ORA-35522: (SNSYN336) The format of the NLSITEMS function is:\n \n
NLSITEMS({LANGUAGE | TERRITORY})

ORA-35524: (SNSYN337) The format of the NLSAVAIL function is:\n \n
NLSAVAIL({LANGUAGE | TERRITORY} itemname)

ORA-35526: (SORTENG10A) The expression for TOP or BOTTOM has a value of
NA.

ORA-35528: (SORTENG10B) In the TOP or BOTTOM phrase, you requested a
negative number of dimension values (*number*).

ORA-35529: (SORTENG10D) You cannot sort more than $2^{31} - 1$ values.

ORA-35530: (SORTENG10C) You cannot specify a percentage greater than 100 or
less than 0. You requested *number*.

ORA-35532: (SPSFILE1) The file you specified is not in *string* format.

ORA-35534: (SPSFILE2) *string* files require worksheets with only two dimensions.

ORA-35536: (SPSFILE3) PRN files require worksheets with only two dimensions.

ORA-35538: (SPSIDIF01) A record (*string*) that was not in DIF format was read
while importing file *string*.

ORA-35540: (SPSIWKS1) An unexpected end-of-file occurred in spreadsheet file
string. Check your data to make sure you imported all you expected.

ORA-35542: (SPSRREC01) An unexpected end-of-file occurred while importing file
string. Check your data to make sure you imported all you expected.

ORA-35544: (SQA03) The SQL data in column *number* of your fetch statement
cannot be converted to type *string*.

ORA-35548: (SQCGEXE01) SQL statement-name '*string*' has not been prepared in
the current program.

ORA-35550: (SQCGOPN01) SQL cursor '*string*' has not been declared in the current
program.

ORA-35554: (SQCSRNAM00) SQL cursor name '*number*' has an invalid length of
number. A cursor name must have a length of 1 to 18 bytes, inclusive.

ORA-35556: (SQCSRNAM01) SQL cursor name '*number*' has an invalid first character. Use a-z, @, # or \$.

ORA-35558: (SQCSRNAM02) SQL cursor name '*number*' contains an invalid character. Use a-z, 0-9, @, #, \$ and _.

ORA-35559: (SQCSRNAM03) SQL cursor name cannot be INTO.

ORA-35560: (SQGETCD01) Conjoint dimension *workspace object* cannot be an input host variable. You can use the current values of its bases via the KEY function.

ORA-35561: (XSRWLD01) Object *workspace object* is not a valid target.

Cause: An invalid object was specified as a target.

Action: Choose a valid object as a target.

ORA-35562: (SQLIMP01) The SQL IMPORT command will produce *number* columns of output, but you have provided *number* host variables in your INTO clause.

Cause: The expression in the source query do not match the targets in the INTO clause.

Action: Make sure the the expressions in the source query match the targets in the INTO clause.

ORA-35563: (XSRWLD17) Multiple values exist for an attribute of this dimension member.

Cause: Multiple source table rows containing different values for a dimension attribute were found. Only the first of the multiple rows has been loaded.

Action: Fix the mapping or remove the rows with conflicting attribute values.

ORA-35564: (XSRWLD02) Cannot convert from the *string* type to the *string* type.

Cause: Conversion from source to target is not allowed

Action: Choose a different target datatype

ORA-35565: (XSRWLD03) For object *workspace object* only APPEND, MATCH or ASSIGN may be used.

Cause: An incorrect setting was applied to the target

Action: For DIMENSIONs use APPEND or MATCH, for SURROGATEs use ASSIGN.

ORA-35566: (XSRWLD04) Object *workspace object* cannot be used with QDRs

Cause: A QDR was placed on a target dimension

Action: Remove the QDR on the target dimension

ORA-35568: (SQLIMP03) The datatype of variable *number* should be INTEGER, LONGINTEGER or SHORTINTEGER.

Cause: The target variable was not INTEGER, LONGINTEGER or SHORTINTEGER.

Action: The target variable must be INTEGER, LONGINTEGER or SHORTINTEGER.

ORA-35569: (XSRWLD05) An error was encountered in converting data *string* to *string* in column *number*.

Cause: The data could not be converted to the target datatype.

Action: Ensure the source data is valid for the target datatype.

ORA-35570: (XSRWLD06) A column value is not a valid member of its target dimension.

Cause: The source value for a dimension is not an existing member of the dimension.

Action: Ensure the column value is an existing member of its target dimension.

ORA-35571: (XSRWLD07) The maximum number of load errors has occurred. No changes from this step were committed to the database.

Cause: The number of load errors exceeded the specified maximum.

Action: Fix the load errors, or increase the maximum number allowed and rerun the load.

ORA-35572: (XSRWLD08) A column value is not a valid member of its related dimension.

Cause: The source data for a relation is not a member of the related dimension.

Action: Ensure the source data is a valid member of the related dimension.

ORA-35573: (XSRWLD09) An incoming dimension value is null.

Cause: A source value for a dimension is null.

Action: Ensure the source data for the dimension is not null.

ORA-35574: (SQLOUT02) SQL cursor '*number*' is not known in the current logical unit of work.

ORA-35575: (SQLOUT04) The *string* command will produce *number* columns of output, but you have provided *number* host variables in your INTO clause.

ORA-35576: (SQLOUT09) SQL cursor '*number*' is not open.

ORA-35577: (SQLOUT10) SQL cursor '*number*' has already been declared with a different SELECT statement.

ORA-35578: (SQLOUT11) SQL cursor '*number*' cannot be used with CURRENT OF *cursor name* syntax

Cause: The CURRENT OF *cursor* syntax in the WHERE clause tried to use a cursor that was not declared with the FOR UPDATE [*of column name*] SQL syntax.

Action: Add the FOR UPDATE [OF *column name*] SQL syntax to the cursor specified.

ORA-35579: (SQLOUT12) SQL cursor '*number*' has already been opened.

ORA-35580: (XSRWLD10) An incoming column contains a data type mismatch.

Cause: The data could not be converted to the target datatype.

Action: Ensure the source data is valid for the target datatype.

ORA-35581: (XSRWLD11) You do not have permission to write this value of the target.

Cause: You do not have sufficient permissions to write to the specified target.

Action: Ask the owner of the schema or OLAP DBA to grant you sufficient permissions.

ORA-35582: (XSRWLD12) Cannot change the level of dimension member "*number*" from "*number*" to "*number*" within a single load.

Cause: A dimension member is mapped to more than one level.

Action: Change the mapping so that each dimension member is mapped to only one level.

ORA-35583: (XSRWLD13) Cannot change the level of a dimension member within a single load.

Cause: A dimension member is mapped to more than one level.

Action: Change the mapping so that each dimension member is mapped to only one level.

ORA-35584: (SQLOUT17) The *string* procedure requires *number* parameters.

ORA-35585: (XSRWLD14) This SQL query generated rejected records.

Cause: Rejected records were generated by this query.

Action: Locate the records that were rejected and resolve the rejection (for example, data, mapping, and so on).

ORA-35586: (SQLOUT19) The parameter list passed to the procedure is syntactically incorrect.

ORA-35587: (SQLOUT20) The nesting of table functions and SQL commands has exceeded the maximum of *number* levels.

Cause: The nesting of table functions with the PREDMLCMD token populated with an OLAP DML expression that use the embedded SQL support to access another table function which contains a table functions with the PREDMLCMD token filled in with an OLAP DML expression that uses the embedded SQL support.

Action: Reduce the level of nesting between table functions and OLAP DML embedded SQL support.

ORA-35588: (XSRWLD15) Cannot change the parent of existing dimension member "*number*" from "*number*" to "*number*" in LOAD RETAIN mode.

Cause: An attempt was made to change the parent of an existing dimension member in LOAD RETAIN mode.

Action: Fix the mapping or use LOAD [NO] SYNCH mode.

ORA-35589: (XSRWLD16) Cannot change the parent of an existing dimension member in LOAD RETAIN mode.

Cause: An attempt was made to change the parent of an existing dimension member in LOAD RETAIN mode.

Action: Fix the mapping or use LOAD [NO] SYNCH mode.

ORA-35590: (SQPHRASE01) The host variable expression has invalid syntax.

ORA-35592: (SQRT00) The argument to SQRT is negative. Set ROOTOFNEGATIVE to YES if you want NA to be returned for the root of a negative number.

ORA-35594: (SSCGEXP01) The LIMIT criterion expression must be dimensioned by *workspace object*.

ORA-35596: (SSCGEXP02) The LIMIT criterion expression must be dimensioned by *workspace object*, which is a component of *workspace object*.

ORA-35600: (SSCGLIMIT01) The IFNONE label is not allowed when you specify NULL status.

ORA-35602: (SSCGLIMIT02) You cannot limit dimension composite *workspace object*.

ORA-35603: (SSCGLIMIT03) You cannot limit PARTITION TEMPLATE *workspace object*.

ORA-35604: (SSCGNULL01) The phrase "IFNONE label" can only be used when the LIMIT command executes in a program.

ORA-35606: (SSCGNULL02) *string* is not defined as a label.

ORA-35608: (SSCGPOS01) You cannot limit a dimension to values of type *string*. Use the CONVERT function if necessary.

ORA-35610: (SSCGREL01) *workspace object* and *workspace object* are not related.

ORA-35612: (SSCGREL02) Related dimension values are not allowed when you specify a scalar or multi-dimensional relationship array.

ORA-35614: (SSCGREL03) *workspace object* is not a relationship involving *workspace object*.

ORA-35622: (SSCGREL07) *workspace object* is not a relation of *workspace object*.

ORA-35623: (XSSCLLEV07) *workspace object* is not a valueset of *workspace object*.

ORA-35624: (SSCGREL08) *workspace object* is not dimensioned by *workspace object*.

ORA-35625: (XSSCLLEV08) *workspace object* is not dimensioned by *workspace object*.

ORA-35626: (SSCGREL09) *workspace object* is not related to itself.

ORA-35627: (XSSCLEV09) *workspace object* is not a relationship array.

ORA-35628: (SSCGREL10) *workspace object* is not a dimension of relation *workspace object*.

ORA-35629: (XSBASLIM00) *workspace object* does not have base dimensions.

ORA-35630: (SSCGREL11) While limiting dimension *workspace object*, you cannot use it to qualify relation *workspace object*.

ORA-35632: (SSCGREL12) While limiting an alias of *workspace object*, you cannot use it to qualify relation *workspace object*.

ORA-35633: (STATEQ01) Both arguments to STATEQUAL must be status lists of the same dimension.

ORA-35634: (SSCGVALS01) The format of a related dimension list is:\n related-dimension [valuelist] | relationship-array-name

ORA-35636: (SSCGVALS02) *workspace object* is a dimension composite and its position numbers cannot be used in LIMIT NOCONVERT.

ORA-35638: (SSEXECUT02) NA is not a value of *workspace object*.

ORA-35640: (SSEXECUT03) You cannot MAINTAIN ADD *workspace object* while it is being LIMITED.

ORA-35642: (SSEXECUT07A) The expression for the beginning of the dimension range has a value of NA.

ORA-35644: (SSEXECUT07B) The expression for the end of the dimension range has a value of NA.

ORA-35646: (SSEXECUT08) The expression for BEFORE or AFTER has a value of NA.

ORA-35648: (SSEXECUT09) The expression for FIRST or LAST has a value of NA.

ORA-35650: (SSEXECUT15) The expression for BEFORE or AFTER is not in current status.

ORA-35652: (SSFRLST01) In the FIRST or LAST phrase, you requested a negative number of dimension values (*number*).

ORA-35654: (SSNULL) The status of the *workspace object* dimension cannot be set to null.

ORA-35656: (STATCHK00) *workspace object* has no values in status.

ORA-35658: (STATLIST01) The data width argument to the STATLIST function must be greater than zero.

ORA-35660: (STATVAL03) The *workspace object* dimension does not have a status value numbered *number*.

ORA-35662: (STKTOINF01) The width argument to the CONVERT(... INFILE) function was *number*. The limit is *number*.

ORA-35664: (STKTOINF02) Conversion to INFILE would produce a value *number* bytes wide, exceeding the maximum input line length *number*.

ORA-35666: (STRBYT01) NTEXT arguments to the BYTE functions must be converted to TEXT. Use CONVERT(value TEXT NOTRANSLATE) to avoid translation.

ORA-35668: (STRCHG01) The oldtext and newtext arguments must be single-line text values.

ORA-35670: (STRCHG02) The oldtext argument must contain at least one character.

ORA-35672: (STRCHG03) The number-to-change argument must be greater than 0.

ORA-35674: (STRDEL01) The position of the first character to remove must be at least 1.

ORA-35676: (STRDEL02) You must remove at least one character. You cannot remove *number* characters.

ORA-35678: (STREXTR01) The position of the first character to extract must be greater than zero. You cannot start extracting at position *number*.

ORA-35680: (STREXTR02) You must extract at least one character. You cannot extract *number* characters.

ORA-35682: (STRFIND01) The start argument must be at least 1.

ORA-35684: (STRINS01) Insertion must begin after a character position of zero or greater.

ORA-35686: (STRINS02) The length of one line of a text value cannot exceed *number* characters. You attempted to create a line with *number* characters.

ORA-35688: (STRREP01) The position of the first character to replace must be at least 1.

ORA-35690: (SUBGONE00) You have requested a feature or used a command that is not supported in this release.

ORA-35692: (TDENDPT00) Dimension *workspace object* is empty.

ORA-35694: (TDINCNUM00) You attempted to work with a date outside of the allowable range.

ORA-35696: (TEXTFENG01) The data width argument to the TEXTFILL function must be greater than zero.

ORA-35698: (TFGROUP01) Dimension *workspace object* appears in more than one GROUP phrase, either directly or via a dimension composite or conjoint dimension.

ORA-35700: (TFGROUP02) An expression used in a GROUP phrase must have exactly one dimension.

ORA-35702: (TFPARSE01) Dimension *workspace object* appears in both the DOWN phrase and a GROUP phrase, either directly or via a conjoint dimension or composite.

ORA-35704: (TFPARSE02) Dimension *workspace object* appears in both the DOWN phrase and an ACROSS phrase, either directly or via a conjoint dimension or composite.

ORA-35706: (TFPARSE03) Dimension *workspace object* appears both inside and outside an ACROSS loop.

ORA-35708: (TFPARSE04) The expressions used in the DOWN phrase must all have the same single dimension.

ORA-35710: (TFPARSE05) The DOWN phrase must be a single expression or a list of expressions enclosed in angle brackets .

ORA-35712: (TFPARSE07) Dimension *workspace object* appears in both an ACROSS phrase and a GROUP phrase, either directly or via a conjoint dimension or composite.

ORA-35716: (TRIGGER00) NA trigger calls exceed the maximum allowable depth of *number*.

ORA-35718: (TRIGGER01) The NA trigger expression for variable *workspace object* contains a format error.

ORA-35720: (TRIGGER02) The NA trigger for *workspace object* could not be executed recursively because the RECURSIVE option is set to NO.

ORA-35726: (TSFENG01) The starting point (*number*) for a moving function must be less than or equal to the stopping point (*number*).

ORA-35728: (TSFENG02) The step value (*number*) for a moving function must be greater than zero.

ORA-35730: (TSFENG03) The starting point, stopping point, and step value for a moving function cannot be NA.

ORA-35732: (UNITCHEK01) *number* is an invalid file unit number.

ORA-35734: (UNITCHEK02) File unit *number* is not open.

ORA-35736: (VALNAME01) You cannot define NAME. NAME is a special reserved dimension used to organize your analytic workspace dictionary.

ORA-35738: (VCLEX01) "*number*" is not a valid dimension value because it contains invalid characters or blanks, but it is not enclosed in single quotes.

ORA-35740: (VCLEX02) *string* is too large to be an integer.

ORA-35742: (VCLEX06) *number* already exists in the *string* analytic workspace.

ORA-35744: (VCLEX07) "*number*" is not a valid name because it contains invalid characters or blanks.

ORA-35746: (VCLEX08) *string* is too large to be a short integer.

ORA-35748: (VCOVRFLW01) A text value cannot be more than *number* characters long. Your value is *number* characters long.

ORA-35749: (VCHEX01) '*character*' is not a valid hexadecimal digit.
Cause: The text being converted contains an invalid hexadecimal digit.
Action: Replace the character with a digit in the range 0-9 or A-F.

ORA-35750: (VCTOBOOL01) A multiline text value cannot be converted to a BOOLEAN.

ORA-35752: (VCTODT00) '*string*' is not a valid date order. Valid orders are YMD, YDM, MYD, MDY, DMY, and DYM.

ORA-35754: (VCTODT01) '*number*' is not a valid date because *number* is out of range for a month.

ORA-35756: (VCTODT02) 'number' is not a valid date because *number* is out of range for a year.

Cause: n'%1p'

Action: n/a

ORA-35758: (VCTODT03) 'number' is not a valid date because *number* is out of range for a day of the month.

ORA-35760: (VCTODT04) 'number' is not a valid date because it is ambiguous.

ORA-35762: (VCTODT05) 'number' is not a valid packed numeric date.

ORA-35764: (VCTODT06) 'number' is not a valid date.

ORA-35766: (VCTODT07) 'number' is not a valid date or name for the *workspace object* dimension.

ORA-35768: (VCTODT08) 'number' is not a valid name for *workspace object*, because the period *number* is out of range.

ORA-35770: (VCTODT15) 'number' is not a valid date. The numeric field '*string*' cannot be interpreted.

ORA-35772: (VCTODT16) 'number' is not a valid date. '*string*' is the second year field encountered.

ORA-35774: (VCTODT17) 'number' is not a valid date. A second alphabetic field, '*string*', is not allowed.

ORA-35776: (VCTODT18) 'number' is not a valid date. A date cannot end with a separation character.

ORA-35778: (VCTODT19) 'number' is not a valid date. Input after '*string*' is extra.

ORA-35780: (VCTODT20) A date cannot be an empty string.

ORA-35782: (VCTODT21) 'number' is not a valid date because it is incomplete.

ORA-35784: (VCTODT22) 'number' is not a valid date. Packed numeric notation must be 6 or 8 digits long.

ORA-35786: (VCTODT23) 'number' is not a valid date. '*string*' cannot be recognized as a month name.

ORA-35788: (VCTODT24) 'number' is not a valid date. There are too many leading zeros beginning at '*string*'.

ORA-35790: (VCTODT25) 'number' is not a valid date. A date cannot begin with '*string*'.

ORA-35792: (VCTODT27) 'number' is not a valid date. '*string*' is not a valid character.

ORA-35794: (VCTORD01) A multiline text value cannot be converted to a number.

ORA-35796: (VERFAIL01) Your response does not meet the requirements for this item.

ORA-35798: (VERFAIL02) *string*

ORA-35800: (VSDOKAY01) Discarding compiled code for *workspace object*, because *number* now resolves to a value of *workspace object*. Previously, it resolved to a value of *workspace object*.

ORA-35802: (VSDOKAY02) Discarding compiled code for *workspace object*, because *number* is no longer a value of *workspace object*.

ORA-35804: (WATCHXEQ01) Watch point *number*: *number* is true in *workspace object* at statement:

ORA-35810: (XSINPUTERR) The command has requested more input than was supplied in the command string.

Cause: The command required input that was not supplied in the string.

Action: Reexecute the command with the required input.

ORA-35812: (XSACROSS01) The *string* command cannot be executed by ACROSS.

ORA-35818: (XSCAT01) Group definition values cannot be NA.

ORA-35820: (XSCAT02) Each group definition value must be greater than its predecessor.

ORA-35822: (XSCGCAT01) The source expression must be numeric.

ORA-35824: (XSCGCAT02) The group expression must be numeric.

ORA-35826: (XSCGCAT03) The group expression must be one-dimensional.

ORA-35828: (XSCGCROR01) Data expressions must be numeric.

ORA-35830: (XSCGCROR02) BASEDON names must be dimensions.

ORA-35832: (XSCGCROR03) BASEDON names must be dimensions of both data expressions.

ORA-35834: (XSCGCROR04) You have named duplicate BASEDON dimensions.

ORA-35836: (XSCGCROR05) The two expressions must have at least one common dimension.

ORA-35838: (XSCGMODE01) The data expression must be numeric.

ORA-35840: (XSCGMODE02) BASEDON names must be dimensions.

ORA-35842: (XSCGMODE03) BASEDON names must be dimensions of the data expression.

ORA-35844: (XSCGMODE04) You have named duplicate BASEDON dimensions.

ORA-35846: (XSCGPCTAGE01) The data expression must be numeric.

ORA-35848: (XSCGPCTAGE02) BASEDON names must be dimensions.

ORA-35850: (XSCGPCTAGE03) BASEDON names must be dimensions of the data expression.

ORA-35852: (XSCGPCTAGE04) You have named duplicate BASEDON dimensions.

ORA-35854: (XSCGRANK01) The data expression must be numeric.

ORA-35856: (XSCGRANK02) BASEDON names must be dimensions.

ORA-35858: (XSCGRANK03) BASEDON names must be dimensions of the data expression.

ORA-35860: (XSCGRANK04) You have named duplicate BASEDON dimensions.

ORA-35862: (XSCGSMOOTH01) The data expression must be numeric.

ORA-35864: (XSCGSMOOTH02) You have not supplied enough smoothing parameters.

ORA-35866: (XSCGSMOOTH03) The smoothing parameters must be numeric.

ORA-35868: (XSCGSMOOTH04) BASEDON names must be dimensions.

ORA-35870: (XSCGSMOOTH05) BASEDON names must be dimensions of the data expression.

ORA-35872: (XSCGSMOOTH06) You have named duplicate BASEDON dimensions.

ORA-35874: (XSFCAST01) The *string* forecasting option cannot be set.

ORA-35876: (XSFCAST02) You must use an INTO phrase to specify an output location for the forecast results.

ORA-35878: (XSFCAST03) The *string* forecasting option cannot be queried.

ORA-35880: (XSFCAST04) You cannot specify a trial number when querying the *string* forecasting option.

ORA-35882: (XSFCAST05) You must specify a trial number when querying the *string* forecasting option.

ORA-35884: (XSFCAST06) The forecasting context handle cannot be NA.

ORA-35886: (XSFCAST07) The time dimension *workspace object* has *number* values in status. The limit is *number*.

ORA-35888: (XSFCAST08) The time dimension *workspace object* has no values in status.

ORA-35890: (XSFCAST09) The time dimension *workspace object* has only *number* values in status. You cannot specify *number* historical periods.

ORA-35892: (XSFCAST10) The *string* target variable must also be dimensioned by *string*.

ORA-35894: (XSFCAST11) *string* must be less than or equal to *string*. The current values are *number* and *number*, respectively.

ORA-35896: (XSFCAST12) The value of *string* must evenly divide the difference between MIN and MAX values. The current values are *number*, *number*, and *number*.

ORA-35898: (XSFCAST13) The trial number for querying *string* cannot be NA.

ORA-35900: (XSFCAST14) *number* is not the handle of an open forecasting context.

ORA-35902: (XSFCAST15) You cannot specify an NA value for *string*.

ORA-35904: (XSFCAST16) Values of *string* must be between *number* and *number*. You specified *number*.

ORA-35906: (XSFCAST17) Values of *string* must be between *number* and *number*. You specified *number*.

ORA-35908: (XSFCAST18) '*number*' is not a recognized value of *string*.

ORA-35910: (XSFCAST19) The forecasting context *number* has been invalidated because one or more of the extra dimensions of the time-series expression is no longer available.

ORA-35912: (XSFCAST20) A forecasting context identified by the text '*string*' already exists. Its handle is *number*.

ORA-35914: (XSFCAST21) Values of the TRADINGDAYS expression cannot be less than or equal to zero.

ORA-35916: (XSHIDE01) *workspace object* is not a program or model.

ORA-35917: (XSHIDE05) You cannot HIDE model *workspace object* because the analytic workspace in which it is defined has not been upgraded to version *string*. Cause: User attempted to apply the HIDE command to a model in an AW that has not been upgraded to the necessary compatibility level.

Action: Make sure that the database is running in the appropriate compatibility mode, and upgrade the AW.

ORA-35918: (XSHIDE02) You do not have access to *workspace object*.

ORA-35920: (XSHIDE03) The encryption seed for HIDE and UNHIDE must be a non-empty, one-line TEXT value.

ORA-35922: (XSHIDE04) *workspace object* is already hidden.

ORA-35924: (XSMOOTH01) Smoothing parameters cannot be NA.

ORA-35926: (XSMOOTH02) Smoothing constants must be between 0 and 1.

ORA-35928: (XSMOOTH03) Cannot compute valuespace offset

ORA-35930: (XSPCTAGE01) Cannot compute valuespace offset

ORA-35932: (XSPGFTCH01) Analytic workspace *string* is not attached.

ORA-35934: (XSPGFTCH02) No fetch analytic workspace specified

ORA-35936: (XSPGFTCH03) PageSpace has *number number* pages.

ORA-35950: (OBSCURE01) The seed expression argument to OBSCURE cannot be NA.

ORA-35952: (XSSPFC01) The *string* dimension *workspace object* and the *string* dimension *workspace object* must have the same number of values in status for SPFCEXEC method *number*.

Cause: This method requires the named dimensions to have the same number of values in status, but the user provided statuses of different lengths.

Action: Relimit the dimensions so that their status lengths are the same.

ORA-35958: (XSPGREPORT01) Of *number* allocated pages *number* are currently in use, *number* are available for use, *number* are hard-locked, and *number* are soft-locked.

ORA-35964: (COPYDFN01) You must have a current analytic workspace to perform a COPYDFN.

ORA-35966: (COPYDFN02) The format of the COPYDFN command is:\n\n COPYDFN newname oldname.

ORA-35968: (COPYDFN03) Analytic workspace object %1 does not exist.

ORA-35970: (COPYDFN05) You cannot copy the definition of an OPTION.

ORA-35972: (COPYDFN06) %1 is an invalid name for an analytic workspace object.

ORA-35974: (DBDESC00) There are no objects in this analytic workspace.

ORA-35998: (DBDESC12) Updated:

ORA-36000: (DBDESC13) At:

ORA-36002: (DBDESC14) NAME

ORA-36004: (DBDESC15) TYPE

ORA-36006: (DBDESC16) DESCRIPTION

ORA-36008: (DBDESC17) Analytic Workspace Listing

ORA-36010: (DBDESC18) Page

ORA-36016: (XSHIERCK01) One or more loops have been detected in hierarchy *workspace object over number*. The loops include *number* items (*number* and *number*).

ORA-36017: (XSHIERCK10) The definition of hierarchy *workspace object over number* in level *number* is not star consistent. The collision parents include *number*.
Cause: The definition of the hierarchy was not star consistent.

Action: Change the definition of the hierarchy.

ORA-36018: (XSHIERCK02) The format of the HIERCHECK command is:\n\n HIERCHECK relation [STATUS | NOSTATUS | valueset] [MULTIPATH] [CONSISTENT] [{BALANCED | STAR_CONSISTENT} levelrelation] \nOr\n HIERCHECK aggmap [MULTIPATH] [CONSISTENT]

Cause: The wrong object type was specified.

Action: Change the object to a RELATION or AGGMAP.

ORA-36019: (XSHIERCK11) The format of the HIERSHAPE function is:\n\n HIERSHAPE(relation[(qdr)] {level | ragged | skiplevel | regular} USING levelrel [INHIERARCHY inhvs] LEVELORDER levelvs)

Cause: The wrong object type or the wrong object definition was specified.

Action: Change the object type or use the correct object definition.

ORA-36020: (XSHIERCK03) The definition of hierarchy *workspace object over number* is inconsistent.

Cause: The definition of the hierarchy was inconsistent.

Action: Change the definition of the hierarchy.

ORA-36021: (XSHIERCK12) The format of the HIERCHECK function is:\n\n HIERCHECK(relation [STATUS | NOSTATUS | valueset] [MULTIPATH] [CONSISTENT] [{BALANCED | STAR_CONSISTENT} levelrelation]) \nOr\n HIERCHECK(aggmap [MULTIPATH] [CONSISTENT])

Cause: The wrong object type was specified.

Action: Change the object to a RELATION or AGGMAP.

ORA-36022: (XSHIERCK04) Valuesets specified in the HIERCHECK command must be scalar. *workspace object* is dimensioned.

Cause: The HIERCHECK command specified a dimensioned valueset.

Action: Specify a scalar valueset in its place.

ORA-36024: (XSHIERCK05) Valueset *workspace object* must contain values of one of the extra dimensions of relation *workspace object*.

Cause: The HIERCHECK command specified a valueset over an invalid dimension.

Action: Specify a valueset containing values of one of the self-relation's extra dimensions (the dimensions in the relation's dimension list, minus the self-related dimension itself).

ORA-36025: (XSHIERCK06) The level dimension of the level relation *workspace object* is the same as the relation dimension *workspace object*.

Cause: The level dimension was the same as the relation dimension.

Action: Change the definition of the level relation.

ORA-36026: (XSHIERCK07) Level relation *workspace object* is not dimensioned by relation dimension *workspace object*.

Cause: The level relation was not dimensioned by the relation dimension.

Action: Change the definition of the level relation.

ORA-36027: (XSHIERCK08) Hierarchy *workspace object* is not balanced.

Cause: The current hierarchy was not balanced.

Action: Change the hierarchy to balanced.

ORA-36028: (XSHIERCK09) Hierarchy *workspace object* has multiple paths from *number* to *number*.

Cause: The current hierarchy had multiple paths.

Action: Remove multiple paths from the hierarchy.

ORA-36034: (XSMHIERCK00) One or more loops have been detected in relationship *workspace object* over *workspace object*. The last *number* of the items are *number*.

Cause: A relation was used that had loops in it. There were more items involved than could be reported.

Action: Correct the relation so that it does not contain loops.

ORA-36035: (XSMHIERCKREL) One or more loops have been detected in *workspace object*. *number* items involved are *number*.

Cause: A relation was used that had loops in it.

Action: Correct the relation so that it does not contain loops.

ORA-36036: (XSMHIERCK01) One or more loops have been detected in relationship *workspace object* over *workspace object*. The *number* items involved are *number*.

Cause: A relation was used that had loops in it.

Action: Correct the relation so that it does not contain loops.

ORA-36038: (INTL00) No application code specified

ORA-36040: (INTL01) IMPORTANT: The length of the following phrase(s) exceeds %1. They will be truncated.

ORA-36042: (INTL02A) The %1 language analytic workspace for %2 could not be attached, and there is no English-language analytic workspace for this application.

ORA-36044: (INTL02B) Neither the %1 language analytic workspace nor the %2 language analytic workspace could be attached for %3, and there is no English-language analytic workspace for this application.

ORA-36050: (INTL06) Invalid option specified. Option must be either OSM, CA, or blank.

ORA-36052: (LISTBY00) LISTBY cannot be called as a function returning a value.

ORA-36054: (LISTBY01) You must have a current analytic workspace to use the LISTBY command.

ORA-36056: (LISTBY02) The syntax of the LISTBY command is:\n LISTBY dimension [dimension ...]\nDimension composites can also be named.

ORA-36058: (LISTBY03) %1 does not exist in any attached analytic workspace.

ORA-36060: (LISTBY04) %1 is not a dimension or composite.

ORA-36062: (LISTBY05) %1 is in a different analytic workspace from previously specified object(s) "%2".

ORA-36064: (LISTBY06) The syntax for specifying an unnamed composite is:\n SPARSE*dimension-list*\nwhere 'dimension-list' is a list of simple or conjoint dimensions or named composites.

ORA-36066: (LISTBY07) %1 objects dimensioned by or related to %2 in analytic workspace %3

ORA-36068: (LISTNAMES00) Analytic workspace %1 is not attached.

ORA-36070: (LISTNAMES01) There are no objects in the analytic workspace of the following types:\n%1

ORA-36072: (LISTNAMES02) There are no objects in the analytic workspace.

ORA-36074: (LISTNAMES03) There are no objects in the analytic workspace that match '%1'.

ORA-36076: (LISTNAMES04) %1 is not a valid keyword for LISTNAMES.\nValid keywords are:\nALL, SORT or UNSORT, AW workspace-name\n%2

ORA-36078: (MODEL00) Specify the name of a model for the report.

ORA-36080: (MODEL01) %1 does not exist.

ORA-36082: (MODEL02) %1 is not a model.

ORA-36084: (MODEL03) Model %1 has not been compiled.

ORA-36086: (MODEL04) Information is not available for model %1.

ORA-36088: (MODEL05) Model %1 is not the most-recently executed model.

ORA-36090: (MODEL06) Solution status:

ORA-36092: (MODEL07) Model options in use:

ORA-36094: (MODEL08) Solution status:

ORA-36096: (MODEL09) Iterations:

ORA-36098: (MODEL10) Divergent statement

ORA-36100: (MODEL11) Model: %1

ORA-36102: (MODEL12) Statement %1%2

ORA-36104: (STATUS00) You must have a current analytic workspace to use the STATUS command.

ORA-36106: (STATUS01) There are no dimensions in your current analytic workspace.

ORA-36108: (STATUS02) There are no dimensions in analytic workspace %1.

ORA-36110: (STATUS03) %1 has no dimensions.

ORA-36112: (STATUS04) The current status of %1 is:

ORA-36114: (STDHDR00) Page

ORA-36116: (TRACKREPORT00) Program name

ORA-36118: (TRACKREPORT01) Exclusive cost

ORA-36120: (TRACKREPORT02) Inclusive cost

ORA-36122: (TRACKREPORT03) Number of calls

ORA-36124: (XLIST00) %1 exceptions found.

ORA-36126: (XLIST01) %1 already exists.

ORA-36128: (XLIST03) The exception criterion must be a single expression.

ORA-36130: (XLIST04) The exception criterion must be a BOOLEAN expression.

ORA-36132: (XLIST05) The exception criterion must be dimensioned.

ORA-36134: (XLIST06) %1 is not an exception list.

ORA-36136: (XLIST07) There is no current exception list. You can use the NAMEXL command to specify one.

ORA-36138: (XLIST08) %1 has been deleted.

ORA-36140: (XREF00) References To:

ORA-36142: (XREF01) Referenced By:

ORA-36144: (XREF02) NONE

ORA-36145: (SETPROP01) The property "%1" cannot be set for measure "%2".

Cause: A property name was given that is not one of the allowed properties to be set.

Action: Specify one of the legal property names.

ORA-36146: (READSIZE01) The *string* expression cannot be missing or NA.

ORA-36148: (READSIZE02) The minimum value for *string* is *number*. You specified a value of *number*.

ORA-36152: (READSIZE04) The maximum value for *string* is *number*. You specified a value of *number*.

ORA-36154: (XSMXAGGR01) *workspace object* is not a data variable.

Cause: An object was specified on the Aggregate command line that was not a variable

Action: Specify a variable instead

ORA-36155: (XSMXAGGRFROM) *workspace object* must be a variable or formula of a similar data type to *workspace object* to be used with FROM, or a TEXT variable or formula to be used with FROMVAR.

Cause: The user specified an illegal variable for use with FROM or FROMVAR on the AGGREGATE command line

Action: Specify a legal variable instead

ORA-36156: (XSMXAGGR02) When using the BOOLEAN or FORMULA WEIGHT *workspace object*, WNAFILL is the only valid option.

ORA-36157: (XSMXAGGRCOMMIT) To use the AUTOCOMMIT keyword, you must also specify the AUTOUPDATE keyword.

Cause: The user specified AUTOCOMMIT but not AUTOUPDATE on the AGGREGATE command line, which is illegal

Action: Either also specify AUTOUPDATE or don't specify AUTOCOMMIT

ORA-36158: (XSMXAGGR03) *workspace object* must be an AGGMAP object.

ORA-36160: (XSMXAGGR04) You cannot use *string* on scalar VARIABLE *workspace object*.

Cause: The user tried to run the AGGREGATE or AGGCOUNT command or function on a scalar variable.

Action: Specify a dimensioned variable instead

ORA-36161: (XSAGGRRUVCV) Aggregation variable *workspace object* cannot have itself as a COUNTVAR.

Cause: The user specified the same variable as both an aggregation variable and a COUNTVAR

Action: Specify a different COUNTVAR

ORA-36162: (XSMXAGGR05) COUNTVAR variable *workspace object* must be of type INTEGER, not *string*.

Cause: The user specified a non-INTEGER variable as a COUNTVAR for aggregation

Action: Redefine the COUNTVAR to be an INTEGER

ORA-36164: (XSMXAGGR07) When using the COUNTVAR clause, the number of variables to be aggregated (*number*) must match the number of COUNTVAR variables (*number*).

Cause: The user specified a COUNTVAR clause to the AGGREGATE command, but the number of COUNTVAR variables specified did not match the number of variables to be aggregated

Action: Specify a separate COUNTVAR for each variable

ORA-36165: (XSAGGCNTPROP) Variable *workspace object* cannot have both an AGGCOUNT and the \$COUNTVAR property.

Cause: An attempt was made to add the \$COUNTVAR property to a variable which already had an AGGCOUNT, or vice versa.

Action: Delete the already existing \$COUNTVAR property or AGGCOUNT first.

ORA-36166: (XSMXAGGR08) *workspace object* is not a VARIABLE.

Cause: An attempt was made to perform an AGGREGATE or other action on an object which is not a variable.

Action: Specify a variable instead.

ORA-36167: (XSAGGRFORM) *workspace object* is an illegal AGGMAP for aggregating a FORMULA.

Cause: The user attempted to aggregate a FORMULA using an AGGMAP that is not valid for aggregating FORMULAs. The AGGMAP must specify PRECOMPUTE(NA) for all relation lines and must not specify any caching.

Action: Correct the AGGMAP so it is legal for aggregating a FORMULA.

ORA-36168: (XSMXAGGR10) COUNTVAR variable *workspace object* must have the same dimensionality as *workspace object*

Cause: The user specified a COUNTVAR variable which is missing at least one dimension of the aggregation variable

Action: Specify a COUNTVAR variable which has at least as many base dimensions as the aggregation variable

ORA-36170: (XSMXAGGR12) The data type of the WEIGHT *workspace object* must be numeric or BOOLEAN, not *string*.

Cause: The user specified a WEIGHT variable or formula which wasn't numeric or boolean

Action: Specify a numerical or boolean weight instead

ORA-36172: (XSMXAGGR18) WEIGHT option WNOAGG cannot be used with the WSTORE, WVARPRIORITY, or WAGGPRIORITY options on WEIGHT *workspace object*.

ORA-36174: (XSMXAGGR23) *workspace object* must be either a VARIABLE, a RELATION or a FORMULA.

Cause: The user specified something that was not a variable, a relation or a formula as a weight for AGGREGATE

Action: Specify a valid variable, relation or formula instead

ORA-36176: (XSMXAGGR25) Relation *workspace object* must be a one-dimensional self-relation to be used as a weight for AGGREGATE.

Cause: The user specified an illegal relation as a weight. The relation might have been multidimensional, not a self-relation, or not a relation over one of the bases of the aggregation variable.

Action: Specify a valid self relation over one of the bases of the aggregation variable.

ORA-36178: (XSAGGR01) To be used with AGGREGATE, AGGMAP *workspace object* must be declared with the AGGMAP command.

Cause: The user used the ALLOCMAP command to define the AGGMAP, so the AGGMAP can only be used with the ALLOCATE command, or the AGGMAP has no contents attached to it.

Action: Use the AGGMAP command to define the AGGMAP.

ORA-36179: (XSNOAGM) No AGGMAP was specified for VARIABLE *workspace object*.

Cause: The user used the AGGREGATE command without specifying an AGGMAP on the command line, with a variable which had no \$AGGMAP property.

Action: Specify an AGGMAP on the AGGREGATE command line, or add the \$AGGMAP property to the variable in question.

ORA-36180: (XSAGGR08) AGGREGATE cannot function because there is a permission clause associated with variable *workspace object*.

Cause: When using AGGREGATE, only simple permissions and permissions on base dimensions are valid.

Action: Remove the permissions clause from the variable causing problems.

ORA-36181: A VARIABLE cannot have both the \$AGGREGATE_FROM and \$AGGREGATE_FROMVAR properties applied to it.

Cause: The user attempted to add both the \$AGGREGATE_FROM and \$AGGREGATE_FROMVAR properties to a single variable.

Action: Remove the existing property before applying the new one.

ORA-36182: (XSAGGR09) Could not locate a value for variable *number in measure dimension workspace object*.

Cause: A measure dimension was supplied in the AGGMAP, but a position for the variable was not found in it.

Action: Add a position for the variable in the measure dimension.

ORA-36184: (XSAGGR10) You do not have sufficient permissions for the variable *workspace object*.

Cause: The user lacked the permissions necessary for the aggregation variable.

Action: Remove the restricting permissions from the variable or base dimension.

ORA-36185: (XSAGGR11) *workspace object* does not have any AGGCOUNT information.

Cause: User attempted an operation (such as the AVERAGE aggregation operator or the AGGCOUNT function) that requires a variable to have AGGCOUNT information on a variable that does not.

Action: Define the variable using the WITH AGGCOUNT clause, or use the CHGDFN ADD AGGCOUNT command to enable AGGCOUNT for the variable.

ORA-36186: (XSAGGR12) You must use a COUNTVAR when aggregating with AVERAGE.

ORA-36188: (XSAGGR16) AGGREGATE read a value less than 1 out of COUNTVAR variable *workspace object*. Either the values of the COUNTVAR variable are stored improperly, or there is problem in AGGREGATE. If no one has modified the values in this COUNTVAR, contact Oracle customer support.

Cause: Either someone improperly changed the COUNTVAR variable, or AGGREGATE has an error.

Action: Set the COUNTVAR variable to NA before starting AGGREGATE. If you previously set the COUNTVAR variable to NA, then contact Oracle OLAP technical support.

ORA-36190: (XSAGGR26) *workspace object* is of type *string*. The numerical calculation *string* requires INTEGER, DECIMAL or SHORTDECIMAL data.

ORA-36192: (XSAGGR27) *workspace object* is of type *string*. The boolean calculation *string* requires BOOLEAN data.

ORA-36194: (XSAGGR28) *workspace object* is of type *string*. The requested operation requires INTEGER, DECIMAL, SHORTDECIMAL or BOOLEAN data.

ORA-36196: (XSAGGR32) '*number*' is an invalid argument specifier for AGGREGATE.

ORA-36198: (XSAGGR33) Cannot aggregate over COMPRESSED COMPOSITE *workspace object* using AGGMAP *workspace object* because the operator variable with more than 1 line dimensions is not supported for bases of a COMPRESSED COMPOSITE.

Cause: The user specified an aggregation the operator variable with more than 1 line dimensions that is not supported by COMPRESSED COMPOSITES.

Action: Use a MODEL for the calculation, or use an uncompressed COMPOSITE.

ORA-36200: (XSAGGR34) AGGREGATE operator *string* requires a WEIGHTBY clause, but ARGS variable *workspace object* did not specify one.

Cause: The given operator requires a WEIGHT specification, but the ARGS variable did not supply one.

Action: Modify the ARGS variable to specify a weight for the operation.

ORA-36201: (XSAGGR35) Cannot aggregate *workspace object*(*partition workspace object*) because the subpartition is itself partitioned.

Cause: Attempted to aggregate an intermediate partition of a variable with nested partitioning.

Action: rerun the aggregate command separately for each ultimate partition or just for the variable as a whole

ORA-36202: (XSAGOP01) '*number*' is not a valid aggregation operator.

Cause: An invalid string was provided for an aggregation operator.

Action: Check the spelling of the operator to make sure you are specifying a valid one.

ORA-36204: (XSAGOP04N) In AGGMAP *workspace object*, the NAOOPERATOR *string* must be HFIRST, HLAST or HEVEN.

Cause: An invalid NAOOPERATOR was specified.

Action: Specify HFIRST, HLAST or HEVEN.

ORA-36206: (XSAGOP04R) In AGGMAP *workspace object*, REMOPERATOR *string* must be MIN, MAX, FIRST, LAST, HFIRST or HLAST.

Cause: An invalid REMOPERATOR was specified.

Action: Specify one of the legal operators.

ORA-36208: (XSAGOP05N) In AGGMAP *workspace object*, you can only specify NAOOPERATOR *string* with the PROPORTIONAL or EVEN operators, not *string*.

Cause: The user specified an NAOOPERATOR when you were not using PROPORTIONAL or EVEN.

Action: Remove the NAOOPERATOR clause from the RELATION line.

ORA-36210: (XSAGOP05R) In AGGMAP *workspace object*, you can only specify the REMOPERATOR *string* with the PROPORTIONAL, EVEN, or HEVEN operators, not *string*.

Cause: The user specified a REMOPERATOR without using PROPORTIONAL, EVEN, or HEVEN.

Action: Remove the REMOPERATOR clause from the RELATION line.

ORA-36212: (XSAGOP06) In AGGMAP *workspace object*, you can only specify the MIN, MAX, FLOOR, and CEILING arguments while using the PROPORTIONAL operator, not *string*.

Cause: The user specified MIN, MAX, FLOOR, or CEILING when using an operator other than PROPORTIONAL.

Action: Remove the incorrect argument from the RELATION line.

ORA-36214: (XSRELOBC01) The value of INDEXCACHESIZE must be positive.

ORA-36216: (XSOPARM01) A DIMENSION must have a data type (ID, TEXT, or INTEGER), a time period, or a list of bases for a conjoint dimension.

ORA-36220: (XSLPDSC01) All dimensions in LIST *number* are also in the IGNORE clause.

Cause: One of the dimension lists in the dimension loop descriptor had no base dimensions except those in the IGNORE list. This leaves no dimensions for looping over.

Action: Fix the dimension loop descriptor.

ORA-36221: (XSLPDSC02) LIST *number* and LIST *number* have different base dimensions.

Cause: The base dimensions of the dimension lists given in the loop descriptor do not match.

Action: Ensure that each dimension list has the same set of looping base dimensions. If necessary, use IGNORE within a lists to discard base dimensions that should not be looped.

ORA-36222: (XSLPDSC03) duplicate IGNORE or DENSE information for dimension *workspace object*

Cause: An IGNORE or DENSE list in a dimension loop descriptor included the dimension twice, included two different valuesets of the dimension, or includes the dimension and a valueset of the dimension.

Action: Only use the dimension or a valueset of the dimension once in an IGNORE or DENSE list.

ORA-36223: (XSLPDSC04) object *workspace object* in IGNORE or DENSE list has illegal type

Cause: An IGNORE or DENSE list in a dimension loop descriptor included an object that was not a dimension or a valueset, was a conjoint dimension, or was a dimensioned valueset.

Action: Only use simple dimensions and undimensioned valuesets in the IGNORE or DENSE list.

ORA-36224: (XSLPDSC05) *workspace object* is not a loop dimension

Cause: An IGNORE or DENSE list in a dimension loop descriptor referenced a dimension (or a valueset of a dimension) that was not a base dimension of the loop dimension list.

Action: Remove the dimension or valueset from the IGNORE or DENSE list.

ORA-36225: (XSLPDSC06) A LOOP AGGMAP list must contain an aggmap object, followed by one or more variables and/or dimensions.

Cause: An invalid AGGMAP list was specified. Either too few objects were specified, or an incorrect type of object was used.

Action: Specify a valid AGGMAP list consisting of an aggmap object, followed by one or more variables and/or dimensions.

ORA-36226: (XSLPDSC07) The syntax of the \$LOOP property on formula *workspace object* is incorrect.

Cause: Unrecognized contents in the \$LOOP property of a formula in the table function measure list.

Action: Restrict the contents of the \$LOOP property to valid elements (other than OPTIMIZED and MEASURES) of the table function LOOP directive.

ORA-36230: (XSANALYZ00) object *workspace object* cannot be used in the ANALYZE command

Cause: An object that cannot be analyzed was used in the ANALYZE command.

Action: Analyze VARIABLES, RELATIONS, DIMENSIONS, or SURROGATES.

ORA-36231: (XSANALYZ01) object *workspace object* cannot be used in the INHIERARCHY clause

Cause: An invalid INHIERARCHY object was referenced.

Action: Use either a VALUESET or boolean VARIABLE.

ORA-36232: (XSANALYZ02) a level list was specified when a language dimension was present

Cause: A level list dimension was specified when a language dimension was present.

Action: Remove the USING clause.

ORA-36233: (XSANALYZ03) the dimensionality of object *workspace object* does not match the ANALYZE command

Cause: The dimensionality of the object did not match the ANALYZE command syntax used.

Action: Match the ANALYZE syntax to the dimensionality of the specified object.

ORA-36234: (XSANALYZ04) all objects in the current status of the NAME dimension must have the same dimensionality when used with the ANALYZE command

Cause: The dimensionality of at least one of the objects listed in the NAME dimension does not match the rest of the objects.

Action: Make sure all objects listed in the NAME dimension have the same dimensionality.

ORA-36236: (XSANALYZ06) the AW format must be 11.0.0.0 or higher to use the ANALYZE command

Cause: The AW version is less than 11.0.0.0

Action: Make sure the compatible mode is 11.0.0.0 or higher and upgrade the AW

ORA-36237: (XSANALYZ07) analytic workspace *string.string* must be attached RW or EXCLUSIVE mode

Cause: The analytic workspace was already attached RO or MULTI mode.

Action: Detach the analytic workspace.

ORA-36238: (XSANALYZ08) object *string.string* does not exist

Cause: The object name does not exist

Action: Check the spelling and case of the object name

ORA-36258: (XSAGINFO00) When the AGGMAPINFO function is called, *workspace object* must be an AGGMAP.

Cause: The AGGMAPINFO function was called with an object that is not an AGGMAP.

Action: Modify the call to AGGMAPINFO to specify an AGGMAP object.

ORA-36260: (XSAGHIERPART00) Aggregating from partition %J to partition %J over hierarchy *workspace object* creates an increase in sparsity.

Cause: In the partition creation / aggmap creation a situation developed such that when aggregating over a particular dimension of the aggmap a partition boundary was crossed such that the sparsity of the target partition included dimensions that were not in the sparsity of the source partition. Since the process of aggregation always densifies rather than sparsifying this is an extremely suboptimal design and it is not supported by the aggregate system.

Action: Set up your partitioning such that for any partition boundary the source and target partitions of the aggregation will always move towards denser partitions. For any child (c) and any parent (p) where (c) and (p) are in different partitions it must be the case that the parent partition contains no dimension in the composite that the child partition does not contain in its composite.

ORA-36261: (XSAGPARTDEP00) Can not Aggregate PARTITION TEMPLATE %J because the path of aggregation would recursively enter partition %J.

Cause: The partitioning scheme was such that while aggregating there exists a cell (m) such that both one of its descendants and one of its ancestors are both in the referenced partition, while (m) is in a different partition.

Action: Change the partitioning scheme.

ORA-36262: (XSAGREMOD00) MODEL *workspace object* was not attached to the AGGMAP.

ORA-36264: (XSAGREMOD01) Removed MODEL: *number*

ORA-36266: (XSCGMDLAGG00) Invalid context for the AGGREGATION function

Cause: The AGGREGATION function was used outside of the MODEL context.

Action: Use AGGREGATION only in a model.

ORA-36267: (XSCGMDLAGG09) *workspace object* has no dimensions, so it cannot have a qualified data reference.

Cause: A dimension qualification was specified for a valueset with no dimensions.

Action: Remove the qualification.

ORA-36268: (XSCGMDLAGG01) '*string*' is not a valid dimension value.

Cause: The AGGREGATION parameter list included a value that does not exist in the MODEL dimension that contains the target of the AGGREGATION

Action: Specify only values from the appropriate MODEL dimension

ORA-36269: (XSCGMDLAGG10) '*workspace object*' does not exist or is not a dimension.

Cause: A nonexistent or invalid object was specified as a QDR dimension.

Action: Specify existing dimensions only.

ORA-36270: (XSCGMDLAGG03) The parameter list for the AGGREGATION function includes duplicate values.

Cause: One or more duplicate values appeared in the AGGREGATION parameter list.

Action: Remove the duplication.

ORA-36271: (XSCGMDLAGG11) *workspace object* is not in the dimension list of valueset *workspace object*.

Cause: A QDR dimension was specified that does not appear in the valueset's dimension list.

Action: Specify only dimensions in the valueset's dimension list.

ORA-36272: (XSCGMDLAGG04) '*workspace object*' is not a valid operator for the AGGREGATION function.

Cause: An invalid AGGREGATION operator was specified.

Action: Correct the invalid operator.

ORA-36273: (XSCGMDLAGG12) Dimension *workspace object* appears more than once in the QDR.

Cause: A dimension was specified more than once in the QDR.

Action: Remove the duplication.

ORA-36274: (XSCGMDLAGG05) The operator used in this equation needs a weight variable.

Cause: An invalid weight variable was specified.

Action: Correct the invalid weight variable.

ORA-36275: (XSCGMDLAGG13) *string* is not a valid *workspace object*.

Cause: A value was specified that does not exist in the QDR dimension.

Action: Specify an existing value.

ORA-36276: (XSCGMDLAGG06) The current operator does not need a weight variable.

Cause: A weight variable was specified in a context that does not support it.

Action: Remove the weight variable.

ORA-36278: (XSCGMDLAGG07) *workspace object* does not exist or is not valueset.

Cause: A nonexistent or invalid object was specified where a valueset is required.

Action: Specify an existing valueset only.

ORA-36280: (XSCGMDLAGG08) Valueset *workspace object* does not contain values of any dimension of the current model.

Cause: AGGREGATION specified a valueset of a dimension not listed in a DIMENSION statement for the current model.

Action: Add the valueset's dimension to the model's DIMENSION list, or choose a different valueset.

ORA-36282: (DNAMELEN01) Object name *string* is longer than *number* bytes.

ORA-36286: (EIFMAKEF12) The EXPORT command terminated, because there was not enough disk space in path *string* to contain a complete extension file.

ORA-36290: (EIFMAKEF14) You cannot export object *workspace object*, because EIFVERSION is set to *number*. That version does not support *string strings*.

Cause: The user tried to export a NUMBER dimension to an EIF file with the EIFVERSION option set to a number less than 80000. Versions previous to that version do not support NUMBER dimensions.

Action: A NUMBER dimension cannot be used in a version of older than 9.2.0. If

ORA-36300: (XSCGTERM01) The command is too long or complex to compile. Eliminate or simplify expressions, or remove or shorten text constants.

ORA-36302: (MXCLASS03) You cannot reference an analytic workspace NAME dimension using a QON. You can only access the NAME dimension of the current analytic workspace.

ORA-36304: (MXDCLAGR02) *workspace object* was not defined as an AGGMAP.

ORA-36306: (MXDCLAGR03) Since there is no current aggmap definition, the AGGMAP statements will be discarded. Type END to return to the command line.

ORA-36308: (MXDCLAGR04) The object *workspace object* has been defined as an AGGMAP, and it cannot be redefined as an ALLOCMAP.

ORA-36310: (MXDCLAGR05) The object *workspace object* has been defined an ALLOCMAP, and it cannot be redefined as an AGGMAP.

ORA-36312: (PHYS00) *workspace object* must be a dimension, dimensioned variable or relation.

Cause: The user specified an invalid OLAP object while attempting to use the PHYSICAL function

Action: Specify a valid object

ORA-36313: (PHYS03) The VALUE option of PHYSICAL cannot be applied to a variable.

Cause: the VALUE argument to PHYSICAL was supplied for a variable.

Action: remove VALUE or specify a relation or dimension.

ORA-36314: (PHYS01) *workspace object* must be a dimension, relation or variable.

Cause: The user specified an invalid OLAP object while attempting to use the PHYSICAL command

Action: Specify a valid object

ORA-36315: (PHYS04) You must specify the VALUE option for scalar relation *workspace object*.

Cause: The VALUE argument to PHYSICAL was omitted for a scalar relation

Action: specify VALUE or choose a dimensioned relation

ORA-36316: (PHYS02) Relation *workspace object* must be a single-dimensional relation that relates one INTEGER dimension to another.

Cause: The user specified an invalid relation while attempting to use the PHYSICAL command

Action: Specify a valid relation

ORA-36320: (PPENG05) No more than *number* push levels are allowed.

ORA-36322: (PPENG06) *workspace object* cannot be pushed more than *number* times.

ORA-36324: (PPNLSOPT00) '*number*' is not a legal value for the *string* option. The previous value was retained.

ORA-36330: (SNSYN124) The format of the PHYSICAL command is:\n \n PHYSICAL [dimension | relation]

ORA-36332: (SNSYN125) The format of the PHYSICAL function is:\n \n PHYSICAL(dimension | variable | {relation [VALUE]})

ORA-36334: (SNSYN126) The format of the TO_DATE function is:\n \n TO_DATE(value [format] [{option optionvalue}...])

ORA-36336: (SNSYN127) The format of the TO_CHAR function is:\n \n TO_CHAR(value [format] [{option optionvalue}...])

ORA-36338: (SNSYN128) The format of the TO_NUMBER function is:\n \n TO_NUMBER(value [format] [{option optionvalue}...])

ORA-36339: (SNSYN129) The format of the TO_NCHAR function is:\n \n TO_NCHAR(value [format] [{option optionvalue}...])

ORA-36340: (SNSYN130) The format of the PARTITIONCHECK function is:\n \n PARTITIONCHECK(aggmap, partition_template)
Cause: Bad syntax
Action: Correct syntax

ORA-36341: (SNSYN131) The format of the TO_TIMESTAMP function is:\n \n TO_TIMESTAMP(value [format] [{option optionvalue}...])

ORA-36342: (SNSYN200) The format of the CLEAR command is:\n \n CLEAR [ALL | STATUS] [AGGREGATES | CHANGES | PRECOMPUTES | NONPRECOMPUTES | CACHE] FROM var1 [var2, var3...] [USING aggmap]
Cause: The syntax for the CLEAR command was invalid.
Action: Modify your syntax using the correct format.

ORA-36344: (SNSYN272) The format of the AGGREGATION function is:\n \n AGGREGATION(dimension-value [dimension-value ...]) [OPERATOR operatorname [WEIGHT | WEIGHTBY weightvar]]

ORA-36346: (SNSYN338) The format of the TRUNC function is:\n \n TRUNC(expression1 [, expression2])

ORA-36348: (SNSYN339) The format of the CEIL function is:\n \n CEIL(number)

ORA-36350: (SNSYN340) The format of the FLOOR function is:\n \n FLOOR(number)

ORA-36352: (SNSYN341) The format of the ADD_MONTHS function is:\n \n ADD_MONTHS(date, number of months)

ORA-36354: (SNSYN342) The format of the LAST_DAY function is:\n \n LAST_DAY(date)

ORA-36356: (SNSYN343) The format of the MONTHS_BETWEEN function is:\n \n MONTHS_BETWEEN(date, date)

ORA-36358: (SNSYN344) The format of the NEW_TIME function is:\n \n NEW_TIME(date, zone, new zone)

ORA-36360: (SNSYN345) The format of the NEXT_DAY function is:\n \n NEXT_DAY(date, day name)

ORA-36362: (XPROPEN01) Discarding compiled code for *workspace object* because it was compiled with code version *number*. The current code version is *number*.

ORA-36376: (XSAGZERO) AGGREGATE attempted to divide by zero. Set DIVIDEBYZERO to YES if you want NA to be returned as the result of a division by zero.
Cause: A calculation in the current AGGREGATE command attempted to divide by zero as a result of an AVERAGE, WAVERAGE, HAVERAGE or HWAVERAGE operation.

Action: Either fix the data, or set DIVIDEBYZERO to YES to return NA instead of signaling an error.

ORA-36378: (XSAGTHRWEIGHT) While running AGGREGATE with multiple threads, the weight variable *workspace object* specified by your ARGS variable *workspace object* must exist in the same analytic workspace as your AGGMAP *workspace object*.

Cause: While running AGGREGATE in threaded mode, you attempted to specify a WEIGHT variable in another analytic workspace.

Action: Use a weight variable from the same analytic workspace as the aggmap and rollup variable.

ORA-36380: (AGGRECURSE) AGGREGATE was called recursively, which is not allowed.

Cause: A model, NATRIGGER, or other object called the AGGREGATE function or command while another AGGREGATE function or command was already in progress.

Action: Modify your objects so that they do not need to have two AGGREGATE commands or functions executing at once.

ORA-36387: (XSPARTCHECK00) Object *workspace object* must be an AGGMAP.

ORA-36388: (XSPARTCHECK01) Object *workspace object* must be a PARTITION TEMPLATE.

ORA-36389: (XSAGPARTDEP01) Can not aggregate from PARTITION *number* into PARTITION *number* due to increasing sparsity along DIMENSION %J.

Cause: The user is attempting to use partitions as a means of sparsity control, however they have set up their partitions in a manner that simply makes no sense. It is a simple fact that during aggregation data becomes more dense, not less dense, and yet their partitions indicate the opposite.

Action: Modify the partition template add the specified dimension into the source composite, or removing it from the target composite.

ORA-36391: (XSMXCLEA01) When CLEAR is used with the STATUS keyword or an AGGMAP, *workspace object* must be dimensioned identically to *workspace object*.

Cause: The user specified objects whose dimensionality didn't match

Action: Break up the CLEAR command into multiple commands where the dimensionality of the objects matches

ORA-36392: (XSMXCLEA02) When using CLEAR with the PRECOMPUTES or NONPRECOMPUTES options, you must specify an AGGMAP.

Cause: The user didn't specify an AGGMAP with the CLEAR command.

Action: specify an aggmap by adding a USING phrase to the CLEAR command, or attach a '\$AGGMAP' property to the variable.

ORA-36393: (XSMXCLEA03) When using the AGGREGATES, CHANGES or CACHE options, you must specify the ALL keyword.

Cause: The user didn't use the ALL keyword when using CHANGES or CACHE.

Action: Specify the ALL keyword.

ORA-36394: (XSMXCLEA04) When using CLEAR on the AGGMAP *workspace* object, CACHE is the only valid directive.

Cause: The user attempted to CLEAR an AGGMAP using a directive other than CACHE.

Action: Amend the CLEAR line to only use the CACHE keyword with AGGMAPs.

ORA-36395: (XSMXCLEA05) To CLEAR ALL AGGREGATES from *workspace* object, you must specify an AGGMAP.

Cause: The CLEAR command could not determine how the variable was aggregated because the variable is not dimensioned by a compressed composite.

Action: Specify an aggmap by adding a USING phrase to the CLEAR command, or attach a '\$AGGMAP' property to the variable.

ORA-36397: (XSSPROPNA) The value of property *string* cannot be NA.

Cause: The user tried to set a system-reserved property on an OLAP object to NA

Action: Set the property to a non-NA value

ORA-36398: (XSSPROP01) Property name '*number*' is invalid because only system-reserved property names can begin with '\$'.

Cause: The user attempted to add a property which starts with \$ but is not a reserved property name

Action: Remove the \$ from the property name

ORA-36399: (XSSPROPDTYPE) The data type of property *string* must be *string*.

Cause: The user tried to set a system-reserved property on an OLAP object to a value with an illegal datatype

Action: Set the property with the proper datatype

ORA-36400: (XSSPROP02) *workspace* object is not a valid variable name.

Cause: Not a valid variable name

Action: Change to a valid variable name

ORA-36401: (XSSPROPOTYPE) Property *string* may only be applied to objects of type *string*.

Cause: The user applied a reserved property name to an incorrect object type

Action: Apply the property to the correct object

ORA-36402: (XSSPROP03) The property '\$*string*' requires a leading '\$' because it is a system-reserved property name.

Cause: The user tried to specify a property name which is reserved, but did not use a leading \$

Action: Either add a leading \$ or choose another property name

ORA-36403: (XSBADSPROP) *number* is an illegal value for system-reserved property *string* on *workspace* object.

Cause: The user tried to specify an illegal value for a special property

Action: Specify a legal value.

ORA-36404: (XSSPROP04) Property *string* cannot be applied to an undimensioned (scalar) TEMPORARY variable.

Cause: The user applied a reserved property name to an incorrect object type

Action: Apply the property to the correct object

ORA-36405: (XSSPROP05) Property ignored for object *workspace object*:

Cause: A property was ignored during import.

Action: Refer to the message that follows this one and correct the error it describes.

ORA-36406: (VCACHE00) '*number*' is an invalid value for the VARCHACHE option. The only permissible values are 'SESSION', 'VARIABLE', and 'NONE'.

Cause: The user tried to assign an invalid value to the VARCHACHE option

Action: Assign one of the valid values

ORA-36410: (VCACHE03) '*number*' is an invalid value for the \$VARCHACHE property. The only permissible values are 'DEFAULT', 'SESSION', 'VARIABLE', and 'NONE'.

Cause: The user tried to assign an invalid value to the \$VARCHACHE property on a variable

Action: Assign one of the valid values

ORA-36608: (XSAGHOVERFLOW) The depth of the hierarchies encountered while processing a composite dimension in AGGREGATE caused a counter overflow.

Cause: The depth of the hierarchies that are part of a composite exceeded 4 billion levels during the merge.

Action: Reduce the number of levels in the hierarchies, reduce the number of dimensions in the composite, or do not aggregate over all dimensions at once.

ORA-36610: (XSLMS00) Unable to locate a message file for OLAP message: *value*

Cause: An internal OLAP DML program in the EXPRESS Analytic Workspace failed to retrieve a user message.

Action: Contact support.

ORA-36612: (XSLMS01) invalid OLAP message number: *value*

Cause: An internal OLAP DML program in the EXPRESS Analytic Workspace attempted to retrieve a non-existent message.

Action: Contact support.

ORA-36616: (XSAGMODHIER01) There is a cycle formed by MODEL *workspace object* and other embedded or containing models with the same dimension, *workspace object*.

Cause: Inclusion of a dynamic model formed a cycle in the named dimension.

Action: Edit the models involving this dimension to remove the cycle.

ORA-36617: (XSAGMODHIER02) There is a self-cycle equation in MODEL *workspace object*.

Cause: The model for relation modification included a self-cycle equation.

Action: Remove the self-cycle equation from the model.

ORA-36618: (XSAGMODDIM00) *workspace object* is not a valid dynamic model for AGGMAP.

Cause: The model failed one of the following tests: 1) only one dimension (aside from LAG/LEAD dimensions); 2) assignment to dimension values only; 3) a single simple solution block; 4) no time-series functions with variable step values.

Action: Edit the model so that it conforms to the above requirements.

ORA-36620: (XSAGMODDIM01) MODEL *workspace object* cannot find the matching embedded model.

Cause: AGGMAP ADD model could not find the matching embedded model.

Action: Add the matching embedded model to the AGGMAP.

ORA-36621: (XSAGMODDIM02) You cannot AGGREGATE the individual partition using static model *workspace object* because a partition dimension or its deriver *workspace object* appears in the equation of the step or simultaneous block.

Cause: An attempt was made to AGGREGATE the individual partition using the static model with the partition dimension in the equation of the step or simultaneous block.

Action: AGGREGATE the variable instead of the individual partition.

ORA-36622: (XSAGMODLIST00) *workspace object* cannot be added to the AGGMAP *workspace object* because it is not a valid MODEL.

Cause: An object specified in AGGMAP ADD was not a model.

Action: Specify the name of a model.

ORA-36626: (XSAGMODLIST02) MODEL *workspace object* was skipped because there is already a MODEL by that name attached to AGGMAP *workspace object*.

Cause: An attempt was made to add the same model to the AGGMAP twice.

Action: None required.

ORA-36628: (XSAGMODLIST03) MODEL *workspace object* could not be added to AGGMAP *workspace object*.

Cause: The dimension of the model did not match a hierarchy of the aggmap.

Action: Add a RELATION statement to the AGGMAP for that dimension.

ORA-36630: (XSDUNION00) An empty base dimension list was specified in the concat dimension definition.

Cause: An empty concat dimension list was specified.

Action: Specify a valid list of dimensions when defining a concat dimension.

ORA-36632: (XSDUNION01) The concat dimension *workspace object* is not currently defined as UNIQUE.

Cause: Attempt was made to CHGDFN a concat, which is already non-unique, to NOT UNIQUE.

Action: Since the concat is already non-unique, this command is unnecessary.

ORA-36634: (XSDUNION02) INTEGER dimension *workspace object* cannot be used as a concat dimension base.

Cause: The user cannot specify INTEGER base dimensions when defining a concat dimension.

Action: Change the datatype of the INTEGER base dimension, or omit it from the concat.

ORA-36635: (XSDUNION03) The base dimension *workspace object* has an invalid datatype for use in a UNIQUE concat definition.

Cause: Base dimensions of a unique concat must have TEXT or ID datatypes.

Action: Specify a valid list of dimensions when defining a unique concat dimension.

ORA-36636: (XSDUNION04) The unique concat dimension *workspace object* cannot be changed to NOT UNIQUE, because it is a base of at least one other unique concat dimension.

Cause: A non-unique concat dimension cannot be used as a base of a dependent unique concat.

Action: CHGDFN any dependent unique concat dimensions to NOT UNIQUE and retry.

ORA-36637: (XSDUNION05) The concat dimension cannot be defined as UNIQUE because it has a non-unique concat base dimension *workspace object*.

Cause: A non-unique concat dimension cannot be used as a base of a dependent unique concat.

Action: CHGDFN any non-unique concat base dimensions to UNIQUE and retry.

ORA-36638: (XSDUNION17) Concat dimension *workspace object* cannot be changed to UNIQUE because it has a non-unique concat base dimension *workspace object*.

Cause: A non-unique concat dimension cannot be used as a base of a dependent unique concat.

Action: CHGDFN any non-unique concat base dimensions to UNIQUE and retry.

ORA-36639: (XSDUNION18) UNIQUE cannot be applied to this concat dimension because leaves *workspace object* and *workspace object* share the value *number*.

Cause: Unique concat base dimensions cannot contain duplicate values.

Action: Use MAINTAIN RENAME to change one of the duplicate values and retry.

ORA-36640: (XSDUNION19) Concat dimension *workspace object* cannot be changed to UNIQUE because base dimension *workspace object* does not have a TEXT or ID datatype.

Cause: Base dimensions of a unique concat must have TEXT or ID datatypes.

Action: n/a

ORA-36641: (XSDUNION20) The concat dimension must be defined as UNIQUE because base dimension *workspace object* contains custom member values.

Cause: The UNIQUE keyword was not specified in the concat dimension definition, and is required if any of its base dimensions contain custom member values.

Action: Define the concat as UNIQUE, or remove all base custom member values.

ORA-36642: (XSDUNION06) Concat dimension list contains duplicate leaf dimension *workspace object*.

Cause: Duplicate concat leaf dimension was found.

Action: Remove duplicate concat base dimensions and retry.

ORA-36643: (XSDUNION21) Concat dimension *workspace object* cannot be changed to NOT UNIQUE because it contains custom member values.

Cause: Only UNIQUE concat dimensions can have custom member values or base dimensions which contain custom member values.

Action: Remove all custom member values from the concat and all of its bases, and retry.

ORA-36644: (XSDUNION07) Concat dimension *workspace object* contains a previously detected leaf dimension.

Cause: Concat dimension contains a previously detected leaf dimension.

Action: n/a

ORA-36646: (XSDUNION08) Only concat dimensions can be redefined as UNIQUE. *workspace object* is not a concat dimension.

Cause: UNIQUE keyword was used with an invalid object.

Action: Retry without the UNIQUE keyword.

ORA-36648: (XSDUNION09) Concat dimension *workspace object* is already defined as UNIQUE.

Cause: Attempt to change a concat dimension to UNIQUE, but it is already UNIQUE.

Action: n/a

ORA-36650: (XSDUNION10) Concat dimension *workspace object* cannot be changed to UNIQUE. Leaves *workspace object* and *workspace object* share the value *number*.

Cause: Unique concat base dimensions cannot contain duplicate values.

Action: Use MAINTAIN RENAME to change one of the duplicate values and retry.

ORA-36652: (XSDUNION11) *workspace object* is not a *string type* dimension.

Cause: The CHGDFN BASE ADD command is only valid for concat dimensions.

Action: n/a

ORA-36654: (XSDUNION12) *workspace object* cannot be added to *workspace object* because it conflicts with the dimensions of object *workspace object*.

ORA-36656: (XSDUNION13) *workspace object* is already a member of *workspace object* and cannot be added.

ORA-36658: (XSDUNION14) *workspace object* is not a direct base of *workspace object*.

ORA-36660: (XSDUENG00) The first argument to the *string* function must be an expression yielding a dimension value.

ORA-36662: (XSDUENG01) You cannot apply the *string* function to *workspace object* because it is not a concat dimension.

ORA-36663: (XSDPART01) You must specify a dimension list when defining a PARTITION TEMPLATE.

ORA-36664: (XSDPART02) You must specify a partitioning method and one or more partition dimensions when defining a PARTITION TEMPLATE.

Cause: User tried to define a PARTITION TEMPLATE without a PARTITION BY clause.

Action: Add a PARTITION BY clause.

ORA-36665: (XSDPART03) *workspace object* is not in the dimension list of the PARTITION TEMPLATE.

Cause: While defining a partition template, user attempted to specify a partition dimension that is not a dimension of the partition template itself.

Action: Choose a partition dimension from among the dimensions of the partition template.

ORA-36666: (XSDPART04) *workspace object* is not a concat dimension.

Cause: User tried to define a partition template with PARTITION BY CONCAT(... dim ...) where dim is not a concat dimension.

Action: Only concat dimensions can serve as partition dimensions with CONCAT partitioning. Choose a different partition dimension.

ORA-36667: (XSDPART05) *string* is not a legal CONCAT partition.

Cause: User attempted to use RANGE or LIST syntax in defining a CONCAT partition template.

Action: Use CONCAT partition syntax.

ORA-36668: (XSDPART06) *string* is not a legal RANGE partition.

Cause: User attempted to use CONCAT or LIST syntax in defining a RANGE partition template.

Action: Use RANGE partition syntax.

ORA-36669: (XSDPART07) *string* is not a legal LIST partition.

Cause: User attempted to use RANGE or CONCAT syntax in defining a LIST partition template.

Action: Use LIST partition syntax.

ORA-36670: (XSDPART08) *workspace object* is an INTEGER or NTEXT dimension, or contains an INTEGER or NTEXT dimension. INTEGER and NTEXT dimensions cannot be used as partition dimensions.

Cause: User attempted to define a partition template partitioned by an INTEGER or NTEXT dimension or a concat containing an NTEXT leaf.

Action: Either pick a different partition dimension, or redefine the dimension to use a different datatype.

ORA-36671: (XSDPART09) Leaves of *workspace object* have different datatypes. A partition dimension cannot have more than one datatype when RANGE partitioning is used.

Cause: User attempted to define a range partition template with a concat partition dimension, and the concat had two leaf dimensions with different datatypes.

Action: Pick a different partition dimension.

ORA-36672: (XSDPART10) A RANGE or LIST PARTITION TEMPLATE can only have a single partition dimension.

Cause: User attempted to define a RANGE or LIST partition template with more than one partition dimension.

Action: Remove all but one of the dimensions from the PARTITION BY RANGE(...) or PARTITION BY LIST(...) clause of the partition template definition.

ORA-36673: (XSDPART11) Use simple leaf values to identify concat dimension values in a VALUES LESS THAN clause, rather than the <LEAF: VALUE> format.

Cause: When defining a RANGE partition template with a concat dimension for the partition dimension, the user attempted to define a range using the <LEAF: VALUE> format of a concat dimension value.

Action: Use just the leaf value. Instead of "VALUES LESS THAN <leaf: value>", just say, "VALUES LESS THAN value".

ORA-36674: (XSDPART12) Invalid dimension value starting at *string*.

Cause: When defining a RANGE or LIST partition template, the user specified an invalid value in a VALUES LESS THAN or VALUES clause. An "invalid value" can be one of two things: a value whose datatype does not match the partition dimension's datatype, or a non-constant value.

Action: Modify the offending VALUES LESS THAN or VALUES phrase.

ORA-36675: (XSDPART13) A RANGE or LIST PARTITION TEMPLATE cannot have a conjoint for its partition dimension.

ORA-36676: (XSDPART14) Missing dimension list for *string*.

Cause: User attempted to define a CONCAT partition template, and didn't supply a list of dimensions for one of the partition definitions.

Action: Give a dimension list for each partition.

ORA-36677: (XSDPART15) Duplicate value in value lists of *number* and *number*

Cause: In a LIST PARTITION TEMPLATE definition, a value appeared in more than one value list, or more than once within a single value list.

Action: List each value only once.

ORA-36678: (XSDPART16) *workspace object* is missing from one or more partition dimension lists.

Cause: In the definition of a partition template, one of the partitions had a dimension list that did not contain all the dimensions of the partition template.

Action: Add the offending dimension to the partition's dimension list, or delete it from the partition template's dimension list. If using CONCAT partitioning and the missing dimension is a partition dimension, add to the partition dimension list any leaf of the partition dimension or any concat of leaves of the partition dimension.

ORA-36679: (XSDPART17) *workspace object* contains a leaf (*workspace object*) that is not part of the partition dimension *workspace object*.

Cause: In the definition of a CONCAT partition template, one of the partitions was dimensioned by a dimension that is "concat-related" to a partition dimension, meaning it shares some leaves with the partition dimension, but it contained some leaves that are not in the partition dimension.

Action: Either modify the dimensionality of the partition template to include a concat dimension that contains all the desired leaves, or pick a different dimension for the partition.

ORA-36680: (XSDPART18) *workspace object* is not a dimension of the PARTITION TEMPLATE.

Cause: In the definition of a partition template, one of the partitions was dimensioned by a dimension that was not given in the dimension list of the partition template.

Action: Remove the offending dimension from the partition's dimension list, or add it to the partition template's dimension list.

ORA-36681: (XSDPART19) Partitions *string* and *string* are out of order.

Cause: In the definition of a range partition template, a partition with a lower range boundary was listed after a partition with a higher range boundary.

Action: Alter the order of the partition definition list.

ORA-36682: (XSDPART20) Partition name *string* appears twice.

Cause: User gave a list of AW partitions in which some partition name appeared twice.

Action: Remove all but the first instance of the partition name from the list.

ORA-36683: (XSDPART21) Partition *string* dimensioned by more than one composite.

Cause: It is illegal to define a partition template in which one of the partitions is dimensioned by more than one composite.

Action: Make sure that the partition template being defined has at most one composite per partition.

ORA-36684: (XSDPART22) You cannot rename values of DIMENSION *workspace object* because it is the partition dimension of RANGE PARTITION TEMPLATE *workspace object*

Cause: User attempted to rename a value of a dimension that serves as the partition dimension of some RANGE or LIST partition template.

Action: It is not possible to rename values in such a dimension without deleting all RANGE and LIST partition templates that are partitioned by it.

ORA-36685: (XSDPART23) Only CONCAT partition templates can be subpartitioned.

Cause: User attempted to define a RANGE or LIST partition template with one or more partitions dimensioned by another partition template.

Action: Use only regular dimensions and composites to dimension each partition of the RANGE or LIST template.

ORA-36686: (XSDPART24) Value *number* is not in partition *number*.

Cause: User attempted to reorganize a list partition template by removing a value from some partition's list, but the value was not in the list.

Action: Ensure that the given values match the given partition.

ORA-36687: (XSDPART25) You cannot use compressed composite *workspace object* to dimension multiple partitions of the partition template, because its dimension list includes the PARTITION BY dimension *workspace object*.

Cause: The specified PARTITION BY dimension also occurred in the dimension list of a compressed composite used to dimension multiple partitions.

Action: Ensure that no PARTITION BY dimension occurs among the bases of the compressed composite used to dimension multiple partitions.

ORA-36688: (NTEXTCNV00) Error during conversion from TEXT to NTEXT.

Cause: An unknown character set conversion error occurred when converting a TEXT value to an NTEXT value.

Action: Unknown.

ORA-36691: (NTEXTCNV02) Invalid escape sequence in argument to UNISTR function: *string*.

Cause: The user called the UNISTR function on a string that had an invalid escape sequence. The only valid escape sequences in UNISTR are 1.) an escape-escape sequence, and 2.) an escape, followed by exactly four hexadecimal digits.

Action: Make sure that all escape sequences in UNISTR arguments are exactly four hexadecimal digits. To represent codepoints whose value is less than 0x1000, use preceding zeros. WRONG: 0x10; RIGHT: 0x0010.

ORA-36692: (XSRELGID24) A level relation must be specified for the GROUPSET and ROLLUP options of GROUPINGID.

Cause: level relation was not specified.

Action: Specify a level relation.

ORA-36693: (XSRELGID25) INHIERARCHY cannot be specified with the GROUPSET and ROLLUP options of GROUPINGID.

Cause: INHIERARCHY option was specified.

Action: Remove INHIERARCHY option.

ORA-36694: (XSRELTBL01) The value cannot be added to dimension *workspace object*.

Cause: Unknown.

Action: Check the context and permission for dimension maintenance.

ORA-36695: (XSRELGID26) The length of GID dimension status is *number*. The length of LEVEL dimension status is *number*.

Cause: GID dimension status did not match LEVEL dimension status.

Action: Change either GID dimension status or LEVEL dimension status.

ORA-36696: (XSRELTBL02) QDR dimension *workspace object* should not be the related dimension of the relation.

Cause: An ineligible dimension was specified in the Qualified Data Reference

Action: Do not attempt to qualify this dimension.

ORA-36698: (XSRELTBL03) QDR dimension *workspace object* should be in the dimension list that dimensions the relation.

Cause: The named dimension was not in the relation's dimension list.

Action: Select only dimensions that are in the relation's dimension list.

ORA-36700: (XSRELTBL04) Dimension *workspace object* cannot be qualified more than once.

Cause: The same dimension was specified more than once in the QDR.

Action: Specify each QDR dimension only once.

ORA-36702: (XSRELTBL05) The format of the HIERHEIGHT function is: \n HIERHEIGHT(relation [,] level)\n level >= 1.

Cause: The HIERHEIGHT function was specified incorrectly.

Action: Make sure the format is correct.

ORA-36704: (XSRELTBL06) *workspace object* should be dimensioned by *workspace object*.

Cause: The level relation is not dimensioned by the source relation dimension.

Action: Make sure the level relation has the correct definition.

ORA-36706: (XSRELTBL07) *workspace object* should be dimensioned by *workspace object* and one level dimension.

Cause: The destination relation has the wrong definition.

Action: Make sure the destination relation has the correct dimensions.

ORA-36708: (XSMXALLOC00) Variable *workspace object* must be dimensioned to be used by the ALLOCATE command.

Cause: The user supplied an undimensioned (scalar) variable to the ALLOCATE command.

Action: Use a dimensioned variable.

ORA-36710: (XSMXALLOC01) TARGETLOG variable *workspace object* must be dimensioned identically to TARGET variable *workspace object*.

Cause: The user attempted to execute ALLOCATE with mismatched TARGET and TARGETLOG variables

Action: Use TARGET and TARGETLOG variables with matching dimensionality.

ORA-36712: (XSMXALLOC02) Relation *workspace object* must be a one-dimensional self-relation to be used as a SOURCE or BASIS with ALLOCATE.

Cause: The user specified an invalid source or basis relation on the ALLOCATE command line.

Action: Modify the relation to be a one-dimensional self-relation.

ORA-36714: (XSMXALLOC03) TARGETLOG variable *workspace object* must have the same data type as TARGET variable *workspace object*.

Cause: The user specified a TARGETLOG variable that had a different data type from the TARGET variable.

Action: Use TARGETLOG and TARGET variables with an identical data type.

ORA-36718: (XSALLOC00) You do not have the necessary permissions to use AGGMAP *workspace object*.

Cause: The user did not have sufficient permissions to run the ALLOCATE command

Action: Change to a user ID with the appropriate permissions, or use objects that you have permission to use.

ORA-36720: (XSALLOC01) To be used with ALLOCATE, your AGGMAP *workspace object* must be defined with the ALLOCMAP command.

Cause: The user used the AGGMAP command to define the AGGMAP, so either the AGGMAP can only be used with the AGGREGATE command, or the AGGMAP has no contents attached to it.

Action: Use the ALLOCMAP command to define the AGGMAP.

ORA-36722: (XSALLOC02) In AGGMAP *workspace object*, you specified an NA or ZERO sourceval but supplied formula *workspace object* as your source for ALLOCATE.

Cause: The user requested that source values be modified during the allocation, but that is not possible when using a formula source.

Action: Either use a VARIABLE source or remove the SOURCEVAL specification for your ALLOCMAP.

ORA-36724: (XSALLOC03) *workspace object* cannot include more dimensions than the source variable.

ORA-36726: (XSALERR00) The character '*character*' is not a valid format specifier for the ALLOCATE error log.

Cause: The user specified an invalid formatter in the ALLOCERRLOGHEADER or ALLOCERRLOGFORMAT options.

Action: Correct the option to have a valid format.

ORA-36728: (XSALERR01) While performing the ALLOCATE command with AGGMAP *workspace object*, the error logging limit of *number* was exceeded.

Cause: The user specified an ERRORLOG MAX value in the ALLOCMAP, but more errors were encountered while performing the allocation.

Action: Either set ERRORLOG NOSTOP, reduce the allocation errors, or increase the ERRORLOG MAX setting

ORA-36730: A deadlock occurred allocating data.

ORA-36731: An NA basis parent cell was encountered.

ORA-36732: A value was less than the FLOOR specification.

ORA-36733: A value exceeded the CEILING specification.

ORA-36734: A value was less than the MIN specification.

ORA-36735: A value exceeded the MAX specification

Cause: .

Action: n/a

ORA-36736: Renormalizing data

ORA-36737: The logging limit was exceeded.

ORA-36738: Falling back to NAOOPERATOR after deadlock.

ORA-36739: Redistributing remainder with REMOPERATOR.

ORA-36740: A CHILDLCK was detected in your valueset

Cause: .

Action: n/a

ORA-36741: A source was OVER ALLOCATED to its children

ORA-36761: (XSLANGDM01) Analytic workspace *string* already contains a dimension (%J) with the *string* property.

Cause: An attempt was made to apply this property to more than one dimension in the AW.

Action: Remove the property from the named dimension and try the command again.

ORA-36762: (XSLANGDM02) You cannot modify the *string* property of %J because analytic workspace *string* is attached in MULTI mode.

Cause: An attempt was made to add or delete a \$DEFAULT_LANGUAGE property in an AW attached in multiwriter mode.

Action: Attach the AW in a different mode.

ORA-36763: (XSAGGCNTMOVE01) Aggregation variable *workspace object* cannot have itself as an AGGCOUNT.

Cause: An attempt was made to turn a variable into its own AGGCOUNT.

Action: Select a different AGGCOUNT variable.

ORA-36764: (XSAGGCNTMOVE02) AGGCOUNT variable *workspace object* must be of type INTEGER, not *string*.

Cause: An attempt was made to create a non-INTEGER AGGCOUNT.

Action: Select an INTEGER AGGCOUNT variable.

ORA-36765: (XSAGGCNTMOVE03) A *string* aggregation variable cannot have a *string* AGGCOUNT.

Cause: The specified AGGCOUNT variable did not have the same permanence as the aggregation variable.

Action: Select an AGGCOUNT variable with the same TEMPORARY or PERMANENT attribute as the aggregation variable.

ORA-36766: (XSAGGCNTMOVE04) *workspace object* cannot be used as an AGGCOUNT because it has an AGGCOUNT.

Cause: The specified AGGCOUNT variable had its own AGGCOUNT

Action: Select a different variable, or remove the AGGCOUNT using CHGDFN.

ORA-36767: (XSAGGCNTMOVE05) *workspace object* cannot be used as an AGGCOUNT while there are permissions applied to it.

Cause: The specified AGGCOUNT variable had its own permissions distinct from those on the aggregation variable.

Action: Select a different AGGCOUNT variable, or remove the permissions. In some cases this may require an UPDATE before the command can succeed.

ORA-36768: (XSAGGCNTMOVE06) An aggregation variable and its AGGCOUNT must have the same base dimensions.

Cause: An AGGCOUNT variable was specified with different base dimensions than the aggregation variable.

Action: Select an AGGCOUNT variable with exactly the same base dimensions as the aggregation variable.

ORA-36778: (XSPGTRLOW) The amount of available temporary storage is still low. Free some temporary storage immediately. You can do so, for example, by UPDATING or DETACHING an analytic workspace.

Cause: Ran out of temporary tablespace storage.

Action: Increase the amount of temporary tablespace storage.

ORA-36779: Invalid parameter value.

Cause: The specified value for OLAP_PAGE_POOL_SIZE initialization parameter was out of range. OLAP_PAGE_POOL_SIZE must be between 2097152 and 2147483647. Additionally, you cannot use a fixed-size OLAP page pool with multiple tablespace block sizes. OLAP_PAGE_POOL_SIZE remains unmodified.

Action: None

ORA-36780: (IOSEC01) Current Directory Alias is not set. Cannot complete *string*.

ORA-36782: (IOSEC02) Directory Alias used in *string* does not exist, or you do not have sufficient privileges to access it.

ORA-36784: (IOSEC03) *string* is an invalid directory or file name.

ORA-36786: (IOSEC04) File *string* does not exist or cannot be accessed.

ORA-36788: (IOSEC05) Access to the directory specified by *string* denied.

ORA-36790: (IOSEC06) Access to the file *string* denied.

ORA-36792: (IOSEC07) Error accessing file *string*.

ORA-36800: (XSTBLFUNC00) The OLAP_TABLE function can only have a single LOOP statement within the LIMITMAP

Cause: The OLAP table function given used more than one LOOP statement.

Action: It is currently impossible to specify more than one LOOP composite, either remove one of the statements (and loop densely over relevant dimensions), or create a new composite that encompasses both loops and have a single loop statement refer to that.

ORA-36802: (XSTBLFUNC01) The OLAP_TABLE function must contain a DATAMAP that executes a FETCH command or a LIMITMAP.

Cause: There is no limitmap on the table function and either the datamap does not contain a fetch, or it errored before the fetch was called.

Action: Check the datamap for errors, make sure that it executes a fetch statement, if it is not intended to execute the fetch then make sure that the table function has a valid limitmap.

ORA-36804: (XSTBLFUNC02) The OLAP_TABLE function encountered an error while parsing the LIMITMAP.

Cause: Invalid LIMITMAP syntax, or the name resolution failure of an ANALYTIC WORKSPACE OBJECT.

Action: Check the syntax of the limit map, check that the OLAP_TABLE function refers to a valid analytic workspace, check that all analytic workspace objects within the limitmap actually exist within the analytic workspace

ORA-36806: (XSTBLFUNC03) The OLAP_TABLE function refers to an invalid ADT attribute: *string*.

Cause: The limitmap refers to a matching of ADT attribute to AW object, but the ADT attribute is not an element of the specified ADT table. Most commonly this is a typo.

Action: Add the attribute to the ADT, correct the LIMITMAP, or remove the reference from the LIMITMAP.

ORA-36808: (XSTBLFUNC04) The OLAP_TABLE function LEVELREL clause cannot declare *number* ADT fields from *number* AW fields.

Cause: The limitmap has a levelrel clause which has a different number of values in the list to the right of the FROM than it has to the left.

Action: Change the limitmap so that there is a 1:1 mapping of adt and aw elements.

ORA-36810: (XSTBLFUNC05) Analytic workspace object *number* does not exist.

Cause: The limitmap refers to a non-existent aw object.

Action: Change the limitmap or define the object

ORA-36812: (XSTBLFUNC06) Invalid Syntax at '?'.

Cause: The limitmap has a question mark character outside the context of a string.

Action: Fix the limitmap

ORA-36814: (XSTBLFUNC07) The datatype of the column used in the ROW2CELL clause of a LIMITMAP must be RAW(16).

Cause: Datatype of column used in ROW2CELL clause of a LIMITMAP is not RAW(16).

Action: Change datatype to RAW(16).

ORA-36815: (XSTBLFUNC08) The OLAP_TABLE has attempted to use an AW single row function with the aw_attach parameter set to DURATION QUERY.

Cause: The OLAP_TABLE aw_attach parameter was set to DURATION QUERY.

Action: Change the OLAP_TABLE aw_attach parameter to DURATION SESSION.

ORA-36816: (XSTBLFUNC09) The *workspace object* dimension is of datatype *string* which does not support custom member upserts.

Cause: Custom members were attempted to be added via an upsert to a dimension that does not support them

Action: Disable the AW Hash optimization for this query

ORA-36817: (XSTBLFUNC10) The LIMITMAP LOOP clause specifies an invalid type of object. *workspace object* must be a DIMENSION or COMPOSITE.

Cause: An invalid type of object was specified in the LOOP clause.

Action: Correct the LOOP clause.

ORA-36818: (XSTBLFUNC11) A LIMITMAP DIMENSION clause specifies an invalid type of object. *workspace object* must be a DIMENSION.

Cause: An invalid type of object was specified in the DIMENSION clause.

Action: Correct the DIMENSION clause.

ORA-36819: (XSTBLFUNC12) *workspace object* cannot be used in a LIMITMAP *string* clause.

Cause: An invalid type of object was specified in a LIMITMAP clause.

Action: Correct the LIMITMAP clause.

ORA-36820: (XSLMINFO00) The LIMITMAPINFO function encountered an error while parsing the LIMITMAP.

Cause: Invalid LIMITMAP syntax.

Action: Correct the syntax of the limit map.

ORA-36821: (XSJPUSH00) An error occurred while attempting to push a join of 2 AW tables.

Cause: Unknown.

Action: Re-execute the query with parameter `_optimizer_aw_join_push_enabled = FALSE`.

ORA-36825: (XSTBLFUNC13) An error occurred expanding the `cube_name` argument in the OLAP table function

Cause: Incorrect metadata or invalid cube name

Action: Correct the metadata.

ORA-36826: (XSTBLFUNC14) OLAP C Looper is disabled by event 37395
Cause: init.ora event 37395 includes level 8 which disables the OLAP C looper
Action: Remove event level 8 and use explicit FETCH function for OLAP_TABLE

ORA-36830: (XSLMGEN00) Object *string.string* does not exist
Cause: The object does not exist
Action: Check view token for errors

ORA-36831: (XSLMGEN01) View token cannot be NA
Cause: A NA was passed as the view token
Action: Pass in a valid view token

ORA-36832: (XSLMGEN02) View token cannot be greater than 4000 bytes
Cause: A view token was greater than 4000 bytes
Action: Pass in a view token less than 4000 bytes

ORA-36833: (XSLMGEN03) View token cannot be blank
Cause: A blank was passed as the view token
Action: Pass in a valid view token

ORA-36834: (XSLMGEN04) Column tag is greater than 30 bytes
Cause: A value greater than 30 bytes was passed as the column tag
Action: Pass in a column tag of 30 bytes or less

ORA-36835: (XSLMGEN05) Dimension *string.string* hierarchy *string* level *string* is missing a COLUMNNAME property value
Cause: The COLUMNNAME property has no value
Action: Add a value to COLUMNNAME property

ORA-36836: (XSLMGEN06) The dimensionality of object *string.string* is different than the view token
Cause: The dimensionality of the cube does not match the view token
Action: Check view token for unrelated hierarchies clauses

ORA-36837: (XSLMGEN07) Object owner *string* is different than *string*
Cause: The object owners are different
Action: Make the object owners match

ORA-36838: (XSLMGEN08) Dimension *string.string* attribute *string* is missing a COLUMNNAME property value
Cause: The COLUMNNAME property has no value
Action: Add a value to COLUMNNAME property

ORA-36839: (XSLMGEN09) Cube *string.string* measure *string* is missing a COLUMNNAME property value
Cause: The COLUMNNAME property has no value
Action: Add a value to COLUMNNAME property

ORA-36840: (XSLMGEN10) Cube *string.string* has no measures
Cause: The cube has no measures

Action: Add a measure to the cube

ORA-36841: (XSLMGEN11) Dimension *string.string* was not found

Cause: The view token referenced a dimension that does not exist

Action: Pass in a dimension that does exist

ORA-36842: (XSLMGEN12) Hierarchy *string.string.string* was not found

Cause: The view token referenced a hierarchy that does not exist

Action: Pass in a hierarchy that does exist

ORA-36843: (XSLMGEN13) Dimension *string.string* hierarchy *string* is missing a PHYSICALNAME property value

Cause: The property PHYSICALNAME has no value

Action: Populate the property PHYSICALNAME with a value

ORA-36844: (XSLMGEN14) Dimension *string.string* is missing a *string* property value

Cause: The dimension is missing a required property

Action: Check dimension property values

ORA-36845: (XSLMGEN15) Owner is greater than 30 bytes

Cause: The owner passed is greater than 30 bytes

Action: Pass in an owner that is 30 bytes or less

ORA-36846: (XSLMGEN16) AW name is greater than 30 bytes

Cause: The AW name passed is greater than 30 bytes

Action: Pass in an AW name that is 30 bytes or less

ORA-36847: (XSLMGEN17) AW name is blank

Cause: The AW name passed is blank

Action: Pass in an AW name that has a value

ORA-36848: (XSLMGEN18) Object name *string* is different than *string*

Cause: The object names are different

Action: Make the object names match

ORA-36849: (XSLMGEN19) AW owner does not match View token owner

Cause: The AW owner does not match the View token owner

Action: Match AW owner to View token object owner

ORA-36850: (XSLMGEN20) View token *string* is not correct

Cause: The view token is not correct

Action: Check view token syntax for errors

ORA-36861: (XSTFRC01) SQL Cache ID parameter is invalid or missing.

Cause: SQL Cache ID parameter is required to identify SQL cache to query

Action: Supply a valid SQL Cache ID. Normally, users should not call OLAP Random Access Cursor table function themselves and therefore should not encounter this error.

ORA-36862: (XSTFRC02) Column number for this SQL Cache must be between 1 and *number*. Specified column number *number* is invalid.

Cause: Column Map references a column number that is greater than the maximum column number in SQL Cache

Action: Reference a correct column number. Normally, users should not call OLAP Random Access Cursor table function themselves and therefore should not encounter this error.

ORA-36871: (XSFTDSC01) Object *string* cannot be used to define a column in a LIMITMAP.

Cause: The object cannot define a column in LIMITMAP most likely because it is of a wrong type such as, for example, a Worksheet.

Action: Remove the reference from the LIMITMAP.

ORA-36872: (XSTFDSC02) Column type specifier cannot be used when the table function data type is specified.

Cause: Column type can only be used with implicitly-specified table functions

Action: Remove column type from reference from the LIMITMAP or remove the explicit table function data type specification.

ORA-36873: (XSTFDSC03) Column type must be specified explicitly.

Cause: Missing column type specification.

Action: Please, make sure to specify a column type in COLUMN MAP. Normally, users should not call OLAP Random Access Cursor table function themselves and therefore should not encounter this error.

ORA-36874: (XSTFDSC04) Expression *string* cannot be used to define a column in a LIMITMAP.

Cause: The expression cannot define a column in LIMITMAP most likely because it is of a wrong type such as, for example, a Worksheet.

Action: Remove the reference from the LIMITMAP.

ORA-36875: (XSTFDSC05) LIMITMAP is missing or is not a string literal.

Cause: Table functions that have an automatic ADT require LIMITMAP to be a string literal.

Action: Either specify ADT for the table function or specify LIMITMAP as a string literal.

ORA-36876: (XSTFDSC06) The column datatype *string* is not supported in OLAP table functions.

Cause: The object type layer does not support column datatype.

Action: Use a supported column datatype.

ORA-36881: (XSSRF00) The OLAP DML ROW2CELL function can only be used in a LIMITMAP.

Cause: Using the ROW2CELL function outside of the LIMITMAP.

Action: Remove use of the ROW2CELL function.

ORA-36882: (XSSRF01) The second parameter of an AW single row function cannot be NULL.

Cause: The second parameter of the AW single row function was NULL

Action: Pass a valid OLAP DML expression as the second parameter of the AW single row function

ORA-36883: (XSSRF02) The first parameter of an AW single row function cannot be NULL.

Cause: The first parameter of the AW single row function was NULL

Action: Make sure the column specified in the LIMITMAP ROW2CELL clause is the first parameter of the AW single row function.

ORA-36884: (XSSRF03) The value of the first parameter of the AW single row function is incorrect.

Cause: The column specified in the LIMITMAP ROW2CELL clause was not the first parameter of the AW single row function.

Action: Make sure the column specified in the LIMITMAP ROW2CELL clause is the first parameter of the AW single row function.

ORA-36885: (XSSRF04) Error rewriting OLAP DML expression. Column name too big

Cause: The column name specified in the OLAP DML expression was larger than 30 bytes.

Action: Make sure the column name specified in the OLAP DML expression is less than or equal to 30 bytes.

ORA-36886: (XSSRF05) Error rewriting OLAP DML expression. Rewritten expression is greater than *number* bytes

Cause: The rewritten OLAP DML expression was larger than the output buffer.

Action: Create a smaller OLAP DML expression.

ORA-36887: (XSSRF06) Error rewriting OLAP DML expression. Column name *string* is not a valid ADT column.

Cause: The column name passes does not exist.

Action: Only reference columns that exist.

ORA-36902: (XSAGDNGL43) In AGGMAP *workspace object*, the MODEL *workspace object* is not a model over a base dimension of the AGGMAP.

Cause: Model may include equations others than dimension values, or blocks other than simple blocks.

Action: Make sure model only includes the simple blocks with dimension values.

ORA-36904: (XSAGDNGL44) In AGGMAP *workspace object*, RELATION *workspace object* occurs after a dynamic model. The dynamic model must be the last calculation within the AGGMAP.

Cause: Before the current relation, dynamic model exists.

Action: Make sure the dynamic model is the last statement.

ORA-36910: (XSAGDNGL47) In AGGMAP *workspace object*, DYNAMIC MODEL *workspace object* can only edit the top level of its matching relation hierarchy.

Cause: The model attempted to edit a child node in the relation hierarchy.

Action: Remove this attempt from the model definition.

ORA-36912: (XSAGDNGL48) In AGGMAP *workspace object*, MODEL *workspace object* cannot be simultaneous.

Cause: The aggmap contained a simultaneous model.

Action: Change the model definition so that it is no longer simultaneous.

ORA-36913: (XSAGDNGL49) In AGGMAP *workspace object*, LOAD_STATUS *workspace object* must be an undimensioned VALUESET over the relation dimension.

Cause: The object referred to by the LOAD_STATUS clause of the aggmap wasn't an undimensioned valueset over the related dimension

Action: Change the aggmap definition so that it doesn't refer to an invalid object

ORA-36914: (XSAGDNGL50) In AGGMAP *workspace object*, LOAD_STATUS *valueset workspace object* contains both a child and its ancestor.

Cause: The LOAD_STATUS valueset is not allowed to contain both a dimension value and an ancestor of that value.

Action: Perform a limit remove ancestors on the valueset and confirm that the result matches the intended load.

ORA-36920: (XSVPMTOPART01) *workspace object* cannot become anonymous because it has properties.

Cause: The OLAP DML command would result in a named object becoming an anonymous object, but the object had one or more properties associated with it.

Action: Remove the properties using the PROPERTY command. In some cases an UPDATE may be required before the command can proceed.

ORA-36921: (XSVPMTOPART02) *workspace object* and *workspace object* are not in the same analytic workspace.

Cause: The OLAP DML command requires certain objects to be in the same analytic workspace, and the command string specified objects from two different analytic workspaces.

Action: If more than one analytic workspace is attached to the session, make sure that the object names given in the command are unique across all attached analytic workspaces. Use qualified object names (QON's) if necessary.

ORA-36922: (XSVPMTOPART03) *workspace object* is the target of an external partition of a partitioned variable.

Cause: An attempt was made to perform some prohibited operation on a variable which is itself a partition of some other variable.

Action: If desired, use the CHGDFN command to DROP the partition from the partitioned variable, and then run the command again.

ORA-36923: (XSVPMTOPART04) *workspace object* is not a LIST or RANGE PARTITION TEMPLATE.

Cause: The user ran a command that only operates on a LIST or RANGE partition template (or a variable dimensioned by a LIST or RANGE partition template) on some other kind of analytic workspace object.

Action: Rerun the command on a LIST or RANGE partition template or a variable dimensioned by a LIST or RANGE partition template.

ORA-36924: (XSVPMTOPART05) *workspace object* is not in a COMPOSITE.

Cause: The OLAP DML command expected that the variable would be dimensioned by a composite containing the specified dimension, the specified dimension within a composite.

Action: Rerun the command on some variable is dimensioned by a composite containing the specified dimension.

ORA-36925: (XSVPMTOPART06) Partition *number* has some values that are not in *workspace object*.

ORA-36926: (XSVPMTOPART07) More than one variable is dimensioned by *workspace object*.

ORA-36930: Cannot start a recursive call to Oracle OLAP because a ROLLBACK past an UPDATE to an attached analytic workspace has been performed.

Cause: ROLLBACK past the UPDATE of one of the attached Analytic Workspaces was called. A recursive Oracle OLAP call cannot be made until the control returns to the initial OLAP call and the affected Analytic Workspaces detached.

Action: Change the called SQL procedure to avoid the ROLLBACK

ORA-36940: (XSDPENG00) You cannot apply the PARTITION function to *workspace object* because it is not a partition template.

ORA-36950: (XSFCAST22) The list of *string* values cannot have more than *number* members. You supplied *number*.

Cause: There are more than the maximum number of OFFSET or PERIODICITY values.

Action: Remove some of the values.

ORA-36951: (XSFCAST28) The ALLOCLAST parameter cannot be set to YES unless PERIODICITY specifies more than one cycle.

Cause: ALLOCLAST was set to YES when PERIODICITY specified a single value rather than a list of nested cycles.

Action: Set ALLOCLAST to FALSE (the default), or specify more than one value for PERIODICITY (in the form of a parenthesized list).

ORA-36952: (XSFCAST23) You cannot specify a cycle number when querying the *string* forecasting option.

Cause: A cycle number was specified in a call to FCQUERY to retrieve forecast data not related to a cycle.

Action: Remove the cycle specification from the call to FCQUERY.

ORA-36954: (XSFCAST24) The cycle number must be between 1 and *number*. You specified *number*.

Cause: A cycle number less than 1 or greater than the maximum value was specified in a call to FCQUERY.

Action: Specify a number in the indicated range.

ORA-36956: (XSFCAST25) There are only *number* PERIODICITY values. You cannot specify more OFFSET values.

Cause: More OFFSET values were specified than PERIODICITY values.

Action: Supply only as many OFFSETs as there are PERIODICITY values.

ORA-36958: (XSFCAS26) The OFFSET value for cycle *number* cannot be greater than the cycle's PERIODICITY, which is *number*. You specified *number*.

Cause: The OFFSET for a cycle exceeded the PERIODICITY for that cycle.

Action: Supply an OFFSET less than or equal to the PERIODICITY for the corresponding cycle.

ORA-36960: (XSFCAS27) The value of the *string* expression must be an odd number. You specified *number*.

Cause: An even number was given for an option that requires an odd number.

Action: Supply an odd number or let the option default.

ORA-36961: Oracle OLAP is not available.

Cause: The user attempted to utilize functionality found only in Oracle OLAP, but OLAP has not been enabled in the executable.

Action: Install the Oracle OLAP option

ORA-36962: (XSRELTBL08) *string* is not a valid *workspace object*.

Cause: The specified value does not exist in the dimension.

Action: Specify an existing value of the dimension.

ORA-36963: (XSRELTBL16) INHIERARCHY object *workspace object* should be a valid valueset or boolean variable.

Cause: Invalid valueset or variable was specified.

Action: Specify a valid valueset or variable.

ORA-36964: (XSRELTBL09) *workspace object* is not a valid level relation.

Cause: The specified level relation was not consistent with the parentage hierarchy.

Action: Fix one or both of the relations involved so that all parents are at a higher level than their children.

ORA-36965: (XSRELTBL17) Invalid LEVELORDER valueset *workspace object*.

Cause: Invalid LEVELORDER valueset was specified.

Action: Specify a valid valueset.

ORA-36966: (XSRELTBL10) *workspace object* must be a dimension.

Cause: The qualified object must be a dimensions.

Action: Remove the named object from the QDR.

ORA-36967: (XSRELTBL18) Invalid INHIERARCHY valueset *workspace object*.

Cause: Invalid valueset was specified.

Action: Specify a valid valueset.

ORA-36968: (XSRELTBL11) Invalid relation *workspace object*.

Cause: Non-object or an object other than a RELATION was specified as source or destination.

Action: Specify RELATION objects.

ORA-36969: (XSRELTBL19) Merged family relation cannot take INHIERARCHY option.

Cause: INHIERARCHY option was specified.

Action: Remove INHIERARCHY option.

ORA-36970: (XSRELTBL12) *workspace object* must be a self-relation.

Cause: The specified source relation was not a self-relation.

Action: Specify a self-relation as the source.

ORA-36971: (XSRELTBL19) Merged family relation cannot take LEVELORDER option.

Cause: LEVELORDER option was specified.

Action: Remove LEVELORDER option.

ORA-36972: (XSRELTBL13) Relation *workspace object* must be dimensioned by *workspace object*.

Cause: Destination relation is not dimensioned by source relation dimension.

Action: Give a correct destination relation.

ORA-36974: (XSRELTBL14) *workspace object* is not a BOOLEAN variable dimensioned by all the dimensions of the hierarchy.

Cause: The named variable had either the wrong data type or the wrong dimensions.

Action: Specify a BOOLEAN variable dimensioned by all the dimensions of the hierarchy.

ORA-36975: (XSRELTBL15) You must specify a USING clause naming a relation with same level dimension as LEVELORDER valueset *workspace object*.

Cause: USING was omitted from the HIERHEIGHT command, or specified a relation containing values of a different dimension than the LEVELORDER valueset.

Action: Provide a USING clause naming a relation containing values from the correct level dimension. -----

ORA-36976: (XSRELGID00) Invalid GROUPINGID destination relation or variable *workspace object*.

Cause: Non-Object or invalid relation or invalid variable.

Action: Specify the valid relation or variable.

ORA-36977: (XSRELGID17) The GROUPINGID command does not support hierarchies with more than 126 levels.

Cause: The user specified a hierarchy with more than 126 levels.

Action: Decrease the number of levels in the hierarchy.

ORA-36978: (XSRELGID01) *workspace object* must be a self-relation.

Cause: Source relation is not a self-relation.

Action: Specify a self-relation as the source relation.

ORA-36979: (XSRELGID18) Property *number* can only be set by the GROUPINGID command.

Cause: You tried to set the \$GID_DEPTH property.

Action: Stop to set the \$GID_DEPTH property.

ORA-36980: (XSRELGID02) Variable *workspace object* must have a numeric data type.

Cause: The destination variable does not have a numeric data type.

Action: Make sure the variable is numeric.

ORA-36981: (XSRELGID19) The format of the GROUPINGID function is:\n \n GROUPINGID(gidrel1 [gidrel2],...)

Cause: Bad syntax

Action: Correct syntax

ORA-36982: (XSRELGID03) The destination variable/relation *workspace object* must be dimensioned by all dimensions of the source relation *workspace object* that have more than one value in status.

Cause: Destination variable/relation does not have enough dimensionality to hold the result from the multi-dimensional source relation.

Action: Either limit the status of hierarchy dimensions or redefine the destination variable/relation with the extended dimensionality

ORA-36983: (XSRELGID20) The groupingid relation *workspace object* repeats.

Cause: The groupingid relation repeated.

Action: Remove the duplicated groupingid relation.

ORA-36984: (XSRELGID04) A value cannot be inserted into dimension *workspace object*.

ORA-36985: (XSRELGID21) The source relation can be omitted only when using both surrogate GID and level order valueset.

Cause: Source relation was not specified.

Action: Specify the source relation or both surrogate gid and level order valueset.

ORA-36986: (XSRELGID05) Relation *workspace object* must be dimensioned by *workspace object*.

Cause: The destination relation is not dimensioned by the dimension of the source relation.

Action: Redefine the destination relation or choose another relation with the correct dimensionality.

ORA-36988: (XSRELGID06) The related dimension of relation *workspace object* must be of type NUMBER.

Cause: The related dimension of the destination relation has the wrong data type.

Action: Redefine the destination relation or choose another relation whose related dimension is of type NUMBER.

ORA-36989: (XSRELGID23) GROUPSET and ROLLUP options in GROUPINGID require the destination relation.

Cause: Either variable or surrogate dimension was specified as destination.

Action: Specify the destination relation.

ORA-36990: (XSRELGID07) The level relation *workspace object* should be dimensioned by a level dimension.

Cause: The level relation is not dimensioned by a level dimension.

Action: Redefine the level relation or choose another relation with the correct dimensionality.

ORA-36991: (XSRELGID08) The level relation and level order valueset provide inconsistent level mappings.

Cause: There is a conflict between the hierarchy/level relation and the level order valueset.

Action: Choose objects that do not conflict.

ORA-36992: (XSRELGID09) A level relation is needed to produce a surrogate dimension gid.

Cause: A level relation was not specified.

Action: Specify a level relation.

ORA-36993: (XSRELGID10) OBJECT *workspace object* must be a VARIABLE, RELATION, or a numeric SURROGATE DIMENSION based on the level dimension *workspace object*.

Cause: not a surrogate dimension, or the surrogate dimension is not based on the level dimension.

Action: modify/change the surrogate dimension.

ORA-36994: (XSRELGID11) The SURROGATE DIMENSION *workspace object* must be numeric.

Cause: The surrogate dimension is not numeric

Action: Change the surrogate dimension as numeric

ORA-36995: (XSRELGID12) There are duplicate values in the surrogate dimension gid. Use the levelorder option to resolve the ambiguity.

Cause: more than 1 hierarchies in the current computing scope.

Action: use inhierarchy to limit

ORA-36996: (XSRELGID13) Valueset *workspace object* should be defined over dimension *workspace object*.

Cause: Valueset doesn't match the dimension

Action: Change the valueset's dimension

ORA-36997: (XSRELGID14) For variable or relation grouping ids, a level relation is needed when a level order valueset is specified.

Cause: no level relation exists with level order valueset.

Action: provide the level relation.

ORA-36998: (XSRELGID15) LEVEL ORDER VALUESET *workspace object* and LEVEL RELATION *workspace object* have the different level dimensions.

Cause: either level order valueset or level relation has wrong level dimension.

Action: choose the correct level dimension

ORA-36999: (XSRELGID16) OBJECT *workspace object* is not a surrogate dimension, a source relation must be specified when creating any non-surrogate grouping id.

Cause: use variable/relation gid without providing the source relation

Action: use the surrogate or provide the source relation

ORA-37000: (NOTALIAS00) *workspace object is not an ALIAS DIMENSION of workspace object.*

Cause: The user specified an object which is not alias dimension of the first dimension

Action: Specify an alias dimension of the first dimension

ORA-37001: You have one or more attached but unupdated analytic workspaces.

Cause: The user has attempted to shut down OLAP, but they have active analytic workspaces whose changes have not been saved.

Action: Either issue the update command to update the AWs, or pass TRUE as the force parameter to `dbms_aw.shutdown()`

ORA-37002: Oracle OLAP failed to initialize. Please contact Oracle OLAP technical support.

Cause: A severe error occurred while initializing OLAP.

Action: Contact support (and possibly OLAP development) for help in debugging the issue.

ORA-37003: (AWLISTALL01) *number readers*

Cause: used in AW(LISTALL) output formatting when %d is 0

Action: None

ORA-37004: (AWLISTALL02) *number reader*

Cause: used in AW(LISTALL) output formatting when %d is 1

Action: None

ORA-37005: (AWLISTALL03) *number readers*

Cause: used in AW(LISTALL) output formatting when %d is > 1

Action: None

ORA-37006: (AWLISTALL04) *number writers*

Cause: used in AW(LISTALL) output formatting when %d is 0

Action: None

ORA-37007: (AWLISTALL05) *number writer*

Cause: used in AW(LISTALL) output formatting when %d is 1

Action: None

ORA-37008: (AWLISTALL06) *number writers*

Cause: used in AW(LISTALL) output formatting when %d is > 1

Action: None

ORA-37010: (XSACQUIRE_DIFFAW) When using the CONSISTENT WITH clause, all objects must come from the same analytic workspace.

Cause: The ACQUIRE command cannot keep objects from several workspaces consistent with each other

Action: Omit the CONSISTENT WITH clause or make sure all objects being acquired belong to the same analytic workspace.

ORA-37011: (XSACQUIRE_LOCKED) Object *workspace object* is locked by another user.

Cause: Could not acquire (or acquire consistent) the object, since it is locked by another user

Action: Try to acquire this object later

ORA-37012: (XSACQUIRE_TIMEOUT) Object *workspace object* is locked by another user and the WAIT timed out.

Cause: Could not acquire (or acquire consistent) the object for a while, since it is locked by another user

Action: Try to acquire this object later

ORA-37013: (XSACQUIRE_DEADLOCK) Cannot wait to acquire object *workspace object*, since doing so would cause a deadlock.

Cause: Waiting to acquire the object would cause a deadlock

Action: Release some other object that another user is waiting for and try to acquire this object again.

ORA-37014: (XSACQUIRE_ACQUIRED) Object *workspace object* is already acquired.

Cause: The object is already acquired

Action: Do not try to acquire this object again

ORA-37015: (XSACQUIRE_YNRESYNC) Object *workspace object* is ambiguously listed to be acquired both with and without RESYNC.

Cause: The object is listed in with resync list and no resync list. Such usage is ambiguous as to the user's intent on preserving or not preserving private changes.

Action: Do not list the object both with and without RESYNC

ORA-37016: (XSACQUIRE01) You must specify objects to acquire for the ACQUIRE command.

Cause: A list of objects to acquire with or without resync is missing

Action: Specify the list of objects to acquire

ORA-37018: (XSACQUIRE03) Multiwriter operations are not supported for object *workspace object*.

Cause: Multiwriter presently does not work for this object type

Action: Attach the AW in RW or EXCLUSIVE modes to modify this object.

ORA-37020: (XSMULTI01) Analytic workspace *string* is not in MULTI mode.

Cause: The workspace for an object is not in multiwriter mode. Hence, no multiwriter operations are allowed on the objects in the workspace

Action: Attach the workspace in the multiwriter mode or do not use multiwriter commands with it.

ORA-37021: (XSMULTI02) Object *workspace object* is not acquired.

Cause: The object must be acquired for this multiwriter operation

Action: Do not use this multiwriter operation on an object that is not acquired

ORA-37023: (XSMLTUPD01) Object *workspace object* cannot be updated without dimension *workspace object*.

Cause: One cannot update an object if it is dimensioned by a maintained dimension without updating that dimension or if the object is a relation and the dimension is its target.

Action: Include the maintained dimension in the update list

ORA-37026: (XSMLTRESYNC01) Object *workspace object* cannot be resynced without dimension *workspace object*.

Cause: One cannot resync an object if it is dimensioned by a maintained dimension without updating that dimension or if the object is a relation and the dimension is its target.

Action: Include the maintained dimension in the update list

ORA-37027: (XSMLTRESYNC02) Object *workspace object* cannot be resynced without modified object *workspace object* because they share a modified composite dimension.

Cause: When one resyncs an object that is dimensioned by a composite dimension, the composite dimension is resynced automatically, dropping all new tuples. This cannot be done, however, if the automatic resync of the composite dimension might cause data in an object that shares the composite dimension to become NA.

Action: Resync both objects together. Alternatively, you can try to acquire the other object (that will ensure that the composite dimension is locked in the latest generation and will not be resynced when resyncing the first object), resync the first object, and release the other object.

ORA-37028: (XSMLTRESYNC03) Object *workspace object* cannot be resynced without modified object *workspace object* because they share a modified dimension map.

Cause: When one resyncs an object that is dimensioned by a dimension map, the dimension map is resynced automatically, dropping all changes. This cannot be done, however, if the automatic resync of the dimension map might cause data in an object that shares the dimension map to become NA.

Action: Resync both objects together. Alternatively, you can try to acquire the other object (that will ensure that the dimensions map is locked in the latest generation and will not be resynced when resyncing the first object), resync the first object, and release the other object.

ORA-37030: (XSMLTMAINT01) You cannot maintain *workspace object* because it is not ACQUIRED.

Cause: One cannot maintain a dimension in a multiwriter AW if it is not acquired.

Action: Acquire the dimension first.

ORA-37031: (XSMLTMAINT02) You cannot DELETE values of dimension *workspace object* in MULTI mode.

Cause: DELETE is allowed in multiwriter mode only for SESSION dimension members

Action: Attach the AW in a R/W mode and perform the DELETE operation

ORA-37032: (XSMLTMAINT03) You cannot MAINTAIN partition template workspace object in MULTI mode.

Cause: User attempted to add or remove values from a LIST partition template's lists while the AW containing the partition template was attached in multiwriter mode.

Action: Do the maintenance in read only or read-write mode.

ORA-37035: (XSMLTDCL01) You can only DEFINE SESSION objects in analytic workspace string because it is attached in MULTI mode.

Cause: Persistent object definition in multiwriter mode is not allowed.

Action: Do all persistent object definitions in read-write mode.

ORA-37036: (XSMLTDCL02) You cannot DELETE objects in analytic workspace string because it is attached in MULTI mode.

Cause: One cannot delete objects in an analytic workspace attached in MULTI mode.

Action: Do all object in read-only or read-write mode.

ORA-37037: (XSMLTDCL03) You cannot RENAME objects in analytic workspace string because it is attached in MULTI mode.

Cause: One cannot rename objects in an analytic workspace attached in MULTI mode.

Action: Do all persistent object maintenance in read-write mode.

ORA-37038: (XSMLTDCL04) You cannot change definitions of objects in analytic workspace string because it is attached in MULTI mode.

Cause: One cannot use CHGDFN command on objects in an analytic workspace attached in MULTI mode.

Action: Do all persistent object maintenance in read-write mode.

ORA-37039: (XSMLTDCL05) You cannot maintain triggers in analytic workspace string because it is attached in MULTI mode.

Cause: One cannot use TRIGGER command on objects in an analytic workspace attached in MULTI mode.

Action: Do all persistent object maintenance in read-write mode.

ORA-37040: (XSACQUIRE_DEP_LOCKED) Composite, concat, dimension map, or internal partition workspace object is locked by another user.

Cause: Some object required locking a composite, concat, dimension map, or internal partition, which is locked by another user

Action: Try to acquire this object later

ORA-37041: (XSACQUIRE_DEP_TIMEOUT) Composite, concat, dimension map, or internal partition workspace object is locked by another user and the WAIT timed out.

Cause: Some object required locking a composite, concat, dimension map, or internal partition, which could not be locked for a while, since it is locked by another user

Action: Try to acquire this object later

ORA-37042: (XSACQUIRE_DEP_DEADLOCK) Cannot wait to acquire composite, concat, dimension map, or internal partition workspace object, since doing so would cause a deadlock.

Cause: Some object required locking a composite, concat, dimension map, or internal partition, which would cause a deadlock

Action: Release some other object that another user is waiting for and try to acquire this object again.

ORA-37043: (XSACQUIRE_DEP_OLDGEN) Composite, concat, dimension map, or internal partition *workspace object* cannot be locked, since another user has committed a new one already.

Cause: Some object required locking a composite, concat, dimension map, or internal partition in the present generation, which is not possible, since a newer generation already exists.

Action: Try to acquire the main object with resync

ORA-37044: (XSACQUIRE_OLDGEN) Cannot acquire object *workspace object* without resync.

Cause: Could not acquire the object without resync because another user has committed a newer version of it already.

Action: Try to acquire this object with resync parameter

ORA-37050: (XSMLTDCL06) You cannot use the RELATION command with *workspace object* because analytic workspace *string* is attached in MULTI mode.

Cause: One cannot use the RELATION command on objects in an analytic workspace attached in MULTI mode.

Action: Change the default relation when the analytic workspace is attached in RW or Exclusive mode.

ORA-37051: (XSAWRESREV01) You cannot RESYNC or REVERT analytic workspace *string* because one or more objects have been defined in it during this session.

ORA-37052: (XSAWRESREV02) You cannot RESYNC or REVERT analytic workspace *string* because one or more objects have been deleted from it during this session.

ORA-37053: (XSAWRESREV03) You cannot RESYNC or REVERT analytic workspace *string* because one or more of its objects have had their definitions changed during this session.

ORA-37054: (XSAWRESREV04) You cannot RESYNC or REVERT analytic workspace *string* because it contains one or more unnamed composites renamed during this session.

ORA-37055: (XSAWRESREV05) You cannot RESYNC analytic workspace *string* because another session has changed the definitions of one or more objects it contains.

ORA-37056: (XSAWRESREV06) You cannot RESYNC or REVERT analytic workspace *string* because one or more SESSION dimensions or composites are based on *workspace object*.

ORA-37060: (XSMCSESS08) *number* is not a valid custom member in dimension *workspace object*.

Cause: No custom member or invalid custom member

Action: Create the custom member or use the correct custom member

ORA-37069: You may not execute a parallel OLAP operation against the EXPRESS AW.

Cause: A parallel OLAP command attempted to execute against EXPRESS.

Action: Contact Oracle support. Users should not see this message.

ORA-37070: You may not execute OLAP DML programs in a parallel query session.

Cause: The user attempted to execute a DML program inside of a parallel query session, perhaps in parallel aggregate

Action: Adjust the job so that a program does not need to be executed, or disable parallelism

ORA-37071: You may not execute a parallel OLAP operation against updated but uncommitted AW string.

Cause: The user attempted to use a parallel feature against an AW which they updated but which has not been committed

Action: Commit the current changes

ORA-37072: (XSMCSESS00) Object *workspace object* has the wrong type.

Cause: The object is not of the object type specified in the APPLY clause

Action: Specify the correct object type

ORA-37073: (XSMCSESS01) Applied relation *workspace object* must be dimensioned by dimension *workspace object*.

Cause: Applied relation has the different dimension from the dimension currently being maintained

Action: Maintain relation dimension

ORA-37074: (XSMCSESS02) Variable *workspace object* has no default aggmap.

Cause: The applied variable has no default aggmap

Action: Use variable with the default aggmap or aggmap directly

ORA-37075: (XSMCSESS03) You cannot rename a session-only dimension value.

Cause: The user tried to apply MAINTAIN RENAME to a SESSION value.

Action: Delete the old value and add a new one with the desired name.

ORA-37076: (XSMCSESS04) *workspace object* is not the type of dimension that can have session-only values. Valid types are TEXT, NTEXT, ID, NUMBER, and CONCAT with the UNIQUE attribute.

Cause: The user tried to add a SESSION value to a dimension type that does not support SESSION values.

Action: Use a dimension of one of the listed types.

ORA-37077: (XSMCSESS05) Object *workspace object* is specified more than once.

Cause: The same object name was given more than once in the apply clause or in the step dimension list.

Action: Remove the repetitions.

ORA-37078: (XSMCSESS06) The dimension being maintained (*workspace object*) cannot also be used as a step dimension.

Cause: The dimension being maintained was named as a step dimension.

Action: Remove this dimension from the list of step dimensions.

ORA-37079: (XSMCSESS07) Aggmap *workspace object* cannot be used for AGGREGATE.

Cause: The current aggmap may be for ALLOCATE

Action: Choose the correct aggmap for AGGREGATE only.

ORA-37080: Advice requested for hierarchy with too many levels

Cause: A request was made for advice on a hierarchy with more levels than are supported.

Action: Only request advice for hierarchies with less than 32 levels.

ORA-37082: Invalid percent

Cause: A request was made for advice with an illegal percent value.

Action: Request between 0 and 100 percent precomputation.

ORA-37083: Invalid object *string*

Cause: A request was made for advice with an illegal object name.

Action: Request using valid object names.

ORA-37084: Output valueset *string* must match *string*'s dimensionality

Cause: A request was made for advice for a relation with different dimensionality from the output valueset.

Action: Request using objects that have the same dimensionality.

ORA-37086: *string* is not a valueset

Cause: An operation was attempted that supports only valuesets as precompute expressions in an aggmap, yet a different kind of precompute expression was used.

Action: Replace this limit expression with an equivalent valueset and retry the operation. General precompute expressions are deprecated.

ORA-37093: (XSOBJORG_BAD_CUBE) invalid property "*string*" specified for cube "*string.string*"

Cause: Either the specified cube did not have an AW organization, or the specified property did not apply to cubes.

Action: Specify a property that applies to cubes and a cube with an AW organization.

ORA-37094: (XSOBJORG_BAD_DIM) invalid property "*string*" specified for dimension "*string.string*"

Cause: Either the specified dimension did not have an AW organization, or the specified property did not apply to dimensions.

Action: Specify a property that applies to dimensions and a dimension with an AW organization.

ORA-37095: (XSOBJORG_BAD_MEAS) invalid property "*string*" specified for measure "*string.string.string*"

Cause: Either the specified measure did not have an AW organization, or the specified property did not apply to measures.

Action: Specify a property that applies to measures and a measure with an AW organization.

ORA-37096: (XSOBJORG_BAD_ATTR) invalid property "string" specified for base attribute "string.string.string"

Cause: Either the specified base attribute did not have an AW organization, or the specified property did not apply to base attribute.

Action: Specify a property that applies to base attributes and a base attribute with an AW organization.

ORA-37097: (XSOBJORG_BAD_DIM_LEVEL) invalid property "string" specified for dimension level "string.string.string"

Cause: Either the specified dimension level did not have an AW organization, or the specified property did not apply to dimension levels.

Action: Specify a property that applies to dimension levels and a dimension level with an AW organization.

ORA-37098: (XSOBJORG_BAD_MODEL) invalid property "string" specified for dimension calculation model "string.string.string"

Cause: Either the specified dimension calculation model did not have an AW organization, or the specified property did not apply to dimension calculation models.

Action: Specify a property that applies to dimension calculation models and a dimension calculation model with an AW organization.

ORA-37099: (XSOBJORG_BAD_DIMALITY) invalid property "string" specified for dimensionality "string.string.string"

Cause: Either the specified dimensionality did not have an AW organization, or the specified property did not apply to dimensionalities.

Action: Specify a property that applies to dimensionalities and a dimensionality with an AW organization.

ORA-37100: (XSUNCOMMITTED) You have one or more updated but uncommitted analytic workspaces.

Cause: The user has attempted to shut down OLAP, but they have active analytic workspaces whose changes have not been saved.

Action: Issue the commit command. --- 37101 - 37110 are reserved for partitioned variables ---

ORA-37101: (XSVPART01) Partitioning information can only be given for variables dimensioned by a PARTITION TEMPLATE.

Cause: User attempted to define or reference an AW object with the "all internal" phrase or internal / external partition list, but the object was not a variable, was not dimensioned by a partition template, or was an already existing target of an external partition.

Action: Eliminate phrases specific to partitioned variables from the definition string, or dimension the variable by a partition template.

ORA-37102: (XSVPART02) Invalid partition name string.

Cause: The user gave an invalid partition name. When defining a partitioned variable, this message indicates that the partition name does not exist in the partition template. In any other context, it indicates that the partitioned variable or partition template does not have a partition with the given name.

Action: Supply a valid partition name.

ORA-37103: (XSVPART03) The dimensionality or datatype of *workspace object* does not match the dimensionality or datatype of the partition.

Cause: User attempted to define a partitioned variable with an external partition, but the target of the external partition had incorrect dimensionality or datatype.

Action: Pick a different target variable. The target variable must be dimensioned by exactly the same dimensions, composites, and partition templates, in the same order, as are specified in the partition template, and must have the exact same datatype (including width, precision, and scale) as the partitioned variable itself.

ORA-37104: (XSVPART04) A partitioned variable must be dimensioned by a single partition template only.

Cause: User attempted to define a partitioned variable with more than one partition templates, or a partition template and one or more other dimensions, in the dimension list.

Action: Use only a partition template in the dimension list of the variable. All dimensions of the variable must be included in the definition of the partition template.

ORA-37105: (XSVPART05) Only variables dimensioned by a CONCAT PARTITION TEMPLATE can have *string* partitions.

Cause: User attempted to create an external partition on a partitioned variable, but the variable was dimensioned by a RANGE or LIST partition template.

Action: Declare the partition INTERNAL instead of EXTERNAL, or use a CONCAT partition template in place of the RANGE or LIST partition template.

ORA-37106: (XSVPART06) Invalid partition name *number*.

Cause: The user gave an invalid partition name.

Action: Supply a valid partition name.

ORA-37107: (XSVPART07) Attempt to write to non-existent partition of *workspace object*.

Cause: Some action attempted to write data to a partitioned variable, but the variable didn't have a partition for that data. This can result from a partition template that does not assign all possible dimension values to some subcube, or from a partitioned variable that does not have a partition for one of the partitions defined by the partition template.

Action: Make sure that the cell being written is assigned to some partition by the partition template, and that the variable has an actual partition associated with the partition of the template. Use the CHGDFN template DEFINE... command to define new partitions within the template, and the CHGDFN variable ADD... command to add new partitions to the variable. Alternatively, the PARTWRITEERR can be set to false, in which case data being written to a non-existent partition will be silently discarded.

ORA-37108: (XSVPART08) *workspace object* has an AGGCOUNT, but *workspace object* does not.

Cause: An attempt was made to add a partition to a partitioned variable. Either the partition was defined WITH AGGCOUNT and the partitioned variable was not, or the partitioned variable was defined WITH AGGCOUNT and the partition was not.

Action: Use CHGDFN ADD AGGCOUNT or CHGDFN DROP AGGCOUNT to either add or remove an AGGCOUNT from either the partition or the partitioned variable.

ORA-37109: (XSVPART09) Partition *workspace object* and its parent variable *workspace object* cannot both be specified.

Cause: Partition and its parent partition were operated upon together.

Action: Remove the partition from the object list.

ORA-37111: Unable to load the OLAP API sharable library: (*string*)

Cause: This happens if: (1) the OLAP API sharable library is missing. (2) a sharable library upon which the OLAP API sharable library depends is missing. (3) the OLAP API sharable library is the wrong version.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Customer Support.

ORA-37113: OLAP API initialization error: (*string*)

Cause: OLAP API initialization failed.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Customer Support.

ORA-37114: OLAP API bootstrap error: (*string*)

Cause: OLAP API bootstrapping failed.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Customer Support.

ORA-37115: New OLAP API history is not allowed

Cause: If there are active OLAP API sessions, it is not allowed to start a new OLAP API history by setting `_olapi_history_retention` parameter to true.

Action: Wait until all active OLAP API sessions terminate before resetting `_olapi_history_retention` parameter to true.

ORA-37116: OLAP API table function error: (*string*)

Cause: OLAP API table function failed.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Customer Support.

ORA-37117: olapi history retention has been disabled

Cause: Under certain circumstances, for example, when the database is read only, olapi history retention is not possible because it requires updating persistent tables from time to time. If olapi history retention has been disabled, setting `_olapi_history_retention` parameter to true has no effect.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Customer Support.

ORA-37118: The OLAP API library was not preloaded.

Cause: In shared-server mode, the OLAP API library should be loaded during process initialization to ensure that the C++ virtual table addresses are identical in all shared-server processes. The OLAP API session was executing in a process in which the library had not been loaded.

Action: Set option `_XSOLAPI_LOAD_AT_PROCESS_START` to `SHARED_SERVER` or `ALWAYS`, restart the instance, and try again.

ORA-37119: Incompatible OLAP API library load address

Cause: The OLAP API session was executing in a process in which the OLAP API sharable library was loaded which was at a different address than the process in which the OLAP API session originated.

Action: Set option `_XSOLAPI_LOAD_AT_PROCESS_START` to `ALWAYS`, restart the instance, and try again.

ORA-37120: expression string is null

Cause: expression parser received a null string for syntax analysis.

Action: Prepare a non-null and well-formed MDX query string and try again.

ORA-37121: AW Spreadsheet invalidated

Cause: While this cursor was open, a command was issued that changed the underlying data to become inconsistent.

Action: Perform the query again, avoid performing dimension maintenance and cache clears during spreadsheet processing.

ORA-37122: AW Session cache disabled

Cause: A SQL Spreadsheet was attempted while the AW Session cache was disabled.

Action: Enable the session cache and perform the query again.

ORA-37123: (XSCCOMP17) Can not AGGREGATE *workspace object*(partition number) because it depends on unaggregated compressed partition number.

Cause: attempted to use a feature not supported by CC's in the current AW format

Action: Remove the unsupported feature from the aggmap, or upgrade the AW

ORA-37124: (XSCCOMP16) COMPRESSED COMPOSITES with *string* are not supported in analytic workspace *string* because it has not been upgraded to version *string*.

Cause: attempted to use a feature not supported by CC's in the current AW format

Action: Remove the unsupported feature from the aggmap, or upgrade the AW

ORA-37126: (XSCCOMP01) The COMPRESSED COMPOSITE *workspace object* can only be used as a base of a single variable.

Cause: The user attempted to DEFINE a variable dimensioned by a COMPRESSED COMPOSITE, but that COMPRESSED COMPOSITE is already being used by another VARIABLE.

Action: Create a second COMPRESSED COMPOSITE for the second VARIABLE or add a measure dimension to the first variable.

ORA-37127: (XSCCOMP02) The COMPRESSED COMPOSITE *workspace object* must be last in the dimension list.

Cause: The user attempted to DEFINE a variable dimensioned by a COMPRESSED COMPOSITE, but gave a slower varying dimension in the dimension list.

Action: Put the COMPRESSED COMPOSITE last in the dimension list when defining the VARIABLE.

ORA-37128: (XSCCOMP20) The partition template *workspace object* has already used the COMPRESSED COMPOSITE *workspace object*.

Cause: The COMPRESSED COMPOSITE specified for either a variable or partition template is already in use in another partition template.

Action: Define a different COMPRESSED COMPOSITE.

ORA-37129: (XSCCOMP04) Cannot aggregate over COMPRESSED COMPOSITE *workspace object* using AGGMAP *workspace object*. All static MODEL statements must precede all RELATION statements over the bases of the COMPRESSED COMPOSITE.

Cause: The AGGMAP was defined with a MODEL statement after a RELATION statement over a base of the COMPRESSED COMPOSITE.

Action: Change the AGGMAP so that the MODEL statements appear before the RELATION statements.

ORA-37130: (XSCCOMP05) Cannot aggregate over COMPRESSED COMPOSITE *workspace object* using AGGMAP *workspace object* because you must specify AGGINDEX OFF when there is a PRECOMPUTE clause on a RELATION over base *workspace object*.

Cause: A PRECOMPUTE clause was specified in the AGGMAP for a RELATION over a base of a COMPRESSED COMPOSITE, but AGGINDEX was ON

Action: Remove the PRECOMPUTE clause from the AGGMAP, or add AGGINDEX OFF

ORA-37131: (XSCCOMP06) Cannot aggregate over COMPRESSED COMPOSITE *workspace object* using AGGMAP *workspace object* because the OPERATOR *string* is not supported for bases of a COMPRESSED COMPOSITE.

Cause: The user specified an aggregation OPERATOR that is not supported by COMPRESSED COMPOSITES.

Action: Use a MODEL for the calculation, or use an uncompressed COMPOSITE.

ORA-37132: (XSCCOMP07) Incremental aggregation over the dense DIMENSION *workspace object* is not supported when aggregating a VARIABLE dimensioned by a COMPRESSED COMPOSITE.

Cause: The status of the specified dimension did not include all detail cells.

Action: Add all detail cells to the status of the dimension and reissue the AGGREGATE command.

ORA-37133: (XSCCOMP08) You cannot write into an aggregated VARIABLE dimensioned by a COMPRESSED COMPOSITE. Use the CLEAR AGGREGATES command to reenable write access.

Cause: The user attempted to store a value into to a variable dimensioned by a compressed composite, and the variable had previously been precomputed using the AGGREGATE command. Once the AGGREGATE command is run on a variable dimensioned by a compressed composite, it becomes read-only until the computed values are removed with the CLEAR command.

Action: Run the CLEAR AGGREGATES command to remove the computed values from the variable and then rerun the failed operation. Note that CLEAR AGGREGATES will remove all the data computed during the last AGGREGATE command on this variable.

ORA-37134: (XSCCOMP09) You cannot add new values to *workspace object* because it includes positions for precomputed aggregate values.

Cause: The user attempted to create a new position in a compressed composite, either directly (using MAINTAIN MERGE or MAINTAIN ADD) or by storing a value into the variable dimensioned by the compressed composite. This is not allowed when the variable has been precomputed using the AGGREGATE command. Once the AGGREGATE command is run on a variable dimensioned by a compressed composite, the compressed composite becomes read-only until the computed values are removed with the CLEAR command.

Action: Run the CLEAR AGGREGATES command to remove the computed values from the variable and then rerun the failed operation. Note that CLEAR AGGREGATES will remove all the data computed during the last AGGREGATE command on this variable.

ORA-37135: (XSCCOMP19) The COMPRESSED COMPOSITE *workspace object* in the current defined partition template should be unique or global.

Cause: The COMPRESSED COMPOSITE was neither unique nor global. Unique means each subpartition should have different COMPRESSED COMPOSITES; Global means all subpartitions should use the same COMPRESSED COMPOSITE if they use any COMPRESSED COMPOSITE.

Action: Redefine the partition template.

ORA-37136: (XSCCOMP11) Cannot ROLLUP dimension *workspace object* which is a base of COMPRESSED COMPOSITE *workspace object*, use AGGREGATE instead.

Cause: The user ran ROLLUP on a variable dimensioned by a COMPRESSED COMPOSITE.

Action: Instead of using ROLLUP, generate an aggmap and use AGGREGATE

ORA-37137: (XSCCOMP12) You cannot CHGDFN *workspace object* because it is a COMPRESSED COMPOSITE.

Cause: The user tried to CHGDFN a compressed composite

Action: If the change is desired then delete the old composite and create a new one.

ORA-37138: (XSCCOMP13) You cannot delete values from *workspace object* because it is an aggregated COMPRESSED COMPOSITE.

Cause: The user tried to MAINTAIN DELETE from an aggregated COMPRESSED COMPOSITE.

Action: In order to perform this sort of maintenance the composite must first be cleared. This can be done by running the CLEAR AGGREGATES command on the variable dimensioning the composite. Note that this will remove all data computed during the last AGGREGATE command.

ORA-37139: (XSCCOMP14) Cannot AGGREGATE *workspace object* using AGGMAP *workspace object* because you can not AGGREGATE a variable dimensioned by a COMPRESSED COMPOSITE using an AGGMAP with a PROTECT clause.

Cause: The user tried to AGGREGATE a variable dimensioned by a COMPRESSED COMPOSITE with an AGGMAP that included a PROTECT clause.

Action: Modify the aggmap or create a new aggmap that does not include a PROTECT clause and reaggregate.

ORA-37140: (XSCCOMP15) Cannot AGGREGATE partitioned variable *workspace object* using AGGMAP *workspace object* because you cannot use the base of a COMPRESSED COMPOSITE as a partition dimension.

Cause: The user tried to run aggregate on a partitioned variable with a partition dimension that is a base of a COMPRESSED COMPOSITE.

Action: Repartition the data, drop the partition dimension from the aggmap, or don't use COMPRESSED COMPOSITES.

ORA-37141: (XSSQLMDQ01) Invalid host variable syntax for MDQUERY procedure.

Cause: The schema and analytic workspace name for the MDQUERY cursor declaration were incorrectly specified.

Action: Specify the schema and awname as a host variable name preceded by a colon, or as a text literal string of the form 'SCHEMA.AWNAME' or '*.*' (quotes optional).

ORA-37142: (XSSQLMDQ02) Invalid host variable data type for MDQUERY procedure: *string* expected.

Cause: The user specified a host variable that was not of the correct type.

Action: Choose a different host variable.

ORA-37143: (XSSQLMDQ03) *string* is not a valid analytic workspace name.

Cause: The user specified an analytic workspace name not qualified by a schema name, or one or both components of the name exceed the maximum length

Action: Specify a schema-qualified analytic workspace name with components no longer than 30 characters long.

ORA-37144: (MDQUERY01) *string* is not a valid metadata object type for MDQUERY.

Cause: The user specified an unrecognized first argument to MDQUERY

Action: Specify a recognized object type (CUBE or DIMENSION)

ORA-37145: (XSTTS_PLAT) Cannot transport analytic workspace across platforms.

Cause: The user attempted to transport a tablespace containing an analytic workspace from one platform to another.

Action: Use export/import to move an analytic workspace across platforms.

ORA-37146: (XSCCOMP18) The variable *workspace object* is already dimensioned by the COMPRESSED COMPOSITE *workspace object*.

Cause: An attempt was made to define the partition template dimensioned by the COMPRESSED COMPOSITE which had dimensioned the variable.

Action: Define the second COMPRESSED COMPOSITE.

ORA-37147: (XSCCOMP21) The variable *workspace object* must be in the current operation group of the COMPRESSED COMPOSITE *workspace object*.

Cause: The variable dimensioned by the COMPRESSED COMPOSITE was not in the object list of the current operation group. For AGGREGATE, all variables dimensioned by the same COMPRESSED COMPOSITE also must use the same aggmap

Action: Add the variable into the object list of the current operation group.

ORA-37148: (XSCCOMP22) *workspace object* is an aggregated COMPRESSED COMPOSITE.

Cause: Defined the variable or partition template with the aggregated COMPRESSED COMPOSITE.

Action: Clear the COMPRESSED COMPOSITE or use a new COMPRESSED COMPOSITE

ORA-37149: (XSCCOMP23) Individual partitions of the variable dimensioned by *workspace object* cannot be aggregated separately.

Cause: An attempt was made to aggregate partitions of a variable dimensioned by a global COMPRESSED COMPOSITE partition template.

Action: Aggregate the partitioned variable dimensioned by the global COMPRESSED COMPOSITE.

ORA-37150: line *string*, column *string*, *string*

Cause: expression syntax error was found in expression query string.

Action: Check the error message details and make the corrections.

ORA-37151: expression parser initialization error

Cause: expression parser initialization failed

Action: Please report this to Oracle Support Services.

ORA-37152: MDX query error: (*string*)

Cause: An exception occurred while MDX query was processed.

Action: Check the error message details and try again.

ORA-37153: unknown exception caught: (case *string*)

Cause: An unknown exception was caught while MDX query was processed.

Action: Please report it to Oracle Support Services.

ORA-37154: OLAP API initialization error: (case *string*)

Cause: OLAP API initialization failed.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Support Services.

ORA-37155: OLAP API bootstrap error: (case *string*)

Cause: OLAP API bootstrapping failed.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Support Services.

ORA-37156: (*string*)

Cause: unknown

Action: Check the error message details.

ORA-37157: expression syntax error was found in expression string but error text was missing

Cause: This happened because the message file was missing.

Action: Make sure that the message file xsous.msb is located in \$ORACLE_HOME/olap/mesg and rerun your expression query.

ORA-37158: Bad clob or varray IN-args: (case string)

Cause: When in clob or varray mode, the PL/SQL mappings of OLAP API's IDL interface methods were executed blindly with null clob/varray or non-null clob/varray containing garbages.

Action: Do not blindly execute them as doing so does not make sense unless you understand how OLAP API works internally.

ORA-37159: C++ virtual table addresses become invalid due to session migration in shared server mode.

Cause: Exec-shield is the primary reason that caused this error in shared server mode. When exec-shield is turned on, there is no way to ensure that the C++ virtual table addresses are identical in all shared-server processes.

Action: Set option `_XSOLAPI_FIX_VPTRS` to TRUE, restart the instance, and try again.

ORA-37160: OLAP object does not exist

Cause: The specified OLAP object did not exist.

Action: Use an existing OLAP object instead.

ORA-37161: invalid privilege specified for OLAP object

Cause: An attempt was made to grant or revoke an invalid privilege on an OLAP object.

Action: Specify a valid privilege.

ORA-37162: OLAP error

Cause: An exception was raised by OLAP code.

Action: Check error messages and correct any reported problems.

ORA-37163: cannot delete or truncate AW with dependent CUBES or CUBE DIMENSIONS

Cause: User attempted to delete or truncate an AW which currently has a CUBE or CUBE DIMENSION defined over it

Action: Drop the corresponding CUBE or CUBE DIMENSION before deleting the AW

ORA-37164: The current SQL statement does not support this OLAP object

Cause: The OLAP object is not supported in the current SQL statement.

Action: Use a valid SQL command on the OLAP object.

ORA-37165: cannot use EIF IMPORT into a non-empty Analytic Workspace (string.string)

Cause: An attempt was made to use EIF IMPORT to populate a non-empty Analytic Workspace.

Action: Ensure that the target Analytic Workspace is empty before populating it with EIF IMPORT.

ORA-37166: (XSOQ_BAD_OBJ) OLAP object "string.string" does not exist

Cause: The specified OLAP object did not exist.

Action: Use an existing OLAP object instead.

ORA-37167: (XSOQ_BAD_SUBOBJ) OLAP object "*string.string.string*" does not exist

Cause: The specified OLAP object did not exist.

Action: Use an existing OLAP object instead.

ORA-37168: (XSOBJORG_UNSUPP_OBJ) unsupported OLAP object "*string.string*" for OBJORG function

Cause: The specified OLAP object was of a type that is not supported by the OBJORG function.

Action: Specify an OLAP object of a type that the OBJORG function supports.

ORA-37169: (XSOBJORG_UNSUPP_SUBOBJ) unsupported OLAP object "*string.string.string*" for OBJORG function

Cause: The specified OLAP object was of a type that is not supported by the OBJORG function.

Action: Specify an OLAP object of a type that the OBJORG function supports.

ORA-37170: (XSOBJORG_NA) The top-level object name argument to the OBJORG function cannot be NA.

Cause: You passed NA as the second argument to the OBJORG function.

Action: Pass the name of the top-level object instead.

ORA-37171: dimension sources not specified

Cause: The user passed an empty or null collection to DBMS_AW.ADVISE_SPARSITY

Action: Specify a valid set of dimension sources

ORA-37172: illegal dimension type

Cause: The user specified an invalid member of the DIMTYPE field in the dimension sources argument

Action: Specify one of the valid enumerated values in DBMS_AW

ORA-37173: null dimension source data

Cause: The user specified NULL for one of the members of the dimension sources argument

Action: Specify a value

ORA-37174: source SQL must be a SELECT statement

Cause: The user specified an INSERT, UPDATE, DELETE or other type of SQL statement

Action: Specify a SQL SELECT statement instead

ORA-37175: column *string* is not a column of source data

Cause: A dimension column was specified which did not exist in the input data

Action: Specify one of the columns of the input data

ORA-37176: argument *string* is not valid for the sparsity advisor

Cause: An invalid argument was passed to the advisor

Action: Specify a TABLE, VIEW or SELECT statement instead

ORA-37177: column *string* does not have any leaf values

Cause: The specified dimension column or fact table did not contain any leaf values

Action: Populate the source data

ORA-37178: column *string* has no values

Cause: The specified dimension column did not contain any values

Action: Populate the source data

ORA-37179: expected at least one column for dimension *string*, got *string*

Cause: Not enough columns were specified for the dimension

Action: Specify more source columns, or change the dimension to another type

ORA-37180: expected exactly one column for dimension *string*, got *string*

Cause: Expected a single source column for the dimension. Either none or more than one was specified.

Action: Specify exactly one column, or change the dimension to another type

ORA-37181: expected exactly *string* columns for dimension *string*, got *string*

Cause: Expected a certain number of source columns for the dimension. Either none or the wrong number of columns was specified.

Action: Specify the right number of columns, or change the dimension to another type

ORA-37182: you may only specify one dimension to partition

Cause: The user passed a DIMENSION_SOURCE_T to ADVISE_SPARSITY which specified partitioning on more than one dimension

Action: Remove all but one of the partitioning requests

ORA-37183: illegal value *string* for PARTBY

Cause: The user passed a value other than PARTBY_DEFAULT, PARTBY_NONE or PARTBY_FORCE to DBMS_AW.ADVISE_SPARSITY *Action: Supply a legal value instead

Action: n/a

ORA-37184: illegal value *string* for ADVMODE

Cause: The user passed a value other than ADVICE_DEFAULT, ADVICE_FAST or ADVICE_FULL to DBMS_AW.ADVISE_SPARSITY *Action: Supply a legal value instead

Action: n/a

ORA-37185: length of *string* (*string*) exceeds maximum (*string*)

Cause: The user passed an excessively long value

Action: Specify a legal value

ORA-37186: null child value for parent (*string*) found in parent-child hierarchy

Cause: While reading values for a parent-child hierarchy, a NULL child value was found for a non-NULL parent

Action: Correct the source table or SQL to return value parent and child pairs.

ORA-37187: null parent and child pair found in parent-child hierarchy

Cause: While reading values for a parent-child hierarchy, a row was retrieved which had both null child and parent values.

Action: Correct the source table or SQL to return value parent and child pairs.

ORA-37188: unexpected null result while querying *string*

Cause: While querying the input fact table, the sparsity advisor unexpectedly got no results, possibly due to changes being made during operation.

Action: Retry the operation ensuring that the data is not changed while the sparsity advisor is running / Errors from 37200 - 37399 are reserved for events

ORA-37400: analytic workspace does not exist

Cause: The user attempted to create an OLAP MV or Table on an AW that does not exist.

Action: Specify a valid AW in the ORGANIZATION CUBE clause

ORA-37401: you may not perform this operation on a system analytic workspace

Cause: The user attempted to create a CUBE MV or Table on a system-created AW.

Action: Specify a valid AW in the ORGANIZATION CUBE clause

ORA-37402: analytic workspace object does not exist

Cause: The user attempted to create a CUBE MV or Table mapping to an object that does not exist in the AW.

Action: Specify a valid AW object name in the ORGANIZATION CUBE clause.

ORA-37403: invalid analytic workspace object type

Cause: The user attempted to create a CUBE MV or Table mapping to an object that is not the correct type.

Action: Specify a valid AW object name in the ORGANIZATION CUBE clause.

ORA-37404: Create table as select disallowed for CUBE ORGANIZED tables

Cause: User attempted to create a CUBE ORGANIZED table by doing a create table as select.

Action: Do a create table followed by an insert as select

ORA-37405: unknown ORGANIZATION CUBE keyword

Cause: An unknown keyword was encountered while parsing the ORGANIZATION CUBE clause

Action: Correct the ORGANIZATION CUBE syntax

ORA-37406: invalid option for a CUBE ORGANIZED table

Cause: An attempt to specify one or more options for a CUBE ORGANIZED table such as: [NO]CACHE, NO LOGGING, CLUSTER, (NO)COMPRESS

Action: Remove the illegal option(s)

ORA-37407: invalid column type for a CUBE ORGANIZED table

Cause: A illegal column type is specified in a CUBE ORGANIZED table.

Action: Do not use column types such as LONG, LOB

ORA-37408: Truncate table disallowed for CUBE ORGANIZED tables

Cause: User attempted to perform a TRUNCATE operation on a CUBE ORGANIZED table

Action: Remove data with DELETE or drop the table and recreate it

ORA-37409: cannot delete or truncate AW used by CUBE ORGANIZED table

Cause: User attempted to delete or truncate an AW which currently has a CUBE ORGANIZED table or MV defined over it

Action: Drop the corresponding table or MV before deleting the AW

ORA-37410: cannot delete or modify AW object referenced by CUBE ORGANIZED table

Cause: User attempted to delete, chgdfn, or otherwise modify an object referenced by a CUBE ORGANIZED table or MV

Action: Drop the corresponding table or MV before manipulating the object

ORA-37411: invalid object type

Cause: User referenced an invalid object type

Action: Use an appropriate object

ORA-37412: column not mapped by ORGANIZATION CUBE clause

Cause: Not all columns in the table or MV definition were mapped in the ORGANIZATION CUBE clause

Action: Make sure that all columns are mapped

ORA-37413: column referenced multiple times in ORGANIZATION CUBE clause

Cause: The same column name was referenced multiple times inside of the ORGANIZATION CUBE clause

Action: Supply unique mappings for each column

ORA-37414: dimension without mapping or hierarchy in ORGANIZATION CUBE clause

Cause: A dimension was listed in the ORGANIZATION CUBE clause but no mapping information was supplied

Action: Provide either a column mapping or hierarchy for the dimension

ORA-37415: AW schema must match TABLE or MATERIALIZED VIEW schema

Cause: An ORGANIZATION CUBE table or MV on top of an existing AW must be created in the same schema as the AW

Action: Create the new object in the same schema as the AW

ORA-37416: multiple GROUPING IDs found for ORGANIZATION CUBE

Cause: Multiple GROUPING IDs for the ORGANIZATION CUBE TABLE or MATERIALIZED VIEW

Action: Remove the duplicates

ORA-37417: variable does not have an AGGCOUNT

Cause: A COUNT clause was specified in the ORGANIZATION CUBE description for a variable that does not have an AGGCOUNT

Action: chgdfn the variable to include an AGGCOUNT

ORA-37418: detail query cannot be derived

Cause: If an ORGANIZATION CUBE MV is to automatically derive its loading clause, then its definition query cannot contain set operators (eg UNION ALL), a HAVING clause, START WITH or a SQL MODEL clause. The definition query contains these or other unsupported syntax.

Action: Use an explicit ORGANIZATION CUBE clause, or simplify the defining query.

ORA-37419: ORGANIZATION CUBE clause not allowed in explain mvview

Cause: User tries to explain mvview on a CREATE MATERIALIZED VIEW statement that contains a ORGANIZATION CUBE clause.

Action: Remove the ORGANIZATION CUBE clause from the CREATE MATERIALIZED MATERIALIZED VIEW statement.

ORA-37420: unsupported feature with CUBE ORGANIZED materialized view

Cause: User attempts operations such as creating a mv log on an CUBE ORGANIZED MATERIALIZED VIEW.

Action: Do not do that.

ORA-37421: specified pseudocolumn is not supported by CUBE ORGANIZED tables

Cause: An unsupported pseudocolumn was referenced with a CUBE ORGANIZED table.

Action: Remove the unsupported pseudocolumn.

ORA-37422: illegal attempt to write to a calculated column

Cause: An attempt was made to write to a calculated column which could not be written to.

Action: List only the non-calculated columns in your DML command.

ORA-37423: operation not supported on CUBE ORGANIZED tables

Cause: The attempted operation was not supported with CUBE ORGANIZED tables.

Action: Do not attempt this operation on CUBE ORGANIZED tables.

ORA-37424: alter materialized view (MV) on a primary cube organized MV failed to find secondary cube MV table

Cause: The operation failed due to the missing secondary cube materialized view (MV) table in alter MV.

Action: Recreate the primary CUBE MV and make sure the secondary cube MV table is correctly created.

ORA-37521: (HASHSCAN00) Dimension *string* contains duplicate values. Please contact Oracle OLAP Technical Support.

Cause: The named dimension contains duplicate values.

Action: Contact Technical Support for instructions.

ORA-37522: (HASHSCAN01) You must specify the name of an existing TEXT or NTEXT dimension.

Cause: the _HASHSCAN program was invoked with an invalid argument

Action: Provide a text expression yielding the name of an existing TEXT dimension

ORA-37527: (XSCHGDFN01) SESSION values of dimension *string* are being automatically deleted.

Cause: When using CHGDFN to rebuild the hash index of a TEXT or NTEXT dimension, SESSION values were encountered.

Action: Recreate the SESSION values after the CHGDFN command completes. Information about the deleted values has been written to the trace file.

ORA-37528: (XSOBJORG_BAD_HIER) invalid property "string" specified for hierarchy "string.string.string"

Cause: Either the specified hierarchy did not have an AW organization, or the specified property did not apply to hierarchies.

Action: Specify a property that applies to hierarchy and a dimension with an AW organization.

ORA-37530: (XSCCLOAD01) When aggregating between compressed partitions the base dimensions of workspace object did not match the base dimensions of workspace object.

Cause: When aggregating a partitioned variable the dimensionality of any compressed partitions should be identical.

Action: Delete the upper partition and redefine it with a composite that matches the lower partition. If it is dependent on multiple partitions with varying sparsity you must first unify the the sparsity of the source partitions.

ORA-37531: (XSCCLOAD02) When aggregating between compressed partitions the source partitions were aggregated with a different AGGMAP, or the RELATIONS have changed since the source partitions were aggregated.

Cause: When aggregation crosses partition boundaries within a compressed variable the individual partitions must all be aggregated using a similar aggmap over the same unaltered relations.

Action: Modify the aggmap for the upper partition to more exactly match the aggmap of the source partitions, or if the aggmap is already similar, re-aggregate the source partitions to pick up any changes to the relations.

ORA-37541: Hierarchy element DIMENSION_MEMBER can aggregate into element MEMBER_ANCESTOR through multiple paths.

Cause: When a low level hierarchy element can reach an aggregate element by more than one path through the hierarchy, it is said to have multiple paths. The danger is that the value of the low level hierarchy element will have its value counted multiple times (once per path) in the total of the aggregate element.

Action: Eliminate multiple paths from the hierarchy.

ORA-37542: DIMENSION_MEMBER makes hierarchy HIERARCHY1 unbalanced.

Cause: A hierarchy is balanced if: 1) All members of a level are at the same depth from the root of the hierarchy and 2) All the members in different levels are at different depths from the root of the hierarchy.

Action: Fix the hierarchy so that it is balanced. This is often done by looking for nulls in the middle levels of a hierarchy.

ORA-37543: Hierarchy member DIMENSION_MEMBER is inconsistent across HIERARCHY1 and HIERARCHY2.

Cause: Two hierarchies are inconsistent when members that appear in both hierarchies have different ultimate leaves.

Action: This problem is usually resolved by defining a new dimension member for the secondary hierarchy, or fixing the hierarchy table so that the definitions of the member match across hierarchies.

ORA-37544: Dimension members DIMENSION_MEMBER and MEMBER_ANCESTOR make this dimension star inconsistent.

Cause: A dimension is "star consistent" when it can be represented in a star schema table. This requires that a hierarchy level map to a single underlying column. If a level is shared across one or more hierarchies, it must have the same set of members in each hierarchy (to share a column).

Action: Create a different level for the secondary hierarchy. This provides a separate level column for each hierarchy.

ORA-37545: DIMENSION_MEMBER is part of a hierarchy loop.

Cause: A hierarchy has loops when the ancestor of a dimension member uses that member as its parent. Note that some loops are created across hierarchies. For example, in hierarchy 1, dimension member A is the parent of B, B is the parent of C and in hierarchy 2, C is that parent of A forms a hierarchy loop.

Action: Change the hierarchies so that the loop is eliminated or move the problem hierarchy to a different dimension.

ORA-37546: (XSHIERSP00) Levelorder valueset is empty.

Cause: An empty levelorder valueset was specified for the HIERSHAPE function.

Action: specify a non-empty levelorder valueset.

ORA-37547: (XSHIERSP01) DIMENSION_MEMBER has no level associated with it.

Cause: DIMENSION_MEMBER did not have an associated level. Level based hierarchies must have a level for every dimension member.

Action: Add level assignments for all dimension members in the hierarchy.

ORA-37548: (XSHIERSP02) DIMENSION_MEMBER is not specified as a member of HIERARCHY1.

Cause: When a dimension member is part of a hierarchy, it appears in the INHIER valueset associated with the hierarchy. This dimension member is missing from this value set and thus should not be part of this hierarchy.

Action: Alter the hierarchy's membership to include the specified dimension member.

ORA-37549: (XSHIERSP03) The level of DIMENSION_MEMBER is not lower than the level of MEMBER_ANCESTOR.

Cause: A dimension member has a parent that is lower or on the same level as this member according to the levelorder valueset.

Action: Fix the child and/or parent levels so that every dimension member has a parent whose level is higher than the level of this member.

ORA-37550: (XSHIERSP04) The level of MEMBER_ANCESTOR is not one level above DIMENSION_MEMBER.

Cause: A dimension member has a parent that is not one level above the level of this member according to the levelorder valueset.

Action: Fix the child and/or parent levels so that every dimension member has a parent whose level is one level above the level of this member according to the levelorder.

ORA-37551: (XSHIERSP05) Leaf value DIMENSION_MEMBER is not on the same level as the rest of leaf dimension values.

Cause: The detail or leaf values of this hierarchy must all have the same level. This member is on a different level than most of the leaf values.

Action: Fix DIMENSION_MEMBER's level so that all leaves are on the same level.

ORA-37552: (XSHIERSP06) DIMENSION_MEMBER is associated with a level not found in the levelorder valueset.

Cause: DIMENSION_MEMBER must have an associated level that is found in the levelorder valueset so that we can figure out DIMENSION_MEMBER's level depth.

Action: Fix DIMENSION_MEMBER's associated level.

ORA-37553: A cycle between *number* and *number* has been detected in relation *workspace object* over *workspace object*.

Cause: A relation was used that had loops in it.

Action: Correct the relation so that it does not contain loops.

ORA-37554: A cycle between *number* and *number* has been detected in relation *workspace object*.

Cause: A relation was used that had loops in it.

Action: Correct the relation so that it does not contain loops.

ORA-37560: lob locator invalid for specified log target

Cause: A lob locator was passed as a target to DBMS_CUBE_LOG.ENABLE, but the log_target was not DBMS_CUBE_LOG.TARGET_LOB

Action: Specify LOG_TARGET_LOB as the log_target, or specify a valid location instead

ORA-37561: unknown logging type

Cause: An invalid log_type was specified

Action: Specify a valid logging type from the DBMS_CUBE_LOG package

ORA-37562: unknown logging target

Cause: An invalid log_target was specified

Action: Specify a valid logging target from the DBMS_CUBE_LOG package

ORA-37563: invalid log verbosity

Cause: An invalid log_verbosity was specified

Action: Specify a valid logging verbosity from the DBMS_CUBE_LOG package

ORA-37564: unknown log table version

Cause: Could not determine the version of the specified logging table

Action: Specify a valid target table, or use DBMS_CUBE_LOG.TABLE_CREATE to create one

ORA-37565: invalid parameter for specified log type

Cause: The log_type specified does not support the specified parameter, for instance, DBMS_CUBE_LOG.MAX_ERRORS is not valid for

Action: Specify a valid log_type / log_param combination

ORA-37566: invalid log location

Cause: The specified log location is in an invalid format. For file targets it must be of the form 'directory_alias/filename'

Action: Specify a valid log location

ORA-37567: log location not specified

Cause: The log location was not specified for a log target which requires one

Action: Specify a valid log location

ORA-37568: invalid log parameter

Cause: An invalid log_param was passed to dbms_cube_log.set_parameter or get_parameter

Action: Specify a valid parameter

ORA-37569: invalid log parameter value

Cause: An invalid value was passed to dbms_cube_log.set_parameter

Action: Specify a valid value

ORA-37570: invalid log specification

Cause: An invalid logging specification was supplied to DBMS_CUBE_LOG.SET_LOG_SPEC

Action: Correct the syntax being supplied

ORA-37571: invalid SQL ID

Cause: Either the SQL ID supplied was invalid or no associated logging information was captured.

Action: Specify a valid SQL ID.

ORA-37572: invalid ID

Cause: An invalid ID was supplied for the given SQL ID.

Action: Specify a valid ID for that SQL ID.

ORA-37573: no limits logged

Cause: There were no corresponding OLAP filters to the supplied information.

Action: Specify predicates on the original query or specify a new SQL ID or ID.

ORA-37574: error logging to table "*string.string*"

Cause: An error occurred attempting to write log records to the named table.

Action: Make sure the user has permissions to write to the table.

ORA-37575: Invalid cube operations log component, "*string*".

Cause: Invalid cube operations log component value.

Action: Provide a valid cube operations log component or accept the default value by leaving the parameter unspecified.

ORA-37576: Invalid cube operations log handle id.

Cause: An invalid cube operations log handle id was specified. No oplog handle found for oplogHandleId parameter.

Action: Provide a valid cube operations log handle id for oplogHandleId. Use DBMS_CUBE_LOG.START_OPLOG to get a valid handle id.

ORA-37577: Invalid cube operations log message name.

Cause: Cube operations log message name value is NULL.

Action: Provide a valid non-null cube operations log message name.

ORA-37578: Invalid cube operations log operation value.

Cause: Cube operation log operations value is NULL.

Action: Provide a valid non-null cube operations log operation value.

ORA-37580: The EXPRESS AW does not exist.

Cause: The EXPRESS AW does not exist.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Support Services.

ORA-37581: The EXPRESS AW has not been properly installed.

Cause: The EXPRESS AW has not been properly installed.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Support Services.

ORA-37582: The EXPRESS AW version *string* is different than the Oracle version *string*.

Cause: The EXPRESS AW version does not match the current Oracle version.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Support Services.

ORA-37600: (XSPGERRPERMDETACH) Ran out of tablespace storage while updating analytic workspace *string*

Cause: Ran out of lob segment space.

Action: Increase tablespace storage. AW may need to be detached.

ORA-37601: (XSPGERRTEMP) Ran out of temporary storage while writing to analytic workspace with ID=*number*. Free some temporary storage immediately. You can do so, for example, by DETACHING an analytic workspace.

Cause: Ran out of temporary tablespace storage.

Action: Increase the amount of temporary tablespace storage.

ORA-37602: (XSPGERRTEMPUSER) Ran out of temporary storage while writing to analytic workspace *string*. Free some temporary storage immediately. You can do so, for example, by DETACHING an analytic workspace.

Cause: Ran out of temporary tablespace storage.

Action: Increase the amount of temporary tablespace storage.

ORA-37603: (XSPGERRTEMPSYSTEM) Ran out of temporary storage while writing to a system temporary analytic workspace. Free some temporary storage immediately. You can do so, for example, by DETACHING an analytic workspace.

Cause: Ran out of temporary tablespace storage.

Action: Increase the amount of temporary tablespace storage.

ORA-37604: (XSPGERRPQUPD) Parallel updating analytic workspace *string* failed

Cause: Unexpected error occurred to parallel update servers.

Action: Check the error underneath and act accordingly. AW may need to be detached.

ORA-37605: error during OLAP AW UPDATE

Cause: An error occurred during the UPDATE process

Action: Refer to the next error in the error stack

**ORA-37996: (SNSYN950) The format of the SYSINFO function is:\n
SYSINFO(option)**

ORA-37999: Serious OLAP error: *string*. Please contact Oracle Technical Support.

Cause: Something unexpected occurred in the OLAP system

Action: Contact Oracle technical support

ORA-38001 to ORA-39965

- ORA-38001: RBO Disable constant predicate elimination optimization
- ORA-38002: CBO enable restriction on type of join (NL only) for a query block with pushed predicate
- ORA-38003: CBO Disable column stats for the dictionary objects in recursive SQL
- ORA-38004: CBO (9.0.1 ONLY) Enable column stats for the dictionary objects in recursive SQL
- ORA-38005: CBO disable fix for bug 2251373
- ORA-38006: DBMS_STATS override commit threshold for (sub)partition level stats
- ORA-38008: CBO disable costing overhead of inlist iteration
- ORA-38009: CBO disable fix for bug 2109825
- ORA-38010: CBO disable push predicate, driven by functional index into PV
- ORA-38011: CBO disable truncation of bind when dealing with fixed char descend index expression
- ORA-38012: CBO disable normalization of b-tree index selectivity
- ORA-38013: CBO disable delayed ANY=>EXISTS conversion for collocated subquery of CTAS
- ORA-38014: CBO disable grouping pruning if star_transformation is enabled
- ORA-38015: CBO enable unnesting of more than one subquery based on CVM
- ORA-38016: CBO disable full functional index scan
- ORA-38017: CBO disable push of join predicate for a table with RLS
- ORA-38018: CBO disable full statistics load for evaluation of average row length
- ORA-38020: CBO disable fix for bug 2324795
- ORA-38021: CBO disable view merge with multi-referenced non-deterministic function
- ORA-38022: CBO disable Distinct Sort Elimination at subquery unnest

ORA-38023: CBO disable fix for bug 2853398

ORA-38025: CBO enable generation of excessive semijoin subqueries

ORA-38026: CBO enable bitmap plan based on domain index, with no domain index driver

ORA-38027: CBO disable evaluation column gnd using inlist gnd

ORA-38028: DBMS_STATS disable small object optimization

ORA-38029: object statistics are locked
Cause: An attempt was made to modify optimizer statistics of the object.
Action: Unlock statistics with the DBMS_STATS.UNLOCK_TABLE_STATS procedure on base table(s). Retry the operation if it is okay to update statistics.

ORA-38030: CBO enable strongly connected preds for intersect to join

ORA-38031: CBO disable the fix for bug 2663857

ORA-38032: CBO disable the fix for bug 3063008

ORA-38033: CBO disable costing of push join predicate in OJ view

ORA-38034: CBO disable the fix for bug 2871645

ORA-38036: NSO disable the fix for bug 3070157

ORA-38037: CBO disable the fix for bug 3405237

ORA-38038: CBO disable the fix for bug 3168961

ORA-38039: CBO enable view merge/ subquery ANY=>EXISTS conversion having view(subquery) predicates in front of outer query block (connecting) predicates

ORA-38040: DBMS_STATS minimum sample size in number of rows (0 = internal default)

ORA-38041: DBMS_STATS auto_sample_size overrides

ORA-38042: CBO disable usage of tjp when generating pruning subquery

ORA-38044: CBO disable expression folding at evaluation of a predicate selectivity

ORA-38047: CBO disable join back elimination of 1-row tables

ORA-38048: CBO enable the fix for bug 3400412

ORA-38049: CBO disable the fix for bug 3406977

ORA-38050: CBO disable the fix for bug 2943173

ORA-38051: CBO disable the fix for bug 3349903

ORA-38052: CBO disable the fix for bug 3317309

ORA-38053: DBMS_STATS override automatic sample size adjustment

ORA-38054: VOP enable the fix for bug 3537765

ORA-38055: CBO disable the fix for bug 3193835

ORA-38056: CBO disable peeking of form func(:b) bug 3668224

ORA-38057: CBO disable special numeric string normalization for bug 3567928

ORA-38058: CBO disable the fix for bug 3756797

ORA-38060: CBO enable the fix for bug 3517431(enable NL with view on right side)

ORA-38061: CBO disable unnest of a subquery with WITH subqueries

ORA-38063: CBO disable the fix for bug 3903100

ORA-38064: CBO disable the fix for bug 3488546

ORA-38065: CBO disable the fix for bug 3746511

ORA-38066: NSO regulate unnesting, semijoin elimination for IN and EXISTS subqueries with a view

ORA-38067: CBO enable peeking at replaced literal in equality(inequality) predicate

ORA-38068: CBO enable override of guess impact on index choice

ORA-38069: CBO disable duplicate predicate elimination

ORA-38073: CBO disable the fix for bug 4308414

ORA-38074: CBO disable the fix for bug 4275716

ORA-38075: CBO enables fix for bug 4235962

ORA-38076: CBO enables fix for bug 4258835

ORA-38077: CBO enables fix for bug 4488689

ORA-38078: CBO disables fix for bug 4708389

ORA-38079: SQL Diagnostic

ORA-38087: dbms_stats enable fix of bug 5842686

ORA-38090: CBO dump virtual columns in EXPLAIN PLAN

ORA-38091: CBO forces native full outer join

ORA-38094: dbms_stats enable fix of bug 6934892

ORA-38098: CBO reject various transformation even if chosen

ORA-38100: enable tracing of DML frequency tracking

ORA-38101: Invalid column in the INSERT VALUES Clause: *string*
Cause: INSERT VALUES clause refers to the destination table columns
Action: n/a

ORA-38102: Invalid column in the INSERT WHERE Clause: *string*
Cause: INSERT WHERE clause refers to the destination table columns
Action: n/a

ORA-38103: Invalid column in the UPDATE SET Clause: *string*
Cause: UPDATE SET clause refers to the source table columns in the LHS
Action: n/a

ORA-38104: Columns referenced in the ON Clause cannot be updated: *string*
Cause: LHS of UPDATE SET contains the columns referenced in the ON Clause
Action: n/a

ORA-38105: Delete not yet supported when Update row-migration is possible
Cause: When Update Row-Migration is possible, Delete in MERGE is not yet supported
Action: n/a

ORA-38106: MERGE not supported on join view or view with INSTEAD OF trigger.
Cause: The MERGE operation contained a join view or view with INSTEAD of trigger which is not supported.
Action: When using MERGE to modify a view, you must only specify a single table in the view, and the view cannot have an INSTEAD OF trigger.

ORA-38131: specified SQL handle *string* does not exist
Cause: The specified SQL handle did not exist in the repository.
Action: Specify correct SQL handle.

ORA-38132: specified SQL ID *string* does not exist
Cause: The SQL statement for SQL ID did not exist in the cursor cache.
Action: Specify correct SQL ID.

ORA-38133: invalid parameter name *string* specified
Cause: An invalid parameter name was specified.
Action: Verify the name of the parameter.

ORA-38134: invalid parameter value *string* specified
Cause: An invalid parameter value was specified.
Action: Verify the parameter value.

ORA-38135: invalid fixed status value specified
Cause: Specified fixed status value was neither YES or NO.
Action: Specify either 'YES' or 'NO'.

ORA-38136: invalid attribute name *string* specified
Cause: An invalid attribute name was specified.

Action: Verify the name of the attribute.

ORA-38137: invalid attribute value *string* specified

Cause: An invalid attribute value was specified.

Action: Verify the attribute value.

ORA-38138: plan name is missing or NULL

Cause: A valid plan name was not specified.

Action: Specify a valid plan name.

ORA-38139: concurrent DDL Error in load plans operation

Cause: A concurrent DDL operation was performed during a load plans operation.

Action: Try operation again.

ORA-38140: no SQL plan baselines were found

Cause: No SQL plan baselines were found during pack or unpack operation.

Action: Specify correct selection criterion.

ORA-38141: SQL plan baseline *string* does not exist

Cause: A SQL plan baseline name was specified that did not exist.

Action: Verify the name of the SQL plan baseline.

ORA-38142: SQL plan baseline named *string* already exists

Cause: A SQL plan baseline already exists with the name specified.

Action: Specify a different name or drop the existing SQL plan baseline.

ORA-38143: invalid enabled status value specified

Cause: Specified enabled status value was neither YES or NO.

Action: Specify either 'YES' or 'NO'.

ORA-38144: specified plan name *string* does not exist

Cause: The specified plan name did not exist in the repository.

Action: Specify correct plan name.

ORA-38145: neither SQL handle nor plan name specified

Cause: The SQL handle or plan name was not specified. The SQL handle or plan name is required.

Action: Specify either SQL handle or plan name or both.

ORA-38146: invalid verify value specified

Cause: Specified verify value was neither YES or NO.

Action: Specify either 'YES' or 'NO'.

ORA-38147: invalid commit value specified

Cause: Specified commit value was neither YES or NO.

Action: Specify either 'YES' or 'NO'.

ORA-38148: invalid time limit specified

Cause: Specified time limit value was not a positive integer.

Action: Specify a positive integer value.

ORA-38149: There is no recommended action for object *string* in task *string*.

Cause: The advisor did not generate a recommended action for the given object and task.

Action: Choose a different object and retry the operation.

ORA-38171: Insufficient privileges for SQL management object operation

Cause: A DDL operation was attempted on a SQL management object by a session without the proper privileges.

Action: Grant the appropriate privilege.

ORA-38172: No SQL management object satisfies specified filters

Cause: An attempt was made to perform an operation by specifying filters that did not target any SQL management objects.

Action: Try different filters.

ORA-38173: Invalid value *string* specified for SQL management object attribute *string*

Cause: An invalid attribute value was specified.

Action: Specify a valid attribute value.

ORA-38301: can not perform DDL/DML over objects in Recycle Bin

Cause: Tried to perform DDL or DML operation on Recycle Bin object.

Action: DDL or DML operations are not permitted on Recycle Bin objects.

ORA-38302: invalid PURGE option

Cause: Invalid purge option specified.

Action: Specify a valid purge option.

ORA-38303: invalid option for PURGE TABLESPACE

Cause: Either a token other than USER was found following the tablespace name or some text was found following USER *user name*.

Action: Place nothing or only USER *user name* after the tablespace name

ORA-38304: missing or invalid user name

Cause: A valid user name was expected.

Action: Specify a valid user name.

ORA-38305: object not in RECYCLE BIN

Cause: Trying to Flashback Drop an object which is not in RecycleBin.

Action: Only the objects in RecycleBin can be Flashback Dropped.

ORA-38306: this object is not recoverable standalone

Cause: Trying to flashback drop an object other than of type TABLE.

Action: Only tables are recoverable.

ORA-38307: object not in RECYCLE BIN

Cause: Trying to Purge the object which is not in RecycleBin.

Action: Only the objects in RecycleBin can be PURGEDED.

ORA-38308: invalid FLASHBACK DROP option

Cause: Invalid Flashback Drop option specified.

Action: Specify a valid Flashback Drop option.

ORA-38309: object not purgable

Cause: An attempt was made to purge an object that is either not purgable or else dependent upon some other object.

Action: Cannot purge this object.

ORA-38310: cannot purge tablespace for other users

Cause: An attempt was made to purge the tablespace for a different user by a user who does not have system DBA privileges.

Action: Cannot purge the tablespace for some other user.

ORA-38311: cannot purge objects owned by other users

Cause: An attempt was made to purge an object which is owned by some other user.

Action: Cannot purge this object.

ORA-38312: original name is used by an existing object

Cause: An attempt was made to recover an object preserving the original name, but that name is taken up by some other object.

Action: use the RENAME clause to recover the object with a different name.

ORA-38320: policy does not exist

Cause: An attempt was made to delete a nonexistent policy.

Action: Correct the policy name.

ORA-38321: duplicate policy name specified

Cause: A policy name was specified that already existed under this schema.

Action: Correct the policy name.

ORA-38322: scope of policy not specified

Cause: An attempt was made to add a policy without the scope.

Action: Specify a scope when creating a policy.

ORA-38323: policy conflicts with policy *string*

Cause: An attempt was made to create a policy with the same action type and based on the same statistic as another policy on the object.

Action: Use a different action and/or statistic for the new policy, or delete the old policy.

ORA-38324: policy conflicts with policy *string*

Cause: An attempt was made to create a policy with the same action, scope and compression level as another policy on the object.

Action: Use a different action, scope and/or level for the new policy, or delete the old policy.

ORA-38325: policy conflicts with policy *string*

Cause: An attempt was made to create a compression policy that conflicts with another policy on the object.

Action: Change the policy so that policies with a higher compression level take effect after policies with a lower compression level, or delete the old policy.

ORA-38326: schema level policies are not supported

Cause: Attempt was made to create a schema level policy.

Action: Do not create a schema level policy.

ORA-38327: invalid argument value

Cause: The specified API argument values were of the wrong value range.

Action: Supply valid values for the API.

ORA-38328: inconsistent internal state

Cause: An inconsistency was detected in ILM related data in the dictionary.

Action: Contact Oracle Support Services.

ORA-38329: internal ILM error

Cause: An internal error occurred during execution of ILM related activity. Further information can be found in the alert log.

Action: Fix the problem and retry the operation.

ORA-38330: insufficient privilege for ILM operation

Cause: Sufficient privileges were not granted for the ILM operation.

Action: Retry operation with sufficient privileges granted. Consult documentation for privileges required to perform the ILM operation.

ORA-38331: row-level write activity tracking not enabled on the table

Cause: An attempt was made to create a modification time-based policy when row-level write tracking was not enabled on the object.

Action: Ensure that row-level write tracking is enabled on the table.

ORA-38332: valid time periods were not present on the table

Cause: An attempt was made to create a valid time-based policy when valid time periods were not present on the table.

Action: Add valid time periods to the table.

ORA-38333: row-level access activity tracking not enabled on the table

Cause: An attempt was made to create an access time-based policy when row-level access tracking was not enabled on the object.

Action: Ensure that row-level access tracking is enabled on the table.

ORA-38334: segment-level access activity tracking not enabled on the table

Cause: An attempt was made to create an access time-based policy when segment-level access tracking was not enabled on the object.

Action: Ensure that segment-level access tracking is enabled on the table.

ORA-38335: sysdba privilege is required

Cause: SYSDBA privilege is required for applying ILM policies on a tablespace.

Action: Grant user SYSDBA role before applying tablespace level ILM policies.

ORA-38336: invalid policy

Cause: A row level policy was used with a compression level other than OLTP.

Action: Use the OLTP compression level with row level compression policies.

ORA-38337: invalid policy

Cause: A custom policy is only allowed at the segment level.

Action: Change the scope of the policy to be of type segment.

ORA-38338: incorrect ILM policy scope

Cause: An attempt was made to create an Information Lifecycle Management (ILM) policy with incompatible scope.

Action: Ensure that the scope of the ILM policy is compatible.

ORA-38339: invalid action specified

Cause: An invalid action was specified in the policy definition.

Action: Specify a valid action in the policy definition.

ORA-38340: invalid policy

Cause: An attempt was made to create a custom policy at the tablespace level.

Action: Specify the policy directly on the desired objects.

ORA-38341: policy conflicts with policy *string*

Cause: An attempt was made to create more than one storage tiering policy directly on an object.

Action: Delete the conflicting policy before creating a new policy.

ORA-38342: heat map not enabled

Cause: An attempt was made to create an Information Lifecycle Management (ILM) policy when heat map was not enabled.

Action: Enable heat map before creating a new ILM policy.

ORA-38343: ADO online mode not supported with supplemental logging enabled

Cause: An attempt was made to perform an automatic data optimization (ADO) operation with supplemental logging enabled.

Action: Disable supplemental logging or switch to ADO offline mode and retry.

ORA-38393: ILM internal out-of-space error

Cause: Information Lifecycle Management (ILM) internal operation encountered out-of-space error.

Action: None

ORA-38394: test event for table ILM operations

Cause: Internal testing event for table Information Lifecycle Management (ILM) operations.

Action: None

ORA-38395: debug event for table ILM operations

Cause: There was an internal debugging event for table Information Lifecycle Management (ILM) operations.

Action: None

ORA-38396: table is already enabled for the ILM feature

Cause: The table was already enabled for the specified Information Lifecycle Management (ILM) feature.

Action: No action required.

ORA-38397: table is not enabled for the ILM feature

Cause: An attempt was made to perform an Information Lifecycle Management (ILM) operation on a table on which the specified ILM feature is not enabled.

Action: No action required.

ORA-38398: DDL not allowed on the system ILM column

Cause: An attempt was made to drop, rename, or modify a system Information Lifecycle Management (ILM) column.

Action: No action required.

ORA-38399: cannot update the system ILM column

Cause: An attempt was made to update a system Information Lifecycle Management (ILM) column.

Action: No action required.

ORA-38400: cannot combine ILM operation with other operations

Cause: An attempt was made to combine Information Lifecycle Management (ILM) operation with other ALTER TABLE operations.

Action: Ensure that ILM is the sole operation specified in ALTER TABLE.

ORA-38401: synonym *string* not allowed

Cause: An attempt was made to use a synonym for a data type of an attribute or a table alias.

Action: Use the object name instead of the synonym.

ORA-38402: invalid name: empty string or spaces in the name

Cause: There were spaces in the name.

Action: Remove spaces in the name or use quotes around the name.

ORA-38403: attribute set name may not be longer than 22 characters

Cause: The attribute set name was longer than 22 characters.

Action: Choose a name that has 22 or fewer characters.

ORA-38404: schema extension not allowed for the attribute set name

Cause: There was a schema extension for the attribute set name. Attribute sets are always created in the current schema and thus schema extended names are not allowed.

Action: Create the attribute set from the appropriate schema.

ORA-38405: quotes not allowed in the attribute set name

Cause: The attribute set name contained quotes.

Action: Remove quotes in the attribute set name.

ORA-38406: attribute set *string* already exists

Cause: An attribute set with a matching name already exists in the current schema.

Action: Drop the existing attribute set or choose a different name.

ORA-38407: The ADT associated with the attribute set already exists.

Cause: The Abstract type (ADT) with the same name as the attribute set already exists in the current schema.

Action: Create the attribute set for the existing ADT or drop the ADT.

ORA-38408: The ADT "*string*" does not exist in the current schema.

Cause: An attempt was made to create the attribute set from a nonexistent ADT.

Action: Make sure that the ADT with the same name as the attribute set exists in the current schema.

ORA-38409: invalid name or option for the attribute set: *string*

Cause: An invalid name or option was used for the attribute set.

Action: Set serveroutput ON and repeat the operation for additional information.

ORA-38410: schema extension not allowed for the table name

Cause: An attempt was made to use a schema extended name for the table storing expressions.

Action: The table storing expressions and the corresponding attribute set should be created in the same schema.

ORA-38411: invalid datatype for the column storing expressions

Cause: An attempt was made to create an expression column from a column of invalid datatype.

Action: Create a VARCHAR2 or CHAR column to store expressions in a table.

ORA-38412: Expression set column *string* does not exist.

Cause: The column storing expressions does not exist.

Action: Pass a valid name for the column storing expressions.

ORA-38413: elementary attribute name may not be longer than 32 characters

Cause: An attempt was made to create an elementary attribute with a name longer than 32 characters.

Action: Use a shorter name for the elementary attribute.

ORA-38414: invalid datatype for the attribute *string*

Cause: The datatype specified for the attribute was invalid.

Action: If the datatype is an ADT, make sure that the ADT exists and the current user has execute permissions to it.

ORA-38415: invalid name or datatype for the attribute: *string*

Cause: An invalid name or datatype was used for the attribute.

Action: Set serveroutput ON and repeat the operation for additional information.

ORA-38416: A stored attribute may not be longer than 300 characters.

Cause: An attempt was made to create a stored or indexed attribute longer than 300 characters.

Action: A predicate with such attribute may not be indexed. It will be evaluated as sparse predicate.

ORA-38417: attribute set *string* does not exist

Cause: An attempt was made to use an attribute set that does not exist.

Action: Create the attribute set or choose an existing attribute set.

ORA-38418: ADT associated with the attribute set *string* does not exist

Cause: The ADT with the same name as the attribute set was not found in the current schema.

Action: Drop the attribute set and recreate it.

ORA-38419: invalid identifier in attribute : *string*

Cause: An identifier used in the stored/indexed attribute sub-expression was not defined or was invalid.

Action: Create all the required elementary attributes and user-defined functions and try again.

ORA-38420: invalid stored attribute sub-expression: *string*

Cause: The sub-expression used for the stored expression was invalid.

Action: Set serveroutput ON and repeat the operation for additional information.

ORA-38421: attribute *string* already exists

Cause: An attribute with a matching name (or form) already exists in the attribute set.

Action: Drop the existing attribute or choose a different name for the new attribute.

ORA-38422: invalid datatype for the attribute: *string*

Cause: An attempt was made to create an attribute with invalid datatype.

Action: If the data type of the attribute is an ADT, make sure that the type exists.

ORA-38423: Attribute set created from an ADT may not be extended.

Cause: An attempt was made to add an elementary attribute to an attribute set created from an ADT.

Action: Create a new attribute set and add all the required elementary attributes one at a time.

ORA-38424: no attribute set currently assigned to the expression set

Cause: An attempt was made to un-assign an attribute set from an expression set when there is no attribute set assigned to it.

Action: No action is required.

ORA-38425: attribute set used for an index object may not be unassigned

Cause: An attempt was made to un-assign an attribute set from an expression set when there is an Expression Filter index defined on the column.

Action: Drop the index before un-assigning the attribute set.

ORA-38426: attribute set assigned to an expression set may not be dropped

Cause: An attempt was made to drop an attribute set when it is still associated with an expression set.

Action: Un-assign the attribute set from the expression set before dropping it.

ORA-38427: attribute *string* does not exist

Cause: An attempt was made to use an attribute set that does not exist.

Action: Create the attribute set.

ORA-38428: too many attributes selected for indexing

Cause: An attempt was made to create an expression filter index with more than 490 indexed attributes.

Action: Remove some of the indexed attributes. Make sure that the default indexed attributes associated with the attribute set combined with the indexed attributes specified in the Create Index Parameters clause are less than or equal to 490.

ORA-38429: invalid datatype for a stored attribute: *string*

Cause: The (resulting) datatype for the attribute was not appropriate for storing.

Action: Choose a stored attribute that has a resulting datatype of NUMBER, VARCHAR2, CHAR or DATE.

ORA-38430: Operation "*string*" not supported in the current release.

Cause: An attempt was made to perform an unsupported operation.

Action: Do not use the operation.

ORA-38431: could not evaluate subexpression "*string*" for rowid "*string*"

Cause: Either the expression was not a valid SQL-WHERE clause format or it had references to nonexistent schema objects.

Action: Correct the expression.

ORA-38432: EVALUATE operator only allowed on an expression column

Cause: An attempt was made to use the EVALUATE operator on a column not configured as a column storing expressions.

Action: Assign an attribute set to the column.

ORA-38433: index "*string*" could not be maintained due to "*string*"

Cause: The error was caused by the recursive operation.

Action: Fix the error and retry.

ORA-38434: could not evaluate expression "*string*"

Cause: Either the expression was not in a valid SQL-WHERE clause format or it had references to nonexistent schema objects or there is a missing attribute value.

Action: Set serveroutput ON for more details.

ORA-38435: missing elementary attribute value or invalid name-value pairs

Cause: The second argument to the EVALUATE operator had either a missing attribute or an invalid value for an attribute.

Action: Try again after fixing the error.

ORA-38436: attribute set used for an Expression set may not be modified.

Cause: An attempt was made to add an elementary attribute to an attribute set assigned to an expression set.

Action: Un-assign the attribute set and try again.

ORA-38437: The ADT "*string*" may not contain any user methods.

Cause: An attempt was made to create an attribute set from an ADT that has one or more user methods.

Action: Drop the ADT and recreate it with no user methods.

ORA-38438: getVarchar not possible due to "string" datatype in the attribute set

Cause: An attempt was made to use the getVarchar API when the attribute set has one or more non-scalar types.

Action: Use AnyData conversion to encode the data item.

ORA-38439: invalid operation "string"

Cause: An attempt was made to use an invalid operation.

Action: Use one of the following operations : ADD, DROP

ORA-38440: attribute set *string* does not exist

Cause: An attempt was made to copy an attribute set that is not accessible from the current schema.

Action: Grant execute permissions on the corresponding ADT to the current user and try again.

ORA-38441: System could not derive the list of STORED and INDEXED attributes.

Cause: The attribute set was created without default index parameters.

Action: Specify the default index parameters for the attribute set or include a valid PARAMETERS clause for the CREATE INDEX command.

ORA-38442: The ADT "string" is not in a valid state.

Cause: An attempt was made to use an ADT that is not in a valid state.

Action: Check the INCOMPLETE field in the user_types catalog view to make sure that the ADT is in a valid state. Drop the invalid ADT and recreate the corresponding attribute set.

ORA-38443: An attribute set should be assigned to the expression set for statistics collection.

Cause: An attempt was made to collect statistics for an expression set with no attribute set assigned to it.

Action: Assign an attribute set to the expression set before collecting the statistics.

ORA-38444: statistics do not exist for the expression set

Cause: An attempt was made to clear the statistics that do not exist.

Action: No action was required.

ORA-38445: TOP clause not allowed with no statistics

Cause: An attempt was made to use the TOP parameters clause with no statistics available for the expression set.

Action: Collect statistics for the expression set and try again.

ORA-38446: Error with embedded ADT "string" in the attribute set.

Cause: The embedded ADT has errors.

Action: Set serveroutput ON for additional information.

ORA-38447: Type required for the embedded ADT attribute "string" is missing

Cause: Object type required for the embedded ADT was missing.

Action: Set serveroutput ON for additional information.

ORA-38448: Indexing predicates with "string" operator is not supported.

Cause: An unsupported operator was used in the exf\$indexoper array.

Action: Choose the operators from this list : =, <, >, <=, >=, !=, is null, is not null, nvl, and between.

ORA-38449: table "string" does not exist or is not accessible

Cause: An attempt was made to create a table alias for a table that does not exist or is not accessible.

Action: Grant select privileges on the table to the current user.

ORA-38450: error computing a stored attribute for the expression set.

Cause: Either values for one of the attributes was incorrect or a stored attribute was invalid due to broken dependencies.

Action: Correct the input.

ORA-38451: index is in an inconsistent state

Cause: One or more secondary objects used to maintain the index did not exist

Action: Drop the index and recreate it.

ORA-38452: Expression Filter index name may not be longer than 25 characters

Cause: An attempt was made to use a name longer than 25 characters for the Expression Filter index.

Action: Choose a name that has 25 or fewer characters

ORA-38453: ExpFilter index should be created in the same schema as the base table.

Cause: An attempt was made to create the Expression Filter index in a schema other than that of the base table.

Action: Create the index in the same schema as the base table.

ORA-38454: attribute set not defined for the column being indexed

Cause: An attempt was made to create an Expression Filter index on a column with no attribute set association.

Action: Assign an attribute set to the expression set column being indexed.

ORA-38455: Expression Filter index should be created by the owner.

Cause: An attempt was made to create the Expression Filter index by a user who is not the owner of the index.

Action: Create the index using owner's privileges.

ORA-38456: The attribute set "string" is in an inconsistent state.

Cause: The attribute set was in an inconsistent state due to broken dependencies.

Action: Set serveroutput ON for more details. The attribute set may not be reused after this error.

ORA-38457: The attribute "string" is not a valid XMLType attribute.

Cause: An attempt was made to use a non-XMLType attribute to configure XPath filtering.

Action: Use an attribute of sys.XMLType datatype to configure XPath filtering.

ORA-38458: invalid operation "string" for XPATH_FILTER_PARAMETERS

Cause: An attempt was made to use an invalid operation.

Action: Use one of the following operations : ADD, DROP.

ORA-38459: XML Tag "*string*" not found for the XMLType attribute "*string*"

Cause: An Attempt was made to use a non-existent XML Tag.

Action: Correct the name of the XML Tag or the XMLType attribute.

ORA-38460: filtering based on datatype "*string*" not supported for XML Tags

Cause: An attempt was made to configure XPath filtering with an XML Tag of unsupported datatype.

Action: Leave the XML Tag out of filter parameters. It will be processed as sparse predicate

ORA-38461: XML Tag "*string*" already exists for the XMLType attribute "*string*"

Cause: An attempt was made to create a duplicate XML Tag.

Action: Choose a different XML Tag.

ORA-38462: invalid attribute list

Cause: The input was missing an attribute list or had null values for the attribute names.

Action: Correct the input.

ORA-38463: invalid XML Tag list

Cause: The input was missing a tag list or had null values for the tag names.

Action: Correct the input.

ORA-38464: expression set is not empty.

Cause: An attempt was made to assign an attribute set to a non-empty expression set.

Action: Use FORCE = 'TRUE' to validate all the existing expressions.

ORA-38465: failed to create the privilege checking trigger due to: *string*

Cause: Creation of the trigger failed due to the error listed in the message.

Action: Set serveroutput ON for more information.

ORA-38466: user does not have privileges to CREATE/MODIFY expressions

Cause: An attempt was made to INSERT or UPDATE a column storing expression without appropriate permissions.

Action: Appropriate privileges on the expression set should be granted by the owner of the expression set.

ORA-38467: user cannot GRANT/REVOKE privileges to/from himself

Cause: An attempt was made to GRANT or REVOKE privileges to or from the current user.

Action: The the to_user or from_user field should be different from the user performing the operation.

ORA-38468: column "*string*" is not identified as a column storing expressions.

Cause: An attempt was made to grant permission on a nonexistent expression set.

Action: Make sure that the table and the column exist and an attribute set is associated with the column.

ORA-38469: invalid privilege for an expression set: *string*

Cause: An attempt was made to use an invalid privilege.

Action: See documentation for a valid privilege.

ORA-38470: cannot revoke a privilege that was not granted.

Cause: An attempt was made to revoke a privilege that had not been granted.

Action: Check catalog views to see if the user has the privilege.

ORA-38471: ROWIDs for table aliases cannot be null

Cause: An attempt was made to pass a null value for the table alias attribute in the data item, which is not permitted.

Action: Pass a valid rowid value for the table alias.

ORA-38472: VARCHAR representation of the data item is too long.

Cause: The VARCHAR representation of data item was too long.

Action: Use the EVALUATE operator with AnyData argument instead.

ORA-38473: cannot drop a type used for Expression Filter attribute set

Cause: An attempt was made to drop an ADT that was used to maintain an attribute set for the Expression Filter.

Action: Query USER_EXPFIL_ATTRIBUTE_SETS view to see the dependency.

ORA-38474: attribute set may not have attributes of TABLE COLLECTION type.

Cause: An attempt was made to create an attribute with a TABLE COLLECTION type.

Action: Use VARRAYs instead of table collection, if possible.

ORA-38475: The attribute set and the associated ADT are out of sync.

Cause: The ADT was directly modified by CREATE or ALTER operations.

Action: Drop the attribute set and recreate it from scratch.

ORA-38476: abstract type used for an Attribute set may not be modified.

Cause: An attempt was made to alter a type (ADT) that is used to maintain an attribute set of an Expression set.

Action: Do not modify the ADT directly. Use DBMS_EXPFIL APIs instead.

ORA-38477: attribute set cannot be derived from an evolved type or a subtype.

Cause: An attempt was made to create an attribute set from an evolved ADT or a subtype.

Action: The ADT used for the attribute set cannot be an evolved type or a subtype.

ORA-38478: creation of system trigger EXPFIL_DROPOBJ_MAINT failed

Cause: The creation of the system trigger EXPFIL_DROPOBJ_MAINT failed due to missing Expression Filter dictionary tables.

Action: Try a clean installation again. If this error is ignored, the Expression Filter dictionary could have some stale entries.

ORA-38479: creation of system trigger EXPFIL_RESTRICT_TYPEEVOLVE failed

Cause: The creation of system trigger EXPFIL_RESTRICT_TYPEEVOLVE failed due to missing Expression Filter dictionary tables.

Action: Try a clean installation again. If this error is ignored, the user will be able to evolve ADTs associated with the attribute set, thus causing spurious errors.

