## DMS-50700 to DMS-58075

### DMS-50700: initialization error

**Cause:** (See message)

**Action:** Review the exception chain in log files for the cause and correct the specific problem.

**Level:** 1

**Type:** ERROR

**Impact:** Configuration

### DMS-50701: security error

**Cause:** (See message)

**Action:** Review the exception chain in log files for the cause and make sure that the appropriate permission has been granted.

**Level:** 1

**Type:** ERROR

**Impact:** Security

### DMS-50702: The DMS Java class "{0}" could not be found.

**Cause:** (See message)

**Action:** Review the classpath of the application and ensure that the class is available in a jar file or directory listed therein.

**Level:** 1

**Type:** ERROR

**Impact:** Configuration

### DMS-50703: The LogWriter name "{0}" is reserved.

**Cause:** (See message)

**Action:** Use a different name.

**Level:** 1

**Type:** ERROR

**Impact:** Logging

### DMS-50704: unable to create a new LogWriter: {0}

**Cause:** (See message)

---

**Action:** Review the exception chain in log files for the cause and correct the specific problem.

**Level:** 1

**Type:** ERROR

**Impact:** Logging

**DMS-50705: attempting to create a concrete LogWriter instance with an invalid class ({0})**

**Cause:** (See message)

**Action:** Correct the declaration for the LogWriter to use a valid class.

**Level:** 1

**Type:** ERROR

**Impact:** Logging

**DMS-50706: invalid configuration property: name = "{0}", value = "{1}"**

**Cause:** (See message)

**Action:** Remove the property or correct its name or value to comply with the set of supported property names. If the property value is at fault then reviewing the base exception may provide more information on the manner of the fault (e.g. missing class, invalid directory name).

**Level:** 1

**Type:** WARNING

**Impact:** Configuration

**DMS-50707: unable to load configuration file "{0}"**

**Type:** WARNING

**Impact:** Other

**DMS-57003: Failed to process the serialized DMS execution context {0} sent by {1} (user-agent: {2}) when requesting the resource {3}.**

**Cause:** By scrutinizing the incoming HTTP request DMS has attempted to detect and, if appropriate, make use of a wrapped execution context. That process has failed. This should not affect the processing of the servlet handling the request, but the ability to correlate the processing of this request with others to which it may related will have been adversely affected. A DMS execution context is an object that contains context information about the piece of work being performed at a particular moment in time. The type of context information carried by the DMS execution context may include the URL of the http request, the unique correlation key (ECID) assigned to that piece of work, etc - information that is useful for tracking requests though the system. The execution context does not carry user names, passwords or general application parameters. The DMS execution context should not be confused with application specific context objects, such as ADF-context or Faces-context, which are vital to the accurate execution of the application concerned.

**Action:** Contact Oracle Support Services.

**Level:** 1

**Type:** WARNING

**Impact:** Other

**DMS-57004: Failed to initialize the DMS trace to be associated with DMS execution context {0}, that itself is associated with a request of resource {1}.**

**Cause:** A problem has occurred in the initialization of the trace system for this request. This should not affect the processing of the servlet handling the request but will be a problem if the trace (aggregate, debug or triggered) data was of value to the system's administrator.

**DMS-57005: Failed to terminate the DMS trace associated with DMS execution context {0}, that itself is associated with a request of resource {1}.**

**Cause:** A problem has occurred in the finalization of the trace system for this request. This should not affect the processing of the servlet handling the request but will be a problem if the trace (aggregate, debug or triggered) data was of value to the system's administrator.

---

**DMS-57006: Failed to deactivate the DMS execution context, {0}, associated with a request of resource {1}.**

**Cause:** A problem has occurred in the termination of the DMS execution context in place during the processing of the HTTP request. This should not affect the servlet handling the request, but may result in an invalid execution context being in place for the processing of future requests and possibly prevent accurate trace data from being gathered.

**Action:** Contact Oracle Support Services.

**Level:** 1

**Type:** WARNING

**Impact:** Other

**DMS-57007: Failed to url-decode a serialized execution context ({0}) due to a problem in the decoding process itself: {1}**

**Cause:** A problem has occurred while trying to url-decode a wrapped execution context found as a url-parameter. The consequence is that the execution context being passed from client to server can not be used. A failure in the DMS execution context feature does not generally result in a complete failure of the system or application making use of it, but it can result in misleading trace output or misleading correlation keys (ECID) in log messages: generally only the administrator will be aware of such changes in the behavior of an affected application.

**Action:** Determine if there is any code in the system that integrates with the Oracle DMS Context API (java package oracle.dms.context) but was not produced by Oracle. If there is no such code then contact Oracle Support Services. Otherwise scrutinize and test the non-Oracle code, and if necessary contact Oracle Support Services.

**Level:** 1

**Type:** WARNING

**Impact:** Other

**DMS-57008: The execution context put in place at the start of the request, {0}, is not the execution context in place at the end of the request, {1}. The request is as follows: {2}**

**Cause:** When enabled to do so DMS associates an execution context with the resources (typically a thread) assigned to process an incoming request. In this case the context that DMS assigned at the start of the processing is not the one in place at the end of the processing. At some point during the processing the context has been changed. This could result in the loss of the ability to correlate the work performed across the complete request lifecycle for this request. A failure in the DMS execution context feature does not generally result in a complete failure of the system or application making use of it, but it can result in misleading trace output or misleading correlation keys (ECID) in log messages: generally only the administrator will be aware of such changes in the behavior of an affected application.

**Impact:** Other

**DMS-58006: Problem encountered while removing old files from trace output directories.**

**Cause:** DMS was attempting to remove old files from the trace output directories but for some reason (see base exception) has failed.

**Action:** The system is unlikely to fail as a consequence of this error, but disk space will be used that would otherwise have been released. Refer to the base exception to see if the problem can be addressed, and consider deleting unrequired files manually (DMS no longer needs these old files so any or all of them can be removed).

**Level:** 1

**Type:** WARNING

**Impact:** Files

**DMS-58007: Problem encountered when closing file and associated streams.**

**Cause:** As part of the termination of a normal read or write operation on a file the file could not be closed.

**Action:** If a file can not be properly closed then the operating system's file-handle associated with that file may not be properly released. An operating system can manage only a finite number of file-handles and if they are not released then new file-handles can not be created. One consequence of a depletion of file-handles is that file input/output on the machine concerned may be forced to come to a stop. It is more likely, however, that this is a one-off problem and that Java will tidy up the file-handle internally. This type of problem suggests a problem with either the JVM, the operating system or the state of the machine on which they are running. Review the base exception to see if the issue can be resolved (e.g. memory issues, disk space issues, file access issues, etc.). In order to understand the scale of the problem continue to monitor the system for similar or related issues. If necessary stop and start the product to fully reinitialize the JVM on which it runs.

**DMS-58013: Problem encountered aggregating trace: {0}.**

**Cause:** DMS has failed to perform the aggregation process on the trace data collected during the handling of this particular task or servlet request. A DMS trace is composed of a series of DMS trace events that represent an operation performed within DMS. Examples of trace events are: a sensor update, the start and end of an HTTP request. An aggregate trace is the result of aggregating trace data for tasks (typically HTTP requests) associated with the same URI. Failure to perform the aggregation processing for this task will mean that the summary data for the URI concerned will not be accurate.

**Action:** Review exception details and the log for any seemingly related messages. If the problem has come from the JVM itself: This type of problem suggests a problem with either the JVM, the operating system or the state of the machine on which they are running. Review the base exception to see if the issue can be resolved (e.g. memory issues, disk space issues, file access issues, etc.). In order to understand the scale of the problem continue to monitor the system for similar or related issues. If necessary stop and start the product to fully reinitialize the JVM on which it runs. Failure to perform the aggregation processing for this task will mean that the summary data for the URI concerned will not be accurate.

A DMS trace is composed of a series of DMS trace events that represent an operation performed within DMS. Examples of trace events are: a sensor update, the start and end of an HTTP request. An aggregate trace is the result of aggregating trace data for tasks (typically HTTP requests) associated with the same URI.

**Action:** If aggregate trace information is not required for this request there is no action required. Otherwise please review the value of the system property `oracle.dms.trace.maxAggregates`.

**Level:** 1

**Type:** WARNING

**Impact:** Other

**DMS-58018: Cannot delete old trace file: {0}.**

**Cause:** An attempt to delete a file system file has failed (the deletion attempt was intended to keep files organized and their number manageable). The system is unlikely to fail as a consequence of this error, but disk space will be used that would otherwise have been released.

**Action:** This type of problem suggests a problem with either the JVM, the operating system or the state of the machine on which they are running. Review the base exception to see if the issue can be resolved (e.g. memory issues, disk space issues, file access issues, etc.). In order to understand the scale of the problem continue to monitor the system for similar or related issues. If necessary stop and start the product to fully reinitialize the JVM on which it runs.

**Level:** 1

**Type:** WARNING

**Impact:** Files

**DMS-58019: Cannot generate aggregate trace data because the trace system failed initialization.**

**Cause:** (See message)

**Action:** Review the log files for reports of other problems relating to initialization failure. Where possible correct those other problems and restart the system. Failure of the trace subsystem should not affect the ability of the system to execute, but will prevent traces from being produced.

**Level:** 1

**Type:** WARNING

**Impact:** Other

**DMS-58020: failure writing DMS configuration file {0}**

**Cause:** An error occurred attempting to save the DMS configuration file.

**Action:** Check that the process has permission to write the configuration file. Review log files for more information on this issue.

**Level:** 1

**Type:** WARNING

**Impact:** Files

**DMS-58021: failure loading DMS configuration file {0}**

**Cause:** An error occurred attempting to load the DMS configuration file.

**Action:** Check that the process has permission to read the configuration file, and the file exists. Review log files for more information on this issue.

**Level:** 1

**Type:** WARNING

**Impact:** Files

**DMS-58022: failure registering DMS configuration MBean {0}**

**Cause:** An error occurred attempting to register the DMS configuration MBean.

**Action:** Check that the J2EE container is up. Review log files for more information.

**Level:** 1

**Type:** WARNING

**Impact:** Configuration

**DMS-58023: There has been a failure activating the DMS configuration. Failed to close the event configuration file for server "{0}".**

**Cause:** An error occurred attempting to activate the DMS configuration.

**Action:** Review the log files for more information.

**Level:** 1

**Type:** WARNING

**Impact:** Configuration

**DMS-58025: cannot instantiate class {0} for destination with id = {1}**

**Cause:** A Destination could not be created at runtime.

**Action:** Check that the Destination has been configured correctly.

**Level:** 1

**Type:** WARNING

**Impact:** Configuration

**DMS-58026: cannot not set property {0} on an instance of class {1} for destination with id = {2}**

**Cause:** The configuration of a destination specified one or more properties to be set on the destination before the destination was used. A problem was encountered trying to set the property listed in the message the precise details of which are also shown in the message.

**Action:** Verify that the property exists on the class being instantiated as the destination, and that the value is legal for that property.

**Level:** 1

**Type:** WARNING

---

**Impact:** Configuration

**DMS-58028: will not associate filter {0} and destination {1} - one or both are null or have null IDs.**

**Cause:** (See message)

**Action:** Check the configuration of the filter and destination, and search the log file for other messages that may report problems creating instances of the filter or destination.

**DMS-58032: Can not remove a filter using a null or empty filter ID.**

**Cause:**

**Action:**

**Level:** 1

**Type:** WARNING

**Impact:** Configuration

**DMS-58033: Can not associate a destination, id={0}, with a filter, id={1} if the filter declares that it will not pass any events.**

---

**Cause:** An instance of a filter should declare the set of event types in which it has an interest. In this particular case the set is empty and thus the filter is apparently interested in no events at all. Such a filter serves no sensible purpose and therefore will be ignored.

**Action:** Check the log file for other error relating to this filter to see if there were problems in its construction. Also verify the configuration of the filter and its associated destination (some filters are created implicitly to cooperate with a destination, so the configuration may only specify details of the destination).

