# Preface

---

Welcome to the Oracle Field Service Cloud Configuration Guide for Oracle Utilities Work and Asset Cloud Service Integration to Oracle Field Service Cloud 20B.

This document focuses on the Oracle Field Service Cloud configurations and administration information required for this integration. The preface includes the following:

- [Audience](#)
- [Documentation and Accessibility](#)
- [Abbreviations](#)

## Audience

This document is intended for anyone implementing the Oracle Utilities Integration for Work and Asset Cloud Service and Oracle Field Service Cloud.

## Documentation and Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

## Access to Oracle Support

Oracle customers have access to electronic support for the hearing impaired. Visit:

<http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or  
<http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs>

## Abbreviations

Term	Expanded Form
OFSC	Oracle Field Service Cloud
WAM	Oracle Utilities Work and Asset Management
OIC	Oracle Integration Cloud Service
WACS	Work and Asset Cloud Service

# Chapter 1: Accelerator Overview

---

This chapter focuses on the software requirements for Oracle Field Service Cloud and provides an overview of the configuration. It includes the following sections:

- [Configuration Overview](#)
- [Accelerator Package](#)
- [Accelerator Activity Types](#)

## Configuration Overview

This section covers basic Oracle Field Service Cloud configurations, such as Activity Types, User Types, Properties, UI screens, validations for these UIs, plugins, and resource configurations.

## Accelerator Package

The accelerator package includes various user types, properties, and plugins. This document explains the configurations for other elements such as activity types, work zones, work skills, work conditions and outbound channel.

The package helps customers to configure and set up Oracle Field Service Cloud to be used in the Oracle Utilities Work and Asset Cloud Service integration to Oracle Field Service Cloud as the package contains only Oracle Utilities Work and Asset Cloud Service and Oracle Integration Cloud configuration files and instructions. It is used in addition to the integration package which provides a complete end-to-end set up for the integration.

The contents of the package are:

- **User Types** – Define layouts and UI screens. Refer to the [User Types](#) section for more details.
- **Properties** – Create layouts and mapping. Refer to the [Properties](#) section for more information.
- **Plugins** – The plugins that are part of this integration are measurements, service history, resource usage and validate completion. Refer to the [Forms and Plugins](#) section for more information.

## Accelerator Activity Types

This accelerator is a sample and supports a few Activity Types in this release. More activity types can be added based on the requirement.

## Chapter 2: Installing the Basic Accelerator Package

---

This chapter focuses on importing the files that come as a part of the package and configuring them in the Oracle Field Service Cloud environment for the integration to run successfully. Make sure to follow the same sequence for successful configuration.

- [Order of Importing the Package](#)
- [Activity Types](#)
- [Properties](#)
- [Glossary](#)
- [Forms and Plugins](#)
- [User Types](#)

### Order of Importing the Package

Make sure to follow the order mentioned below during the package import.

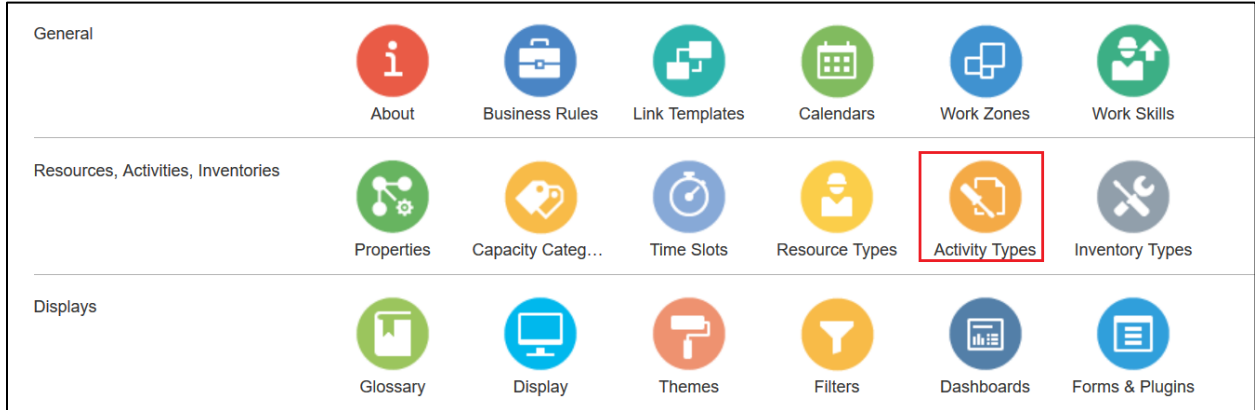

- Activity Types
- Properties
- Glossary
- Measurements Plugin
- ResourceUsage Plugin
- ServiceHistory Plugin
- ValidateCompletion Plugin
- PlannedServiceHistory Plugin
- Asset Component Install Exchange Undo Plugin
- WACS OFSC User Type
- WACS OFSC Dispatcher User Type

### Activity Types

Activity types define the categories of the activity supported by Oracle Field Service Cloud (in this case, Oracle Utilities Work and Asset Cloud Service Integration to Oracle Field Service Cloud). In the activity type, there are various fields such as time slots, activity status denoted using colors and features that each activity type supports. They can be customized for each activity type.

To create an activity type:

1. Login to OFSC with valid credentials, click on the  icon on left side of the home screen.
2. Navigate to **Configurations**.
3. On the **Configuration** page, select **Resources, Activities, Inventories > Activity Type**.

4. Select the 'WAM-OFSC' group from the list.

WAM-OFSC (ID: 90) <a href="#">Rename</a>		ID	Status	Activity Type Name ▲	Activity Type Label	Actions
<input type="checkbox"/>	93	✓	Field Inspection	Field Inspection	<a href="#">Modify</a> <a href="#">Clone</a>	
<input type="checkbox"/>	94	✓	Hydrant Inspection	Hydrant Inspection	<a href="#">Modify</a> <a href="#">Clone</a>	
<input type="checkbox"/>	91	✓	Major Repair	Major Repair	<a href="#">Modify</a> <a href="#">Clone</a>	
<input type="checkbox"/>	92	✓	Preventive Maintenance	Preventive Maintenance	<a href="#">Modify</a> <a href="#">Clone</a>	

1-4 of 4

If it does not exist, create a group.

a. Click **Add Group**.

b. Enter the group name. Example: WAM-OFSC

**Add Group** ✕

\* Label

\* Name

\* English

SpanishLA

Portuguese (Brazil)

Cancel
Add

c. Click **Add Activity Type**.

### Add Activity Type

#### Activity type info

\* Label: Major Repair

\* Name

\* English: Major Repair

SpanishLA:

Portuguese (Brazil):

Active:

Group: WAM-OFSC

\* Default Duration: 60 minutes

#### Color scheme

Copy from:

Pending: FFDE00

Completed: 84BBE6

#### Features

Allow mass activities

Teamwork

Enable segmenting and extended duration

Allow move between resources

Allow creation in buckets

Allow reschedule

Support of not-ordered activities

Allow non-scheduled

Support of work zones

Support of work skills

Support of time slots

Support of inventory

Support of links

d. Enter the name and other activity type details. Click **Add**.

### Add Activity Type

Warning	F6CAB7
Suspended	99FFFF
Not Done	60CECE

Started	5DBE3F
Cancelled	80FF80

Available time slots

08-10 (08:00 AM - 10:00 AM) - disabled

10-12 (10:00 AM - 12:00 PM) - disabled

13-15 (01:00 PM - 03:00 PM) - disabled

15-17 (03:00 PM - 05:00 PM) - disabled

All-Day (12:00 AM - 12:00 AM) - disabled

Lunch break (12:00 PM - 12:30 PM) - disabled

Second Lunch Break (01:00 PM - 02:00 PM) - disabled

Support of preferred resources

Allow Repeating Activities

Calculate travel

Calculate activity duration using statistics

Allow to search

Allow to create from Incoming interface

Enable 'day before' trigger

Enable 'reminder' and 'change' triggers

Enable 'not started' trigger

Enable 'SW warning' trigger

Calculate delivery window

SLA and Service window use customer time zone (required for routing)

Support of required inventory

Disable resource tracking for this activity type

Cancel
Add

5. Click **Clone** to create more activity types. Modify the name and details as required.

**Note:** Make sure the label names are exactly the same as given below. Else, update the new name in the activity type lookup of Oracle Integration for Cloud.

6. Make sure the corresponding lookup values in the WAMOFSC\_ActivityType lookup exist for all activity types in Oracle Integration for Cloud.

