possible that one or more of the logs is an old copy rather than the current version. All online log files must be listed in the command and must be the current versions of the online logs.

Action: Find the correct online logs or use the RESETLOGS option.

ORA-01230: cannot make read only - file *string* is offline

Cause: An attempt to make a tablespace read only found that one of its files is offline.

Action: Bring the file online and retry this command.

ORA-01231: cannot make read write - file *string* is offline

Cause: An attempt to make a tablespace read write found that one of its files is offline.

Action: Bring the file online and retry this command.

ORA-01232: cannot start online backup - file *string* is being made read-only

Cause: An attempt to start an online backup found that one of the files is in transition to read-only mode.

Action: Wait for the transition to complete and then retry the command, if this is an ALTER DATABASE BEGIN BACKUP command, or take the backup without any begin or end commands, if this is an ALTER TABLESPACE BEGIN BACKUP command.

ORA-01233: file *string* is read only - cannot recover using backup control file

Cause: An attempt to do media recovery using a backup control file found that one of the files is marked read only. Read only files do not normally need to be recovered, but recovery with a backup control file must recover all online files.

Action: If the file really is read only, take it offline before the recovery, and bring the read only tablespace online after the database is open. If the file does need recovery use a control file from the time the file was read-write. If the correct control file is not available, use CREATE CONTROLFILE to make one.

ORA-01234: cannot end backup of file *string* - file is in use or recovery

Cause: Attempted to end an online backup of file when the file is busy. Some operation such as recovery or rename may be active, or there may still be some instance that has the database open with this file online.

Action: If there is an instance with the database open then the backup can be ended there by using the ALTER TABLESPACE command. Otherwise wait for the completion of the other operation.

ORA-01235: END BACKUP failed for *string* file(s) and succeeded for *string*

Cause: One or more of the files in an end backup command failed. Some other files given in the same command may have succeeded.

Action: See the accompanying error messages for the reason the backups could not be ended. Any files not listed in the error messages were successful.

ORA-01236: Error *string* occurred during initialization of file header access

Cause: The indicated error occurred while doing initialization processing of file headers.

Action: The error indicated should be corrected. An attempt is made to recover from this error by using a slower access algorithm.

ORA-01237: cannot extend datafile *string*

Cause: An operating system error occurred during the resize.

Action: Fix the cause of the operating system error and retry the command.

ORA-01238: cannot shrink datafile *string*

Cause: An operating system error occurred during the resize.

Action: The error is ignored, operation continues normally.

ORA-01239: database must be in ARCHIVELOG mode to use external cache

Cause: An online file uses an external cache, but the database is in NOARCHIVELOG mode. Since an external cache may require media recovery this can not be allowed.

Action: Change database to be in ARCHIVELOG mode or do not use an external cache.

ORA-01240: too many data files to add in one command

Cause: The command specifies adding more data files than can be done in one command. It is necessary to fit all the file names into one log entry, but that would make the entry too large.

Action: If this is a CREATE TABLESPACE command, create with fewer files then add the other files later. If this is an ADD DATAFILE command, break it up into multiple commands.

ORA-01241: an external cache has died

Cause: The external cache may have been restarted.

Action: Take the file mentioned in the error stack offline, perform media recovery, bring the file online, and retry the attempted operation. You may also restart all instances to make sure they access all data files through consistent external caches.

ORA-01242: data file suffered media failure: database in NOARCHIVELOG mode

Cause: The database is in NOARCHIVELOG mode and a database file was detected as inaccessible due to media failure.

Action: Restore accessibility to the file mentioned in the error stack and restart the instance.

ORA-01243: system tablespace file suffered media failure

Cause: A system tablespace file was detected as inaccessible due to media failure.

Action: Restore accessibility to the file mentioned in the error stack and restart the instance.

ORA-01244: unnamed datafile(s) added to control file by media recovery

Cause: Media recovery with a backup control file or a control file that was rebuilt, encountered the creation of a datafile that was not in the control file. An entry has been added to the control file for the new datafiles, but with the file name UNNAMEDnnnn, where nnnn is the file number. Attached errors describe the file names that were originally used to create the files.

Action: Rename the files to valid file names and resume recovery. If necessary the command ALTER DATABASE CREATE DATAFILE may be used to create a file suitable for recovery and do the rename. If the file is not going to be recovered then take it offline with the FOR DROP option.

ORA-01245: offline file *string* will be lost if RESETLOGS is done

Cause: Attempting to do an OPEN RESETLOGS with a file that will be lost because it is offline. The file was not taken offline with the FOR DROP option.

Action: Either bring the file online and recover it, or take it offline with the FOR DROP option.

ORA-01246: recovering files through TSPITR of tablespace *string*

Cause: The files named in the accompanying errors are backups that were made before a tablespace point in time recovery of this tablespace. They cannot be recovered to a time after the point in time recovery.

Action: Restore more recent backups and recover them.

ORA-01247: database recovery through TSPITR of tablespace *string*

Cause: Recovery of the whole database encountered redo indicating there was a point in time recovery of the tablespace. The new version of the files in the tablespace should be included in the recovery, but that was not done.

Action: If the tablespace should not be recovered, take its file offline for drop. If it should be recovered, then restore or rename as needed and restart the recovery.

ORA-01248: file *string* was created in the future of incomplete recovery

Cause: Attempting to do a RESETLOGS open with a file entry in the control file that was originally created after the UNTIL time of the incomplete recovery. Allowing such an entry may hide the version of the file that is needed at this time. The file number may be in use for a different file which would be lost if the RESETLOGS was allowed.

Action: If more recovery is desired then apply redo until the creation time of the file is reached. If the file is not wanted and the same file number is not in use at the stop time of the recovery, then the file can be taken offline with the FOR DROP option. Otherwise a different control file is needed to allow the RESETLOGS. Another backup can be restored and recovered, or a control file can be created via CREATE CONTROLFILE.

ORA-01249: archiving not allowed in a clone database

Cause: Attempting to archive an online redo log or enable archiving for a clone database.

Action: Do not attempt to archive from a clone. The archive log destination could easily be the same as the primary database destroying its archived logs. If archiving is needed then recreate database as not a clone.

ORA-01250: Error *string* occurred during termination of file header access

Cause: The indicated error occurred while terminating the processing of file headers. The error was other than a write error.

Action: The indicated error should be corrected.

ORA-01251: Unknown File Header Version read for file number *string*

Cause: Read of the file header returned a record but its version cannot be identified. Either the header has been corrupted, or the file is not a valid database file.

Action: Have the operating system make the correct file available to the database, or recover the file.

ORA-01252: cannot prevent writes - file *string* in recovery manager backup

Cause: An attempt to make a tablespace read only or offline normal found that a recovery manager proxy backup is in progress. If the file is made offline or read-only, then the file header cannot be updated when the backup is complete.

Action: Wait for the Recovery Manager backup to complete and retry this command.

ORA-01253: cannot start online backup - file *string* in recovery manager backup

Cause: The specified file is being backed up by Recovery Manager.

Action: Wait for the Recovery Manager proxy backup to complete before starting another backup.

ORA-01254: cannot end online backup - file *string* in recovery manager backup

Cause: The specified file is being backed up by Recovery Manager.

Action: Wait for the Recovery Manager proxy backup to complete. Recovery Manager backup mode cannot be initiated or terminated manually.

ORA-01255: cannot shutdown - file *string* in recovery manager backup

Cause: An attempt to shutdown normally found that a Recovery Manager backup is still in progress.

Action: Wait for the Recovery Manager proxy backup to complete and retry this command.

ORA-01256: error in locking database file *string*

Cause: The file is in use by another database instance.

Action: Determine which database instance legitimately owns the file.

ORA-01257: cannot reuse database file *string*, unknown file size

Cause: The size of the raw partition cannot be determined

Action: Add the datafile/logfile by specifying the size parameter.

ORA-01258: unable to delete temporary file *string*

Cause: A DROP TABLESPACE INCLUDING CONTENTS AND DATAFILES or ALTER DATABASE TEMPFILE DROP INCLUDING DATAFILES operation was not able to delete a temporary file in the database.

Action: Subsequent errors describe the operating system error that prevented the file deletion. Fix the problem, if possible, and manually purge the file.

ORA-01259: unable to delete datafile *string*

Cause: A DROP TABLESPACE INCLUDING CONTENTS AND DATAFILES operation was not able to delete a datafile in the tablespace.

Action: Subsequent errors describe the operating system error that prevented the file deletion. Fix the problem, if possible, and manually purge the file.

ORA-01260: warning: END BACKUP succeeded but some files found not to be in backup mode

Cause: END BACKUP completed successfully for all files that were in online backup mode. However one or more modifiable files were found not to be in online backup mode. Backup of those files (if it was done) can be invalid and, if restored, can result in an inconsistent database.

Action: Check the alert log for a list of the files that were found not to be in backup mode. If there is a possibility that those files have been modified during online backup, then replace their backups with new ones.

ORA-01261: Parameter *string* destination string cannot be translated

Cause: The value for the specified parameter contained a destination string that could not be translated.

Action: Use a valid destination string in the specified parameter.

ORA-01262: Stat failed on a file destination directory

Cause: Unable to get information about an Oracle managed files destination directory.

Action: Check the permissions on the directory or use a different directory name.

ORA-01263: Name given for file destination directory is invalid

Cause: The name given for an Oracle managed files destination does not correspond to a directory.

Action: Use a different name.

ORA-01264: Unable to create *string* file name

Cause: Unable to create an Oracle managed file name.

Action: Check previous error messages for the reason Oracle was unable to create the file name. Take corrective action, if possible, and retry the command.

ORA-01265: Unable to delete *string string*

Cause: An error prevented the file from being deleted.

Action: See the subsequent error messages that describe the operating system error that prevented the file from being deleted. If possible, fix the problem and manually delete the file.

ORA-01266: Unable to create unique file name

Cause: Unable to create a unique file name for an Oracle managed file. Oracle tried several names but each file name was already in use in the default destination directory for the file type.

Action: Retry the operation. If that fails, also, it may be necessary to change the default destination directory for the file type and then retry.

ORA-01267: Failure getting date/time

Cause: Could not get date/time when trying to create unique file name.

Action: Internal error - contact Oracle Customer Support.

ORA-01268: invalid TEMPFILE clause for alter of permanent TABLESPACE

Cause: A TEMPFILE clause was specified for an ALTER TABLESPACE for a permanent tablespace.

Action: Retry with a DATAFILE clause.

ORA-01269: Destination parameter string is too long

Cause: The value for DB_CREATE_FILE_DEST, DB_CREATE_ONLINE_LOG_DEST_n or DB_RECOVERY_FILE_DEST parameter was too long.

Action: Replace the destination value for the specified parameter with a shorter character string.

ORA-01270: *string* operation is not allowed if STANDBY_PRESERVES_NAMES is true

Cause: An operation that renames or adds/drops a file was attempted at a standby database and STANDBY_PRESERVES_NAMES is true.

Action: Set STANDBY_PRESERVES_NAMES false if the operation must be performed.

ORA-01271: Unable to create new file name for file *string*

Cause: During standby database recovery an error occurred when trying to create a new file name for the indicated file.

Action: Use the ALTER DATABASE CREATE DATAFILE command with a new unique name and then resume the standby database recovery.

ORA-01272: REUSE only allowed when a file name is provided.

Cause: The REUSE parameter was specified in a command without a file name.

Action: Either supply a file name or remove the REUSE parameter.

ORA-01273: STANDBY_FILE_MANAGEMENT = AUTO needs COMPATIBLE = *string* or higher

Cause: Automated standby file management was disabled, so an added file

Action: Restart the instance with COMPATIBLE set to the correct release.

ORA-01274: cannot add data file that was originally created as '*string*'

Cause: The recovery failed to add the specified data file either because the recovery tried to create the specified data file but automated standby file management was disabled, or the recovery tried to look for the specified data file but the data file did not exist. In the former case, the recovery added a control file entry as 'UNNAMEDnnnnn'.

Action: Either use the ALTER DATABASE CREATE DATAFILE statement to create the file, or set STANDBY_FILE_MANAGEMENT to AUTO, or restore the data file to the location specified by the corresponding control file entry, and restart standby recovery.

ORA-01275: Operation *string* is not allowed if standby file management is automatic.

Cause: An operation that renames, adds, or drops a file was attempted at a standby database and STANDBY_FILE_MANAGEMENT was set to AUTO.

Action: Set STANDBY_FILE_MANAGEMENT to MANUAL if the operation must be performed.

ORA-01276: Cannot add file *string*. File has an Oracle Managed Files file name.

Cause: An attempt was made to add to the database a datafile, log file, control file, snapshot control file, backup control file, datafile copy, control file copy or backuppiece with an Oracle Managed Files file name.

Action: Retry the operation with a new file name.

ORA-01277: file '*string*' already exists

Cause: An ALTER DATABASE BACKUP CONTROLFILE TO TRACE AS 'filename' command specified a file name which is already in use.

Action: Either specify a different file name, or add the REUSE parameter to the command to overwrite the existing file.

ORA-01278: error creating file '*string*'

Cause: An operating system error occurred while attempting to create a trace file specified in the command ALTER DATABASE BACKUP CONTROLFILE TO TRACE AS 'filename'.

Action: Check the error stack for more detailed information.

ORA-01279: db_files too large

Cause: db_files has been set too high to be supported by the system.

Action: Decrease the number of db_files.

ORA-01280: Fatal LogMiner error.

Cause: An internal error occurred inside LogMiner.

Action: Check the alert log and trace files for further information.

ORA-01281: SCN range specified is invalid

Cause: StartSCN may be greater than EndSCN, or the SCN specified may be invalid.

Action: Specify a valid SCN range.

ORA-01282: date range specified is invalid

Cause: startTime may be greater than endTime. startTime or endTime may be greater than year 2110. startTime may be less than year 1988.

Action: Specify a valid date range.

ORA-01283: Options specified is invalid

Cause: The specified options parameter is invalid for the procedure.

Action: Specify valid Options parameter.

ORA-01284: file *string* cannot be opened

Cause: The file or directory may not exist or may be inaccessible. Pathname exceeds 256 characters.

Action: Ensure that the file and the directory exist and are accessible.

ORA-01285: error reading file *string*

Cause: The file or directory may not exist or is inaccessible.

Action: Specify valid file or directory. Make sure that file and directory are accessible.

ORA-01286: start interval required

Cause: Options were supplied which require a starting time or starting SCN

Action: Specify a starting interval (time or SCN).

ORA-01287: file *string* is from a different database incarnation

Cause: The logfile is produced by a different incarnation of the database.

Action: Add a logfile that is produced by the same incarnation.

ORA-01288: cannot apply this DDL to the Logminer Dictionary

Cause: A command that is not supported by Logminer was present in a logfile. Commands that change the character set of the database are not supported by Logminer. "ALTER DATABASE SET TIME_ZONE" is not supported by Logminer.

Action: Do not execute unsupported commands when using Streams, Logical Standby, or Logminer. Turn off DDL tracking in order for Logminer to skip unsupported commands.

ORA-01289: cannot add duplicate logfile *string*

Cause: The logfile specified has already been added to the list of logfiles.

Action: Specify a different logfile.

ORA-01290: cannot remove unlisted logfile *string*

Cause: The user attempted to remove a logfile that is not present in the list.

Action: Specify a valid logfile.

ORA-01291: missing logfile

Cause: Not all logfiles corresponding to the time or scn range specified have been added to the list.

Action: Check the v\$logmnr_logs view to determine the missing scn range, and add the relevant logfiles.

ORA-01292: no log file has been specified for the current LogMiner session

Cause: No logfile has been specified for the LogMiner session.

Action: Specify atleast one log file.

ORA-01293: mounted database required for specified LogMiner options

Cause: Options were specified which required the database to be mounted

Action: Specify different options or mount the database.

ORA-01294: error occurred while processing information in dictionary file *string*, possible corruption

Cause: The dictionary file is corrupt.

Action: Get a new dictionary file.

ORA-01295: DB_ID mismatch between dictionary *string* and logfiles

Cause: The dictionary file is produced by a database that is different from that produced the logfiles.

Action: Specify a compatible dictionary file.

ORA-01296: character set mismatch between dictionary *string* and logfiles

Cause: The character set of the database that produced the dictionary file is different from the character set of the database that produced the logfiles.

Action: Specify a dictionary file with the same character set.

ORA-01297: redo version mismatch between dictionary *string* and logfiles

Cause: The redo version of the database generating the dictionary is different from the one generating the logfiles.

Action: n/a

ORA-01298: conflicting dictionary option

Cause: More than one dictionary source was specified or DDL_DICT_TRACKING was specified with DICT_FROM_ONLINE_CATALOG.

Action: n/a

ORA-01299: dictionary *string* corresponds to a different database incarnation

Cause: The dictionary file was extracted from a different incarnation of the database.

Action: Specify a dictionary file extracted from the correct database incarnation.

ORA-01300: writable database required for specified LogMiner options

Cause: Options were specified which required the database to be writable.

Action: Specify different options or open the database for write access.

ORA-01301: error writing to file during flat file build

Cause: Error writing to file during flat file build

Action: n/a

ORA-01302: dictionary build options missing or incorrect

Cause: Missing dictionary build options or incorrectly specified options

Action: Specify either a build to redo log or to flat file. If build to flat file, specify filename and directory.

ORA-01303: subordinate process error: *string*. Check alert and trace logs

Cause: A process subordinate to this Logminer process has exited with this error status.

Action: Search for this error in the alert log and trace files for additional information.

ORA-01304: subordinate process error. Check alert and trace logs

Cause: A process subordinate to this Logminer process has exited with an error condition.

Action: Look in the alert log and trace files for additional information.

ORA-01305: incompatible database character set

Cause: The database character set of the mining database was not a superset of the source database character set.

Action: Perform the mining operation on a database having a compatible database character set.

ORA-01306: dbms_logmnr.start_logmnr() must be invoked before selecting from v\$logmnr_contents

Cause: A select was issued from v\$logmnr_contents without first invoking the dbms_logmnr.start_logmnr() procedure.

Action: Invoke the dbms_logmnr.start_logmnr() procedure before issuing a select from the v\$logmnr_contents view.

ORA-01307: no LogMiner session is currently active

Cause: A select was issued from v\$logmnr_contents without first invoking the dbms_logmnr.start_logmnr() procedure. Otherwise, dbms_logmnr.end_logmnr() was called without a prior call to dbms_logmnr.start_logmnr() or dbms_logmnr.add_logfile()

Action: Invoke the dbms_logmnr.start_logmnr() procedure before issuing a select from the v\$logmnr_contents view.

ORA-01308: initialization parameter utl_file_dir is not set

Cause: utl_file_dir is not set in the initialization file.

Action: Set utl_file_dir to the appropriate directory.

ORA-01309: invalid session

Cause: The specified Logminer session ID or session handle is invalid.

Action: Use a valid Logminer session ID or session handle.

ORA-01310: requested return type not supported by the lcr_mine function

Cause: The return type requested by the user is not supported by lcr_mine"

Action: Pick a return type supported by the lcr_mine function"

ORA-01311: Illegal invocation of the mine_value function

Cause: An attempt was made to use mine_value function on a column other than redo_value or undo_value columns of SYS.X\$LOGMNR_CONTENTS or SYS.V\$logmnr_contents fixed table/view.

Action: Rewrite the SQL statement with a legal invocation of mine_value

ORA-01312: Specified table/column does not exist

Cause: The table/column specified in the lcr_mine call does not exist at the the specified SCN. The table/column definition has to exist at the start SCN specified for lcr_mine to be able to identify the table/column correctly.

Action: Create a LogMiner session at a start SCN at which the table definition is available.

ORA-01313: LogMiner dictionary column type different from specified type

Cause: The return type specified for the column in lcr_mine call is different from the actual type of the column.

Action: Rewrite the lcr_mine invocation with the right return type.

ORA-01314: Name of the column to be mined should be a string literal

Cause: The fully qualified name of the column to be mined by the LogMiner functions should be string literal.

Action: If the fully qualified name of the column to be mined is a.b.c.d, enclose the column name in quotes as in 'a.b.c.d'.

ORA-01315: Log file has been added or removed during select

Cause: A redo log file has been added or removed while selecting on the v\$logmnr_logs fixed view.

Action: Re-issue the SQL select statement on the v\$logmnr_logs view.

ORA-01316: Already attached to a Logminer session

Cause: A Logminer attach session was issued while already attached to a Logminer session.

Action: Detach from the current Logminer session and attach to the requested session.

ORA-01317: Not attached to a Logminer session

Cause: A command or procedure was issued which requires an attached Logminer session.

Action: Attach to a Logminer session before issuing the command or procedure.

ORA-01318: incompatible national character set

Cause: The national character set of the mining database was not a superset of the source database national character set.

Action: Perform the mining operation on a database having a compatible national character set.

ORA-01319: Invalid Logminer session attribute

Cause: A session attribute was supplied which is invalid.

Action: Re-issue with valid session attribute.

ORA-01320: Invalid Logminer dictionary attribute

Cause: A Logminer dictionary attribute was supplied which is invalid.

Action: Re-issue with valid dictionary attribute.

ORA-01321: No Logminer Dictionary for requested start SCN

Cause: The requested session start SCN is less than the SCN of any available Logminer Dictionary build. It is not possible to unwind a Logminer Dictionary to the requested start SCN.

Action: Re-issue the start_logminer request with a start SCN for which a Logminer Dictionary is available.

ORA-01322: No such table

Cause: An non-existent table was supplied to Logminer include_src_tbl() or exclude_src_table().

Action: Re-issue with valid table name.

ORA-01323: Invalid state

Cause: A Logminer routine was called from the wrong state.

Action: n/a

ORA-01324: cannot add file *string* due to DB_ID mismatch

Cause: The logfile is produced by a different database than other logfiles already added to the list.

Action: Specify a logfile produced by the same database.

ORA-01325: archive log mode must be enabled to build into the logstream

Cause: Database does not have archivelog mode enabled.

Action: Mount the database, then issue commands to enable archivelog mode. startup pfile=init.ora mount alter database archivelog alter database open

ORA-01326: compatability of 9.0 or greater required to build into the logstream

Cause: Compatibility mode set to some value less than 9.0

Action: Ensure that init.ora parameter establishing a compatability of 9.0 or greater is set. For example: compatible=9.0.0.0.0

ORA-01327: failed to exclusively lock system dictionary as required by build

Cause: Other users are performing DDL operations.

Action: n/a

ORA-01328: only one build operation may occur at one time

Cause: Another processes is simultaneously attempting to run build();

Action: Wait until the other processes completes.

ORA-01329: unable to truncate required build table

Cause: The table may be missing, or locked by another user.

Action: n/a

ORA-01330: problem loading a required build table

ORA-01331: general error while running build

ORA-01332: internal Logminer Dictionary error

Cause: Unexpected error condition

Action: Check trace and/or alert logs

ORA-01333: failed to establish Logminer Dictionary

Cause: No previously established Logminer Dictionary is available and a complete gather of a source system data dictionary was not found in the logstream. build() may not have been run to force the gathering of a source system data dictionary. Or

add_log_file() may not have been called to add all log files which contain the complete gathered system data dictionary.

Action: If build() was not employed prior to this mining session the Logminer Ad Hoc user may elect to employ an alternate dictionary such as the current system catalog or a previously built flat file dictionary. Other Logminer clients must run build() prior to mining. If build() has been run, ensure that all logfiles which comprise the gathered system dictionary have been added. The following query, run on the system which build() was run, can be helpful in identifying the required files. select DICTIONARY_BEGIN, DICTIONARY_END, name from v\$archived_log; Minimally a set of files beginning with one which has DICTIONARY_BEGIN = 'YES' and all following log files through one marked DICTIONARY_END = 'YES' must be added.

ORA-01334: invalid or missing logminer dictionary processes context

Cause: Unexpected internal error condition

Action: n/a

ORA-01335: feature not yet implemented

ORA-01336: specified dictionary file cannot be opened

Cause: The dictionary file or directory does not exist or is inaccessible.

Action: Make sure that the dictionary file and directory exist and are accessible.

ORA-01337: log file has a different compatibility version

Cause: The logfile has a different compatibility version than the rest of the logfile in the session"

Action: Make sure that the logfile has the same compatibility version as the rest of the logfiles in the session.

ORA-01338: Other process is attached to LogMiner session

Cause: Can not do this when other process is attached to LogMiner session.

Action: n/a

ORA-01339: LogMiner BUILD: Error copying system catalog metadata to LogMiner dictionary

Cause: Unexpected result while accessing system catalog metadata.

Action: Check the alert log.

ORA-01340: NLS error

Cause: Could not load NLS package.

Action: n/a

ORA-01341: LogMiner out-of-memory

Cause: The LogMiner session requires more system resources than is currently available.

Action: Allocate more SGA for LogMiner.

ORA-01342: LogMiner can not resume session due to inability of staging checkpointed data

Cause: Logmnr can not resume session because there is not enough SGA memory available to read in checkpointed data. Logminer periodically checkpoints data to enable faster crash recovery.

Action: Specify a bigger max_sga for the given LogMiner session and try again.

ORA-01343: LogMiner encountered corruption in the logstream

Cause: Log file is missing a range of scn values.

Action: Verify the contiguity of the scn range represented by the log files added to LogMiner.

ORA-01344: LogMiner coordinator already attached

Cause: A coordinator process is already attached to the specified logminer context.

Action: Detach from the active coordinator session and retry the attach.

ORA-01345: Must be a LogMiner coordinator process

Cause: A LogMiner client attempted to perform a privileged operation.

Action: Issue the operation from the coordinator process.

ORA-01346: Oracle LogMiner processed redo beyond primary reset log SCN *string*

Cause: Oracle LogMiner detected a new branch with reset log SCN information prior to redo already mined.

Action: If running inside SQL Apply, retrieve standby reset SCN by executing `DBMS_LOGSTDBY.MAP_PRIMARY_SCN` (primary reset log SCN). And, execute `FLASHBACK STANDBY DATABASE [<database_name>] TO BEFORE SCN standby reset SCN`. Note: If the primary reset log SCN is 0, then intermediary log files are missing. Check the primary database for missing log files. In other scenarios, contact Oracle Support Services.

ORA-01347: Supplemental log data no longer found

Cause: The source database instance producing log files for this LogMiner session was altered to no longer log supplemental data.

Action: Destroy this Logminer session. Re-enable supplemental log data on the source system and create a new LogMiner session.

ORA-01348: LogMiner testing event

ORA-01349: LogMiner tracing event

ORA-01350: must specify a tablespace name

Cause: Invocation failed to specify a valid tablespace

Action: Reformat invocation of `DBMS_LOGMNR_D.SET_TABLESPACE` to include the name of a valid tablespace.

ORA-01351: tablespace given for Logminer dictionary does not exist

Cause: The tablespace name given as a parameter to `DBMS_LOGMNR_D.SET_TABLESPACE` does not exist.

Action: Check spelling of the tablespace name. If spelling is correct verify that the named tablespace has already been created. `DBMS_LOGMNR_D.SET_TABLESPACE` does not create a tablespace.

ORA-01352: tablespace given for Logminer spill does not exist

Cause: The tablespace name given as the parameter to `DBMS_LOGMNR_D.SET_TABLESPACE` does not exist.

Action: Check spelling of the tablespace name. If spelling is correct verify that the named tablespace has already been created. `DBMS_LOGMNR_D.SET_TABLESPACE` does not create a tablespace.

ORA-01353: existing Logminer session

Cause: An attempt was made to execute DBMS_LOGMNR_D.SET_TABLESPACE while a Logminer session(s) was active.

Action: First cause all Logminer sessions to be closed. A Logminer session can exist as a result of executing DBMS_LOGMNR.START_LOGMNR or as the result of using Oracle features such as Data Guard SQL Apply or Streams which use Logminer. Next, execute DBMS_LOGMNR_D.SET_TABLESPACE.

ORA-01354: Supplemental log data must be added to run this command

Cause: An attempt was made to perform an operation that required that supplemental log data be enabled.

Action: Execute a command such as ALTER DATABASE ADD SUPPLEMENTAL LOG DATA; and then reissue the command that failed with this error.

ORA-01355: logminer tablespace change in progress

Cause: The tables used by logminer are in the process of being moved to another tablespace.

Action: Wait until the move is complete and try again.

ORA-01356: active logminer sessions found

Cause: Logminer sessions are currently active.

Action: End all logminer sessions and retry.

ORA-01358: LogMiner version is less than mined dictionary version

Cause: An attempt was made to mine a LogMiner dictionary from redo logs. The version of the Oracle database that created the logs was higher than the Oracle database version that attempted to mine the logs.

Action: Mine the logs using a newer version of the Oracle database having a version number that is equal to or greater than the dictionary version.

ORA-01360: invalid token

ORA-01361: global name mismatch

Cause: The database global name where the log file was generated did not match the user-specified global name of the Streams Capture process.

Action: Start a new capture process and ensure that the user-specified global name matches that of the database that generated the log file.

ORA-01362: Specified SQL_REDO_UNDO parameter is invalid

Cause: The specified input value for the parameter was not a valid number.

Action: Specify a valid number and try again.

ORA-01363: Specified COLUMN_NAME parameter is NULL

Cause: NULL was specified for input value of parameter.

Action: Specify a non-NULL value and try again.

ORA-01364: waiting for branch at SCN *string*

Cause: LogMiner reader process has completed mining of physical standby terminal logs up to the stop SCN. LogMiner reader is now waiting for logs from the new branch.

Action: No action necessary. This informational statement is provided to record the event for diagnostic purposes. If there is a problem with log transport, the files can be registered manually using the ALTER DATABASE REGISTER LOGICAL LOGFILE statement.

ORA-01365: waiting for new branch registration

Cause: LogMiner reader process has completed mining of physical standby terminal logs up to the stop SCN. The builder process is now waiting for logs from the new branch to be registered before continuing.

Action: No action necessary. This informational statement is provided to record the event for diagnostic purposes. If there is a problem with log transport, the files may be registered manually using the ALTER DATABASE REGISTER LOGICAL LOGFILE statement.

ORA-01366: failed to find redo logs required for terminal apply

Cause: LogMiner failed to find all the expected log files required to complete the terminal apply, requested using the FINISH APPLY clause. During terminal apply, LogMiner does not wait for logs to be registered. It expects all logs between the starting point and the last log on any redo branch that it will or could mine through, to be present at the mining site.

Action: Examine system.logmnr_log\$ to see which logs are known to LogMiner. Then, locate or restore any missing logs and use the ALTER DATABASE REGISTER LOGICAL LOGFILE statement to register them. Alternatively, do not use the FINISH APPLY clause, but if activating a logical standby, only do this when you are sure that the missing log files can not be located and registered as this can lead to data loss.

ORA-01370: Specified restart SCN is too old

Cause: specified restart scn is too old, logmnr could not find a proper checkpoint.

Action: Specify a bigger restart SCN to try again

ORA-01371: Complete LogMiner dictionary not found

Cause: One or more log files containing the LogMiner dictionary was not found.

Action: Add into LogMiner all log files containing the dictionary.

ORA-01372: Insufficient processes for specified LogMiner operation

Cause: The number of processes requested by the caller can not be allocated

Action: Increase number of parallel servers allocated to the instance

ORA-01373: insufficient memory for staging persistent LogMiner session

Cause: The maximum number of concurrent persistent LogMiner sessions allowed is limited by LOGMNR_MAX_PERSISTENT_SESSIONS parameter. Not enough memory has been set aside at instance startup to allocate the new LogMiner session.

Action: Increase LOGMNR_MAX_PERSISTENT_SESSIONS and restart instance.

ORA-01374: _log_parallelism_max greater than 1 not supported in this release

Cause: LogMiner does not mine redo records generated with _log_parallelism_max set to a value greater than 1.

Action: n/a

ORA-01375: Corrupt logfile string recovered

Cause: A corrupt logfile has been recovered by RFS

Action: None. Logical Standby should automatically restart. If logfile is still corrupt, may need to manually copy and reregister the logfile on the standby.

ORA-01376: LogMiner testing event

ORA-01377: Invalid log file block size

Cause: An invalid value was specified in the BLOCKSIZE clause.

Action: Use correct syntax.

ORA-01378: The logical block size (*string*) of file *string* is not compatible with the disk sector size (media sector size is *string* and host sector size is *string*)

Cause: One of the following occurred: (1) An attempt was made to create a file. (2) A file was moved to disks with different sector size.

Action: Create file or move file to the proper disk.

ORA-01379: LogMiner testing event

ORA-01380: Instance *string* (thread *string*) has less than two *string* block size log files

Cause: One of the following occurred: (1) An attempt was made to switch to specified block size logs for all threads. (2) An attempt was made to open a thread.

Action: Add log files to the thread that signals error, and try again.

ORA-01381: Dropping log *string* would leave less than two log files with block size *string* for instance *string* (thread *string*)

Cause: The database was migrated to use a specified log block size. Dropping all the logs specified would leave fewer than the required two log files with the specified block size per enabled thread.

Action: Either drop fewer logs or disable the thread before deleting the logs. It may be possible to clear the log rather than drop it.

ORA-01382: Thread *string* failed to open log file *string*. The log file's block size (*string*) is larger than the disk sector size (*string*)

Cause: Log file was created on bigger sector disks, and moved to smaller sector disks.

Action: Move the log file back to bigger sector disks.

ORA-01383: Thread *string* failed to open *string* block size log file '*string*' on *string* sector native-mode disks

Cause: Log file was copied from smaller sector disks to larger sector native-mode disks.

Action: Move the log file back to smaller sector disks.

ORA-01398: LogMiner public event

ORA-01399: LogMiner public event

ORA-01400: cannot insert NULL into (*string*)

Cause: An attempt was made to insert NULL into previously listed objects.

Action: These objects cannot accept NULL values.

ORA-01401: inserted value too large for column

Cause: The value inserted was too large for the given column.

Action: Do not insert a value greater than what the column can hold.

ORA-01402: view WITH CHECK OPTION where-clause violation

ORA-01403: no data found

Cause: No data was found from the objects.

Action: There was no data from the objects which may be due to end of fetch.

ORA-01404: ALTER COLUMN will make an index too large

ORA-01405: fetched column value is NULL

ORA-01406: fetched column value was truncated

Cause: The fetched column values were truncated.

Action: Use the right data types to avoid truncation.

ORA-01407: cannot update (*string*) to NULL

ORA-01408: such column list already indexed

ORA-01409: NOSORT option may not be used; rows are not in ascending order

Cause: Creation of index with NOSORT option when rows were not ascending. For non-unique indexes the rowid is considered part of the index key. Therefore, if you create an index nosort and two of the rows in the table have the same key and are stored in ascending order, but get split across two extents where the dba of the first block in the second extent is less than the dba of the last block in the first extent, then the create index nosort may fail.

Action: Create the index without the NOSORT option, or ensure table is stored in one extent.

ORA-01410: invalid ROWID

ORA-01411: cannot store the length of column in the indicator

Cause: Tried to fetch a column of size more than 64K and couldn't store the length of the column in the given indicator of size 2 bytes.

Action: Use the new bind type with call backs to fetch the long column.

ORA-01412: zero length not allowed for this datatype

Cause: The length for type 97 is 0

Action: Specify the correct length.

ORA-01413: illegal value in packed decimal number buffer

Cause: The user buffer bound by the user as packed decimal number contained an illegal value.

Action: Use a legal value.

ORA-01414: invalid array length when trying to bind array

Cause: An attempt was made to bind an array without either a current array length pointer or a zero maximum array length.

Action: Specify a valid length.

ORA-01415: too many distinct aggregate functions

Cause: The query contains more distinct aggregates than can be processed. The current limit is 255.

Action: Reduce the number of distinct aggregate functions in the query.

ORA-01416: two tables cannot be outer-joined to each other

ORA-01417: a table may be outer joined to at most one other table

Cause: a.b (+) = b.b and a.c (+) = c.c is not allowed

Action: Check that this is really what you want, then join b and c first in a view.

ORA-01418: specified index does not exist

ORA-01419: datdts: illegal format code

ORA-01420: datstd: illegal format code

ORA-01421: datrnd/datrn: illegal precision specifier

ORA-01422: exact fetch returns more than requested number of rows

Cause: The number specified in exact fetch is less than the rows returned.

Action: Rewrite the query or change number of rows requested

ORA-01423: error encountered while checking for extra rows in exact fetch

ORA-01424: missing or illegal character following the escape character

Cause: The character following the escape character in LIKE pattern is missing or not one of the escape character, '%', or '_'.
Action: Remove the escape character or specify the missing character.

Action: Remove the escape character or specify the missing character.

ORA-01425: escape character must be character string of length 1

Cause: Given escape character for LIKE is not a character string of length 1.

Action: Change it to a character string of length 1.

ORA-01426: numeric overflow

Cause: Evaluation of an value expression causes an overflow/underflow.

Action: Reduce the operands.

ORA-01427: single-row subquery returns more than one row

ORA-01428: argument 'string' is out of range

ORA-01429: Index-Organized Table: no data segment to store overflow row-pieces

Cause: No overflow segment defined.

Action: Add overflow segment.

ORA-01430: column being added already exists in table

ORA-01431: internal inconsistency in GRANT command

ORA-01432: public synonym to be dropped does not exist

ORA-01433: synonym to be created is already defined

ORA-01434: private synonym to be dropped does not exist

ORA-01435: user does not exist

ORA-01436: CONNECT BY loop in user data

ORA-01437: cannot have join with CONNECT BY

ORA-01438: value larger than specified precision allowed for this column

Cause: When inserting or updating records, a numeric value was entered that exceeded the precision defined for the column.

Action: Enter a value that complies with the numeric column's precision, or use the MODIFY option with the ALTER TABLE command to expand the precision.

ORA-01439: column to be modified must be empty to change datatype

ORA-01440: column to be modified must be empty to decrease precision or scale

ORA-01441: cannot decrease column length because some value is too big

ORA-01442: column to be modified to NOT NULL is already NOT NULL

ORA-01443: internal inconsistency; illegal datatype in resultant view column

ORA-01444: internal inconsistency; internal datatype maps to invalid external type

ORA-01445: cannot select ROWID from, or sample, a join view without a key-preserved table

ORA-01446: cannot select ROWID from, or sample, a view with DISTINCT, GROUP BY, etc.

ORA-01447: ALTER TABLE does not operate on clustered columns

ORA-01448: index must be dropped before changing to desired type

ORA-01449: column contains NULL values; cannot alter to NOT NULL

ORA-01450: maximum key length (*string*) exceeded

ORA-01451: column to be modified to NULL cannot be modified to NULL

Cause: the column may already allow NULL values, the NOT NULL constraint is part of a primary key or check constraint.

Action: if a primary key or check constraint is enforcing the NOT NULL constraint, then drop that constraint.

ORA-01452: cannot CREATE UNIQUE INDEX; duplicate keys found

ORA-01453: SET TRANSACTION must be first statement of transaction

Cause: self-evident

Action: commit (or rollback) transaction, and re-execute

ORA-01454: cannot convert column into numeric datatype

ORA-01455: converting column overflows integer datatype

ORA-01456: may not perform insert/delete/update operation inside a READ ONLY transaction

Cause: A non-DDL insert/delete/update or select for update operation was attempted

Action: commit (or rollback) transaction, and re-execute

ORA-01457: converting column overflows decimal datatype

ORA-01458: invalid length inside variable character string

ORA-01459: invalid length for variable character string

ORA-01460: unimplemented or unreasonable conversion requested

ORA-01461: can bind a LONG value only for insert into a LONG column

ORA-01462: cannot insert string literals longer than 4000 characters

ORA-01463: cannot modify column datatype with current constraint(s)

Cause: An attempt was made to modify the datatype of column which has referential constraints; or has check constraints which only allows changing the datatype from CHAR to VARCHAR or vice versa.

Action: Remove the constraint(s) or do not perform the offending operation.

ORA-01464: circular grant (granting to grant ancestor) of table or view

ORA-01465: invalid hex number

ORA-01466: unable to read data - table definition has changed

Cause: Query parsed after tbl (or index) change, and executed w/old snapshot

Action: commit (or rollback) transaction, and re-execute

ORA-01467: sort key too long

ORA-01468: a predicate may reference only one outer-joined table

ORA-01469: PRIOR can only be followed by a column name

Cause: Attempting to specify "PRIOR *something*" where *something* is not a column name.

Action: Only a column name can follow PRIOR. Replace with a column name.

ORA-01470: In-list iteration does not support mixed operators

Cause: Constants of different types are specified in an in-list.

Action: Use constants of same type for in-lists.

ORA-01471: cannot create a synonym with same name as object

ORA-01472: cannot use CONNECT BY on view with DISTINCT, GROUP BY, etc.

ORA-01473: cannot have subqueries in CONNECT BY clause

ORA-01474: cannot have START WITH or PRIOR without CONNECT BY

ORA-01475: must reparse cursor to change bind variable datatype

ORA-01476: divisor is equal to zero

ORA-01477: user data area descriptor is too large

ORA-01478: array bind may not include any LONG columns

Cause: User is performing an array bind with a bind variable whose maximum size is greater than 2000 bytes.

Action: Such bind variables cannot participate in array binds. Use an ordinary bind operation instead.

ORA-01479: last character in the buffer is not Null

Cause: A bind variable of type 97 does not contain null at the last position

Action: Make the last character null

ORA-01480: trailing null missing from STR bind value

Cause: A bind variable of type 5 (null-terminated string) does not contain the terminating null in its buffer.

Action: Terminate the string with a null character

ORA-01481: invalid number format model

Cause: The user is attempting to either convert a number to a string via TO_CHAR or a string to a number via TO_NUMBER and has supplied an invalid number format model parameter.

Action: Consult your manual.

ORA-01482: unsupported character set

Cause: The character set used to perform the operation, such as the CONVERT function, is not a supported character set.

Action: Use one of the supported character sets.

ORA-01483: invalid length for DATE or NUMBER bind variable

Cause: A bind variable of type DATE or NUMBER is too long.

Action: Consult your manual for the maximum allowable length.

ORA-01484: arrays can only be bound to PL/SQL statements

Cause: You tried to bind an array to a non-PL/SQL statement.

Action: n/a

ORA-01485: compile bind length different from execute bind length

Cause: You bound a buffer of type DTYVCS (VARCHAR with the two byte length in front) and at execute time the length in the first two bytes is more than the maximum buffer length (given in the bind call). The number of elements in the array and the current number of elements in the array cannot be more than the maximum size of the array.

Action: n/a

ORA-01486: size of array element is too large

Cause: You tried to bind a data value which was either too large for the datatype (for example, NUMBER) or was greater than 4000 bytes (for example, VARCHAR or LONG).

Action: n/a

ORA-01487: packed decimal number too large for supplied buffer

Cause: An impossible request for decimal to oracle number conversion was made

Action: This conversion cannot be performed

ORA-01488: invalid nibble or byte in the input data

Cause: An impossible request for decimal to oracle number conversion was made

Action: This conversion cannot be performed

ORA-01489: result of string concatenation is too long

Cause: String concatenation result is more than the maximum size.

Action: Make sure that the result is less than the maximum size.

ORA-01490: invalid ANALYZE command

Cause: Incorrect syntax specified

Action: Retry the command

ORA-01491: CASCADE option not valid

Cause: The CASCADE option is only valid for tables or clusters.

Action: Do not specify CASCADE

ORA-01492: LIST option not valid

Cause: The LIST option is only valid for tables or clusters.

Action: Do not specify LIST

ORA-01493: invalid SAMPLE size specified

Cause: The specified SAMPLE size is out of range

Action: Specify a value within the proper range.

ORA-01494: invalid SIZE specified

Cause: The specified histogram SIZE value was out of range.

Action: Specify a value within the proper range.

ORA-01495: specified chain row table not found

Cause: The specified table either does not exist or user does not have the proper privileges.

Action: Specify the correct table to use.

ORA-01496: specified chain row table form incorrect

Cause: The specified table does not have the proper field definitions.

Action: Specify the correct table to use.

ORA-01497: illegal option for ANALYZE CLUSTER

Cause: The FOR COLUMNS *column-list* clause may not be used with ANALYZE CLUSTER.

Action: Retry with a legal syntax.

ORA-01498: block check failure - see trace file

ORA-01499: table/index cross reference failure - see trace file

ORA-01500 to ORA-02098

ORA-01500: failure in getting date/time

Cause: During create database or alter tablespace, there was a failure in getting the date and time.

Action: Contact your customer support representative.

ORA-01501: CREATE DATABASE failed

Cause: An error occurred during create database

Action: See accompanying errors.

ORA-01502: index '*string.string*' or partition of such index is in unusable state

Cause: An attempt has been made to access an index or index partition that has been marked unusable by a direct load or by a DDL operation

Action: DROP the specified index, or REBUILD the specified index, or REBUILD the unusable index partition

ORA-01503: CREATE CONTROLFILE failed

Cause: An error occurred during CREATE CONTROLFILE

Action: See accompanying errors.

ORA-01504: database name '*string*' does not match parameter db_name '*string*'

Cause: The name in a database create or mount does not match the name given in the INIT.ORA parameter db_name.

Action: correct or omit one of the two names.

ORA-01505: error in adding log files

Cause: During create or alter database, error(s) occurred when adding new log files.

Action: Check error stack for detailed error information.

ORA-01506: missing or illegal database name

Cause: No db_name INIT.ORA parameter was specified.

Action: The database name must be given in the db_name INIT.ORA parameter.

ORA-01507: database not mounted

Cause: A command was attempted that requires the database to be mounted.

Action: If you are using the ALTER DATABASE statement via the SQLDBA startup command, specify the MOUNT option to startup; else if you are directly doing an ALTER DATABASE DISMOUNT, do nothing; else specify the MOUNT option to ALTER DATABASE. If you are doing a backup or copy, you must first mount the desired database. If you are doing a FLASHBACK DATABASE, you must first mount the desired database.

ORA-01508: cannot create database; error in file '*string*' at line *string*

Cause: CREATE DATABASE was unable to process the specified file.

Action: Check the offending line in the specified file.

ORA-01509: specified name '*string*' does not match actual '*string*'

Cause: The database name specified in ALTER DATABASE does not match the name of the currently mounted database.

Action: Correct the database name spelling or DISMOUNT the mounted database.

ORA-01510: error in deleting log files

Cause: During ALTER DATABASE, an error occurred while dropping log files.

Action: Check the error stack for detailed error information.

ORA-01511: error in renaming log/data files

Cause: An error occurred during the ALTER DATABASE RENAME FILE command.

Action: Check the error stack for detailed error information.

ORA-01512: error renaming log file *string* - new file *string* not found

Cause: An attempt to change a log file's name in the control file failed because no file was found with the new name.

Action: Make sure that the log file has been properly renamed by the operating system and retry.

ORA-01513: invalid current time returned by operating system

Cause: The operating system returned a time that was not between 1988 and 2121.

Action: Correct the time kept by the operating system.

ORA-01514: error in log specification: no such log

Cause: A log file name, or list of member names, did not correspond to an existing log.

Action: Specify an existing log file.

ORA-01515: error dropping log group *string*: no such log

Cause: ALTER DATABASE is attempting to drop a log file which is not known to the database control file.

Action: Specify the name of an existing log file.

ORA-01516: nonexistent log file, data file, or temporary file "*string*"

Cause: An attempt was made to use ALTER DATABASE to rename a log file, data file, or temporary file; or to change attributes of a data file or temporary file (for example, resize, autoextend, online or offline); or to re-create or move a data file. The attempt failed because the specified file is not known to the database's control file or is not of a type supported by the request.

Action: Specify the name or number of an existing file of the correct type, as appropriate. Check the relevant V\$ table for a list of possible files.

ORA-01517: log member: '*string*'

Cause: Used to print member names

Action: See top level error for information

ORA-01518: CREATE DATABASE must specify more than one log file

Cause: Only one log file was specified in the CREATE DATABASE statement.

Action: Specify at least two log files.

ORA-01519: error while processing file '*string*' near line *string*

Cause: CREATE DATABASE encountered a problem while processing specified file. The specified file is bad.

Action: Retry your system installation procedure or contact your customer support representative.

ORA-01520: number of data files to add (*string*) exceeds limit of *string*

Cause: CREATE TABLESPACE statement specifies more files than is permitted for this database.

Action: Use fewer files or re-create the database with a larger value of MAXDATAFILES.

ORA-01521: error in adding data files

Cause: During CREATE or ALTER TABLESPACE, an error was detected while adding data files.

Action: Check the error stack for detailed error information.

ORA-01522: file '*string*' to be renamed does not exist

Cause: During ALTER TABLESPACE RENAME, a file to be renamed was not found in the database control file.

Action: Specify the correct file name.

ORA-01523: cannot rename data file to '*string*' - file already part of database

Cause: During ALTER DATABASE RENAME or ALTER TABLESPACE RENAME, the new name of a file is already present in the control file.

Action: Rename the file to a name not already being used as part of the database.

ORA-01524: cannot create data file as '*string*' - file already part of database

Cause: During ALTER DATABASE CREATE DATAFILE, the new name of a file is already present in the control file.

Action: Create the file as a name not already being used as part of the database.

ORA-01525: error in renaming data files

Cause: An error occurred when renaming files as part of ALTER TABLESPACE.

Action: Check the error stack for detailed information. All files are renamed except for those mentioned in the error stack.

ORA-01526: error in opening file '*string*'

Cause: CREATE DATABASE was not able to open the specified file. This is probably due to a system installation error.

Action: Retry your system installation procedure or contact your customer support representative.

ORA-01527: error while reading file

Cause: CREATE DATABASE was not able to read the specified file. This is probably due to a system installation error.

Action: Retry your system installation procedure or contact your customer support representative.

ORA-01528: EOF while processing SQL statement

Cause: CREATE DATABASE unexpectedly hit EOF while reading the specified file. The sql.bsq file is bad.

Action: Retry your system installation procedure or contact your customer support representative.

ORA-01529: error closing file '*string*'

Cause: CREATE DATABASE was not able to close the specified file.

Action: Retry your system installation procedure or contact your customer support representative.

ORA-01530: a database already mounted by the instance

Cause: During ALTER DATABASE MOUNT, an attempt is being made to mount a database on an instance in which a database is or has previously been mounted.

Action: If you wish to mount the database, shutdown the instance and then startup the instance and retry the operation.

ORA-01531: a database already open by the instance

Cause: During ALTER DATABASE, an attempt was made to open a database on an instance for which there is already an open database.

Action: If you wish to open a new database on the instance, first shutdown the instance and then startup the instance and retry the operation.

ORA-01532: cannot create database; instance being started elsewhere

Cause: During CREATE DATABASE, another user appears to be simultaneously altering the instance.

Action: Make sure no one else is simultaneously altering the instance. If no one is, contact your customer support representative; otherwise, retry the operation.

ORA-01533: cannot rename file '*string*'; file does not belong to tablespace

Cause: During ALTER TABLESPACE RENAME, a file to be renamed was not found in the argument tablespace.

Action: Specify the correct file name or the correct tablespace name.

ORA-01534: rollback segment '*string*' doesn't exist

Cause: During ALTER or DROP ROLLBACK SEGMENT, the specified rollback segment name is unknown.

Action: Use the correct rollback segment name.

ORA-01535: rollback segment '*string*' already exists or given name has prefix _SYSSMU

Cause: Specified rollback segment already exists or given name starts with _SYSSMU.

Action: Use a different name. Note that _SYSSMU is an illegal prefix to an RBU segment.

ORA-01536: space quota exceeded for tablespace '*string*'

Cause: The space quota for the segment owner in the tablespace has been exhausted and the operation attempted the creation of a new segment extent in the tablespace.

Action: Either drop unnecessary objects in the tablespace to reclaim space or have a privileged user increase the quota on this tablespace for the segment owner.

ORA-01537: cannot add file '*string*' - file already part of database

Cause: During CREATE or ALTER TABLESPACE, a file being added is already part of the database.

Action: Use a different file name.

ORA-01538: failed to acquire any rollback segment

Cause: Failed to acquire any rollback segment during startup in shared mode

Action: Startup in exclusive mode to create one more public segment or specify available private segments in the INIT.ORA parameter `rollback_segments_required`, then startup in shared mode

ORA-01539: tablespace '*string*' is not online

Cause: Failed to either make a tablespace read-only or offline because it is not online. A tablespace must be online before it can become read-only or offline normal.

Action: Check the status of the tablespace. Use IMMEDIATE or TEMPORARY options to force all files offline. Bring the tablespace online before making it read-only.

ORA-01540: tablespace '*string*' is not offline

Cause: Failed to bring a tablespace online because it is not offline

Action: Check the status of the tablespace

ORA-01541: system tablespace cannot be brought offline; shut down if necessary

Cause: Tried to bring system tablespace offline

Action: Shutdown if necessary to do recovery

ORA-01542: tablespace '*string*' is offline, cannot allocate space in it

Cause: Tried to allocate space in an offline tablespace

Action: Bring the tablespace online or create the object in other tablespace

ORA-01543: tablespace '*string*' already exists

Cause: Tried to create a tablespace which already exists

Action: Use a different name for the new tablespace

ORA-01544: cannot drop system rollback segment

Cause: Tried to drop system rollback segment

Action: None

ORA-01545: rollback segment '*string*' specified not available

Cause: Either: 1) An attempt was made to bring a rollback segment online that is unavailable during startup; for example, the rollback segment is in an offline tablespace. 2) An attempt was made to bring a rollback segment online that is already online. This is because the rollback segment is specified twice in the ROLLBACK_SEGMENTS parameter in the initialization parameter file or the rollback segment is already online by another instance. 3) An attempt was made to drop a rollback segment that is currently online. 4) An attempt was made to alter a rollback segment that is currently online to use unlimited extents. 5) An attempt was made to online a rollback segment that is corrupted. This is because the rollback is specified in `_corrupted_rollback_segments` parameter in initialization parameter file.

Action: Either: 1) Make the rollback segment available; for example, bring an offline tablespace online. 2) Remove the name from the ROLLBACK_SEGMENTS parameter if the name is a duplicate or if another instance has already acquired the rollback segment. 3) Bring the rollback segment offline first. This may involve waiting for the active transactions to finish, or, if the rollback segment needs recovery, discover which errors are holding up the rolling back of the transactions and take appropriate actions. 4) Same as 3). 5) Remove the name from the _corrupted_rollback_segments parameter.

ORA-01546: tablespace contains active rollback segment '*string*'

Cause: Tried to make a tablespace that contains active rollback segment(s) offline or read-only

Action: Shutdown instances that use the active rollback segments in the tablespace and then make the tablespace offline or read-only

ORA-01547: warning: RECOVER succeeded but OPEN RESETLOGS would get error below

Cause: Media recovery with one of the incomplete recovery options ended without error. However, if the ALTER DATABASE OPEN RESETLOGS command were attempted now, it would fail with the specified error. The most likely cause of this error is forgetting to restore one or more datafiles from a sufficiently old backup before executing the incomplete recovery.

Action: Rerun the incomplete media recovery using different datafile backups, a different control file, or different stop criteria.

ORA-01548: active rollback segment '*string*' found, terminate dropping tablespace

Cause: Tried to drop a tablespace that contains active rollback segment(s)

Action: Shutdown instances that use the active rollback segments in the tablespace and then drop the tablespace

ORA-01549: tablespace not empty, use INCLUDING CONTENTS option

Cause: Tried to drop a non-empty tablespace

Action: To drop all the objects in the tablespace, use the INCLUDING CONTENTS option

ORA-01550: cannot drop system tablespace

Cause: Tried to drop system tablespace

Action: None

ORA-01551: extended rollback segment, pinned blocks released

Cause: Doing recursive extent of rollback segment, trapped internally by the system

Action: None

ORA-01552: cannot use system rollback segment for non-system tablespace '*string*'

Cause: Tried to use the system rollback segment for operations involving non-system tablespace. If this is a clone database then this will happen when attempting any data modification outside of the system tablespace. Only the system rollback segment can be online in a clone database.

Action: Create one or more private/public segment(s), shutdown and then startup again. May need to modify the INIT.ORA parameter rollback_segments to acquire private rollback segment. If this is a clone database being used for tablespace point in time recovery then this operation is not allowed. If the non-system tablespace has AUTO segment space management, then create an undo tablespace.

ORA-01553: MAXEXTENTS must be no smaller than the *string* extents currently allocated

Cause: The number of extents allocated is greater than the MAXEXTENTS specified.

Action: Specify a larger MAXEXTENTS value.

ORA-01554: transaction concurrency limit reached reason:*string* params:*string*, *string*

Cause: Too many concurrent transactions

Action: Shutdown the system, modify the INIT.ORA parameters transactions, rollback_segments or rollback_segments_required, then startup again.

ORA-01555: snapshot too old: rollback segment number *string* with name "*string*" too small

Cause: rollback records needed by a reader for consistent read are overwritten by other writers

Action: If in Automatic Undo Management mode, increase undo_retention setting. Otherwise, use larger rollback segments

ORA-01556: MINEXTENTS for rollback segment must be greater than 1

Cause: Specified MINEXTENTS of less than 2 for rollback segment

Action: Specify larger MINEXTENTS

ORA-01557: rollback segment extents must be at least *string* blocks

Cause: Specified extent of less than minimum size for rollback segment

Action: Specify larger extents

ORA-01558: out of transaction ID's in rollback segment *string*

Cause: All the available transaction id's have been used

Action: Shutdown the instance and restart using other rollback segment(s), then drop the rollback segment that has no more transaction id's.

ORA-01559: MAXEXTENTS for rollback segment must be greater than 1

Cause: Specified MAXEXTENTS of less than 2 for rollback segment

Action: Specify larger MAXEXTENTS

ORA-01560: LIKE pattern contains partial or illegal character

Cause: like pattern is not formed correctly

Action: make sure like pattern is specified correctly

ORA-01561: failed to remove all objects in the tablespace specified

Cause: Failed to remove all objects when dropping a tablespace

Action: Retry the drop tablespace until all objects are dropped

ORA-01562: failed to extend rollback segment number *string*

Cause: Failure occurred when trying to extend rollback segment

Action: This is normally followed by another error message that caused the failure. You may take the rollback segment offline to perform maintenance. Use the alter rollback segment offline command to take the rollback segment offline.

ORA-01563: rollback segment is PUBLIC, need to use the keyword PUBLIC

Cause: Did not use the keyword PUBLIC to identified public rollback segment

Action: Use the keyword PUBLIC when identifying public rollback segment

ORA-01564: rollback segment is not PUBLIC

Cause: The rollback segment segment identified is not public

Action: Do not use the keyword PUBLIC when identifying private rollback segment

ORA-01565: error in identifying file '*string*'

Cause: An error occurred while trying to identify a file.

Action: Check the error stack for detailed information.

ORA-01566: file specified more than once in ALTER DATABASE

Cause: The list of files supplied to the command contained at least one duplicate.

Action: Remove the duplicate file specification and retry.

ORA-01567: dropping log *string* would leave less than 2 log files for instance *string* (thread *string*)

Cause: Dropping all the logs specified would leave fewer than the required two log files per enabled thread.

Action: Either drop fewer logs or disable the thread before deleting the logs. It may be possible to clear the log rather than drop it.

ORA-01568: cannot set space quota on PUBLIC

Cause: Trying to set space quota on a tablespace for PUBLIC.

Action: If trying to grant system-wide or tablespace-wide space privileges to all users, use GRANT RESOURCE [ON *tablespace*] TO PUBLIC.

ORA-01569: data file too small for system dictionary tables

Cause: The datafile specified during creation of the database is too small to hold the system dictionary tables.

Action: Recreate the database by specifying a larger file or more files.

ORA-01570: MINEXTENTS must be no larger than the *string* extents currently allocated

Cause: The number of extents allocated is smaller than the MINEXTENTS specified.

Action: Specify a smaller MINEXTENTS value.

ORA-01571: redo version *string* incompatible with ORACLE version *string*

Cause: This software version can not read the current redo logs, and either crash recovery is required or there are offline database files that need media recovery. If a file name is listed then it needs media recovery.

Action: Shutdown and startup using the compatible software. Do any required media recovery, and open the database. Shutdown and then startup using current software. If the file is going to be dropped then take it offline with the DROP option to skip this check.

ORA-01572: rollback segment '*string*' cannot be brought online, *string* extents exceeded

Cause: The number of extents in the rollback segment exceeds the hard limit. It cannot be brought online for writing.

Action: Drop and recreate the rollback segment.

ORA-01573: shutting down instance, no further change allowed

Cause: Some process tries to make changes while the db is being shutdown

Action: None

ORA-01574: maximum number of concurrent transactions exceeded

Cause: the limit on the number of concurrent transactions has been hit

Action: shutdown the system, increase the INIT.ORA parameter 'transactions' , and then restart the system.

ORA-01575: timeout waiting for space management resource

Cause: failed to acquire necessary resource to do space management.

Action: Retry the operation.

ORA-01576: The instance *string* is not enabled

Cause: The thread associated with instance is not enabled.

Action: Enable the thread associated with the instance using ALTER DATABASE ENABLE INSTANCE command.

ORA-01577: cannot add log file '*string*' - file already part of database

Cause: During CREATE or ALTER DATABASE, a file being added is already part of the database.

Action: Use a different file name.

ORA-01578: ORACLE data block corrupted (file # *string*, block # *string*)

Cause: The data block indicated was corrupt. This was a physical corruption, also called a media corruption. The cause is unknown but is most likely external to the database. If ORA-26040 is also signaled, the corruption is due to NOLOGGING or UNRECOVERABLE operations.

Action: The general method to repair a media corrupt block is to restore a backup and recover the backup. For databases in ARCHIVELOG mode, use block media recovery or media recovery. In some situations, you can also drop the segment and re-create it. For example, you can drop an index and re-create the index.

ORA-01579: write error occurred during recovery

Cause: A write error occurred during recovery

Action: Consult trace files for the nature of the write error, and correct error.

ORA-01580: error creating control backup file *string*

Cause: An operating system error occurred while attempting to create a control file backup.

Action: Check the error stack for more detailed information

ORA-01581: attempt to use rollback segment (*string*) new extent (*string*) which is being allocated

Cause: Undo generated to extend a rollback segment run out of current undo block space and is attempting to write into the new extent which has not been completely allocated.

Action: The rollback segment extending will be rolled back by the system, no more extension will be possible until the next extent is freed up by rolling back or committing other transactions.

ORA-01582: unable to open control file for backup

Cause: An operating system error occurred while attempting to open a control file for backup.

Action: Check the error stack for more detailed information

ORA-01583: unable to get block size of control file to be backed up

Cause: An operating system error occurred while attempting to get the block size of a control file for backup.

Action: Check the error stack for more detailed information

ORA-01584: unable to get file size of control file to be backed up

Cause: An operating system error occurred while attempting to get the file size of a control file for backup.

Action: Check the error stack for more detailed information

ORA-01585: error identifying backup file *string*

Cause: An operating system error occurred when attempting to identify the file to be used for control file backup.

Action: Check the error stack for more detailed information

ORA-01586: database must be mounted EXCLUSIVE and not open for this operation

Cause: Attempting to DROP DATABASE when the database is not mounted EXCLUSIVE.

Action: Mount the database in EXCLUSIVE mode.

ORA-01587: error during control file backup file copy

ORA-01588: must use RESETLOGS option for database open

Cause: An earlier attempt to open the database with the RESETLOGS option did not complete, or recovery was done with a control file backup, or a FLASHBACK DATABASE was done.

Action: Use the RESETLOGS option when opening the database.

ORA-01589: must use RESETLOGS or NORESETLOGS option for database open

Cause: Either incomplete or backup control file recovery has been performed. After these types of recovery you must specify either the RESETLOGS option or the NORESETLOGS option to open your database.

Action: Specify the appropriate option.

ORA-01590: number of segment free list (*string*) exceeds maximum of *string*

Cause: storage parameter FREELIST GROUPS is too large.

Action: Reduce storage parameters FREELIST GROUPS

ORA-01591: lock held by in-doubt distributed transaction *string*

Cause: Trying to access resource that is locked by a dead two-phase commit transaction that is in prepared state.

Action: DBA should query the pending_trans\$ and related tables, and attempt to repair network connection(s) to coordinator and commit point. If timely repair is not possible, DBA should contact DBA at commit point if known or end user for correct outcome, or use heuristic default if given to issue a heuristic commit or abort command to finalize the local portion of the distributed transaction.

ORA-01592: error converting Version 7 rollback segment (*string*) to Oracle 8 format

Cause: Look at the accompanying internal error; Version 7 database may not have shutdown cleanly.

Action: Investigate the internal error; may have to reload the Version 7 database (from backup) and shutdown the database cleanly.

ORA-01593: rollback segment optimal size (*string* blks) is smaller than the computed initial size (*string* blks)

Cause: Specified OPTIMAL size is smaller than the cumulative size of the initial extents during create rollback segment.

Action: Specify a larger OPTIMAL size.

ORA-01594: attempt to wrap into rollback segment (*string*) extent (*string*) which is being freed

Cause: Undo generated to free a rollback segment extent is attempting to write into the same extent due to small extents and/or too many extents to free

Action: The rollback segment shrinking will be rolled back by the system; increase the optimal size of the rollback segment.

ORA-01595: error freeing extent (*string*) of rollback segment (*string*)

Cause: Some error occurred while freeing inactive rollback segment extents.

Action: Investigate the accompanying error.

ORA-01596: cannot specify system in *string* parameter

Cause: The system rollback segment is specified in the INIT.ORA parameter referred to in the error message

Action: change the INIT.ORA parameter

ORA-01597: cannot alter system rollback segment online or offline

Cause: Tried to online or offline the system rollback segment

Action: None

ORA-01598: rollback segment '*string*' is not online

Cause: Could have been taken offline before by DBA or cleaned up by SMON.

Action: Check the status of rollback segment in undo\$ or dba_rollback_segs to make sure the rollback segment is actually online.

ORA-01599: failed to acquire rollback segment (*string*), cache space is full

Cause: the amount statically allocated is not enough based on max_rollback_segments parameter.

Action: For now take another rollback segment offline or increase the parameter max_rollback_segments

ORA-01600: at most one "*string*" in clause "*string*" of *string*

Cause: The INIT.ORA parameter was mis-specified.

Action: Correct the INIT.ORA parameter and restart the instance.

ORA-01601: illegal bucket size in clause "*string*" of *string*

Cause: The bucket size was invalid for this parameter.

Action: Correct the INIT.ORA parameter and restart the instance.

ORA-01603: illegal grouping size in clause "*string*" of *string*

Cause: The grouping size was invalid for this parameter.

Action: Correct the INIT.ORA parameter and restart the instance.

ORA-01604: illegal number range in clause "*string*" of *string*

Cause: The number range was invalid for this parameter.

Action: Correct the INIT.ORA parameter and restart the instance.

ORA-01605: missing numbers in clause "*string*" of *string*

Cause: The numbers were missing for this parameter.

Action: Correct the INIT.ORA parameter and restart the instance.

ORA-01606: parameter not identical to that of another mounted instance

Cause: A parameter was different on two instances.

Action: Modify the initialization parameter and restart.

ORA-01607: cannot add logfile to the specified instance

Cause: The limit on the number of instances supported by the control file has been reached.

Action: Use an instance name supported by the control file, or resize the thread record and/or checkpoint progress record sections of the control file.

ORA-01608: cannot bring rollback segment '*string*' online, its status is (*string*)

Cause: Could have been brought online before by DBA or left as a result of process crash.

Action: Check the status of rollback segment in undo\$ or dba_rollback_segs

ORA-01609: log *string* is the current log for thread *string* - cannot drop members

Cause: A member of the current log for a thread cannot be dropped.

Action: If the thread is opened, request a log switch by the instance that is using it. If it is not open, disable the thread, manually archive the log, or clear it.

ORA-01610: recovery using the BACKUP CONTROLFILE option must be done

Cause: Either an earlier database recovery session specified BACKUP CONTROLFILE, or the control file was recreated with the RESETLOGS option, or the control file being used is a backup control file. After that only BACKUP CONTROLFILE recovery is allowed and it must be followed by a log reset at the next database open.

Action: Perform recovery using the BACKUP CONTROLFILE option.

ORA-01611: thread number *string* is invalid - must be between 1 and *string*

Cause: A thread number in a command is greater than the number of threads supported by the control file.

Action: Use a thread number that is valid, or resize the thread record and/or checkpoint progress record sections of the control file.

ORA-01612: instance *string* (thread *string*) is already enabled

Cause: An attempt was made to enable a thread that is already enabled.

Action: Either use this thread or enable another thread.

ORA-01613: instance *string* (thread *string*) only has *string* logs - at least 2 logs required to enable.

Cause: The thread cannot be enabled because it only has two online log files associated with it.

Action: Add logs to the thread or pick another thread to enable

ORA-01614: instance *string* (thread *string*) is busy - cannot enable

Cause: The mount enqueue for the thread could not be acquired when attempting to enable the thread. This probably means that another process has already started enabling this thread.

Action: Wait and try again, or find another thread to enable.

ORA-01615: instance *string* (thread *string*) is mounted - cannot disable

Cause: Some instance, possibly this one, has allocated the thread for its use. The thread can not be disabled while in use.

Action: Shut the instance down cleanly using the thread.

ORA-01616: instance *string* (thread *string*) is open - cannot disable

Cause: The thread is not closed. The last instance to use the thread died leaving the thread open. A thread cannot be disabled until it is closed. It is still required for crash or instance recovery.

Action: If the database is open, instance recovery should close the thread soon - wait a few minutes. Otherwise open the database - crash recovery will close the thread.

ORA-01617: cannot mount: *string* is not a valid thread number

Cause: The INIT.ORA parameter "thread" is not between 1 and the number of threads allowed by the control file.

Action: Shut down the instance, change the INIT.ORA parameter and startup, or resize the thread record and/or checkpoint progress record sections of the control file.

ORA-01618: redo thread *string* is not enabled - cannot mount

Cause: The INIT.ORA parameter "thread" requests a thread that is not enabled. A thread must be enabled before it can be mounted.

Action: Shutdown the instance, change the INIT.ORA parameter and startup mounting a different thread. If the database is open in another instance then the thread may be enabled.

ORA-01619: thread *string* is mounted by another instance

Cause: The INIT.ORA parameter "thread" requests a thread that has been mounted by another instance. Only one instance may use a thread.

Action: Shutdown the instance, change the INIT.ORA parameter and startup mounting a different thread.

ORA-01620: no public threads are available for mounting

Cause: The INIT.ORA parameter "thread" is zero, its default value. There are no threads which have been publicly enabled, and not mounted.

Action: Shutdown the instance, change the INIT.ORA parameter to a thread which is privately enabled and not mounted. If the database is open in another instance, then a thread may be publicly enabled.

ORA-01621: cannot rename member of current log if database is open

Cause: This is a rename command for a member of the current log for an open thread. If the database is open anywhere, the log may be in use, so the rename cannot be done.

Action: Wait until the log is not current, or mount the database exclusively.

ORA-01622: thread number must be specified - default not specific

Cause: The thread was not specified when adding a log, and the currently mounted thread was chosen by default at mount time. Since the current thread was not specified explicitly the user cannot know which thread the log will be added to.

Action: Explicitly specify the thread number either in the INIT.ORA parameter "thread", or in the add command.

ORA-01623: log *string* is current log for instance *string* (thread *string*) - cannot drop

Cause: A thread's current log cannot be dropped even if the thread is closed. A disabled thread usually does not have a current log, but a half completed disable may need to be disabled again.

Action: If the database is not open then disable the thread. If the database is open and an instance has the thread open, then the instance can be requested to switch logs. If the database is closed the log can be archived or cleared to force a switch.

ORA-01624: log *string* needed for crash recovery of instance *string* (thread *string*)

Cause: A log cannot be dropped or cleared until the thread's checkpoint has advanced out of the log.

Action: If the database is not open, then open it. Crash recovery will advance the checkpoint. If the database is open force a global checkpoint. If the log is corrupted so that the database cannot be opened, it may be necessary to do incomplete recovery until cancel at this log.

ORA-01625: rollback segment '*string*' does not belong to this instance

Cause: Trying to shrink or take a rollback segment offline that does not belong to this instance.

Action: n/a

ORA-01626: rollback segment number '*string*' cannot handle more transactions

Cause: Too many transactions in this segment.

Action: Choose a different rollback segment, or reduce the number of concurrent transactions.

ORA-01627: rollback segment number '*string*' is not online

Cause: Could have been taken offline before by DBA or cleaned up by SMON.

Action: Check the status of rollback segment in undo\$ or dba_rollback_segs to make sure the rollback segment is actually online.

ORA-01628: max # extents (*string*) reached for rollback segment *string*

Cause: An attempt was made to extend a rollback segment that was already at the MAXEXTENTS value.

Action: If the value of the MAXEXTENTS storage parameter is less than the maximum allowed by the system, raise this value.

ORA-01629: max # extents (*string*) reached saving undo for tablespace *string*

Cause: Save undo for the offline tablespace at max extents

Action: Check the storage parameters for the system tablespace. The tablespace needs to be brought back online so the undo can be applied .

ORA-01630: max # extents (*string*) reached in temp segment in tablespace *string*

Cause: A temp segment tried to extend past max extents.

Action: If maxextents for the tablespace is less than the the system maximum, you can raise that. Otherwise, raise pctincrease for the tablespace

ORA-01631: max # extents (*string*) reached in table *string.string*

Cause: A table tried to extend past maxextents

Action: If maxextents is less than the system maximum, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params

ORA-01632: max # extents (*string*) reached in index *string.string*

Cause: An index tried to extend past maxextents

Action: If maxextents is less than the system max, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params.

ORA-01633: Real Application Clusters Option needed for this operation

Cause: System doesn't have Real Application Clusters configured

Action: Obtain Real Application Clusters option

ORA-01634: rollback segment number '*string*' is about to go offline

Cause: The rollback segment specified was marked to go offline by DBA.

Action: Bring the rollback segment online first.

ORA-01635: rollback segment #*string* specified not available

Cause: (same as 1545)

Action: (same as 1545)

ORA-01636: rollback segment '*string*' is already online

Cause: The instance is trying to online an already online RS

Action: n/a

ORA-01637: rollback segment '*string*' is being used by another instance (#*string*)

Cause: The instance is trying to online a RS already in use by another instance

Action: n/a

ORA-01638: parameter *string* does not allow ORACLE version *string* to mount cluster database

Cause: The recovery compatible parameter is set too low to allow this software version to mount in cluster database mode.

Action: Either use an earlier software release or advance the recovery_compatible parameter. If this happens when no recovery_compatible parameter has been specified then set it to the current software release.

ORA-01639: instance *string* has no thread assigned to it

Cause: There is no mapping from instance to thread for this instance in the control file.

Action: Make sure that this instance has a thread assigned to it by adding logfiles to this instance or by starting the instance with an existing thread which will automatically create a mapping.

ORA-01640: cannot make tablespace read-only with changes by in-doubt transactions

Cause: An attempt was made to alter a tablespace read-only while there were changes in the tablespace made by in-doubt distributed transactions. The in-doubt transactions must commit or rollback to ensure that there is no undo for a tablespace before it can be made read-only.

Action: Any in-doubt transactions that made changes to the tablespace must be resolved.

ORA-01641: tablespace '*string*' is not online - cannot add data file

Cause: Attempting to add a datafile to a tablespace that has been set to read-only or offline.

Action: Make the tablespace online and read write then add the datafile.

ORA-01642: begin backup not needed for read-only tablespace '*string*'

Cause: Attempting to begin or end a backup for a tablespace that has been set to read-only.

Action: Take the backup without any begin or end commands. The files are not being modified so the backup will be consistent.

ORA-01643: system tablespace can not be made read-only

Cause: Attempting to set the system tablespace to read-only. The system tablespace must remain read write for database operation.

Action: Leave system tablespace read write.

ORA-01644: tablespace '*string*' is already read-only

Cause: Attempting to make tablespace read-only that is already read-only.

Action: Leave tablespace read-only, or make read write then make read-only again.

ORA-01645: previous attempt to make read write is half complete

Cause: A failure while making the tablespace read write left it read only, but the checkpoint was advanced. The tablespace will not be useable after a resetlogs if its files are offline.

Action: Repeat the command to make the tablespace read write.

ORA-01646: tablespace '*string*' is not read-only - cannot make read write

Cause: Attempting to make a tablespace read write that is not read-only. It may be either online or offline.

Action: Leave tablespace read write.

ORA-01647: tablespace '*string*' is read-only, cannot allocate space in it

Cause: Tried to allocate space in a read-only tablespace

Action: Create the object in another tablespace

ORA-01648: log *string* is the current log of disabled instance *string* (thread *string*)

Cause: An attempt to enable the thread failed after it was half completed. This log was left as the current log even though the thread is still disabled. Since a log switch cannot be done until the thread is enabled, the log can not be cleared or archived.

Action: Complete the thread enable by issuing the enable command again.

ORA-01649: operation not allowed with a backup control file

Cause: An attempt is being made to perform a command that does not make sense when the control file is a restored backup.

Action: Wait until after the database has been opened and try again.

ORA-01650: unable to extend rollback segment *string* by *string* in tablespace *string*

Cause: Failed to allocate an extent of the required number of blocks for a rollback segment in the tablespace.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-01651: unable to extend save undo segment by *string* for tablespace *string*

Cause: Failed to allocate an extent of the required number of blocks for saving undo entries for the indicated offline tablespace.

Action: Check the storage parameters for the SYSTEM tablespace. The tablespace needs to be brought back online so the undo can be applied.

ORA-01652: unable to extend temp segment by *string* in tablespace *string*

Cause: Failed to allocate an extent of the required number of blocks for a temporary segment in the tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-01653: unable to extend table *string.string* by *string* in tablespace *string*

Cause: Failed to allocate an extent of the required number of blocks for a table segment in the tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-01654: unable to extend index *string.string* by *string* in tablespace *string*

Cause: Failed to allocate an extent of the required number of blocks for an index segment in the tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-01655: unable to extend cluster *string.string* by *string* in tablespace *string*

Cause: Failed to allocate an extent of the required number of blocks for a cluster segment in tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-01656: max # extents (*string*) reached in cluster *string.string*

Cause: A cluster tried to extend past maxextents

Action: If maxextents is less than the system maximum, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params

ORA-01657: invalid SHRINK option value

Cause: The specified value must be an integer.

Action: Choose an appropriate integer value.

ORA-01658: unable to create INITIAL extent for segment in tablespace *string*

Cause: Failed to find sufficient contiguous space to allocate INITIAL extent for segment being created.

Action: Use ALTER TABLESPACE ADD DATAFILE to add additional space to the tablespace or retry with a smaller value for INITIAL

ORA-01659: unable to allocate MINEXTENTS beyond *string* in tablespace *string*

Cause: Failed to find sufficient contiguous space to allocate MINEXTENTS for the segment being created.

Action: Use ALTER TABLESPACE ADD DATAFILE to add additional space to the tablespace or retry with smaller value for MINEXTENTS, NEXT or PCTINCREASE

ORA-01660: tablespace '*string*' is already permanent

Cause: Attempting to make tablespace permanent that is already permanent.

Action: Leave tablespace permanent.

ORA-01661: tablespace '*string*' is already temporary

Cause: Attempting to make tablespace temporary that is already temporary.

Action: Leave tablespace permanent.

ORA-01662: tablespace '*string*' is non-empty and cannot be made temporary

Cause: Tried to convert a non-empty tablespace to a temporary tablespace

Action: To drop all the objects in the tablespace.

ORA-01663: the contents of tablespace '*string*' is constantly changing

Cause: The contents of the tablespace is always changing between PERMANENT and TEMPORARY.

Action: To decide what the tablespace contents should be and stay with it.

ORA-01664: Transaction which has expanded the Sort Segment has aborted

Cause: Internal Error.

Action: Contact Oracle Support.

ORA-01665: control file is not a standby control file

Cause: Attempting to mount, recover or activate a standby database without a standby control file.

Action: Create a standby control file before attempting to use the database as a standby database.

ORA-01666: control file is for a standby database

Cause: Attempting to mount, recover, or open a standby database without the appropriate command option to designate a standby database.

Action: Use the standby option or appropriate commands, or mount with the primary control file.

ORA-01667: cannot add any more tablespaces: limit of *string* exceeded

Cause: There is no more room in the control file for adding tablespaces.

Action: Resize the control file or drop other tablespaces.

ORA-01668: standby database requires DROP option for offline of data file

Cause: Attempting to take a datafile offline in a standby database without specifying the DROP option. Files that are offline in a standby database are not recovered, and are likely to be unusable if the standby is activated. Note that specifying DROP does not prevent bringing the file online later.

Action: Specify the DROP option or leave the file online.

ORA-01669: standby database control file not consistent

Cause: Attempting to activate a standby database with a control file that has not been recovered to the same point as the data files. Most likely the control file was just copied from the primary database and has not been used for recovery.

Action: Recover the standby database until all the files are consistent.

ORA-01670: new datafile *string* needed for standby database recovery

Cause: Standby database recovery noticed that a file was added to the primary database, but is not available on the standby.

Action: Either copy the file from the primary database or do an ALTER DATABASE CREATE DATAFILE command on the standby to create a file to recover.

ORA-01671: control file is a backup, cannot make a standby control file

Cause: The currently mounted control file is a backup control file, and attempting to create a control file for a standby database.

Action: Complete any needed recovery and open the database with the resetlogs option.

ORA-01672: control file may be missing files or have extra ones

Cause: Attempting to create a standby control file, but the control file was either recently created via CREATE CONTROLFILE or an incomplete recovery has been done. Thus the datafiles in the control file and the ones in the data dictionary may not match.

Action: Open the database, then retry the operation.

ORA-01673: data file *string* has not been identified

Cause: This data file was not in the control file after an incomplete recovery or CREATE CONTROLFILE. Since information from its header is needed for standby database recovery, we can not create a standby control file.

Action: Find the file and bring it online. If desired it may be taken offline again. If you intend to drop this file, then taking it offline with the DROP option will avoid this error.

ORA-01674: data file *string* is an old incarnation rather than current file

Cause: Recovery encountered redo that indicates this file was dropped from the database and another file was added using the same file number. This implies that a CREATE CONTROLFILE command was given the old file which was dropped rather than the latest file.

Action: Rebuild the control file using CREATE CONTROLFILE, and give the correct file.

ORA-01675: max_commit_propagation_delay inconsistent with other instances

Cause: The max_commit_propagation_delay INIT.ORA parameter is inconsistent with those in other instances.

Action: Make sure all instances have the same max_commit_propagation_delay.

ORA-01676: standby file name conversion of '*string*' exceeds maximum length of *string*

Cause: When the given file name was converted to the name used for the standby database, the converted name was bigger than the maximum allowed file name.

Action: Change initialization parameter DB_FILE_NAME_CONVERT or LOG_FILE_NAME_CONVERT to convert to a valid file name.

ORA-01677: standby file name conversion parameters differ from other instance

Cause: The DB_FILE_NAME_CONVERT or LOG_FILE_NAME_CONVERT initialization parameters were not the same as in other instances that already had the database mounted.

Action: Change initialization parameters DB_FILE_NAME_CONVERT or LOG_FILE_NAME_CONVERT to match other instances.

ORA-01678: parameter *string* must be pairs of pattern and replacement strings

Cause: The initialization parameter does not have even number of strings for its value. The odd numbered strings are patterns to be found in file names. The even numbered strings are used to replace the corresponding patterns when found in file names.

Action: Specify even number of strings for the parameter, or omit the parameter.

ORA-01679: database is being opened

Cause: An attempt was made to activate a standby database when the database was in the middle of being opened.

Action: Wait for database open to finish and retry the ACTIVATE command.

ORA-01680: unable to extend LOB segment by *string* in tablespace *string*

Cause: Failed to allocate an extent of the required number of blocks for a LOB segment in the tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-01681: max # extents (*string*) reached in LOB segment in tablespace *string*

Cause: A LOB segment tried to extend past max extents.

Action: If maxextents for the tablespace is less than the the system maximum, you can raise that. Otherwise, raise pctincrease for the tablespace

ORA-01682: read-only DB cannot allocate temporary space in tablespace *string*

Cause: Temporary space (usually for sorting) could not be allocated in either main storage or a tempfile. An attempt was made to allocate the space from the tablespace named, but the database is opened read-only. The database open requires a sort work space.

Action: Either allow sufficient workspace in main storage (SORT_AREA_SIZE initialization parameter), or create a temporary tablespace before making the database read-only. Use ALTER TABLESPACE ADD TEMPFILE statement to add temporary files to the temporary tablespace.

ORA-01683: unable to extend index *string.string* partition *string* by *string* in tablespace *string*

Cause: Failed to allocate an extent of the required number of blocks for index segment in the tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-01684: max # extents (*string*) reached in table *string.string* partition *string*

Cause: A table tried to extend past maxextents

Action: If maxextents is less than the system maximum, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params

ORA-01685: max # extents (*string*) reached in index *string.string* partition *string*

Cause: An index tried to extend past maxextents

Action: If maxextents is less than the system max, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params.

ORA-01686: max # files (*string*) reached for the tablespace *string*

Cause: The number of files for a given tablespace has reached its maximum value

Action: Resize existing files in the tablespace, or partition the objects among multiple tablespaces, or move some objects to a different tablespace.

ORA-01687: specified logging attribute for tablespace '*string*' is same as the existing

Cause: Attempting to change the tablespace default logging attribute (LOGGING or NOLOGGING) to be the same as the existing logging attribute

Action: Change the specified logging attribute

ORA-01688: unable to extend table *string.string* partition *string* by *string* in tablespace *string*

Cause: Failed to allocate an extent of the required number of blocks for table segment in the tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-01689: syntax error in clause "*string*" of *string*

Cause: There was a syntax in the INIT.ORA parameter.

Action: Fix the syntax error and restart the instance.

ORA-01690: sort area size too small

Cause: sort area size too small to fit two records in memory

Action: increase sort_area_size

ORA-01691: unable to extend lob segment *string.string* by *string* in tablespace *string*

Cause: Failed to allocate an extent of the required number of blocks for LOB segment in the tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-01692: unable to extend lob segment *string.string* partition *string* by *string* in tablespace *string*

Cause: Failed to allocate an extent of the required number of blocks for LOB segment in the tablespace indicated.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-01693: max # extents (*string*) reached in lob segment *string.string*

Cause: A LOB segment tried to extend past maxextents

Action: If maxextents is less than the system max, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params.

ORA-01694: max # extents (*string*) reached in lob segment *string.string* partition *string*

Cause: A LOB segment tried to extend past maxextents

Action: If maxextents is less than the system max, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params.

ORA-01695: error converting rollback segment *string* to version 8.0.2

Cause: Version 8.0.1 database may not have shutdown cleanly

Action: May have to reload the 8.0.1 database and shutdown cleanly

ORA-01696: control file is not a clone control file

Cause: Attempting to mount, a database as a clone when it is already mounted by another instance not as a clone or attempting to use a current control file for a clone.

Action: Mount without the clone option or use a backup control file and shutdown the other instances before mounting as a clone.

ORA-01697: control file is for a clone database

Cause: Attempting to mount a clone database without the appropriate command option to designate a clone database.

Action: Use the clone option or appropriate commands, or mount with the primary control file.

ORA-01698: a clone database may only have SYSTEM rollback segment online

Cause: Attempting to online a rollback segment in a clone database.

Action: Do not use this command.

ORA-01699: tablespace '*string*' is being imported for point in time recovery

Cause: Attempting to online a tablespace or begin another point in time import while a point in time import is already in progress

Action: Wait until the import completes

ORA-01700: duplicate username in list

ORA-01701: a cluster is not appropriate here

ORA-01702: a view is not appropriate here

Cause: Among other possible causes, this message will be produced if an attempt was made to define an Editioning View over a view.

Action: An Editioning View may only be created over a base table.

ORA-01703: missing SYNONYM keyword

ORA-01704: string literal too long

Cause: The string literal is longer than 4000 characters.

Action: Use a string literal of at most 4000 characters. Longer values may only be entered using bind variables.

ORA-01705: an outer join cannot be specified on a correlation column

ORA-01706: user function result value was too large

ORA-01707: missing LIST keyword

ORA-01708: ACCESS or SESSION expected

ORA-01709: program does not exist

ORA-01710: missing OF keyword

ORA-01711: duplicate privilege listed

ORA-01712: you cannot grant a privilege which you do not have

ORA-01713: GRANT OPTION does not exist for that privilege

ORA-01714: error in execution of user function

ORA-01715: UNIQUE may not be used with a cluster index

Cause: An attempt was made to create a cluster index with the UNIQUE attribute.

Action: Remove UNIQUE from the CREATE INDEX statement.

ORA-01716: NOSORT may not be used with a cluster index

Cause: An attempt was made to create a cluster index using the NOSORT option.

Action: Remove NOSORT from the CREATE INDEX statement.

ORA-01717: seccta: invalid access mode token passed

ORA-01718: BY ACCESS | SESSION clause not allowed for NOAUDIT

Cause: Attempt to specify BY ACCESS | SESSION in a NOAUDIT statement.

Action: Remove BY ACCESS | SESSION.

ORA-01719: outer join operator (+) not allowed in operand of OR or IN

Cause: An outer join appears in an or clause.

Action: If A and B are predicates, to get the effect of (A(+) or B), try (select where (A(+) and not B)) union all (select where (B)).

ORA-01720: grant option does not exist for 'string.string'

Cause: A grant was being performed on a view or a view was being replaced and the grant option was not present for an underlying object.

Action: Obtain the grant option on all underlying objects of the view or revoke existing grants on the view.

ORA-01721: USERENV(COMMITSCN) invoked more than once in a transaction

Cause: The USERENV('COMMITSCN') function can only be used once in a transaction.

Action: Re-write the transaction to use USERENV('COMMITSCN') only once

ORA-01722: invalid number

Cause: The specified number was invalid.

Action: Specify a valid number.

ORA-01723: zero-length columns are not allowed

Cause: Columns with zero length were not allowed.

Action: Correct the use of the column.

ORA-01724: floating point precision is out of range (1 to 126)

Cause: The specified number had an invalid range.

Action: Use a floating point precision that is in the correct precision.

ORA-01725: USERENV('COMMITSCN') not allowed here

Cause: The function USERENV('COMMITSCN') is only allowed as a top-level expression in the VALUES clause of an INSERT statement, and on the right-hand side of an assignment in an UPDATE statement.

Action: Correct the use of the function.

ORA-01726: a table is not appropriate here

ORA-01727: numeric precision specifier is out of range (1 to 38)

ORA-01728: numeric scale specifier is out of range (-84 to 127)

ORA-01729: database link name expected

ORA-01730: invalid number of column names specified

ORA-01731: circular view definition encountered

ORA-01732: data manipulation operation not legal on this view

ORA-01733: virtual column not allowed here

ORA-01734: illegal parameters - EXTENT MIN higher than EXTENT MAX

Cause: A wrong value is specified for the parameter.

Action: Correct the parameter and reissue the statement.

ORA-01735: invalid ALTER TABLE option

ORA-01736: [NOT] SUCCESSFUL expected

ORA-01737: valid modes: [ROW] SHARE, [[SHARE] ROW] EXCLUSIVE, SHARE UPDATE

ORA-01738: missing IN keyword

ORA-01739: missing MODE keyword

ORA-01740: missing double quote in identifier

ORA-01741: illegal zero-length identifier

ORA-01742: comment not terminated properly

Cause: The indicated comment or hint begun with the /* token did not have the terminating */.

Action: Properly terminate the comment or hint with a */.

ORA-01743: only pure functions can be indexed

Cause: The indexed function uses SYSDATE or the user environment.

Action: PL/SQL functions must be pure (RNDS, RNPS, WNDS, WNPS). SQL expressions must not use SYSDATE, USER, USERENV(), or anything else dependent on the session state. NLS-dependent functions are OK.

ORA-01744: inappropriate INTO

ORA-01745: invalid host/bind variable name

ORA-01746: indicator variable not permitted here

ORA-01747: invalid user.table.column, table.column, or column specification

ORA-01748: only simple column names allowed here

ORA-01749: you may not GRANT/REVOKE privileges to/from yourself

ORA-01750: UPDATE/REFERENCES may only be REVOKEd from the whole table, not by column

ORA-01751: Invalid dump undo option

Cause: An invalid option is specified in the ALTER DUMP UNDO command.

Action: Correct and reissue the command.

ORA-01752: cannot delete from view without exactly one key-preserved table

Cause: The deleted table had - no key-preserved tables, - more than one key-preserved table, or - the key-preserved table was an unmerged view.

Action: Redefine the view or delete it from the underlying base tables.

ORA-01753: column definition incompatible with clustered column definition

ORA-01754: a table may contain only one column of type LONG

Cause: An attempt was made to add a LONG column to a table which already had a LONG column. Note that even if the LONG column currently in the table has already been marked unused, another LONG column may not be added until the unused columns are dropped.

Action: Remove the LONG column currently in the table by using the ALTER TABLE command.

ORA-01755: Must specify an extent number or block number

Cause: Expecting an extent or block number but something else was specified.

Action: Correct the error and reissue the command.

ORA-01756: quoted string not properly terminated

ORA-01757: Must specify an object number

Cause: Expecting an object number but something else was specified.

Action: Correct the error and reissue the command.

ORA-01758: table must be empty to add mandatory (NOT NULL) column

ORA-01759: user function is incorrectly defined

ORA-01760: illegal argument for function

ORA-01761: DML operation does not map to a unique table in the join

Cause: The primary table is the base table against which the update, insert or delete operation is finally being done. For delete either there is no primary table in the join query or there is more than one. For update or insert the columns specified map to more than one base table.

Action: Change the join specification.

ORA-01762: vopdrv: view query block not in FROM

ORA-01763: update or delete involves outer joined table

Cause: For deletes, the table being deleted from is outer joined to some other table. For updates, either the table being updated is outer-joined to some other table, or some table reachable from the primary table is being outer joined to a table not reachable from the primary table.

Action: Change the join specification.

ORA-01764: new update value of join is not guaranteed to be unique

Cause: A row of a join query table is being updated using a row of a table that is not guaranteed to have exactly one value for the row being updated.

Action: Change the join specification.

ORA-01765: specifying owner's name of the table is not allowed

Cause: An attempt was made to rename the object with dotted object name.

Action: Do not specify username.tablename in query for table name.

ORA-01766: dictionary table not allowed in this context

ORA-01767: UPDATE ... SET expression must be a subquery

ORA-01768: number string too long

ORA-01769: duplicate CLUSTER option specifications

Cause: During a CREATE of a clustered table, the user attempted to specify more than one CLUSTER option.

Action: Remove the extra CLUSTER option.

ORA-01770: CLUSTER option not allowed in CREATE CLUSTER command

ORA-01771: illegal option for a clustered table

Cause: During a CREATE or ALTER of a clustered table, the user attempted to enter one or more of the following options: INITRANS, MAXTRANS, PCTFREE, PCTUSED, STORAGE, TABLESPACE. These options may only be specified for the cluster itself.

Action: Remove the illegal option(s).

ORA-01772: Must specify a value for LEVEL

Cause: Expecting the value of LEVEL but something else was specified.

Action: Correct the error and reissue the command.

ORA-01773: may not specify column datatypes in this CREATE TABLE

ORA-01774: Dump undo option specified more than once

Cause: The same option for ALTER DUMP UNDO was specified twice.

Action: Remove the redundant options and reissue the command.

ORA-01775: looping chain of synonyms

ORA-01776: cannot modify more than one base table through a join view

Cause: Columns belonging to more than one underlying table were either inserted into or updated.

Action: Phrase the statement as two or more separate statements.

ORA-01777: WITH GRANT OPTION not allowed in this system

ORA-01778: maximum subquery nesting level exceeded

ORA-01779: cannot modify a column which maps to a non key-preserved table

Cause: An attempt was made to insert or update columns of a join view which map to a non-key-preserved table.

Action: Modify the underlying base tables directly.

ORA-01780: string literal required

ORA-01781: UNRECOVERABLE cannot be specified without AS SELECT

Cause: UNRECOVERABLE was specified in a CREATE TABLE statement without also specifying a populating subquery with an AS clause.

Action: Do not specify UNRECOVERABLE.

ORA-01782: UNRECOVERABLE cannot be specified for a cluster or clustered table

Cause: A CREATE CLUSTER, or clustered CREATE TABLE statement specified UNRECOVERABLE.

Action: Do not specify UNRECOVERABLE.

ORA-01783: only one RECOVERABLE or UNRECOVERABLE clause may be specified

Cause: RECOVERABLE was specified more than once, UNRECOVERABLE was specified more than once, or both RECOVERABLE and UNRECOVERABLE were specified in a CREATE TABLE or CREATE INDEX or ALTER INDEX REBUILD statement.

Action: Remove all but one of the RECOVERABLE or UNRECOVERABLE clauses and reissue the statement.

ORA-01784: RECOVERABLE cannot be specified with database media recovery disabled

Cause: A CREATE TABLE or CREATE INDEX statement specified RECOVERABLE when the database was running in NOARCHIVELOG mode. Since logs are not being archived, they will be overwritten and the object being created cannot be recovered from a backup taken before the object was created.

Action: Do not specify RECOVERABLE, or restart the database with media recovery enabled.

ORA-01785: ORDER BY item must be the number of a SELECT-list expression

ORA-01786: FOR UPDATE of this query expression is not allowed

ORA-01787: only one clause allowed per query block

ORA-01788: CONNECT BY clause required in this query block

ORA-01789: query block has incorrect number of result columns

ORA-01790: expression must have same datatype as corresponding expression

ORA-01791: not a SELECTed expression

ORA-01792: maximum number of columns in a table or view is 1000

Cause: An attempt was made to create a table or view with more than 1000 columns, or to add more columns to a table or view which pushes it over the maximum allowable limit of 1000. Note that unused columns in the table are counted toward the 1000 column limit.

Action: If the error is a result of a CREATE command, then reduce the number of columns in the command and resubmit. If the error is a result of an ALTER TABLE command, then there are two options: 1) If the table contained unused columns, remove them by executing ALTER TABLE DROP UNUSED COLUMNS before adding new columns; 2) Reduce the number of columns in the command and resubmit.

ORA-01793: maximum number of index columns is 32

ORA-01794: maximum number of cluster columns is 32

ORA-01795: maximum number of expressions in a list is 1000

Cause: Number of expressions in the query exceeded than 1000. Note that unused column/expressions are also counted Maximum number of expressions that are allowed are 1000.

Action: Reduce the number of expressions in the list and resubmit.

ORA-01796: this operator cannot be used with lists

ORA-01797: this operator must be followed by ANY or ALL

ORA-01798: missing EXCEPTION keyword

ORA-01799: a column may not be outer-joined to a subquery

Cause: *expression(+)* *relop* (*subquery*) is not allowed.

Action: Either remove the (+) or make a view out of the subquery. In V6 and before, the (+) was just ignored in this case.

ORA-01800: a literal in the date format was too large to process

ORA-01801: date format is too long for internal buffer

ORA-01802: Julian date is out of range

ORA-01803: failure in getting date/time

ORA-01804: failure to initialize timezone information

Cause: The timezone information file was not properly read.

Action: Please contact Oracle Customer Support.

ORA-01805: possible error in date/time operation

Cause: The timezone files on client and server do not match. Operation can potentially result in incorrect results based on local timezone file.

Action: Please ensure client and server timezone versions are same.

ORA-01810: format code appears twice

ORA-01811: Julian date precludes use of day of year

ORA-01812: year may only be specified once

ORA-01813: hour may only be specified once

ORA-01814: AM/PM conflicts with use of A.M./P.M.

ORA-01815: BC/AD conflicts with use of B.C./A.D.

ORA-01816: month may only be specified once

ORA-01817: day of week may only be specified once

ORA-01818: 'HH24' precludes use of meridian indicator

ORA-01819: signed year precludes use of BC/AD

ORA-01820: format code cannot appear in date input format

ORA-01821: date format not recognized

ORA-01822: era format code is not valid with this calendar

ORA-01830: date format picture ends before converting entire input string

ORA-01831: year conflicts with Julian date

ORA-01832: day of year conflicts with Julian date

ORA-01833: month conflicts with Julian date

ORA-01834: day of month conflicts with Julian date

ORA-01835: day of week conflicts with Julian date

ORA-01836: hour conflicts with seconds in day

ORA-01837: minutes of hour conflicts with seconds in day

ORA-01838: seconds of minute conflicts with seconds in day

ORA-01839: date not valid for month specified

ORA-01840: input value not long enough for date format

ORA-01841: (full) year must be between -4713 and +9999, and not be 0

Cause: Illegal year entered

Action: Input year in the specified range

ORA-01842: quarter must be between 1 and 4

ORA-01843: not a valid month

ORA-01844: week of year must be between 1 and 52

ORA-01845: week of month must be between 1 and 5

ORA-01846: not a valid day of the week

ORA-01847: day of month must be between 1 and last day of month

ORA-01848: day of year must be between 1 and 365 (366 for leap year)

ORA-01849: hour must be between 1 and 12

ORA-01850: hour must be between 0 and 23

ORA-01851: minutes must be between 0 and 59

ORA-01852: seconds must be between 0 and 59

ORA-01853: seconds in day must be between 0 and 86399

ORA-01854: julian date must be between 1 and 5373484

Cause: An invalid Julian date was entered.

Action: Enter a valid Julian date between 1 and 5373484.

ORA-01855: AM/A.M. or PM/P.M. required

ORA-01856: BC/B.C. or AD/A.D. required

ORA-01857: not a valid time zone

ORA-01858: a non-numeric character was found where a numeric was expected

Cause: The input data to be converted using a date format model was incorrect. The input data did not contain a number where a number was required by the format model.

Action: Fix the input data or the date format model to make sure the elements match in number and type. Then retry the operation.

ORA-01859: a non-alphabetic character was found where an alphabetic was expected

Cause: The input data to be converted using a date format model was incorrect. The input data did not contain a letter where a letter was required by the format model.

Action: Fix the input data or the date format model to make sure the elements match in number and type. Then retry the operation.

ORA-01860: week of year must be between 1 and 53

ORA-01861: literal does not match format string

Cause: Literals in the input must be the same length as literals in the format string (with the exception of leading whitespace). If the "FX" modifier has been toggled on, the literal must match exactly, with no extra whitespace.

Action: Correct the format string to match the literal.

ORA-01862: the numeric value does not match the length of the format item

Cause: When the FX and FM format codes are specified for an input date, then the number of digits must be exactly the number specified by the format code. For example, 9 will not match the format specifier DD but 09 will.

Action: Correct the input date or turn off the FX or FM format specifier in the format string.

ORA-01863: the year is not supported for the current calendar

Cause: The year is not supported for the current calendar.

Action: Please check the documentation to find out what years are supported for the current calendar.

ORA-01864: the date is out of range for the current calendar

Cause: Your calendar doesn't extend to the specified date.

Action: Specify a date which is legal for this calendar.

ORA-01865: not a valid era

Cause: Era input does not match a known era.

Action: Provide a valid era on input.

ORA-01866: the datetime class is invalid

Cause: This is an internal error.

Action: Please contact Oracle Worldwide Support.

ORA-01867: the interval is invalid

Cause: The character string you specified is not a valid interval.

Action: Please specify a valid interval.

ORA-01868: the leading precision of the interval is too small

Cause: The leading precision of the interval is too small to store the specified interval.

Action: Increase the leading precision of the interval or specify an interval with a smaller leading precision.

ORA-01869: reserved for future use

ORA-01870: the intervals or datetimes are not mutually comparable

Cause: The intervals or datetimes are not mutually comparable.

Action: Specify a pair of intervals or datetimes that are mutually comparable.

ORA-01871: the number of seconds must be less than 60

Cause: The number of seconds specified was greater than 59.

Action: Specify a value for seconds that is 59 or smaller.

ORA-01872: reserved for future use

ORA-01873: the leading precision of the interval is too small

Cause: The leading precision of the interval is too small to store the specified interval.

Action: Increase the leading precision of the interval or specify an interval with a smaller leading precision.

ORA-01874: time zone hour must be between -12 and 14

Cause: The time zone hour specified was not in the valid range.

Action: Specify a time zone hour between -12 and 14.

ORA-01875: time zone minute must be between -59 and 59

Cause: The time zone minute specified was not in the valid range.

Action: Specify a time zone minute between -59 and 59.

ORA-01876: year must be at least -4713

Cause: The specified year was not in range.

Action: Specify a year that is greater than or equal to -4713.

ORA-01877: string is too long for internal buffer

Cause: This is an internal error.

Action: Please contact Oracle Worldwide Support.

ORA-01878: specified field not found in datetime or interval

Cause: The specified field was not found in the datetime or interval.

Action: Make sure that the specified field is in the datetime or interval.

ORA-01879: the hh25 field must be between 0 and 24

Cause: The specified hh25 field was not in the valid range.

