# 1. About this Manual

## 1.1 Introduction

This manual is designed to help you to quickly get familiar with the Oracle Banking Payments. It takes you through the various stages in processing Fedwire and US ACH Payments.

You can further obtain information specific to a particular field by placing the cursor on the relevant field and striking <F1> on the keyboard.

## 1.2 Audience

This manual is intended for the following User/User Roles:

Role	Function
Payment Department Operators	Payments Transaction Input functions except Authorization.
Back Office Payment Department Operators	Payments related maintenances/Payment Transaction Input functions except Authorization
Payment Department Officers	Payments Maintenance/ Transaction Authorization
Bank's Financial Controller/ Payment Department Manager	Host level processing related setup and Dashboard/ Query functions

## 1.3 Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

## 1.4 Organization

This manual is organized into the following chapters.:

Chapter	Description
Chapter 1	<i>About this Manual</i> gives information on the intended audience. It also lists the various chapters covered in this User Manual.
Chapter 2	<i>Fedwire Payments</i> provides information on initiation and processing of outgoing and incoming Fedwire payments.
Chapter 3	<i>NACHA Payments</i> provides information on NACHA Payments.
Chapter 4	<i>Function ID Glossary</i> has alphabetical listing of Function/Screen ID's used in the module with page references for quick navigation.

# 1.5 Glossary of Icons

This User Manual may refer to all or some of the following icons:

Icons	Function
	Exit
	Add row
	Delete row
	Option List

## 2. Fedwire Payments

Fedwire Funds Service is a real-time, gross settlement (RTGS) payment system of USA. It processes each RTGS payment initiated by the Fedwire Member bank on an individual basis and settles it immediately upon receipt. Settlement of funds is immediate, final and irrevocable, as in a RTGS system in any other country. Along-with NACHA ACH and CHIPS, it is a critical domestic payment system in the US.

### High-lights of Fedwire Payments Module

- Manual Payment Initiation
- Receipt of individual payment requests from bank channels
- Receipt of Bulk file for outward payments
- Fedwire network rules validation
- Derivation of Type Code and Sub-type Code in case of outgoing payment
- Support for input of exhaustive Payment related information for 'CTP' payments
- Sanctions check by interfacing with an external Sanctions screening system
- External Credit Approval Check
- Accounting
- Fedwire Message generation
- Support for multiple Network Cut-off times
- Support for Fedwire business day spanning 2 calendar days
- Support for sending and receiving Service messages

## 2.1 Fedwire Maintenances

### 2.1.1 Fedwire Network Preferences

You can capture Network Preferences for Fedwire Network in this maintenance screen.

You can invoke the “Fedwire Network Preferences” screen by typing 'PWDNWPRF' in the field at the top right corner of the application toolbar and clicking the adjoining arrow button. Click new button on the Application toolbar.

The screenshot shows the 'Fedwire Network Preferences Detailed' application window. The window title is 'Fedwire Network Preferences Detailed' and it has standard window controls (minimize, maximize, close). The interface includes a toolbar with 'New' and 'Enter Query' buttons. The main area contains several sections:

- Network Code \*** (text input), **Host Code \*** (text input), and **Transaction Type \*** (dropdown menu set to 'Outgoing').
- Network Description** (text input).
- Exchange Rate Preference** section with **FX Rate Type** (text input) and an **External Exchange Rate Applicable** checkbox.
- Cutoff** section with multiple text inputs for **Funds Transfer CutOff Hours**, **Funds Transfer CutOff Minutes**, **Foreign Transfer CutOff Hours**, **Foreign Transfer CutOff Minutes**, **Settlement Transfer CutOff Hours**, and **Settlement Transfer CutOff Minutes**.
- Service Start Time** (text input) and a **Process on Network Start Day** checkbox.
- Value Dating Preferences** section with a **Branch Holiday Check** checkbox and **Debit value date basis for outbound payments** (dropdown menu).

At the bottom, there is a status bar with fields for **Maker**, **Checker**, **Date Time**, **Mod No**, **Record Status**, and **Authorization Status**. An **Exit** button is located in the bottom right corner.

Specify the following fields:

**Network Code**

Specify a network code of the Fedwire network.

**Network Description**

System defaults the description of the Fedwire network selected.

**Host Code**

Displays the Host code assigned to of the branch selected by the logged in user.

**Transaction Type**

Specify if the Fedwire Network preferences are being specified for transaction type is Outgoing or Incoming transaction type.

**Exchange Rate Preference**

**FX Rate Type**

Specify the FX Rate Type from the list of values.

**External Exchange Rate Applicable**

Check this box to indicate that fetching External Exchange Rate is applicable.

**Cutoff**

**Funds Transfer CutOff Hours**

Specify the Cutoff hours for Funds Transfer of Type code 10.

**Funds Transfer CutOff Minutes**

Specify the Cutoff Minutes for Funds Transfer of Type code 10.

**Foreign Transfer CutOff Hours**

Specify the Cutoff hours for Foreign Transfers to foreign central banks and international organizations i.e. fund transfers of Type code 15.

**Foreign Transfer CutOff Minutes**

Specify the Cutoff Minutes for Foreign Transfers to foreign central banks and international organizations.

**Settlement Transfer CutOff Hours**

Specify the Cutoff hours for Settlement Transfers between Direct Fedwire members i.e. fund transfers of Type code 16.

**Settlement Transfer CutOff Minutes**

Specify the Cutoff Minutes for Settlement Transfers between Direct Fedwire members.

**Service Start Time**

**Service Start Time Hour**

Specify the start time in hours of the Fedwire business day.

**Service Start Time Minute**

Specify the start time in minutes of the Fedwire business day.

**2.1.1.1 Viewing Fedwire Network Preferences Summary**

You can view the summary in “Fedwire Network Preferences Summary” screen. You can invoke the Fedwire Network Preferences Summary screen by typing ‘PWSNWPRF’ in the

field at the top right corner of the Application toolbar and clicking on the adjoining arrow button.

The screenshot shows the 'Fedwire Network Preferences Summary' application window. At the top, there is a search bar with 'Advanced Search' selected, and buttons for 'Search', 'Reset', and 'Clear All'. Below the search bar, there are five search criteria: 'Authorization Status', 'Record Status', 'Network Code', 'Host Code', and 'Transaction Type', each with a dropdown menu and a magnifying glass icon. A table below the search criteria shows a single record with columns for 'Authorization Status', 'Record Status', 'Network Code', 'Host Code', and 'Transaction Type'. The table is currently empty. At the bottom right of the window is an 'Exit' button.

You can search for the records using one or more of the following parameters:

- Authorization Status
- Record Status
- Network Code
- Host Code
- Transaction Type

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria. You can view the following details:

- Authorization Status
- Record Status
- Network Code
- Host Code
- Transaction Type

Double click a record or select a record and click on 'Details' button to view the detailed maintenance screen. You can also export the details of selected records to a file using 'Export' button.

## 2.1.2 Fedwire Network Currency Preferences

You can capture Network Currency Preferences for Fedwire Network.

You can invoke the “Fedwire Network Currency Preferences” screen by typing ‘PWDNCPRF’ in the field at the top right corner of the application toolbar and clicking the adjoining arrow button. Click new button on the Application toolbar.

Specify the following fields:

**Network Code**

Select the network code of the logged in user from the available list of values for the Host.

**Network Description**

This field is auto-populated based on the network code selected.

**Host Code**

Displays the Host code assigned to of the branch selected by the logged in user.

**Transaction Type**

Select the type of transaction for which the Fedwire Network preferences are being specified. The options are:

- Incoming
- Outgoing

**Transfer Currency**

Select the required currency from the list of available currencies for the Fedwire network.

**Limit Details**

**Minimum Amount**

Specify the minimum amount for a Fedwire payment.

**Maximum Amount**

Specify the maximum amount for a Fedwire payment.

## **Pricing Details**

### **Transaction Pricing Code**

Select the Pricing code from the list of available Pricing codes.

### **Drawdown Request Pricing Code**

Select the drawdown pricing code from the list of available Pricing codes.

### **Reversal Payment Pricing Code**

Select the Reversal Payment pricing code from the list of available Pricing codes.

### **Reversal Request Pricing Code**

Select the Reversal request pricing code from the list of available Pricing codes.

## **Accounting Codes**

### **Debit Liquidation**

Specify the template for Debit Liquidation from the list of available accounting templates. You can select the template from the option list. The list displays all the accounting templates maintained in the system.

### **Credit Liquidation**

Specify the template for Credit Liquidation.

## **Small FX Limit**

### **Small FX Limit Currency**

Select the required currency from the list of available currencies for specifying the Small FX Limit.

### **Small FX Limit Amount**

Specify the amount for the Small FX Limit.

## **Return Accounting**

### **Payment Return GL**

Specify the payment return GL, which of picked up, when return of transaction happens.

## **Network Account Details**

### **Network Account**

Specify the Network Account specific to Fedwire.

## 2.1.2.1 Viewing Fedwire Network Currency Preferences Summary

You can view the summary in “Fedwire Network Currency Preferences” screen. You can invoke the Fedwire Network Currency Preferences screen by typing ‘PWSNCPRF’ in the field at the top right corner of the Application toolbar and clicking on the adjoining arrow button.

The screenshot shows a web application window titled "Fedwire Network Currency Preferences Summary". At the top, there is a search bar with buttons for "Search", "Advanced Search", "Reset", and "Clear All". Below the search bar, there are several filter fields: "Case Sensitive" (checkbox), "Authorization Status" (dropdown), "Record Status" (dropdown), "Network Code" (text input with a magnifying glass icon), and "Transfer Currency" (text input with a magnifying glass icon). A "Transaction Type" dropdown is also present. Below the filters, there is a table with columns: "Authorization Status", "Record Status", "Network Code", "Host Code", "Transaction Type", and "Transfer Currency". The table is currently empty. At the bottom right of the window, there is an "Exit" button.

You can search for the records using one or more of the following parameters:

- Authorization Status
- Record Status
- Network Code
- Transaction Type
- Transfer Currency

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria. You can view the following details in here:

- Authorization Status
- Record Status
- Network Code
- Host Code
- Transaction Type
- Transfer Currency

Double click a record or select a record and click on 'Details' button to view the detailed maintenance screen. You can also export the details of selected records to a file using 'Export' button.

## 2.1.3 Fedwire Directory

Fedwire Directory Maintenance can be used to maintain details of all types of Direct Fedwire participants. All the participants defined in this directory who are direct participants, can send/receive to/from messages directly to Fedwire and settle payments on their Master account.

You can manually create new records through this maintenance screen or can upload the details through 'Fedwire Directory Upload' screen. Records created manually and the records uploaded can be viewed here.

You can invoke "Fedwire Directory Maintenance" screen by typing 'PMDFWDIR' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button. Click new button on the Application toolbar

The screenshot shows a web-based application window titled "Fedwire Directory". The window has a menu bar with "New" and "Enter Query". The main area contains a form with the following fields:

- Routing Number\* (with a red asterisk indicating it is mandatory)
- Participant Name
- Telegraphic Name
- State
- City
- Funds Transfer Status (dropdown menu)
- Funds Settlement-only status (dropdown menu)
- Date of Last Revision (YYYY-MM-DD)

At the bottom of the window, there is a status bar with the following fields:

- Maker
- Checker
- Date Time
- Mod No
- Record Status
- Authorization Status
- Exit button

You can specify the following details

### Routing Number

Specify the routing number. It is a unique number and is mandatory. This is the 9 digit number of the Fedwire participant

### Participant Name

Specify the name of the Fedwire Participant

### Telegraphic Name

Specify the short name of the Fedwire participant. This is an optional field with length of 18 characters

### State

Select the State from the list of values displayed. It is the 2 character code of the US state, where the Fedwire participant is located

### City

Specify the name of the City

### Funds Transfer Status

Select the Funds Transfer Status from the LOV displayed. This status indicates if the Fedwire Payment can be received by the participant and settled by Fedwire Clearing. The options are

- Yes - Eligible
- No - Ineligible

### Funds Settlement-only Status

Select the Funds Settlement Status from the LOV available. This is an optional field and indicates if the settlement of payment is supported for the participant. The options are

- Blank
- Settlement Only

---

#### Note

You can select the value in this field, only when the 'Funds Transfer Status' field has value of 'Yes- Eligible'

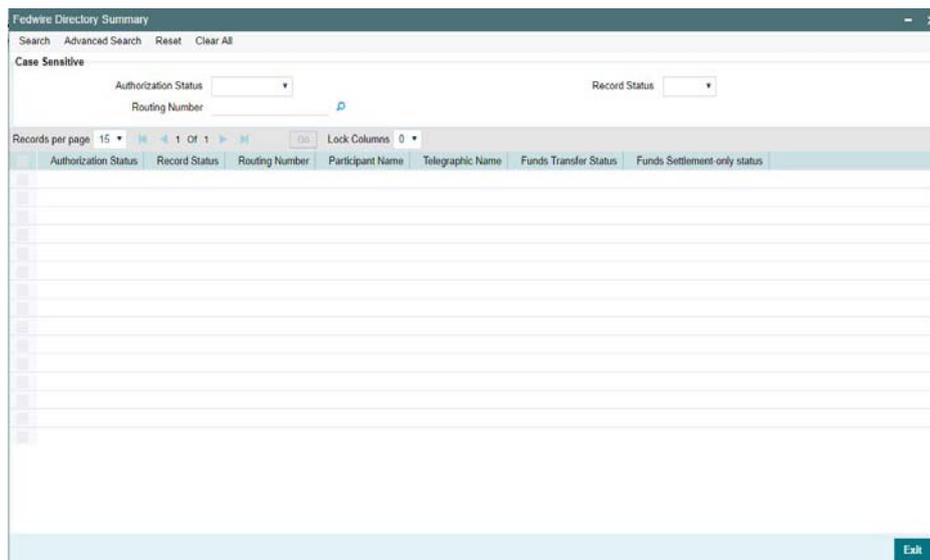

---

### Date of Last revision

Select the Last Revision date. This indicates the date, when the record was last updated in YYYYMMDD format Invoking Fedwire Directory Upload screen

### 2.1.3.1 Fedwire Directory Summary

You can search for records in the Fedwire Directory Summary Screen. You can invoke 'Fedwire Directory Summary' screen by typing 'PMSFWDIR' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

You can search using one or more of the following parameters:

- Authorization Status
- Record Status
- Routing Number

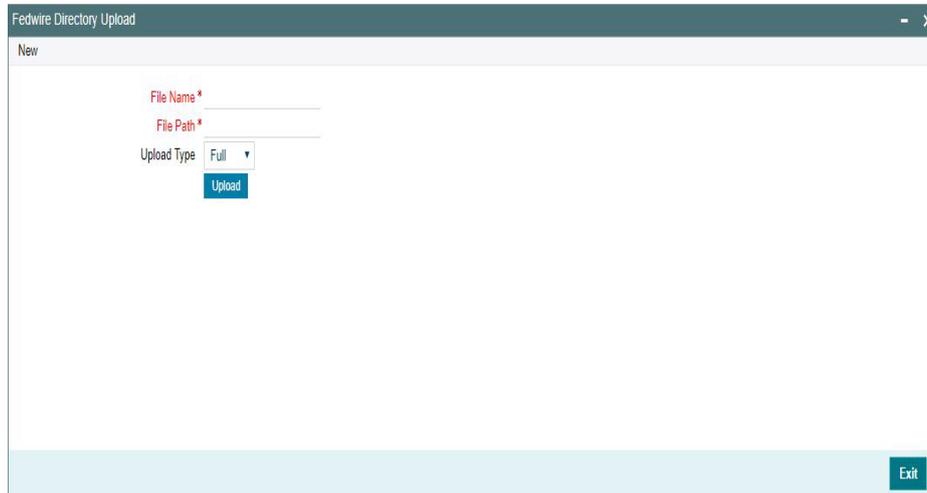

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria.

Double click a record or select a record and click on 'Details' button to view the detailed maintenance screen.

## 2.1.4 Fedwire Directory Upload

A facility is available for manual upload of Fedwire Directory using fixed length text file. The name of this screen is “Fedwire Directory Upload”.

You can invoke “Fedwire Directory Upload” screen by typing ‘PMDFWUPD’ in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button. Click new button on the Application toolbar.

You can specify the following fields:

### **File Name**

Specify the File name of the Fedwire Directory text file.

### **File Path**

Specify the DB server path where the Directory file is placed.

### **Upload Type**

This field indicates if the file to be uploaded is a Full file containing all Fedwire participants or a Partial file containing records updated since a specific date in the past. This drop-down field contain two options – ‘Full’ and ‘Partial’. Choose the required option:

- Full - All existing records in the Fedwire Directory table would be overwritten by the records in the uploaded file.
- Partial - Only specific existing records in the Fedwire Directory table are overwritten by the records in the uploaded file. The records to be updated are identified based on routing number.

### **Upload button**

Click this button to initiate the process of picking up the file from the specified location, parsing it and inserting the records in the Fedwire Directory table.

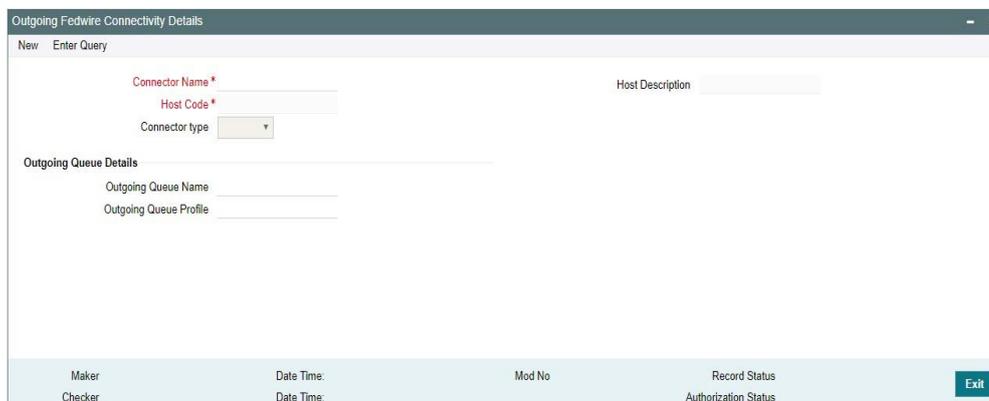

## 2.1.5 Outgoing Fedwire Connectivity Details

You can capture specific JMS queues for outbound messages of FEDWIRE Network.

Below is the list of message types, which falls under the outbound messages category:

- Outbound Messages
  - Fund transfer messages
  - SVC messages
  - Non SVC messages.

You can invoke the 'Outgoing Fedwire Connectivity Details' screen by typing 'PWDFDOCN' in the field at the top right corner of the application toolbar and clicking the adjoining arrow button. Click new button on the Application toolbar.

You can specify the following fields:

### **Connector Name**

Specify the Connector Name for which queue details to be mapped.

### **Host Code**

System defaults the host code of transaction branch on click of 'New

### **Host Description**

Displays the Description of the Host Code.

### **Connector type**

Select the Connector type as given below:

- Auto
- Manual

### **Outgoing Queue Details**

#### **Outgoing Queue Name**

Specify the JMS Queue name in which outbound messages gets dispatched.

Below messages are mapped to the Outgoing Queue.

- Outbound Funds Transfer and SVC messages FTI0811.
- Account Balance Report FTIABAL
- End Point Grand Total Request FTI0041.
- Detailed Summary of Transfer Messages request FTI0043.
- Error code Description Request FTI0091.
- Retrieval request FTI0051.

#### **Outgoing Queue Profile**

Specify the JMS Queue Profile ID for Outbound Messages

## **2.1.6 Incoming Fedwire Connectivity Details**

You can capture specific JMS queues for inbound messages of FEDWIRE Network.

Below is the list of message types, which falls under the inbound messages category:

- Inbound Messages
  - Inbound fund transfer messages & normal SVC messages
  - Acknowledgements & service responses
  - Broadcasts
  - Statements

You can invoke the 'Incoming Fedwire Connectivity Details' screen by typing 'PWDFDIGN' in the field at the top right corner of the application toolbar and clicking the adjoining arrow button. Click new button on the Application toolbar.

The screenshot shows the 'Incoming Fedwire Connectivity Details' application window. The window title is 'Incoming Fedwire Connectivity Details'. The interface includes a toolbar with 'New' and 'Enter Query' buttons. The main form area contains several input fields: 'Connector Name\*' (required), 'Host Code\*' (required), and 'Connector type' (dropdown menu). Below these is a section titled 'Incoming Queue Details' with multiple input fields for various queue names, profiles, and listener counts. At the bottom, there is a status bar with fields for 'Maker', 'Checker', 'Date Time', 'Mod No', 'Record Status', and 'Authorization Status', along with an 'Exit' button.

You can specify the following fields:

### **Connector Name**

Specify the Connector Name for which queue details to be mapped.

### **Host Code**

System defaults the host code of transaction branch on click of 'New

### **Host Description**

Displays the Description of the Host Code.

### **Connector type**

Select the Connector type as given below:

- Auto
- Manual

### **Incoming Queue Details**

#### **AckNack Queue Name**

Specify the JMS Queue name in which Ack/Nack messages FTFR12 gets received

#### **AckNack Queue Profile\**

Specify the JMS Queue Profile ID for Ack/Nack messages.

#### **AckNack Listener Count**

Specify the count of Listeners for Ack/Nack messages.

### **Advices Queue Name**

Specify the JMS Queue name in which Funds transfer SVC messages and Response to the Non SVC messages gets received.

Below messages are mapped to the Advices Queue.

- Inbound Funds Transfer and SVC messages FTR811.
- Response to Account Balance Report FTHBAL
- Response to End Point Grand Total Request FTR041.
- Response to Detailed Summary of Transfer Messages request FTR043.
- Response to Error code Description Request FTR091.
- Response to Retrieval request FTR051.

### **Advices Queue Profile**

Specify the JMS Queue Profile ID for Advices.

### **Advices Listener Count**

Specify the count of Listeners for Advices

### **Broadcast Queue Name**

Specify the JMS Queue name in which Broadcast messages gets received.

Message IDs applicable for broadcast are FT1000, FT1010, FT1090

### **Broadcast Queue Profile**

Specify the JMS Queue Profile ID for Broadcast Messages.

### **Broadcast Listener Count**

Specify the count of Listeners for Broadcast Messages.

### **Statement Queue Name**

Specify the JMS Queue name in which Statement messages gets received.

Message IDs applicable for Statement are FT1020.

### **Statement Queue Profile**

Specify the JMS Queue Profile ID for Statement Messages.

### **Statement Listener Count**

Specify the count of Listeners for Statement Messages.

## **2.2 Fedwire Transactions**

All inbound and outbound Fedwire transactions, reversal of the transactions can be done through these screens

### **2.2.1 Outbound Fedwire Transaction Input**

System supports Fedwire Outbound Payments for the below mentioned transfer type:

- Customer Transfer
- Bank Transfer

Outbound Fedwire payments can be manually booked from this screen in case the inward Fedwire message cannot be received or processed due to any reason. You can invoke 'Outbound Fedwire Transaction Input' screen by typing 'PVDOTONL' in the field at the top

right corner of the Application tool bar and clicking on the adjoining arrow button. Click new button on the Application toolbar.

You can specify the following fields:

### Transaction Branch

The system defaults the transaction branch code with the user's logged in branch code.

### Branch Name

The system defaults the Branch Name on clicking New button.

### Host code

The system defaults the host code of transaction branch.

### Host code Description

The system defaults the host code description-of transaction branch.

### Source Code

The system derives the source code for the transaction depending on the source from where it is received. For manual transactions, source code is defaulted to MANL.

### Source code Description

The system defaults the description of the source code

### Network Code

Specify the required Fedwire network code.

**Network code Description**

The system defaults the description of the Network code

**Transaction Reference Number**

The system generates and displays a unique reference number for the transaction.

**User Reference**

The system defaults the User reference number same as the Transaction Reference Number. You can edit this value to provide own reference number

**Source Reference Number**

The system displays the Source Reference Number provided by the channel or any other source for the transaction. You can input the value for manually booked transaction.

**Transaction Type Code**

Specify the required transaction type code.

**Type**

Specify the type code of the payment. The options are:

- 10 (Customer Transfers)
- 15 (International Transfers)
- 16 (Settlement transfers between Fedwire members)

**Sub Type**

The system defaults the Sub-type code to "00" and is non-editable.

---

**Note**

This is because only the sub-type code of "00" is currently supported for any of the type codes

---

**:3600:Business Function Code**

Specify the desired Business Function Code from the available options. For e.g. CTR (Customer Transfer), BTR (Bank Transfer) etc

**Template ID**

Specify the Template ID, if the transaction has to be saved as a template.

**Save as Template**

Check this box to save this transaction as a template

**Prefunded Payments**

On checking 'Prefunded Payments', Debit Account Number gets defaulted, when the Prefunded GL is defined for that Source and Network.

**Process on Network Start Day**

Check this box to process this transaction on the Network start day as defined in network preferences.

## 2.2.1.1 Main Tab

Click 'Main' tab to capture the Outbound Fedwire details:

The screenshot displays the Oracle Remittance Information form, Main Tab. The form is organized into several sections:

- 5000:Originator**: Fields for Debit Account, Debit Currency, Debit Currency Name, ID Code (dropdown), Identifier, Name, Address 1, Address 2, Address 3, and SSI Label.
- 5010:Originator Option F**: Fields for Party Identifier Format, Party Identifier (dropdown), Name (dropdown), Line 1, Line 2, and Line 3 (all dropdowns).
- 4400:Account Debited in DrawDown**: Fields for ID Code (dropdown), Identifier, Name, and Address.
- 4100:Beneficiary FI**: Fields for ID Code (dropdown), Identifier, Name, and Address.
- Payment Details**: Fields for Booking Date, Instruction Date, Value Date, Instructed Currency Indicator (dropdown), Instructed Currency (dropdown), Instructed Currency Name, Instructed Amount (dropdown), Transfer Currency (USD), Transfer Currency Name, Transfer Amount, and 3720 Exchange Rate (button).
- 3700:Charges**: Fields for Details of Charges (dropdown) and Senders Charges.
- 4200:Beneficiary**: Fields for ID Code (dropdown), Identifier, Name, and Address.

The bottom of the form features a status bar with the following fields: UDF | MIS, Maker Id, Release Time, Checker ID, Checker Date Stamp, Authorization Status, and a 'TAB' button.

Specify the following details

### **-5000:Originator**

#### **Debit Account**

Specify the debit account number of the Originating customer. Alternatively, you can select the debit account number from the option list. The list displays all open and active customer accounts.

#### **Debit Currency & Debit Currency Name**

System defaults the currency and currency name on selecting the debit account.

#### **ID Code**

Select the ID code from the drop down list corresponding to the type of originator identification and details that are desired to be input in the following fields. The options are:

- B - SWIFT Bank Identifier Code (BIC)
- C- CHIPS Participant
- D - Demand Deposit Account (DDA) Number
- F - Fed Routing Number
- T - SWIFT BIC or Bank Entity Identifier (BEI) and account number
- U - CHIPS Identifier
- 1 - Passport Number
- 2 - Tax Identification Number
- 3 - Driver's License Number
- 4 - Alien Registration Number

- 5 - Corporate Identification
- 9 - Other Identification

**Identifier**

Specify the identifier details as per the selected ID Code.

**Name**

The system displays the Originator's name based on the selected Debit account

**Address**

Specify the address details of the originator.

**Address 1**

Specify the additional address details of the originator.

**SSI Label**

Select the SSI label from the list of values.

**Payment Details****Booking Date**

Specify the booking date of the payment..

**Instruction Date**

Specify the Instruction Date of the outgoing payment which can be current or future business date.

**Value Date**

Specify the Value date of the transaction.

**Instructed Currency Indicator**

Select any of the two options:

- Transfer Currency - If the Instructed currency option is 'Transfer Currency' then the Instructed amount provided will be considered as the Transfer Amount.
- Debit Currency - If the option is 'Debit Currency', then the Instructed Amount provided will be the Debit amount.

**Instructed Currency**

Specify the instructed currency

**Instructed Currency Name**

Instructed Currency Name gets defaulted

**Instructed Amount**

Specify the Instructed amount

**Transfer Currency**

System displays the transfer currency of USD by default.

**Transfer Currency Name**

System displays the transfer currency name

**Transfer Amount**

Specify the amount for the transfer.

### **3720:Exchange Rate**

Exchange rate for converting the Transfer amount in USD to debit account currency is derived on clicking the Enrich button.

#### **Enrich**

Click this button for enrichment of the transaction that includes deriving exchange rate (if applicable), Value dates, Charges and mandatory field validation.

### **:5010:Originator Option F**

#### **Party Identifier Format**

Select the Party Identifier Format. Options are Account Number / Unique Identifier.

#### **Party Identifier**

Select the Party Identifier from drop-down values

#### **Name &Line 1-3**

Select the unique values from drop-down values.

#### **Debit Value Date**

The system displays the derived debit value date on clicking Enrich.

#### **Credit Value Date**

The system displays the credit value date on clicking Enrich.

#### **Customer No**

The system displays the customer number (of the customer maintained in the system) that is derived based on the selected debit account number of the originator.

#### **Customer Service Model**

The system displays the customer service model linked to the customer.

#### **Remarks**

Specify any remarks for the payment being booked

### **Receiver**

#### **Receiver ABA Number**

Select the ABA Number of Receiver DI (Depository Institution) from the list of all Fedwire members.

#### **Receiver Short Name**

Specify the Receiver DI's Short Name.

#### **Country of Receiver DI Head Office**

Select the Receiver details from list of values.

### **:3700:ChargesDetails of Charges**

Select the details of charges from the drop down list. The options are:

- B (Beneficiary)
- S (Shared)

#### **Senders Charges**

Specify the sender's charges as <USD><Amount>. For e.g. USD10.25.

### **:4400:Account Debited in Drawdown**

#### **ID Code**

Select the ID code from the drop down corresponding to the type of identification of Beneficiary FI and details that are desired to be input in the following fields The options are:

- B - SWIFT Bank Identifier Code (BIC)
- C - CHIPS Participant
- D - Demand Deposit Account (DDA) Number
- F - Fed Routing Number
- U - CHIPS Identifier

#### **Identifier**

Specify the Beneficiary FI identifier as per the selected ID Code.

#### **Name**

Specify the name of the beneficiary FI.

#### **Address**

Specify the address of the beneficiary FI.

### **:4100:Beneficiary FI**

#### **ID Code**

Select the ID code from the drop down corresponding to the type of identification of Beneficiary FI and details that are desired to be input in the following fields The options are:

- B - SWIFT Bank Identifier Code (BIC)
- C - CHIPS Participant
- D - Demand Deposit Account (DDA) Number
- F - Fed Routing Number
- U - CHIPS Identifier

#### **Identifier**

Specify the Beneficiary FI identifier as per the selected ID Code.

#### **Name**

Specify the name of the beneficiary FI.

#### **Address**

Specify the address of the beneficiary FI.

### **:4200:Beneficiary**

#### **ID Code**

Select the ID code from the drop down corresponding to the type of identification of Beneficiary and details that are desired to be input in the following fields. The options are:

- B - SWIFT Bank Identifier Code (BIC)
- C - CHIPS Participant
- D - Demand Deposit Account (DDA) Number
- F - Fed Routing Number
- T - SWIFT BIC or Bank Entity Identifier (BEI) and account number
- U- CHIPS Identifier
- 1 - Passport Number

- 2 - Tax Identification Number
- 3 - Driver's License Number
- 4 - Alien Registration Number
- 5 - Corporate Identification
- 9 - Other Identification

### Identifier

Specify the identification details as per the selected ID Code.

### Name

Specify the name of the beneficiary.

### Address

Specify the address details of the Beneficiary.

## 2.2.1.2 Pricing Tab

This tab displays the pricing details of the charges computed by system based on the transaction attributes in the Main tab. These details are populated on clicking Enrich button in the Main tab before saving the transaction, or as part of processing on saving the transaction without clicking Enrich.

The below mentioned attributes will be available in the Pricing tab

### Pricing Component

The system displays the Name of the pricing component applicable for the transaction for which charges are computed..

### Pricing Currency

The system displays the Currency in which the charge amount is calculated for the Pricing component.

### Amount

The system displays the charge amount calculated for each pricing component.

### Waived

This field if checked indicates that the charge is waived for the pricing component.

### Debit currency

The system displays the currency in which the charge amount is debited for the pricing component. This is the currency of the debit (originator) account.

## Debit amount

The system displays the charge amount in debit currency to be debited. This amount is different from the calculated Pricing amount if the debit currency is different from the Pricing Currency. The Debit amount for charges is calculated by converting the Pricing amount in Pricing Currency to Debit currency using specified Exchange Rate type in Pricing Code maintenance.

## Deferred

This field if checked indicates that the charges are not collected during transaction processing but their liquidation is deferred based on customer preferences. Applicable only for "S" (Shared) type of charges..

## Borne By Bank

This field if checked indicates that the charges are borne by bank.

### 2.2.1.3 FI Information

Click 'FI Information' tab to specify the FI Information details:

The screenshot displays the 'FI Information' tab in a software application. The interface is organized into several sections, each with a title and input fields. The sections are:

- :6100:Receiver FI Information**: Includes fields for Advice Code and Additional Information.
- :6110:Drawdown Debit Account Advice Information**: Includes fields for Advice Code and Additional Information.
- :6200:Intermediary FI Information**: Includes fields for Advice Code and Additional Information.
- :6210:Intermediary FI Advice Information**: Includes fields for Advice Code and Additional Information.
- :6300:Beneficiary's FI Information**: Includes fields for Advice Code and Additional Information.
- :6310:Beneficiary's FI Advice Information**: Includes fields for Advice Code and Additional Information.
- :6400:Beneficiary Information**: Includes fields for Advice Code and Additional Information.
- :6410:Beneficiary Advice Information**: Includes fields for Advice Code and Additional Information.
- :6420:Method of Payment to Beneficiary**: Includes fields for Method of payment and Additional Information.
- :6500:FI to FI Information**: Includes fields for Advice Code and Additional Information.

At the bottom of the screen, there is a status bar with the following fields: Maker ID, Release Time, Checker ID, Checker Date Stamp, Authorization Status, and an Exit button.

Specify the following details

#### **:6100:Receiver FI Information**

Specify the information for the Receiver FI in the lines provided.

#### **:6110:Drawdown Debit Account Advice Information**

##### **Advice Code**

Select the Advice Code for draw-downs from the drop down list. The options are LTR, PHN, TLX and WRE.

##### **Additional Information**

Specify additional information on the Advice.

### **:6200:Intermediary FI Information**

Specify the information for the Intermediary FI in the lines provided.

### **:6210:Intermediary FI Advice Information**

#### **Advice Code**

Select the appropriate value of the Intermediary FI Advice from the drop down list. The options are LTR, PHN, TLX and WRE.

#### **Additional Information**

Specify additional information on the Advice.

### **:6300:Beneficiary's FI Information**

Specify the Beneficiary FI Information in the lines provided.

### **:6310:Beneficiary's FI Advice Information**

#### **Advice Code**

Select the appropriate value of Advice code for the Beneficiary FI Advice from the drop down list. The options are LTR, PHN, TLX and WRE. After selecting the option, you may specify additional information in the lines provided.

#### **Additional Information**

Specify additional information on the Advice.

### **:6400:Beneficiary Information**

Specify the information for the beneficiary in the lines provided.

### **:6410:Beneficiary Advice Information**

#### **Advice Code**

Select the Advice Code for the Beneficiary Advice from the drop down list. The options are LTR, PHN, TLX and WRE.

#### **Additional Information**

Specify additional information on the Advice.

### **:6420:Method of Payment to Beneficiary**

#### **Method of payment**

Specify the method of payment. 'CHECK' is the only valid option that can be input.

#### **Additional Information**

Specify additional information on the method of payment.

### **:6000:Originator to Beneficiary Information**

Specify the Originator to Beneficiary details in the lines provided.

### **:6500:FI to FI Information**

Specify the FI to FI Information in the lines provided.

## 2.2.1.4 Additional Tab

Click 'Additional' tab to capture the additional details:

The screenshot shows a software interface with a menu bar at the top containing 'Main', 'Pricing', 'FI Information', 'Additional' (highlighted in red), and 'Remittance Information'. Below the menu bar, the 'Additional' tab is active, displaying several sections of input fields:

- Additional Details**
  - :3320:Sender's Reference
  - :3610:Local Instrument Code (with a dropdown arrow)
  - Proprietary Code
  - :4320:Reference for Beneficiary
- :5200:Instructing FI**
  - ID Code
  - Identifier
  - Name
  - Address
  - Address 2
  - Address 3
- :4000:Intermediary FI**
  - ID Code (with a dropdown arrow)
  - Identifier
  - Name
  - Address
  - Address 2
  - Address 3
- :6000:Originator to Beneficiary Information**
  - ID Code
  - Identifier
  - Name
  - Address
  - Address 2
  - Address 3
- :8250:Related Remittance Information**
  - Remittance Identification
  - Remittance Location Method
  - Remittance Location Electronic Address
  - Name
  - Address Type
  - Department
  - Sub Department
  - Street Name
  - Building Number
  - Address

At the bottom of the form, there are fields for 'Maker ID', 'Release Time', 'Checker ID', 'Checker Date Stamp', and 'Authorization Status'. An 'Exit' button is located in the bottom right corner.

