Relationship Pricing

RL001 - UDE Master Maintenance

Using this option you can maintain user data elements that are used to define rules in Relationship Pricing. The main purpose of this option is to represent various data elements in the **FLEXCUBE** database in simple user understandable terms.

There are four types of UDEs defined in **FLEXCUBE**:

- Table Columns: Defines a query returning a single value. It also supports aggregation functions for the selected columns.
- DB Functions: Uses pre-defined database functions returning a particular value.
- Expressions: Uses other UDEs to create complex UDEs. The expressions will use simple mathematical operators or string operators on the existing UDEs or constant values, to arrive at the output.
- Transactional: Uses transactional data, which is not yet saved in the database.

Definition Prerequisites

Not Applicable

Modes Available

Add, Modify, Delete, Cancel, Amend, Authorize, Inquiry. For more information on the procedures of every mode, refer to **Standard Maintenance Procedures**.

To add the UDE master details

1. Type the fast path **RL001** and click **Go** or navigate through the menus to **Global Definitions > Rules > UDE Master Maintenance**.
2. The system displays the **UDE Master Maintenance** screen.

UDE Master Maintenance

The screenshot shows the 'UDE Master Maintenance' application window. It features a yellow title bar and a main content area with several sections:

- Top Section:** Contains input fields for 'UDE Code', 'Version', 'UDE Name', 'UDE Type', 'UDE Context', 'UDE Domain', and 'UDE Data Type'. There are also buttons for selecting values (indicated by '...' icons).
- Navigation Tabs:** A row of tabs labeled 'Table Column', 'Function', 'Expression', 'Transactional', 'Domain Query', and 'Domain List'. The 'Table Column' tab is currently selected.
- Query Section:** Includes a 'SELECT FROM table :' field, a 'Column' dropdown, and an 'IF NULL THEN RETURN' field.
- Table Header:** A table with columns: REFWORD, F, COLUMN, Condition, UDE, VALUE, COLUch, and Delr.
- Table Body:** A large, empty table area for data entry.
- Buttons:** '+', '-', 'Show Query', and 'Validate Query' buttons are located below the table.
- Query and Errors:** Two text areas labeled 'Query:' and 'Errors:' with vertical scrollbars.
- Record Details:** A section with fields for 'Input By', 'Authorized By', 'Last Mnt. Date', 'Last Mnt. Action', and 'Authorized'.
- Footer:** A row of radio buttons for 'Add', 'Modify', 'Delete', 'Cancel', 'Amend', 'Authorize', and 'Inquiry' (which is selected). There are also 'Ok', 'Close', and 'Clear' buttons.

Field Description

Field Name	Description
------------	-------------

UDE Code	[Mandatory, Alphanumeric, 16] Type the unique identification code of the created UDE ¹ .
-----------------	---

Version	[Display] This field displays the version number of the UDE code.
----------------	--

UDE Name	[Mandatory, Alphanumeric, 80] Type the description of the UDE.
-----------------	---

¹(User Defined Entity)

Field Name	Description
UDE Type	<p>[Mandatory, Drop-Down]</p> <p>Select the type of UDE from the drop-down list.</p> <p>The options are:</p> <ul style="list-style-type: none"> • Table Column : This option contains the list of tables which can be used for setting up a UDE. Data of tables are provided for selection as part of setup. You can select only one table. Based on the table selected, relevant column names are populated. Rationalization of columns to populate data is done as part of factory shipped data creation. This is to ensure that no system calculation column or MU fields are populated, which may not be used as attributes. To define the UDE, you are provided with the facility to frame a simple SQL command, using columns in the selected table. The result fetched on execution of the SQL command would be the UDE output and would be utilized for rule definition. • Database Function : This option contains the list of stored functions which are written for setting up the user defined entity. You can select the stored function from the pick list. The stored functions follow a standard naming convention, to facilitate a small subset of functions available for UDE definition. Once a stored function is selected, the maintenance displays all the parameters of the function, which can be mapped to another existing UDE or an absolute value to arrive at the required output. For more information, refer to Example 01 provided at the end of this option. • Expression : An expression allows you to relate existing UDEs to define an output. Expression can be built using the following: <ul style="list-style-type: none"> 1) Existing UDE 2) Constant Values 3) Brackets (to group certain conditions) 4) Mathematical operators - +, -, *, /, MOD(), Trunc(), Round(), Abs() For more information, refer to Example 02 provided at the end of the topic • Transactional : It is equivalent to System Data elements. These fields are available as part of a particular context. For example: Transaction amount will always be available as part of Online SC calculation and will not be required or available for interest computation. So a transactional UDE called Transaction amount in Transaction currency will become a transactional UDE for Online SC Context.
UDE Context	<p>[Mandatory, Pick List]</p> <p>Select the UDE context from the pick list.</p> <p>It denotes the context and the place where the rules are linked to the UDE.</p>