ORA-38480: creation of system trigger EXPFIL_ALTEREXPTAB_MAINT failed.
Cause: The creation of system trigger EXPFIL_ALTEREXPTAB_MAINT failed due to errors in SYS.EXF\$DBMS_EXPFIL_SYSPACK package.

Action: Try a clean installation again. If this error is ignored, a RENAME of the expression table may cause the EVALUATE queries to fail.

ORA-38481: ADT "string" is used for a dependent object.

Cause: An attempt was made to create an attribute set from an ADT which is used by one or more dependent objects.

Action: Use a new ADT instead.

ORA-38482: no elementary attributes defined in the attribute set

Cause: An attempt was made to use an empty attribute set.

Action: Create one or more elementary attributes for the attribute set.

ORA-38483: invalid FUNCTION/PACKAGE/TYPE name: "string"

Cause: An attempt was made to use an invalid name format.

Action: The function/package/type name should be specified in the following format [owner.]object_name

ORA-38484: FUNCTION/PACKAGE/TYPE *string* does not exist

Cause: Attempt was made to use a object that does not exist.

Action: Query ALL_OBJECT view to ensure that the object exists.

ORA-38485: invalid object type for the user-defined function

Cause: An attempt was made to use an invalid object as a function.

Action: Valid object types are FUNCTION / PACKAGE / TYPE

ORA-38486: FUNCTION/PACKAGE/TYPE already exists for the attribute set

Cause: An attempt was made to add a duplicate function to the list.

Action: Use a different object name.

ORA-38487: FUNCTION/PACKAGE/TYPE "string" not allowed in the expression

Cause: An attempt was made to use an un-approved function in the expression.

Action: Add the function to the corresponding attribute set

ORA-38488: attribute set already assigned to the column storing expressions

Cause: An attempt was made to reassign an attribute set to an expression column.

Action: Query USER_EXPFIL_EXPRESSION_SETS view to find the attribute set assigned the expression set

ORA-38489: predicate table creation failed due to: ORAstring

Cause: Predicate table creation failed due to the reported error.

Action: Set serveroutput ON for additional information

ORA-38490: invalid name: quotes do not match

Cause: The quotes in the name did not match.

Action: Correct the name to match the quotes.

ORA-38491: could not evaluate subexpression for rowid "*string*"

Cause: Either the expression was not in a valid SQL-WHERE clause format or it had references to nonexistent schema objects.

Action: Correct the expression.

ORA-38492: invalid ALTER INDEX parameters clause "*string*"

Cause: An invalid parameters clause was specified with the ALTER INDEX command.

Action: See documentation for a valid list of parameters.

ORA-38493: feature not enabled : Expression Filter index

Cause: An attempt was made to create an Expression Filter index in Standard Edition.

Action: Do not attempt to use this feature.

ORA-38494: column in the table alias and an attribute have matching names

Cause: One of the attributes in the set has the same name as the name of one of the columns in the table configured for table alias.

Action: If possible, use a different name for the attribute.

ORA-38495: data type for the stored attribute *string* is inconsistent.

Cause: The actual data type for the stored attribute configured for the Expression Filter index object did not match the data type recorded in the Expression Filter dictionary.

Action: Delete the attribute from the default index attributes and recreate it.

ORA-38496: Expression Filter index is not in a valid state

Cause: An attempt was made to REBUILD an Expression Filter index that was not valid.

Action: Use DEFAULT keyword in the parameters clause to rebuild the index from defaults or drop and recreate the index.

ORA-38497: Expression Filter index does not exist

Cause: Index with a matching name does not exist or the index was not created using ExpFilter indextype.

Action: Identify the correct index using the Expression Filter catalog views

ORA-38498: invalid stored attribute for the index object : *string*

Cause: The expression filter index object has a stored or indexed attribute that had broken dependencies.

Action: Make sure that all the identifiers used in the attribute are valid.

ORA-38499: expression set already configured for stored/indexed attributes

Cause: The expression set already had a list of stored and indexed attributes. Additional attributes cannot be specified in the CREATE INDEX parameters clause.

Action: Remove TOP, STOREATTRS and INDEXATTRS clauses from the parameters clause or clear the expression set statistics using DBMS_EXPFIL.INDEX_PARAMETERS API.

ORA-38500: *string*

Cause: There was a generic error

Action: See documentation for further information.

ORA-38501: sub-query not allowed in the expression

Cause: An attempt was made to use a sub-query in the expression.

Action: Do not use sub-queries in the expressions.

ORA-38502: invalid XML tag: *string*

Cause: An attempt was made to use an invalid XML tag for the index.

Action: Correct the XML tag and retry.

ORA-38503: index already defined using the parameters

Cause: An attempt was made to modify the index parameters after the index creation.

Action: Drop the index and retry.

ORA-38504: this operator not allowed with the configured attribute set

Cause: An attempt was made to use the operator binding with an attribute set containing more than one (table alias) attribute. This is not permitted.

Action: Use a different operator binding.

ORA-38505: invalid default value for the attribute

Cause: An attempt was made to use an invalid default value or a default that is larger than 100 characters.

Action: Specify a correct default value.

ORA-38506: invalid attribute type for text predicates

Cause: An attempt was made to use an invalid type for an attribute configured for text predicates.

Action: Use either a VARCHAR or a CLOB attribute instead.

ORA-38507: attributes of *string* data type should be indexed

Cause: An attempt was made to configure an attribute of spatial or text data type as stored predicate group.

Action: Configure them as indexed predicate groups instead.

ORA-38601: FI Not enough memory for frequent itemset counting: *string*

Cause: The memory size did not satisfy the minimum memory requirement.

Action: In `workarea_size_policy='manual'` mode, set `_fic_area_size` to a reasonably larger value. Or, In `workarea_size_policy='auto'` mode, this error should never happen.

ORA-38602: FI invalid input cursor

Cause: The input cursor did not return exactly two columns for transactional input format or the input cursor didn't have consistent data types for horizontal input format

Action: For transactional input format, specify that the input cursor returns exactly two columns: one for transaction-id, one for item-id. For horizontal input format, make sure the input cursor's columns have the same data types.

ORA-38603: FI including & excluding cursor can only return one column

Cause: The including & excluding cursor did not return exactly one column.

Action: Specify that the cursor return only one column: item-id.

ORA-38604: FI including & excluding cursor item-id type must match input cursor item-id type

Cause: The including & excluding cursor item-id type did not match input cursor item-id type

Action: Specify that the item-id type of the cursors match each other.

ORA-38605: FI not enough memory(*string*K) for candidate generation(*string*K)

Cause: There was insufficient available memory for candidate generation.

Action: In `workarea_size_policy='manual'` mode, set `_fic_area_size` to a reasonably larger value. Or, in `workarea_size_policy='auto'` mode, set `pga_aggregate_target` to a reasonably larger value.

ORA-38606: FI support threshold not between [0, 1]

Cause: The user inputed a support threshold not in the range of [0, 1].

Action: The user should adjust the input value in the range of [0, 1].

ORA-38607: FI minimum and maximum itemset length not between [1, *string*]

Cause: The inputed minimum or maximum itemset length exceed the internal maximum itemset length or less than 1.

Action: The user should adjust the input value not larger than the internal maximum itemset length and not less than 1.

ORA-38608: FI itemset minimum-length(*string*) should not be greater than maximum length(*string*)

Cause: The user inputed minimum length is more than maximum length.

Action: The user should adjust the input values to make the minimum length less than or equal to the maximum length.

ORA-38609: FI Not enough memory for tree counting, requires at least *string*KB

Cause: The memory size did not satisfy the minimum memory requirement for tree counting.

Action: In `workarea_size_policy='manual'` mode, set `_fic_area_size` to a reasonably larger value. Or, In `workarea_size_policy='auto'` mode, this error should never happen.

ORA-38610: FI "*string*" name prefix is reserved for frequent itemset counting

Cause: An error occurred because `DBMS_FREQUENT_ITEMSET` and prefix `ORA_FI` are reserved for the `DBMS_FREQUENT_ITEMSET` package's internal use.

Action: Do not re-define functions with names starting with `DBMS_FREQUENT_ITEMSET` package or `ORA_FI`.

ORA-38611: FI input cursor's item type is not supported

Cause: The input cursor's item type is not number or character type

Action: Redefine the input cursor so that item type is number or character type.

ORA-38612: FI item length cannot exceed half of one database block.

Cause: The item's length was more than half of one database block.

Action: Redefine the data type of the item column so that its maximum length is less than half of one database block.

ORA-38613: FI Cursor is returning less than 2 columns.

Cause: Cursor parameter is returning less than 2 columns.

Action: Modify the Cursor argument to return 2 columns.

ORA-38620: DT expressions in input cursor do not have an alias name

Cause: Expressions in input cursor do not have an alias name.

Action: Add an alias name for the expression.

ORA-38621: Decision Tree maximum depth setting not between [2, 20]

Cause: The user specified a max tree depth not in the range of [2, 20].

Action: The user should adjust the input value to be in the range of [2, 20].

ORA-38622: Decision Tree not enough memory, requires at least *string*KB

Cause: The memory size did not satisfy the minimum memory requirement for decision tree building.

Action: In `workarea_size_policy='manual'` mode, set `_dtree_area_size` to a reasonably larger value. Or, In `workarea_size_policy='auto'` mode, please raise `pga_aggregate_target` to a reasonably larger value.

ORA-38700: Limit of *string* flashback database logs has been exceeded.

Cause: The maximum number of flashback database log files was exceeded.

Action: `DB_FLASHBACK_RETENTION_TARGET` may be set to high. Modify it to a smaller value.

ORA-38701: Flashback database log *string* seq *string* thread *string*: "*string*"

Cause: This message reports the filename for details of another message.

Action: Other messages will accompany this message. See the associated messages for the appropriate action to take.

ORA-38702: Cannot update flashback database log file header.

Cause: Could not write to the flashback database log file.

Action: Restore access to the file.

ORA-38703: Type *string* in header is not a flashback database log file.

Cause: A corrupt flashback database log file header was read.

Action: If you are doing a `FLASHBACK DATABASE`, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38704: Checksum error in flashback database log file header.

Cause: The flashback database log file header contained a checksum that does not match the value calculated from the file header as read from disk. This means the file header was corrupt.

Action: If you are doing a `FLASHBACK DATABASE`, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38705: Expected block size *string* does not match *string* in log header.

Cause: When the flashback log file header was read, the block size in the control file did not match the block size contained in the header.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38706: Cannot turn on FLASHBACK DATABASE logging.

Cause: An ALTER DATABASE FLASHBACK ON command failed. Other messages in the alert log describe the problem.

Action: Fix the problem and retry.

ORA-38707: Media recovery is not enabled.

Cause: An ALTER DATABASE FLASHBACK ON command failed because media recovery was not enabled.

Action: Turn on media recovery with an ALTER DATABASE ARCHIVELOG command and then retry the command.

ORA-38708: not enough space for first flashback database log file

Cause: An ALTER DATABASE FLASHBACK ON command failed because there was not enough space in the Recovery Area for the first flashback database log file.

Action: Make more space in the Recovery Area. For example, this can be done by increasing the value of DB_RECOVERY_FILE_DEST_SIZE.

ORA-38709: Recovery Area is not enabled.

Cause: An ALTER DATABASE FLASHBACK ON command failed because the Recovery Area was not enabled.

Action: Set DB_RECOVERY_FILE_DEST to a location and retry.

ORA-38710: Flashback log version *string* is incompatible with ORACLE version *string*.

Cause: The flashback database log file was rejected because it appeared to be written by an incompatible version of Oracle.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38711: Corrupt flashback log block header: block *string*

Cause: A corrupt Flashback Database log file block header was read. More information was dumped to the trace file.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38712: Corrupt flashback log record header: block *string*, offset *string*.

Cause: A corrupt flashback database log record header was read. Either the record type or length were incorrect. More information was dumped to the trace file.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38713: Flashback Database logging is already turned on.

Cause: An ALTER DATABASE FLASHBACK ON command had no effect because flashback database logging was already on.

Action: No action required.

ORA-38714: Instance recovery required.

Cause: An ALTER DATABASE FLASHBACK ON command failed because the database either crashed or was shutdown with the ABORT option.

Action: Open the database and then enter the SHUTDOWN command with the NORMAL or IMMEDIATE option.

ORA-38715: Invalid log number specified in the DUMP FLASHBACK command.

Cause: An invalid log number was used when dumping a flashback database log file.

Action: Specify a valid flashback database log number.

ORA-38716: Must supply an integer for the TYPE option.

Cause: An invalid value was specified for TYPE in the DUMP FLASHBACK command.

Action: Specify an integer value.

ORA-38717: Invalid DUMP FLASHBACK option.

Cause: An invalid option was specified in the DUMP FLASHBACK command. Currently the only options allowed are: DBA, TYPE, and LOGICAL.

Action: Retry the command with the correct options.

ORA-38718: Invalid thread number specified in the DUMP FLASHBACK command.

Cause: An invalid thread number was used in dumping the flashback database log files for a thread.

Action: Specify a valid thread number.

ORA-38719: Invalid DUMP FLASHBACK object.

Cause: An invalid object was specified in a DUMP FLASHBACK command. Currently the only objects allowed are: LOGFILE or THREAD.

Action: Retry the command with the correct options.

ORA-38720: Missing log file name or number.

Cause: A log file name or number was missing in a DUMP FLASHBACK LOGFILE command.

Action: Supply a valid log file name or number.

ORA-38721: Invalid file number.

Cause: An invalid file number was specified in the DBA clause of a DUMP FLASHBACK command.

Action: Supply a valid file number.

ORA-38722: ON or OFF expected.

Cause: The ALTER DATABASE FLASHBACK command was specified without the ON or OFF keyword.

Action: Retry the command with the ON or OFF keyword.

ORA-38723: Invalid SCN expression.

Cause: The SCN keyword was specified in a FLASHBACK DATABASE command but the SCN expression was invalid.

Action: Retry the command using a valid SCN number.

ORA-38724: Invalid option to the FLASHBACK DATABASE command.

Cause: An invalid option was specified to the FLASHBACK DATABASE command. Valid options are: SCN or TIMESTAMP.

Action: Correct the syntax and retry the command.

ORA-38725: specified name "*string*" does not match actual "*string*"

Cause: The database name specified in a FLASHBACK DATABASE command did not match the name of the currently mounted database.

Action: Correct the database name spelling or DISMOUNT the mounted database and mount the correct database.

ORA-38726: Flashback database logging is not on.

Cause: A FLASHBACK DATABASE command was tried but flashback database logging has not been enabled.

Action: Flashback database logging must be enabled via the ALTER DATABASE FLASHBACK ON command before a FLASHBACK DATABASE command can be tried. If the database must be taken back in time then a restore and incomplete recovery must be performed.

ORA-38727: FLASHBACK DATABASE requires a current control file.

Cause: The control file being used is a backup control file.

Action: FLASHBACK DATABASE cannot be used with a backup control file. If the database must be taken back in time then a restore and an incomplete recovery must be performed.

ORA-38728: Cannot FLASHBACK DATABASE to the future.

Cause: An SCN or time stamp provided in a FLASHBACK DATABASE command was in the future.

Action: Supply a proper SCN or time stamp and retry the command.

ORA-38729: Not enough flashback database log data to do FLASHBACK.

Cause: There was not enough flashback database log data to do the FLASHBACK DATABASE.

Action: If the database must be taken back in time then a restore and incomplete recovery must be performed.

ORA-38730: Invalid SCN/TIMESTAMP expression.

Cause: The expression supplied in a FLASHBACK DATABASE command was invalid.

Action: Retry the command using a valid number or time stamp expression.

ORA-38731: Expected version *string* does not match *string* in log header.

Cause: The version of the flashback database log file header was corrupt.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38732: Expected file size *string* does not match *string*.

Cause: The file size indicated in the control file did not match the file size contained in the flashback log file header. The flashback database log file was corrupt.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38733: Physical size *string* less than needed *string*.

Cause: A flashback database log file shrank in size. This was likely to have been caused by operator or operating system error.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38734: Flashback log is inconsistent; belongs to another database.

Cause: The database ID in the flashback database log file did not match the database ID in the control file.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38735: Wrong log number *string* in flashback log file header.

Cause: The log file number in the flashback database log file did not match the control file.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38736: Wrong thread number *string* in flashback log file header.

Cause: The thread number in the flashback database log file did not match the control file.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38737: Expected sequence number *string* doesn't match *string*

Cause: The flashback database log is corrupted or is an old version.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38738: Flashback log file is not current copy.

Cause: A check of flashback database log file header at database open found that the flashback database log appeared to be an incorrectly restored backup. Flashback database log files cannot be backed up and restored.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38739: Flashback log file is more recent than control file.

Cause: The control file change sequence number in the flashback database log file was greater than the number in the control file. This implies that the wrong control file was being used. Note that repeatedly causing this error can make it stop happening without correcting the real problem. Every attempt to open the database will advance the control file change sequence number until it is great enough.

Action: FLASHBACK DATABASE can only be used with the current control file. If it is not available, then a restore and an incomplete recovery must be performed instead.

ORA-38740: Usable blocks value *string* is not valid.

Cause: A flashback database log file header contained a usable blocks value greater than the file size. The flashback database log file file is corrupt.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38741: Formatted blocks value *string* is not valid.

Cause: The formatted blocks value in the flashback database log file was greater than the file size. The flashback database log file was corrupt.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38742: Flashback log file has incorrect log reset status.

Cause: The flashback database log file header had log reset data that was different than the control file. The log was probably an incorrectly restored backup. Flashback database logs cannot be backed up.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38743: Time/SCN is in the future of the database.

Cause: The Time/SCN provided in a FLASHBACK DATABASE command was in the future of the database.

Action: Retry the command with a correct Time/SCN or RECOVER the database.

ORA-38744: file *string* is not the same file seen at start of flashback

Cause: A different copy of the file was accessed the last time FLASHBACK DATABASE looked at the file header. A backup of the file was restored or the meaning of the file name changed during FLASHBACK DATABASE.

Action: Ensure the correct file is available, then retry FLASHBACK DATABASE.

ORA-38746: error occurred while restoring data block (file# *string*, block# *string*)

Cause: An error occurred during a FLASHBACK DATABASE command. See other errors on error stack.

Action: Investigate why the error occurred. It may be that the flashback database log data is corrupt. If so, a restore and an incomplete recovery must be performed instead.

ORA-38747: corrupt before image (file# *string*, block# *string*)

Cause: A corrupt data block before image was encountered during a FLASHBACK DATABASE command.

Action: The flashback log data is probably corrupt. If so, a restore and an incomplete recovery must be performed instead.

ORA-38748: cannot flashback data file *string* - file is in use or recovery

Cause: An attempt to do FLASHBACK DATABASE found that the file was not available for recovery. Either it was online and the database was open in some instance, or another process was currently doing media recovery or flashback on the file.

Action: Do not do FLASHBACK DATABASE.

ORA-38749: A media recovery has been started.

Cause: An attempt was made to start a FLASHBACK DATABASE in the same session as a media recovery.

Action: Complete or cancel the first media recovery session.

ORA-38750: FLASHBACK DATABASE may not be performed using a dispatcher.

Cause: An attempt was made to use a dispatcher process for FLASHBACK DATABASE. Memory requirements disallow this recovery method.

Action: Connect to the instance via a dedicated server process to perform FLASHBACK DATABASE.

ORA-38751: Flashback database log: "*string*"

Cause: This message reports the filename for details of another message.

Action: Other messages will accompany this message. See the associated messages for the appropriate action to take.

ORA-38752: file *string* does not exist

Cause: During an RMAN FLASHBACK DATABASE conversation, a file was listed which was not part of the database. The RMAN conversation was aborted.

Action: Retry the conversation with the appropriate file numbers.

ORA-38753: Cannot flashback data file *string*; no flashback log data.

Cause: An attempt to perform a FLASHBACK DATABASE failed because the file does not have enough flashback log data to cover the time to flash back. Either the file did not have flashback generation enabled for it, or had flashback generation turned off for it some time during the time span of the flashback.

Action: The file cannot be flashed back. The file must be taken offline or the tablespace dropped before continuing with the FLASHBACK DATABASE command.

ORA-38754: FLASHBACK DATABASE not started; required redo log is not available

Cause: A FLASHBACK DATABASE command did not start. A redo log needed for the recovery part of FLASHBACK DATABASE could not be found or accessed.

Action: See trace files for details of the problem.

ORA-38755: Flashback is already turned on for this tablespace.

Cause: An attempt was made to turn on flashback database logging for a tablespace that already has flashback turned on.

Action: No action required.

ORA-38756: Flashback is already turned off for this tablespace.

Cause: An attempt was made to turn off flashback database logging for a tablespace that already has flashback off.

Action: No action required.

ORA-38757: Database must be mounted and not open to FLASHBACK.

Cause: An attempt to Flashback a database was made when the database was not mounted or was already open.

Action: Mount the database and retry the FLASHBACK command.

ORA-38758: cannot flashback data file *string*; restored since last recovery

Cause: An attempt to do FLASHBACK DATABASE found that the file was restored since the last standby recovery. The file cannot be flashed back.

Action: The file must be taken offline before continuing with the FLASHBACK DATABASE command.

ORA-38759: Database must be mounted by only one instance and not open.

Cause: An attempt to turn on or off Flashback Database logging was made when the database was open or mounted by more than one instance.

Action: Mount the database in only one instance and retry the command.

ORA-38760: This database instance failed to turn on flashback database

Cause: Database flashback is on but this instance failed to start generating flashback data. Look in alert log for more specific errors.

Action: Correct the error or turn off database flashback.

ORA-38761: redo log sequence *string* in thread *string*, incarnation *string* could not be accessed

Cause: A redo log needed for the recovery portion of FLASHBACK could not be read or opened. The FLASHBACK operation failed.

Action: Restore the log and retry the FLASHBACK command.

ORA-38762: redo logs needed for SCN *string* to SCN *string*

Cause: The FLASHBACK DATABASE operation failed. The recovery portion of FLASHBACK DATABASE needed redo from the first SCN to the second, but one or more of the redo logs in the range could not be read or opened.

Action: Check the FLASHBACK DATABASE command trace file for a description of the inaccessible redo logs, restore access to them, and retry the FLASHBACK DATABASE command.

ORA-38763: flashback not started; enabled threads have changed

Cause: A FLASHBACK DATABASE command did not start. The set of enabled threads changed during the time to flash back.

Action: The flashback cannot be performed. Perform a restore and an incomplete recovery instead.

ORA-38764: flashback not started; datafile *string* enabled threads are different

Cause: A FLASHBACK DATABASE command did not start. The datafile was restored from a backup taken when the enabled threads were different than at the time of the flashback.

Action: The flashback cannot be performed. Perform a restore and an incomplete recovery instead.

ORA-38765: Flashback database cannot be opened read-only.

Cause: A complete recovery was performed after a database flashback but the database was not opened for read-write access, or a FLASHBACK DATABASE command failed.

Action: If a complete recovery was performed after a database flashback, open the database for read-write access. If a FLASHBACK DATABASE command failed, fix what caused the command to fail and retry the command, or recover and open the database for read-write access.

ORA-38766: cannot flashback data file *string*; file resized smaller

Cause: An attempt to do FLASHBACK DATABASE found that the file was shrunk during the time to flash back.

Action: The file cannot be flashed back. The file must be taken offline or the tablespace dropped before continuing with the FLASHBACK DATABASE command.

ORA-38767: flashback retention target parameter mismatch

Cause: The value of parameters DB_FLASHBACK_RETENTION_TARGET must be same in all instances. All databases must have same flashback retention target parameters.

Action: Check DB_FLASHBACK_RETENTION_TARGET values in all instances.

ORA-38768: resizing datafile *string* failed

Cause: An operating system error occurred when Flashback Database tried to shrink (resize) a datafile. Flashback shrinks a file in order to undo the effects of a file expand, for example, an autoextension of the file.

Action: Recover the database to return it to its previous state, or fix the cause of the operating system error and retry the Flashback. If that is not possible, then the file can be taken offline and the Flashback command retried. The file will have to be restored from a backup and rolled forward.

ORA-38769: FLASHBACK DATABASE failed after modifying data.

Cause: A FLASHBACK DATABASE command failed after modifying the the database. Look in the alert log for more information about the failure.

Action: Recover the database to return it to its previous state, or fix the cause of the error and retry the Flashback.

ORA-38770: FLASHBACK DATABASE failed during recovery.

Cause: A FLASHBACK DATABASE command successfully restored the database but failed during the recovery step. Look in the alert log for more information about the failure.

Action: Fix the error and then recover the database to the same SCN or timestamp used in the FLASHBACK DATABASE command.

ORA-38771: unnamed datafile(s) added to control file by flashback recovery

Cause: The recovery step of FLASHBACK DATABASE encountered the creation of a datafile that could not be added to the control file. An entry has been added to the control file for the new datafile, but with the file name UNNAMEDnnnn, where nnnn is the file number. Related error messages provide the file names that were originally used to create the files.

Action: Rename the file in the control file, or use the ALTER ALTER DATABASE CREATE DATAFILE command to create a file suitable for recovery. If the file is not going to be recovered, then take it offline with the FOR DROP option. The recovery

step of Flashback can be resumed by entering a RECOVERY command with the same SCN or timestamp as used in the FLASHBACK DATABASE command. For example, RECOVER AUTOMTATIC DATABASE UNTIL CHANGE *flashback-scن*.

ORA-38772: cannot add datafile '*string*' - file could not be created

Cause: The recovery step of FLASHBACK DATABASE encountered the creation of a datafile and could not recreate the file. The error from the creation attempt is displayed in another message. The control file file entry for the file is 'UNNAMEDnnnnn'.

Action: Use the ALTER DATABASE CREATE DATAFILE statement to create the file.

ORA-38773: cannot add data file '*string*' - file already part of database

Cause: The recovery step of FLASHBACK database encountered the creation of a datafile and could not create the file because the file name is already in use in the database. The control file file entry for the file is 'UNNAMEDnnnnn'.

Action: Use the ALTER DATABASE CREATE DATAFILE statement to create the file with a different name.

ORA-38774: cannot disable media recovery - flashback database is enabled

Cause: An attempt was made to disable media recovery while flashback database was enabled.

Action: Use the ALTER DATABASE FLASHBACK OFF statement to disable flashback database, then disable media recovery.

ORA-38775: cannot disable recovery area - flashback database is enabled

Cause: An attempt was made to set DB_RECOVERY_FILE_DEST to null while flashback database was enabled. Flashback database requires DB_RECOVERY_FILE_DEST to be set.

Action: Use the ALTER DATABASE FLASHBACK OFF statement to disable flashback database, then disable the recovery area.

ORA-38776: cannot begin flashback generation - recovery area is disabled

Cause: During a database mount, the RVWR process discovered that the recovery area was disabled. DB_RECOVERY_FILE_DEST must have been set null or removed from the INIT.ORA file while the database was unmounted.

Action: Flashback database requires the recovery area to be enabled. Either enable the recovery area by setting the DB_RECOVERY_FILE_DEST and DB_RECOVERY_FILE_DEST_SIZE initialization parameters, or turn off flashback database with the ALTER DATABASE FLASHBACK OFF command.

ORA-38777: database must not be started in any other instance

Cause: A command was attempted that required the database to be mounted in this instance and not started in any other instance. ALTER DATABASE OPEN RESETLOGS requires that the database be started in only one instance if flashback database logging is enabled.

Action: Ensure that the no other instances are started. Then retry the command.

ORA-38778: Restore point '*string*' already exists.

Cause: The restore point name of the CREATE RESTORE POINT command already exists. A restore point name must be unique.

Action: Either use a different name or delete the existing restore point with the same name.

ORA-38779: cannot create restore point - too many restore points.

Cause: The maximum number of restore points already have been created.

Action: Delete some existing restore point and retry the operation.

ORA-38780: Restore point '*string*' does not exist.

Cause: The restore point name of the DROP RESTORE POINT command does not exist.

Action: No action required.

ORA-38781: cannot disable media recovery - have guaranteed restore points

Cause: An attempt was made to disable media recovery while there is at least one guaranteed restore point.

Action: Drop all guaranteed restore points and then disable media recovery.

ORA-38782: cannot flashback database to non-guaranteed restore point '*string*'

Cause: An attempt was made to flashback database to a non-guaranteed restore point while flashback database is off. You can only flashback a database to guaranteed restore point when flashback database is not on.

Action: Consider picking a guaranteed restore point to flashback the database to, if there is one.

ORA-38783: Instance recovery required.

Cause: An attempt was made to create a restore point when the database is in mount mode but it was not shutdown cleanly before it was mounted. In order to create a restore point when the database is mounted, the database must be shutdown cleanly before it is mounted.

Action: Consider one of the following: 1. Create the restore point after opening the database. 2. Open the database, shut it down cleanly, mount the database, and retry creating the restore point.

ORA-38784: Cannot create restore point '*string*'.

Cause: An attempt to create a restore point failed. See other errors on the error stack and in the alert log for the specific reason.

Action: Fix the problem and retry.

ORA-38785: Media recovery must be enabled for guaranteed restore point.

Cause: Media recovery is not enabled. Media recovery must be enabled in order to create a guaranteed restore point.

Action: Turn on media recovery with an ALTER DATABASE ARCHIVELOG statement and then retry the command.

ORA-38786: Recovery area is not enabled.

Cause: An attempt was made to perform a command that requires Flash recovery area to be enabled.

Action: Set DB_RECOVERY_FILE_DEST to an appropriate location and retry.

ORA-38787: Creating the first guaranteed restore point requires mount mode when flashback database is off.

Cause: While flashback database is not on, an attempt was made to create the first guaranteed restore point while the database is open.

Action: Mount the database and retry.

ORA-38788: More standby database recovery is needed

Cause: An attempt was made to create a restore point or a guaranteed while a physical standby database is not cleanly checkpointed.

Action: Perform more standby database recovery via managed standby database recovery. Cancel managed recovery and retry the command.

ORA-38789: File name is too long.

Cause: The file name provided in the command was longer than the maximum allowed.

Action: Use a shorter file name.

ORA-38790: BEFORE must be specified with RESETLOGS

Cause: The FLASHBACK DATABASE command included the RESETLOGS parameter but not the BEFORE parameter.

Action: Retry the command with TO BEFORE RESETLOGS.

ORA-38791: flashback did not start because file *string* was not in a valid incarnation

Cause: Flashback could not be started because a file was checkpointed or fuzzy at a point where the file can neither be restored nor recovered to our restore target. In order for a file to be brought to the restore target, the file has to be in one of the incarnations along the ancestral path from the current incarnation to the restore incarnation.

Action: Manually restore or recover the file to a point where it is in one of the incarnations along the ancestral path from the current incarnation to the restore incarnation.

ORA-38792: encountered unknown flashback record from release *string*

Cause: A Flashback Database logfile contains a record written by a future Oracle release and is unknown by this release.

Action: The given release of Oracle must be installed in order to use these flashback database log files.

ORA-38793: cannot FLASHBACK the database or pluggable database to a future SCN or time

Cause: The Flashback Pluggable Database target SCN or timestamp is greater than the current database or pluggable database SCN/timestamp and the database or pluggable database incarnation is not the last opened incarnation.

Action: If the target SCN or timestamp is in the current incarnation or a child incarnation whose branch point is after the current database or pluggable database SCN then RECOVER DATABASE or RECOVER PLUGGABLE DATABASE to the target SCN or time. If the target SCN or timestamp is in a child incarnation whose branch point is prior to the current database or pluggable database SCN then FLASHBACK DATABASE to before the branch point. Next, use RMAN to reset the database or pluggable database to the child incarnation. Finally, RECOVER DATABASE OR PLUGGABLE DATABASE to the target SCN time.

ORA-38794: Flashback target time not in current incarnation

Cause: The Flashback Database target timestamp is not in the database's current incarnation or any of its ancestors.

Action: Use a different target timestamp or use RMAN to reset the database to the appropriate incarnation.

ORA-38795: WARNING: FLASHBACK DATABASE succeeded but OPEN RESETLOGS would fail

Cause: FLASHBACK DATABASE succeeded. However, if ALTER DATABASE OPEN RESETLOGS command was attempted now, it would fail with the specified error.

Action: Fix the error before trying ALTER DATABASE OPEN RESETLOGS.

ORA-38796: Not enough flashback database log data to undo FLASHBACK.

Cause: There was not enough flashback log data to undo the flashback so a flashback was not started.

Action: It is still possible to get to the restore target by doing a flashback until the resetlogs branch point of the restore target is reached. This can be done by executing multiple "flashback to before resetlogs" commands, or by doing a flashback to the exact time or SCN of the desired resetlogs branch point. Note that this flashback cannot be undone should an error occur. The only option is to complete the flashback.

ORA-38797: Full database recovery required after a database has been flashed back

Cause: An attempt was made to recover some datafiles or tablespaces of a database after the database had been flashed back. In order to recover control file and all datafiles correctly, full database recovery is required after a database has been flashed back.

Action: Recover the whole database instead.

ORA-38798: Cannot perform partial database recovery

Cause: See other other messages on error stack for the cause.

Action: See other other messages on error stack for the action.

ORA-38799: Cannot drop guaranteed restore point internally created for snapshot standby

Cause: An attempt is made to drop the guaranteed restore point Oracle created internally for a snapshot standby.

Action: Use the "alter database convert to physical standby" command to convert the snapshot standby to a normal physical standby. This will automatically flashback the database and drop this guaranteed restore point.

ORA-38800: Cannot start Redo Apply on the open physical standby database

Cause: An attempt was made to start Redo Apply on an open physical standby database instance.

Action: Make sure the primary database is at compatibility 11.0.0 or higher. The redo logs to be recovered on an open physical standby database must be generated at compatibility 11.0.0 or higher. If you have any redo below 11.0.0 to be applied on the standby, you must apply them on a mounted standby before restarting recovery on an open standby when the log format advances to 11.0.0 or higher. If this is a RAC standby database, make sure the ACTIVE_INSTANCE_COUNT parameter is not set.

ORA-38801: improper value for ORA_EDITION

Cause: An improper value was used for ORA_EDITION when trying to specify an edition to use at login time. The value is not understandable as an identifier, or is too long.

Action: Correct the value for ORA_EDITION and try again.

ORA-38802: edition does not exist

Cause: This error occurred because a reference was made to an edition that does not exist or that the current user does not have privileges on.

Action: Check the edition name and verify that the current user has appropriate privileges on the edition.

ORA-38803: edition is unusable

Cause: This error occurred because a reference was made to an unusable edition.

Action: Use another edition.

ORA-38804: not a legal edition name

Cause: This error occurred because an attempt was made to create an edition called ORA\$BASE, DATABASE_DEFAULT, or USER_DEFAULT. These are not legal edition names. Or a value provided as an edition name is not understandable as an identifier, or is too long.

Action: Choose a different name for the edition.

ORA-38805: edition is in use

Cause: An attempt was made to ALTER or DROP an edition that was being used in another session or was the database default edition.

Action: Retry when the edition is not in use and is not the database default edition.

ORA-38806: edition is being altered or dropped

Cause: An attempt was made to use an edition that was in the process of being altered or dropped.

Action: Use a different edition.

ORA-38807: Implementation restriction: an edition can have only one child

Cause: This error occurred because an attempt was made to create more than one child edition for a parent edition.

Action: Create the edition as a child of the leaf edition.

ORA-38808: edition has a usable parent and a usable child

Cause: An attempt was made to make an edition with a usable parent and a usable child edition unusable.

Action: An edition with a usable parent and a usable child edition cannot be made unusable. Retry after either parent or child has been made unusable.

ORA-38809: edition must be unusable

Cause: This error occurred because an attempt was made to drop a usable edition.

Action: Retry after the altering the edition to be unusable.

ORA-38810: Implementation restriction: cannot drop edition that has a parent and a child

Cause: This error occurred because an attempt was made to drop an edition that has a parent and a child edition.

Action: Retry after dropping the parent or child edition.

ORA-38811: need CASCADE option to drop edition that has actual objects

Cause: This error occurred because an attempt was made to drop an edition that has actual objects.

Action: Specify CASCADE option in drop command.

ORA-38812: maximum number of editions reached

Cause: The number of editions has reached the limit.

Action: Drop some editions before creating new ones.

ORA-38813: editions not supported for schema *string*

Cause: The Oracle-supplied schema did not support editions.

Action: Do not attempt to enable editions for the specified Oracle-supplied schema.

ORA-38814: ALTER SESSION SET EDITION must be first statement of transaction

Cause: An attempt was made to execute an edition switch within an open transaction.

Action: Commit or rollback the transaction and reexecute the statement, or use DBMS_SESSION.SET_EDITION_DEFERRED if its deferred effect is appropriate.

ORA-38815: ALTER SESSION SET EDITION must be a top-level SQL statement

Cause: An edition switch failed because it was executed from a PL/SQL block or using recursive SQL.

Action: Execute the statement from a top-level OCI call, or use dbms_session.set_edition if its deferred effect is appropriate.

ORA-38816: edition has a child that inherits objects from the edition

Cause: This error occurred because an attempt was made to drop an edition that a child that inherits objects from the edition.

Action: Retry after the child edition has no inherited objects.

ORA-38817: Insufficient privileges

Cause: You did not have sufficient privileges to execute the subprogram package DBMS_EDITIONS_UTIL.

Action: Obtain the necessary privileges. Please see the package specification for details.

ORA-38818: illegal reference to editioned object *string.string*

Cause: An attempt was made to violate the rule "A noneditioned object may not depend on an editioned object."

Action: Either make this object editioned; or do not make the illegal reference.

ORA-38819: user *string* owns one or more objects whose type is editionable and that have noneditioned dependent objects

Cause: An attempt was made to violate the rule "A noneditioned object may not depend on an editioned object."

Action: Either make sure that those objects owned by this user whose type is editionable have no noneditioned dependent objects; or use the FORCE option.

ORA-38820: user has evolved object type

Cause: User could not be edition enabled if it has evolved object type.

Action: Reset the evolved object type first.

ORA-38821: unsupported DBMS_SQL Edition operation

Cause: Could not bind or define ADT, VARRAY, nested table or REF data type when the specified Edition is different from the current edition.

Action: Use the current Edition.

ORA-38822: referential integrity constraints not allowed on editioned views

Cause: An attempt was made to create a referential integrity constraint to or from an editioned view or enable editions for a user that has views with referential integrity constraints.

Action: Do not attempt to create editioned views with referential integrity constraints.

ORA-38823: Crossedition triggers are not allowed to exist when dropping the root edition

Cause: An attempt was made to drop the root edition when enabled crossedition trigger exists.

Action: Drop or disable all the crossedition triggers before dropping the root edition.

ORA-38824: A CREATE OR REPLACE command may not change the EDITIONABLE property of an existing object.

Cause: An attempt was made to replace an existing object with a different value for the EDITIONABLE property.

Action: Switch the EDITIONABLE property in the REPLACE statement, or alter the existing object to have an EDITIONABLE property matching the EDITIONABLE property in the REPLACE statement.

ORA-38825: The EDITIONABLE property of an editioned object cannot be altered.

Cause: An attempt was made to alter the EDITIONABLE property of an object whose type has been enabled for editioning in the owner's schema.

Action: Drop the object and re-create it with the desired EDITIONABLE state.

ORA-38826: The EDITIONABLE property of a TYPE or PACKAGE specification and its body must match.

Cause: An attempt was made to create a TYPE or PACKAGE specification or body whose EDITIONABLE property did not match its counterpart.

Action: Switch the EDITIONABLE property in the CREATE statement, or alter the existing object to have an EDITIONABLE property matching the EDITIONABLE property in the CREATE statement.

ORA-38850: an enabled thread missing from control file

Cause: A CREATE CONTROLFILE statement was given that did not list all the enabled threads for the database.

Action: Reissue the CREATE CONTROLFILE statement, including all enabled threads.

ORA-38851: cannot mark the current instance (redo thread) as disabled

Cause: The standby switchover or failover operation failed because it needs to mark the current instance (redo thread) as disabled.

Action: Shut down this instance and start up using a different instance name or redo thread number and retry.

ORA-38852: cannot mark the current instance (redo thread) as disabled

Cause: The open resetlogs or standby activation operation failed because it must use a different instance (redo thread) than the current instance (redo thread) to open the database.

Action: Shut down this instance and start up using a different instance name or redo thread number and retry.

ORA-38853: cannot mark instance *string* (redo thread *string*) as disabled

Cause: The standby switchover or failover operation failed because it needs to mark an instance (redo thread) as disabled. That instance was up, which prevented it from being disabled.

Action: Shut down the specified instance and retry this command.

ORA-38854: cannot mark instance *string* (redo thread *string*) as disabled

Cause: The open resetlogs or standby activation operation failed because it needs to mark an instance (redo thread) as disabled. That instance was up, which prevented it from being disabled.

Action: Shut down the specified instance and retry this command.

ORA-38855: cannot mark instance *string* (redo thread *string*) as enabled

Cause: The standby switchover or failover operation failed because it needs to mark an instance (redo thread) as enabled. However, it had less than 2 online redo logs, which prevented it from being enabled.

Action: Add more logfiles to the specified instance and retry the command.

ORA-38856: cannot mark instance *string* (redo thread *string*) as enabled

Cause: The open resetlogs or standby activation operation failed because it needs to mark an instance (redo thread) as enabled. However, it had less than 2 online redo logs, which prevented it from being enabled.

Action: Add more logfiles to the specified instance and retry the command.

ORA-38857: cannot mark redo thread *string* as enabled

Cause: The standby switchover or failover operation failed because it needs to mark a redo thread as enabled. However, the control file was recreated with a MAXINSTANCES value smaller than the thread number of the redo thread.

Action: Recreate the control file with a larger MAXINSTANCES value.

ORA-38858: cannot mark redo thread *string* as enabled

Cause: The open resetlogs or standby activation operation failed because it needs to mark a redo thread as enabled. However, the control file was recreated with a MAXINSTANCES value smaller than the thread number of the redo thread.

Action: Recreate the control file with a larger MAXINSTANCES value.

ORA-38859: instance *string* (thread *string*) is not ready to be disabled

Cause: The command attempted to switch the instance (thread) into a new log before disabling it. The switch attempt failed because all eligible online logs were either being cleared or not completely archived yet.

Action: Wait a few minutes and retry.

ORA-38860: cannot FLASHBACK DATABASE during instantiation of a logical standby

Cause: The command was not permitted because the controlfile indicates the database was in the process of becoming a logical standby database but the controlfile conversion had not completed.

Action: If in the process of creating a logical standby database, perform the remaining instantiation procedures to completion. If this flashback operation followed a Data Guard failure, permit the errant Data Guard operation to successfully complete. Once the instantiation is complete, reissue the flashback operation.

ORA-38861: flashback recovery stopped before reaching recovery target

Cause: Flashback recovery on the standby ended early because the user attempted to flashback to an SCN or time for which there were no redo logs. Most likely, the user is trying to flashback to a future time in the database that the database has never recovered through. Check the alert log to find out which SCN the database recovered to.

Action: Flashback to an older SCN or acquire the necessary redo logs.

ORA-38862: Flashback database logs are in use.

Cause: The command could not be performed because the flashback database logs were locked by another operation, such as FLASHBACK DATABASE or a query of V\$FLASHBACK_DATABASE_LOG.

Action: Wait for the other operation to complete.

ORA-38863: datafile *string* has been restored from an optimized RMAN backup.

Cause: Flashback Database could not flash back the file because it was restored from an RMAN optimized backup with deallocated objects. Flashback cannot revert the file to a time before the last deallocation in the datafile backup.

Action: Restore the file from a backup prior to the Flashback target SCN or time and then retry the command.

ORA-38864: cannot create a guaranteed restore point with user specified SCN or time.

Cause: An SCN or timestamp was specified when creating a guaranteed restore point. This is not supported. You can only create a guaranteed restore point as of the current time.

Action: Avoid this combination of options for creating a restore point.

ORA-38865: cannot create restore point for a future SCN or time.

Cause: An attempt was made to create a restore point with an SCN or timestamp that is in the future.

Action: Revise the SCN or timestamp specified so that it is an SCN or timestamp in the past.

ORA-38866: cannot create restore point for an SCN or time before current database incarnation.

Cause: An attempt was made to create a restore point with an SCN or timestamp that is before the beginning of the current database incarnation.

Action: Revise the SCN or timestamp specified so that it is within current database incarnation.

ORA-38867: database not open: cannot create restore point with the specified timestamp

Cause: An attempt was made to create a restore point with the specified timestamp while the database was not open. The database must be open in order to map the timestamp to an SCN.

Action: Open the database first or pick another way to create the restore point.

ORA-38868: warning: the control file may have incorrect data file structure

Cause: This control file was created or converted based on a control file from a time different from the time of the database.

Action: Open database and all pluggable databases read-only to synchronize the control file with the database dictionary. You can also force recovery to proceed by invoking recovery again.

ORA-38869: datafile *string* has been restored from an RMAN backup with undo block compression.

Cause: Flashback Database could not flash back the database because a file was restored from an RMAN backup with undo block compression, and the Flashback target was to a time when the missing undo may be needed to open the database.

Action: Restore an earlier backup of the file and retry the command or Flashback to a later time.

ORA-38870: cannot backup a control file that may have incorrect data file structure.

Cause: This control file was created or converted based on a control file from a time different from the time of the database.

Action: Open database read-only to synchronize the control file with the database dictionary to fix the control file.

ORA-38871: cannot enable flashback before open resetlogs after incomplete recovery.

Cause: To enable flashback on a primary database, the database must be clean without requiring open resetlogs.

Action: Open resetlogs first and then enable flashback database.

ORA-38872: Cannot perform backup control file recovery if Flashback Database is enabled.

Cause: RECOVER DATABASE with the BACKUP CONTROLFILE option, or a database recovery that required the control file be made a backup failed because Flashback Database was enabled or there was a guaranteed restore point.

Action: Disable Flashback Database or remove the guaranteed restore point and retry the command.

ORA-38873: missing incarnation information

Cause: Flashback Database failed because incarnation information was not found in the control file. The Flashback target incarnation was not in the control file or had a missing parent incarnation.

Action: Register logs from the missing incarnations and retry the command.

ORA-38874: cannot flashback data file *string* - missing incarnation information

Cause: Flashback Database failed because incarnation information for the start of the offline range for a file was not found in the control file. Flashback could not update the file's header with the missing incarnation's resetlogs information.

Action: Check the trace log for the offline range of the data file. If redo logs from the missing incarnation can be found, register the logs in the control file and retry the command.

ORA-38875: FLASHBACK DATABASE not started; in test mode

Cause: The FLASHBACK DATABASE command was not performed because it was started in test mode.

Action: No action required.

ORA-38876: redo logs not required

Cause: The FLASHBACK DATABASE command was performed in test mode and determined that no redo logs were required to perform the tested FLASHBACK DATABASE command.

Action: No action required.

ORA-38877: required redo logs are available

Cause: The FLASHBACK DATABASE command was performed in test mode and determined that no redo logs required to perform the tested FLASHBACK DATABASE command were missing.

Action: No action required.

ORA-38878: required redo log is not available

Cause: A redo log needed for the recovery part of FLASHBACK DATABASE could not be found or accessed.

Action: See trace files for details of the problem.

ORA-38879: Cannot flashback data file *string*; may not be able to undo all changes.

Cause: A data file was plugged in when there was a guaranteed restore point, but Flashback Database was not enabled. It is possible that some changes to the data file, after it was converted, were not logged to the Flashback Database logs.

Action: If the FLASHBACK DATABASE command was meant to rewind the database to a time before the file was plugged in, take the data file offline and retry the command. If the FLASHBACK DATABASE command was meant to rewind the database to a time after the file was plugged in, restore the original version of the plugged in file and retry the command.

ORA-38880: Cannot advance compatibility from *string* to *string* due to guaranteed restore points

Cause: Flashback database cannot undo the advance of database compatibility. Therefore, one cannot advance the compatibility of the database while there are guaranteed restore points in the database.

Action: Drop all guaranteed restore points first and retry, or delay the advance of database compatibility to a later time.

ORA-38881: Cannot drop tablespace *string* on primary database due to guaranteed restore points.

Cause: An attempt was made to drop a tablespace on a primary database while there are guaranteed restore points. You cannot do this because Flashback database cannot undo dropping of a tablespace.

Action: Drop all guaranteed restore points first and retry, or delay dropping the tablespace until all guaranteed restore points are removed.

ORA-38882: Cannot drop tablespace *string* on standby database due to guaranteed restore points.

Cause: An attempt was made to drop a tablespace on a standby database while there are guaranteed restore points. You cannot do this because Flashback database cannot undo dropping of a tablespace.

Action: Drop all guaranteed restore points and rerun recovery on standby database.

ORA-38883: Cannot shrink data file *string* on primary database due to guaranteed restore points.

Cause: An attempt was made to shrink a data file on a primary database while there are guaranteed restore points. You cannot do this because Flashback database cannot undo the shrinking of a data file.

Action: Drop all guaranteed restore points first and retry, or delay the data file resize until all guaranteed restore points are removed.

ORA-38884: Cannot shrink data file *string* on standby database due to guaranteed restore points.

Cause: An attempt was made to shrink a data file on a standby database while there are guaranteed restore points. You cannot do this because Flashback database cannot undo the shrinking of a data file.

Action: Drop all guaranteed restore points and rerun recovery on standby database.

ORA-38885: WARNING: Flashback database has been disabled while fast-start failover is enabled.

Cause: Flashback database was disabled while fast-start failover was enabled.

Action: Enable flashback database if fast-start failover is enabled.

ORA-38886: WARNING: Flashback database was disabled due to error when writing flashback database logs.

Cause: Recovery writer (RVWR) encountered an error when writing flashback database logs.

Action: See the error stack in the alert log.

ORA-38887: WARNING: Recovery writer (RVWR) hang due to error when writing flashback database logs.

Cause: An error occurred while writing to the flashback database logs.

Action: Shutdown the instance or turn off flashback database.

ORA-38888: invalid redo thread number

Cause: The provided thread number was invalid.

Action: Specify a valid redo thread number.

ORA-38900: missing mandatory column "*string*" of error log table "*string*"

Cause: Mandatory column of error logging table is not present

Action: Add the named column to the error logging table. Consult ORACLE documentation for the correct data type.

ORA-38901: column "*string*" of table "*string*" must be one of the first "*string*" columns

Cause: Mandatory information column of error logging table is present, but must be at the beginning of the row.

Action: Create the error logging table correctly. Consult ORACLE documentation for the correct format of an error logging table.

ORA-38902: errors in array DML exceed *string*

Cause: The operation failed because the array DML had more errors than can be stored internally for BATCH ERRORS.

Action: Do not use BATCH ERROR mode when array DML has more error rows than the number specified in the error.

ORA-38903: DML error logging is not supported for abstract column "string"

Cause: A DML Error Logging operation was attempted on a table which has an ADT, REF, VARRAY, or nested table column type, and the error logging table referred to the specified column.

Action: Either do not use DML Error Logging on such a table or remove the offending column from the error logging table. The scalar columns can be logged, but not abstract column types.

ORA-38904: DML error logging is not supported for LOB column "string"

Cause: A DML Error Logging operation was attempted on a table which has a CLOB, NCLOB, or BLOB column type, and the error logging table referred to the specified column.

Action: Either do not use DML Error Logging on such table or remove the offending column from the error logging table. The scalar columns can be logged, but not LOB column types.

ORA-38905: DML error logging is not supported for LONG column "string"

Cause: A DML Error Logging operation was attempted on a table which has a LONG, or LONG RAW column type, and the error logging table referred to the specified column.

Action: Either do not use DML Error Logging on such a table or remove the offending column from the error logging table. The scalar columns can be logged, but not long column types.

ORA-38906: insert into DML Error Logging table "string" failed

Cause: An error occurred when attempting to log a DML Error on behalf of the DML Error logging clause. This may be intended if a trigger is defined on the error table (which in turn errors out in certain cases).

Action: Determine root cause of error (in error stack).

ORA-38907: DML error logging is not supported for FILE column "string"

Cause: A DML Error Logging operation was attempted on a table which has a BFILE column and the Error Logging table referred to the specified column.

Action: Either don't use DML Error Logging on such table or remove the offending column from the error logging table. The scalar columns can be logged, but not BFILE column types.

ORA-38908: internal error occurred during DML Error Logging

Cause: An unexpected error occurred while executing recursive SQL to insert a row into the DML Error Logging table.

Action: Report this error to Oracle Support.

ORA-38909: DML Error logging is not supported with BATCH ERROR mode

Cause: A DML Error Logging operation was attempted on a table which has BATCH ERROR mode also specified.

Action: Refrain from using both DML Error Logging and BATCH ERROR mode on the same table.

ORA-38910: BATCH ERROR mode is not supported for this operation

Cause: BATCH ERROR mode specified for this operation.

Action: Refrain from using BATCH ERROR mode with this operation.

ORA-38911: unique constraint (*string.string*) violated

Cause: An INSERT statement with a CHANGE_DUPKEY_ERROR_INDEX hint tried to insert a duplicate key into a table.

Action: Either remove the unique restriction or do not insert the key.

ORA-38912: An index must be specified in the index hint

Cause: Index specification was missing in an IGNORE_ROW_ON_DUPKEY_INDEX or CHANGE_DUPKEY_ERROR_INDEX hint.

Action: In the hint, specify a unique index that exists on the table.

ORA-38913: Index specified in the index hint is invalid

Cause: The index specified in an IGNORE_ROW_ON_DUPKEY_INDEX or CHANGE_DUPKEY_ERROR_INDEX hint could not be found.

Action: Specify a unique index that exists on the table. The index cannot be a non-unique index or a bitmap index.

ORA-38914: Either mutate the error or ignore row on unique violation

Cause: IGNORE_ROW_ON_DUPKEY_INDEX and CHANGE_DUPKEY_ERROR_INDEX were both specified in the same statement.

Action: You cannot specify both hints in the same statement. Remove one of these two hints, or both, from the statement.

ORA-38915: Multiple indexes in change or ignore duplicate key hint

Cause: Multiple indexes were specified in an IGNORE_ROW_ON_DUPKEY_INDEX or CHANGE_DUPKEY_ERROR_INDEX hint.

Action: Only one index must be specified in the hint.

ORA-38916: CHANGE_DUPKEY_ERROR_INDEX hint disallowed for this operation

Cause: CHANGE_DUPKEY_ERROR_INDEX hint was specified for the operation.

Action: You cannot specify this hint for this operation. Remove the hint from the statement.

ORA-38917: IGNORE_ROW_ON_DUPKEY_INDEX hint disallowed for this operation

Cause: IGNORE_ROW_ON_DUPKEY_INDEX hint was specified for the operation.

Action: You cannot specify this hint for this operation. Remove the hint from the statement.

ORA-38918: RETRY_ON_ROW_CHANGE hint disallowed for this operation

Cause: RETRY_ON_ROW_CHANGE hint was specified for the operation.

Action: You cannot specify this hint for this operation. Remove the hint from the statement.

ORA-38919: remote table not supported for DML error logging

Cause: A remote table was specified in the DML error logging clause.

Action: You cannot specify a remote table to which errors will be logged. Specify a local table only.

ORA-38950: Source platform *string* not cross platform compliant

Cause: Cross platform transport was not allowed for this platform.

Action: For a list of supported platforms, query fixed view SYS.V\$TRANSPORTABLE_PLATFORM.

ORA-38951: Target platform *string* not cross platform compliant

Cause: Cross platform transport was not allowed for this platform.

Action: For a list of supported platforms, query fixed view SYS.V\$TRANSPORTABLE_PLATFORM.

ORA-38952: Source database not 10.0.0.0 compatible

Cause: Cross platform transport is not supported unless database compatibility is advanced to 10.0.0.0 or higher

Action: Use the compatible parameter to advance source database compatibility and redo the transport

ORA-38953: Cross platform transport is not supported between source platform *string* and target platform *string*

ORA-38954: Cross platform transport is not supported between source platform identifier *string* and target platform identifier *string*

Cause: The platform identifier in the transported file indicated that the datafile format was different than the target database datafile format.

Action: For a list of supported platforms, query fixed view SYS.V\$TRANSPORTABLE_PLATFORM. If both platforms are present, Contact Oracle support

ORA-38955: Source platform *string* not cross platform compliant

Cause: The platform identifier in the transported file indicated that this platform is not supported for a cross platform transport.

Action: For a list of supported platforms, query fixed view SYS.V\$TRANSPORTABLE_PLATFORM.

ORA-38956: Target platform *string* not cross platform compliant

Cause: Cross platform transport was not allowed for this platform.

Action: For a list of supported platforms, query fixed view SYS.V\$TRANSPORTABLE_PLATFORM.

ORA-38958: Source platform *string* is in different byte order than target platform *string*

Cause: Probably a conversion was not done before the import phase of the transport.

Action: Use RMAN CONVERT functionality to convert endian ordering.

ORA-38959: Failed to update block 0 to new version 10 format

Cause: An attempt was made to update block 0 to version 10 format.

Action: check additional error messages and contact Oracle Support Services.

ORA-38960: File *string* from platform *string* is not compatible with current platform *string*

Cause: The file was directly copied to this platform from a platform with a different endian ordering.

Action: Use RMAN CONVERT functionality to convert endian ordering.

ORA-38961: data file: *string*

Cause: Reporting file name for details of another error.

Action: See associated error message.

ORA-39000: bad dump file specification

Cause: The user specified a dump file that could not be used in the current job. Subsequent error messages describe the inadequacies of the dump file.

Action: Specify a dump file that is usable for the job.

ORA-39001: invalid argument value

Cause: The user specified API parameters were of the wrong type or value range. Subsequent messages supplied by DBMS_DATAPUMP.GET_STATUS will further describe the error.

Action: Correct the bad argument and retry the API.

ORA-39002: invalid operation

Cause: The current API cannot be executed because of inconsistencies between the API and the current definition of the job. Subsequent messages supplied by DBMS_DATAPUMP.GET_STATUS will further describe the error.

Action: Modify the API call to be consistent with the current job or redefine the job in a manner that will support the specified API.

ORA-39003: unable to get count of total workers alive

Cause: Attempt to get count of total worker processes alive failed.

Action: Check the additional error messages to see what caused the failure. Correct the error, if possible, and try the operation again. If this error occurs from a Data Pump client (e.g. expdp or impdp), try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39004: invalid state

Cause: The state of the job precludes the execution of the API.

Action: Rerun the job to specify the API when the job is an appropriate state.

ORA-39005: inconsistent arguments

Cause: The current API cannot be executed because of inconsistencies between arguments of the API call. Subsequent messages supplied by DBMS_DATAPUMP.GET_STATUS will further describe the error.

Action: Modify the API call to be consistent with itself.

ORA-39006: internal error

Cause: An unexpected error occurred while processing a Data Pump job. Subsequent messages supplied by DBMS_DATAPUMP.GET_STATUS will further describe the error.

Action: Contact Oracle Customer Support.

ORA-39012: Client detached before the job started.

Cause: The client detached or ended their session before the Data Pump job was started.

Action: Create new job and remain attached to the job until it is started.

ORA-39013: Remapping the SYSTEM schema is not supported.

Cause: A remap_schema transform with the SYSTEM schema was specified.

Action: Retry the import command without remapping the SYSTEM schema.

ORA-39014: One or more workers have prematurely exited.

Cause: One or more of the worker processes exited before the job was completed. With no workers, the master process will terminate the job.

Action: Rerun the job. If problem persists, contact Oracle Customer Support.

ORA-39015: job is not running

Cause: An API was executed that required the job to be running, but the job was not active.

Action: Retry the API. If problem persists, contact Oracle Customer Support.

ORA-39016: Operation not supported when job is in *string* state.

Cause: The state of the job precludes the execution of the API.

Action: Rerun the job to specify the API when the job is an appropriate state.

ORA-39017: Worker request not supported when job is in *string* state.

Cause: The state of the job precludes the execution of a worker request. This is an internal error.

Action: Contact Oracle Customer Support.

ORA-39018: master process received invalid message number *string*

Cause: Internal Error

Action: Contact Oracle Customer Support.

ORA-39019: invalid operation type *string*

Cause: User specified an invalid operation name on an DBMS_DATAPUMP.OPEN API or an invalid operation name was specified in the master table for a restart API.

Action: Correct the operation name and recreate the job.

ORA-39020: invalid mode type *string*

Cause: User specified an invalid mode on an DBMS_DATAPUMP.OPEN API or an invalid mode was specified in the master table for a restart API.

Action: Correct the mode and recreate the job.

ORA-39021: Database compatibility version *string* is not supported.

Cause: User selected COMPATIBLE as the version on an DBMS_DATAPUMP.OPEN API, but the current database compatibility version is not supported by the Data Pump API. Database versions before 9.2 are not supported by the Data Pump.

Action: Specify a supported version and recreate the job.

ORA-39022: Database version *string* is not supported.

Cause: User selected LATEST as the version on an DBMS_DATAPUMP.OPEN API, but the current database version is not supported by the Data Pump API. Database versions before 9.2 are not supported by the Data Pump.

Action: Specify a supported version and recreate the job.

ORA-39023: Version *string* is not supported.

Cause: User specified an explicit version on an DBMS_DATAPUMP.OPEN API, but the current database version is not supported by the Data Pump API. Database versions before 9.2 are not supported by the Data Pump.

Action: Specify a supported version and recreate the job.

ORA-39024: wrong schema specified for job

Cause: Internal error caused by the master process finding inconsistencies between the schemas specified for the job.

Action: Contact Oracle Customer Support.

ORA-39025: jobs of type *string* are not restartable

Cause: Attempt to restart a job which was not restartable.

Action: Recreate the job via the open API.

ORA-39026: master table is inconsistent on validation *string*

Cause: Job cannot be restarted because it failed a validation check. Validation checks are of the form -xx.y where -xx is the value of the PROCESS_ORDER column in the master table where the error was detected and y is the actual validity check for the row.

Action: Recreate the job. If master table has not been modified, but problem persists, contact Oracle Customer Support.

ORA-39027: wrong version of master table

Cause: Job cannot be restarted because the version of the database upon which the job started is different than the current version of the database and the format of the master table has changed between the versions.

Action: Recreate the job.

ORA-39028: cannot restart job from *string* state

Cause: The job was not in a suitable state for restart. Jobs must begin executing before they can be restarted.

Action: Recreate the job.

ORA-39029: worker *string* with process name "*string*" prematurely terminated

Cause: The specified worker process terminated unexpectedly. Subsequent messages describe the reason for the termination.

Action: In many cases, the Data Pump will attempt to automatically restart the worker. If problem persists, contact Oracle Customer Support.

ORA-39030: invalid file type *string*

Cause: An invalid filetype was specified for an DBMS_DATAPUMP.ADD_FILE API call.

Action: Correct the filetype parameter and reissue the API request.

ORA-39031: invalid filter name *string*

Cause: An invalid filter name was specified on a DBMS_DATAPUMP.DATA_FILTER API call.

Action: Correct the filter name parameter and reissue the API request.

ORA-39032: Parameter *string* is not supported in *string* jobs.

Cause: The specified parameter was not supported for the specified class of jobs.

Action: Re-create the job with the appropriate mode or operation type.

ORA-39033: Data cannot be filtered under the direct path access method.

Cause: The user specified that the data access method for the job was direct which precludes the use of certain data filters.

Action: Use the SUBQUERY or the SAMPLE data filter with the automatic data access method.

ORA-39034: Table *string* does not exist.

Cause: The user referenced a table in an API that did not exist.

Action: Correct table name and retry API.

ORA-39035: Data filter *string* has already been specified.

Cause: The user has already specified a data filter that matches on the filter name, schema name, and table.

Action: Specify a different data filter.

ORA-39036: invalid metadata filter name *string*

Cause: An invalid metadata filter name was specified on a DBMS_DATAPUMP.METADATA_FILTER API call.

Action: Correct the metadata filter name parameter and reissue the API request.

ORA-39037: Object type path not supported for *string* metadata filter.

Cause: An object type path was specified for the filter, but the filter does not support the object type path parameter.

Action: Remove the object type path parameter.

ORA-39038: Object path "*string*" is not supported for *string* jobs.

Cause: The specified object type path is invalid for the job mode.

Action: Correct the object type path.

ORA-39039: Schema expression "*string*" contains no valid schemas.

Cause: The specified SCHEMA_EXPR filter resulted in no schemas being selected.

Action: Correct the the SCHEMA_EXPR filter specification.

ORA-39040: Schema expression "*string*" must identify exactly one schema.

Cause: For TABLE mode jobs, the SCHEMA_EXPR filter must identify exactly one schema.

Action: Correct the the SCHEMA_EXPR filter specification.

ORA-39041: Filter "*string*" either identifies all object types or no object types.

Cause: A Metadata filter specifying path names either returned all objects or no objects in the job.

Action: Correct the the metadata filter specification.

ORA-39042: invalid transform name *string*

Cause: An invalid transform name was specified on a DBMS_DATAPUMP.METADATA_TRANSFORM API call.

Action: Correct the transform name parameter and reissue the API request.

ORA-39043: Object type *string* is not supported for *string*.

Cause: The specified object type is invalid for the specified transform or remap.

Action: Correct the object type.

ORA-39044: Metadata transform *string* has already been specified.

Cause: The user has already specified the metadata transform for the same class of object types.

Action: Specify a different object_type for the transform.

ORA-39045: invalid metadata remap name *string*

Cause: An invalid metadata remap name was specified on a DBMS_DATAPUMP.METADATA_REMAP API call.

Action: Correct the metadata remap name parameter and reissue the API request.

ORA-39046: Metadata remap *string* has already been specified.

Cause: The user has already specified a metadata remap that matches on the remap name and original value.

Action: Specify a different original value.

ORA-39047: Jobs of type *string* cannot use multiple execution streams.

Cause: The user specified a value of parallelism that is precluded by the operation type or mode of the job.

Action: Specify only a parallelism of 1 for this type of job.

ORA-39048: Unable to start all workers; only *string* worker(s) available.

Cause: The full degree of parallelism could not be honored due process limits, resource limits, or other internal errors.

Action: Increase process/resource limits for the job.

ORA-39049: invalid parameter name *string*

Cause: An invalid parameter name was specified on a DBMS_DATAPUMP.SET_PARAMETER API call.

Action: Correct the parameter name and reissue the API request.

ORA-39050: parameter *string* is incompatible with parameter *string*

Cause: Two parameters were set that were incompatible with each other. Only the first parameter setting will be used.

Action: Decide which parameter is to be used and stick to it.

ORA-39051: parameter *string* specified multiple times

Cause: The user has already specified a parameter that matches on the name and the specific parameter doesn't support duplicate definitions.

Action: Specify non-repeatable parameters only once.

ORA-39052: cannot specify SKIP_CURRENT on initial start of a job.

Cause: The user has already specified SKIP_CURRENT for a job that has never executed.

Action: Only specify SKIP_CURRENT when restarting a job.

ORA-39053: parameter or attribute *string* must be defined for a *string* job

Cause: The job being defined cannot be started because it is missing the specified definition.

Action: Specify the omitted parameter or attribute before starting the job.

ORA-39054: missing or invalid definition of the SQL output file.

Cause: The job being defined cannot be started because it is missing the file to receive the SQL output of the job or the definition is unusable.

Action: Specify a valid directory name and file name for the SQL file.

ORA-39055: The *string* feature is not supported in version *string*.

Cause: The user attempted to use a feature that was not enabled in the database version specified for the current job. Typically, this error occurs if the compatibility level of the database is below the current version of the database or if the user explicitly specifies a version for a Data Pump job.

Action: Specify the current database version as a version parameter for the the job.

ORA-39056: invalid log file specification.

Cause: The log file for the job was incorrectly specified.

Action: Specify a valid directory name and file name for the log file.

ORA-39057: invalid worker request *string* for *string* jobs.

Cause: The worker process sent a message that wasn't supported for the current job.

Action: Internal error -- contact Oracle Customer Support and report the error.

ORA-39058: current object skipped: *string* of type *string*

Cause: The user specified SKIP_CURRENT when restarting a job. This message is a confirmation that the object will not be imported.

Action: User must manually define the object in the target database.

ORA-39059: dump file set is incomplete

Cause: An IMPORT or SQL_FILE operation was being performed but not all of the files from the EXPORT dump file set were included.

Action: Check the export log file and make sure all of the files that were exported are included in the current job.

ORA-39060: table(s) dropped because of conflict with master table

Cause: A table specified by a job was not included because its definition would collide with the master table definition for the current job.

Action: After the job completes. Import the conflicting tables using a unique job name to avoid conflicts with normal user tables.

ORA-39061: import mode *string* conflicts with export mode *string*

Cause: The mode used for import cannot be used with a dump file set of specified mode. Transportable jobs are not compatible with other modes.

Action: Perform the import using a mode compatible with the export.

ORA-39062: error creating master process *string*

Cause: An attempt to create the listed master process failed.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39064: unable to write to the log file

Cause: Errors were detecting while writing to the log file. Subsequent messages will detail the problems.

Action: Fix the problems outlined in the secondary messages.

ORA-39065: unexpected master process exception in *string*

Cause: An unhandled exception was detected internally within the master control process for the Data Pump job. This is an internal error. messages will detail the problems.

Action: If problem persists, contact Oracle Customer Support.

ORA-39067: Unable to close the log file.

Cause: Errors were detecting while closing the log file. Subsequent messages will detail the problems.

Action: Fix the problems outlined in the secondary messages.

ORA-39068: invalid master table data in row with PROCESS_ORDER=*string*

Cause: A corruption was detected in the master table in the specified row(s). Either the row wasn't found, it was missing columns or had illegal values in its columns.

Action: Rerun the job with an uncorrupted master table.

ORA-39070: Unable to open the log file.

Cause: Errors were detecting while opening the log file. Subsequent messages will detail the problems.

Action: Fix the problems outlined in the secondary messages.

ORA-39071: Value for *string* is badly formed.

Cause: The value of the user specified filter did not contain a legitimate SQL clause. Subsequent messages will detail the problems.

Action: Fix the problems outlined in the secondary messages.

ORA-39076: cannot delete job *string* for user *string*

Cause: Unable to delete a job. Refer to the any following or prior error messages for clarification.

Action: Eliminate the problems indicated.

ORA-39077: unable to subscribe agent *string* to queue "*string*"

Cause: The Data Pump's communication layer was unable to attach one of its processes to the control or status queue. Subsequent messages will detail the problem.

Action: Fix the problem if possible, or contact Oracle Customer Support.

ORA-39078: unable to dequeue message for agent *string* from queue "*string*"

Cause: The Data Pump's communication layer was unable to retrieve a message from the control or status queue. Subsequent messages will detail the problem.

Action: Fix the problem if possible, or contact Oracle Customer Support.

ORA-39079: unable to enqueue message *string*

Cause: The Data Pump's communication layer was unable to send the specified message on the control or status queue. Subsequent messages will detail the problem.

Action: Fix the problem if possible, or contact Oracle Customer Support.

ORA-39080: failed to create queues "*string*" and "*string*" for Data Pump job

Cause: The Data Pump's communication layer was unable to create the status and control queues required for interprocess communication. Subsequent messages will detail the problem.

Action: Fix the problem if possible, or contact Oracle Support.

ORA-39081: failed to unsubscribe agent *string* from queue "*string*"

Cause: The Data Pump's communication layer was unable to unsubscribe a process from the control or status queue. Subsequent messages will detail the problem.

Action: Fix the problem if possible, or contact Oracle Customer Support.

ORA-39082: Object type *string* created with compilation warnings

Cause: The object in the SQL statement following this error was created with compilation errors. If this error occurred for a view, it is possible that the base table of the view was missing.

Action: This is a warning. The object may have to be recompiled before being used.

ORA-39083: Object type *string* failed to create with error: \n*string*\nFailing sql is: \n*string*

Cause: Examine original error code to determine actual cause

Action: Original error code will contain more information

ORA-39084: cannot detach job *string* for user *string*

Cause: Unable to detach a job from the session. Refer to any following error messages for clarification.

Action: Eliminate the problems indicated.

ORA-39085: cannot update job *string* for user *string*

Cause: Unable to update the fixed table information for a job. Refer to any following or prior error messages for clarification.

Action: Eliminate the problems indicated.

ORA-39086: cannot retrieve job information

Cause: Unable to retrieve fixed table information for a job. Refer to the secondary error messages that follow this one for clarification.

Action: Eliminate the problems indicated by the secondary errors.

ORA-39087: directory name *string* is invalid

Cause: A corresponding directory object does not exist.

Action: Correct the directory object parameter, or create a corresponding directory object with the CREATE DIRECTORY command.

ORA-39088: file name cannot contain a path specification

Cause: The name of a dump file, log file, or sql file contains a path specification.

Action: Use the name of a directory object to indicate where the file should be stored.

ORA-39090: Cannot add devices to file oriented job.

Cause: Attempt to add a device to a job that already contains more than one disk file.

Action: Only specify one file for jobs that contain sequential devices.

ORA-39091: unable to determine logical standby and streams status

Cause: An error occurred when determining if the Data Pump job needed to support logical standby or streams.

Action: The subsequent message describes the error that was detected. Correct the specified problem and restart the job.

ORA-39092: unable to set SCN metadata for object "*string.string*" of type *string*

Cause: An error occurred when applying a SCN to the specified object to support logical standby or streams.

Action: The subsequent message describes the error that was detected. Correct the specified problem and restart the job.

ORA-39093: FLASHBACK automatically enabled to preserve database integrity.

Cause: A Data Pump job was required to enable flashback support to specific SCNs in order to preserve the consistency of a logical standby or streams instantiation.

Action: None

ORA-39094: Parallel execution not supported in this database edition.

Cause: Parallel execution of Data Pump jobs is not supported for this database edition.

Action: Specify a parallelism of 1 for jobs not running on Enterprise Edition databases.

ORA-39095: Dump file space has been exhausted: Unable to allocate *string* bytes

Cause: The Export job ran out of dump file space before the job was completed.

Action: Reattach to the job and add additional dump files to the job restarting the job.

ORA-39096: invalid input value *string* for parameter *string*

Cause: A NULL or invalid value was supplied for the parameter.

Action: Correct the input value and try the call again.

ORA-39097: Data Pump job encountered unexpected error *string*

Cause: An unexpected, potentially non-fatal error occurred while processing a Data Pump job.

Action: Contact Oracle Customer Support.

ORA-39098: Worker process received data objects while loading metadata. Invalid process order range is *string..string*

Cause: This is an internal error. Messages will detail the problem.

Action: If problem persists, contact Oracle Customer Support.

ORA-39099: cannot create index for "*string*" on master table *string*

Cause: One or more indexes couldn't be created on the master table. subsequent error messages describe the failure.

Action: Correct the condition that is preventing the indexes from being created.

ORA-39102: Timeout before master process *string* finished initialization. Master error:

Cause: The master process whose name is listed started up but did not finish its initialization within the allowed time limit.

Action: Refer to any following error messages for possible actions. Also, check the trace log for the failed process, if one was created, to see if there is any additional information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39103: Timeout before worker process *string* finished initialization. Worker error:

Cause: The worker process whose name is listed started up but did not finish its initialization within the allowed time limit.

Action: Refer to any following error messages for possible actions. Also, check the trace log for the failed process, if one was created, to see if there is any additional information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39104: cannot call this function from a SQL parallel query slave process

Cause: Called a Data Pump process model function from a process which is a SQL parallel query slave process

Action: A SQL parallel query slave process cannot create a Data Pump master process. This is not supported. If this error occurs from a Data Pump client (for example, expdp or impdp), contact Oracle Customer Support and report the error.

ORA-39105: Master process *string* failed during startup. Master error:

Cause: The master process whose name is listed failed during startup.

Action: Refer to any following error messages for possible actions. Also, check the trace log for the failed process, if one was created, to see if there is any additional information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39106: Worker process *string* failed during startup. Worker error:

Cause: The worker process whose name is listed failed during startup.

Action: Refer to any following error messages for possible actions. Also, check the trace log for the failed process, if one was created, to see if there is any additional information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39107: Master process *string* violated startup protocol. Master error:

Cause: The master process whose name is listed started up but then exited before notifying the creating process that it was finished with initialization.

Action: Refer to any following error messages for possible actions. Also, check the trace log for the failed process, if one was created, to see if there is any additional information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39108: Worker process *string* violated startup protocol. Worker error:

Cause: The worker process whose name is listed started up but then exited before notifying the creating process that it was finished with initialization.

Action: Refer to any following error messages for possible actions. Also, check the trace log for the failed process, if one was created, to see if there is any additional

information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39109: Unprivileged users may not operate upon other users' schemas

Cause: An unprivileged user attempted to reference another user's schema during a Data Pump operation. Because of this, no schemas were selected for the job.

Action: Retry the operation under a username owning the schema.

ORA-39110: error deleting worker processes

Cause: An attempt to delete the worker processes failed.

Action: Refer to any following error messages for possible actions. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39111: Dependent object type *string* skipped, base object type *string* already exists

Cause: During a Data Pump import job, a dependent object is being skipped because its base object already existed.

Action: If the object from the dump file is wanted, drop the base and dependent objects and try to import again using desired filters.

ORA-39112: Dependent object type *string* skipped, base object type *string* creation failed

Cause: During a Data Pump import job, a dependent object is being skipped because its base object creation failed.

Action: If the object from the dump file is wanted, drop the base and dependent objects and try to import again using desired filters

ORA-39113: Unable to determine database version

Cause: The Data Pump was unable to determine the compatibility level and version of the current database using SYS.DBMS_UTILITY.DB_VERSION.

Action: Make sure access to the DBMS_UTILITY package is granted to you. If this is a network job, be sure that access to the DBMS_UTILITY package is granted to you on the remote instance.

ORA-39114: Dump files are not supported for network jobs.

Cause: An attempt was made to add a dumpfile to an Import job that is using a network link to the source database.

Action: Do not specify a dumpfile for jobs that do not require dumpfiles.

ORA-39115: *string* is not supported over a network link

Cause: An attempt was made to use an option that is not supported over network links such as the PARTITION_LIST filter.

Action: Do not attempt to use Data Pump features on network jobs if they are not compatible with jobs over the network.

ORA-39116: invalid trigger operation on mutating table *string.string*

Cause: A Data Pump load operation failed because a trigger attempted to fire on the table while it was mutating.

Action: Disable trigger(s) on the specified table. Also see ORA-004091.

ORA-39117: Type needed to create table is not included in this operation. Failing sql is:\nstring

Cause: A create table was attempted and a dependent type does not exist in the dumpfile or on the target database. Either the export or the import Data Pump job was a table mode job and types are not included in table mode jobs.

Action: Determine which type(s) are missing and create them on the target system and run the Data Pump import job again.

ORA-39119: worker process interrupt for delete worker processes call by master process

Cause: The master process that created this worker process called delete worker processes to abort the current operation.

Action: No action is necessary. This is an informational error message.

ORA-39120: Table *string* can't be truncated, data will be skipped. Failing error is:\nstring

Cause: Table data was about to be loaded into a table that already existed and the table_exists_action parameter is truncate, but the table could not be truncated.

Action: Determine actual cause by looking at base error.

ORA-39121: Table *string* can't be replaced, data will be skipped. Failing error is:\nstring

Cause: Table data was about to be loaded into a table that already existed and the table_exists_action parameter is replace, but the table could not be dropped.

Action: Determine actual cause by looking at base error.

ORA-39122: Unprivileged users may not perform *string* remappings.

Cause: A user attempted to remap objects during an import but lacked the IMPORT_FULL_DATABASE privilege.

Action: Retry the job from a schema that owns the IMPORT_FULL_DATABASE privilege.

ORA-39123: Data Pump transportable tablespace job aborted\nstring

Cause: A DBMS_PLUGTS procedure failed and the Data Pump operation could not continue so it was aborted. The DBMS_PLUGTS failure listed describes the original error.

Action: Look at the DBMS_PLUGTS error to determine actual cause.

ORA-39124: dump file name "*string*" contains an invalid substitution variable

Cause: The substitution variable '%' must be followed by '%', 'u', or 'U'.

Action: Correct the substitution variable in the dump file name and re-enter the command.

ORA-39125: Worker unexpected fatal error in *string* while calling *string* [*string*]

Cause: An unhandled exception was detected internally within the worker process for the Data Pump job while calling the specified external routine. This is an internal error. Additional information may be supplied.

Action: If problem persists, contact Oracle Customer Support.

ORA-39126: Worker unexpected fatal error in *string* [*string*] \n*string*

Cause: An unhandled exception was detected internally within the worker process for the Data Pump job. This is an internal error. Additional information may be supplied.

Action: If problem persists, contact Oracle Customer Support.

ORA-39127: unexpected error from call to *string* \n*string*

Cause: The exception was raised by the function invocation, a procedural action extension of export.

Action: Record the accompanying messages and report this as a Data Pump internal error to customer support.

ORA-39128: unexpected DbmsJava error *number* from statement *string*

Cause: The error was returned from a call to a DbmsJava procedure.

Action: Record the accompanying messages and report this as a Data Pump internal error to customer support.

ORA-39129: Object type *string* not imported. Name conflicts with the master table

Cause: The table being imported from the remote instance has the same name as the master table running this Data Pump job.

Action: Rerun the Data Pump job with a nonconflicting name.

ORA-39130: Object type *string* not imported. Base object name conflicts with the master table

Cause: The object being imported from the remote instance is dependent on an object that has the same name as the master table running this Data Pump job.

Action: Rerun the Data Pump job with a nonconflicting name.

ORA-39132: object type "*string*"."*string*" already exists with different hashcode

Cause: An object type could not be created because there was already a type with the same name but a different hashcode on the target system. Tables in the transportable tablespace set that use this object type cannot be read.

Action: Drop the object type from the target system and retry the operation.

ORA-39133: object type "*string*"."*string*" already exists with different typeid

Cause: An object type in a transportable tablespace set already exists on the target system, but with a different typeid. The typeid could not be changed because the type is used by an existing table. Tables in the transportable tablespace set that use this object type cannot be read.

Action: Drop the object type from the target system and retry the operation.

ORA-39134: Cannot include "*string*" tablespace as a Transportable Tablespace

Cause: The user attempt to specify the SYSAUX or SYSTEM tablespace as a member of the transportable tablespace list in the current job. These tablespaces may not be transported between databases.

Action: Specify different tablespaces to be transported.

ORA-39135: File "*string*" is already a member of this dump set

Cause: An attempt was made to add a new file to an export job but a file with the same name already exists in the dump set for the job.

Action: Reenter the new file information using a different file name.

ORA-39136: cannot specify an SCN on a transportable job

Cause: A target SCN was specified for a table in a transportable job by the streams or logical standby components which was not the defaulted SCN for the table.

Action: This is an internal error. Please report it to Oracle support.

ORA-39137: cannot specify a TABLE_EXISTS_ACTION of *string* for a job with no metadata

Cause: A job was defined with the TABLE_EXISTS_ACTION parameter set to REPLACE or SKIP, but without metadata. Without metadata, data could not be loaded for the requested table actions.

Action: Change the setting of the TABLE_EXISTS_ACTION parameter to APPEND or TRUNCATE or supply Metadata with the data.

ORA-39138: Insufficient privileges to load data not in your schema

Cause: An unprivileged user attempted to load data into a different schema.

Action: Use a privileged account if you must load data not in your schema

ORA-39139: Data Pump does not support XMLType objects in version *string*. *string* will be skipped.

Cause: Object had an XMLType column using either an object relational or binary storage format, which is unsupported by Data Pump in the target version.

Action: Use the original export and import utilities to move this object.

ORA-39140: dump file "*string*" belongs to job *string*

Cause: When a dump file set consists of multiple files, all files in the set must be specified for an import operation, and all files must have been produced by the same export job. One of the files provided does not belong to the original dump file set. For instance, it was created by a different export job than the other files.

Action: Remove the dump file indicated in the message and retry the import operation providing only the complete set of dump files created by a specific export job.

ORA-39141: dump file "*string*" is a duplicate of dump file "*string*"

Cause: When a dump file set consists of multiple files, all files in the set must be specified for an import operation. One of the files provided to import was found to be a duplicate of another dump file in the set. This can occur if the files in the dump set were copied or renamed using operating system utilities and the same dump file was inadvertently copied more than once with different destination names.

Action: Remove the dump file indicated in the message and retry the import operation providing only the complete set of dump files created by a specific export job.

ORA-39142: incompatible version number *string* in dump file "*string*"

Cause: A dump file was specified for an import operation whose version number is incompatible with the dump file version of the Data Pump product currently running on the system. Usually this message indicates that the dump file was produced by a newer version of the Data Pump export utility.

Action: Import this dump file using the Data Pump import utility with the same version as the export which created the file.

ORA-39143: dump file "*string*" may be an original export dump file

Cause: A dump file was specified for an import operation which appears to have been created using the original export utility. These dump files cannot be processed by the Data Pump import utility.

Action: Try using the original import utility to process this dump file.

ORA-39144: file name parameter must be specified and non-null

Cause: No file name was provided in an DBMS_DATAPUMP.ADD_FILE API call.

Action: Correct the file name parameter and reissue the API request.

ORA-39145: directory object parameter must be specified and non-null

Cause: No directory object was provided in either an DBMS_DATAPUMP.ADD_FILE API call or to the directory parameter used by the Data Pump command line clients.

Action: Correct the directory object parameter and retry the operation.

ORA-39146: schema "*string*" does not exist

Cause: The specified schema was referenced as the source of a REMAP_SCHEMA parameter, but did not exist in the dump file (for file-based import) or in the source database (for network import).

Action: Specify the correct name of the schema to be remapped.

ORA-39147: cannot migrate Data Pump queue table ownership to this instance

Cause: There are active Data Pump jobs running on another instance in a RAC. All concurrent, active Data Pump jobs must be run on the same instance.

Action: Start this job on the same instance where other active Data Pump jobs are running, or wait until they finish.

ORA-39148: unable to import data into pre-existing queue table *string*.

Table_exists_action of *string* being ignored for this table

Cause: A Data Pump import detected that a queue table that was to be imported already exists. Importing data into pre-existing queue tables is not supported.

Action: If the data from the dump file is desired, then drop the queue table and perform the import again, or use the import parameter table_exists_action=replace.

ORA-39149: cannot link privileged user to non-privileged user

Cause: A Data Pump job initiated by a user with EXPORT_FULL_DATABASE/IMPORT_FULL_DATABASE roles specified a network link that did not correspond to a user with equivalent roles on the remote database.

Action: Specify a network link that maps users to identically privileged users in the remote database.

ORA-39150: bad flashback time

Cause: A flashback time was specified for the Data Pump job which either could not be parsed or else could not be translated into a system change number (SCN). This typically occurs when specifying a time far in the past.

Action: Specify an explicit SCN for the desired flashback rather than a time.

ORA-39154: Objects from foreign schemas have been removed from import

Cause: A non-privileged user attempted to import objects into a schema other than their own.

Action: Either perform the import from a privileged schema or else remap all schemas that were exported into the username running the import.

ORA-39155: error expanding dump file name "*string*"

Cause: Export was unable to expand the directory object and dump file name into a full file name. Subsequent messages will detail the problems.

Action: Fix the problems outlined in the secondary messages.

ORA-39156: error parsing dump file name "*string*"

Cause: Export was unable to parse the dump file name. Subsequent messages will detail the problems.

Action: Fix the problems outlined in the secondary messages.

ORA-39157: error appending extension to file "*string*"

Cause: Export or Import was unable to append the default extension to create the file name. The given file name could be too long or contain illegal characters. Subsequent messages will detail the problems.

Action: Fix the problems outlined in the secondary messages.

ORA-39159: cannot call this function from a non-Data Pump process

Cause: Called a Data Pump process model function from a process which is not a Data Pump process.

Action: Refer to any other error messages for additional information. If this error occurs from a Data Pump client (e.g. expdp or impdp), try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39160: error on what's my name call

Cause: Attempt to get the Data Pump process name failed.

Action: Refer to any following error messages for additional information. If this error occurs from a Data Pump client (e.g. expdp or impdp), try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39161: Full database jobs require privileges

Cause: Either an attempt to perform a full database export without the EXP_FULL_DATABASE role or an attempt to perform a full database import over a network link without the IMP_FULL_DATABASE role.

Action: Retry the operation in a schema that has the required roles.

ORA-39162: Transportable tablespace job require privileges

Cause: User attempted to perform a transportable tablespace job without being having the proper EXP_FULL_DATABASE or IMP_FULL_DATABASE role.

Action: Retry the operation in a schema that has the required roles.

ORA-39163: A sample size of *string* is invalid.

Cause: An attempt was made to do data sampling on a table with a value outside of the range of 0 - 100.

Action: Retry the filtering using a sampling number greater than 0 and less than 100.

ORA-39164: Partition *string* was not found.

Cause: If exporting or importing over the network, the user specified a partition name that was not found in the source database. For importing from files, the user specified a partition name not found in the dump file set.

Action: Retry the operation using the correct partition name.

ORA-39165: Schema *string* was not found.

Cause: If exporting or importing over the network, either the user specified a schema name that was not found in the source database or else the user lacked the proper EXP_FULL_DATABASE or IMP_FULL_DATABASE role that would allow them to access another schema. For importing from files, the user specified a schema name not found in the dump file set.

Action: Retry the operation using the correct schema name.

ORA-39166: Object *string* was not found or could not be exported or imported.

Cause: If exporting to files or importing over the network, one of the following occurred: - The object specified did not exist in the source database. - The user lacked the proper EXP_FULL_DATABASE or IMP_FULL_DATABASE role that would allow access to the object. - The VIEWS_AS_TABLES object contained a type that is not supported with the VIEWS_AS_TABLES parameter. If importing from files, the user specified an object name that was not found in the dump file set.

Action: Retry the operation using the correct object name, correct set of privileges, or a view that has only supported types.

ORA-39168: Object path *string* was not found.

Cause: If exporting or importing over the network, the user specified an object type path name that was not found in the source database. For importing from files, the user specified an object type path name not found in the dump file set.

Action: Retry the operation using the correct object type path name.

ORA-39169: Local version of *string* cannot work with remote version of *string*.

Cause: A Data Pump job specified a network link, but the version on the remote database cannot interoperate with the version on the local database.

Action: Do not specify network links between instance running different versions of the database.

ORA-39170: Schema expression *string* does not correspond to any schemas.

Cause: A schema expression or schema list was supplied for a Data Pump job that did not identify any schemas in the source database.

Action: Correct the schema specifications and retry the job.

ORA-39171: Job is experiencing a resumable wait.\n*string*

Cause: The Data Pump job is stalled with one or more of its sessions having a resumable wait. Resumable waits are typically caused by a non-expandable tablespace running out of space. The follow-on message describes the nature of the wait.

Action: Correct the condition causing the wait. This will typically involve adding datafiles to the tablespace that is full.

ORA-39172: Cannot remap transportable tablespace names with compatibility of *string*.

Cause: The user attempted to remap a tablespace name in a transportable tablespace job when the compatibility level was set below 10.1.

Action: Reset the compatibility level of the database to a more recent version.

ORA-39173: Encrypted data has been stored unencrypted in dump file set.

Cause: No encryption password was specified for an export job that involved data that was encrypted in the database.

Action: No specific user action is required. This is only a warning that secure data may be readable from within the dump file set.

ORA-39174: Encryption password must be supplied.

Cause: No encryption password was supplied to import a dump file set that was created using an encryption password.

Action: Specify the encryption password for the dump file set.

ORA-39175: Encryption password is not needed.

Cause: An encryption password was supplied to import a dump file set that was not created using an encryption password.

Action: No user action is required. This is merely a warning message.

ORA-39176: Encryption password is incorrect.

Cause: The wrong encryption password was supplied to import a dump file set.

Action: Resubmit the job using the correct encryption password for the dump file set.

ORA-39177: invalid compression value *string*

Cause: An invalid value was specified for compression.

Action: Correct the value and recreate the job.

ORA-39178: cannot perform estimate on metadata only jobs

Cause: An estimate was requested for a job by specifying the ESTIMATE or ESTIMATE_ONLY parameter. However, the job was also defined to have no data. These specifications conflict with each other.

Action: Remove one of the conflicting specifications for the job.

ORA-39179: unable to load table "*string*"."*string*" because of OID transform

Cause: The OID transform for the job was set to false and the identified table contained either VARRAYs with non-final types or unscoped REF columns. Both of these column types have embedded OIDs so they cannot be imported correctly when OIDs are not preserved.

Action: You must manually move the data with the specified tables when OIDs are not preserved.

ORA-39180: unable to encrypt ENCRYPTION_PASSWORD

Cause: The specified encryption password was unable to be encrypted for placement within the master table or decrypted when it was to be restored from the master table. Subsequent messages will describe the actual error that caused the encryption to fail.

Action: Fix the problems referenced by the subsequent messages. The most common reason for the encryption to fail is the lack of a security wallet.

ORA-39181: Only partial table data may be exported due to fine grain access control on *string*

Cause: An unprivileged user has tried to export a table that has fine grain access control. The table owner is subjected to access control and may not be able to export all rows in the table. Only the rows that can be seen by that user will be exported. In

order to preserve integrity of the table, the user importing the table should have enough privilege to recreate the table with the security policies at import time.

Action: It is strongly recommended that the database administrator handle exporting of this table.

ORA-39182: internal error *string* occurred during compression phase *string*\n

Cause: An unexpected error occurred while compressing data buffers.

Action: Contact Oracle Customer Support.

ORA-39183: internal error *string* occurred during decompression phase *string*\n

Cause: An unexpected error occurred while decompressing data buffers.

Action: Contact Oracle Customer Support.

ORA-39184: Transportable Data Pump jobs cannot exclude PLUGTS objects

Cause: A Transportable Data Pump job requires all PLUGTS% objects, but the user-supplied exclude filters were excluding these objects.

Action: Reenter command without excluding PLUGTS% objects.

ORA-39185: The transportable tablespace failure list is

Cause: Some of the tablespaces specified for this job could not be exported.

Action: See specific errors for each tablespace, correct the problem, and try again.

ORA-39186: No tablespaces in the specified list exist.

Cause: The tablespaces specified on the EXPORT command did not exist.

Action: Check the list of tablespaces and reenter command with correct set of tablespaces.

ORA-39187: The transportable set is not self-contained, violation list is

Cause: The tablespaces specified for this job did not satisfy the closure checking. The list of violations specified each closure violation.

Action: See specific errors for violation and correct the problem or change the tablespaces on the command line and try again.

ORA-39188: unable to encrypt dump file set

Cause: Data Pump could not create an encrypted dump file set. This message will be accompanied by other messages that give more details about why the encrypted dump file set could not be created. The most common reason for this message is that you are trying to create a dump file set that can be transparently decrypted, and the database external security device is not open.

Action: If the external security device is not open, then open it. If the external security device is not configured, then the only type of encrypted dump file set that you can create is a password-based dump file set.

ORA-39189: unable to decrypt dump file set

Cause: The dump file set could not be decrypted. The reason could be either that an invalid password was entered, or that, when using transparent decryption, the database external security device was not open.

Action: If password-based import was enabled for this dump file set, then supply the correct password. If transparent import was enabled for this dump file set, then ensure that the database external security device is open.

ORA-39190: internal error occurred during encryption phase *string*\n

Cause: An unexpected error occurred while encrypting data buffers.

Action: See the secondary error for more information and contact Oracle Customer Support.

ORA-39191: internal error occurred during decryption phase *string*\n

Cause: An unexpected error occurred while decrypting data buffers.

Action: See the secondary error for more information and contact Oracle Customer Support.

ORA-39192: table mode jobs with transportable=always and partition filters only allow objects from one table

Cause: Multiple tables are not supported when specifying partitions while using transportable table mode.

Action: Retry the job specifying only one table.

ORA-39193: Table mode jobs do not allow the schema to be wild carded.

Cause: The table filter included a schema expression with the % wild card.

Action: Retry the job specifying actual schemas.

ORA-39194: Table mode jobs require the tables to be comma separated.

Cause: The string describing tables in a table mode job was not comma separated.

Action: Retry the job specifying the tables separated by commas.

ORA-39195: At least one schema in the TABLE_FILTER does not exist.

Cause: The TABLE_FILTER specified contains a schema that does not exist.

Action: Retry the job specifying only schemas that exist.

ORA-39200: Link name "*string*" is invalid.

Cause: The name of the network link supplied for a Data Pump job was not usable. Secondary messages identify the problem.

Action: Rerun the job using a valid network link.

ORA-39201: Dump files are not supported for estimate only jobs.

Cause: An attempt was made to add a dumpfile to an Export job that only requested file estimates.

Action: Do not specify a dumpfile for jobs that do not require dumpfiles.

ORA-39202: Data cannot be filtered or selected in *string* jobs.

Cause: A data filter was supplied for the specified type of job, but is not supported in the specified job type. From the command line, data filters can be specified by the CONTENT, TABLES (partition specifications), SAMPLE and QUERY parameters.

Action: Do not restrict data handling on jobs that cannot support data filtering.

ORA-39203: Partition selection is not supported over a network link.

Cause: Specific partitions were selected for a job operating over a network link.

Action: Remove the partition specifications and rerun the job.

ORA-39204: No subsetting of tablespaces is allowed for transportable import.

Cause: A tablespace filter was applied to a transportable import job that was not performed over a network link. In this case, the tablespace may not be changed from its specification at export time.

Action: Rerun the job without specifying a tablespace filter.

ORA-39205: Transforms are not supported in transportable jobs.

Cause: A metadata transformation such as STORAGE or SEGMENT_ATTRIBUTES has been specified for a transportable Data Pump job.

Action: Rerun the job without specifying a transform.

ORA-39206: A parallel degree of *string* is invalid.

Cause: A bad numeric was supplied for specifying the parallelism to be used within a Data Pump job. The degree of parallelism must be an integer great than 0.

Action: The the degree specifying and retry the parallelism setting.

ORA-39207: Value *string* is invalid for parameter *string*.

Cause: A parameter for a Data Pump job was set with a NULL or invalid value.

Action: Refer to the documentation to identify the legal values for each parameter. Retry the operation with a valid value.

ORA-39208: Parameter *string* is invalid for *string* jobs.

Cause: The a parameter has been specified that is not supported for the specified type of Data Pump.

Action: Remove the parameter specification and retry the operation.

ORA-39209: Parameter *string* requires privileges.

Cause: Use of the specified privileges requires the user to have the IMP_FULL_DATABASE role for import jobs or the EXP_FULL_DATABASE role for export jobs.

Action: Remove the parameter specification and retry the operation.

ORA-39210: A PCTSPACE adjustment of *string* is invalid.

Cause: User specified a storage space transformation that was out of range. Values for PCTSPACE must be greater than zero.

Action: Retry the operation with a valid PCTSPACE value.

ORA-39211: unable to retrieve dumpfile information as specified

Cause: User specified an invalid or inaccessible file with the specified filename and directory object.

Action: Retry the operation with a valid directory object and filename.

ORA-39212: installation error: XSL stylesheets not loaded correctly

Cause: The XSL stylesheets used by the Data Pump Metadata API were not loaded correctly into the Oracle dictionary table "sys.metastylesheet." Either the stylesheets were not loaded at all, or they were not converted to the database character set.

Action: Connect AS SYSDBA and execute dbms_metadata_util.load_stylesheets to reload the stylesheets.

ORA-39213: Metadata processing is not available

Cause: The Data Pump could not use the Metadata API. Typically, this is caused by the XSL stylesheets not being set up properly.

Action: Connect AS SYSDBA and execute `dbms_metadata_util.load_stylesheets` to reload the stylesheets.

ORA-39214: Data Pump does not support external tables with encrypted columns. *string* will not be exported

Cause: The object is an external table with encrypted columns and this is unsupported with Data Pump.

Action: External table must be manually recreated on the target system.

ORA-39216: object type "*string*"."*string*" hashcode mismatch

Cause: An object type in a transportable tablespace set could not be used because there was a type with the same name but a different hashcode (and type definition) on the target system. Tables in the transportable tablespace set that use this object type cannot be created.

Action: Drop the object type and dependent objects from the target system if possible and retry the operation.

ORA-39217: object type "*string*"."*string*" typeid mismatch

Cause: An object type in a transportable tablespace set already exists on the target system, but with a different typeid. The typeid could not be changed because the type or a dependent type is used by an existing table. Tables in the transportable tablespace set that use this object be created.

Action: Drop the object type and dependent objects from the target system if possible and retry the operation.

ORA-39218: type check on object type "*string*"."*string*" failed

Cause: The type check on a type failed. Therefore, the table create for the table which uses the type also fails.

Action: Refer to any following error messages for additional information. Correct the error, if possible, and try the action again.

ORA-39219: directory object name is too long

Cause: The directory object name provided to the Data Pump Job was invalid because its length was greater than 30 characters.

Action: Retry the operation with a valid directory object name.

ORA-39220: file name is too long

Cause: The file name provided to the Data Pump Job was invalid because its length was greater than 4000 characters.

Action: Retry the operation with a valid file name.

ORA-39221: Specifying data filters is invalid when dumpfiles do not contain table data.

Cause: A data filter was supplied for an import job, but the dumpfile does not contain any table data. The export command created a dumpfile with metadata only. No table data was included. From the command line, data filters can be specified by the `CONTENT`, `SAMPLE` and `QUERY` parameters.

Action: Do not restrict data handling on jobs that cannot support data filtering.

ORA-39222: Unable to create global temporary master table *string*

Cause: Data Pump tried to create a global temporary master table but could not. The errors that follow describe why the table could not be created.

Action: Examine and fix the problems described in the additional errors.

ORA-39223: Internal Data Pump error. Master table information for version *string* not found.

Cause: An unexpected error occurred while processing the job. The data in an internal table could not be found.

Action: Contact Oracle Support Services.

ORA-39224: *string* row(s) were rejected with the following error:\n*string*

Cause: These rows were not loaded due to constraint or index violations.

Action: Retry the operation when row data is fixed.

ORA-39228: Unable to construct a unique departioned object name for *string string.string:string* when defaulted.

Cause: All (sub)partitions in the job were to be created as individual objects and the renaming was defaulted. The job will attempt to create unique object names, but the name creation algorithm was unable to find a unique object name for the specified (sub)partition.

Action: Specify a rename_table transform to use or delete some of the existing objects causing the name conflicts.

ORA-39230: Service name *string* is not available

Cause: The specified resource service name for the Data Pump job was not available.

Action: Pick a service name that the user is authorized to use.

ORA-39231: invalid data remap name: *string*

Cause: The specified type of data remapping was not supported.

Action: Only COLUMN_FUNCTION data remaps are supported. Retry the operation using a supported data remap name.

ORA-39232: invalid remap function: *string*

Cause: The specified package function for performing data remapping was not found.

Action: Either create the specified package function or else grant the user access to the function.

ORA-39233: invalid remap column name: *string*

Cause: The column name specified for the data remapping does not exist in the specified table.

Action: Specify a scalar column name within the table to be remapped.

ORA-39234: Data cannot be remapped under the direct path access method.

Cause: Data remapping was requested on a job that requires the direct path access method. Data remapping can only be performed using the external table access method.

Action: Retry the job without specifying any access method.

ORA-39235: data remap *string* has already been specified

Cause: A data remap has already been specified for the indicated column. Only one data remap may be defined for a column.

Action: Remove one of the data remap specifications for the job.

ORA-39237: Failed to load XML document *string*. Compare process aborted.

Cause: An error occurred while performing XML difference parse.

Action: Resubmit XML compare request with valid document.

ORA-39238: XML node attribute differences are not supported.

Cause: MDAPI XML difference parsing did not support node attributes.

Action: Resubmit XML compare request with valid document.

ORA-39239: No differences found.

Cause: XML documents compared were identical.

Action: No action required.

ORA-39240: Error while processing difference document.

Cause: Error occurred in the MDAPI difference writer.

Action: Refer to any following error messages for additional information. Correct the error, if possible, and try the action again.

ORA-39242: Unable to export/import *string* due to table attributes.

Cause: See the Data Pump documentation for an explanation of what table attributes prevent an export or import from succeeding.

Action: Resolve conflicting table attributes.

ORA-39243: Import job requires 'TRANSPORT_DATAFILES' parameter.

Cause: The export job used 'TRANSPORTABLE=ALWAYS' and the import job requires TRANSPORT_DATAFILES to be specified.

Action: Specify the transport datafiles associated with this job.

ORA-39245: import job requires export dump file "*string*"

Cause: A Data Pump IMPORT or SQL_FILE operation was being performed but not all of the files from the Data Pump export dump file set were included.

Action: Check the export log file and make sure all of the files that were exported are included in the current job. The import log file also lists the export names of the missing files.

ORA-39246: cannot locate master table within provided dump files

Cause: A Data Pump IMPORT or SQL_FILE operation was being performed but not all of the files from the Data Pump export dump file set were included. In particular, the dump file containing the export job's master table was not provided.

Action: Check the export log file and make sure all of the files that were exported are included in the current job.

ORA-39251: Importing a SecureFile LOB with metadata into a scalar, column *string*, is not allowed.

Cause: An import of a SecureFile LOB with metadata into a scalar column was attempted.

Action: Change the scalar column to a SecureFile LOB.

ORA-39252: Importing a SecureFile LOB with metadata or archived SecureFile LOB into a BasicFile LOB is not allowed

Cause: An attempt was made to import a SecureFile LOB that contained metadata or was archived at the time of export into a BasicFile LOB.

Action: Perform the import into a different table, perform DBMS_LOB.ARCHIVE_GET on any archived SecureFile LOBs, and then use INSERT AS SELECT to migrate the SecureFile LOB data to the BasicFile LOB.

ORA-39253: Specified tables do not exist.

Cause: The tables specified for this export job did not exist.

Action: Check the specified table list and make sure the tables listed exist.

ORA-39254: direct path load not possible into preexisting table with column that has a default value and is not being loaded; table *string*, column *string*

Cause: The direct path access method could not be used to load into a pre-existing table that has a column with a default value and that column is not being loaded into.

Action: Remove the ACCESS_METHOD parameter from the import command line.

ORA-39255: Failed to fetch PLUGTS_BLKs.

Cause: The Data Pump expected a PLUGTS_BLK object to be exported but none were.

Action: Contact Oracle Support Services.

ORA-39256: Transportable tablespace Data Pump jobs from read-only databases not supported.

Cause: The remote database was read-only and Data Pump export jobs using transportable tablespace over a network link require the remote database to be read/write.

Action: Use Data Pump without transportable tablespace or make the remote database read/write.

ORA-39258: Cannot rename cluster.

Cause: DBMS_METADATA_DIFF was comparing two clusters with different names. There is no SQL ALTER statement to rename a cluster.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39259: Cannot add column to cluster.

Cause: DBMS_METADATA_DIFF was comparing two clusters with different column lists. There is no SQL ALTER statement to add a column to a cluster.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39260: Cannot delete column from cluster.

Cause: DBMS_METADATA_DIFF was comparing two clusters with different column lists. There is no SQL ALTER statement to delete a column from a cluster.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39261: Cannot modify column in cluster.

Cause: DBMS_METADATA_DIFF was comparing two clusters with different column lists. There is no SQL ALTER statement to modify a column in a cluster.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39262: Cannot alter size for hash cluster.

Cause: DBMS_METADATA_DIFF was comparing two hash clusters with different sizes. There is no SQL ALTER statement to modify the size of a hash cluster.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39263: Cannot alter PARALLEL INSTANCES.

Cause: DBMS_METADATA_DIFF was comparing two objects, both with PARALLEL but with different INSTANCES values. There is no SQL ALTER statement to modify PARALLEL INSTANCES.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39264: Cannot alter type of table: *string*

Cause: DBMS_METADATA_DIFF was comparing tables of different types: relational table, object table or XMLType table. There is no SQL ALTER statement to change a table's type.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39265: Cannot alter object_type of object table: *string*

Cause: DBMS_METADATA_DIFF was comparing object tables based on different object types. There is no SQL ALTER statement to change an object table's object type.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39266: Cannot alter unpartitioned table to partitioned.

Cause: DBMS_METADATA_DIFF was comparing two tables, one unpartitioned, the other partitioned. There is no SQL ALTER statement to partition an unpartitioned table.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39267: Cannot remove default from table column.

Cause: DBMS_METADATA_DIFF was comparing two table columns, one with a default value, one without. There is no SQL ALTER syntax to remove a column default.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39268: Cannot alter a real column to make it virtual or vice versa.

Cause: DBMS_METADATA_DIFF was comparing two table columns, one virtual, one real. There is no SQL ALTER statement to make a virtual column real or vice versa.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39269: Cannot alter a column of type LONG to anything other than LOB.

Cause: DBMS_METADATA_DIFF was comparing two table columns, the first of type LONG, the second of a data type other than LOB. There is no SQL ALTER statement to modify a long data type to anything other than a CLOB or NCLOB.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39270: Cannot alter a LOB column to another data type.

Cause: DBMS_METADATA_DIFF was comparing two table columns, the first of type CLOB, NCLOB or BLOB, the second of some other data type. There is no SQL ALTER statement to change the data type of a LOB column.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39271: Cannot alter substitutability of column: *string*

Cause: DBMS_METADATA_DIFF was comparing two table columns. This error may occur because the first column is substitutable and the second column is not, or because the first column is OF TYPE and the second column is substitutable.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39272: Cannot alter organization of nested table column: *string*

Cause: DBMS_METADATA_DIFF was comparing two nested table columns. One was a heap table, the other an index-organized table. There is no SQL ALTER statement to change the organization of a nested table.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39273: Cannot alter storage type of XMLType column: *string*

Cause: DBMS_METADATA_DIFF was comparing two XMLType columns with different storage types (CLOB, BINARY, OBJECT RELATIONAL). There is no SQL ALTER statement to change the storage type of an XMLType column.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39274: Cannot alter physical organization of table.

Cause: DBMS_METADATA_DIFF was comparing two tables with different physical organizations (heap, index organized, external, or cluster). There is no SQL ALTER statement to change the physical organization of a table.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39275: Cannot alter INITIAL storage option.

Cause: DBMS_METADATA_DIFF was comparing two tables with different FREELIST GROUPS storage options. There is no SQL ALTER statement to change a table's INITIAL storage option.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39276: Cannot alter MINEXTENTS storage option.

Cause: DBMS_METADATA_DIFF was comparing two tables with different MINEXTENTS storage options. There is no SQL ALTER statement to change a table's MINEXTENTS storage option.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39277: Cannot alter FREELIST GROUPS storage option.

Cause: DBMS_METADATA_DIFF was comparing two tables with different FREELIST GROUPS storage options. There is no SQL ALTER statement to change a table's FREELIST GROUPS storage option.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39278: Cannot alter table with segments to segment creation deferred.

Cause: DBMS_METADATA_DIFF was comparing two tables, the first with allocated segments, the second with deferred segments. There is no SQL ALTER statement to change a table which already has segments to segment creation deferred.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39279: Cannot alter tablespace of overflow segment.

Cause: DBMS_METADATA_DIFF was comparing two index organized tables whose overflow segments have different tablespaces. There is no SQL ALTER statement to change an overflow segment's tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39280: Cannot drop overflow segment.

Cause: DBMS_METADATA_DIFF was comparing two index organized tables, the first with an overflow segment, the second without. There is no SQL ALTER statement to drop an overflow segment.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39281: Cannot alter COMPRESS in index-organized materialized view.

Cause: DBMS_METADATA_DIFF was comparing two index organized materialized views with different key compression values. There is no SQL ALTER statement to modify the key compression of an index organized materialized view.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39282: Cannot alter default tablespace of partitions in partitioned table.

Cause: DBMS_METADATA_DIFF was comparing two partitioned tables with different default tablespaces. There is no SQL ALTER statement to change the default tablespace of a partitioned table.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39283: Cannot drop, split or merge hash partition: *string*

Cause: DBMS_METADATA_DIFF was comparing two tables or indexes partitioned or subpartitioned by hash, and a (sub)partition in the first object was not present in the second object. Partition maintenance operations such as drop, split or merge can only be performed on list or range (sub)partitioned objects.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39284: Cannot alter the list values of a list subpartition: *string*

Cause: DBMS_METADATA_DIFF was comparing two tables subpartitioned by list, one of which has a subpartition with the same name but a different values list as a subpartition in the other. There is no SQL ALTER statement to change the list values of a list subpartition.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39285: Cannot alter index key compression.

Cause: DBMS_METADATA_DIFF was comparing two indexes with different values of key compression. There is no SQL ALTER statement to change index key compression.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39286: Cannot convert between types of index.

Cause: DBMS_METADATA_DIFF was comparing two indexes of different types, for example, a table index, a domain index, a cluster index, a bitmap index or a bitmap join index. There is no SQL ALTER statement to change the type of an index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39287: Cannot alter index column list.

Cause: DBMS_METADATA_DIFF was comparing two indexes with different column lists. There is no SQL ALTER statement to change the columns of an index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39288: Cannot alter index base table.

Cause: DBMS_METADATA_DIFF was comparing two table indexes defined on different tables. There is no SQL ALTER statement to change the base table of an index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39289: Cannot add or drop local index partition or subpartition: *string*

Cause: DBMS_METADATA_DIFF was comparing two locally partitioned indexes with different partitions or subpartitions. There is no SQL ALTER statement to add or drop a partition or subpartition of a locally partitioned index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39290: Cannot drop a partition of a globally partitioned index.

Cause: DBMS_METADATA_DIFF was comparing two globally partitioned indexes and a partition in the first index does not exist in the second index. There is no SQL ALTER statement to drop a partition of a globally partitioned index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39291: Cannot alter index storage option: *string*

Cause: DBMS_METADATA_DIFF was comparing two indexes with different values for the specified storage option. There is no SQL ALTER statement to change this storage option.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39292: Cannot alter join table of bitmap join index.

Cause: DBMS_METADATA_DIFF was comparing two bitmap join indexes with different join tables. There is no SQL ALTER statement to alter the join tables of a bitmap join index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39293: Cannot alter join condition of bitmap join index.

Cause: DBMS_METADATA_DIFF was comparing two bitmap join indexes with different join conditions. There is no SQL ALTER statement to alter the join condition of a bitmap join index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39294: Cannot alter indextype of domain index.

Cause: DBMS_METADATA_DIFF was comparing two bitmap domain indexes with different indextypes. There is no SQL ALTER statement to alter the indextype of a domain index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39295: Cannot alter index base cluster.

Cause: DBMS_METADATA_DIFF was comparing two cluster indexes defined on different clusters. There is no SQL ALTER statement to change the base cluster of a cluster index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39296: Cannot alter index partitioning type or partitioning columns.

Cause: DBMS_METADATA_DIFF was comparing two indexes with incompatible partitioning: (1) one is partitioned and one is not (2) both are partitioned but in different ways (locally vs. globally, hash vs. range) (3) both are partitioned but on different columns. There is no SQL ALTER statement to change the way an index is partitioned.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39297: Cannot alter materialized view attribute: *string*

Cause: DBMS_METADATA_DIFF was comparing two materialized views with incompatible attributes. There is no SQL ALTER statement to change this attribute of a materialized view.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39298: Cannot alter materialized view partitioning type or partitioning columns.

Cause: DBMS_METADATA_DIFF was comparing two materialized views with incompatible partitioning: (1) one is partitioned and one is not (2) both are partitioned but in different ways (locally vs. globally, hash vs. range) (3) both are partitioned but on different columns. There is no SQL ALTER statement to change the way a materialized view is partitioned.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39299: Cannot alter materialized view physical organization.

Cause: DBMS_METADATA_DIFF was comparing two materialized views with different physical organizations: heap, index organized, etc. There is no SQL ALTER statement to change the index organization of a materialized view.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39300: Cannot alter materialized view log partitioning type or partitioning columns.

Cause: DBMS_METADATA_DIFF was comparing two materialized view logs with incompatible partitioning: (1) one is partitioned and one is not (2) both are partitioned but in different ways (locally vs. globally, hash vs. range) (3) both are partitioned but on different columns. There is no SQL ALTER statement to change the way a materialized view log is partitioned.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39301: Cannot alter values recorded in materialized view log: *string*

Cause: DBMS_METADATA_DIFF was comparing two materialized view logs that are recording different values, and the set of values in the first materialized view log cannot be changed to that in the second materialized view log. The error message identifies the specific problem.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39302: Cannot alter tablespace of materialized view log.

Cause: DBMS_METADATA_DIFF was comparing two materialized view logs which have different tablespaces. There is no SQL ALTER statement to change the tablespace of a materialized view log.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39303: Cannot alter attribute of queue: *string*

Cause: DBMS_METADATA_DIFF was comparing two advanced queues with attribute differences that cannot be reconciled. The error message identifies the specific problem.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39304: Cannot alter attribute of queue table: *string*

Cause: DBMS_METADATA_DIFF was comparing two AQ queue tablespaces with attribute differences that cannot be reconciled. The error message identifies the specific problem.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39305: Cannot alter attribute of sequence: *string*

Cause: DBMS_METADATA_DIFF was comparing two sequences with attribute differences that cannot be reconciled. The error message identifies the specific problem.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39306: Cannot alter attribute of trigger: *string*

Cause: DBMS_METADATA_DIFF was comparing two triggers with differences that cannot be reconciled. The error message identifies the specific problem.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39307: Cannot alter attribute of type: *string*

Cause: DBMS_METADATA_DIFF was comparing two types with differences that cannot be reconciled. The error message identifies the specific problem.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39308: Cannot alter attribute of view: *string*

Cause: DBMS_METADATA_DIFF was comparing two views with differences that cannot be reconciled. The error message identifies the specific problem.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39309: Cannot alter tablespace between bigfile and smallfile.

Cause: DBMS_METADATA_DIFF was comparing two tablespaces, one bigfile, one smallfile. There is no SQL ALTER statement to change a tablespace from smallfile to bigfile or vice versa.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39310: Cannot alter tablespace type.

Cause: DBMS_METADATA_DIFF was comparing two tablespaces of different types: permanent, temporary or undo. There is no SQL ALTER statement to change the type of a tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39311: Cannot alter tablespace blocksize.

Cause: DBMS_METADATA_DIFF was comparing two tablespaces with different blocksizes. There is no SQL ALTER statement to change the blocksize of a tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39312: Cannot alter tablespace encryption.

Cause: DBMS_METADATA_DIFF was comparing two tablespaces, one encrypted, one not. There is no SQL ALTER statement to change the encryption property of a tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39313: Cannot alter tablespace flashback mode.

Cause: DBMS_METADATA_DIFF was comparing two tablespaces, one in flashback mode, one not. There is no SQL ALTER statement to alter the flashback mode of a tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39314: Cannot alter tablespace extent_management.

Cause: DBMS_METADATA_DIFF was comparing two tablespaces with different extent management properties. There is no SQL ALTER statement to alter the extent management properties of a tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39315: Cannot drop the first data file from a permanent or undo tablespace.

Cause: DBMS_METADATA_DIFF was comparing two permanent or undo tablespaces. The first data file in the first tablespace is missing from the second tablespace. There is no SQL ALTER statement to drop the first data file from a permanent or undo tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39316: Cannot resize a data file in a smallfile tablespace.

Cause: DBMS_METADATA_DIFF was comparing two smallfile tablespaces. A data file in the first tablespace is of a different size from the corresponding data file in the second tablespace. There is no SQL ALTER statement to resize a data file in a smallfile tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39317: Cannot change the segment space management of a tablespace.

Cause: DBMS_METADATA_DIFF was comparing two tablespaces with different segment space management. There is no SQL ALTER statement to change the segment space management of a tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39318: Cannot alter user name.

Cause: DBMS_METADATA_DIFF was comparing two users with different names. There is no SQL ALTER statement to change the name of a user.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39319: Cannot undo password expiration.

Cause: DBMS_METADATA_DIFF was comparing two users and the first user had an expired password. There is no SQL ALTER statement to undo the expiration of a user password.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39320: Column names do not match between export and import databases.

Cause: The column names of the table being imported did not match the column names of the preexisting table.

Action: Ensure the column names match between export and import database.

ORA-39321: Cannot alter functional index or virtual expression column: *string*

Cause: Altered column was referenced in a virtual column or functional index expression. There is no SQL ALTER statement to change a column which is referenced in one of these types of expressions.

Action: The difference cannot be eliminated with a SQL ALTER statement.

ORA-39322: Cannot use transportable tablespace with TIMESTAMP WITH TIME ZONE columns and different time zone version.

Cause: The source database was at a different time zone version than the target database and there were tables in the dumpfile with TIMESTAMP WITH TIME ZONE columns.

Action: Convert the target database to the same timezone version as the source database or use Data Pump without transportable tablespace.

ORA-39323: cannot load data from external table dump file "*string*"

Cause: A dump file was specified for an import operation that had been created with external tables using the ORACLE_DATAPUMP access driver. This type of dump file cannot be processed using the Data Pump import utility.

Action: Access the data in this dump file with external tables using the ORACLE_DATAPUMP access driver.

ORA-39324: cannot load data from Data Pump dump file "*string*"

Cause: A dump file was specified for a load operation that had been created using the Data Pump. This type of dump file cannot be processed by external tables using the ORACLE_DATAPUMP access driver.

Action: Access the data in this dump file using the Data Pump.

ORA-39325: TABLE_EXISTS_ACTION cannot be applied to *string*.

Cause: An object was already in existence that uses a name in common with this table. The name collision could be the table name, a constraint, a LOB storage table, or something else in the table definition.

Action: Drop the existing object before running Data Pump.

ORA-39326: cannot load data into table, *string*, due to an unusable index

Cause: An unusable index existed on the table. This index prevented data from being loaded into the table associated with this index.

Action: Either drop the unusable index or make it valid before attempting the import operation.

ORA-39327: Oracle Database Vault data is being stored unencrypted in dump file set.

Cause: No encryption was specified for an export job that involved data from an Oracle Database Vault realm.

Action: No specific user action is required. This is only a warning that secure data may be readable from within the dump file set.

ORA-39328: encryption password is too long

Cause: The encryption password provided to the Data Pump job was invalid because its length was greater than the maximum allowed. When using the password to

encrypt the dump file set, the maximum length is 1000 bytes. When using the password to re-encrypt encrypted columns only, the maximum length is 30 bytes.

Action: Retry the operation with a valid encryption password.

ORA-39329: Tablespace *string* needs to be locally managed.

Cause: An attempt was made to run an Oracle Data Pump job with the TRANSPORTABLE=ALWAYS parameter. Tablespaces that contain data for EARLY_OPTIONS in an Oracle Data Pump job run with FULL=Y and TRANSPORTABLE=ALWAYS parameter need to be locally managed.

Action: Run the Oracle Data Pump job without the TRANSPORTABLE parameter set to ALWAYS.

ORA-39331: Wallet is not open on remote node.

Cause: The security module wallet was not open on the remote node.

Action: Open the wallet on the remote node.

ORA-39339: Table *string* was skipped due to transportable import and TSTZ issues resulting from time zone version mismatch.

Cause: The source database is at a different time zone version than the target database and this table contains TIMESTAMP WITH TIME ZONE data.

Action: Convert the target database to the same time zone version as the source database or use Oracle Data Pump with conventional data movement to export then import this table.

ORA-39340: unsupported object, *string* will be skipped.

Cause: Oracle Data Pump encountered an object type that it currently does not support.

Action: Manually move the object to the target database.

ORA-39341: Cannot convert an existing column into an identity column.

Cause: An attempt was made to convert an existing column into an identity column. There is no SQL ALTER statement that will convert an existing column into an identity column.

Action: The difference cannot be eliminated with a SQL ALTER statement.

ORA-39342: Internal error - failed to import internal objects tagged with *string* due to *string*.

Cause: Oracle Data Pump encountered an internal tagged object that failed to import properly. All other objects with the same tag will be skipped.

Action: Contact Oracle Support Services.

ORA-39343: Object type *string* failed to create returning error: \nstring\n

Cause: The object type could not be created. Examine the original error code to determine the actual cause.

Action: The original error code will contain more information.

ORA-39345: WARNING: possible data loss in character set conversions

Cause: Oracle Data Pump displayed this message at the start of the import operation because it determined that the character set or the NCHAR character set used by the export database was different from that of the target database and also that the target database character set was not a superset of the export database character set.

Action: No specific user action is required.

ORA-39346: data loss in character set conversion for object *string*

Cause: Oracle Data Pump import converted a metadata object from the export database character set into the target database character set prior to processing the object. Some characters could not be converted to the target database character set and so the default replacement character was used.

Action: No specific user action is required. This type of data loss can occur if the target database character set is not a superset of the export databases character set.

ORA-39347: Character data loss was detected during conversion, the row was rejected.

Cause: The row contained characters that did not exist in the destination character set.

Action: No specific user action is required. The destination character set must be a superset of the source character set to avoid data loss.

ORA-39352: Wrong number of TRANSPORT_DATAFILES specified: expected *string*, received *string*

Cause: The number of TRANSPORT_DATAFILES specified on the impdp command was not correct.

Action: Specify the correct TRANSPORT_DATAFILES for this transportable job.

ORA-39353: Data was not imported for *string*. Cannot locate the time zone version *string* file.

Cause: This table contains TIMESTAMP WITH TIME ZONE data and Oracle Data Pump needed to load the source version of the time zone file. This version cannot be located.

Action: Install the latest time zone version files.

ORA-39357: \nWARNING: Oracle Data Pump operations are not typically needed when connected to the root or seed of a container database.\n

Cause: The Oracle Data Pump client was attached to the root or seed container database.

Action: Continue if this is the desired connection string or attach to a pluggable database within the container database.

ORA-39358: Export dump file version *string* not compatible with target version *string*

Cause: The Oracle Data Pump export job version was newer than the target compatibility version.

Action: Upgrade the target database to a compatibility level of at least the export job version, or rerun the export job with a job version that is lower than or equal to the compatibility version of the target database.

ORA-39359: Source time zone version is *string* and target time zone version is *string*.

Cause: The time zone version of the source database is not the same as the time zone version of the target database.

Action: Tables containing TIMESTAMP WITH TIME ZONE data cannot be imported with transportable tablespace technology when time zone versions are different between the export and target databases. All affected tables will be reported during the import job and will not be created. If any are reported, convert the target database to the same time zone version as the source or use Oracle Data Pump with conventional data movement to export then import the affected tables.

ORA-39360: Table *string* was skipped due to transportable import and TSLTZ issues resulting from time zone mismatch.

Cause: The time zone of the source database is different than the time zone of the target database and this table contains TIMESTAMP WITH LOCAL TIME ZONE data.

Action: Convert the target database to the same time zone as the source database or use Oracle Data Pump with conventional data movement to export then import this table.

ORA-39361: Source time zone is *string* and target time zone is *string*.

Cause: The time zone of the source database is different than the time zone of the target database.

Action: Tables containing TIMESTAMP WITH LOCAL TIME ZONE data cannot be imported with transportable tablespace technology when time zones are different between the export and target databases. All affected tables will be reported during the import job and will not be created. If any are reported, convert the target database to the same time zone as the source or use Oracle Data Pump with conventional data movement to export then import the affected tables.

ORA-39363: Type evolution could not be preserved for *string*

Cause: Trying to apply each version of the type during import resulted in compilation warnings. The type was successfully recreated to the latest version only.

Action: Export dump files as well as transportable tablespaces that contain earlier versions of this type cannot be imported on top of this type definition.

ORA-39364: encryption password is too long

Cause: The encryption password provided to the Oracle Data Pump job was invalid because its length was greater than the maximum allowed. When using the password to encrypt the dump file set, the maximum length is 128 bytes. When using the password to re-encrypt encrypted columns only, the maximum length is 30 bytes.

Action: Retry the operation with a valid encryption password.

ORA-39365: supplemental log data could not be generated for *string*

Cause: The instance was unable to generate supplemental log data when Data Pump was importing the table. Supplemental logging is not supported for Data Pump import of tables containing columns of user-defined types.

Action: No action is required for replication using Oracle GoldenGate. For logical standby users, perform a separate import of this table into the standby database.

ORA-39366: disable table lock on *string.string* failed with:\nstring\n

Cause: Examine the original error code to determine the actual cause.

Action: The original error code contains more information.

ORA-39367: Statistics are being skipped. Cannot locate the time zone version *string* file.

Cause: Importing statistics requires that the Oracle Data Pump load the source version of the time zone file. This version cannot be located.

Action: Install the latest time zone version files.

ORA-39368: cannot alter partition varray column properties

Cause: DBMS_METADATA_DIFF was comparing two partitioned tables. There is no SQL ALTER statement to change varray column properties.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39369: some rows may not be exported for *string* due to block corruption

Cause: The corrupted data blocks were ignored when Oracle Data Pump was exporting the table.

Action: No action is required.

ORA-39370: remap value *string* is too long

Cause: The remap value provided to the Oracle Data Pump job was invalid because its length was greater than the maximum allowed.

Action: Retry the operation with a valid remap value.

ORA-39371: cannot specify partition in remap_table without departmentioning

Cause: The 'remap_table' value specified a partition but the tables were not being departmentioned.

Action: Either remove the partition name in the 'remap_table' parameter or add the 'partition_options=departmention' parameter.

ORA-39500: failed to notify CRS of a Startup/Shutdown event for database "*string*", instance "*string*" (ignored)

Cause: The instance was unable to obtain the context or information required to notify the CRS framework.

Action: None Required. The error is ignored.

ORA-39501: failed to notify CRS of a Startup/Shutdown event [*string*] (ignored)

Cause: The instance was unable to communicate with the CRS framework.

Action: None Required. The error is ignored.

ORA-39502: failed to notify CRS of a Startup/Shutdown event [*string*] (ignored)

Cause: The instance was unable to create an environment context.

Action: None Required. The error is ignored.

ORA-39503: failed to notify CRS of a Startup/Shutdown event [*string*] (ignored)

Cause: The instance was unable to populate the environment context.

Action: None Required. The error is ignored.

ORA-39504: failed to notify CRS of a Startup/Shutdown event [*string*] (ignored)

Cause: The instance was unable to find the location of the alert file.

Action: None Required. The error is ignored.

ORA-39510: CRS error performing *string* on *string* '*string*' on '*string*'\n*nstring*

Cause: Unable to perform action on associated CRS resource.

Action: See following error messages for additional information. Fix error and retry.

ORA-39600: Queue keys needs to be a suffix of cluster key.

Cause: Attempt to specify queue key columns that don't form a suffix of the cluster key.

Action: Only specify queue key columns as a suffix of cluster key.

ORA-39601: Hash key is required.

Cause: Missing hash key in the cluster key specification.

Action: Specify one or more hash key columns.

ORA-39700: database must be opened with UPGRADE option

Cause: A normal database open was attempted, but the database has not been upgraded to the current server version.

Action: Use the UPGRADE option when opening the database to run catupgrd.sql (for database upgrade), or to run catalog.sql and catproc.sql (after initial database creation).

ORA-39701: database must be mounted EXCLUSIVE for UPGRADE or DOWNGRADE

Cause: The database was mounted for SHARED cluster access.

Action: Set the CLUSTER_DATABASE initialization parameter to FALSE and restart the server with the UPGRADE or DOWNGRADE option.

ORA-39702: database not open for UPGRADE or DOWNGRADE

Cause: An upgrade, downgrade, reload, or patch script was invoked when the database was not open for UPGRADE or DOWNGRADE.

Action: Use STARTUP UPGRADE to open the database for upgrade or to apply a patch set. Use STARTUP DOWNGRADE for running a downgrade script or the reload script.

ORA-39703: server version and script version do not match

Cause: An upgrade, downgrade, reload, or patch script was invoked, but the database instance version was not the version for which the script was intended.

Action: Check that the correct ORACLE_HOME and ORACLE_SID environment variables are set. Also check that the SQL script is being invoked from the correct ORACLE_HOME.

ORA-39704: permission to modify component registry entry denied

Cause: An attempt was made to modify an entry in the component registry, but the session user was not authorized; only the CONTROL or SCHEMA user for the component are authorized to modify the component registry entry.

Action: Connect as either the CONTROL or SCHEMA user for the component.

ORA-39705: component '*string*' not found in registry

Cause: No entry in the component registry was found for the specified component.

Action: Check the spelling of the component ID and use the DBA_REGISTRY view to list the existing components.

ORA-39706: schema '*string*' not found

Cause: The schema name specified was not found in the database.

Action: Create the schema before loading the component.

ORA-39707: compatible parameter *string* too high for downgrade to *string*

Cause: A downgrade was attempted, but the compatible initialization parameter value was greater than the downgrade release version.

Action: Once the compatible value has been raised, downgrade to earlier releases is not supported.

ORA-39708: component '*string*' not a *string* component

Cause: The component was not a component for the specified namespace.

Action: Either enter a valid component identifier for the namespace or set the session namespace to the correct component namespace.

ORA-39709: incomplete component downgrade; *string* downgrade aborted

Cause: One or more components did not have a status of DOWNGRADED.

Action: Correct the component problem and re-run the downgrade script.

ORA-39710: only connect AS SYSDBA is allowed when OPEN in UPGRADE mode

Cause: An attempt was made to connect to a database when the database was OPEN for UPGRADE or DOWNGRADE.

Action: Try to connect again after the database upgrade or downgrade is complete.

ORA-39711: critical patch number less than last installed CPU number

Cause: A Critical Patch Update (CPU) script was invoked that had a number that was less than the last CPU installed in the database.

Action: Check the DBA_REGISTRY_HISTORY view to identify the last CPU for the database, and install the most recent CPU.

ORA-39712: XE edition server cannot open database

Cause: An attempt was made to open a Standard Edition or Enterprise Edition database with the Express Edition of the server.

Action: Use the Express Edition server only with Express Edition databases.

ORA-39714: upgrade script utlmmig.sql failed

Cause: A normal database open was attempted, but the upgrade script utlmmig.sql failed to complete.

Action: Use the UPGRADE option when opening the database and then run utlmmig.sql.

ORA-39715: Downgrade script UTLMMIGDOWN.SQL failed.

Cause: A normal database open was attempted, but the downgrade script UTLMMIGDOWN.SQL failed to complete.

Action: Use the DOWNGRADE option when opening the database and then run UTLMMIGDOWN.SQL.

ORA-39726: unsupported add/drop column operation on compressed tables

Cause: An unsupported add/drop column operation for compressed table was attempted.

Action: When adding a column, do not specify a default value. DROP column is only supported in the form of SET UNUSED column (meta-data drop column).

ORA-39727: COMPATIBLE must be set to 10.0.0.0.0 or higher

Cause: An add/drop column operation for compressed table has been performed on the database. This requires COMPATIBLE to be set to 10.0.0.0.0 or higher during upgrade from 9.2 to a 10i or higher release.

Action: Set COMPATIBLE to 10.0.0.0.0 and retry the upgrade.

ORA-39751: partitioned table on both sides of PARTITIONED OUTER JOIN is not supported

Cause: An attempt was made to partition both sides of PARTITIONED OUTER JOIN.

Action: Specify partitioned table on one side of PARTITIONED OUTER JOIN only.

ORA-39752: redundant column in partitioning and join columns is not allowed

Cause: An attempt was made to specify redundant columns in partitioning and join columns for NATURAL or named column PARTITIONED OUTER JOIN.

Action: Do not specify redundant column in partitioning and join columns.

ORA-39753: unsupported use of subquery in PARTITIONED OUTER JOIN condition

Cause: An attempt was made to use subquery in PARTITIONED OUTER JOIN condition.

Action: Remove subquery from the join condition.

ORA-39754: FULL PARTITIONED OUTER JOIN is not supported

Cause: An attempt was made to use FULL PARTITIONED OUTER JOIN.

Action: Specify FULL PARTITIONED OUTER JOIN through UNION of LEFT and RIGHT PARTITION OUTER JOIN.

ORA-39755: cannot use PARTITIONED OUTER JOIN with a left correlation

Cause: An attempt was made to use a PARTITIONED OUTER JOIN where the right side is a lateral view with a left correlation to the left side and is partitioned.

Action: Rewrite the query without the left correlation.

ORA-39761: stream reset required before loading this stream again

Cause: An attempt was made to load a stream that was previously loaded but has not been reset yet.

Action: Reset the specified stream and convert column array data to it before attempting to load it again.

ORA-39762: streams must be loaded in conversion order

Cause: An attempt was made to load a stream out of conversion order.

Action: Load streams in the same order they were converted.

ORA-39763: stream must be completely loaded before it is reset

Cause: An attempt was made to reset a stream that contains converted column array data and hasn't been completely loaded yet.

Action: Before resetting a stream, load it until a status of OCI_SUCCESS, OCI_NO_DATA, or OCI_NEED_DATA is returned.

ORA-39764: specified stream is not in the specified direct path context

Cause: A direct path operation was attempted using a stream that was not created in the specified direct path context.

Action: Only use streams created in the specified direct path context.

ORA-39765: stream must be reset before used in a column array conversion

Cause: The stream was completely loaded, but has not been reset yet.

Action: Reset loaded streams after load returns OCI_SUCCESS, OCI_NO_DATA, or OCI_NEED_DATA. The stream can then be used in a column array to stream conversion.

ORA-39766: invalid stream specified for column array conversion

Cause: A stream must be loaded and reset before used again in a column-array-to-stream conversion. This error is issued if another stream has subsequently been

converted before the specified stream has been loaded, or if the latest load of this stream returned OCI_ERROR.

Action: Don't convert into a previous stream before it is loaded. Also, when load stream returns OCI_ERROR, the stream must be loaded again to insure any remaining information in the stream is loaded. The stream must be loaded even if the last or only row was in error. There may be error information in the stream that needs to be sent to the server.

ORA-39767: finish is not allowed when unloaded stream data exists

Cause: A direct path finish was attempted when at least one stream buffer has not been completely loaded.

Action: All streams must be loaded after a column array to stream conversion until load stream returns a status of OCI_SUCCESS or OCI_NO_DATA. The load can then be finished.

ORA-39768: only one direct path context top level column array is allowed

Cause: Attempt to create multiple top level column arrays in a direct path context, when only one is allowed.

Action: Create another direct path context if additional top level column arrays are required.

ORA-39769: finish is not allowed with an incompletely loaded last row

Cause: Part of a row has been loaded, but it is not complete.

Action: Finish loading the current row when load stream returns OCI_ERROR or OCI_NEED_DATA.

ORA-39771: stream must be loaded before its handle is freed

Cause: An attempt was made to free a stream handle after conversion but before the stream was loaded.

Action: Load the stream until OCI_SUCCESS, OCI_NEED_DATA or OCI_NO_DATA is returned before attempting to free the stream handle. If OCI_NEED_DATA is returned, another stream must be loaded to complete last row.

ORA-39772: column array reset disallowed after OCI_CONTINUE or OCI_NEED_DATA

Cause: An attempt was made to reset a column array when a row conversion is still in progress.

Action: Complete the current row before resetting the column array. To ignore the current row when conversion returned OCI_NEED_DATA, set the current column flag to OCI_DIRPATH_COL_ERROR. This should be followed by a conversion, which will undo and ignore the row. The column array(s) can then be reset.

ORA-39773: parse of metadata stream failed

Cause: An unexpected error occurred while attempting to parse the metadata // stream for a table being loaded.

Action: Call Oracle support.

ORA-39774: parse of metadata stream failed with the following error:\n string

Cause: An unexpected error occurred while parsing the metadata stream.

Action: See the secondary error for more information.

ORA-39775: direct path API commit not allowed due to previous fatal error

Cause: An attempt was made to commit a Direct Path context after a fatal error.

Action: Correct the error and retry.

ORA-39776: fatal Direct Path API error loading table *string*

Cause: A fatal error was detected loading the specified or previous table.

Action: Correct the error and retry.

ORA-39777: data saves are not allowed when loading lob columns

Cause: An attempt was made to save data when loading lob columns or columns stored as lobs (such as varrays and xml types).

Action: Do not attempt to do a data save or partial save when loading lob columns. A finish save is allowed.

ORA-39778: the parallel load option is not allowed when loading lob columns

Cause: An attempt was made to load lob columns using the attribute OCI_ATTR_DIRPATH_PARALLEL. This error will also be issued when loading any columns that are stored as lobs (such as varrays and xml types).

Action: Do not use the parallel attribute when loading lob columns.

ORA-39779: type "*string*".*string*" not found or conversion to latest version is not possible

Cause: Unable to import table data using the specified type. The type was nonexistent in the database or the input type could not be converted to the existing type. The reasons why a conversion was not possible are: 1. The version of the type in the database was greater than the version of the type at export time because 1 or more attributes have been added or dropped from the type. 2. If the type existed in the database prior to the import operation, then its internal identifier may not match the internal identifier of the type from the export database. The identifiers must match for an import to succeed.

Action: Ensure the types in the database match those at export time.

ORA-39780: Direct path context operations are not allowed after the context is aborted or finished

Cause: The specified direct path context was aborted or finished.

Action: Do not pass a direct path context that has ended to any direct path functions.

ORA-39781: Direct path stream loads are not allowed after another context loading the same table has ended

Cause: Attempt to load a stream in one context after another loading the same table has ended.

Action: Close all contexts before trying to create another that loads the same table as a previous context in the same session.

ORA-39782: Direct path prepare is not allowed after another context loading the same table has ended

Cause: Direct path prepare called after a context loading the same table has ended.

Action: Close all contexts before trying to create another that loads the same table as a previous context in the same session.

ORA-39783: Invalid direct path transaction active

Cause: Direct path operations were not performed in the transaction started by the first OCIDirPathPrepare call.

Action: Ensure the correct transaction is active prior to calling Direct Path API operations.

ORA-39784: This direct path operation is not allowed while another is in progress

Cause: Another direct path operation was active.

Action: Complete any direct path operations in progress before attempting this operation.

ORA-39785: SQL expressions returning ADT objects are not allowed in direct path

Cause: The passed SQL expression returned a user-defined ADT which was not supported.

Action: Remove the SQL expression.

ORA-39786: Number of columns does not match between export and import databases

Cause: External tables could not import into a table with mismatched columns.

Action: Ensure the number of columns matches between export and import database.

ORA-39787: Column *string* subtype "*string*".*string* is not instantiable.

Cause: Subtype specified was not instantiable.

Action: Ensure all subtypes specified are instantiable.

ORA-39788: Subtype "*string*".*string* is specified multiple times for column *string*.

Cause: Subtype specified was not unique.

Action: Ensure all subtypes specified are unique.

ORA-39789: "*string*".*string* is not a valid type for column *string*.

Cause: Subtype specified was not a valid type for the column being loaded.

Action: Ensure all subtypes specified are valid types for the column being loaded.

ORA-39790: Attribute "*string*" specified multiple times for column *string*.

Cause: Attribute specified multiple times.

Action: Ensure all attributes specified are unique.

ORA-39791: Attribute "*string*" for column *string* is not in subtype "*string*".*string*.

Cause: Attribute was not included in the subtype indicated.

Action: Ensure the attribute is included in the subtype indicated by the specified subtype index.

ORA-39792: Attribute "*string*" is not valid for subtype(s) loaded into column *string*.

Cause: Attribute specified was not included in any subtypes specified for the column or the declared subtype of the column.

Action: Ensure the attribute is included in at least one of the subtypes loaded into the column.

ORA-39793: Attribute "string" is not unique within the hierarchy being loaded.

Cause: The attribute was defined in multiple lines of descent in the hierarchy being loaded.

Action: When describing the attribute, a subtype index must be specified to uniquely identify the attribute being loaded.

ORA-39794: No attributes loaded for subtype "string"."string".

Cause: None of the attributes loaded were included in the type shown.

Action: At least one attribute must be loaded for each subtype specified.

ORA-39795: Subtype index is not first attribute for object table or column, string.

Cause: The subtype index was not the first attribute when describing the attributes of an object column or object table with multiple subtypes.

Action: Describe the subtype index as the first attribute for this object column or object table.

ORA-39796: column array entry for string is not valid for the current subtype

Cause: This column was not part of the current subtype being loaded for this object column or table. Therefore, its entry must be null in the column array.

Action: Set the column array entry to null.

ORA-39797: The subtype index value is not valid.

Cause: The subtype index value in the column array was not valid for the object column or object table.

Action: Set a valid subtype index value in the column array for this table or column.

ORA-39798: The column array row offset *number* is out of range (max: *number*).

Cause: The specified row offset was too large for the column array.

Action: Ensure the row offset is in range.

ORA-39799: The column index *number* is out of range (max: *number*).

Cause: The specified column index was too large for the column array.

Action: Ensure the column index is in range.

ORA-39800: Database version *number* does not support the load of multiple subtypes.

Cause: Direct Path API support for loading multiple subtypes of an object table or column was only present in the Oracle 11 release and higher.

Action: Upgrade database to Oracle 11 or higher.

ORA-39801: Subtype "string"."string" is not a valid subtype for column *string*.

Cause: Subtype specified was not the declared type nor was it derived from the declared type.

Action: Ensure all subtypes specified are either the declared type or derived from the declared type.

ORA-39802: ADT object column *string* specified a SQL expression which is not allowed in direct path mode.

Cause: The ADT column reported in the error specified a SQL expression which returned the ADT. This is not supported.

Action: Remove the SQL expression.

ORA-39803: Data saves are not allowed on tables with partitioning referential constraints.

Cause: Data saves (and the sqlldr ROWS parameter) are not allowed when loading both the parent and child tables of a partitioning referential constraint.

Action: Do not attempt data saves when loading both the parent and child tables of a partitioning referential constraint.

ORA-39804: The load was aborted due to an error loading parent *string* while also loading child *string*.

Cause: An error occurred while loading the child and parent table of a partitioning referential constraint. The load was aborted to ensure the partitioning referential constraint was not violated.

Action: Fix the error that caused the load to abort and retry.

ORA-39805: Parallel loads are not allowed when loading child and parent.

Cause: A parallel load was requested when loading the child and parent of a partitioning referential constraint. This is not allowed.

Action: Remove the parallel option.

ORA-39806: The attempt to lock *string* parent table *string string string* failed.

Cause: While loading the child table of a partitioning referential constraint, the parent table must be locked in SHARE mode.

Action: Determine why the parent table could not be locked and retry.

ORA-39807: Partial data save on child *string* was ignored.

Cause: An attempt was made to partially save data when loading both the child and parent of a partitioning referential constraint or when loading a table with a domain index.

Action: Fix the error that caused the partial load and retry.

ORA-39808: The SINGLEROW option must be specified for parent table *string*.

Cause: The SINGLEROW option was not specified when loading both the parent and child table of a partitioning referential constraint.

Action: Ensure the SINGLEROW option is specified for the parent when loading the parent and child of a partitioning referential constraint.

ORA-39809: Data saves are not allowed on tables with domain indexes.

Cause: Data saves (and the sqlldr ROWS parameter) could not be allowed when loading a table with domain indexes.

Action: Do not attempt data saves when loading a table with domain indexes.

ORA-39810: Data saves are not allowed when NO_INDEX_ERRORS is specified.

Cause: Data saves (and the sqlldr ROWS parameter) could not be allowed when loading with the NO_INDEX_ERRORS option.

Action: Do not attempt data saves when loading a table with the NO_INDEX_ERRORS option.

ORA-39811: index *string.string* had the following error:

Cause: An error occurred on the index; error follows.

Action: Fix the error and retry.

ORA-39812: index *string.string* partition *string* had the following error:

Cause: An error occurred on the index; error follows.

Action: Fix the error and retry.

ORA-39813: index *string.string* had *string* partition errors:

Cause: A logical index error occurred on a partitioned index which affected one or more index partitions, which are listed below this message.

Action: Fix the error(s) and retry.

ORA-39814: The SKIP_INDEX_MAINTENANCE option is not allowed with NO_INDEX_ERRORS.

Cause: The SKIP_INDEX_MAINTENANCE option was used with the NO_INDEX_ERRORS option.

Action: Do not use SKIP_INDEX_MAINTENANCE with NO_INDEX_ERRORS.

ORA-39815: Direct Path Unload of an external table is not allowed.

Cause: An attempt was made to use Direct Path API Unload to unload an external table.

Action: Do not use Direct Path Unload to unload an external table.

ORA-39816: Direct Path Unload of tables with encrypted column(*string.string*) is not allowed.

Cause: An attempt was made to use Direct Path API Unload to unload a table with encrypted columns.

Action: Do not use Direct Path Unload to unload a table with encrypted columns.

ORA-39817: index *string.string* was ignored due to:

Cause: Index was unusable at the start of the load and it was requested that unusable indexes be skipped.

Action: No action required.

ORA-39818: index *string.string* partition *string* was ignored due to:

Cause: Index was unusable at the start of the load and it was requested that unusable indexes be skipped.

Action: No action required.

ORA-39819: The OCI_ATTR_DIRPATH_NO_INDEX_ERRORS attribute cannot be set to TRUE in direct path parallel loads.

Cause: An attempt was made to set the OCI_ATTR_DIRPATH_NO_INDEX_ERRORS attribute to TRUE in a direct path parallel load.

Action: Do not set the OCI_ATTR_DIRPATH_NO_INDEX_ERRORS to TRUE for direct path parallel loads.

ORA-39820: Zero length LONG piece detected for column *string* row *string*.

Cause: A zero length piece was detected for a LONG column.

Action: Do not use a length of zero when loading LONG columns.

ORA-39821: domain index on columnar data made unusable\n

Cause: An attempt was made to load a columnar table with a domain index using SQL*Loader direct part load

Action: n/a

ORA-39822: A new direct path operation is not allowed in the current transaction.
Cause: All previous direct path contexts ended and the current transaction was ready for a commit or abort of those changes.

Action: Commit or abort the current transaction, and start a new transaction for the next direct path context.

ORA-39823: The attribute OCI_ATTR_DIRPATH_USE_ACTIVE_TRANS is only allowed for load operations.

Cause: The attribute OCI_ATTR_DIRPATH_USE_ACTIVE_TRANS was set for a nonload operation.

Action: Use OCI_ATTR_DIRPATH_USE_ACTIVE_TRANS for load operations only.

ORA-39824: The OCI_ATTR_DIRPATH_USE_ACTIVE_TRANS attribute was set when no transaction was active.

Cause: There was no active transaction to use.

Action: Start a transaction or do not set the attribute OCI_ATTR_DIRPATH_USE_ACTIVE_TRANS to TRUE.

ORA-39825: Direct path load of view or synonym (*string.string*) with multiple dependencies not permitted.

Cause: An attempt was made to load a view or synonym which has more than a single dependency.

Action: A view or synonym being loaded by the direct path API must resolve to a single object.

ORA-39826: Direct path load of view or synonym (*string.string*) could not be resolved.

Cause: A synonym or view could not be translated.

Action: Verify that the view or synonym is valid.

ORA-39827: Direct path load of PL/SQL function not permitted.

Cause: An attempt was made to load a PL/SQL function with the direct path API.

Action: Remove PL/SQL function the direct path load.

ORA-39828: Constraint *string* was disabled because of index *string.string* error.

Cause: The index used for the constraint was set as unusable.

Action: Fix the error that caused the index to be set unusable.

ORA-39829: function-based index on columnar data made unusable\n

Cause: An attempt was made to load a columnar table with a function-based index using SQL*Loader direct path load.

Action: Rebuild the function-based index after the load completes.

ORA-39830: XML parsing failed \n*string*

Cause: XML parser returned an error while trying to parse the document.

Action: Fix the error that caused the document to be invalid.

ORA-39831: Direct path load failed, (*string.string*) is not a table.

Cause: Object being loaded did not resolve to a table.

Action: Verify that the view or table name is correct.

ORA-39832: Direct path unload was not allowed due to columns with default values.

Cause: Direct path unload was attempted on a table with columns that have default values.

Action: Do not attempt a direct path unload of a table with columns that have default values.

ORA-39833: Direct path parallel load was not allowed on a temporary table.

Cause: A direct path parallel load was attempted on a temporary table.

Action: Do not attempt a direct path parallel load on a temporary table.

ORA-39834: Direct path load or unload was not allowed on a remote table.

Cause: An attempt was made to specify a remote table in a direct path API load or unload.

Action: Do not specify a remote table in a direct path API load or unload.

ORA-39835: Direct path load partition memory exceeded. PGA use is *string*kb, PGA limit is: *string*kb

Cause: A direct path load ran out of process memory when loading multiple partitions.

Action: Use the PARTITION_MEMORY parameter to limit memory used when loading many partitions. Once this limit is reached, loading of some partition rows will be delayed until memory use falls below the limit. Use a value (kb) lower than the current program global area (PGA) limit included in this message and try the load again.

ORA-39861: auxiliary data file copy file for Pluggable Database *string*: "*string*"

Cause: This message reports the filename for details of another message.

Action: Other messages will accompany this message. See the associated messages for the appropriate action to take.

ORA-39862: RESETLOGS option only valid after a Pluggable Database incomplete recovery

Cause: The ALTER PLUGGABLE DATABASE OPEN RESETLOGS command was issued, but the Pluggable Database was not flashed back or point-in-time recovered.

Action: Retry the ALTER PLUGGABLE DATABASE OPEN command without specifying RESETLOGS.

ORA-39863: An earlier Pluggable Database incomplete recovery failed.

Cause: An earlier Pluggable Database flashback or point-in-time recovery failed.

Action: Retry the Pluggable Database flashback or incomplete recovery.

ORA-39865: cannot FLASHBACK beyond Pluggable Database resetlogs operation

Cause: An attempt was made to perform a FLASHBACK DATABASE beyond a Pluggable Database resetlogs system change number (SCN).

Action: Choose a FLASHBACK SCN that is more recent than the Pluggable Database resetlogs SCN.

ORA-39866: Data files for Pluggable Database *string* must be offline to flashback across PDB point-in-time recovery.

Cause: An attempt was made to perform a FLASHBACK DATABASE beyond a Pluggable Database (PDB) resetlogs system change number (SCN) while data files for the Pluggable Database are still online.

Action: Take the data files for the Pluggable Database (PDB) offline before performing the FLASHBACK DATABASE command. To bring the PDB to the same past point in time as the container database (CDB), those data files can be restored from backups and recovered to that same past point in time. This can be done in one of two ways: * Flashback the CDB and open the CDB with resetlogs. Restore the PDB later, and perform a complete PDB recovery. * Flashback the CDB first. Restore and recover the PDB to the same system change number (SCN). Open CDB with resetlogs.

ORA-39870: container database is not open in read/write mode

Cause: A command was attempted that requires the container database (CDB) to be open in read/write mode.

Action: Open the container database in read/write mode and try the command again.

ORA-39871: An earlier Pluggable Database resetlogs operation failed after making changes.

Cause: An earlier ALTER PLUGGABLE DATABASE OPEN RESETLOGS command failed after it made some changes.

Action: Perform another Pluggable Database point-in-time recovery before attempting to open the Pluggable Database with RESETLOGS.

ORA-39872: Data file *number* is in the middle of Pluggable Database resetlogs operation.

Cause: The data file was in the middle of a Pluggable Database resetlogs operation.

Action: Find the right file version or perform more media recovery. For additional information, see other errors.

ORA-39873: Restore all data files to a checkpoint SCN lower than *string*.

Cause: This error provides additional information for error 39874.

Action: Restore the data files as suggested and restart the recovery process.

ORA-39874: Pluggable Database *string* recovery halted

Cause: The Pluggable Database was recovered into an orphan branch.

Action: Restore all data files to a checkpoint system change number (SCN) lower than the branch point and restart the recovery process. Check the alert log for additional information.

ORA-39875: Data file *string* is in the middle of Pluggable Database resetlogs operation.

Cause: The data file is in the middle of a Pluggable Database (PDB) resetlogs operation.

Action: If possible, recover the data file further so that it is not in the middle of a PDB resetlogs operation. Another alternative is to perform PDB point-in-time recovery.

ORA-39876: cannot perform CDB OPEN RESETLOGS because data file *string* is in the middle of a PDB resetlogs operation

Cause: The data file mentioned was in the middle of a Pluggable Database (PDB) resetlogs operation.

Action: Recover the container database (CDB) to a different system change number (SCN) at which the data files are not in the middle of a PDB resetlogs operation. Alternatively, you can offline the problematic data file and let CDB OPEN RESETLOGS succeed. You may need to perform PDB point-in-time recovery later in order to open the PDB of the offlined data file.

ORA-39877: keyword ONLINE or OFFLINE expected

Cause: The ONLINE or OFFLINE keyword was not specified after the ALL keyword.

Action: Use the correct syntax.

ORA-39878: Only one Pluggable Database name can be specified.

Cause: Multiple Pluggable Database names were specified for the ALTER PLUGGABLE DATABASE OPEN RESETLOGS command.

Action: Specify only one Pluggable Database name.

ORA-39879: Pluggable Database *string* is in the middle of a Pluggable Database RESETLOGS operation

Cause: There was already an on-going Pluggable Database OPEN RESETLOGS operation for this Pluggable Database.

Action: If needed, retry after the Pluggable Database OPEN RESETLOGS operation completes.

ORA-39880: One or more pluggable databases were in the middle of a point-in-time recovery at this incomplete database recovery SCN.

Cause: In the past, one or more pluggable databases had an active pluggable database RESETLOGS operation as of this incomplete recovery SCN.

Action: Additional messages are logged in the alert log indicating all of the pluggable databases affected by this container database OPEN RESETLOGS operation. Recover the container database to a different system change number (SCN) at which none of the pluggable databases had an active RESETLOGS operation. To continue the container database OPEN RESETLOGS operation at the same SCN, offline all of the data files of the affected pluggable databases first and reissue the command. However, a new point-in-time recovery of the affected pluggable databases would be required before these databases can be opened again.

ORA-39881: Pluggable database *string* must be closed while recovering the physical standby across PDB RESETLOGS

Cause: The pluggable database (PDB) is open while the physical standby is recovering across a PDB RESETLOGS operation for the PDB.

Action: Close the PDB and restart physical standby recovery.

ORA-39901: Partitioned table *string.string* is partially contained in the transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Check table partitions by querying SYS.DBA_TAB_PARTITIONS.

ORA-39902: Subpartitioned table *string.string* is partially contained in the transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Check table subpartitions by querying SYS.DBA_TAB_SUBPARTITIONS.

ORA-39903: IOT Partition *string.string* is partially contained in the transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Check table partitions by querying SYS.DBA_IND_PARTITIONS.

ORA-39904: Partitioned object *string.string* is partially contained in the transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Check partitions and overflow segments by querying SYS.DBA_IND_PARTITIONS and SYS.DBA_TAB_PARTITIONS.

ORA-39905: Table *string.string* in tablespace *string* points to LOB segment *string.string* in tablespace *string*.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39906: Constraint *string* between table *string.string* in tablespace *string* and table *string.string* in tablespace *string*.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39907: Index *string.string* in tablespace *string* points to table *string.string* in tablespace *string*.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39908: Index *string.string* in tablespace *string* enforces primary constraints *string* of table *string.string* in tablespace *string*.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39909: Index *string.string* in tablespace *string* points to table/cluster *string.string* in tablespace *string*.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39910: Partitioned Global index *string.string* in tablespace *string* points to partition *string* of table *string.string* in tablespace *string* outside of transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39911: Index *string.string* in tablespace *string* points to partition *string* of table *string.string* in tablespace *string* outside of transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39912: Partitioned index *string.string* in tablespace *string* points to table *string.string* in tablespace *string* outside of transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39913: *string string.string* in tablespace *string* not allowed in transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39914: Index *string.string* in tablespace *string* points to subpartition *string* of table *string.string* in tablespace *string* outside of transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39915: Partition *string* of table *string.string* in tablespace *string* points to LOB segment *string.string* in tablespace *string*.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39916: Subpartition *string* of table *string.string* in tablespace *string* points to LOB segment *string.string* in tablespace *string*.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39917: SYS owned object *string* in tablespace *string* not allowed in pluggable set

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39918: PLSQL Functional Index *string.string* in tablespace *string* not allowed in transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39919: Object *string.string* in tablespace *string* not contained within transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Check SYS.DBA_OBJECTS.

ORA-39920: Rollback segment *string* in tablespace *string* not allowed in transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39921: Default Partition (Table) Tablespace *string* for *string* not contained in transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39922: Default Partition (Index) Tablespace *string* for *string* not contained in transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39923: Default Composite Partition (Table) Tablespace *string* for *string* not contained in transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39924: Default Composite Partition (Index) Tablespace *string* for *string* not contained in transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39925: LOB segment *string.string* in tablespace *string* points to table *string.string* in tablespace *string*.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39926: Join index between table *string.string* in tablespace *string* and table *string.string* in tablespace *string*.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39927: Scoped REF constraint between table *string.string* in tablespace *string* and table *string.string* in tablespace *string*.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39928: *string.string* in tablespace *string* contains evolved type data that have not been upgraded.

Cause: Transportable tablespace operation could not be performed because some tables depending on evolved types were not upgraded.

Action: Transportable tablespace operation can only be performed when all tables depending on evolved types have been upgraded. Perform ALTER TABLE <tab_name> UPGRADE for the table name listed in the message above

ORA-39929: Table *string.string* in tablespace *string* has encrypted columns which are not supported.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39930: Violation *string*.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Contact Oracle Support Services.

ORA-39931: XML Schema *string* Owner: *string* not fully contained in the transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Identify the associated elements and resolve self containment.

ORA-39932: Extensible Index *string.string* not fully contained in the transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Identify the associated table and list of secondary objects and resolve self containment.

ORA-39933: Parent table *string.string* and its nested table columns are not fully contained in the transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Identify the nested tables using view DBA_NESTED_TABLES and resolve self containment.

ORA-39934: Materialized view log *string.string* in tablespace *string* and master table *string.string* in tablespace *string* are not fully contained in the transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39935: Updatable materialized view log *string.string* in tablespace *string* and materialized view *string.string* in tablespace *string* are not fully contained in the transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39936: Token manager for the CSX tablespace *string* not fully contained in the transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Include the specified tablespace into the transportable set.

ORA-39937: Unsupported operation, default token tables used for binary XML data.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Copy default token tables into a new token table set using DBMS_CSX_ADMIN package.

ORA-39938: Operation not supported, tablespace *string* contains binary XML data.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39939: More than one set of token tables are used in tablespace *string*.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Remap tables in the specified tablespace to use same token tables.

ORA-39940: Child reference partitioned table *string.string* in tablespace *string* or parent table *string.string* in tablespace *string* is included but not both.

Cause: Informational message to describe a failure during transportable containment checking. Both parent and child reference partition tables must be included.

Action: Check reference partitioned tables.

ORA-39941: Partitioned table *string.string* in tablespace *string* has a partition that has an incomplete online move.

Cause: This is an informational message to describe a failure during transportable containment checking. Online moves need to be complete before transporting a tablespace.

Action: Use the DBMS_PART.CLEANUP_ONLINE_OP procedure to force the online move to complete.

ORA-39942: Subpartitioned table *string.string* in tablespace *string* has a subpartition that has an incomplete online move.

Cause: This is an informational message to describe a failure during transportable containment checking. Online moves need to be complete before transporting a tablespace.

Action: Use the DBMS_PART.CLEANUP_ONLINE_OP procedure to force the online move to complete.

ORA-39943: Global index *string.string* in tablespace *string* has orphaned entries.

Cause: This is an informational message to describe a failure during transportable containment checking. Orphaned entries need to be cleaned up before transporting a tablespace.

Action: Use DBMS_PART.CLEANUP_GIDX() to cleanup orphaned index entries.

ORA-39944: Global partitioned index *string.string* in tablespace *string* has orphaned entries.

Cause: This is an informational message to describe a failure during transportable containment checking. Orphaned entries need to be cleaned up before transporting a tablespace.

Action: Use DBMS_PART.CLEANUP_GIDX() to cleanup orphaned index entries.

ORA-39945: Token conflicting with existing tokens.

Cause: The binary XML tokens contained in the imported tablespace conflicted with the existing tokens.

Action: Use the dump file export or import instead of transportable tablespace.

ORA-39946: Nondefault token table encountered.

Cause: During transportable tablespace import, a nondefault token table was encountered.

Action: Use the dump file export or import instead of transportable tablespace.

ORA-39950: invalid parameter for PLSQL warnings flag

Cause: The user either entered invalid value for the PLSQL_WARNINGS flag or the value of the flag conflicts with other values.

Action: Enter correct values for the switch.

ORA-39951: incomplete values specified for PL/SQL warning settings

Cause: The user either did not enter the value for the settings or entered incomplete values.

Action: Enter correct syntax for the switch.

ORA-39952: only numbers can be specified as range values

Cause: The range values did not have numerical values only.

Action: Enter only numerical values.

ORA-39953: the range value specified is beyond allowed range

Cause: The range values were either too low or too high.

Action: Specify only the allowed range values.

ORA-39954: DEFERRED is required for this system parameter

Cause: The ALTER SYSTEM command for PLSQL_WARNINGS did not include the keyword, DEFERRED.

Action: Change the command to use the keyword, DEFERRED.

ORA-39955: invalid PL/SQL warning message number

Cause: The PL/SQL message number specified was not in a valid range.

Action: Specify PL/SQL warning message numbers within the valid range.

ORA-39956: duplicate setting for PL/SQL compiler parameter *string*

Cause: A PL/SQL compiler parameter was set more than once.

Action: Remove the duplicate PL/SQL compiler setting.

ORA-39957: invalid warning category

Cause: The category of the message was incorrect.

Action: Specify a valid category

ORA-39958: invalid warning category qualifier

Cause: The category qualifier was incorrect.

Action: Specify a valid category qualifier.

ORA-39959: invalid warning number (*string*)

Cause: The warning number was incorrect.

Action: Specify a valid warning number.

ORA-39960: scope can only be SYSTEM or SESSION

Cause: The scope specified was not set.

Action: Specify a valid scope, either SESSION or SYSTEM.

ORA-39961: message specified was not found

Cause: The message number specified was not set.

Action: specify the message number whose settings have been set in the given scope.

ORA-39962: invalid parameter for PLSQL_CCFLAGS

Cause: The value for the PLSQL_CCFLAGS parameter was not valid.

Action: Specify a valid value for the PLSQL_CCFLAGS parameter.

ORA-39964: Specified value for _PLSQL_MAX_STACK_SIZE (*string*) is larger than available memory (*string*)

Cause: The value specified for the _PLSQL_MAX_STACK_SIZE parameter was larger than the amount of stack size available to the process.

Action: Specify a smaller value for the _PLSQL_MAX_STACK_SIZE parameter.

ORA-39965: Collection of records with PL/SQL type attributes are not allowed in this context.

Cause: The collection of records with attributes of PL/SQL types were not allowed as an argument to the TABLE operator.

Action: Use the collection of records whose attributes are of the types that SQL can understand.

ORA-40001 to ORA-40570

ORA-40001: value for *string* must be greater than zero

Cause: The input parameter in question has a value of zero or less.

Action: Provide a value greater than zero for the relevant parameter.

ORA-40002: wordsize must be *string* or greater

Cause: The input wordsize is less than the prescribed limit for the BLAST Match or Align algorithm.

Action: Provide a wordsize greater than or equal to the prescribed value.

ORA-40003: wordsize must be in the range *string* - *string* for BLAST-P

Cause: The input wordsize has a value out of the prescribed range.

Action: Provide a wordsize value within the prescribed range for BLAST-P.

ORA-40004: penalty must be negative for BLAST-N

Cause: The input value provided for penalty is zero or greater.

Action: Provide a negative penalty value.

ORA-40021: no column named *string* in training table *string*

Cause: The training table does not contain the specified column

Action: Provide a case-id/target column that exists in the training table

ORA-40022: null case ID column - cannot provide row diagnostics in *string*

Cause: A row diagnostics table name was provided, but without a corresponding case or row identifier column in the build data.

Action: Provide a non-null case identifier column in the build data to identify rows in the row diagnostics table.

ORA-40023: sufficient memory could not be allocated given the number of attributes

Cause: Unable to allocate sufficient memory to create a model capable of producing confidence bounds on predictions because there were too many attributes or there were high cardinality categorical attributes, or both, in the build data.

Action: Reduce the number of attributes, especially high cardinality categoricals, or enable ridge regression.

ORA-40024: solution to least squares problem could not be found

Cause: Unable to find solution because the predictor covariance matrix was singular.

Action: Enable ridge regression or remove exact multicollinearities from the build data.

ORA-40025: reference class name not found in build data

Cause: The provided reference class name was not found in the build data.

Action: Provide an existing target value as the reference class name.

ORA-40026: reference class name not found in the weights table

Cause: The provided reference class name did not correspond to any of the entries in the weights table.

Action: Provide consistent specification for reference class name and weights table.

ORA-40027: Target attribute has more than two distinct values

Cause: Generalized Linear Models only support binary classification.

Action: Consolidate target values into two distinct categories.

ORA-40028: solution to least squares problem could not be found

Cause: Unable to find solution because the predictor build data were not properly scaled.

Action: Standardize the predictor build data by enabling auto prep.

ORA-40029: Specified diagnostics table name already exists

Cause: A diagnostics table name matching an existing table was specified.

Action: Choose a table name that does not match any existing user table.

ORA-40030: solution to least squares problem could not be found

Cause: Unable to find solution because the predictor covariance matrix was singular for the forced-in features.

Action: If there are forced-in features, remove them. If GLMS_FTR_ACCEPTANCE was set to GLMS_FTR_ACCEPTANCE_STRICT, reset it to GLMS_FTR_ACCEPTANCE_RELAXED and rebuild the model.

ORA-40031: insufficient memory for model build given the number of forced-in features (maximum allowable for this data: *string*)

Cause: Unable to allocate sufficient memory to create a feature-selection model because there were too many forced-in features or the forced-in features were high cardinality categorical attributes, or both.

Action: Reduce the number of forced-in attributes, especially high cardinality categoricals.

ORA-40032: solution to least squares problem could not be found

Cause: Unable to find solution because the predictor covariance matrix was singular for the selected features.

Action: If GLMS_FTR_ACCEPTANCE was set to GLMS_FTR_ACCEPTANCE_STRICT, reset it to GLMS_FTR_ACCEPTANCE_RELAXED and rebuild the model.

ORA-40101: Data Mining System Error *string-string-string*

Cause: An internal system error occurred during a data mining operation.

Action: Contact Oracle Support Services.

ORA-40102: invalid input *string* for data mining operation *string*

Cause: The input parameter is either null or invalid for the given operation.

Action: Provide a valid value. Check range for NUMBER parameters.

ORA-40103: invalid case-id column: *string*

Cause: The case-id column was invalid. If a case-id column is specified, it must be present in the input data source. The case-id column cannot be the same as the target column, and the column's data type is restricted to NUMBER, CHAR, and VARCHAR2 when building a GLM model with a diagnostics table.

Action: Change the schema of your input data to supply a case-id column of appropriate data type.

ORA-40104: invalid training data for model build

Cause: The training data provided in the reported table is unsuitable for build, either because it is empty, has unsuitable data, or the schema of the table does not match the input specifications.

Action: Inspect the training data and correct the contents/schema as appropriate.

ORA-40105: input data incompatible with model signature

Cause: The data provided for this post-build operation is in format different from that used for model build.

Action: Provide data whose attribute data types match the build data. Input data attributes must have the same data types as those described in the model signature for the model.

ORA-40106: positive target value not specified for computing Lift

Cause: Positive target value has not been specified for Lift.

Action: Provide a positive target value for the Lift operation.

ORA-40107: operation requires *string* option to be installed

Cause: The specified option has not been installed with the RDBMS.

Action: Install the reported option and retry the operation.

ORA-40108: input data contains too few distinct target (*string*) values

Cause: At least two distinct target values are required for Build.

Action: Provide counter-example target values in the input data.

ORA-40109: inconsistent logical data record

Cause: Repeated instances of a record identifier or repeated attribute(s) in a nested column.

Action: Remove or re-label repeated instances to resolve inconsistencies.

ORA-40110: Duplicate model tables found for table type *string*

Cause: Operation would result in duplicate model table types which is not supported.

Action: Remove the duplicate entry.

ORA-40111: no mining attributes found in build data

Cause: Could not build a model when only special or empty columns were present. Special columns include target, row weight, and case ID columns.

Action: Provide mining attribute data.

ORA-40112: insufficient number of valid data rows

Cause: Fewer than two valid data rows were found in the build data.

Action: Provide at least two valid build data rows. If the model is either a classification or regression model, then valid rows must have non-NULL targets. If a

weight column was provided, then valid rows must have positive row weights. In addition, if DELETE_ROW missing value treatment was used, consider disabling it.

ORA-40113: insufficient number of distinct target values

Cause: Less than two distinct target values were found in the build data.

Action: Provide the classification build data with valid rows containing at least two distinct target values. Valid rows must have non-NULL targets. If a weight column was provided, then valid rows must have positive row weights. In addition, if DELETE_ROW missing value treatment was used, consider disabling it.

ORA-40114: weights table target values mismatched with build data

Cause: The entries in the weights table did not correspond to the target values in the build data.

Action: Verify the entries in the weights table.

ORA-40115: weights table schema is incorrect

Cause: The weights table did not have the required schema.

Action: Provide a weights table with schema: (target_value, weight), where the type of the first column corresponds to the type of the target column (CHAR, VARCHAR2 or NUMBER) and the type of the second column is NUMBER.

ORA-40116: NULL values found in weights table

Cause: The weights table had NULL entries.

Action: Replace or eliminate all NULL entries in the weights table.

ORA-40117: repeated target values found in weights table

Cause: The weights table had repeated target values.

Action: Remove the repeated target values from the weights table.

ORA-40118: insufficient number of target values in weights table

Cause: The weights table had less than 2 target values.

Action: Provide at least two target values in the weights table.

ORA-40119: nested columns incompatible with missing value treatment

Cause: delete_row missing value treatment is not supported for nested columns.

Action: Use 2D (non-nested) data representation or manually delete the rows with NULL values and disable the delete_row missing value treatment.

ORA-40120: invalid weight value in the weights table

Cause: Negative or zero weight values were found in the weights table.

Action: Ensure that weight values in the weights table are positive.

ORA-40121: force option not allowed for drop model in different schema

Cause: The force option was specified, but the model is in a different schema.

Action: If the force option is necessary, run the drop model from the owning schema. If the force option is not necessary, set the force parameter to FALSE.

ORA-40122: invalid data type for row weights column *string*.

Cause: Row weights column was not assigned one of the allowed data types.

Action: Choose a row weight column of type NUMBER or FLOAT.

ORA-40123: invalid row weights column *string*

Cause: Row weights column was the same as the target column.

Action: Choose a new row weights column.

ORA-40181: invalid transformation definition for column *string*

Cause: Transformation definition has duplicate or NULL columns.

Action: Provide a valid transformation definition specification.

ORA-40182: invalid column reference

Cause: Transformation expression has no column references or more than one reference or the reference is qualified.

Action: Provide a valid expression.

ORA-40183: invalid stack definition for attribute *string*

Cause: Stack definition expression or reverse expression has syntax errors or it does not match the transformation definition.

Action: Provide a valid expression.

ORA-40184: transformation definition does not match the data

Cause: Transformation definition specifies nested transformation for non-nested data or it removes all of the columns.

Action: Provide a valid data.

ORA-40201: invalid input parameter *string*

Cause: The input parameter was either null or invalid.

Action: Provide a valid value for the input parameter.

ORA-40202: column *string* does not exist in the input table *string*

Cause: The column was missing from the table.

Action: Correct the table schema and/or provide the correct column name.

ORA-40203: model *string* does not exist

Cause: The model did not exist.

Action: Supply a valid model name.

ORA-40204: model *string* already exists

Cause: A model by the same name exists.

Action: Provide a different, unique name for the model.

ORA-40205: invalid setting name *string*

Cause: The input setting name was invalid.

Action: Consult the documentation for the settings table and provide a valid setting name.

ORA-40206: invalid setting value for setting name *string*

Cause: The input value for the given setting name was invalid.

Action: Consult the documentation for the settings table and provide a valid setting value.

ORA-40207: duplicate or multiple function settings

Cause: The input settings table contained settings for multiple mining functions.

Action: Provide setting(s) for a single function in the settings table.

ORA-40208: duplicate or multiple algorithm settings for function *string*

Cause: The input settings table had duplicate or multiple algorithm settings for a mining function.

Action: Provide only one appropriate algorithm setting for the mining function.

ORA-40209: setting *string* is invalid for *string* function

Cause: The specified setting was not supported for the mining function supplied.

Action: Provide appropriate combination of function and algorithm settings.

ORA-40210: invalid score criterion type when cost matrix is specified

Cause: The score criterion type may not be 'PROBABILITY' when a cost matrix is specified.

Action: Set score criterion type to 'COST' or don't specify a cost matrix.

ORA-40211: algorithm name *string* is invalid

Cause: Algorithm name for the model was invalid or the operation was not valid for the algorithm.

Action: Check the algorithm name for the model and verify that the operation is valid.

ORA-40212: invalid target data type in input data for *string* function

Cause: Target data type was invalid.

Action: Classification function accepts CHAR, VARCHAR2, and NUMBER targets. Regression function accepts NUMBER targets only.

ORA-40213: contradictory values for settings: *string*, *string*

Cause: The settings values were not compatible.

Action: Check the documentation and change the setting value(s).

ORA-40214: duplicate setting: *string*

Cause: Duplicate setting in the settings table.

Action: Remove the duplicate setting from the settings table.

ORA-40215: model *string* is incompatible with current operation

Cause: The current operation was not supported for the mining function the model corresponds to.

Action: Provide the model name suitable for current operation.

ORA-40216: feature not supported

Cause: The feature was not supported in the API.

Action: Modify the code to avoid usage of the feature.

ORA-40217: priors table mismatched with training data

Cause: The entries in the priors table do not correspond to the targets in the training data.

Action: Verify the entries in the priors table.

ORA-40218: Both priors table and weights table are specified

Cause: Both a priors table and a weights table are specified for SVM model build.

Action: Priors table is the old (pre 11g) mechanism for specifying class weights, and class weights table is the new (and correct) way to specify class weights. Remove the priors table entry from the settings table (after transferring class weight settings, if appropriate). Going forward, priors table will be valid only for NB models. Use class weights for SVM.

ORA-40219: apply result table *string* is incompatible with current operation

Cause: The current operation was not allowed for the apply result table supplied.

Action: Make sure the operation being performed is valid for the mining function used to build the model (using which the apply result table was created).

ORA-40220: maximum number of attributes exceeded

Cause: The data had too many attributes.

Action: Reduce the dimensionality of the data.

ORA-40221: maximum target cardinality exceeded

Cause: The target cardinality of the training data was too high.

Action: Reduce the target cardinality.

ORA-40222: data mining model export failed, job name=*string*, error=*string*

Cause: The model export job failed.

Action: Check export job settings as required by DataPump.

ORA-40223: data mining model import failed, job name=*string*, error=*string*

Cause: The model import job failed.

Action: Check import job settings as required by DataPump.

ORA-40224: transactional input - no matching id for value column *string*

Cause: The training data is transactional - and a value column is specified without a matching id specification.

Action: Specify a valid id column name as input

ORA-40225: model is currently in use by another process

Cause: The model is currently in use by another process.

Action: Retry if necessary.

ORA-40226: model upgrade/downgrade must be performed by SYS

Cause: Upgrade/Downgrade routines are being invoked by a user with insufficient privileges.

Action: Run the routines as SYS during migration.

ORA-40227: invalid transformation attribute

Cause: Transformation list provided to CREATE_MODEL has duplicate or NULL attributes. Case ID or target attribute has attribute_subname that is not NULL. Attribute provided to ALTER_REVERSE_EXPRESSION does not exist in the model.

Action: Remove NULLs and duplicates and fix case ID and target attributes or provide a valid attribute for a given model.

ORA-40228: scoring cost matrix already exists

Cause: The model already has a scoring cost matrix.

Action: To add a new scoring cost matrix the existing one should be removed first.

ORA-40229: scoring cost matrix not found

Cause: The model does not have a scoring cost matrix.

Action: To remove a scoring cost matrix the model should have one.

ORA-40230: invalid transformation expression

Cause: Expression has syntax or semantic errors.

Action: Provide a valid expression.

ORA-40231: transactional input incompatible with specified algorithm

Cause: Training data in transactional format is not accepted for model creation using the specified mining algorithm.

Action: Pivot the data into 2D tabular format, or provide the transactional input through a nested table column.

ORA-40232: transactional input - incompatible datatype for column *string*

Cause: The data type of the column in the input training data is not supported.

Action: Cast or change the type of the column to one of CHAR, VARCHAR, NUMBER or FLOAT

ORA-40233: transactional input - case id should be provided with id *string*

Cause: The training data is transactional by virtue of presence of a and item id - but does not have a case id specification.

Action: Specify a valid case id column name as input

ORA-40234: reverse expression incompatible with model cost matrix

Cause: A cost matrix existed for this model with actual and predicted values which were inconsistent with the values resulting from the specified reverse transformation.

Action: Either remove the cost matrix table and re-add it with the new actual and predicted values, or respecify the reverse transformation to be consistent with the existing cost matrix.

ORA-40251: no support vectors were found

Cause: The input data is non-predictive in nature, or one of the input settings is incorrect/incompatible with respect to the input data.

Action: Provide additional data or change model setting value.

ORA-40252: no target values were found

Cause: No target values were identified during load.

Action: Validate that the target is correctly specified.

ORA-40253: no target counter examples were found

Cause: One or more of the target classes have only positive examples.

Action: Provide counter examples or remove that target class.

ORA-40254: priors cannot be specified for one-class models

Cause: Priors were specified.

Action: Do NOT provide priors for one-class models.

ORA-40255: specified priors or weights table has an incorrect schema

Cause: The priors or class weights table whose name is specified in the settings does not have the prescribed schema. A priors table should have the schema (target_value, prior_probability) and a class weights table should have the schema (target_value, class_weight)

Action: Modify the schema of the input priors or class weights table to match the ones provided above (also in the documentation).

ORA-40261: input data for model build contains negative values

Cause: The input data contains negative values, which is not acceptable for a Non-negative Matrix Factorization model.

Action: Provide clean data for build without any negative values.

ORA-40262: NMF: number of features not between [1, string]

Cause: The number of requested features must be greater than 1, and less than the smaller of the number of attributes and the number of cases in the dataset.

Action: Specify the desired number of features within the acceptable range.

ORA-40263: no meaningful matrix factorization found

Cause: Input data was not significantly different from 0.

Action: Check your data for problems or add a positive constant to all the numeric attributes.

ORA-40264: number of mining attributes (string) exceeds maximum (string)

Cause: Input data was found to contain a number of mining attributes exceeding the maximum allowed.

Action: Check the input data for categorical fields with high cardinality.

ORA-40271: no statistically significant features were found

Cause: Input data inadequate in volume and/or quality to derive statistically significant predictors for building a data mining model.

Action: Provide a well-prepared training data set.

ORA-40272: apply rules prohibited for this model mode

Cause: Adaptive Bayes Network rules are only generated for SingleFeature ABN models

Action: Rebuild model in SingleFeature mode and then apply with rules.

ORA-40273: invalid model type string for Adaptive Bayes Network algorithm

Cause: The valid values for the abns_model_type settings are: abns_multi_feature, abns_single_feature, abns_naive_bayes.

Action: Use a valid value for the abns_model_type setting.

ORA-40274: the Adaptive Bayes Network algorithm is deprecated

Cause: An attempt was made to score an Adaptive Bayes Network model.

Action: Drop the existing model and build a new model using a supported classification algorithm.

ORA-40281: invalid model name

Cause: A model name is invalid or does not exist.

Action: Check spelling. A valid model name must begin with a letter and may contain only alphanumeric characters and the special characters \$, _, and #. The name must be less than or equal to 30 characters and cannot be a reserved word.

ORA-40282: invalid cost matrix

Cause: Cost matrix specification is invalid.

Action: Provide valid cost matrix specification. Check syntax for data mining functions.

ORA-40283: missing cost matrix

Cause: Cost matrix specification is missing.

Action: Provide valid cost matrix specification. Check syntax for data mining functions.

ORA-40284: model does not exist

Cause: The model entered does not exist.

Action: Check spelling.

ORA-40285: label not in the model

Cause: The user-specified label was not present in the model.

Action: Provide a valid label. The set of valid labels can be retrieved from a classification model by invoking PREDICTION_SET, from a clustering model by invoking CLUSTER_SET, and from a feature extraction model by invoking FEATURE_SET.

ORA-40286: remote operations not permitted on mining models

Cause: An attempt was made to perform queries or DML operations on remote tables using local mining models.

Action: Remove the reference to remote tables in the statement.

ORA-40287: invalid data for model - cosine distance out of bounds

Cause: The norm computed using attribute values from the incoming row for the cosine model is outside the range 0-1.

Action: Remove or correct the data in the offending row.

ORA-40289: duplicate attributes provided for data mining function

Cause: A duplicate, non-nested attribute was provided as input to the data mining function. A duplicate attribute is one which is present in the model signature, occurs more than once in the USING clause after tablename expansion, and is not a collection element in a nested table column.

Action: Eliminate the duplicate attribute(s).

ORA-40290: model incompatible with data mining function

Cause: The supplied model cannot be operated upon by the data mining function because the model is built for a mining function and/ or based on an algorithm that is incompatible with function.

Action: Provide the name of the model suitable for the function.

ORA-40291: model cost not available

Cause: The supplied model was assumed to have been built with a cost matrix specification, when in reality, it was not.

Action: Provide a model name that corresponds to a model that was built with an appropriate cost matrix specification.

ORA-40292: confidence level must be greater than 0 and less than 1

Cause: The specified value for confidence level is out of range.

Action: Specify a value for confidence level in the range $0 < \text{level} < 1$

ORA-40293: input class is invalid for the specified predictive model

Cause: The specified model is either not a classification model, or does not have the input class label as one of its target values.

Action: Provide the correct target value (class label) or provide the appropriate classification model with the target attribute that has the specified class label as one of its values.

ORA-40301: invalid cost matrix specification

Cause: A valid cost matrix is not specified.

Action: Consult documentation for valid cost matrix specification.

ORA-40302: invalid classname *string* in cost matrix specification

Cause: Actual or predicted classname specified is not present in training data

Action: Provide valid classname(s) in cost matrix specification

ORA-40303: invalid prior probability specification

Cause: Valid prior probabilities not specified. Valid probabilities should be between 0 and 1.

Action: Consult documentation for valid prior probability specification.

ORA-40304: invalid classname *string* in prior probability specification

Cause: Actual or predicted classname specified is not present in training data.

Action: Provide valid classname(s) in prior probability specification.

ORA-40305: invalid impurity metric specified

Cause: Impurity metric specified is not valid. Examples of valid metrics are TREE_IMPURITY_GINI, TREE_IMPURITY_ENTROPY.

Action: Consult documentation for valid impurity metrics and specification.

ORA-40306: dm_nested types not supported by this algorithm

Cause: The training input to the CREATE_MODEL routine contained one or more columns of DM_NESTED type (DM_NESTED_NUMERICALS or DM_NESTED_CATEGORICALS). These columns are currently not supported by Orthogonal Partitioning Clustering (O-Cluster).

Action: Remove columns of these data types from the input data source.

ORA-40307: nested attribute combined name and value too long

Cause: The data that was presented to the decision tree algorithm was too long. The length is computed from the sum of the length of the nested attribute name and the length of the attribute value.

Action: Reduce the length of the attribute name or reduce the length of the categorical value (perhaps by recoding).

ORA-40321: invalid bin number, is zero or negative value

Cause: Input bin number has zero or negative values.

Action: Provide positive bin numbers starting from 1.

ORA-40322: bin number too large

Cause: Bin number is too large.

Action: Reprocess build data by choosing smaller bin numbers.

ORA-40323: Attribute *string* has too many distinct values (*string*)

Cause: Exceeded maximum number of distinct values allowed in an attribute.

Action: Bin numerical data with fewer than 1024 bins or recode categorical data with fewer than 1024 unique values.

ORA-40324: All rows contain the same data

Cause: All rows contained the same data and could not be clustered using k-Means with cosine distance metric.

Action: Use Euclidean distance metric.

ORA-40341: access violation on model storage object

Cause: An attempt was made to directly access/modify a schema object that stores model metadata and content.

Action: Perform all mining operations (create,drop,alter, and select using data mining functions) against named model objects. Contact your DBA or Oracle Support if you suspect that an orphaned schema object.

ORA-40342: model was not correctly upgraded

Cause: An attempt was made to use a model, but the model was not correctly upgraded to the current release. This is most likely caused by importing a model from an old release without upgrading it, but could also be caused by a failed database upgrade.

Action: Invoke the SYS.DMP_SYS.UPGRADE_MODELS() procedure.

ORA-40343: invalid version specified in UPGRADE_MODELS

Cause: An invalid version was specified when invoking the UPGRADE_MODELS procedure. Valid values for the version are 10.2.0, 11.0.0, 12.0.0, and NULL.

Action: Specify a valid version for UPGRADE_MODELS.

ORA-40350: One or more models exist that cannot be downgraded

Cause: There are data mining models in the database that were created in a release beyond the selected release for downgrade.

Action: Prior to downgrade, drop data mining models that cannot be downgraded to the selected release.

ORA-40361: only SELECT and ALTER are valid for mining models

Cause: An attempt was made to grant or revoke an invalid privilege on a mining model.

Action: Do not attempt to grant or revoke any privilege besides SELECT or ALTER on mining models.

ORA-40362: invalid object *string.string* specified in the statement

Cause: An attempt was made to grant a privilege on an invalid object.

Action: Make sure the dependents of the object are valid before attempting // to grant the privilege on the object.

ORA-40381: Invalid field specification for: *string*

Cause: The derived field was incorrectly defined.

Action: Make sure the field is correctly defined in the PMML document.

ORA-40382: More than one linear regression equation in the model

Cause: More than one linear regression equation was in the model.

Action: Make sure there is only one linear regression equation in the model.

ORA-40383: No model found in PMML document

Cause: There was no model found in the PMML document.

Action: Make sure the PMML document contains a model section.

ORA-40384: Only one model allowed in PMML document

Cause: More than one model existed in the PMML document.

Action: PMML model import only supports one model per PMML document. Make sure only one model exists in the PMML document.

ORA-40385: Target has more than two categories

Cause: The target contained more than two categories.

Action: PMML model import supports only binary logistic regression. Make sure the target contains no more than two categories.

ORA-40386: NormContinuous must include at least two LinearNorm elements

Cause: NormContinuous included less than two LinearNorm elements.

Action: NormContinuous must include at least two LinearNorm elements. Make sure at least two LinearNorm elements are included.

ORA-40387: Invalid interval for Discretize field: *string*

Cause: The intervals were incorrect.

Action: Make sure that both margins are not missing.

ORA-40388: Unsupported feature in PMML document: *string*

Cause: The feature was not supported by PMML model import.

Action: Please make sure to use supported features.

ORA-40389: Unsupported PMML transformation: *string*

Cause: The transformation was not supported.

Action: Make sure to use supported transformations.

ORA-40390: PMML DerivedField must have a unique name specified: *string*

Cause: A DerivedField did not reference another defined field.

Action: A DerivedField did not have a unique name specified. Make sure to specify a unique name for each DerivedField.

ORA-40391: PMML DerivedField depends on a undefined field: *string*

Cause: A DerivedField may only reference other defined fields.

Action: Make sure DerivedFields reference other defined fields.

ORA-40392: PMML regression equation references an undefined field: *string*

Cause: Regression equation did not reference defined fields.

Action: Regression equation may only reference defined fields. Make sure all fields are defined.

ORA-40401: categorical attributes are not supported by this algorithm

Cause: The build data provided to the CREATE_MODEL routine contained one or more categorical attributes of types CHAR, VARCHAR2, or DM_NESTED_CATEGORICAL. These attributes are currently not supported for the SVD algorithm.

Action: Remove the categorical attributes from the build data.

ORA-40402: cannot output U matrix without a valid case identifier column

Cause: A U matrix was requested, but there was no case identifier column in the build data.

Action: Provide a non-null case identifier column in the build data.

ORA-40403: model does not have any valid features

Cause: All singular values in the SVD model were equal to zero. This can occur if the build data contains only zeros or all build columns have constant values and automatic data preparation is turned on.

Action: Inspect and modify the build data.

ORA-40404: approximate computation cannot be disabled for the build data

Cause: The build data had a very high number of attributes. An SVD model can be built only by enabling approximate computation.

Action: Enable approximate computation.

ORA-40421: missing text policy name

Cause: Text policy name was missing.

Action: Provide a valid text policy name created using CTX_DDL.CREATE_POLICY().

ORA-40422: TEXT attribute types not supported by this algorithm

Cause: The training input to the CREATE_MODEL routine contained one or more attributes of TEXT type. These attributes are currently not supported by Orthogonal Partitioning Clustering (O-Cluster).

Action: Remove attributes of these types from the input data source.

ORA-40441: JSON syntax error

Cause: The provided JavaScript Object Notation (JSON) data had invalid syntax and could not be parsed.

Action: Provide JSON data with the correct syntax.

ORA-40442: JSON path expression syntax error ('string')

Cause: The provided JavaScript Object Notation (JSON) path expression had an invalid syntax and could not be parsed.

Action: Provide JSON path expression with the correct syntax.

ORA-40443: unsupported JSON path expression

Cause: The provided JavaScript Object Notation (JSON) path expression contained unsupported features.

Action: Remove unsupported features from JSON path expression.

ORA-40444: JSON processing error

Cause: The requested JavaScript Object Notation (JSON) operation failed.

Action: Make sure the JSON operation is invoked correctly.

ORA-40445: unsupported JSON operation

Cause: The requested JavaScript Object Notation (JSON) operation is not supported.

Action: None

ORA-40446: expecting keyword STREAM

Cause: The JavaScript Object Notation (JSON) operator expected the keyword STREAM.

Action: Add the keyword STREAM to the JSON operator.

ORA-40447: expecting PASSING clause

Cause: The JavaScript Object Notation (JSON) operator expected a PASSING clause.

Action: Add a PASSING clause to the JSON operator.

ORA-40448: expecting RETURNING clause

Cause: The JavaScript Object Notation (JSON) operator expected a RETURNING clause.

Action: Add a RETURNING clause to the JSON operator.

ORA-40449: invalid data type for return value

Cause: The provided data type for the return value was invalid or unsupported.

Action: Provide a supported return value.

ORA-40450: invalid ON ERROR clause

Cause: The provided ON ERROR clause was invalid.

Action: Provide a valid ON ERROR clause.

ORA-40451: invalid default value provided

Cause: The provided default value was not allowed here.

Action: Provide a valid default value.

ORA-40452: default value not matching type defined in RETURNING clause

Cause: The provided default value did not match the type defined in RETURNING clause.

Action: Make sure that the default value and RETURNING clause are of the same type.

ORA-40453: JSON operator syntax error

Cause: The provided JavaScript Object Notation (JSON) operator had invalid syntax.

Action: Provide JSON operator with correct syntax.

ORA-40454: path expression not a literal

Cause: The provided path expression was not a literal (a constant).

Action: Provide a constant path expression.

ORA-40455: default value not a literal

Cause: The provided default value was not a literal (a constant).

Action: Provide a constant default value.

ORA-40456: JSON_VALUE evaluated to non-scalar value

Cause: The provided JavaScript Object Notation (JSON) path expression selected a non-scalar value.

Action: Correct the JSON path expression or use JSON_QUERY.

ORA-40457: JSON path expression contained an invalid array index

Cause: The provided JavaScript Object Notation (JSON) path expression contained an invalid array index.

Action: Provide array index greater 0. The first element in the array has the index 1.

ORA-40458: JSON_EXISTS used outside predicate

Cause: The operator JSON_EXISTS was used outside a predicate.

Action: Use JSON_EXISTS inside a predicate, for instance by embedding it inside a CASE expression.

ORA-40459: output value too large (actual: *string*, maximum: *string*)

Cause: The provided JavaScript Object Notation (JSON) operator generated a result which exceeds the maximum length specified in the RETURN clause.

Action: Increase the maximum size of the data type in the RETURNING clause or use a CLOB/BLOB in the RETURNING clause.

ORA-40460: default value too large

Cause: The provided default value exceed the maximum length specified in the RETURN clause.

Action: Increase the maximum size of the data type in the RETURNING clause or reduce the length of the default value.

ORA-40461: Unsupported character set

Cause: The provided JavaScript Object Notation (JSON) operator does not supported the current database character set.

Action: Chose a different database character set, for instance AL32UTF8, AL16UTF16, or a single byte character set.

ORA-40462: JSON_VALUE evaluated to no value

Cause: The provided JavaScript Object Notation (JSON) path expression did not select a value.

Action: Correct the JSON path expression.

ORA-40463: JSON path expression contained an invalid variable name

Cause: The provided JavaScript Object Notation (JSON) path expression contained a variable name that is not used in the PASSING clause.

Action: Make sure that the variable names in the path expression and PASSING clause match.

ORA-40464: JSON PASSING clause contained duplicate variable names

Cause: The provided JavaScript Object Notation (JSON) PASSING clause contained non-unique variable names.

Action: Rename the variables in the PASSING clause.

ORA-40465: JSON PASSING clause contained too many unnamed parameters

Cause: The provided JavaScript Object Notation (JSON) PASSING clause contained too many unnamed parameters.

Action: Assign names to the parameters provided in the PASSING clause.

ORA-40466: Invalid parameter in IS [NOT] JSON predicate

Cause: The IS [NOT] JSON predicate contains an invalid parameter.

Action: Remove or correct the parameter.

ORA-40467: JSON_TEXTCONTAINS() cannot be evaluated without JavaScript Object Notation (JSON) index

Cause: There was no JSON-enabled context index available.

Action: Create a JSON-enabled context index.

ORA-40468: first input parameter to JSON_TEXTCONTAINS() must be a column

Cause: The first input parameter to JSON_TEXTCONTAINS() was not a column.

Action: Pass a column to the first input parameter to JSON_TEXTCONTAINS().

ORA-40469: JSON path expression in JSON_TEXTCONTAINS() is invalid

Cause: A predicate or array position was used in JavaScript Object Notation (JSON) path expression.

Action: Do not use a predicate or array position in a JSON path expression.

ORA-40470: JSON_VALUE evaluated to multiple values

Cause: The provided JavaScript Object Notation (JSON) path expression selected more than one value.

Action: Correct the JSON path expression or use JSON_QUERY.

ORA-40471: selected value not JSON array or object

Cause: The selected value was not a JavaScript Object Notation (JSON) value. (object or array)

Action: Use CAST AS ARRAY to return this value.

ORA-40472: invalid escape in JSON data

Cause: The provided JavaScript Object Notation (JSON) data had an invalid escape sequence.

Action: Provide JSON data with corrected escape sequence.

ORA-40473: duplicate key names in JSON object

Cause: The provided JavaScript Object Notation (JSON) data had duplicate key names in one object.

Action: Provide JSON data with unique key names in each JSON object.

ORA-40474: invalid UTF-8 byte sequence in JSON data

Cause: The provided JavaScript Object Notation (JSON) data had an invalid UTF-8 byte sequence.

Action: Provide JSON data with corrected UTF-8 byte sequence or escape the characters.

ORA-40475: JSON data nested too many levels

Cause: The provided JavaScript Object Notation (JSON) data had too many levels of nesting.

Action: Provide JSON data with fewer levels of nesting.

ORA-40476: JSON key too long

Cause: The provided JavaScript Object Notation (JSON) data had a key which exceeds the maximum length.

Action: Provide JSON data with shorter key names.

ORA-40477: internal JSON error

Cause: There was an internal error in the JavaScript Object Notation (JSON) processing layer.

Action: None

ORA-40478: output value too large (maximum: *string*)

Cause: The provided JavaScript Object Notation (JSON) operator generated a result which exceeds the maximum length specified in the RETURN clause.

Action: Increase the maximum size of the data type in the RETURNING clause or use a CLOB or BLOB in the RETURNING clause.

ORA-40479: internal JSON serializer error

Cause: There was an internal error in the JavaScript Object Notation (JSON) serializer).

Action: None

ORA-40480: result cannot be returned without array wrapper

Cause: The JavaScript Object Notation (JSON) path expressions selected a value that can only be returned inside an array.

Action: Add WITH ARRAY WRAPPER to the JSON function.

ORA-40481: ASCII or PRETTY not supported for non-textual return data type

Cause: An attempt was made to pretty print or escape non-ASCII characters for a non-textual output of a JSON operation.

Action: Change return data type to VARCHAR2 or CLOB or remove the PRETTY or ASCII serialization option.

ORA-40482: JSON_TEXTCONTAINS() used outside predicate of WHERE clause

Cause: JSON_TEXTCONTAINS() was used outside of the predicate of a WHERE clause.

Action: Use JSON_TEXTCONTAINS() inside a predicate of a WHERE clause.

ORA-40483: incorrect search string to JSON_TEXTCONTAINS()

Cause: An incorrect search string to JSON_TEXTCONTAINS() was used.

Action: The search string to JSON_TEXTCONTAINS() needs to be a non-zero length compile time constant.

ORA-40484: invalid data type for JSON_TABLE column

Cause: A column in the provided JSON_TABLE had an unsupported data type.

Action: Provide a supported data type.

ORA-40485: keyword PRETTY not valid for this column

Cause: A JSON_TABLE column with JSON_VALUE semantics could not be pretty printed.

Action: Change column semantics to JSON_QUERY or remove the keyword PRETTY.

ORA-40486: array wrapper not valid for this column

Cause: A JSON_TABLE column with JSON_VALUE semantics could not have an array wrapper.

Action: Change column semantics to JSON_QUERY or remove the array wrapper.

ORA-40487: invalid usage of keyword EXISTS

Cause: A JSON_TABLE column with JSON_EXISTS semantics had invalid parameters.

Action: Remove the invalid keywords.