## DVT-02012 to DVT-26021

**DVT-02012: Column {0} exceeds boundary {1}.**

**Cause:** The specified column number was greater than the total number of columns.

**Action:** Get the total number of columns, by calling the getColumnCount method of the graph or of the column header in the pivot table. Then specify a column that does not exceed the total number of columns.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-02013: Row {0} exceeds boundary {1}.**

**Cause:** The specified row number was greater than the total number of rows.

**Action:** Get the total number of rows, by calling the getRowCount method of the graph or of the column header in the pivot table. Then specify a row that does not exceed the total number of rows.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-02015: Slice {0} exceeds boundary {1}.**

**Cause:** The specified slice number was greater than the total number of slices.

**Action:** Specify a slice that does not exceed the total number of slices.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-02016: Layer {0} exceeds boundary {1}.**

**Cause:** The specified layer was greater than the total number of layers that are available on the given edge.

**Action:** Specify a layer that does not exceed the total number of layers.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

---

**DVT-02017: Series {0} exceeds boundary {1}.**

**Cause:** The specified series was greater than the total series that is available in the graph.

**Action:** Specify a zero-based series index that does not exceed the total series. The `Graph.getDisplaySeries` method should provide the number of series that are displayed in the graph. Or, if `Graph.isDataRowShownAsASeries` returns true, then `Graph.getRowCount` returns the number of series that can be displayed. If `Graph.isDataRowShownAsASeries` returns false, then `Graph.getColumnCount` returns the total number of series that can be displayed.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-02018: Edge {0} exceeds boundary {1}.**

**Cause:** The specified edge was greater than the total number of edges that are available on the given edge. Valid edges for methods that require an edge are: `DataDirector.COLUMN_EDGE`, `DataDirector.ROW_EDGE`, and `DataDirector.PAGE_EDGE`.

**Action:** Specify a valid edge constant.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-02019: Current DataSource does not support required type: {0}.{1}.**

**Cause:** The `DataSource` did not support the required type of data in its `DataMap`. For example, the view requested `DataMap.DATA_GROUPSORT` information, and the `DataSource` that the view uses did not supply group sort information.

**Action:** Request support for the required data types in the `DataSource`, or use a different `DataSource`.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-02020: DTD file cannot be found.**

**Cause:** The specified DTD could not be found. The XML parser needed the DTD in order to validate XML files.

**Action:** Ensure that the specified DTD file exists, or disable XML validation. DTDs for Data Visualization components are in their respective packages. To turn off validation, call `Dataview.setXMLValidated(false)`;

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-03000: No Mergeable object is provided.**

**Cause:** No default Mergeable object was provided to resolve rules.

---

**Action:** Provide at least one default Mergeable object, so that rules can be resolved. For more information about Mergeable objects, see the Javadoc for the `oracle.dss.rules.Mergeable` interface.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-03001: attempt to call `merge(Mergeable)` on an incompatible Mergeable class**

**Cause:** An attempt was made to merge incompatible Mergeable classes. Only Mergeable objects of the same class can be merged. For example, `ViewStyle` objects can be merged, but a `ViewStyle` cannot be merged with a `ViewFormat`.

**Action:** Merge two classes that are compatible. For more information, see the Javadoc for the `oracle.dss.rules.RuleBundle` class.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-06000: unexpected data error from Pivot Table data model**

**Cause:** An unexpected exception was thrown by the Pivot Table's data model.

**Action:** Log a bug against the application. Verify that the Pivot Table's data model is configured properly.

**Level:** 1

**Type:** ERROR

**Impact:** Data

**DVT-06001: no Converter for data type {0} during Pivot Table text formatting**

**Cause:** The application could not create a Converter for a specific data type. The most likely reason was that a Converter was not registered for that data type.

**Action:** Log a bug against the application. Verify that the application can create a default Converter for all data types rendered by the Pivot Table.

**Level:** 1

**DVT-07001: cannot create Graph image**

**Cause:** Under heavy loads, there was not enough memory to create the `BufferedImage`, or the `Graphics` instance from the `BufferedImage`. Therefore, the generated image file is empty.

**Action:** Reduce the memory load; for example, reduce the image size or allocate more memory to the JVM.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-08000: unexpected data error from Data Model**

**Cause:** An invalid operation was performed by Data Model.

---

**Action:** Log a bug against the application. Verify that the Data model is configured properly.

**Level:** 1

**Impact:** Data

**DVT-22004: cannot create Gauge image**

**Cause:** Under heavy loads, there was not enough memory to create the BufferedImage, or the Graphics instance from the BufferedImage. Therefore, the generated image file is empty.

**Action:** Reduce the memory load; for example, reduce the image size or allocate more memory to the JVM.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-23000: End date cannot be earlier than start date.**

**Cause:** The end date specified for the Gantt chart was earlier than the specified start date.

**Action:** Specify a correct start date and end date for the Gantt chart.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-23001: The time unit in the major axis must be greater than the time unit in the minor axis.**

**Cause:** The time unit specified in the major axis was not greater than the time unit specified in the minor axis. For example, if "days" was specified as the time unit for the minor axis, then the time unit specified in the major time axis must be greater than "days", such as "months", and not anything less, such as "hours".

**Action:** Ensure that the time unit in the major axis is greater than the time unit in the minor axis.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-23002: An invalid time scale is specified.**

**Cause:** The specified time scale in the major or minor axis was not recognized.

**Action:** Specify a valid time scale for the axis.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**DVT-23003: End date of a task cannot be earlier than its start date. Start date: {0}, End date: {1}**

**Cause:** The end date specified for the task was earlier than its start date.

---

**Action:** Check the data to ensure that the start date and end date are loaded correctly.

**Level:** 1

**Type:** WARNING

**Impact:** Data

**DVT-23004: No tooltip keys or labels are specified.**

**Cause:** No tooltip keys or labels were specified in the Gantt tag.

**Level:** 1

**Type:** WARNING

**Impact:** Programmatic

**DVT-23005: No legend keys or labels are specified.**

**Cause:** No legend keys or labels were specified in the Gantt tag.

**Action:** Specify keys and labels for the legend to ensure that the legend is not empty.

**Level:** 1

**Type:** WARNING

**Impact:** Programmatic

**DVT-23006: The number of tooltip keys does not match the number of tooltip labels.**

**Cause:** The number of tooltip keys did not match the number of tooltip labels specified in the Gantt tag.

**Action:** Ensure that the number of tooltip keys specified in the Gantt tag (tooltipKeys attribute) matches the tooltip labels specified in the Gantt tag (tooltipLabels attribute).

**Level:** 1

**Type:** WARNING

**Impact:** Programmatic

**DVT-23007: The number of legend keys does not match the number of legend labels.**

**Cause:** The number of legend keys did not match the number of legend labels specified in the Gantt tag.

**Action:** Ensure that the number of legend keys specified in the Gantt tag (legendKeys attribute) matches the legend labels specified in the Gantt tag (legendKeyLabels attribute).

**Level:** 1

**Type:** WARNING

**Impact:** Programmatic

**DVT-23008: The start date of the task is out of range. Value: {0}**

---

**Cause:** The start and end date of a task was outside of the time range specified for the Gantt chart.

**Action:** No action necessary, if it is okay not to show the task. Otherwise, verify data is correct or specify a wider time range for the Gantt chart (using the `startTime` and `endTime` attributes)

**Level:** 1

**Type:** WARNING

**Impact:** Data

**DVT-23009: cannot find format for type {0}; skipping task: {1}**

**Cause:** No format for type {0} was registered.

**FRM-91129: runtime process: no value specified for required environment variable {0}**

**Cause:** A required environment variable was not set or was set to the empty string. Execution of the runtime process might have been terminated, or it might have continued. In the latter case, the functionality that required this environment variable was disabled.

**Action:** If this error message appears for DOMAIN\_HOME or FORMS\_INSTANCE\_NAME, and the problem persists, contact Oracle Support Services. Otherwise, set the environment variable to a non-empty value.

**Level:** 1

**Type:** ERROR

**Impact:** Configuration

**FRM-91137: runtime process: unable to open log file {0}**

**Cause:** An invalid name was specified for a log file or a trace file. The name might be too long, or it might specify a non-existent or read-only directory. In the former case, the error message shows the name truncated at the maximum allowable length, followed by 3 dots. Execution of the runtime process might have been terminated, or it might have continued. In the latter case, messages that subsequently would have been written to the file were silently discarded.

**Action:** Correct the environment variable used to specify the directory (e.g. FORMS\_TRACE\_DIR), and/or the file name proper (which might have been specified e.g. by the value of the 'log' configuration parameter). If no environment variable or configuration parameter was set to specify the directory or the file name proper, and the problem persists, contact Oracle Support Services.

**FRM-91145: fatal error in runtime process: missing serverArgs parameter**

**Cause:** If this error occurred when using the Forms Servlet, both the serverArgs configuration parameter and the serverArgs applet parameter (either of which can represent the command-line arguments that are passed to the frmweb executable) were either missing or had a blank value. If this error occurred for static HTML (HTML that's not generated by the Forms Servlet), the serverArgs applet parameter was either missing or had a blank value.

**Action:** If this error occurred for static HTML, add a serverArgs parameter to the applet. Otherwise, ensure that the Forms Servlet configuration file or the base HTML files correctly define a serverArgs parameter. [Note that the base HTML files that are shipped with the produce omit the serverArgs parameter, but the shipped Forms Servlet configuration file specifies a non-blank value.]

**FRM-91990: runtime process: A maximum of {0}K bytes were simultaneously allocated for archived record data.**

**Cause:** The runtime process allocated the indicated amount of memory without reserving swap space or /tmp file space. The memory will be included in many reports of memory usage (such as the output of the Linux pmap command), but it will not consume system resources (real memory or disk) until it is actually used for archived record data. (See FRM-91992).

**Action:** No action is required.

**Level:** 1

**Type:** TRACE

**FRM-91991: runtime process: A maximum of {0}K bytes were simultaneously allocated and reserved for archived record data.**

---

**Cause:** The runtime process allocated the indicated amount of memory, and reserved swap space or /tmp file space for it.

**Action:** No action is required. However, if the number reported by this message is significantly larger than the number reported by FRM-91992 and you are using mapped-memory archiving (FORMS\_RECMGR\_ARCHIVE unset, or set to MAP\_SWAP or MAP\_TMPFILE), you may want to reduce the value of FORMS\_RECMGR\_BLOCK\_SIZE (which defaults to 64K when memory is being reserved, but can be set as low as 32K). Better yet, don't reserve memory that's allocated for archived record data, if possible. (This can be accomplished in most Unix installations, by setting FORMS\_RECMGR\_RESERVE\_SPACE to '0').

**Level:** 1

**Type:** TRACE

**Impact:** Performance

**FRM-91992: runtime process: A maximum of {0}K bytes were simultaneously in use for archived record data.**

**Cause:** The runtime process used the indicated amount of memory for archived record data. Specifically, at time of maximum usage, it (the runtime process) had written data into the pages of memory, and the data was still needed at that point (because there was a possibility that the record might subsequently need to be activated). Note that when FORMS\_RECMGR\_ARCHIVE has been set to WRITE\_TMPFILE, the runtime process has no way of notifying the file system when it no longer needs a page, and so the file system may retain an unneeded page in a real-memory buffer for a while. Thus, in this case the number reported by this message should be viewed as lower bound.

**Action:** No action is required. However, the numbers reported by this message for various applications may help to determine an appropriate value for FORMS\_RECMGR\_ARCHIVE\_THRESHOLD.

**Level:** 1

**Type:** TRACE

**Impact:** Performance

**FRM-91994: runtime process: Record groups required {0}K bytes for archived record data, plus approximately {1}K additional bytes for active record data and record anchors. If FORMS\_RECMGR\_USED\_FOR\_RECGRPS were set to FALSE, a total of approximately {2}K bytes would instead have been required.**

**Cause:** At the point in time when total memory for archived record data was at its maximum (as reported by FRM-91992), the runtime process used the sum of the first two amounts for all data and anchors for all records in record groups, but would instead have used the third amount if FORMS\_RECMGR\_USED\_FOR\_RECGRPS had been set to FALSE.

**Action:** No action is required. However, the numbers reported by this message for various applications may help to determine the appropriate value for FORMS\_RECMGR\_USED\_FOR\_RECGRPS. [Bear in mind that TRUE (the default) requires more CPU than FALSE.]

**Type:** ERROR

**Impact:** Configuration

**FRM-93114: Forms Servlet configuration file {0} contains invalid data.**

**Cause:** A syntax error was detected while parsing the specified file.

**Action:** A preceding FRM-93113 or FRM-93142 error message will provide more information. Take the action indicated for the FRM-93113 or FRM-93142 message.