Field Name	Description
UDE Domain	<p>[Mandatory, Drop-Down]</p> <p>Select the domain of the UDE from the drop-down list.</p> <p>The options are:</p> <ul style="list-style-type: none"> • None • Query • List
UDE Data Type	<p>[Display]</p> <p>This field displays the data type of the UDE.</p> <p>The options are:</p> <ul style="list-style-type: none"> • STRING • NUMERIC • BOOLEAN • DATE

3. Click the **Add** button.
4. Enter the UDE code and name.
5. Select the UDE type and domain from the drop-down list.
6. Select the UDE context from the pick list.

Transactional

The screenshot shows the 'UDE Master Maintenance' window. At the top, there are fields for 'UDE Code' (CASAINTDEV_BAL), 'Version' (0), 'UDE Name' (Balance for Interest), 'UDE Type' (Transactional), 'UDE Context' (CASAINTDEV), 'UDE Domain' (None), and 'UDE Data Type' (NUMERIC). Below these are tabs for 'Table Column', 'Function', 'Expression', 'Transactional' (selected), 'Domain Query', and 'Domain List'. The 'Transactional' tab contains a 'Source Type' dropdown (Procedure Parameter), a 'Transaction' field, and a 'Source Field' field (var_pi_bal_for_intere). At the bottom, there are buttons for '+', '-', 'Show Query', and 'Validate Query'. Below these are 'Query:' and 'Errors:' text areas. The 'Record Details' section shows 'Input By' (SYSTEM), 'Authorized By' (SYSTEM), 'Last Mnt. Date' (02/12/2005 00:00:00), 'Last Mnt. Action' (Authorize), and 'Authorized' (checked). At the very bottom are radio buttons for 'Add', 'Modify' (selected), 'Delete', 'Cancel', 'Amend', 'Authorize', and 'Inquiry', along with 'Ok', 'Close', and 'Clear' buttons.

Field Description

Field Name	Description
Source Type	[Mandatory, Drop-Down] Select the source type from the drop-down list. The source type can be a procedure parameter or screen based.
Transaction	[Display] This field displays the task code associated with the UDE. The corresponding logical name of the task is displayed in the adjacent field. For future use only.
Source Field	[Display] This field displays the name of the parameter of the procedure.
Query	[Display] This field displays the query that is executed. The query is displayed once the Show Query button is clicked.

Field Name	Description
Errors	[Display] This field displays the errors, if any, on execution of the query.

9. Click the **OK** button.
10. The system displays the message "Record Added... Authorisation Pending.. Click Ok to Continue". Click the **OK** button.
11. The UDE master details are added once the record is authorised.

Example 01: Database Function

Assume a database function is available to calculate customer balance, with two parameters i.e. Customer ID and Balance type. The balance type indicates the accounts whose balance has to be considered like Deposits balance, Total balance, Customer Group balance etc. This single function can, therefore, be mapped to create different UDEs. Once the stored function is selected for creating UDE, system will display a grid containing two rows, which will be mapped to a UDE or a constant value as follows:

Input Parameters	Mapped UDE or Constant
pi_cod_cust_id	Input Customer ID
pi_bal_type	Customer Group Balance

In this case, system will create a UDE that calculates the Customer Group balance for the given customer.

