2 Overview of Oracle Banking Branch

2.1 Introduction

Oracle Banking Branch is a retail banking application that gives a 360-degree view of the customer and financial transactions to the Teller of the bank. This enables you as the Teller, to provide better customer-focused services as well as cross-sell and up-sell the other products and services of the bank.

A typical transaction under branch is classified into the following stages:

1. Teller capturing the transaction request and transaction enrichment
2. Authorization by the Supervisor
3. Teller Resubmission – applicable for certain transactions

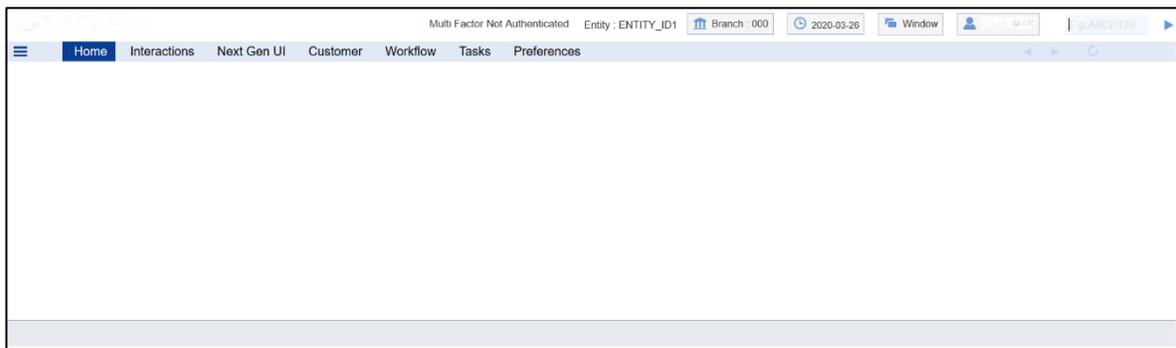

2.2 Pre-Requisites

To launch Oracle Banking Branch through FLEXCUBE Universal Banking, perform the following steps:

1. Specify **User Id** and **Password**, and login to FLEXCUBE Universal Banking **Home screen**.

→ The FLEXCUBE Universal Banking **Home screen** is displayed.

Figure 1: FLEXCUBE Universal Banking Home screen

- Specify **CSDNGUIM** in the top right corner text box, and click **Next**.

→ The **Next Gen UI Products Maintenance** screen is displayed.

NOTE: Make sure that user has roles for the screen.

Figure 2: Next Gen UI Products Maintenance

- Update the **Next Generation UI** Product URL in the maintenance screen **CSDNGUIM**.

NOTE: For example, **NEW TELLER** can be used as the Function id, with the description as **Teller Next Generation Product**. It is released as Static Data and ensure the user roles has been maintained for the same in FLEXCUBE Universal Banking.

- Once the roles are maintained in FLEXCUBE Universal Banking, click **Next Generation UI** on the tool bar.

→ **Next Gen UI Dashboard** displays with the list of products.

Figure 3: Next Gen UI Dashboard

Product Name	Product Description
NEW TELLER	Teller Next Generation Product

5. Click **NEW TELLER**.

→ The **Next Generation – Home screen** is displayed.

NOTE: Make sure that the same user id is maintained in FLEXCUBE Universal Banking. In addition, make sure that the **Next Generation UI** is maintained and it has necessary roles. For example, if the user id is JOHN, the same needs to be present in FLEXCUBE Universal Banking SMS system and **Next Generation UI SMS** system.

6. Do the following **Next Generation UI** changes:

SECURITY_CONFIG table in PLATO_SECURITY schema must have the following entries:

INTEGRATION_ENABLED {id} true

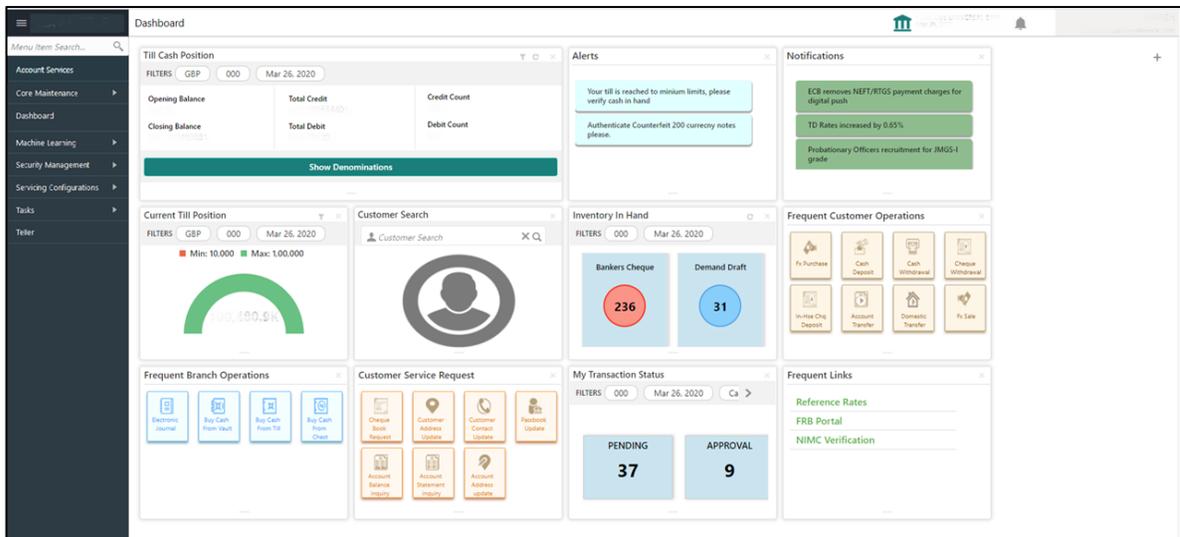

INTEGRATION_CALLBACK_URL {id}

<https://10.00.00.00:1010/FCJNeoWeb/ValidationService/FCNonceValidation/validate>

NOTE: Update the IP and port number of the FLEXCUBE Universal Banking server.

→ The **Home screen** (Branch Dashboard) is displayed.

2.3.3.1 Generating Teller Sequence Number

The system generates a unique Teller Sequence Number and displays an information message **Teller Sequence Number nnn** indicating the generated number after submission of each teller transaction. The generated sequence number is also displayed at the following levels:

- Completion
- Authorization Submission
- Re-submission
- Reversal
- Rejection

2.3.3.2 Generation of Advices for Teller Transactions

The system generates the transaction advice if it is enabled in the definition of function code. The advice includes the currency and amount values involved in the transaction.

2.3.3.3 Transaction Approval

When you perform a transaction for an amount greater than the allowed limit, it needs approval from the Supervisor. Based on the **Assignment Mode** in **Function Code Preferences** screen, the following conditions apply:

- **Manual** – The system will show a list of approval if the request status is **Approval**.
- **Auto** – The transaction is automatically assigned to the default authorizer if the request status is **Approval**.

