3. Function ID Glossary 3-1

1. About this Manual

1.1 Introduction

This manual is designed to help you to quickly get familiar with the features of SEPA Instant Credit Transfer in Oracle Banking Payments. It takes you through the various stages in processing a SEPA Instant Credit Transfer transaction.

You can further obtain information specific to a particular field by placing the cursor on the relevant field and striking <F1> on the keyboard.

1.2 Audience

This manual is intended for the following User/User Roles:

Role	Function
Payment Department Operators	Payments Transaction Input functions except Authorization.
Back Office Payment Department Operators	Payments related maintenances/Payment Transaction Input functions except Authorization
Payment Department Officers	Payments Maintenance/ Transaction Authorization
Bank's Financial Controller/ Payment Department Manager	Host level processing related setup for Payments and PM Dashboard/Query functions

1.3 Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

1.4 Organization

This manual is organized into the following chapters.:

Chapter	Description
Chapter 1	<i>About this Manual</i> gives information on the intended audience. It also lists the various chapters covered in this User Manual.
Chapter 2	<i>SEPA Instant Credit Transfer</i> provides information on SEPA Instant Credit Transfer.
Chapter 3	<i>Function ID Glossary</i> has alphabetical listing of Function/Screen ID's used in the module with page references for quick navigation.

1.5 Glossary of Icons

This User Manual may refer to all or some of the following icons:

Icons	Function
	Exit
	Add row
	Delete row
	Option List

2. SEPA Instant Credit Transfer

SEPA Instant Credit Transfer (SCT Inst) is an instant payment instrument for the execution of credit transfers in Euro. The messages are exchanged in ISO XML formats over a high speed network resulting in credit to beneficiary's account in seconds.

Oracle Banking Payments supports execution of SCT Instant payments.

SCT Inst scheme allows a target maximum execution time of 10 seconds to process a payment within which the Beneficiary Bank must report acceptance/rejection of the payment. The services based on the Scheme are available 24 hours a day and on all Calendar Days of the year.

Payment Processing

- On receiving an SCT Inst payment request, the originator bank completes the necessary validations related to the payment. On processing the payment successfully, the bank makes a reservation of the Amount (amount block) on the Originator's Account.
- The Originator Bank instantly prepares pacs.008 message for SCT Instant Instruction, puts the Time Stamp and forwards the same to beneficiary bank through CSM. The Time Stamp marks the start of the Execution Time Cycle of the SCT Inst Transaction.
- The Beneficiary Bank receives the SCT Inst Transaction from its CSM, verifies whether it can apply the payment to the Beneficiary's Payment Account and executes various validation checks. The Beneficiary Bank sends the confirmation message back to its CSM within the maximum allowed execution time.
- The CSM passes on the positive confirmation message to the Originator Bank. Based on this positive confirmation message, the Originator Bank debits the Originator's account.
- Beneficiary bank receives a technical confirmation from CSM that its positive confirmation message has been successfully delivered to the CSM, based on which funds are made available to the beneficiary.
- A '**Reject**' occurs when an SCT Instant Transaction is not accepted for normal execution under the Scheme because of validation failures or delay in receiving the message. Reject messages contain a reason code by the CSM or beneficiary bank. When Beneficiary Bank has the certainty that its confirmation message cannot reach or has not reached the CSM within the 20 seconds after the Time Stamp, the Beneficiary Bank sends a negative confirmation message with the appropriate reason code to its CSM.
- If the Originator Bank receives a negative confirmation message regarding the SCT Instant Transaction, the Originator Bank cancels the SCT Instant Instruction and revokes the reservation of the Amount on the Originator's account. It is obliged to immediately report the SCT Inst Transaction failure to the Originator with a reason.
- The CSM of the Originator Bank or the Originator Bank **cannot** unilaterally reject the SCT Inst Transaction **after the time-out deadline**.
- The Scheme delivers the end-to-end carrying of Customer remittance data on either a structured or an unstructured basis.

Recall Processing

- An **SCT Inst Recall** occurs when the Originator Bank requests to cancel an SCT Instant transaction. The Recall procedure can be initiated only by the Originator Bank which may do it on behalf of the Originator. The Originator Bank must send out the SCT Inst Recall within 10 Banking Business Days after the execution date of the initial SCT Inst Transaction.

- Before initiating the Recall procedure, the Originator Bank checks if the SCT Instant Transaction is subject to only one of the following reasons:
 - Duplicate sending
 - Technical problems resulting in erroneous SCT Inst Transaction(s)
 - Fraudulent originated SCT Inst Instruction
- The Beneficiary Bank provides the Originator Bank with an answer to the SCT Inst Recall within 10 Banking Business Days following the SCT Inst Recall from the Originator Bank.
- Beneficiary Bank can charge a return fee to the Originator Bank. This practice is only allowed for a positive response to a Recall. The amount sent back can differ from the initial amount of the SCT Inst Transaction in such cases.

Investigation Messages

- The Originator Bank sends an SCT Inst status inquiry message pacs.028 to the Beneficiary Bank through CSM to inquire about the actual status of the initial SCT Inst Transaction. This is done if no response is received regarding the status of the payment after an allowed time limit. The current time limit is 25 seconds.
- Each party in the Interbank Space instantly verifies if it actually received the initial SCT Inst Transaction from the Originator Bank.
- In case the initial SCT Inst Transaction had not been received by CSM/beneficiary bank, non-delivery of this initial transaction is reported back to the Originator Bank who then rejects the transaction and informs the Originator. If a party in the Interbank Space had received a confirmation message on the initial SCT Inst Transaction, this party is obliged to instantly retransmit this confirmation message to the Originator Bank.

Message versions supported by SCT Inst

Message Type		
FI to FI Customer Credit Transfer	pacs.008.001.02	pacs.008.001.08
Confirmation Message Positive/ Negative	pacs.002.001.03	pacs.002.001.10
Cancellation Request (Recall)	camt.056.001.01	camt.056.001.08
Negative Response to Recall	camt.029.001.03	camt.029.001.09
Positive Response to Recall	pacs.004.001.02	pacs.004.001.09
Transaction status investigation message	pacs.028.001.001	pacs.028.001.03

For ISO 2019 version, maintenance is to be done in SEPA Message Preferences screen (Function ID:PMDSEPAM).

2.1 Faster Payment Maintenances

This section lists the major maintenances that are required for processing of outward and inward Faster Payments.

- Network Maintenance
- Source Maintenance
- Source Network Preferences
- Network Currency Preferences
- Network Preferences
- External System Maintenances
- External Customer Account Input
- Pricing Code
- Pricing Value

For maintenance details, refer to Payments Core and Payment Pricing – User Manuals.

2.2 Outbound Faster Payments Transaction Input

2.2.1 Outbound SCT Inst Transaction Input

You can invoke “Outbound SCT Inst Transaction Input” screen by typing ‘PFDOTONL’ in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button. This screen can be used to manually input the SCT Inst payment details for an outbound transaction.

You can specify the following fields:

Transaction Branch

The system indicates the branch from which the customer is logged in.

Branch Name

System defaults the Branch Name of the Transaction Branch Code

Host Code

The system indicates the host code that is linked to the transaction branch of the customer.

Host Code Description

System defaults the description of the host code

Source Code

This is defaulted to 'MANL' and it is non-editable for manually initiated transactions.

Source Code Description

System defaults the description of the Source code

Transaction Reference Number

Indicates a unique identifier of the SCT Inst payment transaction and auto-generated by the system based on the common transaction reference generation logic.

Network Code

The field shows a list of valid network codes from the Network maintenance (PMDNWMNT) with payment type as 'Faster payment'. This is a mandatory field.

Network Code Description

System defaults the description of the Network code.

End to End Identification

End to End ID is populated as the transaction reference. You can modify the same to indicate the End to End ID provided by the originating customer (debit account owner).

Instruction ID

This is an optional field. This is for input of the Instruction ID received from the customer's payment request.

On Us Transfer

By-default the value is set to No and the field is disabled.

During enrich or save, the system auto-updates the value to Yes if:

- The creditor agent BIC is a branch BIC of the same host (as per STDCRBRN), and
- Dispatch On Us Transfers is not selected in Network Preferences.

2.2.1.1 Main Tab

Click **Main** tab from the Faster Outgoing Payment screen

The screenshot shows the 'Main' tab of the 'Faster Outgoing Payment' screen. The interface is organized into four main sections: 'Debtor Details', 'Payment Details', 'Creditor Details', and 'Verification of Payee Response Details'. The 'Debtor Details' section contains fields for Debtor Account Number, Debtor Account IBAN, Account Currency, Debit Currency Name, Account Branch, Debtor Name, Debit Amount, Customer Number, and Customer Service Model. The 'Payment Details' section includes Booking Date, Instruction Date, Execution Time, Activation Date, Instructed Currency Indicator, Instructed Currency, Instructed Currency Name, Instructed Amount, Transfer Currency, Transfer Currency Name, Transfer Amount, Exchange Rate, FX Reference Number, and Remarks. The 'Creditor Details' section includes SSI Label, Creditor Account IBAN, Creditor Name, and Creditor Bank Code. The 'Verification of Payee Response Details' section includes Response Status, Name Match Status, Beneficiary Name, Error Code, and Error Details. At the bottom, there are fields for Maker Id, Maker Date Stamp, Checker Id, Checker Date Stamp, and Authorization Status. There are also buttons for 'Additional Details' and 'Exit'.

You can specify the following fields:

Debtor Details

Debtor Account Number

Specify the account number of the debtor. Alternatively, you can select the account number from the option list. The list displays all valid account numbers maintained in the system. This is a mandatory field.

Debtor Account IBAN

This field is auto-populated based on the debtor account selected.

Account Currency

Account currency is defaulted based on the selected debit account.

Account Branch

Account Branch is also defaulted based on the selected debit account.

Debtor Name

This is populated based on debtor account customer.

Debit Amount

This field is populated as the transfer amount converted in debtor account currency. The exchange rate pick up is based on network preferences maintained. This field is disabled for user input.

Customer Number

The system indicates the customer linked to the debtor account.

Customer Service Model

The system indicates the service model linked to the customer.

Creditor Details

SSI Label

Select the required SSI label from the list of values so that beneficiary details can appear by default.

This list is populated with valid SSI Labels, applicable for the customer and the Network. This is an optional field

Creditor Account IBAN

Specify the IBAN of the beneficiary. This is a mandatory field.

Creditor Name

Specify the name of the beneficiary. This is a mandatory field.

Creditor Bank Code

Select the required bank code from the list of values. All open and authorized Bank Codes/ BIC codes available in local bank directory (PMDBKMNT) applicable for the Network are listed in this field. The listing is based on the 'Bank Network Identifier' maintained for Network maintenance (PMDNWMNT). For Network Type code corresponding to TIPS, only the BICs in the "TIPS Directory" are displayed.

Verification of Payee button

On clicking Verification of Payee button, system sends out Verification of Payee request for Creditor IBAN and Creditor Name.

Payment Details**Booking Date**

The current date is defaulted as Booking Date. This is a disabled field for user modification.

Instruction Date

This is defaulted to current application server date. You can modify this date. This is the requested execution date by the customer. Back dates are not allowed.

Execution Date

This is defaulted to the current time in time zone of the logged in Branch.

Activation Date

This date is derived from Instruction date and it is disabled. Since Network / Branch holidays are not applicable for SCT Instant, activation date is the same as instruction date. Payment is submitted to the Clearing Infrastructure (CI) on Activation date and processed by the CI on the same date.

Instructed Currency Indicator

Select any of the two options:

- Transfer Currency - If the Instructed currency option is 'Transfer Currency' then the Instructed amount provided will be considered as the Transfer Amount.
- Debit Currency - If the option is 'Debit Currency', then the Instructed Amount provided will be the Debit amount.

Instructed Currency

Select the currency from the list of values available required for the transaction

Instructed Amount

Specify the Instructed Amount for the transaction

Transfer Currency

This is automatically populated based on the selected Network code and the currency maintained in Network currency preferences (PMDNCMNT) maintenance. This is a mandatory field.

Transfer Amount

Specify the payment amount for transfer. This is a mandatory field.

Exchange Rate

Specify the exchange rate if debit account currency is different from the transfer currency. The system retains the input value and validate the same against override and stop variances maintained in the Network preference.

If exchange rate is not specified, then the system populates the exchange rate on enrich or save, if the transfer amount is less than small FX limit maintained.

FX Reference Number

Specify the FX Reference Number if the External Exchange Rate is applicable and advance FX booking is done.