Example 02: Expressions

An expression can be setup to get the following: (Sum of Credits - Sum of Debits) * 2

In this UDE following things are used:

1. Existing UDEs i.e. Sum of Credits and Sum of Debits.
2. A constant value i.e. 2
3. Brackets
4. Mathematical operators i.e. +, *

RL002 - Rule Definition Master Maintenance

Using this option you can create rules. Using these rules, bank can create any kind of conditional offering to their customers. Multiple conditions can be set in a single rule ID. The rules created, can be used at appropriate places in the system to calculate interest rates, service charges, etc.

Definition Prerequisites

- RL001 - UDE Master Maintenance

Modes Available

Add, Modify, Delete, Cancel, Amend, Authorize, Inquiry. For more information on the procedures of every mode, refer to **Standard Maintenance Procedures**.

To add a rule

1. Type the fast path **RL002** and click **Go** or navigate through the menus to **Global Definitions > Rules > Rule Definition Master Maintenance**.
2. The system displays the **Rule Definition Master Maintenance** screen.

Field Description

Field Name	Description
------------	-------------

Field Name	Description
Rule Code	[Mandatory, Alphanumeric, 20] Type the unique identification code of the rule created.
Version No	[Display] This field displays the version number of the rule. A new version is created whenever the rule is modified. The latest version is always the one in use, although older versions can be queried upon.
Rule Name	[Mandatory, Alphanumeric, 80] Type the description of the rule.
RuleContext	[Mandatory, Pick List] Select the rule context from the pick list. Rule context defines the purpose for which rule is being set up. For e.g. a context SCTXN states that, this rule is used to compute service charge for Transactions in FLEXCUBE . The values for this will be set up through Day 0 setup.
RuleReturnType	[Mandatory, Pick List] Select the rule return type from the pick list. This value determines the return value of the rule. This value depends on the rule context selected. For e.g. for context SCTXN, a rule can return Transaction amount (on which SC will be calculated based on SC code parameters) or SC amount.

3. Click the **Add** button.
4. Enter the rule code and press the **<Tab> or <Enter>** key.
5. Enter the rule name.
6. Select the rulecontext and rulereturntype from the pick list.

- Select the check boxes corresponding to the rules to be debugged.

Rule Debug Maintenance

The screenshot shows the 'Rule Debug Maintenance' window. It contains a table with three columns: Rule Code, Rule Name, and Debug?. The table lists various rules, including IFST, BANK_NOTE_3, BOOKBALSCHEMPTION, and others. The 'Debug?' column has checkboxes for each rule. Below the table, there is a pagination control showing '1 / 2' and '1 2'. At the bottom of the window, there is a toolbar with buttons for 'Add By Copy', 'Add', 'Modify', 'Delete', 'Cancel', 'Amend', 'Authorize', 'Inquiry', 'UDF', 'Ok', 'Close', and 'Clear'.

RP004 - Interest Variance Package Maintenance

The interest rates for options like CASA and TD are maintained at the product level respectively. Using this option preferential interest rate plans can be maintained for a certain set of customers.

Separate packages will be created for defining variances for CASA and TD. Once a module is selected for maintaining interest variance, the interest types falling under the same will be displayed. The user will be able to maintain interest variance for all the interest types falling under each module.

Definition Prerequisites

- RL002 - Rule Definition Master Maintenance

Modes Available

Add, Modify, Delete, Cancel, Amend, Authorize, Inquiry. For more information on the procedures of every mode, refer to **Standard Maintenance Procedures**.

To add the interest variance package details

1. Type the fast path **RP004** and click **Go** or navigate through the menus to **Global Definitions > Relationship Pricing > Interest Variance Package Maintenance**.
2. The system displays the **Interest Variance Package Maintenance** screen.

RP003 - Benefit Plan Maintenance

Using this option you can link various products to the interest variance packages and SC packages created for **Relationship Pricing**.

Once a scheme is linked to the customer, his/her accounts belonging under the products defined in benefit plan, will get the benefits defined in the interest variance package or SC package. The benefit plan consists of various interest rate variance and service charge packages.

For the **Relationship Pricing** functionality, the different package types defined on **FLEXCUBE** are:

- Service Charges Package
- CASA Interest Package
- TD Interest Package

Unique benefit plans are defined on the system for each package type, there by linking existing products to the respective package.