Specify the following details:

### **Additional Details**

#### **:3320:Sender's Reference**

Specify the Sender's Reference.

#### **:3610:Local Instrument Code**

Select the local Instrument Code from the drop down list. The available values are ANSI, COVS, GXML, IXML, NARR, PROP, RMTS, RRMT, S820, SWIF and UEDI.

#### **Proprietary Code**

Specify a Proprietary Code if the Local Instrument Code element selected is PROP.

#### **:4320:Reference for Beneficiary**

Specify the reference details for beneficiary.

### **:4000:Intermediary FI**

#### **ID Code**

Select the required ID Code from the drop down list. The available values are B, C, D, U and F.

#### **Identifier**

Specify the Identifier details of the Intermediary for the selected ID Code.

#### **Name**

Specify the name of the Intermediary.

#### **Address 1 to 3**

Specify the address of the Intermediary in the lines provided.

### **:5200:Instructing FI**

#### **ID Code**

Specify the required ID Code from the drop down list. The available values are B, C, D, U and F.

#### **Identifier**

Specify the Identifier details for the selected ID code.

#### **Name**

Specify the name of the Instructing FI.

#### **Address 1 to 3**

Specify the address of the Instructing FI in the lines provided.

### **:8250:Related Remittance Information**

#### **Remittance Identification**

Specify the Remittance Identification details.

#### **Remittance Location Method**

Specify the Remittance Location Method details.

#### **Remittance Location Electronic Address**

Specify the Remittance Location Electronic Address details.

#### **Name**

Specify the name as mentioned in the Remittance Information.

#### **Address Type**

Specify the Address Type which should be one of the following allowed values - ADDR, BIZZ, DLVY, HOME, MLTO and PBOX.

#### **Department**

Specify the associated department details.

#### **Sub Department**

Specify the associated sub department details.

#### **Street Name**

Specify the Street Name.

#### **Building Number**

Specify the Building Number.

#### **Address**

Specify the address.

### **:8200:Unstructured Addenda Information**

#### **Line 1-5**

Specify the line details.

#### **Addenda Length**

The value gets defaulted.

## 2.2.1.5 Remittance Parties Tab

Click 'Remittance Parties' tab to capture the information on Remittance:

The screenshot displays the 'Remittance Parties' tab in a software application. The interface is divided into two main sections: ':8300:Remittance Originator' and ':8350:Remittance Beneficiary'. Each section contains various input fields for capturing remittance information. The ':8300:Remittance Originator' section includes fields for Identification Type (a dropdown menu), Identification Code, Name, Identification Number, Identification Number Issuer, Date of Birth (YYYY-MM-DD), Place of Birth, Address Type (a dropdown menu), Department, and Sub Department. The ':8350:Remittance Beneficiary' section includes fields for Name, Identification Type (a dropdown menu), Identification Code, Identification Number, Identification Number Issuer, Date of Birth (YYYY-MM-DD), Place of Birth, Address Type (a dropdown menu), Department, and Sub Department. At the bottom of the form, there is a status bar with fields for Maker Id, Release Time, Checker ID, Checker Date Stamp, Authorization Status, and an Exit button.

Specify the following details:

### **:8300:Remittance Originator**

#### **:8300:Remittance Originator Identification Type**

Select the Originator Identification Type from the drop down.

#### **Identification Code**

Specify the Identification Code.

#### **Name**

Specify the name of the Remittance Originator.

#### **Identification Number**

Specify the Identification Number of the Originator.

#### **Identification Number Issuer**

Specify the Identification Number Issuer of the identification.

#### **Date & Place Of Birth**

Specify the Originator's date of birth and place of birth.

#### **Address Type**

Specify the address type, which should be one of the following allowed values - ADDR, BIZZ, DLVY, HOME, MLTO and PBOX.

#### **Department**

Specify the department.

**Sub Department**

Specify the sub department.

**Street Name**

Specify the street name

**Building Number**

Specify the building number.

**Post Code**

Specify the Post Code.

**Town Name**

Specify the Town name.

**Country Subdivision/ State**

Specify the Country subdivision/State.

**Country**

Specify the Country...

**Address**

Specify the address details.

**:8350:Remittance Beneficiary****Name**

Specify the name of the Beneficiary of the remittance.

**Identification Type**

Specify the Identification Type of the Beneficiary.

**Identification Code**

Specify the Identification Code of the Beneficiary as per the selected Identification type.

**Identification Number**

Specify the Identification Number of the beneficiary.

**Identification Number Issuer**

Specify the beneficiary's Identification Number Issuer.

**Date & Place Of Birth**

Specify the beneficiary's date of birth and place of birth.

**Address Type**

Select the address type from the drop down, which should be one of the following allowed values - ADDR, BIZZ, DLVY, HOME, MLTO and PBOX.

**Department**

Specify the department.

**Address**

Specify the address details.

Also you can specify the following details:

- Country of Residence
- Contact Name

- Contact Phone
- Contact Mobile Number
- Contact Fax Number
- Contact Electronic Address
- Contact Other Information

### 2.2.1.6 Remittance Information Tab

Click 'Remittance Information' tab to capture the information on Remittance

The screenshot displays the 'Remittance Information' tab in a software application. The interface is divided into several sections for data entry:

- :8300:Remittance Originator**: Includes fields for Identification Type (dropdown), Identification Code, Name, Identification Number, Identification Number Issuer, Date & Place Of Birth, Address Type, Department, and Address.
- :8350:Remittance Beneficiary**: Includes fields for Name, Identification Type (dropdown), Identification Code, Identification Number, Identification Number Issuer, Date & Place Of Birth, Address Type (dropdown), Department, and Address.
- :8400:Primary Remittance Document Information**: Includes Document Type Code (dropdown), Proprietary Document Type Code, Document Identification Number, and Issuer.
- :8450:Actual Amount Paid**: Includes Currency Code and Amount.
- :8500:Gross Amount of Remittance Document**: Includes Document Currency Code and Amount.
- :8650:Date Of Remittance Document**: Includes Date Of Remittance Document.
- :8550:Amount of Negotiated Discount**: Includes Discount Currency Code and Amount.
- :8600:Adjustment Information**: Includes Adjustment Reason Code (dropdown), Credit Debit Indicator, Currency Code, Amount, and Additional Information.
- :8700:Secondary Remittance Document Information**: Includes Document Type Code (dropdown), Proprietary Document Type Code, Document Identification Number, and Issuer.
- :8750:Remittance Free Text**: Includes multiple text input lines.

At the bottom, a status bar contains the following fields: Maker ID, Release Time, Checker ID, Checker Date Stamp, Authorization Status, and an Exit button.

#### :8400:Primary Remittance Document Information

##### **Document Type Code**

Select the code to specify the document type from the drop down list.

##### **Proprietary Document Type Code**

Specify a Proprietary Document Type Code if the Document Type Code selected is PROP.

##### **Document Identification Number**

Specify the Document Identification Number

##### **Issuer**

Specify the Issuer of the document.

#### :8450:Actual Amount Paid

##### **Currency Code**

Specify the currency code of the actual amount remitted.

**Amount**

Specify the actual amount remitted.

**:8500:Gross Amount of Remittance Document****Document Currency Code**

Specify the currency code of the gross amount remitted as mentioned in the Remittance Document.

**Amount**

Specify the gross amount remitted.

**:8550:Amount of Negotiated Discount****Discount Currency Code**

Specify the currency code of the negotiated discount for the amount payable.

**Amount**

Specify the discounted amount.

**:8600:Adjustment Information****Adjustment Reason Code**

Specify the adjustment reason code from the drop down.

**Credit Debit Indicator**

Specify if the adjustment is done for credit or debit.

**Currency Code**

Specify the currency code of the adjustment amount.

**Amount**

Specify the adjusted amount.

**Additional Information**

Specify any other related information.

**:8700:Secondary Remittance Document Information****Document Type Code**

Select the code to specify the document type from the drop down list.

**Proprietary Document Type Code**

Specify a Proprietary Document Type Code if the Document Type Code selected is PROP.

**Document Identification Number**

Specify the Document Identification Number

**Issuer**

Specify the Issuer of the Secondary Remittance Document document.

**:8750 Remittance Free text**

Specify any remarks on the remittance in the free text format in the lines provided.

### 2.2.1.8 UDF Tab

Click on the 'UDF' button present in the bottom of the screen to invoke this screen.

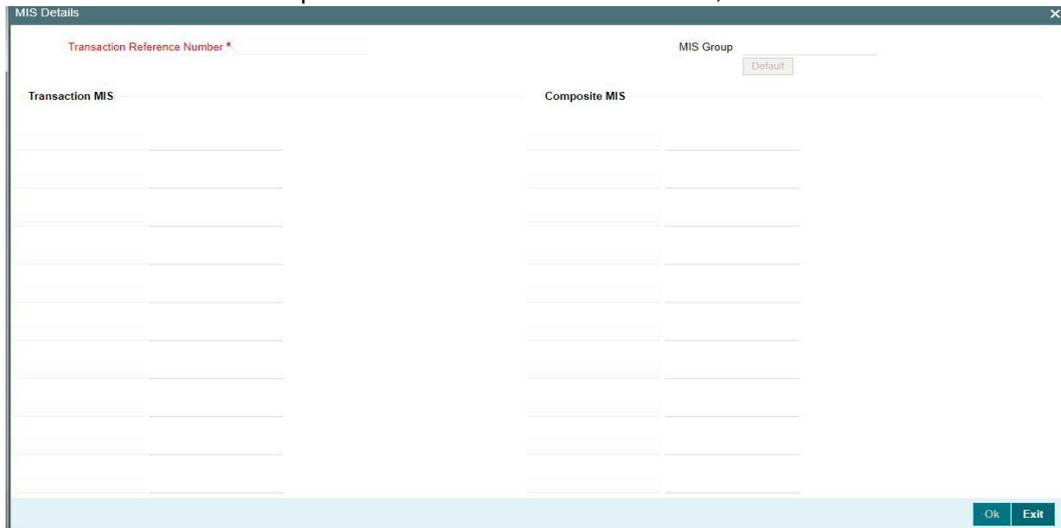

The screenshot shows a window titled 'Fields'. At the top, there is a navigation bar with '1 Of 1' and a 'Go' button. Below this is a table with two columns: 'Field Label' and 'Field Value'. The table is currently empty. At the bottom right of the window, there are 'OK' and 'Exit' buttons.

You can specify user defined fields for each transaction.

### 2.2.1.9 MIS Tab

Click on the 'MIS' button present in the bottom of the screen, to invoke this screen.

The screenshot shows a window titled 'MIS Details'. At the top, there is a 'Transaction Reference Number' field and a 'MIS Group' dropdown menu with a 'Default' button. Below this, there are two columns: 'Transaction MIS' and 'Composite MIS'. Each column contains a list of empty text input fields. At the bottom right of the window, there are 'OK' and 'Exit' buttons.

You can specify the MIS details in this sub-screen.

## 2.2.1.10 Viewing Fedwire Outgoing Summary

You can view the summary outbound fedwire transactions in this screen. You can invoke the 'Outbound Fedwire Transaction Summary' screen by typing 'PWSOTONL' in the field at the top right corner of the Application toolbar and clicking on the adjoining arrow button.

Transaction Reference Number	Value Date	Network Code	User Reference	Source Code	Transaction Branch	Instruction Date	Booking Date	Customer Number	Customer ID
------------------------------	------------	--------------	----------------	-------------	--------------------	------------------	--------------	-----------------	-------------

You can search for the records using one or more of the following parameters:

- Transaction reference no
- Value Date
- Network Code
- User Reference
- Source Code
- Transaction Branch
- Instruction Date
- Booking Date
- Customer Number
- Customer Service Model
- Receiver DI
- Authorization Status
- Source Reference Number

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria.

Double click a record or select a record and click on 'Details' button to view the detailed maintenance screen.

## 2.2.2 Outbound Fedwire View

You can view the details of an outbound Fedwire transaction in this screen. You can invoke the 'Outbound Fedwire View' screen by typing 'PWDOVIEW' in the field at the top right corner of the Application toolbar and clicking on the adjoining arrow button.

- From this screen, click Enter Query. The Transaction Reference field gets enabled, for the user to specify the Reference Number.
- Along with the transaction details in the Main and Pricing tabs you can also view the Status details for the following:
  - Transaction Status
  - External System Status
  - Pending Queue Details
  - Sanction Seizure

### View Queue

This button launches the corresponding Queue screen, where the transaction is currently held. The Queue Messages screen will be launched in query mode, listing this transaction alone.

- Click Execute Query to populate the details of the transaction in the Outbound Fedwire View Detailed screen.

### gpi Agent

This field is not editable and is disabled. This field has the drop-down values as -Yes/No

## Incoming gpi

This field is disabled. This is set to 'Y' for pass-through cases only when processing an inbound gpi message

## UETR

The UETR (Unique End-to-End Transaction Reference) is generated for the outbound transaction

For more details on Main, Pricing, Fi Information, Additional Details, Remittance Parties, Remittance Information, Sequence B - Cover Details tabs, refer to 'PWDOTONL' screen details above.

---

### Note

- Outbound Fedwire transactions is also created via inbound pass-through SWIFT message upload.
  - Based on Network Rules defined, Fedwire network is derived and outbound Fedwire transaction is created and available for view in PWDOVIEW.
  - Outbound Fedwire is created as CTR, BTR, CTP based on the inbound pass-through SWIFT message type uploaded.
- 

### 2.2.2.1 Exceptions Tab

Click on the 'Exceptions' tab to view the reversal details for the transaction. Following details can be viewed:

- Reversal Details
- Reversal request Details
- Reversal Payment details
- External System Status Reversal request
- External System Status Reversal payment

The screenshot displays the 'Exceptions' tab in a software interface. At the top, there is a navigation bar with tabs: 'Main', 'Pricing', 'Fi Information', 'Additional', 'Remittance Parties', 'Remittance Information', and 'Exceptions' (which is highlighted in red). Below the navigation bar, the 'Reversal Details' section is visible. It includes a dropdown menu for 'Reversal request status'. The main content area is divided into two columns: 'Reversal Request Details' and 'Reversal Payment details'. The 'Reversal Request Details' column contains fields for 'Reversal Reference', 'Reversal Request Date' (with a YYYYMMDD format), 'Sub Type Code', and three 'Reversal Request Reason' fields (Reason 1, Reason 2, Reason 3). The 'Reversal Payment details' column contains fields for 'Reversal Payment Reference', 'Reversal Payment date' (with a YYYYMMDD format), 'BFC', 'Type Code', 'Sub Type Code', and 'Returned Amount'. At the bottom of the interface, there is a footer with links: 'View Queue Action', 'UDF', 'MIS', 'All Messages', 'Accounting Entries', and 'View Repair Log'. A light blue bar at the very bottom contains fields for 'Maker Id', 'Maker Date Stamp', 'Authorization Status', 'Checker ID', and 'Checker Date Stamp', along with a 'Cancel' button.

### 2.2.2.2 View Queue Action Log

You can view all the queue actions for the respective transaction initiated. You can invoke this screen by clicking the 'View Queue Action' button in View screen, where the Transaction Reference Number is auto populated and related details are displayed.:

Transaction Reference Number	Action	Remarks	Queue Code	Authorization Status	Maker Id	Maker Date Stamp
------------------------------	--------	---------	------------	----------------------	----------	------------------

Following details are displayed:

- Transaction Reference Number
- Network Code
- Action
- Remarks
- Queue Code
- Authorization Status
- Maker ID
- Maker Date Stamp
- Checker ID
- Checker Date Stamp
- Queue Status
- Queue Reference No
- Primary External Status
- Secondary External Status
- External Reference Number

You can view the request sent and the corresponding response received for each row in Queue Action Log.

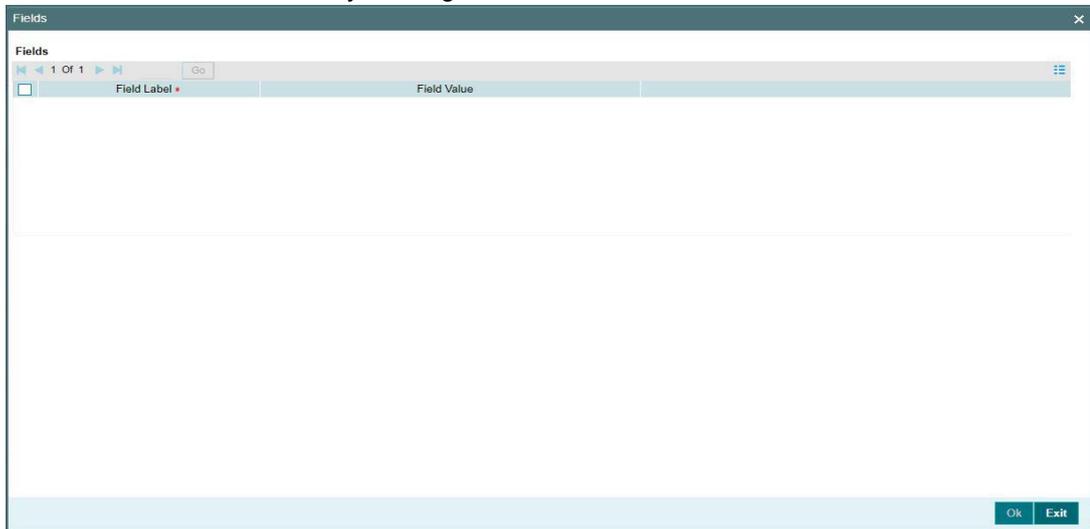

Also you can view the request sent to and the response received from external systems for the following:

- Sanction screening
- External credit approval
- External Account Check

- External FX fetch
- External price fetch
- Accounting system

### 2.2.2.3 UDF Tab

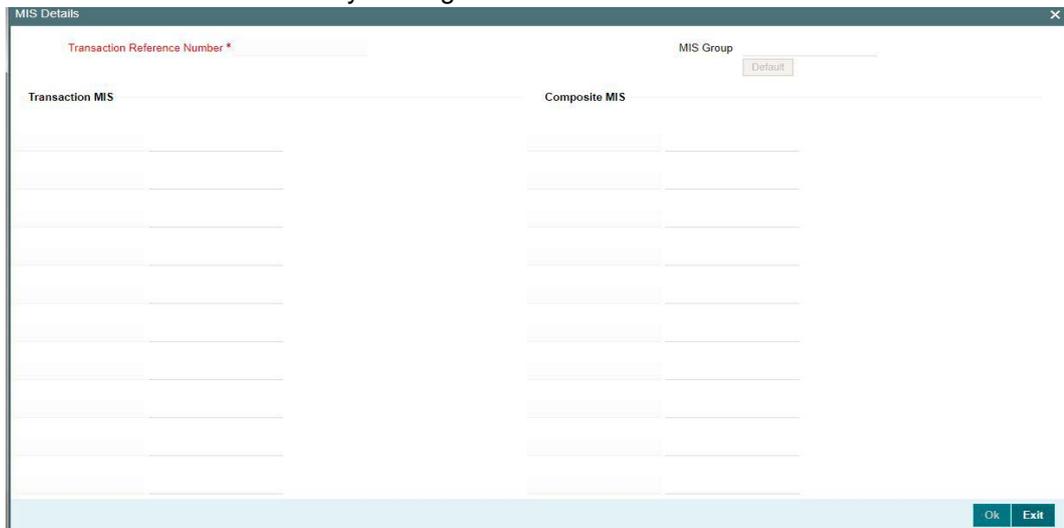

You can invoke this screen by clicking 'UDF' tab in the screen.

The screenshot shows a window titled "Fields" with a close button (X) in the top right corner. Below the title bar, there is a navigation bar with a left arrow, "1 Of 1", a right arrow, and a "Go" button. A table with two columns, "Field Label" and "Field Value", is displayed. The table is currently empty. At the bottom right of the window, there are "Ok" and "Exit" buttons.

### 2.2.2.4 MIS Tab

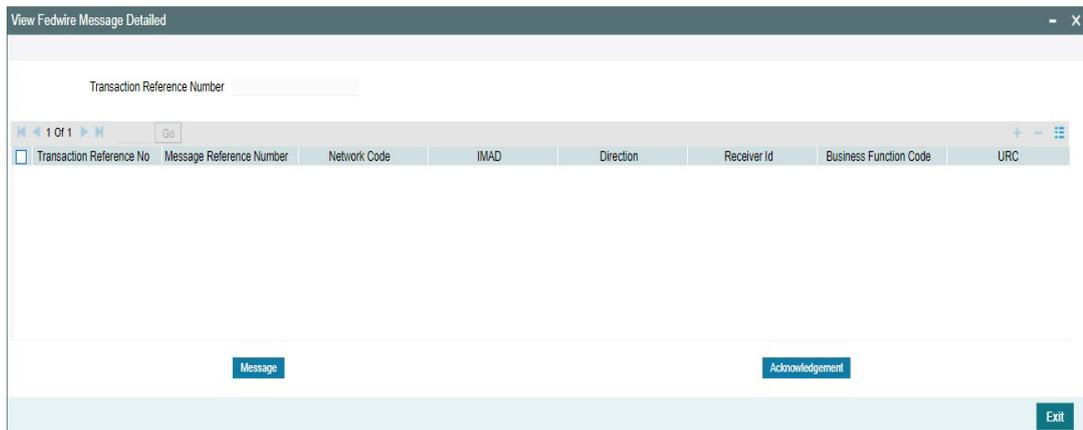

You can invoke this screen by clicking 'MIS' tab in the screen.

The screenshot shows a window titled "MIS Details" with a close button (X) in the top right corner. At the top, there are two input fields: "Transaction Reference Number" (with a red asterisk) and "MIS Group" (with a "Default" button). Below these fields, there are two tables: "Transaction MIS" on the left and "Composite MIS" on the right. Both tables are currently empty. At the bottom right of the window, there are "Ok" and "Exit" buttons.

### 2.2.2.5 All Messages

Click the “All Messages” link in the View screen to invoke this sub-screen.

The system displays the following details in a grid form containing one or multiple rows

#### **Transaction Reference No**

Displays the transaction reference number.

#### **Message Reference Number**

Displays Message Reference Number.

#### **Network Code**

Displays Network Code.

#### **IMAD**

Displays IMAD.

#### **Direction**

Displays the Direction.

#### **Receiver Id**

Displays the Receiver Id.

#### **Business Function Code**

Displays Business Function Code.

#### **URC**

Displays URC.

#### **Acknowledge**

Acknowledgement button shows the ACK or NACK message received for selected FW out message sent,

### 2.2.2.6 Message Details

You can select a particular message in the All Messages summary sub-screen (explained above) and view the message details in this screen.

Displays the following details for the selected message.

#### **Reference Number**

Specify the transaction reference number.

**DCN**

The system displays DCN of the message.

**ESN/Version Number**

The system displays the version number of the message.

**Receiver/Sender**

The system displays receiver/sender of the message.

**Message Type**

The system displays system defined message type.

**SWIFT Message Type**

The system displays SWIFT message type.

**Message**

The system displays details of the actual message including BIC and Name and Address details of the Sender and Receiver as well as the fields and values populated in the message body.

**Remarks**

Specify a comments or remarks for the message.

**Reject Reason**

The system displays the reject reason code.

**Message Trailers**

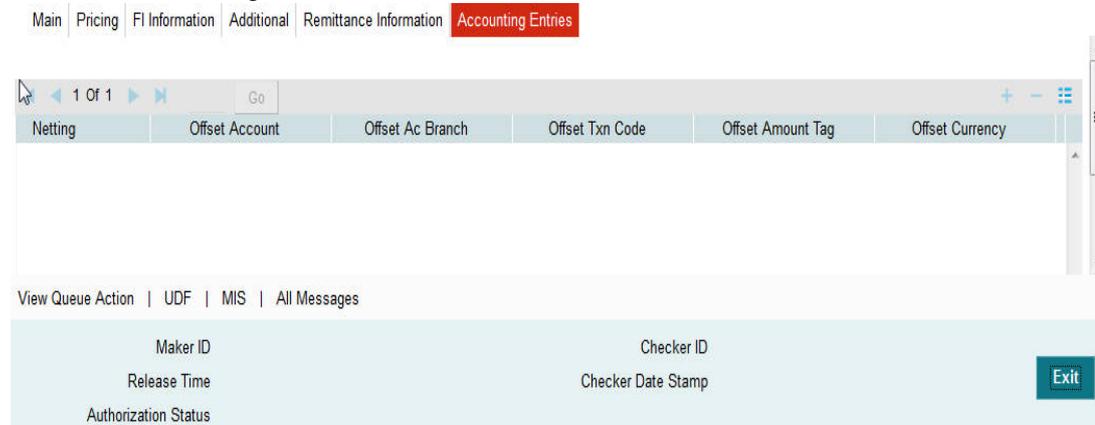

The system displays the message trailers.

**2.2.2.7 Accounting Entries**

During payment transaction processing, the accounting entries whose for which hand -off status is pending are posted to a JMS Queue. Once these entries are posted in the queue, the status is updated as handed off.

If the Accounting system and the ECA system are not the same, an update is sent to the ECA system as well while doing the accounting handoff. Any amount block in the customer account done during External credit approval can be released on receiving accounting update.

Click the "Accounting Entries" tab in the view screen to invoke the screen

The system displays the following details in a grid form that contains accounting entries in multiple rows:

**Reference Number**

Displays the Transaction reference number.

**Event Code**

Displays the Accounting event code.

**Account**

The system displays the transaction account number that is debited or credited in the accounting entry.

**Account Branch**

The system displays the account branch.

**TRN Code**

The system populates the transaction code of the accounting entry from the Account Template maintenance.

**Dr/Cr.**

The system displays whether the accounting entry is 'debit' or 'credit' leg.

**Amount Tag**

The system displays the amount tag of the Amount being debited/credited.

**Account Currency**

The system displays the transaction account currency.

**Transaction Amount**

The system displays the transaction amount being debited/credited.

**Netting**

The system displays if Netting of accounting entries is required.

**Offset Account**

The system displays the Offset Account of the accounting entry for posting the offset debit/credit.

**Offset Account Branch**

The system displays the Offset Account Branch.

**Offset TRN Code**

The system displays the Offset Transaction Code from the Account Template maintenance.

**Offset Amount Tag**

The system displays the Offset Amount Tag of the Offset amount.

**Offset Currency**

The system displays the Offset Amount Currency.

**Offset Amount**

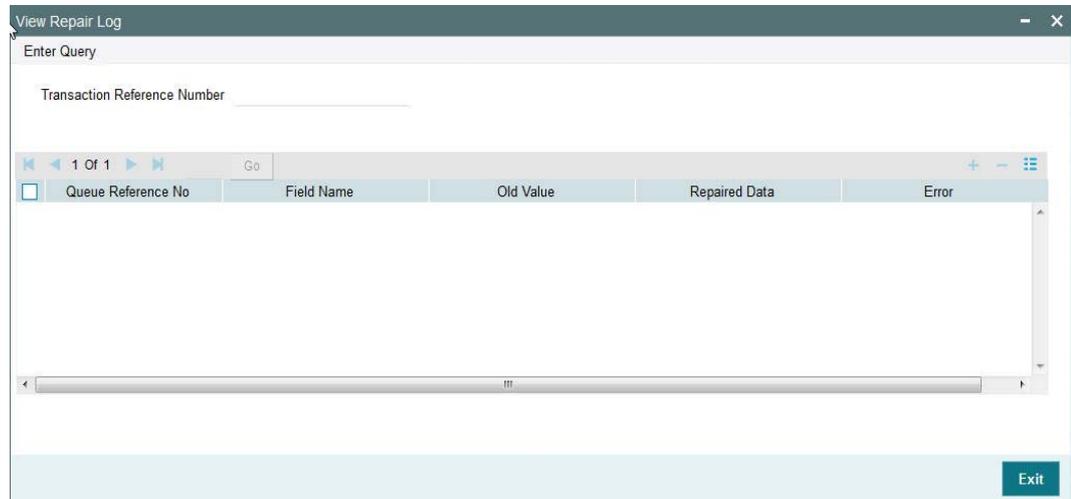

The system displays the Offset Amount being debited or credited.

**Offset Netting**

The system displays if the Offset Netting is required.

### 2.2.2.8 View Repair Log

You can view all the Repair actions for the respective transaction initiated. You can invoke this screen by clicking the 'View Repair Log' button in View screen, where the Transaction Reference Number is auto populated and related details are displayed.:

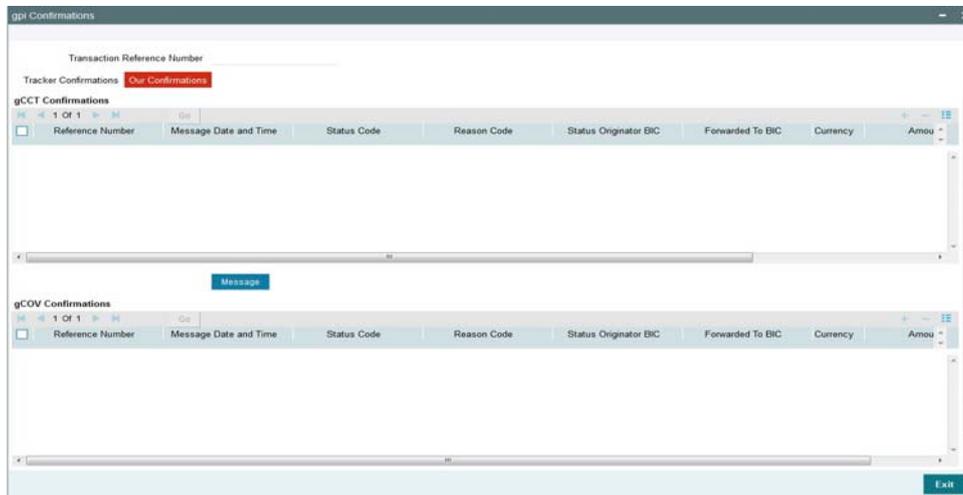

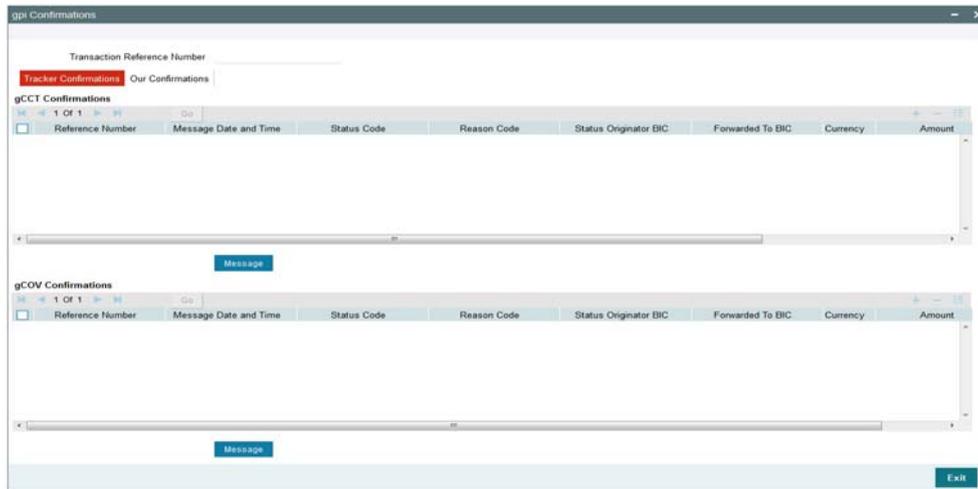

Following details are displayed:

- Queue Reference No
- Field Name
- Old Value
- Repaired Data
- Error

### 2.2.2.9 gpi Confirmations

You can view all the confirmation messages received from gpi Tracker and sent to gpi Tracker. You can invoke this screen by clicking the 'gpi Confirmations' button in View screen, where the Transaction Reference Number is auto populated and related details are displayed.

This screen has 'Tracker Confirmations', 'Our Confirmations' Tabs displaying gCCT/ gCOV confirmations received from and sent to the tracker

Following are the details listed under 'Tracker Confirmations' and 'Our Confirmations' tab in the screen:

- **gCCT Confirmations:**
  - Reference Number
  - Message Date and Time (Only for Tracker Confirmations)
  - Status Code
  - Reason Code
  - Status Originator BIC
  - Forwarded To BIC
  - Currency
  - Amount
  - Exchange Rate
  
- **gCOV Confirmations:**
  - Reference Number

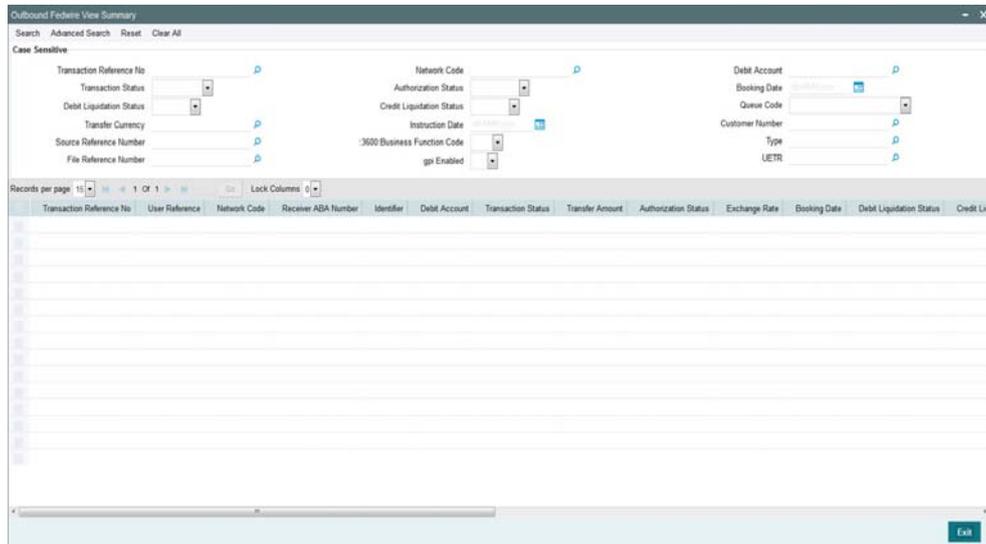

- Message Date and Time
- Status Code
- Reason Code
- Status Originator BIC
- Forwarded To BIC
- Currency
- Amount

### Message Button

Click on 'Message' button, to view gCCT/gCOV confirmation message that received or generated and sent out.

### 2.2.2.10 Outbound Fedwire View Summary

You can invoke the "Outbound Fedwire View Summary" screen by typing 'PWSOVIEW' in the field at the top right corner of the application toolbar and clicking on the adjoining arrow button

You can search for the records using one or more of the following parameters:

- Transaction reference no
- Network Code
- Debit Account
- 
- Transaction Status
- Authorization Status
- Booking Date
- 
- Debit Liquidation Status
- Credit Liquidation Status
- Queue Code
- 
- Transfer Currency

- Instruction Date
- Customer Number
- 
- Transfer Type
- Source Reference Number
- gpi Enabled
- 
- Type
- File Reference Number
- UETR

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria.

Double click a record or select a record and click on 'Details' button to view the detailed maintenance screen.

### 2.2.3 Fedwire Reversal Request Detailed

A new Transaction Input screen is created for initiating Request for Reversal of a Fedwire payment sent in the current or previous Fedwire business day.

You can view the details of a Fedwire Reversal Request Detailed in the “Fedwire Reversal Request Detailed” Screen. You can invoke the “Fedwire Reversal Request Detailed” screen by typing 'PWDOTREV' in the field at the top right corner of the Application toolbar and clicking on the adjoining arrow button.

The following tabs are available in this screen:

#### 2.2.3.1 Main Tab

You can specify the Main details of the Fedwire Reversal Request like Reversal Details, Original Outgoing Transaction Details, Originator and Beneficiary details.

Specify the following fields:

**Reversal Reference Number**

This is populated when you click on New.

**Reversal Request Date**

Specify the Reversal Request Date.

**BFC**

This is defaulted and fixed to “CTP” Customer Transfer Plus, for the reversal request.

**Original Outgoing Payment Preference**

Select the Original Outgoing Payment Preference from the LOV.

**Outgoing payment Date**

After selecting the Original Outgoing Payment Preference, the Outgoing payment Date is populated by the system. The system indicates Input Cycle Date i.e. Fedwire business date of the selected outgoing payment.

**Transaction Branch**

This is populated when you click on New.

**Source Code**

This is populated when you click on New.

**Host Code**

This is populated when you click on New.

**Network Code**

This is populated when you click on New

**Reversal Details**

**Type Code**

This is populated after selecting the Original Outgoing Payment Preference. This is derived and populated to be same as that of the selected outgoing payment transaction being requested to be reversed.

**Sub Type Code**

This is populated after selecting the Original Outgoing Payment Preference. This would be derived and populated to be one of the following –

- “01” – If the selected payment transaction was sent in current Fedwire business day (Cycle date = current business day),
- “07” – If the payment transaction was sent in previous Fedwire business day

**Reversal Request Reason 1 -6**

Specify the reason for Reversal Request in the lines specified. This is a mandatory text field containing multiple lines for user to input (free format) the reason for Reversal request and any relevant info.