Action: Specify an hh25 field between 0 and 24.

ORA-01880: the fractional seconds must be between 0 and 999999999

Cause: The specified fractional seconds were not in the valid range.

Action: Specify a value for fractional seconds between 0 and 999999999.

ORA-01881: timezone region ID is invalid

Cause: The region ID referenced an invalid region.

Action: Contact Oracle Support Services.

ORA-01882: timezone region not found

Cause: The specified region name was not found.

Action: Contact Oracle Support Services.

ORA-01883: overlap was disabled during a region transition

Cause: The region was changing state and the overlap flag was disabled.

Action: Please contact Oracle Customer Support.

ORA-01884: divisor is equal to zero

Cause: An attempt was made to divide by zero.

Action: Avoid zero divisor.

ORA-01885: public synonym collides with Oracle-supplied schema name

Cause: The public synonym was the same as the Oracle-supplied schema name.

Action: Use either a different synonym or a different schema name.

ORA-01890: NLS error detected

Cause: An NLS error was detected.

Action: Look for additional error messages and take appropriate action. If there are no additional errors, call Oracle Worldwide Support.

ORA-01891: Datetime/Interval internal error

Cause: Internal error.

Action: Please contact Oracle Worldwide Support.

ORA-01898: too many precision specifiers

Cause: While trying to truncate or round dates, extra data was found in the date format picture

Action: Check the syntax of the date format picture and retry.

ORA-01899: bad precision specifier

ORA-01900: LOGFILE keyword expected

Cause: keyword missing

Action: supply missing keyword

ORA-01901: ROLLBACK keyword expected

Cause: keyword missing

Action: supply missing keyword

ORA-01902: SEGMENT keyword expected

Cause: keyword missing

Action: supply missing keyword

ORA-01903: EVENTS keyword expected

Cause: keyword missing

Action: supply missing keyword

ORA-01904: DATAFILE keyword expected

Cause: keyword missing

Action: supply missing keyword

ORA-01905: STORAGE keyword expected

Cause: keyword missing

Action: supply missing keyword

ORA-01906: BACKUP keyword expected

Cause: keyword missing

Action: supply missing keyword

ORA-01907: TABLESPACE keyword expected

Cause: keyword missing

Action: supply missing keyword

ORA-01908: EXISTS keyword expected

Cause: keyword missing

Action: supply missing keyword

ORA-01909: REUSE keyword expected

Cause: keyword missing

Action: supply missing keyword

ORA-01910: TABLES keyword expected

Cause: keyword missing

Action: supply missing keyword

ORA-01911: CONTENTS keyword expected

Cause: keyword missing

Action: supply missing keyword

ORA-01912: ROW keyword expected

Cause: keyword missing

Action: supply missing keyword

ORA-01913: EXCLUSIVE keyword expected

Cause: keyword missing

Action: supply missing keyword

ORA-01914: invalid auditing option for sequence numbers

Cause: AUDIT or NOAUDIT on a sequence number specifies an auditing option that is not legal for sequence numbers.

Action: The following options may not be used for sequence numbers and should be removed: COMMENT, DELETE, INDEX, INSERT, LOCK, RENAME, UPDATE, REFERENCES, EXECUTE

ORA-01915: invalid auditing option for views

Cause: AUDIT or NOAUDIT on a view specifies an auditing option that is not legal for views.

Action: The following options may not be used for views and should be removed: ALTER, INDEX, REFERENCES, EXECUTE

ORA-01916: keyword ONLINE, OFFLINE, RESIZE, AUTOEXTEND, END, DROP, ENCRYPT, or DECRYPT expected

Cause: An expected keyword was not used for data file or the temp file clause.

Action: Use the correct syntax.

ORA-01917: user or role '*string*' does not exist

Cause: There is not a user or role by that name.

Action: Re-specify the name.

ORA-01918: user '*string*' does not exist

Cause: User does not exist in the system.

Action: Verify the user name is correct.

ORA-01919: role '*string*' does not exist

Cause: Role by that name does not exist.

Action: Verify you are using the correct role name.

ORA-01920: user name '*string*' conflicts with another user or role name

Cause: There is already a user or role with that name.

Action: Specify a different user name.

ORA-01921: role name '*string*' conflicts with another user or role name

Cause: There is already a user or role with that name.

Action: Specify a different role name.

ORA-01922: CASCADE must be specified to drop '*string*'

Cause: Cascade is required to remove this user from the system. The user own's object which will need to be dropped.

Action: Specify cascade.

ORA-01923: CASCADE aborted, objects locked by another user

Cause: Cannot drop the user's objects; someone has them locked.

Action: Use the lock monitor to determine who has the objects locked.

ORA-01924: role '*string*' not granted or does not exist

Cause: Either the role was not granted to the user, or the role did not exist.

Action: Create the role or grant the role to the user and retry the operation.

ORA-01925: maximum of *string* enabled roles exceeded

Cause: The INIT.ORA parameter "max_enabled_roles" has been exceeded.

Action: Increase max_enabled_roles and warm start the database.

ORA-01926: cannot GRANT to a role WITH GRANT OPTION

Cause: Role cannot have a privilege with the grant option.

Action: Perform the grant without the grant option.

ORA-01927: cannot REVOKE privileges you did not grant

Cause: You can only revoke privileges you granted.

Action: Don't revoke these privileges.

ORA-01928: GRANT option not granted for all privileges

Cause: In order to grant a privilege, you must first have the privilege with the grant option.

Action: Obtain the privilege with the grant option and try again.

ORA-01929: no privileges to GRANT

Cause: "ALL" was specified but the user doesn't have any privileges with the grant option.

Action: Don't grant privileges on that object.

ORA-01930: auditing the object is not supported

Cause: AUDIT or NOAUDIT was specified for an object that cannot be audited.

Action: Don't attempt to AUDIT the object.

ORA-01931: cannot grant *string* to a role

Cause: REFERENCES, INDEX, SYSDBA, SYSOPER or SYSASM privilege could not be granted to a role.

Action: Grant privilege directly to the user.

ORA-01932: ADMIN option not granted for role 'string'

Cause: The operation requires the admin option on the role.

Action: Obtain the grant option and re-try.

ORA-01933: cannot create a stored object using privileges from a role

Cause: An attempt was made to create a stored object using privileges from a role. Stored objects cannot use privileges from roles.

Action: Grant the privileges required to the user directly.

ORA-01934: circular role grant detected

Cause: Roles cannot be granted circularly. Also, a role cannot be granted to itself.

Action: Do not perform the grant.

ORA-01935: missing user or role name

Cause: A user or role name was expected.

Action: Specify a user or role name.

ORA-01936: cannot specify owner when creating users or roles

Cause: Users and roles do not have owners.

Action: Don't specify an owner.

ORA-01937: missing or invalid role name

Cause: A valid role name was expected.

Action: Specify a valid role name.

ORA-01938: IDENTIFIED BY must be specified for CREATE USER

Cause: Cannot create a user without specifying a password or "IDENTIFIED EXTERNALLY".

Action: Specify one of the password clauses.

ORA-01939: only the ADMIN OPTION can be specified

Cause: System privileges and roles can only be granted with the admin option. The grant option cannot be used with system privileges and roles. The delegate option cannot be used with system privileges.

Action: Specify the admin option.

ORA-01940: cannot drop a user that is currently connected

Cause: Attempt was made to drop a user that is currently logged in.

Action: Make sure user is logged off, then repeat command.

ORA-01941: SEQUENCE keyword expected

Cause: keyword missing

Action: supply missing keyword

ORA-01942: IDENTIFIED BY and EXTERNALLY cannot both be specified

Cause: A user cannot be specified to have and not have a password.

Action: Specify only one of the options.

ORA-01943: IDENTIFIED BY already specified

Cause: The identified clause has been given twice.

Action: Use only one identified by clause.

ORA-01944: IDENTIFIED EXTERNALLY already specified

Cause: The identified externaly clause has been given twice.

Action: Use only one identified clause.

ORA-01945: DEFAULT ROLE[S] already specified

Cause: The default roles clause has been given twice.

Action: Use only on default role clause.

ORA-01946: DEFAULT TABLESPACE already specified

Cause: The default tablespace clause has been given twice.

Action: Use only one default tablespace clause.

ORA-01947: TEMPORARY TABLESPACE already specified

Cause: The temporary tablespace clause has been given twice.

Action: Use only one temporary tablespace clause.

ORA-01948: identifier's name length (*string*) exceeds maximum (*string*)

Cause: A name has been specified that is too long. For example, `dbms_session.is_role_enabled()` specifies a role name that is too long.

Action: Change the application or command to use a correct identifier.

ORA-01949: ROLE keyword expected

Cause: The role keyword is required here.

Action: Specify the role keyword.

ORA-01950: no privileges on tablespace '*string*'

Cause: User does not have privileges to allocate an extent in the specified tablespace.

Action: Grant the user the appropriate system privileges or grant the user space resource on the tablespace.

ORA-01951: ROLE '*string*' not granted to '*string*'

Cause: The role you tried to revoke was not granted to the user.

Action: Don't try to revoke a privilege which is not granted.

ORA-01952: system privileges not granted to '*string*'

Cause: A system privilege you tried to revoke was not granted to the user.

Action: Make sure the privileges you are trying to revoke are granted.

ORA-01953: command no longer valid, see ALTER USER

Cause: The syntax for assigning quotas on tablespaces has changed. The ALTER USER command is now used to perform the functionality

Action: Use the alter user command instead.

ORA-01954: DEFAULT ROLE clause not valid for CREATE USER

Cause: Default roles cannot be specified for create user.

Action: Grant and alter the user's default roles after creating the user.

ORA-01955: DEFAULT ROLE '*string*' not granted to user

Cause: The user being altered does not have the specified role granted directly to the user. Note, sub-roles cannot be used in the default role clause.

Action: Grant the role to the user.

ORA-01956: invalid command when OS_ROLES are being used

Cause: This command cannot be used when the INIT.ORA parameter OS_ROLES is TRUE.

Action: Grant the role to the user in the operating system.

ORA-01957: Keyword MIN or MAX expected, not found

ORA-01958: Must supply an integer for the LAYER option

ORA-01959: Must supply an integer for the OPCODE option

ORA-01960: Invalid dump logfile option

ORA-01961: Invalid dump option

ORA-01962: Must specify a file number or log sequence number

ORA-01963: Must specify a block number

ORA-01964: Must specify a time for the TIME option

ORA-01965: Must specify a PERIOD

ORA-01967: invalid option for CREATE CONTROLFILE

Cause: An invalid CREATE CONTROLFILE option is present.

Action: Specify only valid CREATE CONTROLFILE options.

ORA-01968: Only specify RESETLOGS or NORESETLOGS once

Cause: The keyword RESETLOGS or NORESETLOGS has appeared more than once

Action: Be sure to specify RESETLOGS or NORESETLOGS exactly once.

ORA-01969: You must specify RESETLOGS or NORESETLOGS

Cause: Missing a RESETLOGS or a NORESETLOGS

Action: Be sure to specify RESETLOGS or NORESETLOGS exactly once.

ORA-01970: You must specify a database name for CREATE CONTROLFILE

Cause: Missing a database name

Action: Retype CREATE CONTROLFILE command with the DATABASE keyword.

ORA-01971: Illegal ALTER TRACING option

ORA-01972: Must specify a string for ALTER TRACING ENABLE or DISABLE

ORA-01973: Missing change number

Cause: Keyword "CHANGE" found but change number not specified.

Action: Fix command line and resubmit

ORA-01974: Illegal archive option

Cause: Not a valid option to the "ALTER SYSTEM ARCHIVE" command

Action: n/a

ORA-01975: Illegal character in change number *string*

ORA-01976: Missing change number

ORA-01977: Missing thread number

Cause: Keyword "THREAD" found but thread number not specified.

Action: Fix command line and resubmit

ORA-01978: Missing sequence number

Cause: Keyword "SEQUENCE" found but sequence number not specified.

Action: Fix command line and resubmit

ORA-01979: missing or invalid password for role '*string*'

Cause: An attempt was made to enable a role without giving the proper password.

Action: Use the IDENTIFIED BY clause in SET ROLE to specify the correct password.

ORA-01980: error during OS ROLE initialization

Cause: An OS error occurred while loading a users OS ROLES.

Action: Check the OS error.

ORA-01981: CASCADE CONSTRAINTS must be specified to perform this revoke

Cause: During this revoke some foreign key constraints will be removed. In order to perform this automatically, CASCADE CONSTRAINTS must be specified.

Action: Remove the constraints or specify CASCADE CONSTRAINTS.

ORA-01982: invalid auditing option for tables

Cause: AUDIT or NOAUDIT on a table specifies an auditing option that is not legal for tables.

Action: The following options may not be used for tables and should be removed: REFERENCES, EXECUTE

ORA-01983: invalid auditing option for DEFAULT

Cause: AUDIT or NOAUDIT on a DEFAULT specifies an auditing option that is not legal for DEFAULT.

Action: The following options may not be used for DEFAULT and should be removed: REFERENCES

ORA-01984: invalid auditing option for procedures/packages/functions

Cause: AUDIT or NOAUDIT on a DEFAULT specifies an auditing option that is not legal for procedures, packages, or functions.

Action: The following options may not be used for procedures, packages, and functions and should be removed: all but EXECUTE

ORA-01985: cannot create user as LICENSE_MAX_USERS parameter exceeded

Cause: Maximum users in the database license limit exceeded.

Action: Increase license limit.

ORA-01986: OPTIMIZER_GOAL is obsolete

Cause: An obsolete parameter, OPTIMIZER_GOAL, was referenced.

Action: Use the OPTIMIZER_MODE parameter.

ORA-01987: client os username is too long

Cause: A client's os username is too long for the os logon to succeed.

Action: Use a shorter os username.

ORA-01988: remote os logon is not allowed

Cause: Remote os login attempted when not allowed.

Action: Use a local client, or use the remote_os_authent system parameter to turn on remote os logon.

ORA-01989: role '*string*' not authorized by operating system

Cause: The os role does not exist, is not granted to you, or you did not provide the correct password.

Action: Re-attempt the SET ROLE with a valid os role and password, if necessary.

ORA-01990: error opening password file '*string*'

Cause: The password file either did not exist or was inaccessible.

Action: Ensure that the file exists and is accessible.

ORA-01991: invalid password file '*string*'

ORA-01992: error closing password file '*string*'

ORA-01993: error writing password file '*string*'

ORA-01994: GRANT failed: password file missing or disabled

Cause: The operation failed either because the INIT.ORA parameter REMOTE_LOGIN_PASSWORDFILE was set to NONE or else because the password file was missing.

Action: Create the password file using the orapwd tool and set the INIT.ORA parameter REMOTE_LOGIN_PASSWORDFILE to EXCLUSIVE.

ORA-01995: error reading password file '*string*'

ORA-01996: GRANT failed: password file '*string*' is full

ORA-01997: GRANT failed: user '*string*' is identified externally

ORA-01998: REVOKE failed: user SYS always has SYSOPER and SYSDBA

ORA-01999: password file cannot be updated in SHARED mode

Cause: The operation failed because the INIT.ORA parameter REMOTE_LOGIN_PASSWORDFILE was set to SHARED.

Action: Set the INIT.ORA parameter to EXCLUSIVE.

ORA-02000: missing *string* keyword

ORA-02001: user SYS is not permitted to create indexes with freelist groups

Cause: user tried to create an index while running with sys authorization.

Action: n/a

ORA-02002: error while writing to audit trail

ORA-02003: invalid USERENV parameter

ORA-02004: security violation

Cause: This error code is never returned to a user. It is used as a value for column, audit_trail.returncode, to signal that a security violation occurred.

Action: None

ORA-02005: implicit (-1) length not valid for this bind or define datatype

ORA-02006: invalid packed decimal format string

ORA-02007: can't use ALLOCATE or DEALLOCATE options with REBUILD

Cause: Allocate or deallocate storage and rebuild index are not compatible.

Action: Choose one or the other.

ORA-02008: non-zero scale specified for nonnumeric column

ORA-02009: the size specified for a file must not be zero

Cause: A value of zero was specified in a SIZE or RESIZE clause of a file specification.

Action: Use correct syntax, or, if allowed, omit the SIZE or RESIZE clause.

ORA-02010: missing host connect string

ORA-02011: duplicate database link name

ORA-02012: missing USING keyword

ORA-02013: missing CONNECT keyword

ORA-02014: cannot select FOR UPDATE from view with DISTINCT, GROUP BY, etc.

Cause: An attempt was made to select FOR UPDATE from a view which had not been merged because the view used syntax (for example, DISTINCT or GROUP BY) preventing the merge, or because of initialization file parameter settings.

Action: Determine the reason the view will not merge and, if possible, make changes so that it can.

ORA-02015: cannot select FOR UPDATE from remote table

Cause: An attempt was made to select FOR UPDATE on a remote table (directly, or via a view) that had abstract data type columns, and the view or select list contained abstract data type columns or non-column items.

Action: To attempt a select FOR UPDATE, use a view or select list that consists only of base columns from the remote table, none of which may be abstract data type columns.

ORA-02016: cannot use a subquery in a START WITH on a remote database

ORA-02017: integer value required

ORA-02018: database link of same name has an open connection

ORA-02019: connection description for remote database not found

ORA-02020: too many database links in use

Cause: The current session has exceeded the INIT.ORA open_links maximum.

Action: Increase the open_links limit, or free up some open links by committing or rolling back the transaction and canceling open cursors that reference remote databases.

ORA-02021: DDL operations are not allowed on a remote database

Cause: An attempt was made to use a DDL operation on a remote database. For example, "CREATE TABLE tablename@remotedbname ...".

Action: To alter the remote database structure, you must connect to the remote database with the appropriate privileges.

ORA-02022: remote statement has unoptimized view with remote object

Cause: The local view is unoptimized and contains references to objects at the remote database and the statement must be executed at the remote database.

Action: Create a similar view on the remote database and modify the violating view in the SQL statement with the new view@remote.

ORA-02023: START WITH or CONNECT BY predicate cannot be evaluated by remote data base

ORA-02024: database link not found

Cause: Database link to be dropped is not found in dictionary

Action: Correct the database link name

ORA-02025: all tables in the SQL statement must be at the remote database

Cause: The user's SQL statement references tables from multiple databases. The remote database is not Oracle V7 or above, and can perform updates only if it can reference all tables in the SQL statement.

Action: n/a

ORA-02026: missing LINK keyword

Cause: keyword missing

Action: supply missing keyword

ORA-02027: multi-row UPDATE of LONG column is not supported

Cause: A bind variable with length greater than 4000 bytes is being used to update a column, and the update statement updates more than one row.

Action: You may only update a single row with such a bind variable.

ORA-02028: fetching an exact number of rows is not supported by the server

Cause: The server does not support UPIALL, so the fetch of an exact number of rows cannot be emulated on the user side.

Action: Connect to a valid server or do not use an exact fetch.

ORA-02029: missing FILE keyword

Cause: keyword missing

Action: supply missing keyword

ORA-02030: can only select from fixed tables/views

Cause: An attempt is being made to perform an operation other than a retrieval from a fixed table/view.

Action: You may only select rows from fixed tables/views.

ORA-02031: no ROWID for fixed tables or for external-organized tables

Cause: An attempt is being made to access rowid from a fixed table or from an external-organized table.

Action: Do not access ROWID from a fixed table or from an external-organized table.

ORA-02032: clustered tables cannot be used before the cluster index is built

Cause: User attempted to perform a DML statement on a clustered table for which no cluster index has yet been created.

Action: Create the cluster index.

ORA-02033: a cluster index for this cluster already exists

Cause: A cluster index already exists for the cluster.

Action: None

ORA-02034: speed bind not permitted

Cause: Speed bind not allowed with supplied bind variables. Trapped internally by the system.

Action: None

ORA-02035: illegal bundled operation combination

Cause: User requested that the UPI bundled execution call perform an illegal combination of operations.

Action: See documentation for legal operation combinations.

ORA-02036: too many variables to describe with automatic cursor open

Cause: User requested that the UPI bundled execution call perform automatic cursor open and close on a describe operation. There were too many select-list items or bind variables to do this.

Action: open and close cursor explicitly

ORA-02037: uninitialized speed bind storage

Cause: User attempted a UPI bundled execution call containing a standalone execute operation without first performing a UPI bundled execution call containing a bind operation.

Action: perform a UPI bundled execution call with bind before performing a bundled execution call with execute

ORA-02038: define is not allowed for array type

Cause: User attempted to define a select list variable of type "array". Arrays may only serve as host bind variables.

Action: n/a

ORA-02039: bind by value is not allowed for array type

Cause: User attempted to bind an array host variable by value. Arrays may only be bound by reference.

Action: n/a

ORA-02040: remote database *string* does not support two-phase commit

Cause: the database was potentially updated but does not support prepare to commit (as determined by its logon transaction traits). The transaction was rolled back.

Action: Do not attempt to update the remote database unless it is the only database updated in one transaction.

ORA-02041: client database did not begin a transaction

Cause: internal error

Action: contact support

ORA-02042: too many distributed transactions

Cause: the distributed transaction table was full because too many distributed transactions were active.

Action: Run fewer transactions. If you are sure you don't have too many concurrent distributed transactions, this indicates an internal error and support should be notified. Instance shutdown/restart would be a work-around.

ORA-02043: must end current transaction before executing *string*

Cause: a transaction is in progress and one of the following commands is issued: COMMIT FORCE, ROLLBACK FORCE, or ALTER SYSTEM ENABLE DISTRIBUTED RECOVERY in single process mode.

Action: COMMIT or ROLLBACK the current transaction and resubmit command.

ORA-02044: transaction manager login denied: transaction in progress

Cause: a remote transaction manager tried to log in while a distributed transaction is in progress.

Action: end the current transaction (this is a protocol error from a remote transaction manager)

ORA-02045: too many local sessions participating in global transaction

Cause: too many sessions at this site for this transaction.

Action: use an existing link so another session need not be created.

ORA-02046: distributed transaction already begun

Cause: internal error or error in external transaction manager. A server session received a begin_tran RPC before finishing with a previous distributed tran.

Action: n/a

ORA-02047: cannot join the distributed transaction in progress

Cause: Either a transaction is in progress against a remote database that does not fully support two phase commit, and an update is attempted on another database, or updates are pending and an attempt is made to update a different database that does not fully support two phase commit.

Action: complete the current transaction and then resubmit the update request.

ORA-02048: attempt to begin distributed transaction without logging on

Cause: client program must issue a distributed transaction login.

Action: contact support.

ORA-02049: timeout: distributed transaction waiting for lock

Cause: exceeded INIT.ORA distributed_lock_timeout seconds waiting for lock.

Action: treat as a deadlock

ORA-02050: transaction *string* rolled back, some remote DBs may be in-doubt

Cause: network or remote failure in 2PC.

Action: Notify operations; remote DBs will automatically re-sync when the failure is repaired.

ORA-02051: another session or branch in same transaction failed or finalized

Cause: A session at the same site with the same global transaction ID failed. The failure could also be caused by an application error if an attempt was made to update the database while another tightly coupled transaction branch with the same global transaction ID was finalized or aborted.

Action: No action necessary as the transaction will be automatically recovered. In the case of an application error, make sure there are no more updates to the database once the transaction manager has started two-phase commit for tightly coupled distributed transaction.

ORA-02052: remote transaction failure at *string*

Cause: error in remote transaction at given DBLINK

Action: retry

ORA-02053: transaction *string* committed, some remote DBs may be in-doubt

Cause: network or remote failure in 2PC.

Action: Notify operations; remote DBs will automatically re-sync when the failure is repaired.

ORA-02054: transaction *string* in-doubt

Cause: network or remote failure in 2PC.

Action: Notify operations; DBs will automatically re-sync when the failure is repaired. Monitor pending_trans\$ for final outcome.

ORA-02055: distributed update operation failed; rollback required

Cause: a failure during distributed update operation may not have rolled back all effects of the operation. Since some sites may be inconsistent, the transaction must roll back to a savepoint or entirely

Action: rollback to a savepoint or rollback transaction and resubmit

ORA-02056: 2PC: *string*: bad two-phase command number *string* from *string*

Cause: two-phase commit protocol error.

Action: recovery of transaction attempted. Monitor pending_trans\$ table to ensure correct resolution. Contact support.

ORA-02057: 2PC: *string*: bad two-phase recovery state number *string* from *string*

Cause: internal error in two-phase recovery protocol

Action: contact support

ORA-02058: no prepared transaction found with ID *string*

Cause: no transaction with local_tran_id or global_tran_id found in the pending_trans \$ table in prepared state.

Action: check the pending_trans\$ table.

ORA-02059: ORA-2PC-CRASH-TEST-*string* in commit comment

Cause: This is a special comment used to test the two phase commit.

Action: Don't use this special comment (%s a number 1-10)

ORA-02060: select for update specified a join of distributed tables

Cause: tables in a join with the for update clause must reside at the same DB.

Action: n/a

ORA-02061: lock table specified list of distributed tables

Cause: tables in a lock table statement must reside at the same DB.

Action: issue multiple lock table commands.

ORA-02062: distributed recovery received DBID *string*, expected *string*

Cause: a database link at a coordinator no longer points to the expected database.

Link may have been redefined, or a different DB mounted.

Action: restore link definition or remote database.

ORA-02063: preceding *stringstring* from *stringstring*

Cause: an Oracle error was received from a remote database link.

Action: refer to the preceding error message(s)

ORA-02064: distributed operation not supported

Cause: One of the following unsupported operations was attempted: 1. array execute of a remote update with a subquery that references a dblink, or 2. an update of a long column with bind variable and an update of a second column with a subquery that both references a dblink and a bind variable, or 3. a commit is issued in a coordinated session from an RPC procedure call with OUT parameters or function call.

Action: simplify remote update statement

ORA-02065: illegal option for ALTER SYSTEM

Cause: The option specified for ALTER SYSTEM is not supported

Action: refer to the user manual for option supported

ORA-02066: missing or invalid DISPATCHERS text

Cause: A character string literal was expected, but not found, following ALTER SYSTEM SET DISPATCHERS

Action: place the string literal containing the dispatcher's specification after ALTER SYSTEM SET DISPATCHERS

ORA-02067: transaction or savepoint rollback required

Cause: A failure (typically a trigger or stored procedure with multiple remote updates) occurred such that the all-or-nothing execution of a previous Oracle call cannot be guaranteed.

Action: rollback to a previous savepoint or rollback the transaction and resubmit.

ORA-02068: following severe error from *stringstring*

Cause: A severe error (disconnect, fatal Oracle error) received from the indicated database link. See following error text.

Action: Contact the remote system administrator.

ORA-02069: global_names parameter must be set to TRUE for this operation

Cause: A remote mapping of the statement is required but cannot be achieved because global_names should be set to TRUE for it to be achieved

Action: Issue alter session set global_names = true if possible

ORA-02070: database stringstring does not support string in this context

Cause: The remote database does not support the named capability in the context in which it is used.

Action: Simplify the SQL statement.

ORA-02071: error initializing capabilities for remote database string

Cause: Could not load a remote-specified capability table.

Action: Contact support for the remote SQL*Connect product.

ORA-02072: distributed database network protocol mismatch

Cause: This should never happen between different PRODUCTION releases of ORACLE, but may happen between alpha and beta releases, for example.

Action: Upgrade the older release.

ORA-02073: sequence numbers not supported in remote updates

Cause: Sequence numbers may not be used in INSERTS, UPDATES, or DELETES on remote tables.

Action: n/a

ORA-02074: cannot string in a distributed transaction

Cause: A commit or rollback was attempted from session other than the parent of a distributed transaction.

Action: Only commit or rollback from the parent session.

ORA-02075: another instance changed state of transaction string

Cause: A commit force or rollback force was issued from a session in another instance.

Action: Check if another Oracle instance is performing recovery of pending transactions. Query DBA_2PC_PENDING to determine the new state of the transaction.

ORA-02076: sequence not co-located with updated table or long column

Cause: all referenced sequences must be co-located with the table with the long column.

Action: n/a

ORA-02077: selects of long columns must be from co-located tables

Cause: if a select returns long columns from multiple tables, all the tables must be co-located

Action: n/a

ORA-02078: invalid setting for ALTER SYSTEM FIXED_DATE

ORA-02079: cannot join a committing distributed transaction

Cause: Once a transaction branch is prepared, no more new transaction branches are allowed to start, nor is the prepared transaction branch allowed to be joined.

Action: Check the application code as this is an XA protocol violation.

ORA-02080: database link is in use

Cause: a transaction is active or a cursor is open on the database link given in the alter session close database link *link* command.

Action: commit or rollback, and close all cursors

ORA-02081: database link is not open

Cause: dblink given is not currently open.

Action: n/a

ORA-02082: a loopback database link must have a connection qualifier

Cause: An attempt was made to create a database link with the same name as the current database.

Action: a loopback database link needs a trailing qualifier, for example MYDB.EXAMPLE.COM@INST1 - the '@INST1' is the qualifier

ORA-02083: database name has illegal character '*string*'

Cause: supplied database name can contain only A-Z, 0-9, '_', '#', '\$', '.' and '@' characters.

Action: n/a

ORA-02084: database name is missing a component

Cause: supplied database name cannot contain a leading '.', trailing '.' or '@', or two '.' or '@' in a row.

Action: n/a

ORA-02085: database link *string* connects to *string*

Cause: a database link connected to a database with a different name. The connection is rejected.

Action: create a database link with the same name as the database it connects to, or set global_names=false.

ORA-02086: database (link) name is too long

Cause: database/database link name can have at most 128 characters.

Action: n/a

ORA-02087: object locked by another process in same transaction

Cause: A database link is being used in the cluster database environment that loops back to the same instance. One session is trying to convert a lock that was obtained by the other session.

Action: Get the more restrictive lock first. For example, if session 1 gets a share lock and session 2 gets an exclusive lock on the same object, get the exclusive lock first. Or, simply use the same session to access the object.

ORA-02088: distributed database option not installed

Cause: Remote and distributed updates and transactions are a separately priced option in ORACLE V7.

Action: n/a

ORA-02089: COMMIT is not allowed in a subordinate session

Cause: COMMIT was issued in a session that is not the two-phase commit global coordinator.

Action: Issue commit at the global coordinator only.

ORA-02090: network error: attempted callback+passthru

Cause: internal error.

Action: n/a

ORA-02091: transaction rolled back

Cause: Also see error 2092. If the transaction is aborted at a remote site then you will only see 2091; if aborted at host then you will see 2092 and 2091.

Action: Add rollback segment and retry the transaction.

ORA-02092: out of transaction table slots for distributed transaction

Cause: The transaction is assigned to the system rollback segment and is trying to get into the PREPARED state, but the required number of non-PREPARED slots are not available, hence the transaction is rolled back.

Action: Add a rollback segment and retry the transaction.

ORA-02093: TRANSACTIONS_PER_ROLLBACK_SEGMENT(*string*) more than maximum possible(*string*)

Cause: Value of parameter specified is greater than allowed on this port.

Action: Use default or reduce it to less than max.

ORA-02094: replication option not installed

Cause: The replication option was not installed at this site. Updatable materialized views, deferred RPCs, and other replication features were, therefore, unavailable.

Action: Install the replication option. The replication option is not part of the Oracle Server product and must be purchased separately. Contact an Oracle Sales representative if the replication option needs to be purchased.

ORA-02095: specified initialization parameter cannot be modified

Cause: The specified initialization parameter is not modifiable

Action: n/a

ORA-02096: specified initialization parameter is not modifiable with this option

Cause: Though the initialization parameter is modifiable, it cannot be modified using the specified command.

Action: Check the DBA guide for information about under what scope the parameter may be modified

ORA-02097: parameter cannot be modified because specified value is invalid

Cause: Though the initialization parameter is modifiable, the modified value is not acceptable to the parameter.

Action: Check the DBA guide for range of acceptable values for this parameter.

ORA-02098: error parsing index-table reference (:I)

Cause: An incorrect index-table (:I) syntax was encountered.

Action: This syntax is for oracle internal use only.

ORA-02100 to ORA-04099

ORA-02100: PCC: out of memory (i.e., could not allocate)

ORA-02101: PCC: inconsistent cursor cache (uce/cuc mismatch)

ORA-02102: PCC: inconsistent cursor cache (no cuc entry for this uce)

ORA-02103: PCC: inconsistent cursor cache (out-of-range cuc ref)

ORA-02104: PCC: inconsistent host cache (no cuc available)

ORA-02105: PCC: inconsistent cursor cache (no cuc entry in cache)

ORA-02106: PCC: inconsistent cursor cache (OraCursor nr is bad)

ORA-02107: PCC: this pgm too old for run-time library: please re-PCC it

ORA-02108: PCC: invalid descriptor passed to run-time library

ORA-02109: PCC: inconsistent host cache (out-of-range sit ref)

ORA-02110: PCC: inconsistent host cache (invalid sqi type)

ORA-02111: PCC: heap consistency error

ORA-02112: PCC: SELECT..INTO returns too many rows

ORA-02140: invalid tablespace name

Cause: An identifier does not follow ALTER TABLESPACE.

Action: Specify a tablespace name following ALTER TABLESPACE.

ORA-02141: invalid OFFLINE option

Cause: An option other than NORMAL or IMMEDIATE follows OFFLINE.

Action: The user must either specify no option following OFFLINE or one of the options NORMAL or IMMEDIATE.

ORA-02142: missing or invalid ALTER TABLESPACE option

Cause: A valid option was not present.

Action: Use one of the valid options: add, rename, default, online, offline, read only, read write, begin, end, no, force, retention guarantee and retention noguarantee.

ORA-02143: invalid STORAGE option

Cause: An option other than INITIAL, NEXT, MINEXTENTS, MAXEXTENTS, or PCTINCREASE was specified in the STORAGE clause.

Action: Specify only valid options.

ORA-02144: no option specified for ALTER CLUSTER

Cause: No ALTER CLUSTER options are specified.

Action: Specify one or more of the following options: pctfree, pctused, size, storage.

ORA-02145: missing STORAGE option

Cause: No STORAGE options were specified following STORAGE (

Action: Specify one or more STORAGE option between the parentheses.

ORA-02146: SHARED specified multiple times

Cause: The SHARED option was specified in a CREATE DATABASE statement multiple times.

Action: Only specify the SHARED option once.

ORA-02147: conflicting SHARED/EXCLUSIVE options

Cause: Both the SHARED and EXCLUSIVE options were specified in a CREATE DATABASE statement.

Action: Specify SHARED or EXCLUSIVE, but not both.

ORA-02148: EXCLUSIVE specified multiple times

Cause: The EXCLUSIVE option was specified in a CREATE DATABASE statement multiple times.

Action: Only specify the EXCLUSIVE option once.

ORA-02149: Specified partition does not exist

Cause: Partition not found for the object.

Action: Retry with correct partition name.

ORA-02150: invalid new tablespace name

Cause: The new tablespace name specified in ALTER TABLESPACE RENAME TO statement was invalid.

Action: Retry with a valid new tablespace name.

ORA-02151: invalid tablespace name: *string*

Cause: Oracle cannot create a tablespace whose name starts with '_\$deleted\$'.

Action: Try a different tablespace name.

ORA-02152: Invalid ALTER TABLESPACE ... RENAME option

Cause: An option other than DATAFILE or TO follows by ALTER TABLESPACE ... RENAME.

Action: The user must specify either DATAFILE or TO following ALTER TABLESPACE ... RENAME.

ORA-02153: invalid VALUES password string

Cause: An encoded password string does not follow the VALUES clause.

Action: Place a proper encoded password string after the VALUES clause.

ORA-02154: a tablespace with the name '*string*' is found

Cause: An attempt to rename a tablespace to a new name failed because the new name is already used by some other tablespace.

Action: Retry with a different new name.

ORA-02155: invalid DEFAULT tablespace identifier

Cause: An identifier does not follow DEFAULT TABLESPACE.

Action: Place a tablespace name after DEFAULT TABLESPACE.

ORA-02156: invalid TEMPORARY tablespace identifier

Cause: An identifier does not follow TEMPORARY TABLESPACE.

Action: Place a tablespace name after TEMPORARY TABLESPACE.

ORA-02157: no options specified for ALTER USER

Cause: No options were specified.

Action: Specify at least one ALTER USER option.

ORA-02158: invalid CREATE INDEX option

Cause: An option other than COMPRESS, NOCOMPRESS, PCTFREE, INITRANS, MAXTRANS, STORAGE, TABLESPACE, PARALLEL, NOPARALLEL, RECOVERABLE, UNRECOVERABLE, LOGGING, NOLOGGING, LOCAL, or GLOBAL was specified.

Action: Choose one of the valid CREATE INDEX options.

ORA-02159: installed DLM does not support releasable locking mode

Cause: The parameter file specified gc_* parameters that allow locks to be release by the LCK process when not in use. This mode requires additional support from the DLM that is not available.

Action: Specify configuration parameters that do not require the additional function.

ORA-02160: index-organized table can not contain columns of type LONG

Cause: A column of type LONG defined for index-organized table.

Action: Do not use columns of type LONG in index-organized tables.

ORA-02161: invalid value for MAXLOGFILES

Cause: A number does not follow MAXLOGFILES.

Action: Specify a number after MAXLOGFILES.

ORA-02162: invalid value for MAXDATAFILES

Cause: A number does not follow MAXDATAFILES.

Action: Specify a number after MAXDATAFILES.

ORA-02163: invalid value for FREELIST GROUPS

Cause: A number does not follow FREELIST GROUPS.

Action: Specify a number after FREELIST GROUPS.

ORA-02164: DATAFILE clause specified more than once

Cause: The CREATE DATABASE command contains more than one DATAFILE clause.

Action: Specify at most one DATAFILE clause.

ORA-02165: invalid option for CREATE DATABASE

Cause: An invalid CREATE DATABASE option is present.

Action: Specify only valid CREATE DATABASE options.

ORA-02166: ARCHIVELOG and NOARCHIVELOG specified

Cause: Both ARCHIVELOG and NOARCHIVELOG are specified in a CREATE DATABASE statement.

Action: Specify at most one of these two options.

ORA-02167: LOGFILE clause specified more than once

Cause: The CREATE DATABASE command contains more than one LOGFILE clause.

Action: Specify at most one LOGFILE clause.

ORA-02168: invalid value for FREELISTS

Cause: A number does not follow FREELISTS

Action: Specify a number after FREELISTS

ORA-02169: FREELISTS storage option not allowed

Cause: The user attempted to specify the FREELISTS storage option. This option may only be specified during create table or create index.

Action: Remove these options and retry the statement.

ORA-02170: FREELIST GROUPS storage option not allowed

Cause: The user attempted to specify the FREELIST GROUPS storage option. This option may only be specified during create table and when allow_freelist_groups INIT.ORA is specified.

Action: Remove this option and retry the statement or set the allow_freelist_groups INIT.ORA parameter.

ORA-02171: invalid value for MAXLOGHISTORY

Cause: A number does not follow MAXLOGHISTORY

Action: Specify a number after MAXLOGHISTORY

ORA-02172: The PUBLIC keyword is not appropriate for a disable thread

Cause: The PUBLIC keyword was specified for a disable.

Action: Remove the keyword and resubmit.

ORA-02173: invalid option for DROP TABLESPACE

Cause: Either a token other than INCLUDING was found following the tablespace name or some text was found following INCLUDING CONTENTS.

Action: Place nothing or only INCLUDING CONTENTS after the tablespace name.

ORA-02174: Missing required thread number

Cause: Must specify thread number after THREAD keyword

Action: n/a

ORA-02175: invalid rollback segment name

Cause: In the CREATE or DROP ROLLBACK SEGMENT statements, an identifier was not found following ROLLBACK SEGMENT.

Action: Place the segment name following ROLLBACK SEGMENT.

ORA-02176: invalid option for CREATE ROLLBACK SEGMENT

Cause: An invalid option was specified in a CREATE ROLLBACK SEGMENT statement.

Action: Specify one of the valid options: TABLESPACE and STORAGE.

ORA-02177: Missing required group number

Cause: Must specify group number after GROUP keyword

Action: n/a

ORA-02178: correct syntax is: SET TRANSACTION READ { ONLY | WRITE }

Cause: There is a syntax error in the user's statement.

Action: Correct the syntax as indicated.

ORA-02179: valid options: ISOLATION LEVEL { SERIALIZABLE | READ COMMITTED }

Cause: There is a syntax error in the user's statement.

Action: Correct the syntax as indicated.

ORA-02180: invalid option for CREATE TABLESPACE

Cause: An invalid option appeared.

Action: Specify one of the valid options: DATAFILE, DEFAULT STORAGE, ONLINE, OFFLINE, FORCE, RETENTION.

ORA-02181: invalid option to ROLLBACK WORK

Cause: A token other than TO follows ROLLBACK [WORK].

Action: Place nothing or TO SAVEPOINT *name* after ROLLBACK [WORK].

ORA-02182: savepoint name expected

Cause: An identifier does not follow ROLLBACK [WORK] TO [SAVEPOINT].

Action: Place a savepoint name following TO [SAVEPOINT].

ORA-02183: valid options: ISOLATION_LEVEL { SERIALIZABLE | READ COMMITTED }

Cause: There is a syntax error in the user's statement.

Action: Correct the syntax as indicated.

ORA-02184: resource quotas are not allowed in REVOKE

Cause: In a revoke statement, a resource quota was specified.

Action: Specify resource privilege without the quota.

ORA-02185: a token other than WORK follows COMMIT

Cause: A token other than WORK follows COMMIT.

Action: Place either nothing or WORK after COMMIT.

ORA-02186: tablespace resource privilege may not appear with other privileges

Cause: An attempt was made to grant or revoke a resource quota in the same statement in which other privileges are granted or revoked.

Action: Use a separate grant or revoke statement for the resource quota privilege.

ORA-02187: invalid quota specification

Cause: In a grant or revoke statement, the user attempted to grant a tablespace quota above the upper limit.

Action: Grant a smaller tablespace quota.

ORA-02188: Cannot enable instance publicly

Cause: An attempt was made to publicly enable a thread associated with an instance.

Action: Leave out the PUBLIC keyword.

ORA-02189: ON *tablespace* required

Cause: In a grant or revoke statement, the user specified a tablespace quota but did not follow it with the ON *tablespace* clause.

Action: Specify the tablespace on which the quota is to be applied with the ON *tablespace* clause.

ORA-02190: keyword TABLES expected

Cause: The keyword TABLES is expected following DROP CLUSTER *name* INCLUDING.

Action: Place TABLES after INCLUDING.

ORA-02191: correct syntax is: SET TRANSACTION USE ROLLBACK SEGMENT *rbs*

Cause: There is a syntax error in the user's statement.

Action: Correct the syntax as indicated.

ORA-02192: PCTINCREASE not allowed for rollback segment storage clauses

Cause: pctincrease was specified in a create or alter rollback segment

Action: reissue statement without the pctincrease clause

ORA-02194: event specification syntax error *string* (minor error *string*) near '*string*'

Cause: There is a syntax error in an event specification.

Action: Fix the error.

ORA-02195: Attempt to create *string* object in a *string* tablespace

Cause: The object type is inconsistent with a tablespace contents.

Action: Create an object in a different tablespace, or change the user defaults.

ORA-02196: PERMANENT/TEMPORARY option already specified

Cause: In CREATE TABLESPACE, the PERMANENT and/or TEMPORARY options were specified more than once.

Action: n/a

ORA-02197: file list already specified

Cause: In CREATE TABLESPACE, more than one DATAFILE/TEMPFILE clause was specified.

Action: Merge the DATAFILE/TEMPFILE clauses into a single clause.

ORA-02198: ONLINE/OFFLINE option already specified

Cause: In CREATE TABLESPACE, the ONLINE and/or OFFLINE options were specified more than once.

Action: Specify at most one of ONLINE or OFFLINE.

ORA-02199: missing DATAFILE/TEMPFILE clause

Cause: A CREATE TABLESPACE statement has no DATAFILE/TEMPFILE clause.

Action: Specify a DATAFILE/TEMPFILE clause.

ORA-02200: WITH GRANT OPTION not allowed for PUBLIC

Cause: An attempt was made to GRANT to PUBLIC WITH GRANT OPTION.

Action: Remove the WITH GRANT OPTION clause.

ORA-02201: sequence not allowed here

Cause: An attempt was made to reference a sequence in a from-list.

Action: A sequence can only be referenced in a select-list.

ORA-02202: no more tables permitted in this cluster

Cause: An attempt was made to create a table in a cluster which already contains 32 tables.

Action: Up to 32 tables may be stored per cluster.

ORA-02203: INITIAL storage options not allowed

Cause: The user attempted to alter the INITIAL storage option of a table, cluster, index, or rollback segment. These options may only be specified when the object is created.

Action: Remove these options and retry the statement.

ORA-02204: ALTER, INDEX and EXECUTE not allowed for views

Cause: An attempt was made to grant or revoke an invalid privilege on a view.

Action: Do not attempt to grant or revoke any of ALTER, INDEX, or EXECUTE privileges on views.

ORA-02205: only SELECT and ALTER privileges are valid for sequences

Cause: An attempt was made to grant or revoke an invalid privilege on a sequence.

Action: Do not attempt to grant or revoke DELETE, INDEX, INSERT, UPDATE, REFERENCES or EXECUTE privilege on sequences.

ORA-02206: duplicate INITRANS option specification

Cause: INITRANS is specified more than once.

Action: Specify INITRANS at most once.

ORA-02207: invalid INITRANS option value

Cause: The INITRANS value is not an integer between 1 and 255 and less than or equal to the MAXTRANS value.

Action: Choose a valid INITRANS value.

ORA-02208: duplicate MAXTRANS option specification

Cause: MAXTRANS is specified more than once.

Action: Specify MAXTRANS at most once.

ORA-02209: invalid MAXTRANS option value

Cause: The MAXTRANS value is not an integer between 1 and 255 and greater than or equal to the INITRANS value.

Action: Choose a valid MAXTRANS value.

ORA-02210: no options specified for ALTER TABLE

Cause: No ALTER TABLE option was specified.

Action: Specify at least one alter table option.

ORA-02211: invalid value for PCTFREE or PCTUSED

Cause: The specified value for PCTFREE or PCTUSED is not an integer between 0 and 100.

Action: Choose an appropriate value for the option.

ORA-02212: duplicate PCTFREE option specification

Cause: PCTFREE option specified more than once.

Action: Specify PCTFREE at most once.

ORA-02213: duplicate PCTUSED option specification

Cause: PCTUSED option specified more than once.

Action: Specify PCTUSED at most once.

ORA-02214: duplicate BACKUP option specification

Cause: The BACKUP option to ALTER TABLE is specified more than once.

Action: Specify the option at most once.

ORA-02215: duplicate tablespace name clause

Cause: There is more than one TABLESPACE clause in the CREATE TABLE, CREATE INDEX, or CREATE ROLLBACK SEGMENT statement.

Action: Specify at most one TABLESPACE clause.

ORA-02216: tablespace name expected

Cause: A tablespace name was not present where required by the syntax for the failing statement.

Action: Specify a tablespace name where required by the syntax.

ORA-02217: duplicate storage option specification

Cause: A storage option (INITIAL, NEXT, MINEXTENTS, MAXEXTENTS, PCTINCREASE) is specified more than once.

Action: Specify all storage options at most once.

ORA-02218: invalid INITIAL storage option value

Cause: The specified value must be an integer.

Action: Choose an appropriate integer value.

ORA-02219: invalid NEXT storage option value

Cause: The specified value must be an integer.

Action: Choose an appropriate integer value.

ORA-02220: invalid MINEXTENTS storage option value

Cause: The specified value must be a positive integer less than or equal to MAXEXTENTS.

Action: Specify an appropriate value.

ORA-02221: invalid MAXEXTENTS storage option value

Cause: The specified value must be a positive integer greater than or equal to MINEXTENTS.

Action: Specify an appropriate value.

ORA-02222: invalid PCTINCREASE storage option value

Cause: The specified value must be a positive integer.

Action: Specify an appropriate value.

ORA-02223: invalid OPTIMAL storage option value

Cause: The specified value must be an integer.

Action: Choose an appropriate integer value.

ORA-02224: EXECUTE privilege not allowed for tables

Cause: An attempt was made to grant or revoke an invalid privilege on a table.

Action: Do not attempt to grant or revoke EXECUTE privilege on tables.

ORA-02225: only EXECUTE and DEBUG privileges are valid for procedures

Cause: An attempt was made to grant or revoke an invalid privilege on a procedure, function or package.

Action: Do not attempt to grant or revoke any privilege besides EXECUTE or DEBUG on procedures, functions or packages.

ORA-02226: invalid MAXEXTENTS value (max allowed: *string*)

Cause: The MAXEXTENTS specified is too large for the database block size. This applies only to SYSTEM rollback segment.

Action: Specify a smaller value.

ORA-02227: invalid cluster name

Cause: A cluster name of the form [*identifier .*] *identifier* is expected but not present.

Action: Enter an appropriate cluster name.

ORA-02228: duplicate SIZE specification

Cause: The SIZE option is specified more than once.

Action: Specify the SIZE option at most once.

ORA-02229: invalid SIZE option value

Cause: The specified value must be an integer number of bytes.

Action: Specify an appropriate value.

ORA-02230: invalid ALTER CLUSTER option

Cause: An option other than PCTFREE, PCTUSED, INITRANS, MAXTRANS, STORAGE, or SIZE is specified in an ALTER CLUSTER statement.

Action: Specify only legal options.

ORA-02231: missing or invalid option to ALTER DATABASE

Cause: An option other than ADD, DROP, RENAME, ARCHIVELOG, NOARCHIVELOG, MOUNT, DISMOUNT, OPEN, or CLOSE is specified in the statement.

Action: Specify only legal options.

ORA-02232: invalid MOUNT mode

Cause: A mode other than SHARED or EXCLUSIVE follows the MOUNT keyword in an ALTER DATABASE statement.

Action: Specify either SHARED, EXCLUSIVE, or nothing following MOUNT.

ORA-02233: invalid CLOSE mode

Cause: A mode other than NORMAL or IMMEDIATE follows the CLOSE keyword in an ALTER DATABASE statement.

Action: Specify either NORMAL, IMMEDIATE, or nothing following CLOSE.

ORA-02234: changes to this table are already logged

Cause: the log table to be added is a duplicate of another

Action: Don't add this change log to the system; check that the replication product's system tables are consistent

ORA-02235: this table logs changes to another table already

Cause: the table to be altered is already a change log for another table

Action: Don't log changes to the specified base table to this table; check that the replication product's system tables are consistent

ORA-02236: invalid file name

Cause: A character string literal was not used in the filename list of a LOGFILE, DATAFILE, or RENAME clause.

Action: Use correct syntax.

ORA-02237: invalid file size

Cause: A non-integer value was specified in the SIZE or RESIZE clause.

Action: Use correct syntax.

ORA-02238: filename lists have different numbers of files

Cause: In a RENAME clause in ALTER DATABASE or TABLESPACE, the the number of existing filenames does not equal the number of new filenames.

Action: Make sure there is a new filename to correspond to each existing filename.

ORA-02239: there are objects which reference this sequence

Cause: the sequence to be dropped is still referenced

Action: Make sure the sequence name is correct, or drop the referencing constraint/object

ORA-02240: invalid value for OBJNO or TABNO

Cause: A number does not follow either OBJNO or TABNO.

Action: Specify a number after OBJNO or TABNO.

ORA-02241: must of form EXTENTS (FILE *n* BLOCK *n* SIZE *n*, ...)

Cause: bad extent storage clause

Action: respecify

ORA-02242: no options specified for ALTER INDEX

Cause: No options specified.

Action: Specify at least one of REBUILD, INITRANS, MAXTRANS, or STORAGE.

ORA-02243: invalid ALTER INDEX or ALTER MATERIALIZED VIEW option

Cause: An option other than INITRANS, MAXTRANS, or STORAGE is specified in an ALTER INDEX statement or in the USING INDEX clause of an ALTER MATERIALIZED VIEW statement.

Action: Specify only legal options.

ORA-02244: invalid ALTER ROLLBACK SEGMENT option

Cause: The STORAGE option is expected but not found.

Action: Specify the STORAGE option.

ORA-02245: invalid ROLLBACK SEGMENT name

Cause: An identifier was expected, but not found, following ALTER [PUBLIC] ROLLBACK SEGMENT.

Action: Place a rollback segment name following SEGMENT.

ORA-02246: missing EVENTS text

Cause: A character string literal was expected, but not found, following ALTER SESSION SET EVENTS.

Action: Place the string literal containing the events text after EVENTS.

ORA-02247: no option specified for ALTER SESSION

Cause: The option SET EVENTS was expected, but not found, following ALTER SESSION.

Action: Place the SET EVENTS option after ALTER SESSION.

ORA-02248: invalid option for ALTER SESSION

Cause: Obvious.

Action: see SQL Language Manual for legal options.

ORA-02249: missing or invalid value for MAXLOGMEMBERS

Cause: A valid number does not follow MAXLOGMEMBERS. The value specified must be between 1 and the port-specific maximum number of log file members.

Action: Specify a valid number after MAXLOGMEMBERS.

ORA-02250: missing or invalid constraint name

Cause: The constraint name is missing or invalid.

Action: Specify a valid identifier name for the constraint name.

ORA-02251: subquery not allowed here

Cause: Subquery is not allowed here in the statement.

Action: Remove the subquery from the statement.

ORA-02252: check constraint condition not properly ended

Cause: The specified search condition for the check constraint is not properly ended.

Action: End the condition properly.

ORA-02253: constraint specification not allowed here

Cause: Constraint specification is not allowed here in the statement.

Action: Remove the constraint specification from the statement.

ORA-02254: DEFAULT *expression* not allowed here

Cause: Default value expression is not allowed for the column here in the statement.

Action: Remove the default value expression from the statement.

ORA-02255: obsolete 7.1.5

Cause: Was that defaults must not conflict with not null constraints

Action: n/a

ORA-02256: number of referencing columns must match referenced columns

Cause: The number of columns in the foreign-key referencing list is not equal to the number of columns in the referenced list.

Action: Make sure that the referencing columns match the referenced columns.

ORA-02257: maximum number of columns exceeded

Cause: The number of columns in the key list exceeds the maximum number.

Action: Reduce the number columns in the list.

ORA-02258: duplicate or conflicting NULL and/or NOT NULL specifications

Cause: Self-evident.

Action: Remove the duplicate or conflicting specification.

ORA-02259: duplicate UNIQUE/PRIMARY KEY specifications

Cause: Self-evident.

Action: Remove the duplicate specification.

ORA-02260: table can have only one primary key

Cause: Self-evident.

Action: Remove the extra primary key.

ORA-02261: such unique or primary key already exists in the table

Cause: Self-evident.

Action: Remove the extra key.

ORA-02262: ORA-string occurs while type-checking column default value expression

Cause: New column datatype causes type-checking error for existing column default value expression.

Action: Remove the default value expression or don't alter the column datatype.

ORA-02263: need to specify the datatype for this column

Cause: The required datatype for the column is missing.

Action: Specify the required datatype.

ORA-02264: name already used by an existing constraint

Cause: The specified constraint name has to be unique.

Action: Specify a unique constraint name for the constraint.

ORA-02265: cannot derive the datatype of the referencing column

Cause: The datatype of the referenced column is not defined as yet.

Action: Make sure that the datatype of the referenced column is defined before referencing it.

ORA-02266: unique/primary keys in table referenced by enabled foreign keys

Cause: An attempt was made to truncate a table with unique or primary keys referenced by foreign keys enabled in another table. Other operations not allowed are dropping/truncating a partition of a partitioned table or an ALTER TABLE EXCHANGE PARTITION.

Action: Before performing the above operations the table, disable the foreign key constraints in other tables. You can see what constraints are referencing a table by issuing the following command: `SELECT * FROM USER_CONSTRAINTS WHERE TABLE_NAME = "tabnam";`

ORA-02267: column type incompatible with referenced column type

Cause: The datatype of the referencing column is incompatible with the

Action: Select a compatible datatype for the referencing column.

ORA-02268: referenced table does not have a primary key

Cause: The referenced table does not have a primary key.

Action: Specify explicitly the referenced table unique key.

ORA-02269: key column cannot be of LONG datatype

Cause: Self-evident.

Action: Change the datatype of the column, or remove the column from the key.

ORA-02270: no matching unique or primary key for this column-list

Cause: A REFERENCES clause in a CREATE/ALTER TABLE statement gives a column-list for which there is no matching unique or primary key constraint in the referenced table.

Action: Find the correct column names using the ALL_CONS_COLUMNS catalog view

ORA-02271: table does not have such constraint

Cause: Self-evident.

Action: Make sure the specified constraint name is correct.

ORA-02272: constrained column cannot be of LONG datatype

Cause: Self-evident.

Action: Change the datatype of the column, or remove the constraint on the column.

ORA-02273: this unique/primary key is referenced by some foreign keys

Cause: Self-evident.

Action: Remove all references to the key before the key is to be dropped.

ORA-02274: duplicate referential constraint specifications

Cause: Self-evident.

Action: Remove the duplicate specification.

ORA-02275: such a referential constraint already exists in the table

Cause: Self-evident.

Action: Remove the extra constraint.

ORA-02276: default value type incompatible with column type

Cause: The type of the evaluated default expression is incompatible with the datatype of the column.

Action: Change the type of the column, or modify the default expression.

ORA-02277: invalid sequence name

Cause: The specified sequence name is not a valid identifier name.

Action: Specify a valid identifier name for the sequence name.

ORA-02278: duplicate or conflicting MAXVALUE/NOMAXVALUE specifications

Cause: Self-evident.

Action: Remove the duplicate or conflicting specification.

ORA-02279: duplicate or conflicting MINVALUE/NOMINVALUE specifications

Cause: Self-evident.

Action: Remove the duplicate or conflicting specification.

ORA-02280: duplicate or conflicting CYCLE/NOCYCLE specifications

Cause: Self-evident.

Action: Remove the duplicate or conflicting specification.

ORA-02281: duplicate or conflicting CACHE/NOCACHE specifications

Cause: Self-evident.

Action: Remove the duplicate or conflicting specification.

ORA-02282: duplicate or conflicting ORDER/NOORDER specifications

Cause: Self-evident.

Action: Remove the duplicate or conflicting specification.

ORA-02283: cannot alter starting sequence number

Cause: Self-evident.

Action: Don't alter it.

ORA-02284: duplicate INCREMENT BY specifications

Cause: Self-evident.

Action: Remove the duplicate specification.

ORA-02285: duplicate START WITH specifications

Cause: Self-evident.

Action: Remove the duplicate specification.

ORA-02286: no options specified for ALTER SEQUENCE

Cause: Self-evident.

Action: The statement is meaningless without any options.

ORA-02287: sequence number not allowed here

Cause: The specified sequence number (CURRVAL or NEXTVAL) is inappropriate here in the statement.

Action: Remove the sequence number.

ORA-02288: invalid OPEN mode

Cause: A token other than RESETLOGS appears following ALTER DATABASE *name* OPEN.

Action: Either nothing or RESETLOGS should be placed following OPEN.

ORA-02289: sequence does not exist

Cause: The specified sequence does not exist, or the user does not have the required privilege to perform this operation.

Action: Make sure the sequence name is correct, and that you have the right to perform the desired operation on this sequence.

ORA-02290: check constraint (*string.string*) violated

Cause: The values being inserted do not satisfy the named check constraint.

Action: do not insert values that violate the constraint.

ORA-02291: integrity constraint (*string.string*) violated - parent key not found

Cause: A foreign key value has no matching primary key value.

Action: Delete the foreign key or add a matching primary key.

ORA-02292: integrity constraint (*string.string*) violated - child record found

Cause: attempted to delete a parent key value that had a foreign key dependency.

Action: delete dependencies first then parent or disable constraint.

ORA-02293: cannot validate (*string.string*) - check constraint violated

Cause: an alter table operation tried to validate a check constraint to a populated table that had noncomplying values.

Action: Obvious

ORA-02294: cannot enable (*string.string*) - constraint changed during validation

Cause: While one DDL statement was attempting to enable this constraint, another DDL changed this same constraint.

Action: Try again, with only one DDL changing the constraint this time.

ORA-02295: found more than one enable/disable clause for constraint

Cause: a create or alter table specified more than one enable and/or disable clause for a given constraint.

Action: only one enable or disable may be specified for a given constraint.

ORA-02296: cannot enable (*string.string*) - null values found

Cause: an alter table enable constraint failed because the table contains values that do not satisfy the constraint.

Action: Obvious

ORA-02297: cannot disable constraint (*string.string*) - dependencies exist

Cause: an alter table disable constraint failed because the table has foreign keys that are dependent on this constraint.

Action: Either disable the foreign key constraints or use disable cascade

ORA-02298: cannot validate (*string.string*) - parent keys not found

Cause: an alter table validating constraint failed because the table has orphaned child records.

Action: Obvious

ORA-02299: cannot validate (*string.string*) - duplicate keys found

Cause: an alter table validating constraint failed because the table has duplicate key values.

Action: Obvious

ORA-02300: invalid value for OIDGENERATORS

Cause: A number was not specified for the value of OIDGENERATORS.

Action: Specify a number for OIDGENERATORS.

ORA-02301: maximum number of OIDGENERATORS is 255

Cause: A number greater than 255 was specified for the value of OIDGENERATORS.

Action: Make sure the number specified for OIDGENERATORS does not exceed 255.

ORA-02302: invalid or missing type name

Cause: An invalid or missing type name was entered in a statement.

Action: Enter a valid type name in the statement and retry the operation.

ORA-02303: cannot drop or replace a type with type or table dependents

Cause: An attempt was made to drop or replace a type that has type or table dependents.

Action: For DROP TYPE, drop all type(s) and table(s) depending on the type and then retry the operation, or use the FORCE option. For CREATE TYPE, drop all type(s) and table(s) depending on the type and then retry the operation, or drop all table(s) depending on the type and retry with the FORCE option.

ORA-02304: invalid object identifier literal

Cause: An attempt was made to enter an object identifier literal for CREATE TYPE that is either: - not a string of 32 hexadecimal characters - an object identifier that already identifies an existing object - an object identifier different from the original object identifier already assigned to the type

Action: Do not specify the object identifier clause or specify a 32 hexadecimal-character object identifier literal that is unique or identical to the originally assigned object identifier. Then retry the operation.

ORA-02305: only EXECUTE, DEBUG, and UNDER privileges are valid for types

Cause: An attempt was made to GRANT or REVOKE an invalid privilege (not EXECUTE, DEBUG, or UNDER) on a type.

Action: GRANT or REVOKE only the EXECUTE, DEBUG, or UNDER privilege on types.

ORA-02306: cannot create a type that already has valid dependent(s)

Cause: An attempt was made to create a type that already has some valid dependent(s) (these dependents depend on the fact that the type does not exist).

Action: Drop the dependents first before creating the type, or do not create the type.

ORA-02307: cannot alter with REPLACE option a type that is not valid

Cause: An attempt was made to ALTER with REPLACE option a type that is not valid.

Action: Use the CREATE OR REPLACE TYPE command to modify the type.

ORA-02308: invalid option *string* for object type column

Cause: An attempt was made to specify an invalid option, such as PACKED or UNPACKED, for the object type column.

Action: Remove the invalid option from column specification and retry the operation.

ORA-02309: atomic NULL violation

Cause: An attempt was made to access the attributes of a NULL object instance.

Action: Ensure that the object instance is non-NULL before accessing.

ORA-02310: exceeded maximum number of allowable columns in table

Cause: The attributes in the object type column exceeded the maximum number of columns allowed in a table.

Action: Specify fewer attributes for the object type and retry the operation.

ORA-02311: cannot alter with COMPILE option a valid type with type or table dependents

Cause: An attempt was made to ALTER with COMPILE option a type that is valid and has type or table dependents.

Action: No need to perform this operation.

ORA-02313: object type contains non-queryable type *string* attribute

Cause: The specified object type contains a nested attribute whose type is non-queryable.

Action: Use an object type with queryable attribute types.

ORA-02314: illegal use of type constructor

Cause: The statement contains an illegal use of a type constructor.

Action: Refer to the SQL Reference manual for the correct statement syntax.

ORA-02315: incorrect number of arguments for default constructor

Cause: The number of arguments specified for the default constructor doesn't match the number of attributes of the object type.

Action: Specify the correct number of arguments for the default constructor and retry the operation.

ORA-02320: failure in creating storage table for nested table column *string*

Cause: An error occurred while creating the storage table for the specified nested table column.

Action: See the messages that follow for more details. If the situation they describe can be corrected, do so; otherwise contact Oracle Support.

ORA-02322: failure in accessing storage table of the nested table column

Cause: An error occurred while performing DML on the storage table of the nested table column.

Action: If the situation described in the following messages can be corrected, do so; otherwise contact Oracle Support.

ORA-02324: more than one column in the SELECT list of THE subquery

Cause: More than one column was selected in the THE subquery.

Action: Specify only one column in the SELECT list of the THE subquery and retry the operation.

ORA-02327: cannot create index on expression with datatype *string*

Cause: An attempt was made to create an index on a non-indexable expression.

Action: Change the column datatype or do not create the index on an expression whose datatype is one of VARRAY, nested table, object, LOB, or REF.

ORA-02329: column of datatype *string* cannot be unique or a primary key

Cause: An attempt was made to place a UNIQUE or a PRIMARY KEY constraint on a column of datatype VARRAY, nested table, object, LOB, FILE or REF.

Action: Change the column datatype or remove the constraint. Then retry the operation.

ORA-02330: datatype specification not allowed

Cause: An attempt was made to specify the data type in the column constraint specification of an object table.

Action: Remove data type specification and retry the operation.

ORA-02331: cannot create constraint on column of datatype *string*

Cause: An attempt was made to create a constraint on a column possessing a non-constrainable datatype -- VARRAY, nested table, object, LOB, FILE, or REF.

Action: Change the column datatype, or remove the constraint.

ORA-02332: cannot create index on attributes of this column

Cause: An attempt was made to create an index on an attributes of an object type column.

Action: Do not specify the index on the attribute.

ORA-02333: cannot create constraints on attributes of this column

Cause: An attempt was made to create a constraint on an attribute of an object type column.

Action: Remove the constraint or change the object type.

ORA-02334: cannot infer type for column

Cause: A datatype was not declared for this column (in the CREATE TABLE) and an attempt was made to create a constraint on an attribute of this column.

Action: Declare a datatype for the column.

ORA-02335: invalid datatype for cluster column

Cause: An attempt was made to declare a CLUSTER column of datatype object, REF, nested table, VARRAY, LOB, or FILE.

Action: Remove the CLUSTER column or change the datatype of the column.

ORA-02336: column attribute cannot be accessed

Cause: An attempt was made to extract an attribute of an object type column.

Action: Change the object type for the column and retry the operation.

ORA-02337: not an object type column

Cause: An attempt was made to use dotted notation on a non-ADT column; that is, "a.b.c" where "a" is not an object type.

Action: Either change the column type to an object type or do not perform this operation.

ORA-02338: missing or invalid column constraint specification

Cause: A column constraint was not specified.

Action: Remove the column specification or specify a column constraint. Then retry the operation.

ORA-02339: invalid column specification

Cause: An attempt was made to specify the PACKED or UNPACKED keyword for a non-object type column.

Action: Remove the PACKED or UNPACKED keyword in the column specification and retry the operation.

ORA-02340: invalid column specification

Cause: An attempt was made to specify an UNPACKED column within a packed table.

Action: Remove the UNPACKED keyword in the column specification.

ORA-02342: replacement type has compilation errors

Cause: The use of the ALTER...REPLACE statement on a valid type caused a compilation error.

Action: Use the ALTER...REPLACE statement to replace the type with a valid type which does not cause compilation errors.

ORA-02344: cannot revoke execute on a type with table dependents

Cause: An attempt was made to revoke execute on a type that has dependents.

Action: Drop all table(s) depending on the type, then retry the operation, or use the FORCE option.

ORA-02345: cannot create a view with column based on CURSOR operator

Cause: A CURSOR operator was used as one of the SELECT elements in the subquery of a CREATE VIEW or CREATE TABLE ... AS SELECT statement.

Action: Remove the CURSOR operator and replace it with the CAST operator.

ORA-02347: cannot grant privileges on columns of an object table

Cause: An attempt was made to grant privileges on the columns of an object table.

Action: n/a

ORA-02348: cannot create VARRAY column with embedded LOB

Cause: An attempt was made to create a column of a VARRAY type which has an embedded LOB attribute. The LOB could be an attribute of a subtype of the declared type of VARRAY's element.

Action: Remove offending attribute from type. If it is a subtype attribute then declare the VARRAY column NOT SUBSTITUTABLE.

ORA-02349: invalid user-defined type - type is incomplete

Cause: An attempt was made to use an incomplete type definition as a column or table datatype.

Action: Complete the type definition and retry the operation.

ORA-02351: internal error: *string*\n

Cause: An unexpected error condition was detected.

Action: Make a note of the error number and message and contact Oracle Support Services.

ORA-02352: error setting an OCI attribute: *string*\n

Cause: An OCI error has occurred.

Action: The table or column referenced may not be accessible. Contact Oracle Support Services if the problem cannot be resolved.

ORA-02353: error fetching an OCI attribute: *string*\n

Cause: An OCI error has occurred.

Action: The table or column referenced may not be accessible. Contact Oracle Support Services if the problem cannot be resolved.

ORA-02354: error in exporting/importing data\n*string*

Cause: An error has occurred in a stream export or import operation. This message will be followed by another message giving more details about this error.

Action: See export/import documentation for an explanation of the second error message.

ORA-02355: error opening file: *string*\n

Cause: An attempt to open the specified file for data export/import failed.

Action: Review the error message. Resolve the problem and retry the the operation. Contact Oracle Support Services if the problem cannot be resolved.

ORA-02356: The database is out of space. The load cannot continue

Cause: The load was discontinued due to space exhaustion in the database.

Action: Add space for the specified table.

ORA-02357: header in file *string* may not contain correct information\n

Cause: The header may be corrupted.

Action: Contact Oracle Support Services.

ORA-02358: error in exporting or importing data\n

Cause: An error has occurred in a stream export or import operation.

Action: Contact Oracle Support Services.

ORA-02359: database version in file *string* is not valid\n

Cause: The specified file could not be used for this load because its database version was not compatible with the database version in the other files in the DUMPFILE clause.

Action: Verify all the files in the DUMPFILE clause are from the same unload operation.

ORA-02360: fatal error during data export/import initialization\n

Cause: An unexpected error occurred during initialization for data export/import.

Action: Contact Oracle Support Services.

ORA-02361: error while attempting to allocate *number* bytes of memory\n

Cause: An error occurred while trying to allocate memory. This is likely caused by insufficient memory.

Action: Reconnect to the instance and retry the operation.

ORA-02362: error closing file: *string*\n

Cause: An attempt to close the specified file for data export/import failed.

Action: Review the error message. Resolve the problem and retry the the operation. Contact Oracle Support Services if the problem cannot be resolved.

ORA-02363: error reading from file: *string*\n

Cause: An attempt to read from the specified file for data export/import failed.

Action: Review the error message. Resolve the problem and retry the the operation.
Contact Oracle Support Services if the problem cannot be resolved.

ORA-02364: error writing to file: *string*\n

Cause: An attempt to write to the specified file for data export or import failed.

Action: Review the error message. Resolve the problem and retry the the operation.
Contact Oracle Support Services if the problem cannot be resolved.

ORA-02365: error seeking in file: *string*\n

Cause: An attempt to seek to the specified position in file failed.

Action: Review the error message. Resolve the problem and retry the the operation.
Contact Oracle Support Services if the problem cannot be resolved.

ORA-02366: The following index(es) on table *string* were processed:

Cause: The table had some indexes which were loaded if there were no errors.

Action: None

ORA-02367: read ended but had expected more data from file *string*\n

Cause: A truncated or incomplete file was used for the load operation.

Action: Verify unload operation completed successfully and that the files had not been accidentally truncated.

ORA-02368: the following file is not valid for this load operation\n

Cause: A file could not be used for this load. See the following message for more information.

Action: Verify all the files in the DUMPFILE clause are from the same unload operation and that the unload was successful.

ORA-02369: internal number in header in file *string* is not valid\n

Cause: The specified file could not be used for this load because the internal number in the header was not valid.

Action: If the dump files were transferred over, verify the transfer operation was done correctly.

ORA-02370: internal metadata in file *string* is not valid\n

Cause: The specified file could not be used for this load because the internal metadata stored in this file does not match the metadata stored in the first file piece set.

Action: Verify all the files in the DUMPFILE clause are from the same unload operation.

ORA-02371: Loader must be at least version *string.string.string.string.string* for direct path

Cause: The loader being used is incompatible with this version of the kernel.

Action: Upgrade your loader to at least the specified version or use the conventional path.

ORA-02372: data for row: *string* \n

Cause: A conversion error occurred while loading data into a table. The message shows values for the field in the row that had the conversion error.

Action: None. This is only an informational message.

ORA-02373: Error parsing insert statement for table *string*.

Cause: self-evident.

Action: Check the error given below this one.

ORA-02374: conversion error loading table *string.string*

Cause: A row could not be loaded into the table because there was a conversion error for one or more columns in a row.

Action: See the message that follows for more information about the row that could not be loaded. To avoid this error, make sure the definition of the table being imported matches the definition of the table being exported.

ORA-02375: conversion error loading table *string.string* partition *string*

Cause: A row could not be loaded into the table because there was a conversion error for one or more columns in a row.

Action: See the message that follows for more information about the row that could not be loaded. To avoid this error, make sure the definition of the table being imported matches the definition of the table being exported.

ORA-02376: invalid or redundant resource

Cause: a create, or alter profile command which names a resource not yet defined, or try to specify same resource twice.

Action: define resource first

ORA-02377: invalid resource limit

Cause: specifying limit of 0

Action: specify limit > 0

ORA-02378: duplicate resource name *string*

ORA-02379: profile *string* already exists

Cause: Try to create a profile which already exist

Action: n/a

ORA-02380: profile *string* does not exist

Cause: Try to assign a user to a non-existent profile

Action: n/a

ORA-02381: cannot drop PUBLIC_DEFAULT profile

Cause: Try to drop PUBLIC_DEFAULT profile

Action: n/a

ORA-02382: profile *string* has users assigned, cannot drop without CASCADE

ORA-02383: illegal cost factor

Cause: Negative or UNLIMITED cost for this resource

Action: n/a

ORA-02390: exceeded COMPOSITE_LIMIT, you are being logged off

ORA-02391: exceeded simultaneous SESSIONS_PER_USER limit

Cause: An attempt was made to exceed the maximum number of concurrent sessions allowed by the SESSION_PER_USER clause of the user profile.

Action: End one or more concurrent sessions or ask the database administrator to increase the SESSION_PER_USER limit of the user profile.

ORA-02392: exceeded session limit on CPU usage, you are being logged off

ORA-02393: exceeded call limit on CPU usage

ORA-02394: exceeded session limit on IO usage, you are being logged off

ORA-02395: exceeded call limit on IO usage

ORA-02396: exceeded maximum idle time, please connect again

Cause: as stated

Action: n/a

ORA-02397: exceeded PRIVATE_SGA limit, you are being logged off

Cause: Only when using TP monitor

Action: expand limit

ORA-02398: exceeded procedure space usage

Cause: Stored procedured used up too much space in SYSTEM Tablespace

Action: Use less stored procedure

ORA-02399: exceeded maximum connect time, you are being logged off

Cause: As stated

Action: n/a

ORA-02400: explain plan output buffer size limit exceeded

Cause: Internally this error is raised and caught to handle cases where the plan output exceeds te buffer size. The output is truncated in cases.

Action: This error should never be seen externally.

ORA-02401: cannot EXPLAIN view owned by another user

Cause: The view specified in the SQL statement belongs to another user and cannot be explained.

Action: Create a view with the same definition that belongs to current user.

ORA-02402: PLAN_TABLE not found

Cause: The table used by EXPLAIN to store row source information does not exist in the current schema.

Action: Create a plan table in the current schema or use the INTO clause of the statement to put the results of the explain command in an existing plan table.

ORA-02403: plan table does not have correct format

Cause: The explicit plan table does not have the appropriate field definitions.

Action: Redefine the plan table to have the appropriate field definitions.

ORA-02404: specified plan table not found

Cause: The specified plan table does cannot be found.

Action: Create the specified plan table or use an existing plan table.

ORA-02405: invalid sql plan object provided

Cause: The user provided a NULL, empty, or malformed object of type SQL_PLAN_TABLE_TYPE

Action: Provide a new, properly formed object to the function

ORA-02420: missing schema authorization clause

Cause: the AUTHORIZATION clause is missing from a create schema statement.

Action: Precede the schema authorization identifier with the AUTHORIZATION keyword.

ORA-02421: missing or invalid schema authorization identifier

Cause: the schema name is missing or is incorrect in an authorization clause of a create schema statement.

Action: If the name is present, it must be the same as the current schema.

ORA-02422: missing or invalid schema element

Cause: A statement other than a create table, create view, or grant privilege appears in a create schema statement.

Action: Self-evident.

ORA-02423: schema name does not match schema authorization identifier

Cause: a table definition with a schema name prepended to the table name does not match the schema name provided in the authorization clause of a create schema statement.

Action: make sure the schema names match.

ORA-02424: potential circular view references or unknown referenced tables

Cause: the create schema statement contains views that depend on other views in the containing create schema statement or they contain references to unknown tables.

Action: create the dependent views in a separate create schema statement and make sure all referenced tables are either defined in the create schema statement or exist outside the statement.

ORA-02425: create table failed

Cause: a create table statement failed in the create schema statement.

Action: the cause for failure will be presented below this error message. Follow appropriate action(s) as suggested by the subsequent error message.

ORA-02426: privilege grant failed

Cause: a grant privilege statement failed in the create schema statement.

Action: the cause for failure will be presented below this error message. Follow appropriate action(s) as suggested by the subsequent error message.

ORA-02427: create view failed

Cause: a create view statement failed in the create schema statement.

Action: the cause for failure will be presented below this error message. Follow appropriate action(s) as suggested by the subsequent error message.

ORA-02428: could not add foreign key reference

Cause: could not add a foreign key reference because of error in declaration. Either referenced table does not exist or table does not have an unique key.

Action: make sure referenced table exists and/or has unique key

ORA-02429: cannot drop index used for enforcement of unique/primary key

Cause: user attempted to drop an index that is being used as the enforcement mechanism for unique or primary key.

Action: drop the constraint instead of the index.

ORA-02430: cannot enable constraint (*string*) - no such constraint

Cause: the named constraint does not exist for this table.

Action: Obvious

ORA-02431: cannot disable constraint (*string*) - no such constraint

Cause: the named constraint does not exist for this table.

Action: Obvious

ORA-02432: cannot enable primary key - primary key not defined for table

Cause: Attempted to enable a primary key that is not defined for the table.

Action: Need to add a primary key definition for the table.

ORA-02433: cannot disable primary key - primary key not defined for table

Cause: Attempted to disable a primary key tht is not defined for the table.

Action: None

ORA-02434: cannot enable unique(*string*) - unique key not defined for table

Cause: attempted to enable a unique key that is not defined for the table.

Action: None

ORA-02435: cannot disable unique(*string*) - unique key not defined for table

Cause: attempted to disable a unique key that is not deined for the table.

Action: None

ORA-02436: date or system variable wrongly specified in CHECK constraint

Cause: An attempt was made to use a date constant or system variable, such as USER, in a check constraint that was not completely specified in a CREATE TABLE or ALTER TABLE statement. For example, a date was specified without the century.

Action: Completely specify the date constant or system variable. Setting the event 10149 allows constraints like "a1 > '10-MAY-96'", which a bug permitted to be created before version 8.

ORA-02437: cannot validate (*string.string*) - primary key violated

Cause: attempted to validate a primary key with duplicate values or null values.

Action: remove the duplicates and null values before enabling a primary key.

ORA-02438: Column check constraint cannot reference other columns

Cause: attempted to define a column check constraint that references another column.

Action: define it as a table check constriant.

ORA-02439: Unique index on a deferrable constraint is not allowed

Cause: attempted to enable a deferrable primary key/unique constraint that has an existing unique index on the constraint columns.

Action: Drop the index on the constraint columns or make the constraint not deferrable.

ORA-02440: Create as select with referential constraints not allowed

Cause: create table foo (... ref. con. ...) as select ...;

Action: Create the table as select, then alter the table to add the constraints afterwards.

ORA-02441: Cannot drop nonexistent primary key

Cause: alter table drop primary key - primary key does not exist.

Action: None

ORA-02442: Cannot drop nonexistent unique key

Cause: alter table drop unique (*col list*) - unique specification does not exist.

Action: make sure column list for unique constraint is correct.

ORA-02443: Cannot drop constraint - nonexistent constraint

Cause: alter table drop constraint <constraint_name>

Action: make sure you supply correct constraint name.

ORA-02444: Cannot resolve referenced object in referential constraints

Cause: attempted to define foreign key referencing an object which cannot be resolved to a base table reference

Action: referential constraints can only be defined on objects which can be resolved to base table reference

ORA-02445: Exceptions table not found

Cause: the explicitly or implicitly declared exceptions table does not exist.

Action: Create the table then issue the enable command again.

ORA-02446: CREATE TABLE ... AS SELECT failed - check constraint violated

Cause: An attempt was made to use a CREATE TABLE ... AS SELECT statement when some rows violated one or more CHECK constraints.

Action: Do not select rows that violate constraints.

ORA-02447: cannot defer a constraint that is not deferrable

Cause: An attempt was made to defer a nondeferrable constraint

Action: Drop the constraint and create a new one that is deferrable

ORA-02448: constraint does not exist

Cause: The named constraint does not exist

Action: Stop trying to do something with a nonexistent constraint

ORA-02449: unique/primary keys in table referenced by foreign keys

Cause: An attempt was made to drop a table with unique or primary keys referenced by foreign keys in another table.

Action: Before performing the above operations the table, drop the foreign key constraints in other tables. You can see what constraints are referencing a table by issuing the following command: `SELECT * FROM USER_CONSTRAINTS WHERE TABLE_NAME = "tabnam";`

ORA-02450: Invalid hash option - missing keyword IS

Cause: Missing IS keyword.

Action: Specify HASH IS option.

ORA-02451: duplicate HASHKEYS specification

Cause: The HASHKEYS option is specified more than once.

Action: Only specify the HASHKEYS option once.

ORA-02452: invalid HASHKEYS option value

Cause: The specified HASHKEYS option must be an integer value.

Action: Specify an appropriate value.

ORA-02453: duplicate HASH IS specification

Cause: The HASH IS option is specified more than once.

Action: only specify the HASH IS option once.

ORA-02454: Number of hash keys per block (*string*) exceeds maximum of *string*

Cause: The SIZE argument is too small.

Action: Increase the SIZE argument.

ORA-02455: The number of cluster key column must be 1

Cause: When specifying the HASH IS option, the number of key columns must be 1.

Action: Either do not specify the HASH IS option or reduce the number of key columns.

ORA-02456: The HASH IS column specification must be NUMBER(*,0)

Cause: The column specification must specify an integer.

Action: Specify the column definition as type NUMBER(precision, 0).

ORA-02457: The HASH IS option must specify a valid column

Cause: The HASH IS column name is not specified in the cluster definition.

Action: Specify a valid column name.

ORA-02458: HASHKEYS must be specified for a HASH CLUSTER

Cause: The HASHKEYS option must be specified when creating a HASH CLUSTER.

Action: Specify the HASHKEYS option.

ORA-02459: Hashkey value must be a positive integer

Cause: The value of the hash key was not a positive number.

Action: Specify a positive integer.

ORA-02460: Inappropriate index operation on a hash cluster

Cause: An attempt to create a cluster index was issued on a hash cluster.

Action: Do not attempt to create such an index.

ORA-02461: Inappropriate use of the INDEX option

Cause: This option is only valid for non hash clusters.

Action: Do not specify this option.

ORA-02462: Duplicate INDEX option specified

Cause: The INDEX option is specified more than once.

Action: Only specify the INDEX option once.

ORA-02463: Duplicate HASH IS option specified

Cause: The HASH IS option is specified more than once.

Action: Only specify the HASH IS option once.

ORA-02464: Cluster definition can not be both HASH and INDEX

Cause: The cluster can either be a hash or indexed cluster - not both.

Action: Remove either the HASH IS or INDEX options.

ORA-02465: Inappropriate use of the HASH IS option

Cause: This option is only valid for clusters

Action: Do not specify this option

ORA-02466: The SIZE and INITRANS options cannot be altered for HASH CLUSTERS.

Cause: An attempt was made to change the SIZE and INITRANS options after the hash cluster was created.

Action: Do not specify this option.

ORA-02467: Column referenced in expression not found in cluster definition

Cause: A column in the hash is expression was not present in cluster definition.

Action: Recreate the cluster and correct the error in hash expression.

ORA-02468: Constant or system variable wrongly specified in expression

Cause: A constant or system variable was specified in the hash expression.

Action: Recreate the cluster and correct the error in hash expression.

ORA-02469: Hash expression does not return an Oracle Number.

Cause: Result of evaluating hash expression is not an Oracle Number.

Action: Recreate the cluster and correct the error in hash expression.

ORA-02470: TO_DATE, USERENV, or SYSDATE incorrectly used in hash expression.

Cause: An attempt was made to specify SYSDATE, UID, USER, ROWNUM, or LEVEL in hash expression.

Action: Re-create the cluster and correct the error in hash expression.

ORA-02471: SYSDATE, UID, USER, ROWNUM, or LEVEL incorrectly used in hash expression.

Cause: SYSDATE, UID, USER, ROWNUM, or LEVEL are not allowed in hash expressions.

Action: Recreate the cluster and remove the offending keywords.

ORA-02472: PL/SQL functions not allowed in hash expressions

Cause: A PL/SQL function was used in the hash expression.

Action: Recreate the cluster and remove the PL/SQL function.

ORA-02473: Error while evaluating the cluster's hash expression.

Cause: An error occurred while evaluating the clusters hash expression.

Action: Correct the query and retry.

ORA-02474: Fixed hash area extents used (*string*) exceeds maximum allowed (*string*)

Cause: The number of extents required for creating the fixed hash area exceeds the maximum number allowed.

Action: Reduce the number of extents required by increasing the extent allocation sizes within the STORAGE clause.

ORA-02475: maximum cluster chain block count of *string* has been exceeded

Cause: The number of blocks in a cluster chain exceeds the maximum number allowed.

Action: Increase SIZE parameter in CREATE CLUSTER statement or reconsider suitability of cluster key.

ORA-02476: can not create index due to parallel direct load on table

Cause: A parallel direct load is occurring to the specified table.

Action: Retry statement after load is complete.

ORA-02477: can not perform parallel direct load on object *string*

Cause: A parallel direct load is not possible because an index is is being created on the table.

Action: Retry load after index creation is complete.

ORA-02478: merge into base segment would overflow MAXEXTENTS limit

Cause: Merge of temporary segment into base segment failed because MAXEXTENTS was larger than the total in the temp and base segments

Action: Use a larger value for MAXEXTENTS on the base segment or make the extents in the temporary segments larger

ORA-02479: error while translating file name for parallel load

Cause: An invalid file name was specified to load data into.

Action: Specify a valid database file.

ORA-02481: Too many processes specified for events (max *string*)

Cause: Too many processes specified than allowed per event.

Action: Enter fewer processes by using ranges or wildcards if possible.

ORA-02482: Syntax error in event specification (*string*)

Cause: Illegal event string

Action: Enter a legal event string

ORA-02483: Syntax error in process specification (*string*)

Cause: Illegal process string

Action: Enter a legal process string

ORA-02484: Invalid `_trace_buffers` parameter specification (*string*)

Cause: Bad process or size in `_trace_buffers` INIT.ORA parameter.

Action: n/a

ORA-02485: Invalid `_trace_options` parameter specification (*string*)

Cause: Bad syntax for `_trace_options` INIT.ORA parameter.

Action: n/a

ORA-02486: Error in writing trace file *string*

Cause: Error occurred in creating/writing the file.

Action: Check file name and make sure it is constructed properly. Also, check permissions for directories.

ORA-02487: Error in converting trace data

Cause: Incompatible binary trace data was specified.

Action: Check the format of the input data.

ORA-02488: Error encountered when accessing file [*string*] for trace conversion

Cause: An attempt was made to open or access the trace file during a trace conversion.

Action: Check the permissions for both input and output files. Also, check the file compatibility for the trace conversion.

ORA-02490: missing required file size in RESIZE clause

Cause: No value was specified for the RESIZE clause.

Action: Use correct syntax.

ORA-02491: missing required keyword ON or OFF in AUTOEXTEND clause

Cause: The keyword ON or OFF was not specified for the AUTOEXTEND clause.

Action: Use correct syntax.

ORA-02492: missing required file block increment size in NEXT clause

Cause: No value was specified for the NEXT clause.

Action: Use correct syntax.

ORA-02493: invalid file increment size in NEXT clause

Cause: A non-integer value was used for the NEXT clause of the DATAFILE list.

Action: Use correct syntax.

ORA-02494: invalid or missing maximum file size in MAXSIZE clause

Cause: UNLIMITED was not specified, or an invalid integer value was specified, for the MAXSIZE clause in the DATAFILE file list. The MAXSIZE value cannot be smaller than the SIZE value.

Action: Use correct syntax.

ORA-02495: cannot resize file *string*, tablespace *string* is read only

Cause: An attempt was made to resize a data file in a tablespace that is read only.

Action: Change the tablespace to read/write and retry the resize operation.

ORA-02700: osnoraenv: error translating ORACLE_SID

Cause: Two-task driver could not find the value of ORACLE_SID in the environment.

Action: Make sure that the ORACLE_SID environment variable has been properly set and exported.

ORA-02701: osnoraenv: error translating oracle image name

Cause: ORACLE_HOME environment variable not set.

Action: Make sure that the ORACLE_HOME environment variable has been properly set and exported.

ORA-02702: osnoraenv: error translating orapop image name

Cause: ORACLE_HOME environment variable not set.

Action: Make sure that the ORACLE_HOME environment variable has been properly set and exported.

ORA-02703: osnpipe: pipe creation failed

Cause: The pipe driver failed to create pipes for communications with the orapop process.

Action: You have probably exceeded the maximum number of open file descriptors per user or the system file table is full. Note the operating system error code and contact your system administrator.

ORA-02704: osndopop: fork failed

Cause: The two-task driver could not fork orapop.

Action: Verify that there are enough system resources to support another process. The user or system process limit may have been exceeded, or the amount of free memory or swap space may be temporarily insufficient.

ORA-02705: osnpol: polling of communication channel failed

Cause: The pipe driver failed while polling the communications channel.

Action: Contact your customer support representative.

ORA-02706: osnshs: host name too long

Cause: The length of your host-string specified by the TWO_TASK environment variable exceeds the ORACLE system-imposed limit.

Action: Contact your customer support representative.

ORA-02707: osnax: cannot allocate context area

Cause: The invoked Unix two-task driver could not allocate heap space for the context area.

Action: Contact your customer support representative.

ORA-02708: osnrntab: connect to host failed, unknown ORACLE_SID

Cause: The invoked Unix two-task driver failed to find an entry in oratab for the sid you supplied.

Action: First, check whether you have read access to oratab, and see if the desired sid is there. Add an entry to oratab for the desired sid, if necessary.

ORA-02709: osnpop: pipe creation failed

Cause: The pipe driver failed to create pipes for two-task communications with the oracle shadow process.

Action: You have probably exceeded the maximum number of open file descriptors per user or the system file table is full. Note the operating system error code and contact your system administrator.

ORA-02710: osnpop: fork failed

Cause: The pipe driver could not fork the oracle shadow process.

Action: Verify that there are enough system resources to support another process. The user or system process limit may have been exceeded, or the amount of free memory or swap space may be temporarily insufficient.

ORA-02711: osnvalid: write to validation channel failed

Cause: The pipe driver failed to write to the orapop process.

Action: Contact your customer support representative.

ORA-02712: osnpop: malloc failed

Cause: The pipe driver failed to allocate enough heap space for its context area buffers.

Action: Contact your customer support representative.

ORA-02713: osnprd: message receive failure

Cause: The pipe driver failed to read a message from the communications channel.

Action: Contact your customer support representative.

ORA-02714: osnpwr: message send failure

Cause: The pipe driver failed to write a message to the communications channel.

Action: Contact your customer support representative.

ORA-02715: osnpgetbrkmsg: message from host had incorrect message type

Cause: The pipe driver received a message having an unrecognizable message type.

Action: Contact your customer support representative.

ORA-02716: osnpgetdatmsg: message from host had incorrect message type

Cause: The Pipe driver received a message having an unrecognizable message type.

Action: Contact your customer support representative.

ORA-02717: osnpfs: incorrect number of bytes written

Cause: The Pipe driver sent a message that was apparently successful, but the number of bytes transmitted did not match the number of bytes furnished to the driver.

Action: Contact your customer support representative.

ORA-02718: osnprs: reset protocol error

Cause: The two-task driver could not reset the connection.

Action: Contact your customer support representative.

ORA-02719: osnfop: fork failed

Cause: The fast driver could not fork the oracle shadow process.

Action: Verify that there are enough system resources to support another process. The user or system process limit may have been exceeded, or the amount of free memory or swap space may be temporarily insufficient.

ORA-02720: osnfop: shmat failed

Cause: When the fast driver was invoked, processes failed to attach to the shared memory buffer. You probably supplied an illegal shared memory attach address, or the system ran out of data space to accommodate the buffer.

Action: Try invoking the Fast driver later, or use the default attach address.

ORA-02721: osnsemit: cannot create semaphore set

Cause: The Fast driver failed to get a semaphore set.

Action: The system-imposed limit on semaphores or semaphore identifiers may have been exceeded. Read the returned operating system error code and check with your system administrator.

ORA-02722: osnpui: cannot send break message to orapop

Cause: The Pipe driver could not send a break message to orapop.

Action: Contact your customer support representative.

ORA-02723: osnpui: cannot send break signal

Cause: The Pipe driver could not send a break message to the ORACLE shadow process.

Action: Contact your customer support representative.

ORA-02724: osnpbr: cannot send break message to orapop

Cause: The Pipe driver could not send a break message to orapop.

Action: Contact your customer support representative.

ORA-02725: osnpbr: cannot send break signal

Cause: The Pipe driver could not send a break message to the ORACLE shadow process.

Action: Kill system call failed. Check errno and contact customer support.

ORA-02726: osnpop: access error on oracle executable

Cause: The Pipe driver could not access the oracle executable.

Action: Check the permissions on the ORACLE executable and each component of the ORACLE_HOME/bin path.

ORA-02727: osnpop: access error on orapop executable

Cause: The Pipe driver could not access the orapop executable.

Action: Check the permissions on the orapop executable and each component of the ORACLE_HOME/bin path.

ORA-02728: osnfop: access error on oracle executable

Cause: The Fast driver could not access the oracle executable.

Action: Check the permissions on the ORACLE executable and each component of the ORACLE_HOME/bin path.

ORA-02729: osncon: driver not in osntab

Cause: The driver you have specified is not supported.

Action: Check with your database administrator which drivers are supported.

ORA-02730: osnrnf: cannot find user logon directory

Cause: The driver you have specified could not find your logon directory while searching for your local .sqlnet file.

Action: Set and export the HOME environment variable to identify your home directory. Check with your system administrator to make sure that your uid and home directory are correct in the /etc/passwd file.

ORA-02731: osnrnf: malloc of buffer failed

Cause: The specified driver could not find enough heap space to malloc a buffer.

Action: Contact your customer support representative.

ORA-02732: osnrnf: cannot find a matching database alias

Cause: Database alias specified was not identified in either \$HOME/.sqlnet or /etc/sqlnet.

Action: Create the alias in a file called .sqlnet in your home directory for personal use or ask your system administrator to create the alias in /etc/sqlnet for system-wide use.

ORA-02733: osnsnf: database string too long

Cause: While converting a database alias to a database ID, the resulting database ID string exceeded the ORACLE system-imposed limit.

Action: Contact your customer support representative.

ORA-02734: osnftt: cannot reset shared memory permission

Cause: The Fast driver was unable to reset shared memory permissions.

Action: Contact your customer support representative.

ORA-02735: osnfpm: cannot create shared memory segment

Cause: The Fast driver failed to create a shared memory segment for two-task communication.

Action: Check whether the system-imposed limit on shared memory identifiers has already been reached for your system.

ORA-02736: osnfpm: illegal default shared memory address

Cause: The Fast driver failed to establish a default shared memory address.

Action: Contact your customer support representative.

ORA-02737: osnpcl: cannot tell orapop to exit

Cause: The Pipe driver failed to send orapop the command to exit.

Action: Contact your customer support representative.

ORA-02738: osnpwrtbrkmsg: incorrect number of bytes written

Cause: The pipe driver apparently sent an incomplete break message.

Action: Contact your customer support representative.

ORA-02739: osncon: host alias is too long

Cause: The alias used for a sqlnet host is longer than 161 characters.

Action: Use a shorter alias.

ORA-02750: osnfsmmap: cannot open shared memory file ?/dbs/ftt_pid.dbf

Cause: The Fast driver failed to create a shared memory file for two-task communication.

Action: Check the permissions on the directory ?/dbs

ORA-02751: osnfsmmap: cannot map shared memory file

Cause: The Fast driver failed to map a shared memory file for two-task communication.

Action: Contact your customer support representative.

ORA-02752: osnfsmmap: illegal shared memory address

Cause: The Fast driver failed to attach shared memory at the expected location.

Action: Contact your customer support representative.

ORA-02753: osnfsmmap: cannot close shared memory file

Cause: The Fast driver cannot close the shared memory file.

Action: Contact your customer support representative.

ORA-02754: osnfsmmap: cannot change shared memory inheritance

Cause: The Fast driver could not alter the inheritance attributes of the shared memory.

Action: Contact your customer support representative.

ORA-02755: osnfsmcre: cannot create shared memory file ?/dbs/ftt_pid.dbf

Cause: The Fast driver failed to create a file for shared memory.

Action: Check the permissions on the directory ?/dbs

ORA-02756: osnfsmnam: name translation failure

Cause: The Fast driver encountered an error translating the shared memory filename ?/dbs/ftt_pid.dbf.

Action: Contact your customer support representative.

ORA-02757: osnfop: fork_and_bind failed

Cause: The Fast driver failed to fork a process onto the desired cluster and node number.

Action: Check the desired node number in sercose[0] and cluster ID in sercose[1]. If these seem valid, contact customer support.

ORA-02758: Allocation of internal array failed

Cause: The package was unable to allocate memory for an array because the system ran out of memory.

Action: Either reclaim memory by killing other processes or reboot the machine with more memory.

ORA-02759: Not enough request descriptors available

Cause: All of the package's request descriptors are in use performing other requests.

Action: Either wait until enough requests are done, or shut the package down and re-initialize it with more request descriptors.

ORA-02760: Client close of file failed.

Cause: The client was unable to close a file after forking the servers.

Action: This is a system problem - contact your System Administrator.

ORA-02761: File number to be canceled is negative.

Cause: The file number contained with the sfiov structure is less than zero.

Action: This may be a programming error. If it is not, contact ORACLE support.

ORA-02762: file number to be cancelled is greater than the maximum.

Cause: The file number contained with the sfiov structure is greater than the maximum.

Action: This may be a programming error. If it is not, contact ORACLE support.

ORA-02763: Unable to cancel at least one request

Cause: No requests were found that could be cancelled.

Action: This error can occur if all the requests dealing with that file number have already been filled.

ORA-02764: Invalid package mode

Cause: The mode of the package can only be parallel or duplex.

Action: See sfa.h for the correct values.

ORA-02765: Invalid maximum number of servers

Cause: The number of servers given was less than or equal to zero.

Action: Use a number greater than zero.

ORA-02766: Invalid maximum of request descriptors

Cause: The number of request descriptors was less than or equal to zero.

Action: Use a number greater than zero.

ORA-02767: Less than one request descriptor was allocated per server

Cause: The package requires that the number of request descriptors be greater than or equal to the number of servers used.

Action: Use a higher number

ORA-02768: Maximum number of files is invalid

Cause: The maximum number of files to be used by the package was less than or equal to zero.

Action: Use a positive number.

ORA-02769: Setting of handler for SIGTERM failed

Cause: The package was unable to set up handling by the server for the termination signal. This is an internal error.

Action: Contact ORACLE support.

ORA-02770: Total number of blocks is invalid

Cause: The total number of blocks to be allocated for use by the package was not greater than zero.

Action: Use a positive number.

ORA-02771: Illegal request time out value

Cause: The number was not a positive number.

Action: Use a positive number.

ORA-02772: Invalid maximum server idle time

Cause: The time given was not a positive number.

Action: Use a positive number.

ORA-02773: Invalid maximum client wait time

Cause: The time given was not a positive number.

Action: Use a positive number.

ORA-02774: Invalid request list latch time out value

Cause: The time given was not a positive number.

Action: Use a positive number.

ORA-02775: Invalid request done signal

Cause: The signal number was not a positive number.

Action: Use a positive number.

ORA-02776: Value for request done signal exceeds maximum

Cause: The value sent to the package for use as the "request done" signal exceeds the maximum allowed by the operating system.

Action: n/a

ORA-02777: Stat failed on log directory

Cause: The package was unable to get information about the directory in which the log files are to reside.

Action: Check the permissions on the directory or use a different directory name.

ORA-02778: Name given for the log directory is invalid

Cause: The name given for the directory in which the logs are to be kept does not correspond to a directory.

Action: Use a different name.

ORA-02779: Stat failed on core dump directory

Cause: The package was unable to get information about the directory into which the servers are to dump core in the event of an exception.

Action: Check the permissions on the directory or use a different directory name.

ORA-02780: Name given for the core dump directory is invalid

Cause: The name given for the directory in which the server processes are to dump core in the event of an exception does not correspond to a directory.

Action: Use a different name.

ORA-02781: Invalid value given for the timing wanted flag

Cause: The value given was not TRUE or FALSE.

Action: n/a

ORA-02782: Both read and write functions were not specified

Cause: To ensure that the functions act symmetrically, pointers to both the read and write functions must be given.

Action: Either specify both functions or specify neither. The package will supply its own functions.

ORA-02783: Both post and wait functions were not specified

Cause: To ensure that the functions act symmetrically, pointers to both the posting and waiting functions must be given.

Action: Either specify both functions or specify neither. The package will supply its own functions.

ORA-02784: Invalid shared memory ID specified

Cause: The ID of the segment specified for use as the shared buffer region was invalid.

Action: Use a different ID, or let the package specify its own.

ORA-02785: Invalid shared memory buffer size

Cause: The size given for the shared memory segment to be used as the shared buffer region was less than or equal to zero.

Action: Use a positive number.

ORA-02786: Size needed for shared region is greater than segment size

Cause: The size of the shared segment that was specified for the shared buffer region is less than the number of bytes required. The first field of the "additional information" field is the size needed. The second is the size of the segment.

Action: Use a larger size segment or let the package allocate its own.

ORA-02787: Unable to allocate memory for segment list

Cause: The package cannot allocate memory for an internal segment list because the system has run out of memory. The "additional information" field is the amount of memory that the package attempted to allocate.

Action: n/a

ORA-02788: Unable to find kernel process pointer in async process array

Cause: Internal error - Contact ORACLE support.

Action: n/a

ORA-02789: Maximum number of files reached

Cause: The maximum number of files that can be used for asynchronous I/O has been reached.

Action: Shut down the servers and re-initialize the package with a higher number.

ORA-02790: File name is too long

Cause: The length of the name of a file that is being opened for asynchronous I/O is longer than the maximum. The "additional information" field is the maximum length.

Action: Use a shorter name.

ORA-02791: Unable to open file for use with asynchronous I/O

Cause: The package could not open file for some reason.

Action: Check the file name.

ORA-02792: Unable to fstat() a file being used for asynchronous I/O.

Cause: The fstat(2) call on a file being used for asynchronous I/O failed.

Action: Check the file name.

ORA-02793: Close of asynchronous I/O failed.

Cause: The client was unable to close a file being used for asynchronous I/O.

Action: Contact ORACLE support - this should not happen.

ORA-02794: Client unable to get key for shared memory

Cause: The client was unable to get a key so that it obtain shared memory for use with shared memory.

Action: Contact ORACLE support - this is an internal error.

ORA-02795: Request list is empty

Cause: The client was signalled by a server that it was done with a request but the "done" list was empty.

Action: Internal error - contact ORACLE support.

ORA-02796: Done request is not in correct state

Cause: A request is not in the right state.

Action: Internal error - contact ORACLE support.

ORA-02797: No requests available

Cause: No free request descriptors are available.