RP001 - Scheme Definition Maintenance

A scheme is a group of benefit plan that has been defined for various components (i.e. interest variance, service charge). It would include details on the benefits being offered to the customer i.e. relevant benefit plans, start date and end date for the scheme.

Schemes will be created containing details of all types of benefits (interest, SC) for all the products or only one type of benefit component can be passed on to the customer.

Using this option schemes created can be applied automatically to a customer without waiting for his consent or after taking customers consent and apply the relationship package. A scheme will be set up with a start date and end date. Using this tool, banks can run various business development schemes and campaigns.

Field Description

Column Name	Description
Validity	
Start Date	[Mandatory, Pick List, dd/mm/yyyy] Select the start date of the relationship package from the pick list. A scheme cannot be applied to any customer before the start date.
End Date	[Mandatory, Pick List, dd/mm/yyyy] Select the end date of the relationship package from the pick list. In case bank wants to have a forever running pricing policy, the end date will be required to be set up to a high value. A scheme cannot be applied to any customer after the end date.

Column Name	Description
Benefit Valid For	<p>[Mandatory, Numeric, Two, Drop-Down]</p> <p>Type the period for which benefits will be applicable from the date of applying.</p> <p>This period can be even after the scheme has expired. In this case no new customers can get the scheme, but customers already enjoying the benefits of the scheme will continue to do so, till this period.</p> <p>E.g. If an account is opened during Christmas period, all SCs will be reduced to half for one year. Here Christmas period is Start-End Date. And 1 year is the duration.</p> <p>In case, the scheme benefits are also applicable for the same period as the scheme duration, then either set it to same as Scheme days or set it to 0.</p> <p>The options are:</p> <ul style="list-style-type: none"> • Days • Months • Years
Validity Type	<p>[Mandatory, Drop-Down]</p> <p>Select the validity type from the drop-down list.</p> <p>The options are:</p> <ul style="list-style-type: none"> • Perpetual - Once applied to the customer, the benefits will be available to the customer, even if he falls out of eligibility later. • Renewable - These schemes will always check the eligibility and if a customer falls out of eligibility, the benefits will be expired. The benefits will be given again, if the customer becomes eligible again. • One Time - These schemes will apply to the customer only till the time he is eligible as per the eligibility criteria. If he falls out of eligibility, the benefits will be expired and he will not get the benefits of the scheme again. <p>All the rules pertaining to validity type are applicable, if the scheme is linked via eligibility criteria and not directly to the customer. In case of direct linking of scheme to the customer, the scheme will behave as perpetual.</p>
Applicability	

Column Name	Description
Apply For	<p>[Mandatory, Drop-Down]</p> <p>Select the appropriate option for applicability of scheme from the drop-down list.</p> <p>This will enable the bank to determine for a given set of customers “what are the set of accounts” on which the benefits specified in the benefit plan has to be applied to.</p> <p>The options are:</p> <ul style="list-style-type: none"> • New Accounts • All Accounts • Existing Accounts
Automatic/Manual	<p>[Mandatory, Drop-Down]</p> <p>Select the type of applicability from the drop-down list.</p> <p>This actually denotes whether the scheme is to be applied automatically to the customer or requires manual intervention of the branch.</p> <p>The options are:</p> <ul style="list-style-type: none"> • Manual • Automatic

Benefit Components

The screenshot shows a software window titled "Scheme Definition Maintenance". At the top, there are two input fields: "Scheme ID :" with the value "SCH01" and "Scheme Name :" with the value "Scheme1". Below these are two tabs: "Scheme Parameters" and "Benefit Components", with the latter being the active tab. The main area of the window contains a table with three columns: "Benefit Plan Type", "Benefit Plan Code", and "Benefit Plan Name". The first row of the table has the values "TDINT", "-", and "-" respectively. Below the table is a large empty rectangular area. At the bottom of the window, there is a "Record Details" section with five input fields: "Input By", "Authorized By", "Last Mnt. Date", "Last Mnt. Action", and "Authorized". The "Authorized" field has a checked checkbox. At the very bottom, there is a row of buttons: "Add", "Modify", "Delete", "Cancel", "Amend", "Authorize", "Inquiry", "Ok", "Close", and "Clear".