**Level:** 1

**Type:** ERROR

**Impact:** Configuration

**FRM-93121: Cannot find environment variable configuration file {0}.**

**Cause:** One of the following occurred. (The first is by far the most likely.) Note that an envFile parameter may specify a relative path; if it was not found in the current directory, Forms will search for it in the directory that contains the Forms Servlet configuration file. 1. The envFile configuration parameter for this application specified a nonexistent file. A preceding FRM-93141 error message provides details. 2. The envFile configuration parameter for this application specified a file that existed when the Forms Servlet extracted the parameter, but the file subsequently disappeared. 3. No envFile configuration parameter that would apply to this application was specified, and the envFile servlet parameter specified a nonexistent file.

**Action:** Take action depending on the cause. 1. Take action indicated for the preceding FRM-93141 error message. 2. Re-create the file, or correct the envFile configuration parameter. 3. Verify that the envFile servlet parameter specifies the correct value. Create the file if necessary.

**Level:** 1

**Type:** ERROR

**Impact:** Configuration

**FRM-93122: error reading environment variable configuration file {0}**

**Cause:** An I/O error occurred while reading the specified file.

**Action:** If the error persists, determine if the file has been damaged. Re-create the file if necessary.

**Level:** 1

**Type:** ERROR

**Impact:** Files

---

**FRM-93124: Environment variable configuration file {0} contains invalid data.**

**Cause:** The specified configuration file contained an invalid section name.

**Action:** Provide a valid section name.

**Level:** 1

**Type:** ERROR

**Impact:** Configuration

**FRM-93130: No base HTML file is specified.**

**Cause:** Java Web Start was not enabled, but the basehtml configuration parameter was not specified, nor was the basehtmljpi configuration parameter, where relevant. (See Oracle Fusion Middleware Forms Services Deployment Guide for details about which configuration parameter is appropriate.) The FRM-93140 error message provides details about which configuration sections were searched. (Note that the error message will always refer to the basehtml configuration parameter, not the basehtmljpi configuration parameter.)

**Action:** Specify the appropriate configuration parameter.

**Level:** 1

**Type:** ERROR

**Impact:** Configuration

**FRM-93131: Cannot find base HTML file {0}.**

**Cause:** Java Web Start was not enabled, but the specified base HTML file was not found. This file is typically specified by the basehtml configuration parameter, but in certain cases may be specified by the basehtmljpi configuration parameter. The FRM-93141 error message provides details. Note that the parameter may specify a relative path; if the file is not found in the current directory, Forms will search for the file in the directory that contains the Forms Servlet configuration file.

**Action:** Verify that the parameter specifies the correct file. Create the file if necessary.

**Level:** 1

**Type:** ERROR

**Impact:** Configuration

**FRM-93132: error reading base HTML or JNLP file {0}**

**Cause:** An I/O error occurred while reading the specified file.

**Action:** If the error persists, determine if the file has been damaged. Re-create the file if necessary.

**Level:** 1

**Type:** ERROR

**Impact:** Files

**FRM-93134: No base JNLP file is specified.**

**Cause:** Java Web Start was enabled or a JNLP file was embedded in the HTML file, but the basejnlp configuration parameter was not specified. The FRM-93140 error message provides details about which configuration sections were searched.

**Action:** Specify the basejnlp configuration parameter.

**Level:** 1

---

**Type:** ERROR

**Impact:** Configuration

**FRM-93135: Cannot find base JNLP file {0}.**

**Cause:** Java Web Start was enabled or a JNLP file was embedded in the HTML file, but the specified base JNLP file was not found. This file is specified by the basejnlp configuration parameter. The FRM-93141 error message provides details. Note that the parameter may specify a relative path; if the file is not found in the current directory, Forms will search for the file in the directory that contains the Forms Servlet configuration file.

**Action:** Verify that the basejnlp parameter specifies the correct file. Create the file if necessary.

**Level:** 1

**Type:** ERROR

**Impact:** Configuration

**FRM-93136: no base TXT file specified for Oracle Forms Standalone Application**

**Cause:** The baseSAAfile configuration parameter was not specified.

**Action:** Specify the baseSAAfile configuration parameter.

**FRM-93140: Section [{0}] of Forms Servlet configuration file {1} does not specify (or inherit) a value for the required parameter {2}.**

**Cause:** A required configuration parameter was not specified in the indicated configuration section or in a parent section.

**Action:** Specify the parameter value in the indicated section, or in a parent section. (See Oracle Fusion Middleware Forms Services Deployment Guide for details about what values are expected.)

**Level:** 1

**Type:** ERROR

**Impact:** Configuration

**FRM-93141: Section [{0}] of Forms Servlet configuration file {1} specifies the nonexistent file {2} for parameter {3}.**

**Cause:** A configuration parameter in the indicated configuration section specified the name of a nonexistent file.

---

**Action:** Verify that the parameter specifies the correct file. Create the file if necessary.

**Level:** 1

**Type:** ERROR

**Impact:** Configuration

**FRM-93142: Section [{0}] of Forms Servlet configuration file {1} specifies the invalid value "{2}" for parameter {3}.**

**Cause:** An invalid configuration parameter value was specified in the indicated configuration section. Note that invalid values for certain crucial parameters (such as HTMLdelimiter) will cause a subsequent error, FRM-93114.

**Action:** Correct the parameter value. (See Oracle Fusion Middleware Forms Services Deployment Guide for details about what values are expected.)

**Level:** 1

**Type:** ERROR

**Impact:** Configuration

**FRM-93145: Oracle Forms Standalone Launcher version parameter is missing.**

**Cause:** The request received from Oracle Forms Standalone Launcher does not contain Oracle Forms Standalone Launcher version information.

**Action:** Get the latest Oracle Forms Standalone Launcher file.

**Level:** 1

**Type:** ERROR

**Impact:** Configuration

**FRM-93146: Oracle Forms Standalone Launcher version {0} does not match server version {1}.**

**Cause:** Oracle Forms Standalone Launcher jar is outdated.

**Action:** Get the latest Oracle Forms Standalone Launcher file.

**Impact:** Configuration

**FRM-93153: New connections to this Forms Servlet are not being allowed.**

**Attempting to redirect connection attempt to {0}.**

**Cause:** The allowNewConnections configuration parameter was false, and a value was specified for the connectionDisallowedURL configuration parameter. Redirection will be attempted to that URL.

**Action:** No action is required.

**Level:** 1

**Type:** NOTIFICATION

**Impact:** Configuration

**FRM-93154: The Forms Servlet is not allowing new connections.**

**Cause:** The allowNewConnections configuration parameter was false, and either no value was specified for the connectionDisallowedURL configuration parameter, or else redirection to the specified URL failed.

**Action:** If a value is specified for the connectionDisallowedURL configuration parameter (as indicated in error message FRM-93153), check to see if the specified URL is malformed; if so, correct the URL. Otherwise, no action is required.

**Level:** 1

**Type:** NOTIFICATION

**Impact:** Configuration

**FRM-93156: The Forms Servlet is unable to contact the Forms Load Balancing Server at {0}:{1}.**

**Cause:** The Forms Servlet was unable to contact the indicated Forms Load Balancing Server, and the MetricsServerErrorURL configuration parameter was not specified.

**Action:** Do one or both of the following. 1. Determine why the server is unavailable, and correct the condition. 2. Specify a value for the MetricsServerErrorURL parameter in the Forms Servlet configuration file.

**Type:** NOTIFICATION

**Impact:** Configuration

**FRM-93196: Process list file {0} does not exist or is not writable; process list disabled.**

**Cause:** When a runtime process was started or stopped, an attempt was made to write an updated list of runtime processes to the specified file, but it did not exist or was not writable. Note that the name of the process list file is obtained from the em\_process\_file parameter in the URL, the Forms Servlet configuration file, or the environment variable configuration file.

**Action:** Verify that the em\_process\_file parameter specifies the correct file. If necessary, create the file or make it writable, or both.

**Level:** 1

**Level:** 1

**Type:** ERROR

---

**Impact:** Configuration

**FRM-93211: error decoding query string using {0} encoding. Spaces generated from "+" in the value of otherparams may be converted to "%20".**

**Cause:** There was a mismatch between the way that the browser encoded multibyte characters and the way that the Forms Servlet decoded them. This could indicate an invalid value for the defaultcharset parameter in the configuration file, or possibly a problem in either the browser or Oracle software.

**Action:** If the site uses the otherparams parameter in any URLs, verify that the defaultcharset parameter in the configuration file is correct; if the defaultcharset parameter is correct, contact Oracle Support Services. Otherwise, no action is required.

**Level:** 1

**Type:** WARNING

**Impact:** Configuration

**FRM-93214: internal buffer ({0} bytes) not big enough to read request content ({1} bytes)**

**Cause:** An internal buffer was not big enough to read the content of a request from the Java client. The FRM-93214 error message provides supplemental detail for the FRM-93218 error message.

**Action:** If the problem persists, contact Oracle Support Services.

**Level:** 1

**Type:** ERROR

**Impact:** Requests/Responses

**FRM-93217: unable to read whole request from client: expected {0}, got {1}**

**Cause:** A fatal error occurred while reading the content of a request from the Java client. The FRM-93217 error message provides supplemental detail for the FRM-93218 error message.

**Action:** Check for problems on the network that connects the Forms Java Client with the Forms Listener Servlet.

**Level:** 1

**Type:** ERROR

**Impact:** Requests/Responses

**FRM-93218: fatal error reading client request content**

**Cause:** A fatal error occurred while attempting to read the content of a request from the Java client. A preceding FRM-93214 or FRM-93217 error message might provide more detail.

**Action:** Check for problems on the network that connects the Forms Java Client with the Forms Listener Servlet.

**Level:** 1

**Type:** ERROR

**Impact:** Requests/Responses

**FRM-93228: fatal error writing response to client**

**Cause:** A fatal error occurred while writing a response to the Forms Java client.

---

**Action:** Check for problems on the network that connects the Forms Java Client with the Forms Listener Servlet.

**Level:** 1

**Type:** ERROR

**Impact:** Requests/Responses

**FRM-93240: Multiple Forms applications cannot share an HTTP session.**

**Cause:** A Forms application was launched in such a way that it attempted to share an HTTP session with an already running Forms application. This might result from one of the following:1. The user selected File, then New, then Browser Window (or Ctrl+N) in Internet Explorer while the servlet session was being tracked using cookies (that is, session cookies were enabled). In this case Forms does not support creating a new session for the second window.2. An application attempted to launch multiple Forms applications, and cookies were enabled in the Forms application.3. An application attempted to launch multiple Forms applications using POST, cookies were disabled in the Forms application, and the launching application specified the same cookie name as did the Forms application.

**Action:** Take action depending on the cause.1. No action is required.2. Disable cookies in the Forms application.3. Change the cookie name in the launching application or the Forms application. This can be accomplished via <cookie-name> under <session-descriptor> in the weblogic.xml deployment descriptor.

**Level:** 1

**Type:** NOTIFICATION

**Impact:** Session

**FRM-93242: serverURL applet parameter refers to an HTTP session that no longer exists.**

**Cause:** The serverURL applet parameter specified an encoding (e.g. jsessionid) for a non-existent HTTP session. This probably resulted from the user double-clicking on a downloaded JNLP file that was created for Java Web Start with SSO enabled.

**Action:** No action is required.

**Level:** 1

**Type:** ERROR

**Impact:** Session

**FRM-93243: Static HTML is not allowed.**

**Cause:** The serverURL applet parameter did not specify an ifcfs parameter and did not specify an encoding (e.g. jsessionid) for an HTTP session. The request for this URL was sent directly to the Forms Listener Servlet, but no HTTP session was associated with the request. This indicates that the HTML that defines the applet is "static", i.e. that it was not generated by the Forms Servlet. Static HTML is not allowed unless the envFile servlet initialization parameter for lervlet is set to a non-blank value.

**Action:** If you wish to allow static HTML, set the envFile servlet initialization parameter for lervlet to a non-blank value. This parameter specifies the full path of a file that defines values for environment variables (e.g. default.env). If you don't need such a file for static HTML (e.g. because all necessary environment variables are set in the Windows registry or in the script that launches webLogic), then set the envFile servlet initialization parameter for lervlet to ".".

**Level:** 1

**Type:** ERROR

**Impact:** Session

**FRM-93244: URL could not be rewritten for a Java Web Start application or an Oracle Forms Standalone application.**

**Cause:** Oracle Forms was attempting to run a Java Web Start application or an Oracle Forms Standalone application. Either URL rewriting was disabled (url-rewriting-enabled set to false in weblogic.xml), or else SSO was enabled (for Java Web Start: SSO is not allowed for Oracle Forms Standalone applications) and cookies were enabled (cookies-enabled not set or set to true in weblogic.xml). The application was terminated.