ORA-40488: invalid ON ERROR clause for column semantics

Cause: An ON ERROR clause was provided that was not valid for the selected column semantics.

Action: Change or remove the ON ERROR clause or change the column semantics.

ORA-40489: keyword ASCII not valid for this column

Cause: A JSON_TABLE column with JSON_VALUE semantics could not be pretty printed.

Action: Change column semantics to JSON_QUERY or remove keyword ASCII.

ORA-40490: COLUMNS clause required

Cause: The provided JSON_TABLE row source requires a COLUMNS clause.

Action: Provide a COLUMNS clause.

ORA-40491: invalid input data type for JSON_TABLE

Cause: The provided input to JSON_TABLE has an unsupported data type.

Action: Provide a (N)VARCHAR2, (N)CLOB, RAW, BLOB or BFILE input.

ORA-40492: invalid column definition in JSON_TABLE

Cause: A column definition inside JSON_TABLE was invalid.

Action: Correct the column definition.

ORA-40493: invalid option or parameter in JSON_TABLE

Cause: The provided JSON_TABLE definition contained one or more invalid options or parameters.

Action: Correct the JSON_TABLE definition.

ORA-40494: error during execution of JSON_TABLE

Cause: The provided JSON_TABLE definition could not be evaluated.

Action: Correct the JSON_TABLE definition.

ORA-40495: internal error in JSON_TABLE

Cause: The provided JSON_TABLE definition could not be evaluated.

Action: Contact Oracle Support Services.

ORA-40497: only one ordinality column permitted

Cause: The provided JSON_TABLE definition contained more than one ordinality column.

Action: Remove the ordinality column or columns from the JSON_TABLE definition.

ORA-40498: binary format requested for non-binary data type

Cause: The provided JSON format was binary but the input data type was not binary.

Action: Either change the format clause or use an input of binary data type.

ORA-40499: no format defined for binary data type

Cause: The provided JSON input was of binary type but a format was not defined.

Action: Define a format for binary input.

ORA-40501: cannot open an encrypted log file

Cause: An attempt was made to open a log file that has been encrypted for storage and management by the Oracle Availability Machine. Only the processes involved in shipping such a log to or from the Oracle Availability Machine can open the log.

Action: Allow the Oracle Availability Machine to manage the log file.

ORA-40551: internal BSON/JSON conversion error [string]

Cause: BSON/JSON conversion failed with internal error.

Action: Contact Oracle Support Services.

ORA-40552: invalid data type

Cause: The BSON/JSON converter was invoked with an invalid data type.

Action: Ensure that both the input and output is of data type BLOB.

ORA-40553: path expression with predicates not supported in this operation

Cause: A path expression with predicates was specified in a JavaScript Object Notation (JSON) operation that does not support predicates.

Action: Only JSON_EXISTS supports predicates.

ORA-40554: invalid input data type in PASSING clause

Cause: The specified PASSING clause had an unsupported data type.

Action: Use a supported data type in the PASSING clause.

ORA-40555: incorrect PASSING clause

Cause: The specified PASSING clause was invalid.

Action: Specify a valid passing clause.

ORA-40556: unsupported chaining of JSON_TABLE

Cause: The specified JSON_TABLES were chained.

Action: Use the NESTED PATH syntax for JSON_TABLE.

ORA-40557: cannot update a JSON value

Cause: An attempt was made to update a JavaScript Object Notation (JSON) value.

Action: Update the entire JSON object instead.

ORA-40558: package functions are unsupported below compatible 12.0.0.0.0

Cause: DBMS_SODA_ADMIN was used when the database was operating at a compatible setting lower than 12.0.0.0.0.

Action: Upgrade the database compatible setting to 12.0.0.0.0 or higher to enable the desired new features.

ORA-40559: one or more JSON objects exist that cannot be downgraded.

Cause: There were JavaScript Object Notation (JSON) objects in the database that were created in a release beyond the selected release for downgrade.

Action: Prior to downgrade, drop the JSON objects that cannot be downgraded to the selected release.

ORA-40560: JSON_TABLE nested path expressions not disjunct

Cause: The JSON_TABLE expression contained two or more nested path expressions that (partially or fully) selected the same fields.

Action: Correct or combine the nested path expressions so that they become disjunct.

ORA-40561: invalid path in JSON_TABLE nested path clause

Cause: The JSON_TABLE expression contained a nested path clause with an invalid path expression.

Action: Correct or remove the nested path expression.

ORA-40562: Conversion FROM GeoJson to SDO_GEOMETRY failed.

Cause: The selected value could not be converted to a SDO_GEOMETRY object.

Action: Make sure the path expression selects one valid GeoJson value.

ORA-40563: default value not allowed for object types.

Cause: The error handler specified a default value and the returned data type was an object type. These cannot be combined.

Action: Change either the return type or choose 'NULL ON ERROR' or 'ERROR ON ERROR' as error handler.

ORA-40564: Invalid JSON specification.

Cause: The provided specification was invalid.

Action: Correct the specification parameter.

ORA-40565: JSON path expression did not select a value.

Cause: The JSON path expression did not select a value.

Action: Correct the JSON path expression.

ORA-40566: JSON path expression selected a value of different data type.

Cause: The JSON path expression selected a data type value different than the requested data type.

Action: Use another 'get-method' to retrieve the value selected by the JSON path expression.

ORA-40567: JSON patch operation failed.

Cause: The JSON patch operation failed.

Action: Correct the specification parameter.

ORA-40568: Cannot modify read-only target.

Cause: An attempt to modify a JSON structure failed because the structure cannot be modified.

Action: None

ORA-40569: Unimplemented JSON feature.

Cause: An attempt was made to execute an unimplemented JSON feature.

Action: None

ORA-40570: JSON conversion failed.

Cause: A conversion between a JSON value and another type failed.

Action: Check the type definition or the selected JSON value.

ORA-41001 to ORA-42804

ORA-41001: session id list not specified

Cause: An attempt to migrate was made, which failed because the session id list specified was null.

Action: Check the session id list, and try again with a valid value.

ORA-41002: destination instance not specified

Cause: An attempt to migrate was made, which failed because the destination instance specified was null.

Action: Check the destination instance , and try again with a valid value.

ORA-41003: client id not specified

Cause: An attempt to migrate was made, which failed because the client id specified was null.

Action: Check the client id, and try again with a valid value.

ORA-41004: percentage not specified

Cause: An attempt to migrate was made, which failed because the percentage specified was null.

Action: Check the percentage, and try again with a valid value.

ORA-41005: session id list not specified

Cause: An attempt to cancel migration was made, which failed because the session id list specified was null.

Action: Check the session id list, and try again with a valid value.

ORA-41006: session id not specified

Cause: An attempt to get migration status was made, which failed because the session id specified was null.

Action: Check the session id, and try again with a valid value.

ORA-41007: sid field is null

Cause: A session id instance passed into a dbms_tsm procedure or function had a null sid field.

Action: Check the session id, and try again with a valid value.

ORA-41008: serial# field is null

Cause: A session id instance passed into a dbms_tsm procedure or function had a null serial# field.

Action: Check the session id, and try again with a valid value.

ORA-41009: Session with session number *string*, serial number *string* does not exist

Cause: An attempt to migrate was made, which failed because of invalid session number and/or serial number.

Action: Check the session number and serial number and try again.

ORA-41010: No more memory to hold connection state information

Cause: An attempt to reference more connections than configured

Action: Check the connection information and try again.

ORA-41011: Operation failed for session id *string*, serial number *string*

Cause: An migration related operation failed because of contention between sessions.

Action: Check the additional error codes for more information, and retry operation later.

ORA-41012: Migration not allowed for session number *string*, serial number *string*

Cause: An attempt to migrate was made, which failed because the session specified cannot be migrated.

Action: Check the session number and serial number and try again.

ORA-41013: instance name not specified

Cause: An attempt to migrate was made, which failed because the instance name specified was null.

Action: Check the instance name, and try again with a valid value.

ORA-41014: Session number *string*, serial number *string* currently being migrated

Cause: An attempt to migrate was made, which failed because the session specified is currently being migrated.

Action: Check the session number and serial number and try again.

ORA-41015: destination connect string not specified

Cause: A migration attempt was made, which failed because the connect string specified was null.

Action: Check the connect string and try again.

ORA-41016: Session recreation failed

Cause: Session recreation failed at the destination instance.

Action: Check session state and try migration again

ORA-41017: Session prepare failed for session number *string*, serial number *string*

Cause: A migration attempt was made, which failed because session prepare failed.

Action: Retry migration again after checking all arguments.

ORA-41019: Session begin at the destination instance failed

Cause: Session begin failed at the destination instance because the shadow connection could not be established.

Action: Check the connect string and try beginning the session again.

ORA-41020: invalid value "*string*" specified for parameter "*string*"

Cause: An invalid value was specified for the the given parameter.

Action: Correct the value being specified for the parameter.

ORA-41021: OCI error during transparent session migration

Cause: An OCI operation failed during transparent session migration.

Action: Check the OCI error signalled, and take corrective action.

ORA-41022: instance name not specified

Cause: An attempt to recover after instance death was made, which failed because the instance name specified was null.

Action: Check the instance name, and try again with a valid value.

ORA-41023: death time not specified

Cause: An attempt to recover after instance death was made, which failed because the death time specified was null.

Action: Check the death time, and try again with a valid value.

ORA-41024: Cursor needs to be parsed again

Cause: An SQL operation failed because the cursor state was lost.

Action: Reissue all operations starting from parse.

ORA-41025: sid field *string* is invalid

Cause: A session id instance passed into a dbms_tsm procedure or function had an invalid sid field.

Action: Check the session id, and try again with a valid value.

ORA-41026: serial# field *string* is invalid

Cause: A session id instance passed into a dbms_tsm procedure or function had an invalid serial# field.

Action: Check the serial#, and try again with a valid value.

ORA-41027: Error status *string* during OCI operation at *string*

Cause: An OCI operation failed during transparent session migration.

Action: Check the OCI error signalled, and take corrective action.

ORA-41028: Session id not specified

Cause: An attempt to migrate was made, which failed during migration because the session id specified by the client was null.

Action: Check the session id, and try again with a valid value.

ORA-41029: Destination session id not specified for sid *string* serial# *string*

Cause: An attempt to migrate was made, which failed during migration because the destination session id specified by the client was null.

Action: Check the session id, and try again with a valid value.

ORA-41030: Session id not specified

Cause: An attempt to migrate was made, which failed during migration because the session id specified by the client was null.

Action: Check the session id, and try again with a valid value.

ORA-41031: Destination session key not specified for sid *string* serial# *string*

Cause: An attempt to migrate was made, which failed during migration because the destination session key specified by the client was null.

Action: Check the session id, and try again with a valid value.

ORA-41100: Oracle Cluster Registry operation failed with event *string*.

Cause: The Portable Clusterware/Oracle Cluster Registry stack returned an error.

Action: Check if the Portable Clusterware stack is properly brought up.

ORA-41101: The database: *string* has already been designated as Cluster Director.

Cause: An attempt was made to designate multiple databases as the Cluster Director.

Action: Undesignate the existing Cluster Director before Designating a new one.

ORA-41102: No database has currently been designated as Cluster Director.

Cause: An attempt was made to query/undesignate a Cluster Director when no database has been designated as Cluster Director.

Action: n/a

ORA-41103: Only the designated Cluster Director: *string* can undesignate itself.

Cause: An attempt was made to undesignate the current Cluster Director by a database that is not the Cluster Director.

Action: Login to the currently designated Cluster Director to perform the undesignation.

ORA-41104: The database: *string* is the Cluster Director.

Cause: An attempt was made to control the Cluster Director on a database that is not the Cluster Director.

Action: Log in to the currently designated Cluster Director to perform the control operation.

ORA-41105: The Cluster Director is not stopped.

Cause: An attempt was made to control the Cluster Director before the Cluster Director was stopped.

Action: Use `dbms_cluster_director.stop` to stop the Cluster Director and retry the control operation.

ORA-41106: invalid argument *string*: value is null

Cause: An attempt to read the scan hostname or port failed

Action: Verify pcw is running and scan is configured. Run `grdcscan read_config` to verify or `grdcscan set_config host:port` to set scan name and port.

ORA-41107: invalid argument: service *string* cannot be found

Cause: The program attempted to access a nonexistent or deleted service.

Action: Check to make sure the service has been properly created.

ORA-41108: Posting system alert with reason_id *string* failed with code [*string*] [*string*]

Cause: Internal Error: An attempt to post a system alert failed.

Action: If this condition repeats, please contact Oracle Support.

ORA-41109: Updating system alert with reason_id *string* failed; previous alert not found

Cause: System Error: An attempt to update a system alert failed. The alert was improperly cleared from `WRI$_ALERT_OUTSTANDING`.

Action: Do not delete from `WRI$_ALERT_OUTSTANDING`. If this condition repeats, please contact Oracle Support.

ORA-41110: The Director has blocked this instance. Cannot start [*string*]

Cause: An attempt to start services on an instance that will be shutdown

Action: Start the services on another available instance

ORA-41201: Session state not capturable due to reason (*string*, *string*)

Cause: Session state capture was initiated when session state could not be captured.

Action: Check session state status and make sure session state can be captured.

ORA-41202: Session state capture or restore failed

Cause: Capture or restore operation failed.

Action: Check session state status and failure reason for details.

ORA-41203: Invalid session state operation

Cause: Invalid session state operation was issued.

Action: Check if session status was valid for the current operation.

ORA-41204: Session capture in progress

Cause: Session state capture was initiated and could not perform the requested operation.

Action: Wait for the current capture to complete or abort it.

ORA-41205: Invalid parameter for session state capture or restore

Cause: Invalid parameter was passed to session state capture or restore interface.

Action: Correct the invalid parameter(s).

ORA-41206: Session capture or restore internal error KPCSFR-*string*

Cause: Internal operation error was encountered.

Action: Turn on related trace for details and report it as a bug.

ORA-41207: Cannot restore session state due to reason (*string*, *string*)

Cause: Session state restore was initiated when session was not ready for state restore.

Action: Restore session state immediately after logging into a session or perform necessary operations to make the session ready for restore; for example, commit current transaction, or close BFiles.

ORA-41208: OCI error during session state capture and restore

Cause: An OCI operation failed during an internal operation of session state capture and restore.

Action: Check the OCI error signaled and take corrective action.

ORA-41209: OCI operation failed at *string* due to ORA-*string*

Cause: An OCI operation failed during an internal operation of session state capture and restore.

Action: Check the OCI error signaled and take corrective action.

ORA-41210: Failed to resolve session state directory object

Cause: Session state directory object passed to capture or restore was incorrect.

Action: Verify session state directory object and retry.

ORA-41211: Failed to insert capture or restore record

Cause: An error occurred while capture or restore record was being stored into the database.

Action: Check the error signaled and take corrective action.

ORA-41251: Failed to restore session state from a file (error code *number*)

Cause: Session state file may be corrupted.

Action: Ensure that the file is a session state file.

ORA-41252: Failed to switch to new session in SSCR

Cause: This is the generic internal error number for the SSCR exceptions. This indicates that the SSCR has encountered an exceptional condition.

Action: Report as a bug.

ORA-41253: Failed to access session state file

Cause: An error was encountered while reading from or writing to session state capture file.

Action: Check the error stack for the actual error number and turn on tracing if necessary.

ORA-41254: Invalid session state file: *string*

Cause: An invalid session state file was used in session state restore operation.

Action: Check if the session state file is a valid file created by session capture.

ORA-41255: Package not supported: *string*

Cause: The specified package is not supported.

Action: Do not call the package functions and procedures.

ORA-41300: File driver is not initialized

Cause: An attempt was made to operate on the uninitialized file driver.

Action: Initialize the file driver using the OCIServerAttach function.

ORA-41301: failed to write data to file

Cause: You may not have sufficient privileges or quotas for this action.

Action: Ensure that you have sufficient privileges and quotas for this action.

ORA-41302: failed to read data from file

Cause: The file may not exist or you do not have privileges for this action.

Action: Ensure that the file exists and that you have sufficient privileges for this action.

ORA-41303: Received partial data from file

Cause: This is the generic internal error number for file driver exceptions. This indicated that file driver encountered an exception condition.

Action: Report as a bug.

ORA-41304: Failed to connect to file driver

Cause: The connect string may be incorrect.

Action: Ensure that the connect string is correct.

ORA-41305: Failed to open file

Cause: You may not have sufficient privileges for this action.

Action: Ensure that the file exists and that you have sufficient privileges for this action.

ORA-41400: Bind character set (*string*) does not match database character set (*string*)

Cause: In this recursive OCI call, the bind character set was different from the current database character set. This is usually caused by database character set change.

Action: Be sure to obtain bind data in database character set and do rebind in the current environment.

ORA-41401: Define character set (*string*) does not match database character set (*string*)

Cause: In this recursive OCI call, the define character set was different from the current database character set. This is usually caused by database character set change.

Action: Be sure to do redefine in the current environment.

ORA-41402: SCNs not valid after failover; failover cannot continue

Cause: The Oracle server process failed and replay was initiated.

Action: Resubmit the request.

ORA-41403: failed over to older server; failover cannot continue (*string*, *string*, *string*)

Cause: Failover replay was enabled for a service in which some standby databases were older than the original server and could not replay work from the original server.

Action: Disable replay on the service, or upgrade your databases to compatible versions.

ORA-41404: invalid replay context

Cause: Application continuity protocol was violated.

Action: Contact Oracle Support Services.

ORA-41405: Failed over to older server; failover cannot continue (*string*, *string*).

Cause: Failover replay was enabled for a service in which some standby databases were older than the original server and could not replay work from the original server.

Action: Disable replay on the service, or upgrade your databases to compatible versions.

ORA-41407: SQL command not supported for replay; replay disabled

Cause: Application replay encountered a command that was not supported for replay, and so replay was disabled.

Action: Use a service without replay for this operation.

ORA-41408: embedded COMMIT in last call; failover cannot continue

Cause: The Oracle server process failed after committing a transaction but COMMIT was embedded in a stored procedure and it cannot be guaranteed that the stored procedure finished. Failover cannot continue.

Action: User may resubmit request.

ORA-41409: cannot replay committed transaction; failover cannot continue

Cause: The Oracle server process failed after committing a transaction in the current request. The transaction cannot be replayed, so the current request cannot be replayed and session state cannot be restored. Failover cannot continue.

Action: User may resubmit request.

ORA-41410: call committed a transaction and started a new transaction; failover cannot continue

Cause: The Oracle server process failed after committing a transaction in the current request. One call that committed a transaction, and thus cannot be replayed, also started a new transaction. Since that call cannot be replayed, the new transaction cannot be restored. Failover cannot continue.

Action: Resubmit, and consider restructuring application to not start a transaction in the same call after committing a transaction.

ORA-41411: too many round trips in request; replay disabled

Cause: The Oracle server process failed after executing a request with more than 65535 round trips, so replay of the request is not possible.

Action: Resubmit, and consider partitioning application calls into more requests with fewer round trips.

ORA-41412: results changed during replay; failover cannot continue

Cause: The Oracle server process failed and replay was initiated. However, results of the replay differed from the original execution. Failover cannot continue.

Action: User may resubmit request.

ORA-41413: too much data in call capture; replay disabled

Cause: The Oracle server process failed after executing a request with a complicated call whose capture had too much data, therefore, replaying of the request was not possible.

Action: Resubmit and partition the application calls into more requests with fewer round trips.

ORA-41414: could not allocate memory for call capture; replay disabled

Cause: The Oracle server process failed after executing a request with a memory allocation failure during capture, therefore, replaying of the request was not possible.

Action: Resubmit and partition the application calls into more requests with fewer round trips.

ORA-41415: duplicate or conflicting KEEP or NOKEEP specifications

Cause: Duplicate KEEP or NOKEEP was specified, or both KEEP and NOKEEP were specified.

Action: Remove the duplicate or conflicting specification.

ORA-41417: invalid use of DBMS_APP_CONT_PRIVT: [string] [string] [mode=string] [string] [string] [string] [string] [string]

Cause: Application continuity protocol was violated.

Action: Contact Oracle Support Services.

ORA-41418: Replay context is corrupt. Reason: *[string], [string], [string], [string]*

Cause: The replay context was not valid.

Action: Check your network configuration and hardware.

ORA-41601: invalid property for the rule class

Cause: An invalid property was specified for the rule class.

Action: Correct the rule class properties and try again.

ORA-41602: insufficient privileges

Cause: The user does not have required privileges on the object.

Action: Obtain the required privileges and try again.

ORA-41603: invalid privilege type

Cause: An attempt was made to grant an invalid privilege on a rule class.

Action: Correct the privilege name and try again.

ORA-41604: cannot revoke a privilege that was not granted

Cause: An attempt was made to revoke a privilege that was never granted.

Action: None

ORA-41605: schema extended name not allowed: *string*

Cause: An attempt was made to specify a schema extended name for an event structure, a rule class, or an action call-back procedure.

Action: Specify the object name with out a schema extension.

ORA-41606: rule class name already used by an existing object

Cause: An attempt was made to create a rule class with a name that is already used by an existing object.

Action: Specify a different name for the rule class and try again.

ORA-41607: rule class creation failed with *string*

Cause: rule class creation failed with a recursive error.

Action: Correct the rule class specification and try again.

ORA-41608: rule class does not exist

Cause: An attempt was made to access a rule class that does not exist or is not accessible.

Action: Correct the rule class name and try again.

ORA-41609: invalid name for the rule class

Cause: An invalid name was specified for the rule class.

Action: Correct the rule class name and try again.

ORA-41610: callback procedure name already used for an existing object

Cause: An attempt was made to create a callback procedure with a name that is already used for an existing object.

Action: Choose another name for the callback procedure.

ORA-41611: rule identifier "*string*" not unique in the rule class

Cause: An attempt was made to use a duplicate rule identifier.

Action: Choose a unique identifier for the rule and try again.

ORA-41612: scalar values expected for action preferences

Cause: Incorrect values were specified for the action preferences.

Action: Correct the action preferences values and try again.

ORA-41613: invalid action preference for rule class: *string*

Cause: An attempt was made to use an invalid action preference.

Action: Correct the input and try again.

ORA-41614: missing action preference value

Cause: Values for one or more action preferences were not specified.

Action: Specify values for all relevant action preferences.

ORA-41615: too many values in action preference list

Cause: Too many entries were specified in the action preference values list. The action preference values list should not have more entries than the action preference names list.

Action: Correct the input and try again.

ORA-41616: rule class's action callback procedure may have errors

Cause: The operation failed because the action callback procedure associated with the rule class has compilation errors.

Action: Recompile the action callback procedure and try the operation again.

ORA-41617: action preference name "*string*" collides with an event attribute name

Cause: An attempt was made to create an action preference with the same name as an attribute in the event structure.

Action: Choose a different name for action preference and try again.

ORA-41618: specified rule does not exist

Cause: Invalid rule identifier was used to operate on a rule definition.

Action: Use a valid rule identifier.

ORA-41619: rule manager feature currently not supported

Cause: An attempt was made to use a rule manager feature that is currently not supported.

Action: No action necessary. This is an informational message only.

ORA-41620: invalid ordering property for the rule class

Cause: An attempt was made to specify an invalid ordering property for the rule class.

Action: Make sure that the attributes listed in the ordering property are all part of the rule class/event structure definition with appropriate extended names.

ORA-41621: error in ordering property *:string*

Cause: An attempt was made to specify an invalid ordering property for the rule class.

Action: Make sure that the attributes listed in the ordering property are all part of the rule class/event structure definition with appropriate extended names.

ORA-41622: invalid primitive event object in rule class properties : *string*

Cause: In the rule class properties, the name used for one or the primitive event objects was not found in the corresponding composite event structure.

Action: Correct the name of the primitive event object in the rule class properties and try again.

ORA-41623: conflicting values for autocommit and duration properties

Cause: An attempt was made to create a rule class with autocommit enabled when the duration of events is set to TRANSACTION.

Action: Turn autocommit off or choose a different duration policy.

ORA-41624: invalid duration policy for primitive object in a composite event

Cause: An attempt was made to specify a SESSION or TRANSACTION duration policy for the primitive objects.

Action: Correct the rule class properties and try again.

ORA-41625: event structure *string* does not exist

Cause: The object type that represents the event structure was not created in the user's schema.

Action: Create the object type with the event structure's name and try again.

ORA-41626: invalid XML element "*string*" in rule class properties

Cause: An invalid XML element was used in the properties specification for the rule class.

Action: Use the correct (case-sensitive) tags in the properties.

ORA-41627: event structure object type in inconsistent state

Cause: The object type specified for the event structure was in an inconsistent state.

Action: Fix the object type and try again.

ORA-41628: invalid usage of "*string*" attribute in "*string*" element

Cause: An invalid or unsupported XML attribute was used in the rule class properties.

Action: Use the correct (case-sensitive) tags in the properties.

ORA-41629: event structure for simple events cannot be reused for composite events

Cause: An attempt was made to reuse an object type (event structure) for composite events when it is already configured for simple events.

Action: Drop the attribute set associated with the object and try again.

ORA-41630: invalid value for "*string*" attribute in the rule class properties

Cause: An invalid value was specified for an attribute in the rule class properties.

Action: Correct the value and try again.

ORA-41631: invalid text node or child element for "*string*" element in properties

Cause: An attempt was made to specify a child element or a text node in invalid position in the rule class properties specification.

Action: Correct the rule class properties and try again.

ORA-41632: invalid value for the "string" attribute

Cause: An attempt was made to assign an invalid value for an attribute in the rule class properties.

Action: See the documentation.

ORA-41633: specified rule class configuration not supported: "string"

Cause: An attempt was made to use an unsupported configuration for the rule class.

Action: Remove the specified tag in the properties and try again.

ORA-41634: invalid duration specification in rule properties: "string"

Cause: Invalid value was specified for the duration attribute in the rule class properties.

Action: Correct the value and try again.

ORA-41635: invalid unit of time used in duration specification

Cause: An attempt was made to use an invalid unit of time for the rule class's duration specification. Valid units are : minutes, hours, and days.

Action: Correct the duration specification and try again.

ORA-41636: invalid duration specification at the primitive event level

Cause: An attempt was made to specify a duration policy for the primitive events when the composite event was configured with TRANSACTION or SESSION duration policy.

Action: Correct the rule class properties and try again.

ORA-41637: missing primitive event name

Cause: The name attribute of the object element in the rule class properties was not specified. This is a required value.

Action: Specify the name of the primitive event and try again.

ORA-41638: invalid attribute for "string" element in rule condition

Cause: An attempt was made to specify an invalid attribute for an XML element in the rule condition.

Action: Correct the rule condition and try again.

ORA-41639: invalid child node in "string" element

Cause: An attempt was made to specify an invalid child element or text node for an XML element in the rule condition.

Action: Correct the rule condition and try again.

ORA-41640: invalid element "string" in the rule condition

Cause: An attempt was made to use an invalid element or a valid element in invalid position in the rule condition.

Action: Correct the rule condition and try again.

ORA-41641: invalid or empty rule condition

Cause: An attempt was made to specify an invalid or empty rule condition.

Action: Correct the input and try again.

ORA-41642: Missing "string" element in the rule condition

Cause: The rule condition was specified without a required element.

Action: Correct the rule condition and try again.

ORA-41643: invalid attribute for the "string" element in the rule condition

Cause: An attempt was made to specify an invalid attribute for an element in the rule condition.

Action: Correct the rule condition and try again.

ORA-41644: invalid use of "string" attribute in rule condition

Cause: An attempt was made to specify an invalid attribute for an element in the rule condition.

Action: Correct the rule condition and try again.

ORA-41645: duplicate tag "string" in rule condition

Cause: An attempt was made to specify the same XML tag in more than one positions within a single rule condition.

Action: Remove the duplicate reference to the tag and try again.

ORA-41646: missing "string" attribute for "string" element in the rule condition

Cause: One of the required attributes was not specified in the rule condition.

Action: Correct the rule condition and try again.

ORA-41647: negation not allowed in rule conditions with "any" semantics

Cause: An attempt was made to specify a "not" element within an "any" element in the rule condition.

Action: Correct the rule condition and try again.

ORA-41648: invalid sequence of child elements in "string" element

Cause: An attempt was made to specify an invalid sequence of elements within a parent element.

Action: Correct the rule condition and try again.

ORA-41649: invalid rule condition for a rule class involving composite events

Cause: An attempt was made to add an invalid rule condition to a rule set defined for composite events.

Action: Correct the input and try again.

ORA-41650: invalid composite event structure

Cause: A composite event structure may only have attributes that are either table aliases or of an object type that is defined in the owner's schema.

Action: Ensure that the event structure has no scalar attributes and all the embedded types in it are defined in the owner's schema.

ORA-41651: Event structure object type has one or more dependent objects

Cause: An attempt was made to configure an object type that has one or more dependents as a event structure. The object type cannot be modified due to the dependent objects.

Action: Create a new object type for the event structure and try again.

ORA-41652: invalid value for the equal attribute in the rule condition

Cause: An invalid value is assigned to the equal attribute in the rule condition.

Action: Correct the input and try again.

ORA-41653: inconsistent value for the "count" attribute of the "any" element

Cause: The value specified for the "count" attribute of the "any" element is greater than or equal to the the number of primitive events appearing in the rule condition.

Action: Specify a smaller value for the "any" element's "count" attribute.

ORA-41654: insufficient number of primitive events for the use of "sequence"

Cause: An attempt was made to use "sequence" attribute when there is an insufficient number of primitive events in the rule conditions.

Action: Remove the sequence specification.

ORA-41655: rule condition construct not supported: *string*

Cause: An attempt was made to use a rule condition construct that is not supported in the current release.

Action: Modify the rule condition.

ORA-41656: insufficient number of child elements in "*string*" element.

Cause: An attempt was made to use fewer than two elements within an "and" or "notany" element.

Action: Specify at least two elements within the parent element.

ORA-41657: rule class internal objects cannot be dropped

Cause: An attempt was made to drop an internal object that is required for a rule class.

Action: Drop the rule class associated with this object.

ORA-41658: invalid value for the "count" attribute in the "any" element

Cause: An invalid value is assigned to the count attribute in the rule condition. The values should be a positive integer that is smaller than the number of object elements within the "any" element.

Action: Correct the input and try again.

ORA-41659: invalid primitive event "*string*" for the rule class

Cause: An attempt was made to use an invalid primitive event in a rule condition.

Action: Correct the input and try again.

ORA-41660: ordering property for the rule class is too long

Cause: An attempt was made to configure the rule class with an ordering property that is longer than 240 characters.

Action: Correct the input and try again.

ORA-41661: the system generated rule class package has errors

Cause: An attempt was made to use a rule class configuration that was not supported.

Action: File a bug.

ORA-41662: number of primitive events in the composite event exceeds maximum limit

Cause: An attempt was made to create a composite event structure with more than 32 primitive events.

Action: Use a composite event that consists of fewer primitive events.

ORA-41663: invalid use of "equal" or "sequence" attribute with a single event

Cause: An attempt was made to use "equal" or "sequence" attribute when the "count" attribute in a rule condition with "any" semantics is set to 1.

Action: Remove the "equal" and "sequence" specifications.

ORA-41664: invalid consumption policy for the primitive event

Cause: An attempt was made to use EXCLUSIVE consumption policy for a primitive event when the composite event is configured for RULE consumption policy.

Action: Correct the rule class properties and try again.

ORA-41665: conflicting values for duration, consumption, and autocommit policies

Cause: An attempt was made to use an EXCLUSIVE consumption policy with no autocommit and a duration other than TRANSACTION or SESSION.

Action: Modify the rule class properties and try again. Autocommit should be set to YES when the consumption policy is EXCLUSIVE.

ORA-41666: XML schema validation failed when validating against *string*

Cause: The user input has undefined element or attribute according to the provided XML schema definition.

Action: Correct the user inputs and try again.

ORA-41667: rule class results view name already used for an existing object

Cause: An attempt was made to use a duplicate name for the rule class results view.

Action: Use a different name for the rule class results view.

ORA-41668: invalid operation for the rule class

Cause: An attempt was made to use an invalid operation for the rule class.

Action: No action necessary. This is an informational message only.

ORA-41669: invalid list of primitive event identifiers

Cause: An attempt was made to pass an empty list of primitive event identifiers to the CONSUME_PRIM_EVENTS API.

Action: Correct the input and try again.

ORA-41670: duplicate or invalid event name in equal specification

Cause: An attempt was made to specify a duplicate or invalid primitive event for the rule class's equal property.

Action: Correct the input and try again.

ORA-41671: duplicate table names in the event structure with table aliases

Cause: The table used for an event structure has the same name as another table or a primitive event type in the event structure.

Action: Use an event structure with distinct table names for table aliases.

ORA-41672: invalid rowid passed in for "string" table

Cause: An attempt was made to pass a NULL or invalid rowid for a table in the event structure.

Action: Correct the input and try again.

ORA-41673: sequence attribute not allowed in rule conditions using table aliases

Cause: An attempt was made to use sequence attribute in a rule condition that is defined using table aliases. Sequence usage is not permitted for the lack of timestamp attribute.

Action: Correct the input and try again.

ORA-41674: dmlevents policy allowed only for event structures with table aliases

Cause: An attempt was made to use the dmlevents policy for an event structure with no table alias constructs.

Action: Correct the rule class properties and try again.

ORA-41675: schema for data tables does not match that of the rule class

Cause: An attempt was made to use the dmlevents policy for a rule class that refers to table residing in different schema. To use the dmlevents policy, the table associated with table aliases in the event structure and the rule class should exist in the same schema.

Action: Remove dmlevents specification from rule class properties.

ORA-41676: invalid use of dmlevents policy for primitive event

Cause: An attempt was made to use the dmlevents policy for a primitive event defined with more than one table alias attribute.

Action: Remove the dmlevents specification from the rule class properties.

ORA-41677: DML event trigger creation failed with *string*

Cause: Triggers could not be created on the data table to track DML events.

Action: Remove the dmlevents specification from the rule class properties.

ORA-41678: conflicting values for the autocommit and dmlevents policies

Cause: An attempt was made to use dmlevents policy in combination with autocommit set to YES. This combination is not allowed.

Action: Set autocommit to NO and try again.

ORA-41679: dmlevents specification only allowed with table alias attributes

Cause: An attempt was made to use the dmlevents policy for an event structure not containing any table alias attributes.

Action: Remove the dmlevents specification from the rule class properties.

ORA-41680: Rules Manager background process *string* does not exist

Cause: An attempt was made to use a Scheduler process that does not exist.

Action: Execute EXFSYS.RLM\$CREATE_SCHEDULER_JOBS procedure as a privileged user.

ORA-41681: clean up of expired events failed

Cause: The background process that cleans up the expired events failed for a rule class.

Action: Invoke EXFSYS.DBMS_RLMGR_UTL.CLEANUP_EVENTS API for the exact nature of the problem.

ORA-41682: invalid rule class package

Cause: An attempt was made to use a rule class package with invalid signature or permissions.

Action: Drop the rule class and recreate it.

ORA-41683: unable to lock a rule in the rule class

Cause: A rule matching the current event is locked by another session.

Action: Reissue the command after committing the other sessions.

ORA-41684: invalid value for the RLM\$ENABLED column

Cause: An attempt was made to insert or update a value other than 'Y' or 'N' into the RLM\$ENABLED column of a rule class table.

Action: Retry the DML statement with a value of 'Y' or 'N' for the RLM\$ENABLED column.

ORA-41685: invalid window specification for the collection element

Cause: An invalid attribute value was specified for the "windowlen" or the "windowsize" attribute. The value specified for the "windowlen" attribute should be a number indicating the number of days or a fraction of a day. The value specified for the "windowsize" attribute should be an integer which indicates number of items in the collection. The maximum value allowed for the window specification is 64000.

Action: Correct the input and try again.

ORA-41686: use of "collection" invalid for the primitive event

Cause: An attempt was made to define a rule condition with "collection" element when the corresponding event was not configured for collections of events.

Action: Correct the rule condition and try again.

ORA-41687: attribute "string" not allowed in the "groupby" specification

Cause: The attributes listed in the "groupby" specification in a rule condition were not a subset of the attributes specified in the rule class properties.

Action: Correct the "groupby" specification for the rule condition and try again.

ORA-41688: invalid value for the "groupby" attribute

Cause: An invalid value was specified for the "groupby" attribute.

Action: Correct the input and try again.

ORA-41689: invalid collection specification in the rule condition

Cause: An attempt was made to insert a rule condition with invalid collection element specification.

Action: Correct the input and try again.

ORA-41690: maximum number of grouping expressions for a rule class exceeded

Cause: An attempt was made to specify more than 32 expressions for the "groupby" clause in rule class properties.

Action: Use fewer than 32 expressions for the "groupby" clause.

ORA-41691: invalid aggregate specification: *string*

Cause: The aggregate operation specified in the rule condition was invalid.

Action: Correct the input and try again.

ORA-41692: unsupported aggregate operator in the having/compute clause: *string*

Cause: An attempt was made to use an unsupported aggregate operator in the having or the compute clause in the rule condition.

Action: Correct the input and try again.

ORA-41693: invalid attribute or data type for an aggregate operator: *string*

Cause: An attempt was made to apply an aggregate operator on an invalid attribute or an attribute with invalid or unsupported data type in the aggregate operator. Only NUMBER and DATE attributes are allowed in the aggregate operators.

Action: Correct the input and try again.

ORA-41694: invalid equal specification around: *string*

Cause: An attempt was made to specify an invalid equal clause for a rule condition or the rule class properties.

Action: Correct the input and try again.

ORA-41695: equal specification should have a minimum of two elements

Cause: An attempt was made to specify fewer than two elements in the equal clause for a rule condition or the rule class properties.

Action: Correct the input and try again.

ORA-41696: invalid operator in the having clause: *string*

Cause: An attempt was made to use an invalid relational operator in the having clause of the rule condition.

Action: Correct the input and try again.

ORA-41697: attribute prefix missing in aggregate specification: *string*

Cause: An attempt was made to specify an aggregate predicate across multiple primitive event types with no attribute prefix.

Action: Correct the input and try again.

ORA-41698: invalid use of "*string*" attribute in aggregate predicate

Cause: An attempt was made to use an attribute where a literal is expected in the aggregate predicate in the rule condition.

Action: Correct the input and try again.

ORA-41699: maximum number of aggregate operations per rule condition exceeded

Cause: An attempt was made to specify more than 5 aggregate operations in a rule condition.

Action: Correct the input and try again.

ORA-41700: a conditions table already exists for the event structure

Cause: A table storing the primitive rule conditions was already assigned to the event structure.

Action: No action necessary. This is an informational message only.

ORA-41701: conditions table with a rule class association cannot be truncated or dropped

Cause: An attempt was made to truncate or drop a conditions table when one or more rule classes are associated to it through the event structure.

Action: Drop the rule class before truncating or dropping the conditions table.

ORA-41702: invalid conditions table

Cause: An attempt was made to use an invalid conditions table.

Action: Correct the input and try again.

ORA-41703: invalid child node in "object" element with "ref" attribute

Cause: An attempt was made to use both a condition and a "ref" attribute in the "object" element.

Action: Remove the "ref" attribute.

ORA-41704: invalid condition reference: "string"

Cause: An attempt was made to use a reference to a nonexistent conditions table or a condition.

Action: Ensure that the conditions table exists for the primitive event and the value specified for the "ref" attribute of the "object" element is valid.

ORA-41705: conditions table cannot be dropped with DROP TABLE command

Cause: An attempt was made to drop a conditions table with a DROP TABLE command.

Action: Use DBMS_RLMGR.DROP_CONDITIONS_TABLE instead.

ORA-41706: a condition referenced in rule conditions may not be deleted

Cause: An attempt was made to delete a condition when one or more rule conditions refer to it.

Action: Delete the rules before deleting the conditions.

ORA-41707: unsupported construct with collection events: "string"

Cause: An attempt was made to define a collection rule condition with unsupported constructs.

Action: Correct the input and try again.

ORA-41708: the identifier for the shared condition may not be modified

Cause: An attempt was made to update the identifier of a row stored in the conditions table.

Action: Insert a row with the new identifier instead.

ORA-41710: invalid use of aggregate operator for a noncollection event

Cause: An attempt was made to specify an aggregate operator on an event that is not identified as collection.

Action: Correct the input and try again.

ORA-41711: invalid attribute in the rule condition's having clause

Cause: An invalid attribute is used in the specification for the having clause of the rule condition.

Action: Correct the input and try again.

ORA-41712: missing groupby specification for the collection "string"

Cause: An attempt was made to use a collection element with no groupby specification in the rule condition.

Action: Correct the input and try again.

ORA-41713: invalid use of "windowlen" and "windowsize" attributes

Cause: An attempt was made to use the windowlen and windowsize attributes within the same collection element.

Action: Correct the input and try again.

ORA-41714: invalid use of window specification with SESSION/TRANSACTION duration

Cause: An attempt was made to use the windowlen or windowsize attributes when the events are configured for SESSION or TRANSACTION duration.

Action: Remove the window specification and try again.

ORA-41721: invalid use of DMLEVENTS and CNFEVENTS in rule class properties

Cause: An attempt was made to specify both the DMLEVENTS and CNFEVENTS for the same rule class.

Action: Remove either the DMLEVENTS or the CNFEVENTS specification.

ORA-41722: insufficient privileges for database change notification

Cause: An attempt was made to use CNFEVENTS property with insufficient privileges.

Action: Grant CHANGE NOTIFICATION privilege and EXECUTE privilege on DBMS_CHANGE_NOTIFICATION to the user and try again.

ORA-42000: invalid online redefinition column mapping for table "string"."string"

Cause: An attempt was made to change the logical structure of a materialized view log, queue table, or a partition by specifying a non-NULL column mapping during online redefinition.

Action: Pass a NULL column mapping parameter.

ORA-42002: partition "string" of table "string"."string" not being redefined

Cause: An attempt was made to redefine a partition which is not involved in this redefinition.

Action: Pass a valid partition name.

ORA-42003: partition must be specified for this redefinition

Cause: A partition was involved in this redefinition but was not specified.

Action: Specify the partition involved in this redefinition.

ORA-42004: redefinition not instantiated

Cause: An attempt was made to complete an instantiation-deferred redefinition without invoking dbms_redefinition.sync_interim_table.

Action: Invoke dbms_redefinition.sync_interim_table to instantiate this redefinition.

ORA-42005: invalid type of redefinition method

Cause: An unknown redefinition method was used.

Action: Use one of the supported redefinition methods: o dbms_redefinition.cons_use_pk o dbms_redefinition.cons_use_rowid

ORA-42006: dependent object registration not supported during a partition redefinition

Cause: An attempt was made to register dependent objects when redefining a partition.

Action: Do not invoke dbms_redefinition.register_dependent_object during a partition redefinition.

ORA-42007: dependent object unregistration not supported during a partition redefinition

Cause: An attempt was made to unregister dependent objects when redefining a partition.

Action: Do not invoke `dbms_redefinition.unregister_dependent_object` during a partition redefinition.

ORA-42008: error occurred while instantiating the redefinition

Cause: An error occurred while instantiating the online redefinition which requires aborting the redefinition.

Action: Correct the error, abort, and restart the online redefinition.

ORA-42009: error occurred while synchronizing the redefinition

Cause: An error occurred while synchronizing the online redefinition.

Action: Correct the error and continue the online redefinition.

ORA-42010: error occurred while synchronizing the redefinition

Cause: An error occurred while synchronizing the online redefinition which requires aborting the redefinition.

Action: Correct the error, abort, and restart the online redefinition.

ORA-42011: error occurred while completing the redefinition

Cause: An error occurred while completing the online redefinition.

Action: Correct the error and continue the online redefinition.

ORA-42012: error occurred while completing the redefinition

Cause: An error occurred while completing the online redefinition which requires aborting the redefinition.

Action: Correct the error, abort, and restart the online redefinition.

ORA-42013: interim table of an AQ IOT table should be an IOT table

Cause: An attempt was made to create a table that is not an index-organized table (IOT) as the interim table of an AQ IOT table (history, time management, or dequeue).

Action: Ensure that the interim table is created as an IOT table.

ORA-42014: online redefinition unable to lock AQ objects

Cause: An online redefinition of an AQ table was unable to lock all related AQ objects.

Action: Abort and retry the redefinition.

ORA-42015: online redefinition unable to log changes made to AQ tables

Cause: An online redefinition of an AQ table was unable to log changes made to AQ tables during the redefinition.

Action: Abort and retry the redefinition.

ORA-42016: shape of interim table does not match specified column mapping

Cause: The number of columns, or the type or the length semantics of a column, in the interim table did not match the specified column mapping.

Action: Ensure that the interim table matches the column mapping by either modifying the column mapping string or altering the interim table's column definition(s).

ORA-42017: interim table of an AQ table should not be an AQ table

Cause: An attempt was made to create an AQ table as an interim table of an online redefined AQ table.

Action: Ensure that the interim table is not created as an AQ table.

ORA-42018: partition cannot be redefined online because of index organization incompatibility

Cause: interim table is incompatible with partition being redefined because one or more of the following apply: - one is index-organized and the other is not - one has IOT overflow segment and the other does not - one has IOT mapping table and the other does not

Action: Ensure that the interim table is compatible with the partition being redefined.

ORA-42019: partition cannot be redefined online because of incompatible partitioning of interim table

Cause: both original and interim tables are partitioned, or original table is composite-partitioned but interim table is non-partitioned.

Action: Ensure that the interim table has compatible partitioning with the original table. For example, if the original table is partitioned, the interim table should be non-partitioned. If the original table is composite-partitioned, the interim table should be partitioned.

ORA-42020: partition cannot be redefined online because of unsupported type of interim table

Cause: An unsupported type of interim table was provided during the partition redefinition. Currently the following types of interim tables are not supported: - a nested table or has nested-table columns - an external table - part of cluster - contains LOB shared segments

Action: Do not use unsupported types of interim tables.

ORA-42021: partition cannot be redefined online because of incompatible row dependencies

Cause: original/interim table was created with row dependency and interim/original table was not.

Action: Ensure that both tables are created with same row dependency properties.

ORA-42022: partition cannot be redefined online because of presence of nested columns

Cause: An attempt was made to online redefine a partition with nested table columns.

Action: Do not attempt to online redefine a partition with nested table columns.

ORA-42023: compatibility of AQ table must be release 8.1.x or later

Cause: An attempt was made to perform online redefinition on an AQ table that was created with compatibility prior to release 8.1.x.

Action: Ensure that the AQ table is created with the COMPATIBLE parameter set to release 8.1.x or later before attempting online redefinition.

ORA-42024: interim table of an AQ table can not be a partitioned table

Cause: An attempt was made to use a partitioned table as an interim table.

Action: Ensure that the interim table is not a partitioned table.

ORA-42025: redefinition of CONS_USE_ROWID method cannot be used to redefine an AQ IOT table

Cause: An attempt was made to use method of DBMS_REDEFINITION.CONΣ_USE_ROWID to redefine an AQ IOT table.

Action: Ensure that method of DBMS_REDEFINITION.CONΣ_USE_PK is used to redefine an AQ IOT table.

ORA-42026: duplicated rows detected while instantiating the redefinition

Cause: Duplicated rows are detected during instantiation of the redefinition.

Action: Abort the redefinition, turn off the optimistic ascending SCN optimization, and restart the redefinition.

ORA-42027: cannot redefine an object online that is not a table

Cause: An attempt was made to redefine an object online that is not a table.

Action: Ensure that the object being redefined online is a table.

ORA-42028: materialized view log "string"."string" does not exist

Cause: An attempt was made to register a nonexistent materialized view log as a dependent object.

Action: Invoke DBMS_REDEFINITION.REGISTER_DEPENDENT_OBJECT on a valid materialized view log.

ORA-42029: cannot online redefine table "string"."string" at this time

Cause: An attempt was made to redefine a table which is incompatible with another ongoing redefinition.

Action: Do not perform the redefinition operation on this table or wait until the incompatible ongoing redefinition has completed.

ORA-42030: cannot online redefine table "string"."string" with commit SCN-based MV log

Cause: An attempt was made to redefine a table which had a commit SCN-based materialized view log defined on it.

Action: Do not attempt to online redefine a table that has a commit SCN-based materialized view log defined on it.

ORA-42031: interim table cannot have a commit SCN-based MV log defined on it

Cause: An attempt was made to use an interim table which had a commit SCN-based materialized view log defined on it.

Action: Ensure that the interim table does not have a commit SCN-based materialized view log defined on it.

ORA-42032: cannot online redefine table "string"."string" with Flashback Data Archive enabled

Cause: An attempt was made to redefine a table which had Flashback Data Archive enabled.

Action: Do not attempt to online redefine a table that has Flashback Data Archive enabled.

ORA-42033: interim table "string"."string" cannot have Flashback Data Archive enabled

Cause: An attempt was made to redefine a table with an interim table which had Flashback Data Archive enabled.

Action: Do not attempt to online redefine a table with an interim table which has Flashback Data Archive enabled.

ORA-42034: cannot online redefine table "string"."string" which is a CDC table

Cause: An attempt was made to redefine a table which is a CDC table.

Action: Do not attempt to online redefine a table that is a CDC table.

ORA-42035: cannot online redefine IOT table "string"."string" with CONS_USE_ROWID

Cause: An attempt was made to redefine an IOT table with CONS_USE_ROWID.

Action: Do not attempt to online redefine an IOT table with CONS_USE_ROWID.

ORA-42036: cannot online redefine temporary table "string"."string"

Cause: An attempt was made to redefine a temporary table.

Action: Do not attempt to online redefine a temporary table.

ORA-42037: cannot online redefine table "string"."string" with IOT overflow segment

Cause: An attempt was made to redefine a table with IOT overflow segment.

Action: Do not attempt to online redefine a table with IOT overflow segment.

ORA-42038: cannot online redefine table "string"."string" with a CDC log defined on it

Cause: An attempt was made to redefine a table with a CDC log defined on it.

Action: Do not attempt to online redefine a table with a CDC log defined on it.

ORA-42039: cannot online redefine table "string"."string" with FGA enabled

Cause: An attempt was made to redefine a table with Fine Grained Auditing (FGA) or Row Level Security (RLS) enabled.

Action: Do not attempt to online redefine a table with Fine Grained Auditing (FGA) or Row Level Security (RLS) enabled.

ORA-42040: cannot online redefine table "string"."string" with column of binary XML type

Cause: An attempt was made to redefine a table with a column of binary XML type.

Action: Do not attempt to online redefine a table with a column of binary XML type.

ORA-42041: cannot online redefine table "string"."string" with nested table columns

Cause: An attempt was made to redefine a table with nested table columns.

Action: Do not attempt to online redefine a table with nested table columns.

ORA-42042: time out in acquiring DML lock during online redefinition

Cause: During FINISH_REDEF_TABLE procedure, the elapsed time waiting to acquire a table or partition DML lock on the original table exceeds the timeout the user specified.

Action: Rerun FINISH_REDEF_TABLE procedure to continue the process.

ORA-42043: CONS_VPD_AUTO is only applicable to null column mapping

Cause: An attempt was made to specify CONS_VPD_AUTO for non-null column mapping other than null column mapping. CONS_VPD_AUTO can only be specified for null column mapping.

Action: Set the COPY_VPD_OPT value to CONS_VPD_MANUAL.

ORA-42044: cannot redefine table with non-null VPD policy predicate against the table owner or redefinition invoker

Cause: Virtual Private Database (VPD) policies with non-null predicate against the table owner or redefinition invoker existed on the original table.

Action: Drop the VPD policies with non-null predicate against the table owner or redefinition invoker. Restart online redefinition.

ORA-42045: COPY_VPD_OPT cannot be set to CONS_VPD_NONE with VPD policies on table "string"."string".

Cause: An attempt was made to set the COPY_VPD_OPT value to CONS_VPD_NONE. COPY_VPD_OPT cannot be set to CONS_VPD_NONE with Virtual Private Database (VPD) policies on the original table.

Action: Set COPY_VPD_OPT to CONS_VPD_AUTO or CONS_VPD_MANUAL.

ORA-42046: COPY_VPD_OPT cannot be set to string with VPD policies on interim table "string"."string".

Cause: An attempt was made to set the COPY_VPD_OPT value to either CONS_VPD_NONE or CONS_VPD_AUTO. Cannot set the COPY_VPD_OPT value to CONS_VPD_NONE or CONS_VPD_AUTO with Virtual Private Database (VPD) policies on the interim table.

Action: Set the COPY_VPD_OPT value to CONS_VPD_MANUAL.

ORA-42047: The specified value for COPY_VPD_OPT is invalid.

Cause: An unknown COPY_VPD_OPT value was used.

Action: Use one of the supported COPY_VPD_OPT values: o

DBMS_REDEFINITION.CONS_VPD_NONE o

DBMS_REDEFINITION.CONS_VPD_AUTO o

DBMS_REDEFINITION.CONS_VPD_MANUAL

ORA-42048: Automatic copying of VPD policies with application context is not supported in online redefinition.

Cause: An attempt was made to set the COPY_VPD_OPT value to CONS_VPD_AUTO for Virtual Private Database (VPD) policies with application context. Automatic copying of VPD policies with application context is not supported in online redefinition.

Action: Drop VPD policies with application context or set the COPY_VPD_OPT value to CONS_VPD_MANUAL.

ORA-42049: cannot online redefine multiple tables and multiple partitions

Cause: An online redefinition procedure was passed multiple original tables and multiple partitions to redefine.

Action: Do not attempt to online redefine multiple tables at the same time as multiple partitions.

ORA-42050: COPY_VPD_OPT cannot be set to CONS_VPD_MANUAL when redefining a partition.

Cause: An attempt was made to set the COPY_VPD_OPT value to CONS_VPD_MANUAL. COPY_VPD_OPT cannot be set to CONS_VPD_MANUAL when redefining a partition.

Action: Set COPY_VPD_OPT to CONS_VPD_NONE or CONS_VPD_AUTO.

ORA-42051: duplicate partition names in partition name list

Cause: An online redefinition procedure was passed a partition name list containing duplicates.

Action: Ensure that all names in the partition name list are unique.

ORA-42052: interim table cannot have materialized view or zonemap defined on it

Cause: An attempt was made to redefine a table with an interim table on which a materialized view or zonemap was defined.

Action: Remove all materialized views and zonemaps defined on the interim table and retry online redefinition, or do not attempt online redefinition.

ORA-42053: cannot online redefine table "string"."string" with OLS/XDS enabled

Cause: An attempt was made to redefine a table with Oracle Label Security (OLS) or Extensible Data Security (XDS) enabled.

Action: Do not attempt to online redefine a table with Oracle Label Security (OLS) or Extensible Data Security (XDS) enabled.

ORA-42054: cannot online redefine table "string"."string" with UXI XML index

Cause: An attempt was made to redefine a table with XML indexes having an Unstructured XMLIndex (UXI) component.

Action: Do not attempt to online redefine a table with XML indexes having an Unstructured XMLIndex (UXI) component.

ORA-42056: interim table cannot be a system-partitioned table

Cause: An attempt was made to redefine a table with an interim table that was a system-partitioned table.

Action: Use an interim table whose partition type is supported.

ORA-42287: cannot rename user on whose type a table depends

Cause: An attempt was made to rename a user whose schema contained a type on which some table depends. The operation may not proceed as it would render the table invalid causing loss of data.

Action: Drop table(s) dependent on types belonging to the schema of the user being renamed.

ORA-42288: may not create a schema synonym for the specified schema

Cause: An attempt was made to create a schema synonym for one of the reserved schemas (such as SYS or SYSTEM.)

Action: Schema synonyms for this schema may not be created.

ORA-42289: may not rename specified user

Cause: An attempt was made to rename one of the following: - reserved user (such as SYS or SYSTEM) - an administrative user - a common user - a locked user account

Action: This user may not be renamed.

ORA-42290: specified schema does not exist

Cause: An attempt was made to create a schema synonym for a schema which did not exist.

Action: Correct the input and try again.

ORA-42291: schema synonym '*string*' does not exist

Cause: The named schema synonym did not exist.

Action: Verify you are using the correct schema synonym name.

ORA-42292: RENAME TO already specified

Cause: The RENAME TO clause was specified twice.

Action: Use only one RENAME TO clause.

ORA-42293: user name conflicts with another user, role or schema synonym name

Cause: There was already a user, role or schema synonym with that name.

Action: Specify a different user name.

ORA-42294: role name conflicts with another user, role or schema synonym name

Cause: There was already a user, role or schema synonym with that name.

Action: Specify a different role name.

ORA-42295: schema synonym name conflicts with another user, role or schema synonym name

Cause: There was already a user, role or schema synonym with that name.

Action: Specify a different schema synonym name or use CREATE OR REPLACE SCHEMA SYNONYM.

ORA-42296: user, role or schema synonym '*string*' does not exist

Cause: There was no user, role, or schema synonym by that name.

Action: Respecify the name.

ORA-42297: cannot drop a schema synonym for a schema of a user who is currently connected

Cause: An attempt was made to drop a schema synonym for a schema of a user who was logged on.

Action: Make sure user is logged off, then repeat command.

ORA-42298: cannot rename a user that is currently connected

Cause: An attempt was made to rename a user that was logged on.

Action: Make sure user is logged off, then repeat command.

ORA-42300: an Editioning view is already defined on this table

Cause: An attempt was made to create an Editioning view on a table on which another Editioning view is already defined in the same Edition. This violates a restriction that at most one Editioning view may be associated with any base table in a given Edition.

Action: Create the new view as a regular view or, if the view being created is really intended to be an Editioning view associated with this table, drop the existing Editioning view before creating the new one.

ORA-42301: definition of an Editioning view may not refer to a synonym

Cause: An attempt was made to create an Editioning view referring to a synonym, which is not supported.

Action: Do not create an Editioning view if you want the view to refer to a synonym.

ORA-42302: definition of an Editioning view may not refer to remote tables

Cause: An attempt was made to create an Editioning view referring to remote tables, which is not supported.

Action: Do not create an Editioning view if you want the view to refer to a remote table.

ORA-42303: duplicate column reference in a definition of an Editioning view

Cause: An attempt was made create an Editioning view referencing the same column of a base table more than once, which is not supported.

Action: Do not create an Editioning view if you have multiple columns referring to the same column of the base table.

ORA-42304: base table and the Editioning view must belong to the same schema

Cause: An attempt was made to create an Editioning view in a schema different from that of the base table.

Action: Create an Editioning view in the same schema as the base table.

ORA-42305: only an Editioning view may replace an Editioning view

Cause: An attempt was made to replace an Editioning view with a view which is not an Editioning view or vice versa.

Action: Ensure that either both or neither of the views involved are Editioning views.

ORA-42306: a CrossEdition trigger may not be created on an Editioning view

Cause: An attempt was made to create a CrossEdition trigger on an Editioning view, which is not supported.

Action: Instead of creating a CrossEdition trigger on an Editioning view, create it on the Editioning view's underlying table.

ORA-42307: columns of an Editioning view may only refer to base table columns

Cause: An attempt was made to define an Editioning view containing a column referring to an entity other than a base table column (for example, a PL/SQL function without a parameter), which is not supported.

Action: Ensure that every column of an Editioning view refers to a column of a base table.

ORA-42308: view *string.string* is already in read-only mode

Cause: An attempt was made to set a read-only table in read-only mode.

Action: This DDL can only be executed on a read/write view.

ORA-42309: view *string.string* is already in read/write mode

Cause: An attempt was made to set a read/write view in read/write mode.

Action: This DDL can only be executed on a read-only view.

ORA-42310: Implementation restriction: this operation is only permitted on Editioning views

Cause: The view being altered was not an Editioning view. In this release, an ALTER VIEW READ ONLY, or ALTER VIEW READ WRITE operation is only permitted on Editioning views.

Action: Ensure that the view is an Editioning view.

ORA-42311: This operation is not permitted on Editioning views with compilation errors

Cause: ALTER VIEW READ ONLY and ALTER VIEW READ WRITE are not permitted on Editioning views which have compilation errors.

Action: Resolve the compilation errors.

ORA-42313: This operation is not supported on Editioning views marked invalid

Cause: ALTER VIEW READ ONLY and ALTER VIEW READ WRITE are not permitted on Editioning views which are marked invalid.

Action: Recompile the Editioning view to ensure that it is valid.

ORA-42314: editioning view cannot be owned by a non-editioned user

Cause: An attempt was made to create an editioning view in a schema where views were not editionable.

Action: Enable editions for the user for views and then create the editioning view.

ORA-42399: cannot perform a DML operation on a read-only view

Cause: An attempt was made to insert, delete, or update row(s) of a view created with read-only option. DML operations on such views are explicitly prohibited.

Action: Perform the desired DML operation on the view's underlying base table or issue ALTER VIEW ... READ WRITE command to make the view updatable.

ORA-42800: The specified attribute association ("*string*", "*string*") is already attached to existing shared context-sensitive policies with the specified policy function *string.string*.

Cause: An attempt was made to add an attribute association which was already attached to shared context-sensitive policies with the specified policy function. All shared context-sensitive policies with a common policy function need to have the same set of attribute associations. Attribute associations of an existing shared context-sensitive policy which is using the specified policy function will be automatically added to the new policy.

Action: Retry the operation without specifying the attribute association.

ORA-42801: Value is not set for context attribute ("*string*", "*string*") which is associated with the Row Level Security (RLS) policy "*string*".

Cause: The value was not set for every attribute association of the shared context-sensitive policy. The value must be set for every attribute association of the shared context-sensitive policy.

Action: Set the value for the context attribute and retry the operation.

ORA-42802: Could not read attribute associations from an existing shared context-sensitive policy which is using the specified policy function.

Cause: An existing shared context-sensitive policy using the specified policy function was dropped from another session.

Action: Re-issue the command.

ORA-42803: Cannot use bind variable in VERSIONS clause when the object has a Row-Level Security (RLS) policy defined on it.

Cause: The object being accessed had a Row-Level Security (RLS) policy defined on it and the VERSIONS clause contained a bind variable.

Action: Rewrite the query without the use of bind variable in the VERSIONS clause.

ORA-42804: The query could disclose rows protected by select VPD policy.

Cause: The object being accessed had a select Virtual Private Database (VPD) policy defined on it and the DML which is executed could disclose rows protected by the select VPD policy.

Action: Define VPD policy with the specific statement type.

ORA-43750 to ORA-45907

ORA-43750: invalid or illegal combination of COMMIT WRITE options

Cause: invalid or illegal combination of options provided to COMMIT WRITE SQL statement.

Action: Provide a valid combination of options for COMMIT WRITE statement

ORA-43751: invalid value for parameter *string*

Cause: invalid or illegal value provided for parameter.

Action: Provide a valid value for the parameter

ORA-43807: indexes on ORA_ROWSCN not allowed

Cause: An attempt was made to create an index that refers to the ORA_ROWSCN pseudo-column, either directly or in an expression.

Action: Do not use ORA_ROWSCN to define an index on a table.

ORA-43814: DROP INDEX is invalid for hash cluster index

Cause: An attempt was made to drop an index defined on a hash cluster. Hash cluster indexes cannot be dropped.

Action: Do not attempt to drop an index defined on a hash cluster.

ORA-43850: Advanced Compression Option parameter is required to be enabled

Cause: An Advanced Compression Option (ACO) feature was specified without enabling the ACO parameter.

Action: Set or Update the ACO parameter (enable_option_advanced_compression) to TRUE.

ORA-43852: SECUREFILE and BASICFILE cannot be used together

Cause: SECUREFILE and BASICFILE were both specified.

Action: Modify the SQL statement to specify only one of SECUREFILE or BASICFILE.

ORA-43856: Unsupported LOB type for SECUREFILE LOB operation

Cause: A LOB that is not a SECUREFILE was used in a SQL statement or in a call where a SECUREFILE LOB was expected.

Action: Convert the LOB to a SECUREFILE LOB or do not use this keyword or call.

ORA-43857: Parameter Error

Cause: Attempt to modify a LOB with an invalid parameter.

Action: Fix parameters and retry the operation.

ORA-43859: CONTENTTYPE string too long

Cause: Length of CONTENTTYPE string exceeded the defined maximum.

Action: Modify length of CONTENTTYPE string and retry operation.

ORA-43862: CONTENTTYPE buffer length incorrect

Cause: Length of CONTENTTYPE buffer less than defined constant.

Action: Modify length of CONTENTTYPE buffer and retry operation.

ORA-43878: LOB feature unsupported below compatible setting 11.2.0

Cause: An 11.2 LOB feature was specified when the database was operating at a compatible setting lower than "11.2.0".

Action: Upgrade the database compatible setting to "11.2.0" or higher to enable the desired new features.

ORA-43883: SECUREFILE LOBs delta update invalid operation

Cause: Invalid delta update operation was issued on LOB. This includes operation beyond LOB length; move operation with destination offset inside move interval.

Action: Check operation parameters for validity.

ORA-44001: invalid schema

Cause: The schema for the given schema name did not exist.

Action: Provide a valid schema name.

ORA-44002: invalid object name

Cause: The input parameter string was not a qualified SQL identifier of an existing SQL object.

Action: Make sure the string matches an existing SQL object that is accessible by the current schema.

ORA-44003: invalid SQL name

Cause: The input parameter string was not a valid simple SQL name.

Action: Check with the DBMS_ASSERT spec to verify that the parameter string is a valid simple SQL name.

ORA-44004: invalid qualified SQL name

Cause: The input parameter string was not a valid qualified SQL name.

Action: Check with the DBMS_ASSERT spec to verify that the parameter string is a valid qualified SQL name.

ORA-44101: invalid priority

Cause: The priority level given by the user was invalid.

Action: See UTL_MAIL for valid priority values and change the priority parameter accordingly.

ORA-44102: unknown or unsupported algorithm

Cause: An unknown or unsupported authentication or compression algorithm was encountered.

Action: Check the authentication or compression algorithm. Use one that is supported by Oracle.

ORA-44203: timeout waiting for lock on cursor

Cause: A timeout occurred while waiting for a cursor to be compiled. This is usually caused by the SQL parse requiring access to system resources which are locked by concurrently executing sessions.

Action: Investigate possible causes of resource contention. If necessary, contact support for additional information on how to diagnose this problem.

ORA-44204: library cache object *string.string* found in an in-flux state

Cause: The pseudo-cursor depends on a table which was found to be obsolete due to metadata invalidation of the library cache object.

Action: Contact Oracle Support Services for additional information.

ORA-44301: NULL service name is not permitted

Cause: The service name argument was found to be NULL.

Action: Provide a non-NULL service name.

ORA-44302: NULL network name is not permitted

Cause: The network name argument was found to be NULL.

Action: Provide a non-NULL network name.

ORA-44303: service name exists

Cause: This service name was already in existence.

Action: Provide a new unique service name.

ORA-44304: service *string* does not exist

Cause: The specified service was not in existence.

Action: Provide a valid service name.

ORA-44305: service *string* is running

Cause: The specified service was running.

Action: This message is informational only.

ORA-44306: service name exceeds maximum length of *string*

Cause: The service name was too long.

Action: Use a shorter service name.

ORA-44307: network name too long

Cause: The network name, excluding the domain, was too long.

Action: Use a shorter network name.

ORA-44310: maximum number of services exceeded

Cause: The maximum number of services has been reached.

Action: None

ORA-44311: service *string* not running

Cause: The specified service was not running.

Action: This message is informational only.

ORA-44312: database closed

Cause: The database was closed.

Action: Open the database and retry the operation.

ORA-44313: instance name invalid

Cause: The instance name argument was not valid.

Action: Provide a valid instance name.

ORA-44314: network name already exists

Cause: The network name was already in existence.

Action: Use an alternate network name.

ORA-44315: all service attributes null

Cause: All attributes specified were null.

Action: At least one attribute must be non-null.

ORA-44316: invalid argument

Cause: Invalid argument supplied.

Action: Supply a valid argument.

ORA-44317: database open read-only

Cause: The database is open read-only.

Action: Close the database and reopen it read/write before trying again.

ORA-44318: exceeded maximum SERVICE_NAMES length

Cause: The total length of all running service network names exceeded the maximum allowable length.

Action: Stop another service to start this one.

ORA-44319: Cannot delete AQ service

Cause: Specified AQ service belonged to a queue.

Action: Delete the queue.

ORA-44320: cannot modify global service

Cause: Could not modify the global service because of insufficient privileges or you were trying to modify the global service attribute.

Action: Use global service management to modify a global service.

ORA-44321: cannot read command line from trace file *string*

Cause: Trace file could not be read.

Action: Make sure trace file exists and contains valid raw trace data.

ORA-44322: invalid file name '*string*'

Cause: A NULL or zero length file name was specified.

Action: Correct the file name to be a nonzero length string.

ORA-44323: negative count '*string*' to *string* option

Cause: The given count was a nonpositive number.

Action: Provide a positive count number.

ORA-44324: no count argument to *string* option

Cause: Count number was missing for the option.

Action: Provide a count number to the option.

ORA-44325: no entry points found in trace file *string*

Cause: The given trace symbol was not found.

Action: None

ORA-44326: no *symbol* argument to *string* option

Cause: *symbol* argument to `-[un]trace` option was missing.

Action: Provide *symbol* argument to `-[un]trace` option.

ORA-44327: no *filename* argument to *string* option

Cause: *filename* argument to the option was missing.

Action: Provide *filename* argument to the option.

ORA-44328: unsupported version number: *string*

Cause: Version of the trace file was not supported.

Action: Provide supported version of trace file.

ORA-44403: invalid value specified for flag parameter

Cause: Mutually exclusive values were specified for the flag parameter.

Action: Internal error. Contact Oracle Support Services.

ORA-44404: upicui2 client function requires Oracle server of 10.2 or higher

Cause: A 10.2 or higher client is being used with an older Oracle server.

Action: Use an Oracle server with the same version as the client.

ORA-44411: Invalid ACL: START_DATE cannot be larger than END_DATE for all ACE

Cause: The END_DATE was smaller than the START_DATE in one of the ACE's in this ACL.

Action: Set all END_DATE to be larger than or equal to the START_DATE in each of the ACE's in this ACL.

ORA-44412: Invalid ACL: Cyclic ACL inheritance is not allowed

Cause: A cycle was formed by ACL inheritance.

Action: Check the ACL inheritance and break the cycle by removing some ACL inheritance.GG function exceeds system limits.

ORA-44413: Invalid ACL: Security class of parent ACL must be an ancestor of security class of child ACL

Cause: Security class of parent ACL was not an ancestor of security class of child ACL

Action: Change the security class of parent ACL to be an ancestor of security class of child ACL.

ORA-44414: Invalid ACL: Parent ACL '*string*' does not exist

Cause: The path to the parent ACL was not a valid resource.

Action: Change the parent ACL of this resource or create the parent ACL at the specified location.

ORA-44415: Invalid ACL: Undefined privileges

Cause: An undefined privilege was found in an ACE in the ACL.

Action: Make sure the privilege is defined in the security class as specified in the ACL.

ORA-44416: Invalid ACL: Unresolved principal '*string*'

Cause: An unresolved principal is found in an ACE in the ACL.

Action: Make sure the principal is a valid user or role in the system.

ORA-44417: Invalid ACL: Invalid ACLID

Cause: The specified ACLID did not point to a valid ACL document.

Action: Make sure the ACLID points to a valid ACL document.

ORA-44418: Invalid ACL: *string*

Cause: The specified ACL did not meet the validation requirements of the constraining ACL.

Action: Ensure ACL meets the validation requirements of the constraining ACL.

ORA-44421: cannot DISALLOW NONSCHEMA without a SCHEMA clause

Cause: If no SCHEMA clause (explicit schema or ANYSCHEMA) was specified, nonschema data cannot be disallowed.

Action: Remove DISALLOW NONSCHEMA or add some SCHEMA clause.

ORA-44422: nonschema XML disallowed for this column

Cause: An attempt was made to insert nonschema based XML documents in a binary XML column that disallows nonschema data.

Action: Insert only schema-based documents or alter the column to ALLOW NONSCHEMA data.

ORA-44423: XML Schema registered for BINARY cannot be used for CLOB/OBJ-REL

Cause: An attempt was made to use a XML Schema registered for binary usage as part of a CLOB or OBJ-REL clause.

Action: Specify a schema registered for CLOB or OBJ-REL use. Else specify BINARY XML storage for column.

ORA-44424: BINARY XML storage requires XML Schema registered for BINARY usage

Cause: An attempt was made to specify BINARY XML storage using an XML schema not registered for BINARY.

Action: Specify a schema registered for BINARY usage. Else specify CLOB or OBJ-REL storage for column.

ORA-44425: XML DB needs to be installed for creating an XMLType table or column

Cause: An attempt was made to create an XMLType table or column with out XML DB installed.

Action: Install XML DB.

ORA-44501: QMEL: Too much concurrency.

Cause: Too much concurrency

Action: Transient error, try again.

ORA-44502: QMEL: Lock not found.

Cause: Lock not found

Action: Check arguments

ORA-44503: QMEL: Lock Denied.

Cause: Lock denied

Action: None

ORA-44504: Resource Locked by Implicit Lock

Cause: The resource is locked by an implicit lock

Action: Implicit locks are normally caused by NFS locks. Refer to XDB Protocol guide for removing/obtaining information about implicit locks.

ORA-44505: QMEL: Invalid arguments.

Cause: Arguments to QMEL are not correct.

Action: None

ORA-44607: Archive logging must be enabled.

Cause: Archive logging was not enabled.

Action: Enable archive logging on the database.

ORA-44700: Language '*string*' is not a valid language for a translation

Cause: Invalid language.

Action: The language must conform to IETF RFC 3066.

ORA-44701: Language not found for translation

Cause: The document had multiple translations and one of them did not have the xml:lang attribute.

Action: All translations must have the xml:lang attribute when multiple translations are present.

ORA-44702: Multiple translations found for language '*string*'

Cause: The document had multiple translations for a language.

Action: The document must contain only one translation per language for every translated element.

ORA-44703: Multiple source language translations found

Cause: The document had multiple source language translations.

Action: The document must contain only one source language translation for every translated element.

ORA-44704: XPath '*string*' does not uniquely identify a translated element

Cause: The given XPath pointed to multiple translated elements.

Action: The given XPath must uniquely identify a translated element.

ORA-44705: Must have xdb:maxOccurs='1' for translated elements

Cause: The value of xdb:maxOccurs was not '1' for a translated element.

Action: The value of xdb:maxOccurs must be '1' for a translated element.

ORA-44706: Must have xsd:maxOccurs='unbounded' for translated elements

Cause: The value of xsd:maxOccurs was not 'unbounded' for a translated element.

Action: The value of xsd:maxOccurs must be 'unbounded' for a translated element.

ORA-44707: No source language translation found

Cause: The document had no source language translation for a translated element.

Action: The document must contain exactly one source language translation for every translated element.

ORA-44708: Translations not supported for object relational storage

Cause: The storage type of the schema was object relational.

Action: Register the schema with storage type as clob or binary xml.

ORA-44709: Invalid schema definition for translated element

Cause: The schema definition for a translated element was invalid.

Action: A translated element must be a complex type with simple content which is a restriction or extension of xs:string.

ORA-44710: Malformed XLIFF document: *string*

Cause: The XLIFF document was malformed.

Action: Fix the error and try again.

ORA-44711: XPath refers to an untranslatable element

Cause: XPath pointed to an untranslatable element.

Action: XPath for this operation must refer to a translatable element.

ORA-44712: Invalid XPath in XLIFF document used for merging

Cause: XPath within trans-unit/id attribute was invalid.

Action: XPath within trans-unit/id attribute must point to a set of translations, not to a particular translation.

ORA-44713: XPath does not select all translations

Cause: XPath did not select all translations for a particular element.

Action: XPath must point to a set of translations, not to a particular translation.

ORA-44717: First 7 positions (0-6) in the XDB repository is reserved for fusion security

Cause: An attempt was made to add or add a resource to the XDB repository at a position reserved for fusion security.

Action: Give a position other than 0 to 6.

ORA-44718: Port conflict in XDB Configuration file

Cause: A port number specified in the XDB Configuration file conflicts with a port number used in the XDB Configuration file of the same non-consolidated database or the same Pluggable Database or a different Pluggable Database of the same consolidated database or the root container of the same consolidated database.

Action: Specify a different port number.

ORA-44730: XML Index *string* is not usable at the moment

Cause: The async XML Index could not be used since ORACLE is not open for query.

Action: Try the same query again when ORACLE is open for query, or use NO_XMLINDEX_REWRITE hint.

ORA-44731: Path *string* cannot be removed from the repository XML Index

Cause: The repository XML Index indexed one of the parent folders of the resource identified by given path.

Action: Try removing the parent folder from the repository XML Index.

ORA-44732: Path *string* cannot be removed from the repository XML Index

Cause: The repository XML Index did not index the resource identified by given path.

Action: Try removing a resource that is indexed by the repository XML Index.

ORA-44733: The repository XML Index cannot be dropped directly

Cause: DROP INDEX could not be used on the repository XML Index.

Action: Try using DBMS_XDB_ADMIN.DROPREPOSITORYXMLINDEX.

ORA-44734: Predicate Index on nodes with similar children not allowed

Cause: There was at least one node in the document with multiple similar children which was used in Predicate Indexing.

Action: Try removing Predicate Index on nodes with multiple similar children.

ORA-44735: Too many predicates

Cause: Number of predicates were more than limit.

Action: Try reducing number of predicates.

ORA-44736: Group name already existed

Cause: The group name specified already exists.

Action: Try a different group name.

ORA-44737: Parameter *string* did not exist.

Cause: The parameter name specified did not exist.

Action: Check the parameter name.

ORA-44738: Group *string* did not exist.

Cause: The group name specified did not exist.

Action: Check the group name.

ORA-44739: Cannot drop the last group.

Cause: An attempt was made to drop the last group in the index.

Action: Use the DROP INDEX statement instead.

ORA-44740: Parameter *string* is already registered.

Cause: The parameter name specified was already registered.

Action: Either drop the existing parameter or use a different parameter name.

ORA-44741: Cannot drop a group whose tables are shared by other group(s).

Cause: An attempt was made to drop a group whose tables are shared by other group(s).

Action: First drop group(s) with shared table(s) from this group.

ORA-44742: Cannot alter columns of a table that is shared by other group(s).

Cause: An attempt was made to add columns to, modify columns of, or drop columns from a table shared by other group(s).

Action: First drop group(s) with shared table(s) from this group and then proceed with this operation.

ORA-44743: Cannot alter columns of a dependent shared table.

Cause: An attempt was made to add columns to, modify columns of, or drop columns from a dependent shared table. One can only add columns to, modify columns of, or drop columns from the original shared table.

Action: Use the group name of the original shared table while executing this operation.

ORA-44744: Cannot have more than one drop, add or modify operations in an ALTER INDEX statement.

Cause: An attempt was made to have more than one add, modify, or drop column or group operations in the ALTER INDEX statement.

Action: Use multiple ALTER INDEX statements instead.

ORA-44745: Cannot add or drop columns to or from multiple tables.

Cause: An attempt was made to add or drop columns to or from multiple tables in a single ALTER INDEX statement.

Action: Use multiple ALTER INDEX statements instead.

ORA-44746: Missing XMLTABLE in GROUP clause.

Cause: An attempt was made to create or add a group without XMLTABLE.

Action: Add required XMLTABLE clause to the GROUP clause.

ORA-44747: An XMLIndex with a structured component cannot be specified with ASYNC.

Cause: An attempt was made to specify ASYNC parameter for an XMLIndex with a structured component.

Action: Use valid parameters for XMLIndex with a structured component.

ORA-44748: Invalid name for GROUP.

Cause: An attempt was made to create a GROUP with invalid name.

Action: Use a valid name for the GROUP.

ORA-44749: Missing PATH for the COLUMN.

Cause: An attempt was made to create a COLUMN without PATH.

Action: Specify PATH for the COLUMN definition.

ORA-44750: Cannot create secondary index on unstructured component of XMLIndex.

Cause: An attempt was made to create a secondary index on the unstructured component of an XMLIndex when the XMLIndex does not have an unstructured component.

Action: Alter XMLIndex to add an unstructured component.

ORA-44751: XML schema enumeration index is out of range

Cause: The enumeration item corresponding to the enumeration index could not be found in the XML schema.

Action: If the XML schema has been evolved, try restarting the client that performed the evolution.

ORA-44752: New element '*string*' in complex type '*string*' has the same qualified name as another element

Cause: The new element that was added to a complex type by in-place XML schema evolution had the same qualified name as another element in the same complex type or in one of its ancestor complex types.

Action: Try adding an element with a different qualified name.

ORA-44753: Change to minOccurs attribute of element '*string*' is illegal

Cause: The value of attribute minOccurs on an element could not be increased by in-place XML schema evolution.

Action: Do not increase the value of attribute minOccurs.

ORA-44754: Change to maxOccurs attribute of element '*string*' is illegal

Cause: The value of attribute maxOccurs on an element could not be decreased by in-place XML schema evolution.

Action: Do not decrease the value of attribute maxOccurs.

ORA-44755: Change to complexType property of element '*string*' is illegal

Cause: The complexType property on an element could not be changed by in-place XML schema evolution.

Action: Do not change the complexType property.

ORA-44756: Change to SQLType attribute of element '*string*' is illegal

Cause: The SQLType property on an element in a binary XML schema could not be changed by in-place XML schema evolution.

Action: Do not change the SQLType property.

ORA-44771: Invalid name for a container database.

Cause: The service operation failed.

Action: Check the name of the container database.

ORA-44772: Cluster Ready Services (CRS) operation failed

Cause: The CRS operation failed.

Action: Check the trace file and the CRS daemon log file for details.

ORA-44773: Cannot perform requested service operation.

Cause: The consolidated database was not open. The operation was not performed.

Action: Open the consolidated database.

ORA-44774: Pluggable database attribute cannot be changed.

Cause: The attempted operation was invalid for a consolidated database.

Action: PDB attribute of a service cannot be changed.

ORA-44775: Pluggable database service cannot be created.

Cause: The attempted pluggable database operation failed.

Action: Check the trace file for details.

ORA-44776: Pluggable database service cannot be deleted.

Cause: The attempted pluggable database operation failed.

Action: Check the trace file for details.

ORA-44777: Pluggable database service cannot be started.

Cause: The attempted pluggable database operation failed.

Action: Check the trace file for details.

ORA-44778: Invalid value for service attribute retention_time.

Cause: The attempted operation failed.

Action: The value for the service attribute 'retention_time' must be greater than the value of the service attribute 'replay_initiation_timeout'.

ORA-44779: Invalid value for service attribute replay_initiation_timeout.

Cause: The attempted operation failed.

Action: The value for the service attribute 'replay_initiation_timeout' must be greater than the value of the service attribute 'failover_delay'.

ORA-44780: Invalid value for service attribute commit_outcome.

Cause: The attempted operation failed.

Action: The value for the service attribute 'commit_outcome' cannot be disabled if the service attribute 'failover_type' has the value 'transaction'.

ORA-44781: Invalid value for service attribute aq_ha_notifications.

Cause: The attempted operation failed.

Action: The value for the service attribute 'aq_ha_notifications' cannot be disabled if the service attribute 'failover_type' has the value 'transaction'.

ORA-44782: Cluster Ready Services (CRS) service operation failed - reason: *string*.

Cause: The attempted CRS service operation failed.

Action: Check the trace file for details.

ORA-44783: The maximum number of runtime load balancing services exceeded.

Cause: The number of runtime load balancing services reached the maximum allowed.

Action: None

ORA-44784: Service cannot be deleted.

Cause: The attempted service operation failed.

Action: Internal services and the database service cannot be deleted.

ORA-44785: Service attribute commit_outcome cannot be specified for the database or Pluggable Database service.

Cause: The attempted service operation failed.

Action: None

ORA-44786: Service cannot be started.

Cause: The service was not imported successfully while plugging in the pluggable database.

Action: None

ORA-44800: Number of classifiers cannot be NULL

Cause: The num_classifiers argument was found to be NULL.

Action: Provide a non-NULL num_classifiers.

ORA-44801: NULL classifier list not permitted

Cause: The wlm_classifiers argument was found to be NULL.

Action: Provide a non-NULL wlm_classifiers.

ORA-44802: No new plan (classifier list) has been submitted

Cause: No new plan was created before submission.

Action: Create a new plan, followed by adding classifier & PC lists.

ORA-44803: Plan is in transition (about to be activated)

Cause: New plan was attempted to be created before activating the current plan.

Action: Completely submit the current plan and activate it.

ORA-44804: Plan is not created yet

Cause: A new plan was not created before submitting the Classifier and Performance Class lists.

Action: Call dbms_wlm.create_plan first to create the plan.

ORA-44805: No classifier is present

Cause: The classifier list contained no classifiers.

Action: Check the syntax of the classifier list.

ORA-44806: Extra classifiers are present in list

Cause: More classifiers were present in the list than specified.

Action: Only include the number of classifiers less than or equal to num_classifiers mentioned in dbms_wlm.create_plan.

ORA-44807: Performance Class name is too large

Cause: The Performance Class name was larger than 32 bytes.

Action: Rename the Performance Class to fit within 32 bytes.

ORA-44808: Work Request Class name is too large

Cause: The Work Request Class name was larger than 32 bytes.

Action: Rename the Work Request Class to fit within 32 bytes.

ORA-44809: No expression is present for classifier

Cause: This classifiers contained no expression. It should contain one more more expressions.

Action: Check syntax in the classifier list.

ORA-44810: No parameter is present for expression

Cause: This expression contained no paramaters or attribute values. It should contain one or more attribute values. Attributes can be SERVICE_NAME, MODULE, ACTION, PROGRAM or USER.

Action: Check syntax in the classifier list.

ORA-44811: Service name is too large

Cause: The service name mentioned in the parameter list was too large.

Action: Check the service name.

ORA-44812: Module name is too large

Cause: The module name mentioned in the parameter list was too large.

Action: Check the module name.

ORA-44813: Action name is too large

Cause: The action name mentioned in the parameter list was too large.

Action: Check the action name.

ORA-44814: Program name is too large

Cause: The program name mentioned in the parameter list was too large.

Action: Check the program name.

ORA-44815: User name is too large

Cause: The user name mentioned in the parameter list was too large.

Action: Check the user name.

ORA-44816: Number of Performance Classes is less than specified

Cause: The number of Performance Classes submitted were less than what was specified.

Action: Submit the full list of Performance Classes.

ORA-44817: Classifier list is too large

Cause: The length of the classifier list was greater than 4000 bytes.

Action: Break the list into two lists before submission.

ORA-44818: General failure

Cause: There was an unknown failure.

Action: Contact Oracle Support Services.

ORA-44819: Execution of this WLM function is denied

Cause: Either a WLM plan was being loaded from another instance, or the strict order of the PL/SQL calls for loading WLM plan was not followed.

Action: Check if another session is also concurrently trying to load a WLM plan. If that is not true, check the order in which you are making these PL/SQL calls to load your WLM plan.

ORA-44820: Number of Work Request Classes is less than specified

Cause: The number of Work Request Classes submitted were less than what was specified.

Action: Submit the full list of Work Request Classes.

ORA-44821: Number of classifiers is too large

Cause: A very large number (> 1024) of classifiers were requested.

Action: Submit a smaller (< 1024) number of classifiers.

ORA-44822: QoS Resource Manager plan does not exist in database "*string*"

Cause: QoS Resource Manager plan did not exist in this database.

Action: Rerun CATPROC.SQL to create the plan.

ORA-44823: The QoS Resource Manager plan is not in use

Cause: The QoS Resource Manager plan was not in use.

Action: Correct the setting of the current Resource Manager plan and try again.

ORA-44824: Resource Manager is disabled

Cause: Resource Manager was turned off.

Action: Reenable the Resource Manager and retry the operation.

ORA-44825: Classifier plan does not match across instances

Cause: Classifier plan was not the same across instances.

Action: Resubmit the classifier plan and try again.

ORA-44826: Number of Performance Classes is more than what was specified.

Cause: The number of Performance Classes submitted were more than what was specified.

Action: Submit only the specified number of Performance Classes.

ORA-44827: Number of Performance Classes is too large

Cause: A large number (≥ 50) of Performance Classes were requested.

Action: Submit a smaller (< 50) number of Performance Classes.

ORA-44850: attempt to set a bad status *string* [*string*]

Cause: There was an internal Global Service Manager (GSM) error.

Action: Contact Oracle Support Services.

ORA-44851: "*string*" is not a valid name for a database

Cause: The specified database name was not valid.

Action: Provide a valid database name.

ORA-44852: maximum number of regions exceeded

Cause: The maximum number of regions was exceeded.

Action: Check the catalog to see if you can remove unused regions.

ORA-44853: maximum number of valid nodes for VNCR exceeded

Cause: The maximum number of nodes for valid node checking for registration (VNCR) was exceeded.

Action: Check the catalog to see if you can remove unused nodes.

ORA-44854: catalog has already been created

Cause: This database already contained the cloud catalog.

Action: Make sure that the specified database name is correct and, if yes, delete and re-create the catalog.

ORA-44855: cloud name is not valid

Cause: The specified cloud name contained invalid characters or was too long.

Action: Provide a valid (or shorter) cloud name.

ORA-44856: catalog service name is not valid

Cause: There was an internal Global Service Manager (GSM) error.

Action: Contact Oracle Support Services.

ORA-44857: cloud "*string*" does not exist

Cause: The specified cloud name did not match the one found in the catalog.

Action: Provide a valid cloud name.

ORA-44858: cannot remove catalog

Cause: The catalog contained one or more database or Global Service Manager (GSM) objects.

Action: Remove the database and GSM objects from the catalog.

ORA-44859: GSM "*string*" is already defined in the catalog

Cause: The specified Global Service Manager (GSM) was already in existence in the catalog.

Action: Check the specified object name.

ORA-44860: Region "*string*" was not found in the catalog.

Cause: The specified region was not found in the catalog.

Action: Check the specified object name.

ORA-44861: invalid use of REMOVE VNCR command

Cause: A valid node and group name were specified in the same command.

Action: Provide either a valid node or group name.

ORA-44862: region name and buddy region name cannot be the same

Cause: A region was specified as buddy for itself.

Action: Provide a valid buddy region name.

ORA-44863: region "*string*" is the last region and cannot be removed

Cause: The last region could not be removed from the cloud catalog.

Action: No action is required.

ORA-44864: cannot remove region because it is still being used by a GSM

Cause: The region contained databases or Global Service Manager (GSM).

Action: Remove the database and GSM objects from the region first.

ORA-44865: cannot remove GDS pool because it is still being used by a database or service

Cause: The Global Data Services (GDS) pool contained databases or services.

Action: Remove the databases and services from the GDS pool.

ORA-44866: pool "*string*" can only contain databases that belong to a Data Guard broker configuration

Cause: An attempt was made to add a database that does not belong to a Data Guard broker configuration to a Data Guard broker pool.

Action: None

ORA-44867: GDS pool already contains database "*string*"

Cause: The database or service was already in the Global Data Services (GDS) pool.

Action: None

ORA-44868: pool "*string*" is a pool that contains a Data Guard broker configuration; Databases that do not belong to a broker configuration cannot be added to this pool.

Cause: An attempt was made to add a database to a pool that contains a Data Guard broker configuration.

Action: None

ORA-44869: cannot build net service name with "string\ because it is too long

Cause: The automatically created network service name was too long.

Action: Use a shorter network domain name.

ORA-44870: The "role" property is only supported for pools that contain a Data Guard broker configuration.

Cause: ROLE was specified for a pool that did not contain a Data Guard broker configuration.

Action: None

ORA-44871: This operation cannot be performed on PREFERRED_ALL service "string".

Cause: The service was created with the PREFERRED_ALL option.

Action: Do not perform this operation on a PREFERRED_ALL service.

ORA-44872: The same name "string" cannot be used for both source and target databases.

Cause: The source and target parameters of MOVE SERVICE were the same.

Action: Check the parameters and try again.

ORA-44873: database "string" already offers the service

Cause: An attempt was made to add a service to a database that already offered the service.

Action: No action is required.

ORA-44874: service "string" not offerered by database "string"

Cause: An attempt was made to start or stop a service on a database that does not offer the service.

Action: None

ORA-44875: database-related service parameters exceed the maximum allowed parameter length (1024 bytes)

Cause: The specified database-related service parameters were not valid.

Action: Check the parameters and try again.

ORA-44876: service *string* is running

Cause: The specified service was running.

Action: This message is informational only.

ORA-44877: service "string" is not enabled on database "string"

Cause: The service could not be started on the database because it was disabled.

Action: Enable the service.

ORA-44878: The database current lag is too high for the service "string".

Cause: The service could not be started on the standby database because the database current lag exceeds the service lag.

Action: The standby current lag needs to be reduced.

ORA-44879: A region name has not been provided.

Cause: An attempt was made to add a new Global Service Manager (GSM) without providing a region. When there is more than one existing region, a region name must be provided.

Action: Check the syntax and rerun the command.

ORA-44880: catalog has not yet been created

Cause: An attempt was made to modify the catalog, but it does not yet exist.

Action: Create the catalog before trying to modify it.

ORA-44881: GDS pool is not empty

Cause: An attempt was made to add broker configuration to a Global Data Services (GDS) pool that already contained a database. This is not allowed.

Action: Either remove all databases from the Global Data Services (GDS) pool or create a new GDS pool.

ORA-44882: The name "*string*" is not valid for a GDS pool.

Cause: The name of the specified Global Data Services (GDS) pool was not valid.

Action: Check the name and try again.

ORA-44883: The name "*string*" is not valid for a region.

Cause: The name of the specified region was not valid.

Action: Check the name and try again.

ORA-44884: The name "*string*" is not valid for a service.

Cause: The name of the specified service was not valid.

Action: Check the name and try again.

ORA-44885: invalid VNCR name *string*

Cause: The name specified for the valid node checking for registration (VNCR) was not valid.

Action: Check the name and try again.

ORA-44886: The name "*string*" is not valid for a VNCR group.

Cause: The name specified for the valid node checking for registration (VNCR) group was not valid.

Action: Check the name and try again.

ORA-44887: The name "*string*" is not valid for a GSM.

Cause: The name of the specified Global Service Manager (GSM) was not valid.

Action: n/a

ORA-44888: The name "*string*" is not valid for a GSM user.

Cause: The name of the specified Global Service Manager (GSM) was not valid.

Action: Check the name and try again.

ORA-44889: Region "*string*" is already defined in the catalog.

Cause: The specified region was already in existence in the catalog.

Action: Check the specified region name.

ORA-44890: GDS pool "*string*" is already defined in the catalog.

Cause: The specified Global Data Services (GDS) pool was already in existence in the catalog.

Action: Check the specified pool name.

ORA-44891: GSM "*string*" was not found in the catalog

Cause: The specified region was not found in the catalog.

Action: Check the specified region name.

ORA-44892: GDS pool "*string*" was not found in the catalog.

Cause: The specified Global Data Services (GDS) pool was not found in the catalog.

Action: Check the specified pool name.

ORA-44893: Database "*string*" was not found in pool "*string*".

Cause: The specified database was not found in the pool.

Action: Check the specified database name.

ORA-44894: Service "*string*" was not found in the catalog.

Cause: The specified service was not found in the catalog.

Action: Check the specified service name.

ORA-44895: cannot remove region because it is still being used by a database

Cause: The region contained databases.

Action: Remove the database objects from the region.

ORA-44896: GDS pool already contains service "*string*"

Cause: The service was already in the Global Data Services (GDS) pool.

Action: None

ORA-44897: The "*lag*" property is only supported for pools that contain a Data Guard broker configuration.

Cause: LAG was specified for a pool that did not contain a Data Guard broker configuration.

Action: None

ORA-44898: The "*failover_primary*" property is only supported for pools that contain a Data Guard broker configuration.

Cause: FAILOVER_PRIMARY was specified for a pool that did not contain a Data Guard broker configuration.

Action: None

ORA-44899: VNCR name "*string*" is already defined in the catalog.

Cause: The specified valid node checking for registration (VNCR) name was already in existence in the catalog.

Action: Check the specified VNCR name.

ORA-44900: Identifier "*string*" is too long.

Cause: The specified identifier exceeded the maximum allowed length.

Action: Use a shorter identifier name

ORA-44901: Unable to resolve symbolic link "*string*"

Cause: The system is unable to resolve the specified symbolic link.

Action: Check the definition of the symbolic link to ensure that this refers to a valid resource.

ORA-44902: Too many steps in resolving symbolic link "*string*"

Cause: This error is raised when the system is unable to fully resolve a path with symbolic links within a reasonable number of steps. It could be due to cycles in definitions of symbolic links or very long chains of symbolic links to symbolic links.

Action: Remove any cycles in symbolic link definitions. If there are no cycles, reduce the length of chains of symbolic links to symbolic links.

ORA-44903: Cannot create hard link to specified resource

Cause: The system cannot create a hard link to the specified resource.

Action: Check the configuration parameter(s) to verify the restrictions on creating hard links to folder or non-folder resources.

ORA-44904: target path in document link exceeds maximum length

Cause: Target path length exceeds the maximum which can be stored to disk.

Action: Reduce target path to smaller length

ORA-44905: extended link type not supported

Cause: XLink type attribute is extended.

Action: Remove extended link, or replace with simple link.

ORA-44906: unable to resolve target in document link

Cause: target path does not resolve to valid resource.

Action: check validity of target path.

ORA-44907: can not delete with incoming hard document links

Cause: there is a hard document link with this resource as the target.

Action: query DOCUMENT_LINKS view to see which resource has a hard link to this resource. Change the document link in the source resource accordingly.

ORA-44908: found a loop in XInclude elements while expanding *string*

Cause: There is a loop in XInclude elements within the document.

Action: Remove the loop in XInclude elements.

ORA-44909: href attribute is required within XInclude element

Cause: The href attribute is missing within XInclude element.

Action: Add the href attribute.

ORA-44910: xpointer not supported within XInclude element

Cause: The xpointer attribute is specified within XInclude element.

Action: Remove the xpointer attribute.

ORA-44911: exceeded maximum depth of nested xinclude expansion

Cause: The depth of nested xinclude expansion has exceeded system limit.

Action: Reduce the depth of nested xinclude expansion.

ORA-44912: invalid or unsupported xpath expression *string*

Cause: The specified xpath is either invalid or unsupported in this context.

Action: Change the xpath expression.

ORA-44913: error while processing XInclude *string*

Cause: There was an error while processing the specified XInclude.

Action: Ensure that the XInclude attributes are correct.

ORA-45000: SecureFile feature unsupported below compatible 11.2.0.0.0

Cause: An 11gR2 LOB feature was specified when the database was operating at a compatible setting lower than 11.2.0.0.0.

Action: Upgrade the database compatible setting to 11.2.0.0.0 or higher to enable the desired new features.

ORA-45001: SecureFile archive implicit not allowed

Cause: A SecureFile was archived and implicit retrieval was not allowed.

Action: Retrieve the SecureFile with a Get operation.

ORA-45002: Content ID not found in the DBFS HS

Cause: The content ID was invalid or was already deleted.

Action: No action required.

ORA-45003: DBFS HS: Invalid checksum, potential data corruption

Cause: Potential data corruption.

Action: No action required.

ORA-45004: DBFS HS SBT Error

Cause: Error related to SBT Tape library.

Action: Refer to error log for more details.

ORA-45005: DBFS HS invalid store

Cause: Error related to DBFS HS Store.

Action: Check that the store name and store parameters are valid values.

ORA-45400: operation not permitted on current database

Cause: An operation was not permitted to start because the database role is not supported.

Action: Attempt the operation on the primary database. If the primary database has recently switched to a logical standby database, and an error has occurred, reexecute the DBMS_ROLLING.SWITCHOVER procedure on the former primary database until successful completion of the operation.

ORA-45401: upgrade plan is already active

Cause: An upgrade plan was already active.

Action: The existing plan must first be destroyed by calling DBMS_ROLLING.DESTROY_PLAN.

ORA-45402: LOG_ARCHIVE_CONFIG must contain the DG_CONFIG attribute

Cause: The DG_CONFIG attribute was missing from the LOG_ARCHIVE_CONFIG parameter.

Action: Configure this parameter with the DG_CONFIG attribute before performing DBMS_ROLLING operations.

ORA-45403: database *string* must be specified in DG_CONFIG

Cause: The specified database was not found in the DG_CONFIG attribute of the LOG_ARCHIVE_CONFIG parameter.

Action: Add the specified database to the DG_CONFIG attribute of the LOG_ARCHIVE_CONFIG parameter.

ORA-45404: target version is incompatible

Cause: The configured target software version was incompatible with a DBMS_ROLLING administered upgrade.

Action: Use alternative upgrade methods.

ORA-45405: A rolling upgrade operation is already in progress.

Cause: A DBMS_ROLLING operation was already in progress. Only one operation is permitted at a time.

Action: Wait for the operation to complete, or query the PID column of DBA_ROLLING_STATUS view to identify the active process.

ORA-45406: operation completed with warnings

Cause: An operation succeeded but warnings were generated.

Action: Consult the DBA_ROLLING_EVENTS view for the list of warnings.

ORA-45407: operation encountered a query error

Cause: An internal database query failed.

Action: Consult the DBA_ROLLING_EVENTS and DBA_ROLLING_PLAN views to identify the error code and instruction that caused the failure.

ORA-45408: parameter name is unknown

Cause: The specified parameter could not be modified because the parameter name was not recognized.

Action: Verify that the parameter is among the available parameters listed in DBA_ROLLING_PARAMETERS view.

ORA-45409: parameter value is invalid or out of bounds

Cause: The specified parameter could not be modified because its value was invalid or out of bounds.

Action: Consult the DBA_ROLLING_PARAMETERS view to obtain the valid range of values for the associated parameter.

ORA-45410: parameter may not be modified

Cause: The specified parameter could not be modified.

Action: Internal parameters may not be modified through the DBMS_ROLLING.SET_PARAMETER procedure. If the parameter is a user parameter, the parameter is no longer meaningful at the current phase of the upgrade.

ORA-45411: operation requires additional arguments

Cause: An operation has failed because one or more arguments were not supplied.

Action: Retry the operation with all required arguments.

ORA-45412: parameter scope argument is unknown

Cause: An operation has failed because the database unique name provided in the scope argument was not known.

Action: Verify that the database unique name exists in the DG_CONFIG attribute of the LOG_ARCHIVE_CONFIG parameter.

ORA-45413: parameter has no default value

Cause: The specified parameter could not be reverted back to its default value because the default value did not exist.

Action: The parameter must be set to an explicit value.

ORA-45414: could not connect to a remote database

Cause: Connections to one or more databases failed.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the involved databases and the specific error codes.

ORA-45415: instruction execution failure

Cause: A rolling upgrade operation has halted due to the failure of one or more required upgrade instructions.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the active instructions and their associated error codes.

ORA-45416: operation cannot start until plan rebuild

Cause: An operation was not permitted to start due to recent parameter modifications which required a rebuild of the upgrade plan.

Action: Call the DBMS_ROLLING.BUILD procedure to rebuild the upgrade plan.

ORA-45417: operation not permitted since current phase was not *string*

Cause: An operation was not permitted to start because the upgrade was in a different phase.

Action: Call the DBMS_ROLLING procedure associated with the current phase.

ORA-45418: database is not running the higher version RDBMS

Cause: A rolling upgrade instruction has failed because a database was not running the correct target RDBMS version.

Action: Consult the DBA_ROLLING_PLAN view to identify the offending databases and restart them on the higher version binaries.

ORA-45419: DB_UNIQUE_NAME parameter must be specified

Cause: The DB_UNIQUE_NAME parameter was not configured.

Action: Configure the DB_UNIQUE_NAME parameter.

ORA-45420: return TNS service was not found

Cause: An instruction failed because a Transparent Network Substrate (TNS) service name for return communication was not found on a remote database.

Action: Consult the DBA_ROLLING_PLAN view to identify the offending database or databases.

ORA-45421: database type is not supported by rolling upgrade

Cause: One or more databases specified in the DG_CONFIG attribute was incompatible with a DBMS_ROLLING administered upgrade.

Action: Disable the databases from the upgrade configuration by setting their associated INVOLVEMENT parameters to a value of NONE, and rebuild the upgrade plan.

ORA-45422: operation requires existing plan

Cause: An operation was not permitted to start because it required an active plan.

Action: Configure an upgrade plan by calling the DBMS_ROLLING.INIT_PLAN procedure.

ORA-45423: target database has mismatched DB_UNIQUE_NAME

Cause: A specified DB_UNIQUE_NAME attribute in a LOG_ARCHIVE_DEST_n parameter did not match the DB_UNIQUE_NAME at the target database.

Action: Ensure the DB_UNIQUE_NAME attribute and associated Transparent Network Substrate (TNS) service name or associated connect string has been configured properly.

ORA-45424: initialization parameter file has unexpected value

Cause: An instruction failed due to an initialization parameter file at a remote database that was found to be invalid.

Action: Consult the DBA_ROLLING_PLAN view to identify the offending database.

ORA-45425: operation halted due to required user interaction

Cause: A rolling upgrade operation stopped because interaction is required.

Action: Consult the DBA_ROLLING_EVENTS view to identify the actions required.

ORA-45426: managed recovery process was not running

Cause: An operation failed due to the inactive managed recovery process at a remote database.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the offending database. Restart the managed recovery process or resolve any errors that would prevent the managed recovery process from remaining active.

ORA-45427: logical standby Redo Apply process was not running

Cause: An operation failed due to the inactive logical standby Redo Apply process at a remote database.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the offending database. Restart the logical standby Redo Apply process or resolve any errors that would prevent the logical standby Redo Apply process from remaining active.

ORA-45428: database was not in expected database role

Cause: An instruction failed due to a database operating in a database role which was not expected.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the offending database. If the role change is due to a failover, the FAILOVER parameter must be set and the upgrade plan must be rebuilt before resuming the rolling upgrade.

ORA-45429: database was set to an invalid Data Guard protection mode

Cause: An instruction failed due to a database operating at a data protection mode that was not expected.

Action: Consult the DBA_ROLLING_PLAN view to identify the offending database. Set the data protection mode accordingly based on the requirement as described in the instruction.

ORA-45430: flashback database was not enabled

Cause: An instruction failed due to a database that was found to not have Flashback Database enabled.

Action: Consult the DBA_ROLLING_PLAN view to identify the offending database. Configure the database with adequate storage to support guaranteed restore points and enable Flashback Database.

ORA-45431: database was mounted or open in an invalid mode

Cause: An instruction failed due to a database that was mounted or open in an invalid mode.

Action: Consult the DBA_ROLLING_PLAN view to identify the offending database and the expected mode. Restart the database in the expected mode.

ORA-45432: future primary database is not a physical standby database

Cause: An operation was not permitted because the future primary database is not a physical standby database.

Action: Specify a physical standby database as the future primary database.

ORA-45433: failover was detected on an unsupported database

Cause: An operation was not permitted because a failover was detected on a database which does not permit continuation of the rolling upgrade.

Action: Consult the DBA_ROLLING_EVENTS view to identify the unsupported database and abort the rolling upgrade.

ORA-45434: multiple failovers of the same type detected

Cause: An operation was not permitted because multiple failovers were detected on standby databases which protect a common target.

Action: Consult the DBA_ROLLING_EVENTS view to identify the offending databases. Remove the unwanted databases from the configuration and rebuild the upgrade plan.

ORA-45435: managed recovery process was running

Cause: An operation failed due to an active managed recovery process at a remote database.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the offending database and stop the managed recovery process.

ORA-45436: logical standby Redo Apply process was running

Cause: An operation failed due to an active Redo Apply process at a remote database.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the offending database and stop the Redo Apply process.

ORA-45437: database upgrade progress is inconsistent

Cause: An operation failed due to the discovery of the catalog upgrade progress on a database that was different from the progress value saved in the plan state.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the offending database and remove the database from the configuration.

ORA-45438: database is not in mounted mode

Cause: An operation failed due to the discovery of a database which was not in mounted mode.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the offending database. If the database was opened, restart the database in mounted mode.

ORA-45439: database is not in open read/write mode

Cause: An operation failed due to the discovery of a database which was not in open read/write mode.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the offending database. Open the database in read/write mode.

ORA-45440: server parameter file has not been configured

Cause: An operation failed due to the discovery of a database which was not configured with a server parameter file that could be modified.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the offending database. Ensure the database has been configured with a server parameter file, and that the parameter file can be modified.

ORA-45441: no databases eligible for rollback

Cause: A rollback operation could not start because the databases have not created the guaranteed restore point needed for rollback.

Action: A rollback is not necessary. The rolling operation can be cancelled by calling DBMS_ROLLING.DESTROY_PLAN.

ORA-45442: rollback is not permitted after a role change

Cause: A rollback operation was not permitted due to a prior role change event such as a switchover or failover.

Action: Reconfigure the Data Guard configuration manually.

ORA-45443: cannot quiesce replicated PL/SQL procedures

Cause: An operation failed because there were other processes executing long running replicated PL/SQL procedures.

Action: Increase the value of DICTIONARY_PLS_WAIT_TIMEOUT and retry the failed operation.

ORA-45486: database update progress is inconsistent

Cause: An operation failed due to the discovery of the update progress on a database that was different from the progress value saved in the plan state.

Action: Consult the DBA_ROLLING_PLAN and DBA_ROLLING_EVENTS views to identify the offending database and remove the database from the configuration.

ORA-45500: Cannot remove a database from a pool that contains a broker configuration.

Cause: An attempt was made to remove a database from a pool that contained a broker configuration.

Action: If the broker configuration has changed, use the SYNC command in gsmctl to synchronize the pool

ORA-45501: The maximum number of global service managers for this region has been exceeded.

Cause: A new Global Service Manager (GSM) was added to a region that already contained the maximum number of GSMs.

Action: The maximum has been reached. Do not attempt to add anymore GSMs.

ORA-45502: Insufficient privileges to perform this operation.

Cause: A Global Service Manager (GSM) command was executed by a non-privileged user.

Action: Either connect as a privileged user, or ask your GSM administrator to add you as a pool or GSM administrator.

ORA-45503: This database is already in cloud *string*.

Cause: An attempt was made to add a database to a cloud when it was already in another cloud.

Action: A database can only be in one cloud. Remove it from the other cloud first.

ORA-45504: Cannot relocate a preferred_all service.

Cause: The command 'relocate service' is not supported for preferred_all services.

Action: Do no attempt to relocate a preferred_all service.

ORA-45505: The maximum number of services has been reached.

Cause: The hard limit for the number of global services has been reached.

Action: No more global services can be added without first removing a service.

ORA-45506: The maximum number of GDS pools has been reached.

Cause: The hard limit for the number of Global Data Services (GDS) pools has been reached.

Action: No more Global Data Services (GDS) pools can be added without first removing a pool.

ORA-45507: Region *string* does not have a buddy region.

Cause: The specified region did not have a buddy.

Action: This message is informational only. Consider using 'modify region' to add a buddy for this region.

ORA-45508: Database *string* does not have an assigned region.

Cause: The specified database did not have an assigned region.

Action: Use 'modify database' to assign a region to this database.

ORA-45509: Database *string* has an invalid status "*string*".

Cause: The specified database had an invalid status.

Action: Check that the account "gsmuser" has been enabled by the remote DBA, that you used the correct password for "gsmuser" when running "add database", and that there is an existing valid node check for registration (VNCR) entry for this database host.

ORA-45510: There is an outstanding GSM request for change number *string* created at *string*. GSM has failed to apply this request *string* times.

Cause: A change request originating from a gdsctl command was not applied after several minutes.

Action: Verify that the Global Service Manager (GSM) server is able to connect to all databases in the framework to apply the change.

ORA-45511: Service *string* does not have a preferred database.

Cause: The specified service did not have a preferred database. This can happen if the database was removed from the pool.

Action: Use 'modify service' to provide a preferred database for this service.

ORA-45512: Service *string* is a local only service which has an available database in region *string*, but does not have a preferred database in the same region.

Cause: The specified service did not have a preferred database in a region in which it had an available database.

Action: Use 'modify service' to provide a preferred database in this region for this service, or remove the available database in this region.

ORA-45513: Database *string* has no global services defined for it.

Cause: A database was added to the global data services framework, but no global services have been defined for it, or they have all been removed.

Action: This is an informational message. Consider defining a service for this database, or removing the database from the framework.

ORA-45514: Region *string* does not contain any databases.

Cause: A region was added to the global data services framework, but no databases were added to this region, or they have all been removed.

Action: This is an informational message. Consider adding a database to this region or removing the region.

ORA-45515: Region *string* does not contain any GSMs.

Cause: A region was added to the global data services framework, but no global services manager servers were defined for this region, or they have all been removed.

Action: This is a warning message. You are advised to define a GSM in this region for high availability.

ORA-45516: GDS pool *string* does not contain any databases.

Cause: The specified Global Data Services (GDS) pool did not contain any databases.

Action: This is an informational message. Consider adding databases to this pool or removing the pool from the global data services framework.

ORA-45517: GDS pool *string* does not contain any global services.

Cause: The specified Global Data Services (GDS) pool did not contain any global services.

Action: This is an informational message. Consider adding services to this pool or removing the pool from the global data services framework.

ORA-45518: Service *string* will not be started on logical/snapshot standby.

Cause: The specified service will not be started on a logical/snapshot standby.

Action: This is a warning message. Consider re-defining lag parameter to "any", if the service needs to be started on a logical/snapshot standby.

ORA-45519: Database pool *string* is empty; this operation cannot be performed on an empty pool.

Cause: The database pool does not contain any databases. Therefore this operation will have no effect.

Action: This is a warning message. Do not perform this operation on an empty database pool.

ORA-45520: A service with locality ANYWHERE cannot set region failover.

Cause: Service attributes ANYWHERE and REGION_FAILOVER are incompatible.

Action: Do not attempt to set REGION_FAILOVER on a service with locality ANYWHERE.

ORA-45521: A service with a primary role cannot set FAILOVER_PRIMARY.

Cause: A service with a primary role cannot set FAILOVER_PRIMARY.

Action: Do not attempt to set FAILOVER_PRIMARY on a service that has a primary role.

ORA-45522: LOCAL_ONLY service *string* cannot be relocated to a database in another region.

Cause: The specified service is LOCAL_ONLY and cannot be relocated to a database in a different region.

Action: Do not relocate a LOCAL_ONLY service to a database in another region.

ORA-45523: Warning: service *string* is already stopped.

Cause: The service was stopped already.

Action: None; this is only a warning message.

ORA-45524: must explicitly specify Global Data Services pool name because there could be multiple candidates

Cause: An attempt to have a default Global Data Services pool when multiple pools already coexist in the domain failed.

Action: Do not omit '-gdspool gdspool_name_list' when multiple pools exist

ORA-45525: A value of TRANSACTION was provided for the service parameter '-failovertime', but bad or nonexistent value was specified for service parameter '-retention'.

Cause: The command specified a value of TRANSACTION for the service parameter '-failovertime', and either did not provide a value for the parameter '-retention', or provided a value that was less than or equal to the value provided for the parameter '-replay_init_time'.

Action: If a service is created with a value of TRANSACTION for the parameter '-failovertime', then a value must be provided for the parameter '-retention', and that value must be greater than the value provided for the parameter '-replay_init_time'.

ORA-45526: A value of TRANSACTION was provided for the service parameter '-failovertime', but a bad or nonexistent value was specified for service parameter '-replay_init_time'.

Cause: The command specified a value of TRANSACTION for the service parameter '-failovertime', and either did not provide a value for the parameter '-replay_init_time', or provided a value that was less than or equal to the value provided for the parameter '-failoverdelay'.

Action: If a service is created with a value of TRANSACTION for the parameter '-failovertype', then a value must be provided for the parameter '-replay_init_time', and that value must be greater than the value provided for the parameter '-failoverdelay'.

ORA-45527: Database compatibility level was too low for use with Global Data Services (GDS).

Cause: The major database compatibility level is below 12. The Global Data Services (GDS) feature requires that the database compatibility level of all participating databases be at 12 or above.

Action: In order to use this database for Global Data Services (GDS), an upgrade must be completed so that its major compatibility level is at 12 or above.

ORA-45528: Service *string* has not been globally started.

Cause: An attempt was made to start the service in a specific database without first starting it globally.

Action: Start the service globally by using 'start service' command without specifying the '-database' parameter.

ORA-45529: Database has not been configured to use an SPFILE.

Cause: The database was not configured to use an SPFILE. This is required before it can be used within a Global Data Services (GDS) framework.

Action: Reconfigure the database to use an SPFILE and attempt the action again.

ORA-45530: A local service with the same name already exists.

Cause: An attempt was made to create a global service with the same name as an existing local service.

Action: Use a different service name or delete the existing local service.

ORA-45531: This database is already in another Global Data Services (GDS) framework.

Cause: An attempt was made to create a Global Data Services (GDS) catalog on a database that was already in another GDS framework.

Action: Remove this database from the other framework before using it as a Global Data Services (GDS) catalog.

ORA-45532: This database is already a catalog for another Global Data Services (GDS) framework.

Cause: An attempt was made add a database to a Global Data Services (GDS) framework, but it was already a catalog database for another framework.

Action: Do not attempt to to add a Global Data Services (GDS) catalog to another GDS framework.

ORA-45533: Service *string* is already being modified from another GDSCTL session.

Cause: The specified service was already in the process of being modified.

Action: Wait until any other service modifications have completed. If this problem persists, contact Oracle Support Services.

ORA-45534: There is a running GSM (Global Service Manager) connected to the catalog.

Cause: This command could not be executed while there were running GSM (Global Service Manager) servers connected to the catalog.

Action: Shut down all GSM servers before running this command.

ORA-45535: Catalog version cannot be determined.

Cause: The version of the GDS (Global Data Services) catalog could not be determined.

Action: Contact Oracle Support Services.

ORA-45536: This version of GDSCTL is not compatible with the GDS (Global Data Services) catalog.

Cause: The version of GDSCTL being used was not compatible with the current GDS catalog.

Action: Refer to the documentation for compatible versions and upgrade or downgrade GDSCTL or the GDS catalog.

ORA-45537: This version of GSM (Global Service Manager) is not compatible with the GDS (Global Data Services) catalog.

Cause: The version of GSM being used was not compatible with the current GDS catalog.

Action: Refer to the documentation for compatible versions and upgrade or downgrade GSM or the GDS catalog.

ORA-45538: The database version is not compatible with the GDS (Global Data Services) catalog.

Cause: The version of the database being added was not compatible with the GDS catalog.

Action: Refer to the documentation for compatible versions and upgrade or downgrade the database or the GDS catalog.

ORA-45539: Database *string* has already been added to another pool.

Cause: An attempt was made to add a database to a pool, but this database has already been added to another pool.

Action: Do not attempt to add a database to two different pools.

ORA-45540: Call to SRVCTL failed with status *string*, errors: *string*.

Cause: An attempt to call the SRVCTL command line failed with the specified errors.

Action: Refer to the Oracle Real Application Clusters (Oracle RAC) documentation and resolve the problems reported by SRVCTL.

ORA-45541: Parameters "-serverpool" and "-cardinality" are invalid for administrator-managed Oracle RAC databases.

Cause: The service command stipulated -serverpool or -cardinality but this database was an administrator-managed Oracle RAC database, which does not recognize these parameters.

Action: Do not use -serverpool or -cardinality on administrator-managed Oracle RAC databases.

ORA-45542: Parameters "-serverpool", "-cardinality", and "-instances" are invalid for non-Oracle RAC databases.

Cause: The service command stipulated -serverpool, -cardinality, or -instances but this database was a non-Oracle RAC database, which does not recognize these parameters.

Action: Do not use `-serverpool`, `-cardinality`, or `-instances` on non-Oracle RAC databases.

ORA-45543: Parameter "-instances" is invalid for policy-managed Oracle RAC databases.

Cause: The service command stipulated `-instances`, but this database was a policy-managed Oracle RAC database, which does not recognize this parameter.

Action: Do not use `-instances` on policy-managed Oracle RAC databases.

ORA-45544: An invalid weight string was provided for manual override of runtime load balancing.

Cause: The string provided by GDSCTL to override runtime load balancing with manual region weights was badly formed.

Action: Retry the command. If the problem persists, contact Oracle Support Services.

ORA-45545: cannot delete all remaining instances

Cause: This command would delete all remaining instances from the `:` service, leaving the service in an invalid state.

Action: Do not provide an instance list that would delete all instances.

ORA-45546: cannot create process to run SRVCTL

Cause: There was a problem creating a new process to run SRVCTL from the command line.

Action: Check the Oracle alert log on the Oracle database server machine and rectify the problem on the server.

ORA-45547: A call to SRVCTL failed with error *string* because of bad parameters.

Cause: The command-line execution of SRVCTL failed because of bad parameters.

Action: Check the database server traces and contact Oracle Support Services.

ORA-45548: The catalog database can be downgraded, downgrading a catalog database after making changes is not advised.

Cause: This is a warning message only. This command required catalog changes and the 'compatible' database parameter indicated that the database could be downgraded. Downgrading a catalog database after making catalog changes is not advised and may cause data loss in the catalog.

Action: Make your database upgrade permanent by updating the 'compatible' database parameter before using GDSCTL commands that will alter the catalog.

ORA-45549: Catalog changes are not possible without a running GSM at the current version.

Cause: This command required catalog changes, which are not allowed unless there is at least one Global Service Manager (GSM) server running at the current version.

Action: Start a GSM server that is running the current version of the software. If there are none, upgrade at least one existing GSM or add a new one at the current version.

ORA-45550: service does not exist

Cause: An attempt was made to start a service that did not exist on the target database.

Action: None. This error was caught by the Global Service Manager (GSM), and the service was created automatically.

ORA-45551: Instance *string* was not in the instance list for this database.

Cause: An attempt was made to delete an instance from this database but the instance was not in the existing instance list.

Action: None. This is a warning only. No action was taken for the named instance.

ORA-45552: None of the provided instances were in the instance list for this database.

Cause: The provided instance list did not contain any valid instances, or the existing instance list for the catalog was empty.

Action: Check the list of instances and run the command again if necessary.

ORA-45553: Service *string* does not have any instances defined for database\\(s\\) *string*.

Cause: An attempt was made to start a service on an administrator-managed Oracle RAC database, but there were no instances defined for the service on that database.

Action: Define instances for the service on all of the listed databases before attempting to start the service.

ORA-45554: There are no services that can start on database *string*.

Cause: An attempt was made to start all services for a given database but there were no services that could start.

Action: None. This is a warning message indicating that no action was taken for this command.

ORA-45555: The target database is not in the preferred or available list for this service.

Cause: The new database name provided was not in the list of preferred or available databases for the service.

Action: Either add the new database to the service or relocate the service to another database.

ORA-45556: A database name or service name was not provided.

Cause: A disable service request did not provide either a database name or a service name.

Action: Provide either a service name or a database name on the request.

ORA-45557: The database pool *string* does not contain a broker configuration.

Cause: An attempt was made to remove a broker configuration from a database pool that does not contain one.

Action: Rerun the command using a different database pool.

ORA-45558: There are no database pools in this catalog.

Cause: The catalog did not have any database pools defined.

Action: Create at least one database pool before running any other commands.

ORA-45559: Global service manager (GSM) *string* did not provide a version.

Cause: The GSM did not provide a version when attempting to connect to the catalog.

Action: This version of GSM is too old to connect to the catalog. Upgrade the GSM installation.

ORA-45560: Database *string* must contain at least one preferred instance.

Cause: The MODIFY command did not add any preferred instances or removed all existing preferred instances from this database.

Action: Provide at least one preferred instance, or do not attempt to remove all existing preferred instances.

ORA-45561: region name is required

Cause: A region name was not provided and was required because there were multiple regions in the catalog.

Action: Provide the region name on the command line.

ORA-45562: The Global Data Services catalog must be created in a root container.

Cause: The CREATE CATALOG command could not be executed on a container other than the root container.

Action: Use the root container to create the Global Data Services catalog.

ORA-45563: The pool database cannot be a pluggable database.

Cause: The ADD DATABASE command could not add a pluggable database.

Action: Provide the consolidated database name instead.

ORA-45568: A 12.1.0.1 GDSCTL session cannot make changes in a higher versioned catalog. Upgrade GDSCTL or run this command from a different client.

Cause: A Global Data Services Control (GDSCTL) command executed from a 12.1.0.1 GDSCTL client attempted to obtain a catalog lock in a higher versioned catalog.

Action: Upgrade GDSCTL or run this command from another client.

ORA-45600: Transparent Sensitive Data Protection (TSDP) internal error

Cause: There was an unexpected error during TSDP operation.

Action: Retry the command. If the problem persists, contact Oracle Support Services.

ORA-45601: Invalid data has been found and discarded. Valid data has been imported.

Cause: The names of invalid or nonexistent database objects were found in the XML input.

Action: Check the trace files for the names of the invalid objects found in the XML input.

ORA-45602: Schema *string* does not exist.

Cause: The schema specified did not exist.

Action: Specify a valid schema.

ORA-45603: Schema *string* does not contain table *string*.

Cause: The table specified did not exist in the schema.

Action: Specify a valid table.

ORA-45604: Column *string.string* does not exist in schema *string*.

Cause: The column specified did not exist.

Action: Specify a valid column.

ORA-45605: invalid sensitive type *string*

Cause: A sensitive type that was associated with one or more sensitive columns did not exist.

Action: Ensure the valid sensitive type is mentioned. If it is a new sensitive type, include the definition in the XML input.

ORA-45606: There was no sensitive column matching the given criteria.

Cause: There was no sensitive column matching the schema, table and column input.

Action: Ensure the valid column is mentioned.

ORA-45607: Column *string.string* in schema *string* has already been identified as sensitive.

Cause: The column was already identified as sensitive.

Action: Remove the column from the list of sensitive columns to be imported.

ORA-45608: There are no sensitive columns for source *string*.

Cause: No sensitive columns were found for the given source.

Action: Specify the valid source.

ORA-45609: Sensitive type *string* already exists.

Cause: The sensitive type already existed in the database.

Action: Specify a different name for the sensitive type.

ORA-45610: Sensitive type *string* does not exist.

Cause: The sensitive type did not exist in the database.

Action: Specify the valid sensitive type.

ORA-45611: cannot drop sensitive type *string*

Cause: The sensitive type that is associated with one or more columns could not be dropped.

Action: Ensure the sensitive type is not associated with any column before dropping it.

ORA-45612: A Transparent Sensitive Data Protection (TSDP) policy with name *string* already exists.

Cause: A TSDP policy with the same name was found.

Action: Specify a different name for the policy.

ORA-45613: invalid Oracle security feature

Cause: The Oracle security feature specified was not supported by Transparent Sensitive Data Protection.

Action: Specify a valid security feature.

ORA-45614: invalid Transparent Sensitive Data Protection (TSDP) policy *string*

Cause: The TSDP policy specified did not exist.

Action: Specify a valid policy.

ORA-45615: One or more sensitive column types already exist.

Cause: Importing the list of sensitive columns succeeded. However, one or more sensitive column types already existed in the database and were not imported again. The corresponding column is associated with the existing type.

Action: Check the trace files for details regarding which sensitive column types were not imported.

ORA-45616: Column *string.string* in schema *string* is not identified as sensitive.

Cause: An attempt was made to alter a column that was not identified as sensitive.

Action: Specify a valid column.

ORA-45617: Policy *string* is not associated with sensitive column type *string*.

Cause: The given policy was not associated with the sensitive column type.

Action: Specify the valid combination of policy and sensitive column type.

ORA-45618: Policy enforcement on one or more columns failed.

Cause: Policy enforcement on one or more columns encountered errors.

Action: Check the alert log for more details.

ORA-45619: Policy *string* is not enabled on column *string*.

Cause: The given policy was not enabled on the column.

Action: Specify a valid policy.

ORA-45620: Policy *string* is already associated with sensitive column type *string*.

Cause: The given policy was associated with the sensitive column type.

Action: Specify the valid policy and sensitive column type.

ORA-45621: Disabling of a policy on one or more columns failed.

Cause: Errors were encountered while disabling one or more policies.

Action: Check the alert log for more details.

ORA-45622: warnings generated during policy enforcement

Cause: The cause of this error could be one or more of the following: - The policy that was associated with the sensitive column type of a column was not enabled on the column because no subpolicy matched the column properties. - There was no policy associated with the sensitive column type of a sensitive column. - A conflicting redaction policy was enabled on the table.

Action: Check the alert log for more details.

ORA-45623: There is no policy associated with the sensitive column type.

Cause: There was no policy associated with the sensitive column type of a column.

Action: Check the alert log for more details.

ORA-45624: reenabling protection failed before import

Cause: Importing the list of sensitive columns failed because there was a problem in disabling protection on the columns. A subsequent attempt to reenable protection on the columns also failed.

Action: Check the alert log for more details.

ORA-45625: reenabling protection failed after import

Cause: Importing the list of sensitive columns succeeded. A subsequent attempt to reenable protection on the columns failed.

Action: Check the alert log for more details.

ORA-45626: Dropping of one or more columns from the list failed.

Cause: Disabling protection on the column failed.

Action: Check the trace files for more details.

ORA-45627: There are no sensitive columns of sensitive column type *string*.

Cause: There was no column for the given sensitive column type.

Action: Specify a valid sensitive column type.

ORA-45628: no policy associated with sensitive column type *string*

Cause: There was no policy associated with the sensitive column type.

Action: Specify a valid sensitive column type.

ORA-45629: policy *string* is enabled on one or more columns

Cause: A Transparent Sensitive Data Protection policy that was enabled on a column could not be altered or dropped.

Action: Disable the policy before altering or dropping the policy.

ORA-45630: Policy *string* is associated with one or more sensitive types.

Cause: A Transparent Sensitive Data Protection policy that was associated with a sensitive column type could not be dropped.

Action: Disassociate the policy from the sensitive column type before dropping the policy.

ORA-45631: Policy *string* does not have the given condition.

Cause: The given condition was not found for the policy.

Action: Specify the valid condition for the policy.

ORA-45632: default policy *string* cannot be altered

Cause: The default policy for Transparent Sensitive Data Protection could not be altered.

Action: Specify the valid policy to be altered.

ORA-45633: default policy *string* cannot be dropped

Cause: The default policy for Transparent Sensitive Data Protection could not be dropped.

Action: Specify the valid policy to be dropped.

ORA-45634: The security feature does not contain parameter *string*.

Cause: An invalid parameter was found for the given security feature.

Action: Verify the parameters input to the policy.

ORA-45635: invalid parameter found: *string*

Cause: An invalid parameter was found for the given security feature.

Action: Verify the parameters input to the policy.

ORA-45636: Input parameter for '*string*' is not valid.

Cause: Invalid input was given for the parameter.

Action: Enter valid input.

ORA-45637: invalid condition given for policy condition

Cause: The given condition was invalid.

Action: Enter a valid value for the condition.

ORA-45638: Policy *string* is enabled on one or more columns of sensitive type *string*.

Cause: A Transparent Sensitive Data Protection policy that was enabled on one or more columns of a particular sensitive type could not be disassociated from the sensitive type.

Action: Ensure the policy is not enabled on a column of the given sensitive type.

ORA-45639: discovery result cannot be imported

Cause: One or more columns from the XML input were already identified as sensitive by a different source.

Action: Check the trace file for a list of sensitive columns that were already identified as sensitive.

ORA-45640: Columns from SYS schema cannot be marked as sensitive.

Cause: A column in a SYS-owned table was being marked as sensitive.

Action: Ensure the column being marked as sensitive does not belong to SYS schema.

ORA-45641: cannot specify SEC_RELEVANT_COLS parameter

Cause: The SEC_RELEVANT_COLS parameter was specified while configuring a Transparent Sensitive Data Protection (TSDP) policy. SEC_RELEVANT_COLS_OPT parameter can be specified to indicate that TSDP should input the sensitive column as input to SEC_RELEVANT_COLS parameter at the time of enabling protection.

Action: Use the SEC_RELEVANT_COLS_OPT parameter to configure the security relevant column.

ORA-45900: data file number *string* already included as *string*

Cause: RMAN attempted to use the specified data file number, but this data file number was already in use by a different container database.

Action: Resolve the conflict and retry the command.

ORA-45901: File *string* is from different container identifier *string*; current *string*

Cause: This backup piece contained a data file that did not belong to the current container. Cataloging such a backup piece is not allowed.

Action: Connect to root or correct Pluggable Database and retry the command.

ORA-45902: cannot rename data file '*string*' - file was instantly restored.

Cause: During ALTER DATABASE RENAME or RMAN command SWITCH, the rename was specified for an instantly restored file.

Action: Rename the file that was not instantly restored or wait until the repopulation work is complete and the retry the command.

ORA-45903: catalog instantly restored data file copy *string* is not supported

Cause: This data file copy was instantly restored. Cataloging such file is not supported.

Action: Do not request to catalog instantly restored data file copy.

ORA-45904: instant restore of data file copy *string* is not supported

Cause: An attempt was made to create a data file copy in instant restore mode. This is not supported.

Action: Do not request to create data file copy in instant restore mode.

ORA-45905: deleting or restoring instantly restored data file *string* is not supported

Cause: This data file was instantly restored with the full option. A background process was repopulating the data file. An attempt to take the data file out of the process failed. Deleting or restoring such files is not supported.

Action: Retry the command later.

ORA-45906: moving instantly restored data file *string* is not supported

Cause: This data file was instantly restored. Moving such file is not supported.

Action: Do not request to move instantly restored data file.

ORA-45907: instant restore of data file *string* failed

Cause: During an instant restore, it was not possible to initialize the destination data file. There might be other messages on the error stack or alert log or trace file that indicate the specific reason for the failure. One common reason for this message is that the instant restore feature is disabled in this database.

Action: Check the other messages. If the situation cannot be resolved, then request a regular (not instant) restore.

ORA-46000 to ORA-46900

ORA-46000: invalid option to apply XS Data Security

Cause: The input value was not a valid option to apply XS Data Security.

Action: Use a valid option to apply XS Data Security.

ORA-46001: argument *string* is not valid for XS Data Security policies

Cause: An illegal argument value was used with DBMS_RLS to apply XS Data Security.

Action: Use the XS_DATA_SECURITY API to apply XS Data Security.

ORA-46003: Column "*string*" is not valid in data security policy for "*string*"

Cause: An invalid column was specified in the data security policy.

Action: Correct the column name in the policy.

ORA-46004: XS Data Security policy is not applied on *string.string*

Cause: A table without an XS Data Security policy applied was specified.

Action: Specify a table with one XS Data Security policy applied.

ORA-46005: multiple XS Data Security policies applied on *string.string*

Cause: A table with more than one XS Data Security policy applied was specified.

Action: Specify a table with one XS Data Security policy applied.

ORA-46006: cannot mix VPD column and XS column constraint policies

Cause: The object was protected by both VPD (Virtual Private Database) column security and XS column constraint policies.

Action: Disable or drop either the VPD or XS column policies.

ORA-46007: no XS Data Security policy associated with *string.string*

Cause: A table not associated with an XS Data Security policy was specified.

Action: Specify a table associated with an XS Data Security policy.

ORA-46008: multiple XS Data Security policies associated with *string.string*

Cause: A table associated with more than one XS Data Security policy was specified.

Action: Specify a table associated with one XS Data Security policy.

ORA-46019: User-built Static ACL Materialized View does not exist

Cause: A non-existing user-built Static ACL Materialized View was specified

Action: Create a user-built Static ACL Materialized View with the specified name or use system-built Static ACL views

ORA-46020: User-built Static ACL Materialized View has invalid schema

Cause: A user-built Static ACL Materialized View was specified but with an incorrect schema

Action: Create a user-built Static ACL Materialized View with at least the required columns with correct names and types

ORA-46021: Invalid refresh mode specified for Static ACL Materialized View

Cause: The refresh mode specified for the Materialized View supporting static ACLs is invalid.

Action: Specify either "ON DEMAND" or "ON COMMIT" for parameter refresh_mode

ORA-46022: Invalid name specified for user-built Static ACL Materialized View

Cause: The name specified for the Static ACL Materialized View (ACLMV) is reserved for system-built ACLMVs.

Action: Rename the user-built Static ACL Materialized View

ORA-46023: Application Session affinity is not the same as when the cursor was parsed.

Cause: The security context was changed and was different from the time the cursor was parsed.

Action: Make sure the security context is the same as when the cursor was parsed.

ORA-46024: The policy schema differs from the object schema for Static ACL Materialized View based XDS policy.

Cause: The specified object schema was different from the policy schema.

Action: Make sure the object and the policy have the same schema.

ORA-46025: no static rule specified in applied policy

Cause: The policy applied on the table did not contain any static rules.

Action: Ensure the applied policy has at least one static rule.

ORA-46026: creation of static ACL materialized view (MV) failed

Cause: Creation of the static access control list (ACL) materialized view (MV) failed.

Action: Check the trace file for detailed error information.

ORA-46050: Oracle Real Application Security internal error.

Cause: There was an Oracle Database Real Application Security internal error.

Action: None

ORA-46051: invalid application user specified

Cause: An invalid application user was specified.

Action: Check the user name and execute the function or procedure again.

ORA-46052: invalid session ID specified

Cause: An invalid XS Security session ID was specified.

Action: Check the session ID and execute the function or procedure again.

ORA-46053: invalid cookie specified

Cause: An invalid XS Security session cookie was specified.

Action: Check the session cookie and execute the function or procedure again.

ORA-46054: invalid namespace specified

Cause: An invalid XS session application namespace or system-defined namespace was specified. Certain operations are not allowed on the system-defined namespace.

Action: Check the namespace and execute the function or procedure again.

ORA-46055: invalid role specified

Cause: An invalid application role was specified.

Action: Check the role and execute the function or procedure again.

ORA-46056: invalid namespace or attribute specified

Cause: An invalid XS Security application namespace or attribute was specified.

Action: Check the namespace and attribute, and execute the function or procedure again.

ORA-46057: namespace already exists

Cause: The specified XS Security application namespace was already in existence.

Action: Execute the function or procedure with a different namespace.

ORA-46058: attribute *string* is invalid

Cause: An invalid XS Security application namespace attribute was specified.

Action: Check the attribute and execute the function or procedure.

ORA-46059: Invalid ACL identifier specified

Cause: The specified ACL identifier is invalid.

Action: Check the ACL identifier, and execute the function or procedure again with a valid ACL ID.

ORA-46060: user name not specified

Cause: An application user was not specified.

Action: Execute the function or procedure with a user name.

ORA-46061: session ID not specified

Cause: XS Security session ID was not specified.

Action: Execute the function or procedure with a session ID.

ORA-46062: Namespace not specified

Cause: XS Security application namespace was not specified.

Action: Execute the function or procedure with a namespace.

ORA-46063: not attached to XS Security session

Cause: There was no attachment to an XS Security session.

Action: Attach to an XS Security session and execute the function or procedure.

ORA-46064: attribute name not specified

Cause: XS Security application namespace attribute name was not specified.

Action: Execute the function or procedure with an attribute name.

ORA-46065: attribute value not specified

Cause: XS Security application namespace attribute value was not specified.

Action: Execute the function or procedure with an attribute value.

ORA-46066: inactivity timeout not specified

Cause: XS Security session inactivity timeout was not specified.

Action: Execute the function or procedure with an inactivity timeout value.

ORA-46067: cookie not specified

Cause: XS Security session cookie was not specified.

Action: Execute the function or procedure with a cookie value.

ORA-46068: role not specified

Cause: XS Security role was not specified.

Action: Execute the function or procedure with a Role value.

ORA-46069: operation disallowed in an application session

Cause: Operations were blocked when an application session was attached.

Action: Try the operation later after the application session is detached.

ORA-46070: insufficient privileges

Cause: An attempt was made to execute an XS Security session function or procedure without the appropriate privilege.

Action: Ask the administrator to perform the operation or to grant the appropriate privilege.

ORA-46071: Error occurred in event handler *string*

Cause: An error or exception was returned by the error handling function invoked as part of the current operation.

Action: Check the trace files to identify the source of the error in the event handling function. Attempt the operation again after the error has been resolved. Also, abort attach session since the changes made to the session by the event handler might not have been recorded because of the error.

ORA-46072: Column width too small

Cause: The size of the column or variable used to store the output of this function or procedure is too small.

Action: Increase the size of the column or variable and try again.

ORA-46073: cookie already in use by another session

Cause: The specified XS Security session cookie was used by another XS Security session.

Action: Execute the function or procedure with a different cookie.

ORA-46074: session ID mismatch

Cause: The specified session ID does not match the attached session ID.

Action: Execute the function or procedure without a session ID or with a matching attached session.

ORA-46075: already attached to an application user session

Cause: The current database session is already attached to an application user session.

Action: Detach from the current application user session before attaching to the new application user session.

ORA-46076: The specified name length not within valid range.

Cause: The length of the name was shorter or longer than allowed limits.

Action: Try again with a new name with a length less than the maximum or or more than the minimum allowed.

ORA-46077: Length of value too large

Cause: The specified attribute value is too large.

Action: Execute the function or procedure again with a smaller attribute value.

ORA-46078: Invalid event type specified

Cause: The event type specified is invalid.

Action: Reattempt the operation with an invalid event type.

ORA-46079: invalid external principal specified

Cause: An XS Security principal already existed with same name.

Action: Specify another external principal and try again.

ORA-46080: User status is currently inactive

Cause: User was marked inactive.

Action: Change status in enterprise directory to active and try again.

ORA-46081: User's password has expired

Cause: User password was expired.

Action: Change the user's password and update status to active.

ORA-46082: User's account was locked

Cause: The user's account is locked.

Action: Update user's status to Active in Enterprise Directory and try again.

ORA-46083: Cannot update the GUID of the principal

Cause: The GUID of the principal existed or the external source was not set.

Action: None

ORA-46084: cannot update or delete system-seeded XS objects.

Cause: An attempt was made to update or delete system-seeded XS objects.

Action: Do not attempt to update or delete system-seeded XS objects.

ORA-46085: Cannot add a proxy user when there was no proxy roles.

Cause: An attempt was made to add a proxy user to a target user when proxy roles did not exist.

Action: Verify the proxy roles and try again.

ORA-46086: Cannot detach from a direct-login XS session

Cause: An attempt was made to detach from an XS session created by a direct password login.

Action: To detach and destroy the XS session, logout of the DB session.

ORA-46087: Switching users not allowed for a proxy session

Cause: An attempt was made to switch users within a proxy session.

Action: Switch back to original user and try again.

ORA-46088: operation disallowed in application session

Cause: The specified operation was not allowed in an application session.

Action: None

ORA-46089: Unsupported verifier type

Cause: This verifier was not currently supported.

Action: Execute again with a different verifier type.

ORA-46090: Requested event handler not registered for the event

Cause: An attempt was made to update or delete nonregistered event handler.

Action: Please verify event handler name.

ORA-46091: Requested event handler already registered for the event

Cause: An attempt was made to re-register an event handler.

Action: Please verify event handler name.

ORA-46092: Requested event handler does not exist

Cause: An attempt was made to register a nonexistent event handler.

Action: Please verify event handler name or create the event handler.

ORA-46093: Cannot destroy a direct-login XS session

Cause: An attempt was made to destroy an XS session created by a direct password login.

Action: To destroy the XS session, logout of the DB session.

ORA-46094: XS user not effective

Cause: An attempt was made to create an XS session by a user that is not effective.

Action: To create the XS session, contact the administrator to check the effective dates on the user.

ORA-46095: Invalid error code supplied

Cause: An error code with an illegal value was supplied.

Action: Use an error code from the range of valid values.

ORA-46096: An attribute in a namespace cannot have both default value and first read event set.

Cause: Both default value and first read were specified in namespace template.

Action: Specify either default value or first read for the attribute in the namespace, but not both.

ORA-46097: The *string* did not exist in the *string*.

Cause: An attempt was made to delete an XS artifact which was not in existence within the scope.

Action: Check if the XS artifact was created or referenced within the scope.

ORA-46098: The *string* already exists in the *string*.

Cause: An attempt was made to create or refer to an XS artifact which was already in existence within the scope.

Action: Check if the XS artifact name is unique within the scope.

ORA-46099: Feature unsupported or not implemented

Cause: This feature was not supported or implemented.

Action: None

ORA-46100: XS session operations are disallowed during the execution of a definer's rights program unit.

Cause: An attempt was made to do an XS session operation that could modify the current security context inside a definer's rights program unit.

Action: Change the program unit to invoker's rights.

ORA-46101: Circular definition for aggregate privilege *string* in security class *string*

Cause: Definition of an aggregate privilege contained itself.

Action: Fix the aggregate privilege definition.

ORA-46102: Privilege *string* aggregated in security class *string* is not found

Cause: Definition of an aggregate privilege contained a privilege that is not defined in this or parent security classes.

Action: Fix the aggregate privilege definition.

ORA-46103: Circular definition for security class *string*

Cause: Security class definition inherited from itself through circular definition.

Action: Fix the security class definition.

ORA-46104: Security class *string* cannot inherit from base security classes

Cause: Definition of a security class specified an internal base security class as a parent security class.

Action: Remove the internal base security class from the "inherits-from" list.

ORA-46105: unable to load security class *string*

Cause: The specified security class did not exist.

Action: Create the security class.

ORA-46106: Missing parent security class for security class *string*

Cause: The specified security class did not have any parent security class.

Action: Add a parent security class using "inherits-from" tag.

ORA-46107: Privilege *string* not found in the associated security classes

Cause: The specified privilege did not exist in the security classes that were associated with the ACLs.

Action: Use a security class that contains the specified privilege.

ORA-46108: Invalid security class targetNamespace or name.

Cause: The security class targetNamespace attribute was either null or was longer than 4000 characters. Or, the security class name attribute was either null or was longer than 1024 characters.

Action: Provide valid targetNamespace and name attributes.

ORA-46109: Duplicate definition for privilege *string* in security class *string*.

Cause: The privilege name in the security class was previously defined in another security class.

Action: Provide a unique name for the privilege.

ORA-46111: Security Class *string* specified in the ACL *string* does not exist.

Cause: An invalid security class was specified in the ACL.

Action: Specify a valid security class.

ORA-46112: Duplicate security class name *string* under targetnamespace *string*

Cause: The security class name under the targetnamespace was also used for another security class.

Action: Provide a unique name for the security class.

ORA-46114: ACL name *string* not found.

Cause: An invalid ACL name was used as one of the operator parameters.

Action: Specify a valid ACL name.

ORA-46115: error raised during evaluation of a data realm

Cause: During SQL execution, evaluation of a data realm failed with an error.

Action: Find the cause of the error from the error stack.

ORA-46116: The ACL *string* is referenced by a namespace template.

Cause: An attempt was made to delete an access control list (ACL) which was referenced by a namespace template.

Action: Delete the namespace template first if the ACL needs to be deleted.

ORA-46200: Attribute cannot be deleted. The attribute is seeded from the template.

Cause: An attempt was made to delete an attribute that was seeded from the template from which this namespace was created.

Action: Attempt to delete only custom attributes.

ORA-46201: Attribute *string* already exists in namespace *string*.

Cause: An attempt was made to create an attribute that already exists within the given namespace.

Action: Make sure the attribute name is unique within the namespace.

ORA-46202: handler specified in the namespace template does not exist

Cause: An attempt was made to create a namespace template with an invalid handler function.

Action: Specify a valid handler function in the template.

ORA-46203: handler is not specified in the namespace template

Cause: An attempt was made to create a template or a custom attribute with events specified. However, a handler function was not specified in the template.

Action: Specify a valid handler function in the template.

ORA-46204: Multiple UID or GUID specified for the resource.

Cause: An attempt was made to create a resource with multiple UIDs or GUIDs specified in the document.

Action: Provide, at most, one UID or GUID for the resource in the document.

ORA-46205: User with empty GUID cannot create session.

Cause: An attempt was made by an user with an empty GUID to create a session.

Action: Update the GUID for the user.

ORA-46206: Negative inactivity timeout value not allowed.

Cause: An attempt was made to set the inactivity timeout time to a negative value.

Action: Specify a non-negative inactivity timeout value.

ORA-46207: During global callback execution, *string* is not allowed.

Cause: An attempt was made to execute a disallowed session operation during global callback execution.

Action: Remove the invalid session operation from callback function.

ORA-46208: Circular callback call caused by *string*

Cause: Circular callback call caused an infinite chain of callback function executions.

Action: Check the event handling functions to identify the source of the circular callback call. Attempt the operation again after the error has been resolved.

ORA-46209: User switch is disallowed for administrative operation.

Cause: An attempt was made to switch user with administrative operation.

Action: Attach the application session to a database session first.

ORA-46210: Source user is not anonymous in user assignment operation.

Cause: An attempt was made to assign user to a named user.

Action: Change source user to the anonymous user first.

ORA-46211: XS entity name length not within valid range.

Cause: An attempt was made to create an XS entity with a name length less than the minimum or more than the maximum allowed.

Action: Ensure the name length is in the valid range (between 1 and 128).

ORA-46212: XS entity with this name already exists.

Cause: An attempt was made to create an XS entity with a name that already belongs to another entity.

Action: Use a different name and try again.

ORA-46213: An unexpected constraint violation occurred during creation of an XS entity.

Cause: An attempt was made to create an XS entity resulting in an unexpected constraint violation.

Action: Check with the DBA or security administrator for resolution.

ORA-46214: Deletion of the XS entity is not allowed while dependencies exist.

Cause: An attempt was made to delete an XS entity with dependent entities in the system.

Action: Remove the dependencies and try again.

ORA-46215: XS entity by the name *string* did not exist.

Cause: A reference was made to an XS entity that did not exist.

Action: Review the entity reference and try again.

ORA-46216: XS entities are not related.

Cause: An attempt was made to remove a relation that did not exist.

Action: Review the entity reference and try again.

ORA-46217: Operation is not allowed.

Cause: An unexpected operation was performed.

Action: Check with the DBA or security administrator for resolution.

ORA-46218: Unauthorized proxy user

Cause: The current user was not an authorized proxy user of the client user during a switching user operation.

Action: Add the current user as a proxy user of the client user.

ORA-46219: Role version numbers mismatch in server and mid-tier.

Cause: There was another mid-tier attached to the server session with a different set of roles.

Action: Reattach the session supplying the current set of roles.

ORA-46220: database is in readable standby mode; changes will not be saved

Cause: An attempt was made to change an application session in readable standby mode.

Action: None

ORA-46221: cannot modify an application user that is currently connected

Cause: An attempt was made to modify an application user that is currently logged on.

Action: Make sure the application user is logged off, then repeat the command.

ORA-46222: Real Application principal name *string* conflicts with another user or role name.

Cause: There was already a user or role with that name.

Action: Specify a different user or role name.

ORA-46230: XS administrative operation failed.

Cause: An unexpected error occurred during the requested XS administrative operation.

Action: None

ORA-46231: Granted role is not a regular role.

Cause: A nonregular role was granted to a principal.

Action: Grant a regular role to a principal.

ORA-46232: Circular grant for role

Cause: The role was granted from itself through circular operation.

Action: Fix the role grant operation.

ORA-46233: Circular definition for ACL *string*

Cause: The ACL was inherited from itself through circular definition.

Action: Fix the ACL definition.

ORA-46235: Policy parameter *string* did not exist.

Cause: The policy parameter did not exist.

Action: Review the parameter definition and try again.

ORA-46236: Invalid policy parameter type

Cause: Invalid parameter type was specified.

Action: Use the correct parameter type.

ORA-46237: Mid-tier cache synchronization failed

Cause: An unexpected error occurred during mid-tier cache synchronization.

Action: None

ORA-46238: Database user or role '*string*' does not exist

Cause: An invalid database user or role was specified as the principal name.

Action: Make sure the database principal is a valid database user or role.

ORA-46239: Key manager not initialized.

Cause: A request to sign the message could not be processed because the key manager was not initialized.

Action: Reinitialize the key manager and resubmit the request.

ORA-46240: Application proxy user is already configured with a schema.

Cause: An attempt was made to add a schema to an application proxy user that already was configured with a schema.

Action: Remove the schema configuration of the application proxy user and try again.

ORA-46241: Application proxy user is not configured with the schema.

Cause: An attempt was made to remove a schema from an application proxy user that was not configured.

Action: None

ORA-46242: Granting a role to XSGUEST is not allowed.

Cause: An attempt was made to grant a role to the XSGUEST seeded user.

Action: None

ORA-46243: The dispatcher's session does not exist.

Cause: The dispatcher's session timed out due to inactivity.

Action: Increase the inactivity timeout for the dispatcher's session.

ORA-46244: The request is not signed by the dispatcher.

Cause: A request was made without the dispatcher's signature. The server is configured to accept requests signed by the dispatcher only.

Action: Ask the administrator to configure the mid-tier allowing the dispatcher signature. Or, ask the administrator to configure the server to not be in dispatcher-only mode.

ORA-46245: Invalid session or namespace request

Cause: The request message was corrupt.

Action: Check with the DBA or security administrator for resolution.

ORA-46246: session operation failed

Cause: An attempt was made to either update an XS Data Security session which did not exist, or to create an XS Data Security session which already existed, or to attach a direct-login XS Data Security session.

Action: None

ORA-46247: detach completed; session changes are not saved

Cause: The XS Data Security session is detached successfully, but session changes are not saved due to updating an XS Data Security session which did not exist.

Action: None

ORA-46250: Invalid value for argument '*string*'

Cause: Input value was not valid for the procedure.

Action: Use a valid option.

ORA-46251: Value for argument '*string*' out of range

Cause: Input value was out of range.

Action: Use a value within allowed range.

ORA-46252: Cannot complete the operation, overlapping job already exists

Cause: Cleanup job already existed which spanned the given audit trail type.

Action: Drop the existing job.

ORA-46253: Cannot complete the operation, overlapping property already exists

Cause: The property already exists which spans the given audit trail type.

Action: Clear the existing property.

ORA-46254: '*string*' already exists

Cause: The value being set already existed.

Action: Delete the existing entry.

ORA-46255: Incorrect job name specified

Cause: The job did not exist or was not created by DBMS_AUDIT_MGMT package.

Action: Create the job using DBMS_AUDIT_MGMT package.

ORA-46256: Internal error: Audit Table not partitioned

Cause: Invalid operation on a non partitioned table.

Action: Contact Oracle Support Services.

ORA-46257: Property '*string*' cannot be cleared

Cause: The property could not be cleared.

Action: None. The property can only be set or reset.

ORA-46258: Cleanup not initialized for the audit trail

Cause: DBMS_AUDIT_MGMT.INIT_CLEANUP was not called for the erroring audit trail.

Action: Invoke the procedure, DBMS_AUDIT_MGMT.INIT_CLEANUP.

ORA-46260: Error during audit trail cleanup

Cause: The audit trail cleanup operation could not be completed.

Action: Check the UNIX error number for a possible operating system error. If there is no error, contact Oracle Support Services.

ORA-46261: Error during audit trail cleanup, internal error

Cause: The audit trail cleanup could not be completed because of an internal error.

Action: Contact Oracle Support Services.

ORA-46262: Audit table(s) cannot be moved to 'string' tablespace

Cause: The tablespace was either unavailable or did not have enough space to accommodate the audit table being moved.

Action: Make sure that the tablespace is online and has enough space for the audit tables being moved.

ORA-46263: The audit trail is already initialized for cleanup

Cause: DBMS_AUDIT_MGMT.INIT_CLEANUP was already invoked for the audit trail type.

Action: None

ORA-46264: Error during DBMS_AUDIT_MGMT operation

Cause: Could not complete the DBMS_AUDIT_MGMT operation.

Action: Check the PL/SQL error stack and trace files for a possible error. Fix the cause and retry the operation. If the error is internal or if there is no error, contact Oracle Support Services.

ORA-46265: Subset of audit trail is already initialized

Cause: Audit Trail was initialized which spans the given audit trail type.

Action: Use DBMS_AUDIT_MGMT.DEINIT_CLEANUP to deinitialize conflicting audit trail types.

ORA-46266: Missing value for argument 'string' in Oracle RAC enabled database

Cause: The DBMS_AUDIT_MGMT API was executed in an Oracle RAC enabled database and AUDIT_TRAIL_TYPE was one of AUDIT_TRAIL_OS or AUDIT_TRAIL_XML. But, Oracle RAC instance number for which DBMS_AUDIT_MGMT API was run, was not supplied.

Action: Input a valid Oracle RAC instance number for which the configuration must be done.

ORA-46267: Insufficient space in 'string' tablespace, cannot complete operation

Cause: Could not complete the operation because the DBMS_AUDIT_MGMT API involved movement of one or more audit tables and there was not enough space in the destination tablespace.

Action: Turn on tracing using DBMS_AUDIT_MGMT.SET_DEBUG_LEVEL to find the amount of space required. Then, allocate that space in the destination tablespace, even if destination tablespace datafile has AUTOEXTEND option turned on. And then, retry the operation.

ORA-46268: Conflicting operation on audit table(s)

Cause: Audit tables were being operated by more than one DBMS_AUDIT_MGMT API from different sessions. The simultaneous execution of the following API with one another and with itself can cause the conflict: INIT_CLEANUP, DEINIT_CLEANUP, SET_AUDIT_TRAIL_LOCATION and MOVE_DBAUDIT_TABLES.

Action: Wait until the execution of one of the API's completes and try executing the API again.

ORA-46269: Conflicting operation on audit files

Cause: Audit files were being operated by more than one DBMS_AUDIT_MGMT API from different sessions. The simultaneous execution of the CLEAN_AUDIT_TRAIL API with itself can cause the conflict.

Action: Wait until the execution of one of the API's complete and try executing the API again.

ORA-46271: Error during DBMS_AUDIT_MGMT operation; database I/O suspended

Cause: An I/O attempt occurred during DBMS_AUDIT_MGMT operation and the database I/O was suspended.

Action: Retry the operation after resuming database I/O suspension. If database I/O is not suspended, contact Oracle Support Services.

ORA-46272: Subset of audit trail is already deinitialized

Cause: Audit trail was deinitialized which spans the given audit trail type.

Action: Use DBMS_AUDIT_MGMT.INIT_CLEANUP to initialize conflicting audit trail types.

ORA-46273: DBMS_AUDIT_MGMT operation failed in one of the PDB

Cause: The executed DBMS_AUDIT_MGMT operation failed in one of the PDB.

Action: Check the trace files for the PDB information where the operation failed. Fix the cause and retry the operation. If the error is internal or if there is no error, contact Oracle Support Services.

ORA-46274: Error during DBMS_AUDIT_MGMT operation; tablespace '*string*' not available

Cause: The tablespace associated with Unified Audit Trail is either invalid or is offline.

Action: Check if the tablespace is valid and make sure the tablespace is online and writable.

ORA-46275: Conflicting operations on '*string*' table

Cause: Audit trail table was being operated by more than one API from different sessions. The simultaneous execution of DBMS_AUDIT_MGMT.INIT_CLEANUP or DBMS_AUDIT_MGMT.SET_AUDIT_TRAIL_LOCATION with SA_SYSDBA.CREATE_POLICY or SA_SYSDBA.DROP_POLICY can cause the conflict.

Action: Wait for the completion of the conflicting SA_SYSDBA procedure and try executing the DBMS_AUDIT_MGMT API again.

ORA-46276: DBMS_AUDIT_MGMT operation on unified audit trail failed

Cause: Audit records were not generated in the unified audit trail.

Action: Generate audit records in the unified audit trail and retry the operation.

ORA-46277: Conflicting operation on unified audit trail

Cause: Unified audit trail is being operated by more than one DBMS_AUDIT_MGMT API from different sessions. The simultaneous execution of the following API with one another and with itself can cause the conflict: FLUSH_UNIFIED_AUDIT_TRAIL, LOAD_UNIFIED_AUDIT_FILES, CLEAN_AUDIT_TRAIL, and SET_AUDIT_TRAIL_LOCATION.

Action: Wait until the execution of one of the API's complete and try executing the API again.

ORA-46278: Conflicting operation using DBMS_AUDIT_MGMT routines

Cause: One of the following API's was concurrently executed with itself or with another API in separate sessions causing a conflict: -
SET_LAST_ARCHIVE_TIMESTAMP - CLEAR_LAST_ARCHIVE_TIMESTAMP -
CLEAN_AUDIT_TRAIL - SET_AUDIT_TRAIL_PROPERTY -
CLEAR_AUDIT_TRAIL_PROPERTY.

Action: Wait until the execution of one of the API's completes and try executing the API again.

ORA-46340: Command cannot have both BY *user-list* and IN SESSION *session-information* clauses together

Cause: BY *user-list* clause was supplied with IN SESSION *session-information* clause in the command.

Action: Use either BY *user-list* or IN SESSION *session-information* clause.

ORA-46341: ALL STATEMENTS option cannot be supplied with BY SESSION clause

Cause: An attempt was made to use ALL STATEMENTS audit option with BY SESSION clause. ALL STATEMENTS audit option can be configured with BY ACCESS only.

Action: Specify BY ACCESS instead of BY SESSION.

ORA-46342: NOAUDIT command cannot be executed with IN SESSION clause

Cause: An attempt was made to use IN SESSION *session-information* clause in NOAUDIT command.

Action: None

ORA-46343: Cannot drop AUDSYS user

Cause: An attempt was made to drop the AUDSYS user that hosts the audit trail.

Action: None

ORA-46350: Audit policy *string* already applied with the BY clause.

Cause: An attempt was made to apply audit policy with the EXCEPT clause which was already applied with the BY clause.

Action: Remove audit policy using the NOAUDIT command.

ORA-46351: Audit policy *string* already applied with the EXCEPT clause.

Cause: An attempt was made to apply audit policy with the BY clause which was already applied with the EXCEPT clause.

Action: Remove audit policy using the NOAUDIT command.

ORA-46352: NOAUDIT command with the EXCEPT clause is not allowed.

Cause: An attempt was made to remove audit policy using NOAUDIT command with the EXCEPT clause.

Action: Remove audit policy selectively using NOAUDIT command with the BY clause.

ORA-46353: missing or invalid audit policy name.

Cause: A valid audit policy name was expected.

Action: Specify a valid audit policy name.

ORA-46354: missing or invalid audit context or attribute name.

Cause: A valid context or attribute name was expected.

Action: Specify a valid context attribute name.

ORA-46355: missing or invalid privilege audit option.

Cause: Creating or altering the audit policy was attempted with an invalid system privilege audit option.

Action: Use a valid system privilege audit option.

ORA-46356: missing or invalid action audit option.

Cause: Creating or altering the audit policy was attempted with an invalid action audit option.

Action: Use a valid action audit option.

ORA-46357: Audit policy *string* not found.

Cause: The specified audit policy object did not exist in the database.

Action: Use the correct audit policy name and try again.

ORA-46358: Audit policy *string* already exists.

Cause: The specified audit policy object already existed in the database.

Action: Use a different name and try again.

ORA-46359: Invalid auditing option for *string*.

Cause: Creating or altering the audit policy was attempted with an invalid audit option for the object.

Action: Use a valid audit option for the object.

ORA-46360: Same auditing option cannot be both added and dropped in audit policy.

Cause: Altering the audit policy was attempted for adding and dropping the same auditing option in the audit policy.

Action: Choose either to add or drop the audit option.

ORA-46361: Audit policy cannot be dropped as it is currently enabled.

Cause: An attempt was made to drop the audit policy which is currently enabled.

Action: Disable the audit policy before dropping.

ORA-46362: Could not translate variable ORACLE_BASE.

Cause: An attempt to obtain the value for ORACLE_BASE failed.

Action: Make sure the variable is set.

ORA-46363: Audit directory '*string*' not found.

Cause: Could not find the specified audit directory.

Action: Make sure the audit directory is created.

ORA-46364: Audit directory '*string*' could not be created.

Cause: Could not create the specified audit directory.

Action: Make sure the Oracle process has permissions to create the audit directory.

ORA-46365: Audit file '*string*' could not be created.

Cause: Could not create the specified audit file.

Action: Make sure the Oracle process has permissions to create the audit files in the audit directory.

ORA-46366: File '*string*' is not a recognized Oracle audit file.

Cause: The file found in Oracle audit directory was not a valid Oracle audit file.

Action: Remove the file from the audit directory and try the action again.

ORA-46367: Database is not opened for write; cannot complete operation.

Cause: An operation requiring the database to be open in read/write mode was attempted.

Action: Open the database in read/write mode.

ORA-46368: Audit policy does not have a simple rule condition.

Cause: Creating or altering the audit policy was attempted with a complex audit condition.

Action: Use a simple rule expression for audit policy condition.

ORA-46369: An error occurred while evaluating audit policy condition.

Cause: Check the error stack for detailed error information.

Action: Fix the errors in the error stack and retry the operation.

ORA-46370: cannot connect as AUDSYS user

Cause: An attempt was made to connect to the database as AUDSYS user.

Action: Do not connect to the database as AUDSYS user.

ORA-46372: audit file '*string*' not found

Cause: An operation was attempted on the audit file which was not available in the audit directory.

Action: Make sure the file exists in the \$ORACLE_BASE/audit/\$ORACLE_SID directory.

ORA-46373: Audit policy '*string*' must have at least one audit option.

Cause: An attempt was made to create, alter or enable the empty audit policy.

Action: Use at least one audit option in the audit policy.

ORA-46374: error during AUDIT or NOAUDIT of audit policy in an Oracle RAC enabled database

Cause: The operation could not be completed on one or more Oracle RAC instances.

Action: Check the trace file for more information. Ensure every instance in Oracle RAC is operational and retry the operation.

ORA-46376: FGA policy owner '*string*' is not available

Cause: An attempt to import Fine-Grained Audit (FGA) policy failed because the specified FGA policy owner has not been imported.

Action: Perform the import of the specified user schema and retry the operation.

ORA-46377: Auditing cannot be configured on the specified system privilege.

Cause: An attempt was made to configure auditing on the system privilege which is not supported by the audit facility.

Action: None

ORA-46378: Cannot use bind variable in VERSIONS clause when the object has FGA policy defined on it.

Cause: The object being accessed had a fine-grained audit (FGA) policy defined on it and the VERSIONS clause contained a bind variable.

Action: Rewrite the query without the use of a bind variable in the VERSIONS clause.

ORA-46379: generation of audit session ID failed with error 'number'

Cause: An error was encountered while generating the audit session ID.

Action: Retry the operation and, if the error persists, contact Oracle Support Services.

ORA-46500: User is not a common user.

Cause: An attempt was made to apply the common audit configuration to a local user. Common audit configuration can be applied only to common users.

Action: Specify a common user.

ORA-46501: Object is not a common object.

Cause: Object audit option for the common audit policy was specified on a local object. A common audit policy can have object audit options on common objects only.

Action: Specify a common object.

ORA-46503: not connected to a pluggable database

Cause: An attempt was made to create a local audit policy or configuration while not connected to a pluggable database. Local audit policy or configuration can be created only when connected to a pluggable database.

Action: Connect or switch session to a pluggable database to create local audit policy or configuration.

ORA-46504: AUDIT command cannot specify ON *object* and CONTAINER clauses together.

Cause: An attempt was made to specify the CONTAINER clause with the AUDIT command while configuring object auditing. The CONTAINER clause is not supported for object auditing using the SQL AUDIT command.

Action: Do not specify the CONTAINER clause while configuring object auditing using SQL AUDIT command.

ORA-46600: invalid ADMINISTER KEY MANAGEMENT command

ORA-46601: missing KEYSTORE, ENCRYPTION, KEY, or TAG keyword

ORA-46602: missing OPEN or CLOSE keyword

ORA-46603: invalid ADMINISTER KEY MANAGEMENT CREATE command

ORA-46604: invalid or missing keystore file name

Cause: The required keystore file name was invalid or missing.

Action: Specify a valid keystore file name.

ORA-46605: master key identifier is invalid or missing

ORA-46606: master key tag is invalid or missing

ORA-46607: client secret is invalid or missing

ORA-46608: client identifier is invalid or missing

ORA-46609: export or import secret is invalid or missing

ORA-46610: expecting SELECT query that returns the master key identifiers

ORA-46612: import file name is invalid or missing

ORA-46614: export file name is invalid or missing

ORA-46615: missing WITH or CONTAINER keyword

ORA-46616: master key is invalid or missing

ORA-46617: master key identifier is invalid or missing

ORA-46620: backup for the keystore cannot be taken

Cause: Either the specified backup location was not an ASM path name when the configured keystore location was an ASM path or the specified backup location was an ASM path name when the configured keystore location was not an ASM path.

Action: Either specify an ASM path name for the backup location if the keystore location is an ASM path or specify a non-ASM path name for the backup location if the keystore location is not an ASM path.

ORA-46621: no backup identifier specified

Cause: Backup identifier was not specified.

Action: Provide a valid backup identifier.

ORA-46622: location of the backed up keystore is incorrect

Cause: Keystore location where the backup was to be created was incorrect.

Action: Provide a valid location to backup the keystore.

ORA-46623: cannot create the keystore file name

Cause: Keystore name could not be formed possibly due to the incorrectly specified keystore location.

Action: Verify the location to where the keystore can be backed up.

ORA-46624: cannot find the source keystore

Cause: The source keystore for which the backup was requested was not found.

Action: Verify that the source keystore exists and try again.

ORA-46625: backup keystore already exists

Cause: A backup of the keystore of the same name already existed in the given location.

Action: Change the location of the backup keystore or the backup identifier of the backup keystore and try again.

ORA-46626: cannot create a backup of the keystore

Cause: The backup of the keystore could not be created.

Action: Check the trace file for more information and try again.

ORA-46627: keystore password mismatch

Cause: The keystore password specified did not match that of the keystore that was open.

Action: Specify the correct keystore password.

ORA-46628: cannot alter the software keystore password

Cause: An attempt was made to alter the software keystore password.

Action: Check the viability of the keystore and replace the keystore from the backup if required and try to alter the keystore password.

ORA-46629: keystore was not open after the alter keystore operation

Cause: The keystore password was changed. However, the keystore was closed during this operation.

Action: Reopen the keystore with the new password.

ORA-46630: keystore cannot be created at the specified location

Cause: Keystore could not be created at the specified location because a keystore of the same type already existed.

Action: Specify a different location to create the keystore. If no keystore exists and the operation is failing, check the trace file and try again.

ORA-46631: keystore needs to be backed up

Cause: The keystore was not backed up. For this operation to proceed, the keystore must be backed up.

Action: Backup the keystore and try again.

ORA-46632: password-based keystore does not exist

Cause: Password-based keystore was missing for this operation. Auto login keystore can be created from a password-based keystore only.

Action: Specify a location where the password-based keystore exists.

ORA-46633: creation of a password-based keystore failed

Cause: Password-based keystore could not be created at the specified location due to either incorrect file permissions for Oracle on the specified location or due to the nonexistence of the specified location.

Action: Check the trace file for more information, create permissions on the specified location, or specify a different location and try again.

ORA-46634: creation of a local auto login keystore failed

Cause: The local auto login keystore could not be created at the specified location due to the incorrect password specified for the password-based keystore or due to incorrect file permissions for Oracle on the specified location or due to the nonexistence of the specified location.

Action: Check the trace file for more information, specify the correct password for the password-based keystore, create permissions on the specified location, or specify a different location and try again.

ORA-46635: creation of an auto login keystore failed

Cause: The auto login keystore could not be created at the specified location due to the incorrect password specified for the password-based keystore or due to incorrect file permissions for Oracle on the specified location or due to the nonexistence of the specified location.

Action: Check the trace file for more information, specify the correct password for the password-based keystore, create permissions on the specified location, or specify a different location and try again.

ORA-46636: cannot add second keystore to the target keystore

Cause: The second keystore could not be added to the target keystore.

Action: Check trace files for more information. Delete the target keystore and try merging the two keystores again.

ORA-46637: cannot add first keystore to the target keystore

Cause: The first keystore could not be added to the target keystore.

Action: Check trace files for more information. Delete the target keystore and try merging the two keystores again.

ORA-46638: merging of the two keystores failed

Cause: The two keystores could not be merged.

Action: Check trace files for more information. If the target keystore is corrupted, replace it from the backup and try merging the two keystores again.

ORA-46639: backup of keystore failed during migration

Cause: Keystore location was not configured correctly in the sqlnet.ora file.

Action: Keystore location is missing or not correct in the sqlnet.ora file. Specify the correct keystore location for migration and backup.

ORA-46640: incorrect file name for exporting keys

Cause: The file name of the the file to which keys from the keystore will be written was incorrect or invalid.

Action: Verify the file name. Ensure that both the full path and the file name are provided.

ORA-46641: incorrect file name for importing keys

Cause: The file name of the the file from which the keys will be read and saved in the keystore was incorrect or invalid.

Action: Verify the file name. Ensure that both the full path and the file name are provided.

ORA-46642: key export destination file already exists

Cause: The file name specified as the export destination for keys exported from the keystore was already in existence.

Action: Specify a different file name that does not exist.

ORA-46643: file from which keys are to be imported does not exist

Cause: The specified file from which the keys are to be imported into the keystore did not exist.

Action: Specify the name of a file that contains keys exported from the keystore.

ORA-46644: creation or open of file to store the exported keys failed

Cause: Creation or opening of the file specified as the key export destination, where the keys exported from the keystore were to be written, failed.

Action: Verify that the file name is valid and that the Oracle process has sufficient privilege to create, open and write to the file.

ORA-46645: open of file from which keys are to be imported failed

Cause: The file specified as the key import source, from which the keys were to be imported into the keystore, could not be opened.

Action: Verify that the file name is valid and that the Oracle process has sufficient privilege to read the file.

ORA-46646: file from which keys are to be imported is invalid

Cause: The file specified as the key import source, from which the keys are to be imported, was not a valid file.

Action: Specify a valid file, containing keys which were previously exported from the keystore.

ORA-46647: specified protection differs from that specified in the file

Cause: The file specified as the key import source, from which the keys are to be imported, had different protection from what was specified in the SQL command.

Action: Provide a valid protection option, ensuring that it is the same protection option that was in the file from which the keys are to be imported.

ORA-46648: cannot commit the keys to the keystore

Cause: The operation of writing the keys to the keystore failed.

Action: Verify that the keystore is not corrupt. Copy the keystore from the backup if it is corrupt. Retry the command.

ORA-46649: master key with the specified identifier does not exist

Cause: Master key with the specified identifier does not exist in the keystore.

Action: Specify a valid master key identifier for the SQL command and retry the command.

ORA-46650: cannot retrieve information for a master key identifier

Cause: The master key or the master key information associated with a specified master key identifier did not exist.

Action: Check the contents of the trace file to identify the faulty master key identifier. Either fix or drop the faulty master key, then retry the command.

ORA-46651: cannot create a master key

Cause: Master key creation failed.

Action: Check the trace file for errors and retry the command.

ORA-46652: cannot create tag for the master key

Cause: Creation of the tag for the specified master key failed.

Action: Check the contents of the trace file for errors and retry the command.

ORA-46653: cannot retrieve master key information

Cause: Retrieval of the master key information for the specified master key identifier failed.

Action: Check the contents of the trace file for errors and retry the command.

ORA-46654: cannot add the imported keys to the keystore

Cause: The operation of writing the imported keys to the keystore failed.

Action: Check the contents of the trace file for more information on the cause of the failure and retry the command.

ORA-46655: no valid keys in the file from which keys are to be imported

Cause: The specified keystore, from which keys are to be imported, did not contain any valid keys.

Action: None

ORA-46656: operation not valid for container database

Cause: The specified operation was not supported for the container database.

Action: None

ORA-46657: the source keystores are the same

Cause: The specified source keystores to be merged were the same. There is no need to merge these keystores.

Action: Check the locations and types of the specified keystores. Specify the correct path and types for the source keystores, if necessary.

ORA-46658: keystore not open in the container

Cause: The keystore was not open in the container.

Action: Open the keystore in the container.

ORA-46659: master keys for the given PDB not found

Cause: The master keys for the specified pluggable database (PDB) could not be retrieved.

Action: Check if the master keys were generated for the specified PDB and retry the command.

ORA-46660: the source and target keystores are the same

Cause: The specified source and target keystores to be merged were the same. There is no need to merge these keystores.

Action: Check the locations and types of the specified keystores. Specify the correct path and types for the source and target keystores, if necessary.

ORA-46661: keystore not open in root container

Cause: The root container keystore was not open.

Action: Open the root container keystore.

ORA-46662: master keys not created for all PDBs

Cause: Creation of the master key failed for one or more pluggable databases (PDBs).

Action: Check the trace files for errors. Create the keys in PDBs where the operation failed or retry the command.

ORA-46663: master keys not created for all PDBs for REKEY

Cause: Creation of the master key failed for one or more pluggable databases (PDBs) and as such REKEY failed for these PDBs.

Action: Check the trace files for errors. REKEY the keys in PDBs where the master keys could not be created or retry the command.

ORA-46664: master keys not created for any PDBs during REKEY

Cause: Creation of the master key failed for all pluggable databases (PDBs).

Action: Check the contents of the trace file for more information on the cause of the failure and retry the command.

ORA-46665: master keys not activated for all PDBs during REKEY

Cause: Activation of the master key failed for one or more pluggable databases (PDBs) and as such REKEY failed for these PDBs.

Action: Check the trace files for errors. Activate the keys in PDBs where the master keys were created but not activated or retry the command.

ORA-46666: master keys not created or activated for all PDBs during REKEY

Cause: Creation of the master key failed for one or more pluggable databases (PDBs). Further, activation of one or more created master keys also failed for some PDBs and as such REKEY failed on these PDBs.

Action: Check the trace files for errors. REKEY the PDBs where the master keys could not be created. Activate the keys in PDBs where the master keys were created but not activated or retry the command.

ORA-46667: client not found in the keystore

Cause: An entry with the given client name was not found in the keystore.

Action: Add the secret for the given client to the keystore, if required.

ORA-46668: client already exists in the keystore

Cause: An entry with the given client name was already in existence in the keystore.

Action: Delete or update the entry with the client name.

ORA-46669: the target keystore does not exist

Cause: The location specified for the target keystore did not contain a valid keystore, or target keystore did not have valid file permissions.

Action: Specify a different location for the target keystore where it exists. Also, check the file permissions of the target keystore.

ORA-46670: client secret keystore operation failed

Cause: The client secret keystore add, update or delete operation failed.

Action: Open the keystore and retry the client secret keystore operation.

ORA-46671: master key not set in root container

Cause: Master key was not set in the root container.

Action: Set the Master key in the root container.

ORA-46672: backup keystore file name could not be stored

Cause: The file name of the keystore backup could not be recorded in props\$.

Action: Open the keystore and retry the backup operation.

ORA-46673: write to the export file failed

Cause: Oracle was unable to write an entry to the export file.

Action: Check the trace file for more information and retry the operation. If there is no trace information and trying the operation again fails, contact Oracle Support Services.

ORA-46674: read from the export file failed

Cause: Oracle was unable to read an entry from the export file.

Action: Check the trace file for more information and retry the operation. If there is no trace information and trying the operation again fails, contact Oracle Support Services.

ORA-46900: unsupported proxy authentication

Cause: A proxy authentication was attempted using an administrative privilege.

Action: Authenticate without any administrative privilege if proxy authentication is desired.

ORA-47000 to ORA-47999

ORA-47000: Factor Type *string* already defined

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47001: Factor Type *string* not found

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47002: error creating Factor Type *string, string*

Cause: An unexpected error occurred creating the factor type

Action: Please review the definition and retry the operation

ORA-47003: error deleting Factor Type *string, string*

Cause: An unexpected error occurred deleting the factor type

Action: Please review the definition and retry the operation

ORA-47004: error updating Factor Type *string, string*

Cause: An unexpected error occurred updating the factor type

Action: Please review the definition and retry the operation

ORA-47005: error renaming Factor Type *string, string*

Cause: An unexpected error occurred renaming the factor type

Action: Please review the definition and retry the operation

ORA-47020: Factor *string* already defined

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47021: Factor *string* not found

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47022: error creating Factor *string, string*

Cause: An unexpected error occurred creating the factor

Action: Please review the definition for accuracy and retry the operation

ORA-47023: error deleting Factor *string, string*

Cause: An unexpected error occurred deleting the factor

Action: Please review the definition for accuracy and retry the operation

ORA-47024: error updating Factor *string*, *string*

Cause: An unexpected error occurred updating the factor

Action: Please review the definition for accuracy and retry the operation

ORA-47025: Factor Link already exists for *string* and *string*

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47026: error creating Factor Link for *string* and *string*, *string*

Cause: An unexpected error occurred creating the factor link

Action: Please review the definition for accuracy and retry the operation

ORA-47027: Factor Link does not exist for *string* and *string*

Cause: The factor link referenced does not exist

Action: Please review the definition for accuracy and retry the operation

ORA-47028: error deleting Factor Link for *string* and *string*, *string*

Cause: An unexpected error occurred deleting the factor link

Action: Please review the definition for accuracy and retry the operation

ORA-47029: Factor type *string* is used by one or more factors.

Cause: The specified factor type was used by existing factor(s).

Action: Remove the dependent factors and retry the operation.

ORA-47030: Factor *string* is referred by one or more factor links.

Cause: The specified factor was referred by existing factor link(s).

Action: Remove the dependent factor links and retry the operation.

ORA-47031: Factor *string* is used by one or more policy factors.

Cause: The specified factor was used by existing policy factor(s).

Action: Remove the dependent policy factors and retry the operation.

ORA-47032: Factor *string* is referred by one or more identities.

Cause: The specified factor was referred by existing identities.

Action: Remove the dependent identities and retry the operation.

ORA-47033: Factor link for *string* and *string* is referred by one or more identity maps.

Cause: The specified factor link was referred by existing identity maps.

Action: Remove the dependent identity maps and retry the operation.

ORA-47040: Identity *string* for Factor *string* already defined

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47041: Identity *string* for Factor *string* not found

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47042: error creating Identity *string* for Factor *string*, *string*

Cause: An unexpected error occurred creating the identity

Action: Please review the definition for accuracy and retry the operation

ORA-47043: error deleting Identity *string* for Factor *string*, *string*

Cause: An unexpected error occurred deleting the identity

Action: Please review the definition for accuracy and retry the operation

ORA-47044: error updating Identity *string* for Factor *string*, *string*

Cause: An unexpected error occurred updating the identity

Action: Please review the definition for accuracy and retry the operation

ORA-47045: Identity *string* for Factor *string* is used by one or more identity maps.

Cause: The specified identity was used by existing identity map(s).

Action: Remove the dependent identity maps and retry the operation.

ORA-47046: Identity *string* for Factor *string* is referred by one or more policy labels.

Cause: The specified identity was used by existing policy label(s).

Action: Remove the dependent policy labels and retry the operation.

ORA-47060: Identity map for Identity *string.string*, Factor Link *string*, *string* already defined for operation *string* on *string*

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47061: Identity map for Identity *string.string*, Factor Link *string*, *string* not found for operation *string* on *string*

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47062: error creating Identity map for Identity *string.string*, Factor Link *string*, *string* already defined for operation *string* on *string*

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47063: error deleting Identity map for Identity *string.string*, Factor Link *string*, *string* already defined for operation *string* on *string*

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47080: code *string* already defined in group *string*

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47081: code *string* not found in group *string*

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47100: Command Rule *string* already defined for *string.string*

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47101: Command Rule *string* not found for *string.string*

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47102: error creating Command Rule *string* for *string.string, string*

Cause: An unexpected error occurred creating the command rule

Action: Please review the definition for accuracy and retry the operation

ORA-47103: error deleting Command Rule *string* for *string.string, string*

Cause: An unexpected error occurred deleting the command rule

Action: Please review the definition for accuracy and retry the operation

ORA-47104: error updating Command Rule *string* for *string.string, string*

Cause: An unexpected error occurred updating the command rule

Action: Please review the definition for accuracy and retry the operation

ORA-47105: invalid object owner *string* for command *string*

Cause: The object owner is invalid for this command

Action: Choose an object owner other than SYS or a wildcard for this command

ORA-47120: Document *string* already defined

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47121: Document *string* not found

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47140: Factor expression *string* already defined

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47141: Factor expression *string* not found

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47160: Factor link *string* already defined

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47161: Factor link *string* not found

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47180: Integration Policy for OLS Policy *string* is already defined

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47181: Integration Policy for OLS Policy *string* not found

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47182: Label algorithm *string* not found

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47183: error creating Integration Policy for OLS Policy *string*, *string*

Cause: An unexpected error occurred creating the integration policy

Action: Please review the definition for accuracy and retry the operation

ORA-47184: error updating Integration Policy for OLS Policy *string*, *string*

Cause: An unexpected error occurred updating the integration policy

Action: Please review the definition for accuracy and retry the operation

ORA-47185: error deleting Integration Policy for OLS Policy *string*, *string*

Cause: An unexpected error occurred deleting the integration policy

Action: Please review the definition for accuracy and retry the operation

ORA-47200: Integration Policy Factor already defined for Factor *string* and Policy *string*

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47201: Integration Policy Factor not found for Factor *string* and Policy *string*

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47202: error creating Integration Policy Factor for factor *string* and policy *string*, *string*

Cause: An unexpected error occurred creating the integration policy factor

Action: Please review the definition for accuracy and retry the operation

ORA-47203: error deleting Integration Policy Factor for factor *string* and policy *string*, *string*

Cause: An unexpected error occurred deleting the integration policy factor

Action: Please review the definition for accuracy and retry the operation

ORA-47220: Label *string* for Identity *string.string* under OLS Policy *string* already defined

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47221: Label *string* for Identity *string.string* under OLS Policy *string* not found

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47222: error creating Label *string* for Identity *string.string* under OLS Policy *string, string*

Cause: An unexpected error occurred creating the identity label

Action: Please review the definition for accuracy and retry the operation

ORA-47223: error deleting Label *string* for Identity *string.string* under OLS Policy *string, string*

Cause: An unexpected error occurred deleting the identity label

Action: Please review the definition for accuracy and retry the operation

ORA-47240: Realm *string* already defined

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47241: Realm *string* not found

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47242: error creating Realm *string, string*

Cause: An unexpected error occurred creating the realm

Action: Please review the definition for accuracy and retry the operation

ORA-47243: error deleting Realm *string, string*

Cause: An unexpected error occurred deleting the realm

Action: Please review the definition for accuracy and retry the operation

ORA-47244: error updating Realm *string, string*

Cause: An unexpected error occurred updating the realm

Action: Please review the definition for accuracy and retry the operation

ORA-47245: error renaming Realm *string, string*

Cause: An unexpected error occurred renaming the realm

Action: Please review the definition for accuracy and retry the operation

ORA-47246: cannot change default realm *string* to mandatory realm

Cause: An attempt was made to change the realm type of this default realm to mandatory realm.

Action: No action required.

ORA-47260: Realm Authorization to *string* for Realm *string* already defined

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47261: Realm Authorization to *string* for Realm *string* not found

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47262: error creating Realm Authorization to *string* for Realm *string, string*

Cause: An unexpected error occurred creating the realm authorization

Action: Please review the definition for accuracy and retry the operation

ORA-47263: error deleting Realm Authorization to *string* for Realm *string, string*

Cause: An unexpected error occurred deleting the realm authorization

Action: Please review the definition for accuracy and retry the operation

ORA-47264: error updating Realm Authorization to *string* for Realm *string, string*

Cause: An unexpected error occurred updating the realm authorization

Action: Please review the definition for accuracy and retry the operation

ORA-47280: Realm Object *string,string.string* already defined in Realm *string*

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47281: Realm Object *string,string.string* not found in Realm *string*

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47282: error adding Realm Object *string,string.string* to Realm *string, string*

Cause: An unexpected error occurred creating the realm object

Action: Please review the definition for accuracy and retry the operation

ORA-47283: error deleting Realm Object *string,string.string* from Realm *string, string*

Cause: An unexpected error occurred deleting the realm object

Action: Please review the definition for accuracy and retry the operation

ORA-47284: error adding Realm Object *string.string.string* is not a valid object type

Cause: The specified object type is not valid.

Action: Enter a valid object type for the specified object name, or enter "%" and all objects with the specified name and the specified owner will be added to the realm.

ORA-47290: error creating VPD policy for Realm *string, string*

Cause: An unexpected error occurred creating the VPD policy

Action: Please review the definition for accuracy and retry the operation

ORA-47300: Role already *string* defined

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47301: Role *string* not found

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47302: error creating Role *string, string*

Cause: An unexpected error occurred creating the role

Action: Please review the definition for accuracy and retry the operation

ORA-47303: error deleting Role *string, string*

Cause: An unexpected error occurred deleting the role

Action: Please review the definition for accuracy and retry the operation

ORA-47304: error updating Rule *string*, *string*

Cause: An unexpected error occurred updating the role

Action: Please review the definition for accuracy and retry the operation

ORA-47305: Rule Set violation on *string* (*string*)

Cause: An operation that was attempted failed due to a rule set violation

Action: Ensure you have sufficient privileges for this operation retry the operation

ORA-47320: Rule *string* already defined

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47321: Rule *string* not found

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47322: error creating Rule *string*, *string*

Cause: An unexpected error occurred creating the rule

Action: Please review the definition for accuracy and retry the operation

ORA-47323: error deleting Rule *string*, *string*

Cause: An unexpected error occurred deleting the rule

Action: Please review the definition for accuracy and retry the operation

ORA-47324: error updating Rule *string*, *string*

Cause: An unexpected error occurred updating the rule

Action: Please review the definition for accuracy and retry the operation

ORA-47325: Rule *string* is used by one or more rule sets.

Cause: The specified rule was used by existing rule set(s).

Action: Remove the dependent rule sets and retry the operation.

ORA-47340: Rule Set *string* already defined

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47341: Rule Set *string* not found

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47342: error creating Rule Set *string*, *string*

Cause: An unexpected error occurred creating the rule set

Action: Please review the definition for accuracy and retry the operation

ORA-47343: error deleting Rule Set *string*, *string*

Cause: An unexpected error occurred deleting the rule set

Action: Please review the definition for accuracy and retry the operation

ORA-47344: error updating Rule Set *string*, *string*

Cause: An unexpected error occurred updating the rule set

Action: Please review the definition for accuracy and retry the operation

ORA-47345: Rule set *string* is used by one or more realm authorizations.

Cause: The specified rule set was used by existing realm authorization(s).

Action: Remove the dependent realm authorizations and retry the operation.

ORA-47346: Rule set *string* is used by one or more command rules.

Cause: The specified rule set was used by existing command rule(s).

Action: Remove the dependent command rules and retry the operation.

ORA-47347: Rule set *string* is used by one or more secure application roles.

Cause: The specified rule set was used by existing secure application role(s).

Action: Remove the dependent secure application roles and retry the operation.

ORA-47348: Rule set *string* is used by one or more factors.

Cause: The specified rule set was used by existing factor(s).

Action: Remove the dependent factors and retry the operation.

ORA-47349: error occurred when executing the rule set handler

Cause: Either there was a syntax error on the rule set handler or DVSYS did not have sufficient privilege to execute the rule set handler.

Action: Fix the syntax error on the rule set handler or grant execute privilege on the rule set handler to DVSYS.

ORA-47360: rule *string* already added to rule set *string*

Cause: The object with this name existed already.

Action: Choose a unique object name and retry the operation.

ORA-47361: rule *string* not associated to rule set *string*

Cause: The rule specified was not associated to the rule set.

Action: Review the definition for accuracy and retry the operation.

ORA-47362: error adding rule *string* to rule set *string*, *string*

Cause: An unexpected error occurred while adding the rule to the rule set.

Action: Review the definition for accuracy and retry the operation.

ORA-47363: error deleting rule *string* from rule set *string*, *string*

Cause: An unexpected error occurred while deleting the rule from the rule set.

Action: Review the definition for accuracy and retry the operation.

ORA-47381: Oracle Label Security (OLS) Policy *string* not found

Cause: The object being requested did not exist.

Action: Choose an object name that exists and retry the operation.

ORA-47382: Oracle Label Security (OLS) Policy Label *string* not found for policy *string*

Cause: The object being requested did not exist.

Action: Choose an object name that exists and retry the operation.

ORA-47383: error capturing the session state information

Cause: An internal error occurred capture the session state

Action: Please retry the operation if possible

ORA-47390: failed to audit event, *string*

Cause: An internal error auditing the operation

Action: Please retry the operation if possible

ORA-47391: attempt to set Factor *string* violates Rule Set *string*

Cause: An attempt to set the factor violated the associated rule set

Action: Please check to ensure you have the ability to set the factor

ORA-47392: Factor *string* cannot be set

Cause: The attempt to set the factor is not allowed

Action: This factor cannot be set so there is no corrective action

ORA-47393: Factor *string* value not allowed

Cause: The value being assigned to the factor is not allowed

Action: This factor cannot be set to this value so there is no corrective action

ORA-47394: Factor assignment rule set not defined

Cause: The rule set being associated to the factor does not exist

Action: Please review the definition for accuracy and retry the operation

ORA-47395: error returned by Factor *string* evaluation expression *string*

Cause: The factor retrieval method resulted in an error

Action: Please review the retrieval method definition for accuracy and correct it as required

ORA-47396: error returned by Factor *string* validation expression *string*

Cause: The factor retrieval method resulted in an invalid value based on its validation method

Action: Please review the factor definition and correct it as required

ORA-47397: incorrect identified by value for Factor *string*

Cause: The factor identified by value is incorrect

Action: Please review the factor definition and correct it as required

ORA-47398: multiple identities defined for Factor *string*

Cause: The factor has duplicate identities defined

Action: Please review the factor definition and correct it as required

ORA-47399: incorrect labeled by value for Factor *string*

Cause: The factor labeled by value is incorrect

Action: Please review the factor definition and correct it as required

ORA-47400: Command Rule violation for *string* on *string*

Cause: An operation that was attempted failed due to a command rule violation

Action: Ensure you have sufficient privileges for this operation retry the operation

ORA-47401: Realm violation for *string* on *string.string*

Cause: An operation that was attempted failed due to a realm protection

Action: Ensure you have sufficient privileges for this operation retry the operation

ORA-47402: incorrect evaluation options value for Factor *string*

Cause: The factor evaluations options value is incorrect

Action: Please review the factor definition and correct it as required

ORA-47403: NULL returned by Factor *string* evaluation expression *string*

Cause: The factor evaluated to a NULL value

Action: Please review the factor definition and correct it as required

ORA-47404: NULL trust level for Factor *string*

Cause: The factor has a NULL trust level

Action: Please review the factor definition and correct it as required

ORA-47405: negative trust level for Factor *string*

Cause: The factor has a negative trust level

Action: Please review the factor definition and correct it as required

ORA-47406: ALWAYS AUDIT option set for Factor *string*

Cause: The factor audit option is set to always audit

Action: No action required

ORA-47407: ALWAYS AUDIT option set for Rule Set *string*

Cause: The rule set audit option is set to always audit

Action: No action required

ORA-47408: Realm violation for the EXECUTE command

Cause: A realm violation has occurred for a realm-protected stored procedure.

Action: In order to invoke the realm-protected procedure, you must have GRANT privileges to execute the procedure, or you must be authorized to operate in the procedure's realm.

ORA-47409: Command Rule violation for the EXECUTE command

Cause: A command rule violation occurred when trying to perform the EXECUTE command for a stored procedure protected by a command rule.

Action: Ask the Database Vault administrator to perform the operation or remove the command rule for the protected stored procedure.

ORA-47410: Realm violation for *string* on *string*

Cause: An operation that was attempted failed with insufficient privileges due to an attempt to violate a Database Vault Realm security policy which is currently enabled and enforced.

Action: Ensure you have sufficient privileges for this operation and retry the operation.

ORA-47411: Cannot use *string* due to Oracle Database Vault policy.

Cause: An operation that was attempted failed because Database Vault policy currently prevents the related feature from being used.

Action: Ask the Database Vault administrator to allow the feature to be used.

ORA-47412: The DVSYS and DVF users are not allowed to switch containers.

Cause: An attempt was made to switch containers while connecting as DVSYS or DVF, which is not allowed.

Action: Connect as a different user and try again.

ORA-47413: Cannot connect due to Oracle Database Vault policy.

Cause: An attempt to connect to DVSYS or DVF accounts failed because the Database Vault administrator had disabled the account.

Action: Ask the Database Vault administrator to enable the account.

ORA-47500: Database Vault cannot be configured.

Cause: The Database Vault configuration failed because some Database Vault objects were missing.

Action: Run the dvremov.sql script to remove Database Vault and then reinstall Database Vault.

ORA-47501: Database Vault has already been configured.

Cause: An attempt was made to run this procedure more than once. This procedure can be run successfully only once.

Action: If you are attempting to grant the DV_OWNER or DV_ACCTMGR roles, do so manually.

ORA-47502: Database Vault is not yet configured.

Cause: The Database Vault configuration procedure dvsys.configure_dv() had not been run.

Action: Run dvsys.configure_dv() before attempting to enable or disable Database Vault enforcement.

ORA-47503: Database Vault is not enabled on CDB\$ROOT.

Cause: Database Vault is required to be enabled on CDB\$ROOT for this operation.

Action: Enable Database Vault on CDB\$ROOT and retry the operation.

ORA-47504: Common audit policies for component Oracle Database Vault not supported.

Cause: Audit policies for Oracle Database Vault realms, factors and rule sets could not be common audit policies.

Action: If creating audit policies for Oracle Database Vault objects on CDB\$ROOT, include the clause 'container=current'.

ORA-47901: OLS policy not specified

Cause: An OLS policy name is required for this operation

Action: Specify a policy name and retry the operation

ORA-47902: OLS policy label not specified

Cause: An OLS policy label is required for this operation

Action: Specify a policy label and retry the operation

ORA-47903: OLS policy label *string* not found for policy *string*

Cause: The policy label being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47904: OLS session label does not exist

Cause: The policy label specified does not exist

Action: Choose a valid policy label and retry the operation

ORA-47905: OLS policy label *string* is not allowed for policy *string*

Cause: The policy label specified is not valid for this policy

Action: Choose a valid policy label for this policy and retry the operation

ORA-47906: OLS policy label not specified for identity *string.string* under policy *string*

Cause: The policy label is required for this operation

Action: Choose a valid policy label for this policy and retry the operation

ORA-47907: Database Vault associated OLS policy *string* not fully configured

Cause: The Oracle Label Security (OLS) policy was associated with Database Vault. But either the policy was not configured with a factor or the current factor identity was not assigned a label.

Action: Based on the cause, either configure a factor with the OLS policy using DVSYS.DBMS_MACADM.ADD_POLICY_FACTOR procedure and assign labels to factor identities using DVSYS.DBMS_MACADM.CREATE_POLICY_LABEL procedure or remove Database Vault association using DVSYS.DBMS_MACADM.DELETE_MAC_POLICY_CASCADE procedure.

ORA-47920: Authorization failed for user *string* to perform this operation

Cause: The operation attempted is not allowed for this user

Action: Please ensure you have privileges to perform this operation

ORA-47921: error adding host *string* to domain *string, string*

Cause: An error occurred adding the host specified to the domain specified

Action: Please review the host and domain definition and correct it as required

ORA-47922: error removing host *string* to domain *string, string*

Cause: An error occurred removing the host specified to the domain specified

Action: Please review the host and domain definition and correct it as required

ORA-47930: Privilege capture *string* already exists.

Cause: A privilege capture with the given name was already in existence.

Action: Choose another capture name or drop the existing privilege capture.

ORA-47931: Privilege capture *string* does not exist.

Cause: The given privilege capture did not exist.

Action: Choose another privilege capture.

ORA-47932: Privilege capture *string* is still enabled.

Cause: The given privilege capture was still enabled.

Action: Choose another capture or disable the given privilege capture.

ORA-47933: Privilege capture *string* is already enabled.

Cause: The given privilege capture was already enabled.

Action: Choose another privilege capture.

ORA-47934: Two privilege captures are already enabled.

Cause: The maximum number of two privilege captures were enabled."

Action: Disable one of the enabled privilege captures.

ORA-47935: Another privilege capture is enabled.

Cause: Another capture of the same type or another nondatabase-wide capture was enabled.

Action: Disable the enabled privilege capture.

ORA-47936: Privilege capture *string* is already disabled.

Cause: The given privilege capture was already disabled.

Action: Choose another capture.

ORA-47937: Input *string* does not match the given privilege capture type.

Cause: The given input did not match the given privilege capture type.

Action: Change the input or the privilege capture type.

ORA-47938: GENERATE_RESULT is already running for privilege capture *string*.

Cause: DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT was already running for the given privilege capture.

Action: Wait and retry later or choose another privilege capture.

ORA-47939: Capture context namespace or attribute does not exist or is invalid.

Cause: Context namespace or attribute used in the capture condition did not exist or was invalid.

Action: Create the namespace or set the attribute or recreate a privilege capture with a valid namespace and attribute.

ORA-47950: no value defined for required parameter *string*

Cause: The operation requires a value for this parameter

Action: Please specify the missing parameter and retry the operation

ORA-47951: invalid input value or length for parameter '*string*'

Cause: The value specified for this parameter is invalid or too large

Action: Please specify the a valid parameter and retry the operation

ORA-47952: Oracle Data Pump authorization for Oracle Database Vault to *string* already exists

Cause: Oracle Data Pump authorization for Oracle Database Vault was already granted to the given grantee.

Action: Choose a different grantee and retry the operation.

ORA-47953: Oracle Data Pump authorization for Oracle Database Vault to *string* on schema *string* already exists

Cause: Oracle Data Pump authorization for Oracle Database Vault on the given schema was already granted to the given grantee.

Action: Choose a different grantee or schema and retry the operation.

ORA-47954: Oracle Data Pump authorization for Oracle Database Vault to *string* on object *string.string* already exists

Cause: Oracle Data Pump authorization for Oracle Database Vault on the given object was already granted to the given grantee.