7. Add only specific activity types as needed from the list below.

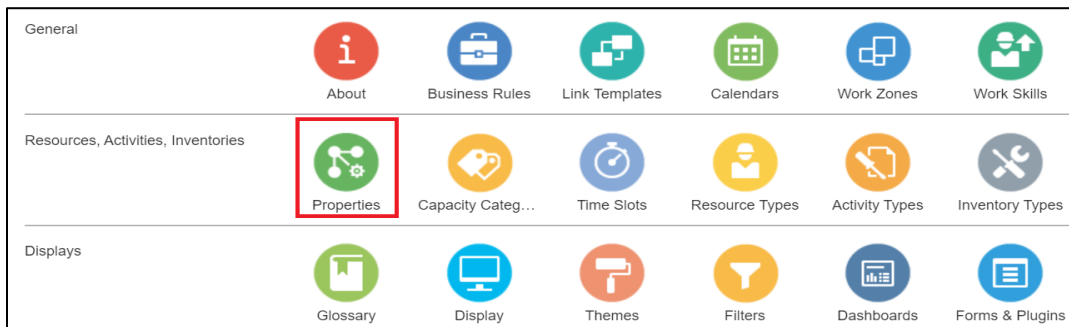

Status	Activity Type Name ▲	Activity Type Label
✓	Activity - Gas Leak Repair	WD-LeakRepair-Old
✓	Activity - Gas Leak Repair- Multiday	WD-LeakRepair
✓	Activity - Minor Repair	WD-MinorPlantRepair
✓	Activity-Normal	Activity-Normal
✓	OFC ACT FOR MOB ID	OFC ACT FOR MOB ID
✓	Pickup Work Order	pickupWorkOrder
✓	Pickup Work Request	pickupWorkRequest
✓	VF Activity - Old Long Pipe Repare	WAM_DK_VF_Activity
✓	ZZ_WAM_OFSC_MultiDayAct2	ZZ_WAM_OFSC_MultiDayAct2
✓	ZZ_WAM_OFSC_MultiDayPlanedAct	ZZ_WAM_OFSC_MultiDayPlanedAct

## Properties

Properties enable the integration specific UIs created and map the Oracle Field Service Cloud UI element with a property. Each property is classified into types such as field, integer, enumeration, string on the basis of requirements and should be addressed using this property.

To import the property file included in the accelerator package:

1. On the **Configuration** page, select **Resources, Activities, Inventories > Properites**.

2. Click **Import**.

3. Browse to the location of the file to be imported and click **Import**.

4. Verify the successful import of the file.

Import properties		Import
Successfully imported	111	
Imported with warnings	0	
Not imported	0	

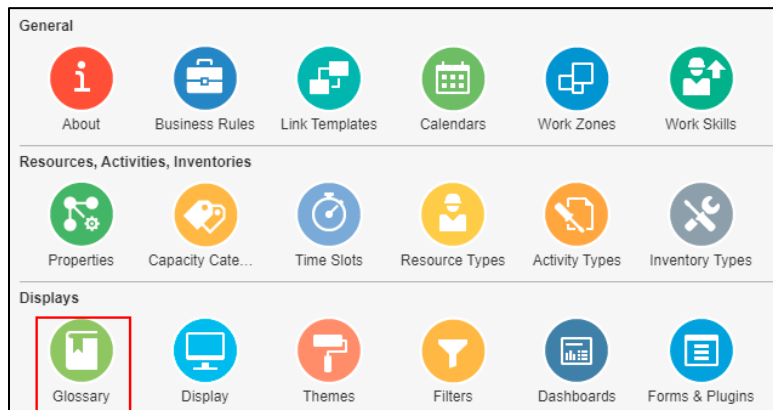

Close

## Glossary

Glossary is used for cosmetic changes in label names. This function provides the flexibility to change labels based on the business needs.

To use the glossary function:

1. On the **Configuration** page click **Glossary**.

2. Click **Import** to import the file provided as part of the package.

3. Click **Browse** and select the file. Click **Import**.

Make sure the file imports successfully.

- As part of the package, the following labels are changed. Change the labels based on the preference.

```
Category (ctg),Identifier (id),Type (tp),ID/Label (lb1),User Types (ut),English (en-US)
"Glossary: mobile_shared, wap_inventory",glossary,translation,10109,,Assets/Equipment
Glossary: mobile_shared,glossary,translation,10865,,Assets/Equipment
Glossary: mobile_shared,glossary,translation,10767,,Asset/Equipment Details
Glossary: wap_inventory,glossary,translation,10111,,Existing
"Screen Configuration - Mobility: Edit/View activity","fae3e1efebea180ba048eb3f1b0c011f029fdfd5e","layout","list_inventories","C2M
OFSC","Equipment"
"Screen Configuration - Mobility: Edit/View activity","9bdc924764e5ac57bfb15c4e166282c8a3189de","layout","list_inventories","WAM OFSC","Assets"
```

Example: To change the Asset label, change the Asset in the given file. You can add more values to the existing values.

## Forms and Plugins

Plugins are used to make changes to screen and data, based on their type and status of target and parent object. They are also used to enter measurements, record time/materials/equipment used while completing an activity, populate service history information and validate completion information before actually sending the information to verify if the message is accepted by Oracle Utilities Work and Asset Cloud Service.

Plug-ins in Oracle Field Service Cloud perform actions not found in the standard solution. They appear as selectable links on the application. They open a new window, tab, or frame in a browser where an external HTML5 application is executed.

For more information on Oracle Field Service Cloud plugin framework refer to latest Oracle Field Service Cloud documentation at:

<https://docs.oracle.com/en/cloud/saas/field-service/20c/fapcf/overview-of-the-plug-in-api.html#overview-of-the-plug-in-api>

Each plugin contains a JavaScript file that has the main business logic required for functionality of the plugin. The data required for each plugin is available through the properties that are added for the plugin. XML data obtained through properties is parsed and appropriate XSL is applied to it to render each UI.

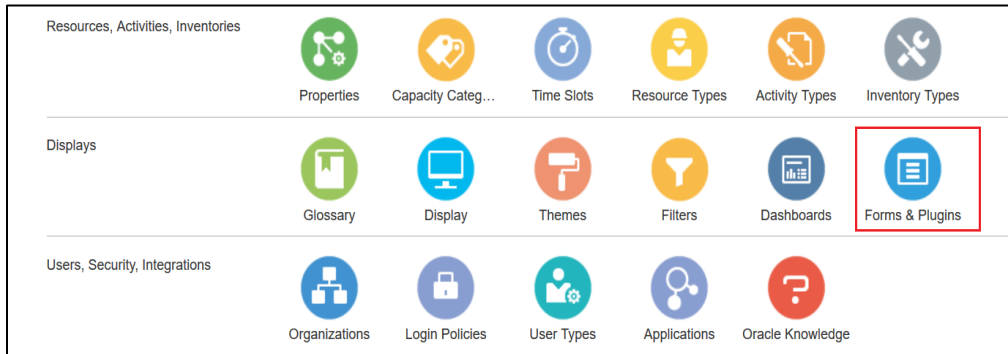

## Measurement Plugin

Measurements manage the asset operational and runtime data collected and tracked for assets. Asset measurements include mileage, hours of uptime, number of start-stops, and more.

Since they almost entirely depend on the usage of the related asset, readings cannot be calculated or predicted accurately by the system. Instead, readings must be collected and entered into the system, either manually by a user or imported as the result of activity completion.

To import plugins:

1. Login to OFSC with valid credentials, click on the  icon on left side of the home screen.
2. Navigate to **Configuration > Displays > Forms and Plugins**.

3. Click **Import Plugins**.

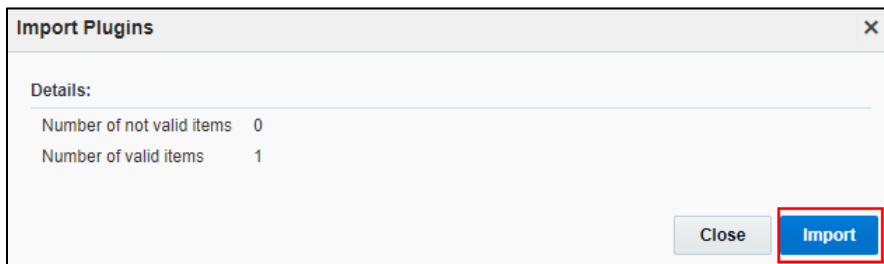

4. On the **Choose file** field, click **Browse** to select measurement plugin. Click **Validate**.

Oracle Field Service Cloud validates the plugin and the number of valid items should be 1.