**Action:** If you wish to support Java Web Start or Oracle Forms Standalone applications when SSO is not enabled, ensure that url-rewriting-enabled is not set or is set to true in weblogic.xml. If, in addition, you wish to support Java Web Start applications when SSO is enabled, then also ensure that cookies-enabled is set to false weblogic.xml.

**Type:** NOTIFICATION

**Impact:** Process

**FRM-93500: unexpected error while attempting to create the runtime process**

**Cause:** An unchecked Exception or Error was encountered while attempting to create the runtime process. Typically, a runtime process creation error would cause a more specific message.

**Action:** Examine the stack trace that accompanies this message. If the stack trace indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

**Level:** 1

**Type:** ERROR

**Impact:** Process

**FRM-93520: Runtime process not created: Maximum permissible number of runtime processes is exceeded.**

**Cause:** The maxRuntimeProcesses configuration parameter specified a positive decimal number, and there appeared to be that many runtime processes already executing.

**Action:** No action is required.

**Level:** 1

**Type:** NOTIFICATION

**Impact:** Configuration

**FRM-93530: unable to switch to working directory {0}**

**Cause:** The specified file did not exist or was not a directory. Note that the name of the working directory is obtained from one of the following: 1. The workingDirectory parameter in the Forms Servlet configuration file. 2. The workingDirectory servlet parameter. 3. <oracle\_home>/forms, where <oracle\_home> is derived from the ORACLE\_HOME parameter in the environment variable configuration file. 4. <oracle\_home>/forms, where <oracle\_home> is derived from the ORACLE\_HOME environment variable.

**Action:** For cases 1 and 2, verify that the workingDirectory parameter specifies the correct directory. For cases 3 and 4, verify that the ORACLE\_HOME parameter or environment variable specifies the correct directory. If necessary, create the directory.

**Level:** 1

**Type:** ERROR

**Impact:** Configuration

**FRM-93531: cannot create runtime process: unable to switch to working directory**

**Cause:** Refer to error message FRM-93530 (which always precedes this message). The FRM-93530 message provides the name of the directory.

**Action:** Refer to error message FRM-93530.

**Level:** 1

**Type:** ERROR

**Impact:** Configuration

**FRM-93534: unable to execute startup command {0}**

**Cause:** The specified command (which was intended to start the runtime process) threw an Exception. The command was retried with <oracle\_home>/bin prefixed, but that too threw an Exception. A stack trace accompanies the following FRM-93535 error message. This error should never occur at a customer site. Note that <oracle\_home> is derived from one of the following:1. The ORACLE\_HOME parameter in the environment variable configuration file.2. The ORACLE\_HOME environment variable.

**Action:** Contact Oracle Support Services.

**Level:** 1

**Type:** ERROR

**Impact:** Process

**FRM-93535: cannot create runtime process: unable to execute startup command**

**Cause:** Refer to error message FRM-93534 (which always precedes this message). The FRM-93534 error message specifies the command. This error should never occur at a customer site.

**Action:** Contact Oracle Support Services.

**Level:** 1

**Type:** ERROR

**Impact:** Process

**FRM-93536: cannot create runtime process: unable to create temporary logging file**

**Cause:** An IOException occurred while trying to create a temporary logging file to capture the standard output and standard error streams of the newly created runtime process.

**Action:** Verify that the Forms Listener Servlet has the necessary permissions and disk space to create a temporary file.

**Level:** 1

**Type:** ERROR

**Impact:** Files

**FRM-93543: cannot connect to runtime process: unable to get I/O streams from newly created runtime process**

**Cause:** The Forms Listener Servlet encountered an Exception when attempting to obtain a BufferedInputStream for the standard output or standard error streams produced by the newly created runtime process. This error should never occur at a customer site.

**Action:** Contact Oracle Support Services.

**Level:** 1

**Type:** ERROR

**Impact:** Process

---

**FRM-93546: external message from runtime process: {0}**

**Cause:** The runtime process wrote the specified message to stderr or stdout, but the message does not appear to have been written by the frmweb executable. It typically will be an O/S message identifying an error that occurred while attempting to load the executable. In such a case, this message will be followed immediately by FRM-93552.

**Action:** Examine the external message. If it identifies a fatal error, correct it, if possible. If the problem persists, contact Oracle Support Services.

**Level:** 1

**Type:** ERROR

**Impact:** Process

**FRM-93548: Runtime process ID is {0}.**

**Cause:** The newly created runtime process sent its process ID back to the Forms Listener Servlet.

**Action:** No action is required.

**Level:** 16

**Type:** NOTIFICATION

**Impact:** Process

**FRM-93550: cannot connect to runtime process: no response from newly created runtime process**

**Cause:** The Forms Listener Servlet waited several times (for a total of roughly 4 minutes) for the initial response from the newly created runtime process, but no response arrived.

**Action:** If the problem persists, contact Oracle Support Services.

**Level:** 1

**Type:** ERROR

**Impact:** Process

**FRM-93552: cannot connect to runtime process: Newly created runtime process has terminated abnormally.**

**Cause:** The Forms Listener Servlet created the runtime process, but the process terminated abnormally. The preceding error message provides more detail.

**Action:** Take the action indicated for the preceding error message.

**Level:** 1

**Type:** ERROR

**Impact:** Process

**FRM-93553: cannot connect to runtime process: unable to establish a socket connection to newly created runtime process**

**Cause:** The Forms Listener Servlet created the runtime process, but was unable to establish a socket connection to the process.

**Action:** If the problem persists, contact Oracle Support Services.

**Level:** 1

**Type:** ERROR

---

**Impact:** Process

**FRM-93558: cannot connect to runtime process: error reading data from newly created runtime process**

**Cause:** The Forms Listener Servlet encountered an IOException while attempting to receive data from the newly created runtime process.

**Action:** Examine the stack trace that accompanies this message. If the stack trace indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

**Level:** 1

**Type:** ERROR

**Impact:** Process

**FRM-93566: unexpected error while attempting to stop runtime process**

**Cause:** An unchecked Exception or Error was encountered while attempting to stop the runtime process. Processing continued. However, the runtime process might have been left in existence (thereby consuming resources), and messages from the runtime process might not have been written to the Oracle Diagnostic Log.

**Action:** Examine the stack trace that accompanies this message. If the stack trace indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

**Level:** 1

**Type:** WARNING

**Impact:** Process

**FRM-93572: error reading messages from runtime process**

**Cause:** An I/O error occurred while reading the temporary file to which messages from the runtime process were written. Processing continued. However, messages from the runtime process were not written to the Oracle Diagnostic Log.

**Action:** Examine the stack trace that accompanies this message. If the stack trace indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

**Level:** 1

**Type:** WARNING

**Impact:** Files

**FRM-93574: Application server does not support Oracle character set {0}.**

**Cause:** The runtime process used the specified Oracle character set when it wrote messages for the Oracle Diagnostic Log, but the application server did not support that character set. Processing continued, using the ISO-8859-1 Java character set. However, some multibyte characters (those in variable arguments) in messages from the runtime process might have been displayed incorrectly in the Oracle Diagnostic Log.

**Action:** Verify that the environment variable configuration file specifies the correct value for NLS\_LANG (specifically, the correct character set). If the problem persists, contact Oracle Support Services.

**Impact:** Configuration

**FRM-93600: unexpected error while attempting to communicate with the client or the runtime process**

**Cause:** An unchecked Exception or Error was encountered while attempting to communicate with the client or the runtime process. Typically, a communication error would cause a more specific message.

**Action:** Examine the stack trace that accompanies this message. If the stack trace indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

**Level:** 1

**Type:** ERROR

**Impact:** Process

**FRM-93614: invalid or absent Content-Length from runtime process**

**Cause:** This message provides more detail for the following FRM-93618 error message.

**Action:** Refer to error message FRM-93618.

**Level:** 1

**Type:** ERROR

**Impact:** Process

**FRM-93618: fatal error reading data from runtime process**

**Cause:** The runtime process was still running, but the Forms Listener Servlet encountered an IOException while attempting to receive data from the process. A preceding message might provide more detail. The accompanying stack trace represents the state of the process when the previous detail message was logged.

**Action:** Examine the stack trace that accompanies this message. If the stack trace indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

**Impact:** Process

**FRM-93624: internal buffer ({0} bytes) not big enough to hold header ({1} bytes) for message from servlet to runtime process**

**Cause:** An internal buffer was not big enough to hold the header for a message from the servlet to the runtime process. The FRM-93624 error message provides supplemental detail for the FRM-93628 error message.

**Action:** If the problem persists, contact Oracle Support Services.

**Level:** 1

**Type:** ERROR

**Impact:** Requests/Responses

**FRM-93625: internal buffer ({0} bytes) not big enough to generate initial message from servlet to runtime process**

---

**Cause:** An internal buffer was not big enough to generate the initial message from the servlet to the runtime process. The FRM-93625 error message provides supplemental detail for the FRM-93628 error message.

**Action:** If the problem persists, contact Oracle Support Services.

**Level:** 1

**Type:** ERROR

**Impact:** Requests/Responses

**FRM-93628: fatal error writing data to runtime process**

**Cause:** The runtime process was still running, but the Forms Listener Servlet encountered a fatal error while attempting to write data to the process. A preceding FRM-93624 or FRM-93625 error message might provide more detail.

**Action:** Examine the stack trace that accompanies this message. If the stack trace indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

**Level:** 1

**Type:** ERROR

**Impact:** Process

**FRM-93652: The runtime process has terminated abnormally.**

**Cause:** The Forms Listener Servlet attempted to communicate with the runtime process, but the process had terminated prematurely. The preceding error message provides more detail.

**Action:** Take the action indicated for the preceding error message.

**Level:** 1

**Type:** ERROR

**Impact:** Process

**FRM-93654: Runtime process {0} is terminating due to external action.**

**Cause:** The runtime process was running on a UNIX platform, and received a signal 9 (SIGKILL) or 15 (SIGTERM), or the runtime process was running on a Windows platform, and exited with exit code 1. Presumably the runtime process was terminated explicitly, either via the Enterprise Manager, or via a 'kill' command (UNIX) or the task manager (Windows). As a result, the runtime process terminated abnormally. This message provides more detail for a following FRM-93552 or FRM-93652 error message.

**Action:** No action is required.

**Level:** 1

**Type:** ERROR

**Impact:** Process

**FRM-93656: Runtime process {0} is terminating due to signal {1}.**

**Cause:** The runtime process was running on a UNIX platform, and received a signal other than 9 (SIGKILL) or 15 (SIGTERM). The signal caused the runtime process to terminate abnormally. This message provides more detail for a following FRM-93552 or FRM-93652 error message. If the FORMS\_CATCHTERM environment variable was not set to a value that is equivalent to FALSE, there will typically be a stack trace. If the FORMS\_C\_STACK\_TRACE\_TO\_FILE

---

environment variable was set to a value that is equivalent to FALSE, the stack trace will accompany this message; otherwise, the stack trace will appear in a file named `frmweb_dump_<pid>` in the Forms trace directory, where `<pid>` is the process ID. If the `FORMS_CATCHTERM` environment variable was set to a value that is equivalent to FALSE, there may be a core file that contains a stack trace.

**Action:** Examine the stack trace for the runtime process. If the stack trace indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

**Level:** 1

**Type:** ERROR

**Impact:** Process

**FRM-93657: Runtime process {0} is terminating due to exception {1}.**

**Cause:** The runtime process was running on a Windows platform, and encountered an exception (which is displayed as 8 hexadecimal digits in the error message, in some cases followed by a descriptive phrase). The exception caused the runtime process to terminate abnormally. This message provides more detail for a following FRM-93552 or FRM-93652 error message. If the `FORMS_CATCHTERM` environment variable was not set to a value that is equivalent to FALSE, there will typically be a stack trace. If the `FORMS_C_STACK_TRACE_TO_FILE` environment variable was set to a value that is equivalent to FALSE, the stack trace will accompany this message; otherwise, the stack trace will appear in a file named `frmweb_dump_<pid>` in the Forms trace directory, where `<pid>` is the process ID.

**JBO-24002: User {0} is not found.**

**Cause:** An error occurred while retrieving the user.

**Action:** Make sure that the user information is correct.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-24003: Attribute {2} in entity {1} is not updatable.**

**Cause:** An attempt was made to update the attribute, but the user did not have permission or the attribute was not updatable.