Action: Choose a different grantee or a different object and retry the operation.

ORA-47955: Oracle Data Pump authorization for Oracle Database Vault to *string* is not found

Cause: Oracle Data Pump authorization for Oracle Database Vault was not granted to the given user.

Action: Choose a user who has Oracle Data Pump authorization for Oracle Database Vault and retry the operation.

ORA-47956: Oracle Data Pump authorization for Oracle Database Vault to *string* on schema *string* is not found

Cause: Oracle Data Pump authorization for Oracle Database Vault was not granted to the given user on the given schema.

Action: Choose a different user or schema and retry the operation.

ORA-47957: Oracle Data Pump authorization for Oracle Database Vault to *string* on object *string.string* is not found

Cause: Oracle Data Pump authorization for Oracle Database Vault was not granted to the given user on the given object.

Action: Choose a different user or object and retry the operation.

ORA-47958: Running EXP with direct path option is disallowed when Oracle Database Vault is enabled.

Cause: While Oracle Database Vault was enabled, an attempt was made to run EXP with the 'direct=y' option.

Action: Change the option to 'direct=n' or disable Oracle Database Vault and retry the operation.

ORA-47959: Oracle transportable tablespace authorization for Oracle Database Vault to *string* on tablespace *string* already exists.

Cause: Oracle transportable tablespace authorization for Oracle Database Vault on the given tablespace was already granted to the given grantee.

Action: Choose a different grantee or tablespace and retry the operation.

ORA-47960: Oracle transportable tablespace authorization for Oracle Database Vault to *string* on tablespace *string* is not found.

Cause: Oracle transportable tablespace authorization for Oracle Database Vault was not granted to the given user on the given tablespace.

Action: Choose a different user or tablespace and retry the operation.

ORA-47961: Oracle Scheduler Job authorization for Oracle Database Vault to *string* already exists

Cause: Oracle Scheduler Job authorization for Oracle Database Vault was already granted to the given grantee.

Action: Choose a different grantee and retry the operation.

ORA-47962: Oracle Scheduler Job authorization for Oracle Database Vault to *string* on schema *string* already exists

Cause: Oracle Scheduler Job authorization for Oracle Database Vault on the given schema was already granted to the given grantee.

Action: Choose a different grantee or schema and retry the operation.

ORA-47963: Oracle Scheduler Job authorization for Oracle Database Vault to *string* is not found

Cause: Oracle Scheduler Job authorization for Oracle Database Vault was not granted to the given user.

Action: Choose a user who has Oracle Scheduler Job authorization for Oracle Database Vault and retry the operation.

ORA-47964: Oracle Scheduler job authorization for Oracle Database Vault to *string* on schema *string* is not found

Cause: Oracle Scheduler job authorization for Oracle Database Vault was not granted to the given user on the given schema.

Action: Choose a different user or schema and retry the operation.

ORA-47971: Oracle proxy authorization for Oracle Database Vault to *string* on schema *string* already exists

Cause: Oracle proxy authorization for Oracle Database Vault on the given schema was already granted to the given grantee.

Action: Choose a different grantee or schema and retry the operation.

ORA-47972: Oracle proxy authorization for Oracle Database Vault to *string* on schema *string* is not found.

Cause: Oracle proxy authorization for Oracle Database Vault was not granted to the given user on the given schema.

Action: Choose a different user or schema and retry the operation.

ORA-47973: Oracle DDL authorization for Oracle Database Vault to *string* on schema *string* already exists.

Cause: Oracle DDL authorization for Oracle Database Vault on the given schema was already granted to the given grantee.

Action: Choose a different grantee or schema and retry the operation.

ORA-47974: Oracle DDL authorization for Oracle Database Vault to *string* on schema *string* is not found.

Cause: Oracle DDL authorization for Oracle Database Vault was not granted to the given user on the given schema.

Action: Choose a different user or schema and retry the operation.

ORA-47985: password same as or similar to user

Cause: The password specified similar to the user account name and therefore insecure

Action: Please specify the more complex password and retry the operation

ORA-47986: password length must be 8 characters or more

Cause: The password specified is too short and therefore insecure

Action: Please specify a password with more characters and retry the operation

ORA-47987: password is too simple

Cause: The password specified can be guessed based on dictionary terms and therefore insecure

Action: Please specify a password that is not based on dictionary terms and retry the operation

ORA-47988: password should contain at least one numeric and one alphabetic character

Cause: The password does not contain at least one numeric and one alphabetic character

Action: Please specify a password with at least one numeric and one alphabetic character and retry the operation

ORA-47989: password should differ by at least 3 characters

Cause: The password specified does not differ from the previous one by more than 3 characters

Action: Please specify a password that differs from the previous one by more than 3 characters and retry the operation

ORA-47994: Database Vault removal script must be run as SYS

Cause: The Database Vault removal script was not run as SYS.

Action: Run the Database Vault removal script as SYS.

ORA-47995: Database Vault must be linked off and disabled before removal

Cause: Database Vault was not linked off and disabled.

Action: Link Database Vault off and execute DBMS_MACADM.DISABLE_DV_CHECK as DV_OWNER.

ORA-47996: The RECYCLEBIN is turned on

Cause: The RECYCLEBIN was turned on.

Action: Turn off the RECYCLEBIN and then execute Database Vault Removal script.

ORA-47997: Database Vault protected schema does not exist

Cause: The Database Vault DVSYS protected schema did not exist.

Action: Contact Oracle Support Services for instructions.

ORA-47999: internal Database Vault error: *string*\n Error: *string*

Cause: An internal Database Vault framework error occurred.

Action: Contact Oracle Customer Support.

ORA-48001 to ORA-51705

ORA-48001: internal error code, arguments: [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*]

Cause: This is the generic internal error number for program exceptions. This indicated that a process encountered an exceptional condition.

Action: Report as a bug - the first argument is the internal error number.

ORA-48002: thread terminated by fatal error

Cause: The thread was in an unrecoverable state.

Action: Examine the thread trace file for more information.

ORA-48003: out of process memory when trying to allocate *string* bytes (*string*,*string*)

Cause: Operating system process private memory was exhausted.

Action: n/a

ORA-48004: unable to allocate *string* bytes of shared memory ("*string*", "*string*", "*string*", "*string*")

Cause: More shared memory is needed than was allocated in the shared pool.

Action: Reduce your use of shared memory or increase the amount of available shared memory.

ORA-48006: user requested cancel of current operation

ORA-48007: name is already used by an existing product type

Cause: An attempt was made to define a product type with the same name as an already defined product type.

Action: Use the already existing product type with the specified name, or use a different name for the product type.

ORA-48008: id is already used by an existing product type

Cause: An attempt was made to define a product type with the same id as an already defined product type.

Action: Choose a different name for the product type.

ORA-48100: error encountered when attempting to open a file

Cause: There was an error encountered when attempting to open a file with the ADR file interface.

Action: Check that the specified directory name, file name, and open options are valid.

ORA-48101: error encountered when attempting to read a file [*string*] [*string*] [*string*]

Cause: There was an error encountered when attempting to read a file with the ADR file interface.

Action: Check the specified arguments to the read interface.

ORA-48102: encountered the end-of-file when reading the file

Cause: The ADR file interface encountered the end-of-file when reading the file.

Action: Handle the end of file condition.

ORA-48103: error encountered when attempting to write a file [*string*] [*string*] [*string*]

Cause: There was an error encountered when attempting to write a file with the ADR file interface.

Action: Check the specified arguments to the write interface.

ORA-48104: read mismatch on blocks requested and returned, [*string*], [*string*]

Cause: There was a mismatch between the number of blocks requested for reading and the number of blocks actually returned.

Action: Check the file to make sure there are no partial blocks.

ORA-48105: write mismatch on blocks requested and returned, [*string*], [*string*]

Cause: There was a mismatch between the number of blocks requested for writing and the number of blocks actually written.

Action: Check that there is enough space left on the device to write the requested number of blocks.

ORA-48106: error initializing the ADR *string* object

Cause: There was an error encountered during the initialization of one of the ADR file objects.

Action: Check the validity of the specified directory name and file name.

ORA-48107: invalid Bfile input, [*string*]

Cause: An invalid Bfile was passed into the routine to convert the bfile into a file handle.

Action: Verify the contents of the specified Bfile.

ORA-48108: invalid value given for the diagnostic_dest init.ora parameter

Cause: The value given for the diagnostic_dest directory is not a valid directory. Either the directory does not exist or the process does not have read/write privileges on the directory.

Action: Use a value for diagnostic_dest that is a valid directory with the proper read and write privileges.

ORA-48109: invalid lock mode for file descriptor, [*string*]

Cause: The lock mode associated with the file descriptor was invalid in the context of the routine.

Action: Verify that a file is not trying to obtain multiple locks and that the file is holding a lock when attempting to release the lock.

ORA-48110: error encountered while attempting to get a file lock [string] [string]

Cause: There was an error encountered while trying to get a file lock.

Action: Check the state of the file and operating system.

ORA-48111: error encountered while attempting to release a file lock [string]

Cause: There was an error encountered while trying to release a file lock.

Action: Check the state of the file and operating system.

ORA-48112: invalid flags for open file, string

Cause: Invalid flags were passed in to the open file routine.

Action: Check to see if the flags are a valid combination.

ORA-48113: unable to write to stream file because of out of space condition

Cause: The system is unable to write the requested number of bytes to a stream file.

This is due to an out of space condition. The additional information shows how many bytes were not written.

Action: Check that there is enough space left on the device to write the requested number of bytes.

ORA-48114: error encountered when attempting to close a file

Cause: There was an error encountered when attempting to close a file with the ADR file interface.

Action: Check the validity of the file descriptor.

ORA-48115: error encountered while seeking a file position

Cause: There was an error encountered while seeking a position in a file.

Action: Check that the requested file position falls within the file boundaries.

ORA-48116: error encountered when attempting to create a directory [string]

Cause: There was an error encountered when attempting to create a directory.

Action: Check the directory name.

ORA-48117: error encountered when attempting to remove a directory [string]

Cause: There was an error encountered when attempting to remove a directory.

Action: Check the directory name.

ORA-48118: error encountered with list directory [string]

Cause: There was an error with listing the elements of a directory.

Action: Check the state of the operating system.

ORA-48119: error encountered when attempting to remove a file [string] [string]

Cause: There was an error encountered when attempting to remove a file with the ADR file interface.

Action: Check the directory name and file name.

ORA-48120: error encountered when attempting to retrieve the file size [string] [string]

Cause: There was an error encountered when attempting to retrieve the file size with the ADR file interface.

Action: Check the directory name and file name.

ORA-48121: error with opening the ADR stream file [string] [string]

Cause: An error was encountered when attempting to open an ADR stream file.

Action: Check the rest of the error stack for details of the actual error that was encountered.

ORA-48122: error with opening the ADR block file [string] [string]

Cause: An error was encountered when attempting to open an ADR block file.

Action: Check the rest of the error stack for details of the actual error that was encountered.

ORA-48123: error encountered when attempting to flush a file

Cause: There was an error encountered when attempting to flush a file with the ADR file interface.

Action: Check the state of the file.

ORA-48124: device full encountered during write to a file

Cause: The device full error was encountered during the write to a file.

Action: Check the amount of free space on the device.

ORA-48125: illegal identifier length, argn:string, len:string, lim:string

Cause: An input identifier was passed in that has a length that is greater than the max length.

Action: Make sure the input identifier has a length that is less than the max length.

ORA-48126: attempting to create a file that already exists

Cause: The client attempted to create a file that already exists.

Action: Either remove the file or check if it is okay if the file already exists.

ORA-48127: attempting to open a file that does not exist

Cause: An attempt was made to open a file that does not exist.

Action: Either create the file or check why the file does not exist.

ORA-48128: opening of a symbolic link is disallowed

Cause: An error was encountered when attempting to open a file that is a symbolic link. Users are not allowed to open symbolic links.

Action: Check the specified file name.

ORA-48129: invalid input for the full path specification

Cause: Input was incorrectly specified for the full path specification, or the default extension may have been incorrectly specified. Or an empty string was passed in for the full path.

Action: Check that the full path string is non-NULL. If you want to specify a relative path from ADR Home for the full path specification, then use '<ADR_HOME>' instead of the actual path to ADR Home. For ADR Base, use '<ADR_BASE>'.

ORA-48130: invalid lock parameters for get file lock [string]

Cause: Invalid lock parameters passed in for the get file lock routine. The user must pass in file as the lock type. Or, there is a lock mode mismatch. Exclusive locks are not allowed in read-only mode, and shared locks are not allowed in write-only mode.

Action: Check that correct lock type is specified and that the correct lock mode is requested for the file given its open flags.

ORA-48131: error encountered when attempting to tell the file position

Cause: An error was encountered when attempting to tell the file position using the ADR file interface.

Action: Check the directory and file name of the file along with the open state.

ORA-48132: requested file lock is busy, [string] [string]

Cause: The requested file lock is busy because another process is holding the file lock.

Action: Try to get the file lock again at a later time.

ORA-48133: file descriptor has already been opened [string] [string]

Cause: The specified file descriptor has already been opened.

Action: Do not open a file that has previously been opened, or check your code to make sure you are cleaning up a file descriptor that is being reused correctly.

ORA-48134: invalid file descriptor state for operation, string, string, string

Cause: The state of the file descriptor was invalid for the requested operation. An example is that a file was opened for read, but a write operation to the file was requested.

Action: Check the state of the file descriptor and make sure it matches the operation.

ORA-48135: uninitialized file descriptor

Cause: The specified file descriptor is uninitialized.

Action: Make sure the file descriptor is initialized before passing it into the routine.

ORA-48136: directory already exists [string]

Cause: Operation failed because the specified directory already exists.

Action: Remove the directory or ignore this error.

ORA-48137: uninitialized file handle

Cause: The specified file handle is uninitialized.

Action: Make sure the file handle is initialized before passing it into the routine.

ORA-48138: invalid directory name input for client address

Cause: An invalid directory name was specified as part of the address path specification.

Action: Check that the directory name is non-NULL and that the directory name length does not exceed the maximum length.

ORA-48139: invalid input to ADR initialization routine

Cause: There was an invalid input to the ADR initialization routine.

Action: Check the length of the ADR base, product ID, and instance ID input arguments.

ORA-48140: the specified ADR Base directory does not exist [string]

Cause: The specified ADR Base Directory does not exist.

Action: Check that the specified ADR Base Directory is a valid path name and that the directory exists.

ORA-48141: error creating directory during ADR initialization [string]

Cause: Error encountered when creating a directory during the initialization of the ADR subsystem.

Action: Check the input arguments to the ADR initialization routine and the state of the operating system.

ORA-48142: invalid permissions input for change permissions

Cause: Invalid permissions passed into change permissions routine.

Action: Check the value of the permissions input.

ORA-48143: error changing permissions for a file

Cause: Error encountered while changing the permissions for a file

Action: Check the specified directory and file and the state of the operating system.

ORA-48144: error encountered while performing standard file I/O

Cause: Error encountered while performing standard file I/O

Action: Check the validity of standard in, out, and error.

ORA-48145: invalid seek location, [*string*], [*string*]

Cause: Invalid seek location specified for routine.

Action: Check the validity of specified seek location.

ORA-48146: missing read, write, or exec permission on directory during ADR initialization [*string*] [*string*]

Cause: Error encountered when checking if the process has read, write, and exec privileges on directories needed by the ADR subsystem. This error occurs during the initialization of the ADR subsystem.

Action: Check the input arguments to the ADR initialization routine and the state of the operating system. Ensure that the user has the proper permissions on the ADR directories.

ORA-48147: invalid home location specification for ADR, [*string*], [*string*], [*string*]

Cause: Invalid read or write home location specification for ADR.

Action: An invalid home was specified for the ADR Read or Write Home location.

ORA-48148: error encountered when attempting to move a file

Cause: There was an error encountered when attempting to move a file with the ADR file interface.

Action: Check the directory name and file name.

ORA-48149: error encountered when attempting to copy a file

Cause: There was an error encountered when attempting to copy a file with the ADR file interface.

Action: Check the directory name and file name.

ORA-48150: error encountered with set current working directory

Cause: There was an error with setting the current working directory.

Action: Check the path used, or the state of the operating system.

ORA-48151: error getting operating system time for a file

Cause: Error encountered while getting the operating system time for a file.

Action: Check the specified directory and file and the state of the operating system.

ORA-48152: lock table is full

Cause: Lock table is full - too many locks granted

Action: Try again later

ORA-48153: error encountered when getting ADR base directory default

Cause: There was an error encountered when attempting to get the ADR base directory default value.

Action: Check your environment to see if the \$ORACLE_BASE and \$ORACLE_HOME environment variables are set.

ORA-48154: reached end of file for alert log

Cause: The end of file was reached for reading the Alert Log. There are no more messages to read in the Alert Log.

Action: Do not read from the Alert Log

ORA-48155: error encountered when read alert log [*string*]

Cause: There was an error encountered when attempting to read a message from the Alert Log.

Action: Check the error message and the contents of the alert message.

ORA-48156: Alert log purge has occurred - retry operation

Cause: The purge of the alert log has occurred.

Action: Retry the operation.

ORA-48157: null input to ADR initialization

Cause: There was a null input to the ADR initialization routine.

Action: Check the ADR base, product ID, and instance ID input arguments.

ORA-48158: invalid input for ADR base directory

Cause: An invalid input was passed in for the ADR base directory name. The ADR base directory name is either NULL or too long of a string.

Action: Check the ADR base directory input argument.

ORA-48159: invalid input for ADR product type

Cause: An invalid input was passed in for the ADR product type. The ADR product type is out of bounds.

Action: Check the ADR product type input argument.

ORA-48160: invalid input for ADR product id

Cause: An invalid input was passed in for the ADR product id. The ADR product id is either NULL or too long of a string.

Action: Check the ADR product id input argument.

ORA-48161: invalid input for ADR instance id

Cause: An invalid input was passed in for the ADR instance id. The ADR instance id is either NULL or too long of a string.

Action: Check the ADR instance id input argument.

ORA-48162: string buffer too small to hold input, [*string*], [*string*], [*string*]

Cause: The string buffer is too small to copy an input string into.

Action: Check the size of the string buffer and the input string. Look in the argument for the location in the code where the error occurs.

ORA-48163: error concatenating directory onto path, [string], [string], [string]

Cause: Error encountered while concatenating a directory onto a path name.

Action: Check the error returned by the OS and the size of the input and output buffers.

ORA-48164: error concatenating file onto path, [string], [string], [string]

Cause: Error encountered while concatenating a directory onto a path name.

Action: Check the error returned by the OS and the size of the input and output buffers.

ORA-48165: user missing read, write, or exec permission on specified ADR Base directory [string]

Cause: The specified ADR Base Directory does not have the correct permissions.

Action: Check the read, write, and exec permissions on the specified ADR Base Directory

ORA-48166: error with opening ADR block file because file does not exist [string] [string]

Cause: An error was encountered with opening an ADR block file because the file does not exist.

Action: Check the existence of the ADR Block File.

ORA-48167: invalid argument for checking ADR initialization

Cause: Invalid arguments were specified for the routine to check ADR initialization.

Action: Check the inputs to the ADR initialization routine.

ORA-48168: the ADR sub-system is not initialized

Cause: The ADR subsystem has not been initialized. The requested operation cannot be performed.

Action: Check the usage of the call to the ADR services. The ADR sub-system must be initialized for the call to work.

ORA-48169: incorrect arguments to ADR deferred initialization

Cause: There are incorrect arguments to the ADR deferred initialization.

Action: Check the input arguments. It could be possible that the product is not set up for deferred initialization.

ORA-48170: unable to lock file - already in use

Cause: the file is locked by another process, indicating that it is currently in use by another process

Action: determine which process legitimately owns this file.

ORA-48171: unable to get share lock - file not readable

Cause: share lock request was made on a file not open for read access.

Action: file must be open read-only or read-write to get a share lock.

ORA-48172: unable to find a valid ADR base

Cause: Unable to find a valid ADR base. We tried the ORACLE_BASE, ORACLE_HOME, home, and tmp directories, but none of the directories exist for read/write access.

Action: Check the validity of the ORACLE_BASE, ORACLE_HOME, home, and tmp directories.

ORA-48173: error checking directory existence during ADR initialization [string]

Cause: Error encountered when checking directory existence during the initialization of the ADR subsystem. Either the diag or product type directory does not exist underneath the ADR base.

Action: The directory in the error message must exist in order for ADR initialization to succeed. Make sure the directories exist.

ORA-48174: error encountered with get current working directory

Cause: There was an error with getting the current working directory.

Action: Check the state of the operating system or the size of the path buffer.

ORA-48175: the path name must not contain the string '..'.

Cause: The specified path name contains '..'.

Action: Correct the path name and retry the operation.

ORA-48176: error translating a path name into its full path name

Cause: An error was encountered when translating a path name into its full path name.

Action: Check the inputted path name to make sure it is a valid relative path.

ORA-48177: file name with full path information [string] not allowed

Cause: Input was incorrectly specified for the file name. The inputted file name is greater than the maximum length, or the file name has path information. In this case, the file name should not have any path information. The path information should be specified in a separate argument.

Action: Check that the string for the file name is not too long and does not have path information.

ORA-48178: error encountered while reading an ADR block file during ADR initialization [string]

Cause: An error was encountered while reading an ADR block file during the initialization of the ADR subsystem.

Action: Check the state of the file system.

ORA-48179: OS file synchronization failure

Cause: OS command to synchronize the changes to a file with the operating system failed.

Action: Check the state of the file system and the amount of free space left on your device.

ORA-48180: OS open system call failure

Cause: OS open system call failed. The system failed to open or create a file in the requested mode.

Action: Check the OS error code

ORA-48181: OS write system call failure

Cause: OS write system call failed. The system failed to write to a file.

Action: Check the OS error code

ORA-48182: OS read system call failure

Cause: OS read system call failed. The system failed to read to a file.

Action: Check the OS error code

ORA-48183: OS close system call failure

Cause: OS close system call failed. The system failed to close a file.

Action: Check the OS error code

ORA-48184: OS seek system call failure

Cause: OS seek system call failed. The system failed to seek to a position in a file.

Action: Check the OS error code

ORA-48185: OS file size system call failure

Cause: OS file size call failed. The system failed to retrieve the file size for a file.

Action: Check the OS error code

ORA-48186: OS check file exists system call failure

Cause: OS check file exists system call failed. The system failed to perform the check file exists command for a file.

Action: Check the OS error code

ORA-48187: specified directory does not exist

Cause: The specified directory does not exist.

Action: Check the directory name.

ORA-48188: user missing read, write, or exec permission on specified directory

Cause: The user does not have valid permissions on the specified directory. The user is missing either the read, write, or execute permission.

Action: Check the permissions of the specified directory.

ORA-48189: OS command to create directory failed

Cause: The OS command to create a directory failed.

Action: Check the error number associated with the create directory failure.

ORA-48190: OS unlink system call failure

Cause: OS unlink system call failed. The system failed to perform unlink on the specified file.

Action: Check the OS error code

ORA-48191: user missing read or write permission on specified file

Cause: The user does not have valid permissions on the specified file. The user is missing either the read or write permission.

Action: Check the permissions of the specified file.

ORA-48192: OS command to move a file failed

Cause: The OS command to move a file failed.

Action: Check the error number associated with the move file.

ORA-48193: OS command to open a directory failed

Cause: The OS command to open a directory failed.

Action: Check the OS error associated with the open directory failure.

ORA-48194: OS command to close a directory failed

Cause: The OS command to close a directory failed.

Action: Check the OS error associated with the close directory failure.

ORA-48195: OS command to remove a directory failed

Cause: The OS command to remove a directory failed.

Action: Check the OS error associated with the remove directory failure.

ORA-48196: OS command to release advisory lock failed

Cause: The OS command to release the advisory lock failed

Action: Check the OS error associated with the release advisory lock failure.

ORA-48197: OS command to get the file status failed

Cause: The OS command to get the file status failed. This could be because the file is not open or file descriptor is invalid.

Action: Check the OS error associated with the get file status failure.

ORA-48198: OS command to change the file permissions failed

Cause: The OS command to change the file permissions failed.

Action: Check the OS error associated with the failure.

ORA-48199: OS command to copy a file failed

Cause: The OS command to copy a file failed.

Action: Check the error number associated with the copy file.

ORA-48200: Illegal Input Argument [string]

Cause: An illegal argument was passed in.

Action: Fix the call.

ORA-48201: Field Length Exceeds Maximum [string] [string] [string]

Cause: An illegal field length was used.

Action: Fix the call.

ORA-48202: Illegal Identifier [string] [string]

Cause: Illegal identifier specified.

Action: Use a valid identifier.

ORA-48203: Illegal Data Type [string]

Cause: Illegal data type specified.

Action: Use a valid data type.

ORA-48204: Illegal Identifier Length [string] [string] [string]

Cause: The input identifier is too long.

Action: Specify a shorter identifier.

ORA-48205: Record Length too Big *[string] [string] [string]*

Cause: The sum of the maximum lengths of all fields exceeds the maximum record length that is supported.

Action: Remove or shorten some of the fields.

ORA-48206: Illegal Number of Fields *[string] [string] [string]*

Cause: The number of fields specified exceeds the supported maximum.

Action: Remove some of the fields in the relation.

ORA-48207: Illegal Field Name *[string]*

Cause: The field name is invalid.

Action: Specify a valid field name.

ORA-48208: Duplicate Field Names *[string]*

Cause: The list of fields specified contains a duplicate field.

Action: Remove the duplicate field.

ORA-48209: Relation Already Exists

Cause: The relation already exists.

Action: Remove the relation.

ORA-48210: Relation Not Found

Cause: The relation was not found.

Action: Either specify a valid relation name or create one with that name.

ORA-48211: Illegal Access Mode *[string] [string]*

Cause: The supplied access mode is not recognized.

Action: Supply a valid mode.

ORA-48212: Open Record Access Not Done

Cause: The open record access call was not performed.

Action: The open record access call is required before attempting this call.

ORA-48213: Incorrect Access Mode for Operation *[string] [string]*

Cause: The relation was opened in a mode not compatible with the attempted operation being done.

Action: Reopen the relation in the correct mode.

ORA-48214: Sequence Overflow *[string] [string] [string]*

Cause: The sequence number will exceed the system maximum.

Action: Reset the sequence number.

ORA-48215: Sequence Invalid Operation *[string] [string]*

Cause: The specified sequence operation is not valid.

Action: Specify a valid operation.

ORA-48216: Field Len Exceeds Max Field Length *[string] [string] [string] [string]*

Cause: The field length specified exceeds the defined maximum for the field.

Action: Supply a smaller field length.

ORA-48217: Out of Space on Device

Cause: The storage subsystem is out of space.

Action: Add more space to the storage subsystem.

ORA-48218: Duplicate Key Name [string] [string]

Cause: The key name already exists.

Action: Specify a different key name.

ORA-48219: Key Name Doesn't Match Any Existing Key

Cause: The key name provided doesn't match an existing key.

Action: Specify a key name that exists.

ORA-48220: Too Many Keys Defined [string] [string]

Cause: A key is trying to be created that exceeds the maximum number of keys supported.

Action: Drop another key.

ORA-48221: Key Exceeds Maximum Allowed Length [string] [string] [string]

Cause: The sum of the lengths of the fields in the key exceeds the maximum length supported.

Action: Remove one or more fields from the key.

ORA-48222: Predicates/Order By Not Allowed

Cause: A predicate or order by can not be added after fetch has started.

Action: Put the predicate or order by call before the first fetch.

ORA-48223: Interrupt Requested - Fetch Aborted - Return Code [string] [string]

Cause: User interrupt has occurred.

Action: None

ORA-48224: DDL has occurred since parse - reparse [string] [string] [string]

Cause: Another session has performed a DDL (i.e. add field, create key, drop key) that prevents this session from being to continue.

Action: Call open record access again.

ORA-48225: No More Space in Order By Buffer

Cause: The order by buffer size is not sufficient for the number of rows.

Action: Increase the order by buffer size specified.

ORA-48226: No Fetch in Progress

Cause: An attempt to perform update or delete has occurred without a fetch.

Action: You must first perform a fetch.

ORA-48227: Invalid Relation File - [string] [string] [string] [string]

Cause: The AMS file is invalid or corrupt.

Action: Do a repair relation

ORA-48228: Missing Define Call [string]

Cause: A call to define was not performed before doing a fetch.

Action: Call the define service before fetch.

ORA-48229: Invalid Relation Handle Provided [string] [string]

Cause: An invalid or corrupt relation handle was used.

Action: Possible memory corruption.

ORA-48230: Expression arguments must match types

Cause: Incorrect type semantics for fields in the predicate.

Action: Correct the predicate.

ORA-48231: Predicate syntax error

Cause: A syntax error exists in the predicate string.

Action: Correct the predicate.

ORA-48232: Debug command syntax error [string]

Cause: An invalid debug command has been specified.

Action: Correct the debug command.

ORA-48233: Invalid Field Handle [string] [string] [string]

Cause: The field handle is invalid.

Action: Possible memory corruption.

ORA-48238: Invalid Surrogate Length Specified [string] [string]

Cause: An invalid length during create field was specified

Action: Specify a correct length

ORA-48239: Invalid Predicate Handle Provided [string] [string]

Cause: An invalid or corrupt relation handle was used.

Action: Possible memory corruption.

ORA-48240: Field is NOT NULL but NULL value supplied

Cause: A field [%s] declared to not allow nulls contains a null value.

Action: Specify a correct value

ORA-48242: Fields that are NOT NULL can not use surrogates

Cause: NOT NULL fields can not have surrogates specified.

Action: Either remove the constraint or the surrogate.

ORA-48243: Additional Fields must be declared nulls allowed

Cause: A field can not be added to a relation that is defined NOT NULL

Action: Do not specify NOT NULL

ORA-48244: Purge for Retention can't be called while in an Query

Cause: A query is already running - purge for retention can't be invoked

Action: Fix call sequence

ORA-48245: Attempt to Update/Delete when at EOF

Cause: The fetch operation is positioned at EOF - can not update/delete

Action: Do not call update/delete after fetch has returned EOF

ORA-48246: Illegal Operation on External Relation

Cause: An illegal call was made using an external relation

Action: Do not perform the API Call

ORA-48247: Predicate Conversion Error *string*

Cause: A time conversion failed

Action: Fix the input

ORA-48248: Function *string* type check error; ityp = *string* typ = *string* arg = *string*

Cause: Invalid inputs to the specified function

Action: Change the inputs

ORA-48251: Failed to open relation due to following error

Cause: See error below in the error stack

Action: See error below in the error stack

ORA-48252: Relation does not require migration

Cause: Relation on disk is compatible with the current code

Action: Don't run the migration services

ORA-48258: AMS Corrupt Page Found - Rebuild Relation

Cause: A corrupted page has been found.

Action: Do a rebuild of the relation

ORA-48259: AMS Relation not Created Correctly

Cause: Create relation failed

Action: Recreate the relation

ORA-48260: Function *string* not found

Cause: A reference to a function that is not valid was found

Action: Fix the function name

ORA-48262: Sequence references not allowed in predicates

Cause: References to currval or nextval not allowed

Action: Remove these references

ORA-48263: Currval not set yet - use nextval

Cause: References to currval can't occur until a nextval is done

Action: Remove the reference

ORA-48265: Incorrect number of arguments (*string*) provided - expected (*string*)

Cause: Number of arguments to function is incorrect

Action: Specify the correct number of arguments

ORA-48291: Field name *string* can't be unique resolved

Cause: Field name appears in more than one relation

Action: Prefix the field name with the relation name

ORA-48292: Can't use outer join syntax mixed with inner join syntax

Cause: The join condition was specified using both inner and outer join elements"

Action: Specify the join condition correctly

ORA-48293: Outer join syntax not allowed without a join

Cause: Using outer join syntax in the predicate without doing a join

Action: Fix the predicate

ORA-48300: Incident Record Already Exists

Cause: trying to create an incident that already exists

Action: retry operation with new incident ID

ORA-48301: An Invalid Incident ID was specified

Cause: the specified incident ID was invalid

Action: retry operation with correct incident ID

ORA-48302: Incident Directory does not exist

Cause: the incident directory was not found

Action: retry operation with a different incident ID

ORA-48303: Exceeded max Incident Sequence Value

Cause: the maximum supported incident sequence value was exceeded

Action: reset incident sequence and retry operation

ORA-48304: incident staging file not found

Cause: the incident staging file is missing

Action: retry with a different incident ID

ORA-48305: incident ID range is too large

Cause: the maximum incident sequence value was exceeded

Action: retry operation with a smaller range

ORA-48309: illegal incident state transition, [string] to [string]

Cause: the incident cannot be moved to the new state

Action: retry operation with a valid incident status

ORA-48310: Incident string staging file not found

Cause: the incident staging file does not exist

Action: retry operation with a valid incident ID

ORA-48311: Invalid field name [string]

Cause: the specified field name is invalid

Action: retry operation with a valid field name

ORA-48312: Sweep incident string staging file failed

Cause: the sweep action of incident staging file failed

Action: check the incident ID and retry

ORA-48313: Updates not allowed on ADR relation [string] of Version=string

Cause: Update operations not supported on this version of ADR relation

Action: check ADR version and retry

ORA-48314: Invalid ADR Control parameter [string]

Cause: the specified control parameter is invalid

Action: check parameter and reissue command

ORA-48315: ADR unavailable

Cause: the ADR directory is not available

Action: enable ADR and retry operation

ORA-48316: relation [*string*] unavailable or cannot be created

Cause: the ADR relation is not available

Action: check ADR directory and retry operation

ORA-48317: ADR Relation [*string*] of version=*string* is obsolete

Cause: the version of ADR relation is too old and not supported

Action: check the ADR version and retry

ORA-48318: ADR Relation [*string*] of version=*string* cannot be supported

Cause: the version of ADR relation is too new and cannot be supported

Action: need to use a newer release to access the ADR

ORA-48319: Update operation on ADR relation [*string*] not allowed

Cause: updates to foreign ADR relation cannot be supported

Action: verify ADR location and reissue command

ORA-48320: Too many incidents to report

Cause: the result set of incidents is too large to handle

Action: use a predicate to reduce the number of incidents and retry

ORA-48321: ADR Relation [*string*] not found

Cause: the required ADR relation is missing, ADR may be corrupted

Action: check ADR directory and retry

ORA-48322: Relation [*string*] of ADR V[*string*] incompatible with V[*string*] tool

Cause: the tool version is incompatible with the ADR version

Action: use another version of tool and retry

ORA-48323: Specified pathname [*string*] must be inside current ADR home

Cause: A file outside of ADR home was not allowed for this type of file.

Action: Check the file name and retry.

ORA-48324: Incompatible staging file encountered

Cause: sweep incident failed because staging file is incompatible

Action: check the incident ID and version of ADR and retry

ORA-48339: view [*string*] does not exist

Cause: view has not been created

Action: verify view name and reissue command

ORA-48340: operation not supported on view [*string*]

Cause: unsupported (dml) operation on views

Action: verify relation name and reissue command

ORA-48341: Field [*string*] not a grouping field

Cause: the field name specified is not a grouping field

Action: verify field names and groupby clause and reissue command

ORA-48342: Field [*string*] cannot be mixed with *string* fields

Cause: the specified field is incompatible with other grouping fields *A8ction: verify this and other field names and reissue command

Action: n/a

ORA-48343: invalid field [*string*] reference in *string* clause

Cause: the specified field in the specified clause is invalid

Action: verify this field name and reissue command

ORA-48344: Invalid Name [*string*] specified

Cause: Either the name refers to an existing object or violates the reserved namespace rules.

Action: Pick another name

ORA-48345: Timeout encountered during operation

Cause: The attempted operation conflicted with another operation that was already being executed.

Action: Retry operation at a later time.

ORA-48400: ADRCI initialization failed

Cause: The ADR Base directory does not exist

Action: Either create an ADR Base directory or point to an existing one

ORA-48401: SET command requires arguments

Cause: No arguments are input for the SET command

Action: Input the arguments

ORA-48402: Variable is not defined

Cause: No substitution value is input.

Action: Input the substitution value following after the variable name.

ORA-48403: DEFINE or UNDEFINE command has no arguments

Cause: DEFINE and UNDEFINE command need users to input the substitution variable name.

Action: Input the vairable name follow after the DEFINE or UNDEFINE

ORA-48404: RUN or @ command has no arguments

Cause: RUN and @ commands need users to input script filename

Action: Input script filename after RUN and @ commands

ORA-48405: The option in the command is invalid

Cause: The option is not allowed in the command

Action: Check the command syntax

ORA-48406: ECHO or TERMOUT status must be set to ON or OFF

Cause: the status of ECHO ann TERMOUT commands must be ON or OFF

Action: input ON or OFF

ORA-48407: DESCRIBE and QUERY commands need at least relation name argument

Cause: This is no relation name is input as argument

Action: Need users to input at least the relation name

ORA-48408: The incident number exceeds the maximum number [string]

Cause: The input incident number exceeds the maximum number

Action: Input less incidents

ORA-48409: The ADR homes exceeds the maximum number [string]

Cause: The input ADR homes number exceeds the maximum number

Action: Input less ADR home string

ORA-48410: The trace path exceeds the maximum number [string]

Cause: The input trace path exceeds the maximum number

Action: Input less trace path

ORA-48411: The trace files exceeds the maximum number [string]

Cause: The input trace file path number exceeds the maximum number

Action: Input less trace file path

ORA-48412: The parameters exceeds the maximum number [string]

Cause: The input paramter number exceeds the maximum number

Action: Input less parameter number or increase the upper bound

ORA-48413: The number of orderby fields exceeds maximum number [string]

Cause: The orderby field number exceeds the maximum number

Action: Input less fields

ORA-48414: The string in the execution option exceeds maximum length [string]

Cause: The string length is too long

Action: Divid the commands into two sets or use adrci scripts.

ORA-48415: Syntax error found in string [string] at column [string]

Cause: Parsing error found in the user input string

Action: Validate the input string

ORA-48419: Illegal arguments

Cause: The input argument is illegal

Action: Check the input arguments and make sure it is not null

ORA-48421: Predicate string in the command must be single or double quoted

Cause: The predicate string is not single or double quoted

Action: Put single or double quotes around the predicate string

ORA-48422: Invalid relation field type [string]

ORA-48423: IMPORT command must have a filename

Cause: File name is missing from the command

Action: Input the import file name after the IMPORT keyword

ORA-48424: SHOW TRACE command needs argument

Cause: SHOW TRACE command needs arguments

Action: Input arguments

ORA-48426: The initialization filename is too long

Cause: The initialization filename length exceeds the maximum length

Action: This is really an internal setting parameter of the ADRCI, report it as a bug. Alternatively move the initialization file to the current working directory

ORA-48427: Unknown command

ORA-48428: Input command string exceeds max length [*string*]

Cause: The current command string is too long and exceeds the limit

Action: Input less characters

ORA-48429: Variable name [*string*] is an invalid identifier

Cause: The substitution variable name is not a valid identifier

Action: Input the valid identifier defined by ADRCI

ORA-48430: Cannot read the parameter

ORA-48431: Must specify at least one ADR home path

Cause: The command syntax requires at least one ADR home path to be input

Action: Check the command syntax and input the home path

ORA-48432: The ADR home path [*string*] is not valid

Cause: The adr home user inputs is not valid, which may due to the path does not exist.

Action: Check if the input home path exists

ORA-48433: Unknown help topic

Cause: The input topic is unknown

Action: Check if the topic is valid

ORA-48434: No DDE commands are input

Cause: No DDE commands are input

Action: Input a DDE command

ORA-48435: Input a trace file

Cause: Show trace expects a trace file

Action: Input a trace file

ORA-48436: File [*string*] does not exist

Cause: the file does not exist

Action: Validate the trace file name

ORA-48437: No IPS commands are input

Cause: No IPS commands are input

Action: Input a IPS command

ORA-48438: [string] is not a valid number

Cause: The input number is not valid

Action: Check the input number

ORA-48439: The input path name exceeds the maximum length [string]

Cause: The input path name is too long

Action: Report as a bug to change the limit

ORA-48440: Variable [string] is already defined

Cause: The variable name is defined previously

Action: Use another variable name

ORA-48441: The function parameter number exceeds the maximum number [string]

Cause: The function parameter number exceeds the maximum number

Action: Report it as bug to change the maximum number

ORA-48442: The control parameter number exceeds the maximum number [string]

Cause: The control parameter number exceeds the maximum number

Action: Report it as bug to change the maximum number

ORA-48443: Trace Record type appears in the middle of the path

Cause: The trace record cannot be in the middle of the path

Action: Validate the input

ORA-48444: The single "." and "*" cannot appear in the middle of the path

Cause: The single "." and "*" appears in the middle of the path

Action: Validate the input

ORA-48445: Path expression only supports one bucket dump type

Cause: The path expression only supports one bucket dump"

Action: Change the path expresison syntax

ORA-48446: The command needs path input

Cause: No path is input as a parameter

Action: Input the path

ORA-48447: The input path [string] does not contain any ADR homes

Cause: The input path does not contain ADR homes

Action: Validate the path

ORA-48448: This command does not support multiple ADR homes

Cause: There are multiple homes in the current adr setting.

Action: Use command SET HOMEPATH to set a single home

ORA-48449: Tail alert can only apply to single ADR home

Cause: There are multiple homes in the current setting

Action: Use command SET HOMEPATH to set a single home

ORA-48450: Syntax:\n

ORA-48451: adrci [-help] [-script script_filename]\n\n

ORA-48452: Options Description (Default)\n

ORA-48453: -----\n

ORA-48454: script script file name (None) \n

ORA-48455: help help on the command options (None) \n

ORA-48456: -----\n

ORA-48457: ADRCI core dumped

Cause: It is adrci internal error.

Action: Report to Oracle

ORA-48458: "show incident" failed due to the following errors

Cause: There could be a bug or users do not have the access permission

Action: Report to Oracle if the errors are not due to ADR permission settings

ORA-48459: "describe" command only supports one ADR home path

Cause: Multiple ADR home paths in the command

Action: put one ADR home path

ORA-48460: The home path [*string*] is not valid

Cause: The input home path is not valid home path

Action: Verify the homopath

ORA-48461: "describe" failed due to the following errors

Cause: Underlying code failed

Action: If it is not due to permission issue, report to Oracle

ORA-48462: Fatal error encountered in [*string*]

Cause: Fatal error encountered

Action: Report to Oracle

ORA-48463: The value buffer reached the maximum length [*string*]

Cause: The value buffer is full

Action: Report to Oracle

ORA-48464: The predicate buffer reached the maximum length [*string*]

Cause: The predicate buffer is too small

Action: Report to Oracle

ORA-48465: The specified type [*string*] is undefined

Cause: The purge type specified is undefined

Action: Check the type name

ORA-48466: Internal failure, the report context is not initialized

Cause: Internal problem failure.

Action: Report to Oracle

ORA-48467: "string" for the keyword "string" is not a valid number

Cause: The keyword value is not a valid number

Action: Check the value

ORA-48468: "string" is not a valid keyword

Cause: The keyword is not defined for the command

Action: Check the available keywords

ORA-48469: Keyword "string" cannot be duplicated

Cause: The command can only allow one key with the name

Action: Remove one keyword name from the command

ORA-48470: Unknown "string" command

Cause: The command is not valid

Action: Use help manual to check the command syntax

ORA-48472: Invalid product name

Cause: The product name provided does not exist

Action: Specify a product name, see HELP SHOW BASE

ORA-48473: Internal failure, unknown return code [string]

Cause: Internal program failure

Action: Report to Oracle

ORA-48474: Syntax error specifying product, must not be NULL

Cause: The product clause is being used, but no product name is provided

Action: Supply the product name

ORA-48475: [string] is not a valid timestamp

Cause: The input timestamp string is not in valid format

Action: None

ORA-48476: Cannot write the results out to a file, please check if \nthe environment variable TMPDIR is set or the current directory is \nnot writable

Cause: The current path may not be writable

Action: If the current path is writable, report to Oracle

ORA-48477: The input path does not contain any valid ADR homes

Cause: The input path does not contain any valid ADR homes

Action: Check the path if it is valid

ORA-48478: No alert messages are created

Cause: No alert messages are created

Action: No action

ORA-48479: No HM runs are created

Cause: There is no hm runs

Action: No action

ORA-48480: No incidents are created

Cause: There is no incident

Action: No action

ORA-48481: Report is not available

Cause: The requested report does not exist"

Action: Check the report ID

ORA-48482: Report is not generated

Cause: The requested report is not ready to be generated

Action: Check the report ID

ORA-48483: Spooling failed, it may be because the spool file cannot be created due to a permission issue

Cause: The spooling filename may not be valid or the file cannot be created

Action: Check the permissions of the target directory and verify the filename

ORA-48484: Run script failed, it may be because the script file does not exist

Cause: The script file may not exist

Action: Check if the script file exist

ORA-48485: The file exceeds the maximum length [*string*]

Cause: The filename is too long

Action: Report to Oracle

ORA-48486: The file [*string*] exceeds the maximum length [*string*]

Cause: The filename is too long

Action: Report to Oracle

ORA-48487: The internal predicate string exceeds the maximum length [*string*]

Cause: The predicate string exceeds the maximum length

Action: Report to Oracle

ORA-48488: The predicate string exceeds the maximum length [*string*]

Cause: The input predicate string exceeds the maximum length

Action: Report to Oracle

ORA-48489: The input exceeds the maximum length [*string*]

Cause: The input exceeds the maximum length

Action: Report to Oracle

ORA-48490: The field number exceeds the maximum number [*string*]

Cause: The input field number exceeds the maximum number

Action: Input less field names

ORA-48491: The program name is too long, exceeds the maximum length [*string*]

Cause: the program name length exceeds the maximum length setting

Action: Report to Oracle

ORA-48492: The report component name is not defined

Cause: the report component name does not exist

Action: Check the component name to ensure it is registered

ORA-48493: Sweep command needs parameters

Cause: sweep command needs parameter

Action: Check the syntax of the command

ORA-48494: ADR home is not set, the corresponding operation cannot be done

Cause: The adr home is not set in the current adrci session

Action: Set the adr home using the adrci command "set base" and "set homopath"

ORA-48495: Interrupt requested

Cause: User requested to interrupt the current action

Action: No action is needed

ORA-48496: "string" is a mandatory keyword for the command

Cause: The keyword is not specified for the command

Action: Input the keyword

ORA-48497: "string" is an invalid product type

Cause: The product type is not registered

Action: Check the product type

ORA-48499: The value of the keyword "string" exceeds the maximum length string

Cause: The keyword value is too long

Action: Check the limit and input again

ORA-48500: File Write Error [string] [string]

Cause: Number of bytes written differs from number requested. Possibly due to out of disk space.

Action: Ensure sufficient disk space.

ORA-48501: File Read Error [string] [string]

Cause: Number of bytes read differs from number requested. Possibly due due to corrupted file.

Action: Recreate the file.

ORA-48502: Invalid Command Line - Missing Required Elements

Cause: Missing required command line arguments.

Action: Review the help message and supply the required arguments.

ORA-48503: Invalid Parameter Specified

Cause: Invalid input parameter supplied.

Action: Review the help message and correct the invalid input parameter.

ORA-48504: Relation Parameter Must be Specified

Cause: Relation parameter must be specified during adrexp.

Action: Supply the relation parameter.

ORA-48505: File Parameter Must be Specified

Cause: File parameter must be specified during adrimp.

Action: Supply the file parameter.

ORA-48506: Existing Relation at different version than export [string] [string]

Cause: Attempting to import into an existing relation and the schema version of that relation differs from the schema of the relation that was exported.

Action: Drop the existing relation if you still wish to import the relation.

ORA-48507: Predicate Not Allowed during Import

Cause: The predicate option is not allowed during adrimp.

Action: Remove the predicate argument.

ORA-48508: Export File Version [string] Can Not be Used by Import [string]

Cause: The version of the export file is not able to be read by this version of adrimp.

Action: Rerun the export using the current version of adrimp.

ORA-48509: Error occurred during operation. See the following errors

Cause: An underlying error has occurred.

Action: Review and correct the underlying error.

ORA-48510: Can not export an in memory relation

Cause: In memory relations can not be exported.

Action: Pick a different relation.

ORA-48600: HM run with name [string] already exists

Cause: The specified run name already existed.

Action: Specify different run name and re-run the check

ORA-48615: Parameter [string] value not specified

Cause: Run was invoked without specifying the parameter and its value

Action: Specify the needed parameter and its value

ORA-48617: Parameter [string] value [string] length exceeds the maximum limit [string]

ORA-48618: Invalid HM run name specified

Cause: An invalid Health Monitor (HM) run name was specified.

Action: Specify a HM run name using only alphanumeric and underscore characters.

ORA-48800: "string" for the keyword "string" is not in the right format of timestamp

Cause: The value format is not right

Action: Check the format ADRCI supports

ORA-48801: The option "string" is duplicated

Cause: The option has been specified more than once

Action: Check the input

ORA-48802: The options "string" and "string" are mutual exclusive

Cause: These two options cannot be specified together

Action: Only specify one of them

ORA-48803: The keyword "string" is not defined for this command

Cause: The keyword is invalid

Action: Check the valid keywords for the command

ORA-48804: The command needs at least one file input

Cause: No files are specified to view

Action: Input the files

ORA-48805: BEGIN BACKUP issued already - must do an END BACKUP first

Cause: A begin backup was already issued.

Action: Issue END BACKUP

ORA-48806: Unknown Function Reference (*string*)

Cause: The function reference is not a valid function

Action: Change the reference

ORA-48807: The SET subcommand requires at least one additional parameter

Cause: An argument was not specified for the SET subcommand.

Action: Specify additional arguments or precede the command with help.

ORA-48808: malformed SET CONTROL command - see "help SET CONTROL"

Cause: Improper syntax was specified for the SET CONTROL command.

Action: Specify additional arguments or precede the command with help.

ORA-48900: Illegal Input Argument [*string*]

Cause: The input argument is invalid

Action: Check the input parameter

ORA-48902: Empty component specification

ORA-48903: String [*string*] is not a valid library name

ORA-48904: String [*string*] is not a valid component name

ORA-48905: String [*string*] is not a valid operation name

ORA-48906: Parser context is not valid

Cause: The parser context is not initialized

Action: Call the initialization routine first before using the context

ORA-48907: The end of file is reached

Cause: The end of file is reached

Action: Handle the end of file

ORA-48908: No trace files are found

Cause: This is no file in the navigator context, either it is done with parsing, or no file is pushed

Action: Check if the file is added to the context

ORA-48909: Scan context is not initialized

Cause: The scan context is not initialized

Action: call the initialization routine of the scan context

ORA-48912: The specified trace filename is too long

Cause: The resulting trace filename length exceeds the maximum length

Action: Use a smaller trace filename suffix or move ADR higher in the directory hierarchy

ORA-48913: Writing into trace file failed, file size limit [*string*] reached

Cause: An attempt was made to write into a trace file that exceeds the trace's file size limit

Action: increase the trace's file size limit.

ORA-48914: File position is not in right format

Cause: The file position format is not right

Action: Check if the file format string is the right one

ORA-48928: The predicate exceeds the max limit *string*

Cause: The predicate is too long, exceeds the max limit

Action: Use a shorter predicate

ORA-48929: The trace record size exceeded the max size that can be read [*string*]

Cause: A trace record is too large to be read by the ADR viewer

Action: Report to Oracle

ORA-48930: Cannot allocate memory for processing traces

Cause: A memory allocation request failed

Action: Report to Oracle

ORA-48934: invalid input for the file name identifier

Cause: An invalid input was given for the file name identifier. The file name is not allowed to have slashes ('/', '/') and is not allowed to refer to the parent directory using the '..' characters.

Action: Check the file name and provide a valid input.

ORA-48936: The number of relations exceeds maximum number [*string*]

Cause: Too many relations listed

Action: Reduce the number

ORA-48937: Feature (*string*) currently not allowed for SELECT

Cause: Feature is not allowed

Action: Remove feature

ORA-48938: View select column count differs from select alias list

Cause: The view alias list has a different number of fields than the select list"

Action: Change the alias list or view select statement

ORA-48939: Select * not allowed in a CREATE VIEW

Cause: * is currently not allowed for a create view select list

Action: List the fields explicitly

ORA-49315: Invalid incident type specified [*string*]

Cause: The specified incident type is not defined in this ADR.

Action: Specify an available incident type.

ORA-49404: No such package [*string*]

Cause: The specified package does not exist.

Action: Specify an existing package.

ORA-49405: Cannot change package name [*string*] [*string*]

Cause: Attempted to change package name after package generation.

Action: Use current name, or create a new package with the desired name.

ORA-49406: Undefined configuration parameter specified [*string*]

Cause: The specified configuration parameter was not found in ADR.

Action: Specify an existing parameter. Re-populate parameters if necessary.

ORA-49407: No unpacking history in this home

Cause: No packages were unpacked into this home.

Action: Verify the current home. Unpack a package if necessary.

ORA-49408: Invalid home specified [*string*]

Cause: An invalid ADR_HOME was specified.

Action: Verify that the directory exists, and has the correct structure.

ORA-49409: Incremental package provided when complete expected

Cause: No packages were unpacked into this home.

Action: Provide a complete package, or use FORCE option.

ORA-49410: Not an IPS package

Cause: The specified file was not an IPS package.

Action: Verify that the file is a valid zip file with expected contents.

ORA-49412: Package ID does not match existing ID [*string*] [*string*]

Cause: The package ID in package file did not match previously unpacked packages.

Action: Use the correct location for unpacking the package.

ORA-49413: Package name does not match existing name [*string*] [*string*]

Cause: The package name in package file did not match previously unpacked packages.

Action: Use the correct location for unpacking the package.

ORA-49414: Package sequence later than expected [*string*] [*string*]

Cause: The package sequence in package file was later than expected.

Action: Apply packages in correct order, or use FORCE option.

ORA-49415: Package sequence earlier than expected [*string*] [*string*]

Cause: The package sequence in package file was earlier than expected.

Action: Apply packages in correct order, or use FORCE option.

ORA-49416: Earlier package sequence applied with FORCE option [string] [string]

Cause: An earlier package sequence was applied using the FORCE option.

Action: Apply a complete sequence which is later than any already applied, or use FORCE option to apply an incremental package.

ORA-49417: Cannot modify already generated package

Cause: Attempted to change package attributes after package generation.

Action: Create a new package with the desired name.

ORA-49418: Invalid package name specified

Cause: An invalid Incident Packaging Service (IPS) package name was specified.

Action: Specify a package name using only alphanumeric and underscore characters.

ORA-49420: Package too large [string] [string]

Cause: The package is too large.

Action: Remove some files or incidents from the package, or try using incremental mode.

ORA-49421: Maximum number of package files generated [string]

Cause: The command generated the maximum number of package files.

Action: Remove some files or incidents from the package, or use incremental mode to generate additional files.

ORA-49423: File outside ADR not allowed

Cause: The specified file is not within the ADR directory structure.

Action: Specify a file inside ADR.

ORA-49424: Directory outside ADR not allowed

Cause: The specified directory is not within the ADR directory structure.

Action: Specify a directory inside ADR.

ORA-49425: File inside ADR not allowed

Cause: The specified file is within the ADR directory structure.

Action: Specify a file outside ADR.

ORA-49426: Directory inside ADR not allowed

Cause: The specified directory is within the ADR directory structure.

Action: Specify a directory outside ADR.

ORA-49427: No such file or file not accessible [string]

Cause: The specified file does not exist or cannot be accessed.

Action: Create the file or verify file permissions.

ORA-49428: No such directory or directory not accessible [string]

Cause: The specified directory does not exist or cannot be accessed.

Action: Create the directory or verify directory permissions.

ORA-49429: File already exists and OVERWRITE option not specified [string]

Cause: The client attempted to create a file that already exists.

Action: Either remove the file or use the OVERWRITE option.

ORA-49430: No such problem [string]

Cause: The specified problem does not exist.

Action: Specify a problem that exists in this repository.

ORA-49431: No such incident [string]

Cause: The specified incident does not exist.

Action: Specify an incident that exists in this repository.

ORA-49432: Problem not part of package [string]

Cause: The specified problem is not included in the package.

Action: Specify a problem that is included in the package.

ORA-49433: Incident not part of package [string]

Cause: The specified incident is not included in the package.

Action: Specify an incident that is included in the package.

ORA-49434: Invalid date format

Cause: An invalid format was used to specify a date

Action: Specify the date in a supported format.

ORA-49435: Flood-controlled incident not allowed here [string]

Cause: A flood-controlled incident cannot be included in a package

Action: Specify an incident that is not flood-controlled

ORA-49436: Date conversion error [string]

Cause: An invalid format was used to specify a date

Action: Specify the date in a supported format.

ORA-49440: Warnings while unpacking package, details in file *string*

Cause: There were some non-fatal errors when unpacking a package

Action: Review the specified unpacking log file

ORA-49441: Warnings while finalizing package, details in file *string*

Cause: There were some non-fatal errors when finalizing a package

Action: Review the specified finalize log file

ORA-49450: Non-zero return code from archiving utility [string] [string]

Cause: The archiving utility (zip/unzip) returned a warning or error.

Action: Verify that the file and directory exist and are readable, and that the file is a valid zip file.

ORA-49451: Archive file structure error [string] [string]

Cause: The archiving utility (zip/unzip) returned an error indicating that the archive file structure is incorrect.

Action: Verify that the file was transferred correctly and that the file is a valid zip file.

ORA-49452: Archiving utility out of memory [string] [string]

Cause: The archiving utility (zip/unzip) returned an error indicating that it was unable to allocate enough memory.

Action: Check for operating system limitations on process memory usage.

ORA-49453: Invalid command invoking archiving utility [string] [string]

Cause: The archiving utility (zip/unzip) was invoked with an invalid command line, or with invalid options.

Action: Verify that there are no operating system settings affecting the behavior of the archiving utility..

ORA-49454: Archive is missing or empty [string] [string]

Cause: The specified archive does not exist, or is empty.

Action: Check if the specified archive exists.

ORA-49455: Archive I/O failed [string] [string]

Cause: An attempt to create, write to or read from an archive failed.

Action: Verify that operating system I/O operations are working correctly.

ORA-49456: Operation failed due to insufficient disk space [string] [string]

Cause: An operation on an archive failed due to insufficient disk space.

Action: Verify that there is sufficient disk space. Check for operating system quotas or other restrictions.

ORA-49601: syntax error: found "string": expecting one of: "string" etc..

Cause: Syntax error discovered when processing event specification

Action: Enter correct event specification

ORA-49701: Parameter 'string' is NULL.

Cause: NULL was passed to a function that requires a non-NULL parameter.

Action: Pass a valid non-NULL parameter.

ORA-49702: unable to allocate 'string' bytes of external procedure call memory

Cause: An attempt to allocate memory in a C external procedure failed due to insufficient memory.

Action: Try the operation again.

ORA-49703: invalid ADR service name

Cause: A NULL or undefined Automatic Diagnostic Respository (ADR) service name was specified.

Action: Specify a valid ADR service name.

ORA-49704: invalid incident ID

Cause: A NULL or nonpositive incident ID was specified.

Action: Specify a valid ADR incident ID.

ORA-51001: check [string] not found in HM catalog

Cause: checker name might have been misspelled

Action: retry running check with proper checker name

ORA-51003: run parameters not formatted correctly

Cause: Run parameters were given in a wrong format

Action: Correct the run params text and try again

ORA-51004: Check doesn't take any input params

Cause: run params were passed to the check, which doesn't take any inputs

Action: don't pass any run params and try again

ORA-51006: unexpected delimiter ';' in the run params text

Cause: run params were not properly formatted.

Action: correct the run params format and try again

ORA-51007: parameter [*string*] not registered with this check

Cause: Wrong inputs were given to this check.

Action: correct the run params and try the check again

ORA-51008: parameter [*string*] value is not a proper number

Cause: the given parameter value is a not a proper number

Action: correct the run params and try again

ORA-51025: check name should be non NULL value

Cause: NULL value was passed for check name

Action: give a proper check name and retry again

ORA-51035: invalid timeout value

Cause: User specified an invalid timeout value

Action: n/a

ORA-51036: check [*string*] can only be executed in database instance

Cause: An attempt was made to run database-specific check in ASM environment

Action: Don't run the check in ASM environment

ORA-51037: check [*string*] can only be executed in ASM instance

Cause: An attempt was made to run ASM-specific check in a database environment

Action: Don't run the check in database environment

ORA-51102: cannot change priority of a critical failure *string*

Cause: An attempt was made to change priority of a failure with CRITICAL priority.

Action: No action is required.

ORA-51103: cannot change priority of a closed failure *string*

Cause: An attempt was made to change priority of a closed failure.

Action: No action is required.

ORA-51105: cannot change priority of a failure to CRITICAL

Cause: An attempt was made to change priority of a failure to CRITICAL.

Action: No action is required.

ORA-51106: check failed to complete due to an error. See error below

Cause: While executing the check, an unexpected error occurred.

Action: Check the errors below and try rerunning the check.

ORA-51107: failures are changing too rapidly - retry command

Cause: Failures were added or closed during a Data Recovery Advisor command.

Action: Retry the command.

ORA-51108: unable to access diagnostic repository - retry command

Cause: A lock or timeout error occurred when trying to read failure or repair data from the Automatic Diagnostic Repository.

Action: Retry the command.

ORA-51109: repair script file is too large

Cause: Data Recovery Advisor generated a repair script file that was too large.

Action: Retry the command with fewer failures selected.

ORA-51110: buffer size [*string*] is too small - [*string*] is needed

Cause: An internal buffer was too small.

Action: This is an internal error. Contact Oracle Support Services.

ORA-51111: failure revalidation timed out

Cause: Data Recovery Manager was unable to revalidate all failures before timing out.

Action: Increase timeout and retry the command.

ORA-51190: Internal error [*string*], [*string*] from DBMS_IR

Cause: An unexpected error occurred while executing a routine in the DBMS_IR package.

Action: This is an internal error. Contact Oracle Support Services.

ORA-51191: Too many files opened

Cause: Data Recovery Advisor attempted to open too many files using the DBMS_IR package.

Action: This is an internal error. Contact Oracle Support Services.

ORA-51192: File not open

Cause: Data Recovery Advisor attempted to read or write from a file that was not open.

Action: This is an internal error. Contact Oracle Support Services.

ORA-51193: invalid parameter value

Cause: An invalid parameter value was supplied in a call to the DBMS_IR package.

Action: Fix the parameter value and retry the call.

ORA-51303: illegal check mask value specified

Cause: An illegal check mask value was specified.

Action: Specify one of the following legal values: COLUMN_CHECKS, ROW_CHECKS, REFERENTIAL_CHECKS, or ALL.

ORA-51316: No check meta-data found on specified table *string*

Cause: No check meta-data was found for the object

Action: Table may not exist or no checks currently defined for the table

ORA-51700: Invalid file URL

Cause: A URL with invalid syntax was provided, either directly to the function or through an XML IMPORT or INCLUDE.

Action: Check the URL.

ORA-51701: Invalid file URL or path prefix

Cause: Either a URL or path prefix with invalid syntax was provided.

Action: Check the URL.

ORA-51702: Could not find file at URL provided

Cause: The file requested could not be found in the given location.

Action: Check the URL provided.

ORA-51703: Missing *body* tag from HTML

Cause: An HTML document was passed to the function missing its *body* tag.

Action: Check the HTML source.

ORA-51704: Error *string* received from XPath engine

Cause: An error was received from the XPath library during an XPath operation.

Action: Check xmlerr.h to understand the cause of the error and correct the relevant client code.

ORA-51705: XML *string* error: *string* "*string*"

Cause: An error was received from an underlying XDK API and is being resignalled.

Action: Check xmlerr.h to understand the cause of the error and correct the relevant client code.

ORA-53000 to ORA-54047

ORA-53000: document type "*string*" is invalid

Cause: An invalid document type was specified.

Action: See the ORDDCM_DOCUMENT_TYPES view for a list of valid document types.

ORA-53001: TAG and <TAG_RANGE> tag values are null

Cause: An invalid attribute was found in the private dictionary document. The values specified by the TAG and <TAG_RANGE> tags were null.

Action: A private attribute definition must contain either a non-null TAG value or a non-null <TAG_RANGE> value. Correct the values and try the operation again. See the private dictionary schema (ordcmpv.xsd) listed in the Oracle Multimedia documentation for more information.

ORA-53002: document name "*string*" already inserted

Cause: The specified document name was found in the repository.

Action: Specify a unique document name and try again. See the ORDDCM_DOCUMENTS view for a list of document names.

ORA-53003: document *string* does not exist

Cause: The specified document name was not found in the repository.

Action: Correct the value and try again. See the ORDDCM_DOCUMENTS view for a list of documents in the repository.

ORA-53004: The value of tag VR "*string*" is invalid.

Cause: An invalid value for the VR tag was found in the dictionary document.

Action: Correct the value and try again. The value of the VR tag must either be a value defined by DICOM or an Oracle extension. See the data type schema (ordcmdt.xsd) listed in the Oracle Multimedia documentation for a list of valid VR tag values.

ORA-53005: tag references found in document: *string*

Cause: The delete operation failed because some tags in the dictionary document were being referenced by the listed document.

Action: To perform the delete operation, follow these steps: 1. Export the listed document to a file. 2. Delete the listed document from the repository. 3. Remove the referencing tags from the exported document. 4. Insert the updated document into the repository. 5. Repeat the delete operation.

ORA-53006: wild card characters are not allowed in <TAG_RANGE> tags

Cause: A <TAG_RANGE> tag containing wild card characters 'x' or 'X' was found in the dictionary document.

Action: Remove the wild card characters from <TAG_RANGE> tag and try again. See the Oracle Multimedia documentation for information about the private dictionary schema (ordcmpv.xsd).

ORA-53007: The document type STANDARD_DICTIONARY is not loaded.

Cause: The standard dictionary document was not found.

Action: Load the standard dictionary document (ordcmsd.xml). This is an installation error. Contact Oracle Support Services.

ORA-53008: The NAMESPACE tag value is not a registered schema.

Cause: The schema URL specified by the value of the *NAMESPACE* tag was not a registered Oracle XML DB schema.

Action: Specify a registered schema URL value. See the ALL_XML_SCHEMAS view for a list of registered schemas. See the Oracle XML DB Developers's Guide for information about registering schemas. See the Oracle Multimedia documentation for information about the mapping document schema (ordcmmmp.xsd).

ORA-53009: cannot find the <ROOT_ELEM_TAG> tag value in the metadata schema

Cause: The value of the <ROOT_ELEM_TAG> tag was not found in the metadata schema specified by the value of the *NAMESPACE* tag.

Action: Correct the value and try again. You can either specify a valid value for the <ROOT_ELEM_TAG> tag or clear the value of the *NAMESPACE* tag. See the Oracle Multimedia documentation for information about the mapping document schema (ordcmmmp.xsd).

ORA-53010: The value of the VR tag is null.

Cause: A null *VR* tag was found in the dictionary document.

Action: Correct the value and try again. If the value of the *VR* tag is null, then the value of the *RETIRED* tag must be set to true. See the Oracle Multimedia documentation for information about the standard dictionary schema (ordcmsd.xsd) and the private dictionary schema (ordcmpv.xsd).

ORA-53011: cannot find the <MAPPED_ELEM> tag value in the metadata schema

Cause: The value of the <MAPPED_ELEM> tag was not found in the metadata schema specified by the value of the *NAMESPACE* tag.

Action: Correct the value and try again. You can either specify a valid value for the <MAPPED_ELEM> tag or clear the value of the *NAMESPACE* tag. See the Oracle Multimedia documentation for information on the mapping document schema (ordcmmmp.xsd).

ORA-53012: cannot find the <UNMAPPED_ELEM> tag value in the metadata schema

Cause: The value of the <UNMAPPED_ELEM> tag was not found in the metadata schema specified by the value of the *NAMESPACE* tag.

Action: Correct the value and try again. You can either specify a valid value for the <UNMAPPED_ELEM> tag or clear the value of the *NAMESPACE* tag. See the Oracle Multimedia documentation for information about the mapping document schema (ordcmmmp.xsd).

ORA-53013: cannot find the <ATTRIBUTE_TAG> value: *string* in the dictionaries

Cause: The value of the specified <ATTRIBUTE_TAG> tag was not found in the standard or private dictionaries.

Action: Correct the tag and/or the definer name value and try again. The value of the <ATTRIBUTE_TAG> tag must refer to a tag and definer name specified in the data dictionaries.

ORA-53014: The runtime preference table is not empty

Cause: The function was unable to process due to an internal error.

Action: Contact Oracle Support Services.

ORA-53015: An internal dictionary attributes table is empty

Cause: This document could not be processed due to an internal error.

Action: Contact Oracle Support Services.

ORA-53016: null input argument: *string*

Cause: The function was unable to process due to an internal error

Action: Contact Oracle Support Services.

ORA-53017: The installation file *string* has an incorrect document type

Cause: An incorrect document type was specified for this file during installation. The function was unable to process due to an internal error.

Action: Contact Oracle Support Services.

ORA-53018: document *string* contains an unsupported encrypt action attribute

Cause: The operation failed because an unsupported encrypt action

Action: Change the value of the action attribute to none, remove or replace

ORA-53019: cannot delete installation document: *string*

Cause: The document could not be deleted because it was an installation document.

Action: See the ORDDCM_DOCUMENTS view for a list of the documents in the repository.

ORA-53020: invalid external reference in the constraint document: *string*

Cause: The referenced external rule or macro could not be found in the repository.

Action: Insert the referenced documents first and try again.

ORA-53021: cannot insert a rule or macro *string* that was already inserted

Cause: The rules or macros existed in the repository.

Action: Insert a new rule or macro.

ORA-53022: rules or macros in the constraint document *string* do not exist

Cause: The rules or macros did not exist in the repository.

Action: Delete or update an existing rule or macro.

ORA-53023: cannot delete or update a referenced rule or macro *string*

Cause: Because the rules or macros were referenced by other rules or macros, they could not be deleted or updated.

Action: Delete the referencing rules or macros first and try again.

ORA-53024: error processing constraint document: *string*

Cause: An error occurred while processing the constraint document.

Action: If the error described in the message can be corrected, do so; otherwise, contact Oracle Support Services.

ORA-53025: invalid constraint document: *string*

Cause: The constraint document was invalid.

Action: Correct the error described in the message and try again.

ORA-53026: failed to insert the constraint *string* to the database

Cause: An error occurred while trying to insert the constraint document into the database.

Action: Contact Oracle Support Services.

ORA-53027: invalid invocation of a macro *string* that is partially defined

Cause: Constraint rules could not invoke partially defined constraint macros.

Action: Ensure that all dependent constraint macros are inserted into the repository, then try the operation again.

ORA-53031: unable to export or import data model: *string*

Cause: An error occurred during export or import data model.

Action: If the error described in the message can be corrected, do so; otherwise, contact Oracle Support Services.

ORA-53032: The default preference document cannot be found.

Cause: The delete operation failed due to an internal error.

Action: When a user-defined preference document is deleted, the default values are restored from the Oracle default preference document. The default preference document is loaded during installation. If this document cannot be found, it is an unrecoverable error. Contact Oracle Support Services.

ORA-53033: The default UID Definition document cannot be found.

Cause: The delete operation failed due to an internal error.

Action: When a user-defined UID Definition document is deleted, the default values are restored from the Oracle default UID Definition document. The default UID Definition document is loaded during installation. If this document cannot be found, it is an unrecoverable error. Contact Oracle Support Services.

ORA-53034: document *string* contains an unsupported action attribute

Cause: The operation failed because an unsupported action attribute was found in the specified anonymity document.

Action: Change the value of the action attribute to none, remove or replace

ORA-53035: The rows for the mapping document (*string*) do not exist.

Cause: The delete operation failed due to an internal error.

Action: Contact Oracle Support Services.

ORA-53036: An internal table for the mapping document (*string*) is empty.

Cause: The function failed due to an internal error.

Action: Contact Oracle Support Services.

ORA-53037: invalid range tag, <START_TAG> *string* must be less than <END_TAG> *string*

Cause: The operation failed because an invalid range tag was specified.

Action: Correct the value and try the operation again.

ORA-53038: The data type name for tag: *string* cannot be found.

Cause: The function failed due to an internal error.

Action: Contact Oracle Support Services.

ORA-53039: user-defined preference document: *string* already exists

Cause: The insert operation failed because only one user-defined preference document is allowed.

Action: To change an existing user-defined preference document, follow these steps: 1. Export the specified document to a file. 2. Delete the specified document from the repository. 3. Make changes to the exported document. 4. Insert the updated document into the repository. To add a new user-defined preference document, follow these steps: 1. Delete the specified document from the repository. 2. Insert the new document into the repository.

ORA-53040: user-defined UID definition document: *string* already exists

Cause: The insert operation failed because only one user-defined UID definition document is allowed.

Action: To change an existing user-defined UID definition document, follow these steps: 1. Export the specified document to a file. 2. Delete the specified document from the repository. 3. Make changes to the exported document. 4. Insert the updated document into the repository. To add a new user-defined UID definition document, follow these steps: 1. Delete the specified document from the repository. 2. Insert the new document into the repository.

ORA-53041: The tag value for a replace action attribute is null.

Cause: The operation failed because a null tag value was found for a replace action attribute in the anonymity document

Action: Either add a non-null tag value for each replace action attribute

ORA-53042: tag *string* is referenced by document: *string*

Cause: The insert operation failed because the specified tag in the dictionary document was being referenced by the listed document.

Action: To perform the insert operation, follow these steps 1. Export the listed document to a file. 2. Delete the listed document from the repository. 3. Remove the specified tag from the exported document. 4. Insert the updated document into the repository. 5. Repeat the insert operation.

ORA-53043: tag *string* is referenced by unknown document

Cause: The operation failed because a tag in the specified dictionary document was being referenced by another document in the repository.

Action: This is an internal error. Contact Oracle Support Services.

ORA-53044: invalid tag: *string*

Cause: The operation failed because the specified tag was invalid.

Action: The tag must match the regular expression ([0-9a-fA-FxX]{8}). Correct the tag format and try the operation again. See the dictionary schemas (ordcmsd.xsd, ordcmpv.xsd) listed in the Oracle Multimedia documentation for more information.

ORA-53045: invalid tag: *string*

Cause: The operation failed because the specified tag was invalid.

Action: The tag must match the regular expression ([0-9a-fA-F]{8}). Correct the tag format and try the operation again. See the dictionary schemas (ordcmsd.xsd, ordcmpv.xsd) listed in the Oracle Multimedia documentation for more information.

ORA-53046: tag: *string* collides with existing tag: *string* in document: *string*

Cause: The operation failed because the specified tag collided with an existing tag in the specified document.

Action: Tag collisions are not allowed in the dictionary documents. Correct the specified tag in the document and try the operation again.

ORA-53047: internal error: *string*

Cause: This document could not be processed due to an internal error.

Action: Contact Oracle Support Services.

ORA-53048: definer name DICOM is not allowed in a private dictionary

Cause: The operation failed because the definer name DICOM was found in the private dictionary.

Action: Correct the definer name and try the operation again.

ORA-53049: unsupported <ATTRIBUTE_TAG> tag value: *string*

Cause: The operation failed because the locator path with FIELD_TAG was not supported in the <ATTRIBUTE_TAG> tag in the anonymity document.

Action: Remove the FIELD_TAG in the locator path and try the operation again. See the Oracle Multimedia documentation for more information about locator path syntax.

ORA-53050: The data model is being edited by another user.

Cause: The operation failed because the data model was being edited by another user.

Action: The data model can be edited by only one administrator at a time.

ORA-53051: no editDataModel session found

Cause: The operation failed because there was no editDataModel session.

Action: Call the editDataModel procedure first and try the operation again.

ORA-53052: lock release returned error: *string*

Cause: The operation succeeded, but an error occurred while releasing a lock.

Action: This is an internal error. Contact Oracle Support Services.

ORA-53053: lock request error: *string*

Cause: The operation failed because an exclusive lock could not be acquired.

Action: This is an internal error. Contact Oracle Support Services.

ORA-53054: An editDataModel session already exists.

Cause: The editDataModel procedure was called more than once in the same session.

Action: Continue the insert or delete operations, call rollbackDataModel to rollback the data model changes, or call publishDataModel to publish the data model changes.

ORA-53055: empty data model table

Cause: The operation failed because the data model table was empty.

Action: This is an internal error. Contact Oracle Support Services.

ORA-53056: unrecognized preference parameter name: *string*

Cause: The operation failed because the parameter name was invalid.

Action: Correct the value and try the operation again. See the preference schema (ordcmpf.xsd) listed in the Oracle Multimedia documentation for more information.

ORA-53057: invalid preference parameter value: *string*

Cause: The operation failed because the parameter value was invalid.

Action: Correct the value and try the operation again. See the preference schema (ordcmpf.xsd) listed in the Oracle Multimedia documentation for more information.

ORA-53058: The <ATTRIBUTE_TAG> value:*string* is not a simple tag.

Cause: The operation failed because the value of the specified <ATTRIBUTE_TAG> tag contained wild card characters 'x' or 'X'.

Action: Only simple tags that match the regular expression `[0-9A-F]{8}(\(.*\))?` are allowed in the <ATTRIBUTE_TAG> tag. For example: 00080096(DICOM), 00080096 and so on. Correct the tag format and try the operation again. See the schemas ordcmdt.xsd, ordcmmmp.xsd, and ordcman.xsd listed in the Oracle Multimedia documentation for more information.

ORA-53059: document name: *string* is too long

Cause: A document name with more than 100 characters was specified.

Action: Use a shorter document name and try the operation again.

ORA-53060: *string* is not a standard attribute tag

Cause: The operation failed because the specified standard dictionary attribute tag did not have an even group number.

Action: A standard dictionary attribute tag represents a two-byte hexadecimal number (group number followed by element number) and must match the regular expression `[0-9a-fA-FxX]{3}[02468aceACEExX]{1}[0-9a-fA-FxX]{4}`. Correct the attribute tag format and try the operation again.

ORA-53061: document name *string* contains reserved prefix - ORD

Cause: The operation failed because the specified document name contained the ORD prefix that is reserved for Oracle Multimedia documents.

Action: Remove the ORD prefix from the document name and try the operation again.

ORA-53062: invalid model name: *string*

Cause: The operation failed because the specified model name was invalid.

Action: The model name DEFAULT is the only value that is supported in this release. Remove the model name or replace it with the value DEFAULT and try the operation again.

ORA-53063: invalid exportOption: *string*

Cause: The specified value for the exportOption parameter was not valid.

Action: Valid values for the exportOption parameter are USER, ALL, or ORACLE. The default value is USER. Remove the specified value for the exportOption parameter or replace it with a valid value for this parameter.

ORA-53064: no user-defined documents to export

Cause: The value USER was specified for the exportOption parameter, but there were no user-defined documents in the repository.

Action: Valid values for the exportOption parameter are USER, ALL, or ORACLE. Specify another valid value for the exportOption parameter.

ORA-53065: stored tag list document: *string* already exists

Cause: The operation failed because only one stored tag list document is allowed.

Action: To change an existing stored tag list document, follow these steps: 1. Export the specified document to a file. 2. Delete the specified document from the repository. 3. Make changes to the exported document. 4. Insert the updated document into the repository. To add a new stored tag list document, follow these steps: 1. Delete the specified document from the repository. 2. Insert the new document into the repository.

ORA-53066: invalid manifest file: *string* or directory: *string*

Cause: The specified manifest file name or directory name was invalid.

Action: Confirm that the manifest file and the directory exist, and that the names are valid.

ORA-53067: validation failed for manifest file: *string*

Cause: The specified manifest file did not conform to the XML schema ordcmmft.xsd.

Action: Ensure that the manifest file conforms to the XML schema ordcmmft.xsd.

ORA-53068: cannot import data model because user-defined documents exist

Cause: User-defined documents were found in the repository.

Action: First export all user-defined documents in the repository so they can be saved, then delete all user-defined documents in the repository before importing a data model.

ORA-53069: doc version:*string* in *string* is not <= repos version:*string*

Cause: The document version of the specified document was not compatible with the repository version.

Action: You cannot import this data model into this version of the repository. Either upgrade or import a data model that is compatible with your repository version. See the Oracle Multimedia documentation for more information about document versioning considerations for the importDataModel procedure.

ORA-53070: manifest file:*string* does not contain all the Oracle documents

Cause: The specified manifest file did not contain the complete set of Oracle-defined documents that were included in the database release.

Action: A manifest file can contain all user-defined documents, all Oracle-defined documents, or both. Confirm that the manifest file includes all the documents listed in the orddcm_dbrelease_docs information view or no Oracle-defined documents. See the Oracle Multimedia documentation for more information on manifest files.

ORA-53071: tag: *string* from *string* is not listed in the stored tag list document

Cause: The specified document contained a tag that was not included in the stored tag list document.

Action: If the preference parameter MANDATE_ATTR_TAGS_IN_STL is set to true the stored tag list document must contain all the tags used by the constraint and mapping documents. Change the preference parameter value to false, or add the listed tag to the stored tag list document. See the Oracle Multimedia documentation for more information on stored tag list documents.

ORA-53072: even group number is not allowed in private tag: *string*

Cause: The operation failed because the specified private dictionary attribute tag contained an even group number.

Action: A dictionary attribute tag represents a two-byte hexadecimal number (a group number followed by an element number). Even group numbers are reserved for the DICOM Standard dictionary. Thus, the group number of a private dictionary attribute tag must be an odd number. Replace the even group number with an odd number in the specified attribute tag, and try the operation again.

ORA-53073: invalid docSet: *string*

Cause: The specified value for the docSet parameter was not valid.

Action: Valid values for the docSet parameter are USER, ALL, or ORACLE. The default value is USER. Remove the specified value for the docSet parameter, or replace it with a valid value.

ORA-53074: namespace value is too long

Cause: A namespace value longer than 700 characters was specified in the mapping document.

Action: Use a shorter namespace value and try the operation again.

ORA-53075: null ROOT_ELEM_TAG tag value

Cause: The value of the ROOT_ELEM_TAG tag was null or all spaces.

Action: Correct the value and try again.

ORA-53076: attempt to modify data model repository during rolling upgrade

Cause: An attempt was made to modify the Digital Imaging and Communications in Medicine (DICOM) data model in an administrator editing session during a rolling upgrade.

Action: Wait for the rolling upgrade to complete, then try the operation again. If a DICOM administrator editing session was in progress when the rolling upgrade was started, execute the rollbackDataModel() procedure to end the DICOM administrator session. Then, after the rolling upgrade completes, execute the editDataModel() procedure to restart the session.

ORA-53100: The repository data model is in invalid state.

Cause: Error detected while loading the data model from the repository.

Action: Contact Oracle Support Services.

ORA-53111: The repository data model is not loaded.

Cause: The operation failed because the ord_dicom.setDataModel procedure was not called to load the repository data model.

Action: Call the ord_dicom.setDataModel procedure first and try the operation again.

ORA-53112: unable to load repository: *string*

Cause: The ord_dicom.setDataModel procedure failed to load the repository due to the listed error.

Action: This is an internal error. Contact Oracle Support Services.

ORA-53122: invalid document type : *string*

Cause: The ord_dicom.setDataModel procedure failed to load the repository because an invalid document type was found.

Action: This is an internal error. Contact Oracle Support Services.

ORA-53124: cannot find VR number for data type: *string*

Cause: The VR number for the listed data type could not be found in the lookup table.

Action: This is an internal error. Contact Oracle Support Services.

ORA-53125: invalid range tag: *string*

Cause: The ord_dicom.setDataModel procedure failed to load the repository because an invalid range tag was found in the dictionary table.

Action: This is an internal error. Contact Oracle Support Services.

ORA-53126: assertion failure: *string*

Cause: The operation failed because an assertion error had occurred.

Action: This is an internal error. Contact Oracle Support Services.

ORA-53200: Argument *string* is null.

Cause: The argument was expecting a non-null value, but the value of the passed argument was null.

Action: Check your program and ensure that the caller of the routine does not pass a null argument value.

ORA-53201: Argument *string* is null or invalid.

Cause: The argument was expecting a non-null, valid value, but the value of the passed argument was null or invalid.

Action: Check your program and ensure that the caller of the routine does not pass a null or invalid argument value.

ORA-53202: internal error, argument [*string*]

Cause: The internal argument was invalid.

Action: Contact Oracle Support Services.

ORA-53203: security violation

Cause: A possible security violation was detected.

Action: Check the alert log and trace file for more information.

ORA-53210: unable to read empty DICOM object

Cause: There was no data in the specified DICOM object.

Action: See the Oracle Multimedia documentation for information about loading DICOM object data into the database.

ORA-53211: unable to read invalid ORDDicom object

Cause: The value of the source attribute or the extension attribute of the ORDDicom object was null.

Action: See the Oracle Multimedia documentation for information about creating a valid ORDDicom object.

ORA-53212: unable to read invalid ORDImage object: attribute *string* is null

Cause: The ORDImage object was invalid.

Action: See the Oracle Multimedia documentation for information about creating a valid ORDImage object.

ORA-53213: cannot access DICOM data with invalid source type

Cause: An invalid source type was stored in the source attribute of the ORDDicom object.

Action: See the Oracle Multimedia documentation for information about the supported source types for DICOM data.

ORA-53214: cannot access DICOM image data with invalid source type

Cause: An invalid source type was stored in the source attribute of the ORDImage object.

Action: See the Oracle Multimedia documentation for information about the supported source types for DICOM image data.

ORA-53215: cannot access ORDDataSource object with invalid source type

Cause: An invalid source type was stored in the ORDDataSource object. Or, an error occurred while trying to retrieve a BFILE while the object status was local.

Action: See the Oracle Multimedia documentation for information about the supported source types.

ORA-53216: cannot export the ORDDataSource object with an external source

Cause: The source of the ORDDataSource object was not local.

Action: Import the data before calling the export procedure. Or, get the data directly from the external source.

ORA-53217: The source LOB locator is null.

Cause: The source BLOB locator or BFILE locator was null.

Action: Correct the statement to pass an initialized LOB locator.

ORA-53230: unable to write to an invalid destination ORDDicom object

Cause: The value of the source attribute or the extension attribute of the destination ORDDicom object was null.

Action: See the Oracle Multimedia documentation for information about constructing a valid ORDDicom object.

ORA-53231: unable to write to a nonlocal destination ORDDicom object

Cause: The source attribute of the destination ORDDicom object was not local.

Action: See the Oracle Multimedia documentation for information about constructing a local ORDDicom object.

ORA-53232: unable to write to an invalid destination ORDImage object

Cause: The value of the source attribute of the destination ORDImage object was null.

Action: See the Oracle Multimedia documentation for information about constructing a valid ORDImage object.

ORA-53233: unable to write to a nonlocal destination ORDImage object

Cause: The source attribute of the destination ORDImage object was not local.

Action: See the Oracle Multimedia documentation for information about constructing a local ORDImage object.

ORA-53234: The destination BLOB locator is null.

Cause: The destination BLOB locator was null.

Action: Correct the statement to pass an initialized BLOB locator.

ORA-53250: Mapping document does not exist.

Cause: The specified mapping document did not exist.

Action: Check the installed mapping documents, and correct the statement to pass the name of an installed mapping document.

ORA-53251: Anonymity document does not exist.

Cause: The specified anonymity document did not exist.

Action: Check the installed anonymity definition documents, and correct the statement to pass the name of an installed anonymity definition document.

ORA-53252: Constraint does not exist.

Cause: The specified constraint did not exist.

Action: Check the installed constraints, and correct the statement to pass an installed constraint name.

ORA-53253: The metadata for the new DICOM object is invalid.

Cause: The metadata for the new DICOM object did not conform to the default metadata schema (ordcmmd.xsd).

Action: Check the metadata argument to ensure it has the correct namespace and conforms to the default metadata schema (ordcmmd.xsd). See the Oracle Multimedia documentation for information about the default metadata schema (ordcmmd.xsd).

ORA-53254: The SOP INSTANCE UID for the new DICOM object is invalid.

Cause: The SOP INSTANCE UID for the new DICOM object was invalid.

Action: See the Oracle Multimedia documentation for information about creating a valid SOP INSTANCE UID.

ORA-53255: cannot import from a null or invalid source type

Cause: A null or invalid source type was specified in the import procedure.

Action: See the Oracle Multimedia documentation for information about the supported source types for the DICOM object.

ORA-53256: cannot export to a null or invalid destination data type

Cause: A null or invalid destination data type was specified in the export procedure.

Action: See the Oracle Multimedia documentation for information about the supported destination data types for the DICOM object.

ORA-53257: Attribute does not exist.

Cause: The specified attribute did not exist.

Action: Ensure that the attribute name is valid.

ORA-53258: Metadata attribute is not available.

Cause: The value of the metadata attribute of the ORDDicom object was null.

Action: Call the setProperties method first.

ORA-53259: cannot extract metadata that conforms to the schema definition

Cause: The extracted metadata did not conform to its schema definition.

Action: Check the metadata schema definition, the mapping document and the parameters for the extractMetadata method to ensure that they are correct. See the Oracle Multimedia documentation for information about creating repository documents and extracting metadata.

ORA-53400: Missing DICOM magic number.

Cause: The DICOM object did not contain the DICOM magic number "dicm" required by part 10 of the DICOM standard.

Action: Fix the DICOM object or the DICOM object source, if possible. Otherwise, update the DICOM preference document to ignore this category of error.

ORA-53402: Missing DICOM header.

Cause: The DICOM object did not contain the file preamble.

Action: Fix the DICOM object or the DICOM object source, if possible. Otherwise, update the DICOM preference document to ignore this category of error.

ORA-53404: Missing the mandatory DICOM attribute *string*.

Cause: One or more mandatory DICOM attributes were missing from the DICOM object.

Action: Fix the DICOM object or the DICOM object source, if possible. Otherwise, update the DICOM preference document to ignore this category of error.

ORA-53406: The DICOM object contains invalid attribute value *string*.

Cause: The DICOM object did not conform to the DICOM standard and contained invalid attribute values.

Action: Fix the DICOM object or the DICOM object source, if possible. Otherwise, update the DICOM preference document to ignore this category of error.

ORA-53408: The DICOM object encoding is wrong *string*.

Cause: The DICOM object did not conform to the DICOM standard's binary encoding rules.

Action: Determine if the DICOM object is corrupt. If the DICOM object is not corrupt, verify whether it conforms to the binary encoding rules in the DICOM standard. If the DICOM object is corrupt, fix it if possible. Otherwise, update the DICOM preference document to ignore this category of error.

ORA-53410: The attribute *string* does not conform to the VM rule.

Cause: The DICOM object either contained an attribute that did not conform to the DICOM value multiplicity rule or was missing an attribute that was required by the DICOM standard.

Action: Determine if the DICOM object conforms to the DICOM standard. If it does, verify if the data dictionary matches the DICOM object or is more recent than the DICOM object. If the data dictionary is obsolete, update it using the ORD_DICOM_ADMIN repository API, if possible. Otherwise, update the DICOM preference document to ignore this category of error.

ORA-53412: The DICOM object contains an invalid VR value *string*.

Cause: The DICOM object with explicit value representation encoding had attribute VR values that did not match their definitions in the data dictionary.

Action: Determine if the DICOM object conforms to the DICOM standard. If it does, verify if the data dictionary matches the DICOM object or is more recent than the DICOM object. If the data dictionary is obsolete, update it using the ORD_DICOM_ADMIN repository API, if possible. Otherwise, update the DICOM preference document to ignore this category of error.

ORA-53414: The DICOM object contains undefined values *string*.

Cause: The DICOM object had attribute values that were expected to be part of the data model.

Action: Determine if the DICOM object conforms to the DICOM standard. If it does, verify if the data model matches the DICOM object or is more recent than the DICOM object. If the data model is obsolete, update it using the ORD_DICOM_ADMIN repository API, if possible. Otherwise, update the DICOM preference document to ignore this category of error.

ORA-53430: The DICOM object contains unsupported values *string*.

Cause: This type of DICOM object is not supported by the current release.

Action: Check for software updates, and contact Oracle Support Services for information about feature enhancements.

ORA-53432: The DICOM object attribute *string* has invalid definer name.

Cause: A private attribute definer for a private attribute contained in this DICOM object had invalid characters.

Action: Determine if the DICOM object is corrupt. If the DICOM object conforms to the DICOM standard, contact Oracle Support Services.

ORA-53434: Not a DICOM object.

Cause: The binary object is not a DICOM object.

Action: Determine if the DICOM object is corrupt. If the DICOM object conforms to the DICOM standard, contact Oracle Support Services.

ORA-53500: Not a DICOM image.

Cause: The binary object was not a DICOM image.

Action: Determine if the DICOM object is an image. Only DICOM images can be processed with image processing functions.

ORA-53502: Image processing failure.

Cause: An error occurred when processing a DICOM image.

Action: Determine if the DICOM image is corrupt, and if it is supported by the current release.

ORA-53800: The DICOM object does not contain attribute *string*.

Cause: The DICOM object did not contain the attribute that was required for conformance validation.

Action: Determine if the locator path is properly constructed. All attributes used in the locator path must be defined in the DICOM standard, and must not be retired. All attributes except the last attribute in the locator path must be of sequence type. If the locator path is correct, verify if the DICOM data dictionary is up to date. If the data dictionary is obsolete, update it using the ORD_DICOM_ADMIN repository API.

ORA-53801: cannot apply conformance validation on DICOM attribute *string*.

Cause: The content length of the attribute exceeded the value of the XML_SKIP_ATTR parameter that was defined in the preference document.

Action: Remove the attribute from the constraint rule or increase the value of the XML_SKIP_ATTR parameter that is defined in the preference document. Then, attempt the operation again.

ORA-53802: cannot perform conformance validation because recursion level exceeds MAX_RECURSION_DEPTH

Cause: When evaluating the recursive constraint on the DICOM object, the number of levels of recursion exceeded the value of the MAX_RECURSION_DEPTH parameter that was defined in the preference document.

Action: Ensure that the constraint definition is correct. If necessary, increase the value of the MAX_RECURSION_DEPTH parameter that is defined in the preference document. Then, attempt the operation again.

ORA-53810: error logging conformance validation messages

Cause: An error occurred while trying to log conformance validation messages.

Action: Ensure that the constraint rule definition does not contain any ACTION elements if the isConformanceValid method is called from a SQL query. If this error persists, contact Oracle Support Services.

ORA-53820: Invalid locator path *string*

Cause: A locator path for an attribute was invalid.

Action: Please verify the locator path is properly constructed. All attribute used in the locator path must be defined in the DICOM standard and must not be retired. An attribute that is not the last one of the locator path must be a sequence type. If the locator path is correct, please verify the DICOM data dictionary is up-to-date. If the data dictionary is obsolete, please use the ORD_DICOM_ADMIN API to update the data dictionary.

ORA-53900: I/O failure *string*.

Cause: A device I/O failure occurred when attempting to read from and write to a DICOM object.

Action: Check the permissions and privileges that have been granted for I/O operations.

ORA-53910: SQL error *string*.

Cause: An error occurred when attempting to run a SQL command.

Action: If you are using a JDBC connection string, ensure that the connection string is valid. Check the user account to see if it is locked. Ensure that the listener and the database server are running. And ensure that the setDataModel() function has been invoked before any other DICOM functions are called.

ORA-53920: XML error *string*.

Cause: An error occurred when attempting to read from and write to XML metadata.

Action: Ensure that Oracle XDB and all related schemas are properly installed.

ORA-53930: XSLT error *string*.

Cause: An error occurred while attempting to process XML metadata.

Action: Ensure that Oracle XDB and all related schemas are properly installed. And, verify that the mapping and anonymity documents are valid.

ORA-53940: make anonymous error *string*.

Cause: An error occurred while attempting to make DICOM object anonymous.

Action: Ensure that the anonymity document content is valid.

ORA-53980: unimplemented feature: *string*

Cause: The specified feature is not implemented.

Action: Contact Oracle Support Services.

ORA-53990: internal error *string*.

Cause: An internal error occurred while attempting to process a DICOM object.

Action: Contact Oracle Support Services, and supply them with a script that can be duplicated as well as the DICOM object that caused this error.

ORA-53991: cannot move tablespace because tables are being used

Cause: The operation failed because Oracle Multimedia tables were being used.

Action: End all sessions using Oracle Multimedia tables and try again.

ORA-54000: Virtual column feature not yet implemented

Cause: Feature has not been implemented.

Action: Feature is being implemented.

ORA-54001: *string*: invalid identifier specified for virtual column expression

Cause: Column expression referenced a column that does not exist in the table.

Action: Rewrite column expression to reference only scalar columns in the table.

ORA-54002: only pure functions can be specified in a virtual column expression

Cause: Column expression contained a function whose evaluation is non-deterministic.

Action: Rewrite column expression to reference only pure functions.

ORA-54003: specified data type is not supported for a virtual column

Cause: Only scalar data types are supported for virtual columns. LONG, BLOB, REF, and BFILE data types are not supported for virtual columns.

Action: Specify the expression column with a supported scalar data type.

ORA-54004: resultant data type of virtual column is not supported

Cause: The data type of the underlying expression is not supported. Only scalar data types are supported for virtual columns. LONG, BLOB, REF, and BFILE data types are not supported for virtual columns.

Action: Specify the expression of virtual column to return a supported scalar data type.

ORA-54005: keyword VIRTUAL cannot be specified here

Cause: The keyword VIRTUAL was either repeated or incorrectly specified.

Action: Remove the keyword from the specified syntax.

ORA-54006: keyword VISIBLE cannot be specified here

Cause: The keyword VISIBLE was either repeated or incorrectly specified.

Action: Remove the keyword from the specified syntax.

ORA-54007: keyword HIDDEN cannot be specified here

Cause: The keyword HIDDEN was either repeated or incorrectly specified.

Action: Remove the keyword from the specified syntax.

ORA-54008: expression column is not supported for an index organized table

Cause: Attempt to create/alter an index organized table with an expression column

Action: These columns are not supported, change the DDL.

ORA-54009: expression column is not supported for an external table

Cause: Attempt to create/alter an external table with an expression column

Action: These columns are not supported, change the DDL.

ORA-54010: expression column is not supported for a temporary table

Cause: Attempt to create/alter a temporary table with an expression column

Action: These columns are not supported, change the DDL.

ORA-54011: expression column is not supported for a clustered table

Cause: Attempt to create/alter a clustered table with an expression column

Action: These columns are not supported, change the DDL.

ORA-54012: virtual column is referenced in a column expression

Cause: This virtual column was referenced in an expression of another virtual column

Action: Ensure the column expression definition for any virtual column does not refer to any virtual column

ORA-54013: INSERT operation disallowed on virtual columns

Cause: Attempted to insert values into a virtual column

Action: Re-issue the statement without providing values for a virtual column

ORA-54014: Resulting table from a CTAS operation contains virtual column(s)

Cause: Table being created by a CTAS operation contains a virtual column definition

Action: Remove the virtual column definition from the table being created

ORA-54015: Duplicate column expression was specified

Cause: Expression of the virtual column being added/created conflicts with an existing/previously specified functional index expression or virtual column expression

Action: Change the expression of the virtual column as there are no duplicate expressions

ORA-54016: Invalid column expression was specified

Cause: Virtual column expression is not a valid arithmetic expression. It probably refers to another column in the table

Action: Change the expression of the virtual column

ORA-54017: UPDATE operation disallowed on virtual columns

Cause: Attempted to update values of a virtual column

Action: Re-issue the statement without setting values for the virtual column

ORA-54018: A virtual column exists for this expression

Cause: Specified index expression matches an existing virtual column"

Action: Re-issue the statement by replacing the index expression with the matching virtual column

ORA-54019: Virtual column expression cannot be changed because it is a partitioning column

Cause: Attempted to modify the expression of a virtual column that was also a partitioning column.

Action: This is not supported.

ORA-54020: Virtual column expression cannot be changed because it is a subpartitioning column

Cause: Attempted to modify the expression of a virtual column that was also a subpartitioning column.

Action: This is not supported.

ORA-54021: Cannot use PL/SQL expressions in partitioning or subpartitioning columns

Cause: Attempted to partition a table on a virtual column that contained PL/SQL expressions.

Action: This is not supported.

ORA-54022: Virtual column expression cannot be changed because an index is defined on column

Cause: Attempted to change the expression of a virtual column that was indexed.

Action: Alter index unsable. Change expression and then rebuild index.

ORA-54023: Virtual column expression cannot be changed because a constraint is defined on column

Cause: Attempted to change the expression of a virtual column that had a constraint defined on it.

Action: Drop constraint and then change expression.

ORA-54024: expression column is not supported for an organization cube table

Cause: Attempted to create or alter an organization cube table with an expression column

Action: These columns are not supported, change the DDL.

ORA-54025: Virtual column cannot have a default value

Cause: Attempted to alter a virtual column to have a default value.

Action: This is not valid, change the DDL.

ORA-54026: Real column cannot have an expression

Cause: Attempted to alter a real column to have an expression.

Action: This is not valid, change the DDL.

ORA-54027: cannot modify data-type of virtual column

Cause: Attempted to change the data-type of virtual column without modifying the underlying expression

Action: change the underlying expression to be compatible with the data-type change

ORA-54028: cannot change the HIDDEN/VISIBLE property of a virtual column

Cause: Attempted to change the HIDDEN/VIRTUAL property of a virtual column

Action: re-issue the DDL without the virtual column property change

ORA-54029: Virtual column cannot be updated in trigger body

Cause: Attempted to change the value of virtual column in a trigger body"

Action: This is not valid, change the trigger definition.

ORA-54030: datatype mismatch between virtual column and expression

Cause: virtual column expression was changed after column was created"

Action: change the underlying expression to return datatype that conforms to the virtual column

ORA-54031: column to be dropped or modified is used in a virtual column expression

Cause: Attempted to drop or modify a column that was used in a virtual column expression.

Action: Drop the virtual column first or change the virtual column expression to eliminate dependency on the column to be dropped.

ORA-54032: column to be renamed is used in a virtual column expression

Cause: Attempted to rename a column that was used in a virtual column expression.

Action: Drop the virtual column first or change the virtual column expression to eliminate dependency on the column to be renamed.

ORA-54033: column to be modified is used in a virtual column expression

Cause: Attempted to modify the data type of a column that was used in a virtual column expression.

Action: Drop the virtual column first or change the virtual column expression to eliminate dependency on the column to be modified.

ORA-54034: virtual columns not allowed in functional index expressions

Cause: An attempt was made to create a functional index with an expression defined on one or more virtual columns.

Action: Specify the index expression using only regular columns.

ORA-54035: keyword HIDDEN cannot be specified here

Cause: Attempted to specify HIDDEN key word for a virtual column

Action: This is not supported.

ORA-54036: cannot define referential constraint with ON DELETE SET NULL clause on virtual column

Cause: Attempted to specify ON DELETE SET NULL clause for a referential integrity constraint on a virtual column.

Action: Reissue the statement without specifying ON DELETE SET NULL clause.

ORA-54037: table must have at least 1 column that is not virtual

Cause: An attempt was made to create a table with only virtual columns.

Action: Include at least 1 column that is not virtual in the table being created.

ORA-54038: Virtual column cannot be encrypted

Cause: An attempt was made to create or alter a virtual column to have encryption.

Action: Encryption is unnecessary for a virtual column as the data is not stored on disk.

ORA-54039: table must have at least one column that is not invisible

Cause: An attempt was made to create or alter a table to have only invisible columns.

Action: Include at least one column that is not invisible in the table being created or altered.

ORA-54040: Visibility of a system-generated column cannot be changed.

Cause: An attempt was made to alter the visibility of a system-generated column.

Action: This is not supported.

ORA-54041: Visibility of an abstract data type column cannot be changed.

Cause: An attempt was made to alter the visibility of an abstract data type column.

Action: Specify the column visibility change with a supported data type.

ORA-54042: Invisible column is not supported on this type of table.

Cause: An attempt was made to create or alter the visibility of a column on an unsupported table type. Invisible columns are only supported for heap and index-organized tables (IOT).

Action: These columns are not supported, change the DDL.

ORA-54043: Including column of an IOT cannot be an invisible column.

Cause: An attempt was made to alter the visibility of the included column of an index-organized table (IOT).

Action: This is not supported.

ORA-54044: Visibility of a column having a column-level object privilege cannot be changed.

Cause: An attempt was made to alter the visibility of a column with a column-level object privilege.

Action: Revoke the column-level object privilege before making the column invisible.

ORA-54045: An invisible column cannot be granted a column-level object privilege.

Cause: An attempt was made to grant a column-level object privilege to an invisible column.

Action: Modify the column to make it visible and then grant the column-level object privilege.

ORA-54046: Column visibility modifications cannot be combined with any other modified column DDL option.

Cause: An attempt was made to combine the modification of the visibility of a column with other modified column property changes.

Action: Separate column visibility modifications into a standalone DDL.

ORA-54047: virtual columns not allowed for XMLType tables with object-relational storage

Cause: An attempt was made to create an object-relational XMLType table with virtual columns.

Action: Do not create virtual columns for XMLType tables with object-relational storage . This feature is not available.

ORA-54500 to ORA-56974

ORA-54500: invalid combination of elements

Cause: The geometry did not start from the correct level in the hierarchy.

Action: Correct the hierarchy in the geometry.

ORA-54501: no holes expected

Cause: The geometry contained one or more unexpected holes.

Action: Remove any holes in the geometry.

ORA-54502: solid not closed

Cause: The solid geometry was not closed i.e., faces of solid are not 2-manifold due to incorrectly defined, oriented, or traversed line segment because each edge of a solid must be traversed exactly twice, once in one direction and once in the reverse direction.

Action: Correct the orientation of the edges of the neighboring polygons.

ORA-54503: incorrect solid orientation

Cause: The orientation of the solid was not correct.

Action: Correct the orientation or specification of the outer or inner solid geometry according to the geometry rules for such a solid.

ORA-54504: multiple outer geometries

Cause: The geometry contained more than one outer geometry.

Action: Remove all but one of the outer geometries.

ORA-54505: ring does not lie on a plane

Cause: The ring was not flat.

Action: Make sure all of the vertices of the ring are on the same plane.

ORA-54506: compound curve not supported for 3-D geometries

Cause: The 3-D geometry contained one or more compound curves, which are not supported for 3-D geometries.

Action: Remove all compound curves from the geometry.

ORA-54507: duplicate points in multipoint geometry

Cause: The multipoint geometry had two points that either had identical coordinates or were the same point considering the geometry tolerance.

Action: Make sure all points are different, considering the tolerance.

ORA-54508: overlapping surfaces in a multisolid geometry

Cause: The multisolid geometry contained one or more fully or partially overlapping surfaces.

Action: Ensure that the multisolid geometry contains no overlapping areas.

ORA-54509: solid not attached to composite solid

Cause: To connect solids in a composite solid geometry, at least one of the faces of a solid must be shared (fully or partially) with only another solid. However, at least one of the faces in this composite solid was not shared by exactly two solids only.

Action: Ensure that at least one face in a composite solid is shared by exactly two solids.

ORA-54510: no outer geometry expected

Cause: An outer geometry was found when only inner geometries were expected.

Action: Remove all outer geometries.

ORA-54511: edges of inner and outer solids intersect

Cause: An inner solid had a common edge with outer solid.

Action: Ensure that edges of inner and outer solids do not intersect.

ORA-54512: a vertex of an inner solid is outside corresponding outer solid

Cause: A solid geometry contained an inner solid with at least one vertex outside its corresponding outer solid.

Action: Ensure that all vertices of inner solids are not outside their corresponding outer solid.

ORA-54513: inner solid surface overlaps outer solid surface

Cause: One or more faces of an inner solid surface either fully or partially overlapped an outer solid surface.

Action: Ensure that inner and outer surfaces have no shared (fully or partially overlapping) faces.

ORA-54514: overlapping areas in multipolygon

Cause: A multipolygon geometry contained one or more common (shared, fully or partially overlapped) polygons.

Action: Ensure that no polygons in a multipolygon overlap.

ORA-54515: outer rings in a composite surface intersect

Cause: Outer rings, either on the same plane or different planes, in a composite surface intersected.

Action: Ensure that outer rings do not intersect. They can share edges.

ORA-54516: adjacent outer rings of composite surface cannot be on same plane

Cause: The conditional flag was set, and a composite surface had at least two outer rings sharing a common edge on the same plane.

Action: Change those outer rings into one larger outer ring.

ORA-54517: outer ring is on the same plane and overlaps another outer ring

Cause: An outer ring in a composite surface shared a common area with another outer ring.

Action: Ensure that no outer rings fully or partially overlap.

ORA-54518: shared edge of composite surface not oriented correctly

Cause: A shared edge (one shared by two polygons) in a composite surface was not correctly oriented. Each shared edge must be oriented in one direction with respect to its first polygon and then in the reverse direction with respect to its second polygon.

Action: Reverse one of the directions of the shared edge with respect to its polygons.

ORA-54519: polygon (surface) not attached to composite surface

Cause: Not all polygons of a surface had a common (fully or partially shared) edge.

Action: Ensure that each polygon is attached to the composite surface by one of its edges.

ORA-54520: inner ring not on the same plane as its outer ring

Cause: An inner ring was not on the same plane as its outer ring.

Action: Ensure that each inner ring is on the same plane as its outer ring.

ORA-54521: inner ring is not inside or is touching outer ring more than once

Cause: An inner ring either was not inside its outer ring or touched its outer ring more than once.

Action: Ensure that the inner ring is inside its outer ring and does not touch the outer ring more than once. If an inner ring touches its outer ring more than once, then the outer ring is no longer a topologically simple or singly connected polygon (ring).

ORA-54522: inner rings of same outer ring cannot intersect or share boundary

Cause: Two inner rings of the same outer ring intersected or shared a boundary.

Action: Ensure that line segments of an inner ring do not intersect or fully or partially coincide with line segments of another inner ring sharing the same outer ring.

ORA-54523: inner rings of same outer ring cannot touch more than once

Cause: Two inner rings of the same outer ring touched more than once.

Action: Ensure that inner rings of the same outer ring touch at no more than one point.

ORA-54524: inner ring cannot be inside another inner ring of same outer ring

Cause: An inner ring was inside another ring of the same outer ring.

Action: Ensure that no inner ring is inside another inner ring of the same outer ring.

ORA-54525: incorrect box volume due to wrong ordinates

Cause: The rectangular box in shortcut format did not have its first x,y,z coordinates either all greater or less than its second x,y,z coordinates.

Action: Make sure that the first x,y,z coordinates are either all greater or all less than the second x,y,z coordinates.

ORA-54526: multi or composite geometry must be decomposed before extraction

Cause: The extraction could not be performed because the multi or composite geometry must first be decomposed into simple geometries (with or without inner geometries). The multi or composite geometry had a gtype of GTYPE_MULTISOLID, GTYPE_MULTISURFACE, GTYPE_MULTICURVE, GTYPE_MULTIPOINT, or GTYPE_COLLECTION, or the geometry was a line string.

Action: Use the MULTICOMP_TOSIMPLE parameter to element extractor to decompose the multi or composite geometry to a simple geometry.

ORA-54527: operation not permitted on a simple geometry

Cause: A MULTICOMP_TOSIMPLE parameter to element extractor was attempted on a geometry that is already simple.

Action: Do not use the MULTICOMP_TOSIMPLE parameter to element extractor on simple geometries.

ORA-54528: inner composite surfaces or surfaces with inner ring(s) expected

Cause: An INNER_OUTER parameter to element extractor was attempted on a surface that was not simple or composite.

Action: Ensure that the etype of the geometry for the INNER_OUTER parameter to element extractor is ETYPE_SURFACE or ETYPE_COMPOSITESURFACE.

ORA-54529: geometry should have multi-level hierarchy (like triangle)

Cause: The geometry did not have the multi-level hierarchy required for this operation. For example, if the parameter to element extractor (hierarchy level) is not LOWER_LEVEL, but the geometry etype is ETYPE_SOLID and gtype is GTYPE_SOLID, an extract operation is not allowed, because a simple solid can only be decomposed into lower level geometries, such as composite surfaces.

Action: Ensure that the geometry has the appropriate hierarchy. For example, if the geometry etype is ETYPE_SOLID and gtype is GTYPE_SOLID, the parameter to element extractor (hierarchy level) should be LOWER_LEVEL.

ORA-54530: invalid etype for element at element offset

Cause: An invalid etype was encountered.

Action: Correct the etype of the geometry.

ORA-54531: invalid orientation for element at element offset

Cause: The orientation of the current geometry was not valid.

Action: Reverse the orientation of the geometry.

ORA-54532: incomplete composite surface

Cause: The end of composite surface was reached before all necessary surfaces were defined.

Action: Add more surfaces to match the geometry definition, or reduce the specified number of surfaces.

ORA-54533: invalid etype in composite surface of solid

Cause: The etype of the composite surface of a solid was not valid.

Action: Ensure that the etype is orient*1000+ETYPE_SOLID, where orient is 1 for outer solid and 2 for inner solid.

ORA-54534: incorrect box surface due to wrong specification

Cause: The elemInfo definition was not correct for the surface of the axis aligned box.

Action: Change the interpretation to 3 in the elemInfo definition.

ORA-54535: incorrect box surface because it is on arbitrary plane

Cause: The axis aligned box surface was not on the yz, xz, or xy plane.

Action: Ensure that the first and fourth coordinates, or the second and fifth coordinates, or the third and sixth coordinates are the same. This means that the surface is on the yz, xz or xy plane, respectively.

ORA-54536: axis aligned box surface not defined properly

Cause: The inner geometry etype did not start with 2, or the outer geometry etype did not start with 1, or both occurred.

Action: Use the correct etype for the inner and outer geometries.

ORA-54537: incorrect box surface due to wrong orientation

Cause: The rectangular surface in shortcut format did not have its first x,y,z coordinates all greater than or equal to or all less than or equal to its second x,y,z coordinates.

Action: Ensure that the first x,y,z coordinates are either all greater than or equal to or all less than or equal to the second x,y,z coordinates.

ORA-54538: unexpected gtype

Cause: The gtype of the geometry was not GTYPE_SOLID, GTYPE_SURFACE, GTYPE_CURVE or GTYPE_POINT.

Action: Correct the elemInfo array to fix any invalid gtype and etypes that violate the geometry hierarchy.

ORA-54539: cannot process the geometry(s) for this operation

Cause: The geometry had errors in it.

Action: Validate the geometry or geometries to ensure that each is valid.

ORA-54540: at least one element must be a surface or solid

Cause: One of the geometries had holes, and the geometries were neither (A) simple, composite, or multisurfaces, or (B) simple, composite, or multisolids. (Surfaces and solids are the only geometries that can have holes. Points and curves cannot have holes.)

Action: Ensure that each geometry having holes is a surface or solid (simple, composite, or multi).

ORA-54545: holes incorrectly defined

Cause: The holes were defined with incorrect etype.

Action: Ensure that the etype is correct in the definition of the inner geometry.

ORA-54546: volume of solid cannot be 0 or less

Cause: The solid geometry having one outer and multiple inner geometries had a negative or zero volume.

Action: Correct the orientation or specification of the outer solid geometry to obey outer geometry rules so that the outer geometry has a positive volume. Additionally, correct the orientation or specification of inner solid geometries to obey inner geometry rules so that each inner geometry has a negative volume.

ORA-54547: wrong input for COUNT_SHARED_EDGES

Cause: The COUNT_SHARED_EDGES parameter value was not 1 or 2.

Action: Ensure that the COUNT_SHARED_EDGES parameter value is either 1 or 2.

ORA-54548: input geometry gtype must be GTYPE_POLYGON for extrusion

Cause: The input geometry gtype was not GTYPE_POLYGON.

Action: Ensure that the gtype of the input polygon is GTYPE_POLYGON.

ORA-54549: input geometry has incorrect elemInfo

Cause: The input 2-D polygon did not have only one outer ring.

Action: Ensure that the input 2-D polygon has only one outer ring.

ORA-54550: input 2-D polygon not valid

Cause: The 2-D polygon violated the rules for polygons and rings.

Action: Correct the polygon definition.

ORA-54551: grdHeight and/or Height array sizes incorrect

Cause: The sizes of `grdHeight` and `Height` arrays were not equal to half the size of input 2-D polygon's ordinates array. As a result, each point in the 2-D polygon could not be extruded from the `grdHeight` entry to the `Height` entry.

Action: Ensure that the sizes of the `grdHeight` and `Height` arrays are half that of input 2-D polygon ordinates array.

ORA-54552: height entries must be >= to ground height entries

Cause: In the definition of a solid, the height values were less than the ground height.

Action: Ensure that that height values are greater than or equal to ground height values.

ORA-54553: incorrect geometry for appending

Cause: The geometry could not be appended to a homogeneous collection (for example, multi-geometry) or to a heterogeneous geometry (for example, collection). In other words, the `gtype` of the geometry to be appended was neither `GYPTE_COLLECTION` or `GTYPE_MULTI-X` (where X is point, curve, surface, or solid).

Action: Ensure that the geometries involved in the append operation have appropriate `gtypes`.

ORA-54554: arcs are not supported as defined

Cause: An arc was defined in a geometry type in which arcs are not supported. Arcs are supported for 2-D (circle) polygons, 2-D compound polygons, 2-D single arc, and 2-D compound (composite) curves only.

Action: Remove or simplify the arcs.

ORA-54555: invalid geometry dimension

Cause: The geometry did not have three dimensions.

Action: Ensure that geometry has three dimensions.

ORA-54556: operation is not supported for 3-D geometry

Cause: A 3-D geometry was passed into an operation that supports only 2-D geometries.

Action: Check the Spatial documentation for operations that are supported and not supported on 3-D geometries.

ORA-54557: incomplete composite solid

Cause: The end of composite solid was reached before all necessary solids were defined.

Action: Add more solids to match the geometry definition, or reduce the specified number of solids.

ORA-54558: 3D SRID is not found for the corresponding 2D SRID

Cause: In extruding a 2D polygon into a 3D geometry, the SRID conversion function did not find an equivalent 3D SRID of the 2D SRID.

Action: Specify a 2D SRID that has a 3D equivalent

ORA-54559: query element and source geometry cannot be the same

Cause: A query element geometry and a source geometry were the same, which prevented a label pointing query element in the source geometry from being output.

Action: Redefine the query element or the source geometry so that a label can be output.

ORA-54560: query element cannot be a collection or multitype geometry

Cause: A query element was a collection geometry or a multitype geometry. Such geometries are not permitted in a query element because they are at the top of the geometry hierarchy. A query element must be part of the source geometry.

Action: Redefine the query element or the source geometry so that a label can be output.

ORA-54601: CREATE_PC: invalid parameters for creation of Point Cloud

Cause: An invalid or unknown parameter was specified in the creation of Point Cloud.

Action: Check for valid set of parameters.

ORA-54602: CREATE_PC: input points table *string* does not exist

Cause: The specified table for loading points into a Point Cloud did not exist.

Action: Create the points table with appropriate columns, and then create the Point Cloud.

ORA-54603: CREATE_PC: specified total dimensionality cannot exceed 8

Cause: The specified total dimensionality for the Point Cloud exceeded the maximum limit of 8.

Action: Create the Point Cloud with fewer dimensions. You can store the rest in the output points table.

ORA-54604: CREATE_PC: input points table should not be empty

Cause: The input points table had no data.

Action: Insert data into the input points table and then create the Point Cloud.

ORA-54605: CREATE_PC: scratch-tables/views (*string*) exist and need to be dropped

Cause: Transient tables/views from a previous CREATE_PC operation were still in existence.

Action: Delete the invalid Point Cloud from the base table (for cleanup of scratch tables), and initialize and create the Point Cloud again. Alternately, use SDO_UTIL.DROP_WORK_TABLES with oidstring as the parameter.

ORA-54607: CREATE_PC: error fetching data from input points table

Cause: An internal read error occurred during Point Cloud creation.

Action: Contact Oracle Support Services with the error number reported.

ORA-54608: CREATE_PC: error writing Point Cloud LOB

Cause: An internal LOB write error occurred during Point Cloud creation. The cause might be lack of table space.

Action: Look for information from other errors in the stack, or contact Oracle Support Services with the error number reported.

ORA-54609: CREATE_PC: input extent cannot be null

Cause: The extent of the Point Cloud was null.

Action: Specify an extent for the Point Cloud that is not null.

ORA-54610: CREATE_PC: input extent cannot be more than 2-D for geodetic data

Cause: The extent of the Point Cloud was more than 2-D for geodetic data.

Action: Change the extent to 2-D (longitude, latitude).

ORA-54611: INIT: either invalid basetable/schema or they do not exist

Cause: The base table or schema, or both, were invalid strings; or the base table and schema combination did not exist.

Action: Ensure that the specified base table exists in the specified schema before performing the initialization operation.

ORA-54613: INIT: internal error creating DML trigger

Cause: The necessary privileges to create the trigger were not granted.

Action: Grant the necessary privileges to create the trigger. If necessary, contact Oracle Support Services for help with privileges for trigger creation.

ORA-54614: INIT: block table name has to be unique

Cause: The specified block table name was not unique. For example, it might have been used for another block table.

Action: Specify a different block table name.

ORA-54616: INIT: internal error [*number, string*]

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

ORA-54617: CLIP_PC: invalid Point Cloud; extent is empty

Cause: The input Point Cloud for the CLIP_PC operation was invalid.

Action: Specify a point cloud that was created using the CREATE_PC procedure.

ORA-54618: CLIP_PC: SRIDs of query and Point Cloud are incompatible

Cause: The Point Cloud and the query geometry had incompatible SRID values.

Action: Change the query SRID to be compatible with that of the Point Cloud.

ORA-54619: CLIP_PC: query and BLKID parameters cannot both be null

Cause: Both the query and BLKID parameters were null in the call to the CLIP_PC operation.

Action: Either specify a query geometry that is not null, or specify a BLKID for use as a query.

ORA-54620: CLIP_PC: internal error [*number, string*]

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

ORA-54621: TO_GEOMETRY: TOTAL_DIMENSIONALITY not same as in INIT operation

Cause: The specified TOTAL_DIMENSIONALITY was invalid.

Action: Ensure that the TOTAL_DIMENSIONALITY matches that specified in the call to the initialization operation.

ORA-54622: TO_GEOMETRY: internal error [number, string]

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

ORA-54623: CREATE_PC: internal error [number, string]

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

ORA-54640: PARTITION_TABLE utility: invalid input parameters [number, string]

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

ORA-54641: PARTITION_TABLE utility: scratch tables exist with oidstr = string

Cause: Scratch tables/views could not be created because they already existed.

Action: Use SDO_UTIL.DROP_WORK_TABLES with the specified oidstr parameter to clean up the scratch tables.

ORA-54642: PARTITION_TABLE utility: invalid SORT_DIMENSION specified

Cause: An invalid string was specified for the SORT_DIMENSION.

Action: Specify the SORT_DIMENSION as 'BEST_DIM', 'DIMENSION_1', 'DIMENSION_2', or 'DIMENSION_3'.

ORA-54643: PARTITION_TABLE utility: invalid WORKTABLESPACE parameter

Cause: An invalid string was specified for the WORKTABLESPACE parameter.

Action: Specify an existing valid tablespace for WORKTABLESPACE (to hold the scratch tables).

ORA-54644: PARTITION_TABLE utility: error in reading input, output tables

Cause: The names for the input/output tables were invalid, or the tables did not exist or did not have the right structure.

Action: Check the Spatial documentation for PARTITION_TABLE.

ORA-54651: CREATE_TIN: invalid parameters specified in creation of TIN

Cause: An invalid or unknown parameter was specified in the creation of the TIN.

Action: Check the Spatial documentation for CREATE_TIN.

ORA-54652: CREATE_TIN: input points table *string* does not exist

Cause: The specified table for loading points into a TIN did not exist.

Action: Create the points table with appropriate columns, and then create the TIN.

ORA-54653: CREATE_TIN: specified total dimensionality cannot exceed 8

Cause: The specified total dimensionality for the TIN exceeded the maximum limit of 8.

Action: Create the TIN with fewer dimensions. You can store the rest in the output points table.

ORA-54654: CREATE_TIN: input points table should not be empty

Cause: The input points table had no data.

Action: Insert data into the input points table, and then create the TIN.

ORA-54655: CREATE_TIN: scratch tables/views(*string*) exist and need to be dropped

Cause: Transient tables from previous CREATE_TIN operation still existed.

Action: Delete the invalid TIN from the base table (for cleanup of scratch tables), and initialize and create the TIN again. Alternately, use SDO_UTIL.DROP_WORK_TABLES with oidstring as its parameter.

ORA-54656: CREATE_TIN: error fetching data from input points table

Cause: An internal read error occurred during TIN creation.

Action: Contact Oracle Support Services with the error number reported.

ORA-54657: CREATE_TIN: error writing TIN LOB

Cause: An internal LOB write error occurred during TIN creation. The cause might be lack of table space.

Action: Look for information from other errors in the stack, or contact Oracle Support Services with the error number reported.

ORA-54658: CREATE_TIN: input extent cannot be null

Cause: The extent of the TIN was null.

Action: Specify an extent for the TIN that is not null.

ORA-54659: CREATE_TIN: input extent has to be 2-D for geodetic data

Cause: The extent of the TIN was more than 2-D for geodetic data.

Action: Change the extent to 2-D (longitude, latitude).

ORA-54660: CLIP_TIN: invalid Point Cloud; extent is empty

Cause: The input TIN for the CLIP_TIN operation was invalid.

Action: Specify a TIN that was created using the CREATE_TIN operation.

ORA-54661: CLIP_TIN: SRIDs of query and TIN are incompatible

Cause: The TIN and the query geometry had incompatible SRID values.

Action: Change the query geometry SRID to be compatible with that of TIN.

ORA-54662: CLIP_TIN: query and blkid parameters cannot both be null

Cause: Both the query and blkid parameters were null in the call to the CLIP_TIN operation.

Action: Either specify a query geometry that is not null, or specify a blkid for use as a query.

ORA-54663: CLIP_TIN: internal error [*number, string*]

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

ORA-54664: TO_GEOMETRY: internal error [*number, string*]

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

ORA-54665: CREATE_TIN: internal error [number, string]

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

ORA-54666: query gtype is a superset of the source geometry

Cause: A query element geometry was at a higher level in the geometry hierarchy than the source geometry.

Action: Try replacing the source geometry with the query geometry.

ORA-54667: query element cannot be matched to an element in source geometry (string)

Cause: A query element geometry was not a part of the source geometry.

Action: Redefine the query element or the source geometry.

ORA-54668: a 2D SRID cannot be used with a 3D geometry

Cause: A 2D SRID was used with a 3D geometry.

Action: Replace the 2D SRID with an appropriate 3D SRID.

ORA-55200: Java exception from tag data translation java stack

Cause: Java exceptions.

Action: Turn on java output by calling `dbms_java.set_output(OUTPUT_SIZE)`; Set java logging level by calling `MGD_ID_UTL.setJavaLoggingLevel('INFO')`; Analyze java logging messages.

ORA-55201: Tag data translation category not found

Cause: No matching category ID could be found.

Action: Make sure the input category name, category version or category ID is correct.

ORA-55202: Tag data translation scheme not found

Cause: No matching scheme could be found for the input data format.

Action: Make sure the input data format is supported and correct.

ORA-55203: Tag data translation level not found

Cause: No matching level could be found for the input data format.

Action: Make sure the input data format is supported and correct.

ORA-55204: Tag data translation option not found

Cause: No matching option could be found for the input data format.

Action: Make sure the input data format is supported and correct.

ORA-55205: Tag data translation field validation failed

Cause: Invalid field value.

Action: Make sure the field value of the input data is within the range specified in the tag data translation XML.

ORA-55206: Tag data translation field not found

Cause: Invalid input field.

Action: Make sure the spellings of the input fields are correct.

ORA-55207: Tag data translation rule evaluation failure

Cause: Error occurred when idcode translator tried to evaluate the rule specified in the tag data translation XML.

Action: Java proxy must be set in order to evaluate manager look up rules. Call `MGD_ID_UTL.setProxy(PROXY_HOST, PROXY_PORT)` to enable java proxy.

ORA-55208: Too many matching levels were found for the input data

Cause: Necessary field values were missing.

Action: Add additional field value pairs that are necessary to determine a unique matching level.

ORA-55300: model *string* does not exist

Cause: The specified model could not be found.

Action: Make sure that the model has been created.

ORA-55301: rulebase *string* does not exist

Cause: The specified rulebase could not be found.

Action: Make sure that the rulebase has been created.

ORA-55302: insufficient privileges *string*

Cause: Sufficient privileges were not granted.

Action: Ask the database administrator to grant the appropriate privileges.

ORA-55303: SDO_RDF_TRIPLE_S constructor failed: *string*

Cause: SDO_RDF_TRIPLE_S constructor failed.

Action: Check the stack trace for additional information.

ORA-55304: specified reuse-bNode model-id *string* != target model-id *string*

Cause: The reuse-bNode model-id specified for the SDO_RDF_TRIPLE_S constructor was neither 0 nor the model-id of the target model.

Action: Make sure that the reuse-bNode model is either 0 or the model-id of the target model.

ORA-55305: reification constructor functions not supported

Cause: Unsupported reification constructor functions were used.

Action: Insert each triple in the reification quad individually. See documentation for more information.

ORA-55306: internal error: invalid *string*: value_name=*string* value_type=*string*

Cause: The value type of this component of the RDF triple was invalid.

Action: This is an internal error. Contact Oracle Support Services.

ORA-55307: invalid value type for lexical value: *string*

Cause: The value type of this lexical value was invalid.

Action: Make sure that the lexical value format is correct. If this error occurs during bulk load from a staging table, then this may be an internal error. Contact Oracle Support Services.

ORA-55308: invalid time zone *string* for lexical value *string*

Cause: The time zone of this lexical value was invalid.

Action: Make sure that the lexical value format is correct. If this error occurs during bulk load from a staging table then this may be an internal error. Contact Oracle Support Services.

ORA-55309: hash collision resolution failed for lexical value *string*

Cause: Attempts to resolve hash collision exceeded the maximum retry count.

Action: This may be an internal error. Contact Oracle Support Services.

ORA-55310: parse failed for the *string* lexical value: *string*

Cause: Attempts to insert the specified lexical value failed.

Action: This may be an internal error. Contact Oracle Support Services.

ORA-55311: invalid value type *string* for long lexical value *string*

Cause: The value type of this long (length > 4000) lexical value was invalid.

Action: Make sure that the long value has a valid value type.

ORA-55312: parse failed for triple: id-form: *string string string*

Cause: Attempts to insert triple failed.

Action: This may be an internal error. Contact Oracle Support Services.

ORA-55313: SDO_RDF_TRIPLE_S constructor failed to process triple containing bNode

Cause: The SDO_RDF_TRIPLE_S constructor without bNode reuse option was invalid for triple containing bNode.

Action: Use SDO_RDF_TRIPLE_S constructor that allows bNode reuse.

ORA-55314: invalid temporary table name (*string*) for use with batch load

Cause: Specified temporary table name was not valid.

Action: See documentation for rules for temporary table name validity.

ORA-55315: batch load attempt failed: *string*

Cause: The batch load operation failed.

Action: This may be an internal error. Contact Oracle Support Services.

ORA-55316: model *string* does not match model *string* for table and column

Cause: This column of the table was not associated with the specified model.

Action: Make sure to use the correct target model.

ORA-55317: model *string* already exists

Cause: A model with the specified name was already present.

Action: Choose a different model name, or delete the existing model and create a new model with the specified name.

ORA-55318: column *string* in table *string* already contains data

Cause: At model creation time, the table column contained data.

Action: Ensure that the table column does not contain data before model creation.

ORA-55319: model *string* create attempt failed: *string*

Cause: The attempt to create the specified model did not succeed.

Action: This may be an internal error. Contact Oracle Support Services.

ORA-55320: model *string* drop attempt failed: *string*

Cause: The attempt to drop the specified model did not succeed.

Action: This may be an internal error. Contact Oracle Support Services.

ORA-55321: network already exists

Cause: Attempt to create the network failed because the network already existed.

Action: If necessary, drop the network before trying to recreate the network.

ORA-55322: model(s) exist

Cause: An attempt was made to drop a network that contained one or more models.

Action: Drop all the model(s) and then retry the operation.

ORA-55323: rulebase(s) exist

Cause: An attempt was made to drop a network that contained one or more rulebases.

Action: Drop all the rulebase(s) and then retry the operation.

ORA-55324: no rulebases specified

Cause: Rulebases for the operation were not specified.

Action: Specify at least one rulebase.

ORA-55325: rulebase or rules index *string* already exists *string*

Cause: A rulebase or rules index with the specified name already existed.

Action: Choose a different name, or delete the existing rulebase or rules index.

ORA-55326: rules index (*string*) create attempt failed: *string*

Cause: The attempt to create the specified rules index did not succeed.

Action: This may be an internal error. Contact Oracle Support Services.

ORA-55327: rule *string* yields a triple with a literal subject or predicate

Cause: The specified rule created an invalid triple containing a literal in the subject or predicate position.

Action: Check and modify the rule to avoid creation of invalid triple.

ORA-55328: literal value *string* insert attempt failed

Cause: The attempt to create the specified literal value failed.

Action: This may be an internal error. Contact Oracle Support Services.

ORA-55329: same model *string* specified more than once in the list of models

Cause: The specified model occurred more than once in the list of models.

Action: Eliminate duplicate occurrences of the model in the list of models.

ORA-55330: rulebase or rules index *string* is busy

Cause: The specified rulebase or rules index was busy and could not be used.

Action: Retry your operation later.

ORA-55331: user owns RDF objects

Cause: The user could not be dropped because it owns RDF objects.

Action: Drop the RDF objects and then retry.

ORA-55332: virtual model cannot be used in this context

Cause: A virtual model was used as input instead of a model.

Action: Use a model as input.

ORA-55333: virtual model *string* does not exist

Cause: The specified virtual model could not be found.

Action: Make sure that the virtual model has been created.

ORA-55334: virtual model name *string* is invalid

Cause: The specified virtual model name was not valid.

Action: Check Oracle documentation for valid virtual model names.

ORA-55335: at least one model must be specified

Cause: An empty list of models was specified as the set of models for a virtual model.

Action: Make sure at least one model appears in the set of models used to create a virtual model.

ORA-55336: insufficient privileges for using one or more of the models and rules indexes

Cause: An attempt was made to create a virtual model without the appropriate privileges.

Action: Ask the database administrator to perform the operation or to grant the required privileges.

ORA-55337: a virtual model or rules index with the name *string* already exists

Cause: A virtual model or rules index with the specified name was already present.

Action: Choose a different virtual model name.

ORA-55338: a model with the name *string* already exists

Cause: A model with the specified name was already present.

Action: Choose a different virtual model name.

ORA-55339: a virtual model already exists for the specified model-rulebase combination

Cause: A virtual model with identical components was already present.

Action: Choose a different set of components for the new virtual model.

ORA-55340: rules index does not exist for the specified model-rulebase combination

Cause: A rules index did not exist for the specified sets of models and rulebases.

Action: Make sure a rules index is created for the specified sets of models and rulebases.

ORA-55341: label index out-of-range

Cause: An attempt was made to use an out-of-range index for retrieving the label.

Action: Correct the input and try again.

ORA-55342: not a defined label in the policy

Cause: An attempt was made to use an undefined label.

Action: Correct the input and try again.

ORA-55343: invalid dependent component for custom label generator

Cause: An attempt was made to specify an invalid dependent component for the label generator.

Action: Correct the input and try again.

ORA-55344: invalid label generator implementation or use

Cause: An attempt was made to use an invalid label generator to generate labels for inferred data.

Action: Correct the input and try again.

ORA-55345: invalid use of label generator with no OLS policy

Cause: An attempt was made to use a label generator when Oracle Label Security (OLS) was not enabled for Resource Definition Framework (RDF) data.

Action: None

ORA-55346: invalid label generation option with user rules

Cause: An attempt was made to specify an invalid label generation option for entailment involving user rules.

Action: Correct the input and try again.

ORA-55347: missing proof for the specified label generation option

Cause: The chosen label generation option required proof, which was missing for the entailment.

Action: Correct the input and try again.

ORA-55348: label generator error: RDF data not enabled for *string*

Cause: An invalid label generator option was chosen for entailment.

Action: Correct the input and try again.

ORA-55349: OLS not installed or in an invalid state

Cause: Oracle Label Security (OLS) support for Resource Definition Framework (RDF) was not installed.

Action: Consult Oracle documentation to install the Oracle Label Security (OLS) support.

ORA-55350: RDF-OLS table option *string* not supported

Cause: An attempt was made to use an unsupported Oracle Label Security (OLS) option for Resource Definition Framework (RDF) data.

Action: Correct the input and try again.

ORA-55351: RDF secure access option not supported or is invalid

Cause: An attempt was made to use an unsupported secure access option for Resource Definition Framework (RDF).

Action: Correct the input and try again.

ORA-55352: insufficient privileges for policy administration

Cause: The necessary privileges needed to administer Oracle Label Security (OLS) or Oracle Virtual Private Database (VPD) policies for Resource Definition Framework (RDF) data were not specified.

Action: None

ORA-55353: invalid column name for label column *string*

Cause: An attempt was made to use an invalid column to maintain labels for Resource Definition Framework (RDF) data.

Action: Use CTXT2 as the label column.

ORA-55354: Policy *string* does not exist or is inaccessible

Cause: An attempt was made to use a nonexistent policy.

Action: Correct the input and try again.

ORA-55355: RDF network does not exist

Cause: An attempt was made to perform an operation that required Resource Definition Framework (RDF) network to be present.

Action: Create the Resource Definition Framework (RDF) network.

ORA-55356: OLS not enabled for RDF data

Cause: An attempt was made to perform an RDF-OLS-specific operation when Oracle Label Security (OLS) was not enabled for Resource Definition Framework (RDF) data.

Action: None

ORA-55357: insufficient privileges for the current operation

Cause: An attempt was made to perform a Resource Definition Framework (RDF) secure access operation with restricted privileges.

Action: See Oracle documentation.

ORA-55358: model "*string*" is not empty

Cause: An attempt was made to reset Oracle Label Security (OLS) labels for a model with some data.

Action: None

ORA-55359: unauthorized operation with policy *string* - *string*

Cause: An attempt was made to perform an unauthorized DML operation on OLS-enabled Resource Definition Framework (RDF) repository.

Action: None

ORA-55360: invalid value for resource position - *string*

Cause: An invalid value was specified for the resource position while setting labels.

Action: Correct the input and try again.

ORA-55361: duplicate specification for the namespace found

Cause: An attempt was made to use a namespace map that contained one or more duplicate specifications.

Action: Correct the input and try again.

ORA-55362: RDF VPD policy may not be created in the SYS schema

Cause: An attempt was made to create an Oracle Virtual Private Database (VPD) policy in the SYS schema.

Action: None

ORA-55363: context *string* does not exist

Cause: An attempt was made to specify a nonexistent context for the Oracle Virtual Private Database (VPD) policy.

Action: Create the context using CREATE CONTEXT command.

ORA-55364: invalid operation type *string* for VPD policy

Cause: An attempt was made to specify an invalid operation for the application of Oracle Virtual Private Database (VPD) policy.

Action: Specify ALL, QUERY, or DML for operation type.

ORA-55365: invalid metadata for VPD policy

Cause: An attempt was made to define invalid metadata elements for the Oracle Virtual Private Database (VPD) policy.

Action: See Oracle documentation for valid set of metadata elements.

ORA-55366: unknown namespace prefix "*string*"

Cause: An attempt was made to make use of an undefined namespace prefix in Oracle Virtual Private Database (VPD) metadata.

Action: Correct the input and try again.

ORA-55367: invalid maintenance operation for VPD metadata

Cause: An attempt was made to perform an invalid maintenance operation on Oracle Virtual Private Database (VPD) metadata.

Action: Specify ADD or DELETE for VPD metadata maintenance.

ORA-55368: empty match or apply pattern not allowed in a VPD constraint

Cause: An attempt was made to specify an empty match or apply pattern for a Oracle Virtual Private Database (VPD) constraint.

Action: Correct the input and try again.

ORA-55369: invalid identifier specified for the constraint group

Cause: An invalid SQL identifier was specified for the constraint group.

Action: Correct the input and try again.

ORA-55370: input parameter not a zero or positive integer

Cause: The input parameter was not zero or a positive integer.

Action: Change the input parameter to zero or a positive integer.

ORA-55371: RDF rules index '*string*' exists for different model-rulebase combination

Cause: A rules index with the specified name has already been built for a different model-rulebase combination.

Action: Specify a different rules index name, or drop the existing rules index and then create a new rules index with that name.

ORA-55372: entailment (rules index) '*string*' already exists

Cause: The entailed graph (rules index) already exists.

Action: Specify a different rules index name, or drop the existing rules index and then create a new rules index with that name.

ORA-55373: inference internal error: *string*

Cause: An unexpected internal error condition occurred.

Action: Check the error message and the stack trace.

ORA-55374: query constants not in the database; no rows selected

Cause: URIs or literals used in the query did not exist in the database.

Action: Check the query, and ensure that the URIs or literals do exist.

ORA-55375: cannot drop table '*string*' because this table owns RDF objects

Cause: A table containing RDF data could not be dropped without first dropping its RDF model.

Action: Drop the corresponding RDF model or models, and then drop the table.

ORA-55376: cannot alter or drop column '*string*' because this column owns RDF objects

Cause: A table column containing RDF data could not be altered or dropped without first dropping its RDF model.

Action: Drop the corresponding RDF model or models, and then alter or drop the column.

ORA-55377: number of triples less than 1 or null error indication marker

Cause: An internal error occurred during validation. The number of triples was less than 1 or the error indication marker was null.

Action: Check the input parameters, and ensure that the number of triples is 1 or greater and that the error indication marker is not null; or contact Oracle Support Services.

ORA-55378: invalid error code

Cause: An invalid error code was passed in during validation.

Action: Specify a valid error code.

ORA-55379: too many triples

Cause: An internal error occurred during validation. Too many triples were passed in.

Action: Specify a valid number of triples for the operation, or contact Oracle Support Services.

ORA-55430: query pattern is null

Cause: The query pattern specified in the SEM_MATCH query was null.

Action: Modify the query pattern to be non-null.

ORA-55441: insufficient privileges to drop virtual model *string*

Cause: An attempt was made to drop a virtual model without the appropriate privileges.

Action: Ask the database administrator to perform the operation or grant the required privileges.

ORA-55442: a virtual model cannot be used with other models in a SEM_MATCH query

Cause: The set of models used as input to a SEM_MATCH query contained a virtual model.

Action: Create a new virtual model with contents that are equivalent to the specified SEM_MATCH model set and query the new virtual model.

ORA-55443: a virtual model cannot be used with a rulebase in a SEM_MATCH query

Cause: A rulebase was specified in conjunction with a virtual model as input to a SEM_MATCH query.

Action: Create a new virtual model that expands the specified virtual model to include the specified rulebase and query the new virtual model.

ORA-55450: continually refreshed workspaces not supported with RDF

Cause: An attempt was made to use continually refreshed workspaces with Resource Definition Framework (RDF) data.

Action: None

ORA-55451: multi-parent workspaces not supported with RDF

Cause: An attempt was made to use multi-parent workspaces with Resource Definition Framework (RDF) data.

Action: None

ORA-55452: batch mode not allowed with version-enabled models

Cause: An attempt was made to batch load data into a version-enabled Resource Definition Framework (RDF) model. This is not supported.

Action: None

ORA-55453: OLS/VPD-enabled indexes must be created with CREATE_ENTAILMENT API

Cause: An attempt was made to create entailment for OLS/VPD-enabled models using unsupported API.

Action: Correct the input and try again.

ORA-55454: version-enabled indexes must be created with CREATE_ENTAILMENT API

Cause: An attempt was made to create entailment for version-enabled models using unsupported API.

Action: Correct the input and try again.

ORA-55455: rules index status not recognized (*string*)

Cause: The specified rules index status was not recognized.

Action: Ensure that the rules index status is VALID, INCOMPLETE, or INVALID, and retry the operation.

ORA-55456: no valid rules index for this model-rulebase combination

Cause: A valid rules index did not exist for specified combination of models and rulebases.

Action: Create a rules index for the specified models and rulebases combination, or use a combination of models and rulebases for which a rules index exists, and retry the operation. Also ensure that the rules index status matches the status for the rules index specified in the query.

ORA-55457: predicate not found in model

Cause: The predicate value passed in as an argument to the semantic operator did not exist in the model.

Action: In the query using semantic operators, use a predicate value that exists in the model and retry the operation.

ORA-55458: object not found in model

Cause: The object value passed in as an argument to the semantic operator did not exist in the model.

Action: In the query using semantic operators, use an object value that exists in the model and retry the operation.

ORA-55459: invalid parameter string

Cause: The parameter string used in the creation of an index of type SEM_INDEXTYPE had invalid or malformed parameters.

Action: See the documentation for information on how to write a valid parameter string.

ORA-55460: incorrect usage of semantic operators

Cause: There was a syntax error in the call to the SEM_RELATED operator

Action: See the documentation for information on how to use the SEM_RELATED operator. Check that the value returned by SEM_RELATED is compared to 1 or 0.

ORA-55461: no distance information available

Cause: Distance information was not generated during rules index creation.

Action: Retry query without the SEM_DISTANCE operator and/or without specifying bounds in the SEM_RELATED operator. See the documentation for information on when distance information is generated.

ORA-55462: internal error

Cause: An internal error occurred during a semantic operator query or during the creation of an index of type SEM_INDEXTYPE.

Action: Contact Oracle Support Services.

ORA-55463: missing privileges for MDSYS schema for OLS-enabled entailment

Cause: An attempt was made to run entailment with insufficient privileges for MDSYS schema.

Action: Grant EXEMPT ACCESS POLICY to MDSYS.

ORA-55464: model "*string*" does not exist

Cause: An attempt was made to use a nonexistent Resource Definition Framework (RDF) model.

Action: Correct the input and try again.

ORA-55465: resource position *string* not secured with OLS policy

Cause: An attempt was made to associate labels with resource positions that were not secured with Oracle Label Security (OLS).

Action: Correct the input and try again.

ORA-55466: one or more triples have incompatible sensitivity label

Cause: An attempt was made to reset a label for a resource that participated in triples with incompatible label.

Action: Correct the input and try again.

ORA-55467: model-specific label for the resource is incompatible

Cause: An attempt was made to set a global label for a resource when an incompatible model-specific label already existed.

Action: Correct the input and try again.

ORA-55468: rule base "*string*" does not exist or is not accessible

Cause: An attempt was made to specify a rule base that did not exist.

Action: Correct the input and try again.

ORA-55469: rule "*string*" does not exist or is not accessible

Cause: An attempt was made to set a label for a rule that did not exist.

Action: Correct the input and try again.

ORA-55470: OLS may not be applied with one or more models VPD-enabled

Cause: An attempt was made to OLS-enable Resource Definition Framework (RDF) repository when one or more models is VPD-enabled.

Action: Oracle Label Security (OLS) and Oracle Virtual Private Database (VPD) may not be used simultaneously.

ORA-55471: OLS may not be applied to version-enabled RDF repository

Cause: An attempt was made to OLS-enable Resource Definition Framework (RDF) repository when one or more models is version-enabled.

Action: Oracle Label Security (OLS) may not be enabled when one or more models is version-enabled.

ORA-55472: Secure access policy already assigned to RDF data

Cause: An attempt was made to assign an Oracle Label Security (OLS) policy to Resource Definition Framework (RDF) data when some other policy was already in effect.

Action: None

ORA-55473: RDF model participating in a virtual model may not be version-enabled

Cause: An attempt was made to version-enable a Resource Definition Framework (RDF) model which participated in a virtual model.

Action: None

ORA-55474: internal error: [*string*],[*string*],[*string*]

Cause: There was an internal error with Resource Definition Framework (RDF) OLS/VPS support.

Action: Contact Oracle Support Services.

ORA-55475: policy with a matching name already exists

Cause: An attempt was made to specify a duplicate Oracle Virtual Private Database (VPD) policy name.

Action: Correct the input and try again.

ORA-55476: policy "*string*" does not exist

Cause: An attempt was made to use a nonexistent Oracle Virtual Private Database (VPD) policy.

Action: Correct the input and try again.

ORA-55477: policy with dependent models may not be dropped

Cause: An attempt was made to drop an Oracle Virtual Private Database (VPD) policy with dependent models.

Action: Remove the VPD policy from the models and try again.

ORA-55478: application table with multiple RDF models not suitable for VPD

Cause: An attempt was made to VPD-enable a model which shared the application table with another model.

Action: None

ORA-55479: a policy already assigned to the RDF model

Cause: An attempt was made to assign Oracle Virtual Private Database (VPD) policy to a model with a VPD policy already in effect.

Action: None

ORA-55480: model participating in a virtual model may not be VPD-enabled

Cause: An attempt was made to VPD-enable a model that participated in a virtual model.

Action: None

ORA-55481: VPD policy may not be applied for OLS-enabled RDF repository

Cause: An attempt was made to VPD-enable a model with an Oracle Label Security (OLS) policy already in effect.

Action: OLS and VPD may not be used simultaneously.

ORA-55482: VPD may not be applied to version-enabled RDF repository

Cause: An attempt was made to VPD-enable a version-enabled Resource Definition Framework (RDF) repository. This is not supported.

Action: None

ORA-55483: policy "*string*" not assigned to the model

Cause: An attempt was made to remove an Oracle Virtual Private Database (VPD) policy that was never assigned to the model.

Action: None

ORA-55484: circular dependency not allowed in RDF metadata

Cause: An attempt was made to define metadata elements that had a circular dependency for the Oracle Virtual Private Database (VPD) policy.

Action: Correct the input and try again.

ORA-55485: metadata may not be directly assigned to an equivalent property

Cause: An attempt was made to assign metadata directly to a property that was declared to be an equivalent of another.

Action: None

ORA-55486: metadata exists for the equivalent property

Cause: An attempt was made to make a property equivalent of another when some metadata already existed for this property.

Action: None

ORA-55487: VPD constraints exist for the equivalent property

Cause: An attempt was made to make a property equivalent of another when some Oracle Virtual Private Database (VPD) constraints already existed for this property.

Action: Correct the input and try again.

ORA-55488: metadata definition already exists for the policy

Cause: An attempt was made to add a duplicate metadata definition for an Oracle Virtual Private Database (VPD) policy.

Action: None

ORA-55489: conflicting metadata definition exists for the policy

Cause: An attempt was made to define conflicting metadata definitions for an Oracle Virtual Private Database (VPD) policy.

Action: Correct the input and try again.

ORA-55490: VPD constraint may not be assigned to an equivalent property

Cause: An attempt was made to assign an Oracle Virtual Private Database (VPD) constraint to a property declared to be an equivalent of another.

Action: Assign the VPD constraint to the property that is the target of the equivalent property.

ORA-55491: VPD policy constraint with matching name already exists

Cause: An attempt was made to specify a duplicate name for the Oracle Virtual Private Database (VPD) policy.

Action: Correct the input and try again.

ORA-55492: error creating VPD policy constraint: *string*

Cause: The Oracle Virtual Private Database (VPD) constraint had errors.

Action: See Oracle documentation.

ORA-55493: specified VPD policy constraint does not exist

Cause: An attempt was made to operate on an Oracle Virtual Private Database (VPD) constraint that did not exist.

Action: None

ORA-55494: input model set may only have a unique VPD policy

Cause: An attempt was made to execute a multi-model query where the models, as a set, did not have a unique Oracle Virtual Private Database (VPD) policy.

Action: Correct the input and try again.

ORA-55495: application table with multiple models may not be version-enabled

Cause: An attempt was made to version-enable an application table associated with multiple Resource Definition Framework (RDF) models.

Action: Correct the input and try again.

ORA-55496: unsupported versioning configuration (History/Valid time) for RDF data

Cause: An attempt was made to use an unsupported configuration for Resource Definition Framework (RDF) versioning.

Action: Correct the input and try again.

ORA-55497: RDF repository with an OLS policy may not be version-enabled

Cause: An attempt was made to version-enable a model with Oracle Label Security (OLS) policy.

Action: Versioning is not supported for OLS-enabled Resource Definition Framework (RDF) repository.

ORA-55498: VPD-enabled RDF model may not be version-enabled

Cause: An attempt was made to version-enable a model with an Oracle Virtual Private Database (VPD) policy in effect.

Action: Versioning of VPD-enabled Resource Definition Framework (RDF) models is not supported.

ORA-55500: Event to be used for different trace levels

Cause: None.

Action: Change level for desired tracing in Flashback Transaction Backout.

ORA-55501: Backing out live transaction

Cause: Flashback Transaction Backout was requested on a transaction that has not committed yet.

Action: Commit the transaction before using this feature.

ORA-55502: Specified input transaction by name has no SCN hint

Cause: The specified transaction names for Flashback Transaction Backout was missing an SCN hint.

Action: Provide an SCN hint, and guarantee that the named transactions start before the given SCN.

ORA-55503: Mining finished without seeing specified transactions

Cause: The SCN hit passed was not good. The SCN hit may have come after the start of any of the input transactions.

Action: Give a lesser and more conservative SCN hint, with greater probability of having seen the start of a transaction.

ORA-55504: Transaction conflicts in NOCASCADE mode

Cause: Transactions other than the ones specified conflicts with the specified transactions.

Action: Try using other options like NONCONFLICT_ONLY or CASCADE or NOCASCADE_FORCE.

ORA-55505: DDL done on an interesting object after mining start SCN

Cause: The Flashback Transaction Backout process encountered an interesting object which had its last DDL operation done on it after the mining start time. An interesting object is one that has been modified by either the specified transactions or any of their dependents.

Action: Specify transactions that have committed after the last DDL done on all the objects they touched.

ORA-55506: Transaction performed unsupported change

Cause: A transaction in the dependency DAG performed some action that cannot be backed out. You can back out a transaction, only if undo has been logged for all of its operations. Note some operations do not log undo, such as Insert Direct Load and

LOB changes. If you encounter a transaction that has performed any of these operations, you cannot back it out.

Action: The specified transaction cannot be backed out.

ORA-55507: Encountered mining error during Flashback Transaction Backout.

function:*string*

Cause: Mining error.

Action: None

ORA-55508: Invalid input to Flashback Transaction Backout

Cause: Null varrays passed or invalid input specified

Action: Specify properly formed varrays and valid options

ORA-55509: Creation of dependencies could not finish

Cause: One or more input transaction or any of its dependents are not committed or have been aborted after more than 1 minute of calling the backout function.

Action: Commit all the active transactions associated with this table and try again.

ORA-55510: Mining could not start

Cause: Mining could not start for the following reasons. 1. A logminer session was processing 2. The database was not mounted or not opened for read and write 3. Minimum supplemental logging was not enabled 4. Archiving was not enabled

Action: Fix the mentioned problems and try again. Note that if you enable supplemental logging now, you will not be able to remove a transaction that has committed without supplemental logging.

ORA-55511: Flashback Transaction experienced error in executing undo SQL

Cause: There was a constraint violation exception when executing in NOCASCADE_FORCE mode. Users could also get this error if appropriate supplemental logging is not enabled causing constraint dependencies to go unnoticed.

Action: Either use CASCADE or NONCONFLICT_ONLY options or add appropriate level for supplemental logging.

ORA-55512: Backing out PDML or XA-RAC transaction

Cause: One of the transactions in the dependency graph was a PDML transaction or a local transaction which is a branch of a global XA transaction, spanning multiple RAC instances. Currently flashback transaction does not support this type of transaction.

Action: None

ORA-55513: Backing out an AQ transaction

Cause: One of the transactions in the dependency graph touched an AQ table. As AQ externalizes database information, these transactions are not backed out, as the entire effects of the transaction cannot be seen from inside the database.

Action: None

ORA-55514: Backing out a DDL transaction

Cause: One of the transactions in the dependency graph is a DDL transaction and could not be backed out.

Action: None

ORA-55515: Mining sees input transaction changes without seeing transaction start

Cause: The start SCN provided was higher than the transaction start but below the transaction commit. The result was only partial changes for the given transaction.

Action: Please provide a lower scn hint to flashback transaction.

ORA-55516: Event to dump the LCR's seen by flashback transaction backout to trace file

Cause: None.

Action: Set it to 0 for real flashback transaction. If this is set, flashback transaction will not proceed.

ORA-55517: Internal use

Cause: None.

Action: None

ORA-55518: Mining across reset logs

Cause: Flashback Transaction Backout cannot work with missing changes. This error is thrown if we walk across a reset-logs branch, where we might have missed changes.

Action: If the user knows that the transaction happened in the current reset logs branch, then the SCN-hint is possibly incorrect. Provide an SCN in the current reset log branch.

ORA-55519: Supplemental logging not available for mining SCN range

Cause: Flashback Transaction cannot work if there are regions in the mining range where supplemental logging is not enabled.

Action: If you have provided a SCN/time hint which is approximate and far beyond the specified transaction start time, then readjust the SCN hint and try again. If the system has figured out the transaction start time or you are sure of the range, then the specified transaction cannot be backed out.

ORA-55520: Log record in compatibility lower than 11.0

Cause: The logical change record shows that the compatibility of the mined redo is lower than version 11.0. Flashback transaction works only on redo versions 11.0 and above.

Action: Advance the compatibility and try to back out transactions that have occurred after the compatibility increase.

ORA-55521: Transaction layer temp undo- miscellaneous debug event

ORA-55522: failed to extend temporary undo segment number *string*

Cause: A failure occurred when trying to extend the temporary undo segment.

Action: This is normally followed by another error message that caused the failure. Check the size of default the temporary tablespace.

ORA-55523: Transaction layer parallel transaction- miscellaneous debug event

ORA-55524: Too many recursive autonomous transactions for temporary undo

Cause: An attempt was made to issue too many recursive autonomous transactions causing the temporary undo segment to be out of slots.

Action: Reconnect to establish a new session and do not use deep nesting of autonomous transactions.

ORA-55525: cannot generate temporary undo in a distributed transaction

Cause: An attempt was made to generate temporary undo in a distributed transaction.

Action: Do not change temporary objects in a distributed transaction.

ORA-55526: temporary tablespace to store temporary undo not available

Cause: An attempt was made to generate temporary undo without adding temporary tablespace in the database.

Action: Add temporary tablespace prior to enabling temporary undo.

ORA-55527: Diagnostic event for external SCN-comparing errors

ORA-55528: maximum number of RECO sessions reached

Cause: To mitigate a potential denial-of-service (DoS) attack via the recoverer process (RECO), the creation of a new RECO session has been prevented, because the maximum number of RECO sessions has been reached.

Action: If there is a legitimate requirement for additional concurrent RECO sessions, adjust the values for the RECO parameters to allow more RECO sessions.

ORA-55550: Event to be used for testing ktubu extensions

Cause: None.

Action: None

ORA-55551: Trigger 4136 corruption

ORA-55552: Trigger 4137 corruption

ORA-55553: Trigger 4139 corruption

ORA-55554: Trigger 4140 corruption

ORA-55555: Trigger 4152 corruption

ORA-55556: Trigger 4143 corruption

ORA-55557: Trigger 4144 corruption

Cause: Above events used for testing corruption path

Action: None

ORA-55558: *string* is not a corrupted transaction

Cause: the given transaction is not in the corrupt list v\$corrupt_xid_list

Action: check v\$corrupt_xid_list

ORA-55559: Test proactive txn health check

ORA-55560: Test reactive txn health check

ORA-55561: Test 25027 corruption

ORA-55562: Not able to get TX enqueue, cannot force commit *string*

ORA-55563: *number* is not a valid undo segment number

Cause: the given usn is not a valid one

Action: check undo\$

ORA-55564: *string* is not a valid transaction id

Cause: the given txn is not a valid one

Action: check txn id

ORA-55565: *string* is not a valid undo segment number

Cause: the given usn is not a valid one

Action: check undo\$

ORA-55566: SQL statement issued when the database was not open for queries

Cause: Tried to access SMON time zone information when database was not open for queries.

Action: Reissue the SQL statement after the database is open for queries.

ORA-55567: The *_highthreshold_undoretention* value should be at least *string* based on the current undo retention settings.

Cause: The *_highthreshold_undoretention* value was not greater than or equal to the UNDO_RETENTION setting and the low threshold value used for tuning undo retention.

Action: Reissue the SQL statement with a higher value.

ORA-55568: The maximum query length (mql) value should be atmost *string* based on the current *_highthreshold_undoretention* setting.

Cause: The maximum query length (mql in minutes) was not less than or equal to half the *_highthreshold_undoretention* parameter setting.

Action: Reissue the SQL statement with a lower value for mql or increase the value of *_highthreshold_undoretention* parameter.

ORA-55569: The UNDO_RETENTION parameter value should be atmost *string*, the *_highthreshold_undoretention* setting.

Cause: The UNDO_RETENTION parameter value was not less than or equal to the *_highthreshold_undoretention* parameter setting.

Action: Reissue the SQL statement with a lower value for UNDO_RETENTION parameter or increase the value of *_highthreshold_undoretention* parameter.

ORA-55570: transaction layer debug trace event

ORA-55600: The table "*string*".*string*" is already enabled for Flashback Archive

Cause: The specified table is already enabled for Flashback Archive.

Action: No action required.

ORA-55601: The table "*string*".*string*" cannot be enabled for Flashback Archive

Cause: An attempt is made to enable Flashback Archive for a table which should never be enabled for Flashback Archive.

Action: Check the table name.

ORA-55602: The table "*string*".*string*" is not enabled for Flashback Archive

Cause: An attempt was made to perform Flashback Archive operation on a table on which Flashback Archive is not enabled.

Action: Check the table name.

ORA-55603: invalid flashback archive or valid time period command

Cause: An invalid flashback archive or valid time period command was specified.

Action: Check the SQL statement.

ORA-55604: Incorrect tablespace is specified

Cause: An incorrect tablespace is specified for the Flashback Archive.

Action: Check the SQL statement and verify the possible causes, 1, the tablespace that was already used by the Flashback Archive. 2, the tablespace was not used by the Flashback Archive. 3, the tablespace block size is less than 8K.

ORA-55605: Incorrect Flashback Archive is specified

Cause: An attempt was made to operate on a Flashback Archive that does not exist, or to create a Flashback Archive that already exists.

Action: Check the SQL statement.

ORA-55606: Event to modify archiver sleep time in seconds

Cause: 30 seconds is recommended as the archiver sleep time for tests.

Action: The default archiver sleep time is 300 seconds

ORA-55607: Event to enable debugging of archiver

Cause: The purpose of this event is for debugging.

Action: Attach to process specified.

ORA-55608: Default Flashback Archive does not exist

Cause: The default Flashback Archive did not exist.

Action: Create the default Flashback Archive first.

ORA-55609: Attempt to create duplicate default Flashback Archive

Cause: An attempt was made to create a default Flashback Archive while one already exists.

Action: No action required.

ORA-55610: Invalid DDL statement on history-tracked table

Cause: An attempt was made to perform certain DDL statement that is disallowed on tables that are enabled for Flashback Archive.

Action: No action required.

ORA-55611: No privilege to manage default Flashback Archive

Cause: An attempt was made to create, alter, or drop the default Flashback Archive.

Action: No action required.

ORA-55612: No privilege to manage Flashback Archive

Cause: An attempt was made to create, alter, or drop a Flashback Archive.

Action: No action required.

ORA-55613: Invalid Flashback Archive quota size

Cause: An attempt was made to specify invalid Flashback Archive quota size.

Action: Specify size in MB, GB, TB, PB, or EB.

ORA-55614: AUM needed for transactions on tracked tables

Cause: An attempt was made to execute DML on a tracked table without enabling Auto Undo Management.

Action: Disable tracking on the table or enable Auto Undo Management.

ORA-55615: Event to test archiver scheduled internal tasks

Cause: The purpose of this event is for testing.

Action: No action required.

ORA-55616: Transaction table needs Flashback Archiver processing

Cause: Too many transaction table slots were being taken by transactions on tracked tables.

Action: Wait for some amount of time before doing tracked transactions.

ORA-55617: Flashback Archive "*string*" runs out of space and tracking on "*string*" is suspended

Cause: Flashback archive tablespace quota is running out.

Action: Add tablespace or increase tablespace quota for the flashback archive.

ORA-55618: Insufficient privilege to grant Flashback Archive privilege

Cause: An attempt was made to grant Flashback Archive privilege.

Action: No action required.

ORA-55619: Invalid privilege to grant on Flashback Archive

Cause: An attempt was made to grant invalid privilege on a Flashback Archive object.

Action: Specify valid privilege.

ORA-55620: No privilege to use Flashback Archive

Cause: An attempt was made to enable Flashback Archive on a table without such privileges.

Action: No action required.

ORA-55621: User quota on tablespace "*string*" is not enough for Flashback Archive

Cause: An attempt was made to create or alter a Flashback Archive quota which is larger than the user's quota.

Action: No action required.

ORA-55622: DML, ALTER and CREATE UNIQUE INDEX operations are not allowed on table "*string*".*string*"

Cause: An attempt was made to write to or alter or create unique index on a Flashback Archive internal table.

Action: No action required. Only Oracle is allowed to perform such operations on Flashback Archive internal tables.

ORA-55623: Flashback Archive "*string*" is blocking and tracking on all tables is suspended

Cause: Flashback archive tablespace has run out of space.

Action: Add tablespace or increase tablespace quota for the flashback archive.

ORA-55624: The table "*string*"."*string*" cannot be enabled for Flashback Archive at this point

Cause: An attempt was made to enable Flashback Archive again on a table which was just disabled.

Action: Try again later.

ORA-55625: Cannot grant Flashback Archive privilege to a role

Cause: An attempt was made to grant or revoke Flashback Archive privilege to a role.

Action: No action required.

ORA-55626: Cannot remove the Flashback Archive's primary tablespace

Cause: An attempt was made to remove the primary tablespace of the Flashback Archive.

Action: No action required.

ORA-55627: Flashback Archive tablespace must be ASSM tablespace

Cause: An attempt was made to add a tablespace that was not an ASSM tablespace.

Action: Add tablespace that is created with segment space management auto.

ORA-55628: Flashback Archive supports Oracle 11g or higher

Cause: An attempt was made to create a Flashback Archive with incorrect compatible mode or without auto undo management.

Action: Use compatible mode equal to 11.0 or higher, and use auto undo management.

ORA-55629: Event to test Flashback Archiver internal management tasks

Cause: The purpose of this event is for testing.

Action: No action required.

ORA-55630: Flashback data archive cannot be enabled on a nested table, temporary table, external table, materialized view, AQ table, clustered table, or non-table object.

Cause: An attempt was made to enable flashback data archive on an object which is not supported by flashback data archive.

Action: Do not use the FLASHBACK ARCHIVE clause for this object.

ORA-55631: Table has columns with data types that are not supported by Flashback Data Archive

Cause: An attempt was made to add a column of data type that is not supported by Flashback Data Archive. Or, the table on which Flashback Data Archive is being enabled contains column(s) with data types not supported by Flashback Data Archive.

Action: Do not use FLASHBACK ARCHIVE clause for this object. If adding column, do not use LONG or Nested Table column data type.

ORA-55632: Tablespace has Flashback Archive tables

Cause: An attempt was made to remove a tablespace that has Flashback Archive tables.

Action: No action required.

ORA-55633: Cannot do DDL on Flashback Data Archive enabled table

Cause: An attempt was made to do DDL on tracked tables while one DDL is running.

Action: Retry the DDL at a later time.

ORA-55634: Unable to disassociate or re-associate Flashback Data Archive table "*string*".*string*"

Cause: Either an incorrect table name was used or an exclusive lock on the table could not be acquired.

Action: Check the table name and release locks on the table.

ORA-55635: Flashback Data Archive enabled table "*string*".*string*" is disassociated

Cause: An attempt was made to perform operation on a Flashback Data Archive enabled table that is currently disassociated for DDL.

Action: Retry the operation at a later time.

ORA-55636: Flashback Data Archive enabled table "*string*".*string*" has different definition from its history table

Cause: The Flashback Data Archive enabled table has different table definition from its history table.

Action: Fix the table definition.

ORA-55637: Flashback Data Archive enabled table "*string*".*string*" is not in the correct compliance mode for this operation

Cause: An attempt was made to perform disassociation operation on a Flashback Data Archive enabled table that is in compliance mode. Or, DDL are not supported on tables in noncompliance mode.

Action: Disable compliance mode before retrying the disassociation operation.

ORA-55638: DDL operations on Flashback Data Archive-enabled table are not allowed at this point

Cause: Flashback Data Archive could not acquire resources to complete the operation on Oracle RAC.

Action: Retry the DDL at a later time.

ORA-55639: Flashback Data Archive internal SQL error

Cause: Flashback Data Archive encountered internal SQL error.

Action: No action required.

ORA-55640: Insufficient privilege to perform the Flashback Data Archive operation

Cause: An attempt was made to disassociate tables enabled for Flashback Data Archive without the required privilege.

Action: No action required.

ORA-55641: Cannot drop tablespace used by Flashback Data Archive

Cause: An attempt was made to drop a Flashback Data Archive tablespace.

Action: Remove the tablespace from Flashback Data Archive before retrying the operation.

ORA-55642: Table has column names that are reserved by Flashback Data Archive

Cause: The table on which Flashback Data Archive is being enabled contains column(s) with names that are reserved by Flashback Data Archive.

Action: Rename column name before retry.

ORA-55643: cannot combine Flashback Data Archive operation with other operations

Cause: An attempt was made to combine the Flashback Data Archive operation with other ALTER TABLE operations.

Action: Ensure that Flashback Data Archive is the sole operation specified in ALTER TABLE statement.

ORA-55644: event to enable system column ORA_XID testing

Cause: The purpose of this event was for testing.

Action: No action required.

ORA-55645: Valid time period cannot be enabled on a nested table, temporary table, external table, materialized view, AQ table, clustered table, or non-table object.

Cause: An attempt was made to enable a valid time period on an object which is not supported by valid time period.

Action: Do not use a valid time period for this object.

ORA-55646: application already enabled for flashback archive

Cause: An attempt was made to enable flashback archive on an application for a second time.

Action: No need to enable flashback archive on this application.

ORA-55647: application not previously enabled for flashback archive

Cause: An attempt was made to disable flashback archive on an application that has not been enabled for flashback archive.

Action: No need to disable flashback archive on this application.

ORA-55648: table already added to application

Cause: An attempt was made to add a table to an application for a second time.

Action: Do not add a table to an application more than once.

ORA-55649: table not previously added to application

Cause: An attempt was made to remove a table that has not been added to an application.

Action: No need to remove table from application.

ORA-55650: application not registered for flashback archive

Cause: An attempt was made to access an application that has not been registered for flashback archive.

Action: Register the application before accessing it.

ORA-55651: application already registered for flashback archive

Cause: An attempt was made to register an application for flashback archive for a second time.

Action: No need to register this application for flashback archive.

ORA-55652: application already locked down

Cause: An attempt was made to lock down an application for a second time.

Action: No need to lock down this application.

ORA-55653: application not previously locked down

Cause: An attempt was made to unlock an application that was not previously locked down.

Action: No need to unlock this application.

ORA-55654: too many columns in the base table

Cause: An attempt was made to enable flashback archive on a base table with so many columns that the history table has no room for metadata columns.

Action: Have fewer columns in the base table.

ORA-55710: Unable to alter system parameter GLOBAL_TXN_PROCESSES at this time

Cause: The system was in the process of adjusting the number of global transaction background processes.

Action: Retry the operation at a later time.

ORA-55711: Unable to bind clusterwide global transactions to compatible undo

Cause: Undo tablespace was not onlined for automatic undo management.

Action: Create undo tablespace if it has not been created.

ORA-55712: XA transactions on RAC are not supported with GLOBAL_TXN_PROCESSES set to 0

Cause: The initialization parameter GLOBAL_TXN_PROCESSES was set to 0.

Action: Set the initialization parameter GLOBAL_TXN_PROCESSES to a value greater than 0.

ORA-55713: GLOBAL_TXN_PROCESSES cannot be set to 0 at runtime

Cause: An attempt was made to set initialization parameter GLOBAL_TXN_PROCESSES to 0 at runtime.

Action: Set the initialization parameter GLOBAL_TXN_PROCESSES to 0 before starting RAC instance to disable GTX background processes. Note that XA transactions are not supported on RAC database when GTX background processes are disabled.

ORA-55714: savepoint '*string*' disabled with interleaved changes across Oracle RAC instances

Cause: After the savepoints were established, interleaved changes were made across Oracle RAC instances within the clusterwide global transaction.

Action: Do not make interleaved changes across Oracle RAC instances after savepoints are established.

ORA-55800: NLS errors while processing Oracle number

Cause: Error occurred when trying to convert Oracle number to an integer.

Action: Check the input parameters.

ORA-55801: Event to control CR activity

Cause: The bit values that we consider. 0x1: Remove fix for bug 3514835 which could potentially throw more 8177 errors We have conservatively blocked some serializability errors, where there could potentially be a dependency between a service transaction in an index and forward going transaction.

Action: Set event 55801 to 1 to disable the bug fix, thereby reducing 8177 error, although it might cause some internal errors instead.

ORA-55903: Secure file log feature unimplemented: *string*

Cause: This feature has not been implemented yet.

Action: None

ORA-55904: Secure file log name too big

Cause: The specified log name was bigger than the maximum identifier supported in Oracle.

Action: Use a smaller log name.

ORA-55905: Secure file log *string* exists with same name

Cause: Create operation was attempted on an existing secure file log.

Action: Destroy the log with the specified name and retry.

ORA-55906: Secure file log [id: *string* name: *string*] does not exist

Cause: An open operation for read or write was attempted on a nonexistent log.

Action: Create the log and retry.

ORA-55907: Tablespace *string* does not exist for secure file log

Cause: The specified tablespace to keep the swap space for the secure file log does not exist.

Action: Retry with a different tablespace or create one with the specified name.

ORA-55908: Tablespace *string* does not support secure files

Cause: Specified tablespace to keep secure file logs did not support secure files.

Action: Provide a tablespace that supports secure files, or remove secure file options in the create statement.

ORA-55909: Create mode invalid: *string*

Cause: The mode to create the log was not supported, or there was a discrepancy between the in-memory log creation and the persistent definition already present.

Action: Retry by correcting the problem.

ORA-55910: Swap table *string* does not exist

Cause: The dictionary-provided swap name did not exist. This could be caused by an external dropping of the swap table without going through the secure file log API's. This means that all of the persistent part of the log was lost.

Action: Destroy the specified log and recreate from start.

ORA-55911: Log with id: *string* is being destroyed

Cause: A write, read or open operation was being tried on a log that was in the process of being destroyed.

Action: None

ORA-55912: Invalid thread Id provided to write to a threaded log

Cause: A valid thread Id was not provided in order to write to a threaded log. Thread Ids are used to partially order messages to the log from different writing processes.

Action: Provide a logical thread Id or use a nonthreaded log.

ORA-55913: Valid thread Id provided to a nonthreaded log

Cause: A valid logical thread Id was provided for a nonthreaded log. A partial order will not be maintained in a nonthreaded log and messages could be output in random order.

Action: Provide a null thread-id for a non-threaded log, or create a threaded log to do what is required.

ORA-55914: An invalid descriptor was passed to a log operation. Reason: *string*

Cause: An invalid or uninitialized descriptor was found while doing a secure file log read or write.

Action: Provide a properly initialized descriptor created by log open.

ORA-55915: Invalid option: *string*

Cause: An invalid option was passed for a log operation.

Action: Check the cause and retry.

ORA-55916: Message too long

Cause: The log is opened with split messages across buffers set to false. However, the message size is bigger than what can be fit in one buffer.

Action: Write the message in smaller segments or allow split messages while creating the log.

ORA-55917: Table flush I/O failed for log ID: *string* bucket ID: *string*

Cause: Table flush I/O failed. The most common cause for this could be out-of-space errors in the tablespace.

Action: Resolve the underlying problem and retry.

ORA-55918: Required buffer size too big

Cause: The buffer size was greater than 16K. Secure file logging supports buffer sizes of 4K, 8K and 16K. The only reason a large buffer size is required is if split message is set to false, and the potential message is large.

Action: Request a smaller buffer size, or try to use smaller message segments.

ORA-55919: destroying, purging or partitioning log while writers or readers have open descriptors

Cause: The method to destroy, purge or partition log was called and requested to wait for open descriptors. After waiting for 5 minutes, an error is returned if writers or readers still exist.

Action: Close all open descriptors or call destroylog, purgelog or createpartition with the option of not waiting for open descriptors.

ORA-55920: Buffer sequence is too low

Cause: The buffer sequence was too low or rows were removed from the swap table.

Action: Try to read from a higher sequence. Note, that the data in buffer with this sequence has been lost.

ORA-55921: Start point provided is incorrect.

Cause: The provided start point, from which to begin reading, was incorrect.

Action: Provide a minimum SCN, timestamp or sequence or specify that reading should begin with the oldest data available.

ORA-55922: PL/SQL API error: *string*

Cause: PL/SQL callbacks had a problem

Action: Consider the problem string and act appropriately

ORA-55923: PL/SQL maximum number of array elements exceeded

Cause: Number of elements in an array write exceeded the maximum limit 100 message segments in one write.

Action: Try a write buffered with multi-segment write or reduce the element count in the array write.

ORA-55924: PL/SQL encountered a NULL element in the array

Cause: A null element was encountered during an array write.

Action: Provide non-null VARCHAR2 or RAW elements as an array element.

ORA-55925: write end called without proper write start

Cause: An attempt was made to end write without a corresponding start write.

Action: Write starts and ends must be called in the right order for writing piecewise or use a write whole option which does not need an explicit start or end.

ORA-55926: Closing log descriptor before calling write end

Cause: An attempt was made to close the log descriptor before the corresponding write end.

Action: Write end should be called before closing the log write descriptor

ORA-55927: No tablespace found for the log

Cause: No suitable tablespace was found for the log.

Action: Provide a tablespace and retry log creation.

ORA-55928: Duplicate tablespace being added

Cause: The tablespace being added for the named log already existed in the list of tablespaces available for this log.

Action: The user should provide a different tablespace for addition to the list of available tablespaces for the named log.

ORA-55929: Creating new partition when current partition is empty

Cause: An attempt was made to create a new partition for the named log when the current partition is empty.

Action: Do not attempt to create a new partition when the current partition is still empty.

ORA-55930: Version of log, identified by (logname, instanceid), does not exist

Cause: Version of log, identified by (logname, instanceid), did not exist.

Action: Provide the correct (logname, instanceid) input.

ORA-55931: The highest partition of log, identified by (logname, instanceid), does not exist

Cause: The highest partition of log, identified by (logname, instanceid), did not exist.

Action: Provide the correct (logname, instanceid) input.

ORA-55932: No SGA memory available for buffers

Cause: An attempt was made to create a secure file log with no available memory for buffers.

Action: Set SECUREFILE_LOG_SHARED_POOL_SIZE to allocate adequate memory.

ORA-55933: invalid log owner provided

Cause: The user provided did not own the secure file log under consideration.

Action: Provide the correct owner of the secure file log.

ORA-55934: invalid user ID provided

Cause: The specified user ID did not exist in the database.

Action: Provide a valid database user ID.

ORA-55935: invalid user name provided

Cause: The specified user name did not exist in the database.

Action: Provide a valid database user name.

ORA-55936: user ID mismatch

Cause: The user ID provided did not own the secure file log under consideration.

Action: Provide the correct owner of the secure file log.

ORA-55937: storage already associated with the secure file log

Cause: An attempt was made to associate storage with a secure file log which already has storage.

Action: Do not attempt to associate storage with a secure file log which already has associated storage.

ORA-55938: no flush callback associated with the secure file log

Cause: Flush callback was not associated with the secure file log under consideration.

Action: The secure file log needs to be re-created with valid flush callback.

ORA-55939: database is not open for attempted operation

Cause: The attempted operation failed because the database is not yet open.

Action: Resubmit the operation when the database opens.

ORA-55940: An error occurred during execution of ktlIngestExternData.

Cause: An error occurred during execution of ktlIngestExternData.

Action: See the message associated with the error for remedial action.

ORA-55941: DML and DDL operations are not allowed on table "string"."string"

Cause: A DML or DDL operation was attempted on a Common Logging Infrastructure internal table.

Action: No action required. Only Oracle is allowed to perform such operations on Common Logging Infrastructure internal tables.

ORA-55942: read not started for read descriptor of the secure file log

Cause: An attempt was made to get a readsavpoint before ktliRead successfully returned a message, using the secure file log descriptor under consideration.

Action: Execute a ktliRead, which returns a message using the secure file log descriptor, before attempting to get a readsavpoint.

ORA-55943: unsupported verison in readsavpoint of the secure file log

Cause: An attempt was made to open a secure file log with a readsavpoint which had unsupported version.

Action: Contact Oracle Support Services.

ORA-55944: External flush I/O failed for log ID: *string* bucket ID: *string*

Cause: External flush I/O failed.

Action: Resolve the underlying problem and retry.

ORA-55945: tablespace name not specified

Cause: The tablespace needed to keep the swap space for the secure file log has not been provided by the user.

Action: Retry the operation with the appropriate tablespace name.

ORA-55946: operation failed due to CrossInstanceCall failure - *string string*

Cause: The operation failed due to a CrossInstanceCall failure. Check the trace files on remote instances for the underlying problem.

Action: Resolve the underlying problem and retry.

ORA-55947: message too long

Cause: The message length was greater than what the Secure file log supports.

Action: Provide the message with a length that the Secure file log supports and retry the operation.

ORA-55948: flush threshold is invalid

Cause: The flush threshold specified for the secure file log is invalid.

Action: The flush threshold for secure file log must be an integer greater than or equal to 1 and less than or equal to 100.

ORA-55949: swap table of secure file log (*string, string*) does not exist

Cause: The swap table of secure file log did not exist. This could be caused by an external dropping of the swap table without going through the secure file log API's. This means that all of the persistent parts of the log were lost.

Action: Destroy the specified log and re-create it from the start.

ORA-55950: storage not associated with the secure file log [name: *string*]

Cause: An attempt was made to import data from an external source into a secure file log which is not associated with tablespace storage.

Action: Associate tablespace storage with a secure file log before importing data from an external source.

ORA-56500: DRCP: Pool not found

Cause: The pool name passed was either null or an invalid pool name.

Action: Input a valid pool name.

ORA-56501: DRCP: Pool startup failed

Cause: The connection pool failed to start up.

Action: Check logs for details.

ORA-56502: DRCP: Pool is inactive

Cause: The operation is only supported on an active pool.

Action: Start the pool.

ORA-56503: DRCP: Pool is active

Cause: The operation is only supported on an inactive pool.

Action: Shutdown the pool.

ORA-56504: DRCP: Invalid pool configuration parameter name

Cause: The configuration parameter name is null or invalid input.

Action: Input a valid configuration parameter name.

ORA-56505: DRCP: Invalid pool configuration parameter value

Cause: The configuration parameter value is null or invalid input.

Action: Input a valid configuration parameter value.

ORA-56506: DRCP: Pool shutdown failed

Cause: Connection pool failed to shutdown.

Action: Check logs for details.

ORA-56507: DRCP: Pool alter configuration failed

Cause: Connection pool failed to configure pool.

Action: Check logs for details.

ORA-56508: DRCP: Pool startup failed

Cause: Connection Broker failed to startup the pool.

Action: Check logs for details.

ORA-56509: DRCP: Pool shutdown failed

Cause: Connection Broker failed to shutdown the pool.

Action: Check logs for details.

ORA-56510: DRCP: Pool alter configuration failed

Cause: Connection Broker failed to configure the pool.

Action: Check logs for details. For the NUM_CBROK and MAXCONN_CBROK values, if the initialization parameter CONNECTION_BROKERS contains a (TYPE=POOLED) entry, then use the parameter instead to update these values.

ORA-56511: DRCP: Cross instance synchronization failed

Cause: Publish message to all RAC instances failed.

Action: Check logs for details.

ORA-56512: DRCP: Failed to synchronize RAC instances [*string*]

Cause: Some of the RAC instances were not synchronized.

Action: Perform the same operations on all the failed instances.

ORA-56513: DRCP: Cannot perform requested operation using pooled connection

Cause: This operation was not supported using connections from a pool.

Action: Use a regular connection to perform this operation.

ORA-56514: DRCP: invalid value for maximum number of connections to Connection broker

Cause: The value passed exceeded the maximum allowed.

Action: No action required. The maximum number of connections was automatically set to the maximum allowed value.

ORA-56515: DRCP: Operation not allowed from a Pluggable Database

Cause: The operation was not allowed in Database Resident Connection Pooling when connected to a Pluggable Database.

Action: Connect to the root database and retry the same operation.

ORA-56600: DRCP: Illegal call [*string*]

Cause: An illegal OCI function call was issued.

Action: Check the documentation for Database Resident Connection Pool (DRCP) usage.

ORA-56601: DRCP: Illegal connection class

Cause: Wrong value for connection class was given.

Action: Check the documentation for Database Resident connection pool usage.

ORA-56602: DRCP: Illegal purity

Cause: Wrong value for purity was provided.

Action: Check the documentation for Database Resident connection pool usage.

ORA-56603: DRCP: Internal error

Cause: Malformed input values.

Action: Input well-formed values.

ORA-56604: DRCP: Length[*string*] for *string* exceeded the MAX allowed

Cause: Length exceeded MAX for the value.

Action: Use a value within the MAX allowed.

ORA-56605: DRCP: Session switching and migration not allowed

Cause: Application tried to switch or migrate session across connections.

Action: This usage is irrelevant in the Database Resident connection pooling context and is not supported. Release existing session.

ORA-56606: DRCP: Client version does not support the feature

Cause: The client version is lower than 11g.

Action: Upgrade to a higher client version or turn off (SERVER=POOLED) in the connect string.

ORA-56607: DRCP: Connection is already authenticated

Cause: Attempt to reauthenticate the connection which is authenticated.

Action: Logoff the connection before reauthenticating.

ORA-56608: DRCP: Server Group feature is not supported

Cause: Server Group attribute was set on the server handle, connected to a Database Resident connection pool.

Action: Do not set Server Group attribute on server handles while using Database Resident connection pool.

ORA-56609: Usage not supported with DRCP

Cause: This usage was not supported on a DRCP connection.

Action: Use a dedicated connection to perform this task.

ORA-56700: plan *string* is a subplan and SUB_PLAN attribute cannot be modified

Cause: An attempt was made to modify the SUB_PLAN attribute of the specified plan.

Action: Do not attempt to modify the SUB_PLAN attribute.

ORA-56701: INTERNAL_USE attribute of consumer group *string* cannot be modified

Cause: An attempt was made to modify the INTERNAL_USE attribute of the specified consumer group.

Action: Do not attempt to modify the INTERNAL_USE attribute.

ORA-56702: consumer group *string* is for internal use only and cannot be a switch target

Cause: An attempt was made to specify an INTERNAL_USE consumer group as a switch target.

Action: Do not attempt to switch to INTERNAL_USE consumer groups.

ORA-56703: VKTM process died unexpectedly

Cause: An explicit kill or internal error caused the death of VKTM background process.

Action: Restart the instance.

ORA-56704: EXPLICIT consumer group mapping priority must be set to 1

Cause: An attempt was made to set the EXPLICIT mapping priority to a value other than 1.

Action: Set the mapping priorities to unique integers within the documented range with the EXPLICIT priority set to 1.

ORA-56705: I/O calibration already in progress

Cause: An attempt was made to run a second instance of I/O Calibration

Action: Wait until the first I/O calibration run is complete; then, retry the operation.

ORA-56706: The specified Resource Manager plan is a subplan and cannot be set as a top-level plan

Cause: An attempt was made to set a subplan as a top-level plan.

Action: Do not attempt to set subplans as top-level plans.

ORA-56707: INTERNAL QUIESCE plan cannot be specified as a top-level Resource Manager plan

Cause: An attempt was made to specify INTERNAL QUIESCE as a top-level Resource Manager plan.

Action: Do not attempt to set INTERNAL_QUIESCE as a Resource Manager plan.

ORA-56708: Could not find any datafiles with asynchronous i/o capability

Cause: There are no datafiles which are asynchronous I/O capable.

Action: Make sure asynchronous i/o is permitted to datafiles.

ORA-56709: timed_statistics set to FALSE

Cause: timed_statistics parameter in database is set to FALSE. Needs to be enabled for calibration.

Action: set timed_statistics=TRUE in init.ora or "alter system set timed_statistics=TRUE"

ORA-56710: DBRM process died unexpectedly

Cause: An explicit kill or internal error caused the death of the DBRM background process.

Action: Restart the instance.

ORA-56711: string is an invalid string argument

Cause: The named argument is invalid.

Action: Specify a valid argument for this procedure.

ORA-56713: insufficient Resource Manager privileges

Cause: An attempt was made to execute administration procedures from the DBMS_RESOURCE_MANAGER package without the appropriate privilege. The procedure requires the Resource Manager system privilege.

Action: Ask the database administrator to grant the Resource Manager system privilege to the user.

ORA-56714: Plan name string exceeds the maximum length allowed

Cause: Plan name is greater than 30 characters long.

Action: Do not exceed 30 characters when naming a resource plan.

ORA-56715: string resource plan contains a reserved word

Cause: The specified plan name is prefixed with a reserved prefix such as FORCE or SCHED.

Action: Do not prefix resource plan name with FORCE or SCHED.

ORA-56716: Category string does not exist

Cause: A non-existent category was specified as an argument to a procedure in the package, DBMS_RESOURCE_MANAGER.

Action: Specify an existing category name or create a new category with this name.

ORA-56717: switch directives are set without a corresponding SWITCH_GROUP

Cause: The plan directive contained a switch directive (SWITCH_TIME, SWITCH_IO_REQS, or SWITCH_IO_MEGABYTES) without a SWITCH_GROUP.

Action: Specify a SWITCH_GROUP parameter in the plan directive.

ORA-56718: Timeout occurred while setting resource plan

Cause: A timeout occurred while waiting for one or more RAC instances to set the resource plan.

Action: Since the resource plan may have actually been set successfully, first check the current resource plan for each instance by querying gv\$src_plan. If the resource plan was not successfully set on all instances, then retry the operation.

ORA-56719: Error spawning or communicating with calibration slave

Cause: An error occurred in calibration slave process - Calibration process aborted.

Action: Review trace files for errors.

ORA-56720: I/O data limit exceeded - call aborted

Cause: The Resource Manager SWITCH_IO_MEGABYTES limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

ORA-56721: I/O data limit exceeded - session terminated

Cause: The Resource Manager SWITCH_IO_MEGABYTES limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

ORA-56722: I/O request limit exceeded - call aborted

Cause: The Resource Manager SWITCH_IO_REQS limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

ORA-56723: I/O request limit exceeded - session terminated

Cause: The Resource Manager SWITCH_IO_REQS limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

ORA-56724: ksfd calibration tracing

ORA-56725: Could not spawn additional calibration slaves

Cause: An error occurred when spawning calibration slave process - Calibration process aborted.

Action: Check OS resources required for spawning processes

ORA-56726: Category *string* is referred to by a consumer group and cannot be deleted

Cause: An attempt was made to delete a category that is referred to by a consumer group.

Action: Modify or remove all consumer groups that use this category and then retry.

ORA-56727: Orion (*string*) must be invoked using its full, absolute path

Cause: Orion is spawning a child process and cannot determine the location of the executable.

Action: Use the full, absolute path for Orion.

ORA-56728: SQL blocks cannot be nested

Cause: An attempt was made to start an SQL block using DBMS_RESOURCE_MANAGER.BEGIN_SQL_BLOCK() while already inside an SQL block.

Action: Close the existing SQL block using DBMS_RESOURCE_MANAGER.BEGIN_SQL_BLOCK() or remove this call.

ORA-56729: Failed to bind the database instance to processor group *string*

Cause: Binding the database instance to the processor group specified by the PROCESSOR_GROUP_NAME parameter failed.

Action: Set the PROCESSOR_GROUP_NAME to a valid, configured processor group and restart the database instance.

ORA-56730: pluggable database plan *string* may not specify parameter *string*

Cause: Resource plans inside a pluggable database attempted to use the following parameters: MGMT_P2, MGMT_P3, MGMT_P4, MGMT_P5, MGMT_P6, MGMT_P7, MGMT_P8

Action: Remove these parameters and try again.

ORA-56731: pluggable database plan *string* may not use subplans

Cause: A plan was specified as the argument to the GROUP_OR_SUBPLAN parameter. Resource plans inside a pluggable database may not specify a plan for the GROUP_OR_SUBPLAN parameter.

Action: Specify only consumer groups for the GROUP_OR_SUBPLAN parameter.

ORA-56732: value *string* for *string* is outside valid range of 0 to 4294967295

Cause: An invalid value was specified for a plan directive parameter.

Action: Specify a value between 0 and 4294967295, inclusive.

ORA-56733: logical I/O limit exceeded - call aborted

Cause: The Resource Manager SWITCH_IO_LOGICAL limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

ORA-56734: logical I/O limit exceeded - session terminated

Cause: The Resource Manager SWITCH_IO_LOGICAL limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

ORA-56735: elapsed time limit exceeded - call aborted

Cause: The Resource Manager SWITCH_ELAPSED_TIME limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

ORA-56736: elapsed time limit exceeded - session terminated

Cause: The Resource Manager SWITCH_ELAPSED_TIME limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

ORA-56737: SWITCH_GROUP is set without a corresponding switch directive

Cause: The plan directive specified a value for SWITCH_GROUP without specifying one of the following switch directives: - SWITCH_TIME - SWITCH_IO_REQS - SWITCH_IO_MEGABYTES - SWITCH_ELAPSED_TIME - SWITCH_IO_LOGICAL

Action: Specify a switch directive or remove SWITCH_GROUP directive.

ORA-56738: CDB resource plan *string* has more than *string* profile directives.

Cause: An attempt was made to create or update the specified multitenant container database (CDB) resource plan to use more than the supported number of profile directives.

Action: Remove the directives for profiles that are not active on this database.

ORA-56800: DSKM process died unexpectedly

Cause: An explicit kill or internal error caused the death of the DSKM background process.

Action: Restart the instance.

ORA-56840: LIBCELL API error in Master Diskmon

Cause: A LIBCELL operation in Master Diskmon failed.

Action: Look in the `$ORA_CRS_HOME/log/hostname/diskmon/diskmon.log` file for additional error information.

ORA-56841: Master Diskmon cannot connect to a CELL

Cause: A LIBCELL operation from Master Diskmon failed to create a network connection to the target CELL.

Action: Look in the `$ORA_CRS_HOME/log/hostname/diskmon/diskmon.log` file for additional error information.

ORA-56842: LIBCELL operation network error in Master Diskmon

Cause: A LIBCELL operation in Master Diskmon failed because of a network error.

Action: Look in the `$ORA_CRS_HOME/log/hostname/diskmon/diskmon.log` file for additional error information.

ORA-56843: LIBCELL SKGXP error in Master Diskmon

Cause: A LIBCELL operation from Master Diskmon failed because of an SKGXP network layer error.

Action: Look in the `$ORA_CRS_HOME/log/hostname/diskmon/diskmon.log` file for additional error information.

ORA-56864: Master Diskmon "*stringstring*" operation cannot complete because of a LIBCELL network error

Cause: A LIBCELL operation between Master Diskmon and a CELL failed because of a network error.

Action: Look in the `$ORA_CRS_HOME/log/hostname/diskmon/diskmon.log` file for additional error information.

ORA-56865: Invalid IP address in CELLINIT.ORA

Cause: One or more of the specified IP addresses in CELLINIT.ORA is not valid.

Action: Check that all IP addresses in CELLINIT.ORA are valid.

ORA-56866: No IP parameter

Cause: No IP address is set in CELLINIT.ORA.

Action: Check that one or more valid IP addresses are set in CELLINIT.ORA.

ORA-56867: Cannot connect to Master Diskmon on pipe "*string*"

Cause: Master Diskmon was not running or the listening pipe was deleted.

Action: Look at the \$ORA_CRS_HOME/log/*hostname*/diskmon/diskmon.log, \$ORA_CRS_HOME/log/*hostname*/hasmsgs.log and \$ORA_CRS_HOME/log/*hostname*/alerthostname.log for additional error information.

ORA-56868: Duplicate IP address in CELLINIT.ORA

Cause: One or more of the specified IP addresses in CELLINIT.ORA was repeated.

Action: Check that all IP addresses in CELLINIT.ORA are unique.

ORA-56870: Attempt to register dead cell with Master Diskmon

Cause: An attempt was made by a process to register a cell that is known to be down.

Action: None

ORA-56900: bind variable is not supported inside pivot | unpivot operation

Cause: Attempted to use bind variables inside pivot | unpivot operation.

Action: This is not supported.

ORA-56901: non-constant expression is not allowed for pivot | unpivot values

Cause: Attempted to use non-constant expression for pivot | unpivot values.

Action: Use constants for pivot | unpivot values.

ORA-56902: expect aggregate function inside pivot operation

Cause: Attempted to use non-aggregate expression inside pivot operation.

Action: Use aggregate function.

ORA-56903: sys_op_pivot function is not allowed here

Cause: invalid use of sys_op_pivot function.

Action: Remove sys_op_pivot function.

ORA-56904: pivot value must have datatype that is convertible to pivot column

Cause: Datatype of pivot value is not convertible to the datatype of pivot column.

Action: Check and correct pivot value.

ORA-56905: pivot | unpivot operations are not supported on lateral views

Cause: An attempt was made to do a pivot or unpivot operation on a lateral view.

Action: This is not supported.

ORA-56920: a prepare or upgrade window or an on-demand or datapump-job loading of a secondary time zone data file is in an active state

Cause: A prepare or upgrade window was started or an on-demand or datapump-job loading of a secondary time zone data file was done.

Action: Make sure there is no active prepare or upgrade window and no active on-demand or datapump-job loading of a secondary time zone data file.

ORA-56921: invalid time zone version

Cause: Invalid time zone version passed.

Action: Check and correct the time zone version.

ORA-56922: Starting a prepare window failed

Cause: Error(s) occurred when starting a prepare window.

Action: Check alert or trace file for error(s).

ORA-56923: database properties related to time zone version are not set up properly

Cause: There were no database properties related to time zone version in dictionary table sys.props\$.

Action: Contact Oracle Support Services.

ORA-56924: prepare window does not exist

Cause: There was no active prepare window.

Action: None

ORA-56925: Ending a prepare window failed

Cause: Error(s) occurred when ending a prepare window.

Action: Check alert or trace file for error(s).

ORA-56926: database must be in UPGRADE mode in order to start an upgrade window

Cause: Database was not in UPGRADE mode.

Action: Restart database in UPGRADE mode.

ORA-56927: Starting an upgrade window failed

Cause: Error(s) occurred when starting an upgrade window.

Action: Check alert or trace file for error(s).

ORA-56928: upgrade window does not exist

Cause: There was no active upgrade window.

Action: None

ORA-56929: Ending an upgrade window failed

Cause: Ending an upgrade window failed or there were tables containing TSTZ data which have not been upgraded.

Action: Check alert or trace file for error(s) or complete upgrading of tables containing TSTZ data.

ORA-56930: database must be restarted before performing upgrade of user tables

Cause: Database was not restarted after starting an upgrade window.

Action: Restart database.

ORA-56931: inconsistent DST patching state found

Cause: DST patching was in an inconsistent state.

Action: Contact Oracle Support Services.

ORA-56932: "string"."string" does not exist

Cause: Specified table name was invalid.

Action: Check the existence of the specified table name.

ORA-56933: Table creation failed

Cause: Error(s) occurred when creating the table.

Action: Check the error.

ORA-56934: database property DST_UPGRADE_STATE for datapump job is in an inconsistent state

Cause: Database property DST_UPGRADE_STATE was not recorded correctly.

Action: Check the alert file.

ORA-56935: existing datapump jobs are using a different version of time zone data file

Cause: An attempt was made from a datapump job to request a different version of time zone data file from the one used by existing datapump jobs.

Action: Wait until existing datapump jobs unload the secondary time zone data file.

ORA-56936: datapump jobs are utilizing secondary time zone data file

Cause: An on-demand loading of secondary time zone data file was requested when there was a secondary time zone data file already loaded in the database utilized by existing datapump jobs.

Action: Wait until existing datapump jobs unload the secondary time zone data file.

ORA-56937: failed to load the secondary time zone data file

Cause: Attempt to load the secondary timezone data file failed.

Action: Check alert or trace files for error(s).

ORA-56938: no secondary time zone data file being loaded by on-demand or a datapump job

Cause: There was no secondary timezone data file being loaded by on-demand or a datapump job.

Action: None

ORA-56939: failed to unload the secondary time zone data file

Cause: Attempt to unload the secondary timezone data file failed.

Action: Check alert or trace files for error(s).

ORA-56950: Invalid value for incident identifier

Cause: Invalid incident identifier argument passed.

Action: Check and correct the identifier

ORA-56971: Invalid set of export options

Cause: The options specified are inconsistent

Action: Check and a consistent set of option parameters

ORA-56972: referenced file not found

Cause: One of the file specified in the test case package is missing

Action: rebuild the SQL test case or make sure that all the referenced files are readable and located in the same directory as the SQL test case manifest.