Action: Wait until some requests are filled and then retry the request, or shutdown the servers and initialize the package with a higher number of requests.

ORA-02798: Invalid number of requests

Cause: The number of operations sent to either sfard() or sfawrite() is less than zero.

Action: This is a user programming error.

ORA-02799: Unable to arm signal handler

Cause: The arming of a signal handler for the "done" signal failed.

Action: Internal error - contact ORACLE support.

ORA-02800: Requests timed out

Cause: Some of the requests for asynchronous input or output were not serviced in the required amount of time.

Action: If the load on the system is high, it is possible that the timeout limit is too low. Reset it with sfainit(). If the server processes are dying due to unexpected signals, this is an internal error, and ORACLE support should be contacted.

ORA-02801: Operations timed out

Cause: Some asynchronous operations timed out in kernel mode.

Action: Internal error - contact ORACLE support.

ORA-02802: No idle servers available in parallel mode

Cause: Internal error.

Action: Contact ORACLE support.

ORA-02803: Retrieval of current time failed

Cause: Internal error.

Action: Contact ORACLE support.

ORA-02804: Allocation of memory failed for log file name

Cause: The client was unable to allocated a buffer for the name of the log file.

Action: Contact your System Administrator.

ORA-02805: Unable to set handler for SIGTPA

Cause: Internal error.

Action: Contact ORACLE support.

ORA-02806: Unable to set handler for SIGALRM

Cause: Internal error.

Action: Contact ORACLE support.

ORA-02807: Allocation of memory for I/O vectors failed.

Cause: The client was unable to allocate memory for the array of I/O vectors that the servers are to use.

Action: Contact your System Administrator.

ORA-02808: Allocation of memory of open files array failed.

Cause: The client was unable to allocate memory for an array of flags that the servers are to use.

Action: Contact your System Administrator.

ORA-02809: Jump buffer not valid

Cause: Internal error.

Action: Contact ORACLE support.

ORA-02810: Unable to make temporary file name for memory mapped file

ORA-02811: Unable to attach shared memory segment

ORA-02812: Bad attach address

ORA-02813: Unable to make temporary file name in order to get key

Cause: Internal error.

Action: Contact ORACLE support.

ORA-02814: Unable to get shared memory

Cause: Shmget(2) failed.

Action: Check the UNIX number. If you are unsure about what it means, contact ORACLE customer support.

ORA-02815: Unable to attach shared memory

Cause: Shmat(2) failed.

Action: Check the UNIX number. If you are unsure about what it means, contact ORACLE customer support.

ORA-02816: Unable to kill a process

Cause: A server did not die after being sent a kill signal.

Action: The process may be a runaway - contact ORACLE customer support.

ORA-02817: Read failed

Cause: A server could not read a requested amount of data.

Action: Check the call to sfard(). An incorrect file descriptor may have been sent to sfard(). The number in the "additional information" field is the starting block number of the data segment being read in.

ORA-02818: Less than the number of blocks requested was read in

Cause: A server could not read in the request amount of data. The first number in the "additional information" field is the block number being read in. The second is the actual number of bytes that was read in.

Action: This is a programming error.

ORA-02819: Write failed

Cause: A server was unable to perform a write. The number in the "additional information" field is the starting block number of the data segment being written out. The first number in the "additional information" field is the block number being written out. The second is the actual number of bytes that was written out. The disk may have filled up.

Action: Check the UNIX error number.

ORA-02820: Unable to write the requested number of blocks

Cause: A server could not write the requested amount of data out to disk. The disk may have run out of space.

Action: Check the UNIX error number.

ORA-02821: Unable to read the requested number of blocks.

Cause: A server could not read the number of blocks that was requested. The end of the file may have been read.

Action: Check the file on disk.

ORA-02822: Invalid block offset

Cause: A server was unable to seek to the designated block.

Action: Check the UNIX error number.

ORA-02823: Buffer is not aligned.

Cause: The buffer on which an I/O is being done is not on the correct boundary.

Action: Check the calling program.

ORA-02824: Request free list is empty

Cause: The list from which the package allocates request descriptors is empty because all of the descriptors is in use.

Action: Wait until some become free, or initialize the package with a higher number of request descriptors.

ORA-02825: Request on free list was not free

Cause: Internal error.

Action: Contact ORACLE support.

ORA-02826: Illegal block size

Cause: A negative number was given for the I/O block size to be used by the asynchronous I/O package.

Action: This is a programming error - use either a positive number or zero to get the default value.

ORA-02827: Invalid file number

Cause: The file number upon which an operation is to done is either less than zero or greater than the maximum number of files than can be open.

Action: This is a programming error. Since the calling program should not touch this number, this is a programming error.

ORA-02828: Segment free list is empty

Cause: No segments are available to allocated.

Action: Free some segments or shut down the package and re-initialize it with a higher number of segments.

ORA-02829: No segment of the proper size is available

Cause: No segment of the proper size is ready for use by the caller.

Action: Free some segments and try again.

ORA-02830: Segment could not be split - no free segments available

Cause: A segment that is larger than that desired could not be split because no free segment was available.

Action: Free some segments and try again.

ORA-02831: Segment deallocation failed - empty segment list

Cause: The caller attempted to deallocate a segment but the "in use" list was empty. This is a programming error.

Action: Check the calling program.

ORA-02832: Segment deallocation failed - segment not on list

Cause: The caller attempted to deallocate a segment that was not on the "in use" list. This is a programming error.

Action: Check the calling program.

ORA-02833: Server was unable to close file

Cause: A server was unable to close a file being used for asynchronous I/O.

Action: See the UNIX error number for more information.

ORA-02834: Server unable to open file

Cause: The server was unable to open a file for use with asynchronous I/O.

Action: Check the UNIX error number for more information.

ORA-02835: Server unable to send signal to client

Cause: Internal error.

Action: Contact ORACLE support.

ORA-02836: Unable to create temporary key file

Cause: Internal error.

Action: Contact ORACLE support.

ORA-02837: Unable to unlink temporary file

Cause: Internal error.

Action: Contact ORACLE support.

ORA-02838: Unable to arm signal handler for the alarm signal

Cause: The arming of a signal handler for the alarm signal failed.

Action: Internal error - contact ORACLE support.

ORA-02839: Sync of blocks to disk failed.

Cause: The server was unable to flush its writes out to disk.

Action: Check the UNIX error number.

ORA-02840: Open of log file by client failed

Cause: The client process was unable to open its log file.

Action: Check the UNIX error number for more information.

ORA-02841: Server died on start up

Cause: A server exited during its initialization process.

Action: Check the servers' logs for more information.

ORA-02842: Client unable to fork a server

Cause: The client could not spawn a server. A possible reason is that the operating system has reached its limit on the number of processes that it can spawn.

Action: Either reduce the number of servers that are to be used, or reconfigure the operating system so that it can handle more processes.

ORA-02843: Invalid value for kernel flag

Cause: An illegal value was given for the kernel flag in the information structure. Only TRUE and FALSE are permitted.

Action: This is a programming error - check the calling routine.

ORA-02844: Invalid value for the leave open flag

Cause: A value was given for the flag that determines whether a file is to be left open after the client checks it to see if the servers can use it. Only TRUE and FALSE are supported.

Action: This is a programming error - check the calling routine.

ORA-02845: Invalid value for the timing wanted flag

Cause: A value was given for the flag that indicates that operations are to be timed out. Only TRUE and FALSE are supported.

Action: This is a programming error - check the calling routine.

ORA-02846: Unkillable server

Cause: A server would not respond to the termination signal. The first number is the number of the server. The second is its UNIX process number. This is an internal problem.

Action: This is an operating system problem.

ORA-02847: Server did not terminate when posted

Cause: A server did not respond to a posted request to shutdown. The first number is the number of the server. The second is its UNIX process number. This is an internal problem.

Action: Contact ORACLE support.

ORA-02848: Asynchronous I/O package is not running

Cause: An operation using the asynchronous I/O package was attempted without first initializing the package using sfainit().

Action: Call sfainit() before using the package.

ORA-02849: Read failed because of an error

Cause: A server could not read the requested amount of data from disk.

Action: Check the UNIX error number.

ORA-02850: File is closed

Cause: A file upon which an asynchronous I/O operation is to be performed has already been closed by the package.

Action: This is a programming error.

ORA-02851: Request list is empty when it should not be

Cause: This is an internal problem.

Action: Contact ORACLE support.

ORA-02852: Invalid critical-section time out value

Cause: The time given was not a positive number.

Action: Use a positive number.

ORA-02853: Invalid server list latch time out value

Cause: The time given was not a positive number.

Action: Use a positive number.

ORA-02854: Invalid number of request buffers

Cause: The value given for "db_slave_buffers" in your INIT.ORA file is less than 0.

Action: Use a number that is greater than or equal to 0.

ORA-02855: Number of requests is less than the number of slaves

Cause: The value given for 'db_slave_buffers' in the initialization parameter file was less than the number specified for the number of slaves, 'db_slaves.'

Action: Specify a number that is greater than that given for 'db_slaves.' Alternatively, specify 0. The kernel will supply the appropriate number.

ORA-02875: smpini: Unable to get shared memory for PGA

Cause: Stated in errno.

Action: Resolve the problem.

ORA-02876: smpini: Unable to attach to shared memory for PGA

Cause: Stated in errno.

Action: Resolve the problem.

ORA-02877: smpini: Unable to initialize memory protection

Cause: The adspcinit program has not been executed.

Action: Execute the adspcinit program as shown in your Installation and Users' Guide. If the problem persists, try rebooting your computer.

ORA-02878: sou2o: Variable smpdidini overwritten

Cause: The variable smpdidini was overwritten, probably by client code.

Action: Verify client code, e.g. Pro*C, for illegal memory access. If the problem occurs outside Single Task operation, contact your customer support representative.

ORA-02879: sou2o: Could not gain access to protected memory

Cause: This is an internal error, note error code in errno.

Action: Report to your customer support representative. Restarting your application or your computer may cure the problem.

ORA-02880: smpini: Could not register PGA for protection

Cause: This is an internal error, note error code in errno.

Action: Report to your customer support representative. Restarting your application or your computer may cure the problem.

ORA-02881: sou2o: Could not revoke access to protected memory

Cause: This is an internal error, note error code in errno.

Action: Report to your customer support representative. Restarting your application or your computer may cure the problem.

ORA-02882: sou2o: Could not register SGA for protection

Cause: This is an internal error, note error code in errno.

Action: Report to your customer support representative. Restarting your application or your computer may cure the problem.

ORA-02899: smscre: Cannot create SGA with Extended Shared Memory feature

Cause: The environment variable EXTSHM was set before starting oracle.

Action: Unset the environment variable EXTSHM and startup oracle.

ORA-03001: unimplemented feature

Cause: This feature is not implemented.

Action: None

ORA-03002: operator not implemented

Cause: This is an internal error.

Action: Contact your customer support representative.

ORA-03007: obsolete feature

Cause: User attempted to use a feature which is no longer supported.

Action: None

ORA-03009: Incompatible OCI function call

Cause: An incompatible OCI function call was issued for new functionality.

Action: Do not use V7 OCI calls for this functionality.

ORA-03100: communication area cannot be allocated; insufficient memory

ORA-03105: internal protocol error

ORA-03106: fatal two-task communication protocol error

ORA-03107: oranet buffer underflow

ORA-03108: oranet: ORACLE does not support this interface version

ORA-03109: oranet buffer overflow

ORA-03110: oranet: ORACLE does not support this SQL version

ORA-03111: break received on communication channel

ORA-03112: a server linked as single-task cannot use SQL*Net

Cause: A statement containing a SQL*Net connect string was issued to the single-task server. For example, a database link was used in a SQL statement.

Action: Do not use SQL*Net connect strings in a single-task environment.

ORA-03113: end-of-file on communication channel

Cause: The connection between Client and Server process was broken.

Action: There was a communication error that requires further investigation. First, check for network problems and review the SQL*Net setup. Also, look in the alert.log file for any errors. Finally, test to see whether the server process is dead and whether a trace file was generated at failure time.

ORA-03114: not connected to ORACLE

ORA-03115: unsupported network datatype or representation

ORA-03116: invalid buffer length passed to a conversion routine

ORA-03117: two-task save area overflow

ORA-03118: two-task coroutine has invalid state

ORA-03119: two-task detected inconsistent datatype specification

Cause: There was both a datatype, and an anonymous datatype declaration found.

Action: Correct the specification.

ORA-03120: two-task conversion routine: integer overflow

ORA-03121: no interface driver connected - function not performed

ORA-03122: attempt to close ORACLE-side window on user side

Cause: This is an internal error.

Action: Contact your customer support representative.

ORA-03123: operation would block

Cause: This is a status code that indicates that the operation cannot complete now.

Action: None; this is not an error. The operation should be retried again for completion.

ORA-03124: two-task internal error

Cause: Internal error.

Action: Contact your customer support representative.

ORA-03125: client-server protocol violation

Cause: The application received a bad escape sequence from the server and may indicate a problem with the client application user code.

Action: Contact your customer support representative.

ORA-03126: network driver does not support non-blocking operations

Cause: A non-blocking operation was attempted and the network driver does not support non-blocking operations.

Action: Use default blocking operations or use a driver supporting non-blocking operations.

ORA-03127: no new operations allowed until the active operation ends

Cause: An attempt was made to execute a new operation before the active non-blocking operation completed or a new operation was attempted before all the pieces of a column were inserted or fetched.

Action: Execute the new operation after the non-blocking operation completes. If piecewise binds/defines were done, execute the new operation after all the pieces have been inserted or fetched.

ORA-03128: connection is in blocking mode

Cause: The OCI test for non-blocking mode on a connection indicates that the connection is in blocking mode.

Action: If non-blocking mode is required use appropriate OCI calls to change the mode.

ORA-03129: the next piece to be inserted is required

Cause: The application performed a piecewise bind on a column.

Action: Provide the next piece of this bind variable.

ORA-03130: the buffer for the next piece to be fetched is required

Cause: The application performed a piecewise define on the column.

Action: Provide the next buffer for the next piece to be retrieved.

ORA-03131: an invalid buffer was provided for the next piece

Cause: The application either provided the length of the buffer for the next piece to be zero or provided a null pointer.

Action: Verify if the buffer pointer for the next piece is null or if the length is zero.

ORA-03132: two-task default value overflow

Cause: The default value specified for a record field was too large.

Action: Change the default value to fit the field size.

ORA-03134: Connections to this server version are no longer supported.

Cause: An attempt was made to connect to an Oracle server of older version.

Action: Please refer to documentation for more details.

ORA-03135: connection lost contact

Cause: 1) Server unexpectedly terminated or was forced to terminate. 2) Server timed out the connection.

Action: 1) Check if the server session was terminated. 2) Check if the timeout parameters are set properly in sqlnet.ora.

ORA-03136: inbound connection timed out

Cause: Inbound connection was timed out by the server because user authentication was not completed within the given time specified by SQLNET.INBOUND_CONNECT_TIMEOUT or its default value

Action: 1) Check SQL*NET and RDBMS log for trace of suspicious connections. 2) Configure SQL*NET with a proper inbound connect timeout value if necessary.

ORA-03137: TTC protocol internal error : *[string] [string] [string] [string] [string] [string] [string] [string]*

Cause: TTC protocol internal error.

Action: Contact Oracle Support Services.

ORA-03138: Connection terminated due to security policy violation

Cause: Connection was terminated due to a security policy violation.

Action: Contact the Database Administrator

ORA-03139: This OCI call has been disabled by the DBA

Cause: The SEC_DISABLE_OLDER_ORACLE_RPC initialization parameter was enabled.

Action: Contact the Database Administrator

ORA-03140: I/O operation in progress

Cause: The current I/O operation was not complete. The error is typically returned from vectored and/or asynchronous I/O calls.

Action: Perform the necessary operation to complete or abort the current I/O.

ORA-03141: I/O request queue full

Cause: The I/O request queue was full and no more requests could be queued.

Action: Perform the proper operations to complete part or all of the current in-progress I/O requests.

ORA-03142: Session ID: *number* Serial number: *number*

Cause: Connection was lost for the specified session and serial number. This is either due to session being killed or network problems.

Action: Reconnect and if error persists, contact Oracle Support Services.

ORA-03143: Process ID: *string* Thread ID: *string*

Cause: Connection was lost for the specified process ID and thread ID. This is either due to session being killed or network problems.

Action: Reconnect and if error persists, contact Oracle Support Services.

ORA-03144: Process ID: *string*

Cause: Connection was lost for the specified process ID. This is either due to session being killed or network problems.

Action: Reconnect and if error persists, contact Oracle Support Services.

ORA-03145: I/O streaming direction error

Cause: Attempted to PUT data when GET streaming was in progress or attempted to GET data when PUT streaming was in progress.

Action: Complete current stream read or write I/O before attempting I/O in reverse direction.

ORA-03146: Invalid buffer length for TTC field

Cause: A corrupt Two-Task Common (TTC) packet was received.

Action: This is an internal protocol error. Contact Oracle Support Services.

ORA-03147: Missing mandatory TTC field

Cause: A corrupt Two-Task Common (TTC) packet was received.

Action: This is an internal protocol error. Contact Oracle Support Services.

ORA-03148: OCI_ATTR_ROW_COUNT cannot return a row count exceeding UB4MAXVAL. The actual row count is [string]

Cause: The row count was larger than UB4MAXVAL. OCI clients using OCI_ATTR_ROW_COUNT cannot see row counts larger than UB4MAXVAL.

Action: Upgrade Oracle client to version 12 client libraries or higher and use OCI_ATTR_UB8_ROW_COUNT instead.

ORA-03149: Invalid Oracle error code

Cause: An invalid Oracle error code was received by the server.

Action: This is an internal protocol error. Contact Oracle Support Services.

ORA-03150: end-of-file on communication channel for database link

Cause: The connection between the client and the remote server process was broken.

Action: Look in the alert.log file of the remote server for any errors. Also, check to see whether the remote server process is dead and whether a trace file was generated at failure time.

ORA-03160: An invalid client operation was requested by the server

Cause: You are using an Oracle client application linked with libraries with lower version than the current server version.

Action: Upgrade client libraries to be same as or higher than the server version.

ORA-03170: deadlocked on readable physical standby (undo segment string)

Cause: A new undo segment was added. A query can occasionally deadlock when issued around the time an undo segment is added and used immediately on the primary.

Action: Retry the query. Avoid creating new undo segments when using standby as a regular part of operation.

ORA-03171: Recovery was terminated during query execution

Cause: Recovery was terminated. A query can occasionally deadlock when recovery is terminated because it needs a block with changes that are made after the point at which recovery was terminated.

Action: Retry the query. Avoid cancelling recovery on standby.

ORA-03172: STANDBY_MAX_DATA_DELAY of string seconds exceeded

Cause: Standby recovery fell behind the STANDBY_MAX_DATA_DELAY requirement.

Action: Tune recovery and retry the query later, or switch to another standby database within the data delay requirement.

ORA-03173: Standby may not be synced with primary

Cause: ALTER SESSION SYNC WITH PRIMARY did not work because either the standby was not synchronous or in a data-loss mode with regard to the primary, or the standby recovery was terminated.

Action: Make the standby synchronous and no-data-loss with regard to the primary. Make the standby recovery active.

ORA-03174: STANDBY_MAX_DATA_DELAY does not apply to SYS users
Cause: ALTER SESSION SET STANDBY_MAX_DATA_DELAY did not work for SYS users.

Action: Issue ALTER SESSION SET STANDBY_MAX_DATA_DELAY for non-SYS users.

ORA-03175: parameter *string* mismatch

Cause: The value of the %s parameter was not the same in all instances.

Action: Check %s in all instances.

ORA-03176: *string* only works on an open physical standby database

Cause: The database was not an open physical standby database.

Action: Issue the command on an open physical standby database.

ORA-03177: enable read-only violation logging

ORA-03178: duplicate SESSION or GLOBAL specifications

Cause: Duplicate SESSION or GLOBAL specifications were specified.

Action: Remove the duplicate specification.

ORA-03179: NOCACHE or ORDER sequences cannot be accessed from Active Data Guard standby

Cause: NOCACHE or ORDER sequences were not supported for Active Data Guard standby.

Action: Alter the sequence properties.

ORA-03180: Sequence values cannot be allocated for Oracle Active Data Guard standby.

Cause: Connection to the corresponding primary database failed. The primary database might be down.

Action: Try again later.

ORA-03181: Sequence object no longer exists for Oracle Active Data Guard standby.

Cause: The sequence object might have been dropped by the primary database.

Action: Check the sequence status on the primary database.

ORA-03182: The sequence object is no longer a global sequence for Oracle Active Data Guard standby database.

Cause: The sequence object might have been altered by the primary database.

Action: Check the sequence status on the primary database.

ORA-03200: the segment type specification is invalid

Cause: segment type is not TABLE, INDEX, or CLUSTER

Action: use a correct segment type

ORA-03201: the group number specification is invalid

Cause: the freelist group number was either negative or larger than the the number of freelist groups in the segment

Action: use a correct group number

ORA-03202: the scan limit specification is invalid

Cause: the scan limit did not have a positive integer value the number of freelist groups in the segment

Action: use a correct scan limit

ORA-03203: concurrent update activity makes space analysis impossible

Cause: high volume of user updates interfere with the space analysis

Action: retry the command or lock the underlying objects

ORA-03204: the segment type specification should indicate partitioning

Cause: partition name is specified for the space analysis, but the object type does not indicate partitioning

Action: specify PARTITION in the segment type, if the object is partitioned, otherwise, omit the partition name

ORA-03205: partition name is required when partitioned type is specified

Cause: partition name is not specified for the space analysis, but the object type indicates partitioning

Action: specify partition name, if the object is partitioned, otherwise, specify a non-partitioned type

ORA-03206: maximum file size of (*string*) blocks in AUTOEXTEND clause is out of range

Cause: The maximum file size for an autoextendable file has exceeded the maximum number of blocks allowed.

Action: Reduce the size and retry.

ORA-03207: subpartitioned type must be specified for composite object

Cause: partition type is specified for the space analysis, but the object type indicates composite partitioning

Action: specify subpartition name and subpartition type

ORA-03208: partitioned type must be specified for a non-composite object

Cause: subpartition type is specified for the space analysis, but the object type indicates non-composite partitioning

Action: specify partition name and partition type

ORA-03209: DBMS_ADMIN_PACKAGE invalid file/block specification

Cause: The value of file number or block number is outside of limits or inconsistent

Action: Fix the file number/block number value

ORA-03210: DBMS_ADMIN_PACKAGE invalid option specification

Cause: The value of one of the option parameters is incorrect

Action: Fix the option value

ORA-03211: The segment does not exist or is not in a valid state

Cause: The segment specified in the DBMS_SPACE_ADMIN or DBMS_SPACE operation does not exist or is not in a state appropriate for this operation

Action: Fix the segment specification, or put the segment in the appropriate state.

ORA-03212: Temporary Segment cannot be created in locally-managed tablespace

Cause: Attempt to create a temporary segment for sort/hash/lobs in in permanent tablespace of kind locally-managed

Action: Alter temporary tablespace of user to a temporary tablespace or a dictionary-managed permanent tablespace

ORA-03213: Invalid Lob Segment Name for DBMS_SPACE package

Cause: The Lob Segment specified in the DBMS_SPACE operation does not exist.

Action: Fix the Segment Specification

ORA-03214: File Size specified is smaller than minimum required

Cause: File Size specified for add/resize datafile/tempfile does not allow for the minimum required of one allocation unit.

Action: Increase the specification for file size

ORA-03215: File Size specified for resize is too small

Cause: File Size specified for resize datafile/tempfile causes bitmap control structures to overlap

Action: Increase the specification for file size

ORA-03216: Tablespace/Segment Verification cannot proceed

Cause: Corruptions detected during verification which cannot be dealt with

Action: Do manual verification

ORA-03217: invalid option for alter of TEMPORARY TABLESPACE

Cause: invalid option for alter of temporary tablespace was specified

Action: Specify one of the valid options: ADD TEMPFILE, TEMPFILE ONLINE, TEMPFILE OFFLINE

ORA-03218: invalid option for CREATE/ALTER TABLESPACE

Cause: invalid option for create/alter tablespace of type locally-managed

Action: Specify one of the valid options.

ORA-03219: Tablespace '*string*' is dictionary-managed, offline or temporary

Cause: Operation which is only applicable to permanent, online, locally-managed tablespaces is specified for a tablespace which is either dictionary-managed, offline or temporary

Action: Reissue operation for a different tablespace, mount the tablespace or do not issue it at all, since it does not apply for the given tablespace

ORA-03220: DBMS_ADMIN_PACKAGE required parameter is NULL or missing

Cause: Some of the procedures was called with missing or NULL parameters

Action: Specify the missing parameter

ORA-03221: Temporary tablespaces and temporary segments must have standard block size

Cause: An attempt was made to do one of the following : (1) create a temporary tablespace with a non-standard block size or, (2) alter an existing permanent tablespace of non-standard block size to a temporary tablespace or, (3) issue a DDL statement that would result in the creation of a temporary segment in a tablespace of non-standard block size.

Action: (1) If creating a temporary tablespace, do not specify a block size different from the standard block size. (2) If altering an existing permanent tablespace to a temporary tablespace, ensure that it is of standard block size. (3) Ensure that the user's temporary tablespace is a tablespace having the standard block size.

ORA-03222: average row size and row count must be greater than zero

Cause: Either a bad value passed to `dbms_space.create_table_cost()` or explain plan did not pass through size information.

Action: Check the row size parameter in `dbms_space.create_table_cost()`. For explain plan, make sure statistics have been computed for all source tables in the CREATE TABLE AS SELECT statement.

ORA-03223: Bitmap index block addressable limitation reached

Cause: The limitation of addressability of BMIB (Bitmap Index Block) was reached for the current blocksize.

Action: If the segment size has grown greater than addressability of BMIB (Bitmap Index Block), do the following: (1) Partition the table. (2) Move the segment to a tablespace having bigger blocksize.

ORA-03230: segment only contains *string* blocks of unused space above high water mark

Cause: Attempt to preserve too many blocks.

Action: reduce the KEEP amount.

ORA-03231: the INITIAL extent may not be deallocated

Cause: Attempt to deallocate space from the segment which was truncated prior to the 7.3 release.

Action: increase the KEEP amount, or truncate the segment, and reissue the command.

ORA-03233: unable to extend table *string.string* subpartition *string* by *string* in tablespace *string*

Cause: Failed to allocate an extent for table subpartition segment in tablespace.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-03234: unable to extend index *string.string* subpartition *string* by *string* in tablespace *string*

Cause: Failed to allocate an extent for index subpartition segment in tablespace.

Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-03235: max # extents (*string*) reached in table *string.string* subpartition *string*

Cause: A table subpartition tried to extend past maxextents

Action: If maxextents is less than the system maximum, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params

ORA-03236: max # extents (*string*) reached in index *string.string* subpartition *string*

Cause: An index subpartition tried to extend past maxextents

Action: If maxextents is less than the system max, raise it. Otherwise, you must recreate with larger initial, next or pctincrease params.

ORA-03237: Initial Extent of specified size cannot be allocated in tablespace (*string*)

Cause: Too large a size for an initial extent due to freelist group specification

Action: Reduce number of freelist groups specified for segment

ORA-03238: unable to extend LOB segment *string.string* subpartition *string* by *string* in tablespace *string*

Cause: An attempt was made to allocate an extent for LOB subpartition segment in tablespace, but the extent could not be allocated because there is not enough space in the tablespace indicated.

Action: Use the ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-03239: maxextents (*string*) reached in LOB segment *string.string* subpartition *string*

Cause: A LOB subpartition segment tried to extend past maxextents.

Action: If maxextents is less than the system maximum, raise it. Otherwise, recreate the subpartition with larger INITIAL, NEXT, or PCTINCREASE parameters.

ORA-03240: User's temporary tablespace same as tablespace being migrated

Cause: Users default temporary tablespace must be different from the tablespace being migrated.

Action: alter users default temporary tablespace to be different.

ORA-03241: Invalid unit size

Cause: User specified an invalid unit size for the tablespace

Action: Specify the correct unit size. To estimate unit size please refer to Oracle Server Administrator's Guide.

ORA-03242: Tablespace migration retried 500 times

Cause: For migration to complete, temporary segments should not be present in the tablespace at the time of migration.

Action: Avoid migrating the tablespace when there is heavy temporary segment creation going on as with object drops.

ORA-03243: destination dba overlaps with existing control information

Cause: Cannot overlap control information during relocation

Action: Please chose another destination address

ORA-03244: No free space found to place the control information

Cause: During migration of tablespace found no place to put the control information. If during bitmaps relocation, found no space at the specified destination.

Action: If during migration, add more space to the tablespace and retry migration. If during bitmaps relocation, specify a destination address where there is enough free space.

ORA-03245: Tablespace has to be dictionary managed, online and permanent to be able to migrate

Cause: Tablespace was not dictionary managed or online or permanent.

Action: Make sure the tablespace is online, permanent and dictionary managed

ORA-03246: Invalid block number specified

Cause: Control information cannot be placed at the specified dba either because the block number specified is beyond the file end or the file is not large enough to accommodate the control information at that location

Action: specify a correct block number

ORA-03247: Invalid block number specified

Cause: Relocation of bitmaps to the said destination will make the tablespace self descriptive

Action: Choose another destination dba.

ORA-03248: Too much of segment creation activity during migration

Cause: Temporary segments were attempted to be created during migration

Action: The error is signalled after retrying migration for 500 times. Run migration when there is less of segment creation activity is going on.

ORA-03249: Uniform size for auto segment space managed tablespace should have atleast *string* blocks

Cause: For the given blocksize, uniform size specified is insufficient

Action: Specify larger extent size and retry

ORA-03250: Cannot mark this segment corrupt

Cause: This segment cannot be marked corrupt because it contains data dictionary objects

Action: Check the segment information and reissue the command.

ORA-03251: Cannot issue this command on SYSTEM tablespace

Cause: It is not permitted to migrate SYSTEM tablespace from locally managed format to dictionary managed format or relocate bitmaps.

Action: Check the tablespace name and procedure name

ORA-03252: initial extent size not enough for LOB segment

Cause: Fatblock size of LOB segment is too big to fit into the initial extent.

Action: Specify a smaller fatblock size or create the LOB segment in other tablespaces with bigger initial extent size.

ORA-03254: unable to execute the sql in read only database

Cause: Unable to create a consistent snapshot of the object in a read only database. Transaction recovery must be performed before opening the database read only.

Action: Open the database read write, allow dead transaction recovery to complete and then open the database read only.

ORA-03261: the tablespace *string* has only one file

Cause: Dropping file from ts which has a single file extent.

Action: Cannot make a tablespace fileless

ORA-03262: the file is non-empty

Cause: Trying to drop a non-empty datafile

Action: Cannot drop a non empty datafile

ORA-03263: cannot drop the first file of tablespace *string*

Cause: Trying to drop the first datafile with which ts is created

Action: Cannot drop the first datafile with which ts is created

ORA-03264: cannot drop offline datafile of locally managed tablespace

Cause: Trying to drop offline datafile in lmts

Action: Try to drop file afetr making it online

ORA-03274: both ALLOCATE EXTENT and DEALLOCATE UNUSED options are specified

Cause: The DEALLOCATE option and the ALLOCATE option are specified in the same command.

Action: Choose one of the options or issue two separate commands.

ORA-03275: duplicate DEALLOCATE option specification

Cause: The DEALLOCATE UNUSED option to ALTER TABLE or ALTER INDEX is specified more than once.

Action: Specify the option at most once.

ORA-03276: duplicate ALLOCATE EXTENT option specification

Cause: The ALLOCATE EXTENT option to ALTER TABLE or ALTER INDEX is specified more than once.

Action: Specify the option at most once.

ORA-03277: invalid SIZE specified

Cause: The specified value must be an integer.

Action: Choose an appropriate integer value.

ORA-03278: duplicate ALLOCATE EXTENT option specification

Cause: An option (DATAFILE, SIZE or INSTANCE) was specified more than once.

Action: Specify each option at most once.

ORA-03279: invalid INSTANCE specified

Cause: The specified value is not recognized as a valid instance name.

Action: Use a valid name.

ORA-03280: invalid DATAFILE filename specified

Cause: A character string literal is expected, but not found.

Action: Specify filenames using character string literals.

ORA-03281: invalid ALLOCATE EXTENT option

Cause: An option other than DATAFILE, SIZE or INSTANCE was specified.

Action: Remove invalid option and retry the command.

ORA-03282: missing ALLOCATE EXTENT option

Cause: No ALLOCATE EXTENT options were specified.

Action: Specified one or more of the following options: DATAFILE, SIZE or INSTANCE.

ORA-03283: specified datafile *string* does not exist

Cause: The datafile does not exist

Action: Retry the option with the correct datafile

ORA-03284: datafile or tempfile *string* is not a member of tablespace *string*

Cause: The specified datafile or tempfile did not belong to the tablespace that the object resides in.

Action: Retry the option with the correct datafile or tempfile.

ORA-03286: ALLOCATE EXTENT not valid for HASH CLUSTERS

Cause: The cluster is a hash cluster, and can not use the allcoate extent option.

Action: n/a

ORA-03287: invalid FREELIST GROUP specified

Cause: The specified FREELIST GROUP number is invalid

Action: Choose a number between 1 and # freelist groups for this object

ORA-03288: both FREELIST GROUP and INSTANCE parameters may not be specified

Cause: Both FREELIST GROUP and INSTANCE were specified in clause

Action: Remove one of the two parameters

ORA-03289: partition name and segment type do not match

Cause: Partition name and segment type specified for space analysis do not match

Action: Specify type PARTITION if the object is partitioned, specify SUBPARTITION if the object is composite

ORA-03290: Invalid truncate command - missing CLUSTER or TABLE keyword

Cause: Invalid object specification given.

Action: Either specify TRUNCATE CLUSTER or TRUNCATE TABLE

ORA-03291: Invalid truncate option - missing STORAGE keyword

Cause: Expected STORAGE keyword

Action: Either specify DROP STORAGE or REUSE STORAGE

ORA-03292: Table to be truncated is part of a cluster

Cause: The table being truncated is a member of a cluster.

Action: Either use TRUNCATE CLUSTER or DROP TABLE

ORA-03293: Cluster to be truncated is a HASH CLUSTER

Cause: Only INDEX CLUSTERS can be truncated.

Action: Drop and recreate the HASH CLUSTER instead of using truncate.

ORA-03296: cannot resize datafile - file *string* not found

Cause: The specified datafile is not available for resizing.

Action: Ensure that the datafile name is valid, and if so, ensure the file is accessible.

ORA-03297: file contains used data beyond requested RESIZE value

Cause: Some portion of the file in the region to be trimmed is currently in use by a database object

Action: Drop or move segments containing extents in this region prior to resizing the file, or choose a resize value such that only free space is in the trimmed.

ORA-03298: cannot shrink datafile - file *string* is under hot backup

Cause: Attempt to shrink a datafile while it is under hot backup. This is not allowed.

Action: Retry shrinking the file after the hot backup completes.

ORA-03299: cannot create dictionary table *string*

Cause: A dictionary table is created upon the first execution of the command 'alter database datafile autoextend on' for a database. This operation did not succeed. The most probable cause for this is insufficient space in the system tablespace.

Action: See action for next error message in error stack.

ORA-04000: the sum of PCTUSED and PCTFREE cannot exceed 100

Cause: the sum of PCTUSED and PCTFREE for a cluster or table exceeds 100

Action: create the table/cluster specifying values whose sum is <= 100

ORA-04001: sequence parameter *string* must be an integer

Cause: %s (a sequence parameter) specified was not an integer

Action: create the sequence, giving the specified parameter an integer value

ORA-04002: INCREMENT must be a non-zero integer

Cause: a sequence increment was specified to be zero

Action: specify the increment to be a non-zero value

ORA-04003: sequence parameter *string* exceeds maximum size allowed (*string* digits)

Cause: %s (a sequencer parameter) had too many digits

Action: specify the parameter with the allowed number of digits

ORA-04004: MINVALUE must be less than MAXVALUE

Cause: MINVALUE was specified to be greater than or equal to MAXVALUE

Action: specify a MINVALUE that is less than MAXVALUE

ORA-04005: INCREMENT must be less than MAXVALUE minus MINVALUE

Cause: the INCREMENT specified is >= MAXVALUE-MINVALUE

Action: specify an INCREMENT that is < MAXVALUE-MINVALUE

ORA-04006: START WITH cannot be less than MINVALUE

Cause: the given starting value is less than MINVALUE

Action: make sure that the starting value is >= MINVALUE

ORA-04007: MINVALUE cannot be made to exceed the current value

Cause: the given MINVALUE would be greater than the current value

Action: always make sure that MINVALUE is <= the current value

ORA-04008: START WITH cannot be more than MAXVALUE

Cause: the starting value would be larger than MAXVALUE

Action: make sure that the starting value is less than MAXVALUE

ORA-04009: MAXVALUE cannot be made to be less than the current value

Cause: the current value exceeds the given MAXVALUE

Action: make sure that the new MAXVALUE is larger than the current value

ORA-04010: the number of values to CACHE must be greater than 1

Cause: the value in the CACHE clause was one

Action: specify NOCACHE, or a value larger than one

ORA-04011: sequence *string* must range between *string* and *string*

Cause: the value specified for one of the sequence parameters exceeds limits

Action: specify parameter within these limits

ORA-04012: object is not a sequence

Cause: the object specified cannot have sequence ddl's performed on it

Action: re-enter the statement being careful with the spelling of the name

ORA-04013: number to CACHE must be less than one cycle

Cause: number to CACHE given is larger than values in a cycle

Action: enlarge the cycle, or cache fewer values

ORA-04014: descending sequences that CYCLE must specify MINVALUE

Cause: sequences that cycle must have their wrap-wrap specified

Action: re-create the sequence, specifying its wrap-value

ORA-04015: ascending sequences that CYCLE must specify MAXVALUE

Cause: sequences that cycle must have their wrap-wrap specified

Action: re-create the sequence, specifying its wrap-value

ORA-04016: sequence *string* no longer exists

Cause: sequence was dropped while processing its next value.

Action: re-create the sequence

**ORA-04017: invalid value *string* (length = *string*) for parameter
MAX_DUMP_FILE_SIZE**

Cause: The string supplied for the parameter MAX_DUMP_FILE_SIZE was not an integer, an integer followed by 'K', 'M', or 'G', nor the special value UNLIMITED.

Action: Provide a proper value for this parameter.

**ORA-04020: deadlock detected while trying to lock object
*stringstringstringstringstring***

Cause: While trying to lock a library object, a deadlock is detected.

Action: Retry the operation later.

**ORA-04021: timeout occurred while waiting to lock object
*stringstringstringstringstring***

Cause: While waiting to lock a library object, a timeout occurred.

Action: Retry the operation later.

ORA-04022: nowait requested, but had to wait to lock dictionary object

Cause: Had to wait to lock a library object during a nowait request.

Action: Retry the operation later.

ORA-04023: Object *stringstringstringstringstring* could not be validated or authorized

Cause: A number of attempts were made to validate or authorize an object but failed.

Action: Please report this error to Oracle Support Services.

ORA-04024: self-deadlock detected while trying to mutex pin cursor *string*

Cause: While trying to mutex pin a cursor, a self-deadlock is detected.

Action: Retry the operation later.

ORA-04025: maximum allowed library object lock allocated for *stringstringstringstringstring*

Cause: Too many active locks for the object has been allocated. This error can be a result of too many cursors kept open per session.

Action: Close cursors, reduce `session_cached_cursors` value.

ORA-04027: self-deadlock during automatic validation for object *string.string*

Cause: An attempt was made to validate an invalidated object but it failed because of a self-deadlock.

Action: Identify the root cause of the self-deadlock and take corrective action, e.g. compile the invalidated object separately.

ORA-04028: cannot generate diana for object *stringstringstringstringstring*

Cause: Cannot generate diana for an object because of lock conflict.

Action: Please report this error to your support representative.

ORA-04029: error ORA-*string* occurred when querying *stringstringstring*

Cause: The table or view being queried might be missing. The error number indicates the error.

Action: Fix the error.

ORA-04030: out of process memory when trying to allocate *string* bytes (*string,string*)

Cause: Operating system process private memory was exhausted.

Action: n/a

ORA-04031: unable to allocate *string* bytes of shared memory ("*string*","*string*","*string*","*string*")

Cause: More shared memory is needed than was allocated in the shared pool or Streams pool.

Action: If the shared pool is out of memory, either use the `DBMS_SHARED_POOL` package to pin large packages, reduce your use of shared memory, or increase the amount of available shared memory by increasing the value of the initialization parameters `SHARED_POOL_RESERVED_SIZE` and `SHARED_POOL_SIZE`. If the large pool is out of memory, increase the initialization parameter `LARGE_POOL_SIZE`. If the error is issued from an Oracle Streams or XStream process, increase the initialization parameter `STREAMS_POOL_SIZE` or increase the capture or apply parameter `MAX_SGA_SIZE`.

ORA-04032: pga_aggregate_target must be set before switching to auto mode

Cause: attempt to set workarea_size_policy to AUTO while pga_aggregate_target is not specified

Action: before setting workarea_size_policy, set pga_aggregate_target to a value representing the total private memory available to the instance. This total is generally the total physical memory available in the system minus what is needed for the SGA minus what is needed for the operating system (e.g. 500MB)

ORA-04033: Insufficient memory to grow pool

Cause: The system had insufficient memory to grow the pool to the specified size.

Action: Specify a smaller value to grow the pool.

ORA-04034: unable to shrink pool to specified size

Cause: The pool could not shrink to the specified size as it could not free memory.

Action: Specify a larger value to which to shrink the pool to.

ORA-04035: unable to allocate *string* bytes of shared memory in shared object cache "*string*" of size "*string*"

Cause: More shared memory is needed than was allocated in the shared object cache.

Action: n/a

ORA-04036: PGA memory used by the instance exceeds PGA_AGGREGATE_LIMIT

Cause: Private memory across the instance exceeded the limit specified in the PGA_AGGREGATE_LIMIT initialization parameter. The largest sessions using Program Global Area (PGA) memory were interrupted to get under the limit.

Action: Increase the PGA_AGGREGATE_LIMIT initialization parameter or reduce memory usage.

ORA-04041: package specification must be created first before creating package body

Cause: Attempt to create a package body before creating its package specification.

Action: Create the package specification first before creating the package body.

ORA-04042: procedure, function, package, or package body does not exist

Cause: Attempt to access a procedure, function, package, or package body that does not exist.

Action: Make sure the name is correct.

ORA-04043: object *string* does not exist

Cause: An object name was specified that was not recognized by the system. There are several possible causes: - An invalid name for a table, view, sequence, procedure, function, package, or package body was entered. Since the system could not recognize the invalid name, it responded with the message that the named object does not exist. - An attempt was made to rename an index or a cluster, or some other object that cannot be renamed.

Action: Check the spelling of the named object and rerun the code. (Valid names of tables, views, functions, etc. can be listed by querying the data dictionary.)

ORA-04044: procedure, function, package, or type is not allowed here

Cause: A procedure, function, or package was specified in an inappropriate place in a statement.

Action: Make sure the name is correct or remove it.

ORA-04045: errors during recompilation/revalidation of *string.string*

Cause: This message indicates the object to which the following errors apply. The errors occurred during implicit recompilation/revalidation of the object.

Action: Check the following errors for more information, and make the necessary corrections to the object.

ORA-04046: results of compilation are too large to support

Cause: Attempt to compile and store a large stored procedure that results in compilation data that is too large for the system to support or store.

Action: Reduce the size of the stored procedure by splitting it into smaller stored procedures.

ORA-04047: object specified is incompatible with the flag specified

Cause: The object type implied by the flag does not match the type of object specified.

Action: Specify the correct object, or use the appropriate flag

ORA-04050: invalid or missing procedure, function, or package name

Cause: The required procedure, function, or package name is invalid or missing.

Action: Specify a valid name.

ORA-04051: user *string* cannot use database link *string.string*

Cause: During forwarding of a remote object access, an attempt was made to use a non-existent database link or one owned by a user other than the logon user or PUBLIC.

Action: Change your database link structure so that all indirect remote accesses are done from the same userid that originates the request.

**ORA-04052: error occurred when looking up remote object
*stringstringstringstringstring***

Cause: An error occurred when trying to look up a remote object.

Action: Fix the error. Make sure the remote database system has run CATRPC.SQL to create necessary views used for querying or looking up objects stored in the database.

**ORA-04053: error occurred when validating remote object
*stringstringstringstringstring***

Cause: An error occurred when trying to validate a remote object.

Action: Fix the error. Make sure the remote database system has run CATRPC.SQL to create necessary views used for querying or looking up objects stored in the database.

ORA-04054: database link *string* does not exist

Cause: During compilation of a PL/SQL block, an attempt was made to use a non-existent database link.

Action: Either use a different database link or create the database link.

ORA-04055: Aborted: "string" formed a non-REF mutually-dependent cycle with "string".

Cause: This compilation was aborted because the library unit that was compiled would have formed a non-REF mutually-dependent cycle with some other library units. This happens when an attempt is made to compile types that have attributes of other types that may participate in a cycle with this type. Example: create type t1; create type t2 (a t1); create type t1 (a t2);

Action: Break the cycle (possibly by adding a REF or by using another type).

ORA-04060: insufficient privileges to execute string

Cause: Attempt to execute a stored procedure without sufficient privileges.

Action: Get necessary privileges.

ORA-04061: existing state of string has been invalidated

Cause: Attempt to resume the execution of a stored procedure using the existing state which has become invalid or inconsistent with the stored procedure because the procedure has been altered or dropped.

Action: Try again; this error should have caused the existing state of all packages to be re-initialized.

ORA-04062: string of string has been changed

Cause: Attempt to execute a stored procedure to serve an RPC stub which specifies a timestamp or signature that is different from the current timestamp/signature of the procedure.

Action: Recompile the caller in order to pick up the new timestamp.

ORA-04063: string has errors

Cause: Attempt to execute a stored procedure or use a view that has errors. For stored procedures, the problem could be syntax errors or references to other, non-existent procedures. For views, the problem could be a reference in the view's defining query to a non-existent table. Can also be a table which has references to non-existent or inaccessible types.

Action: Fix the errors and/or create referenced objects as necessary.

ORA-04064: not executed, invalidated string

Cause: Attempt to execute a stored procedure that has been invalidated.

Action: Recompile it.

ORA-04065: not executed, altered or dropped string

Cause: Attempt to execute a stored procedure that has been altered or dropped thus making it not callable from the calling procedure.

Action: Recompile its dependents.

ORA-04066: non-executable object, string

Cause: Attempt to execute a non-procedure.

Action: Make sure that a correct name is given.

ORA-04067: not executed, string does not exist

Cause: Attempt to execute a non-existent stored procedure.

Action: Make sure that a correct name is given.

ORA-04068: existing state of packagesstringstringstring has been discarded

Cause: One of errors 4060 - 4067 when attempt to execute a stored procedure.

Action: Try again after proper re-initialization of any application's state.

ORA-04069: cannot drop or replace a library with table dependents

Cause: An attempt was made to drop or replace a library that has dependents. There could be a table which depends on type which depends on the library being dropped.

Action: Drop all table(s) depending on the type, then retry.

ORA-04070: invalid trigger name

Cause: An invalid trigger name was specified.

Action: Verify that trigger name is not a reserved keyword.

ORA-04071: missing BEFORE, AFTER or INSTEAD OF keyword

Cause: The trigger statement is missing the BEFORE/AFTER/INSTEAD OF clause.

Action: Specify either BEFORE, AFTER or INSTEAD OF.

ORA-04072: invalid trigger type

Cause: An invalid trigger type was given.

Action: Specify either INSERT, UPDATE or DELETE.

ORA-04073: column list not valid for this trigger type

Cause: A column list was specified for a non-update trigger type.

Action: Remove the column list.

ORA-04074: invalid REFERENCING name

Cause: An invalid name was given in the referencing clause.

Action: Verify the referencing name is not a reserved word.

ORA-04075: invalid trigger action

Cause: A statement was given for the trigger action.

Action: Re-specify the trigger action.

ORA-04076: invalid NEW or OLD specification

Cause: An invalid NEW or OLD specification was given for a column.

Action: Re-specify the column using the correct NEW or OLD specification.

ORA-04077: WHEN clause cannot be used with table level triggers

Cause: The when clause can only be specified for row level triggers.

Action: Remove the when clause or specify for each row.

ORA-04078: OLD and NEW values cannot be identical

Cause: The referencing clause specifies identical values for NEW and OLD.

Action: Re-specify either the OLD or NEW referencing value.

ORA-04079: invalid trigger specification

Cause: The create TRIGGER statement is invalid.

Action: Check the statement for correct syntax.

ORA-04080: trigger '*string*' does not exist

Cause: The TRIGGER name is invalid.

Action: Check the trigger name.

ORA-04081: trigger '*string*' already exists

Cause: The TRIGGER name or type already exists.

Action: Use a different trigger name or drop the trigger which is of the same name.

ORA-04082: NEW or OLD references not allowed in table level triggers

Cause: The trigger is accessing "new" or "old" values in a table trigger.

Action: Remove any new or old references.

ORA-04083: invalid trigger variable '*string*'

Cause: The variable referenced in the trigger body is invalid.

Action: See the manual for valid trigger variable types.

ORA-04084: cannot change NEW values for this trigger type

Cause: New trigger variables can only be changed in before row insert or update triggers.

Action: Change the trigger type or remove the variable reference.

ORA-04085: cannot change the value of an OLD reference variable

Cause: Old values can only be read and not changed.

Action: Do not attempt to change an old variable.

ORA-04086: trigger description too long, move comments into triggering code

Cause: The trigger description is limited to 2000 characters (for dictionary storage reasons). The description does not include the text of the "when" clause or the text of the pl/sql code executed for the trigger.

Action: If the trigger description contains a large comment, move that

ORA-04087: cannot change the value of ROWID reference variable

Cause: Rowid's can only be read and not changed.

Action: Do not attempt to change an rowid value.

ORA-04088: error during execution of trigger '*string.string*'

Cause: A runtime error occurred during execution of a trigger.

Action: Check the triggers which were involved in the operation.

ORA-04089: cannot create triggers on objects owned by SYS

Cause: An attempt was made to create a trigger on an object owned by SYS.

Action: Do not create triggers on objects owned by SYS.

ORA-04090: '*string*' specifies same table, event and trigger time as '*string*'

Cause: Trigger is of duplicate event and trigger time.

Action: Combine the triggering information into one trigger which is fired at the given time.

ORA-04091: table *string.string* is mutating, trigger/function may not see it

Cause: A trigger (or a user defined plsql function that is referenced in this statement) attempted to look at (or modify) a table that was in the middle of being modified by the statement which fired it.

Action: Rewrite the trigger (or function) so it does not read that table.

ORA-04092: cannot *string* in a trigger

Cause: A trigger attempted to commit or rollback.

Action: Rewrite the trigger so it does not commit or rollback.

ORA-04093: references to columns of type LONG are not allowed in triggers

Cause: A trigger attempted to reference a long column in the triggering table.

Action: Do not reference the long column.

ORA-04094: table *string.string* is constraining, trigger may not modify it

Cause: A trigger attempted to modify a table that was constraining for some referential constraint of a parent SQL statement.

Action: n/a

ORA-04095: trigger '*string*' already exists on another table, cannot replace it

Cause: Cannot replace a trigger which already exists on a different table than the one being replaced.

Action: Drop the trigger with the same name and re-create it.

ORA-04096: trigger '*string*' has a WHEN clause which is too large, limit 2K

Cause: A trigger's 'when' clause is limited to 2K for dictionary storage reasons. The trigger being created exceeded that size.

Action: Use a smaller 'when' clause. Note, the trigger body could be used to perform the same limiting action as the 'when' clause.

ORA-04097: DDL conflict while trying to drop or alter a trigger

Cause: An attempt was made to concurrently perform two DDL operations on a trigger or trigger table.

Action: Investigate the new state of the trigger and retry the DDL operation, if still appropriate.

ORA-04098: trigger '*string.string*' is invalid and failed re-validation

Cause: A trigger was attempted to be retrieved for execution and was found to be invalid. This also means that compilation/authorization failed for the trigger.

Action: Options are to resolve the compilation/authorization errors, disable the trigger, or drop the trigger.

ORA-04099: trigger '*string*' is valid but not stored in compiled form

Cause: A trigger was attempted to be retrieved for execution and was found to be valid, but not stored. This may mean the an upgrade was done improperly from a non-stored trigger release.

Action: Alter compile the trigger to create the trigger in stored form. Also, you may want to review that a proper upgrade was done.

ORA-04930 to ORA-07499

ORA-04930: open sequence number failed or initial state is valid

Cause: Either Shared Sequence Number OS component was not installed properly, or an MC hardware failure may have occurred or a previous instance was not shut down properly.

Action: Verify that there are no background or foreground Oracle processes from a previous instance on this node using the OS command `ps -ef | grep <instance_name>`. Verify that there are no shared memory segments belonging to the user which owns the Oracle installation by using the `ipcs -b` OS command. If there are shared memory segments or processes still on the system, use `svrmgrl` to shutdown the instance with the abort option. If the instance is not up, verify that the cluster software and/or the hardware is installed and working. Log in as superuser and issue the `cnxshow` command. Are all of the nodes in the cluster listed? Are they members of the cluster? Is the communications between nodes okay? If the answer to any of these questions is false, contact Digital's customer support organization.

ORA-04931: unable to set initial sequence number value

Cause: A call to the SSN failed to set the sequence number to its initial value, possibly caused by an MC hardware problem.

Action: Verify that the MC hardware is functioning properly. If it is not, contact Digital's customer support organization. If it is, contact Oracle support.

ORA-04932: increment or adjust of sequence number failed

Cause: A call to the SSN failed to increment the sequence number.

Action: Verify that the MC hardware is functioning properly. If it is not, contact Digital's customer support organization. If it is, contact Oracle support.

ORA-04933: initial service identifier is non-zero

Cause: A valid service identifier existed before the sequence number service was opened.

Action: Verify that the instance is completely shut down.

ORA-04934: unable to obtain the current sequence number

Cause: A call to the SSN failed to return its current value. Either there are many errors occurring on the MC hardware, or the sequence number has become invalid and cannot be validated.

Action: Verify that the MC hardware is functioning properly. If it is, contact Oracle Support.

ORA-04935: unable to get/convert SCN recovery lock

Cause: A process has timed out trying to get or convert the SCN recovery lock. Another process probably has the lock in EX or SHR mode, but is not releasing it.

Action: Contact Oracle Support.

ORA-04940: unsupported optimization of Oracle binary, check alert log for more info

Cause: ORACLE binary has been optimized with unsupported options or a required option has not been used.

Action: Check the documentation for a list of supported and required flags for the optimizing utility that you used to optimize ORACLE. Shutdown the instance, optimize ORACLE again with supported combination of options and restart the instance.

ORA-04941: required operating system patch needs to be applied

Cause: The operating system could not return the start time of a process.

Action: Check that the operating system kernel has been patched to return process start time. Apply the required operating system patch and restart the instance.

ORA-06000: NETASY: port open failure

Cause: Autologin unable to open port

Action: Check log file for OS-specific error code

ORA-06001: NETASY: port set-up failure

Cause: Autologin unable to change port attributes

Action: Check log file for OS-specific error code

ORA-06002: NETASY: port read failure

Cause: Autologin unable to read from port

Action: Check log file for OS-specific error code

ORA-06003: NETASY: port write failure

Cause: Autologin unable to write to port

Action: Check log file for OS-specific error code

ORA-06004: NETASY: dialogue file open failure

Cause: Autologin unable to open dialogue file

Action: Check connect string for accuracy/typos

ORA-06005: NETASY: dialogue file read failure

Cause: Autologin unable to read dialogue file

Action: Check log file for OS-specific error code

ORA-06006: NETASY: dialogue execute failure

Cause: Expected response never received

Action: None

ORA-06007: NETASY: bad dialogue format

Cause: Dialogue file contains syntax error

Action: Correct the dialogue file

ORA-06009: NETASY: dialogue filename too long

Cause: Full file spec for dialogue file exceeds 64 bytes

Action: Amend connect string accordingly

ORA-06010: NETASY: dialogue file too long

Cause: Dialogue file exceeds 768 bytes in length

Action: Simplify dialogue (e.g. remove comments, redundant white space), or split into two and link with "more" command

ORA-06011: NETASY: dialogue too long

Cause: One of two: 1. Dialogue contains more than 24 exchange blocks 2. Dialogue send string exceeds 84 bytes in length

Action: Simplify dialogue or split into two and link with "more" command

ORA-06017: NETASY: message receive failure

Cause: Async driver gets I/O error while doing network read operation

Action: Check log file for OS-specific error code and contact your customer support representative.

ORA-06018: NETASY: message send failure

Cause: Async driver gets I/O error while doing network write operation

Action: Check log file for OS-specific error code and contact your customer support representative.

ORA-06019: NETASY: invalid login (connect) string

Cause: Syntax error in login string.

Action: Resubmit with correct string.

ORA-06020: NETASY: initialisation failure

Cause: Async driver unable to complete initialisation

Action: Check log file for OS-specific error code

ORA-06021: NETASY: connect failed

Cause: Async driver unable to establish connection with partner

Action: Check log file for OS-specific error code

ORA-06022: NETASY: channel open failure

Cause: no free channel [should never happen]

Action: Contact your customer support representative.

ORA-06023: NETASY: port open failure

Cause: Async driver unable to open port

Action: Check log file for OS-specific error code

ORA-06024: NETASY: VTM error

Cause: Virtual Terminal Manager unable to read/write to port

Action: Check log file for OS-specific error code

ORA-06025: NETASY: Configuration error

Cause: Async driver genned for server-only, but client service requested

Action: Contact your customer support representative.

ORA-06026: NETASY: port close failure

Cause: Async driver unable to close port

Action: Check log file for OS-specific error code

ORA-06027: NETASY: channel close failure

Cause: Async driver unable to close channel

Action: Check log file for OS-specific error code

ORA-06028: NETASY: unable to initialise for logging

Cause: Async driver unable to initialise for logging I/O

Action: Contact your customer support representative.

ORA-06029: NETASY: port assignment failure

Cause: Async driver unable to assign port to channel [should never happen]

Action: Contact your customer support representative.

ORA-06030: NETDNT: connect failed, unrecognized node name

Cause: Node name specified in host string is unknown (probably misspelled)

Action: Retry with correct node name

ORA-06031: NETDNT: connect failed, unrecognized object name

Cause: Host string contains reference to object (which doesn't exist): @d:*node-obj* => object is *ORDNobj*; when *node* is VMS, the object is *ORDNobj.COM* when *node* is UNIX, the object is *ORDNobj @d:node::"task=obj"* => object is *obj*; when *node* is VMS, the object is *obj.COM* when *node* is UNIX, the object is *obj*

Action: Retry with correct object name or create the required object on host node

ORA-06032: NETDNT: connect failed, access control data rejected

Cause: Host string contains invalid username/password

Action: Retry with correct username/password

ORA-06033: NETDNT: connect failed, partner rejected connection

Cause: Connection with partner was made but was rejected.

Action: Contact your network administrator.

ORA-06034: NETDNT: connect failed, partner exited unexpectedly

Cause: Connection with host node was made but partner aborted

Action: Make sure object (see 06031, above) is working (for VMS run the command file and make sure that the ORACLE server process starts up); sometimes happens when the network/node is under stress - in this case a retry often works.

ORA-06035: NETDNT: connect failed, insufficient resources

Cause: Insufficient system resources are available to complete the connection; for example, all DECnet channels are in use.

Action: Contact your network administrator.

ORA-06036: NETDNT: connect failed, no response from object

ORA-06037: NETDNT: connect failed, node unreachable

Cause: Host node is down.

Action: Contact your network administrator.

ORA-06038: NETDNT: connect failed, network driver not loaded

ORA-06039: NETDNT: connect failed

Cause: Connect failed for unexpected reason (see OSD error).

Action: Contact your customer support representative.

ORA-06040: NETDNT: invalid login (connect) string

Cause: Syntax error in login string.

Action: Resubmit with correct string.

ORA-06041: NETDNT: disconnect failed

Cause: Driver gets error while doing network close operation

Action: Contact your customer support representative.

ORA-06042: NETDNT: message receive failure

Cause: Driver gets I/O error while doing network read operation

Action: Contact your customer support representative.

ORA-06043: NETDNT: message send failure

Cause: Driver gets I/O error while doing network write operation

Action: Contact your customer support representative.

ORA-06044: NETDNT: connect failed, byte count quota exceeded

Cause: Connect failed because of insufficient byte count quota.

Action: Increase byte count quota.

ORA-06102: NETTCP: cannot allocate context area

Cause: Insufficient dynamic memory available for connection context area.

Action: Contact your customer support representative.

ORA-06105: NETTCP: remote host is unknown

Cause: Host name specified in the login (connect) string is unknown.

Action: Check spelling; make sure name is in the TCP/IP HOST file.

ORA-06106: NETTCP: socket creation failure

Cause: Process open file quota probably exceeded.

Action: Contact your customer support representative.

ORA-06107: NETTCP: ORACLE network server not found

Cause: No entry in SERVICES file for ORACLE server.

Action: Add ("orasrv") entry to the TCP/IP SERVICES file.

ORA-06108: NETTCP: connect to host failed

Cause: Connection attempt to remote host has failed. Probably means that the SQL*Net TCP/IP server on the remote host is not up, or the host itself is not up (check the latter by targeting it with Telnet).

Action: Start the SQL*Net TCP/IP server process on the remote host.

ORA-06109: NETTCP: message receive failure

Cause: I/O error occurred while attempting network read operation.

Action: Contact your customer support representative.

ORA-06110: NETTCP: message send failure

Cause: I/O error occurred while attempting network write operation.

Action: Contact your customer support representative.

ORA-06111: NETTCP: disconnect failure

Cause: Error occurred while closing a socket.

Action: Contact your customer support representative.

ORA-06112: NETTCP: invalid buffer size

Cause: The buffer size specified in the login string exceeds the allowed maximum (of 4096).

Action: Re-submit with valid buffer size.

ORA-06113: NETTCP: Too many connections

Cause: The maximum no. of concurrently open connections has been reached.

Action: Exit an application with an open connection which is no longer required.

ORA-06114: NETTCP: SID lookup failure

Cause: From the remote host's SQL*Net TCP/IP server: the database SID, specified in the login (connect) string, was not recognized.

Action: Add the appropriate SID entry to the CONFIG.ORA file on the remote host (and restart the SQL*Net TCP/IP server).

ORA-06115: NETTCP: unable to create ORACLE logicals

Cause: The host's SQL*Net TCP/IP server was unable to create the necessary logicals required by the ORACLE server process. See the SQL*Net TCP/IP server log file for more details.

Action: Contact your system administrator.

ORA-06116: NETTCP: unable to create ORASRV process

Cause: The host's SQL*Net TCP/IP server was unable to create the ORACLE server process. See the SQL*Net TCP/IP server log file for more details.

Action: Contact your system administrator.

ORA-06117: NETTCP: unable to create ORASRV: quota exceeded

Cause: The host's SQL*Net TCP/IP server was unable to create the ORACLE server process because of quota depletion.

Action: Increase quota allocations to the SQL*Net TCP/IP server process.

ORA-06118: NETTCP: unable to complete handshake with ORASRV

Cause: The ORACLE server process was started but failed to complete its initialization.

Action: Contact your customer support representative.

ORA-06119: NETTCP: spurious client request

Cause: The host's SQL*Net TCP/IP server was unable to recognize this connection request. See the SQL*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

ORA-06120: NETTCP: network driver not loaded

Cause: The TCP/IP network driver is not loaded.

Action: Check that the TCP/IP driver is loaded correctly.

ORA-06121: NETTCP: access failure

Cause: The host's SQL*Net TCP/IP server was unable to test the accessibility of the SID mapping file (specified in CONFIG.ORA) associated with this connection request. See the SQL*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

ORA-06122: NETTCP: setup failure

Cause: The host's SQL*Net TCP/IP server was unable to set up the appropriate environment to service this connection request. See the SQL*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

ORA-06123: NETTCP: cannot set KEEPALIVE

Cause: The host's SQL*Net TCP/IP server was unable to set the socket KEEPALIVE option. See the SQL*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

ORA-06124: NETTCP: timeout waiting for ORASRV

Cause: The ORACLE server process was started but failed to respond after N secs.

Action: For heavily loaded systems this is not an uncommon occurrence. Increase the value of N (the default is 30) by placing the following entry in the CONFIG.ORA file: SQLNET ORASRV_WAIT = <no. of secs> which will come into effect the next time the SQL*Net TCP/IP server is started.

ORA-06125: NETTCP: ORASRV exited unexpectedly

Cause: The ORACLE server process was started but exited unexpectedly. Possible causes: 1. Insufficient quotas to run ORASRV 2. ORACLE is not installed See the ORASRV output file for more details; the file will be in the ORA_SQLNET directory and will have a name of the form: ORA_SRVTnn_SID.OUT

Action: If appropriate action is not obvious from the ORASRV output file then contact your customer support representative.

ORA-06126: NETTCP: ORASRV unable to open network connection

Cause: The ORACLE server process was started but was unable to open the socket passed to it by TCPSRV.

Action: Contact your customer support representative.

ORA-06127: NETTCP: unable to change username

Cause: The host's SQL*Net TCP/IP server could not establish a PROXY LOGIN connection because the client username is unknown (to the host OS).

Action: Create new user account on host.

ORA-06128: NETTCP: unable to create mailbox

Cause: The host's SQL*Net TCP/IP server was unable to create a mailbox (needed for IPC communication with the ORACLE server process). See the SQL*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

ORA-06129: NETTCP: unable to transfer socket ownership to ORASRV

Cause: The host's SQL*Net TCP/IP server was unable to transfer the network communication handle to the ORACLE server process. See the SQL*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

ORA-06130: NETTCP: host access denied

Cause: The host's SQL*Net TCP/IP server rejected this connection request because the client node does not have access privilege - as determined by the contents of the Valid Node Table (VNT), a component of the host's CONFIG.ORA.

Action: To grant access, add appropriate entry to the host's VNT.

ORA-06131: NETTCP: user access denied

Cause: The host's SQL*Net TCP/IP server rejected this connection request because the client user(name) does not have access privilege - as determined by the contents of the Username Mapping Table (UMT), a component of the host's CONFIG.ORA.

Action: To grant access, add appropriate entry to the host's UMT.

ORA-06132: NETTCP: access denied, wrong password

Cause: The host SQL*Net TCP/IP server rejected this connection request because the client password did not match the host password.

Action: To grant access, get passwords in sync.

ORA-06133: NETTCP: file not found

Cause: The host's SQL*Net TCP/IP server could not find the SID mapping file (specified in CONFIG.ORA) associated with this connection request.

Action: Check CONFIG.ORA for spelling; make correct entry.

ORA-06134: NETTCP: file access privilege violation

Cause: The host's SQL*Net TCP/IP server did not have READ/ EXECUTE permission for the SID mapping file (specified in CONFIG.ORA) associated with this connection request.

Action: Change protection on SID mapping file.

ORA-06135: NETTCP: connection rejected; server is stopping

Cause: The host's SQL*Net TCP/IP server rejected this connection request because it is in the process of stopping.

Action: Re-start SQL*Net TCP/IP server.

ORA-06136: NETTCP: error during connection handshake

Cause: Network I/O failure occurred while communicating with the host's SQL*Net TCP/IP server. See the SQL*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

ORA-06137: NETTCP: error during connection handshake

Cause: Network I/O failure occurred while communicating with the host's SQL*Net TCP/IP server. See the SQL*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

ORA-06138: NETTCP: error during connection handshake

Cause: Network I/O failure occurred while communicating with the host's SQL*Net TCP/IP server. See the SQL*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

ORA-06140: NETTCP: no such user

Cause: A proxy login connect attempt failed because the client username has no counterpart on the host.

Action: n/a

ORA-06141: NETTCP: no privilege for user

Cause: A proxy login connect attempt failed because the SQL*Net TCP/IP server had insufficient privileges to access the proxy account.

Action: Change account protection; change server privileges.

ORA-06142: NETTCP: error getting user information

Cause: A proxy login connect attempt failed because the SQL*Net TCP/IP server was unable to access the proxy account. See the SQL*Net TCP/IP server log file for more details.

Action: Contact your customer support representative.

ORA-06143: NETTCP: maximum connections exceeded

Cause: The connect failed because the maximum concurrent connections supported by the host's SQL*Net TCP/IP server has already been reached.

Action: Wait for a short period and re-try.

ORA-06144: NETTCP: SID (database) is unavailable

Cause: The database administrator on the host has varied the SID offline.

Action: Wait for it to be varied back on-line.

ORA-06145: NETTCP: unable to start ORASRV: images not installed

Cause: The host's SQL*Net TCP/IP server was unable to start the ORACLE server process because the ORACLE protected images were not installed.

Action: Install the images.

ORA-06200: TWOTASK: connect failed, can't create mailbox

ORA-06201: TWOTASK: connect failed, can't attach to mailbox

ORA-06202: TWOTASK: connect failed, can't spawn ORASRV process

ORA-06203: TWOTASK: connect failed, handshake failure

ORA-06204: TWOTASK: connect failed, can't access ORASRV2.COM

ORA-06205: TWOTASK: connect failed, can't create logical name

ORA-06206: TWOTASK: message receive failure

ORA-06207: TWOTASK: message send failure

ORA-06208: TWOTASK: invalid login (connect) string

ORA-06209: TWOTASK: connect failed, mailbox already exists

ORA-06210: TWOTASK: connect failed, ORASRV exited unexpectedly

ORA-06211: TWOTASK: connect failed, timeout waiting for ORASRV

ORA-06212: TWOTASK: connect failed, logical name table is full

ORA-06213: TWOTASK: connect failed

ORA-06214: TWOTASK: connect failed, insufficient quotas to create ORASRV

ORA-06215: TWOTASK: connect failed, ORASRV protected image not installed

ORA-06216: TWOTASK: connect failed, can't find ORASRV image file

ORA-06250: NETNTT: cannot allocate send and receive buffers

Cause: Two-task driver could not allocate data buffers.

Action: There is insufficient memory to run your program. Kill off other processes to free up memory.

ORA-06251: NETNTT: cannot translate address file name

Cause: ORACLE_HOME environment variable not set.

Action: Make sure that the ORACLE_HOME environment variable has been properly set and exported.

ORA-06252: NETNTT: cannot open address file

Cause: The NTT two-task driver could not open a file containing address information.

Action: Make sure that the ORACLE_HOME environment variable has been properly set and exported. Make sure the instance you are attempting to connect to is actually up and running.

ORA-06253: NETNTT: cannot read arguments from address file

Cause: The NTT two-task driver could not read addressing information from its addressing file.

Action: Make sure that the ORACLE_HOME environment variable has been properly set and exported. Make sure the instance you are attempting to connect to is actually up and running.

ORA-06254: NETNTT: cannot share connection to cube

Cause: The NTT two-task driver could not share a connection to the cube.

Action: Make sure that the ORACLE_HOME environment variable has been properly set and exported. Make sure the instance you are attempting to connect to is actually up and running.

ORA-06255: NETNTT: cannot read pid of remote process

Cause: An error occurred while reading the NTT communications link.

Action: Contact your customer support representative.

ORA-06256: NETNTT: remote fork failed

Cause: The Oracle listener process on the cube could not fork off a shadow process.

Action: The instance you are trying to connect to probably doesn't have enough memory to run another shadow process. Ask someone else to log off, or connect to a different instance.

ORA-06257: NETNTT: cannot send command line to shadow process

Cause: An error occurred while writing the NTT communications link.

Action: Contact your customer support representative.

ORA-06258: NETNTT: cannot allocate context area

Cause: Two-task driver could not allocate data buffers.

Action: There is insufficient memory to run your program. Kill off other processes to free up memory.

ORA-06259: NETNTT: cannot read from remote process

Cause: An error occurred while reading the NTT communications link.

Action: Contact your customer support representative.

ORA-06260: NETNTT: cannot write to remote process

Cause: An error occurred while writing the NTT communications linke.

Action: Contact your customer support representative.

ORA-06261: NETNTT: nrange() failed

Cause: The call to 'nrange()' failed while attempting to establish a connection.

Action: Contact your customer support representative.

ORA-06262: NETNTT: nfconn() failed

Cause: The call to 'nfconn()' failed while attempting to establish a connection.

Action: Contact your customer support representative.

ORA-06263: NETNTT: out of memory in pi_connect

Cause: Two-task driver could not allocate data buffers.

Action: There is insufficient memory to run your program. Kill off other processes to free up memory.

ORA-06264: NETNTT: data protocol error

Cause: The NTT two-task driver received an unexpected message type."

Action: Contact your customer support representative.

ORA-06265: NETNTT: break protocol error

Cause: The NTT two-task driver received an unexpected message type."

Action: Contact your customer support representative.

ORA-06266: NETNTT: bad write length

Cause: The NTT two-task driver failed on an internal consistency check.

Action: Contact your customer support representative.

ORA-06267: NETNTT: bad state

Cause: The NTT two-task driver failed on an internal consistency check.

Action: Contact your customer support representative.

ORA-06268: NETNTT: cannot read /etc/oratab

Cause: The NTT two-task driver could not read configuration information from /etc/oratab.

Action: Make sure /etc/oratab exists and is readable. This error may occur if the file is incorrectly formatted. It also may occur if the driver has run out of memory.

ORA-06300: IPA: Disconnect failure

Cause: A fatal error occurred during the disconnect from the server. This was probably caused by inaccessible message queues.

Action: If there is no message queue, restart the SQL*Net IPA servers using ipactl. Otherwise contact your customer support representative.

ORA-06301: IPA: Cannot allocate driver context

Cause: The memory pool is exhausted.

Action: Check the circumstances and try to allocate less memory in your program or adjust the init parameters in your INIT.ORA file and retry.

ORA-06302: IPA: Cannot connect to remote host

Cause: The cause may be one of the following: - there is no ADI server defined to reflect a connection to the specified host. - the remote host is not known by the local system. - the ORACLE kernel on the remote host is not generated with the IPA driver

Action: Check sequentially for the above causes and eliminate the actual cause found.

ORA-06303: IPA: Message send error

Cause: The SQL*Net IPA driver could not write the message into the message queue.

Action: Make sure that the message queue exists and is accessible. If necessary rerun ipactl.

ORA-06304: IPA: Message receive error

Cause: The SQL*Net IPA driver could not read a message from the message queue.

Action: Make sure that the message queue exists and is accessible. If necessary rerun ipactl.

ORA-06305: IPA: Illegal message type

Cause: The communication between user and ORACLE is out of synchronization. This message should not normally be issued.

Action: Contact your customer support representative.

ORA-06306: IPA: Message write length error

Cause: The IPA driver tried to write a message in the queue that was too big for the queue.

Action: Contact your customer support representative.

ORA-06307: IPA: Cannot reset connection

Cause: A fatal error occurred during the resetting of the connection.

Action: Contact your customer support representative.

ORA-06308: IPA: No more connections available

Cause: You have exhausted all your connections.

Action: Try again when some of the current users have logged off.

ORA-06309: IPA: No message queue available

Cause: The SQL*Net IPA servers have not been started.

Action: Run ipactl.

ORA-06310: IPA: Environment variable(s) not set

Cause: Environment variable(s) not set correctly.

Action: Check and correct.

ORA-06311: IPA: Maximum number of servers reached

Cause: Maximum number of servers reached.

Action: Shutdown and restart with an increased maximum number of servers. Note that database links consume one server per link. Be sure to start up enough servers to support database links.

ORA-06312: IPA: Incorrect outgoing service name supplied

Cause: Incorrect outgoing service name supplied.

Action: Check and correct the service name.

ORA-06313: IPA: Shared memory failed to initialise

Cause: The shared memory has not been set up correctly.

Action: Contact your system manager.

ORA-06314: IPA: Event set up failure

Cause: Fatal interprocess communication error.

Action: Contact your system manager.

ORA-06315: IPA: Invalid connect string

Cause: The connect string is malformed.

Action: Check and correct.

ORA-06316: IPA: Invalid database SID

Cause: The SID is unknown at the remote side.

Action: Either the database does not exist, is not running, or there are no reserved servers for that SID.

ORA-06317: IPA: Local maximum number of users exceeded

Cause: The maximum number of simultaneous users of SQL*Net IPA has been exceeded on the local side.

Action: Wait for free connections to become available. If the problem persists, contact your system manager.

ORA-06318: IPA: Local maximum number of connections exceeded

Cause: The maximum number of simultaneous connections that SQL*Net IPA can handle to different hosts has been exceeded on the local side.

Action: Wait for free connections to become available. If the problem persists, contact your system manager.

ORA-06319: IPA: Remote maximum number of users exceeded

Cause: The maximum number of simultaneous users of SQL*Net IPA has been exceeded on the remote side.

Action: Wait for free connections to become available. If the problem persists, contact your system manager.

ORA-06320: IPA: Remote maximum number of connections exceeded

Cause: The maximum number of simultaneous connections that SQL*Net IPA can handle from different hosts has been exceeded on the remote side.

Action: Wait for free connections to become available. If the problem persists, contact your system manager.

ORA-06321: IPA: Cannot reach the remote side

Cause: There has been a timeout on an attempt to connect to a remote server the reason for which is most likely to be the remote SQL*Net IPA software is not running. An alternative reason could be that the remote initiator service name is incorrect.

Action: Check and start the remote SQL*Net software. Check that it is started with the correct service names supplied.

ORA-06322: IPA: Fatal shared memory error

Cause: An internal error has occurred in the shared memory handling.

Action: Contact customer support.

ORA-06323: IPA: Cause event error

Cause: Fatal interprocess communication error.

Action: Contact your system manager.

ORA-06400: NETCMN: No default host string specified

Cause: There was no default host string specified in the configuration and the user didn't specify any explicit connect string.

Action: Either reconfigure the system specifying a default connect string or use an explicit connect string.

ORA-06401: NETCMN: invalid driver designator

Cause: The login (connect) string contains an invalid driver designator.

Action: Correct the string and re-submit.

ORA-06402: NETCMN: error receiving break message

Cause: Error occurred while attempting to read a break message.

Action: Contact your customer support representative.

ORA-06403: Unable to allocate memory.

Cause: System unable to allocate needed virtual memory.

Action: Configure more memory, reduce load, or simply try again.

ORA-06404: NETCMN: invalid login (connect) string

Cause: Syntax error in login string.

Action: Correct string and re-submit.

ORA-06405: NETCMN: reset protocol error

Cause: Unable to reset out of break state.

Action: Contact your customer support representative.

ORA-06406: NETCMN: error sending break message

Cause: Error occurred while attempting to send a break message.

Action: Contact your customer support representative.

ORA-06407: NETCMN: unable to set up break handling environment

Cause: Error occurred while attempting to set up asynchronous handlers for incoming, out-of-band break messages.

Action: Contact your customer support representative.

ORA-06408: NETCMN: incorrect message format

Cause: Message from partner contains bad header.

Action: Contact your customer support representative.

ORA-06413: Connection not open.

Cause: Unable to establish connection.

Action: Use diagnostic procedures to ascertain exact problem.

ORA-06416: NETCMN: error on test

Cause: Error occurred while testing I/O status of the network connection.

Action: Contact your customer support representative.

ORA-06419: NETCMN: server can not start oracle

Cause: The remote server was unable to start an ORACLE process on behalf of the client.

Action: Make sure permissions on the remote ORACLE program are correctly set. Contact your system administrator.

ORA-06420: NETCMN: SID lookup failure

Cause: From the remote host's server: the database SID, specified in the login (connect) string, was not recognized.

Action: Add the appropriate SID entry to the CONFIG.ORA or oratab file on the remote host (restarting the remote server may be needed).

ORA-06421: NETCMN: Error detected in the read-in data

Cause: Error found during recomputation of checksum or CRC.

Action: Possible hardware failures of communication nodes. Contact system administrator immediately.

ORA-06422: NETCMN: Error in sending data

Cause: Unable to transmit data to remote host.

Action: Try reconnect to remote host, and contact your system administrator.

ORA-06423: NETCMN: Error in receiving data

Cause: Unable to receive data from remote host.

Action: Try reconnect to remote host, and contact your system administrator.

ORA-06430: ssaio: Seals do not match

Cause: A function was called with an invalid argument.

Action: Contact your Oracle Customer Support Representative.

ORA-06431: ssaio: Invalid Block number

Cause: The file block number is out of range of the file. The additional information returns the block number.

Action: Verify that the block number is correct. Run dbfsize and check if the block number is in that range. Contact your Oracle Customer Support Representative.

ORA-06432: ssaio: Buffer Not Aligned

Cause: The I/O buffer was not aligned on a 2K boundary.

Action: Contact your Oracle Customer Support Representative.

ORA-06433: ssaio: LSEEK error, unable to seek to requested block.

Cause: The additional information returns the block number

Action: Look up the additional information returned in your operating system reference manual. Verify that the block number is correct.

ORA-06434: ssaio: read error, unable to read requested block from database file.

Cause: The read system call returned an error.

Action: The additional information indicates the block number. Look up the additional information returned in your operating system manual.

ORA-06435: ssaio: write error, unable to write requested block to database file.

Cause: The write system call returned an error.

Action: The additional information indicates the block number. Look up the additional information returned in your operating system manual.

ORA-06436: ssaio: asynchronous I/O failed due to incorrect parameters.

Cause: The Asynchronous I/O system call returned an error.

Action: The additional information indicates the block number. Look up the additional information returned in your operating system manual.

ORA-06437: ssaio: the asynchronous write was unable to write to the database file.

Cause: The Asynchronous I/O system call returned an error.

Action: The additional information indicates the block number. Look up the additional information returned in your operating system manual.

ORA-06438: ssaio: the asynchronous read was unable to read from the database file.

Cause: The Asynchronous I/O system call returned an error.

Action: The additional information indicates the block number. Look up the additional information returned in your operating system manual.

ORA-06439: ssaio: the asynchronous write returned incorrect number of bytes

Cause: This write call may have been truncated. The additional information returns the block number and number of bytes.

Action: Verify that the block number and the number of bytes written are correct.

ORA-06440: ssaio: the asynchronous read returned incorrect number of bytes

Cause: This read call may have been truncated. The additional information returns the block number and number of bytes.

Action: Verify that the block number and the number of bytes read are correct.

ORA-06441: ssvwatev: Incorrect parameter passed to function call

Cause: Either the ORACLE process id, or wait time or event ID is invalid.

Action: The additional information indicates the process id, time and event id.

ORA-06442: ssvwatev: Failed with unexpected error number.

Cause: Some system problems may exist on your system, please check error logs.

Action: The additional information indicates the error number. Look up the additional information returned in your operating system manual.

ORA-06443: ssvpstev: Incorrect parameter passed to function call

Cause: An invalid event ID is passed in to this routine.

Action: The additional information indicates the event id.

ORA-06444: ssvpstev: Failed with unexpected error number.

Cause: Some system problems may exist on your system, please check error logs.

Action: The additional information indicates the error number. Look up the additional information returned in your operating system manual.

ORA-06445: ssvpstevrg: Incorrect parameters passed to function call

Cause: An invalid event id, or the low and high event ID do not exist.

Action: The additional information indicates the error number. It also contains the event id, low boundary and high boundary.

ORA-06446: ssvpstevrg: Failed with unexpected error number.

Cause: Some system problems may exist on your system, please check error logs.

Action: The additional information indicates the error number. Look up the additional information returned in your operating system manual.

ORA-06447: ssvpstp: Incorrect parameter passed to function call

Cause: Invalid oracle process ID is passed in to this routine.

Action: The additional information indicates the process id.

ORA-06448: ssvpstp: Failed with unexpected error number.

Cause: Some system problems may exist on your system, please check error logs.

Action: The additional information indicates the error number. Look up the additional information returned in your operating system manual.

ORA-06449: The list IO or the sysvndor is not installed.

Cause: ORACLE tries to use the sysvndor interface (INIT.ORA parameter use_sysvndor=true) but the UNIX kernel does not have the ORACLE sysvndor interface linked in.

Action: Set use_sysvndor=false in INIT.ORA, if you don't want to use this interface or link the UNIX kernel with this interface so that ORACLE can use it.

ORA-06500: PL/SQL: storage error

Cause: PL/SQL was unable to allocate additional storage. This message normally appears with an ORA-4030 or ORA-4031 error which gives additional information. Sometimes this error can be caused by runaway programs.

Action: 1) Ensure there are no issues or bugs in your PL/SQL program which are causing excessive amounts of memory to be used. 2) Programmatically cause unused

objects to be freed (e.g. by setting them to NULL). 3) Increase the amount of shared or process memory (as appropriate) available to you.

ORA-06501: PL/SQL: program error

Cause: This is an internal error message. An error has been detected in a PL/SQL program.

Action: Contact Oracle Support Services.

ORA-06502: PL/SQL: numeric or value errorstring

Cause: An arithmetic, numeric, string, conversion, or constraint error occurred. For example, this error occurs if an attempt is made to assign the value NULL to a variable declared NOT NULL, or if an attempt is made to assign an integer larger than 99 to a variable declared NUMBER(2).

Action: Change the data, how it is manipulated, or how it is declared so that values do not violate constraints.

ORA-06503: PL/SQL: Function returned without value

Cause: A call to PL/SQL function completed, but no RETURN statement was executed.

Action: Rewrite PL/SQL function, making sure that it always returns a value of a proper type.

ORA-06504: PL/SQL: Return types of Result Set variables or query do not match

Cause: Number and/or types of columns in a query does not match declared return type of a result set variable, or declared types of two Result Set variables do not match.

Action: Change the program statement or declaration. Verify what query the variable actually refers to during execution.

ORA-06505: PL/SQL: variable requires more than 32767 bytes of contiguous memory

Cause: A PL/SQL variable was declared with a constraint which required more than 32767 bytes of memory. PL/SQL does not currently support allocations of contiguous memory greater than 32767 bytes.

Action: Consider reducing the constraint in the variable declaration. If that is not possible, try changing the database or national character set to such, that requires less memory for the same constraint. Note: changing the character set will impact execution of all PL/SQL code.

ORA-06508: PL/SQL: could not find program unit being calledstring

ORA-06509: PL/SQL: ICD vector missing for this package

ORA-06510: PL/SQL: unhandled user-defined exception

Cause: A user-defined exception was raised by PL/SQL code, but not handled.

Action: Fix the problem causing the exception or write an exception handler for this condition. Or you may need to contact your application administrator or DBA.

ORA-06511: PL/SQL: cursor already open

Cause: An attempt was made to open a cursor that was already open.

Action: Close cursor first before reopening.

ORA-06512: at *stringline string*

Cause: Backtrace message as the stack is unwound by unhandled exceptions.

Action: Fix the problem causing the exception or write an exception handler for this condition. Or you may need to contact your application administrator or DBA.

ORA-06513: PL/SQL: index for PL/SQL table out of range for host language array

Cause: An attempt is being made to copy a PL/SQL table to a host language array. But an index in the table is either less than one or greater than the maximum size of the host language array. When copying PL/SQL tables to host language arrays, the table entry at index 1 is placed in the first element of the array, the entry at index 2 is placed in the second element of the array, etc. If an table entry has not been assigned then the corresponding element in the host language array is set to null.

Action: Increase size of host language array, or decrease size of PL/SQL table. Also make sure that you don't use index values less than 1.

ORA-06514: PL/SQL: The remote call cannot be handled by the server

Cause: The remote call has parameters that are cursor variables or lob variables. This cannot be handled by stored procedures on your server.

Action: Avoid using cursor variables or lob variables as parameters for stored procedures on this server or upgrade your server to a version that supports this.

ORA-06515: PL/SQL: unhandled exception *string*

Cause: An exception was raised by PL/SQL code, but not handled. The exception number is outside the legal range of Oracle errors.

Action: Fix the problem causing the exception or write an exception handler for this condition. Or you may need to contact your application administrator or DBA.

ORA-06516: PL/SQL: the Probe packages do not exist or are invalid

Cause: A Probe operation, probably an attempt to initialize the ORACLE server to debug PL/SQL, could not be completed because the Probe packages were not loaded or have become invalid.

Action: DBA should load the Probe packages. This can be done by running the pload.sql script supplied with the RDBMS.

ORA-06517: PL/SQL: Probe error - *string*

Cause: An error occurred while passing a Probe operation to the server for execution.

Action: Refer to the entry for the embedded error message.

ORA-06518: PL/SQL: Probe version *string* incompatible with version *string*

Cause: The current version of Probe is incompatible with the version on the ORACLE server.

Action: Refer to the documentation to ensure that this degree of compatibility is supported.

ORA-06519: active autonomous transaction detected and rolled back

Cause: Before returning from an autonomous PL/SQL block, all autonomous transactions started within the block must be completed (either committed or rolled back). If not, the active autonomous transaction is implicitly rolled back and this error is raised.

Action: Ensure that before returning from an autonomous PL/SQL block, any active autonomous transactions are explicitly committed or rolled back.

----- 06520 through 06529 reserved
for Foreign function errors

ORA-06520: PL/SQL: Error loading external library

Cause: An error was detected by PL/SQL trying to load the external library dynamically.

Action: Check the stacked error (if any) for more details.

ORA-06521: PL/SQL: Error mapping function

Cause: An error was detected by PL/SQL trying to map the mentioned function dynamically.

Action: Check the stacked error (if any) for more details.

ORA-06522: *string*

Cause: ORA-06520 or ORA-065211 could stack this error with a system specific error string.

Action: This error string should give the cause for errors ORA-06520 or ORA-065211

ORA-06523: Maximum number of arguments exceeded

Cause: There is an upper limit on the number of arguments that one can pass to the external function.

Action: Check the port specific documentation on how to calculate the upper limit.

ORA-06524: Unsupported option : *string*

Cause: The option specified is an unsupported feature for external procedures.

Action: Correct the syntax in the external specification

ORA-06525: Length Mismatch for CHAR or RAW data

Cause: The length specified in the length variable has an illegal value. This can happen if you have requested requested a PL/SQL INOUT, OUT or RETURN raw variable to be passed as a RAW with no corresponding length variable. This error can also happen if there is a mismatch in the length value set in the length variable and the length in the orlvstr or orlraw.

Action: Correct the external procedure code and set the length variable correctly.

ORA-06526: Unable to load PL/SQL library

Cause: PL/SQL was unable to instantiate the library referenced by this referenced in the EXTERNAL syntax. This is a serious error and should normally not happen.

Action: Report this problem to customer support.

ORA-06527: External procedure SQLLIB error: *string*

Cause: An error occurred in sqllib during execution of a Pro* external procedure.

Action: The message text indicates the actual SQLLIB error that occurred. Consult the Oracle Error Messages and Codes manual for a complete description of the error message and follow the appropriate action.

ORA-06528: Error executing PL/SQL profiler

Cause: An error occurred in during execution of a PL/SQL profiler procedure.

Action: Check the stacked errors for more details.

ORA-06529: Version mismatch - PL/SQL profiler

Cause: The PL/SQL profiler package (dbmspb.sql, prvtpbp.plb) does not match the version of the code in the server implementing the profiler.

Action: Run the package profload.sql in \$ORACLE_HOME/rdbms/admin to load the correct version of the PL/SQL profiler packages

ORA-06530: Reference to uninitialized composite

Cause: An object, LOB, or other composite was referenced as a left hand side without having been initialized.

Action: Initialize the composite with an appropriate constructor or whole-object assignment.

ORA-06531: Reference to uninitialized collection

Cause: An element or member function of a nested table or varray was referenced (where an initialized collection is needed) without the collection having been initialized.

Action: Initialize the collection with an appropriate constructor or whole-object assignment.

ORA-06532: Subscript outside of limit

Cause: A subscript was greater than the limit of a varray or non-positive for a varray or nested table.

Action: Check the program logic and increase the varray limit if necessary.

ORA-06533: Subscript beyond count

Cause: An in-limit subscript was greater than the count of a varray or too large for a nested table.

Action: Check the program logic and explicitly extend if necessary.

ORA-06534: Cannot access Serially Reusable package *string*

Cause: The program attempted to access a Serially Reusable package in PL/SQL called from SQL context (trigger or otherwise). Such an access is currently unsupported.

Action: Check the program logic and remove any references to Serially Reusable packages (procedure, function or variable references) which might happen in PL/SQL called from sql context (trigger or otherwise).

ORA-06535: statement string in *string* is NULL or 0 length

Cause: The program attempted to use a dynamic statement string that was either NULL or 0 length.

Action: Check the program logic and ensure that the dynamic statement string is properly initialized.

ORA-06536: IN bind variable bound to an OUT position

Cause: The program attempted to bind an IN bind variable to a statement that was expecting an OUT bind variable at that position.

Action: Make sure that an OUT or IN OUT bind mode is specified for the bind argument.

ORA-06537: OUT bind variable bound to an IN position

Cause: The program attempted to bind an OUT bind variable to a statement that was expecting an IN bind variable at that position.

Action: Make sure that an IN or IN OUT bind mode is specified for the bind argument.

ORA-06538: statement violates *string* RESTRICT_REFERENCES pragma

Cause: The program attempted to execute a dynamic statement which does not meet the purity level specified (in the pragma RESTRICT_REFERENCES directive) for the module executing the statement.

Action: Ensure that the dynamic statement meets the purity level specified for the module executing the statement.

ORA-06539: target of OPEN must be a query

Cause: The program attempted to perform an OPEN cursor operation on a dynamic statement that was not a query.

Action: Ensure that the OPEN cursor operation is done on a dynamic query statement. ----- 06540 through 06549 reserved for pl/sql error handling

ORA-06540: PL/SQL: compilation error

Cause: A pl/sql compilation error occurred. However, the user generally will not see this error message. Instead, there will be accompanying PLS-nnnnn error messages.

Action: See accompanying PLS-nnnnn error messages.

ORA-06541: PL/SQL: compilation error - compilation aborted

Cause: A pl/sql compilation error occurred and the compilation was aborted; but the compilation unit was written out to the backing store. However, unlike ora-06545, the user generally will not see this error message. Instead, there will be accompanying PLS-nnnnn error messages.

Action: See accompanying PLS-nnnnn error messages.

ORA-06542: PL/SQL: execution error

ORA-06543: PL/SQL: execution error - execution aborted

ORA-06544: PL/SQL: internal error, arguments: [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*]

Cause: A pl/sql internal error occurred.

Action: Report as a bug; the first argument is the internal error number.

ORA-06545: PL/SQL: compilation error - compilation aborted

Cause: A pl/sql compilation error occurred and the compilation was aborted completely without the compilation unit being written out to the backing store. Unlike ora-06541, the user will always see this error along with the accompanying PLS-nnnnn error messages.

Action: See accompanying PLS-nnnnn error messages.

ORA-06546: DDL statement is executed in an illegal context

Cause: DDL statement is executed dynamically in illegal PL/SQL context. - Dynamic OPEN cursor for a DDL in PL/SQL - Bind variable's used in USING clause to

EXECUTE IMMEDIATE a DDL - Define variable's used in INTO clause to EXECUTE IMMEDIATE a DDL

Action: Use EXECUTE IMMEDIATE without USING and INTO clauses to execute the DDL statement.

ORA-06547: RETURNING clause must be used with INSERT, UPDATE, or DELETE statements

Cause: EXECUTE IMMEDIATE with a RETURNING clause is used to execute dynamic UPDATE, INSERT, or DELETE statements only.

Action: use RETURNING clause in EXECUTE IMMEDIATE for INSERT, UPDATE, or DELETE statements only. For other statements, use USING clause instead.

ORA-06548: no more rows needed

Cause: The caller of a pipelined function did not need more rows to be produced by the pipelined function.

Action: Do not catch the NO_DATA_NEEDED exception in an exception handling block.

ORA-06549: PL/SQL: failed to dynamically open shared object (DLL): *string:string*

Cause: One possible cause might be there are too many DLLs open at the same time.

Action: -----

ORA-06550: line *string*, column *string*:\n*nstring*

Cause: Usually a PL/SQL compilation error.

Action: n/a

ORA-06551: PL/SQL: Unhandled exception

ORA-06552: PL/SQL: *string*

ORA-06553: PLS-*string*: *string*

ORA-06554: package DBMS_STANDARD must be created before using PL/SQL

Cause: The DBMS specific extensions to PL/SQL's package "STANDARD" are in package "DBMS_STANDARD". This package must be created before using PL/SQL.

Action: Create package "DBMS_STANDARD". The source for this PL/SQL stored package is provided with the distribution.

ORA-06555: this name is currently reserved for use by user SYS

Cause: You tried to create a package named "STANDARD", "DBMS_STANDARD" or "DEBUG_IO". These are currently reserved for use by user SYS.

Action: Choose another name for your package.

ORA-06556: the pipe is empty, cannot fulfill the unpack_message request

Cause: There are no more items in the pipe.

Action: Check that the sender and receiver agree on the number and types of items placed on the pipe.

ORA-06557: null values are not allowed for any parameters to pipe icd's

Cause: Internal error from the dbms_pipe package.

Action: n/a

ORA-06558: buffer in dbms_pipe package is full. No more items allowed

Cause: The pipe buffer size has been exceeded.

Action: n/a

ORA-06559: wrong datatype requested, *string*, actual datatype is *string*

Cause: The sender put different datatype on the pipe than that being requested (package 'dbms_pipe'). The numbers are: 6 - number, 9 - char, 12 - date.

Action: Check that the sender and receiver agree on the number and types of items placed on the pipe.

ORA-06560: pos, *string*, is negative or larger than the buffer size, *string*

Cause: Internal error from the dbms_pipe package.

Action: n/a

ORA-06561: given statement is not supported by package DBMS_SQL

Cause: Attempting to parse an unsupported statement using procedure PARSE provided by package DBMS_SQL.

Action: Only statements which begin with SELECT, DELETE, INSERT, UPDATE, LOCK, BEGIN, DECLARE or << (PL/SQL label delimiter) are supported.

ORA-06562: type of out argument must match type of column or bind variable

Cause: Attempting to get the value of a column or a bind variable by calling procedure COLUMN_VALUE or VARIABLE_VALUE of package DBMS_SQL but the type of the given out argument where to place the value is different from the type of the column or bind variable that was previously defined by calling procedure DEFINE_COLUMN (for defining a column) or BIND_VARIABLE (for binding a bind variable) of package DBMS_SQL.

Action: Pass in an out argument of the correct type when calling procedure COLUMN_VALUE or VARIABLE_VALUE. The right type is the type that was provided when defining the column or binding the bind variable.

ORA-06563: name has too many parts

Cause: The name to be resolved was specified as one of the following: - With three parts (A.B.C) but the A.B parts resolved to an object that did not expose visible nested procedures; the C part could not be resolved. - With two parts (A.B) and the A part resolved to an object that did not expose visible nested procedures; the B part could not be resolved.

Action: Specify the valid name of an object or of a packaged procedure or function without specifying any additional trailing parts.

ORA-06564: object *string* does not exist

Cause: The named object could not be found. Either it does not exist or you do not have permission to access it.

Action: Create the object or get permission to access it.

ORA-06565: cannot execute *string* from within stored procedure

Cause: The named procedure cannot be executed from within a stored procedure, function or package. This function can only be used from pl/sql anonymous blocks.

Action: Remove the procedure from the calling stored procedure.

ORA-06566: invalid number of rows specified

Cause: An invalid number of rows was specified in a call to the procedure DEFINE_COLUMN in the package DBMS_SQL. For a given parsed statement in a given cursor, all columns must be defined to have the same number of rows, so all the calls to DEFINE_COLUMN must specify the same number of rows.

Action: Specify a number that matches that for previously defined columns.

ORA-06567: invalid number of values specified

Cause: An invalid number of values to be bound was specified in a call to the procedure BIND_VARIABLE in the package DBMS_SQL. In order to execute a given parsed statement in a given cursor, the same number of values must have been bound for all bind variables, so when EXECUTE is called, the latest calls to BIND_VARIABLE must have specified the same number of values to be bound for all bind variables.

Action: Make sure that the same number of values have been bound for all of the bind variables.

ORA-06568: obsolete ICD procedure called

Cause: An obsolete ICD procedure was called by a PL/SQL program. The PL/SQL program was probably written for an earlier release of RDBMS.

Action: Make sure that all PL/SQL programs have been upgraded to the latest release of the RDBMS. This can be accomplished by following upgrade instructions in the README file, or by running the catproc.sql script supplied with the RDBMS.

ORA-06569: Collection bound by bind_array contains no elements

Cause: A collection with zero elements was bound to a bind variable in a call to procedure BIND_ARRAY in the package DBMS_SQL. In order to execute a bind of a collection, the collection must contain at least one element. If no elements are present then at execute time there will be no value for this bind and the statement is meaningless.

Action: Fill the collection with the elements you want to bind and try the bind call again.

ORA-06570: shared pool object does not exist, cannot be pinned/purged

Cause: The specified shared pool shared cursor could not be found, therefore it cannot be pinned/purged.

Action: Make sure that a correct shared cursor name is given. Names are a string of the form 'HHHHHHHH,SDDDDDDDDDD' where the H's are an 8 digit hex number from the 'address' column of v\$sqlarea, and the D's are a 1 to 10 digit decimal number with an optional leading sign (from the 'hash_value' column) Remove the procedure from the calling stored procedure.

ORA-06571: Function *string* does not guarantee not to update database

Cause: There are two possible causes for this message: * A SQL statement references a packaged, PL/SQL function that does not contain a pragma that prevents the database from being updated. * A SQL statement references a stand-alone, PL/SQL function that contains an instruction to update the database.

Action: If the referenced function is a packaged, PL/SQL function: Recreate the PL/SQL function with the required pragma; be certain to include the 'Write No Database State' (WNDS) argument in the argument list of the pragma. If the referenced function is a stand-alone, PL/SQL function: Do not use the function.

ORA-06572: Function *string* has out arguments

Cause: A SQL statement references either a packaged, or a stand-alone, PL/SQL function that contains an OUT parameter in its argument list. PL/SQL functions referenced by SQL statements must not contain the OUT parameter.

Action: Recreate the PL/SQL function without the OUT parameter in the argument list.

ORA-06573: Function *string* modifies package state, cannot be used here

Cause: There are two possible causes for this message: * A SQL statement references a packaged, PL/SQL function that does not contain a pragma containing the 'Write no Package State' (WNPS). * A SQL statement references a stand-alone, PL/SQL function that modifies a package state. A stand-alone, PL/SQL function referenced by a SQL statement cannot modify a package state.

Action: If the function is a packaged, PL/SQL function: Recreate the function and include a pragma containing the 'Write no Package State' (WNPS). If the function is a stand-alone, PL/SQL function: Delete the function from the SQL statement.

ORA-06574: Function *string* references package state, cannot execute remotely

Cause: There are two possible causes for this message: * A remote, packaged function or a remote-mapped, local, packaged function that does not contain a pragma with the 'Write no Package State' (WNPS) and 'Read no Package State' (RNPS) arguments references a package state. * A remote, stand-alone function or a remote-mapped, local, stand-alone function contains a reference to a package state (reads or writes a package variable). Only local functions that are referenced in a SELECT list, VALUES clause of an INSERT statement, or SET clause of an UPDATE statement can modify a package state.

Action: If the function is a packaged function: Recreate the function and include a pragma containing the 'Write no Package State' (WNPS) and 'Read no Package State' (RNPS) arguments. If the function is a stand-alone function: Do not call the function.

ORA-06575: Package or function *string* is in an invalid state

Cause: A SQL statement references a PL/SQL function that is in an invalid state. Oracle attempted to compile the function, but detected errors.

Action: Check the SQL statement and the PL/SQL function for syntax errors or incorrectly assigned, or missing, privileges for a referenced object.

ORA-06576: not a valid function or procedure name

Cause: Could not find a function (if an INTO clause was present) or a procedure (if the statement did not have an INTO clause) to call.

Action: Change the statement to invoke a function or procedure

ORA-06577: output parameter not a bind variable

Cause: The argument corresponding to an IN/OUT or OUT parameter for a function or a procedure or a function return value in a CALL statement must be a bind variable.

Action: Change the argument to a bind variable

ORA-06578: output parameter cannot be a duplicate bind

Cause: The bind variable corresponding to an IN/OUT or OUT parameter for a function or a procedure or a function return value in a CALL statement cannot be a duplicate bind variable.

Action: Change the bind variable to be unique

ORA-06579: Bind variable not big enough to hold the output value

Cause: The bind variable specified by the user is not large enough to hold the output returned by the function or a procedure.

Action: Specify a bind variable of larger size.