Field Description

Column Name	Description
Benefit Plan Type	[Display] This column displays whether the benefit plan is being made for interest variance or for service charges.
Benefit Plan Code	[Mandatory, Pick List] Select the identification code that is assigned to a benefit plan from the pick list. A benefit plan can be defined as a group of benefits that can be assigned to a customer base. This code is a summation of benefits that are packaged under one head.
Benefit Plan Name	[Display] This column displays the description of the benefit plan offered by the bank. For e.g. Bank may set up one benefit plan each with the following description: <ul style="list-style-type: none">• Normal Customer Benefit Plan• Senior Citizen Customers Plan

7. Click the **Ok** button.
8. The system displays the message "Record Added...Authorisation Pending...Click Ok to Continue". Click the **OK** button.
9. The scheme definition details are added once the record is authorised.

RP002 - Eligibility Criteria Maintenance

Using this option you can define different eligibility criteria for a set of benefits under a scheme. This plan determines the set of customers who will get the benefits defined under the scheme. This definition helps identify the target customers for a scheme.

The customers who are excluded from the benefit defined under the scheme will also be set up in this maintenance, as an exclusion plan. Exclusion Plan contains the criteria, which if matched by the customer, will make him ineligible for the scheme. In other words, all the facilities or benefits provided to the customer will cease, and he / she will be tagged the normal customer status. Exclusion plan set up is provided to facilitate exclusion of a common set of customers, who needs to be excluded from most of the schemes.

Definition Prerequisites

- RL002 - Rule Definition Master Maintenance

Modes Available

Add, Modify, Delete, Cancel, Amend, Authorize, Inquiry. For more information on the procedures of every mode, refer to **Standard Maintenance Procedures**.

To add eligibility criteria details

1. Type the fast path **RP002** and click **Go** or navigate through the menus to **Global Definitions > Relationship Pricing > Eligibility Criteria Maintenance**.
2. The system displays the **Eligibility Criteria Maintenance** screen.

13. The system displays the message "Record modified". Click the **OK** button.

RP011 - Customer Scheme Linkage

Banks can define various schemes and based on certain eligibility criteria, benefits defined in the scheme can be given to customers who meet those criteria's. The benefits defined in the scheme can also be given to customer based on bank's discretion without going through the eligibility criteria.

Schemes created can be applied automatically to a customer without waiting for his consent or can be configured to be applied only after customer has provided his consent.

Using this option you can apply the scheme and relationship package after taking customer's consent. It also allows linking a scheme manually to the customer based on bank's discretion. It also provides complete history of the schemes that were linked to the customer in past or are running at present.

Definition Prerequisites

- RP010 - Eligibility Scheme Linkage
- RP001 - Scheme Definition Maintenance
- 8053 - Customer Addition

Modes Available

Modify, Cancel, Amend, Authorize, Inquiry. For more information on the procedures of every mode, refer to **Standard Maintenance Procedures**.

To modify the customer scheme linkage details

1. Type the fast path **RP011** and click **Go** or navigate through the menus to **Global Definitions > Relationship Pricing > Customer Scheme Linkage**.
2. The system displays the **Customer Scheme Linkage** screen.

CIM50 - Relationship Value Tag Definition

RVT⁵ is a code associated to a customer categorizing his relationship with the bank. RVT codes will be linked to a customer through the **Customer Master Maintenance** (Fast Path: CIM09) option and **GEFU** upload. It is possible to define any number of RVT types and associate any number of values, which that particular type can have. For e.g. a RVT Type can be Customer Loyalty Code and can have a possible values as Platinum, Gold, Silver and Blue.

Definition Prerequisites

CIM51 - Customer Group Definition Maintenance

Using this option you can maintain the definition of a customer group in **FLEXCUBE**. It uses customer to customer relationship in **FLEXCUBE** as basis. This maintenance will be used to identify if a customer belongs to a group based on his/her relationships with other customers in the bank. This information can be used to provide benefits to a customer based on the behavior of a group to which he / she belongs to. This maintenance also captures customer to account relationships to identify the accounts of other customers to be considered for deriving the behavior of the group.