The transaction approval flow consists of the following steps:

- Initiation
- Pending Approval
- Pending
- Completed

2.3.3.3.1 Initiation to Pending Approval

If the transaction amount exceeds the limit defined in Branch User Limits and on click of **Submit**, the system shows a popup message **Amount exceeds limit for this transaction** and request status is shown as **Approval**.

If assignment mode is manual and on click of **Confirm**, the system shows a list of approval based on branch code, transaction amount, currency, and function code. The user can give a narrative and click **Submit for Approval** button.

2.3.3.3.2 Pending Approval to Sent Back

The Approver needs to log in and fetch the transaction from **Journal Log** with transaction status as **Pending Approval**. The Supervisor can approve the pending transaction by clicking **Approve** with the supervisor comment.

NOTE: The approver remarks are mandatory during the rejection of a transaction.

2.3.3.3.3 Sent Back to Completed

The user needs to fetch the transaction from **Journal Log** with transaction status as **Sent Back** and click **Submit**.

2.3.3.3.4 Override Flow (Initiation to Completed)

Based on the branch maintenance setup at certain levels like Function Code, Function Code Preferences, Branch User Limits, and Branch role limits, if the transaction is validated with any warning override, the system shows a popup message with request status as **Warning**. Once the user confirms, the transaction status will be shown as **Completed**.

2.3.3.4 Transaction Reversal with Approval

A transaction can be reversed with the auto approval or approval from the Supervisor. Based on the **Assignment Mode** in **Function Code Preferences** screen, the following conditions apply:

- **Manual** – The system will show a list of approval if the request status is **Approval**.
- **Auto** – The transaction is automatically assigned to the default authorizer if the request status is **Approval**.

The transaction approval flow consists of the following steps:

- Completed
- Pending Approval
- Pending

- Reversed

2.3.3.4.1 Completed to Pending Approval

The completed transaction can be selected from the **Journal Log** screen. Once you click **Reverse**, the system shows a popup message **Authorization required for Reversal** and request changes to **Approval**.

If assignment mode is manual and on click of **Confirm**, the system shows a list of approval based on branch code, transaction amount, currency, and function code. The user can give a narrative and click **Submit for Approval** button.

2.3.3.4.2 Pending Approval to Sent Back

The Approver needs to log in and fetch the transaction from **Journal Log** with transaction status as **Pending Approval**. The Supervisor can approve the pending transaction by clicking **Approve** with the supervisor comment.

NOTE:

- The approver remarks are mandatory during the rejection of a reversal transaction.
- On rejection, the transaction will be restored to the **Completed** status.

2.3.3.4.3 Sent Back to Reversed

2.3.3.5 The user needs to fetch the transaction from Journal Log with transaction status as Sent Back and click Complete Reversal.Transaction Reversal

A transaction can be manually reversed only when it is authorized and completed from the **Journal Log**.

When you reverse a transaction, the data remains in the system with the status **Reversed** and the accounting entries are reversed (negative amounts are posted into the accounts). Also, this will update the Till Balance for the currencies (for cash transactions), wherever applicable.

You can select the transaction to be reversed from the transaction screen. If the reversal is applicable for the function code, **Reversal** icon will be enabled. When you click this icon, the reversal request will be initiated.

If cash transactions are reversed, the system validates the following:

- the Till used for the reversal is the same as that used in the original transaction

- the denominations are input (If the transaction is reversed the same day of its input, the denominations of the transaction is altered.)
- a batch is open

2.3.3.6 Transaction Rejection

You can manually reject the authorized customer transactions from the Teller **Journal Log**.

NOTE: When you reject a transaction, the data remains in the system with the contract status **Discarded** and no further action is allowed on the transaction.

2.3.3.7 External API

External APIs will be processed only if called by an external system, which is maintained in Oracle Banking Branch. External system can be maintained using External System Maintenance screen. For more information on External System Maintenance screen, refer to the topic [External System Maintenance](#) in this guide. External APIs are supported for the following transactions:

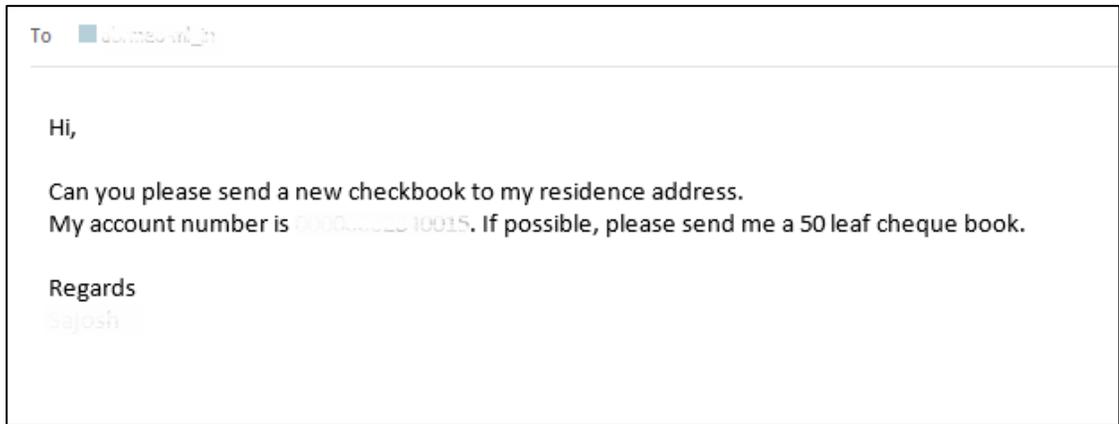

- Cash Deposit
- Cash Withdrawal
- Account Balance Inquiry
- Account Transfer

NOTE: These transactions will work only if OAuth is enabled.

2.3.3.8 Machine Learning

Oracle Banking Branch uses machine learning to process an email request from a customer automatically. When a customer sends an email request, the requirement is understood using machine learning, and the transaction is processed. A sample email request is shown in [Figure 10](#). Based on pre-defined machine learning in External System Maintenance, the transaction is processed automatically.

Figure 10: Sample Email Request

The following conditions apply to the machine learning use case for cheque book request:

- If sufficient details are provided in the email request, the transaction will be processed until completion.
- If details are insufficient in the email request to process a transaction, it will be assigned in the Servicing Journal for user correction. After the assigned user does the correction, the transaction will be processed.