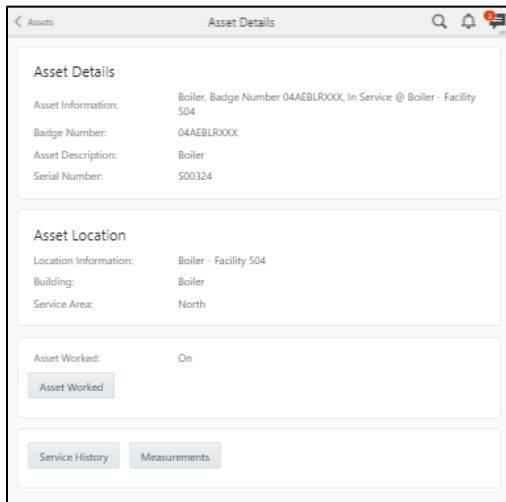

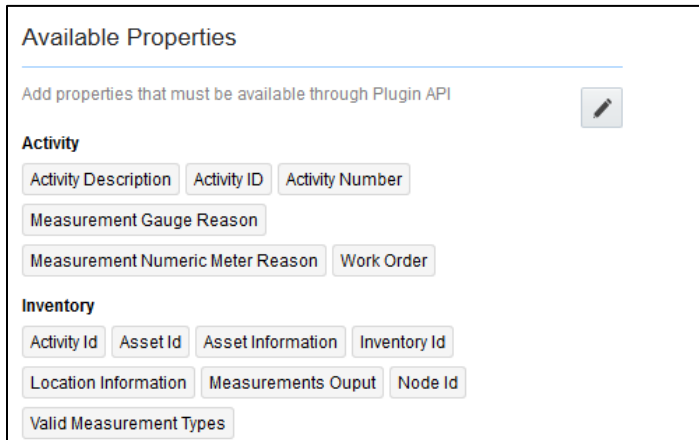

5. Click **Import**.

After the successful import of plugin, Oracle Field Service Cloud displays the details as shown below.

6. Make sure the **Available Properties** tab is populated with all properties.

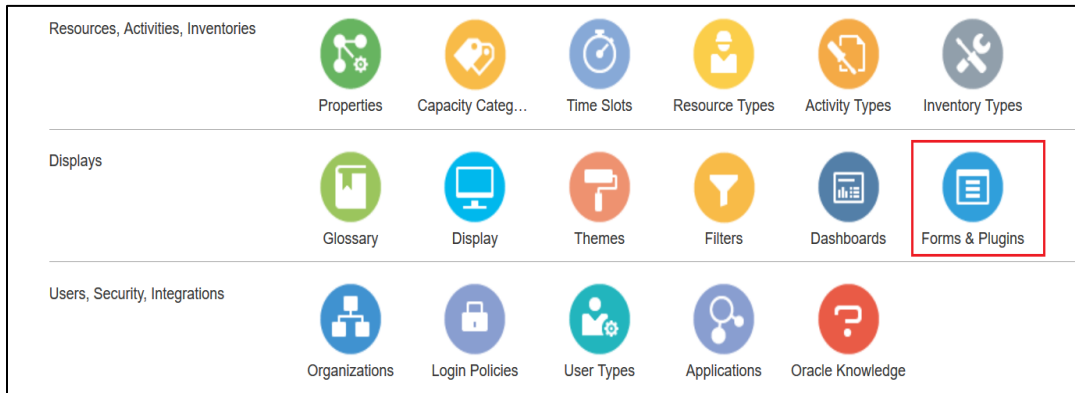

## Resource Usage Plugin

Timesheets are used to record the amount of time that workers (labor resources) spend on activities or work orders. Once charges are entered, processing allows employees to receive proper compensation for their work and labor charges are applied to the appropriate cost buckets.

Generally, only each individual and the person is designated as the supervisor on that individual's crew can access timesheet information for that person.

To import the plugin:

1. Login to OFSC with valid credentials, click on the  icon on left side of the home screen.
2. Navigate to **Configuration** page > **Displays**> **Forms and Plugins**.

3. Repeat steps 3 to 5 from [Measurement Plugin](#).

4. Click **Import Plugins** to import the resource usage plugin provided in the package.

5. Select the resource plugin and enter the details:

- URL: OIC integration point URL for the plugin
- OIC\_uname/OIC\_password: OIC username/password

Oracle Field Service Cloud users should to configure the following:

- ofsc\_uname: clientID@instance ID
- ofsc\_password: client secret key
- ofsc\_bucket: External ID of bucket configured in your environment

**Secure parameters**

Duplicate names are not allowed. Overall size should not exceed 5 KB.

oic_url	Value	-
oic_uname	Value	-
oic_password	Value	-
ofsc_uname	Value	-
ofsc_password	Value	-
ofsc_bucket	Value	-
		+

6. Make sure the **Available Properties** tab is populated with properties shown below.

## Service History Plugin

Service history is information regarding some type of service or maintenance performed on an asset. Information typically associated with service history include record inspection feedback, pass/fail details, downtime, parts failure information, maintenance or service logs, or other information regarding service on the asset.

1. Click **Import Service History Plugin** to import  
Navigate to Configuration page > Forms and Plugins.
2. Repeat steps 3 to 5 from [Measurement Plugin](#).
3. Click **Import Plugins** to import the service history plugin provided in the package.

4. Make sure the **Available Properties** tab is populated with the properties shown below.

## Validate Completion Plugin

This plugin helps crew to validate the eligibility to the activity to complete. If the activity is not yet eligible, the plugin displays corresponding error message if the eligibility is success so the crew can complete the activity.

1. Navigate to **Configuration** page > **Forms and Plugins**.
2. Repeat steps 3 to 5 from the [Measurement Plugin](#) section.
3. Click **Import Validate Completion Plugin** to import the service history plugin provided in the package.

4. Select the **Validate Completion** plugin and enter the details:
  - ofsc\_username: clientID@instance ID
  - ofsc\_password: client secret key
  - ofsc\_bucket: External ID of bucket configured in your environment
5. Ensure that the **Available Properties** tab is populated with the properties shown below.

## Planned Service History Plugin

Planned Service history is information regarding some type of service or maintenance performed on an asset. Information typically associated with service history include record inspection feedback, pass/fail details, downtime, parts failure information, maintenance or service logs, or other information regarding service on the asset.

1. Click **Import Planned Service History Plugin**  
To import Navigate to Configuration page > Forms and Plugins.
2. Repeat steps 3 to 5 from the [Measurement Plugin](#) section.
3. Click **Import Plugins** to import the Planned Service history plugin provided in the package.

4. Make sure the **Available Properties** tab is populated with the properties shown below

**Available Properties**

Add properties that must be available through Plugin API

WAM Activity Id

## Asset Component Install Exchange Undo Plugin

Handle operations on Install, Uninstall and replace actions for the assets and components in a work activity. Information associated with the components used for the assets on completion of the activity is handled.

1. Click **Import Asset Component Install Exchange Undo Plugin**.
2. To import navigate to **Configuration > Forms and Plugins**.
3. Repeat steps 3 to 5 from the [Measurement Plugin](#) section.
4. Click **Import Plugins** to import the Planned Service history plugin provided in the package.

ORACLE

< Configuration | Forms & Plugins

Inventory Id   Inventory Type   Item Number   Location Information   Node Id

Point ID   Room   Run To Failure   Serial Number   Service Area

Site Location   Valid Measurement Types   WAM Activity Id

**Resource**

ID

## User Types

The user types are used to manage permissions for all the users. Each user type has a profile that defines security and display permissions, such as the user's login method, the ability to use certain functions, and access to menu items and properties. Screen-configuration settings define the screens, windows, pop-up windows and other elements visible to a certain user type. They also support the context layout editor, in which the content, arrangement, and visibilities of each context are set.

Use the user types to create custom screen context layouts for Oracle Work and Asset Cloud Service integration to Oracle Field Service Cloud for utilities by accessing the screen configuration settings in specific user types created.