**Action:** Make sure that the user permission and updatable setting for the attribute are correct.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-24004: Rows cannot be removed from entity {0}.**

**Cause:** An attempt was made to remove the row, but the user did not have permission or the entity was read-only.

---

**Action:** Make sure that the user permission and read-only setting for the entity are correct.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-24005: Rows cannot be created in entity {0}.**

**Cause:** An attempt was made to create a row, but the user did not have permission or the entity was read-only.

**Action:** Make sure that the user permission and read-only setting for the entity are correct.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-24006: The entity already has permission defined.**

**Cause:** The entity already has permission defined.

**Action:** Modify permission def is not allowed.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-24007: Unable to get system property {0} when security manager is enable.**

**Cause:** The property is not defined.

**Action:** Get property value is not allowed.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25000: SQL type {0} is invalid.**

**Cause:** An attempt was made to generate a null value for a domain with an invalid SQL type.

**Action:** Provide a valid SQL type name for the domain. Examples include VARCHAR, CHAR and NUMBER. See oracle.jbo.server.OracleTypeMapEntries for a full list.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25001: Object {1} of type {0} already exists.**

**Cause:** An attempt was made to load a business component with the same name and type as another business component already loaded by the application module.

**Action:** Provide a different name for the business component. If a null value or null string is provided for the name, the framework will create a unique name within the scope of the application module.

---

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25002: Definition {1} of type {0} is not found.**

**Cause:** A definition object with the given name could not be found.

**Action:** Provide a correct name for the business component definition (using the format 'packagename.objectname') and ensure that the definition is available on the classpath. This error can also occur if there is a case conflict, as when the database expects 'DEPTNO' and receives 'Deptno' instead.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25003: Object {1} of type {0} is not found.**

**Cause:** A business component object with the given name could not be found in the application module.

**Action:** Provide a different name for the business component object or create a new business component with the given name.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25004: Definition name {1} of type {0} is invalid.**

**Cause:** An attempt has been made to load an invalid definition name or associate a definition name with a type for which it is not valid.

**Action:** Ensure that the name is a valid Java identifier with no spaces or punctuation, and conforms to the format 'packagename.objectname'.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25005: Object name {1} of type {0} is invalid.**

**Cause:** An attempt has been made to associate a business component name with an object for which it is not valid.

**Action:** Ensure that the name is a valid Java identifier with no spaces or punctuation, and conforms to the format 'packagename.objectname'.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25006: Value {2} passed as parameter {1} to method {0} is invalid: {3}.**

**Cause:** An attempt was made to invoke a business components method with an invalid parameter value.

**Action:** Pass a correct value for the parameter. To determine the allowed values for a given parameter, check the Javadoc for the method that throws this exception. For example, Javadoc indicates that the

---

'DBTransactionImpl.executeCommand' method throws this exception when the 'command' parameter is empty.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25007: The validation flag cannot be reset for a default iterator.**

**Cause:** An attempt was made to reset the row validation flag for the default iterator of a rowset or view object.

**Action:** Reset the row validation flag for the rowset or view object instead. This will create a secondary iterator to allow the rowset or viewobject to navigate to another row without validating.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25008: Object {0} cannot be removed because it is referenced by object {1}.**

**Cause:** An attempt was made to remove a view object that is participating in a view link.

**Action:** Remove the view link before removing the view object.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25009: Cannot create an object of type:{0} from type:{2} with value:{1}**

**Cause:** A domain object could not be created with the given value. Either a domain constructor that accepts the given value does not exist, or there is no conversion method in the domain object for the given value type, or the domain constructor threw an unexpected exception.

**Action:** Ensure that the value being passed is valid with respect to the domain type being created. For example, passing the string value 'one' to the 'oracle.jbo.domain.Number' constructor will throw this exception.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25010: A validation failure has occurred while creating a domain with value {0}.**

**Cause:** Validation failed with the given value in a domain constructor. This exception is thrown in the domain type 'validate()' method.

**Action:** Provide a valid value for the domain type.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25011: Rowset {0} is forward only.**

---

**Cause:** An attempt was made to invoke an invalid navigation method on a forward-only view object or rowset.

**Action:** Either remove the forward-only setting for the view object or rowset, or do not invoke navigation methods other than 'next()' on the forward-only view object or rowset.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25012: View object {0} does not have entity {1} as its primary base.**

**Cause:** The client attempted to locate a view row that has the given entity row as its primary entity row. However, the entity row's entity definition does not match the entity definition of the view object's primary entity object base.

**Action:** Ensure that the entity row used to locate view rows is based on the same entity definition as the view object's primary entity object base.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25013: Too many objects match the primary key {0}.**

**Cause:** An attempt was made to add a newly fetched or created entity to the cache, but the new entity has the same primary key as an existing entity. The primary key must be unique for this entity type.

**Action:** Add more attributes to the key definition for the entity type, so that each row for this entity is uniquely identifiable. Or fix the primary key value so that this entity has a unique key identifier.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25014: Another user has changed the row with primary key {0}.**

**Cause:** The database value does not match the cached value for this entity object. This could happen when another user or operation has committed modifications to the same entity row in the database. This exception can also be thrown if the 'equals' method on one of the domain type attributes in the entity fails.

**Action:** Choose from the following options: 1. Verify that another user or operation has not modified the same row in the database. If this entity has attributes of a domain type verify that the `equals()` method on these domains do not fail when comparing the existing cached value with the newly fetched value. 2. For any attributes/columns that are updated by the database, modify the entity attribute definition by selecting 'Refresh after update' on the Attribute Settings page of the Entity Object Wizard. 3. Use 'view.executeQuery()' frequently, especially after any operations that result in data being changed.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

---

**JBO-25015: Query collection {0} is closed.**

**Cause:** An attempt was made to execute a query or access a row from a closed or removed view object or rowset.

**Action:** Verify that the view object or rowset is not removed or closed.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25016: View object {0} is read-only.**

**Cause:** An attempt was made to modify data for a view object which is declared to be read-only. This includes creating a new row for this view object, removing a row, or modifying attributes of a view row for this view object.

**Action:** Create a view object with the read-only flag set to 'false' in order to modify data.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25017: New entity row of type {0} cannot be created.**

**Cause:** An unexpected exception occurred while creating a new entity instance.

**Action:** Ensure that the entity has a public default constructor. Fix the cause of the InstantiationException or IllegalAccessException that appears in the details of this exception.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25018: New view row of type {0} cannot be created.**

**Cause:** An unexpected exception occurred while creating a new view row instance.

**Action:** Ensure that the view row has a public default constructor. Fix the cause of the InstantiationException or IllegalAccessException that appears in the details of this exception.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25019: Entity row with key {1} is not found in {0}.**

**Cause:** An attempt was made to lock a nonexistent row in the database. This could occur when the cache has an entity which was subsequently deleted from the database by another user or operation.

**Action:** Remove the current entity from the entity cache by calling 'remove'. Or, synchronize the cache with the database by rolling back the current transaction or by committing the existing set of changes and then dropping the entity cache.

**Level:** 1

**Type:** ERROR

---

**Impact:** Programmatic

**JBO-25020: View row with key {1} is not found in {0}.**

**Cause:** An attempt to find a referenced entity in the view row failed due to a changed foreign key value.

**Action:** Provide a valid foreign key value or remove the current one.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25021: Domain object type {0} cannot be created.**

**Cause:** A domain object could not be created with the given value. Either a domain constructor that accepts the given value does not exist, or there is no conversion method in the domain object for the given value type, or the domain constructor threw an unexpected exception.

**Action:** Ensure that the value being passed is valid with respect to the domain type being created. For example, passing the string value 'one' to the 'oracle.jbo.domain.Number' constructor will throw this exception.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25022: A view link {0} already exists between source view object {1} and destination view object {2}.**

**Cause:** An attempt was made to set the master rowset for this rowset more than once.

**Action:** Do not invoke 'setMasterRowSetIterator' more than once on a rowset.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25023: Operation {0} on domain value {1} of class {2} cannot be performed.**

**Cause:** An unexpected domain exception occurred.

**Action:** Contact Oracle Support Services.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25024: Method {0} is obsolete.**

**Cause:** An attempt was made to use an obsolete type map constructor.

**Action:** Verify that the type map is compatible with this version of the framework. See example type maps in 'oracle.jbo.server.OracleTypeMapEntries'.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25025: Rowset with XML tag {0} cannot be loaded.**

---

**Cause:** An error occurred while reading the XML data for a view object. This exception might contain other ReadXMLExceptions.

**Action:** Fix the contained row-level or attribute-level exceptions in the details for this exception.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25026: Row {1} with XML tag {0} cannot be loaded.**

**Cause:** An error occurred while reading the XML data for a view row. This exception might contain other ReadXMLExceptions for contained rowsets or attributes.

**Action:** Fix the rowset-level or attribute-level exceptions in the details for this exception.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25027: Attribute {1} at index {2} with XML tag {0} cannot be loaded.**

**Cause:** An error occurred while reading the XML data for an attribute of a view row. This exception might contain other JboExceptions thrown from the set method for this attribute.

**Action:** Fix the JboException in the details for this exception.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25028: Domain object type {0} cannot be created: {1}.**

**Cause:** A domain object could not be created with the given value. Either a domain constructor that accepts the given value does not exist, or there is no conversion method in the domain object for the given value type, or the domain constructor threw an unexpected exception.

**Action:** Ensure that the value being passed is valid with respect to the domain type being created. For example, passing the string value 'one' to the 'oracle.jbo.domain.Number' constructor will throw this exception.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25029: Domain class {0} is not found.**

**Cause:** The named data class (typically a domain) could not be found.

**Action:** Ensure that the data class is accessible from the CLASSPATH and is a valid data class.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

---

**JBO-25030: Detail entity {0} with row key {1} cannot find or invalidate its owning entity.**

**Cause:** No container entity was found for a detail entity in a composition association. This could occur if a nonexistent master key value was passed in during creation of a new detail entity instance, or if the foreign key value of this entity was modified so that it no longer matched any master entity.

**Action:** Pass a valid foreign key value to the 'create' method or 'setAttribute' method so that an appropriate master row is found for this entity.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25031: View row for view object {0} is missing entity row for {1}.**

**Cause:** The client attempted to access an attribute of a view which is mapped to an entity row, but the corresponding entity row is null. If the view object consists of multiple entity object bases and if the secondary entity object bases are reference-only, the entity rows could be null if the foreign key linking the primary entity to the secondary entity object is null.

**Action:** Do not try to access attributes of missing entity rows in this situation.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25032: Passivation to target store {1} is unsuccessful.**

**Cause:** A failure occurred while trying to passivate the application module or transaction state.

**Action:** Resolve the detail exception raised by the passivation target store (Database, File or Memory).

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25033: Activating state with id {0} from target store {1} is unsuccessful.**

**Cause:** A failure occurred while trying to activate the application module or transaction state.

**Action:** Resolve the detail exception raised by the passivation target store (Database, File or Memory) and ensure that the state snapshot ID exists in the target store.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25034: Row with handle {1} is not found in rowset {0}.**

**Cause:** The client attempted to locate a row with a stale row handle. This error might be raised if the client tries to take a row out of one query collection and use its handle to find a row in another query collection. Note that if the client calls `executeQuery` on a rowset, it might receive a new query collection. Thus, this error might occur if the client retrieves a row from a rowset, takes its row handle, calls

---

executeQuery, and then tries to locate the row using the saved handle. This exception might also be raised if a row reference is used across transaction boundaries and the row handle has become stale and hence the corresponding row cannot be found.

**Action:** Make sure that the row handle is not stale. One approach is to find the row again using its primary key before attempting to act on the row.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25035: The application module passivation store is invalid.**

**Cause:** An application attempted to change an application module's passivation store after it had been initialized. The passivation store (Database, File or Memory) can only be initialized once. If the customer application logic has not specified a passivation store when the serialization framework is invoked, the passivation store is initialized by the framework.

**Action:** Check the client application logic for invocations of ApplicationModuleImpl.setStoreForPassiveState which are invoked after the application module passivation store has been initialized.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25036: An invalid object operation was invoked on type {0} with name {1}**

**Cause:** An application invoked an object operation that is not supported in the object's current state.

**Action:** Remove the invalid operation invocation or provide exception handling logic.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25037: Detail row set {0} is missing a master row set iterator for view link {1}, master view object {2}.**

**Cause:** This row set is a detail in a master-detail relationship, but it is missing a master row set iterator. Most likely, this occurred because a master row set iterator was removed through a call to removeMasterRowSetIterator() and has not been replaced with an appropriate one.