Figure 11: ML Correction Assistance – Extracted Information

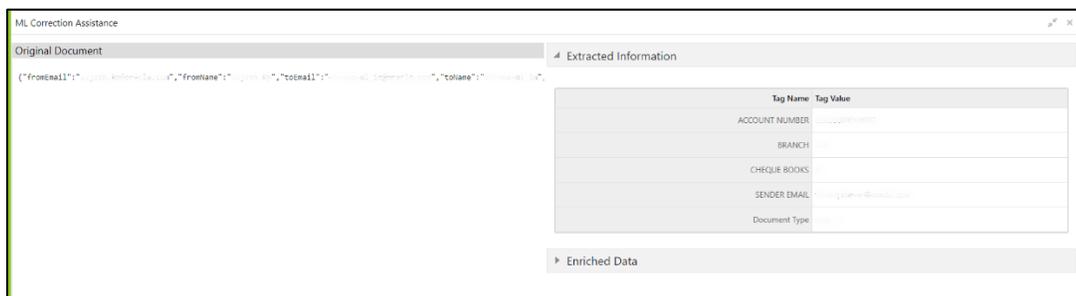

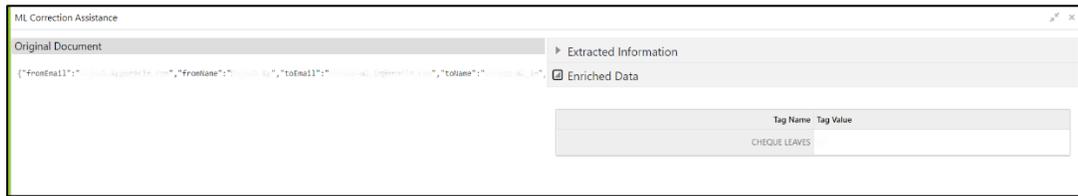

Figure 12: ML Correction Assistance – Enriched Data

In the **Electronic Journal**, you can view the details of the Cheque Book Request initiated through the email request. The **View Request** button will be enabled for the transactions that is submitted or completed. You can view the details of the email request by clicking the **View Request**.

Figure 13: View Request (Completed Transaction)

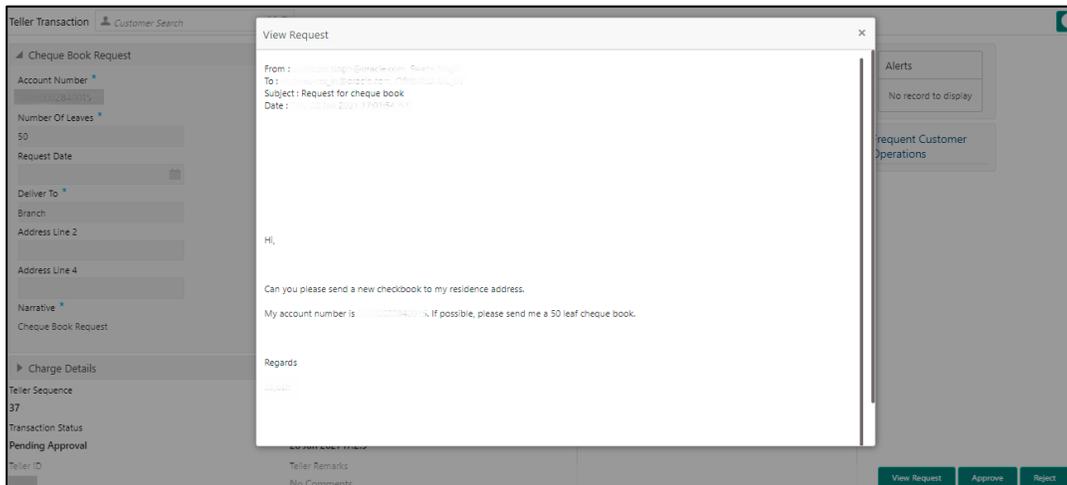

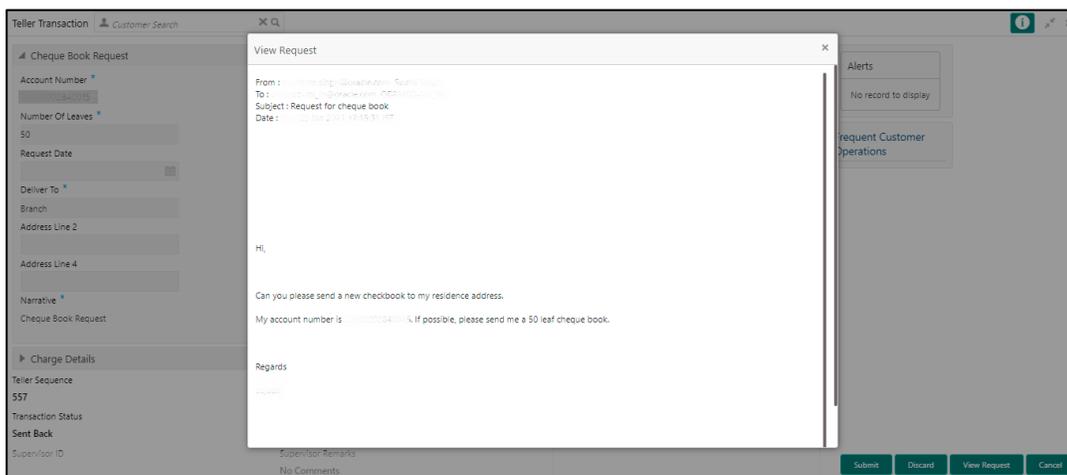

Figure 14: View Request (Submitted Transaction)

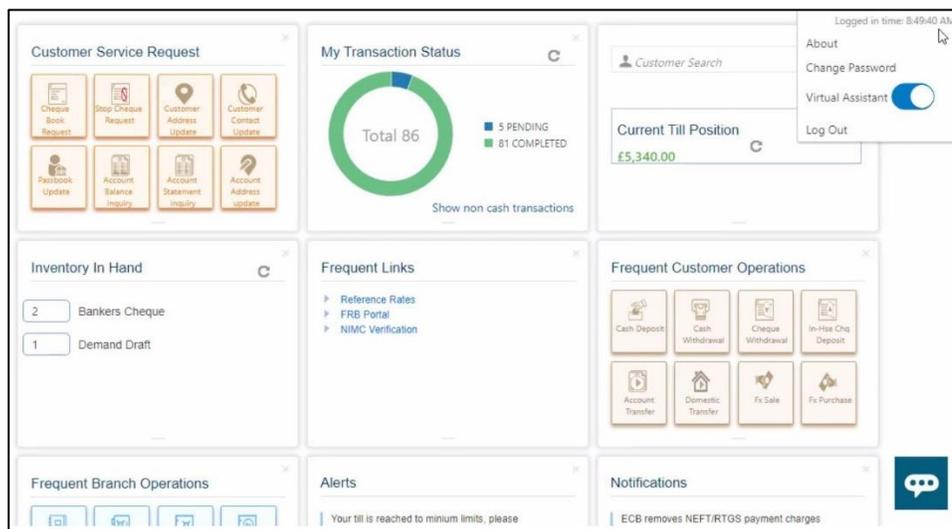

The following conditions apply to the machine learning use case for card block request:

- If sufficient details are provided in the email request, the transaction will be processed until completion.