ORA-06580: Hash Join ran out of memory while keeping large rows in memory

Cause: Hash Join reserves 3 slots (each slot size = DB_BLOCK_SIZE * HASH_JOIN_MULTIBLOCK_IO_COUNT) for a row. If a row is larger than that, this error will be raised.

Action: Increase HASH_JOIN_MULTIBLOCK_IO_COUNT so that each joined row fits in a slot. HASH_AREA_SIZE may also need to be increased.

ORA-06592: CASE not found while executing CASE statement

Cause: A CASE statement must either list all possible cases or have an else clause.

Action: Add all missing cases or an else clause.

ORA-06593: *string* is not supported with natively compiled PL/SQL modules

Cause: Specified feature is not yet supported for natively compiled PL/SQL modules yet.

Action: Recompile the relevant PL/SQL modules in non-native mode by setting the parameter `plsql_compiler_flags` to INTERPRETED.

ORA-06595: REF CURSOR parameters are not supported in forwarded RPC calls

Cause: An attempt was made to make a forwarded RPC call with a REF CURSOR parameter.

Action: Either call the remote function directly (i.e., not by way of forwarding), or move the remote function to a database where it can be called directly.

ORA-06596: object cannot be purged, object is permanently kept in shared pool

Cause: The specified object was permanently kept, therefore, cannot be purged.

Action: Use DBMS_SHARED_POOL.UNKEEP procedure to unkeep the object and then purge it.

ORA-06597: Failed to increase the session's call stack memory to *string* bytes at a depth of *string* calls. (The current maximum is *string* bytes.)

Cause: PL/SQL program execution used more call stack memory than permitted.

Action: * Ask your DBA to increase the maximum allowed call stack memory. *
Decrease the amount of call stack used by the program. This may be accomplished by using fewer, smaller local variables, or by limiting the depth of function call nesting.

ORA-06598: insufficient INHERIT PRIVILEGES privilege

Cause: An attempt was made to run an AUTHID CURRENT_USER function or procedure, or to reference a BEQUEATH CURRENT_USER view, and the owner of that function, procedure, or view lacks INHERIT PRIVILEGES privilege on the calling user.

Action: Either do not call the function or procedure or reference the view, or grant the owner of the function, procedure, or view INHERIT PRIVILEGES privilege on the calling user.

ORA-06599: unsupported LOB operation in RPC call

Cause: An attempt was made to perform certain large object (LOB) date type operations (for example, deep copying of a temporary or abstract LOB on the client side) while performing a remote procedural call (RPC). This is not currently supported.

Action: Perform the LOB operation in question before starting the RPC. Or, perform those LOB operations on the server side instead of the client side.

ORA-06600: LU6.2 Driver: SNA software is not loaded

Cause: The SNA software is not running.

Action: Start the SNA software and try again.

ORA-06601: LU6.2 Driver: Invalid database ID string

Cause: The database string in the connect was invalid.

Action: Provide a valid database string, as defined in documentation.

ORA-06602: LU6.2 Driver: Error allocating context area

Cause: Context area failure.

Action: Contact your local service representative.

ORA-06603: LU6.2 Driver: Error allocating memory

Cause: Operating system refused request for memory.

Action: Contact you local service representative.

ORA-06604: LU6.2 Driver: Unable to allocate session with remote LU

Cause: Allocate system call failed.

Action: Ensure that the SNA software is running and that sessions are free. If this is the case, then check your SNA configuration data for errors. You may have entered an incorrect parameter.

ORA-06605: LU6.2 Driver: Unexpected line turnaround

Cause: SNA software switched from send to receive unexpectedly.

Action: Check the SNA configuration data, particularly parameters associated with a session.

ORA-06606: LU6.2 Driver: Unexpected response from SNA

Cause: A parameter in an SNA call returned an unexpected value.

Action: Attempt to reproduce problem, debug and record the value of the 'what' data parameter at the time of error. Then contact your service representative.

ORA-06607: LU6.2 Driver: Reset occurred in send state

Cause: A reset was issued whilst in send state.

Action: Check the SNA LOG data, if relevent, for further information.

ORA-06608: LU6.2 Driver: Reset occurred in receive state

Cause: A reset was received from the partner whilst in receive state. This may be because the partner deallocated.

Action: Check the SNA LOG data, if relevent, for further information.

ORA-06610: LU6.2 Driver: Failed during deallocation

Cause: LU6.2 driver was unable to deallocate gracefully.

Action: Check the reason for deallocation. Consult the SNA LOG data.

ORA-06611: LU6.2 Driver: Request to send error

ORA-06612: LU6.2 Driver: Send data error

ORA-06613: LU6.2 Driver: Receive and wait error

ORA-06614: LU6.2 Driver: Receive Immediate error

ORA-06615: LU6.2 Driver: Send error

ORA-06616: LU6.2 Driver: Attach to LU failed

Cause: The SQL*Net LU6.2 driver was unable to attach to the LU specified in the connect string, or was unable to attach to the default LU.

Action: Check that the LU name specified in the connect string, or the default LU name if no LU was specified, is correctly configured and operational.

ORA-06617: LU6.2 Driver: Attach to PU failed

ORA-06618: LU6.2 Driver: Activation of subnetwork failed

ORA-06619: LU6.2 Driver: Unable to activate remote partner

ORA-06620: LU6.2 Driver: Invalid remote partner

ORA-06621: LU6.2 Driver: Allocation error

ORA-06622: LU6.2 Driver: Unable to attach to SNA

Cause: The SQL*Net LU6.2 driver could not attach to the SNA software on your machine. The most likely cause is that the SNA software is not operational.

Action: Check the status of the SNA software, ensure that it is operational and then try again.

ORA-06700: TLI Driver: incorrect message type from host

Cause: TLI received a message with an unrecognizable message type.

Action: Contact your customer support representative.

ORA-06701: TLI Driver: incorrect number of bytes written

Cause: TLI sent a message that was apparently successful, but the number of bytes transmitted did not match the number of bytes supplied to the driver.

Action: Contact your customer support representative.

ORA-06702: TLI Driver: cannot allocate context area

Cause: TLI could not allocate heap space for the context area.

Action: Contact your customer support representative.

ORA-06703: TLI Driver: send break message failed

Cause: TLI failed to send a break message across the connection.

Action: Contact your customer support representative.

ORA-06704: TLI Driver: receive break message failed

Cause: TLI failed to receive an expected break message.

Action: Contact your customer support representative.

ORA-06705: TLI Driver: remote node is unknown

Cause: TLI could not find your remote host information.

Action: Make sure you specified the hostname correctly on the command line. (Also, check your capitalization and spelling.)

ORA-06706: TLI Driver: service not found

Cause: TLI could not find service information for the specified service name.

Action: If you specified the service name on the command line or with the environment variable TLI_SERVER, make sure you specified it correctly. If the service name is not in the SERVICES file for your protocol, ask your system administrator to add it.

ORA-06707: TLI Driver: connection failed

Cause: TLI failed to establish the connection to a SQL*Net TCP/IP server due to an error encountered by the remote server, which has supplied a string describing the remote error.

Action: See the SQL*Net TCP/IP User's Guide section "orasrv Messages" for the specific cause and action.

ORA-06708: TLI Driver: message receive failure

Cause: TLI encountered an error receiving a message from the communication channel.

Action: Contact your customer support representative.

ORA-06709: TLI Driver: message send failure

Cause: TLI encountered an error sending a message across the communication channel.

Action: Contact your customer support representative.

ORA-06710: TLI Driver: send interrupt break message failed

Cause: TLI failed to send a break message while handling an interrupt signal from the user.

Action: Contact your customer support representative.

ORA-06711: TLI Driver: error on bind

Cause: TLI failed to assign a network address to the communication channel.

Action: Contact your customer support representative.

ORA-06712: TLI Driver: error on accept

Cause: TLI failed to accept a connection request from the client.

Action: Contact your customer support representative.

ORA-06713: TLI Driver: error on connect

Cause: TLI failed to connect the client to the remote server. The network line to the remote host may be down.

Action: Use other network login programs to make sure that the remote host is accessible.

ORA-06720: TLI Driver: SID lookup failure

Cause: The database SID supplied in the database login string was not recognized by the remote host.

Action: Ask your system administrator to add the appropriate SID entry to oratab on the remote host.

ORA-06721: TLI Driver: spurious client req

Cause: The remote TLI server received an undefined request.

Action: Contact your customer support representative.

ORA-06722: TLI Driver: connection setup failure

Cause: The remote TLI server rejected the connection request, and the client was unable to retrieve an error code or message.

Action: Contact your customer support representative.

ORA-06730: TLI Driver: unable to open clone device

Cause: TLI failed to open the Streams clone device associated with the transport provider.

Action: Contact your customer support representative.

ORA-06731: TLI Driver: cannot alloc t_call

Cause: TLI cannot allocate space for the client's connection information.

Action: Contact your customer support representative.

ORA-06732: TLI Driver: cannot alloc t_discon

Cause: TLI cannot allocate space for the client's disconnection information.

Action: Contact your customer support representative.

ORA-06733: TLI Driver: failed to receive disconnect

Cause: TLI failed to receive an expected disconnection message during connection release.

Action: Contact your customer support representative.

ORA-06734: TLI Driver: cannot connect

Cause: TLI failed to connect the client to the remote server.

Action: Check that the remote TLI server is running.

ORA-06735: TLI Driver: client failed to close error conn

Cause: TLI failed to properly close a connection after an error was received.

Action: Contact your customer support representative.

ORA-06736: TLI Driver: server not running

Cause: TLI timed out while attempting to connect to the remote TLI server.

Action: Check that the remote TLI server is running with the status utility for the transport provider you are using. If it is not, ask your system administrator to start it.

ORA-06737: TLI Driver: connection failed

Cause: TLI could not establish a connection to the remote TLI server.

Action: Check that the remote TLI server is running with the status utility for the transport provider you are using.

ORA-06741: TLI Driver: unable to open protocol device

Cause: The TLI server failed to open the Streams device associated with the transport provider.

Action: Contact your customer support representative.

ORA-06742: TLI Driver: cannot alloc t_bind

Cause: The TLI server cannot allocate space for its requested network address.

Action: Contact your customer support representative.

ORA-06743: TLI Driver: cannot alloc t_bind

Cause: The TLI server cannot allocate space for its actual network address.

Action: Contact your customer support representative.

ORA-06744: TLI Driver: listener cannot bind

Cause: The TLI server failed to assign the correct network address on which to listen for connections.

Action: Contact your customer support representative.

ORA-06745: TLI Driver: listener already running

Cause: The network address on which the TLI server awaits connection requests is in use, possibly because the server is already running.

Action: Ensure that the TLI server is not already running. If it is not running and this error message recurs, contact your customer support representative.

ORA-06746: TLI Driver: cannot alloc t_call

Cause: TLI cannot allocate space for the TLI server's connection information.

Action: Contact your customer support representative.

ORA-06747: TLI Driver: error in listen

Cause: The TLI server encountered an error while listening for connection requests.

Action: Contact your customer support representative.

ORA-06748: TLI Driver: cannot allocate t_discon

Cause: TLI cannot allocate space for the TLI server's disconnection information.

Action: Contact your customer support representative.

ORA-06749: TLI Driver: option not allowed across network

Cause: The requested TLI server command must be issued from the same host on which the server is running.

Action: Log in to the remote host and try again.

ORA-06750: TLI Driver: sync failed

Cause: The ORACLE process started by the TLI server was unable to synchronize its inherited connection.

Action: Contact your customer support representative.

ORA-06751: TLI Driver: bound addresses unequal

Cause: The osn check server address failed. The bound server address was not the same as the requested binding address.

Action: Contact your customer support representative.

ORA-06752: TLI: error in signal setup

Cause: A call to sigaction() returned with a system error.

Action: Contact your customer support representative.

ORA-06753: TLI Driver: name-to-address mapping failed

Cause: For SVR4, the netdir_getbyname() call failed for some unknown reason.

Action: Contact your customer service representative.

ORA-06754: TLI Driver: unable to get local host address

Cause: The name of the remote host to connect to was not specified, and the name of the local host cannot be retrieved from the HOSTS file.

Action: Contact your system administrator.

ORA-06755: TLI Driver: cannot close transport endpoint

Cause: The TLI server was unable to close a connection after passing it to an ORACLE process.

Action: Contact your customer support representative.

ORA-06756: TLI Driver: cannot open oratab

Cause: The TLI server could not open the file used to define the locations of remotely accessible databases.

Action: Ask your system administrator to check that the file exists and has the correct permissions.

ORA-06757: TLI Driver: server got bad command

Cause: The TLI server received an invalid command.

Action: Contact your customer support representative.

ORA-06760: TLI Driver: timeout reading orderly release

Cause: TLI was not able to retrieve an expected disconnect message while closing the communication channel.

Action: Contact your customer support representative.

ORA-06761: TLI Driver: error sending orderly release

Cause: TLI encountered an error sending a disconnect message closing the communication channel.

Action: Contact your customer support representative.

ORA-06762: TLI Driver: error reading orderly release

Cause: TLI encountered an error receiving an expected disconnect message while closing the communication channel.

Action: Contact your customer support representative.

ORA-06763: TLI Driver: error sending disconnect

Cause: TLI encountered an error sending a disconnect message closing the communication channel.

Action: Contact your customer support representative.

ORA-06764: TLI Driver: error reading disconnect

Cause: TLI was not able to retrieve an expected disconnect message while closing the communication channel.

Action: Contact your customer support representative.

ORA-06765: TLI Driver: error awaiting orderly release

Cause: TLI encountered an error awaiting a disconnect message while closing the communication channel.

Action: Contact your customer support representative.

ORA-06766: TLI Driver: close failed during release

Cause: TLI failed to close the communication channel after receiving a disconnect message.

Action: Contact your customer support representative.

ORA-06767: TLI Driver: alloc failed during release

Cause: TLI cannot allocate space for disconnection information while closing the communication channel.

Action: Contact your customer support representative.

ORA-06770: TLI Driver: error sending version

Cause: TLI encountered an error while sending its version information during connection establishment.

Action: Contact your customer support representative.

ORA-06771: TLI Driver: error reading version

Cause: TLI encountered an error while awaiting the expected version information during connection establishment.

Action: Contact your customer support representative.

ORA-06772: TLI Driver: error sending command

Cause: TLI encountered an error while sending a command message during connection establishment.

Action: Contact your customer support representative.

ORA-06773: TLI Driver: error reading command

Cause: TLI encountered an error while awaiting the expected command message during connection establishment.

Action: Contact your customer support representative.

ORA-06774: TLI Driver: error sending break mode

Cause: TLI encountered an error while sending break-mode message during connection establishment.

Action: Contact your customer support representative.

ORA-06775: TLI Driver: error reading break mode

Cause: TLI encountered an error while awaiting the expected break-mode message during connection establishment.

Action: Contact your customer support representative.

ORA-06776: TLI Driver: error sending parms

Cause: TLI encountered an error while sending the connection parameters during connection establishment.

Action: Contact your customer support representative.

ORA-06777: TLI Driver: error reading parms

Cause: TLI encountered an error while awaiting the expected connection parameter message during connection establishment.

Action: Contact your customer support representative.

ORA-06778: TLI Driver: error sending ccode

Cause: TLI encountered an error while sending the completion status message during connection establishment.

Action: Contact your customer support representative.

ORA-06779: TLI Driver: error reading ccode

Cause: TLI encountered an error while awaiting the expected completion status message during connection establishment.

Action: Contact your customer support representative.

ORA-06780: TLI Driver: rcv error code failed

Cause: TLI encountered an error while awaiting an expected error message during connection establishment.

Action: Contact your customer support representative.

ORA-06781: TLI Driver: error reading negotiation string

Cause: TLI encountered an error while awaiting the expected negotiation message during connection establishment.

Action: Contact your customer support representative.

ORA-06790: TLI Driver: poll failed

Cause: TLI was unable to poll the communication channel for possible incoming messages.

Action: Contact your customer support representative.

ORA-06791: TLI Driver: poll returned error event

Cause: TLI received an unexpected event while polling the communication channel for possible incoming messages.

Action: Contact your customer support representative.

ORA-06792: TLI Driver: server cannot exec oracle

Cause: The remote TLI server was unable to start an ORACLE process on behalf of the client.

Action: Note the operating system error message or number and contact your system administrator. The permissions on the remote ORACLE program may be set incorrectly.

ORA-06793: TLI Driver: server cannot create new process

Cause: The remote TLI server was unable to start an ORACLE process on behalf of the client.

Action: Note the operating system error message or number and contact your system administrator. The remote host may be unable to create any new processes due to a full process table.

ORA-06794: TLI Driver: shadow process could not retrieve protocol info

Cause: The ORACLE process either failed to allocate memory to store the protocol information record, or the protocol rejected the request for some unknown reason.

Action: Contact your customer support representative.

ORA-06800: TLI Driver: SQL*Net SPX client went away during reconnect

Cause: The client process was aborted by the system or the user, and was unable to complete the connection establishment with the server listener process.

Action: Determine cause of client exit, and reattempt connection.

ORA-06801: TLI Driver: listen for SPX server reconnect failed

Cause: An unknown event occurred on the client's listening socket.

Action: Contact your customer support representative.

ORA-06802: TLI Driver: could not open the /etc/netware/yellowpages file

Cause: The /etc/netware/yellowpages file does not exist, or is not readable by the TLI listener process.

Action: Insure the file exists and is readable. Make sure that the server machine's node name, network number, ethernet address, and listening socket number are encoded in the file.

ORA-06803: TLI Driver: the IPX device file could not be opened

Cause: The /dev/ipx file does not exist, or the driver has not been installed in the kernel correctly.

Action: Reinvoke the Oracle root installation. If problem continues, contact your customer support representative.

ORA-06804: TLI Driver: could not bind an IPX address at initialization

Cause: The IPX driver has not been correctly installed.

Action: Reinvoke the Oracle root installation. If problem continues, contact your customer support representative.

ORA-06805: TLI Driver: could not send datagram SAP packet for SPX

Cause: The socket endpoint for sending SAP packet was corrupted for some unknown reason.

Action: Contact your customer support representative.

ORA-06806: TLI Driver: could not complete protocol initialization for SPX

Cause: A step in the SPX/IPX protocol initialization failed.

Action: Check the previous error reported, and follow corrective action.

ORA-06807: TLI Driver: could not open ethernet device driver file

Cause: The file /dev/eth does not exist, or the driver it references could not be opened.

Action: The system's real ethernet device file, for example /dev/wd, for the Western Digital ethernet driver, should be linked to the file /dev/eth. If this has been done, insure that the ethernet driver has been installed by completing the TCP/IP installation on your system, and testing a connection. If problem continues, contact your customer support representative for a list of supported ethernet drivers.

ORA-06808: TLI Driver: could not link IPX and ethernet streams

Cause: Either the ethernet driver has not been installed in the system correctly, or the ethernet driver is not supported.

Action: Insure that the ethernet driver has been installed by completing the TCP/IP installation on your system, and testing a connection. If problem continues, contact your customer support representative for a list of supported ethernet drivers.

ORA-06809: TLI Driver: could not clear the IPX ethernet SAP at init

Cause: The IPX driver has not been correctly installed.

Action: Reinvoke the Oracle root installation. If problem continues, contact your customer support representative.

ORA-06810: TLI Driver: could not set the IPX ethernet SAP at init

Cause: The IPX driver has not been correctly installed.

Action: Reinvoke the Oracle root installation. If problem continues, contact your customer support representative.

ORA-06811: TLI Driver: could not set the IPX network number at init

Cause: The IPX driver has not been correctly installed, or the network number encoded in the `/etc/netware/yellowpages` file is invalid.

Action: The network number in the yellowpages file should match the four-byte network number of your Novell file server. If this is configured correctly, reinvoke the Oracle root installation. If problem continues, contact your customer support representative.

ORA-06812: TLI Driver: could not read the ethernet driver's node address

Cause: The ethernet driver is not installed correctly, or does not support this operation.

Action: Contact your customer support representative for a list of supported ethernet drivers.

ORA-06813: TLI Driver: the configured ethernet address is incorrect

Cause: The node address read from the ethernet driver does not match the value encoded in the `/etc/netware/yellowpages` file for this server.

Action: Confirm the correct ethernet node address for your LAN card, and enter this value in the yellowpages file.

ORA-06814: TLI Driver: the SPX device file could not be opened

Cause: The `/dev/nspxd` file does not exist, or the driver has not been installed in the kernel correctly.

Action: Reinvoke the Oracle root installation. If problem continues, contact your customer support representative.

ORA-06815: TLI Driver: could not link SPX and IPX streams

Cause: The SPX driver has not been correctly installed.

Action: Reinvoke the Oracle root installation. If problem continues, contact your customer support representative.

ORA-06816: TLI Driver: could not set the SPX SAP address

Cause: The SPX driver has not been correctly installed.

Action: Reinvoke the Oracle root installation. If problem continues, contact your customer support representative.

ORA-06817: TLI Driver: could not read the Novell network address

Cause: The file \$ORACLE_HOME/spx/address could not be opened for reading and writing.

Action: Make sure ORACLE_HOME is set, and the permissions on the ORACLE_HOME are read, write. If this file has been unintentionally deleted, run spxctl (net option) to reset the configured Novell network number for SQL*Net SPX.

ORA-06900: CMX: cannot read tns directory

Cause: CMX is not started on your system.

Action: Install and/or start CMX on your system.

ORA-06901: CMX: no local name assigned to local application

Cause: Local application oracmx has no local name assigned

Action: Enter unique local name for oracmx in the tns directory

ORA-06902: CMX: cannot attach to cmx subsystem

Cause: ccp-xxxx is not started

Action: start your ccp software on the communication controller

ORA-06903: CMX: cannot read transport address of remote application

Cause: remote application not entered in tns directory

Action: enter remote application in tns directory

ORA-06904: CMX: no transport address available for remote application

Cause: no local name assigned to remote application

Action: assign local name to remote application

ORA-06905: CMX: connect error

Cause: remote partner not listening

Action: make sure remote node has CMX installed and running make sure oracmx is running on remote host

ORA-06906: CMX: cannot get maximum packet size from CMX

Cause: internal error in CMX

Action: contact your customer support representative

ORA-06907: CMX: error during connect confirmation

Cause: remote partner aborted

Action: contact your customer support representative

ORA-06908: CMX: error during transfer of ORACLE_SID

Cause: remote partner aborted

Action: contact your customer support representative

ORA-06909: CMX: error during acknowledge of ORACLE_SID

Cause: remote partner aborted

Action: contact your customer support representative

ORA-06910: CMX: Cannot start oracle process on remote machine

Cause: oracle process not found or wrong mode (should be 4751)

Action: change /etc/oratab or set mode to 4751

ORA-06911: CMX: t_event returns ERROR

Cause: internal error in CMX

Action: contact your customer support representative

ORA-06912: CMX: write error in datarq

Cause: internal error in CMX

Action: contact your customer support representative

ORA-06913: CMX: error during redirection of connection

Cause: oracmx has been stopped, or user process has been aborted

Action: contact your customer support representative

ORA-06914: CMX: unexpected event during start of oracle

Cause: connect sequence out of sync

Action: contact your customer support representative

ORA-06915: CMX: unknown t_event in datarq

Cause: internal error in CMX

Action: contact your customer support representative

ORA-06916: CMX: error in data read (t_datain)

Cause: remote partner aborted

Action: contact your customer support representative

ORA-06917: CMX: error in data read (too many bytes read)

Cause: internal error in CMX

Action: contact your customer support representative

ORA-06918: CMX: T_NOEVENT during wait for read event

Cause: internal error in CMX

Action: contact your customer support representative

ORA-06919: CMX: error during write request (unknown event)

Cause: internal error in CMX

Action: contact your customer support representative

ORA-06920: CMX: getbrkmsg illegal datatype

Cause: received packets are corrupted

Action: contact your customer support representative

ORA-06921: CMX: getdatmsg illegal datatype

Cause: received packets are corrupted

Action: contact your customer support representative

ORA-06922: CMX: bad write length

Cause: internal error in CMX

Action: contact your customer support representative

ORA-06923: CMX: illegal break condition

Cause: break handling out of sync

Action: contact your customer support representative

ORA-06924: CMX: wrong break message length

Cause: received packets are corrupted

Action: contact your customer support representative

ORA-06925: CMX: disconnect during connect request

Cause: partner is not responding

Action: make sure partner is up and running and reachable

ORA-06926: CMX: T_ERROR during read data

Cause: internal error in CMX

Action: contact your customer support representative

ORA-06927: CMX: T_DATAIN received before all data written

Cause: internal error in CMX

Action: contact your customer support representative

ORA-06928: CMX: wrong ORACLE_SID

Cause: ORACLE_SID is not entered in remote oratab

Action: add ORACLE_SID to remote oratab

ORA-06929: CMX: error when sending ORACLE_SID

Cause: internal error in CMX

Action: contact your customer support representative

ORA-06930: CMX: error when checking ORACLE_SID

Cause: internal error in CMX

Action: contact your customer support representative

ORA-06931: CMX: error during read_properties for server

Cause: internal error in CMX

Action: contact your customer support representative

ORA-06932: CMX: error in local name

Cause: internal error in CMX

Action: contact your customer support representative

ORA-06933: CMX: error during attach

Cause: internal error in CMX

Action: contact your customer support representative

ORA-06950: No error

Cause: SQL*Net AppleTalk error codes base. This is not an error.

Action: None

ORA-06951: Operating system call error

Cause: AppleTalk API received error in VMS system service.

Action: Contact Oracle Customer Support representative.

ORA-06952: Remote end of the communication issued a forward-reset packet.

Cause: Peer program may have aborted

Action: Investigate network problems and try again.

ORA-06953: Not enough virtual memory

Cause: Not enough memory available.

Action: Check VMS process quotas and/or sysgen parameters

ORA-06954: Illegal file name

Cause: Erroneous file name

Action: Check path name for server output file, or SQL*Net Appletalk Logical names and symbols.

ORA-06955: Number of database servers exceed limit

Cause: Too many database connections.

Action: Check ATKSRV_MAXCONparameter in configuration file.

ORA-06956: Failed to get local host name

Cause: Unable to get Appletalk host name.

Action: Check Appletalk configuration.

ORA-06957: No SID is currently available

Cause: Incoming SQL*Net connection specified invalid SID name.

Action: Specify correct SID in connect string and retry.

ORA-06958: Failed to access configuration file

Cause: Unable to access CONFIG.ATK

Action: Check file protections.

ORA-06959: Buffer I/O quota is too small

Cause: Buffered I/O quota exceeded.

Action: Increase BIOlm using AUTHORIZE utility and retry.

ORA-06960: Failed to access log file

Cause: SQL*Net Appletalk listener could not create log file.

Action: Check directory path and protections.

ORA-06961: Insufficient privilege for attempted operation

ORA-06970: X.25 Driver: remote host is unknown

Cause: Host name specified in the login (connect string) is unknown.

Action: Check spelling; make sure name is in the X.25 HOST file.

ORA-06971: X.25 Driver: error while receiving data

ORA-06972: X.25 Driver: error while sending data

ORA-06973: X.25 Driver: invalid buffer size

Cause: The buffer size specified in the login string must be between 5 and 4096.

Action: Re-submit with valid buffer size.

ORA-06974: X.25 Driver: SID lookup failure

Cause: From the remote host's SQL*Net X.25 server: the database SID, specified in the login (connect) string, was not recognized.

Action: Add the appropriate SID entry to the CONFIG.ORA file on the remote host (and restart the SQL*Net X.25 server).

ORA-06975: X.25 Driver: connect to host failed

Cause: Connection attempt to remote host has failed. Probably means that the SQL*Net X.25 server on the remote host is not up, or the host itself is not up.

Action: Start the SQL*Net X.25 server process on the remote host.

ORA-06976: X.25 Driver: endpoint creation failure

Cause: Process open file quota probably exceeded.

Action: Contact your customer support representative.

ORA-06977: X.25 Driver: X.25 Level 2 failure

Cause: X.25 level 2 is down. X.25 link is not working.

Action: Run system checks to verify functioning of X.25 software. Contact your hardware vendor.

ORA-06978: X.25 Driver: Too many callback tries

Cause: Call back address probably same as called address.

Action: Verify that callback address and called address are different.

ORA-06979: X.25 Driver: server cannot start oracle

Cause: The remote X.25 server was unable to start an ORACLE process on behalf of the client.

Action: Make sure permissions on the remote ORACLE program are correctly set. Contact your system administrator.

ORA-07200: slsid: oracle_sid not set.

Cause: The environment variable \$(ORACLE_SID) is not set.

Action: Set ORACLE_SID environment variable.

ORA-07201: slhom: oracle_home variable not set in environment.

Cause: \$(ORACLE_HOME) environment variable not set.

Action: Set ORACLE_HOME.

ORA-07202: sltln: invalid parameter to sltln.

Cause: The sltln name translation routine was called with invalid arguments. The input, or output strings were either NULL or 0 length.

Action: Probable internal oracle error. Contact customer support.

ORA-07203: sltln: attempt to translate a long environment variable.

Cause: A string was passed to sltln containing a long environment variable. sltln accepts environment names of 30 or less characters.

Action: Shorten environment variable name to less than 30 characters.

ORA-07204: sltln: name translation failed due to lack of output buffer space.

Cause: The sltln routine is given a maximum length buffer to expand the name into. An overflow of this buffer occurred.

Action: Possible internal error. Check output buffer length stored in sercose[0]. Pathnames are limited to 255 characters.

ORA-07205: slgtd: time error, unable to obtain time.

Cause: Time() system call returned an error. Possible OS error.

Action: Check additional information returned. Contact customer support.

ORA-07206: slgtd: gettimeofday error, unable to obtain time.

Cause: Gettimeofday() system call returned an error. Possible OS error.

Action: Check additional information returned. Contact customer support.

ORA-07207: sigpidu: process ID string overflows internal buffer.

Cause: The sigpidu routine is given a maximum length buffer to hold process ID string. An overflow of this buffer occurred.

Action: Internal error. Contact customer support.

ORA-07208: sfwfb: failed to flush dirty buffers to disk.

Cause: The fsync system call returned an error. Possible OS error.

Action: Check additional information returned. Contact customer support.

ORA-07209: sfofi: file size limit was exceeded.

Cause: The size of the file to be opened exceeded the OS limit imposed on this process.

Action: Run osh to increase the file size limit.

ORA-07210: slcpu: getrusage error, unable to get cpu time.

Cause: Getrusage system call returned an error. Possible OS error.

Action: Check additional information returned. Contact customer support.

ORA-07211: slgcs: gettimeofday error, unable to get wall clock.

Cause: Gettimeofday system call returned an error. Possible OS error.

Action: Check additional information returned in OS reference manual. Contact customer support.

ORA-07212: slcpu: times error, unable to get cpu time.

Cause: times system call returned an error. Possible OS error.

Action: Check additional information returned. Contact customer support.

ORA-07213: slgcs: times error, unable to get wall clock.

Cause: times system call returned an error. Possible OS error.

Action: Check additional information returned in OS reference manual. Contact customer support.

ORA-07214: slgunm: uname error, unable to get system information.

Cause: uname system call returned an error. Possible OS error.

Action: Check additional information returned in OS reference manual. Contact customer support.

ORA-07215: slsget: getrusage error.

Cause: Getrusage system call returned an error. Possible OS error.

Action: Check additional information returned. Look for information in OS reference. Contact customer support.

ORA-07216: slghst: gethostname error, unable to get name of current host.

Cause: gethostname system call returned an error. Possible OS error.

Action: Check additional information returned in OS reference manual. Contact customer support.

ORA-07217: sltln: environment variable cannot be evaluated.

Cause: getenv call returned a null pointer.

Action: Set the environment variable and try again.

ORA-07218: slkhst: could not perform host operation

Cause: Unix system() call failed

Action: Examine system error message

ORA-07219: slspool: unable to allocate spooler argument buffer.

Cause: Malloc failed to allocate space to hold spooler arguments.

Action: Check additional information returned in OS reference manual. The process may have run out of heap space. Contact customer support.

ORA-07220: slspool: wait error.

Cause: Wait returned an error, when waiting for spool job to complete. Possible spooler program error.

Action: Check additional information returned. Refer to OS reference manual. Contact customer support.

ORA-07221: slspool: exec error, unable to start spooler program.

Cause: Exec failed when starting line printer spooler command. Likely that either the default line printer command, or ORACLE_LPPROG, is incorrectly set.

Action: Verify default line printer command and ORACLE_LPPROG are set correctly. Set ORACLE_LPPROG to working line printer spooler.

ORA-07222: slspool: line printer spooler command exited with an error.

Cause: The line printer spooler exited with a non-zero return value. This probably indicates an error in spooling file.

Action: Verify that line printer spooler is up. Verify that ORACLE_LPPROG, and ORACLE_LPARG are set properly. Check exit value returned as additional informatin.

ORA-07223: slspool: fork error, unable to spawn spool process.

Cause: Fork system call failed to create additional process. Probable resource limit reached.

Action: Check additional information returned. Retry operation. Contact system administrator.

ORA-07224: sfnfy: failed to obtain file size limit; errno = *string*.

Cause: The ulimit system call returned an error.

Action: Check errno and contact customer support.

ORA-07225: sldext: translation error, unable to expand file name.

Cause: Additional information returned is error returned from sltln.

Action: Check additional information.

ORA-07226: rtneco: unable to get terminal mode.

Cause: The ioctl call returned an error. Possible OS error.

Action: Check additional information for errno. Contact customer support.

ORA-07227: rtneco: unable to set noecho mode.

Cause: The ioctl call returned an error. Possible OS error.

Action: Check additional information for errno. Contact customer support.

ORA-07228: rtecho: unable to restore terminal to echo mode.

Cause: The ioctl call returned an error. Possible OS error.

Action: Check additional information for errno. Contact customer support.

ORA-07229: slcpuc: error in getting number of CPUs.

Cause: error in mpcntl system call

Action: check errno and contact system administrator

ORA-07230: slemcr: fopen error, unable to open error file.

Cause: Fopen failed to open file.

Action: Try to determine which file was not opened. Check that file exists and is accessible.

ORA-07231: slemcc: invalid file handle, seals do not match.

Cause: Function was called with an invalid argument. The file handle used was not obtained by slemcr.

Action: Internal error. Contact customer support.

ORA-07232: slemcc: fclose error.

Cause: An error was encountered when closing the file. Possible OS error.

Action: Contact system administrator.

ORA-07233: slemcw: invalid file handle, seals do not match.

Cause: Function was called with an invalid file handle. File handle was not obtained by slemcr.

Action: Internal error. Contact customer support.

ORA-07234: slemcw: fseek error.

Cause: Unable to seek to desired position in file. Possible OS error. Possible internal error.

Action: Verify that error message file is intact. Try to regenerate error message file. Contact customer support.

ORA-07235: slemcw: fwrite error.

Cause: Unable to write item to file. Possible OS error. Possible permissions problem.

Action: Retry operation.

ORA-07236: slemop: open error.

Cause: Unable to open error file. Possible permissions problem.

Action: Verify permission on error message file. Check additional information for errno.

ORA-07237: slemcl: invalid file handle, seals do not match.

Cause: Function was called with an invalid file handle. Handle was not obtained by previous call to slemop.

Action: Internal error.

ORA-07238: slemcl: close error.

Cause: Unable to close file. Possible OS error.

Action: Contact system administrator. Check additional information for errno.

ORA-07239: slemrd: invalid file handle, seals do not match.

Cause: Function was called with invalid file handle. Handle was not obtained by call to slemop.

Action: Internal error. Contact customer support.

ORA-07240: slemrd: seek error.

Cause: Unable to seek to desired position in file. Possible OS error.

Action: Check that error file is still intact. Verify space on device. Contact system administrator. Check additional information for errno.

ORA-07241: slemrd: read error.

Cause: Unable to read file. Possible OS error.

Action: Verify that error file is intact. Regenerate error message file. Contact customer support. Check additional information for errno.

ORA-07242: slembfn: translation error, unable to translate error file name.

Cause: Additional information indicates error returned from sltln.

Action: Check additional information.

ORA-07243: supplied buffer not big enough to hold entire line

Cause: supplied buffer was not big enough

Action: Internal error. Contact customer support. Additional information indicates how big the supplied buffer was.

ORA-07244: ssfcf: create file failed, file size limit reached.

Cause: An attempt was made to create a file that exceeds the process's file size limit.

Action: Run osh to raise the file size limit.

ORA-07245: sfccf: unable to lseek and write the last block.

Cause: An attempt was made to move and write to a bad device address.

Action: Check errno. Possible lack of space on device.

ORA-07246: sfofi: open error, unable to open database file.

Cause: sfofi returns an error.

Action: This is an oracle internal error.

ORA-07247: skgfrfms, skgfrnms: read error, unable to read block from database file

Cause: The ioctl() system call returned an error doing VOL_READ_MIRRORS.

Action: Check errno.

ORA-07248: sfwfb: write error, unable to write database block.

Cause: sfwfb returns an error.

Action: This is an oracle internal error.

ORA-07249: slsget: open error, unable to open /proc/pid.

Cause: The open() system call returned an error.

Action: Check that /proc has the right permissions.

ORA-07250: spcre: semget error, unable to get first semaphore set.

Cause: An error occurred when trying to get first semaphore set.

Action: Check errno. Verify that system is configured to have semaphores. Verify that enough semaphores are available. Additional information indicates how many semaphores were requested.

ORA-07251: spcre: semget error, could not allocate any semaphores.

Cause: Semget failed to even allocate a single semaphore. Either they are all in use or the system is not configured to have any semaphores.

Action: Check to see if all semaphores are in use. Check to see if system is configured to have semaphores. Check errno.

ORA-07252: spcre: semget error, could not allocate semaphores.

Cause: Semget system call returned an error. Possible resource limit problem.

Action: Check errno. Verify that enough semaphores are available in system. If additional errors occur in destroying the semaphore sets then sercose[0] will be non-zero. If this occurs, remove the semaphore sets using ipcrm.

ORA-07253: spdes: semctl error, unable to destroy semaphore set.

Cause: Semctl system call returned an error.

Action: Check semaphore sets. May require manual cleanup. Check additional information returned. Consult OS reference manual.

ORA-07254: spdcr: translation error while expanding ?/bin/oracle.

Cause: An error occurred while translating the name of the oracle executable.

Action: Check sercose[0] for error returned from sltln. Perhaps \$(ORACLE_HOME) is not set correctly.

ORA-07255: spini: cannot set up signal handler.

Cause: System failed to set up signal handler.

Action: Check errno and sercose[0] for the signal number that failed.

ORA-07256: sptrap: cannot set up signal handler to catch exceptions.

Cause: System failed to set up signal handler to catch exceptions.

Action: Check errno and sercose[0] for the signal number that failed.

ORA-07257: spdcr: translation error expanding program name.

Cause: Error occurred when expanding program name ora_PNAME_@. The result of this translation is put in argv[0] of oracle process.

Action: Check error returned by sltln returned in sercose[0].

ORA-07258: spdcr: fork error, unable to create process.

Cause: An error occurred when creating a new process.

Action: Check errno. Perhaps a system limit on the number of processes has been exceeded.

ORA-07259: spdcr: exec error, detached process failed in startup.

Cause: An oracle detached process died shortly after startup. Wait() indicated that a child process terminated.

Action: Check ?/dbs directory for trace or core files. Check errno.

ORA-07260: spdcr: wait error.

Cause: Wait system call returned an error.

Action: Check errno.

ORA-07261: spdde: kill error, unable to send signal to process.

Cause: Kill system call returned an error. Possibly an attempt to destroy an already gone process.

Action: Check errno.

ORA-07262: sptpa: sptpa called with invalid process id.

Cause: This is an internal error.

Action: This is an oracle internal error.

ORA-07263: sptpa: kill error.

Cause: Kill system call returned an error. Possible OS error.

Action: Check errno. Additional information indicates the process ID tested.

ORA-07264: spwat: semop error, unable to decrement semaphore.

Cause: Semop system call returned an error. Semaphore set may not exist.

Action: Check errno. Semaphore ID is returned in sercose[0]. Verify semaphore set exists. A possible cause for this error is that a "shutdown abort" was done while this process was running.

ORA-07265: sppst: semop error, unable to increment semaphore.

Cause: Semop system call returned an error. Semaphore set may not exist.

Action: Check errno. Semaphore ID is returned in sercose[0]. Check semaphore set existence. A possible cause for this error is that a "shutdown abort" was done while this process was running.

ORA-07266: sppst: invalid process number passed to sppst.

Cause: Function was passed an invalid oracle process id.

Action: Internal error.

ORA-07267: spwat: invalid process number.

Cause: Function was passed an invalid oracle process id.

Action: Internal error. Additional information indicates the invalid process id.

ORA-07268: szguns: getpwuid error.

Cause: Getpwuid() could not find an entry in the passwd file for a user.

Action: Add an entry for the user in the passwd file.

ORA-07269: spdcr: detached process died after exec.

Cause: Detached process successfully execed, but died shortly thereafter. Additional information indicates exit code, and termination status.

Action: Check termination code for information as to why process exited. Check for core dump or trace file.

ORA-07270: spalck: setitimer error, unable to set interval timer.

Cause: An error occurred while trying to set an interval timer. Probable porting problem.

Action: Check errno.

ORA-07271: spwat: invalid oracle process number.

Cause: Function was called with an invalid oracle process number (0).

Action: Internal oracle error.

ORA-07272: spwat: invalid semaphore set id.

Cause: Semaphore ID fetched from SGA was not initialized to valid value. Additional information returned is semaphore set index, and oracle process number.

Action: Oracle internal error. Check semaphore set index. Check oracle process number.

ORA-07273: sppst: invalid semaphore id.

Cause: Semaphore ID fetched from SGA contained an invalid value. Additional information returned is semaphore set index, and oracle process number.

Action: Oracle internal error. Check semaphore set index. Check oracle process number.

ORA-07274: spdcr: access error, access to oracle denied.

Cause: Unable to access "oracle" program. Verify ?/bin/oracle or \$ORABCKPRG exist, and are executable.

Action: Check errno returned.

ORA-07275: unable to send signal to process

Cause: The kill system call returned an error. Possibly an attempt to signal a process which does not exist.

Action: Check errno.

ORA-07276: no dba group in /etc/group.

Cause: A group has not been set up for dba users.

Action: Contact system administrator. Set up dba group in /etc/group.

ORA-07277: spdde: illegal pid passed as argument.

Cause: A 0 pid was passed to spdde.

Action: Internal error. .

ORA-07278: splon: ops\$username exceeds buffer length.

Cause: Splon constructed an ops\$username logon which exceeded the allotted buffer space.

Action: Use a shorter Unix username, or use an oracle username. Contact customer support.

ORA-07279: spcre: semget error, unable to get first semaphore set.

Cause: An error occurred when trying to get first semaphore set.

Action: Check errno. Verify that system is configured to have semaphores. Verify that enough semaphores are available. Additional information indicates how many semaphores were requested.

ORA-07280: slsget: unable to get process information.

Cause: The ioctl call returned an error. Possible OS error.

Action: Check additional information for errno. Contact customer support.

ORA-07281: slsget: times error, unable to get cpu time.

Cause: times system call returned an error. Possible OS error.

Action: Check additional information returned. Contact customer support.

ORA-07282: sksaprd: string overflow.

Cause: The internal buffer is not big enough to hold the archive control string.

Action: Internal restriction. Try a shorter archive control string.

ORA-07283: sksaprd: invalid volume size for archive destination.

Cause: An invalid volume size was specified.

Action: Specify a valid volume size in archive control string.

ORA-07284: sksaprd: volume size specification not terminated properly.

Cause: Some non-numeric text follows the volume size specification.

Action: Enter a correct archive control string.

ORA-07285: sksaprd: volume size should not be specified for a disk file.

Cause: Volume size was specified for a disk file.

Action: If you are archiving to a disk file, do not specify its volume size.

ORA-07286: sksagdi: cannot obtain device information.

Cause: Stat on the log archiving device failed.

Action: Check the returned OSD error for the reason of failure.

ORA-07287: sksagdi: unsupported device for log archiving.

Cause: Log archiving to this device is unsupported.

Action: Try log archiving to a supported device.

ORA-07290: sksagdi: specified directory for archiving does not exist.

Cause: The specified pathname is not a directory.

Action: Verify that the archive destination directory exists.

ORA-07303: ksmcsg: illegal database buffer size.

Cause: The database buffer size must be a multiple of the database block size, and less than the maximum block size.

Action: Verify that the db_block_size parameter is correct in INIT.ORA.

ORA-07304: ksmcsg: illegal redo buffer size.

Cause: The redo buffer size must be a multiple of machine block size.

Action: Verify that the log_buffer INIT.ORA parameter is correctly set.

ORA-07305: ksmcsg: illegal database buffer size.

Cause: The database buffer size must be a multiple of the extended cache mapping size for indirect data buffers to be used.

Action: Verify that the db_block_size parameter is correct in INIT.ORA, or disable the use_indirect_data_buffers parameter.

ORA-07324: smpall: malloc error while allocating pga.

Cause: Malloc library routine returned an error.

Action: Check errno. Possibly out of swap space.

ORA-07327: smpdal: attempt to destroy pga when it was not mapped.

Cause: Smpdal was called when the PGA had not been previously created.

Action: Internal error.

ORA-07339: spcre: maximum number of semaphore sets exceeded.

Cause: The internal buffer is not big enough to hold the number of semaphore set identifiers requested.

Action: Reconfigure OS to have more semaphores per set.

ORA-07345: The datafile name must not contain the string '..'.

Cause: The specified datafile name contains '..'.

Action: Correct the datafile name and retry the operation.

ORA-07346: slnrm: normalized file name is too long

Cause: After normalizing the specified file name, the resulting file name was too long.

Action: Specify the shorter file name and retry the operation.

ORA-07390: sftopn: translate error, unable to translate file name.

Cause: An error occurred while expanding the file name to open. Additional information returns error generated in translation routine.

Action: Lookup additional error code for further information.

ORA-07391: sftopn: fopen error, unable to open text file.

Cause: Fopen library routine returned an error.

Action: Verify existence and permissions.

ORA-07392: sftcls: fclose error, unable to close text file.

Cause: Fclose library routine returned an error.

Action: Possible internal oracle error.

ORA-07393: unable to delete text file

Cause: An error occurred while deleting a text file.

Action: Verify that the file exists and check additional errors.

ORA-07394: unable to append string to text file

Cause: An error occurred while performing a string put operation.

Action: This is an internal error. Check additional information.

ORA-07400: slemtr: translated name for the message file is too long.

Cause: The name for the message file overflows internal buffer.

Action: Try making the complete path-name of the message file shorter by reorganizing the directory hierarchy.

ORA-07401: sptrap: cannot restore user exception handlers.

Cause: The system failed to restore user exception handlers.

Action: Check errno and sercose[0] for the signal number that failed.

ORA-07402: sprst: cannot restore user signal handler.

Cause: The system failed to restore user signal handlers.

Action: Check errno and sercose[0] for the signal number that failed.

ORA-07403: sfanfy: db_writers parameter not valid.

Cause: The db_writers parameter in INIT.ORA exceeds the system-dependent maximum or is less than 0.

Action: Change the db_writers parameter in INIT.ORA.

ORA-07404: sfareq: Timeout occurred waiting for request to complete.

Cause: The master database writer timed out waiting for a write or close to complete. One of the database writers may have stopped running.

Action: Check all database writer trace files. Shut down the database and try to warm start.

ORA-07405: sptrap: cannot setup alternate signal stack.

Cause: The system failed to setup an alternate signal stack.

Action: Check errno and sercose[0] for the location where it failed.

ORA-07406: slbtpd: invalid number.

Cause: An impossible request for binary to decimal conversion was made.

Action: This conversion cannot be performed.

ORA-07407: slbtpd: invalid exponent.

Cause: An impossible request for binary to decimal conversion was made

Action: This conversion cannot be performed.

ORA-07408: slbtpd: overflow while converting to packed decimal.

Cause: An impossible request for binary to decimal conversion was made.

Action: This conversion cannot be performed.

ORA-07409: slpdtb: invalid packed decimal nibble.

Cause: An impossible request for decimal to binary conversion was made.

Action: This conversion cannot be performed.

ORA-07410: slpdtb: number too large for supplied buffer.

Cause: An impossible request for decimal to binary conversion was made.

Action: This conversion cannot be performed.

ORA-07411: slgfn: full path name too big for supplied buffer.

Cause: The supplied buffer is not big enough to hold the full path name.

Action: The construction of the full path name cannot be performed.

ORA-07412: sfaslv: Error getting entry in asynchronous write array.

Cause: One of the database writer processes could not locate its entry in the SGA.

Action: Contact customer support.

ORA-07415: slpath: allocation of memory buffer failed.

Cause: Malloc() failed to allocate buffer for storing ORACLE_PATH.

Action: System has run out of heap space. Additional information indicates errno.

ORA-07416: slpath: pathname construction failed; lack of output buffer space.

Cause: The slpath routine is given a maximum length buffer to expand the name into. An overflow of this buffer occurred.

Action: Possible internal error. Check output buffer length stored in sercose[0] and constructed pathname length in sercose[1].

ORA-07417: sfareq: One or more database writers not active.

Cause: One or more of the database writer processes is no longer running.

Action: Check the trace files for the database writers. Shut down the database and try to warm start.

ORA-07418: sfareq: Database writer got error in timing function.

Cause: An error occurred when the database writer called the system timing function.

Action: Check the database writer trace file. Shut down database and try to warm start.

ORA-07419: sfareq: Database writer got error in timing function.

Cause: An error occurred when the database writer called the system timing function.

Action: Check the database writer trace file. Shut down database and try to warm start.

ORA-07425: sdpri: error *string* in translating dump file location.

Cause: An oracle error occurred when translating the location of the dump file.

Action: Check the oracle error code.

ORA-07426: spstp: cannot obtain the location of dbs directory.

Cause: An oracle error occurred when translating the location of the dbs directory.

Action: Check additional information for the error returned from sltln.

ORA-07427: spstp: cannot change directory to dbs.

Cause: Chdir system call returned an error. Possible permission problems.

Action: Check additional information for the OS error code.

ORA-07431: fork failed

Cause: The server process was unable to fork a child process.

Action: Verify that there are enough system resources to support another process. The user or system process limit may have been exceeded, or the amount of free memory or swap space may be temporarily insufficient.

ORA-07432: unable to perform nested sleep

Cause: An attempt was made to make a process sleep when it was already sleeping. This platform does not support this capability.

Action: Try the SLEEP command when the process is not sleeping.

ORA-07440: WMON process terminated with error

Cause: The wakeup monitor process died.

Action: Warm start instance.

ORA-07441: function address must be aligned on *string* byte boundary

Cause: An improperly aligned function address was specified.

Action: Use a properly aligned function address.

ORA-07442: function address must be in the range *string* to *string*

Cause: An invalid function address was specified.

Action: Use a valid function address.

ORA-07443: function *string* not found

Cause: An invalid function name was specified.

Action: Use a valid function name.

ORA-07444: function address *string* is not readable

Cause: An invalid function name/address was specified.

Action: Use a valid function name/address.

ORA-07445: exception encountered: core dump [*string*] [*string*] [*string*] [*string*] [*string*] [*string*]

Cause: An operating system exception occurred which should result in the creation of a core file. This is an internal error.

Action: Visit My Oracle Support to access the ORA-07445 Lookup tool (reference Note 7445.1) for more information regarding the specific ORA-07445 error encountered. An Incident has been created for this error in the Automatic Diagnostic Repository (ADR). When logging a service request, use the Incident Packaging Service (IPS) from the Support Workbench or the ADR Command Interpreter (ADRCI) to automatically package the relevant trace information (reference My Oracle Support Note 411.1). The following information should also be gathered to help determine the root cause: - changes leading up to the error - events or unusual circumstances leading up to the error - operations attempted prior to the error - conditions of the operating system and databases at the time of the error Note: The cause of this message may manifest itself as different errors at different times. Be aware of the history of errors that occurred before this internal error.

ORA-07446: sdnfy: bad value '*string*' for parameter *string*.

Cause: The directory specified as the value for the stated parameter could not be used.

Action: Make sure the directory you have specified is a valid directory/file specification.

ORA-07447: ssarena: usinit failed.

Cause: Oracle failed to create a shared arena file.

Action: Use `sercerno` field to determine cause of failure.

ORA-07448: ssarena: maximum number of shared arenas exceeded.

Cause: Oracle attempted to create more shared arena files than permitted.

Action: Raise the value for `max_arena` in `INIT.ORA`.

ORA-07449: sc: usnewlock failed.

Cause: Oracle failed to acquire a shared arena lock.

Action: Check result code in `sercerno` to determine the cause of failure.

ORA-07451: slskstat: unable to obtain load information.

Cause: `kstat` library returned an error. Possible OS failure

Action: Check result code in `sercose[0]` for more information.

ORA-07452: specified resource manager plan does not exist in the data dictionary

Cause: User tried to load a resource manager plan that does not exist.

Action: Use a resource manager plan that exists in the data dictionary.

ORA-07453: requested resource manager plan schema does not contain OTHER_GROUPS

Cause: User tried to load a resource manager plan schema that does not contain the OTHER_GROUPS group.

Action: Use a resource manager plan schema that contains the OTHER_GROUPS group.

ORA-07454: queue timeout, *string* second(s), exceeded

Cause: User session queued for longer than maximum specified queue queue duration time for consumer group.

Action: Re-submit job at a later time or increase queue timeout.

ORA-07455: estimated execution time (*string* secs), exceeds limit (*string* secs)

Cause: User attempted to execute an operation whose estimated execution time exceeds the limit specified for the consumer group.

Action: Execute job on behalf of another group, or increase limit.

ORA-07456: cannot set RESOURCE_MANAGER_PLAN when database is closed

Cause: An attempt was made to turn on the Resource Manager when the database was closed.

Action: Open the database and try again.

ORA-07457: cannot set _INTERNAL_RESOURCE_MANAGER_PLAN because of FORCE

Cause: An attempt was made to set the _INTERNAL_RESOURCE_MANAGER_PLAN parameter, however this failed because the current RESOURCE_MANAGER_PLAN has the FORCE prefix.

Action: Remove the FORCE prefix from the RESOURCE_MANAGER_PLAN parameter.

ORA-07458: cannot set the RESOURCE_MANAGER_PLAN parameter

Cause: An attempt was made to set the RESOURCE_MANAGER_PLAN parameter, however, this failed because the database was quiesced.

Action: Unquiesce the database.

ORA-07459: cannot restore the RESOURCE_MANAGER_PLAN parameter

Cause: An attempt was made to internally restore the RESOURCE_MANAGER_PLAN parameter to the value before it was internally set. This failed because the current plan was set by the user and therefore did not need to be restored.

Action: No action needed.

ORA-07460: cannot set the RESOURCE_MANAGER_PLAN parameter

Cause: An attempt was made to internally set the RESOURCE_MANAGER_PLAN parameter, however, this failed because the current RESOURCE_MANAGER_PLAN has the FORCE prefix.

Action: Remove the FORCE prefix from the RESOURCE_MANAGER_PLAN parameter.

ORA-07468: spwat: mset error, unable to set semaphore.

Cause: The mset routine returned an error. Semaphore may not exist.

Action: Check result code in sercerrno. Semaphore number returned in sercose[0].

ORA-07469: sppst: mclear error, unable to clear semaphore.

Cause: The mclear routine returned an error. Semaphore may not exist.

Action: Check result code in sercerrno. Semaphore number returned in sercose[0].

ORA-07470: snclget: cannot get cluster number.

Cause: The cluster_status system call failed to get status information for the current cluster.

Action: Check result code in sercose[0]. Possible operating system failure.

ORA-07471: snclrd: name translation error of sgadef.dbf file name.

Cause: Unable to expand out ?/dbs/sgadef@.dbf file name.

Action: Verify \$(ORACLE_HOME) and \$(ORACLE_SID) are properly set. Check error number returned from sltn in sercose[0].

ORA-07472: snclrd: open error when opening sgadef.dbf file.

Cause: open failed when opening the file ?/dbs/sgadef@.dbf

Action: Check errno. Possible permission problem. Verify that the file ?/dbs/sgadef@.dbf exists.

ORA-07473: snclrd: read error when trying to read sgadef.dbf file.

Cause: Read had an error when reading sgadef.dbf file.

Action: Check errno. Verify file exists, and is correct size.

ORA-07474: snclrd: close error, unable to close sgadef.dbf file.

Cause: An error occurred in close, while closing the file "?/dbs/sgadef@.dbf"

Action: Check errno. Possible operating system error.

ORA-07475: slsget: cannot get vm statistics.

Cause: The vm_statistics system call failed to get virtual memory statistics.

Action: Check result code in sercerrno. Possible operating system failure.

ORA-07476: slsget: cannot get mapped memory statistics.

Cause: The vm_mapmem system call failed to get mapped memory statistics.

Action: Check result code in sercerrno. Possible operating system failure.

ORA-07477: scgcmn: lock manager not initialized.

Cause: Lock manager must be initialized before converting locks.

Action: Check result code in sercerrno. Possible lock manager failure.

ORA-07478: scgcmn: cannot get lock status.

Cause: lm_stat_lock failed.

Action: Check result code in sercerrno. Possible lock manager failure.

ORA-07479: scgcmn: cannot open or convert lock.

Cause: lm_open or lm_open_convert failed.

Action: Check result code in sercerno. Possible lock manager failure.

ORA-07480: snchmod: cannot change permissions on ?/dbs/sgalm.dbf.

Cause: When creating an instance, snlmini could not change the permissions on ?/dbs/sgalm.dbf

Action: Contact your customer support representative.

ORA-07481: snlmatt: cannot attach to lock manager instance.

Cause: lm_attach failed to attach to lock manager instance.

Action: Check result code in sercerno. Possible lock manager failure.

ORA-07482: snlmini: cannot create lock manager instance.

Cause: lm_create failed to create lock manager instance.

Action: Check permissions on ?/dbs, and remove ?/dbs/sgalm.dbf if it exists, then retry.

ORA-07483: snlkget: cannot convert(get) lock.

Cause: lm_convert failed to convert(get) lock.

Action: Check result code in sercerno. Possible lock manager failure.

ORA-07484: snlkput: cannot convert(put) lock.

Cause: lm_convert failed to put lock value.

Action: Check result code in sercerno. Possible lock manager failure.

ORA-07485: scg_get_inst: cannot open instance number lock.

Cause: lm_open failed.

Action: Check result code in sercerno. Possible lock manager failure.

ORA-07486: scg_get_inst: cannot convert(get) instance number lock.

Cause: lm_convert failed to get lock value.

Action: Check result code in sercerno. Possible lock manager failure.

ORA-07487: scg_init_lm: cannot create lock manager instance.

Cause: lm_create failed.

Action: Check result code in sercerno. Possible lock manager failure.

ORA-07488: scgrcl: lock manager not initialized.

Cause: Lock manager must be initialized before releasing locks.

Action: Check result code in sercerno. Possible lock manager failure.

ORA-07489: scgrcl: cannot get lock status.

Cause: lm_stat_lock failed during lock release/cancel.

Action: Check result code in sercerno. Possible lock manager failure.

ORA-07490: scgrcl: cannot convert lock.

Cause: lm_convert failed during lock release/cancel.

Action: Check result code in sercerno. Possible lock manager failure.

ORA-07491: scgrcl: cannot cancel lock request.

Cause: lm_cancel failed during lock release/cancel.

Action: Check result code in sercerno. Possible lock manager failure.

ORA-07492: scgrcl: cannot close lock.

Cause: lm_close failed during lock release/cancel.

Action: Check result code in sercerno. Possible lock manager failure.

ORA-07493: scgrcl: lock manager error.

Cause: An error was encountered releasing the lock.

Action: Check result code in sercerno. Possible lock manager failure.

ORA-07494: scgcm: unexpected error.

Cause: Unknown or unexpected error code.

Action: Check result code in sercerno. Possible lock manager failure.

ORA-07495: spwat: lm_wait failed.

Cause: lm_wait failed.

Action: Check result code in sercerno. Possible lock manager failure.

ORA-07496: sppst: lm_post failed.

Cause: lm_post failed.

Action: Check result code in sercerno. Possible lock manager failure.

ORA-07497: sdpri: cannot create trace file '*string*'; errno = *string*.

Cause: 1. The trace file could not be created for writing. 2. The trace file is a symbolic link.

Action: 1. Check if the dump directory exists and whether it is writable. 2. Remove the symbolic link.

ORA-07498: spstp: Unable to open /dev/resched.

Cause: The rescheduling driver /dev/resched is not found or is not working properly.

Action: Check installation of the ORACLE rescheduling driver in the AIX kernel.

ORA-07499: spglk: Cannot reschedule.

Cause: The rescheduling driver /dev/resched is not open. This is an internal error and should not occur.

Action: Contact your customer support representative.

ORA-07500 to ORA-09859

ORA-07500: scglaa: \$cantim unexpected return

Cause: VMS system service \$CANTIM returned an unexpected value

Action: Check for system error message and refer to VMS documentation

ORA-07501: scgtoa: \$deq unexpected return

Cause: VMS system service \$DEQ returned an unexpected value

Action: Check for system error message and refer to VMS documentation

ORA-07502: scgcmn: \$enq unexpected return

Cause: VMS system service \$ENQ returned an unexpected value

Action: Check for system error message and refer to VMS documentation

ORA-07503: scgcmn: \$setimr unexpected return

Cause: VMS system service \$SETIMR returned an unexpected value

Action: Check for system error message and refer to VMS documentation

ORA-07504: scgcmn: \$hiber unexpected return

Cause: VMS system service \$HIBER returned an unexpected value

Action: Check for system error message and refer to VMS documentation

ORA-07505: scggt: \$enq parent lock unexpected return

Cause: VMS system service \$ENQ returned an unexpected value

Action: Check for system error message and refer to VMS documentation

ORA-07506: scgrl: \$deq unexpected return on lockid *string*

Cause: VMS system service \$DEQ returned an unexpected value

Action: Check for system error message and refer to VMS documentation

ORA-07507: scgcm: unexpected lock status condition

Cause: A global locking system service returned an unexpected value.

Action: Check for system error message (if any) and refer to VMS documentation, or contact your customer support representative.

ORA-07508: scgfal: \$deq all unexpected return

Cause: VMS system service \$DEQ returned an unexpected value

Action: Check for system error message and refer to VMS documentation

ORA-07509: scgfal: \$deq parent lock unexpected return

Cause: VMS system service \$DEQ returned an unexpected value

Action: Check for system error message and refer to VMS documentation

ORA-07510: scgbrm: \$getlki unexpected return on lockid *string*
Cause: VMS system service \$GETLKI returned an unexpected value
Action: Check for system error message and refer to VMS documentation

ORA-07511: sscgctl: \$enq unexpected return for master termination lock
Cause: VMS system service \$ENQ returned an unexpected value
Action: Check for system error message and refer to VMS documentation

ORA-07512: sscgctl: \$enq unexpected return for client termination lock
Cause: VMS system service \$ENQ returned an unexpected value
Action: Check for system error message and refer to VMS documentation

ORA-07513: sscgctl: \$deq unexpected return on cancel of term. lock
Cause: VMS system service \$DEQ returned an unexpected value
Action: Check for system error message and refer to VMS documentation

ORA-07514: scgcan: \$deq unexpected return while canceling lock
Cause: VMS system service \$DEQ returned an unexpected value
Action: Check for system error message and refer to VMS documentation

ORA-07534: scginq: \$getlki unexpected return on lockid *string*
Cause: VMS system service \$GETLKI returned an unexpected value
Action: Check for system error message and refer to VMS documentation

ORA-07548: sftopn: Maximum number of files already open
Cause: Too many test files open
Action: This is an internal error, please report to Oracle

ORA-07549: sftopn: \$OPEN failure
Cause: VMS system service \$OPEN failed
Action: Examine system error message and refer to VMS documentation

ORA-07550: sftopn: \$CONNECT failure
Cause: VMS system service \$OPEN failed
Action: Examine system error message and refer to VMS documentation

ORA-07551: sftcls: \$CLOSE failure
Cause: VMS system service \$CLOSE failed
Action: Examine system error message and refer to VMS documentation

ORA-07552: sftget: \$GET failure
Cause: VMS system service \$GET failed
Action: Examine system error message and refer to VMS documentation

ORA-07561: szprv: \$IDTOASC failure
Cause: VMS system service \$IDTOASC failed
Action: Examine system error message and refer to VMS documentation

ORA-07562: sldext: extension must be 3 characters
Cause: An extension was found but it is of improper length

Action: This is an internal error, please report to Oracle

ORA-07563: sldext: \$PARSE failure

Cause: VMS system service \$PARSE failed

Action: Examine system error message and refer to VMS documentation

ORA-07564: sldext: wildcard in filename or extension

Cause: A wildcard was used in the file name

Action: Reenter the file name completely

ORA-07565: sldext: \$SEARCH failure

Cause: VMS system service \$SEARCH failed

Action: Examine system error message and refer to VMS documentation

ORA-07568: slspool: \$OPEN failure

Cause: VMS system service \$OPEN failed

Action: Examine system error message and refer to VMS documentation

ORA-07569: slspool: \$CLOSE failure

Cause: VMS system service \$CLOSE failed

Action: Examine system error message and refer to VMS documentation

ORA-07570: szrfc: \$IDTOASC failure

Cause: VMS system service \$IDTOASC failed

Action: Examine system error message and refer to VMS documentation

ORA-07571: szrfc: \$FIND_HELD failure

Cause: VMS system service \$FIND_HELD failed

Action: Examine system error message and refer to VMS documentation

ORA-07572: szrfc: insufficient rolename buffer space

Cause: An OS role name was too long.

Action: Re-define the role name to be of correct length.

ORA-07573: slkhst: could not perform host operation

Cause: VMS system service LIB\$SPAWN failed

Action: Examine system error message and refer to VMS documentation

ORA-07574: szrfc: \$GETUAI failure

Cause: VMS system service \$GETUAI failed

Action: Examine system error message and refer to VMS documentation

ORA-07576: sspexst: \$GETJPIW failure on process ID *string*

Cause: VMS system service \$GETJPIW failed

Action: Examine system error message and refer to VMS documentation

ORA-07577: no such user in authorization file

Cause: An attempt was made to set an INTERNAL password (for either DBA or OPER privilege), but the corresponding VMS account (either ORA_*sid*_DBA or ORA_*sid*_OPER) hasn't been created yet.

Action: Add a VMS account for ORA_sid_DBA and/or ORA_sid_OPER before trying to set a password for them.

ORA-07578: szprv: \$FIND_HELD failure

Cause: VMS system service \$FIND_HELD failed

Action: Examine system error message and refer to VMS documentation

ORA-07579: spini: \$DCLEXH failure

Cause: VMS system service \$PARSE failed

Action: Examine system error message and refer to VMS documentation

ORA-07580: spstp: \$GETJPIW failure

Cause: VMS system service \$GETJPIW failed

Action: Examine system error message and refer to VMS documentation

ORA-07581: spstp: cannot derive SID from unexpected process name

Cause: A background process did not have name of correct form

Action: If the job name was changed, restore it, otherwise this is an internal error, please report to Oracle.

ORA-07582: spstp: ORA_SID has illegal value

Cause: The ORA_SID must exist and be less than 6 characters

Action: Consult the VMS Installation guide for information on setting the SID.

ORA-07584: spdcr: invalid value for ORA_sid_(proc_)PQL\$_item

Cause: A logical name used to set a detached process quota value has an invalid value (probably non-numeric).

Action: Examine the values of these logical names, correct the one in error, and retry.

ORA-07585: spdcr: \$PARSE failure

Cause: VMS system service \$PARSE failed

Action: Examine system error message and refer to VMS documentation

ORA-07586: spdcr: \$SEARCH failure

Cause: VMS system service \$SEARCH failed

Action: Examine system error message and refer to VMS documentation

ORA-07587: spdcr: \$CREPRC failure

Cause: VMS system service \$CREPRC failed

Action: Examine system error message and refer to VMS documentation

ORA-07588: spdcr: \$GETJPIW get image name failure

Cause: VMS system service \$GETJPIW failed

Action: Examine system error message and refer to VMS documentation

ORA-07589: spdde: system ID not set

Cause: The logical name ORA_SID doesn't translate to a valid value.

Action: Check the value of ORA_SID in the process that gets the error, and correct the installation or command procedures that caused ORA_SID to be set incorrectly.

ORA-07590: spdde: \$DELPRC failure

Cause: VMS system service \$DELPRC failed

Action: Examine system error message and refer to VMS documentation

ORA-07591: spdde: \$GETJPIW failure

Cause: VMS system service \$GETJPIW failed

Action: Examine system error message and refer to VMS documentation

ORA-07592: sspgprv: Error obtaining required privileges

Cause: While obtaining needed privileges, an error was returned from SYS\$SETPRV.

Action: This is an internal error. Please report to Oracle

ORA-07593: ssprprv: Error release privileges

Cause: While releasing privileges, an error was returned from SYS\$SETPRV.

Action: This is an internal error. Please report to Oracle

ORA-07594: spiip: \$GETJPIW failure

Cause: VMS system service \$GETJPIW failed

Action: Examine system error message and refer to VMS documentation

ORA-07595: sppid: \$GETJPIW failure

Cause: VMS system service \$GETJPIW failed

Action: Examine system error message and refer to VMS documentation

ORA-07596: sptpa: \$GETJPIW failure

Cause: VMS system service \$GETJPIW failed

Action: Examine system error message and refer to VMS documentation

ORA-07597: spguns: \$GETJPIW failure

Cause: VMS system service \$GETJPIW failed

Action: Examine system error message and refer to VMS documentation

ORA-07598: spwat: \$SETIMR failure

Cause: VMS system service \$GETJPIW failed

Action: Examine system error message and refer to VMS documentation

ORA-07599: spwat: \$SCHDWK failure

Cause: VMS system service \$SCHDWK failed

Action: Examine system error message and refer to VMS documentation

ORA-07600: slkmm: \$GETSYIW failure

Cause: VMS system service \$GETSYIW failed

Action: Examine system error message and refer to VMS documentation

ORA-07601: spguno: \$GETJPIW failure

Cause: VMS system service \$GETJPIW failed

Action: Examine system error message and refer to VMS documentation

ORA-07602: spgto: \$GETJPIW failure

Cause: VMS system service \$GETJPIW failed

Action: Examine system error message and refer to VMS documentation

ORA-07605: szprv: \$ASCTOID failure

Cause: VMS system service \$ASCTOID failed

Action: Examine system error message and refer to VMS documentation

ORA-07606: szprv: \$CHKPRO failure

Cause: VMS system service \$CHKPRO failed

Action: Examine system error message and refer to VMS documentation

ORA-07607: szaud: \$SNDOPR failure

Cause: VMS system service \$SNDOPR failed

Action: Examine system error message and refer to VMS documentation

ORA-07608: szprv: \$GETUAI failure

Cause: VMS system service \$GETUAI failed

Action: Examine system error message and refer to VMS documentation

ORA-07609: szprv: \$HASH_PASSWORD failure

Cause: VMS system service \$HASH_PASSWORD failed

Action: Examine system error message and refer to VMS documentation

ORA-07610: \$GETJPIW failed in retrieving the user's MAC privileges

Cause: VMS system service \$GETJPIW failed

Action: Examine system error message and refer to VMS documentation

ORA-07612: \$GETUAI failed in retrieving the user's clearance level

Cause: VMS system service \$GETUAI failed

Action: Examine system error message and refer to VMS documentation

ORA-07613: \$GETJPIW failed in retrieving the user's process label

Cause: VMS system service \$GETJPIW failed

Action: Examine system error message and refer to VMS documentation

ORA-07614: \$CHANGE_CLASS failed in retrieving the user's process label

Cause: VMS system service \$CHANGE_CLASS failed

Action: Examine system error message and refer to SEVMS documentation

ORA-07615: \$CHANGE_CLASS failed in retrieving the specified file label

Cause: VMS system service \$CHANGE_CLASS failed

Action: Examine system error message and refer to SEVMS documentation

ORA-07616: \$CHANGE_CLASS failed in retrieving the specified device label

Cause: VMS system service \$CHANGE_CLASS failed

Action: Examine system error message and refer to SEVMS documentation

ORA-07617: \$FORMAT_CLASS failed translating the binary label to a string

Cause: VMS system service \$FORMAT_CLASS failed because the given binary classification was not valid.

Action: Examine system error message and refer to SEVMS documentation

ORA-07618: \$IDTOASC failed translating a secrecy level

Cause: VMS system service \$IDTOASC failed while looking up the string representation in the rights database of a secrecy level.

Action: Define the entry in the rights database which the binary label you specified references.

ORA-07619: \$IDTOASC failed translating an integrity level

Cause: VMS system service \$IDTOASC failed while looking up the string representation in the rights database of an integrity level.

Action: Define the entry in the rights database which the binary label you specified references.

ORA-07620: smscre: illegal database block size

Cause: An illegal database block size was specified in the parameter file. It must be positive, a multiple of 512, and less than the maximum physical i/o data size.

Action: Change db_block_size in the parameter file to conform to these limits.

ORA-07621: smscre: illegal redo block size

Cause: An illegal redo log buffer size was specified in the parameter file. It must be positive and a multiple of 512.

Action: Change log_buffer in the parameter file to conform to these limits.

ORA-07622: smscre: \$CREATE failure

Cause: While creating the system global area (SGA) backing file, VMS system service \$CREATE failed.

Action: Examine the system error message and refer to VMS documentation.

ORA-07623: smscre: \$CRMPSC failure

Cause: While creating the system global area (SGA), VMS system service \$CRMPSC failed.

Action: Examine the system error message and refer to VMS documentation.

ORA-07624: smsdes: \$DGBLSC failure

Cause: While deleting the system global area (SGA), VMS system service \$DGBLSC failed.

Action: Examine the system error message and refer to VMS documentation.

ORA-07625: smsget: \$MGBLSC failure

Cause: While mapping the system global area (SGA) during logon, VMS system service \$MGBLSC failed. The usual reason is that Oracle has not been started up.

Action: Examine the system error message and refer to VMS documentation. Start up Oracle if it is not already started.

ORA-07626: smsget: sga already mapped

Cause: An attempt to map the SGA during logon failed because it was already mapped. This is an internal error.

Action: Exit your program and try again, and report this to your customer support representative.

ORA-07627: smsfre: \$CRETVA failure

Cause: While unmapping the system global area (SGA) during logoff, VMS system service \$CRETVA failed.

Action: Examine the system error message and refer to VMS documentation.

ORA-07628: smsfre: sga not mapped

Cause: An attempt to unmap the SGA during logoff failed because it was not mapped. This is an internal error.

Action: Exit your program and try again, and report this to your customer support representative.

ORA-07629: smpall: \$EXPREG failure

Cause: While extending the program global area (PGA), VMS system service \$EXPREG failed. This often happens when the virtual memory page count quota is exceeded.

Action: Examine the system error message and refer to VMS documentation.

ORA-07630: smpdal: \$DELTVA failure

Cause: While deleting the program global area (PGA) during logoff, VMS system service \$DELTVA failed.

Action: Examine the system error message and refer to VMS documentation.

ORA-07631: smcacx: \$EXPREG failure

Cause: While creating or extending a context area, VMS system service \$EXPREG failed. This often happens when the virtual memory page count quota is exceeded.

Action: Examine the system error message and refer to VMS documentation.

ORA-07632: smsrcx: \$DELTVA failure

Cause: While deleting a context area, VMS system service \$DELTVA failed.

Action: Examine the system error message and refer to VMS documentation.

ORA-07633: smsdbp: illegal protection value

Cause: The buffer debug function was called with an illegal value. This is an internal error.

Action: Contact your customer support representative.

ORA-07634: smsdbp: \$CRETVA failure

Cause: While attempting to set protection in the database buffer debug mechanism, VMS system service \$CRETVA failed.

Action: Contact your customer support representative.

ORA-07635: smsdbp: \$SETPRT failure

Cause: While attempting to set protection in the database buffer debug mechanism, VMS system service \$SETPRT failed.

Action: Contact your customer support representative.

ORA-07636: smsdbp: \$MGBLSC failure

Cause: While attempting to set protection in the database buffer debug mechanism, VMS system service \$MGBLSC failed.

Action: Contact your customer support representative.

ORA-07637: smsdbp: buffer protect option not specified when sga created

Cause: Trying to change the buffer protect mode when the SGA was not created with buffer protect debug option. This is an internal error.

Action: Contact your customer support representative.

ORA-07638: smsget: SGA pad area not large enough for created SGA

Cause: An attempt was made to map an SGA with software in which the SGA pad area isn't large enough.

Action: Create a smaller SGA, or relink the software with a larger pad.

ORA-07639: smscre: SGA pad area not large enough (*string* bytes required)

Cause: An attempt was made to create an SGA with software in which the SGA pad area isn't large enough.

Action: Create a smaller SGA, or relink the software with a larger pad.

ORA-07640: smsget: SGA not yet valid. Initialization in progress

Cause: An attempt was made to map to the SGA while it was being initialized.

Action: Wait until initialization is complete, and try again.

ORA-07641: smscre: Unable to use the system pagefile for the SGA

Cause: The system global area (SGA) backing file could not be allocated using the system pagefile because the system-wide limit on global pages has been exceeded.

Action: Either increase the VMS system parameter GBLPAGFIL or use a disk file as the SGA backing file.

ORA-07642: smprtset: \$CMKRNL failure

Cause: While attempting to set the protection of a region of memory, an error was returned from the \$CMKRNL system service.

Action: Examine the system error message and refer to VMS documentation.

ORA-07643: smsalo: SMSVAR is invalid

Cause: an internal error

Action: Report this error to Oracle Support Services, provide your INIT.ORA file.

ORA-07645: sszfsl: \$CHANGE_CLASS failure

Cause: While attempting to set the label on a file, SEVMS service \$CHANGE_CLASS failed.

Action: Examine the system message and refer to SEVMS system documentation.

ORA-07646: sszfck: \$CREATE failure

Cause: While attempting to create a file, VMS system service \$CREATE failed.

Action: Examine the system message and refer to VMS system documentation.

ORA-07647: sszfck: \$OPEN failure

Cause: While attempting to reopen a file, VMS system service \$OPEN failed.

Action: Examine the system message and refer to VMS system documentation.

ORA-07650: sigunc: \$GETJPIW failure

Cause: While attempting to get the user's terminal device name, user name, user program name, or process name during logon, VMS system service \$GETJPIW failed.

Action: Examine the system error message and refer to VMS documentation.

ORA-07655: slsprom:\$TRNLOG failure

Cause: While attempting to translate SYS\$INPUT during a prompt for a password, VMS system service \$TRNLOG failed.

Action: Examine the system error message and refer to VMS documentation.

ORA-07656: slsprom:\$GETDVI failure

Cause: While attempting to get device characteristics during a prompt for a password, VMS system service \$GETDVI failed.

Action: Examine the system error message and refer to VMS documentation.

ORA-07657: slsprom:\$ASSIGN failure

Cause: While prompting for a password, VMS system service \$ASSIGN failed.

Action: Examine the system error message and refer to VMS documentation.

ORA-07658: slsprom:\$QIOW read failure

Cause: While prompting for a password, VMS system service \$QIOW failed.

Action: Examine the system error message and refer to VMS documentation.

ORA-07665: ssrexhd: recursive exception encountered *string string string string string string*

Cause: A VMS exception occurred while executing in the Oracle exception handler. The message includes the signal number, first and second signal arguments, and exception PC, PSL and R0. This is an internal error.

Action: Contact your customer support representative.

ORA-07670: \$IDTOASC failed translating a secrecy category

Cause: VMS system service \$IDTOASC failed while looking up the string representation in the rights database of a secrecy category.

Action: Define the entry in the rights database which the binary label you specified references.

ORA-07671: \$IDTOASC failed translating an integrity category

Cause: VMS system service \$IDTOASC failed while looking up the string representation in the rights database of an integrity category.

Action: Define the entry in the rights database which the binary label you specified references.

ORA-07672: \$PARSE_CLASS failed translating the string into a binary label

Cause: SEVMS system service \$PARSE_CLASS failed because the given string did not represent a valid classification.

Action: Examine system error message and refer to SEVMS documentation.

ORA-07680: sou2os: another call to Oracle currently executing

Cause: A call to the Oracle shared image entry point occurred from within the shared image. This is an internal error.

Action: Contact your customer support representative.

ORA-07681: sou2os: An error occurred while initializing Oracle

Cause: While attempting to set up the dispatch vectors for the shared image, an error occurred. This is an internal error.

Action: Contact your customer support representative.

ORA-07682: sou2os: set kernel dispatch fail err

Cause: During Oracle shared image entry, a dispatch to kernel mode failed.

Action: Make sure that your shared image is installed with the CMKRNL privilege, then contact your customer support representative.

ORA-07683: sou2os: \$SETPRV reset error

Cause: During an attempt to restore user privileges at Oracle shared image exit, VMS system service \$SETPRV failed. This is an internal error.

Action: Contact your customer support representative.

ORA-07684: sou2os: supervisor stack reset error

Cause: During an attempt to restore the supervisor-mode stack at Oracle shared image exit, VMS system service \$SETSTK failed. This is an internal error.

Action: Contact your customer support representative.

ORA-07685: sou2os: supervisor stack set error

Cause: During an attempt to set the Oracle supervisor-mode stack at Oracle shared image entry, VMS system service \$SETSTK failed. This is an internal error.

Action: Contact your customer support representative.

ORA-07700: sksarch: interrupt received

Cause: An interrupt was received while archiving the logs

Action: Retry operation

ORA-07701: sksatln: internal exception: output buffer too small

Cause: Overflow of buffer for parsing archive control text string

Action: This is an internal error, please report to Oracle

ORA-07702: unrecognized device type in archive text

Cause: Unrecognized device type in archive text

Action: This is an internal error, please report to Oracle

ORA-07703: error in archive text: need '/' after device type

Cause: The archive control text in the ARCHIVE command is invalid; the device type (to indicate a file or tape) must be followed by a '/'.

Action: Refer to the SQLDBA Guide for the proper syntax of the text.

ORA-07704: error in archive text: need ':' after device name

Cause: The archive control text in the ARCHIVE command is invalid; the device name must be followed by a ':'.

Action: Refer to the SQLDBA Guide for the proper syntax of the text.

ORA-07705: sksapr: device name buffer too small

Cause: The buffer supplied for the device name is too small. This is an internal error.

Action: Contact your customer support representative.

ORA-07706: error in archive text: need disk file name

Cause: The archive control text in the ARCHIVE command is invalid; the disk file name is missing.

Action: Refer to the SQLDBA Guide for the proper syntax of the text.

ORA-07707: error in archive text: need tape label name

Cause: The archive control text in the ARCHIVE command is invalid; the tape label name is missing.

Action: Refer to the SQLDBA Guide for the proper syntax of the text.

ORA-07708: sksaprs: tape label name buffer too small

Cause: The buffer supplied for the tape label is too small. This is an internal error.

Action: Contact your customer support representative.

ORA-07709: sksaprs: archiving to a remote host is not allowed

Cause: The user specified a remote disk for archiving via DECnet.

Action: Archive to a disk on the local host.

ORA-07710: sksaprs: file name buffer too small

Cause: The buffer supplied for the file name is too small. This is an internal error.

Action: Contact your customer support representative.

ORA-07713: sksamtd: could not mount archival device (SYS\$MOUNT failure)

Cause: VMS system service SYS\$MOUNT failed

Action: Examine system error message and refer to VMS documentation

ORA-07715: sksadtd: could not dismount archival device (SYS\$DISMNT failure)

Cause: VMS system service SYS\$DISMNT failed

Action: Examine system error message and refer to VMS documentation

ORA-07716: sksachk: invalid device specification for ARCHIVE

Cause: VMS system service SYS\$GETDVI failed"

Action: Specify a valid device in ARCHIVE control string

ORA-07717: sksaalo: error allocating memory

Cause: VMS system service LIB\$GET_VM failed"

Action: Examine system error message and refer to VMS documentation

ORA-07718: sksafre: error freeing memory

Cause: VMS system service LIB\$FREE_VM failed

Action: Examine system error message and refer to VMS documentation

ORA-07721: scgcm: not enough OS resource to obtain system enqueue

Cause: A call to sys\$enq returned an error indicating that the operating system lacked the resources necessary to create a lock. This is caused by the messages SS\$_EXENQLM or SS\$_INSFMEM.

Action: Free up some of the required resource to allow the creation of the required lock.

ORA-07740: slemop: incorrect handle size (programming error)

Cause: structures used for reading error message files do not match

Action: this is an internal error, please report to Oracle

ORA-07741: slemop: \$OPEN failure

Cause: VMS system service \$OPEN failed

Action: Examine system error message and refer to VMS documentation

ORA-07742: slemop: \$CONNECT failure

Cause: VMS system service \$CONNECT failed

Action: Examine system error message and refer to VMS documentation

ORA-07743: slemop: incorrect error file attributes

Cause: An error message file is of incorrect format

Action: Unless an error file has been changed, report this to Oracle

ORA-07744: slemcl: invalid error message file handle

Cause: seal in passed in handle does not match correct value

Action: this is an internal error, please report to Oracle

ORA-07745: slemcl: \$CLOSE failure

Cause: VMS system service \$CLOSE failed

Action: Check system error and refer to VMS documentation

ORA-07746: slemrd: invalid error message file handle

Cause: seal in passed in handle does not match correct value

Action: this is an internal error, please report to Oracle

ORA-07747: slemrd: \$READ failure

Cause: VMS system service \$READ failed

Action: Check system error and refer to VMS documentation

ORA-07750: slemcr: fopen failure

Cause: An attempt to create a message file failed. This is an internal error.

Action: Contact your customer support representative.

ORA-07751: slemcr: malloc failure

Cause: An attempt to allocate a cache for a newly-created message file failed. This is an internal error.

Action: Contact your customer support representative.

ORA-07753: slemcf: fseek before write failure

Cause: An attempt to seek before writing a message file cache element failed. This is an internal error.

Action: Contact your customer support representative.

ORA-07754: slemcf: fwrite failure

Cause: An attempt to write a message file cache element failed. This is an internal error.

Action: Contact your customer support representative.

ORA-07755: slemcf: fseek before read failure

Cause: An attempt to seek before reading a message file cache element failed. This is an internal error.

Action: Contact your customer support representative.

ORA-07756: slemcf: fread failure

Cause: An attempt to read a message file cache element failed. This is an internal error.

Action: Contact your customer support representative.

ORA-07757: slemcc: invalid handle

Cause: The seal in a passed-in handle does not match correct value. This is an internal error.

Action: Contact your customer support representative.

ORA-07758: slemcw: invalid handle

Cause: The seal in a passed-in handle does not match correct value. This is an internal error.

Action: Contact your customer support representative.

ORA-07759: slemtr: invalid destination

Cause: The destination string provided to the function is too short This is an internal error.

Action: Contact your customer support representative.

ORA-07760: slemtr: \$open failure

Cause: the \$open service failed. This is an internal error

Action: Contact your customer support representative.

ORA-07800: slbtpd: invalid number

Cause: An impossible request for binary to decimal conversion was made

Action: This conversion cannot be performed

ORA-07801: slbtpd: invalid exponent

Cause: An impossible request for binary to decimal conversion was made

Action: This conversion cannot be performed

ORA-07802: slbtpd: overflow while converting to packed decimal

Cause: An impossible request for binary to decimal conversion was made

Action: This conversion cannot be performed

ORA-07803: slpdtb: invalid packed decimal nibble

Cause: An impossible request for decimal to binary conversion was made

Action: This conversion cannot be performed

ORA-07804: slpdtb: number too large for supplied buffer

Cause: An impossible request for decimal to binary conversion was made

Action: This conversion cannot be performed

ORA-07820: sspscn: SYS\$CRELNM failure

Cause: An error was returned from the SYS\$CRELNM function

Action: Check system error and refer to VMS documentation

ORA-07821: sspsdn: SYS\$DELLNM failure

Cause: An error was returned from the SYS\$DELLNM function

Action: Check system error and refer to VMS documentation

ORA-07822: sspscm: SYS\$CREMBX failure

Cause: An error was returned from the SYS\$CREMBX function while trying to create the process dump mailbox.

Action: Check system error and refer to VMS documentation

ORA-07823: sspsqr: \$QIO failure

Cause: An error was returned from \$QIO while trying to queue a read to the process dump mailbox.

Action: Check system error and refer to VMS documentation

ORA-07824: sspain: \$SETIMR failure

Cause: An error was returned from SYS\$SETIMR while trying to queue a process spin-watch timer.

Action: Check system error and refer to VMS documentation

ORA-07825: sspsc: \$QIO failure at AST level

Cause: An error was returned from SYS\$QIO while trying to read the process dump mailbox.

Action: Check system error and refer to VMS documentation

ORA-07826: sspscm: SYS\$GETDVIW failure

Cause: An error was returned from SYS\$GETDVIW while trying to get information about the process dump mailbox.

Action: Check system error and refer to VMS documentation

ORA-07840: sllfop: LIB\$GET_VM failure

Cause: An error was returned from LIB\$GET_VM while attempting to allocate memory for an i/o vector.

Action: Check system error and refer to VMS documentation

ORA-07841: sllfop: SYS\$OPEN failure

Cause: An error was returned from SYS\$OPEN while attempting to open the data file for reading

Action: Check system error and refer to VMS documentation

ORA-07842: sllfcl: SYS\$CLOSE failure

Cause: An error was returned from SYS\$CLOSE while attempting to close the input data file

Action: Check system error and refer to VMS documentation

ORA-07843: sllfcl: LIB\$FREE_VM failure

Cause: An error was returned from LIB\$FREE_VM while attempting to free the memory for the i/o vector

Action: Check system error and refer to VMS documentation

ORA-07844: sllfop: LIB\$GET_VM failure

Cause: An error was returned from LIB\$GET_VM while attempting to allocate memory for data and index buffers

Action: Check system error and refer to VMS documentation

ORA-07845: sllfcl: LIB\$FREE_VM failue

Cause: An error was returned from LIB\$FREE_VM while attempting to free memory used by data and index buffers

Action: Check system error and refer to VMS documentation

ORA-07846: sllfop: *string* byte record too big for *string* byte user buffer

Cause: The longest record in the file will not fit into the largest data buffer that can be allocated

Action: Modify the RMS file to have smaller records

ORA-07847: sllfop: \$CONNECT failure

Cause: An error was returned by SYS\$CONNECT while attempting to open the data file

Action: Check system error and refer to VMS documentation

ORA-07848: sllfrb: \$GET failure

Cause: An error was returned by SYS\$GET while attempting to read the data file

Action: Check system error and refer to VMS documentation

ORA-07849: sllfsk: \$GET failure

Cause: An error was returned by SYS\$GET while attempting to skip records in the input file

Action: Check system error and refer to VMS documentation

ORA-07850: sllfop: bad option

Cause: You are using a bad option to loader Fixed= is one legal option. Check documentation for others.

Action: Check documentation

ORA-07860: osnsoi: error setting up interrupt handler

Cause: An error occurred while setting up the control interrupt handler

Action: This is an internal error. Contact your Oracle representative.

ORA-07880: sdopnf: internal error

Cause: A list of all files open by this process could not be obtained.

Action: This is an internal error. Contact your customer support representative.

ORA-08000: maximum number of session sequence lists exceeded

Cause: the sequence parent state objects for this session are all used

Action: an internal error; quit the session and begin a new one

ORA-08002: sequence *string*.CURRVAL is not yet defined in this session

Cause: sequence CURRVAL has been selected before sequence NEXTVAL

Action: select NEXTVAL from the sequence before selecting CURRVAL

ORA-08003: sequence *string*.NEXTVAL exceeds internal limits

Cause: The sequence was created with unsafe values for some of the parameters. The calculation of NEXTVAL cannot be made because it exceeds the legal representation size.

Action: Alter or recreate the sequence number with legal limits.

ORA-08004: sequence *string*.NEXTVAL *string string*VALUE and cannot be instantiated

Cause: instantiating NEXTVAL would violate one of MAX/MINVALUE

Action: alter the sequence so that a new value can be requested

ORA-08005: specified row does not exist

Cause: A row with the given rowid does not exist in any of the tables given

Action: check the query for misspellings of table names and the rowid

ORA-08006: specified row no longer exists

Cause: the row has been deleted by another user since the operation began

Action: re-try the operation

ORA-08007: Further changes to this block by this transaction not allowed

Cause: Max locks have been reached for this transaction in this block

Action: Commit changes

ORA-08008: another instance is mounted with USE_ROW_ENQUEUEES = *string*

Cause: the shared instance being started does not have the same value for use_row_enqueuees as already running instances

Action: ensure that all instances' INIT.ORA files specify the same value for the parameter 'use_row_enqueuees'

ORA-08100: index is not valid - see trace file for diagnostics

Cause: Validate Index detected an inconsistency in its argument index

Action: Send trace file to your customer support representative

ORA-08101: index key does not exist file *string*: (root *string*, node *string*) blocks (*string*)

Cause: Internal error: possible inconsistency in index

Action: Send trace file to your customer support representative, along with information on reproducing the error

ORA-08102: index key not found, obj# *string*, file *string*, block *string* (*string*)

Cause: Internal error: possible inconsistency in index

Action: Send trace file to your customer support representative, along with information on reproducing the error

ORA-08103: object no longer exists

Cause: The object has been deleted by another user since the operation began, or a prior incomplete recovery restored the database to a point in time during the deletion of the object.

Action: Delete the object if this is the result of an incomplete recovery.

ORA-08104: this index object *string* is being online built or rebuilt

Cause: the index is being created or rebuilt or waited for recovering from the online (re)build

Action: wait the online index build or recovery to complete

ORA-08105: Oracle event to turn off smon cleanup for online index build

Cause: set this event only under the supervision of Oracle development

Action: debugging only

ORA-08106: cannot create journal table *string.string*

Cause: The online index builder could not create its journal table

Action: Rename the conflicting table or rerun the SQL statement. There * may be a concurrent online index rebuild on the same object. rename your table in conflict or rerun the SQL statement * there may be a concurrent online index rebuild on the same object.

ORA-08108: may not build or rebuild this type of index online

Cause: only support normal index or IOT top-level index

Action: change your index type

ORA-08109: nosort is not a supported option for online index build

Cause: may not specify nosort for online index build

Action: get rid of nosort in the index creation command

ORA-08110: Oracle event to test SMON cleanup for online index build

Cause: Oracle Kernel test only

Action: Donot set this event(for test only)

ORA-08111: a partitioned index may not be coalesced as a whole

Cause: User attempted to coalesce a partitioned index using ALTER INDEX COALESCE statement, which is illegal

Action: Coalesce the index a (sub)partition at a time (using ALTER INDEX MODIFY (sub)PARTITION COALESCE)

ORA-08112: a composite partition may not be coalesced as a whole

Cause: User attempted to coalesce a composite partition

Action: Coalesce the index a subpartition at a time (using ALTER INDEX MODIFY SUBPARTITION COALESCE)

ORA-08113: composite partition index may not be compressed

Cause: User attempted to compress a composite partition index

Action: create uncompressed composite partition index

ORA-08114: can not alter a fake index

Cause: User attempted to alter a fake index

Action: drop fake index

ORA-08115: can not online create/rebuild this index type

Cause: User attempted to create index type that online doesnot support

Action: use offline index create/rebuild command

ORA-08116: can not acquire dml enough lock(S mode) for online index build

Cause: User attempted to create index online without allowing DML Share lock

Action: allow DML share lock on the base table

ORA-08117: Index Organized Table operation released its block pin

Cause: Block maintenance forced the release of a block pin

Action: Contact your customer support representative

ORA-08118: Deferred FK constraints cannot be enforced, index too big (*string*)

Cause: Deferred Foreign Key constraints cannot be enforced due to the index key being too big and built on a non-default DB_BLOCK_SIZE.

Action: First try to drop the Foreign Key and then the primary key.

ORA-08119: The new intrans will make the index too big

Cause: Specifying the intrans need additional space to hold the index key which might make the index too big

Action: Try giving a smaller intrans value

ORA-08120: Need to create SYS.IND_ONLINE\$ table in order to (re)build index

Cause: Alter index Build/Rebuild online require existing of SYS.IND_ONLINE\$ table.

Action: User/DBA needs to create sys.ind_online\$ before alter the index /rdbms/admin/catcio.sql contains script to create ind_online\$.

ORA-08121: Number of indexes need to be maintained offline exceeds limit for DML

Cause: Too many indexes needed to be maintained. The limit is 2¹⁶ indexes for each DML statement

Action: Make sure the index maintainance is online. If indexes need to be maintained offline, drop some indexes.

ORA-08122: Online (re)build of index rolled back due to DML conflict

Cause: The online (re)build journal is inconsistent with ongoing DML and cannot be used successfully to complete the online index (re)build.

Action: Reissue the online (re)build operation, after performing any cleanup, if needed.

ORA-08175: discrete transaction restriction violated (*string*)

Cause: An attempt was made to perform an action that is not currently supported in a discrete transaction.

Action: Rollback the transaction, and retry it as a normal transaction.

ORA-08176: consistent read failure; rollback data not available

Cause: Encountered data changed by an operation that does not generate rollback data : create index, direct load or discrete transaction.

Action: In read/write transactions, retry the intended operation. Read only transactions must be restarted.

ORA-08177: can't serialize access for this transaction

Cause: Encountered data changed by an operation that occurred after the start of this serializable transaction.

Action: In read/write transactions, retry the intended operation or transaction.

ORA-08178: illegal SERIALIZABLE clause specified for user INTERNAL

Cause: Serializable mode is not supported for user INTERNAL.

Action: Reconnect as another user and retry the SET TRANSACTION command.

ORA-08179: concurrency check failed

Cause: Encountered data changed by an operation that occurred after a specific snapshot. This is usually used to indicate that a particular cached copy of a datablock is stale. This is used for internal use for now.

Action: refresh the cached copy of the datablock and retry operation.

ORA-08180: no snapshot found based on specified time

Cause: Could not match the time to an SCN from the mapping table.

Action: try using a larger time.

ORA-08181: specified number is not a valid system change number

Cause: supplied scn was beyond the bounds of a valid scn.

Action: use a valid scn.

ORA-08182: operation not supported while in Flashback mode

Cause: user tried to do dml or ddl while in Flashback mode

Action: disable Flashback and re-attempt the operation

ORA-08183: Flashback cannot be enabled in the middle of a transaction

Cause: user tried to do Flashback in the middle of a transaction

Action: do a commit

ORA-08184: attempting to re-enable Flashback while in Flashback mode

Cause: as stated above

Action: disable first before re-enabling

ORA-08185: Flashback not supported for user SYS

Cause: user logged on as SYS

Action: logon as a different (non SYS) user.

ORA-08186: invalid timestamp specified

Cause: as stated above

Action: enter a valid timestamp

ORA-08187: snapshot expression not allowed here

Cause: A snapshot expression using AS OF was specified when not allowed.

Action: Do not use the AS OF clause

ORA-08189: cannot flashback the table because row movement is not enabled

Cause: An attempt was made to perform Flashback Table operation on a table for which row movement has not been enabled. Because the Flashback Table does not preserve the rowids, it is necessary that row movement be enabled on the table.

Action: Enable row movement on the table

ORA-08190: restore point *string* is from a different incarnation of the database

Cause: An attempt was made to perform Flashback Table operation using a restore point from a different incarnation of the database

Action: Provide a restore point from the current database incarnation

ORA-08191: Flashback Table operation is not supported on remote tables

Cause: An attempt was made to perform Flashback Table operation on a remote table. This is not permitted.

Action: Do not perform a Flashback Table operation on remote tables.

ORA-08192: Flashback Table operation is not allowed on fixed tables

Cause: An attempt was made to perform Flashback Table operation on a fixed table. This is not permitted.

Action: Do not perform a Flashback Table operation on fixed tables.

ORA-08193: Flashback Table operation is not allowed on temporary tables

Cause: An attempt was made to perform Flashback Table operation on a temporary table. This is not permitted.

Action: Do not perform a Flashback Table operation on temporary tables.

ORA-08194: Flashback Table operation is not allowed on materialized views

Cause: An attempt was made to perform Flashback Table operation on a materialized view. This is not permitted.

Action: Do not perform a Flashback Table operation on materialized views or snapshot logs.

ORA-08195: Flashback Table operation is not supported on partitions

Cause: An attempt was made to perform Flashback Table operation on a partition. This is not permitted.

Action: Do not perform a Flashback Table operation on partitions.

ORA-08196: Flashback Table operation is not allowed on AQ tables

Cause: An attempt was made to perform Flashback Table operation on AQ tables. This is not permitted.

Action: Do not perform a Flashback Table operation on AQ tables.

ORA-08197: Flashback Table operation is not supported on clustered tables

Cause: An attempt was made to perform Flashback Table operation on a clustered table. This is not permitted.

Action: Do not perform a Flashback Table operation on clustered tables.

ORA-08198: Flashback Table is not supported on object tables, nested tables

Cause: An attempt was made to perform Flashback Table operation on a object table or a nested table or a table with nested table column. This is not permitted.

Action: Do not perform a Flashback Table operation on such tables.

ORA-08199: Flashback Table operation is not supported on this object

Cause: An attempt was made to perform Flashback Table operation on an object on which the operation is not supported.

Action: Do not perform a Flashback Table operation on such objects.

ORA-08205: ora_addr: \$ORACLE_SID not set in environment

Cause: The environment variable ORACLE_SID is not set.

Action: Set the ORACLE_SID environment variable.

ORA-08206: ora_addr: cannot translate address file name

Cause: Cannot translate \$ORACLE_HOME/dbs/sgadef\$ORACLE_SID.dbf.

Action: Ensure that ORACLE_HOME and ORACLE_SID are properly set.

ORA-08207: ora_addr: cannot open address file

Cause: The address file could not be opened.

Action: Check that ORACLE is up. Check that the file \$(ORACLE_HOME)/dbs/sgadef\$(ORACLE_SID).dbf exists and has correct permissions.

ORA-08208: ora_addr: cannot read from address file

Cause: The address file could not be read.

Action: Check that the file \$(ORACLE_HOME)/dbs/sgadef\$(ORACLE_SID).dbf exists and contains a single line of text.

ORA-08209: scngrs: SCN not yet initialized

Cause: The System Commit Number has not yet been initialized.

Action: Contact your customer support representative.

ORA-08210: Requested I/O error

Cause: Oracle requested that an I/O error be returned for this operation.

Action: This should not occur in normal Oracle operation. Contact support.

ORA-08230: smscre: failed to allocate SGA

Cause: The n_core system call failed, maybe due to insufficient memory.

Action: Specify a smaller number of buffers. Check INIT.ORA parameters.

ORA-08231: smscre: unable to attach to SGA

Cause: The process cannot attach to the SGA. This can happen if either the listener can't attach, or the process cannot communicate with the listener.

Action: Verify that the instance is up and running. Contact your customer support representative.

ORA-08232: smsdes: cannot detach from SGA

Cause: Probably, the listener process has died.

Action: Contact your customer support representative.

ORA-08233: smsdes: cannot unmap SGA

Cause: The n_core system call failed while detaching from the SGA.

Action: Note nCX error returned; contact your customer support representative.

ORA-08234: smsget: cannot get instance listener address

Cause: The instance listener address cannot be read from the sgadef file.

Action: Verify \$(ORACLE_HOME) and \$(ORACLE_SID) are set correctly. Additional information gives error return from ora_addr.

ORA-08235: smsget: listener not on this node

Cause: A process wishing to attach to the SGA is on a different node from its instance's listener.

Action: Verify \$(ORACLE_HOME) and \$(ORACLE_SID) are set correctly. Contact your customer support representative.

ORA-08236: smsget: cannot share subcube with listener

Cause: The n_share call failed, probably because the listener has died.

Action: Check if the listener is running, and contact your customer support representative.

ORA-08237: smsget: SGA region not yet created

Cause: Attempting to attach to an SGA which has not yet been created.

Action: Verify that the instance is running. Contact your customer support representative.

ORA-08238: smsfre: cannot detach from SGA

Cause: The n_core system call failed while detaching from the SGA.

Action: Check nCX error, and contact your customer support representative.

ORA-08243: recursive audit operation attempted

Cause: A recursive operation requiring audit was attempted in the middle of an auditing operation. The most likely reason is space management operations needed to free up space in the audit tablespace.

Action: Check space in the tablespace for SYS.AUD\$ and correct the problem.

ORA-08260: ora_addr: cannot open nameserver

Cause: A process could not connect to the nameserver.

Action: Make sure the nameserver is up and running. Additional information gives nameserver's returned status.

ORA-08261: ora_addr: cannot find name in nameserver

Cause: The listener nameserver entry for an instance could not be found.

Action: Make sure the nameserver is up and running. Additional information gives nameserver's returned status.