The user types that are part of this integration are:

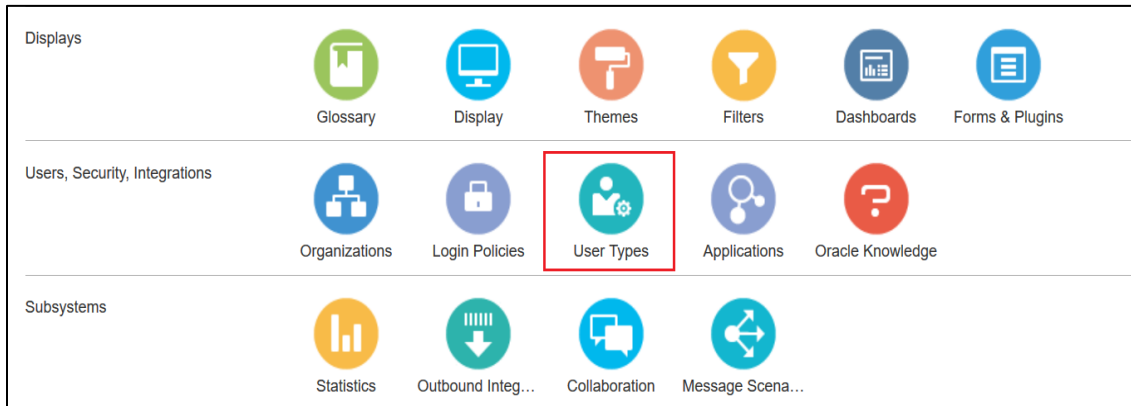

- WACS\_OFSC\_Dispatcher\_User\_Type
- WACS\_OFSC\_User\_Type

To setup user types:

**Important!** Make sure to load the Properties, Activity Types, and Plugins before proceeding.

1. Login to Oracle Field Service Cloud.
2. Click  on the **Home** page.

3. Navigate to **Configuration** page > **Users, Security, Integrations** > **User Types**.

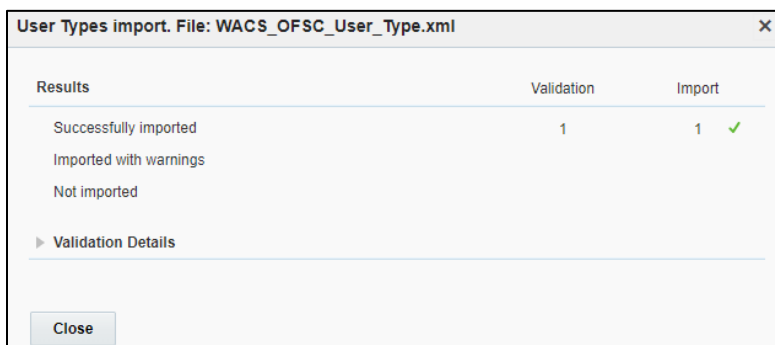

4. Click **Import** to import the user types.

5. On the **Choose file** field, click **Browse** to select measurement plugin. Click **Validate**.

6. Click **Import** and verify the import is successful.

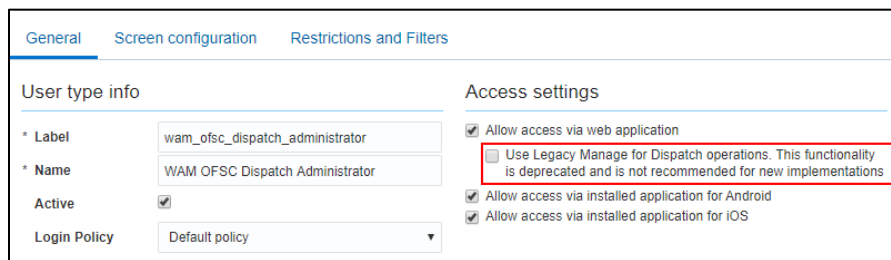

7. Import 'WACS\_OFSC\_Dispatcher\_User\_Type'.

After the Dispatcher user type is set up, perform the following:

1. Make sure the Dispatcher user type import is successful without warnings.
2. Navigate to resources search for admin user. Note the user type configured in your environment.
3. Navigate to **Configuration > User types > WAM OFSC Dispatch Administrator**.
4. On the **General** tab, configure the display profile as 'WAM OFSC Dispatch Administrator' and the profile that was configured to admin user.
5. Navigate to **Resources search** for admin and click **Edit**.
6. Set the user type as 'WAM OFSC Dispatch Administrator'.
7. Enter the password and click **Submit**.

Make sure that the Access settings are selected for both the user types.

## Chapter 3: Additional OFSC Configurations

This chapter elaborates on the additional configuration of organization, work zones, outbound channel and UI validations in user types. It includes the following:

- [Sync Mobile Control Data Information from WACS to OFSC](#)
- [Organization](#)
- [Work Zones](#)
- [Resource and Bucket Info](#)
- [Outbound Channel](#)
- [UI Validations](#)
- [Checklist](#)

### Sync Mobile Control Data Information from WACS to OFSC

Information from Oracle Utilities Work and Asset Cloud Service has to be replicated to Oracle Field Service Cloud to provide the drop-down information used in the Oracle Field Service Cloud mobile application. Create work skills, work skill properties, and work skill conditions in Oracle Field Service Cloud to match activities with resources and for crew tracking.

As part of this accelerator, Sync\_MobileControlData\_WAMToOFSC deployed on Oracle Integration Cloud (OIC) is provided to create these configurations automatically making migration of data easier and get rid of tedious manual work.

Sync\_MobileControlData\_WAMToOFSC needs to be run on initial installation or on a need to basis when new control data from Oracle Utilities Work and Asset Cloud Service or work skill related configurations needs to be created or updated in Oracle Field Service Cloud.

This sync integration process is manually run in OIC by scheduling the integration process to run on a scheduled date or selecting **Submit Now** from the menu of the activated sync integration process to initiate an instance of the integration. An optional language parameter can be entered, it should be an ISO 2 letter language code, to determine the description to retrieve from Oracle Utilities Work and Asset Cloud Service and in what language code the property name should be created in Oracle Field Service Cloud. If the language is not populated or blank, it is defaulted to English (en).

Refer to the Business Flows chapter in *Oracle Utilities Work and Asset Management Integration to Oracle Field Service Cloud Configuration Guide* at [https://docs.oracle.com/cd/F25987\\_01/index.htm](https://docs.oracle.com/cd/F25987_01/index.htm).

The following configurations are created/updated by the Sync Process:

- Create/update the enumeration values of the Oracle Field Service Cloud properties.

OFSC Property label	Synced WACS Information
wam_craft	Craft
wam_crew_shift_type	Crew Shift Type
wam_downtime_reason	Downtime Reason

OFSC Property label	Synced WACS Information
wam_equipment_type	Equipment Type
wam_labor_earning_type	Labor Earning Type
wam_measurement_gauge_reason	Measurement Gauge Reason
wam_measurement_meter_reason	Measurement Meter Reason
wam_other_resource_type	Other Resource Type
wam_overtime_type	Overtime Type
wam_resource_uom	Unit of Measure-Resource

To verify the information synced from Oracle Utilities Work and Asset Cloud Service to Oracle Field Service Cloud, navigate to the respective property and check the enumeration values. Click **Modify**.

**NOTE:**

- After a resource is created in Oracle Utilities Work and Asset Cloud Service, the resource code (craft code, equipment code and other resource code) cannot be changed. The sync integration process uses these resource codes to create the enumeration values for equipment type, craft and other resource type property in Oracle Field Service Cloud. Slash (/) should not be included in the resource code.
- The sync integration process cannot delete enumeration values added to a property in Oracle Field Service Cloud; the OFSC REST API that updates the enumeration values of a property does not allow it. The only way to delete an enumeration value(s) in a property is by deleting the property, recreate the property and run the sync to get the latest values.

- Work Skill Related Configurations
  - A work skill is created in Oracle Field Service Cloud for each craft synced from Oracle Utilities Work and Asset Cloud Service. Work skill is a job-specific skill and is used as a criteria to match activities with the resources. The label format for Work Skill created in Oracle Field Service Cloud is:
    - **W\_ + WACS craftcode**  
Example: Work Skill created in Oracle Field Service Cloud

**Edit work skill: "Carpenter"**

\* Name

\* English

SpanishLA

Portuguese (Brazil)

\* Label

Sharing of the skill in teamwork

Active

- A work skill property on the activity level is created in Oracle Field Service Cloud for each craft synced from Oracle Utilities Work and Asset Cloud Service. This property will contain information about how many people with the particular work skill is needed for the activity. The label format for Work Skill property created in Oracle Field Service Cloud is:

- **W\_ + WAM craftcode + \_Nd**

Example: Work Skill Property created in OFSC

The screenshot shows a 'Modify Property' form with the following fields and values:

- Property type: String
- \* Property name:
  - \* English: Carpenter needed
  - SpanishLA: (empty)
  - Portuguese (Brazil): (empty)
- \* Property Label: W\_Carpenter\_Nd
- Property hint:
  - English: (empty)
  - SpanishLA: (empty)
  - Portuguese (Brazil): (empty)
- Entity: Activity
- Regular expression: (empty)
- \* Lines count: 1
- GUI: Text element
- Clone property data on Reopen or Prewrite:

- Work Skill Conditions are created in Oracle Field Service Cloud based on the craft and the configuration property value of workSkillCond.actvtySameSkillMaxWorker.default obtained from WAMOFSC\_ConfigProps lookup defined in Oracle Integration Cloud. This configuration property value contains the maximum number of people with the same work skill allowed to work simultaneously in an activity.