Using this maintenance, bank can define:

- A customer group code and name
- All the customer to customer relationships, which form the part of the customer group
- All customer to account relationships which will be considered to pick up accounts while considering the behavior of the group

This maintenance just defines relationships between any two customers that will make them form a group. The **Customer Group definition** maintained will be linked to eligibility in the form of a **UDE**⁶. This UDE definition will take customer group name as input.

Definition Prerequisites

- CIM07 - Relation Master Maintenance

Modes Available

Add, Modify, Delete, Cancel, Amend, Authorize, Inquiry. For more information on the procedures of every mode, refer to **Standard Maintenance Procedures**.

To add the customer group details

1. Type the fast path **CIM51** and click **Go** or navigate through the menus to **Global Definitions > Customer > Customer Group Definition Maintenance**.
2. The system displays the **Customer Group Definition Maintenance** screen.

Field Name	Description
Search Criteria	<p>[Mandatory, Drop-Down]</p> <p>Select the search criteria, to search for the customer, from the drop-down list.</p> <p>The options are:</p> <ul style="list-style-type: none"> • Customer short name: The short name of the customer. • Customer IC: The identification criteria (IC) arrived at by the bank during customer addition. • Customer ID: The unique identification given by the bank.
Search String	<p>[Mandatory, Alphanumeric, 20]</p> <p>Type the search string, to search for a customer, corresponding to the search criteria selected in the Search Criteria field.</p> <p>If the search criterion is specified as customers' short name or IC then any letter of the short name or IC can be entered. The system displays the pick list of all those customers having those letters in their respective criteria. Choose the appropriate customer from the existing customer list.</p> <p>For example, The customer's short name is George Abraham. One can search the above customer by entering Geo in the Search String field.</p>
Customer ID	<p>[Display]</p> <p>This field displays the ID of the customer.</p> <p>A customer ID is an identification number, generated by the system after customer addition is completed successfully. This running number, unique to a customer across the system, is generated after the system has identified the customer IC and the customer category combination to be non-existent in the system. This ID is used for searching and tracking the customer in the system.</p>
Full Name	<p>[Display]</p> <p>This field displays the full name of the customer.</p> <p>The full name of the customer is defaulted from the Customer Addition (Fast Path: 8053) option.</p>

3. Select the search criteria from the drop-down list.
4. Type the search string and press the **<Tab>** or **<Enter>** key and select the customer from the pick list. The selected customer's detail appears in the relevant fields.

CH067 - CASA Interest Inquiry

Using this option you can view the complete history of interest calculated on a CASA account and the details of the rules applied to it. As a part of relationship pricing, the bank may provide rule based variances for the CASA interest.

Definition Prerequisites

- 8051 - CASA Account Opening
- RL002 - Rule Definition Master Maintenance
- CASA accounts to have interest applied.

Modes Available

Not Applicable

To view the CASA interest details

1. Type the fast path **CH067** and click **Go** or navigate through the menus to **Transaction Processing > Account Transactions > CASA Account Transactions > Inquiries > CASA Interest Inquiry**.
2. The system displays the **CASA Interest Inquiry** screen.

Examples for Relationship Pricing

Processing for different examples of Relationship Pricing

Scenario I

The **CRR**⁷/Collectability of the account or customer can be a parameter for defining rules. According to the account CRR or customer CRR, the customer can be either selected or excluded for RP benefits.

Scheme Details:

Customer has an account in Product X (Loan Product) in FCR.

Average balance of the loan account during the month is to be greater than 100 mio.

The CRR of the customer is to be equal to 10 and the LOB code of the customer is "SMEC".

In this case the benefit to be given is that the OD account in product Z in FCR will get interest variance of -0.50%.

	Bal in Million			
	Loan in Product X	Loan in Product Y	OD in Product Z	CRR of the customer
Customer A	50	100	0	10
Customer B	150	0	100	20
Customer C	150	200	100	10

Approach

Step I – UDE⁸ Maintenance

A UDE will be defined to capture average monthly balance of CASA, OD and loan account in FCR. A UDE will also be defined to store the value of CRR of the customer. UDE will also be defined to store the value of LOB code of the customer.

