

Oracle® Communications Indexing and Search Service

Release Notes

Release 1.0.5

E67907-03

August 2017

This document provides release notes for Oracle Communications Indexing and Search Service Release 1.0.5, consisting of the following sections:

- [New Features](#)
- [Fixes in This Release](#)
- [Known Limitations](#)
- [Documentation Accessibility](#)

New Features

The new features in this release of Indexing and Search Service are:

- [Improved Bootstrap Performance](#)
- [Optimizing Event Backlog](#)
- [Automatically Checking and Repairing dIndex Problems](#)
- [Support for Java 8](#)
- [Improved Web Services Proxy](#)
- [Indexing and Search Service User Can Manage Services By Using Solaris svcadm Commands](#)
- [-T Option for postpatch_restart and setup Scripts](#)
- [Additional Output for the liststats Option](#)
- [Searching Message Body with OR Terms No Longer Returns Extraneous Matches](#)
- [listbrief Option Has Been Enhanced](#)

Improved Bootstrap Performance

Indexing and Search Service 1.0.5.29 provides new configuration parameters to improve bootstrapping large actions due to the overhead with merge operations. See the `iss.indexsvc.segmentmerge.factor` and `iss.indexsvc.segmentmerge.factor.autoadjust.enabled` parameters, and the topic on improving bootstrap performance for large accounts in *Indexing and Search Service System Administrator's Guide*, for more information.

Optimizing Event Backlog

You can optimize Indexing and Search Service 1.0.5.29 so that the **jmqconsumer** process scans the event backlog and marks the useless events to be skipped before submitting them to the **indexSvc** process. See the **iss.jmqconsumer.useless.event.skip.enabled** configuration parameter, and the topic on optimizing event backlog in *Indexing and Search Service System Administrator's Guide*, for more information.

Automatically Checking and Repairing dIndex Problems

Indexing and Search Service 1.0.5.29 provides the capability to automatically check the dIndex when the **indexSvc** process starts, and to automatically repair some issues that it finds. See the **iss.indexsvc.periodic.autosync.checkstore.enabled** and **iss.indexsvc.periodic.autosync.checkstore.sync.enabled** configuration parameters, and the topic on automatically checking and repairing dIndex problems in *Indexing and Search Service System Administrator's Guide*, for more information.

Support for Java 8

Starting with Indexing and Search Service 1.0.5.29, Java 8 is supported.

Improved Web Services Proxy

The **isshttpsd** proxy in Indexing and Search Service 1.0.5.30 provides an API that enables non-Convergence clients, such as mobile clients, to search Indexing and Search Service. No additional configuration is necessary to be able to use this API.

Indexing and Search Service User Can Manage Services By Using Solaris svcadm Commands

The **setup** script in Indexing and Search Service 1.0.5.30 has been improved so that the Indexing and Search Service user ID (**iss.user**) can manage services through Oracle Solaris Service Management Facility (SMF).

-T Option for postpatch_restart and setup Scripts

Indexing and Search Service 1.0.5.30 has added the **-T** option for **postpatch_restart** and **setup** scripts to improve timeout situations.

Additional Output for the liststats Option

Indexing and Search Service 1.0.5.30 has added additional output to the **liststats** option to display the following autobootstrap statistics:

- Candidates reboot by age
- Candidates from checkstore
- Accounts bootstrapped

See the **iss.store.reboot.age** configuration parameter, and topic about the output of the **liststats** option in *Indexing and Search Service System Administrator's Guide*, for more information.

Searching Message Body with OR Terms No Longer Returns Extraneous Matches

Indexing and Search Service 1.0.5.29 changes the contents of the index for an account to correct a problem where a message body search with OR terms was returning extraneous matches. These changes also remove most of the restrictions on the use of "body" and "text" terms in search queries.

With the changed index, the "body" and "text" terms are now part of the "content terms" kind, and so can be freely mixed in combinations with other content terms like "to," "from," "cc," and so on.

To be able to use this change, rebootstrap accounts to trigger a rebuild of the index:

1. Run the following command:

```
issadmin.sh --listbrief | grep 'separate (legacy)' |awk '{print $2}' &> /var/tmp/rebootlist
```

2. Run the following command:

```
issadmin.sh --setautobootlist /var/tmp/rebootlist --reboot
```

Note: If either autobootstrap or autosync are enabled, the process of rebootstrapping users, and rebuilding their indexes, happens automatically over time.

After you rebootstrap accounts, the content index becomes larger, perhaps as much as double the original size, to support the previous Indexing and Search Service search capabilities. However, if your deployment does not use the attachment store (nor the Convergence attachment window view), you can reduce the size of the index to approximately the original size by using the **iss.indexsvc.attachment.indexmode** configuration parameter. The default value is **full**, which generates all attachment records along with the new "fullcontents" field. To reduce the index size, set this parameter to **IMAPonly**, and the indexing service generates only the new "fullcontents" field.

listbrief Option Has Been Enhanced

In Indexing and Search Service 1.0.5.30, when the **--selectstate** *statelist* command is specified with the **--listbrief** option, only users in the selected state are displayed

Fixes in This Release

This section lists the fixed issues in this release of Indexing and Search Service.

Table 1 Fixes in Indexing and Search Service 1.0.5.29 and 1.0.5.30

Bug Number	Customer SR	Notes
25490517	3-14204991011	The setup script timeout is now configurable. See " -T Option for postpatch_restart and setup Scripts " for more information.
25367495	3-14006074461	See " Indexing and Search Service User Can Manage Services By Using Solaris svcadm Commands " for more information.
25178199	N/A	Autoreboot candidates have been added to the liststats option. See " Additional Output for the liststats Option " for more information.
24341871	3-13067221031	You can configure Indexing and Search Service to use a standby Indexing and Search Service server for autobootstrapping accounts. The bootstrap event on the standby server is delayed so that it only runs when the main Indexing and Search Service server is done bootstrapping the user. See the topic about replicating autobootstrap events to a standby server in <i>Indexing and Search Service System Administrator's Guide</i> for more information.
22750583	3-14140106191, 3-12059238051	The checkIss command now gives time reporting on the tests that it is running.
21505813	3-11090833741	The --listbrief option has been enhanced to filter on account state.
17969121	3-8251849101, 3-10282967771	A problem as been corrected where search queries on a message body using OR terms was returning extraneous matches. See " Searching Message Body with OR Terms No Longer Returns Extraneous Matches " for more information.

Known Limitations

This section lists the known limitations in this release of Indexing and Search Service.

Patch Upgrade Fails on a Configured Patch

SR number: NA

Bug number: 18896930

When you run a patch upgrade on a configured patch, it fails.

Workaround:

When upgrading by using an Indexing and Search Service Automated Release Update (ARU) patch, you must run following commands:

```
commpkg upgrade  
IndexSearch_home/bin/setup -u  
IndexSearch_home/bin/setup
```

where *IndexSearch_home* specifies the installation location for the Indexing and Search Service software. The default is **/opt/sun/comms/jiss**.

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.