**Action:** Call setMasterRowSetIterator() to provide a valid master row set iterator.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25038: Value {2} passed as parameter {1} to method {0} is invalid.**

**Cause:** An attempt was made to invoke a business components method with an invalid parameter value.

**Action:** Refer to the documentation of error message JBO-25006 (EXC\_INVALID\_PARAMETER) for more information. The difference between this error message

---

and EXC\_INVALID\_PARAMETER is that this version does not include an explanation. In general, Oracle recommends using JBO-25006 instead of JBO-25038.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25039: No current row in row set iterator {0}**

**Cause:** The client attempted to work with the current row of a row set iterator, but the iterator has no current row.

**Action:** Position the iterator to the correct row and perform the operation.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25040: Row should be locked before getting an output stream from an attribute.**

**Cause:** The row containing a large object was not locked before attempting to call a method on the large object that could potentially change the data of the object.

**JBO-25042: Row of trans post listener handle {0} not found in list.**

**Cause:** Entity row of the given handle is not found in transaction post listener list. Most likely cause of this error is as follows: the user requests certain operation. The operation tries to get access to the row in database. This fails for whatever reason (this exception's detail might have further information). The system tries to fix the problem at the entity level. It looks for the entity row in the transaction post listener list. The specified row is not found.

**Action:** Look at the details and see if the cause can be determined from them. Check to see if concurrent updates to database could have caused the problem.

**JBO-25051: Row of range index {1} is not found in RowSetIterator {0}.**

**Cause:** The client has attempted to locate a row with a range index, but the Row Set Iterator's range does not have a row at the index. It might be that the range index is too big ( $\geq$  the range size), or that the range is at the bottom and the range index is beyond the last row of the Row Set. Or, the Row Set might have been reset because of operations like rollback and clear-cache. Hence, the range is empty and no row is found

**JBO-25068: Entity {0} has a base EO {1} with no discriminator, but base EO has rows in its cache. Cannot populate both caches.**

**Cause:** An attempt was made to create a new instance of an Entity Row. However, this Entity Definition is a subclass Entity Definition with no discriminator, and a base EO has a row already instantiated. A conflict exists because nothing discriminates this Entity from the base Entity.

**Action:** Typically in this situation, the base class should not instantiate any row. Use the subclass Entity to create the row

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25069: Row definition {0} has two sibling subclasses defs, {1} and {2}, but no discriminator to distinguish them.**

**Cause:** Two sibling subclasses of a Row Definition are found, but the Row Definition has no discriminator. This condition is disallowed because when a row is either retrieved or created, the framework cannot determine the correct row class. That is, the hierarchy forks without a discriminator. The only situation whether subclassing is allowed without discriminator is when the tree is straight lined and only one of the classes in the hierarchy line is used to instantiate rows.

**Impact:** Programmatic

**JBO-25085: The value being set for attribute {0} does not match the value derived from list binding {1}**

**Cause:** An attribute value being set does not match the attribute value derived from a list binding. This typically happens in the following situations. First, suppose the user sets values for Deptno from 10 to 20 and Dname from ABC to DEF. If a list binding is triggered by Deptno and if it sets Dname to XYZ, the result is an inconsistent state where DEF does not match XYZ. In this situation, this exception is thrown. Second, suppose there is an EmpDept view object with Emp and Dept entity bases. Suppose Dept is reference and read-only and there is a list binding on Dept.Dname whose derived attribute is Emp.Deptno. If the user selects a new Dept through the dept name, a new Dept entity row is brought in (because a new Emp.Deptno is chosen). After this, the framework checks to make sure that the Dname coming from the new entity row matches the original selection from the list binding. If they do not match, this exception is thrown.

**Action:** Make sure the list binding definition and attribute set values end up in a consistent result (i.e., the derived values from the list binding match the row's attribute values).

**JBO-25221: Method {0} not supported**

**Cause:** Attempting to call a method that is either not implemented or not supported.

---

**Action:** This method is not available on the called object. E.g. `setAttribute()` in `oracle.jbo.Key` class is not implemented and will throw this exception.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25222: Unable to create application module.**

**Cause:** The application module was typically not created for one of the following reasons: 1. Business components deployed in local mode were not found on the classpath. 2. Unresolved classes existed on the server. 3. Java2 permissions were not granted. 4. Java pool size was too small.

**Action:** Depending on the cause, chose from the following actions: If business components are deployed in local mode, they might not be on the classpath.  
<br>If this is the cause of the error, the exception will usually be followed by a different exception, JBO-25002: NoDefException. If this occurs, try the following: Make a library for the business components. Add the library to the client's project properties. Include the library on the 'libraries' page when creating a deployment profile for the client (whether the client was a web application or a command-line application). Copy the library with the client to the target platform (whether the client was a web application or a command-line application). Include all the copied files (including the library) when setting the classpath on the target platform. There might be unresolved classes on the server. Try the following procedure to resolve any unresolved classes on the database. In the System Navigator, right-click the JDBC connection used to deploy the Business Components project. Choose Invoke SQLPlus from the context menu. Copy and paste the following SQLPlus script into the SQLPlus window. set termout off set echo off set heading off set pages 999 set linesize 2000 set feedback off select 'alter java class "" | replace(dbms\_java.longname(object\_name), '/' ;') | |' resolve;' from user\_objects where object\_type='JAVA CLASS' and status = 'INVALID' spool C:\temp\resolve.sql / spool off set echo on set termout on @C:\temp\resolve.sql  
There might be missing Java2 permissions. If this is the cause of the error, there will be permissions errors in the database trace file. To correct the problem, see the help topic 'Granting Permissions on a Business Components EJB' for information on granting Java2 permissions. Note: The location of the database trace file varies from installation to installation, but in a default Windows NT installation, the file will be in the directory ORACLE\_HOME\admin\orcl\udump and will have the form orclnnnn.trc. The Java pool size might be too small Business Components for Java deployed as EJBs work best with a Java pool size of at least 50MB. Edit the init.ora file and check the `java_pool_size` parameter. If it is under 50MB, change it, restart the database, and try the connection again.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25223: Cannot create multiple root application modules.**

**Cause:** When business components are running inside JServer, only one root application module can be created. This is because JServer (already) provides one transaction context.

**Action:** It is illegal to attempt to create multiple root transactions when running inside JServer.

---

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25224: Could not disconnect and retain application module state because database state exists for current connection.**

**Cause:** Trying to retain the application module state during a transaction disconnect failed.

**Action:** The disconnect and retain application module state target requires that no database state exist before the transaction connection is closed. Examples of database state include open database cursors in non-forward only view objects, database locks, and uncommitted database changes. The client should clean up this state by fetching or resetting any open view objects and committing any uncommitted changes.

**Type:** ERROR

**Impact:** Programmatic

**JBO-25226: Application module definition {0} contains recursive AM reference.**

**Cause:** This application module definition contains recursive references to child application modules. For example, if application module definition appMod1 contains a child application module of appMod2, and appMod2 contains appMod1, this error will be raised.

**Action:** Remove recursive application module definition references.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25227: Recursive view links found. Master-detail chain: {0}.**

**Cause:** The user has attempted to create a view link (in an application module) that will result in a recursive loop of view links. The error message should show a chain of recursive master-detail relationships.

**Action:** If a static view link is causing the recursion, remove the view link from the application module. If a dynamic view link is causing the recursion, remove the code that creates the recursive view link.

**Impact:** Programmatic

**JBO-25230: XML document {0} has no stream to save**

**Cause:** An attempt was made to save XML document, but the document has not been persisted (most likely saveXMLContents() is called without a call to writeXMLContents()).

**Action:** Call writeXMLContents() first.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25301: Application module {0} is not a root app module but has no parent**

**Cause:** While traversing the parenthood chain for application modules, a child application module was found with no container (parent) application module.

**Action:** If this application has added custom business component classes, the application code might be attempting to access a child application module before it is fully initialized. If this is not the case, this error probably represents some internal error in the framework, in which case contact Oracle Support Services.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25302: Component object {0} has no parent**

**Cause:** A business component is found without a container (parent) application module.

**Action:** If this application has added custom business component classes, the application code might be attempting to access a business component before it is fully initialized. If this is not the case, this error probably represents some internal error in the framework, in which case contact Oracle Support Services.

**Level:** 1

**Impact:** Programmatic

**JBO-25308: The primary key of an existing entity bean cannot be modified for entity facade {0}.**

**Cause:** An attempt was made to modify the primary key of an existing entity bean. This is disallowed by EJB.

**Action:** Do not modify primary key of an old (not-new) entity bean.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25309: The primary key of an entity bean cannot be null for entity facade {0}.**

**Cause:** The primary key of an entity bean is null. This is disallowed by EJB.

**Action:** Set the primary key to be not null.

**JBO-26000: A Generic exception occurred during loading Customizations.**

---

**Cause:** Metadata objects failed to load due to unexpected or corrupt data in the XML file.

**Action:** Verify that the XML metadata for various components is valid.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-26001: XML File not found for the Container {0}**

**Cause:** Could not open the named XML file for reading.

**Action:** Try the following: Make sure that the file is present. In particular, if the file is to be found in a Zip/JAR file, make sure that the Zip/JAR file is included in the CLASSPATH. This error is also reported if the name of the XML file does not match the object Name specified in the XML file. If the file system supports case insensitive file names (e.g., Windows NT), make sure that the file name matches the object Name in the XML file in case-sensitive fashion. For a JPX file, this error is reported if the JPX file is missing the JboProject XML tag. Check the JPX file to make sure that the valid tag is in there. One XML file might be extending another XML file (specified by the Extends element in this XML file). This error is reported if the base XML file is not found. When loading the XML file for a package (JboPackage tag), this error is reported if some unexpected error occurs while loading a contained object. In all of the above cases, a more descriptive message might be printed on Diagnostic. To see these messages, run the application with Diagnostic turned on, as in 'java -Djbo.debugoutput=console ...', to see Diagnostic messages.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-26002: Error Parsing the XML file "{0}".**

**Cause:** Some XML parsing exception (`oracle.xml.parser.v2.XMLParseException`) was thrown.

**Action:** The XMLParseException information is output to Diagnostic. To see diagnostic messages, run the application with diagnostic turned on, for example 'java -Djbo.debugoutput=console ...'

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-26003: Mismatch in the attribute indices declared in Java versus the indices in the definition for entity {0}.**

**Cause:** An error occurred while loading entity object definitions. An attribute index in the Java class for this entity has a mismatch with the index in the definition, or an attribute index is missing in the Java class.

**Action:** Ensure that the indices of attributes in the definition for this entity match the indices defined in the Java class for this entity.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

---

**JBO-26004: A recursive base definition is found while attempting to set the base definition of {0} to {1}.**

**Cause:** An attempt was made to set the base definition of another definition object, e.g., setting B's base definition to A (i.e., B Extends A). However, A already extends B. Setting a recursive (circular) subclassing relationship among definition objects is illegal.

**Action:** Review the subclassing hierarchy of the definition objects and correct errors.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-26005: FetchMode must be either FETCH\_AS\_NEEDED, FETCH\_ALL or FETCH\_DEFAULT. View object {0}**

**Cause:** The fetch mode specified in the view definition XML file is not valid.

**Action:** Check the content of the XML file for the view definition. Look for an XML element named 'FetchMode'. Make sure that the value for that element is valid. Valid values are: 'FETCH\_AS\_NEEDED', 'FETCH\_ALL', and 'FETCH\_DEFAULT'

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-26006: FetchSize must be a positive integer. View object {0}**

**Cause:** The fetch size specified in the view definition XML file is not valid.

**Action:** Check the content of the XML file for the view definition. Look for an XML element named 'FetchSize'. Make sure that the value for the element is a positive integer.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-26007: MaxFetchSize should be MAX\_FETCH\_UNLIMITED, MAX\_FETCH\_DEFAULT or integer. View object {0}**

**Cause:** The maximum fetch size specified in the view definition XML file is not valid.

**Action:** Check the content of the XML file for the view definition. Look for an XML element named 'MaxFetchSize'. Make sure that the value for the element is a non-negative integer, or 'MAX\_FETCH\_UNLIMITED', or 'MAX\_FETCH\_DEFAULT'. A MaxFetchSize of 0 is the same as MAX\_FETCH\_UNLIMITED.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-26008: Could not resolve reference to "{0}".**

**Cause:** A problem is found in resolving a view link definition or an association. In case of a view link, this error might be caused by the fact that the source or destination view object cannot be found. Or, if the view link ends have attribute

---

names, this error might indicate that the named attributes cannot be found. Similarly, for an association, this error indicates that either source or destination entity object or attributes involved in the association cannot be found.