ORA-08263: ora_addr: cannot free listener address

Cause: The listener nameserver entry could not be freed

Action: Additional information gives nameserver's returned status. Contact your customer support representative.

ORA-08264: ora_addr: cannot close nameserver

Cause: The connection to the nameserver could not be closed.

Action: Additional information gives nameserver's returned status. Contact your customer support representative.

ORA-08265: create_ora_addr: cannot open nameserver

Cause: A process could not connect to the nameserver.

Action: Make sure the nameserver is up and running. Additional information gives nameserver's returned status.

ORA-08266: create_ora_addr: cannot register name in nameserver

Cause: The listener's addressing information could not be registered.

Action: Make sure the nameserver is up and running. Additional information gives nameserver's returned status.

ORA-08267: destroy_ora_addr: cannot close nameserver

Cause: The connection to the nameserver could not be closed.

Action: Additional information gives nameserver's returned status. Contact your customer support representative.

ORA-08268: create_ora_addr: cannot close nameserver

Cause: The connection to the nameserver could not be closed.

Action: Additional information gives nameserver's returned status. Contact your customer support representative.

ORA-08269: destroy_ora_addr: cannot destroy name

Cause: The listener's addressing information could not be removed.

Action: Additional information gives nameserver's returned status. Contact your customer support representative.

ORA-08270: sksachk: Illegal archival control string

Cause: Archive files cannot be created with the given archival control string.

Action: Check that the volume exists

ORA-08271: sksabl: Buffer size not large enough for archive control string

Cause: The given archival control string expands into too many characters.

Action: Reduce archive control string length.

ORA-08274: Out of memory for environment variable

Cause: There is insufficient memory to return the requested value

Action: Reduce memory usage and retry.

ORA-08275: Environment variable unset

Cause: The requested environment variable is not set

Action: Ensure that the variable name requested is correct.

ORA-08276: No room in nameserver for pid

Cause: There is no room to record the pid for a background process

Action: Shutdown abort and restart the database.

ORA-08277: Cannot set environment variable

Cause: There is insufficient memory to expand the environment.

Action: Reduce memory usage and retry.

ORA-08278: Cannot get CPU statistics

Cause: Could not retrieve CPU times because n_stat failed.

Action: Contact customer support.

ORA-08308: sllfop: Cannot open file

Cause: Oracle could not open a file.

Action: Check the Unix errno returned as additional information.

ORA-08309: sllfop: Cannot fstat file

Cause: Oracle could not obtain information about an open file.

Action: Check the Unix errno returned as additional information.

ORA-08310: sllfop: Bad value for recsize

Cause: An illegal value for the record size was specified.

Action: Specify a value for the recsize option that is greater than 0.

ORA-08311: sllfop: bad value for maxrecsize

Cause: An illegal value for the maximum record size was specified.

Action: Specify a value for the maxrecsize option that is greater than 0.

ORA-08312: sllfop: unrecognized processing option

Cause: An unrecognized processing option was specified.

Action: Check the Oracle for nCUBE 2 User's Guide for valid options.

ORA-08313: sllfop: could not allocate buffers

Cause: Memory for the load buffers could not be allocated.

Action: Reduce the maximum record size. Eliminate any unnecessary processes on your current node before running SQL*Loader again.

ORA-08314: sllfcf: Error closing file

Cause: An error occurred trying to close a file.

Action: Check the Unix errno returned as additional information.

ORA-08315: sllfrb: Error reading file

Cause: An error occurred trying to read from a file.

Action: Check the Unix errno returned as additional information.

ORA-08316: sllfsk: Error seeking in file.

Cause: The lseek system call returned an error.

Action: Check the Unix errno returned as additional information.

ORA-08317: sllfsk: Error seeking in file.

Cause: The lseek system call returned an error.

Action: Check the Unix errno returned as additional information.

ORA-08318: sllfsk: Error reading file

Cause: An error occurred trying to read from a file.

Action: Check the Unix errno returned as additional information.

ORA-08319: sllfsk: Error reading file

Cause: An error occurred trying to read from a file.

Action: Check the Unix errno returned as additional information.

ORA-08320: scnget: Call to scnget before scnset or scnfnf.

Cause: An internal error

Action: Contact your customer support representative.

ORA-08321: scnmin: NOT IMPLEMENTED YET

Cause: An internal error

Action: Contact your customer support representative.

ORA-08322: scnmin: open/convert of bias lock failed

Cause: A call to the lkmgr failed to open and convert the bias lock

Action: Check to make sure the lkmgr is up.

ORA-08323: scnmin: close of bias lock failed

Cause: A call to the lkmgr failed to close the bias lock

Action: Check to make sure the lkmgr is up.

ORA-08330: Printing not supported

Cause: An attempt was made to automatically spool a file to the printer

Action: None

ORA-08331: Wait operation timed out

Cause: Oracle timed out waiting for an event

Action: Contact your Oracle support representative

ORA-08332: rollback segment #string specified not available

Cause: (same as 1545)

Action: (same as 1545). Also, make sure you have created enough rollback segments for the number of instances you are trying to start.

ORA-08340: This command not allowed on nCUBE, only one thread is ever used.

Cause: An illegal command was executed for the nCUBE platform.

Action: There is no need to issue this command.

ORA-08341: On nCUBE, this command can only be executed from instance 1.

Cause: A command that can only be issued on instance 1 was issued elsewhere.

Action: Log on to instance 1 and repeat the command.

ORA-08342: sropen: failed to open a redo server connection

Cause: An error occurred trying to connect to the redo server.

Action: The OS specific error message should tell you what to do.

ORA-08343: srclose: failed to close a redo server connection

Cause: An error occurred trying to close the redo server connection.

Action: The OS specific error message should tell you what to do.

ORA-08344: srapp: failed to send redo data to the redo server

Cause: An error occurred trying to send redo to the redo server.

Action: The OS specific error message should tell you what to do.

ORA-08401: invalid compiler name: string

Cause: An invalid compiler name *compname* was passed to a UTL_PG conversion routine.

Action: Correct the compiler name parameter in the PL/SQL code that called the conversion routine.

ORA-08412: error encountered in WMSGBSIZ, size for WMSGBLK is not big enough for warning message

Cause: The WMSGBSIZ is the maximum size for warning message block, it is recommended to be 1024 bytes to 8 kbytes.

Action: Define WMSGBLK of size between 1k to 8k bytes and update the WMSGBSIZ to the sizeof(WMSGBLK).

ORA-08413: invalid compiler type in FORMAT parameter at *string*

Cause: An invalid compiler type is defined in format control block. The format control block is invalid.

Action: Check to be sure that the format parameter was built by MAKE_RAW_TO_NUMBER_FORMAT or MAKE_NUMBER_TO_RAW_FORMAT, and that it was not accidentally overwritten or modified by the PL/SQL procedure.

ORA-08414: error encountered in *string*

Cause: The function *routine* returned an error. Where *routine* may be: RAW_TO_NUMBER NUMBER_TO_RAW RAW_TO_NUMBER_FORMAT NUMBER_TO_RAW_FORMAT MAKE_NUMBER_TO_RAW_FORMAT MAKE_RAW_TO_NUMBER_FORMAT

Action: This message will be preceded by messages providing details about the error. Check those messages to determine what action to take.

ORA-08429: raw data has invalid digit in display type data

Cause: The input raw buffer passed to a UTL_PG RAW_TO_NUMBER conversion routine contained invalid data. The picture mask parameter specified a digit, but the corresponding input from the raw data did not contain a valid digit.

Action: Either the input data is incorrect, or the picture mask is incorrect. Correct the appropriate item.

ORA-08430: raw data missing leading sign

Cause: The input raw buffer passed to a UTL_PG RAW_TO_NUMBER conversion routine had no leading sign, but the mask options parameter specified a leading sign.

Action: Correct the input raw data or the mask options so that they match.

ORA-08431: raw data missing zero as defined in picture

Cause: The picture mask parameter passed to a UTL_PG RAW_TO_NUMBER conversion routine contained a zero, but the corresponding input from the raw data was not a zero.

Action: Either the input data is incorrect, or the picture mask is incorrect. Correct the appropriate item.

ORA-08432: raw data has invalid floating point data

Cause: The input raw data passed to a UTL_PG RAW_TO_NUMBER conversion routine contained invalid floating point data.

Action: Correct the input raw data.

ORA-08433: invalid picture type in convert raw to number

Cause: The picture mask parameter passed to a UTL_PG RAW_TO_NUMBER conversion routine contained non-numeric characters, but the conversion was to a numeric data type.

Action: Correct the picture mask parameter.

ORA-08434: raw data has invalid trailing sign

Cause: The input raw buffer passed to a UTL_PG RAW_TO_NUMBER conversion routine had no trailing sign, but the mask options parameter specified a trailing sign.

Action: Correct the input raw data or the mask options so that they match.

ORA-08435: PICTURE MASK missing the leading sign when SIGN IS LEADING specified

Cause: The input MASK passed to a UTL_PG RAW_TO_NUMBER conversion routine had no leading sign, but the mask options parameter specified a leading sign.

Action: Correct the input raw data or the mask options so that they match.

ORA-08436: raw data has invalid sign digit

Cause: The input raw buffer passed to a UTL_PG RAW_TO_NUMBER conversion routine had an invalid sign digit in the position where the picture mask specified a sign.

Action: Correct the input raw data or the picture mask so that they match.

ORA-08437: invalid picture type in picture mask

Cause: The picture mask parameter passed to a UTL_PG NUMBER_TO_RAW conversion routine contained non-numeric characters, but the conversion was to a numeric data type.

Action: Correct the picture mask parameter.

ORA-08440: raw buffer is too short to hold converted data

Cause: The output raw buffer passed to a UTL_PG NUMBER_TO_RAW conversion routine was not large enough to contain the results of the conversion based on the picture mask.

Action: Increase the raw buffer size to the size necessary to hold the entire result of the conversion.

ORA-08441: closed parenthesis missing in picture mask

Cause: A closed parenthesis was missing from the picture mask passed to a UTL_PG conversion routine.

Action: Correct the picture mask.

ORA-08443: syntax error in BLANK WHEN ZERO clause in mask options

Cause: A syntax error was found in the BLANK WHEN ZERO clause in the mask options parameter passed to a UTL_PG conversion routine. Valid specifications are: BLANK ZERO BLANK ZEROS BLANK ZEROES BLANK WHEN ZERO BLANK WHEN ZEROS BLANK WHEN ZEROES

Action: Correct the mask options parameter.

ORA-08444: syntax error in JUSTIFIED clause in mask options

Cause: A syntax error was found in the JUSTIFIED clause in the mask options parameter passed to a UTL_PG conversion routine. Valid specifications are: JUST JUST RIGHT JUSTIFIED JUSTIFIED RIGHT

Action: Correct the mask options parameter.

ORA-08445: syntax error in SIGN clause in mask options

Cause: A syntax error was found in the SIGN clause in the mask options parameter passed to a UTL_PG conversion routine. Valid specifications are: SIGN LEADING SIGN LEADING SEPARATE SIGN LEADING SEPARATE CHARACTER SIGN

TRAILING SIGN TRAILING SEPARATE SIGN TRAILING SEPARATE
CHARACTER SIGN IS LEADING SIGN IS LEADING SEPARATE SIGN IS
LEADING SEPARATE CHARACTER SIGN IS TRAILING SIGN IS TRAILING
SEPARATE SIGN IS TRAILING SEPARATE CHARACTER

Action: Correct the mask options parameter.

ORA-08446: syntax error in SYNCHRONIZED clause in mask options

Cause: A syntax error was found in the SYNCHRONIZED clause in the mask options parameter passed to a UTL_PG conversion routine. Valid specifications are: SYNC SYNC LEFT SYNC RIGHT SYNCHRONIZED SYNCHRONIZED LEFT SYNCHRONIZED RIGHT

Action: Correct the mask options parameter.

ORA-08447: syntax error in USAGE clause in mask options

Cause: A syntax error was found in the USAGE clause in the mask options parameter passed to a UTL_PG conversion routine. Valid specifications are: USAGE DISPLAY USAGE COMP USAGE COMP-3 USAGE COMP-4 USAGE COMPUTATIONAL USAGE COMPUTATIONAL-3 USAGE COMPUTATIONAL-4 USAGE IS DISPLAY USAGE IS COMP USAGE IS COMP-3 USAGE IS COMP-4 USAGE IS COMPUTATIONAL USAGE IS COMPUTATIONAL-3 USAGE IS COMPUTATIONAL-4

Action: Correct the mask options parameter.

ORA-08448: syntax error in DECIMAL-POINT environment clause

Cause: A syntax error was found in the DECIMAL-POINT environment clause parameter passed to a UTL_PG conversion routine. Valid specifications are: DECIMAL-POINT IS COMMA

Action: Correct the environment clause parameter.

ORA-08449: invalid numeric symbol found in picture mask

Cause: An invalid numeric symbol was found in the picture mask parameter passed to a UTL_PG conversion routine.

Action: Correct the picture mask parameter.

ORA-08450: invalid specification of CR in picture mask

Cause: The CR suffix was incorrectly specified in the picture mask parameter passed to a UTL_PG conversion routine. The CR suffix can only appear at the end of a picture mask.

Action: Correct the picture mask parameter.

ORA-08451: invalid specification of DB in picture mask

Cause: The DB suffix was incorrectly specified in the picture mask parameter passed to a UTL_PG conversion routine. The DB suffix can only appear at the end of a picture mask.

Action: Correct the picture mask parameter.

ORA-08452: specification of E in picture mask is unsupported

Cause: The floating point exponent symbol 'E' was specified in the picture mask parameter passed to a UTL_PG conversion routine. The floating point data type is currently not supported by the UTL_PG conversion routines.

Action: Correct the picture mask parameter, and the data, if necessary.

ORA-08453: more than one V symbol specified in picture mask

Cause: The picture mask passed to a UTL_PG conversion routine contained more than one decimal point indicator ('V'). Only one decimal point indicator is allowed in the picture mask.

Action: Correct the picture mask parameter.

ORA-08454: more than one S symbol specified in picture mask

Cause: The picture mask passed to a UTL_PG conversion routine contained more than one operational sign indicator ('S'). Only one operational sign indicator is allowed in the picture mask.

Action: Correct the picture mask parameter.

ORA-08455: syntax error in CURRENCY SIGN environment clause

Cause: A syntax error was found in the CURRENCY SIGN environment clause parameter passed to a UTL_PG conversion routine. Valid specifications are: CURRENCY SIGN IS x where x is a valid currency sign

Action: Correct the environment clause parameter.

ORA-08456: no sign in picture mask but SIGN clause in mask options

Cause: The picture mask parameter passed to a UTL_PG conversion routine contained no sign symbol ('S', '+', or '-'), but the mask options parameter contained a SIGN clause. A sign symbol is required in the picture mask parameter when the mask options parameter contains a SIGN clause.

Action: Correct the picture mask parameter or the mask options parameter.

ORA-08457: syntax error in SEPARATE CHARACTER option of SIGN clause

Cause: A syntax error was found in the SEPARATE CHARACTER option of the SIGN clause in the mask options parameter passed to a UTL_PG conversion routine. Valid specifications are: SEPARATE SEPARATE CHARACTER

Action: Correct the mask options parameter.

ORA-08458: invalid format parameter

Cause: The format parameter passed to a UTL_PG conversion routine was invalid. The format parameter should have been built by a prior call to either MAKE_RAW_TO_NUMBER_FORMAT or MAKE_NUMBER_TO_RAW_FORMAT.

Action: Check to be sure that the format parameter was built by MAKE_RAW_TO_NUMBER_FORMAT or MAKE_NUMBER_TO_RAW_FORMAT, and that it was not accidentally overwritten or modified by the PL/SQL procedure.

ORA-08459: invalid format parameter length

Cause: The format parameter passed to a UTL_PG conversion routine was not the correct length. Format parameters must be 2048 bytes in length.

Action: Check to be sure that the format parameter was built by MAKE_RAW_TO_NUMBER_FORMAT or MAKE_NUMBER_TO_RAW_FORMAT, and that it was not accidentally overwritten or modified by the PL/SQL procedure.

ORA-08460: invalid environment clause in environment parameter

Cause: The environment parameter passed to a UTL_PG conversion routine contained an unsupported or invalid environment clause. Only the CURRENCY SIGN and the DECIMAL-POINT IS COMMA environment clauses are supported.

Action: Correct the environment parameter.

ORA-08462: raw buffer contains invalid decimal data

Cause: The input raw buffer passed to a UTL_PG RAW_TO_NUMBER conversion routine contains invalid decimal data.

Action: Correct the input data.

ORA-08463: overflow converting decimal number to Oracle number

Cause: The output variable passed to a UTL_PG RAW_TO_NUMBER was not large enough to hold the Oracle number resulting from the input decimal number.

Action: Be sure that the input decimal number is valid, and be sure that the output variable is large enough to hold the Oracle number value.

ORA-08464: input raw decimal data contains more than 42 digits

Cause: The input raw buffer passed to a UTL_PG RAW_TO_NUMBER conversion routine contained more than 42 digits. This exceeds the maximum size of an Oracle number.

Action: Correct the raw input buffer.

ORA-08465: input mask contains more than 32 characters

Cause: The input mask passed to UTL_PG numeric conversion routine contained more than 32 characters.

Action: Correct the mask input buffer.

ORA-08466: raw buffer length *string* is too short for *string*

Cause: The input raw buffer passed to a UTL_PG RAW_TO_NUMBER conversion routine was less than %s bytes long, but the picture mask parameter specified that %s bytes of input data were to be converted.

Action: Either the input data is incorrect, or the picture mask is incorrect. Correct the appropriate item.

ORA-08467: error converting Oracle number to *string*

Cause: An error occurred when converting an Oracle number to a COBOL *type* of: DISPLAY COMP-3 or character variable. The Oracle number was not in the correct format.

Action: Correct the call to the conversion routine. The input must be a valid Oracle number variable.

ORA-08468: mask option *string* is not supported

Cause: The mask option *clause* was passed to a UTL_PG conversion routine, but is not supported by UTL_PG. The *clause* can be: USAGE IS POINTER USAGE IS INDEX USAGE IS COMP-1 USAGE IS COMP-2 POINTER

Action: Remove the *clause* from the mask options parameter in the PL/SQL call to UTL_PG.

ORA-08469: must use the SIGN IS SEPARATE clause in mask options

Cause: A signed numeric entry with DISPLAY usage was converted using a non-defaulted character set and its PICTURE character-string contains an S. In these circumstances, a SIGN IS SEPARATE clause must be specified in the mask options.

Action: Either specify a valid SIGN IS SEPARATE clause in the mask options, use the defaulted character set, or don't specify an S in the PICTURE character-string.

ORA-08498: Warning: picture mask 'string' overrides picture mask option 'USAGE IS string' to 'USAGE IS DISPLAY'

Cause: Picture mask USAGE option was overridden by the picture mask.

Action: This is an informational message only. The message may be eliminated by changing the USAGE option to match the picture mask.

ORA-08499: Warning: picture mask options 'string' ignored by UTL_PG

Cause: Picture mask options such as OCCUR, SYNC and others are not processed by the UTL_PG numeric conversion routines.

Action: This is an informational message only. The message may be eliminated by removing the unnecessary picture mask options from the parameter list passed to the UTL_PG routine.

ORA-09200: sfccf: error creating file

Cause: Could be out of disk space

Action: See OSD error accompanying this message

ORA-09201: sfcopy: error copying file

Cause: Block sizes may not match

Action: See OSD error accompanying this message

ORA-09202: sfifi: error identifying file

Cause: db_block_size specified in init.ora could be incorrect

Action: See OSD error accompanying this message

ORA-09203: sfofi: error opening file

Cause: File attributes may have changed

Action: See OSD error accompanying this message

ORA-09204: sfof: error opening temporary file

Cause: Incorrect path may have been specified for the file

Action: See OSD error accompanying this message

ORA-09205: sfqio: error reading or writing to disk

Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

ORA-09206: sfrfb: error reading from file

Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

ORA-09207: sfsrd: error reading from file

Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

ORA-09208: sftcls: error closing file

Cause: File may have been corrupted

Action: See OSD error accompanying this message

ORA-09209: sftget: error reading from file

Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

ORA-09210: sftopn: error opening file

Cause: Incorrect path may have been specified for the file

Action: See OSD error accompanying this message

ORA-09211: sfwfb: error writing to file

Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

ORA-09212: sfwfbmt: error writing to file

Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

ORA-09213: slgfn: error fabricating file name

Cause: Filename may be too long

Action: See OSD error accompanying this message

ORA-09214: sfdone: I/O error detected

Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

ORA-09215: sfqio: error detected in IOCompletionRoutine

Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

ORA-09216: sdnfy: bad value '*string*' for parameter *string*

Cause: The directory specified as the value for the stated parameter could not be used.

Action: Make sure the directory you have specified is a valid directory/file specification.

ORA-09217: sfsfs: failed to resize file

Cause: Could be out of disk space

Action: See OSD error accompanying this message

ORA-09218: sfrfs: failed to refresh file size

Cause: File may be corrupted or truncated

Action: See OSD error accompanying this message

ORA-09240: smpalo: error allocating PGA memory

Cause: Could be out of memory

Action: See OSD error accompanying this message

ORA-09241: smsalo: error allocating SGA memory

Cause: Could be out of memory

Action: See OSD error accompanying this message

ORA-09242: smscre: error creating SGA

ORA-09243: smsget: error attaching to SGA

Cause: SGA may not have been created (database not started)

Action: See OSD error accompanying this message

ORA-09244: smprset: error setting memory protections

ORA-09245: smcstk: error switching stacks

ORA-09246: sfsmap: unable to map SGA

ORA-09247: smsdes: error destroying the SGA

ORA-09260: sigpidu: error obtaining process id

Cause: May be out of resources

Action: See OSD error accompanying this message

ORA-09261: spdcr: error creating detached (background) process

Cause: Could be out of resources

Action: See OSD error accompanying this message

ORA-09262: spdde: error terminating detached (background) process

Cause: Could be out of resources

Action: See OSD error accompanying this message

ORA-09263: spini: error initializing process

Cause: Could be out of memory

Action: See OSD error accompanying this message

ORA-09264: sptpa: error flagging process

Cause: Could be out of resources

Action: See OSD error accompanying this message

ORA-09265: spwat: error temporarily suspending process

Cause: Could be out of resources

Action: See OSD error accompanying this message

ORA-09266: spawn: error starting an Oracle process

Cause: Could be out memory

Action: See OSD error accompanying this message

ORA-09270: szalloc: error allocating memory for security

Cause: Could be out of memory

Action: See OSD error accompanying this message

ORA-09271: szlon: error verifying user name

Cause: Username may be too long

Action: See OSD error accompanying this message

ORA-09272: remote os logon is not allowed

Cause: Remote os login attempted when not allowed.

Action: See OSD error accompanying this message

ORA-09273: szrfc: error verifying role name

Cause: An OS error was returned when verifying the role name.

Action: See OSD error accompanying this message

ORA-09274: szrfc: insufficient role name buffer space

Cause: An OS role name was too long.

Action: See OSD error accompanying this message

ORA-09275: CONNECT INTERNAL is not a valid DBA connection

Cause: CONNECT INTERNAL is no longer supported for DBA connections.

Action: Please try to connect AS SYSDBA or AS SYSOPER.

ORA-09276: All bequeath database links must be loopback database links

Cause: A non-loopback bequeath connect string was supplied for a database link.

Action: Please use a connect string with a different transport protocol, or specify a loopback connect string (one that points to the instance for the current session) using "(PROGRAM=<this instance's ORACLE_HOME>/bin/oracle)" and, optionally, "(ENVS="ORACLE_SID=<this instance's ORACLE_SID>")".

ORA-09280: sllfcf: error closing file

Cause: File may be corrupted

Action: See OSD error accompanying this message

ORA-09281: sllfop: error opening file

Cause: Possibly incorrect path specified to the file

Action: See OSD error accompanying this message

ORA-09282: sllfrb: error reading records

Cause: File could be corrupted

Action: See OSD error accompanying this message

ORA-09283: sllfsk: error skipping records

Cause: File could be corrupted

Action: See OSD error accompanying this message

ORA-09284: sllfop: cannot allocate read buffer

Cause: malloc() system call returned an error. The system might have run out of heap space

Action: Check additional information for the OS error.

ORA-09285: sllfop: unrecognizable processing option, incorrect format

Cause: Processing option passed is of incorrect format

Action: Consult your IUG for permissible formats

ORA-09290: sksaalo: error allocating memory for archival

Cause: Could be out of memory

Action: See OSD error accompanying this message

ORA-09291: sksachk: invalid device specified for archive destination

Cause: Unable to access directory

Action: Specify a valid device in ARCHIVE control string

ORA-09292: sksabl: unable to build archive file name

Cause: Bad directory or format specified

Action: Specify a valid directory in 'log_archive_format' and a valid format string in 'log_archive_format' in init.ora

ORA-09293: sksasm: unable to send message to console

Cause: An error was returned while attempting to send a message to the console operator

Action: See OSD error accompanying this message

ORA-09300: osncon: unable to connect, DPMS not available

Cause: Unable to detect the presence of DPMS

Action: Restart Windows and retry

ORA-09301: osncon: local kernel only supported in standard mode

Cause: An attempt was made to connect to S: while in enhanced mode

Action: Restart Windows in standard mode

ORA-09310: sclgt: error freeing latch

Cause: Internal error

Action: See OSD error accompanying this message

ORA-09311: slsleep: error temporarily suspending process

Cause: May be out of resources

Action: See OSD error accompanying this message

ORA-09312: slspool: error spooling file to printer

Cause: Could be out of resources

Action: See OSD error accompanying this message

ORA-09313: slsprom: error prompting user

Cause: May be out of resources

Action: See OSD error accompanying this message

ORA-09314: sltln: error translating logical name

Cause: Internal buffer may have overflowed

Action: See OSD error accompanying this message

ORA-09315: sql2tt: two-task error translating ORACLE_EXECUTABLE

Cause: Internal error

Action: See OSD error accompanying this message

ORA-09316: szrpc: unable to verify password for role

Cause: OS roles may not be supported for this platform

Action: See OSD error accompanying this message

ORA-09317: szprv: insufficient privileges

Cause: The password specified is invalid

Action: See OSD error accompanying this message

ORA-09318: slkfst: unable to host out to operating system

Cause: There might not be enough memory for the command or hosting out may not be supported on this platform

Action: See OSD error accompanying this message

ORA-09319: slgtd: unable to obtain the current date and time

Cause: The system time might be set incorrectly

Action: See OSD error accompanying this message

ORA-09320: szrfc: unable to obtain the list of valid OS roles

Cause: OS roles may not be supported on this platform

Action: See OSD error accompanying this message

ORA-09321: slzdtb: unable to convert zoned decimal to binary

Cause: internal error

Action: See OSD error accompanying this message

ORA-09322: slpdtb: unable to convert packed decimal to binary

Cause: internal error

Action: See OSD error accompanying this message

ORA-09330: Session terminated internally by Oracle or by an Oracle DBA

Cause: A client workstation that is abnormally disconnected would cause Oracle to terminate that session after about a minute. This message also appears in the trace file if a shutdown abort is performed.

Action: n/a

ORA-09340: Specified ORACLE_SID is either invalid or too long

Cause: ORACLE_SID must be at the most 4 alphanumeric characters.

Action: n/a

ORA-09341: scumnt: unable to mount database

Cause: Another instance is currently mounting the database

Action: n/a

ORA-09342: Detached process terminated by Oracle during shutdown abort

Cause: The user performed a shutdown abort.

Action: n/a

ORA-09344: spsig: error signalling thread

Cause: This function may not be implemented.

Action: n/a

ORA-09350: Windows 32-bit Two-Task driver unable to allocate context area

Cause: See OSD error accompanying this message

Action: n/a

ORA-09351: Windows 32-bit Two-Task driver unable to allocate shared memory

Cause: See OSD error accompanying this message

Action: n/a

ORA-09352: Windows 32-bit Two-Task driver unable to spawn new ORACLE task

Cause: See OSD error accompanying this message

Action: n/a

ORA-09353: Windows 32-bit Two-Task driver unable to open event semaphore

Cause: See OSD error accompanying this message

Action: n/a

ORA-09354: Windows 32-bit Two-Task driver: ORACLE task unexpectedly died

Cause: See OSD error accompanying this message

Action: n/a

ORA-09360: Windows 3.1 Two-Task driver unable to allocate context area

Cause: See OSD error accompanying this message

Action: n/a

ORA-09361: Windows 3.1 Two-Task driver unable to lock context area

Cause: See OSD error accompanying this message

Action: n/a

ORA-09362: Windows 3.1 Two-Task driver unable to deallocate context area

Cause: See OSD error accompanying this message

Action: n/a

ORA-09363: Windows 3.1 Two-Task driver invalid context area

Cause: See OSD error accompanying this message

Action: n/a

ORA-09364: Windows 3.1 Two-Task driver unable to create hidden window

Cause: See OSD error accompanying this message

Action: n/a

ORA-09365: Windows 3.1 Two-Task driver unable to destroy hidden window

Cause: See OSD error accompanying this message

Action: n/a

ORA-09366: Windows 3.1 Two-Task driver unable to allocate shared memory

Cause: See OSD error accompanying this message

Action: n/a

ORA-09367: Windows 3.1 Two-Task driver unable to deallocate shared memory

Cause: See OSD error accompanying this message

Action: n/a

ORA-09368: Windows 3.1 Two-Task driver unable to spawn ORACLE

Cause: See OSD error accompanying this message

Action: n/a

ORA-09369: Windows 3.1 Two-Task driver bad instance handle

Cause: See OSD error accompanying this message

Action: n/a

ORA-09370: Windows 3.1 Two-Task driver ORACLE task timed out

Cause: See OSD error accompanying this message

Action: n/a

ORA-09700: sclin: maximum number of latches exceeded

Cause: ORACLE wants to use more latches than available.

Action: increase INIT.ORA parameter latch_pages or decrease the amount of shared memory you are using.

ORA-09701: scnfy: maximum number of processes exceeded

Cause: PROCESSES INIT.ORA parameter exceeded.

Action: Decrease the PROCESSES parameter and restart.

ORA-09702: sem_acquire: cannot acquire latch semaphore

Cause: The semaphore used for accessing latches could not be seized

Action: Send trace file to your customer support representative, along with information on reproducing the error.

ORA-09703: sem_release: cannot release latch semaphore

Cause: The semaphore used for accessing latches could not be released

Action: Send trace file to your customer support representative, along with information on reproducing the error.

ORA-09704: sstacre: ftok error in creating test and set pages.

Cause: the ftok() library call failed in sstastcre().

Action: Verify that tasdef@.dbf file exists. If it does then this is a possible system failure. Perhaps System V compatibility is not enabled.

ORA-09705: spcre: cannot initialize latch semaphore

Cause: The semaphore used for accessing latches could not be initialized

Action: Send trace file to your customer support representative, along with information on reproducing the error.

ORA-09706: slsget: get_process_stats error.

Cause: get_process_stats system call returned an error. Possible OS error.

Action: Check additional information returned. Look for information in OS reference. Contact customer support.

ORA-09708: soacon: failed to bind socket to port.

Cause: The bind system call failed on the socket.

Action: Check additional information for OS error. Try connecting again.

ORA-09709: soacon: failed to accept a connection.

Cause: The accept system call failed on the socket.

Action: Check additional information for OS error. Try connecting again.

ORA-09710: soarcv: buffer overflow.

Cause: The internal buffer is not big enough to hold the message read.

Action: Internal error. Contact customer support representative.

ORA-09711: orasrv: archmon already connected.

Cause: An existing connection has already been made from archmon to orasrv.

Action: Stop trying to connect.

ORA-09712: orasrv: log archiver already connected.

Cause: An existing connection has already been made from log archiver to orasrv.

Action: Stop trying to connect.

ORA-09714: Two Task interface: cannot obtain puname

Cause: The TXIPC driver cannot obtain the name of the PU. (Possible OS error)

Action: Check if the PUs are named (consistend).

ORA-09715: orasrv: cannot obtain puname

Cause: Orasrv cannot obtain the name of the PU. (Possible OS error)

Action: Check if the PUs are named (consistend).

ORA-09716: kslcll: Unable to fix in-flux lamport latch.

Cause: One Oracle process died while still holding a lamport latch.

Action: Exit (kill) all Oracle user processes. Shutdown (abort) and restart Oracle RDBMS kernel.

ORA-09717: osnsui: maximum number of user interrupt handlers exceeded.

Cause: The internal limit on the number of user interrupt handlers has been exceeded.

Action: Reduce the number of simulataneous logons or reduce the number of user interrupt handlers.

ORA-09718: osnsui: cannot set up user interrupt handler.

Cause: Malloc() failed to allocate space to hold user interrupt handler.

Action: Possible memory resource shortage.

ORA-09719: osncui: invalid handle.

Cause: The handle passed to osncui is out of the valid range.

Action: Use a valid handle.

ORA-09740: slsget: cannot get virtual memory region statistics.

Cause: The vm_region system call failed to get virual memory region statistics.

Action: Check return code in sercerrno. Possible operating system failure.

ORA-09741: spwat: error waiting for a post.

Cause: Msg_receive system call returned an error. Internal error.

Action: Check return code in sercerrno. Port name is returned in sercose[0].

ORA-09742: sppst: error during a post.

Cause: Msg_send system call returned an error. Internal error.

Action: Check return code in sercerrno. Port name is returned in sercose[0].

ORA-09743: smscre: could not attach shared memory.

Cause: The mmap or write system call returned an error. Internal error.

Action: Contact Oracle support.

ORA-09744: smsget: mmap returned an error.

Cause: The mmap system call returned an error. Internal error.

Action: Contact Oracle support.

ORA-09745: smscre: vm_allocate error, unable to create shared memory.

Cause: Error in system call vm_allocate. Failed to create SGA as a single shared memory segment.

Action: Check result code returned in sercerno. Verify that the SGA attach address is valid.

ORA-09746: smscre: shared memory attach address incorrect.

Cause: The vm_allocate system call attached the SGA at an incorrect location.

Action: Verify that the SGA attach address is valid.

ORA-09747: pw_detachPorts: server call pws_detach failed.

Cause: The call pws_detach to (Oracle helper) failed.

Action: Make sure the server is still active. Check the error code returned in sercerno, and look for error messages in the server log file.

ORA-09748: pws_look_up: fork failed

Cause: The pws_look_up call could not fork the (Oracle helper) process.

Action: Verify that there are enough system resources to support another process. The user or system process limit may have been exceeded, or the amount of free memory or swap space may be temporarily insufficient.

ORA-09749: pws_look_up: port lookup failure

Cause: The pws_look_up could not find a port to (Oracle helper).

Action: Make sure the (Oracle helper) server has been started correctly by pws_look_up, and that the network name server is still running.

ORA-09750: pw_attachPorts: port_rename failed.

Cause: The port_rename system call failed; possible internal error.

Action: Check return code in sercerno, report to Oracle customer support.

ORA-09751: pw_attachPorts: server call pws_attach failed.

Cause: The call pws_attach to (Oracle helper) failed.

Action: Make sure the server is still active. Check the error code returned in sercerno, and look for error messages in the server log file.

ORA-09752: pw_attachPorts: port_allocate failed.

Cause: The port_allocate system call failed; possible resource exhaustion.

Action: Check return code in sercerno, report to Oracle customer support.

ORA-09753: spwat: invalid process number.

Cause: Function was passed an invalid oracle process id.

Action: Internal error. Additional information indicates the invalid process id.

ORA-09754: sppst: invalid process number passed to sppst.

Cause: Function was passed an invalid oracle process id.

Action: Internal error. Contact Oracle support.

ORA-09755: osngpn: port allocation failure.

Cause: The port_allocate system call failed.

Action: Possible system resource shortage; check the error code in sercerno.

ORA-09756: osnpns: no port in the name server.

Cause: osnpns could not find the given named port in the name server.

Action: Check the error code in sercerno. Make sure the shadow process and network name server are still running.

ORA-09757: osnipn: port allocation failure.

Cause: The port_allocate system call failed.

Action: Possible system resource shortage; check the error code in sercerno.

ORA-09758: osnipn: could not check port in name server.

Cause: The netname_check_in call failed.

Action: Check the error code in sercerno. Make sure the network name server is running.

ORA-09759: osnsbt: bad message received.

Cause: The msg_receive system call failed, or received a bad message.

Action: Internal error. Report the error code returned in sercerno.

ORA-09760: osnpui: cannot send break message

Cause: The Pipe driver could not send a break message to the ORACLE shadow process break thread.

Action: Contact your customer support representative.

ORA-09761: pw_destroyPorts: server call pws_stop_instance failed.

Cause: The call pws_stop_instance to (Oracle helper) failed.

Action: Make sure the server is still active. Check the error code returned in sercerno, and look for error messages in the server log file.

ORA-09762: sNeXT_instanceName: translation error.

Cause: A failure was detected while translating the value of ORACLE_SID.

Action: Make sure ORACLE_SID is defined, and that it is of legal length.

ORA-09763: osnmpx: send/receive error exchanging Mach ports.

Cause: The Mach driver failed to exchange port information with the other side of the connection. Either msg_send (sercose[0] == 1) or msg_receive (sercose[0] == 2) failed.

Action: Check return code in sercerno. Make sure both sides of the connection are still running.

ORA-09764: osnmop: access error on oracle executable

Cause: The Mach driver could not access the oracle executable.

Action: Check the permissions on the ORACLE executable and each component of the ORACLE_HOME/bin path.

ORA-09765: osnmop: fork failed

Cause: The Mach driver could not fork the oracle shadow process.

Action: Verify that there are enough system resources to support another process. The user or system process limit may have been exceeded, or the amount of free memory or swap space may be temporarily insufficient.

ORA-09766: osnmop: buffer allocation failure.

Cause: The Mach driver failed to allocate enough vm space for its I/O buffers.

Action: Decrease the value of buffer_size parameter in the Two-Task driver hoststring.

ORA-09767: osnmfs: bad return code from msg_send.

Cause: The msg_send system call failed while flushing the Mach driver's send buffer.

Action: Internal error. Contact your customer support representative.

ORA-09768: osnmgetmsg: could not read a message

Cause: The msg_receive system call returned a failure code while waiting for a message in the Mach driver.

Action: Internal error. Contact your customer support representative.

ORA-09769: osnmbr: cannot send break message

Cause: The Mach driver could not send a break message to the ORACLE shadow process break thread.

Action: Internal error. Contact your customer support representative.

ORA-09770: pws_look_up: translation failure.

Cause: The pws_look_up routine failed to translate the name of the (Oracle helper) executable.

Action: Make sure ORACLE_SID and ORACLE_HOME are set and correct. Additional information gives the translation error code.

ORA-09771: osnmwrbrkmsg: bad return code from msg_send.

Cause: The msg_send system call failed while sending a Mach driver break.

Action: Internal error. Contact your customer support representative.

ORA-09772: osnmetbrkmsg: message from host had incorrect message type

Cause: The Mach driver received a message having an unrecognizable message type.

Action: Internal error. Contact your customer support representative.

ORA-09773: osnmgetdatmsg: message from host had incorrect message type

Cause: The Mach driver received a message having an unrecognizable message type.

Action: Internal error. Contact your customer support representative.

ORA-09774: osnmui: cannot send break message

Cause: The Mach driver could not send a break message to the ORACLE shadow process break thread.

Action: Internal error. Contact your customer support representative.

ORA-09775: osnmrs: reset protocol error

Cause: The Mach two-task driver could not reset the connection.

Action: Internal error. Contact your customer support representative.

ORA-09776: pws_look_up: access error on (Oracle helper) executable

Cause: The pws_look_up call could not access the (Oracle helper) executable.

Action: Check the permissions on the (Oracle helper) executable and each component of the ORACLE_HOME/bin path.

ORA-09777: osnpbr: cannot send break message

Cause: The pipe driver could not send a break message to the ORACLE shadow process break thread.

Action: Internal error. Contact your customer support representative.

ORA-09778: snyfyport: failure allocating the notify port.

Cause: The routine failed to allocate or set the task's notify port.

Action: Possible operating system error. Contact Oracle support.

ORA-09779: snyGetPort: failure to allocate a port.

Cause: The port_allocate system call failed; system resources might be exhausted.

Action: Possible operating system error. Contact Oracle support.

ORA-09786: sllfop: open error, unable to open file.

Cause: Open system call returned an error.

Action: Check errno.

ORA-09787: sllfop: unrecognizable processing option, incorrect format.

Cause: Processing option passed is of incorrect format.

Action: Consult your IUG for permissible formats.

ORA-09788: sllfrb: unable to read file.

Cause: Read system call returned an error.

Action: Check errno. Verify file exists.

ORA-09789: sllfsk: unable to read file.

Cause: Read system call returned an error.

Action: Check errno. Verify file exists.

ORA-09790: sllfcf: unable to close file.

Cause: Close system call returned an error.

Action: Check errno.

ORA-09791: slembdf: translation error, unable to translate error file name.

Cause: Additional information indicates error returned from sltln.

Action: Check additional information.

ORA-09792: sllfop: cannot allocate read buffer.

Cause: Malloc system call returned an error. The system might have run out of heap space.

Action: Check additional information for the OS error.

ORA-09793: szguns: length of user name is greater than buffer.

Cause: The length of the name of the user being looked up is longer than size of the buffer provided by the calling routine.

Action: This is an internal error. Contact Oracle Support Services.

ORA-09794: szrbuild: length of role name is greater than buffer.

Cause: The length of the name of the role being looked up is longer than size of the buffer provided by the calling routine.

Action: This is an internal error. Contact Oracle Support Services.

ORA-09795: szrbuild: malloc of role structure failed.

Cause: The allocation of memory for an internal structure used to hold a role descriptor failed.

Action: Check the UNIX error number for a possible operating system failure.

ORA-09796: szrbuild: malloc of role name failed.

Cause: The allocation of memory for an internal buffer used to hold the name of a role failed.

Action: Check the UNIX error number for a possible operating system failure.

ORA-09797: Failed to get O/S MAC privileges.

Cause: The operating system would not allow the retrieval of this process' privileges.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services.

ORA-09798: Label comparison failed.

Cause: The comparison of two binary labels failed.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services.

ORA-09799: File label retrieval failed.

Cause: ORACLE was unable to get a label attached to a file.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services.

ORA-09800: Process sensitivity label retrieval failed.

Cause: ORACLE was unable to get the sensitivity label for a process.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services.

ORA-09801: Unable to get user ID from connection

Cause: ORACLE was unable to retrieve the user's ID number from the SQL*Net connection.

Action: Check the UNIX error number for a possible operating system error. Also check the "additional information" field for the SQL*Net error. If there is no error, contact Oracle Support Services.

ORA-09802: Conversion of binary label to string failed.

Cause: ORACLE was unable to convert a binary label to a string.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services.

ORA-09803: Allocation of string buffer failed.

Cause: a buffer used to hold the name of the file for which a label was to be obtained could not be allocated.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services. The number of bytes that ORACLE attempted to allocate is in the "Additional Information" field.

ORA-09804: Class conversion from binary to ORACLE failed.

Cause: ORACLE was unable to convert a class component from binary format to ORACLE format.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services.

ORA-09805: conversion of category number to string failed.

Cause: ORACLE was unable to translate a category number to its corresponding string representation failed.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services. The category number is contained in the "Additional information" field.

ORA-09806: Allocation of label string buffer failed.

Cause: a temporary buffer used to hold a label could not be allocated.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services. The number of bytes that ORACLE attempted to allocate is in the "Additional Information" field.

ORA-09807: Conversion of label from string to binary failed.

Cause: ORACLE was unable to convert the string representation of a label to binary format.

Action: Re-enter a valid label.

ORA-09808: Could not obtain user clearance.

Cause: ORACLE was unable to get a user's clearance level.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services.

ORA-09809: Unable to get user's group ID from connection

Cause: ORACLE was unable to retrieve the user's group ID number from the SQL*Net connection.

Action: Check the UNIX error number for a possible operating system error. Also check the "additional information" field for the SQL*Net error. If there is no error, contact Oracle Support Services.

ORA-09810: Unable to get process ID from connection

Cause: ORACLE was unable to retrieve the user's process ID number from the SQL*Net connection.

Action: Check the UNIX error number for a possible operating system error. Also check the "additional information" field for the SQL*Net error. If there is no error, contact Oracle Support Services.

ORA-09811: Unable to initialize package.

Cause: ORACLE was unable to initialize the library used to obtain security information.

Action: This is an internal error. Contact Oracle Support Services.

ORA-09812: Unable to get user clearance from connection

Cause: ORACLE was unable to retrieve the user's operating system session clearance from the SQL*Net connection.

Action: Check the UNIX error number for a possible operating system error. Also check the "additional information" field for the SQL*Net error. If there is no error, contact Oracle Support Services.

ORA-09813: Unable to get directory status

Cause: ORACLE was unable to determine if a directory is multilevel.

Action: Check the UNIX error number for a possible operating system error. If there is no error, contact Oracle Support Services.

ORA-09814: Unable to expand file name

Cause: ORACLE was unable to expand the name of a file that resides in multilevel directory.

Action: Check the UNIX error number for a possible operating system error. If there is no error, contact Oracle Support Services.

ORA-09815: File name buffer overflow

Cause: The buffer that ORACLE uses to hold the expanded name of a too small.

Action: This is an internal error. Contact Oracle Support Services.

ORA-09816: Unable to set effective privileges

ORA-09817: Write to audit file failed.

Cause: ORACLE was unable to write an entry to the file used as the audit trail.

Action: Check the UNIX error number for a possible operating system error. If there is no error, contact Oracle Support Services.

ORA-09818: Number is too large

Cause: ORACLE was unable to convert a component string to a number because the number is larger than the largest possible value for an integer. The additional information field specifies the maximum.

Action: Correct the string and repeat the conversion.

ORA-09819: Number exceeds maximum legal value

Cause: the number specified for a component was greater than the maximum value allowed for that component.

Action: Change the component to a value less than the maximum and repeat the conversion. The maximum component number is contained in the "Additional information" field.

ORA-09820: Conversion of class string to numeric representation failed.

Cause: ORACLE was unable to convert a class string to a number because all of the characters in the string were not numeric.

Action: Change the string to be either all numbers or all non-numeric characters and repeat the conversion.

ORA-09821: Numeric label is not valid

Cause: A label specified in ORACLE numeric format was found not to be valid.

Action: Re-enter a valid label. Consult your system's encodings for valid numeric component values.

ORA-09822: Translation of audit file name failed.

Cause: Oracle was unable to translate the value of the AUDIT_FILE_DEST initialization parameter.

Action: Check the UNIX error number for a possible operating system error. If there is no error, contact Oracle Support Services.

ORA-09823: device name is too long

Cause: The name of a device was too long to fit into an internal buffer. The additional information field contains the length of the device name.

Action: This is an internal error. Contact Oracle Support Services.

ORA-09824: Unable to enable allowmacaccess privilege.

Cause: ORACLE was not able to turn on allowmacaccess privilege so that it could do a label comparison.

Action: Check the UNIX error number. If it indicates that ORACLE does not have the allowmacaccess privilege, add the allowmacaccess privilege to the potential privilege set of \$ORACLE_HOME/bin/oracle using chpriv (1M). If the executable already has the allowmacaccess privilege, contact Oracle Support Services.

ORA-09825: Unable to disable allowmacaccess privilege.

Cause: ORACLE was not able to turn off the allowmacaccess privilege after doing a label comparison.

Action: This is an internal error. Contact Oracle Support Services.

ORA-09826: SCLIN: cannot initialize atomic latch.

Cause: System call atomic_op() return error.

Action: Check additional information in the trace file.

ORA-09827: SCLGT: atomic latch return unknown error.

Cause: System call atomic_op() return unexpected error.

Action: Check additional information in the trace file.

ORA-09828: SCLFR: atomic latch return error.

Cause: System call atomic_op() return unexpected error.

Action: Check additional information in the trace file.

ORA-09829: pw_createPorts: server call pws_start_instance failed.

Cause: The call pws_start_instance to (Oracle helper) failed; system resources might be exhausted.

Action: Make sure the server is still active. Check the error code returned in sercerno, and look for error messages in the server log file.

ORA-09830: snyAddPort: failed to perform a remote procedure call.

Cause: The msg_rpc system call returned an error.

Action: Internal error. Contact Oracle support.

ORA-09831: snyStartThread: failed to build the server port set.

Cause: The routine failed to build a port set on which to listen for requests.

Action: Possible operating system failure. Contact Oracle support.

ORA-09832: infoCallback: bad message format.

Cause: The routine received an incorrectly formatted request.

Action: Internal error. Contact Oracle support.

ORA-09833: addCallback: bad message format.

Cause: The routine received an incorrectly formatted request.

Action: Internal error. Contact Oracle support.

ORA-09834: snyGetPortSet: failed to collect info on a port.

Cause: The port_status system called failed.

Action: Possible operating system error. Contact Oracle support.

ORA-09835: addCallback: callback port is already in a set.

Cause: The port to be added to the callback list is already in a port set.

Action: Internal error. Contact Oracle support.

ORA-09836: addCallback: could not add a port to the callback set.

Cause: The port_set_add system called failed.

Action: Possible operating system error. Contact Oracle support.

ORA-09837: addCallback: could not add allocate a callback link.

Cause: The malloc library call failed to allocate space for a callback link.

Action: Possible operating system error. Contact Oracle support.

ORA-09838: removeCallback: failure removing the callback port.

Cause: The port port_set_remove system call failed.

Action: Possible operating system error. Contact Oracle support.

ORA-09839: removeCallback: callback port is not in the callback set.

Cause: The port to be removed to the callback list is not in the callback port set.

Action: Internal error. Contact Oracle support.

ORA-09840: soacon: Name translation failure.

Cause: sltln() could not translate the named pipe ?/dbs/mon2arch_@.

Action: Make sure that the ORACLE_HOME specified for this ORACLE_SID in oratab is correct.

ORA-09841: soacon: Name translation failure.

Cause: sltln() could not translate the named pipe ?/dbs/arch2mon_@.

Action: Make sure that the ORACLE_HOME specified for this ORACLE_SID in oratab is correct.

ORA-09842: soacon: Archmon unable to create named pipe.

Cause: mknod() failed to create named pipe ?/dbs/mon2arch_@.

Action: Your current OS login may lack write permission for the ORACLE_HOME/dbs directory. Only users in the dba group of a given instance can run archmon for that ORACLE_SID. Make sure that the ORACLE_HOME directory is correct in oratab.

ORA-09843: soacon: Archmon unable to create named pipe.

Cause: mknod() failed to create named pipe ?/dbs/arch2mon_@.

Action: Your current OS login may lack write permission for the ORACLE_HOME/dbs directory. Only userids in the dba group of a given instance can run archmon for that ORACLE_SID. Make sure that the ORACLE_HOME directory is correct in oratab.

ORA-09844: soacon: Archmon unable to open named pipe.

Cause: open() failed to open named pipe ?/dbs/mon2arch_@.

Action: Only the oracle dba can run archmon. Make sure that your current OS login has owner or group search permission for the ORACLE_HOME/dbs directory. The max number of open files may have been exceeded.

ORA-09845: soacon: Archmon unable to open named pipe.

Cause: open() failed to open named pipe ?/dbs/arch2mon_@.

Action: Only the oracle dba can run archmon. Make sure that your current OS login has owner or group search permission for the ORACLE_HOME/dbs directory. The max number of open files may have been exceeded.

ORA-09846: soacon: ARCH unable to open named pipe.

Cause: open() failed to open named pipe ?/dbs/mon2arch_@.

Action: Make sure that the OS userid of the currently running database has search permission for the ORACLE_HOME/dbs directory. The max number of open files may have been exceeded.

ORA-09847: soacon: ARCH unable to open named pipe.

Cause: open() failed to open named pipe ?/dbs/arch2mon_@.

Action: Make sure that the OS userid of the currently running database has search permission for the ORACLE_HOME/dbs directory. The max number of open files may have been exceeded.

ORA-09848: soawrt: Unable to write to named pipe.

ORA-09849: soarcv: Unable to read from named pipe.

ORA-09850: soacon: Archmon unable to lock named pipe.

Cause: fcntl() failed to set write lock on named pipe ?/dbs/arch2mon_@.

Action: Make sure that archmon is not already active on another terminal for this ORACLE_SID. Only one archmon session is allowed at a time for a given instance.

ORA-09851: soacon: Archmon unable to lock named pipe.

Cause: fcntl() failed to set read lock on named pipe ?/dbs/mon2arch_@.

Action: Make sure that archmon is not already active on another terminal for this ORACLE_SID. Only one archmon session is allowed at a time for a given instance.

ORA-09853: snyRemovePort: bad return code from request.

Cause: The request to remove a port from the callback set returned a failure code.

Action: Possible operating system error. Contact Oracle support.

ORA-09854: snyPortInfo: bad return code from request.

Cause: The request to collect info on a port in the callback set returned a failure code.

Action: Possible operating system error. Contact Oracle support.

ORA-09855: removeCallback: bad message format.

Cause: The routine received an incorrectly formatted request.

Action: Internal error. Contact Oracle support.

ORA-09856: smpalo: vm_allocate error while allocating pga.

Cause: The vm_allocate system call returned an error.

Action: Check returned error. Possibly out of system resources.

ORA-09857: smprset: vm_protect error while protecting pga.

Cause: The vm_protect system call returned an error.

Action: Internal error. Contact Oracle support.

ORA-09858: sfngat: the input file name is not in the OMF format

Cause: The function sfngat() received a filename which is not an OMF file name.

Action: Further diagnostic information should be in the error stack.

ORA-09859: sfngat: the input file name is not in the autobackup OMF format

Cause: The function sfngat() received a filename which is not an autobackup OMF file name.

Action: Further diagnostic information should be in the error stack.

ORA-09870 to ORA-12100

ORA-09870: spini: failure initializing maximum number of open files.

Cause: ulimit system call returned an error.

Action: Check errno.

ORA-09871: TASDEF_NAME: translation error while expanding ?/dbs/tasdef@.dbf.

Cause: Failure of sltln(?/tasdef@.dbf) while creating test and set pages.

Action: Check additional return error for more information.

ORA-09872: TASDEF_CREATE: create failure in creating ?/dbs/tasdef@.dbf.

Cause: Create() failed when trying to create the tasdef file.

Action: Verify permissions on \$(ORACLE_HOME)/dbs directory.

ORA-09873: TASDEF_OPEN: open error when opening tasdef@.dbf file.

Cause: Unable to open tasdef@.dbf file.

Action: Check errno. Possible permission problem. Verify that tasdef@.dbf file exists.

ORA-09874: TASDEF_READ: read error, unable to read tasdef@.dbf file.

Cause: Read system call returned an error when attempting to read ?/dbs/tasdef@.dbf.

Action: Check errno returned. Sgodef file may be corrupted or incompatible with oracle version.

ORA-09875: TASDEF_WRITE: write error when writing ?/dbs/tasdef@.dbf file.

Cause: Write call failed.

Action: Check errno returned. Possibly out of space on device.

ORA-09876: TASDEF_CLOSE: unable to close ?/dbs/tasdef@.dbf file.

Cause: Close system call returned an error.

Action: Check errno returned. Possible operating system failure.

ORA-09877: sstascre: shmget error, unable to get a shared memory segment.

Cause: Error in shmget.

Action: Check errno returned. Verify that enough shared memory is available on the system.

ORA-09878: sstascre/sstasat: shmat error, unable to attach tas write page

Cause: Error in shmat.

Action: Check errno returned. Verify that enough shared memory is available on the system.

ORA-09879: sstascre/sstasat: shmat error, unable to attach tas read page

Cause: Error in shmat.

Action: Check errno returned. Verify that enough shared memory is available on the system.

ORA-09880: sstasfre/sstasdel: shmdt error, unable to detach tas write page

Cause: Error in shmdt.

Action: Check errno returned.

ORA-09881: sstasfre/sstasdel: shmdt error, unable to detach tas read page

Cause: Error in shmdt.

Action: Check errno returned.

ORA-09882: sstasfre/sstasdel: shmctl error, unable to remove tas shm page

Cause: Error in shmctl.

Action: Check errno returned.

ORA-09883: Two Task interface: oratab file does not exist

Cause: The oratab file does not exist.

Action: Install oracle before you use it or recreate the oratab file.

ORA-09884: Two Task interface: SID doesn't match current PU

Cause: You are trying to start oracle on another PU than you configured oracle on or there is no entry for this SID in oratab file.

Action: Start oracle with this SID on its designated PU (see oratab file). Or install the new database with SID.

ORA-09885: osnTXtt: cannot create TXIPC channel

Cause: The TXIPC driver failed to create pipes for two-task communications with the oracle shadow process.

Action: You have probably exceeded the maximum number of open file descriptors per user or the system file table is full. Note the operating system error code and contact your system administrator.

ORA-09886: osnTXtt: translation error while expanding txipc@.trc.

Cause: Failure of sltln(txipc@.trc) while creating debug channel.

Action: Check additional return error for more information.

ORA-09887: osnTXtt: Failed to create/open debug channel.

ORA-09888: osnTXtt: txipc channel creation failed

Cause: The txipc driver failed to create channels for two-task communications with the oracle shadow process.

Action: You have probably exceeded the maximum number of open file descriptors per user or the system file table operating system error code and contact your system administrator.

ORA-09889: osnTXtt: access error on oracle executable

Cause: The txipc driver could not access the oracle executable.

Action: Check the permissions on the ORACLE executable and each component of the ORACLE_HOME/bin path.

ORA-09890: osnTXtt: malloc failed

Cause: The txipx driver failed to allocate enough heap space for its context area buffers.

Action: Contact your customer support representative.

ORA-09908: slkmm: gethostname returned error code.

Cause: The system call gethostname returned an error.

Action: This is most likely an internal error. Make sure gethostname is successful in other contexts, and if so contact Oracle support.

ORA-09909: Malloc of scratch buffer failed.

Cause: Memory needed for a temporary buffer could not be allocated. The additional information field contains the number of bytes that ORACLE attempted to allocate.

Action: Check the UNIX error number. It is probable that the system has run out of memory. If there is no error, contact ORACLE support.

ORA-09910: Unable to find ORACLE password file entry for user.

Cause: No entry exists for the user in the ORACLE password file.

Action: Have the database administrator install a password entry by running orapasswd.

ORA-09911: Incorrect user password.

Cause: The password entered by the user was incorrect.

Action: Enter the correct password.

ORA-09912: Malloc of name buffer(s) failed.

Cause: ORACLE was unable to allocate memory for one or both of the buffers that are used to hold the name of DBA and the operator users.

Action: Check the UNIX error number. It is probable that the system has run out of memory. If there is no error, contact ORACLE support.

ORA-09913: Malloc of dummy name failed.

Cause: ORACLE was unable to allocate memory for the user name that is to be used in the encryption of the user's password.

Action: Check the UNIX error number. It is probable that the system has run out of memory. If there is no error, contact ORACLE support.

ORA-09914: Unable to open the ORACLE password file.

Cause: ORACLE could not open the password file for reading.

Action: Check the UNIX error number. If the error number indicates that the file does not exist, have the database administrator create the file by running orapasswd. If the error number indicates insufficient permissions, ask the database administrator to change the permissions. Otherwise, contact ORACLE customer support.

ORA-09915: Password encryption failed.

Cause: ORACLE was unable to encrypt a password.

Action: This is an internal error - contact ORACLE customer support.

ORA-09916: Required password was not specified.

Cause: A user attempted to connect as "internal," but did not specify a password.

Action: Connect as internal again and specify a password.

ORA-09918: Unable to get user privileges from SQL*Net

Cause: ORACLE was unable to retrieve the user's privilege set from the SQL*Net connection.

Action: Check the UNIX error number for a possible operating system error. Also check the "additional information" field for the SQL*Net error. If there is no error, contact ORACLE support.

ORA-09919: Unable to set label of dedicated server

Cause: ORACLE was unable to set the label of the dedicated to server to the required value.

Action: Check the UNIX error number for a possible operating system error. Also, check the privileges on the oracle executable. It should have at least "allowmacaccess" privilege.

ORA-09920: Unable to get sensitivity label from connection

Cause: ORACLE was unable to retrieve the user's sensitivity label from the SQL*Net connection.

Action: Check the UNIX error number for a possible operating system error. Also check the "additional information" field for the SQL*Net error. If there is no error, contact ORACLE support.

ORA-09921: Unable to get information label from connection

Cause: ORACLE was unable to retrieve the user's information label from the SQL*Net connection.

Action: Check the UNIX error number for a possible operating system error. Also check the "additional information" field for the SQL*Net error. If there is no error, contact ORACLE support.

ORA-09922: Can't spawn process - background log directory not created properly

Cause: ORACLE was unable to spawn a background process because the directory that will hold trace files of the background processes was not created properly.

Action: Examine the directory pointed to by the initialization parameter "background_dump_dest". Make sure that all of the following is true: 1. The directory exists. 2. The name indeed points to a directory, and is not a file. 3. The directory is accessible and writable to the ORACLE user.

ORA-09923: Can't spawn process - user log directory not created properly

Cause: ORACLE was unable to spawn a background process because the directory that holds the trace files of the dedicated server processes was not created properly.

Action: Examine the directory pointed to by the initialization parameter "user_dump_dest". Make sure that all of the following is true: 1. The directory exists. 2. The name indeed points to a directory, and is not a file. 3. The directory is accessible and writable to the ORACLE user.

ORA-09924: Can't spawn process - core dump directory not created properly

Cause: ORACLE was unable to spawn a background process because the directory that holds the core dumps produced by ORACLE processes in the event of exceptions was not created properly.

Action: Examine the directory pointed to by the initialization parameter "core_dump_dest". Make sure that all of the following is true: 1. The directory exists. 2. The name indeed points to a directory, and is not a file. 3. The directory is accessible and writable to the ORACLE user.

ORA-09925: Unable to create audit trail file

Cause: ORACLE was not able to create the file being used to hold audit trail records.

Action: Check the UNIX error number for a possible operating system error. If there is no error, contact ORACLE customer support.

ORA-09926: Unable to set effective privilege set of the server

Cause: A dedicated server was unable to set its own privilege set.

Action: Check the privileges granted to the ORACLE executable. It must have at least "allowmacaccess" privilege.

ORA-09927: Unable to set label of server

Cause: ORACLE was not able to set the label of a server to a new value.

Action: Check the privileges on \$ORACLE_HOME/bin/oracle. Make sure that it has "allowmacaccess" privilege.

ORA-09928: Unable to restore the label of server

Cause: ORACLE was unable to restore the label of the server to the value that it had before raising it to database high.

Action: This is an internal error - contact ORACLE support.

ORA-09929: GLB of two labels is invalid

Cause: The result of a greatest lower bound operation on two labels was not valid.

Action: Repeat the operation with two different labels. Consult the system encoding file for the values of valid labels.

ORA-09930: LUB of two labels is invalid

Cause: The result of a least upper bound operation on two labels was not valid.

Action: Repeat the operation with two different labels. Consult the system encoding file for the values of valid labels.

ORA-09931: Unable to open ORACLE password file for reading

Cause: An attempt to open a password file for reading failed.

Action: Make sure that the permissions on the file have not been changed so that the ORACLE user cannot open it.

ORA-09932: Close of ORACLE password file failed.

Cause: An attempt to close a password file failed.

Action: Check the UNIX error number for the specific reason.

ORA-09933: Deletion of old password file failed.

Cause: The removal of the old password file failed.

Action: Check the UNIX error number for the specific reason.

ORA-09934: Link of current password file to old failed.

Cause: ORACLE was unable to create a link so that the old password file could be saved.

Action: Check the UNIX error number for the specific reason.

ORA-09935: Unlink of current password file failed.

Cause: ORACLE was unable to complete the saving of the current password file.

Action: Check the UNIX error number for the specific reason.

ORA-09936: Open of ORACLE password file for write failed.

Cause: ORACLE was unable to create a password file.

Action: Check the UNIX error number for the specific reason.

ORA-09937: Chmod of ORACLE password file failed.

Cause: ORACLE was unable to change a password file to be readonly.

Action: Check the UNIX error number for the specific reason.

ORA-09938: Save of signal handlers failed.

Cause: ORACLE was unable to save the previous values of selected signal handlers.

Action: This is an internal error. Contact ORACLE support.

ORA-09939: Restoration of signal handlers failed.

Cause: ORACLE was unable to restore the previous values of selected signal handlers.

Action: This is an internal error. Contact ORACLE support.

ORA-09940: ORACLE password file header is corrupt

Cause: The header of one of the password files was not in the format that ORACLE expected.

Action: Check the headers of both files. The header should be in the format "FILE VERSION: N.N.N.N.N EXECUTABLE VERSION: N.N.N.N.N" where N is a number. Remove the corrupt file(s) and re-run "orapasswd".

ORA-09941: Version of orapasswd or installer is older than file.

Cause: The version of orapasswd or installer that is being run is older than that of the ORACLE password file. Since the file version is only changed when the format is changed, this error means that the executable is using a different format than that with which the file was created.

Action: Run a version of the installer or orapasswd whose version is the same or later than that of the file.

ORA-09942: Write of ORACLE password file header failed.

Cause: The attempt to write out the header of the ORACLE password file failed.

Action: Check the operating system error number. It is possible that the file system became full.

ORA-09943: Allocation of memory for password list component failed.

Cause: When it is building a list of password file entries, ORACLE allocates memory for various components. One of the allocations failed.

Action: Check the operating system error number. The system has probably run out of memory.

ORA-09944: Password entry is corrupt.

Cause: An entry in an ORACLE password file was not in the format that ORACLE expected.

Action: Removed the corrupt file(s) and re-run "orapasswd."

ORA-09945: Unable to initialize the audit trail file

Cause: ORACLE unable to write header information to the file being used as the audit trail.

Action: Check the UNIX error number for a possible operating system error. If there is no error, contact ORACLE customer support.

ORA-09946: File name too long for buffer

Cause: The buffer that was to be used to hold a file name was determined to be too short for the generated name. This will happen if the translated name for either a trace file or an audit file is longer than the maximum allowed, which on many ports is 256 characters.

Action: Use a shorter file name.

ORA-09947: Unable to allocate connection attributes structure

Cause: ORACLE was not able to allocate the memory needed to hold the attributes of the SQL*Net connection. The "Additional Information" field holds the number of bytes that ORACLE attempted to allocate.

Action: Check the UNIX error number. It is probable that the system has run out of memory. If there is no error, contact ORACLE customer support.

ORA-09948: Process information label retrieval failed.

Cause: ORACLE was unable to get the information label for a process.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact ORACLE support.

ORA-09949: Unable to get client operating system privileges

Cause: ORACLE was unable to get the operating system privileges for the client process.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact ORACLE support.

ORA-09950: Unable to get server operating system privileges

Cause: ORACLE was unable to get its privileges from the operating system.

Action: This is an error that should never happen. Contact ORACLE customer support.

ORA-09951: Unable to create file

Cause: ORACLE was unable to create a file.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact ORACLE support.

ORA-09952: scgcmn: lk_open_convert unexpected return: open failed

Cause: The distributed lock manager returned an unexpected value

Action: Check for system error message and refer to the distributed lock manager documentation or contact your customer support representative.

ORA-09953: scggc: unexpected return of a lock convert

Cause: The distributed lock manager returned an unexpected value

Action: Check for lock manager error message and refer to DLM documentation refer to the distributed lock manager documentation or contact your customer support representative.

ORA-09954: scgcc: unexpected return status to callback of lock close

Cause: The distributed lock manager returned an unexpected value

Action: Check for lock manager error message and refer to DLM documentation refer to the distributed lock manager documentation or contact your customer support representative.

ORA-09955: scgcan: unexpected return status when canceling a lock

Cause: DLM system service x returned an unexpected value

Action: Check for system error message and refer to DLM documentation refer to the distributed lock manager documentation or contact your customer support representative.

ORA-09956: scgcm: unexpected lock status condition

Cause: A global locking system service returned an unexpected value.

Action: Check for system error message (if any) and refer to refer to the distributed lock manager documentation or contact your customer support representative.

ORA-09957: Unable to send termination request to IMON

Cause: The attempt to send a termination signal to IMON failed.

Action: This is an internal error, contact ORACLE support.

ORA-09958: IMON: two processes with the same ORACLE pid are active

Cause: The IMON process was unable to add an entry for a server process because another active process occupies the slot.

Action: This is an internal error, contact ORACLE support.

ORA-09959: IMON: deletion of a process failed.

Cause: The IMON process was unable to delete a server process from its process ID array because no entry for the process could be found.

Action: This is an internal error, contact ORACLE support.

ORA-09960: Unable to establish signal handler for termination signal

Cause: ORACLE was unable to set up a handler for the signal used to notify it that the instance was shutting down.

Action: This is an internal error, contact ORACLE support.

ORA-09961: Unable to restore termination signal handler

Cause: ORACLE failed to set the handler for the termination signal to its previous value.

Action: This is an internal error, contact ORACLE support.

ORA-09962: lk_group_create error in scggc

ORA-09963: lk_group_attach error in scggra

ORA-09964: lk_group_detach error in scgrd

ORA-09966: failure in translation while expanding ?/dbs/lk for lock file

Cause: Oracle failed to translate ?/dbs/lk, when creating a file name for the database mount lock or the instance startup/shutdown lock.

Action: Check additional return errors for more information.

ORA-09967: unable to create or open lock file

Cause: Oracle failed, when making an open system call, in order to acquire a file lock used by the database mount lock or the instance startup/shutdown lock.

Action: Check errno for more information.

ORA-09968: unable to lock file

Cause: The system call for locking a file returned an error when trying to acquire a database mount lock or the instance startup/shutdown lock.

Action: Check errno for more information.

ORA-09969: unable to close or remove lock file

Cause: The close system call or unlink system call returned an error.

Action: Check errno for more information.

ORA-09974: skxfidini: Error Initializing SDI Channel

Cause: The process was unable to initialize the SDI channel properly.

Action: Correct the operating system error and retry the operation.

ORA-09975: kxfspini: Error Initializing SDI Process

Cause: The process was unable to attach to the SDI channel.

Action: Verify that the SDI process specific limits are correctly configured. Correct the operating system error and retry the operation.

ORA-09976: skxfqadini: Error Creating Port

Cause: The process was unable to create a communications endpoint.

Action: Verify that the SDI port specific limits are correctly configured. Correct the operating system error and retry the operation.

ORA-09977: skxfqhini: Error Connecting

Cause: The process was unable to connect to another endpoint.

Action: Verify that the SDI port specific limits are correctly configured. Check that the other node(s) is part of the cluster and operating properly. Correct the operating system error and retry the operation.

ORA-09978: skxfqhdel: Error Disconnecting from another endpoint.

Cause: The process was unable to disconnect cleanly from another endpoint.

Action: Check that the other node(s) are part of the cluster and operating properly. Check the instance and processes on the other node(s). Correct the operating system error and retry the operation.

ORA-09979: skxfqhsnd: Error Sending a message to another endpoint

Cause: The process was unable to send a message to an existing endpoint.

Action: Check that the other node(s) are part of the cluster and operating properly. Check the instance and processes on the other node(s). Correct the operating system error and retry the operation.

ORA-09980: skxfqdrvc: Error Receiving a message from another endpoint

Cause: The process encountered an error while trying to receive a message.

Action: Check that the other node(s) are part of the cluster and operating properly. Check the instance and processes on the other node(s). Correct the operating system error and retry the operation.

ORA-09981: skxfqdreg: Error Adding a page to the SDI buffer pool

Cause: The process was unable to add a page to the SDI buffer pool.

Action: Correct the operating system error and retry the operation.

ORA-09982: skxfqddrg: Error Removing a page from the SDI buffer pool

Cause: The process was unable to remove a page to the SDI buffer pool.

Action: Correct the operating system error and retry the operation.

ORA-09983: skxfidsht: Error shutting down SDI channel

Cause: The process was unable shut down the SDI channel

Action: Check the SDI persistent resources using SDI tools. Verify that all processes exited cleanly and the instance is safely shut down. Delete any remaining SDI channel IDs associated with the current instance.

ORA-09984: SGA file \$ORACLE_HOME/dbs/sgadef\$ORACLE_SID.dbf does not exist

Cause: file does not exist or is not accessible

Action: Restart the instance to create the SGA definition file.

ORA-09985: SGA definition file could not be read

Cause: UNIX read() operation failed

Action: check errno and take appropriate action.

ORA-09986: wrong number of bytes read from SGA definition file

Cause: Struct skgmsdef size differs from no. of bytes read from SGA file

Action: Compare the two struct definitions and ensure that they are identical in size and structure.

ORA-09987: unable to attach to SGA in READ-ONLY mode

Cause: The instance is not up, or SGA segments are not read-accessible

Action: Verify that the instance is up and read permissions for the SGA segments are set.

ORA-09988: error while detaching SGA

Cause: skgmsdef struct is corrupted and/or segment addresses are modified

Action: Safely shut down instance and mount SGA segments again.

ORA-09989: attempt to use invalid skgmsdef struct pointer

Cause: Pointer to skgmsdef struct used without validating it

Action: Assign a valid address to the skgmsdef struct pointer before using it.

ORA-10010: Begin Transaction

ORA-10011: End Transaction

ORA-10012: Abort Transaction

ORA-10230: KSFD block repair test event

ORA-10231: skip corrupted blocks on `_table_scans_`

ORA-10232: dump corrupted blocks symbolically when kcbgotten

ORA-10233: skip corrupted blocks on index operations

ORA-10235: check memory manager internal structures

ORA-10237: simulate ^C (for testing purposes)

ORA-10238: instantiation manager

ORA-10239: multi-instance library cache manager

ORA-10240: dump dba's of blocks that we wait for

ORA-10241: remote SQL execution tracing/validation

ORA-10242: suppress OER 2063 (for testing distrib w/o different error log)

ORA-10243: simulated error for test *string* of K2GTAB latch cleanup
Cause: levels 1..6 for insert, 7..11 for delete
Action: n/a

ORA-10244: make tranids in error msgs print as 0.0.0 (for testing)
Cause: also makes "alter system enable distributed recovery" synchronous
Action: n/a

ORA-10245: Testing event used by server I/O ksfk/ksfq module

ORA-10246: print trace of PMON actions to trace file

ORA-10247: Turn on scgcmn tracing. (VMS ONLY)

ORA-10248: turn on tracing for dispatchers

ORA-10249: turn on tracing for multi-stated servers

ORA-10250: Trace all allocate and free calls to the topmost SGA heap

ORA-10251: check consistency of transaction table and undo block

ORA-10252: shared IO pool error simulation

ORA-10253: limit SQL text returned from X\$KGLNA[1]

ORA-10254: trace cross-instance calls

ORA-10255: pl/sql parse checking

ORA-10257: trace shared server load balancing

ORA-10258: force shared servers to be chosen round-robin

ORA-10259: get error message text from remote using explicit call

Cause: for npigem coverage testing (normally called only for V5 remote)

Action: n/a

ORA-10260: limit size (*string*) of the PGA heap set by event 10261 exceeded

Cause: The PGA memory use exceeded the limit set by the event 10261.

Action: Check event 10261 settings.

ORA-10261: limit the size of the PGA heap

Cause: The limit was one kilobyte times the level of the event. If the PGA grows bigger than this, signal an external error.

Action: n/a

ORA-10262: Don't check for memory leaks

Cause: Setting this event to level one causes memory leak checking to be disabled. Setting this event to any other non-zero number allows that number to be used as a threshold value when checking for memory leaks in the PGA, SGA, and UGA heaps.

Action: n/a

ORA-10263: Don't free empty PGA heap extents

Cause: This is useful for debugging since watchpoints are lost on free

Action: n/a

ORA-10265: Keep random system generated output out of error messages

Cause: so test system files don't diff

Action: n/a

ORA-10266: Trace OSD stack usage

Cause: Porters should implement this to help them debug their stack implementations. It should be used in at least smcstk().

Action: n/a

ORA-10267: Inhibit KSEDMP for testing

Cause: Some tests may generate internal or fatal errors on purpose.

Action: LEVEL used by KSEDMP is one less than level of this event.

ORA-10268: Don't do forward coalesce when deleting extents

Cause: setting this event keeps kts from coalescing forward at each extent when dropping a temp segment.

Action: n/a

ORA-10269: Don't do coalesces of free space in SMON

Cause: setting this event prevents SMON from doing free space coalesces

Action: n/a

ORA-10270: Debug shared cursors

Cause: Enables debugging code in shared cursor management modules

Action: n/a

ORA-10271: distributed transaction after COLLECT

ORA-10272: distributed transaction before PREPARE

ORA-10273: distributed transaction after PREPARE

ORA-10274: distributed transaction before COMMIT

ORA-10275: distributed transaction after COMMIT

ORA-10276: distributed transaction before FORGET

ORA-10277: Cursor sharing (or not) related event (used for testing)

ORA-10278: Internal testing

ORA-10279: Simulate block corruption in kdb4chk

ORA-10280: Internal testing - segmentation fault during crash recovery

ORA-10281: maximum time to wait for process creation

Cause: used to override the default SPMXWAIT, level = timeout in sec.

Action: n/a

ORA-10282: Inhibit signalling of other backgrounds when one dies

Cause: Used in KSB

Action: n/a

ORA-10284: simulate zero/infinite asynch I/O buffering

Cause: Used in KCF, level=1 out of space (red), level=2 infinite (green)

Action: n/a

ORA-10285: Simulate control file header corruption

ORA-10286: Simulate control file open error

ORA-10287: Simulate archiver error

ORA-10288: Do not check block type in ktrget

ORA-10289: Do block dumps to trace file in hex rather than formatted

ORA-10290: Internal sequence tracing event

ORA-10291: die in tbsdrv to test control file undo

ORA-10294: ksrpc tracing

ORA-10296: disable ORA-379

ORA-10298: ksfd i/o tracing

ORA-10299: Trace prefetch tracking decisions made by CKPT

ORA-10301: Enable LCK timeout table consistency check

ORA-10319: Trace PGA statistics maintenance

ORA-10320: Enable data layer (kdtgrs) tracing of space management calls

ORA-10322: CBO don't simplify inlist predicates

ORA-10323: before committing an add datafile command

ORA-10324: Enable better checking of redo logs errors

ORA-10336: Do remote object transfer using remote SQL

ORA-10338: CBO don't use inlist iterator with function-based indexes

ORA-10339: CBO disable DECODE simplification

ORA-10341: Simulate out of PGA memory in DBWR during object reuse

ORA-10342: Raise unknown exception in ACQ_ADD when checkpointing

ORA-10343: Raise an out of memory exception-OER 4031 in ACQ_ADD

ORA-10345: validate queue when linking or unlinking a buffer

ORA-10346: check that all buffers for checkpoint have been written

ORA-10347: dump active checkpoint entries and checkpoint buffers

ORA-10349: do not allow ckpt to complete

ORA-10350: Simulate more than one object & tsn id in object reuse

ORA-10351: size of slots

ORA-10352: report direct path statistics

ORA-10353: number of slots

ORA-10354: turn on direct read path for parallel query

ORA-10355: turn on direct read path for scans

ORA-10356: turn on hint usage for direct read

ORA-10357: turn on debug information for direct path

ORA-10358: Simulate out of PGA memory in cache advisory reset

ORA-10359: turn off updates to control file for direct writes

ORA-10365: turn on debug information for adaptive direct reads

ORA-10366: kgnfs tracing

ORA-10367: kgodm tracing

ORA-10368: maximum number of internal errors a process will tolerate

ORA-10369: test SQL monitoring feature

ORA-10375: turn on checks for statistics rollups

ORA-10376: enable archive compression loads

ORA-10378: force hard process/range affinity

ORA-10380: kxpf latch cleanup testing event

ORA-10381: kxpf latch cleanup testing event

ORA-10383: auto parallelization testing event

ORA-10384: parallel dataflow scheduler tracing

ORA-10385: parallel table scan range sampling method

ORA-10386: parallel SQL hash and range statistics

ORA-10390: Trace parallel query slave execution

ORA-10391: trace PX granule allocation/assignment

ORA-10392: parallel query debugging bits

ORA-10393: print parallel query statistics

ORA-10394: generate a fake load to test adaptive and load balancing

ORA-10395: adjust sample size for range table queues

ORA-10397: suppress verbose parallel coordinator error reporting

ORA-10398: enable timeouts in parallel query threads

ORA-10399: trace buffer allocation

ORA-10400: turn on system state dumps for shutdown debugging

ORA-10401: turn on IPC (ksxp) debugging

ORA-10402: turn on IPC (skgxp) debugging

ORA-10403: fake CPU number for default degree of parallelism

ORA-10404: crash dbwr after write

ORA-10405: emulate broken mirrors

ORA-10406: enable datetime TIMESTAMP, INTERVAL datatype creation

ORA-10407: enable datetime TIME datatype creation

ORA-10408: disable OLAP builtin window function usage

ORA-10409: enable granule memset and block invalidation at startup

ORA-10450: signal ctrl-c in kdddca (drop column) after n rows

ORA-10451: Force heap segment compression bypassing compatibility checks

ORA-10452: Cannot do block media recovery; media recovery session may be in progress

Cause: A media recovery, RMAN, or flashback database session may have been in progress when an attempt was made to perform block media recovery on the standby database.

Action: Check for and cancel any conflicting recovery session and perform block media recovery on the standby database.

ORA-10456: cannot open standby database; media recovery session may be in progress

Cause: A media recovery, RMAN, or flashback database session may have been in progress on a mounted instance of a standby database when an attempt was made to open the standby database.

Action: Check for and cancel any conflicting recovery session and open the standby database.

ORA-10457: cannot close standby database due to active media recovery

Cause: A media recovery session was in progress on a standby database when an attempt was made to close the standby database.

Action: Cancel the media recovery session and close the standby database.

ORA-10458: standby database requires recovery

Cause: A standby database was in a state requiring media recovery when an attempt was made to open the standby database.

Action: Perform the necessary recovery and open the standby database.

ORA-10459: cannot start media recovery on standby database; conflicting state detected

Cause: An attempt was made to perform media recovery on a standby database while another instance was performing recovery on the standby database, had the standby database open, or a data file move operation was in progress.

Action: Close the standby on all other instances, cancel any conflicting recovery session or data file move operation, and perform manual recovery.

ORA-10460: Perform backward tablescans for consistent read reduction

ORA-10461: Simulate control file corruption during write operation

ORA-10462: enable recovery debug module

ORA-10469: error creating control file backup, no checkpoint

Cause: The control file being backed up did not contain a valid control file checkpoint. Therefore the control file could not be backed up, as such a backup would not be usable later for recovery. A common cause for this situation is that you executed CREATE CONTROLFILE, which mounts the database, but not ALTER DATABASE OPEN, to open the database. The latter operation generates a valid control file checkpoint.

Action: Open the database with ALTER DATABASE OPEN ..., which results in a valid control file checkpoint. Run the backup operation again.

ORA-10481: Backup data block for data file has an unlogged change

Cause: Flashback was enabled for the data file when the backup data block used for block media recovery had an unlogged change.

Action: Remove the data file from the flashback set or use a backup block that does not contain an unlogged change to perform block media recovery.

ORA-10482: Automatic block repair cannot repair an offline or read-only data file

Cause: Automatic block repair failed when trying to repair an offline or read-only data file.

Action: Bring the data file online in read/write mode.

ORA-10485: Real-Time Query cannot be enabled while applying migration redo.

Cause: The Real-Time Query feature was enabled when an attempt was made to recover through migration redo generated during primary upgrades or downgrades.

Action: Close the standby database in order to recover through migration redo. Reenable the Real-Time Query feature afterwards.

ORA-10493: Return empty define buffers on 1422

ORA-10496: Turn off fix for bug 2554178

ORA-10498: Trim blank characters including control characters

ORA-10501: periodically check selected heap

ORA-10502: CBO disable the fix for bug 2098120

ORA-10503: enable user-specified graduated bind lengths

ORA-10504: CBO disable the fix for bug 2607029

ORA-10505: CBO enable dynamic sampling dump to table

ORA-10506: Disable fix for bug 2588217

ORA-10507: Trace bind equivalence logic

ORA-10508: Enable fix for bug 14772545

ORA-10509: Check kghu subheaps at call boundaries

ORA-10510: turn off SMON check to offline pending offline rollback segment

ORA-10511: turn off SMON check to cleanup undo dictionary

ORA-10512: turn off SMON check to shrink rollback segments

ORA-10515: turn on event to use physical cleanout

ORA-10519: enable ALTER TYPE RESET support

ORA-10520: recreate view only if definition has changed

ORA-10522: turn off wrap source compression

ORA-10523: force recreate package even if definition is unchanged

ORA-10525: Disable automatic object validation for describe

ORA-10526: enables lightweight thread tracing

Cause: Used in ksolt.

Action: Set this event only under the supervision of Oracle Support Services.

ORA-10527: enables defer SGA allocation tracing

Cause: Used for deferred SGA allocation.

Action: Set this event only under the supervision of Oracle Support Services.

ORA-10528: enables ksmg tracing

Cause: Used in ksmg module.

Action: Set this event only under the supervision of Oracle Support Services.

ORA-10530: Lightweight thread spawn failed, error stack:

Cause: Check alert/trace files for more information

Action: n/a

ORA-10531: Lightweight thread unit test failure error

Cause: Check alert/trace files for more information

Action: n/a

ORA-10546: Cannot perform block media recovery; standby database does not have requisite redo.

Cause: An attempt was made to perform block media recovery on the standby database when the necessary redo was not available.

Action: Wait until the necessary redo is available and reattempt block media recovery.

ORA-10547: Cannot perform block media recovery; standby database is not caught up with primary.

Cause: An attempt was made to perform block media recovery on the standby database up to scn %s, which is greater than the highest scn of %s yet applied at the standby.

Action: Recover the standby up to scn %s and reattempt block media recovery.

ORA-10548: Cannot perform block media recovery on a read-only plugged-in datafile.

Cause: An attempt was made to perform block media recovery on a read-only plugged-in datafile.

Action: Convert the plugged-in datafile to read/write and reattempt block media recovery.

ORA-10549: Cannot perform block media recovery using a read-only plugged-in backup datafile.

Cause: An attempt was made to perform block media recovery using a backup of a read-only plugged-in datafile.

Action: Reattempt block media recovery using a backup taken after the plugged-in datafile has been converted to read/write.

ORA-10550: signal error during create as select/create index after n rows

ORA-10551: Internal testing for ORA-1551 error handling

ORA-10553: Incompatible UNTIL CONSISTENT clause

Cause: RECOVER UNTIL CONSISTENT required database-level recovery with a backup control file.

Action: Omit the UNTIL CONSISTENT clause and retry recovery.

ORA-10554: Media recovery failed to bring datafile *string* to a consistent point

Cause: Media recovery couldn't recover database to a consistent point due to the specified datafile.

Action: Restore a backup of the datafile.

ORA-10555: Disable redo dumping

ORA-10560: block type '*string*'

Cause: Report block type for details of another error.

Action: See associated error message.

ORA-10561: block type '*string*', data object# *string*

Cause: Report block type and data object number for details of another error.

Action: See associated error message.

ORA-10562: Error occurred while applying redo to data block (file# *string*, block# *string*)

Cause: See other errors on error stack.

Action: Investigate why the error occurred and how important is the data block.

Media and standby database recovery usually can continue if user allows recovery to corrupt this data block.

ORA-10563: Test recovery had to corrupt data block (file# *string*, block# *string*) in order to proceed

Cause: Test recovery completed.

Action: No action is needed. Test recovery has ended successfully. See other messages on error stack for a summary of the result of the test recovery.

ORA-10564: tablespace *string*

Cause: Report tablespace name for details of another error.

Action: See associated error message.

ORA-10565: Another test recovery session is active

Cause: There can only be one test recovery session at any time. Another test recovery session is active.

Action: Wait till the other test recovery session completes.

ORA-10566: Test recovery has used all the memory it can use

Cause: Test recovery tests redo in memory. It can no longer proceed because it has consumed all the memory it can use.

Action: No action is needed. Test recovery has ended successfully. See other messages on error stack for a summary result of the test recovery.

ORA-10567: Redo is inconsistent with data block (file# *string*, block# *string*, file offset is *string* bytes)

Cause: There are two possible causes of this error: (1) A write issued by Oracle was lost by the underlying OS or storage system. (2) an Oracle internal error.

Action: Investigate why the error occurred and how important is the data block. Media and standby database recovery usually can continue if user allows recovery to corrupt this data block.

ORA-10568: Failed to allocate recovery state object: out of SGA memory

Cause: out of SGA memory

Action: Restart the instance. If problem persists, call Oracle support.

ORA-10570: Test recovery complete

Cause: Test recovery completed.

Action: No action is needed. Test recovery has ended successfully. See other messages on error stack for a summary result of the test recovery.

ORA-10571: Test recovery canceled

Cause: User canceled test recovery.

Action: No action is needed. Test recovery has ended successfully. See other messages on error stack for a summary of the result of the test recovery.

ORA-10572: Test recovery canceled due to errors

Cause: See other errors on the error stack.

Action: See other messages on error stack. It is possible that no action is needed. See other messages on error stack for a summary of the result of the test recovery so far.

ORA-10573: Test recovery tested redo from change *string* to *string*

Cause: This message show the range of test recovery have tested.

Action: No action is needed. See other messages on error stack.

ORA-10574: Test recovery did not corrupt any data block

Cause: This message summarizes test recovery result.

Action: No action is needed. See other messages on error stack.

ORA-10575: Give up restoring recovered datafiles to consistent state: out of memory

Cause: There were not enough memory to restore recovered datafiles to consistent state

Action: This error is just a warning: You may not be able to open the database with resetlogs immediately after this error. However, you may continue media/standby recovery, and that may make the datafiles recovered consistent again.

ORA-10576: Give up restoring recovered datafiles to consistent state: some error occurred

Cause: See alert file or other errors on the stack for a cause of the problem.

Action: This error is just a warning: You may not be able to open the database with resetlogs immediately after this error. However, you may continue media/standby recovery, and that may make the datafiles recovered consistent again.

ORA-10577: Can not invoke test recovery for managed standby database recovery

Cause: Test recovery option is used for managed standby database recovery.

Action: Either remove the test recovery option or invoke manual test standby database recovery.

ORA-10578: Can not allow corruption for managed standby database recovery

Cause: You used the allow corruption option for managed standby database recovery.

Action: Either remove the allow corruption option or invoke manual standby database recovery.

ORA-10579: Can not modify control file during test recovery

Cause: To proceed with recovery, test recovery needs to modify the control file. But test recovery is not allowed to modify control file.

Action: No action is needed. Test recovery has ended successfully. It can only go so far in the redo stream.

ORA-10580: Can not modify datafile header during test recovery

Cause: To proceed with recovery, test recovery needs to modify a datafile header. But test recovery is not allowed to modify datafile headers.

Action: No action is needed. Test recovery has ended successfully. It can only go so far in the redo stream.

ORA-10581: Can not modify redo log header during test recovery

Cause: To proceed with recovery, test recovery needs to modify a redo log header. But test recovery is not allowed to modify redo log headers.

Action: No action is needed. Test recovery has ended successfully. It can only go so far in the redo stream.

ORA-10582: The control file is not a backup control file

Cause: User requested backup control file test recovery, but the control file is not a backup control file.

Action: Use a backup control file, or do not use USING BACKUP CONTROLFILE option.

ORA-10583: Can not recovery file *string* renamed as missing during test recovery

Cause: One of the files to be recovered is renamed as missing.

Action: Rename the file to the correct file or offline it.

ORA-10584: Can not invoke parallel recovery for test recovery

Cause: Both test recovery and parallel recovery are requested.

Action: Drop either one of the two recovery options.

ORA-10585: Test recovery can not apply redo that may modify control file

Cause: Test recovery has encountered a special redo that may modify control file.

Action: No action is needed. Test recovery has proceeded successfully as far as it could from its starting point.

ORA-10586: Test recovery had to corrupt 1 data block in order to proceed

Cause: This message summarizes test recovery result: Oracle may have to corrupt one block in order to apply the range of redo tested.

Action: See alert log for details of the problem.

ORA-10587: Invalid count for ALLOW n CORRUPTION option

Cause: The number specified in the ALLOW n CORRUPTION option is too big.

Action: Use a smaller number.

ORA-10588: media recovery file header validation

ORA-10589: Test recovery had to corrupt *string* data blocks in order to proceed

Cause: This message summarizes test recovery result: Oracle may have to corrupt a number of data blocks as specified in the message in order to apply the range of redo tested.

Action: See alert log for details of the problems.

ORA-10590: kga (argus debugger) test flags

ORA-10591: kga (argus debugger) test flags

ORA-10592: kga (argus debugger) test flags

ORA-10593: kga (argus debugger) test flags

ORA-10594: kga (argus debugger) test flags

ORA-10595: kga (argus debugger) test flags

ORA-10596: kga (argus debugger) test flags

ORA-10597: kga (argus debugger) test flags

ORA-10598: kga (argus debugger) test flags

ORA-10599: kga (argus debugger) test flags

ORA-10600: check cursor frame allocation

ORA-10601: turn on debugging for cursor_sharing (literal replacement)

ORA-10603: cause an error to occur during truncate (for testing purposes)

ORA-10604: trace parallel create index

ORA-10605: enable parallel create index by default

ORA-10606: trace parallel create index

ORA-10607: trace index rowid partition scan

ORA-10608: trace create bitmap index

ORA-10609: trace for array index insertion

ORA-10610: trace create index pseudo optimizer

ORA-10611: causes migration to fail - testing only

ORA-10612: prints debug information for auto-space managed segments

ORA-10613: prints debug information for auto-space managed segments

ORA-10614: Operation not allowed on this segment

Cause: This procedure can be used only on segments in tablespaces with AUTO SEGMENT SPACE MANAGEMENT

Action: Recheck the segment name and type and re-issue the statement

ORA-10615: Invalid tablespace type for temporary tablespace

Cause: Tablespace with AUTO SEGMENT SPACE MANAGENEMT specified cannot be used as a temporary tablespace

Action: Recheck the tablespace name and re-issue the statement

ORA-10616: Operation not allowed on this tablespace

Cause: Cannot perform the operation on tablespace with AUTO SEGMENT SPACE MANAGEMENT

Action: Recheck the tablespace name and re-issue the statement

ORA-10617: Cannot create rollback segment in dictionary managed tablespace

Cause: Rollback segments cannot be created in dictionary managed tablespaces when SYSTEM tablespace is locally managed

Action: Recheck the tablespace name and re-issue the statement

ORA-10618: Operation not allowed on this segment

Cause: This DBMS_SPACE operation is not permitted on segments in tablespaces with AUTO SEGMENT SPACE MANAGEMENT

Action: Recheck the segment name and type and re-issue the statement

ORA-10619: Avoid assertions when possible

Cause: A bug (or upgrade) hits unicode assertions (csid, csform, bfc)

Action: Event makes RDBMS skip assertions and patch up datastructures

ORA-10620: Operation not allowed on this segment

Cause: Cannot alter freelist storage parameter for segments in tablespaces with AUTO SEGMENT SPACE MANAGEMENT

Action: Recheck the segment name and re-issue the statement

ORA-10621: specify retry count for online index build cleanup DML lock get

ORA-10624: Disable UJV invalidation on drop index

ORA-10625: Turn off redo log dump for the index when OERI 12700

ORA-10626: specify timeout for online index rebuild to wait for DML

ORA-10627: Dump the content of the index leaf block

Cause: Generate a complete index tree dump, not just an overview during alter session set events immediate trace name treedump

Action: This event is recommended only for small table/index since it

ORA-10628: Turn on sanity check for kdiss index skip scan state

Cause: Will do sanity checking on the kdiss state.

Action: set this event only under the supervision of Oracle development

ORA-10629: force online index build to backoff and retry DML lock upgrade

ORA-10630: Illegal syntax specified with SHRINK clause

Cause: An illegal option was specified with the SHRINK clause

Action: Verify the SQL Reference Manual and reissue the command

ORA-10631: SHRINK clause should not be specified for this object

Cause: It is incorrect to issue shrink on the object

Action: Verify the object name and type and reissue the command

ORA-10632: Invalid rowid

Cause: Segment Highwatermark was overwritten due to shrink and space reused

Action: Reissue this command.

ORA-10634: Segment is already being shrunk

Cause: Only one invocation of shrink can be in progress on a segment at any time

Action: Reissue the command after the first shrink is over

ORA-10635: Invalid segment or tablespace type

Cause: Cannot shrink the segment because it is not in auto segment space managed tablespace or it is not a data, index or lob segment.

Action: Check the tablespace and segment type and reissue the statement

ORA-10636: ROW MOVEMENT is not enabled

Cause: To shrink a data segment, row movement must be enabled.

Action: Enable row movement and reissue this command.

ORA-10637: The segment does not exist

Cause: Segment to be shrunk has been dropped

Action: n/a

ORA-10638: Index status is invalid

Cause: Cannot shrink an index which is being rebuilt or disabled is an unusable state.

Action: n/a

ORA-10639: Dump library cache during reparse loops

Cause: During this error a library cache dump is necessary , so enable librarycache dump if event is set.

Action: Dump a library cache if this event is set when reparse error.

ORA-10640: Operation not permitted during SYSTEM tablespace migration

Cause: SYSTEM tablespace is being migrated to locally managed format.

Action: Reissue this command once SYSTEM tablespace migration is over.

ORA-10641: Cannot find a rollback segment to bind to

Cause: SYSTEM tablespace migration requires rollback segment in locally managed tablespace.

Action: Drop rollback segments in dictionary managed tablespaces other than SYSTEM and create rollback segments in locally managed tablespace and retry migration.

ORA-10642: Found rollback segments in dictionary managed tablespaces

Cause: When SYSTEM tablespace is migrated found rollback segments in dictionary managed tablespaces.

Action: Drop the rollback segments in dictionary managed tablespaces and reissue the command

ORA-10643: Database should be mounted in restricted mode and Exclusive mode

Cause: When SYSTEM tablespace is being migrated database should be mounted in Exclusive mode and in Restricted mode.

Action: Reissue this command after mounting the database in right mode.

ORA-10644: SYSTEM tablespace cannot be default temporary tablespace

Cause: When SYSTEM tablespace is being migrated no user should have SYSTEM as the default temporary tablespace.

Action: Reissue this command after altering the default temporary tablespace setting for all users.

ORA-10645: Recursive Extension in SYSTEM tablespace during migration

Cause: When SYSTEM tablespace is being migrated, dictionary tables tried to extend recursively. Must be caught and processed internally. Should not be thrown to the user.

Action: Report the error as a bug.

ORA-10646: Too many recursive extensions during SYSTEM tablespace migration

Cause: When SYSTEM tablespace is being migrated, dictionary tables tried to extend recursively more than 1000 times.

Action: If SYSTEM tablespace is very large, then simply reissue the tablespace migration command.

ORA-10647: Tablespace other than SYSTEM, *string*, *string* not found in read only mode

Cause: When SYSTEM tablespace is being migrated, tablespaces other than the three should be ALTERed to read only.

Action: Alter the tablespace status to read only and retry migration.

ORA-10648: Tablespace SYSAUX is not offline

Cause: The SYSAUX tablespace was online while SYSTEM tablespace was being migrated.

Action: Alter the SYSAUX tablespace status to offline and retry migration.

ORA-10649: Turn off/trace lob index freelist coalesce

Cause: Will turn off or trace lob index freelist coalescing

Action: set this event only under the supervision of Oracle development

ORA-10650: disable cache-callback optimisation

ORA-10651: incorrect file number block number specified

Cause: The dba specified is not valid

Action: Check if the dba specified belongs to the segment and is under the segment HWM and reissue the statement

ORA-10652: Object has on-commit materialized views

Cause: It is illegal to issue shrink on an object with on-commit materialized views

Action: n/a

ORA-10653: Table is in a cluster

Cause: It is illegal to shrink a table belonging to a cluster

Action: n/a

ORA-10654: Table is of type temporary or external

Cause: It is illegal to shrink a temporary table or an external table

Action: n/a

ORA-10655: Segment can be shrunk

Cause: Error message returned when called in probe mode by OEM

Action: n/a

ORA-10656: Table is in unusable state due to incomplete operation

Cause: ALTER TABLE SHRINK operation was tried on the table which is in unusable state because of previously failed/incomplete operation.

Action: If the previous operation was - DROP COLUMN, resubmit DROP COLUMN CONTINUE - DROP TABLE, resubmit DROP TABLE *table* PURGE

ORA-10657: Lob column to be shrunk does not exist

Cause: Shrink was issued on a lob segment that did not exist

Action: n/a

ORA-10658: Lob column to be shrunk is marked unused

Cause: Shrink was issued on a lob segment that is marked as unused

Action: n/a

ORA-10659: Segment being shrunk is not a lob

Cause: Shrink was issued on a segment that should be a first class lob or other data type stored in lob

Action: n/a

ORA-10660: Segment is a shared lob segment

Cause: Shrink was issued on a segment that was being shared by multiple lob columns

Action: n/a

ORA-10661: Invalid option specified

Cause: Check option can be specified for one segment only

Action: n/a

ORA-10662: Segment has long columns

Cause: Shrink was issued on a segment with long columns. This is not supported.

Action: n/a

ORA-10663: Object has rowid based materialized views

Cause: Shrink was issued on an object with rowid based materialized views.

Action: Drop the rowid based materialized views and issue shrink on the object

ORA-10664: Table has bitmap join indexes

Cause: SHRINK was issued on a table with bitmap join indexes.

Action: Drop bitmap join indexes and reissue SHRINK on the object.

ORA-10665: Inject Evil Literals

Cause: Event 10665 is set to some number > 0, causing 1/(value-1) of all literals to be replaced by 2000 letter 'A's. A value of 1 does not corrupt anything.

Action: never set this event

ORA-10666: Do not get database enqueue name

ORA-10667: Cause sppst to check for valid process ids

ORA-10668: Inject Evil Identifiers

Cause: event 10668 is set to some number > 0, causing 1/(value-1) of all identifiers to be replaced by a maximum amount of x's. It is common for an identifier to be parsed once with a max of 30 bytes, then reparsed later with a max of 4000, so it may not be possible to inject such an identifier without the aid of this event. A value of 1 causes no identifiers to be corrupted.

Action: never set this event

ORA-10690: Set shadow process core file dump type (Unix only)

Cause: Control core file size for shadow processes

Action: Level 1: Detach SGA before dumping core Level 2: Do not produce any core

ORA-10691: Set background process core file type (Unix only)

Cause: Control core file size file for background processes

Action: Level 1: Detach SGA before dumping core

ORA-10700: Alter access violation exception handler

Cause: Use this event to control what the VMS exception handler does when it encounters an access violation.

Action: Level: >=10 Suspend current process on access violation *** SET THIS EVENT ONLY UNDER THE SUPERVISION OF ORACLE DEVELOPMENT ***

ORA-10701: Dump direct loader index keys

Cause: Dumps index keys at various points in a direct load based on the value of this event.

Action: n/a

ORA-10702: Application continuity debugging was not enabled

Cause: Enable application continuity debugging

Action: Level indicates details. Level: 0x0001: Transaction intention debugging
0x1000: Failure injection testing 0x2000: Failure injection testing 0x4000: Failure
injection testing

ORA-10704: Print out information about what enqueues are being obtained

Cause: When enabled, prints out arguments to calls to ksqcmi and ksqlrl and the
return values.

Action: Level indicates details: Level: 1-4: print out basic info for ksqlrl, ksqcmi 5-9:
also print out stuff in callbacks: ksqlac, ksqlqp 10+: also print out time for each line

ORA-10706: Print out information about global enqueue manipulation

Cause: When enabled, prints out activity in ksi routines.

Action: INternal system parameter (_ksi_trace) can be used in addition to setting this
event to limit output information on selected set of global enqueue server enqueue
type(s) For example: _ksi_trace = RTXA output information only for RT and XA lock
types. Level indicates details: 0-4: show args for each main call 5-9: also indicate
callbacks 10+: also printout time for each line

ORA-10707: Simulate process death for instance registration

Cause: When enabled, process commits suicide to test instance registration recovery
code.