2.3.3.9 Oracle Digital Assistant

The Oracle Digital Assistant (ODA) helps the Teller to reduce the time taken to access the transaction screens through automatic text/voice processing. To enable this feature, navigate to user menu, and select **Virtual Assistant**.

Figure 15: Virtual Assistant

The Virtual Assistant supports the following use cases:

- Teller can either type/say, **Cash Withdrawal Account Number, Do Cash Withdrawal Account Number** in ODA Chat bot. Based on the input provided, the **Cash Withdrawal** screen will be opened automatically with the specified account number.
NOTE: Teller need to type/say the specific account number while giving the input text/voice.
- Teller can either type/say, **Cash Deposit Account Number, Do Cash Deposit Account Number** in ODA Chat bot. Based on the input provided, the **Cash Deposit** screen will be opened with the specified account number.
- Teller can type/say the name of the operation like **Open Teller Batch** or **Open My Batch**. If the Teller batch is closed, the ODA will check the current Till balance and prompt for confirmation from Teller. Once the Teller confirms, then it will open the teller batch. In case the Teller batch is already open, a response message (**Teller batch already open**) will be displayed.

- Teller can type/say the name of the operation like **Check Batch Status**, **What is my Batch Status**, or **Check Batch**. Based on the input, the following conditions apply:
 - If the Teller batch is open, the ODA will show the message **Your Teller Batch is Open**.
 - If the Teller batch is closed, the ODA will show the message **Your Teller Batch is Closed** and prompts **Do you want to open your Batch** with following options:
 - Yes** – Select to open the Teller batch
 - No** – Select if it is not required to open Teller batch.

Figure 16: Use Case with Account Number

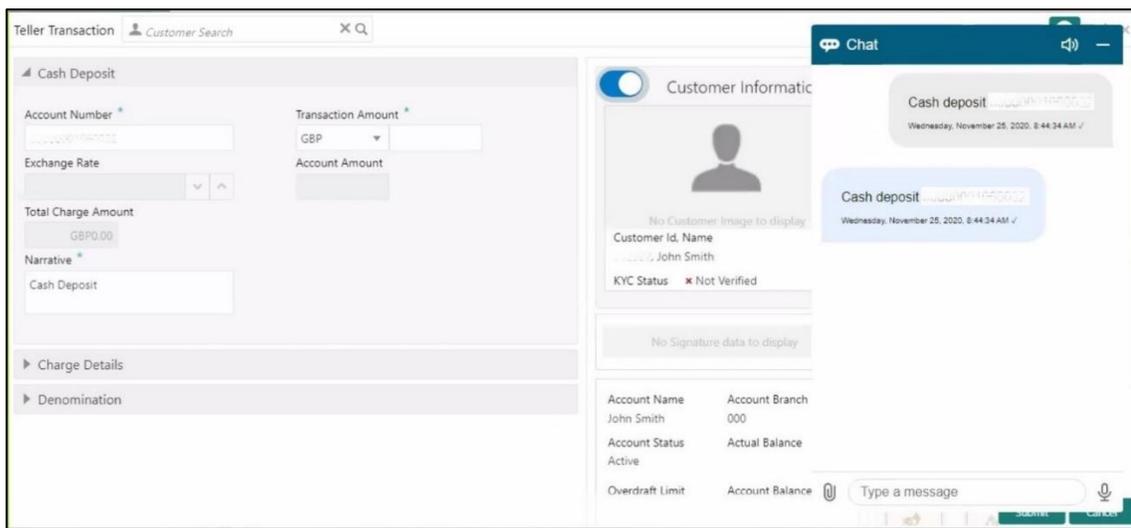

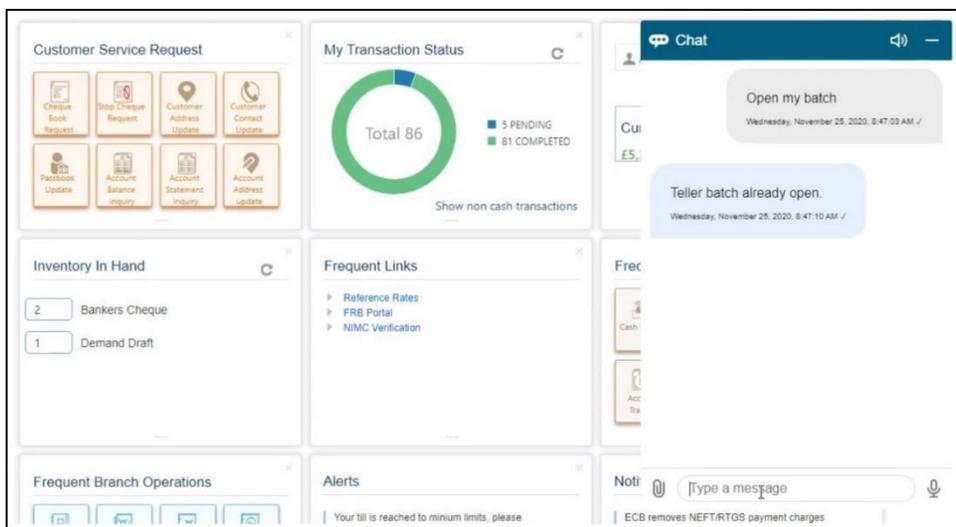

Figure 17: Use Case without Account Number

2.3.3.10 Virtual Identifier

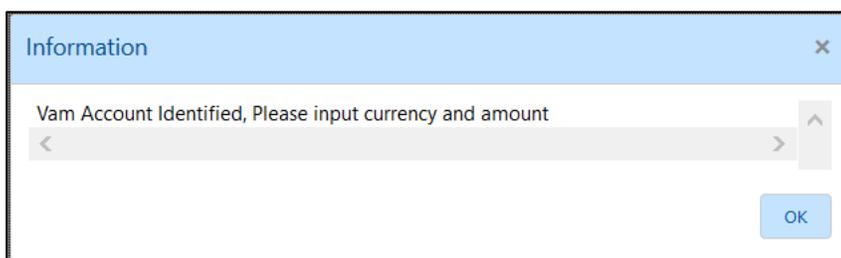

The Virtual Identifier is used to validate the specified account number of the customer. It is supported for the following screens:

- Cash Deposit
- Miscellaneous Customer Credit
- Account Transfer
- In-House Cheque Deposit

If Virtual Identifier is enabled, the validation is performed as follows:

- After you specify the account number, and on tab out, the system will validate the specified account number.
- If the account number is invalid, the system prompts information message to input the currency and amount.
- Once the currency and amount is entered, the Virtual Identifier service will be invoked to validate if it is a valid Virtual Account or not.