**Original Outgoing Transaction Details**

**Transfer Amount**

This is populated after selecting the Original Outgoing Payment Preference.

**Transfer Currency**

This is populated after selecting the Original Outgoing Payment Preference.

**Receiver DI**

This is populated after selecting the Original Outgoing Payment Preference. This is also the Receiver of the generated Reversal request.

**IMAD**

This is populated after selecting the Original Outgoing Payment Preference.

**BFC**

This is populated after selecting the Original Outgoing Payment Preference.

**Type Code**

This is populated after selecting the Original Outgoing Payment Preference.

**:5000:Originator****Debit Account**

This is populated after selecting the Original Outgoing Payment Preference.

**Debit Currency**

This is populated after selecting the Original Outgoing Payment Preference.

**Id Code**

This is populated after selecting the Original Outgoing Payment Preference.

**Beneficiary ID**

This is populated after selecting the Original Outgoing Payment Preference.

**Name**

This is populated after selecting the Original Outgoing Payment Preference.

**:5010:Originator Option F****Party Identifier**

If Originator in Option F {5010} is present, then this field is auto-populated.

**Name**

If Originator in Option F {5010} is present, then this field is auto-populated.

**:4200:Beneficiary****ID Code**

Specify the ID code.

**Beneficiary ID**

Specify the Beneficiary Id.

**Name**

Specify the name

**2.2.3.2 Pricing Tab**

Pricing related information of the Fedwire Reversal Request are available in this tab. This tab displays the pricing details of the charges computed by system based on the transaction attributes in the Main tab. These details are populated on clicking Enrich button in the Main

tab before saving the transaction, or as part of processing on saving the transaction without clicking Enrich.

The screenshot shows a software window titled "Main Pricing". At the top, there is a navigation bar with "1 Of 1" and a "Go" button. Below this is a table with the following columns: Pricing Code, Component Name, Pricing Currency, Amount, Waived, and Debtor Account Currency. The table is currently empty. At the bottom of the window, there are several fields: Maker Id, Checker ID, Authorization Status, Maker Date Stamp, and Checker Date Stamp. A "Cancel" button is located in the bottom right corner.

The below mentioned attributes will be available in the Pricing tab

### **Pricing Component**

The system displays the Name of the pricing component applicable for the transaction for which charges are computed.

### **Pricing Currency**

The system displays the Currency in which the charge amount is calculated for the Pricing component.

### **Amount**

The system displays the charge amount calculated for each pricing component.

### **Waived**

This field if checked indicates that the charge is waived for the pricing component.

### **Debtor Account Currency**

The system displays the currency in which the charge amount is debited for the pricing component. This is the currency of the debit (originator) account.

### **Debit Amount**

The system displays the charge amount in debit currency to be debited. This amount is different from the calculated Pricing amount if the debit currency is different from the Pricing Currency. The Debit amount for charges is calculated by converting the Pricing amount in Pricing Currency to Debit currency using specified Exchange Rate type in Pricing Code maintenance.

### **Accounting Code**

The system indicates the Accounting Code.

### **Lcy Amount**

The system indicates the Lcy Amount.

### **Exchange Rate**

The system indicates the Exchange Rate.

### 2.2.3.3 Fedwire Reversal Request Summary

You can invoke the “Fedwire Reversal Request Summary” screen by typing ‘PWSOTREV’ in the field at the top right corner of the Application toolbar and clicking on the adjoining arrow button.

Reversal Reference Number	Reversal Request Date	BFC	Original Outgoing Payment Preference	Outgoing payment Date	Transaction Branch
---------------------------	-----------------------	-----	--------------------------------------	-----------------------	--------------------

You can search for the records using one or more of the following parameters:

- Reversal Reference Number
- Reversal Request Date

Once you have specified the search parameters, click ‘Search’ button. The system displays the records that match the search criteria

Double click a record or select a record and click on ‘Details’ button to view the detailed maintenance screen.

### 2.2.4 Fedwire Reversal Response

All the Reversal requests that are successful, are made available in the Reversal response screen for Ops decision. Responses for the reversal requests initiated is given through this screen.

You can invoke 'Fedwire Reversal Response' screen by typing 'PWDREVRS' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button. Click new button on the Application toolbar.

You can specify the following details:

### Reversal Reference

Select a reversal reference from the LOV. On selection of a record, this field would be populated with value of IMAD of the Reversal request message.

---

#### Note

This LOV would be filtered on all the matched and validated Reversal requests received and for which Reversal response transaction has not been created.

---

### Reversal Request Date

Select the Reversal request date. This is the Cycle Date from OMAD of Reversal request message

### Original Incoming Reference Number

Incoming Reference number is auto populated with the IMAD of the matched incoming payment

### Network Code

System defaults the Network Code of the reversal reference specified.

### Response Reference

System auto -generates the reference number for reversal response. This would not be sent in the outgoing payment message (if sent) but only used in system for internal tracking.

### Response Date

System automatically generates the Response date. This is the date of authorization of response transaction.

### **Transaction Branch**

System defaults the Branch code for the Reversal reference specified.

### **Host Code**

System defaults the user's logged in branch.

### **Reversal Response Details**

#### **Reversal Response**

You can select the reversal responses from the drop-down values. Options are - Accept/Reject. You can either accept/ reject the request.

#### **Reject Reason**

This field is mandatory and enabled only if the Reversal Response is 'Reject'.

#### **Additional Comments**

Specify the remarks, if any. Free text field to input Comments/Remarks about Accept or Reject response.

#### **Enrich**

Click on Enrich button on specifying all the mandatory details. System processes all the validations and charges on clicking Enrich.

### **Incoming Reversal Request Details**

Following details are auto populated on specifying a valid Reversal Request Reference. All the details pertaining to that reference are displayed:

- Transfer Share
- Sender DI
- IMAD
- :1510:Type
- Sub Type
- :3320:Sender's Reference

### **Original Incoming Transaction Details**

The following key details of the matched original incoming payment are auto-populated for information only, on selection of the Reversal Request Reference

- Current Transaction Status
- Transfer Amount
- Receiver DI
- IMAD
- Business Function Code
- Type Code

### **:6100:Receiver FI Information**

System auto populates the FI information details, on selecting the Reversal Request Reference, if these details are specified in the original transaction.

## **Originator**

System auto populates the Originator details, on selecting the Reversal Request Reference, if tags{5000} or{5010} are specified in the original transaction. Following details are populated

- Debit Account
- Debit Currency
- ID Code
- Identifier
- Name

## **Beneficiary**

System auto populates the Beneficiary details, on selecting the Reversal Request Reference, if tags{4200} are specified in the original transaction. Following details are populated

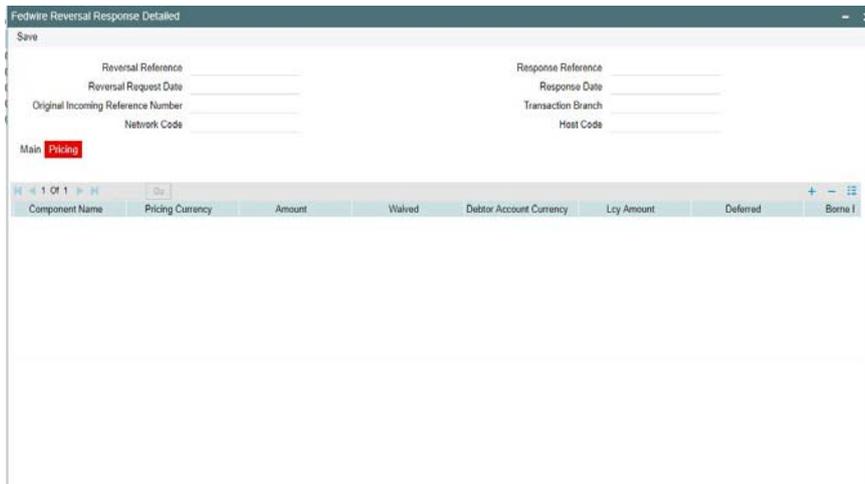

- ID Code
- Identifier
- Name

## **FI to FI Information**

System auto populates the FI to FI information details, on selecting the Reversal Request Reference, if these details are specified in the original transaction.

### **2.2.4.1 Pricing Tab**

Pricing related information of the Fedwire Reversal response are available in this tab. This tab displays the pricing details of the charges computed by system based on the transaction attributes in the Main tab. These details are populated on clicking Enrich button in the Main tab before saving the transaction, or as part of processing on saving the transaction without clicking Enrich.

The screenshot shows a window titled "Fedwire Reversal Response Detailed" with a "Save" button at the top left. The window is divided into two main sections: "Main" and "Pricing". The "Main" section contains several input fields: "Reversal Reference", "Reversal Request Date", "Original Incoming Reference Number", "Network Code", "Response Reference", "Response Date", "Transaction Branch", and "Host Code". The "Pricing" tab is currently selected and highlighted in red. Below the input fields, there is a table with the following columns: "Component Name", "Pricing Currency", "Amount", "Waived", "Debtor Account Currency", "Lcy Amount", "Deferred", and "Balance". The table is currently empty, and the "1 Of 1" indicator is visible at the top left of the table area.

The below mentioned attributes will be available in the Pricing tab

#### **Component Name**

The system displays the Name of the pricing component applicable for the transaction for which charges are computed.

### Pricing Currency

The system displays the Currency in which the charge amount is calculated for the Pricing component.

### Amount

The system displays the charge amount calculated for each pricing component.

### Waived

This field if checked indicates that the charge is waived for the pricing component.

### Debtor Account Currency

The system displays the currency in which the charge amount is debited for the pricing component. This is the currency of the debit (originator) account.

### LCY Amount

System displays the charge amount in local currency.

### Deferred

If any fees/charges are deferred, then it is marked here

### Borne By Bank

If the charges is borne by bank or to be paid by customer is displayed here.

## 2.2.4.2 Fedwire Reversal Response Summary

You can search for reversal response records in this screen. You can invoke 'Fedwire Reversal Response Summary' screen by typing 'PWSREVRS' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

The screenshot shows the 'Fedwire Reversal Response Summary' application window. It includes a search bar with 'Search', 'Advanced Search', 'Reset', and 'Clear All' options. Below the search bar, there are several input fields for search criteria: 'Reversal Reference', 'Original Incoming Reference Number', 'Reversal Request Date', 'Response Reference', and 'Authorization Status'. Each field has a magnifying glass icon. The search criteria are set to 'Case Sensitive'. Below the search fields, there is a table with columns: 'Reversal Reference', 'Original Incoming Reference Number', 'Reversal Request Date', 'Response Reference', 'Response Date', 'Host Code', 'Network Code', 'Transaction Branch', and 'Reversa'. The table is currently empty. At the bottom right of the window, there is an 'Exit' button.

You can search using one or more of the following parameters:

- Reversal Reference
- Original Incoming Reference Number
- Reversal Request Date
- Response Reference
- Authorization Status

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria.

Double click a record or select a record and clicking on 'Details' button to view the detailed maintenance screen.

## 2.2.5 Fedwire Service Message

A new Transaction Input screen is created for initiating Fedwire Service Message. A Service Message sent using the Fedwire network is a non-value message used to communicate questions and information related to messages sent/received previously of certain Type and Sub-type codes.

This input screen allows you to initiate Service messages with reference to any Fedwire value and non-value message sent or received earlier.

You can view the details of a Fedwire Service Message Detailed in the "Fedwire Service Message Detailed" Screen. You can invoke the "Fedwire Service Message Detailed" screen by typing 'PWDSVCME' in the field at the top right corner of the Application toolbar and clicking on the adjoining arrow button.

The screenshot shows a software application window titled "Fedwire Service Message Detailed". At the top left, there is a "New Enter Query" button. The main area is divided into two columns of input fields. The left column includes "Transaction Branch", "Reference No \*", "Network Code", "Related Reference Number", and "IMAD". The right column includes "Host Code", "BFC SVC", "Type Code", "Sub-Type Code", "Receiver DI \*", and "Receiver DI Name". Below these fields is a section titled "Service Message Information" containing 12 numbered lines (Line 1 to Line 12) for text entry. At the bottom of the window, there are fields for "Maker ID", "Release Time", "Checker ID", "Checker Date Stamp", "Authorization Status", and an "Exit" button.

Specify the following fields:

### **Transaction Branch**

This is auto-populated once you click on New button.

### **Reference Number**

This is auto-populated once you click on New button.

### **Network Code**

This is auto-populated once you click on New button. The value would be FEDWIRE.

### **Related Reference Number**

You can input or search and select Reference number of an outgoing/incoming transaction of the selected Type code and Sub-type code combination. e.g. Reversal request of type code 10 sent earlier.

**IMAD**

In case of Incoming message, you can input or search and select IMAD of an incoming transaction of the selected Type code and Sub-type code combination. e.g. Reversal request of type code 16 received from another bank.

**Host Code**

This is auto-populated once you click on New button.

**BFC**

This is defaulted and fixed to "SVC" i.e. Service message.

**Type Code**

Select any of the Type Codes from the LOV.

**Sub-Type Code**

Select any of the Type Codes from the LOV

---

**Note**

Sub-type code of '33' would not be allowed if Type code selected is '15'.

---

**Receiver DI**

ABA number of the Receiver of this Service message, which can be input or searched and selected from LOV.

**Receiver DI Name**

This is populated when you select the required Receiver DI.

**Service Message Information****Line 1-12**

Specify the service message information in the lines.

## 2.2.5.1 Fedwire Service Message Summary

You can invoke the “Fedwire Service Message Summary” screen by typing ‘PWSSVCME’ in the field at the top right corner of the Application toolbar and clicking on the adjoining arrow button.

Reference No	Related Reference Number	Network Code	Transaction Branch	Host Code	Type Code	Sub-Type Code	IMAD	Receiver
--------------	--------------------------	--------------	--------------------	-----------	-----------	---------------	------	----------

You can search for the records using one or more of the following parameters:

- Reference Number
- Network Code
- Type Code
- IMAD
- Authorization Status
- Related Reference Number
- Transaction Branch
- Sub-Type Code
- Receiver DI

Once you have specified the search parameters, click ‘Search’ button. The system displays the records that match the search criteria.

Double click a record or select a record and clicking on ‘Details’ button to view the detailed maintenance screen.

## 2.2.6 Inbound Fedwire Transaction Input

System supports Fedwire Incoming Payments for the below mentioned transfer type:

- Customer Transfer
- Bank Transfer

Inbound Fedwire payments can be manually booked from this screen in case the inward Fedwire message cannot be received or processed due to any reason. You can invoke

“Inbound Fedwire Transaction Input” screen by typing ‘PWDITONL’ in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button. Click new button on the Application toolbar.

You can specify the following fields:

### Transaction Branch

The system defaults the transaction branch code with the user's logged in branch code.

### Branch Name

The system defaults the Branch Name on clicking New button.

### Host code

The system defaults the host code of transaction branch.

### Host code Description

The system defaults the host code description-of transaction branch.

### Source Code

The system derives the source code for the transaction depending on the source from where it is received. For manual transactions, source code is defaulted to MANL.

### Source code Description

The system defaults the description of the source code

### Network Code

Specify the required Fedwire network code.

**Network code Description**

The system defaults the description of the Network code

**Transaction Reference Number**

The system generates and displays a unique reference number for the transaction.

**Source Reference Number**

The system displays the Source Reference Number provided by the channel or any other source for the transaction. You can input the value for manually booked transaction.

**OMAD**

This field is data string in the OMAD tag in the received message, which primarily consists of Output Cycle Date (CCYYMMDD), unique Output Sequence Number (6 char) and Output Date (calendar date in MMDD format) fields.

OMAD is generated and appended by Fedwire in the cleared message sent to Receiving bank

**IMAD**

This is the value of IMAD {1520} tag in the received message generated by the Sending bank, which primarily consists of Input Cycle Date (CCYYMMDD) and unique Input Sequence Number (6 char).

**:3600:Business Function Code**

Specify the desired Business Function Code from the available options. For e.g. CTR (Customer Transfer), BTR (Bank Transfer) etc

**Message Duplication Code**

This field indicates if the message received is an original message sent by the Sending bank or a possible duplicate message as identified by Fedwire. This is a drop-down field allowing user to select one of the options given below.

- Original
- Duplicate

**Transaction Type Code**

Specify the required transaction type code.

**Type**

Specify the type code of the payment. The options are:

- 10 (Customer Transfers)
- 15 (International Transfers)
- 16 (Settlement transfers between Fedwire members)

**Sub Type**

The system defaults the Sub-type code to "00" and is non-editable.

---

**Note**

This is because only the sub-type code of "00" is currently supported for any of the type codes

---

**Credit to GL**

This is a flag to indicate that the incoming Fedwire payment needs to be credited to a GL instead of a beneficiary customer account.

## Note

This is applicable, where the actual incoming Fedwire message and the associated credit accounting would be processed by another bank system. Only Nostro accounting would be expected from Payments system that would involve crediting the amount of the incoming payment to a specified internal GL.

- System will verify whether 'Inbound Credit to GL' is checked in the Source maintenance. If it is not set for the source, error will be thrown on screen on save of transaction.
- If 'Credit to GL' flag is checked for the source then the 'Intermediary Credit GL' maintained for the source in Source maintenance would be identified as the Beneficiary account.

### 2.2.6.1 Main Tab

Click 'Main' tab to capture the Inbound Fedwire details.:

The screenshot shows the 'Main' tab of the Oracle Payments system interface. The form is organized into several sections:

- :4200:Beneficiary**: Includes fields for ID Code (dropdown), Beneficiary Identifier (required), Name, Address, Address 2, and Address 3.
- :4100:Beneficiary FI**: Includes fields for ID Code (dropdown), Identifier, Name, and Address.
- Sender**: Includes fields for Sender ABA Number and Sender Short Name.
- :3700:Charges**: Includes a dropdown for Details of Charges and a field for Senders Charges.
- :4400:Account Debited in DrawDown**: Includes fields for ID Code (dropdown), Identifier, Name, and Address.
- Payment Details**: Includes fields for Booking Date, Instruction Date (required), Original Instruction Date, Activation Date, Transfer Currency (USD), Transfer Currency Name, and Transfer Amount (required).
- :5000:Originator**: Includes fields for ID Code (dropdown), Identifier, Name, and Address.
- :5010:Originator Option F**: Includes a dropdown for Party Identifier Format (Account Number), a field for Party Identifier, and three dropdowns for Name, Line 2, and Line 3.

The bottom of the form features a status bar with the following fields: UDF | MIS, Maker Id, Release Time, Checker ID, Checker Date Stamp, Authorization Status, and an Exit button.

Specify the following details

#### :4200:Beneficiary ID Code

Select the ID code from the drop down list corresponding to the type of originator identification and details that are desired to be input in the following fields. The options are:

- B - SWIFT Bank Identifier Code (BIC)
- C- CHIPS Participant
- D - Demand Deposit Account (DDA) Number
- F - Fed Routing Number
- T - SWIFT BIC or Bank Entity Identifier (BEI) and account number
- U - CHIPS Identifier
- 1 - Passport Number

- 2 - Tax Identification Number
- 3 - Driver's License Number
- 4 - Alien Registration Number
- 5 - Corporate Identification
- 9 - Other Identification

### **Beneficiary Identifier**

Specify the identifier details as per the selected ID Code.

#### **Name**

The system displays the Originator's name based on the selected Debit account

#### **Address**

Specify the address details of the originator.

#### **Address 2-3**

Specify the additional address details of the originator.

### **Payment Details**

#### **Booking Date**

Specify the booking date of the payment..

#### **Instruction Date**

Specify the Instruction Date of the incoming payment which can be current or future business date.

#### **Original Instruction Date**

System defaults the Original Instruction Date.

#### **Activation Date**

System defaults the Activation Date.on successful completion of transaction.

#### **Transfer Currency**

System displays the transfer currency of USD by default.

#### **Transfer Currency Name**

System displays the currency name.

#### **Transfer Amount**

Specify the amount for the transfer.

#### **Enrich**

Click this button for enrichment of the transaction that includes deriving exchange rate (if applicable), Value dates, Charges and mandatory field validation.

### **:4100:Beneficiary FI**

#### **ID Code**

Select the ID code from the drop down corresponding to the type of identification of Beneficiary FI and details that are desired to be input in the following fields The options are:

- B - SWIFT Bank Identifier Code (BIC)
- C - CHIPS Participant
- D - Demand Deposit Account (DDA) Number
- F - Fed Routing Number

- U - CHIPS Identifier

**Identifier**

Specify the Beneficiary FI identifier as per the selected ID Code.

**Name**

Specify the name of the beneficiary FI.

**Address**

Specify the address of the beneficiary FI.

**Debit Value Date**

The system displays the derived debit value date on clicking Enrich.

**Credit Value Date**

The system displays displays the credit value date on clicking Enrich.

**Customer No**

The system displays the customer number (of the customer maintained in the system) that is derived based on the selected debit account number of the originator.

**Customer Service Model**

The system displays the customer service model linked to the customer.

**Remarks**

Specify any remarks for the payment being booked

**Sender**

**Sender ABA Number**

Select the ABA Number of Sender DI (Depository Institution) from the list of all Fedwire members.

**Sender Short Name**

Specify the Sender's Short Name.

:3700:Charges

**Details of Charges**

Select the details of charges from the drop down list. The options are:

- B (Beneficiary)
- S (Shared)

**Senders Charges**

Specify the sender's charges as <USD><Amount>. For e.g. USD10.25.

**:5000:Originator**

**ID Code**

Select the ID code from the drop down corresponding to the type of identification of Originator and details that are desired to be input in the following fields. The options are:

- B - SWIFT Bank Identifier Code (BIC)
- C - CHIPS Participant
- D - Demand Deposit Account (DDA) Number
- F - Fed Routing Number
- T - SWIFT BIC or Bank Entity Identifier (BEI) and account number

- U- CHIPS Identifier
- 1 - Passport Number
- 2 - Tax Identification Number
- 3 - Driver's License Number
- 4 - Alien Registration Number
- 5 - Corporate Identification
- 9 - Other Identification

**Identifier**

Specify the identification details as per the selected ID Code.

**Name**

Specify the name of the Originator.

**Address**

Specify the address details of the Originator.

**:4400:Account Debited in Drawdown**

**ID Code**

Select the ID code from the drop down corresponding to the type of identification of Beneficiary FI and details that are desired to be input in the following fields The options are:

- B - SWIFT Bank Identifier Code (BIC)
- C - CHIPS Participant
- D - Demand Deposit Account (DDA) Number
- F - Fed Routing Number
- U - CHIPS Identifier
- 1 - Passport Number
- 2 - Tax Identification Number
- 3 - Driver's License Number
- 4 - Alien Registration Number
- 5 - Corporate Identification
- 9 - Other Identification

**Identifier**

Specify the Beneficiary FI identifier as per the selected ID Code.

**Name**

Specify the name of the beneficiary FI.

**Address**

Specify the address of the beneficiary FI.

**:5010:Originator Option F**

**Party Identifier Format**

Select the Party Identifier Format. Options are Account Number / Unique Identifier.

**Party Identifier**

Select the Party Identifier from drop-down values

### Name &Line 1-3

Select the unique values from drop-down values

#### 2.2.6.2 Pricing Tab

This tab displays the pricing details of the charges computed by system based on the transaction attributes in the Main tab. These details are populated on clicking Enrich button in the Main tab before saving the transaction, or as part of processing on saving the transaction without clicking Enrich.

Pricing Component	Pricing Currency	Amount	Waived	Debit Currency	Debit Amount	Deferred	Borne By Bank
-------------------	------------------	--------	--------	----------------	--------------	----------	---------------

The below mentioned attributes will be available in the Pricing tab

#### Pricing Component

The system displays the Name of the pricing component applicable for the transaction for which charges are computed..

#### Pricing Currency

The system displays the Currency in which the charge amount is calculated for the Pricing component.

#### Amount

The system displays the charge amount calculated for each pricing component.

#### Waived

This field if checked indicates that the charge is waived for the pricing component.

#### Debit currency

The system displays the currency in which the charge amount is debited for the pricing component. This is the currency of the debit (originator) account.

#### Debit amount

The system displays the charge amount in debit currency to be debited. This amount is different from the calculated Pricing amount if the debit currency is different from the Pricing Currency. The Debit amount for charges is calculated by converting the Pricing amount in Pricing Currency to Debit currency using specified Exchange Rate type in Pricing Code maintenance.

#### Deferred

This field if checked indicates that the charges are not collected during transaction processing but their liquidation is deferred based on customer preferences. Applicable only for "S" (Shared) type of charges..

## Borne By Bank

This field if checked indicates that the charges are borne by bank.

## 2.2.6.7 Viewing Fedwire Incoming Summary

You can view the summary in “Fedwire Incoming Summary” screen. You can invoke the “Fedwire Incoming Summary” screen by typing ‘PWSITONL’ in the field at the top right corner of the Application toolbar and clicking on the adjoining arrow button.

The screenshot shows the 'Inbound Fedwire Transaction Summary' application window. It includes a search bar with 'Search', 'Advanced Search', 'Reset', and 'Clear All' options. Below the search bar is a 'Case Sensitive' checkbox. The main area contains two columns of search criteria: Transaction Reference Number, Network Code, Source Code, Instruction Date (YYYYMMDD), Customer Number, and Authorization Status (dropdown) on the left; and Value Date (YYYYMMDD), User Reference, Transaction Branch, Booking Date (YYYYMMDD), Customer Service Model, and Source Reference Number on the right. Each field has a magnifying glass icon. Below the search fields is a table with columns: Transaction Reference Number, Value Date, Network Code, User Reference, Source Code, Transaction Branch, Instruction Date, Booking Date, Customer Number, and Customer Service Model. The table is currently empty. At the bottom right of the window is an 'Exit' button.

You can search for the records using one or more of the following parameters:

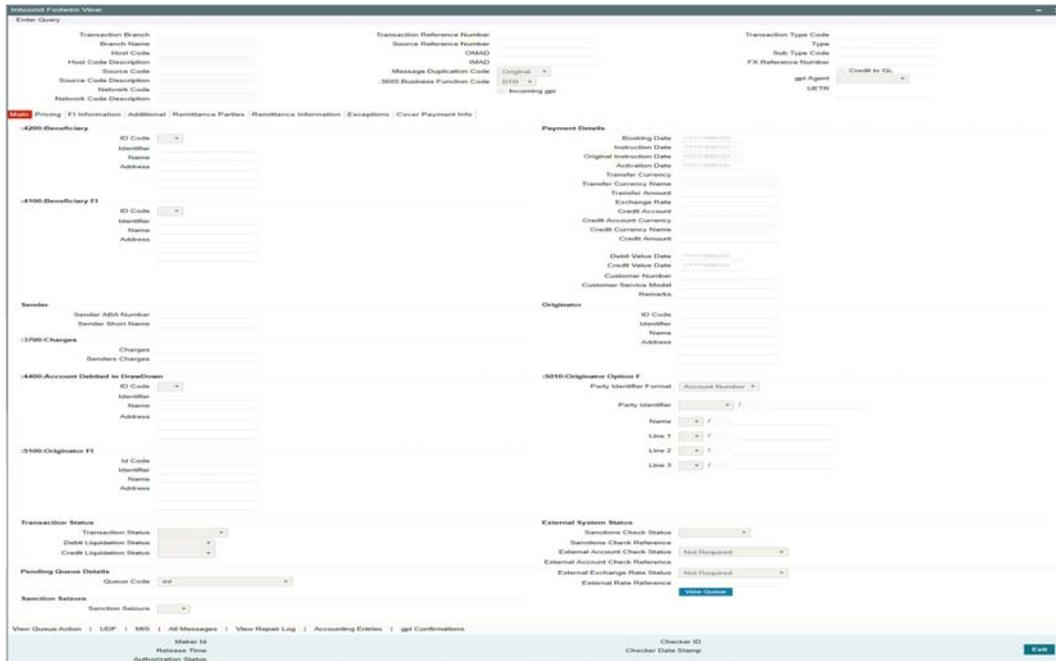

- Transaction reference no
- Value Date
- Network Code
- User Reference
- Source Code
- Transaction Branch
- Instruction Date
- Booking Date
- Customer No
- Customer Service Model
- Receiver ABA Number
- Authorization Status

Once you have specified the search parameters, click ‘Search’ button. The system displays the records that match the search criteria.

Double click a record or select a record and clicking on ‘Details’ button to view the detailed maintenance screen.

## 2.2.7 Inbound Fedwire View

You can view the details of an Incoming Fedwire transaction in the “Fedwire Incoming View” Screen You can invoke the “Fedwire Incoming View” screen by typing ‘PWDIVIEW’ in the field at the top right corner of the Application toolbar and clicking on the adjoining arrow button.

- From this screen, click Enter Query. The Transaction Reference field gets enabled, for the user to specify the Reference Number.
- Along with the transaction details in the Main and Pricing tabs you can also view the Status details for the following:
  - Transaction Status
  - External System Status
  - Pending Queue Details
  - Sanction Seizure

### View Queue

This button launches the corresponding Queue screen, where the transaction is currently held. The Queue screen will be launched in query mode, listing this transaction alone.

- Click Execute Query to populate the details of the transaction in the Inbound Fedwire View Detailed screen.

### gpi Enabled

This field is not editable and is disabled. This field has the drop-down values as - Yes/No

### Incoming gpi

This field is disabled. This is set to 'Y' for pass-through cases only when processing an inbound gpi message

### UETR

The UETR (Unique End-to-End Transaction Reference) is generated for the outbound transaction

For more details on Main, Pricing, Fi Information, Additional Details, Remittance Parties, Remittance Information tabs refer to 'PWDITONL' screen details above.

## 2.2.7.1 Exceptions Tab

Click on the 'Exceptions' tab to view the reversal details for the transaction. Following details can be viewed:

- Reversal Details
- Reversal request Details
- Reversal Payment details
- External System Status Reversal request
- External System Status Reversal payment

**Exit**

For more details on the fields and screen, refer to section 2.2.2.2

### 2.2.7.3 UDF Tab

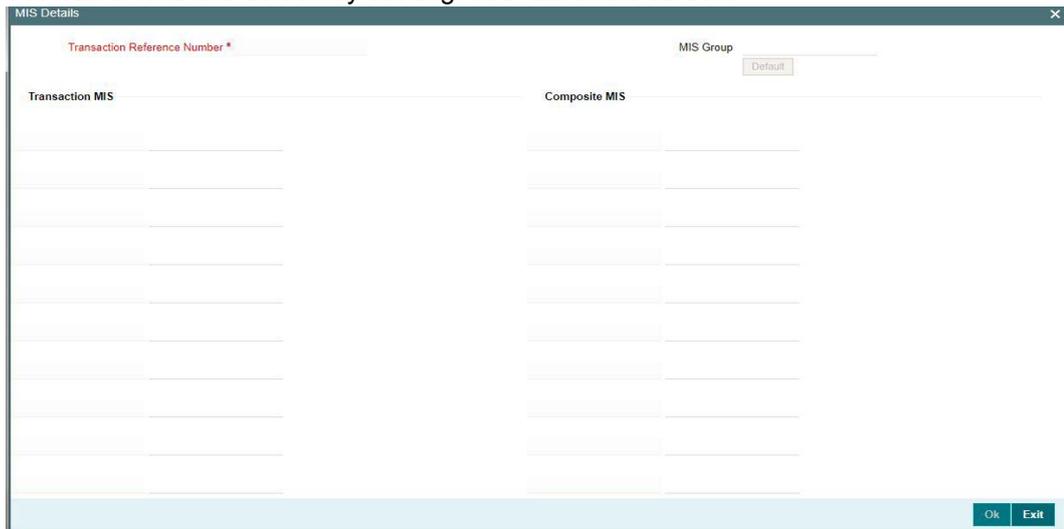

You can invoke this screen by clicking 'UDF' tab in the screen.

The screenshot shows a window titled "Fields" with a close button (X) in the top right corner. Below the title bar, there is a navigation bar with a left arrow, "1 Of 1", a right arrow, and a "Go" button. The main area contains a table with two columns: "Field Label" and "Field Value". The table is currently empty. At the bottom right of the window, there are "Ok" and "Exit" buttons.

### 2.2.7.4 MIS Tab

You can invoke this screen by clicking 'MIS' tab in the screen.

The screenshot shows a window titled "MIS Details" with a close button (X) in the top right corner. At the top, there is a "Transaction Reference Number" field with a red asterisk and a "MIS Group" dropdown menu with a "Default" button. Below these are two columns of tables: "Transaction MIS" on the left and "Composite MIS" on the right. Both tables are empty. At the bottom right of the window, there are "Ok" and "Exit" buttons.

## 2.2.7.5 All Messages

Click the “All Messages” link in the View screen to invoke this sub-screen.

The screenshot shows a web application window titled "All Messages". At the top, there is a "Contract Reference" input field. Below it is a table grid with the following columns: "DCN" (marked with a red asterisk), "Message Type", "SWIFT Message Type", "Direction", "Value Date", "Message Status", and "Test Status". The grid is currently empty. At the bottom right of the window, there is a "Cancel" button.

The system displays the following details in a grid form containing one or multiple rows

### Transaction Reference

Displays the transaction reference number.

### DCN

Displays the unique DCN number assigned by the system to each generated message.

### Message Type

Displays the system defined message type e.g. Cust\_Transfer, Cover etc.

### SWIFT Message Type

Specify the SWIFT message type of the generated message e.g. MT103, MT202COV etc.

### Direction

Displays if the message is outgoing or incoming.

### Media

Displays the message generation date.

### Message Status

The system displays the message status. e.g. Hand-off, Repair etc.

### Test Status

The system displays the Test status of the message, which would generally be “Not Applicable”.

### Authorization Status

The system displays the authorization status. i.e. Authorized or Unauthorized. For incoming messages which fall into Repair or a user defined queue, this status may be “Unauthorized” if the message has been manually repaired and awaiting authorization.

**Acknowledgment Status**

The system displays whether Acknowledgement from SWIFT (ACK/NAK) is required or not for the outgoing SWIFT message. This value is displayed based on the message level configuration.

**Media**

The system displays the media of the message which is "SWIFT".

**Receiver/Sender**

Displays the Customer ID of the Receiver of an outgoing SWIFT message or of the Sender of an incoming SWIFT message.

**Receiver Name**

Displays the name of the receiver or sender.

**PDE Flag**

Displays if PDE trailer is included in the incoming or outgoing message.

**2.2.7.6 Message Details**

You can select a particular message in the All Messages summary sub-screen (explained above) and view the message details in this screen.

Displays the following details for the selected message.

**Reference Number**

Specify the transaction reference number.

**DCN**

The system displays DCN of the message.

**ESN/Version Number**

The system displays the version number of the message.

**Receiver/Sender**

The system displays receiver/sender of the message.

**Message Type**

The system displays system defined message type.

**SWIFT Message Type**

The system displays SWIFT message type.

**Message**

The system displays details of the actual message including BIC and Name and Address details of the Sender and Receiver as well as the fields and values populated in the message body.

**Remarks**

Specify a comments or remarks for the message.

**Reject Reason**

The system displays the reject reason code.

**Message Trailers**

The system displays the message trailers.

## 2.2.7.7 Accounting Entries

During payment transaction processing, the accounting entries whose for which hand-off status is pending are posted to a JMS Queue. Once these entries are posted in the queue, the status is updated as handed off.

If the Accounting system and the ECA system are not the same, an update is sent to the ECA system as well while doing the accounting handoff. Any amount block in the customer account done during External credit approval can be released on receiving accounting update.

Click the “Accounting Entries” tab in the view screen to invoke the screen

The screenshot shows a web application interface for 'Accounting Entries'. The top navigation bar has tabs for 'Main', 'Pricing', 'FI Information', 'Additional', 'Remittance Information', and 'Accounting Entries' (which is selected and highlighted in red). Below the navigation bar is a table with the following columns: 'Netting', 'Offset Account', 'Offset Ac Branch', 'Offset Txn Code', 'Offset Amount Tag', and 'Offset Currency'. The table is currently empty. Below the table is a footer area with links: 'View Queue Action', 'UDF', 'MIS', and 'All Messages'. At the bottom, there are fields for 'Maker ID', 'Release Time', 'Authorization Status', 'Checker ID', and 'Checker Date Stamp', along with an 'Exit' button.

The system displays the following details in a grid form that contains accounting entries in multiple rows:

### **Reference Number**

Displays the Transaction reference number.

### **Event Code**

Displays the Accounting event code.

### **Account**

The system displays the transaction account number that is debited or credited in the accounting entry.

### **Account Branch**

The system displays the account branch.

### **TRN Code**

The system populates the transaction code of the accounting entry from the Account Template maintenance.

### **Dr/Cr.**

The system displays whether the accounting entry is 'debit' or 'credit' leg.

### **Amount Tag**

The system displays the amount tag of the Amount being debited/credited.

### **Account Currency**

The system displays the transaction account currency.

### **Transaction Amount**

The system displays the transaction amount being debited/credited.

## Netting

The system displays if Netting of accounting entries is required.

## Offset Account

The system displays the Offset Account of the accounting entry for posting the offset debit/credit.

## Offset Account Branch

The system displays the Offset Account Branch.