Enrich

Click this button to trigger computation of Charges and tax on charges, if applicable based on the maintenance for Pricing Code specified in Network Currency Preferences (PMDNCPRF).

Exchange rate is fetched if internal rates are applicable.

Remarks

Specify the required Remarks.

Note

IBAN Validation for Outbound/Inbound Instant payments is done only if IBAN validation required field is maintained as Yes in Network Maintenance screen (PMDNWMNT).

Verification of Payee Response Details

The response details received for the verification of payee request sent can be viewed in this section.

Response Status

System displays the Response Status from the following values:

- Success
- Failed

Name Match Status

System displays the Name Match Status.

Beneficiary Name

System displays the Beneficiary Name.

Error Code

System displays the Error Code.

Error Details

System displays the Error Details.

2.2.1.2 Additional Details - Debtor Creditor Details

Under **Main** tab, click the **Additional Details** button in the Outbound Faster Payment screen.

The screenshot shows the 'Additional Details' window with the following sections and fields:

- Transaction Reference Number** and **Activation Date** (top left)
- Host Code** and **Network Code** (top right)
- Debtor Creditor Details** (tabbed view, currently on 'Debtor Creditor Details')
- Debtor Unstructured Address Details**: Address Line 1, Address Line 2
- Debtor Structured Address Details**: Department, Sub Department, Street Name, Building Number, Building Name, Floor, Post Box, Room, Post Code, Town Name, Town Location Name, District Name, Country Sub Division, Country
- Debtor Private Details**: Birth Date (YYYY-MM-DD), Province Of Birth, City Of Birth, Country Of Birth
- Debtor Account Proxy Details**: Proxy Type Code (dropdown), Proxy Type Proprietary, Account Proxy Identification
- Creditor Unstructured Address Details**: Address Line 1, Address Line 2
- Creditor Structured Address Details**: Department, Sub Department, Street Name, Building Number, Building Name, Floor, Post Box, Room, Post Code, Town Name, Town Location Name, District Name, Country Sub Division, Country
- Creditor Private Details**: Birth Date (YYYY-MM-DD), Province Of Birth, City Of Birth, Country Of Birth
- Ultimate Debtor Details**: Name
- Ultimate Debtor Private Details**: Birth Date (YYYY-MM-DD), Province Of Birth, City Of Birth, Country Of Birth
- Ultimate Debtor Identification**: Organization Bank ID, LEI, Organization Identification, Private Identification, Identification Issuer, Identification Scheme Code, Identification Scheme Proprietary
- Ultimate Creditor Details**: Name
- Ultimate Creditor Private Details**: Birth Date (YYYY-MM-DD), Province Of Birth, City Of Birth, Country Of Birth
- Ultimate Creditor Identification**: Organization Bank ID, LEI, Organization Identification, Private Identification, Identification Issuer, Identification Scheme Code, Identification Scheme Proprietary

You can specify the following fields:

Debtor Unstructured Address Details

Address 1

Specifies the first line of the debtor's address.

Address 2

Specify the second line of the debtor's address.

Debtor Account Proxy Details

Proxy Type Code

Specify the Proxy Type Code from the following:

- TELE
- EMAL
- DNAM

Proxy Type Proprietary

Specify the Proxy Type Proprietary.

Account Proxy Identification

Specify the Account Proxy Identification.

Debtor Structured Address Details

Specify the following fields:

- Department
- Sub Department
- Street Name
- Building Number
- Building Name
- Floor
- Post Box
- Room
- Post Code
- Town Name
- Town Location Name
- District Name
- Country Sub Division
- Country

Debtor Private Details

Birth Date

Specify the date of birth of the debtor.

Province Of Birth

Specify the province of birth of the debtor.

City Of Birth

Specify the city of birth of the debtor.

Country Of Birth

Specify the country of birth. Alternatively, you can select the country code from the option list. The list displays all valid country codes maintained in the system.

Debtor Identification

Organization Bank Id

Specify the BIC details in case the organization is a Financial Institution. In case of non-financial specify the BIC assigned to the corporate organization.

LEI

Specify the LEI.

Organization Identification

Specify the Identification of the Debtor identification.

Private Identification

Specify the Private Identification details that is issued by a government or private organization to an individual person.

Identification Issuer

Specify the Issuer that provided the identification.

Identification Scheme Code

Specify the Identification Scheme Code from the list of values.

Identification Scheme Proprietary

Specify the Identification Scheme Proprietary details.

Creditor Unstructured Address Details**Address 1**

Specifies the first line of the creditor's address.

Address 2

Specify the second line of the creditor's address.

Creditor Account Proxy Details**Proxy Type Code**

Specify the Proxy Type Code from the following:

- TELE
- EMAL
- DNAM

Proxy Type Proprietary

Specify the Proxy Type Proprietary.

Account Proxy Identification

Specify the Account Proxy Identification.

Creditor Structured Address Details

Specify the following fields:

- Department
- Sub Department
- Street Name
- Building Number
- Building Name
- Floor
- Post Box
- Room
- Post Code
- Town Name
- Town Location Name
- District Name
- Country Sub Division
- Country

Creditor Private Details**Birth Date**

Specify the date of birth of the creditor.

Province Of Birth

Specify the province of birth of the creditor.

City Of Birth

Specify the city of birth of the creditor.

Country Of Birth

Specify the country of birth. Alternatively, you can select the country code from the option list. The list displays all valid country codes maintained in the system.

Creditor Identification**Organization Bank Id**

Specify the BIC details in case the organization is a Financial Institution. In case of non-financial specify the BIC assigned to the corporate organization.

LEI

Specify the LEI.

Organization Identification

Specify the Identification of the Creditor identification.

Private Identification

Specify the Private Identification details that is issued by a government or private organization to an individual person.

Identification Issuer

Specify the Issuer that provided the identification.

Identification Scheme Code

Specify the Identification Scheme Code from the list of values.

Identification Scheme Proprietary

Specify the Identification Scheme Proprietary details.

Ultimate Debtor Details**Name**

Specify the name of the Ultimate Debtor.

Ultimate Debtor Private Details**Birth Date**

Specify the date of birth of the Ultimate Debtor.

Province Of Birth

Specify the province of birth of the Ultimate Debtor.

City Of Birth

Specify the city of birth of the Ultimate Debtor.

Country Of Birth

Specify the country of birth. Alternatively, you can select the country code from the option list. The list displays all valid country codes maintained in the system.

Ultimate Debtor Identification

Organization Bank Id

Specify the BIC details in case the organization is a Financial Institution. In case of non-financial specify the BIC assigned to the corporate organization.

LEI

Specify the LEI.

Organization Identification

Specify the Identification of the Ultimate Debtor identification.

Private Identification

Specify the Private Identification details that is issued by a government or private organization to an individual person.

Identification Issuer

Specify the Issuer that provided the identification.

Identification Scheme Code

Specify the Identification Scheme Code from the list of values.

Identification Scheme Proprietary

Specify the Identification Scheme Proprietary details.

Ultimate Creditor Details

Name

Specify the name of the Ultimate Debtor.

Ultimate Creditor Private Details

Birth Date

Specify the date of birth of the debtor.

Province Of Birth

Specify the province of birth of the debtor.

City Of Birth

Specify the city of birth of the debtor.

Country Of Birth

Specify the country of birth. Alternatively, you can select the country code from the option list. The list displays all valid country codes maintained in the system.

Ultimate Creditor Identification

Organization Bank Id

Specify the BIC details in case the organization is a Financial Institution. In case of non-financial specify the BIC assigned to the corporate organization.

LEI

Specify the LEI.

Organization Identification

Specify the Identification of the Ultimate Creditor identification.

Private Identification

Specify the Private Identification details that is issued by a government or private organization to an individual person.

Identification Issuer

Specify the Issuer that provided the identification.

Identification Scheme Code

Specify the Identification Scheme Code from the list of values.

Identification Scheme Proprietary

Specify the Identification Scheme Proprietary details.

2.2.1.3 Additional Details - Other Details

After specifying the Debtor Creditor details, click the Other Details tab.

The screenshot shows the 'Outgoing Faster Payments' window with the 'Other Details' tab selected. The window contains several input fields and sections:

- Transaction Reference No** and **Host Code** (top left and right).
- Activation Date** and **Network Code** (below the above fields).
- Debtor Creditor Details** and **Other Details** (tabs, with 'Other Details' selected).
- Purpose Code** (input field with a dropdown arrow).
- Remittance Information(Unstructured)** section with four **Payment Details** (1-4) input fields, each with a dropdown arrow.
- Remittance Information(Structured)** section with **Remitter Code**, **Remitter Info Issuer**, and **Remitter Info Reference** input fields, each with a dropdown arrow.
- Payment Type Information** section with **Category Purpose Code** (input field with a dropdown arrow) and **Category Purpose Value** (input field).
- Ok** and **Cancel** buttons at the bottom right.

You can specify the following fields:

Purpose Code

Select the purpose code from the list of values.

Remittance Information (Unstructured)

Payment Details 1 -4

Specify the first line of the payment details for the creditor to identify the purpose so that payment can be applied. You can enter a maximum of 35 characters.

Remittance Information (Structured)

Remitter Code

Specify the remitter code details.

Remitter Info Issuer

Specify the Remitter Info Issuer details.

Remitter Info Reference

Specify the Remitter Info Reference details.

Payment Type Information

Category Purpose Code

Select the category of the purpose code from the list of values.

Category Purpose Value

Specify the value of the Category Purpose.

2.2.1.4 Field Level Validations

Upon saving of an Outbound SCT Instant payment transaction, the system performs validations for presence of the following mandatory fields:

- Host Code
- Transaction Branch Code
- Network Code
- End to End ID
- Debtor Account IBAN
- Debtor Account Name
- Creditor Bank Code
- Creditor Account IBAN
- Creditor Account Name
- Transfer Currency
- Transfer Amount
- Activation Date

If the country code embedded in the Creditor Agent BIC has values like 'PF', 'NC' or 'WF', AND the country code embedded in the Debtor Agent BIC does not have one of values like: 'FR', 'GP', 'RE', 'MQ', 'GF', 'PM', 'PF', 'NC', 'WF', 'BL', 'MF' or 'YT', then the individual transaction is rejected. (Field validation as required by EBA RT1)

In party identification for each party (Debtor/Creditor/Ultimate Debtor/Ultimate Creditor), only one of the values in can occur for:

- Organization Bank ID
- Organization identification
- Private Identification

Only one of the values can be present for:

- Category purpose code
- Category purpose proprietary

Only one of structured Payment Details or Unstructured Payment details may be present.

2.2.1.5 Pricing Tab

Click the **Pricing** tab from the Faster Payment Outbound Payment screen.:

The screenshot displays the 'Pricing' tab interface. At the top, there are tabs for 'Main' and 'Pricing', with 'Pricing' being the active tab. Below the tabs is a navigation bar with '1 Of 1' and a 'Go' button. The main area contains a table with the following columns: 'Pricing Component', 'Pricing Currency', 'Pricing Amount', 'Waived', 'Debit Currency', and 'Debit Amount'. The table is currently empty. Below the table, there are fields for 'Maker ID', 'Checker ID', 'Authorization Status', 'Maker Date Stamp', and 'Checker Date Stamp'. An 'Exit' button is located in the bottom right corner.

Note

- On clicking the Enrich button, system would compute the Charges, and Tax on Charges if applicable, based on the maintenance for Pricing Code specified in Network Currency Preferences (PMDNCPRF).
 - There may be one or more applicable Charge and Tax components as defined in the Pricing Code maintenance. For each Charge and/or Tax component, the fixed amount or rate would be fetched from Pricing Value Maintenance screen (PPDV-LMNT) as applicable for the Payment Source code & Customer Service model.
-

You can specify the following fields:

Pricing Component

The system displays the name of the applicable Charge component.

Pricing Currency

The system displays the pricing currency of the component from the Pricing Code Maintenance.

Pricing Amount

The system displays the fixed or calculated charge amount using the Pricing Value Maintenance. You can edit this field to a non-zero value.

Waived

Check this box to select the charge component to waive the associated charges.

Note

- If a particular Charge component is waived by you, then system would automatically also check the Waiver check box for the associated Tax component (identified from the Pricing code maintenance) if displayed in this grid. You would not be able to clear the Waiver check box for this Tax component unless the associated Charge component waiver flag is unchecked.
 - If charge/tax component is already waived in the Pricing Value maintenance, this component would still be displayed with the value and the waiver flag checked. This flag would not be allowed to be unchecked.
-

Debit Currency

Displays the debit account currency.