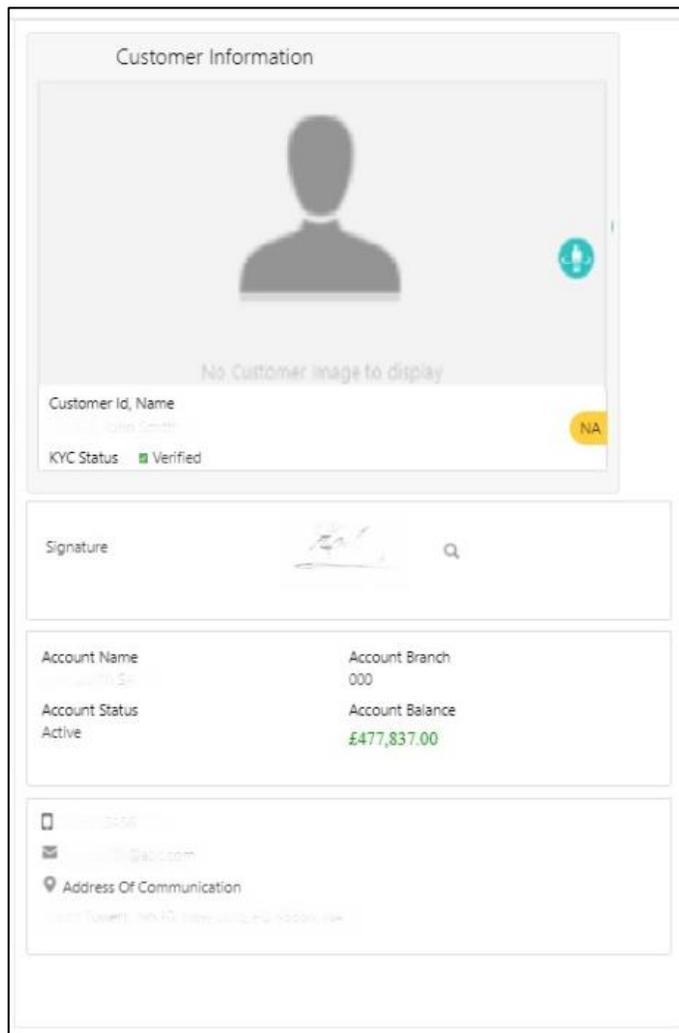

Figure 18: Virtual Identifier – Information Message

2.3.3.11 Amount-Based Signature Verification

The Teller can use this feature is used to verify the signature displayed in the Customer Information widget while performing the transactions. To enable/disable this feature, configure the value as Y/N in the *AMOUNT_BASED_SV* flag. This flag is present in *srv_tm_bc_param_dtls* table in the transaction domain.

If the amount-based signature verification is disabled, and the user specifies the Account Number in a transaction screen and presses the Tab key, the system displays the signature in the Customer Information widget.

Figure 19: Amount-based Signature Verification Disabled

If the amount-based signature verification is disabled, and the user specifies the Account Number and Amount in a transaction screen and presses the Tab key, the system displays the following details of signature in the Customer Information widget:

- Signature
- Signature Type
- Group ID
- Number of Signatories

2.3.4 Keyboard Navigation for Transaction Screens

This topic describes Navigation of various interactive elements using shortcut keys. The keyboard navigation can be used as an alternative method to navigate through interactive elements on a screen – fields, buttons, data segments, tables, etc. It can be used to navigate through the application, input the necessary values, and perform the transactions.

2.3.4.1 Input Values in Fields

After you launch the transaction screen, press Tab key to navigate to the desired field, and specify the value.

2.3.4.2 Select Date

To select the appropriate date, perform the following steps:

1. Press Tab/Shift + Tab keys to navigate to the desired calendar icon.
2. Use Arrow keys to navigate to the desired date.
3. Press Enter key or Spacebar to select the date.

2.3.4.3 Select from Drop-down Lists

To select value from the drop-down list, perform the following steps:

1. Press Tab/Shift + Tab keys to navigate to the desired drop-down list.
2. Use Arrow keys to navigate to the desired value.
3. Press Enter key to select the value.

2.3.4.4 Select from List of Values

To select value from the list of values, perform the following steps:

1. Press Tab/Shift + Tab keys to navigate to the desired list of values.
2. Press Enter key or Spacebar to enter into list of values.
3. If the exact value is known, specify the value in search field, and press Tab key to navigate to **Fetch** button. Press Enter key to select **Fetch** button.

→ The results will be fetched based on the input value.
4. Press Tab key to navigate to the results.
5. Use Arrow keys to navigate to the desired value.
6. Press Spacebar to select the value.

2.3.4.5 Navigating through Tables

To specify/select value in the fields/cells of a table, perform the following steps:

1. Press Tab/Shift + Tab keys to navigate to the desired data segment, and navigate to the desired table row.
2. Press Enter key to enter into the data fields/cells.
3. Specify the necessary value in the fields.
4. If there are more cells in the row, use Tab key to navigate to the other cells and specify the values.
5. After you specify the values in the cells, press Esc key to change the selection from cell to the row.
6. Press Tab key to navigate to the other tables/data segments/fields/buttons.

2.3.4.6 Select Option Buttons/Icons

To select option buttons, perform the following steps:

1. Press Tab/Shift + Tab keys to navigate to the desired option button.
2. Press Enter key or Spacebar to select the option button.

2.3.4.7 Perform Transaction

To specify/select the necessary values and submit a transaction using keyboard navigation, perform the following steps:

1. Use the appropriate shortcut keys to navigate to the fields, buttons, data segments, tables, etc., and specify/select the necessary values.
2. After you specify the necessary values, use appropriate shortcut keys to select **Submit** button to complete a transaction.

2.3.5 Business Process Codes

Business Process Code defines the various stages for the servicing transactions. The screens available in the Oracle Banking Branch application are using the conductor flow. As a part of Oracle Banking Branch releases, a set of default process codes are factory-shipped for the following Customer Servicing transactions:

- Customer Address Update
- Account Address Update
- Customer Contact Details Update

For more information on business process, refer to section 2.3 in Servicing Configurations User Guide.

2.4 Branch Operations

This section describes the various screens used to perform the branch operations. The screens are described in the following sub-sections:

- [2.4.1 Open Branch Batch](#)
- [2.4.2 Open Vault Batch](#)
- [2.4.3 Open Teller Batch](#)
- [2.4.4 Current Open Tills](#)
- [2.4.5 Branch Breaching Limits](#)
- [2.4.6 Till Vault Position](#)
- [2.4.7 Teller Totals Position](#)
- [2.4.8 Close Teller Batch](#)
- [2.4.9 Close Vault Batch](#)
- [2.4.10 Close Branch Batch](#)
- [2.4.11 Book Shortage](#)
- [2.4.12 Book Overage](#)
- [2.4.13 Teller Session](#)

2.4.1 Open Branch Batch

This screen is used to initiate the branch operations for the **Posting Date**. The Supervisor or Branch Manager with necessary access can open this screen. The Teller or Vault Teller can perform the branch operations only after the branch batch is submitted for the posting date. When a branch batch is closed for the day, system derives the next working day automatically, based on the branch calendar.