## Offset TRN Code

The system displays the Offset Transaction Code from the Account Template maintenance.

## Offset Amount Tag

The system displays the Offset Amount Tag of the Offset amount.

## Offset Currency

The system displays the Offset Amount Currency.

## Offset Amount

The system displays the Offset Amount being debited or credited.

## Offset Netting

The system displays if the Offset Netting is required.

### 2.2.7.8 View Repair Log

You can view all the Repair actions for the respective transaction initiated. You can invoke this screen by clicking the 'View Repair Log' button in View screen, where the Transaction Reference Number is auto populated and related details are displayed.:

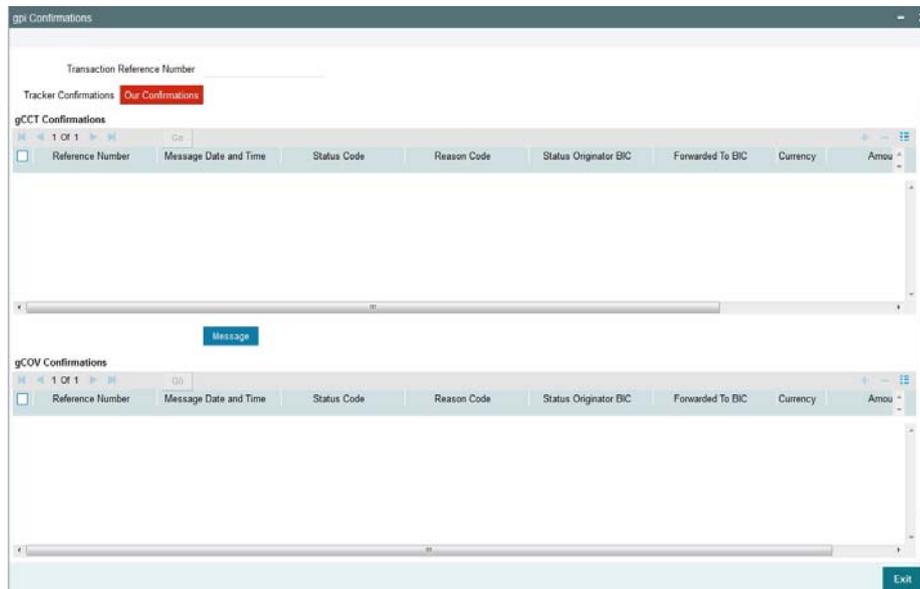

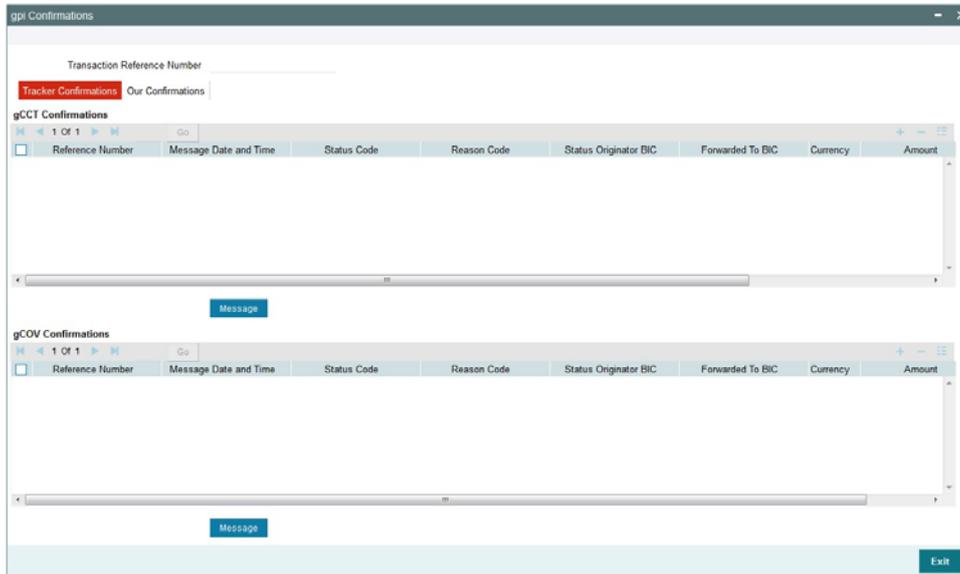

Queue Reference No	Field Name	Old Value	Repaired Data	Error
--------------------	------------	-----------	---------------	-------

Following details are displayed:

- Queue Reference No
- Field Name
- Old Value
- Repaired Data
- Error

## 2.2.7.9 gpiConfirmations

You can view all the confirmation messages received from gpi Tracker and sent to gpi Tracker. You can invoke this screen by clicking the 'gpi Confirmations' button in View screen, where the Transaction Reference Number is auto populated and related details are displayed.

This screen has 'Tracker Confirmations', 'Our Confirmations' Tabs displaying gCCT/gCOV confirmations received from and sent to the tracker

Following are the details listed under 'Tracker Confirmations' and 'Our Confirmations' tab in the screen:

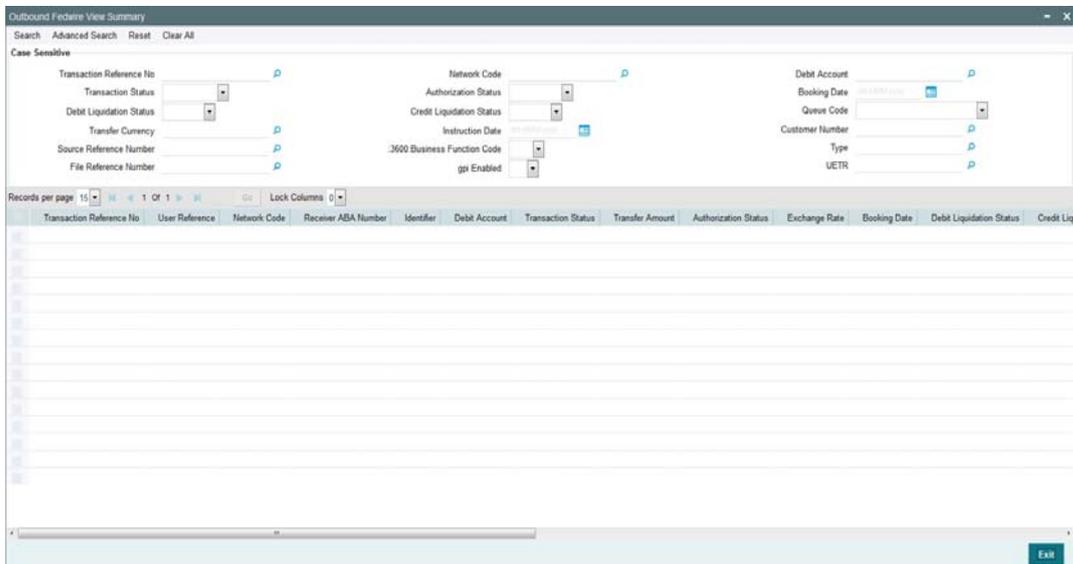

- **gCCT Confirmations:**
  - Reference Number
  - Message Date and Time (Only for Tracker Confirmations)
  - Status Code

- Reason Code
- Status Originator BIC
- Forwarded To BIC
- Currency
- Amount
- Exchange Rate
- **gCOV Confirmations:**
  - Reference Number
  - Message Date and Time
  - Status Code
  - Reason Code
  - Status Originator BIC
  - Forwarded To BIC
  - Currency
  - Amount

### Message Button

Click on 'Message' button, to view gCCT/gCOV confirmation message that was received or generated and sent out

**Inbound Fedwire View Summary** You can invoke the 'Inbound Fedwire View Summary' screen by typing 'PWSVIEW' in the field at the top right corner of the application toolbar and clicking the adjoining arrow button.

You can search for the records using one or more of the following parameters:

- Transaction reference no
- Network Code
- Originator F Account Number 5010
- Transaction Status
- Authorization Status

- Booking Date
- Debit Liquidation Status
- Credit Liquidation Status
- Queue Code
- Transfer Currency
- Instruction Date
- Customer Number
- Business Function Code
- Type
- OMAD
- UETR
- IMAD

gpi EnabledOnce you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria.

Double click a record or select a record and click on 'Details' button to view the detailed maintenance screen.

### **2.2.8 Fedwire Incoming Service Message View**

Processing of Incoming Service Messages would involve linking them to underlying payment transactions and making them available to be viewed in the relevant View screen.

On receipt of incoming Service message, system would attempt to match it to an underlying outgoing/incoming payment transaction (including Drawdown or Reversal payment), Drawdown/Reversal request, Drawdown Refusal message or Service message.

- This would be done using the value present in {3500} Previous Message Identifier tag of the received Service message with the value of IMAD in any of the following –
  - 'Processed' outgoing payment transaction
  - Incoming payment transaction in any status
  - Outgoing Drawdown request transaction – whose message is generated
  - Incoming Drawdown request message
  - Outgoing Reversal Request transaction – whose message is generated
  - Incoming Reversal request message
  - Generated or received Drawdown Refusal message
  - Generated Service message
- Once the underlying transaction or message is identified, system would validate that the Sender DI of the Service message is either the Receiver DI or Sender DI of the identified underlying transaction or message.
- Thereafter, system would generate Sanctions request for the received Service message and send it to Sanctions system.
  - This would involve including the actual Service message in a message block in the Sanctions request and sending it to Sanctions system.
- On receiving an Approved response from Sanctions system, the incoming Service message would be linked to the matched Payment or Request transaction, and would be available to be viewed in the relevant View screen
- If any status other than Approved is received from Sanctions system then system will move the incoming Service message to the existing Sanctions queue.

- You can take appropriate action on the message in the queue similar to the existing functionality for payment transactions.
- If Auto-cancellation has been configured for a Reject response from Sanctions then the incoming Service message would be auto-cancelled.

If the incoming Service message could not be matched to any payment/request transaction then it would be available to be viewed in a Fedwire Incoming Service Message View screen

You can invoke the 'Fedwire Incoming Service Message View' screen by typing 'PWDISMVW' in the field at the top right corner of the application toolbar and clicking the adjoining arrow button.

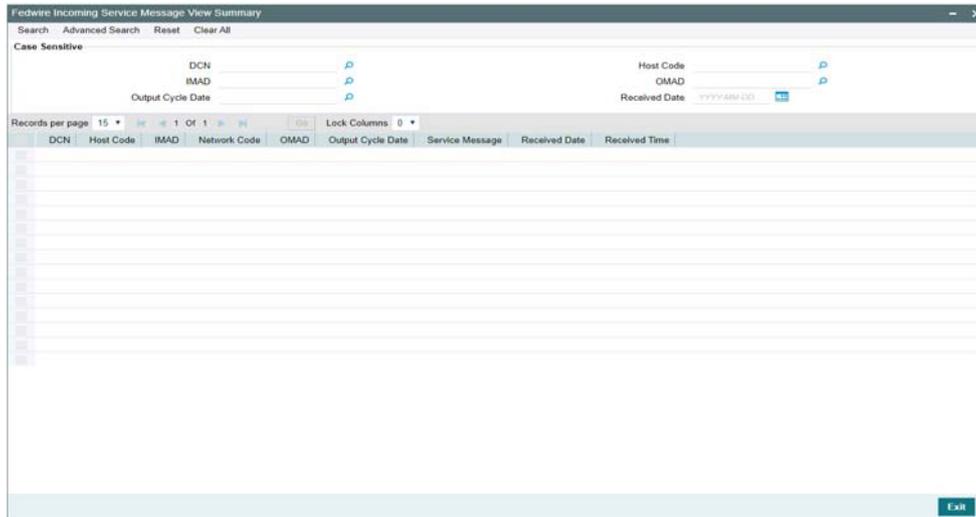

Specify the 'DCN' and click on enter query button to view the details. System displays the following details on clicking Execute Query:

- IMAD - value of IMAD tag present in the incoming Service message
- OMAD - value of OMAD tag present in the incoming Service message
- Output Cycle Date - Cycle date in CCYYMMDD format that is part of the OMAD value
- Service Message - actual message would be displayed in this text area box.
- Host Code
- Network Code

### 2.2.8.1 **Fedwire Incoming Service Message View Summary**

This screen enables you to query for incoming service messages that were not matched with any underlying transaction or message.

You can invoke the 'Fedwire Incoming Service Message View Summary' screen by typing 'PWSISMVW' in the field at the top right corner of the application toolbar and clicking the adjoining arrow button.

You can search using one or more of the following parameters:

- DCN
- IMAD
- Output Cycle Date
- Host Code
- OMAD
- Received Date

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria.

Double click a record or select a record and click on 'Details' button to view the detailed maintenance screen.

## **2.2.9 Fedwire Inbound Message Browser Summary**

You can view the uploaded inbound Fedwire messages and its related transactions, if any through this screen. All SVC messages, received by the system, are displayed here.

You can invoke the 'Fedwire Inbound Message Browser Summary' screen by typing 'PWSSVCBR' in the field at the top right corner of the application toolbar and clicking the adjoining arrow button..

You can search for records using one or more of the following parameters:

- Transaction Reference Number
- Message Reference Number
- Generated Reference
- IMAD
- Message Date
- Message Type
- Received Date
- Status

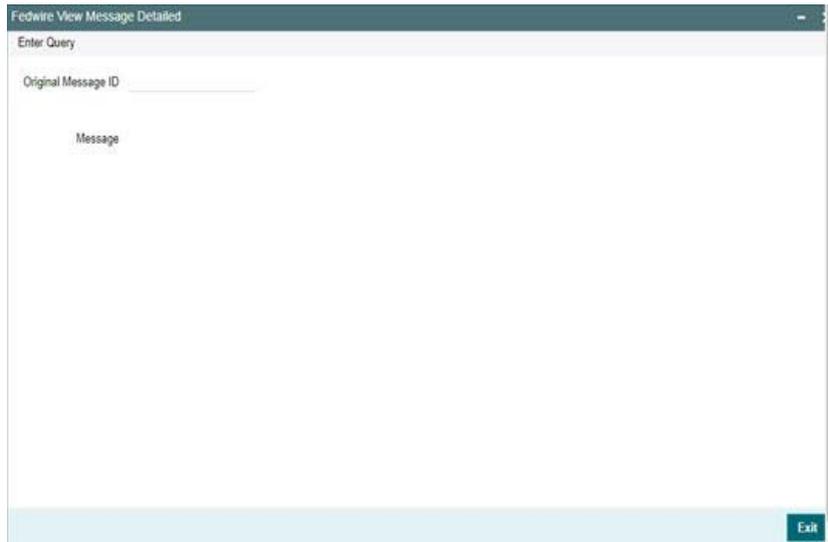

Once you have specified the search parameters, click 'Search' button. The system displays records that match the search criteria.

Select a record and click on View Message or View Transaction button to view the detailed transaction or uploaded inbound message..

### 2.2.9.1 **View Message**

You can view the uploaded inbound Fedwire message by clicking the 'View Message' action button, present in the bottom of the screen. The uploaded inbound message gets displayed.

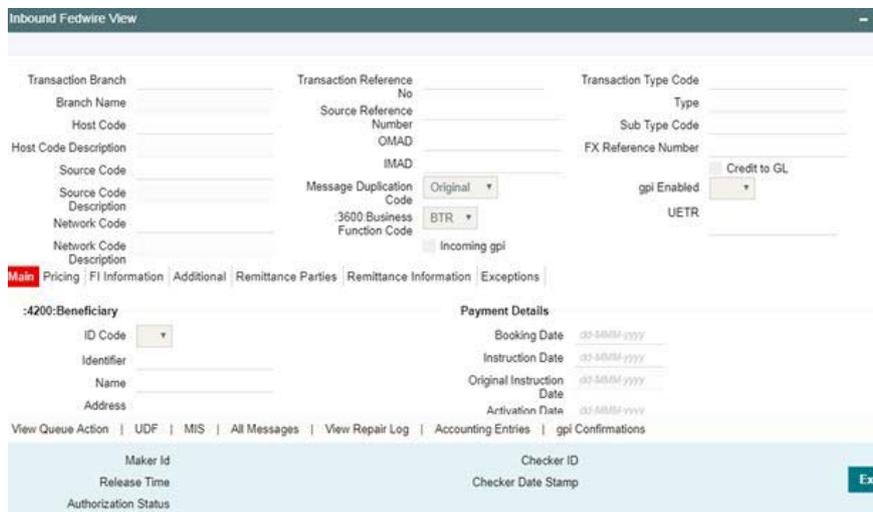

You need to select a record and click on 'View Message'to view the message details.

### 2.2.9.2 View Transaction

You can view the Transaction, which is linked to an uploaded inbound Fedwire message by clicking the 'View Transaction' action button present in the bottom of the screen. The detailed Inbound FEDWIRE view screen gets displayed.

You need to select a record and click on 'View Transaction' to view the linked transaction in detailed view

### 2.2.10 Fedwire Outbound Browser Summary

You can view all the outbound Fedwire messages sent through this screen. All the outbound messages of all the message status are displayed here.

You can invoke the 'Fedwire Outbound Browser Summary' screen by typing 'PWSOTBRW' in the field at the top right corner of the application toolbar and clicking the adjoining arrow button.

You can view all the messages for the various Message status listed.

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria.

Double click a record or select a record and click on 'Details' button to view the detailed maintenance screen.

You can search using one or more of the following parameters

- Message Type (Broadcast/ Statement)
- Message ID (Broadcast:FT1000/ FT1010/ FT1090/ Statement: FT1020)
- Received Date

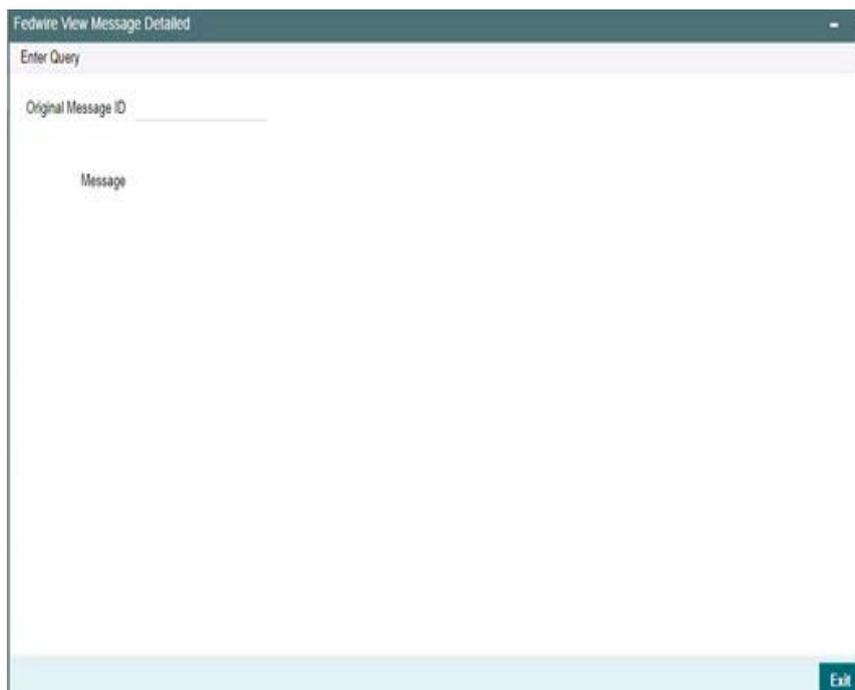

You can view messages based on the gpi enabled.

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria.

Select a record and click on 'View Message' button to view the message received from Network.

### 2.2.11.1 View Message

You can view the uploaded inbound Fedwire Broadcast and Statement messages received from network by clicking the 'View Message' action button, present in the bottom of the screen. The uploaded message gets displayed.

You need to select a record and click on 'View Message' to view the message details

## 2.2.12 **ACK/NAK Processing**

### 2.2.12.1 **Positive Response Processing**

For every Outbound message sent, Fedwire Fund Service sends the positive acknowledgement for accepted messages in FTFR12 message format.

The incoming positive response is in the following format.

Field Name	Field Name	Type	Description
URC	8	AN	User Response Correlation is same as in the corresponding outbound message
INPUT_CYCLE_DATE	4	N	MMDD format; cycle date of outbound message
INPUT_SOURCE	8	AN	End point ID of the bank
INPUT_SEQUENCE_NUMBER	6	N	Sequence Number provided for the outbound message
INPUT_DATE_N_TIME	8	N	Calendar date MMDD and time HHMM based on Eastern time when the message was received by Fedwire Fund Service
INPUT_FRB_APPLICATION_ID	4	AN	Fedwire service site which processed the message FT01, FT02 or FT03
MSG_STATUS_CD	1	N	2-Accepted with fund transfer accounting  7-Accepted without accounting (Example type/subtype code 1090)
MSG_DUPLICATION_CD	1	A	" " :Original message  'P' :Possible duplicate message  This value will be same as the one for the outbound message sent
OUTPUT_CYCLE_DATE	4	N	The cycle date for FFS (MMDD)
OUTPUT_SOURCE	8	AN	Unique endpoint of the receiver (Bank)

Field Name	Field Name	Type	Description
OUTPUT_SEQUENCE_NUMBER	6	N	The sequence number generated by Fedwire service. It will be starting with 1 for every cycle and right justified with leading zeroes.
OUTPUT_DATE_N_TIME	8	N	Calendar date MMDD and time HHMM based on Eastern time on which the advice is generated
OUTPUT_FRB_APPLICATION_ID	4	AN	FT01,FT02 or FT03
INPUT_CYCLE_YEAR	4	N	The cycle & year (CCYY)when the message was sent
OUTPUT_CYCLE_YEAR	4	N	The cycle & year (CCYY)when the message was generated
FILLER	24	ANS	For future use (spaces)

On upload of acknowledgement, system matches the URC & input sequence number received with the URC & sequence number generated for the outbound message.

Network status gets marked as Accepted /Accepted without accounting based on MSG\_STATUS\_CD received in the acknowledgement.

### 2.2.12.2 Negative Response Processing

The negative acknowledgement is a Reject message from network which contain the copy of the original message with error tag {1130}.

- Error Category- Alphanumeric 1 (E-Data Error)
- F-Insufficient Balance X-Duplicate IMAD
- H-Accountability Error
- W-Cutoff hour timing error
- I-In process/Intercepted )
- Error code Alphanumeric 1
- Error Description Alphanumeric & special characters 0-35

On upload of a reject message, Network status of the message gets marked as rejected. You can get the number of messages accepted/rejected by the nwtwork in the dashboard.

Based on Network status, messages/Transactions can be fetched in the Outbound Fedwire message browser / Outbound Fedwire View summary screens The applicable values are 'ACK Received', 'ACK-without accounting' & 'NAK Received'

### 2.2.13 SVC Non Financial Messages

SVC Non Financial Messages supports the following service request to Fedwire and the related responses.

- Account Balance Request(FTIABAL) - To obtain current account balance
- Endpoint (Lterm) Grant Totals Request(FTI0041) - To obtain their current summary of the day's traffic associated with a given End point (Lterm).

- Detailed summary of Transfer Messages Request(FTI0043) - To obtain the details of a range of sequence numbers for the incoming or outgoing messages associated with a given endpoint (LTerm)
- Error Code Description Request(FTI0091) - To obtain detailed information for an error code and guidelines for its resolution.
- Retrieval Request(FTI0051) - To obtain a copy of one or more of outgoing or incoming Fedwire Fund Service messages

### 2.2.13.1 Fedwire Service Request Generation

You can generate a Service Request in Fedwire Service Request Generation Screen by typing 'PWDFWSVC' in the field at the top right corner of the Application toolbar and clicking on the adjoining arrow button.

#### Host Code

System defaults the host code of logged in branch.

#### Message Type

Input the message Type from option list. Applicable values are

- FTIABAL - Account Balance Request.
- FTI0041 - Endpoint (Lterm) Grant Totals Request
- FTI0043 - Detailed summary of Transfer Messages Request
- FTI0091 - Error Code Description Request
- FTI0051 - Retrieval RequestMessage Reference

System generates 16 digit Message Reference number for the request.

**URC**

System generates 8 length alphanumeric User Correlated Reference for each message.

**Message Date**

Specify the Message Date

**Endpoint ID**

Select the Endpoint ID from the LOV.

The value maintained for the system parameter FEDWIRE\_ENDPOINT\_ID is populated in this field provided the message Type is selected as FTI0041, FTI0043 or FTI0051.

**Inquiry ABA**

Select the ABA number of the branch whose balance to be retrieved. LOV lists all valid ABA numbers applicable for the bank and Host Applicable for message type FTIABAL. Traffic Type

Select the Traffic Type as either Message Sent or Message Received. Applicable for message type FTI0043, FTI0051. Balance Type

Select the Balance Type as either Self Balance or Master Balance. Default value is Self Balance. Applicable for message type FTIABAL Start sequence

Input the Start sequence of Input (IMAD) or Output (OMAD). Applicable for message types

FTI0043 and FTI0051

**Stop Sequence**

Input the Stop sequence of Input (IMAD) or Output (OMAD). Applicable for message types

FTI0043 and FTI0051

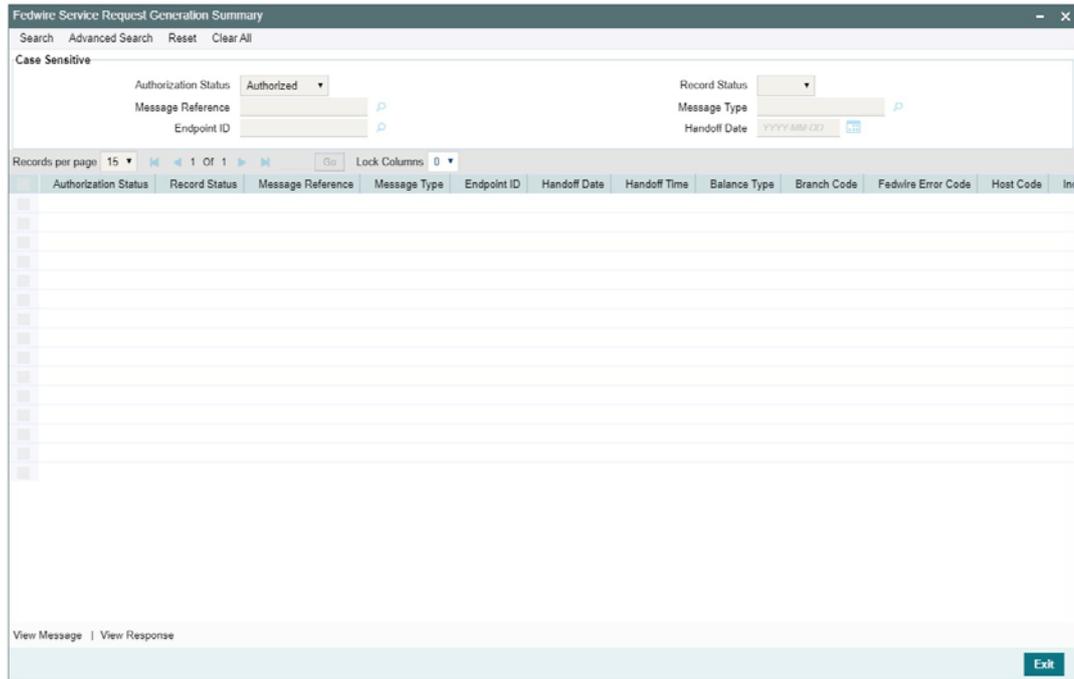

System validate START-SEQ# & STOP-SEQ# as IMAD number if the traffic type selected is 'Message sent'. For traffic type 'Message Received', only OMAD numbers are allowed.

**Fedwire Error Code**

Mention the error code for sending Error Code Description Request Message. Applicable for message type FTI0091

**2.2.13.2 Fedwire Service Request Generation Summary**

You can view the Fedwire Service Request and the corresponding response message by typing 'PWSFWSVC' in the field at the top right corner of the Application toolbar and clicking on the adjoining arrow button.

You can search using one or more of the following parameters

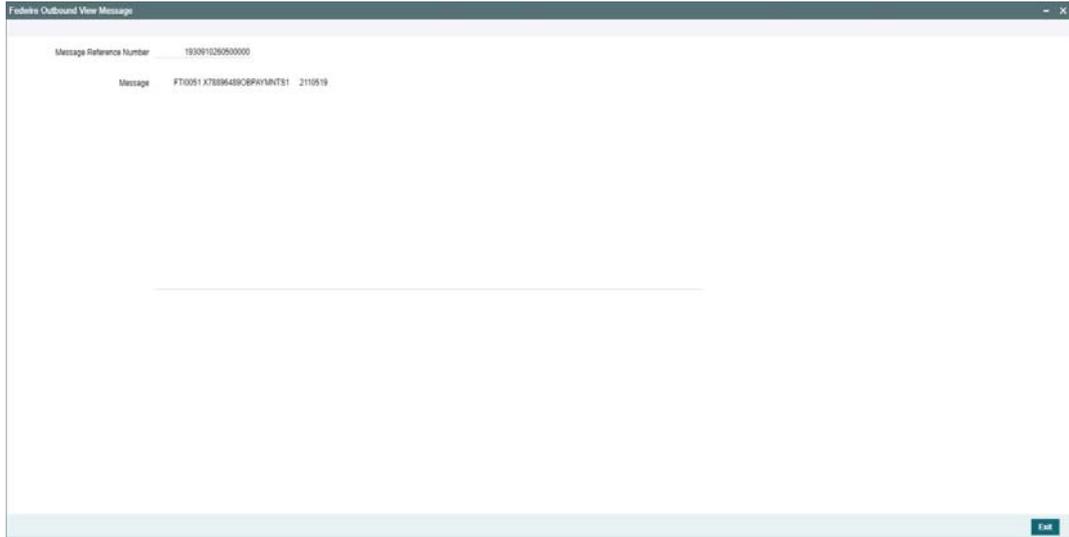

- Authorization Status
- Message Reference
- Endpoint ID
- Record Status
- Message Type
- Handoff Date

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria.

Select a record and click on 'View Message' button to view the message received from Network.

### **2.2.13.3 View Message**

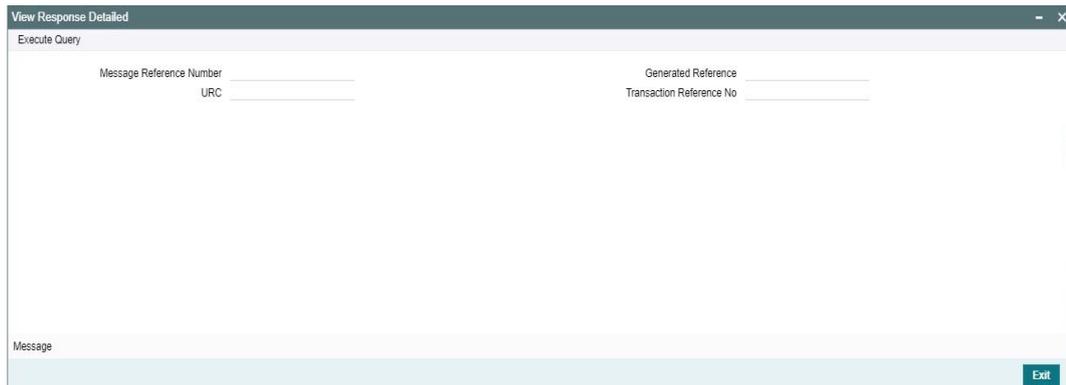

You can view the uploaded messages received from network by clicking the 'View Message' action button, present in the bottom of the screen. The uploaded message gets displayed.

You need to select a record and click on 'View Message' to view the message details

#### 2.2.13.4 **View Response**

You can view the responses received from network by clicking the 'View Response' action button, present in the bottom of the screen. The uploaded message gets displayed.

#### 2.2.14 **SWIFT gpi Fedwire Transaction Processing Changes**

##### **Outbound (Pass-Thru)/Inbound**

During Fedwire transaction processing, the validations mentioned under Outbound (Pass-Thru)/Inbound section (4.2.1) of Cross Border Manual gets validated

In addition to above validation, system checks whether UETR is not null (mapped to Tag 3620) (Element 03)) for the incoming/pass-thru payment

- If UETR is not 'NULL', system generates MT199 gCCT confirmation as per the conditions already mentioned
- If UETR is 'NULL' then system does not generates MT199 gCCT confirmation

**Note**

- If system finds that processing branch doesn't have any BIC linked to it at all (STDCRB RN) then it sets 'gpi Agent' to 'Not Applicable' and it should not generate MT199 gCCT confirmation

**2.2.14.1 MT199 gCCT Confirmation Message Generation Matrix**

- System generates gCCT MT199 confirmation message for final credit confirmation (//ACCC), Intermediate status confirmation (//ACSP/G000/G001/G002) and for final reject status (//RJCT) as below when the UETR is not 'NULL' and gpi\_agent = 'Yes or No'

Transaction Type	Processing status	Message generated	Status Code/ Reason Code	Date & Time details	Payment Processing Status [PXDGP IST]	In Progress Codes [PXDGP IST]
Inbound Fedwire transaction	Processed & Credited to beneficiary's account	On accounting completion	ACCC	Credit value date & current time	PROCESSED	NA
	Pending by EOD in process exceptions queues (including Warehouse queue)	By EOD, transaction is pending in any exception queue	ACSP/G002	Message generation Date & time	INPROGRESS	PENDING CREDIT
	Cancelled from any exception queue	On successful cancellation action	RJCT	Message generation Date & time	REJECTED	NA

•

•

Transaction Type	Processing status	Message generated	Status Code/ Reason Code	Date & Time details	Payment Processing Status [PXDGP IST]	In Progress Codes [PXDGP IST]
------------------	-------------------	-------------------	--------------------------	---------------------	---------------------------------------	-------------------------------

Outbound Pass through Fedwire transaction	Payment Processed & forwarded as a gpi message to a gpi agent	On successful dispatch of Fedwire message	ACSP/G000*	Message generation Date & time	NA	NA
	Outbound payment Processed & forwarded as a gpi message to a non-gpi agent	On successful dispatch of Fedwire message	ACSP/G001*	Message generation Date & time	NA	NA
	Pending by EOD in process exceptions queues (including Warehouse queue)	By EOD, transaction is pending in any exception queue	ACSP/G002	Message generation Date & time	INPROGRESS	PENDING CREDIT
	Cancelled from any exception queue	On successful cancellation action	RJCT	Message generation Date & time	REJECTED	NA

•

When the confirmation status is ACSP/G000, the presence of the field 'Forwarded To Agent' (Line 3 of Field 79) is mandatory and when confirmation status is ACSP/G001 (as next party in transaction may not have a BIC code), the field presence is optional

//GPIBBEBBXXX

//GPIABICXXXX/GPIBBICXXXX

## 2.3 Fedwire Draw-downs

- Fedwire Drawdown requests and payments are also known as "Reverse Wires".

- A Fedwire Drawdown or Reverse wire is typically a B2B transaction which involves the corporate bank account holder authorizing another party, such as a vendor, to withdraw funds from their account via a wire transfer. It is called a Reverse wire because it is initiated by the recipient of the funds, rather than the sender. The applicable Business Function Code (BFC) is “DRC” i.e. Customer or Corporate Drawdown Request.
- The payment for a Drawdown request, called Drawdown payment, is similar to any other Fedwire payment (say, like CTR or BTR BFC) and settled by Fedwire Funds Service in real time and sent to the beneficiary mentioned in the Drawdown request.
- The benefit to the payer of Drawdown payment is that once they have authorized their bank in writing to respond to future draw-down requests, no work is required on the payer’s part to execute a payment.
- Drawdown requests are of particular use where the payment is high-risk (or time critical), on a recurring basis, and for a variable amount. Typical scenarios for initiating Drawdown requests include high-volume, variable amount purchases of perishable inventory, and Payroll services.
- If the inbound Drawdown request matches with the agreement and all the validations are success then the Drawdown request gets automatically processed by booking an outbound Fedwire payment transaction with BFC as “DRW”, sub-type code as “32” and Type code as “10”. Previous message identifier of Outbound drawdown payment gets populated with IMAD of inbound Drawdown request.

This section contains the following sub-sections:

- Fedwire Drawdown Authorization Agreement Detailed
- Fedwire Drawdown Request Detailed
- Fedwire Drawdown Request Manual Match Detailed
- Fedwire Drawdown Approval Queue
- Fedwire Drawdown View

### **2.3.1 Fedwire Drawdown Authorization Agreement**

This Maintenance captures the details of Drawdown Authorization Agreement between the Payer (Originator) of a Drawdown payment and their bank i.e. ODFI (same as Sender DI) of the Drawdown payment.

This agreement maintenance captures transaction attributes necessary for validating an incoming Drawdown request and for the ODFI to process the outgoing Drawdown payment.

You can invoke the “Fedwire Drawdown Authorization Agreement Detailed” screen by typing ‘PWDRAGMT’ in the field at the top right corner of the Application toolbar and clicking on the adjoining arrow button.

Specify the following fields:

**Host Code**

This is auto-populated once you click on New button.

**Network Code**

This is auto-populated once you click on New button

**Customer No**

Select the Customer Number from the LOV.

**Debtor Details**

**Debtor Account Number**

Select the Account number of the customer to be used in Drawdown payment from the LOV.

**Debit Account Currency**

This is auto-populated once you select the Account Number.