Debit Amount

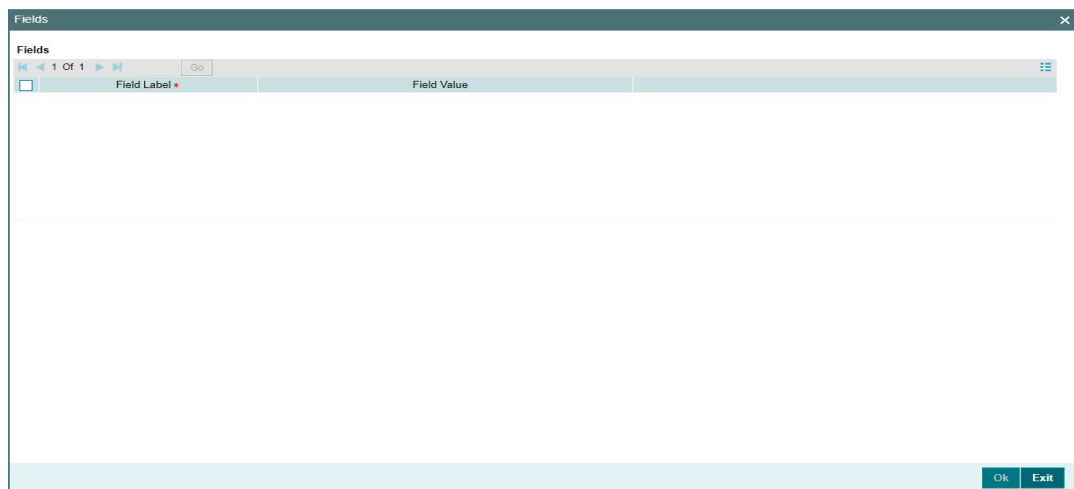

The system displays the amount debited to the selected debit amount.

Note

Debit Currency is the same as Pricing Currency.

2.2.1.6 UDF button

Click on the 'UDF' button to invoke this screen.

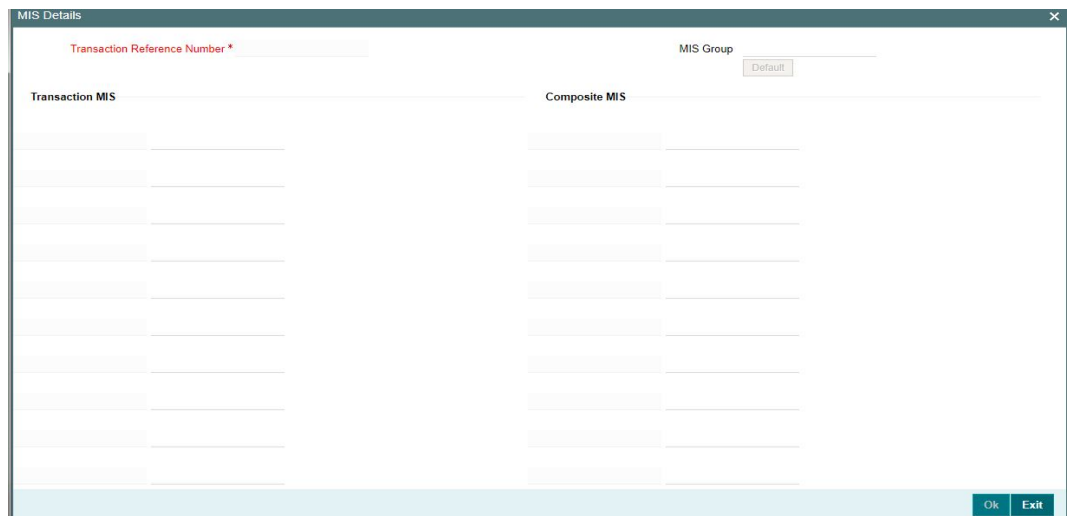

You can specify user defined fields for each transaction.

Based on the UDF Group linked in the Source Maintenance screen for source code applicable to Manual initiation, UDF fields are available for input while creating the transaction.

2.2.1.7 MIS button

Click on the 'MIS' button to invoke this screen.

You can specify the MIS details in this sub-screen.

Based on the MIS Group linked in the Source Maintenance screen for source code applicable to Manual initiation, MIS class codes and MIS default values are populated for the SCT Instant payment transaction.

It is possible to change the default MIS values and input values for other MIS fields for which no value is defaulted.

Actions allowed in the Outbound Payment Input screen

The following are the operations which are supported in the Outbound Payments Input Screen:

- New: This operation is to be used to create a new Payment Transaction.
- Delete: This operation is to be used to delete the new Payment transaction created before Payment Authorization. Only the user who created the Payment transaction can do this Operation.
- Copy: This operation enables the user to create a transaction by copying details from an existing transaction.
- Authorize: This operation is to be used to approve the Payment creation or the last operation on the payment.

Query: This operation is to retrieve already created payment using the combination of header fields. The search fields should be used in a manner so that it results in a single matching transaction being retrieved as a search result.

2.2.2 Outbound SCT Inst Transaction Template

You can invoke Outbound SCT Inst Transaction Template screen by typing PFDOTSTM in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button. This screen is utilized for managing SI using SEPA Instant Outbound Transactions.

Note

- Standing Instruction templates can be made with or without a transfer amount being entered.
 - Required checks for enriching or saving SEPA Instant payments will also apply when saving templates. Any validation errors will result in an error message. If an amount is not had by the template or if it is zero, the validations related to the transfer amount will be ignored.
 - The Template Type will be determined as either Complete or Incomplete. If a non-zero transfer amount is included by the template, it will be classified as Complete, otherwise, it will be 'Incomplete.
 - 6-eye Verification support will be provided for the template screens. New templates that are saved will show up in the current SI common summary screen.
-

On Outbound SCT Inst Transaction Template screen, specify the fields. For more information of fields, refer to the field description below.

Transaction Branch

Indicates the particular branch where a transaction starts. When user clicks New, the system sets the Transaction Branch to the default value.

Branch Name

When the user clicks New, the system automatically sets the Branch Name for the transaction branch.

Template ID

User is required to input the Unique Identifier for a template creation.

Host Code

The system indicates the host code that is linked to the transaction branch of the customer.

Host Code Description

System defaults the description of the host code

Source Code

Select the source code from the LOV.

Source Code Description

System defaults the description of the Source code

Network Code

The field shows a list of valid network codes from the Network maintenance (PMDNWMNT) with payment type as Faster payment. This is a mandatory field.

Network Code Description

System defaults the description of the Network code.

Instruction ID

This is an optional field. This is for input of the Instruction ID received from the customer's payment request.

Debtor Details**Debtor Account Number**

Specify the account number of the debtor. Alternatively, you can select the account number from the option list. The list displays all valid account numbers maintained in the system. This is a mandatory field.

Debtor Account IBAN

This field is auto-populated based on the debtor account selected.

Account Currency

Account currency is defaulted based on the selected debit account.

Account Branch

Account Branch is also defaulted based on the selected debit account.

Debtor Name

This is populated based on debtor account customer.

Debit Amount

This field is populated as the transfer amount converted in debtor account currency. The exchange rate pick up is based on network preferences maintained. This field is disabled for user input.

Customer Number

The system indicates the customer linked to the debtor account.

Customer Service Model

The system indicates the service model linked to the customer.

Creditor Details**SSI Label**

Select the required SSI label from the list of values so that beneficiary details can appear by default.

This list is populated with valid SSI Labels, applicable for the customer and the Network. This is an optional field

Creditor Account IBAN

Specify the IBAN of the beneficiary. This is a mandatory field.

Creditor Name

Specify the name of the beneficiary. This is a mandatory field.

Creditor Bank Code

Select the necessary bank code from the provided list. All active and approved Bank Codes/ BIC codes found in the local bank directory (PMDBKMNT) relevant to the Network are shown in this section. The list is created based on the 'Bank Network Identifier' used for Network maintenance (PMDNWMNT). For the Network Type code related to TIPS, only the BICs listed in the 'TIPS Directory' will be visible.

Verification of Payee button

On clicking Verification of Payee button, system sends out Verification of Payee request for Creditor IBAN and Creditor Name.

Payment Details**Instructed Currency Indicator**

Select any of the two options:

- Transfer Currency - If the Instructed currency option is 'Transfer Currency' then the Instructed amount provided will be considered as the Transfer Amount.
- Debit Currency - If the option is 'Debit Currency', then the Instructed Amount provided will be the Debit amount.

Instructed Currency

Select the currency from the list of values available required for the transaction

Instructed Currency Name

The Instruction Currency is referred to by the currency used for executing a particular payment instruction or transaction. Specify the Instruction Currency Name.

Instructed Amount

Specify the Instructed Amount for the transaction

Transfer Currency

This is automatically populated based on the selected Network code and the currency maintained in Network currency preferences (PMDNCMNT) maintenance. This is a mandatory field.

Transfer Currency Name

Specify the Transfer Currency Name.

Transfer Amount

Specify the payment amount for transfer. This is a mandatory field.

Remarks

Specify the required Remarks.

Verification of Payee Response Details

The response details received for the verification of payee request sent can be viewed in this section.

Response Status

System displays the Response Status from the following values:

- Success
- Failed

Name Match Status

System displays the Name Match Status.

Beneficiary Name

System displays the Beneficiary Name.

Error Code

System displays the Error Code.

Error Details

System displays the Error Details.

For information of UDF and MIS fields, refer to the sections, "Example 2.2.1.6" on page 16

2.2.2.1 Standing Instruction Template Summary

You can invoke the Standing Instruction Summary screen by typing PMSSITMP in the field at the top right corner of the application toolbar and clicking on the adjoining arrow button.

Note

- New templates that are saved will show up in the current SI common summary screen.
-

Template Id

This is a unique ID given by the user while creating a template. Click the search icon and specify the template ID to fetch the Template. Select the Template ID from the Search Results.

Network Code

It serves as a unique identifier for defining and managing payment processing networks, including local, cross-border, or specific systems like ACH and RTGS. This identifier is worked alongside other information such as a host code, payment type, and network service ID to enable transactions through designated clearing and payment networks.

Click the search icon and specify the Network Code and click Fetch. Select the Network code from the search results.

Checker ID

The Checker ID is the identifier for the user who approves a transaction submitted by another user, called the Maker.

Click the Search icon and specify the Checker ID and click Fetch. Select the Checker ID from the search results.

Template Type

Template type indicates different preset formats designed for specific tasks like data entry, bulk uploads, messaging, and general ledger entries. These templates assist in standardizing operations and data processing in banking software.

Select the Template Type from the drop-down list. The available options are:

- Complete
- Incomplete

Transfer Amount

The transfer amount is a required numeric field where you input the money value of the transfer.

Click the Search icon and specify the Transfer Amount and click Fetch. Select the Transfer Amount from the search results.

Network Type Code

The unique codes that identify various payment networks for handling financial transactions are indicated by Network Type Code. The system's maintenance screens, like the Network Preference screen, specify these codes.

Click the Search icon and specify the Network Type Code and click Fetch. Select the Network Type Code from the search results.

Template reference

Click the Search icon and specify the Template Reference and click Fetch. Select the reference from the search results.

Transaction Type

Select the Transaction type from the drop-down list. The available options are:

- Incoming
- Outgoing

Debator Account Number

Click the Search icon and specify the Debator Account Number and click Fetch. Select the Debator Account Number from the search results.

Verification Status

Select the Verification status from the drop-down list. The available options are:

- Not Required
- Authorized
- Unauthorized
- Rejected

Transfer Currency

Click the Search icon and specify the Transfer Currency and click Fetch. Select the Transfer Currency from the search results.

Transfer Type

Select the Transfer type from the drop-down list. The available options are:

- Customer Transfer
- Bank Transfer

Maker ID

Click the search icon and specify the Maker ID and click Fetch. Select the Maker ID from the search results.

Authorization Status

Click the drop-down list and select the Authorization status. The available options are:

- Authorized
- Unauthorized
- Rejected

Customer ID

Click the search icon and specify the Customer ID and click Fetch. Select the Customer ID from the search results.

Verifier ID

Click the search icon and specify the Verifier ID and click Fetch. Select the Verifier ID from the search results.

Source Code

Click the search icon and specify the Source Code and click Fetch. Select the Source Code from the search results.

View Template

User can view the details of the standing Instruction Template for the chosen record.

Modify Template

Users can modify the template. This action needs authorization.

Authorize

This action will enable the authorization of a template record that is not authorized or the authorization of a modification action.

Delete

Enables the user to remove the modification started by the creator

Verify

Enables the user to verify (6-eye changes) the created template

Reject

Reject the un authorized modification status.