To process this screen, type **Open Branch Batch** in the **Menu Item Search** located at the left corner of the application toolbar and select the appropriate screen (or) do the following steps:

1. From **Home screen**, click **Teller**. On Teller Mega Menu, under **Branch Operations**, click **Open Branch Batch**.

→ The **Open Branch Batch** screen is displayed.

Figure 21: Open Branch Batch

Specify the details in the **Open Branch Batch** screen. For more information on fields, refer to table [Field Description: Open Branch Batch](#).

Field Description: Open Branch Batch

Field	Description
Posting Date	Indicates the date on which the branch batch need to be opened. NOTE: By default, the system displays the current date.

Click **Submit** to open the branch batch for the specified posting date.

NOTE: Opening branch batch indicates to the head office that the branch is open for business operations on the specified posting date. You can open a Teller batch for the posting date only after the branch batch is opened.

2.4.2 Open Vault Batch

The Vault Teller can use this screen to open a vault batch on a specified date. On the specified posting date, the Vault Teller can open only one vault batch. To open another vault batch, the vault batch which is opened previously needs to be closed. All the tellers buy additional cash and sell their excess cash to the Vault Teller. When this screen is launched, the system will default the cash balances.

To process this screen, type **Open Vault Batch** in the **Menu Item Search** located at the left corner of the application toolbar and select the appropriate screen (or) do the following steps:

1. From **Home screen**, click **Teller**. On Teller Mega Menu, under **Branch Operations**, click **Open Vault Batch**.

→ The **Open Vault Batch** screen is displayed.

Figure 22: Open Vault Batch

The screenshot shows the 'Open Vault Batch' interface. At the top, there is a 'Posting Date' field with a calendar icon. Below this are two summary tables. The first table has columns: Currency, Total Cash, Cash Available, and Shortage/Overage Amount. The second table has columns: Currency, Denomination, Total Units, Total Value, System Units, System Total, Shortage/Overage Units, and Shortage/Overage Amount. At the bottom, there are two summary boxes: 'Total Cash Amount' and 'Denomination Total', followed by a 'Validate Denominations' button and three action buttons: 'Submit', 'Clear', and 'Cancel'.

NOTE: If there is any overage or shortage, the system displays an error message stating that the cash/TC is not balanced for the Teller ID. Also, if any of the conditions mentioned above fail, the system displays an appropriate error message on submit.

2.4.9 Close Vault Batch

This screen is used to close the vault batch for a specific date. The Vault Teller can log in and close the vault batch only if the below conditions are met:

- Verify if there is a difference in the physical cash and that calculated by the system, the overage or shortage has to be booked accordingly. After the overage or shortage is booked, the Vault Teller can close the vault batch for that day.
- Verify that the cash position of the Vault Teller retains the minimum limit for every currency as maintained in the User limits. If the minimum limit is breached, the system prompts the error to maintain the required minimum balance.

NOTE: The Vault Teller can close the vault batch even if the Tills are open. When the Vault Batch is closed, the user will not be able to post transactions like **Buy Cash from Vault** that involve Vault.

To process this screen, type **Close Vault Batch** in the **Menu Item Search** located at the left corner of the application toolbar and select the appropriate screen (or) do the following steps:

1. From **Home screen**, click **Teller**. On Teller Mega Menu, under **Branch Operations**, click **Close Vault Batch**.

Field	Description
Posting Date	Indicates the date on which the branch batch needs to be closed. NOTE: By default, the system displays the current date.

Click **Submit** to close the branch batch for the specified posting date.

2.4.11 Book Shortage

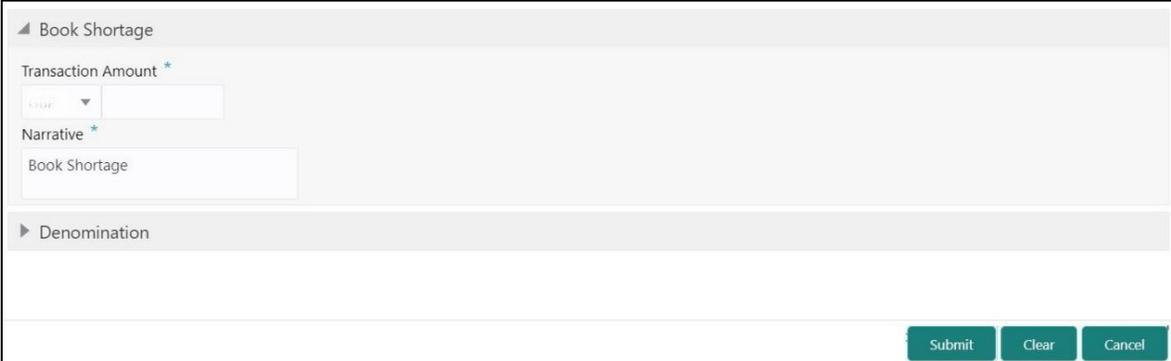

The Teller or Vault Teller can use this screen to book the shortage if the actual or physical cash present is less than the system cash. While booking the shortage, the system lowers the cash balance to bring it in sync with the physical cash balance of the Teller by passing the difference to a cash shortage GL. After the system cash and the physical cash are synchronized, the Teller can perform the cash balancing and close the Teller/Vault Teller batch for the posting date.

To process this screen, type **Book Shortage** in the **Menu Item Search** located at the left corner of the application toolbar and select the appropriate screen (or) do the following steps:

1. From **Home screen**, click **Teller**. On Teller Mega Menu, under **Till-Vault Operations**, click **Book Shortage**.

Total Cash Amount	<p>Displays the total cash amount.</p> <p>NOTE: The system computes the Denomination Amount and validates if it is equal to the Total Cash Amount. It also prompts error during saving if there is any difference.</p>

2.4.11.3 Transaction Submission

1. Click **Submit** to complete the transaction.

→ A Teller Sequence Number is generated and the **Transaction Completed Successfully** information message is displayed.

The transaction is moved to authorization in case of any warning raised when the transaction saves. On transaction completion, the system reduces the cash balance by this transaction amount to synchronize with physical cash held with Teller.

2.4.12 Book Overage

The Teller or Vault Teller can use this screen to book the physical cash held in a particular currency, which exceeds the cash in that currency shown in the system. While booking a cash overage, the system passes the difference to a cash overage liability GL and increases the cash balance, and brings it to synchronize with the physical balance with the Teller. After the system cash and the physical cash are synchronized, the Teller can perform the cash balancing and close the Teller/Vault Teller batch for the posting date.