**Action:** Make sure the XML definition for the view link/association has correct view object/entity object/attribute names.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-26009: Serialized file "{0}" is invalid. The root object is not a Business Component object.**

**Cause:** This error occurs if the application uses meta object serialization files (.ser files) instead of XML files. It indicates that after the .ser file was deserialized, the top level object returned from deserialization was not an instance of oracle.jbo.server.xml.JboElementImpl.

**Action:** Repair the corrupt .ser file.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-26010: Invalid Entity Attribute Name "{1}" specified for the View Attribute "{0}"**

**Cause:** Entity attribute name in the view definition XML file is invalid or is not found.

**Action:** Make sure that the entity name is valid. Also, check to make sure that the named attribute does exist in the entity object. The entity object is identified by the EntityUsage element.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-26011: SQLType not specified for the View Attribute "{0}"**

**Cause:** Attribute definition found in XML file is invalid. It is missing SQLType value.

**Action:** Correct the error in the XML file.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-26012: Invalid View Link Definition "{0}". View Link must have two ViewLinkDefEnds.**

**Cause:** The view link definition in the XML file is missing either the source or destination view link end. For a view link XML file, two elements named ViewLinkDefEnd should be found.

**Action:** Correct the error in the XML file.

**Level:** 1

**Type:** ERROR

---

**Impact:** Programmatic

**JBO-26013: Naming Exception occurred while looking up the object "{0}".**

**Cause:** Meta object name passed for lookup is invalid.

**Action:** Normally, the meta object name is a dot-separated name of the meta object. For an entity object named Emp in package1.example, the correct name would be `<code>package1.example.Emp</code>`. To correct, locate where the invalid name is coming from (could be meta object names mentioned in an XML file, or the name of the project, etc.) and change the name to a valid one.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-26015: View object {0} does not include a discriminator column {2} of entity base {1}.**

**Cause:** A view definition does not include a discriminator column of an entity base. If an entity base has discriminator columns, it must include all of them in the view object's attribute mapping.

**Action:** Change the view definition to include discriminator column attributes.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-26016: Cannot set user query to view "{0}" because it is a destination in a view link**

**Cause:** An attempt was made to call 'setQuery()' on a detail view object in a master detail view link.

**Action:** Do not call setQuery() if the view object is a detail.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-26017: Association or view link definition {0} has an invalid attribute list.**

**Cause:** The association or view link definition has a missing or invalid attribute list.

**Action:** Correct the error(s) in the XML file.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-26018: Entity {0} cannot be posted to the database because it has no attributes set.**

**Cause:** An attempt was made to post a row with no attribute set. Some databases (Oracle Database in particular) do not allow an INSERT statement with no VALUE specified.

**Action:** Set some attributes on the row before attempting to insert it into the database.

---

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-26019: Attempting to remove a parent entity without removing all children entities**

**Cause:** Attempting to remove a master which has detail entities. In the case of a composition, a master cannot be removed if it has details.

**Action:** Remove all the details of this master by accessing the details via an association and removing all of them.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-26020: Attempting to insert row with no matching EO base**

**Cause:** The application code tried to take a row from one row set (or view object) and insert it into another row set (view object). In response, the framework will make a copy of the row in the new row set. This new row will share references to the underlying entity objects. However, if the source and destination row sets do not share any entity object bases at all, this operation will fail as it does not find any entity rows to share.

**Action:** When attempting to take a row from one row set and insert into another, make sure that they share at least one entity object base.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-26021: NullPointerException while parsing XML file "{0}". Perhaps missing DTD file?**

**Cause:** A NullPointerException was thrown while parsing an XML file. A possible cause for this is that the DTD file is missing (oracle.jbo.dtd.jbo.dtd).

**Action:** Make sure the appropriate DTD file is present.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-26022: Custom class {0} cannot be found.**

**Cause:** A custom class could not be found and loaded. The custom class might be for a component (for example, view object), a definition (for example, view definition), or a row (for example, view row or entity row).

**Action:** Make sure that the named class is reachable from the CLASSPATH. The detail exception (if present) provides more specific reasons why the attempt to locate and load the custom class failed.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

---

**JBO-26023: Custom class {0} is not assignable to {1}**

**Cause:** Custom class was found and loaded, but it is invalid in that it is not assignable to a framework (super) class.

**Action:** Make sure that the custom class subclasses the appropriate framework (super) class.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-26024: An error occurred while creating InitialContext**

**Cause:** An error occurred while creating initial context. This error usually carries a detail exception which will give further information on the cause of the error.

**Action:** When running inside JServer, make sure that the database user (schema) has the setContextClassLoader permission. To grant this, the database system administrator can invoke the following PL/SQL procedure: EXEC DBMS\_JAVA.GRANT\_PERMISSION('&&1', 'SYS:java.lang.RuntimePermission', 'setContextClassLoader', null);

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-26025: An error occurred while trying to get System properties**

**Cause:** An error occurred while trying to get System properties. Specifically, System.getProperties() call failed.

**Action:** When running inside JServer, make sure that the database user (schema) has the proper property permission. To grant this, database system can invoke the following PL/SQL procedure: EXEC DBMS\_JAVA.GRANT\_PERMISSION('&&1', 'SYS:java.util.PropertyPermission', '', 'read');

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-26026: An error occurred while loading properties from a properties file {0}**

**Cause:** An error occurred while trying to get load properties.

**Action:** Check to see if the named properties file contains valid Java properties.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-26027: Unable to find resource. {0}**

**Cause:** Unable to find a resource

**Action:** Check to see if the resource exists and the framework code has adequate permissions to load the resource.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

---

**JBO-26028: View object {0} does not include a primary key attribute {2} of entity base {1}.**

**Cause:** A view definition does not include a primary key attribute of an entity base. When a view object uses an entity as one of its entity bases, it must include all primary key attributes of the underlying entity object.

**Action:** Change the view definition to include all primary key attributes.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-26029: Could not find and load the type map class {0}**

**Cause:** Custom type map class could not be found and loaded.

**Action:** Make sure that the named class is reachable from the CLASSPATH. If `jbo.TypeMapEntries` property is specified, make sure that the property value is correct. Also, though unlikely, this might be caused by an improper implementation of `SQLBuilder` where it is returning an incorrect value for type map class name. The detail exception (if present) will provide more specific reasons why the attempt to locate and load the custom class failed.

**JBO-26031: Association end {0} of assoc {1} invalid for entity base {2} in view object {3}.**

**Cause:** Problem in secondary entity base definition in view definition. The named entity base is supposed to use the named entity association end to join it with another entity base, but, when resolved with the association definition, the association end does not resolve to the same entity. For example, suppose one builds a view object with `Dept` and `Emp`. `Emp` is supposed to join with `Dept` using the `EmpEnd` of the `DeptEmp` association. For such a view definition, the framework verifies that `EmpEnd` indeed is from `Emp` entity. If `EmpEnd` was from another entity, say `Person` (or `Dept`), it would not be correct to use that association end to perform join.

**Action:** Most commonly, this is caused by incorrect information in the view object XML file. Make sure that the association end for the named entity usage is not pointing at the wrong end of association.

**JBO-26042: Failed to generate REF and OID on entity {0}.**

**Cause:** A database failure occurred while trying to generate an object ID (OID) and object reference (REF). When a new row is created on an entity which maps to an Oracle object table, an OID and REF for the new row are generated. This executes a SQL statement like `select a.oid, make_ref(table-name, a.oid) ...`. Somehow, this statement is failing.

**Action:** Ensure that : The Oracle database version is correct. The table in question is an object table. **JBO-26083: Comparison operator {0} has a string code for its description, but the message bundle class cannot be found.**

**Cause:** A comparison operator was specified with string code, but the message bundle class could not be loaded. When specifying a string code for translatable operator description, the framework first checks to see if the operator specification includes a message bundle class name. If so, it attempts to find the string in that message bundle. If not, then the framework tries to find the string in the owning object's (either view object or entity object) message bundle. If both fail, this error is raised.

**JBO-28021: Activation error on collection {0}, collection id {1}, persistent id {2}**

**Cause:** An unexpected error occurred while activating objects from the persistent store. An exception might have been thrown during deserialization.

**Action:** Look at the details of this exception for further information on the problem and how to address it.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-28030: Could not insert row into table {0}, collection id {1}, persistent id {2}**

**Cause:** An unexpected error occurred while inserting a passivation row into the persistent store table.

**Action:** Look at the details of this exception for further information on the problem and how to address it.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-28031: Could not update row into table {0}, collection id {1}, persistent id {2}**

**Cause:** An unexpected error occurred while updating a passivation row in the persistent store table.

**Action:** Look at the details of this exception for further information on the problem and how to address it.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-28032: Could not delete row from table {0}, collection id {1}, persistent id {2}**

---

**Cause:** An unexpected error occurred while deleting a passivation row from the persistent store table.

**Action:** Look at the details of this exception for further information on the problem and how to address it.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-28033: Could not retrieve row from table {0}, collection id {1}, persistent id {2}**

**Cause:** An unexpected error occurred while retrieving a passivation row from the persistent store table.

**Action:** Look at the details of this exception for further information on the problem and how to address it.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-28034: Retrieval by id not supported for collection {0}, collection id {1}. Call enableAccessById()**

**Cause:** The client attempted to retrieve a row in a persistent collection by an id, but the by-id access is not enabled on the persistent collection.

**Action:** Enable by-id access by calling `PCollection.enableIdAccess`.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-28035: Persistent id {1} is invalid for a collection {0}, collection id {1}. It should be > 0**

**Cause:** The client attempted to retrieve a row by an id, but the id value is invalid. The id must be greater than 0.

**Action:** Give a valid id.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-28036: Object of id {2} is already active in its parent {3} in a persistent collection {0}, collection id {1}**

**Cause:** While attempting to activate an object of a given id, an internal integrity problem was found. In particular, a node which was thought to be passivated was found to be active.

**Action:** Contact Oracle Support Services.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

---

**JBO-28037: Object of id {2} not found in its parent {3} in a persistent collection {0}, collection id {1}**

**Cause:** While attempting to activate an object of a given id, an internal integrity problem was found. In particular, a child node/element expected to be found in a node is missing.

**Action:** Contact Oracle Support Services.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-28038: Could not delete all rows for collection of id {1} from table {0}**

**Cause:** An unexpected error occurred while deleting all passivation rows from the persistent store table.

**Action:** Look at the details of this exception for further information on the problem and how to address it.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-28039: Root node for collection {0} is invalid, collection id {1}, persistent id {2}**

**Cause:** While attempting to activate an object of a given id, an internal integrity problem was found. In particular, the root node of the persistent collection is not good. It is either (1) `null`, (2) has younger or older sibling, or (3) has a parent node. None of these should apply to the root node.

**Action:** Contact Oracle Support Services.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-28040: Could not retrieve ids of rows whose key id is {1} and hash is {2} from table {0}**

**Cause:** An unexpected error occurred while retrieving an array of persistent ids of rows from the persistent store table of given key hash code at the given key index.

**Action:** Look at the details of this exception for further information on the problem and how to address it.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-28041: Update found multiple rows or no matching row. Persistence table {0}, collection id {1}, persistent id {2}**

**Cause:** The system tried to update a row in the persistence store table, but it found either no row or more than one matching row.

**Action:** Contact Oracle Support Services.

**Level:** 1

**Type:** ERROR

---

**Impact:** Programmatic

**JBO-28100: The resource pool, {0}, failed to create a pooled resource instance.**

**Cause:** Either the JDBC connection pool or the application pool were unable to create a new pooled JDBC connection or application module.

**Action:** If the exception details indicate that an exception occurred while creating a JDBC connection then check the JDBC connection description to ensure that it references a valid, live database instance. If the exception details indicate that an exception occurred while creating an application module then check the application module configuration to ensure that it references a valid, live application server and application application module class.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-28101: An application attempted to set a pooled resource that might be in use as available.**

**Cause:** The application attempted to mark a pooled resource which has already been available in the resource pool as available.