Action: Level indicates where the process will die

ORA-10709: enable parallel instances in create index by default

ORA-10710: trace bitmap index access

ORA-10711: trace bitmap index merge

ORA-10712: trace bitmap index or

ORA-10713: trace bitmap index and

ORA-10714: trace bitmap index minus

ORA-10715: trace bitmap index conversion to rowids

ORA-10716: trace bitmap index compress/decompress

ORA-10717: trace bitmap index compaction trace for index creation

ORA-10718: event to disable automatic compaction after index creation

ORA-10719: trace bitmap index dml

ORA-10720: trace db scheduling

ORA-10721: Internal testing - temp table transformation

ORA-10722: trace server level database scheduling

ORA-10723: Internal testing - release buffer for buffer cache shrink

ORA-10724: trace cross-instance broadcast

ORA-10725: bitmap index version control

ORA-10726: frequent itemset counting

ORA-10728: set parameters for CPU frequency calculation (debug)

ORA-10731: dump SQL for CURSOR expressions

ORA-10736: buffer cache pin history dump

ORA-10740: disables fix for bug 598861

ORA-10750: test rollback segment blksize guessing for index array insert

ORA-10751: override for remote row source maximum buffer size

ORA-10752: override for the Exponential Moving Average factor

ORA-10753: enforce deterministic behaviour for prefetching row source

ORA-10754: disable fix for bug 14173995 for multi-table select for update

ORA-10804: reserved for ksxb

ORA-10806: Switch to 7.3 mode when detaching sessions

ORA-10807: Disable user id check when switching to a global transaction

ORA-10808: Enable assert when waiting without a reason

ORA-10828: memory allocator error
Cause: Error in the memory allocator
Action: Check the trace files and other relevant output

ORA-10830: Trace group by sort row source

ORA-10831: Trace group by rollup row source

ORA-10832: Trace approximate NDV row source

ORA-10833: Runtime distribution keys for adaptive partial rollup

ORA-10834: Runtime behavior control for adaptive partial rollup

ORA-10841: Default un-initialized charact set form to SQLCS_IMPLICIT
Cause: client side, such as JDBC-THIN 8i client sends 0 as charset form
Action: This event sets charset form as SQLCS_IMPLICIT when it is 0

ORA-10842: Event for OCI Tracing and Statistics Info
Cause: This event is meant for tracing OCI Calls and getting statistics
Action: This event sets tracing OCI Calls and gets statistics info

ORA-10844: turn on Native Net IPC debugging (skgxp)

ORA-10845: Enable Director tracing

Cause: N/A

Action: Enable tracing of director/workload manager packages

ORA-10848: OCI Non Blocking not supported with *string*

Cause: Attempt made to set connection as non-blocking with another feature that does not support non-blocking.

Action: Use blocking connection.

ORA-10849: Internal OCI event number

Cause: N/A

Action: Set this event only under the supervision of Oracle Support or Development. This event enable compatible behavior with sending describe information when a cursor rebuilt.

ORA-10850: Enable time manager tracing

ORA-10862: resolve default queue owner to current user in enqueue/dequeue

Cause: resolve default queue owner to current user in enqueue/dequeue.

Action: turn on if client wish to resolve the default queue owner to the current user. If not turned on, the default queue owner will be resolved to the login user.

ORA-10873: file *string* needs to be either taken out of backup mode or media recovered

Cause: An attempt was made to open a database after an instance failure or SHUTDOWN ABORT interrupted an online backup.

Action: If the indicated file is not a restored backup, then issue the ALTER DATABASE END BACKUP command and open the database. If the file is a restored online backup, then apply media recovery to it and open the database.

ORA-10877: error signaled in parallel recovery slave *string*

Cause: A parallel recovery logmerger reached an exception condition.

Action: Check the following error message for the cause, and consult your error manual for the appropriate action.

ORA-10878: parallel recovery slave died unexpectedly

Cause: A parallel recovery slave died unexpectedly, PMON cleaning up the process.

Action: Check your system for anomalies and reissue the statement. If this error persists, contact Oracle Support Services. See trace file for more details.

ORA-10879: error signaled in parallel recovery slave *string*

Cause: A parallel recovery slave reached an exception condition.

Action: Check the following error message for the cause, and consult your error manual for the appropriate action.

ORA-10883: Event for Fast Application Notification tracing

Cause: This event sets tracing for Fast Application Notification (FAN).

Action: Level 5 - Set this level to dump out all FAN High Availability related messages to trace files. This includes event payloads and error messages. 10 - Set this level to dump out FAN Runtime Load Balancing related messages. This includes RLB payloads and error messages.

ORA-10900: extent manager fault insertion event #string

Cause: causes faults to be generated in instrumented extent code

Action: this should only be enabled for internal testing

ORA-10901: disable the fix for bug 1230798

ORA-10902: disable seghdr conversion for ro operation

Cause: causes seghdr conversion to be turned off for ro ops(#555856)

Action: this should be enabled only if determined that bug 555856 has occurred. Table needs to be exported subsequently

ORA-10906: Unable to extend segment after insert direct load

Cause: This is a restriction with insert direct load transactions.

Action: When a segment has been insert direct loaded, avoid DMLs that could cause more space to be consumed.

ORA-10911: Locally managed SYSTEM tablespace bitmaps can be modified only under the supervision of Oracle Support

Cause: N/A

Action: n/a

ORA-10912: Used to perform admin operations on locally managed SYSTEM tablespace

Cause: N/A

Action: The event should be used only under the supervision of Oracle Support

ORA-10914: invalid TABLESPACE GROUP clause

Cause: An invalid option appears for TABLESPACE GROUP clause.

Action: Specify a valid tablespace group name.

ORA-10915: TABLESPACE GROUP cannot be specified for this type of tablespace

Cause: In CREATE/ALTER TABLESPACE, the TABLESPACE GROUP clause was used while creating/altering a tablespace that is not TEMPORARY.

Action: Remove the TABLESPACE GROUP clause.

ORA-10916: TABLESPACE GROUP already specified

Cause: In CREATE/ALTER TABLESPACE, the TABLESPACE GROUP option was specified more than once.

Action: Remove all but one of the TABLESPACE GROUP specifications.

ORA-10917: TABLESPACE GROUP cannot be specified

Cause: The tablespace name specified in the command is actually the name of a tablespace group.

Action: Please specify an appropriate tablespace name.

ORA-10918: TABLESPACE GROUP name cannot be the same as tablespace name

Cause: The tablespace group name specified in the command is the same as the tablespace being CREATED/ALTERed.

Action: Please specify an appropriate tablespace group name.

ORA-10919: Default temporary tablespace group must have at least one tablespace

Cause: An attempt was made to move the only tablespace in the default database temporary tablespace group to another tablespace group.

Action: Either change the database default temporary tablespace or add another tablespace to the group that this tablespace belongs to.

ORA-10920: Cannot offline tablespace belonging to default temporary tablespace group

Cause: An attempt was made to offline a tablespace in the default database temporary tablespace group.

Action: Either change the database default temporary tablespace or change the tablespace group of this tablespace.

ORA-10921: Cannot drop tablespace belonging to default temporary tablespace group

Cause: An attempt was made to drop a tablespace in the default database temporary tablespace group.

Action: Either change the database default temporary tablespace or change the tablespace group of this tablespace.

ORA-10922: Temporary tablespace group is empty

Cause: An attempt was made to allocate a temporary segment in a group, which now no longer has any members.

Action: Either add some temporary tablespaces or change the temporary tablespace for this user.

ORA-10923: prints debug information for object space server manageability

ORA-10924: import storage parse error ignore event

Cause: causes server to ignore specific error associated with freelists and freelist groups when parsing

Action: this should be enabled by import code only

ORA-10925: trace name context forever

Cause: When enabled, turns off bugfix 237911

Action: set this event ONLY if necessary - after reading the README for this release or under supervision of Oracle Support.

ORA-10926: trace name context forever

Cause: When enabled, turns off bugfix 190119

Action: set this event ONLY if necessary - after reading the README for this release or under supervision of Oracle Support.

ORA-10927: trace name context forever

Cause: When enabled, turns off bugfix 235190

Action: set this event ONLY if necessary - after reading the README for this release or under supervision of Oracle Support.

ORA-10928: trace name context forever

ORA-10929: trace name context forever

Cause: When enabled, turns off bugfix 343966

Action: set this event ONLY if necessary - after reading the README for this release or under supervision of Oracle Support.

ORA-10930: trace name context forever

Cause: When enabled, provides V7 behavior for fixed char binds

Action: set this event ONLY if necessary - after reading the README for this release or under supervision of Oracle Support.

ORA-10931: trace name context forever

Cause: When enabled, allows normal packages to be compiled with standard extensions like "<ADT_1>"

Action: Set this event only for a short amount of time. Once the packages are compiled, this event should be turned off. Level 1 - Turn the event on Level > 1 - Turn the event off

ORA-10932: trace name context forever

Cause: When enabled, disables one or more features or bug fixes available only in version 8.x.

Action: set this event ONLY if necessary - after reading the README for this release or under supervision of Oracle Support.

ORA-10933: trace name context forever

Cause: When enabled, disables one or more features or bug fixes available only in version 8.x.

Action: set this event ONLY if necessary - after reading the README for this release or under supervision of Oracle Support.

ORA-10934: trace name context forever

Cause: When enabled, disables one or more features or bug fixes available only in version 11.x.

Action: Set this event only if necessary - after reading the README for this release or under supervision of Oracle Support Services.

ORA-10936: trace name context forever

Cause: When enabled, disables one or more features or bug fixes available in versions 7.x and 8.x.

Action: set this event ONLY if necessary - after reading the README for this release or under supervision of Oracle Support.

ORA-10937: trace name context forever

ORA-10938: trace name context forever

ORA-10939: trace name context forever

ORA-10940: trace name context forever

Cause: Size of the PL/SQL tracing circular buffer, in kilobytes.

Action: Set this event in concert with the 10938 event and the `_PLSQL_DUMP_BUFFER_EVENTS` init.ora parameter, under supervision of Oracle Support.

ORA-10941: trace name context forever

Cause: When enabled, turns on PL/SQL profiler

Action: set this event ONLY if necessary - after reading the README for this release or under supervision of Oracle Support.

ORA-10943: trace name context forever

Cause: When enabled, disables one or more features or bug fixes available only in version 8.x.

Action: set this event ONLY if necessary - after reading the README for this release or under supervision of Oracle Support.

ORA-10944: trace name context forever

Cause: When enabled, allows or controls PL/SQL OPT code gen project. available only in version 8.2+.

Action: set this event ONLY for development of the OPT project. This is not for general use or deployment.

ORA-10945: trace name context forever

Cause: When enabled, disables the behaviour change introduced by the fix for bug 822764, which traps and handles invalidations of packages whereas the previous behaviour was to use stale invalidated instantiations of the stateful package body.

Action: set this event ONLY if necessary - after reading the README for this release or under supervision of Oracle Support.

ORA-10946: trace name context forever

Cause: When enabled, disables one or more features or bug fixes available only in version 10.x.

Action: set this event ONLY if necessary - after reading the README for this release or under supervision of Oracle Support.

ORA-10947: trace name context forever

Cause: When enabled, causes various PL/SQL warnings related debugging info to be written in a trace file. Useful for debugging various Oracle processes. available only in version 10.x.

Action: set this event ONLY if necessary - after reading the README for this release or under supervision of Oracle Support.

ORA-10949: Disable autotune direct path read for full table scan

ORA-10970: backout event for bug 2133357

Cause: 2133357 dynamically sets the varying width flag and character width. Lob data which is not migrated during migration from single byte to multibyte character set will be displayed as special characters.

Action: To help migrate lob data which was not migrated during migration by backing out 2133357, so lob data can be selected and moved to multibyte character set.

ORA-10973: backout event for 2619509

Cause: 2619509 catches offsets when not reading/writing on full character boundary. To facilitate backward compatibility event is being introduced.

Action: To help upgrade/migrate issues which already have corrupt data

ORA-10979: trace flags for join index implementation

Cause: This is an informational message.

Action: Values are as follows: LEVEL ACTION

----- > 1 Dump refresh expressions (SQL) to trace file. > 999 If a complete refresh is invoked, it will not be performed but the system will assume that a complete refresh was done, causing the view to be VALID and updating timestamps. This should be used only under Oracle Support supervision.

ORA-10990: dump spreadsheet info

ORA-10992: event to enable dbms_job instead of dbms_scheduler

ORA-10993: Runtime enable IOQ batching

ORA-10994: Compiletime enable IOQ batching

ORA-10997: another startup/shutdown operation of this instance in progress

Cause: An Oracle Instance startup or shutdown operation failed to procure the serialization primitive. Another foreground process may have attempted startup or shutdown operation in parallel.

Action: Check additional error messages in the alert log and the process trace file.

ORA-10999: do not get database enqueue name

ORA-12000: a materialized view log already exists on table '*string*'

ORA-12001: cannot create log: table '*string*' already has a trigger

Cause: Materialized view logs are filled by a trigger on the master table. That trigger cannot be created.

Action: To create a materialized view log, drop the current trigger on the master.

ORA-12002: there is no materialized view log on table "*string*".*string*"

Cause: There was no materialized view log on the master table.

Action: Create a materialized view log on the master table.

ORA-12003: materialized view or zonemap "*string*".*string*" does not exist

Cause: The database object with the given owner and name was not found.

Action: Verify input and retry.

ORA-12004: REFRESH FAST cannot be used for materialized view "*string*".*string*"

Cause: The materialized view log does not exist or cannot be used. PCT refresh is also not enabled on the materialized view

Action: Use just REFRESH, which will reconstitute the entire table. If a materialized view log exists and the form of the materialized view allows the use of a materialized view log or PCT refresh is possible after a given set of changes, REFRESH FAST will be available starting the next time the materialized view is refreshed.

ORA-12005: may not schedule automatic refresh for times in the past

Cause: An attempt was made to schedule an automated materialized view refresh for a time in the past.

Action: Choose a time in the future instead.

ORA-12007: materialized view reuse parameters are inconsistent

Cause: The CREATE MATERIALIZED VIEW .. or CREATE MATERIALIZED VIEW LOG .. REUSE command was given inconsistent parameters immediately after the REUSE.

Action: Examine the other messages on the stack to find the problem.

ORA-12008: error in materialized view refresh path

Cause: Table SNAP\$_<mview_name> reads rows from the view MVIEW \$_<mview_name>, which is a view on the master table (the master may be at a remote site). Any error in this path will cause this error at refresh time. For fast refreshes, the table <master_owner>.MLOG\$_master is also referenced.

Action: Examine the other messages on the stack to find the problem. See if the objects SNAP\$_<mview_name>, MVIEW\$_<mview_name>, *mowner.master@dblink*, *mowner.MLOG\$_master@dblink* still exist.

ORA-12009: materialized views may not contain long columns

ORA-12010: cannot create materialized view log on table owned by SYS

Cause: An attempt was made to create a materialized view log on the table owned by SYS. CREATE MATERIALIZED VIEW LOG attempts to create a trigger on the table, but triggers can not be created on SYS tables.

Action: Do not create a materialized view log on SYS tables.

ORA-12011: execution of *string* jobs failed

Cause: An error was caught in dbms_ijob.run from one or more jobs which were due to be run.

Action: Look at the alert log for details on which jobs failed and why.

ORA-12012: error on auto execute of job *string*

Cause: An error was caught while doing an automatic execution of a job.

Action: Look at the accompanying errors for details on why the execute failed.

ORA-12013: updatable materialized view must be simple enough and have a materialized view log on its master table to do fast refresh

Cause: The updatable materialized view query contained a JOIN, SUBQUERY, UNION, CONNECT BY, ORDER BY, or GROUP BY clause, or the master table did not have a materialized view log.

Action: Make the materialized view simpler. If a join is really needed, make multiple simple materialized views then put a view on top of them. Make sure a materialized view log is created for the master table.

ORA-12014: table '*string*' does not contain a primary key constraint

Cause: The CREATE MATERIALIZED VIEW LOG command was issued with the WITH PRIMARY KEY option and the master table did not contain a primary key constraint or the constraint was disabled.

Action: Reissue the command using only the WITH ROWID option, create a primary key constraint on the master table, or enable an existing primary key constraint.

ORA-12015: cannot create a fast refresh materialized view from a complex query

Cause: Neither ROWIDs and nor primary key constraints are supported for complex queries.

Action: Reissue the command with the REFRESH FORCE or REFRESH COMPLETE option or create a simple materialized view.

ORA-12016: materialized view does not include all primary key columns

Cause: The query that instantiates the materialized view did not include all of the columns in the master's primary key constraint.

Action: Include all of the master's primary key columns in the materialized view query or create a ROWID materialized view.

ORA-12017: cannot alter primary key mview '*string*' to a rowid mview

Cause: An attempt was made to convert the primary key of a materialized view to a ROWID materialized view.

Action: Conversion of a primary key materialized view to a ROWID materialized view is not supported. Create a new materialized view with ROWIDs or drop and recreate the materialized view with ROWIDs.

ORA-12018: following error encountered during code generation for "*string*".*string*"

Cause: The refresh operations for the indicated materialized view could not be regenerated due to errors.

Action: Correct the problem indicated in the following error messages and repeat the operation.

ORA-12019: master table is a synonym to a remote object

Cause: An attempt was made to create a materialized view or a materialized view log on a remote synonym which is unsupported.

Action: Do not create a materialized view or materialized view log on a remote synonym.

ORA-12020: materialized view *string* is not registered

Cause: An attempt was made to unregister a materialized view that is not registered.

Action: No action required.

ORA-12021: materialized view "*string*".*string*" is corrupt

Cause: The materialized view indicated is no longer valid.

Action: Contact Oracle Customer Support.

ORA-12022: materialized view log on "*string*".*string*" already has rowid

Cause: Materialized view log on the indicated table already has ROWID information.

Action: No action required.

ORA-12023: missing index on materialized view "*string*".*string*"

Cause: The specified ROWID materialized view did not have the required index on the ROWID column of its underlying table.

Action: Drop and recreate the materialized view.

ORA-12024: materialized view log on "*string*".*string*" does not have primary key columns

Cause: Materialized view log on the indicated table does not have primary key information.

Action: Add primary keys to the materialized view log using the ALTER MATERIALIZED VIEW command.

ORA-12025: materialized view log on "string"."string" already has primary keys
Cause: Materialized view log on the indicated table already has primary key columns.
Action: No action required.

ORA-12026: invalid filter column detected
Cause: One or more of the specified filter columns did not exist or was a primary key column or a primary key based object identifier.
Action: Ensure that all specified filter columns exist in the master table and ensure that primary key columns or primary key based object identifiers are not included in the list of filter columns.

ORA-12027: duplicate filter column
Cause: One or more of the specified filter columns were already being recorded in the materialized view log.
Action: Describe the materialized view log table and reissue the SQL command with the filter columns that are already being recorded in the materialized view log.

ORA-12028: materialized view type is not supported by master site string
Cause: Pre-Oracle8 master sites are not able to support primary key or subquery materialized views that are able to perform a fast refresh.
Action: Create a ROWID materialized view or use a master table from an Oracle8 site.

ORA-12029: LOB columns may not be used as filter columns
Cause: An attempt was made to use LOB columns as filter columns.
Action: Remove LOB columns from the filter columns list and retry command.

ORA-12030: cannot create a fast refresh materialized view
Cause: The materialized view log did not exist or did not log the information needed by the materialized view to perform a fast refresh.
Action: Ensure that the materialized view log exists and logs the necessary information. - For ROWID materialized views, the master table's ROWID must be logged. - For primary key materialized views, the master table's primary key columns must be logged. - For subquery materialized views, the filter columns, primary key, and ROWID values must be logged. - For object materialized views, object id must be logged.

ORA-12031: cannot use primary key columns from materialized view log on "string"."string"
Cause: The materialized view log either did not have primary key columns logged, or the timestamp associated with the primary key columns was more recent than the last refresh time.
Action: A complete refresh is required before the next fast refresh. Add primary key columns to the materialized view log, if required.

ORA-12032: cannot use rowid column from materialized view log on "string"."string"
Cause: The materialized view log either does not have ROWID columns logged, or the timestamp associated with the ROWID columns is more recent than the last refresh time.
Action: A complete refresh is required before the next fast refresh. Add ROWID columns to the materialized view log, if required.

ORA-12033: cannot use filter columns from materialized view log on "string"."string"

Cause: The materialized view log either did not have filter columns logged, or the timestamp associated with the filter columns was more recent than the last refresh time.

Action: A complete refresh is required before the next fast refresh. Add filter columns to the materialized view log, if required.

ORA-12034: materialized view log on "string"."string" younger than last refresh

Cause: The materialized view log was younger than the last refresh.

Action: A complete refresh is required before the next fast refresh.

ORA-12035: could not use materialized view log on "string"."string"

Cause: The materialized view log did not exist or could not be used.

Action: Use just REFRESH, which will re instantiate the entire table. If a materialized view log exists and the form of the materialized view allows the use of a materialized view log, REFRESH FAST will be available starting the next time the materialized view is refreshed.

ORA-12036: updatable materialized view log is not empty, refresh materialized view

Cause: The updatable materialized view log was not empty. The updatable materialized view log must be empty before an updatable rowid materialized view can be altered to a primary key materialized view.

Action: Ensure that updatable materialized view log is empty by refreshing the materialized view before converting the updatable ROWID materialized view to a primary key materialized view.

ORA-12037: unknown export format

Cause: An attempt was made to import a materialized view exported by an unknown export version (e.g., from a newer release than the importing site)

Action: Re-export the file using a version of export known by the importing site.

ORA-12038: string literal has unexpected length

ORA-12039: unable to use local rollback segment "string"

Cause: A local rollback segment was specified in the CREATE MATERIALIZED VIEW command, but automatic refresh parameters were not specified. Therefore a refresh group was not created to automatically refresh the materialized view and the local rollback segment can't be registered for future use.

Action: Either supply the automatic refresh parameters so that a refresh group will be created or do not specify a local rollback segment.

ORA-12040: master rollback segment option not support by master site string

Cause: An attempt was made to specify master rollback segment in the current operation. The master site of the current materialized view does not allow users to specify a rollback segment to be used for materialized view operations. This feature is only supported by Oracle8 or later master sites.

Action: Do not specify a master rollback segment in the current operation or choose a new master site.

ORA-12041: cannot record ROWIDs for index-organized table "string"."string"

Cause: Index-organized tables do not have ROWIDs. Therefore a materialized view log that records the ROWIDs of an index-organized table could not be created.

Action: Do not include the WITH ROWID option when using the CREATE MATERIALIZED VIEW command and do not include the ADD ROWID option when using the ALTER MATERIALIZED VIEW command if the master table is index-organized.

ORA-12042: cannot alter job_queue_processes in single process mode

Cause: An attempt was made to alter job_queue_processes in single process mode.

Action: Do not attempt to set job_queue_processes in single process mode.

ORA-12043: invalid CREATE MATERIALIZED VIEW option

Cause: An invalid option was used in a CREATE MATERIALIZED VIEW statement.

Action: Specify only valid options.

ORA-12044: invalid CREATE MATERIALIZED VIEW LOG option

Cause: An invalid option was used in a CREATE MATERIALIZED VIEW LOG statement.

Action: Specify only valid options.

ORA-12045: invalid ALTER MATERIALIZED VIEW LOG option

Cause: An invalid option was used in an ALTER MATERIALIZED VIEW LOG statement.

Action: Specify only valid options.

ORA-12046: cannot use trusted constraints for refreshing remote MV

Cause: REFRESH USING TRUSTED CONSTRAINTS specified in ALTER MATERIALIZED VIEW or CREATE MATERIALIZED VIEW of a remote materialized view

Action: remove this attribute from ALTER/ CREATE MATERIALIZED VIEW DDL

ORA-12047: PCT FAST REFRESH cannot be used for materialized view "string"."string"

Cause: PCT refresh is either not enabled on this materialized view or not possible after set of the base table changes since last refresh.

Action: Use just REFRESH FORCE, which will reinstantiate the entire table and try to pick the best refresh method on the materialized view Do explain_mvview to look at the cause why PCT refresh is not possible on this materialized view

ORA-12048: error encountered while refreshing materialized view "string"."string"

Cause: Some problem occurs during refresh of multiple materialized views in atomic mode. The materialized view whose refresh failed has raised this error.

Action: Examine the other messages on the stack to find the refresh problem.

ORA-12051: ON COMMIT attribute is incompatible with other options

Cause: ON COMMIT refresh attribute, incompatible with other refresh options such as automatic periodic refresh, was specified.

Action: Specify only valid options.

ORA-12052: cannot fast refresh materialized view *string.string*

Cause: Either ROWIDs of certain tables were missing in the definition or the inner table of an outer join did not have UNIQUE constraints on join columns.

Action: Specify the FORCE or COMPLETE option. If this error is got during creation, the materialized view definition may have be changed. Refer to the documentation on materialized views.

ORA-12053: this is not a valid nested materialized view

Cause: The list of objects in the FROM clause of the definition of this materialized view had some dependencies upon each other.

Action: Refer to the documentation to see which types of nesting are valid.

ORA-12054: cannot set the ON COMMIT refresh attribute for the materialized view

Cause: The materialized view did not satisfy conditions for refresh at commit time.

Action: Specify only valid options.

ORA-12055: materialized view definition contains cyclic dependencies with existing materialized views

Cause: The materialized view query definition introduced a cyclic dependency with existing materialized view.

Action: Modify the materialized view query definition.

ORA-12056: invalid REFRESH method

Cause: The NEVER REFRESH option may not be used under the following conditions: * The materialized view is updatable * The materialized view refreshes ON COMMIT * Automatic refresh options are specified

Action: For updatable materialized views, reissue the SQL command using REFRESH FORCE, REFRESH FAST, or REFRESH COMPLETE. For read-only materialized views, reissue the SQL command using ON DEMAND.

ORA-12057: materialized view or zonemap "*string*"."*string*" is invalid and must use complete refresh

Cause: The status of the materialized view or zonemap was invalid and an attempt was made to fast refresh it.

Action: Perform a complete refresh of the materialized view or zonemap.

ORA-12058: materialized view cannot use prebuilt table

Cause: An attempt was made to use the prebuilt tables.

Action: Reissue the SQL command using BUILD IMMEDIATE or BUILD DEFERRED.

ORA-12059: prebuilt table "*string*"."*string*" does not exist

Cause: The specified prebuilt table did not exist.

Action: Reissue the SQL command using BUILD IMMEDIATE, BUILD DEFERRED, or ensure that the prebuilt table exists.

ORA-12060: shape of prebuilt table does not match definition query

Cause: The number of columns or the type or the length semantics of a column in the prebuilt table did not match the materialized view definition query.

Action: Reissue the SQL command using BUILD IMMEDIATE, BUILD DEFERRED, or ensure that the prebuilt table matches the materialized view definition query.

ORA-12061: invalid ALTER MATERIALIZED VIEW option

Cause: An invalid option was used in an ALTER MATERIALIZED VIEW statement.

Action: Specify only valid options.

ORA-12062: transaction *string* received out of sequence from site *string*

Cause: A transaction from the client site was received out of sequence. This implies that one or more transactions were missing.

Action: Ensure that the transaction queue at the client site is valid and has not been corrupted.

ORA-12063: unable to apply transaction from site *string*

Cause: The current transaction from the client site could not be applied to the master site.

Action: Ensure that the client site is still valid and that it has not been dropped from the master site.

ORA-12064: invalid refresh sequence number: *string*

Cause: The client site was attempting to perform a refresh with an invalid refresh sequence.

Action: Perform a complete refresh to synchronize the refresh sequence number.

ORA-12065: unknown refresh group identifier *string*

Cause: The specified refresh group did not exist at the master site.

Action: Ensure that the client site is still valid and that it has not been dropped from the master site.

ORA-12066: invalid CREATE MATERIALIZED VIEW command

Cause: The Replication API does not support the following options and types of materialized view: o ROWID materialized views o REFRESH ON COMMIT o ON PREBUILT TABLE o BUILD DEFERRED o NEVER REFRESH o ENABLE QUERY REWRITE

Action: Create a PRIMARY KEY materialized view using REFRESH WITH PRIMARY KEY and/or remove the invalid options.

ORA-12067: empty refresh groups are not allowed

Cause: The refresh group being instantiated did not contain any materialized views.

Action: Modify the template to include at least one materialized view.

ORA-12068: updatable mview log for mview "*string*"."*string*" does not exist

Cause: The updatable materialized view was missing the updatable materialized view log required to track updates made to the materialized view.

Action: Create the updatable materialized view log.

ORA-12069: invalid object for offline instantiation

Cause: Only materialized views can be offline instantiated. The object being offline instantiated was not a valid materialized view.

Action: Remove the object from the template or replace the object with a valid materialized view.

ORA-12070: cannot offline instantiate materialized view "*string*"."*string*"

Cause: Offline instantiation does not support materialized views using the following options: o ON PREBUILT TABLE o BUILD DEFERRED

Action: Remove the invalid options.

ORA-12071: definition query of "*string*"."*string*" is invalid for offline instantiation

Cause: Offline instantiation requires materialized view definition queries to observe the following constraints: o The database link that will be used by the materialized view site to connect to the master site must be included with each master table referenced in the query. o All master tables referenced must be located at the local site. References to other sites are not allowed.

Action: Modify the materialized view definition query.

ORA-12072: updatable materialized view log data for "*string*"."*string*" cannot be created

Cause: The updatable materialized view was missing the updatable materialized view log required to track updates made to the materialized view.

Action: Create an updatable materialized view log.

ORA-12073: request cannot be processed

Cause: An out-of-sequence request was made and it cannot be processed.

Action: Try again with a valid request.

ORA-12074: invalid memory address

Cause: An attempt was made to access an invalid memory region.

Action: Reconnect and try the command again.

ORA-12075: invalid object or field

Cause: An attempt was made to access an invalid field or object in the Java Virtual Memory.

Action: Retry the request.

ORA-12076: invalid threshold value

Cause: The result set threshold or LOB threshold value is not supported.

Action: Specify a threshold value below 64K.

ORA-12077: temporary updatable materialized view log does not exist

Cause: Temporary updatable materialized view log was not created or was dropped.

Action: Re-create the temporary updatable materialized view log. Warning: This will cause a complete refresh of the materialized view.

ORA-12078: fast refresh of refresh group ID *string* failed

Cause: Refresh result set sent through client method REFRESH_REQ_RESULT returned an unknown value.

Action: Re-issue the refresh request.

ORA-12079: do not invalidate result cache created during materialized view refresh

Cause: Result cache created during materialized view refresh was not invalidated at end.

Action: Do not set this as an event.

ORA-12080: Buffer cache miss for IOQ batching

ORA-12081: update operation not allowed on table "*string*"."*string*"

Cause: An attempt was made to update a read-only materialized view.

Action: No action required. Only Oracle is allowed to update a read-only materialized view.

ORA-12082: "*string*"."*string*" cannot be index organized

Cause: An attempt was made to create an index-organized materialized aggregate view or an index-organized updatable ROWID materialized view. This is not supported.

Action: Try to create the materialized view without the index organization clause.

ORA-12083: must use DROP MATERIALIZED VIEW to drop "*string*"."*string*"

Cause: An attempt was made to drop a materialized view using a command other than DROP MATERIALIZED VIEW.

Action: Use the DROP MATERIALIZED VIEW command.

ORA-12084: must use ALTER MATERIALIZED VIEW to alter "*string*"."*string*"

Cause: An attempt was made to alter a materialized view using a command other than ALTER MATERIALIZED VIEW.

Action: Use the ALTER MATERIALIZED VIEW command.

ORA-12085: materialized view log on "*string*"."*string*" already has object id

Cause: Materialized view log on the indicated table already has object id information.

Action: No action required.

ORA-12086: table "*string*"."*string*" is not an object table

Cause: The CREATE MATERIALIZED VIEW LOG command was issued with the WITH OBJECT ID option and the master table is not an object table.

Action: Either specify the name of an object table, or remove the WITH OBJECT ID clause.

ORA-12087: online redefinition not allowed on tables owned by "*string*"

Cause: An attempt was made to online redefine a table owned by SYS or SYSTEM.

Action: Do not attempt to online redefine a table owned by SYS or SYSTEM.

ORA-12088: cannot online redefine table "*string*"."*string*" with unsupported datatype

Cause: An attempt was made to online redefine a table containing a LONG column, an ADT column, or a FILE column.

Action: Do not attempt to online redefine a table containing a LONG column, an ADT column, or a FILE column.

ORA-12089: cannot online redefine table "*string*"."*string*" with no primary key

Cause: An attempt was made to online redefine a table that does not have a primary key defined on it.

Action: Do not attempt to online redefine a table that does not have a primary key defined on it.

ORA-12090: cannot online redefine table "*string*"."*string*"

Cause: An attempt was made to online redefine a table that is either a temporary table, an IOT overflow table, a table with fine-grained access control or row-level security enabled, a CDC change table, or a table with a CDC change table defined on it.

Action: Do not attempt to online redefine a table that is not supported by online redefinition.

ORA-12091: cannot online redefine table "*string*"."*string*" with materialized views

Cause: An attempt was made to online redefine a table that had materialized views defined on it or had a materialized view log defined on it or is a master.

Action: Drop all materialized views and materialized view logs before attempting to online redefine the table.

ORA-12092: cannot online redefine replicated table "*string*"."*string*"

Cause: An attempt was made to online redefine a table that is either a materialized view or a replicated table.

Action: Do not attempt to online redefine a table that is either a materialized view or a replicated table.

ORA-12093: invalid interim table "*string*"."*string*"

Cause: The table is not the interim table of the corresponding table to be online redefined.

Action: Pass in the valid interim table.

ORA-12094: error during online redefinition

Cause: There was an error during the online redefinition process.

Action: Abort the online redefinition process.

ORA-12096: error in materialized view log on "*string*"."*string*"

Cause: There was an error originating from this materialized view log. One possible cause is that schema redefinition has occurred on the master table and one or more columns in the log is now a different type than corresponding master column(s). Another possible cause is that there is a problem accessing the underlying materialized view log table.

Action: Check further error messages in stack for more detail about the cause. If there has been schema redefinition, drop the materialized view log and recreate it.

ORA-12097: changes in the master tables during refresh, try refresh again

Cause: There are some changes (i.e., conventional DML, direct load, partition maintenance operation) in the master tables during materialized view refresh.

Action: Refresh the affected materialized views again.

ORA-12098: cannot comment on the materialized view

Cause: An attempt was made to issue a COMMENT ON TABLE statement on a materialized view.

Action: Issue a COMMENT ON MATERIALIZED VIEW statement instead.

ORA-12099: Don't go into fast table scan (kdst) mode

ORA-12100: materialized view log on "*string*"."*string*" already has sequence

Cause: Materialized view log on the indicated table already has sequence information.

Action: No action required.

ORA-12150 to ORA-12236

ORA-12150: TNS:unable to send data

Cause: Unable to send data. Connection probably disconnected.

Action: Reestablish connection. If the error is persistent, turn on tracing and reexecute the operation.

ORA-12151: TNS:received bad packet type from network layer

Cause: Internal error.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

ORA-12152: TNS:unable to send break message

Cause: Unable to send break message. Connection probably disconnected.

Action: Reestablish connection. If the error is persistent, turn on tracing and reexecute the operation.

ORA-12153: TNS:not connected

Cause: Not currently connected to a remote host.

Action: Reestablish connection.

ORA-12154: TNS:could not resolve the connect identifier specified

Cause: A connection to a database or other service was requested using a connect identifier, and the connect identifier specified could not be resolved into a connect descriptor using one of the naming methods configured. For example, if the type of connect identifier used was a net service name then the net service name could not be found in a naming method repository, or the repository could not be located or reached.

Action: - If you are using local naming (TNSNAMES.ORA file): - Make sure that "TNSNAMES" is listed as one of the values of the NAMES.DIRECTORY_PATH parameter in the Oracle Net profile (SQLNET.ORA) - Verify that a TNSNAMES.ORA file exists and is in the proper directory and is accessible. - Check that the net service name used as the connect identifier exists in the TNSNAMES.ORA file. - Make sure there are no syntax errors anywhere in the TNSNAMES.ORA file. Look for unmatched parentheses or stray characters. Errors in a TNSNAMES.ORA file may make it unusable. - If you are using directory naming: - Verify that "LDAP" is listed as one of the values of the NAMES.DIRECTORY_PATH parameter in the Oracle Net profile (SQLNET.ORA). - Verify that the LDAP directory server is up and that it is accessible. - Verify that the net service name or database name used as the connect identifier is configured in the directory. - Verify that the default context being used is correct by specifying a fully qualified net service name or a full LDAP DN as the connect identifier - If you are using easy connect naming: - Verify that "EZCONNECT" is listed as one of the values of the NAMES.DIRECTORY_PATH

parameter in the Oracle Net profile (SQLNET.ORA). - Make sure the host, port and service name specified are correct. - Try enclosing the connect identifier in quote marks. See the Oracle Net Services Administrators Guide or the Oracle operating system specific guide for more information on naming.

ORA-12155: TNS:received bad datatype in NSWMARKER packet

Cause: Internal error during break handling.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

ORA-12156: TNS:tried to reset line from incorrect state

Cause: Internal error during break handling.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

ORA-12157: TNS:internal network communication error

Cause: Internal error during network communication.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

ORA-12158: TNS:could not initialize parameter subsystem

Cause: Unable to locate parameter file.

Action: Verify that a valid parameter file exists, and is readable.

ORA-12159: TNS:trace file not writeable

Cause: The trace file to be generated is not writeable by this user.

Action: If the user does not have write permissions in the directory to which the trace file will be written, contact an administrator to get the proper permissions or set the TRACE_DIRECTORY_CLIENT parameter in the net profile (SQLNET.ORA file) to a directory the user can write to.

ORA-12160: TNS:internal error: Bad error number

Cause: Corrupt error reporting subsystem.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

ORA-12161: TNS:internal error: partial data received

Cause: The connection may be terminated.

Action: Reconnect and try again. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

ORA-12162: TNS:net service name is incorrectly specified

Cause: The connect descriptor corresponding to the net service name in TNSNAMES.ORA or in the directory server (Oracle Internet Directory) is incorrectly specified.

Action: If using local naming make sure there are no syntax errors in the corresponding connect descriptor in the TNSNAMES.ORA file. If using directory naming check the information provided through the administration used for directory naming.

ORA-12163: TNS:connect descriptor is too long

Cause: The connect descriptor corresponding to the net service name specified as the connect identifier is too long. The maximum length for a connect descriptor is 512 bytes and this limit has been exceeded.

Action: Check the net service name's connect descriptor in the local naming file (TNSNAMES.ORA) or in the directory server (Oracle Internet Directory). Use a smaller connect descriptor. If this is not possible, contact Worldwide Customer Support.

ORA-12164: TNS:Sqlnet.fdf file not present

Cause: The sqlnet.fdf file doesn't exist in \$ORACLE_HOME/network/admin.

Action: The sqlnet.fdf file is required for Oracle Tracing to occur. Either install the sqlnet.fdf file in \$ORACLE_HOME/network/admin or turn off tracing in your ORA file.

ORA-12165: TNS:Trying to write trace file into swap space.

Cause: Oracle Trace doesn't allow writing trace information into your swap space.

Action: Oracle Trace cannot write trace information into swap space so either disable tracing or redirect trace files to be written to another area of your disk.

ORA-12166: TNS:Client can not connect to HO agent.

Cause: NVstring contained DESCRIPTION/HO.

Action: Call HO agent from integrating server.

ORA-12168: TNS:Unable to contact LDAP Directory Server

Cause: Cannot contact LDAP directory server to get Oracle Net configuration.

Action: Verify that the directory server is up and accessible from the network. Verify that directory access configuration is correct. For more information see the Oracle Internet Directory Administrators Guide or the Oracle Net Administrators Guide.

ORA-12169: TNS:Net service name given as connect identifier is too long

Cause: The net service name you are attempting to resolve is too long.

Action: The maximum length of a net service name is 255 bytes; this limit has been exceeded. Use a smaller net service name. If this is not possible, contact Worldwide Customer Support.

ORA-12170: TNS:Connect timeout occurred

Cause: The server shut down because connection establishment or communication with a client failed to complete within the allotted time interval. This may be a result of network or system delays; or this may indicate that a malicious client is trying to cause a Denial of Service attack on the server.

Action: If the error occurred because of a slow network or system, reconfigure one or all of the parameters SQLNET.INBOUND_CONNECT_TIMEOUT, SQLNET.SEND_TIMEOUT, SQLNET.RECV_TIMEOUT in sqlnet.ora to larger values. If a malicious client is suspected, use the address in sqlnet.log to identify the source and restrict access. Note that logged addresses may not be reliable as they can be forged (e.g. in TCP/IP).

ORA-12171: TNS:could not resolve connect identifier: *string*

Cause: A connection to a database or other service was requested using a connect identifier, and the connect identifier specified could not be resolved into a connect descriptor using one of the naming methods configured. For example, if the type of

connect identifier used was a net service name then the net service name could not be found in a naming method repository, or the repository could not be located or reached.

Action: - If you are using local naming (TNSNAMES.ORA file): - Make sure that "TNSNAMES" is listed as one of the values of the NAMES.DIRECTORY_PATH parameter in the Oracle Net profile (SQLNET.ORA) - Verify that a TNSNAMES.ORA file exists and is in the proper directory and is accessible. - Check that the net service name used as the connect identifier exists in the TNSNAMES.ORA file. - Make sure there are no syntax errors anywhere in the TNSNAMES.ORA file. Look for unmatched parentheses or stray characters. Errors in a TNSNAMES.ORA file may make it unusable. - If you are using directory naming: - Verify that "LDAP" is listed as one of the values of the NAMES.DIRECTORY_PATH parameter in the Oracle Net profile (SQLNET.ORA). - Verify that the LDAP directory server is up and that it is accessible. - Verify that the net service name or database name used as the connect identifier is configured in the directory. - Verify that the default context being used is correct by specifying a fully qualified net service name or a full LDAP DN as the connect identifier - If you are using easy connect naming: - Verify that "EZCONNECT" is listed as one of the values of the NAMES.DIRECTORY_PATH parameter in the Oracle Net profile (SQLNET.ORA). - Make sure the host, port and service name specified are correct. - Try enclosing the connect identifier in quote marks. See the Oracle Net Services Administrators Guide or the Oracle operating system specific guide for more information on naming.

ORA-12196: TNS:received an error from TNS

Cause: The navigation layer received an error from TNS.

Action: See the error log file for the specific TNS error.

ORA-12197: TNS:keyword-value resolution error

Cause: The navigation layer received an error while trying to look up a value for a keyword.

Action: Check the syntax of the connect descriptor.

ORA-12198: TNS:could not find path to destination

Cause: Could not navigate a path through Interchanges to the destination. This error occurs if an invalid community is in the address string, or the address includes a protocol that is not available or the TNSNAV.ORA file does not have a correct CMANAGER address specified or the Interchange is down.

Action: Assure that Interchanges necessary to get to the desired destination are up and have available capacity for an additional connection. Also check that the correct community and protocol have been specified in the CMANAGER address used.

ORA-12200: TNS:could not allocate memory

Cause: Out of memory on machine.

Action: Reconfigure machine to have more storage or run fewer applications while the Interchange is running.

ORA-12201: TNS:encountered too small a connection buffer

Cause: TNS connection buffer supplied by the application was too small to retrieve the data sent back.

Action: Supply a larger connection buffer. If problem persists, call Worldwide Customer Support.

ORA-12202: TNS:internal navigation error

Cause: Internal navigation error.

Action: Not normally visible to the user. For further details contact Worldwide Customer Support.

ORA-12203: TNS:unable to connect to destination

Cause: Invalid address specified or destination is not listening. This error can also occur because of underlying network or network transport problems.

Action: Verify that the net service name you entered was correct. Verify that the ADDRESS portion of the connect descriptor which corresponds to the net service name is correct. Ensure that the destination process (for example the listener) is running at the remote node.

ORA-12204: TNS:received data refused from an application

Cause: The application using Connection Manager refused the connection at the listener.

Action: Make sure that the application listener at the destination is functioning correctly. If it is and the problem persists, contact Worldwide Customer Support.

ORA-12205: TNS:could not get failed addresses

Cause: Internal navigation error.

Action: Not normally visible to the user. For further details contact Worldwide Customer Support.

ORA-12206: TNS:received a TNS error during navigation

Cause: Internal navigation error because of an unexpected TNS error.

Action: Look at the log file to find the TNS error. If necessary, turn on tracing and repeat the operation.

ORA-12207: TNS:unable to perform navigation

Cause: Improperly configured navigation file TNSNAV.ORA.

Action: Check the syntax of the TNSNAV.ORA file on the application's machine, and verify that it lists the correct communities.

ORA-12208: TNS:could not find the TNSNAV.ORA file

Cause: Either the ORACLE environment is not set up correctly, or the TNSNAV.ORA file is not present.

Action: Ensure that the ORACLE environment is set up appropriately on your platform and that a TNSNAV.ORA file is present.

ORA-12209: TNS:encountered uninitialized global

Cause: Application calling navigation routine has not properly configured the global variables. There are no TNSNAV.ORA files available, or they are defective.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

ORA-12210: TNS:error in finding Navigator data

Cause: Application calling navigation routine has not properly configured the TNSNAV.ORA file.

Action: Check the syntax of the TNSNAV.ORA file.

ORA-12211: TNS:needs PREFERRED_CMANGERS entry in TNSNAV.ORA

Cause: TNSNAV.ORA does not have a PREFERRED_CMANGERS defined.

Action: Add a PREFERRED_CMANGERS entry to the TNSNAV.ORA file.

ORA-12212: TNS:incomplete PREFERRED_CMANGERS binding in TNSNAV.ORA

Cause: The PREFERRED_CMANGERS binding in the client's TNSNAV.ORA file does not have a CMANGER_NAME specified.

Action: Define the CMANGER_NAME as part of the PREFERRED_CMANGERS binding. Use of the Oracle Network Manager should eliminate this error.

ORA-12213: TNS:incomplete PREFERRED_CMANGERS binding in TNSNAV.ORA

Cause: The PREFERRED_CMANGERS binding in the client's TNSNAV.ORA file does not have an ADDRESS specified.

Action: Define the ADDRESS as part of the PREFERRED_CMANGERS binding.

ORA-12214: TNS:missing local communities entry in TNSNAV.ORA

Cause: There is no LOCAL_COMMUNITIES entry in TNSNAV.ORA.

Action: Define the LOCAL_COMMUNITIES for this node in the TNSNAV.ORA file.

ORA-12215: TNS:poorly formed PREFERRED_NAVIGATORS Addresses in TNSNAV.ORA

Cause: Address binding for PREFERRED_NAVIGATORS entry is improperly entered. entry.

Action: Check your PREFERRED_NAVIGATORS entry and fix it in TNSNAV.ORA

ORA-12216: TNS:poorly formed PREFERRED_CMANGERS addresses in TNSNAV.ORA

Cause: Address binding for the PREFERRED_CMANGERS entry in the client's TNSNAV.ORA file is improperly entered.

Action: Define the ADDRESS as part of the PREFERRED_CMANGERS binding.

ORA-12217: TNS:could not contact PREFERRED_CMANGERS in TNSNAV.ORA

Cause: There is a syntax error in the PREFERRED_CMANGERS entry, or addresses specified are wrong, or the intended Connection Managers are unavailable.

Action: Check the PREFERRED_CMANGERS entries in the client's TNSNAV.ORA file and correct them or talk with your network administrator to determine if the specified Connection Managers are available. Verify that the Interchanges are active by using the INTCTL STATUS command.

ORA-12218: TNS:unacceptable network configuration data

Cause: Poorly formed network configuration data. For example, a PREFERRED_CMANGERS entry may have an incorrect CMANGER_NAME in the client's TNSNAV.ORA file. Or an Interchange downtime parameter (TIMEOUT_INTERVAL) on the Navigator may be set to zero in INTCHG.ORA.

Action: Check the entries in TNSNAV.ORA and the Interchange configuration files and correct them. If necessary, talk with your network administrator to determine if the specified Interchanges (Connection Managers) are available and properly configured. Use the Oracle Network Manager to generate the configuration files if necessary.

ORA-12219: TNS:missing community name from address in ADDRESS_LIST

Cause: This error occurs when an ADDRESS_LIST has some ADDRESSES in it that have no COMMUNITY component and others that do have a COMMUNITY component.

Action: Check that in the connect descriptors you are using either all the ADDRESSES have a COMMUNITY component or all do not.

ORA-12221: TNS:illegal ADDRESS parameters

Cause: An illegal set of protocol adapter parameters was specified. In some cases, this error is returned when a connection cannot be made to the protocol transport.

Action: Verify that the destination can be reached using the specified protocol. Check the parameters within the ADDRESS section of TNSNAMES.ORA or in the directory. Legal ADDRESS parameter formats may be found in the Oracle operating system specific documentation or the Oracle Net Administrator's Guide. Protocols that resolve names at the transport layer are vulnerable to this error if not properly configured or names are misspelled.

ORA-12222: TNS:no support is available for the protocol indicated

Cause: The protocol requested in the ADDRESS portion of the connect descriptor identified through the net service name is not available. If the supplied ADDRESS is typographically correct then support for that protocol is not installed.

Action: Install support for the protocol or correct typographical error, as appropriate. Note: if the supplied address was derived from resolving the net service name, check the address in the appropriate file (TNSNAMES.ORA, LISTENER.ORA) or in the directory server.

ORA-12223: TNS:internal limit restriction exceeded

Cause: Too many TNS connections open simultaneously.

Action: Wait for connections to close and re-try.

ORA-12224: TNS:no listener

Cause: The connection request could not be completed because the listener is not running.

Action: Ensure that the supplied destination address matches one of the addresses used by the listener - compare the TNSNAMES.ORA entry with the appropriate LISTENER.ORA file (or TNSNAV.ORA if the connection is to go by way of an Interchange). Start the listener on the remote machine.

ORA-12225: TNS:destination host unreachable

Cause: Contact can not be made with remote party.

Action: Make sure the network driver is functioning and the network is up.

ORA-12226: TNS:operating system resource quota exceeded

Cause: The current user has exceeded the allotted resource assigned in the operating system.

Action: Acquire more operating system resource, or perform a different function.

ORA-12227: TNS:syntax error

Cause: The supplied connect descriptor contains illegal syntax.

Action: Check the syntax of the connect descriptor in TNSNAMES.ORA.

ORA-12228: TNS:protocol adapter not loadable

Cause: On some platforms (such as Windows) protocol support is loaded at run-time. If the shared library (or DLL) for the protocol adapter is missing or one of its supporting libraries is missing then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will include the name of the shared library (or DLL) that could not be loaded.

ORA-12229: TNS:Interchange has no more free connections

Cause: One or more Interchanges along the path to the destination desired has no more free connections available to be used for this call.

Action: Try again later when the Interchanges are less busy, or contact your network administrator to have him determine which interchange it is, and increase the number of connections available on that interchange.

ORA-12230: TNS:Severe Network error occurred in making this connection

Cause: This error is reported by an interchange which fails to make contact with the destination due to a physical network error while calling a destination.

Action: Try again later when the network service may have been fixed or report the problem to your Network Administrator so that he may fix the problem.

ORA-12231: TNS:No connection possible to destination

Cause: This error is reported by an interchange which fails to find a possible connection along the path to the destination.

Action: Report the problem to your Network Administrator so that he may fix the problem.

ORA-12232: TNS:No path available to destination

Cause: This error is reported by an interchange which fails to find a possible path to the destination.

Action: Report the problem to your Network Administrator so that he may fix the problem.

ORA-12233: TNS:Failure to accept a connection

Cause: This error is reported by an interchange which fails to accept a connection due to a redirect failure.

Action: Report the problem to your Network Administrator so that he may isolate the interchange problem.

ORA-12234: TNS:Redirect to destination

Cause: This error is reported by an interchange which determines that this interchange is not the right gateway and needs to redirect the connection to another gateway along the path to the destination.

Action: None

ORA-12235: TNS:Failure to redirect to destination

Cause: This error is reported by an interchange which fails to redirect a connection to another interchange along the path to the destination.

Action: Report the problem to your Network Administrator so that he may fix the problem.

ORA-12236: TNS:protocol support not loaded

Cause: On some platforms (such as Windows) protocol support is loaded at run-time. If the shared library (or DLL) for the protocol adapter has not been loaded, then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will have the name of the shared library (or DLL) that has not been loaded.

ORA-12315 to ORA-12354

ORA-12315: database link type is invalid for the ALTER DATABASE statement

Cause: The database link name you specified on the ALTER DATABASE statement is not an ROM: link. You must specify an ROM: link when using the ALTER DATABASE statement to mount or open a secondary database.

Action: Re-issue the ALTER DATABASE statement using a valid ROM: link to the database you want to mount or open. If a valid ROM: link does not exist, create one using the CREATE DATABASE LINK command. See the Trusted ORACLE RDBMS Guide to Security Features for more information about creating database links using the ROM: link type.

ORA-12316: syntax error in database link's connect string

Cause: The connect string in the CREATE DATABASE LINK statement has a syntactical error.

Action: Drop the database link and recreate it using valid syntax. See the SQL Language Reference Manual for more information about the connect string portion of the CREATE DATABASE LINK statement.

ORA-12317: logon to database (link name *string*) denied

Cause: There are several possible causes for this error. First, you can get this error if your username (and password, if you are using database instead of operating system authentication) in the secondary database are not identical to your username (and password) in the primary database. Second, you can get this error if your username in the secondary database is invalid (has not been created). Third, you can get this error if the username/password combination specified in the connect string of the database link definition is invalid (either not created or has an invalid password).

Action: In the first case, ensure that the secondary database contains a username (and password, if you are using database authentication) identical to the one you are using in the primary database. In general, you should always use operating system authentication in Trusted ORACLE (see the Trusted ORACLE RDBMS Guide to Security Features for more information about the advantages of OS authentication). In the second case, ensure that your username in the secondary database has been created. In the third case, ensure that the username specified in the connect string has been created in the secondary database.

ORA-12318: database (link name *string*) is already mounted

Cause: You are attempting to mount a secondary database that has already been mounted by your instance.

Action: The database is already mounted, so you need not take additional action to mount it. To establish access, use the ALTER DATABASE *linkname* OPEN command to open the database.

ORA-12319: database (link name *string*) is already open

Cause: You are attempting to open a secondary database that is already open.

Action: The database is open and you need not take additional action to establish access.

**ORA-12321: database (link name *string*) is not open and
AUTO_MOUNTING=FALSE**

Cause: The secondary database that your instance is attempting to mount is not open and automatic mounting has not been enabled.

Action: Manually mount and open the secondary database using ALTER DATABASE *linkname* with the OPEN and MOUNT options. Alternately, to allow your instance to automatically mount and open secondary databases, set the AUTO_MOUNTING parameter in the parameter file to TRUE.

ORA-12322: unable to mount database (link name *string*)

Cause: This message should be accompanied by additional error messages that indicate the cause of the problem.

Action: Follow the steps outlined in the accompanying error messages to resolve the problem.

ORA-12323: unable to open database (link name *string*)

Cause: This message should be accompanied by additional error messages that indicate the cause of the problem.

Action: Follow the steps outlined in the accompanying error messages to resolve the problem.

ORA-12324: cannot use the ROM: link type on a private database link

Cause: You can only specify the ROM: link type on a public, not a private, database link.

Action: Determine if there is an existing public database link to the secondary database. If not, and if you wish to establish public access to the secondary database, create a public database link to the secondary database using the CREATE DATABASE LINK command.

ORA-12326: database *string* is closing immediately; no operations are permitted

Cause: The database you attempted to access is closing, so your operation has been terminated.

Action: Wait until the database has been reopened, or contact the database administrator.

ORA-12329: database *string* is closed; no operations are permitted

Cause: The database you attempted to access is closed, so your operation has been terminated.

Action: Wait until the database is reopened, or contact the database administrator.

ORA-12333: database (link name *string*) is not mounted

Cause: You attempted to open a database that has not been mounted.

Action: Mount the database with the ALTER DATABASE *linkname* MOUNT command, then re-attempt to open the database.

ORA-12334: database (link name *string*) is still open

Cause: You attempted to dismount a database that is still open.

Action: Close the database with the ALTER DATABASE *linkname* CLOSE command, then re-attempt to dismount the database.

ORA-12335: database (link name *string*) is not open

Cause: You attempted to close a database that is not open.

Action: The database is closed; you can proceed with dismounting it.

ORA-12336: cannot login to database (link name *string*)

Cause: You are trying to login while another user is mounting or dismounting the same database.

Action: Check to see if the database is in the middle of being mounted or opened and try your login again once the database is accessible.

ORA-12341: maximum number of open mounts exceeded

Cause: The number specified on the OPEN_MOUNTS parameter in the parameter file exceeds the maximum allowed (255).

Action: Change the value of this parameter so that it reflects the actual number of possible open mounts to secondary databases. This must be less than 255.

ORA-12342: open mounts exceeds limit set on the OPEN_MOUNTS parameter

Cause: The number of currently open mounts exceeds the value you specified on the OPEN_MOUNTS parameter.

Action: Increase the value of the OPEN_MOUNTS parameter so that it accommodates the maximum possible number of open mounts to secondary databases.

ORA-12345: user *string* lacks CREATE SESSION privilege in database link (linkname *string*)

Cause: There are several possible causes for this message: First, you will get this message if your username in the second database specified was not granted the CREATE SESSION system privilege. Second, you will get this message if the username specified in the connect string of the database link definition was not granted the CREATE SESSION system privilege.

Action: The action you take depends upon the cause of the message: In the first case, ensure that your username in the secondary database was granted the CREATE SESSION system privilege. In the second case, ensure the username specified in the connect string of the database link definition was granted the CREATE SESSION system privilege in the secondary database.

ORA-12350: database link being dropped is still mounted

Cause: An attempt was made to drop a ROM: database link that was still mounted and/or opened.

Action: Close and dismount the database and then re-issue the drop statement.

ORA-12351: cannot create view using a remote object which has a remote object reference

Cause: You tried to create a view which references a remote object which, in turn, references an object on another database. Since the view that you tried to create references a remote object, that object cannot reference an object on another database.

Action: Choose a different object to reference in your view or change the remote object so that it does not reference another database.

ORA-12352: object *string.string@string* is invalid

Cause: An attempt was made to reference (compile against) an object of a secondary database but the object is invalid and the system cannot validate or recompile it because it is in a secondary database.

Action: Manually recompile the invalid object in the secondary database.

ORA-12353: secondary stored object cannot reference remote object

Cause: You tried to either select from a remote view or execute a remote procedure which references an object on another database. Since the remote view or procedure is on a secondary database, an additional reference to another database cannot be done.

Action: Choose a different object to reference or change the remote view or procedure so that it does not reference another database.

ORA-12354: secondary object being dropped

Cause: You tried to access a object (for example, a table or view) on a secondary database that was in the process of being dropped.

Action: Repeat the operation. If you receive this message again, try to access the object from the secondary database. If you receive an internal error or a trace file, contact Oracle WorldWide Technical Support.

ORA-12400 to ORA-12498

ORA-12400: invalid argument to facility error handling

Cause: An argument to a facility error handling function exceeded a maximum limit or referred to an invalid product/facility.

Action: Specify a valid facility error handling parameter value.

ORA-12401: invalid label string: *string*

Cause: The policy could not convert the label string to a valid internal label.

Action: Correct the syntax of the label string.

ORA-12402: invalid format string: *string*

Cause: The format string is not supported by the policy.

Action: Correct the syntax of the format string.

ORA-12403: invalid internal label

Cause: An internal label could not be converted to a valid label for the policy.

Action: Analyze any additional messages on the error stack and consult the policy documentation.

ORA-12404: invalid privilege string: *string*

Cause: The policy could not interpret the privilege string.

Action: Specify a privilege string that is supported by the policy.

ORA-12405: invalid label list

Cause: The policy determined that the label list was invalid for its intended use.

Action: Check the policy constraints on the specific list of labels.

ORA-12406: unauthorized SQL statement for policy *string*

Cause: The policy did not authorize the database session to perform the requested SQL statement.

Action: Grant the user or program unit the necessary policy privilege or additional authorizations.

ORA-12407: unauthorized operation for policy *string*

Cause: The policy did not authorize the database session to perform the requested operation.

Action: Grant the user or program unit the necessary policy privilege or additional authorizations.

ORA-12408: unsupported operation: *string*

Cause: The specified policy does not support the requested operation.

Action: Consult the policy documentation to determine the supported access mediation operations.

ORA-12409: policy startup failure for *string* policy

Cause: The policy encountered an error during startup processing; access to the data protected by the policy is prohibited.

Action: Check the alert log for additional information, correct the policy error, and restart the instance.

ORA-12410: internal policy error for policy: *string*\n Error: *string*

Cause: The policy enforcement encountered an internal error.

Action: Consult the policy documentation for details.

ORA-12411: invalid label value

Cause: The specified label value does not exist.

Action: Check the data dictionary views for the policy to identify valid labels.

ORA-12412: policy package *string* is not installed

Cause: The policy package does not exist in the database.

Action: Check that the policy package name is correct or install the required policy package.

ORA-12413: labels do not belong to the same policy

Cause: The labels being compared belong to different policies.

Action: Only compare labels that belong to the same policy.

ORA-12414: internal LBAC error: *string*\n Error: *string*

Cause: An internal label policy framework error occurred.

Action: Contact Oracle Customer Support.

ORA-12415: A column of another datatype exists on the specified table

Cause: The datatype of the column present in the table is different from the datatype set for the policy column.

Action: Drop the column on the table or change the datatype for policy column.

ORA-12416: policy *string* not found

Cause: The specified policy does not exist in the database.

Action: Enter the correct policy name or create the policy.

ORA-12417: database object "*string*" not found

Cause: The specified object was not in the database.

Action: Enter the correct name for the database object.

ORA-12418: user *string* not found

Cause: The specified user does not exist in the database.

Action: Correct the user name or create the user.

ORA-12419: null binary label value

Cause: A null value was provided for a binary label operation.

Action: Provide a valid binary label for the operation.

ORA-12420: required procedures and functions not in policy package "*string*"

Cause: The policy package did not contain all of the procedures and functions necessary to enforce the policy.

Action: Consult the label framework documentation for a list of required procedures and functions for a policy package.

ORA-12421: different size binary labels

Cause: The label sizes for the binary label operation were not equal.

Action: Provide binary labels with the same lengths for the operation.

ORA-12422: max policies exceeded

Cause: You tried to create a new policy, but the maximum number of policies for the instance had already been created.

Action: Increase the size of the MAX_LABEL_POLICIES initialization parameter and restart the server.

ORA-12423: invalid position specified

Cause: The position specified for a binary label operation was invalid.

Action: Provide a position that is within the label size limits.

ORA-12424: length exceeds binary label size

Cause: The length specified for a binary label operation exceeded the the size of the binary label.

Action: Provide a bit or byte length that is within the label size limits.

ORA-12425: cannot apply policies or set authorizations for system schemas

Cause: You tried to either apply a policy to the SYS, SYSTEM, or LBACSYS schema or to set user labels/privileges for the SYS, SYSTEM, or LBACSYS user.

Action: Apply policies and set authorizations only for non-system users.

ORA-12426: invalid audit option

Cause: The option specified was not a valid audit option for the specified policy.

Action: Enter a correct audit option.

ORA-12427: invalid input value for *string* parameter

Cause: An input parameter was specified incorrectly.

Action: Correct the parameter value.

ORA-12428:

ORA-12429: label list range exceeded

Cause: The specified index value was not between 1 and 6.

Action: Correct the index value for the label list operation.

ORA-12430: invalid privilege number

Cause: The specified privilege number was not between 1 and 32.

Action: Correct the privilege number.

ORA-12431: invalid audit action

Cause: The specified audit action was not a valid audit action.

Action: Correct the audit action number.

ORA-12432: LBAC error: *string*

Cause: LBAC enforcement resulted in an error.

Action: Correct the problem identified in the error message.

ORA-12433: create trigger failed, policy not applied

Cause: The policy could not be applied due to errors during the creation of a DML trigger.

Action: Correct the SQL syntax of the label function specification.

ORA-12434: invalid audit type: *string*

Cause: The audit type must be BY ACCESS or BY SESSION.

Action: Correct the audit type value.

ORA-12435: invalid audit success: *string*

Cause: The audit success parameter must be SUCCESSFUL or NOT SUCCESSFUL.

Action: Correct the audit success value.

ORA-12436: no policy options specified

Cause: A NULL option string was specified, but no default schema or policy option string was found.

Action: Enter a valid option string, or alter the schema or policy to have a valid default option string.

ORA-12437: invalid policy option: *string*

Cause: A value that was not a valid policy option was entered.

Action: Correct the policy option value.

ORA-12438: repeated policy option: *string*

Cause: A policy option was entered more than once in the option string.

Action: Remove the duplicate policy option value.

ORA-12439: invalid combination of policy options

Cause: A set of contradictory policy options was entered.

Action: Provide a set of compatible policy options.

ORA-12440: insufficient authorization for the SYSDBA package

Cause: The use of the SYSDBA package requires the LBAC_DBA role.

Action: Grant the LBAC_DBA role to the database user.

ORA-12441: policy *string* already exists

Cause: You tried to create a policy with the same name as an existing one.

Action: Use a different name or drop the existing policy.

ORA-12442: policy column "*string*" already used by an existing policy

Cause: You tried to create a policy with the same policy column name as an existing policy.

Action: Use a different name for the policy column or drop the existing policy.

ORA-12443: policy not applied to some tables in schema

Cause: You applied a policy to a schema, and some of the tables in the schema already had the policy applied.

Action: No action necessary; the policy was applied to the remaining tables.

ORA-12444: policy already applied to table

Cause: You tried to apply a policy to a table that was already protected by the policy.

Action: To change the policy options, predicate, or label function, remove the policy from the table and re-apply it.

ORA-12445: cannot change HIDDEN property of column

Cause: You tried to specify a different HIDE option for a table with an existing policy column.

Action: Drop the column from the table and reapply the policy with the new HIDE option.

ORA-12446: Insufficient authorization for administration of policy *string*

Cause: You tried to perform an administrative function for a policy, but you have not been granted the *policy_DBA* role.

Action: Grant the user the *policy_DBA* role for the specified policy.

ORA-12447: policy role already exists for policy *string*

Cause: The role named *policy_DBA* already exists.

Action: Correct the policy name or delete the existing policy.

ORA-12448: policy *string* not applied to schema *string*

Cause: You tried to alter a schema policy that was not applied.

Action: Correct the policy name or schema name.

ORA-12449: Labels specified for user must be of type USER

Cause: You tried to set labels for a user, but the labels in the list were not all designated as USER labels.

Action: Alter the labels to be USER labels.

ORA-12450: LOB datatype disabled in LBAC initialization file

Cause: You tried to specify a LOB datatype for a column or attribute, but the use of the LOB datatype has been disabled.

Action: Change the LBAC initialization file to allow the creation of LOB columns and attributes.

ORA-12451: label not designated as USER or DATA

Cause: A label is either a DATA label, a USER label, or both DATA and USER.

Action: Enter TRUE for at least DATA or USER.

ORA-12452: label tag *string* already exists

Cause: The label tag value you entered is already in use for another label.

Action: Enter a different value for the label tag.

ORA-12453: label *string* already exists

Cause: The label value you entered already exists.

Action: No action necessary; alter the label to change its tag or type.

ORA-12454: label *string* does not exist for policy *string*

Cause: The label tag or value you entered did not identify a label for the policy.

Action: Enter a label value or tag that is in use by the policy.

ORA-12455: internal error in Label Security MMON cleanup task

Cause: An internal error occurred in the Label Security MMON cleanup task.

Action: Contact Oracle Customer Support.

ORA-12456: label security startup in progress

Cause: You attempted to connect to the database before the Oracle Label Security component was fully initialized.

Action: Wait until the database is fully open before attempting to connect.

ORA-12457: security label exceeded maximum allowable length

Cause: An operation attempted to materialize a security label greater than 4000 bytes in length.

Action: Consult the Oracle Label Security documentation for information on how the length of a security label is calculated. Re-submit the operation once the problem has been corrected.

ORA-12458: Oracle Label Security not enabled

Cause: A Label Security operation was attempted without enabling Oracle Label Security.

Action: Consult the Oracle Label Security documentation for information on how to enable Oracle Label Security.

ORA-12459: Oracle Label Security not configured

Cause: An administrative operation was attempted without configuring Oracle Label Security.

Action: Consult the Oracle Label Security documentation for information on how to configure Oracle Label Security.

ORA-12460: cannot disable Oracle Label Security when Database Vault is enabled

Cause: An attempt was made to disable Oracle Label Security when Database Vault was enabled.

Action: Disable Database Vault and bounce the database before attempting to disable Oracle Label Security.

ORA-12461: undefined level *string* for policy *string*

Cause: The specified level is not defined for the policy.

Action: Correct the level identifier value.

ORA-12462: undefined compartment *string* for policy *string*

Cause: The specified compartment is not defined for the policy.

Action: Correct the compartment identifier value.

ORA-12463: undefined group *string* for policy *string*

Cause: The specified group is not defined for the policy.

Action: Correct the group identifier value.

ORA-12464: invalid characters in label component *string*

Cause: Label components can contain only alphanumeric characters, blanks, and underscores.

Action: Correct syntax of the label component.

ORA-12465: not authorized for read or write on specified groups or compartments

Cause: Groups or compartments were included that were not in the user's list of groups and compartments authorized for read or write access.

Action: Include groups or compartments authorized for read or write access in the user's list of groups and compartments.

ORA-12466: default level is greater than the user's maximum

Cause: The default level cannot be greater than the user's maximum.

Action: Enter an authorized level.

ORA-12467: minimum label can contain a level only

Cause: You included compartments or groups in the minimum label.

Action: Enter only an authorized minimum level as the label.

ORA-12468: max write level does not equal max read level

Cause: The level in the max write label must equal the level in the max read label.

Action: Enter max read and max write labels with the same level component.

ORA-12469: no user levels found for user *string* and policy *string*

Cause: No levels have been specified for the user.

Action: Enter the maximum and minimum labels for the user.

ORA-12470: NULL or invalid user label: *string*

Cause: The label entered is NULL or not within the user's authorizations.

Action: Enter the authorized labels for the user.

ORA-12471: Specified compartment or group is not authorized for user

Cause: The specified compartment or group is not in user's authorizations or the user does not have read on compartment or group specified for write.

Action: Enter an authorized compartment or group.

ORA-12472: policy *string* is being used

Cause: The policy which was being dropped due to event propagation from OID was applied to some table or schema.

Action: Drop a policy in OID only if it is not used in any of the databases using the policy.

ORA-12473: The procedure is disabled when Label Security is used with OID.

Cause: Using Label Security with OID disabled this procedure.

Action: Do not use OID with Label Security if this procedure is required to function.

ORA-12474: cannot change column name for a policy in use

Cause: An attempt was made to change a column name for a policy that was applied on user schemas or tables.

Action: Disable the policy for all user schemas and tables before changing the column name.

ORA-12475: incompatible Oracle Label Security configuration

Cause: An attempt was made to configure Oracle Label Security with OID in a pluggable database when Oracle Label Security without OID is configured in another pluggable database or vice-versa.

Action: Use similar configurations of Oracle Label Security in all pluggable databases.

ORA-12476: least upper bound resulted in an invalid OS label

Cause: You tried to do an operation that generated a least upper bound (LUB) label which is not a valid label on your operating system.

Action: Consult your OS label management documentation for information on invalid label generation.

ORA-12477: greatest lower bound resulted in an invalid OS label

Cause: You tried to do an operation that generated a greatest lower bound (GLB) label which is not a valid label on your operating system.

Action: Consult your OS label management documentation for information on invalid label generation.

ORA-12479: file label *string* must equal DBHIGH *string*

Cause: A database file had an OS label that did not match DBHIGH. Either DBHIGH was altered or the OS file was relabeled.

Action: Relabel the file so that its label matches DBHIGH, or alter DBHIGH so that it matches the label on the file.

ORA-12480: specified clearance labels not within the effective clearance

Cause: You specified a clearance range that was not within your authorized clearance; you can only specify clearance ranges that are within your clearance.

Action: Specify clearance labels that are within your own clearance range.

ORA-12481: effective label not within program unit clearance range

Cause: The effective label when the program unit was invoked was not within the range authorized for the program unit.

Action: Modify the program unit clearance range or invoke the program unit from a session with an authorized effective clearance.

ORA-12482: internal MLS error: *string*\n Error: *string*

Cause: An internal MLS policy error occurred.

Action: Contact Oracle Customer Support.

ORA-12483: label not in OS system accreditation range

Cause: The specified label is above the OS maximum label or below the OS minimum label.

Action: Use a label that is within the accreditation range for the host OS.

ORA-12484: invalid OS label

Cause: The specified label does not exist in the OS host's label definition file.

Action: Use the OS label management tools to define the label.

ORA-12485: new effective label not within effective clearance

Cause: You attempted to enter a value for an effective label that did not dominate the effective min label or was not dominated by the effective max label.

Action: Enter a value between the min and the max labels.

ORA-12486: effective max labels and min labels cannot be changed

Cause: You attempted to enter a value for an effective min label or effective max label, but these labels cannot be changed.

Action: Enter NULL values for the effective minimum and maximum labels.

ORA-12487: clearance labels not between DBHIGH and DBLOW

Cause: You attempted to enter a value for a clearance label that was not dominated by DBHIGH or did not dominate DBLOW.

Action: Enter clearance label values between DBHIGH and DBLOW.

ORA-12488: maximum label does not dominate minimum label

Cause: You attempted to enter a value for a clearance label that did not preserve the dominance relationship between the minimum and maximum labels.

Action: Enter label values that preserves the dominance relationship between the minimum and maximum.

ORA-12489: default label not within clearance range

Cause: You attempted to enter a value for a default label that did not dominate the minimum clearance or was not dominated by the maximum clearance.

Action: Enter a default label value within the clearance range.

ORA-12490: DBHIGH cannot be lowered

Cause: You attempted to enter a value for DBHIGH that did not dominate the existing value of DBHIGH.

Action: Enter a value for DBHIGH that dominates the old value.

ORA-12491: DBHIGH value does not dominate DBLOW

Cause: You attempted to enter a value for DBHIGH that did not dominate DBLOW.

Action: Enter a value for DBHIGH that dominates DBLOW.

ORA-12492: DBLOW cannot be changed

Cause: You attempted to change the value of DBLOW after it had been set to any initial value. DBLOW can only be set once after initial database creation.

Action: To change DBLOW, you have to create a new database, set DBLOW to the new value, and import your data into the new database.

ORA-12493: invalid MLS binary label

Cause: The MLS binary label contained an invalid value, was not the correct size, or contained a level, category, or release category that was not enabled.

Action: Check the DBA_MLS_LABELS view for the valid MLS labels.

ORA-12494: cannot insert or delete a level, category, or release category

Cause: You attempted to insert or delete a level, category, or release category definition.

Action: If the label definition is no longer valid, change its name to one that identifies it as invalid. When any labels are converted to character strings, the new label definition will be used.

ORA-12495: cannot disable an enabled level, category, or release category

Cause: You attempted to disable a level, category, or release category that had previously been enabled. An enabled label definition may exist in some database label, so cannot be disabled.

Action: If the label definition is no longer valid, change its name to one that identifies it as invalid. When any labels are converted to character strings, the new label definition will be used.

ORA-12496: cannot change existing level, category, or release numbers

Cause: You attempted to change the number assigned to level, category or releasability category.

Action: Change the character string representations, not the numbers.

ORA-12497: maximum combined categories exceeds *string*

Cause: The maximum number of descriptive categories plus release categories supported by the MLS policy was exceeded.

Action: Enter numbers that do not add up to more than the maximum.

ORA-12498:

ORA-12500 to ORA-12699

ORA-12500: TNS:listener failed to start a dedicated server process

Cause: The process of starting up a dedicated server process failed. The executable could not be found or the environment may be set up incorrectly.

Action: Turn on tracing at the ADMIN level and reexecute the operation. Verify that the ORACLE Server executable is present and has execute permissions enabled. Ensure that the ORACLE environment is specified correctly in LISTENER.ORA. The Oracle Protocol Adapter that is being called may not be installed on the local hard drive. Please check that the correct Protocol Adapter are successfully linked. If error persists, contact Oracle Customer Support.

ORA-12502: TNS:listener received no CONNECT_DATA from client

Cause: No CONNECT_DATA was passed to the listener.

Action: Check that the service name resolved from TNSNAMES.ORA has the CONNECT_DATA component of the connect descriptor.

ORA-12503: TNS:listener received an invalid REGION from client

Cause: Invalid REGION was passed to the listener.

Action: Check the REGION name specified in the CONNECT_DATA component of the connect descriptor.

ORA-12504: TNS:listener was not given the SERVICE_NAME in CONNECT_DATA

Cause: The listener was not configured with a default service and SERVICE_NAME was missing from the CONNECT_DATA received by the listener.

Action: Possible solutions are: - Configure DEFAULT_SERVICE parameter in LISTENER.ORA with a valid service name. Reload the listener parameter file using reload [<listener_name>]. This should be done by the LISTENER administrator. - If using a service name, Check that the connect descriptor corresponding to the service name in TNSNAMES.ORA has a SERVICE_NAME or SID component in the CONNECT_DATA.

ORA-12505: TNS:listener does not currently know of SID given in connect descriptor

Cause: The listener received a request to establish a connection to a database or other service. The connect descriptor received by the listener specified a SID for an instance (usually a database instance) that either has not yet dynamically registered with the listener or has not been statically configured for the listener. This may be a temporary condition such as after the listener has started, but before the database instance has registered with the listener.

Action: - Wait a moment and try to connect a second time. - Check which instances are currently known by the listener by executing: lsnrctl services *listener name* - Check

that the SID parameter in the connect descriptor specifies an instance known by the listener. - Check for an event in the listener.log file.

ORA-12508: TNS:listener could not resolve the COMMAND given

Cause: The COMMAND given to listener is not supported.

Action: This is not seen in normal use of Oracle Net.

ORA-12509: TNS:listener failed to redirect client to service handler

Cause: The dispatcher terminated unexpectedly

Action: Attempt to connect again and if the same error occurs, contact the DBA to check the state of the dispatchers for this SID. If the problem persists, turn on tracing in the listener to determine the TNS error caused by the redirect.

ORA-12510: TNS:database temporarily lacks resources to handle the request

Cause: The dispatchers appear to be busy handling other requests.

Action: Attempt the connection again. If error persists, ask the DBA to increase the number of dispatchers and/or dispatchers' limit on number of connections/sessions that they can accept.

ORA-12511: TNS:service handler found but it is not accepting connections

Cause: The dispatchers notified the listener that they temporarily do not accept new connections.

Action: Attempt the connection again. If error persists, contact the DBA to check the state of the dispatchers and/or ask him to increase the number of dispatchers.

ORA-12513: TNS:service handler found but it has registered for a different protocol

Cause: The dispatchers registered for this service are connected to the listener by way of a different network protocol than that of the client.

Action: Contact the DBA to register a dispatcher on your protocol.

ORA-12514: TNS:listener does not currently know of service requested in connect descriptor

Cause: The listener received a request to establish a connection to a database or other service. The connect descriptor received by the listener specified a service name for a service (usually a database service) that either has not yet dynamically registered with the listener or has not been statically configured for the listener. This may be a temporary condition such as after the listener has started, but before the database instance has registered with the listener.

Action: - Wait a moment and try to connect a second time. - Check which services are currently known by the listener by executing: `lsnrctl services listener_name` - Check that the SERVICE_NAME parameter in the connect descriptor of the net service name used specifies a service known by the listener. - If an easy connect naming connect identifier was used, check that the service name specified is a service known by the listener. - Check for an event in the listener.log file.

ORA-12515: TNS:listener could not find a handler for this presentation

Cause: None of the listener's known service handlers are registered as supporting the presentation protocol required by the connecting client.

Action: Check that the destination service is configured to accept the presentation protocol.

ORA-12516: TNS:listener could not find available handler with matching protocol stack

Cause: None of the known and available service handlers for the given SERVICE_NAME support the client's protocol stack: transport, session, and presentation protocols.

Action: Check to make sure that the service handlers (e.g. dispatchers) for the given SERVICE_NAME are registered with the listener, are accepting connections, and that they are properly configured to support the desired protocols.

ORA-12518: TNS:listener could not hand off client connection

Cause: The process of handing off a client connection to another process failed.

Action: Turn on listener tracing and re-execute the operation. Verify that the listener and database instance are properly configured for direct handoff. If problem persists, call Oracle Support.

ORA-12519: TNS:no appropriate service handler found

Cause: The listener could not find any available service handlers that are appropriate for the client connection.

Action: Run "lsnrctl services" to ensure that the instance(s) have registered with the listener, and are accepting connections.

ORA-12520: TNS:listener could not find available handler for requested type of server

Cause: None of the known and available service handlers for requested type of server (dedicated or shared) are appropriate for the client connection.

Action: Run "lsnrctl services" to ensure that the instance(s) have registered with the listener and that the appropriate handlers are accepting connections.

ORA-12521: TNS:listener does not currently know of instance requested in connect descriptor

Cause: The listener received a request to establish a connection to a database or other service. The connect descriptor received by the listener specified in addition to the service name an instance name for an instance (usually a database instance) that either has not yet dynamically registered with the listener or has not been statically configured for the listener. This may be a temporary condition such as after the listener has started, but before the database instance has registered with the listener.

Action: - Wait a moment and try to connect a second time. - Check which instances are currently known by the listener by executing: lsnrctl services *listener name* - Check that the INSTANCE_NAME parameter in the connect descriptor specifies an instance name known by the listener. - Check for an event in the listener.log file.

ORA-12522: TNS:listener could not find available instance with given INSTANCE_ROLE

Cause: There are not any available and appropriate database instances registered with the listener, that are part of the service identified by SERVICE_NAME given in the connect descriptor and that have the specified INSTANCE_ROLE (and INSTANCE_NAME, if specified).

Action: Check to make sure that the INSTANCE_ROLE specified is correct. Run "lsnrctl services" to ensure that the instance(s) have registered with the listener and that they are ready to accept connections.

ORA-12523: TNS:listener could not find instance appropriate for the client connection

Cause: The listener could not find any available (database) instances, that are appropriate for the client connection.

Action: Run "lsnrctl services" to ensure that the instance(s) are registered with the listener, and have status READY.

ORA-12524: TNS:listener could not resolve HANDLER_NAME given in connect descriptor

Cause: The HANDLER_NAME in the CONNECT_DATA was not found in the listener's tables for the specified SERVICE_NAME and INSTANCE_NAME.

Action: Check to make sure that the HANDLER_NAME specified is correct.

ORA-12525: TNS:listener has not received client's request in time allowed

Cause: The listener disconnected the client because the client failed to provide the necessary connect information within the allowed time interval. This may be a result of network or system delays; or this may indicate that a malicious client is trying to cause a Denial of Service attack on the listener.

Action: If the error occurred because of a slow network or system, reconfigure INBOUND_CONNECT_TIMEOUT to a larger value. If a malicious client is suspected, use the address in listener.log to identify the source and restrict access. Turn on tracing for more information.

ORA-12526: TNS:listener: all appropriate instances are in restricted mode

Cause: Database instances supporting the service requested by the client were in restricted mode. The Listener does not allow connections to instances in restricted mode. This condition may be temporary, such as during periods when database administration is performed.

Action: Attempt the connection again. If error persists, then contact the database administrator to change the mode of the instance, if appropriate.

ORA-12527: TNS:listener: all instances are in restricted mode or blocking new connections

Cause: All appropriate database instances supporting the service requested by the client reported that they either were in restricted mode or were blocking the new connections. The Listener does not allow connections to such instances. This condition may be temporary, such as at instance startup.

Action: Attempt the connection again. If error persists, then contact the database administrator to check the status of the instances.

ORA-12528: TNS:listener: all appropriate instances are blocking new connections

Cause: All instances supporting the service requested by the client reported that they were blocking the new connections. This condition may be temporary, such as at instance startup.

Action: Attempt the connection again. If error persists, then contact the administrator to check the status of the instances.

ORA-12529: TNS:connect request rejected based on current filtering rules

Cause: Connection Manager and its listener were configured with filtering rules specifying that the connect request be rejected.

Action: If this connect request should be allowed, then contact the administrator to modify the filtering rules.

ORA-12531: TNS:cannot allocate memory

Cause: Sufficient memory could not be allocated to perform the desired activity.

Action: Either free some resource for TNS, or add more memory to the machine. For further details, turn on tracing and reexecute the operation.

ORA-12532: TNS:invalid argument

Cause: An internal function received an invalid parameter.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12533: TNS:illegal ADDRESS parameters

Cause: An illegal set of protocol adapter parameters was specified. In some cases, this error is returned when a connection cannot be made to the protocol transport.

Action: Verify that the destination can be reached using the specified protocol. Check the parameters within the ADDRESS section of TNSNAMES.ORA. Legal ADDRESS parameter formats may be found in the Oracle operating system specific documentation for your platform. Protocols that resolve names at the transport layer (such as DECnet object names) are vulnerable to this error if not properly configured or names are misspelled.

ORA-12534: TNS:operation not supported

Cause: An internal function received a request to perform an operation that is not supported (on this machine).

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12535: TNS:operation timed out

Cause: The requested operation could not be completed within the time out period.

Action: Look at the documentation on the secondary errors for possible remedy. See SQLNET.LOG to find secondary error if not provided explicitly. Turn on tracing to gather more information.

ORA-12536: TNS:operation would block

Cause: An internal operation did not commence because to do so would block the current process and the user has requested that operations be non-blocking.

Action: None needed; this is an information message.

ORA-12537: TNS:connection closed

Cause: "End of file" condition has been reached; partner has disconnected.

Action: None needed; this is an information message.

ORA-12538: TNS:no such protocol adapter

Cause: The protocol adapter requested (by way of the "(PROTOCOL=..)" keyword-value pair in a TNS address) is unknown. If the supplied address is typographically correct then the protocol adapter is not installed.

Action: Install the protocol adapter or correct typographically error, as appropriate. Note: if the supplied address was derived from resolving the service name, check the address in the appropriate file (TNSNAMES.ORA, LISTENER.ORA or SQLNET.ORA).

ORA-12539: TNS:buffer over- or under-flow

Cause: Buffer too small for incoming data or too large for outgoing data.

Action: This restriction (which is associated with CONNECT DATA) is not normally visible to the user. For further details, turn on tracing and reexecute the operation; contact Oracle Customer Support.

ORA-12540: TNS:internal limit restriction exceeded

Cause: Too many TNS connections open simultaneously.

Action: Wait for connections to close and re-try.

ORA-12541: TNS:no listener

Cause: The connection request could not be completed because the listener is not running.

Action: Ensure that the supplied destination address matches one of the addresses used by the listener - compare the TNSNAMES.ORA entry with the appropriate LISTENER.ORA file (or TNSNAV.ORA if the connection is to go by way of an Interchange). Start the listener on the remote machine.

ORA-12542: TNS:address already in use

Cause: Specified listener address is already being used.

Action: Start your listener with a unique address.

ORA-12543: TNS:destination host unreachable

Cause: Contact can not be made with remote party.

Action: Make sure the network driver is functioning and the network is up.

ORA-12544: TNS:contexts have different wait/test functions

Cause: Two protocol adapters have conflicting wait/test functions.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12545: Connect failed because target host or object does not exist

Cause: The address specified is not valid, or the program being connected to does not exist.

Action: Ensure the ADDRESS parameters have been entered correctly; the most likely incorrect parameter is the node name. Ensure that the executable for the server exists (perhaps "oracle" is missing.) If the protocol is TCP/IP, edit the TNSNAMES.ORA file to change the host name to a numeric IP address and try again.

ORA-12546: TNS:permission denied

Cause: User has insufficient privileges to perform the requested operation.

Action: Acquire necessary privileges and try again.

ORA-12547: TNS:lost contact

Cause: Partner has unexpectedly gone away, usually during process startup.

Action: Investigate partner application for abnormal termination. On an Interchange, this can happen if the machine is overloaded.

ORA-12548: TNS:incomplete read or write

Cause: A data send or receive failed.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12549: TNS:operating system resource quota exceeded

Cause: The current user has exceeded the allotted resource assigned in the operating system.

Action: Acquire more operating system resource, or perform a different function.

ORA-12550: TNS:syntax error

Cause: The supplied connect descriptor contains illegal syntax.

Action: Check the syntax of the connect descriptor in TNSNAMES.ORA.

ORA-12551: TNS:missing keyword

Cause: The supplied connect descriptor is missing one or more TNS keywords.

Action: Check the syntax, and ensure all required keywords are present.

ORA-12552: TNS:operation was interrupted

Cause: An internal operation was interrupted and could not complete.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12554: TNS:current operation is still in progress

Cause: An internal operation is still in progress.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12555: TNS:permission denied

Cause: User has insufficient privileges to perform the requested operation.

Action: Acquire necessary privileges and try again.

ORA-12556: TNS:no caller

Cause: TNS detected an incoming connect request but there was no caller.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12557: TNS:protocol adapter not loadable

Cause: On some platforms (such as OS/2) protocol adapters are loaded at run-time. If the shared library (or DLL) for the protocol adapter is missing or one of its supporting libraries is missing then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will include the name of the shared library (or DLL) that could not be loaded.

ORA-12558: TNS:protocol adapter not loaded

Cause: On some platforms (such as OS/2) protocol adapters are loaded at run-time. If the shared library (or DLL) for the protocol adapter has not been loaded, then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will have the name of the shared library (or DLL) that has not been loaded.

ORA-12560: TNS:protocol adapter error

Cause: A generic protocol adapter error occurred.

Action: Check addresses used for proper protocol specification. Before reporting this error, look at the error stack and check for lower level transport errors. For further

details, turn on tracing and reexecute the operation. Turn off tracing when the operation is complete.

ORA-12561: TNS:unknown error

Cause: A generic protocol error occurred.

Action: For further details, turn on tracing and reexecute the operation.

ORA-12562: TNS:bad global handle

Cause: Internal error - bad 'gbh' argument passed to TNS from caller. System may have been linked with old libraries.

Action: Not normally visible to the user, contact Oracle Customer Support.

ORA-12564: TNS:connection refused

Cause: The connect request was denied by the remote user (or TNS software).

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation.

ORA-12566: TNS:protocol error

Cause: An unexpected TNS protocol error has occurred.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12569: TNS:packet checksum failure

Cause: The data received is not the same as the data sent.

Action: Attempt the transaction again. If the error is persistent, turn on tracing and reexecute the operation.

ORA-12570: TNS:packet reader failure

Cause: An error occurred during a data receive.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12571: TNS:packet writer failure

Cause: An error occurred during a data send.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12574: TNS:redirection denied

Cause: The connect request failed because it would have required redirection and the caller has requested no redirections.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12575: TNS:dhctx busy

Cause: The handoff over a dhctx failed as dhctx was already busy with an ongoing handoff.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12576: TNS:handoff not supported for this session

Cause: Handoff of a established session was attempted which either had tcps as its transport or NA options were enabled for this session.

Action: Check the transport setting as well as NA options. If error persists, contact Oracle Customer Support.

ORA-12578: TNS:wallet open failed

Cause: An error was encountered while trying to open the specified wallet.

Action: For further details, turn on tracing and re-execute the operation.

ORA-12582: TNS:invalid operation

Cause: An internal function received an invalid request.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12583: TNS:no reader

Cause: A send operation has been requested but partner has already disconnected.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12585: TNS:data truncation

Cause: A receive operation has completed with insufficient data to satisfy the user's request.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12589: TNS:connection not bequeathable

Cause: An attempt to hand-off a connection from one process to another has failed because the protocol provider does not support it.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12590: TNS:no I/O buffer

Cause: An attempt to perform an I/O operation failed because no buffer was available.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12591: TNS:event signal failure

Cause: The TNS software is unable to signal an event occurrence.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12592: TNS:bad packet

Cause: An ill-formed packet has been detected by the TNS software.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12593: TNS:no registered connection

Cause: An attempt to solicit network event activity has failed because no connections are registered for event notification.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12595: TNS:no confirmation

Cause: TNS is unable to get requested confirmation acknowledgment from remote partner.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12596: TNS:internal inconsistency

Cause: TNS has detected an internal inconsistency.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

ORA-12597: TNS:connect descriptor already in use

Cause: Internal error - illegal use of connect descriptor.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12598: TNS:banner registration failed

Cause: The registration of a product banner with the Oracle server failed.

Action: This is an error which is not normally visible externally. Enable tracing and attempt to repeat the error. If it occurs again, contact Oracle Customer Support.

ORA-12599: TNS:cryptographic checksum mismatch

Cause: The data received is not the same as the data sent.

Action: Attempt the transaction again. If error persists, check (and correct) the integrity of your physical connection.

ORA-12600: TNS: string open failed

Cause: The creation of a string in ORACLE NLS format failed.

Action: This is an internal error, enable tracing and attempt to repeat the error. If it occurs again, contact Oracle Customer Support.

ORA-12601: TNS:information flags check failed

Cause: The TNS information flags set by the process prior to connection negotiation were not present after the negotiation was finished.

Action: This is an internal error. Enable tracing and attempt to repeat the error. If it occurs again, contact Oracle Customer Support.

ORA-12602: TNS: Connection Pooling limit reached

Cause: The operation failed because maximum active current connections has been reached. It may not be a real error when the Connection Pooling feature is enabled. It is possible that the application later reissues the operation and successfully grabs the connection pool slot and proceeds.

Action: This is an internal error. Enable tracing and attempt to repeat the error. If it occurs again, contact Oracle Customer Support.

ORA-12606: TNS: Application timeout occurred

Cause: A network session did not reach an application-defined stage within the allowed time interval.

Action: This is an error which does not normally appear at the high level. The action to take is application specific, and is detailed in the higher level error description.

ORA-12607: TNS: Connect timeout occurred

Cause: A network session did not reach a predefined connect stage within the allowed time interval.

Action: This is an error which does not normally appear at the high level. The action to take is application specific, and is detailed in the higher level error description.

ORA-12608: TNS: Send timeout occurred

Cause: The send or write operation did not complete within the allowed time interval.

Action: Check if the peer host is available. Increase the send timeout value if necessary.

ORA-12609: TNS: Receive timeout occurred

Cause: The receive or read operation did not complete within the allowed time interval.

Action: Check if the peer host is available. Increase the receive timeout value if necessary.

ORA-12611: TNS:operation is not portable

Cause: Attempted operation is not portable.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12612: TNS:connection is busy

Cause: Attempted operation failed because it conflicts with an ongoing action or status of the connection.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12615: TNS:preempt error

Cause: A request to service an event failed because no event notification has yet been posted.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12616: TNS:no event signals

Cause: The operation failed because the type of data specified is unknown.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12618: TNS:versions are incompatible

Cause: The two machines are running incompatible versions of TNS.

Action: Check the version numbers, and upgrade the machine with the smaller one.

ORA-12619: TNS:unable to grant requested service

Cause: The connect request failed because requested service could not be provided by the local TNS software.

Action: If appropriate, reexecute with reduced service requirements.

ORA-12620: TNS:requested characteristic not available

Cause: The connect request failed because a requested transport characteristic could not be supported by the remote TNS software.

Action: If appropriate, reexecute with reduced requirements.

ORA-12622: TNS:event notifications are not homogeneous

Cause: An attempt to register a connection for event notification failed because the event notification type conflicts with existing registrations.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

ORA-12623: TNS:operation is illegal in this state

Cause: Connection is half-duplex and a full-duplex operation was attempted.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12624: TNS:connection is already registered

Cause: An attempt to register a connection for event notification failed because the connection is already registered.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

ORA-12625: TNS:missing argument

Cause: An operation failed because an argument was missing"

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

ORA-12626: TNS:bad event type

Cause: An attempt to register a connection for event notification failed because the event type is unknown.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

ORA-12628: TNS:no event callbacks

Cause: An attempt to register a connection for event notification failed because asynchronous callbacks are not available.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

ORA-12629: TNS:no event test

Cause: An attempt to register a connection for event notification failed because the ability to test for events is not available.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

ORA-12630: Native service operation not supported

Cause: An operation requested by a user is not supported by the native services component.

Action: This may be an internal error if the operation should have been supported.

ORA-12631: Username retrieval failed

Cause: The authentication service failed to retrieve the name of a user.

Action: Enable tracing to determine which routine is failing.

ORA-12632: Role fetch failed

Cause: The authentication service failed to retrieve one of the user's roles.

Action: Enable tracing to determine which routine is failing.

ORA-12633: No shared authentication services

Cause: The list of authentication services specified by the user does not match those supported by the process.

Action: Either specify another list or relink the executable with the desired services.

ORA-12634: Memory allocation failed

Cause: Process was unable to allocate memory.

Action: Terminate other processes in order to reclaim needed memory.

ORA-12635: No authentication adapters available

Cause: The executable was not linked with any authentication service adapters but the sqlnet.ora parameter that determines whether or not authentication is required was set to true.

Action: Either disable the parameter or relink the executable with service adapters.

ORA-12636: Packet send failed

Cause: A process was unable to send a packet to another process. Possible causes are: 1. The other process was terminated. 2. The machine on which the other process is running went down. 3. Some other communications error occurred.

Action: If the cause is not obvious, contact Oracle Customer Support.

ORA-12637: Packet receive failed

Cause: A process was unable to receive a packet from another process. Possible causes are: 1. The other process was terminated. 2. The machine on which the other process is running went down. 3. Some other communications error occurred.

Action: If the cause is not obvious, contact Oracle Customer Support.

ORA-12638: Credential retrieval failed

Cause: The authentication service failed to retrieve the credentials of a user.

Action: Enable tracing to determine the exact error.

ORA-12639: Authentication service negotiation failed

Cause: No match was found between the types of authentication services that the client supports and those that the server is using.

Action: Possible solutions: 1. Change the entry in sqlnet.ora that determines which services are to be used. 2. Relink the client with at least one of the authentication service adapters that the server supports. 3. Relink the server with at least one of the authentication service adapters that the client supports. 4. Disable authentication on both the client and server.

ORA-12640: Authentication adapter initialization failed

Cause: The function specified in the authentication table entry for the service failed.

Action: Enable tracing to determine the exact error.

ORA-12641: Authentication service failed to initialize

Cause: The authentication service failed during initialization.

Action: Enable tracing to determine the exact error.

ORA-12642: No session key

Cause: A process has no session key associated with it because the authentication service being used does not use one.

Action: If a session key is required, use another authentication service.

ORA-12643: Client received internal error from server

Cause: The client process received an error from the server that indicated that an internal Oracle Net native services error had occurred.

Action: Enable tracing on both processes and attempt to recreate the problem. If successful in recreating the problem, contact Oracle Customer Support.

ORA-12645: Parameter does not exist.

Cause: A sqlnet.ora parameter from which a value was needed does not exist.

Action: Set the parameter in the parameter file.

ORA-12646: Invalid value specified for boolean parameter

Cause: The value specified for a parameter was set to a value other than true/false or on/off.

Action: Correct the value of the parameter.

ORA-12647: Authentication required

Cause: The parameter that controls whether authentication is required was set to true, but the executable does not have an authentication service linked in.

Action: Either re-link the executable with an authentication service adapter or disable the parameter.

ORA-12648: Encryption or data integrity algorithm list empty

Cause: A list-of-algorithms parameter was empty, e.g. "()".

Action: Change the list to contain the name of at least one installed algorithm, or remove the list entirely if every installed algorithm is acceptable.

ORA-12649: Unknown encryption or data integrity algorithm

Cause: A list-of-algorithms parameter included an algorithm name that was not recognized.

Action: Either remove that algorithm name, correct it if it was misspelled, or install the driver for the missing algorithm.

ORA-12650: No common encryption or data integrity algorithm

Cause: The client and server have no algorithm in common for either encryption or data integrity or both.

Action: Choose sets of algorithms that overlap. In other words, add one of the client's algorithm choices to the server's list or vice versa.

ORA-12651: Encryption or data integrity algorithm unacceptable

Cause: The algorithm the server chose to use for encryption or data integrity was not one of the choices acceptable to the client. This is either the result of an internal error, of a network data transmission error, or of deliberate tampering with the transmitted data.

Action: For further details, turn on tracing, re-execute the operation, and contact Oracle Customer Support.

ORA-12652: String truncated

Cause: Not enough memory was allocated for a string so it had to be truncated

Action: If it is OK that the string is truncated, then it is not an error. Otherwise, call the routine that reported the error again with a larger string buffer.

ORA-12653: Authentication control function failed

Cause: The control function utilized by the authentication service driver failed.

Action: Enable tracing to determine the exact error.

ORA-12654: Authentication conversion failed

Cause: The authentication service was unable to convert the credentials of a user from the format specific to the format into the ORACLE format.

Action: Enable tracing to determine the exact error.

ORA-12655: Password check failed

Cause: The authentication service being used was unable to verify the provided password.

Action: Enable tracing to determine the exact error.

ORA-12656: Cryptographic checksum mismatch

Cause: The cryptographic checksum received with a packet of incoming data didn't match the checksum computed by the receiving end. This indicates that the packet was tampered with or otherwise corrupted in transit.

Action: Look for sources of data corruption, perhaps including deliberate tampering.

ORA-12657: No algorithms installed

Cause: The near side of the connection required the use of a service (either encryption or checksumming) when no algorithms for that service were installed.

Action: Remove the "ON" requirement for that service.

ORA-12658: ANO service required but TNS version is incompatible

Cause: A client process that is running an earlier version of TNS attempted to connect but the connection failed because the server process required that an ANO service (authentication, encryption, etc.) be used.

Action: Relink the calling executable and retry the connection or eliminate the requirement that the service be used on the server side.

ORA-12659: Error received from other process

Cause: An error was received by one or more services from the process on the other side of the connection.

Action: Enable tracing to determine the exact error(s). The error(s) is (are) not returned directly because an error generated by a server may not make sense on the client side and vice-versa.

ORA-12660: Encryption or crypto-checksumming parameters incompatible

Cause: One side of the connection specified "REQUIRED" for encryption or crypto-checksumming, while the other side specified "REJECTED".

Action: Change the "REQUIRED" side to "REQUESTED" if the you want encryption or crypto-checksumming to be optional, or change the "REJECTED" side to "ACCEPTED" if you do not want the service to be optional.

ORA-12661: Protocol authentication to be used

Cause: The authentication service has determined that the Oracle Net transport protocol in use is to be utilized to authenticate a user's identity.

Action: This error is used solely to communicate information between the authentication service and the Oracle Net session layer and should not normally be visible. If the error is seen, contact Oracle Worldwide Support.

ORA-12662: proxy ticket retrieval failed

Cause: The authentication adapter used by Oracle Net failed to retrieve the credentials needed to authenticate a database link.

Action: Enable tracing to determine the exact error.

ORA-12663: Services required by client not available on the server

Cause: Service(s) that was (were) required by the client process were not available on the server process.

Action: Configure the server with the services required by the client (best solution) or delete the requirement from the configuration file of the client (least secure).

ORA-12664: Services required by server not available on the client

Cause: Service(s) that was (were) required by the server process were not available on the client process.

Action: Configure the client with the services required by the server (best solution) or delete the requirement from the configuration file of the server (least secure).

ORA-12665: NLS string open failed

Cause: A native service was unable to make a string available for use by the National Language Support component.

Action: Make sure the National Language Support component has been properly. If it has, enable tracing and report the problem to Customer Support.

ORA-12666: Dedicated server: outbound transport protocol different from inbound

Cause: The protocol specified for an externally-identified outbound connection from a dedicated server (database link) was not the same as that used for the inbound connection. It is not possible for Oracle Net to authenticate a proxy connection that uses a protocol that is different from that which was used for the connection to the dedicated server.

Action: Specify the same protocol in the Oracle Net connect descriptor for the outbound connection as that used for the inbound connection.

ORA-12667: Shared server: outbound transport protocol different from inbound

Cause: The protocol specified for an externally-identified outbound connection from a shared server (database link) was not the same as as that used for the inbound connection. It is not possible for Oracle Net to authenticate a proxy connection that uses a protocol that is different from that which was used for the connection to the shared server.

Action: Specify the same protocol in the Oracle Net connect descriptor for the outbound connection as that used for the inbound connection

ORA-12668: Dedicated server: outbound protocol does not support proxies

Cause: The protocol specified to perform an externally-identified proxy connection (database link) from a dedicated server does not support proxy connections.

Action: Specify a protocol in the Oracle Net connect descriptor used for the connection that does support externally-authenticated proxy connections. NOTE: Because of a limitation in Oracle Net, the protocol used for the proxy connection must be the same as that used for the connection from the client to the server.

ORA-12669: Shared server: outbound protocol does not support proxies

Cause: The protocol specified to perform an externally-identified proxy connection (database link) from a shared server does not support proxy connections.

Action: Specify a protocol in the Oracle Net connect descriptor used for the connection that does support externally-authenticated proxy connections. NOTE: Because of a limitation in Oracle Net, the protocol used for the proxy connection must be the same as that used for the connection from the client to the server.

ORA-12670: Incorrect role password

Cause: A password supplied for a role could not be validated by the authentication service.

Action: Supply the correct password.