To process this screen, type **Book Overage** in the **Menu Item Search** located at the left corner of the application toolbar and select the appropriate screen (or) do the following steps:

1. From **Home screen**, click **Teller**. On Teller Mega Menu, under **Till-Vault Operations**, click **Book Overage**.

On selection of an appropriate value from the **Form Type**, only the corresponding tab will be enabled for input. For example, if you select **F24 Standard** as the Form Type then only the tab **F24 Standard** will be enabled and all other tabs will be disabled. The **Principal Fiscal Code** needs to be specified. After entering all the form details, user need to click on Refresh button in the **F24 Payment Details** block .It then adds up the Amounts and defaults the sum in the **Payment Amount** field. The system posts the following accounting entries on save and authorization of the record.

Accounting entries posted for the payment amount:

Dr/Cr	Description	Amount
Dr	Cash Account	Final Section Amount of the corresponding tab which has been entered.

Dr/Cr	Description	Amount
Cr	Account maintained in ARC of the associated product	Final Section Amount of the corresponding tab which has been entered.

Accounting entries posted for the charge amount:

Dr/Cr	Description	Amount
Dr	Cash Account	Charges amount computed as per ARC maintenance
Cr	Income Account	Charges amount computed as per ARC maintenance

2.6.24.7 Validations

The system validates only the data format of the fields specified. If any of such validations fail, the system displays an appropriate error message. If you maintain more than the specified number of rows in any of the below blocks then the system displays an appropriate error message. The following list shows the number of rows, which can be maintained for each Form Type:

- In **F24 Standard** tab, the system allows you to maintain only the following number of records:
 - up to a maximum of 6 rows in the **ERARIO** multi record block.
 - up to a maximum of 4 rows in the **INPS** multi record block.
 - up to a maximum of 4 rows in the **REGIONI** multi record block.
 - up to a maximum of 4 rows in the **IMU E ALTRI ENTI LOCALI** multi record block.
 - up to a maximum of 4 rows in the **INAIL** multi record block.
 - up to a maximum of 3 rows in the **ALTRI ENTI** multi record block.
 - up to a maximum of 7 rows in the **ACCISE** multi record block.
- In **F24 Simplified** tab up to a maximum of 10 rows in the **Tax Details** multi record block.

- In **F24 Elide** tab up to a maximum of 28 rows in the **Tax Details** multi record block.
- In **F24 Predefined** tab up to a maximum of 1 row in the **Tax Details** multi record block.

If the computed value for **Payment Amount** field value is less than or equal to 0, the system displays an appropriate error message. If the **Principal Fiscal Code** and **Secondary Fiscal Code** fields have, a value of 16, character that is for non-individual customers the system validates the last character in the value as per the checksum algorithm for **Fiscal Code**. If the validation fails, then the system displays an appropriate error message. In case of individual customers, where the **Principal Fiscal Code** and **Secondary Fiscal Code** field has a value of 11 character, the system validates the last character in the value as per the checksum algorithm for VAT number. If the validation fails, then the system displays an appropriate error message.

Once Pickup is completed, do the following step:

1. Click **Submit** to complete the transaction.
 - A Teller Sequence Number is generated, and the **Transaction Completed Successfully** information message is displayed.

The transaction is moved to authorization in case of any approval warning raised when the transaction saves. On transaction submission, the deposit of tax amount is completed successfully.

2.6.26.7 Transaction Submission

On selection of an appropriate value from the **Form Type**, only corresponding fields of the form will be displayed for input. For example, if you select **F24 Standard** as the Form Type then only the fields of **F24 Standard** will be available. The **Principal Fiscal Code** needs to be specified. After entering all the form details, user need to click on Refresh button in the **F24 Payment Details** block .It then adds up the Amounts and defaults the sum in the **Payment Amount** field. The system posts the following accounting entries on save and authorization of the record.

Accounting entries posted for the payment amount:

Dr/Cr	Description	Amount
Dr	Cash Account	Final Section Amount of the corresponding tab which has been entered.
Cr	Account maintained in ARC of the associated product	Final Section Amount of the corresponding tab which has been entered.

Accounting entries posted for the charge amount:

Dr/Cr	Description	Amount
Dr	Cash Account	Charges amount computed as per ARC maintenance
Cr	Income Account	Charges amount computed as per ARC maintenance

2.6.26.8 Validations

The system validates only the data format of the fields specified. If any of such validations fail, the system displays an appropriate error message. If you maintain more than the specified number of rows in any of the below blocks then the system displays an appropriate error message. The following list shows the number of rows, which can be maintained for each Form Type:

- In **F24 Standard** tab, the system allows you to maintain only the following number of records:
 - up to a maximum of 6 rows in the **ERARIO** multi record block.
 - up to a maximum of 4 rows in the **INPS** multi record block.
 - up to a maximum of 4 rows in the **REGIONI** multi record block.
 - up to a maximum of 4 rows in the **IMU E ALTRI ENTI LOCALI** multi record block.

2.10.1.5.14 Charge Details

The **Charge Details** segment is used to view or waive the computed charges. This segment is not applicable for the **Inquiry** and **Cancel** modes. For more information on this segment, refer to the topic [2.6.1.3 Charge Details](#) in this guide.

2.10.1.5.15 Denomination Details

The **Denomination** segment is used to view the denominations maintained for the transaction currency and to enter the denomination units. This segment is applicable to the **Cash** modes. For more information on this segment, refer to the topic [2.4.11.2 Denomination Details](#) in this guide.

2.10.1.5.16 View Bankers Cheque Details

This segment is used to view the additional details of the BC. This will be a non-editable data segment and it is not applicable for the **Inquiry** mode.

2.10.1.5.17 Transaction Submission

1. Click **Submit** to complete the transaction.

→ A Teller Sequence Number is generated and the **Transaction Completed Successfully** information message is displayed.

The transaction is moved to authorization in case of any warning raised when the transaction saves. On transaction submission, the system will handoff the details to payments product processor (Oracle Banking Payments) for processing. When you get success notification from Oracle Banking Payments, the system will update the transaction status as **Success** and mark for charges accounting handoff. The transaction accounting is not applicable for the transaction. In case of reject notification from Oracle Banking Payments, the system will discard the transaction. In addition, the transaction accounting is not applicable for the **Duplicate Issue** mode and the transaction submission is not required for **Inquiry** mode.

2.10.1.6 Multi BC Issuance

The Teller can use this screen to issue bankers cheques against multiple beneficiaries for a single remitter account. In addition, it is used to issue bankers cheque against Cash GL for walk-in customers.

To process this screen, type **Multi BC Issuance** in the **Menu Item Search** located at the left corner of the application toolbar and select the appropriate screen (or) do the following steps:

1. From **Home screen**, click **Teller**. On Teller Mega Menu, under **Remittances**, click **Multi BC Issuance**.

→ The **Multi BC Issuance** screen is displayed.