View

Users can see the details of the queue actions related to the actions taken.

2.2.2.2 Outbound SCT Inst Transaction Summary

You can view the summary in “Outbound SCT Inst Transaction Summary” screen. You can invoke the Outbound Faster Payments Summary screen by typing ‘PFSOTONL’ in the field at the top right corner of the Application toolbar and clicking on the adjoining arrow button.

Outbound SCT Inst Transaction Summary

Search Advanced Search Reset Clear All

Transaction Reference Number	Network Code	Creditor Account Number	Transaction Branch	Booking Date	Instruction Date	Activation Date	Debtor Account Number	Debtor Account IBAN	Transfer Currency	Transfer Amount
------------------------------	--------------	-------------------------	--------------------	--------------	------------------	-----------------	-----------------------	---------------------	-------------------	-----------------

Exit

You can search for the records using one or more of the following parameters:

- Transaction Reference Number
- Network Code
- Transaction Branch
- Booking Date
- Instruction Date
- Activation Date
- Debtor Account Number
- Debtor Account IBAN
- Transfer Amount
- Transfer Currency
- Creditor Bank Code
- Creditor Account IBAN
- SSI Label
- Authorization Status
- On Us Transfer

Once you have specified the search parameters, click ‘Search’ button. The system displays the records that match the search criteria.

2.2.3 Outbound Faster Payments Transaction Processes

The time limit for SCT Inst processing by all banks/CSM involved in the process starts from the time stamp put by the Originator’s bank in the outbound message once the required processing is over. Hence, processing queues are allowed for outbound payments for better operational control.

The transaction steps are detailed below:

- Initial Validations
 - If Creditor Account BIC is not available as part of payment details, the system derives the Creditor Bank BIC from Creditor Account IBAN if IBANPlus details are maintained.
 - Network character replacement is done for characters that are not allowed by the Network if the corresponding maintenance is available.
 - If Account re-direction or bank re-direction is maintained, then the account / bank details is replaced by the values. Account re-direction is applicable for debtor account only.
 - Mandatory Fields / Referential data checks are done based on the details received in the payment request and the values populated by the system. Validation is available to verify whether the Creditor Bank Code is allowed for the Network chosen. In case of validation failure, the transaction is rejected.
 - Transfer amount limit check is done for the minimum and maximum amount limits defined for the Network, as maintained in Network Currency Preferences (PMDNCPRF).
 - Customer /Account Status validations – Customer accounts are verified whether account records are open and authorized.
 - Customer Account level Limits - If Account Level Daily Limits (Function ID: PMDACC PF) is maintained, then it is validated.

In case of validation failures transaction is upfront rejected. Source + account level limits are checked first, if maintained, followed by account level limits. Transaction limit and daily aggregate limit are tracked.

Note

Customer and account status checks are done by the external ECA system along with account balance check.

-
- In case of invalid IBAN or Network character validation failure, transaction is moved to repair queue.
 - Duplicate Check
 - Duplicate parameters can be maintained for the source. Based on the duplicate days and fields set, duplicate check for the transaction are done. If the transaction is identified as a duplicate transaction, the transaction is moved to business override queue.
 - Sanction Check

The transaction can be sent for sanction screening to an external system. The external system status can be linked to one of the following system status:

- Approved
- Rejected
- Interim
- Seized
- Timed out

If sanction is approved, the transaction is resumed with the further processing. In case of seizure, if seizure accounting is applicable, then customer account is debited and the Seizure GL is credited. If the status is rejected, interim or timed out, the transaction is moved to sanction check queue.

- Charge /Tax Computation

Price code is linked in Network Currency preferences. Internal charge/tax values are picked up from Price value maintenance PMDVLMNT for the price code.

Note

Price fetch from External systems is not supported for SCT Instant payments.

- Exchange rate

The debit account can be in any currency. It is not mandatory to have debit account currency as Euro. The system fetches the internal exchange rate maintained if the transfer amount is within the mall FX limit maintained. If the transfer amount is more than the FX limit maintained and if External exchange rate fetch is applicable, the transaction details are sent to the external FX system for rate fetch. Any failure in rate fetch moves the transaction to exchange rate related Exception queues.

- Balance Check with DDA (CASA) System

The debit details are sent to the DDA system for account validation and balance check. The external system status can be linked to one of the following system status:

- Approved
- Rejected
- Interim
- Timed out

If balance check is approved, the transaction is resumed with the further processing. If the status is rejected, interim or timed out, the transaction is moved to Credit Approval queue.

Note

It is assumed that DDA system will create an amount block on the debit account for the debit amount on a successful ECA check.

- Accounting

Accounting preference can be set at Network preferences for the Outbound transactions. If the preference selected is 'Before Messaging' accounting entries will be handed off to Accounting system before Messaging. On payment reject, the reversal entries will be posted.

If the preference is for posting the accounting 'On Confirmation from CI', the accounting handoff will be deferred till positive confirmation is received from CSM.

- Accounting entries:

Details in Accounting hand-off	Debit Liquidation	Credit Liquidation
Accounting Event	DRLQ	CRLQ
Amount Tag	XFER_AMT	XFER_AMT

Details in Accounting hand-off	Debit Liquidation	Credit Liquidation
Transaction Account	Debit Customer Account	Faster Payment Clearing GL maintained in the Accounting code. If Nostro Account is maintained in PMDNCPRF that account is considered.
Offset Account	Intermediary GL: This is picked from the Debit Liquidation Accounting code maintenance.	Intermediary GL: This is picked from the Credit Liquidation Accounting code maintenance.
Transaction Currency	Debit Account Currency	Transfer Currency
Transaction Amount	Debit Amount	Transfer Amount
Value Date	Transaction Value Date	Transaction Value Date
Offset Currency	Transfer Currency	Transfer Currency
Offset Amount	Transfer Amount	Transfer Amount
Local Currency Amount	Transfer amount (in Local Currency)	Transfer amount (in Local Currency)

- Messaging

Every payment generates a pacs.008 message with group header details. Time stamp put in the message are stored for the transaction.

While generating the pacs.008 message, the following values are populated for SCT Inst:

- Instructing Bank –This is populated as BIC of length 8 from the BIC maintained in Dispatch parameters for service type SCT.
- Instructed Bank -EBA IPS BIC is fetched from Network maintenance
- Clearing system Proprietary value is IPS
- Settlement method is CLRG
- Service level code is populated as SEPA
- Local instrument code is INST
- Charge bearer value is populated as SLEV

The message is forwarded to Clearing Infrastructure.

- Response Handling
 - The Accept or Reject confirmation is received from the CSM in pacs.002 format. For every message sent, a confirmation message is received.
 - The system parses and uploads the received message and based on the status value received ACCP / RJCT, the outbound transaction is further processed.
 - If the accounting is configured to be after confirmation, the accounting entries are handed off on getting a ACCP status.
 - On receiving RJCT status, if the accounting is already passed, reversal entries are posted
 - if accounting is pending, then Balance block reversal (ECA reversal) request is sent to DDA system

Notification is sent to debtor customer that indicates the status of the payment.

2.2.3.1 On Us Transaction Processing

SCT Inst transaction is marked as On-us if

- Creditor agent BIC is Branch BIC of any Branch of the same Host as maintained in STDCRBRN And
- Dispatch On US transfers preference is not checked in Network Preferences (Function ID:PMDNWPRF).

For an On-us transaction, the following additional processing steps are done:

- Credit account related validations
- EAC check
- Credit accounting posting to Credit account instead of Network GL

2.2.3.2 Webservices

- Outbound SCT Inst payment request received via SOAP services, ReST web services or via J-SON over JMS from the bank's channels is processed in Oracle Banking Payments. The system automatically creates an Outbound SCT Inst payment transaction for a web service request received.
- If the Transaction branch code is received but no Host code then Host code is identified and populated in the transaction based on the Transaction branch code.
- Instead of the fields of Creditor Account IBAN, Creditor Account Name and Creditor Bank Code being present in the request, SSI label may be present.
- If the End to End ID value is not received in the request then this field in the transaction is set to Transaction Reference Number.
- Instruction date, if not provided will be considered as current date.
- On receiving and parsing of a payment request via ReST web services or via J-SON over JMS, the system performs validations for the following mandatory fields:
 - Network code
 - Transaction Branch
 - Source Reference Number
 - Debtor Account Number
 - Creditor IBAN - This field may be empty if SSI label is present.
 - Creditor Account Name - This field may be empty if SSI label is present.
 - Transfer Currency
 - Transfer Amount

Note

Creditor Bank Code is not mandatory in the request as the Creditor Bank BIC can be derived from the Creditor IBAN available. All transaction field level validations applicable to user interface is applicable to requests received through web services too.

2.2.3.3 Routing Matrix Support

You can do Routing matrix validations for SEPA Instant outbound requests via following channels:

- Rest / SOAP services
- C2B upload
- UI

Upon Network resolution, immediate validation occurs based on routing rules.

Note

Only Reject Rules are pertinent to SEPA Instant transactions.

Application of a reject rule leads to upfront transaction rejection, with detailed logging of routing rule application.

Rule maintenance with the latest effective date equal to or earlier than the current date is applied.

2.2.4 Outbound Faster Payments View

Faster payment Outbound transaction view screen allows you to query the payment details.

You can invoke “Outbound Faster Payments View” screen by typing ‘PFDOVIEW’ in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button...

The screenshot displays the 'Outbound SCT Inst Transaction View' application window. It features a top navigation bar with 'Main', 'Pricing', and 'Exceptions' tabs. The main content area is organized into several sections:

- Enter Query:** Includes fields for Transaction Branch, Branch Name, Host Code, Host Code Description, Source Code, Source Code Description, Network Code, and Network Code Description. It also has fields for Transaction Reference Number, Source Reference Number, File Reference Number, End to End Identification, Instruction ID, Batch ID, and On Us Transfer (a dropdown menu).
- Debtor Details:** Includes fields for Debtor Account Number, Debtor Account IBAN, Account Currency, Debit Currency Name, Debtor Name, Account Branch, Debit Amount, Customer Number, and Customer Service Model.
- Creditor Details:** Includes fields for SSI Label, Creditor Name, Creditor Bank Code, and Creditor Account IBAN.
- External System Status:** Includes dropdown menus for Sanctions Check Status, Sanctions Check Reference, External Credit Approval Status, External Credit Approval Reference, External Exchange Rate Status, and External Rate Reference. A 'View Queue' button is located below this section.
- Payment Details:** Includes fields for Booking Date, Instruction Date, Activation Date, Transfer Currency, Transfer Currency Name, Transfer Amount, Exchange Rate, FX Reference Number, and Remarks.
- Transaction Status:** Includes dropdown menus for Transaction Status, Debit Liquidation Status, Credit Liquidation Status, Sanction Seizure, Queue Code, and Accounting Handoff Status. An 'Accounting Queue' button is located below this section.
- Error Details:** Includes fields for Error Code and Error Description.

At the bottom of the screen, there is a status bar with the following information: 'View Queue Action | UDF | MIS | View Repair Log | All Messages | Accounting Entries | View Verification of Payee Details'. Below this, there are fields for 'Maker Id', 'Maker Date Stamp', 'Checker Id', 'Checker Date Stamp', and 'Authorization Status'. An 'Exit' button is located in the bottom right corner.

- From this screen, click Enter Query. The Transaction Reference field gets enabled which opens an LOV screen.

- Click the Fetch button and select the required value.
- Along with the transaction details in the Main and Pricing tabs user can also view the Status details for the following:
 - External System Status
 - Transaction Status
 - Pending Queue Details
 - Sanction Seizure

Accounting Handoff Status

Accounting Handoff status for a transaction is set considering the accounting status of all accounting entries for the transaction and assigning the priority for the status as below:

- Rejected
- In Progress (if any entry has status as Pending/Deferred/Requested)
- Success
- Cancelled
- Suppressed
- Not Applicable

Accounting Queue

You can get to Accounting Queue by pressing Accounting Queue Button. All accounting entries of the transactions in the Accounting Queue are listed. If no entry is available for the transaction error is displayed.

- Click Execute Query to populate the details of the transaction in the Outbound Faster Payments View screen.

For more details on Main and Pricing tabs refer to 'PFDOTONL' screen details above.

2.2.4.1 Exceptions tab

User can all view the recall details and its response, Network reject details and external system status here.