In this example: For work skill = Carpenter and workSkillCond.actvtySameSkillMaxWorker.default = 3, these are the work skill conditions created.

Example: Work Skill Conditions created for Work Skill Carpenter in OFSC

The screenshot shows a table of 'Work skill conditions' for the 'Carpenter' craft. The table has the following data:

ID	Name	Status	Work skill conditions	Actions
10880	Carpenter(1/1)	✓	Carpenter needed In 1	Modify
10881	Carpenter(2/2)	✓	Carpenter needed In 2	Modify
10882	Carpenter(3/3)	✓	Carpenter needed In 3	Modify

These configuration are used to track teams (crews) consisting of people with different work skills and make sure that activities that require several people simultaneously is assigned to the right team.

## Organization

An organization can have buckets, organization units (Org Units), field resources, tools or vehicle associations. Create an organization before adding any type of resource.

To create an organization:

1. Navigate to the **Configuration** page and click **Organization**.
2. Click **Add New** to add a new organization.

3. Enter the name of the organization and click **Submit** to save the details.

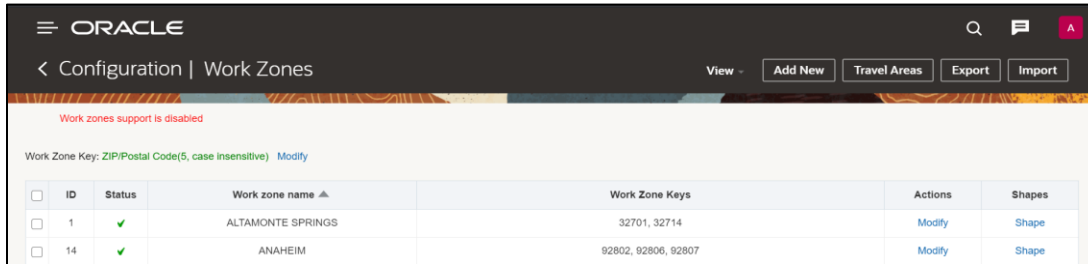

A screenshot of the 'Edit Organization' form. The form has a title bar with 'Edit Organization' and a close button. It contains several input fields: '\* English' with the value 'Sunrise Utilities', 'Portuguese (Brazil)', 'SpanishLA', '\* Label' with the value 'Sunrise Utilities', and 'Type' with a dropdown menu set to 'In-house'. At the bottom, there are two buttons: 'Discard changes' and 'Submit'.

## Work Zones

Work zones are used to divide area in different zones for better scheduling of crews. Use the work zone keys to provide the ZIP/postal code to facilitate the division through the Service Point information that comes from Oracle Utilities Work and Asset Cloud Service.

To add a work zone:

1. Navigate to the **Configuration** page and click **Work Zone**.
2. Make sure the **Work Zone Key** (top left corner) is ZIP/Postal Code.

- On the **Work Zone** page, click **Add new** to add the required postal codes in the Work Zone Keys field.

\* Work zone name: Stark

\* Work zone label: Stark

Status: Active

Delimiter: new line

Travel Area: Sunrise Ente

Work Zone Keys: 32704, 44720

- Click **Add** to save the new work zone.

## Resource and Bucket Info

Oracle Field Service Cloud uses bucket and resources to categorize the resources. In this integration, use the bucket as a resource type to route the entire meter service tasks to workers. In the bucket, create two resources (field workers) who are assigned field activities coming from Oracle Utilities Work and Asset Cloud Service.

To create resources in the bucket:

- On the Oracle Field Service Cloud Home page, click the three lines on the top left corner.

- Click **Resource & Bucket Info**.
- Click **Add Child**.

**Resource & Bucket Info > Sunrise Cable** Add Child Resource History

**Resource Information**

External ID: Cable      Credence: 

\* Name: Sunrise Utilities

## Outbound Channel

This element is used to create a channel to communicate with Oracle Utilities Work and Asset Cloud Service through Oracle Integration Cloud. Various channel types can be chosen, but since Oracle Work and Asset Cloud Service integration to Oracle Field Service Cloud is through Oracle Integration Cloud, it is used as the channel type.

To add a communication channel:

1. Navigate to the **Configuration** page > **Subsystems** > **Outbound Integration** icon.

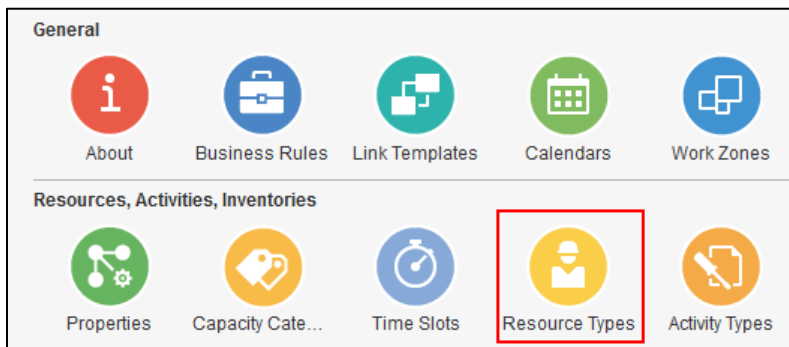

2. Click **Add channel**. Enter the required details and click **OK**.

The 'Add Channel' dialog box is shown with the following fields: Channel Type (Business Intelligence Cloud Service), \*Name, \*URL, \*Identity Domain, \*User Name, \*Password, and \*Confirm Password. There are 'Close', 'Test Connection', and 'OK' buttons at the bottom.

## Crew Configuration

To configure a crew:

1. Navigate to **Configuration** page and click **Resource Types**.

2. Click **Add Resource Type**.

ID	Resource type name ▲	Status	Label	Role	Icons	Actions
3	Bucket	✓	BK	Bucket		Modify
2	Group	✓	GR	Organization unit		Modify
5	Network Tech	✓	EG	Field resource		Modify

3. Enter the required details and make sure the crew has 'PR' as the label. Save the record.

**Edit Resource Type**

**Resource Type Info**

Name

\* English: Technician

SpanishLA:

Portuguese (Brazil): Técnico

\* Label: PR

Active:

**Features**

Role: Field resource

Resource is a Contingent Worker

Resource can participate in team

Resource can be a teamholder

Share inventory in teamwork

Share geolocation in teamwork

Share work skills in teamwork (team-member only)

Used for Quota management

Routing can assign activities

Enable 'Not activated in time' alert and trigger

**Load threshold**

Units of measurement: number of activities

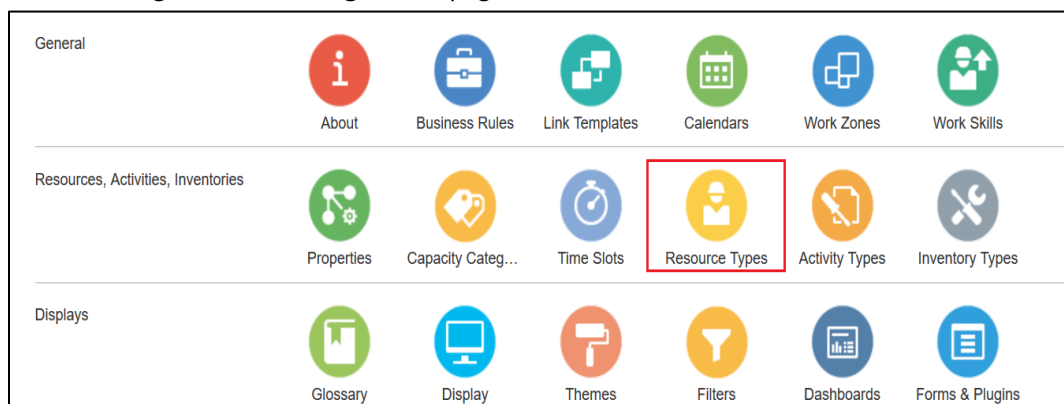

Full load: If resource has 10 or more activities

Empty: If resource has 0 or less activities

*Adding Crew and Crew Member*

To create resources for the crew member and crew itself:

1. Navigate to the **Configuration** page > **Resources, Activities, Inventories** > **Resource Types**.

2. Click on **Add Resource Type**.
3. Populate the required information and click **Add**.

### Add Resource Type

<h4 style="margin: 0;">Resource Type Info</h4> <p>Name <input style="width: 100%;" type="text"/></p> <p>* English <input style="width: 100%;" type="text" value="Crew"/></p> <p>SpanishLA <input style="width: 100%;" type="text"/></p> <p>Portuguese (Brazil) <input style="width: 100%;" type="text"/></p> <p>* Label <input style="width: 100%;" type="text" value="Crew"/></p> <p>Active <input checked="" type="checkbox"/></p>	<h4 style="margin: 0;">Features</h4> <p>Role <input type="text" value="Field resource"/> </p> <p><input type="checkbox"/> Resource is a Contingent Worker</p> <p><input checked="" type="checkbox"/> Resource can participate in team</p> <p><input checked="" type="checkbox"/> Resource can be a teamholder</p> <p><input type="checkbox"/> Share inventory in teamwork</p> <p><input type="checkbox"/> Share geolocation in teamwork</p> <p><input type="checkbox"/> Share work skills in teamwork (team-member only)</p> <p><input type="checkbox"/> Used for Quota management</p> <p><input checked="" type="checkbox"/> Routing can assign activities</p> <p><input type="checkbox"/> Enable 'Not activated in time' alert and trigger</p>
<h4 style="margin: 0;">Load threshold</h4> <p>Units of measurement <input type="text" value="number of activities"/></p> <p>Full load If resource has <input type="text" value="10"/> or more activities</p> <p>Empty If resource has <input type="text" value="10"/> or less activities</p>	

### Travel Allowance

**Start of Day Travel**

Working Time does not include the Travel Time to the first activity

Working Time includes the Travel Time to the first activity

Working Time includes up to  minutes of the Travel Time to the first activity

**End of Day Travel**

Working Time does not include the Travel Time from the last activity to the Resources End Location

Working Time includes the Travel Time from the last activity to the Resources End Location

Working Time includes up to  minutes of the Travel Time from the last activity to the Resources End Location

**Statistic Parameters**

Personalize the estimation of activity duration

Use data reported to enhance company-wide estimations

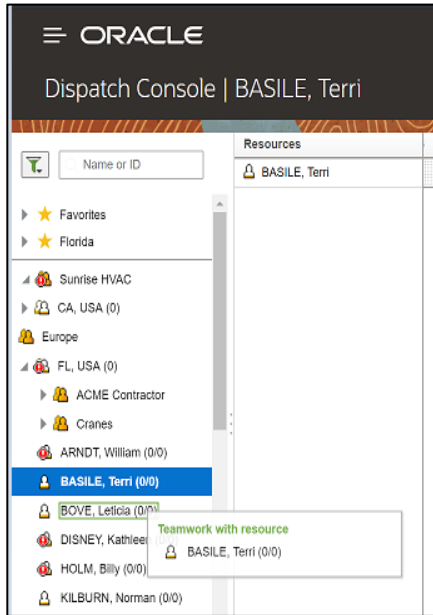

Do not consider reported data of the first  working days, for statistic estimations

4. Repeat steps 2 and 3 to create resource types for crew members.

## Assigning Resources

To add multiple resources to a crew so that they can assist it in the completion of work:

1. Navigate to the **Activities** page and observe various resources.
2. Drag and drop the resources to the crew so as they can assist.

3. Upon successful drag and drop, add activities to the crew.

4. Populate the required information and click **Submit**.

## Offline vs Online Mode

When the crew is enroute to perform an activity in the field there is a possibility that the location does not have network (offline mode); if the network exists, the mode is online. When online, crew can perform the work, validate the completion of the activity, and submit the activity for completion. But, when offline, though the crew can validate and complete the activity, this completion information will be synched to server and message is sent out of Oracle Field Service Cloud only when it comes online.

**Note:** No offline support is currently provided when adding attachments to a service history. If crew time is entered offline, supervisor has to open the **Resource Usage** page when online before going offline. This

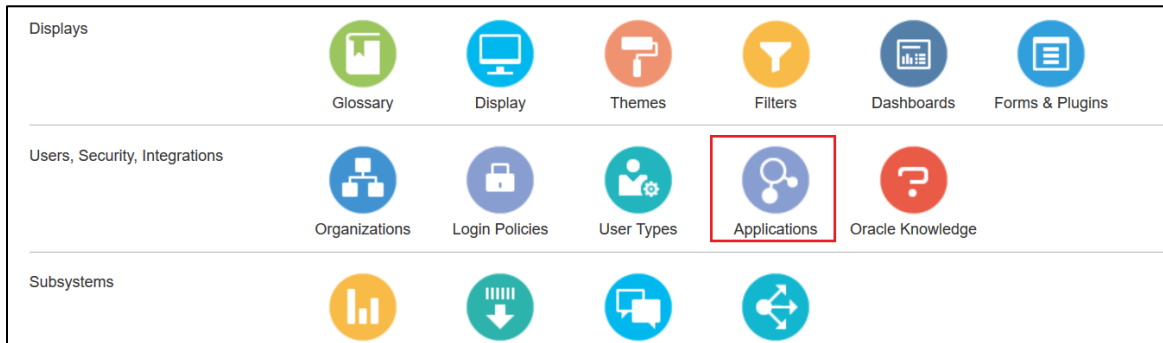

ensures all relevant crew member information needed is available on local storage before going offline. Timesheets can then be entered in offline mode as well.

## Crew Time

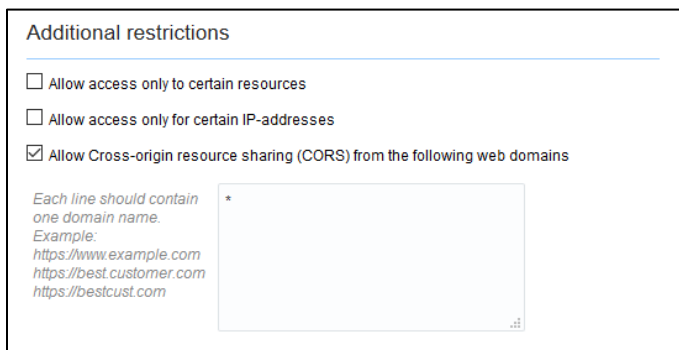

As part of the crew time sheet functionality, from the plugin, there is an invocation call to OFSC REST API to configure the crew members under Crew. To call OFSC REST API from the plugin, set up cross-origin resource sharing (CORS) in Oracle Field Service Cloud as follows:

1. Navigate to **Configuration > Application > Additional Resources**.

2. Select **Allow Cross-origin resource sharing (CORS)** from the following web domains and provide the Oracle Field Service Cloud domain.

If the domain details are unknown, enter '\*'. For the actual Oracle Field Service Cloud domain contact the Oracle Field Service Cloud support team.

A screenshot of the 'Additional restrictions' configuration page. It features three checkboxes: 'Allow access only to certain resources', 'Allow access only for certain IP-addresses', and 'Allow Cross-origin resource sharing (CORS) from the following web domains'. The third checkbox is checked. Below the checked checkbox is a text area with a placeholder '\*'. To the left of the text area, there is instructional text: 'Each line should contain one domain name. Example: https://www.example.com https://best.customer.com https://bestcust.com'. The text area has a small '...' icon at the bottom right.

## Inventory Types

The inventory types (such as asset, material, etc) are stored in Oracle Field Service Cloud.

To add an inventory type:

1. Navigate to **Configuration > Inventory Types**. Click **Add New**.

< Configuration | Inventory Types

Add New

ID	Name	Label	Unit	Model Property	Status	Non-serialized
1	2T Trane A/C	NT		Model	✓	
2	Rheem RTE13 4.0 Tankless WH	DT		Model	✓	
3	Goodman 46,000 BTU Furnace	AT		Model	✓	
4	40 Gal Rheem HW Heater	TV		Model	✓	

2. Enter the details as shown below and click **Save**.

\* Label

The screenshot shows a configuration form for an equipment item category. The form includes the following fields and options:

- \* Label:** A text input field containing "Equipment".
- Active:** A checked checkbox.
- Non Serialized:** A checked checkbox.
- Model Property:** A dropdown menu currently showing "Item Category [Item Category]".
- \* Name:** A section header for the name fields.
- Unit of Measurement:** A section header for the unit of measurement fields.
- \* English:** A text input field containing "Equipment".
- \* English:** A text input field containing "Each".
- SpanishLA:** An empty text input field.
- SpanishLA:** An empty text input field.
- Portuguese (Brazil):** An empty text input field.
- Portuguese (Brazil):** An empty text input field.
- Buttons:** "Close" (grey) and "Save" (blue).