Step II – Rules Maintenance

In the Rules Definition Maintenance (Fast Path: RL002) option and using the above defined UDE, define a rule for CASA OD interest.

Select rule return type as Interest variance.

⁷(Credit Risk Rating)

⁸(User Defined Entity)

Rule will be defined in the following manner:

*IF Average Balance is > 100 mio and **LOB**⁹ = "SMEC" and CRR is =10 then add interest -0.50% to base interest rate.*

Step III – Interest Variance Package

Interest variance package will be defined for CASA OD account in the Interest Variance Package Maintenance (Fast Path: RP004) option. Interest Variance package will be created for CASA module.

The Benefit plan maintenance consists of different packages which are context specific (For CASA/TD or SC). At one time only one Plan Type (i.e. CASA / TD / SC) can be selected. Under the benefit plan maintenance the user can select as to for which product the benefits are to be given (would be very useful for product promotion).

In RP004 the user can define Interest Packages for CASA for Credit Interest, TOD and OL. Then in the Benefit Plan Maintenance, when the user selects CASA as the context he can attach the previously defined Interest Packages to one or more CASA Products. This will form a CASA benefit plan.

Step IV

Benefit plan defined in step III has to be linked to a scheme through the Scheme Definition Master Maintenance (Fast Path: RP001). Scheme will have a start and end date. In the Customer Scheme Linkage (Fast Path: RP011) option the user can see the eligible Customers and the Accounts. The scheme can be stamped manually for the eligible customers. Alternatively the benefits can be awarded automatically.

Step V

In the Eligibility Criteria Maintenance (RP002) the customers to whom the scheme is to be offered can be identified.

The Exclusion Plan determines who will be excluded for the benefits defined. E.g. Staff A/c's.

After the Scheme is defined in RP001 and the Eligibility Plan in RP002, the Scheme and the particular eligibility has to be linked which would state that the customers eligible through a particular Eligibility would get a particular scheme.

After the linkage the set of eligible customers would start receiving the benefits from next day.

Thus in the example given Customer C will get the benefits.

Scenario II

Example for Relationship pricing which should be able to calculate the monthly average balance of the CIF (average total credit balance and average total debit balance of all accounts of a customer) and should allow setting up rules based on the average total balances (Debit/Credit/Net) of the customer. Bank should be able to exclude certain accounts (for example, savings account) of the customer from calculating average balances. Same way, at the time of applying benefits, bank should be able to exclude some accounts from applying benefit.

For the above purpose a scheme can be created as follows:

If total credit balance of the customer is > 15000, then Interest rate for CASA product 601 - +0.25%

⁹(Line of Business)

If total credit balance of the customer is > 20000, then Interest rate for CASA product 601 - +0.25%, and Int rate for TD - +0.10%.

If total Debit balance of the customer is > 10000, then interest rate for OD is -0.25%

If total Debit balance of the customer is > 20000, then interest rate for OD is -0.50% and free 1 cheque book

Same way, the benefits will be given to only those accounts whose CRR >= 10

Rule should also exclude the Savings balance (i.e. product 602)

Customer	CASA 601	Savings 602	TD	OD	CRR
A	5000	6000	10000	-7000	10
B	10000	0	0	-15000	20
C	2000		20000	-10000	10

Customer A = Total credit balance 21000 - 6000 = 15000

Customer A = Total debit balance = -7000

Customer A will get interest rate for CASA as +0.25%

Customer A will not get interest benefit for OD account

Customer B = Total Credit Balance = 10000

Customer B will not get any interest benefit

Customer B = Total Debit balance = 0 (since CRR = 20)

Customer C = Total credit balance = 22000. Hence he will get interest benefit for CASA interest variance of +0.25% and for TD as interest variance of +0.10%

Customer C = Total Debit balance = -10,000, hence he will get interest benefit for OD as -0.25%

Approach

Step I – UDE Maintenance

A UDE will be defined to capture the total credit balance of the customer. Another UDE will be defined to capture total debit balance of the customer.

A UDE A1 will be defined to store the SC amount for issuance of 1 cheque book.

A UDE UC will be defined to store the CRR of the customer.