Main | Pricing | **Exceptions**

Recall Details

Recall Status

Recall Request	Recall Response

Exit

Following details are displayed:

- Transaction Reference Number
- Network Code
- Action
- Remarks
- Queue Code
- Authorization Status
- Maker ID
- Maker Date Stamp
- Checker ID
- Checker Date Stamp
- Queue Status
- Queue Reference No
- Primary External Status
- Secondary External Status
- External Reference Number

You can view the request sent and the corresponding response received for each row in Queue Action Log.

Also you can view the request sent to and the response received from external systems for the following:

- Sanction screening
- External credit approval
- External Account Check
- External FX fetch
- External price fetch
- Accounting system

2.2.4.3 UDF Tab

Click on the 'UDF' button to invoke this screen.

Field Label	Field Value
-------------	-------------

You can specify user defined fields for each transaction

2.2.4.4 MIS Tab

Click on the 'MIS' button to invoke this screen.

Transaction MIS		Composite MIS	

You can specify the MIS details in this sub-screen.

2.2.4.5 View Repair Log

You can view all the Repair actions for the respective transaction initiated. You can invoke this screen by clicking the 'View Repair Log' button in View screen, where the Transaction Reference Number is auto populated and related details are displayed.

Queue Reference No	Field Name	Old Value	Repaired Data	Error

Following details are displayed:

- Queue Reference No
- Field Name
- Old Value
- Repaired Data
- Error

2.2.4.6 All Messages Screen

Click the All Messages button in the View Outbound Faster Payments screen. Click the "All Messages" link in the transaction input screen to invoke this sub-screen.

Message ID	Message Type	Direction	Message Date

The system displays the message details like Message Identification, Message Type, Direction and Message Date.

2.2.4.7 Accounting Entries Tab

You can invoke this screen by clicking 'Accounting Entries' tab in the screen to view the complete accounting entries

Enter Query

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria.

Future Valued Transaction Processing

SCT Inst scheme rules allow the customers to send the payment requests with future value date. Such requests are processed by the system till sanction screening on booking date and are marked as future valued.

On value date future dated transaction job processes the payments starting from the initial validations.

2.2.5 Faster Payments Additional Processing Preferences

The Faster Payments Additional Processing Preferences screen allows user to facilitate the processing of outbound SEPA Instant transactions without routing them to exception queues. Transactions with exceptions are automatically rejected.

You can invoke “Faster Payments Additional Processing Preferences” screen by typing “PFDNWAPR” in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button..

You can specify the following fields:

Host Code

The system indicates the host code that is linked to the transaction branch of the customer.

Host Description

System defaults the description of the host code

Network Code

Specify the Network Code from the list of values.

Network Description

System defaults the description of the Network code.

Outbound Transaction Preferences

Auto Reject Exceptions

Select the Auto Reject Exceptions from the following:

- Yes
- No (Default)

If 'Yes' is selected, exception queue processing gets skipped, if applicable.

2.3 Inbound Faster Payments View

User can view the complete details about the Inbound Faster Payments transaction, approvals from the system, Queue actions, and all the details pertaining to the transaction in this screen

2.3.1 Inbound SCT Inst Transaction View

You can invoke “Inbound SCT Inst Transaction View” screen by typing ‘PFDIVIEW’ in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

The screenshot shows the 'Inbound SCT Inst Transaction View' application window. It features a top navigation bar with 'Main' and 'Pricing' tabs. Below the tabs, there are several sections for data entry and viewing. The 'Enter Query' section at the top left contains fields for Transaction Branch, Branch Name, Host Code, Host Code Description, Source Code, Source Code Description, Network Code, and Network Code Description. To the right, the 'Transaction Reference Number' section includes fields for Sender Transaction ID, Sender End to End ID, and Sender Instruction ID. The 'Creditor Details' section on the left lists fields for Creditor Account Number, Creditor Account IBAN, Account Currency, Credit Account Currency, Creditor Name, Account Branch, Credit Amount, Customer Number, and Customer Service Model. The 'Payment Details' section on the right includes fields for Booking Date, Settlement Date, Activation Date, Transfer Currency, Transfer Currency Name, Transfer Amount, Exchange Rate, and FX Reference Number. The 'Debtor Details' section on the left lists fields for Debtor Name, Debtor Bank Code, Debtor Account IBAN, and Instructing Agent. The 'Transaction Status' section on the right includes dropdown menus for Transaction Status, Debit Liquidation Status, Credit Liquidation Status, Sanction Seizure, Queue Code, and Accounting Handoff Status. There are buttons for 'Additional Details' and 'Accounting Queue'. At the bottom, there are tabs for 'View Queue Action', 'UDF', 'MIS', 'All Messages', and 'Accounting Entries', and a footer with 'Maker Id', 'Maker Date Stamp', 'Checker Id', 'Checker Date Stamp', 'Authorization Status', and an 'Exit' button.

- From this screen, click Enter Query. The Transaction Reference field gets enabled which opens an LOV screen.
- Click the Fetch button and select the required value.
- Along with the transaction details in the Main and Pricing tabs user can also view the Status details for the following:
 - External System Status
 - Transaction Status
 - Pending Queue Details
 - Sanction Seizure

Accounting Handoff Status

Accounting Handoff status for a transaction is set considering the accounting status of all accounting entries for the transaction and assigning the priority for the status as below:

- Rejected
- In Progress (if any entry has status as Pending/Deferred/Requested)
- Success
- Cancelled
- Suppressed
- Not Applicable

Accounting Queue

You can get to Accounting Queue by pressing Accounting Queue Button. All accounting entries of the transactions in the Accounting Queue are listed. If no entry is available for the transaction error is displayed.

- Click Execute Query to populate the details of the transaction in the Inbound Faster Payments View screen.

For more details on Main and Pricing tabs refer to ‘PFDOTONL’ screen details above.

2.3.1.1 Exceptions tab

User can all view the recall details and its response, Network reject details and external system status here.

2.3.1.3 UDF Tab

Click on the 'UDF' button to invoke this screen.

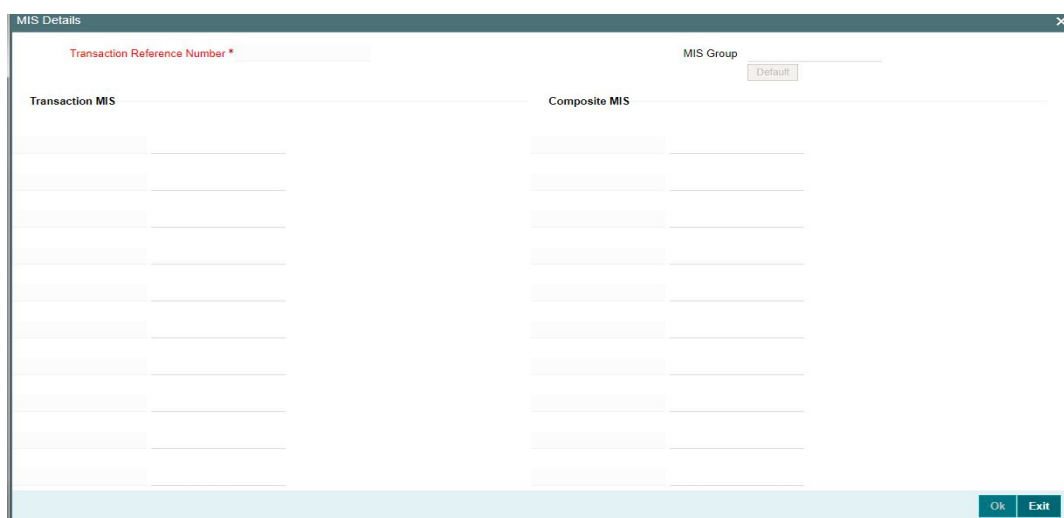

The screenshot shows a window titled 'Fields'. At the top, there is a navigation bar with a back arrow, '1 of 1', a forward arrow, and a 'Go' button. Below this is a table with two columns: 'Field Label' and 'Field Value'. The table is currently empty. At the bottom right of the window, there are 'Ok' and 'Exit' buttons.

You can specify user defined fields for each transaction

2.3.1.4 MIS Tab

Click on the 'MIS' button to invoke this screen.

The screenshot shows a window titled 'MIS Details'. At the top, there is a 'Transaction Reference Number' field with a red asterisk indicating it is required. To its right is a 'MIS Group' field with a 'Default' button. Below these fields, there are two tables: 'Transaction MIS' on the left and 'Composite MIS' on the right. Both tables have multiple rows and columns for data entry. At the bottom right of the window, there are 'Ok' and 'Exit' buttons.

You can specify the MIS details in this sub-screen.

2.3.1.5 All Messages Screen

Click the All Messages button in the View Outbound Faster Payments screen. Click the “All Messages” link in the transaction input screen to invoke this sub-screen.

Message ID	Message Type	Direction	Message Date

The system displays the message details like Message Identification, Message Type, Direction and Message Date.

2.3.1.6 Accounting Entries Tab

You can invoke this screen by clicking ‘Accounting Entries’ tab in the screen. to view the complete accounting entries.

2.3.1.7 Inbound SCT Inst Transaction View Summary

You can view the summary in “Inbound SCT Inst Transaction View Summary” screen. You can invoke the Inbound Faster Payments View Summary screen by typing ‘PFSVIEW’ in the

field at the top right corner of the Application toolbar and clicking on the adjoining arrow button.

You can search for the records using one or more of the following parameters:

- Transaction Reference Number
- Network Code
- Source Code
- Transaction Status
- Transfer Amount
- Transfer Currency
- Transaction Branch
- Activation Date
- Booking Date
- Debit Liquidation Status
- Credit Liquidation Status
- Queue Code
- Customer Service Model
- Sender End to End ID
- Sanction Seizure
- SSI Label
- FX Reference Number

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria.

Double click a record or select a record and click on 'Details' button to view the detailed maintenance screen.

View Status Request Update Details

On clicking this button, Inbound Request for Status Update View Summary screen is launched.

2.3.1.8 Inbound Faster Payments Processes

- The Inbound SCT Inst payments are received as pacs.008 messages from CI. The system receives and processes the payments based on predefined processing steps.
- Before starting the transaction processing, the system validates whether the message is received within the time out time maintained for the Inbound transaction in Network preferences. Time stamp in the message is used for this validation.
- If received after time out seconds maintained, the payment is rejected upfront. On payment rejection, pacs.002 message is sent to CSM with an appropriate Reason Code.
- If the payment is received within the allowed time limit, Inbound payment is further processed. The system does the below validations similar to the outbound payments:
 - Account/Bank re-direction → Account re-direction is done for the credit account
 - Mandatory field checks/ Referential data checks
 - Network limit check
 - Customer account is verified whether it is open and authorized.
- Beneficiary name validation is done if the same is set as required in Source Network Preferences.
- Minimum and maximum amount maintained in Network Currency Preference screen (PMDNCPRF) for SEPA Instant network will be validated when inbound messages are received.
- Any failure during validation processing results in a transaction reject and pacs.002 message is sent to CSM with appropriate reason code.
- On completing all the initial validation successfully, the following steps are executed:
 - Sanction check – If the sanction check status is approved, the next processing activity is followed. In case of Seizure, the transaction amount will get credited to Seizure GL skipping further processing. In case of reject/interim/timed out status, transaction is rejected by the system and pacs.002 message is sent out.
 - External Account Check (EAC) – If EAC fails with reject/interim/timed out status, payment is rejected and pacs.002 message is sent out.
- On successful completion of EAC, the system validates again whether the processing is completed before time out seconds maintained for inbound payments. This is checked with respect to the time stamp available in the Inbound pacs.008 message. If yes, acceptance message to CSM is sent. If the processing is completed after the maintained time out seconds, reject message is sent to CSM.
- If EAC request is rejected by external system, you can send pacs.002 reject message with the reason code linked to the external error code in Reject code maintenance (PMDRJMNT). If the external system returns with multiple reject codes, any one of the error code to reason code linkage maintained is considered by system.
- After sending an acceptance message, the system waits for the response from CSM before processing the payment further.
- If positive technical confirmation is received back from CSM, price/exchange rate processing are performed for the Inbound payment and beneficiary account is credited by handing off the payment accounting entries to Accounting System.
- Notification to Beneficiary is sent after the credit accounting is successfully handed off.
- If the technical confirmation from CSM is received as negative, the Inbound payment is marked as rejected.

Note

While processing inbound SEPA instant transactions, it is possible that processing time is exceeded the timeout period.

Network can send a pacs.002 reject message in such cases. On processing pacs.002 reject message, inward transactions will get cancelled without processing further.