## Checklist

Before proceeding to chapter 4, verify if the following activities are complete.

- All the Activity Types specific to customer are created
- Properties are imported
- User Types are imported
- Plugins are configured
- Make sure the quota is allocated and need not be configured
- Name of the organization
- Sync information from Oracle Utilities Work and Asset Cloud Service to Oracle Field Service Cloud
- Work Skills are created
- Name of the resources, work zones
- Inventory Types are created
- Details of Oracle Integration Cloud used to create the outbound channel

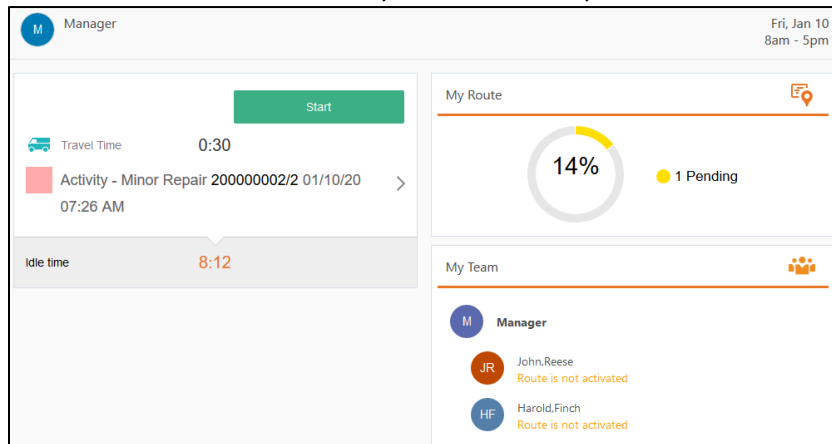

# Chapter 4: User Operations

This chapter provides step by step instructions for user operations.

1. Login to Oracle Field Service Cloud Mobility application.

You can access the application by adding '/m' to the Oracle Field Service Cloud URL <ofsc\_link/m>.

2. Access the Mobility page using the worker/technician's credentials. The page shows the activities in the queue of the worker.
3. Click **Start** to start the activity in the worker's queue.

4. Enter the **Work Activity Number** and click **Submit**.

The screenshot shows a form for entering a 'Work Activity Number'. The number '36246904142514' is entered in the text field. Below the field are two buttons: 'Dismiss' and 'Submit'.

5. To enter the activity details:
  - a. Click the activity. On the **Activity Details** page, click **Assets**.

# Chapter 5: Customizations

Adding new properties according to the requirement and customizations help customers to enhance the functionality of the integration and increase the usability. The customizations are done in Oracle Integration Cloud, Oracle Field Service Cloud, and Oracle Utilities Customer Cloud Service depending on the fields, elements, or properties to be added and whether they are available.

This chapter focuses on a few cases about customizations.

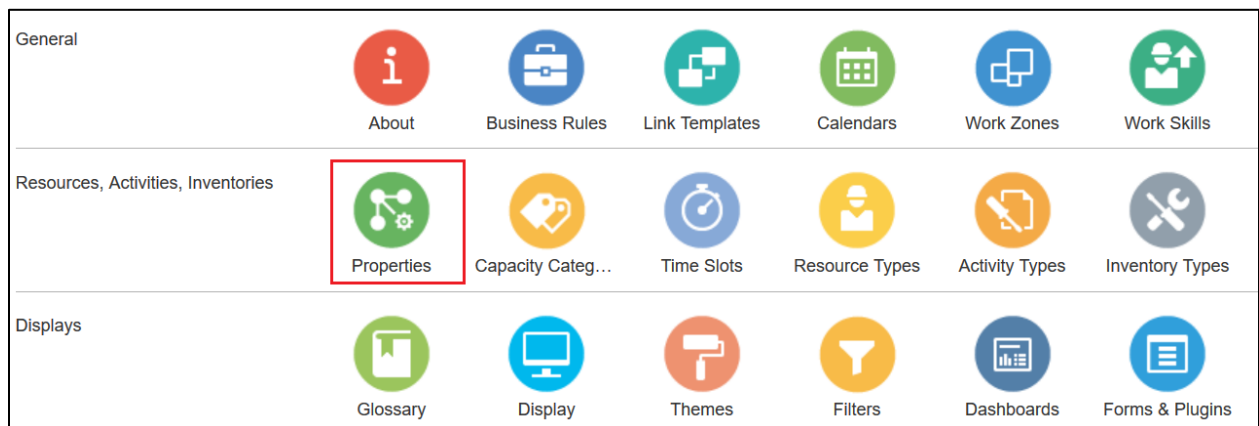

- [Adding New Fields to Field Activity](#)
- [Adding Custom Business Objects](#)
- [Plugins Rendering Data](#)
- [Validation for Completion](#)

## Adding New Fields to Field Activity

This section provides the steps to add a new field to the field activity already available but not present in the field activity.

### Oracle Field Service Cloud Configurations

1. Login to Oracle Field Service Cloud.
2. Navigate to **Configuration > Resources, Activities, Inventories > Properties**.

3. Enter the **Property name** and **Property Label**.
4. Select the entity, type of GUI, and add the enumeration values “customprop1” and “customprop2”.

**Modify Property**

Property type: Enumeration

\* Property name

\* English: Test Custom Property

SpanishLA:

Portuguese (Brazil):

\* Property Label: test\_customproperty

Property hint

English:

SpanishLA:

Portuguese (Brazil):

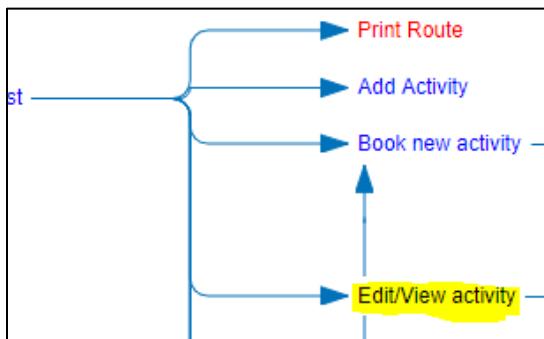

Entity: Activity

GUI:  Combobox  Radiogroup

Clone property data on Reopen or Prework:

Enumeration values

5. Navigate to **Configuration > Users, Security, Integrations > User Types** and select the required user type.
6. Navigate to the Screen configurations for the select user type and open the **Edit/View activity** section.

7. Add a new element by dragging and dropping a new 'Input' from the **Add New Element** section.
8. Map the element to the **Test Custom Property**. Save this configuration after mapping the field.

*Oracle Utilities Work and Asset Cloud Service Configurations*

1. Login to Oracle Utilities Work and Asset Cloud Service.
2. To configure with a new schema element:
  - a. Navigate to the W1-ActivityComplInboundComm business object.
  - b. Identify the data area to add the new schema element.

Example: To make changes to the Completion Event Details section, the data area to be changed is the custom data area created for Oracle Field Service Cloud.

- c. Extend the data area. Add the completion event details data area in the **Extended Data Area** field.

**Data Area**

Main Schema

General Information

DATA AREA	CM_OFSCDA
DESCRIPTION	CM_OFSCDA
OWNER	Customer Modification

Schema Designer

View Mode

TREE TEXT

```

1 <schema>
2   <custom mdField="CM_NOTES" mapXML="BO_DATA_AREA"/>
3 </schema>
4

```

d. The new schema element is displayed in the business object schema.

```

<creationDateTime suppress="true" required="true" dataType="dateTime" default="CURRENT_DATE"/>
<statusDateTime suppress="true" dataType="dateTime" mapField="STATUS_UPD_DTTM"/>
<version suppress="true" dataType="number" mapField="VERSION"/>
<exceptionInformation type="group" mapXML="BO_DATA_AREA">
  <messageCategory suppress="true" mdField="MESSAGE_CAT_NBR" dataType="number"/>
  <messageNumber suppress="true" mdField="MESSAGE_NBR" dataType="number"/>
  <longDescription suppress="true" mdField="DESCRLONG"/>
  <expandedMessage suppress="input" mdField="ACT_ERROR_MESSAGE"/>
  <messageParameters suppress="true" type="list">
    <parameterSequence mdField="PARAM_SEQ" dataType="number" isPrimeKey="true"/>
    <messageParameterType mdField="MSG_PARAM_TYP_FLG" dataType="lookup" lookup="MSG"/>
    <messageParameterValue mdField="F1_MSG_PARAM_VLONG"/>
  </messageParameters>
</exceptionInformation>
<accessControl type="group">
  <owningAccessGroup fkRef="F1-ACCGP" mapField="OWNING_ACCESS_GRP_CD"/>
</accessControl>
<eventInformation type="group">
  <completionDateTime dataType="dateTime" mapField="W1_EVT_DTTM"/>
  <comments mdField="COMMENTS" mapXML="BO_DATA_AREA"/>
  <crewName mdField="CREW_NAME" mapXML="BO_DATA_AREA"/>
  <custom mdField="CM_NOTES" mapXML="BO_DATA_AREA"/>
</eventInformation>

```

## Adding Custom Business Objects

After a custom business object for a service history is added in Oracle Utilities Work and Asset Management, the information is available to Service History plugin along with all other service histories as part of “wam\_asset\_valid\_service\_history\_types” property.