Step II – Rules Maintenance

Using the Rules Definition Maintenance (Fast Path: RL002) option and the above defined UDE, define a rule. The user will define rule for Interest for CASA and TD.

Select rule return type as Interest variance.

Rule will be defined in the following manner:

If total credit balance of the customer is > 15000, then Interest rate for CASA product 601 = +0.25%.

If total credit balance of the customer is > 20000, then Interest rate for CASA product 601 = +0.25%, and Int rate for TD = +0.10%.

If total Debit balance of the customer is > 10000, then interest rate for OD is -0.25%.

If total Debit balance of the customer is > 20000, then interest rate for OD is -0.50%.

If total Debit balance of the customer is > 20000 then SC amount to be charged (REFUNDED) is equal to UDE A1.

Step III – Interest Variance Package

Interest variance package will be defined for CASA account and TD account in the Interest Variance Package Maintenance (Fast Path: RP004) option. Separate packages will be created for variances for CASA and TD module.

Step IV

Benefit plan defined in step III will be linked to a scheme through the Scheme Definition Master Maintenance (Fast Path: RP001) option. Scheme will have a start and end date. In the Customer Scheme Linkage (Fast Path: RP011) option the user can see the eligible Customers and the Accounts. The scheme can be stamped manually for the eligible customers. Alternatively the benefits can be awarded automatically.

Step V

In the Eligibility Criteria Maintenance (RP002) option the customers to whom the scheme is to be offered can be identified. Example: Rule should select customers who have CRR >= 10

The Eligibility Plan determines “Which set of customers will get the benefits under a scheme”.

Eligibility Criteria defined for any benefit could be based on various attributes (Customer / A/c).

All these attributes will be available via UDE's.

The Exclusion Plan determines who will be excluded for the benefits defined.

After the Scheme is defined in RP001 and the Eligibility Plan in RP002, the Scheme and the particular eligibility has to be linked which would state that the customers eligible through a particular Eligibility would get a particular scheme.

After the linkage the set of eligible customers would start receiving the benefits from next day.

Scenario III

Based on the average balance in FCC + FCR loan & OD accounts, Cash back / Service charge discount can be given to the customer on the transactions & monthly periodic fees. LOB code, Product code and CRR of the customer will also be considered for cash back / waiver facility.

Customer will be having account in FCC and FCR. If customer is having LOB as ‘Corporate’ and if total average balance of FCC+FCR is > 100 bio, then customer will get interest benefit of - 0.25% to the OD as well as FCC accounts.

Approach

Step I

FCC will be sending a file which will contain customer ID, product code, account number and Principal outstanding balance of the customer.

Step II

A UDE will be defined to capture the total average balance (FCC +FCR accounts).

Step III

Using the Rules Definition Master Maintenance (Fast Path: RL002) option, rules will be defined in the following manner:

If the total average balance of FCC+FCR is > 100 Bio and LOB is "Corporate" then give the interest benefit as -0.25% to the OD account.

Step III

Interest variance package will be defined for CASA account in the Interest Variance Package Maintenance (Fast Path: RP004) option.

Step IV

Benefit plan defined in step III will be linked to a scheme through the Scheme Definition Master Maintenance (Fast Path: RP001) option. Scheme will have a start and end date. In the Customer Scheme Linkage (Fast Path: RP011) option the user can see the eligible Customers and the Accounts. The scheme can be stamped manually for the eligible customers. Alternatively the benefits can be awarded automatically.

Step V

In the Eligibility Criteria Maintenance (Fast Path: RP002) the customers to whom the scheme is to be offered can be identified.

Example: Rule should exclude customers whose CRR is > 1. The Eligibility Plan determines "Which set of customers will get the benefits under a scheme".

Eligibility Criteria defined for any benefit could be based on various attributes (Customer / A/c).

All these attributes will be available via UDE's.

The Exclusion Plan determines who will be excluded for the benefits defined. E.g. Customers whose CRR is > 1.

After the Scheme is defined in RP001 and the Eligibility Plan in RP002, the Scheme and the particular eligibility has to be linked which would state that the customers eligible through a particular Eligibility would get a particular scheme.

After the linkage the set of eligible customers would start receiving the benefits from next day.