2.4 Recall of SEPA Instant Credit Transfer

A recall happens when an Originator Bank requests to cancel a SEPA Instant Credit Transfer. The recall can be requested by the originating customer. The recall procedure must be initiated by the Originator Bank within the number of days maintained as Recall days in Network Preferences after the execution date. A recall procedure is initiated for the following reasons:

- Duplicate payment
- Technical problems
- Fraudulent Credit Transfers

Note

Only Outbound payment transaction in 'Processed' and 'Future Valued' status will be allowed to be selected for recall processing.

2.4.1 Outbound SCT Inst Recall Request

You can access the Outbound SCT Inst Recall Request Screen by typing PFDOTRCL in the field in the top right corner of the application tool bar and clicking on the adjoining arrow button.

The screenshot shows the 'Outbound SCT Inst Recall Request' window. It has a title bar with 'New' and 'Enter Query' buttons. The main area is divided into several sections:

- Recall Details:** Includes fields for Recall Reference Number, Recall Date (YYYY-MM-DD), Customer Initiated (Yes/No dropdown), Original Reference (marked with a red asterisk), and End to End Identification.
- Original Transaction Details:** Includes fields for Branch Code, Host Code, Network Code, Transfer Currency, Transfer Amount, Debtor IBAN, Debtor Name, Creditor IBAN, Creditor Name, and Creditor Bank BIC.
- On Us Transfer Details:** Includes an 'On Us Transfer' dropdown menu.
- Response Details:** Includes fields for Response Reference, Response Status, Response Date, Reason Code, Reason Details, Compensation Amount, and Recall Reference Number.
- Network Reject Details:** Includes fields for Reject Reference, Reject Received Date, Reject Code, Reject Reason, and Recall Reference Number.
- Accounting Details:** Includes fields for Maker Id, Checker ID, Date Time, and Authorization Status (with a dropdown arrow). There is an 'Exit' button in the bottom right corner.

Recall Reference Number

System defaults the recall reference number.

Recall Date

Displays date on which the recall was initiated. This date is defaulted as recall booking date.

Customer Initiated

System defaults the value as 'Yes'.

Branch Code

System defaults the Branch Code on clicking New button

Host Code

System defaults the Host Code on clicking New button

Original Reference

Select the Original Payment Reference. All Outbound payments with transaction status as 'Processed' or 'Future Valued' are listed for this field.

On selecting the Original Transaction Reference, the information related to the transaction is defaulted in the below listed fields:

- Network Code
- End to End Identification

Original Transaction Details

- Transfer Currency
- Transfer Amount
- Debtor IBAN
- Debtor Name
- Creditor IBAN
- Creditor Name
- Creditor Bank BIC

Recall Details**Recall Reason**

While initiating a Recall request, you can specify the reason for the recall. All valid reject codes applicable for the Network for the operation 'Payment Recall' are listed for this field.

Reason Description

Based on the Reason code selected, reason description is defaulted.

Additional Recall Information

If the reason code entered is 'FRAD' then you can provide additional details in this field.

Originator Name

Specifies the name of the Originator.

Originator Bank

Specifies the name of the Originator Bank.

Note

Either Originator name or Originator Bank code can be captured as part of recall request. For Network Type code corresponding to TIPS, only the BICs in the "TIPS Directory" are displayed.

On Us Transfer Details

Based on the original transaction selected, on us transaction field is populated.

Response Details

Response details are populated if a positive response is received from Beneficiary bank.

Response Reference

Displays the reference of the response.

Response Status

Displays the Response Status received

Response Date

Displays the date on which the response was created.

Reason Code

Displays the reason code.

Reason Details

Displays the reason for recall.

Compensation Amount

Displays the compensation amount.

Recall Reference Number

Displays the Recall Reference Number.

Additional Details

On clicking Additional Details button, you can invoke Additional Details button to specify Additional information 1 to 13 for the recall response. The number of "Additional Information" that can be entered changes based on the value of "Recall Response", "Response Reason" and whether Recall or RFRO.

Network Reject Details

Network reject details are populated if the recall request sent is rejected by the CSM.

Reject Reference

Displays the reference for rejection.

Reject Received Date

Displays the date on which the reject was received.

Reject Code

Displays the reject code.

Reject Reason

Displays the reason for rejection.

Recall Reference Number

Displays the Recall Reference Number.

2.4.1.1 Outbound SCT Inst Recall Request Summary

You can invoke the 'Outbound SCT Inst Recall Request Summary' screen by typing 'PFSOTRCL' in the field at the top right corner of the application toolbar and clicking the adjoining arrow button. Click new button on the Application toolbar.

Exit

You can search for the records using one or more of the following parameters:

- Recall Reference Number
- Original Reference
- Recall Date
- Debtor IBAN
- Authorization Status

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria.

Double click a record to view the detailed maintenance screen.

You can perform following actions:

Action	Description
View Response Details	Click the button with search applied on "Recall Reference Number to launch screen PFDOTRCL.
Generate Status Request Message	Click the button to generate Request for Status Update message (pacs.028) corresponding to the SCT inquiry.
View Status Update Details	Click the button to view the Status update details.

2.4.1.2 Outbound Recall Processing

- If you process the recall request before the dispatch of the original transaction message, it is considered as a cancellation of the original payment.
- Original transaction status is also marked as 'Cancelled' and payment liquidation entries are reversed. Entries are reversed with negative values.
- If the recall is after the message dispatch, system verifies whether Recall is initiated within the recall days specified in payment preferences. If it exceeds the recall days specified, system displays an override.
- Original transaction is marked as 'Recall Requested' and recall record is inserted in message table. camt.056 message is generated for a recall request during dispatch.
- Recall reference, recall date and recall reason is available for original transaction.
- Recall request does not have any accounting impact.

Note

If recall is initiated for On-us transactions, system displays an override message on save of the recall.

On acceptance of the override message and authorization of recall, reversal accounting entries are processed.

2.4.2 Inbound Faster Payments Recall Request

You can access the Inbound SCT Inst Recall Request screen by typing PFDINRCL in the field in the top right corner of the application tool bar and clicking on the adjoining arrow button.

Generate Response	Click the button with search applied on “Recall Reference Number to launch screen PFDITRCL.
View Status Update Details	Click the button to view the Inbound Request for Status Update View Summary screen.

2.4.3 **Negative Response for Recall Request**

- On receiving a negative response camt.029 for a recall request from beneficiary bank, the system matches the same with the original transaction.
- Parent transaction is matched using the Original Transaction ID field with Transaction reference of Outbound payments in ‘Recall Requested’ status.
- On getting the parent transaction, further matching is done based on the following fields:
 - Transaction currency
 - Transaction Amount
 - Original debtor IBAN
 - Original Creditor IBAN
 - Original Creditor BIC
- The original transaction is marked back to ‘Completed’ status. Further operations are possible for this transaction.
- Response details are available as part of original transaction exception details in the view screen.
- There is no accounting impact.

Note

Status of the Original transaction is updated as ‘Recall Rejected’ when Negative Recall response is processed successfully for a transaction.

If the original transaction status is ‘Recall Rejected’ system will not allow another recall/ return processing for the same transaction.

2.4.4 **Positive Response for Recall Request**

If pacs.004 is received with reject reason ‘FOCR’ – Following Cancellation Request, as response of a recall request, then it is matched with original Outbound transactions with ‘Recall Requested’ status.

On getting the parent transaction, further matching is done for the following fields:

- Transaction Currency
- Transaction Amount
- Original Debtor IBAN
- Original Creditor IBAN
- Original Creditor BIC

Original transaction is marked as Returned. Return of the Outbound payment transaction is processed.

ECA and accounting related to Inbound return is done.

No further action is allowed for a Recall Accepted transaction. Acceptance details are available for viewing.

- Return accounting will be original settlement amount and charges will be debited separately. Customer debit account will be the charge recovery account and charge amount will be the amount mentioned in Inbound message. Reversal details will be sent to DDA system for external account check along with charge details. Accounting entries will be handed off to accounting system.
- Accounting code and derived based on the price code linked for third party charges in payment currency preferences for transaction type 'Outbound'.

2.4.5 Inbound Recall Upload

- When a Inbound camt.056 is received from CSM, matching of the details with original Inbound transaction is done.
- Original transaction ID is mapped with Relate Reference field of Inbound transactions which are processed in 'Processed' status.
- On successful matching with a parent transaction, further matching will be done with the following fields:
 - Transaction Currency
 - Transaction Amount
 - Original debtor IBAN
 - Original Creditor IBAN
 - Original Creditor BIC
- Inbound recall request is uploaded on successful matching and will be available in Inbound Recall Screen. You can manually accept or refuse the recall request from this screen.

2.4.6 Response to Inbound SCT Inst Recall

You can access the "Response to Inbound SCT Inst Recall" Screen by typing PFDITRCL in the field in the top right corner of the application tool bar and clicking on the adjoining arrow button.

- Reject Reference
- Reject Received Date
- Reject Code
- Reject Reason

Inbound Recall Details

- Recall Reference Number
- Recall Date
- Originator Name
- Originator Bank

You can unlock the record and provide the Recall Response details:

Recall Response

You can either accept or reject the recall request received.

Reject Reason

The applicable reject code for the action can be selected

Reason Description

Reason description is populated based on the Reject reason chosen.

2.4.6.1 Response Summary of Inbound SCT Inst Recall

You can invoke the “Response Summary of Inbound SCT Inst Recall ” screen by typing ‘PFSITRCL’ in the field at the top right corner of the application tool-bar and clicking the adjoining arrow button. Click new button on the Application tool-bar.

You can search for the records using one or more of the following parameters:

- Inbound Recall Reference
- Original Payment Reference
- Inbound Recall Date
- Debtor IBAN
- Response Reference
- Response Date
- Recall Response
- Authorization Status

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria.

Double click a record to view the detailed maintenance screen. You can also export the details of selected records to a file using 'Export' button

2.4.7 Inbound Recall Processing

- While processing a Recall response, it will be validated whether response is being sent within the response days specified in Network preferences. If it exceeds the recall days specified, system displays an override.
- Acceptance of recall triggers return of original Inbound and related details gets inserted in message table for sending return message in pacs.004 format.
- Refusal of recall sends out camt.029

2.4.8 Outbound Positive Response to Recall

- On processing Outbound positive response to recall, system validates whether reject reason input is FOCR when recall response type is 'Accept'.

- On tabbing out of the reason code field, charge is populated based on the Recall Acceptance Price code maintenance for the transaction type 'Inbound' in Payment Currency Preferences.
- You can modify the populated charge amount.
- Return accounting is processed with original settlement amount. Charges are processed separately. GL mentioned in price accounting code is the charge recovery account and charge amount is the amount mentioned in Inbound message.
- Reversal details is sent to DDA system for external credit approval. Any failure moves the transaction to ECA queue.
- Accounting entries are handed off to accounting system.

2.4.9 Investigation Messages

- The Investigation message in pacs.028 format is generated if the originator bank does not getting a response from the CSM even after the time out period maintained in Network Preferences (PMDNWPRF) for the outbound payments.
- Generation of investigation message and handling of the response message in pacs.002 format are supported.
- If a Beneficiary bank receives an investigation message, upload and processing of the Inbound message and the generation of the corresponding response message are supported.

2.5 SCT/ SCT Inst - Processing of inbound status request message (pacs.028)

2.5.1 Processing

A pacs.028 can be received for the below scenarios

SCT	SCT Inst
<ul style="list-style-type: none"> > Request for Status Update on a SCT Inquiry > Request for Status Update on a RFRO > Request for Status Update on a Recall 	<ul style="list-style-type: none"> > FI to FI Payment Status Request > Request for Status Update on a RFRO > Request for Status Update on a Recall

2.5.2 Processing Steps

On receiving a pacs.028 message, system performs the identification whether the message is for a pacs.008, camt.056, camt.027, or camt.87.

When the "Original Message Name Identification" (OrgnlGrpInf/OrgnlMsgNmId) is

- "pacs.008", then the pacs.028 received is for a "FI to FI Payment Status Request"
- "camt.056", then the pacs.028 received is for a "Request for Status Update on a Recall or RFRO".
- "camt.027" or "camt.087", then the pacs.028 received is for a "Request for Status Update on a SCT Inquiry".

FI to FI Payment Status Request

Attempt to match the status request with the original inbound pacs.008 transaction.

- Resend the pacs.002 previously generated if a match is found and mark the processing of the pacs.028 as "Processed". Update the "Original Transaction Match Status" corresponding to the inbound pacs.028 as "Matched".

Note that the Originator Bank can send one or more status update requests.

- Update the "Original Transaction Match Status" corresponding to the inbound pacs.028 as "Unmatched" if a match is not found. Additionally, generate a negative pacs.002 with reason code 'AG09'.