**Debit Account Branch**

This is auto-populated once you select the Account Number.

**Account Name**

This is auto-populated once you select the Account Number.

**:4200:Beneficiary**

**Id Code**

This field indicates the ID code of the identifier of the Beneficiary. Select one of the options such as B, C, F, U, 1, 2, 3, 4, 5 or 9.

**Beneficiary ID**

Specify the identification of beneficiary as per the selected ID code option.

**Name**

Specify the name of the beneficiary.

**Address**

Specify the address of the beneficiary.

**Beneficiary Account**

Specify Account number of the beneficiary.

**Authorization Details****Sequence Type**

This field indicates if only one or multiple Drawdown requests are expected. The drop down option is One Off.

**Drawdown Amount Limit**

Specify the maximum limit on the USD amount of any Drawdown request from the beneficiary.

**Drawdown Amount Currency**

This is auto-populated once you click on New button.

**Effective Date**

This is auto-populated once you click on New button. Specifies the date from which this Authorization would be effective. The date may be changed to a future date also.

**Expiry Date**

Specifies the End date of this authorization after which it would not be valid. This is an optional field. If not specified, then it means the Authorization agreement is perpetual.

**Beneficiary FI Details****Beneficiary FI ABA Number**

Select the ABA number of the Beneficiary's bank which would also be the Receiver DI of the outgoing Drawdown payment message from the LOV.

**Beneficiary FI Name**

Specify the Beneficiary FI Name.

**Beneficiary FI Address**

Specify the Beneficiary FI Address details.

**Beneficiary FI Phone Number**

Specify the Beneficiary FI Phone Number.

**Beneficiary FI Email Address**

Specify the Beneficiary FI Email Address

### 2.3.1.1 Fedwire Drawdown Authorization Agreement Summary

You can invoke the “Fedwire Drawdown Authorization Agreement Summary” screen by typing ‘PWSRAGMT’ in the field at the top right corner of the Application toolbar and clicking on the adjoining arrow button.

The screenshot displays the 'Fedwire Drawdown Authorization Agreement Summary' application window. At the top, there is a search bar with 'Advanced Search' selected, and buttons for 'Reset' and 'Clear All'. Below the search bar, there are search filters for 'Case Sensitive', 'Authorization Status', 'Record Status', 'Host Code', 'Fedwire Network Code', 'Customer No', and 'Debtor Account Number'. A table below shows columns for 'Authorization Status', 'Record Status', 'Host Code', 'Fedwire Network Code', 'Customer No', 'Debtor Account Number', 'Debit Account Currency', 'Debtor Account Branch', and 'Account Name'. The table is currently empty. An 'Exit' button is located in the bottom right corner.

You can search for the records using one or more of the following parameters:

- Authorization Status
- Record Status
- Host Code
- Network Code
- Customer No
- Debtor Account Number

Once you have specified the search parameters, click ‘Search’ button. The system displays the records that match the search criteria.

Double click a record or select a record and click on ‘Details’ button to view the detailed maintenance screen.

### 2.3.2 Fedwire Drawdown Request Detailed

This screen allows only Corporate Drawdown requests to be initiated for receiving Fedwire payment from a corporate account maintained with another bank (who would be the receiver of Drawdown request).

You can invoke the “Fedwire Drawdown Request Detailed” screen by typing ‘PWDOTDRC’ in the field at the top right corner of the Application toolbar and clicking on the adjoining arrow button.

Specify the following fields:

### Transaction Branch

The Transaction Branch code is populated on the click of New button.

### Host Code

The Host Code is populated on the click of New button.

### Source Code

The Source Code is populated on the click of New button. I fixed and defaulted to MANL.

### Network Code

Specify the Network Code from the LOV.

### :3600:Business Function Code

This is defaulted and fixed to "DRC" i.e. Customer or Corporate Drawdown Request.

### :1510:Type Code

This is defaulted and fixed to "10" (Funds Transfer).

### Sub Type Code

This is defaulted and fixed to "31" (Request for Credit (Drawdown)).

### Transaction Reference No

The Transaction Reference Number is generated and populated.

### User Reference Number

Specify the User Reference Number.

### Source Reference Number

Specify the Source Reference Number.

### Template Id

Specify the Template ID to identify this template if this Save as Template flag is selected.

### Save as Template

Click this flag to indicate if this Drawdown request can be saved as a Template.

## 2.3.2.1 Main Tab

Click the New button in the Fedwire Drawdown Request Detailed screen. The fields in the Main Tab get enabled.

The screenshot shows a web application interface for a Fedwire Drawdown Request. The 'Main' tab is active, and the form is divided into three main sections: Beneficiary Account, Payment Details, and Receiver. The Beneficiary Account section includes fields for Beneficiary Account, Currency, Id Code (D), Beneficiary ID, Name, and Address. The Payment Details section includes Booking Date, Instruction Date, Activation Date, Drawdown Request Currency (USD), Drawdown Request Amount, Customer No, Customer Service Model, Remarks, and Message Date. The Receiver section includes Receiver ABA Number, Receiver Short Name, and Sender's Reference. At the bottom, there are fields for Maker ID, Checker ID, Authorization Status, Release Time, Checker Date Stamp, and an Exit button.

Specify the following fields:

### **:4200:Beneficiary**

#### **Beneficiary Account**

Account number of the Beneficiary can be input or searched and selected from LOV that is filtered on all valid Normal accounts in the system.

#### **Beneficiary Account Currency**

Currency of the selected account is populated.

#### **Id Code**

This field indicates the ID code of the identifier of the Beneficiary that is included in the Fedwire Drawdown message. This field is defaulted and fixed to option "D" (Demand Deposit Account (DDA) Number).

#### **Beneficiary ID**

Specify the Beneficiary Id.

#### **Name**

This field is defaulted with the Account name of the Beneficiary account number, on Save.

#### **Address**

This field is defaulted with the address of the Customer of the selected Beneficiary account number on the click on Save button. Alternatively, you can input the address before saving the transaction.

### **Payment Details**

#### **Booking Date**

This is defaulted as application server date.

#### **Instruction Date**

Specify the Instruction (Value) date of the payment, as instructed by the customer. This can be the current date or any date in the future. Back valued payments are not allowed.

**Activation Date**

Specify the date on which the transaction is processed. This date will be same as the Revised Instruction date.

**Drawdown Request Currency**

This is defaulted and fixed to USD.

**Drawdown Request Amount**

Specify the Drawdown amount requested. This amount is populated in tag {2000} of outgoing Drawdown request.

**Customer No**

The system indicates the customer number of the Beneficiary of the Drawdown request.

**Customer Service Model**

Specify the Service model derived for the customer.

**Remarks**

Specify remarks for the outgoing Drawdown request.

**Message Date**

This date is derived and populated as part of processing the transaction. This would be same as the Revised Instruction date.

**:4400:Account Debited in DrawDown****ID Code**

This field indicates the ID code of the identifier of the Payer of the Drawdown payment. This field is defaulted and fixed to option "D" (Demand Deposit Account (DDA) Number).

**Identifier**

Specify the Payer's account number.

**Name**

Specify the account name of the Payer's account number.

**Address**

Specify the address of the Payer's account. 3 lines of Address details each containing up to 35 characters can be specified.

**Receiver****Receiver ABA Number**

Specify the ABA number of the Receiver DI or search and select from the LOV filtered on ABA numbers from Fedwire directory maintenance.

**Receiver Short Name**

This is populated upon the selection of the ABA number from the 'Telegraphic Name' field of the Fedwire directory.

**:3200:Sender's Reference**

This field is populated with Transaction Reference number generated for this Drawdown request when it is manually initiated.

**2.3.2.2 FI Information Tab**

Click the FI Information Tab in the Fedwire Drawdown Request Detailed screen. The fields in the Main Tab get enabled.

Specify the following fields:

### **:6100:Receiver FI Information**

This is a free format field that can be used to specify any information specifically meant for the Receiver of the Drawdown request. These details can be specified in 1 line of up to 30 characters, plus up to 5 lines of 33 characters each.

### **:6110:Drawdown Debit Account Advice Information**

#### **Advice Code**

Select one of the values like LTR, PHN, TLX or WRE.

#### **Additional Information**

Specify any additional info about the Advice in 1 line of up to 26 characters, plus up to 5 lines of 33 characters each.

### **:6410:Beneficiary Advice Information**

#### **Advice Code**

Select one of the values like LTR, PHN, TLX, HLD or WRE.

#### **Additional Information**

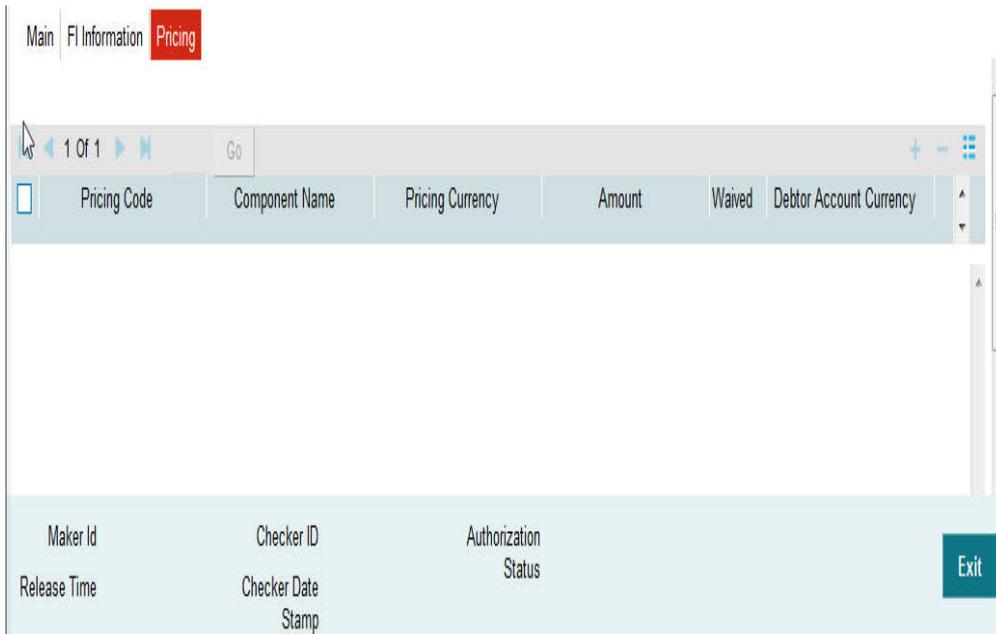

Specify any additional info about the Advice in 1 line of up to 26 characters, plus up to 5 lines of 33 characters each.

### **:6500:FI to FI Information**

This is a free format field that can be used to input any additional info that could not be accommodated in {6100}.

### **2.3.2.3 Pricing Tab**

This tab displays the pricing details of the charges computed by system based on the transaction attributes in the Main tab. These details are populated on clicking Enrich button in the Main tab before saving the transaction, or as part of processing on saving the transaction without clicking Enrich.

The below mentioned attributes will be available in the Pricing tab:

**Pricing Code**

The system displays the Pricing Code.

**Component Name**

The system displays the Name of the pricing component applicable for the transaction for which charges are computed.

**Pricing Currency**

The system displays the Currency in which the charge amount is calculated for the Pricing component.

**Amount**

The system displays the charge amount calculated for each pricing component.

**Waived**

This field if checked indicates that the charge is waived for the pricing component.

**Debtor Account Currency**

The system displays the Debtor Account Currency.

### 2.3.2.4 Fedwire Drawdown Request Summary

You can invoke the “Fedwire Drawdown Request Summary” screen by typing ‘PWSOTDRC’ in the field at the top right corner of the Application toolbar and clicking on the adjoining arrow button.

The screenshot shows the 'Fedwire Drawdown Request Summary' application window. It includes a search bar with 'Search', 'Advanced Search', 'Reset', and 'Clear All' buttons. Below the search bar, there is a 'Case Sensitive' checkbox. The main area contains several input fields for search criteria: Transaction Reference No, Booking Date (YYYYMMDD), Instruction Date (YYYYMMDD), Activation Date (YYYYMMDD), Network Code, User Reference Number, Customer No, Receiver ABA Number, Customer Service Model, and Source Reference Number. Each date field has a calendar icon, and each alphanumeric field has a magnifying glass icon. Below the input fields, there is a table with columns: Transaction Reference No, Booking Date, Instruction Date, Activation Date, Network Code, User Reference Number, Customer No, and Customi. The table currently shows 1 record. At the bottom right, there is an 'Exit' button.

You can search for the records using one or more of the following parameters:

- Transaction Reference No
- Instruction Date
- Network Code
- Customer No
- Receiver ABA Number
- Booking Date
- Activation Date
- User Reference Number
- Customer Service Model
- Source Reference Number

Once you have specified the search parameters, click ‘Search’ button. The system displays the records that match the search criteria.

Double click a record or select a record and click on ‘Details’ button to view the detailed maintenance screen.

## 2.3.3 Fedwire Drawdown View

You can invoke the 'Fedwire Drawdown View' screen by typing 'PWDDDRVW' in the field at the top right corner of the application toolbar and clicking the adjoining arrow button. Click new button on the Application toolbar.

- From this screen, click Enter Query. The Transaction Reference field gets enabled which opens an LOV screen.
- Click the Fetch button and select the required value.
- Along with the transaction details in the Main and Pricing tabs you can also view the Status details for the following:
  - External System Status
  - Transaction Status

### View Queue

This button launches the corresponding Queue screen, where the transaction is currently held. The Queue screen will be launched in query mode, listing this transaction alone.

- Click Execute Query to populate the details of the transaction in the Fedwire Drawdown View screen.

For more details on Main, Pricing tabs refer to 'PWDOTDRC' screen details above.

### 2.3.3.1 View Queue Action Log

You can view all the queue actions for the respective transaction initiated. You can invoke this screen by clicking the 'View Queue Action' button in View screen, where the Transaction Reference Number is auto populated and related details are displayed.:

View Queue Action Log

Enter Query

Transaction Reference Number  Network Code

1 Of 1 Go

<input type="checkbox"/>	Transaction Reference Number	Action	Remarks	Queue Code	Authorization Status	Maker Id	Maker Date Stamp

View Request Message View Response Message Exit

For more details on the fields and screen, refer to section 2.2.2.2

### 2.3.3.2 UDF Tab

You can invoke this screen by clicking 'UDF' tab in the screen.

Fields

Fields

1 Of 1 Go

<input type="checkbox"/>	Field Label	Field Value

Ok Exit

### 2.3.3.3 MIS Tab

You can invoke this screen by clicking 'MIS' tab in the screen.

The screenshot shows a software window titled "MIS Details". At the top, there is a "Transaction Reference Number \*" field and a "MIS Group" dropdown menu with a "Default" button. Below this, the screen is divided into two columns: "Transaction MIS" on the left and "Composite MIS" on the right. Each column contains a table with several empty rows. At the bottom right of the window, there are "OK" and "Exit" buttons.

### 2.3.3.4 All Messages

Click the "All Messages" link in the View screen to invoke this sub-screen. For more details on fields, refer to section 2.2.7.5 and 2.2.7.6.

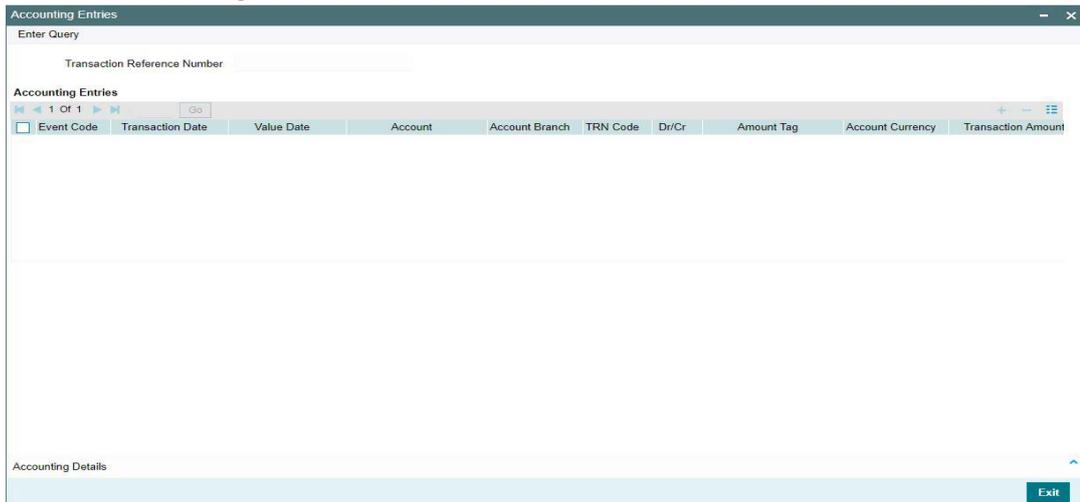

The screenshot shows a software window titled "All Messages". It has an "Execute Query" section with a "Contract Reference" field. Below this is a table with the following columns: "DCN \*", "Message Type", "SWIFT Message Type", "Direction", "Value Date", "Message Status", and "Test Statu". The table shows "1 Of 1" records. Below the table is a "Message" button. At the bottom right of the window, there is a "Cancel" button.

### 2.3.3.5 Accounting Entries

During payment transaction processing, the accounting entries whose for which hand -off status is pending are posted to a JMS Queue. Once these entries are posted in the queue, the status is updated as handed off.

If the Accounting system and the ECA system are not the same, an update is sent to the ECA system as well while doing the accounting handoff. Any amount block in the customer account done during External credit approval can be released on receiving accounting update.

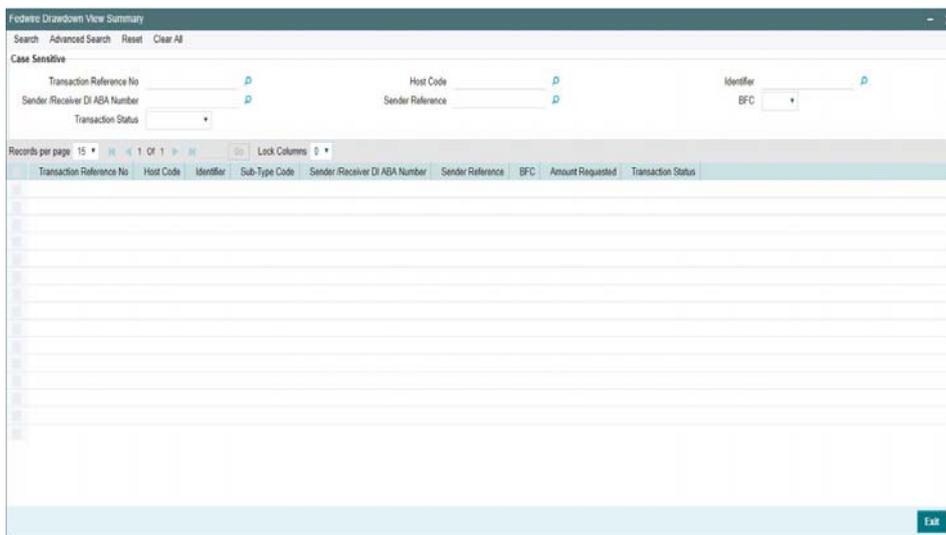

Click the “Accounting Entries” tab in the view screen to invoke the screen. For details on the

fields refer to section 2.2.7.7

### 2.3.3.6 Fedwire Drawdown View Summary

You can invoke the ‘Fedwire Drawdown View Summary’ screen by typing ‘PWSDDRVW’ in the field at the top right corner of the application toolbar and clicking the adjoining arrow button.

You can search using one or more of the following parameters:

- Transaction Reference Number
- Host Code
- Identifier
- Sender/Receiver Di ABA Number
- Sender Reference
- BFC
- Transaction Status

Once you have specified the search parameters, click ‘Search’ button. The system displays the records that match the search criteria.

Double click a record or select a record and click on 'Details' button to view the detailed maintenance screen.

### 2.3.4 Fedwire Drawdown Request Manual Match

If the system cannot match a Processed Drawdown payment to Drawdown request sent earlier then you can manually match both from a New Manual match screen, called "Fedwire Drawdown Request Manual Match".

You can view the details of a Fedwire Drawdown Request Manual Match Detailed in the "Fedwire Drawdown Request Manual Match Detailed" Screen. You can invoke the "Fedwire Drawdown Request Manual Match Detailed" screen by typing 'PWDDDMAT' in the field at the top right corner of the Application toolbar and clicking on the adjoining arrow button.

The screenshot shows a software application window titled "Fedwire Drawdown Request Manual Match Detailed". The window has a menu bar with "New" and "Enter Query" options. Below the menu bar, there are three input fields: "Host Code \*" (with a red asterisk), "Drawdown Request Reference \*" (with a red asterisk), and "Drawdown Payment Reference". At the bottom of the window, there is a status bar with fields for "Maker ID", "Checker ID", "Authorization Status", "Maker Date Stamp", and "Checker Date Stamp", along with an "Exit" button.

Specify the following fields:

#### **Host Code**

This is auto-populated once you click on New button.

#### **Drawdown Request Reference**

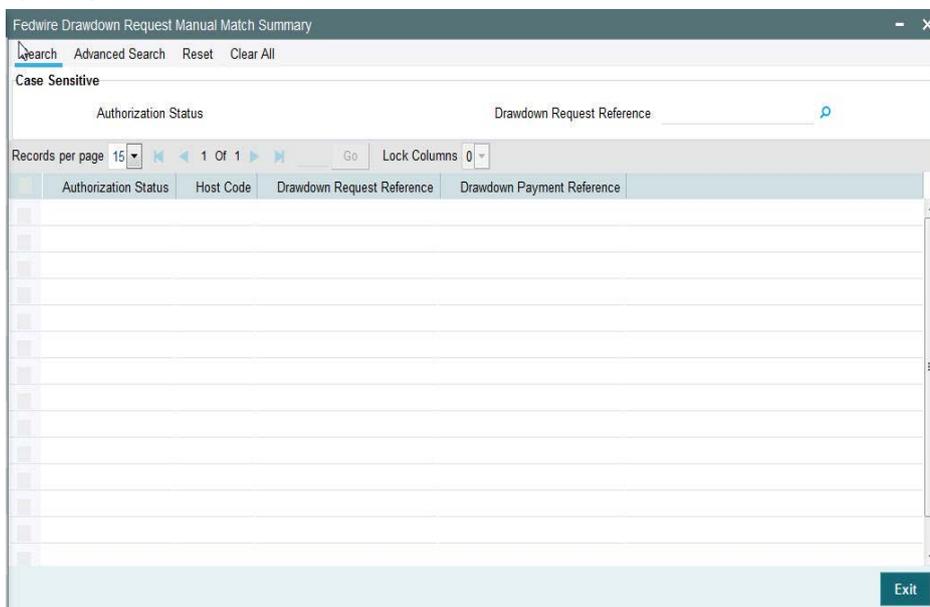

Select the Transaction Reference of Drawdown request. The LOV is filtered on transaction ref. numbers of only those Drawdown requests that are not linked with any Drawdown payment.

#### **Drawdown Payment Reference**

Select the Transaction Reference of Drawdown payment transaction. The LOV is filtered on transaction ref. numbers. of only those Drawdown payments that are not linked with any Drawdown requests.

### 2.3.4.1 Fedwire Drawdown Request Manual Match Summary

You can invoke the “Fedwire Drawdown Request Manual Match Summary” screen by typing ‘PWSDDMAT’ in the field at the top right corner of the Application toolbar and clicking on the adjoining arrow button.

You can search for the records using one or more of the following parameters:

- Authorization Status
- Drawdown Request Reference

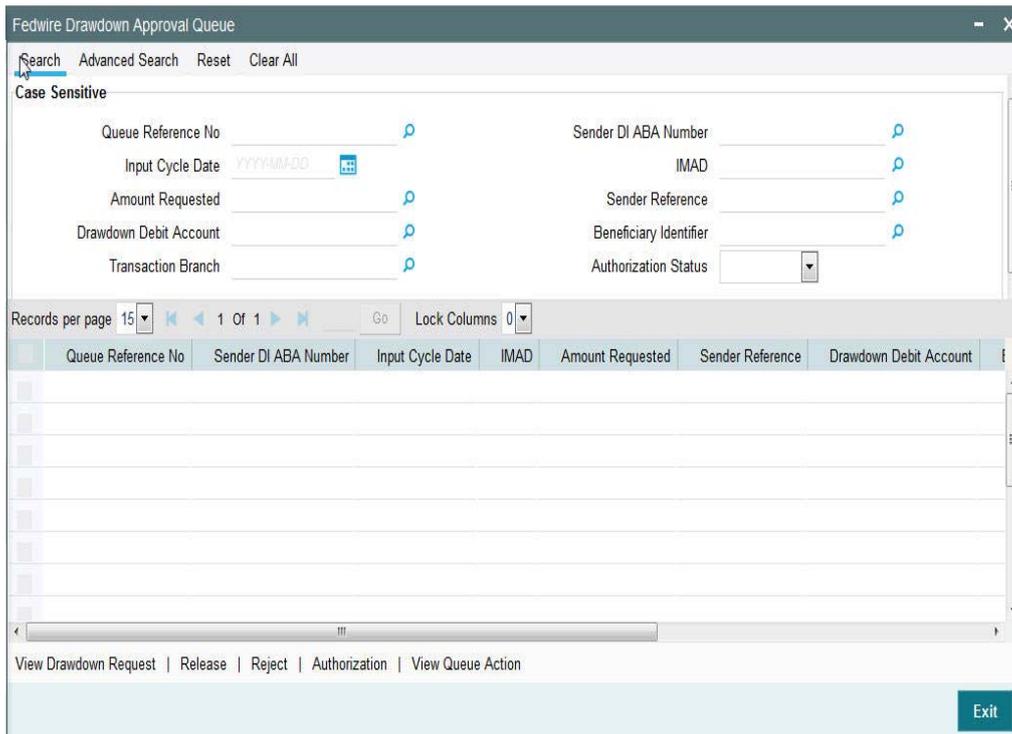

Once you have specified the search parameters, click ‘Search’ button. The system displays the records that match the search criteria.

Double click a record or select a record and click on ‘Details’ button to view the detailed maintenance screen.

### 2.3.5 Fedwire Drawdown Approval Queue

In case of failure of non-critical agreement validations, the Drawdown request is moved to a New exception queue called “Fedwire Drawdown Approval” queue for decision by Operational users.

You can invoke the 'Fedwire Drawdown Approval Queue' screen by typing 'PQSFWDDQ' in the field at the top right corner of the application toolbar and clicking the adjoining arrow button. Click new button on the Application toolbar.

You can search using one or more of the following parameters:

- Queue Reference No
- Input Cycle Date
- Amount Requested
- Drawdown Debit Account
- Transaction Branch
- Sender DI ABA Number
- IMAD
- Sender Reference
- Beneficiary Identifier
- Authorization Status

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria:

The following actions can be performed for transactions in Business Override queue

Actions	Functions
View Drawdown Request	You can view the selected transaction details.
Release	The system processes the Drawdown request

Reject	The system generates the Drawdown Refusal message. While rejecting the Drawdown request, it is mandatory to input Remarks for specifying reason for rejection. This would be included in the generated Drawdown Refusal message. The Remarks text would be allowed up to 195 characters.
Authorization	You can manually move the transaction for processing on next working day.
View Queue Actions	Displays all queue activities performed for the selected transaction. This action allows you to view key details of the selected Drawdown request.
View Transaction	You can view the selected transaction details.

## 2.4 **Fedwire gpi processing**

This section contains all the maintenances pertaining to gpi and required for gpi. Below are the existing gpi Maintenances which are applicable for the payment types - Fedwire.

Following are the required maintenances for gpi:

- SWIFT gpi Static Preferences (PXDGPST)
- SWIFT gpi Host Preferences (PXDGPIPF)
- SWIFT gpi Directory (PMDGPIDR)

For more details on the above maintenances refer to CrossBorder\_Payments User Guide section(4.1)

Following points need to be considered during Fedwire gpi processing

1. RMA/RMA+ Validation for Tracker should not be performed for exchange of gCCT/gCOV confirmations
2. In Branch Core Parameters screen (STDCRBRN), default BIC value is gpi Participant ID(11-Character BIC) of the processing branch
3. gpi Confirmations generation should not happen if the Fedwire transaction status is 'Seized'

### 2.4.1 **Outbound gCCT & gCOV processing**

#### 2.4.1.1 **SWIFT STP Changes**

Following changes are done to the Outbound Fedwire payment transaction creation processing from an Incoming SWIFT message,

- For Outbound Fedwire payment ,UETR field populates with the Tag 121 value of incoming SWIFT MT 103/ MT 202COV / MT 205 COV messages
- For the incoming SWIFT MT 103 / MT 202 COV / MT 205 COV message whose Tag 111 value is '001', the 'Incoming gpi flag' gets automatically checked else unchecked

### 2.4.1.2 Outbound gCCT Processing

#### **gpi enabled Transaction:**

System performs below validation when the 'Business Function Code' is selected as 'CTP', payment types and Type & Subtype(combined) value is '1000' (Funds Transfer/ Basic Funds Transfer ) (or) '1600' (Settlement Transfer/Basic Funds Transfer) for the Fedwire Outbound transactions

- Checks if 'gpi Processing Enabled' is set to 'Y' at host level (PXDGPIPF)
- If the flag is set to 'Y', then system checks Sender BIC (Processing branch BIC – Default BIC :11 Character – linked in Branch Core Parameters screen (STDCRBRN)) and Transfer Currency combination is present in SWIFT gpi Directory (PMDGPIDR)
  - If 'Yes', then the 'gpi enabled' flag of the transaction updates to 'Yes'
  - If 'No', then the 'gpi enabled' flag updates to 'No'

#### **Fedwire message generation:**

- At the transaction level, if the 'gpi Enabled' flag is 'Yes' and if the charging method is BEN or SHA, then the tags {3620} and {3700} populates as below

Tag	Tag Name	Element Name	Format	Population Logic
3620	Payment Notification	Element 01 – Notification Indicator	1 Character	Value '3' hardcoded gets populated
3620	Payment Notification	Element 03 – Contact Name	140 Characters	UETR value gets populated
3700	Charges	Senders Charges	15 Characters	Sender Charges information received in the Inbound SWIFT message gets populated.  If there are no sender charges applicable, then populate this field with a value "USD0,00"

**System populates the tags {3620} and {3700} values as below when the charging method is OUR**

Tag	Tag Name	Element Name	Format	Population Logic
3620	Payment Notification	Element 01 – Notification Indicator	1 Character	Value '4' hardcoded gets populated
3620	Payment Notification	Element 03 – Contact Name	140 Characters	UETR value gets populated
3620	Payment Notification	Element 06 – Contact Fax Number	35 Characters	Charges information if applicable for the transaction gets populated

Tag {3700} should not get populated when charging method is OUR

---

**Note**

For 'gpi Enabled' Outbound Fedwire transactions, Network cut-off time validation logic remains same as existing

---

### 2.4.1.3 **Outbound gCOV Processing**

**gpi enabled Transaction:**

System performs below validation when the 'Business Function Code' is selected as 'CTP', Local Instrument value [{3610}] is 'COVS' and Type & Subtype(combined) value is '1000' (or) '1600'

- Checks if 'gpi Processing Enabled' is set to 'Y' at host level (PXDGPIPF)
- If the flag is set to 'Y', then system checks Sender BIC (Processing branch BIC – Default BIC :11 Character – linked in Branch Core Parameters screen (STDCRBRN)) and Transfer Currency combination is present in SWIFT gpi Directory (PMDGPIDR)
  - If 'Yes', then the 'gpi enabled' flag of the transaction updates to 'Yes'
  - If 'No', then the 'gpi enabled' flag updates to 'No'

**Fedwire message generation:**

At the transaction level, if the 'gpi Enabled' flag is 'Yes', then the tag {3620} populates as below

§Tag {3620} Element 01 Payment Notification Indicator populates with a value '3'

§Tag{3620} Element 03 Contact Name populates with UETR value

Tag	Tag Name	Element Name	Format	Population logic
-----	----------	--------------	--------	------------------

3620	Payment Notification	Element 01-Notification Indicator	1 Character	Value '4' hardcoded gets populated
3620	Payment Notification	Element 03-Contact Name	140 Characters	UETR value gets populated

---

**Note**

For 'gpi Enabled' Outbound Fedwire transactions, Network cut-off time validation logic remains same as existing

---

## **2.4.2 Inbound gCCT &GCOV Processing**

Following changes are done to the Inbound Fedwire payment transaction creation processing from an Inbound Fedwire message to populate gpi related fields

### **2.4.2.1 Incoming gpi:**

This field updates to 'Y' once the below conditions met

In Customer Transfer (or) Cover Transfer message , Tag {3600} value is 'CTP' / Tag {3610} is not present (or ) Tag {3610} is present and value is 'CVOS' in Tag {3620} Payment notification , the Element 01 Notification Indicator contains either a value either '3' or '4'

### **2.4.2.2 UETR Population:**

The Tag {3620} 'Payment notification - Element 03' receives the UETR value and populates the same in the Inbound Fedwire transaction UETR field.

The above populated value gets converted to lower case

### **2.4.2.3 gpi Enabled flag:**

The 'gpi Enabled' field sets to 'Y' once the below conditions are satisfied for the Inbound Customer Transfer ('CTP') or Cover Transfer ('CTP COVS') Fedwire payment

Host level 'gpi Processing Enabled' flag value is 'Y' (PXDGPIPF)

SWIFT gpi Directory (PMDGPIDR) has the maintenance of Processing Branch BIC (Default BIC: 11 Character which is linked in Branch Core Parameters screen (STDCRBRN)) and Transfer Currency values

The Tag {3620} 'Payment notification – Element 01' related 'Notification Indicator' field contains either a value '3' or '4'

The 'gpi Enabled' field sets to 'Confirm' once the below conditions are satisfied for the Inbound Customer Transfer ('CTP') or Cover Transfer ('CTP COVS') Fedwire payment

Host level 'gpi Processing Enabled' flag value is 'Y' (PXDGPIPF)

SWIFT gpi Directory (PMDGPIDR) has the Processing Branch BIC (Default BIC : 11 Character – linked in Branch Core Parameters screen (STDCRBRN) value should be gpi Customer which is not the gpi Agent for the Transfer Currency

The Tag {3620} 'Payment notification – Element 01' related 'Notification Indicator' field should have either a value '3' or '4'

## 2.4.3 **Outbound Fedwire Payments - gpi Processing:**

### 2.4.3.1 **Outbound gpi Confirmations:**

For the Outbound Pass-through Fedwire gpi payments, if the transaction level 'gpi Enabled' flag set to 'Yes' then system generates SWIFT gpi Confirmations (MT 199 for gCCT/MT 299 for gCOV) and populates the Confirmation messages fields as listed below

- Receiver field value gets updated with the value of Tracker BIC maintained in the gpi Host preferences maintenance (PXDGPIPF)
- Field 111 of Block 3 populates with '001' ( Service type identifier for gCCT/gCOV)
- Field 121 of Block 3 will be populated with UETR of the transaction
- Field 20 populates with the Fedwire Transaction Reference
- Field 21 populates with Field 20 of MT 103 for gCCT confirmation and with Field 20 of MT 202 COV/MT 205 COV for gCOV confirmation message
- Following details gets populated for Field 79 of the gCCT/gCOV confirmation messages
  - Line 1 populates with date & time along with UTC offset
  - Line 2 populates with confirmation statuses code and reason code depending on the transaction processing status [Refer table]

Transaction Type	Processing status	Message generated	Status Code / Reason Code	Date & Time details	Payment Processing Status [PXDGPIS]	In Progress Codes [PXDGPIS]
------------------	-------------------	-------------------	---------------------------	---------------------	-------------------------------------	-----------------------------

Outbound Pass through Fedwire transaction	Payment Processed & forwarded as a gpi message to a gpi agent	On successful dispatch of Fedwire message	ACSP/G000	Message generation Date & time	NA	NA
	Outbound payment Processed & forwarded as a gpi message to a non-gpi agent	On successful dispatch of Fedwire message	ACSP/G001	Message generation Date & time	NA	NA
	Pending by EOD in process exceptions queues(includ ing Warehouse queue)	By EOD, transaction is pending in any exception queue	ACSP/G002	Message generation Date & time	IN PROGRESS	PENDING CREDIT
	Cancelled from any exception queue	On successful cancellation action	RJCT	Message generation Date & time	REJECTED	NA

- Line 3 populates with Branch default BIC followed by Intermediary FI BIC if available (or) by Beneficiary FI BIC.
- Line 4 populates with settlement amount [Final amount deducting charges if any]
- For gCCT confirmation message,
  - Line 5 : EXCH, Original Currency, Transfer Currency & Exchange Rate should not be populated
  - Charge deduction : If there is no charge then system populates Zero charge amount else charge amount details gets populated

---

**Note**

- RMA/RMA+ validation should not perform on the Tracker BIC
  - At EOD, confirmation message should get generated by the auto job 'PQDPRQUE'
-

### 2.4.3.2 Inbound gpi Confirmations:

- System links the Incoming gpi confirmation messages (gCCT/gCOV) with the original Outbound Fedwire transaction. From Block 3, Matching criteria happens as follows
  - 121: UETR of Outbound Fedwire Transaction = 121: UETR of gpi confirmation
- Once the match is successful, system parses the message and the same should be stored to display the confirmations at the Outbound transaction view screen (PWDOVIEW)

### 2.4.4 Inbound Fedwire Payments - gpi Processing:

#### 2.4.4.1 Outbound gpi Confirmations:

For the Inbound Fedwire gpi payments, if the transaction level 'gpi Enabled' flag set to 'Yes' then system generates SWIFT gpi Confirmations (MT 199 for gCCT/MT 299 for gCOV) and populates the Confirmation messages fields as listed below

- Receiver field value gets updated with the value of Tracker BIC maintained in the gpi Host preferences maintenance (PXDGPIPF)
- Field 111 of Block 3 populates with '001' ( Service type identifier for gCCT/gCOV)
- Field 121 of Block 3 will be populated with UETR of the transaction
- Field 20 populates with the Fedwire Transaction Reference
- If the Inbound Fedwire message has Sender's reference value then only the system populates the Field 21 with the Sender's Reference value received in Tag {3320} else Field 21 should not get populated

Following details gets populated for Field 79 of the gCCT/gCOV confirmation messages

- Line 1 populates with date & time [Refer table below] along with UTC offset
- Line 2 populates with confirmation statuses code and reason code depending on the transaction processing status [Refer table]

Transaction Type	Processing status	Message generated	Status Code / Reason Code	Date & Time details	Payment Processing Status [PXDGPST]	In Progress Codes [PXDGPST]
Inbound Fedwire transaction	Processed & credited to beneficiary's account	On accounting completion	ACSC	Credit value date & current time	PROCESSED	NA
	Pending by EOD in process exceptions queues (including Warehouse queue)	By EOD, transaction is pending in any exception queue	ACSP/ G002	Message generation Date & time	IN PROGRESS	PENDING CREDIT

	Cancelled from any exception queue	On successful cancellation action	RJCT	Message generation Date & time	REJECTED	NA
--	------------------------------------	-----------------------------------	------	--------------------------------	----------	----

- Line 3 populates with Branch default BIC
- Line 4 populates with settlement amount [Final amount deducting charges if any]
- For gCCT confirmation message,
  - Line 5 : EXCH, Original Currency, Transfer Currency & Exchange Rate should not be populated
  - Charge deduction : If there is no charge then system populates Zero charge amount else charge amount details gets populated

---

**Note**

- RMA/RMA+ validation should not perform on the Tracker BIC
  - At EOD, confirmation message should get generated by the auto job 'PQDPRQUE'
- 

**2.4.4.2 Inbound gpi Confirmations:**

- System links the Incoming gpi confirmation messages (gCOV) with the Inbound Fedwire transaction when it can't find any matching Outbound Fedwire transaction. From Block 3, Matching criteria happens as follows
  - 121: UETR of Inbound Fedwire Transaction = 121: UETR of gpi confirmation

Once the match is successful, system parses the message and the same should be stored to display the confirmations at the Inbound transaction view screen(PWDIVIEW)

---

## 3. NACHA Payments

NACHA payments are US ACH payments managed and governed by NACHA (previously, 'National Automated Clearing House Association'). They include both Credit Transfers and Direct Debit collections. The ACH Network serves as a network for direct consumer, business, and government payments, and annually facilitates billions of payments such as Direct Deposits and Direct Payments (Collections). It is used by more than 10,000 Direct and Indirect financial institutions and numerous Third party Service providers.