ORA-12671: Shared server: adapter failed to save context

Cause: The adapter for the authentication service failed when it tried to save the data needed for proxy connections (database links) through the shared server.

Action: Enable tracing to determine the exact error. Contact Oracle Customer Support if the reason is not obvious.

ORA-12672: Database logon failure

Cause: The authentication service adapter in use encountered an error it attempted to validate the logon attempt of a user.

Action: Enable tracing to determine the exact error encountered by the adapter.

ORA-12673: Dedicated server: context not saved

Cause: A connection was marked as being a proxy connection (database link) from a dedicated server but no inbound context was present.

Action: This error should not normally be visible to the user. Contact Oracle Customer Support.

ORA-12674: Shared server: proxy context not saved

Cause: A connection was marked as being a proxy connection (database link) from a shared server but no inbound context was present.

Action: This error should not normally be visible to the user. Contact Oracle Customer Support.

ORA-12675: External user name not available yet

Cause: The authentication service in use was not able to return the external name of a user of the ORACLE server because it is not available to the service yet.

Action: This is just an informational message and should not normally be visible to the user. If the error does appear, contact Oracle Customer Support.

ORA-12676: Server received internal error from client

Cause: The server process received an error from the client which indicated that an internal Oracle Net native services error had occurred.

Action: Enable tracing on both processes and attempt to recreate the problem. If the problem recurs, contact Oracle Customer Support.

ORA-12677: Authentication service not supported by database link

Cause: The authentication service used by the proxy process (database link) was unable to find the adapter being used by the client in its list of authentication mechanisms.

Action: Specify an authentication adapter that is shared by the client and the server being used for the database link.

ORA-12678: Authentication disabled but required

Cause: The configuration parameters that control whether authentication is disabled or required were both set to TRUE.

Action: Set one or both of the parameters to FALSE.

ORA-12679: Native services disabled by other process but required

Cause: The remote process has disabled native services but the local process requires them.

Action: Enable native services on the remote process or disable them locally.

ORA-12680: Native services disabled but required

Cause: The process has disabled native services but at least one service is required.

Action: Enable native services or change the configuration file so that none of the available services are required.

ORA-12681: Login failed: the SecurID card does not have a pincode yet

Cause: The SecurID card that is used to logon to Oracle, does not have a pincode assigned to it.

Action: Use one of the programs supplied by Security Dynamics to assign a pincode to the card.

ORA-12682: Login failed: the SecurID card is in next PRN mode

Cause: The SecurID card and the SecurID server are out of sync and the server requires the next cardcode to resynchronize the card.

Action: Use one of the programs supplied by Security Dynamics to resynchronize the SecurID card.

ORA-12683: encryption/crypto-checksumming: no Diffie-Hellman seed

Cause: The "sqlnet.crypto_seed" parameter is missing from the SQLNET.ORA parameters file.

Action: Add this line to SQLNET.ORA: sqlnet.crypto_seed = "randomly-chosen text"

ORA-12684: encryption/crypto-checksumming: Diffie-Hellman seed too small

Cause: The "sqlnet.crypto_seed" parameter in the SQLNET.ORA parameter file is too small.

Action: Add more randomly-chosen text to it, perhaps using Network Manager.

ORA-12685: Native service required remotely but disabled locally

Cause: A native service is required by the remote process but native services have been disabled locally.

Action: Enable native services locally or change the configuration parameters on the remote host so that no native services are required.

ORA-12686: Invalid command specified for a service

Cause: An operation which does not exist was specified for a native service.

Action: This is a programming error and should not normally be visible to the user. If the error does appear, contact Oracle Customer Support.

ORA-12687: Credentials expired.

Cause: The credentials that are used to authenticate the user for the requested connection have expired.

Action: Renew your credentials. Refer to the documentation specific for your Network Authentication Adapter on how to do this.

ORA-12688: Login failed: the SecurID server rejected the new pincode

Cause: There are a number of reasons why the SecurID server would refuse a pincode: - The user might not have permission to make up his own pincode. - The pincode was either too short or too long. Valid pincodes consist of minimal four, but no more than eight characters. - The pincode contains any non alphanumeric characters.

Action: Reexecute the operation and make sure to use a pincode that satisfies the above requirements. If the problem persists, turn on tracing at the Oracle Server side of the connection and examine the trace file for the exact error.

ORA-12689: Server Authentication required, but not supported

Cause: Server Authentication is required for this connection, but not supported by both sides of the connection.

Action: Make sure both sides of the connection have the correct version of Advanced Networking Option, and that the Authentication Adapter supports Server Authentication.

ORA-12690: Server Authentication failed, login cancelled

Cause: Server Authentication is required, but the server's credentials were found invalid by the client.

Action: Make sure that the server has a valid set of credentials. Refer to your authentication adapter specific documentation on how to do this.

ORA-12696: Double Encryption Turned On, login disallowed

Cause: The user is using a Secure Protocol Adapter that has Encryption turned ON as well as ANO Encryption.

Action: Turn OFF either ANO Encryption or the Protocol Adapter Encryption if possible. Refer to the Administrator's Guide on how to do this.

ORA-12699: Native service internal error

Cause: An internal error occurred in the native services component.

Action: Enable tracing to determine the exact error. Contact Oracle Customer Support.

ORA-12700 to ORA-19400

ORA-12700: invalid NLS parameter value (*string*)

Cause: An invalid or unknown NLS configuration parameter was specified.

Action: n/a

ORA-12701: CREATE DATABASE character set is not known

Cause: The character set specified when creating the database is unknown.

Action: n/a

ORA-12702: invalid NLS parameter string used in SQL function

Cause: An unknown parameter name or invalid value is specified in a NLS parameter string.

Action: n/a

ORA-12703: this character set conversion is not supported

Cause: The requested conversion between two character sets in the CONVERT function is not implemented

Action: n/a

ORA-12704: character set mismatch

Cause: One of the following: - The string operands (other than an nlsparams argument) to an operator or built-in function do not have the same character set. - An nlsparams operand is not in the database character set. - String data with character set other than the database character set is passed to a built-in function not expecting it. - The second argument to CHR() or CSCONVERT() is not CHAR_CS or NCHAR_CS. - A string expression in the VALUES clause of an INSERT statement, or the SET clause of an UPDATE statement, does not have the same character set as the column into which the value would be inserted. - A value provided in a DEFAULT clause when creating a table does not have the same character set as declared for the column. - An argument to a PL/SQL function does not conform to the character set requirements of the corresponding parameter.

Action: n/a

ORA-12705: Cannot access NLS data files or invalid environment specified

Cause: Either an attempt was made to issue an ALTER SESSION command with an invalid NLS parameter or value; or the environment variable(s) NLS_LANG, ORA_NLSxx, or ORACLE_HOME was incorrectly specified, therefore the NLS data files cannot be located.

Action: Check the syntax of the ALTER SESSION command and the NLS parameter, correct the syntax and retry the statement, or specify the correct directory path/values in the environment variables.

ORA-12706: this CREATE DATABASE character set is not allowed

Cause: It is not allowed to create a database on a native ASCII-based machine using an EBCDIC-based character set, and vice versa.

Action: n/a

ORA-12707: error while getting create database NLS parameter *string*

Cause: Internal error

Action: n/a

ORA-12708: error while loading create database NLS parameter *string*

Cause: Internal error

Action: n/a

ORA-12709: error while loading create database character set

Cause: Internal error

Action: n/a

ORA-12710: CREATE CONTROLFILE character set is not known

Cause: The character set specified when creating the control file is unknown.

Action: n/a

ORA-12711: this CREATE CONTROLFILE character set is not allowed

Cause: It is not allowed to create a control file on a native ASCII-based machine using an EBCDIC-based character set, and vice versa.

Action: n/a

ORA-12712: new character set must be a superset of old character set

Cause: When you ALTER DATABASE ... CHARACTER SET, the new character set must be a superset of the old character set. For example, WE8ISO8859P1 is not a superset of the WE8DEC.

Action: Specify a superset character set.

ORA-12713: Character data loss in NCHAR/CHAR conversion

Cause: When character set conversion happens between CHAR and NCHAR either implicitly or explicitly, some characters are lost due to no mapping characters in the destination character set.

Action: Make sure all the characters can be mapped to destination character set or set NLS_NCHAR_CONV_EXCP to be FALSE.

ORA-12714: invalid national character set specified

Cause: Only UTF8 and AL16UTF16 are allowed to be used as the national character set

Action: Ensure that the specified national character set is valid

ORA-12715: invalid character set specified

Cause: The character set specified is not allowed for this operation or is invalid

Action: Ensure that the specified character set is valid

ORA-12716: Cannot ALTER DATABASE CHARACTER SET when CLOB data exists

Cause: CLOB data changes representation to Unicode when converting to a multibyte character set and must be migrated

Action: Remove CLOB data as listed in the alert file. CLOB data can be migrated by methods such as import/export

ORA-12717: Cannot issue ALTER DATABASE NATIONAL CHARACTER SET when NCLOB, NCHAR or NVARCHAR2 data exists

Cause: NCLOB, NCHAR or NVARCHAR2 data changed the representation to Unicode when converting to a multibyte character set and must be migrated.

Action: Remove NCLOB, NCHAR or NVARCHAR2 data as listed in the alert file. The above type data can be migrated by methods such as import/export.

ORA-12718: operation requires connection as SYS

Cause: This command can only be run when connecting as SYS

Action: Connect as SYS to run this command

ORA-12719: operation requires database is in RESTRICTED mode

Cause: This command can only be run when the database is in RESTRICTED mode

Action: Ensure that the system is in RESTRICTED mode

ORA-12720: operation requires database is in EXCLUSIVE mode

Cause: This command can only be run when the database is in EXCLUSIVE mode

Action: Ensure that the system is in EXCLUSIVE mode

ORA-12721: operation cannot execute when other sessions are active

Cause: This command can only be run when there are no other sessions active

Action: Ensure there are no other connections to the database

ORA-12722: regular expression internal error

Cause: A regular expression internal error occurred.

Action: This is an internal error. Contact Oracle Support Services.

ORA-12723: regular expression too complex

Cause: The regular expression was too complex and could not be parsed.

Action: This is an internal error. Contact Oracle Support Services.

ORA-12724: regular expression corrupt

Cause: The regular expression contained an incorrect sequence of metacharacters.

Action: Ensure the metacharacters are correctly positioned.

ORA-12725: unmatched parentheses in regular expression

Cause: The regular expression did not have balanced parentheses.

Action: Ensure the parentheses are correctly balanced.

ORA-12726: unmatched bracket in regular expression

Cause: The regular expression did not have balanced brackets.

Action: Ensure the brackets are correctly balanced.

ORA-12727: invalid back reference in regular expression

Cause: A back references was found before a sub-expression.

Action: Ensure a valid sub-expression is being referenced.

ORA-12728: invalid range in regular expression

Cause: An invalid range was found in the regular expression.

Action: Ensure a valid range is being used.

ORA-12729: invalid character class in regular expression

Cause: An unknown character class was found in the regular expression.

Action: Ensure a valid characters class is being used.

ORA-12730: invalid equivalence class in regular expression

Cause: An unknown equivalence class was found in the regular expression.

Action: Ensure a valid equivalence class is being used.

ORA-12731: invalid collation class in regular expression

Cause: An unknown collation class was found in the regular expression.

Action: Ensure a valid collation class is being used.

ORA-12732: invalid interval value in regular expression

Cause: An invalid interval value was found in the regular expression.

Action: Ensure a valid interval value is being used.

ORA-12733: regular expression too long

Cause: The operation failed because the regular expression it used exceeds the maximum supported size.

Action: Use a shorter regular expression.

ORA-12734: Instant Client Light: unsupported client national character set *string*

Cause: Only UTF8 and AL16UTF16 are allowed to be used as the national character set. Instant Client Light has only minimal character sets.

Action: Do not use Instant Client Light for this character set

ORA-12735: Instant Client Light: unsupported client character set *string*

Cause: The character set specified is not allowed for this operation or is invalid. Instant Client Light has only minimal character sets.

Action: Do not use Instant Client Light for this character set

ORA-12736: Instant Client Light: unsupported server national character set *string*

Cause: Only UTF8 and AL16UTF16 are allowed to be used as the national character set. Instant Client Light has only minimal character sets.

Action: Do not use Instant Client Light for this character set

ORA-12737: Instant Client Light: unsupported server character set *string*

Cause: The character set specified is not allowed for this operation or is invalid. Instant Client Light has only minimal character sets.

Action: Do not use Instant Client Light for this character set

ORA-12738: Express Instant Client: unsupported client national character set *string*
Cause: Only UTF8 and AL16UTF16 are allowed to be used as the national character set. Instant Client has only minimal character sets.

Action: Do not use Express Instant Client for this character set

ORA-12739: Express Instant Client: unsupported client character set *string*
Cause: The character set specified is not allowed for this operation or is invalid. Express Instant Client has only minimal character sets.

Action: Do not use Express Instant Client for this character set

ORA-12740: Express Instant Client: unsupported server national character set *string*
Cause: Only UTF8 and AL16UTF16 are allowed to be used as the national character set. Instant Client has only minimal character sets.

Action: Do not use Express Instant Client for this character set

ORA-12741: Express Instant Client: unsupported server character set *string*
Cause: The character set specified is not allowed for this operation or is invalid. Express Instant Client has only minimal character sets.

Action: Do not use Express Instant Light for this character set

ORA-12742: unable to create the collation key

Cause: The character argument of a collation-sensitive operator was too long or it had too many decomposable characters to create a collation key for it in the available buffer space.

Action: Shorten the argument value or, if using a UCA-based collation, increase the ratio of characters with short or no Unicode decomposition to characters with long Unicode decomposition in the value.

ORA-12743: internal LX error code, arguments: [*string*], [*string*], [*string*]

Cause: This is an internal error in a globalization support function.

Action: Contact Oracle Support Services.

ORA-12744: Character set *string* is not allowed as a database character set.

Cause: An attempt was made to create or alter a database using a client-only or conversion-only character set.

Action: Specify a supported database character set.

ORA-12752: An instance-critical process has terminated.

Cause: An unexpected error was encountered by an instance-critical process.

Action: Contact Oracle Support Services.

ORA-12753: The Oracle home user ID does not match the effective user ID of the local client which connected to the Oracle instance.

Cause: The user ID that is the owner of the Oracle home directory was not the same as the effective user ID of the local client that connected to the Oracle instance.

Action: Run the local client that connects to Oracle instance with the same user ID as the owner of the Oracle home.

ORA-12800: system appears too busy for parallel query execution

Cause: load on system is too high to perform parallel queries.

Action: re-execute serially or wait until system load is reduced.

ORA-12801: error signaled in parallel query server *string*

Cause: A parallel query server reached an exception condition.

Action: Check the following error message for the cause, and consult your error manual for the appropriate action.

ORA-12802: parallel query server lost contact with coordinator

Cause: A parallel query server lost contact with the foreground (coordinator) process/thread.

Action: Check your system for anomalies and reissue the statement. If this error persists, contact Oracle Support Services.

ORA-12803: parallel query server lost contact with another server

Cause: A parallel query server lost contact with another server.

Action: Check your system for anomalies and reissue the statement. If this error persists, contact Oracle Support Services.

ORA-12804: parallel query server appears to have died

Cause: Cannot find process information for a parallel query server thread.

Action: Check your system for anomalies and reissue the statement. If this error persists, contact Oracle Support Services.

ORA-12805: parallel query server died unexpectedly

Cause: A parallel query server died unexpectedly, PMON cleaning up the process.

Action: Check your system for anomalies and reissue the statement. If this error persists, contact Oracle Support Services. See trace file for more details.

ORA-12806: could not get background process to hold enqueue

Cause: Internal error.

Action: This error should not normally occur. If it persists, contact Oracle Support Services.

ORA-12807: process queue could not receive parallel query message

Cause: Internal error.

Action: This error should not normally occur. If it persists, contact Oracle Support Services.

ORA-12808: cannot set *string*_INSTANCES greater than number of instances *string*

Cause: An attempt was made to set SCAN_INSTANCES or CACHE_INSTANCES using the ALTER SYSTEM command to a value larger than the number of available instances.

Action: See the accompanying message for the current allowable maximum value, or set SCAN_INSTANCES / CACHE_INSTANCES to ALL.

ORA-12809: cannot set *string*_INSTANCES when mounted in exclusive mode

Cause: An attempt was made to set SCAN_INSTANCES or CACHE_INSTANCES using the ALTER SYSTEM command while the database was mounted in exclusive mode.

Action: SCAN_INSTANCES / CACHE_INSTANCES may not be set unless running Oracle Real Application Clusters mounted in CLUSTER_DATABASE mode.

ORA-12810: PARALLEL_MAX_SERVERS must be less than or equal to *string*

Cause: An attempt was made to set the PARALLEL_MAX_SERVERS parameter to a value higher than the maximum allowed by the system.

Action: Set PARALLEL_MAX_SERVERS to a value less than or equal to the maximum specified in the accompanying message and retry.

ORA-12811: PARALLEL_MIN_SERVERS must be less than or equal to PARALLEL_MAX_SERVERS, *string*

Cause: An attempt was made to set the PARALLEL_MIN_SERVERS parameter to a value higher than PARALLEL_MAX_SERVERS.

Action: Set PARALLEL_MIN_SERVERS to a value less than or equal to PARALLEL_MAX_SERVERS (indicated in the accompanying message) and retry.

ORA-12812: only one PARALLEL or NOPARALLEL clause may be specified

Cause: PARALLEL was specified more than once, NOPARALLEL was specified more than once, or both PARALLEL and NOPARALLEL were specified in a CREATE TABLE, CLUSTER, or INDEX or in an ALTER TABLE or CLUSTER statement, or in a RECOVER command.

Action: Remove all but one of the PARALLEL or NOPARALLEL clauses and reissue the statement.

ORA-12813: value for PARALLEL or DEGREE must be greater than 0

Cause: PARALLEL 0 or DEGREE 0 was specified in a CREATE TABLE, CLUSTER, or INDEX or in an ALTER TABLE or CLUSTER statement.

Action: Specify a degree of parallelism greater than 0 or specify default parallelism using PARALLEL with no degree or using DEGREE DEFAULT within a PARALLEL clause.

ORA-12814: only one CACHE or NOCACHE clause may be specified

Cause: CACHE was specified more than once, NOCACHE was specified more than once, or both CACHE and NOCACHE were specified in a CREATE TABLE or CLUSTER, or in an ALTER TABLE or CLUSTER statement.

Action: Remove all but one of the CACHE or NOCACHE clauses and reissue the statement.

ORA-12815: value for INSTANCES must be greater than 0

Cause: PARALLEL parameter specifying number of instances must be a positive integer or DEFAULT

Action: specify a positive integer or DEFAULT for INSTANCES if parallelism across instances is desired.

ORA-12816: parallel create index fastpath operation

ORA-12817: parallel query option must be enabled

Cause: A parallel query option feature has been invoked but this option has not been enabled.

Action: Enable the parallel query option.

ORA-12818: invalid option in PARALLEL clause

Cause: an unrecognized option was used within a PARALLEL clause.

Action: specify any combination of DEGREE { *n* | DEFAULT } and INSTANCES { *n* | DEFAULT } within the PARALLEL clause.

ORA-12819: missing options in PARALLEL clause

Cause: PARALLEL clause cannot be empty.

Action: specify any combination of DEGREE { *n* | DEFAULT } and INSTANCES { *n* | DEFAULT } within the PARALLEL clause.

ORA-12820: invalid value for DEGREE

Cause: invalid value for DEGREE was specified within a PARALLEL clause.

Action: specify a positive integer or DEFAULT for the DEGREE option within a PARALLEL clause.

ORA-12821: invalid value for INSTANCES

Cause: invalid value for INSTANCES was specified within a PARALLEL clause.

Action: specify a positive integer or DEFAULT for the INSTANCES option within a PARALLEL clause.

ORA-12822: duplicate option in PARALLEL clause

Cause: DEGREE or INSTANCES was specified more than once within a PARALLEL clause.

Action: specify each desired PARALLEL clause option only once.

ORA-12823: default degree of parallelism may not be specified here

Cause: the PARALLEL keyword was used alone or DEGREE DEFAULT was specified in the PARALLEL clause of an ALTER DATABASE RECOVER command.

Action: respecify with an explicit degree of parallelism.

ORA-12824: INSTANCES DEFAULT may not be specified here

Cause: INSTANCES DEFAULT was specified in the PARALLEL clause of an ALTER DATABASE RECOVER command

Action: respecify with an explicit value for INSTANCES or omit the INSTANCES option if single instance recovery is desired.

ORA-12825: explicit degree of parallelism must be specified here

Cause: the DEGREE option was omitted from an ALTER DATABASE RECOVER command.

Action: respecify with an explicit degree of parallelism.

ORA-12826: hung parallel query server was killed

Cause: parallel query server was hung and subsequently killed.

Action: re-execute query and report suspicious events in trace file to Oracle Support Services if error persists.

ORA-12827: insufficient parallel query slaves (requested *string*, available *string*, parallel_min_percent *string*)

Cause: PARALLEL_MIN_PERCENT parameter was specified and fewer than the minimum number of slaves were acquired

Action: Either reexecute the query with a lower PARALLEL_MIN_PERCENT or wait until some running queries are completed, thus freeing up slaves

ORA-12828: Can't start parallel transaction at a remote site

Cause: PDML transaction cannot be started because we are not in the coordinator site of the distributed transaction.

Action: Do not use PDML at remote sites.

ORA-12829: Deadlock - itls occupied by siblings at block *string* of file *string*

Cause: parallel statement failed because all itls in the current block are occupied by siblings of the same transaction.

Action: increase MAXTRANS of the block or reduce the degree of parallelism for the statement. Reexecute the statement. Report suspicious events in trace file to Oracle Support Services if error persists.

ORA-12830: Must COMMIT or ROLLBACK after executing parallel INSERT/UPDATE/DELETE

Cause: After executing a parallel INSERT/UPDATE/DELETE statement, a command other than COMMIT or ROLLBACK was issued.

Action: Execute COMMIT or ROLLBACK before issuing another SQL command.

ORA-12831: Must COMMIT or ROLLBACK after executing INSERT with APPEND hint

Cause: After executing an INSERT statement with an APPEND hint, a command other than COMMIT or ROLLBACK was issued.

Action: Execute COMMIT or ROLLBACK before issuing another SQL command.

ORA-12832: Could not allocate slaves on all specified instances

Cause: After executing a query on a global v\$ fixed view, one or more instances failed to allocate a slave to process query

Action: To allow results to be returned by successfully allocated slaves, execute ALTER SESSION SET ALLOW_PARTIAL_SN_RESULTS=TRUE statement, or check parameters of instances

ORA-12833: Coordinator's instance not a member of parallel_instance_group

Cause: The coordinator's instance must be a member of the parallel_instance_group in which this operation will be run.

Action: Either add the coordinator's instance to the current parallel_instance_group or change parallel_instance_group.

ORA-12834: Instance group name, '*string*', too long, must be less than *string* characters

Cause: The instance group name is too long.

Action: Either shorten the name or get rid of the instance group.

ORA-12835: No instances are active in the GLOBAL_VIEW_ADMIN_GROUP

Cause: There must be at least one instance in the GLOBAL_VIEW_ADMIN_GROUP in order to execute a query on global views

Action: Change the value of GLOBAL_VIEW_ADMIN_GROUP

ORA-12838: cannot read/modify an object after modifying it in parallel

Cause: Within the same transaction, an attempt was made to add read or modification statements on a table after it had been modified in parallel or with direct load. This is not permitted.

Action: Rewrite the transaction, or break it up into two transactions: one containing the initial modification and the second containing the parallel modification operation.

ORA-12839: cannot modify an object in parallel after modifying it

Cause: Within the same transaction, an attempt was made to perform parallel modification operations on a table after it had been modified. This is not permitted.

Action: Rewrite the transaction or break it up into two transactions: one containing the parallel modification and the second containing the initial modification operation.

ORA-12840: cannot access a remote table after parallel/insert direct load txn

Cause: Within a transaction, an attempt was made to perform distributed access after a PDML or insert direct statement had been issued.

Action: Commit/rollback the PDML transaction first, and then perform the distributed access, or perform the distributed access before the first PDML statement in the transaction.

ORA-12841: Cannot alter the session parallel DML state within a transaction

Cause: Transaction in progress

Action: Commit or rollback transaction and then re-execute

ORA-12842: Cursor invalidated during parallel execution

Cause: The cursor was invalidated during the parse phase of deferred parallel processing, e.g. when set operands are parallelized.

Action: Depends on why the cursor was invalidated. Possible causes include DDL on a schema object and shared pool being flushed.

ORA-12843: pdml lock not held properly on the table

Cause: The coordinator crashed or released the lock on the partition which the slave is trying to acquire currently.

Action: Check if the coordinator or some of the other slaves died. Also check that the lock has not been corrupted. Issue the pdml again.

ORA-12845: failed to receive interinstance parallel execution message

Cause: OS or interconnect problem receiving interinstance message

Action: Check OS specific diagnostics

ORA-12850: Could not allocate slaves on all specified instances: *string* needed, *string* allocated

Cause: When executing a query on a gv\$ fixed view, one or more instances failed to allocate a slave to process query.

Action: Check trace output for instances on which slaves failed to start. GV\$ query can only proceed if slaves can be allocated on all instances.

ORA-12851: PARALLEL_MAX_SERVERS must be greater than or equal to PARALLEL_MIN_SERVERS, *string*

Cause: An attempt was made to set the PARALLEL_MAX_SERVERS parameter to a value less than PARALLEL_MIN_SERVERS.

Action: Set PARALLEL_MAX_SERVERS to a value greater than or equal to PARALLEL_MIN_SERVERS value specified in the accompanying message and retry.

ORA-12852: PARALLEL_MIN_SERVERS must be less than PROCESSES, *string*

Cause: An attempt was made to set the PARALLEL_MIN_SERVERS parameter to a value higher than PROCESSES.

Action: Set PARALLEL_MIN_SERVERS to a value less than PROCESSES value specified in the accompanying message and retry.

ORA-12853: insufficient memory for PX buffers: current *string*K, max needed *string*K

Cause: Insufficient SGA memory for PX buffers

Action: Reconfigure sga to include at least (max - current) bytes of additional memory

ORA-12854: Parallel query is not supported on temporary LOBs

Cause: The parallel query statement produced a temporary LOB.

Action: Turn off parallelism for the query or underlying table

ORA-12855: cannot run parallel or insert direct load in a loopback

Cause: A loopback was created in the transaction before this operation.

Action: Do not use loopback when using pdml or insert direct load.

ORA-12856: cannot run parallel query on a loopback connection

Cause: A table or index in a parallel query is referenced via a loopback connection.

Action: Do not use loopback connection when running a query in parallel.

ORA-12872: First slave parse gave different plan

Cause: First hard parse on slave given QC-supplied environment and parameters gave different plan from QC. Try again with outline.

Action: No external action. Internally used for outline-based reparse.

ORA-12874: parallel execution monitor terminated with error

Cause: The parallel execution monitor process died.

Action: Wait for the process to restart.

ORA-12899: value too large for column *string* (actual: *string*, maximum: *string*)

Cause: An attempt was made to insert or update a column with a value which is too wide for the width of the destination column. The name of the column is given, along with the actual width of the value, and the maximum allowed width of the column. Note that widths are reported in characters if character length semantics are in effect for the column, otherwise widths are reported in bytes.

Action: Examine the SQL statement for correctness. Check source and destination column data types. Either make the destination column wider, or use a subset of the source column (i.e. use substring).

ORA-12900: must specify a default temporary tablespace for a locally managed database

Cause: a locally managed database must have a temporary tablespace other than SYSTEM tablespace

Action: specify the default temporary tablespace when creating a locally managed database

ORA-12901: default temporary tablespace must be of TEMPORARY type

Cause: in a locally managed database, default temporary tablespace must be TEMPORARY type

Action: n/a

ORA-12902: default temporary tablespace must be SYSTEM or of TEMPORARY type

Cause: in a dictionary managed database, default temporary tablespace must be SYSTEM or TEMPORARY type

Action: n/a

ORA-12903: default temporary tablespace must be an ONLINE tablespace

ORA-12904: default temporary tablespace cannot be altered to PERMANENT type

ORA-12905: default temporary tablespace cannot be brought OFFLINE

ORA-12906: cannot drop default temporary tablespace

ORA-12907: tablespace *string* is already the default temporary tablespace

ORA-12908: cannot specify SYSTEM as default temporary tablespace when creating database

ORA-12909: TEMPORARY keyword expected

ORA-12910: cannot specify temporary tablespace as default tablespace

Cause: attempt to assign a temporary tablespace to be a user's default tablespace

Action: assign a permanent tablespace to be the default tablespace

ORA-12911: permanent tablespace cannot be temporary tablespace

Cause: attempt to assign a permanent tablespace to be a user's temporary tablespace

Action: assign a temporary tablespace to be user's temporary tablespace

ORA-12912: Dictionary managed tablespace specified as temporary tablespace

Cause: attempt to assign a dictionary managed tablespace to be a user's temporary tablespace

Action: Assign a locally managed temporary tablespace to be user's temporary tablespace

ORA-12913: Cannot create dictionary managed tablespace

Cause: Attempt to create dictionary managed tablespace in database which has system tablespace as locally managed

Action: Create a locally managed tablespace.

ORA-12914: Cannot migrate tablespace to dictionary managed type

Cause: Attempt to migrate locally managed tablespace to dictionary managed type when the database has locally managed system tablespace.

Action: Command cannot be issued.

ORA-12915: Cannot alter dictionary managed tablespace to read write

Cause: Attempt to alter dictionary managed tablespace to read write in database which has system tablespace as locally managed. This tablespace can only be dropped.

Action: Command cannot be issued.

ORA-12916: cannot shrink permanent or dictionary managed tablespace

Cause: An attempt was made to shrink a permanent tablespace or a dictionary managed tablespace.

Action: Check the tablespace type and issue the statement only on locally managed temporary tablespaces.

ORA-12917: Invalid option specified for default permanent tablespace

ORA-12918: Invalid tablespace type for default permanent tablespace

Cause: The tablespace is either dropped, temporary or undo

Action: Check the tablespace type and reissue the statement

ORA-12919: Can not drop the default permanent tablespace

Cause: An attempt was made to drop the default permanent tablespace

Action: Make a different tablespace as the default permanent tablespace and reissue the drop

ORA-12920: database is already in force logging mode

Cause: ALTER DATABASE FORCE LOGGING command failed because the database is already in force logging mode.

Action: n/a

ORA-12921: database is not in force logging mode

Cause: ALTER DATABASE NO FORCE LOGGING command failed because the database is not in force logging mode.

Action: n/a

ORA-12922: concurrent ALTER DATABASE [NO] FORCE LOGGING command is running

Cause: There is a concurrent ALTER DATABASE FORCE LOGGING or ALTER DATABASE NO FORCE LOGGING command running in the system.

Action: Contact the database administrator who is responsible for the concurrent command.

ORA-12923: tablespace *string* is in force logging mode

Cause: An attempt to alter the specified tablespace temporary failed because the tablespace is in force logging mode.

Action: Put the tablespace out of force logging mode by ALTER TABLESPACE NO FORCE LOGGING command.

ORA-12924: tablespace *string* is already in force logging mode

Cause: An attempt to alter the specified tablespace into force logging mode failed because it is already in force logging mode.

Action: n/a

ORA-12925: tablespace *string* is not in force logging mode

Cause: An attempt to alter the specified tablespace out of force logging mode failed because it is not in force logging mode.

Action: n/a

ORA-12926: FORCE LOGGING option already specified

Cause: In CREATE TABLESPACE, the FORCE LOGGING option was specified more than once.

Action: Remove all but one of the FORCE LOGGING options.

ORA-12927: RETENTION option already specified

Cause: In CREATE TABLESPACE, the RETENTION option was specified more than once.

Action: Remove all but one of the RETENTION options.

ORA-12928: ENCRYPTION option already specified

Cause: In CREATE TABLESPACE, the ENCRYPTION option was specified more than once.

Action: Remove all but one of the ENCRYPTION options.

ORA-12931: FORCE LOGGING or SET STANDBY NOLOGGING already specified

Cause: FORCE LOGGING or SET STANDBY NOLOGGING options were specified more than once.

Action: Remove all but one of the FORCE LOGGING or SET STANDBY NOLOGGING options.

ORA-12940: Not enough space in DBVerify text buffer

Cause: DBVerify ran out of text buffer. The error was trapped internally by the system. DBVerify would return the result in text buffer and then resume checking.

Action: None

ORA-12941: DBVerify exception

Cause: DBVerify encountered run-time error. The error signal was trapped internally by the system.

Action: None

ORA-12950: SYSTEM tablespace specified as default permanent tablespace

Cause: SYSTEM tablespace was specified as the default permanent during database creation.

Action: If default permanent tablespace is not specified, then SYSTEM will implicitly become the default permanent tablespace. Specify an alternate tablespace or omit the default tablespace clause and reissue the CREATE DATABASE statement

ORA-12951: Attempt to change default permanent tablespace to temporary

Cause: It is incorrect to alter the default permanent tablespace of a database to temporary type

Action: n/a

ORA-12952: Control space growth in ASSM segment under concurrency

ORA-12980: checkpoint option not allowed with SET UNUSED

Cause: An attempt was made to specify checkpoint option with SET UNUSED.

Action: Remove checkpoint option.

ORA-12981: cannot drop column from an object type table

Cause: An attempt was made to drop a column from an object type table.

Action: This action is not allowed.

ORA-12982: cannot drop column from a nested table

Cause: An attempt was made to drop a column from a nested table.

Action: This action is not allowed.

ORA-12983: cannot drop all columns in a table

Cause: An attempt was made to drop all columns in a table.

Action: Make sure at least one column remains in the table after the drop column operation.

ORA-12984: cannot drop partitioning column

Cause: An attempt was made to drop a column used as the partitioning key.

Action: This action is not allowed.

ORA-12985: tablespace '*string*' is read only, cannot drop column

Cause: An attempt was made to drop column from a partition/subpartition on a read only tablespace.

Action: Set the tablespace to read write and resubmit statement.

ORA-12986: columns in partially dropped state. Submit ALTER TABLE DROP COLUMNS CONTINUE

Cause: An attempt was made to access a table with columns in partially dropped state (i.e., drop column operation was interrupted).

Action: Submit ALTER TABLE DROP COLUMNS CONTINUE to complete the drop column operation before accessing the table.

ORA-12987: cannot combine drop column with other operations

Cause: An attempt was made to combine drop column with other ALTER TABLE operations.

Action: Ensure that drop column is the sole operation specified in ALTER TABLE.

ORA-12988: cannot drop column from table owned by SYS

Cause: An attempt was made to drop a column from a system table.

Action: This action is not allowed

ORA-12989: invalid value for checkpoint interval

Cause: An invalid checkpoint interval specified in statement. Checkpoint interval must be between 0 and $(2^{31}-1)$.

Action: Correct checkpoint interval and resubmit statement

ORA-12990: duplicate option specified

Cause: Duplicate option specified in statement.

Action: Remove the duplicate option and resubmit statement.

ORA-12991: column is referenced in a multi-column constraint

Cause: An attempt was made to drop a column referenced by some constraints.

Action: Drop all constraints referencing the dropped column or specify CASCADE CONSTRAINTS in statement.

ORA-12992: cannot drop parent key column

Cause: An attempt was made to drop a parent key column.

Action: Drop all constraints referencing the parent key column, or specify CASCADE CONSTRAINTS in statement.

ORA-12993: tablespace '*string*' is offline, cannot drop column

Cause: An attempt was made to drop a column from a partition/subpartition on an offline tablespace.

Action: Bring the tablespace online and resubmit statement.

ORA-12994: drop column option only allowed once in statement

Cause: An attempt was made to repeat the drop column option in a single statement.

Action: Separate drop column options into different statements and resubmit statements.

ORA-12995: no columns in partially dropped state

Cause: An attempt was made to submit DROP COLUMNS CONTINUE statement while there are no partially dropped columns.

Action: Cannot submit this statement.

ORA-12996: cannot drop system-generated virtual column

Cause: An attempt was made to drop a virtual column generated by the system.

Action: n/a

ORA-12997: cannot drop primary key column from an index-organized table

Cause: An attempt was made to drop a primary key column from an index-organized table.

Action: This action is not allowed.

ORA-12998: Ignore errors during drop column from atb.c

ORA-12999: cannot DROP or SET UNUSED a column that has been set unused

Cause: An attempt was made to DROP or SET UNUSED a column that has already been 'set unused'.

Action: Use the DROP UNUSED COLUMNS option to remove the column.

ORA-13000: dimension number is out of range

Cause: The specified dimension is either smaller than 1 or greater than the number of dimensions encoded in the HHCODE.

Action: Make sure that the dimension number is between 1 and the maximum number of dimensions encoded in the HHCODE.

ORA-13001: dimensions mismatch error

Cause: The number of dimensions in two HHCODEs involved in a binary HHCODE operation do not match.

Action: Make sure that the number of dimensions in the HHCODEs match.

ORA-13002: specified level is out of range

Cause: The specified level is either smaller than 1 or greater than the maximum level encoded in an HHCODE.

Action: Verify that all levels are between 1 and the maximum number of levels encoded in the HHCODE.

ORA-13003: the specified range for a dimension is invalid

Cause: The specified range for a dimension is invalid.

Action: Make sure that the lower bound (lb) is less than the upper bound (ub).

ORA-13004: the specified buffer size is invalid

Cause: The buffer size for a function is not valid.

Action: This is an internal error. Contact Oracle Support Services.

ORA-13005: recursive HHCODE function error

Cause: An error occurred in a recursively called HHCODE function.

Action: This is an internal error. Contact Oracle Support Services.

ORA-13006: the specified cell number is invalid

Cause: The cell identifier is either less than 0 or greater than $(2^{\text{ndim}} - 1)$.

Action: Make sure that the cell identifier is between 0 and $(2^{\text{ndim}} - 1)$.

ORA-13007: an invalid HEX character was detected

Cause: A character that is not in the range [0-9] or [A-F a-f] was detected.

Action: Verify that all characters in a string are in [0-9] or [A-F a-f].

ORA-13008: the specified date format has an invalid component

Cause: Part of specified date format is invalid.

Action: Verify that the date format is valid.

ORA-13009: the specified date string is invalid

Cause: The specified date string has a bad component or does not match the specified format string.

Action: Make sure that the components of the date string are valid and that the date and format strings match.

ORA-13010: an invalid number of arguments has been specified

Cause: An invalid number of arguments was specified for an SDO function.

Action: Verify the syntax of the function call.

ORA-13011: value is out of range

Cause: A specified dimension value is outside the range defined for that dimension.

Action: Make sure that all values to be encoded are within the defined dimension range.

ORA-13012: an invalid window type was specified

Cause: An invalid window type was specified.

Action: Valid window types are RANGE, PROXIMITY, POLYGON.

ORA-13013: the specified topology was not INTERIOR or BOUNDARY

Cause: A topology was specified that was not INTERIOR or BOUNDARY.

Action: Make sure that INTERIOR or BOUNDARY is used to describe an HHCODE's topology.

ORA-13014: a topology identifier outside the range of 1 to 8 was specified

Cause: A topology identifier outside the range of 1 to 8 was specified.

Action: Specify a topology in the range of 1 to 8.

ORA-13015: the window definition is not valid

Cause: The number of values used to define the window does not correspond to the window type.

Action: Verify that the number of values used to defined the window is correct for the window type and number of dimensions.

ORA-13016: specified topology [*string*] is invalid

Cause: The specified topology did not exist in the database, or some components of the topology were missing from the database.

Action: Check the specified topology by executing the SDO_TOPO.validate_topology function.

ORA-13017: unrecognized line partition shape

Cause: The shape of a 2-D line partition could not be determined.

Action: This is an internal error. Contact Oracle Support Services.

ORA-13018: bad distance type

Cause: The specified distance type is invalid.

Action: The only supported distance functions are EUCLID and MANHATTAN.

ORA-13019: coordinates out of bounds

Cause: Vertex coordinates lie outside the valid range for specified dimension.

Action: Redefine vertex coordinates within specified boundaries.

ORA-13020: coordinate is NULL

Cause: A vertex coordinate has a NULL value.

Action: Redefine vertex coordinate to have non-NULL value.

ORA-13021: element not continuous

Cause: The coordinates defining a geometric element are not connected.

Action: Redefine coordinates for the geometric element.

ORA-13022: polygon crosses itself

Cause: The coordinates defining a polygonal geometric element represent crossing segments.

Action: Redefine coordinates for the polygon.

ORA-13023: interior element interacts with exterior element

Cause: An interior element of a geometric object interacts with the exterior element of that object.

Action: Redefine coordinates for the geometric elements.

ORA-13024: polygon has less than three segments

Cause: The coordinates defining a polygonal geometric element represent less than three segments.

Action: Redefine the coordinates for the polygon.

ORA-13025: polygon does not close

Cause: The coordinates defining a polygonal geometric element represent an open polygon.

Action: Redefine the coordinates of the polygon.

ORA-13026: unknown element type for element *string.string.string*

Cause: The SDO_ETYPE column in the *layer_SDOGEOM* table contains an invalid geometric element type value.

Action: Redefine the geometric element type in the *layer_SDOGEOM* table for the specified geometric element using one of the supported SDO_ETYPE values. See the Oracle Spatial documentation for an explanation of SDO_ETYPE and its possible values.

ORA-13027: unable to read dimension definition from *string*

Cause: There was a problem reading the dimension definition from the *layer_SDODIM* table.

Action: Verify that the *layer_SDODIM* table exists and that the appropriate privileges exist on the table. Address any other errors that might appear with the message.

ORA-13028: Invalid Gtype in the SDO_GEOMETRY object

Cause: There is an invalid SDO_GTYPE in the SDO_GEOMETRY object.

Action: Verify that the geometries have valid gtypes.

ORA-13029: Invalid SRID in the SDO_GEOMETRY object

Cause: There is an invalid SDO_SRID in the SDO_GEOMETRY object. The specified SRID may be outside the valid SRID range.

Action: Verify that the geometries have valid SRIDs.

ORA-13030: Invalid dimension for the SDO_GEOMETRY object

Cause: There is a mismatch between the dimension in the SDO_GTYPE and dimension in the SDO_GEOM_METADATA for the SDO_GEOMETRY object.

Action: Verify that the geometries have valid dimensionality.

ORA-13031: Invalid Gtype in the SDO_GEOMETRY object for point object

Cause: There is an invalid SDO_GTYPE in the SDO_GEOMETRY object where the VARRAYs are NULL but the SDO_GTYPE is not of type POINT.

Action: Verify that the geometries have valid gtypes.

ORA-13032: Invalid NULL SDO_GEOMETRY object

Cause: There are invalid SDO_POINT_TYPE or SDO_ELEM_INFO_ARRAY or SDO_ORDINATE_ARRAY fields in the SDO_GEOMETRY object.

Action: Verify that the geometries have valid fields. To specify a NULL geometry, specify the whole SDO_GEOMETRY as NULL instead of setting each field to NULL.

ORA-13033: Invalid data in the SDO_ELEM_INFO_ARRAY in SDO_GEOMETRY object

Cause: There is invalid data in the SDO_ELEM_INFO_ARRAY field of the SDO_GEOMETRY object. The triplets in this field do not make up a valid geometry.

Action: Verify that the geometries have valid data.

ORA-13034: Invalid data in the SDO_ORDINATE_ARRAY in SDO_GEOMETRY object

Cause: There is invalid data in the SDO_ORDINATE_ARRAY field of the SDO_GEOMETRY object. The coordinates in this field do not make up a valid geometry. There may be NULL values for X or Y or both.

Action: Verify that the geometries have valid data.

ORA-13035: Invalid data (arcs in geodetic data) in the SDO_GEOMETRY object

Cause: There is invalid data in the SDO_ELEM_INFO_ARRAY field of the SDO_GEOMETRY object. There are arcs in a geometry that has geodetic coordinates.

Action: Verify that the geometries have valid data.

ORA-13036: Operation [*string*] not supported for Point Data

Cause: The specified geometry function is not supported for point data.

Action: Make sure that the specified geometry function is not called on point data.

ORA-13037: SRIDs do not match for the two geometries

Cause: A Spatial operation is invoked with two geometries where one geometry has an SRID and the other geometry does not have an SRID.

Action: Make sure that the spatial operations are invoked between two geometries with compatible SRIDs.

ORA-13039: failed to update spatial index for element *string.string.string*

Cause: Another error will accompany this message that will indicate the problem.

Action: Correct any accompanying errors. If no accompanying error message appears, contact Oracle Support Services.

ORA-13040: failed to subdivide tile

Cause: This is an internal error.

Action: Note any accompanying errors and contact Oracle Support Services.

ORA-13041: failed to compare tile with element *string.string.string*

Cause: The spatial relationship between a generated tile and the specified element could not be determined.

Action: This is an internal error. Verify the geometry using the VALIDATE_GEOMETRY_WITH_CONTEXT procedure. If the procedure does not return any errors, note any errors that accompany ORA-13041 and contact Oracle Support Services.

ORA-13042: invalid SDO_LEVEL and SDO_NUMTILES combination

Cause: An invalid combination of SDO_LEVEL and SDO_NUMTILES values was read from the *layer_SDOLAYER* table. The most likely cause is that the columns are NULL.

Action: Verify that SDO_LEVEL and SDO_NUMTILES columns contain valid integer values as described in the Oracle Spatial documentation. Then retry the operation.

ORA-13043: failed to read metadata from the *layer_SDOLAYER* table

Cause: An error was encountered reading the layer metadata from the *layer_SDOLAYER* table.

Action: This error is usually the result of an earlier error which should also have been reported. Address this accompanying error and retry the current operation. If no accompanying error was reported, contact Oracle Support Services.

ORA-13044: the specified tile size is smaller than the tolerance

Cause: The tile size specified for fixed size tessellation is smaller than the tolerance as specified in the layer metadata.

Action: See the Oracle Spatial documentation for an explanation of tiling levels, tile size, and tiling resolution. Ensure that the tiling parameters are set such that any generated tile is always larger than or equal to a tile at the maximum level of resolution. This can be achieved by using a fewer number of tiles per geometric object or specifying a smaller tile size value than the current one.

ORA-13045: invalid compatibility flag

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13046: invalid number of arguments

Cause: An invalid number of arguments were specified for an SDO_GEOM function.

Action: See the Oracle Spatial documentation for a description of the syntax and semantics of the relevant SDO_GEOM function.

ORA-13047: unable to determine ordinate count from table *layer_SDOLAYER*

Cause: An SDO_GEOM function was unable to determine the number of ordinates for the SDO layer *layer*.

Action: Verify that the *layer_SDOLAYER* table has a valid value for the column SDO_ORDCNT. Then retry the operation.

ORA-13048: recursive SQL fetch error

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13049: unable to determine tolerance value from table *layer_SDODIM*

Cause: An SDO_GEOM function was unable to determine the tolerance value for the SDO layer *layer*.

Action: Verify that the *layer_SDODIM* table has a valid value for the column SDO_TOLERANCE.

ORA-13050: unable to construct spatial object

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13051: failed to initialize spatial object

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13052: unsupported geometric type for geometry *string.string*

Cause: The geometry type for a specific instance in a *layer_SDOGEOM* table is not among the set of geometry types supported by Oracle Spatial.

Action: Check the Oracle Spatial documentation for the list of supported geometry types and workarounds that permit the storage and retrieval of non-supported geometric types with the SDO schema.

ORA-13053: maximum number of geometric elements in argument list exceeded

Cause: The maximum number of geometric elements that can be specified in the argument list for an SDO_GEOM function was exceeded.

Action: Check the Oracle Spatial documentation for the syntax of the SDO_GEOM function and use fewer arguments to describe the geometry, or check the description of the SDO_WINDOW package for a workaround that permits storing the object in a table and then using it in as an argument in a call to the SDO_GEOM function.

ORA-13054: recursive SQL parse error

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13055: Oracle object *string* does not exist in specified table

Cause: The requested object is not present in the specified table.

Action: Verify the syntax of the function or procedure that reported this error and verify that the object does indeed exist in the specified table. Then retry the operation.

ORA-13060: topology with the name *string* already exists

Cause: The specified topology name was not unique in the database.

Action: Verify that the CREATE_TOPOLOGY call specifies the correct topology name and that the procedure is invoked from the correct schema.

ORA-13061: topology with the name *string* does not exist

Cause: The specified topology did not exist in the database.

Action: Verify that the current procedure/function call specifies the correct schema and topology name.

ORA-13062: topology IDs do not match in the feature table and the topology

Cause: The specified topology ID in the feature table did not match the topology ID stored in the topology metadata.

Action: Verify that the specified topology ID matches the topology ID stored in the topology metadata.

ORA-13063: relationship information table is missing data for feature table [*string*]

Cause: The topology relationship information table (xxx_RELATION\$) did not have the matching partition corresponding to the feature table.

Action: Make sure the correct topology IDs and names are specified in the call to register the feature table with the topology.

ORA-13064: relationship information table has inconsistent data for feature table [*string*]

Cause: The topology_id, tg_layer_id values stored in the feature table did not match the values stored in the topology relationship information table (xxx_RELATION\$).

Action: Make sure that the correct feature tables are specified in the call to register the feature table with the topology.

ORA-13065: cannot delete a child layer with a parent layer

Cause: A call was made to delete a feature layer which has a dependent layer defined on it.

Action: Make sure that all dependent feature layers are deleted before deleting the current feature layer.

ORA-13066: wrong feature geometry or element type

Cause: The SDO_TOPO_GEOMETRY object had the wrong geometry and/or element type.

Action: Correct the geometry and/or element type in the SDO_TOPO_GEOMETRY object.

ORA-13067: operator requires both parameters from the same topology

Cause: Both SDO_TOPO_GEOMETRY parameters did not come from the same topology.

Action: Make sure both the parameters to the operator are from the same topology. If this is not possible, consider using a signature of the operator that does not use two SDO_TOPO_GEOMETRY parameters.

ORA-13068: wrong table or column name in SDO_TOPO_GEOMETRY constructor

Cause: An SDO_TOPO_GEOMETRY constructor was invoked with incorrect parameters for table name and/or column name.

Action: Fix the parameters in the call and try again.

ORA-13069: incorrect degree value for SDO_GEOMETRY object

Cause: An incorrect degree value ≤ 1 was passed for a Non-Uniform Rational B-Spline curve.

Action: Correct the degree value for the Non-Uniform Rational B-Spline curve.

ORA-13070: incorrect number of control points for SDO_GEOMETRY object

Cause: An incorrect number of control points was passed for a Non-Uniform Rational B-Spline curve.

Action: Correct the number of control points for the Non-Uniform Rational B-Spline curve.

ORA-13071: incorrect control points, degree for SDO_GEOMETRY object

Cause: An incorrect number of control points and degree was passed for a Non-Uniform Rational B-Spline curve.

Action: Ensure that the number of control points is greater than the degree for a Non-Uniform Rational B-Spline curve.

ORA-13072: incorrect number of knots for SDO_GEOMETRY object

Cause: An incorrect number of knot values was passed for a Non-Uniform Rational B-Spline curve.

Action: Correct the number of knot values passed for the Non-Uniform Rational B-Spline curve.

ORA-13073: incorrect control point weight value for a SDO_GEOMETRY object

Cause: An incorrect value was passed for the weight of a control point of a Non-Uniform Rational B-Spline curve.

Action: Ensure all weight values for control points are positive.

ORA-13074: incorrect knot value for SDO_GEOMETRY object

Cause: An incorrect knot value was passed for a Non-Uniform Rational B-Spline curve.

Action: Ensure the knot values passed for the Non-Uniform Rational B-Spline curve are in non-decreasing order.

ORA-13075: incorrect knot value sequence for SDO_GEOMETRY object

Cause: An incorrect knot value sequence was passed for a Non-Uniform Rational B-Spline curve.

Action: Ensure the knot values passed for the Non-Uniform Rational B-Spline curve have no more than a sequence of 'k' consecutive identical values or no more than 'k + 1' consecutive same values at the beginning or end of Non-Uniform Rational B-Spline curve.

ORA-13076: incorrect knot value sequence for SDO_GEOMETRY object

Cause: An incorrect knot value sequence was passed for a Non-Uniform Rational B-Spline curve.

Action: Ensure the knot value sequence passed for the Non-Uniform Rational B-Spline curve is a normalized vector beginning at zero and ending at one.

ORA-13077: incorrect start or end point for subelement of a compound curve

Cause: The end point of a subelement for a compound curve was not equal to the start point of the next subelement, or the start point of a subelement was not equal to the end point of the previous subelement and one of the subelements was a NURBS curve.

Action: Ensure that the end point of each subelement is equal to the start point of the next subelement and that the start point of each subelement is equal to the end point of the previous subelement when one of the subelements is a NURBS curve.

ORA-13107: operation not supported for Non-Uniform Rational B-Spline type

Cause: This operation cannot be executed for Non-Uniform Rational B-Spline curves.

Action: Specify a geometry that does not contain a Non-Uniform Rational B-Spline curve type.

ORA-13108: spatial table *string* not found

Cause: The specified spatial table does not exist.

Action: Check the Spatial data dictionary to make sure that the table is registered.

ORA-13109: spatial table *string* exists

Cause: The specified spatial table is registered in the Spatial data dictionary.

Action: Remove the existing table from the Spatial data dictionary or use a different name.

ORA-13110: cannot drop topology with associated topo_geometry tables

Cause: The drop_topology procedure was invoked for a topology that has associated topo_geometry layers with it.

Action: Delete the topo_geometry layers from the topology before dropping the topology. Use SDO_TOPO.delete_topo_geometry_layer to delete topo_geometry layers from the topology.

ORA-13111: cannot add topo_geometry layer [*string*] to topology

Cause: It was not possible to add the specified topo_geometry layer to the topology.

Action: Make sure the topo_geometry layer table exists in the database.

ORA-13112: cannot delete topo_geometry layer [*string*] from topology

Cause: It was not possible to delete the specified topo_geometry layer from the topology.

Action: Check USER_SDO_TOPO_METADATA to see if the specified topo_geometry layer is part of the topology. Only those topo_geometry layers which are part of the topology can be deleted from it.

ORA-13113: invalid tg_layer_id in sdo_topo_geometry constructor

Cause: An invalid layer_id was passed to the SDO_TOPO_GEOMETRY constructor.

Action: Valid layer_ids are obtained by adding a topo_geometry layer to the topology. Check USER_SDO_TOPO_METADATA to find out the layer_id for an existing topo_geometry layer.

ORA-13114: [*string*]._NODE\$ table does not exist

Cause: The NODE\$ table for the topology did not exist in the database.

Action: There is a severe corruption of the topology. Call Oracle Support Services with the error number.

ORA-13115: [*string*]._EDGE\$ table does not exist

Cause: The EDGE\$ table for the topology did not exist in the database.

Action: There is a severe corruption of the topology. Call Oracle Support Services with the error number.

ORA-13116: [*string*]._FACE\$ table does not exist

Cause: The FACE\$ table for the topology did not exist in the database.

Action: There is a severe corruption of the topology. Call Oracle Support Services with the error number.

ORA-13117: [*string*]._RELATION\$ table does not exist

Cause: The RELATION\$ table for the topology did not exist in the database.

Action: There is a severe corruption of the topology. Call Oracle Support Services with the error number.

ORA-13118: invalid node_id [*string*]

Cause: A topology node operation was invoked with an invalid node_id.

Action: Check the topology node\$ table to see if the specified node_id exists in the topology.

ORA-13119: invalid edge_id [*string*]

Cause: A topology edge operation was invoked with an invalid edge_id.

Action: Check the topology edge\$ table to see if the specified edge_id exists in the topology.

ORA-13120: invalid face_id [*string*]

Cause: A topology face operation was invoked with an invalid face_id.

Action: Check the topology face\$ table to see if the specified face_id exists in the topology.

ORA-13121: layer type mismatch with topo_geometry layer type

Cause: The tg_type in SDO_TOPO_GEOMETRY constructor did not match the type specified for the layer.

Action: Check the USER_SDO_TOPO_METADATA view to see the layer type for the layer and use it in the constructor.

ORA-13122: invalid topo_geometry specified

Cause: The SDO_TOPO_GEOMETRY object passed into the function/operator was not valid.

Action: Check the SDO_TOPO_GEOMETRY object and verify that it is a valid topo_geometry object.

ORA-13123: invalid TOPOLOGY name specified

Cause: The create_topo operation requires a unique TOPOLOGY name, that already does not exist in the database.

Action: Check to see if there is already an entry in the USER_SDO_TOPO_METADATA (or the MDSYS.SDO_TOPO_METADATA_TABLE) with this topology name.

ORA-13124: unable to determine column id for column *string*

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13125: partition key is already set

Cause: A partition key is already set for the spatial table.

Action: Only one partition key can be specified per spatial table.

ORA-13126: unable to determine class for spatial table *string*

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13127: failed to generate target partition

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13128: current tiling level exceeds user specified tiling level

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13129: HHCODE column *string* not found

Cause: The specified spatial column does not exist.

Action: Verify that the specified column is a spatial column by checking the Spatial data dictionary.

ORA-13135: failed to alter spatial table

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13136: null common code generated

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13137: failed to generate tablespace sequence number

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13138: could not determine name of object *string*

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13139: could not obtain column definition for *string*

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13140: invalid target type

Cause: The specified target type is not valid.

Action: Substitute a valid target type. Valid target types are TABLE and VIEW.

ORA-13141: invalid RANGE window definition

Cause: The RANGE window specified is not correctly defined.

Action: A RANGE window is defined by specifying the lower and upper boundary of each dimension as a pair of values (e.g.:

lower_bound1,upper_bound1,lower_bound2,upper_bound2,...). There should be an even number of values.

ORA-13142: invalid PROXIMITY window definition

Cause: The PROXIMITY window specified is not correctly defined.

Action: A PROXIMITY window is defined by specifying a center point and a radius. The center point is defined by ND values. There should be ND+1 values.

ORA-13143: invalid POLYGON window definition

Cause: The POLYGON window specified is not correctly defined.

Action: A POLYGON window is defined by specifying N pairs of values that represent the vertices of the polygon. There should be an even number of values.

ORA-13144: target table *string* not found

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13145: failed to generate range list

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13146: could not find table substitution variable *string*

Cause: The partition name substitution variable %s was not found in the SQL filter.

Action: The substitution variable %s must be in the SQL filter to indicate where that partition name should be placed.

ORA-13147: failed to generate MBR

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13148: failed to generate SQL filter

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13149: failed to generate next sequence number for spatial table *string*

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13150: failed to insert exception record

Cause: Operation failed to insert a record into the exception table.

Action: Fix any other errors reported.

ORA-13151: failed to remove exception record

Cause: Operation failed to remove a record from the exception table.

Action: Fix any other errors reported.

ORA-13152: invalid HHCODE type

Cause: Specified HHCODE type is not valid.

Action: Substitute a valid HHCODE type. Valid HHCODE types are POINT and LINE.

ORA-13153: invalid high water mark specified

Cause: The high water mark must be greater than or equal to zero.

Action: Make sure that the high water mark is an integer greater than or equal to zero.

ORA-13154: invalid precision specified

Cause: The precision specified is out of range.

Action: The precision must be an integer greater than or equal to zero.

ORA-13155: invalid number of dimensions specified

Cause: The number of dimensions specified is out of range.

Action: The number of dimension must be between 1 and 32.

ORA-13156: table to be registered *string.string* is not empty

Cause: The specified table has rows in it.

Action: Make sure that the table to be registered is empty.

ORA-13157: Oracle error *ORAstring* encountered while *string*

Cause: The specified Oracle error was encountered.

Action: Correct the Oracle error.

ORA-13158: Oracle object *string* does not exist

Cause: The specified object does not exist.

Action: Verify that the specified object exists.

ORA-13159: Oracle table *string* already exists

Cause: The specified table already exists.

Action: Drop the specified table.

ORA-13181: unable to determine length of column *string*_SDOINDEX.SDO_CODE

Cause: The length of the SDO_CODE column in the *layer*_SDOINDEX table could not be determined.

Action: Make sure that the *layer_SDOINDEX* table exists with the *SDO_CODE* column. Verify that the appropriate privileges exist on the table. Then retry the operation.

ORA-13182: failed to read element *string.string.string*

Cause: The specified element could not be read from the *layer_SDOGEOM* table.

Action: Verify that the specified element exists in the table. Then retry the operation.

ORA-13183: unsupported geometric type for geometry *string.string*

Cause: The geometry type in the *layer_SDOGEOM* table is unsupported.

Action: Modify the geometry type to be one of the supported types.

ORA-13184: failed to initialize tessellation package

Cause: Initialization of the tessellation package failed.

Action: Record the error messages that are returned and contact Oracle Support Services.

ORA-13185: failed to generate initial HHCODE

Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

ORA-13186: fixed tile size tessellation failed

Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

ORA-13187: subdivision failed

Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

ORA-13188: cell decode failed

Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

ORA-13189: recursive SQL parse failed

Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

ORA-13190: recursive SQL fetch failed

Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

ORA-13191: failed to read *SDO_ORDCNT* value

Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

ORA-13192: failed to read number of element rows

Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

ORA-13193: failed to allocate space for geometry

Cause: There was insufficient memory to read the geometry from the database.

Action: Validate the geometry. Record the error messages that are returned and contact Oracle Support Services.

ORA-13194: failed to decode supercell

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13195: failed to generate maximum tile value

Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

ORA-13196: failed to compute supercell for element *string.string.string*

Cause: The system was unable to compute the minimum bounding HHCODE or supercell for the geometry.

Action: Another error might accompany this error. Correct the accompanying error. Also, validate the geometry for correctness.

ORA-13197: element *string.string.string* is out of range

Cause: Tessellation did not generate any tiles for this element. This error could be caused if the geometry definition puts the geometry outside the domain defined in the *layer_SDODIM* table.

Action: Verify that the geometry is valid and within the defined domain.

ORA-13198: Spatial error: *string*

Cause: Internal error in some Oracle Spatial stored procedure.

Action: Record the sequence of procedure calls or events that preceded this error, and contact Oracle Support Services if the error message text does not clearly specify the cause of the error.

ORA-13199: *string*

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13200: internal error [*string*] in spatial indexing.

Cause: This is an internal error.

Action: Contact Oracle Support Services with the exact error text.

ORA-13201: invalid parameters supplied in CREATE INDEX statement

Cause: An error was encountered while trying to parse the parameters clause for the spatial CREATE INDEX statement.

Action: Check the Oracle Spatial documentation for the number, syntax, and semantics of expected parameters for spatial index creation.

ORA-13202: failed to create or insert into the SDO_INDEX_METADATA table

Cause: An error was encountered while trying to create the SDO_INDEX_METADATA table or insert data into it.

Action: Verify that the current user has CREATE TABLE privilege and that the user has sufficient quota in the default or specified tablespace.

ORA-13203: failed to read USER_SDO_GEOM_METADATA view

Cause: An error encountered while trying to read the USER_SDO_GEOM_METADATA view.

Action: Check that USER_SDO_GEOM_METADATA has an entry for the current geometry table.

ORA-13204: failed to create spatial index table

Cause: An error was encountered while trying to create the index table.

Action: Check that user has CREATE TABLE privilege in the current schema and that the user has sufficient quota in the default or specified tablespace.

ORA-13205: internal error while parsing spatial parameters

Cause: An internal error was encountered while parsing the spatial parameters.

Action: Check that the parameters passed in the parameter string are all valid.

ORA-13206: internal error [*string*] while creating the spatial index

Cause: An internal error was encountered while creating the spatial index.

Action: Contact Oracle Support Services with the exact error text.

ORA-13207: incorrect use of the [*string*] operator

Cause: An error was encountered while evaluating the specified operator.

Action: Check the parameters and the return type of the specified operator.

ORA-13208: internal error while evaluating [*string*] operator

Cause: An internal error was encountered.

Action: Contact Oracle Support Services with the exact error text.

ORA-13209: internal error while reading SDO_INDEX_METADATA table

Cause: An internal error was encountered while trying to read the SDO_INDEX_METADATA table.

Action: Contact Oracle Support Services. Note this and accompanying error numbers.

ORA-13210: error inserting data into the index table

Cause: An error was encountered while trying to insert data into the index table. Likely causes are: - Insufficient quota in the current tablespace - User does not appropriate privileges

Action: Check the accompanying error messages.

ORA-13211: failed to tessellate the window object

Cause: An internal error was encountered while trying to tessellate the window object.

Action: Verify the geometric integrity of the window object using the VALIDATE_GEOMETRY_WITH_CONTEXT procedure.

ORA-13212: failed to compare tile with the window object

Cause: The spatial relationship between a generated tile and the specified window object could not be determined.

Action: This is an internal error. Verify the geometry using the `VALIDATE_GEOMETRY_WITH_CONTEXT` procedure. If the procedure does not return any errors, note any accompanying errors and contact Oracle Support Services.

ORA-13213: failed to generate spatial index for window object

Cause: Another error, indicating the real cause of the problem, should accompany this error.

Action: Correct any accompanying errors. If no accompanying error message appears, contact Oracle Support Services.

ORA-13214: failed to compute supercell for window object

Cause: The system was unable to compute the minimum bounding tile or supercell for the geometry.

Action: Another error might accompany this error. Correct the accompanying error. Also, validate the geometry for correctness.

ORA-13215: window object is out of range

Cause: Tessellation did not generate any tiles for this geometry. This error could be caused if the geometry definition puts the geometry outside the domain defined in the `USER_SDO_GEOM_METADATA` view.

Action: Verify that the geometry is valid and within the defined domain.

ORA-13216: failed to update spatial index

Cause: Another error will accompany this message that will indicate the problem.

Action: Correct any accompanying errors. If no accompanying error message appears, contact Oracle Support Services.

ORA-13217: invalid parameters supplied in ALTER INDEX statement

Cause: An error was encountered while trying to parse the parameters clause for the spatial `ALTER INDEX` statement.

Action: Check the Oracle Spatial documentation for the number, syntax, and semantics of expected parameters for the spatial `ALTER INDEX` statement.

ORA-13218: max number of supported index tables reached for [*string*] index

Cause: An `add_index` parameter was passed to `ALTER INDEX` when the number of existing index tables is already at maximum.

Action: Delete one of the index tables before adding another index table.

ORA-13219: failed to create spatial index table [*string*]

Cause: An error was encountered while trying to create the index table.

Action: There is a table in the index's schema with the specified name. The `CREATE INDEX` statement will try to create an index table with this name. Either rename this table or change the name of the index.

ORA-13220: failed to compare tile with the geometry

Cause: The spatial relationship between a generated tile and the specified geometry could not be determined.

Action: This is an internal error. Validate the geometry using the `VALIDATE_GEOMETRY_WITH_CONTEXT` procedure. If the procedure does not return any errors, note any errors that accompany ORA-13220 and contact Oracle Support Services.

ORA-13221: unknown geometry type in the geometry object

Cause: The `SDO_GTYPE` attribute in the geometry object contains an invalid value

Action: Redefine the geometric type in the geometry table using one of the supported `SDO_GTYPE` values. See the Oracle Spatial documentation for an explanation of `SDO_GTYPE` and its possible values.

ORA-13222: failed to compute supercell for geometry in *string*

Cause: The system was unable to compute the minimum bounding tile or supercell for a geometry in the specified table.

Action: Another error might accompany this error. Correct the accompanying error. Also, validate the geometry for correctness.

ORA-13223: duplicate entry for *string* in SDO_GEOM_METADATA

Cause: There are duplicate entries for the given table and column value pair in the `USER_SDO_GEOM_METADATA` view.

Action: Check that the specified table and geometry column names are correct. There should be only one entry per table, geometry column pair in the `USER_SDO_GEOM_METADATA` view.

ORA-13224: zero tolerance specified for layer in USER_SDO_GEOM_METADATA

Cause: A tolerance of zero or NULL is supplied for a layer in `USER_SDO_GEOM_METADATA` view.

Action: Check the tolerance specified to make sure it is a positive value.

ORA-13225: specified index table name is too long for a spatial index

Cause: An index table name is specified which is longer than the supported length of the spatial index table name.

Action: Check the supported size of the index table name and reduce the size of the index name.

ORA-13226: interface not supported without a spatial index

Cause: The geometry table does not have a spatial index.

Action: Verify that the geometry table referenced in the spatial operator has a spatial index on it.

ORA-13227: SDO_LEVEL values for the two index tables do not match

Cause: The `SDO_LEVEL` values for the two index tables used in the spatial join operator do not match.

Action: Verify that two compatible indexes are used for the spatial join operator. Quadtree indexes are compatible if they have the same `SDO_LEVEL` and `SDO_NUMTILES` values

ORA-13228: spatial index create failed due to invalid type

Cause: An Attempt was made to create a spatial index on a column of type other than `SDO_GEOMETRY`.

Action: Make sure that the index is created on a column of type `SDO_GEOMETRY`.

ORA-13230: failed to create temporary table [string] during R-tree creation

Cause: The specified temporary table either already exists or there is not enough tablespace.

Action: Delete the table if it already exists and verify if the current user has CREATE TABLE privileges and has sufficient space in the default or specified tablespace.

ORA-13231: failed to create index table [string] during R-tree creation

Cause: The specified index table either already exists or there is not enough tablespace.

Action: Delete the table if it already exists and verify if the current user has CREATE TABLE privileges and has sufficient space in the default or specified tablespace. If that fails to correct the problem, contact Oracle Support Services.

ORA-13232: failed to allocate memory during R-tree creation

Cause: This feature assumes a minimum of 64K memory for bulk creation.

Action: Create the index for a small subset of the data. Then, use transactional insert operations for the rest of the data.

ORA-13233: failed to create sequence number [string] for R-tree

Cause: The specified sequence number exists.

Action: Delete the sequence object, or contact Oracle Support Services.

ORA-13234: failed to access R-tree-index table [string]

Cause: The index table is either deleted or corrupted.

Action: Rebuild the index or contact Oracle Support Services with accompanying error messages.

ORA-13236: internal error in R-tree processing: [string]

Cause: An internal error occurred in R-tree processing.

Action: Contact Oracle Support Services with the message text.

ORA-13237: internal error during R-tree concurrent updates: [string]

Cause: An inconsistency is encountered during concurrent updates, possibly due to the use of serializable isolation level.

Action: Change the isolation level to "read committed" using the ALTER SESSION statement, or contact Oracle Support Services with the message text.

ORA-13239: sdo_dimensionality not specified during n-d R-tree creation

Cause: An error occurred in reading the dimensionality parameter

Action: Check the documentation for a valid range, and specify the dimensionality as a parameter.

ORA-13240: specified dimensionality greater than that of the query mbr

Cause: An error occurred because of too few values in the query minimum bounding rectangle (MBR).

Action: Omit the dimensionality, or use the dimensionality of the query.

ORA-13241: specified dimensionality does not match that of the data

Cause: An error occurred because the dimensionality specified in the CREATE INDEX statement does not match that of the data.

Action: Change the statement to reflect the data dimensionality.

ORA-13243: specified operator is not supported for 3- or higher-dimensional R-tree

Cause: Currently, an R-tree index with three or more index dimensions can be used only with the SDO_FILTER operator.

Action: Use the SDO_FILTER operator, and check the documentation for the querytype parameter for SDO_FILTER; or contact Oracle Support Services.

ORA-13249: *string*

Cause: An internal error was encountered in the extensible spatial index component. The text of the message is obtained from some other server component.

Action: Contact Oracle Support Services with the exact error text.

ORA-13250: insufficient privileges to modify metadata table entries

Cause: The user requesting the operation does not have the appropriate privileges on the referenced tables.

Action: Check that the specified feature and geometry table names are correct, and then verify that the current user has at least SELECT privilege on those tables.

ORA-13251: duplicate entry *string* in metadata table

Cause: The specified entry already exists in the metadata table.

Action: Check that the specified feature and geometry table names are correct. A feature-geometry table association should be registered only once.

ORA-13260: layer table *string* does not exist

Cause: Data migration source table *layer_SDOGEOM* does not exist.

Action: Ensure that the specified layer name is correct and that the corresponding spatial layer tables exist in the current schema.

ORA-13261: geometry table *string* does not exist

Cause: The specified geometry table does not exist in the current schema.

Action: Create a table containing a column of type SDO_GEOMETRY and a column of type NUMBER for the GID values.

ORA-13262: geometry column *string* does not exist in table *string*

Cause: The specified table does not have a column of type SDO_GEOMETRY.

Action: Alter or re-create the table such that it includes a column of type SDO_GEOMETRY and a column of type NUMBER.

ORA-13263: column *string* in table *string* is not of type SDO_GEOMETRY

Cause: The column intended for storing the geometry is not of type SDO_GEOMETRY.

Action: Alter the column definition to be of type SDO_GEOMETRY.

ORA-13264: geometry identifier column *string* does not exist in table *string*

Cause: The specified table does not contain a GID column.

Action: Confirm that the GID column name was correctly specified and that it exists in the specified table.

ORA-13265: geometry identifier column *string* in table *string* is not of type NUMBER

Cause: GID column is not of type NUMBER.

Action: Alter the table definition such that the column containing the geometry identifier (GID) is of type NUMBER.

ORA-13266: error inserting data into table *string*

Cause: An OCI error occurred, or the user has insufficient quota in the active tablespace, or the rollback segments are too small.

Action: There should be an accompanying error message that indicates the cause of the problem. Take appropriate action to correct the indicated problem.

ORA-13267: error reading data from layer table *string*

Cause: There was an error reading the geometry data from the *layer_SDOGEOM* table.

Action: Verify that *layer_SDOGEOM* and *layer_SDODIM* exist. If they do exist, run `VALIDATE_LAYER_WITH_CONTEXT` on the specified layer.

ORA-13268: error obtaining dimension from USER_SDO_GEOM_METADATA

Cause: There is no entry in the `USER_SDO_GEOM_METADATA` view for the specified geometry table.

Action: Insert an entry for the destination geometry table with the correct dimension information.

ORA-13269: internal error [*string*] encountered when processing geometry table

Cause: An internal error occurred.

Action: Contact Oracle Support Services with the exact error message text.

ORA-13270: OCI error \n*string*

Cause: An OCI error occurred while processing the layer or geometry tables.

Action: Take the appropriate steps to correct the OCI-specific error.

ORA-13271: error allocating memory for geometry object

Cause: Insufficient memory.

Action: Make more memory available to the current session/process.

ORA-13272: geometric object *string* in table *string* is invalid

Cause: The specified object failed the geometric integrity checks performed by the validation function.

Action: Check the Oracle Spatial documentation for information about the geometric integrity checks performed by `VALIDATE_GEOMETRY_WITH_CONTEXT` and correct the geometry definition if required.

ORA-13273: dimension metadata table *string* does not exist

Cause: The *layer_SDODIM* table does not exist.

Action: Verify that the specified layer name is correct and that the *layer_SDODIM* table exists in the current schema.

ORA-13274: operator invoked with non-compatible SRIDs

Cause: A Spatial operator was invoked with a window geometry with an SRID but the layer has no SRID; or the window has no SRID but the layer has an SRID.

Action: Make sure that the layer and window both have an SRID or that they both do not have an SRID.

ORA-13275: spatial index creation failure on unsupported type

Cause: An attempt was made to create a spatial index create on a column that is not of type SDO_GEOMETRY.

Action: A spatial index can only be created on a column of type SDO_GEOMETRY. Make sure the indexed column is of type SDO_GEOMETRY.

ORA-13276: internal error [*string*] in coordinate transformation

Cause: OCI internal error.

Action: Contact Oracle Support Services with the exact error message text.

ORA-13278: failure to convert SRID to native format

Cause: OCI internal error.

Action: Contact Oracle Support Services with the exact error message text.

ORA-13281: failure in execution of SQL statement to retrieve WKT

Cause: OCI internal error, or SRID does not match a table entry.

Action: Check that a valid SRID is being used.

ORA-13282: failure on initialization of coordinate transformation

Cause: Parsing error on source or destination coordinate system WKT, or incompatible coordinate systems.

Action: Check the validity of the WKT for table entries, and check if the requested transformation is valid.

ORA-13283: failure to get new geometry object for conversion in place

Cause: OCI internal error.

Action: Contact Oracle Support Services with the exact error message text.

ORA-13284: failure to copy geometry object for conversion in place

Cause: OCI internal error.

Action: Contact Oracle Support Services with the exact error message text.

ORA-13285: Geometry coordinate transformation error

Cause: A coordinate pair was out of valid range for a conversion/projection.

Action: Check that data to be transformed is consistent with the desired conversion/projection.

ORA-13287: can't transform unknown gtype

Cause: A geometry with a gtype of ≤ 0 was specified for transformation. Only a gtype ≥ 1 is allowed.

Action: Check the Oracle Spatial documentation for SDO_GTYPE values, and specify a value whose last digit is 1 or higher.

ORA-13288: point coordinate transformation error

Cause: An internal error occurred while transforming points.

Action: Check the accompanying error messages.

ORA-13290: the specified unit is not supported

Cause: An Oracle Spatial function was called with an unknown UNIT value.

Action: Check Spatial documentation for the supported units, and call the function with the correct UNIT parameter.

ORA-13291: conversion error between the specified unit and standard unit

Cause: Cannot convert the specified unit from/to standard unit for linear distance, angle, or area.

Action: Check the unit specification and respecify it.

ORA-13292: incorrect ARC_TOLERANCE specification

Cause: When a SDO_BUFFER or SDO_AGGR_BUFFER function is called on a geodetic geometry, or SDO_ARC_DENSIFY is called, ARC_TOLERANCE must be specified, and it should not be less than the tolerance specified for the geometry.

Action: Check ARC_TOLERANCE specification and make sure it is correct.

ORA-13293: cannot specify unit for geometry without a georeferenced SRID

Cause: An Oracle Spatial function with a UNIT parameter was called on a geometry without a georeferenced SRID.

Action: Make sure that spatial functions with UNIT parameters are only called on geometries with georeferenced SRIDs.

ORA-13294: cannot transform geometry containing circular arcs

Cause: It is impossible to transform a 3-point representation of a circular arc without distortion.

Action: Make sure a geometry does not contain circular arcs.

ORA-13295: geometry objects are in different coordinate systems

Cause: An Oracle Spatial function was called with two geometries that have different SRIDs.

Action: Transform geometry objects to be in the same coordinate system and call the spatial function.

ORA-13296: incorrect coordinate system specification

Cause: Wrong numbers in WKT for Earth radius or flattening for the current SRID.

Action: Check WKT in the MDSYS.CS_SRS table for Earth radius and inverse flattening.

ORA-13300: single point transform error

Cause: Low-level coordinate transformation error trap.

Action: Check the accompanying error messages.

ORA-13303: failure to retrieve a geometry object from a table

Cause: OCI internal error.

Action: Contact Oracle Support Services with the exact error message text.

ORA-13304: failure to insert a transformed geometry object in a table

Cause: OCI internal error.

Action: Contact Oracle Support Services with the exact error message text.

ORA-13330: invalid MASK

Cause: The MASK passed to the RELATE function is not valid.

Action: Verify that the mask is not NULL. See the Oracle Spatial documentation for a list of supported masks.

ORA-13331: invalid LRS segment

Cause: The given LRS segment was not a valid line string.

Action: A valid LRS geometric segment is a line string geometry in Oracle Spatial. It could be a simple or compound line string (made of lines or arcs, or both). The dimension information must include the measure dimension as the last element in the Oracle Spatial metadata. Currently, the number of dimensions for an LRS segment must be greater than 2 (x/y or longitude/latitude, plus measure)

ORA-13332: invalid LRS point

Cause: The specified LRS point was not a point geometry with measure information.

Action: Check the given point geometry. A valid LRS point is a point geometry in Oracle Spatial with an additional dimension for measure.

ORA-13333: invalid LRS measure

Cause: The given measure for linear referencing was out of range.

Action: Redefine the measure.

ORA-13334: LRS segments not connected

Cause: The specified geometric segments are not connected.

Action: Check the start/end points of the given geometric segments.

ORA-13335: LRS measure information not defined

Cause: The measure information of a geometric segment was not assigned (IS NULL).

Action: Assign/define the measure information. An LRS geometric segment is defined if its start and end measure are assigned (non-null).

ORA-13336: failure in converting standard diminfo/geometry to LRS dim/geom

Cause: There is no room for the measure dimension in the given diminfo, or the specified standard geometry is not a point a line string.

Action: Check if the diminfo dimensions are less than 3 or if the geometry type is point or line string.

ORA-13337: failure in concatenating LRS polygons

Cause: LRS concatenation involving LRS polygons is not supported.

Action: Check the geometry and element types to make sure the concatenate operation is not called with a polygon type.

ORA-13338: failure in reversing LRS polygon/collection geometry

Cause: Reversing an LRS polygon/collection geometry produces an invalid geometry.

Action: Check the geometry type to make sure this operation is called on non-polygon geometries.

ORA-13339: LRS polygon clipping across multiple rings

Cause: Clipping (dynseg) a polygon across multiple rings is not allowed.

Action: Polygon clipping is allowed only for a single ring.

ORA-13340: a point geometry has more than one coordinate

Cause: A geometry, specified as being a point, has more than one coordinate in its definition.

Action: A point has only one coordinate. If this geometry is intended to represent a point cluster, line, or polygon, set the appropriate SDO_GTYPE or SDO_ETYPE value. If this is a single point object, remove the extraneous coordinates from its definition.

ORA-13341: a line geometry has fewer than two coordinates

Cause: A geometry, specified as being a line, has fewer than two coordinates in its definition.

Action: A line must consist of at least two distinct coordinates. Correct the geometric definition, or set the appropriate SDO_GTYPE or SDO_ETYPE attribute for this geometry.

ORA-13342: an arc geometry has fewer than three coordinates

Cause: A geometry, specified as being an arc, has fewer than three coordinates in its definition.

Action: An arc must consist of at least three distinct coordinates. Correct the geometric definition, or set the appropriate SDO_GTYPE or SDO_ETYPE attribute for this geometry.

ORA-13343: a polygon geometry has fewer than four coordinates

Cause: A geometry, specified as being a polygon, has fewer than four coordinates in its definition.

Action: A polygon must consist of at least four distinct coordinates. Correct the geometric definition, or set the appropriate SDO_GTYPE or SDO_ETYPE attribute for this geometry.

ORA-13344: an arcpolygon geometry has fewer than five coordinates

Cause: A geometry, specified as being an arcpolygon, has fewer than five coordinates in its definition.

Action: An arcpolygon must consist of at least five coordinates. An arcpolygon consists of an ordered sequence of arcs, each of which must be described using three coordinates. Since arcs are connected the end-point of the first is the start of the second and does not have to be repeated. Correct the geometric definition, or set the appropriate SDO_GTYPE or SDO_ETYPE attribute for this geometry.

ORA-13345: a compound polygon geometry has fewer than five coordinates

Cause: A geometry, specified as being a compound polygon, has fewer than five coordinates in its definition.

Action: A compound polygon must contain at least five coordinates. A compound polygon consists of at least one arc and one line, each of which must be described using three and at least two distinct coordinates respectively. Correct the geometric definition, or set the appropriate SDO_GTYPE or SDO_ETYPE attribute for this geometry.

ORA-13346: the coordinates defining an arc are collinear

Cause: Invalid definition of an arc. An arc is defined using three non-collinear coordinates.

Action: Alter the definition of the arc, or set the SDO_ETYPE or SDO_GTYPE to the line type.

ORA-13347: the coordinates defining an arc are not distinct

Cause: Two or more of the three points defining an arc are the same.

Action: Alter the definition of the arc to ensure that three distinct coordinate values are used.

ORA-13348: polygon boundary is not closed

Cause: The boundary of a polygon does not close.

Action: Alter the coordinate values or the definition of the SDO_GTYPE or SDO_ETYPE attribute of the geometry.

ORA-13349: polygon boundary crosses itself

Cause: The boundary of a polygon intersects itself.

Action: Correct the geometric definition of the object.

ORA-13350: two or more rings of a complex polygon touch

Cause: The inner or outer rings of a complex polygon touch.

Action: All rings of a complex polygon must be disjoint. Correct the geometric definition of the object.

ORA-13351: two or more rings of a complex polygon overlap

Cause: The inner or outer rings of a complex polygon overlap.

Action: All rings of a complex polygon must be disjoint. Correct the geometric definition of the object.

ORA-13352: the coordinates do not describe a circle

Cause: The set of coordinates used to describe a circle are incorrect.

Action: Confirm that the set of coordinates actually represent points on the circumference of a circle.

ORA-13353: ELEM_INFO_ARRAY not grouped in threes

Cause: The ELEM_INFO_ARRAY in an SDO_GEOMETRY definition has more or fewer elements than expected.

Action: Confirm that the number of elements in ELEM_INFO_ARRAY is divisible by 3.

ORA-13354: incorrect offset in ELEM_INFO_ARRAY

Cause: The offset field in ELEM_INFO_ARRAY of an SDO_GEOMETRY definition references an invalid array subscript in SDO_ORDINATE_ARRAY.

Action: Confirm that the offset is a valid array subscript in SDO_ORDINATE_ARRAY.

ORA-13355: SDO_ORDINATE_ARRAY not grouped by number of dimensions specified

Cause: The number of elements in SDO_ORDINATE_ARRAY is not a multiple of the number of dimensions supplied by the user.

Action: Confirm that the number of dimensions is consistent with data representation in SDO_ORDINATE_ARRAY.

ORA-13356: adjacent points in a geometry are redundant

Cause: There are repeated points in the sequence of coordinates.

Action: Remove the redundant point.

ORA-13357: extent type does not contain 2 points

Cause: Extent type should be represented by two points: lower left and upper right.

Action: Confirm that there are only two points for an extent type.

ORA-13358: circle type does not contain 3 points

Cause: Circle type should be represented by three distinct points on the circumference.

Action: Confirm that there are only three points for a circle type.

ORA-13359: extent does not have an area

Cause: The two points representing the extent are identical.

Action: Confirm that the two points describing the extent type are distinct.

ORA-13360: invalid subtype in a compound type

Cause: This subtype is not allowed within the ETYPE specified.

Action: Check the Oracle Spatial documentation for type definitions.

ORA-13361: not enough sub-elements within a compound ETYPE

Cause: The compound type declare more sub-elements than actually defined.

Action: Confirm that the number of sub-elements is consistent with the compound type declaration.

ORA-13362: disjoint sub-element in a compound polygon

Cause: Compound polygon must describe an enclosed area.

Action: Confirm that all sub-elements are connected.

ORA-13363: no valid ETYPE in the geometry

Cause: None of the ETYPES within the geometry is supported.

Action: Confirm that there is at least one valid ETYPE.

ORA-13364: layer dimensionality does not match geometry dimensions

Cause: The spatial layer has a geometry with a different dimensions than the dimensions specified for the layer.

Action: Make sure that all geometries in a layer have the same dimensions and that they match the dimensions in the SDO_DIM_ARRAY object for the layer in the USER_SDO_GEOM_METADATA view.

ORA-13365: layer SRID does not match geometry SRID

Cause: The spatial layer has a geometry with a different SRID than the SRID specified for the layer.

Action: Make sure that all geometries in a layer have the same SRID and that the SRIDs match the SRID for the layer in the USER_SDO_GEOM_METADATA view.

ORA-13366: invalid combination of interior exterior rings

Cause: In an Oracle Spatial geometry, interior and exterior rings are not used consistently.

Action: Make sure that the interior rings corresponding to an exterior ring follow the exterior ring in the ordinate array.

ORA-13367: wrong orientation for interior/exterior rings

Cause: In an Oracle Spatial geometry, the exterior and/or interior rings are not oriented correctly.

Action: Be sure that the exterior rings are oriented counterclockwise and the interior rings are oriented clockwise.

ORA-13368: simple polygon type has more than one exterior ring

Cause: In a polygon geometry there is more than one exterior ring.

Action: Set the type to be multipolygon if more than one exterior ring is present in the geometry.

ORA-13369: invalid value for etype in the 4-digit format

Cause: A 4-digit etype for a non-polygon type element is used, or the orientation is not a valid orientation for interior/exterior rings of the polygon.

Action: Correct the geometry definition.

ORA-13370: failure in applying 3D LRS functions

Cause: Only non-geodetic 3D line string geometries (made of line segments) are supported for 3D LRS functions.

Action: Check the geometry and element types and the SRID values.

ORA-13371: invalid position of measure dimension

Cause: LRS measure dimension has to be after spatial dimensions. The position has to be either 3rd or 4th in the dim_info_array.

Action: Check the geometry's gtype and its position in the dim_info_array.

ORA-13372: failure in modifying metadata for a table with spatial index

Cause: Modifying the metadata after the index is created will cause an inconsistency between the geometry's gtype and diminfo.

Action: Modify (or Prepare) metadata before creating an index on the SDO_GEOMETRY column.

ORA-13373: invalid line segment in geodetic data

Cause: A geodetic line segment was not less than half of a great circle.

Action: Densify the line by adding points.

ORA-13374: SDO_MBR not supported for geodetic data

Cause: The SDO_MBR functionality is not supported for geodetic data.

Action: Find an alternative function that can be used in this context.

ORA-13375: the layer is of type [string] while geometry inserted has type [string]

Cause: The layer has a type that is different or inconsistent with the type of the current geometry.

Action: Change the geometry type to agree with the layer type, or change the layer type to agree with the geometry type.

ORA-13376: invalid type name specified for layer_gtype parameter

Cause: An invalid type name is specified for the layer_gtype constraint.

Action: See the Spatial documentation for of valid keywords that can be used in defining a layer_gtype constraint.

ORA-13377: invalid combination of elements with orientation

Cause: An element of the geometry has orientation specified while some other element has no orientation specified (4-digit etype).

Action: Make sure all the polygon elements have orientation specified using the 4-digit etype notation.

ORA-13378: invalid index for element to be extracted

Cause: An invalid (or out of bounds) index was specified for extracting an element from a geometry.

Action: Make sure the parameters to the extract function are in the valid range for the geometry.

ORA-13379: invalid index for sub-element to be extracted

Cause: An invalid (or out of bounds) index was specified for extracting a sub-element from a geometry.

Action: Make sure the parameters to the extract function are in the valid range for the geometry.

ORA-13380: network not found

Cause: The specified network was not found in the network metadata.

Action: Insert the network information in the USER_SDO_NETWORK_METADATA view.

ORA-13381: table:*string* not found in network:*string*

Cause: The specified table was not found in the network metadata.

Action: Insert the table information in the USER_SDO_NETWORK_METADATA view.

ORA-13382: geometry metadata (table:*string* column:*string*) not found in spatial network:*string*

Cause: The specified geometry metadata was not found in the spatial network metadata.

Action: Insert the spatial metadata information in the USER_SDO_NETWORK_METADATA view.

ORA-13383: inconsistent network metadata: *string*

Cause: There was an inconsistency between the network metadata and the node/link information.

Action: Check the network metadata and the node/link information.

ORA-13384: error in network schema: *string*

Cause: The network table(s) did not have required column(s)

Action: Check the network schema.

ORA-13385: error in network manager: [*string*]

Cause: There was an internal error in network manager.

Action: Contact Oracle Customer Support for more help.

ORA-13386: commit/rollback operation error: [*string*]

Cause: The index-level changes were not fully incorporated as part of the commit or rollback operation.

Action: Correct the specified error and use the following statement: ALTER INDEX *index-name* PARAMETERS ('index_status=synchronize');

ORA-13387: sdo_batch_size for array inserts should be in the range [*number,number*]

Cause: The specified value for sdo_batch_size was too high or too low.

Action: Change the value to be in the specified range.

ORA-13388: invalid value for *dst_spec* parameter

Cause: The *dst_spec* parameter was specified in the wrong format.

Action: Check the documentation for this parameter.

ORA-13389: unable to compute buffers or intersections in analysis function

Cause: There was an internal error in computing the buffers or intersections in the specified spatial analysis function.

Action: Modify the tolerance value in the *USER_SDO_GEOM_METADATA* view before invoking the spatial analysis function.

ORA-13390: error in spatial analysis and mining function: [*string*]

Cause: There was an internal error in the specified analysis function.

Action: Contact Oracle Customer Support for more help.

ORA-13391: *string*

Cause: An attempt was made to violate GeoRaster management restrictions.

Action: Check the documentation for more detailed information.

ORA-13392: status report error: *string*

Cause: There was an error on status report related operation.

Action: Check the error message for details.

ORA-13393: null or invalid *string* parameter

Cause: The operation failed because the input parameter was null or invalid.

Action: Correct the parameter and try again.

ORA-13397: different dimension sizes in the input GeoRaster objects

Cause: The two input GeoRaster objects had different dimension sizes.

Action: Check the documentation and make sure the dimension size is same for both input GeoRaster objects.

ORA-13398: invalid expression parameter: *string*

Cause: The expression parameter was not a valid math expression.

Action: Check the documentation and make sure the expression parameter is correct.

ORA-13399: invalid condition parameter: *string*

Cause: The condition parameter was not a valid boolean expression.

Action: Check the documentation and make sure the condition parameter is correct.

ORA-13400: duplicate entry for *string* in *USER_SDO_GEOR_SYSDATA* view

Cause: The current operation caused a duplicate *RASTER_DATA_TABLE* and *RASTER_ID* combination to be inserted into the *USER_SDO_GEOR_SYSDATA* view.

Action: Ensure that the *RASTER_DATA_TABLE* and *RASTER_ID* combination to be inserted into the *USER_SDO_GEOR_SYSDATA* view is unique.

ORA-13401: duplicate entry for *string* in *USER_SDO_GEOR_SYSDATA* view

Cause: The *RASTER_DATA_TABLE* and *RASTER_ID* columns contained the same information in two or more rows in the *USER_SDO_GEOR_SYSDATA* view.

Action: Ensure that the RASTER_DATA_TABLE and RASTER_ID columns in the USER_SDO_GEOG_SYSDATA view contain the correct information, and that the value pair is unique for each row.

ORA-13402: the rasterType is null or not supported

Cause: The specified rasterType was null or not supported.

Action: Check the documentation for the rasterType number and/or formats supported by GeoRaster.

ORA-13403: invalid rasterDataTable specification: *string*

Cause: Each GeoRaster object must have an associated raster data table whose name is unique among raster data table names in the database. If the GeoRaster object is not empty and not blank, the raster data table must exist, be visible in the current schema, be defined in the same schema as the GeoRaster data table, and be an object table of SDO_RASTER type. However, one or more of these requirements were not met.

Action: Check the rasterDataTable specification and ensure that all relevant raster data table requirements are met.

ORA-13404: invalid ultCoordinate parameter

Cause: The ultCoordinate array parameter had the wrong length or contained an invalid value.

Action: Check the documentation, and make sure the ultCoordinate parameter is correct.

ORA-13405: null or invalid dimensionSize parameter

Cause: The dimensionSize array parameter was null, had the wrong length, or contained an invalid value.

Action: Check the documentation, and make sure the dimensionSize parameter is correct.

ORA-13406: null or invalid GeoRaster object for output

Cause: The GeoRaster object for output was null or invalid.

Action: Make sure the GeoRaster object for output has been initialized properly.

ORA-13407: invalid storage parameter *string*

Cause: The storage parameter contained an invalid specification.

Action: Check the documentation, and make sure the storage parameter is correct.

ORA-13408: invalid blockSize storage parameter

Cause: The blockSize storage parameter had the wrong length or contained invalid value.

Action: Check the documentation, and make sure the blockSize storage parameter is correct.

ORA-13409: null or invalid pyramidLevel parameter

Cause: The specified pyramidLevel parameter was null or invalid.

Action: Make sure the pyramidLevel parameter specifies a valid pyramid level value for the GeoRaster object.

ORA-13410: invalid layerNumbers or bandNumbers parameter

Cause: The layerNumbers or bandNumbers parameter was invalid.

Action: Check the documentation and make sure the layerNumbers or bandNumbers parameter is valid.

ORA-13411: subset results in null data set

Cause: The intersection of cropArea and source GeoRaster object was null.

Action: Check the documentation, and make sure the cropArea parameter is correct.

ORA-13412: invalid scale parameterstring

Cause: The scale parameter contained an invalid specification.

Action: Check the documentation, and make sure the scale parameter is correct.

ORA-13413: null or invalid resampling parameter

Cause: The resampling parameter was null or invalid.

Action: Check the documentation, and make sure the resampling parameter is correct.

ORA-13414: invalid pyramid parameter

Cause: The pyramid parameter was invalid.

Action: Check the documentation, and make sure the pyramid parameter is correct.

ORA-13415: invalid or out of scope point specification

Cause: The point position specified by the <ptGeom, layerNumber> or <rowNumber, colNumber, bandNumber> parameter combination was invalid or out of scope.

Action: Make sure the parameter(s) specify a valid point that is or can be translated into a cell position inside the cell space of the GeoRaster object.

ORA-13416: invalid geometry parameter

Cause: The geometry parameter did not specify a valid single-point geometry.

Action: Specify a valid single-point geometry.

ORA-13417: null or invalid layerNumber parameter

Cause: The layerNumber parameter was null or out of scope.

Action: Specify a valid layerNumber parameter.

ORA-13418: null or invalid parameter(s) for set functions

Cause: A parameter for set metadata operations was null or invalid.

Action: Check the documentation for information about the parameters.

ORA-13419: cannot perform mosaic operation: string

Cause: An attempt to perform a mosaic operation failed.

Action: Check the error message for details.

ORA-13420: the SRID of the geometry parameter was not null

Cause: The input geometry must be in the GeoRaster cell space, which has a null SRID value.

Action: Make sure the geometry parameter has a null SRID.

ORA-13421: NULL or invalid cell value

Cause: The cell value was NULL or out-of-scope.

Action: Make sure the cell value is not NULL and is in the range as designated by the cellDepth definition of the specified GeoRaster object.

ORA-13422: invalid model coordinate parameter

Cause: The model coordinate array parameter had the wrong length or had null ordinate element(s).

Action: Make sure the model coordinate parameter is valid.

ORA-13423: invalid cell coordinate parameter

Cause: The cell coordinate array parameter had the wrong length or had null ordinate element(s).

Action: Make sure the cell coordinate parameter is valid.

ORA-13424: the GeoRaster object is not spatially referenced

Cause: The GeoRaster object was not spatially referenced.

Action: Make sure the GeoRaster object is spatially referenced.

ORA-13425: invalid background filling value parameter

Cause: The background filling value parameter was invalid either because the array had the wrong size or because some of the element values were invalid.

Action: Make sure the parameter that specifies the background filling value is valid. The size of the array must equal to either 1 (the value is for all bands) or the exact band dimension size. The element values must be valid cell values as determined by the cell depth.

ORA-13426: invalid window parameter

Cause: The specified window parameter was invalid.

Action: Specify a valid window parameter. Check the documentation for details.

ORA-13427: invalid bitmap mask

Cause: The bitmap mask was not a valid 1BIT GeoRaster object, or it had the wrong dimension sizes.

Action: Make sure the bitmap mask is a valid 1BIT GeoRaster object with only one band, and the row and column dimension sizes of the bitmap mask are the same as those of the target GeoRaster object.

ORA-13428: invalid modelCoordinateLocation

Cause: The program [or user] specified a modelCoordinateLocation that is not supported, or the modelCoordinateLocation of the GeoRaster object was wrong.

Action: Set or specify the modelCoordinateLocation to be CENTER (0) or UPPERLEFT (1).

ORA-13429: invalid xCoefficients or yCoefficients parameter(s)

Cause: An attempt to perform a georeference operation failed. Possible reasons include xCoefficients or yCoefficients having the wrong number of coefficients or invalid coefficients.

Action: Check the documentation for supported coefficient specifications.

ORA-13430: the GeoRaster object has null attribute(s)

Cause: The metadata or rasterType of the GeoRaster object was null.

Action: This object may only be used as an output parameter of procedures or functions. It is not valid for other purposes.

ORA-13431: GeoRaster metadata rasterType error

Cause: The rasterType in the metadata of the GeoRaster object was inconsistent with the GeoRaster rasterType attribute.

Action: Make sure the rasterType in the metadata of the GeoRaster object and the GeoRaster rasterType attribute have the same value.

ORA-13432: NULL or invalid blankCellValue

Cause: The blankCellValue element could not be found in the metadata of a blank GeoRaster object, or the specified blankCellValue element value was NULL or invalid.

Action: Call SDO_GEOR.setBlankCellValue to add blankCellValue to the metadata whenever the isBlank element value is TRUE, and make sure that the specified blankCellValue element value is not NULL and is in the range as designated by the cellDepth definition of the GeoRaster object.

ORA-13433: GeoRaster metadata default RGB error

Cause: At least one of the defaultRed, defaultGreen, and defaultBlue values (logical layer numbers) was zero, negative, or out of range.

Action: Check the documentation for details.

ORA-13434: GeoRaster metadata cellRepresentation error

Cause: The cellRepresentation type was not supported.

Action: Check the documentation for supported cellRepresentation types.

ORA-13435: GeoRaster metadata dimension inconsistent

Cause: The specification of dimensions or totalDimensions was inconsistent with rasterType, or vice versa.

Action: Make sure dimension specifications are consistent.

ORA-13436: GeoRaster metadata dimensionSize error

Cause: Either the dimensionSize for each dimension was not specified, or an extraneous dimensionSize was specified.

Action: Add a dimensionSize for each dimension of the GeoRaster object and delete extra dimensionSize elements.

ORA-13437: GeoRaster metadata blocking error

Cause: Either the wrong block number(s) or block size(s) along dimensions were specified, or the block numbers and sizes when taken together were not consistent.

Action: Check the documentation for details.

ORA-13438: GeoRaster metadata pyramid type error

Cause: The specified pyramid type was not supported.

Action: Check the documentation for supported pyramid types.

ORA-13439: GeoRaster metadata pyramid maxLevel error

Cause: The specified maxLevel exceeded the maximum level allowed by the specified pyramid type.

Action: Check the documentation for supported pyramid types and their total level limitations.

ORA-13440: GeoRaster metadata compression type error

Cause: The specified compression type was not supported.

Action: Check the documentation for supported compression types.

ORA-13441: GeoRaster metadata SRS error: *string*

Cause: The specified error relates to the polynomialModel element in the Spatial Reference System (SRS) metadata.

Action: Check the documentation and make sure that a valid polynomial model is specified.

ORA-13442: GeoRaster object not registered: *string*

Cause: There was no sysdata entry for the specified GeoRaster object.

Action: Make sure that a sysdata entry has been inserted for the specified GeoRaster object.

ORA-13443: null or invalid values in *string*

Cause: There were null or invalid component values in the specified metadata.

Action: Check the documentation and make sure that all the component values are valid.

ORA-13444: cannot perform mergeLayers operation

Cause: The two GeoRaster objects whose layers are to be combined together either had different row or column dimension sizes, or their georeferencing information did not match.

Action: Make sure the objects have the same row and column dimension sizes. If neither is georeferenced, their ULTCordinate values must be the same. Otherwise, they must be both georeferenced and cover the same area in the model space.

ORA-13445: NULL or invalid NODATA value or value range

Cause: There was invalid NODATA value or value range in the metadata, or the specified NODATA value or value range was invalid.

Action: Make sure the NODATA value or value range is not NULL and is completely contained in the range as designated by the cellDepth definition of the specified GeoRaster object.

ORA-13446: GeoRaster metadata TRS error

Cause: The GeoRaster Temporal Reference System was not supported.

Action: Set isReferenced to FALSE.

ORA-13447: GeoRaster metadata BRS error

Cause: The GeoRaster Band Reference System was not supported.

Action: Set isReferenced to FALSE.

ORA-13448: GeoRaster metadata BRS error

Cause: The GeoRaster spectral extent specification was incorrect.

Action: The MIN value must be less than the MAX value in the spectralExtent element.

ORA-13449: GeoRaster metadata ULTCordinate error

Cause: The GeoRaster rasterInfo ULTCordinate was not correct.

Action: Check the documentation for restrictions.

ORA-13450: GeoRaster metadata layerInfo error

Cause: The GeoRaster had more than one layerInfo element, or the layerDimension value was not supported.

Action: The current release only supports one layerInfo element; layer can only be defined along one dimension, and this dimension must be BAND.

ORA-13451: GeoRaster metadata scaling function error

Cause: The scaling function had a zero denominator.

Action: Make sure the scaling function denominator is not zero.

ORA-13452: GeoRaster metadata BIN function error

Cause: The bin function data did not match its type.

Action: For EXPLICIT type, provide a binTableName element; otherwise, provide a binFunctionData element.

ORA-13453: GeoRaster metadata layer error

Cause: Too many subLayers were defined for the GeoRaster object, or layerNumber or layerDimensionOrdinate was not assigned correctly.

Action: The total number of logical layers cannot exceed the total number of physical layers, and each logical layer must be assigned a valid physical layer number following the same order. Check the documentation for more details.