Note - Configure 'AG09' in the "Reject Code Detailed" screen (PMDRJMNT).

Request for Status Update on a Recall or RFRO

Attempt to match the status request with the original inbound camt.056. The inbound camt.056 could be for a SCT or SCT Inst.

- Update the "Original Transaction Match Status" corresponding to the inbound pacs.028 as "Matched" when a match is found.
- Update the "Original Transaction Match Status" corresponding to the inbound pacs.028 as "Unmatched" when no match is found.
- In both cases above, the processing status of the pacs.028 is "Not Processed".

Request for Status Update on a SCT Inquiry

Attempt to match the status request with the original inbound camt.027 or camt.87.

- Update the "Original Transaction Match Status" corresponding to the inbound pacs.028 as "Matched" when a match is found.
- Update the "Original Transaction Match Status" corresponding to the inbound pacs.028 as "Unmatched" when no match was found.
- In both cases above, the processing status of the pacs.028 is "Not Processed".

2.5.3 Request for status update on Single or group SCT inquiries or SCT/ SCT Inst Recall/ RFRO

The Request for Status Update (pacs.028) received have the Transaction Information tag (FIToFIPmtStsReq/TxInf) repeated for multiple SCT Inquiries or multiple SCT/ SCTInst Recall or RFRO.

- On receiving the pacs.028 message, for each FIToFIPmtStsReq/TxInf, the system matches it with a pending inbound SCT Inquiry (camt.027 or camt.087) or inbound SCT/ SCT Inst Recall or RFRO (camt.056).

2.6 Faster Payments Message Browser

2.6.1 Inbound Faster Payments Message Browser

You can view the message details about the Inbound messages received for inbound transactions for the all the message types - pacs.008, pacs.028, pacs.002, pacs.004, camt.056, camt.029 in the message browser screen.

You can invoke “Inbound Faster Payments Message Browser” screen by typing ‘PFSINBRW’ in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

The screenshot shows the 'Inbound Faster Payments Message Browser' application window. At the top, there are tabs for 'Saved Queries', 'Search', 'Advanced Search', 'Reset', and 'Clear All'. Below this is a 'Case Sensitive' checkbox. The main area contains a grid of search filters with labels and input fields, each with a magnifying glass icon. The filters are: Original Message ID, End to End Identification, Transaction ID, Transaction Reference Number, Message ID, Message Date, Message Status, Network Code, Creditor IBAN, Debtor IBAN, Debtor Bank Code, and Transaction Branch. Below the filters is a 'Records per page' dropdown set to 15, and a 'Go' button. The table below has columns: Original Message ID, End to End Identification, Transaction ID, Transaction Reference Number, Message ID, Message Date, Message Status, Network Code, Creditor IBAN, Debtor IBAN, and Debtor E. The table is currently empty. At the bottom, there are links for 'View Message' and 'View NR Data', and an 'Exit' button.

You can search for the records using one or more of the following parameters:

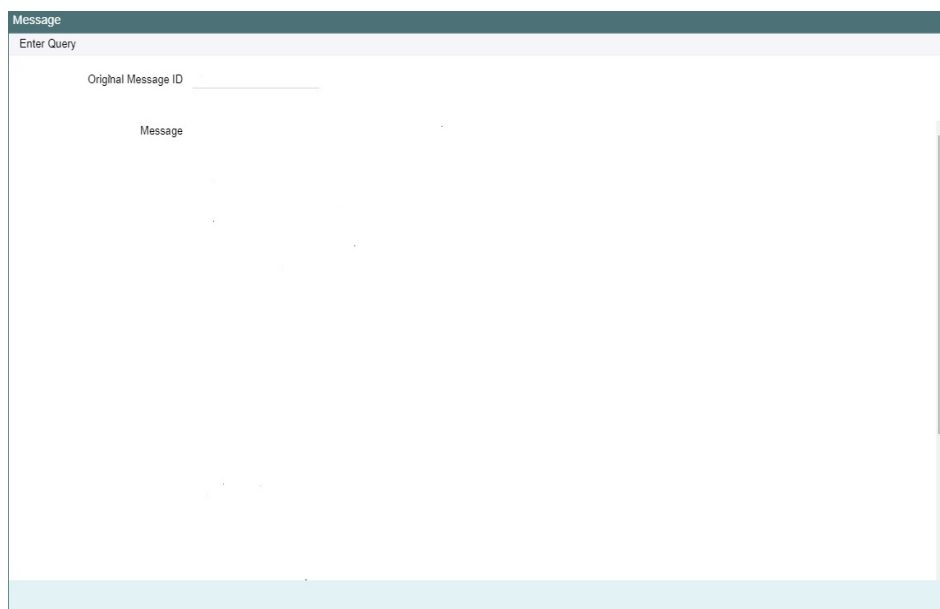

- Original Message ID
- End to End ID
- Transaction ID
- Transaction Reference No
- Message ID
- Message Date
- Message Status
- Network Code
- Creditor IBAN
- Debtor IBAN
- Debtor Bank Code
- Message Type
- Transaction Branch

Once you have specified the search parameters, click ‘Search’ button. The system displays the records that match the following search criteria.

Double click a record or select a record and click on Details button to view the detailed maintenance screen.

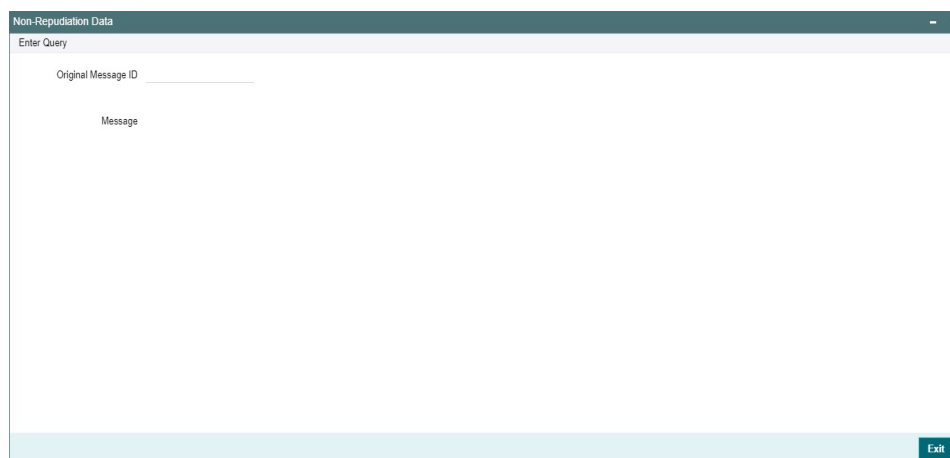

2.6.1.1 **View Message**

You can view the message generated for a specific record by clicking the 'View Message' tab in the left corner of the screen.

2.6.1.2 **View NR Data**

You can view the NR Data message screen (PFDNOMSG) for a specific record by clicking the 'View Message' tab in the screen.

2.6.2 **Outbound Faster Payments Message Browser**

You can invoke "Outbound Faster Payments Message Browser" screen by typing 'PFSOTBRW' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

You can search for the records using one or more of the following parameters:

- Message ID
- End to End Identification
- Network Code
- Creditor Bank Code
- Message Date
- Message Type
- Debtor IBAN
- Transaction Branch
- Sender Transaction ID
- Message Status
- Creditor IBAN
- Delivery Status

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria. Double click a record to view the detailed maintenance screen.

You can perform below actions:

2.6.2.1 View Message

You can view the corresponding message for a specific record by clicking the 'View Message' tab in the screen.

Message

Enter Query

Original Message ID

Message

2.6.2.2 **View Notification**

You can view the Notification message screen (PFDNTMSG) for a specific record by clicking the 'View Notification' tab in the screen.

Notification Message

Execute Query

Original Message ID

Message

Exit

2.6.2.3 **View Technical ACK**

You can view the Technical ACK message screen (PFDACMSG) for a specific record by clicking the 'View Message' tab in the screen.

2.6.2.4 View NR Data

You can view the NR Data message screen (PFDNOMSG) for a specific record by clicking the 'View Message' tab in the screen.

2.6.3 SEPA Messaging Preferences

A file type preference field is provided in this maintenance to decide whether CSM based bulk messages to be generated or ISO messages. This is an optional maintenance. If this maintenance is not available, the system generates EBA specific SEPA files

You can access the 'SEPA Messaging Preferences' Screen by typing 'PMDSEPAM' in the field in the top right corner of the application tool bar and clicking on the adjoining arrow button.

You can specify the following details:

Host Code

System defaults the host code of transaction branch on click of 'New'.

Network Code

Specify the Network Code from the list of values.

Network Type

Defaults the description of the selected Host Code.

Network Description

Defaults the description of the selected Host Code.

File Format Details

Non-CSM based files

Select the value between Yes or No.

2.6.3.1 SEPA Messaging Preferences Summary

You can invoke the 'SEPA Messaging Preferences Summary' screen by typing 'PMSSEPAM' in the field at the top right corner of the application toolbar and clicking the adjoining arrow button.

[illegible]

You can search for the records using one or more of the following parameters:

- Authorization Status
- Network Code
- Non-CSM based files
- Record Status
- Network Type

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria. Double click a record to view the detailed maintenance screen.

2.6.4 SEPA Participant Directory

You can access the 'SEPA Routing Directory' Screen by typing 'PMDSEPAD' in the field in the top right corner of the application tool bar and clicking on the adjoining arrow button.

You can specify the following details:

Participant Bank BIC

Specify the Participant Bank BIC from the list of values. All valid BICs are listed from BIC directory.

Bank Name

System defaults the Bank Name on the Participant Bank BIC selected.

Town Name

System defaults the City on the Participant Bank BIC selected.

Country

System defaults the Country Code on the Participant Bank BIC selected.

Scheme

Select the Scheme from the following values:

- SCT
- SDD CORE
- SDD B2B
- SCT INST

Channel ID

Specify the Channel ID. It supports 20c Data type.

Preferred Channel

Select the Preferred Channel between Yes or No.

Participant Type

Select the Participant Type from the following values:

- Direct
- Indirect

Intermediary BIC

This field is enabled to specify only if the participation type is 'Indirect'. All valid BICs already available in PMDSEPAD maintenance with participation type as 'Direct' are listed.

Start Date

Select the Start Date.

End Date

Select the End Date.

2.6.4.1 SEPA Routing Directory Summary

You can invoke the 'SEPA Routing Directory Summary' screen by typing 'PMSSEPAD' in the field at the top right corner of the application toolbar and clicking the adjoining arrow button.

The screenshot shows the 'SEPA Routing Directory Summary' application window. At the top, there is a title bar with the window name and standard OS controls. Below the title bar is a search bar with options: 'Search', 'Advanced Search', 'Reset', and 'Clear All'. The main area is divided into two sections. The left section, labeled 'Case Sensitive', contains search filters: 'Authorization Status' (a dropdown menu), 'Participant Bank BIC' (a text input with a magnifying glass icon), and 'Channel ID' (a text input with a magnifying glass icon). The right section contains 'Record Status' (a dropdown menu), 'Scheme' (a dropdown menu), and 'Country' (a text input with a magnifying glass icon). Below these filters is a pagination bar showing 'Records per page' set to 15, navigation arrows, and '1 Of 1'. To the right of the pagination bar is a 'Go' button and a 'Lock Columns' dropdown set to 0. Below the pagination bar is a table with the following columns: 'Authorization Status', 'Record Status', 'Participant Bank BIC', 'Scheme', 'Channel ID', 'Preferred Channel', 'Participant Type', 'Intermediary BIC', and 'Bank Na'. The table is currently empty. At the bottom right of the window is an 'Exit' button.

You can search for the records using one or more of the following parameters:

- Authorization Status
- Participant Bank BIC
- Channel ID
- Record Status
- Scheme
- Country

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria. Double click a record to view the detailed maintenance screen.

2.7 **Alliance Gateway Instant (AGI) Integration**

SWIFTNet Instant is a messaging service by SWIFT to provide participants access to Instant Payment CSMs. At the moment there are two Instant Payment CSMs that are accessible through SWIFTNet Instant, namely EBA RT1 (SEPA Instant) and TIPS. It is mandatory that participants install Alliance Gateway Instant (AGI) software on their hosts (or virtual machines) in their data centres to access the SWIFTNet Instant messaging service. AGI acts as a local communication gateway between OBPM and the SWIFT network.