ORA-56973: import options do not match export options

Cause: The import options specified do not match the export options

Action: Check that import is being invoked with the same values for options like export environment, export data and export metadata

ORA-56974: Invalid set of import options

Cause: The import options specified are inconsistent

Action: Check that import options are consistent and have valid values

ORA-57000 to ORA-57000

ORA-57000: TimesTen IMDB error: *string*

Cause: An error occurred during a TimesTen operation.

Action: Look up the error code in the TimesTen error documentation to diagnose.

ORA-60001 to ORA-65535

ORA-60001: adding (*string*) blocks to save undo segment in tablespace *string* with MAXSIZE (*string*)

Cause: Save undo for the offline tablespace at segment MAXSIZE.

Action: Check the storage parameters for the system tablespace. The tablespace needs to be brought back online so the undo can be applied.

ORA-60002: adding (*string*) blocks to temporary segment in tablespace *string* with MAXSIZE (*string*)

Cause: Extending a temporary segment violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60003: adding (*string*) blocks to table *string.string* partition *string* with MAXSIZE (*string*)

Cause: Extending a table partition violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60004: adding (*string*) blocks to table *string.string* with MAXSIZE (*string*)

Cause: Extending a table violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60005: adding (*string*) blocks to cluster *string.string* with MAXSIZE (*string*)

Cause: Extending a cluster violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60006: adding (*string*) blocks to index *string.string* partition *string* with MAXSIZE (*string*)

Cause: Extending an index partition violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60007: adding (*string*) blocks to index *string.string* subpartition *string* with MAXSIZE (*string*)

Cause: Extending an index subpartition violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60008: adding (*string*) blocks to index *string.string* with MAXSIZE (*string*)

Cause: Extending an index violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60009: adding (*string*) blocks to LOB segment *string.string* partition *string* with MAXSIZE (*string*)

Cause: Extending a LOB segment violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60010: adding (*string*) blocks to LOB segment *string.string* with MAXSIZE (*string*)

Cause: Extending a LOB segment violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60011: adding (*string*) blocks to lob segment *string.string* subpartition *string* with MAXSIZE (*string*)

Cause: Extending a LOB segment violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60012: adding (*string*) blocks to table *string.string* subpartition *string* with MAXSIZE (*string*)

Cause: Extending a table subpartition violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60013: invalid MAXSIZE storage option value

Cause: Invalid value was specified for MAXSIZE storage clause.

Action: Correct the value and retry command.

ORA-60014: invalid MAXSIZE storage option value

Cause: Minimum of 1M should have been specified against the MAXSIZE storage clause.

Action: Correct the value and retry command.

ORA-60015: invalid RETENTION storage option value

Cause: Value of MIN retention should have been nonzero.

Action: Correct the value and retry command.

ORA-60016: Operation not supported on SECUREFILE segment

Cause: The operation to ALTER FREELIST/RETENTION was not supported on SECUREFILE segment.

Action: Check the LOB type and reissue the statement.

ORA-60018: adding *string* blocks to rollback segment *string* with MAXSIZE (*string*)

Cause: Extending a rollback segment violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60019: Creating initial extent of size *string* in tablespace of extent size *string*

Cause: Creation of SECUREFILE segment failed due to small tablespace extent size.

Action: Create tablespace with larger extent size and reissue command.

ORA-60025: Event for temp segment cleanup used for temp lobs

Cause: Temp LOB segments used for temporary LOBs are deleted only on session exit which may lead to large amounts of memory being held across multiple sessions.

Action: Setting this event will cause temporary LOB segments to be freed when there are no active temporary LOBs in the session. Setting this event will have a significant performance impact as it can cause temporary lob segments to be allocated and deleted many times during a session rather than once per session. Use this event only when temporary LOB segment memory use is an issue.

ORA-60072: adding (*string*) blocks to heat map segment with MAXSIZE (*string*)

Cause: Extending the heat map segment violated the MAXSIZE limit.

Action: Increase the MAXSIZE limit.

ORA-60073: Heat map segment cannot be created

Cause: SYSAUX tablespace has uniform extent allocation and the extent size is not a multiple of megabyte.

Action: Re-create SYSAUX tablespace with autoallocate extent management policy or use the uniform extent size which is a multiple of megabyte.

ORA-62001: value for parameter cannot contain a comma

Cause: Parameter value contained a comma.

Action: Remove the comma from the parameter value.

ORA-62007: Encountered a value of unsupported type or size for XPath (*string*)

Cause: Encountered a value of unsupported type in a SQL/XML DML operator. SQL/XML operators, such as UPDATEXML, expect value operands of type VARCHAR2 and XMLTYPE. XML DML replication is not supported for SQL/XML DML operators with values of unsupported types or very large values of supported types.

Action: Rewrite the UPDATE statement using XQuery update or set event 19027 level 1 to dump XML Document as against XMLDiff in redo log.

ORA-62008: Cannot rewrite a newer version of XML redo diff (encountered: *string*, supported: *string*)

Cause: Encountered a newer version of XML redo diff that is not supported.

Action: Use RDBMS version that supports rewrite of given version of XML redo diff.

ORA-62009: An attempt to encode invalid XML character *string* in supplemental log has occurred.

Cause: An attribute was being populated or updated with characters which are not valid for XML and therefore could not be supplementally logged.

Action: Store the desired value in a RAW or BLOB attribute.

ORA-62500: function is not allowed outside of MATCH_RECOGNIZE clause

Cause: The function was specified outside of the MATCH_RECOGNIZE clause. This function is only allowed in the MATCH_RECOGNIZE clause.

Action: Rewrite the SQL statement.

ORA-62501: invalid value specified for bounded quantifier in MATCH_RECOGNIZE clause

Cause: The specified lower bound or upper bound value was greater than UB4MAXVAL. The lower bound value must be non-negative. The upper bound value must be strictly positive. The upper bound value must be greater than or equal to the lower bound value.

Action: Choose an appropriate value and retry the operation.

ORA-62502: invalid variable name

Cause: The specified variable name was invalid. Variable names are not allowed to be "^", "\$", or "*".

Action: Choose an appropriate variable name and retry the operation.

ORA-62503: illegal variable definition

Cause: The specified variable definition was invalid. Variables defined in the DEFINE clause must be in the PATTERN clause. Variables defined in the SUBSET clause cannot be in the PATTERN clause. Variables cannot be defined twice either in the SUBSET clause or the DEFINE clause.

Action: Choose an appropriate variable and retry the operation.

ORA-62504: illegal variable reference

Cause: The referenced variable was invalid. Variables referenced in the SUBSET clause must be in the PATTERN clause. Variables referenced in the DEFINE clause, the MEASURES clause, and the AFTER MATCH SKIP TO must be in the PATTERN clause or defined in the SUBSET clause.

Action: Choose an appropriate variable and retry the operation.

ORA-62505: expression needs to be aliased

Cause: The expression was not aliased. MEASURES clause items have to be aliased.

Action: Choose an appropriate variable and retry the operation.

ORA-62506: illegal nesting of operators in MATCH_RECOGNIZE clause

Cause: An attempt was made to nest aggregates/FIRST/LAST/PREV/NEXT. Aggregates/FIRST/LAST/PREV/NEXT cannot be nested. The only exception allowed is PREV/NEXT(FIRST/LAST()).

Action: Modify the query and retry the operation.

ORA-62507: illegal use of MATCH_NUMBER or CLASSIFIER in MATCH_RECOGNIZE clause

Cause: An attempt was made to use MATCH_NUMBER or CLASSIFIER in the MATCH_RECOGNIZE clause. CLASSIFIER and MATCH_NUMBER can only be used in the MEASURES clause. CLASSIFIER can only be used if the query is ALL ROWS PER MATCH. CLASSIFIER and MATCH_NUMBER cannot be used inside aggregates/FIRST/LAST/PREV/NEXT.

Action: Modify the query and retry the operation.

ORA-62508: illegal use of aggregates or navigation operators in MATCH_RECOGNIZE clause

Cause: An attempt was made to define aggregates/FIRST/LAST/PREV/NEXT over multiple variables. Aggregates/FIRST/LAST/PREV/NEXT cannot be defined over multiple variables.

Action: Modify the query and retry the operation.

ORA-62509: illegal use of RUNNING or FINAL in MATCH_RECOGNIZE clause

Cause: An attempt was made to use RUNNING or FINAL in MATCH_RECOGNIZE. RUNNING or FINAL can only be used on aggregate/FIRST/LAST. FINAL aggregate/FIRST/LAST is not allowed in the DEFINE clause.

Action: Modify the query and retry the operation.

ORA-62510: Correlated subqueries are not allowed in MATCH_RECOGNIZE clause.

Cause: An attempt was made to use correlated subqueries in the MATCH_RECOGNIZE clause. Correlated subqueries are currently not allowed in the MATCH_RECOGNIZE clause.

Action: Modify the query and retry the operation.

ORA-62511: Correlation variables are not allowed in MATCH_RECOGNIZE clause.

Cause: An attempt was made to use correlation variables in the MATCH_RECOGNIZE clause. Correlation variables are currently not allowed in the MATCH_RECOGNIZE clause.

Action: Modify the query and retry the operation.

ORA-62512: This aggregate is not yet supported in MATCH_RECOGNIZE clause.

Cause: An unsupported aggregate was specified in the MATCH_RECOGNIZE clause. Only COUNT, SUM, AVG, MIN, and MAX are currently supported in the MATCH_RECOGNIZE clause. Distinct aggregates are currently not supported in the MATCH_RECOGNIZE clause.

Action: Modify the query and retry the operation.

ORA-62513: Quantified subpatterns that can have empty matches are not yet supported.

Cause: There were empty matches for the quantified subpattern in the PATTERN clause. Quantified subpatterns are currently required to match one or more rows.

Action: Modify the query and retry the operation.

ORA-62514: AFTER MATCH SKIP TO variable is not bounded in the match found.

Cause: AFTER MATCH SKIP TO variable was not bound in the match found due to pattern operators such as |, *, ?, and so on.

Action: Modify the query and retry the operation.

ORA-62515: Exclusion syntax cannot be used with WITH UNMATCHED ROWS.

Cause: An attempt was made to use exclusion syntax with WITH UNMATCHED ROWS. Exclusion syntax {- -} cannot be used with WITH UNMATCHED ROWS.

Action: Modify the query and retry the operation.

ORA-62516: The PARTITION BY, ORDER BY, or MEASURES clause is too large for MATCH_RECOGNIZE.

Cause: The number of items in PARTITION BY, ORDER BY, or MEASURES clause exceeded the maximum allowed. There cannot be more than UB2MAXVAL elements in PARTITION BY, ORDER BY, or MEASURES clause.

Action: Modify the query and retry the operation.

ORA-62517: Next match starts at the same point last match started.

Cause: AFTER MATCH SKIP TO option repositioned the next match at the start of the previous one resulting in an infinite loop.

Action: Modify the query and retry the operation.

ORA-62518: MATCH_RECOGNIZE pattern is too large.

Cause: MATCH_RECOGNIZE pattern was too large. More than UB2MAXVAL elements in alternation, concatenation, or permute, or more than UB4MAXVAL states

in the state machine are currently not supported. Permute with more than 7 elements or bounded quantifier bound greater than 200 are also currently not supported.

Action: Modify the query and retry the operation.

ORA-62519: Subquery inside MATCH_RECOGNIZE cannot contain MATCH_RECOGNIZE.

Cause: An attempt was made to use a subquery containing a MATCH_RECOGNIZE clause inside a MATCH_RECOGNIZE clause. Subqueries containing MATCH_RECOGNIZE clauses are currently not allowed in the MATCH_RECOGNIZE clause.

Action: Modify the query and retry the operation.

ORA-62520: illegal offset for MATCH_RECOGNIZE navigation operators

Cause: An attempt was made to use something other than a constant or a bind variable as the offset for MATCH_RECOGNIZE navigation operators FIRST, LAST, PREV, or NEXT. Offset for MATCH_RECOGNIZE navigation operators have to be constants or bind variables.

Action: Modify the query and retry the operation.

ORA-62521: MATCH_RECOGNIZE is not supported on lateral views

Cause: An attempt was made to use MATCH_RECOGNIZE on a lateral view, which is not supported.

Action: Modify the query and retry the operation.

ORA-62550: Invalid SQL ROW LIMITING expression was specified.

Cause: The SQL ROW LIMITING expression contained components other than literals, binds, correlation variables, or subqueries.

Action: Modify the SQL ROW LIMITING expression and retry the operation.

ORA-63000: operation disallowed: data file *string* is being moved

Cause: The specified data file was being moved.

Action: Wait for the move operation to complete and retry the command.

ORA-63001: file error during move operation

Cause: The move operation encountered an error for the moved data file. The error might be caused by file going offline or by an I/O error. See alert or trace files in all instances for further information.

Action: Retry the move command.

ORA-63002: a data file copy that is not current

Cause: An obsolete copy of a data file left from a data file move operation was used for the CREATE CONTROLFILE command or file header read.

Action: Pass a valid file or perform a media recovery on the file.

ORA-63003: a half-done data file copy

Cause: A half-done copy of a data file created from a previous data file move operation was used for the CREATE CONTROLFILE command or file header read.

Action: Check file headers and pass only valid files.

ORA-63004: Database names in file headers are inconsistent: *string* and *string*.

Cause: Differing database names were found in database file headers.

Action: Check that correct and valid data files are used.

ORA-63997: file size refresh failed

Cause: An operating system error or device error occurred when retrieving the file's size.

Action: Remedy the operating system or device errors mentioned in the error stack and then perform crash recovery.

ORA-63998: undo tablespace file suffered media failure

Cause: An undo tablespace file was detected as inaccessible due to media failure.

Action: Restore accessibility to the file mentioned in the error stack and restart the instance.

ORA-63999: data file suffered media failure

Cause: A data file was detected as inaccessible due to media failure.

Action: Restore accessibility to the file mentioned in the error stack and restart the instance.

ORA-64000: specified path already exists

Cause: The pathname of a new item specified in a DBFS API operation already exists.

Action: Specify a valid, new pathname for the operation.

ORA-64001: invalid parent directory in specified path

Cause: The pathname of an item specified in a DBFS API operation has one or more invalid parent components.

Action: Specify a valid pathname with valid parent components for the operation.

ORA-64002: specified path is invalid

Cause: The pathname of an item specified in a DBFS API operation is invalid.

Action: Specify a valid pathname for the operation.

ORA-64003: an unsupported operation was invoked

Cause: The current DBFS API operation is unsupported by a provider.

Action: Use the provider feature set to invoke only supported operations.

ORA-64004: an invalid combination of arguments was specified

Cause: The current DBFS API operation specifies an invalid combination of arguments for the specified pathname(s) and operation.

Action: Specify a valid combination of pathname(s) and arguments.

ORA-64005: access control checks failed

Cause: The current DBFS API operation failed access control checks for the pathname(s) being accessed.

Action: Specify valid pathname(s) and principal for the operation, or take store-specific actions to enable access.

ORA-64006: lock conflict in current operation

Cause: A DBFS API locking operation could not be completed due to conflicts in the locking protocol.

Action: Follow the proper lock/unlock protocol according to the provider feature set.

ORA-64007: invalid store specified

Cause: The current operation specifies an invalid store name.

Action: Specify a valid store name for the operation.

ORA-64008: invalid mount-point specified

Cause: The current operation specifies an invalid mount-point.

Action: Specify a valid mount-point for the operation.

ORA-64009: invalid provider specified

Cause: The current operation refers to an invalid or incomplete or non-conformant store provider package.

Action: Specify a valid, complete, and conformant (per "dbms_dbfs_content_spi") store provider package.

ORA-64010: cannot modify store via read-only mount

Cause: The current operation attempts to modify a store via a read-only mount (or specifies a read-only store).

Action: Specify a valid modifiable store/mount for the operation.

ORA-64011: cross store operation

Cause: The current operation attempts to span 2 or more different stores and cannot be implemented entirely by the DBFS API.

Action: Split the operation, at the application-level, into multiple sub-operations to implement the same overall functionality.

ORA-64012: specified path is a directory

Cause: The current operation specifies a path that is a directory element, when a non-directory element is expected.

Action: Specify a path of the proper type for the operation.

ORA-64013: specified path is not a directory

Cause: The current operation specifies a path that is not a directory element, when a directory element is expected.

Action: Specify a path of the proper type for the operation.

ORA-64014: directory not empty

Cause: The current operation specifies a directory element that is not empty as required.

Action: Specify an empty directory element.

ORA-64101: Cannot alter both a structured and an unstructured component of an XMLIndex in the same ALTER INDEX statement.

Cause: An attempt was made to alter the unstructured component and structured component of an XMLIndex at the same time.

Action: Use separate ALTER INDEX statements to change an unstructured component and a structured component of an XMLIndex.

ORA-64102: Cannot create an XMLIndex with a structured component on a CLOB column within the object-relational storage model.

Cause: An attempt was made to create an XMLIndex with a structured component on a CLOB column within the object-relational storage model.

Action: Only unstructured XML indexes can be created on a CLOB column within the object-relational storage model.

ORA-64103: Cannot create an XMLIndex on an object-relational XML type table or column.

Cause: An attempt was made to create an XMLIndex on an XML type table or column that uses the object-relational storage model.

Action: The object-relational storage model does not support an XMLIndex.

ORA-64104: Column name already used by internal column of the structured component of the XMLIndex.

Cause: An attempt was made to use a column name already in use by an internal column of the structured component of the XMLIndex.

Action: Chose another column name.

ORA-64105: Cannot create domain index on XMLIndex internal tables.

Cause: An attempt was made to create a domain index on an internal table of an XMLIndex.

Action: Create the domain index on the base table.

ORA-64106: Incorrect use of comma(,) punctuation in COLUMN definitions.

Cause: An attempt was made to define COLUMNS with incorrect use of comma punctuation.

Action: Properly separate COLUMN definitions with comma punctuation.

ORA-64107: The XMLIndex has been successfully altered but the metadata could not be updated.

Cause: An internal error occurred when updating the index metadata. The `dbms_metadata.get_ddl` function may return improper metadata.

Action: contact Oracle Support Services.

ORA-64108: Cannot truncate a table that has an XMLIndex whose internal table has been indexed using Oracle Text.

Cause: An attempt was made to truncate a table that has an XMLIndex whose internal table has been indexed using Oracle Text.

Action: Drop the Oracle Text index on the XMLIndex internal table.

ORA-64109: XMLIndex: problems encountered during the dropping of statistics

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64110: XMLIndex: problems encountered during the gathering of statistics

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64111: XMLIndex: problems encountered during EXPORT

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64112: XMLIndex: problems encountered during IMPORT

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64113: XMLIndex: XDB.XDB\$XIDX_IMP_T still has bad data for "string"."string"

Cause: See associated error message.

Action: Ask the DBA to delete all the rows that belong to the given schema_name.index_name from the system table XDB.XDB\$XIDX_IMP_T."

ORA-64114: XMLIndex: reserved for EXPORT or IMPORT

ORA-64115: XMLIndex Exchange Partition: the table has no XMLIndex

Cause: The non-partitioned table had no XMLIndex.

Action: None

ORA-64116: XMLIndex Exchange Partition: incompatible XPath subsets

Cause: The XMLIndexes on the two tables had different path subsets.

Action: Correct the error and retry the command.

ORA-64117: XMLIndex Exchange Partition: incompatible modes for asynchronous DML

Cause: The XMLIndexes on the two tables had different deferred DML modes.

Action: Correct the error and retry the command.

ORA-64118: XMLIndex Exchange Partition: incompatible unstructured components

Cause: One of the XMLIndexes had no unstructured component.

Action: Correct the error and retry the command.

ORA-64119: XMLIndex Exchange Partition: incompatible structured components

Cause: One of the XMLIndexes had no structured component.

Action: Correct the error and retry the command.

ORA-64120: XMLIndex Exchange Partition: incompatible structured components

Cause: The XMLIndexes had different structured components.

Action: Correct the error and retry the command.

ORA-64121: XMLIndex DDL: failure of the internal "string"

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64122: XMLIndex DDL: failure of the recursive "string"

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64123: XMLIndex DDL: failure of a recursive DDL

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64124: XMLIndex: failure during the setting of an event

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64125: XMLIndex: failure during the resetting of an event

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64126: XMLIndex Table Function: failure at the start of the function

Cause: See associated error message.

Action: Examine the error messages and take appropriate action.

ORA-64127: XMLIndex Table Function: failure at the beginning of the function

Cause: See associated error message.

Action: Examine the error messages and take appropriate action.

ORA-64128: XMLIndex Table Function: failure during the function evaluation

Cause: See associated error message.

Action: Examine the error messages and take appropriate action.

ORA-64129: XMLIndex Table Function: failure at the end of the function

Cause: See associated error message.

Action: Examine the error messages and take appropriate action.

ORA-64130: XMLIndex: invalid namespace mapping "string"

Cause: Namespace mapping was invalid. The syntax is XMLNS="string".

Action: Check the namespace string, correct the error and retry command.

ORA-64131: XMLIndex Metadata: failure during the looking up of the dictionary

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64132: XMLIndex Metadata: failure during the updating of the dictionary

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64133: XMLIndex DML: failure of the internal "string"

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64134: XMLIndex DML: failure of the recursive "string"

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64135: XMLIndex DML: failure of a recursive DML

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64136: XMLIndex Asynchronous DML: synchronization failure

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64137: Cannot drop an XMLIndex whose internal table has been indexed using Oracle Text.

Cause: An attempt was made to drop an XMLIndex whose internal table has been indexed using Oracle Text.

Action: Drop the Oracle Text index on the XMLIndex internal table.

ORA-64138: Cannot drop groups from an XMLIndex whose internal table has been indexed using Oracle Text.

Cause: An attempt was made to drop groups from an XMLIndex whose internal table has been indexed using Oracle Text.

Action: Drop the Oracle Text index on the XMLIndex internal table.

ORA-64139: The type of VIRTUAL column is not XMLTYPE

Cause: An attempt was made to create an XML index with VIRTUAL column not of XMLTYPE.

Action: Specify the type of VIRTUAL column to be XMLTYPE.

ORA-64140: missing chaining XMLTABLE for VIRTUAL column in the index

Cause: An attempt was made to create an XML index with VIRTUAL column but without required chaining XMLTABLE.

Action: Specify a chaining XMLTABLE after VIRTUAL column.

ORA-64141: Can only have a single XMLType column when a table is shared.

Cause: An attempt was made to create a shared table with more than one columns.

Action: Specify a correct shared table definition with only one XMLType column.

ORA-64142: Shared tables must have same semantics for truncation.

Cause: An attempt was made to create shared tables with inconsistent semantics for truncation. Either all shared tables should have or should not have (TRUNCATE) keyword.

Action: Be consistent with (TRUNCATE) keyword while defining shared tables.

ORA-64143: Can only share an existing XMLIndex table with an XMLTYPE column.

Cause: An attempt was made to share a table without an XMLTYPE column.

Action: Drop the group containing the XMLIndex table without an XMLTYPE column and re-create the group with new definition.

ORA-64144: Shared tables must have equivalent paths.

Cause: An attempt was made to share a table with different paths.

Action: Specify a correct shared table definition with appropriate paths.

ORA-64145: This XMLIndex rewrite failed

Cause: One of the rewrites being tried by XMLIndex engine failed.

Action: None. This error is for understanding the trace file of XMLIndex rewrite.

ORA-64146: Nonblocking alter XMLIndex error

Cause: Internal error.

Action: None

ORA-64147: Invalid use of NONBLOCKING COMPLETE or ABORT.

Cause: NONBLOCKING COMPLETE or ABORT is only allowed for XMLIndex that is being modified using NONBLOCKING ADD_GROUP or ADD_COLUMN.

Action: None

ORA-64148: Cannot complete nonblocking alter index operation.

Cause: NONBLOCKING COMPLETE is only allowed for XMLIndex that is being modified using NONBLOCKING ADD_GROUP or ADD_COLUMN and there are no pending rows left.

Action: Call DBMS_XMLINDEX.PROCESS_PENDING to finish pending work.

ORA-64149: Invalid alter XMLIndex operation.

Cause: An attempt was made to alter an XMLIndex that is already being modified using NONBLOCKING ADD_GROUP or ADD_COLUMN. Only NONBLOCKING COMPLETE or ABORT alter index operations are allowed. Also, NONBLOCKING operation is not allowed with alter index rebuild.

Action: Call DBMS_XMLINDEX.PROCESS_PENDING to finish pending work and then execute NONBLOCKING COMPLETE to successfully finish existing NONBLOCKING operation. Execute NONBLOCKING ABORT to cancel existing NONBLOCKING operation.

ORA-64151: Invalid use of DBMS_XMLINDEX.PROCESS_PENDING.

Cause: DBMS_XMLINDEX.PROCESS_PENDING was called on an index that was not modified using NONBLOCKING ADD_GROUP or ADD_COLUMN.

Action: None

ORA-64152: There are no pending rows to process.

Cause: DBMS_XMLINDEX.PROCESS_PENDING was called on an index that does not have any pending rows to process.

Action: Execute NONBLOCKING COMPLETE operation to complete the nonblocking alter index.

ORA-64201: unregistered LOB value encountered

Cause: The LOB value associated with the input locator did not exist in client-side reference tables.

Action: This is an internal error. Contact Oracle Support Services.

ORA-64202: remote temporary or abstract LOB locator is encountered

Cause: Local database encountered a temporary or abstract LOB created on a remote database. Remote access to temporary or abstract LOB is not supported.

Action: Avoid remote queries that return a temporary or abstract LOB.

ORA-64203: Destination buffer too small to hold CLOB data after character set conversion.

Cause: An attempt was made to convert CLOB to CHAR, where the LOB size was bigger than the buffer limit for CHAR types or the CHAR buffer was not big enough to hold all data after character set conversion.

Action: Do one of the following: * Make the LOB smaller before performing the conversion. for example, by using SUBSTR on CLOB * Use DBMS_LOB.SUBSTR to convert CLOB to CHAR.

ORA-64204: encountered partial multibyte character

Cause: The requested operation could not complete because a partial multibyte character was found at the end of the input.

Action: Ensure that the input buffer ends with a complete multibyte character and retry the operation.

ORA-64205: Cannot use other triggering events along with LOGICAL LOB UPDATE event

Cause: An attempt was made to use other triggering events (such as INSERT, DELETE and UPDATE) with the LOGICAL LOB UPDATE event.

Action: Create multiple triggers instead of sharing a trigger for multiple events.

ORA-64206: Cannot create INSTEAD OF LOGICAL LOB UPDATE trigger

Cause: INSTEAD OF LOGICAL LOB UPDATE trigger was not allowed.

Action: None

ORA-64207: Invalid LOGICAL LOB UPDATE trigger definition

Cause: The LOGICAL LOB UPDATE trigger could not be created on a non-LOB column of a table. The column name has to be specified while creating the trigger. Only one column name can be specified while creating the trigger.

Action: Specify LOGICAL LOB UPDATE trigger with a valid definition.

ORA-64208: FOR EACH ROW clause is required for before or after LOGICAL LOB UPDATE triggers

Cause: An attempt was made to create a before or after LOGICAL LOB UPDATE trigger without a FOR EACH ROW clause.

Action: Specify a FOR EACH ROW clause for a before/after LOGICAL LOB UPDATE trigger.

ORA-64209: WHEN clause is not allowed for LOGICAL LOB UPDATE triggers

Cause: WHEN clause was specified for a LOGICAL LOB UPDATE trigger.

Action: Remove the WHEN clause when creating a LOGICAL LOB UPDATE trigger.

ORA-64210: Cannot reference a trigger of a different type

Cause: The LOGICAL LOB UPDATE trigger did not follow other LOGICAL LOB UPDATE triggers. Non-LOGICAL LOB UPDATE triggers cannot follow LOGICAL LOB UPDATE triggers.

Action: None

ORA-64211: Cannot access other columns within a LOGICAL LOB UPDATE trigger body

Cause: An attempt was made to access an invalid column. A LOGICAL LOB UPDATE trigger can only access ROWID column and the column for which it was specified. Access to other columns is not allowed.

Action: Remove references to other columns within a LOGICAL LOB UPDATE trigger body.

ORA-64212: Cannot create a LOGICAL LOB UPDATE trigger on a view

Cause: A LOGICAL LOB UPDATE trigger could not be created on view.

Action: None

ORA-64213: Cannot create a compound LOGICAL LOB UPDATE trigger with statement level actions

Cause: A compound LOGICAL LOB UPDATE trigger could not contain statement level actions.

Action: None

ORA-64214: Cannot create a crossedition LOGICAL LOB UPDATE trigger

Cause: Crossedition LOGICAL LOB UPDATE triggers were not supported.

Action: None

ORA-64215: PL/SQL subprogram '*string*' for internal use only

Cause: An attempt was made to use a subprogram that is for internal Oracle development use only.

Action: Do not use this unsupported subprogram. Refer to Oracle documentation for available subprograms.

ORA-64300: Invalid compression level specified

Cause: The specified archive compression level value was invalid. Valid values are LOW or HIGH.

Action: Choose a valid level and retry the operation.

ORA-64307: Exadata Hybrid Columnar Compression is not supported for tablespaces on this storage type

Cause: An attempt was made to use Exadata Hybrid Columnar Compression on unsupported storage.

Action: Create this table in a tablespace residing on Oracle Exadata, Oracle's Sun ZFS or Pillar Axiom storage or use a different compression type.

ORA-64308: hybrid columnar compressed table cannot have column with LONG data type

Cause: One of the following was attempted: - Create a hybrid columnar compressed table with a LONG data type. - Alter an existing table with a LONG data type to be hybrid columnar compressed. - Add a LONG data type column to a hybrid columnar compressed table.

Action: LONG data types are not supported with hybrid columnar compressed tables. Create table without LONG column or change table to not be hybrid columnar compressed. If adding a column, do not use LONG data type. If modifying attributes of a column to change data type to LONG, the table cannot be hybrid columnar compressed.

ORA-64309: Hybrid Columnar Compression with row-level locking is not supported for tablespaces on this storage type.

Cause: An attempt was made to use Hybrid Columnar Compression with row-level locking on an unsupported storage type.

Action: Create this table in a tablespace residing on Oracle Exadata storage or use a different compression type.

ORA-64310: could not get compression analysis lock

Cause: An operation could not obtain the compression analysis lock in a reasonable amount of time.

Action: Retry the operation.

ORA-64350: only one INMEMORY clause may be specified

Cause: INMEMORY was specified more than once.

Action: Specify each desired INMEMORY clause option only once.

ORA-64364: In-memory column store on Oracle RAC is only supported on Oracle-engineered systems.

Cause: An attempt was made to use the in-memory column store feature with Oracle RAC on an unsupported system.

Action: Disable Oracle RAC before attempting to use the in-memory column store in this environment or use an Oracle-engineered system.

ORA-64367: In-memory column store FastStart tablespace is offline.

Cause: The FastStart feature was enabled but its tablespace was offline.

Action: Disable FastStart or bring the FastStart tablespace online.

ORA-64368: In-memory FastStart is only supported on Oracle-engineered systems.

Cause: An attempt was made to use the in-memory column store FastStart feature on an unsupported system.

Action: Use FastStart on an Oracle-engineered system.

ORA-64369: In-memory FastStart Oracle Call Interface (OCI) error *string*

Cause: An OCI error occurred when enabling or disabling FastStart.

Action: Manually correct the problem.

ORA-64370: INMEMORY clause with DISTRIBUTE BY PARTITION specified for a table that is not partitioned.

Cause: DISTRIBUTE BY PARTITION was specified for a table that is not partitioned.

Action: None

ORA-64371: INMEMORY clause with DISTRIBUTE BY SUBPARTITION specified for a table that is not composite.

Cause: DISTRIBUTE BY SUBPARTITION was specified for a table that is not composite.

Action: None

ORA-64372: INMEMORY clause with DISTRIBUTE BY SUBPARTITION specified for a table that is not partitioned.

Cause: DISTRIBUTE BY SUBPARTITION was specified for a table that is not partitioned.

Action: None

ORA-64401: This manageability package is only supported on Oracle RDBMS versions 10.2, 11.1, and 11.2.

Cause: Package installation invoked on database version that was not 10.2, 11.1 or 11.2..

Action: Use Oracle databaseversion 10.2, 11.1, or 11.2.

ORA-64402: Invalid input. XMLSchema is null.

Cause: XMLSchema was not provided to the procedure or function call..

Action: Provide an XMLSchema.

ORA-64403: Input cannot be null

Cause: An input parameter was null.

Action: Provide input paramter.

ORA-64404: Input string cannot exceed 30 characters

Cause: An input string was provided whose length exceeded 30 character.

Action: Provide a shorter input string.

ORA-64405: No matching elements found. Zero annotations were applied.

Cause: The parameters provided to annotate the XMLSchema did not match any entities in the XMLSchema.

Action: Correct the parameters.

ORA-64406: No matching elements found. Zero annotations were removed.

Cause: The parameters provided to annotate the XMLSchema did not match any entities in the XMLSchema.

Action: Correct the parameters.

ORA-64407: Annotation maps to multiple elements.

Cause: The parameters provided to annotate the XMLSchema matched to multiple entities in the XMLSchema.

Action: .

ORA-64408: Name for collection table too long.

Cause: The name for the collection table exceeded 25 characters.

Action: Reduce the length of the name of the collection table.

ORA-64409: XPath could not be mapped to exactly one table.

Cause: XPath could not be mapped to existing table.

Action: Check input parameters.

ORA-64410: Invalid XPath.

Cause: The XPath string provided to the procedure was not valid.

Action: Check XPath string.

ORA-64411: Invalid collection table specified by XPath.

Cause: An invalid collection table was specified by the XPath string.

Action: Check XPath string.

ORA-64412: Procedure called on XML table with BINARY storage model.

Cause: The procedure renameCollectionTable did not work on binary storage model.

Action: .

ORA-64413: Cannot disable constraints/indexes for non-global schemas owned by other users or a non schema based table/column.

Cause: An attempt was made to disable constraints or indexes for non-global schemas owned by other users or a non schema based table/column.

Action: Use an OR schema based table/column or change users to disable constraints or indexes.

ORA-64414: Cannot enable constraints/indexes for non-global schemas owned by other users or a non schema based table/column.

Cause: An attempt was made to enable constraints or indexes for schemas owned by other users or for a non schema based table/column.

Action: Use an OR schema based table/column or change users to enable constraints or indexes.

ORA-64415: Error in namespace declaration.

Cause: The namespace declaration was invalid.

Action: Correct namespace declaration.

ORA-64416: Table does not exist.

Cause: The tab_name parameter provided the name of a table that did not exist..

Action: Correct the tab_name parameter.

ORA-64417: Column does not exist in table.

Cause: The col_name parameter provided the name of a column that did not exist in the given table.

Action: Correct the col_name parameter.

ORA-64418: Column not of XMLType.

Cause: The col_name parameter provided the name of a column that was not an XMLType column.

Action: Correct the col_name parameter.

ORA-64419: Name for collection table already exists.

Cause: The name for the collection table could not be used because it already exists.

Action: Use another name for collection table.

ORA-64420: Table not of XMLType.

Cause: The table_name parameter provided the name of a table that was not an XMLType table.

Action: Correct the table_name parameter or provide the name of an XMLType column in the table.

ORA-64477: Multiple token tables are not supported.

Cause: An attempt was made to create a new token table. If encountered during an import, a critical patch was possibly missing on the export database.

Action: Use the default token table. If encountered during an import, apply the appropriate patch on the export database and try the export and import again.

ORA-64600: duplicate or conflicting PARTITION or NOPARTITION specifications

Cause: The specifications were either a duplicate of each other or were conflicting.

Action: Remove the duplicate or conflicting specification.

ORA-64601: duplicate RESTART specified

Cause: The specified RESTART was a duplicate.

Action: Remove the duplicate specification.

ORA-64620: duplicate user tablespace specification

Cause: An attempt was made to create more than one user tablespace during database creation.

Action: Modify the command to contain only one user tablespace.

ORA-64621: SQL statement length (*string*) exceeds maximum allowed length (*string*)

Cause: An attempt was made to issue a SQL statement that exceeded the maximum allowed length of a statement.

Action: Modify the SQL statement or the views to which it refers to fit within the maximum length or split the SQL statement.

ORA-64700: Recovery Appliance is shutting down

Cause: The Recovery Appliance was in the process of shutting down. This message is recorded in the incident log for the Recovery Appliance. When the shutdown completes, the incident is marked as FIXED.

Action: Wait for the Recovery Appliance to complete its shutdown.

ORA-64701: storage location *string* can no longer honor its reservations.

Cause: The specified storage location did not contain enough space to fulfill the reservations of all of the databases assigned to it. This error will be seen if a storage location lost part of its disk space and was in the process of being repaired.

Action: Either shrink the reservations for the databases contained within the storage location or add additional disk space to the storage location.

ORA-64702: error repairing container files for storage location *string*:*nstring*

Cause: An error was returned while trying to rebuild or repair the container files used to store data from protected databases.

Action: The subsequent error will identify the error that needs to be addressed before the Recovery Appliance can be repaired.

ORA-64703: resource error detected

Cause: A task needed to be interrupted because it detected a resource limitation such as insufficient temporary table space or a snapshot being too old. It will be retried once the contention for the resource decreases. The secondary messages will identify the resource that has been exhausted.

Action: If this error occurs rarely, no user action is required. If the condition becomes persistent, the Recovery Appliance administrator should increase the resource that is exhausted.

ORA-64705: no destination in "*string*" at column *string*

Cause: The storage destination contained a syntax error.

Action: Correct the syntax error and retry the operation.

ORA-64708: more than one polling_location in "*string*" at column *string*

Cause: More than one polling_location was specified. Only one polling_location is allowed.

Action: Specify only one polling destination directory and retry the operation.

ORA-64709: ASM polling_location is not supported in "*string*" at column *string*

Cause: The polling_location specified an ASM-based location. Only non-ASM-based polling_locations are supported.

Action: Specify one non-ASM polling destination and retry the operation.

ORA-64711: storage destination do not reference an ASM diskgroup

Cause: The storage destination referenced a non-ASM storage location. Only ASM-based storage destinations are allowed. The operation has been rolled back.

Action: Correct the syntax error and retry the operation.

ORA-64713: requested size *string* for *string* was too small; already using *string*

Cause: The size requested for the storage destination was smaller than its current size.

Action: Increase the requested size and retry the operation.

ORA-64714: requested size *string* for *string* was larger than total available space *string*

Cause: The size requested for the storage destination was larger than its current used space plus its current free space.

Action: Decrease the requested size and retry the operation.

ORA-64715: redundancy type "*string*" for diskgroup *string* is invalid

Cause: The redundancy type for the specified diskgroup was not one of {NORMAL | HIGH | EXTERN}.

Action: Correct the redundancy type of the diskgroup and retry the operation.

ORA-64716: storage location *string* allocation size *string* does not equal diskgroup *string* allocation size *string*

Cause: The minimum allocation size of the specified storage location was not the same as the specified diskgroup allocation unit size.

Action: Specify a different diskgroup or a different storage location and retry the operation.

ORA-64717: network chunk size *string* is not a multiple of diskgroup *string* allocation size *string*

Cause: The configured network chunk size was not a multiple of the specified diskgroup allocation unit size.

Action: Specify a different diskgroup or reconfigure the network chunk size and retry the operation.

ORA-64718: diskgroup *string* allocation size *string* is not a power of two

Cause: The diskgroup allocation unit size was not a power of two.

Action: Specify a different diskgroup and retry the operation.

ORA-64719: diskgroup *string* allocation size *string* is less than two megabytes *string*

Cause: The diskgroup allocation unit size was less than two megabytes.

Action: Specify a different diskgroup and retry the operation.

ORA-64720: no containers were created for storage location *string*

Cause: No storage was allocated and initialized for the specified storage location.

Action: Specify a different diskgroup for the storage location, increase the size of the diskgroup, or reduce the size of the storage location and retry the operation.

ORA-64721: reserved space *string* is less than the minimum reservation *string*

Cause: No storage was allocated and initialized for the specified storage location.

Action: Specify a different diskgroup for the storage location, increase the size of the diskgroup, or reduce the size of the storage location and retry the operation.

ORA-64722: number of drives must be greater than zero

Cause: The specified number of tape drives was NULL or was less than or equal to zero.

Action: Specify a number of tape drives greater than 0 and retry the operation.

ORA-64723: number of drives reserved for restore operations must be greater than or equal to zero

Cause: The number of tape drives reserved for restore operations was NULL or was less than zero.

Action: Specify a number of tape drives reserved for restore operations greater than or equal to zero and retry the operation.

ORA-64724: number of restore drives *string* too large; must be less than *string*

Cause: The number of tape drives reserved for restore operations was at least as large as the total number of drives available. The number of tape drives reserved for restore operations must be at least one less than the total number of drives available.

Action: Specify a number of tape drives reserved for restore operations less than the total number of drives available and retry the operation.

ORA-64725: number of streams must be greater than zero

Cause: The number of streams was less than or equal to zero.

Action: Specify a number of streams greater than zero and retry the operation.

ORA-64726: number of streams *string* too large; must be no larger than *string*

Cause: The number of streams was larger than the total number of drives available. The number of streams must be no larger than the total number of drives available.

Action: Reduce the number of available streams and retry the operation.

ORA-64727: number of copies *string* not in the range 1 through 4

Cause: The number of copies was either NULL or not in the range 1 through 4 inclusive.

Action: Specify a number of copies in the range 1 through 4 and retry the operation.

ORA-64728: replication server name length *string* is too long

Cause: The replication server name was longer than 128 characters.

Action: Specify a replication server name shorter than 128 characters and retry the operation.

ORA-64729: replication server proxy port *string* must be greater than zero

Cause: The replication server proxy port number was less than or equal to zero.

Action: Specify a replication server proxy port number greater than zero and retry the operation.

ORA-64730: replication server proxy URL provided but proxy port is NULL

Cause: A replication server proxy URL was provided but a proxy port number was not. If either a proxy URL or a proxy port are specified, both must be specified.

Action: Specify both a replication server URL and a replication server proxy port number and retry the operation.

ORA-64731: replication server proxy port provided but proxy URL is NULL

Cause: A replication server proxy port number was provided but a proxy URL was not. If either a proxy URL or a proxy port are specified, both must be specified.

Action: Specify both a replication server URL and a replication server proxy port number and retry the operation.

ORA-64732: HTTP server not configured at replication host

Cause: The HTTP server at the replication host site has not been configured.

Action: Configure the HTTP server at the replication host site and retry the operation.

ORA-64733: unable to move individual backup piece with BP_KEY *string*; not a KEEP backup

Cause: An attempt was made to move an individual backup piece, but the backup set of which this backup piece was a member was not a KEEP backup.

Action: Specify a backup piece key that is a member of a KEEP backup set and retry the operation.

ORA-64735: unknown incarnation detected at Recovery Appliance, need catalog resync

Cause: A new archived log or backup set belonging to the new incarnation was received at Recovery Appliance.

Action: Using RMAN, connect to the Recovery Appliance as a recovery catalog, primary database as target database and perform the resynchronization operation using the RESYNC CATALOG RMAN command. If this error occurred at downstream of the Recovery Appliance (in a replicated Recovery Appliance setup), the reconcile operation fixes this error automatically when the same error is fixed at the upstream Recovery Appliance.

ORA-64736: Task ID *string* of type *string* has been interrupted *string* times.

Cause: The specified task was restarted an unexpected number of times. Tasks get interrupted when there is competition for resources. This is only a warning. It does not necessarily indicate a problem with the Recovery Appliance.

Action: If these problems persist for long periods, contact Oracle Support Services.

ORA-64737: unable to copy a full backup for database *string* because of missing data files

Cause: While creating a full database backup to tape or to a replicated recovery appliance, level 0 backups of one or more data files were missing.

Action: Query the RA_SBT_TEMPLATE_MDF view to determine the data files for which backups are missing. If using the "incremental forever" backup strategy, perform a level-0 incremental backup for the given database and retry the operation.

ORA-64738: guaranteed copy suspended for database *string*

Cause: One of the following operations was performed resulting in the database using more than its allotted disk space: - UPDATE_DB lowering the DISK_SPACE_RESERVE value. - UPDATE_PROTECTION_POLICY setting the guaranteed_copy parameter to YES - DELETE_SBT_LIBRARY where backup data for the given database existed. New backup requests may be stalled until the system can recompute the safety of allowing additional backup data or backup data may be lost.

Action: This event can be avoided by ensuring backups are written to tape in a timely manner. Conversely, one should avoid the activities listed in the Cause statement when backups are not being written to tape in a timely manner.

ORA-64739: RECOVERY_WINDOW_GOAL is lost for database *string*

Cause: The recovery window goal in the protection policy indicates a desire to be able to restore and recover to any point in time within that range. This is not possible given the current set of backups. Possible reasons are missing archive log backups, missing data file backups or lack of reserved disk space.

Action: Ensure that backups are done regularly. Ensure that your disk reserved space value is set high enough to support your goals. Query RA_DATABASE view for DISK_RESERVED_SPACE and RECOVERY_WINDOW_SPACE parameters and compare these two parameters to ensure enough space has been provisioned to meet your goals. However, you may use the DBMS_RA.UPDATE_PROTECTION_POLICY procedure to increase the DISK_RESERVED_SPACE value to ensure additional backups are saved. Also, check for KEEP backups consuming space on the disk and decide if they should be moved to tape or other disk storage.

ORA-64740: Backups from database *string* have not been seen for more than UNPROTECTED_WINDOW period

Cause: An UNPROTECTED_WINDOW parameter in protection policy has been specified and the Recovery Appliance has not received sufficient archive log backups or data file backups from the given target database for at least that period.

Action: Ensure that backups are being performed in a timely manner and that, if set up, redo logs or backups are being sent to the Recovery Appliance.

ORA-64741: Scheduler *string* running task *string* of type *string* did not stop after *string* requests.

Cause: The specified Recovery Appliance scheduler process could not be stopped.

Action: If these problems persist for long periods, contact Oracle Support Services.

ORA-64744: Argument *string* is null, invalid, or out of range.

Cause: The argument was expecting a non-null, valid value but the argument value passed in was null, invalid, or out of range.

Action: Check your program and correct the caller of the routine to not pass a null, invalid or out-of-range argument value.

ORA-64745: Name length is *string* characters; maximum length is *string* characters.

Cause: The length of the name exceeded the limit.

Action: Specify a shorter name and retry the operation.

ORA-64746: Name contains invalid characters.

Cause: The name incorrectly started with "_", "-", ":" or digits or contained non-alphanumeric characters. Verify that all other double quotation marks, if any, in the string are adjacent pairs of double quotation marks. Double quotation marks must not be used in the middle of the name.

Action: Change the name and exclude the invalid characters.

ORA-64747: Name contains invalid character "*string*" at the position [*string*].

Cause: The name incorrectly started with "_", "-", ":" or digits or contained non-alphanumeric characters. Verify that all other double quotation marks, if any, in the string are adjacent pairs of double quotation marks. Double quotation marks must not be used in the middle of the name.

Action: Change the name and exclude the invalid characters.

ORA-64748: trace file writing initiated using *string*

Cause: The configuration of the Recovery Appliance was modified to enable the producing of trace files. Trace files have the capacity to exhaust disk space on the Recovery Appliance.

Action: Turn off the tracing when it is no longer required.

ORA-64750: Instance *string* is unable to access *string*.

Cause: The Recovery Appliance was unable to find a file that is required for its operation.

Action: Ensure that the file system of the specified file is available on the specified instance.

ORA-64751: Replication setup error during *string*. replication server:*string* database:*string*.

Cause: The Recovery Appliance was unable to complete the configuration and setup of replication for the database specified.

Action: Validate that the downstream replication server is properly configured and all network communication paths are valid.

ORA-64752: storage unavailable for new redo or backups for database *string*

Cause: There was a failure while backing up redo or copying backups from a polling location. This condition may be due to one of the following reasons: * An individual backup piece exceeded the database protection policy DISK_RESERVE_SPACE value. * Guaranteed_copy is enabled but not enough data has been spooled to tape. * Misconfiguration of the storage location size.

Action: Check for the value of DISK_RESERVED_SPACE and storage location uses.

ORA-64753: Incorrect object type specified; specified *string*, expected *string*

Cause: An incorrect object type was given to an API command.

Action: Use the object-specific API. For example, use 'resume_replication_server' instead of 'resume_sbt_library'.

ORA-64754: unable to perform operation with associated tape or replication objects

Cause: An attempt to execute 'update_db' or 'update_protection_policy' and change storage locations with a replication server or tape job associated with the protection policy failed.

Action: Create a temporary protection policy that has the same storage location as the current protection policy with the tape and replication attributes of the target protection policy, Update to the temporary protection policy then finally update to the target protection policy.

ORA-64755: failed to delete database *string*; the Recovery Appliance is not running

Cause: An attempt was made to delete a database, but the Recovery Appliance has been deactivated by the administrator.

Action: Have the Recovery Appliance administrator execute DBMS_RA.STARTUP_RECOVERY_APPLIANCE and retry the delete_db() operation.

ORA-64756: failed to delete database *string*; error completing delete job

Cause: The database could not be deleted because the background delete job failed unexpectedly.

Action: Contact Oracle Support Services for additional information.

ORA-64757: unable to restore backup piece with BP_KEY *string*

Cause: An attempt was made to restore the specified backup piece which resulted in an error. An explanation of the error appears in the following messages.

Action: Verify the correctness of the backup piece. If it is corrupt, either delete it or replace it.

ORA-65000: missing or invalid pluggable database name

Cause: A valid pluggable database name was not present where required.

Action: Reissue the statement with a valid pluggable database name.

ORA-65001: missing or invalid administrative user name

Cause: A valid administrative user name was not present where required by the syntax of CREATE PLUGGABLE DATABASE statement.

Action: Reissue the CREATE PLUGGABLE DATABASE statement with a valid administrative user name.

ORA-65002: missing or invalid administrative user password

Cause: A valid administrative user password was not present where required by the syntax of CREATE PLUGGABLE DATABASE statement.

Action: Reissue the CREATE PLUGGABLE DATABASE statement with a valid administrative user password.

ORA-65003: missing or invalid XML file name

Cause: A valid XML file name was not present where required by the syntax of CREATE PLUGGABLE DATABASE statement.

Action: Reissue the CREATE PLUGGABLE DATABASE statement with a valid XML file name.

ORA-65004: missing or invalid database link name

Cause: A valid database link name was not present where required by the syntax of CREATE PLUGGABLE DATABASE statement.

Action: Reissue the CREATE PLUGGABLE DATABASE statement with a valid database link name.

ORA-65005: missing or invalid file name pattern for file - *string*

Cause: Either source or replacement file name pattern was missing or invalid in a SOURCE_FILE_NAME_CONVERT or FILE_NAME_CONVERT clause.

Action: Correct the SOURCE_FILE_NAME_CONVERT or FILE_NAME_CONVERT clause and reissue the statement.

ORA-65006: missing or invalid ENABLE PLUGGABLE DATABASE clause

Cause: An ENABLE PLUGGABLE DATABASE clause was not present where required by the syntax of CREATE DATABASE statement.

Action: Reissue the CREATE DATABASE statement with a valid ENABLE PLUGGABLE DATABASE clause.

ORA-65007: duplicate ENABLE PLUGGABLE DATABASE clause

Cause: A duplicate ENABLE PLUGGABLE DATABASE clause was specified in a CREATE DATABASE statement.

Action: Reissue the CREATE DATABASE statement with a valid ENABLE PLUGGABLE DATABASE clause.

ORA-65008: missing or invalid SEED clause

Cause: A SEED clause was not present where required by the syntax of CREATE DATABASE statement.

Action: Reissue the CREATE DATABASE statement with a valid SEED clause.

ORA-65010: maximum number of pluggable databases created

Cause: User attempted to create more than supported number of pluggable databases.

Action: Avoid creating too many pluggable databases.

ORA-65011: Pluggable database *string* does not exist.

Cause: User attempted to specify a pluggable database that does not exist.

Action: Check DBA_PDBS to see if it exists.

ORA-65012: Pluggable database *string* already exists.

Cause: User attempted to create a pluggable database with a name that already exists.

Action: Check DBA_PDBS to see if the name exists.

ORA-65013: invalid CONTAINER clause

Cause: An invalid CONTAINER clause was encountered.

Action: Reissue the DDL statement with a valid CONTAINER clause.

ORA-65014: invalid SHARING clause

Cause: An invalid SHARING clause was encountered.

Action: Reissue the DDL statement with a valid SHARING clause.

ORA-65015: missing or invalid container name

Cause: A valid container name was not present where required by the syntax of ALTER SESSION SET CONTAINER or ALTER USER ... SET | ADD | REMOVE CONTAINER_DATA statement.

Action: Reissue the statement with a valid container name.

ORA-65016: FILE_NAME_CONVERT must be specified

Cause: Data files, and possibly other files, needed to be copied as a part of creating a pluggable database. However, Oracle Managed Files (OMF) was not enabled, PDB_FILE_NAME_CONVERT was not defined, and there was a failure to specify the FILE_NAME_CONVERT clause.

Action: Enable OMF or define PDB_FILE_NAME_CONVERT system parameter before issuing CREATE PLUGGABLE DATABASE statement, or specify FILE_NAME_CONVERT clause as a part of the statement.

ORA-65017: seed pluggable database may not be dropped or altered

Cause: User attempted to drop or alter the Seed pluggable database which is not allowed.

Action: Specify a legal pluggable database name.

ORA-65018: FILE_NAME_CONVERT or NOCOPY must be specified

Cause: Oracle Managed Files (OMF) was not enabled and PDB_FILE_NAME_CONVERT was not defined. The FILE_NAME_CONVERT or the NOCOPY clause was not specified as a part of creating a pluggable database using data files.

Action: Enable OMF or define PDB_FILE_NAME_CONVERT system parameter before issuing CREATE PLUGGABLE DATABASE statement, or specify FILE_NAME_CONVERT clause or NOCOPY as a part of the statement.

ORA-65019: pluggable database *string* already open

Cause: An attempt was made to open a pluggable database that was already opened.

Action: Check the OPEN_MODE column in V\$PDBS view.

ORA-65020: pluggable database *string* already closed

Cause: An attempt was made to close a pluggable database that was already closed.

Action: Check the OPEN_MODE column in V\$PDBS view.

ORA-65021: illegal use of SHARING clause

Cause: A SHARING clause was encountered in unexpected context.

Action: Do not use SHARING clause outside of Oracle-supplied scripts.

ORA-65022: CONTAINER clause already specified

Cause: A statement contained multiple CONTAINER clauses.

Action: Eliminate redundant CONTAINER clauses.

ORA-65023: active transaction exists in container *string*

Cause: A statement attempted to create a new transaction in the current container while there was an active transaction in another container.

Action: Switch to the container with the active transaction and commit, rollback or detach the active transaction before attempting to issue any statement that will attempt to create a new transaction in another container.

ORA-65024: Pluggable database *string* is not open.

Cause: An operation was attempted on a pluggable database that was not open.

Action: Open the pluggable database using appropriate open mode.

ORA-65025: Pluggable database *string* is not closed on all instances.

Cause: An operation was attempted on a pluggable database that was not closed on all Oracle RAC instances.

Action: Close the pluggable database on all instances and retry the operation.

ORA-65026: XML metadata file error : *string*

Cause: An error occurred while trying to parse or write to the XML metadata file.

Action: Check that the XML metadata file exists and is readable.

ORA-65027: XML metadata file error while getting node or value for (*string* - *string*)

Cause: An error occurred while trying to parse the XML metadata file.

Action: Check and correct the XML metadata file.

ORA-65028: Unable to open plugin data file at path *string*

Cause: Error occurred while trying to open the datafile.

Action: Check that the datafile exists at the path.

ORA-65029: a Local User may not grant or revoke a Common Privilege or Role

Cause: A Local User issued a GRANT or REVOKE statement specifying CONTAINER=ALL, which is illegal.

Action: Remove CONTAINER=ALL from the statement.

ORA-65030: one may not grant a Common Privilege to a Local User or Role

Cause: A Common User issued a GRANT statement specifying CONTAINER=ALL and naming a Local User or Role as a grantee, which is illegal.

Action: If trying to grant a Local Privilege, remove CONTAINER=ALL from the statement. If trying to grant a Common Privilege, remove Local Users and Roles from the list of grantees.

ORA-65031: one may not revoke a Common Privilege from a Local User or Role

Cause: A Common User issued a REVOKE statement specifying CONTAINER=ALL and naming a Local User or Role as a grantee, which is illegal.

Action: If trying to revoke a Local Privilege, remove CONTAINER=ALL from the statement. If trying to revoke a Common Privilege, remove Local Users and Roles from the list of grantees.

ORA-65032: a Local Role may only be granted or revoked within the current Container

Cause: A user issued a GRANT or REVOKE statement specifying CONTAINER=ALL and listing a Local Role among roles to be granted or revoked, which is illegal.

Action: If trying to revoke a Local Role, remove CONTAINER=ALL from the statement. If trying to revoke Common Privileges and/or Roles, remove Local Roles from the list of roles being granted or revoked.

ORA-65033: a common privilege may not be granted or revoked on a local object

Cause: A GRANT or REVOKE statement was issued specifying CONTAINER=ALL and naming a local object on which privileges are to be granted or revoked, which is illegal.

Action: Remove CONTAINER=ALL from the statement.

ORA-65034: PDB describe output file not specified

Cause: User attempted to describe a pluggable database without specifying an output XML file location.

Action: Specify an output file location for describe

ORA-65035: unable to create pluggable database from *string*

Cause: The pluggable database had ongoing or active transactions that need to be recovered.

Action: Open the pluggable database in read/write mode before cloning again so that transaction recovery can be performed.

ORA-65036: pluggable database *string* not open in required mode

Cause: Attempted to perform an operation on a pluggable database in incorrect open mode.

Action: Open the pluggable database in the mode required for this operation

ORA-65037: a common privilege may not be granted or revoked on a local user

Cause: A GRANT or REVOKE statement was issued specifying CONTAINER=ALL and naming a local user on which privileges are to be granted or revoked, which is illegal.

Action: Remove CONTAINER=ALL from the statement.

ORA-65039: container identifier column missing or is of unexpected type in a definition of a CONTAINER_DATA object

Cause: Table or view whose definition contained a CONTAINER_DATA clause lacked a column used to identify a container to which data belongs or the column was of unexpected type.

Action: Correct the statement and reenter.

ORA-65040: operation not allowed from within a pluggable database

Cause: An operation was attempted that can only be performed in the root container.

Action: Switch to the root container to perform the operation.

ORA-65041: CONTAINER_DATA attribute for this user cannot be modified

Cause: An attempt was made to modify CONTAINER_DATA attribute for user SYS or SYSBACKUP which is disallowed.

Action: Do not attempt to modify CONTAINER_DATA attribute for users SYS or SYSBACKUP.

ORA-65042: name is already used by an existing container

Cause: The name was already used by another container.

Action: Specify a valid name.

ORA-65043: TABLESPACE keyword expected

Cause: TABLESPACE keyword was missing.

Action: Specify a TABLESPACE keyword.

ORA-65044: missing or invalid option following STORAGE keyword

Cause: An option other than MAXSIZE or MAX_SHARED_TEMP_SIZE was specified.

Action: Specify only legal options.

ORA-65045: pluggable database not in a restricted mode

Cause: An operation was attempted on a pluggable database that was not in restricted mode.

Action: Open the pluggable database in a restricted mode.

ORA-65046: operation not allowed from outside a pluggable database

Cause: An operation was attempted that can only be performed from within a pluggable database.

Action: Switch to a pluggable database to perform the operation.

ORA-65047: object *string.string* is invalid or compiled with errors in CDB\$ROOT

Cause: An attempt was made to issue a metadata link ddl for an object that was invalid or compiled with errors in CDB\$ROOT.

Action: Check the validity of the object in CDB\$ROOT.

ORA-65048: error encountered when processing the current DDL statement in pluggable database *string*

Cause: An error was encountered when executing a statement in one of the pluggable databases.

Action: Examine the cause of failure in the pluggable database.

ORA-65049: creation of local user or role is not allowed in CDB\$ROOT

Cause: An attempt was made to create a local user or role in CDB\$ROOT.

Action: If trying to create a common user or role, specify CONTAINER=ALL.

ORA-65050: Common DDLs only allowed in CDB\$ROOT

Cause: An attempt was made to issue a Common DDL in a pluggable database.

Action: Switch to CDB\$ROOT and issue the Common DDL there.

ORA-65051: missing valid container identifier

Cause: A valid container identifier was not specified.

Action: Specify a valid container identifier.

ORA-65052: statement involves operations with different container scope

Cause: An attempt was made to combine one operation that applies to all containers with another that only applies to the local container into one statement.

Action: Execute the operations in separate statements.

ORA-65053: A global user cannot change the container in the session.

Cause: An attempt was made by a global user to change the container using the ALTER SESSION SET CONTAINER statement.

Action: This operation is not allowed for global users.

ORA-65054: Cannot open a pluggable database in the desired mode.

Cause: An attempt was made to open a pluggable database in a mode incompatible with that of the CDB.

Action: Open the CDB in a compatible mode first and retry the operation.

ORA-65056: CONTAINER_DATA attribute is not used in a pluggable database.

Cause: User connected to a pluggable database attempted to modify a CONTAINER_DATA attribute which is illegal.

Action: User connected to a pluggable database may only see rows of CONTAINER_DATA objects on which he has been granted appropriate privilege and which pertain to that pluggable database or to the CDB as a whole. Ability to see this data is not controlled by CONTAINER_DATA attribute, which is only used to control ability to see rows pertaining to certain Containers while connected to CDB\$ROOT in a CDB.

ORA-65057: CONTAINER_DATA attribute must always include the current container

Cause: User issuing ALTER USER ... SET | REMOVE CONTAINER_DATA = ... statement attempted to exclude the current container from a CONTAINER_DATA attribute.

Action: Ensure that a CONTAINER_DATA attribute always includes the current container.

ORA-65058: object-specific CONTAINER_DATA attribute may only be specified for a CONTAINER_DATA object

Cause: Object referenced in an ALTER USER statement modifying an object-specific CONTAINER_DATA attribute is not a CONTAINER_DATA table or view.

Action: Ensure that an object referenced in the statement is a CONTAINER_DATA table or view.

ORA-65059: duplicate container name in CONTAINER_DATA clause

Cause: Duplicate references to a name of some container was encountered in a CONTAINER_DATA clause.

Action: Ensure that no container name appears more than once.

ORA-65060: CONTAINER_DATA attribute is not set

Cause: User attempted to add container(s) to an object-specific CONTAINER_DATA attribute which has not been explicitly set or has been set to DEFAULT or remove containers from a CONTAINER_DATA attribute which has not been explicitly set or has been set to DEFAULT.

Action: Avoid adding containers to object-specific CONTAINER_DATA attribute which has not been explicitly set or has been set to DEFAULT or removing containers from a CONTAINER_DATA attribute which has not been explicitly set or has been set to DEFAULT.

ORA-65061: some of specified containers do not belong to the CONTAINER_DATA attribute

Cause: User attempted to remove from a CONTAINER_DATA attribute container(s) which do not belong to it.

Action: Do not attempt to remove from a CONTAINER_DATA attribute container(s) which do not belong to it.

ORA-65062: CONTAINER_DATA attribute is set to ALL

Cause: User attempted to add/remove container(s) to/from a CONTAINER_DATA attribute whose current value is ALL, which is not supported.

Action: Do not attempt to add/remove container(s) to/from a CONTAINER_DATA attribute whose current value is ALL.

ORA-65063: CONTAINER_DATA clause has already been specified

Cause: The CONTAINER_DATA clause was specified twice.

Action: Specify only one CONTAINER_DATA clause.

ORA-65064: incorrect contents of XML metadata file

Cause: The contents of the XML metadata file were different from the actual file properties.

Action: Check and correct the XML metadata file.

ORA-65065: A local user or role can only be altered within the current container

Cause: The ALTER USER or ALTER ROLE statement was issued specifying CONTAINER=ALL and listing a local user or role among the users or roles to be altered, which is illegal.

Action: If trying to alter a local user or role, specify CONTAINER=CURRENT. If trying to alter common users or roles, remove local users or roles from the list of roles being altered.

ORA-65066: The specified changes must apply to all containers

Cause: An attempt was made to apply the specified changes to the current container.

Action: Specify CONTAINER=ALL.

ORA-65067: DEFAULT ROLE clause referencing a local role can only apply to the current container

Cause: An attempt was made to reference a local role across all containers using the DEFAULT ROLE clause.

Action: If you are trying to set a local role as the default role, specify CONTAINER=CURRENT. If trying to set common roles as the default roles, remove local roles from the list of roles referenced in the DEFAULT ROLE clause.

ORA-65068: cannot define a trigger that fires after a pluggable database is unplugged

Cause: An attempt was made to create a trigger that fires after a pluggable database has been unplugged. This type of trigger is not supported.

Action: Do not attempt to create a trigger that fires after a pluggable database has been unplugged.

ORA-65069: AFTER DB_ROLE_CHANGE triggers cannot be defined on a pluggable database

Cause: An attempt was made to create a pluggable database trigger that fires after a role change occurs from a standby database to primary or vice versa. This type of trigger is not supported.

Action: Do not specify AFTER DB_ROLE_CHANGE when creating a trigger on a pluggable database.

ORA-65070: AFTER CLONE trigger can only be created on a pluggable database

Cause: An attempt was made to create an AFTER CLONE trigger on a schema or a database. This type of trigger is not supported.

Action: Do not specify AFTER CLONE when creating a trigger on a schema or a database.

ORA-65071: BEFORE UNPLUG trigger can only be created on a pluggable database

Cause: An attempt was made to create a BEFORE UNPLUG trigger on a schema or a database. This type of triggers is not supported.

Action: Do not specify BEFORE UNPLUG when creating a trigger on a schema or a database.

ORA-65072: user must be connected to a pluggable database on which a trigger is being created

Cause: An attempt was made to create a database event trigger on a pluggable database while not connected to a pluggable database. This is not supported.

Action: Connect to the pluggable database on which a database event trigger needs to be created before attempting to create such a trigger.

ORA-65073: cannot define a trigger that fires before a pluggable database is cloned

Cause: An attempt was made to create a trigger that fires before a pluggable database has been cloned. This type of trigger is not supported.

Action: Do not attempt to create a trigger that fires before a pluggable database has been cloned.

ORA-65074: editions not supported for common users

Cause: An attempt was made to support editions for common users.

Action: Do not attempt to enable editions for common users.

ORA-65080: cannot determine pluggable database name

Cause: An attempt was made to map the database ID to the pluggable database name.

Action: Contact Oracle Support Services.

ORA-65081: database or pluggable database is not open in read only mode

Cause: An operation was attempted on a database or pluggable database that is not open in read only mode

Action: Open the database or pluggable database in read only mode and then retry the operation.

ORA-65082: cannot add any more pluggable databases: limit of *string* exceeded

Cause: There was no more room in the control file for adding pluggable databases.

Action: Recreate the control file.

ORA-65083: pluggable database (PDB) shutdown in progress

Cause: The pluggable database is in the middle of shutdown abort

Action: Retry the operation later.

ORA-65084: object *string.string* does not exist in root

Cause: An attempt was made to create a common object that does not exist in root.

Action: Invoke the script using catcon.pl to create the object in all containers.

ORA-65085: cannot open pluggable database in read-only mode

Cause: The pluggable database has been created and not opened.

Action: The pluggable database needs to be opened in read/write or restricted mode first.

ORA-65086: cannot open/close the pluggable database

Cause: The pluggable database has been unplugged.

Action: The pluggable database can only be dropped.

ORA-65087: Oracle-supplied operation not allowed from within a pluggable database

Cause: An operation in an Oracle-supplied script was attempted that can only be performed in the root container.

Action: Confirm that the operation is needed in the root container, and switch to the root container to perform the operation.

ORA-65088: database open should be retried

Cause: An inconsistency between the control file and the data dictionary was found and fixed during the database open. The database open needs to be executed again.

Action: Retry the database open.

ORA-65089: pluggable database is not clean

Cause: The pluggable database was not open anywhere but was not marked as clean yet.

Action: Wait until the cleanup is done and retry.

ORA-65090: operation only allowed in a container database

Cause: User attempted an operation that is only allowed in a CDB

Action: Connect to a CDB to perform this operation

ORA-65091: operation on *string* not allowed in a pluggable database

Cause: An undo tablespace or rollback segment operation was attempted that can only be performed in the root container.

Action: Switch to the root container to perform the undo tablespace or rollback segment operation.

ORA-65092: system privilege granted with a different scope to '*string*'

Cause: An attempt to revoke a system privilege that was granted with a different scope has been made. The user tried to either revoke a common privilege in the current container or to revoke a local privilege in a container database (CDB).

Action: Specify the correct value for the CONTAINER clause.

ORA-65093: multitenant container database not set up properly

Cause: An attempt was made to open a multitenant container database without the correct parameter set for a multitenant container database in the initialization parameter file.

Action: Set the 'enable_pluggable_database=true' parameter for the multitenant container database in the initialization parameter file and restart the database.

ORA-65094: invalid local user or role name

Cause: An attempt was made to create a local user or role with a name that was not valid for local users or roles. In addition to the usual rules for user and role names, local user and role names cannot start with C## or c##.

Action: Specify a valid local user or role name.

ORA-65095: invalid common object name

Cause: An attempt was made to create a common object with a name that was not valid for common objects. In addition to the usual rules for object names, common object names must consist only of ASCII characters.

Action: Specify a valid common object name.

ORA-65096: invalid common user or role name

Cause: An attempt was made to create a common user or role with a name that was not valid for common users or roles. In addition to the usual rules for user and role names, common user and role names must start with C## or c## and consist only of ASCII characters.

Action: Specify a valid common user or role name.

ORA-65097: Invalid argument supplied to CDB\$VIEW function

Cause: CDB\$VIEW may be applied to a valid table name of the form *owner.tablename*

Action: Correct the statement

ORA-65098: Datatype not supported with CDB\$VIEW function

Cause: Column with unsupported datatype was selected from a CDB View.

Action: Remove the column from the select list

ORA-65099: Operation cannot be performed when the CDB is not open

Cause: An operation was attempted inside a pluggable database that requires the container database (CDB) to be open. *Action: Open the CDB and then reissue the operation.

Action: n/a

ORA-65100: missing or invalid path prefix - *string*

Cause: Path prefix was missing or invalid.

Action: Correct the PATH_PREFIX clause and reissue the statement.

ORA-65101: container database set up incorrectly

Cause: An attempt was made to use a non container database control file to startup a container database (CDB).

Action: Create a new control file for the CDB.

ORA-65102: missing or invalid instance name

Cause: A valid instance name was not present where required by the syntax of a ALTER PLUGGABLE DATABASE statement.

Action: Reissue the statement with a valid instance name.

ORA-65103: UPGRADE cannot be specified for PDBs being open in READ ONLY mode

Cause: ALTER PLUGGABLE DATABASE ... OPEN UPGRADE was specified, but the root is open READ ONLY, so the specified PDBs will also be opened READ ONLY, and UPGRADE cannot be specified for PDBs being opened READ ONLY.

Action: Reissue the statement without specifying UPGRADE or reopen the root in READ WRITE mode and then reissue the statement.

ORA-65104: operation not allowed on an inactive pluggable database

Cause: The pluggable database status was INACTIVE. It was still being created or there was an error during the create operation.

Action: Wait until the status is changed to CREATED or, in case of errors, drop the pluggable database and re-create it.

ORA-65105: SYSTEM data file for pluggable database #*string* not found

Cause: Data files were not specified in a CREATE CONTROLFILE statement in the SYSTEM tablespace of a pluggable database.

Action: Locate the data files and resubmit the CREATE CONTROLFILE statement.

ORA-65106: Pluggable database #*string* (*string*) is in an invalid state.

Cause: Data files were not specified in a CREATE CONTROLFILE statement of a pluggable database.

Action: Drop the pluggable database or locate the data files and resubmit the CREATE CONTROLFILE statement.

ORA-65107: Error encountered when processing the current task on instance:*string*

Cause: An error was encountered when executing a pluggable database task on one of the Oracle RAC instances.

Action: Examine the cause of failure on the instance.

ORA-65108: invalid use of a cursor belonging to another container

Cause: An attempt was made to use a cursor that was parsed or executed in a different container.

Action: Check if there are any incorrect uses of the SET CONTAINER statement. Parse, execute, fetch, and close a cursor only all in the same container.

ORA-65109: operation not allowed in CDB\$ROOT

Cause: An operation was attempted that is not supported in the Container Database root.

Action: Switch to a pluggable database to perform the operation.

ORA-65110: Invalid instance name specified

Cause: An attempt was made to use an invalid or inactive instance name in the instance clause to alter the state of a pluggable database.

Action: Specify a valid and active instance name.

ORA-65111: Cannot relocate to the same instance

Cause: An attempt was made to relocate a pluggable database to the current instance.

Action: Specify an instance which is different then the current instance.

ORA-65112: pluggable database *string* not closed on all instances of the standby database

Cause: Media recovery stopped because the pluggable database was either unplugged, dropped or renamed on the primary database.

Action: Close the pluggable database on all instances and restart the recovery.

ORA-65113: value of MAX_PDB_STORAGE property for the PDB is too low

Cause: The value of MAX_PDB_STORAGE specified in the ALTER or CREATE PLUGGABLE DATABASE statement is less than the current space usage of data files and temporary files of the container.

Action: Specify a higher value for MAX_PDB_STORAGE.

ORA-65114: space usage in container is too high

Cause: Space usage in the current container exceeded the value of MAX_PDB_STORAGE for the container.

Action: Specify a higher value for MAX_PDB_STORAGE using the ALTER PLUGGABLE DATABASE statement.

ORA-65115: CDB resource plan *string* has more than *string* PDB directives.

Cause: An attempt was made to create or update the specified multitenant container database (CDB) resource plan to use more than the supported number of directives.

Action: Remove the directives for pluggable databases (PDBs) that are not active on this database.

ORA-65116: incompatible database character set

Cause: The database character set of the container database was not a superset of the database character set of the pluggable database being plugged in.

Action: Plug the pluggable database into a container database having a compatible database character set.

ORA-65117: CONTAINER clause may only be specified when connected to a container database

Cause: The CONTAINER clause was specified when not connected to a container database (CDB).

Action: Reenter the statement without the CONTAINER clause.

ORA-65118: operation affecting a pluggable database cannot be performed from another pluggable database

Cause: An attempt was made to perform an operation affecting a pluggable database while connected to a different pluggable database.

Action: Connect to the desired pluggable database and perform the operation.

ORA-65119: incompatible national character set

Cause: The national character set of the container database was not the same as the national character set of the pluggable database being plugged in.

Action: Plug the pluggable database into a container database having the same national character set.

ORA-65120: illegal character set ID in XML metadata file

Cause: The XML metadata file for the pluggable database being plugged in contained a database or national character set ID that was not valid for the container database. This can happen if the XML file is manually modified, if it is corrupted on disk, or if the set of supported character sets differs between the container database and the source database of the pluggable database because a user-defined character set has not been installed in the Oracle Home directory of the container database.

Action: If you have manually modified the XML metadata file of the pluggable database, restore the original file or re-create the pluggable database from its source database. Manual modifications of the XML file are not supported. If the pluggable database uses a user-defined character set, make sure the character set is installed in the Oracle Home directory of the container database. Otherwise, contact Oracle Support Services.

ORA-65121: ALTER SESSION SET CONTAINER not allowed from this client

Cause: Clients earlier than Oracle Database 12c Release 1 do not support this feature.

Action: Upgrade the client to Oracle Database 12c Release 1 or later.

ORA-65122: Pluggable database GUID conflicts with the GUID of an existing container.

Cause: While creating a pluggable database, the GUID conflicted with the GUID of an existing container in the container database.

Action: Retry creating the pluggable database or consider using the AS CLONE clause for CREATE PLUGGABLE DATABASE if plugging in a copy of another pluggable database.

ORA-65123: cannot perform a SET CONTAINER operation in this context

Cause: An attempt was made to set the container inside a context where such an operation is prohibited.

Action: Do not set the container from inside a system trigger or a DML context.

ORA-65125: valid XML file name is required

Cause: An attempt was made to provide a file name that did not have an XML extension.

Action: Specify an XML file.

ORA-65126: pluggable database *string* cannot be unplugged.

Cause: The pluggable database was not closed cleanly and there are active transactions that need to be recovered.

Action: Open the pluggable database in read/write mode before unplugging again so that transaction recovery can be performed.

ORA-65127: PDB recover output file not specified

Cause: An attempt was made to recover a pluggable database (PDB) without specifying an output XML file location.

Action: Specify an output file location for recovery.

ORA-65128: PDB recover data file name not specified

Cause: An attempt was made to recover a pluggable database (PDB) without specifying a data file location.

Action: Specify a data file location for recovery.

ORA-65129: Pluggable database *string* cannot be relocated.

Cause: The pluggable database was already opened on all instances.

Action: Close the pluggable database without RELOCATE clause or close the pluggable database on another instance.

ORA-65130: cannot relocate more than one pluggable database.

Cause: An attempt was made to relocate more than one pluggable database.

Action: RELOCATE pluggable database one at a time.

ORA-65131: The feature *string* is not supported in a pluggable database.

Cause: An attempt was made to use a feature that is not supported in a pluggable database.

Action: Do not use this feature in a pluggable database.

ORA-65134: endian mismatch

Cause: The endian of the container database was not the same as the endian of the pluggable database being plugged in.

Action: Plug the pluggable database into a container database having the same endian.

ORA-65135: cannot perform ALTER SESSION SET CONTAINER operation in this context

Cause: An ALTER SESSION SET CONTAINER operation was attempted in a context where such an operation is prohibited.

Action: Do not perform the ALTER SESSION SET CONTAINER operation from a session that can be migrated or a session from an OCI connection pool.

ORA-65136: SPFILE name cannot be specified for a pluggable database

Cause: An attempt was made to specify an SPFILE name for a pluggable database.

Action: Remove the SPFILE name and retry the operation in the pluggable database.

ORA-65137: Pluggable database *string* is in the middle of Pluggable Database RESETLOGS operation.

Cause: The pluggable database is in the middle of a Pluggable Database (PDB) RESETLOGS operation.

Action: If possible, recover the Container Database further so that this Pluggable database is not in the middle of a PDB RESETLOGS operation. Another alternative is to perform PDB point-in-time recovery. A message is logged in the alert log

indicating SCN and time until which the pluggable database can be point-in-time recovered.

ORA-65138: Data file *string* of pluggable database *string* belongs to an orphan PDB incarnation.

Cause: Either the specified data file was restored from a backup that was taken during a period of time that was discarded by a RESETLOGS operation, or Oracle could not identify which pluggable database incarnation the file belongs to. The alert log contains more information.

Action: Restore a backup of this file that belonged to either the current or a prior incarnation of the pluggable database. If you are using RMAN to restore, RMAN will automatically select a correct backup.

ORA-65139: Mismatch between XML metadata file and data file *string* for value of *string* (*string*)

Cause: Either the XML metadata file or the data file was corrupt.

Action: Verify that the XML metadata file and the data file are consistent as of the point when the unplug was done and retry the operation.

ORA-65140: invalid common profile name

Cause: An attempt was made to create a common profile with a name that is not valid for common profiles. Common profile names must start with C## or c## and consist only of ASCII characters.

Action: Specify a valid common profile name.

ORA-65141: invalid local profile name

Cause: An attempt was made to create a local profile with a name that is not valid for local profiles. Local profile names cannot start with C## or c##.

Action: Specify a valid local profile name.

ORA-65142: A local profile can be altered only within the current container

Cause: An attempt was made to alter a local profile using an ALTER PROFILE statement with the CONTAINER=ALL clause.

Action: If attempting to alter a local profile, ensure that you are connected to the correct container and optionally specify CONTAINER=CURRENT.

ORA-65143: creation of local profiles is not allowed in CDB\$ROOT

Cause: An attempt was made to create a local profile in CDB\$ROOT.

Action: If attempting to create a common profile, do not specify CONTAINER=CURRENT.

ORA-65144: ALTER SYSTEM DISABLE RESTRICTED SESSION is not permitted

Cause: An attempt was made to disable a restricted session while an unresolved error existed in PDB_PLUG_IN_VIOLATIONS.

Action: Resolve all of the errors before trying to disable a restricted session.

ORA-65145: FORCE open of a pluggable database on more than one instance is not supported

Cause: An attempt was made to FORCE open a pluggable database on more than one instance.

Action: Retry the FORCE open of the pluggable database one instance at a time.

ORA-65146: account cannot be unlocked in a PDB while it is locked in the root

Cause: An attempt was made to unlock a common user account in a pluggable database (PDB) which was locked in the root of the container database.

Action: Ensure that a common user account is not locked in the root before attempting to unlock it in a PDB.

ORA-65147: DB_UNIQUE_NAME specified without SPFILE scope

Cause: An attempt was made to specify a DB_UNIQUE_NAME in an ALTER SYSTEM statement without SCOPE=SPFILE.

Action: Use DB_UNIQUE_NAME only with SCOPE=SPFILE.

ORA-65148: cannot FORCE open a pluggable database to or from upgrade mode

Cause: An attempt was made to FORCE open a pluggable database to or from upgrade mode.

Action: Close the pluggable database first and retry the operation.

ORA-65149: PDB name conflicts with existing service name in the CDB or the PDB

Cause: An attempt was made to create a pluggable database (PDB) whose name conflicts with the existing service name in the container database (CDB) or the PDB.

Action: Choose a different name for the PDB.

ORA-65150: unable to start the instance

Cause: An attempt was made to start an instance as a container or a non-container database when atleast one of the other instances was started in a different mode.

Action: Start the instance in the same mode as all the other instances.

ORA-65151: invalid tablespace name specified

Cause: An attempt was made to use an invalid tablespace name or a mandatory tablespace name (SYSTEM or SYSAUX) in the USER_TABLESPACES clause when creating a pluggable database.

Action: Specify a valid tablespace name.

ORA-65152: cannot bring datafile online

Cause: An attempt was made to bring online one or more datafiles belonging to a pluggable database that is disabled for recovery.

Action: Issue the ALTER PLUGGABLE DATABASE ENABLE RECOVERY statement first and retry the operation.

ORA-65153: cannot bring tablespace online

Cause: An attempt was made to bring online a tablespace that was either missing in the plug XML file or excluded when the pluggable database was created.

Action: Drop and recreate the tablespace to bring it online.

ORA-65154: specified logging attribute for the pluggable database is same as the current attribute value

Cause: An attempt was made to change the default logging attribute to be the same as the current attribute value for the pluggable database.

Action: Change the logging attribute to a different value.

ORA-65155: missing or invalid source file directory *string*

Cause: Source file directory was missing or invalid.

Action: Correct the SOURCE_FILE_DIRECTORY clause and reissue the statement.

ORA-65156: pluggable database version *string* not allowed

Cause: An attempt was made to plug in a pluggable database with an incompatible version of the multitenant container database.

Action: Plug in a pluggable database with a compatible version of the multitenant container database.

ORA-65157: SOURCE_FILE_NAME_CONVERT and SOURCE_FILE_DIRECTORY cannot be specified together

Cause: SOURCE_FILE_NAME_CONVERT and SOURCE_FILE_DIRECTORY clauses were both specified.

Action: Use either the SOURCE_FILE_NAME_CONVERT or the SOURCE_FILE_DIRECTORY clause and reissue the statement.

ORA-65158: could not find a matching file for - *string*

Cause: A matching file was not found in the directory specified with the SOURCE_FILE_DIRECTORY clause.

Action: Correct the SOURCE_FILE_DIRECTORY clause or check that the file exists in the directory and reissue the statement.

ORA-65159: invalid service name specified

Cause: An attempt was made to use an invalid service name in the services clause.

Action: Specify a valid service name.

ORA-65160: invalid cleanup task ID

Cause: An attempt was made to pass an invalid cleanup task ID to the DBMS_PDB.CLEANUP_TASK function.

Action: Specify a valid cleanup task ID.

ORA-65161: Unable to create pluggable database with no data

Cause: An attempt was made to clone a pluggable database which contains some clustered tables or index organized tables or advanced queue tables.

Action: Retry the clone operation after dropping all such objects from the source pluggable database.

ORA-65162: The password has expired.

Cause: The user's account expired and the password needs to be changed by connecting to the root of the multitenant container database

Action: Change the password or contact the DBA.

ORA-65164: database is in NOARCHIVELOG mode

Cause: The database was in NOARCHIVELOG mode when pluggable database (PDB) shutdown abort was attempted.

Action: Set the database to ARCHIVELOG mode by issuing the ALTER DATABASE ARCHIVELOG command.

ORA-65165: missing or invalid path for file creation *string*

Cause: The path specified in CREATE_FILE_DEST clause was missing or invalid.

Action: Correct the CREATE_FILE_DEST clause and reissue the statement.

ORA-65166: cannot run noncdb_to_pdb.sql if PDB's version differs from CDB's
Cause: An attempt was made to run noncdb_to_pdb.sql when the version of the pluggable database (PDB) was different from the version of the multitenant container database (CDB).

Action: Upgrade the PDB before running noncdb_to_pdb.sql

ORA-65167: cannot run noncdb_to_pdb.sql if container database is in upgrade mode

Cause: An attempt was made to run noncdb_to_pdb.sql when the multitenant container database (CDB) was in upgrade mode.

Action: Open the CDB in non-upgrade mode.

ORA-65168: missing PFILE name

Cause: An operation involving PFILE was issued in a pluggable database without specifying the PFILE name

Action: Specify a valid PFILE name and retry the operation in the pluggable database.

ORA-65169: error encountered while attempting to copy file *string*

Cause: An error was encountered while attempting to copy the file while creating a pluggable database.

Action: Check additional error messages for the cause of the failure to copy the file, and resolve the issue accordingly.

ORA-65170: XML file *string* already exists

Cause: An attempt to create an XML file failed because a file with that name already exists.

Action: Use a different XML file name.

ORA-65171: invalid value for DB_BLOCK_CHECKING parameter

Cause: An attempt was made to specify a value of FALSE or OFF for the DB_BLOCK_CHECKING parameter in a pluggable database (PDB), when the value of DB_BLOCK_CHECKING parameter in the multitenant container database (CDB) is neither FALSE nor OFF. If the CDB has enabled the DB_BLOCK_CHECKING parameter, then the PDB cannot disable the DB_BLOCK_CHECKING parameter.

Action: Specify a value other than FALSE or OFF for the DB_BLOCK_CHECKING parameter in the PDB.

ORA-65172: cannot run noncdb_to_pdb.sql unless pluggable database is an unconverted non-container database

Cause: An attempt was made to run 'noncdb_to_pdb.sql' on a pluggable database (PDB) that was not an unconverted non-container database.

Action: 'noncdb_to_pdb.sql' is not necessary for this PDB.

ORA-65173: privilege granted with a different scope to '*string*'

Cause: An attempt to revoke a privilege that was granted with a different scope has failed. The user tried to either revoke a common privilege in the current container or to revoke a local privilege in a multitenant container database (CDB).

Action: Specify the correct value for the CONTAINER clause.

ORA-65174: invalid or conflicting name in service *string* found in the pluggable database

Cause: The service name or network name in the specified service is invalid or it conflicts with an existing service name or network name in the container database.

Action: Use an appropriate SERVICE_NAME_CONVERT clause and reissue the statement.

ORA-65175: cannot grant SYSDBA privilege locally in the root

Cause: An attempt was made to grant SYSDBA privilege locally in the root of a multitenant container database (CDB).

Action: While connected to the root, SYSDBA privilege can only be granted commonly.

ORA-65176: system tablespace block size (*string*) does not match configured block sizes

Cause: The block size of the system tablespace of the pluggable database to be plugged in did not match the block sizes configured in the container database.

Action: Configure the appropriate cache for the block size of the system tablespace using the DB_#K_CACHE_SIZE parameter (where # is 2, 4, 8, 16, or 32).

ORA-65177: cannot create common user with the same name as local user

Cause: An attempt was made to create a common user with the same name as an existing local user.

Action: Specify a different user name.

ORA-65178: invalid logging mode specified for the pluggable database

Cause: An attempt was made to either enable a conflicting logging mode or to disable a logging mode when it was not enabled.

Action: Check the current logging modes in DBA_PDBS for the pluggable database and specify a valid mode.

ORA-65179: cannot keep datafiles for a pluggable database that is not unplugged

Cause: An attempt was made to drop a pluggable database without specifying the INCLUDING DATAFILES clause, and the pluggable database has not been unplugged.

Action: Unplug the pluggable database before dropping the pluggable database or use the INCLUDING DATAFILES clause in the DROP PLUGGABLE DATABASE statement.

ORA-65180: duplicate file name encountered - *string*

Cause: An attempt was made to issue a CREATE PLUGGABLE DATABASE statement with a duplicate source or target file name for the source file name mentioned in the message. This could be caused by incorrect SOURCE_FILE_NAME_CONVERT or FILE_NAME_CONVERT clause.

Action: Use an appropriate SOURCE_FILE_NAME_CONVERT or FILE_NAME_CONVERT clause to ensure that there are no duplicate source or target file names and then reissue the statement.

ORA-65181: invalid argument supplied to CONTAINERS function

Cause: An attempt was made to create a multitenant container database (CDB) view with an invalid table or view name.

Action: Specify a valid table or view name of the form *owner.<table_name | view_name>*.

ORA-65182: unable to modify the state of pluggable database *string*

Cause: An attempt was made to modify the state of a pluggable database which is currently in the middle of a state transition.

Action: Retry the operation later.

ORA-65183: FORCE open of a PDB on only a few instances where its open on is not allowed

Cause: An attempt was made to FORCE open a pluggable database on only a few Oracle RAC instances where it is currently open.

Action: Retry the FORCE open and include all Oracle instances where the PDB is open

ORA-65184: encountered data files belonging to different PDBs

Cause: An attempt was made to invoke DBMS_PDB.RECOVER() by specifying data files or a directory name containing data files belonging to different PDBs.

Action: Check the paths provided to DBMS_PDB.RECOVER() and retry the operation.

ORA-65185: could not find data file belonging to SYSTEM tablespace

Cause: An attempt was made to invoke DBMS_PDB.RECOVER() by specifying data files or a directory name containing data files where no data file belonging to SYSTEM tablespace was found. SYSTEM tablespace is critical to recover a PDB.

Action: Check the paths specified to dbms_pdb.recover() and ensure that it at least contains data files belonging to SYSTEM tablespace.

ORA-65186: The user, role or profile *string* has sync errors.

Cause: There were pending SQL statements involving this user, role or profile which need to be resolved in order for the pluggable database (PDB) to be synced with ROOT.

Action: Resolve the pending SQL statement in the PDB and retry the operation.

ORA-65400: Table does not have CLUSTERING clause associated with it

Cause: User attempts to modify clustering clause on a table that does not have one.

Action: Create CLUSTERING clause on the table first.

ORA-65402: invalid option on CLUSTERING clause

Cause: Invalid option on CLUSTERING clause. Only [YES | NO] ON LOAD or [YES | NO] ON DATA MOVEMENT are valid.

Action: Correct the option on the CLUSTERING clause.

ORA-65403: invalid usage of CLUSTERING clause

Cause: Invalid usage of CLUSTERING clause. The clause can be specified only for CREATE/ALTER TABLE/SNAPSHOT/MATERIALIZED VIEW

Action: Don't use CLUSTERING clause in this statement

ORA-65404: CLUSTERING clause specified more than once on a table

Cause: A table can have only one clustering clause. The clause was specified multiple times.

Action: Correct the statement to use only one CLUSTERING clause.

ORA-65405: CLUSTERING clause cannot be used with existing table options

Cause: CLUSTERING clause conflicts with other clauses on the table. Clustering cannot be used on IOT, CLUSTERED, GLOBAL TEMPORARY TABLE, EXTERNAL TABLE.

Action: Correct the statement so clustering clause does not conflict with other clauses.

ORA-65406: invalid option on CLUSTERING clause

Cause: CLUSTERING was not followed by BY [LINEAR | MULTIDIMENSIONAL] ORDER.

Action: Correct the option on the CLUSTERING clause.

ORA-65407: CLUSTERING clause already exists on the table

Cause: Add CLUSTERING clause was specified on a table with an existing clustering clause.

Action: If table has clustering, you can only change ON LOAD or ON DATA MOVEMENT options. To change other options, you must first drop the clause.

ORA-65408: CLUSTERING clause has too many columns in BY ORDER

Cause: More than 10 columns were specified in the BY ORDER subclause. You can have at most 10 columns in the BY ORDER subclause.

Action: Lower the number of columns in the BY ORDER subclause to a value of 10 or less.

ORA-65409: CLUSTERING clause has too many MULTIDIMENSIONAL columns or groups

Cause: More than 40 columns were specified in the MULTIDIMENSIONAL ORDER subclause. You can have at most 40 columns in the MULTIDIMENSIONAL ORDER subclause.

Action: Lower the number of columns in the BY MULTIDIMENSIONAL ORDER subclause to a value of 40 columns or less or 4 groups or less.

ORA-65410: CLUSTERING clause can have only scalar columns

Cause: A non-scalar column was specified in the BY LINEAR or MULTIDIMENSIONAL ORDER subclause. Also, virtual or hidden columns are not allowed.

Action: Specify only scalar columns in the BY [LINEAR | MULTIDIMENSIONAL] ORDER subclause.

ORA-65411: CLUSTERING clause does not exist

Cause: An attempt was made to modify or drop a CLUSTERING clause in a table that had no CLUSTERING clause associated with it.

Action: Do not attempt to modify a nonexistent CLUSTERING clause.

ORA-65412: invalid option on ALTER TABLE .. CLUSTERING ..

Cause: You have specified an invalid option on ALTER TABLE...CLUSTERING. For example, you specified DROP and ADD CLUSTERING in one statement.

Action: Correct the statement.

ORA-65413: cannot resolve referenced object in the CLUSTERING clause

Cause: An object was referenced in the CLUSTERING clause that could not be resolved to a base table reference.

Action: The CLUSTERING clause can refer to base tables only.

ORA-65414: column resolves to multiple tables in the CLUSTERING clause

Cause: A column resolved to multiple tables in the CLUSTERING clause.

Action: Correct the statement. The column should resolve to only one table. Need to qualify by table name.

ORA-65415: wrong join condition in the CLUSTERING clause

Cause: The CLUSTERING clause had an OR condition and the individual join condition on the base table columns was not an equijoin.

Action: Correct the statement. Make sure that join conditions are equijoins and there are no OR conditions, or no expressions in the join.

ORA-65416: multiple dimension tables in the CLUSTERING clause

Cause: Joins in the CLUSTERING referenced a dimension table more than once.

Action: Correct the statement. Remove one of the references.

ORA-65417: illegal dimension table in the CLUSTERING clause

Cause: The dimension table in the CLUSTERING clause was illegal. Dimension table cannot be GLOBAL TEMPORARY TABLE or EXTERNAL TABLE.

Action: Rewrite the statement so it does not use an illegal option on the dimension table.

ORA-65418: primary or unique Key constraint missing in CLUSTERING join

Cause: The join between the fact and dimension tables in the CLUSTERING clause did not have a primary or unique key constraint on the dimension table.

Action: Add a primary or unique key constraint to the join columns on the dimension table.

ORA-65419: columns in a clustering group come from different tables

Cause: Columns in the clustering group did not come from the same table. For example: .. CLUSTERING BY ..(t1.c1, t2.c2), (t2.c1, t2.c2)). Clustering group (t1.c1, t2.c2) must contain references to only one table.

Action: Restructure the clustering group so it contains only references to a single table.

ORA-65420: columns in a join condition in the CLUSTERING clause are not compatible

Cause: The data type of columns in the join condition of CLUSTERING clause were not compatible. They must be of the same type.

Action: Select a compatible data type for the join conditions in the CLUSTERING clause.

ORA-65421: The CLUSTERING clause is defined on columns that are to be modified

Cause: An ALTER TABLE MODIFY COLUMN command was issued on a column on which a CLUSTERING clause exists.

Action: Drop the CLUSTERING clause before attempting to modify the column.

ORA-65422: The CLUSTERING clause already has a zonemap defined on it

Cause: An ALTER TABLE MODIFY CLUSTERING command was issued with the WITH MATERIALIZED ZONEMAP option but the table already had zonemap define on it.

Action: Drop the zonemap associated with the base table before attempting to add zonemap using the CLUSTERING clause.

ORA-65423: The CLUSTERING clause does not have a zonemap associated with it

Cause: An ALTER TABLE MODIFY CLUSTERING command was issued with the WITHOUT MATERIALIZED ZONEMAP option but the table did not have zonemap associated with the CLUSTERING clause.

Action: Do not use the ALTER TABLE MODIFY CLUSTERING WITHOUT ZONEMAP.

ORA-65424: CLUSTERING clause has too many joins

Cause: More than 4 joins were specified in the CLUSTERING clause. You can have at most 4 joins to the dimension tables.

Action: Reduce the number of joins to 4 or less.

ORA-65425: CLUSTERING clause not supported for table stored in tablespace of this storage type

Cause: An attempt was made to define clustering on a table stored in non-Oracle Exadata storage.

Action: Create this table in a tablespace residing on Oracle Exadata storage or remove the CLUSTERING clause.

ORA-65426: Non-scalar data type is used for a clustering column

Cause: Oracle cannot perform data clustering because an attempt was made to populate a clustering column with non-scalar data values, or a clustering column defaulted to non-scalar values was omitted.

Action: Use only scalar data type for the clustering columns, or disable data clustering with NO_CLUSTERING hint.

ORA-65451: Advanced index compression is not supported for tablespaces on this storage type.

Cause: An attempt was made to use advanced index compression on an unsupported storage type.

Action: Drop and re-create the index with a compression option that is supported on the current storage type.

ORA-65455: family *string* is invalid

Cause: An invalid family was used to specify a parameter value.

Action: Use a valid family.

ORA-65456: family *string* is not valid in *string* instance

Cause: The specified family could not be used in the current instance type.

Action: Remove the family from the environment variable ORACLE_FAMILY.

ORA-65457: family *string* is not valid in *string* instance

Cause: The specified family could not be used in the current instance type.

Action: Use a family that is valid for this instance to set the initialization parameter.

ORA-65458: maximum length of parameter qualifier exceeded

Cause: Too many characters were specified in the parameter qualifier in the initialization parameter file.

Action: Change the parameter qualifier to a valid SID or family.

ORA-65459: family used with a specific system identifier (SID)

Cause: A SID was used with FAMILY.

Action: Use FAMILY without a SID.

ORA-65460: family *string* is invalid

Cause: An invalid family was specified for this instance in ORACLE_FAMILY.

Action: Use a valid family in ORACLE_FAMILY.

ORA-65461: invalid parameter name specified with CONTAINER clause set to ALL

Cause: The CONTAINER clause was set to ALL in the ALTER SYSTEM SET statement for a non-PDB modifiable parameter.

Action: Retry the ALTER SYSTEM SET statement without the CONTAINER clause.

ORA-65466: family '*string*' contains an illegal character or is too long

Cause: The specified family contained an illegal character or the family specified was too long, which cannot occur in an SPFILE setting. Illegal characters include *,#"=() and whitespace.

Action: Use a family that does not contain a special character or whitespace. Check platform-specific documentation for the maximum length of family.

ORA-65500: could not modify DB_UNIQUE_NAME, resource exists

Cause: DB_UNIQUE_NAME could not be modified, because a database resource identified by DB_UNIQUE_NAME existed in the cluster. To modify DB_UNIQUE_NAME, any resource it identifies must first be removed.

Action: Remove the database resource identified by DB_UNIQUE_NAME before modifying DB_UNIQUE_NAME.

ORA-65501: locator from *string* container cannot be used in container *string* for this operation

Cause: In a pluggable database environment, an attempt was made to modify a LOB using a locator which belongs to a different container.

Action: Switch back to the original container.

ORA-65502: cannot access temporary LOB data

Cause: The database did not open.

Action: Open the database before accessing LOB data.

ORA-65535: Oracle client cannot handle error code exceeding 65535. Actual error code and message follow:\n

Cause: Oracle server encountered an error whose error code exceeded 65535. Older Oracle clients (prior to version 12) cannot handle error codes larger than 65535.

Action: Actual Oracle error code and error message are a part of the error message for ORA-65535. Upgrade Oracle client to version 12 client libraries or higher.

PCC-02010 to PCC-02474

PCC-02010: found end-of-file while scanning string literal

Cause: A string in a SQL statement, which should be delimited by single quotation marks, was not terminated properly.

Action: Check that all strings are delimited.

PCC-02011: found identifier greater than 128 characters (truncated)

Cause: The precompiler found an identifier that was too long.

Action: Shorten the identifier. SQL identifiers should be limited to 18 characters.

PCC-02012: did not find matching quote for char constant

Cause: A character constant with a single quotation mark was not terminated.

Action: Terminate the character constant.

PCC-02013: unknown escape sequence

Cause: The precompiler found an escape sequence that it could not process inside a string literal. This error can arise when multibyte character strings that can contain shift-in or shift-out escape sequences are used.

Action: Correct the string representation.

PCC-02014: Syntax error at line *number*, column *number*, file *string*:\n

Cause: The precompiler detected an error in C or embedded SQL syntax. This message is followed by a more specific error message.

Action: Correct the syntax error.

PCC-02015: unable to open include file

Cause: The precompiler could not open a header file that was specified using the #include preprocessor directive or the EXEC SQL INCLUDE statement. This can happen if the file specification is inaccurate or if read permission or read access rights on the file or on one or more of the directories in the path were not granted.

Action: Recheck that the file specification is correct, that the file exists, and that read permission has been granted so that the file can be read.

PCC-02016: Absolute path to included file, "*string*" exceeds the limit of *number* characters

Cause: The file name length specified exceeded the maximum length. Some operating systems have a maximum file name length.

Action: Use a file name of length less than or equal to the maximum platform specific file name length.

PCC-02017: unable to open output file

Cause: The precompiler could not open an output file. This could be a generated code output file(.c file) or a listing file. This message can result from many causes. For example: o) A pathname for a specified output file contains a non-existent directory. o) An operating-system error occurred because the file system or disk is full. o) Write permission on the specified directory or directories in the path do not exist.

Action: Track down the cause of the error, as suggested above, and correct it.

PCC-02018: found end-of-file while scanning comment

Cause: A C comment either in C code or in an embedded SQL statement, was not terminated.

Action: Find the unterminated comment and terminate it with */ .

PCC-02019: Preprocessor warning at line *number*, column *number*, file *string*:\n

Cause: This message indicates that a warning condition occurred as the precompiler was doing the preprocessor pass. A more specific warning message will follow this message.

Action: Correct the condition according to the action specified for the message that follows.

PCC-02020: Preprocessor error at line *number*, column *number*, file *string*:\n

Cause: This message indicates that an error condition occurred as the precompiler was in the preprocessing phase. A more specific error message will follow this message.

Action: Correct the error according to the action specified for the message that follows.

PCC-02021: Found newline while scanning string literal

Cause: A string constant contains a newline character, For example `char x[] = "Hello world";`

Action: Remove the newline character.

PCC-02022: Found end of file while scanning a SQL statement

Cause: The precompiler encountered an end of file while parsing an EXEC SQL statement.

Action: Add statement terminator(;) or complete the EXEC SQL statement.

PCC-02023: Found end of file while scanning a PL/SQL statement

Cause: The precompiler encountered an end of file while parsing a PL/SQL statement (EXEC SQL EXECUTE ...).

Action: Complete the PL/SQL statement.

PCC-02035: CMD-LINE: CONFIG= option is invalid in a config file

Cause: A user configuration file inside a user configuration file cannot be specified. That is, nested configuration files cannot be nested.

Action: If there are nested configuration files, move the options from the nested files to the top levels.

PCC-02040: CMD-LINE: Option selected, but no value provided

Cause: An option on the command line was specified, but a value for it was not included. For example, the offending code might look like: `proc iname=sample1.pc oname=`

Action: Provide a value for the option.

PCC-02041: CMD-LINE: Option does not exist:

Cause: A non-existent option on the command line was specified.

Action: See the Programmer's Guide to the Oracle Precompilers, Release 2.2 for a list of the valid command line options and their possible values.

PCC-02043: CMD-LINE: Option syntax is incorrect

Cause: A value for a command line option was incorrectly specified.

Action: See the Programmer's Guide to the Oracle Precompilers, Release 2.2 for the correct syntax for specifying command line option values.

PCC-02044: CMD-LINE: Illegal or out of range value for option:

Cause: A value specified for a command line option was not within the accepted range. For example, the range for the MAXOPENCURSORS option is 5 to 256. If a value outside the range is specified, the message is triggered.

Action: See the Programmer's Guide to the Oracle Precompilers for the ranges that option values can take.

PCC-02045: CMD-LINE: Option is not unique:

Cause: An option name was partially specified on the command line that made it non-unique. For example, % proc in=t.pc the "in" option can imply either the INAME or INCLUDE option.

Action: Provide sufficient characters on the command line to make the option name unique.

PCC-02046: CMD-LINE: Unable to open config file:

Cause: A non-existent user configuration file was specified on the command line with the config option.

Action: Provide a valid filename for the configuration file.

PCC-02047: CMD-LINE: Option is not allowed inline:

Cause: An option was entered inline that can only be entered on the command line or in a configuration file. For example, the offending code might look like EXEC ORACLE OPTION (NLS_CHAR=*name*); The NLS_CHAR option can only be entered on the command line or in a configuration file.

Action: Remove the option from the source file, and specify it on the command line.

PCC-02066: CMD-LINE: Could not find or could not open system config file

Cause: The system configuration file has a standard name (pmscfg.h) and a location that is operating system dependent. On UNIX systems, it is located in the ORACLE_HOME/proc directory. If a file named pmscfg.h is not found in the standard location, this warning message is issued.

Action: Create a system configuration file in the standard location. The file can be empty. See also the operating system specific Oracle documentation.

PCC-02081: CMD-LINE: Unterminated option value list or value list was truncated.

Cause: An option that takes a list of values was entered. The value list did not have a closing parenthesis. This error may also occur if the list of values entered on a single line was too long and Pro*C truncated it.

Action: Ensure that all value lists are terminated with a closing parenthesis. Split long value lists into individual entries.

PCC-02100: Unable to initialize PL/SQL

Cause: The precompiler connected to Oracle but could not invoke the PL/SQL engine. This error can result if an earlier release of Oracle7 is used without the Procedural Option.

Action: To use PL/SQL, upgrade to a more recent release of Oracle7.

PCC-02101: Unable to open input file

Cause: The precompiler could not open the input file. This is the .pc file specified in the INAME=option. This means that the file does not exist, that a directory was incorrectly specified in the pathname, or that the person running the precompiler does not have read permission for the file. This message could also result from operating-system errors. For example, an unmounted file system or disk I/O errors, could trigger this error.

Action: Check that permission to read the file exists and that the full pathname has been specified correctly. Check for operating- system problems. See also the operating system-specific Oracle documentation.

PCC-02102: Fatal error while doing C preprocessing

Cause: The precompiler issues this message after a more specific message.

Action: Correct the problem specified in the previous message or messages.

PCC-02103: Password:

Cause: The username was specified on the command line without a password. For example, `proc sqlcheck=full iname=sample1.pc userid=scott`

Action: Re-enter the command line, and include the password or specify the password when prompted.

PCC-02104: Unable to connect to Oracle

Cause: The precompiler could not connect to Oracle with the username, password, and, if applicable, database link that was supplied. Note that this is a precompiler message, not a runtime message. This means that the USERID option value, either on the command line or in a configuration file, was incorrect.

Action: Check that the username and password are current and correct. Run `SQL*DBA` or `SQL*PLUS` and verify that connection can be made using that username and password.

PCC-02105: Unable to open list file

Cause: The precompiler could not open the listing file. This message can result from many causes. For example, o) A pathname for a specified listing file contains a non-existent directory. o) An operating-system error occurred because the file system or disk is full. o) Write permission on the specified directory has not been granted.

Action: Track down the cause of the error, as suggested above, and correct it.

PCC-02106: Userid only used when SQLCHECK = FULL, userid ignored.

Cause: The USERID option was specified on the command line, but SQLCHECK was not equal to FULL or SEMANTICS. The USERID has no effect, unless SQLCHECK=FULL or SQLCHECK=SEMANTICS.

Action: This is a warning message only.

PCC-02107: You may not specify PARSE = FULL when CODE = CPP

Cause: The PARSE=FULL and CODE=CPP options were both specified on the command line. The PARSE=FULL option invokes the C parser which does not

understand any C++ constructs generated by the precompiler with CODE=CPP option.

Action: Set the PARSE option to either NONE or PARTIAL if the CODE=CPP option is specified.

PCC-02108: UNSAFE_NULL=YES allowed if MODE=ORACLE and DBMS=V7 or V8

Cause: UNSAFE_NULL=YES was specified on the command line, but either the MODE was not ORACLE or the DBMS was not V7 or V8.

Action: Specify MODE=ORACLE and DBMS=V7 or V8 when using UNSAFE_NULL=YES.

PCC-02109: SQLCHECK=NONE is no longer supported.. using SYNTAX

Cause: SQLCHECK=NONE was specified on the command line but is no longer a supported option. SQLCHECK=SYNTAX was used instead.

Action: This is a warning message only. To avoid this warning, specify SQLCHECK=SYNTAX or SQLCHECK=SEMANTICS.

PCC-02110: DBMS=V6_CHAR is deprecated. Use CHAR_MAP=VARCHAR2, DBMS=V7 instead

Cause: DBMS=V6_CHAR was specified on the command line but is no longer a supported option. The options CHAR_MAP=VARCHAR2 and DBMS=V7 were used instead.

Action: This is a warning message only. To avoid this warning, specify CHAR_MAP=VARCHAR2 and, if required, DBMS=V7.

PCC-02111: CHAR_MAP option ignored. Only CHAR_MAP=VARCHAR2 allowed for DBMS=V6

Cause: DBMS=V6 was specified, and CHAR_MAP was specified with a value other than VARCHAR2. The CHAR_MAP value is ignored.

Action: This is a warning message only. To avoid this warning, specify a DBMS value other than DBMS=V6 or use CHAR_MAP=VARCHAR2.

PCC-02112: OBJECTS option ignored. OBJECTS=YES is not allowed for DBMS=V6 or V7.

Cause: OBJECTS=YES was specified on the Pro*C command line, but the DBMS option value was not valid.

Action: This is a warning message only. To avoid this warning for OBJECTS=YES, use DBMS=V8 or DBMS=NATIVE with a V8 database.

PCC-02113: DBMS=V6 no longer supported; using DBMS=NATIVE, CHAR_MAP=VARCHAR2.

Cause: DBMS=V6 was specified on the command line, but is no longer a supported option value. The options DBMS=NATIVE and CHAR_MAP=VARCHAR2 were used instead.

Action: Check your program to verify that you are not depending on any V6 behavior. Please refer to the Programmer's Guide to the Pro*C/C++ Precompiler for effects of specifying DBMS=V6.

PCC-02114: Command line argument MODE=ANSI may not be used with DBMS=V6

Cause: The semantics of certain operations (such as character comparison) in Oracle version ^ are not 100% compliant with the ANSI/ISO SQL standards. When V6 semantics are requested, using the DBMS=V6 or DBMS=V6_CHAR option, precompilation with MODE=ANSI is not permitted.

Action: Do not use ANSI mode with V6 options.

PCC-02115: Unable to open output file for writing

Cause: An attempt was made to precompile a header file where the output data file could not be opened (or created) for writing.

Action: Check for appropriate permissions on the directory and possibly file objects (if a data file already exists) to make sure that write permissions have been granted.

PCC-02116: You must specify a file extension using the HEADER option

Cause: An attempt was made to precompile a header file without specifying the name of the extension to use when creating the generated data file.

Action: Use the HEADER option to specify the name of a file extension to use when creating a data file for a precompiled header.

PCC-02117: Semantic checking disabled by TimesTen.

Cause: Semantic checking is not supported by TimesTen

Action: This is a warning message only.

PCC-02129: CMD-LINE: Client supplied static options table is invalid

Cause: This is an internal error message not usually issued.

Action: Call Oracle customer support.

PCC-02132: CMD-LINE: Could not allocate memory

Cause: This is an internal error message not usually issued.

Action: Call Oracle customer support.

PCC-02133: CMD-LINE: Error in string processing function

Cause: This is an internal error message not usually issued. It indicates that a C string function, such as strcpy or strlen, returned an error.

Action: Call Oracle customer support.

PCC-02134: CMD-LINE: Null option supplied

Cause: A zero length option was specified on the command line.

Action: Re-enter the command line with a valid option.

PCC-02135: CMD-LINE: User asked for help

Cause: This is a final message that the precompiler issues when information about the command line options has been requested. For example, if the command proc ? is issued to get a list of current default values for the command line options, this message appears at the end of the list.

Action: No action required.

PCC-02138: CMD-LINE: Internal consistency error

Cause: This is an internal message for program exceptions. An unexpected condition was encountered by the command-line processor and a consistency check failed.

Some possible causes of this message include: --invalid command-line options --memory corruption

Action: Report this error to Worldwide Support after gathering the following information: --the events that led to the error --the attempted operations that led to the error --any unusual circumstances prior to this error

PCC-02144: CMD-LINE: Blank characters are not allowed on either side of an equal sign (=)

Cause: An equal sign (=) was either immediately preceded or followed by a blank character.

Action: Precompile your program again without blank characters on either side of any equal sign (=) on the command line.

PCC-02146: CMD-LINE: value of option too long

Cause: The length of the user option exceeded 1023 bytes

Action: Reduce the length of the user option

PCC-02150: Error at line *number*, column *number* in file *string*

Cause: An error was encountered at the given location.

Action: Check the named source file and correct the error using the additional information which follows this error message.

PCC-02151: Line *number* column *number* file *string*:

Cause: An error was encountered at the given location.

Action: Check the listed source file and correct the error using the additional information which follows this error message.

PCC-02152: Unable to open file *string* to display or list the source line *number*

Cause: The file contains an error, but could not be reopened to list or display the incorrect line.

Action: Check that the file is intact and it has read permission. Then rerun the operation.

PCC-02153: Open file: *string*

Cause: A new source file was opened while producing the list file.

Action: No action required; this is an informational message.

PCC-02154: Close file: *string*

Cause: A source file was closed while producing the list file.

Action: No action required; this is an informational message.

PCC-02200: found unrecognized punctuation sequence

Cause: The error indicates that the precompiler parser encountered a badly-formed identifier or keyword.

Action: Correct the syntax.

PCC-02201: Found syntax error

Cause: This general message precedes one or more specific messages that detail the nature of the error.

Action: No action required. Correct the errors diagnosed in the following message(s).

PCC-02202: No typedef name was given

Cause: The precompiler parser encountered a typedef statement that had no name after the type specification. For example, typedef int;

Action: Correct the syntax

PCC-02203: found end of file when not expected

Cause: The parser can emit this message when a general syntax error occurs, for example, an unmatched '{' or '('.

Action: Correct the syntax.

PCC-02204: EXEC SQL INCLUDE not permitted from within an included file

Cause: EXEC SQL INCLUDE statements cannot be nested. Also, EXEC SQL INCLUDE statement cannot be put inside a file that is included using the #include preprocessor command.

Action: Recode the program so that the nested include statement is not required.

PCC-02205: Parser error at line *number*, column *number*, file *string*:\n

Cause: The precompiler parser encountered a syntax error, either in C code or in SQL code. A more specific message should follow.

Action: No action required for this message. Take the appropriate action for any following messages.

PCC-02206: Host variables are not permitted within a DDL statement

Cause: A Data Definition Language statement cannot use host variables. For example, the statement CREATE TABLE :table_name (c1 char(10)); is illegal, because the name of the table in a CREATE TABLE statement cannot be represented using host variable.

Action: Use dynamic SQL to create the names of database objects (tables, views, columns, etc.) at runtime. See the Programmer's Guide to the Oracle Precompilers, Release 2.2 for information about dynamic SQL.

PCC-02207: Invalid macro name

Cause: The precompiler parser encountered a #define directive that had no macro name associated with it. For example, #define

Action: Correct the syntax.

PCC-02208: No filename specified in #include statement

Cause: The precompiler parser encountered a #include directive that had no filename associated with it. For example, #include

Action: Specify appropriate filename with the #include directive, or correct the syntax.

PCC-02209: Macro invocation has incorrect number of arguments

Cause: A macro invocation in the source does not have the same number of arguments as the macro definition in the #define line.

Action: Correct the macro reference or the macro definition.

PCC-02210: C++ punctuation sequences are not permitted

Cause: C++ punctuation sequences are not supported by the ProC/C++ precompiler.

Action: Rewrite your C++ code without using punctuation sequences and precompile it again.

PCC-02301: cannot reopen input file for reading

Cause: The semantic analysis phase of the precompiler could not reopen the input file to generate the output code.

Action: Check that the input file and its directory protection and privileges do not change during precompilation.

PCC-02302: cannot open code generation output file "string"

Cause: Pro*C was unable to open one or both temporary files required for code generation. The user executing the precompiler must have write permission (and/or the appropriate privileges) on the current directory.

Action: Check that permission exists to create files in the the directory where you precompile.

PCC-02303: cannot open include file

Cause: The precompiler was not able to open a header file specified using the #INCLUDE preprocessor directive or the EXEC SQL INCLUDE statement. This can happen if the file specification is inaccurate or if read permission or read-access rights on the file or on one or more of the directories in the path have not been granted.

Action: Recheck that the file specification is correct, that the file exists, and that read permission has been granted so that the file can be read.

PCC-02304: invalid declaration of C function

Cause: A C function using invalid syntax was declared.

Action: Consult a C programming manual and correct the declaration.

PCC-02305: illegal mixing of new and old style C function declarations

Cause: All C functions using either the traditional style (K&R style) function declarations or the new (ANSI) style must be declared; the two styles cannot be mixed.

Action: Adopt a consist declaration style for functions.

PCC-02306: illegal name of C function

Cause: A C function was declared with a name that is not a legal C identifier.

Action: Use legal C identifiers for all function names.

PCC-02307: void can only be used when single parameter

Cause: A function can be declared or defined using the following syntax: int func1(void) to indicate that the function has no parameters. void can be used only once in this case.

Action: Remove the extra voids in the function definition or declaration.

PCC-02308: identifier required in this function declaration

Cause: A function definition written in ANSI C must have both the name and the type for all parameters.

Action: Rewrite the function definition so that it contains the name of each parameter.

PCC-02309: illegal formal parameter declaration

Cause: A formal parameter to a function was specified without giving its type.

Action: Rewrite the function declaration and include types of all parameters in function declarations.

PCC-02310: formal parameter VARCHARs should be declared as pointers

Cause: Many C compilers allow structures to be passed to and returned from functions. Although a VARCHAR is implemented as a C struct, VARCHARs must be passed to a function as pointers.

Action: Take the address of a VARCHAR when it is passed to a function. See the example in the section "Referencing VARCHAR Variables" in the Programmer's Guide to the Oracle Precompilers.

PCC-02311: cannot have VARCHAR bit fields

Cause: Host variables cannot contain bit fields.

Action: Recode the application to remove the bit fields.

PCC-02312: arrays of VARCHAR greater than 2 dimensions not allowed

Cause: A VARCHAR variable having more than 2 dimensions was declared. Multidimensional arrays are not supported as host variables.

Action: Recode the application to remove multidimensional array usage.

PCC-02313: malformed VARCHAR declaration - missing length

Cause: When a VARCHAR is declared, a length specification is mandatory. For example, the following VARCHAR declaration is meaningless, hence illegal:
VARCHAR v1[];

Action: Specify the length for each declared VARCHAR.

PCC-02314: cannot evaluate constant sizeof expression

Cause: A SIZEOF operator was used where a precompiler expression was expected. For example, as the length of a varchar.

Action: Eliminate the SIZEOF operator in this instance.

PCC-02315: cannot evaluate expression as constant

Cause: The specified expression does not evaluate to a constant. Such expressions are required, for example, as the length of a VARCHAR.

Action: Replace the expression with one that does evaluate to a constant integer.

PCC-02316: illegal operator in constant expression

Cause: A non-arithmetic operator was present in a constant expression.

Action: Rewrite the expression to eliminate the non-arithmetic operator.

PCC-02317: illegal cast type expression

Cause: An illegal cast is present in the expression.

Action: Remove the illegal cast.

PCC-02318: missing type expression

Cause: The specified expression is missing the declaration of a type.

Action: Specify a type for the expression.

PCC-02319: expression type does not match usage

Cause: The type of a variable does not match its usage. For example, in dynamic SQL, a host variable containing the text of a SQL statement must be declared as a C character type or be equivalenced to the SQL type STRING.

Action: Remove the declaration.

PCC-02320: arithmetic expression does not have correct operand types

Cause: The arithmetic expression must be specified with integral types.

Action: Rewrite the expression using integral types.

PCC-02321: only subtraction between two pointers is permitted

Cause: Pointer values cannot be added, multiplied, or divided. The only arithmetic operation permitted with pointers is subtraction.

Action: Recode to avoid this error message.

PCC-02322: found undefined identifier

Cause: An identifier used in a SQL statement was not defined. For example, a cursor name was referenced that had not been declared, or in a DECLARE CURSOR statement, a statement name was used that had not been PREPARED.

Action: Check that all SQL identifiers, such as cursor names and statement names, have been defined before use. Provide a declaration for the variable and/or its type identifier.

PCC-02323: found typedef name used in an expression (expecting a value)

Cause: The name of a typedef was found where a variable was expected.

Action: Rewrite the expression and remove the reference to the typedef.

PCC-02324: found variable name used as a typedef name

Cause: The name of a variable was found where a typedef was expected.

Action: Rewrite the expression and specify the correct typedef reference.

PCC-02325: illegal indirection operation

Cause: An attempt was made to use a non-pointer type as a pointer.

Action: Rewrite the expression.

PCC-02326: illegal structure reference operation

Cause: A structure component using invalid syntax was referenced. For example, a -> operator was used instead of a required `.' operator.

Action: Correct the invalid reference.

PCC-02327: struct or struct pointer required

Cause: A scalar host variable was used in a context where a structure (or its pointer) is required.

Action: Make the host variable a structure or add more scalar host variables to satisfy the SQL syntax requirements.

PCC-02328: undefined struct member

Cause: A structure component was referenced that was not declared as part of the structure.

Action: Redefine the structure member.

PCC-02329: found reference to undeclared function

Cause: A function was referenced that was not declared. All function references must be declared.

Action: Declare the function.

PCC-02330: expecting an expression of integer type

Cause: The expression does not evaluate to an integer. For example, a SQL FOR expression must evaluate to an integral type.

Action: Rewrite the expression.

PCC-02331: undefined SQL identifier

Cause: All SQL identifiers must be declared before they are used. This message can result when a CURSOR or STATEMENT is not declared (defined) before being referenced.

Action: Define the SQL identifier before it is used.

PCC-02332: attempted to redefine SQL identifier

Cause: A SQL identifier (such as a cursor name) can be defined only once.

Action: Do not redefine the SQL identifier. Use a different name.

PCC-02333: SQL identifier was not declared as a statement

Cause: A SQL statement identifier was referenced in a DECLARE... CURSOR statement that was not PREPARED.

Action: Check that all SQL statement names have been declared. Remember that SQL statement names are identifiers, not variables, and that they are local to the precompilation unit.

PCC-02334: SQL identifier was not declared as a cursor

Cause: A cursor name was used in an OPEN, FETCH, or CLOSE statement that had not been DECLARED.

Action: Check that all SQL cursor names have been declared. Remember that cursors are identifiers, not variables, and that they are local to the precompilation unit.

PCC-02335: body of cursor must name statement identifier

Cause: In a Dynamic SQL Method 4 application, the DECLARE... CURSOR statement must name a statement identifier that has been PREPARED in a preceding statement. The PREPARE statement must physically (not logically) precede the DECLARE command.

Action: This error message is followed by another message that gives the line and column of the reference to the statement. Recode the application.

PCC-02336: host variable expression has invalid type

Cause: The host variable was declared using a C type that is not permitted as a host variable. See the Programmer's Guide to the Oracle Precompilers for a list of the permissible C types for host variables.

Action: Use a permissible host variable type.

PCC-02337: cannot declare multi-dimensioned array for this type

Cause: Host variable arrays of scalars with more than 1 dimension cannot be declared. The only host variables allowed to be multi-dimensioned are CHAR and VARCHAR.

Action: Rewrite the variable declaration.

PCC-02338: structure contains a nested struct or union

Cause: A structure used as a host variable may not have structures or unions nested within it.

Action: Rewrite the variable declaration.

PCC-02339: host variables cannot be of union types

Cause: A C union as a host variable cannot be used.

Action: This error message is followed by another message that gives the line and column of the reference to the illegal union. Recode, using a struct or individual scalar host variables.

PCC-02340: structure contains a bit field

Cause: Bit fields are not allowed in host variables because they are meaningless for database DML operations.

Action: This error message is followed by another message that gives the line and column of the reference to the offending host variable. Recode the application.

PCC-02341: host variable has illegal type

Cause: A host variable has an unpermitted type (i.e.; enum, void, etc).

Action: Rewrite the host variable declaration, using a permissible host variable type.

PCC-02342: using WHERE CURRENT OF on cursor defined without FOR UPDATE clause

Cause: When MODE=Oracle, a cursor defined with a WHERE CURRENT OF clause must also have a FOR UPDATE clause.

Action: Rewrite the cursor definition.

PCC-02343: body of cursor must be a query expression

Cause: A cursor definition must be a SELECT statement.

Action: Rewrite the cursor definition.

PCC-02344: Host variable array size mismatch. Using minimum: *number*

Cause: Host variable arrays in a single statement should all be of equal size.

Action: Redefine the bind variable array lengths to all be the same size.

PCC-02345: SQLCHECK=SEMANTICS must be given when embedded PL/SQL blocks are used

Cause: Embedded PL/SQL blocks require that the command-line flag SQLCHECK=SEMANTICS is used.

Action: Use the SQLCHECK=SEMANTICS option. This also requires that the USERID connect option be given.

PCC-02346: PL/SQL found semantic errors

Cause: A database entity, such as a table or column name, was referenced, that does not exist. This is a compile time error, not a runtime error.

Action: Check that all referenced objects in PL/SQL statements actually exist and that the necessary access permission on them have been granted.

PCC-02347: PL/SQL found syntax errors

Cause: A PL/SQL statement was used illegally.

Action: Check the PL/SQL User's Guide and Reference for the correct syntax.

PCC-02348: indicators are not allowed in EXEC IAF statements

Cause: Indicator variables associated with host variables cannot be used in EXECIAF statements such as GET and PUT in a user exit.

Action: Eliminate the indicator variables. If feasible (for example with Forms V4), use EXEC TOOLS statements, which do allow indicator variables. See the Programmer's Guide to the Oracle Precompilers for more information of EXECIAF and EXEC TOOLS statements.

PCC-02349: precision must be specified for this type

Cause: In a VAR or TYPE statement, certain Oracle types require that the precision be specified. For example, VARCHAR2 or CHAR.

Action: Indicate the precision.

PCC-02350: cannot equivalence this SQL type

Cause: Datatype or variable equivalencing to the datatypes NUMBER or DECIMAL cannot be used. See the "Datatype Equivalencing" section in the Programmer's Guide to the Oracle Precompilers for more information.

Action: Use the appropriate datatype for the application.

PCC-02351: illegal datatype equivalencing operation

Cause: The datatype specified could not be equivalenced, or the syntax was incorrect in the VAR or TYPE statement.

Action: See the Programmer's Guide to the Oracle Precompilers for a list of the datatypes that can be equivalenced and the correct syntax of the VAR or TYPE statement.

PCC-02352: out of bounds bind position from PL/SQL

Cause: PL/SQL requested a bind position that does not exist.

Action: Contact ORACLE customer support.

PCC-02353: Semantic error at line *number*, column *number*, file *string*:\n

Cause: This error message precedes a more specific error message.

Action: No action required. Correct the error(s) reported in the following message(s).

PCC-02354: A file included with #include may not contain SQL statements

Cause: The Pro*C Precompiler reads header files referenced in #INCLUDE directives and uses the values defined in them. But the precompiler never generates code using statements in header files, so use of SQL statements in these files is illegal.

Action: Move the SQL statement(s) into the main body of the application or use EXEC SQL INCLUDE to check that the included file is precompiled.

PCC-02355: Invalid or obsolete option, ignored

Cause: A command-line option that is not used in Pro*C Release 2.0 was specified. For example, the option AREASIZE is no longer valid with precompilers used with the Oracle7 Server.

Action: No action required. This is an informational message.

PCC-02356: Warning at line *number*, column *number*, file *string*:\n

Cause: This is a generic warning message. It precedes a more specific warning.

Action: No action required. Correct the error(s) indicated in the following message(s).

PCC-02357: Function calls may not be used as host variable expressions

Cause: Only objects that are lvalues (that resolve to an address) can be host variables. Because a function call is not an lvalue, one cannot be used in place of a host variable.

Action: Recode the application.

PCC-02358: Identifier following ARRAYLEN must be the name of an array

Cause: A declared array must be specified as the argument for an ARRAYLEN statement. Declare the array textually before the ARRAYLEN statement. See the Programmer's Guide to the Oracle Precompilers for the syntax of the ARRAYLEN statement.

Action: Correct the statement, specifying a host array as the argument.

PCC-02359: Identifier specifying ARRAYLEN must be a 4-byte integer

Cause: The expression that specifies the ARRAYLEN dimension must evaluate to an integer. For example, the statement EXEC SQL ARRAYLEN my_array(1,3) cannot be parsed.

Action: Correct the statement, using an integral dimension.

PCC-02360: This array type is invalid for use with ARRAYLEN statement

Cause: Arrays of some host variable types are not allowed and hence also cannot be used in ARRAYLEN statements. VARCHAR and DATE are examples.

Action: Specify an array with a datatype that can be used in host arrays.

PCC-02361: Use of ARRAYLEN with SQL bind arrays is ignored

Cause: ARRAYLEN is only valid with arrays that can be bound in PL/SQL blocks.

Action: Use an appropriate array type.

PCC-02362: Host variable not declared within SQL DECLARE section

Cause: When MODE=ANSI is specified at precompile time, all host variables must be declared inside Declare Sections. Remember that MODE=ANSI refers to ANSI SQL, not ANSI C.

Action: Add the EXEC SQL BEGIN DECLARE SECTION... EXEC SQL END DECLARE SECTION statements around all host variable declarations.

PCC-02363: Indicator variable must be a structure

Cause: If a host variable is a structure, the associated indicator variable must also be a structure.

Action: Recode the application to create an indicator variable as a structure.

PCC-02364: Host struct and its indicator must have the same number of fields

Cause: When a structure containing indicator variables is declared and associated with a host structure, the indicator structure must contain the same number of fields as the host structure. This is so even when some of the indicators will not be used or even when it would not make sense to do so (for fields constrained as NON NULL, for example).

Action: Redeclare the indicator variable with the correct number of fields.

PCC-02365: Indicator array size cannot be smaller than host array size

Cause: An indicator array must have dimension greater than or equal to the corresponding host variable array dimension.

Action: Change the dimension of the indicator array.

PCC-02366: Command line argument MODE=ANSI may not be used with DBMS=V6

Cause: The semantics of certain operations (such as character comparison) in Oracle version ^ are not 100% compliant with the ANSI/ISO SQL standards. When V6

semantics are requested, using the DBMS=V6 or DBMS=V6_CHAR option, precompilation with MODE=ANSI is not permitted.

Action: Do not use ANSI mode with V6 options.

PCC-02367: This indicator variable must be declared as type short

Cause: An indicator for a host variable of this type must have the C type short. An array of such indicators must be an array of shorts.

Action: Declare the indicator variable or indicator array as type short.

PCC-02368: An EXEC TOOLS host variable context name is not type char

Cause: If a host variable is used to define a context name in an EXEC TOOLS GET CONTEXT or EXEC TOOLS SET CONTEXT statement, that host variable must be of a character type.

Action: Redefine the context name to a host variable of a char type.

PCC-02369: An EXEC TOOLS host pointer variable is not a pointer

Cause: The host variable specifying an EXEC TOOLS context must be a pointer type.

Action: Redefine the variable, making sure that it is a pointer.

PCC-02370: An EXEC TOOLS MESSAGE host variable is not type char

Cause: If a host variable is used to define a context name in an EXEC TOOLS GET CONTEXT or EXEC TOOLS SET CONTEXT statement, that host variable must be of a character type.

Action: Declare the message to a host variable of a char type.

PCC-02371: Illegal FOR clause

Cause: The argument of a FOR clause must be specified as an integer or as an identifier containing an integer.

Action: Rewrite the FOR clause.

PCC-02372: FOR clause not allowed in SELECT statement

Cause: A SQL statement containing a SELECT command cannot contain a FOR clause. The meaning of such a statement would be unclear.

Action: Rephrase the SELECT statement, removing the FOR clause.

PCC-02373: Invalid declaration in EXEC SQL DECLARE section

Cause: An improper declaration was placed in a Declare Section. This message is usually caused by including an EXEC SQL TYPE or EXEC SQL VAR declaration in a Declare Section.

Action: Move the declaration outside of the SQL DECLARE section.

PCC-02374: SQLCHECK value exceeds command line value

Cause: The value given to the SQLCHECK option in an EXEC ORACLE statement in a program was greater than the value given either on the command line or greater than the default value if no SQLCHECK option was given on the command line. The order of the option values is SEMANTICS>SYNTAX>NONE. When this warning message is issued, the original value of SQLCHECK (the default or the command-line value) stays in effect.

Action: Remove or recode the EXEC Oracle option(s) in the .pc source file to avoid this warning message.

PCC-02375: SQL statement found outside the body of a function

Cause: A SQL statement other than a declarative, datatype equivalence or WHENEVER statement was found outside the body of a function when PARSE=FULL.

Action: Move the SQL statement inside the body of a function.

PCC-02376: You may not declare SQLCODE when DEF_SQLCODE = TRUE

Cause: The DEF_SQLCODE option may not be specified if a SQLCODE declaration already explicitly appears in the program.

Action: Remove the SQLCODE declaration from the program or specify DEF_SQLCODE=NO (the default).

PCC-02377: Arrays of implicit varchars are not permitted

Cause: An array of implicit VARCHARS was declared when HOST_VARCHAR=TRUE.

Action: Rewrite the implicit VARCHAR declaration without using arrays.

PCC-02378: Invalid type for National Language character variable

Cause: A variable declared as a National Language character using the NLS_CHAR option was not declared as a char or implicit VARCHAR.

Action: Declare the variable as a char or implicit VARCHAR or do not specify using the NLS_CHAR option.

PCC-02379: Cannot equivalence National Language character variables

Cause: A National Language character variable (specified using the NLS_CHAR option) has undergone datatype equivalencing using either the EXEC SQL VAR or TYPE statements.

Action: Do not equivalence National Language character variables.

PCC-02380: Cannot specify a connect mode when altering a user password

Cause: An attempt was made to connect in either SYSOPER or SYSDBA mode while at the same time trying to change passwords using the ALTER AUTHORIZATION clause in the same CONNECT statement.

Action: Changing passwords while connecting in SYSOPER or SYSDBA mode is prohibited. Rewrite the connect statement by either removing the ALTER AUTHORIZATION clause or the CONNECT MODE clause.

PCC-02382: You must specify MODE=ANSI when using NLS_LOCAL=YES

Cause: NLS_CHAR was used to specify NLS multi-byte character variables without specifying MODE=ANSI.

Action: Specify MODE=ANSI on the command line when using NLS_LOCAL=TRUE.

PCC-02383: Expecting an expression of type OCIExtProcContext

Cause: The type of the bind variable given in a REGISTER CONNECT USING statement was not (pointer to) OCIExtProcContext.

Action: Declare a variable having type (pointer to) OCIExtProcContext and use it in the REGISTER CONNECT USING statement.

PCC-02384: Missing array length specifier

Cause: An array declaration was given without an array length specifier.

Action: Provide the length for the array declaration.

PCC-02385: CHAR_MAP disallowed when using NLS_CHAR and NLS_LOCAL=TRUE

Cause: The CHAR_MAP option was specified while indicating which host variables are to be treated by the precompiler as NLS multi-byte character variables. This mapping cannot be performed with the option NLS_LOCAL=TRUE. This error also occurs when DBMS=V6 is used in conjunction with NLS_CHAR and NLS_LOCAL=TRUE.

Action: Remove either the CHAR_MAP option or set NLS_LOCAL=FALSE. Ensure that DBMS is not set to V6.

PCC-02386: Use of the AT clause is not permitted here

Cause: An explicit AT clause was used with an ALLOCATE statement or a FETCH/CLOSE statement also using a SQL_CURSOR declaration.

Action: Remove the AT clause.

PCC-02387: Expecting an expression of type sql_cursor

Cause: A host bind variable was used in an ALLOCATE, FETCH or CLOSE statement that was not declared as a result set SQL_CURSOR.

Action: Declare the variable to be of type sql_cursor.

PCC-02388: Arrays not allowed in FROM/WHERE clause of SELECT statement

Cause: A host array was used in the WHERE clause of a SELECT-INTO statement.

Action: Rewrite the SELECT statement without using arrays or use a cursor.

PCC-02389: Arrays not allowed as input bind variables in SELECT list

Cause: A host array was used in the SELECT list of a SELECT-INTO statement.

Action: Rewrite the SELECT statement without using arrays in SELECT list.

PCC-02390: No EXEC SQL CONTEXT USE statement encountered

Cause: No EXEC SQL CONTEXT USE statement was encountered and the option threads=yes was requested.

Action: Ensure that the necessary context variable (of type sql_context) has been declared and that has been ALLOCATED and USED prior to any executable SQL statements.

PCC-02391: Runtime context variable not of correct type

Cause: The host variable in a EXEC SQL CONTEXT USE statement or in the RETURNING clause of a REGISTER CONNECT statement was not declared to be of type SQL_CONTEXT.

Action: Declare the runtime context variable to be of type SQL_CONTEXT.

PCC-02392: You are already in an EXEC SQL DECLARE SECTION

Cause: A SQL DECLARE SECTION appears nested inside another one.

Action: Do not nest DECLARE SECTIONS. Remove any nested inner ones.

PCC-02393: SQL statement found inside an EXEC SQL DECLARE SECTION

Cause: An executable SQL statement appears inside a DECLARE SECTION.

Action: Move the SQL statement into the body of a function.

PCC-02394: Input file name and output filename are identical

Cause: The values of INAME and ONAME are the same or the default output filename is the same as that specified by ONAME.

Action: Use ONAME to specify a different filename for the output file.

PCC-02395: Using arrays of structs requires that the struct be named

Cause: An array of some unnamed struct was used as a host variable. When using arrays of structs, the struct requires a name or tag.

Action: Provide a name for the struct.

PCC-02396: Illegal use of arrays inside an array of structs

Cause: An array of a struct that contained arrays of scalars or two-dimensional char or VARCHAR fields was used as a host variable.

Action: Rewrite the struct so that there are no scalar arrays or two-dimensional char or VARCHAR fields.

PCC-02397: VARCHAR declarations not permitted in #include file

Cause: A VARCHAR declaration was found in a file included using a #include form.

Action: Use the EXEC SQL INCLUDE form to include files with VARCHAR declarations instead.

PCC-02398: Indicator ignored in this statement for this type

Cause: An indicator variable was used in a host/indicator variable pair for some type in a statement that did not require or need one. Typically, indicator variables are not used in ALLOCATE and FREE statements for types other than object or collection types. They are also not used in OBJECT CREATE/DEREF statements for REF types.

Action: Remove the use of the indicator for the type in the specified statement. It will be ignored otherwise.

PCC-02399: Illegal CHAR_MAP option value for DBMS=V6. Option ignored.

Cause: A CHAR_MAP option other than CHAR_MAP=VARCHAR2 was specified inline. Since DBMS=V6, this option is ignored for a character or string variable in the offending statement.

Action: Either set DBMS to something other than V6, or specify CHAR_MAP=VARCHAR2.

PCC-02400: This host variable must be declared as a pointer type

Cause: The specified host variable was not declared as a pointer type.

Action: Declare the host variable to be a pointer type.

PCC-02401: Host variable arrays of this type are currently not supported

Cause: Host variable arrays of the specified type are not supported.

Action: Rewrite your program so that there are no arrays of this type.

PCC-02402: Pro*C option OBJECTS=YES is required when using the object cache

Cause: The object cache will be used for this host variable, but OBJECTS=NO was specified on the Pro*C command line.

Action: Specify OBJECTS=YES on the Pro*C command line when using the object cache.

PCC-02403: Invalid indicator variable type for this host variable

Cause: The type of the indicator variable is not appropriate for the specified host variable.

Action: Change the type of the indicator variable to a valid type. Refer to the "Programmer's Guide to the ORACLE Pro*C/C++ Precompiler" for a discussion of appropriate indicator variable declarations.

PCC-02404: This indicator variable must be declared as a pointer type

Cause: The specified indicator variable was not declared as pointer type.

Action: Declare the indicator variable to be a pointer type.

PCC-02405: Variable is of undefined type

Cause: No declaration was found for the type identifier of the variable.

Action: Provide a valid declaration for the type of the host variable. If using objects in your program, check that the OTT-generated header for the object type was #included and that the typefile was specified in the INTYPE option on the Pro*C command line.

PCC-02406: Expecting the form 'RETURN[ING] REF INTO :ref' only

Cause: When using the RETURNING clause in an OBJECT CREATE statement, only a single 'REF INTO :host variable' is expected. This error occurs if the expression list to which REF belongs is greater than one or if there are more than one host variables supplied in the into list.

Action: Rewrite the RETURNING clause as per the given specification.

PCC-02407: Object and REF types do not match

Cause: In an OBJECT CREATE or DEREf statement, the types of the given Object and its associated REF do not match.

Action: Make sure that the Object and its REF have the same type. The type information is generated by OTT and should appear in the header file which OTT creates.

PCC-02408: Expecting an expression of some Object type

Cause: The expression is not an Object type. For example, many host variable expressions in the Navigational statements require that the variable be declared of some Object type.

Action: Rewrite the expression or declare the variable to be an Object.

PCC-02409: Expecting an expression of some REF type

Cause: The expression is not a REF type. For example, some host variables in the Navigational CREATE and DEREf statements are required to be declared of some REF type.

Action: Rewrite the expression or declare the variable to be a REF.

PCC-02410: Expecting an expression of some Collection type.

Cause: The expression is not a Collection type. A VARRAY or Nested Table object was expected, but the given host variable did not resolve to a valid Collection type.

Action: Check that the OTT-generated header for the Collection type was properly #included in the Pro*C/C++ program and that the typefile was specified in the INTYPE option on the Pro*C/C++ command line.

PCC-02411: Invalid type for INDICATOR descriptor item host variable

Cause: The type of the host variable paired with the INDICATOR descriptor item was invalid. The only permissible types for the INDICATOR item are a signed 2 byte numeric type or an indicator struct generated by the Object Type Translator for a user defined object type.

Action: Either replace the INDICATOR host variable with a valid one having an acceptable type or redeclare the existing host variable to be of a valid type.

PCC-02412: FOR clause not permitted in OBJECT GET or SET statement

Cause: An explicit FOR clause was used in an OBJECT GET or OBJECT SET statement. Use of the FOR clause is illegal for these statements.

Action: Remove the FOR clause.

PCC-02413: Number of attributes does not match number of host variables

Cause: The number of attributes supplied in the attribute list of an OBJECT SET or GET statement does not match the total number of host variables also supplied in that statement.

Action: Either remove some attributes or remove some host variables from the statement in order to make the total count for each the same.

PCC-02414: This attribute does not exist in the specified Object

Cause: An attribute given in the attribute list of an OBJECT SET or GET statement is not a member of the specified object in that statement.

Action: Remove the attribute from the list.

PCC-02415: Cannot manipulate Object attributes in an OBJECT GET or SET

Cause: An attempt was made to either GET or SET an attribute of an Object that itself was an Object or REF type.

Action: Remove the attribute from the attribute list in the statement.

PCC-02416: The Object in an OBJECT GET or SET must not be an array

Cause: The Object specified in an OBJECT GET or SET statement is an array which is illegal.

Action: Redefine the Object so that it is not an array or subscript the Object so that only a single element of the Object array is specified.

PCC-02417: Illegal type conversion between attribute and host variable

Cause: An illegal type conversion was attempted in a Navigational GET or SET statement between the type of the Attribute and the type of the Host Variable.

Action: Change the type of either the Attribute or the Host Variable.

PCC-02418: Array size mismatch between Object and REF host variables

Cause: The array sizes of the Object and REF variables in an OBJECT CREATE or DEREf do not match.

Action: Adjust the array dimensions of the two host variables so that they are equal to one another.

PCC-02419: Host variable arrays not allowed in an OBJECT SET or GET

Cause: An array was found in the host variable list of an OBJECT SET or GET statement.

Action: Only scalars are allowed (except for single dimensioned char or varchar variables) in the host variable list of an OBJECT SET or GET. Make sure to use only scalars in these statements.

PCC-02420: Incomplete (or missing) type specification

Cause: An incomplete or perhaps missing type specification was given when declaring a host variable used in some SQL statement.

Action: Provide a complete type definition when declaring host variables intended for use inside any SQL statements.

PCC-02421: This host variable requires the use of an indicator variable

Cause: No indicator variable was provided (or matched) with a specific host variable where one was explicitly required.

Action: Provide an indicator variable for use with the specified host variable in the given SQL statement.

PCC-02422: Invalid value specified for the given context option

Cause: An illegal value was given for the specified runtime context option in the CONTEXT *option* OPTION SET (or GET) statement.

Action: Use a valid option value in the statement for the specified option being manipulated by the statement.

PCC-02423: Host variable has an invalid type for this option value

Cause: The type of the host variable corresponding to a specific option value in a CONTEXT *option* OPTION SET (or GET) statement is invalid for that particular value.

Action: Use a type suitable for the specific value being manipulated.

PCC-02424: The number of values and host variables does not match

Cause: There is a mismatch between the number of values specified and the number of valid host variables given in a CONTEXT *option* OPTION SET (or GET) statement.

Action: Use the same number of host variables as there are values given in that particular statement.

PCC-02425: An indicator variable is not required with this attribute

Cause: In a LOB or Collection DESCRIBE, an Indicator Variable was used with a Host Variable when retrieving a LOB attribute that doesn't require one.

Action: Remove the Indicator Variable.

PCC-02426: Incompatible LOB types

Cause: A LOB operation was attempted between LOBs whose types were not compatible. For example, When ASSIGNing one LOB to another, both LOBs must be of the same type. If they are not, this error results.

Action: Correct the LOB operation by having it function between LOBs of the same type. This may require a redeclaration of one of the LOBs used in the LOB statement performing the specified operation.

PCC-02427: Expression is not of the correct character string type

Cause: The given host variable expression was not declared to be of the required character type. In this case, one of several possible character types would have been accepted. However, the host variable type did not match any of them.

Action: Redeclare the problematic host variable, using one of the permitted character types.

PCC-02428: Buffer type is incompatible with LOB type

Cause: This error can occur in either of the following situations 1. An attempt to READ from a LOB into a buffer whose type was not compatible with the LOB type. 2. An attempt to WRITE a buffer into a LOB whose type was not compatible with the buffer type.

Action: Either the LOB type or the buffer type needs to be changed so that the LOB and buffer types become compatible for the specified operation.

PCC-02429: Expecting an expression of some internal LOB type

Cause: The given host variable was not declared to be an Internal LOB. BLOB, CLOB or NCLOB would have been accepted, however, the type of the host variable did not match any of these.

Action: Redeclare the host variable using one of the Internal LOB types.

PCC-02430: Expecting an expression of some arbitrary LOB type

Cause: The given host variable was not declared to be any type of LOB, Internal or External. In addition to any Internal LOB type, BFILE would also have been accepted, however, the type of the host variable did not match any of these.

Action: Redeclare the host variable using any of the LOB types, Internal or External.

PCC-02431: Expecting an expression of type external LOB (BFILE)

Cause: The given host variable was not declared to be an External LOB. Only BFILE would have been accepted in this case.

Action: Redeclare the host variable using an External LOB type (BFILE).

PCC-02432: Cannot open an external LOB (BFILE) in READ WRITE mode

Cause: An attempt was made to OPEN a BFILE in READ WRITE mode. Writable BFILES are currently not supported so this operation is considered erroneous.

Action: Do not open BFILES using READ WRITE mode. BFILES can only be OPENed in READ ONLY mode.

PCC-02433: Invalid host variable and attribute pairing

Cause: The host variable and attribute pairing in a LOB or Collection DESCRIBE is invalid. Most likely, this was due to some problem with the host variable. For example, this error could occur if the host variable was not declared or is otherwise not provided.

Action: Usually, other, more specific, errors will accompany this one. Correcting some or all of those problems should resolve this error.

PCC-02434: FOR clause not permitted in any LOB statement

Cause: An explicit FOR clause was used in some LOB statement. The use of the FOR clause in LOB statements is erroneous.

Action: Remove the FOR clause.

PCC-02435: This attribute is only valid for internal LOB types

Cause: A request for a LOB attribute was made in a LOB DESCRIBE statement in which the given LOB was not of some Internal LOB type.

Action: Replace the LOB host variable in the LOB DESCRIBE with one that was declared to be an Internal LOB.

PCC-02436: This attribute is only valid for external LOB types (BFILEs)

Cause: A request for a LOB attribute was made in a LOB DESCRIBE statement in which the given LOB was not an External LOB type (BFILE).

Action: Use an External LOB (BFILE) host variable in the LOB DESCRIBE statement.

PCC-02437: Expecting an expression having binary integral type

Cause: A host variable was given that was not declared to be of some acceptable binary numeric integral type. Generally, when this error occurs, a signed or unsigned integral type was expected. Floating point or otherwise imprecise numeric types are considered erroneous.

Action: Replace the problematic host variable with one that was declared using a proper exact numeric integral type.

PCC-02438: Arrays of collection objects are not allowed

Cause: An array of collections was given in a COLLECTION statement. Only scalar (non-array) collection objects are allowed in any of the COLLECTION statements.

Action: Change the declaration of the Collection host variable so that it is not an array.

PCC-02439: FOR clause not allowed in this COLLECTION statement

Cause: An illegal FOR clause was used in a COLLECTION statement that did not allow one, particularly, one of either the TRIM or DESCRIBE COLLECTION statements.

Action: Remove the FOR clause from the statement.

PCC-02440: This attribute is valid for either internal or external LOBs

Cause: A request for a LOB attribute was made in a LOB DESCRIBE statement in which the given LOB host variable was neither an Internal an External LOB (BFILE) type.

Action: Use either an Internal or External LOB host variable in the LOB DESCRIBE statement.

PCC-02441: Number of attributes does not match number of host variables

Cause: There is a mismatch between the number of attributes and the number of valid host variables in the LOB or Collection DESCRIBE.

Action: Make sure that for each attribute being requested there is at most a single valid host variable given to hold its value.

PCC-02442: Expecting a value between 1 and 65535 inclusive

Cause: The value specified in the WITH MAX clause of an ALLOCATE DESCRIPTOR statement or the VALUE clause of a GET/SET DESCRIPTOR statement was either less than 1 or greater than 65535.

Action: Specify a value between 1 and 65535 inclusive.

PCC-02443: This usage is only valid when DYNAMIC=ANSI is specified

Cause: One of the following statements was used without specifying a DYNAMIC=ANSI command line option setting
o EXEC SQL ALLOCATE/
DEALLOCATE/GET/SET DESCRIPTOR
o EXEC SQL DESCRIBE OUTPUT/
INPUT ... USING ... *descriptor*
o EXEC SQL EXECUTE ... INTO ...
o EXEC SQL EXECUTE ... USING ... *descriptor*
o EXEC SQL OPEN ... INTO ...
o EXEC SQL OPEN ...
USING ... *descriptor*

Action: Specify DYNAMIC=ANSI or remove statements like those above from the program.

PCC-02444: Invalid combination of descriptor and non-descriptor clauses

Cause: There was a mixing of descriptor and non-descriptor clauses in an ANSI Dynamic SQL statement.

Action: Do not mix descriptors and non-descriptors in the ANSI statement in question.

PCC-02445: USING clause valid only on a PREPARED dynamic statement

Cause: The USING clause was used with an OPEN cursor statement where the cursor declaration was not for a PREPARED statement. The correct sequence of statements should be as follows EXEC SQL PREPARE s FROM :stmt; EXEC SQL DECLARE c CURSOR FOR s; EXEC SQL OPEN c USING ...;

Action: Use the PREPARE statement for the SQL statement and use that in the DECLARE CURSOR statement.

PCC-02446: FOR clause not allowed in a DEALLOCATE statement

Cause: An explicit FOR clause was used in a DEALLOCATE DESCRIPTOR statement.

Action: Remove the FOR clause from the statement.

PCC-02447: Cannot specify destination offset in a LOB WRITE APPEND

Cause: A destination offset was specified in a LOB WRITE APPEND statement. The destination offset is assumed to be the end of the LOB so specifying an explicit destination offset is erroneous.

Action: Remove the destination offset from the LOB WRITE APPEND statement.

PCC-02448: Cannot specify a UCS2 variable in the NLS_NCHAR option

Cause: A variable declared as utext, uvvarchar, or longuvvarchar was specified in the NLS_NCHAR command line option.

Action: Re-compile without specifying the variable in an NLS_NCHAR command line option.

PCC-02449: Cannot type equivalence a UCS2 type

Cause: A UCS2 type has been type equivalenced in an EXEC SQL TYPE statement or a variable of UCS2 type has been type equivalenced in an EXEC SQL VAR statement.

Action: Remove the EXEC SQL TYPE or EXEC SQL VAR statement.

PCC-02450: Cursor was not declared in scrollable mode

Cause: A cursor which was not DECLARED in SCROLL mode was used in scrollable mode in the FETCH statement.

Action: Declare the cursor in scroll mode using the SCROLL keyword.

PCC-02451: Value of offset cannot be negative in ABSOLUTE orientation mode

Cause: The offset for the FETCH ABSOLUTE statement is negative.

Action: Value of offset should be positive.

PCC-02452: Common SQL Front End found semantic error

Cause: A database entity, such as a table or column name, was referenced, that does not exist. This is a compile time error, not a runtime error.

Action: Check that all referenced objects in the SQL statements actually exist and that the necessary access permission on them have been granted.

PCC-02453: Must use option SQLCHECK=SEMANTICS(FULL) when option OUTLINE is used

Cause: The precompiler option OUTLINE was used without specifying SQLCHECK=SEMANTICS(FULL).

Action: Set the precompiler option SQLCHECK=SEMANTICS(FULL).

PCC-02454: Must use option OUTLINE when option OUTLINPREFIX is used

Cause: The precompiler option OUTLINEPREFIX was used without specifying OUTLINE=YES | *OUTLINENAME*. The precompiler option OUTLINE must be specified if OUTLINPREFIX is used.

Action: Set the precompiler option OUTLINE=YES | *OUTLINENAME*.

PCC-02455: Must use option OUTLINE when option RUNOUTLINE is used

Cause: The precompiler option RUNOUTLINE was used without specifying OUTLINE=YES | *OUTLINENAME*. The precompiler option OUTLINE must be specified if RUNOUTLINE is used.

Action: Set the precompiler option OUTLINE=YES | *OUTLINENAME*.

PCC-02456: Unable to open Outline SQL file

Cause: Pro*C was unable to open the OUTLINE SQL file. The user executing the precompiler must have write permission (and/or the appropriate privileges) on the current directory.

Action: Check that permission exists to create files.

PCC-02457: Unable to open Outline LOG file

Cause: Pro*C was unable to open the OUTLINE LOG file. The user executing the precompiler must have write permission (and/or the appropriate privileges) on the current directory.

Action: Check that permission exists to create files.

PCC-02458: Outline name length exceeds the allowed limit

Cause: Outline name *value of outline option _filename_ filetype_ seqno* has exceeded the allowed limit.

Action: Use OUTLINPREFIX option to specify the outline name which will be well in the permitted limit.

PCC-02459: Number of outlines has exceeded the limit

Cause: Number of outlines that can be created has exceeded the file limit. Allowed outlines per file is 10000.

Action: Split the file so that each file can have not more than 10000 outlines.

PCC-02460: Outline cannot be created

Cause: Outline cannot be created as there is syntax error; or outlines are not supported on that statement.

Action: Correct the syntax error in the actual SQL used in the file or refer to "Performance Tuning Guide" for the list of supported statements.

PCC-02461: Must specify SQLCHECK=FULL along with option PLAN_BASELINE

Cause: The precompiler option PLAN_BASELINE was used without specifying SQLCHECK=FULL.

Action: Set the precompiler option SQLCHECK=FULL.

PCC-02462: Must use option PLAN_BASELINE along with option PLAN_PREFIX

Cause: The precompiler option PLAN_PREFIX was used without specifying PLAN_BASELINE=[<module_name>/yes].

Action: Specify the option PLAN_BASELINE=[<module_name>/yes].

PCC-02463: Must use option PLAN_BASELINE along with option PLAN_RUN

Cause: The precompiler option PLAN_RUN was used without specifying PLAN_BASELINE=[<module_name>/yes].

Action: Specify the option PLAN_BASELINE=[<module_name>/yes].

PCC-02464: Unable to open Plan Baseline SQL file

Cause: Pro*C was unable to open the Plan Baseline SQL file. The user executing the precompiler must have write permission (or the appropriate privileges) on the current directory.

Action: Check that permission is granted to create files.

PCC-02465: Unable to open Plan Baseline LOG file

Cause: Pro*C was unable to open the Plan Baseline LOG file. The user executing the precompiler must have write permission (and/or the appropriate privileges) on the current directory.

Action: Check that permission exists to create files.

PCC-02466: Length of Plan Baseline name exceeds the allowed limit

Cause: Plan Baseline name <module_name>_filename_filetype_seqno exceeded the allowed limit.

Action: Use PLAN_PREFIX option to specify the Plan Baseline prefix-name.

PCC-02467: Number of Plan Baselines has exceeded the limit per file

Cause: Number of Plan Baselines that can be created has exceeded the file limit. Allowed Plan Baselines per file is 10000.

Action: Split the file so that each file can have no more than 10000 Baselines.

PCC-02468: Plan Baseline cannot be created

Cause: Plan Baseline cannot be created, as there is a syntax error or Baselines are not supported on that statement.

Action: Correct the syntax error in the actual SQL used in the file or refer to the Oracle Database Performance Tuning Guide for the list of supported statements.

PCC-02469: Must use option PLAN_BASELINE along with option PLAN_ENABLED

Cause: Parameter required for Plan Baseline creation (PLAN_ENABLED) was used without specifying the option PLAN_BASELINE=[<module_name>/yes].

Action: Specify the option PLAN_BASELINE=[<module_name>/yes].

PCC-02470: Must use option PLAN_BASELINE along with option PLAN_FIXED

Cause: Parameter required for Plan Baseline creation (PLAN_FIXED) was used without specifying PLAN_BASELINE=[<module_name>/yes].

Action: Specify the option PLAN_BASELINE=[<module_name>/yes].

PCC-02471: Cannot use both PLAN_BASELINE and OUTLINE simultaneously

Cause: Both PLAN_BASELINE and OUTLINE options were specified. These options are not supported simultaneously.

Action: Specify either the PLAN_BASELINE option or the OUTLINE option, but not both.

PCC-02472: Module name exceeds 30 bytes, will be truncated in database

Cause: SQL Plan Management (SPM) does not support module names greater than 30 bytes and the specified module name exceeded this limit.

Action: Shorten the module name to stay within this limit.

PCC-02473: program has EXEC SQL DECLARE TABLE, therefore PLAN_RUN option is ignored

Cause: PLAN_RUN was ignored because DECLARE TABLE was found. Baseline plans were not created during precompilation.

Action: Run the generated SQL manually.

PCC-02474: invalid numeric value

Cause: The numeric value was invalid.

Action: Specify a proper numeric value.

PGA-20900 to PGA-22014

PGA-20900: unable to obtain *number* bytes of storage for *string*

Cause: Memory shortage in the gateway server process.

Action: Ensure your system has enough available memory to support the number of concurrent users you are running.

PGA-20901: internal gateway error: *string*

Cause: Internal error in the gateway server process.

Action: Reproduce the error with debugging enabled to produce a log file. Supported customers should contact Oracle Worldwide Support for assistance.

PGA-20905: invalid conversation id: no active conversations were found

Cause: There were no APPC conversations active for the user.

Action: Check that the application is not calling the PL/SQL TIP routines out of sequence.

PGA-20906: invalid conversation id: no matching conversation was found

Cause: The conversation id received from the caller is not a valid active conversation id.

Action: Check that the application is not calling the PL/SQL TIP routines out of sequence.

PGA-20907: preceding error occurred during gateway *string* processing

Cause: An error occurred processing the Oracle function *func*. This message is preceded by additional messages providing more detailed information about the error.

Action: Refer to the messages preceding this one to determine the course of action to take.

PGA-20910: communication error: CPI-C *string* failed, rc = *number*, errno = *number*

Cause: An unexpected communication error occurred while executing the specified CPI-C function *func*. The CPI-C function return code *rc* and system error number *errno* are provided in the message text. The CPI-C function return codes and system error numbers are described in the vendor documentation.

Action: Determine the cause of the communications error, correct it, and rerun the transaction.

PGA-20911: update transaction is already active with TP *string* at LU *string*

Cause: Transaction *tpname* has already been started at LU *luname* by a PGAINIT call with synclevel set to 1 or 2. Only one transaction at synclevel 1 or 2 is allowed at any given time.

Action: The new transaction is not started. Change your application to start the second update transaction after the first one has completed, or to use a different gateway database link for the second update transaction.

PGA-20912: send and receive buffer lengths cannot both be zero

Cause: Both the send and receive buffer lengths passed to PGAXFER were zero. This is invalid.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20914: send buffer length of *number* exceeds actual send buffer size of *number*

Cause: The send buffer length *len* passed to PGAXFER was larger than the actual size of the send buffer passed to PGAXFER.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20915: receive buffer length of *number* exceeds the maximum of *number*

Cause: The receive buffer length *len* passed to PGAXFER was larger than the maximum allowed length *max*.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20916: send count is *number* but only *number* send lengths were specified

Cause: The first value *count* in the send lengths array passed to PGAXFER specified more elements than the send lengths array contained. Only *num* elements were found in the array.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20917: receive count is *number* but only *number* receive lengths were specified

Cause: The first value *count* in the receive lengths array passed to PGAXFER specified more elements than the receive lengths array contained. Only *num* elements were found in the array.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20918: send length *number* is *number* but only *number* bytes are left in the buffer

Cause: The length *len* specified in send lengths array element number *num* exceeded the number of bytes *bytes* of data remaining in the send buffer.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL

TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20919: receive length number *number* is *number* but only *number* bytes are left in the buffer

Cause: The length *len* specified in receive lengths array element number *num* exceeded the number of bytes *bytes* of space remaining in the receive buffer.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20920: unexpected request-to-send received

Cause: The remote transaction program requested to send data when the gateway was still sending data.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20921: buffer overflow on receive: requested *number* bytes, received *number* bytes

Cause: The remote transaction program sent *len* bytes of data when the gateway was expecting to receive only *num* bytes.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20922: no data available to receive: *number* bytes were requested

Cause: The remote transaction program has either requested to receive or deallocated the conversation, but the gateway is still expecting to receive more data.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20923: unexpected status, *number* (*string*), received after *string*

Cause: An unexpected status code *stat* was received from the remote transaction program following the CPI-C *func* call. The descriptive name of the status code is *desc*. *func* is the CPI-C function receiving the status.

Action: This is usually a problem with the remote transaction program or a network problem. The status codes for each CPI-C function call are documented in the platform-specific SNA software documentation for your system. Refer to the "System Requirements" chapter of the Oracle Database Gateway for APPC Installation and Configuration Guide for your platform for titles of SNA software documentation.

PGA-20924: unable to enter send state for deallocate, state = *number* (*string*)

Cause: The gateway was unable to enter send state to perform a normal deallocation. The conversation state is *state*, and its descriptive name is *desc*. The conversation states are documented in the /usr/include/cmc.h header file.

Action: This is usually a problem with the remote transaction program or a problem with the network. Check the remote system for diagnostic information. The gateway will perform an abnormal deallocation after this error has been encountered.

PGA-20925: missing LU/TP/MODE name parameter and no side info profile specified

Cause: PGAINIT was called with no Side Information profile name specified but the LU name, TP name, and MODE name parameters were not all filled in with non-blank values.

Action: Check the PGDL used to define the transaction program to PGAU to ensure that either a valid Side Information profile name is specified (SIDEPROFILE keyword), or that the LU name, TP name, and Mode name (LUNAME, TPNAME, LOGMODE keywords) are all specified with valid values. If no Side Information profile is specified, the LU name, TP name, and Mode name parameters are all required.

PGA-20926: userid *string* length of *number* is invalid; maximum length is *number*

Cause: The userid *uid* is too long (*len*) to be used with APPC conversation security. The maximum allowable length for the userid is *max* characters. This can occur only when the gateway initialization parameter PGA_SECURITY_TYPE is set to either SAME or PROGRAM.

Action: The userid must be changed to a shorter value on both the client system and the system where the remote transaction program is being executed. This restriction is imposed by SNA and APPC, not by the gateway.

PGA-20927: password length of *number* is invalid; maximum length is *number*

Cause: The password is too long (*len*) to be used with APPC conversation security. The maximum allowable length for the password is *max* characters. This can occur only when the gateway initialization parameter PGA_SECURITY_TYPE is set to PROGRAM.

Action: The password must be changed to a shorter value on both the client system and the system where the remote transaction program is being executed. This restriction is imposed by SNA and APPC, not by the gateway.

PGA-20928: cannot open parameter file *string*

Cause: The gateway cannot locate or open the file specified.

Action: Make sure that the file exists in a location expected by the gateway and can be opened.

PGA-20930: invalid SYNCLEVEL, *number*, specified; valid range is *number:number*

Cause: The synclevel, *sync*, passed to PGAINIT is not a valid value. This value is specified by the SYNCLEVEL keyword in the DEFINE TRANSACTION statement used to define the transaction to PGAU.

Action: The value for SYNCLEVEL must fall within the range *min:max*. Correct the value specified in the DEFINE TRANSACTION statement for the SYNCLEVEL keyword, and regenerate the PL/SQL TIP using PGAU.

PGA-20931: send buffer length of *number* exceeds the maximum of *number*

Cause: The send buffer length, *len*, passed to PGAXFER was larger than the maximum allowed, *max*.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU do not define any data items larger than the maximum size

allowed by APPC. Correct the data item(s) in error and regenerate the PL/SQL TIP using PGAU.

PGA-20932: invalid function code, *string*, passed to *pgatctl*

Cause: The function code, *func*, passed to the PGATCTL function was invalid.

Action: Correct the function code in the PL/SQL procedure, recompile it, and retry the operation.

PGA-20933: invalid value specified by initialization parameter *string=string*

Cause: The keyword parameter *keyword=value* specifies an invalid value.

Action: Refer to the Oracle Database Gateway for APPC, Installation and Configuration Guide, documenting gateway initialization parameters for the keyword and correct the error.

PGA-20934: side information profile *string* not defined; cannot establish conversation

Cause: The Side Information profile *profile* is not defined to the SNA software. Either the profile name was misspelled, or no profile has been defined.

Action: Correct the profile name if it was misspelled, or have the profile defined to the SNA software if it was not already defined.

PGA-20936: send buffer length is *number* but no send lengths were specified

Cause: The send buffer length passed to PGAXFER was *len*, but the send lengths array was either null or contained a send count of zero.

Action: Check that the PGDL or COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions.

PGA-20937: receive buffer length is *number* but no receive lengths were specified

Cause: The receive buffer length passed to PGAXFER was *len*, but the receive lengths array was either null or contained a receive count of zero.

Action: Check that the PGDL or COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions.

PGA-20938: send lengths array too small (*number*) to contain a valid send count

Cause: The send lengths array passed to PGAXFER was too small to contain a valid send item count. The actual length of the send lengths array was *len*. The minimum length of the send lengths array is 4 bytes.

Action: If the TIP was generated by PGAU, ensure that it was not modified incorrectly. If the TIP was not modified, supported customers should contact Oracle Worldwide Support for assistance. If the TIP was modified or was not generated by PGAU, correct the send lengths array passed to PGAXFER.

PGA-20939: receive lengths array too small (*number*) to contain a valid receive count

Cause: The receive lengths array passed to PGAXFER was too small to contain a valid receive item count. The actual length of the receive lengths array was *len*. The minimum length of the receive lengths array is 4 bytes.

Action: If the TIP was generated by PGAU, ensure that it was not modified incorrectly. If the TIP was not modified, supported customers should contact Oracle Worldwide Support for assistance. If the TIP was modified or was not generated by PGAU, correct the receive lengths array passed to PGAXFER.

PGA-20945: unable to log on to Oracle for transaction logging

Cause: The gateway server was unable to connect to the Oracle server where the transaction log table is stored. An Oracle server message will follow this message.

Action: Ensure that the Oracle server and its TNS listener are both operational. If the protocol is SNA: also check the PGA_LOG_DB, PGA_LOG_USER, and PGA_LOG_PASS parameters in the gateway init file and ensure that they specify the correct database string, userid, and password, respectively. If the protocol is TCP/IP: also check the PGA_TCP_DB, PGA_TCP_USER, and PGA_LOG_PASS parameters in the gateway init file and ensure that they specify the correct database string, userid, and password, respectively. Refer to the Oracle Server Messages and Codes Manual for information on the Oracle server message.

PGA-20947: unable to bind variable *string* for transaction logging

Cause: The gateway server was unable to bind variable *var* for use in performing transaction logging functions. An Oracle server message will follow this message.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also check the PGA_LOG_DB, PGA_LOG_USER, and PGA_LOG_PASS parameters in the gateway init file and ensure that they specify the correct database string, userid, and password, respectively. Refer to the Oracle Server Messages and Codes Manual for information on the Oracle server message.

PGA-20948: unable to prepare the statement for transaction logging

Cause: The gateway server was unable to prepare the statement to be used to call the transaction logging PL/SQL stored procedure. An Oracle server message will follow this message.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also check the PGA_LOG_DB, PGA_LOG_USER, and PGA_LOG_PASS parameters in the gateway init file and ensure that they specify the correct database string, userid, and password, respectively. Verify that the transaction logging PL/SQL procedure has been properly installed into the Oracle server under the userid and password specified by PGA_LOG_USER and PGA_LOG_PASS and that it is executable. Refer to the Oracle Server Messages and Codes Manual for information on the Oracle server message.

PGA-20949: unable to define variable *string* for transaction recovery

Cause: The gateway server was unable to define variable *var* to be used in accessing the transaction log table during recovery processing. An Oracle server message will follow this message.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also check the PGA_LOG_DB, PGA_LOG_USER, and PGA_LOG_PASS parameters in the gateway init file and ensure that they specify the correct database string, userid, and password, respectively. Refer to the Oracle Server Messages and Codes Manual for information on the Oracle server message.

PGA-20950: unable to perform *string* on transaction log

Cause: The gateway server was unable to insert, update, or delete a pending transaction row in the transaction log table. An Oracle server message will follow this message.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also check the PGA_LOG_DB, PGA_LOG_USER, and PGA_LOG_PASS parameters in the gateway init file and ensure that they specify the correct database string, userid, and password, respectively. Verify that the transaction logging PL/SQL stored procedure

and the transaction log table have been properly installed into the Oracle server under the userid and password specified by PGA_LOG_USER and PGA_LOG_PASS. Refer to the Oracle Server Message and Codes Manual for information on the Oracle server message.

PGA-20960: missing *string* parameter, required when PGA_CAPABILITY=*string*

Cause: The PGA_CAPABILITY parameter specified *cap*, but another required parameter, *parm*, was omitted.

Action: Add the missing parameter to the gateway initialization file. Refer to Appendix A, 'Gateway Initialization Parameters', in the Oracle Database Gateway for APPC Installation and Configuration Guide for information on required parameters.

PGA-20961: synclevel 1 conversations not allowed when PGA_CAPABILITY=2_PHASE

Cause: A conversation was requested at synclevel 1. The gateway init file specified PGA_CAPABILITY=2_PHASE. When 2-phase commit is enabled, synclevel 1 conversations are not supported, since they are not protected by 2-phase processing.

Action: Either use synclevel 2 for the conversation (if the remote transaction program supports it) or use a different gateway SID for this conversation.

PGA-20962: synclevel 2 conversations not currently allowed

Cause: A conversation was requested at synclevel 2, but the SNA software allocated the conversation at synclevel 0 or 1. This means that the SNA software is not configured to support synclevel 2, or has no RRM enabled.

Action: Correct the SNA software configuration to support synclevel 2 and to enable RRN processing.

PGA-20963: side profile *string* specifies the wrong local LU name (*string*)

Cause: The Side Information profile *profile* specified for this conversation has a local LU name *lu* that is different from the local LU name specified by the PGA_LOCAL_LU gateway initialization parameter.

Action: This message will be accompanied by message PGA-20984, which provides the local LU name that was specified by the PGA_LOCAL_LU gateway initialization parameter. The Side Information profile must be changed to use the same local LU name.

PGA-20964: local LU name specified by PGA_LOCAL_LU is *string*

Cause: Message PGA-20963 was issued. This message always follows.

Action: See message PGA-20963.

PGA-20965: syncpoint error: expecting *string* PS header, received *string*

Cause: During the processing of a 2-phase commit, an incorrect response was received from the remote transaction program following a syncpoint control command. The response received was *rcv* and not a *pstype* PS header as expected.

Action: This is an error in the remote transaction program or the remote OLTP. Check the remote system for error messages from the OLTP. Contact the system administrator for the remote system to assist in problem determination.

PGA-20966: syncpoint error: sent *string*, expecting *string*, received *string*

Cause: During the processing of a 2-phase commit, an incorrect response *resp* was received from the remote transaction program following a syncpoint control command *psh*. The expected response was *exp*.

Action: This is an error in the remote transaction program or the remote OLTP. Check the remote system for error messages from the OLTP. Contact the system administrator for the remote system to assist in problem determination.

PGA-20967: 2-phase commit recovery attempted, DBA action required

Cause: The recovery process of the Oracle integrating server has connected to the gateway to perform recovery. However, the gateway cannot perform automatic recovery for this transaction due to unknown heuristic action taken by the target OLTP.

Action: The DBA must attempt to manually resolve the in-doubt transaction. Detailed information on how to proceed is contained in Chapter 8 of the Oracle Database Gateway for APPC Installation and Configuration Guide, in the section titled "Manual Recovery of In-Doubt Transactions".

PGA-20995: communication error: 'string' failed, rc = number, errno = number

Cause: An unexpected communications error occurred while executing the AIX SNA Server API *func* function. The function return code is *rc* and the system error number is *errno*. The AIX SNA Server LU6.2 API function return codes and system error numbers are described in the vendor documentation. The SNA system error numbers can also be found in the `/usr/include/luxsna.h` header file on AIX systems.

Action: Determine the cause of the communications error, correct it, and rerun the transaction. If you need assistance, contact your system administrator.

PGA-20999: SIGDANGER received from system - all conversations deallocated

Cause: The system sent a SIGDANGER signal to the server, indicating that there is a shortage of paging space. All currently active conversations are deallocated abnormally.

Action: Contact your system administrator.

PGA-21001: internal error: string

Cause: Internal error in the gateway RRM process.

Action: Reproduce the error with tracing enabled to produce a trace file. Supported customers should contact Oracle Worldwide Support for assistance.

PGA-21002: unable to obtain number bytes of memory for string

Cause: Memory shortage in the gateway RRM process. A request failed to allocate *bytes* of memory for the *usage* area.

Action: Ensure your system has enough available memory to support the RRM.

PGA-21003: memory allocation error in lxlnit

Cause: Memory shortage in the gateway RRM process.

Action: Ensure your system has enough available memory to support the RRM.

PGA-21004: invalid string specified by NLS_LANG

Cause: The *comp* component of the NLS_LANG environment variable was not valid. The component can be the language, territory, or character set.

Action: Correct the invalid component and restart the RRM process.

PGA-21005: no message file found for language 'string'

Cause: There was no message file available for the language *lang* specified by the NLS_LANG environment variable.

Action: Refer to Appendix J, National Language Support, for a list of message file languages supported by the RRM. If the language required is supported, ensure that the ORACLE_HOME environment variable specifies the gateway's home directory and that the message files are properly installed.

PGA-21006: RRM initialization failed

Cause: The initialization of the gateway RRM process failed.

Action: This message is sent to the system log as an ALERT message when the initialization of the RRM failed before it could initialize the message facility or before it could determine the local LU name for which it was started.

PGA-21010: missing fully-qualified local LU name argument

Cause: The fully-qualified local LU name was not passed as the first argument to the pg4arm program on the command line.

Action: The fully-qualified local LU name must be specified as the first argument to the pg4arm program. Reenter the command line with the fully-qualified local LU name specified.

PGA-21011: invalid network name length (*number*), valid range is *number:number*

Cause: The network name portion of the fully-qualified local LU name specified as the first argument to the pg4arm program is the wrong length (*len*).

Action: The valid range of lengths for the network name is given in the message text by *min:max*. Reenter the command line with a valid network name specified in the fully-qualified local LU name.

PGA-21012: invalid LU name length (*number*), valid range is *number:number*

Cause: The LU name portion of the fully-qualified local LU name specified as the first argument to the pg4arm program is the wrong length (*len*).

Action: The valid range of lengths for the LU name is given in the message text by *min:max*. Reenter the command line with a valid LU name specified in the fully-qualified local LU name.

PGA-21013: missing period(.) in fully-qualified local LU name

Cause: There is no period (.) in the fully-qualified local LU name specified as the first argument to the pg4arm program.

Action: A fully-qualified local LU name must contain a network name and an LU name, separated by a period (.). Reenter the command line with a valid fully-qualified local LU name specified.

PGA-21014: invalid character(s) found in network name '*string*'

Cause: One or more invalid characters were found in the network name portion *net* of the fully-qualified local LU name.

Action: The network name must begin with an upper-case alphabetic character or one of the national characters \$, #, or @. Subsequent characters can be upper-case alphabetic, national, or numeric. Reenter the command line with a valid network name specified in the fully-qualified local LU name.

PGA-21015: invalid character(s) found in LU name '*string*'

Cause: One or more invalid characters were found in the LU name portion *lu* of the fully-qualified local LU name.

Action: The LU name must begin with an upper-case alphabetic character or one of the national characters \$, #, or @. Subsequent characters can be upper-case alphabetic,

national, or numeric. Reenter the command line with a valid network name specified in the fully-qualified local LU name.

PGA-21016: RRM initialization failed for LU *string*

Cause: The initialization of the gateway RRM process for local LU *lu* failed.

Action: This message is sent to the system log as an ALERT message when the initialization of the RRM failed for the local LU.

PGA-21017: RRM already active for LU *string*

Cause: The RRM has already been started for the local LU *lu*. A second RRM cannot be started for the same local LU.

Action: Determine whether the RRM is still active and functioning. If it is not, then it may have terminated without cleaning up. On AIX systems, the `/tmp/o/eluname` file may still exist. This will prevent a new RRM from being started. If you have verified that the original RRM is no longer running, you can delete the file to allow a new copy of the RRM to be started.

PGA-21020: error creating path object for init file

Cause: A memory shortage occurred while creating an internal control block for accessing the init file.

Action: Ensure that sufficient memory is available to the RRM process. If the problem persists, supported customers should contact Oracle Worldwide Support for assistance.

PGA-21021: error creating name object for init file

Cause: A memory shortage occurred while creating an internal control block for accessing the init file.

Action: Ensure that sufficient memory is available to the RRM process. If the problem persists, supported customers should contact Oracle Worldwide Support for assistance.

PGA-21022: error creating file object for init file

Cause: A memory shortage occurred while creating an internal control block for accessing the init file.

Action: Ensure that sufficient memory is available to the RRM process. If the problem persists, supported customers should contact Oracle Worldwide Support for assistance.

PGA-21023: error opening init file *string*

Cause: An error occurred opening the init file *ifn*.

Action: This message will be followed by an OS-specific message displaying the error information. Use that information to determine the cause of the error and correct it. Then restart the RRM process.

PGA-21024: error reading init file *string*

Cause: An error occurred reading the init file *ifn*.

Action: This message will be followed by an OS-specific message displaying the error information. Use that information to determine the cause of the error and correct it. Then restart the RRM process.

PGA-21025: error closing init file *string*

Cause: An error occurred opening the init file *ifn*.

Action: This message will be followed by an OS-specific message displaying the error information. Use that information to determine the cause of the error and correct it. Then restart the RRM process.

PGA-21030: invalid keyword in line *number*

Cause: An invalid keyword was encountered in the init file in line number *line*.

Action: Correct the invalid line in the init file and restart the RRM process.

PGA-21031: length of *string* value (*number*) not within valid range (*number:number*)

Cause: The length *len* of the value specified in the init file by the keyword *key* is not within the valid range *min:max*.

Action: Correct the invalid keyword value in the init file and restart the RRM process.

PGA-21032: invalid value specified by *stringstring*

Cause: The value *val* specified in the init file by the keyword *key* is invalid.

Action: Correct the invalid keyword value in the init file and restart the RRM process.

PGA-21033: error(s) found in init file

Cause: One or more errors were found in the init file during RRM initialization. The RRM process has terminated.

Action: Correct all init file errors and restart the RRM process.

PGA-21034: too many errors in init file, cannot continue

Cause: The init file contained more errors than the RRM initialization code could process.

Action: Correct all errors that have been processed so far, and restart the RRM process. Any additional errors will then be processed. This error is received only when the init file contains a very large number of invalid lines.

PGA-21035: value of *string* (*number*) not within valid range (*number:number*)

Cause: The value *val* specified in the init file by the keyword *key* is not within the valid range *min:max*.

Action: Correct the invalid keyword value in the init file and restart the RRM process.

PGA-21040: error creating path object for log file

Cause: A memory shortage occurred while creating an internal control block for accessing the log file.

Action: Ensure that sufficient memory is available to the RRM process. If the problem persists, supported customers should contact Oracle Worldwide Support for assistance.

PGA-21041: error creating name object for log file

Cause: A memory shortage occurred while creating an internal control block for accessing the log file.

Action: Ensure that sufficient memory is available to the RRM process. If the problem persists, supported customers should contact Oracle Worldwide Support for assistance.

PGA-21042: error creating file object for log file

Cause: A memory shortage occurred while creating an internal control block for accessing the log file.

Action: Ensure that sufficient memory is available to the RRM process. If the problem persists, supported customers should contact Oracle Worldwide Support for assistance.

PGA-21043: error opening log file *string*

Cause: An error occurred opening the log file *lfn*.

Action: This message will be followed by an OS-specific message displaying the error information. Use that information to determine the cause of the error and correct it. Then restart the RRM process.

PGA-21044: error writing to log file *string*

Cause: An error occurred writing to the log file *lfn*.

Action: This message will be followed by an OS-specific message displaying the error information. Use that information to determine the cause of the error and correct it. Then restart the RRM process.

PGA-21045: error closing log file *string*

Cause: An error occurred closing the log file *lfn*.

Action: This message will be followed by an OS-specific message displaying the error information. Use that information to determine the cause of the error and correct it. Then restart the RRM process.

PGA-21046: logging switched to system log due to error on log file

Cause: An error occurred writing to the log file, and logging as been switched to the system log facility for the remainder of this RRM execution.

Action: Correct the problem that caused the error on the log file, so that the next restart of the RRM will be able to write to the log file. A common cause for this message is unavailable disk space for the file.

PGA-21050: error creating path object for trace file

Cause: A memory shortage occurred while creating an internal control block for accessing the trace file.

Action: Ensure that sufficient memory is available to the RRM process. If the problem persists, supported customers should contact Oracle Worldwide Support for assistance.

PGA-21051: error creating name object for trace file

Cause: A memory shortage occurred while creating an internal control block for accessing the trace file.

Action: Ensure that sufficient memory is available to the RRM process. If the problem persists, supported customers should contact Oracle Worldwide Support for assistance.

PGA-21052: error creating file object for trace file

Cause: A memory shortage occurred while creating an internal control block for accessing the trace file.

Action: Ensure that sufficient memory is available to the RRM process. If the problem persists, supported customers should contact Oracle Worldwide Support for assistance.

PGA-21053: error opening trace file *string*

Cause: An error occurred opening the trace file *tfn*.

Action: This message will be followed by an OS-specific message displaying the error information. Use that information to determine the cause of the error and correct it. Then restart the RRM process.

PGA-21054: error writing to trace file *string*

Cause: An error occurred writing to the trace file *tfn*.

Action: This message will be followed by an OS-specific message displaying the error information. Use that information to determine the cause of the error and correct it. Then restart the RRM process.

PGA-21055: error closing trace file *string*

Cause: An error occurred closing the trace file *tfn*.

Action: This message will be followed by an OS-specific message displaying the error information. Use that information to determine the cause of the error and correct it. Then restart the RRM process.

PGA-21056: tracing suspended due to error on trace file

Cause: An error occurred writing to the trace file, and tracing has been suspended for the remainder of this RRM execution.

Action: Correct the problem that caused the error on the trace file, so that the next restart of the RRM will be able to write to the trace file. A common cause for this message is unavailable disk space for the file.

PGA-21060: system *errno* = *number*

Cause: The system error number was *errno* following a failure in a file operation.

Action: The system error codes are documented in the header file `/usr/include/errno.h`. Determine the cause of the file error and correct it.

PGA-21100: RRM initializing for local LU *string*

Cause: The RRM is initializing for the local LU *llu*.

Action: Informational message.

PGA-21101: initialization parameters read from *string*

Cause: Init parameters were read from the file *ifn*.

Action: Informational message.

PGA-21102: log messages written to *string*

Cause: Log messages will be written to the file *lfn*.

Action: Informational message.

PGA-21103: trace information written to *string*

Cause: Trace information will be written to the file *tfn*.

Action: Informational message.

PGA-21104: trace level currently set to *number*

Cause: The trace level specified by the TRACE_LEVEL parameter is *trc*.

Action: Informational message.

PGA-21105: startup for local LU *string* is warm

Cause: The RRM is warm-starting for the local LU *llu*. The RRM will attempt to restore all LU6.2 log states from the RRM LU6.2 log as it existed at the last RRM shutdown.

Action: Informational message.

PGA-21106: warm start complete for local LU *string*

Cause: The RRM has warm-started for the local LU *llu*. This means that all state information for the local LU and partner LUs with which the RRM has previously communicated was restored from the RRM LU6.2 log as it existed at the last RRM shutdown.

Action: Informational message.

PGA-21107: startup for local LU *string* is cold

Cause: The RRM is cold-starting for the local LU *llu*. The RRM will not retain any LU6.2 log states from the previous execution.

Action: Informational message.

PGA-21108: cold start complete for local LU *string*

Cause: The RRM has cold-started for the local LU *llu*. The RRM has a new local LU6.2 log name and all LU6.2 log names for partner LUs have been erased.

Action: Informational message.

PGA-21109: local log name is *x'string'*

Cause: The local LU's LU6.2 log name is *llog*. Since the log name is not necessarily a printable string, it is listed as a hexadecimal string.

Action: Informational message.

PGA-21110: XLN received from partner LU *string*

Cause: An Exchange Log Names (XLN) GDS variable has been received from the RRM at the partner LU *plu*. This is the first thing that occurs when communication is established with a partner LU for the first time since either the local RRM or the partner RRM was last started.

Action: Informational message.

PGA-21111: partner log name is *x'string'*

Cause: The partner LU's LU6.2 log name is *plog*. Since the log name is not necessarily a printable string, it is listed as a hexadecimal string.

Action: Informational message.

PGA-21112: creating new log entry for partner LU *string*

Cause: The RRM is creating an entry in its LU6.2 log for the partner LU *plu*. This happens only the first time that the partner LU's RRM contacts the local RRM since the last cold start of the local RRM.

Action: Informational message.

PGA-21113: warm starting for partner LU *string*

Cause: The RRM is warm starting for the partner LU *plu*. This happens when the partner LU's RRM is warm starting and is contacting the local RRM for the first time since the local RRM was started.

Action: Informational message.

PGA-21114: cold starting for partner LU *string*

Cause: The RRM is cold starting for the partner LU *plu*. This happens when the partner LU's RRM is cold starting and is contacting the local RRM for the first time since the local RRM was started.

Action: Informational message.

PGA-21115: shutdown request received

Cause: A shutdown request has been received by the RRM.

Action: Informational message.

PGA-21116: RRM termination complete for local LU *string*

Cause: The RRM has terminated for the local LU *llu*.

Action: Informational message.

PGA-21200: connect to Oracle Server as *string* failed

Cause: The RRM was unable to connect as user *user* to the Oracle server where its LU6.2 log information is stored. An Oracle server message will follow this message.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also check the LOG_DB, LOG_USER, and LOG_PASS parameters in the RRM init file and ensure that they specify the correct database string, userid, and password, respectively.

PGA-21201: error selecting PGA_2PC_LUS row for local LU *string*

Cause: The RRM was unable to read its local LU6.2 log entry. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

PGA-21202: error updating PGA_2PC_LUS row for local LU *string*

Cause: The RRM was unable to update its local LU6.2 log entry during warm start processing. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

PGA-21203: error inserting PGA_2PC_LUS rows for local LU *string*

Cause: The RRM was unable to create its local LU6.2 log entry during cold start processing. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started again.

PGA-21204: error deleting PGA_2PC_PENDING rows for local LU *string*

Cause: The RRM was unable to delete the pending transaction entries from its local LU6.2 log during cold start processing. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_PENDING table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started again.

PGA-21205: error deleting PGA_2PC_LUS rows for partner LUs

Cause: The RRM was unable to delete the partner LU entries from its local LU6.2 log during cold start processing. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started again.

PGA-21206: error selecting PGA_2PC_LUS row for partner LU *string*

Cause: The RRM was unable to read its local LU6.2 log entry for the partner LU. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

PGA-21207: error inserting PGA_2PC_LUS row for partner LU *string*

Cause: The RRM was unable to create a local LU6.2 log entry for the partner LU. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

PGA-21208: error updating PGA_2PC_LUS row for partner LU *string*

Cause: The RRM was unable to update its local LU6.2 log entry for the partner LU. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

PGA-21209: error selecting PGA_2PC_PENDING rows for partner LU *string*

Cause: The RRM was unable to read the pending transaction entries from its LU6.2 log for the partner LU *plu*. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_PENDING table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

PGA-21210: unable to open connection with SNA services

Cause: The RRM was unable to initialize its connection with the SNA software for LU6.2 communications. An OS-specific error message precedes this message.

Action: Check the error information in the OS-specific error message to determine the cause of the problem, and take corrective action. Once the problem has been corrected, restart the RRM.

PGA-21211: unable to allocate LU6.2 listen for RRM TP

Cause: The RRM was unable to allocate an LU6.2 listen with the SNA software for LU6.2 communications. An OS-specific error message precedes this message.

Action: Check the error information in the OS-specific error message to determine the cause of the problem, and take corrective action. Once the problem has been corrected, restart the RRM.

PGA-21212: incorrect data received from partner LU *string*

Cause: A partner LU has sent incorrect data in its initial communication with the local RRM. The first data received should be an Exchange Log Names (XLN) GDS variable, but was not.

Action: This error indicates that there is a problem on the partner LU side of the connection. Corrective action must be taken by the system administrator for that LU.

PGA-21213: received *x'string'*

Cause: This message follows message PGA-00208, and dumps out the first 32 bytes of the data received from the partner LU.

Action: If the data in this message is not sufficient for determination of the problem at the partner LU, use SNA traces on either side of the connection to gather more detailed information, or use the TRACE_LEVEL parameter in the RRM init file to enable SNA data tracing to the trace file.

PGA-21214: incorrect service flag in XLN

Cause: The service flag in the Exchange Log Names (XLN) GDS variable received from the partner LU's RRM is not correct. The XLN is expected to have the REQUEST flag set.

Action: This error indicates that there is a problem on the partner LU side of the connection. Corrective action must be taken by the system administrator for that LU.

PGA-21215: partner log name mismatch on warm start

Cause: The Exchange Log Names (XLN) GDS variable received from the partner LU's RRM contains an LU6.2 log name that is different from that known by the local LU's RRM.

Action: This can happen if the partner LU was cold started and later warm started, all between the times the local LU's RRM was last shut down and warm started. The local LU's RRM is not aware that the partner LU was cold started, and therefore assumes that the partner LU's RRM is using the wrong LU6.2 log name. Verify that this is what happened, and if so, the local LU's RRM can be forced to accept the new LU6.2 log name from the partner LU's RRM by deleting the local RRM's LU6.2 log entry for the partner LU, and then forcing the partner LU to reinitiate the connection to the local LU. For further information on recovery from this error, refer to "RRM Recovery" in Chapter 12, "2-Phase Commit".

PGA-21216: last stored log name *x'string'*

Cause: This message always follows message PGA-00213, and lists the last partner LU LU6.2 log name *plog* saved by the local LU's RRM.

Action: The log name in the message may be of use to the system administrator for the partner LU in determining the cause for the log name mismatch.

PGA-21217: partner sent log name *x'string'*

Cause: This message always follows message PGA-00214, and lists the LU6.2 log name *plog* sent by the partner LU's RRM in the warm start Exchange Log Names (XLN) GDS variable.

Action: The log name in the message may be of use to the system administrator for the partner LU in determining the cause for the log name mismatch.

PGA-21218: cold start for partner LU *string* rejected, *number* pending transactions exist

Cause: A cold start was requested by the partner LU's RRM, but the local RRM determined that there are still unresolved pending transactions for that LU in the local RRM's LU6.2 log.

Action: If the pending transactions have been resolved, then they must be manually deleted from the local RRM's LU6.2 log before the partner LU's cold start request will be accepted. If the pending transactions have not been resolved, then they must be resolved and then manually deleted from the local RRM's LU6.2 log before the partner LU's cold start request will be accepted.

PGA-21219: recovery action by DBA required for local LU *string*

Cause: A condition has occurred which requires action by the DBA. This message is also sent to the system log as an alert message.

Action: The DBA should examine the RRM log file to determine what action to take. The messages in the log file show what event has occurred that makes DBA action necessary, and their descriptions in this appendix provide the DBA with a course of action. For further information on recovery, refer to "RRM Recovery" in Chapter 8, "Implementing Two-Phase Commit", of the Oracle Database Gateway for APPC Installation and Configuration Guide.

PGA-21220: logging error limit (*number*) exceeded, RRM shutting down for LU *string*

Cause: The limit of *lim* Oracle errors while accessing the RRM's local LU6.2 log tables has exceeded. The RRM for the local LU *llu* is shutting down.

Action: The DBA should examine the RRM log file to determine what action to take. The messages in the log file will show what Oracle errors have occurred, and the DBA should take whatever corrective action is required.

PGA-21221: commit failed during cold start of local LU *string*

Cause: The RRM was unable to commit updates to its local log during a cold start of local LU *llu*. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

PGA-21222: commit failed during warm start of local LU *string*

Cause: The RRM was unable to commit updates to its local log during a warm start of local LU *llu*. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated

manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

PGA-21223: commit failed during first-time processing for partner LU *string*

Cause: The RRM was unable to commit updates to its local log during a first-time processing for partner LU *plu*. An Oracle Server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

PGA-21224: commit failed during cold start of partner LU *string*

Cause: The RRM was unable to commit updates to its local log during a cold start of partner LU *plu*. An Oracle Server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

PGA-21300: received no data when expecting data

Cause: The RRM was expecting to receive data from a partner RRM, but received none.

Action: This error indicates that there may be a problem on the partner LU side of the connection. Corrective action must be taken by the system administrator for that LU.

PGA-21301: invalid control received: *string*

Cause: The RRM received an invalid control flag *control* from a partner RRM.

Action: This error indicates that there may be a problem on the partner LU side of the connection. Corrective action must be taken by the system administrator for that LU.

PGA-21400: ORACLE_HOME environment variable not set

Cause: The ORACLE_HOME environment variable was not set before the RRM was started.

Action: The ORACLE_HOME environment variable must be set to the gateway's ORACLE_HOME directory before the RRM is started.

PGA-21401: ORACLE_HOME environment variable set to null string

Cause: The ORACLE_HOME environment variable was set to a null value.

Action: The ORACLE_HOME environment variable must be set to the gateway's ORACLE_HOME directory before the RRM is started.

PGA-21402: error opening file *string*, fopen errno = *number*

Cause: An error occurred opening the RRM enqueue file *fn* for writing. The error number from fopen is *errno*.

Action: Use the *errno* value to determine the cause of the problem and correct it before restarting the RRM.

PGA-21403: error writing to file *string*, fputs errno = *number*

Cause: An error occurred writing to the RRM enqueue file *fn*. The error number from fputs is *errno*.

Action: Use the *errno* value to determine the cause of the problem and correct it before restarting the RRM.

PGA-21404: error closing file *string*, *fclose* *errno* = *number*

Cause: An error occurred closing the RRM enqueue file *fn*. The error number from *fclose* is *errno*.

Action: Use the *errno* value to determine the cause of the problem and correct it before restarting the RRM.

PGA-21405: error deleting file *string*, *remove* *errno* = *number*

Cause: An error occurred deleting the RRM enqueue file *fn* during shutdown. The error number from *remove* is *errno*.

Action: Use the *errno* value to determine the cause of the problem and correct it before restarting the RRM. The file *fn* must be manually deleted before attempting to start the RRM.

PGA-21450: communication error: '*string*' failed, *errno* = *number*

Cause: The AIX SNA function *func* failed with a system error number of *errno*.

Action: The AIX SNA error codes are documented in the IBM manual AIX SNA Server: Diagnosis Guide and Messages. Use this manual to determine the cause of the problem and correct it. AIX SNA system error numbers are also documented in the `/usr/include/luxsna.h` header file on AIX systems.

PGA-21451: SNA Server is shutting down

Cause: SNA Server is being shut down and sent a SIGUSR1 to the RRM.

Action: The RRM must terminate when this occurs. Contact the system administrator to determine the cause of the SNA Server shutdown. Restart the RRM after SNA Server has been restarted.

PGA-22001: remote host name is null.

Cause: TCP/IP protocol has returned "null" for the remote host name.

Action: Verify the remote host name via the `pg4tcpmap` tool and re-execute your PL/SQL statement. If the problem cannot be resolved, supported customers should contact Oracle Support Services.

PGA-22002: communication error: TCP/IP *string* failed, *rc* = *number*

Cause: The function *func* has failed with the return code of *rc*.

Action: If the problem cannot be resolved, the supported customers should contact Oracle Support Services for assistance.

PGA-22003: communication error: TCP/IP *string* failed, *rc* = *number*, *for*, *string*

Cause: An unexpected communications error occurred while executing the specified TCP/IP function *func*. The TCP/IP function return code is *rc* and the function *func* parameter is *parm*.

Action: If the problem cannot be resolved, the supported customers should contact Oracle Support Services for assistance.

PGA-22004: length of the total message value (*number*) not within valid range (*number:number*)

Cause: The length *len* for the value is not within the valid range *min:max*.

Action: If the problem cannot be resolved, the supported customers should contact Oracle Support Services for assistance.

PGA-22005: invalid socket file descriptor: no active conversations were found

Cause: There were no TCP/IP conversations active for the user.

Action: Check that the application is not calling the PL/SQL TIP routines out of sequence.

PGA-22006: Parameter *string* is not specified.

Cause: Parameter *parm* is missing from the gateway initialization file.

Action: Add the missing parameter to the gateway initialization file. Refer to the Oracle Database Gateway Installation and Configuration Guide for the required initialization parameters for gateways using TCP/IP.

PGA-22007: user ID *string* length of *number* is invalid; maximum length is *number*

Cause: The user id *uid* is too long *len* to be used. The maximum allowable length for the user ID is *max* characters.

Action: The user id must be changed to a shorter value for OCI logon to the table PGA_TCP_IMSC. Refer to the Oracle Database Gateway Installation and Configuration Guide for the required gateway initialization parameters for gateways using TCP/IP.

PGA-22008: password length of *number* is invalid; maximum length is *number*

Cause: The password is too long *len* to be used. The maximum allowable length for the password is *max* characters.

Action: The password must be changed to a shorter value for OCI logon to the table PGA_TCP_IMSC. Refer to the Oracle Database Gateway Installation and Configuration Guide for the required gateway initialization parameters for gateways using TCP/IP.

PGA-22009: database name *string* length of *number* is invalid; maximum length is *number*

Cause: The database name *db name* is too long *len* to be used. The maximum allowable length for the database name is *max* characters.

Action: The database name must be changed to a shorter value for OCI logon to the table PGA_TCP_IMSC. Refer to the Oracle Database Gateway Installation and Configuration Guide for the required gateway initialization parameters for gateways using TCP/IP.

PGA-22010: userid *string* length of *number* is invalid; maximum length is *number*

Cause: The userid *uid* is too long (*len*) to be used with TCP/IP RACF conversation security. This can occur only when the gateway initialization parameter PGA_SECURITY_TYPE is set to either SAME or PROGRAM.

Action: The userid must be changed to a shorter value on both the client system and the system where the remote transaction program is being executed. The maximum allowable length for the userid is *max* characters. This restriction is imposed by RACF, not by the gateway.