Tellers and Supervisors can use this screen to view the status of the cash transactions performed by them on the posting date. Tellers can view the status of the transactions performed only by them and Supervisors can view the status of the transactions performed by them and other Tellers. This screen is used to perform the following operations:

- View the status of all transactions performed by the logged-in Teller ID.
- Reverse the completed transaction posted by Teller during the day.
- Re-submit the incomplete transactions performed by the logged-in Teller ID, that are either:
 - Approved by the supervisor and moved to Teller EJ log for re-submission.
 - Transactions processed by external system (say Oracle Banking Payments) and responded to Teller with the status as **Success**.
- Reject the incomplete transactions that are either:
 - Rejected by external system (say Oracle Banking Payments) with the status as **Reject**.
 - Prompted with error due to processing validations.
- View the approval history to see the list of all transactions that are either approved or rejected by the logged-in approver ID.
- Approve or Reject the transactions that are assigned to the logged-in Approver ID during the day.

In the tile and grid views, the transactions are displayed for all statuses by default. The status can be changed using the filters option. If the user closes the screen with a status other than All, the selected status will be defaulted until the browser tab is closed. The following conditions apply for the default status:

- The browser tab is not closed – the transactions will be displayed for the previously selected status if this screen is launched again.
- The browser tab is closed and the user logs in to the application in a new tab or window – the transactions will be displayed for all statuses if this screen is launched.

User can perform any of the following actions in this screen:

2.22.6 Function Code Preferences

This screen is used to define the workflow preferences (validation preferences and authorization preferences) for a function code. For the list of function codes and the respective screen names, refer to the table [Annexure 3: List of Function Codes](#). The Rule Based Authorization option in this screen is used to configure multi-level authorization. The multi-level authorization feature is described with the following example.

The sample user roles considered as follows:

- JR.TELLER (Supervisor enabled)
- SR.TELLER1
- SR.TELLER 2
- VAULT TELLER1
- VAULT TELLER 2
- BRN MANAGER

The sample values for limits and roles maintained are as below:

Sample Values for Multi-level Authorization

Transaction Limit	Primary Authorization	Alternate Authorization
50,000 to 9,99,999	SR.TELLER2, VAULT TELLER1, and VAULT TELLER2	VAULT TELLER2 and BRN MANAGER
10,00,000 to 99,99,99,99,999	SR.TELLER2, VAULT TELLER 1, and VAULT TELLER2	BRN MANAGER

The approval needs to be provided by all the roles configured either in the primary authorization path or in the alternate authorization path. Based on the sample values provided, the following are some possible scenarios for multi-level authorization:

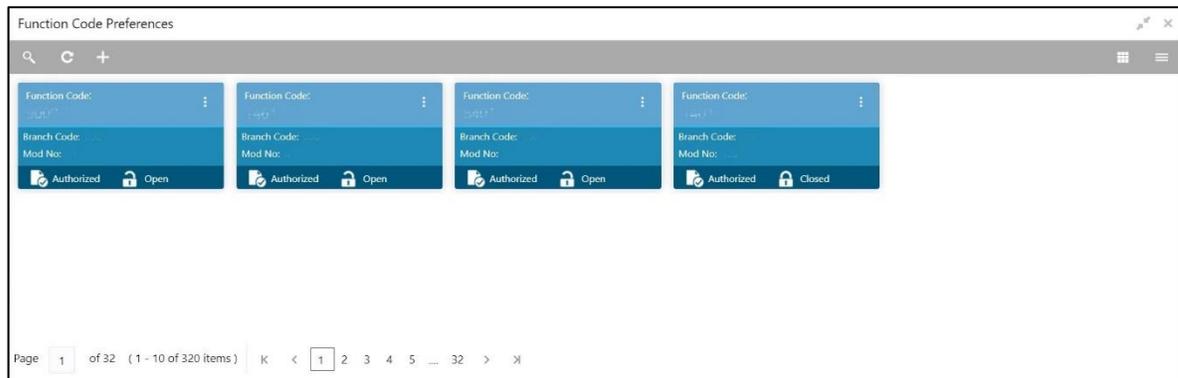

- If a Teller with JR.TELLER role inputs a cash deposit transaction of amount 10,000, the transaction gets completed automatically without authorization.
- If a Teller with JR.TELLER role input a cash deposit of 60,000, the transaction gets assigned to all the roles mentioned in Primary and Alternate Authorization paths. For example, when a user with VAULT TELLER2 role picks the transaction and authorizes it, the transaction gets assigned to the other four roles in the Primary and Alternate paths. Further, based on the user who picks for approval, the corresponding path will be chosen by the system. If a user with BRN MANAGER Role picks the transaction for approval, the system identifies the Alternate Path for approval and ends the authorization process.
- If a Teller inputs an account transfer of 20,00,000, the transaction gets assigned to all the roles mentioned in Primary and Alternate Authorization paths. When a user with BRN MANAGER role picks the transaction and authorizes it, the system identifies the path as Alternate and ends the authorization process.

To process this screen, type **Function Code Preferences** in the **Menu Item Search** located at the left corner of the application toolbar and select the appropriate screen (or) do the following steps:

1. From **Home screen**, click **Teller**. On Teller Mega Menu, under **Branch Maintenance**, click **Function Code Preferences**.

- **Part Waive/ Part Debit:** If there is some amount in the account but not sufficient to collect the full charge, the system will collect the available amount and waive off the remaining amount. No tracking would be done for the waived amount. For example, If the charge amount is Rs. 100 and there is Rs. 70 in the customer account, then Rs. 70 would be collected as the charge and the remaining Rs. 30 would be waived off.
- **Part Track/ Part Debit:** If there is some amount in the account but not sufficient to collect the full charge, the system will collect the available amount and track the remaining amount. For example, If the charge amount is Rs. 100 and there is Rs. 70 in the customer account, then Rs. 70 would be collected as the charge and the remaining Rs. 30 would be tracked for collection.
- **Full Waive:** The full charge amount would be waived off if the amount in the account does not cover the charge fully. For example, If the charge amount is Rs. 100 and there is Rs. 70 in the account, the entire Rs. 100 charge would be waived off.
- **Full Track:** If the account does not have sufficient amount to cover the charge, the entire amount will be tracked. For example, If the charge is Rs. 100 and the amount in the account is Rs. 70, no charge would be collected, instead an amount block for Rs. 100 would be created and this would be tracked till closure.
- **Force Debit:** In this case, the charge amount would be forcibly debited to the customer's account. For example, If the charge is Rs. 100 and the customer account has Rs. 70, then the system would forcibly debit the customer account of Rs. 100 resulting in the customer account balance becoming Rs. -30. No Tracking of amounts is done in this case
- **Reject:** Under this option, the entire transaction would be rejected if the amount in the customer account did not have sufficient amount for the charge. For example, If the transaction is a Cash Withdrawal of Rs. 500 and the charge is Rs. 100, then if the customer account balance is less than Rs. 600, then the entire transaction would be rejected. The customer can withdraw a maximum of Rs. 400.