**Action:** Remove the application logic that invokes {@link oracle.jbo.pool.ResourcePool#setAvailable(Object)}, or move the application logic such that it occurs only once before the resource is made available.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-28102: A request was timed out while waiting for a resource to be returned to the resource pool, {0}.**

**Cause:** A client request timed out while waiting for a resource to be returned to the resource pool.

**Action:** Increase the maximum resource pool size in order to accommodate the maximum expected active request size. If the exception details indicate that the exception was thrown while waiting for an application module in the application pool then the maximum pool size can be increased with the property, `jbo.ampool.maxpoolsize`. If the exception details indicate that the exception was thrown while waiting for a JDBC connection in the JDBC connection pool then the maximum pool size can be increased with the property, `jbo.maxpoolsize`.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-28103: A pool operation was specified for a pooled resource that does not belong to the resource pool.**

**Cause:** A pool request was made for a resource that does not belong to the pool.

**Action:** Ensure that the pool request is accessing the same pool instance that was used to acquire the resource instance.

**Impact:** Programmatic

**JBO-28200: Validation threshold limit reached. Invalid Entities still in cache**

**Cause:** Invalid entities still found in the validation list of the transaction after attempting to validate all invalid entities for the `VALIDATION_THRESHOLD` 10 times (by default).

**Action:** Fix any logic that invalidates entity instances in the validation cycle (perhaps in overridden `validateEntity()` methods) such that all entities are valid before the `VALIDATION_THRESHOLD` limit is reached.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-28201: Post threshold limit reached. Some entities yet to be posted.**

**Cause:** There are invalid entities or entities in the post list of the transaction after trying to post all changes for the `POST_THRESHOLD` 10 times (by default).

**Action:** Fix any logic that places entities in the transaction's list of entities to be validated or posted in the post cycle, such that all entities get posted before the `POST_THRESHOLD` is reached.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-28202: Entities invalidated in `beforeCommit()`. Need to revalidate and post.**

**Cause:** Invalid entity instances found in the transaction in the `beforeCommit` phase.

**Action:** Fix any business logic that invalidates entity instances in `postChanges()` such that there are no more invalid entities after all changes are posted during the commit cycle.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-28203: The updated row cannot be refreshed because its key values are unset or modified by database triggers.**

**Cause:** The row could not be refreshed after update because the value of its primary or unique key was not set or unknown.

**Action:** Ensure values are set for at least one primary or unique key that can be used to fetch the row that is being updated. If that is not possible, use a custom `SQLBuilder` with `doRefreshSQL()` defined to refresh the row.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-28204: Too many objects match the alternate key {0} for entity {1}, key {2}.**

**Cause:** Attempting to add a new entity to the cache with alternate key that is same as an existing entity. This exception is thrown when uniquing a newly fetched/created entity with the cached set of entities.

---

**Action:** Fix the named alternative value of the row. Or, the alternate key definition might have to be augmented with additional attributes.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-28205: Validator {0} needs a row from iterator {1} to perform its validation, but did not find any row. Validation fails for row with key {2}.**

**Cause:** A validator needs a row to perform validation, but the view object could not find any matching row.

**Action:** Since the necessary row is not found, the validation failed. Check to ensure that it is not an application error that cause no row to be found.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-28206: Row of index {0} not found in range for range-paging mode for query collection {1}.**

**Cause:** The row of the specified index is not in the current range for range-paging mode. The requested operation requires the row to be in the range.

**Action:** The requested operation cannot be performed because the row is not in the range with range-paging mode. Scroll range to make sure that the desired row is in the range before performing the operation.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-29000: Unexpected exception caught: {0}, msg={1}**

**Cause:** If an unexpected exception occurs during a framework operation, this exception is thrown, with the unexpected exception included in the details of this exception.

**Action:** Fix the cause for the exception in the details for this JboException.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-29001: Type mismatch. Expected {0}. Actual {0}**

**Cause:** During creation of application module in the EJB deployment mode, the object returned by the EJB home is not an instance of oracle.jbo.common.remote.ejb.RemoteApplicationModule.

**Action:** This usually means that the wrong EJB home is being invoked to create a remote application module. Fix it to point to the correct home.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-29004: Server-side configuration for creating the pool not specified.**

---

**Cause:** A configuration was not specified for the remote ApplicationModule usage.

**Action:** Use the design time to specify a configuration for the remote ApplicationModule usage.

**JBO-29105: Attributes referenced in view criteria {0},{1} with property AppliedIfJoinSatisfied do not map to the same entity usage.**

**Cause:** The attributes used in the View Criteria do not map to the same entity usage.

**Action:** Make sure the attributes used in the View Criteria all map to the same entity usage if AppliedIfJoinSatisfied is set to true.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-29106: Attributes referenced in view criteria {0},{1} with property AppliedIfJoinSatisfied map to the primary entity usage.**

**Cause:** The attributes used in the View Criteria cannot map to the primary entity usage.

**Action:** Make sure the attributes used in the View Criteria all map to a non-primary entity usage if AppliedIfJoinSatisfied is set to true.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-29107: View criteria {0},{1} with property AppliedIfJoinSatisfied must be used with an entity-based view object.**

**Cause:** The view criteria cannot be used with a non-entity based view object

**Action:** The view criteria can only be used with an entity-based view object if AppliedIfJoinSatisfied is set to true.

**Level:** 1

**Type:** ERROR

**JBO-29108: The value specified for the property {0} in the rowidam.properties file is invalid.**

**Cause:** Invalid value specified in the rowidam.properties file. The values cannot be  $\leq 0$ .

**Action:** Update the properties to specify accepted values. The property values should be  $> 0$ .

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

---

**JBO-29109: The value specified for column {0} in the S\_ROW\_ID table is invalid.**

**Cause:** One or more column values in S\_ROW\_ID table are invalid.

**Action:** Update the S\_ROW\_ID table with accepted values. The column values should be greater than zero.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-29110: Unable to cast the class type specified for RowId comparison to GeneratorSequenceImpl or BigDecimal.**

**Cause:** Invalid value specified for comparison.

**Action:** The value to be compared with the RowId should be of type BigDecimal or any other type that can be converted to BigDecimal.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-29111: View criteria {0} is a union VC and contains an invalid element of type {1} at index {2}**

**Cause:** This view criteria is marked for union query but contains a view criteria element which is neither a ViewCriteria nor ViewCriteriaUsage.

**Action:** A union view criteria can only contain ViewCriteria or ViewCriteriaUsage. Correct the view criteria definition.

**Level:** 1

**Type:** ERROR

**JBO-29121: View criteria {0} has nested VC that uses variable {1} of type {2}, but variable {1} in view object {3} is of type {4}.**

**Cause:** A correlated sub-query generated for an accessor view object uses a bind variable of the same name as the outer one but has a different type.

**Action:** Change the data type of the bind variable, or remove the nested view criteria.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-29122: Cannot copy variable {0} from {1} to view object {2} for view criteria {3} because a variable of same name is already copied from {4}.**

**Cause:** Two correlated sub-queries generated for two accessor view objects use a bind variable of the same name.

**Action:** Redefine the bind variable on the root view object, or remove one or both nested view criteria.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-29123: View criteria {0} has nested VC on accessor VO {1} which uses bind variable(s). This cannot be applied on view object {2}.**

**Cause:** A correlated sub-query generated for an accessor view object uses a bind variable but the outer view object is a composite view object.

**Action:** Remove the nested view criteria.

**Level:** 1

**Type:** ERROR

---

**Impact:** Programmatic

**JBO-29124: Filter view criteria cannot be applied to iterator {0} of viewobject {1} because it was created from a different viewobject {2}**

**Cause:** An attempt was made to apply a filter view criteria on a viewobject that is not its parent.

**Action:** Ensure that the filter criteria is applied on the same view object it was created on.

**Level:** 1

**JBO-30002: The pool signature for the cookie is invalid.**

**Cause:** Deprecated.

**Action:** N/A

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-30003: Application pool {0} fails to check out an application module due to the following exception:**

**Cause:** The pool failed to create an application module instance during checkout. Typically this exception occurs when the pool has been configured with an invalid application module name, EJB server, etc. or when an invalid JDBC username, password, URL, or datasource name has been specified.

**Action:** See the exception details for more information regarding the failure. Correct the application's configuration properties appropriately.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-30004: An application module that was not checked out was checked into the pool, {0}**

**Cause:** The application attempted to check in an application module that was not checked out from the pool.

**Action:** Remove redundant `releaseApplicationModule()` invocations from the application logic.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

---

**JBO-30005: A pool operation was specified for an application module instance that was not created by that pool.**

**Cause:** The application attempted to invoke an application pool method with an application module that was not created by that application pool instance.

**Action:** Correct the application logic. Use the session cookie that was used to acquire the application module instance to acquire a reference to the application pool that created that application module instance.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-30006: The cookie for session {0} and application {1} is not a valid handle for application pool, {2}. The cookie cannot be used to access this pool instance.**

**Cause:** The application attempted to access the application pool with a session cookie that is not registered with that application pool.

**Action:** Correct the application logic. The application should not reference the application pool directly. Use the session cookie interface for all application pool interaction.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-30009: A thread attempted to set as 'available' an application module that could already be in use. An application module's availability cannot be changed from outside of the pool once it has been made available.**

**Cause:** The application attempted to modify the availability status of an application module that is already in active pool use.

**Action:** Remove the application logic that is updating the application module availability status.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-30010: The cookie for session {0} and application {1} cannot be replicated with an active cookie instance.**

**Cause:** The web server attempted to replicate a session cookie with an existing, active cookie.

**Action:** Internal exception. Contact Oracle Support Services.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-30011: A null session cookie application id, session id, or application pool reference ({0}, {1}, {2}) was specified during cookie construction. The cookie could not be constructed.**

**Cause:** The application attempted to create a session cookie with an invalid set of cookie parameters.

---

**Action:** Correct the application logic that creates the session cookie. Verify that the cookie session id, application id, and application pool reference are all not null.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-30012: A cookie for session {0} and application {1} has already been registered with application pool {2}. The cookie must be removed first.**

**Cause:** The application attempted to create a session cookie in an application pool that already contains that session cookie.

**Action:** Correct the application logic that creates the session cookie. Remove the existing session cookie before creating a new one in that pool.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-30013: The cookie environment for session {0} and application {1} cannot be reset after the cookie has become active.**

**Cause:** The application attempted to change the session cookie environment after the session cookie became active.

**Action:** Correct the application logic that sets the session cookie environment. Move all logic that changes the session cookie such that it occurs before the session cookie becomes active. A session cookie is active after it is first used to acquire an application module.

**Level:** 1

**Type:** ERROR

**Impact:** Configuration

**JBO-30014: The cookie for session {0} and application {1} cannot be removed from the application pool while it has an application module checked out.**

**Cause:** Correct the application logic that sets the session cookie environment. Move all logic that changes the session cookie such that it occurs before the session cookie becomes active. A session cookie is active after it is first used to acquire an application module.

**Action:** Correct the application logic that removes the session cookie from the application pool. Be sure to invoke `SessionCookie.releaseApplicationModule()` before invoking `ApplicationPool.removeCookie(SessionCookie)`.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-30015: The cookie for session {0} and application {1} cannot be serialized while in use.**

**Cause:** The application attempted to serialize a session cookie while that cookie had an application module instance checked out or which the cookie was locked by a client request thread.

---

**Action:** Correct the serialization logic such that the session cookie is serialized after the session cookie application module has been released to the application pool and after all client requests have released their cookie locks.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-30016: The request thread for session {0} and application {1} was timed out while waiting for an available application module in the pool, {2}.**

**Cause:** The application request thread timed out while waiting for an available application module instance in the pool.

**Action:** Prevent wait timeouts by increasing the maximum pool size.

**Type:** ERROR

**Impact:** Programmatic

**JBO-30018: The cookie configuration does not match the specified configuration. applicationId: {0}, sessionId: {1}, cookieConfig: {2}, specifiedConfig: {3}.**

**Cause:** oracle.jbo.http.HttpContainer.findSessionCookie was invoked with a configName which was different than the configuration that was used to create the specified SessionCookie.

**Action:** Use a distinct applicationId to identify the cookie for each distinct Configuration.

**Level:** 1

**Type:** ERROR

**Impact:** Configuration

**JBO-30019: An unavailable cookie state is detected while attempting to use a cookie from application {0}, session {1}.**

**Cause:** An application pool method was invoked for a cookie that was not currently available. A cookie can be in an unavailable state if another thread is currently updating the cookie. For example, consider the following scenario: 1. cookie 1 releases an ApplicationModule with the managed state option 2. cookie 2 targets that ApplicationModule for recycling 3. Before cookie 2 has passivated the ApplicationModule state for cookie 1, cookie 1 requests another ApplicationModule In this instance the ApplicationPool could throw an

---

unavailable exception. Note that most of the occurrences of this exception should be handled by the pooling framework.

**Action:** Report the exception to Oracle Support Services. Attempt the invalid operation again.