PGA-22011: password length of *number* is invalid; maximum length is *number*

Cause: The password is too long (*len*) to be used with TCP/IP RACF conversation security. This can occur only when the gateway initialization parameter PGA_SECURITY_TYPE is set to PROGRAM.

Action: The password must be changed to a shorter value on both the client system and the system where the remote transaction program is being executed. The

maximum allowable length for the password is *max* characters. This restriction is imposed by RACF, not by the gateway.

PGA-22012: IMS Connect error: return code = *string*, reason code = *string*

Cause: An unexpected IMS Connect error occurred while executing the 'recv' function. The return code *rc* and reason code *rsc* are provided in the message text. For more information, look at the OLTP SDSF log and IMS Connect error message which starts with HWS. The messages are documented in the IBM IMS Connect Guide and Reference manual.

Action: Determine the cause of the error, correct it, and rerun the transaction.

PGA-22014: Transaction code length of *number* exceeds the maximum of *number*

Cause: The transaction code length *len* passed to PGAINIT or PGAINIT_SEC was larger than the maximum allowed length *max*.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGU-00100 to PGU-50101

PGU-00100: invalid SPOOL file name

Cause: When using the SPOOL command, you specified the name of a file that already exists.

Action: Specify a valid name for a file that does not currently exist.

PGU-00101: extraneous text at end of command

Cause: There were unrecognized commands or other text on the command line.

Action: Check the syntax of the command, then issue the command again.

PGU-00106: invalid ECHO switch

Cause: An invalid option for the SET ECHO command was specified.

Action: Use either ON or OFF as an option for the SET ECHO command.

PGU-00107: invalid TERMOUT switch

Cause: An invalid option for the SET TERMOUT command was specified.

Action: Use either ON or OFF as an option for the SET TERMOUT command.

PGU-00108: invalid TIMING switch

Cause: An invalid option for the SET TIMING command was specified.

Action: Use either ON or OFF as an option for the SET TIMING command.

PGU-00110: illegal SET option

Cause: An invalid option for the SET command was specified.

Action: Check the syntax of the SET command and issue the command again.

PGU-00111: illegal SHOW option

Cause: An invalid option for the SHOW command was specified.

Action: Check the syntax of the SHOW command and issue the command again.

PGU-00115: unexpected end of command

Cause: An option was specified without the required arguments.

Action: Check the syntax of the command and enter the command again with the appropriate arguments for options that require values.

PGU-00120: invalid STOPONERROR switch

Cause: An invalid options switch was specified for the SET STOPONERROR command.

Action: Use either ON or OFF as an option for the SET STOPONERROR command.

PGU-00122: invalid SET numeric parameter

Cause: A character or an invalid value was specified when a number was expected as a value for a SET command option.

Action: Check the syntax of the command, use an appropriate number for the option, and enter the command again.

PGU-00125: integer value overflow

Cause: A numeric value was specified that was too large.

Action: Use a smaller number.

PGU-00129: value out of range (1 - number)

Cause: The specified value was out of range. The valid range is given by the error message.

Action: Use a number within the range specified by this message.

PGU-00132: null hostname/password specified

Cause: The hostname/password was not specified.

Action: Specify the correct hostname/password.

PGU-00136: bad variable specification

Cause: A variable was incorrectly specified using the VARIABLE command.

Action: Check the syntax of the command, then issue the command again.

PGU-00137: syntax error in PL/SQL Block

Cause: The PL/SQL block contains a syntax error.

Action: Correct the syntax error.

PGU-00142: cannot recognize object type, owner or name

Cause: The specified object type, owner, or name was not recognized.

Action: Specify a legal object type, owner, or name.

PGU-00143: variable has not been defined

Cause: The specified variable was not recognized.

Action: Specify an existing variable.

PGU-00144: invalid object type for DESCRIBE

Cause: The specified object type was not TABLE, VIEW, or PROCEDURE.

Action: Check that the object is a table, view, or procedure. If so, check that you specified the correct name and try again. If not, you describe the object.

PGU-00145: invalid object name for DESCRIBE

Cause: The specified table, view, stored procedure, or function was not recognized.

Action: Check the spelling and be sure to specify an existing table, view, stored procedure, or function.

PGU-00149: invalid SERVEROUTPUT switch

Cause: An invalid option was specified for the SET SERVEROUTPUT command.

Action: Check the syntax of the command, then issue the command again.

PGU-00300: internal error code; arguments: [*number*], [*string*]

Cause: You have encountered an internal error.

Action: Supported customers should contact Oracle Worldwide Support and provide the circumstances leading to the error and the complete set of messages.

PGU-00302: not connected to a database

Cause: You must be connected to the database for the requested operation.

Action: CONNECT to the database using a valid username and password before retrying the operation.

PGU-00304: input file I/O error [*number*] - input aborted

Cause: A command file used as input to PGAU is corrupt or invalid.

Action: Check the file before retrying the operation.

PGU-00305: command size exceeds internal buffer size (*number*)

Cause: The SQL statement size exceeds PGAU's buffer size.

Action: Shorten the SQL statement by removing extra blanks or by using intermediate statements as views, if necessary.

PGU-00306: monitor cycle interval time out of range (1 - *number*)

Cause: You entered an invalid number for the cycle interval.

Action: Enter a number between 1 and 3600 for the cycle interval. The number indicates seconds.

PGU-00307: cannot open spool file *string*

Cause: PGAU tried to open a spool file after you entered SPOOL filename, but could not open the file. Possible causes are not enough disk space or inadequate privileges to create a file.

Action: Determine why PGAU could not create a new file and retry.

PGU-00308: no spool file opened

Cause: You entered SPOOL OFF, but you were not spooling currently so there was no file to close.

Action: If you wish to capture session output, first use the SPOOL command to open a file, and then enter your commands before closing the file with SPOOL OFF.

PGU-00309: cannot close spool file *string*

Cause: SPOOL OFF could not close the currently open spool file.

Action: Check for an operating system reason that the spool file could not be closed.

PGU-00310: cannot open parameter file *string*

Cause: PGAU cannot locate or open the file specified by the PFILE option, either because the file does not exist or because PGAU has insufficient privilege to open the file.

Action: Make sure that the file exists in a location expected by PGAU and can be opened.

PGU-00311: data exceeds internal buffer size

Cause: The results returned by a SQL query exceed the internal PGAU buffer.

Action: Use the SET command to increase MAXDATA or decrease ARRAYSIZE.

PGU-00314: invalid parameter given on PGAU command line

Cause: An unrecognized parameter was given on the PGAU command line.

Action: Check the parameters given on the PGAU command line.

PGU-00315: cannot open command file *string*

Cause: PGAU cannot locate the specified command file.

Action: Verify the file's name and PGAU's access to it before retrying.

PGU-00317: version of tool conflicts with version [*string*] of DATA

Cause: This version of the PGAU tool cannot process the DATA in the database.

Action: You are attempting to use a tool that might cause damage to the current database. If the version of DATA is greater than the version of the tool, then you are using the wrong version of the tool. If the version of the tool is greater than the version of the DATA, check to see if there is an ORACLE-supplied SQL script to update the DATA to the correct version level.

PGU-00318: PGAU command line error [*number*]

Cause: You made a syntax or typing error while entering a PGAU command line.

Action: Check the syntax and try again.

PGU-00319: cannot locate pgau configuration file, *string*

Cause: File mentioned cannot be located.

Action: Make sure that the specified file exists before re-running PGAU.

PGU-00320: cannot open pgau configuration file, *string*

Cause: File mentioned cannot be opened.

Action: Make sure that the specified file is available for use by PGAU.

PGU-00322: total size of command line parameters exceeds buffer size

Cause: You entered too many command line arguments and the PGAU buffer was exceeded.

Action: Reduce the number of command line arguments.

PGU-00325: pfile too large

Cause: The file you specified using PFILE is too large (exceeds 8K).

Action: Reduce the size of the parameter file before specifying it again with PFILE.

PGU-00327: command not available in this mode

Cause: You have specified a command that is not available in this mode.

Action: Do not specify the command.

PGU-00328: insufficient privilege for this display

Cause: You attempted to display a MONITOR display without sufficient privileges.

Action: Contact the DBA to obtain the required privileges.

PGU-00331: cannot allocate enough memory for SQL Buffer

Cause: There is not enough memory for the current SQL buffer.

Action: Use the SET command to reduce MAXDATA.

PGU-00337: missing instance name

Cause: The instance name was not specified in the connect statement.

Action: Use 'connect username/password@instance' or 'connect username/password'.

PGU-00341: 'string' is an undefined bind variable

Cause: The SQL statement refers to an undefined bind variable.

Action: Use the VARIABLE statement to define the bind variable and re-execute the query.

PGU-00347: no offline tablespaces exist

Cause: The list box of set tablespace online contained 0 elements.

Action: No action is required.

PGU-00359: monitor already active

Cause: An instantiation of this monitor is already active.

Action: Cycle through windows until this monitor becomes visible.

PGU-00360: object to be described does not exist

Cause: The object in a DESCRIBE FUNCTION/PROCEDURE/PACKAGE statement does not exist.

Action: check that the object name and owner are correct and that the object exists.

PGU-00361: error during describe

Cause: An unexpected error occurred during a describe.

Action: Check the following error and correct the problem.

PGU-00362: object *string* is a package; use 'DESCRIBE *package.procedure*'

Cause: The named object is a package. DESCRIBE does not currently describe an entire package specification.

Action: Describe the package specification, as indicated in the message text.

PGU-00363: procedure or function *string* not found in the package

Cause: The named package does not contain the procedure or function specified.

Action: Specify a procedure or function within the package.

PGU-00364: object *string* is a remote object, cannot further describe

Cause: The specified object name contains a database link, or is a synonym that resolves to a name with a database link. Such objects cannot currently be described.

Action: Specify a local object.

PGU-00365: object *string* is invalid, it may not be described

Cause: The object must have been successfully compiled.

Action: Fix any errors in the object and recompile.

PGU-00366: name *string* is malformed, it must be of form [[a.]b.]c@dblink

Cause: The name may have at most 3 parts and a dblink.

Action: Use a well-formed object name.

PGU-00370: mandatory field/list needs to be filled in

Cause: You tried to execute the dialog before filling in all required items.

Action: Fill in all required items and retry.

PGU-00371: cannot open/locate input help file, *string*

Cause: You pressed the Help Key or chose an item from the Help Menu.

Action: Put the help file in the location specified.

PGU-00372: cannot open/locate input index file, *string*

Cause: You pressed the Help Key or chose an item from the Help Menu.

Action: Put the index help file in the location specified.

PGU-00373: cannot allocate memory of size *number* from toolkit

Cause: You pressed the Help Key or chose an item from the Help Menu.

Action: Exit PGAU and re-enter and try again.

PGU-00374: could not set file position in *string* directly

Cause: You pressed the Help Key or chose an item from the Help Menu.

Action: The fseek() routine failed. Alternate chosen - no action is necessary.

PGU-00375: unexpected end of file, *string*

Cause: You pressed the Help Key or chose an item from the Help Menu.

Action: Exit PGAU and install the correct help file.

PGU-00376: mandatory field has to be filled in before navigation is possible

Cause: Attempted to navigate to the next/previous item.

Action: Fill in current field and then go to the next/previous item.

PGU-00377: mandatory list item has to be selected before navigation is possible

Cause: Attempted to navigate to the next/previous item.

Action: Select an item and then go to the next/previous item.

PGU-00378: an item has to be selected before help can be sought for it

Cause: Attempted to obtain help before selecting an item.

Action: Select an item first and re-execute.

PGU-00379: variable(s) not defined

Cause: Attempted SHOW VAR[*I*ABLES] [*var-name*] and the variable was not defined, or no variables were specified or defined.

Action: Ensure the variables are correctly defined.

PGU-00380: procedural option required for this statement

Cause: Attempt to execute a statement that requires the Procedural option was made, but the Procedural option is not installed.

Action: This statement cannot be issued without the Procedural option. Install the Procedural option to execute this statement.

PGU-00381: error in the SERVEROUTPUT option

Cause: Most likely the package DBMS_OUTPUT not installed. Check the accompanying messages for more information.

Action: Check accompanying messages and take appropriate action.

PGU-00382: value *string* is not a recognizable file name for *string*

Cause: The value for the PGAU initialization variable (which points to the initialization file) is not a recognizable file name.

Action: Specify a valid file name or do not define the variable to avoid running the initialization file.

PGU-00383: file name *string* pointed to by *string* could not be opened

Cause: The file name pointed to by the PGAU initialization variable could not be opened.

Action: Specify an available file or do not define the variable to avoid running the initialization file.

PGU-00384: could not open pgau resource file, *string*

Cause: The specified file could not be opened.

Action: Make the file available to PGAU.

PGU-00385: could not locate pgau resource file, *string*

Cause: The specified file could not be located.

Action: Make sure file exists before rerunning PGAU.

PGU-00386: could not open toolkit resource file, *string*

Cause: The specified file could not be opened.

Action: Make the file available to PGAU.

PGU-00387: could not locate toolkit resource file, *string*

Cause: The specified file could not be located.

Action: Make sure file exists before rerunning PGAU.

PGU-00388: cannot start PGAU in screen mode; check if values are legal:

Cause: A variable was not properly set.

Action: Check the values listed by PGAU to see if they are correct.

PGU-00389: toolkit resource file name is defined to *string*

Cause: The specified file could not be located.

Action: Ensure the file specified exists and can be accessed.

PGU-00390: terminal type *string* is defined by *string*

Cause: Terminal type specified by *variable* may not be valid.

Action: Ensure the terminal specification is correct.

PGU-00391: value *string* is defined to *string*; legal values: *string* or *string*

Cause: The PGAU mode has been incorrectly defined.

Action: Define the value of the variable as one of the legal values.

PGU-20000: *string* of *string* statement failed for table *string*, rc=*number*

Cause: PGAU encountered a syntax error during parse operation *oper* of the statement *statement* for the table *table* with the indicated return code *rc*.

Action: Check the PGAU statement identifier names for proper spelling and punctuation, or other syntax errors.

PGU-20001: *string* of *string* variable of *string* statement failed for table *string*, *rc=number*

Cause: The operation *oper* on the variable *varname* for the statement *statement* against the PG DD table *table* failed with return code *rc*.

Action: A semantic error has occurred. Check all the identifier names in the PGAU script.

PGU-20002: unable to login to Oracle

Cause: An error occurred attempting to logon to the Oracle server. Syntax checking only continues with the next statement.

Action: Ensure that the Oracle server containing the PG DD is operational.

PGU-20003: unable to open the cursor

Cause: Internal PGAU logic error - should not occur. An error occurred opening an SQL statement cursor. Syntax checking only continues with the next statement.

Action: Ensure that the Oracle server containing the PG DD is operational. Otherwise, reproduce the error with symptom documentation. Supported Customers should contact Oracle World Wide Support for assistance.

PGU-20004: unable to close the cursor

Cause: Internal PGAU logic error - should not occur. An error occurred closing an SQL statement cursor. Syntax checking only continues with the next statement.

Action: Ensure that the Oracle server containing the PG DD is operational. Otherwise, reproduce the error with symptom documentation. Supported Customers should contact Oracle World Wide Support for assistance.

PGU-20005: unable to commit PG DD changes

Cause: Internal PGAU logic error - should not occur. An error occurred attempting to commit changes to the PG DD. Syntax checking only continues with the next statement.

Action: Ensure that the Oracle server containing the PG DD is operational. Otherwise, reproduce the error with symptom documentation. Supported Customers should contact Oracle World Wide Support for assistance.

PGU-20006: unable to logout from Oracle

Cause: Internal PGAU logic error - should not occur. An error occurred during logoff from the Oracle server. Syntax checking only continues with the next statement.

Action: Ensure that the Oracle server containing the PG DD is operational. Otherwise, reproduce the error with symptom documentation. Supported Customers should contact Oracle World Wide Support for assistance.

PGU-20007: unable to rollback PG DD changes

Cause: Internal PGAU logic error - should not occur. An error occurred attempting to rollback changes from the PG DD. Syntax checking only continues with the next statement.

Action: Ensure that the Oracle server containing the PG DD is operational. Otherwise, reproduce the error with symptom documentation. Supported Customers should contact Oracle World Wide Support for assistance.

PGU-30000: transaction *string*, version *string* specification generated to file *string*

Cause: PGAU successfully completed generation of the TIP specification for transaction *tranname* and version *version* into file *fileid*.

Action: None required. This is an informational message.

PGU-30001: PGAU internal error - *string*

Cause: An internal PGAU operation error has occurred.

Action: Supported Customers should contact Oracle World Wide Support for assistance.

PGU-30002: >>> Initialization of *string* File Header <<<

Cause: This record is written to the Trace or Log file upon initialization.

Action: This is an informational message only.

PGU-30003: transaction *string*, version *string* body generated to file *string*

Cause: PGAU successfully completed generation of the TIP body for transaction *traname* and version *version* into file *fileid*.

Action: None required. This is an informational message.

PGU-30008: failure to open file *string*

Cause: Before complete initialization of LMS functions, PGAU tracing or logging to disks was requested, but PGAU failed to open the indicated trace or log file. *fileid*.

Action: Ensure that write access exists to the file and that space for file growth is available.

PGU-30009: failure to close file *string*

Cause: After termination of LMS functions,PGAU tracing or or logging to disks had been requested, but PGAU failed to close the indicated trace or log file. *fileid*.

Action: Ensure that write access exists to the file and that space for file growth is available.

PGU-30010: failure to obtain *string* bytes of storage for *string*

Cause: Before complete initialization of LMS functions, PGAU failed to obtain *bytes* of storage for *use*, commensurate with LMS initialization.

Action: Increase the total amount of private storage available to PGAU during operation.

PGU-30012: invalid language environment (*string*), default used

Cause: Before complete initialization of LMS functions, the environment variable LANGUAGE specified an invalid Oracle NLS language *lang*. The language environment variable SSTDLANG setting was used as the default.

Action: Correct the LANGUAGE environment variable to specify a valid Oracle NLS Language.

PGU-30014: pgau message file *string* not found

Cause: Before complete initialization of LMS functions, the PGAU message file *fileid* could not be located.

Action: Ensure that the Oracle message file resides in \$ORACLE_HOME/pg4appc/mesg directory and is not damaged. Valid *fileid*'s are of the form *pguxx.msb* where *xx* is the country code.

PGU-30024: memory allocate failure: *string* for *string* bytes

Cause: Insufficient memory available. Storage failed to be allocated for the reason *purpose* of the size *len* specified.

Action: Increase the total amount of private storage available to PGAU during GENERATE operation.

PGU-30026: open failure: file *string* in *string* mode

Cause: Error during fopen processing *file* for *mode* access.

Action: Ensure PGAU has access to the file specified, and write access if file is used for output.

PGU-30028: file *string* failure: *string* rc *string*

Cause: An error occurred during *oper* processing for the file *fileid* with return code *rc*. File operations include: 'fclose' to close input or output files 'remove' to erase, delete, or remove output files

Action: Ensure PGAU has access to the file specified, and write access if file is used for output.

PGU-30030: read failure: *string* from *string* after offset *string*

Cause: Error during fgets *oper* processing for *file* at *offset* bytes into the file.

Action: Ensure PGAU has access to the file specified.

PGU-30031: write failure: *string* to *string* at *number* for *string* bytes

Cause: Error during fputs *oper* processing for *file* from buffer at *addr* for *len* bytes of data.

Action: Ensure PGAU has access to the file specified, and that disk space is available for file growth.

PGU-30032: write log failure: rc %4li, message no was *string*

Cause: fprintf returned the error code *rc* attempting to print PGAU error message number *msgno*. The indicated event message was being written when the error occurred.

Action: Check to insure that PGAU has write access to the pgau.log file and that disk space is available for file growth.

PGU-30033: write trace failure: rc %4li, message no was *string*

Cause: fprintf returned the error code *rc* attempting to print PGAU trace message number *msgno*. The indicated trace message was being written when the error occurred.

Action: Check to insure that PGAU has write access to the pgau.trc file and that disk space is available for file growth.

PGU-30035: file control failure: *string* for *string*, rc *string*

Cause: Error during control function *oper* processing for *file* with error code *rc* returned.

Action: Ensure PGAU has access to the file specified, and that disk space is available for file growth.

PGU-30036: no ORACLE_HOME environment variable available

Cause: The ORACLE_HOME environment variable setting is missing or invalid.

Action: Correct the ORACLE_HOME environment variable to specify the current Oracle home directory.

PGU-30120: missing *string* attribute for parm *string*, field *string* f#*string*

Cause: The parameter *parm* specifies an aggregate data record for which field *field* with PG DD field id number <f#> was being processed, but the field had no relative level attribute *attr*. Typical relative level attributes are: nn ... COBOL-clauses for IBMVSCOBOLII 'LEVEL' attribute Each attribute is stored as a separate row in the PG DD, and the missing attribute's row may have been deleted from the PG DD.

Action: Check the PG DD to ensure that the failing field has a level attribute assigned.

PGU-30122: level limit: field f#=*string* nest level *string* exceeds *string* of *string*

Cause: PGAU was processing nested records when the next field <f#> for nest level *lev* exceeded the product defined minimum or maximum nest level *limit*.

Action: Simplify the data record definition to reduce nest levels.

PGU-30123: level limit: level *string* field *string* can't follow level *string*

Cause: PGAU was processing nested records when the next field at at level *levN*, identified by <fld#>, occurred after fields at current level *levC*. Additional fields at intermediate levels should have preceded this field. This error happens when special fields such as COBOL RENAMES (at LEVEL 66) appear next after the level 01 definition.

Action: Correct the data record definition to place the special fields in their proper sequece, and/or insert fields being modified ahead of the special modifying field.

PGU-30220: allocate failure: *string* storage of *string* bytes

Cause: Insufficient memory available for the specified purpose. Requestor attempted to allocate a *type* control block of *len* size specified.

Action: Increase the total amount of private storage available to PGAU during GENERATE operation.

PGU-30233: control block load failure: *string* block from PG DD

Cause: Control block of the specified *type* was being loaded with a row from the PG Data Dictionary when an error occurred. A preceding message issued specifies the cause.

Action: Refer to the Action for the preceding message.

PGU-30234: attribute array for *string* exceeded by PG DD rows > *string*

Cause: A control block of the specified *type* was being loaded with attribute rows from the PG Data Dictionary when the *limit* was exceeded.

Action: Reproduce the error with tracing enablead and attempt to determine what PG DD rows are exceeding the attribute limit and delete any possible duplicates. Supported Customers should contact Oracle World Wide Support for assistance.

PGU-30300: work file output error writing *string*

Cause: PGAU encountered an error writing a PL/SQL code segment to the indicated work file *fileid*.

Action: Ensure PGAU has access to the file specified, and that disk space is available for file growth.

PGU-30301: TIP output error appending *string* to *string*

Cause: PGAU encountered an error appending the work file *infile* to the TIP output file *outfile*.

Action: Ensure PGAU has access to both files specified, and that disk space is available for TIP output file growth.

PGU-30302: TIP output error writing function *string* to file *string*

Cause: PGAU encountered an error appending the TIP function definition *func* to the work output file *file*. Error occurred during generation of the TIP Package Specification.

Action: Ensure PGAU has write access to the file specified, and that disk space is available for TIP output work file growth.

PGU-30303: TIP generation error writing variable *string* to file *string*

Cause: PGAU encountered an error appending the TIP variable definition *var* to the work output file *file*. Error occurred during generation of the TIP Package Specification.

Action: Ensure PGAU has write access to the file specified, and that disk space is available for TIP output work file growth.

PGU-30304: TIP generation warning: *string* name truncated to *string* characters

Cause: This is a warning of possible non-unique PL/SQL names. PGAU encountered record field names which combined exceed the maximum PL/SQL name length, and the last field name specified *field* was truncated to the length *len*. The condition occurred during generation of the TIP Package Specification for parameter variables.

Action: Revise the PG DD entries for the defined parameters and either reduce the number of nested record levels or shorten the record field names.

PGU-30305: TIP generation error defining record type *string* for *string*

Cause: An occurred during generation of a nested record type *type* for the indicated field name *name*. This message should be preceded by the specific error. Condition occurred during generation of the TIP Package Specification for parameter variables.

Action: Follow recommended action for the first error message issued.

PGU-30306: TIP generation: invalid PL/SQL parameter mode *string* for *string*

Cause: The parameter call mode *mode* specified for the parameter *parm*. Valid parameter modes are IN, OUT or IN OUT. Probable PG DD content error.

Action: Revise the PG DD entries for the indicated parameter and correct the PL/SQL parameter call mode for the indicated parameter.

PGU-30307: TIP generation: invalid PL/SQL variable type *string* for *string*

Cause: An invalid PL/SQL record type *type* was encountered while generating conversion statements for the data field *field*. The indicated *type* is neither valid PL/SQL nor a nested record type, for the indicated record field *field*. Probable PG DD content error.

Action: Revise the PG DD entries for the indicated parameter and either correct the PL/SQL variable type for the field, or define a corresponding nested record for the field.

PGU-30308: TIP generation: name *string.string* exceeds max length of *string* characters

Cause: The number of nested groups and lengths of their field names in the input data, when concatenated to form a fully qualified PL/SQL record field variable name <rename.varname>, exceeded the maximum length allowed by PL/SQL *maxlen*. Condition occurred during generation of the TIP Package Specification for parameter variables.

Action: Revise the PG DD entries for the defined parameters and either reduce the number of nested record levels or shorten the record field names.

PGU-30309: TIP generation: call *string* parm *string* exceeds PGAXFER *string* limit (*string*)

Cause: The TIP function call *cname* at parm *pname* exchanges too many parameters for the *type* buffers on a PGAXFER RPC. The PGAXFER parameter limit is *limit*. The indicated *type* is either 'SEND' or RECEIVE'. Probable PGAU DEFINE CALL error, coding too many parameters. Note also that IN OUT mode parameters are present in both send and receive buffers and may be causing the excess.

Action: Revise the transaction and call to specify the excessive parameters on an additional function call and include that added call in the transaction definition.

PGU-30314: TIP generation: failure converting record type *string* for *string*

Cause: An occurred during generation of PL/SQL statements for conversion of a nested record type *type* for the indicated field name *name*. This message should be preceded by the specific error. Condition occurred during generation of the TIP Package Specification for parameter variables.

Action: Follow recommended action for the first error message issued.

PGU-30315: TIP generation: parameter conversion error for *string*, *string*

Cause: Failure to generate PL/SQL conversion statements for the indicated parameter data *dname* for function *call*. This message may be preceded by specific messages describing the error. Possible errors include disk access, invalid datatype, and/or missing nested record or field datatype definitions.

Action: Follow recommended action for the first error message issued, and ensure the PG DD entries for the indicated parameter are correct and that disk access is allowed to output work files.

PGU-30316: TIP generation: PL/SQL *string* control logic for *string string*

Cause: Failure to generate PL/SQL statement *stmt* used to control TIP processing of the field *fname* for compiler clause *clause*. Typical IBMVSCOBOLII clauses are: OCCURS (requires FOR/LOOP logic) OCCURS DEPENDING ON (requires FOR/LOOP logic) REDEFINES (requires IF/END IF logic) This message may be preceded by specific messages describing the error. Possible errors include disk access, invalid datatype, and/or missing nested record or field datatype definitions.

Action: Follow recommended action for the first error message issued, and ensure the PG DD entries for the indicated parameter are correct and that disk access is allowed to output work files.

PGU-30317: TIP generation: PL/SQL *string* statements for *string string*

Cause: Failure to generate PL/SQL control logic *stmt* to process TIP parameter *dataname* in function *callname*. This message may be preceded by specific messages describing the error. Possible errors include disk access, invalid datatype, and/or missing nested record or field datatype definitions.

Action: Follow recommended action for the first error message issued, and ensure the PG DD entries for the indicated parameter are correct and that disk access is allowed to output work files.

PGU-30318: TIP generation: *string string*, PL/SQL *string* for *string*

Cause: Data field *d-field* <f#> was referenced by other fields which required PL/SQL statements *stmt* be generated for the value *num*, but an error occurred during the generation of the statements. This message may be preceded by specific messages describing the error. Possible errors include disk access and memory exceeded.

Action: Follow recommended action for the first error message issued, and ensure that disk access is allowed to output work files.

PGU-30319: TIP generation: *string string*

Cause: TIP execution diagnostics for PG Data Dictionary References PKGEX(DR) was requested on the PGAU GENERATE statement, but the PG DD reference for *type <id#>* couldn't be generated. This message may be preceded by specific messages describing the error. Possible errors include disk access and memory exceeded.

Action: Follow recommended action for the first error message issued, and ensure that disk access is allowed to output work files.

PGU-30600: TIP generation: invalid COBOL syntax in *string*:

Cause: The COBOL data field *field* specifies conflicting or invalid PIC *mask* and USAGE *maskopts* clauses. The invalid PIC and USAGE definitions were selected from the PG DD to identify field conversion function calls. PGAU also issues messages 30601 for *mask* and 30602 for *maskopts* .

Action: Use the pgddsf.sql script to reproduce the selected rows and then correct the mask and maskopts columns for the stated field in the PG DD.

PGU-30601: COBOL mask: *string*

Cause: Issued to identify *mask* for the preceding message.

Action: See preceding message.

PGU-30602: COBOL maskopts: *string*

Cause: Issued to identify *maskopts* for the preceding message.

Action: See preceding message.

PGU-30604: missing *string* attribute for *string*

Cause: A COBOL field *field* containing a clause of the form *syntax* required a missing attribute *attr* corresponding to *token*. PGAU issues messages 30603 and 30604 consecutively for *field*, *syntax*, *attr*, and *token*. Typical IBMVSCOBOLII required token attributes are: field OCCURS int-1 TIMES where 'int-1' is the token for attribute 'repgrpff' field OCCURS int-1 TO int-2 TIMES DEPENDING ON name-1 where 'int-1' is the token for attribute 'repgrpvf' 'int-2' is the token for attribute 'repgrpvl' 'name-1' is the token for attribute 'repgrpvm' field RENAMES name-1 THRU name-2 where 'name-1' is the token for attribute 'renamemf' 'name-2' is the token for attribute 'renameml' field REDEFINES name-1 WHEN name-2 = value where 'name-1' is the token for attribute 'remapsmf' 'name-2' is the token for attribute 'remapsml' 'value' is the token for attribute 'remapswc' or for attribute 'remapswn' field LENGTH IS name-1 where 'name-1' is the token for attribute 'length' Each attribute is stored as a separate row in the PG DD, and the missing attribute's row may have been deleted from the PG DD.

Action: In the PG DD, redefine the referencing data item to restore the missing attribute row.

PGU-30605: TIP generation: invalid COBOL syntax in unknown field:

Cause: An unidentified COBOL field specifies conflicting or invalid PIC *mask* and USAGE *maskopts* clauses. The invalid PIC and USAGE definitions were selected from the PG DD to identify global TIP conversion variables. PGAU also issues messages 30601 for *mask* and 30602 for *maskopts* .

Action: Use the pgddsf.sql script to reproduce the selected rows and then correct the mask and maskopts columns for the invalid row in the PG DD.

PGU-30606: TIP generation: missing multi-byte NLS name for *string*:

Cause: The COBOL data field *field* specifies character data in the the PIC *mask* and USAGE *maskopts* clauses which require translation with a multi-byte character set (MBCS), but no Oracle MBCS NLS name was specified. The MBCS-oriented PIC and USAGE definitions were selected from the PG DD to identify field conversion function calls. PGAU also issues messages 30601 for *mask* and 30602 for *maskopts* .

Action: Use the pgddsxa.sql script to reproduce the selected rows and then either correct the mask and maskopts columns for the stated field in the PG DD to not require MBCS translation, or use the PGAU REDEFINE DATA FIELD NLS_LANGUAGE(nlsname) parameter to specify an Oracle MBCS NLS name for the field, or specify the NLS_MBCS(nlsname) parameter on the PGAU DEFINE TRANSACTION statement.

PGU-30611: references missing field *string* specified for *string*

Cause: The data field *d-field* containing a clause of the form *syntax* references a missing field *r-field* specified by the clause word *token*. PGAU issues messages 30610 and 30611 consecutively for *d-field syntax r-field* and *token*. Typical IBMVSCOBOLII clause syntax for this error includes: d-field OCCURS int-1 TIMES d-field OCCURS int-1 TO int-2 TIMES DEPENDING ON name-1 d-field RENAMES name-1 THRU name-2 d-field REDEFINES name-1 WHEN name-2 = value d-field LENGTH IS name-1 The clause references a field *r-field* specified by the word *token*. PGAU GENERATE searched previous fields within the current parameter but failed to find the named field *r-field*. The word *token* may be misspelled in the defining clause or the referenced field whose name should match *token* may be missing from, or misspelled in the PG DD.

Action: In the PG DD, redefine the entry for *d-field* to change its clause *token* to specify the correct name of the intended field *r-field*, or redefine the data name of the intended field *r-field* to match the subsequent clause's *token* reference. Also ensure the data field *d-field* containing the clause follows the intended field *r-field* in the data definition.

PGU-30622: unable to insert *string* value for field *string*

Cause: During TIP generation, an attempt to insert a new attribute value for the *attr* attribute for the named field *fname* failed.

Action: Check for an Oracle error message preceding this message to determine the cause of the problem.

PGU-30631: no alignment for environment *string string*, datatype *string string*

Cause: The data field *d-field* <f#> specified an attribute which specifies remote host boundary alignment. The PG DD environment tables were searched for alignment information for environment *ename* compiler *compno* datatype *dtype* datatype alignment group *dagno*, but no entries were found matching these characteristics. PGAU issues messages 30630 and 30631 consecutively for *d-field* <f#> and *ename compno dtype dagno*. PGAU requires the alignment information to properly align the remote host data in the TIP transfer buffers. Supported: environment and compilers are; IBM370 for compiler IBMVSCOBOLII alignment attributes are; *d-field* ... PIC S9(n) *dtype* SYNC *d-field* ... PIC S9(n) *dtype* SYNCHRONIZE datatype values *dtype* may be; COMP COMPUTATIONAL COMP-4 COMPUTATIONAL-4 datatypes grouped under *dagno* by length/alignment: dagno = 1 for 2-byte length aligned on 2-byte boundary dagno = 2 for 4-byte length aligned on 4-byte boundary Possible causes are:
- The TRANSACTION entry in the PG DD for the TIP being generated may have specified an invalid ENVIRONMENT. - The DATA entry in the PG DD being referenced in the TIP function call being generated may have specified an invalid

LANGUAGE. - The field datatype and/or length within the DATA entry may be invalid or unsupported. - The PG DD may be unavailable, in which case previous error messages will indicate problems accessing the PG DD.

Action: In the PG DD, redefine the TRANSACTION or DATA entries to correct the specification of ENVIRONMENT, LANGUAGE or the field datatype and attributes. Ensure the Oracle server supporting the PG DD is active. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-30632: TIP generation: *string string, string ignored for string*

Cause: The data field *d-field* <f#> specified a modifying clause *clause* which is ignored for datatype *dtype* by the compiler in the remote host environment. For supported: environment and compilers; IBM370 for compiler IBMVSCOBOLII *clause* is ignored when *dtype* is; SYNC | SYNCHRONIZE COMP-3 | COMPUTATIONAL-3 SYNC | SYNCHRONIZE DISP | DISPLAY

Action: This is a warning message, PGAU execution continues. No action is necessary. The user may wish to ensure the resulting TIP data conversion is consistent with the remote host data format.

PGU-30635: TIP generation: *string string, nested repeating group for string*

Cause: The data field *d-field* <f#> specified a repeating group clause *clause* while a previous repeating group is active. The repeating group in *d-field* cannot be nested within a previous repeating group. TIP's use PL/SQL tables to implement repeating groups, and PL/SQL tables are limited to a single key or subscript which cannot support nested repeating groups (a table of tables).

Action: Redefine the data such that the previous repeating group is ended before beginning another repeating group.

PGU-30636: TIP generation: *string string, string attribute value (string) ignored*

Cause: The data field *d-field* <f#> specified an attribute *attr* whose value *attrval* is being ignored. Attribute values are ignored for supported: environment and compilers; IBM370 for compiler IBMVSCOBOLII when *attr* is the *attrval* is ignored: SYNC | SYNCHRONIZE LEFT JUST | JUSTIFY LEFT

Action: This is a warning message, PGAU execution continues. No action is necessary. The user may wish to ensure the resulting TIP data conversion is consistent with the remote host data format.

PGU-30637: TIP generation: *string string, string attribute value (string) invalid*

Cause: The data field *d-field* <f#> specified an attribute *attr* whose value *attrval* is invalid or unsupported.

Action: In the PG DD, redefine the FIELD entry to correct the attribute clause to specify a supported value.

PGU-35002: failure to open cursor for statement *string*: rc *string*

Cause: Open of an Oracle cursor for the PGAU SQL statement *stmtname* failed with Oracle error *rc*. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the Oracle server supporting the PG DD is active. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-35003: failure to parse SQL statement *string* for cursor *string*: *rc string*

Cause: Parsing of the PGAU SQL statement *stmtname* for Oracle cursor *curno* failed with Oracle error *rc*. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the Oracle server supporting the PG DD is active. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-35004: failure to bind *string* for cursor *string* statement *string*: *rc string*

Cause: Binding input variable *invar* for Oracle cursor *curno* to the PGAU SQL statement *stmtname* failed with Oracle error *rc*. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the Oracle server supporting the PG DD is active. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-35005: failure to define *string* for cursor *string* statement *string*: *rc string*

Cause: Defining output variable *outvar* for Oracle cursor *curno* to the PGAU SQL statement *stmtname* failed with Oracle error *rc*. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the Oracle server supporting the PG DD is active. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-35006: failure to execute for cursor *string* statement *string*: *rc string*

Cause: Executing Oracle cursor *curno* PGAU SQL statement *stmtname* failed with Oracle error *rc*. Possible error in PGAU GENERATE statement transaction or version parameters, or possible missing rows or misspelled in the PG DD for the requested transaction. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Check that all call, data, and attribute definitions associated with the requested transaction and version are properly defined in the PG DD. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-35007: failure to fetch for cursor *string* statement *string*: *rc string*

Cause: Fetch using Oracle cursor *curno* PGAU SQL statement *stmtname* failed with Oracle error *rc*. Possible error in PGAU GENERATE statement transaction or version parameters, or possible missing rows or misspelled in the PG DD for the requested transaction. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the Oracle server supporting the PG DD is active. Check that all call, data, and attribute definitions associated with the requested transaction and version are properly defined in the PG DD. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-35008: failure to close cursor *string* for statement *string*: *rc string*

Cause: Close of Oracle cursor *curno* for PGAU SQL statement *stmtname* failed with *rc*. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the Oracle server supporting the PG DD is active. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-35009: no transaction rows for statement *string*, *string string*: *rc string*

Cause: No Transaction rows were fetched from the PG DD for PGAU SQL statement *stmt* with transaction name *tname* and transaction version *tver*. The Oracle error code is *rc*. Either the transaction name and version supplied on the GENERATE statement were invalid or the transaction entry is missing from the PG DD. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the requested transaction and version are properly defined in the PG DD or correct the GENERATE statement.

PGU-35010: no *string* rows for statement *string*, *id no string*: *rc string*

Cause: No *type* rows were fetched from the PG DD for PGAU SQL statement *stmt* with id number *idno*. The Oracle error code is *rc*. Either the parent PG DD entry references an invalid subordinate entry or the entry is missing from the PG DD. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the requested transaction and version are properly defined in the PG DD or correct the GENERATE statement.

PGU-35011: no environment rows for statement *string*, *string string*: *rc string*

Cause: No Environment rows were fetched from the PG DD for PGAU SQL statement *stmt* with environment name *ename* and compiler number *compno*. The Oracle error code is *rc*. Either the environment specified for the transaction or the compiler specified for the data entry in the transaction were invalid, or the entries are missing from the PG DD. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the requested transaction and version are properly defined in the PG DD or correct the GENERATE statement.

PGU-35012: missing transaction entry *string string*

Cause: The transaction *tname tver* was not found in the PG DD. Either the transaction name and version requested in the GENERATE statement were invalid or the transaction specified in a previous DEFINE TRANSACTION *tname* may have been deleted from or altered in the PG DD. This message may be preceded by specific messages describing the error.

Action: Correct the requested transaction and version definitions in the PG DD or correct the GENERATE statement.

PGU-35013: missing call entry for transaction *string string (string)*

Cause: A call entry under transaction definition *tname tver (tin)* was not found in the PG DD. The call entry associated with the transaction (as specified in a previous DEFINE TRANSACTION ... CALL(*cname*)) may have been deleted from or altered in the PG DD. This message may be preceded by specific messages describing the error.

Action: Correct the requested transaction and/or call definitions in the PG DD or correct the GENERATE statement to request a different transaction.

PGU-35014: missing parm entry for transaction *string string (string)* call *string string (string)*

Cause: A parameter or data entry for transaction *tname tver (tin)*, call *cname cver (cin)* was not found in the PG DD. The parm or data entry associated with the call (as specified in a previous DEFINE CALL *cname* ... PARMS(*dname*)) may have been

deleted from or altered in the PG DD. This message may be preceded by specific messages describing the error.

Action: Correct the requested transaction and/or call definitions in the PG DD or correct the GENERATE statement to request a different transaction.

PGU-35015: missing field entry for transaction *string string (string) call string string (string) parm string data string string (string)*

Cause: A data field entry for transaction *tname tver (tin)*, call *cname cver (cin)*, parm *relno* data *dname dver (din)* was not found in the PG DD. The field entry associated with this data (as specified in the input file field position or FIELD(*fname*) of a previous DEFINE or REDEFINE DATA statement) may have been deleted from or altered in the PG DD. This message may be preceded by specific messages describing the error.

Action: Correct the requested transaction and/or call definitions in the PG DD or correct the GENERATE statement to request a different transaction.

PGU-35016: missing formatted conversion entry for transaction *string string*

Cause: For transaction *tname tver*, the data field usage, mask, and maskopts entries were not found in the PG DD. PG DD field entries are selected with usage='PASS' and not null mask and maskopts columns, to identify which data fields will use UTL_RAW MAKE_..._FORMAT conversions. Possible invalid entries in pga_fields(usage,mask,maskopts) columns. This message may be preceded by specific messages describing the error.

Action: Correct the data definitions for the requested transaction in the PG DD.

PGU-35017: missing environment *string string* for *t# string d# string*

Cause: The combined environment *ename compno* was not found in the PG DD for transaction id# *tin* and data id# *din*. The environment name stored in the transaction entry and the compiler no stored in a call parameter data entry have no environment rows stored in the PG DD environment tables. This message may be preceded by specific messages describing the error.

Action: Ensure the Oracle server supporting the PG DD is active, and that the TRANSACTION ENVIRONMENT name and the DATA LANGUAGE name are defined in the PG DD with supported values. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-35018: failed select for statement *string, string string: rc string*

Cause: No information was fetched from Oracle dual for SQL statement *stmt* with date format *dfmt* and time format *tfmt*. The Oracle error code is *rc*. Either the date and time formats specified are invalid or some other Oracle server error occurred. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the Oracle server supporting PGAU is active. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

Cause: TIP package generation tracing active. Successful syntax check of cobol field date attribute This trace entry is supplemental to 39605.

Action: None

PGU-39610: TG *string for string #string string, string*

Cause: TIP package generation tracing active. Successful generation of TIP Function. This trace entry is written at the completion of generation for every TIP public function. There should be one trace of this type for every Call defined in the Transaction.

Action: None

PGU-39620: TG rc %4li, *string*

Cause: TIP package generation tracing active. Successful alignment/offset computation

Action: None

PGU-41000: invalid field definition syntax

Cause: An field definition is invalid. There may be invalid punctuation or an invalid keyword present.

Action: Delete invalid punctuation; replace invalid keyword.

PGU-41001: unexpected end of input

Cause: An unexpected end-of-file condition has occurred in the PGAU command stream.

Action: Check the PGAU statement for proper syntax and premature ending on the last line.

PGU-41002: improper REPORT statement

Cause: There is a syntax error in the REPORT statement.

Action: Check for misspelled items or unbalanced parentheses within the REPORT statement.

PGU-41003: invalid data field definition name

Cause: A DEFINE or REDEFINE DATA statement has specified an invalid field name for a field definition. The field name may be missing. A field name must begin with an alphabetic character and contain only alphanumeric characters or an underscore ('_'). Syntax checking only continues with the next statement.

Action: Correct the specification of the field name or its delimiters. Supply the field name if it is missing.

PGU-41004: invalid delimiter

Cause: An invalid delimiter has been found (such as a parenthesis or comma in the wrong place).

Action: The delimiter may have to be deleted. Or there may be tokens missing before the delimiter.

PGU-41005: invalid PGAU statement syntax

Cause: A token has been found which is not a valid PGAU keyword, delimiter, or identifier name. Syntax checking only continues with the next statement.

Action: Correct the PGAU statement.

PGU-41006: value for parameter '*string*' missing

Cause: The parameter keyword *keyword* was properly specified but parameter value was not found. Syntax checking only continues with the next statement.

Action: Supply the missing parameter value or remove the keyword from the PGAU statement. PGAU parameter values should be enclosed in parentheses immediately following the keyword with no intervening space. statement.

PGU-41007: parameter '*string*' was previously specified

Cause: The parameter *dupparm* has been specified earlier in a PGAU statement and is only allowed once. Syntax checking only continues with the next statement.

Action: Remove one of the duplicated specifications from the statement.

PGU-41008: invalid DATA definition dname specified

Cause: An invalid token has been specified for the data name for a DEFINE DATA or REDEFINE DATA statement. A DATA identifier dname must begin with an alphabetic character and contain only alphanumeric characters. Syntax checking only continues with the next statement.

Action: Correct the DATA dname identifier in the statement.

PGU-41012: invalid PLSDNAME parameter

Cause: The parameter specified in the PLSDNAME clause of a DEFINE or REDEFINE DATA statement does not comply with PL/SQL syntax for PL/SQL variable names. Syntax checking only continues with the next statement.

Action: Correct the PLSDNAME parameter to use a name which complies with PL/SQL syntax for data variables.

PGU-41013: invalid LANGUAGE parameter

Cause: The LANGUAGE parameter in a DEFINE or REDEFINE DATA statement is not a valid PGA Compiler Language. Syntax checking only continues with the next statement.

Action: Correct the LANGUAGE parameter to specify a valid PGA Compiler language. Valid languages are: "IBMVSCOBOLII"

PGU-41014: invalid USAGE parameter

Cause: The USAGE parameter in a DEFINE or REDEFINE DATA statement is not a valid PGAU usage. Syntax checking only continues with the next statement.

Action: Correct the USAGE parameter to specify a valid use. Valid use choices are SKIP, ASIS, PASS, and NULL.

PGU-41015: USAGE parameter was previously specified

Cause: The USAGE parameter has already been specified in a DEFINE or REDEFINE DATA statement and is only allowed once per data definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of USAGE from the PGAU statement.

PGU-41016: LANGUAGE parameter was previously specified

Cause: The LANGUAGE parameter has already been specified in a DEFINE or REDEFINE DATA statement and is only allowed once per data definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of LANGUAGE from the PGAU statement.

PGU-41017: PLSDNAME parameter was previously specified

Cause: The PLSDNAME parameter has already been specified in a DEFINE or REDEFINE DATA statement and is only allowed once per data definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of PLSDNAME from the statement.

PGU-41018: invalid COMPOPTS parameter

Cause: The COMPOPTS parameter in a DEFINE or REDEFINE DATA statement is not a valid compiler option string recognized by PGAU. Syntax checking only continues with the next statement.

Action: Correct the COMPOPTS parameter to specify valid options. The only valid option is 'TRUNC(BIN)'.

PGU-41019: COMPOPTS parameter was previously specified

Cause: The COMPOPTS parameter has already been specified in a DEFINE or REDEFINE DATA statement and is only allowed once per data definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of COMPOPTS from the PGAU statement.

PGU-41020: invalid CALL definition cname specified

Cause: The token is not a valid call identifier name for a DEFINE CALL statement. A CALL identifier cname must begin with an alphabetic character and contain only alphanumeric characters. Syntax checking only continues with the next statement.

Action: Correct the CALL cname identifier in the statement.

PGU-41021: PKGCALL parameter was previously specified

Cause: The PKGCALL parameter has already been specified in a DEFINE CALL statement and is only allowed once per call definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of PKGCALL from the statement.

PGU-41022: invalid PKGCALL parameter

Cause: The function name specified in the PKGCALL parameter of a DEFINE CALL statement does not comply with PL/SQL syntax for PL/SQL function names. Syntax checking only continues with the next statement.

Action: Correct the PKGCALL parameter to use a name which complies with PL/SQL syntax for function calls.

PGU-41025: invalid VERSION number specified

Cause: The token is not a valid version number in a PGAU DEFINE or UNDEFINE CALL or TRANSACTION statement, or in a GENERATE statement. Valid version numbers are all numeric and must match the Oracle sequence object value reported by a previous DEFINE statement. Syntax checking only continues with the next statement.

Action: Correct the VERSION number in the statement.

PGU-41026: PARMS parameter was previously specified

Cause: The PARMS parameter has already been specified in a DEFINE CALL statement and is only allowed once per call definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of PARMS from the statement.

PGU-41029: invalid TRANSACTION CALL cname specified

Cause: The token is not a valid call identifier name for specifying CALLs in a DEFINE TRANSACTION statement. A CALL identifier cname must begin with an alphabetic character and contain only alphanumeric characters, and must have originated in a previous DEFINE CALL statement. Syntax checking only continues with the next statement.

Action: Correct the TRANSACTION CALL cname parameter in the statement.

PGU-41030: NLS_LANGUAGE parameter was previously specified

Cause: The NLS_LANGUAGE parameter has already been specified in a DEFINE TRANSACTION statement and is only allowed once per transaction definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of NLS_LANGUAGE from the statement.

PGU-41031: parameter '*string*' specifies undefined Oracle NLS name '*string*'

Cause: The PGAU parameter *parm* specifies an Oracle NLS language name *nlname* which is not defined on the Oracle server to which PGAU connects. The PGAU is connected. The language *nlname* is not defined possibly because it was not selected when Oracle was installed, or the GENERATE'd TIPS are intended to execute on another Oracle, or it is not a valid Oracle NLS Language, i.e. misspelled or unsupported. Syntax checking only continues with the next statement.

Action: Correct the parameter value to specify a valid Oracle NLS Language, or install the language, or ensure the TIPS execute on a server which has the NLS language installed, (in which case this message may be considered a warning). Valid languages must begin with an alphabetic character, contain only alphanumeric characters, not

exceed 40 characters in length. Supported customers may contact Oracle Worldwide Support for assistance with installing or determining NLS language support for your platform.

PGU-41032: ENVIRONMENT parameter was previously specified

Cause: The ENVIRONMENT parameter has already been specified in a DEFINE TRANSACTION statement and is only allowed once per transaction definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of ENVIRONMENT from the statement.

PGU-41033: invalid ENVIRONMENT parameter

Cause: The ENVIRONMENT parameter in a DEFINE TRANSACTION statement is not a valid PGA ENVIRONMENT. Syntax checking only continues with the next statement.

Action: Correct the ENVIRONMENT parameter to specify a valid PGA ENVIRONMENT. Valid environments are: "IBM370"

PGU-41034: SIDEPROFILE parameter was previously specified

Cause: The SIDEPROFILE parameter as already been specified in a DEFINE TRANSACTION statement and is only allowed once per transaction definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of SIDEPROFILE from the statement.

PGU-41035: invalid SIDEPROFILE name specified

Cause: The token is not a valid name for specifying an SNA Side Profile in a DEFINE TRANSACTION statement. A Side Profile name must begin with an alphabetic character and contain only alphanumeric characters. Syntax checking only continues with the next statement.

Action: Correct the TRANSACTION SIDEPROFILE parameter in the statement.

PGU-41036: LUNAME parameter was previously specified

Cause: The LUNAME parameter has already been specified in a DEFINE TRANSACTION statement and is only allowed once per transaction definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of LUNAME from the statement.

PGU-41037: invalid LUNAME name specified

Cause: The token is not a valid name for specifying an SNA LU name in a DEFINE TRANSACTION statement. An LU name must begin with an alphabetic character and contain only alphanumeric characters. Syntax checking only continues with the next statement.

Action: Correct the TRANSACTION LUNAME parameter in the statement.

PGU-41038: TPNAME parameter was previously specified

Cause: The TPNAME parameter has already been specified in a DEFINE TRANSACTION statement and is only allowed once per transaction definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of TPNAME from the statement.

PGU-41039: invalid TPNAME name specified

Cause: The token is not a valid name for specifying an SNA TP name in a DEFINE TRANSACTION statement. A TP name must begin with an alphabetic character and

contain only alphanumeric characters. Syntax checking only continues with the next statement.

Action: Correct the TRANSACTION TPNAME parameter in the statement.

PGU-41040: LOGMODE parameter was previously specified

Cause: The LOGMODE parameter has already been specified in a DEFINE TRANSACTION statement and is only allowed once per transaction definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of LOGMODE from the statement.

PGU-41041: invalid LOGMODE name specified

Cause: The token is not a valid name for specifying an SNA logmode in a DEFINE TRANSACTION statement. A logmode must begin with an alphabetic character and contain only alphanumeric characters. Syntax checking only continues with the next statement.

Action: Correct the TRANSACTION LOGMODE parameter in the statement.

PGU-41042: SYNCLEVEL parameter was previously specified

Cause: The SYNCLEVEL parameter has already been specified in a DEFINE TRANSACTION statement and is only allowed once per transaction definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of SYNCLEVEL from the statement.

PGU-41043: invalid SYNCLEVEL value specified

Cause: The token is not a valid value for specifying an APPC SYNC level in a DEFINE TRANSACTION statement. The only values allowed for SYNC level are 0 and 1. Syntax checking only continues with the next statement.

Action: Correct the TRANSACTION SYNCLEVEL parameter in the statement.

PGU-41044: invalid TRANSACTION name

Cause: The token is not a valid transaction identifier name in a DEFINE TRANSACTION statement. A transaction name must begin with an alphabetic character and contain only alphanumeric characters. Syntax checking only continues with the next statement.

Action: Correct the TRANSACTION name parameter in the statement.

PGU-41045: missing call name in DEFINE TRANSACTION

Cause: PGAU DEFINE TRANSACTION syntax requires a call name which was not found. Syntax checking only continues with the next statement.

Action: Correct the DEFINE TRANSACTION statement to specify a call name.

PGU-41046: SIDEPROFILE omitted: all of LUNAME, TPNAME, and LOGMODE required

Cause: If the SNA SIDEPROFILE parameter is not specified, then all three of the LUNAME, TPNAME and LOGMODE parameters must be specified in a DEFINE TRANSACTION statement. Syntax checking only continues with the next statement.

Action: Correct the DEFINE TRANSACTION statement to specify either (1) the SIDEPROFILE parameter, (2) all three of the LUNAME, TPNAME and LOGMODE parameters, or (3) the SIDEPROFILE parameter and any combination of the LUNAME, TPNAME, and LOGMODE parameters.

PGU-41048: CALL parameter was previously specified

Cause: The CALL parameter has already been specified in a DEFINE TRANSACTION statement and is only allowed once per transaction definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of CALL parameter from the statement.

PGU-41049: DEFINE TRANSACTION parameter *string* previously specified

Cause: The parameter *parm* has already been specified in a DEFINE TRANSACTION statement and is only allowed once per transaction definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of the parameter *parm* from the DEFINE TRANSACTION statement.

PGU-41053: VERSION parameter was previously specified

Cause: The VERSION parameter has already been specified, and is only allowed once in a GENERATE or REDEFINE statement. Syntax checking only continues with the next statement.

Action: Remove the second specification of VERSION from the statement.

PGU-41054: invalid version number in VERSION parameter

Cause: The version number must follow the VERSION keyword enclosed in parenthesis in a GENERATE or REDEFINE statement. Syntax checking only continues with the next statement.

Action: Correct the version number specification in the VERSION parameter.

PGU-41055: invalid FIELD or PLSFNAME name for indicated language

Cause: The token is not a valid field identifier name in the specified language for specifying a FIELD or PLSFNAME parameter in a REDEFINE DATA statement. A field identifier name must obey the naming conventions of the specified language. In COBOL, only alphanumerics may be used in addition to the hyphen character and the first character must be alphabetic. Syntax checking only continues with the next statement.

Action: Correct the FIELD or PLSFNAME identifier name in the statement.

PGU-41058: invalid transaction name specified

Cause: The token is not a valid transaction identifier name for a GENERATE statement. A transaction identifier name must begin with an alphabetic character and contain only alphanumeric characters, and must have originated in a previous DEFINE TRANSACTION statement. Syntax checking only continues with the next statement.

Action: Correct the transaction identifier name in the statement.

PGU-41059: PKGNAME parameter was previously specified

Cause: The PKGNAME parameter has already been specified in a GENERATE statement and is only allowed once per GENERATE request. Syntax checking only continues with the next statement.

Action: Remove the second specification of PKGNAME from the statement.

PGU-41060: invalid PKGNAME name specified

Cause: The token is not a valid identifier name for specifying the PL/SQL TIP package name in a GENERATE statement. A package name identifier must begin

with an alphabetic character and contain only alphanumeric characters. Syntax checking only continues with the next statement.

Action: Correct the GENERATE PKGNAME parameter in the statement.

PGU-41061: OUTFILE parameter was previously specified

Cause: The OUTFILE parameter has already been specified in a GENERATE statement and is only allowed once per GENERATE request. Syntax checking only continues with the next statement.

Action: Remove the second specification of OUTFILE from the statement.

PGU-41063: DIAGNOSE parameter was previously specified

Cause: The DIAGNOSE parameter has already been specified in a GENERATE statement and is only allowed once per GENERATE request. Syntax checking only continues with the next statement.

Action: Remove the second specification of DIAGNOSE from the statement.

PGU-41064: PGANODE parameter was previously specified

Cause: The PGANODE parameter *keyword* has already been specified in a GENERATE statement and is only allowed once per GENERATE request. Syntax checking only continues with the next statement.

Action: Remove the second specification of PGANODE from the statement.

PGU-41065: invalid PGANODE name specified

Cause: The token is not a valid PGA node identifier name in a GENERATE statement. A PGA node identifier name must begin with an alphabetic character and contain only alphanumeric characters, and be a valid Oracle DB link name. Syntax checking only continues with the next statement.

Action: Correct the PGANODE parameter in the statement.

PGU-41068: unable to open the input definition file

Cause: An error occurred opening the input definition file specified with the INFILE parameter in a DEFINE or REDEFINE DATA statement. Syntax checking only continues with the next statement.

Action: Ensure that the input definition file exists and read access is allowed to the input definition file.

PGU-41070: COBOL inline definition must start with left-paren at line end

Cause: A COBOL inline definition starts with a left parenthesis. The left parenthesis must be the last character on the line preceding any COBOL data definition statements.

Action: Make sure an inline COBOL data definition starts on a line following a left parenthesis

PGU-41071: missing LANGUAGE parameter

Cause: PGAU DEFINE or REDEFINE DATA syntax requires a LANGUAGE parameter which was not found. Syntax checking only continues with the next statement.

Action: Correct the DEFINE or REDEFINE DATA statement to specify a LANGUAGE parameter.

PGU-41072: OPTIONS parameter was previously specified

Cause: The OPTIONS parameter has already been specified in a GENERATE statement and is only allowed once per GENERATE request. Syntax checking only continues with the next statement.

Action: Remove the second specification of OPTIONS from the statement.

PGU-41073: repeated OPTIONS subparameter

Cause: The indicated subparameter was previously specified in an OPTIONS parameter. The only valid OPTIONS subparameter is UDF. It may be specified only once per GENERATE statement. Syntax checking only continues with the next statement.

Action: Remove the duplicate subparameter from the OPTIONS specification.

PGU-41075: TRACE parameter was previously specified

Cause: The TRACE parameter has already been specified in a GENERATE statement and is only allowed once per GENERATE request. Syntax checking only continues with the next statement.

Action: Remove the second specification of TRACE from the statement.

PGU-41076: repeated TRACE or PKGEX parameter

Cause: The indicated parameter was previously specified in a DIAGNOSE TRACE or PKGEX parameter. The valid TRACE parameters are SE, IT, QM, IO, OC, DD, and TG. The valid PKGEX parameters are DC and DR. Each may be specified only once per GENERATE statement. Syntax checking only continues with the next statement.

Action: Remove the duplicate parameter from the TRACE/PKGEX specification.

PGU-41077: PKGEX parameter was previously specified

Cause: The PKGEX parameter has already been specified in a GENERATE statement and is only allowed once per GENERATE request.

Action: Remove the second specification of PKGEX from the statement.

PGU-41079: data definition *string* version *number* inserted into PG DD

Cause: PGAU inserted the data definition *dname* with version number *dver* as the result of processing a DEFINE DATA statement.

Action: Note the VERSION number of the data definition for future reference.

PGU-41080: call definition *string* version *number* inserted into PG DD

Cause: PGAU inserted the call definition *cname* with version number *cver* as the result of processing a DEFINE CALL statement.

Action: Note the VERSION number of the call definition for future reference.

PGU-41081: transaction definition *string* version *number* inserted into PG DD

Cause: PGAU inserted the transaction definition *tname* with version number *tver* as the result of processing a DEFINE TRANSACTION statement.

Action: Note the VERSION number of the transaction definition for future reference.

PGU-41082: data definition *string* version *number* updated in PG DD

Cause: PGAU updated the data definition *dname* with version number *dver* as the result of processing a REDEFINE DATA statement.

Action: None required. This is an informational message.

PGU-41083: data definition *string* version *number* deleted from PG DD

Cause: PGAU deleted the data definition *dname* with version number *dver* as the result of processing an UNDEFINE DATA statement.

Action: None required. This is an informational message.

PGU-41084: call definition *string* version *number* deleted from PG DD

Cause: PGAU deleted the call definition *cname* with version number *cver* as the result of processing an UNDEFINE CALL statement.

Action: None required. This is an informational message.

PGU-41085: transaction definition *string* version *number* deleted from PG DD

Cause: PGAU deleted the transaction definition *tname* with version number *tver* as the result of processing an UNDEFINE TRANSACTION statement.

Action: None required. This is an informational message.

PGU-41086: length of *string* token exceeds maximum allowed length of *number*

Cause: The object name of type *var* is longer than the maximum length *len* allowed by PGAU. Only syntax checking continues with the next statement.

Action: Reduce the length of the indicated name.

PGU-41087: data name *string* does not exist

Cause: A DEFINE CALL references a data definition name *dname* that does not exist.

Action: Use only previously defined data definitions in a DEFINE CALL statement.

PGU-41088: data name *string* or specified version (*number*) of data name *string* does not exist

Cause: A DEFINE CALL references a data definition name *dname* that does not exist, or specified a non-existent version *dver* of the data definition *dname*.

Action: Use only previously defined data definitions in a DEFINE CALL statement.

PGU-41089: call name *string* does not exist

Cause: A DEFINE TRANSACTION references a call definition name *cname* that does not exist.

Action: Use only previously defined call definitions in a DEFINE TRANSACTION statement.

PGU-41090: call name *string* or specified version (*number*) of call name *string* does not exist

Cause: A DEFINE TRANSACTION references a call definition name *cname* that does not exist, or specified a non-existent version *cver* of the call definition *cname*.

Action: Use only previously defined data definitions in a DEFINE TRANSACTION statement.

PGU-41091: data name *string* does not exist

Cause: An UNDEFINE DATA references a data definition name *dname* that does not exist.

Action: Use only previously defined data definitions in an UNDEFINE DATA statement.

PGU-41092: data name *string* or specified version (*number*) of data name *string* does not exist

Cause: An UNDEFINE DATA references a data definition name *dname* that does not exist, or specified a non-existent version *dver* of the data definition *dname*.

Action: Use only previously defined data definitions in an UNDEFINE DATA statement.

PGU-41093: call name *string* does not exist

Cause: An UNDEFINE CALL references a call definition name *cname* that does not exist.

Action: Use only previously defined call definitions in an UNDEFINE CALL statement.

PGU-41094: call name *string* or specified version (*number*) of call name *string* does not exist

Cause: An UNDEFINE CALL references a call definition name *cname* that does not exist, or specified a non-existent version *cver* of the call definition *cname*.

Action: Use only previously defined call definitions in an UNDEFINE CALL statement.

PGU-41095: transaction name *string* does not exist

Cause: An UNDEFINE TRANSACTION references a transaction definition name *tname* that does not exist.

Action: Use only previously defined transaction definitions in an UNDEFINE TRANSACTION statement.

PGU-41096: transaction name *string* or specified version (*number*) of transaction name *string* does not exist

Cause: An UNDEFINE TRANSACTION references a transaction definition name *tname* that does not exist, or specified a non-existent version *tver* of the transaction definition *tname*.

Action: Use only previously defined transaction definitions in an UNDEFINE TRANSACTION statement.

PGU-41097: language parameter given in REDEFINE DATA conflicts with DEFINE DATA

Cause: The LANGUAGE parameter in a REDEFINE DATA statement for a given dataname specifies a language different than the language originally specified in the DEFINE DATA statement for the given dataname.

Action: Change the LANGUAGE parameter in the REDEFINE DATA statement to that of the original DEFINE DATA statement. The associated language-dependent field definitions must also be changed.

PGU-41100: FIELD parameter on REDEFINE specifies unknown field name (*string*)

Cause: A REDEFINE with the FIELD parameter specifies a field name *fname* that does not currently exist in the data object being REDEFINED.

Action: Specify the correct field name on the FIELD parameter. Use the REPORT DATA statement to list current field names.

PGU-41101: INFILE parameter given on DEFINE DATA with inline data

Cause: An INFILE parameter was found on a DEFINE DATA statement, but an inline data definition was also found. Only one of the two forms is allowed in a single DEFINE DATA statement.

Action: Remove the INFILE specification or the inline data definition.

PGU-41102: data definition missing on *string* DATA

Cause: Neither an inline data definition nor an INFILE parameter was found in a DEFINE DATA or REDEFINE DATA statement. One of these is required in a DEFINE DATA. One of these may be required in a REDEFINE DATA depending on other parameters given.

Action: Specify either an INFILE parameter or an inline data definition.

PGU-41103: INFILE parameter was previously specified

Cause: The INFILE parameter has already been specified in a DEFINE DATA or REDEFINE DATA statement and is only allowed once per data definition or redefinition. Syntax checking only continues with the next statement.

Action: Remove the second specification of INFILE from the statement.

PGU-41105: memory exhausted

Cause: An attempt to allocated memory failed.

Action: Supported customers should contact Oracle Worldwide Support for assistance.

PGU-41106: missing left parenthesis in a GROUP

Cause: Left parenthesis must immediately follow a GROUP verb

Action: Examine source for missing left parenthesis.

PGU-41107: GROUP within a GROUP not allowed

Cause: A GROUP was found within a GROUP.

Action: There is no need to have a recursive GROUP. Delete the inner GROUP along with its enclosing parentheses.

PGU-41108: data definition *string* does not exist

Cause: A data name, *name*, was specified but does not exist.

Action: Check *name* for a misspelling or, if an explicit version was specified, recheck for a misnumbering. Use the REPORT verb to find out what really exists.

PGU-41109: field name *string* does not exist in data definition *string*

Cause: The field name *fld* does not exist in the data definition named *dnm*.

Action: Check the data definition named *dnm* for the existence of a field named *fld*. Use the REPORT verb to find out what really exists in the data definition named *dnm*.

PGU-41110: field name *string* appears multiple times in data definition *string*

Cause: A REDEFINE specifies the field name *fld*; this field name is multiply defined in the data definition *dnm*. The field name must be sufficiently qualified to remove the ambiguity so that a unique field may be referenced.

Action: Replace the ambiguous field name *fld* with a sufficiently qualified field name. An example of a qualified field name is SUBFIELD2 OF FIELD1 (or the generic equivalent, FIELD1.SUBFIELD2). It may be easier to just spool the output for a

REPORT of the DATA definition for *dnm* into an output file, edit the output file, and DEFINE the DATA object named *dnm* anew.

PGU-41111: missing *string* name

Cause: A DEFINE or REDEFINE statement is missing the name of a transaction object, a call object, or a data object. *token* is the type of object.

Action: Supply the missing name (as well as any other parameters that are surely needed).

PGU-41112: invalid name for UNDEFINE *string*

Cause: The identifier name in an UNDEFINE statement is invalid. An identifier name must begin with an alphabetic character and contain only alphanumeric characters. *token* is the type of object.

Action: Check the name for illegal characters in the identifier name.

PGU-41113: invalid WITH operand

Cause: The token is not a valid operand in a WITH phrase. Only DATA and CALLS are valid.

Action: WITH must be followed by DATA or CALLS.

PGU-41114: duplicate WITH operand

Cause: An identical WITH phrase has been previously found in this statement.

Action: Delete one of the identical phrases.

PGU-41115: invalid WITH operand in this context

Cause: A WITH phrase has been found in an invalid context. The phrase WITH CALLS can appear only in an UNDEFINE TRANSACTION; the phrase WITH DATA cannot appear in an UNDEFINE DATA.

Action: Delete the offending WITH phrase

PGU-41119: expecting one of DATA, CALL, or TRANSACTION in a DEFINE

Cause: One of DATA, CALL, or TRANSACTION must be given to specify what type of object is to be defined.

Action: Insert one of DATA, CALL, or TRANSACTION into the command.

PGU-41120: VERSION parameter conflicts with UNDEFINE ALL

Cause: A VERSION parameter was found in an UNDEFINE ALL.

Action: Either delete the ALL (in UNDEFINE ALL) or delete the VERSION parameter.

PGU-41121: invalid DIAGNOSE parameter

Cause: An invalid sub-parameter was found within a DIAGNOSE parameter.

Action: Check the sub-parameter for misspelling.

PGU-41122: no transaction name given in a GENERATE statement

Cause: The transaction name is missing.

Action: Provide a transaction name.

PGU-41123: expecting DATA (type of object)

Cause: DATA was expected to be found at this point in the REDEFINE.

Action: Examine the REDEFINE statement for the missing DATA token and insert if necessary.

PGU-41124: expecting one of DATA, CALL, or TRANSACTION in an UNDEFINE
Cause: One of DATA, CALL, or TRANSACTION must be given to specify what type of object is to be deleted.

Action: Insert one of DATA, CALL, or TRANSACTION into the command.

PGU-41125: expecting the name of a *string* object

Cause: The type of object (DATA, CALL, or TRANSACTION) must be followed by a name for the object.

Action: Insert the name of a DATA, CALL, or TRANSACTION object.

PGU-41126: WITH token immediately followed by another WITH token

Cause: There are two successive WITH tokens in the command input stream.

Action: Insert DATA or CALLS after the WITH token depending on which type of referenced objects should also be UNDEFINed or REPORTed.

PGU-41127: a DATA or CALLS token was found but not preceded by a WITH token

Cause: There is a missing WITH token before DATA or CALLS

Action: Insert the WITH token in the proper place.

PGU-41128: a WITH token ends *string*

Cause: A WITH token was found as the last token in an UNDEFINE or REPORT command.

Action: The WITH token must be followed either by DATA or CALLS to delete or REPORT all referenced DATA or CALLS.

PGU-41129: parameter *string* invalid without FIELD parameter

Cause: The FIELD parameter is a pre-requisite to specify the *parm* parameter because *parm* applies to FIELDS within a DATA redefinition. PGAU REDEFINE parameters which require FIELD are: - PLSFNAME - CODEPAGE

Action: Include the FIELD parameter in the REDEFINE statement to indicate to which FIELD the redefinition of *parm* applies, or remove the *parm* specification.

PGU-41131: FIELD specified, but USAGE, PLSFNAME, or language input absent

Cause: The FIELD keyword must be accompanied by at least one of the following keywords: USAGE, PLSFNAME, INFILE.

Action: Make sure at least one of the above keywords is specified.

PGU-41132: language input defines more than one field

Cause: A REDEFINE DATA with the FIELD option indicates that a single field is being redefined. The language input contained definitions for more than one field.

Action: Delete the extra field definitions.

PGU-41133: language input defines no data field for REDEFINE ... FIELD(...)

Cause: A REDEFINE DATA with the FIELD option indicates that a single field is being redefined. However, the language input contained no field definitions.

Action: Supply the (single) field definition in the language input.

PGU-41134: no *string* PGAU objects satisfied the REPORT request

Cause: A REPORT command requested information about a group of unnamed PGAU data objects with a type specified by *token*. But there were no objects of that type.

Action: This is an informational message.

PGU-41135: no PGAU *string* objects named *string* satisfied the REPORT request

Cause: A REPORT command requested information about a PGAU data object with a type specified by *type* and a name of *name*. But there were no objects of that *type* with the given *name*.

Action: This is an informational message.

PGU-41136: no *string* PGAU object named *string* at version *number* satisfied the REPORT request

Cause: A REPORT command requested information about a specific PGAU data object with a type specified by *type*, a name of *name*, and a version of *vsn*. But there is no object with that name and version.

Action: This is an informational message.

PGU-41137: too many version requests; maximum of *number* allowed

Cause: The VERSION parameter of a REPORT request has too many sub-parameters; the *maximum* is specified in the message.

Action: split the request into multiple REPORTs.

PGU-41138: missing *string* name

Cause: The *object* name is missing in a REPORT statement.

Action: supply the missing name.

PGU-41139: use of VERSION parameter conflicts with ALL parameter

Cause: A VERSION parameter has been found. But an ALL parameter has also been found (denoting all versions)

Action: Delete the ALL parameter or the VERSION parameter.

PGU-41140: version number expected

Cause: A version number was expected at this point.

Action: supply a version number or delete the entire VERSION parameter.

PGU-41141: an invalid version number was found

Cause: A non-numeric string was found when scanning for a version number.

Action: Inspect statement for missing delimiters.

PGU-41142: version parameter has already been specified

Cause: The VERSION parameter has already been found.

Action: Delete a VERSION parameter so there is only one left.

PGU-41143: this type of WITH operand invalid with a *string* object

Cause: The WITH phrase is invalid with respect to an object of type *type*. For example, REPORT DATA ... WITH DATA is invalid,

Action: Delete the offending WITH phrase.

PGU-41144: default PKGCALL parameter truncated to *string*

Cause: The PKGCALL parameter was defaulted in a DEFINE CALL statement and normally takes the value of the CALL object name. However, the length of the CALL object name is greater than the maximum length allowed for the PKGCALL parameter (which is 30). The default value actually used is *value*.

Action: None. This is an informational message.

PGU-41145: default PLSDDNAME parameter truncated to *string*

Cause: The PLSDDNAME parameter was defaulted in a DEFINE DATA statement and normally takes the value of the DATA object name. However, the length of the DATA object name is greater than the maximum length allowed for the PLSDDNAME parameter (which is 30). The default value actually used is *value*.

Action: None. This is an informational message.

PGU-41146: invalid INFILE parameter

Cause: The INFILE parameter in a DEFINE or REDEFINE DATA statement does not designate a valid filename. Syntax checking only continues with the next statement.

Action: Correct the INFILE parameter to specify a valid filename.

PGU-42001: ALL not valid in VALUE(S) clause at level 88

Cause: ALL cannot be specified in a level 88 (condition-names) entry

Action: Delete the reserved word ALL

PGU-42002: COPY statement: ended prematurely

Cause: There are missing operands in the COPY clause

Action: Supply missing operands

PGU-42003: COPY reserved word found within a COPY clause

Cause: COPY clause found embedded within another COPY clause

Action: Examine COPY clauses. Statment terminator may be missing.

PGU-42004: COPY not allowed as operand-1 or operand-2 in COPY REPLACING

Cause: COPY reserved word not allowed as operand-1 or operand-2 in the REPLACING clause of a COPY statement.

Action: If operand-1 replace COPY by some other word here and in the copied source file. If operand-2, examine offending COPY clause for missing terminator or reserved words.

PGU-42005: COPY statement: nothing to copy

Cause: No filename operand given in COPY clause

Action: Supply filename operand in COPY clause

PGU-42006: invalid token *string*

Cause: An unrecognized token *token* was found when checking for a COBOL reserved word

Action: Check source around the unrecognized token for other missing reserved words or for a missing statment terminator.

PGU-42007: invalid EJECT statement

Cause: An EJECT statement cannot be given with operands

Action: Delete the extraneous text after EJECT up to the statement terminator

PGU-42008: invalid SKIPn statement

Cause: A SKIP1, SKIP2, or SKIP3 statement cannot have operands

Action: Delete the extraneous text after the SKIPn up to the statement terminator.

PGU-42009: *string*

Cause: This is an echo of the offending source line, *sourceline*.

Action: Peruse this line with respect to a previous error message

PGU-42010: level-number with *number* digits exceeds maximum of two

Cause: A level-number was found with *number* digits. Level-numbers are restricted to a maximum of two digits

Action: Make sure level number is in range 01-49, 66, 77, or 88

PGU-42011: invalid level number of *number* found

Cause: Level numbers are restricted to 01-49, 66, 77, or 88; *number* was found.

Action: Change level number.

PGU-42012: level 01 or 77 has yet to be found

Cause: Record definition must start at level 01 or 77; a level other than 01 or 77 has been found.

Action: Examine source for missing level 01 or 77 definition; if offending definition is a top-level for a record, then renumber it to level 01 or 77.

PGU-42013: level 01 or 77 not yet found or begun between columns *number* and *number*

Cause: Missing level 01 or 77 in source file or the 01 or 77 did not start within the column limits specified by *margin-A* and *margin-B*.

Action: If level 01 or 77 appears, make sure it starts before *margin-B* and after *margin-A*. If level 01 or 77 does not appear, a renumbering of levels may be appropriate.

PGU-42014: RENAMEs clause must be at level 66

Cause: The RENAMEs reserved word may be used ONLY at level 66.

Action: Renumber the level to 66.

PGU-42015: multiple *string* clauses found

Cause: Multiple instances of a clause of type *type* were found.

Action: Make sure there is only one instance of the type of clause given.

PGU-42016: invalid figurative_type value passed

Cause: This is an internal error.

Action: Supported customers should contact Oracle Worldwide Support.

PGU-42017: VALUES can be used only at level 88

Cause: The VALUES keyword can only be specified in a data definition describing a condition and only at level 88.

Action: If the definition describes a condition, make sure it is at level 88; if the definition does not describe a condition, then use VALUE IS rather than VALUES ARE.

PGU-42018: could not open input file *string*

Cause: The specified input file *file* could not be opened for reading.

Action: Make sure the file exists and allows read access.

PGU-42019: REDEFINES clause should be first clause

Cause: A REDEFINES clause must appear before any other clause in a data definition.

Action: Move the REDEFINES clause to the beginning of the data definition immediately after the data definition name.

PGU-42020: RENAMES dn-1 (THROUGH) dn-2 must stand alone

Cause: If a RENAMES clause appears in a data definition, it must be the ONLY clause.

Action: Delete other clauses.

PGU-42021: unterminated record definition found

Cause: An end-of-file was found before the ending statement terminator. This also results from COBOL definitions which extend beyond column 72.

Action: Check last records in input file for a missing statement terminator. Also check to ensure that the data definitions reside within their proper starting and ending columns.

PGU-42022: VALUES clause must be the only clause at level 88

Cause: The only clause allowed at level 88 is a VALUE or VALUES clause.

Action: Delete any clauses other than a VALUE or VALUES clause at level 88.

PGU-42024: missing period-separator in TITLE statement

Cause: A TITLE statement is not ended by a period separator.

Action: Check for missing period separator.

PGU-42025: invalid TITLE statement

Cause: Invalid format for TITLE statement.

Action: Check format of TITLE statement.

PGU-42026: COPY copies a COPY REPLACING or vice versa

Cause: The source file copied by a COPY statement cannot contain a COPY ... REPLACING statement; or the source file copied by a COPY ... REPLACING statement cannot have a COPY statement.

Action: Correct the file in error.

PGU-42027: in line *number* of file *string* as follows

Cause: This message follows another message that describes the actual error. The line following this message echoes the input COBOL source line. The source line was found in line *line* of file *filename*.

Action: Peruse messages immediately before and after this message.

PGU-42028: invalid USAGE token: *string*

Cause: An invalid word, *token* follows USAGE in a USAGE clause. *token* may be valid in some COBOL dialects.

Action: Replace *token* in the USAGE clause with a valid USAGE operand for the IBMVSCOBOLII COBOL dialect.

PGU-42029: reserved word *string* is invalid as a PICTURE

Cause: A reserved word, *token*, was used as a PICTURE operand.

Action: Check PICTURE clause for missing PICTURE operand.

PGU-42030: a *string* clause has been prematurely terminated

Cause: A clause of type *type* has ended but there are missing operands.

Action: Check the clause for missing operands.

PGU-42031: *string* phrase is misplaced after *string* phrase

Cause: A phrase introduced by *key-word-1* cannot come after a phrase introduced by *key-word-2*. Certain phrases must precede other phrases in a data definition. For instance, an ASCENDING [KEY] phrase must appear before an INDEXED phrase.

Action: Reverse the placement of the phrases.

PGU-42032: state value *string* is *string*

Cause: An internal error has occurred in the PGAU COBOL parser. State *state* is either valid or invalid according to *validity*.

Action: Reproduce the error with full diagnostics enabled and save all related input and output files and listings. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-42033: extraneous text at column *string*

Cause: Extraneous text has been found at the end of a record definition. It starts in column *column* of the source input record.

Action: The only source text that can follow the terminating '.' of a record definition is a COPY, EJECT, or SKIPn statement. Check to see if the terminating '.' has been misplaced.

PGU-42034: COPY for file *string* is recursive

Cause: A COPY statement for file *filename* has been found while processing a previous occurrence of a COPY specifying the same file.

Action: Check the COBOL source for recursive COPY. A single COPY file may need to be replaced with multiple, uniquely-named COPY files to achieve the desired results.

PGU-42035: invalid null operand in pseudo-text in a COPY REPLACING clause

Cause: The first operand in a REPLACING clause of a COPY statement is pseudo-text but the pseudo-text is null.

Action: Replace the null pseudo-text string with a non-null string.

PGU-42036: invalid input in *string* clause or paragraph

Cause: Invalid syntax in a *special* clause or paragraph.

Action: Check the indicated source line(s) for syntactical errors.

PGU-42037: missing END-EXEC token

Cause: An END-EXEC was not found while processing an EXEC clause.

Action: Insert an END-EXEC where appropriate. If the COBOL source input was generated by another product, regenerate the source using that product.

PGU-42038: invalid use of reserved word *string*

Cause: A reserved word, *reserved*, was found in an illegal context.

Action: Check to see if a reserved word is perhaps being used where a user dataname would normally appear.

PGU-42039: in line as follows

Cause: This message follows another message that describes the actual error. The line following this message echos the input COBOL source line.

Action: Refer to messages immediately before and after this message.

PGU-42040: DEPENDING ON phrase missing in OCCURS clause

Cause: An OCCURS clause describes a variable length table. One needs a DEPENDING ON phrase to tell how large is the current instance of the table. The DEPENDING ON clause is missing. DEPENDING ON phrase that tells how large the current instance

Action: Supply the DEPENDING ON clause or make the table a fixed length table.

PGU-42041: missing or invalid USAGE clause for DBCS PIC clause

Cause: A PICTURE clause specifies a DBCS datatype, but the required USAGE IS DISPLAY-1 clause is missing or invalid.

Action: Supply the USAGE clause or revise the PIC datatype to noth required DBCS.

PGU-42042: LENGTH IS clause not allowed for numeric or edited data

Cause: A LENGTH IS clause was specified for a data item that is not non-edited character data.

Action: Remove the LENGTH IS clause or change the PICTURE clause for the data item to specify a non-edited, character data mask.

PGU-50001: error reading the log file.

Cause: An error occurred reading the log file.

Action: Determine the cause of the problem and correct it before restarting PG4TCPMAP.

PGU-50002: no data found.

Cause: The predicate that was chosen to delete the row from the PGA_TCP_IMSC table is not found.

Action: Determine the cause of the problem and correct it before restarting PG4TCPMAP.

PGU-50003: string length of number exceeds the maximum of number.

Cause: The parameter, *parm* length, *len*, passed to PG4TCPMAP tool was larger than the maximum allowed, *max*.

Action: Correct the parameter in error and recall PG4TCPMAP tool. For more information, refer to Oracle Database Gateway for APPC, User's Guide.

PGU-50004: PG4TCPMAP has ended with a failure.

Cause: An error occurred processing pg4tcpmap tool. This message is preceded by additional messages providing more information about the error.

Action: Refer to the messages preceding this one to determine the course of action.

PGU-50101: You have entered an invalid value.

Cause: This is a warning that you have entered an invalid value.

Action: The question will be asked again. Enter a valid value.

PLS-00001 to PLS-01918

PLS-00001: *string*

PLS-00022: out of memory

PLS-00027: redeclared SQL Identifier '*string*' at line *number* in file *string*

PLS-00028: option '*string*' not legal as EXEC ORACLE OPTION

PLS-00029: ambiguous option '*string*'

PLS-00030: invalid label range specified

PLS-00031: invalid operand '*string*' for option '*string*'

PLS-00032: invalid option '*string*'

PLS-00033: missing operand for option '*string*'

PLS-00035: no host language specified

PLS-00036: no input file name specified

PLS-00037: ?? unable to log on to ORACLE with '*string*'

PLS-00038: ?? unable to open a cursor

PLS-00039: unable to open input file '*string*'

PLS-00040: unable to open listing file '*string*'

PLS-00041: unable to open output file '*string*'

PLS-00042: unable to close output file '*string*'

PLS-00049: bad bind variable '*string*'

Cause: The client (caller) of PL/SQL has parsed a bind variable that it has informed to be 'bad'.

Action: n/a

PLS-00102: parser stack overflow because nesting is too deep

Cause: The parser, which checks the syntax of PL/SQL statements, uses a data structure called a stack; the number of levels of nesting in the PL/SQL block exceeded the stack capacity.

Action: Reorganize the block structure to avoid nesting at too deep a level. For example, move the lowest-level sub-block to a higher level.

PLS-00103: *string*

Cause: This error message is from the parser. It found a token (language element) that is inappropriate in this context.

Action: Check previous tokens as well as the one given in the error message. The line and column numbers given in the error message refer to the end of the faulty language construct.

PLS-00104: empty argument list in call of procedure '*string*' must be omitted

Cause: In a subprogram call, the name of the subprogram was followed by an empty parameter list. For example, procedure P was called as P(). This is not allowed.

Action: Remove the empty parameter list. In the example, change the procedure call to P.

PLS-00105: at most one forward declaration of type '*string*' is permitted

Cause: More than one forward declaration of a type is redundant.

Action: Remove all but one forward declaration.

PLS-00106: double quote disallowed in a quoted identifier

PLS-00108: declarative units must be a single variable declaration

Cause: While checking a declarative unit (a top-level declare block without the BEGIN...END), PL/SQL found that there was more than one item declared or that the item was not a variable declaration. A table is a common variable declaration at the unit level. To define a TABLE, compile a DECLARE compilation unit, but only one at a time is allowed.

Action: Declare variables in separate declarative units.

PLS-00109: unknown exception name '*string*' in PRAGMA EXCEPTION_INIT

Cause: No declaration for the exception name referenced in an EXCEPTION_INIT pragma was found within the scope of the pragma.

Action: Make sure the pragma follows the exception declaration and is within the same scope.

PLS-00110: bind variable '*string*' not allowed in this context

Cause: A bind variable, that is, an identifier prefixed with a colon, was found in an inappropriate context.

Action: Remove the colon or replace the bind variable with the appropriate object.

PLS-00111: end-of-file in comment

Cause: A Comment had a comment initiator (/*), but before the

Action: Remove the Comment initiator or add a comment terminator. The line and column numbers accompanying the error message refer to the beginning of the last legal token before the Comment initiator.

PLS-00112: end-of-line in quoted identifier

Cause: A quoted identifier had a beginning quote ("), but before the ending quote (") was found, an end-of-line marker was encountered.

Action: Remove the beginning quote or add the ending quote. The line and column numbers accompanying the error message refer to the beginning of the quoted identifier.

PLS-00113: END identifier '*string*' must match '*string*' at line *string*, column *string*

Cause: Following the keyword END, which terminates some language constructs (such as loops, blocks, functions, and procedures), you can optionally place the name of that construct. For example, at the end of the definition of loop L you might write END L. This error occurs when the optional name does not match the name given to the language construct. It is usually caused by a misspelled identifier or by faulty block structure.

Action: Make sure the spelling of the END identifier matches the name given to the language construct and that the block structure is correct.

PLS-00114: identifier '*string*' too long

Cause: The name of a PL/SQL variable is longer than 30 characters. Legal identifiers (including quoted identifiers) have a maximum length of 30 characters. A string literal might have been mistakenly enclosed in double quotes instead of single quotes, in which case PL/SQL considers it a quoted identifier.

Action: Shorten the identifier.

PLS-00115: this PRAGMA must follow the declaration of '*string*'

Cause: The pragma refers to a PL/SQL object that was not declared or is not within the scope of the reference. Identifiers must be declared before they are used in a pragma; forward references are not allowed.

Action: Check the spelling and declaration of the identifier. Also confirm that the declaration is placed correctly in the block structure.

PLS-00116: Duplicate where-clause in table expression

Cause: Two or more WHERE clauses were found in a DELETE, SELECT, or UPDATE statement. The WHERE clause specifies a condition under which rows in a table are processed. The condition can contain several logical expressions connected by AND or OR, but a statement can contain only one WHERE clause.

Action: Remove one of the WHERE clauses and, if necessary, connect logical expressions by AND or OR

PLS-00117: Duplicate connect-by clause in table expression

Cause: Two or more CONNECT BY clauses were found in a SELECT statement. The CONNECT BY clause defines a relationship used to return rows in a hierarchical order. The relationship can contain two expressions separated by a relational operator (such as = or !=), but a statement can contain only one CONNECT BY clause.

Action: Remove one of the CONNECT BY clauses and, if necessary, separate expressions by a relational operator.

PLS-00118: Duplicate group-by clause in table expression

Cause: Two or more GROUP BY clauses were found in a SELECT statement. The GROUP BY clause lists column expressions used to form a summary row for each group of selected rows. The list can contain several column expressions separated by commas, but a statement can contain only one GROUP BY clause.

Action: Remove one of the GROUP BY clauses and, if necessary, separate column expressions by commas.

PLS-00119: Duplicate having-clause in table expression

Cause: Two or more HAVING clauses were found in a SELECT statement. The HAVING clause specifies a condition under which groups of rows (formed by the GROUP BY clause) are included in the result. The condition can include several logical expressions connected by AND or OR, but a statement can contain only one HAVING clause.

Action: Remove one of the HAVING clauses and, if necessary, connect logical expressions by AND or OR.

PLS-00120: inappropriate argument in OPEN statement

Cause: The asterisk (*) option was used in the argument list of a SQL group function other than COUNT. For example, the code might look like SELECT SUM(*) INTO emp_count FROM emp; -- should be COUNT(*) Only COUNT permits the use of the asterisk option, which returns the number of rows in a table.

Action: Remove the asterisk option from the argument list and replace it with an expression that refers to one or more database columns.

PLS-00123: program too large (*string*)

Cause: The PL/SQL compiler has exceeded one of its capacity limits. The compiler cannot proceed.

Action: Revise the PL/SQL program so that it no longer exceeds the reported limit. The specific revision depends on the limit that was exceeded. However, usually a simple reduction in the size of the unit being compiled will fix the problem. Consider splitting the library unit into two or more library units, or shrinking repetitious or patterned code (possibly by creating helper routines).

PLS-00124: name of exception expected for first arg in exception_init pragma

Cause: The first argument passed to the EXCEPTION_INIT pragma was something other than an exception name. The first argument must be the name of a legally declared exception.

Action: Replace the first argument with the name of a legally declared exception.

PLS-00125: type name expected

Cause: When a constant or variable was declared, its datatype was not specified. For example, the code might look like pi CONSTANT := 3.14159; -- should be CONSTANT REAL := 3.14159 Every constant and variable must have a datatype, which specifies a storage format, constraints, and valid range of values.

Action: Supply the type name

PLS-00126: selector ALL is not allowed

Cause: The ALL shortcut for specifying system privileges or statement options was used in a SQL statement. PL/SQL does not support the ALL shortcut.

Action: Remove the ALL shortcut from the SQL statement.

PLS-00127: Pragma *string* is not a supported pragma

Cause: The named pragma (compiler directive) is not among those supported by PL/SQL. The pragma name might be misspelled, or the pragma syntax might be faulty.

Action: Check the spelling of the pragma name, and make sure the proper syntax was used.

PLS-00128: Illegal number of arguments for pragma *string*

Cause: The number of arguments (actual parameters) passed to the named pragma (compiler directive) is incorrect. A required argument was omitted from the argument list, or the pragma syntax is faulty (for example, a comma might be missing between two parameters).

Action: Supply the missing argument, or correct the faulty syntax.

PLS-00129: Pragma *INTERFACE* only supports C as its first argument

Cause: The first parameter passed to pragma *INTERFACE* specified a host language other than C. Currently, C is the only host language supported. The parameter might be misspelled, or the pragma syntax might be faulty (for example, a comma might be missing between two parameters).

Action: Check the spelling of the first parameter, which should be C, and make sure the proper syntax was used.

PLS-00130: Pragma *string* expects 1st argument to be a procedure/function/package/cursor

Cause: The first argument (actual parameter) passed to the named pragma (compiler directive) was not the name of a subprogram, package, or cursor, as required. The parameter might be misspelled, or the pragma syntax might be faulty (for example, a comma might be missing between two parameters).

Action: Check the spelling of the first parameter, and make sure the proper syntax was used.

PLS-00131: Pragma *string* expects 2nd argument to be a procedure/function

Cause: The second argument (actual parameter) passed to the named pragma (compiler directive) was not the name of a procedure or function, as required. The parameter cannot be a non-static method. The parameter might be misspelled or the pragma syntax might be faulty (for example, a comma might be missing between two parameters).

Action: Check the spelling of the second parameter and make sure the proper syntax was used.

PLS-00132: Pragma *string* does not support *string*

Cause: One of the parameters passed to this pragma was not among the list of allowed values. The parameter might be misspelled, or the pragma syntax might be faulty (for example, a comma might be missing between two parameters).

Action: Check the spelling of all the parameters and make sure the proper syntax was used.

PLS-00133: Pragma *string* expects 1st argument to be an identifier or string-literal

Cause: The first argument (actual parameter) passed to the named pragma (compiler directive) was not an identifier or string literal, as required. The parameter might be misspelled, or the pragma syntax might be faulty (for example, a comma might be missing between two parameters).

Action: Check the spelling of the first parameter, and make sure the proper syntax was used.

PLS-00134: Pragma *string* expects 2nd argument to be an identifier or string-literal

Cause: The second argument (actual parameter) passed to the named pragma (compiler directive) was not an identifier or string literal, as required. The parameter

might be misspelled, or the pragma syntax might be faulty (for example, a comma might be missing between two parameters).

Action: Check the spelling of the second parameter, and make sure the proper syntax was used.

PLS-00135: Pragma *string* expects 3rd argument to be an identifier, string or numeric literal

Cause: The fourth argument (actual parameter) passed to the named pragma (compiler directive) was not a numeric literal, as required. The parameter might be miscoded, or the pragma syntax might be faulty (for example, a comma might be missing between two parameters).

Action: Check the coding of the fourth parameter, and make sure the proper syntax was used.

PLS-00138: Precision for a binary type must be one of 8, 16, or 32

Cause: Invalid precision was specified for a signed or unsigned binary type.

Action: Specify precision as one of 8, 16, or 32.

PLS-00139: duplicate external NAME specification in subprogram expression

Cause: The subprogram was found to have two external NAME specifications.

Action: Remove one of the external NAME specifications.

PLS-00140: duplicate external LIBRARY specification in subprogram expression

Cause: The subprogram was found to have two external LIBRARY specifications.

Action: Remove one of the external LIBRARY specifications.

PLS-00141: duplicate external PARAMETER STYLE specification in subprogram expression

Cause: The subprogram was found to have two external PARAMETER STYLE specifications.

Action: Remove one of the external PARAMETER STYLE specifications.

PLS-00142: duplicate external PARAMETER list specification in subprogram expression

Cause: The subprogram was found to have two external PARAMETER STYLE specifications.

Action: Remove one of the external PARAMETER STYLE specifications.

PLS-00143: duplicate external LANGUAGE specification in subprogram expression

Cause: The subprogram was found to have two external LANGUAGE specifications.

Action: Remove one of the external LANGUAGE specifications.

PLS-00144: duplicate external CALLING STANDARD specification in subprogram expression

Cause: The subprogram was found to have two external CALLING STANDARD specifications.

Action: Remove one of the external CALLING STANDARD specifications.

PLS-00145: duplicate external WITH CONTEXT specification in subprogram expression

Cause: The subprogram was found to have two external WITH CONTEXT specifications.

Action: Remove one of the external WITH CONTEXT specifications.

PLS-00146: duplicate external TRUSTED/UNTRUSTED specification in subprogram expression

Cause: The subprogram was found to have two external TRUSTED/UNTRUSTED specifications.

Action: Remove one of the external external TRUSTED/UNTRUSTED specifications.

PLS-00147: LIBRARY or ASSEMBLY file specification string is empty

Cause: A zero-length string was found for the LIBRARY or ASSEMBLY file specification.

Action: Specify a non-zero length string for the LIBRARY or ASSEMBLY file specification.

PLS-00148: Only 1 pragma of this type is allowed per subprogram

Cause: The subprogram was found to have two PRAGMA RESTRICT_REFERENCES.

Action: Remove one of the PRAGMA RESTRICT_REFERENCES.

PLS-00150: found: *string* but expected : INTEGER

Cause: This error happens in the creation of a pl/sql external type: [SIGNED | UNSIGNED] BINARY INTEGER (*precision*). It may be referenced only in a create type statement. Such types are non-queryable. Something other than 'INTEGER' was supplied.

Action: n/a

PLS-00151: Expression or Variable is an illegal type to PLS/QL: *string*

Cause: A type was used which does not belong PL/SQL. This type can only be referenced in CREATE TYPE statements, and is a non-queryable data type.

Action: n/a

PLS-00152: POINTER type may only reference an object type.

Cause: A POINTER type which does not belong to PL/SQL can only refer to an object type. This type can only be referenced in CREATE TYPE statements, and is a non-queryable data type.

Action: n/a

PLS-00153: A *string* type may only be used as an object type attribute.

Cause: A POINTER or [SIGNED/UNSIGNED] BINARY INTEGER can only be used as attributes of object types. These types can only be referenced in CREATE TYPE statements, and are non-queryable data types. One of these external PL/SQL types outside of an object type.

Action: n/a

PLS-00154: An object type may have only 1 MAP or 1 ORDER method.

Cause: More than one map or order function was declared. An object type can have only one map function or one order function, but not both.

Action: n/a

PLS-00155: Only a function may be a MAP, ORDER or CONSTRUCTOR method.

Cause: A procedure was declared as a MAP, ORDER or CONSTRUCTOR method. Only functions can be MAP, ORDER or CONSTRUCTOR methods.

Action: n/a

PLS-00156: Null constraints not supported for object attributes.

Cause: A null constraint was specified for an attribute in an object. This is not supported.

Action: Remove the constraint.

PLS-00157: Only schema-level programs allow *string*

Cause: An AUTHID or ACCESSIBLE BY clause was specified for a subprogram inside a package or type. These clauses are only supported for top-level stored procedures, packages, and types.

Action: Remove the clause.

PLS-00160: AUTHID must specify CURRENT_USER or DEFINER

Cause: The only two allowed options for AUTHID are CURRENT_USER and DEFINER.

Action: Fix the AUTHID clause to specify CURRENT_USER or DEFINER

PLS-00161: Pragma *string* expects 3rd argument to be an identifier or a string literal

Cause: The third argument (actual parameter) passed to the named pragma (compiler directive) was not an identifier or a string literal when there is a fourth argument to the pragma. The parameter might be misspelled, or the pragma syntax might be faulty (for example, a comma might be missing between two parameters).

Action: Check the spelling of the third parameter, and make sure the proper syntax was used.

PLS-00162: Pragma *string* expects 4th argument to be a positive integer literal

Cause: The fourth argument (actual parameter) passed to the named pragma (compiler directive) was not a numeric literal, as required. The parameter might be misspelled, or the pragma syntax might be faulty (for example, a comma might be missing between two parameters).

Action: Check the spelling of the fourth parameter, and make sure the proper syntax was used.

PLS-00164: cursor subqueries are not supported in this release

Cause: This feature is not yet implemented.

Action: n/a

PLS-00165: call statement is not supported in PL/SQL

Cause: A CALL statement was found in PL/SQL source.

Action: Use an ordinary PL/SQL function or procedure call.

PLS-00166: bad format for date, time, timestamp or interval literal

Cause: The contents of the date, time, timestamp or interval literal did not match the expected format.

Action: Correct the format for the date, datetime, or interval literal.

PLS-00167: keyword BULK is used in a wrong context

Cause: keyword BULK is used illegally. For example, BULK is used without INTO clause

Action: remove the keyword BULK.

PLS-00168: duplicate modifier specification '*string*'

Cause: A method or object type modifier was specified more than once.

Action: Remove all but one occurrence of the duplicate modifier.

PLS-00169: modifier '*string*' conflicts with prior '*string*' specification

Cause: The method or object type modifier specified conflicts with an earlier modifier. For example, a FINAL modifier cannot be combined with a NOT FINAL modifier.

Action: Remove one of the conflicting modifiers.

PLS-00170: the SQL statement in an OPEN statement or FOR loop must be a SELECT

Cause: An OPEN cursor statement or cursor FOR loop can only invoke a SELECT statement, not an UPDATE, INSERT or DELETE.

Action: Use only SELECT statements in OPEN or cursor FOR loops

PLS-00171: duplicate dedicated AGENT specification in subprogram expression

Cause: The subprogram was found to have two dedicated AGENT specifications.

Action: Remove one of the dedicated AGENT specifications.

PLS-00172: string literal too long

Cause: The string literal was longer than 32767 bytes.

Action: Use a string literal of at most 32767 bytes.

PLS-00173: SPACE, TAB or RETURN are disallowed as alternative quote delimiters

Cause: SPACE, TAB or RETURN was used as alternative quote delimiter.

Action: Use a character other than SPACE, TAB or RETURN as the alternative quote delimiter.

PLS-00174: a static boolean expression must be used

Cause: The expression contained a syntax or semantic error, or it did not have a boolean type or its evaluation raised an exception.

Action: Write correct static boolean expression.

PLS-00176: unexpected preprocessor token '*\$string*'

Cause: A preprocessor token was used inappropriately.

Action: Remove the preprocessor token that is inappropriately used.

PLS-00177: '*\$string*' preprocessor directive does not end properly

Cause: A preprocessor directive was not ended properly.

Action: Use \$end to end the preprocessor directive properly.

PLS-00178: a static character expression must be used

Cause: The expression contained a syntax or semantic error, or it did not have a character type or its evaluation raised an exception.

Action: Write correct static character expression.

PLS-00179: \$ERROR: *string*

Cause: \$ERROR directive was used. This is an expected error message.

Action: NA

PLS-00180: preprocessor directives are not supported in this context

Cause: A preprocessor directive was used in a compilation unit for which conditional compilation is not supported.

Action: Do not use any preprocessor directives in this compilation unit.

PLS-00181: unsupported preprocessor directive '*string*'

Cause: An unsupported preprocessor directive was used.

Action: Use a supported preprocessor directive.

PLS-00182: Identifier cannot be an empty string

Cause: Identifier was declared using an empty string,

Action: rename the identifier to a non empty string.

PLS-00183: too many bind variables

Cause: The library unit used more bind variables than permitted. (The current limit is 65535 bind variables in one library unit.)

Action: Reduce the number of bind variables in the library unit. Consider splitting the library unit into two or more library units, or shrinking repetitious or patterned code (possibly by creating helper routines.)

PLS-00201: identifier '*string*' must be declared

Cause: You tried to reference either an undeclared variable, exception, procedure, or other item, or an item to which no privilege was granted or an item to which privilege was granted only through a role.

Action: 1) Check your spelling and declaration of the referenced name. 2) Verify that the declaration for the referenced item is placed correctly in the block structure. 3) If the referenced item is indeed declared but you don't have privileges to refer to that item, for security reasons, you will be notified only that the item is not declared. 4) If the referenced item is indeed declared and you believe that you have privileges to refer to that item, check the privileges; if the privileges were granted only via a role, then this is expected and documented behavior. Stored objects (packages, procedures, functions, triggers, views) run in the security domain of the object owner with no roles enabled except PUBLIC. Again, you will be notified only that the item was not declared.

PLS-00202: type '*string*' must be declared

Cause: An attempt was made to reference an undefined type. Either the type specifier was not declared or it is not within the scope of the reference.

Action: Check the spelling and declaration of the type specifier. Also confirm that the declaration is placed correctly in the block structure.

PLS-00203: function DECODE must be called with at least 3 non-boolean arguments

Cause: Less than three arguments were passed to the built-in function DECODE. Though DECODE takes a variable number of (non-Boolean) arguments, at least three arguments must be passed.

Action: Call DECODE with three or more arguments

PLS-00204: function or pseudo-column '*string*' may be used inside a SQL statement only

Cause: A pseudocolumn or proscribed function was used in a procedural statement. The SQL pseudocolumns (LEVEL, ROWID, ROWNUM) can be used only in SQL statements. Likewise, certain functions such as DECODE, DUMP, and VSIZE and the SQL group functions (AVG, MIN, MAX, COUNT, SUM, STDDEV, VARIANCE) can be used only in SQL statements.

Action: Remove the pseudocolumn reference or function call from the procedural statement. Or, replace the procedural statement with a SELECT INTO statement; for example, replace `bonus := DECODE(rating, 1, 5000, 2, 2500, ...)`; with the following statement: `SELECT DECODE(rating, 1, 5000, 2, 2500, ...) INTO bonus FROM dual;`

PLS-00205: Aggregate not allowed here

Cause: An aggregate, that is, a parenthesized list of values such as (7788, 'SCOTT', 20), was found in an inappropriate context.

Action: Remove or relocate the aggregate.

PLS-00206: %%TYPE must be applied to a variable, column, field or attribute, not to "*string*"

Cause: The program object declared using the %TYPE datatype attribute is not of the appropriate class. It must be a variable, column, record component, subprogram formal parameter, or other object to which values can be assigned.

Action: Declare an object of the appropriate class or define the datatype in another way (for example, use %ROWTYPE).

PLS-00207: identifier '*string*', applied to implicit cursor SQL, is not a legal cursor attribute

Cause: An identifier that is not a cursor attribute was applied to the identifier SQL. For example, this error occurs if the cursor attribute is misspelled.

Action: Check the spelling of the cursor attribute name. Make sure the attribute is one of these: %NOTFOUND, %FOUND, %ROWCOUNT, %ISOPEN.

PLS-00208: identifier '*string*' is not a legal cursor attribute

Cause: An identifier not declared as a cursor attribute was applied to an identifier declared as a cursor. For example, this error occurs if the cursor attribute is misspelled.

Action: Check the spelling of the cursor attribute name. Make sure the attribute is one of these: %NOTFOUND, %FOUND, %ROWCOUNT, %ISOPEN.

PLS-00209: table '*string*' is not in FROM clause

Cause: In a query, a table referenced by the select list is not named in the FROM clause.

Action: Check the spelling of the table names, make sure each column in the select list refers to a table in the FROM clause, then re-execute the query.

PLS-00210: an OTHERS clause is required in this CASE statement

Cause: Unless the clauses of a CASE statement mention all values of the type of the selecting expression, an OTHERS clause must be provided as the last clause of the CASE statement. It is impossible to cover all values of type INTEGER (or NUMBER), so an OTHERS clause is always required when the expression following the keyword CASE is of type INTEGER (or NUMBER).

Action: n/a

PLS-00211: CASE labels or ranges must not be duplicated in different WHEN clauses

Cause: In this CASE statement, a value appears in more than one WHEN clause. A value may appear in at most one WHEN clause of a CASE statement.

Action: n/a

PLS-00212: could not obtain enough memory to compile CASE statement

Cause: The CASE statement is too big. The compiler did not have enough storage to process it.

Action: n/a

PLS-00213: package STANDARD not accessible

Cause: The PL/SQL compiler could not find package STANDARD in the current Oracle database. To compile a program, PL/SQL needs package STANDARD.

Action: Make sure that package STANDARD is available in the current Oracle database, then retry the operation.

PLS-00214: BEGIN...END block nesting is too deep

Cause: The number of levels of nesting in the PL/SQL block is too large. Blocks can be nested up to 255 levels deep, depending on the availability of system resources such as memory.

Action: Reorganize the block structure to avoid nesting at too deep a level. For example, move the lowest-level sub-block to a higher level.

PLS-00215: String length constraints must be in range (1 .. 32767)

Cause: When a character variable was declared, a length outside the legal range was specified. For example, the following declarations are illegal: flag CHAR(0); -- illegal; zero length name VARCHAR2(-10); -- illegal; negative length

Action: Change the length constraint, making sure that it lies in the range 1 .. 32767.

PLS-00216: NUMBER precision constraint must be in range (1 .. 38)

Cause: A NUMBER variable was declared with a precision that is outside the legal range. Declarations such as N NUMBER(800) or N NUMBER(123,10) are not supported.

Action: Change the illegal NUMBER precision constraint, making sure that it lies in the range 1 .. 38.

PLS-00217: NUMBER scale constraint must be in range (-84 .. 127)

Cause: A NUMBER variable was declared with a scale that is outside the legal range. Declarations such as N NUMBER(10,345) or N NUMBER(10,-100) are not supported.

Action: Change the illegal NUMBER scale constraint, making sure that it lies in the range -84 .. 127.

PLS-00218: a variable declared NOT NULL must have an initialization assignment

Cause: In general, variables that have no initialization clause in their declaration are automatically initialized to NULL. This is illogical for NOT NULL variables; therefore, an initialization clause is required.

Action: Add an initialization clause to the variable declaration. If the initialization is too complicated for the syntax, one can add a function call (in a later release).

PLS-00219: label '*string*' reference is out of scope

Cause: A block or loop label was used to qualify a variable (as in `outer_block.date`) that was not declared or is not within the scope of the label. The variable name might be misspelled, its declaration might be faulty, or the declaration might be placed incorrectly in the block structure.

Action: Check the spelling and declaration of the variable name. Also confirm that the declaration is placed correctly in the block structure.

PLS-00220: simple name required in this context

Cause: A qualified name such as `A.B` or `A.B.C` is not permitted here.

Action: Use a simple name such as `A` instead.

PLS-00221: '*string*' is not a procedure or is undefined

Cause: An identifier being referenced as a procedure was not declared or actually represents another object (for example, it might have been declared as a function).

Action: Check the spelling and declaration of the identifier. Also confirm that the declaration is placed correctly in the block structure.

PLS-00222: no function with name '*string*' exists in this scope

Cause: An identifier being referenced as a function was not declared or actually represents another object (for example, it might have been declared as a procedure).

Action: Check the spelling and declaration of the identifier. Also confirm that the declaration is placed correctly in the block structure.

PLS-00223: parameterless procedure '*string*' used as function

Cause: An identifier being referenced as a parameterless function actually represents a procedure.

Action: Check the spelling and declaration of the identifier. Also confirm that the declaration is placed correctly in the block structure. If necessary, change the declaration of the identifier or change the reference so that it does not require a return value.

PLS-00224: object '*string*' must be of type function or array to be used this way

Cause: An identifier being referenced as a function or an array actually represents an object (a number or date, for example) that cannot be referenced in this way.

Action: Check the spelling and declaration of the identifier. Also confirm that the declaration is placed correctly in the block structure.

PLS-00225: subprogram or cursor '*string*' reference is out of scope

Cause: The prefix in a qualified name was a subprogram or cursor which was not in an enclosing scope; i.e., a subprogram or cursor name is being used as a scope qualifier for a reference to an entity (within that subprogram or cursor) that is not in scope. Example: `declare x number; type t1 is record (a number); function f return t1 is a number; begin x := f.a; -- legal use of function "f" as a scope qualifier; -- resolves to local variable "a" in function "f". x := f().a; -- legal reference to component "a" of returned record end; begin x := f.a; -- illegal use of function "f" as a scope qualifier x := f().a; -- legal reference to component "a" of returned record end;`

Action: a) if the intention was to refer to a local variable of a non-enclosing function, this is not allowed; remove the reference b) if this is a parameterless function, and the the intention was to access a field of the result of a call to this function, then use empty parentheses in the call.

PLS-00226: package 'string' used as variable reference

Cause: A package was referenced in an expression as if it were a variable or function. Either the name of the variable or function is misspelled or the reference is not fully qualified. For example, to call the function `my_function`, which is stored in package `my_package`, dot notation must be used, as follows: `... my_package.my_function ...`

Action: Correct the spelling of the variable or function name or use dot notation to reference the packaged variable or function.

PLS-00227: subprogram 'in' formal string is not yet denotable

Cause: When the formal parameters of a subprogram were declared, one parameter was used to initialize another, as in `PROCEDURE my_proc (j NUMBER, k NUMBER := j) IS ...`. The first parameter has no value until run time, so it cannot be used to initialize another parameter.

Action: Remove the illegal formal parameter reference.

PLS-00228: Illegal declaration of variable of type LONG

Cause: An attempt was made to declare a variables to be of type LONG. Only columns can be of type LONG. CAUSE: The identifier is a formal parameter which is being used in the context of a default expression value for a formal parameter in the same formal parameter list. E.g.: `procedure p(j number, k number := j)`.

Action: Remove the offending variable definition

PLS-00229: Attribute expression within SQL expression

Cause: An attribute expression, such as `SQL%NOTFOUND`, was used in a SQL statement, but attribute expressions are allowed only in procedural statements.

Action: To workaroud this limitation, assign the value of the attribute expression to a variable, then use the variable in the SQL statement. For example, replace the statement `INSERT INTO audits VALUES (c1%ROWCOUNT, ...)`; with the following statements: `row_count := c1%ROWCOUNT; INSERT INTO audits VALUES (row_count, ...)`;

PLS-00230: OUT and IN OUT formal parameters may not have default expressions

Cause: When the formal parameters of a procedure were declared, an OUT or IN OUT parameter was initialized to a default value, as in `PROCEDURE calc_bonus (bonus OUT REAL := 0, ...) IS ...`. However, only IN parameters can be initialized to default values.

Action: Remove the illegal default expression.

PLS-00231: function 'string' may not be used in SQL

Cause: A proscribed function was used in a SQL statement. Certain functions such as `SQLCODE` and `SQLERRM` can be used only in procedural statements.

Action: Remove the function call from the SQL statement. Or, replace the function call with a local variable. For example, the following statement is illegal: `INSERT INTO errors VALUES (SQLCODE, SQLERRM)`; However, you can assign the values of `SQLCODE` and `SQLERRM` to local variables, then use the variables in the SQL statement, as follows: `err_num := SQLCODE; err_msg := SQLERRM; INSERT INTO errors VALUES (err_num, err_msg)`;

PLS-00232: nested packages not permitted

Cause: A package was declared inside another package, but package declarations are allowed only at the top level. In other words, packages cannot be nested.

Action: Move the package declaration outside the enclosing package.

PLS-00233: function name used as an exception name in when clause

Cause: The WHEN clause in an exception handler contains a function call instead of an exception name. A valid exception handler consists of a WHEN clause, which must specify an exception, followed by a sequence of statements to be executed when that exception is raised.

Action: Check the spelling of the identifier in the WHEN clause, then replace the function call with an exception name.

PLS-00234: PARAMETER STYLE SQL may not be specified with a PARAMATERS list

Cause: A subprogram cannot specify both PARAMETER STYLE SQL and an explicit PARAMETERS list. Use PARAMETER STYLE GENERAL to supply default PARAMETERS list types.

Action: Change the subprogram specification.

PLS-00235: the external type is not appropriate for the parameter

Cause: An unsuccessful attempt was made to convert a parameter to the specified external parameter type.

Action: Specify a different external type or parameter type.

PLS-00236: Invalid external type specification for *string*.

Cause: The external type specified is not valid for one of the following: INDICATOR, LENGTH, MAXLEN, TDO, DURATION, CHARSETID, or CHARSETFORM.

Action: Check the manual and specify an appropriate external type.

PLS-00237: invalid BY VALUE indicator or length specification

Cause: BY VALUE was specified with an indicator or length parameter that is being passed in OUT or IN OUT mode. Only IN mode parameters may be passed by value.

Action: Remove the BY VALUE specification or change it to IN mode.

PLS-00238: external parameter name *string* not found in formal parameter list

Cause: An external parameter name was specified that does not match one in the formal parameter list.

Action: Correct the external parameter name.

PLS-00239: invalid external type specification for SQLCODE

Cause: An inappropriate external parameter type was specified for the SQLCODE parameter.

Action: Correct the SQLCODE parameter specification.

PLS-00240: Invalid type specification for RETURN indicator, length, tdo, duration

Cause: An inappropriate external parameter type was specified for the RETURN indicator, LENGTH, TDO, or DURATION.

Action: Correct the RETURN parameter specification.

PLS-00241: invalid external type specification for SQLSTATE

Cause: An inappropriate external parameter type was specified for the SQLSTATE parameter.

Action: Correct the SQLSTATE parameter specification.

PLS-00242: invalid external type specification for CONTEXT

Cause: An inappropriate external parameter type was specified for the CONTEXT parameter.

Action: Correct the CONTEXT parameter specification.

PLS-00243: invalid external type specification for SQLNAME

Cause: An inappropriate external parameter type was specified for the SQLNAME parameter.

Action: Correct the SQLNAME parameter specification.

PLS-00244: Multiple declarations in foreign function formal parameter list

Cause: There are multiple declarations of at least one the following FORMAL, INDICATOR, LENGTH, MAXLENGTH, or CONTEXT. PL/SQL allows only one declaration of the above for each formal parameter in the PARAMETERS clause.

Action: Correct the PARAMETERS clause.

PLS-00245: Formals used in the 'parameters' clause must appear exactly once

Cause: There are multiple declarations of the formal parameter in the PARAMETERS clause. PL/SQL allows only one declaration of the formal parameter in the PARAMETERS clause.

Action: Correct the PARAMETERS clause.

PLS-00246: PARAMETER STYLE is unsupported

Cause: A PARAMETER STYLE clause was placed in the external subprogram body.

Action: Remove the PARAMETER STYLE clause.

PLS-00247: LIBRARY or ASSEMBLY name must be specified

Cause: The LIBRARY or ASSEMBLY name is missing from the external subprogram body.

Action: The LIBRARY or ASSEMBLY name was not specified in the external subprogram body.

PLS-00248: Invalid Library Syntax

Cause: The LIBRARY syntax was entered incorrectly.

Action: Correct the LIBRARY syntax and recompile.

PLS-00249: Invalid WITH CONTEXT Syntax

Cause: CONTEXT was used in a WITH CONTEXT or a PARAMETERS clause. This is invalid.

Action: Check if WITH CONTEXT is used without specifying CONTEXT in the PARAMETERS clause or vice versa. The PARAMETERS clause must be complete. Thus if WITH CONTEXT is specified, then CONTEXT must be referenced in the PARAMETERS clause (if there is one).

PLS-00250: Incorrect Usage of *string* in parameters clause.

Cause: The usage of Keywords such as MAXLEN, LENGTH, CHARSETID, CHARSETFORM RETURN in the parameters clause was incorrect

Action: This error occurs if keywords like MAXLEN, LENGTH, TDO, DURATION, CHARSETID, or CHARSETFORM cannot be used with PL/SQL formal parameters or the mode of the formal parameter. For example, MAXLEN can only be declared for a CHAR or VARCHAR2 PL/SQL variable and its use is allowed only for OUT or

INOUT PL/SQL variables. Also, RETURN was specified in the parameters clause for a PL/SQL PROCEDURE. E.g. CREATE PROCEDURE proc IS EXTERNAL NAME ... LIBRARY ... PARAMETERS(RETURN INDICATOR SHORT, RETURN);

PLS-00251: RETURN, for actual function return, must be last in the parameters clause

Cause: RETURN specification for the actual function return, used within the parameters clause must hold the very last position. Example : The following will give this error since the RETURN specification for the actual function return in the parameters clause is not the last. FUNCTION myexternalfunc (var1 BINARY_INTEGER, var2 BINARY_INTEGER) RETURN BINARY_INTEGER IS EXTERNAL NAME "myexternalfunc" LIBRARY somelib PARAMETERS (var1 LONG, var2 SHORT, RETURN INT, RETURN INDICATOR SHORT); The correct syntax is the following. Note that RETURN for actual function return is the last specification in the parameters clause. FUNCTION myexternalfunc (var1 BINARY_INTEGER, var2 BINARY_INTEGER) RETURN BINARY_INTEGER IS EXTERNAL NAME "myexternalfunc" LIBRARY somelib PARAMETERS (var1 LONG, var2 SHORT, RETURN INDICATOR SHORT, RETURN INT);

Action: Correct the syntax of the RETURN specification in the parameters clause

PLS-00252: reference to the wrong copy of package STANDARD

Cause: A reference is made to the fixed package version of STANDARD when the database is open, or to the on-disk version when the database is closed. Explicit use of a SYS.X\$ package name can lead to this. One might also see this from a compilation that begins while the db is closed but has the bad luck to have another session open the db before compilation is complete. Another possible cause is having 'set serveroutput on' through svrmgrl when doing an 'alter database close'.

Action: Make use of on-disk versions of packages when the database is open and fixed (preloaded) versions when the database is closed. Do not attempt to use the wrong set. It should be quite hard to reference the wrong set, except by using SYS.X\$ package names explicitly. Also, be sure to 'set serveroutput off' before doing an 'alter database close'.

PLS-00253: Formal parameter *string* missing in the parameters clause

Cause: The parameter clause does not have a matching parameter for a parameter specified in the formal parameter list.

Action: Provide a matching parameter in parameters clause for every formal parameter.

PLS-00254: OUT and IN/OUT modes cannot be used in this context

Cause: actual parameter mode (OUT, or IN/OUT) is not used properly in USING clause. For USING clause in an OPEN statement, only IN mode is allowed.

Action: change the parameter mode in the USING clause to an appropriate mode.

PLS-00255: CALL Specification parameters cannot have default values

Cause: CALL Specification formal parameters default values are disallowed.

Action: Remove the default values in the formal parameter list (spec or body) and compile again.

PLS-00256: *string* is not a valid external library or assembly

Cause: The supplied external library or assembly name in the external clause is not a valid alias library or assembly.

Action: Provide the name of a valid alias library or assembly which is previously declared.

PLS-00257: illegal use of EXTERNAL clause in a TYPE or PACKAGE specification

Cause: An EXTERNAL Clause was detected in a TYPE Specification or a PACKAGE specification.

Action: Remove the EXTERNAL Clause and use the new CALL Specification syntax.

PLS-00258: constrained datatypes disallowed in CALL Specifications

Cause: A call specification for C or Java cannot have constraints on the PL/SQL formal parameter types. PL/SQL types which have constraints are NATURAL, NATURALN, POSITIVE, POSITIVEN, SIGNTYPE, INTEGER, INT, SMALLINT, DECIMAL, NUMERIC, DEC This includes NOT NULL constraints from POSITIVEN, NATURALN

Action: Use the unconstrained type for that PL/SQL formal declaration i.e NUMBER, BINARY_INTEGER or PLS_INTEGER

PLS-00259: rights model (AUTHID) must be specified

Cause: It is mandatory to specify the rights model if a PL/SQL PROCEDURE, FUNCTION, PACKAGE OR TYPE HAS CALL-Specifications

Action: Add the AUTHID clause indicating the rights model.

PLS-00260: Datetime/Interval constraints must be in range (0 .. 9)

Cause: A Datetime/Interval variable or attribute was declared with a constraint outside the legal range.

Action: Change the illegal constraint.

PLS-00261: Java CALL Specification not yet allowed as a method in an object type

Cause: A call specification declaring that an implementation is in Java has been found for a method of an object or opaque type. This usage is not yet supported.

Action: Implement the method using a language other than Java. A PL/SQL method implementation is permitted to call to Java through a call specification provided as a schema-level procedure or in a package; such a call specification can only target a static Java method, however. ***** errors until 300 are reserved for External Procedures ***** PH2 errors *****

PLS-00301: Invalid GOTO to non-label 'string'

Cause: A GOTO was attempted to something which is not a label (for example, a variable).

Action: Specify a valid label name.

PLS-00302: component 'string' must be declared

Cause: In a reference to a component (for example, in the name "A.B", "B" is a component of "A"), the component has not been declared. The component might be misspelled, its declaration might be faulty, or the declaration might be placed incorrectly in the block structure.

Action: Check the spelling and declaration of the component. Also confirm that the declaration is placed correctly in the block structure.

PLS-00303: qualifier 'string' must be declared

Cause: In a name such as "A.B", "A" is the qualifier, and "B" is a component of the qualifier. This error occurs when no declaration for the qualifier is found. The qualifier

might be misspelled, its declaration might be faulty, or the declaration might be placed incorrectly in the block structure.

Action: Check the spelling and declaration of the qualifier. Also confirm that the declaration is placed correctly in the block structure.

PLS-00304: cannot compile body of 'string' without its specification

Cause: The compiled package specification required to compile a package body could not be found. Some possible causes follow: --the package name is misspelled --the package specification was never compiled --the compiled package specification is not accessible The package specification must be compiled before compiling the package body, and the compiler must have access to the compiled specification.

Action: Check the spelling of the package name. Compile the package specification before compiling the package body. Also, make sure the compiler has access to the compiled specification.

PLS-00305: previous use of 'string' (at line string) conflicts with this use

Cause: While looking for prior declarations of a cursor, procedure, function, or package, the compiler found another object with the same name in the same scope. Or, the headers of subprogram in a package specification and body do not match word for word.

Action: Check the spelling of the cursor, procedure, function, or package name. Also check the names of all constants, variables, parameters, and exceptions declared in the same scope. Then, remove or rename the object with the duplicate name. Or, change the headers of the packaged subprogram so that they match word for word.

PLS-00306: wrong number or types of arguments in call to 'string'

Cause: This error occurs when the named subprogram call cannot be matched to any declaration for that subprogram name. The subprogram name might be misspelled, a parameter might have the wrong datatype, the declaration might be faulty, or the declaration might be placed incorrectly in the block structure. For example, this error occurs if the built-in square root function SQRT is called with a misspelled name or with a parameter of the wrong datatype.

Action: Check the spelling and declaration of the subprogram name. Also confirm that its call is correct, its parameters are of the right datatype, and, if it is not a built-in function, that its declaration is placed correctly in the block structure.

PLS-00307: too many declarations of 'string' match this call

Cause: The declaration of a subprogram or cursor name is ambiguous because there was no exact match between the declaration and the call and more than one declaration matched the call when implicit conversions of the parameter datatypes were used. The subprogram or cursor name might be misspelled, its declaration might be faulty, or the declaration might be placed incorrectly in the block structure.

Action: Check the spelling and declaration of the subprogram or cursor name. Also confirm that its call is correct, its parameters are of the right datatype, and, if it is not a built-in function, that its declaration is placed correctly in the block structure.

PLS-00308: this construct is not allowed as the origin of an assignment

Cause: The construct or expression does not designate a value that can be assigned to a variable. For example, the datatype name NUMBER cannot appear on the right hand side of an assignment statement as in X := NUMBER.

Action: Correct the illegal assignment statement.

PLS-00309: with %%LAST attribute, 'string' must be a variable of an enumerated type

Cause: The "%LAST" attribute must be applied to an identifier that has been declared as a variable of an enumerated type (or subtype of an enumerated type). This error occurs when "%LAST" follows some identifier that has not been so declared.

Action: n/a

PLS-00310: with %%ROWTYPE attribute, 'string' must name a table, cursor or cursor-variable

Cause: The %ROWTYPE attribute must be applied to an identifier declared as a cursor, cursor variable, or database table. This error occurs when %ROWTYPE follows some identifier that has not been so declared.

Action: Change the declaration or do not apply the %ROWTYPE attribute to the identifier.

PLS-00311: the declaration of "string" is incomplete or malformed

Cause: This occurrence of the identifier cannot be compiled because its type has not been properly defined.

Action: Correct the faulty datatype declaration.

PLS-00312: a positional parameter association may not follow a named association

Cause: When a list of parameters is passed to a subprogram or cursor, if both positional and named associations are used, all positional associations must be placed in their declared order and before all named associations, which can be in any order.

Action: Reorder the parameter list to meet the requirements or use named association only.

PLS-00313: 'string' not declared in this scope

Cause: There is no declaration for the given identifier within the scope of reference. The identifier might be misspelled, its declaration might be faulty, or the declaration might be placed incorrectly in the block structure.

Action: Check the spelling and declaration of the identifier. Also confirm that the declaration is placed correctly in the block structure.

PLS-00314: TABLE declarations are not allowed as PL/SQL local variables

Cause: In a precompiled program, the DECLARE TABLE statement was mistakenly used inside an embedded PL/SQL block. If an embedded PL/SQL block refers to a database table that does not yet exist, use the DECLARE TABLE statement to tell the precompiler what the table will look like. However, DECLARE TABLE statements are allowed only in the host program.

Action: Move the DECLARE TABLE statement outside the embedded PL/SQL block. If you want a variable that can store an entire row of data selected from a database table or fetched from a cursor or cursor variable, use the %ROWTYPE attribute.

PLS-00315: Implementation restriction: unsupported table index type

Cause: In the INDEX BY clause of a PL/SQL table declaration, a datatype other than BINARY_INTEGER, PLS_INTEGER, or VARCHAR2 was specified. PL/SQL tables can have one column and a primary key. The column can have any scalar type, but the primary key must be either a binary integer type or VARCHAR2.

Action: Use one of the supported key types in the INDEX BY clause.

PLS-00316: PL/SQL TABLEs must use a single index

Cause: In the INDEX BY clause of a PL/SQL table declaration, a composite primary key was specified. PL/SQL tables must have a simple, unnamed primary key of a binary integer or VARCHAR2 type.

Action: Use one of the supported key types in the INDEX BY clause.

PLS-00317: incomplete type "string" was not completed in its declarative region

Cause: An incomplete type declaration was not completed in the declarative region where it was declared.

Action: Complete the type appropriately, then retry the operation.

PLS-00318: type "string" is malformed because it is a non-REF mutually recursive type

Cause: A type-declaration such as: -- a non-REF recursive type, for example: type t is record (a t); or -- non-REF mutually dependent types, for example: type t1; type t2 is record (a t1); type t1 is record (a t2); was performed. In these examples, the type is malformed because it participates in a mutually recursive non-REF relationship with itself and possibly other types.

Action: Use another type to remove the recursion.

PLS-00319: subquery in an IN or NOT IN clause must contain exactly one column

Cause: An invalid expression such as X IN (SELECT A,B ...) was used. When a [NOT]IN clause is used with a subquery, it does not test for set membership. The number of expressions in the [NOT]IN clause and the subquery select list must match. So, in the example above, the subquery must specify at most one column.

Action: Change the subquery to select only one column.

PLS-00320: the declaration of the type of this expression is incomplete or malformed

Cause: In a declaration, the name of a variable or cursor is misspelled or the declaration makes a forward reference. Forward references are not allowed in PL/SQL. A variable or cursor must be declared before it is referenced in other statements, including other declarative statements. For example, the following declaration of dept_rec raises this exception because it refers to a cursor not yet declared: DECLARE dept_rec dept_cur%ROWTYPE; CURSOR dept_cur IS SELECT

Action: Check the spelling of all identifiers in the declaration. If necessary, move the declaration so that it makes no forward references.

PLS-00321: expression 'string' is inappropriate as the left hand side of an assignment statement

Cause: The expression does not designate a variable that can have a value assigned to it. For example, the function SYSDATE cannot appear on the left hand side of an assignment statement such as SYSDATE := '01-JAN-1990';

Action: Correct the illegal assignment statement.

PLS-00322: declaration of a constant 'string' must contain an initialization assignment

Cause: A constant declaration lacks the assignment of an initial value. For example, in the following declaration " := 3.14159" is the initialization clause: "pi constant number := 3.14159;"

Action: Correct the constant declaration by supplying the missing initialization assignment.

PLS-00323: subprogram or cursor '*string*' is declared in a package specification and must be defined in the package body

Cause: A subprogram specification was placed in a package specification, but the corresponding subprogram body was not placed in the package body. The package body implements the package specification. So, the package body must contain the definition of every subprogram declared in the package specification.

Action: Check the spelling of the subprogram name. If necessary, add the missing subprogram body to the package body.

PLS-00324: cursor attribute may not be applied to non-cursor '*string*'

Cause: This error occurs when a cursor-attribute ("%FOUND", "%NOTFOUND", "%ROWS", "%IS_OPEN", etc.) appears following an identifier that is not declared as a cursor or cursor variable. It occurs, for example, if the variable name my_cur in my_cur%FOUND was not properly declared as a cursor or if the variable declaration was placed incorrectly in the block structure.

Action: Check the spelling and declaration of the identifier. Also confirm that the declaration is placed correctly in the block structure.

PLS-00325: non-integral numeric literal *string* is inappropriate in this context

Cause: A non-integral numeric literal was used in a context that requires an integer (a number with no digits to the right of its decimal point).

Action: Replace the inappropriate literal with an integer literal.

PLS-00326: IN clause must contain same number of expressions as subquery

Cause: The number of expressions in an IN clause did not equal the number of expressions in a corresponding subquery select list. For example, the following statement is invalid because the IN clause contains two expressions, but the subquery select list contains just one: ... WHERE (ename, sal) IN (SELECT sal FROM emp);

Action: Check the number of expressions in each set, then revise the statement to make the numbers equal.

PLS-00327: "*string*" is not in SQL scope here

Cause: In a SQL statement, a reference was made to an out-of-scope database object. The referenced object might be misspelled, or the reference might be mixed, as in the following example: CURSOR c1 IS SELECT dept.dname FROM emp;

Action: Check the spelling of all database objects in the SQL statement, and make sure all references are to objects within the current scope.

PLS-00328: A subprogram body must be defined for the forward declaration of *string*.

Cause: A subprogram specification was declared, but the corresponding subprogram body was not defined. Write the subprogram specification and body as a unit. An alternative solution is to separate the specification from its body, which is necessary when you want to define mutually recursive subprograms or you want to group subprograms in a package.

Action: Check the spelling of the subprogram name. If necessary, supply the missing subprogram body.

PLS-00329: schema-level type has illegal reference to *string*

Cause: An attempt was made to make a reference from a schema-level type to something other than a schema-level type.

Action: Replace the illegal reference and retry the operation.

PLS-00330: invalid use of type name or subtype name

Cause: A datatype or subtype specifier was mistakenly used in place of a constant, variable, or expression. For example, the code might look like `IF emp_count > number THEN ... -- illegal; NUMBER is a datatype specifier`

Action: Replace the datatype or subtype specifier with a valid constant, variable, or expression.

PLS-00331: illegal reference to *string*

Cause: You had an EITHER 1. an illegal reference to some object in user SYS. to use one of them in an illegal way OR 2. an illegal reference to a remote object type.

Action: Remove the reference.

PLS-00332: "*string*" is not a valid prefix for a qualified name

Cause: You have a malformed qualified name because the prefix is not valid.

Action: Remove or change the reference.

PLS-00333: "*string*" must match an object-table alias in this context

Cause: The name, appearing in the context of a REF or VALUE, did not resolve to an object-table alias.

Action: 1) If there is no object table in the scope, then remove the REF or VALUE; or provide the missing object table reference. 2) If there is an object table in the scope, but you're not referring to it, add the reference.

PLS-00334: "*string*" matches table or view without an alias

Cause: You have a reference to a table or view name without an alias.

Action: Replace the reference with a reference to an object-table alias.

PLS-00335: a package name conflicts with an existing object

Cause: In a CREATE PACKAGE statement, a package (which is a database object that groups logically related PL/SQL types, objects, and subprograms) was given the same name as an existing database object.

Action: Give the package a unique name.

PLS-00336: non-object-table "*string*" illegal in this context

Cause: You have a REF or VALUE modifier for a non-object-table

Action: Replace the reference with a reference to an object-table alias.

PLS-00337: "*string*" matches too many object table aliases

Cause: You have an ambiguous reference to an object-table alias; there are at least two object-table aliases in the same scope.

Action: Remove all but one of the references or change the alias names of the remaining.

PLS-00338: unable to resolve "*string*" as a column or row expression

Cause: You have a reference to a name that could not be resolved as a column or row expression. This occurred in an update or insert statement involving an object-table.

Action: If this is an update statement and you intended to code this as a column reference, fix it as such. If you intended to code this as a row expression, change this to refer to an alias of an object-table.

PLS-00339: "*string*" matches object-table without a REF or VALUE modifier

Cause: You have an object-table name appearing without a REF or VALUE modifier.

Action: If you intended to code this with a REF or VALUE modifier, add the modifier; if you intended to code this as a column reference, change the reference appropriately; otherwise, remove the reference.

PLS-00341: declaration of cursor '*string*' is incomplete or malformed

Cause: A cursor declaration is improper or an identifier referenced in the cursor declaration was not properly declared. A return type that does not refer to an existing database table or a previously declared cursor or cursor variable might have been specified. For example, the following cursor declaration is illegal because c1 is not yet fully defined: `CURSOR c1 RETURN c1%ROWTYPE IS SELECT ... -- illegal` In this case, a return type does not have to be specified because it is implicit.

Action: Check the spelling and declaration of the cursor name and any identifiers referenced in the cursor declaration. Also confirm that the declaration is placed correctly in the block structure. If a return type was specified, make sure that it refers to an existing database table or a previously declared cursor or cursor variable.

PLS-00351: Not logged onto database '*string*'

Cause: An attempt was made to access an Oracle database without being logged on. Probably, an invalid username or password was entered.

Action: Log on to Oracle with a correctly spelled username and password before trying to access the database.

PLS-00352: Unable to access another database '*string*'

Cause: An attempt was made to reference an object in a database other than the current local or remote Oracle database.

Action: Correct the reference and make sure the object is in the current Oracle database.

PLS-00353: '*string*' must name a user in the database

Cause: This error occurs when the username was misspelled or when the user does not exist in the database.

Action: Check the spelling of the username and make sure the user exists.

PLS-00354: username must be a simple identifier

Cause: A qualified username such as `scott.accts` is not permitted in this context.

Action: Specify a simple username such as `scott` instead.

PLS-00355: use of pl/sql table not allowed in this context

Cause: A PL/SQL table was referenced in the wrong context (for example, with a remote link).

Action: Remove the PL/SQL table reference or change the context.

PLS-00356: '*string*' must name a table to which the user has access

Cause: The named table is not accessible to the user. This error occurs when the table name or username was misspelled, the table and/or user does not exist in the

database, the user was not granted the necessary privileges, or the table name duplicates the name of a local variable or loop counter.

Action: Check the spelling of the table name and username. Also confirm that the table and user exist, the user has the necessary privileges, and the table name does not duplicate the name of a local variable or loop counter.

PLS-00357: Table,View Or Sequence reference '*string*' not allowed in this context

Cause: A reference to database table, view, or sequence was found in an inappropriate context. Such references can appear only in SQL statements or (excluding sequences) in %TYPE and %ROWTYPE declarations. Some valid examples follow: SELECT ename, emp.deptno, dname INTO my_ename, my_deptno, my_dept .FROM emp, dept WHERE emp.deptno = dept.deptno; DECLARE last_name emp.ename%TYPE; dept_rec dept%ROWTYPE;

Action: Remove or relocate the illegal reference.

PLS-00358: column '*string*' exists in more than one table; use qualifier

Cause: The statement is ambiguous because it specifies two or more tables having the same column name. For example, the following statement is ambiguous because deptno is a column in both tables: SELECT deptno, loc INTO my_deptno, my_loc FROM emp, dept;

Action: Precede the column name with the table name (as in emp.deptno) so that the column reference is unambiguous.

PLS-00359: assignment target in '*string*' must have components

Cause: An assignment target was declared that lacks the components needed to store the assigned values. For example, this error occurs if you try to assign a row of column values to a variable instead of a record, as follows: DECLARE dept_rec dept %ROWTYPE; my_deptno dept.deptno%TYPE; ... BEGIN SELECT deptno, dname, loc INTO my_deptno -- invalid FROM dept WHERE ...

Action: Check the spelling of the names of the assignment target and all its components. Make sure the assignment target is declared with the required components and that the declaration is placed correctly in the block structure.

PLS-00360: cursor declaration without body needs return type

Cause: A cursor declaration lacks either a body (SELECT statement) or a return type. If you want to separate a cursor specification from its body, a return type must be supplied, as in CURSOR c1 RETURN emp%ROWTYPE;

Action: Add a SELECT statement or return type to the cursor declaration.

PLS-00361: IN cursor '*string*' cannot be OPEN'ed

Cause: A cursor parameter with mode IN cannot be modified, and therefore cannot be opened.

Action: Change the cursor parameter to be IN OUT or OUT

PLS-00362: invalid cursor return type; '*string*' must be a record type

Cause: In a cursor specification or REF CURSOR type definition, a non- record type such as NUMBER or TABLE was specified as the return type. This is not allowed. Only the following return types are allowed: <record_type_name> <record_name> %TYPE <table_name>%ROWTYPE <cursor_name>%ROWTYPE <cursor_variable_name>%ROWTYTPE

Action: Revise the cursor specification or REF CURSOR type definition so that it specifies one of the above return types.

PLS-00363: expression '*string*' cannot be used as an assignment target

Cause: A literal, constant, IN parameter, loop counter, or function call was mistakenly used as the target of an assignment. For example, the following statement is illegal because the assignment target, 30, is a literal: `SELECT deptno INTO 30 FROM dept WHERE ... -- illegal`

Action: Correct the statement by using a valid assignment target.

PLS-00364: loop index variable '*string*' use is invalid

Cause: An attempt was made to assign the value of an OUT parameter to

Action: Use an IN OUT parameter instead of the OUT parameter. Inside a

PLS-00366: subtype of a NOT NULL type must also be NOT NULL

Cause: After a subtype was defined as NOT NULL, it was used as the base type for another subtype defined as NULL. That is not allowed. For example, the code might look like `DECLARE SUBTYPE Weekday IS INTEGER NOT NULL; SUBTYPE Weekend IS Weekday NULL; -- illegal` instead of `DECLARE SUBTYPE Weekday IS INTEGER NOT NULL; SUBTYPE Weekend IS Weekday;`

Action: Revise the subtype definitions to eliminate the conflict.

PLS-00367: a RAISE statement with no exception name must be inside an exception handler

Cause: A RAISE statement not followed by an exception name was found outside an exception handler

Action: Delete the RAISE statement, relocate it to an exception handler, or supply the missing exception name.

PLS-00368: in RAISE statement, '*string*' must be an exception name

Cause: The identifier in a RAISE statement is not a valid exception name.

Action: Make sure the identifier in the RAISE statement was declared as an exception and is correctly placed in the block structure. If you are using the name of a PL/SQL predefined exception, check its spelling.

PLS-00369: no choices may appear with choice OTHERS in an exception handler

Cause: A construct of the form `WHEN excep1 OR OTHERS =>` was encountered in the definition of an exception handler. The OTHERS handler must appear by itself as the last exception handler in a block.

Action: Remove the identifier that appears with OTHERS or write a separate exception handler for that identifier.

PLS-00370: OTHERS handler must be last among the exception handlers of a block

Cause: One or more exception handlers appear after an OTHERS handler. However, the OTHERS handler must be the last handler in a block or subprogram because it acts as the handler for all exceptions not named specifically.

Action: Move the OTHERS handler so that it follows all specific exception handlers.

PLS-00371: at most one declaration for '*string*' is permitted

Cause: A reference to an identifier was ambiguous because there were multiple declarations for the identifier. At most one local variable with a given identifier is permitted in the declarative part of a block, procedure, or function. At most one label with a given identifier may appear in a block.

Action: Check the spelling of the identifier. If necessary, remove all but one declaration of the identifier.

PLS-00372: In a procedure, RETURN statement cannot contain an expression

Cause: In a procedure, a RETURN statement contains an expression, which is not allowed. In functions, a RETURN statement must contain an expression because its value is assigned to the function identifier. However, in procedures, a RETURN statement simply lets you exit before the normal end of the procedure is reached.

Action: Remove the expression from the RETURN statement, or redefine the procedure as a function.

PLS-00373: EXIT/CONTINUE label '*string*' must label a LOOP statement

Cause: The label in the EXIT or CONTINUE statement did not refer to a LOOP statement. An EXIT or CONTINUE statement need not specify a label. However, if a label is specified (as in EXIT my_label or CONTINUE my_label), it must refer to a LOOP statement.

Action: Make sure the label name is spelled correctly and that it refers to a LOOP statement.

PLS-00374: illegal EXIT/CONTINUE statement; must appear inside the loop labeled '*string*'

Cause: The label in the EXIT or CONTINUE statement did not refer to a loop statement. An EXIT or CONTINUE statement need not specify a label. However, if a label is specified (as in EXIT my_label or CONTINUE my_label), the EXIT or CONTINUE statement must be inside the LOOP statement designated by that label.

Action: Make sure the label name is spelled correctly; if necessary, move the EXIT or CONTINUE statement inside the LOOP statement to which the label refers.

PLS-00375: illegal GOTO statement; this GOTO cannot branch to label '*string*'

Cause: The line and column numbers accompanying the error message refer to a GOTO that branches from outside a construct (a loop or exception handler, for example) that contains a sequence of statements to a label inside that sequence of statements. Such a branch is not allowed.

Action: Either move the GOTO statement inside the sequence of statements or move the labeled statement outside the sequence of statements.

PLS-00376: illegal EXIT/CONTINUE statement; it must appear inside a loop

Cause: An EXIT or CONTINUE statement was found outside of a loop construct. The EXIT statement is used to exit prematurely from a loop and the CONTINUE statement is used to begin the next iteration of a loop; each must always appear within a loop.

Action: Either remove the EXIT or CONTINUE statement or place it inside a loop.

PLS-00377: internal type PLS_INTEGER is not included in this release of PL/SQL

Cause: The type-name INTEGER was used in a declaration.

Action: n/a

PLS-00378: invalid compilation unit for this release of PL/SQL

Cause: A compilation unit is a file containing PL/SQL source code that is passed to the compiler. Only compilation units containing blocks, declarations, statements, and subprograms are allowed. This error occurs when some other language construct is passed to the compiler.

Action: Make sure the compilation unit contains only blocks, declarations, statements, and subprograms.

PLS-00379: CASE statements are not included in this release of PL/SQL

Cause: The unit being compiled contains a CASE statement. However, the current release of PL/SQL does not support CASE statements.

Action: Remove the CASE statement from the compilation unit.

PLS-00380: functions and procedures are not included in this release of PL/SQL

Cause: The program being compiled contains a declaration of a FUNCTION or PROCEDURE.

Action: n/a

PLS-00381: type mismatch found at 'string' between column and variable in subquery or INSERT

Cause: The datatypes of a column and a variable do not match. The variable was encountered in a subquery or INSERT statement.

Action: Change the variable datatype to match that of the column.

PLS-00382: expression is of wrong type

Cause: An expression has the wrong datatype for the context in which it was found.

Action: Change the datatype of the expression. You might want to use datatype conversion functions.

PLS-00383: type mismatch found at 'string' inside an IN or NOT IN clause

Cause: In a test for set membership such as X NOT IN (SELECT Y ...), the expressions X and Y do not match in datatype, and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the expressions so that their datatypes match. You might want to use datatype conversion functions in the select list.

PLS-00384: type mismatch found at 'string' in UPDATE's SET clause

Cause: The column to the left of the equal sign in the SET clause of an UPDATE statement does not match in datatype with the column, expression, or subquery to the right of the equal sign, and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the expressions so that their datatypes match. You might want to use datatype conversion functions in the SET clause.

PLS-00385: type mismatch found at 'string' in SELECT...INTO statement

Cause: The expressions to the left and right of the INTO clause in a SELECT...INTO statement do not match in datatype, and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the expressions so that their datatypes match. You might want to use datatype conversion functions in the select list.

PLS-00386: type mismatch found at 'string' between FETCH cursor and INTO variables

Cause: An assignment target in the INTO list of a FETCH statement does not match in datatype with the corresponding column in the select list of the cursor declaration, and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the cursor declaration or change the datatype of the assignment target. You might want to use datatype conversion functions in the select list of the query associated with the cursor.

PLS-00387: INTO variable cannot be a database object

Cause: An item in the INTO list of a FETCH or SELECT statement was found to be a database object. INTO introduces a list of user-defined variables to which output values are assigned. Therefore, database objects cannot appear in the INTO list.

Action: Check the spelling of the INTO list item. If necessary, remove the item from the INTO list or replace it with a user-defined output variable.

PLS-00388: undefined column 'string' in subquery

Cause: A subquery contains a column name that was not defined in the specified table.

Action: Change the expression to specify a column that was defined.

PLS-00389: table, view or alias name "string" not allowed in this context

Cause: A table, view or alias name *name* corresponding to a regular (non-object) table appeared in an inappropriate context.

Action: Remove the reference, or, if you intended to code this as a column reference, fix it as such.

PLS-00390: undefined column 'string' in INSERT statement

Cause: Check the spelling of the column name, then change the expression so that it refers only to defined columns.

Action: Check the spelling of the column name, then change the expression so that it refers only to defined columns.

PLS-00391: undefined column 'string' in UPDATE statement

Cause: An UPDATE statement refers to a column not defined for the table or view being updated.

Action: Check the spelling of the column name, then revise the statement so that it refers only to defined columns.

PLS-00392: Type mismatch in arguments to BETWEEN

Cause: In a comparison such as X BETWEEN Y AND Z, the expressions X, Y, and Z do not match in datatype, and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the expressions so that their datatypes match. You might want to use datatype conversion functions.

PLS-00393: wrong number of columns in SELECT...INTO statement

Cause: The number of columns selected by a SELECT...INTO statement does not match the number of variables in the INTO clause.

Action: Change the number of columns in the select list or the number of variables in the INTO clause so that the numbers match.

PLS-00394: wrong number of values in the INTO list of a FETCH statement

Cause: The number of variables in the INTO clause of a FETCH statement does not match the number of columns in the cursor declaration.

Action: Change the number of variables in the INTO clause or the number of columns in the cursor declaration so that the numbers match.

PLS-00395: wrong number of values in VALUES clause of INSERT statement

Cause: The number of columns in an INSERT statement does not match the number of values in the VALUES clause. For example, the following statement is faulty because no column is specified for the value 20: INSERT INTO emp (empno, ename) VALUES (7788, 'SCOTT', 20);

Action: Change the number of items in the column list or the number of items in the VALUES list so that the numbers match.

PLS-00396: INSERT statement's subquery yields wrong number of columns

Cause: The number of columns in an INSERT statement does not match the number of columns in a subquery select list. For example, the following statement is faulty because no corresponding column is specified for col3: INSERT INTO emp (ename, empno) SELECT col1, col2, col3 FROM ...

Action: Change the column list of the INSERT or subquery so they are the same length. ACTION: Change the number of items in the column list of the INSERT statement or the number of items in the select list so that the numbers match.

PLS-00397: Type mismatch in arguments to IN

Cause: In a test for set membership such as X IN (Y, Z), the expressions X, Y, and Z do not match in datatype, and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the expressions so that their datatypes match. You might want to use datatype conversion functions.

PLS-00398: wrong number of columns in UNION, INTERSECT, or MINUS expression

Cause: The SELECT clauses to the left and right of a UNION, INTERSECT, or MINUS expression do not select the same number of columns. For example, the following statement is faulty because the select lists do not contain the same number of items: CURSOR my_cur IS SELECT ename FROM emp INTERSECT SELECT ename, empno FROM emp;

Action: Change the select lists so that they contain the same number of items.

PLS-00399: different types of columns in UNION, INTERSECT, or MINUS expression

Cause: The select lists to the left and right of a UNION, INTERSECT, or MINUS expression select at least one column that is mismatched in datatype. For example, the following statement is faulty because the constant 3 has datatype NUMBER, whereas SYSDATE has datatype DATE: CURSOR my_cur IS SELECT 3 FROM emp INTERSECT SELECT SYSDATE FROM emp;

Action: Change the select lists so that they match in datatype. You might want to use datatype conversion functions in the select list of one or more queries.

PLS-00400: different number of columns between cursor SELECT statement and return value

Cause: In a cursor declaration, a return type (such as RETURN emp%ROWTYPE) was specified, but the number of returned column values does not match the number of select-list items.

Action: Change the cursor return type or the select list so that the number of returned column values matches the number of select-list items.

PLS-00401: different column types between cursor SELECT statement and return value found at 'string'

Cause: In a cursor declaration, a return type (such as RETURN emp%ROWTYPE) was specified, but a returned column value and its corresponding select-list item have different datatypes.

Action: Change the cursor return type or the select list so that each returned column value and its corresponding select-list item have the same datatype.

PLS-00402: alias required in SELECT list of cursor to avoid duplicate column names

Cause: A cursor was declared with a SELECT statement that contains duplicate column names. Such references are ambiguous.

Action: Replace the duplicate column name in the select list with an alias.

PLS-00403: expression 'string' cannot be used as an INTO-target of a SELECT/FETCH statement

Cause: A FETCH statement was unable to assign a value to an assignment target in its INTO list because the target is not a legally formed and declared variable. For example, the following assignment is illegal because 'Jones' is a character string, not a variable: FETCH my_cur INTO 'Jones';

Action: Check the spelling and declaration of the assignment target. Make sure that the rules for forming variable names are followed.

PLS-00404: cursor 'string' must be declared with FOR UPDATE to use with CURRENT OF

Cause: The use of the CURRENT OF cursor_name clause is legal only if cursor_name was declared with a FOR UPDATE clause.

Action: Add a FOR UPDATE clause to the definition of the cursor or do not use the CURRENT OF cursor_name clause.

PLS-00405: subquery not allowed in this context

Cause: A subquery was used in an inappropriate context, such as: if (SELECT deptno FROM emp WHERE ...) = 20 then ... Subqueries are allowed only in SQL statements.

Action: The same result can be obtained by using a temporary variable, as in: SELECT deptno INTO temp_var FROM emp WHERE ...; IF temp_var = 20 THEN ...

PLS-00406: length of SELECT list in subquery must match number of assignment targets

Cause: A query select list is not the same length as the list of targets that will receive the returned values. For example, the following statement is faulty because the subquery returns two values for one target: UPDATE emp SET ename = (SELECT ename, empno FROM emp WHERE ename = 'SMITH') ...

Action: Change one of the lists so that they contain the same number of items.

PLS-00407: '*' not allowed here; a list of columns is required

Cause: An asterisk (*) was used as an abbreviation for a list of column names. However, in this context the column names must be written out explicitly.

Action: Replace the asterisk with a list of column names.

PLS-00408: duplicate column 'string' not permitted in INSERT or UPDATE

Cause: An UPDATE or INSERT statement has a column list that contains duplicate column names.

Action: Check the spelling of the column names, then eliminate the duplication.

PLS-00409: duplicate variable '*string*' in INTO list is not permitted

Cause: The same variable appears twice in the INTO list of a SELECT or FETCH statement.

Action: Remove one of the variables from the INTO list.

PLS-00410: duplicate fields in RECORD, TABLE or argument list are not permitted

Cause: When a user-defined record was declared, the same name was given to two fields. Like column names in a database table, field names in a user-defined record must be unique.

Action: Check the spelling of the field names, then remove the duplicate.

PLS-00411: Number of values in aggregate and in subquery don't match

Cause: In a statement of the form aggregate = subquery, the numbers of values in the aggregate and subquery are unequal. For example, the code might look like ... WHERE (10,20,30) = (SELECT empno,deptno FROM emp WHERE...);

Action: Revise the aggregate or subquery so that the numbers of values match.

PLS-00412: list of values not allowed as argument to this function or procedure

Cause: A parenthesized list of values separated by commas (that is, an aggregate) was used in the wrong context. For example, the following usage is invalid: WHERE (col1, col2) > (SELECT col3, col4 FROM my_table ...) However, an equal sign can take a list of values and a subquery as left- and right-hand-side arguments, respectively. So, the following usage is valid: WHERE (col1, col2) = (SELECT col3, col4 FROM my_table ...)

Action: Rewrite the expression. For example, the clause WHERE (col1, col2) > (SELECT col3, col4 FROM my_table ...) can be rewritten as WHERE col1 > (SELECT col3 FROM my_table ...) AND col2 > (SELECT col4 FROM my_table ...)

PLS-00413: identifier in CURRENT OF clause is not a cursor name

Cause: The identifier in a CURRENT OF clause names an object other than a cursor.

Action: Check the spelling of the identifier. Make sure that it names the cursor in the DELETE or UPDATE statement and that it names the cursor itself, not a FOR-loop variable.

PLS-00414: no column '*string*' in table

Cause: A table name or alias was used to qualify a column reference, but the column was not found in that table. Either the column was never defined or the column name is misspelled.

Action: Confirm that the column was defined and check the spelling of the column name.

PLS-00415: '*string*' is an OUT parameter and cannot appear in a function

Cause: An OUT or IN OUT formal parameter was used in a function specification.

Action: n/a

PLS-00416: The third argument of DECODE cannot be NULL

Cause: The third argument of DECODE is NULL.

Action: Enter an argument with a proper type and value.

PLS-00417: unable to resolve "*string*" as a column

Cause: A database table, view, or column was specified in a SQL statement that does not exist, or the privileges required to access the table or view were not granted.

Action: Check the spelling of the table (or view) and column names; make sure the table and columns exist. If necessary, ask the DBA to grant the privileges required to access the table.

PLS-00418: array bind type must match PL/SQL table row type

Cause: A host array was passed (by an Oracle Precompiler program, for example) to a PL/SQL subprogram for binding to a PL/SQL table parameter. However, the datatypes of the array elements and PL/SQL table rows are incompatible. So, the binding failed.

Action: Change the datatype of the array elements or PL/SQL table rows to make the datatypes compatible.

PLS-00419: reference to remote attribute not permitted

Cause: An attempt was made to reference a remote cursor attribute, which is not allowed. For example, the code might look like `IF SQL%NOTFOUND@newyork THEN ...`

Action: Do not try to reference a remote cursor attribute.

PLS-00420: can't call builtin routines remotely

Cause: An attempt was made to call a built-in PL/SQL function remotely, which is not allowed. For example, the code might look like `my_sqlerrm := SQLERRM@newyork;` or `INSERT INTO emp VALUES (my_empno, STANDARD.RTRIM@newyork(my_ename), ...);`

Action: Always call built-in functions locally; never specify a database link.

PLS-00421: circular synonym 'string'

Cause: Directly or indirectly, a synonym was defined in terms of itself, creating a circular definition.

Action: Redefine the synonyms to eliminate the circular definition.

PLS-00422: no PL/SQL translation for the bindtype given for this bind variable

Cause: A host variable was passed (by an Oracle Precompiler program, for example) to PL/SQL for binding. However, its datatype is not compatible with any PL/SQL datatype. So, the binding failed.

Action: Change the datatype of the host variable to make it compatible with a PL/SQL datatype.

PLS-00423: ORDER BY item must be the number of a SELECT-list expression

Cause: A column alias was used in the ORDER BY clause of a SELECT statement that uses a UNION, INTERSECT, or MINUS set operator. This is not allowed. In such cases, expressions in the ORDER BY clause must be unsigned integers that designate the ordinal positions of select-list items.

Action: Change the alias in the ORDER BY clause to an unsigned integer that designates the ordinal position of the select item in question.

PLS-00424: RPC defaults cannot include Package State

Cause: An attempt was made to call a remote subprogram whose defaulted parameters depend on package state, which is not allowed. When calling remote subprograms, the actual parameters must be passed explicitly if the corresponding formal parameters depend on package state.

Action: Call the remote subprogram by passing each actual parameter explicitly.

PLS-00425: in SQL, function argument and return types must be SQL type

Cause: When a cursor variable was declared as the formal parameter of a

Action: Change the parameter mode from OUT to IN or IN OUT.

PLS-00427: RPC defaults cannot use builtins when versions of STANDARD differ

Cause: An attempt was made to call a remote subprogram whose defaulted parameter value is calculated using a builtin operation. If the calling system uses a different version of package STANDARD than does the called system, a defaulted expression must be either a simple numeric or string literal, NULL, or a direct call to a user-written function.

Action: Call the remote subprogram by passing each actual parameter value explicitly.

PLS-00428: an INTO clause is expected in this SELECT statement

Cause: The INTO clause of a SELECT INTO statement was omitted. For example, the code might look like SELECT deptno, dname, loc FROM dept WHERE ... instead of SELECT deptno, dname, loc INTO dept_rec FROM dept WHERE ... In PL/SQL, only a subquery is written without an INTO clause.

Action: Add the required INTO clause.

PLS-00429: unsupported feature with RETURNING clause

Cause: - INTO clause and RETURNING clause cannot be use in the same statement - RETURNING clause is currently not supported for object type columns, LONG columns, records, %rowtypes, remote tables and INSERT with subquery. This is as ORA-28815.

Action: Use separate select statement to get the values.

PLS-00430: FORALL iteration variable *string* is not allowed in this context

Cause: FORALL iteration variable can only be used as a subscript. It cannot be used directly or as a part of an expression.

Action: Use FORALL variable only as a collection subscript.

PLS-00431: bulk SQL attributes must use a single index

Cause: More than one index specified to access SQL bulk attribute.

Action: Use a single index of integer datatype.

PLS-00432: implementation restriction: cannot use FORALL and BULK COLLECT INTO together in SELECT statements

Cause: SELECT statement contains both the FORALL and BULK COLLECT INTO phrases.

Action: Dn not use FORALL and BULK COLLECT INTO together in SELECT statements.

PLS-00433: inconsistent package STANDARD

Cause: PL/SQL compiler could not find the entries (such as type declarations) that should exist in the package STANDARD.

Action: Make sure that the correct version of package STANDARD is available in the current Oracle database, then retry compilation.

PLS-00434: record field has unsupported type: "string"

Cause: An attempt was made to use an unsupported type for a record field. In this release, the use of the SQL92 datetime types (time, timestamp, time with time zone, timestamp with time zone, interval year to month, interval day to second) are not supported in record fields.

Action: Use only supported types for record fields.

PLS-00435: DML statement without BULK In-BIND cannot be used inside FORALL

Cause: The DML (SELECT/INSERT/DELETE/UPDATE) statement inside the FORALL statement does not contain BULK IN-BIND variables.

Action: The DML (SELECT/INSERT/DELETE/UPDATE) statement inside the FORALL statement must contain BULK IN-BIND variables.

PLS-00436: implementation restriction: cannot reference fields of BULK In-BIND table of records or objects

Cause: table(bulk_index).field is not supported at run-time.

Action: Use FOR loop with instead of the FORALL DML statement (MERGE/INSERT/DELETE/UPDATE).

PLS-00437: FORALL bulk index cannot be used in *string* clause

Cause: RETURNING table(bulk_index) is not supported.

Action: Use RETURNING BULK COLLECT instead

PLS-00438: value in LIMIT clause: 'string' use is invalid

Cause: The evaluation value in the LIMIT clause of a bulk fetch was found in an inappropriate context. For example, the following statement is illegal because the LIMIT clause in a bulk fetch expects a numeric value. FETCH c1 BULK COLLECT INTO var_tab LIMIT '22333'; -- illegal

Action: Change the expression of the LIMIT clause so that the evaluation result is compatible to a numeric value.

PLS-00439: A LIMIT clause must be used within a BULK FETCH

Cause: A LIMIT clause is used within a non-bulk fetch

Action: Do not use a LIMIT clause when a non-bulk fetch is used.

PLS-00440: FORALL bulk IN-bind variables cannot be used here

Cause: A reference to a FORALL statement's bulk IN-bind variable was found in a context in which it is not permitted. For example, such variables are not permitted in expressions in the USING clause of a dynamic SQL statement: forall j in 1..Users.Count() execute immediate ' insert into System_Users(Username) values :U' using Upper(Users(j));

Action: In the case described above, move the expression from the USING clause into the SQL statement: forall j in 1..Users.Count() execute immediate ' insert into System_Users(Username) values Upper(:U)' using Users(j);

PLS-00441: EXIT/CONTINUE statement may have a label here; 'string' is not a label

Cause: The specified name was not a label. An EXIT or CONTINUE statement does not require a label, but when the optional name appears, it must be a label.

Action: Check the spelling of the name. Make sure that the name is the label of a loop in which the EXIT or CONTINUE statement is nested. If a label is not needed for this statement, delete the name.

PLS-00442: CONTINUE statement may not have the prefix STANDARD

Cause: The procedure CONTINUE appears in STANDARD but that procedure may not be called either with its name alone or with the prefix STANDARD. It exists only to help in analysis of the CONTINUE statement.

Action: If a CONTINUE statement is intended, remove the prefix. If some other procedure was intended, check the spelling of the prefix and of the procedure name.

PLS-00450: a variable of this private type cannot be declared here

Cause: A variable declaration uses a type that is declared PRIVATE in some other compilation unit.

Action: Do not use this type in a PRIVATE variable declaration.

PLS-00452: Subprogram '*string*' violates its associated pragma

Cause: A packaged function cannot be called from SQL statements unless its purity level is asserted by coding a RESTRICT_REFERENCES pragma in the package specification. The pragma, which is used to control side effects, tells the PL/SQL compiler to deny the packaged function read/write access to database tables, public packaged variables, or both. A SQL statement that violates the pragma will cause a compilation error.

Action: Raise the purity level of the function, or relax the pragma restrictions.

PLS-00453: remote operations not permitted on object tables or user-defined type columns

Cause: A reference to a remote object tables or user-defined type column was found.

Action: Do not refer to it.

PLS-00454: with a returning into clause, the table expression cannot be remote or a subquery

Cause: A reference to a remote table or subquery was found in a sql statement with a returning into clause.

Action: Do not refer to it, or do use a subsequent select statement.

PLS-00455: cursor '*string*' cannot be used in dynamic SQL OPEN statement

Cause: dynamically OPEN a REF CURSOR that has RETURN type. However, only REF CURSOR without RETURN type can be OPEN'ed by an embedded dynamic OPEN statement.

Action: define a REF CURSOR without return type, and use it in the statement.

PLS-00456: item '*string*' is not a cursor

Cause: the given variable is not a cursor and therefore cannot be OPEN'ed or FETCH'ed from.

Action: check the spelling and declaration for the given variable.

PLS-00457: expressions have to be of SQL types

Cause: an expression of wrong type is in USING or dynamic RETURNING clause. In USING or dynamic RETURNING clause, an expression cannot be of non-SQL types such as BOOLEAN, INDEX TABLE, and record.

Action: change the expression type to a SQL type.

PLS-00458: subprogram '*string*' cannot be called from a REPEATABLE subprogram

Cause: The subprogram is not REPEATABLE and cannot be called from a REPEATABLE subprogram.

Action: delete the call or delete REPEATABLE.

PLS-00459: this feature is not allowed in REPEATABLE subprogram

Cause: Having one of the followings feature in the REPEATABLE subprogram: dynamic SQL statements or autonomous transaction.

Action: delete the statements or delete REPEATABLE.

PLS-00460: REPEATABLE subprogram '*string*' has to be RNDS, WNDS, RNPS, and WNPS

Cause: Repeatable subprogram can neither read database state (RNDS), write database state (WNDS), read package state (RNPS), nor write package state (WNPS).

Action: make the subprogram to be RNDS, WNDS, RNPS, and WNPS or delete REPEATABLE

PLS-00461: mismatch REPEATABLE information between specification and body of '*string*'

Cause: REPEATABLE is declared at the subprogram's specification, but not at its body, or vice versa.

Action: make sure both specification and body are declared as REPEATABLE

PLS-00462: nested subprogram '*string*' has to be REPEATABLE

Cause: the nested subprogram of a REPEATABLE subprogram is not declared as REPEATABLE. If a subprogram is REPEATABLE, all of its nested subprograms has to be declared as REPEATABLE.

Action: declared the nested subprogram as REPEATABLE

PLS-00483: exception '*string*' may appear in at most one exception handler in this block

Cause: An exception appears in two different WHEN clauses (that is, two different exception handlers) in the exception-handling part of a PL/SQL block or subprogram.

Action: Remove one of the references to the exception.

PLS-00484: redundant exceptions '*string*' and '*string*' must appear in same exception handler

Cause: Using the EXCEPTION_INIT pragma, different exceptions were initialized to the same Oracle error number; then, they were referenced in different exception handlers within the same exception-handling part. Such references conflict.

Action: Remove one of the exceptions or initialize it to a different Oracle error number.

PLS-00485: in exception handler, '*string*' must be an exception name

Cause: An identifier not declared as an exception appears in an exception handler WHEN clause. Only the name of an exception is valid in a WHEN clause.

Action: Check the spelling of the exception name and make sure the exception was declared properly.

PLS-00486: select list cannot be enclosed in parentheses

Cause: In a SELECT statement, the select list was enclosed in parentheses, as in: SELECT (deptno, dname, loc) FROM dept INTO ... This breaks the rules of SQL syntax. Parentheses are not required because the keywords SELECT and FROM delimit the select list.

Action: Remove the parentheses enclosing the select list.

PLS-00487: Invalid reference to variable '*string*'

Cause: A variable was referenced in a way that is inconsistent with its datatype. For example, a scalar variable might have been mistakenly referenced as a record, as follows: DECLARE CURSOR emp_cur IS SELECT empno, ename, sal FROM emp; emp_rec emp_cur%ROWTYPE; my_sal NUMBER(7,2); BEGIN ... total_sal := total_sal + my_sal.sal; -- invalid ...

Action: Check the spelling of the variable name. Make sure the variable was declared properly and that the declaration and reference are consistent regarding datatype.

PLS-00488: '*string*' must be a type

Cause: The datatype specifier in a declaration or expression does not designate a legal type. For example, the %TYPE attribute might not have been added to a declaration, as in DECLARE my_sal emp.sal%TYPE; my_ename emp.ename; -- missing %TYPE ... When declaring a constant or variable, to provide the datatype of a column automatically, use the %TYPE attribute. Likewise, when declaring a record, to provide the datatypes of a row automatically, use the %ROWTYPE attribute.

Action: Make sure the datatype specifier designates a legal type. Remember to use the %TYPE and %ROWTYPE attributes when necessary.

PLS-00489: invalid table reference: '*string*' must be a column in this expression

Cause: In a query, a select-list item refers to a table in the FROM clause but not to a database column.

Action: Check the spelling of the column names, make sure each column in the select list refers to a table in the FROM clause, then re-execute the query.

PLS-00490: illegal statement

Cause: A constant, variable, function call, or incomplete statement was used where a statement was expected. For example, instead of calling a function from an expression, it might have been called as a statement (as if it were a procedure).

Action: Check the statement, making sure that its commands, identifiers, operators, delimiters, and terminator form a complete and valid PL/SQL statement.

PLS-00491: numeric literal required

Cause: A constant or variable was used where a numeric literal is required. For example, the code might look like my_ename VARCHAR2(max_len); instead of my_ename VARCHAR2(15); When specifying the maximum length of a VARCHAR2 variable, an integer literal must be used.

Action: Replace the identifier with a numeric literal.

PLS-00492: variable or constant initialization may not refer to functions declared in the same package

Cause: If a package spec p declares a function f, that function may not be used in any variable declarations in that same package spec. This is because of a circular instantiation problem: in order to fully instantiate the package spec, the variable must be initialized. To initialize the variable, the function body code in the package body

must be executed. That requires that the package body be instantiated. However, the package body cannot be instantiated until the package spec is fully instantiated.

Action: Remove the reference to the function from the variable initialization. A technique which often works is to move the variable initialization from the variable declaration (in the package spec) to the package body initialization block.

PLS-00493: invalid reference to a server-side object or function in a local context

Cause: A reference to a server-side object (e.g. a table column) or function (a group function such as SUM, AVG, MIN, MAX, ...) was found in a context where only PL/SQL objects may be present (such as within the parameter list of a local function or as the index of a (local) PL/SQL table.)

Action: Rewrite the offending statement; or (if a local function call is the problem context), make the function non-local (either packaged or top- level.)

PLS-00494: coercion into multiple record targets not supported

Cause: The INTO list of a SELECT or FETCH specified more than a single record-type target and the column types required coercion into a record to match the INTO list. This is type checked as correct, but not yet supported.

Action: Create a new record type to hold all of the column types or code the SELECT with an INTO target for every source column.

PLS-00495: too many columns in SELECT...INTO statement after bursting record targets

Cause: Type checking indicated the columns in a SELECT or FETCH were being collected into a record in the INTO list. The record was burst into its fields. There were not enough fields in the record for each of the columns.

Action: Change the number of columns or the record variable(s) in the INTO clause so that they match.

PLS-00496: too few columns in SELECT...INTO statement after bursting record targets

Cause: Type checking indicated the columns in a SELECT or FETCH were being collected into a record in the INTO list. The record was burst into its fields. There were not enough columns to fill all of the fields in the record.

Action: Change the number of columns or the record variable(s) in the INTO clause so that they match.

PLS-00497: cannot mix between single row and multi-row (BULK) in INTO list

Cause: - When BULK syntax (e.g. BULK COLLECT INTO) is used to retrieve data, every variable in the INTO list has to be of type that is a collection of the type of the corresponding column. - When BULK is NOT used, every variable in the INTO list has to be of compatible type with the corresponding column.

Action: Change the INTO list so that all variables have correct data types

PLS-00498: illegal use of a type before its declaration

Cause: A variable or constant was declared to be of a type whose declaration appears later in the compilation unit; or, a type or subtype was declared in terms of another type whose declaration appears later in the compilation unit.

Action: Ensure that the type declaration precedes its use in the variable/ constant/ type declaration.

PLS-00499: coercion into collection of records not supported

Cause: A SELECT or FETCH may specify a column list to be coerced into a variable which is a collection of records. This is type checked as correct, but not yet supported because of the implicit layout change required.

Action: Express the SELECT with an object constructor around the columns and use a collection of objects as an INTO variable. Or, build the collection one row at a time coercing each row into a record which happens to be an element. Or, use a record of collections.

PLS-00500: invalid operator binding

Cause: An operator binding function cannot be found in the specified scope.

Action: Provide the correct number and types of parameters for the operator binding function. Or, specify the correct names for schema, package, or type containing the operator binding function.

PLS-00503: RETURN *value* statement required for this return from function

Cause: In a function body, a RETURN statement was used that contains no expression. In procedures, a RETURN statement contains no expression because the statement simply returns control to the caller. However, in functions, a RETURN statement must contain an expression because its value is assigned to the function identifier.

Action: Add an expression to the RETURN statement.

PLS-00504: type *string_BASE* may not be used outside of package STANDARD

Cause: In a declaration, the datatype NUMBER_BASE (for example) was mistakenly specified. The datatypes CHAR_BASE, DATE_BASE, MLSLABEL_BASE, and NUMBER_BASE are for internal use only.

Action: Specify (for example) the datatype NUMBER instead of NUMBER_BASE.

PLS-00505: User Defined Types may only be defined as PLSQL Tables or Records

Cause: An attempt was made to define a type other than TABLE or RECORD, but these are the only user-defined types allowed in this release of PL/SQL. For example, the following type definition is illegal: TYPE Byte IS INTEGER(2); -- illegal

Action: Remove the type definition, or revise it to specify a TABLE or RECORD type.

PLS-00506: User Defined Constrained Subtypes are disallowed

Cause: An attempt was made to define a constrained subtype, but only unconstrained subtypes are allowed in this release of PL/SQL. For example, the following type definition is illegal: SUBTYPE Acronym IS VARCHAR2(5); -- illegal

Action: Remove the illegal type constraint.

PLS-00507: a PLSQL Table may not contain a table or a record with composite fields

Cause: In a TABLE type definition, a nested record type was specified as the element type. This is not allowed. All fields in the record must be scalars.

Action: Remove the TABLE type definition, or replace the nested record type with a simple record type.

PLS-00508: The expression in a RETURN statement cannot be a type

Cause: A datatype specifier was used instead of an expression in the RETURN statement of a user-defined function, as shown in the example below. Do not confuse the RETURN statement, which sets the function identifier to the result value, with the

RETURN clause, which specifies the datatype of the result value. FUNCTION credit-rating (acct_no NUMBER) RETURN BOOLEAN IS BEGIN ... RETURN NUMBER; -- should be an expression END;

Action: Replace the datatype specifier in the RETURN statement with an appropriate expression.

PLS-00509: Implementation Restriction : Pass a returned record to a temporary identifier before selecting a field

Cause: Illegal syntax was used to call a parameter-less function that returns a record or a PL/SQL table of records. When calling a function that takes parameters and returns a record, you use the following syntax to reference fields in the record: function_name(parameters).field_name However, you cannot use the syntax above to call a parameter-less function because PL/SQL does not allow empty parameter lists. That is, the following syntax is illegal: function_name().field_name -- illegal; empty parameter list You cannot just drop the empty parameter list because the following syntax is also illegal: function_name.field_name -- illegal; no parameter list.

Action: Declare a local record or PL/SQL table of records to which you can assign the function result, then reference its fields directly.

PLS-00510: Float cannot have scale

Cause: When a FLOAT variable was declared, its precision and scale were specified, as shown in the following example: DECLARE Salary FLOAT(7,2); However, a scale for FLOAT variables cannot be specified; only a precision can be specified, as in salary FLOAT(7);

Action: Remove the scale specifier from the declaration, or declare a NUMBER variable instead.

PLS-00511: a record may not contain a PL/SQL table of records

Cause: In a RECORD definition, one of the fields was declared as a PL/SQL table of records. This is not allowed. A record can be the component of another record (that is, records can be nested), but a PL/SQL table of records cannot be the component of a record.

Action: Remove the field declaration, or revise it to specify a simple record type.

PLS-00512: Implementation Restriction: 'string': Cannot directly access remote package variable or cursor

Cause: An attempt was made to reference a remote packaged variable or cursor. This is not allowed. Instead, add to the remote package a function that returns the value of the variable or cursor.

Action: Remove the illegal reference.

PLS-00513: PL/SQL function called from SQL must return value of legal SQL type

Cause: In a SQL statement, do not call a PL/SQL function having a return type that can not be handled by SQL. For example, type BOOLEAN, records and indexed-tables are not supported by SQL and functions returning such values can not be called from SQL.

Action: n/a

PLS-00514: INSERT statement with REF INTO clause requires a typed table

Cause: This INSERT statement provides REF INTO clause, which is only legal when the table specified in the INTO clause is an object table.

Action: n/a

PLS-00515: The type of the REF INTO variable '*string*' must be REF to the table's type

Cause: In INSERT statement with REF INTO clause, the type of the data item must be REF to the type of the table used in INTO clause.

Action: n/a

PLS-00516: Type mismatch between object table and value '*string*' in INSERT statement.

Cause: In the INSERT statement operating on typed tables (tables of objects), the type of a non-aggregate value did not match the object type of the table.

Action: n/a

PLS-00517: Type mismatch between a select list element '*string*' and corresponding table column in INSERT statement with a subquery

Cause: In an INSERT statement with subquery, at least one of the elements of the select list was not type-compatible with the corresponding column of the table in the INTO clause. This error indicates that the subquery should be rewritten to match the structure of the target table.

Action: n/a

PLS-00518: This INSERT statement requires VALUES clause containing a parenthesised list of values

Cause: A VALUES clause was entered without a list of SQL data items in parentheses. In all INSERT statements with an explicit column list, the VALUES clause must contain a list of SQL data items in parentheses. For example: INSERT INTO my_tab (a,b,c) VALUES (1,2,my_variable);

Action: Rewrite the statement to include a list of SQL data items in parentheses.

PLS-00519: This INSERT statement requires a VALUES clause containing an object type expression, not a list of values

Cause: In an INSERT statement with typed tables, an aggregate was used when an object type item was expected.

Action: Replace the aggregate with an object constructor or other object type expression.

PLS-00520: MAP methods must be declared without any parameters other than (optional) SELF.

Cause: A MAP member function was declared with a parameter. Map member functions can have only one parameter: the default SELF parameter. Map methods must be declared without any parameters. The compiler adds the SELF parameter.

Action: Remove the parameter from the map member function.

PLS-00521: ORDER methods must be declared with 1 (one) parameter in addition to (optional) SELF.

Cause: An order member function was declared without the user-specified parameter. Order member functions have two parameters, one is the default SELF parameter which is added by the compiler. the second parameter is added by the user and must declare an order method which must be the same type as the containing object type.

Action: Check and correct the way the parameter is specified.

PLS-00522: MAP methods must return a scalar type.

Cause: The MAP member function was written such that it returns something other than a scalar type.

Action: Rewrite the MAP function such that it returns a scalar type.

PLS-00523: ORDER methods must return an INTEGER.

Cause: An order member function was written such that it returns something other than an integer type.

Action: Rewrite the ORDER method such that it returns an integer type.

PLS-00524: The parameter type in an ORDER method must be the containing object type.

Cause: An order member function was declared without the user- specified parameter. Order member functions have two parameters, one is the default SELF parameter which is added by the compiler. the second parameter is added by the user and must declare an order method which must be the same type as the containing object type.

Action: Check and correct the way the parameter is specified.

PLS-00525: Within SQL statements, only equality comparisons of objects are allowed without a map or order function.

Cause: A map or order function was not provided for a relational comparison. Only equality comparisons may be used when a map or order function is not supplied.

Action: Supply either a map or order function for the object. Otherwise change the program to use only equality comparisons.

PLS-00526: A MAP or ORDER function is required for comparing objects in PL/SQL.

Cause: Within stand alone PL/SQL, an attempt was made to compare objects without a map or order function.

Action: Provide a map or order function and retry the operation.

PLS-00527: MAP or ORDER functions require a PRAGMA RESTRICT_REFERENCES specifying :WNDS,WNPS,RNPS,RNDS.

Cause: Either a PRAGMA RESTRICT_REFERENCES was not specified or it was specified without one of the following: WNDS, WNPS, RNPS, or RNDS.

Action: Add or correct the PRAGMA and retry the operation.

PLS-00528: The parameters to an ORDER function must have IN mode

Cause: You declared parameter to an ORDER function to have OUT or IN OUT mode.

Action: Correct the parameter to use IN mode only.

PLS-00529: Bad column name *string* in INSERT statement (must be an identifier)

Cause: In an INSERT statement, an attempt was made to use a column name that is not an identifier. In any INSERT statement with explicit column list a column name must be a simple identifier.

Action: Rewrite the INSERT statement, using a simple identifier for the column name.

PLS-00530: Illegal type used for object type attribute: '*string*'.

Cause: An attempt was made to use an invalid type for an object type attribute.

Action: Use only supported types for the object type attribute.

PLS-00531: Unsupported type in a VARRAY or TABLE type: 'string'.

Cause: An attempt was made to use an unsupported type in a VARRAY or TABLE type.

Action: Use only supported types in a VARRAY or TABLE type.

PLS-00532: Target of REF must be a complete or incomplete object type.

Cause: The target of a REF can only be a complete or an incomplete object type.

Action: If a REF is to be used, change the type; otherwise, remove the REF.

PLS-00533: Tables of non_queryable types are not supported.

Cause: An attempt was made to create a table of a type which cannot be queried. Tables of such types are not supported.

Action: Create an object type containing the non-queryable type. Then create a table of the object type.

PLS-00534: A Table type may not contain a nested table type or VARRAY.

Cause: An attempt was made to do one of the following: define a table type which contained nested collection types. or define an object table that has (perhaps nested) another table type or VARRAY type.

Action: Check the table definitions to be sure that they do not contain nested tables or VARRAYs.

PLS-00535: A VARRAY type may not contain a NESTED TABLE, VARRAY or LOB

Cause: An attempt was made to do one of the following: define a VARRAY type containing a nested collection type or LOB or define a VARRAY type of an object type that has a nested attribute which is one of NESTED TABLE, VARRAY or LOB type.

Action: Check the VARRAY definitions to be sure that they do not contain nested collection types, LOBs or nested attributes.

PLS-00536: Navigation through REF variables is not supported in PL/SQL.

Cause: The expression of the form refvar.field was entered. This is not supported in PL/SQL, ver 8.0.

Action: n/a

PLS-00537: A VARRAY must have a positive limit

Cause: A VARRAY type was declared with a non-positive limit, for example VARRAY(0).

Action: Declare the VARRAY with a positive limit and retry the operation.

PLS-00538: subprogram or cursor 'string' is declared in an object type specification and must be defined in the object type body

Cause: The specified subprogram is declared in an object type's specification, but is not defined in the object type body.

Action: Define the subprogram in the object type body, or remove the declaration from the specification.

PLS-00539: subprogram 'string' is declared in an object type body and must be defined in the object type specification

Cause: The specified subprogram is declared in an object type's body, but is not defined in the object type's specification. Notice cursor bodies can exist without a specification.

Action: Define the subprogram in the object type's specification, or remove the declaration from the body.

PLS-00540: object not supported in this context.

Cause: An object was declared inside a local scope (Function, Procedure, or anonymous block), or in a package scope which is not supported.

Action: Declare the type in a global or data base scope.

PLS-00541: size or length specified is too large.

Cause: A length or size that is too large was specified for a data item.

Action: Specify a smaller value and retry the operation.

PLS-00542: CLOB and NCLOB cannot use varying-width character sets in the server

Cause: A server type is being created with an embedded CLOB or NCLOB attribute which uses a varying-width character set.

Action: Use VARCHAR2 instead of CLOB, or use a fixed-width character set.

PLS-00543: a PLSQL Table may not contain a nested table type or VARRAY.

Cause: An attempt was made to define a PLSQL table that contained a (possibly deeply) nested table type or VARRAY. Nested collection types are not supported.

Action: Remove the nested table type or VARRAY from the table. Then retry the operation.

PLS-00546: SELF may not be declared as a REF parameter.

Cause: SELF was declared as a ref parameter to a member function or procedure. SELF is not supported as a REF.

Action: Redeclare SELF as a value parameter.

PLS-00548: invalid use of operator.

Cause: A name of an operator is used as a qualifier or appears outside from sql context.

Action: Eliminate the use of operator name as a qualifier or place it in a sql clause.

PLS-00550: character set specification is not allowed for this type

Cause: A character set specification was made on a type that does not require one.

Action: Remove the character set specification, or change the type.

PLS-00551: character set ANY_CS is only allowed on a subprogram parameter

Cause: The character set ANY_CS was specified when it is not allowed.

Action: Change or remove the character set specification.

PLS-00552: flexible character set is not allowed on component element

Cause: ANY_CS or %CHARSET was used to reference an ANY_CS parameter which is not a CHAR, VARCHAR2, or CLOB type. ANY_CS or %CHARSET is not allowed for fields of a record , object, elements of a collection, etc.

Action: Change or remove the character set specification.

PLS-00553: character set name is not recognized

Cause: An unrecognized name appears in a character set specification.

Action: Change or remove the character set specification.

PLS-00554: character set has already been determined

Cause: A redundant or conflicting character set was specified.

Action: Remove the CHARACTER SET specification, or change the character set specified.

PLS-00555: default expressions are not allowed for SQL operators

Cause: A default expression has been specified for a SQL operator.

Action: Eliminate the default expression from the operator.

PLS-00560: character set mismatch

Cause: An expression was used that has the wrong character set for this context.

Action: Adjust the expression, using TRANSLATE(... USING ...) or by rethinking the logic.

PLS-00561: character set mismatch on value for parameter '*string*'

Cause: An expression was used that contains an incorrect character set. The actual argument has a character set conflict. If a default argument value is being used, it might be in conflict with some actual argument that must have the same character set.

Action: Adjust the expression, using TRANSLATE(... USING ...) or change the character set.

PLS-00562: a function must return a type.

Cause: The current function was defined to return something other than a data type.

Action: Make sure the function is returning a data type.

PLS-00563: illegal use of CAST expression

Cause: CAST (in PLSQL) was used outside of a DML scope.

Action: Do not use CAST outside DML statements.

PLS-00564: lob arguments are not permitted in calls to remote server

Cause: use of lob argument in call to remote server

Action: Do not use LOBs in call to remote server

PLS-00565: *string* must be completed as a potential REF target (object type)

Cause: Incomplete library units that are potential targets of REF dependencies must be completed so that they continue to remain potential targets of REF dependencies (since there might be library units with REF dependencies on this library unit). Potential REF targets include complete and incomplete object types. This error happened because an attempt was made to complete a potential REF target as something other than a potential REF target.

Action: Use another name for this library unit, or drop the original incomplete library unit.

PLS-00566: type name "*string*" cannot be constrained

Cause: A lob, date, boolean, rowid, or mlslabel type was constrained with a length specification. For example: X BLOB(5);

Action: Remove the constraint.

PLS-00567: cannot pass NULL to a NOT NULL constrained formal parameter

Cause: You attempted to pass NULL to a NOT NULL constrained parameter.

Action: Pass a NOT NULL expression instead.

PLS-00568: cannot access rows from a non-nested table item

Cause: You attempted to use TABLE expression, from a non-nested table

Action: pass the correct parameter

PLS-00569: numeric overflow or underflow

Cause: A constant literal is either too large or too small to fit in an Oracle number

Action: Change the value of the literal

PLS-00570: different number of columns in the multiset and cast expressions

Cause: Number of columns in the collection returned by MULTISSET and the number of columns for the CAST type don't match. For example: create type tab_obj as object (n number); create type tab1 as table of tab_obj; create table tab2 (col1 number, col2 number); select CAST(MULTISSET(select col1, col2 from tab2) as tab1) from tab2;

Action: n/a

PLS-00571: method access through data base link not yet supported on client side

Cause: Remote link is used with on client side

Action: Create a dummy function to call symbolic link on server side or wait till it is implemented

PLS-00572: improper constraint form used

Cause: "number" types cannot have a range. user-defined aggregate types and integer types cannot have scale or precision specified. Example: "x number(5,3)" is acceptable but "x number range 1..10" is not.

Action: Remove the constraint

PLS-00573: cannot constrain scale, precision, or range of an anchored type declaration

Cause: A variable declared with %TYPE or %ROWTYPE cannot have a scale, precision, or range constraint. Example: x y%TYPE(10) is not acceptable. It is legal to add "NOT NULL" or non-conflicting CHARACTER SET constraints to anchored type declarations.

Action: Remove the constraint or use a type name instead of an anchored type.

PLS-00580: supertype must be an object type

Cause: An attempt was made to declare an object type to have a supertype, but the specified supertype was not itself an object type. Object types can inherit only from other object types.

Action: Remove the supertype specification, or change it to refer to an object type. If the declaration appears correct, make sure the supertype has compiled correctly.

PLS-00581: inheritance is not supported for opaque types

Cause: An attempt was made to declare an opaque type with a supertype.

Action: Remove the supertype specification.

PLS-00582: attribute declarations are not allowed in opaque types

Cause: An attempt was made to declare an attribute in an opaque type.

Action: Remove the attribute declaration.

PLS-00583: size must be specified if opaque type is fixed-length

Cause: An attempt was made to declare a fixed-length opaque type without specifying an explicit size.

Action: Specify an explicit size, or change the declaration to be varying-length.

PLS-00584: size of an opaque type must be between 1 and 4000 bytes

Cause: An attempt was made to specify an explicit size for an opaque type, but the specified size was out of the valid range.

Action: Change the explicit size to be between 1 and 4000 bytes, or change the declaration to be varying-length without an explicit size.

PLS-00585: declared support library for opaque type is not a library

Cause: An attempt was made to name a support library for an opaque type, but the name refers to an object that is not a library.

Action: Change the declaration to name a valid library.

PLS-00586: a static method cannot declare a parameter named SELF

Cause: An attempt was made to name a parameter SELF when declaring a static method. SELF is reserved as a parameter name in methods, to hold the object instance on which the method is applied. A parameter named SELF is not allowed in static methods because static methods do not apply to a particular object instance.

Action: Change the name of the parameter in the declaration.

PLS-00587: a static method cannot be invoked on an instance value

Cause: An attempt was made to use an object instance value, not a typename, as the qualifier of the name of a method invocation, but only a typename can be used as the qualifier when calling a static method.

Action: Use the typename, not an object instance value, to qualify the name of a method if the method is static.

PLS-00588: unqualified instance attribute references allowed only in member methods

Cause: An attempt was made to use the name of an object instance attribute in the body of a static method, or in an initialization default value on another attribute. If the instance attribute is not qualified with a particular object instance that supplies a value, the instance attribute can be named only when it is inside a member method.

Action: Qualify the attribute reference with the name of an object value, or change the containing method to a member method rather than a static method.

PLS-00589: no attributes found in object type "string"

Cause: Table of non adt type is defined.

Action: Table of type should be of ADT type only

PLS-00590: attempting to create a subtype UNDER a FINAL type

Cause: An attempt was made to create a subtype UNDER a FINAL type.

Action: Avoid deriving a subtype from this FINAL type.

PLS-00591: this feature is not supported in client-side programs

Cause: One of the following features was used in a wrong context: pragma AUTONOMOUS_TRANSACTION, dynamic SQL statements, (e.g. EXECUTE

IMMEDIATE), and bulk binds. These listed features can only be used in server-side programs but not client-side programs.

Action: Remove it or define a server-side subprogram to do the work and call the subprogram from the client.

PLS-00592: the type of a object table must be an object type

Cause: You have defined a typed-table of a non-object type.

Action: Replace the non-object type with an object-type.

PLS-00593: default value of parameter "*string*" in body must match that of spec

Cause: The default value initialization of a parameter in a subprogram body contained in a package body did not match that of the corresponding subprogram specification in the corresponding package specification.

Action: Change the default initialization of the parameter in body to match that of spec.

PLS-00594: the SELF parameter can be declared only as IN or as IN OUT

Cause: The SELF parameter was declared as an OUT parameter.

Action: Declare the SELF parameter as either an IN or an IN OUT parameter.

PLS-00595: the TABLE operator is not allowed in this context

Cause: This feature is not yet implemented.

Action: Don't use weak ref cursors with bulk binds.

PLS-00597: expression '*string*' in the INTO list is of wrong type

Cause: This exception is raised for the following errors: - the expression in INTO clause of OPEN or RETURNING statement is neither of legal SQL datatypes nor of PL/SQL RECORD datatype - a collection of records is used in INTO clause of OPEN or RETURNING statement. - a record or a collection of records is used in BULK COLLECT INTO

Action: Use expression with correct datatype in the INTO clause

PLS-00598: comparison of object with NULL using "*string*" is not allowed

Cause: An object is compared with NULL using a relational operator.

Action: Use IS NULL comparison operator.

PLS-00599: SAMPLE percentage must be in the range [0.000001,100)

Cause: The percentage number is not in the range [0.000001,100)

Action: Use a percentage number in the range [0.000001,100)

PLS-00600: SAMPLE cannot be applied to a remote object

Cause: SAMPLE applying to a remote object is not supported

Action: Do not use SAMPLE with a remote object

PLS-00601: partition extended object names may only be used with tables

Cause: User attempted to use a partition-extended object name with an object which is not a table.

Action: Avoid using partition-extended name syntax with objects which are not tables

PLS-00602: CUBE and ROLLUP may appear only in a GROUP BY clause

Cause: User attempted to use the keywords CUBE or ROLLUP outside a GROUP BY clause

Action: Avoid using the keywords CUBE and ROLLUP outside the GROUP BY clause

PLS-00603: GROUPING function supported only with GROUP BY CUBE or ROLLUP

Cause: User attempted to use the GROUPING function without GROUP BY CUBE or GROUP BY ROLLUP

Action: Avoid using the GROUPING function without GROUP BY CUBE or ROLLUP

PLS-00604: aggregate function is not allowed here

Cause: One of the functions, such as AVG, COUNT, MAX, MIN, SUM, STDDEV or VARIANCE, was used in a WHERE or GROUP BY clause

Action: Remove the group function from the WHERE or GROUP BY clause. The desired result may be achieved by including the function in a subquery or HAVING clause.

PLS-00605: set operators are not yet supported as an argument to a MULTISSET operator

Cause: A set operator was used in a subquery that was the argument to a MULTISSET operator.

Action: Rewrite your SQL statement so that it does not use a set operator in the subquery that is the argument to the MULTISSET operator.

PLS-00606: cursor subquery is not supported on client side in this release

Cause: A query that contains a cursor subquery is being used from client side.

Action: Use this feature from server side only.

PLS-00607: SQLJ Object Types can have only SQLJ Types as its supertype or subtype

Cause: You were trying to create a SQLJ Object Type under a non-SQLJ Object Type.

Action: Recreate the type as a SQLJ Object Type.

PLS-00608: the value of the USING clause must match that of the supertype

Cause: You were trying to create a SQLJ Object Type with a different value of the USING clause from the USING clause specified in its supertype.

Action: Change the value of the USING clause to match the USING clause in its supertype.

PLS-00609: the OVERRIDING clause is not valid for SQLJ Object Types

Cause: You were trying to a SQLJ Object Type method that override an inherited method.

Action: Change the SQLJ Object Type definition by removing the OVERRIDING method.

PLS-00610: ROW can be used only once in SET clause of UPDATE statement

Cause: You were trying to use ROW more than once in UPDATE statement.

Action: Remove all the additional ROW in set clause of UPDATE statement.

PLS-00611: right hand side can be only the variables of record type

Cause: with ROW on LHS, only PL/SQL records or %ROWTYPE variables are allowed on right hand side..

Action: Make appropriate changes, so that right hand side should only have variables of record or %ROWTYPE.

PLS-00612: Number of attributes do not match in SET clause

Cause: Number of columns do not match with number of attributes on record type on rhs.

Action: Make sure that number of columns match with the number of attributes in record on rhs.

PLS-00613: only one item is allowed, when using variables of record type

Cause: You are trying to use more than one values in VALUES clause or RETURNING INTO clause, when one of the value is of record type..

Action: Specify only one variable of record type, or don't use variables of record type.

PLS-00614: creating a FINAL NOT INSTANTIABLE type

Cause: An attempt was made to create a FINAL NOT INSTANTIABLE type. No useful operation can be performed with this type.

Action: Avoid using the keywords FINAL and NOT INSTANTIABLE together when creating types.

PLS-00615: type mismatch found at 'string' between CASE operand and WHEN operands

Cause: In a simple CASE statement or expression, the CASE operand and WHEN operands do not match in datatype, and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the CASE operand and WHEN operands so that their datatypes match. Consider using datatype conversion functions in the CASE operand and/or WHEN operands.

PLS-00616: type mismatch found at 'string' among result expressions in a CASE expression

Cause: In a CASE expression, the result expressions do not match in datatype, and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the result expressions so that their datatypes match. Consider using datatype conversion functions in the result expressions.

PLS-00617: at least one result in the CASE expression must not be NULL

Cause: All the results in the CASE expression are the literal NULL.

Action: Change at least one result in the CASE expression to be non-NULL.

PLS-00618: type mismatch found at 'string' between operands in a NULLIF expression

Cause: In a NULLIF expression, the two operands do not match in datatype, and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the operands so that their datatypes match. Consider using datatype conversion functions in the operands.

PLS-00619: the first operand in the NULLIF expression must not be NULL

Cause: The first operand in the NULLIF expression is the literal NULL.

Action: Change the first operand in the NULLIF expression to be non-NULL.

PLS-00620: type mismatch found at '*string*' among operands in a COALESCE expression

Cause: In a COALESCE expression, the operands do not match in datatype, and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the operands so that their datatypes match. Consider using datatype conversion functions in the operands.

PLS-00621: at least one operand in the COALESCE expression must not be NULL

Cause: All the operands in the COALESCE expression are the literal NULL.

Action: Change at least one operand in the COALESCE expression to be non-NULL.

PLS-00622: range constraints must be between -2147483647 and 2147483647

Cause: The range constraints specified for a pls_integer or binary_integer declaration did not fall between -2147483647 and 2147483647.

Action: Use range constraints between -2147483647 and 2147483647.

PLS-00623: FLOAT precision constraint must be between 1 and 126

Cause: The precision specified for a FLOAT, REAL or DOUBLE PRECISION did not fall between 1 and 126.

Action: Use precision constraints between 1 and 126.

PLS-00624: USING clause must be used with either aggregate or pipelined functions

Cause: USING clause cannot be used with functions that are not declared with AGGREGATE or PIPELINED properties.

Action: Define function body in PL/SQL or some other language (using external callout call specification).

PLS-00625: PARTITION/CLUSTER/ORDER-BY clause can only be used with IN parameters

Cause: A PARTITION/CLUSTER/ORDER-BY clause was used with an OUT or IN OUT ref-cursor parameter.

Action: Change the parameter mode to IN or use some other parameter with the PARTITION/CLUSTER/ORDER-BY clause.

PLS-00626: partitioned/clustered/ordered parameter must be a function argument

Cause: A partitioning or clustering/ordering specification specified on an argument that is not one of the function arguments.

Action: Specify partitioning/clustering/ordering based on the function ref-cursor formal argument.

PLS-00627: '*string*' must be a strongly typed ref cursor

Cause: A partitioning or clustering/ordering specification specified on an argument that is not a strongly typed ref cursor.

Action: Specify partitioning/clustering/ordering based on the function ref-cursor formal argument.

PLS-00628: 'string' must be a valid record attribute

Cause: A partitioning or clustering/ordering specification must use only valid record attributes.

Action: Specify partitioning/clustering/ordering based on valid record attributes.