The NACHA Payments module in Oracle Banking Payments has capability for end to end processing of outbound and inbound NACHA payments, right from receipt of file from customer or ACH Operator up until generation of outgoing NACHA file or posting to beneficiary accounts in case of inbound NACHA payments.

The NACHA Payments solution is designed for a depository institution who directly sends/ receives ACH files to/from ACH Operator on behalf of its own customers.

### **High-lights of NACHA Payments**

- Manual Payment Initiation
- Receipt of individual payment requests from bank channels and systems
- Processing of individual transactions for SEC codes - ARC, BOC, CCD, CIE, CTX, POP, PPD.
- NACHA rule validation
- STP of individual transactions up until the Dispatch activity, comprising activities like
- Validation, Dates resolution, Cut-off check, Sanctions check etc.
- Enabling manual intervention in case of various exceptions through specific Operations (Exception) queues
- Generation and Dispatch of outgoing NACHA file comprising Credit Transfers Transactions
- Sanctions check by interfacing with an external Sanctions screening system
- External Credit Approval Check while processing outgoing Credit transfers.
- Accounting
- NACHA file generation
- Receipt and STP of Inbound ACH file from ACH network

## **3.1 NACHA Maintenances**

### **3.1.1 NACHA Directory**

NACHA Directory maintenance maintains details of NACHA participants that are serviced by FedACH ACH Operator.

You can manually create a new record. Once created, it must be authorized.

System validates that the manually created record does not contain a Routing number for which a record already exists.

You can invoke the “NACHA Directory” screen by typing ‘PMDNCHDR’ in the field at the top right corner of the application toolbar and clicking the adjoining arrow button. Click new button on the Application toolbar.

The screenshot shows the NACHA Directory application window. The window title is "NACHA Directory". The menu bar includes "New" and "Enter Query". The main form area contains the following fields:

- Routing Number\*** (red text)
- Office Code (dropdown)
- Servicing FRB Number
- Record Type code (dropdown)
- Change Date (text, placeholder: YYYY-MM-DD)
- New Routing Number
- Customer Name
- Address
- City
- State Code
- Zipcode
- Zipcode Extension
- Telephone Area Code
- Telephone Prefix Number
- Telephone Suffix Number
- Institution Status Code (dropdown)
- Data View Code (dropdown)
- Filler

The bottom status bar contains the following fields:

- Maker
- Date Time:
- Mod No
- Record Status
- Checker
- Date Time:
- Authorization Status
- Exit button

Specify the following fields:

### **Routing Number**

Specify the 9 digit Routing number (ABA number) of the NACHA participant.

### **Office Code**

Select the Office Code. Choose between Main Office (value = O) or Branch (value = B).

### **Servicing FRB Number**

Specify the Servicing Federal Reserve Bank's main office Routing number

### **Record Type code**

Select the code that indicates if the old or new Routing number of the participant to be used while sending ACH transactions. The options are as follows:

- Institution is a Federal Reserve Bank
- Send items to customer routing number
- Send items to customer using new routing number field

### **Change Date**

Specify the Date when this record was last updated by FedACH.

### **New Routing Number**

Specify the New Routing Number.

### **Customer Name**

Specify the name of the NACHA participant.

**Address**

Specify Address details of participant.

**City**

Specify the city of participant.

**State Code**

Specify the 2 character code of US state where the participant is located. Though the bank participant may have multiple branches in different US states, this is the state where it is registered or has its head office or is understood to be located as per relevant US regulation.

**Zip-code**

Specify the zip-code (postal code) of the participant

**Zip-code Extension**

Specify the Zip-code Extension (if applicable) of the participant.

**Telephone Area Code**

Specify the area code of the contact telephone number.

**Telephone Prefix Number**

Specify the Prefix of the contact telephone number.

**Telephone Suffix Number**

Specify the Suffix of the contact telephone number.

**Institution Status Code**

Specify if the participant Receives Gov/Comm transactions.

**Data View Code**

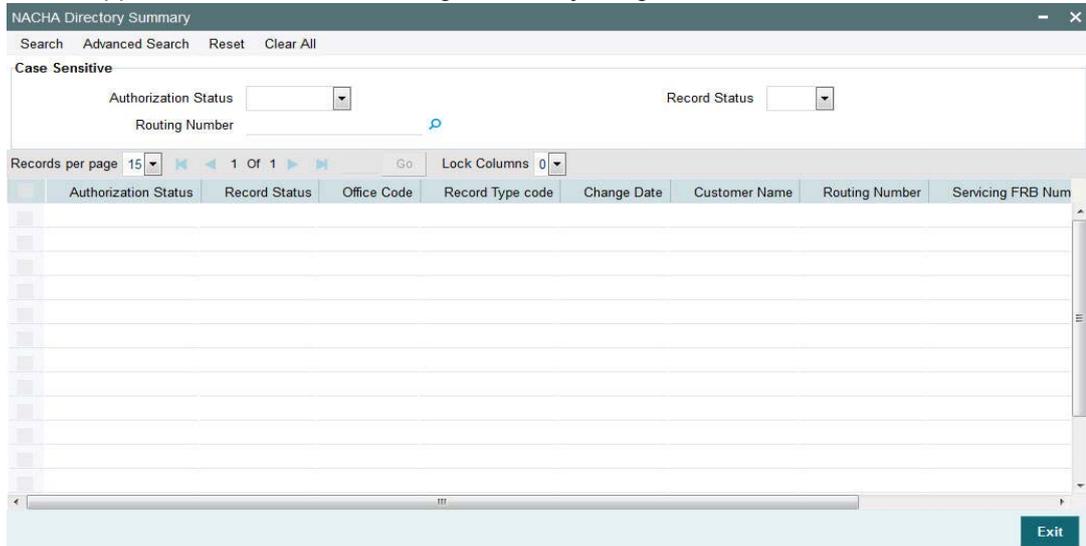

Specify if the relevant code indicates 'Current View'.

**Filler**

Specify the filler details.

**3.1.1.1 Viewing NACHA Directory Summary**

You can view the summary in “NACHA Directory Summary” screen. You can invoke the NACHA Directory Summary screen by typing ‘PMSNCHDR’ in the field at the top right corner of the Application toolbar and clicking on the adjoining arrow button.

You can search for the records using one or more of the following parameters:

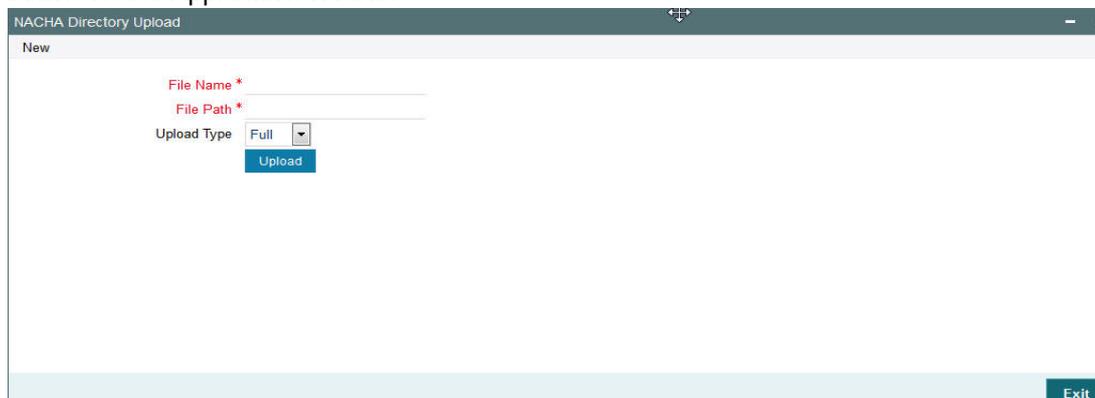

- Authorization Status
- Record Status
- Routing Number

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria.

### 3.1.2 **NACHA Directory Upload**

A facility is available for manual upload of NACHA (FedACH) Directory using fixed length text file. The name of this screen is NACHA Directory Upload.

You can invoke the "NACHA Directory Upload" screen by typing 'PMDNCHUP' in the field at the top right corner of the application toolbar and clicking the adjoining arrow button. Click new button on the Application toolbar.

Specify the following fields:

#### **File Name**

Specify the File name of the NACHA Directory text file.

#### **File Path**

Specify the DB server path where the Directory file is placed.

#### **Upload Type**

Indicates if the file to be uploaded is a Full file containing all NACHA participants or a Partial file containing records updated since a specific date in the past. This drop-down field has two options – 'Full' and 'Partial'.

#### **Upload button**

Click this button to initiate the process of picking up the file from the specified location, parsing it and inserting the records in the NACHA Directory table.

### 3.1.3 **Company ID - Account Mapping**

This NACHA specific maintenance maintains the mapping between a Company Id of a corporate Originator and one or more of their accounts available in the system that could be used as the debit account or credit account in an outgoing ACH Credit or ACH Debit transaction.

You can invoke the “Company ID - Account Mapping Detailed” screen by typing ‘PMDCIACC’ in the field at the top right corner of the application toolbar and clicking the adjoining arrow button. Click new button on the Application toolbar.

Specify the following fields:

### Host Code

This is defaulted from the logged in branch.

### Company ID

Select a Company Id from a LOV that would fetch records from the existing Company Identification Maintenance

### Source Code

Select a source code for a specific channel (including Manual channel) or All (any) channels from where the outgoing ACH transaction could be initiated.

### SEC Code

Select any of the following SEC Code. The options are CIE, CTX, PPD, ARC, BOC, POP, All and CCD

---

#### Note

If “All” option is selected for NACHA Entry Type field then in the SEC code drop-down only the SEC codes would be populated such as CCD, CTX and PPD.

---

### NACHA Entry Type

Select the NACHA Entry Type. The options are “ACH Credit”, “ACH Debit” and ‘Both’.

### Originator Account

Select or enter the Originator account from a LOV that is filtered on all 'Normal' type of accounts owned by Customers of type “Individual” or “Corporate”.

---

#### Note

The same Originator Account number would be allowed to be linked to more than one Company ID.

---

## Customer number

System defaults the customer number of the Originator account selected.

## ACH Preferences

### Prefer Same-day ACH Credit processing

'Yes' indicates that Originator would like their ACH Credit transactions to be "same-day" processed whenever eligible.

### Prefer Same-day ACH Debit processing

'Yes' indicates that Originator would like their ACH Debit transactions to be "same-day" processed whenever eligible.

### 3.1.3.1 Company ID - Account Mapping Summary

User can view all the ID-account mapping maintained in this screen.

You can invoke the 'Company ID-Account Mapping Summary' screen by typing 'PMSCIACC' in the field at the top right corner of the application toolbar and clicking the adjoining arrow button.

The screenshot displays the 'Company ID - Account Mapping Summary' application window. The window title is 'Company ID - Account Mapping Summary'. It features a search bar with 'Search', 'Advanced Search', 'Reset', and 'Clear All' buttons. Below the search bar, there are several filter fields: 'Case Sensitive', 'Authorization Status', 'Host Code', 'NACHA Entry Type', 'Source Code', 'Record Status', 'Company ID', and 'SEC Code'. A table below these fields shows columns for 'Authorization Status', 'Record Status', 'Host Code', 'Company ID', 'NACHA Entry Type', 'SEC Code', 'Source Code', 'Originator Account', and 'Customer Number'. The table is currently empty. At the bottom right of the window is an 'Exit' button.

You can search using one or more of the following parameters:

- Authorization Status
- Record Status
- Host Code
- Company ID
- NACHA Entry Type
- SEC Code
- Source Code

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria.

## 3.2 NACHA Transactions

NACHA inbound and outbound transactions can be booked and viewed through these screens.

### 3.2.1 NACHA Outbound Payment Transaction Input

Bank staff of Originating Depository Financial Institution (ODFI) can manually book an outgoing NACHA payment on behalf of the originator. Alternatively, system can receive a SOAP request from the Originator's system for initiating an outgoing NACHA payment which would be processed on receipt.

You can invoke 'Outbound NACHA Transaction Input' screen by typing 'PNDOTONL' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button. Click new button on the Application toolbar.

Below listed mandatory fields are defaulted on Click of New

#### **Transaction Branch Code**

Defaulted with logged in Branch Code

#### **Branch Name**

System defaults the Branch Name of the Transaction Branch Code

#### **Host Code**

Defaulted with Host Code to which the Logged in Branch is associated .

#### **Host Code Description**

System defaults the description of the Host code

### Source Code

Defaulted as 'MANL'; for Manually Input transactions. For transactions received through channel, relevant source code from Source maintenance would be defaulted.

### Source Code Description

System defaults the description of the Source code

### Transaction Reference Number

Unique Reference number for the payment generated by the System

### Network Code

User has to select the appropriate network Code from the pick-list. If only one NACHA network is maintained (which will generally be the case) then the same will be defaulted.

### Network Code Description

System defaults the description of the Network code

### NACHA Entry Type

This would be defaulted to "ACH Credit", to indicate that the transaction is NACHA Credit transfer.

### Standard Entry Class Code

Select the required SEC codes – The values are CIE, CCD, CTX and PPD.

### User Reference Number

The system defaults the User reference number same as the Transaction Reference Number. You can edit this value to provide own reference number

### Source Reference Number

The system displays the Source Reference Number provided by the channel or any other source for the transaction. You can input the value for manually booked transactionMain Tab

The screenshot displays a web-based form for entering transaction details. The form is organized into several sections: Company Details, Debtor Details, Payment Details, Entry Details, and Transaction Dates. Each section contains multiple input fields with labels and some with red asterisks indicating required fields. At the bottom, there are fields for Maker ID, Checker ID, Authorization Status, and Maker/Checker Date Stamps, along with an Exit button.

Company Details	Debtor Details	Payment Details
Company Identification *	Debtor Account Number	Booking Date yyyy-MM-dd
Company Name	Debtor Name	Instruction Date * yyyy-MM-dd
Company Entry Description *	Account Currency	Transfer Currency *
Company Discretionary Data	Account Branch	Transfer Amount *
Company Descriptive Date	Customer Number	Exchange Rate
	Customer Service Model	FX Reference Number
	Debit Amount	Remarks
		Enter

Entry Details	Transaction Dates
Receiving DFI *	Revised Instruction Date yyyy-MM-dd
Receiving DFI Name	Activation Date yyyy-MM-dd

UDF | MIS | Accounting Details

Maker ID	Checker ID	Authorization Status	Exit
Maker Date Stamp	Checker Date Stamp		

Specify the following fields:

### Company Details

#### Company ID

Select a Company Id of the Originator from a LOV that fetches Company Id records from the existing Company Identification Maintenance (PMDORGDT).

**Company Name**

This would be auto-populated from the Company Identification Maintenance based on the Company Id, as per existing logic.

**Company Entry Description**

Select the Company Entry from the list of values. All valid descriptions are listed in the LOV.

**Company Discretionary Data**

This field in the Batch Header allows Originators/ODFIs to capture any data that is of significance to the processing of the transaction.

**Company Descriptive Date**

Specify the date of the transaction that the Originator would like the RDFI to include in communications to Receiver. It is to be noted that this date would not be the transaction or value date in the account statement of Receiver.

**Debtor Details****Debtor Account Number**

Please select the Account to be debited. Option is available to use the Pick-list which displays all valid Account Numbers available in the system.

**Debtor Name**

System defaults the debtor name on selecting the account number.

**Account Currency**

Defaulted on selecting Account Number.

**Account Branch**

Defaulted on selecting Account Number

**Customer Number**

System identifies the Customer number maintained in the system for the Originator based on the selected Debtor Account Number and the same is defaulted in this field.

**Customer Service Model**

Defaulted with Customer Service Model linked to the identified customer (originator)

**Debit Amount**

This field is populated with the transfer amount converted in originator account currency using the Exchange rate.

**Payment Details****Booking Date**

This is defaulted as application server date.

**Instruction Date**

This is the Instruction (Value) date of the payment, as instructed by the customer.

**Transfer Currency**

Please enter the Transfer Currency which should always be USD.

**Transfer Amount**

Please enter the Amount to be transferred.

**Exchange Rate**

If Transfer currency & Originator account currency are different then Exchange rate can be provided by user. System retains the input value and will validate the same against override and stop variances maintained at Network Preferences.

**FX Reference Number**

This field allows user to specify a specific reference number of Fx deal/contract to be used for deriving the Fx rate to be used for the transaction.

**Remarks**

This indicates any user remarks for the outgoing payment transaction.

**Entry Details****Receiving DFI**

Select a 9 digit ABA number of the Receiving DFI (RDFI) using a LOV that would fetch values from the NACHA participants directory (FedACH directory) maintenance.

**Receiving DFI Name**

System defaults the name of the Receiving DFI selected.

**Receiver Account Number**

Specify the account number of the Receiver (beneficiary) corporate (in case of CCD, CTX, CIE and so on.) or owned by the Receiver individual (in case of PPD, BOC, POP, ARC and so on.).

**Individual Identification Number**

This field would be mandatory for input only when the selected SEC code is "CIE", and optional for other applicable SEC codes like POS, PPD, WEB and so on.

**Identification Name**

System defaults the name of the Individual ID number selected.

**Identification Number**

This field is optional for the applicable SEC codes like CCD, CTX etc. This field typically need to have the customer or accounting identification number (normally issued by Originator) by which the Receiver is known to the Originator.

**Receiving Company Name**

Specify the Company name of Receiver where the Receiver is corporate.

**Transaction Code**

Select relevant options for the ACH Credit transaction of selected SEC code.

**Transaction Code Description**

This is auto-populated with the description of the selected Transaction code.

**Discretionary Data**

This field in the Entry detail record (for the transaction) in the Batch file allows Originators/ ODFIs to capture any 2 character code or data that is of significance to the processing of the transaction or for requesting something from RDFI. This is a user input field and additionally, will has a LOV enabling the user to select the code "AK", meaning an Acknowledgement is requested for the transaction from the RDFI.

**Transaction Dates****Revised Instruction Date**

Specify the Revised Instruction Date.

### **Activation Date**

This is the date on which the transaction would be processed.

### **Debit Value Date**

The value date with which the debit to originator account would be done as part of the DRLQ accounting event. This date is derived by the system as part of processing the transaction. This is a View-only field.

### **Credit Value Date**

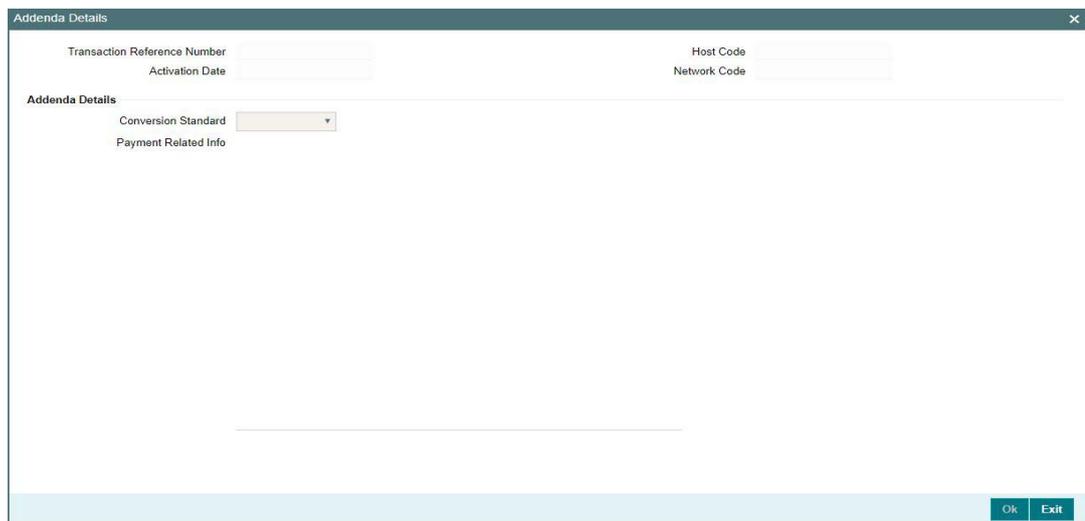

Specify the value date with which the credit to Network Nostro account would be done as part of Dispatch accounting for the file containing this transaction.

### **Dispatch Date**

The date on which the transaction would be dispatched to NACHA as part of an outgoing NACHA file. This date would be calculated as Revised Instruction Date less Network Lead Days.

## **3.2.1.1 Addenda Details**

Click the Addenda Details button in the PNDOTONL Screen.

Specify the following fields:

### **Transaction Reference Number**

The system displays the Transaction Reference No.

### **Host Code**

The system displays the Host Code.

### **Activation Date**

Specify the Activation date.

### **Network Code**

The system displays the Network Code.

## **Addenda Details**

### **Conversion Standard**

Select one of the following standards using which the data in this field needs to be converted, during generation of the Addenda record(s) in the NACH file:

- ASC X12.5 (Interchange Control Structure)
- ASC X12.6 (Application Control Structure)
- Payment related UN/EDIFACT syntax
- ANSI ASC X12 transaction set containing a BPR or BPS data segment

### **Payment Related Info**

Specify Payment Related Info. Data only up to 80 characters would be allowed since only a Max. of 1 Addenda record is allowed. Addenda record is optional for these SEC codes.

### **3.2.1.2 Pricing Tab**

Click on Pricing tab to view the Pricing details

Pricing Component	Pricing Currency	Pricing Amount	Waiver	Debit Currency	Debit Amount
-------------------	------------------	----------------	--------	----------------	--------------

The below mentioned attributes will be available in the Pricing tab.

#### **Pricing Component**

Displays the Name of the pricing component, applicable for the transaction, for which charges are computed.

#### **Pricing Currency**

Displays the Currency in which the charge amount is calculated for the Pricing component.

#### **Pricing Amount**

Displays the charge amount calculated for each pricing component.

#### **Waiver**

Check this box to indicate that the charge is waived for the pricing component.

#### **Debit Currency**

Displays the currency in which the charge amount is debited for the pricing component. This is the currency of the debit (originator) account.

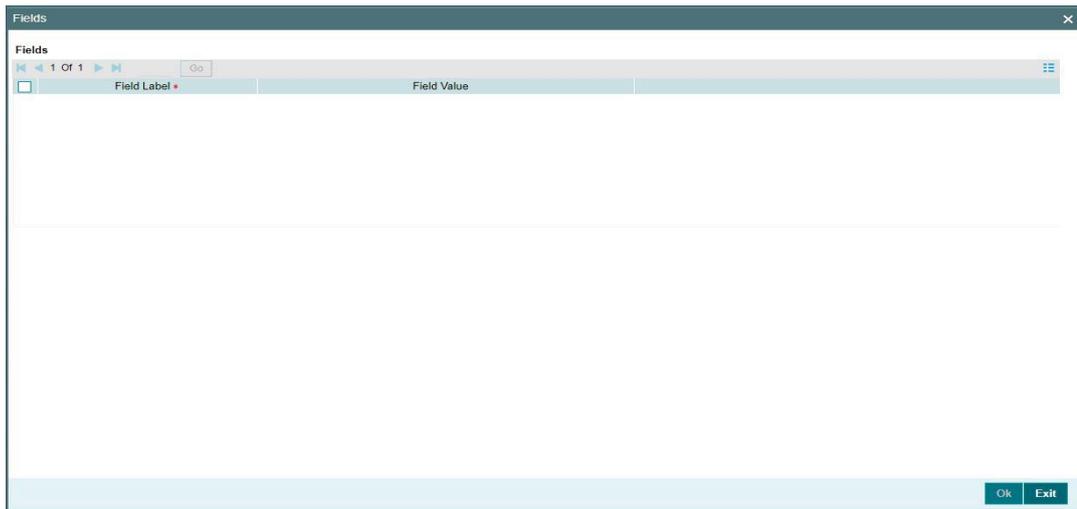

### Debit amount

Displays the charge amount in debit currency to be debited. This amount is different from the calculated Pricing amount if the debit currency is different from the Pricing Currency. The Debit amount for charges is calculated by converting the Pricing amount in Pricing Currency to Debit currency using specified Exchange Rate type in Pricing Code maintenance.

User must click on save button in PNDOTONL Screen to save the outgoing payment and make it available for authorization. On authorization by a different user, system starts processing the US NACHA Outgoing Payment.

#### 3.2.1.3 UDF Tab

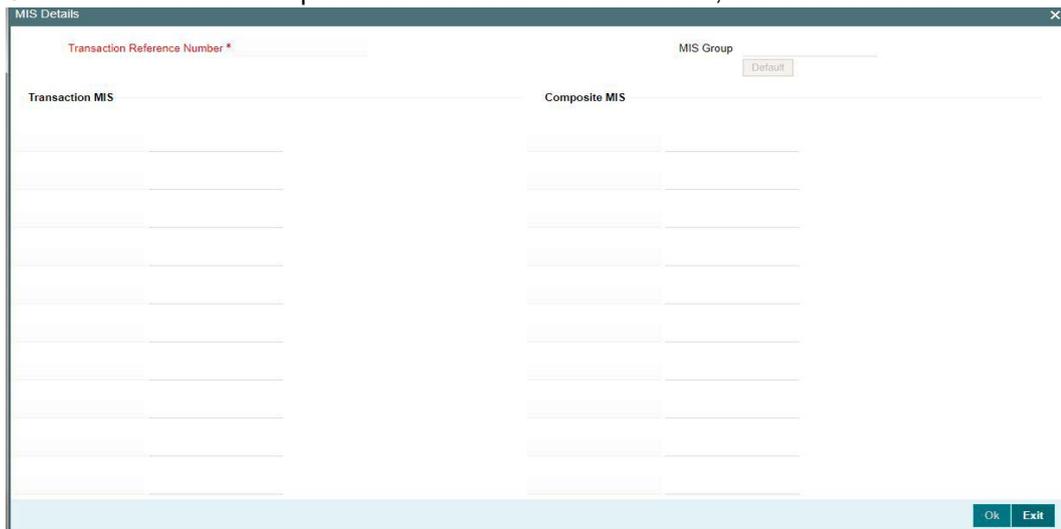

Click on the 'UDF' button present in the bottom of the screen to invoke this screen.

You can specify user defined fields for each transaction.

#### 3.2.1.4 MIS Tab

Click on the 'MIS' button present in the bottom of the screen, to invoke this screen.

You can specify the MIS details in this sub-screen.

### 3.2.1.5 NACHA Outgoing Payments Summary Screen

You can search for outgoing payment records in the NACHA Outgoing Payments Summary Screen. You can invoke 'NACHA Outgoing Payments Summary' screen by typing 'PNSOTONL' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

NACHA Transaction Input Summary

Search Advanced Search Reset Clear All

Case Sensitive

Transaction Reference Number User Reference Number Network Code

Originator Account Number Receiver Account Number Transaction Branch Code

Authorization Status Account Branch Customer No

Customer Service Model Source Reference Number

Records per page: 15 1 Of 1 Lock Columns

Transaction Reference Number	User Reference Number	Network Code	Originator Account Number	Receiver Account Number	Source Code	Host Code	Transfer Amount	Transfer Currency	Debit Amount	Account Currency	Trans
------------------------------	-----------------------	--------------	---------------------------	-------------------------	-------------	-----------	-----------------	-------------------	--------------	------------------	-------

Exit

You can search using one or more of the following parameters:

- Transaction Reference Number
- User Reference Number
- Network Code
- Originator Account Number
- Receiver Account Number
- Transaction Branch Code
- Authorization Status
- Account Branch
- Customer No
- Customer Service Model
- Source Reference Number

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria.

Double click a record or select a record and click on 'Details' button to view the detailed maintenance screen.

### 3.2.2 NACHA Outbound Payment View

You can invoke 'NACHA Outgoing View' screen by typing 'PNDOVIEW' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

- From this screen, click Enter Query. The Transaction Reference field gets enabled which opens an LOV screen.
- Click the Fetch button and select the required value.
- Along with the transaction details in the Main and Pricing tabs user can also view the Status details for the following:
  - External System Status
  - Transaction Status
- Click Execute Query to populate the details of the transaction in the Outbound NACHA payment View screen.

#### **Trace Number**

This is a unique identification of each ACH entry record in the outgoing NACHA file, which is generated during file generation.

#### **Batch Number**

This is a unique identification of every batch in the outgoing NACHA file, which is generated during file generation.

For more details on Main, Pricing tabs refer to 'PNDOTONL' screen details above.

### 3.2.2.1 View Queue Action Log

User can view all the queue actions for the respective transaction initiated. You can invoke this screen by clicking the 'View Queue Action' button in View screen, where the Transaction Reference Number is auto populated and related details are displayed.:

Transaction Reference Number	Action	Remarks	Queue Code	Authorization Status	Maker Id	Maker Date Stamp
------------------------------	--------	---------	------------	----------------------	----------	------------------

Following details are displayed:

- Transaction Reference Number
- Network Code
- Action
- Remarks
- Queue Code
- Authorization Status
- Maker ID
- Maker Date Stamp
- Checker ID
- Checker Date Stamp
- Queue Status
- Queue Reference No
- Primary External Status
- Secondary External Status
- External Reference Number

User can view the request sent and the corresponding response received for each row in Queue Action Log.

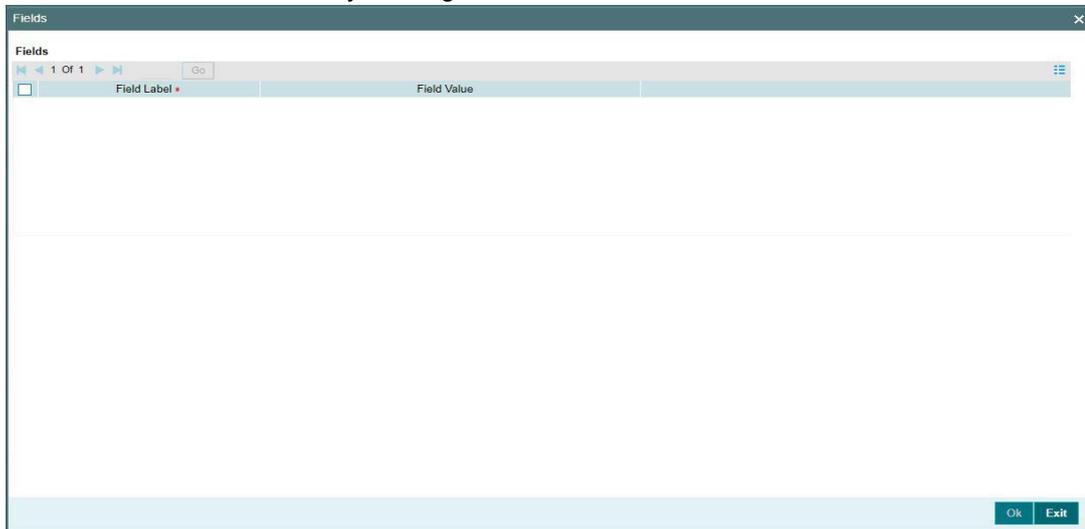

Also user can view the request sent to and the response received from external systems for the following:

- Sanction screening
- External credit approval
- External Account Check

- External FX fetch
- External price fetch
- Accounting system

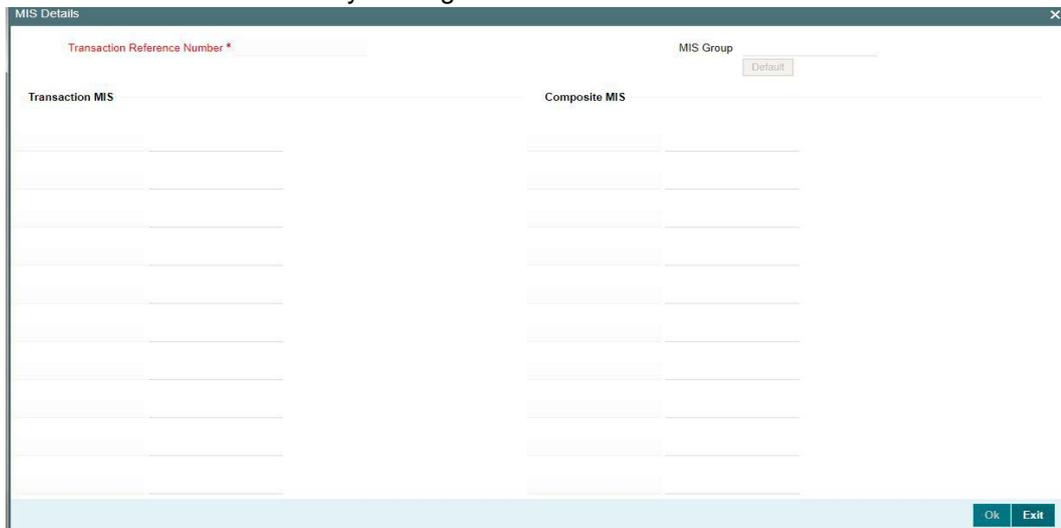

### 3.2.2.2 UDF Tab

You can invoke this screen by clicking 'UDF' tab in the screen.

