**Level:** 1

**Type:** ERROR

**Impact:** Other

**REP-00303: The statement entered is not a SELECT statement.**

**Cause:** What was entered in the SELECT Statement field is something other than a SELECT statement. The possible causes of this error include the following: Case 1: Something besides a SELECT statement was entered in the SELECT Statement field. Case 2: An external query was referenced that did not contain a SELECT statement.

**Action:** Take the following actions to correct this error: If Case 1: Enter a valid SELECT statement. If Case 2: Modify the external query or reference another external query.

**REP-00304: & in SELECT statement was not followed by a valid lexical parameter.**

**Cause:** An ampersand (&) appears in the SELECT statement by itself. The possible causes of this error include the following: Case 1: A lexical reference either left out the name of the column or parameter altogether or there is a space between the ampersand and the name of the column or parameter. Case 2: An ampersand was accidentally typed in the SELECT statement.

**Action:** Take the following actions to correct this error: If Case 1: Verify that the column or parameter name immediately follows the ampersand with no spaces in between. If Case 2: Delete the ampersand.

**Level:** 1

**Type:** ERROR

**Impact:** Other

**REP-00305: Reference {0} cannot be used as a lexical parameter because it is not a character value.**

**Cause:** An invalid lexical reference appears in the SELECT statement. Lexical references can only be made to parameters or columns containing character data. The possible causes of this error include the following: Case 1: The wrong column or parameter was referenced. Case 2: The reference should be a bind reference, not a lexical reference. Case 3: The parameter or column referenced was created with a non-character data type.

---

**Action:** Take the following actions to correct this error: If Case 1: Change the name that follows the ampersand (&) so it references a parameter or column with a data type of Character. If Case 2: Replace the ampersand (&) with a colon (:) when referencing the parameter or column. If Case 3: Change the data type of the parameter or column to be Character, if appropriate.

**Level:** 1

**Type:** ERROR

**Impact:** Other

**REP-00306: The name {0} is not a valid parameter name.**

**Cause:** In making reference to a parameter, an attempt was made to create a parameter with an invalid name. For a bind reference, a parameter definition is automatically created using the name specified in the bind parameter. In this case, Oracle Reports Builder could not create the parameter because the name supplied was not a valid name.

**Action:** Check the naming conventions for data model objects and rules for parameter names. Rename the parameter and change the name in the bind reference.

**Impact:** Other

**REP-00308: An internal error occurred: Unknown column type.**

**Cause:** The possible causes of this error include the following: Case 1: An attempt was made to display the value of a column using SRW.MESSAGE, but the column's data type (for example, LONG, LONG RAW, ROWID) is not supported for that operation. Case 2: An attempt was made to pass the value of a column to Forms Runtime or Graphics Runtime as a parameter, but the column's data type (for example, LONG, LONG RAW, ROWID) is not supported for that operation.

**Action:** Do not attempt to display or pass this column's value.

**Level:** 1

**Type:** ERROR

**Impact:** Other

**REP-00309: The specified database cannot connect after three attempts. Access denied.**

**Cause:** Case 1: Some part of the logon string entered was incorrect. After three failed attempts, Oracle Reports Builder displays a dialog box with this message. Case 2: The NLS\_LANG environment variable value may be invalid.

---

**Action:** Case 1: Accept the dialog box. Confirm the logon information with the system administrator, if necessary. Go back into Oracle Reports Builder and try connecting to Oracle again. If the problem persists, the system administrator may need to create a new Oracle logon. Case 2: Verify the NLS\_LANG value is valid.

**REP-01307: Summary column {0} has an invalid product order.**

---

**Cause:** The possible causes of this error include: Case 1: A summary exists that is not a running summary (that is, its Reset At is not Report), but its Product Order is not a subset of the source column's product order. The source column of the summary must be at least as frequent as the summary, which means that the summary's Product Order should be some subset of the source column's Product Order. Case 2: A running summary (that is, its Reset At is Report) exists with a Product Order that is not a prefix of the source column's Product Order. For example, if the source column's Product Order were A,B,C, then the summary column's Product Order would have to be either A (by itself) or A,B. The summary's Product Order could not be B,A.

**Impact:** Other

**REP-01311: Object {0} with page-dependent references have been changed to fixed sizing.**

---

**Cause:** A field or boilerplate object has a reference to a page calculation or a total number of pages variable. (This is known as a forward reference.) Such layout objects must be fixed in size both horizontally and vertically.

**Action:** The layout object's Horizontal and Vertical Elasticity have been set to Fixed by Oracle Reports Builder. Check the output to ensure that the values are not being truncated. If they are, enlarge the layout object so that it is large enough to contain the values.

**Cause:** The specified object (object1) is in the "push path" of two objects and it is equidistant from both objects. As a result, Oracle Reports Builder cannot use its normal criteria (shortest distance) to determine the implicit anchor. In the absence of its normal criteria, Oracle Reports Builder randomly creates an implicit anchor to the specified object (object2). **Cause:** An illegal argument is being passed to the attribute's set accessor method. TopLink is unable to invoke method `setMethodName` on the object. The number of actual and formal parameters differs, or an unwrapping conversion has failed. Java raises the error and TopLink wraps only the reflection exception.