PLS-00629: PIPE statement cannot be used in non-pipelined functions

Cause: A PIPE statement was used in a non-pipelined function.

Action: Use PIPE statement only in pipelined functions.

PLS-00630: pipelined functions must have a supported collection return type

Cause: A pipelined function was specified with an unsupported return type. The following are not supported as return types of pipelined functions: - non-collections, - PL/SQL tables, - associative arrays, - collections of PL/SQL types: rowid, mlslabel, long, long raw, boolean, binary_integer, pls_integer, string and urowid The following restrictions apply: - If the return type is a collection of records, then each of the attributes of the record must be a supported type. - A collection of records must not contain a record type as one of its attributes.

Action: Specify a supported collection type as the pipelined function return type.

PLS-00631: PARTITION-BY and CLUSTER/ORDER-BY clauses must be used with the same function argument

Cause: PARTITION-BY and CLUSTER/ORDER-BY clauses are specified on different function arguments.

Action: Use the same argument in both PARTITION-BY and CLUSTER/ORDER-BY clauses.

PLS-00632: NOT INSTANTIABLE method cannot have a body

Cause: An attempt was made to provide an implementation for a NOT INSTANTIABLE method.

Action: Remove the implementation for the NOT INSTANTIABLE method.

PLS-00633: RETURN statement in a pipelined function cannot contain an expression

Cause: A RETURN statement in a pipelined function contains an expression, which is not allowed. Pipelined functions must send back values to the caller by using the PIPE statement.

Action: Remove the expression from the RETURN statement and use a PIPE statement to return values. Else, convert the function into a non-pipelined function.

PLS-00634: type with NOT INSTANTIABLE methods must be declared NOT INSTANTIABLE

Cause: The type being created contains NOT INSTANTIABLE methods, either declared or inherited. The type must be explicitly declared NOT INSTANTIABLE

Action: Explicitly specify the NOT INSTANTIABLE keyword or provide implementations for all the NOT INSTANTIABLE methods.

PLS-00635: method does not override

Cause: The method specification contains the OVERRIDING keyword but the method does not override a method in the ancestor types.

Action: Check the method specification.

PLS-00636: overriding method requires OVERRIDING keyword

Cause: An attempt was made to provide an overriding method specification, but the OVERRIDING keyword was not specified.

Action: Modify the method specification and specify the OVERRIDING keyword.

PLS-00637: FINAL method cannot be overridden or hidden

Cause: An attempt was made to override a FINAL MEMBER method or hide a FINAL STATIC method.

Action: Avoid overriding FINAL MEMBER methods or hiding FINAL STATIC methods

PLS-00638: cannot overload MAP method

Cause: The MAP method does override the inherited one.

Action: Make the specifications match.

PLS-00639: NCHAR/NVARCHAR2 cannot be byte length semantics

Cause: NCHAR/NVARCHAR can only be codepoint length semantics. BYTE qualifiers used with NCHAR is illegal: nc NCHAR(7 BYTE); name NVARCHAR2(10 byte);

Action: Remove BYTE qualifier to make it as codepoint length semantics

PLS-00640: a pipelined function cannot be called from PL/SQL context

Cause: A pipelined function was invoked from a PL/SQL expression.

Action: Use the pipelined function in the FROM clause of a SQL query.

PLS-00641: INTO clause not allowed for this SELECT statement

Cause: A SELECT statement in a cursor definition, an OPEN statement or a cursor FOR loop has an erroneous INTO clause.

Action: Remove the INTO clause.

PLS-00642: local collection types not allowed in SQL statements

Cause: A locally-defined (i.e. not schema level) collection type was used in a SQL statement. The type must be defined in a schema to be accepted in a SQL statement.

Action: Define the collection type in your schema, not inside a PL/SQL subprogram.

PLS-00643: booleans, index tables, records and cursors not allowed in SQL statements

Cause: Items of type boolean, table of foo index by binary_integer, record and static cursors cannot be used in SQL statements.

Action: Remove expressions of these types from the SQL statement.

PLS-00644: character set mismatch found at 'string' among result expressions in a CASE expression

Cause: In a CASE expression, the result expressions do not match in character set, and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the result expressions so that their character sets match.

PLS-00645: character set mismatch found at 'string' among operands in a COALESCE expression

Cause: In a COALESCE expression, the operands do not match in character set and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the operands so that their character sets match.

PLS-00646: MAP or ORDER method must be defined in the root of the subtype hierarchy

Cause: An attempt was made to define a MAP or ORDER method in a subtype.

Action: Define the MAP or ORDER method in the root of the subtype hierarchy. You can override MAP methods in subtypes.

PLS-00647: attribute by name "string" conflicts with method by same name

Cause: While creating a subtype some attribute name conflicted with a method name.

Action: Use a different name for attribute or method in the type being created.

PLS-00648: type of supertype attribute "string" can not be a subtype or reference to a subtype in this release

Cause: User tried to complete a type, Tsub as a subtype of another type, Tsuper where Tsuper contained an attribute of type Tsub or of type REF to Tsub. This is an implementation restriction.

Action: Change the design of code to not use any type with attribute whose type is of subtype or REF to subtype.

PLS-00649: method "string" can be overridden only once per object type

Cause: User tried to override the method more than once in the same subtype.

Action: Either make this an extra overload by removing the OVERRIDING keyword where the method signature is different. The argument types should be reconsidered otherwise.

PLS-00650: invalid type for PARTITION/CLUSTER/ORDER BY clause

Cause: User tried to use invalid type for PARTITION/CLUSTER/ORDER BY clause.

Action: Use legal allowed types.

PLS-00651: implementation type in Aggregate/Table function should be a valid type

Cause: User tried to use some other database object like a package to define implementation type of an aggregate/table function.

Action: Use a valid user defined type as implementation type.

PLS-00652: aggregate functions should have exactly one argument

Cause: User tried to create aggregate function with either 0 or more than one arguments.

Action: Do not create aggregate function with 0 or more than one argument.

PLS-00653: aggregate/table functions are not allowed in PL/SQL scope

Cause: User tried to use a table/aggregate function in PL/SQL scope.

Action: Do not use table/aggregate function in PL/SQL scope.

PLS-00654: PARTITION/ORDER/CLUSTER BY are allowed for only with PARALLEL_ENABLE

Cause: User tried partition by order by cluster by without parallel enable clause in table function.

Action: specify parallel enable also when using partition by, cluster by order by clause.

PLS-00655: only functions can be declared as PIPELINED

Cause: user is trying to declare a procedure to be pipelined function

Action: declare a function instead of a procedure to be a pipelined function

PLS-00656: field 'string' not available in input argument

Cause: An EXTRACT operation specified a field that was not present. For example, you tried to extract the YEAR field from a TIME variable.

Action: Specify a legal field in the call to EXTRACT.

PLS-00657: Implementation restriction: bulk SQL with associative arrays with VARCHAR2 key is not supported.

Cause: Variable or expression of associative array type was used as bulk SQL bind or define.

Action: Use collection types supported by bulk SQL.

PLS-00658: constructor method name must match type name

Cause: The name of the object type constructor does not match the type name.

Action: Change the name of the constructor method to match the type name.

PLS-00659: constructor method must return SELF AS RESULT

Cause: The return clause of the constructor method did not specify SELF AS RESULT.

Action: Change the return clause to include RETURN SELF AS RESULT.

PLS-00660: SELF parameter of constructor method must be IN OUT

Cause: The mode of the SELF parameter of the constructor was not IN OUT.

Action: Change the mode of the SELF parameter to be IN OUT.

PLS-00661: RETURN statement in a CONSTRUCTOR cannot include an expression

Cause: An attempt was made to include an expression in the RETURN statement of a CONSTRUCTOR body.

Action: Remove the expression from the RETURN statement.

PLS-00662: Non-external object types containing external mapped attributes are not allowed

Cause: An attempt was made to create a non-external object, whose attributes are mapped externally.

Action: Create the object as an external object.

PLS-00663: the NEW keyword is not allowed in this context

Cause: The NEW keyword is not followed by an call to a constructor method.

Action: Remove the NEW keyword, or make sure the expression following it is a constructor call.

PLS-00664: Both ORDER BY and CLUSTER BY can not be specified for the same table function

Cause: An attempt was made to specify both ORDER BY and CLUSTER BY for the same table function.

Action: specify either ORDER BY or CLUSTER BY for a table function, but not both.

PLS-00665: ORDER BY and CLUSTER BY clauses require a PARTITION BY clause

Cause: An attempt was made to specify an ORDER BY or CLUSTER BY clause without also specifying a PARTITION BY clause.

Action: Add a PARTITION BY clause, or remove the ORDER BY or CLUSTER BY clause.

PLS-00666: Only index by binary_integer/pls_integer associative arrays allowed here

Cause: An attempt was made to specify index collection that was not indexed by binary_integer or pls_integer.

Action: Change the index collection variable type to associative array that is indexed by binary_integer or pls_integer.

PLS-00667: Element type of associative array should be pls_integer or binary_integer

Cause: An attempt was made to specify index collection whose element type was not one of pls_integer or binary_integer.

Action: Change the index collection variable type to associative array whose element type is pls_integer or binary_integer.

PLS-00668: Type of expression should be a collection type

Cause: An attempt was made to specify expression after INDICES OF or VALUES OF clause whose type is not a collection type.

Action: Change the index collection expression type to a valid collection type.

PLS-00669: Type of expression should be a valid collection variable

Cause: An attempt was made to specify expression after INDICES OF or VALUES OF clause that is not a collection variable.

Action: Change the index collection expression type to a valid collection variable.

PLS-00670: sort columns must be simple column names

Cause: An attempt was made to specify an expression as a sort column in a PARTITION BY, CLUSTER BY or ORDER BY clause. Only simple column names are permitted.

Action: Specify a simple column name.

PLS-00671: this expression is allowed only with instance methods

Cause: The generalized invocation syntax was used in instance method context.

Action: The generalized invocation syntax can only be used in an instance method that is not a constructor.

PLS-00672: The expression *string* should be a subtype of the type *string*

Cause: The expression in the generalized expression should be a subtype of the type.

Action: The type of expression should be a subtype of the type name.

PLS-00673: Generalized expression is not allowed in this context

Cause: The generalized expression is used in wrong context.

Action: Fix the expression and remove the generalized expression syntax.

PLS-00674: references to fields of BULK In-BIND table of records or objects must have the form A(I).F

Cause: The form table(bulk_index).field is the only field selection supported at runtime.

Action: Use a FOR loop instead of the FORALL DML statement (MERGE/INSERT/DELETE/UPDATE) or revise reference to fit the form allowed.

PLS-00675: invalid section for this type of Compound Trigger

Cause: Before and After row sections are not allowed for Compound triggers defined on the Table and instead of row section is not allowed for Compound Triggers defined on a view.

Action: Remove the invalid sections for this context.

PLS-00676: duplicate Compound Triggers section

Cause: Each Compound Trigger Section can appear at most once in a body of the compound trigger

Action: Remove the offending sections.

PLS-00677: Compound Triggers cannot be autonomous transactions

Cause: The Compound Triggers had pragma autonomous transaction.

Action: Call autonomous function or procedure, if autonomous transaction behavior is desired from Compound Triggers.

PLS-00678: RETURN statement not allowed inside Compound Triggers

Cause: A return Statement was seen inside a compound trigger

Action: Remove Return statement and use other PL/SQL constructs to transfer flow of control.

PLS-00679: trigger binds not allowed in before/after statement section

Cause: :new or :old were used in this section.

Action: Do not use trigger binds in this section

PLS-00680: BEFORE/AFTER ROW sections were used in a view trigger

Cause: BEFORE/AFTER ROW sections are not allowed with instead of row triggers.

Action: Remove the offending sections.

PLS-00700: PRAGMA EXCEPTION_INIT of *string* must follow declaration of its exception in the same declarative part

Cause: An EXCEPTION_INIT pragma was not declared in the same block as its exception. They must be declared in the proper order in the same block, with the pragma declaration following the exception declaration.

Action: Place the EXCEPTION_INIT pragma directly after the exception declaration referenced by the pragma.

PLS-00701: illegal ORACLE error number *string* for PRAGMA EXCEPTION_INIT

Cause: The error number passed to an EXCEPTION_INIT pragma was out of range. The error number must be in the range -9999 .. -1 (excluding -100) for Oracle errors or in the range -20000 .. -20999 for user-defined errors.

Action: Use a valid error number.

PLS-00702: second argument to PRAGMA EXCEPTION_INIT must be a numeric literal

Cause: The second argument passed to an EXCEPTION_INIT pragma was something other than a numeric literal (a variable, for example). The second argument must be a numeric literal in the range -9999 .. -1 (excluding -100) for Oracle errors or in the range -20000 .. -20999 for user-defined errors.

Action: Replace the second argument with a valid error number.

PLS-00703: multiple instances of named argument in list

Cause: Two or more actual parameters in a subprogram call refer to the same formal parameter.

Action: Remove the duplicate actual parameter.

PLS-00704: 'string' must be declared as an exception

Cause: The exception_name parameter passed to an EXCEPTION_INIT pragma is misspelled or does not refer to a legally declared exception. Or, the pragma is misplaced; it must appear in the same declarative section, somewhere after the exception declaration.

Action: Check the spelling of the exception_name parameter. Then, check the exception declaration, making sure the exception name and the keyword EXCEPTION are spelled correctly. Also make sure the pragma appears in the same declarative section somewhere after the exception declaration.

PLS-00705: exception 'string' used in expression requiring return type

Cause: An exception was referred to in an expression. Exceptions have names but not values and therefore cannot contribute values to an expression. For example, the following RETURN statement is illegal: FUNCTION credit_limit (cust_no INTEGER) RETURN NUMBER IS limit NUMBER; over_limit EXCEPTION; ... BEGIN ... RETURN over_limit; -- illegal END;

Action: Check the spelling of the identifiers in the expression, then rewrite the expression so that it does not refer to an exception.

PLS-00706: Exception string cannot be used as prefix of a selected component

Cause: An exception name was mistakenly used to qualify a reference to a component. For example, when dot notation was used to specify fields within a record, an exception name might have been coded instead of the record name.

Action: Rewrite the component reference using a valid prefix (for example, the name of a package, record, or schema).

PLS-00707: unsupported construct or internal error [string]

Cause: At run time, this is an internal error. At compile time, it indicates one of the following problems: -- A call was made to a remote subprogram that has a parameter type or default expression not supported at the calling site. -- An incomplete upgrade or downgrade was done to a database that has stored procedures. Perhaps incorrect versions of system packages such as STANDARD.SQL were installed. -- A compiler bug was encountered. In such cases, legal PL/SQL syntax will fail to compile.

Action: Either report the internal error to your Customer Support representative or, depending on the problem, take one of the following actions: -- Revise the logic of the application to use parameter types and default expressions that are supported at both the local and remote sites. -- Complete the upgrade or downgrade properly, making sure to install correct versions of all system packages. -- Report the legal-syntax error to your Customer Support representative. If there are line and column numbers displayed with the error message, they might help you find a workaround. For example, try recoding the offending line to avoid the bug.

PLS-00708: Pragma string must be declared in a package specification

Cause: The named pragma was not declared in a package specification, as required. For example, the pragma RESTRICT_REFERENCES must be declared in a package specification.

Action: Remove or relocate the misplaced pragma.

PLS-00709: pragma *string* must be declared in package specification and body

Cause: The named pragma was declared in a package specification but not in the corresponding package body or vice-versa, as well as the package body.

Action: Add the pragma to that part of the package declaration that does not have the pragma.

PLS-00710: Pragma *string* cannot be specified here

Cause: The pragma was specified in an inappropriate context.

Action: Remove or relocate the misplaced pragma. Check the documentation to determine the correct context for this pragma.

PLS-00711: PRAGMA *string* cannot be declared twice

Cause: The PRAGMA was declared twice in the same block.

Action: remove the duplicate declaration of the PRAGMA

PLS-00712: illegal option for subprogram *string*

Cause: Only top level subprograms or subprogram declarations in PACKAGE or TYPE specifications are allowed to have the options DETERMINISTIC or PARALLEL_ENABLE. For example, this error would be raised if the options are used in PACKAGE or TYPE body.

Action: remove the option.

PLS-00713: attempting to instantiate a type that is NOT INSTANTIABLE

Cause: An attempt was made to instantiate a type that is defined as NOT INSTANTIABLE.

Action: Avoid instantiating variables of this NOT INSTANTIABLE type, instead derive an INSTANTIABLE subtype from it and instantiate variables of the subtype.

PLS-00714: supertypes's AUTHID is DEFINER but supertype and subtype are not in same schema

Cause: The supertype's AUTHID is DEFINER, but the supertype and subtype are defined in different schemas. SQL statements executed in dynamically dispatched methods can potentially pick up different values from database tables in the two schemas.

Action: Create the subtype in the same schema as the supertype.

PLS-00715: attribute or method by name '*string*' does not exist

Cause: An attempt was made to drop a nonexistent method or attribute from the type being altered.

Action: Check the spelling of the attribute or method name. Make sure it is locally defined in the type and not inherited.

PLS-00716: Attribute/method '*string*' can occur only once in an ALTER TYPE statement

Cause: User attempted more than one of ADD, DROP or MODIFY on an attribute in single ALTER TYPE statement. User attempted more than one of ADD or DROP on a method in single ALTER TYPE statement.

Action: Do only one ADD, DROP or MODIFY for an attribute in single ALTER TYPE statement. Do only one ADD or DROP for a method in single ALTER TYPE statement.

PLS-00717: method '*string*' does not have matching signature among existing methods

Cause: The method to be dropped matches the name of some existing method but does not match it in signature.

Action: Make sure that a matching method signature is provided for dropping a method.

PLS-00718: type of attribute '*string*' does not allow modifications to the attribute

Cause: The type of the attribute to modify is not one of VARCHAR2, NUMBER, or RAW.

Action: Only VARCHAR2, NUMBER and RAW type attributes are allowed to be modified.

PLS-00719: only widening of attribute '*string*' constraints is allowed

Cause: Modification to the attribute did not widen its constraints or attempted to change the type of the attribute. For NUMBER type attributes, scale and precision can be changed to allow increase in number of digits after and before the decimal point. For VARCHAR2 and RAW type attributes the size can be increased. Other type attributes are not allowed to be modified. Change of type of attribute is also not allowed.

Action: Change the constraint specification so as to widen the existing constraints. To narrow the constraints or to change the type of the attribute, you must drop the attribute and add it with new constraints or new type. In that case you must also take appropriate steps to preserve your existing data based on the type (if you want to preserve it). Typically this will involve backing up the data and restoring it after the ALTER TYPE.

PLS-00720: type '*string*' has evolved

Cause: The type has evolved. The version of the type used by the compiled code is not the same as the latest version of the type.

Action: Recompile the code to use the latest version of the type.

PLS-00721: '*string*' formed a non-REF mutually-dependent cycle with '*string*'

Cause: This compilation was aborted because the library unit that was compiled would have formed a non-REF mutually-dependent cycle with some other library units. This happens when an attempt is made to compile types that have attributes of other types that may participate in a cycle with this type. Example: create type t1; create type t2 (a t1); create type t1 (a t2);

Action: Break the cycle (possibly by adding a REF or by using another type).

PLS-00722: supertypes's AUTHID is different than subtype's AUTHID

Cause: The subtype's AUTHID must be same as the supertype's AUTHID.

Action: Create the subtype with AUTHID of its supertype or do not specify AUTHID for subtype.

PLS-00725: type '*string*' must be a supertype or subtype of the TREAT expression

Cause: In TREAT(*expr* AS *type*), type must be a supertype or subtype of *expr*.

Action: n/a

PLS-00726: MODIFY ELEMENT is supported only on schema-level varray and nested tables

Cause: An attempt was made to modify the limit of a type that was not a schema-level varray and nested table type.

Action: This is not a legal ALTER TYPE command for this type.

PLS-00727: MODIFY LIMIT is supported only on schema-level varray types

Cause: An attempt was made to modify the limit of a type that was not a schema-level varray type.

Action: This is not a legal ALTER TYPE command for this type.

PLS-00728: the limit of a VARRAY can only be increased and to a maximum 2147483647

Cause: An attempt was made to decrease the limit or raise it past 2147483647.

Action: This is not a legal limit for this type, change it.

PLS-00729: only widening of the collection element type is allowed

Cause: Modification to the collection element type did not widen its constraints or attempted to change the type of the element. For NUMBER types, scale and precision can be changed to allow increase in number of digits after and before the decimal point. For VARCHAR2 and RAW type attributes the size can be increased.

Action: Change the constraint specification so as to widen the existing constraints.

PLS-00730: collection element type does not allow modifications

Cause: The element type to modify is not one of VARCHAR2, NUMBER, or RAW.

Action: Only VARCHAR2, NUMBER and RAW collection elements can be modified.

PLS-00731: ALTER TYPE is supported only on schema-level types

Cause: An attempt was made to alter a type that was not schema-level.

Action: ALTER TYPE is not legal for this type.

PLS-00732: Illegal overload of ellipsis in formal parameter list

Cause: An ellipsis and a non-ellipsis type appeared at the same position in separate overload candidates. Currently, if ellipsis types are used they must appear in ALL overload candidates with the same name (regardless of the number or types of their formal parameters) at the same position in the formal parameter list.

Action: Make sure that ellipsis types appear at the same position in all overload candidates.

PLS-00733: RPCs to variable argument functions are not allowed

Cause: Attempted to call a vararg function (a function which contains ellipsis in the formal parameter list) as an RPC.

Action: Do not call vararg functions as an RPC.

PLS-00734: Illegal use of an associational parameter with a formal ellipsis

Cause: Attempted to use an associational actual argument for a formal ellipsis type argument.

Action: Remove associational parameters which correspond to formal ellipsis types.

PLS-00735: Attempted to declare more than one formal ellipsis parameter

Cause: More than one ellipsis ('...') was found in a formal parameter specification for a function or procedure

Action: Make sure only one ellipsis appears in a formal parameter specification for any given function or procedure

PLS-00736: user-declared operators are not allowed

Cause: An attempt was made by the user to declare an operator (a function whose name is enclosed in single quotes ('')). Operators may only be declared in package STANDARD.

Action: Remove the single quotes from around the function name, replacing them with double quotes (""") only if needed.

PLS-00737: LIBRARY or ASSEMBLY file specification exceeds the maximum allowed length

Cause: A string of more than expected number of characters was found for the LIBRARY or ASSEMBLY file specification.

Action: Limit the LIBRARY or ASSEMBLY file specification to the appropriate size for the platform.

PLS-00738: REF target *string* changed during compilation

Cause: The current unit contains a REF to a target object. During compilation, the REF's target object was simultaneously changed by a different session. The current unit is therefore invalid and needs to be recompiled to pick up the latest definition of the REF target.

Action: Recompile the unit that has this error.

PLS-00739: FORALL INSERT/UPDATE/DELETE not supported on remote tables

Cause: The current statement refers to remote insert/update/delete for remote object.

Action: Use a FOR loop instead of a FORALL loop or call a remote function or procedure that includes the FORALL INSERT/UPDATE/ DELETE statement.

PLS-00740: ASSEMBLY identity specification exceeds the maximum allowed length

Cause: A string of more than expected number of characters was found for the ASSEMBLY identity specification.

Action: Limit the ASSEMBLY identity specification to the appropriate size.

PLS-00741: *string* must be specified on subprogram *string*'s declaration and definition

Cause: A property was specified on a subprogram's declaration but not on its definition or vice-versa.

Action: Certain subprogram properties (e.g., RESULT_CACHE) must be specified as part of the subprogram declaration and definition. For example, if the property RESULT_CACHE is specified on a subprogram declared in a package specification, then it must also be specified on the subprogram's definition in the package body (and vice-versa).

PLS-00742: field *string* is not yet denotable

Cause: When the fields of a record were declared, one field was used to initialize another, as in: TYPE my_rec IS RECORD (f1 varchar2(10), f2 varchar2(10) := f1); The first field has no value until run time, so it cannot be used to initialize another field.

Action: Remove the illegal field reference.

PLS-00743: ASSEMBLY IDENTITY string is null

Cause: The string provided for the identity clause of an ASSEMBLY was null.

Action: Provide a valid identity string for the ASSEMBLY.

PLS-00744: DOTNET call specification methodname is null

Cause: The string provided for the METHODNAME clause of a DOTNET call specification was null.

Action: Provide a valid METHODNAME for the ASSEMBLY.

PLS-00745: ASSEMBLY CONTEXT string is null

Cause: The string provided for the CONTEXT clause of an ASSEMBLY was null.

Action: Provide a valid CONTEXT string for the ASSEMBLY.

PLS-00746: ASSEMBLY AGENT string is null

Cause: The string provided for the AGENT clause of an ASSEMBLY was null.

Action: Provide a valid AGENT string for the ASSEMBLY.

PLS-00747: .NET assemblies are not supported on this platform

Cause: .NET assemblies were not supported on this platform. .NET assemblies are only supported on 32-bit and 64-bit Windows.

Action: Only attempt to create assemblies on 32-bit or 64-bit Windows.

PLS-00748: compilation terminated due to other errors

Cause: Compilation of the library unit was terminated because of other reported errors.

Action: Fix the other reported errors.

PLS-00751: cannot find PACKAGE SYS_STUB_FOR_PURITY_ANALYSIS

Cause: A top level subprogram (function or procedure) cannot be created if the system package SYS_STUB_FOR_PURITY_ANALYSIS is missing in the Oracle database.

Action: Make sure the package is in the database, and retry the creation

PLS-00752: Table function *string* is in an inconsistent state.

Cause: Some of the internally generated types prefixed with SYS_ have been dropped. These should never be dropped by the user.

Action: Recompile the table function or the package or type that contains the table function.

PLS-00753: malformed or corrupted wrapped unit

Cause: The format of the wrapped unit being compiled is not understood by the compiler. This may be because the unit was edited or modified after it was wrapped.

Action: Rewrite the unit.

PLS-00754: illegal reference to editioned object *string*

Cause: An attempt was made to violate the rule "A noneditioned object may not depend on an editioned object."

Action: Either make this object editioned; or do not make the illegal reference.

PLS-00755: SYSAUX tablespace offline while saving identifier data

Cause: The SYSAUX tablespace was offline while attempting to save identifier data. Any identifier data previously collected and saved for the libunit will be invalid.

Action: Bring the SYSAUX tablespace back online and recompile the object.

PLS-00756: PL/SQL does not support feature "*string*" "*string*" in this environment

Cause: Some host environments of the PL/SQL compiler do not support the full range of PL/SQL features. A construct in the program violated one of the current host's restrictions.

Action: Modify the program to avoid using features that are not supported by this host environment. Check the host environment documentation for specific changes and limitations in PL/SQL features.

PLS-00757: only one column allowed for PARTITION BY VALUE clause

Cause: More than one column was specified for the PARTITION BY VALUE clause.

Action: Remove the additional columns.

PLS-00758: only a NUMBER column is allowed in this context

Cause: The partitioning column of the PARTITION BY VALUE clause was not a NUMBER column.

Action: Change the partitioning column to be a NUMBER column.

PLS-00801: internal error [*string*]

Cause: This is a generic internal error that might occur during compilation or execution. The first parameter is the internal error number.

Action: Report this error as a bug to your Customer Support representative.

PLS-00900: can't find body of unit '*string*'

Cause: At run time, the body of a program unit could not be found. This can happen for one of two reasons. -- First, there may be a unit 'a' which calls a module 'b', where the spec for 'b' exists but not the body. In this case, since the spec is present, there will be no compile-time errors. -- Secondly, this can occur if there is a reference to a sequence outside of the proper context such as a SQL statement. In this case, the "spec" of the sequence reference can be found, but it is invalid to actually run code which references the sequence outside a SQL statement, as in: `i := seq.nextval;`

Action: If caused by the first reason, create a body for the object that is being referenced. If caused by the second reason, move the sequence into a SQL statement. For example, `i := seq.nextval;` can be replaced by: `select seq.nextval into temp from dual; i := temp;`

PLS-00901: the data type of column '*string*' of table '*string*' is not supported

Cause: A column in a database table belongs to a datatype that is not supported by the current release of PL/SQL.

Action: Remove the offending column from the table or copy the desired columns to another table.

PLS-00902: A READ-ONLY bind variable used in OUT or IN-OUT context

Cause: A host variable that is protected from update was used in a context that allows an update.

Action: Check the context and change the use of the host variable, or assign the value of the host variable to a PL/SQL local variable, then use the local variable instead.

PLS-00904: insufficient privilege to access object *string*

Cause: An attempt was made to operate on a database object without the required privilege. This error occurs, for example, if an attempt was made to UPDATE a table for which only SELECT privileges were granted.

Action: Ask the DBA to perform the operation or to grant you the required privilege.

PLS-00905: object *string* is invalid

Cause: An invalid package specification or stored subprogram was referenced. A package specification or stored subprogram is invalid if its source code or any database object it references has been DROPPed, REPLACed, or ALTERed since it was last compiled.

Action: Find out what invalidated the package specification or stored subprogram, then make sure that Oracle can recompile it without errors.

PLS-00906: Compilation is not possible

Cause: The PL/SQL compiler cannot run properly because its operating environment is corrupted. For example, its error message file might be inaccessible.

Action: Check the PL/SQL operating environment, making sure that all files required by the compiler are accessible.

PLS-00907: cannot load library unit *string* (referenced by *string*)

Cause: PL/SQL is unable to find and load a library unit that was previously available. This typically happens when you try to load a unit which references another library unit that is non-existent or invalid.

Action: Provide the needed library unit.

PLS-00908: The stored format of *string* is not supported by this release

Cause: PL/SQL cannot understand the stored format of a library unit. It has been compiled or shrink-wrapped with a version of PL/SQL either too new or too old for this version to understand it.

Action: Recompile the library unit for this version of PL/SQL.

PLS-00909: object *string* is not declared or insufficient privileges to access object *string*

Cause: An object from the operator declaration is not declared, or it is declared but there is no sufficient privileges to access that object.

Action: Declare the object, or ask the DBA to grant the privileges required to access the object.

PLS-00910: insufficient privilege to inherit from type *string*

Cause: An attempt was made to inherit from a type without the required UNDER privilege.

Action: n/a

PLS-00920: parameter `plsql_native_library_dir` is not set

Cause: A PL/SQL program is being compiled natively, but the compiler parameter `plsql_native_library_dir`, which denotes the directory to store the native shared objects (DLL), is not set.

Action: The DBA should set this parameter.

PLS-00923: native compilation failed: *string:string*

Cause: The native compilation of PL/SQL program has failed because the native shared object (DLL) could not be created successfully.

Action: The DBA should ensure that the commands specified in `spnc_commands` file are correct.

PLS-00924: native compilation is not supported on this platform

Cause: Native compilation of PL/SQL programs is not supported on this platform.

Action: Compile the PL/SQL program to bytecode by setting the parameter `plsqli_compiler_flags` to `INTERPRETED`.

PLS-00925: native compilation failed: Unable to create file (*string string*)

Cause: Native compilation of a PL/SQL program failed because a file could not be created. It is likely that the system parameter `plsqli_native_library_dir` does not reference a writable, existing directory

Action: Ensure that the system parameter `plsqli_native_library_dir` references a directory which exists, and is writable.

PLS-00950: In this version, PL/SQL tables can not be used in this SQL statement.

Cause: In a SQL statement, a PL/SQL table was referenced incorrectly. For example, the following reference might have been made, but PL/SQL table attributes can only be used in procedural statements: `SELECT ename_tab.COUNT INTO name_count WHERE ...`

Action: Remove the incorrect reference from the SQL statement.

PLS-00951: *string* Feature is not supported by this release

Cause: PL/SQL cannot understand something in an imported library unit. It uses some feature either too new or too old for this version to understand it.

Action: Recompile the imported library unit with this version of PL/SQL, to discover more precisely what feature is not supported.

PLS-00960: RPCs cannot use parameters with schema-level object types in this release

Cause: Schema-level object types, or types which recursively use such types, were used in an RPC, which is not permitted. For example: `create type foo as object (...)`
`create package my_pack is type my_rec is record(v foo);` -- on a remote server: `x my_pack.my_rec@rpc;` -- illegal attempt to use type `my_rec`

Action: Use only PL/SQL-defined types in RPC calls. It may be necessary to add extra code to element-wise copy schema-level types into local types in order to move such data through an RPC.

PLS-00970: The class name of a method must match that of EXTERNAL NAME clause in the type header

Cause: The class name defined as part of the method signature does not match the one defined in the type header in the EXTERNAL NAME clause. `create type foo as object EXTERNAL NAME 'foo' LANGUAGE JAVA (... MEMBER FUNCTION my (number) return number EXTERNAL NAME 'bar.func(oracle.sql.NUMBER) return oracle.sql.NUMBER', ..);`

Action: Either omit the class name from the method signature or use the one defined in the type header.

PLS-00989: Cursor Variable in record, object, or collection is not supported by this release

Cause: 3.0 Implementation Restriction for Ref Cursors

Action: n/a

PLS-00990: Index Tables of Cursor Variables are disallowed

Cause: 2.2 Implementation Restriction for Ref Cursors

Action: n/a

PLS-00992: Cursor Variables cannot be FETCH'ed from

Cause: 2.2 Implementation Restriction for Ref Cursors

Action: n/a

PLS-00993: Cursor variables cannot be passed as forwarded RPC arguments or results

Cause: An attempt was made to pass a cursor variable to or from a remote subprogram by way of a forwarded RPC, which is not allowed. For example, from a client-side tool, a procedure on a remote database cannot be used to open a cursor variable because remote subprograms cannot return the values of cursor variables.

Action: Change the subprogram call to reference the local database.

PLS-00994: Cursor Variables cannot be declared as part of a package

Cause: An attempt was made to declare a cursor variable in a package specification, which is not allowed. Although REF CURSOR types can be defined in a PL/SQL block, subprogram, or package, cursor variables can be declared only in a block or subprogram.

Action: Move the cursor variable declaration into a PL/SQL block or subprogram.

PLS-00995: unhandled exception # *string*

Cause: An exception was raised for which no handler was found. If it cannot find a handler for a raised exception, PL/SQL returns an unhandled exception to the host environment. The number embedded in the message is an Oracle error code listed in this manual.

Action: Fix the condition that raised the exception, write an appropriate exception handler, or use the OTHERS handler. If there is an appropriate handler in the current block, the exception was raised in a declaration or exception handler, and therefore propagated immediately to the enclosing block.

PLS-00996: out of memory

Cause: A request from PL/SQL for more memory failed.

Action: Make sure that you are not referencing the wrong row in a PL/SQL table and that the program is not recursing too deeply.

PLS-00997: no cursor return types allowed in this beta version

Cause: Cursor return types have bugs, and it is best to disable them for now.

Action: n/a

PLS-00998: implementation restriction (may be temporary)

PLS-00999: implementation restriction (may be temporary) *string*

PLS-01400: Use of '||' token

Cause: Use of '||' token in expressions is not in ANSI's grammar. This corresponds to the "binary_add_op"'s reduction to a "CAT_" in plsql.y

Action: n/a

PLS-01401: Identifier over 18 characters long

Cause: Identifiers over 18 characters long are not allowed under the ANSI grammar.

Action: n/a

PLS-01402: Use of quoted identifier

Cause: The use of quoted identifiers is a PL/SQL extension and is not allowed under the ANSI grammar.

Action: n/a

PLS-01403: Comment delimiters /* */

Cause: C-style comments (introduced with the '/' and '*' characters) are not part of the ANSI grammar. To conform with ANSI, comments must be preceded by the ANSI comment introducer, '--', and must not contain a newline. If someone can figure out a way to make this message look less cheesy without ending up with nested comments, be my guest.

Action: n/a

PLS-01404: ANSI Identifiers can only consist of letters, digits, and the underscore character

Cause: ANSI identifiers can only consist of letters, digits, and the underscore character. PL/SQL allows "#" and "\$" in identifiers, but these are not ANSI.

Action: n/a

PLS-01405: Under ANSI's grammar, numeric data represented in exponent notation must use an uppercase E

Cause: Under ANSI's grammar, numeric data represented in exponent notation must use an uppercase "E". Example: 3.45E-6 is ANSI, but 3.45e-6 is not.

Action: n/a

PLS-01406: An identifier has been found that is considered a keyword in ANSI's grammar but not in PL/SQL's

Cause: An identifier has been found that is considered a keyword in ANSI's grammar but not in PL/SQL's.

Action: n/a

PLS-01407: One of the identifiers CHAR, CHARACTER, or INTEGER has been redefined by the programmer

Cause: One of the identifiers "CHAR", "CHARACTER", or "INTEGER" (all ansi keywords) has been redefined by the programmer.(special case of 1406, above).

Action: n/a

PLS-01408: Use of '&' token

Cause: Use of '&' token in expressions is not in ANSI's grammar.

Action: n/a

PLS-01409: Use of 'PRIOR_' token

Cause: Use of 'PRIOR_' token in expressions is not in ANSI's grammar.

Action: n/a

PLS-01410: Use of 'MOD' token

Cause: Use of 'MOD' token in expressions is not in ANSI's grammar.

Action: n/a

PLS-01411: Use of 'REM' token

Cause: Use of 'REM' token in expressions is not in ANSI's grammar.

Action: n/a

PLS-01412: Use of 'EXP' token

Cause: Use of 'EXP' token in expressions is not in ANSI's grammar.

Action: n/a

PLS-01413: Use of NULL an expression

Cause: Use of NULL an expression not in ANSI's grammar.

Action: n/a

PLS-01414: Use of qualified expression here

Cause: Use of qualified expression here is not in ANSI's grammar.

Action: n/a

PLS-01415: Use of aggregate value here

Cause: Use of aggregate value here is not in ANSI's grammar.

Action: n/a

PLS-01416: Use of *id (value...)* here

Cause: Use of *id (value...)* here is not in ANSI's grammar.

Action: n/a

PLS-01417: Use of %%attribute

Cause: Use of %%attribute value here is not in ANSI's grammar.

Action: n/a

PLS-01418: Subquery cannot include set operators in ANSI's grammar

Cause: Subquery cannot include set operators in ANSI's grammar.

Action: n/a

PLS-01419: Subquery must have either '*' or exactly one column in its select list

Cause: Subquery must have either '*' or exactly one column in its select list according to ANSI's grammar.

Action: n/a

PLS-01420: INTERSECT and MINUS set operators are not ANSI

Cause: INTERSECT and MINUS set operators are not ANSI

Action: n/a

PLS-01421: FOR UPDATE clause

Cause: FOR UPDATE clause is not in ANSI's grammar.

Action: n/a

PLS-01422: Aliases

Cause: Aliases are not in ANSI's grammar.

Action: n/a

PLS-01423: Subquery on right-hand-side in set clause

Cause: Subquery on right-hand-side in set clause is not in ANSI's grammar.

Action: n/a

PLS-01424: Non-ANSI order of clauses

Cause: ANSI specifies an ordering to clauses in a table-expression which PL/SQL doesn't. The ordering according to ANSI must be: (1) from clause (2) where clause (3) group-by clause (4) having clause In PL/SQL, the from clause must come first, and the clauses after it can appear in any order (with the addition of the non-ansi connect-by clause).

Action: n/a

PLS-01425: Connect-by clause

Cause: ANSI doesn't allow connect-by clauses.

Action: n/a

PLS-01450: This *value expression* contains a nonconforming data type

Cause: This *value expression* contains a nonconforming data type. Section 4.2 of X3H2, "Data types" states that: "A nonnull value is either a character string or a number." Many builtin functions in STANDARD will be flagged with this warning by means of a pragma.

Action: n/a

PLS-01451: The data types of these *value expressions* must be comparable

Cause: The data types of these *value expressions* must be comparable. Section 4.2 of X3H2, "Data types", states that: "A character string and a number are not comparable values." Many builtin functions in STANDARD will be flagged with this warning by means of a pragma. This warning will be place on data-type coercion functions, for example, TO_CHAR(*number*), that are inserted in OracleSQL to allow non-conforming data type combinations.

Action: n/a

PLS-01452: This function is not part of the ANSI standard

Cause: This function is not part of the ANSI standard. This warning is used to flag such functions as "POWER" that are not mentioned in the ANSI specifications.

Action: n/a

PLS-01453: This procedure is not part of the ANSI standard

Cause: This procedure is not part of the ANSI standard. This warning is used to flag such procedures as "STOP" that are not mentioned in the ANSI specifications.

Action: n/a

PLS-01454: No operator may be used with values of data type CHAR

Cause: No operator may be used with values of data type "character string". Section 5.9, "*value expression*", syntax rule 3, of X3H2 states: "If the data type of a *primary* is character string, then the *value expression* shall not include any operators." This warning is placed on many functions in STDBASE that take CHAR args.

Action: n/a

PLS-01455: The predicates IS NULL and IS NOT NULL are defined only for column specifications

Cause: The predicates "IS NULL" and "IS NOT NULL" are defined only for column specifications, not for any other expressions. Section 5.15, "*null predicate*", indicates that in the predicate "x IS NULL", x must be a column, and may not be any other kind of expression.

Action: n/a

PLS-01456: Name length cannot exceed 3.

PLS-01458: The set clause in an UPDATE statement requires a column name of length 1

Cause: The set clause in an UPDATE statement requires a column name of length 1. Sect. 8.11, 8.12

Action: n/a

PLS-01460: Cannot access object on a remote host

Cause: Cannot access object on a remote host.

Action: n/a

PLS-01463: STDDEV is not a standard set function

Cause: STDDEV is not a standard set function.

Action: n/a

PLS-01464: VARIANCE is not a standard set function

Cause: VARIANCE is not a standard set function.

Action: n/a

PLS-01466: Null strings are not allowed

Cause: Null strings are not allowed.

Action: n/a

PLS-01467: The value list of the IN predicate, if not a subquery, must contain only value_specifications

Cause: The value list of the IN predicate, if not a subquery, must contain only value_specifications (i.e. literals and PL/SQL or embedded variables).

Action: n/a

PLS-01468: The first argument of the like-predicate must be a column of type character string

Cause: The first argument of the like-predicate must be a column of type character string.

Action: n/a

PLS-01469: ANSI standard does not permit records

Cause: ANSI standard does not permit records.

Action: n/a

PLS-01470: The escape character in the like-predicate must be a literal or a variable of type CHAR

Cause: The escape character in the like-predicate must be a literal or a variable of type character.

Action: n/a

PLS-01471: The keyword DISTINCT must be present in a COUNT(DISTINCT sim_expr)

Cause: The keyword DISTINCT must be present in a COUNT(DISTINCT sim_expr). Sect 5.8

Action: n/a

PLS-01472: In a set_function_specification, if DISTINCT is present, the expression must be a column_specification

Cause: In a set_function_specification, if DISTINCT is present, the expression must be a column_specification.

Action: n/a

PLS-01473: Use instead of != or ~=

Cause: Use instead of != or ~= . Sect 5.11.

Action: n/a

PLS-01474: Use of ANY is non_ANSI

Cause: Due to the combining of comparison_predicate and quantified_predicate, we may have something like sim_expr = ANY_ sim_expr, which is nonetheless accepted by kernel.

Action: n/a

PLS-01500: Unions are not allowed in the definition of a view

Cause: Unions are not allowed in the definition of a view. Sect. 6.9

Action: n/a

PLS-01501: Options in CREATE TABLE statement is non-ANSI.

Cause: CREATE TABLE allows only the definition of the structure of a table. None of the .SPACE_name. .PCTFREE_numeric_literal. .cluster. is ANSI. Sect. 6.2

Action: n/a

PLS-01502: Constraint name and constraint status are non-ANSI.

Cause: Constraint name and constraint status are non-ANSI. Sect. 6.3

Action: n/a

PLS-01503: The expression in a SET clause must not include a set function

Cause: The expression in a SET clause must not include a set function. Sect. 8.12.

Action: n/a

PLS-01504: Use of AS phase in CREATE TABLE statement is non-ANSI

Cause: CREATE TABLE allows only the definition of the structure of a table. Use of AS phase in CREATE TABLE statement is non-ANSI.

Action: n/a

PLS-01505: ALTER is non-ANSI

Cause: ALTER is non-ANSI

Action: n/a

PLS-01506: CREATE INDEX is non-ANSI

Cause: CREATE INDEX is non-ANSI

Action: n/a

PLS-01507: DROP is non-ANSI

Cause: DROP is non-ANSI

Action: Sect. 6.2

PLS-01701: Illegal syntax in ROLLBACK WORK statement

Cause: Illegal syntax in ROLLBACK WORK statement.

Action: n/a

PLS-01702: Illegal syntax in COMMIT WORK statement

Cause: Illegal syntax in COMMIT WORK statement.

Action: n/a

PLS-01703: Cursor name in CLOSE statment must be of length 1

Cause: Cursor name in CLOSE statment must be of length 1.

Action: n/a

PLS-01704: The expressions in a sort clause must be column specs or unsigned integers, with optional ASC or DESC

Cause: The expressions in a sort clause may only be column specifications or unsigned integers, followed by optional ASC or DESC.

Action: n/a

PLS-01705: table specified by a cursor not updatable if cursor specification has a UNION or ORDER_BY

Cause: Missing keyword FROM.

Action: n/a

PLS-01707: In positioned DELETE or UPDATE statement, table must be identified in specification of cursor

Cause: In a positioned DELETE or UPDATE statement, the table deleted from or updated must be identified in the specification of the cursor.

Action: n/a

PLS-01708: In searched DELETE, UPDATE or INSERT, table must not appear in FROM clause of subqueries in search condition

Cause: In a searched DELETE, UPDATE or INSERT statement, the table affected must not appear in a FROM clause in any of the subqueries in the search condition.

Action: n/a

PLS-01709: value list of INSERT statement, if specified with value list rather than subquery, must be value specification

Cause: In an INSERT statement, the insert value list, if specified with a value list rather than a subquery, must be value specifications, i.e. no compound expressions or column references. Sect 8.7.

Action: n/a

PLS-01710: In a positioned DELETE or UPDATE statement, the cursor name must be of length 1

Cause: In a positioned DELETE or UPDATE statement, the cursor name must be of length 1.

Action: n/a

PLS-01711: A SELECT statement may not contain ORDER_BY, HAVING, or GROUP_BY clause

Cause: A SELECT statement may not contain ORDER_BY, HAVING, or GROUP_BY clause. Sect. 8.10.

Action: n/a

PLS-01712: ANSI does not allow bind variables as INDICATORS

Cause: ANSI does not allow bind variables as INDICATORS

Action: n/a

PLS-01713: The constraints on these types do not match

Cause: The constraints on these types do not match

Action: n/a

PLS-01714: ANSI expects a column name not a literal value here

Cause: ANSI expects a column name not a literal value here

Action: n/a

PLS-01715: ANSI does not accept SAVEPOINTS

PLS-01900: : character to number conversion error

Cause: There was a failure while converting a character string into a numeric value.

Action: Verify that all character strings assigned to number variables have valid numeric value interpretations.

PLS-01901: : host bind array too small

Cause: PL/SQL was unable to transfer data into a host array because the array is too small.

Action: Increase the size of the host array.

PLS-01902: : hex to raw conversion error

Cause: There was a failure while converting a hexadecimal string to a raw.

Action: Verify that the hexadecimal variable to be converted contains a valid hexadecimal value.

PLS-01903: : non-integer error number

Cause: SQLERRM() was called with a non-integer value.

Action: Make sure SQLERRM() is called with an integer value.

PLS-01904: : NULL index table key value

Cause: An attempt was made to index into an index table with a NULL key value.

Action: Make sure key values used to index into index tables are non-NULL.

PLS-01905: : character string buffer too small

Cause: An error was encountered while moving a character string from a source to a destination. This error occurs if, for example, an attempt is made to move a character string of 10 characters into a 1 character buffer. The cause of this error may not always be obvious. For example, the following will result in this error: a varchar2(1); b number; b := 10; a := b; An error results because an implicit conversion causes the number 10 to become the character string '10', which does not fit in the character buffer of 1 allocated for the variable a.

Action: First, look for character string assignment statements where the buffer size is mismatched. If there are none found, then consider the implicit conversion case illustrated in the example above.

PLS-01906: : raw variable length too long

Cause: The length of a raw variable being copied or assigned was too long to fit into its destination.

Action: Make sure the raw variable length is correct.

PLS-01907: : number precision too large

Cause: The number being copied or assigned had too many digits to the left of the decimal and did not fit into its destination. In other words, there is a number precision mismatch. This error may also occur if, for example, an attempt is made to assign a character string to a number, as demonstrated below. a varchar2(4); b number(1,1); a := '10.1'; b := a;

Action: First, check explicit number precision value mismatches. If none are found, then consider implicit conversions of other types to numbers, including conversions performed during binds.

PLS-01908: : RETURNING INTO buffer too small

Cause: PL/SQL determined that a server side DML with a RETURNING INTO clause does not use a buffer that is large enough to hold the data being returned.

Action: Increase the size of the RETURNING INTO clause buffer.

PLS-01909: : cannot assign supertype instance to subtype

Cause: An attempt was made to assign or copy a supertype instance to a container (destination) that can only hold a subtype instance.

Action: Make sure the runtime type of the source of the assignment or copy is the same type as the destination or is a subtype of the destination type

PLS-01910: : associative array shape is not consistent with session parameters

Cause: NLS parameters affecting comparison of keys have been altered dynamically. The associative array's index is invalid.

Action: Avoid using associative arrays with string keys in applications which require frequent changes of NLS_COMP and/or NLS_SORT.

PLS-01911: : associative array key violates its type constraints

Cause: The key value of an element being inserted into an associative array violates the the key type constraints.

Action: Relax the constraints if the key value is meant to be acceptable. Otherwise, apply a valid key value when inserting an element.

PLS-01912: : instance must of be of type 'string'

Cause: The run-time type of the instance is not the declared type. e.g. If the return value of a user defined constructor is wrong.

Action: Return the correct type.

PLS-01913: : instance must of be of type 'string' or one of its subtypes

Cause: The run-time type of the instance is the not declared type or one of its subtypes. e.g. TREAT(supertype AS subtype) fails.

Action: Catch the exception.

PLS-01914: duplicate SECURITY specification in subprogram expression

Cause: The subprogram was found to have two SECURITY specifications.

Action: Remove one of the SECURITY specifications.

PLS-01915: duplicate ASSEMBLY specification in subprogram expression

Cause: The subprogram was found to have two ASSEMBLY specifications.

Action: Remove one of the ASSEMBLY specifications.

PLS-01916: SECURITY level specification exceeds ASSEMBLY SECURITY specification

Cause: The security level specified in the callspec exceeds the maximum security level allowed by the assembly.

Action: Lower the security level specified in the callspec to match the maximum security level specified in the assembly.

PLS-01917: illegal reference to package STANDARD item 'string'

Cause: The item is intended for internal use and must not be referred to in user code.

Action: Remove the reference and use syntax that provides the necessary functionality.

PLS-01918: 9.2 and earlier wrap formats are not permitted

Cause: An attempt was made to compile a unit that was wrapped using 9.2 or earlier version of the wrap utility. Wrapped source created by 9.2 and earlier versions of wrap is not permitted on this database.

Action: Wrap the source using 10g or later versions of the wrap utility. Alternately, set the initialization parameter PERMIT_92_WRAP_FORMAT parameter to TRUE.

PLW-05000 to PLW-07206

PLW-05000: mismatch in NOCOPY qualification between specification and body

Cause: The indicated parameter was declared with the NOCOPY hint in the subprogram specification but not in the body, or it was declared with the NOCOPY hint in the body but not in the specification.

Action: Ensure that the specification and the body agree in their use of NOCOPY. If this mismatch is not corrected, the program will obey the declaration given in the specification, ignoring that in the body.

PLW-05001: previous use of 'string' (at line *string*) conflicts with this use

Cause: While looking for prior declarations of a variable, constant, or label, the compiler found another declaration with the same name in the same scope. Or, the headers of subprogram in a package specification and body were not identical.

Action: Check the spelling of the variable, constant, or label name. Also check the names of all parameters and exceptions declared in the same scope. Then, remove or rename the object with the duplicate name. Or, change the headers of the packaged subprogram in the package specification or body so that they are identical.

PLW-05003: same actual parameter(*string* and *string*) at IN and NOCOPY may have side effects

Cause: The indicated parameter was declared with the NOCOPY hint in the subprogram specification but not in the body, or it was declared with the NOCOPY hint in the body but not in the specification.

Action: Ensure that the specification and the body agree in their use of NOCOPY. If this mismatch is not corrected, the program will obey the declaration given in the specification, ignoring that in the body.

PLW-05004: identifier *string* is also declared in STANDARD or is a SQL builtin

Cause: The indicated identifier was also either: o) declared in package STANDARD, or o) a SQL builtin function, or o) a pseudo-column. This situation can result in name resolution issues since the STANDARD/builtin declaration will be chosen over the local declaration in SQL statements; however the local declaration will be chosen over the STANDARD/builtin declaration outside SQL scope. (See the documentation on PL/SQL name resolution.)

Action: Either: o) rename the given identifier, o) qualify any references to the identifier with the containing scope's name, or o) make sure the intended resolution occurs if using the identifier in SQL scope.

PLW-05005: subprogram *string* returns without value at line *string*

Cause: A function terminated without a return value. RETURN statements with values are required for all PL/SQL functions.

Action: Inspect function source code to ensure that every RETURN statement returns a value and that a function does not terminate by executing its END statement. Notice that this message may appear at the call site for a function if the function call was inlined and if the called function did not terminate properly.

PLW-05006: shadow type generation resulted in warning: *string*

Cause: Compilation of a table function causes the creation of internally-generated types. A problem occurred during creation of these types which was not severe enough to prevent the creation of the types, but which may impact the usage of the table function. See the accompanying error message for more information.

Action: Fix the issue reported in the accompanying error message.

PLW-05007: first parameter to pragma INLINE must be an identifier

Cause: The first parameter to the pragma INLINE must be an identifier denoting a procedure or function.

Action: Use a procedure or function name

PLW-05008: illegal number of arguments for pragma *string*

Cause: The number of arguments (actual parameters) passed to the named pragma (compiler directive) is incorrect. A required argument was omitted from the argument list, or the pragma syntax is faulty (for example, a comma might be missing between two parameters).

Action: Supply the missing argument or correct the faulty syntax.

PLW-05009: pragma INLINE may not appear in a declaration list

Cause: Pragma INLINE applies only to the following statement, and can not appear immediately prior to a declaration

Action: Remove the pragma.

PLW-05010: duplicate pragma INLINE on procedure '*string*'

Cause: Pragma INLINE was applied twice to the same procedure in the same statement. The procedure will be inlined only if all duplicates specify a control value of 'YES'

Action: Remove the duplicate pragma.

PLW-05011: pragma INLINE for procedure '*string*' does not apply to any calls

Cause: A pragma INLINE was provided, but there was no call to the mentioned procedure in the next statement.

Action: Remove the unnecessary pragma.

PLW-05012: pragma INLINE for procedure '*string*' could not be applied

Cause: A pragma INLINE(*name*, 'yes') was used, but the named procedure could not be inlined.

Action: Eliminate the reasons which are blocking the inlining. See the documentation for possible problems.

PLW-05013: second parameter to pragma INLINE '*string*' is not 'YES' or 'NO'

Cause: The second parameter to the pragma INLINE governs whether or not a procedure call can be inlined. The only legal values are 'YES', meaning that the compiler should attempt to inline the call, and 'NO', meaning that the compiler must not inline the call.

Action: Use 'YES' or 'NO' as appropriate.

PLW-05014: Pragma *string* cannot be specified here

Cause: The pragma was specified in an inappropriate context.

Action: Remove or relocate the misplaced pragma. Check the documentation to determine the correct context for this pragma.

PLW-05015: implementation restriction - too many debug records

Cause: The program is so large that it overflowed a compiler limit on the size of the debug symbol table. The module was compiled with partial debugging information.

Action: Compile the module with PLSQL_DEBUG=FALSE, or split it into multiple modules

PLW-05016: INTO clause should not be specified here

Cause: The INTO clause was incorrectly specified on a cursor declaration. It should have been specified on the FETCH statement.

Action: Relocate the misplaced clause.

PLW-05017: prefix of the expression will be ignored

Cause: Generalized invocation with explicit SELF and a dotted name was used to call the type method causing the prefix of the dotted name to be ignored.

Action: Do not use a dotted name to invoked type method in this context.

PLW-05018: unit *string* omitted optional AUTHID clause; default value DEFINER used

Cause: The AUTHID clause is missing. The unit is allowed to have an AUTHID clause. If the clause is missing, DEFINER's rights are used by default. Good practice suggests that an explicit AUTHID clause should always be used.

Action: Write an explicit AUTHID clause for the unit.

PLW-05019: the language element near keyword *string* is deprecated beginning with version *string*

Cause: A deprecated language element was used. The particular language element is deprecated in PL/SQL versions greater than or equal to the version number given in the message text.

Action: The deprecated language element should be deleted or rewritten. Deprecated PL/SQL language elements become obsolete one version after they are deprecated. An obsolete language element will no longer be supported and use of the element will result in an error.

PLW-05020: parameter name must be an identifier

Cause: A string literal was used as the parameter name in a call that used named notation.

Action: Change the code to use an identifier for the parameter name.

PLW-05021: exception *string* does not have a pragma EXCEPTION_INIT

Cause: A user-defined exception was declared but it was not given an exception number by the pragma EXCEPTION_INIT. Good practice suggests that all user-defined exceptions should be explicitly numbered.

Action: Add a pragma EXCEPTION_INIT to give the exception a number.

PLW-05022: argument '*string*' is not comparable

Cause: An argument to either IN, BETWEEN or MEMBER OF was not of a comparable type. Or, if the argument was of an object type, no MAP or ORDER method was specified for the type.

Action: Use appropriate arguments, or specify a MAP or ORDER method.

PLW-05023: PL/Scope is disabled because SYSAUX is offline.

Cause: PL/Scope was disabled for the current PL/SQL unit compilation because the SYSAUX tablespace is or was offline at the time of compilation. Note that PL/Scope stores identified metadata in the SYSAUX tablespace, and thus cannot function when SYSAUX is offline.

Action: Verify SYSAUX is online and recompile the PL/SQL unit.

PLW-05024: Do not use BULK COLLECT clause in a cursor declaration

Cause: A BULK COLLECT clause was specified in a cursor declaration.

Action: Remove the BULK COLLECT clause from the cursor declaration, moving it to the FETCH statement or statements, if appropriate.

PLW-05999: implementation restriction (may be temporary) *string*

PLW-06002: Unreachable code

Cause: Static program analysis determined that some code on the specified line would never be reached during execution. This may have been caused by expression evaluation at compile time.

Action: Inspect program logic for possible defects. Disable the warning if much code is made unreachable intentionally and the warning message is more annoying than helpful.

PLW-06003: unknown inquiry directive '*string*'

Cause: An unknown inquiry directive was used. The inquiry directive is neither predefined nor user-defined.

Action: Use a predefined inquiry directive or define the inquiry directive.

PLW-06004: inlining of call of procedure '*string*' requested

Cause: A pragma INLINE(, 'YES') referring to the named procedure was found. The compiler will, if possible, inline this call.

Action: n/a

PLW-06005: inlining of call of procedure '*string*' was done

Cause: A call to the procedure was inlined.

Action: n/a

PLW-06006: uncalled procedure "*string*" is removed.

Cause: Static program analysis determined that the procedure can never be called or executed. Therefore, it has been removed to save time during compilation and space during execution.

Action: Inspect program logic for possible defects. Disable the warning if the procedure is useful but simply not being used right now and the warning message is more annoying than helpful.

PLW-06007: procedure "string" is removed because optimization removed calls

Cause: Static program analysis determined that the procedure can never be called or executed. Therefore, it has been removed to save time during compilation and space during execution.

Action: Inspect program logic for possible defects. Disable the warning if the procedure is useful but simply not being used right now and the warning message is more annoying than helpful.

PLW-06008: call of procedure 'string' will not be inlined

Cause: A pragma INLINE(, 'NO') referring to the named procedure was found. The compiler is prevented from inlining this call.

Action: n/a

PLW-06009: procedure "string" OTHERS handler does not end in RAISE or RAISE_APPLICATION_ERROR

Cause: The OTHERS handler can exit without executing some form of RAISE or a call to the standard procedure RAISE_APPLICATION_ERROR.

Action: Good programming practices suggest that OTHERS handlers must always pass an exception upward. Inspect the program logic to determine if the handler code needs revision.

PLW-06010: keyword "string" used as a defined name

Cause: A PL/SQL or SQL keyword was used as defined name. Although legal, this is not recommended.

Action: Choose another name for the defined item.

PLW-06011: detailed dependency information discarded due to size limitations

Cause: The compiled unit was so large that the compiler could not store detailed dependency information that could be used to quickly recompile the unit if it was invalidated.

Action: Break up the unit into smaller units.

PLW-06012: SQL statement cannot be inlined. string

Cause: The SQL statement could not be inlined.

Action: n/a

PLW-06013: deprecated parameter PLSQL_DEBUG forces PLSQL_OPTIMIZE_LEVEL <= 1

Cause: The PLSQL_DEBUG parameter was set to TRUE forcing the optimization level to 1 (or 0 if the user selected 0) regardless of the setting of the PLSQL_OPTIMIZE_LEVEL parameter to a higher level

Action: Do not use the PLSQL_DEBUG parameter; it is deprecated. Instead, set the PLSQL_OPTIMIZE_LEVEL parameter to 1.

PLW-06014: PLSQL_OPTIMIZE_LEVEL <= 1 turns off native code generation

Cause: Native code generation was not done because the optimization was set to 1 or less.

Action: The goal of native code generation is high performance and a low optimization level defeats that purpose. Either request a higher optimization level or remove the request for native code generation. Note that using the deprecated parameter PLSQL_DEBUG also forces the optimization level to 1; do not use this parameter when native code generation is desired.

PLW-06015: parameter PLSQL_DEBUG is deprecated; use PLSQL_OPTIMIZE_LEVEL = 1

Cause: The PLSQL_DEBUG parameter was specified.

Action: The parameter PLSQL_DEBUG no longer controls the generation of debugging information by the PL/SQL compiler; debugging information is always generated and no special parameter is needed.

PLW-06016: unit *string* is too large; native code generation turned off

Cause: Because the program was extremely large, analysis took an excessive amount of time or space to complete causing native compilation to be turned off.

Action: The goal of native code generation is high performance and the compiler does extensive analysis of the program. If possible, reduce the size of the largest procedure, or split the program unit into multiple units.

PLW-06017: an operation will raise an exception

Cause: An operation near this location is certain to raise an exception during execution; it may be a programming error because it is not an explicit RAISE.

Action: The compiler has determined that some operation near this location is certain to raise an exception during execution. This may be a programming error; consider rewriting the code. If the intention is to raise an exception, use an explicit RAISE statement.

PLW-06018: an infinity or NaN value is computed or used

Cause: An operation near this location computes or uses an infinite NUMBER, BINARY_FLOAT, or BINARY_DOUBLE value or a NaN BINARY_FLOAT or BINARY_DOUBLE value.

Action: The compiler has determined that an operation near this location computes or uses either an infinity or a not-a-number (NaN) value. This may indicate a programming error; consider rewriting the code. If the intention is to use a BINARY_FLOAT or a BINARY_DOUBLE non-numeric value, use the appropriate constant from STANDARD rather than computing the value. Some valid uses exist for these values; the warning will still appear in those cases. The use of infinite NUMBER values is not well-defined and should be avoided.

PLW-07202: bind type would result in conversion away from column type

Cause: The column type and the bind type do not exactly match. This will result in the column being converted to the type of the bind variable. This type conversion may prevent the SQL optimizer from using any index the column participates in. This may adversely affect the execution performance of this statement.

Action: To make use of any index for this column, make sure the bind type is the same type as the column type.

PLW-07203: parameter '*string*' may benefit from use of the NOCOPY compiler hint

Cause: The mode of the specified parameter was IN OUT or OUT. Use of the NOCOPY compiler hint may speed up calls to this subprogram.

Action: Change the mode of the parameter to explicitly use the NOCOPY compiler hint. For example, if your subprogram declaration is: PROCEDURE proc(p1 IN OUT CLOB); you can change it to: PROCEDURE proc(p1 IN OUT NOCOPY clob); to get the benefit of the NOCOPY hint. For member procedures or functions in object types, you may have to explicitly declare the SELF parameter as illustrated in the following: MEMBER PROCEDURE proc(SELF IN OUT NOCOPY MY_TYPE);

PLW-07204: conversion away from column type may result in sub-optimal query plan

Cause: The column type and the bind type do not exactly match. This may result in the column being converted to the type of the bind variable. This type conversion may prevent the SQL optimizer from using any index the column participates in. This may adversely affect the execution performance of this statement.

Action: To make use of any index for this column, make sure the bind type is the same type as the column type.

PLW-07205: SIMPLE_INTEGER is mixed with BINARY_INTEGER or PLS_INTEGER

Cause: Using SIMPLE_INTEGER and BINARY_INTEGER or PLS_INTEGER arguments in the same arithmetic expression may inhibit certain optimizations.

Action: Try using SIMPLE_INTEGER values only if the expression is computed on a performance critical path.

PLW-07206: analysis suggests that the assignment to 'string' may be unnecessary

Cause: This assignment may be unnecessary; the PL/SQL optimizer could not find any further use of the variable which was being set. If the assignment was being done for some side-effect such as raising a specific exception, the compiler may not have been able to understand the side-effect and this warning may be inappropriate.

Action: If the assignment sets a variable whose value will not be used again and there are no side-effects (exceptions or calls) to consider, remove the assignment for better performance. If the assignment was in place to raise a specific known exception, replace the assignment with a RAISE statement.

PRCA-01000 to PRCA-01126

PRCA-01000: ASM Disk Group {0} does not exist

Cause: An attempt failed to retrieve an ASM disk group that was not configured.

Action: Create the diskgroup using sqlplus if the specified diskgroup does not exist. Mount the diskgroup in ASM which registers the diskgroup with CRS.

PRCA-01001: ASM Disk Group resource does not exist

Cause: There was no disk group resource registered with CRS.

Action: Create the diskgroup using sqlplus and mount the diskgroup in ASM which registers the diskgroup with CRS.

PRCA-01002: Failed to remove CRS resource {0} for ASM Disk Group {1}

Cause: An attempt to remove the CRS resource for the specified ASM Disk Group failed.

Action: Examine the accompanying error messages for details.

PRCA-01003: Failed to create ASM {0} resource {1}

Cause: An attempt to add the CRS resource for ASM failed.

Action: Ensure that the CRS stack is running, the user running srvctl add asm is also the owner of the CRS home, and examine the accompanying error message for details.

PRCA-01005: Failed to retrieve server parameter file of ASM {0}

Cause: Cannot retrieve ASM server parameter file.

Action: Retry the request after ensuring that the CRS stack is running, the ASM resource has been configured, and the user has read permission on the ASM resource.

PRCA-01006: Failed to update server parameter file {0} of ASM {1}

Cause: Unable to update the ASM server parameter file.

Action: Retry the request after ensuring that the CRS stack is running, the ASM resource has been configured, and the user has update permission on the ASM resource.

PRCA-01007: ASM {0} is not using initialization parameters: {1}

Cause: The specified ASM instance does not use the initialization parameters shown.

Action: Examine the accompanying error messages for details.

PRCA-01016: Failed to remove ASM resource {0} for ASM instance {1}

Cause: An attempt to remove the specified ASM configuration failed.

Action: Examine the accompanying error message for details.

PRCA-01017: ASM {0} does not exist

Cause: ASM is not configured yet.

Action: Configure ASM and then retry.

PRCA-01018: Failed to retrieve ASM instance list for ASM {0}

Cause: Failed to retrieve the list of ASM instances.

Action: Make sure that the crs stack is up and the ASM resource has been configured.

PRCA-01019: ASM {0} is not running

Cause: The ASM resource does not have any running instances.

Action: Use 'srvctl start asm' command to start the asm resource.

PRCA-01020: Unable to create ACFS file system resource {0} for the volume device {1}

Cause: The ACFS file system resource for the specified volume device path could not be created. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc) 4) Was unable to identify the mount point that the user requested the resource to use.

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. (srvctl status asm) 3) Verify that the user is running with administrative access. 4) Verify that the mount point given to the create resource command exists.

PRCA-01021: Unable to retrieve ACFS file system for the volume device {0}

Cause: The ACFS file system resource for the specified volume device path could not be retrieved. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc) 4) Was unable to identify the mount point that the user requested the resource to use.

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. (srvctl status asm) 3) Verify that the user is running with administrative access. 4) Verify that the mount point given to the create resource command exists.

PRCA-01022: ACFS file system resource already exists for disk group {0} and volume {1}

Cause: The ACFS file system resource had already been created for the specified disk group and volume names.

Action: Take one of the following actions: 1) Supply a different volume device path to the 'srvctl add filesystem' command to create a different ACFS file system resource. - or- 2) Delete the previous resource ('srvctl remove filesystem -device <volume_device>') and run the command again.

PRCA-01023: Unable to add ACFS file system resource {0} for disk group {1} and volume {2}

Cause: The ACFS file system resource for the specified volume device path could not be added. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc) 4) Was unable to identify the mount point that the user requested the resource to use.

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access. 4) Verify that the mount point given to the create resource command exists.

PRCA-01024: Unable to retrieve the volume for disk group {0} and volume {1}

Cause: The ACFS file system resource for the specified volume device path was unable to be retrieved. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc)

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01025: Unable to retrieve the mountpoint path for disk group {0} and volume {1}

Cause: The ACFS file system resource for the specified volume device path was unable to be retrieved. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc)

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01026: Unable to set the user of the ACFS file system for disk group {0} and volume {1}

Cause: The user of the ACFS file system resource for the specified disk group and volume was unable to be modified. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc)

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01027: Failed to remove ACFS file system configuration for disk group {0} and volume {1}

Cause: Cannot remove the ACFS file system configuration for the specified disk group and volume.

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01028: Failed to retrieve listener associated with ASM {0}

Cause: Failed to retrieve listener associated with ASM.

Action: Ensure that user has read permissions on ASM resource and then retry. Also, ensure that listener specified in ASM resource's start dependencies exists.

PRCA-01029: Failed to associate listener {0} with ASM {1}

Cause: Failed to associate given listener with ASM.

Action: Ensure that user has update permissions on ASM resource and then retry.

PRCA-01030: Failed to retrieve the diskgroup associated with the volume device {0}

Cause: Unable to retrieve the diskgroup associated with the given volume device using "asmcmd volinfo -g <volume_name>" command.

Action: Make sure that the asm instance is running; the asmcmd utility exists and the underlying ofs devices are accessible.

PRCA-01031: Unable to retrieve the diskgroup {0} associated with the volume device {1}

Cause: The ACFS file system resource for the specified volume device path was unable to be retrieved. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc) 4) Disk group is not mounted.

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access. 4) Verify that the disk group is mounted.

PRCA-01032: ASM listener {0} does not exist

Cause: The ASM listener was not registered with Oracle Clusterware.

Action: Add the listener with the 'srvctl add listener -listener <lsnr_name> -asmlistener' command or specify a listener name that is already registered.

PRCA-01033: ACFS file system resource does not exist for volume device {0}

Cause: The ACFS file system resource with the specified volume device was not registered with Oracle Clusterware.

Action: Use the command 'srvctl add filesystem' to create an ACFS file system resource.

PRCA-01034: ACFS file system resource does not exist in Oracle Clusterware

Cause: No ACFS file system resource was registered with Oracle Clusterware.

Action: Use the command 'srvctl add filesystem' to create an ACFS file system resource.

PRCA-01035: Unable to determine the databases that use the disk group {0}

Cause: Unable to retrieve databases that have dependencies on the disk group.

Action: Make sure that the crs stack is up; the user has read permissions on database CRS resources and then retry.

PRCA-01036: An Oracle Restart environment-specific API was invoked in an Oracle Clusterware environment.

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCA-01037: Failed to retrieve the diskgroup discovery string of ASM {0}

Cause: An attempt to retrieve the diskgroup discovery string for ASM failed.

Action: Retry the request after ensuring that the CRS stack is running, the ASM resource has been configured, and the user has read permission on ASM resource.

PRCA-01038: Failed to update the diskgroup discovery string {0} of ASM {1}

Cause: An attempt to update the diskgroup discovery string for ASM failed.

Action: Retry the request after ensuring that the CRS stack is running, the ASM resource has been configured, and the user has update permission on ASM resource.

PRCA-01039: Volume device {0} does not exist

Cause: The supplied volume device does not exist.

Action: Use asmca to create the volume device and then run 'srvctl add filesystem' command again.

PRCA-01040: Failed to check the existence of volume device {0}

Cause: Failed to execute acfsutil command to check for the existence of the supplied volume device.

Action: Review the underlying error messages that provide the details of why acfsutil execution failed. Resolve the reported problem and retry the command.

PRCA-01041: Failed to validate disk group {0} of volume device {1}

Cause: Failed to execute acfsutil command to validate the disk group of the volume device.

Action: Review the underlying error messages that provide the details of why acfsutil execution failed. Resolve the reported problem and retry 'srvctl add filesystem' command.

PRCA-01042: Diskgroup {0} is not valid for volume device {1}

Cause: The supplied diskgroup does not match the underlying diskgroup created for the supplied volume device.

Action: Execute 'srvctl add filesystem' command with the correct disk group value.

PRCA-01043: Failed to validate volume {0} of volume device {1}

Cause: Failed to execute acfsutil command to validate the volume of the volume device.

Action: Review the underlying error messages that provide the details of why acfsutil execution failed. Resolve the reported problem and retry 'srvctl add filesystem' command.

PRCA-01044: Volume {0} is not valid for volume device {1}

Cause: The supplied volume does not match the underlying volume created for the supplied volume device.

Action: Execute 'srvctl add filesystem' command with the correct volume value.

PRCA-01045: ACFS is not supported on this platform

Cause: A filesystem operation was requested on an unsupported platform.

Action: Run srvctl filesystem command on a supported platform.

PRCA-01046: File system for volume device {0} exists in the ACFS registry

Cause: File system for the specified volume device was registered in the ACFS registry. File system can either be in the ACFS registry or registered as a CRS resource, but not both.

Action: Either run the command 'acfsutil registry -d' to delete the volume device from the ACFS registry or run the command 'srvctl add filesystem' with a different volume device.

PRCA-01047: Unable to find ACFS file system resource for volume device {0} because of inability to get the canonical form of the volume device

Cause: An internally-issued 'advmutil canonical' command failed and the volume device recorded in the ACFS file system resource did not match the specified volume device.

Action: Review the underlying error messages that provide the details of why advmutil execution failed. Resolve the reported problem and retry.

PRCA-01048: Invalid mount point path {0} because specified mount point path was a remote path

Cause: The specified mount point path was a remote path.

Action: Make sure that the mount point path was not a remote path.

PRCA-01049: The user "{0}" could not be found on the cluster

Cause: The user specified as the file system owner/user could not be found.

Action: Enter the name of an existing user or the owner of the specified file system.

PRCA-01050: Unable to retrieve the canonical form of the volume device for disk group {0} and volume {1}

Cause: The ACFS file system resource for the specified canonical form of the volume device path was not retrieved.

Action: 1) Make sure that the CRS stack is available. ('crsctl check crs') 2) Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCA-01051: No volume resource registered with CRS for specified diskgroup or volume name or volume device

Cause: There was no volume resource registered with CRS for specified diskgroup and volume name.

Action: Create the volume using sqlplus which registers the volumes with CRS.

PRCA-01052: When attempting to create a volume resource in CRS, volume resource already exists for disk group {0} and volume {1}

Cause: The volume resource was already created for the specified disk group and volume names.

Action: Supply different volume name or diskgroup name to create a different volume resource.

PRCA-01053: Failed to add volume resource {0} for disk group {1} and volume {2}

Cause: The volume resource for the specified volume device path could not be added. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc)

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01054: Failed to remove volume configuration for disk group {0} and volume {1}

Cause: Cannot remove the volume configuration for the specified disk group and volume.

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01055: Failed to retrieve the volume file system type for disk group {0} and volume {1}

Cause: The usage of the specified volume was unable to be retrieved. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc)

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01056: Unable to upgrade ACFS from version {0} to version {1}

Cause: Failed to upgrade ACFS from one version to another version.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCA-01057: Failed to retrieve the password file location used by ASM {0}

Cause: An attempt to retrieve the password file attribute of the specified ASM failed.

Action: Retry the request after ensuring that the CRS stack is running, the ASM resource has been configured, and the user has read permission on the ASM resource.

PRCA-01058: Failed to update password file location {0} used by ASM {1}

Cause: An attempt to update the password file attribute of the specified ASM failed.

Action: Retry the request after ensuring that the CRS stack is running, the ASM resource has been configured, and the user has update permission on the ASM resource.

PRCA-01059: Invalid ASM type {0}

Cause: The ASM type supplied is not valid.

Action: Supply a valid ASM type.

PRCA-01060: Invalid ASM presence {0}

Cause: The ASM presence supplied is not valid.

Action: Supply a valid ASM presence (legacy or remote).

PRCA-01061: Failed to create ASM I/O Server resource {0}

Cause: An attempt to add the CRS resource for ASM I/O Server failed.

Action: Ensure that the CRS stack is running, the user running 'srvctl add asm' is also the owner of the CRS home, and examine the accompanying error message for details.

PRCA-01062: Failed to create cluster ASM resource {0}

Cause: An attempt to add the CRS resource for cluster ASM failed.

Action: Ensure that the CRS stack is running, the user running 'srvctl add asm' is also the owner of the CRS home, and examine the accompanying error message for details.

PRCA-01063: Failed to create ADVN proxy resource {0}

Cause: An attempt to add the CRS resource for ADVN proxy failed.

Action: Ensure that the CRS stack is running, the user running 'srvctl add asm' is also the owner of the CRS home, and examine the accompanying error message for details.

PRCA-01064: Failed to create leaf ASM resource {0}

Cause: An attempt to add the CRS resource for leaf ASM failed.

Action: Ensure that the CRS stack is running, the user running command 'srvctl add asm' is also the owner of the CRS home, and examine the accompanying error message for details.

PRCA-01065: No file system resource found in Oracle Clusterware

Cause: No ACFS or non-ACFS file system resource was registered with Oracle Clusterware.

Action: Use the command 'srvctl add filesystem' to create a file system resource.

PRCA-01066: File system resource already exists for disk group {0} and volume {1}

Cause: The file system resource was already created for the specified disk group and volume names.

Action: Take one of the following actions: 1) Supply a different volume device path to the 'srvctl add filesystem' command to create a different file system resource. -or- 2) Delete the existing resource ('srvctl remove filesystem -device <volume_device>') and run the command again.

PRCA-01067: Unable to add file system resource {0} for disk group {1} and volume {2}

Cause: The file system resource for the specified volume device path could not be added. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc) 4) Was unable to resolve the mount point path that the user requested the resource to use.

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access. 4) Verify that the mount point path given to the create resource command exists.

PRCA-01068: Failed to remove file system resource for disk group {0} and volume {1}

Cause: Failed to remove the file system resource for the specified disk group and volume.

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01069: Unable to set the user of the file system configuration for disk group {0} and volume {1}

Cause: The user of the FS file system resource for the specified disk group and volume was unable to be modified. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc)

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01070: File system resource does not exist for volume device "{0}"

Cause: The file system resource with the specified volume device was not registered with Oracle Clusterware.

Action: Use the command 'srvctl add filesystem' to create a file system resource.

PRCA-01071: Multiple file system resources found for volume device "{0}"

Cause: More than one file system resources with the specified volume device were found.

Action: Internal error. Contact Oracle Support Services.

PRCA-01072: Either zero or multiple volume resources found for diskgroup "{0}" and volume "{1}"

Cause: A single volume was expected to be found for the specified parameters.

Action: Internal error. Contact Oracle Support Services.

PRCA-01073: A resource for application with ID "{0}" that uses a different file system than "{1}" already exists

Cause: A resource with the same application ID was registered for a different file system type.

Action: Make sure that the file system being added uses the same type as the existing resource for the given application ID.

PRCA-01074: Unable to modify the file system resource {0} for disk group {1} and volume {2}

Cause: The ACFS file system resource for the specified volume device path could not be modified. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc)

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01075: The file system resource is running on nodes (e.g. node "{0}") which are not included in the node list

Cause: The attempt to modify the node list failed as the file system resource was running on one or more nodes of the existing node list that were not included in the new node list.

Action: Either stop the resource that is running and retry or add the node where the resource is running to the new node list.

PRCA-01076: The file system resource is running on server pools (e.g. server pool "{0}") which are not included in the server pool list

Cause: The attempt to modify the node list failed as the file system resource was running on one or more server pools of the existing server pool list that were not included in the new server pool list.

Action: Either stop the resource that is running and retry.

PRCA-01077: Unable to retrieve the file system type for disk group {0} and volume {1}

Cause: The file system resource for the specified volume device path was unable to be retrieved. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc)

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01078: Unable to retrieve the file system mount options for disk group {0} and volume {1}

Cause: The file system resource for the specified volume device path was unable to be retrieved. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc)

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01079: Unable to retrieve the file system node names for disk group {0} and volume {1}

Cause: The file system resource for the specified volume device path was unable to be retrieved. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc)

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01080: Unable to retrieve the file system server pools for disk group {0} and volume {1}

Cause: The file system resource for the specified volume device path was unable to be retrieved. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc)

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01081: Unable to retrieve the application ID for disk group {0} and volume {1}

Cause: The file system resource for the specified volume device path was unable to be retrieved. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc)

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01082: Unable to retrieve the value for attribute 'TYPE' for the file system resource with disk group {0} and volume {1}

Cause: The file system resource for the specified volume device path was unable to be retrieved. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc)

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01083: Invalid ASM mode {0}

Cause: The specified ASM mode was not valid.

Action: Specify a valid ASM mode LEGACY, REMOTE or CLIENT.

PRCA-01084: Failed to retrieve ASM Mode

Cause: An attempt to retrieve the configured ASM mode from the ASM resource failed.

Action: Retry the request after ensuring that the CRS stack is running, the ASM resource has been configured, and the user has read permission on the ASM resource.

PRCA-01085: Failed to check if OCR is on ASM, when attempting to create resource {0}

Cause: An attempt to retrieve the OCR locations and check if any of the locations is on ASM failed.

Action: Ensure that the CRS stack is running, the user running command 'srvctl add asm' is also the owner of the CRS home, and examine the accompanying error message for details.

PRCA-01086: Unable to retrieve the file system description for disk group {0} and volume {1}

Cause: The file system resource for the specified volume device path was unable to be retrieved. Possible cause: The CRS stack was not available.

Action: Verify that the CRS stack is available. ('crsctl check crs')

PRCA-01087: Server pool "{0}" does not exist

Cause: No servepool was found for the specified server pool name.

Action: Make sure that the serverpool exists and retry.

PRCA-01088: Unable to retrieve information about server pool "{0}"

Cause: An error occurred while trying to retrieve information about the specified server pool.

Action: Examine the accompanying error messages for details.

PRCA-01089: Unable to retrieve volume and disk group for volume device path {0}

Cause: The volume and disk group resources for the specified volume device path could not be retrieved. Possible causes: 1) The CRS stack was not available. 2) The volume device path does not exist.

Action: 1) Verify that the CRS stack is running. ('crsctl check crs') 2) Verify that the volume device path was previously created.

PRCA-01090: Unable to retrieve information about the server category for server pool "{0}"

Cause: An error occurred while trying to retrieve information about the server category for the specified server pool.

Action: Examine the accompanying error messages for details.

PRCA-01091: The server category for server pool "{0}" is not "{1}"

Cause: The server category for the specified server pool had not the indicated expected value.

Action: Execute the command 'srvctl modify srvpool' to set the server category for the specified server pool to the indicated value and retry.

PRCA-01092: Cannot retrieve ASM resource information on an ASM client cluster

Cause: An attempt was made to get reference to an ASM resource on an ASM client cluster, which is not allowed.

Action: Perform this action only on an ASM cluster in either the Standard mode or in the Remote mode.

PRCA-01093: ASM I/O Server {0} is not running

Cause: The ASM I/O Server resource did not have any running instances.

Action: Use the command 'srvctl start ioserver' to start the ASM I/O Server resource.

PRCA-01094: Failed to retrieve ASM I/O Server instance list for ASM I/O Server {0}

Cause: Failed to retrieve the list of ASM I/O Server instances.

Action: Make sure that the Clusterware stack is up and the ASM I/O Server resource has been configured.

PRCA-01095: Unable to create ASM resource because it already exists.

Cause: An attempt was made to add the ASM resource but the resource already exists.

Action: Either remove the ASM resource and then add it, or avoid adding an already existing resource.

PRCA-01096: failed to create the Network Attached Storage (NAS) resource {0} for mount point path {1}

Cause: An attempt to create a Network Attached Storage (NAS) resource failed for the specified mount point path.

Action: Examine the accompanying error messages for details.

PRCA-01097: failed to retrieve the Network Attached Storage (NAS) resource for the mount point path {0}

Cause: An attempt to retrieve the Network Attached Storage (NAS) resource failed for the specified mount point path.

Action: Examine the accompanying error messages for details.

PRCA-01098: A Network Attached Storage (NAS) resource already exists for mount point path {0}.

Cause: An attempt to create a Network Attached Storage (NAS) resource failed because a NAS resource already exists for the specified mount point path.

Action: Do one of the following: - Supply a different mount point path. - Delete the previous resource.

PRCA-01099: failed to set the user of the Network Attached Storage (NAS) for mount point path {0}

Cause: An attempt to modify the user for the Network Attached Storage (NAS) failed for the specified mount point path.

Action: Examine the accompanying error messages for details.

PRCA-01100: The Network Attached Storage (NAS) resource does not exist for mount point path {0}.

Cause: The Network Attached Storage (NAS) resource with the specified mount point path was not registered with Oracle Clusterware.

Action: Create a Network Attached Storage (NAS) resource with the specified mount point path.

PRCA-01101: failed to modify the Network Attached Storage (NAS) resource for mount point path {0}

Cause: An attempt to modify the Network Attached Storage (NAS) resource failed for the specified mount point path.

Action: Examine the accompanying error messages for details.

PRCA-01102: Mount point path {0} is in use by another file system resource.

Cause: The supplied mount point path was already used by an existing file system resource.

Action: Specify a mount point path not in use by ACFS and not in use by Network Attached Storage (NAS) resources.

PRCA-01103: Failed to validate export server {0}

Cause: An attempt to resolve the export server name failed because the specified server name does not exist in DNS.

Action: Specify a valid IP address or hostname.

PRCA-01104: failed to remove Network Attached Storage (NAS) resource for mount point path {0}

Cause: An attempt to remove the Network Attached Storage (NAS) resource failed for the specified mount point path.

Action: Examine the accompanying error messages for details.

PRCA-01105: The mount point path must be specified when adding a Network Attached Storage (NAS) resource.

Cause: An attempt to create a Network Attached Storage (NAS) resource failed because a value was not specified for the mount point path.

Action: Specify a valid mount point path.

PRCA-01106: Mount point path {0} is in use by another file system resource

Cause: The supplied mount point path was already used by an existing file system resource.

Action: Specify a mount point path that is not in use by a file system resource.

PRCA-01107: A Network Attached Storage (NAS) resource already exists with the name {0}.

Cause: The Network Attached Storage (NAS) resource was already created for the specified name.

Action: Supply a different name or delete the previous resource.

PRCA-01108: The file system resource is not node local.

Cause: The attempt to relocate the specified file system failed because the resource is not node local.

Action: Specify a node local file system resource.

PRCA-01109: The volume for the specified disk group {0} and volume name {1} is not registered with CRS.

Cause: There was no volume resource registered with CRS for the specified disk group and volume name.

Action: Create the volume for the specified disk group and volume name using SQL*Plus which registers the volumes with CRS.

PRCA-01110: The volume for the specified device path {0} is not registered with CRS.

Cause: There was no volume resource registered with CRS for the specified device path.

Action: Create the volume for the specified device path using SQL*Plus which registers the volumes with CRS.

PRCA-01111: Multiple volume resources were found for volume device "{0}".

Cause: This is an internal error. More than one volume resource with the specified volume device were found.

Action: Contact Oracle Support Services.

PRCA-01112: Mount point path {0} is in use by another file system resource on node {1}

Cause: An attempt to add a file system resource was rejected because the specified mount point path was already used by an existing file system resource on one of the specified nodes.

Action: Specify a mount point path not in use by a file system resource on any of the supplied nodes.

PRCA-01113: Unable to upgrade volume resources from version {0} to version {1}

Cause: An attempt to upgrade volume resources from one version to another version failed.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCA-01114: Unable to upgrade export file system resources from version {0} to version {1}

Cause: An attempt to upgrade export file system resources from one version to another version failed.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCA-01115: Volume device {0} is specified as both a primary and an auxiliary volume

Cause: An attempt to add a file system resource was rejected because the specified auxiliary volume devices included a volume device specified as a primary volume.

Action: Specify auxiliary volume devices that are not also specified as a primary volume device.

PRCA-01116: Unable to define auxiliary volumes for non-ACFS file systems

Cause: An attempt to add a file system resource was rejected because auxiliary volume devices were specified for a non-ACFS file system resource.

Action: Specify auxiliary volumes for an ACFS file system.

PRCA-01117: Unable to retrieve the auxiliary volumes for file system resource {0}

Cause: An attempt to retrieve the auxiliary volumes for the specified file system resource failed. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running.

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm')

PRCA-01118: Multiple auxiliary volumes are not supported.

Cause: An attempt to add a file system resource was rejected because multiple auxiliary volume devices were specified for a file system resource.

Action: Specify only one auxiliary volume.

PRCA-01119: Unable to get the users of the file system configuration for disk group {0} and volume {1}

Cause: 1) CRS stack was not running. 2) User was not running with an account with administrative access. (root or administrator)

Action: 1) Verify that the CRS stack is running. ('crsctl check crs') 2) Verify that the user is running with administrative access.

PRCA-01120: Unable to use add (/+) or remove (/-) prefix with a list of operating system users for the file system.

Cause: The modify operation failed because a list of operating system users was specified using the add or remove prefix.

Action: Specify a single operating system user with the add or remove prefix, or specify a list of operating system users without any prefix to replace it entirely.

PRCA-01121: The file system type {0} is not supported for the current operating system platform.

Cause: An attempt to add a file system resource was rejected because the specified file system type is not supported for the current operating system platform.

Action: Specify a valid file system type for the operating system platform in use.

PRCA-01122: unable to modify the mount point path of a running file system resource

Cause: An attempt to modify the mount point path of the specified file system was rejected because the file system was mounted.

Action: Stop the file system resource and retry the operation.

PRCA-01123: The specified ASM cardinality {0} is less than the minimum cardinality of 2.

Cause: An attempt to set ASM cardinality was rejected because the specified cardinality was less than 2.

Action: Specify a number that is equal to or larger than 2 for the '-count' option.

PRCA-01124: The specified ASM cardinality {0} is larger than the maximum cardinality of 1024.

Cause: An attempt to set ASM cardinality was rejected because the specified cardinality was larger than 1024.

Action: Specify a number that is equal to or less than 1024 for the '-count' option.

PRCA-01125: The auxiliary volumes are not supported on this operating system.

Cause: An attempt to add a file system resource was rejected because auxiliary volumes are not supported for the current operating system.

Action: Do not specify auxiliary volumes.

PRCA-01126: unable to retrieve information about server category "{0}"

Cause: An error occurred while trying to retrieve information about the specified server category.

Action: Examine the accompanying error messages for details.

PRCC-01000 to PRCC-01110

PRCC-01000: Parameter {0} value is not valid

Cause: This is an internal error. The value for the specified parameter is null or empty string.

Action: Contact Oracle Support Services.

PRCC-01001: Failed to retrieve install group: {0}

Cause: An attempt to retrieve the install group failed.

Action: Examine the accompanying error messages for details.

PRCC-01002: Failed to update install group: {0}

Cause: An attempt to set the install group failed.

Action: Examine the accompanying error messages for details.

PRCC-01003: Version for module {0} is not available

Cause: An attempt to retrieve the version information for specified module failed.

Action: Examine the accompanying error messages for details.

PRCC-01004: Unknown identifier {0} specified for checking result of operation

Cause: Failed to retrieve the result from the exception data using the specified identifier because the exception did not have the specified identifier.

Action: This is an internal error. Contact Oracle Support Services.

PRCC-01005: Parameter {0} is not an absolute path

Cause: The specified parameter is not an absolute directory path.

Action: Provide an absolute directory path.

PRCC-01006: Path {0} is not a directory

Cause: The specified path is not a directory.

Action: Provide a directory path.

PRCC-01007: Path {0} does not exist

Cause: The specified path did not exist.

Action: Provide an existing directory path.

PRCC-01008: Enumerated type {0} does not have a member with corresponding value of {1}

Cause: This is an internal error.

Action: Contact Oracle Support Services.

PRCC-01009: Parameter {0} cannot have null as a value

Cause: This is an internal error.

Action: Contact Oracle Support Services.

PRCC-01010: {0} was already enabled

Cause: Given entity was already enabled.

Action: No action needed. To re-enable the entity, first disable it and then retry.

PRCC-01011: {0} was already enabled on {1}

Cause: Given entity was already enabled on given nodes.

Action: No action needed. To re-enable the entity on given nodes, first disable it on these nodes and then retry.

PRCC-01012: {0} was already disabled

Cause: Given entity was already disabled.

Action: No action needed. To re-disable the entity, first enable it and then retry.

PRCC-01013: {0} was already disabled on {1}

Cause: Given entity was already disabled on given nodes.

Action: No action needed.

PRCC-01014: {0} was already running

Cause: Given entity is already running.

Action: No action needed. To re-start the entity, first stop it and then retry.

PRCC-01015: {0} was already running on {1}

Cause: Given entity was already running on given nodes.

Action: No action needed. To re-start the entity on given nodes, first stop it on these nodes and then retry.

PRCC-01016: {0} was already stopped

Cause: Given entity was already stopped.

Action: No action needed. To re-stop the entity, first start it and then retry.

PRCC-01017: {0} was already stopped on {1}

Cause: Given entity was already stopped on given nodes.

Action: No action needed. To re-stop the entity on given nodes, first start it on these nodes and then retry.

PRCC-01018: A request to retrieve private network addresses for node {0} found no addresses

Cause: A request to retrieve private network addresses by executing the command 'olsnodes -p' returned no private IP addresses.

Action: Check the command 'oifcfg getif' for cluster_interconnect networks and ensure this node has an IP address on the cluster_interconnect networks.

PRCC-01019: Parameter "{0}" value is not valid

Cause: This is an internal error.

Action: Contact Oracle Support Services.

PRCC-01020: Version {0} cannot be used to administer resource configuration of version {1} or later

Cause: This is an internal error.

Action: Contact Oracle Support Services.

PRCC-01021: One or more of the submitted commands did not execute successfully.

Cause: Either a node failed in the middle of a manageability operation, or the communication between nodes was disrupted.

Action: Examine the accompanying error messages for details.

PRCC-01022: The file system type must be ACFS and not {0}

Cause: Expected ACFS file system while the file system provided in the argument list was non-ACFS.

Action: Make sure that the file system type provided in the argument list is ACFS.

PRCC-01023: The file system type must be non-ACFS

Cause: Expected non-ACFS file system while the file system provided in the argument list was ACFS.

Action: Make sure that the file system type provided in the argument list is non-ACFS.

PRCC-01024: Creation of non-ACFS file system local resource is not supported

Cause: Attempted to create a file system local resource while the file system type was non-ACFS.

Action: Either specify a node or serverpool list to create a cluster resource for the file system or make sure that the file system type is ACFS to create a local resource.

PRCC-01025: Command submitted on node {0} did not complete within {1} seconds

Cause: A command submitted on the node specified did not finish within the specified interval.

Action: Ensure that the node specified is reachable and not overloaded. Contact Oracle Support Services.

PRCC-01100: Failed to create administrator helper resource configuration

Cause: An attempt to create configuration for the administrator helper resource failed. Either the request was not issued by an account with administrative access (root, Administrator and so on) or a problem was detected inside Oracle Clusterware.

Action: Examine the accompanying error messages for details. Make sure that the user has administrative privileges.

PRCC-01101: The database type cannot be MGMTDB.

Cause: An attempt to create the database of the wrong database type has failed.

Action: Contact Oracle Support Services.

PRCC-01102: Mount point path "{0}" is not an absolute path

Cause: The mount point path value was not an absolute path.

Action: Specify an absolute path in the '-mountpoint' argument.

PRCC-01103: Failed to verify node membership

Cause: An error occurred while querying the clusterware to obtain information about the cluster membership.

Action: Examine the accompanying error messages for details.

PRCC-01104: Specified node {0} is not a configured cluster node

Cause: Found a node in the node list that was not configured in the cluster.

Action: Make sure that all the nodes in the specified node list are configured cluster nodes. Check the cluster membership with 'olsnodes'.

PRCC-01105: Server pool or node list cannot be modified because the file system for volume device {0} is a cluster-wide cluster file system

Cause: An attempt to modify the server pool or node list attributes of a cluster file system was rejected because the filesystem resource was a local resource. Placement attributes like server pools or node names apply only to cluster resources.

Action: Do not specify node names and server pools, or remove the local resource and add a cluster resource with the command 'srvctl add filesystem {-serverpools <serverpool_list> |-nodes <node_list>}'.

PRCC-01106: Parameter {0} value {1} is not valid

Cause: This is an internal error. The value for the specified parameter is not valid.

Action: Contact Oracle Support Services.

PRCC-01107: Failed to set the OHASD resource dependencies for ASM

Cause: An attempt to set the OHASD dependencies on all nodes failed.

Action: Examine the accompanying error messages for details.

PRCC-01108: Invalid VIP address {0} because the specified IP address is reachable

Cause: The submitted command was rejected because the Virtual Internet Protocol (VIP) address was reachable.

Action: Configure VIPs to use IP addresses that are not active on any host system and cannot be reached using 'ping'.

PRCC-01109: User {0} is not present on the Access Control List.

Cause: A request to remove a user from an Access Control List specified a user name not in the Access Control List.

Action: Specify a user who is on the Access Control List.

PRCC-01110: User {0} is already added to the Access Control List.

Cause: A request to add a user to an Access Control List specified a user name already on the Access Control List.

Action: Specify a user who is not on the Access Control List.

PRCD-01000 to PRCD-01324

PRCD-01000: Database {0} already exists

Cause: The specified database resource was already registered in Oracle Clusterware.

Action: No action is needed.

PRCD-01001: Database {0} does not exist

Cause: The specified database resource was not registered in Oracle Clusterware.

Action: Register the database resource using the command 'srvctl add database'.

PRCD-01002: Database {0} is dependent upon server pool {1}

Cause: An attempt to remove the specified server pool failed because the server pool is in use.

Action: Remove the specified database before removing the server pool.

PRCD-01003: Service {0} already exists

Cause: The specified service was already created and registered in Oracle Clusterware.

Action: No action is needed.

PRCD-01004: Service {0} is dependent upon server pool {1}

Cause: An attempt to remove the specified server pool failed because the server pool is in use.

Action: Remove the specified service before removing the server pool.

PRCD-01005: Server pool {0} for the database {1} does not exist

Cause: The specified server pool used by the database was removed by force.

Action: Create the server pool using the command 'srvctl add srvpool'.

PRCD-01007: Failed to retrieve the database name

Cause: Failed in retrieving the DB_NAME resource attribute.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCD-01008: Server parameter file does not exist for database {0}

Cause: Failed in retrieving the SPFILE resource attribute.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCD-01009: Failed to retrieve server parameter file of database {0}

Cause: Cannot retrieve the server parameter file for the specified database.

Action: Retry the request after ensuring that the CRS stack is running, the database resource has been configured, and the user has read permission on the database resource.

PRCD-01010: Failed to update server parameter file {0} of database {1}

Cause: Unable to update the server parameter file for the specified database.

Action: Retry the request after ensuring that the CRS stack is running, the database resource has been configured, and the user has update permission on the database resource.

PRCD-01011: Failed to identify whether this database {0} is a multi-instance database

Cause: Failed in retrieving the CLUSTER_DATABASE resource attribute.

Action: Examine the accompanying error messages for details.

PRCD-01012: Failed to retrieve disk group list for database {0}.

Cause: Failed to retrieve the diskgroups from the start dependencies of the specified database.

Action: Examine the accompanying error messages for details. Create the diskgroup using sqlplus if the specified diskgroup does not exist. Mount the diskgroup in database which registers the diskgroup with Oracle Clusterware.

PRCD-01014: Failed to retrieve database domain of database {0}

Cause: Failed to get the domain of the specified database from its USR_ORA_DOMAIN attribute.

Action: Examine the accompanying error messages for details.

PRCD-01015: Combination of service cardinality {0} and TAF {1} is not allowed for service {2}

Cause: The specified service cardinality can not be used with the specified TAF policy.

Action: Change the cardinality or find a matching TAF policy. PRECONNECT can only be used with SINGLETON cardinality.

PRCD-01016: Failure encountered while accessing server pool {0} for database {1}

Cause: An attempt to look up the server pools referenced by the database SERVER_POOLS attribute failed.

Action: Examine the accompanying error messages for details.

PRCD-01019: Failed to retrieve Oracle home of database {0}

Cause: An attempt to retrieve the ORACLE_HOME attribute of the specified database failed.

Action: Examine the accompanying error messages for details.

PRCD-01020: Failed to retrieve TAF policy for service {0}

Cause: An attempt to retrieve the TAF_POLICY attribute of the specified database failed.

Action: Examine the accompanying error messages for details.

PRCD-01021: Failed to update TAF policy {0} for service {1}

Cause: An attempt to set the TAF_POLICY attribute of the specified database failed.

Action: Examine the accompanying error messages for details.

PRCD-01022: Cannot add a second instance to a single instance database

Cause: Unable to add an instance to a single instance database.

Action: Multiple instances are not supported for a single instance database. Convert to a Oracle RAC database if multiple instances are desired.

PRCD-01023: An instance has already been added to node {0} for database {1}

Cause: Unable to add an instance to the database on the specified node because another instance has already been added to the node.

Action: Use the command 'srvctl modify instance' to change the instance name on the specified node.

PRCD-01024: Failed to retrieve instance list for database {0}

Cause: An attempt to get the list of the instances for the specified database failed.

Action: Examine the accompanying error messages for details.

PRCD-01025: Failed to create database {0}

Cause: An attempt to create Clusterware resources for the specified database failed. Either the request was issued by the wrong OS userid or a problem was detected inside Oracle Clusterware.

Action: Examine the accompanying error messages for details. Login in as the user of the Oracle Home to issue the command 'srvctl add database'.

PRCD-01026: failed to create service {0} for database {1}

Cause: An attempt to create the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01027: Failed to retrieve database {0}

Cause: An attempt to get the specified database failed.

Action: Examine the accompanying error messages for details.

PRCD-01028: Failed to retrieve service resource {0} for database {1}

Cause: An attempt to get the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01029: Disk group {0} for database {1} does not exist

Cause: The disk group for the specified database does not exist.

Action: Use the command 'srvctl add diskgroup' to add the specified disk group.

PRCD-01030: Failed to determine whether the database {0} has cardinality

Cause: Failed to determine whether the specified database is cardinality based or not based on its VERSION attribute.

Action: Examine the accompanying error messages for details.

PRCD-01031: Failed to determine whether the service {0} has cardinality

Cause: Failed to check whether the specified service is cardinality based or not.

Action: Examine the accompanying error messages for details.

PRCD-01032: Failed to remove database resource {0}

Cause: Failed to remove the specified database.

Action: Examine the accompanying error messages for details.

PRCD-01033: The server pool of service {0} is different from the server pool of database {1}

Cause: The specified server pool is not the child of the database's server pool.

Action: Use a server pool which is the child of the database's server pool.

PRCD-01034: Database {0} is not a single instance database. It is a cluster database

Cause: The specified database is not a single instance database.

Action: Provide database name for a single instance database.

PRCD-01035: Database {0} is not a cluster database

Cause: The specified database is not a cluster database.

Action: Provide database name for an Oracle RAC database.

PRCD-01036: Failed to set Oracle home {0} for database {1}

Cause: An attempt to update Oracle home for the specified database failed.

Action: Examine the accompanying error messages for details.

PRCD-01037: Failed to set Oracle home {0} for database {1} on node {2}

Cause: An attempt to update Oracle home for the specified database on the specified node failed.

Action: Examine the accompanying error messages for details.

PRCD-01038: Cannot create a RAC database {0} in a non cluster environment

Cause: Failed to create the specified Oracle RAC database because Oracle Clusterware is not installed and configured.

Action: Install and configure Oracle Clusterware before creating the Oracle RAC database.

PRCD-01039: Failed to retrieve database for service {0}

Cause: An attempt to get the database that the specified service depended on failed. This is an internal error.

Action: Contact Oracle Support Services.

PRCD-01040: Specified server pool {0} for {1} is already hosting an administrator-managed configuration for databases {2} and services {3}

Cause: Server pool is hosting administrator-managed databases and service.

Action: Specify a server pool that is not hosting an administrator-managed database and service.

PRCD-01041: The administrator-managed database {0} can have only one server pool {1}

Cause: Multiple server pools cannot be configured for an administrator-managed database

Action: Contact Oracle Support.

PRCD-01042: The database {1} is administrator-managed and a policy-managed service {0} cannot be created on it.

Cause: The specified database does not support policy-managed services.

Action: Provide a database which supports policy-managed services.

PRCD-01043: The service {0} is not a uniform or a singleton service and therefore it cannot be created as policy-managed service. This service can only be created as administrator-managed service using preferred, and optionally available instance lists.

Cause: The service to be created was an administrator-managed service and the database that the service depended on was a policy-managed database.

Action: Use preferred and available instance lists to create an administrator-managed service for an administrator-managed database.

PRCD-01044: Failed to retrieve the list of nodes where instances have been configured for database {0}

Cause: An attempt failed to get the list of nodes where the instances of the specified database were configured.

Action: Examine the accompanying error messages for details.

PRCD-01045: Database {0} is policy managed and does not support add instance option

Cause: The specified database did not support add instance option

Action: Take one of the following actions: 1) Provide an administrator-managed database. -or- 2) For a policy-managed database, add a server to a server pool which manages the database using the 'srvctl modify srvpool' or 'srvctl relocate server' command.

PRCD-01046: Database {0} is policy managed and does not support the remove instance option

Cause: The specified database did not support the remove instance option.

Action: Take one of the following actions: 1) Provide an administrator-managed database. -or- 2) For a policy-managed database, stop the database on a server and then remove that server from the server pool which manages the database using the 'srvctl modify srvpool' or 'srvctl relocate server' command.

PRCD-01047: Failed to retrieve list of services for database {0}

Cause: An attempt to get the list of services for the specified database failed.

Action: Examine the accompanying error messages for details.

PRCD-01048: Cannot remove instance from the single instance database {0}

Cause: An attempt to remove the instance from the single instance database failed.

Action: Remove the database using the command 'srvctl remove database'.

PRCD-01049: Failed to update server pool {0} for database {1}

Cause: An attempt to update the specified server pool failed.

Action: Examine the accompanying error messages for details.

PRCD-01050: Failed to update auto start value of service {0}

Cause: An attempt to update the auto start value for the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01051: Failed to add instance to database {0}

Cause: An attempt to add an instance to the specified database failed because the node of the instance is not a node of the cluster or other errors.

Action: Examine the accompanying error messages for details.

PRCD-01052: Failed to remove instance from database {0}

Cause: An attempt to remove the specified instance failed because the services depended on the instance or other errors.

Action: Examine the accompanying error messages for details.

PRCD-01053: Failed to retrieve the database instances providing service {0}

Cause: An attempt to get the database instances that provide the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01054: Database name is null

Cause: The database name given by the user is null.

Action: Provide a valid database name that is not a null string.

PRCD-01055: Instance name is null

Cause: The instance name given by the user is null.

Action: Provide a valid instance name that is not a null string.

PRCD-01056: Database name {0} contains invalid characters.

Cause: The supplied database name contained invalid characters.

Action: Supply a valid database name. A database name must start with an alphabetic character and may include only characters from "(a-z, A-Z, 0-9, \$, #, _)".

PRCD-01057: Instance name {0} is not valid

Cause: The supplied instance name is not of the correct format.

Action: Supplied a valid instance name. The valid character set for instance name is [a-zA-Z0-9_-].

PRCD-01058: Invalid server pool list {0} supplied for single instance database {1}

Cause: The server pool size was not one when creating a single instance database on a cluster.

Action: Use one server pool with only one server when creating the single instance database.

PRCD-01059: Instance name prefix {0} contains illegal characters

Cause: The supplied instance name prefix contained non-alphanumeric characters.

Action: Supply an instance name prefix that consists of alphanumeric characters a-z, A-Z, and 0-9.

PRCD-01060: Server pool has not been supplied for creating cluster service {0} for database {1}

Cause: No server pool argument has been supplied when configuring a cluster database.

Action: Supply an existing server pool when configuring a cluster database.

PRCD-01061: No database exists

Cause: No database has been configured.

Action: Configured database and retry.

PRCD-01062: Invalid service cardinality {0}

Cause: The service cardinality supplied is not valid.

Action: Supply a valid service cardinality.

PRCD-01063: Invalid service taf policy {0}

Cause: The service taf policy supplied is not valid.

Action: Supply a valid service taf policy.

PRCD-01064: Invalid database role {0}

Cause: The database role supplied is not valid.

Action: Supply a valid database role.

PRCD-01065: Invalid management policy {0}

Cause: The management policy supplied is not valid.

Action: Supply a valid management policy. The management policy should be automatic or manual.

PRCD-01066: Invalid start option {0}

Cause: The start option supplied is not valid.

Action: Supply a valid start option.

PRCD-01067: Invalid stop option {0}

Cause: The stop option supplied is not valid.

Action: Supply a valid stop option.

PRCD-01068: Failed to modify instance {0} on node {1} for database {2}

Cause: The instance for the specified node does not exist on the database.

Action: Use srvctl add instance to add the per-X instance.

PRCD-01069: Failed to modify instance {0} on node {1} for database {2}

Cause: The instance for the specified node cannot not be updated.

Action: Make sure that the crs stack is up and running; the oracle user has the permission to modify the instance; and then retry.

PRCD-01070: Failed to retrieve startup options for database {0}

Cause: Unable to retrieve the startup options for the database.

Action: Make sure that the crs stack is up and running and then retry.

PRCD-01071: Failed to update startup options for database {0}

Cause: Unable to update the startup options for the database.

Action: Make sure that the crs stack is up and running and then retry.

PRCD-01072: Failed to retrieve stop options for database {0}

Cause: Unable to retrieve the stop options for the database.

Action: Make sure that the crs stack is up and running and then retry.

PRCD-01073: Failed to update stop options for database {0}

Cause: Unable to update the stop options for the database.

Action: Make sure that the crs stack is up and running and then retry.

PRCD-01074: Failed to retrieve the database role for database {0}

Cause: Unable to retrieve the database role for the database.

Action: Make sure that the crs stack is up and running and then retry.

PRCD-01075: Failed to set the database role {1} for database {0}

Cause: Unable to update the database role for the database.

Action: Make sure that the crs stack is up and running and then retry.

PRCD-01076: Failed to retrieve the management policy for database {0}

Cause: Unable to retrieve the management policy for the database.

Action: Make sure that the crs stack is up and running and then retry.

PRCD-01077: Failed to update the management policy for database {0}

Cause: Unable to update the management policy for the database.

Action: Make sure that the crs stack is up and running and then retry.

PRCD-01078: Failed to update the db name {0} of database {1}

Cause: Unable to update the db name for the database.

Action: Make sure that the crs stack is up and running and then retry.

PRCD-01079: Failed to update pullup for service {0}: {1}

Cause: Failed to update pullup modifier for the service.

Action: Make sure that the crs stack is up and running and then retry.

PRCD-01080: Failed to get attributes for service {0}

Cause: Failed to get attributes for the service.

Action: Make sure that the crs stack is up and running and then retry.

PRCD-01081: Failed to set attributes for service {0}

Cause: Failed to set attributes for the service.

Action: Make sure that the crs stack is up and running and then retry.

PRCD-01082: Failed to modify service {0}: Unsupported attribute {1}

Cause: Operation doesn't support modification of attribute.

Action: Fix your application.

PRCD-01083: Failed to modify service {0}

Cause: Failed to modify service.

Action: Make sure that the crs stack is up and running and then retry.

PRCD-01084: Failed to start service {0}

Cause: Failed to start the service.

Action: Make sure that the crs stack is up and running and then retry.

PRCD-01085: Failed to stop service {0}

Cause: Failed to stop the service.

Action: Make sure that the crs stack is up, the service is running and then retry.

PRCD-01086: Invalid rlb goal {0}

Cause: The rlb goal supplied is not valid.

Action: Supply a valid rlb goal.

PRCD-01087: Invalid failover type {0}

Cause: The failover type supplied is not valid.

Action: Supply a valid failover type.

PRCD-01088: Invalid connection load balancing goal {0}

Cause: The clb goal supplied is not valid.

Action: Supply a valid clb goal.

PRCD-01089: Invalid failover method {0}

Cause: The failover method supplied is not valid.

Action: Supply a valid failover method.

PRCD-01090: Failed to retrieve Oracle home of database {0} on node {1}

Cause: No Oracle home of the database has been set on the specified node.

Action: Set the Oracle home of the database on the specified node.

PRCD-01091: Failed to create database instance {0} for database {1}

Cause: Unable to create database instance for the specified instance name.

Action: Make sure that the local node can be used for creating a database instance; the instance name provided is valid. The valid character set for instance name is [a-zA-Z0-9_-].

PRCD-01092: Failed to create database instance {0} for database {1} on node {2}

Cause: Unable to create database instance for the specified instance name and node name.

Action: Make sure that the specified node can be used to create a database; the instance name provided is valid. The valid character set for instance name is [a-zA-Z0-9_-].

PRCD-01093: Failed to update the domain {0} of database {1}

Cause: Unable to update the domain for the database.

Action: Make sure that the crs stack is up and running and then retry.

PRCD-01094: Failed to create start dependency for database {0} on the ASM cluster filesystem where ACFS path {1} resides

Cause: Unable to modify the database resource to include a start dependency on the ASM cluster filesystem for the ACFS path.

Action: Make sure that the ASM instance is running, the OFS driver exists in the driver directory, and the underlying ofs devices are accessible.

PRCD-01095: Failed to retrieve databases for version 11.1 and earlier

Cause: Unable to read OCR configuration to get databases for version 11.1 and earlier

Action: Make sure that the Oracle clusterware is up and running and the primary group of the user running srvctl is the same as the primary group of the user who installed the Oracle clusterware home. Also, run 11.1 srvctl config to verify that the database configuration exists in OCR.

PRCD-01096: Failed to retrieve the database unique name

Cause: Unable to read the attribute value for database unique name.

Action: Make sure that the Oracle clusterware is up and running and then retry.

PRCD-01097: Failed to retrieve the active servers of server pool {0} for database {1}

Cause: Unable to read the active servers attribute value for the database underlying server pools.

Action: Make sure that the Oracle clusterware is up and running; the database underlying server pools exist; the user has the permission to access the database underlying server pools and then retry.

PRCD-01098: Failed to retrieve the configured servers of server pool {0} for database {1}

Cause: Unable to read the servers attribute value for the database underlying server pool.

Action: Make sure that the Oracle clusterware is up and running; the database underlying server pool exists and then retry.

PRCD-01099: {0} enum member has a constant value that cannot be changed to given value {1}

Cause: An attempt was made to change value of read-only valued enum member.

Action: Contact Oracle Support Services.

PRCD-01100: Invalid relocate option {0}

Cause: Supplied relocate option is unknown.

Action: Contact Oracle Support Services.

PRCD-01101: Failed to remove running instance {0} for database {1}

Cause: Unable to remove the instance configuration for the database because the instance was still running.

Action: Stop the running instance using srvctl stop instance command and then retry.

PRCD-01102: Failed to create preconnect service for service {0}

Cause: An attempt to register service failed due to failure to register its corresponding preconnect service.

Action: Contact Oracle Support Services.

PRCD-01103: Failed to retrieve the maximum cardinality for database {0}

Cause: Unable to query the number of servers in the server pool used to manage the database.

Action: Make sure that the Oracle clusterware is up and running; the database underlying server pool exists and then retry.

PRCD-01104: A source server must be specified to relocate cluster database {0}

Cause: Cluster database cannot be relocated without specifying source server to relocate instance from.

Action: Supply source and target servers for database relocation.

PRCD-01105: A source server must be specified to relocate service {0}

Cause: Cluster database service cannot be relocated without specifying source server to relocate service member from.

Action: Supply source and target servers for service relocation.

PRCD-01106: Failed remove service {0}: could not get data for its underlying server pool

Cause: Server pool data is not found.

Action: Make sure that the Oracle clusterware is up and running; the service underlying server pool exists.

PRCD-01107: Removed service {0} but failed to remove its underlying server pool {1}

Cause: Failed to remove the server pool.

Action: Make sure that the Oracle clusterware is running and remove the server pool manually.

PRCD-01108: Failed to determine if database {0} is administrator-managed

Cause: An attempt to determine if a database is administrator-managed failed.

Action: Examine the accompanying error messages for details.

PRCD-01109: Failed to find administrator-managed service {0} of database {1} because the database is a policy-managed database.

Cause: The database does not support administrator-managed services.

Action: Provide an administrator-managed database and make sure that the service exists within that database.

PRCD-01110: Database {0} does not have instances {1}

Cause: The database does not have instances mentioned in the message.

Action: Make sure that database name is correct and the database has requested instances.

PRCD-01111: The type of service cardinality for this operation should be {1}, not {0}

Cause: This is an internal error.

Action: Contact Oracle Support Services.

PRCD-01112: Failed to get preferred instances of service {0}

Cause: The service does not exist or the Oracle clusterware is down.

Action: Make sure that the Oracle clusterware is up and running and the service exists.

PRCD-01113: Failed to modify service {0}

Cause: The service does not exist or the Oracle clusterware is down.

Action: Make sure that the Oracle clusterware is up and running and the service exists.

PRCD-01114: Failed to enable service {0} on one or more instances

Cause: The service does not exist or enabled on all database instances. The Oracle clusterware is down.

Action: make sure that the Oracle clusterware is up and running; the service exists and disabled on at least one database instance.

PRCD-01115: Failed to disable service {0} on one or more instances

Cause: The service does not exist or disabled on all database instances. The Oracle clusterware is down.

Action: Make sure that the Oracle clusterware is up and running; the service exists and enabled on at least one database instance.

PRCD-01116: Failed to get available instances of service {0}

Cause: The service does not exist or the Oracle clusterware is down.

Action: Make sure that the Oracle clusterware is up and running and the service exists.

PRCD-01117: Failed to modify service {0}, the service should have at least one preferred instance

Cause: An attempt was made to remove all preferred instances of the service.

Action: Make sure that there is at least one instance provided in the service preferred instance list.

PRCD-01118: Failed to set service {0} to {1} because it runs on more than one node

Cause: The service was running on more than one node.

Action: Make sure that the service is not running or running on one node only.

PRCD-01119: Failed to create database {0} because the database unique name matches that of database {1} in the first 8 characters

Cause: The database unique name was not unique in the first 8 characters. It is a requirement because the name is used to generate ORACLE_SID.

Action: Ensure that the name supplied is unique in the first 8 characters, and retry the command.

PRCD-01120: The resource for database {0} could not be found.

Cause: The resource for the specified database name could not be found. Either the database name was misspelled or the database has not been created.

Action: Correct the database name spelling or use the 'srvctl add database' command to create the database configuration.

PRCD-01121: Specified server pool {0} for {1} is already hosting an administrator-managed configuration for database(s) {2}

Cause: Server pool is hosting administrator-managed databases.

Action: Specify a server pool that is not hosting an administrator-managed database.

PRCD-01122: Specified server pool {0} for {1} is already hosting an administrator-managed configuration for service(s) {2}

Cause: Server pool is hosting administrator-managed services.

Action: Specify a server pool that is not hosting an administrator-managed service.

PRCD-01123: Oracle Clusterware resource does not exist for ACFS filesystem of volume device {0}. A resource is required for the filesystem containing ACFS path {1}.

Cause: The resource for the filesystem did not exist for the database which has its dependency on the ACFS path. A resource is required for path used by the database on ACFS filesystems so that Oracle Clusterware can track the database's dependency on the filesystem. Database's dependent ACFS paths cannot be mounted via the ACFS registry.

Action: Add the resource with 'srvctl add filesystem'.

PRCD-01124: Failed to stop database {0} and its services

Cause: Attempt to stop the database has failed.

Action: Ensure that user attempting to stop the database has execute privileges on the database resource. Also, review the accompanying error messages for details about failure to stop database. Retry after resolving those issues or contact Oracle Support Services.

PRCD-01125: Failed to create dependency from database {0} to its Oracle home {1} that is located on the ASM cluster filesystem

Cause: An attempt to modify the database resource to include a stop dependency on the ASM cluster filesystem for the database's Oracle home failed.

Action: Make sure that the asm instance is running; the ACFS driver exists in the driver directory and the underlying ACFS devices are accessible.

PRCD-01126: Instance {0} cannot be removed because it is the only preferred instance for service(s) {1} for database {2}

Cause: An attempt was made to remove the instance which is the only preferred instance for specified services.

Action: Make sure that specified services have more than one preferred instance or modify services to not have the instance as a preferred instance.

PRCD-01127: Failed to verify if instance {0} is the only preferred instance for any service

Cause: An attempt to verify if the instance is the only preferred instance for any service failed.

Action: Make sure that the Oracle clusterware is up and running. Also, review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01128: Failed to remove all services configured for database {0}

Cause: An attempt to remove all services configured for database.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01129: Failed to start instance {0} for database {1}

Cause: An attempt to start an instance with the specified name failed.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01130: Failed to convert administrator-managed database {0} into a policy-managed database to use server pool {1}

Cause: An attempt to convert the database from an administrator-managed configuration to a policy-managed configuration failed.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01131: Failed to stop database {0} and its services on node(s) {1}

Cause: Attempt to stop the database on given nodes has failed.

Action: Ensure that user attempting to stop the database has execute privileges on the database resource. Also, review the accompanying error messages for details about failure to stop database. Retry after resolving those issues or contact Oracle Support Services.

PRCD-01132: Database {0} doesn't have defined service(s) {1}

Cause: An attempt to start/stop services on the given database failed.

Action: Make sure that every service you want to start or stop is configured for the given database.

PRCD-01133: Failed to start services for database {0}

Cause: An attempt to start given services on the given database failed because those service(s) are not configured for the database.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01134: Failed to find any listener defined for network {0}

Cause: An attempt to find listener(s) defined for specified network failed.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01135: There is no listener defined for network {0} to be used by service {1}

Cause: An attempt to create a service failed because provided network doesn't have listener to publish a service on that network.

Action: Make sure that the provided network has a listener.

PRCD-01136: Failed to retrieve type of the database {0}

Cause: An attempt to query the type of database has failed.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01137: Failed to retrieve online relocation timeout for RAC One Node database {0}

Cause: An attempt to query the current online relocation timeout for RAC One Node database has failed.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01138: Failed to set online relocation timeout to {0} for RAC One Node database {1}

Cause: An attempt to update the online relocation timeout for RAC One Node Database has failed.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01139: The current server {0} where RAC One Node database {1} is running is not in the given candidate server list {2}

Cause: An attempt to update the candidate servers of the server pool hosting RAC One Node Database has failed because current server where this database is running is not in the given candidate server list.

Action: Retry the operation after either including the current server where this database is running in the given candidate server list or stopping the database.

PRCD-01140: Failed to update candidate servers to {0} of the server pool hosting RAC One Node database {1}

Cause: An attempt to update the candidate servers of the server pool hosting RAC One Node Database has failed.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01141: The database {0} is not hosted by a server pool

Cause: An attempt to query the server pool for given database failed because this database is not hosted by a server pool. This is most likely due to a program calling cluster environment API in Oracle Restart environment.

Action: Examine the accompanying error messages for details and contact Oracle Support Services.

PRCD-01142: The {0} TAF policy is not valid for RAC One Node service {1}

Cause: A TAF policy other than BASIC or NONE was specified for RAC One Node service.

Action: Specify BASIC or NONE TAF policy and retry the operation.

PRCD-01143: The cardinality of {0} is not valid for RAC One Node database or service {1}

Cause: An invalid cardinality was specified for RAC One Node database or service.

Action: Specify a SINGLETON cardinality and retry the operation.

PRCD-01144: The {0} management policy is not valid for RAC One Node database {1}

Cause: A management policy other than AUTOMATIC was specified for RAC One Node database.

Action: Specify AUTOMATIC management policy and retry the operation.

PRCD-01145: {0} API is not supported on RAC One Node database environment

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCD-01146: Database {0} is not a RAC One Node database

Cause: The specified database is not a RAC One Node database.

Action: Provide database name for a RAC One Node database.

PRCD-01147: The server pool {0} of administrator-managed database {1} has no candidate servers

Cause: Either the instance had not been added to the database or this database's server pool was altered inappropriately.

Action: If an instance was not added to the database yet, try to add an instance to this database, for example by using the command 'srvctl add instance', and then retry.

Otherwise, contact Oracle Support Services.

PRCD-01148: Failed to convert the configuration of RAC One Node database {0} into its equivalent configuration for RAC database

Cause: Internal error.

Action: Review the accompanying error messages and contact Oracle Support Services.

PRCD-01149: AUTOMATIC management policy cannot be used for the service {0} when the database {1} is not AUTOMATIC

Cause: An attempt to create/modify a service failed because the management policy specified for the service is AUTOMATIC but the database's management policy is not AUTOMATIC.

Action: Make sure that the provided service's management policy is MANUAL or NORESTART when running 'srvctl add service' or 'srvctl modify service' command.

PRCD-01150: Failed to retrieve EDITION for service {0}

Cause: An attempt to retrieve the EDITION attribute of the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01151: Failed to convert the configuration of RAC One Node database {0} into its equivalent RAC database configuration because RAC One Node database is running on a different server {1} than the given target server {2}

Cause: A target server was specified that was different from the server where the RAC One Node database is running.

Action: Either supply the server where RAC One Node Database is running now as target server or stop the database and retry.

PRCD-01152: Failed to update instance name {0} for database {1}

Cause: An attempt to update instance name for the specified database failed.

Action: Examine the accompanying error messages for details.

PRCD-01153: Failed to convert the configuration of cluster database {0} into its equivalent RAC One Node database configuration

Cause: An attempt to convert the specified cluster database to RAC One Node database failed.

Action: Review the accompanying error messages and retry after resolving these errors or contact Oracle Support Services.

PRCD-01154: Failed to convert the configuration of cluster database {0} into its equivalent RAC One Node database configuration because cluster database is running on more than one server {1}

Cause: User attempted conversion of a cluster database to RAC One Node database that was running on more than one servers.

Action: Stop this database on all but one server and retry.

PRCD-01155: Failed to convert the configuration of cluster database {0} into its equivalent RAC One Node database configuration because cluster database has more than one server pool {1} to control its placement

Cause: User attempted conversion of a cluster database that had more than one server pool to control its placement.

Action: Update configuration of this database by either the command 'srvctl modify database' or if this database has services that are in their own respective server pool, then removing all but one of its services via the command 'srvctl remove service' and then retry.

PRCD-01156: Failed to convert the configuration of cluster database {0} into its equivalent configuration for RAC One Node database due to its services {1} having {2} TAF policy

Cause: This database had services that have TAF policy (e.g. PRECONNECT) that is not supported by an Oracle RAC One Node database.

Action: Either modify the TAF policy of these services to either BASIC or NONE using the command 'srvctl modify service' or remove these services using the command 'srvctl remove service' and then retry.

PRCD-01157: Failed to convert the configuration of cluster database {0} into its equivalent configuration for RAC One Node database because none of its services have {1} management policy

Cause: An attempt to convert a cluster database configuration into its equivalent configuration for an Oracle RAC One Node database was rejected because all services of the given database have the MANUAL management policy.

Action: Modify the management policy of at least one of these services to AUTOMATIC using the command 'srvctl modify service ... -policy AUTOMATIC' and then retry.

PRCD-01158: Invalid database type {0}

Cause: The database type supplied is not valid.

Action: Supply a valid database type.

PRCD-01159: Target node must be specified when initiating an online relocation of administrator managed RAC One Node database {0}

Cause: The target node was not specified when requesting online relocation on the administrator managed Oracle RAC One Node database.

Action: Include the '-node' option with the 'srvctl relocate database' command.

PRCD-01160: Online relocation request for RAC One Node database {0} was rejected because this database is not running

Cause: An Oracle RAC One Node database was not running.

Action: Start the database by issuing the command 'srvctl start database' and then retry.

PRCD-01161: Online relocation failed for RAC One Node database {0}

Cause: Online relocation of the given database was unsuccessful.

Action: Either run the command 'srvctl relocate database -a' to abort the online relocation or run the command 'srvctl relocate database -n' to perform online relocation of the database to the given target node.

PRCD-01162: Invalid online relocation status {0}

Cause: This is an internal error.

Action: Review the accompanying error messages and contact Oracle Support Services.

PRCD-01163: Failed to modify database {0}

Cause: Failed to modify database.

Action: Make sure that the CRS stack is up and running and then retry.

PRCD-01164: An online relocation request for RAC One Node database {0} is already active

Cause: The given database has an already active online relocation request.

Action: Either specify another database in the 'srvctl relocate database' command or abort the in-progress request with 'srvctl relocate database -a' command.

PRCD-01165: An online relocation request for RAC One Node database {0} has failed

Cause: An online relocation request for the database has failed and the supplied target node was not the same as that in the failed request.

Action: Use the command 'srvctl status database' to query the target node of the failed online relocation request. Either run the command 'srvctl relocate database -a' to abort the failed request or 'srvctl relocate database -n' command with with the correct target node.

PRCD-01166: The supplied node {0} is not available in the {1} server pool

Cause: Supplied node was not in the Free server pool.

Action: Supply node from the Free server pool.

PRCD-01175: Failed to determine the status of the online relocation request for RAC One Node database {0}

Cause: Unable to determine the status of the online relocation request for the given Oracle RAC One Node database.

Action: Examine the accompanying error messages for details.

PRCD-01176: Invalid online relocation state {0}

Cause: This is an internal error.

Action: Review the accompanying error messages and contact Oracle Support Services.

PRCD-01177: Failed to abort the online relocation request for RAC One Node database {0}

Cause: Failed to abort the online relocation of the Oracle RAC One Node database.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01178: A failed online relocation request for RAC One Node database {0} does not exist

Cause: The supplied Oracle RAC One Node database does not have a failed online relocation request.

Action: Supply an Oracle RAC One Node database that has a failed online relocation request.

PRCD-01179: The online relocation timeout value {0} is not within the range of between {1} and {2}

Cause: The specified online relocation timeout value was not within the required range.

Action: Supply a value within the required range.

PRCD-01180: Configuration of database {0} has already been upgraded to version {1}

Cause: The supplied database was already upgraded.

Action: Supply a database of a lower version.

PRCD-01181: Failed to upgrade configuration of services {0} to version {1}

Cause: Failed to upgrade the service configuration.

Action: Review the accompanying error messages. If you are unable to resolve the problem, contact Oracle Support Services.

PRCD-01182: Failed to upgrade configuration of database {0} to version {1}

Cause: Failed to upgrade the database configuration.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01183: Failed to upgrade configuration of service type to version {0}

Cause: Failed to upgrade the service type configuration.

Action: Review the accompanying error messages and contact Oracle Support Services.

PRCD-01184: Failed to upgrade configuration of database type to version {0}

Cause: Failed to upgrade the database type configuration.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01185: Failed to retrieve service resource {0} for non cluster database {1}

Cause: An attempt to get the specified service failed because the database provided is a single instance and not a cluster database.

Action: Make sure that Oracle Clusterware is configured, specify a service defined for cluster database, and then retry.

PRCD-01186: TAF policy 'PRECONNECT' cannot be used to add a service for single instance database {0}

Cause: Failed to create a service because provided TAF specification can not be used with a single instance database.

Action: Retry after removing 'PRECONNECT' TAF policy.

PRCD-01187: Failed to enable or disable service {0} on particular nodes for non-cluster single instance database {1}

Cause: An attempt to enable or disable the service on particular nodes for single instance database failed. Such enable or disable operations are not applicable to services defined for single instance databases in Oracle Restart.

Action: Specify a service defined for database which is running on cluster or do not specify nodes.

PRCD-01188: Failed to detect whether the standby database {0} supports the Data Guard protection mode

Cause: An attempt has failed to determine whether the standby database supports the configured Data Guard protection mode.

Action: Review the accompanying error messages for details about the failure and retry the command after resolving those issues.

PRCD-01189: Cannot update server pool to {0} for RAC One Node database service {1}

Cause: An attempt to update the server pool of an Oracle RAC One Node database service was rejected because placement of this service is controlled by the server pool hosting the underlying database.

Action: Try updating the server pool controlling the placement of the database via 'srvctl modify database' command or its equivalent.

PRCD-01190: Cannot update server pool to {0} for single instance database service {1}

Cause: An attempt to update the server pool of a single instance (non-RAC) database service was rejected because placement of this service is controlled by the server pool hosting the underlying database.

Action: Try updating the server pool controlling the placement of the database using the 'srvctl modify database' command or its equivalent.

PRCD-01191: Cannot update server pool to {0} for database service {1}

Cause: An attempt to update server pool of database service was rejected because a subpool server pool was specified.

Action: Supply a first-level server pool that is not a subpool of any other server pool and retry the operation.

PRCD-01192: The cardinality {0} is not valid for single instance database service {1}

Cause: An invalid cardinality was specified for single instance (non-RAC) database.

Action: Retry after specifying a SINGLETON cardinality in 'srvctl modify service' command or its equivalent.

PRCD-01193: Service {0} defined for RAC One Node database {1} cannot be started on more than one node

Cause: An attempt to start the specified service failed because RAC One Node service cannot be started on more than one node.

Action: Retry after specifying one node to start the service on.

PRCD-01194: Failed to retrieve the version of database {0}

Cause: An attempt to retrieve the VERSION resource attribute has failed.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01195: Option to remove the target node was not allowed for aborting online relocation of policy-managed RAC One Node database {0}

Cause: The '-revert' option was specified on a request to abort online relocation of the policy-managed Oracle RAC One Node database.

Action: Use the command 'srvctl relocate database -abort' without the '-revert' option.

PRCD-01196: 'PRECONNECT' TAF policy cannot be used to create service {0} on policy managed database {1}

Cause: Failed to create a service because a policy managed database cannot have service with PRECONNECT TAF policy.

Action: Retry after supplying 'BASIC' or 'NONE' TAF policy.

PRCD-01197: The database {0} is policy-managed and an administrator-managed service {1} cannot be created on it

Cause: The specified database does not support administrator-managed services.

Action: Provide a database which supports administrator-managed services.

PRCD-01198: Failed to add service {0} to database {1} because database is already at maximum services limit of {2}

Cause: Attempt to add a new service to database was rejected because database has already reached the maximum services limit.

Action: Retry after removing a service from this database using the command 'srvctl remove service', or contact Oracle Support Services.

PRCD-01199: The stop request on instance {0} of standby database {1} was rejected to prevent termination of the primary database

Cause: The attempt to stop this instance of the standby database was rejected because the configured Data Guard protection mode required this instance to be running to prevent termination of the primary database.

Action: Retry the stop request after stopping the primary database or downgrading the protection mode.

PRCD-01200: Configuration of database {0} has already been downgraded to version {1} for database {2}

Cause: The supplied database was already downgraded.

Action: Supply a database of a higher version.

PRCD-01201: Downgrade from current version {0} to version {1} is not supported for database {2}

Cause: An unsupported version was specified for downgrading the database.

Action: Check that the versions provided are correct.

PRCD-01202: Failed to downgrade configuration of services {0} to version {1}

Cause: A request to downgrade the service configuration failed.

Action: Review the accompanying error messages. If you are unable to resolve the problem, contact Oracle Support Services.

PRCD-01203: Failed to downgrade configuration of database {0} to version {1}

Cause: A request to downgrade the database configuration failed.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01204: Failed to update administrator-managed database {0} to use server pool {1}

Cause: Attempt to update administrator-managed database was rejected because administrator-managed database cannot be moved to another subpool.

Action: Retry after supplying a first-level server pool in 'srvctl modify database' command to convert administrator-managed database to policy-managed database.

PRCD-01205: Failed to update policy-managed database {0} to use server pools {1} because it excludes the server pools {2} of the service {3}

Cause: An attempt to update policy-managed database was rejected because specified server pools do not include all server pools hosting services of this database.

Action: Include all server pools hosting services of this database in the supplied server pool list.

PRCD-01206: Failed to retrieve preferred instance of service {0} of RAC One Node database {1}

Cause: Attempt to retrieve preferred instance of service belonging to RAC One Node database failed because database is either in failed online relocation state or undergoing online relocation.

Action: Check the status of online relocation via 'srvctl status database' command. If online relocation status is reported as active, then retry after online relocation

completes. If online relocation status is reported as failed, then repair the configuration via 'srvctl relocate database ... -a' command and then retry.

PRCD-01207: The start options {2} can not be used while starting service {0} and its database {1}

Cause: An attempt to start the service was rejected because the specified start options can not be used with service when the database is not running.

Action: Remove the specified start options and then retry.

PRCD-01208: The start options {1} can not be used while starting services for database {0}

Cause: An attempt to start the services was rejected because the specified start options can not be used with services when the database is not running.

Action: Remove the specified start options and then retry.

PRCD-01209: RAC One Node database {0} does not have enough servers in its server pool {1} to initiate an online relocation

Cause: Online relocation request was rejected because there were less than two servers in the server pool of the specified RAC One Node database.

Action: Make sure that the minimum and maximum size of the server pool are set properly.

PRCD-01210: The service name {0} cannot be same as the database default service name {1}

Cause: An attempt to create the service was rejected because the given service name is same as the database default service name.

Action: Retry after supplying a service name that is different than the database default service name.

PRCD-01211: Cannot start RAC One Node database {0} because a failure has occurred while trying to clean up an earlier failed online relocation

Cause: An attempt to start an Oracle RAC One Node database was rejected because a failure occurred while trying to clean up an earlier failed online relocation.

Action: Use the command 'srvctl status database' to query the target node of the failed online relocation process. Either run the command 'srvctl relocate database' with the '-abort' option or with the '-node' option with the target node thus discovered.

PRCD-01212: An instance with name "{0}" already exists on node {1}

Cause: An instance could not be added to the database on the specified node because an instance with the same name was found on another node.

Action: Use the command 'srvctl modify instance' to change the name of the existing instance, or use a different instance name in the 'srvctl add instance -instance <inst_name>' command.

PRCD-01213: Service {0} of database {1} is still running

Cause: An attempt to remove RAC One Node service failed because the given service was still running.

Action: Stop the service and then retry the command.

PRCD-01214: Administrator-managed RAC database {0} has more than one instance

Cause: An attempt to convert an Oracle RAC database to an Oracle RAC One Node database failed because there was more than one instance.

Action: Use the command 'srvctl remove instance' to remove all but one instance and then run the 'srvctl convert database -dbtype RACONENODE' command.

PRCD-01215: Unable to downgrade RAC One Node database {0}

Cause: Failed to downgrade RAC One Node database to an earlier version because there was no RAC One Node specific configuration in the earlier version.

Action: None

PRCD-01222: Online relocation of database "{0}" failed but database was restored to its original state

Cause: Online relocation of the given database was unsuccessful, therefore the database was restored to its original state.

Action: See accompanying messages for online relocation failure.

PRCD-01223: The service name {0} contains illegal characters {1}

Cause: An attempt to create the service was rejected because the given service name contains illegal characters.

Action: Retry after supplying a service name that contains an upper or lower case letter as the first character and the remainder includes characters only from the character set {a-z, A-Z, 0-9, _}, and the domain name (if provided) only includes characters from the character set {a-z, A-Z, 0-9, _, \$, #}.

PRCD-01224: The {0} management policy is not valid for RAC One Node database service {1}

Cause: A management policy other than AUTOMATIC was specified for RAC One Node database service.

Action: Either specify AUTOMATIC management policy for this service or modify management policy of another service of this database to AUTOMATIC, such as via 'srvctl modify service' command, and then retry the current operation.

PRCD-01225: An attempt to remove service {0} of database {1} was rejected because this is the last service with {2} management policy. A RAC One Node database must have at least one service with {2} management policy.

Cause: An attempt was made to remove the last service of an Oracle RAC One Node database having the AUTOMATIC management policy.

Action: Add another service with the AUTOMATIC management policy, for example by using the command 'srvctl add service ... -policy AUTOMATIC' or modify the management policy of an existing service to AUTOMATIC using the command 'srvctl modify service', before removing the given service.

PRCD-01226: Failed to retrieve ASM Cluster Filesystem resource {0} for database {1}.

Cause: The ASM Cluster Filesystem resource was not registered in Oracle Clusterware.

Action: Create the ASM Cluster Filesystem resource using the command 'srvctl add filesystem' and then retry.

PRCD-01227: Failed to retrieve ASM Cluster Filesystem list for database {0}.

Cause: Failed to retrieve the ASM Cluster Filesystems of the specified database.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01228: Failed to convert administrator-managed RAC database {0} to RAC One Node database because the database had no instance added

Cause: An attempt to convert an Oracle RAC database to an Oracle RAC One Node database was rejected because the database did not have an instance added.

Action: Use the command 'srvctl add instance' to add an instance and then run the command 'srvctl convert database -dbtype RACONENODE'.

PRCD-01229: An attempt to access configuration of database {0} was rejected because its version {1} differs from the program version {2}. Instead run the program from {3}.

Cause: An attempt was made to access configuration of database that is of different version than that of the program.

Action: Make sure that database configuration version and the program version are same and then retry. For example, try the operation using srvctl from the ORACLE_HOME mentioned in the error message.

PRCD-01230: Failed to modify database {0} to use server pool {1}

Cause: An attempt to modify the database to use the given server pool has failed.

Action: Review the accompanying error messages for details about the failure. For example, a failure could happen if the database owner does not have execute permissions on the given server pool. In this case, use the command 'srvctl config database -db <db_unique_name>' to find out the database owner's user name, create a server pool as that user, and then supply that server pool as an argument when retrying the command.

PRCD-01231: Failed to upgrade configuration of database {0} to version {1} in new Oracle home {2}

Cause: Failed to upgrade the database configuration.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01232: Failed to upgrade configuration of database {0} because database version {1} is an unsupported version for upgrade

Cause: Version of the database was not supported for upgrade.

Action: None

PRCD-01233: Failed to downgrade configuration of database {0} to version {1} in new Oracle home {2}

Cause: Failed to downgrade the database configuration.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01234: Failed to downgrade configuration of database {0} to version {1} because the specified version is unsupported for downgrade

Cause: Specified version was not supported for downgrade.

Action: Specify a version that is 10.1 or later.

PRCD-01235: Unable to downgrade configuration of single instance database {0} to version {1}

Cause: Single instance database was specified.

Action: Remove the single instance database configuration. 11.2 Clusterware cannot manage pre-11.2 single instance databases.

PRCD-01236: Unable to downgrade configuration of RAC One Node database {0} to version {1}

Cause: An Oracle RAC One Node database was specified.

Action: Convert the administrator-managed Oracle RAC One Node database to an administrator-managed Oracle RAC database using the command 'srvctl convert database' and then retry.

PRCD-01237: Unable to downgrade configuration of policy-managed RAC database {0} to version {1}

Cause: A policy-managed Oracle RAC database was specified.

Action: Remove the 11.2 database configuration and use pre-11.2 srvctl to re-create the configuration.

PRCD-01238: Failed to get attributes for database {0}

Cause: Failed to get attributes for the database.

Action: Make sure that the CRS stack is up and running and then retry.

PRCD-01239: Failed to downgrade configuration of database {0} to version {1} because the database has dependency on ASM Cluster File System

Cause: Specified database was dependent on ASM Cluster File System.

Action: None

PRCD-01240: Unable to downgrade configuration of database {0} because its database role of {1} is not supported in version {2}

Cause: Database role of specified database was not supported in the specified version.

Action: Modify the database role using the 'srvctl modify database' command and then retry this command.

PRCD-01241: Failed to upgrade configuration of database {0} to version {1} in new Oracle home {2}. Also failed to remove the internal server pool configuration.

Cause: Failed to upgrade the database configuration.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01242: Unable to convert RAC database {0} to RAC One Node database because the database had no service added

Cause: An attempt to convert an Oracle RAC database to an Oracle RAC One Node database was rejected because the database did not have any service configured. An Oracle RAC One Node database must always have one service.

Action: Use the command 'srvctl add service' to add a service and then run 'srvctl convert database -dbtype RACONENODE'.

PRCD-01243: Failed to start instance {0} of database {1} because an instance having same name was already running on node {2}

Cause: An attempt to start an instance with the given name was rejected because another instance with same name was already running on another node.

Action: Either supply a different instance name or stop the running instance with the same name and then retry.

PRCD-01244: Failed to start service {0} of RAC One Node database {1} on the given node {2} because the database was running on node {3}

Cause: An attempt to start the specified service on the given node was rejected because RAC One Node database is running on a node different than the given node.

Action: Either omit the node option or supply the node where the database is running.

PRCD-01246: Online relocation of RAC One Node Data Guard standby database "{0}" was rejected because the database is in Data Guard maximum protection mode

Cause: An online relocation request was rejected because the specified database is operating in Data Guard maximum protection mode.

Action: Downgrade the protection mode to maximum availability and retry the online relocation.

PRCD-01247: Failed to retrieve pluggable database for service {0}

Cause: An attempt to retrieve the pluggable database attribute of the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01248: Failed to retrieve the maximum value of replication lag available for the service {0}

Cause: An attempt to retrieve the maximum value of replication lag for the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01249: Failed to determine whether the service {0} is global or not

Cause: Failed to check whether the specified service is global or not.

Action: Examine the accompanying error messages for details.

PRCD-01250: Modification of the global service attribute {0} not allowed

Cause: An attempt was made to change a global service attribute managed by Global Data Services for just one database.

Action: The attribute must be changed for all databases at the same time through GDS's 'GDSCCTL' command (or specify '-global_override').

PRCD-01251: The specified operation on global service {0} is not allowed

Cause: An attempt was rejected to operate on a global service managed by Global Data Services for just one database.

Action: Operate on the service using Global Data Services' 'GDSCCTL' command, or specify '-global_override'.

PRCD-01252: Failed to retrieve the password file location of database {0}

Cause: An attempt to retrieve the password file attribute of the specified database failed.

Action: Retry the request after ensuring that the CRS stack is running, the database resource has been configured, and the user has read permission on the database resource.

PRCD-01253: Failed to update password file location {0} of database {1}

Cause: An attempt to update the password file attribute of the specified database failed.

Action: Retry the request after ensuring that the CRS stack is running, the database resource has been configured, and the user has update permission on the database resource.

PRCD-01254: Password file attribute does not exist for database {0}

Cause: An attempt to retrieve the PWFIL resource attribute failed.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCD-01255: Failed to retrieve SQL translation profile for service {0}

Cause: An attempt to retrieve the translation profile attribute of the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01256: Failed to retrieve commit outcome for service {0}

Cause: An attempt to retrieve the commit outcome attribute of the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01257: Invalid session state consistency {0}

Cause: The session state consistency supplied is not valid.

Action: Supply a valid session state consistency either STATIC or DYNAMIC.

PRCD-01258: Addition or modification of retention is not allowed when commit outcome is set to FALSE

Cause: An attempt to add or modify retention value was rejected because the commit outcome is not set to TRUE.

Action: Set the option '-commit_outcome' to TRUE and then modify the retention value.

PRCD-01259: Addition or modification of failover type to TRANSACTION is not allowed when commit outcome is set to FALSE

Cause: An attempt to add or modify failover type value to TRANSACTION was rejected because the commit outcome is not set to TRUE.

Action: Set the option '-commit_outcome' to TRUE and then modify the failover type value.

PRCD-01260: Failed to retrieve failover type for service {0}

Cause: An attempt to retrieve the failover type attribute of the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01261: Failed to add or modify replay initiation time because the failover type is not set to TRANSACTION

Cause: An attempt to modify the replay initiation time attribute of the specified service failed.

Action: Set the failovertime to TRANSACTION and retry the command.

PRCD-01262: Failed to add or modify session state consistency because the failover type is not set to TRANSACTION

Cause: An attempt to modify the session state consistency attribute of the specified service failed.

Action: Set the failovertime to TRANSACTION and retry the command.

PRCD-01263: Invalid retention time {0} seconds greater than the maximum {1} seconds

Cause: The specified value exceeds the maximum permissible retention time.

Action: Supply a valid retention time value less than 2592000.

PRCD-01264: Invalid replay initiation time {0} seconds greater than the maximum {1} seconds

Cause: The specified value exceeds the maximum permissible replay initiation time.

Action: Supply a valid replay initiation time value less than 86400.

PRCD-01265: Failed to retrieve parallel query helper service for service {0}

Cause: An attempt to retrieve the parallel query helper service of the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01266: Failed to set parallel query helper service {0} for service {1}

Cause: An attempt to set the parallel query helper service for the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01267: Failed to retrieve the server pools of the parallel query helper service for service {0}

Cause: An attempt to retrieve the server pools of the parallel query helper service of the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01268: Failed to set parallel query helper service {0} for service {1}

Cause: An attempt to set the parallel query helper service for the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01269: Failed to set parallel query helper service {0} for database {1}

Cause: An attempt to set the parallel query helper service for the specified database failed.

Action: Examine the accompanying error messages for details.

PRCD-01270: {0} API is not supported on management database environment

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRCD-01271: Failed to unset commit outcome because the failover type is set to TRANSACTION

Cause: An attempt to unset the commit outcome attribute of the specified service failed.

Action: Modify the value of failovertyp and retry the command.

PRCD-01272: Failed to remove the management database resource

Cause: An attempt to remove the management database failed.

Action: Examine the accompanying error messages for details.

PRCD-01273: Failed to retrieve the service type for service {0}

Cause: An attempt to retrieve the service type of the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01274: Failed to set service type {0} for service {1}

Cause: An attempt to set the service type for the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01275: Failed to retrieve the server pools of the parallel query helper service for database {0}

Cause: An attempt to retrieve the server pools of the parallel query helper service of the specified database failed.

Action: Examine the accompanying error messages for details.

PRCD-01276: Service {0} of database {1} does not have parallel query helper service

Cause: The specified service did not have parallel query helper service configured.

Action: None

PRCD-01277: The specified operation on global service {0} is not allowed

Cause: An attempt was rejected to operate on a global service managed by Global Data Services for just one database.

Action: Operate on the service using Global Data Services' 'GDSCCTL' command, or specify '-global_override'.

PRCD-01278: The service name {0} cannot be same as the pluggable database default service name {1}

Cause: An attempt to create or modify the service was rejected because the given service name is same as the pluggable database default service name.

Action: Make sure that the service name is different from the pluggable database default service name and retry the command.

PRCD-01279: AQ HA notification cannot be set to FALSE when the failover type is TRANSACTION

Cause: An attempt was rejected to add or modify the service because conflicting options were found.

Action: Set the AQ HA notification to TRUE or modify the failover type to any of the values NONE | SESSION | SELECT.

PRCD-01280: The pluggable database name {0} contains invalid characters.

Cause: The supplied pluggable database name contained invalid characters.

Action: Valid characters in a pluggable database name are a-z, A-Z, 0-9, \$, #, and _ (underscore) and it should start with a letter.

PRCD-01281: The database {0} in an ASM Client Cluster cannot have dependency on diskgroup {1}

Cause: Diskgroups were supplied for creating a database in an ASM Client Cluster.

Action: Do not specify diskgroups when creating a database in an ASM Client Cluster.

PRCD-01282: Cannot add instance {0} for database "{1}" because node {2} has active role {3}.

Cause: An attempt to add an instance for a database specified a node with an active node role other than hub.

Action: Specify the node with hub active node role when adding the instance for database.

PRCD-01283: Password file pathname {0} cannot contain only the diskgroup name

Cause: An attempt to add a password file resource attribute was rejected because the supplied pathname consisted only of a diskgroup name.

Action: Specify a valid password file path and retry the command.

PRCD-01284: Failed to create start dependency for database {0} on the ASM cluster file system because path {1} is not on an ASM cluster file system

Cause: An attempt to create a start dependency for the database resource on the ASM cluster file system failed because the specified path was not on an ASM cluster file system.

Action: Specify a path on an ASM cluster file system.

PRCD-01285: Cannot disable session replay because session disconnect is not requested

Cause: An attempt to stop or relocate services was rejected because the session noreplay option was specified without the session disconnect option.

Action: Specify the '-force' option for session disconnect or omit the '-noreplay' option. For example: 'srvctl stop service -db hr -service hrl -force -noreplay'

PRCD-01286: Failed to create the management database

Cause: An attempt to create the management database failed because the request was issued by the wrong user.

Action: Login in as the owner of the Oracle Home to issue the command 'srvctl add mgmtdb'.

PRCD-01287: User is not authorized to remove service {0} for database {1}

Cause: An attempt to remove the specified service was rejected because the command was not issued by the Oracle home owner.

Action: Examine the accompanying error messages for details. Log in as the user of the Oracle home to issue the command.

PRCD-01288: User is not authorized to create service {0} for database {1}

Cause: An attempt to create the specified service failed because the command was not issued by the Oracle home owner.

Action: Examine the accompanying error messages for details. Log in as the user of the Oracle home to issue the command.

PRCD-01289: Invalid stop option {0} for the online relocation of database {1}

Cause: An attempt to relocate the specified database failed because an invalid stop option was specified. Only NORMAL shutdown of the running instance may be specified for relocation of an Oracle RAC One Node database.

Action: Specify NORMAL to override the default stop option for the running instance or issue the request without any stop option.

PRCD-01290: NORMAL shutdown is not allowed for physical standby databases
Cause: An attempt to relocate the specified database was rejected because an invalid stop option was specified.

Action: Issue the request without any stop option.

PRCD-01291: The specified server pool {0} has maximum size {1} greater than one, which is invalid for a single instance database {2}.

Cause: An attempt to create a single instance database failed because a server pool with maximum size greater than one server was specified.

Action: Specify a different server pool with maximum size of one, or modify the specified server pool using the command 'srvctl modify srvpool' with '-max 1' option to have at most one server.

PRCD-01292: specified server pool {0} has no candidate server for single instance database {1}

Cause: An attempt to create a single instance database failed because the specified server pool had no configured candidate server.

Action: Specify a different server pool with a maximum of one server, or modify the specified server pool using the command 'srvctl modify srvpool' with '-servers' option to configure exactly one candidate server.

PRCD-01293: specified server pool {0} has more than one candidate server

Cause: An attempt to create a single instance database failed because a server pool with more than one candidate server was specified.

Action: Specify a different server pool with a maximum of one server, or modify the specified server pool using the command 'srvctl modify srvpool' with '-servers' option to configure exactly one candidate server.

PRCD-01294: Invalid option GSM flags for the specified non-global service {0}

Cause: An attempt to add or modify the specified option was rejected because an option that is only valid for global services was specified.

Action: Reissue the request without the invalid option.

PRCD-01295: Cannot downgrade configuration of database {0} from version {1} to newer version {2}

Cause: An attempt was made to downgrade the database to a version newer than the current one.

Action: Specify a target version older than the current one.

PRCD-01296: An error occurred while loading Oracle JDBC driver

Cause: An attempt to load Oracle JDBC driver failed.

Action: This is an internal error. Contact Oracle Support Services.

PRCD-01297: An error occurred while establishing connection to database with user name "{0}" and connect descriptor:\n{1}

Cause: An attempt to connect to database failed.

Action: Examine the accompanying error message for details.

PRCD-01298: Version {0} of database or service resource is different from the srvctl version {1}

Cause: The version of srvctl used did not match the version of the database or service to be added or modified.

Action: Run `srvctl` from the Oracle Home where the database or service is configured.

PRCD-01299: Database {0} is policy-managed

Cause: An attempt to retrieve the configured nodes of an administrator-managed database failed because the database is policy-managed.

Action: Specify an administrator-managed database.

PRCD-01300: Failed to retrieve nodes on which database {0} is configured

Cause: An attempt to retrieve the configured nodes of an administrator-managed database failed.

Action: Examine the accompanying error messages for details.

PRCD-01301: Current owner {0} of the database {1} is different from the owner {2} of the specified Oracle home {3}

Cause: An attempt to modify the Oracle home of the database failed because the owner of the Oracle home was not the current owner of the database. Changing to use an Oracle home with a different owner changes the ownership of the database.

Action: To modify the Oracle home of a database to a new home whose owner is not the current owner of this database, specify the new user also as a modification parameter.

PRCD-01302: failed to retrieve the node hosting this single-instance database

Cause: An attempt to retrieve the `HOSTING_MEMBERS` resource attribute of the database failed. Details are provided by the accompanying messages.

Action: Examine the accompanying error messages for details and take the corrective action indicated.

PRCD-01303: cannot retrieve the node hosting a policy-managed, single-instance database

Cause: An attempt to retrieve the node hosting a single-instance database was rejected because the database is policy-managed.

Action: Specify an administrator-managed single-instance database or a fixed single-instance database.

PRCD-01304: failed to set or modify the server pool for fixed single-instance database {0}

Cause: An attempt to set or modify the server pools for this database failed because it is a fixed single-instance database which is not hosted by a server pool.

Action: Provide a database which is not a fixed-single-instance database.

PRCD-01305: Modification of the database role from or to `FAR_SYNC_STANDBY` for database {0} is not allowed.

Cause: An attempt to modify the database role of a database failed because a `FAR_SYNC_STANDBY` role can be specified only during the database creation.

Action: Reissue the request without attempting to modify the role of a database created with the role `FAR_SYNC_STANDBY` or attempting to change the current role to `FAR_SYNC_STANDBY`.

PRCD-01306: Services cannot be created for the far sync database {0}.

Cause: An attempt to create a service for the database was rejected because the database role was `FAR_SYNC_STANDBY`.

Action: If the request was issued with the wrong database name, reissue with the correct database name.

PRCD-01307: Invalid start option OPEN specified for database {0} with the role FAR_SYNC_STANDBY.

Cause: An attempt to add, modify or start the database with start option OPEN was rejected because its role was FAR_SYNC_STANDBY.

Action: Reissue the request with a different start option.

PRCD-01308: Database {0} is not permitted to have the role FAR_SYNC_STANDBY in an Oracle RAC One Node configuration.

Cause: An attempt to add or convert the database failed because a database with role FAR_SYNC_STANDBY cannot be used in an Oracle RAC One Node configuration.

Action: Reissue the request with a different database type or database role.

PRCD-01309: Database {0} cannot be configured on parallel query server pools {1}.

Cause: An attempt to add or modify the database was rejected because a database with role FAR_SYNC_STANDBY cannot run on Leaf nodes.

Action: Reissue the request without specifying the parallel query server pools.

PRCD-01310: Failed to update the open mode of database {0}.

Cause: An attempt to modify the open mode of the database failed.

Action: Examine the accompanying error message for details.

PRCD-01311: Failed to update the open mode of database {0}. \nDetails: \n{1}

Cause: An attempt to modify the open mode of the database failed.

Action: Examine the accompanying error message for details.

PRCD-01312: The targeted database instance or instances are already running in the specified open mode. \nDetails: \n{0}

Cause: An attempt to update the open mode of the database was rejected because the targeted database instance or instances were already running as desired.

Action: Reissue the command with a different start option.

PRCD-01313: The specified start option is incompatible with the current running state of at least one database instance. \nDetails: \n{0}

Cause: An attempt to update the open mode of the database was rejected because it was not one of the following legal transitions: - NOMOUNT to MOUNT, OPEN, or READONLY - MOUNT to OPEN or READONLY

Action: Reissue the command with a different start option and only if the database's current mode is NOMOUNT or MOUNT.

PRCD-01314: failed to retrieve the list of databases configured on the cluster

Cause: An attempt to retrieve the list of databases configured on the cluster failed.

Action: Examine the accompanying error messages for details.

PRCD-01315: failed to stop instances for database {0}

Cause: An attempt to stop the database on the specified nodes has failed.

Action: Ensure that the user attempting to stop the database has execute privileges on the database resource. Also, review the accompanying error messages for details about failure to stop the database. Retry after resolving those issues.

PRCD-01316: failed to stop services {0} for database {1}

Cause: An attempt to stop the specified services for the indicated database failed.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCD-01317: modification of user for database is not supported on Windows

Cause: An attempt to modify the database failed because a new user was specified.

Action: Ensure that there is no attempt to modify the Oracle user of the database and reissue the request.

PRCD-01318: failed to create database {0} because the length of the database unique name is greater than 30 characters

Cause: The length of the database unique name was greater than 30 characters.

Action: Ensure that the length of the database name supplied is less than or equal to 30 characters, and retry the command.

PRCD-01319: failed to move databases from Oracle home {0} to new Oracle home {1}

Cause: An attempt to move databases between the specified Oracle homes has failed.

Action: Examine the accompanying error messages for details.

PRCD-01320: failed to move database {0} to new Oracle home {1}

Cause: An attempt to move the database to a new Oracle home has failed.

Action: Examine the accompanying error messages for details.

PRCD-01321: Version {0} of Oracle home {1} is different from version {2} of Oracle home {3}.

Cause: An attempt to change the Oracle home of a database failed because the version of the new Oracle home is different from the version of the current Oracle home.

Action: Specify Oracle homes that are of the same version.

PRCD-01322: operation not supported for Oracle home {0} of version {1}

Cause: An attempt to change the Oracle home of a database failed because the version of the Oracle home is less than 11.2.

Action: Specify an Oracle home whose version is greater than 11.2.

PRCD-01323: Installation of patch 18697602 is not supported for Oracle Grid Infrastructure of version {0}.

Cause: An attempt to install patch 18697602 failed because the version of Oracle Grid Infrastructure is not 12.1.0.1.0.

Action: Install the patch from 12.1.0.1.0 Oracle Grid Infrastructure.

PRCD-01324: Neither the previous Oracle home {0} nor the new Oracle home {1} has a built-in user account.

Cause: An attempt to modify the Oracle home of the database failed because a database cannot be moved between homes that have different domain users.

Action: Move the database to an Oracle home that has either the same domain user or one that uses built-in account.

PRCF-01001 to PRCF-02030

PRCF-01001: The directory "{0}" does not exist

Cause: A directory that did not exist was chosen for the top-level directory of the directory map.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01002: Source directory "{0}" is not a directory

Cause: An existing file which was not a directory was provided as top-level directory.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01003: The file "{0}" does not exist

Cause: The file was not found in the file system.

Action: Make sure that the file exists in the file system.

PRCF-01004: The link destination "{0}" does not exist

Cause: The link destination was not found in the file system.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01005: "{0}" conflicts with the exclude-list

Cause: The pathname (directory, file or symbolic link pathname) to add to the directory map could not be added as it conflicted with the exclude list.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01006: The directory "{0}" exists already in the directory map

Cause: The directory existed already in the directory map.

Action: No action. This is just to let the user know that no action is taken as the task is already complete.

PRCF-01007: The file "{0}" exists already in the directory map

Cause: The file existed already in the directory map.

Action: No action. This is just to let the user know that no action is taken as the task is already complete.

PRCF-01008: The link "{0}" exists already in the directory map

Cause: The link existed already in the directory map.

Action: No action. This is just to let the user know that no action is taken as the task is already complete.

PRCF-01009: The parent of "{0}" does not exist

Cause: The parent directory of the content (directory, file or symbolic link) that was being processed did not exist.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01010: "{0}" is not a directory

Cause: The indicated object was expected to be a directory, but it was not.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01011: Cannot remove "{0}" as the directory map does not contain it

Cause: The content (i.e., directory, file or symbolic link) could not be removed from the directory map as it did not exist there.

Action: No action. This is just to let the user know that no action is taken as the task is already complete.

PRCF-01012: The following contents (directories, files or symbolic links) cannot be included to to the list of contents to add to the directory map: {0}

Cause: The contents that could not be included to the add-list were those which conflicted with the exclude-list (see the accompanying PRCF-1005 message).

Action: No action. This is just to let the user know about the conflicts with the exclude-list.

PRCF-01013: The directory map has no entry

Cause: The user tried to acquire information about an empty directory map.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01014: Cannot add "{0}" as there is no directory map

Cause: The user tried to add a content (i.e., directory, file or symbolic link) to an empty directory map. This operation is allowed only if there is a directory map.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01015: Cannot add "{0}" to the directory map as "{0}" does not exist

Cause: The content to add to the directory map was not found in the file system.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01016: Cannot remove "{0}" as there is no directory map

Cause: The user tried to remove a content (i.e., directory, file or symbolic link) from an empty directory map. This operation is allowed only if there is a directory map.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01017: Cannot remove "{0}" from the directory map as "{0}" does not exist

Cause: The content to remove from the directory map was not found in the file system.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01018: Exception encountered. Details: {0}

Cause: An unexpected error condition was detected during reading the exclude-list or include-list file.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01019: The API supports only Unix OS

Cause: The user was running on Windows OS.

Action: Make sure that the OS is Unix or Linux.

PRCF-01020: "{0}" is not a file

Cause: The content that was expected to be a file which turned out not to be a file.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01021: "{0}" is not a valid pathname

Cause: The content that was expected to be a valid pathname which turned out to be an invalid one.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01022: "{0}" does not exist

Cause: The specified pathname does not exist in the file system.

Action: Make sure that the pathname exists in the file system.

PRCF-01023: Symbolic link "{0}" points to "{1}" which does not exist

Cause: An existing symbolic link that resolves to a pathname that does not exist.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01024: Symbolic link "{0}" points to "{1}" which is is not a directory

Cause: An existing symbolic link that resolves to a non-directory pathname was provided as top-level directory.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01025: Error while trying to open file "{0}" for reading. Details: {1}

Cause: An I/O error occurred while trying to open the file for reading.

Action: Make sure that the file exists, is a regular file rather than a directory and that the user has read permissions on the file. Also, look at the accompanying error messages for additional details.

PRCF-01026: Error while reading file "{0}". Details: {1}

Cause: An I/O error occurred while reading or closing the file.

Action: Look at the accompanying error messages for additional details.

PRCF-01027: Error while trying to create file "{0}" for writing. Details: {1}

Cause: An I/O error occurred while trying to create the file for writing.

Action: Make sure that if the file exists it is a regular file rather than a directory, if it does not exist it can be created and that the user has write permissions on the file. Also, look at the accompanying error messages for additional details.

PRCF-01028: Error while writing file "{0}". Details: {1}

Cause: An I/O error occurred while writing or closing the file.

Action: Look at the accompanying error messages for additional details.

PRCF-02001: Connection to host/IP address: {0} -- port: {1} refused

Cause: Could not establish connection to the provided host/IP address using the port number reported.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-02002: Connection to node "{0}" is lost

Cause: The connection to the remote node with the specific node ID was lost.

Action: Verify that the remote node (which acts as server) is still up and running. Then do the same for the local node (which acts as client).

PRCF-02003: Expected "{0}" but received "{1}"

Cause: The command was not executed successfully. The local node received a reply from the remote node that was different from the expected one.

Action: No action. The program should take care of it (i.e., catch the exception and handle it).

**PRCF-02004: Problem encountered while saving the directory listing to file "{0}".
Details : {1}**

Cause: While trying to save the directory listing to a file, the operation could not be completed successfully.

Action: If you can correct the problem indicated in the accompanying details, do so and then retry the request. Otherwise, contact Oracle Support Services.

PRCF-02005: File transfer cannot proceed because the remote node names do not match the remote node ports

Cause: An internal error caused a mismatch between the number of remote nodes and the number of remote node ports.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-02006: File transfer cannot proceed because the list of remote nodes is empty

Cause: An empty list of remote nodes was passed as argument.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-02007: Invalid selection for the remote node port. "{0}" is not an integer number as expected.

Cause: The port number for the remote node was either not a number at all or not an integer number.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-02008: The remote node port number "{0}" is out of the expected range [1, 65535]

Cause: The port number for the remote node was indeed an integer number but either less than 1 or greater than 65535.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-02009: Cannot proceed with the file transfer. There has to be at least one remote node to send the installer files!

Cause: The user either provided an empty list of remote nodes or each remote node of the list had invalid format.

Action: Make sure that the list of remote nodes is not empty and the remote nodes have valid format.

PRCF-02010: All connections to the remote nodes got refused. Cannot proceed with the file transfer. There has to be at least one remote node to send the installer files!

Cause: All the attempts to connect to the remote nodes that had valid format failed.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-02011: The file "{0}" cannot be read successfully

Cause: The file existed in the file system but could not be read successfully.

Action: Make sure that the file is not corrupted. To verify that try to open the file manually and read its contents.

PRCF-02012: The top-level directory "{0}" does not exist

Cause: The top-level directory was not found in the file system.

Action: Make sure that the top-level directory exists in the file system.

PRCF-02013: Cannot find the CRS Home

Cause: The CRS Home did not exist or 'oui' was not a directory under the CRS Home.

Action: Make sure that 'oui' is a directory under the CRS Home. Refer to your platform-specific documentation for information about locating the Oracle software inventory.

PRCF-02014: Executing command "{0}" on "{1}" failed on node "{2}".\n{3}

Cause: The command ('mkdir', 'mkfile', 'mklink' or 'wrfile') failed while executing on the remote node.

Action: Try to fix the problem based on the error message. If the problem still exists, contact Oracle Support Services.

PRCF-02015: One or more commands were not executed successfully on one or more nodes

Cause: At least one of the commands 'mkdir', 'mkfile', 'mklink' or 'wrfile' failed while executing on one or more remote nodes.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-02016: Required binary file "{0}" not found

Cause: The binary file was not found under the expected location.

Action: Contact Oracle Support Services.

PRCF-02017: Node "{0}": The transfer binary was not executed successfully as it returned a wrong port number

Cause: Misbehavior of the transfer binary on the provided node.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-02018: Node "{0}": The transfer binary was not executed successfully

Cause: Unsuccessful execution of the transfer binary.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-02019: Cannot retrieve the name for the local node

Cause: No IP address for the local host could be found.

Action: Use the ping command manually to check whether you get a reply from the host or not.

PRCF-02020: Cannot retrieve the host for node "{0}"

Cause: No IP address for the node host could be found.

Action: Use the ping command manually to check whether you get a reply from the host or not.

PRCF-02021: There is a mismatch between the number of node names ({0}) and the number of node destination directories ({1})

Cause: An internal error caused a mismatch between the number of remote nodes and the number of remote destination directories.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-02022: The file "{0}" became smaller while being transferred

Cause: The file became smaller while being transferred.

Action: None

PRCF-02023: The following contents cannot be transferred as they are non-readable. \nDirectories:\n {0} \nFiles:\n {1}

Cause: The file permissions for the listed contents did not allow the requested operation.

Action: Ensure that the user has read permissions on the specified files and directories.

PRCF-02024: The directory "{0}" is not transferred as it is non-readable

Cause: The file permissions of the listed directory did not allow the requested operation.

Action: None

PRCF-02025: Internal error: {0}

Cause: An internal error occurred. The included value is an internal identifier.

Action: Contact Oracle Support Services.

PRCF-02026: File name is too long: {0}

Cause: An internal error occurred.

Action: Ensure that the copy doesn't result in pathnames that are too long, by making sure that the destination directory name is not too long.

PRCF-02027: Link path is too long: {0}

Cause: An internal error occurred.

Action: Ensure that the copy doesn't result in pathnames that are too long, by making sure that the destination directory name is not too long.

PRCF-02028: Failed to get system information for {0}: {1}

Cause: An attempt to get system information failed

Action: Make sure that the specified file, directory or symbolic link exists. To verify that execute '*ls -l file*' manually.

PRCF-02029: The transfer operation completed with partial failures.

Cause: The operation failed to transfer all of the contents to one or more nodes.

Action: Look at the accompanying error messages for details.

PRCF-02030: Parallel transfer workload distribution error.

Cause: An error occurred while distributing the transfer workload to multiple threads.

Action: Look at the accompanying error messages for details.

PRCG-01000 to PRCG-01132

PRCG-01000: Failed to create Rapid Home Provisioning Server configuration

Cause: An attempt to create configuration for the Rapid Home Provisioning Server failed. Either the request was not issued by an account with administrative access (root, Administrator, etc) or a problem was detected inside Oracle Clusterware.

Action: Examine the accompanying error messages for details. Make sure that the user is running with administrative access.

PRCG-01001: Failed to create Rapid Home Provisioning Server configuration because there is an existing Rapid Home Provisioning Client configured on the cluster

Cause: An attempt to create configuration for the Rapid Home Provisioning Server failed because there was a Rapid Home Provisioning Client configured on the cluster.

Action: Either configure the Rapid Home Provisioning Server on another cluster or remove the existing Rapid Home Provisioning Client configuration.

PRCG-01002: Failed to find the management database resource

Cause: An attempt to find the management database resource used for the Rapid Home Provisioning Server failed because the Clusterware stack encountered errors.

Action: Examine the accompanying error messages for details.

PRCG-01003: Failed to create the Rapid Home Provisioning Client configuration

Cause: An attempt to create the configuration for the Rapid Home Provisioning Client failed. Either the request was not issued by an account with administrative access (root, Administrator, etc) or a problem was detected inside Oracle Clusterware.

Action: Examine the accompanying error messages for details. Make sure that the user is running with administrative access.

PRCG-01004: Failed to retrieve storage base path attribute for Rapid Home Provisioning Server

Cause: An attempt to retrieve the STORAGE_BASE_PATH attribute of the Rapid Home Provisioning Server failed.

Action: Examine the accompanying error messages for details.

PRCG-01005: Failed to update the storage base path to {0} for Rapid Home Provisioning Server

Cause: An attempt to update the storage base path for the Rapid Home Provisioning Server failed.

Action: Examine the accompanying error messages for details.

PRCG-01006: Failed to retrieve diskgroup list for Rapid Home Provisioning Server

Cause: An attempt to retrieve the diskgroups from the start dependencies of the Rapid Home Provisioning Server failed.

Action: Examine the accompanying error messages for details.

PRCG-01007: Client data file {0} does not exist for Rapid Home Provisioning Client

Cause: An attempt to locate the specified client data file failed.

Action: Make sure that the path and name of the client data file were entered correctly and the absolute path of the client data file exists.

PRCG-01008: Client data file {0} is not a file

Cause: Specified client data file was a directory.

Action: Make sure that to specify the absolute file path of the client data file.

PRCG-01009: Failed to create Rapid Home Provisioning Client because there is an existing Rapid Home Provisioning Server configured on the cluster

Cause: An attempt to create Clusterware resource for the Rapid Home Provisioning Client failed because there was a Rapid Home Provisioning Server configured on the cluster.

Action: Either configure the Rapid Home Provisioning Client on another cluster or remove the existing Rapid Home Provisioning Server configuration.

PRCG-01010: Failed to determine whether ACFS is configured on Rapid Home Provisioning Server

Cause: An attempt to verify that ACFS was configured on Rapid Home Provisioning Server failed.

Action: Examine the accompanying error messages for details.

PRCG-01011: Failed to determine whether ACFS is configured on Rapid Home Provisioning Client

Cause: An attempt to verify that ACFS was configured on Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details.

PRCG-01012: ACFS is not configured on Rapid Home Provisioning Server

Cause: ACFS was not configured on Rapid Home Provisioning Server.

Action: Configure ACFS on Rapid Home Provisioning Server.

PRCG-01013: ACFS is not configured on Rapid Home Provisioning Client

Cause: Either storage base path or diskgroup was supplied, but ACFS was not configured on Rapid Home Provisioning Client.

Action: Either configure ACFS on Rapid Home Provisioning Client or run the command 'srvctl add rhpclient' without the '-storage' and '-diskgroup' options.

PRCG-01014: Failed to retrieve storage base path for Rapid Home Provisioning Client

Cause: An attempt to retrieve the STORAGE_BASE_PATH attribute of the Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details.

PRCG-01015: Failed to update the storage base path to {0} for Rapid Home Provisioning Client

Cause: An attempt to update the storage base path for the Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details.

PRCG-01016: Failed to retrieve disk group list for Rapid Home Provisioning Client

Cause: Failed to retrieve the diskgroups from the start dependencies of the Rapid Home Provisioning Client.

Action: Examine the accompanying error messages for details.

PRCG-01017: Failed to check for existence of Rapid Home Provisioning Server

Cause: An attempt to find the Rapid Home Provisioning Server resource failed.

Action: Examine the accompanying error messages for details.

PRCG-01018: Failed to check for existence of Rapid Home Provisioning Client

Cause: An attempt to find the Rapid Home Provisioning Client resource failed.

Action: Examine the accompanying error messages for details.

PRCG-01019: Failed to retrieve database schema for Rapid Home Provisioning Server

Cause: An attempt to retrieve the DB_SCHEMA attribute of the Rapid Home Provisioning Server failed.

Action: Examine the accompanying error messages for details.

PRCG-01020: Invalid option {0} for the Rapid Home Provisioning action

Cause: The option supplied was not a valid option name.

Action: Supply a valid option.

PRCG-01021: Invalid return status {0} for the Rapid Home Provisioning action

Cause: An unexpected return status occurred.

Action: Contact Oracle Support Services.

PRCG-01022: Failed to connect to OC4J for cluster {0}

Cause: An attempt to connect to the OC4J container failed for this cluster.

Action: Examine the accompanying error messages for details.

PRCG-01023: Failed to start Rapid Home Provisioning instance

Cause: An attempt to start the Rapid Home Provisioning instance failed.

Action: Examine the accompanying error messages for details.

PRCG-01024: Failed to destroy Rapid Home Provisioning instance

Cause: An attempt to destroy the Rapid Home Provisioning instance failed.

Action: Examine the accompanying error messages for details.

PRCG-01025: Failed to stop Rapid Home Provisioning instance

Cause: An attempt to stop the Rapid Home Provisioning instance failed.

Action: Examine the accompanying error messages for details.

PRCG-01026: Failed to retrieve the Rapid Home Provisioning version

Cause: An attempt to retrieve the version of the Rapid Home Provisioning instance failed.

Action: Examine the accompanying error messages for details.

PRCG-01027: Invalid command specified : {0}

Cause: The command keyword specified on the command line was not recognized.

Action: Valid commands are add | allow | query | delete | deleteimage | disallow | export | grant | import | insertimage | modify | promote | revoke. Usage of `rhpcctl` is printed with this error. Check the `rhpcctl` usage printed along with this error and specify a valid command.

PRCG-01028: Invalid object specified : {0}

Cause: The object keyword specified on the command line was not recognized.

Action: Check the `rhpcctl` usage printed along with the error message and specify a valid object.

PRCG-01029: Invalid value {0} for command-line option -{1}

Cause: An invalid value was specified for the command-line option.

Action: Check the value printed and specify the correct value.

PRCG-01030: Missing mandatory option -{0}

Cause: An option required by the specified command was missing.

Action: Issue `'rhpcctl command object -help'` to display option details for the command and make sure that all the mandatory options are specified.

PRCG-01031: Invalid command-line options for command: {0} and object: {1}. {2} can not be specified with {3}.

Cause: A command was specified with conflicting or incomplete options, some options in one set are missing or the options from both sets were specified.

Action: Check the command-line options entered and make sure that all the options in one set are specified.

PRCG-01032: Command line option {0} must be followed by a value.

Cause: A command-line option that requires a value was specified without one.

Action: Look at the usage and of the command and specify an appropriate value.

PRCG-01033: Invalid command-line option: -{0}

Cause: An invalid command-line option was specified.

Action: Look at the usage of the command and specify the correct option.

PRCG-01034: No option was specified for command : {0} and object: {1} combination. {2} options should be specified.

Cause: Required options were omitted from a command.

Action: Look at the usage of the command and specify required options.

PRCG-01035: Invalid syntax or missing required option: {0} in the specified command.

Cause: A required option was not specified for the command or an invalid combination of options was specified.

Action: Specify required options or check the command-line options entered and make sure that all the options in one set are specified.

PRCG-01037: Failed to update the Rapid Home Provisioning Server's cluster name {0} for Rapid Home Provisioning Client

Cause: An attempt to update the GHS_CLUSTERNAME attribute for the Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details.

PRCG-01038: Failed to retrieve the Rapid Home Provisioning Server's cluster name for Rapid Home Provisioning Client

Cause: An attempt to retrieve the GHS_CLUSTERNAME attribute for the Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details.

PRCG-01039: Failed to update the GNS discovery string {0} for Rapid Home Provisioning Client

Cause: An attempt to update the GNS_DISCOVERY_STRING attribute for the Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details.

PRCG-01040: Failed to retrieve the GNS discovery string for Rapid Home Provisioning Client

Cause: An attempt to retrieve the GNS_DISCOVERY_STRING attribute for the Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details.

PRCG-01041: Invalid internal parameter {0}

Cause: The internal parameter supplied was not a valid parameter.

Action: Contact Oracle Support Services.

PRCG-01043: Failed to modify Rapid Home Provisioning Server's listening port to {0}

Cause: An attempt to modify the Rapid Home Provisioning Server's listening port failed.

Action: Ensure that the Oracle Clusterware stack is up and that the specified IP port is not in use by another program.

PRCG-01044: Failed to modify Rapid Home Provisioning Client's listening port to {0}

Cause: An attempt to modify the Rapid Home Provisioning Client's listening port failed.

Action: Ensure that the Oracle Clusterware stack is up and that the specified IP port is not in use by another program.

PRCG-01045: The specified '-toclientdata' path does not exist

Cause: The '-toclientdata *path*' option value was not an existing file system path.

Action: Ensure that the '-toclientdata *path*' option value corresponds to an existing file system path.

PRCG-01046: Missing mandatory options, either -role or -maproles required.

Cause: The command requires exactly one set of mandatory command-line options.

Action: Check the command-line options entered and make sure that all the mandatory options in one set are specified.

PRCG-01047: Invalid command line syntax or missing mandatory options.

Cause: The command requires exactly one set of mandatory command-line options. But either some options in one set were missing or the options from both sets were specified.

Action: Check the command-line options entered and make sure that all the mandatory options in one set are specified.

PRCG-01048: Failed to import client data from file {0} for Rapid Home Provisioning Client

Cause: An attempt to import client data for the Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details.

PRCG-01049: Storage base path "{0}" is not an absolute path

Cause: The storage base path value was not an absolute path.

Action: Specify an absolute path in the '-storage' argument.

PRCG-01050: Rapid Home Provisioning Server is not running.

Cause: The requested operation failed because the Rapid Home Provisioning Server is not started

Action: Start the Rapid Home Provisioning Server using the command 'srvctl start rhpserver' and retry the operation.

PRCG-01051: Rapid Home Provisioning Client is not running.

Cause: The requested operation failed because the Rapid Home Provisioning Client is not started

Action: Start the Rapid Home Provisioning Client using the command 'srvctl start rhpcient' and retry the operation.

PRCG-01052: The client data file {0} already exists in the specified '-toclientdata' path

Cause: While generating client data, the specified file was found.

Action: Delete the existing file and retry the command.

PRCG-01053: The specified path "{0}" does not exist on nodes {1}

Cause: The mountpath specified was not an existing directory on all cluster nodes.

Action: Ensure that the path corresponds to an existing directory on all cluster nodes.

PRCG-01054: The "-{0}" option requires the specification of {1} option.

Cause: Required options were omitted from a command.

Action: Look at the usage of the command and specify required options.

PRCG-01055: The options "-{0}" and "-{1}" can not be specified together.

Cause: An invalid combination of options was specified together.

Action: Specify only valid combination of options and retry the command.

PRCG-01056: Both "-{0}" and "-{1}" options can not be specified with the "-dbname" option.

Cause: An invalid combination of options was specified.

Action: Specify only one of the other possible options.

PRCG-01057: The specified path "{0}" does not exist

Cause: The path specified was not an existing directory.

Action: Ensure that the path corresponds to an existing directory.

PRCG-01058: The specified path {0} is not an Oracle Database Home

Cause: The specified home path does not contain the 'oracle' binary or it is an Oracle Grid Infrastructure home.

Action: Make sure that the home path is an Oracle database home path.

PRCG-01059: Attribute {0} does not exist in the credential file {1}

Cause: An attempt to add Rapid Home Provisioning Client failed because a required attribute does not exist in the credential file.

Action: Ensure that a valid credential file is supplied and retry the command.

PRCG-01060: The provided credential file {0} does not conform to XML standards

Cause: An attempt to add Rapid Home Provisioning Client failed because an invalid credential file was supplied.

Action: Ensure that a valid credential file is supplied and retry the command.

PRCG-01061: Failed to retrieve the GNS SUBDOMAIN string for Rapid Home Provisioning Client

Cause: An attempt to retrieve the GNS_SUBDOMAIN_STRING attribute for the Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details.

PRCG-01062: Failed to update the GNS SUBDOMAIN string {0} for Rapid Home Provisioning Client

Cause: An attempt to update the GNS_SUBDOMAIN_STRING attribute for the Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details.

PRCG-01063: Invalid command-line option value for option -{0}

Cause: The value specified for a command-line option was an empty string.

Action: Specify a value for the option.

PRCG-01064: An attempt to remove the Rapid Home Provisioning Server configuration failed because the Rapid Home Provisioning Server is running

Cause: A request to remove the Rapid Home Provisioning Server configuration was rejected because such removal requires Rapid Home Provisioning Server to be stopped.

Action: Use the command 'srvctl stop rhpsrvr' or, if necessary, use the command 'srvctl stop rhpsrvr -force' to stop the Rapid Home Provisioning Server and then retry removing the Rapid Home Provisioning Server configuration.

PRCG-01065: Syntax error: expected an option keyword but found {0}

Cause: The command line parser found non-option text where an option with leading dash was expected.

Action: Review the command inline help and formulate the command with valid options.

PRCG-01066: Rapid Home Provisioning Server or Rapid Home Provisioning Client not configured on this cluster

Cause: The requested operation was rejected because the Rapid Home Provisioning Server or Rapid Home Provisioning Client was not configured.

Action: Add the Rapid Home Provisioning Server or Rapid Home Provisioning Client using the command 'srvctl add rhpsrver' or 'srvctl add rhpclient' and retry the operation.

PRCG-01067: The requested operation cannot be executed by user "root"

Cause: The requested operation was rejected because it was attempted as a root user.

Action: Log on as a user other than 'root' to perform this operation.

PRCG-01068: Non-numeric value {0} specified for command-line option {1}

Cause: An invalid value was specified for a command-line option that requires a number.

Action: Check the value printed and specify a number.

PRCG-01069: An attempt to remove the Rapid Home Provisioning Client configuration failed because the Rapid Home Provisioning Client is running

Cause: A request to remove the Rapid Home Provisioning Client configuration was rejected because such removal requires Rapid Home Provisioning Client to be stopped.

Action: Use the command 'srvctl stop rhpclient' or, if necessary, use the command 'srvctl stop rhpclient -force' to stop the Rapid Home Provisioning Client and then retry removing the Rapid Home Provisioning Client configuration.

PRCG-01078: At least one of -{0}, -{1} or -{2} options required

Cause: An attempt to modify NFS home failed because a mandatory option was not specified.

Action: Specify at least one of the required options.

PRCG-01079: Internal error: {0}

Cause: An internal error occurred. The included value is an internal identifier.

Action: Contact Oracle Support Services.

PRCG-01080: Specified name "{0}" is not a valid node.

Cause: The specified node name was not resolved to a registered node in the cluster.

Action: Specify a valid node name.

PRCG-01081: Command "{0}" is not supported for object "{1}"

Cause: An unsupported command and object combination was specified.

Action: Use the command 'rhpctl -h' to identify valid combinations and re-issue the command.

PRCG-01082: No permission to write to the specified path, "{0}"

Cause: The user did not have permission to write to the specified path.

Action: Specify a path to which write permission is granted and retry the command.

PRCG-01083: The credentials file provided is for cluster {0}, not for this cluster {1}.

Cause: The credentials file provided did not correspond to the name of this cluster.

Action: Provide the credentials file generated for this cluster and retry. To generate the credentials file, run the command 'rhpctl export client' on the Rapid Home Provisioning Server cluster, specifying the name of this cluster in the '-client' option.

PRCG-01084: Failed to get hash code of given string

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRCG-01085: Failed to encrypt the given string

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRCG-01086: Failed to decrypt the given string

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRCG-01087: Failed to retrieve security algorithm used for Rapid Home Provisioning Server

Cause: An attempt to retrieve the CRYPTO_ALGORITHM attribute of the Rapid Home Provisioning Server failed.

Action: Examine the accompanying error messages for details.

PRCG-01088: Failed to update the security algorithm to {0} for Rapid Home Provisioning Server

Cause: An attempt to update the security algorithm for the Rapid Home Provisioning Server failed.

Action: Examine the accompanying error messages for details.

PRCG-01089: Failed to retrieve security algorithm used for Rapid Home Provisioning Client

Cause: An attempt to retrieve the CRYPTO_ALGORITHM attribute of the Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details.

PRCG-01090: Failed to update the security algorithm to {0} for Rapid Home Provisioning Client

Cause: An attempt to update the security algorithm for the Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details.

PRCG-01091: The -user option value can not contain "@"

Cause: The requested operation failed because the user name contained a "@" character.

Action: Specify the user name without a "@" character and retry the command.

PRCG-01092: Invalid value list for option -{0}

Cause: A comma-separated list of values was supplied for an option that takes a single value.

Action: Specify single value without commas and retry the command.

PRCG-01093: Failed to get Rapid Home Provisioning Client (RHPC) credential from credential storage for cluster: {0}

Cause: The requested operation failed because an error occurred while accessing the credential storage.

Action: Examine the accompanying error messages for details.

PRCG-01094: The -clientdata option value {0} is a directory, not a file

Cause: A 'rhpctl export client' operation failed because the '-clientdata' option specified a directory.

Action: Ensure that the '-clientdata *path*' option value corresponds to a file path.

PRCG-01095: The client data file {0} already exists in the specified '-clientdata' path

Cause: A request to export client data found the specified output file already exists.

Action: Delete or rename the existing file or choose a different file name.

PRCG-01096: The specified owner {0} is not a valid OS user

Cause: The specified owner was not a valid OS user.

Action: Ensure that the '-pathowner *username*' option value corresponds to the name of an existing OS user.

PRCG-01097: Option '-pathowner' cannot be specified for image type ORACLEDBSOFTWARE

Cause: A request to import an image was rejected because the '-pathowner' option was specified for importing the Oracle Database home.

Action: Omit the '-pathowner' option.

PRCG-01098: Failed to create Administrator Credentials for Rapid Home Provisioning Server

Cause: An attempt to create Administrator Credentials for Rapid Home Provisioning Server failed.

Action: Examine the accompanying error messages for details.

PRCG-01099: Failed to create Administrator Credentials for Rapid Home Provisioning Client

Cause: An attempt to create Administrator Credentials for Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details.

PRCG-01100: The connection to the Rapid Home Provisioning daemon process was lost.

Cause: The requested operation failed because the connection to the Rapid Home Provisioning daemon process for this cluster was lost.

Action: Examine the accompanying error messages for details and take appropriate corrective action.

PRCG-01101: Grid Infrastructure Management Repository resource has not been configured

Cause: A Rapid Home Provisioning Server add request failed because the Grid Infrastructure Management Repository resource was not configured.

Action: If the Grid Infrastructure Management Repository was not configured while installing Grid Infrastructure, then reinstall Grid Infrastructure selecting the option to configure the Grid Infrastructure Management Repository.

PRCG-01102: Specified file name "{0}" is not valid for a template.

Cause: The specified template name did not end with a valid file extension.

Action: Specify a template file name which ends with .dbt or .dbc.

PRCG-01103: The Oracle ASM Dynamic Volume Manager compatibility attribute ({0}) is less than 12.1.0.0.0 for disk group {1}.

Cause: The Oracle ADVM compatibility attribute for the specified disk group was not set to version 12.1.0.0.0 or higher.

Action: Use the Oracle ASM Configuration Assistant (ASMCA) tool or the SQL statement ALTER DISKGROUP to upgrade the 'compatible.advm' attribute.

PRCG-01104: User terminated the command. The command operation is not cancelled by this interruption, and may continue to be processed on the server.

Cause: An 'rhpctl' command execution was interrupted by typing Control-C or by other means.

Action: Verify the completion of this command by executing a 'config' or some other command that would display the results of this interrupted command.

PRCG-01105: unable to configure Rapid Home Provisioning Server because neither GNS server nor GNS client are configured on this cluster

Cause: An attempt to configure Rapid Home Provisioning Server was rejected because neither GNS server nor GNS client were configured.

Action: Configure either GNS server or GNS client using the command 'srvctl add gns' and then retry adding Rapid Home Provisioning Server.

PRCG-01106: failed to determine whether GNS is configured on Rapid Home Provisioning Server

Cause: An attempt to verify the GNS configuration on the Rapid Home Provisioning Server failed. The accompanying messages provide details.

Action: Examine the accompanying error messages for details. Address issues reported and retry the command.

PRCG-01107: failed to delete Rapid Home Provisioning Client (RHPC) credential from credential storage for cluster {0}

Cause: The requested operation failed because an error occurred while accessing the credential storage.

Action: Examine the accompanying error messages for details. Address issues reported and retry the command.

PRCG-01108: Rapid Home Provisioning Server or Client is not configured

Cause: An attempt was made to operate on a resource that does not exist.

Action: Check for the configured resource using 'srvctl config rhpserver' and/or 'srvctl config rhpcclient'. If neither Rapid Home Provisioning resource exists, create the appropriate one using the command 'srvctl add {rhpserver | rhpcclient}'.

PRCG-01109: Repetition of command-line option: -{0}

Cause: Execution of the command was rejected because the command-line option displayed with the error message was repeated.

Action: Retry the command specifying the command-line option only once.

PRCG-01110: failed to modify Rapid Home Provisioning Client with disk group {0}

Cause: An attempt to configure the Rapid Home Provisioning Client with the cited disk group failed because there was already a disk group configured for the Rapid Home Provisioning

Action: Remove the Rapid Home Provisioning Client configuration and run 'srvctl add rhpclient' command.

PRCG-01111: failed to update the storage base path to {0} for Rapid Home Provisioning Client

Cause: An attempt to update the storage base path for the Rapid Home Provisioning Client

Action: Remove the Rapid Home Provisioning Client configuration and run 'srvctl add rhpclient' command.

PRCG-01112: failed to retrieve storage base path attribute for Rapid Home Provisioning Client

Cause: An attempt to retrieve the STORAGE_BASE_PATH attribute of the Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details. Address issues reported and retry the command.

PRCG-01113: failed to update the storage base path to {0} for Rapid Home Provisioning Client

Cause: An attempt to set the STORAGE_BASE_PATH attribute for the Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details.

PRCG-01114: failed to update the storage base path to {0} for Rapid Home Provisioning Client because no disk group was configured

Cause: An attempt to update the storage base path for the Rapid Home Provisioning Client failed because there was no disk group configured for the Rapid Home Provisioning Client.

Action: Run srvctl to configure diskgroup, then retry.

PRCG-01115: Disk group is not configured on Rapid Home Provisioning Client.

Cause: An attempt to retrieve disk group information for the Rapid Home Provisioning Client failed because there was no disk group configured for it.

Action: Run 'srvctl modify rhpclient' command to configure the disk group.

PRCG-01116: Unable to create mount path because the generated mount path name already exists

Cause: An attempt to create a mount path failed because the number of tries attempted for generating the mount path was exhausted.

Action: Retry the command.

PRCG-01117: Working copy name "{0}" is too long or contains characters other than alphanumeric and underscore.

Cause: The workingcopy name was not valid.

Action: Specify a valid workingcopy name.

PRCG-01118: Specified image name "{0}" contains invalid characters.

Cause: The image name was not valid. Image names must not contain the following characters: \$@">()*;*.? .

Action: Specify a valid image name.

PRCG-01119: The -path option is not allowed when storage type is not LOCAL on Rapid Home Provisioning Server (RHPS).

Cause: An attempt to add working copy on RHPS was rejected because the '-path' option was specified when storage type was not LOCAL.

Action: Omit the '-path' option or specify storage type option value as LOCAL.

PRCG-01120: The value {0} exceeds the maximum value of {1} for command line option '-numberOfPDBs'.

Cause: The supplied value exceeded the maximum value for command line option '-numberOfPDBs'.

Action: Specify an integer value within the range given in the error message.

PRCG-01121: The PDB prefix "{0}" contains invalid characters.

Cause: The supplied pluggable database (PDB) prefix contained invalid characters.

Action: Supply a valid PDB prefix. A PDB prefix must start with an alphabetic character and may include only characters from a-z, A-Z, 0-9, \$, # and _.

PRCG-01122: The -datafileDestination option was not specified, when -dbtype was not SINGLE.

Cause: A request to create a RAC or RAC One Node database was rejected because the data file location was not specified using the '-datafileDestination' option.

Action: Reissue the command specifying the -datafileDestination option.

PRCG-01123: failed to create Rapid Home Provisioning Client (RHPC) credential in credential storage for cluster {0}

Cause: The requested operation failed because an error occurred while creating the credential in the credential storage.

Action: Examine the accompanying error messages for details. Address the issues reported and retry the command.

PRCG-01124: failed to export Rapid Home Provisioning Client (RHPC) credential from credential storage for cluster {0} to file {1}

Cause: The requested operation failed because an error occurred while exporting the credential from the credential storage.

Action: Examine the accompanying error messages for details. Address the issues reported and retry the command.

PRCG-01125: failed to import Rapid Home Provisioning Client (RHPC) credential from file {0} into credential storage for cluster {1}

Cause: The requested operation failed because an error occurred while importing the credential from the specified file into the credential storage.

Action: Examine the accompanying error messages for details. Address the issues reported and retry the command.

PRCG-01126: failed to export Rapid Home Provisioning Client (RHPC) credential from credential storage for cluster {0}

Cause: The requested operation failed because an error occurred while exporting the credential from the credential storage.

Action: Examine the accompanying error messages for details. Address the issues reported and retry the command.

PRCG-01127: Server pool cannot be specified for single instance database.

Cause: An attempt to add a single instance database was rejected because a server pool was specified.

Action: Use the '-node' option instead of the '-serverpool' or '-newpool' options when specifying SINGLE for the '-dbtype' option.

PRCG-01128: Improper '-dbversion' option specified for image type SOFTWARE.

Cause: An attempt to query images was rejected because the '-dbversion' option was specified together with a value of SOFTWARE for '-imagetype'.

Action: Either remove the '-dbversion' option or specify ORACLEDBSOFTWARE for '-imagetype' and retry the command.

PRCG-01129: The DB version supplied "{0}" is invalid.

Cause: The DB version supplied did not exist or was an unsupported version.

Action: Supply a valid DB version and retry the command.

PRCG-01130: failed to update Rapid Home Provisioning Client registration in Rapid Home Provisioning Server

Cause: An attempt to update the Rapid Home Provisioning Client registration with the Rapid Home Provisioning Server failed.

Action: Examine the accompanying error messages for details.

PRCG-01131: failed to determine whether this Rapid Home Provisioning Server has any Rapid Home Provisioning Clients registered

Cause: An attempt to determine whether this Rapid Home Provisioning Server has any registered Rapid Home Provisioning Clients failed.

Action: Examine the accompanying error messages for details.

PRCG-01132: unable to delete Rapid Home Provisioning Server because it contains one or more registered Rapid Home Provisioning Clients

Cause: An attempt to delete the Rapid Home Provisioning Server was rejected because one or more Rapid Home Provisioning Clients registered with it.

Action: "Either reissue the command with the '-force' option, or first delete all the registered Rapid Home Provisioning Clients using the command 'rhpcctl delete client'."

PRCH-01000 to PRCH-01061

PRCH-01000: Failed to stop resources running from Oracle home {0}

Cause: An attempt to stop one or more resources in the specified Oracle home failed.

Action: Review the underlying error messages that provide the details of which resources failed to stop, check the cause and action for the individual resource stop failure and perform the steps for each resource that failed to stop.

PRCH-01001: Failed to start resources in Oracle home {0}

Cause: An attempt to start one or more resources in the specified Oracle home failed.

Action: Review the underlying error messages that provide the details of which resources failed to start, check the cause and action for the individual resource start failure and perform the steps for each resource that failed to start.

PRCH-01002: Failed to stop resources running from CRS home {0}

Cause: An attempt to stop one or more resources in the specified CRS home failed.

Action: Review the underlying error messages that provide the details of which resources failed to stop, check the cause and action for the individual resource stop failure, and perform the steps for each resource that failed to stop.

PRCH-01003: Failed to start resources in CRS home {0}

Cause: An attempt to start one or more resources in the specified CRS home failed.

Action: Review the underlying error messages that provide the details of which resources failed to start, check the cause and action for the individual resource start failure and perform the steps for each resource that failed to start.

PRCH-01004: Failed to stop service

Cause: An attempt to stop a service resource failed.

Action: Review the accompanying error messages for possible reasons and if needed, use the command 'srvctl stop service -db <db_unique_name>' to stop the service.

PRCH-01005: Failed to stop database

Cause: An attempt to stop the database resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl stop database -db <db_unique_name>' to stop the database.

PRCH-01006: Failed to stop Listener

Cause: An attempt to stop the listener resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl stop listener' to stop the listener.

PRCH-01007: Failed to stop Listener

Cause: An attempt to stop the listener resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl stop listener' to stop the listener.