AGI can exchange ISO 20022 messages with back-office applications like OBPM using several methods. There are 5 message primitives that are sent/received to/from AGI, namely:

1. **SendRequest** - To send traffic, the Participant's back-office application puts the SendRequest messages into the emission queue that are consumed by AGI.
2. **ReceiveIndication** - When receiving traffic from the SWIFT network, AGI puts the ReceiveIndication messages to reception queue that is consumed by the Participant's back-office application.
3. **Notify** - The Notify message is generated by the local (sending) AGI once the message has been put on the network.
4. **TechnicalACK** - The TechnicalACK is generated (and sent back to) by the receiving AGI once the message has been put on the reception queue of the receiver.
5. **NRData** - NRData is for the purpose of non-repudiation. NR data (signature information) is provided either as part of the Notify (for senders) or as part of the ReceiveIndication (for receivers). Optionally, you can receive non-repudiation data as a separate message (NRData) in a specific queue, so that the payment application is not required to process the signatures on received traffic or notifications. Since the signature size is typically larger than the actual message, it also optimizes the flow towards the Payment Application. For senders, the NRData is provided as a separate message if NR Data queue is configured and "NotificationRequired" in the SendRequest is set as "A". For receivers, the NRData is provided as a separate message if NR Data queue is configured.

2.7.1 **AGI Adapter Maintenance**

You can define a partner with the Emission profile and the Reception profile, using this screen.

You can access the 'AGI Adapter Maintenance Detailed' Screen by typing 'PFDAGADM' in the field in the top right corner of the application tool bar and clicking on the adjoining arrow button.

You can specify the following details:

Partner Name

Specify the Name of the Partner.

Description

Specify the Partner description.

Host Code

System defaults the host code of transaction branch on click of 'New'.

Communication

Emission Profile

Specify the Emission Profile from the list of values. Emission Profiles maintained in PFDAGEQM are listed.

Reception Profile

Specify the Reception Profile from the list of values. Reception Profiles maintained in PFDAGRQM are listed.

2.7.1.1 AGI Adapter Maintenance Summary

You can invoke the 'AGI Adapter Maintenance Summary' screen by typing 'PFSAGADM' in the field at the top right corner of the application toolbar and clicking the adjoining arrow button.

[illegible]

You can search for the records using one or more of the following parameters:

- Authorization Status
- Record Status
- Partner Name

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria. Double click a record to view the detailed maintenance screen.

2.7.2 AGI Adapter Network Maintenance

This screen links a Partner with a Network code corresponding to the Instant Payment.

You can access the 'AGI Adapter Network Maintenance Detailed' Screen by typing 'PFDAGANM' in the field in the top right corner of the application tool bar and clicking on the adjoining arrow button.

Specify the current Protocol Version.

Additional Information

Specify the Additional Information provided to the receiver.

Service Name

Specify the Service for which the message is sent.

Receiver DN

Specify the name of the party that receives the message.

Bank Identifier

On clicking the “Bank Identifier” button in the main screen, the ‘Emission Bank Identifier’ sub screen is launched. The BIC8 and the Sender DN to be used in the SendRequest message can be defined in this screen. For more information, refer to Section 2.7.4.1, "Emission Bank Identifier".

TechnicalACK / Notify Preferences

On clicking the “TechnicalACK/ Notify preferences” button in the main screen, the ‘TechnicalACK / Notify Preferences’ sub screen is launched. The preferences for TechnicalACK and Notifications can be defined for each Message Type in this screen. The entries in the “TechnicalACK/ Notify preferences” screen overrides the preferences in the main screen. For more information, please refer to Section 2.7.4.2, "TechnicalACK / Notify Preferences".

2.7.4.1 Emission Bank Identifier

Sender Bank Identifier	Sender DN
------------------------	-----------

Sending Bank Identifier

Specify the BIC8 of the Sending Bank from the list values. All valid BICs are listed here.

Sender DN

Specify the Name of the party sending the message, in the format of a DN.

2.7.4.2 TechnicalACK / Notify Preferences

The screenshot shows a 'Preferences' dialog box with a title bar and a close button. Below the title bar is a tabbed interface with six tabs: 'Message Type', 'Notification Required', 'TechnicalACK Required', 'TechnicalACK / Notify Queue Name', 'Separate NRData Required', and 'NRData Queue Name'. The 'TechnicalACK / Notify Queue Name' tab is currently selected. The main area of the dialog is empty, and there are 'Ok' and 'Cancel' buttons at the bottom right.

Specify the following field details:

Preferences

Message Type

Specify the Message Type from the list of values. Valid ISO 20022 message type like pacs.008, pacs.004 etc are listed.

Notification Required

This field indicates if a Notify is returned by AGI. Select the Notification Required from the following values:

- Always
- Not Required
- On Error

TechnicalACK Required

This field indicates if a TechnicalAck is returned by AGI. Select the TechnicalACK Required from the following values:

- Always
- Not Required

Description

Specify the Service Description.

2.8.7.1 Service Master Maintenance Summary

You can invoke the 'Service Master Maintenance Summary' screen by typing 'PSSSVMNT' in the field at the top right corner of the application toolbar and clicking the adjoining arrow button.

The screenshot shows a web application window titled "Service Master Maintenance Summary". The interface includes a search section at the top with buttons for "Search", "Advanced Search", "Reset", and "Clear All". Below these, there's a "Case Sensitive" checkbox and two dropdown menus labeled "Authorization Status" and "Record Status". A "Service ID" input field is also present. Below the search section, there's a table with columns: "Authorization Status", "Record Status", "Service ID", and "Description". The table is currently empty. At the bottom right of the window, there is an "Exit" button.

You can search for the records using one or more of the following parameters:

- Authorization Status
- Record Status
- Service ID

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria. Double click a record to view the detailed maintenance screen.

2.8.8 EP Maintenance

You can access the 'EP Maintenance Detailed' Screen by typing 'PSDEPMNT' in the field in the top right corner of the application tool bar and clicking on the adjoining arrow button.

Specify the Host code of the transaction Branch.

Service Id

Specify the Identifier of the service used from the list values. All the Service Identifiers maintained in screen PSDSVMNT are listed.

End Point Id

Specify the EP Id as identified by SIAnet.

Description

Specify the End Point Description.

2.8.8.1 EP Maintenance Summary

You can invoke the 'EP Maintenance Summary' screen by typing 'PSSEPMNT' in the field at the top right corner of the application toolbar and clicking the adjoining arrow button.

You can search for the records using one or more of the following parameters:

- Authorization Status
- Record Status
- EP Id

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria. Double click a record to view the detailed maintenance screen.

2.8.9 Role

You can access the 'Role Maintenance' Screen by typing 'PSDRLMNT' in the field in the top right corner of the application tool bar and clicking on the adjoining arrow button.

You can specify the following details:

Role

Specify the Role Id as identified by SIAnet.

Role Name

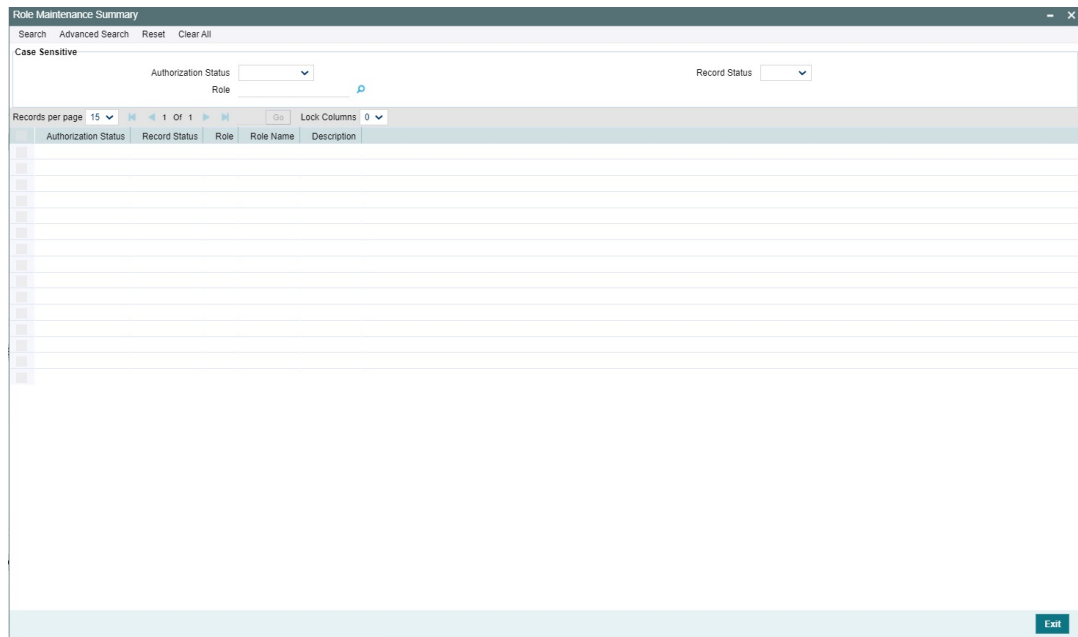

Specify the Name of the Role in SIAnet.

Description

Specify the Description of the Role.

2.8.9.1 Role Maintenance Summary

You can invoke the 'Role Maintenance Summary' screen by typing 'PSSLKMNT' in the field at the top right corner of the application toolbar and clicking the adjoining arrow button.

The screenshot shows a web application window titled "Role Maintenance Summary". At the top, there is a search bar with "Case Sensitive" checked, and two dropdown menus for "Authorization Status" and "Record Status". Below the search bar is a toolbar with "Records per page" set to 15, navigation arrows, and a "Go" button. A table with five columns is displayed: "Authorization Status", "Record Status", "Role", "Role Name", and "Description". The table is currently empty. An "Exit" button is located in the bottom right corner of the window.

You can search for the records using one or more of the following parameters:

- Authorization Status
- Record Status
- Role

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria. Double click a record to view the detailed maintenance screen.

2.8.10 Domain Master Maintenance

2.8.17.1 **BU-EP Link Summary**

You can invoke the 'BU-EP Link Summary' screen by typing 'PSSEXLNK' in the field at the top right corner of the application toolbar and clicking the adjoining arrow button.

The screenshot shows the 'BU-EP Link Summary' application window. At the top, there is a title bar with the text 'BU-EP Link Summary' and standard window controls. Below the title bar is a search bar with the text 'Search' and buttons for 'Advanced Search', 'Reset', and 'Clear All'. The main area is divided into two sections. The top section is labeled 'Case Sensitive' and contains four search filters: 'Authorization Status' (a dropdown menu), 'Record Status' (a dropdown menu), 'BU Id' (a text input field), and 'EP Id' (a text input field). Below these filters is a table with the following columns: 'Authorization Status', 'Record Status', 'BU Id', 'EP Id', 'Retry Interval', 'Timeout Seconds', 'Imx Protocol Id', 'Certificate Id', 'Data Prof Id', and 'BX Protocol Id'. The table is currently empty. At the bottom right of the window is an 'Exit' button.

You can search for the records using one or more of the following parameters:

- Authorization Status
- Record Status
- BU Id
- EP Id

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria. Double click a record to view the detailed maintenance screen.

2.8.18.1 Flow Master Summary

You can invoke the 'Flow Master Summary' screen by typing 'PSSFWMNT' in the field at the top right corner of the application toolbar and clicking the adjoining arrow button.

The 'Flow Master Summary' window includes a search bar with 'Search', 'Advanced Search', 'Reset', and 'Clear All' buttons. Below the search bar, there are filters for 'Case Sensitive', 'Authorization Status' (dropdown), 'Record Status' (dropdown), and 'Flow Id' (text input with a search icon). A pagination bar shows 'Records per page' set to 15, '1 Of 1' records, and a 'Go' button. A 'Lock Columns' dropdown is set to 0. The table has columns: Authorization Status, Record Status, Flow Id, Message Type, and Flow Name. An 'Exit' button is in the bottom right corner.

You can search for the records using one or more of the following parameters:

- Authorization Status
- Record Status
- Flow Id

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria. Double click a record to view the detailed maintenance screen.

2.8.19 Role to Flow Mapping

You can access the 'Role to Flow Mapping' Screen by typing 'PSDRFMAP' in the field in the top right corner of the application tool bar and clicking on the adjoining arrow button.

The 'Role to Flow Mapping' window has a 'New' button and an 'Enter Query' field. It contains two main input sections: 'Role' with a red asterisk and a text field, and 'Flows' with a 'Flow Id' field also marked with a red asterisk. At the bottom, there are fields for 'Maker', 'Checker', 'Date Time', 'Mod No', 'Record Status', and 'Authorization Status'. An 'Exit' button is located in the bottom right corner.

You can specify the following details:

Role Id