**Action:** Inspect the internal exception, and refer to the Java documentation.

**Level:** 1

**Type:** Error

**Impact:** Configuration

**TOP-00034: This class does not define a public default constructor, or the constructor raised an exception.**

**Cause:** The class does not define a public default constructor, or the constructor raised an exception. This error occurs when you invoke the default constructor for the domain object to create a new instance of the object while building new domain objects if: The class represents an abstract class, an interface, an array class, a primitive type, or void. The instantiation fails for some other reason.

**Action:** Inspect the internal exception, and refer to the Java documentation.

**Level:** 1

**Type:** Error

**Impact:** Configuration

**TOP-00035: Invalid event.**

**Cause:** Applications should never encounter this exception. This exception usually occurs at the time of developing TopLink, although in cases, where you write new mapping, it is possible to get this exception. In direct collection mapping and many-to-many mapping, the target table and relational table are populated at the end of the commit process, and if a data modification event is sent to any other mapping, then this exception is raised.

**Action:** Contact Oracle Support Services.

**TOP-00036: Invalid event code `[[0]]`.**

**Cause:** An application should never encounter this exception. This exception usually occurs at the time of developing TopLink, although in cases, where you write new mappings, it is possible to get this exception. In direct collection mapping and many-to-many mapping, the target table and relational table are populated at the end of the commit process, and if a data modification event is sent to these two mappings with wrong event code, then this exception is raised.

**Action:** Contact Oracle Support Services.

**Level:** 1

**Type:** Error

**Impact:** Configuration

**TOP-00037: Invalid descriptor event code `[[0]]`.**

---

**Cause:** An application should never encounter this exception. This exception usually occurs at the time of developing TopLink. The exception means that the descriptor event manager does not support the event code passed in the event.

**Action:** Contact Oracle Support Services.

**Level:** 1

**Type:** Error

**Impact:** Configuration

**TOP-00038: Identity map constructor failed because an invalid identity map was specified.**

**Cause:** The identity map constructor failed because an invalid identity map was specified. The identity map class given in the descriptor cannot be instantiated. The exception is a Java exception that is raised by a Java reflection when TopLink instantiates the identity map class. TopLink wraps only the Java exception.

**Action:** Inspect the internal exception, and refer to the Java documentation.

**Level:** 1

**Type:** Error

**Impact:** Configuration

**TOP-00039: This descriptor does not specify a Java class.**

**Cause:** The descriptor does not define a Java class. The Java class is not specified in the descriptor.

**Action:** Specify the Java class.

**Type:** Error

**Impact:** Configuration

**TOP-00041: A non-read-only mapping must be defined for the sequence number field.**

**Cause:** A non-read-only mapping is not defined for the sequence number field. A mapping is required so that TopLink can put and extract values for the primary key.

**Action:** Define a mapping.

**Level:** 1

**Type:** Error

**Impact:** Configuration

**TOP-00043: Missing class for indicator field value [{0}] of type [{1}].**

---

**Cause:** TopLink is missing the class for indicator field value classFieldValue of type type. There was no class entry found in the inheritance policy for the indicator field value that was read from the database. It is likely that the method addClassIndicator(Class class, Object typeValue) was not called for the field value. The class and typeValue are stored in a hash table, and later the class is extracted from the hash table by passing typeValue as a key. Because Integer(1) is not equivalent to Float(1), this exception occurs when the type of typeValue is incorrectly specified.

**Action:** Verify the descriptor.

**Level:** 1

**Type:** Error

**Impact:** Configuration

**TOP-00044: Missing class indicator field from database row [{0}].**

**Cause:** The class indicator field is missing from the database row that was read from the database. This is performed in the inheritance model where after reading rows from the database, child domain objects are to be constructed depending upon the type indicator values.

**Action:** Define a mapping for the primary key.

**Level:** 1

**Type:** Error

**Impact:** Configuration

**TOP-00047: The multiple table primary key mapping must be specified when a custom multiple table join is used.**

**Cause:** The multiple table primary key mapping is not specified when a custom multiple table join is used. If multiple tables are specified in the descriptor and the join expression is customized, then the primary keys for all the tables must be specified. If the primary keys are not specified, then the exception occurs.

---

**Action:** Call the method `addMultipleTablePrimaryKeyFieldName(String fieldNameInPrimaryTable, String fieldNameInSecondaryTable)` on the descriptor to set the primary keys.

**Level:** 1

**Type:** Error

**Impact:** Configuration

**TOP-00048: Multiple writable mappings exist for the field `[[0]]`. Only one may be defined as writable, all others must be specified read-only.**

**Cause:** Multiple writable mappings for the field `fieldName` are defined in the descriptor. Exactly one must be defined as writable; the others must be specified as read-only. When multiple write mappings are defined for the field, TopLink is unable to choose the appropriate mapping for writing the value of the field in the database row. Therefore, the exception is raised during the validation process of descriptors.

**Action:** Make one of those mappings read-only.

**Level:** 1

**Type:** Error

**Impact:** Configuration

**TOP-00049: An attribute transformation method name is not specified for this mapping.**

**Action:** Set the field by calling `setFieldName(String fieldName)`.

**Level:** 1

**Type:** Error

**Impact:** Configuration

**TOP-00051: No foreign keys have been specified for this mapping.**

**Cause:** Neither the selection criteria nor the foreign keys were specified on one-to-one mapping. If the selection criterion is not specified, then TopLink tries to build one from the foreign keys specified in the mapping.

**Action:** Specify the fields.

**Level:** 1

**Type:** Error

**Impact:** Configuration

---

**TOP-00052: No reference key has been specified for this mapping.**