PRCH-01008: Failed to start service

Cause: An attempt to start a service resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl start service -db <db_unique_name>' to start the service.

PRCH-01009: Failed to start database

Cause: An attempt to start the database resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl start database -db <db_unique_name>' to start the database.

PRCH-01010: Failed to start Listener

Cause: An attempt to start the listener resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl start listener' to start the listener.

PRCH-01011: Failed to start Listener

Cause: An attempt to start the listener resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl start listener' to start the listener.

PRCH-01012: Failed to stop EONS

Cause: An attempt to stop the EONS resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl stop nodeapps' to stop the EONS resource.

PRCH-01013: Failed to start EONS

Cause: An attempt to start the EONS resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl start nodeapps' to start the EONS resource.

PRCH-01014: Failed to stop ONS

Cause: An attempt to stop the ONS resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl stop nodeapps' to stop the ONS resource.

PRCH-01015: Failed to start ONS

Cause: An attempt to start the ONS resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl start nodeapps' to start the ONS resource.

PRCH-01016: Failed to stop GSD resource

Cause: An attempt to stop the GSD resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl stop nodeapps' to stop the GSD resource.

PRCH-01017: Failed to start GSD resource

Cause: An attempt to start the GSD resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl start nodeapps' to start the GSD resource.

PRCH-01018: Failed to stop VIP resource

Cause: An attempt to stop the VIP resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl stop vip -node <node_name>' to stop the VIP resource.

PRCH-01019: Failed to start VIP resource

Cause: An attempt to start the VIP resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl start vip -node <node_name>' to start the VIP resource.

PRCH-01020: Failed to stop Network resource

Cause: An attempt to stop the Network resource failed.

Action: Review the error messages for possible reasons, correct the error and use the command 'srvctl stop nodeapps' to stop the Network resource.

PRCH-01021: Failed to start Network resource

Cause: An attempt to start the Network resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl start nodeapps' to start the Network resource.

PRCH-01022: Failed to stop SCAN VIP resource

Cause: An attempt to stop the SCAN VIP resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl stop scan' to stop the SCAN VIP resource.

PRCH-01023: Failed to start SCAN VIP resource

Cause: An attempt to start the SCAN VIP resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl start scan' to start the SCAN VIP resource.

PRCH-01024: Failed to stop SCAN Listener resource

Cause: An attempt to stop the SCAN listener resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl stop scan_listener' to stop the SCAN listener resource.

PRCH-01025: Failed to start SCAN Listener

Cause: An attempt to start the SCAN listener resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl start scan_listener' to start the SCAN listener resource.

PRCH-01026: Failed to stop ASM

Cause: An attempt to stop the ASM resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl stop asm' to stop the ASM resource.

PRCH-01027: Failed to start ASM

Cause: An attempt to start the ASM resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl start asm' to start the ASM resource.

PRCH-01028: One or more resources failed to start: {0}

Cause: An attempt to start one or more resources failed.

Action: Review the underlying error messages that provide the details of which resources failed to start, check the cause and action for the individual resource start failure and perform the steps for each resource that failed to start.

PRCH-01029: One or more resources failed to stop: {0}

Cause: An attempt to stop one or more resources failed.

Action: Review the underlying error messages that provide the details of which resources failed to stop, check the cause and action for the individual resource stop failure and perform the steps for each resource that failed to stop.

PRCH-01030: One or more resources failed to stop: {0}

Cause: An attempt to stop one or more resources failed.

Action: Review the accompanying resource error messages and their documentation, and correct the problems indicated.

PRCH-01031: One or more resources failed to start: {0}

Cause: An attempt to start one or more resources failed.

Action: Review the underlying error messages that provide the details of which resources failed to start, check the cause and action for the individual resource start failure and perform the steps for each resource that failed to start.

PRCH-01032: Failed to stop GNS resource

Cause: An attempt to stop the GNS resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl stop gns' to stop the GNS resource.

PRCH-01033: Failed to start GNS resource

Cause: An attempt to start the GNS resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl start gns' to start the GNS resource.

PRCH-01034: Failed to stop diskgroup resource

Cause: An attempt to stop the diskgroup resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl stop diskgroup -diskgroup <dg_name>' to stop the diskgroup resource.

PRCH-01035: Failed to start diskgroup resource

Cause: An attempt to start the diskgroup resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl start diskgroup -diskgroup <dg_name>' to start the diskgroup resource.

PRCH-01036: The state file "{0}" does not exist

Cause: The state file required for the current operation was not found.

Action: Make sure the named file exists in the file system.

PRCH-01037: The filesystem object "{0}" is not a file

Cause: The content that was expected to be a file which turned out not to be a file.

Action: Retry the 'srvctl stop home' to generate this file. If the problem still exists, contact Oracle Support Services.

PRCH-01038: "{0}" is a non-readable file

Cause: The user does not have read permissions to open the file.

Action: Modify the file permissions so that the file becomes readable or execute the command from an OS userid with the required privileges.

PRCH-01039: Failed to stop CVU resource

Cause: An attempt to stop the CVU resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl stop cvu' to stop the CVU resource.

PRCH-01040: Failed to start CVU resource

Cause: An attempt to start the CVU resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl start cvu' to start the CVU resource.

PRCH-01041: Failed while checking status of service "{0}"

Cause: An attempt to check the status of the listed service failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01042: Failed while checking status of database "{0}"

Cause: An attempt to check the status of the listed database failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01043: Failed while checking status of database instance "{0}"

Cause: An attempt to check the status of the listed database instance failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01044: Failed while checking status of listener "{0}"

Cause: An attempt to check the status of the listed listener failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01045: Failed while checking status of VIP "{0}"

Cause: An attempt to check the status of the listed VIP failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01046: Failed while checking status of SCAN VIP "{0}"

Cause: An attempt to check the status of the listed SCAN VIP failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01047: Failed while checking status of SCAN Listener "{0}"

Cause: An attempt to check the status of the listed SCAN listener failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01048: Failed while checking status of CVU resource "{0}"

Cause: An attempt to check the status of the listed CVU resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01049: Failed while checking status of disk group "{0}"

Cause: An attempt to check the status of the listed disk group failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01050: Failed while checking status of ASM "{0}"

Cause: An attempt to check the status of the listed ASM failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01051: Failed while checking status of GNS "{0}"

Cause: An attempt to check the status of the listed GNS failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01052: Failed while checking status of GSD "{0}"

Cause: An attempt to check the status of the listed GSD failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01053: Failed while checking status of Network "{0}"

Cause: An attempt to check the status of the listed network failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01054: Failed while checking status of ONS "{0}"

Cause: An attempt to check the status of the listed ONS failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01055: Failed to create or open file "{0}"

Cause: State file processing failed because: the file specified is a directory rather than a file, the file did not exist but could not be created, or the file exists but could not be opened.

Action: Enable state file processing by: not specifying a directory name, ensuring the the directory is writable, or ensuring that an existing state file can be overwritten.

PRCH-01056: Failed to write to file "{0}"

Cause: An attempt to write to the given file failed.

Action: If the state file already exists, then make sure that it is writable. Otherwise, make sure that parent directory of the state file path is writable.

PRCH-01057: The Clusterware resource for database "{0}" does not exist.

Cause: The Oracle Clusterware resource for the database with the given name did not exist.

Action: Make sure that Oracle Clusterware resource for the database with the given name exists.

PRCH-01058: Failed while checking status of CRS home {0}

Cause: An attempt to check the status of the CRS home failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01059: Failed while checking status of Oracle home {0}

Cause: An attempt to check the status of the Oracle home failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01060: Status check for one or more resources failed: {0}

Cause: An attempt to check the status for one or more resources failed.

Action: Review the underlying error messages that provide the details of which resources failed to query their status, check the cause and action for the individual resource start failure and perform the steps for each resource that failed to start.

PRCH-01061: The following resources specified in the state file do not exist: {0}

Cause: An attempt to start one or more resources in the specified state file failed because they do not exist.

Action: Make sure the resources provided in the state file exist.

PRCI-01000 to PRCI-01168

PRCI-01000: Failed to retrieve install information on local node using OUI location {0}

Cause: An attempt to retrieve install information on the local node from the specified location failed.

Action: Examine the accompanying error messages for details.

PRCI-01001: Failed to retrieve install information on remote node {0} using OUI location {1}

Cause: An attempt to retrieve install information on a remote node from the specified location failed.

Action: Examine the accompanying error messages for details.

PRCI-01100: Failed to get Vendor Cluster for CRS home {0}

Cause: Unable to locate vendor cluster library or execute lsnodes.

Action: Install Vendor Clusterware. Then try to run lsnodes again.

PRCI-01101: Failed to get Vendor Cluster for CRS home {0} on node {1}

Cause: Unable to locate vendor cluster library or execute lsnodes on the specified node.

Action: Install Vendor Clusterware on the specified node. Then try to run lsnodes again.

PRCI-01102: Failed to get OracleCM Cluster for CRS home {0}

Cause: Failed to get OracleCM Cluster for the local node using CRS home provided.

Action: Install Oracle 9i and make sure that /etc/ORCLcluster exists.

PRCI-01103: Failed to get OracleCM Cluster for CRS home {0} on node {1}

Cause: Failed to get OracleCM Cluster for the specified node using CRS home provided.

Action: Examine the accompanying error messages for details.

PRCI-01104: Failed to check Oracle Restart running state for Oracle Restart home {0}

Cause: Failed to check whether Oracle Restart is running from the specified home on the local node.

Action: Examine the accompanying error messages for details.

PRCI-01105: Failed to check Oracle Restart running state for Oracle Restart home {0} on node {1}

Cause: Failed to check whether Oracle Restart is running from the specified home on the specified node.

Action: Examine the accompanying error messages for details.

PRCI-01106: Failed to check Oracle Restart configuration state for Oracle Restart home {0} on node {1}

Cause: Failed to check whether Oracle Restart is configured for the specified home on the specified node.

Action: Examine the accompanying error messages for details.

PRCI-01107: Failed to check CRS running state for CRS home {0}

Cause: Failed to check whether Oracle Clusterware is running from the specified home on the local node.

Action: Examine the accompanying error messages for details.

PRCI-01108: Failed to check CRS running state for CRS home {0} on node {1}

Cause: Failed to check whether Oracle Clusterware is running from the specified home on the specified node.

Action: Examine the accompanying error messages for details.

PRCI-01109: Failed to check CRS configuration state for CRS home {0}

Cause: Failed to check whether Oracle Clusterware is configured for the specified home on the specified node.

Action: Examine the accompanying error messages for details.

PRCI-01110: Failed to check CRS configuration state for CRS home {0} on node {1}

Cause: Failed to check whether Oracle Clusterware is configured for the specified home on the local node.

Action: Examine the accompanying error messages for details.

PRCI-01111: File path is null

Cause: The specified file is null or an empty string.

Action: Provide a valid file path that is not null.

PRCI-01112: Directory name passed was null

Cause: The specified directory name is null or an empty string.

Action: Provide a valid directory name that is not null.

PRCI-01113: Directory {0} does not exist

Cause: Could not find the specified directory or it was a file instead of a directory.

Action: Provide an existing directory name.

PRCI-01114: Node name is null

Cause: The specified node name is null or an empty string.

Action: This is an internal error. Contact Oracle Support Services.

PRCI-01115: argument passed is null

Cause: The specified database name is null or an empty string.

Action: This is an internal error. Contact Oracle Support Services.

PRCI-01116: Failed to check if a database named {0} exists

Cause: Failed to execute the command 'crsctl stat resource <database_resource_name>' to decide whether the specified database exists or not.

Action: Examine the accompanying error messages for details.

PRCI-01117: Failed to retrieve list of databases under high availability management

Cause: Failed to execute the command 'crsctl stat resource -w TYPE=ora.database.type *filter*' in order to get the list of databases managed by Oracle Restart.

Action: Examine the accompanying error messages for details.

PRCI-01118: Failed to determine if database {0} depends on Automatic Storage Management

Cause: Failed to execute crsctl command to decide whether the specified database depended on Automatic Storage Management (ASM).

Action: Examine the accompanying error messages for details.

PRCI-01119: Failed to determine if database {0} is configured on node {1}

Cause: An attempt to determine the nodes on which a database is configured failed. Either the specified node name is invalid or an internal request failed.

Action: Examine the accompanying error messages for details.

PRCI-01120: Failed to retrieve list of databases under high availability management for node {0}

Cause: Failed to get the list of database managed by Oracle Restart on the specified node because the specified node is null or an invalid node or crsctl command execution failed.

Action: Examine the accompanying error messages for details.

PRCI-01121: Failed to determine if database {0} depends on Automatic Storage Management on node {1}

Cause: Failed to execute crsctl command to decide whether the specified database depended on Automatic Storage Management (ASM) on the specified node because the specified node is null or an invalid node or crsctl command execution failed.

Action: Examine the accompanying error messages for details.

PRCI-01122: Failed to determine if the public network is using dynamic address assignment (DHCP)

Cause: An attempt to determine whether the public network is using dynamic address assignment (DHCP) failed.

Action: Examine the accompanying error messages for details.

PRCI-01123: CRS home does not exist on the local node

Cause: CRS home is not installed on the local node.

Action: Install a CRS home using the Oracle Universal Installer.

PRCI-01124: Oracle Restart home does not exist on the local node

Cause: Oracle Restart home is not installed.

Action: Install an Oracle Restart home using the Oracle Universal Installer.

PRCI-01125: CRS home does not exist on node {0}

Cause: CRS home is not installed on the specified node.

Action: Install a CRS home using the Oracle Universal Installer.

PRCI-01126: Oracle Restart home does not exist on node {0}

Cause: Oracle Restart home is not installed on the specified node.

Action: Install an Oracle Restart home using the Oracle Universal Installer.

PRCI-01127: CRS active version cannot be queried in a non-cluster environment

Cause: Clusterware is not configured.

Action: Ensure that Clusterware is configured.

PRCI-01128: Failed to check Oracle Restart configuration state for Oracle Restart home {0}

Cause: Oracle Restart may not be configured

Action: Ensure that Oracle Restart is installed and configured

PRCI-01129: Failed to check Oracle Restart configuration state on node {1}

Cause: Oracle Restart may not be configured

Action: Ensure that Oracle Restart is installed and configured

PRCI-01130: Failed to check CRS configuration state

Cause: Clusterware CRS may not be configured

Action: Ensure that Clusterware CRS is installed and configured

PRCI-01131: Failed to check CRS configuration state on node {1}

Cause: Clusterware CRS may not be configured

Action: Ensure that Clusterware CRS is installed and configured

PRCI-01132: Failed to get clustername for CRS home {0} and version {1}

Cause: Clusterware is not configured and CRS stack is not up

Action: Ensure that Clusterware CRS is installed and configured and the stack is up.

PRCI-01133: The IP address {0} does not have the same number of fields with the subnet mask {1}

Cause: IP address is in IPv4 address format while the subnet mask is in IPv6 address format or the other way around.

Action: Ensure that both the IP address and the subnet mask use the same representation (the longer required among IPv4 and IPv6).

PRCI-01134: Applying subnet mask {0} to IP address {1} resulted in an invalid IP address format

Cause: This won't ever happen. Message added just in case.

Action: None

PRCI-01135: Failed to check if path {0} on node {1} is on ACFS

Cause: An attempt to determine if the specified path is on ACFS failed. This can occur because: 1. The Clusterware stack is down on the specified node. 2. ASM is down on the specified node. 3. A diskgroup associated with the path is not online. 4. The path is not mounted.

Action: Perform checks corresponding to the above causes: 1. Ensure the Clusterware stack is running on the specified node. 2. Ensure that ASM is running on the specified node. 3. Ensure that the diskgroup associated with the path is online. 4. Ensure that the file system is mounted on the node.

PRCI-01136: The specified path {0} is not on Oracle Automatic Storage Manager Cluster File System (ACFS)

Cause: The specified path is not on ACFS.

Action: Specify a path that is on ACFS. This check will only accept paths on ACFS.

PRCI-01137: Failed to check if path {0} is on ACFS

Cause: An attempt to determine if the specified path is on ACFS failed. This can occur because: 1. The Clusterware stack is down on the specified node. 2. ASM is down on the specified node. 3. A diskgroup associated with the path is not online. 4. The path is not mounted.

Action: Perform checks corresponding to the above causes: 1. Ensure the Clusterware stack is running on the specified node. 2. Ensure that ASM is running on the specified node. 3. Ensure that the diskgroup associated with the path is online. 4. Ensure that the file system is mounted on the node.

PRCI-01138: Failed to check Oracle Restart configuration state

Cause: Oracle Restart was not configured.

Action: Ensure that Oracle Restart is installed and configured.

PRCI-01140: Error occurred while reading input from console

Cause: An attempt to read input from console failed

Action: Make sure that the process running this program has a valid standard input (stdin).

PRCI-01141: Failed to get volume device for path {0}

Cause: An attempt to retrieve the volume device for the given ACFS path failed. This can occur because: 1. The Clusterware stack is down on the node. 2. ASM is down on the node. 3. A diskgroup associated with the path is not online. 4. The path is not mounted.

Action: Perform checks corresponding to the above causes: 1. Ensure the Clusterware stack is running on the node. 2. Ensure that ASM is running on the node. 3. Ensure that the diskgroup associated with the path is mounted. 4. Ensure that the file system is mounted on the node.

PRCI-01142: Failed to get volume device for path {0} on node {1}

Cause: An attempt to retrieve the volume device for the given ACFS path failed. This can occur because: 1. The Clusterware stack is down on the specified node. 2. ASM is down on the specified node. 3. A diskgroup associated with the path is not online. 4. The path is not mounted.

Action: Perform checks corresponding to the above causes: 1. Ensure the Clusterware stack is running on the specified node. 2. Ensure that ASM is running on the specified node. 3. Ensure that the diskgroup associated with the path is mounted. 4. Ensure that the file system is mounted on the specified node.

PRCI-01143: Error executing the script {0} on nodes {1}

Cause: An error occurred in executing the script on the list of nodes mentioned. This message is accompanied by others providing details of the error.

Action: Correct the problem indicated by the accompanying messages and retry.

PRCI-01144: Failed to retrieve Oracle Grid Infrastructure home path

Cause: An attempt to read Grid Infrastructure home path from OLR configuration file or registry entry failed.

Action: Examine the accompanying error messages for details. 1. Make sure Grid Infrastructure is configured as either Oracle Clusterware or Oracle Restart, and that the invoking user is able to read the configuration. 2. Issue the command '*GI home/srvm/admin/getcrshome*' and examine the resulting output.

PRCI-01145: Failed to retrieve Oracle Grid Infrastructure home path on node {0}

Cause: An attempt to read Grid Infrastructure home path from OLR configuration file or registry entry on specified node failed.

Action: Examine the accompanying error messages for details. 1. Make sure Grid Infrastructure is configured as either Oracle Clusterware or Oracle Restart, and that the invoking user is able to read the configuration. 2. Issue the command '*GI home/srvm/admin/getcrshome*' and examine the resulting output.

PRCI-01146: invalid {0} argument passed

Cause: The argument provided was null.

Action: This is an internal error. Contact Oracle Support Services.

PRCI-01147: root script operation failed on the first node {0}

Cause: The root configuration or upgrade failed on the first node. This message is accompanied by other messages providing details of the error.

Action: Correct the problem indicated by the accompanying messages and retry.

PRCI-01148: root script operation failed on the last node {0}

Cause: The root configuration or upgrade failed on the last node. This message is accompanied by other messages providing details of the error.

Action: Correct the problem indicated by the accompanying messages and retry.

PRCI-01149: olsnodes utility failed to get the cluster node active roles

Cause: An attempt to execute *olsnodes -a* has failed.

Action: This is an internal error. Contact Oracle Support Services.

PRCI-01150: failed to retrieve the active node role of the node {0}

Cause: An attempt to retrieve the active node role of an invalid node of the cluster has failed.

Action: Enter a valid node of the cluster.

PRCI-01151: crsctl utility failed to get the cluster node configured roles

Cause: The argument provided was null.

Action: This is an internal error. Contact Oracle Support Services.

PRCI-01152: failed to retrieve the configured node role of the node {0}

Cause: An attempt to retrieve the configured node role of an invalid node of the cluster has failed.

Action: Enter a valid node of the cluster.

PRCI-01156: The GNS VIP {0} does not match any of the available subnets {1}.

Cause: The provided Grid Naming Service (GNS) virtual internet protocol (VIP) did not belong to an available subnet.

Action: Ensure that GNS VIP belongs to one of subnets connected to the node.

PRCI-01157: Failed to retrieve the node name on which the management database is running.

Cause: An attempt to retrieve the management database node was made when the management database was not running.

Action: Use the 'srvctl start mgmtldb' command to start the management database and retry.

PRCI-01158: Failed to retrieve the size of management database

Cause: An attempt to retrieve the management database size failed because of underlying errors.

Action: Examine the accompanying error messages for details.

PRCI-01159: Path {0} is not on an ACFS file system

Cause: The supplied path was not on an ACFS filesystem.

Action: Supply a path that is on ACFS.

PRCI-01160: Failed to determine if database {0} is administrator-managed

Cause: An internal command to determine management status of the specified database failed.

Action: Examine the accompanying error message for details.

PRCI-01161: Failed to retrieve nodes on which database {0} is configured

Cause: An internal command to determine the nodes configured for the specified database failed.

Action: Examine the accompanying error message for details.

PRCI-01162: The specified subnets {0} do not match with any of the subnets {1} present in the node {2}.

Cause: An attempt to check whether the specified subnets were present in the current node failed.

Action: Ensure that the provided subnets match with the subnets present in the current node.

PRCI-01163: The public subnets {0} do not match with any of subnets {1} present in the node {2}.

Cause: An attempt to check whether the VIP belongs to a public subnet failed.

Action: Ensure that the VIP address belongs to a public subnet. The public subnets are displayed by the command 'oifcfg getif'.

PRCI-01164: File "{0}" does not exist.

Cause: The specified file could not be found.

Action: Reissue the command specifying the name of an existing file.

PRCI-01165: XSD resource "{0}" could not be located.

Cause: The XML Schema Definition file was not found at the designated location. This is an internal error.

Action: Contact Oracle Support Services.

PRCI-01166: Credential file "{0}" is invalid.

Cause: The provided credentials file was invalid.

Action: Reissue the command specifying a valid credentials file.

PRCI-01167: failed to extract attributes from the specified file "{0}"

Cause: An attempt to extract attributes for the specified credentials file failed. This is an internal error.

Action: Contact Oracle Support Services.

PRCI-01168: The OCRDUMP utility failed to get all cluster nodes.

Cause: An attempt to execute "ocrdump -noheader -stdout -keyname SYSTEM.version.hostnames" failed. This is an internal error.

Action: Contact Oracle Support Services.

PRCN-02018 to PRCN-03087

PRCN-02018: Current user {0} is not a privileged user

Cause: Current user did not have sufficient privileges to perform this operation.

Action: Make sure that the user has root privileges on Linux/Unix's and Administrator on Windows.

PRCN-02030: Subnet does not exist for resource {0}

Cause: An attempt was made to query subnet for a network resource configured with Oracle clusterware and it was not found.

Action: Internal error. Contact Oracle Support.

PRCN-02031: Unknown DHCP server name {0} found for resource {1}

Cause: The DHCP server type obtained for the network resource is not a valid server type.

Action: Internal error. Contact Oracle Support.

PRCN-02032: Failed to retrieve DHCP server type {0}

Cause: An attempt to query the DHCP server type for the network resource failed because its value could not be retrieved from the Oracle clusterware resource attributes.

Action: make sure Oracle clusterware is up and running, and also look at the help for the accompanying CRS error message.

PRCN-02033: Failed to update DHCP server type to {0} \n{1}

Cause: An attempt to update the DHCP server type for the network resource failed because its value could not be updated in the Oracle Clusterware resource attribute.

Action: Make sure that the Clusterware stack is up. Make sure that the user has enough permission to modify node applications. Examine the accompanying message for additional details.

PRCN-02034: Could not find dependent resource {0} for resource {1}: {2}

Cause: Could not get the resource associated with a given resource. Could not get the ASM resource associated with a given ASM disk group resource.

Action: Make sure that clusterware stack is up. Make sure that the network resource associated with this resource has not been removed. Make sure that the user has permission to perform this operation.

PRCN-02035: Port {0} is not available on node(s) or virtual host(s): {1}

Cause: The port specified is already being used by some other applications on the nodes or virtual hosts given.

Action: Stop the applications that are using these ports or specify a different port and try the command again.

PRCN-02036: Failed to retrieve port number(s) for {0}

Cause: An attempt to retrieve the port number(s) for the cluster resource failed.

Action: Make sure that the clusterware stack is up. Make sure that the resource you are querying has been configured. Also take a look at the help for the accompanying error message(s).

PRCN-02037: Failed to retrieve Oracle home for {0}

Cause: An attempt to retrieve Oracle home value for the listener resource failed.

Action: Make sure that the clusterware stack is up. Make sure that listener is configured. If node name is being specified in the command line make sure that the node name is a valid node name. Also look at help for the accompanying error message(s).

PRCN-02038: Failed to update Oracle home {0} for listener {1}

Cause: An attempt to update the Oracle home value for the listener resource failed.

Action: Make sure that the clusterware stack is up. Make sure that the listener is configured. If node name is being specified in the command line make sure that the node name is a valid node name. Make sure that user is a owner or has write permissions to modify the listener resource. Also look at the help for other errors listed in error stack.

PRCN-02039: Failed to retrieve Oracle home for {0} on node {1}

Cause: An attempt to retrieve Oracle home value for the listener resource on a the specified node failed.

Action: Make sure that the clusterware stack is up. Make sure that the listener is configured on the node. Make sure that the node name being passed in the command line is a valid node name. Also look at the help for the accompanying error message(s).

PRCN-02040: Failed to update Oracle home {0} for {1} on node {2}

Cause: Attempt to update value of attribute Oracle home for listener resource on the specified node failed.

Action: Make sure that the clusterware stack is up. Make sure that the listener is configured on the node. Make sure that the user has enough permission to modify the listener. Make sure that the node name being passed in the command line is a valid node name. Also look at the help for other errors listed in error stack.

PRCN-02041: Failed to retrieve properties of {0}

Cause: Failed to retrieve properties of the given entity.

Action: Make sure that user has permission to read resource attribute.

PRCN-02042: Failed to set properties {0} of {1}

Cause: Failed to update properties of the given entity.

Action: Make sure that user has permission to update resource attribute.

PRCN-02043: Multiple network resources {0} exist on the cluster

Cause: More than one network resource has been configured and the one to be used for creating this resource has not been specified.

Action: Use the '-netnum <net_num>' option to specify the network to be used and retry the command again.

PRCN-02044: No listener exists

Cause: No listener has been configured.

Action: Use netca or srvctl to add/configure a listener.

PRCN-02045: No network exists

Cause: No network has been configured.

Action: Use 'srvctl add nodeapps' to add/configure network resource.

PRCN-02046: Netmask does not exist for resource {0}

Cause: An attempt to retrieve the subnet information for the network resource resulted in not finding subnet mask.

Action: Internal error. Contact Oracle Support.

PRCN-02047: VIP {0} exists

Cause: The VIP with specified name has been registered in CRS.

Action: Remove the existing VIP before registering it again.

PRCN-02048: The network number {0} is already registered for subnet "{3}" and adapters "{4}". Can not add network number {0} for the specified subnet "{1}" and adapters "{2}".

Cause: The network number is taken by a registered network resource.

Action: Use a different network number to add a new network resource with the specified subnet and adapters, or modify existing network using the command 'srvctl modify nodeapps'.

PRCN-02049: The network attributes specified (network number: {0}, subnet: {1}, adapters: {2}) conflict with an already registered network (network number: {3}, subnet: {4}, adapters: {5})

Cause: The network resource is registered with different network number

Action: Use the registered network resource with the registered network number or provide different subnet or adapters.

PRCN-02050: The requested VIP (nodename: {0}, VIP name: {1}, network number: {2}) has the same VIP name but different network number or preferred node than the registered VIP (nodename: {3}, VIP name: {4}, network number: {5}).

Cause: One VIP name (and IP address) can only be used by one VIP with the same network number on the same node.

Action: Use a different VIP name or IP address.

PRCN-02051: The requested VIP (nodename: {0}, VIP name: {1}, network number: {2}) has the same network number and the same preferred node but different VIP name with the registered VIP (nodename: {3}, VIP name: {4}, network number: {5}).

Cause: One network resource on one preferred node can have only one cluster VIP.

Action: Use different network number or preferred node to register different VIP.

PRCN-02052: Failed to modify network number {0} to use subnet "{1}" with subnet mask "{2}", adapters "{3}" and address type "{4}"

Cause: CRS was unable to modify the network resource to use new subnet/netmask/interface/address type.

Action: Check accompanying error message(s) for details, then ensure that: - The clusterware stack is up. - The subnet, netmask, address type and adapters values are

correct. - The network interface referred to is running. - The user trying to modify the network resource has root privileges.

PRCN-02053: Failed to modify ONS listening port for local client connections to {0}

Cause: CRS unable to modify the ONS listening port for local connections

Action: Make sure that clusterware stack is up. If the port is in use by another application, try using a different port.

PRCN-02054: Failed to modify ONS listening port for remote client connections to {0}

Cause: CRS unable to modify the ONS listening port for remote client connections

Action: Make sure that clusterware stack is up. If the port is in use by another application, try using a different port.

PRCN-02055: Failed to update port number(s) to {0} for {1}

Cause: An attempt to update the listener port failed for the nodes of the cluster.

Action: The port could be in use. Try using different port. If node name was specified in the command line make sure that the node name is a valid node name. Also look at the help for the accompanying error message(s).

PRCN-02056: Invalid listener protocol type {0}

Cause: The specified listener protocol type is invalid.

Action: Provide a valid listener protocol type. It can be TCP, TCPS, IPC, NMP, or SDP.

PRCN-02057: Invalid listener protocol value {0}

Cause: The specified listener protocol value is invalid.

Action: Provide a valid listener protocol value. It cannot contain special characters ';/'

PRCN-02058: Invalid listener protocol ENDPOINTS {0}. Delimiter is "{1}", invalid part is "{2}".

Cause: The specified listener ENDPOINTS are invalid.

Action: Provide valid listener protocol ENDPOINTS. It cannot contain invalid part.

PRCN-02059: Invalid listener port number {0}

Cause: The specified listener port number is invalid.

Action: Provide a valid listener port number.

PRCN-02060: Duplicated listener protocol value {0}

Cause: The specified listener protocol value is a duplication of another one.

Action: Remove duplicated listener protocol value.

PRCN-02061: Failed to add listener {0}

Cause: An attempt to add listener failed because endpoints were not specified correctly or other reasons.

Action: Review the underlying error messages that provide the details of which resources failed to create. Check the cause and action for the individual resource creation failure. If the endpoints were not specified correctly, correct endpoints.

PRCN-02062: The specified hostname or address {0} cannot be resolved.

Cause: An invalid IP address or unresolvable hostname was specified.

Action: If IP address is specified then make sure that it is of legal length. If a host name is specified then make sure that the host name resolves to an IP address.

PRCN-02063: Failed to modify OC4J listening port to {0}

Cause: CRS unable to modify the OC4J instances listening port.

Action: Make sure that clusterware stack is up. If the port is in use by another application, try using a different port.

PRCN-02064: Found {0} VIPs for {1}

Cause: A conflict was found in VIP resource definition: either more than one VIP is using the same name or address, or a VIP is using the same name or address as a real host.

Action: Ensure that each VIP is defined with a distinct name and address relative to other VIPs and hosts in the network.

PRCN-02065: Ports {0} are not available on the nodes given

Cause: The ports specified are already being used by some other applications in one or more of the specified nodes.

Action: Stop the applications that are using these ports or specify different ports.

PRCN-02066: Failed to retrieve cluster listener for {0} because it has the type of Single Client Access Name Listener

Cause: Failed to use cluster listener APIs or `srvctl` commands for specified listener.

Action: Use Single Client Access Name Listener (SCAN listener) APIs or `srvctl` commands (`srvctl verb scan_listener`) for specified listener name.

PRCN-02067: Port {0} is not available on nodes: {1}

Cause: The port specified is already being used by other application.

Action: Stop the application that is using this port or specify a different port.

PRCN-02068: Failed to check the port availability

Cause: This is an internal error.

Action: Contact Oracle Support Services.

PRCN-02069: Unable to retrieve the list of nodes

Cause: This is an internal error.

Action: Contact Oracle Support Services.

PRCN-02070: Failed to validate network. No interface matches required network (subnet: {0}, netmask: {1} adapters: {2}).

Cause: No interfaces were found that match the specified network.

Action: Specify a subnet that exists on all nodes, or reconfigure the nodes to ensure that the specified subnet exists on all nodes.

PRCN-02071: Failed to update attribute USE_EVM to {0}

Cause: An attempt to update the attribute value of USE_EVM for ONS failed.

Action: Examine the accompanying error message(s) and respond accordingly.

PRCN-02072: Failed to get multicast port for events from EONS

Cause: An attempt to get multicast port for events from EONS failed.

Action: Examine the accompanying error message(s) and respond accordingly.

PRCN-02073: Failed to remove EONS

Cause: An attempt to remove EONS failed.

Action: Examine the accompanying error message(s) and respond accordingly.

PRCN-02074: Specified check interval of {0} minutes is below the minimum check interval {1} minutes

Cause: The CVU resource check interval specified was less than the minimum check interval.

Action: Retry the operation with a interval greater than or equal to the minimum check interval.

PRCN-02075: Failed to modify the CVU RUN_INTERVAL attribute to {0}

Cause: CRS was unable to modify the CVU RUN_INTERVAL attribute.

Action: Make sure that the Clusterware stack is up. Make sure that the user is an owner or has write permissions to modify the CVU resource. Check for and respond to any accompanying error messages.

PRCN-02076: failed to retrieve the CVU RUN_INTERVAL attribute for resource "{0}"

Cause: An attempt to retrieve the RUN_INTERVAL attribute for the Cluster Verification Utility cluster resource failed.

Action: Make sure that the Clusterware stack is up. Make sure that the CVU resource has been configured. Check for and respond to any accompanying error messages.

PRCN-02077: Failed to modify the CVU CHECK_RESULTS attribute to "{0}"

Cause: CRS was unable to modify the CVU CHECK_RESULTS attribute.

Action: Make sure that Clusterware stack is up. Make sure that the CVU resource has been configured. Check for and respond to any accompanying error messages.

PRCN-02078: Failed to retrieve the CVU CHECK_RESULTS for "{0}"

Cause: An attempt to retrieve the CHECK_RESULTS attribute for the CVU cluster resource failed.

Action: Make sure that the Clusterware stack is up. Make sure that the CVU resource has been configured. Check for and respond to any accompanying error messages.

PRCN-02079: Port {0} is out of the valid range, between 1 and 65535 and cannot be used on any of the nodes given

Cause: The port number that was provided was either less than 1 or greater than 65535.

Action: Make sure the port provided has a value between 1 and 65535.

PRCN-02080: Address type does not exist for resource {0}

Cause: An attempt was made to query address type for a network resource configured with Oracle clusterware and it was not found.

Action: Contact Oracle Support Services.

PRCN-02081: Failed to modify network number {0} to use subnet "{1}" with prefix length "{2}", adapters "{3}" and address type "{4}"

Cause: CRS was unable to modify the network resource to use new subnet/prefix length/interface/address type.

Action: Check accompanying error message(s) for details, then ensure that: - The clusterware stack is up. - The subnet, prefix length, address type and adapters values are correct. - The network interface referred to is running. - The user trying to modify the network resource has root privileges.

PRCN-02082: Setting the server type to "{0}" is not allowed for an {1} network

Cause: An attempt was made to set the IPv4 network server type to 'autoconfig' or to set the IPv6 network server type to 'static'.

Action: Make sure that the network is IPv4 or IPv6 when trying to set the server type to 'dhcp' or 'autoconfig' respectively.

PRCN-02083: Modifying the server type from "{0}" to "{1}" directly is not allowed

Cause: An attempt was made to change the network server type from 'static' to a dynamic type (or the reverse) without the required intermediate setting of 'mixed'.

Action: First change the server type to 'mixed', then retry the command.

PRCN-02084: Failed to update the {0} server type to "{1}" \n{2}

Cause: An attempt to update the server type for the network resource failed because its value could not be updated in the Oracle Clusterware resource attribute.

Action: Make sure that the Clusterware stack is up. Make sure that the user has enough permission to modify node applications. Examine the accompanying message for additional details.

PRCN-02085: There exists already another network ("{0}") with the same IPv6 link-local subnet

Cause: Already registered another network with the same IPv6 link-local subnet.

Action: Make sure that the IPv6 link-local subnet is unique among the existing networks.

PRCN-02086: Failed to modify the CRSHOME_SPACE_ALERT_MODE attribute of the CVU resource to "{0}"

Cause: Cluster Ready Service (CRS) was unable to modify the CRSHOME_SPACE_ALERT_MODE attribute of the Cluster Verification Utility (CVU) CRS resource.

Action: Make sure that the Oracle Clusterware stack is up. Make sure that the CVU resource has been configured. Examine and respond to any accompanying error messages.

PRCN-02087: Failed to retrieve the CRSHOME_SPACE_ALERT_MODE attribute of the CVU resource

Cause: An attempt to retrieve the CRSHOME_SPACE_ALERT_MODE attribute of the Cluster Verification Utility (CVU) cluster resource failed.

Action: Make sure that the Oracle Clusterware stack is up. Make sure that the CVU resource has been configured. Examine and respond to any accompanying error messages.

PRCN-03000: The IPMI configuration failed on all nodes

Cause: The node names were invalid or were valid but had no IPMI device present.

Action: Make sure that all nodes are reachable and the IPMI device exists on those nodes.

PRCN-03001: The IPMI configuration failed on one or more nodes

Cause: There was at least one node with invalid name or with no IPMI device.

Action: Make sure that all nodes are reachable and the IPMI device exists on those nodes.

PRCN-03002: There is no network resource configured for the cluster

Cause: A request to add a listener was rejected due to the lack of a network resource.

Action: Use the command 'srvctl add network' to configure the network first, then retry the command.

PRCN-03003: Failed to unregister EONS resource type

Cause: A request to unregister the EONS resource type failed because of the reason provided by an accompanying exception message.

Action: Examine the accompanying error message for details.

PRCN-03004: Listener {0} already exists

Cause: The specified listener was already created.

Action: Use the command 'srvctl modify listener' to modify attributes if needed.

PRCN-03005: Failed to add or use registered network {0} with network interfaces "{1}" because the network was already registered for network interfaces "{2}"

Cause: The network resource was already registered with different interfaces.

Action: Use the same network interfaces as the one registered with network resource.

PRCN-03006: Failed to add or use registered network {0} with network interfaces "{1}" because the network was already registered with no interface specified

Cause: The network resource was already registered with no user specified interface.

Action: Do not specify network interface as the system decides the network interface.

PRCN-03007: Failed to add or use registered network {0} with network mask "{1}" because the network was already registered for network mask "{2}"

Cause: The network resource was already registered with a different network mask.

Action: Use the same network mask as the one registered with network resource.

PRCN-03008: Failed to add or use registered network {0} with network subnet "{1}" because the network was already registered for network subnet "{2}"

Cause: The network resource was already registered with a different network subnet.

Action: Use the same network subnet as the one registered with network resource.

PRCN-03009: Failed to retrieve log file attribute for {0} resource

Cause: An attempt to retrieve the log file attribute for the cluster resource failed.

Action: Make sure that the clusterware stack is up. Make sure that the resource you are querying has been configured. Refer also to any accompanying error messages for details.

PRCN-03010: Failed to retrieve log component attribute for {0} resource

Cause: An attempt to retrieve the log component attribute for the cluster resource failed.

Action: Make sure that the clusterware stack is up. Make sure that the resource you are querying has been configured. Refer also to any accompanying error messages for details.

PRCN-03011: Failed to retrieve debug file attribute for {0} resource

Cause: An attempt to retrieve the debug file attribute for the cluster resource failed.

Action: Make sure that the clusterware stack is up. Make sure that the resource you are querying has been configured. Refer also to any accompanying error messages for details.

PRCN-03012: Failed to retrieve debug component attribute for {0} resource

Cause: An attempt to retrieve the debug component attribute for the cluster resource failed.

Action: Make sure that the clusterware stack is up. Make sure that the resource you are querying has been configured. Refer also to any accompanying error messages for details.

PRCN-03013: Failed to update log file attribute of {0} resource

Cause: An attempt to update the attribute value of LOG_FILE for ONS failed.

Action: Examine the accompanying error message(s) and respond accordingly.

PRCN-03014: Failed to update log component attribute of {0} resource

Cause: An attempt to update the attribute value of LOG_COMP for ONS failed.

Action: Examine the accompanying error message(s) and respond accordingly.

PRCN-03015: Failed to update debug file attribute of {0} resource

Cause: An attempt to update the attribute value of DEBUG_FILE for ONS failed.

Action: Examine the accompanying error message(s) and respond accordingly.

PRCN-03016: Failed to update debug component attribute of {0} resource

Cause: An attempt to update the attribute value of DEBUG_COMP for ONS failed.

Action: Examine the accompanying error message(s) and respond accordingly.

PRCN-03017: Specified check interval of {0} minutes exceeds the maximum check interval {1} minutes

Cause: The CVU resource check interval specified was more than the maximum check interval.

Action: Retry the operation with an interval smaller than or equal to the maximum check interval.

PRCN-03018: Addition of listener version {0} is not allowed using srvctl version {1}

Cause: The versions of srvctl used and listener to be created did not match.

Action: Use the same version of srvctl as listener.

PRCN-03019: Not allowed to modify the network address type from {0} to {1}

Cause: An attempt was made to change the network address type directly from "IPv4" to "IPv6" or vice versa.

Action: Ensure that transitions between IPv4 and IPv6 first set an intermediate address type of 'both'.

PRCN-03020: Invalid LISTENER type {0}

Cause: The LISTENER type supplied is not valid.

Action: This is an internal error; contact Oracle Support Services.

PRCN-03021: No ASM listener exists

Cause: No ASM listener was configured for cluster ASM.

Action: Use the command 'srvctl add listener -asm' to configure an ASM listener.

PRCN-03022: Leaf ASM listener does not exist

Cause: Leaf ASM listener was not configured for leaf ASM.

Action: Use the command 'srvctl add listener -leaf' to configure an ASM listener.

PRCN-03023: Unable to retrieve information about the network subnet mask

Cause: An error occurred while obtaining information about the network subnet mask.

Action: Examine the accompanying error messages for details.

PRCN-03024: Mismatch between the subnet mask of the VIP ({0}) and that of the associated network ({1})

Cause: The subnet mask of the VIP address did not match the one of the associated network resource.

Action: Make sure the VIP address has the same subnet mask as the network it belongs to.

PRCN-03025: Mismatch between the prefix length of the VIP ({0}) and that of the associated network ({1})

Cause: The prefix length of VIP address did not match the one of the associated network resource.

Action: Make sure the VIP address has the same prefix length as the network it belongs to.

PRCN-03026: "{0}" is not a valid IPv4 network mask or IPv6 prefix length

Cause: The provided string was neither a valid IPv4 network mask nor a valid IPv6 prefix length.

Action: Contact Oracle Support.

PRCN-03027: Unable to determine the network type

Cause: An error occurred while retrieving the USR_ORA_AUTO network attribute value.

Action: Examine the accompanying error messages for details.

PRCN-03028: VIP {0} address modification is not allowed because the network type is "{1}"

Cause: An attempt was made to change the USR_ORA_VIP value for a VIP on an IPv4 network with 'dhcp' network type or on an IPv6 network with 'autoconfig' network type.

Action: Make sure that the network type is either 'static' or 'mixed' for the IPv4 or IPv6 type of the VIP address that you try to modify.

PRCN-03029: Transition for a network that contains both IPv4 and IPv6 addresses to an {0} network of network type 'mixed' is not allowed

Cause: An attempt was made to transition from a network with both IPv4 and IPv6 addresses to a network that has only one type of addresses and is of network type 'mixed'.

Action: Finish the transition from 'DHCP' or 'autoconfig' to 'static' or vice versa and retry.

PRCN-03030: Unable to retrieve the list of VIPs for network with number {0}

Cause: An error occurred while obtaining information about the VIPs that depend on the given network.

Action: Examine the accompanying error messages for details.

PRCN-03031: Unable to retrieve information about the address of VIP resource "{0}"

Cause: An error occurred while obtaining information about the address of the given VIP resource.

Action: Examine the accompanying error messages for details.

PRCN-03032: The VIP for hosting node "{0}" on network number {1} does not contain an {2} address or a VIP name that resolves to an {2} address

Cause: The given VIP did not contain an IP address or a VIP name that resolved to an IP address of the displayed address type.

Action: Make sure that the VIP contains an IP address or a VIP name that resolves to an IP address of the displayed address type.

PRCN-03033: Unable to retrieve the SCAN name for network {0}

Cause: An error occurred while obtaining the Single Client Access Name (SCAN) name for the specified network.

Action: Examine the accompanying error messages for details.

PRCN-03034: SCAN name "{0}" resolves to one or more {1} addresses

Cause: The given SCAN name resolved to the given type (IPv4 or IPv6) of addresses.

Action: Make sure that the SCAN name does not resolve to addresses of the given address type.

PRCN-03035: SCAN name "{0}" resolves to {1} addresses instead of {2}

Cause: The given SCAN name resolved to a wrong number of addresses.

Action: Make sure that the SCAN name resolves to the same number of addresses as the existing SCAN VIPs by using the 'srvctl modify scan -scanname <scan_name>' command.

PRCN-03036: Unable to retrieve the list of SCAN VIPs that depend on network with network number {0}

Cause: An error occurred while obtaining information about the SCAN VIPs that depend on the given network.

Action: Examine the accompanying error messages for details.

PRCN-03037: Unable to retrieve information about the address of SCAN VIP resource "{0}"

Cause: An error occurred while obtaining information about the address of the given SCAN VIP resource.

Action: Examine the accompanying error messages for details.

PRCN-03038: SCAN name "{0}" resolves to different addresses than those of the existing SCAN VIPs

Cause: While attempting to change the network address type, it was found that the given SCAN name resolved to a set of addresses that are different from the ones of the existing SCAN VIPs.

Action: Make sure that the SCAN name resolves to the same addresses as those of the existing SCAN VIPs by using the command 'srvctl modify scan -scanname <scan_name>'.

PRCN-03039: Unable to remove the {0} address from the VIP resource "{1}"

Cause: An error occurred while trying to remove either the IPv4 or the IPv6 address from all the VIPs on the network.

Action: Examine the accompanying error messages for details.

PRCN-03040: Unable to remove the {0} address from the SCAN VIP resource "{1}"

Cause: An error occurred while trying to remove either the IPv4 or the IPv6 address from all the SCAN VIPs on the network.

Action: Examine the accompanying error messages for details.

PRCN-03041: Failed to modify the network address type

Cause: An error occurred while trying to modify the network address type.

Action: Examine the accompanying error messages for details.

PRCN-03042: Subnet "{0}" is already in use by a network on the cluster

Cause: The specified subnet was already registered with another network on the cluster.

Action: Use a unique subnet and retry the operation.

PRCN-03043: Failed to verify the uniqueness of subnet "{0}" among the networks of the cluster

Cause: An error occurred while trying to verify the uniqueness of the subnet.

Action: Examine the accompanying error messages for details.

PRCN-03044: There is no {0} subnet for network with number {1}

Cause: No subnet of the given address type was found for the specified network.

Action: Modify the network to include a subnet of the specified address type and retry.

PRCN-03045: Management listener is not running in the cluster

Cause: An attempt to retrieve the IP address failed because the management listener was not running.

Action: Start the management listener using the command 'srvctl start mgmtlsnr'.

PRCN-03046: Failed to retrieve the IP address of the management listener

Cause: An attempt to retrieve the IP address of the management listener failed in querying the management listener resource.

Action: Stop and restart the management listener using the commands 'srvctl stop mgmtlsnr' and 'srvctl start mgmtlsnr', then retry the command. If the problem persists, contact Oracle Support Services.

PRCN-03047: Failed to set or get the subnet of the listener resource

Cause: An attempt to set or retrieve the subnet of the listener failed because the operation is not allowed for this resource.

Action: Use the 'srvctl' commands on the underlying network resource to set or get the subnet value or create a different listener.

PRCN-03048: Listener subnet "{0}" is not a subnet classified {1}

Cause: While adding a management listener, the specified subnet was not classified as a subnet of the required type.

Action: Specify a subnet that is classified as required as reported by using the command 'oifcfg getif', or change the subnet classification to the required type using the command 'oifcfg setif'.

PRCN-03049: Cannot change the network subnet address type to 'both' because it has only an {0} subnet address

Cause: An attempt to modify the network address type failed because the network had only one type of subnet address instead of both IPv4 and IPv6 subnet addresses.

Action: Make sure that the network has been configured with both IPv4 and IPv6 subnets using the command 'srvctl modify network -subnet'.

PRCN-03050: SCAN name "{0}" resolves to different number of IPv4 ({1}) and IPv6 ({2}) addresses

Cause: An attempt to change subnet address type to 'both' was rejected because the given SCAN name resolved to a different number of IPv4 and IPv6 addresses.

Action: Make sure that the SCAN name resolves to the same number of IPv4 and IPv6 addresses.

PRCN-03051: Unable to retrieve a list of the hub nodes

Cause: While attempting to change the subnet address type, an error occurred while retrieving a list of the hub nodes.

Action: Examine the accompanying message for details.

PRCN-03052: The following nodes do not have VIPs configured for network: {0}

Cause: While attempting to change the subnet, some nodes were found to be missing VIP addresses.

Action: Configure VIP addresses for the given nodes using the command 'srvctl add VIP'.

PRCN-03053: The following nodes do not have configured VIPs with IPv4 addresses on network {0}: {1}

Cause: A request to change the subnet address type was rejected because the specified nodes had VIPs which did not have any configured IPv4 address or a name that resolved to an IPv4 address.

Action: Make sure that the given nodes have configured VIPs with IPv4 address or name that resolved to an IPv4 address.

PRCN-03054: The following nodes do not have configured VIPs with IPv6 addresses on network {0}: {1}

Cause: A request to change the subnet address type was rejected because the specified nodes had VIPs which did not have any configured IPv6 address or a name that resolved to an IPv6 address.

Action: Make sure that the given nodes have configured VIPs with IPv6 address or name that resolved to an IPv6 address.

PRCN-03055: Cannot change the network subnet address type to 'both' for the following VIP related issues: {0}

Cause: An attempt to modify the network address type was rejected because the network either had no VIPs on one or more nodes or the VIPs did not have the expected address type.

Action: Examine the accompanying message for details.

PRCN-03056: The VIP address "{0}" is an {1} address, while network {2} has no {3} subnet

Cause: The VIP with the given address had a different address type than the network subnet address type.

Action: Either modify the network via the command 'srvctl modify network -subnet' to include the missing type or make sure that the VIP address type matches the address type of the network subnet.

PRCN-03057: The VIP name "{0}" resolves to one or more {1} addresses ("{2}"), while network {3} has no {1} subnet

Cause: The VIP name mapped to an address with different address type than the network subnet address type.

Action: Either modify the network via the command 'srvctl modify network -subnet' to include the missing type or make sure that the VIP name resolves to addresses that match the address type of the network subnet.

PRCN-03058: Cannot update listener that is not an ASM listener

Cause: An attempt was made to update a non-ASM listener.

Action: Specify the name of an ASM listener on the command line. Use the command 'srvctl config listener -asmlistener' to display ASM listener names.

PRCN-03059: Unable to retrieve the network number

Cause: An error occurred while attempting to retrieve the network number.

Action: Examine the accompanying error messages for details.

PRCN-03060: Unable to retrieve the list of configured networks on the cluster

Cause: An error occurred while attempting to retrieve the set of configured network resources 'ora.net*.network'.

Action: Examine the accompanying error messages for details.

PRCN-03061: The specified network server type "{0}" is invalid for an "IPv4" network.

Cause: The network server type was specified as 'autoconfig' which is not valid for an IPv4 network.

Action: The network server type must be 'static' or 'dhcp' or 'mixed'.

PRCN-03062: The specified network server type "{0}" is invalid for an "IPv6" network.

Cause: The network server type was specified as 'dhcp' which is not valid for an IPv6 network.

Action: The network server type must be 'static' or 'autoconfig' or 'mixed'.

PRCN-03063: Failed to find an available port in the default TCP port range {0} - {1} among nodes: {2}

Cause: An attempt to find an available default TCP port failed because all default TCP ports were used by some other applications in at least one node in the cluster.

Action: Specify a port to be used outside the default TCP port range using 'srvctl add listener -endpoints'

PRCN-03064: The user "{0}" could not be found on the cluster

Cause: The user specified as the listener owner was not a known OS user name.

Action: Enter the name of an existing OS user as the owner of the specified listener.

PRCN-03065: Cannot configure the default network as leaf.

Cause: An attempt was made to configure the default network with the leaf category.

Action: Provide a non-default network when using SRVCTL to add a network resource with the '-leaf' flag.

PRCN-03066: Cannot configure network resource as leaf because cluster is not configured as Flex Cluster.

Cause: An attempt was made to add a network resource with the leaf category in a cluster not configured as Flex Cluster.

Action: Use SRVCTL without the '-leaf' flag when adding a network resource in a non-Flex Cluster system. Or, convert the cluster to a Flex Cluster before doing this operation.

PRCN-03067: Unable to modify the owner for an ASM or leaf listener.

Cause: An attempt was made to modify the owner of a ASM or leaf listener resource.

Action: Repeat the operation specifying a node listener.

PRCN-03068: Unable to determine whether the VIP address "{0}" belongs to network with number {1}

Cause: An error occurred while trying to determine whether the VIP address matches the network subnet.

Action: Examine the accompanying error messages for details.

PRCN-03069: Unable to determine whether the VIP address "{0}" belongs to network with number {1} and subnet number {2}

Cause: An error occurred while trying to determine whether the VIP address matches the network subnet.

Action: Examine the accompanying error messages for details.

PRCN-03070: The VIP address "{0}" does not belong to network with number {1} and subnet number {2}

Cause: The VIP address did not match the subnet of the specified network.

Action: Make sure that the VIP address or the address the VIP name resolves to matches the network subnet.

PRCN-03071: Invalid address or unknown host "{0}"

Cause: An attempt was made to configure a network resource with an invalid address or host name.

Action: Specify a resolvable host name or an IP address of legal length.

PRCN-03072: Unable to modify the home node of the HAVIP.

Cause: An attempt to modify the home node of the HAVIP failed because there was an export file system registered with the same path, export options and HAVIP home node.

Action: Provide a different home node or examine the accompanying error messages for details.

PRCN-03073: Invalid node name: {0}

Cause: The home node name was invalid. The home node name must contain alphanumeric characters and hyphens only. It cannot be a fully qualified domain name.

Action: Check the home node name and try again.

PRCN-03074: The specified ping target list contains duplicate addresses.

Cause: The specified ping target list was invalid. It contained duplicate IP addresses or host names that resolve to duplicate IP addresses.

Action: Reissue the command without elements that are or resolve to the same

PRCN-03075: The specified TCP ports ({0}) are configured for another ASM or management listener.

Cause: An attempt to add an ASM or management listener failed because one or more of the specified ports were already configured for another ASM or management listener.

Action: Retry the command specifying a port not in use by another ASM or management listener.

PRCN-03076: Unable to find an available port in the default TCP port range {0} - {1}

Cause: An attempt to find an available default TCP port failed because all default TCP ports were configured for other ASM or management listeners.

Action: Retry the command specifying a port outside the default TCP port range.

PRCN-03077: The specified ports {0} are in the privileged ports range.

Cause: The specified ports were in the privileged ports range (0-1023) which can only be used by daemons running as user 'root'.

Action: Specify port numbers greater than 1023.

PRCN-03078: Setting the address type to "ipv4" is not allowed because the existing network address type is "ipv6".

Cause: An attempt to change the address type from 'ipv6' to 'ipv4' directly was rejected because the address type must first be changed to 'both' then to 'ipv4'.

Action: Use the command 'srvctl modify network' to change the network type to 'both' by adding an IPv4 subnet and retry the command.

PRCN-03079: Setting the address type to "ipv6" is not allowed because the existing network address type is "ipv4".

Cause: An attempt to change the address type from 'ipv4' to 'ipv6' directly was rejected because the address type must first be changed to 'both' then to 'ipv6'.

Action: Use the command 'srvctl modify network' to change the network type to 'both' by adding an IPv6 subnet and then retry the command.

PRCN-03080: The network configuration cannot be modified when the network type is 'mixed'.

Cause: An attempt to modify a network configuration was rejected because either the IPv4 or IPv6 subnet is configured with 'mixed' network type.

Action: Change the network type to 'static' or 'dhcp' or 'autoconfig' before proceeding with the configuration change.

PRCN-03081: The specified subnet ({0}) is already configured for ASM listener "{1}".

Cause: An attempt to add or modify an ASM listener was rejected because the specified subnet was already used for another ASM listener.

Action: Retry the command specifying a subnet that is not in use by another ASM listener.

PRCN-03082: An attempt to modify the OC4J port failed because OC4J is running. Use -force to force stop and restart of OC4J.

Cause: A request to modify the port number of OC4J was rejected because such modification requires OC4J to be stopped and restarted.

Action: Use '-force' option to force restart of OC4J.

PRCN-03083: failed to modify OC4J when trying to set the HTTP port and Remote Method Invocation (RMI) port to the same number {0}

Cause: A request to modify the OC4J port numbers was rejected because the HTTP port number was the same as the Remote Method Invocation (RMI) port number.

Action: Choose a different port that is not in use.

PRCN-03084: failed to modify RMI port for OC4J to use the port number {0} that is used by the listener {1}

Cause: A request to modify the OC4J Remote Method Invocation (RMI) port number was rejected because the specified port was already used by a node listener.

Action: Choose a different port number that is not used as an HTTP port or a node listener port.

PRCN-03085: failed to modify HTTP port for OC4J to use the port number {0} that is used by the listener {1}

Cause: A request to modify the OC4J HTTP port number was rejected because the specified port was already used by a node listener.

Action: Choose a different port number that is not used as an RMI port or a node listener port.

PRCN-03086: failed to merge files "{0}" and "{1}"

Cause: An attempt to merge the two indicated network configuration files failed.

Action: Examine the accompanying error messages for details, resolve issues and retry.

PRCN-03087: An attempt to extract the DNS name server IP address from file "{0}" failed.

Cause: No DNS name server IP address was specified in the specified file.

Action: Make sure that there is a line in the specified file that starts with 'nameserver' followed by the GNS name server IP address.

PRCO-00001 to PRCO-00019

PRCO-00001: Failed to initialize olsnodes

Cause: Unable to initialize and start olsnodes

Action: Ensure that the clusterware is running.

PRCO-00002: Unable to communicate with the clusterware

Cause: Unable to communicate with the clusterware

Action: Ensure that the clusterware is running.

PRCO-00003: OCR operation failed \nstring\n

Cause: OCR operation failed

Action: Refer to the OCR error message

PRCO-00004: OCR initialization failed \nstring\n

Cause: OCR initialization failed

Action: Refer to the OCR error message

PRCO-00008: Unable to retrieve local node number

Cause: Unable to retrieve local node number from clusterware

Action: Ensure that the clusterware is running.

PRCO-00009: Unable to retrieve local node name

Cause: Unable to retrieve local node name from clusterware

Action: Ensure that the clusterware is running.

PRCO-00010: Unable to retrieve max number of nodes

Cause: Unable to retrieve maximum number of nodes from clusterware

Action: Ensure that the clusterware is running.

PRCO-00011: Unable to retrieve node name

Cause: Unable to retrieve node name from clusterware

Action: Ensure that the clusterware is running.

PRCO-00012: Unable to retrieve node number

Cause: Unable to retrieve node number from clusterware

Action: Ensure that the clusterware is running.

PRCO-00013: Unable to retrieve private interconnect name

Cause: Unable to retrieve private interconnect name from clusterware

Action: Ensure that the clusterware is running.

PRCO-00014: Unable to retrieve node virtual IP

Cause: Unable to retrieve node virtual IP from clusterware

Action: Ensure that the clusterware is running.

PRCO-00015: Not a cluster member

Cause: Specified node is not a cluster member

Action: Specify a cluster member node.

PRCO-00016: Cluster node membership interface for retrieving nodes list returned error code *number*

Cause: Call to the CSS nodelist service failed with the specified error as return value

Action: Ensure that the clusterware is running and look at the Clusteware log files

PRCO-00017: Cluster attribute retrieval interface to retrieve max node length failed

Cause: Call to the CSS attribute fetch service failed for attribute max node length

Action: Ensure that the clusterware is running, and look at the Clusterware log files

PRCO-00018: Unable to retrieve cluster name

Cause: Unable to retrieve cluster name from clusterware

Action: Ensure that the clusterware is running.

PRCO-00019: Failure retrieving list of nodes in the cluster

Cause: The list of cluster nodes could not be determined. Additional details on the problem are in accompanying message(s).

Action: Take action based on the accompanying message(s).

PRCR-01000 to PRCR-01194

PRCR-01000: Resource {0} already exists

Cause: An attempt was made to create a resource that already exists.

Action: Check the resource using the command 'srvctl config *object*' and if the resource should not exist then remove it using the command 'srvctl remove *object*'.

PRCR-01001: Resource {0} does not exist

Cause: An attempt was made to operate on a resource that does not exist.

Action: Check the resource using the command 'srvctl config *object*' and if the resource does not exist, then create it using the command 'srvctl add *object*'.

PRCR-01002: Resource {0} is already enabled

Cause: An attempt was made to enable a resource that is already enabled.

Action: If the resource is already enabled then no action is needed. Use the command 'srvctl status *object*' to determine whether it is enabled.

PRCR-01003: Resource {0} is already disabled

Cause: An attempt was made to disable a resource that is already disabled.

Action: If the resource is already disabled then no action is needed. Use the command 'srvctl status *object*' to determine whether it is disabled.

PRCR-01004: Resource {0} is already running

Cause: An attempt was made to start a resource that is already running.

Action: If the resource is already running then no action is needed. Use the command 'srvctl status *object*' to determine whether it is running.

PRCR-01005: Resource {0} is already stopped

Cause: An attempt was made to stop a resource that is already stopped.

Action: If the resource is already stopped then no action is needed. Use the command 'srvctl status *object*' to determine whether it is stopped.

PRCR-01006: Failed to add resource {0} for {1}

Cause: An attempt to add the specified resource failed.

Action: Examine the accompanying error messages for details.

PRCR-01007: Failed to check status of resource {0}

Cause: An attempt to check status of specified resource has failed.

Action: Check the help for the underlying exception.

PRCR-01008: Failed to retrieve version of resource {0}

Cause: An attempt to retrieve version of the specified resource has failed.

Action: Check the help for the underlying exception.

PRCR-01009: Failed to retrieve permissions of resource {0}, ACL {1}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01010: Failed to update permissions of resource {0}

Cause: An attempt to update permissions of specified resource has failed.

Action: Check the help for the underlying exception.

PRCR-01011: Failed to enable resource {0}

Cause: An attempt to enable specified resource has failed.

Action: Check the help for the underlying exception.

PRCR-01012: Failed to disable resource {0}

Cause: An attempt to disable specified resource has failed.

Action: Check the help for the underlying exception.

PRCR-01013: Failed to start resource {0}

Cause: An attempt to start specified resource on several nodes failed.

Action: Check the help for the underlying exception.

PRCR-01014: Failed to stop resource {0}

Cause: An attempt to stop specified resource on several nodes failed.

Action: Check the help for the underlying exception.

PRCR-01015: Failed to relocate resource {0}

Cause: An attempt to relocate specified resource has failed.

Action: Check the help for the underlying exception.

PRCR-01016: Failed to modify resource {0}

Cause: An attempt to modify specified resource has failed.

Action: Check the help for the underlying exception.

PRCR-01024: Failed to remove resource {0} on nodes {1}

Cause: An attempt to remove the resource on the specified nodes failed.

Action: Check the accompanying error messages for details.

PRCR-01025: Resource {0} is still running

Cause: The specified resource is not stopped.

Action: Check the accompanying error messages to decide whether to stop the specified resource.

PRCR-01026: Resource {0} is not running

Cause: The specified resource is not started.

Action: Check the accompanying error messages to decide whether to start the specified resource.

PRCR-01028: Failed to remove resource {0}

Cause: An attempt to remove specified resource failed.

Action: Check the help for the underlying CRSEException.

PRCR-01029: Attribute {0} does not exist in resource {1} definition

Cause: An attempt was made to get an attribute which is not defined for that resource type.

Action: Make sure that the attribute exists in the resource definition.

PRCR-01030: Resource attribute name {0} is not valid

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01031: Resource attribute {0} value {1} is not valid

Cause: Specified resource attribute value is not valid.

Action: Try recreating the resource attribute value using `srvm` APIs or recreating the resource using `srvctl` commands.

PRCR-01032: Current state of resource {0} is not valid

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01033: Resource type {0} does not exist

Cause: An attempt to retrieve the type has failed.

Action: Make sure that the type exists.

PRCR-01035: Failed to look up CRS resource {0} for {1}

Cause: An attempt to access the specified resource failed because it did not exist.

Action: Check that the specified name and resource type are correct.

PRCR-01036: Failed to retrieve cardinality of the resource {0}

Cause: An attempt to retrieve cardinality of resource has failed.

Action: Examine the accompanying error messages to determine how to respond.

PRCR-01037: Failed to update cardinality of the resource {0} to {1}

Cause: An attempt to set cardinality of the resource has failed.

Action: Examine the accompanying error messages to determine how to respond.

PRCR-01039: Server pool {0} does not exist

Cause: An attempt was made to retrieve the server pool which does not exist.

Action: Make sure that requested server pool exists.

PRCR-01040: Resource {0} is already enabled on node(s) {1}

Cause: An attempt was made to enable a resource that is already enable on nodes.

Action: The status of a resource can be checked by using the command '`srvctl status object`'.

PRCR-01041: Resource {0} is already disabled on node(s) {1}

Cause: An attempt was made to disable a resource that is already disabled on nodes.

Action: The status of a resource can be checked by using the command '`srvctl status object`'.

PRCR-01042: Failed to get dependent resources {0} of resource {1}: {2}

Cause: Failed to retrieve dependent resources of the given resource.

Action: Examine the accompanying error messages to determine how to respond.

PRCR-01043: Failed to update dependent resources {0} of resource {1} to resource {2}

Cause: Failed to update dependent resources of the given resource.

Action: Examine the accompanying error messages to determine how to respond.

PRCR-01050: Resource {0} is not configured in Oracle cluster environment

Cause: The environment for the specified resource is not Oracle Clusterware.

Action: The specified commands or APIs can only be used when Oracle Clusterware is running. If the environment is configured as Oracle Restart, use the correspond commands and APIs for Oracle Restart.

PRCR-01051: OracleCM Cluster is not found on node {0}

Cause: The OracleCM Cluster was not found on the specified node because the library for OracleCM Cluster was not found.

Action: Install OracleCM Cluster on the specified node.

PRCR-01052: Failed to find OracleCM Cluster library on node {0}

Cause: Failed to check OracleCM Cluster because of the error in executing the command to find the file /etc/ORCLcluster/oracm/lib/libskgxn2.so.

Action: Make sure that the caller has the read and execute permission for the library file.

PRCR-01053: Vendor Cluster is not found on node {0}

Cause: The Vendor Cluster was not installed and configured on the specified node.

Action: Install and configure the Vendor Cluster on the specified node.

PRCR-01054: Failed to find Vendor Cluster library on node {0}

Cause: Failed to check OracleCM Cluster because of the error in executing the command to find the file /etc/ORCLcluster/lib/libskgxn2.so.

Action: Make sure that the caller has the read and execute permission for the library file.

PRCR-01055: Cluster membership check failed for node {0}

Cause: The specified node does not belong to the cluster.

Action: Check whether the node name is correct.

PRCR-01061: User permissions are insufficient

Cause: User permissions are insufficient to register resource/type.

Action: Make sure the user is crs-user or root.

PRCR-01062: Failed to retrieve attributes of resource {0} on node {1}

Cause: An attempt to retrieve attributes of the resource has failed.

Action: Make sure that resource exists.

PRCR-01063: Failed to create context

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01064: Failed to start resource {0} on node {1}

Cause: An attempt to start the resource has failed.

Action: Make sure that resource is ready to start on the node before starting it.

PRCR-01065: Failed to stop resource {0}

Cause: An attempt to stop the resource failed because the resource wasn't running or the running resource had dependent resources also running.

Action: Check the accompanying messages to identify dependent resources and stop them. Make sure that resource is running before stopping it.

PRCR-01067: Failed to create a filter

Cause: An attempt to create a filter has failed.

Action: Check the help for the underlying exception.

PRCR-01068: Failed to query resources

Cause: An attempt to query the resource failed.

Action: Check the help for the underlying exception.

PRCR-01069: Attribute {0} of {1} {2} not found

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01070: Failed to check if {0} {1} is registered

Cause: Failed to check if resource is registered.

Action: Check the help for the underlying exception.

PRCR-01071: Failed to register or update {0} {1}

Cause: An attempt to register or update the resource failed.

Action: Check the help for the underlying exception.

PRCR-01072: Failed to unregister {0} {1}

Cause: An attempt to unregister specified Oracle clusterware entity failed.

Action: Check the help for the underlying exception.

PRCR-01074: Failed to retrieve attributes for {0} {1}

Cause: Failed to retrieve attributes for specified resource.

Action: Check the help for the underlying exception.

PRCR-01075: Failed to retrieve status for resource {0}

Cause: Failed to retrieve status for specified resource.

Action: Check the help for the underlying exception.

PRCR-01076: Failed to retrieve status for resource {0}: {1} is missed

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01077: Failed to calculate status for resource {0}: {1}/{2}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01078: Failed to retrieve attributes of resource {0}

Cause: An attempt to retrieve attributes of the resource has failed.

Action: Make sure that resource exists.

PRCR-01079: Failed to start resource {0}

Cause: An attempt to start the resource has failed.

Action: Make sure that resource is ready to start before starting it.

PRCR-01085: Unknown typeAsString: {0}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01086: {0} {1} is already registered

Cause: An attempt to register specified resource failed.

Action: Make sure that a resource is not registered before register it.

PRCR-01087: Failed to retrieve resource {0} instances

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01088: Failed to stop resource {0}: it was not started on node {1}

Cause: The resource was not started on the node..

Action: Make sure that resource was started before stopping it.

PRCR-01089: Failed to relocate resource {0}.

Cause: An attempt to relocate specified resource failed.

Action: Check the help for the underlying exception.

PRCR-01090: Failed to relocate resource {0}. It is not running.

Cause: The resource was not started.

Action: Make sure that resource was started before relocating it.

PRCR-01091: Failed to relocate resource {0}. It is not running on node {1}.

Cause: The resource was not started on the node.

Action: Make sure that resource was started before relocating it.

PRCR-01092: Failed to relocate resource {0}. It is running on more than one node

Cause: The resource was started on more than one node.

Action: Make sure that resource is running on one node only before relocating it.

PRCR-01093: Failed to relocate resource {0}. It is already running on node {1}

Cause: The resource is running that node.

Action: Make sure that resource is not running on a node before relocating it.

PRCR-01094: Failed to start resources on node {0}: {1}

Cause: Resources defined by filter cannot be started on the node.

Action: Make sure that resources are not running and ready to run before starting them. Make sure that the node is online.

PRCR-01095: Failed to start resources using filter {0}

Cause: Resources defined by filter cannot be started.

Action: Make sure that resources are not running and ready to run before starting them.

PRCR-01096: Filter cannot be null

Cause: An attempt to use filter has failed.

Action: Make sure that a filter is provided.

PRCR-01097: Resource attribute not found: {0}

Cause: Requested resource attribute not found.

Action: Make sure that resource has requested attribute.

PRCR-01098: Could not set rolling upgrade mode {0}

Cause: An attempt to start the resource in rolling upgrade mode has failed.

Action: Make sure that the correct LD_LIBRARY_PATH is set and all shared libraries are present.

PRCR-01099: Cannot start resource {0} on {1} additional nodes because it would exceed the resource cardinality {2}. Resource is already running on {3} nodes

Cause: Resource cannot be started because of its cardinality restriction.

Action: Make sure that number of additional nodes does not exceed the resource cardinality.

PRCR-01100: Cannot start resource {0} on {1} nodes because it would exceed the resource cardinality {2}

Cause: Resource cannot be started because of its cardinality restriction.

Action: Make sure that number of nodes does not exceed the resource cardinality.

PRCR-01101: Cannot stop resource {0} on {1} nodes, it is running on {2} nodes.

Cause: The resource does not have enough running instances to stop.

Action: Make sure that resource has enough running instances to stop.

PRCR-01102: Failed to verify if user {0} has CRS administrator role

Cause: Failed to verify if the user has CRS administrator role.

Action: Resolve the reported error message and retry.

PRCR-01104: Unsupported relocate option {0}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01105: Failed to relocate resource {0} to node {1}

Cause: An attempt to relocate the resource to the specified node has failed.

Action: Examine accompanying message(s) that provide details of the error, and respond accordingly.

PRCR-01106: Failed to relocate resource {0} from node {1} to node {2}

Cause: An attempt to relocate the resource from the specified node to another has failed.

Action: Check the help for the underlying exception.

PRCR-01107: Error while trying to set default network as dependent resource for {0}

Cause: An attempt to set default network dependency for the specified resource failed.

Action: Examine the accompanying error message(s) for details.

PRCR-01108: ONS cannot be created because default network is not configured.

Cause: An attempt was made to create ONS resource with out creating the dependent default network resource.

Action: Network resource can be created using the command 'srvctl add nodeapps'. Create the network resource and try this command again.

PRCR-01109: Failed to remove attributes "{1}" from resource {0}

Cause: Possible reasons: Oracle Clusterware stack might not be active, CRS resource may not exist, or the CRS resource may not have given attributes set.

Action: Make sure that Oracle Clusterware is active, the CRS resource exists and has given attributes set.

PRCR-01110: Failed to retrieve processed attributes of resource {0} for node {1}

Cause: Oracle Clusterware stack was not active or CRS resource did not exist.

Action: Make sure that Oracle Clusterware is active, the CRS resource exists.

PRCR-01111: Failed to retrieve processed attributes of resource {0} for node {1}

Cause: requested CRS resource did not exist.

Action: Make sure that the CRS resource exists.

PRCR-01112: Failed to retrieve current event sequence number

Cause: Oracle Clusterware stack was not active.

Action: Make sure that Oracle Clusterware is active.

PRCR-01113: Failed to create detailed error message, rc = {0}

Cause: Internal error

Action: Contact Oracle Support Services.

PRCR-01114: Failed to relocate servers {0} into server pool {1}

Cause: Failed to relocate servers into the given server pool. This message may be accompanied by others providing additional details. A likely cause is violation of defined configuration attributes such as pool MIN_SIZE, SERVER_NAMES etc.

Action: If the problem stems from violating configuration attributes, either modify the attributes or reformulate the request. Otherwise, contact Oracle Support Services.

PRCR-01115: Failed to find entities of type {0} that match filters {1} and contain attributes {2}

Cause: Failed to look up entitites of given type that match given filters. This message may be accompanied by others providing additional details. A likely cause is that current user does not have permissions to read attributes of entities of given type.

Action: If lack of permissions is the cause of this failure, then use the command 'srvctl config *object* -a' to find the current owner of the entity and retry the query as that owner user. Otherwise, contact Oracle Support Services.

PRCR-01116: {0} {1} cannot be created and registered now

Cause: Oracle Clusterware stack could not create and register an object.

Action: Check the help for the underlying exception.

PRCR-01117: Failed to stop resources using filter {0}

Cause: An attempt to stop resources using specified filter failed.

Action: Respond based on the accompanying exception message.

PRCR-01118: Failed to generate resource permissions for the resource

Cause: Creation of the Access Control List (permission) structures for the resource failed. This message is accompanied by others providing details of the error.

Action: Respond based on the accompanying exception message(s).

PRCR-01119: Failed to look up CRS resources of {0} type

Cause: An attempt to find the resource for the specified resource type failed because it did not exist.

Action: Create a resource of the type.

PRCR-01120: Resources are already running: {0}

Cause: An attempt to start resources failed because they are already running. For detailed information about resources review the accompanying error messages.

Action: None

PRCR-01121: Value of parameter "{0}" cannot be null or empty

Cause: An attempt to construct ACFS resource name failed due to null or empty value for the indicated parameter.

Action: This is an internal error. Contact Oracle Support Services.

PRCR-01122: Resource type {0} is not registered with Oracle Clusterware

Cause: Given resource type was not registered.

Action: Make sure that required resource type is registered.

PRCR-01123: Failed to rename resource type {0}

Cause: An attempt was made to change name of the given resource type. Resource types cannot be renamed.

Action: None

PRCR-01124: Failed to check resource {0}

Cause: An attempt to check the resource failed.

Action: Correct any problems reported in accompanying messages. Make sure that resource is registered with Oracle Clusterware.

PRCR-01125: Failed to check resource {0} on node {1}

Cause: An attempt to check the resource on specified node failed.

Action: Correct any problems reported in accompanying messages. Make sure that resource is registered with Oracle Clusterware.

PRCR-01126: Failed to relocate resource {0} from node {1}

Cause: An attempt to relocate the resource from the specified node has failed.

Action: Examine the accompanying error messages and respond accordingly.

PRCR-01127: Resource {0} does not have attributes {1} on per node basis

Cause: An attempt to remove given attributes failed because these attributes do not exist on per node basis.

Action: Retry after supplying attributes that exist on per node basis.

PRCR-01128: Resource {0} does not have attributes {1} on node {2}

Cause: An attempt to remove given attributes failed because these attributes do not exist on the given node.

Action: Retry after supplying attributes that exist on the node.

PRCR-01129: Failed to upgrade resource type {0}

Cause: An attempt to upgrade specified resource type failed.

Action: Examine the accompanying error message(s) and respond accordingly.

PRCR-01130: Failed to get the name for resource type {0} from resource type enum class

Cause: An attempt to get the name of the resource type for the given resource type enum class.

Action: Ensure that the resource type enum class contains the proper resource type name.

PRCR-01131: CVU resource cannot be created because default network is not configured.

Cause: An attempt was made to create CVU resource without creating the dependent default network resource.

Action: Network resource can be created using the command 'srvctl add nodeapps'. Create the network resource and try this command again.

PRCR-01132: Failed to stop resources using a filter

Cause: An attempt to stop resources failed because resources were not running or running resources had dependent resources also running.

Action: Check the accompanying messages to identify dependent resources and stop them. Make sure that resources are running before stopping them.

PRCR-01133: Failed to stop database {0} and its running services

Cause: An attempt to stop given database and its running services failed.

Action: Correct any problems reported in accompanying messages.

PRCR-01134: Failed to stop database {0} and its running services on nodes {1}

Cause: An attempt to stop the given database and its running services failed on the specified nodes.

Action: Correct any problems reported in accompanying messages.

PRCR-01135: Failed to check if node with node number 0 exists

Cause: An attempt failed to determine whether a node numbered 0 exists.

Action: Follow action specified for accompanying message.

PRCR-01136: Action {0} is not allowed for snapshot entities

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01137: Action {0} is not allowed for CRS local entities

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01138: Failed to get cached attributes for entity {0} on node {1}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01139: Cache is not ready to generate a snapshot

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01140: Wrong sequence number {0}, expected {1} or more

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01141: Attribute {0} is not set for local entity {1}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01142: Failed to build a snapshot

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01143: Snapshot does not have information about database {0}

Cause: Internal Error: An attempt was made to operate on a database that does not exist in a snapshot.

Action: Contact Oracle Support Services.

PRCR-01144: Failed to evaluate the effects of the proposed request \n{0}

Cause: An error occurred during processing of the proposed request.

Action: Examine the accompanying error messages for details.

PRCR-01145: The proposed operation being evaluated would result in an error \n{0}

Cause: The effect of the proposed WhatIf request resulted in an error.

Action: Examine the accompanying error messages for details of the error that would result from the proposed operation.

PRCR-01146: The cluster active version doesn't allow the requested action

Cause: CRS failed to perform a request because the cluster upgrade is not completed.

Action: Complete the cluster upgrade and retry the request.

PRCR-01147: Snapshot support was interrupted

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01149: Failed to initialize snapshot subsystem

Cause: An attempt to initialize snapshot subsystem failed.

Action: Check the accompanying messages. Make sure that Oracle Clusterware is active.

PRCR-01150: Snapshot subsystem was not initialized

Cause: An attempt was made to create a snapshot but snapshot subsystem is not initialized.

Action: Check the accompanying messages. Make sure that Oracle Clusterware is active.

PRCR-01151: Snapshot does not have information about server {0}

Cause: An attempt was made to operate on a server that does not exist in a snapshot. Either the server name was misspelled or the server has not been registered at the time of snapshot creation.

Action: Make sure that the server name spelling is correct. Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCR-01152: Invalid CRS cache mode: {0}

Cause: CRS cache does not support requested mode.

Action: Retry after supplying correct value for CRS Cache mode.

PRCR-01153: Snapshot internal error: {0}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01154: Failed to create file output stream with file name: {0}

Cause: An attempt to create file output failed because of IO problems opening the file.

Action: Contact Oracle Support Services.

PRCR-01155: Failed to create file output stream with file name: {0} due to security manager does not allowed to permit the operation

Cause: An attempt to create file output failed due to security manager does not allowed to permit the operation.

Action: Run as different user or modify the security permissions or controls.

PRCR-01156: Failed to create file output stream with file name: {0} because 'count' or 'limit' is invalid

Cause: An attempt to create file output failed because of illegal arguments 'count' < 1 or 'limit' < 0.

Action: Retry with proper arguments 'limit' >= 0 or 'count' >= 1.

PRCR-01157: Failed to close the file output stream with file name: {0} due to security manager does not allow to close

Cause: An attempt to create file output failed due to security manager does not permit the operation.

Action: Run as different user or modify the security permissions or controls.

PRCR-01158: Directory {0} in file path does not exist

Cause: An attempt was made to operate on a directory that does not exist.

Action: Retry with valid directory.

PRCR-01159: Failed to create file output stream because of empty file name

Cause: An attempt to create file output stream failed because of empty file name.

Action: Specify valid file name.

PRCR-01160: Output stream does not exist

Cause: An attempt was made to operate on an output stream that does not exist.

Action: Contact Oracle Support Services.

PRCR-01161: Failed to write to output stream

Cause: An attempt to write to an output stream failed.

Action: Check if file system runs out of space otherwise contact Oracle Support Services.

PRCR-01162: Failed to format a message

Cause: An attempt to format a log message failed.

Action: Contact Oracle Support Services.

PRCR-01163: Failed to open or create the output stream with file name: {0}

Cause: An attempt to open or create an output file failed.

Action: Check if file system runs out of space otherwise contact Oracle Support Services.

PRCR-01164: Failed to flush an output stream

Cause: An attempt to flush a log output stream failed.

Action: Contact Oracle Support Services.

PRCR-01165: Failed to close the output stream

Cause: An attempt to close a log file failed.

Action: Contact Oracle Support Services.

PRCR-01166: An operation on output stream failed

Cause: An operation on output stream failed.

Action: Contact Oracle Support Services.

PRCR-01169: Mismatch between the number of attribute names ({0}) and the number of the corresponding attribute values ({1})

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01170: Failed to add resource {0}

Cause: An attempt to add the specified resource failed.

Action: Examine the accompanying error messages for details.

PRCR-01171: Insufficient number of arguments while executing "{0}"

Cause: An attempt was made to execute the specified script with insufficient number of arguments.

Action: This is an internal error. Contact Oracle Support Services.

PRCR-01172: Failed to execute "srvmhelper" for {0}

Cause: Failed to execute srvmhelper for the specified API.

Action: This is an internal error. Contact Oracle Support Services.

PRCR-01173: Failed to look up CRS resource for type {0}

Cause: An attempt to search for resource of the specified type failed.

Action: Check that at least one of the specified type exists. Examine the accompanying error messages for details.

PRCR-01174: Resource {0} is not running on node {1}

Cause: The specified resource is not started or not running on the specified node.

Action: Check that specified resource is running on the specified node.

PRCR-01175: Failed to add ASM Listener "{0}" because a dependent resource does not exist.

Cause: During creation of an ASM listener resource, internal updates to associated ASM or IOServer resources could not be made because the resource(s) did not exist.

Action: Review the accompanying messages for more details.

PRCR-01176: A software exception has occurred.

Cause: An internal exception occurred while attempting to update resource dependencies during creation of an ASM Listener configuration.

Action: Contact Oracle Support Services.

PRCR-01177: Failed to update dependency on related resources when adding ASM listener "{0}"

Cause: During creation of an ASM listener resource, updates to associated ASM or IOServer resources failed.

Action: Review the accompanying messages for more details.

PRCR-01178: Execution of command failed on one or more nodes

Cause: Execution of a command through the administrator helper resource failed.

Action: Examine the accompanying error messages that provide the details of why and where command execution failed . Resolve the reported problem and retry.

PRCR-01179: Failed to retrieve nodes suitable for configuring an administrator-managed database

Cause: An attempt to execute the command 'olsnodes -a' has failed.

Action: Ensure that the clusterware stack is up. If it is, and the errors reported by olsnodes cannot be resolved, contact Oracle Support Services.

PRCR-01180: No response received

Cause: A response was not received while executing the command through the administrator helper resource.

Action: Ensure that the node specified is reachable and responsive. If the problem persists, Contact Oracle Support Services.

PRCR-01181: Failed to request action {0} on resource {1}

Cause: An attempt to request the action on the resource failed.

Action: Make sure that the resource is running.

PRCR-01182: Failed to request action {0} on resource {1} on nodes {2}

Cause: An attempt to request the action on the resource failed on the specified nodes.

Action: Make sure that the resource is running on the specified nodes.

PRCR-01183: Failed to request action {0} on multiple resources

Cause: An attempt to request the action on multiple resources failed.

Action: Make sure that the resources are running.

PRCR-01184: Response from the resource on which the action was requested was not in the correct format

Cause: An internal error occurred. The callback message for the requested action was not in the correct format during an attempt to request the action.

Action: Contact Oracle Support Services.

PRCR-01185: failed to execute "srvmhelper" for command "{0}" with the following errors:\n{1}

Cause: An attempt to execute the command has failed.

Action: Examine the accompanying error messages that provide the details of why and where command execution failed. Resolve the reported problem and retry.

PRCR-01186: Multiple final messages for the requested action were received for node {0}

Cause: An internal error occurred. Multiple final messages for the requested action were received during an attempt to request the action.

Action: Contact Oracle Support Services.

PRCR-01187: No final message for the requested action was received.

Cause: An internal error occurred. No final message for the requested action was received during an attempt to request the action.

Action: Contact Oracle Support Services.

PRCR-01188: The requested action cannot be executed because there is no resource instance.

Cause: The resource has no instance on the specified nodes or, if nodes were not specified, in the cluster.

Action: Make sure that at least one resource instance exists on the specified nodes or, if nodes were not specified, in the cluster.

PRCR-01189: The user {1} does not have read and execute permissions for the ACFS file system resource associated with path {0}.

Cause: A check on the permissions for the ACFS file system resource associated with the indicated path failed because the user indicated in the message did not have read and execute permissions for the resource.

Action: Verify that the specified user has read and execute permissions on the ACFS file system resource using 'srvctl config filesystem'. To change permissions use 'srvctl modify filesystem'.

PRCR-01190: The specified VIP name {0} resolves to multiple {1} addresses.

Cause: The specified VIP name did not resolve to a single IPv4 or IPv6 address.

Action: Specify a numeric GNS VIP address or ensure that the specified VIP name resolves to a single IPv4 or IPv6 address. Use 'nslookup *vipname*' to display the addresses to which the VIP name resolves.

PRCR-01191: The stop request failed because the resource is not running on nodes {0}.

Cause: A request to stop a resource was rejected because the resource did not have a running instance on the specified nodes.

Action: Specify nodes where the resource is running.

PRCR-01192: The specified instance on cardinality ID {0} of resource {1} is already enabled.

Cause: An attempt to enable the specified resource instance was rejected because the resource instance was already enabled.

Action: No action is needed.

PRCR-01193: The specified instance on cardinality ID {0} of resource {1} is already disabled.

Cause: An attempt to disable the specified resource instance was rejected because the resource instance was already disabled.

Action: No action is needed.

PRCR-01194: Resource {0} does not have attributes {1} on cardinality ID {2}.

Cause: An attempt to remove the specified attributes failed because these attributes did not exist on the specified cardinality.

Action: Retry after specifying attributes that exist on the cardinality.

PRCS-01000 to PRCS-01118

PRCS-01000: Failed to get enabled status of {0}

Cause: An attempt to check whether a server is enabled failed.

Action: Examine the accompanying error messages for details.

PRCS-01001: Failed to enable {0}

Cause: An attempt to enable the specified server failed.

Action: Examine the accompanying error messages for details.

PRCS-01002: Failed to disable {0}

Cause: An attempt to disable the specified server failed.

Action: Examine the accompanying error messages for details.

PRCS-01005: Failed to create server {0}

Cause: An attempt to create the specified server failed.

Action: Examine the accompanying error messages for details.

PRCS-01006: Failed to get server for node {0}

Cause: An attempt to get server for the specified node failed.

Action: Examine the accompanying error messages for details.

PRCS-01007: Server pool {0} already exists

Cause: The specified server pool already exists.

Action: Examine the accompanying error messages for details.

PRCS-01008: Server pool {0} does not exist

Cause: The specified server pool does not exist.

Action: Use the `srvctl` command to create server pool.

PRCS-01009: Failed to create server pool {0}

Cause: An attempt to create specified server pool failed.

Action: Examine the accompanying error messages for details.

PRCS-01010: Failed to get {0} of server pool {1}

Cause: An attempt to get the attribute value of the specified server pool failed.

Action: Examine the accompanying error messages for details.

PRCS-01011: Failed to modify server pool {0}

Cause: An attempt to modify the specified server pool failed.

Action: Examine the accompanying error messages for details.

PRCS-01012: Failed to remove server pool {0}

Cause: Failed to unregister server pool. This message is followed by the reason for failure.

Action: Retry after resolving the issue reported in the failure message.

PRCS-01013: Failed to look up server pool {0}

Cause: An attempt to get the specified server pool failed.

Action: Examine the accompanying error messages for details.

PRCS-01014: Server {0} is already part of server pool {1}

Cause: An attempt to add the server as a candidate for the specified server pool failed because the server is already in the pool's SERVER_NAME attribute.

Action: No action is needed.

PRCS-01015: Server {0} is not part of server pool {1}

Cause: An attempt to remove the server from the SERVER_NAMES attribute of the server pool failed because the specified server is not in the pool's SERVER_NAME attribute.

Action: Add the server to the server pool.

PRCS-01016: Failed to resolve Single Client Access Name {0}

Cause: An attempt to resolve specified Single Client Access Name to a list of IP addresses failed because Single Client Access Name could not be resolved in DNS using nslookup or using other lookup methods.

Action: Check whether the specified Single Client Access Name is correct. Review the underlying error messages that provide the details of which resource failed to resolve. Check the cause and action for the individual error. If Single Client Access Name should be resolved in DNS, check the configuration of Single Client Access Name in DNS.

PRCS-01017: Failed to configure Single Client Access Name {0}

Cause: An attempt to add cluster configuration for Single Client Access Name failed.

Action: Review the underlying error messages that provide the details of which resources failed to create. Check the cause and action for the individual resource creation failure.

PRCS-01018: Failed to add cluster configuration for Single Client Access Name listener {0}

Cause: An attempt to configure Single Client Access Name listener failed because endpoints were not specified correctly or other reasons.

Action: Review the underlying error messages that provide the details of which resources failed to create. Check the cause and action for the individual resource creation failure. If the endpoints were not specified correctly, correct endpoints.

PRCS-01019: Failed to remove the configuration for Single Client Access Name listener {0}

Cause: An attempt to remove the configuration of Single Client Access Name listener failed because other resources depended on it or other reasons.

Action: Review the underlying error messages that provide the details of which resources failed to remove. Stop Single Client Access Name listener resource before removing it. Can consider using force flag to remove Single Client Access Name listener resources if no other resources depend on it.

PRCS-01020: Failed to enable Single Client Access Name resources {0}

Cause: An attempt to enable Single Client Access Name resources failed.

Action: Review the underlying error messages that provide the details of which resources failed to enable. Check the cause and action for the individual resource creation failure.

PRCS-01021: Failed to disable Single Client Access Name resources {0}

Cause: An attempt to disable Single Client Access Name resources failed because current user did not have sufficient privileges to perform this operation or other reasons.

Action: Review the underlying error messages that provide the details of which resources failed to disable. Check the cause and action for the individual resource failure. Make sure that the user has root privileges on Linux/Unix's and Administrator on Windows.

PRCS-01022: Failed to start Single Client Access Name resources {0}

Cause: An attempt to start Single Client Access Name resources failed.

Action: Review the underlying error messages that provides the details of which resources failed to start.

PRCS-01023: Failed to stop Single Client Access Name resources {0}

Cause: An attempt to stop Single Client Access Name resources failed because Single Client Access Name listeners were not stopped/relocated or other reasons.

Action: Review the underlying error messages that provides the details of which resources failed to stop. Check the cause and action for the individual resource creation failure. Stop Single Client Access Name listeners first or use force flag to stop Single Client Access Name Virtual Internet Protocol(VIP) resources if no other resources depend on them.

PRCS-01024: Failed to remove Single Client Access Name Virtual Internet Protocol(VIP) resources {0}

Cause: Could not remove Single Client Access Name Virtual Internet Protocol(VIP) resources because the resources are running or Single Client Access Name listeners depend on or other reasons.

Action: Review the underlying error messages that provides the details of which resources failed to remove. Stop the Single Client Access Name VIPs and Single Client Access Name listeners, then remove Single Client Access Name listeners. Or use force flag to remove Single Client Access Name Virtual Internet Protocol(VIP) resources if no other resources depend on them.

PRCS-01025: Could not find any Single Client Access Name (SCAN) Virtual Internet Protocol (VIP) resources using filter {0}

Cause: An attempt to retrieve the SCAN VIP resources failed.

Action: Ensure that the resource name supplied is correct. Examine the accompanying error messages for additional details.

PRCS-01026: Could not find any Single Client Access Name (SCAN) listener resources using filter {0}

Cause: An attempt to retrieve the SCAN listener resources failed.

Action: Ensure that the resource name supplied is correct. Examine the accompanying error messages for additional details.

PRCS-01027: Could not find any Single Client Access Name listener with ordinal number {0}

Cause: Could not find the Single Client Access Name listener for specified ordinal number.

Action: Use the command 'srvctl config scan_listener' to check available ordinal number.

PRCS-01028: Single Client Access Name (SCAN) listener resources already exist on network {0}

Cause: Single Client Access Name listeners were already created on the specified network.

Action: Use the command 'srvctl modify scan_listener' to modify attributes if needed.

PRCS-01031: Failed to modify Single Client Access Name listeners using endpoints {0}

Cause: An attempt to modify Single Client Access Name listeners failed.

Action: Check if the endpoints specified are valid.

PRCS-01032: No server pool was found that matches the query {0}

Cause: An attempt to find server pools that match the given query found no matching server pool.

Action: Either configure a server pool via the command 'srvctl add srvpool' or modify existing a server pool via the command 'srvctl modify srvpool' to match the query and retry the request.

PRCS-01034: Failed to modify Single Client Access Name {0}

Cause: Failed to modify the configuration of Single Client Access Name because the endpoints were not specified correctly or extra Single Client Access Name VIPs could not be removed or other reasons.

Action: Review the underlying error messages that provides the details of which resources failed to modify. Resolve the reported problem and retry. If to modify the endpoints, specify correct endpoints. If to update the number of Single Client Access Name VIPs, stop the Single Client Access Name listeners that depend on.

PRCS-01035: Invalid number of TCP ports ({0}) for SCAN Listener

Cause: Either no port was specified, or more than one port was specified.

Action: Specify only one port number for TCP protocol for SCAN listener.

PRCS-01037: Single Client Access Name (SCAN) Virtual Internet Protocol (VIP) resources already exist on network {0}

Cause: An attempt was made to add SCAN VIPs when SCAN VIPs were already configured. Only one SCAN per cluster network can be configured.

Action: Remove the existing SCAN on the given network and add a new SCAN. Or, modify the SCAN to use a new SCAN name or have the existing SCAN name map to different SCAN VIPs.

PRCS-01038: Failed to find Single Client Access Name Virtual Internet Protocol(VIP) associated with listener {0}

Cause: Cannot find Single Client Access Name Virtual Internet Protocol(VIP) associated with the given listener.

Action: Examine the accompanying error messages to determine how to respond.

PRCS-01039: Failed to find Single Client Access Name listener associated with the given Virtual Internet Protocol(VIP) {0}

Cause: Cannot find Single Client Access Name listener associated with the given Virtual Internet Protocol(VIP).

Action: Examine the accompanying error messages to determine how to respond.

PRCS-01040: User {0} does not have CRS administrator role

Cause: The specified user did not have CRS administrator role.

Action: Grant CRS administrator role to the user by using the command 'crsctl add crs administrator -u <user_name>' and retry.

PRCS-01041: Invalid builtin server pool name {0}

Cause: The specified builtin server pool name is invalid.

Action: Provide a valid builtin server pool name. It can be Generic or Free.

PRCS-01042: Server pool {0} is not hosting any database currently

Cause: A database could not be found referencing the given server pool.

Action: Create the database configuration using the command 'srvctl add database ... - serverpool <server_pool>' and retry.

PRCS-01043: Server pool {0} is not hosting any database service currently

Cause: A service could not be found referencing the given server pool.

Action: Create the service configuration using the command 'srvctl add service ... - serverpool <server_pool>' and retry.

PRCS-01046: Name {0} is not valid

Cause: Specified name was not valid.

Action: Specify a valid string name, and retry.

PRCS-01047: Minimum size of {0} is not valid

Cause: Specified minimum size was not valid.

Action: Specify minimum size to be an integer equal to or greater than zero and less than the maximum size (other than -1), and retry.

PRCS-01048: Maximum size of {0} is not valid

Cause: Specified maximum size was not valid.

Action: Specify maximum size to be an integer greater than or equal to -1 and retry.

PRCS-01049: Importance of {0} is not valid

Cause: Specified importance was not valid.

Action: Specify importance value to be an integer greater than or equal to 0 and retry.

PRCS-01050: Could not add GNS VIP {0} because another one with name {1} already exists

Cause: The name of the GNS VIP to be added matches one that already existed.

Action: Specify another name.

PRCS-01051: Could not add GNS VIP using network {0} because registered another one using network {1} already exists

Cause: The network specified for the GNS VIP to be added matches one that already existed.

Action: Specify another network.

PRCS-01053: failed to resolve address for Grid Naming Service VIP {0};\n{1}

Cause: The address specified for the GNS VIP could not be resolved.

Action: Specify a valid address.

PRCS-01054: Failed to configure VIP for Grid Naming Service VIP {0}

Cause: The creation of the GNS VIP failed.

Action: Examine the accompanying error message for details.

PRCS-01055: Failed to modify Grid Naming Service VIP {0}

Cause: The modification of the GNS VIP failed.

Action: Examine the accompanying error message for details.

PRCS-01056: Could not find resources for Grid Naming Service Virtual Internet Protocol(VIP) {0}

Cause: The specified GNS VIP did not exist.

Action: Specify a valid GNS VIP name.

PRCS-01057: INTERNAL ERROR: no attributes specified.

Cause: No attributes to modify GNS with were passed to a method.

Action: This is an internal error. Please contact Oracle Customer Support.

PRCS-01058: INTERNAL ERROR: unsupported query type: "\${0}"

Cause: The type of query to be made to GNS is unrecognized.

Action: This is an internal error and should not be visible. Please contact Oracle Customer Support.

PRCS-01059: Failed to get sub-server pools of server pool {0}

Cause: Failed to look up PARENT_POOLS attribute of server pools containing the given server pool name. Ensure that current user has read permissions on the given server pool and its sub-server pools.

Action: Grant read permissions on the given server pool and its sub-server pools.

PRCS-01060: Failed to relocate servers {0} into server pool {1}

Cause: Failed to relocate servers into the given server pool. This message may be accompanied by others providing additional details. A likely cause is violation of defined configuration attributes such as pool MIN_SIZE, SERVER_NAMES etc.

Action: If the problem stems from violating configuration attributes, either modify the attributes or reformulate the request. Otherwise, contact Oracle Support Services.

PRCS-01061: Failed to find running database instances hosted by server pool {0}

Cause: Failed to find running database instances hosted by the servers in the given server pool. This message is accompanied by others providing additional details. A likely cause is that current user may not have permissions to query profiles of databases hosted by the given server pool.

Action: If lack of permissions is the cause of this failure, then use the command 'srvctl config *object* -a' to find the current owner of entity and retry the query as that owner user. Otherwise, contact Oracle Support Services.

PRCS-01062: Failed to determine whether server pool {0} has any parents or children

Cause: Failed to find parents or children of the given server pool. A likely cause is that current user may not have permissions to query profile of given server pool or profiles of other server pools whose PARENT_POOLS attribute contains this server pool name.

Action: If lack of permissions is the cause of this failure, then use the command 'srvctl config serverpool *serverpool* -a' to find the current owner of the server pool and retry the query as that owner user. Otherwise, contact Oracle Support Services.

PRCS-01063: Server pool {0} with minimum size {1}, maximum size {2}, importance {3} and server list ({4}) can not be created

Cause: Specified server pool cannot be created because of the reason provided by an accompanying exception message.

Action: Respond based on the accompanying exception message.

PRCS-01064: Failed to find server pools using filter {0}

Cause: Attempt to look up server pool entities using given filter failed. A likely cause is that current user does not have permissions to query server pool entities

Action: If lack of permissions is the cause of this failure, then use the command 'srvctl config serverpool -a' to find the current owner of the server pools and retry the query as that owner user. Otherwise, contact Oracle Support Services.

PRCS-01065: GNS server is not configured in this cluster.

Cause: A command that applies only to a GNS server cluster was rejected because this cluster has not been configured as a GNS server.

Action: If GNS server is to run in this cluster, use the 'srvctl add gns' command to configure it.

PRCS-01066: Server group {0} with server list ({1}) can not be created

Cause: Specified server group cannot be created because of the reason provided by an accompanying exception message.

Action: Respond based on the accompanying exception message.

PRCS-01067: Failed to find online database instances hosted by server pool {0}

Cause: Failed to find online database instances hosted by the servers in the given server pool. This message is accompanied by others providing additional details. A likely cause is that current user may not have permissions to query profiles of databases hosted by the given server pool.

Action: If lack of permissions is the cause of this failure, then use the command 'srvctl config *object* -a' to find the current owner of the entity and retry the query as that owner user. Otherwise, contact Oracle Support Services.

PRCS-01068: Oracle Clusterware server entity for node {0} does not exist

Cause: The server entity for the specified node does not exist.

Action: Start Oracle Clusterware on the given node and retry.

PRCS-01069: Label {0} in GNS domain name {1} does not follow RFC-1035 convention

Cause: The specified portion of the GNS domain name does not follow RFC-1035 label conventions.

Action: Specify a domain name that follows RFC-1035 conventions. According to RFC-1035 conventions, the domain name consists of a set of labels separated by ".". A label must begin with an alphabetic character and can contain only alphanumerics and "-" (dash or minus character), end with an alphanumeric, and be no more than 63 characters long.

PRCS-01070: Label {0} part of GNS domain name {1} is too long

Cause: The specified portion of the GNS domain name does not follow RFC-1035 label conventions, as it is longer than 63 characters.

Action: Specify a domain name that follows RFC-1035 conventions. The domain name consists of a set of labels separated by ".". Label must begin with an alphabetic character and can contain only alphanumeric characters and "-" (dash or minus character), end with an alphanumeric and be no more than 63 characters long.

PRCS-01071: An error occurred while trying to look up IP address for domain name {0}

Cause: An error occurred while trying to translate the indicated fully domain qualified name (FQDN) to an IP addresses.

Action: Make sure that name servers on local node are correctly configured. If the domain in the FDQN is GNS domain make sure that DNS has been set up to forward request to GNS and GNS resource is online. Make sure that there are no firewalls between the local node and the name servers.

PRCS-01072: Failed to create server pool with reserved name {0}

Cause: Request to create the specified server pool was rejected because specified server pool name is the name of builtin server pool of Oracle Clusterware.

Action: Supply a server pool name other than the builtin server pool name (Generic or Free) of Oracle Clusterware and retry.

PRCS-01073: The specified GNS logging level {0} was outside the expected range of {1} to {2}

Cause: The 'log_level' value in the 'srvctl start gns -loglevel <log_level>' command was less than the minimum limit.

Action: Ensure that the 'log_level' value is within the valid range.

PRCS-01074: The specified GNS logging level {0} was outside the expected range of {1} to {2}

Cause: The 'log_level' value in the 'srvctl start gns -loglevel <log_level>' command was greater than the maximum limit.

Action: Ensure that the 'log_level' value is within the valid range.

PRCS-01075: GNS Domain name {0} ends with invalid character {1}

Cause: The specified GNS domain name ends with an invalid character and does not follow RFC-1035 label conventions.

Action: Specify a domain name that follows RFC-1035 conventions. According to RFC-1035 conventions, the domain name consists of a set of labels separated by ".". A label must begin with an alphabetic character and can contain only alphanumeric characters or "-" (dash or minus character), end with an alphanumeric, and be no more than 63 characters long.

PRCS-01076: Invalid Single Client Access Name {0}. The subnet {1} of SCAN VIP {2} differs from the subnet {3} of network {4}

Cause: The SCAN VIPs resolved from the specified Single Client Access Name are in a subnet that differs from the network's subnet.

Action: Use the SCAN name that can be resolved to the SCAN VIPs in the same subnet of network resource.

PRCS-01077: The specified trace level {0} was outside the expected range of {1} to {2}

Cause: The trace level value was less than the minimum limit or greater than the maximum limit.

Action: Ensure that the trace level value is within the valid range.

PRCS-01078: Failed to update the invited nodes {0} for service registration with Scan Listener {1}

Cause: An attempt to update the invited nodes attribute failed.

Action: Retry the request after ensuring that the CRS stack is running, the SCAN listener resource has been configured, and the user has update permission on the SCAN listener resource.

PRCS-01079: Failed to retrieve the invited nodes for service registration with Scan Listener {0}

Cause: An attempt to retrieve the invited nodes attribute value of scan listener failed.

Action: Retry the request after ensuring that the CRS stack is running, the SCAN listener resource has been configured, and the user has update permission on the SCAN listener resource.

PRCS-01080: Failed to update the invited subnets {0} for service registration with Scan Listener {1}

Cause: An attempt to update the invited subnets attribute of scan listener failed.

Action: Retry the request after ensuring that the CRS stack is running, the SCAN listener resource has been configured, and the user has update permission on the SCAN listener resource.

PRCS-01081: Failed to retrieve the invited subnets for service registration with Scan Listener {0}

Cause: An attempt to retrieve the invited subnets attribute of scan listener failed.

Action: Retry the request after ensuring that the CRS stack is running, the SCAN listener resource has been configured, and the user has update permission on the SCAN listener resource.

PRCS-01082: Invalid built-in server category name {0}

Cause: The specified category name was invalid.

Action: Provide a valid category name. It can be ora.hub.category or ora.leaf.category.

PRCS-01083: There is no server category {0} registered in CRS

Cause: The server category did not exist.

Action: Add the server category using the command 'crsctl add category <category_name>' or use the command 'crsctl status category' to get a list of server categories already registered in CRS.

PRCS-01084: Failed to find server categories using filter {0}

Cause: An attempt to look up server category entities using the given filter failed.

Action: See the accompanying error messages for further details.

PRCS-01085: Server category {0} already exists

Cause: A server category that already exists was specified.

Action: Examine the accompanying error messages for details.

PRCS-01086: Failed to create category {0}

Cause: An attempt to create the specified server category failed.

Action: Examine the accompanying error messages for details.

PRCS-01087: SCAN name "{0}" does not resolve to an IPv4 or IPv6 address

Cause: The SCAN name did not resolve to an IP address (either IPv4 or IPv6).

Action: Ensure that the SCAN name resolves to an IP address.

PRCS-01088: SCAN name "{0}" resolves to a different number of IPv4 ({1}) and IPv6 ({2}) addresses

Cause: The number of IPv4 and IPv6 addresses that the SCAN name resolved to were not equal.

Action: Ensure that the SCAN name resolves to an equal number of IPv4 and IPv6 addresses.

PRCS-01089: Domain must be supplied because network "{0}" has type "{1}".

Cause: An attempt to add GNS on a non-static network was rejected because a domain was not supplied.

Action: Ensure that a domain is forwarded from DNS, and supply the domain using the command 'srvctl add gns -vip *address* -domain *domain*'.

PRCS-01090: Failed to retrieve the sub-domain configured for GNS

Cause: An attempt to retrieve the sub-domain attribute of the specified Grid Naming Service (GNS) failed.

Action: Retry the request after ensuring that the CRS stack is running, the GNS resource has been configured, and the user has read permission on the GNS resource.

PRCS-01091: The scan name "{0}" resolves to {1} addresses such as "{2}", while network {3} has only {4} subnet

Cause: The given scan name resolved to a type of addresses that the network did not have.

Action: Either modify the network via the command 'srvctl modify network -subnet' to include the missing type or make sure that the scan name resolves only to the addresses of the same type as the network.

PRCS-01092: Failed to get the value for the attribute {0} of server category {1}

Cause: An attempt to get the attribute value of the specified server category failed.

Action: Examine the accompanying error messages for details.

PRCS-01093: Server pool {0} does not have a server category defined

Cause: The server pool did not have the server category defined as required for policy-managed databases in a an Oracle Flex Cluster.

Action: Modify the server pool using the command 'srvctl modify srvpool -serverpool *serverpool* -category *category* -servers ""'.

PRCS-01094: Server category {0} of server pool {1} has the following non-hub active CSS role: {2}

Cause: The server category of the server pool did not have ACTIVE_CSS_ROLE=HUB as required for policy-managed databases in a Flex Cluster.

Action: Modify the server pool to use a server category that has the hub active CSS role or modify the server category to use ACTIVE_CSS_ROLE=HUB.

PRCS-01095: Conflicting specification of 'servers' and 'category' arguments for the serverpool {0}

Cause: Both 'servers' and 'category' arguments were specified on the command.

Action: Retry the request with either 'servers' or 'category' argument.

PRCS-01096: The serverpool {0} already contains the server names

Cause: The command 'srvctl modify srvpool' specified 'category' option, but the server pool already has a server names attribute.

Action: Remove the server names attribute by issuing the command 'srvctl modify srvpool -serverpool <pool_name> -servers ""'

PRCS-01097: The serverpool {0} already contains the server category

Cause: A 'srvctl modify srvpool' command specified 'servers' but the server pool already has a server category attribute.

Action: Remove the server category attribute by issuing the command 'srvctl modify srvpool -serverpool <pool_name> -category ""'

PRCS-01098: Active CSS role of the server category {0} of PQ server pool {1} is not set

Cause: The server category of the server pool did not specify ACTIVE_CSS_ROLE.

Action: Modify the PQ server pool to use a server category that has a valid active CSS role or modify the server category to set ACTIVE_CSS_ROLE.

PRCS-01099: Nodes {0} of the server pool {1} do not have HUB active CSS roles

Cause: The server pool did not have nodes with ACTIVE_CSS_ROLE=HUB as required for policy-managed databases in a Flex Cluster.

Action: Modify the server pool to use nodes that have HUB active CSS roles.

PRCS-01100: Nodes {0} of the PQ server pool {1} do not have LEAF active CSS roles

Cause: The server pool did not have nodes with ACTIVE_CSS_ROLE=LEAF as required for policy-managed databases in a Flex Cluster.

Action: Modify the server pool to use nodes that have LEAF active CSS roles.

PRCS-01101: Unable to create GNS resource because it already exists.

Cause: An attempt was made to add the GNS resource but the resource already exists.

Action: Either remove the GNS resource and then add it, or avoid adding an already existing resource.

PRCS-01102: Could not find any Single Client Access Name (SCAN) Virtual Internet Protocol (VIP) resources using filter {0} on network {1}

Cause: An attempt to retrieve the SCAN VIP resources on the indicated network failed.

Action: Ensure that the resource name supplied is correct. Examine the accompanying error messages for additional details.

PRCS-01103: Could not find any Single Client Access Name (SCAN) listener resources using filter {0} on network {1}

Cause: An attempt to retrieve the SCAN listener resources on the indicated network failed.

Action: Ensure that the resource name supplied is correct. Examine the accompanying error messages for additional details.

PRCS-01104: Could not find the Single Client Access Name (SCAN) listener with ordinal number {0} on network {1}

Cause: An attempt to find the SCAN listener for the specified ordinal number and network failed.

Action: Use the command 'srvctl config scan_listener -netnum' to check the available ordinal numbers on the given network.

PRCS-01105: Server category {0} of Parallel Query server pool {1} has the following non-leaf active CSS role: {2}

Cause: The server category of the server pool did not have ACTIVE_CSS_ROLE=LEAF as required for the parallel query helper service of the policy-managed databases in a Flex Cluster.

Action: Modify the Parallel Query server pool to use a server category that has the leaf active CSS role or modify the server category to use ACTIVE_CSS_ROLE=LEAF.

PRCS-01106: Nodes {0} of the Parallel Query server pool {1} do not have the leaf active CSS role

Cause: The server pool did not have nodes with ACTIVE_CSS_ROLE=LEAF as required for policy-managed databases in a Flex Cluster.

Action: Modify the server pool to use nodes that have the leaf active CSS role.

PRCS-01107: Cannot add resource on network {0}, which is configured as leaf.

Cause: An attempt to add a resource using a network configured as 'leaf' was made.

Action: Add the resource on a network not configured as 'leaf'.

PRCS-01108: Cannot modify resource to use network {0}, which is configured as leaf.

Cause: An attempt to modify a resource using a network configured as 'leaf' was made.

Action: Provide a network not configured as 'leaf'.

PRCS-01110: Single Client Access Name (SCAN) {0} does not resolve to {1} addresses although it should resolve to both IPv4 and IPv6 addresses

Cause: An attempt to modify the SCAN name while the network type was 'BOTH' was rejected because the specified SCAN name did not resolve to both IPv4 and IPv6 addresses required by the network.

Action: Make sure that the specified SCAN name resolves to both IPv4 and IPv6 addresses.

PRCS-01111: Could not modify GNS VIP because registered type and IP address type are different

Cause: The IP address type specified for the GNS VIP to be added differed from the registered network type.

Action: Specify an IP address of the type that is registered.

PRCS-01112: Server {0} is not assigned to any server pool.

Cause: The given server was not yet recognized by Oracle Clusterware and therefore was not active in any server pool.

Action: Check the state of the server using the command 'crsctl status server *server* -f'.

PRCS-01113: The Single Client Access Name (SCAN) VIP address "{0}" does not belong to network {1} which has only an {2} subnet.

Cause: The network modification failed because the type of the specified SCAN VIP address was incompatible with the subnet of the specified network.

Action: Either modify the network via the command 'srvctl modify network -subnet' to include the missing type or make sure that the SCAN VIP is an address of the same type as the network.

PRCS-01115: An attempt to retrieve the Rapid Home Provisioning Server host name and port number failed with the following error:\n{0}

Cause: While looking up Rapid Home Provisioning Server connection details in Grid Naming Service (GNS), an attempt to retrieve the host name and port number failed.

Action: Address the accompanying error message. Make sure that both the GNS and the Rapid Home Provisioning Server are running on the RHPS cluster.

PRCS-01116: no SRV record for service {0} found in the Grid Naming Service (GNS)

Cause: This is an internal error.

Action: Contact Oracle Support Services.

PRCS-01117: invalid format for SRV record {0} returned from the Grid Naming Service (GNS)

Cause: This is an internal error.

Action: Contact Oracle Support Services.

PRCS-01118: The supplied GNS VIP name "{0}" resolves to multiple IP addresses.

Cause: Multiple addresses were found while looking up the specified GNS VIP name.

Action: Supply a GNS VIP name that resolves to exactly one address, or supply a numeric GNS VIP address.

PRCT-01000 to PRCT-01454

PRCT-01000: File path is null

Cause: The supplied path is set to null.

Action: Oracle internal error. Contact Oracle Support Services..

PRCT-01001: Node name is null

Cause: The supplied node name is set to null.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01003: Failed to run "{0}" on node "{1}"

Cause: Failed to execute the specified command on the specified node.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01004: Directory name passed was null

Cause: The supplied directory name is set to null.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01005: Directory {0} does not exist

Cause: The supplied directory path does not exist.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01006: Failed to retrieve cluster name from node "{0}"

Cause: Failed to get the cluster name using the command 'olsnodes -c' from the specified node.

Action: Execute the command 'olsnodes -c' from the specified node and check the output of the command. Fix the problem according to the error message given in the command output.

PRCT-01007: Failed to retrieve local node name

Cause: Underlying call failed to get the local hostname.

Action: Please check the accompanying error message.

PRCT-01008: Failed to retrieve node names

Cause: Failed to get the node names using the command 'olsnodes'.

Action: Execute the command 'olsnodes' and check the output of the command. Fix the problem according to the error message given in the command output.

PRCT-01009: crsctl execution failed. Detailed error:\n{0}

Cause: Failed to execute crsctl command.

Action: Examine the accompanying error message for details.

PRCT-01010: crsctl execution failed on node {0}. Detailed error: \n{1}

Cause: Failed to execute crsctl command on the specified node.

Action: Examine the accompanying error message for details.

PRCT-01011: Failed to run "{0}". Detailed error: {1}

Cause: Failed to execute the specified command on the local node.

Action: Execute the specified command from the console and check the result. Fix the problem according to the error message given in the command output.

PRCT-01012: Invalid file path {0}

Cause: The supplied path does not exist.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01013: Failed to start remote execution server on local node.

Cause: A remote execution server is required on this platform, but an attempt to start one on this node failed. This message is accompanied by other(s) providing details on the failure.

Action: Correct the problem indicated by the accompanying error messages. On Windows systems, make sure that the current user has authority to remove and create directories and files in the Temp directory and to create and delete registry entries.

PRCT-01014: Internal error: {0}

Cause: An internal error occurred. The included value is an internal identifier.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01015: Version supplied is null

Cause: The supplied version was set to null.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01050: Failed to parse output returned by kfod when executing kfod at location {0}

Cause: Failed to parse the output returned by executing kfod because the output string is null or has fewer rows than expected

Action: This is an internal error. Contact Oracle Support Services.

PRCT-01051: Failed to parse the output returned by kfod for node {0} when executing kfod at location {1}

Cause: Failed to parse the output returned by executing kfod on the specified node because the output string is null or has fewer rows than expected.

Action: This is an internal error. Contact Oracle Support Services.

PRCT-01052: Failed to parse output {0} returned by kfod when executing kfod at location {1}

Cause: Failed to parse the output returned by executing kfod because the output has fewer columns than expected.

Action: This is an internal error. Contact Oracle Support Services.

PRCT-01053: Failed to parse output {0} returned by kfod for node {1} when executing kfod at location {2}

Cause: Failed to parse the output returned by executing kfod on the specified node because the output has fewer columns than expected.

Action: This is an internal error. Contact Oracle Support Services.

PRCT-01054: Fail to retrieve ASM active version for local node

Cause: Failed to get the active version of ASM by executing 'kfod nohdr=true op=version hostlist=*hostlist*'.

Action: This is an internal error. Contact Oracle Support Services.

PRCT-01055: Fail to retrieve ASM active version for node {0}. kfod execution failed at location {1}. Detailed error:\n{2}

Cause: Failed to get the active version of ASM by executing 'kfod nohdr=true op=version hostlist=*hostlist*' on the specified node.

Action: Examine the accompanying error messages for details.

PRCT-01056: Fail to retrieve ASM instance type. kfod execution failed at location {0}. Detailed error:\n{1}

Cause: Failed to get the instance type for ASM instance by executing 'kfod nohdr=true op=version'.

Action: Examine the accompanying error messages for details.

PRCT-01057: The value of ASM instance type {0} is not correct

Cause: The value of ASM instance type is invalid.

Action: The instance type of ASM can only be YES or NO.

PRCT-01058: Fail to check if ASM is running on node {0}. kfod execution failed at location {1}. Detailed error:\n{2}

Cause: Failed to check whether ASM is running by executing 'kfod nohdr=true op=insts hostlist=*hostlist*'.

Action: Examine the accompanying error messages for details.

PRCT-01059: Fail to retrieve list of disk group names for node {0}. kfod execution failed at location {1}. Detailed error:\n{2}

Cause: Failed to get the diskgroup names by executing 'kfod nohdr=true op=groups hostlist=*hostlist*'.

Action: Examine the accompanying error messages for details.

PRCT-01060: Fail to check if ASM is in rolling migration. kfod execution failed at location {1}. Detailed error:\n{2}

Cause: Failed to check whether ASM is in rolling migration by executing 'kfod nohdr=true op=rm'.

Action: Examine the accompanying error messages for details.

PRCT-01061: Failed to verify ASM client credentials file "{0}"\n{1}

Cause: An attempt to verify that the ASM client credentials file specified is a valid credentials file failed.

Action: Examine the accompanying error messages for details.

PRCT-01062: Failed to verify ASM client credentials.\n{0}

Cause: An attempt to verify the ASM credentials for this client cluster failed.

Action: Examine the accompanying error messages for details.

PRCT-01063: Failed to get list of disks managed by ASM on node "{0}"\n{1}

Cause: An attempt to obtain the list of disks that are managed by ASM on the specified node failed.

Action: Examine the accompanying error messages for details.

PRCT-01064: Failed to get ASM default disk discovery string \n {0}

Cause: An attempt to obtain the ASM default disk string failed.

Action: Examine the accompanying error messages for details.

PRCT-01065: Failed to verify the size consistency of ASM disks on node "{0}". kfod execution failed at location "{1}". Detailed error:\n{2}

Cause: An attempt to verify the consistency of ASM disk sizes failed on the identified node with the indicated error message.

Action: Examine the accompanying error messages for details.

PRCT-01100: Failed to retrieve ACFS active version for local node

Cause: Failed to execute acfsutil to retrieve the ACFS active version on the local node.

Action: Review the accompanying error messages that provides the details of why acfsutil execution failed. Resolve the reported problem and retry.

PRCT-01101: Failed to retrieve ACFS active version for node {0}. acfsutil execution failed at file location {1}. Detailed error:\n{2}

Cause: Failed to execute acfsutil to retrieve the ACFS active version on the supplied node.

Action: Review the accompanying error messages that provides the details of why acfsutil execution failed. Resolve the reported problem and retry.

PRCT-01102: Failed to parse output when executing acfsutil at file location {0}

Cause: Unable to parse output returned by acfsutil.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01103: Failed to parse the output for node {0} when executing acfsutil at file location {1}

Cause: Unable to parse output returned by acfsutil on the supplied node.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01104: Failed to parse output {0} when executing acfsutil at file location {1}

Cause: Unable to parse output returned by acfsutil at specified location.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01105: Failed to parse output {0} for node {1} when executing acfsutil at file location {2}

Cause: Unable to parse output returned by acfsutil at specified location on the supplied node.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01109: Failed to get diskgroup names for node {0}

Cause: Unable to parse diskgroup names returned by acfsutil on the supplied node.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01111: Received empty result while getting ACFS Mount Points on node {1}

Cause: The output returned by acfsutil is empty.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01114: Execution of acfsutil command failed on node {0} for location {1}

Cause: Failed to execute acfsutil on the supplied node at the specified location.

Action: Review the accompanying error messages that provides the details of why acfsutil execution failed. Resolve the reported problem and retry.

PRCT-01115: Execution of acfsutil failed on node {0} with result {1}

Cause: Failed to execute acfsutil on the supplied node.

Action: Review the accompanying error messages that provides the details of why acfsutil execution failed. Resolve the reported problem and retry.

PRCT-01116: Invalid partition path {0} specified to acfsutil on node {1}

Cause: The supplied path did not exist.

Action: Supply a valid partition path and retry.

PRCT-01117: Received empty result while getting ACFS Disk Groups on node {1}

Cause: The output returned by acfsutil is empty.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01118: Received empty result while getting total space at file location {0} on node {1}

Cause: The output returned by acfsutil is empty.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01119: Received empty result while getting free space at file location {0} on node {1}

Cause: The output returned by acfsutil is empty.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01120: A NULL path has been specified for the location on node {0}

Cause: A null path was provided for the location.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01121: Execution of acfsutil failed on local node with result {0}

Cause: Execution of acfsutil failed on the local node.

Action: Review the accompanying error messages that provides the details of why acfsutil execution failed. Resolve the reported problem and retry.

PRCT-01122: Received empty result while getting mountpoint for path {0} on the local node

Cause: acfsutil returned an empty value when querying for the mountpoint of a specified path.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01123: The mountpoint is either set to null or empty

Cause: The supplied mountpoint is either an empty string or is set to null.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01124: Received empty result while getting volume device for mountpoint {0} on the local node

Cause: acfsutil returned an empty value when querying for the volume device of a specified mountpoint.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01125: The volume device is either set to null or empty

Cause: The supplied volume device is either an empty string or is set to null.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01126: Received empty result while getting mountpoint for volume device {0} on the local node

Cause: acfsutil returned an empty value when querying for the volume device of a specified mountpoint.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01127: Received empty result while getting all volume devices on the local node

Cause: No ACFS volume devices has been created.

Action: Use usmca to create ACFS volume devices.

PRCT-01128: ACFS is not supported on this operating system

Cause: ACFS is not supported on the accompanying operating system.

Action: Run srvctl filesystem command on a supported operating system.

PRCT-01129: Execution of ACFS driver state check failed on local node with result {0}

Cause: Execution of ACFS driver state check failed on the local node

Action: Review the accompanying error messages that provides the details of why ACFS driver state check execution failed. Resolve the reported problem and retry.

PRCT-01130: Execution of advmutil failed on local node with result {0}

Cause: Execution of advmutil failed on the local node

Action: Review the accompanying error messages that provides the details of why advmutil execution failed. Resolve the reported problem and retry.

PRCT-01131: Failed to retrieve mount point for volume device {0}

Cause: No ACFS filesystem was mounted for the specified volume device.

Action: Mount the filesystem and retry.

PRCT-01132: ACFS driver state check with "{0}" option on local node failed to display any output

Cause: No output was captured when executing ACFS driver state check with the specified option on the local node.

Action: Internal error. Contact Oracle Support Services.

PRCT-01133: ACFS driver state check with "{0}" option on node {1} failed to display any output

Cause: No output was captured when executing ACFS driver state check with the specified option on the specified node.

Action: Internal error. Contact Oracle Support Services.

PRCT-01134: Execution of ACFS driver state check failed on node {0} with result {1}

Cause: Execution of ACFS driver state check failed on the specified node.

Action: Review the accompanying error messages that provides the details of why ACFS driver state check execution failed. Resolve the reported problem and retry.

PRCT-01135: This platform does not support a default location for "{0}"

Cause: An attempt to run the 'acfsutil' command did not provide a location of this binary

Action: Internal error. Contact Oracle Support Services.

PRCT-01136: Invalid mount point

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRCT-01137: acfsutil command failed as the Snapshot {0} does not exist

Cause: The acfsutil command to delete the snapshot with the specified name failed as it does not exist.

Action: Create the snapshot with the specified name and retry the operation.

PRCT-01138: acfsutil command failed as the snapshot {0} already exists

Cause: The acfsutil command to create a snapshot failed because the snapshot with the specified name already existed.

Action: Retry the operation with a different snapshot name.

PRCT-01149: Failed to retrieve cluster name

Cause: The olsnodes command executed successfully, but there was no output.

Action: This is an internal error. Contact Oracle Support Services.

PRCT-01150: Failed to retrieve cluster name

Cause: Clusterware is not running.

Action: Make sure the clusterware is running.

PRCT-01151: Failed to retrieve cluster nodes status

Cause: Clusterware is not running.

Action: Make sure the clusterware is running.

PRCT-01152: Received empty result while getting cluster nodes Status Map

Cause: The olsnodes command executed successfully, but there was no output.

Action: This is an internal error. Contact Oracle Support Services.

PRCT-01153: Received empty result while getting a list of pinned and unpinned nodes in the cluster

Cause: The olsnodes command executed successfully, but there was no output.

Action: This is an internal error. Contact Oracle Support Services.

PRCT-01154: Failed to retrieve private host name for all cluster nodes. Detailed error: \n{0}

Cause: Clusterware is not running.

Action: Make sure the clusterware is running.

PRCT-01155: Received empty result while getting the private interconnect for nodes in the cluster

Cause: The olsnodes command executed successfully, but there was no output.

Action: This is an internal error. Contact Oracle Support Services.

PRCT-01200: Failed to retrieve disk group name for volume device {0}. asmcmd execution failed at location {1}. Detailed error:\n{2}

Cause: Unable to retrieve the disk group name for the specified volume device

Action: Check that ASM instance is running on the local node.

PRCT-01201: Failed to retrieve volume name for volume device {0}. asmcmd execution failed at location {1}. Detailed error:\n{2}

Cause: Unable to retrieve the volume name for the specified volume device

Action: Check that ASM instance is running on the local node.

PRCT-01202: Failed to parse output returned by asmcmd when executing asmcmd at location {0}

Cause: Unable to parse output returned by asmcmd.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01203: Failed to parse the output returned by asmcmd for node {0} when executing asmcmd at location {1}

Cause: This is an internal error.

Action: Contact Oracle Support Services.

PRCT-01204: Failed to find volume device {0}. asmcmd execution failed at location {1}. Detailed error:\n{2}

Cause: Volume device does not exist.

Action: Create the volume device using asm tools.

PRCT-01205: Failed to parse output {0} returned by asmcmd when executing asmcmd at location {1}

Cause: Unable to parse the specified output returned by asmcmd.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01206: Failed to parse output {0} returned by asmcmd for node {1} when executing asmcmd at location {2}

Cause: Unable to parse the specified output returned by asmcmd on specified node.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01207: Failed to set the ORACLE_SID for running asmcmd from CRS home location {0}

Cause: Unable to retrieve the ASM instance name on the local node to generate the ORACLE_SID value.

Action: Use crsctl to make sure that the CRS stack is up; use the command 'srvctl status asm' to make sure that the ASM resource is running on the local node.

PRCT-01208: Failed to create volume {0}. asmcmd execution failed at location {1}. Detailed error:\n{2}

Cause: An attempt to execute asmcmd to create the volume device for the specified volume name failed.

Action: Review the accompanying error messages that provide the details of why asmcmd execution failed. Resolve the reported problem and retry.

PRCT-01209: Diskgroup {0} does not have enough space. asmcmd execution failed at location {1}. Detailed error:\n{2}

Cause: Failed to execute asmcmd because the diskgroup does not have enough space for the specified operation.

Action: Add more disks to the diskgroup and re-try the operation.

PRCT-01210: Disk group {0} does not exist. asmcmd execution failed at location {1}. Detailed error:\n{2}

Cause: An attempt to execute asmcmd to perform an operation with the disk group failed.

Action: Review the accompanying error messages that provide the details of why asmcmd execution failed. Resolve the reported problem and retry.

PRCT-01211: Volume {0} is in use. asmcmd execution failed at location {1}. Detailed error:\n{2}

Cause: An attempt to execute asmcmd to create a volume with the specified volume name failed because this name is already being used by another volume.

Action: Retry the operation with a different volume name.

PRCT-01212: Failed to delete volume device {0}.asmcmd execution failed at location {1}. Detailed error:\n{2}

Cause: An attempt to execute asmcmd to delete the volume device for the specified volume name failed.

Action: Review the accompanying error messages that provide the details of why asmcmd execution failed. Resolve the reported problem and retry.

PRCT-01213: Failed to get volume device for volume {0}.asmcmd execution failed at location {1}. Detailed error:\n{2}

Cause: An attempt to execute asmcmd to get the volume device for the specified volume name failed.

Action: Review the accompanying error messages that provide the details of why asmcmd execution failed. Resolve the reported problem and retry.

PRCT-01214: Command 'asmcmd' could not be executed from directory {1}. Failed to retrieve discovery string for ASM instance. Detailed error:\n{2}

Cause: An attempt to retrieve the discovery string used by ASM instance failed.

Action: Look at the accompanying messages and respond accordingly.

PRCT-01215: Command 'asmcmd' could not be executed from directory {1}. Failed to retrieve the list of disks from ASM instance. Detailed error:\n{2}

Cause: An attempt to retrieve the list of disks from ASM instance failed.

Action: Look at the accompanying messages and respond accordingly.

PRCT-01217: Command 'asmcmd' could not be executed from directory {0}. Failed to resize volume {1}. Detailed error:\n{2}

Cause: An attempt to resize the volume failed.

Action: Review the accompanying error messages that provide the details of the failure. Resolve the reported problem and retry.

PRCT-01218: Command 'asmcmd' could not be executed from directory {1}. Failed to retrieve information of disk groups from ASM instance. Detailed error:\n{2}

Cause: An attempt to retrieve the list of disk groups from ASM instance failed.

Action: Look at the accompanying messages and respond accordingly.

PRCT-01219: Command 'asmcmd spget' could not be executed from directory {0}. Failed to retrieve the ASM SPFILE location for ASM instance. Detailed error:\n{1}

Cause: An attempt to retrieve the SPFILE used by an ASM instance failed.

Action: Look at the accompanying messages and respond accordingly.

PRCT-01220: Received empty result while getting the ASM SPFILE location for ASM instances using command 'asmcmd spget' from directory {0}

Cause: The indicated ASMCMD command executed successfully, but there was no output.

Action: This is an internal error. Contact Oracle Support Services.

PRCT-01300: oifcfg execution failed. Detailed error:\n{0}

Cause: Failed to execute the oifcfg command for the local node. See the accompanying error message for further details.

Action: Try to execute the oifcfg command manually.

PRCT-01301: oifcfg execution failed on node {0}. Detailed error:\n{1}

Cause: Failed to execute the oifcfg command for the remote node. See the accompanying error message for further details.

Action: Try to execute the oifcfg command manually.

PRCT-01302: The specified address "{0}" has an invalid IP address format

Cause: The format of the subnet number and/or the subnet mask was an invalid IP address format.

Action: Make sure that both the subnet number and the subnet mask have a valid IP address format.

PRCT-01303: The oifcfg command returned as result the line "{0}" that has less than 4 fields

Cause: This is an internal error.

Action: Contact Oracle Support Services.

PRCT-01304: The specified IPv6 prefix length "{0}" is not between 0 and 128

Cause: The IPv6 prefix length was either not an integer or was out of the allowed range.

Action: Make sure that the IPv6 prefix length is an integer from 0 to 128.

PRCT-01305: The specified interface name "{0}" does not match the existing network interface name "{1}"

Cause: The interface name did not match the existing network interface name.

Action: Either omit the interface name or make sure it is the same as the existing one for this network.

PRCT-01306: Setting the address type to "ipv4" is not allowed because the existing network address type is "ipv6"

Cause: An attempt to change the address type from 'ipv6' to 'ipv4' directly was rejected, because the address type must first be changed to 'both', then to 'ipv4'.

Action: Use the command 'srvctl modify network' to change the network type to 'both' by adding an IPv4 subnet, then retry the command.

PRCT-01307: Setting the address type to "ipv6" is not allowed because the existing network address type is "ipv4"

Cause: An attempt to change the address type from 'ipv4' to 'ipv6' directly was rejected, because the address type must first be changed to 'both', then to 'ipv6'.

Action: Use the command 'srvctl modify network' to change the network type to 'both' by adding an IPv6 subnet, then retry the command.

PRCT-01308: Modifying the VIP is not allowed because the VIP name "{0}" resolved to both IPv4 and IPv6 addresses

Cause: The existing VIP name maps to both IPv4 and IPv6 addresses and the user tried to modify one of them.

Action: Remove the VIP resource, issue the command 'srvctl add vip' providing either the IPv4 or IPv6 address the VIP name resolves to and then rerun the 'srvctl modify vip' command.

PRCT-01309: The USR_ORA_AUTO_VALUE attribute value "{0}" does not include both an IPv4 and an IPv6 value

Cause: Expected both an IPv4 value and an IPv6 value to coexist.

Action: Internal error. Contact Oracle Support Services.

PRCT-01400: getcrshome execution failed. Detailed error: \n{0}

Cause: Failed to execute the getcrshome command. See the accompanying error message for further details.

Action: Try to execute the getcrshome command manually.

PRCT-01401: getcrshome execution failed on node {0}. Detailed error: \n{1}

Cause: Failed to execute the getcrshome command. See the accompanying error message for further details.

Action: Try to execute the getcrshome command manually.

PRCT-01402: Attempt to retrieve version of SRVCTL from Oracle Home {0} failed. Detailed error: \n {1}

Cause: Failed to execute the 'srvctl -V' command. See the accompanying error message for further details.

Action: Verify that the 'bin' directory under the indicated oracle home contains the 'srvctl' binary, and verify execution of the command 'srvctl -V' manually on that oracle home.

PRCT-01403: Failed to parse output returned by srvctl -V when executing command at Oracle home {0}

Cause: Failed to parse the output returned by executing the command 'srvctl -V' because the output string is null or has unexpected result

Action: Verify execution of the command 'srvctl -V' manually at oracle home or Contact Oracle Support Services.

PRCT-01404: Attempt to retrieve version of SRVCTL on node {0} from Oracle Home {1} failed. Detailed error: \n {2}

Cause: Failed to execute the command 'srvctl -V' command. See the accompanying error message for further details.

Action: Verify that the 'bin' directory in specified node under the indicated oracle home contains the 'srvctl' binary, and verify execution of the command 'srvctl -V' manually on that oracle home.

PRCT-01405: Failed to parse output returned by srvctl -V when executing command at node {0} and Oracle home {1}

Cause: Failed to parse the output returned by executing the command 'srvctl -V' at specified node and because the output string is null or has unexpected result

Action: Verify execution of the command 'srvctl -V' manually at given node and oracle home or Contact Oracle Support Services.

PRCT-01406: Oracle Home location: {0} does not contain {1}

Cause: The current Oracle Home directory does not contain the specified utility.

Action: Provide the correct Oracle Home directory.

PRCT-01407: failed to execute the olsnodes command to retrieve active node roles. Detailed error:\n{0}

Cause: An attempt to execute the command 'olsnodes -a' failed.

Action: Check the accompanying error messages.

PRCT-01408: Encountered unexpected output during the olsnodes command execution to retrieve active node roles

Cause: An attempt to execute olsnodes -a command failed.

Action: Check the accompanying error messages.

PRCT-01409: Received empty result while getting the active node roles for nodes in the cluster

Cause: The olsnodes command executed successfully, but there was no output.

Action: This is an internal error. Contact Oracle Support Services.

PRCT-01410: Failed to execute the crsctl command to retrieve configured node roles. Detailed error:\n{0}

Cause: An attempt to execute crsctl get node role config -all command failed.

Action: Check the accompanying error messages.

PRCT-01411: Encountered unexpected output during the crsctl command execution to retrieve configured node roles

Cause: An attempt to execute crsctl get node role config -all command failed.

Action: Check the accompanying error messages.

PRCT-01412: Received empty result while getting the configured node roles for nodes in the cluster

Cause: The crsctl command executed successfully, but there was no output.

Action: This is an internal error. Contact Oracle Support Services.

PRCT-01413: Failed to retrieve the configured node role of the node {0}

Cause: An attempt to execute crsctl get node role config -node command failed.

Action: Check the accompanying error messages.

PRCT-01414: Execution of the command {0} on the local node failed

Cause: An attempt to clone an Oracle Home using the given command failed.

Action: Check the accompanying error messages.

PRCT-01415: More than one ACFS resource was found for the mount point path {0}

Cause: When looking up the ACFS resource for a mount point, more than one resource was found.

Action: Remove all but one of the ACFS resources that contains the duplicate mount point path.

PRCT-01416: Unable to validate the interface type for subnet "{0}"

Cause: An attempt to validate the interface type for the given subnet failed.

Action: Check the accompanying error messages.

PRCT-01417: Failed to retrieve administrator groups. 'osdbagr' execution failed at location {0}. Detailed error:\n{1}

Cause: During retrieval of administrator group, execution of the 'osdbagr' command to retrieve administrator OS group names failed.

Action: Examine the accompanying error messages for details.

PRCT-01418: Failed to modify the VIP for node {0} because the specified VIP name "{1}" does not resolve to both an IPv4 and IPv6 address, which is required by the network, because it has both IPv4 and IPv6 subnets

Cause: Both IPv4 and IPv6 configured VIP addresses existed, but the specified VIP name did not resolve to both IPv4 and IPv6 addresses.

Action: Ensure that the specified VIP name resolves to both IPv4 and IPv6 addresses.

PRCT-01419: Failed to modify the VIP for node {0} as the specified VIP name "{1}" does not resolved to an IPv4 address

Cause: An IPv4 configured VIP address existed, but the specified VIP name did not resolve to an IPv4 address.

Action: Make sure that the specified VIP name resolves to an IPv4 address.

PRCT-01420: Failed to modify the VIP for node {0} as the specified VIP name "{1}" does not resolved to an IPv6 address

Cause: An IPv6 configured VIP address existed, but the specified VIP name did not resolve to an IPv6 address.

Action: Make sure that the specified VIP name resolves to an IPv6 address.

PRCT-01421: Failed to modify the VIP for node {0} because the specified VIP name or address "{1}" does not resolve to an IPv4 address

Cause: The configured VIP name resolved to an IPv4 address, but the specified VIP name or IP address did not resolve to an IPv4 address.

Action: Make sure that the specified VIP name or address resolves to an IPv4 address.

PRCT-01422: Failed to modify the VIP for node {0} because the specified VIP name or address "{1}" does not resolve to an IPv6 address

Cause: The configured VIP name resolved to an IPv6 address, but the specified VIP name or IP address did not resolve to an IPv6 address.

Action: Make sure that the specified VIP name or address resolves to an IPv6 address.

PRCT-01423: Failed to copy the directory contents from {0} to {1} on node {2}.

Detailed error:\n{2}

Cause: An attempt to execute srvmhlp to copy the directory contents failed.

Action: Examine the accompanying error messages.

PRCT-01424: Rapid Home Provisioning credentials creation failed while executing the Management Database configuration assistant on node {0}.

Cause: An attempt to execute the Management Database configuration assistant to create the Rapid Home Provisioning credentials failed.

Action: Examine the accompanying error messages for details.

PRCT-01425: The specified VIP name "{0}" does not resolve to an IPv4 address

Cause: The configured VIP name resolved to an IPv4 address, but the specified VIP name did not resolve to a single IPv4 address.

Action: Specify a VIP name that resolves to a single IPv4 address. Use 'nslookup *vipname*' to display the addresses to which the VIP name resolves.

PRCT-01426: The specified VIP name "{0}" resolves to multiple addresses

Cause: The specified VIP name resolved to more than one IPv4 or IPv6 address.

Action: Specify a VIP name that resolves to one address. Use 'nslookup *vipname*' to display the addresses to which the VIP name resolves.

PRCT-01427: Failed to create the NFS resource on mount path "{0}". Detailed error:\n{1}

Cause: An attempt to create the NFS resource failed.

Action: Examine the accompanying error messages.

PRCT-01428: Failed to execute Management Database configuration assistant for user "{0}" on node "{1}". Detailed error:\n{2}

Cause: An attempt to run Management Database configuration assistant failed.

Action: Examine the accompanying error messages.

PRCT-01429: Failed to create wallet for Rapid Home Provisioning for user "{0}".

Detailed error:\n{1}

Cause: An attempt to create the wallet for Rapid Home Provisioning failed.

Action: Examine the accompanying error messages.

PRCT-01430: Failed to retrieve the Oracle ASM Dynamic Volume Manager compatibility attribute for disk group {0}. asmcmd execution failed at location {1}.

Detailed error:\n{2}

Cause: An attempt to retrieve the 'compatible.advm' attribute for the specified disk group failed.

Action: Examine the accompanying error messages for details and take appropriate corrective action.

PRCT-01431: The Oracle ASM Dynamic Volume Manager compatibility attribute is not set for disk group {0}.

Cause: An attempt to execute asmcmd against the specified disk group failed because the command requires the retrieval of the 'compatible.advm' attribute which has not been set for that disk group.

Action: Set the 'compatible.advm' attribute for the specified disk group to a version above 11.2.0.3 with the ASM Configuration Assistant (asmca) and retry adding a Rapid Home Provisioning Server using 'srvctl add rhpserver' command.

PRCT-01432: Failed to modify the VIP for node {0} because the specified VIP address "{1}" is not an IPv4 address

Cause: An attempt to modify a node VIP failed because the specified address was not of type IPv4 as required by the configured VIP.

Action: Retry the command making sure that the specified VIP address is an IPv4 address.

PRCT-01433: Failed to modify the VIP for node {0} because the specified VIP address "{1}" is not an IPv6 address

Cause: An attempt to modify a node VIP failed because the specified address was not of type IPv6 as required by the configured VIP.

Action: Retry the command making sure that the specified VIP address is an IPv6 address.

PRCT-01434: Failed to modify the VIP because the specified VIP name "{0}" does not resolve to an IPv4 address as required by network {1}

Cause: The configured network had an IPv4 subnet, but the specified VIP name or IP address did not resolve to an IPv4 address.

Action: Make sure that the specified VIP name or address resolves to an IPv4 address.

PRCT-01435: Failed to modify the VIP because the specified VIP name "{0}" does not resolve to an IPv6 address as required by network {1}

Cause: The configured network had an IPv6 subnet, but the specified VIP name or IP address did not resolve to an IPv6 address.

Action: Make sure that the specified VIP name or address resolves to an IPv6 address.

PRCT-01436: Volume {0} does not exist for disk group {1}. Detailed error:\n{2}

Cause: An attempt to execute 'asmcmd' to delete the volume for the disk group failed.

Action: Review the accompanying error messages that provide the details of why ASMCMD execution failed. Resolve the reported problem and retry.

PRCT-01437: Execution of the 'opatch lspatches -oh' command failed on local node with result {0}

Cause: Execution of the 'opatch lspatches -oh' failed on the local node.

Action: Review the accompanying error messages that provide the details of why the 'opatch lspatches -oh' execution failed. Resolve the reported problem and retry.

PRCT-01438: Failed to get the difference between the patches installed in {0} and {1} Oracle homes. Detailed error:\n{2}

Cause: An attempt to get the difference between the patches installed in the Oracle homes failed.

Action: Examine the accompanying error messages.

PRCT-01439: Failed to create the directory {0} in nodes {1}. Detailed error:\n{2}

Cause: An attempt to execute srvmhelper to create the directory failed. Specifics of failure shown in appended error message.

Action: Examine the accompanying error messages for details. Resolve the problems reported and retry.

PRCT-01440: Failed to determine if database is administrator-managed\n{1}

Cause: An attempt to execute an internal command to determine if the database is administrator-managed failed. Specifics of the failure are shown in the appended error message.

Action: Examine the accompanying error messages for details. Resolve the problems reported and retry.

PRCT-01441: Failed to retrieve configured nodes for an administrator-managed database\n{1}

Cause: An attempt to execute an internal command to retrieve configured nodes for an administrator-managed database failed. Specifics of the failure are shown in the appended error message.

Action: Examine the accompanying error messages for details. Resolve the problems reported and retry.

PRCT-01442: Failed to execute srvmlshelper command because command {0} does not exist

Cause: The srvmlshelper script did not exist or was not accessible to the invoking user.

Action: Check whether the specified srvmlshelper script exists. Also, check whether the user has execute permission on the srvmlshelper script.

PRCT-01443: Setting of password for user GHSUSER failed while executing the Management Database configuration assistant on node {0}.

Cause: An attempt to execute the Management Database configuration assistant to set GHSUSER's password failed.

Action: Examine the accompanying error messages for details.

PRCT-01444: Attempt to retrieve version of SQL*Plus from Oracle home {0} failed. Detailed error: \n {1}

Cause: An attempt to execute the 'sqlplus -V' command failed. See the accompanying error message for further details.

Action: Verify that the 'bin' directory under the indicated Oracle home contains the 'sqlplus' binary, and verify execution of the command 'sqlplus -V' manually on that Oracle home.

PRCT-01445: Failed to parse output returned by sqlplus -V when executing command at Oracle home {0}. Detailed error: \n {1}

Cause: An attempt to parse the output returned by executing the command 'sqlplus -V' failed because the output string is null or has unexpected results.

Action: Verify execution of the command 'sqlplus -V' manually at the Oracle home or contact Oracle Support Services.

PRCT-01446: Attempt to retrieve version of SQL*Plus on node {0} from Oracle home {1} failed. Detailed error: \n {2}

Cause: An attempt to execute the 'sqlplus -V' command failed. See the accompanying error message for further details.

Action: Verify that the 'bin' directory in the specified node under the indicated Oracle home contains the 'sqlplus' binary, and verify execution of the command 'sqlplus -V' manually on that Oracle home.

PRCT-01447: Failed to parse output returned by sqlplus -V when executing command at node {0} and Oracle home {1}. Detailed error: \n {1}

Cause: An attempt to parse the output returned by executing the command 'sqlplus -V' at specified node failed because the output string is null or has unexpected results.

Action: Verify execution of the command 'sqlplus -V' manually at the given node and Oracle home or contact Oracle Support Services.

PRCT-01448: Oracle home location: {0} does not contain {1}

Cause: The current Oracle home directory did not contain the specified utility.

Action: Provide the correct Oracle home directory.

PRCT-01449: Execution of command 'orabase' failed. Detailed error:\n {0}

Cause: Execution of the 'orabase' command failed. See the accompanying error message for further details.

Action: Correct the problem indicated by the accompanying message.

PRCT-01450: The ORACLE_BASE registry key {0} has an empty value on node {1}.

Cause: The ORACLE_BASE registry key did not exist or its value was null.

Action: Clone the existing ORACLE_HOME to re-create the registry entries using the command 'clone.pl'.

PRCT-01451: Error accessing file 'oracle.key'

Cause: An attempt to access the 'oracle.key' file to determine the location of registry containing ORACLE_BASE failed.

Action: Clone the existing ORACLE_HOME to re-create the 'oracle.key' file using the command 'clone.pl'.

PRCT-01452: Execution of the command 'opatch lsinventory -patch -oh' failed on local node with result {0}.

Cause: Execution of the command 'opatch lsinventory -patch -oh' failed on the local node. Details reported in accompanying messages.

Action: Review the accompanying error messages that provide the details of why the 'opatch lsinventory -patch -oh' execution failed. Resolve the reported problem and retry executing the command.

PRCT-01453: Failed to execute the crsctl command to retrieve cluster GUID. Detailed error:\n {0}

Cause: An attempt to execute the command 'crsctl get css clusterguid' failed.

Action: Examine the accompanying error messages, resolve reported problems and retry executing the command.

PRCT-01454: Received empty result while getting the cluster GUID

Cause: The crsctl command executed successfully, but there was no output.

Action: This is an internal error. Contact Oracle Support Services.

PRCW-01001 to PRCW-01017

PRCW-01001: Could not allocate new memory

Cause: Could not allocation any new memory.

Action: Retry after make more memory available.

PRCW-01002: Network Security error code {0}

Cause: Failed to perform the network security operation.

Action: Look at the network security error for the appropriate action.

PRCW-01003: Failed to do the cluster wallet operation {0}

Cause: Failed to perform the cluster wallet operation.

Action: Look at the cluster wallet error for the appropriate action.

PRCW-01004: Could not open the wallet {0} due to error {1} : {2}

Cause: Failed to open the cluster wallet.

Action: Look at the cluster wallet error for the appropriate action.

PRCW-01005: Wallet {1} did not exist due to error code {1}

Cause: The cluster wallet did not exist.

Action: Need to create the cluster wallet.

PRCW-01006: Alias {0} in Wallet {1} did not exist

Cause: The alias within the cluster wallet did not exist.

Action: Need to create the alias within the cluster wallet.

PRCW-01007: Alias {0} in Wallet {1} could not be read due to error {2}

Cause: Could not read the alias within the cluster wallet.

Action: Look at the network security error for the appropriate action.

PRCW-01008: Alias {0} in Wallet {1} could not be written due to error code {2}

Cause: Could not write the secret of the alias to the cluster wallet.

Action: Look at the network security error for the appropriate action.

PRCW-01009: Wallet {0} could not be saved due to error code {1}

Cause: Could not save the cluster wallet.

Action: Look at the cluster wallet error for the appropriate action.

PRCW-01010: Wallet {0} could not be created due to error {1}: {2}

Cause: Could not create the cluster wallet.

Action: Look at the cluster wallet error for the appropriate action.

PRCW-01011: Wallet {0} could not be accessed due to error code {1}

Cause: Could not access the cluster wallet.

Action: Use the correct cluster wallet password.

PRCW-01012: Wallet {0} could not be deleted due to error code {1}

Cause: Could not delete the cluster wallet.

Action: Look at the cluster wallet error for the appropriate action.

PRCW-01013: Failed to initialize cluster wallet context due to error code {0}

Cause: Could not initialize the cluster wallet context.

Action: Look at the cluster wallet error for the appropriate action.

PRCW-01014: Failed to terminate cluster wallet context due to error code {0}

Cause: Could not terminate the cluster wallet context.

Action: Look at the cluster wallet error for the appropriate action.

PRCW-01015: Wallet {0} does not exist. {1}

Cause: An attempted wallet operation could not find the specified wallet.

Action: Ensure that the correct wallet type was supplied, or create the wallet if appropriate.

PRCW-01016: Wallet name is missing for wallet type {0}

Cause: An attempted wallet operation failed as wallet name was not specified.

Action: This is an internal error. Contact Oracle Support Services.

PRCW-01017: Cluster wallet context to be terminated does not exist

Cause: An attempt to terminate the cluster wallet context failed as it has not been initialized.

Action: This is an internal error. Contact Oracle Support Services.

PRCZ-01000 to PRCZ-02051

PRCZ-01000: User name cannot be null or empty

Cause: An invalid value was supplied as user name.

Action: This is an internal error. Contact Oracle Support Services.

PRCZ-01001: Password cannot be null

Cause: A null value was supplied as password parameter to this API.

Action: This is an internal error. Contact Oracle Support Services.

PRCZ-01002: Local node name cannot be null or empty

Cause: An invalid value was supplied as local node name parameter to this API.

Action: This is an internal error. Contact Oracle Support Services.

PRCZ-01003: Remote node name cannot be null

Cause: An invalid value was supplied as remote node names parameter to this API.

Action: This is an internal error. Contact Oracle Support Services.

PRCZ-01004: User name "{0}" does not contain a domain name

Cause: User name that was supplied was not in DOMAINNAME\USERNAME format.

Action: User name needs to be supplied in DOMAINNAME\USERNAME format.

PRCZ-01005: Remote node name list contains null or empty node names

Cause: An invalid value was contained in remote node names list.

Action: This is an internal error. Contact Oracle Support Services.

PRCZ-01006: Parameter {0} value is not valid

Cause: This is an internal error. The value for the specified parameter is null or empty string.

Action: Contact Oracle Support Services.

PRCZ-01007: Unable to determine if user "{0}" has Windows administrator authority.

Cause: An attempt to determine if user specified has Windows administrator authority failed.

Action: Examine the accompanying error messages for details.

PRCZ-01008: Unable to determine if user "{0}" has Windows administrator authority on nodes "{1}"

Cause: An attempt to determine if user specified has Windows administrator authority on specified nodes failed.

Action: Examine the accompanying error messages for details.

PRCZ-01010: Cannot create an instance of Windows Security Services on this platform

Cause: An attempt was made to create an instance of Windows Security Services on a non-Microsoft Windows platform.

Action: This is an internal error. Contact Oracle Support Services.

PRCZ-01011: Unable to determine if user "{0}" is a Windows domain user

Cause: An attempt to determine if user specified is a Windows domain user failed.

Action: Examine the accompanying error messages for details.

PRCZ-01012: Unable to determine if user "{0}" is a valid Windows user

Cause: An attempt to determine if user name and password for user specified are valid failed.

Action: Examine the accompanying error messages for details.

PRCZ-01013: Unable to determine if user "{0}" is a Windows managed service account user

Cause: An attempt to determine if user name specified is a Windows managed service account user failed.

Action: Examine the accompanying error messages for details.

PRCZ-01014: Windows user "{0}" could not be created

Cause: An attempt to create the specified Windows user failed.

Action: Examine the accompanying error messages for details.

PRCZ-01015: Could not create Windows user "{0}" because user name is a domain user

Cause: The user name was in DOMAINNAME\USERNAME format.

Action: If a domain user should own the Oracle home make sure that the domain administrator has created the user. If a new user should be created specify the user name without the domain name.

PRCZ-01016: Windows user "{0}" could not be deleted

Cause: An attempt to delete the specified Windows user failed.

Action: Examine the accompanying error messages for details.

PRCZ-01017: Could not delete Windows user "{0}" because user name is a domain user

Cause: The user name was in DOMAINNAME\USERNAME format.

Action: Only the domain administrator can delete a domain user. Specify a user name without the domain name and the user will be deleted from the local machine.

PRCZ-01018: Failed to set user "{0}" as Oracle home service user for home "{1}"

Cause: An attempt to set specified user as the Oracle home service user for specified home failed.

Action: Examine the accompanying error messages for details.

PRCZ-01019: Failed to set user "{0}" as Oracle home service user for home "{1}" on nodes "{2}"

Cause: An attempt to set specified user as the Oracle home service user for specified home on the specified nodes failed.

Action: Examine the accompanying error messages for details.

PRCZ-01020: Failed to get the Oracle home service user

Cause: An attempt to get the Oracle home service user for current Oracle home failed.

Action: Examine the accompanying error messages for details.

PRCZ-01021: Failed to get the Oracle home service user for Oracle home "{0}"

Cause: An attempt to get the Oracle home service user for Oracle home at the path specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01022: Failed to get the Oracle home service user for Oracle home "{0}" on nodes "{1}"

Cause: An attempt to get the Oracle home service user for Oracle home at the path specified on the nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01023: The Oracle home path "{0}" is invalid

Cause: An invalid value was supplied as Oracle home path.

Action: The path of Oracle home must be between 0 and 260 characters long and the directory must exist. The path must not contain wild card characters.

PRCZ-01024: Failed to determine if the Oracle home service user for Oracle home "{0}" is a Windows managed service account user

Cause: An attempt to determine if the Oracle home service user for the Oracle home specified is a Windows managed service account user failed.

Action: Examine the accompanying error messages for details.

PRCZ-01025: Failed to determine if the Oracle home service user for Oracle home "{0}" is the built in LocalSystem account

Cause: An attempt to determine if the Oracle home service user for the Oracle home specified is the built in LocalSystem account failed.

Action: Examine the accompanying error messages for details.

PRCZ-01026: Failed to determine if the Oracle home service user for Oracle home "{0}" is the built in LocalService account

Cause: An attempt to determine if the Oracle home service user for the Oracle home specified is the built in LocalService account failed.

Action: Examine the accompanying error messages for details.

PRCZ-01027: Unable to determine if the Oracle home service user for Oracle home "{0}" is a Windows built in user or managed service account user

Cause: An attempt to determine if user specified is a Windows built in user or managed service account user failed.

Action: Examine the accompanying error messages for details.

PRCZ-01028: Unable to determine if the Oracle home service user for Oracle home "{0}" is a Windows built in user or managed service account user on nodes "{1}"

Cause: An attempt to determine if user specified is a Windows built in user or managed service account user on nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01029: Failed to set the Oracle home type as "{0}" for Oracle home "{1}"

Cause: An attempt to set specified type as the Oracle home type for specified Oracle home failed.

Action: Examine the accompanying error messages for details.

PRCZ-01030: Failed to set the Oracle home type as "{0}" for home "{1}" on nodes "{2}"

Cause: An attempt to set specified type as the Oracle home type for specified home on the specified nodes failed.

Action: Examine the accompanying error messages for details.

PRCZ-01031: Failed to get the Oracle home type for Oracle home "{0}"

Cause: An attempt to get the Oracle home type for Oracle home at the path specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01032: Failed to get the Oracle home type for Oracle home "{0}" on nodes "{1}"

Cause: An attempt to get the Oracle home type for Oracle home at the path specified on the nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01033: Failed to get the Oracle home service user on node "{0}"

Cause: An attempt to get the Oracle home service user for current Oracle home on the node specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01034: Failed to determine if Oracle home service user for Oracle home "{0}" is the built in LocalSystem account on node "{1}"

Cause: An attempt to determine if the Oracle home service user for the Oracle home specified on the nodes specified is the built in LocalSystem account failed.

Action: Examine the accompanying error messages for details.

PRCZ-01035: Failed to locate Oracle home

Cause: An error occurred while attempting to retrieve value of environment variable ORACLE_HOME.

Action: Set ORACLE_HOME environment variable to point to current Oracle home path.

PRCZ-01036: Failed to determine the operating system privileges granted to Windows user "{0}"

Cause: An attempt to determine the operating system privileges granted to Windows user specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01037: Failed to determine the operating system privileges granted to Windows user "{0}" on nodes "{1}"

Cause: An attempt to determine the operating system privileges granted to Windows user specified on nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01038: Failed to grant Windows user "{0}" operating system privileges required for Oracle home type "{1}"

Cause: An attempt to grant the required operating system privileges for specified Oracle home type to specified Windows user failed.

Action: Examine the accompanying error messages for details.

PRCZ-01039: Failed to grant Windows user "{0}" operating system privileges required for Oracle home type "{1}" on nodes "{2}"

Cause: An attempt to grant the required operating system privileges for specified Oracle home type to specified Windows user on nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01040: Failed to revoke operating system privileges from Windows user "{0}" granted for owning Oracle home type "{1}"

Cause: An attempt to revoke operating system privileges granted to specified Windows user for owning specified Oracle home type failed.

Action: Examine the accompanying error messages for details.

PRCZ-01041: Failed to revoke operating system privileges from Windows user "{0}" granted for Oracle home type "{1}" on nodes "{2}"

Cause: An attempt to revoke operating system privileges granted to specified Windows user for owning specified Oracle home type on nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01042: Failed to add Windows access control list (ACL) entry for user "{0}" for path "{1}"

Cause: An attempt to add Windows access control list entry for user specified to the path specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01043: Failed to add Windows access control list (ACL) entry for user "{0}" for path "{1}" on nodes "{2}"

Cause: An attempt to add Windows access control list entry for user specified to the path specified failed on nodes specified.

Action: Examine the accompanying error messages for details.

PRCZ-01044: Failed to remove Windows access control list (ACL) entry for user "{0}" for path "{1}"

Cause: An attempt to remove Windows access control list entry for user specified from the path specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01045: Failed to remove Windows access control list (ACL) entry for user "{0}" for path "{1}" on nodes "{2}"

Cause: An attempt to remove Windows access control list entry for user specified from the path specified failed on nodes specified.

Action: Examine the accompanying error messages for details.

PRCZ-01046: Failed to verify if Windows access control list (ACL) entry exists for user "{0}" for path "{1}"

Cause: An attempt to verify if Windows access control list entry exists for user specified for the path specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01047: Failed to verify Windows access control list (ACL) entry for user "{0}" for path "{1}" on nodes "{2}"

Cause: An attempt to verify if Windows access control list entry exists for user specified for the path specified failed on nodes specified.

Action: Examine the accompanying error messages for details.

PRCZ-01048: Windows user "{0}" does not have privileges "{1}" required for owning Oracle home "{2}"

Cause: An attempt to verify if the specified Windows user has all privileges required for owning Oracle home type specified found that user did not have some of the privileges required.

Action: Grant the privileges specified to the user.

PRCZ-01049: Windows user "{0}" does not have privileges "{1}" required for owning Oracle home "{2}" on node "{3}"

Cause: An attempt to verify if the specified Windows user has all privileges required for owning Oracle home type specified on node specified found that user did not have some of the privileges required.

Action: Grant the privileges specified to the user.

PRCZ-01050: The path "{0}" specified as Windows service executable file for Windows service "{1}" is invalid

Cause: An invalid value was supplied as Windows service executable file for the specified Windows service.

Action: Specify the full file system path to a valid executable file, without wild card characters and not exceeding 260 characters long.

PRCZ-01051: Failed to update executable file to "{1}" for the Windows service "{0}"

Cause: An attempt to update the file from which specified Windows service runs to specified file failed.

Action: Examine the accompanying error messages for details.

PRCZ-01052: Failed to update executable file to "{1}" for the Windows service "{0}" on nodes "{2}"

Cause: An attempt to update the file from which specified Windows service runs to specified file on the nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01053: Failed to update the Windows service "{0}" user password for Windows user "{1}"

Cause: An attempt to update the password for specified Windows user in the specified Windows service failed.

Action: Examine the accompanying error messages for details.

PRCZ-01054: Failed to update the Windows service "{0}" user password for Windows user "{1}" on nodes "{2}"

Cause: An attempt to update the password for specified Windows user in the specified Windows service on the nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01055: Failed to update executable file to "{2}" and username and password for Windows user "{1}" for the Windows service "{0}"

Cause: An attempt to update the executable file, username and password to specified values for specified Windows service failed.

Action: Examine the accompanying error messages for details.

PRCZ-01056: Failed to update executable file to "{2}" and username and password for Windows user "{1}" for the Windows service "{0}" on nodes "{3}"

Cause: An attempt to update the executable file, username and password to specified values for specified Windows service on specified nodes failed.

Action: Examine the accompanying error messages for details.

PRCZ-01057: Invalid value {0} specified for Windows service access type parameter while creating the service "{1}"

Cause: An invalid value was supplied for Windows service access type parameter while creating specified Windows service.

Action: This is an internal error. Contact Oracle Support Services.

PRCZ-01058: Service dependency list contains null or empty Windows service names while creating Windows service "{0}"

Cause: An invalid value was contained in service dependency list supplied while creating the specified Windows service.

Action: This is an internal error. Contact Oracle Support Services.

PRCZ-01059: Failed to create Windows service "{0}"

Cause: An attempt to create specified Windows service failed.

Action: Examine the accompanying error messages for details.

PRCZ-01060: Failed to create Windows service "{0}" on nodes "{1}"

Cause: An attempt to create specified Windows service on nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01061: Failed to delete Windows service "{0}"

Cause: An attempt to delete specified Windows service failed.

Action: Examine the accompanying error messages for details.

PRCZ-01062: Failed to delete Windows service "{0}" on nodes "{1}"

Cause: An attempt to delete specified Windows service on nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01063: Failed to determine if the Windows service "{0}" will run as the built in LocalSystem account

Cause: An attempt to determine if the specified Windows service will run as the built in LocalSystem account failed.

Action: Examine the accompanying error messages for details.

PRCZ-01064: Failed to determine if the Windows service "{0}" will run as the built in LocalSystem account on nodes "{1}"

Cause: An attempt to determine if the specified Windows service on the nodes specified will run as the built in LocalSystem account failed.

Action: Examine the accompanying error messages for details.

PRCZ-01065: Failed to get the user account for the Windows service "{0}"

Cause: An attempt to get the user account the specified Windows service runs as failed.

Action: Examine the accompanying error messages for details.

PRCZ-01066: Failed to get the user account for the Windows service "{0}" on nodes "{1}"

Cause: An attempt to get the user account the specified Windows service runs as on specified nodes failed.

Action: Examine the accompanying error messages for details.

PRCZ-01067: Failed to retrieve a list of all Windows services that run as Windows user "{0}" from Oracle home "{1}"

Cause: An attempt to get a list of all Windows services that run as specified Windows user from specified Oracle home failed.

Action: Examine the accompanying error messages for details.

PRCZ-01068: Failed to obtain a list of all Windows services that run as Windows user "{0}" from Oracle home "{1}" on nodes "{2}"

Cause: An attempt to get a list of all Windows services that run as specified Windows user from specified Oracle home on nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01069: Failed to update Windows user's password of all Windows services that run as Windows user "{0}" from Oracle home "{1}"

Cause: An attempt to update Windows user's password of all Windows services that run as specified Windows user from specified Oracle home failed.

Action: Examine the accompanying error messages for details.

PRCZ-01070: Failed to update Windows user's password of all Windows services that run as Windows user "{0}" from Oracle home "{1}" on nodes "{2}"

Cause: An attempt to update Windows user's password of all Windows services that run as specified Windows user from specified Oracle home on nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01071: Failed to update Windows service "{0}" username to "{1}" because it differs from Oracle home user "{2}"

Cause: An attempt to update the Windows service execution user account failed because the specified user is not the Oracle home service user.

Action: All services from a home will run as the Oracle home service user.

PRCZ-01072: Failed to obtain a list of all Windows services that run as Windows user "{0}"

Cause: An attempt to obtain a list of all Windows services that run as specified Windows user failed.

Action: Examine the accompanying error messages for details.

PRCZ-01073: Failed to obtain a list of all Windows services that run as Windows user "{0}" on nodes "{1}"

Cause: An attempt to get a list of all Windows services that run as specified Windows user on nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01074: Failed to update Windows user's password for all Windows services that run as Windows user "{0}"

Cause: An attempt to update Windows user's password for all Windows services that run as specified Windows user from specified Oracle home failed.

Action: Examine the accompanying error messages for details.

PRCZ-01075: Failed to update Windows user's password for all Windows services that run as Windows user "{0}" on nodes "{1}"

Cause: An attempt to update Windows user's password for all Windows services that run as specified Windows user from specified Oracle home on nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01076: Windows group "{0}" could not be created

Cause: An attempt to create the specified Windows group failed.

Action: Examine the accompanying error messages for details.

PRCZ-01077: Windows user "{0}" could not be created on nodes "{1}"

Cause: An attempt to create the specified Windows group on the nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01078: Windows group "{0}" could not be removed

Cause: An attempt to remove the specified Windows group failed.

Action: Examine the accompanying error messages for details.

PRCZ-01079: Windows group "{0}" could not be removed on nodes "{1}"

Cause: An attempt to remove the specified Windows group on the nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01080: Unable to determine if Windows group "{0}" exists

Cause: An attempt to determine if the specified Windows group exists failed.

Action: Examine the accompanying error messages for details.

PRCZ-01081: Unable to determine if Windows group "{0}" exists on nodes "{1}"

Cause: An attempt to determine if the specified Windows group exists on the nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01082: Failed to add Windows user or Windows group "{1}" to Windows group "{0}"

Cause: An attempt to add the specified Windows user or Windows group as member of the specified Windows group failed.

Action: Examine the accompanying error messages for details.

PRCZ-01083: Failed to add Windows user or Windows group "{1}" to Windows group "{0}" on nodes "{2}"

Cause: An attempt to add the specified Windows user or Windows group as a member of the specified Windows group on the nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01084: Failed to remove Windows user or Windows group "{1}" from Windows group "{0}"

Cause: An attempt to remove the specified Windows user or Windows group from the specified Windows group failed.

Action: Examine the accompanying error messages for details.

PRCZ-01085: Failed to remove Windows user or Windows group "{1}" from Windows group "{0}" on nodes "{2}"

Cause: An attempt to remove the specified Windows user or Windows group from the specified Windows group on the nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01086: Unable to determine if Windows user or Windows group "{1}" is a member of Windows group "{0}"

Cause: An attempt to determine if the specified Windows user or Windows group is a member of the specified Windows group failed.

Action: Examine the accompanying error messages for details.

PRCZ-01087: Unable to determine if Windows user or Windows group "{1}" is a member of Windows group "{0}" on nodes "{1}"

Cause: An attempt to determine if the specified Windows user or Windows group is a member of the specified Windows group on the nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01088: The Windows group name "{0}" is invalid

Cause: An invalid value was supplied as Windows group name.

Action: The Windows group name must be between 0 and 256 characters long.

PRCZ-01089: The description text "{0}" for Windows group "{1}" is invalid

Cause: An invalid value was supplied as description text for specified Windows group name.

Action: The description text supplied must be between 0 and 256 characters long.

PRCZ-01090: {0} Element in remote node name list contains null or empty node name

Cause: An invalid value was contained in remote node names list.

Action: This is an internal error. Contact Oracle Support Services.

PRCZ-01091: Failed to verify that user name "{0}" is a valid Windows user

Cause: An attempt to verify if the specified user name is a valid Windows user failed.

Action: Examine the accompanying error messages for details.

PRCZ-01092: The user name "{0}" does not exist as a Windows user

Cause: The specified user name was not a valid Windows user name.

Action: Specify a valid Windows user name.

PRCZ-01093: Failed to convert Windows security identifier "{0}" to a Windows user name

Cause: An attempt to convert the specified Windows security identifier to a Windows user name failed.

Action: Examine the accompanying error messages for details.

PRCZ-01094: Failed to add a Windows access control entry for user "{0}" to Windows access control list for path "{1}"

Cause: An attempt to add Windows access control list entry the specified user and path failed.

Action: Examine the accompanying error messages for details.

PRCZ-01095: Failed to add a Windows access control entry for user "{0}" to Windows access control list for path "{1}" on nodes "{2}"

Cause: An attempt to add Windows access control list entry for the specified user and path failed on nodes specified.

Action: Examine the accompanying error messages for details.

PRCZ-01096: Unable to determine if the password meets the requirements of the password policy

Cause: An attempt to determine if password meets the policy has failed.

Action: Examine the accompanying error messages for details.

PRCZ-01097: Unable to determine if a local account for user "{0}" exists on node "{1}"

Cause: An attempt to determine if the indicated local user account exists on the identified node has failed.

Action: Examine the accompanying error messages for details.

PRCZ-01098: Unable to determine the Windows domain name for user "{0}"

Cause: An attempt to determine the Windows domain name of indicated user account has failed.

Action: Examine the accompanying error messages for details.

PRCZ-01099: failed to migrate database services from Windows group "ORA_ASMDBA" to Windows group "ORA_ASMADMIN"

Cause: During the Oracle Clusterware upgrade, an attempt to migrate database services from Windows group 'ORA_ASMDBA' to Windows group 'ORA_ASMADMIN' failed.

Action: Examine the accompanying error messages for details.

PRCZ-01100: failed to migrate database services from Windows group "ORA_ASMADMIN" to Windows group "ORA_ASMDBA"

Cause: During the Oracle Clusterware downgrade, an attempt to migrate database services from Windows group 'ORA_ASMADMIN' to Windows group 'ORA_ASMDBA' failed.

Action: Examine the accompanying error messages for details.

PRCZ-02000: Failed to verify the password for user "{0}" on nodes "{1}"

Cause: An attempt to verify the specified user's password on nodes specified failed.

Action: Make sure that the password specified is correct and is same across all nodes of the cluster. Examine the accompanying error messages for details.

PRCZ-02001: File "{0}" was not found on nodes "{1}"

Cause: An attempt to verify that the specified file exists failed on the nodes specified.

Action: Make sure that the path to the specified file exists on all nodes. Make sure that the currently logged in user has read and execute permission on the file specified on nodes specified. Also look at the accompanying error messages for details.

PRCZ-02002: Failed to execute command "{0}" using 'sudo' from path "{1}" as user "{2}" on nodes "{3}"

Cause: An attempt to run the specified command as using 'sudo' from directory specified using the specified username and password on specified nodes failed.

Action: Make sure that the path specified for the sudo command exists on all nodes. Make sure that the specified user has permission to run the sudo command on all nodes. Make sure that the command specified exists on all nodes. Make sure that the correct password was specified for the specified user. Make sure that the specified user has sudo privileges granted on all nodes. Also look at the accompanying error messages for details.

PRCZ-02003: Failed to verify the password for user "{0}"

Cause: An attempt to verify specified user's password failed.

Action: Make sure that the password specified is correct and is same across all nodes of the cluster. Examine the accompanying error messages for details.

PRCZ-02004: File "{0}" was not found

Cause: An attempt to verify that the specified file exists failed.

Action: Make sure that the path to the specified file exists. Make sure that the currently logged in user has read and execute permissions on the file specified. Also look at the accompanying error messages for details.

PRCZ-02005: Failed to execute command "{0}" using 'sudo' from path "{1}" as user "{2}"

Cause: An attempt to run the specified command as using 'sudo' from the path specified using the specified username failed.

Action: Make sure that the path specified for the sudo command exists. Make sure that the specified user has permission to run the sudo command. Make sure that the command specified exists. Make sure that the correct password was specified for the specified user. Also look at the accompanying error messages for details.

PRCZ-02006: Unable to establish SSH connection to node "{0}" to execute command "{1}"

Cause: An attempt to connect to specified node to execute specified command using SSH failed.

Action: Make sure that the specified node is reachable. Make sure that SSH daemon on the specified node is alive. Also look at the accompanying error messages for details.

PRCZ-02007: Failed to execute the command "{0}"

Cause: An attempt to execute the specified command failed.

Action: Make sure that the path to the specified command exists. Make sure that the currently logged in user has read and execute permissions on the file specified on nodes specified. Also look at the accompanying error messages for details.

PRCZ-02008: Failed to execute the command "{0}" on nodes "{1}"

Cause: An attempt to execute the specified command failed on the nodes specified.

Action: Make sure that the path to the specified command exists on all nodes. Make sure that the currently logged in user has read and execute permissions on the file specified on nodes specified. Also look at the accompanying error messages for details.

PRCZ-02009: Failed to execute command "{0}" as root within {1} seconds on nodes "{2}"

Cause: An attempt to run the specified command within the specified time on the nodes specified failed.

Action: Make sure that the specified command exists on all nodes. Make sure that the specified command has execute permission on all nodes. Make sure that the root user password specified is correct. Also look at the accompanying error messages for details.

PRCZ-02010: Failed to execute command "{0}" using 'sudo' from location "{1}" as user "{2}" within {3} seconds on nodes "{4}"

Cause: An attempt to run the specified command using 'sudo' from location specified as specified user within the specified time on the nodes specified failed.

Action: Make sure that the specified command exists on all nodes. Make sure that the specified command has execute permission on all nodes. Make sure that the location specified for sudo is correct. Make sure that the user specified has sudo privileges. Make sure that the correct password was specified for the user. Also look at the accompanying error messages for details.

PRCZ-02011: Failed to execute command "{0}" using 'pbrun' from location "{1}" as user "{2}" within {3} seconds on nodes "{4}"

Cause: An attempt to run the specified command using 'pbrun' from location specified as specified user within the specified time on the nodes specified failed.

Action: Make sure that the specified command exists on all nodes. Make sure that the specified command has execute permission on all nodes. Make sure that the location specified for pbrun is correct. Make sure that the user specified has pbrun privileges. Make sure that the correct password was specified for the user. Also look at the accompanying error messages for details.

PRCZ-02014: Failed to execute command "{0}" on nodes "{1}"

Cause: An attempt to run the specified command on the nodes specified failed.

Action: Examine the accompanying error messages for details. Ensure that the command exists and is executable on the indicated nodes.

PRCZ-02015: Upgrade pending on following active nodes "{0}"

Cause: An attempt to forcibly complete the upgrade was rejected because some nodes are active and have not yet been upgraded.

Action: Upgrade the active nodes.

PRCZ-02016: could not navigate to domain {0}, CLS credentials return string: {1}, error details: {2}

Cause: An error was encountered when looking for the specified domain of a credentials set.

Action: Ensure that an existing domain is being specified.

PRCZ-02017: could not obtain root credentials domain, CLS credentials return string: {0}, error details: {1}

Cause: An error was encountered when initializing credentials root domain. The root domain is part of the OCR within which all credentials domains are stored. A domain is part of the OCR tree used to store credentials.

Action: Check the included error details.

PRCZ-02018: deletion of credentials set failed, CLS credentials return string: {0}, error details: {1}

Cause: An error was encountered when deleting a credentials set.

Action: Check the included error details.

PRCZ-02019: Credential set was not found in domain {0}.\n Return string: {1}, error details: {2}

Cause: Could not find the credentials set within the specified domain.

Action: Ensure that an existing domain is being specified, or insert appropriate credentials into the specified domain.

PRCZ-02020: the creation of domain {0} failed, CLS credentials return string: {1}, error details: {2}

Cause: An error occurred while creating the credentials domain.

Action: Check the included error details.

PRCZ-02021: the creation of the credentials set failed, CLS credentials return string: {0}, error details: {1}

Cause: An error occurred while creating the credentials set.

Action: Check the included error details.

PRCZ-02022: could not import wallet in file {0}, CLS credentials return string: {1}, error details: {2}

Cause: An error occurred while importing the wallet. The wallet must be stored in an auto-login wallet file.

Action: Check the wallet specified exists and that it is an auto-login wallet file with read permission on the file system.

PRCZ-02023: initialization of OCR context failed, error details: {0}

Cause: An error occurred when initializing the OCR context

Action: Check the included error details.

PRCZ-02024: deletion of credentials set member in domain {0} failed, CLS credentials return string: {1}, error details: {2}

Cause: An error occurred while deleting a credentials set member.

Action: Ensure the domain being specified exists and that the credentials set member was previously imported into the OCR.

PRCZ-02025: The 'sudo' credentials cache could not be invalidated using the command "{0}".

Cause: An attempt to invalidate the 'sudo' credentials cache using the specified command failed.

Action: Make sure that the path to the specified command exists. Make sure that the user currently logged in has read and execute permissions on the file specified. Also, look at the accompanying error messages for details.

PRCZ-02026: The 'sudo' credentials cache could not be invalidated using the command "{0}" on nodes "{1}"

Cause: An attempt to invalidate the 'sudo' credentials cache using the specified command failed on the nodes specified.

Action: Make sure that the path to the specified command exists. Make sure that the currently logged in user has read and execute permissions on the file specified on the nodes specified. Also, look at the accompanying error messages for details.

PRCZ-02027: failed to get the connection information

Cause: An error occurred while retrieving the connection information.

Action: This is an internal error. Contact Oracle Support Services.

PRCZ-02028: There is no connection information.

Cause: An error occurred while retrieving the connection information because the connection information does not exist.

Action: Use 'crsctl check crs' to make sure that the CRS stack is up; use the command 'srvctl status asm' to make sure that the ASM resource is running.

PRCZ-02029: failed to get the connection information because the connection information fetch would exceed buffer

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRCZ-02030: unable to determine the existence of operating system user account "{0}"

Cause: An attempt to determine existence of the indicated operating system user account failed.

Action: Examine the accompanying error messages for details.

PRCZ-02031: unable to determine if operating system user account "{0}" exist on nodes "{1}"

Cause: An attempt to determine if the indicated operating system user account exist on the identified nodes failed.

Action: Examine the accompanying error messages for details.

PRCZ-02032: The deletion of credentials domain {0} failed. Error details:\n{1}

Cause: An error occurred while deleting the credentials domain.

Action: Respond based on the accompanying messages.

PRCZ-02033: Failed to set attributes of credentials domain {0}. Error details:\n{1}

Cause: An error occurred while setting attributes of the credentials domain.

Action: Respond based on the accompanying messages.

PRCZ-02034: Failed to get attributes of credentials domain {0}. Error details:\n{1}

Cause: An error occurred while getting attributes of the credentials domain.

Action: Respond based on the accompanying messages.

PRCZ-02035: Failed to set user name and password credentials for user {0}. Error details:\n{1}

Cause: An error occurred while setting user name and password credentials.

Action: Respond based on the accompanying messages.

PRCZ-02036: Failed to import credentials from wallet path {0}. Error details:\n{1}
Cause: An error occurred while importing credentials from the specified wallet path.
Action: Respond based on the accompanying messages.

PRCZ-02037: Failed to set user {0} as the owner of credentials domain {1}. Error details:\n{2}
Cause: An error occurred while setting the specified user as the owner of the credentials domain.
Action: Respond based on the accompanying messages.

PRCZ-02038: Failed to find credentials domain {0} under parent domain {1}. Error details:\n{2}
Cause: The specified domain did not exist under the specified parent domain.
Action: Ensure that an existing domain is being specified.

PRCZ-02039: Credentials domain {0} already exists under parent domain {1} when the domain is not expected to exist. Error details:\n{2}
Cause: The specified domain was already in existence under the specified parent domain.
Action: Ensure that a nonexisting domain is being specified.

PRCZ-02040: failed to retrieve Oracle VM Manager information because Oracle VM Manager is not configured
Cause: An attempt to retrieve Oracle VM Manager information failed because it was not configured.
Action: Configure Oracle VM Manager in the cluster.

PRCZ-02041: failed to remove Oracle VM Manager because Oracle VM Manager is not configured
Cause: An attempt to remove Oracle VM Manager failed because it was not configured.
Action: Configure Oracle VM Manager in the cluster.

PRCZ-02042: Failed to remove Oracle VM Manager because one or more VM resources is configured. Names of the configured VM resources: {0}
Cause: An attempt to remove Oracle VM Manager failed because one or more VM resources was still configured.
Action: Ensure that all VM resources are removed before issuing this command.

PRCZ-02043: Failed to find credentials domain {0} under the root domain. Error details:\n{1}
Cause: The specified domain did not exist under the root domain.
Action: Ensure that an existing domain is being specified.

PRCZ-02044: failed to create Oracle VM Manager because a credentials error occurred
Cause: An attempt to create Oracle VM Manager failed because an error related to the credentials occurred.
Action: Examine the accompanying error messages for details.

PRCZ-02045: failed to create Oracle VM Manager because the Grid Infrastructure user could not be identified

Cause: An attempt to create Oracle VM Manager failed because an error occurred while retrieving the Grid Infrastructure user.

Action: Examine the accompanying error messages for details.

PRCZ-02046: failed to modify Oracle VM Manager information because a credentials error occurred

Cause: An attempt to modify Oracle VM Manager information failed because an error related to the credentials occurred.

Action: Examine the accompanying error messages for details.

PRCZ-02047: failed to modify Oracle VM Manager because the Grid Infrastructure user could not be identified

Cause: An attempt to modify Oracle VM Manager failed because an error occurred while retrieving the Grid Infrastructure user.

Action: Examine the accompanying error messages for details.

PRCZ-02048: failed to retrieve Oracle VM Manager information because a credentials error occurred

Cause: An attempt to retrieve Oracle VM Manager failed because an error related to the credentials occurred.

Action: Examine the accompanying error messages for details.

PRCZ-02049: failed to remove Oracle VM Manager because a credentials error occurred

Cause: An attempt to remove Oracle VM Manager failed because an error related to the credentials occurred.

Action: Examine the accompanying error messages for details.

PRCZ-02050: failed to remove Oracle VM Manager because the details on VM resources could not be retrieved

Cause: An attempt to remove Oracle VM Manager failed because an error occurred while retrieving the details on the configured VM resources.

Action: Examine the accompanying error messages for details.

PRCZ-02051: failed to import credentials because a wallet did not exist at the specified path {0}

Cause: An error occurred while importing credentials because the specified path did not contain a wallet.

Action: Retry the operation making sure to specify the path of an existing wallet file.

PRGH-01001 to PRGH-01018

PRGH-01001: Failed to get the name of the local node

Cause: An attempt to retrieve local host name failed.

Action: Examine the accompanying error messages.

PRGH-01002: Failed to copy files from {0} to {1}

Cause: An attempt to copy the files failed.

Action: Examine the accompanying error messages.

PRGH-01003: Provisioning of Oracle home at location {0} failed

Cause: One or more steps in provisioning the Oracle home failed.

Action: Examine the accompanying error messages.

PRGH-01004: Cloning operation for the Oracle home at location {0} failed

Cause: An attempt to clone an Oracle Database home directory created from a Rapid Home Provisioning image failed.

Action: Examine the accompanying error messages.

PRGH-01005: Creation of database {0} at Oracle home location {1} failed

Cause: An attempt to create database failed.

Action: Examine the accompanying error messages.

PRGH-01006: Changing the ownership for the software home at location {0} failed

Cause: An attempt to change the ownership of software home failed.

Action: Check the accompanying error messages.

PRGH-01007: Changing the group ownership for the software home at location {0} failed

Cause: An attempt to change the group of software home failed.

Action: Examine the accompanying error messages.

PRGH-01008: Deletion of database {0} at Oracle home location {1} failed

Cause: An attempt to delete the database failed.

Action: Correct the problem indicated by the accompanying messages and retry the failed command

PRGH-01009: Deletion of Oracle home location {0} from inventory failed

Cause: An attempt to detach the Oracle home failed

Action: Correct the problem indicated by the accompanying messages and retry the failed command

PRGH-01010: Removal of Oracle home {0} failed

Cause: An attempt to remove the Oracle home failed

Action: Correct the problem indicated by the accompanying messages and retry the failed command.

PRGH-01011: Move of database {0} to Oracle home location {1} failed

Cause: An attempt to move the database to the new Oracle home failed.

Action: Examine the accompanying error messages.

PRGH-01012: Failed to execute sqlpatch for database {0} from Oracle home {1} on node {2}

Cause: An attempt to execute sqlpatch on the database failed.

Action: Examine the accompanying error messages.

PRGH-01013: The destination working copy at {0} on cluster {1} has the following Oracle patches installed: {2}. Execute the post-patch SQL scripts for these databases: {3}.

Cause: The post-patch SQL scripts were not executed because auto execution of the SQL script was not supported for this database version. Auto execution of the SQL script is not supported for Oracle Database versions prior to 12c.

Action: Execute the 'postinstall.sql' script for these patches if they are located under the SQL patch directory in the Oracle home. Also refer to the patch documentation for these patches and perform any applicable post-patch steps manually.

PRGH-01014: Creation of database {0} at Oracle home location {1} failed because the nodes {2} specified in "-nodes" option are not active

Cause: An attempt to create a database was rejected because the nodes specified in the "-nodes" option were not active.

Action: Specify nodes in the "-nodes" option that are active.

PRGH-01015: Database {0} does not exist

Cause: An attempt to delete a database failed because the specified database did not exist.

Action: Specify a database name of a database that exists within the working copy.

PRGH-01017: failed to retrieve the platform information from the specified Oracle home path "{0}"

Cause: An error occurred while attempting to retrieve the platform information.

Action: Examine the accompanying errors for more information.

PRGH-01018: The creation of database "{0}" at Oracle home location "{1}" failed because the patches for bugs {2} have not been applied.

Cause: An attempt to create a database was rejected because the required patches were not applied to the Oracle home.

Action: Apply the required patches and retry the command.

PRGO-01003 to PRGO-11371**PRGO-01003: Invalid option specified when granting a role to a client user or another role**

Cause: The '-role' option was specified but neither '-user' nor '-grantee' was specified.

Action: Supply the '-user' option or the '-grantee' option when running 'rhpctl grant role' with '-role' option.

PRGO-01004: Invalid option specified when revoking a role from client user or another role

Cause: The '-role' option was specified but neither '-user' nor '-grantee' was specified.

Action: Supply the '-user' option or '-grantee' option when running 'rhpctl revoke role' with '-role' option.

PRGO-01005: Invalid container type "{0}"

Cause: Internal error.

Action: Contact Oracle Support Services.

PRGO-01006: An unsupported 'rhpctl' command was issued on Rapid Home Provisioning Client

Cause: A 'rhpctl' command was submitted on Rapid Home Provisioning Client.

Action: Run the 'rhpctl' command on Rapid Home Provisioning Server.

PRGO-01007: Unable to retrieve Rapid Home Provisioning Server host name

Cause: While accessing GNS, an attempt to retrieve the host name failed.

Action: Make sure that both the GNS and the Rapid Home Provisioning Server are running.

PRGO-01019: Invalid option specified when adding visibility to an image for either client user or role

Cause: Neither the '-identity' option nor the '-role' option was specified

Action: Supply the '-identity' option or the '-role' option when running 'rhpctl allow image'.

PRGO-01020: Invalid option specified when removing visibility from an image for either client user or role

Cause: Neither the '-identity' option nor the '-role' option was specified

Action: Supply the '-identity' option or the '-role' option when running 'rhpctl disallow image'.

PRGO-01021: Invalid option specified when retrieving information for image series

Cause: An invalid combination of the '-series', '-image' and '-client' options was specified.

Action: Supply the correct combination of the '-series', '-image' and '-client' options when running 'rhpctl query series'. Only the following combinations are allowed: 1) no option 2) -client option only 3) -image option only 4) -series option only 5) -series and -client options only

PRGO-01022: Working copy "{0}" already exists.

Cause: An existing working copy of the same name was found when adding a new working copy.

Action: Supply another working copy name or delete the working copy and retry.

PRGO-01028: Disk group "{0}" already exists.

Cause: An existing disk group of the same name was found when adding a new disk group.

Action: Supply another disk group name and retry the operation.

PRGO-01029: Disk group "{0}" does not exist.

Cause: Removal of a disk group failed because the specified disk group was not configured for Rapid Home Provisioning Server.

Action: Supply the name of a disk group that is configured for Rapid Home Provisioning Server.

PRGO-01030: Disk group "{0}" is in use.

Cause: Removal of the disk group failed because the specified disk group was in use for data storage by the Rapid Home Provisioning Server.

Action: Supply another disk group and retry the operation.

PRGO-01031: User "{0}" lacks the authority to perform the 'add role' operation.

Cause: The user running the 'rhpctl add role' command did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-01032: User "{0}" lacks the authority to perform the 'query role' operation.

Cause: The user running the 'rhpctl query role' command did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-01033: User "{0}" lacks the authority to perform the 'delete role' operation.

Cause: The user running the 'rhpctl delete role' command did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-01034: User "{0}" lacks the authority to perform the 'grant role' operation.

Cause: The user running the 'rhpctl grant role' command did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-01035: User "{0}" lacks the authority to perform the 'revoke role' operation.

Cause: The user running the 'rhpctl revoke role' command did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-01036: User "{0}" lacks the authority to perform the 'add image' operation.

Cause: The user running the 'rhpctl add image' command did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-01037: User "{0}" lacks the authority to perform the 'import image' operation.

Cause: The user running the operation on the image did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-01038: User "{0}" lacks the authority to perform the 'delete image' operation.

Cause: The user running the 'rhpctl delete image' command did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-01039: User "{0}" lacks the authority to perform the 'query image' operation.

Cause: The user running the 'rhpctl query image' command did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-01040: User "{0}" lacks the authority to grant viewing access to image "{1}".

Cause: The user running the 'rhpctl allow image' command did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-01041: User "{0}" lacks the authority to disallow viewing access to image "{1}".

Cause: The user running the 'rhpctl disallow image' command did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-01042: User "{0}" lacks the authority to add a new series.

Cause: The user running the 'rhpctl add series' command did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-01043: User "{0}" lacks the authority to add an image to a series.

Cause: The user running the 'rhpctl insertimage series' command did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-01044: User "{0}" lacks the authority to delete a series.

Cause: The user running the 'rhpctl delete series' command did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-01045: User "{0}" lacks the authority to delete an image from a series.

Cause: The user running the 'rhpctl deleteimage series' command did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-01046: User "{0}" lacks the authority to view series.

Cause: The user running the 'rhpctl query series' command did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-01047: User "{0}" lacks the authority to perform the 'delete workingcopy' operation.

Cause: The user running the 'rhpctl delete workingcopy' command did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-01048: User "{0}" lacks the authority to perform the 'query workingcopy' operation.

Cause: The user running the 'rhpctl query workingcopy' command did not have the required authorization.

Action: Request the authorization from your administrator or perform the operation from a user ID that has the required authorization.

PRGO-01049: Rapid Home Provisioning operations cannot be registered with the managed object server

Cause: Operations for the Rapid Home Provisioning application were not registered with the managed object server.

Action: Make sure that the management database is up and running and either the Rapid Home Provisioning Server or the Rapid Home Provisioning Client resource is registered with CRSD.

PRGO-01058: The client name "{0}" supplied is a Rapid Home Provisioning Server (RHPS).

Cause: A RHPS name was received when a Rapid Home Provisioning Client (RHPC) name was expected.

Action: Provide only GHC names to the command.

PRGO-01059: Image "{0}" already exists.

Cause: An existing image of the same name was found when adding a new image.

Action: Supply another image name or delete the existing image and retry.

PRGO-01060: Role "{0}" already exists.

Cause: An existing role of the same name was found when adding a new role.

Action: Supply another role name or delete the existing role and retry.

PRGO-01062: Unable to remove image series "{0}" because it contains images and the '-force' option was not specified.

Cause: An attempt to delete an image series was rejected because the image series contained images.

Action: Either specify the '-force' flag, or delete all images in the image series before attempting to delete the image series.

PRGO-01067: No disk group has been configured for Rapid Home Provisioning Server

Cause: An attempt to retrieve the disk group resources failed because no disk group was configured.

Action: Use the 'rhpctl add diskgroup' command to add a disk group and retry.

PRGO-01068: Failed to connect to Rapid Home Provisioning Server (RHPS)

Cause: An attempt to connect to Rapid Home Provisioning Server (RHPS) failed, possibly because it was not running.

Action: Start Rapid Home Provisioning Server (RHPS) using 'srvctl start rhpsrver' and retry the command.

PRGO-01069: Internal error [# {0} #].

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRGO-01070: Working copy "{0}" cannot be deleted from Rapid Home Provisioning Client cluster "{1}".

Cause: An attempt to delete a working copy failed because the specified working copy had not been created by this Rapid Home Provisioning Client.

Action: Execute the command from the cluster that created this working copy or specify a working copy that was created on this client cluster.

PRGO-01071: Image "{0}" already exists in the series "{1}".

Cause: An attempt to add an image to a series failed because the image was already added to the series.

Action: Supply another image name or delete the existing image and retry.

PRGO-01072: Image "{0}" does not exist in the series "{1}".

Cause: An attempt to delete an image from a series failed because the image was not found in the series.

Action: Supply an existing image name and retry.

PRGO-01073: Rapid Home Provisioning Client "{0}" is disabled.

Cause: The client was disabled and could not run RHPCTL commands.

Action: Contact the Rapid Home Provisioning Server site administrator to enable the client.

PRGO-01074: failed while checking if cluster "{0}" is enabled to run rhpctl commands

Cause: An error occurred while checking if the cluster was enabled.

Action: Examine the accompanying errors for more information.

PRGO-01076: Incorrect syntax in the '-maproles' option: "{0}"

Cause: The syntax of the '-maproles' option supplied was incorrect.

Action: Modify the '-maproles' argument to use the following syntax and retry the command: 'role=username[+username...][,role=username[+username...].]'.
[...]

PRGO-01077: Unable to retrieve Rapid Home Provisioning client host name and port number

Cause: While looking up Rapid Home Provisioning Client connection details in GNS, an attempt to retrieve the host name and port number failed.

Action: Make sure that both the GNS and the Rapid Home Provisioning client are running.

PRGO-01078: unable to retrieve Rapid Home Provisioning Server host name and port number

Cause: While looking up Rapid Home Provisioning Server connection details in Grid Naming Service (GNS), an attempt to retrieve the host name and port number failed.

Action: Make sure that both the GNS and the Rapid Home Provisioning Server are running on the RHPS cluster.

PRGO-01079: Unable to remove image "{0}" because working copies "{1}" have been configured for this image.

Cause: An attempt to delete an image failed because there were working copies configured for the image.

Action: Use the 'rhpctl remove workingcopy' command to remove associated working copies and retry.

PRGO-01081: User "{0}" does not have the role "{1}". The list of roles that the user has is:\n{2}

Cause: An attempt to remove a role from a user failed because the user does not have that role.

Action: Check the arguments supplied and retry the command.

PRGO-01082: User "{0}" for cluster "{1}" was already allowed access to image {2}.

Cause: An attempt to allow access privilege to the user was rejected because the user had already been granted access privilege to the image using the 'rhpctl allow image' command.

Action: Make sure the correct user was specified.

PRGO-01083: Role "{0}" was already allowed access to image "{1}".

Cause: An attempt to allow access privilege to the role was rejected because the role had already been granted access privilege to the image using the 'rhpctl allow image' command.

Action: Make sure the correct role was specified.

PRGO-01084: User "{0}" for cluster "{1}" has never been granted access to image {2}.

Cause: An attempt to disallow the user from access privilege to the image failed because the user had never been granted access privilege to the image using the 'rhpctl allow image' command.

Action: Use the 'rhpctl disallow image' command to disallow access privilege from another user.

PRGO-01085: Role "{0}" has never been granted access to image "{1}".

Cause: An attempt to disallow the role from access privilege to the image failed because the role had never been granted access privilege to the image using the 'rhpctl allow image' command.

Action: Use the 'rhpctl disallow image' command to disallow access privilege from another role.

PRGO-01087: READ privilege cannot be granted for image "{0}" because the image state is NEW.

Cause: An attempt to grant READ privilege for the specified image failed because the image state is NEW."

Action: Use the 'rhpctl promote image' command to promote the image to TESTABLE, RESTRICTED or PUBLISHED state before retrying.

PRGO-01088: READ privilege cannot be removed for image "{0}" because the image state is NEW.

Cause: An attempt to remove READ privilege for the specified image failed because the image state is NEW."

Action: Use the 'rhpctl promote image' command to promote the image to TESTABLE, RESTRICTED or PUBLISHED state before retrying.

PRGO-01090: failed to retrieve the owner of the image "{0}"

Cause: An attempt to retrieve the owner of the image failed.

Action: Examine the accompanying error messages for more information.

PRGO-01091: failed to retrieve the owner of the working copy "{0}"

Cause: An attempt to retrieve the owner of the working copy failed.