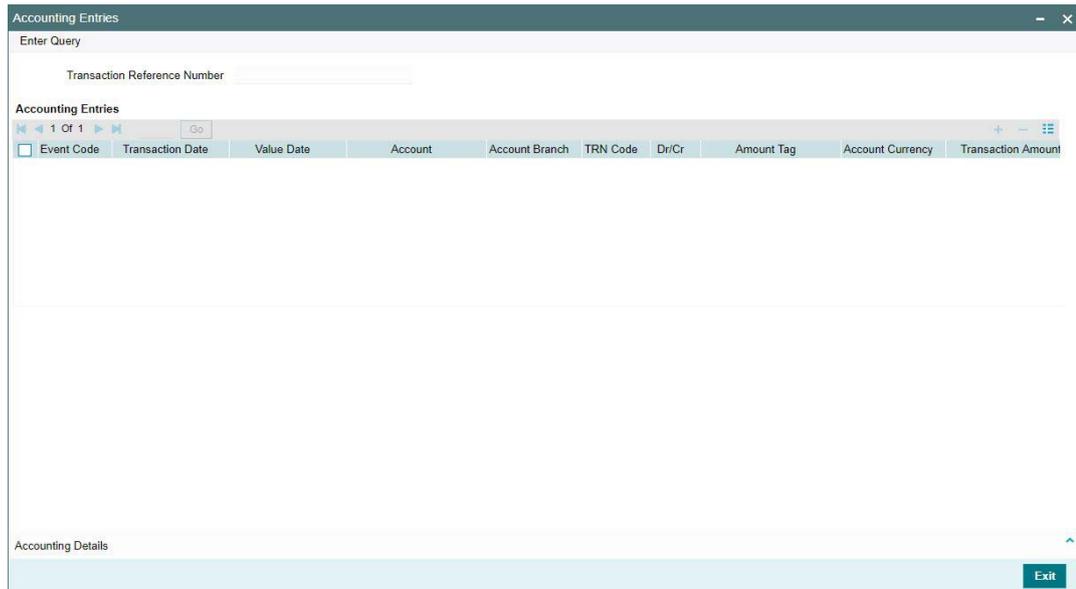

### 3.2.2.3 MIS Tab

You can invoke this screen by clicking 'MIS' tab in the screen.

### 3.2.2.4 Accounting Entries Tab

You can view the Accounting Entries posted for the Outgoing NACHA Payment in Accounting entries Tab.

By default, the following attributes of the **Accounting Entries** tab are displayed:

- Event Code
- Transaction Date
- Value Date
- Account
- Account Branch
- TRN Code
- Dr/Cr.
- Amount Tag
- Account Currency
- Transaction Amount
- Netting
- Offset Account
- Offset Account Branch
- Offset TRN Code
- Offset Amount Tag
- Offset Currency
- Offset Amount
- Offset Netting
- Handoff Status

### 3.2.2.5 **NACHA Outbound View Summary**

You can invoke 'NACHA View Summary' screen by typing 'PNSOVIEW' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

You can search using one or more of the following parameters:

- Transaction Reference Number
- Network Code
- Originator Account Number
- Source Code
- Transaction Status
- Transfer Amount
- Transfer Currency
- Transaction Branch Code
- Authorization Status
- Activation Date
- Booking Date
- Debit Liquidation Status
- Credit Liquidation Status
- File Reference Number
- Source Reference Number
- Queue Code
- Dispatch Reference Number
- Creditor Account IBAN
- Dispatch Reference Number
- SEC Code

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria.

Double click a record or select a record and click on 'Details' button to view the detailed maintenance screen.

### 3.2.3 **NACHA Inbound Payment Transaction Input**

Oracle Banking Payments will process the NACHA inbound Payments received from ACH Operator.

In case of NACHA Inbound file cannot be received or processed due to any reason. A back up screen, is provided to the user to manually capture NACHA Inbound Payments.

You can invoke 'NACHA Inbound Transaction Input' screen by typing the function ID 'PNDITONL' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button...

Below listed fields are mandatory to process Inbound NACHA payments

#### **Transaction Branch Code**

Defaulted with logged in Branch Code

#### **Branch Name**

System defaults the Branch Name of the Transaction Branch Code

#### **Host Code**

Defaulted with Host Code to which the Logged in Branch is associated .

#### **Host Code Description**

System defaults the description of the Host code

**Source Code**

Defaulted as 'MANL'; for Manually Input transactions. For transactions received through channel, relevant source code from Source maintenance would be defaulted.

**Source Code Description**

System defaults the description of the Source code

**Transaction Reference Number**

Unique Reference number for the payment generated by the System. For details on the reference number format, refer to Payments core user manual

**Network Code**

User has to select the appropriate network Code from the pick-list. If only one NACHA network is maintained (which will generally be the case) then the same will be defaulted.

**Network Code Description**

System defaults the description of the Network code

**NACHA Entry Type**

This would be defaulted to "ACH Credit", to indicate that the transaction is NACHA Credit transfer.

**Standard Entry Class Code**

Select the required SEC codes – The values are CIE, CCD, CTX and PPD.

**File Reference Number**

Unique Reference generated by the system for the Inbound NACHA file.

**Batch Number**

Batch Number of the batch to which the Inbound Payment belongs to as per in the received Inbound NACHA File

**Trace Number**

Trace Number of the Inbound Payment (ACH entry) in the received Inbound NACHA File

**Creditor Details****Creditor Account Number**

Please select the Customer Account to be credited. Option is available to use the Pick-list which displays all valid Account Numbers available in the system.

**Creditor Name**

Defaulted on selecting Creditor Account Number

**Account Currency**

Defaulted on selecting Creditor Account Number

**Account Branch**

Defaulted on selecting Creditor Account Number

**Customer Number**

System identifies the Customer number maintained in the system for the Creditor based on the selected Creditor Account Number and the same is defaulted in this field.

**Customer Service Model**

Defaulted with Customer Service Model linked to the identified customer.

**Credit Amount**

This field will be populated with the transfer amount converted in Receiver account currency using the Exchange rate.

**Originator Company Details****Company Identification**

Specify the Identification of Originator of the ACH Credit transaction.

**Company Name**

Specify the Originator name.

**Company Entry Description**

Specify the data as per the ACH entry in the Inbound file.

**Company Discretionary Data**

Specify the data as per the ACH entry in the Inbound file.

**Company Descriptive Date**

Specify the Company Discretionary Date.

**Originating DFI**

Specify the Debtor Bank ABA Number. Option is available to use the pick-list which displays all ABA numbers of all DFIs.

**Originating DFI Name**

The system indicated the Originating DFI Name once you select the Originating DFI from the LOV.

**Payment Details****Booking Date**

Defaulted with current date.

**Instruction Date**

This is the Effective Entry date or Settlement date on which the payment is settled as part of the Inbound file by NACHA.

**Transfer Currency**

Please Enter the Transfer Currency as USD.

**Transfer Amount**

Please enter the Amount to be credited to the Customer.

**Exchange Rate**

If Transfer currency & Receiver (Credit) account currency are different then Exchange rate can be provided by user. System retains the input value and validates the same against override and stop variances maintained at Network Preferences.

**Remarks**

Specify Remarks, if any.

**Entry Details****Individual Identification Number**

This field is applicable but optional for SEC code of PPD and CIE.

**Individual Name**

System defaults the Individual name on selecting the Individual ID Number

**Identification Number**

This field is optional for the applicable SEC codes of CCD and CTX.

**Receiving Company Name**

Defaulted on selecting Creditor Account Number

**Transaction Code**

Specify the Transaction Code from the LOV.

**Transaction Code Description**

Specify the Transaction Code Description.

**Discretionary Data**

Specify the Discretionary Data.

**Transaction Dates**

**Activation Date**

This is the date on which transaction would be processed, and would be generally same as Settlement Date.

**Debit Value Date**

The value date with which the debit to Clearing GL would be done as part of the DRLQ event of transaction accounting on the Activation date. This date would always be same as Settlement Date.

**Credit Value Date**

The value date with which the credit to Receiver account would be done as part of the CRLQ event of transaction accounting on the Activation date. This will be a View only field.

**3.2.3.1 Addenda Details**

Please click on this button to capture Additional Payment Related Information in the Addenda record for the ACH entry in the Inbound file.

Specify the following fields:

**Transaction Reference No**

The system displays the Transaction Reference No.

**Host Code**

The system displays the Host Code.

**Activation Date**

Specify the Activation date.

**Network Code**

The system displays the Network Code.

**Addenda Details****Conversion Standard**

Select one of the following standards using which the data in this field needs to be converted, during generation of the Addenda record(s) in the NACH file:

- ASC X12.5 (Interchange Control Structure)
- ASC X12.6 (Application Control Structure)
- Payment related UN/EDIFACT syntax
- ANSI ASC X12 transaction set containing a BPR or BPS data segment

**Payment Related Info**

Specify Payment Related Info. Data only up to 80 characters would be allowed since only a Max. of 1 Addenda record is allowed. Addenda record is optional for these SEC codes.

**Enrich Button**

On click of this button, System Computes the Exchange Rate & Charges if applicable.

Exchange rate is computed if the creditor account currency is different from Transfer currency. User can view the computed rate in the Exchange Rate field in Main Tab.

User can view the computed Charges in pricing Tab.

User must click on '**Save**' button, to save the inbound payment and make it available for authorization. On authorization by a different user, system starts processing the US NACHA Inbound Payment.

### 3.2.3.2 Pricing Tab

Click on Pricing tab to view the Pricing details. For more details on fields, refer to section 3.2.1.2.

The screenshot shows a software interface with a 'Main Pricing' header. Below the header is a navigation bar with a 'Go' button and a list of tabs: Pricing Component, Pricing Currency, Pricing Amount, Waiver, Debit Currency, and Debit Amount. The 'Pricing Component' tab is selected. The main area is empty. At the bottom, there is a 'UDF | MIS | Accounting Details' section with fields for Maker ID, Checker ID, Authorization Status, Maker Date Stamp, and Checker Date Stamp. A 'Cancel' button is located in the bottom right corner.

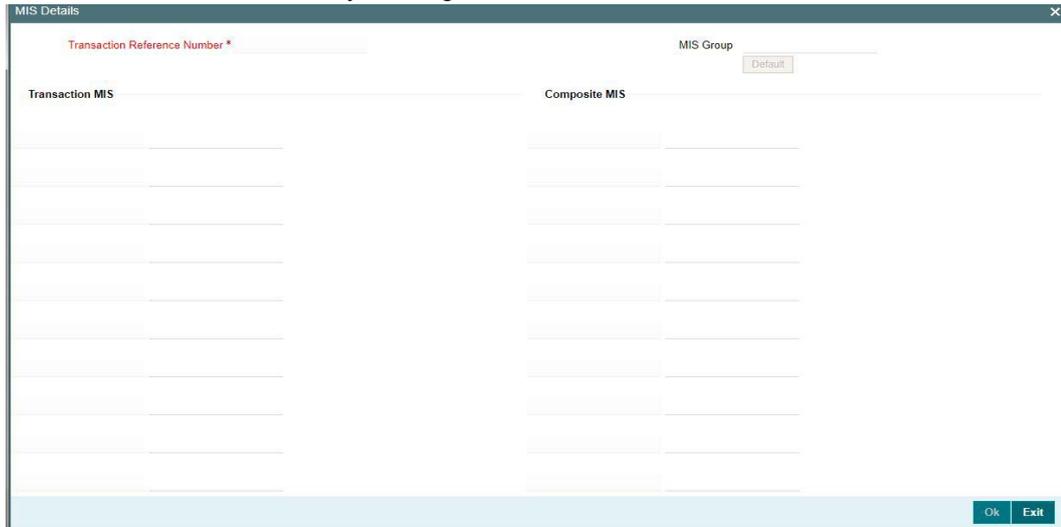

### 3.2.3.3 UDF Tab

You can invoke this screen by clicking 'UDF' tab in the screen.

The screenshot shows a 'Fields' dialog box with a close button in the top right corner. The dialog has a 'Fields' header and a navigation bar with a 'Go' button and a list of tabs: Field Label and Field Value. The 'Field Label' tab is selected. The main area is empty. At the bottom right, there are 'Ok' and 'Exit' buttons.

### 3.2.3.4 MIS Tab

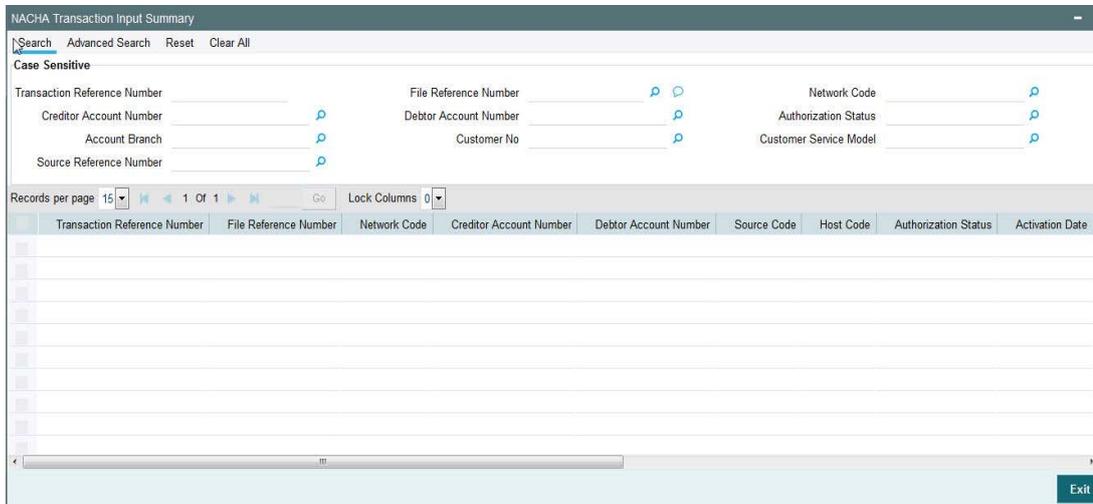

You can invoke this screen by clicking 'MIS' tab in the screen.

User must click on save button in PNDITONL Screen screen to save the Inbound payment and make it available for authorization. On authorization by a different user, system starts processing the US NACHA Inbound Payment.

### 3.2.3.5 NACHA Inbound Payments Summary

You can invoke 'NACHA Inbound Payments Summary' screen by typing 'PNSITONL' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

You can search using one or more of the following parameters:

- Transaction Reference Number
- File Reference Number
- Network Code
- Creditor Account Number
- Debtor Account Number
- Transaction Branch Code
- Authorization Status
- Account Branch

- Customer No
- Customer Service Model
- Source Reference Number

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria.

Double click a record or select a record and click on 'Details' button to view the detailed maintenance screen.

### 3.2.4 NACHA Inbound View

You can invoke 'NACHA Incoming View' screen by typing 'PNDIVIEW' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

- From this screen, click Enter Query. The Transaction Reference field gets enabled which opens an LOV screen.
- Click the Fetch button and select the required value.
- Along with the transaction details in the Main and Pricing tabs user can also view the Status details for the following:
  - External System Status
  - Transaction Status
- Click Execute Query to populate the details of the transaction in the Inbound NACHA Payment View screen.

### Trace Number

This is a unique identification of each ACH entry record in the outgoing NACHA file, which is generated during file generation.

### Batch Number

This is a unique identification of every batch in the outgoing NACHA file, which is generated during file generation.

For more details on Main, Pricing tabs refer to 'PNDITONL' screen details above.

#### 3.2.4.1 View Queue Action Log

User can view all the queue actions for the respective transaction initiated. You can invoke this screen by clicking the 'View Queue Action' button in View screen, where the Transaction Reference Number is auto populated and related details are displayed.:

Transaction Reference Number	Action	Remarks	Queue Code	Authorization Status	Maker Id	Maker Date Stamp
------------------------------	--------	---------	------------	----------------------	----------	------------------

Following details are displayed:

- Transaction Reference Number
- Network Code
- Action
- Remarks
- Queue Code
- Authorization Status
- Maker ID
- Maker Date Stamp
- Checker ID
- Checker Date Stamp
- Queue Status
- Queue Reference No
- Primary External Status
- Secondary External Status
- External Reference Number

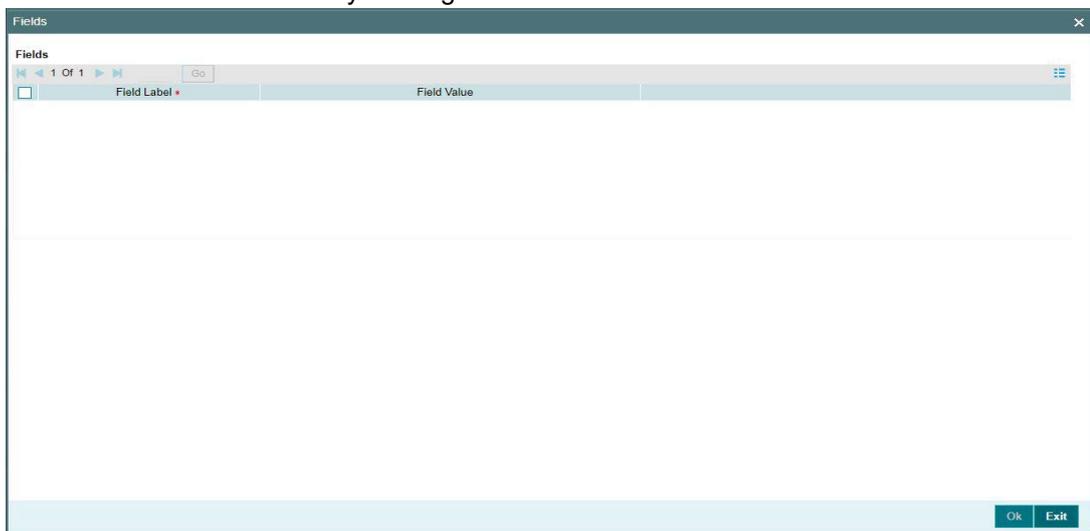

User can view the request sent and the corresponding response received for each row in Queue Action Log.

Also user can view the request sent to and the response received from external systems for the following:

- Sanction screening
- External credit approval
- External Account Check
- External FX fetch
- External price fetch
- Accounting system

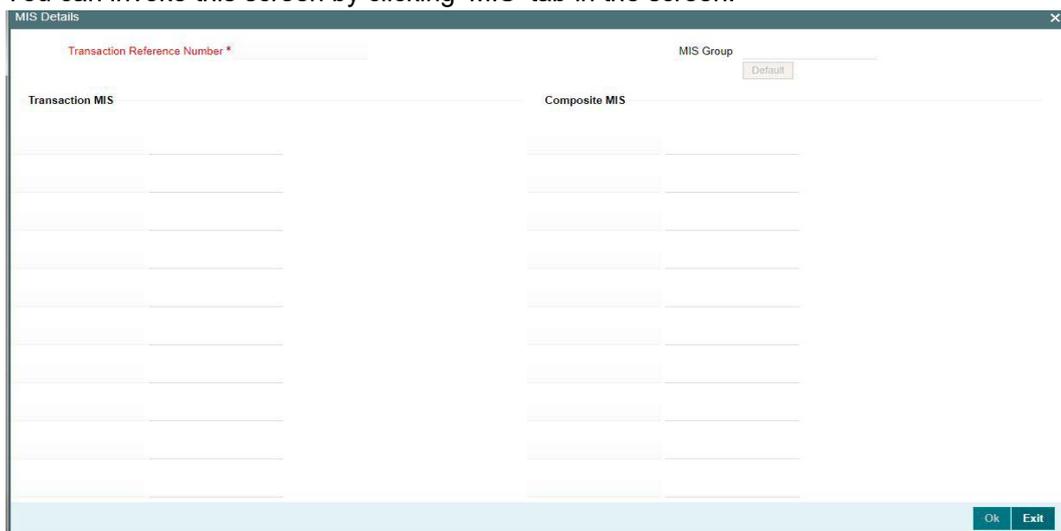

### 3.2.4.2 UDF Tab

You can invoke this screen by clicking 'UDF' tab in the screen.

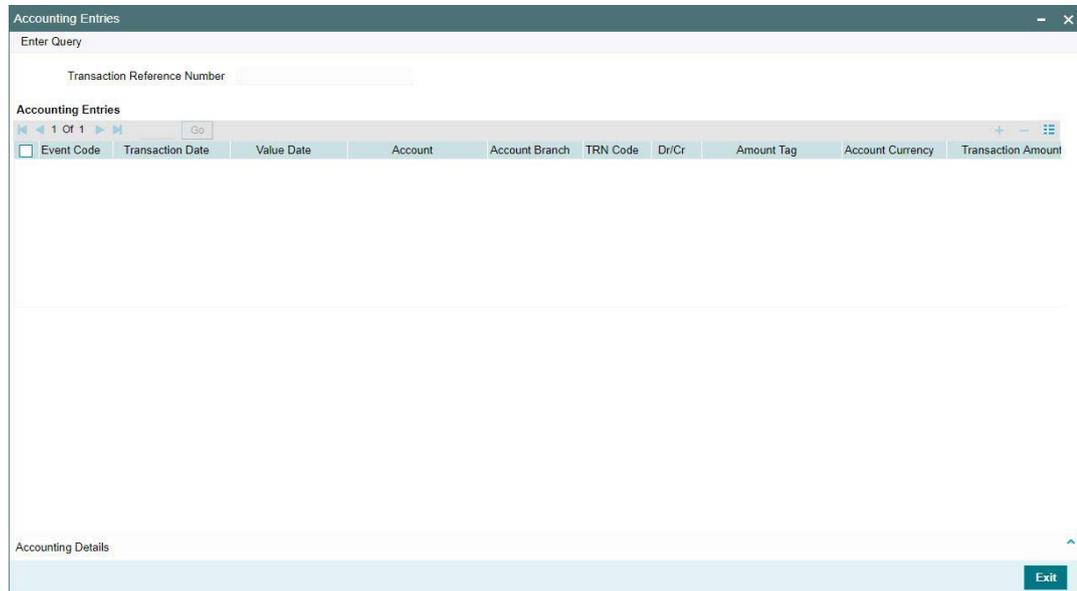

### 3.2.4.3 MIS Tab

You can invoke this screen by clicking 'MIS' tab in the screen.

### 3.2.4.4 Accounting Entries Tab

You can view the Accounting Entries posted for the Inbound NACHA Payment in Accounting entries Tab.

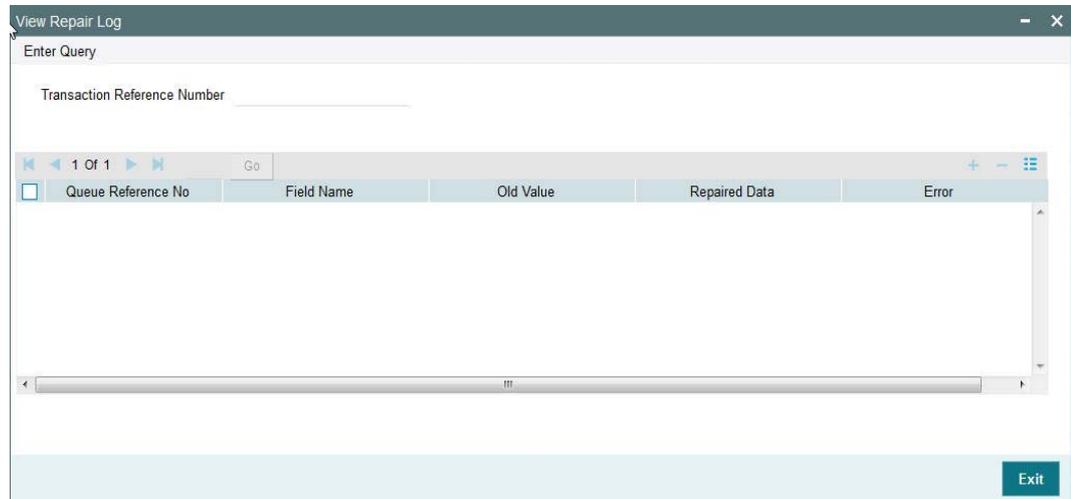

By default, the following attributes of the **Accounting Entries** tab are displayed:

- Event Code
- Transaction Date
- Value Date
- Account
- Account Branch
- TRN Code
- Dr/Cr.
- Amount Tag
- Account Currency
- Transaction Amount
- Netting
- Offset Account
- Offset Account Branch
- Offset TRN Code
- Offset Amount Tag
- Offset Currency
- Offset Amount
- Offset Netting
- Handoff Status

### 3.2.4.5 View Repair Log

User can view all the Repair actions for the respective transaction initiated. You can invoke this screen by clicking the 'View Repair Log' button in View screen, where the Transaction Reference Number is auto populated and related details are displayed.:

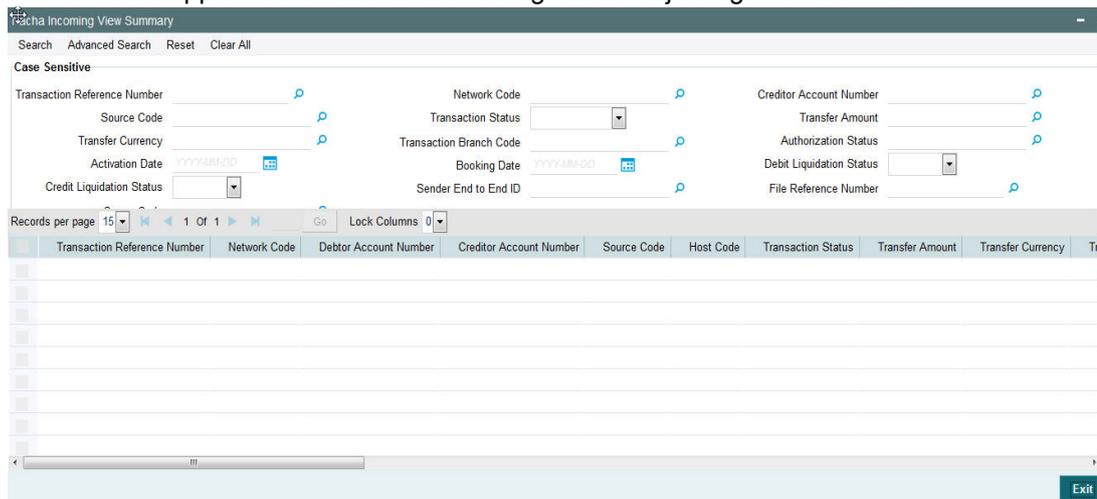

Following details are displayed:

- Queue Reference No
- Field Name
- Old Value
- Repaired Data
- Error

### 3.2.4.6 NACHA Inbound View Summary

You can search for records in the NACHA Inbound View Summary Screen. You can invoke 'NACHA Inbound View Summary' screen by typing 'PNSIVIEW' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

You can search using one or more of the following parameters:

- Transaction Reference Number
- Network Code
- Creditor Account Number

- Source Code
- Transaction Status
- Transfer Amount
- Transfer Currency
- Transaction Branch Code
- Authorization Status
- Activation Date
- Booking Date
- Debit Liquidation Status
- Credit Liquidation Status
- File Reference Number
- Queue Code

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria.

Double click a record or select a record and click on 'Details' button to view the detailed maintenance screen.

## 3.3 NACHA ACH

### 3.3.1 Outbound NACHA ACH Debit Transaction Input

You can invoke "Outbound NACHA ACH Debit Transaction Input" screen by typing the function ID 'PNDODONL' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button...

Specify the following fields:

**Transaction Branch**

Defaulted with logged in Branch Code

**Host Code**

Defaulted with Host Code to which the Logged in Branch is associated with

**Source Code**

Defaulted as 'MANL'; for Manually Input transactions. For transactions received through channel, relevant source code from Source maintenance would be defaulted.

**Network Code**

User has to select the appropriate NACHA network Code from the list

**NACHA Entry Type**

This would be defaulted to "ACH Debit", to indicate that the transaction is NACHA Debit transfer.

**SEC code**

Select the required SEC codes – The values are CCD, CTX, PPD, ARC, BOC and POP.

**Transaction Reference Number**

Unique Reference number for the payment generated by the system

**User Reference**

The system defaults the User reference number same as the Transaction Reference Number. You can edit this value to provide own reference number

**Source Reference Number**

The system displays the Source Reference Number provided by the channel or any other source for the transaction. You can input the value for manually booked transaction

**Originator (Creditor) Details****Company ID**

Specify the Identification of Originator of the ACH Credit transaction.

**Company Name**

The name appears by default upon selection of the Company Identification.

**Originator Account Number**

This would be the account of the Originator of the outgoing ACH Debit transaction that would be credited.

**Account Currency**

The system populates the Account Currency.

**Originator Name**

The system populates the Originator's name.

**Customer No**

The system populates the Customer Number.

**Customer Service Model**

The system specifies the Customer Service Model.

## **Receiver Debtor Details**

### **Receiver Account Number**

Please select the Customer Account to be debited. Option is available to use the Pick-list which displays all valid Account Numbers available in the system.

### **Receiving Company Name**

Defaulted on selecting Creditor Account Number

### **Receiving Consumer Name**

Specify the Receiving Consumer Name

### **Receiving DFI**

Select a 9 digit ABA number of the Receiving DFI (RDFI) using a LOV that would fetch values from the NACHA participants directory (FedACH directory) maintenance.

### **Receiving Point**

Select a 9 digit ABA number of the Receiving Point, using a LOV that would fetch values from the NACHA participants directory (FedACH directory) maintenance.

### **Identification Number**

This field is optional for the applicable SEC codes like CCD, CTX etc. This field typically need to have the customer or accounting identification number (normally issued by Originator) by which the Receiver is known to the Originator.

### **Individual Identification Number**

This field would be mandatory for input only when the selected SEC code is "CIE", and optional for other applicable SEC codes like POS, PPD, WEB and so on.

## **Payment Details**

### **Booking Date**

This will be defaulted as application server date.

### **Instruction Date**

This will be the Instruction (Value) date of the ACH Debit transaction i.e. the intended Collection Date, as instructed by the customer.

### **Dispatch Date**

The date on which the transaction would be dispatched to NACHA as part of an outgoing NACHA file.

### **Transfer Currency**

Specify the currency of outgoing payment, which would be defaulted and fixed to USD.

### **Transfer Amount**

Amount of the outgoing Debit transaction in the Transfer currency. This amount is populated in the Amount field of the Entry Details record.

### **Exchange Rate**

If Transfer currency & originator account currency are different then Exchange rate can be provided by user. System retains the input value and validate the same against override and stop variances maintained at Network Preferences.

### **FX Reference Number**

This Fx reference number is sent in the External Fx rate request during processing.

**Credit Amount**

This field will be populated with the transfer amount converted in originator account currency using the Exchange rate.

**Revised Instruction Date**

Revised Instruction Date is auto populated.

As part of Processing dates resolution step during processing, Instruction date would be validated to be a working day for NACHA. This date would be adjusted (moved ahead), if required, which would then be populated in this field

**Settlement date**

This would be same as the Revised Instruction date. This is the date on which the settlement with the Originator would happen i.e. the originator account would be credited (posted) with Credit Value date.

**Credit Value Date**

The value date with which the credit to Originator account would be done as part of the CRLQ event of transaction accounting on the Settlement date. This date would be calculated as Revised Instruction Date plus 2 NACHA business days. This will be a View only field.

**Debit Value Date**

The value date with which the debit to Clearing GL would be done as part of the DRLQ event of transaction accounting on the Settlement date. This date would be same as Settlement date. This will be a View only field.

**Remarks**

Specify any user remarks for the outgoing payment transaction.

**Other Transaction Details****Company Entry Description**

Specify the data as per the ACH entry in the outgoing file.

**Company Discretionary Data**

Specify the data as per the ACH entry in the outgoing file.

**Company Descriptive Date**

In outgoing ACH Debit transaction, even if this field contains one of the standard keywords for same-day settlement cycles, the same would not be considered by system. This is because same-day processing of ACH Debit transactions is not in scope.

**Transaction Code**

Select relevant options for the ACH Debit transaction of selected SEC code,

**Transaction Code Description**

Select the Transaction Code Description.

**Check Serial Number**

Specify the serial number of the physical cheque which is being collected through this ACH Debit transaction.

**Terminal City**

Specify the truncated name or abbreviation identifying a city, town or village in which the Point of Purchase electronic terminal is present where the original cheque based transaction happened.

### Terminal State

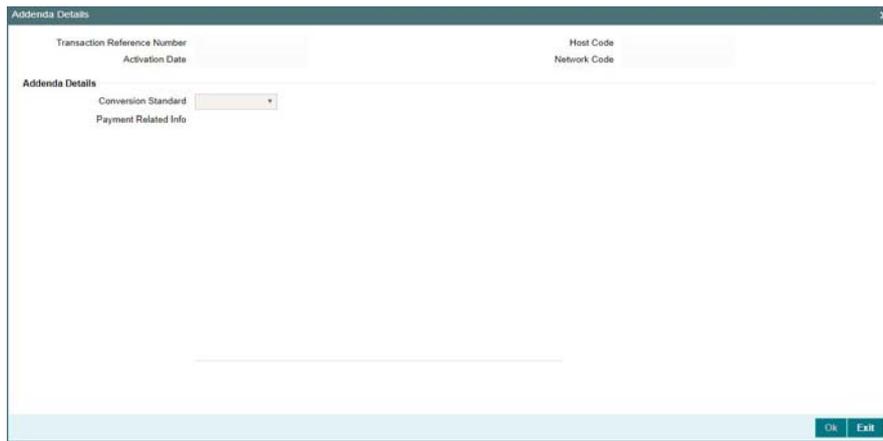

Specify the 2 character state code of a US state in which the city, town or village is present where the Point of Purchase electronic terminal is present.

### Discretionary Data

Specify the Discretionary Data.

### Addenda Details Button

Please click on this button to capture Additional Payment Related Information in the Addenda record for the ACH entry in the incoming file. For more details on the fields, refer to section- 3.2.3.1

### Enrich Button

On click of this button, System Computes the Exchange Rate & Charges if applicable.

Exchange rate is computed if the creditor account currency is different from Transfer currency. User can view the computed rate in the Exchange Rate field in Main Tab.

User can view the computed Charges in pricing Tab.

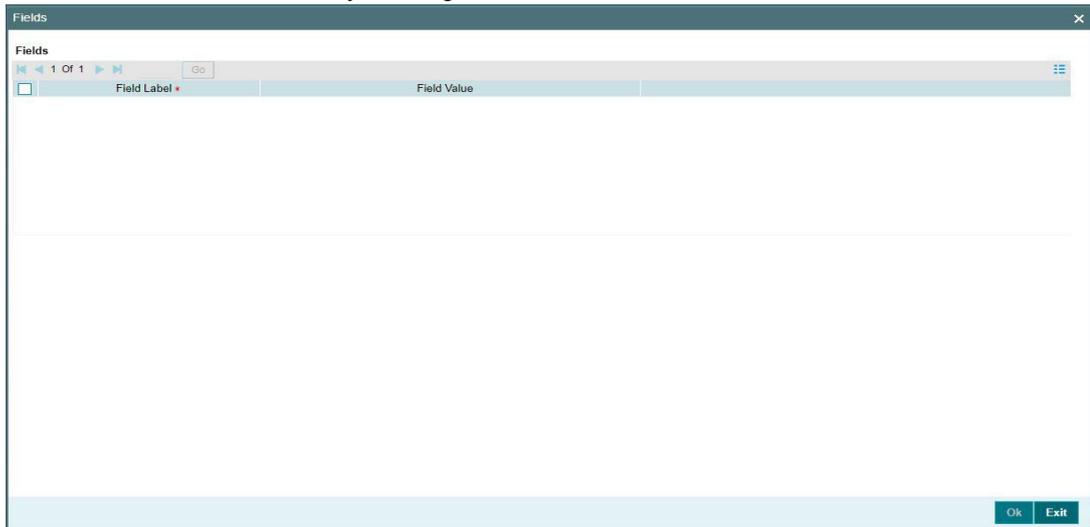

### 3.3.1.1 Pricing Tab

Click on Pricing tab to view the Pricing details. For more details on fields, refer to section 3.2.1.2.

### 3.3.1.2 UDF Tab

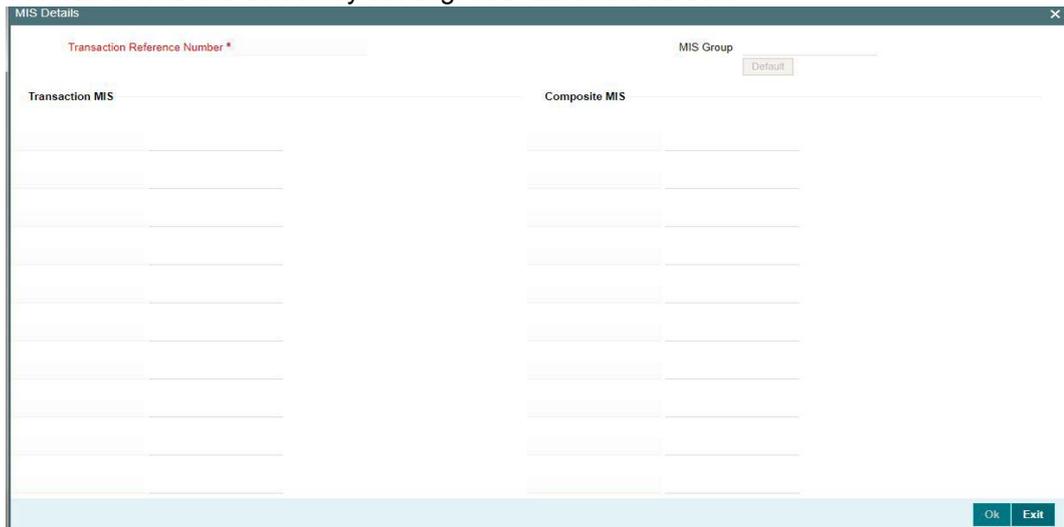

You can invoke this screen by clicking 'UDF' tab in the screen.

The screenshot shows a window titled "Fields" with a close button (X) in the top right corner. Below the title bar, there is a navigation bar with a left arrow, "1 Of 1", a right arrow, and a "Go" button. A table is displayed with two columns: "Field Label" and "Field Value". The table is currently empty. At the bottom right of the window, there are "Ok" and "Exit" buttons.