ORA-13454: GeoRaster metadata is invalid

Cause: The GeoRaster metadata was invalid against its XML Schema.

Action: Run the schemaValidate routine to find the errors.

ORA-13455: GeoRaster metadata TRS error

Cause: The beginDateTime value was later than the endDateTime value.

Action: Make sure that the beginDateTime value is not later than the endDateTime value.

ORA-13456: GeoRaster cell data error: *string*

Cause: There was an error in the original GeoRaster cell data or in the cell data of the pyramids.

Action: If the error is related to the original GeoRaster cell data, the GeoRaster object is invalid and has to be deleted or manually repaired. If the error is related to pyramids, delete the pyramids and regenerate them.

ORA-13457: bitmap mask cell data error: *string*

Cause: There was an error in the cell data of an original bitmap mask or in the cell data of the pyramids of a bitmap mask.

Action: If the error is related to an original bitmap mask, remove the bitmap mask. If the error is related to the pyramids of a bitmap mask, delete the pyramids and regenerate them.

ORA-13458: GeoRaster metadata SRS error

Cause: The polynomial model did not match the requirements of a rectified GeoRaster object.

Action: Check the documentation for the requirements of the polynomial model for a rectified GeoRaster object, or set isRectified to be false.

ORA-13459: GeoRaster metadata SRS error

Cause: The polynomial model was not an six-parameter transformation, or the six-parameter transformation was not valid.

Action: Check the documentation and make sure the polynomial model is a valid six-parameter affine transformation.

ORA-13460: GeoRaster metadata SRS error

Cause: The referenced GeoRaster object had a zero model space SRID or the specified model space SRID was zero.

Action: Set or specify the model space SRID to be a nonzero number.

ORA-13461: the interleaving type is not supported

Cause: The interleaving type of the GeoRaster object was not supported.

Action: Check the documentation for the interleaving types supported by GeoRaster. Use `SDO_GEOR.changeFormatCopy` to transform the image to a supported interleaving type.

ORA-13462: invalid blocking specification

Cause: The specified blocking configuration was invalid.

Action: Check the documentation for the blocking specification supported by GeoRaster.

ORA-13463: error retrieving GeoRaster data: *string*

Cause: An internal error occurred while retrieving GeoRaster data from the database.

Action: Check the error message for details.

ORA-13464: error loading GeoRaster data: *string*

Cause: An internal error occurred while loading GeoRaster data into the database.

Action: Check the error message for details.

ORA-13465: null or invalid table or column specification

Cause: The specified table or column did not exist, or the column was not a GeoRaster column.

Action: Make sure the specified table exists and the specified column is a GeoRaster column.

ORA-13466: format not appropriate for specified compression method: *string*

Cause: The operation failed because the GeoRaster object had an inappropriate type or format for the specified compression method. The GeoRaster type or format is not supported for the specified compression.

Action: Check the error message for details. Check the documentation for the appropriate GeoRaster types and formats for each compression method. Use `SDO_GEOR.changeFormatCopy` to transform the GeoRaster object to an appropriate format, or apply another compression method.

ORA-13467: unsupported GeoRaster metadata specification: *string*

Cause: The GeoRaster metadata specification is not supported.

Action: Check the documentation for the supported GeoRaster metadata specifications.

ORA-13468: invalid blockMBR

Cause: Invalid blockMBR geometries were stored in the raster data table.

Action: Make sure the blockMBR geometries stored in the raster data table are valid, or call SDO_GEOR.generateBlockMBR() to regenerate the blockMBR geometries.

ORA-13469: cannot perform updateRaster operation

Cause: The data of the source GeoRaster object could not be used to update that of the target GeoRaster object.

Action: Make sure the source and the target GeoRaster objects have the same cell depth, and that both objects are either georeferenced or not georeferenced at all. If both are georeferenced, they should be in the same coordinate system and have the same spatial resolutions.

ORA-13470: target and source layers or bands mismatched

Cause: The number of specified target layers or bands and source layers or bands did not match.

Action: When updating layers or bands of a target GeoRaster object to reflect the associated layers or bands of the source GeoRaster object, specify the same number of layers or bands for both the source and the target objects. Check the documentation for details.

ORA-13471: unable to determine the owner of *string*

Cause: The owner of the specified raster data table could not be determined.

Action: Make sure the GeoRaster object that refers to the raster data table has been registered by inserting the object into a GeoRaster table.

ORA-13472: invalid geometry parameter

Cause: The geometry parameter did not specify a valid geometry.

Action: Specify a valid 2D or 3D geometry. If the model SRID is null or indicates a 2D coordinate system, the geometry must be 2D. If the model SRID indicates a 3D coordinate system, the geometry must either be a 3D geometry or a 2D geometry that can be converted to 3D with the specified vertical axis (or vertical SRID) and ellipsoidal parameters.

ORA-13473: invalid rasterSpec parameter

Cause: The rasterSpec parameter contained an invalid specification.

Action: Check the documentation and make sure the rasterSpec parameter contains only valid keywords and values.

ORA-13474: invalid rasterDataTable name: *string*

Cause: The rasterDataTable name was not a valid nonquoted identifier, it contained a period separator, or not all of the alphanumeric characters were uppercase.

Action: Ensure that the table name is a valid nonquoted identifier without any period separators, and that all the alphanumeric characters are uppercase.

ORA-13475: invalid GeoRaster object for output

Cause: The output GeoRaster object had the same RASTER_DATA_TABLE and RASTER_ID combination as that of an input GeoRaster object.

Action: Ensure that the output GeoRaster object is different from any of the input GeoRaster objects.

ORA-13476: invalid or out of scope point specification

Cause: The point position specified by the point geometry parameter or the rowNumber/colNumber parameter combination was null or out of scope.

Action: Ensure that the parameters specify a valid point that translates or can be translated into a cell position inside the cell space of the GeoRaster object.

ORA-13477: invalid GCP georeferencing specification: *string*

Cause: The specified functional fitting method was not supported, the number of GCPs was insufficient, some GCPs were invalid, or the distribution of the GCPs led to no solution or an unstable solution.

Action: Check the GeoRaster documentation for the supported functional fitting methods and the requirements of GCPs.

ORA-13478: the target SRID is the same as the source GeoRaster object's SRID

Cause: The target SRID was not different from the source GeoRaster object's SRID.

Action: Specify a different valid SRID for the target GeoRaster object.

ORA-13479: cannot reproject

Cause: Reprojection from source to destination projection produced a large distortion.

Action: Check the destination projection and make sure it is suitable for the area covered by the source GeoRaster object. Check the GeoRaster documentation for more information about reprojection.

ORA-13480: the Source Type is not supported

Cause: The specified source type was not supported.

Action: Check the documentation for the source types (such as FILE and HTTP) supported by GeoRaster.

ORA-13481: the destination type is not supported

Cause: The specified destination type was not supported.

Action: Check the documentation for the destination types (such as FILE) supported by GeoRaster.

ORA-13482: GeoRaster object is not initialized for the image

Cause: No GeoRaster object has been initialized for the specified image.

Action: Initialize a GeoRaster object to hold this image before loading it into the database. Check the documentation for details.

ORA-13483: insufficient memory for the specified GeoRaster data

Cause: There was insufficient memory to hold the specified GeoRaster data for this operation.

Action: Use SDO_GEOR.subset to isolate a subset of the GeoRaster data, or reblock the GeoRaster data into smaller sized blocks. Check the documentation for details.

ORA-13484: the file format or compression type is not supported: *string*

Cause: The file format or compression type was not supported.

Action: Check the documentation for formats that are currently supported by GeoRaster.

ORA-13485: error occurred during compression or decompression: *string*

Cause: The operation could not be completed because an error occurred during compression or decompression. Check the error message for details.

Action: Check that the GeoRaster object is valid, that its metadata is valid for the specified compression format, and that valid parameters are passed into the compression or decompression operation.

ORA-13486: invalid or insufficient GeoTIFF metadata to georeference the GeoRaster object: *string*

Cause: The GeoTIFF metadata of the specified input image contained invalid or insufficient information to georeference the GeoRaster object.

Action: Check the error message for details.

ORA-13487: SRID not found for source coordinate system metadata

Cause: No SRID was found in the Oracle Spatial CS_SRS table to match the source coordinate system metadata.

Action: Add a user-defined coordinate reference system for this coordinate system, as explained in the Oracle Spatial documentation.

ORA-13488: cannot perform transformation: *string*

Cause: An attempt to perform a transformation operation failed.

Action: Check the error message for details.

ORA-13497: *string*

Cause: This is an internal GeoRaster error.

Action: Contact Oracle Support Services. You may want to make sure the GeoRaster object is valid before you do so.

ORA-13498: *string*

Cause: An error related to an external plugin was encountered in the GeoRaster component.

Action: Check the documentation for the external plugin, or contact the plugin provider and supply the exact error text.

ORA-13499: *string*

Cause: This is an internal Spatial error.

Action: Contact Oracle Support Services.

ORA-13500: SYSAUX DATAFILE clause specified more than once

Cause: The CREATE DATABASE command contains more than one SYSAUX DATAFILE clause.

Action: Specify at most one SYSAUX DATAFILE clause.

ORA-13501: Cannot drop SYSAUX tablespace

Cause: Tried to drop SYSAUX tablespace

Action: None

ORA-13502: Cannot rename SYSAUX tablespace

Cause: An attempt to rename the SYSAUX tablespace failed.

Action: No action required.

ORA-13503: Creating SYSAUX tablespace with invalid attributes

Cause: An attempt to create the SYSAUX tablespace with invalid attributes.

Action: Create SYSAUX tablespace with ONLINE, PERMANENT, EXTENT MANAGEMENT LOCAL, SEGMENT SPACE MANAGEMENT AUTO attributes.

ORA-13504: No SYSAUX datafile clause specified

Cause: If Create Database has the datafile clause, then SYSAUX datafile clause has to be specified, unless using OMF.

Action: Specify the SYSAUX datafile clause.

ORA-13505: SYSAUX tablespace can not be made read only

Cause: Attempting to set the SYSAUX tablespace to read only. The SYSAUX tablespace must remain read write for database operation.

Action: Leave SYSAUX tablespace read write.

ORA-13506: operation failed due to invalid snapshot range (*string, string*)

Cause: An attempt was made to perform operation with an invalid Start/End Snapshot Pair.

Action: Choose a valid Start/End Snapshot Pair.

ORA-13509: error encountered during updates to a AWR table

Cause: An update error occurred during OCI operation due to an underlying error.

Action: Check associated OCI error. Correct problem and retry the operation.

ORA-13510: invalid RETENTION *string*, must be in the range (*string, string*)

Cause: The user has specified a RETENTION setting that is not in the supported range of (MIN, MAX).

Action: Choose a valid RETENTION setting and retry the operation.

ORA-13511: invalid INTERVAL *string*, must be in the range (*string, string*)

Cause: The user has specified a INTERVAL setting that is not in the supported range of (MIN, MAX).

Action: Choose a valid INTERVAL setting and retry the operation.

ORA-13514: Metric Capture too close to last capture, group *string*

Cause: The metric capture cannot be executed because it is too close to the last capture (within 1 centi-second).

Action: add some delay and reissue command to retry.

ORA-13515: Error encountered during Database Usage Statistics capture

Cause: Error occurred during OCI operation due to underlying error.

Action: Check associated OCI error. Correct problem and retry the operation.

ORA-13516: AWR Operation failed: *string*

Cause: The operation failed because AWR is not available. The possible causes are: AWR schema not yet created; AWR not enabled; AWR schema not initialized; or database not open or is running in READONLY or STANDBY mode.

Action: check the above conditions and retry the operation.

ORA-13517: Baseline (id = *string*) does not exist

Cause: The operation failed because the specified baseline ID does not exist in the Workload Repository.

Action: check the baseline id and retry the operation.

ORA-13518: Invalid database id (*string*)

Cause: The operation failed because the specified database ID does not exist in the Workload Repository.

Action: check the database id and retry the operation.

ORA-13519: Database id (*string*) exists in the workload repository

Cause: The operation failed because the specified database ID already exists in the Workload Repository.

Action: check the database id and retry the operation.

ORA-13520: Database id (*string*) not registered, Status = *string*

Cause: The operation failed because the specified database ID was not registered in the Workload Repository properly.

Action: check the status of database id and retry the operation.

ORA-13521: Unregister operation on local Database id (*string*) not allowed

Cause: The operation failed because the local database ID cannot be unregistered from the Workload Repository.

Action: check the database id and retry the operation.

ORA-13523: unable to allocate required space for return type

Cause: Out of memory to allocate the space for the return variable for an external procedure.

Action: Try operation again.

ORA-13524: error encountered while retrieving baseline information

Cause: A read error occurred during the OCI operation to retrieve the baseline information

Action: Check associated error. Correct problem and retry the operation.

ORA-13525: error with computing space usage for sysaux occupant

Cause: Error occurred during OCI operation due to underlying error.

Action: Check associated OCI error. Correct problem and retry the operation.

ORA-13526: baseline (*string*) does not exist

Cause: The operation failed because the specified baseline name does not exist in the Workload Repository.

Action: check the baseline name and retry the operation.

ORA-13527: invalid baseline name

Cause: The operation failed because the specified baseline name is invalid.

Action: check the baseline name and retry the operation.

ORA-13528: name (*string*) is already used by an existing baseline

Cause: The operation failed because the specified baseline name already exists in the Workload Repository.

Action: check the baseline name and retry the operation.

ORA-13529: Error occurred when flushing AWR table group

Cause: An error occurred during the flushing of a table group. Because of the error in the group, we are unable to flush this table.

Action: Check the error associated with the table group.

ORA-13530: invalid TOPNSQL *string*, must be in the range (*string*, *string*)

Cause: The user has specified a TOPNSQL setting that is not in the supported range of (MIN, MAX).

Action: Choose a valid TOPNSQL setting and retry the operation.

ORA-13531: SQL Text was purged from AWR before the operation completed

Cause: A SQL was purged from AWR before the operation completed.

Action: Retry the operation.

ORA-13532: SQL ID [*string*] already exists

Cause: The operation failed because the specified SQL ID already existed in the repository.

Action: Check the SQL ID and retry the operation.

ORA-13533: invalid SQL ID

Cause: The operation failed because the specified SQL ID was invalid.

Action: Check the SQL ID and retry the operation.

ORA-13534: Current SQL count(*string*) reached maximum allowed (*string*)

Cause: The operation failed because the maximum allowed colored SQL was exceeded.

Action: Check the count for colored SQL.

ORA-13535: name (*string*) is already used by an existing baseline template

Cause: The operation failed because the specified baseline template name already existed in the Workload Repository.

Action: Check the baseline template name and retry the operation.

ORA-13536: baseline template (*string*) does not exist

Cause: The operation failed because the specified baseline template name did not exist in the Workload Repository.

Action: Check the baseline template name and retry the operation.

ORA-13537: invalid input for create baseline template (*string*, *string*)

Cause: Invalid input was specified for the create baseline template routine.

Action: Check the argument displayed in the error message text.

ORA-13538: invalid value for baseline expiration (*string*)

Cause: An invalid value was specified for the expiration of a baseline. The expiration is specified in number of days, and the expiration must be at least one day.

Action: Check the value for expiration.

ORA-13539: invalid input for modify baseline window size (*string*, *string*)

Cause: Invalid input was specified for the modify baseline window size routine.

Action: Check the argument displayed in the error message text.

ORA-13540: operation not allowed on system moving window baseline (*string*)

Cause: The requested operation was not allowed on the system moving window baseline.

Action: Retry the operation with another baseline name.

ORA-13541: system moving window baseline size (*string*) greater than retention (*string*)

Cause: The system moving window baseline size must be less than the retention setting. The specified window size or retention violate this.

Action: Check the moving window baseline size or retention.

ORA-13542: baseline ID (*string*) does not exist

Cause: The operation failed because the specified baseline ID did not exist in the Workload Repository.

Action: Check the baseline ID and retry the operation.

ORA-13543: error encountered while retrieving baseline template information

Cause: A read error occurred during the OCI operation to retrieve the baseline template information.

Action: Check associated error. Correct problem and retry the operation.

ORA-13544: error encountered while automatically generating a baseline

Cause: An error occurred while automatically generating a baseline based on the template information.

Action: Look in the trace file for more error information.

ORA-13545: invalid baseline template name

Cause: The operation failed because the specified baseline template name was an invalid identifier.

Action: Check the baseline template name and retry the operation.

ORA-13546: Error encountered during maintenance of Adaptive Thresholds

Cause: Error occurred during OCI operation due to underlying error.

Action: Check associated OCI error. Correct problem and retry the operation.

ORA-13547: Unable to drop baseline since it is in use by *string*

Cause: The system is not able to drop the baseline since the baseline is in use by a functionality that depends on its existence.

Action: Note the name of the functionality using the baseline, and check if the functionality still needs the baseline.

ORA-13548: Unable to find valid snapshot IDs for the inputted baseline time range

Cause: The system is not able to find valid snapshot IDs for the inputted time range while attempting to create a baseline.

Action: Check that the inputted time range has at least two valid snapshots. The `dba_hist_snapshot` displays the snapshot id and time information.

ORA-13549: invalid input for create baseline with time range (*string*)

Cause: Invalid time input was specified for the create baseline routine.

Action: Check the argument displayed in the error message text.

ORA-13550: value "*string*" of length (*string*) exceeded maximum length (*string*) for parameter [*string*]

Cause: An invalid parameter was specified for the Automatic Workload Repository (AWR) registration routine.

Action: Check the argument displayed in the error message text.

ORA-13551: source database same [*string*] not found in AWR

Cause: An invalid parameter was specified for the Automatic Workload Repository (AWR) operation.

Action: Check the argument displayed in the error message text.

ORA-13552: parameter [*string*] of value [*string*] mismatched with AWR registered value [*string*]

Cause: An invalid parameter was specified for the Automatic Workload Repository (AWR) operation.

Action: Check the argument displayed in the error message text.

ORA-13553: operation failed - missing parameter [*string*]

Cause: The required parameter was missing for the Automatic Workload Repository (AWR) operation.

Action: Check the parameter name displayed in the error message text.

ORA-13554: failed to stop report capture on all instances

Cause: The API 'finish_report_capture' ran successfully on %d instances only.

Action: Check if all instances are active and running.

ORA-13600: error encountered in Advisor*nstring*

Cause: An error occurred in the Advisor. This message will be followed by a second message giving more details about the nature of the error.

Action: See the Advisor documentation for an explanation of the second error message.

ORA-13601: The specified Advisor *string* does not exist.

Cause: The user specified an advisor name that has not be defined in the advisor repository.

Action: Correct the advisor name and retry the operation.

ORA-13602: The specified parameter *string* is not valid for task or object *string*.

Cause: The user attempted to access a task parameter that does not exist for the specified advisor object. The parameter may be misspelled or the user has selected a parameter that is not supported by the particular advisor.

Action: Validate the parameter name and retry the operation.

ORA-13603: The specified parameter *string* cannot be fetched as a numeric value for task or object *string*.

Cause: The user attempted to retrieve a string parameter as a numeric value.

Action: Check the datatype for the task parameter and retry the operation.

ORA-13604: The specified parameter *string* cannot be fetched as a SQL table.

Cause: The user attempted to retrieve a non-table parameter as a table name.

Action: Check the datatype for the task parameter and retry the operation.

ORA-13605: The specified task or object *string* does not exist for the current user.

Cause: The user attempted to reference an advisor task or object using a name that does not exist in the Advisor repository.

Action: Adjust the name and retry the operation.

ORA-13606: the specified task parameter element *string* is out of range for parameter *string*.

Cause: The user attempted to reference an invalid parameter element.

Action: Adjust the element offset and retry the operation.

ORA-13607: The specified task or object *string* already exists

Cause: The user attempted to create the specified task or object using a name that already exists in the Advisor repository. Task names must be unique to the database user.

Action: Adjust the name and retry the operation.

ORA-13608: The specified name *string* is invalid.

Cause: An attempt was made to specify a name for a task, object, execution or directive instance, which contained invalid characters or an invalid wildcard specifier.

Action: Adjust the name and retry the operation.

ORA-13609: The specified task *string* must be executing to be cancelled or interrupted.

Cause: The user attempted to cancel or interrupt a task that is not currently executing.

Action: Check the status of the task and retry the operation.

ORA-13610: The directive *string* does not exist for task *string*.

Cause: The user attempted to access a task directive that does not exist.

Action: Validate the directive and retry the operation.

ORA-13611: The command *string* is not a valid advisor command.

Cause: The user attempted to specify a command that does not exist.

Action: Validate the command and retry the operation.

ORA-13612: The recommendation action *string,string* is not valid for task *string*.

Cause: The user attempted to access a recommendation action that does not exist in the task.

Action: Validate the recommendation-action and retry the operation.

ORA-13613: The requested operation is not supported for this advisor object.

Cause: The user attempted to perform an operation that is not supported for the particular advisor or task type.

Action: Validate the task or object and retry the operation.

ORA-13614: The template *string* is not compatible with the current advisor.

Cause: The user attempted to create a new task or object using an existing task or object that was not created by the same advisor.

Action: Validate the template and retry the operation.

ORA-13615: The task or object *string* is greater than the maximum allowable length of 30 characters.

Cause: The user attempted to create a new task or object using a name that is too long.

Action: Shorten the name and retry the operation.

ORA-13616: The current user *string* has not been granted the ADVISOR privilege.

Cause: The user attempted an advisor operation that requires privilege.

Action: Adjust the user's privileges and retry the operation.

ORA-13617: The specified task *string* already executing

Cause: The user attempted to execute a task that is currently executing.

Action: Wait for the task to finish before attempting any further task activities.

ORA-13618: The specified value is not a valid value for procedure argument *string*.

Cause: The user executed a procedure but failed to provide correct values for the argument.

Action: Correct the procedure arguments and retry the operation.

ORA-13619: The procedure argument *string* is greater than the maximum allowable length of *string* characters.

Cause: The user attempted to pass a character argument that is too long.

Action: Shorten the specified character argument and retry the operation.

ORA-13620: The task or object *string* is read-only and cannot be deleted or modified.

Cause: The user attempted to perform an operation that will update or delete a read-only task or object.

Action: Adjust the READ_ONLY property for the object and retry the operation.

ORA-13621: The task_or object *string* is marked as a template and cannot perform the requested operation.

Cause: The user attempted perform an unsupported operation on a task or object that is identified as a template.

Action: Choose a different object and retry the operation.

ORA-13622: invalid recommendation annotation

Cause: The user attempted to mark a recommendation using an invalid annotation. Valid annotation actions are ACCEPT, REJECT and IGNORE.

Action: Correct the action and retry the operation.

ORA-13623: The recommendation *string* is not valid for task *string*.

Cause: The user attempted to access a recommendation that does not exist in the task.

Action: Validate the recommendation and retry the operation.

ORA-13624: The task *string* is executing and cannot be deleted or modified.

Cause: The user attempted to access a task that currently executing.

Action: Wait for the task to complete and retry the operation.

ORA-13625: *string* is an invalid advisor object type.

Cause: The user has specified an invlaid object type.

Action: Refre to dba_advisor_object_types for all valid object types

ORA-13626: The specified object *string* is not valid for task *string*.

Cause: The user specified a non-existent object for the task

Action: Choose a different object and retry the operation.

ORA-13627: Setting of parameter *string* is disallowed until the task is reset.

Cause: The user attempted to set the value of a parameter before the task was reset.

This parameter cannot be changed until the task is reset.

Action: Reset the task and retry the operation.

ORA-13628: Insufficient privileges to access the task belonging to the specified user

Cause: The user could not access dba_* views.

Action: Retry operation as owner of the task or after granting new privileges.

ORA-13629: The task or object *string* is being used by another operation.

Cause: The user attempted to access a task or object that is locked by another session.

Action: Wait for the task or object activity to complete and retry the operation.

ORA-13630: The task *string* contains execution results and cannot be executed.

Cause: The user attempted to execute a task that already contains execution results.

Action: Reset the task to its initial state and retry the operation.

ORA-13631: The most recent execution of task *string* contains no results.

Cause: The user attempted to create a report or script from a task that has not successfully completed an execution.

Action: Execute the task and then retry the operation

ORA-13632: The user cancelled the current operation.

Cause: The user signaled a cancel during a task or object operation.

Action: None

ORA-13633: The task *string* was interrupted and needs to be resumed.

Cause: The user attempted to execute a task that was interrupted.

Action: Resume the execution of the task via the RESUME_TASK API.

ORA-13634: The task *string* needs to be reset before being re-executed.

Cause: The task must be in an initial state to be executed.

Action: Reset the task to its initial state and retry the operation.

ORA-13635: The value provided for parameter *string* cannot be converted to a number.

Cause: A numeric parameter was incorrectly supplied in string form.

Action: Retry by supplying valid numeric value.

ORA-13636: The specified value provided for parameter *string* is not valid for this advisor.

Cause: The user supplied an invalid parameter value.

Action: Retry by supplying valid value.

ORA-13637: Executing or modifying task *string* is disallowed until the task is reset to its initial state.

Cause: The user attempted to execute or modify the task that is in not in its INITIAL state.

Action: Reset the task and retry the operation.

ORA-13638: The user interrupted the current operation.

Cause: The user signaled an interrupt during a task or object operation.

Action: None

ORA-13639: The current operation was interrupted because it timed out.

Cause: The task or object operation timed out.

Action: None

ORA-13640: The current operation was cancelled because it timed out, and was not in interruptible mode.

Cause: The task or object operation timed out.

Action: None

ORA-13641: Task cannot be interrupted yet. You may cancel it instead.

Cause: The user attempted to interrupt a task that has not reached interruptible mode.

Action: Wait until the task reaches interruptible mode, or cancel the task execution.

ORA-13642: The specified string *string* provided for *string* cannot be converted to a date. The acceptable date format is *string*.

Cause: The user supplied a date value in an incorrect format.

Action: Retry by supplying valid value.

ORA-13643: The task can not be interrupted or cancelled.

Cause: Request to interrupt or cancel task execution can not be granted because the task has not reached the appropriate mode.

Action: User should wait for a few seconds and try again.

ORA-13644: The user "*string*" is invalid.

Cause: Invalid user name specified to advisor framework

Action: User should specify a correct, case-sensitive, name

ORA-13645: The specified execution *string* does not exist for this task.

Cause: You attempted to reference an advisor task execution using a name that did not exist.

Action: Adjust the name and retry the operation.

ORA-13646: The specified execution *string* already exists

Cause: You attempted to perform a new execution using a name that already exists for the specified task. Execution names must be unique within the same task.

Action: Adjust the name and retry the operation.

ORA-13647: Setting of parameter *string* is disallowed during task execution.

Cause: You attempted to set the value of a parameter while the task was being executed. This parameter cannot be changed until the task finishes its execution.

Action: Verify the status of the task and retry the operation.

ORA-13648: The specified execution type does not exist for this advisor.

Cause: You attempted to use an advisor task execution type using a name that did not exist.

Action: Adjust the name and retry the operation.

ORA-13649: The type of execution is not specified for this advisor or task.

Cause: You attempted to execute a task for a multi-execution task advisor without specifying the type of execution to perform.

Action: Set the execution type and retry the operation.

ORA-13650: The specified object does not exist for this execution.

Cause: You attempted to associate an object to a task execution that did not contain the object.

Action: Adjust the execution name and object ID, and then retry the operation.

ORA-13651: The specified list of execution parameters is invalid.

Cause: The list did not include pairs of (parameter_name, parameter_value) where every parameter is a valid task parameter. Duplicates are not allowed.

Action: Adjust the content of the list, and then retry the operation.

ORA-13652: Cannot set execution parameters for this advisor

Cause: You attempted to set execution parameters for an advisor that did not support multiple executions of its tasks.

Action: Adjust the property of the advisor, and then retry the operation.

ORA-13653: The directive with definition id *string* was not found.

Cause: An invalid directive identifier was specified to advisor framework.

Action: User should specify a correct identifier number and retry the operation.

ORA-13654: The directive with instance id of *string* was not found.

Cause: An invalid instance identifier was specified to advisor framework.

Action: User should specify a correct instance identifier number and retry the operation.

ORA-13655: The directive document contains a syntax error and cannot be loaded.

Cause: An attempt was made to load an XML-based directive that does not conform to the documented DTD.

Action: Reformat the directive according to the documented DTD.

ORA-13656: The parameter was not found in directive *string*.

Cause: The specified parameter name could not be located within the directive XML document.

Action: Verify the existence of the parameter in the specified directive.

ORA-13657: The filter Xpath specification has invalid syntax.

Cause: The specified filter could not be compiled within the directive XML document.

Action: Verify the syntax of the filter and retry the operation.

ORA-13658: The specified directive already has an instance

Cause: An attempt was made to create multiple instances of a directive when not permitted

Action: Verify the parent directive identifier and the instance name.

ORA-13659: A directive with domain "*string*" and name "*string*" already exists for advisor *string*.

Cause: The specified directive is not unique among the directives.

Action: Choose a directive name and domain that is distinct for the associated advisor.

ORA-13660: A directive instance with the name "*string*" already exists.

Cause: The specified directive instance is not unique among instances for this directive.

Action: Choose an instance name that is distinct for the associated directive.

ORA-13661: A directive instance with the name "*string*" was not found.

Cause: An attempt was made to update or delete a non-existent directive instance.

Action: Verify the parent directive identifier and the instance name.

ORA-13662: The specified value provided for parameter *string* is not valid for this task.

Cause: The supplied parameter value was not valid for the current task configuration.

Action: Retry by supplying valid value. Check the current task configuration.

ORA-13663: The task *string* contains no results for execution *string*.

Cause: An attempt was made to create a report or script from an execution that had not been successfully completed.

Action: Run a new execution and then retry the operation.

ORA-13664: A task-managed "SQL Tuning Set" already exists for task "*string*".

Cause: An attempt was made to create a task-managed SQL Tuning Set for a task that already had one.

Action: Create a new task to use a different SQL Tuning Set.

ORA-13665: Execution names are not correctly ordered.

Cause: The supplied execution names were not properly ordered by execution start date.

Action: Retry by supplying a valid order.

ORA-13666: Task ID *string* does not exist.

Cause: The supplied task ID was invalid.

Action: Check the task ID and try again.

ORA-13667: Execution ID *string* does not exist.

Cause: The supplied execution ID was invalid.

Action: Check the execution ID and try again.

ORA-13668: The current operation was aborted because it was blocking another session.

Cause: The task or object operation interrupted itself when it detected that it was blocking some other session.

Action: Retry the operation when the conflicting operations are not running.

ORA-13669: Execution provided has type "*string*", expected "*string*".

Cause: An execution was provided whose type did not match the one expected by the API.

Action: Check the execution name, and try again.

ORA-13670: No execution of type *string* exists for task provided.

Cause: No execution of the required type existed for the given advisor task.

Action: Check the task, and try again.

ORA-13699: Advisor feature is not currently implemented.

Cause: An attempt was made to execute an unsupported advisor operation.

Action: Verify the availability of the operation.

ORA-13700: Reserved for ADDM tracing.

ORA-13701: Snapshot pair [*string*, *string*] seems to be specified in reverse order.

Cause: The start snapshot id was greater than the end snapshot id.

Action: Swap the start and end snapshot ids.

ORA-13702: Snapshot IDs specified by the range [*string*, *string*] are equal.

Cause: The start snapshot id and end snapshot id were identical.

Action: Provide different start and end snapshot ids.

ORA-13703: The snapshot pair [*string*, *string*] for database_id *string* and instance_id *string* are not found in the current repository.

Cause: The snapshot ids or the database id or the instance id was invalid or the specified snapshots have already been purged.

Action: Set valid snapshot ids and retry.

ORA-13704: Invalid value "*string*" specified for parameter "*string*".

Cause: The parameter was not set before executing the ADDM.

Action: Set the parameter to a valid value and retry.

ORA-13705: There was a instance shutdown/startup between the snapshots in the range [*string*, *string*].

Cause: Instance was shut down and restarted between the two specified snapshots.

Action: Specify start and end snapshot ids that does not have a shutdown/startup in between them.

ORA-13706: Invalid value "*string*" specified for parameter "*string*" in "*string*" analysis mode.

Cause: The parameter was not set to an acceptable value for this particular mode of analysis.

Action: Set the parameter to a valid value and retry.

ORA-13707: Either the start snapshot *string* or the end snapshot *string* is incomplete or missing key statistics.

Cause: Either the start or the end snapshots was missing or purged or had encountered errors while creating them.

Action: Verify that AWR is done taking these two snapshots, or Look in DBA_HIST_SNAP_ERROR to find what tables are missing in the start/end

snapshots. Use the ERROR_NUMBER column in that view together with the alert log to identify the reason for failure and take necessary action to prevent such failures in the future. Try running ADDM on a different snapshot range that has valid start and end snapshots.

ORA-13708: Some snapshots in the range [*string*, *string*] were purged before the analysis was complete.

Cause: One or both of the snapshots have been purged from AWR.

Action: Verify that the AWR auto purging is not trying to purge these snapshots and re-run ADDM.

ORA-13709: Required parameter "*string*" must be set before execution.

Cause: The parameter needs to be set before running the ADDM

Action: Set the parameter to a valid value and retry.

ORA-13710: Parameter "*string*" must have a higher value than parameter "*string*". The values supplied were "*string*" and "*string*" respectively.

Cause: Invalid interaction between two parameter values.

Action: Set at least one of the values so the value of the first parameter is higher than the value of the second parameter.

ORA-13711: Some snapshots in the range [*string*, *string*] are missing key statistics.

Cause: Some AWR tables encountered errors while creating one or more snapshots in the given range. The data present in one or more of these missing tables is necessary to perform an ADDM analysis.

Action: Look in DBA_HIST_SNAP_ERROR to find what tables are missing in the given snapshot range. Use the ERROR_NUMBER column in that view together with the alert log to identify the reason for failure and take necessary action to prevent such failures in the future. Try running ADDM on a different snapshot range that does not include any incomplete snapshots.

ORA-13712: Cannot perform ADDM analysis on AWR snapshots from previous releases. Snapshot version "*string*" do not match the database version "*string*".

Cause: ADDM analysis can only be performed on AWR snapshots taken in the current release.

Action: One can still generate AWR and ASH reports using `*/rdbms/admin/awrrpt` and `*/rdbms/admin/ashrpt` on these snapshots to analyze the data in them.

ORA-13713: Finding name "*string*" does not exist. Look in DBA_ADVISOR_FINDING_NAMES for all valid values

Cause: Attempt to refer to an advisor's finding name that does not exist.

Action: Specify a valid value. The list of all valid values is in DBA_ADVISOR_FINDING_NAMES

ORA-13714: "*string*" is not a valid SQL_ID value

Cause: The specified value of SQL_ID was not properly formatted.

Action: Specify a valid value consisting of a 13 character string with characters from '0' to '9' and from 'a' to 'z'.

ORA-13715: "*string*" is not recognized by ADDM as a parameter name

Cause: The specified value for a system parameter was not recognized by ADDM.

Action: Specify a value that appears in the NAME column of V\$PARAMETER.

ORA-13716: Diagnostic Package License is needed for using this feature.

Cause: The specified value for system parameter CONTROL_MANAGEMENT_PACK_ACCESS indicated that the Diagnostic Package was disabled.

Action: Modify the parameter value if the Diagnostic Package License was purchased.

ORA-13717: Tuning Package License is needed for using this feature.

Cause: The specified value for system parameter CONTROL_MANAGEMENT_PACK_ACCESS indicated that the Tuning Package was disabled.

Action: Modify the parameter value if the Tuning Package License was purchased.

ORA-13718: Tuning Package License or Real Application Testing Option is needed for using this feature.

Cause: The specified package license and option were not installed.

Action: Consider purchasing and installing either the missing package licence or option. If the tuning package license was purchased, then check the value of system parameter CONTROL_MANAGEMENT_PACK_ACCESS.

ORA-13719: Imported AWR snapshots are from a database with an incompatible character set.

Cause: ADDM analysis was attempted on imported Automatic Workload Repository (AWR) snapshots with incompatible character set.

Action: Perform ADDM analysis using a database with the same version and character set as the original database.

ORA-13720: dimension name provided is too long

Cause: Active Session History (ASH) dimension name provided was longer than the limit of 30 characters.

Action: Correct the dimension name and retry the operation.

ORA-13721: dimension name provided is invalid

Cause: Active Session History (ASH) dimension name provided was invalid.

Action: Correct the dimension name and retry the operation.

ORA-13750: User "*string*" has not been granted the "ADMINISTER SQL TUNING SET" privilege.

Cause: The user attempted an SQL Tuning Set operation that requires a specific privilege.

Action: Adjust the user's privileges and retry the operation.

ORA-13751: "SQL Tuning Set" "*string*" does not exist for owner "*string*" or user "*string*" does not have permission to access the "SQL Tuning Set".

Cause: The user attempted to access a SQL Tuning Set that does not exist or the user does have permission to access the SQL Tuning Set

Action: Check the existence of the "SQL Tuning Set" or adjust the user's privileges and retry the operation.

ORA-13752: User "*string*" must be SYS or must have the "ADMINISTER ANY SQL TUNING SET" privilege.

Cause: The attempted to create a SQL Tuning Set in another schema without having the right privilege.

Action: Connect as SYS or adjust the user's privilege and retry the operation.

ORA-13753: "SQL Tuning Set" "*string*" already exists for user "*string*".

Cause: The user attempted to create a "\SQL Tuning"\ Set using a name that already exists for that owner.

Action: Change the name of the SQL Tuning Set and retry the operation.

ORA-13754: "SQL Tuning Set" "*string*" does not exist for user "*string*".

Cause: The user attempted to access a SQL Tuning Set that does not exist.

Action: Check the spelling of the SQL Tuning Set name and retry the operation.

ORA-13755: invalid "SQL Tuning Set" name

Cause: The user attempted to specify a SQL Tuning Set name that is invalid. A name must not contain wildcards and its length must be less than 30 characters.

Action: Adjust the name and retry the operation.

ORA-13756: Cannot update attribute "*string*".

Cause: The user attempted to update an attribute element that cannot be modified. The only string attributes that can be updated are MODULE, ACTION, PARSING_SCHEMA_NAME, PRIORITY, and OTHER.

Action: Adjust the attribute name and retry the operation.

ORA-13757: "SQL Tuning Set" "*string*" owned by user "*string*" is active.

Cause: The user attempted to update an active SQL Tuning Set.

Action: Remove all reference to the SQL Tuning Set and retry the operation.

ORA-13758: "SQL Tuning Set" "*string*" owned by user "*string*" is in use.

Cause: The user attempted to modify a SQL Tuning Set or to add a reference to a SQL Tuning Set which is in use.

Action: Wait until the end of the previous operation and retry.

ORA-13759: User "*string*" cannot remove reference "*string*".

Cause: The user attempted to remove a SQL Tuning Set reference that does not exist. The user might not own the reference.

Action: Check the reference ID and the reference owner and retry the operation.

ORA-13761: invalid filter

Cause: The user attempted to select data from a data source using an invalid filter. A filter is a WHERE clause on data source content.

Action: Correct the filter and retry the operation.

ORA-13762: The *string* ranking measure is invalid.

Cause: The user attempted to select data from a data source using an invalid ranking measure. A ranking measure must represent a valid numerical expression.

Action: Correct the ranking measure and retry the operation.

ORA-13763: illegal ranking attribute "string"

Cause: The user attempted to use an attribute element that is not allowed in a ranking measure.

Action: Check the attribute in the ranking measure and retry the operation.

ORA-13764: Value "string" is illegal as a result percentage.

Cause: The user attempted to select data from a SQL Tuning Set using an invalid result percentage. The result percentage must be between 0 and 1.

Action: Correct the result percentage value and retry the operation.

ORA-13765: Value "string" is illegal for a result limit.

Cause: The user attempted to select data from a SQL Tuning Set using an invalid result limit. A result limit must be a positive interger.

Action: Correct the result limit value and retry the operation.

ORA-13766: A ranking measure is required.

Cause: The user attempted to select data from a SQL Tuning Set using a percentage argument without specifying a ranking measure.

Action: Add a ranking measure or remove the percentage argument and retry the operation.

ORA-13767: End snapshot ID must be greater than begin snapshot ID.

Cause: The user attempted to select data from the workload repository using an invalid snaphot ID range.

Action: Adjust the snapshot ID range and retry the operation.

ORA-13768: Snapshot ID must be between *string* and *string*.

Cause: The user attempted to select data from the workload repository using a snaphot ID which does not exist.

Action: Adjust the snapshot ID and retry the operation.

ORA-13769: Snapshots *string* and *string* do not exist.

Cause: The user attempted to select data from the workload repository using snapshots that do not exist.

Action: Check the snapshot identifiers and retry the operation.

ORA-13770: Baseline "string" does not exist.

Cause: The user attempted to access a baseline that does not exist.

Action: Check the spelling of the baseline name and retry the operation.

ORA-13771: cannot obtain exclusive lock *string* on "SQL Tuning Set" "string" owned by user "string"

Cause: Unexpected error from DBMS_LOCK.REQUEST.

Action: This error should not normally occur. Check your system for anomalies and retry the operation. If this error persists, contact Oracle Support Services.

ORA-13772: unexpected deadlock on "SQL Tuning Set" "string" owned by user "string"

Cause: Unexpected error from DBMS_LOCK.REQUEST

Action: This error should not normally occur. Check your system for anomalies and retry the operation. If this error persists, contact Oracle Support Services.

ORA-13773: insufficient privileges to select data from the cursor cache

Cause: The user attempted to perform an operation without having the appropriate privileges on V\$SQL and V\$SQL_BIND_CAPTURE.

Action: Adjust the user's privileges and retry the operation.

ORA-13774: insufficient privileges to select data from the workload repository

Cause: The user attempted to perform an operation without having the appropriate privileges on views DBA_HIST_BASELINE, DBA_HIST_SQLTEXT, DBA_HIST_SQLSTAT, DBA_HIST_SQLBIND, DBA_HIST_OPTIMIZER_ENV, and DBA_HIST_SNAPSHOT.

Action: Adjust the user's privileges and retry the operation.

ORA-13775: inconsistent datatype in input cursor

Cause: The user attempted to load a SQL Tuning Set using an invalid input cursor. All rows in the cursor must match type SQLSET_ROW.

Action: Check the rows type in the cursor and retry the operation.

ORA-13776: User "*string*" has not been granted the "SELECT" privilege on the "SQL tuning set" DBA views.

Cause: The user attempted to read a SQL tuning set belonging to someone else without having SELECT privilege on the DBA views

Action: User should be granted the privilege or only access his own STS

ORA-13777: invalid list of attribute names

Cause: The user specified an attribute element that is not valid. The only attributes that can be selected are NULL, BASIC, TYPICAL, ALL or a comma separated list of the names including EXECUTION_STATISTICS, OBJECT_LIST, BIND_LIST and SQL_PLAN.

Action: Adjust the attribute list and retry the operation.

ORA-13778: no new name or owner specified for "SQL Tuning Set"

Cause: The user attempted to call remap_stgtab_sqlset without specifying either a new SQL tuning set name or a new SQL tuning set owner

Action: Specify at least one or the other argument as non-NULL

ORA-13779: invalid load option

Cause: The user attempted to call load_sqlset with a load option that is different than INSERT, UPDATE and MERGE.

Action: Adjust the load option and retry the operation.

ORA-13780: SQL statement does not exist.

Cause: The user attempted to tune a SQL statement that does not exist.

Action: Verify the sql_id and the plan hash value of the statement and retry the operation.

ORA-13781: cannot perform test-execute and explain plan operations on the automatic SQL tuning task

Cause: The user attempted to test-execute or generate explain plans for a SQL workload using the automatic SQL tuning task.

Action: Verify the name of the tuning task and retry the operation.

ORA-13783: invalid tuning scope

Cause: The user attempted to specify a tuning task scope that is invalid. The possible values are LIMITED or COMPREHENSIVE.

Action: Check the scope value and retry the operation.

ORA-13784: cannot accept SQL profiles for all statements in the "string"

Cause: An attempt was made to accept SQL profiles for all statements in the input workload.

Action: Provide the object identifier corresponding to a statement in the workload and retry the operation.

ORA-13785: missing target object for tuning task "string"

Cause: The user attempted to perform an operation on a task without specifying a target object or by using an invalid object identifier.

Action: Check the identifier of the object and retry the operation.

ORA-13786: missing SQL text of statement object "string" for tuning task "string"

Cause: The user attempted to accept SQL profile for an object that has not a SQL text associated to it.

Action: Check the identifier of the object and retry the operation.

ORA-13787: missing SQL profile for statement object "string" for tuning task "string"

Cause: The user attempted to accept a SQL profile for an object that has not a SQL profile associated to it.

Action: Check the identifier of the object and retry the operation.

ORA-13788: invalid recommendation type

Cause: The user passed an invalid recommendation type in the rec_type argument to script_tuning_task. Possible values are ALL or any subset of a comma-separated list of PROFILES, STATISTICS and INDEXES.

Action: Check the rec_type arg and retry the operation.

ORA-13789: invalid process action

Cause: The user passed an invalid action to process a SQL statement. Possible value is any subset of a comma-separated list of EXECUTE and EXPLAIN_PLAN.

Action: Check the action argument and retry the operation.

ORA-13790: invalid value for time limit

Cause: The user passed an invalid value for the time limit argument.

Action: Check the argument specified value and retry the operation.

ORA-13791: cannot resume a task created to process a single statement

Cause: An attempt was made to resume a task that was created for a single SQL statement. A task can be resumed only if it is used for a SQL Tuning Set.

Action: No action required.

ORA-13793: invalid comparison metric

Cause: An invalid metric to compare SQL performance was specified.

Action: Use execution statistics to compare the result of two executions and optimizer_cost to analyze performance of two explain plan actions.

ORA-13794: execution type mismatch

Cause: An attempt was made to analyze the performance of a SQL workload using two executions that were generated using two different actions.

Action: check the name and type of task executions to analyze and retry the operation.

ORA-13795: missing task execution

Cause: An insufficient number of valid task executions to analyze the performance of a SQL workload were specified.

Action: run the task to generate two executions of the same type and retry the operation.

ORA-13796: invalid value *string* specified for problem type

Cause: An invalid problem type was specified to the SQL diagnosis advisor. Problem type should be one of the PROBLEM_TYPE_* defined in 'admin/dbmsdiag.sql'.

Action: Specify valid problem type.

ORA-13797: invalid SQL Id specified, *string*

Cause: Invalid SQL Id specified for conversion.

Action: Specify valid SQL Id.

ORA-13798: Parameter *string* cannot be NULL.

Cause: A call to GET_THRESHOLD procedure was made without a required parameter.

Action: Specify a valid value for this parameter.

ORA-13799: threshold not found

Cause: No threshold was found with the specified threshold key.

Action: No action required.

ORA-13800: concurrent DDL failure on SQL repository objects

Cause: A SQL repository object was the target of two concurrent DDL operations.

Action: Check the current state of the object and retry the operation that failed.

ORA-13801: invalid value for SQLTUNE_CATEGORY parameter

Cause: An invalid Oracle identifier was used as the value of the parameter.

Action: Specify the parameter conforming to the rules for Oracle identifiers.

ORA-13802: failed to purge SQL Tuning Base entry from sql\$

Cause: An error occurred while trying to delete a SQL Tuning Base object.

Action: Look at the underlying error(s) on the error stack.

ORA-13810: FORCE_TRACKING parameter can only be values of NO_FORCE_TRACKING or FORCE_TRACKING

Cause: The wrong value was passed in for the parameter.

Action: Check the value and input the correct value.

ORA-13811: error encountered during the start of the operation

Cause: An internal error was encountered.

Action: Check the alert log and report to Oracle Support Services.

ORA-13812: current session does not have database operation monitored

Cause: An attempt was made to end a database operation that did not exist.

Action: Check if the database operation is being monitored.

ORA-13813: database operation name or execution ID does not match

Cause: The database operation name or execution ID did not match.

Action: Call the interface with the right database operation name and execution ID.

ORA-13825: missing SQL statement text

Cause: No SQL text was provided to the create SQL profile or patch operation.

Action: Retry with properly specified SQL text.

ORA-13826: empty SQL profile or patch not allowed

Cause: No attributes were specified to the create SQL profile or patch operation.

Action: Retry with at least one hint specified.

ORA-13827: null or zero length attribute not allowed

Cause: One of the attributes within the SQL profile or patch was not properly specified.

Action: Retry with a fully specified SQL profile or patch.

ORA-13828: generated SQL profile or patch name *string* already exists

Cause: A SQL profile or patch already exists with the name generated by the system.

Action: Retry the operation as the generated name is time sensitive.

ORA-13829: SQL profile or patch named *string* already exists

Cause: A SQL profile or patch already exists with the name specified.

Action: Specify a different name or drop the existing SQL profile or patch.

ORA-13830: SQL profile or patch with category *string* already exists for this SQL statement

Cause: A SQL profile or patch already exists for the given SQL statement and category.

Action: Drop or update the existing SQL profile or patch.

ORA-13831: SQL profile or patch name specified is invalid

Cause: An invalid SQL profile or patch name was specified.

Action: Look for the underlying error on the error message stack.

ORA-13832: category name specified is invalid

Cause: An invalid category name was specified.

Action: Look for the underlying error on the error message stack.

ORA-13833: SQL profile or patch named *string* doesn't exist

Cause: A SQL profile or patch name was specified that doesn't exist.

Action: Verify the name of the SQL profile or patch.

ORA-13834: name of SQL profile or patch to be cloned must be provided

Cause: A SQL profile or patch name was not provided as the from target of a clone SQL profile or patch operation.

Action: Provide the name of the SQL profile or patch being cloned.

ORA-13835: invalid attribute name specified

Cause: An invalid attribute name was specified for an alter SQL profile or patch operation.

Action: Verify the name of the attribute.

ORA-13836: invalid attribute value specified

Cause: An invalid attribute value was specified for an alter SQL profile or patch operation.

Action: Verify the attribute value.

ORA-13837: invalid HASH_VALUE

Cause: An invalid HASH_VALUE was passed to a create SQL profile operation

Action: Verify the HASH_VALUE.

ORA-13838: invalid ADDRESS value

Cause: An invalid ADDRESS value was passed to a create SQL profile operation.

Action: Verify the ADDRESS value.

ORA-13839: V\$SQL row doesn't exist with given HASH_VALUE and ADDRESS.

Cause: A HASH_VALUE and ADDRESS combination passed to the create SQL profile operation doesn't correspond to an existing V\$SQL entry.

Action: Verify the HASH_VALUE and ADDRESS in V\$SQL.

ORA-13840: Concurrent DDL Error in create SQL profile operation.

Cause: A concurrent DDL operation was performed during a create or replace sql profile operation.

Action: Try operation again

ORA-13841: SQL profile named *string* already exists for a different signature/category pair

Cause: A SQL profile already exists with the name specified under a different signature/category pair so it cannot be replaced, even with FORCE specified.

Action: Specify a different name or drop the existing SQL profile.

ORA-13842: no SELECT privilege on DBA_SQL_PROFILES

Cause: A user has tried to perform an operation that requires SELECT privileges on the DBA_SQL_PROFILES view.

Action: Either perform the operation as another user or get the privilege

ORA-13843: no SQL profile with name like "*string*" exists for category like "*string*"

Cause: A user tried to perform an operation by specifying a profile name/ category filter that did not target any profiles

Action: Try a different filter after checking the profile name/category

ORA-13844: no new SQL profile name or category specified.

Cause: A user called remap_stgtab_sqlprof without specifying new values for the sql profile name or category. At least one is required.

Action: Specify either a new profile name, or a new category, or both

ORA-13845: invalid SQL profile XML specification provided

Cause: The supplied XML specification for the SQL profile did not adhere to the proper schema.

Action: Check the syntax and try again.

ORA-13846: Cannot create SQL plan baseline on the given plan

Cause: There are either multiple plans exist for the given value or the plan is not reproducible.

Action: Call Oracle Support.

ORA-13847: The plan with plan hash value *string* does not exist

Cause: The give plan does not exist.

Action: Check the available plans.

ORA-13850: Tracing for client identifier *string* is not enabled

Cause: Attempt to disable a client identifier tracing which was never enabled

Action: Supply correct client identifier

ORA-13851: Tracing for client identifier *string* is already enabled

Cause: Attempt to enable a client identifier tracing which has been already enabled

Action: Supply correct client identifier, or disable and re-enable tracing with different bind/wait options

ORA-13852: Tracing for service(module/action) *string* is not enabled

Cause: Attempt to disable a service-level tracing which was never enabled

Action: Supply correct service(module/action) name

ORA-13853: Tracing for service (module/action) *string* is already enabled

Cause: Attempt to enable a service-level tracing which has been already enabled

Action: Supply correct service(module/action), or disable and re-enable tracing with different bind/wait options

ORA-13854: Tracing for service(module/action) *string* on instance *string* is not enabled

Cause: Attempt to disable a service-level tracing which was never explicitly enabled on a specific instance

Action: Supply correct service(module/action) name

ORA-13855: Tracing for service (module/action) *string* on instance *string* is already enabled

Cause: Attempt to enable a service-level tracing which has been already enabled on a specific instance

Action: Supply correct service(module/action), or disable and re-enable tracing with different bind/wait options

ORA-13856: Service name must be specified

Cause: Omitting service name while enabling/disabling tracing or aggregation

Action: Supply the service name

ORA-13857: Invalid module name

Cause: Module name is too long (exceeding 48 characters)

Action: Supply correct name

ORA-13858: Invalid action name

Cause: Action name is too long (exceeding 32 characters)

Action: Supply correct name

ORA-13859: Action cannot be specified without the module specification

Cause: Action name is specified, but the module name is not

Action: Supply the module name

ORA-13860: Invalid service name

Cause: Service name is too long (exceeding 64 characters)

Action: Supply correct name

ORA-13861: Statistics aggregation for client identifier *string* is already enabled

Cause: Attempt to enable a client identifier aggregation which has been already enabled

Action: Supply correct client identifier

ORA-13862: Statistics aggregation for client identifier *string* is not enabled

Cause: Attempt to disable a client identifier statistics aggregation which was never enabled

Action: Supply correct client identifier

ORA-13863: Statistics aggregation for service(module/action) *string* is not enabled

Cause: Attempt to disable a service-level statistics aggregation which was never enabled

Action: Supply correct service(module/action) name

ORA-13864: Statistics aggregation for service (module/action) *string* is already enabled

Cause: Attempt to enable a service-level statistics aggregation which has been already enabled

Action: Supply correct service(module/action)

ORA-13865: Module name must be specified

Cause: Attempt to enable/disable a service-level statistics aggregation without a module specification

Action: Supply module name

ORA-13866: Client identifier must be specified

Cause: Omitting client identifier while enabling/disabling tracing or aggregation

Action: Supply the client identifier

ORA-13867: Database-wide SQL tracing is already enabled

Cause: Attempt to enable a database-level tracing which has been already enabled

Action: Disable and re-enable tracing with different bind/wait options

ORA-13868: Instance-wide SQL tracing on instance *string* is not enabled

Cause: Attempt to disable a service-level tracing which was never explicitly enabled on a specific instance

Action: No action required

ORA-13869: Instance-wide SQL tracing on instance *string* is already enabled

Cause: Attempt to enable an instance-level tracing which has been already enabled on a specific instance

Action: Disable and re-enable tracing with different bind/wait options

ORA-13870: Database-wide SQL tracing is not enabled

Cause: Attempt to disable a database-level tracing which was never enabled

Action: No action required

ORA-13871: Invalid instance name

Cause: Instance name is too long (exceeding 16 characters)

Action: Supply correct name

ORA-13900: missing or invalid parameter *string*

Cause: A call to SET_THRESHOLD procedure was either missing a parameter, or the parameter was invalid.

Action: Specify a valid value for this parameter.

ORA-13901: Object *string* was not found.

Cause: An object name was passed to SET_THRESHOLD procedure that did not map to a valid object.

Action: Specify a valid object name.

ORA-13902: The specified file *string* is not a data file.

Cause: The object name was passed to a SET_THRESHOLD procedure that did not map to a valid data file.

Action: Specify a valid data file name.

ORA-13903: Invalid combination of *string* threshold value and operator.

Cause: A non-positive number was used for "Blocked User Session Count" metrics while operator contains equal.

Action: Use a positive number for the threshold value or use "greater than" operator.

ORA-13904: The file has been dropped and recreated during the procedure call.

Cause: The file on which threshold is specified was dropped and recreated during the procedure call.

Action: Retry this operation.

ORA-13905: Critical or warning threshold have incorrect values

Cause: The tablespace threshold values can be in the range 0 to 100 only.

Action: Check the threshold values

ORA-13906: The tablespace is not of the right type.

Cause: An attempt was made to set a threshold on dictionary-managed tablespaces.

Action: Check the tablespace type and reissue the command.

ORA-13907: Threshold value is invalid.

Cause: An attempt was made to specify an invalid value for critical or warning thresholds.

Action: Use non-negative integers only for threshold values.

ORA-13908: Invalid combination of metrics id and object type parameters.

Cause: An attempt was made to specify an invalid combination of metrics id // and object type parameters.

Action: Specify a valid combination of metrics id and object type parameters.

ORA-13909: Invalid combination of threshold value and operator.

Cause: An attempt was made to specify an invalid combination of threshold value and operator.

Action: Check the operator and threshold values and reissue statement.

ORA-13910: Parameter *string* cannot be NULL.

Cause: An attempt was made to call GET_THRESHOLD procedure without a required parameter.

Action: Specify a valid value for this parameter.

ORA-13911: Threshold not found

Cause: The threshold did not exist with the specified threshold key.

Action: No action required.

ORA-13912: Critical threshold value is less than warning threshold value.

Cause: An attempt was made to call SET_THRESHOLD procedure with the critical threshold value less than the warning threshold value.

Action: Check the threshold values and reissue the statement.

ORA-13913: The threshold cannot be set when SYSAUX is offline.

Cause: SET_THRESHOLD procedure was called when SYSAUX tablespace was offline.

Action: Call SET_THRESHOLD procedure when SYSAUX is online.

ORA-13914: Threshold notification failed.

Cause: An error occurred when sending notification for this threshold.

Action: Make sure you have enough space on SYSAUX tablespace and retry this operation.

ORA-13915: Critical byte based free space threshold value is greater than warning threshold value.

Cause: An attempt was made to call SET_THRESHOLD procedure with the bytes based critical threshold value greater than the warning threshold value.

Action: Check the threshold values and reissue the statement.

ORA-13916: Invalid value "*string*" specified for parameter "*string*".

Cause: An invalid value was specified for the the given parameter.

Action: Correct the value being specified for the parameter.

ORA-13917: Posting system alert with reason_id *string* failed with code [*string*] [*string*]

Cause: Connection to the database is dead, or invalid parameter to alert routine.

Action: If this condition repeats, please contact Oracle Support.

ORA-13918: Updating system alert with reason_id *string* failed; previous alert not found

Cause: System Error: An attempt to update a system alert failed. The alert was improperly cleared from WRI\$_ALERT_OUTSTANDING.

Action: Do not delete from WRI\$_ALERT_OUTSTANDING. If this condition repeats, please contact Oracle Support.

ORA-13919: Cannot specify values for parameter "*string*" and for parameter "*string*"

Cause: Can only specify a value for one or the other.

Action: Pass just one of the parameters.

ORA-13920: Threshold cannot be set when database is in read-only mode.

Cause: SET_THRESHOLD procedure was called when database was open in read-only mode.

Action: Call SET_THRESHOLD procedure when database is open in read/write mode.

ORA-13951: MMON sub-action time limit exceeded

Cause: MMON sub-action did not complete within the system specified time frame.

Action: None

ORA-13970: Invalid name of "*string*" given

Cause: Passed an invalid component, report, or transformation name to the framework. Names must be alphanumeric and can contain the underscore (_) character.

Action: Try again with a valid name

ORA-13971: *string* "*string*" unknown

Cause: Passed an unknown component, report, or transformation to the framework.

Action: Give a different name

ORA-13972: *string* "*string*" unknown for *string* "*string*"

Cause: An object with the first name is unknown within the naming scope of the second name

Action: Change the parameters passed in or register the proper object

ORA-13973: *string* unknown for *string* "*string*"

Cause: An object is unknown within the given naming scope

Action: Change the parameters passed in or register the proper object

ORA-13974: *string* with name "*string*" already exists

Cause: An object with the given name already exists

Action: Give a different name

ORA-13975: *string* with name "*string*" already exists for *string* "*string*"

Cause: An object with the first name already exists within the naming scope of the second name

Action: Give a different name

ORA-13976: Improperly-formed report tag

Cause: The top-level report tag was not built properly

Action: Make sure that the report tag is built using the common tag library function

ORA-13977: Invalid content type

Cause: An invalid content type was passed to the register format API

Action: Correct your code to use the values in dbmsrep.sql

ORA-13978: Invalid reference string parameter or value

Cause: An invalid parameter/value was passed to a dbms_report API

Action: Ensure that the parameter names and values are alphanumeric.

ORA-13979: Filename too long

Cause: An invalid file name was passed to STORE_FILE

Action: Ensure that the filename is less than 500 bytes

ORA-13980: Invalid file URL

Cause: A URL with invalid syntax was provided, either directly to the function or via an XML IMPORT or INCLUDE.

Action: Check the URL.

ORA-13981: Invalid file URL or path prefix

Cause: Either a URL or path prefix with invalid syntax was provided.

Action: Check the URL

ORA-13982: Could not find file at URL provided

Cause: The file requested could not be found in the given location.

Action: Check the URL provided.

ORA-13983: Missing *body* tag from HTML

Cause: An HTML document was passed to the function missing its *body* tag.

Action: Check the HTML source.

ORA-13984: Invalid reference string

Cause: The given reference string could not be parsed.

Action: Check the reference string syntax.

ORA-13985: Invalid URL provided to servlet

Cause: An invalid URL was provided to the servlet.

Action: Check the URL.

ORA-13986: Error *\string* received from XPath engine

Cause: An error was received from the xpath library during an xpath operation.

Action: Check xmlerr.h to understand the cause of the error.

ORA-13987: Invalid input to build common *<string>* tag

Cause: Invalid input was given when attempting to build a common tag.

Action: Check the function input to make sure all necessary information is given.

ORA-13988: Invalid input given to variable argument list report function.

Cause: An invalid parameter was provided to one of the report framework variable argument list functions.

Action: Check the function input and try again.

ORA-13989: Invalid input given to structured argument list report function.

Cause: An invalid parameter was provided to one of the report framework structured argument list functions.

Action: Check the function input and try again.

ORA-13990: Invalid tag name given to common tag callout function.

Cause: This is an internal Server Manageability Error

Action: Contact Oracle Support Services

ORA-14000: only one LOCAL clause may be specified

Cause: CREATE INDEX statement contained more than one LOCAL clause

Action: Specify LOCAL option at most once

ORA-14001: LOCAL clause contradicts previously specified GLOBAL clause

Cause: CREATE INDEX statement contained a GLOBAL clause and a LOCAL clause

Action: Specify LOCAL or GLOBAL clause, but not both

ORA-14002: only one GLOBAL clause may be specified

Cause: CREATE INDEX statement contained more than one GLOBAL clause

Action: Specify GLOBAL option at most once

ORA-14003: GLOBAL clause contradicts previously specified LOCAL clause

Cause: CREATE INDEX statement contained a LOCAL clause and a GLOBAL clause

Action: Specify GLOBAL or LOCAL clause, but not both

ORA-14004: missing PARTITION keyword

Cause: keyword PARTITION missing

Action: supply missing keyword

ORA-14005: missing RANGE keyword

Cause: keyword RANGE missing

Action: supply missing keyword

ORA-14006: invalid partition name

Cause: a partition name of the form *identifier* is expected but not present.

Action: enter an appropriate partition name.

ORA-14007: missing LESS keyword

Cause: keyword LESS missing

Action: supply missing keyword

ORA-14008: missing THAN keyword

Cause: keyword THAN missing

Action: supply missing keyword

ORA-14009: partition bound may not be specified for a LOCAL index partition

Cause: while parsing a CREATE INDEX statement to create a LOCAL partitioned index, *partition-description* of one of partitions was found to contain VALUES LESS THAN clause which is illegal since a LOCAL index inherits partition bounds from its base table

Action: remove all VALUES LESS THAN clauses from descriptions of LOCAL index partitions

ORA-14010: this physical attribute may not be specified for an index partition

Cause: unexpected option was encountered while parsing physical attributes of an index partition; valid options for Range or Composite Range partitions are INITRANS, MAXTRANS, TABLESPACE, STORAGE, PCTFREE; only TABLESPACE may be specified for Hash partitions

Action: remove invalid option(s) from the list of physical attributes of an index partition

ORA-14011: names assigned to resulting partitions must be distinct

Cause: Names of partitions resulting from splitting of an existing table or index partition are not distinct

Action: rename resulting partition(s) to ensure that their names are distinct and different from those of any other partition of the table or index

ORA-14012: resulting partition name conflicts with that of an existing partition

Cause: Name of a partition resulting from splitting of an existing table or index partition is identical to that of some other existing partition of that table or index

Action: rename resulting partition(s) to ensure that their names are distinct and different from those of any other partition of the table or index

ORA-14013: duplicate partition name

Cause: Name of a partition of a table or index being created is not unique

Action: rename partition(s) to ensure that their names are unique among partitions of the table or index being created

ORA-14014: maximum number of partitioning columns is 16

Cause: number of columns in a partitioning column list exceeded the legal limit of 16

Action: modify partitioning column list so that it consists of at most 16 columns

ORA-14015: too many partition descriptions

Cause: CREATE TABLE or CREATE INDEX contained too many partition descriptions; maximum number of partitions is 1048575 (1024K-1).

Action: Reduce number of partitions to not exceed 1048575 (1024K -1).

ORA-14016: underlying table of a LOCAL partitioned index must be partitioned

Cause: User attempted to create a LOCAL partitioned index on a non-partitioned table which is illegal. Only GLOBAL indices (partitioned or otherwise) may be created on a non-partitioned table.

Action: Correct the statement and reenter

ORA-14017: partition bound list contains too many elements

Cause: Partition bound list contained more elements than there are partitioning columns

Action: Ensure that the number of elements in partition bound list is equal to the number of partitioning columns of the table or index

ORA-14018: partition bound list contains too few elements

Cause: Partition bound list contained fewer elements than there are partitioning columns

Action: Ensure that the number of elements in partition bound list is equal to the number of partitioning columns of the table or index

ORA-14019: partition bound element must be one of: string, datetime or interval literal, number, or MAXVALUE

Cause: Partition bound list contained an element of invalid type (i.e. not a number, non-empty string, datetime or interval literal, or MAXVALUE)

Action: Ensure that all elements of partition bound list are of valid type

ORA-14020: this physical attribute may not be specified for a table partition

Cause: unexpected option was encountered while parsing physical attributes of a table partition; valid options for Range or Composite Range partitions are INITRANS, MAXTRANS, TABLESPACE, STORAGE, PCTFREE, and PCTUSED; only TABLESPACE may be specified for Hash partitions

Action: remove invalid option(s) from the list of physical attributes of a table partition

ORA-14021: MAXVALUE must be specified for all columns

Cause: In the VALUES LESS THAN clause for the highest (last) partition of a GLOBAL index, MAXVALUE must be specified for all columns

Action: Ensure that VALUES LESS THAN clause for the last partition of a GLOBAL index has MAXVALUE specified for all columns

ORA-14022: creation of LOCAL partitioned cluster indices is not supported

Cause: An attempt was made to create a LOCAL partitioned cluster index, which is currently illegal

Action: Remove LOCAL along with *partition descriptions*, if any, from the CREATE INDEX statement.

ORA-14023: creation of GLOBAL partitioned cluster indices is not supported

Cause: An attempt was made to create a GLOBAL partitioned cluster index, which is currently illegal

Action: Remove PARTITION BY RANGE clause along with *partition descriptions* from the CREATE INDEX statement.

ORA-14024: number of partitions of LOCAL index must equal that of the underlying table

Cause: User attempted to create a LOCAL partitioned index with a number of partitions which is different from that of the underlying table.

Action: Correct the CREATE INDEX statement to specify a correct number of partitions

ORA-14025: PARTITION may not be specified for a materialized view or a materialized view log

Cause: PARTITION option was encountered while parsing a definition of a materialized view or a materialized view log

Action: Ensure that a definition of a MATERIALIZED VIEW does not include invalid options

ORA-14026: PARTITION and CLUSTER clauses are mutually exclusive

Cause: definition of a table contained both PARTITION and CLUSTER clauses which is illegal

Action: Remove one of the conflicting clauses

ORA-14027: only one PARTITION clause may be specified

Cause: CREATE TABLE statement contained more than one PARTITION clause

Action: Specify PARTITION option at most once

ORA-14028: missing AT or VALUES keyword

Cause: keyword AT or VALUES missing

Action: supply missing keyword

ORA-14029: GLOBAL partitioned index must be prefixed

Cause: partitioning columns of a global partitioned index must form a prefix of the index' key columns

Action: Ensure that the GLOBAL partitioned index being created is prefixed

ORA-14030: non-existent partitioning column in CREATE TABLE statement

Cause: Partitioning column specified in CREATE TABLE statement is not one of columns of the table being created.

Action: Ensure that all columns in the partitioning column list are columns of the table being created.

ORA-14031: partitioning column may not be of type LONG or LONG RAW

Cause: Partitioning column specified by the user was of type LONG or LONG RAW, which is illegal.

Action: Ensure that no partitioning column is of type LONG or LONG RAW.

ORA-14032: partition bound of partition number *string* is too high

Cause: High bound of the partition whose number (partitions are numbered starting with 1) is displayed in this message did not collate lower than that of the following partition, which is illegal.

Action: Ensure that high bound of every partition (except for the last one) collates lower than that of a following partition.

ORA-14036: partition bound value too large for column

Cause: Length of partition bound value is longer than that of the corresponding partitioning column.

Action: Ensure that lengths of high bound values do not exceed those of corresponding partitioning columns

ORA-14037: partition bound of partition "*string*" is too high

Cause: High bound of the partition whose name (explicitly specified by the user) is displayed in this message did not collate lower than that of the following partition, which is illegal.

Action: Ensure that high bound of every partition (except for the last one) collates lower than that of a following partition.

ORA-14038: GLOBAL partitioned index must be prefixed

Cause: User attempted to create a GLOBAL non-prefixed partitioned index which is illegal

Action: If the user, indeed, desired to create a non-prefixed index, it must be created as LOCAL; otherwise, correct the list of key and/or partitioning columns to ensure that the index is prefixed

ORA-14039: partitioning columns must form a subset of key columns of a UNIQUE index

Cause: User attempted to create a UNIQUE partitioned index whose partitioning columns do not form a subset of its key columns which is illegal

Action: If the user, indeed, desired to create an index whose partitioning columns do not form a subset of its key columns, it must be created as non-UNIQUE; otherwise, correct the list of key and/or partitioning columns to ensure that the index' partitioning columns form a subset of its key columns

ORA-14041: partition bound may not be specified for resulting partitions

Cause: while parsing an ALTER {TABLE | INDEX} SPLIT PARTITION statement, *partition-description* of a resulting partition was found to contain VALUES LESS THAN clause which is illegal

Action: remove VALUES LESS THAN clause from the description(s) of partitions resulting from splitting an existing table or index partition

ORA-14042: partition bound may not be specified for a partition being moved, modified or rebuilt

Cause: while parsing an ALTER {TABLE | INDEX} MODIFY PARTITION, ALTER TABLE MOVE PARTITION, or ALTER INDEX REBUILD PARTITION statement, description of new physical attributes of the partition being moved, modified, or rebuilt was found to contain VALUES LESS THAN clause which is illegal

Action: remove VALUES LESS THAN clause from the description of new attributes of the partition being moved, modified, or rebuilt

ORA-14043: only one partition may be added

Cause: ALTER TABLE ADD PARTITION contained descriptions of more than one partition to be added

Action: Ensure that the statement contains exactly one partition definition and that it does not contain any commas

ORA-14044: only one partition may be moved

Cause: ALTER TABLE MOVE PARTITION contained descriptions of more than one partition to be moved

Action: Ensure that the statement describes exactly one partition to be moved and that it does not contain any commas

ORA-14045: only one partition may be modified

Cause: ALTER TABLE | INDEX MODIFY PARTITION contained descriptions of more than one partition to be modified

Action: Ensure that the statement describes exactly one partition to be modified and that it does not contain any commas

ORA-14046: a partition may be split into exactly two new partitions

Cause: ALTER TABLE | INDEX SPLIT PARTITION did not contain descriptions of exactly two new partitions into which an existing table or index partition was to be split

Action: Ensure that the statement describes exactly two partition into which an existing partition is to be split

ORA-14047: ALTER TABLE | INDEX RENAME may not be combined with other operations

Cause: ALTER TABLE or ALTER INDEX statement attempted to combine a RENAME operation with some other operation which is illegal

Action: Ensure that RENAME operation is the sole operation specified in ALTER TABLE or ALTER INDEX statement;

ORA-14048: a partition maintenance operation may not be combined with other operations

Cause: ALTER TABLE or ALTER INDEX statement attempted to combine a partition maintenance operation (e.g. MOVE PARTITION) with some other operation (e.g. ADD PARTITION or PCTFREE which is illegal

Action: Ensure that a partition maintenance operation is the sole operation specified in ALTER TABLE or ALTER INDEX statement; operations other than those dealing with partitions, default attributes of partitioned tables/indices or specifying that a table be renamed (ALTER TABLE RENAME) may be combined at will

ORA-14049: invalid ALTER TABLE MODIFY PARTITION option

Cause: An option other than PCTFREE, PCTUSED, INITRANS, MAXTRANS, STORAGE, BACKUP, ALLOCATE EXTENT, or DEALLOCATE UNUSED was specified in an ALTER TABLE MODIFY PARTITION statement for a Range or Composite Range partition.

Action: Specify only legal options.

ORA-14050: invalid ALTER INDEX MODIFY PARTITION option

Cause: An option other than INITRANS, MAXTRANS, STORAGE, or DEALLOCATE UNUSED was specified in an ALTER INDEX MODIFY PARTITION statement.

Action: Specify only legal options.

ORA-14051: invalid ALTER MATERIALIZED VIEW option

Cause: An option other than PCTFREE, PCTUSED, INITRANS, MAXTRANS, STORAGE, or BACKUP was specified in an ALTER MATERIALIZED VIEW statement.

Action: Specify only legal options.

ORA-14052: partition-extended table name syntax is disallowed in this context

Cause: User attempted to use partition-extended table name syntax in illegal context (i.e. not in FROM-clause or INSERT, DELETE, or UPDATE statement)

Action: Avoid use of partition-extended table name in contexts other those mentioned above.

ORA-14053: illegal attempt to modify *string* in *string* statement

Cause: Certain attributes of objects (e.g. tables) may be specified at creation time, but may not be modified using ALTER statement. Unfortunately, user specified one of such attributes.

Action: Ensure that ALTER statement specifies new values only for attributes which may be changed once an object has been created

ORA-14054: invalid ALTER TABLE TRUNCATE PARTITION option

Cause: Name of the partition to be truncated may be followed by DROP STORAGE or REUSE STORAGE

Action: Ensure that no options besides DROP STORAGE or REUSE STORAGE are specified with ALTER TABLE TRUNCATE PARTITION

ORA-14055: keyword REBUILD in ALTER INDEX REBUILD must immediately follow *index name*

Cause: ALTER INDEX statement contained REBUILD keyword following some index attributes (e.g. INITRANS.)

Action: Ensure that keyword REBUILD immediately follows the name of the index being altered

ORA-14056: partition number *string*: sum of PCTUSED and PCTFREE may not exceed 100

Cause: the sum of PCTUSED and PCTFREE for a partition whose number (partitions are numbered starting with 1) is displayed in this message exceeds 100. Note that if PCTUSED and/or PCTFREE values for this partition were not specified explicitly, default values for the partitioned table or index would be used. If, in turn, default PCTUSED and/or PCTFREE values for the partitioned table or index were not specified, system defaults would be used.

Action: ensure that a sum of PCTUSED and PCTFREE for the partition does not exceed 100

ORA-14057: partition "*string*": sum of PCTUSED and PCTFREE may not exceed 100

Cause: the sum of PCTUSED and PCTFREE for a partition whose name (explicitly specified by the user) is displayed in this message exceeds 100. Note that if PCTUSED and/or PCTFREE values for this partition were not specified explicitly, default values for the partitioned table or index would be used. If, in turn, default PCTUSED and/or PCTFREE values for the partitioned table or index were not specified, system defaults would be used.

Action: ensure that a sum of PCTUSED and PCTFREE for the partition does not exceed 100

ORA-14058: partition number *string*: INITRANS value must be less than MAXTRANS value

Cause: Value of INITRANS was found to be greater than that of MAXTRANS for a partition whose number (partitions are numbered starting with 1) is displayed in this message. Note that if INITRANS and/or MAXTRANS values for this partition were not specified explicitly, default values for the partitioned table or index would be used. If, in turn, default INITRANS and/or MAXTRANS values for the partitioned table or index were not specified, system defaults would be used.

Action: ensure that value of INITRANS (whether specified explicitly or derived from the default value for the partitioned table or index) is no greater than that of MAXTRANS

ORA-14059: partition "*string*": INITRANS value must be less than MAXTRANS value

Cause: Value of INITRANS was found to be greater than that of MAXTRANS for a partition whose name (explicitly specified by the user) is displayed in this message. Note that if INITRANS and/or MAXTRANS values for this partition were not specified explicitly, default values for the partitioned table or index would be used. If, in turn, default INITRANS and/or MAXTRANS values for the partitioned table or index were not specified, system defaults would be used.

Action: ensure that value of INITRANS (whether specified explicitly or derived from the default value for the partitioned table or index) is no greater than that of MAXTRANS

ORA-14060: data type or length of a table partitioning column may not be changed

Cause: User issued ALTER TABLE statement attempting to modify data type and/or length of a column used to partition the table named in ALTER TABLE statement, which is illegal

Action: Avoid modifying data type and/or length of table partitioning column(s)

ORA-14061: data type or length of an index partitioning column may not be changed

Cause: User issued ALTER TABLE statement attempting to modify data type and/or length of a column used to partition some index defined on the table named in ALTER TABLE statement, which is illegal

Action: Avoid modifying data type and/or length of index partitioning column(s)

ORA-14062: one or more of table's partitions reside in a read-only tablespace

Cause: User issued ALTER TABLE statement attempting to modify an existing VARCHAR2 (or VARCHAR) column to be of type CHAR (or CHARACTER), increase length of an existing CHAR (or CHARACTER) column, or add a column with user-specified default for a table one or more partitions of which reside in read-only tablespaces, which is illegal

Action: Avoid performing aforementioned operations on a partitioned table one or more partitions of which reside in read-only tablespaces

ORA-14063: Unusable index exists on unique/primary constraint key

Cause: User attempted to add or enable a primary key/unique constraint on column(s) of a table on which there exists an index marked Index Unusable.

Action: Drop the existing index or rebuild it using ALTER INDEX REBUILD

ORA-14064: Index with Unusable partition exists on unique/primary constraint key

Cause: User attempted to add or enable a primary key/unique constraint on column(s) of a table on which there exists an index one or more partitions of which are marked Index Unusable.

Action: Drop the existing index or rebuild unusable partitions it using ALTER INDEX REBUILD PARTITION

ORA-14065: ALLOCATE STORAGE may not be specified for a partitioned table

Cause: User specified ALLOCATE STORAGE clause in ALTER TABLE statement issued against a partitioned table which is illegal.

Action: Remove the illegal option. If it is desired to add storage to individual partitions, ALLOCATE STORAGE clause may be specified with ALTER TABLE MODIFY PARTITION statement.

ORA-14066: illegal option for a non-partitioned index-organized table

Cause: An attempt was made to issue a CREATE or ALTER TABLE command on a non-partitioned IOT, but the command contains an option that is legal only for partitioned index-organized tables. Such options are: ENABLE ROW MOVEMENT and DISABLE ROW MOVEMENT.

Action: Remove the illegal option(s) from the command.

ORA-14067: duplicate TABLESPACE_NUMBER specification

Cause: TABLESPACE_NUMBER clause was specified more than once for a table, index or an index partition

Action: Correct the code generating text of CREATE INDEX statement sent to the slaves

ORA-14068: TABLESPACE and TABLESPACE_NUMBER may not be both specified

Cause: Both TABLESPACE and TABLESPACE_NUMBER clauses were specified for a table, index or an index partition

Action: Correct the code generating text of CREATE INDEX statement sent to the slaves

ORA-14069: invalid TABLESPACE_NUMBER value

Cause: The TABLESPACE_NUMBER value is not an integer between 0 and 0x7FFFFFFF

Action: Correct the code generating text of CREATE INDEX statement sent to the slaves

ORA-14070: option may be specified only for partitioned indices or with REBUILD

Cause: User issued ALTER INDEX statement containing an option which is legal only for partitioned indices or in conjunction with REBUILD against a non-partitioned index. Such options are: PCTFREE, TABLESPACE, [NO]PARALLEL and INITIAL, FREELISTS, and FREELIST GROUPS inside STORAGE clause

Action: Remove illegal option(s).

ORA-14071: invalid option for an index used to enforce a constraint

Cause: An option other than COMPRESS, NOCOMPRESS, PCTFREE, INITRANS, MAXTRANS, STORAGE, TABLESPACE, PARALLEL, NOPARALLEL, RECOVERABLE, UNRECOVERABLE, LOGGING, NOLOGGING, LOCAL, or GLOBAL was specified for an index used to enforce a constraint.

Action: Choose one of the valid index options.

ORA-14072: fixed table may not be truncated

Cause: User attempted to truncate a fixed table which is illegal.

Action: Ensure that the table being truncated is not a fixed table.

ORA-14073: bootstrap table or cluster may not be truncated

Cause: User attempted to truncate a bootstrap table or cluster which is illegal

Action: Ensure that the table (or cluster) being truncated is not a bootstrap table (or cluster)

ORA-14074: partition bound must collate higher than that of the last partition

Cause: Partition bound specified in ALTER TABLE ADD PARTITION statement did not collate higher than that of the table's last partition, which is illegal.

Action: Ensure that the partition bound of the partition to be added collates higher than that of the table's last partition.

ORA-14075: partition maintenance operations may only be performed on partitioned indices

Cause: Index named in ALTER INDEX partition maintenance operation is not partitioned, making a partition maintenance operation, at best, meaningless

Action: Ensure that the index named in ALTER INDEX statement specifying a partition maintenance operation is, indeed, partitioned

ORA-14076: submitted alter index partition/subpartition operation is not valid for local partitioned index

Cause: User attempted to either drop, split, add or coalesce a partition or a subpartition of a local index which is illegal.

Action: Ensure that the index named in such statement is a global partitioned index.

ORA-14078: you may not drop the highest partition of a GLOBAL index

Cause: User attempted to drop highest partition of a GLOBAL index, which is illegal.

Action: Ensure that the partition specified in ALTER INDEX DROP PARTITION statement is not the highest partition of the index.

ORA-14079: illegal option for a partition marked Index Unusable

Cause: ALTER INDEX MODIFY PARTITION statement against an index partition marked Index Unusable contained STORAGE and/or DEALLOCATE SPACE clauses which is illegal

Action: Ensure that only valid options are specified

ORA-14080: partition cannot be split along the specified high bound

Cause: User attempted to split a partition along a bound which either collates higher than that of the partition to be split or lower than that of a partition immediately preceding the one to be split

Action: Ensure that the bound along which a partition is to be split collates lower than that of the partition to be split and higher than that of a partition immediately preceding the one to be split

ORA-14081: new partition name must differ from the old partition name

Cause: User entered ALTER TABLE/INDEX RENAME PARTITION specifying *new-partition-name* which is identical to the name of the partition being renamed

Action: Ensure that the new partition name is different from the name of any (including the one being renamed) existing partition of a given table or index

ORA-14082: new partition name must differ from that of any other partition of the object

Cause: User entered ALTER TABLE/INDEX RENAME PARTITION specifying *new-partition-name* which is identical to the name of some existing partition of the object

Action: Ensure that the new partition name is different from the name of any (including the one being renamed) existing partition of a given table or index

ORA-14083: cannot drop the only partition of a partitioned table

Cause: A drop partition command is being executed when there is only one partition in the table

Action: Ensure that there is at least one partition. Drop table to remove all partitions

ORA-14084: you may specify TABLESPACE DEFAULT only for a LOCAL index

Cause: User attempted to specify TABLESPACE DEFAULT for an object other than a LOCAL index, which is illegal.

Action: Reenter the statement without TABLESPACE DEFAULT clause.

ORA-14085: partitioned table cannot have column with LONG datatype

Cause: User tried to create a partitioned table with a LONG datatype or tried to add a LONG datatype column to a partitioned table.

Action: LONG data types are not supported with partitioned tables. Create table without LONG column or change table to not partitioned. If adding column, do not use LONG datatype. If modifying attributes of a column to change data type to LONG, it has to be a non partitioned table.

ORA-14086: a partitioned index may not be rebuilt as a whole

Cause: User attempted to rebuild a partitioned index using ALTER INDEX REBUILD statement, which is illegal

Action: Rebuild the index a partition at a time (using ALTER INDEX REBUILD PARTITION) or drop and recreate the entire index

ORA-14094: invalid ALTER TABLE EXCHANGE PARTITION option

Cause: Name of the table to be EXCHANGED has to be followed by [(INCLUDING | EXCLUDING) INDEX][(WITH | WITHOUT) VALIDATION]

Action: Ensure that no options besides INCLUDING INDEX or EXCLUDING INDEX are specified with ALTER TABLE EXCHANGE PARTITION

ORA-14095: ALTER TABLE EXCHANGE requires a non-partitioned, non-clustered table

Cause: The table in the EXCHANGE operation is either clustered or partitioned

Action: Ensure that the table with which the partition is being exchanged for is not partitioned or clustered.

ORA-14096: tables in ALTER TABLE EXCHANGE PARTITION must have the same number of columns

Cause: The two tables specified in the EXCHANGE have different number of columns

Action: Ensure that the two tables have the same number of columns with the same type and size.

ORA-14097: column type or size mismatch in ALTER TABLE EXCHANGE PARTITION

Cause: The corresponding columns in the tables specified in the ALTER TABLE EXCHANGE PARTITION are of different type or size

Action: Ensure that the two tables have the same number of columns with the same type and size.

ORA-14098: index mismatch for tables in ALTER TABLE EXCHANGE PARTITION

Cause: The two tables specified in the EXCHANGE have indexes which are not equivalent

Action: Ensure that the indexes for the two tables have indexes which follow this rule For every non partitioned index for the non partitioned table, there has to be an identical LOCAL index on the partitioned table and vice versa. By identical, the column position, type and size have to be the same.

ORA-14099: all rows in table do not qualify for specified partition

Cause: There is at least one row in the non partitioned table which does not qualify for the partition specified in the ALTER TABLE EXCHANGE PARTITION

Action: Ensure that all the rows in the segment qualify for the partition. Perform the alter table operation with the NO CHECKING option. Run ANALYZE table VALIDATE on that partition to find out the invalid rows and delete them.

ORA-14100: partition extended table name cannot refer to a remote object

Cause: User attempted to use partition-extended table name syntax in conjunction with remote object name which is illegal

Action: Correct the statement and reenter

ORA-14101: partition extended table name cannot refer to a synonym

Cause: User attempted to use partition-extended table name syntax in conjunction with synonym name which is illegal

Action: Correct the statement and reenter

ORA-14102: only one LOGGING or NOLOGGING clause may be specified

Cause: LOGGING was specified more than once, NOLOGGING was specified more than once, or both LOGGING and NOLOGGING were specified.

Action: Remove all but one of the LOGGING or NOLOGGING clauses and reissue the statement.

ORA-14103: LOGGING/NOLOGGING may not be combined with RECOVERABLE/UNRECOVERABLE

Cause: A statement contained both [NO]LOGGING and [UN]RECOVERABLE clauses which is disallowed.

Action: Remove one of the offending clauses. [UN]RECOVERABLE is being deprecated in V8 and will be obsoleted in V9. To duplicate semantics of UNRECOVERABLE clause, create an object with NOLOGGING option and then ALTER it specifying LOGGING. To duplicate semantics of RECOVERABLE clause, create an object with LOGGING option.

ORA-14104: RECOVERABLE/UNRECOVERABLE may not be specified for partitioned tables/indices

Cause: CREATE TABLE/INDEX statement used to create a partitioned table/index contained RECOVERABLE or UNRECOVERABLE clause which is illegal

Action: Remove offending clause. [UN]RECOVERABLE is being deprecated in V8 and will be obsoleted in V9. To duplicate semantics of UNRECOVERABLE clause, create an object with NOLOGGING option and then ALTER it specifying LOGGING. To duplicate semantics of RECOVERABLE clause, create an object with LOGGING option.

ORA-14105: RECOVERABLE/UNRECOVERABLE may not be specified in this context

Cause: RECOVERABLE/UNRECOVERABLE clause is not allowed in this context.

Action: Remove offending clause. RECOVERABLE/UNRECOVERABLE may only be specified in CREATE TABLE/INDEX statement describing a non-partitioned table or index and ALTER INDEX REBUILD statement. [UN]RECOVERABLE is being deprecated in V8 and will be obsoleted in V9. To duplicate semantics of UNRECOVERABLE clause, create an object with NOLOGGING option and then ALTER it specifying LOGGING. To duplicate semantics of RECOVERABLE clause, create an object with LOGGING option.

ORA-14106: LOGGING/NOLOGGING may not be specified for a clustered table

Cause: User attempted to specify LOGGING or NOLOGGING clause in CREATE TABLE or ALTER TABLE statement involving a clustered table

Action: Remove offending clause.

ORA-14107: partition specification is required for a partitioned object

Cause: parameter which supplies partition name is missing. This parameter is optional for non-partitioned objects, but is required for partitioned objects.

Action: supply missing parameter

ORA-14108: illegal partition-extended table name syntax

Cause: Partition to be accessed may only be specified using its name. User attempted to use a partition number or a bind variable.

Action: Modify statement to refer to a partition using its name

ORA-14109: partition-extended object names may only be used with tables and editioning views

Cause: An attempt was made to use a partition-extended object name with an object which was not a table or an editioning view.

Action: Avoid using partition-extended name syntax with objects which are not tables or editioning views

ORA-14110: partitioning column may not be of type ROWID

Cause: Partitioning column specified by the user was of type ROWID, which is illegal.

Action: Ensure that no partitioning column is of type ROWID.

ORA-14111: creation of a GLOBAL partitioned index on clustered tables is not supported

Cause: An attempt was made to create a GLOBAL partitioned index on a clustered table which is currently illegal.

Action: Remove PARTITION BY RANGE/HASH clause along with any partition descriptions to create a GLOBAL non-partitioned index on a clustered table

ORA-14112: RECOVERABLE/UNRECOVERABLE may not be specified for a partition or subpartition

Cause: Description of a partition or subpartition found in CREATE TABLE/INDEX statement contained RECOVERABLE or UNRECOVERABLE clause which is illegal

Action: Remove offending clause. Use LOGGING or NOLOGGING instead.

ORA-14113: partitioned table cannot have column with LOB datatype

Cause: User tried to create a partitioned table with a LOB datatype or tried to add a LOB datatype column to a partitioned table.

Action: LOB data types are not supported with partitioned tables. Create table without LOB column or change table to not partitioned. If adding column, do not use LOB datatype. If modifying attributes of a column to change data type to LOB, it has to be a non partitioned table.

ORA-14114: partitioned table cannot have column with object, REF, nested table, array datatype

Cause: User tried to create a partitioned table with a object datatype (object, REF, nested table, array) or tried to add a object datatype column to a partitioned table.

Action: object data types are not supported with partitioned tables. Create table without object column or change table to not partitioned. If adding column, do not use object datatypes. If modifying attributes of a column to change data type to object, it has to be a non partitioned table.

ORA-14115: partition bound of partition number *string* is too long

Cause: Length of linear key representation of a high bound of the partition whose number (partitions are numbered starting with 1) is displayed in this message exceeded the legal limit (4K).

Action: Change representation of a partition high bound to bring its length within legal limit.

ORA-14116: partition bound of partition "*string*" is too long

Cause: Length of linear key representation of a high bound of the partition whose name (explicitly specified by the user) is displayed in this message exceeded the legal limit (4K).

Action: Change representation of a partition high bound to bring its length within legal limit.

ORA-14117: partition resides in offlined tablespace

Cause: User attempted an operation requiring that we access data in a partition which resides in a tablespace which was taken offline. Such operations include trying to drop a tablespace of a table which has indices defined on it or is referenced by a constraint.

Action: Bring tablespace online before attempting the operation.

ORA-14118: CHECK constraint mismatch in ALTER TABLE EXCHANGE PARTITION

Cause: The corresponding columns in the tables specified in the ALTER TABLE EXCHANGE PARTITION statement have CHECK constraint defined on them.

Action: Ensure that the two tables do not have CHECK constraint defined on any column

ORA-14119: specified partition bound is too long

Cause: Length of a linear key representation of a high bound of a table partition being added or along which an existing table or index partition is being split exceeded the legal limit (4K).

Action: Change representation of a partition high bound to bring its length within legal limit.

ORA-14120: incompletely specified partition bound for a DATE column

Cause: An attempt was made to use a date expression whose format does not fully (i.e. day, month, and year (including century)) specify a date as a partition bound for a DATE column. The format may have been specified explicitly (using TO_DATE() function) or implicitly (NLS_DATE_FORMAT).

Action: Ensure that date format used in a partition bound for a DATE column supports complete specification of a date (i.e. day, month, and year (including century)). If NLS_DATE_FORMAT does not support complete (i.e. including the century) specification of the year, use TO_DATE() (e.g. TO_DATE('01-01-1999', 'MM-DD-YYYY') to fully express the desired date.

ORA-14121: MODIFY DEFAULT ATTRIBUTES may not be combined with other operations

Cause: ALTER TABLE or ALTER INDEX statement attempted to combine MODIFY DEFAULT ATTRIBUTES with some other operation (e.g. ADD PARTITION or PCTFREE) which is illegal

Action: Ensure that MODIFY DEFAULT ATTRIBUTES is the sole operation specified in ALTER TABLE or ALTER INDEX statement; operations other than those dealing with partitions, default attributes of partitioned tables/indices or specifying that a table be renamed (ALTER TABLE RENAME) may be combined at will

ORA-14122: only one REVERSE or NOREVERSE clause may be specified

Cause: Both REVERSE and NOREVERSE were specified in CREATE INDEX statement.

Action: Remove all but one of the REVERSE or NOREVERSE clauses and reissue the statement.

ORA-14123: duplicate NOREVERSE clause

Cause: NOREVERSE was specified more than once in ALTER INDEX statement.

Action: Remove all but one of the NOREVERSE clauses and reissue the statement.

ORA-14124: duplicate REVERSE clause

Cause: REVERSE was specified more than once in ALTER INDEX or CREATE INDEX statements.

Action: Remove all but one of the REVERSE clauses and reissue the statement.

ORA-14125: REVERSE/NOREVERSE may not be specified in this context

Cause: REVERSE/NOREVERSE clause is not allowed in this context.

Action: Remove offending clause. REVERSE may be specified as an attribute of an index (not of an individual partition, if creating a partitioned index) in CREATE INDEX statement and ALTER INDEX REBUILD statement. NOREVERSE may be specified only in ALTER INDEX REBUILD statement.

ORA-14126: only a *parallel clause* may follow description(s) of resulting partitions

Cause: Descriptions of partition(s) resulting from splitting of a table or index partition may be followed by an optional *parallel clause* which applies to the entire statement and which, in turn, may not be followed by any other clause.

Action: Ensure that all partition attributes appear within the parenthesized list of descriptions of resulting partitions in ALTER TABLE/INDEX SPLIT PARTITION statement.

ORA-14128: FOREIGN KEY constraint mismatch in ALTER TABLE EXCHANGE PARTITION

Cause: The corresponding columns in the tables specified in the ALTER TABLE EXCHANGE PARTITION statement have different FOREIGN KEY constraints.

Action: Ensure that the two tables do not have FOREIGN KEY constraints defined on any column or disable all FOREIGN KEY constraints on both tables. Then retry the operation.

ORA-14129: INCLUDING INDEXES must be specified as tables have enabled UNIQUE constraints

Cause: Matching UNIQUE constraints in both table are enabled and validated but INCLUDING INDEXES is not specified in ALTER TABLE EXCHANGE PARTITION | SUBPARTITION command.

Action: Disable currently enabled matching UNIQUE constraints on both tables or ensure that INCLUDING INDEXES option is used.

ORA-14130: UNIQUE constraints mismatch in ALTER TABLE EXCHANGE PARTITION

Cause: One of the tables named in the ALTER TABLE EXCHANGE PARTITION command has a UNIQUE constraint for which no matching (vis-a-vis key columns) constraint is defined on the other table or a matching constraint is defined on the other table, but it differs from that defined on the first table vis-a-vis being enabled and/or validated.

Action: Ensure that for every UNIQUE constraint defined on one of the tables named in the ALTER TABLE EXCHANGE PARTITION statement there is a matching (vis-a-vis key columns and being enabled and/or validated) UNIQUE constraint defined on the other table. If UNIQUE constraints are enabled, UNIQUE constraints on the partitioned table should be enforced using local indexes.

ORA-14131: enabled UNIQUE constraint exists on one of the tables

Cause: One of the tables referenced in the ALTER TABLE EXCHANGE PARTITION | SUBPARTITION statement has enabled UNIQUE constraint(s) defined on it, which prevents EXCHANGE from proceeding.

Action: Disable constraints defined on tables referenced in the ALTER TABLE EXCHANGE PARTITION | SUBPARTITION statement and retry the statement.

ORA-14132: table cannot be used in EXCHANGE

Cause: An attempt was made to issue an ALTER TABLE EXCHANGE PARTITION | SUBPARTITION command, but the non-partitioned table cannot be used in the EXCHANGE because one or more of the following apply: - it is a typed table - it is a temporary table - it contains ADT columns - it contains nested-table columns - it contains REF columns - it contains array columns - it is an index-organized table - it contains LOB columns - it is a nested table - it is created with row dependency and the partitioned table is not - it is created without row dependency and the partitioned table is

Action: Make sure the non-partitioned table does not violate any of the above restrictions for the ALTER TABLE EXCHANGE PARTITION | SUBPARTITION command.

ORA-14133: ALTER TABLE MOVE cannot be combined with other operations

Cause: An attempt was made to combine an ALTER TABLE MOVE statement with another operation, such as MODIFY.

Action: Make sure that MOVE is the only operation specified in ALTER TABLE statement;

ORA-14134: indexes cannot use both DESC and REVERSE

Cause: An attempt was made to make a reverse index with some index columns marked DESC.

Action: Do not use DESC in reverse indexes. The rule-based optimizer can scan indexes backwards, which allows a normal reverse index to simulate a reverse index with columns marked DESC.

ORA-14135: a LOB column cannot serve as a partitioning column

Cause: An attempt was made to specify a column of type BLOB or CLOB as a partitioning or subpartitioning column.

Action: Ensure that no partitioning or subpartitioning column is of type BLOB or CLOB.

ORA-14136: ALTER TABLE EXCHANGE restricted by fine-grained security

Cause: User doing exchange does not have full table access due to VPD policies.

Action: Grant exempt privileges to this user.

ORA-14137: Table in partially dropped state, submit DROP TABLE PURGE

Cause: An attempt was made to access a partitioned table in a partially dropped state.

Action: Submit DROP TABLE *table* PURGE to drop the table.

ORA-14138: An unexpected error encountered during drop table operation

Cause: Drop table encountered an unexpected error.

Action: a. Submit drop table *table* purge, or b. If the situation described in the next error on the stack can be corrected, do so. c. Contact Oracle Support.

ORA-14139: table *string.string* is already in read-only mode

Cause: an attempt was made to set a read-only table in read-only mode

Action: this DDL can only be executed on a read/write table

ORA-14140: table *string.string* is already in read/write mode

Cause: an attempt was made to set a read/write table in read/write mode

Action: this DDL can only be executed on a read-only table

ORA-14141: ALTER INDEX VISIBLE | INVISIBLE may not be combined with other operations

Cause: ALTER INDEX statement attempted to combine a VISIBLE | INVISIBLE operation with some other operation which is illegal

Action: Ensure that VISIBLE | INVISIBLE operation is the sole operation specified in ALTER INDEX statement

ORA-14142: ALTER INDEX VISIBLE | INVISIBLE may not be used with certain types of index

Cause: Using the ALTER INDEX VISIBLE | INVISIBLE statement on certain types of indexes (IOT-TOP, Cluster indexes) is illegal.

Action: Remove the option VISIBLE | INVISIBLE.

ORA-14143: CREATE INDEX INVISIBLE may not be used with this type of index

Cause: Certain types of indexes (IOT-TOP, Cluster indexes) cannot be created invisible.

Action: Remove the option INVISIBLE

ORA-14145: only one UNUSABLE clause may be specified

Cause: UNUSABLE was specified more than once.

Action: Remove all but one of the UNUSABLE clauses and reissue the statement.

ORA-14146: Old CONNECT BY does not support partitioned tables

Cause: The query used the old CONNECT BY clause on a partitioned object.

Action: Disable old CONNECT BY by disabling the `_old_connect_by_enabled` parameter.

ORA-14147: There is an existing VISIBLE index defined on the same set of columns.

Cause: An attempt was made to define more than one VISIBLE index on the same set of columns. There can be only one VISIBLE index on the same set of columns. Hence ALTER INDEX VISIBLE was not supported on this index.

Action: Make all the indexes defined on the same set of columns as INVISIBLE and then reexecute this DDL.

ORA-14148: DML and DDL operations are not directly allowed on the guard-column.

Cause: An attempt was made to execute a DML or a DDL directly on the guard-column.

Action: This is not supported.

ORA-14150: missing SUBPARTITION keyword

Cause: keyword SUBPARTITION missing

Action: supply missing keyword

ORA-14151: invalid table partitioning method

Cause: Invalid partitioning method was specified in CREATE TABLE statement. A table may be partitioned by RANGE, HASH, LIST, SYSTEM, or Composite Range-Hash/List/Range (R+H/L/R).

Action: Specify one of valid partitioning methods

ORA-14152: invalid number of partitions specified in PARTITIONS clause

Cause: number-of-partitions clause contained in CREATE TABLE or CREATE INDEX statement specified a number of partitions outside of legal range (1-1048575)

Action: Specify a number between 1 and 1024K-1 in the number-of-partitions clause

ORA-14153: only one of STORE IN or *partition-description* clause may be specified

Cause: both STORE IN and *partition-description* clauses were specified in a CREATE TABLE | INDEX command

Action: Remove one of offending clauses

ORA-14154: only one of STORE IN or *subpartition-description* clause may be specified

Cause: both STORE IN and *subpartition-description* clauses were specified in a CREATE TABLE | INDEX, or ALTER TABLE ADD | SPLIT PARTITION or ALTER TABLE MERGE PARTITIONS command for a Composite Range partitioned object

Action: Remove one of offending clauses

ORA-14155: missing PARTITION, PARTITIONS, SUBPARTITION, or SUBPARTITIONS keyword

Cause: The keyword PARTITION,PARTITIONS, SUBPARTITION, or SUBPARTITIONS was expected but none were supplied.

Action: Supply the missing keyword.

ORA-14156: invalid number of subpartitions specified in [SUBPARTITIONS | SUBPARTITION TEMPLATE] clause

Cause: number-of-subpartitions clause contained in CREATE TABLE or CREATE INDEX statement specified a number of subpartitions outside of legal range (1-1048575)

Action: Specify a number between 1 and 1024K-1 in the number-of-subpartitions clause

ORA-14157: invalid subpartition name

Cause: a subpartition name of the form *identifier* is expected but not present.

Action: enter an appropriate subpartition name.

ORA-14158: too many subpartition descriptions

Cause: CREATE TABLE or CREATE INDEX contained too many subpartition descriptions; maximum number of subpartitions is 1048575.

Action: Reduce number of subpartitions to not exceed 1024K-1.

ORA-14159: duplicate subpartition name

Cause: Name of a subpartition of a table or index being created is not unique

Action: rename subpartition(s) to ensure that their names are unique among subpartitions of the table or index being created

ORA-14160: this physical attribute may not be specified for a table subpartition

Cause: unexpected option was encountered while parsing physical attributes of a table subpartition; TABLESPACE is the only valid option

Action: remove invalid option(s)

ORA-14161: subpartition number *string*: sum of PCTUSED and PCTFREE may not exceed 100