In Oracle Field Service Cloud the new business object value is added as an enumeration value in “wam\_service\_history\_bo” property.

If the new business object belongs to one of the predefined service history categories of Questionnaire, Inspection, Failure, Downtime and General, it is defined as such in the property. For example: A custom business object “CM\_Downtime” is entered in the “wam\_service\_history\_bo” property as shown below. The service history plugin will automatically handle the new business object.

If the new business object entered does not fall into any of the predefined service history categories, after the “wam\_service\_history\_bo” property is updated, the service history plugin javascript should be updated to handle the new service history category. Create a new XSL that needed for the UI of the new service history category to be added.

## Plugins Rendering Data

This section explains how each plugin renders the data.

### Measurements

- Valid measurement types received from Oracle Utilities Work and Asset Clod Service are assigned to “wam\_valid\_measurement\_types” property and are obtained in runtime as XML string and displayed in plugin.
- The individualMeasurementType-to-form.xml and individualMeasurementTypeEdit-to-form.xml are used to style the UI forms to add and update measurement information.
- The measurement information is consolidated into “wam\_measurements\_output” property and made available for validateCompletion plugin.
- Measurement reason types (wam\_measurement\_meter\_reason, wam\_measurement\_gauge\_reason) are populated based on the measurement type selected.

### Resource Usage

- resourceUsage-to-form.xml provides the summary of **Resource Usage Details** page from where crew can add timesheets, equipment, and other resource usage. It also displays the resource usage details entered.
- individualTimeUsage-to-form.xml used to display add/update time sheet screens whereas crewTimeUsage-to-form.xml is used to enter and update individual and crew timesheets.

- individualEquipmentUsage-to-form.xml and individualOtherUsage-to-form.xml are used to enter equipment and other resource usages.
- Upon completion of resource usage which calls Oracle Integration Cloud (Send\_ResourceUsageDetails\_OFSCToWAM integration flow) and update the details in Oracle Utilities Work and Asset Cloud Service.

### *Service History*

- The below XSL are applied to render the UI:
  - serviceHistoryTypes-to-form.xml to show Service History List and the Entered Service histories
  - downtime-to-form.xml for Downtime Service History form
  - failure-to-form.xml for Failure Service History form
  - questionnaire-to-form.xml for Questionnaire and Inspection Service History form
  - sh-to-form.xml for General Service History form
  - entered-sht-count.xml is used to count the entered service histories per each service history type
  - shAttachment-to-form.xml to enter attachments
- The valid service histories are displayed based on the service histories hold by “wam\_asset\_valid\_service\_history\_types” property.
- The asset failure information are displayed based on the values holds in “wam\_failure\_info” property.
- The asset downtime reason are displayed based on the values holds in “wam\_downtime\_reason” property.
- The following BO categories are supported. (Questionnaire and Inspection are handled similarly)
  - Questionnaire
  - Inspection
  - Failure
  - Downtime
  - General
- Refer to [Chapter 5: Customizations](#) for information about adding a custom business object.
  - If the completion message for service histories is greater than 655360, the message is split into multiple wam\_service\_history\_output(i) where i values ranges from 1 to 20 (ie size upto 640KB) properties and and made available for validateCompletion plugin.

### *Asset Component Install Exchange Undo*

- The below XSL are applied to render the UI:
  - assetQuery-to-form.xml to show Install, Attach, Replace, and Undo operation screens.
- Every operation will have have “wam\_asset\_effective\_date\_time” property on the screen defaulted to Current Date/Time which can be modified by the user.
- Upon clicking “Search and Add” or “Search and Replace” for Install, Attach, and Replace operations, it calls Oracle Integration Cloud (AssetQuery\_OFSCToWAM integration flow). If the response succeeds, the assets details are received and the operation is performed successfully. If the response fails, a valid error message is displayed on the screen.

## *Validate Completion*

- This plugin is used to validate and construct the final completion message obtained from individual plugins that is sent out by Oracle Field Service Cloud to Oracle Utilities Work and Asset Management. Click **Complete**.
- The plugin validates to check if there are any pending service histories and all the required service histories are completed.

If the validations are successful, click **OK** to write the completion message to a temporary file. If the validations are successful, click **Complete** to send the completion message to Oracle Utilities Work and Asset Management.

- The plugin populates the “participation” node in the completion message with either "W1AW" or "W1AS" based on if the “Asset worked” was selected (checkbox selected) or not.

## Validation for Completion

### *Validation Rules*

- Basic validation is to ensure that the activity has all the necessary information to be completed.
- All pending service histories must be completed when completing the activity (mandatory).
- Required service histories must be entered for worked assets.
- For each asset that worked, loop through the list of required service history types defined on the activity.
- Find all service histories in the list of activity service histories that its service history type = current service history type being processed and either asset ID = empty or equal current asset being processed.
- If not found, issue an error that "A service history of type %1 is missing for asset %2".

## Chapter 6: Hosting Plug-Ins in OFSC

---

Plug-ins can be hosted within Oracle Field Service or externally.

Oracle Field Service cloud has a limit of up to 10 plug-ins that can be hosted within Oracle Field Service cloud.

The steps to host a Plug-In within Oracle Field Service cloud is documented in

[https://docs.oracle.com/en/cloud/saas/field-service/20a/fapcf/configure-and-use-plugins.html#c\\_hostingPlugins](https://docs.oracle.com/en/cloud/saas/field-service/20a/fapcf/configure-and-use-plugins.html#c_hostingPlugins)

The plugins can be hosted externally on

1. Any webserver (Eg: Tomcat) running on a virtual machine either on premise or on cloud
2. It can be stored in Object Storage on a cloud instance by uploading the files either in a public bucket

Additionally if the plugins are hosted externally, then

1. Navigate to **Configuration > Application > Additional Resources**.
2. Select **Allow Cross-origin resource sharing (CORS) from the following web domains** and provide the domain of the server on which the plugins are hosted.

### Hosting files on a webserver

Plugins can be hosted on a webserver running on a virtual machine either on premise or on cloud.

The mobile device or browser needs to be able to reach and communicate with the server hosting the plugin files.

Please refer to the documentation of the webserver of choice on how setup and host the static content.

The unzipped files of the plugin is then hosted on the webserver. The path to the index.html or the directory containing the index.html is configured in the URL field of the plugin screen as defined in

<https://docs.oracle.com/en/cloud/saas/field-service/20c/fapcf/configure-and-use-plugins.html#configure-and-use-plugins>

The externally hosted plugin can be secured and Oracle Field Service Cloud supports authentication mechanism as defined in

[https://docs.oracle.com/en/cloud/saas/field-service/20c/fapcf/configure-and-use-plugins.html#c\\_authentication](https://docs.oracle.com/en/cloud/saas/field-service/20c/fapcf/configure-and-use-plugins.html#c_authentication)

### Storing files on Object Storage

Before storing files in Object Storage please ensure that the basic administration tasks in Oracle Cloud Infrastructure related to Object Storage have been completed properly, and that the compartments and buckets where the plugin files are stored have been setup.

For more information on Oracle Cloud Object Storage setup for Oracle Utilities Cloud Services, please see the latest Oracle Utilities Cloud Services Object Storage Setup Guide

([https://docs.oracle.com/cd/F32570\\_01/PDF/UGBU\\_Cloud\\_Services\\_Object\\_Storage\\_Setup\\_20B.pdf](https://docs.oracle.com/cd/F32570_01/PDF/UGBU_Cloud_Services_Object_Storage_Setup_20B.pdf))

### Using public bucket

The unzipped plugin files can be uploaded into a public bucket in which case the files are not protected and is open to public. The URL to index.html in the public bucket is configured in URL field in OFSC