### 3.3.1.3 MIS Tab

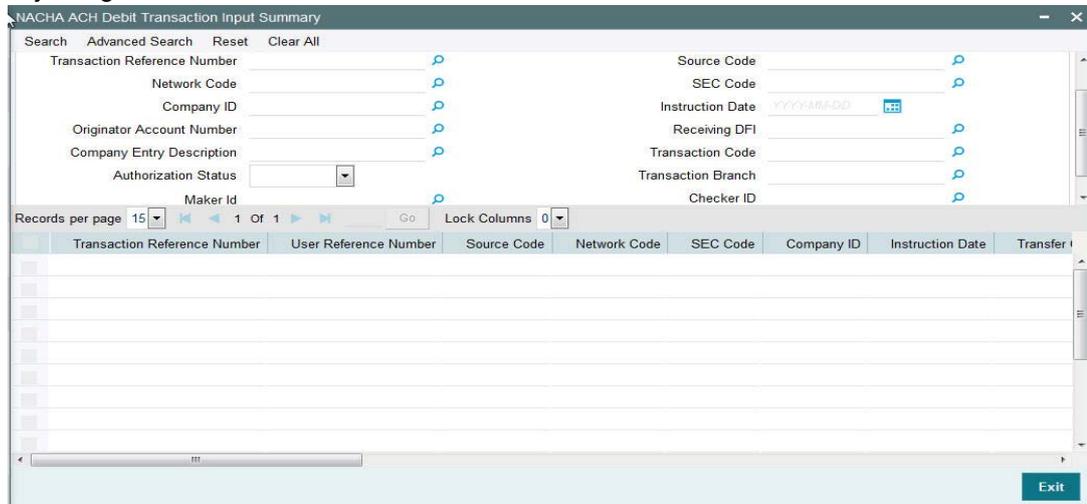

You can invoke this screen by clicking 'MIS' tab in the screen.

The screenshot shows a window titled "MIS Details" with a close button (X) in the top right corner. At the top, there is a "Transaction Reference Number" field with a red asterisk and a "MIS Group" dropdown menu with a "Default" button. Below these are two tables: "Transaction MIS" on the left and "Composite MIS" on the right. Both tables have multiple rows and columns, but they are currently empty. At the bottom right of the window, there are "Ok" and "Exit" buttons.

### 3.3.1.4 Outbound NACHA ACH Debit Transaction Input Summary

You can invoke “Outbound NACHA ACH Debit Transaction Input Summary” screen by typing ‘PNSODONL’ in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

You can search using one or more of the following parameters:

- Transaction Reference Number
- Network Code
- Company ID
- Originator Account Number
- Company Entry Description
- Authorization Status
- Maker Id
- Source Code
- SEC Code
- Instruction Date
- Receiving DFI
- Transaction Code
- Transaction Branch
- Checker ID

Once you have specified the search parameters, click ‘Search’ button. The system displays the records that match the search criteria.

Double click a record or select a record and click on ‘Details’ button to view the detailed maintenance screen.

### 3.3.2 Outbound NACHA ACH Debit Payments View

You can view the Outbound NACHA ACH Debit transactions through this screen.

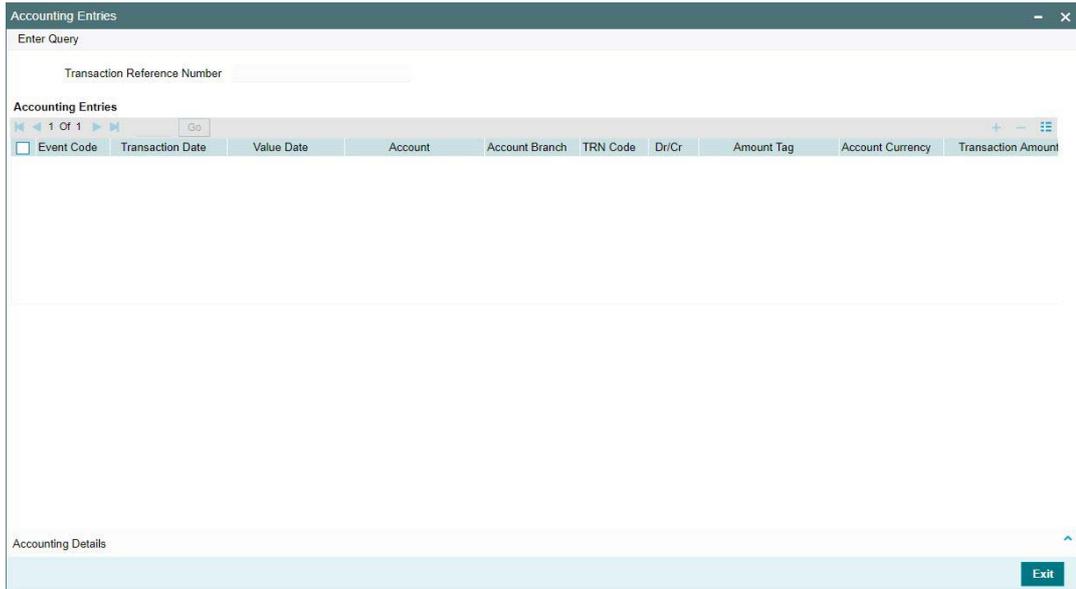

You can invoke 'Outbound NACHA ACH View Detailed' screen by typing 'PNDODOVW' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

- From this screen, click Enter Query. The Transaction Reference field gets enabled, for the user to specify the Reference Number.
- Along with the transaction details in the Main and Pricing tabs user can also view the Status details for the following:
  - Transaction Status
  - External System Status
- Click Execute Query to populate the details of the transaction in the Outbound NACHA ACH Debit Detailed View screen.

For more details on Main, Pricing tabs, refer to 'PNDODONL' screen details above.

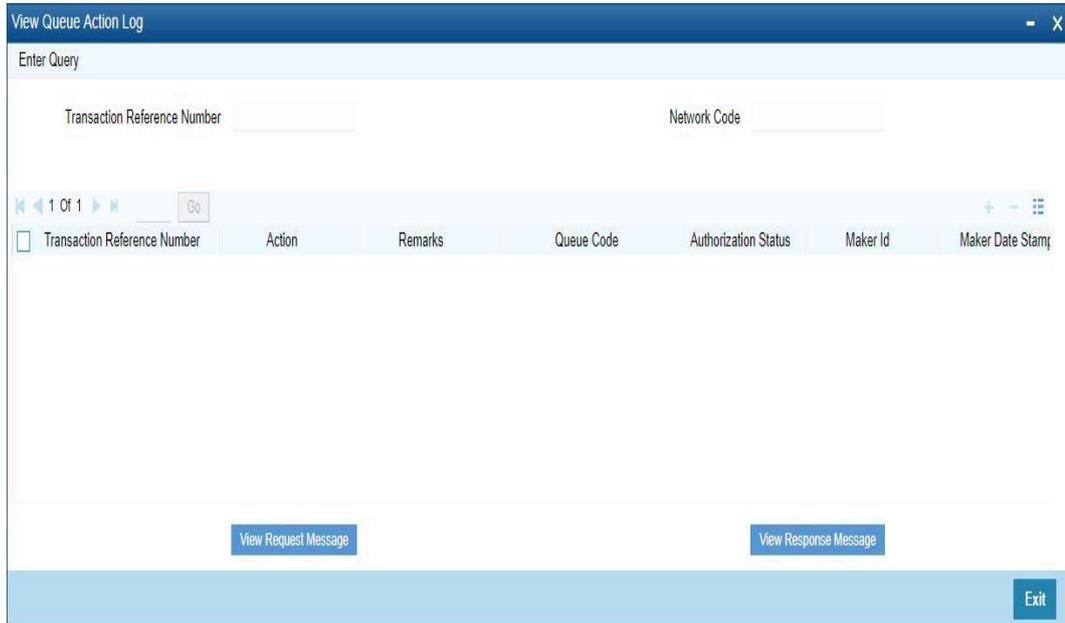

### 3.3.2.1 Accounting Details Tab

You can view the Accounting Entries posted for the Outbound NACHA ACH debit Payment in Accounting Details tab. For more details on fields, refer to 3.2.4.4

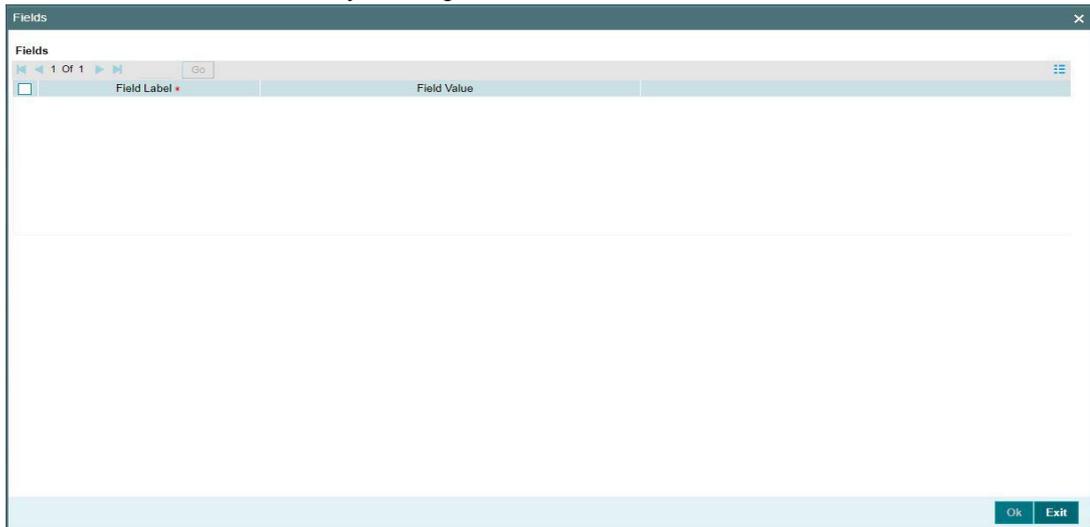

### 3.3.2.2 View Queue Action Log

User can view all the queue actions for the respective transaction initiated. You can invoke this screen by clicking the 'View Queue Action' button in View screen, where the Transaction Reference Number is auto populated and related details are displayed. For more details on the fields refer to section 3.2.4.1

### 3.3.2.3 UDF Tab

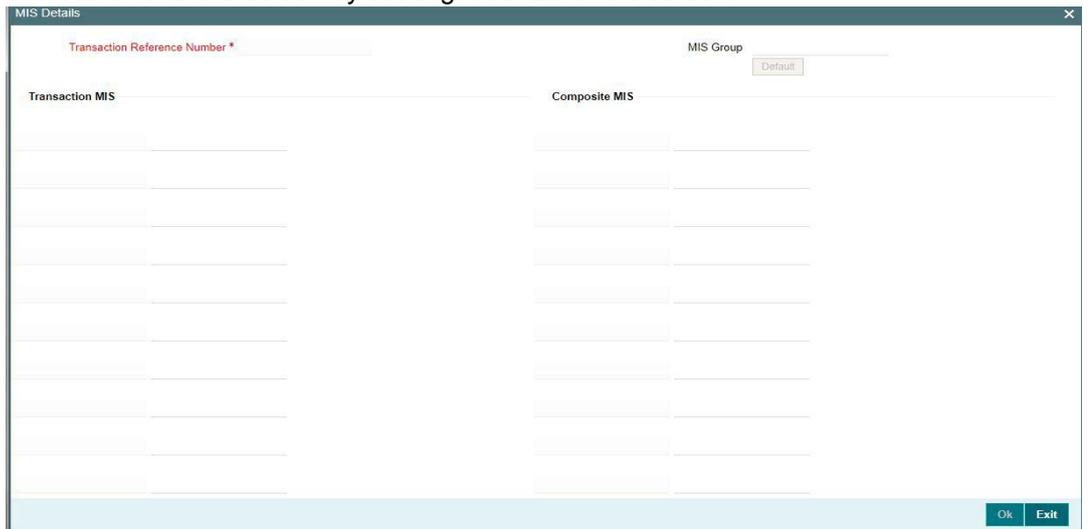

You can invoke this screen by clicking 'UDF' tab in the screen.

The screenshot shows a window titled "Fields" with a close button (X) in the top right corner. Below the title bar, there is a navigation bar with a left arrow, "1 Of 1", a right arrow, and a "Go" button. The main area contains a table with two columns: "Field Label" and "Field Value". The table is currently empty. At the bottom right of the window, there are "Ok" and "Exit" buttons.

### 3.3.2.4 MIS Tab

You can invoke this screen by clicking 'MIS' tab in the screen.

The screenshot shows a window titled "MIS Details" with a close button (X) in the top right corner. At the top, there is a text input field labeled "Transaction Reference Number" with a red asterisk indicating it is required. To its right is another text input field labeled "MIS Group" with a "Default" button next to it. Below these fields, the window is divided into two sections: "Transaction MIS" on the left and "Composite MIS" on the right. Each section contains a table with multiple rows and columns, all of which are currently empty. At the bottom right of the window, there are "Ok" and "Exit" buttons.

### 3.3.2.5 Outbound NACHA ACH Debit View Summary

You can invoke 'Outbound NACHA ACH Debit View Summary' screen by typing 'PNSODOVW' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

The screenshot shows the 'NACHA View Summary' application window. The search bar at the top contains the text 'PNSODOVW'. Below the search bar, there are several search filters arranged in a grid. The filters include: Transaction Reference Number, Source Code, Transfer Currency, Activation Date (YYYYMMDD), Credit Liquidation Status, Queue Code, Network Code, Transaction Status, Transaction Branch Code, Booking Date (YYYYMMDD), File Reference Number, Creditor Account IBAN, Originator Account Number, Transfer Amount, Authorization Status, Debit Liquidation Status, Source Reference Number, and Dispatch Reference Number. Below the filters is a table with columns: Transaction Reference Number, User Reference Number, Network Code, Receiver Account Number, Originator Account Number, Source Code, Host Code, Transaction Status, and Transfer Amount. The table is currently empty. At the bottom right of the window is an 'Exit' button.

You can search using one or more of the following parameters:

- Transaction Reference Number
- Source Code
- Transfer Currency
- Activation Date
- Credit Liquidation Status
- Queue Code
- SEC Code
- Network Code
- Transaction Status
- Transaction Branch Code
- Booking Date
- File Reference Number
- Creditor Account IBAN
- Originator Account Number
- Transfer Amount
- Authorization Status
- Debit Liquidation Status
- Source Reference Number
- Dispatch Reference Number

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria.

Double click a record or select a record and click on 'Details' button to view the detailed maintenance screen.

### 3.3.3 Inbound NACHA ACH Debit Transaction Input

You can invoke “Inbound NACHA ACH Debit Transaction Input Detailed” screen by typing the function ID ‘PNDIDONL’ in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button...

Specify the following fields:

#### Transaction Reference Number

Unique Reference number for the payment generated by the system

#### Transaction Branch

Defaulted with logged in Branch Code

#### Host Code

Defaulted with Host Code to which the Logged in Branch is associated with

#### Source Code

Defaulted as ‘MANL’; for Manually Input transactions. For transactions received through channel, relevant source code from Source maintenance would be defaulted.

#### Network Code

This is selected by default.

#### NACHA Entry Type

This would be defaulted to “ACH Debit”, to indicate that the transaction is NACHA Debit transfer.

#### SEC code

Select the required SEC codes – The values are CCD, CTX, PPD, ARC, BOC and POP.

#### Transaction Reference Number

Unique Reference number for the payment generated by the system.

**User Reference**

System defaults the User reference number same as the Transaction Reference Number. You can edit this value to provide own reference number

**Source Reference Number**

System displays the Source Reference Number provided by the channel or any other source for the transaction. You can input the value for manually booked transaction

**File ID Modifier**

System displays the Unique number for the received file.

**File Creation Time**

System displays the File generation time in HHMM format in the received NACHA file

**Batch Number**

This is a unique identification of every batch in the inbound NACHA file, which is generated during file generation.

**Trace Number**

This is a unique identification of each ACH entry record in the inbound NACHA file, which is generated during file generation.

**Receiver Debtor Details****Receiver Account Number**

Select the Customer Account to be debited. Option is available to use the Pick-list which displays all valid Account Numbers available in the system.

**Account Currency**

Defaulted on selecting Debtor Account Number

**Receiving Company Name**

Defaulted on selecting Debtor Account Number

**Receiving Company ID**

Specify the ID of the Receiving Company.

**Receiving Consumer Name**

Specify the Receiving Consumer Name

**Identification Number**

This field is optional for the applicable SEC codes of CCD and CTX.

**Individual Identification Number**

This field is applicable but optional for SEC code of PPD and CIE.

**Customer Number**

System identifies the Customer number maintained in the system for the Creditor based on the selected Creditor Account Number and the same is defaulted in this field.

**Customer Service Model**

Defaulted with Customer Service Model linked to the identified customer.

**Originator (Creditor) Details****Company ID**

Specify the Identification of Originator of the ACH Credit transaction.

**Company Name**

The name appears by default upon selection of the Company Identification.

**Originating DFI**

You can input or search the Originating DFI from the list of values. Select a 9 digit ABA number of the Originating DFI (ODFI) (Creditor bank) which maintains the Originator's account number. This is mandatory.

**Originating DFI Name**

System defaults the name upon selection of the Originating DFI.

**Sending Point**

Select the Sending Point from the list of values.

If the ABA number in Immediate Origin field in the File Header record is not same as the ABA number in the Originating DFI Identification field in the Batch Header record (of the batch containing this transaction) then the user would need to input or search and select (from LOV) a 9 digit ABA number of the Immediate Origin field.

**Sending DFI Name**

System defaults the name upon selection of the Sending DFI.

**Payment Details****Booking Date**

This will be defaulted as application server date.

**Instruction Date**

This will be the Instruction (Value) date of the ACH Debit transaction i.e. the intended Collection Date, as instructed by the customer.

**Activation Date**

This is the date on which transaction would be processed, and would be same as Instruction Date. No Branch Holiday check would be done on the Activation Date

**Transfer Currency**

Specify the currency of outgoing payment, which would be defaulted and fixed to USD.

**Transfer Amount**

Amount of the outgoing Debit transaction in the Transfer currency. This amount is populated in the Amount field of the Entry Details record.

**Exchange Rate**

If Transfer currency & originator account currency are different then Exchange rate can be provided by user. System retains the input value and validate the same against override and stop variances maintained at Network Preferences.

**FX Reference Number**

This Fx reference number is sent in the External Fx rate request during processing.

**Debit Amount**

This field will be populated with the transfer amount converted in Receiver account currency using the Exchange rate.

**Credit Value Date**

The value date with which the credit to Clearing GL would be done as part of the CRLQ event of transaction accounting on the Settlement date. This date would be same as Instruction Date. This will be a View only field.

### **Debit Value Date**

The value date with which the debit to Receiver account would be done as part of the DRLQ event of transaction accounting on the Activation date. This date would be same as Instruction date. This will be a View only field. This will be a View only field.

### **Remarks**

Specify any user remarks for the outgoing payment transaction.

### **Other Transaction Details**

#### **Company Entry Description**

Specify the data as per the ACH entry in the outgoing file.

#### **Company Discretionary Data**

Specify the data as per the ACH entry in the outgoing file.

#### **Company Descriptive Date**

In outgoing ACH Debit transaction, even if this field contains one of the standard keywords for same-day settlement cycles, the same would not be considered by system. This is because same-day processing of ACH Debit transactions is not in scope.

#### **Transaction Code**

Select relevant options for the ACH Debit transaction of selected SEC code,

#### **Transaction Code Description**

Select the Transaction Code Description.

#### **Check Serial Number**

Specify the serial number of the physical cheque which is being collected through this ACH Debit transaction.

#### **Terminal City**

Specify the truncated name or abbreviation identifying a city, town or village in which the Point of Purchase electronic terminal is present where the original cheque based transaction happened.

#### **Terminal State**

Specify the 2 character state code of a US state in which the city, town or village is present where the Point of Purchase electronic terminal is present.

#### **Discretionary Data**

Specify the Discretionary Data.

#### **Addenda Details Button**

Please click on this button to capture Additional Payment Related Information in the Addenda record for the ACH entry in the incoming file. For more details on the fields, refer to section 3.2.3.1

#### **Enrich Button**

On click of this button, System Computes the Exchange Rate & Charges if applicable.

Exchange rate is computed if the creditor account currency is different from Transfer currency. User can view the computed rate in the Exchange Rate field in Main Tab.

User can view the computed Charges in pricing Tab.

### 3.3.3.1 Pricing Tab

Click on Pricing tab to view the Pricing details. For more details on fields, refer to section 3.2.1.2.

The screenshot shows a software interface with a 'Main Pricing' header. Below the header is a navigation bar with a 'Go' button and a list of tabs: Pricing Component, Pricing Currency, Pricing Amount, Waiver, Debit Currency, and Debit Amount. The main area is currently empty. At the bottom, there is a 'UDF | MIS | Accounting Details' section with fields for Maker ID, Checker ID, Authorization Status, Maker Date Stamp, and Checker Date Stamp. A 'Cancel' button is located in the bottom right corner.

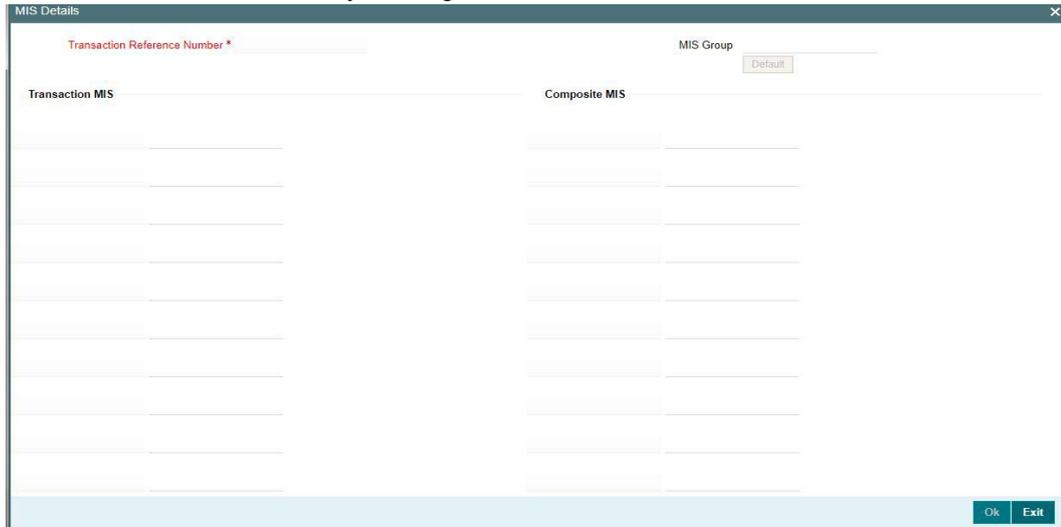

### 3.3.3.2 UDF Tab

You can invoke this screen by clicking 'UDF' tab in the screen.

The screenshot shows a 'Fields' window with a 'Go' button and a list of tabs: Field Label and Field Value. The main area is currently empty. At the bottom right, there are 'Ok' and 'Exit' buttons.

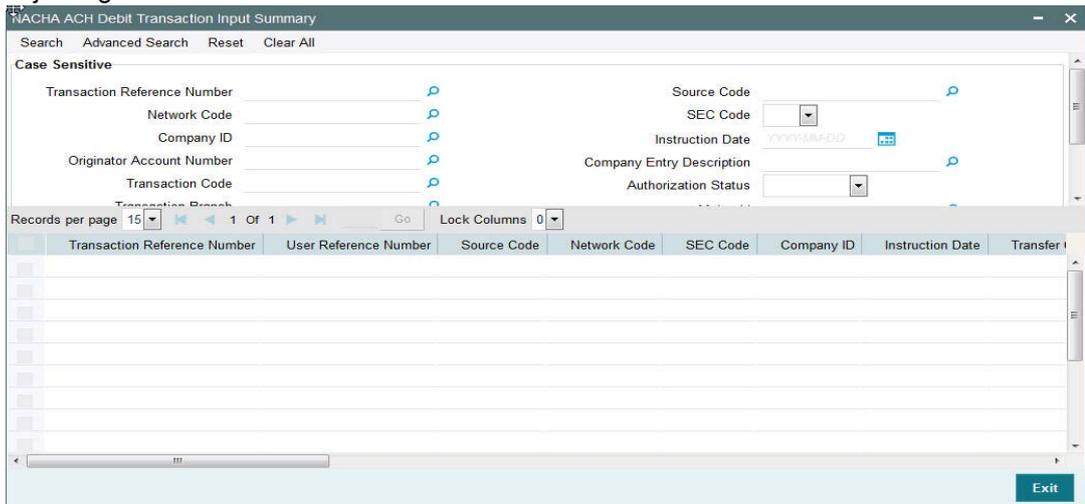

### 3.3.3.3 MIS Tab

You can invoke this screen by clicking 'MIS' tab in the screen.

### 3.3.3.4 Inbound NACHA ACH Debit Transaction Input Summary

You can invoke "Inbound NACHA ACH Debit Transaction Input Summary" screen by typing 'PNSIDONL' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

You can search using one or more of the following parameters:

- Transaction Reference Number
- Network Code
- Company ID
- Originator Account Number
- Transaction Code
- Transaction Branch
- Checker ID
- Batch Number
- Source Code
- SEC Code
- Instruction Date

- Company Entry Description
- Authorization Status
- Maker Id
- File Id Modifier
- Trace Number

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria.

Double click a record or select a record and click on 'Details' button to view the detailed maintenance screen.

### 3.3.4 Inbound NACHA ACH Debit Payments View

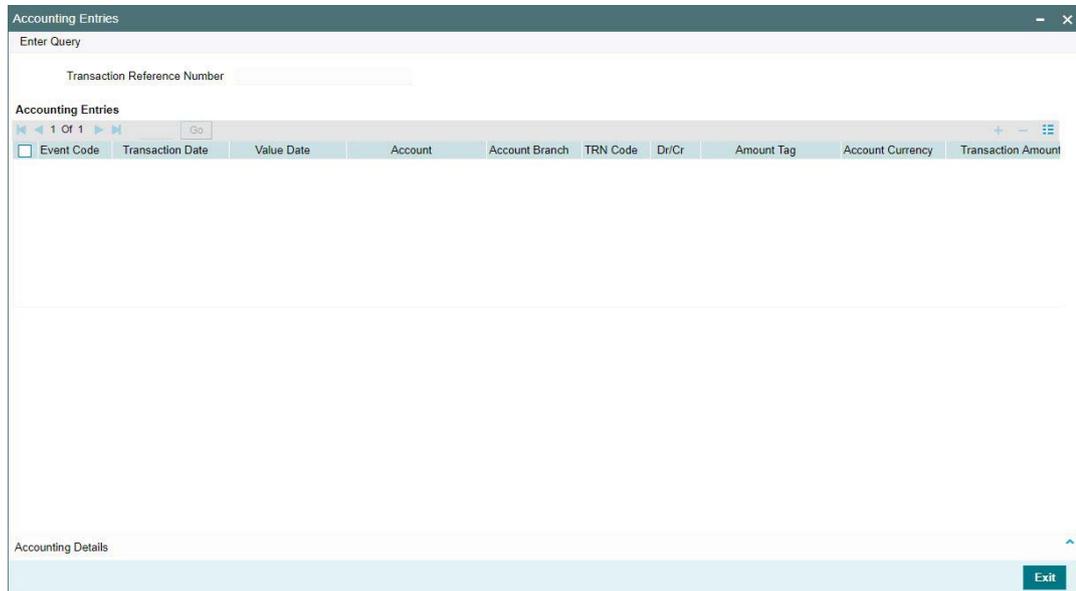

You can invoke 'NACHA Debit Payments View' screen by typing 'PNDIDIVW' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

- From this screen, click Enter Query. The Transaction Reference field gets enabled, for the user to specify the Reference Number.
- Along with the transaction details in the Main and Pricing tabs user can also view the Status details for the following:
  - Transaction Status
  - External System Status
- Click Execute Query to populate the details of the transaction in the Inbound NACHA ACH Debit Detailed View screen.

For more details on Main, Pricing tabs, refer to 'PNDIDONL' screen details above.

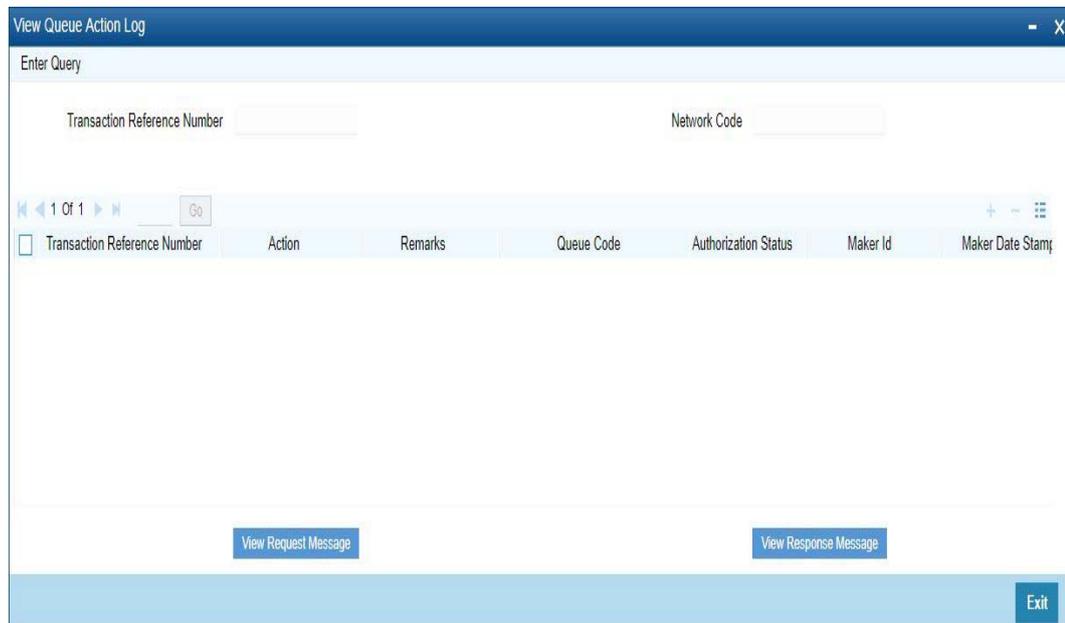

### 3.3.4.1 Accounting Entries Tab

You can view the Accounting Entries posted for the Inbound NACHA ACH debit Payment in Accounting Details tab

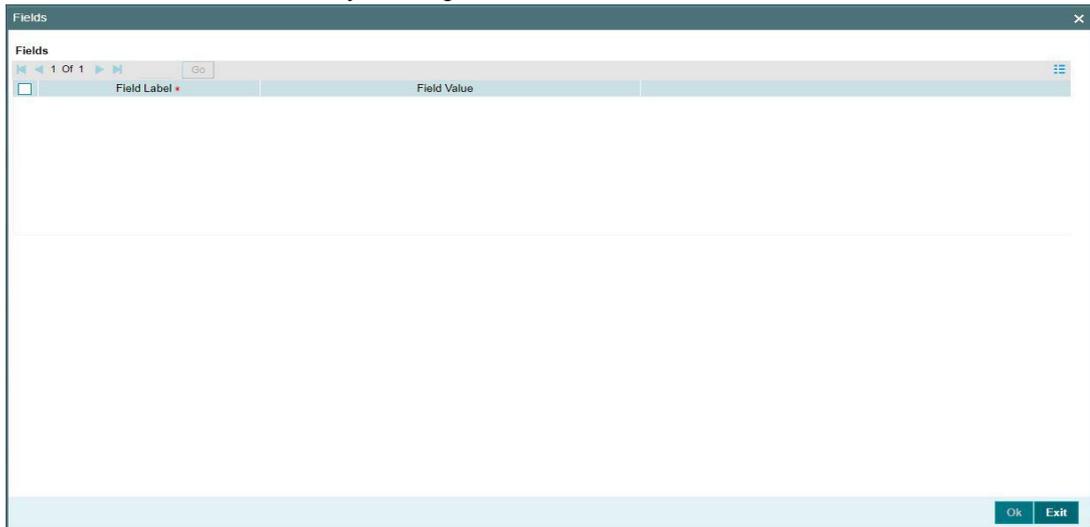

### 3.3.4.2 View Queue Action Log

User can view all the queue actions for the respective transaction initiated. You can invoke this screen by clicking the 'View Queue Action' button in View screen, where the Transaction Reference Number is auto populated and related details are displayed. For more details on the fields refer to section 3.2.4.1

### 3.3.4.3 UDF Tab

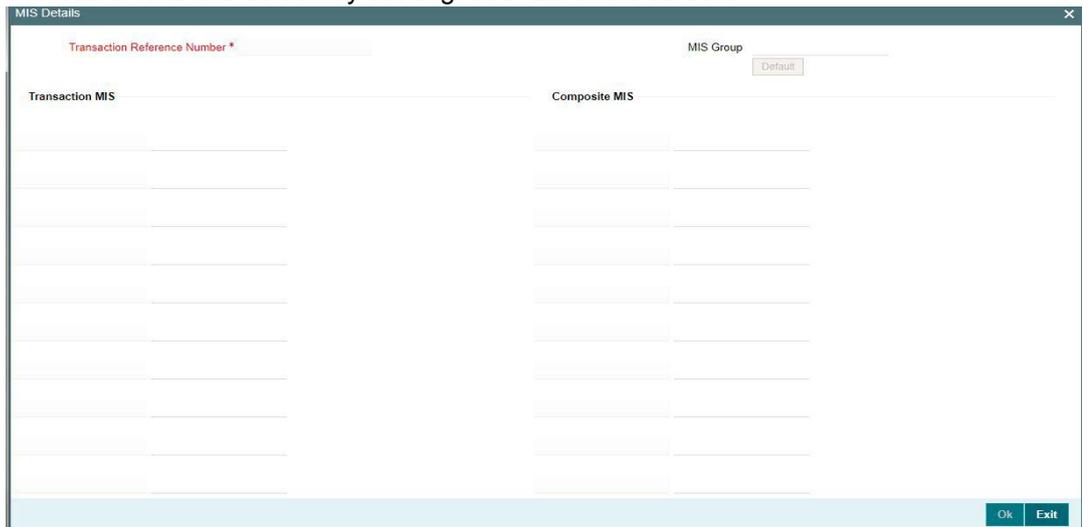

You can invoke this screen by clicking 'UDF' tab in the screen.

The screenshot shows a window titled "Fields" with a close button (X) in the top right corner. Below the title bar, there is a navigation bar with a left arrow, "1 Of 1", a right arrow, and a "Go" button. A table is displayed with two columns: "Field Label" and "Field Value". The table is currently empty. At the bottom right of the window, there are "Ok" and "Exit" buttons.

### 3.3.4.4 MIS Tab

You can invoke this screen by clicking 'MIS' tab in the screen.

The screenshot shows a window titled "MIS Details" with a close button (X) in the top right corner. At the top, there is a "Transaction Reference Number" field with a red asterisk and a "MIS Group" field with a "Default" button. Below these are two tables: "Transaction MIS" on the left and "Composite MIS" on the right. Both tables have multiple rows and columns, but they are currently empty. At the bottom right of the window, there are "Ok" and "Exit" buttons.

### 3.3.4.5 Inbound NACHA ACH Debit Payments View Summary

You can invoke “Inbound NACHA Debit Payments View Summary” screen by typing ‘PNSIDIVW’ in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

The screenshot shows the 'NACHA Debit Payments View Summary' application window. The window title is 'NACHA Debit Payments View Summary'. The interface includes a search bar at the top with 'Search', 'Advanced Search', 'Reset', and 'Clear All' buttons. Below the search bar are various input fields for search criteria: Transaction Reference Number, Transaction Status (dropdown), Transaction Branch Code, Booking Date (YYYYMMDD), File Reference Number, Dispatch Reference Number, Network Code, Transfer Amount, Authorization Status (dropdown), Debit Liquidation Status (dropdown), Source Reference Number, SEC Code (dropdown), Source Code, Transfer Currency, Activation Date (YYYYMMDD), Credit Liquidation Status (dropdown), Queue Code (dropdown), and File Id Modifier. Below the search fields is a table with columns: Transaction Reference Number, User Reference Number, Network Code, Receiver Account Number, Source Code, Host Code, Transaction Status, Transfer Amount, Transfer Currency, and Dt. The table is currently empty. At the bottom right of the window is an 'Exit' button.

You can search using one or more of the following parameters:

- Transaction Reference Number
- Transaction Status
- Transaction Branch Code
- Booking Date
- File Reference Number
- Dispatch Reference Number
- Network Code
- Transfer Amount
- Authorization Status
- Debit Liquidation Status
- Source Reference Number
- SEC Code
- Source Code
- Transfer Currency
- Activation Date
- Credit Liquidation Status
- Queue Code
- File Id Modifier

Once you have specified the search parameters, click ‘Search’ button. The system displays the records that match the search criteria.

Double click a record or select a record and click on ‘Details’ button to view the detailed maintenance screen.
