Oracle Applications Messages Manual

This manual contains a detailed listing of application messages that appear across the Oracle Applications product families.
Overview

This manual includes shared messages that appear in Oracle Financials, Oracle Public Sector Financials, Oracle Manufacturing, Oracle Human Resources, and Oracle Application Object Library.

Shared Oracle Applications messages include messages in the message number range APP–0001 to APP–1999. In addition, you can find messages for each Oracle Applications product in this manual.

To help you understand messages that Oracle Applications display, each message description includes, where appropriate, the probable cause of the problem and the actions you can take to solve the problem.

How This Manual Is Organized

This manual contains messages in the range APP–0001 to APP–72999. Use these messages to help diagnose and solve application problems.

Messages that are specific to particular applications in the Oracle Financials, Oracle Public Sector Financials, Oracle Human Resources, Oracle Manufacturing, and Oracle Application Object Library are clustered in message number ranges. For product-specific messages, refer to the message ranges listed on the Ranges page.

Attention: Many Oracle Application Object Library messages are shared across all Oracle Applications

Messages from Other Oracle Products

Some messages you may encounter in Oracle Applications products are generated by Oracle tools and products other than Oracle Applications. These messages use prefixes other than APP.

Use the manual appropriate to the Oracle product whose prefix appears in the message. For example, the Oracle8 Server product uses the prefix ORA. For ORA messages, such as "ORA–00018: maximum number of sessions exceeded", you would refer to the ORACLE8 Server Messages and Codes Manual to determine how to fix the problem.

Notational Convention

Throughout this manual you will see terms prefaced by an ampersand, such as &Routine Name. When Oracle
Applications displays a message online, Oracle Applications replaces these terms prefaced by an ampersand with the actual text the term represents. The actual text depends on the conditions that cause Oracle Applications to display the message. For example the message “APP–22104 Request &REQUEST_ID is on hold” becomes “APP–22104 Request 17247 is on hold” when you see it online.

### Message Ranges

<table>
<thead>
<tr>
<th>Application Names</th>
<th>Message Ranges</th>

Messages

[APP–1] Abort

[APP–1] ECO Documents

[APP–1] Interval to date calculation cannot have payment type as Fixed Amount.

[APP–1] Standard Processes

[APP–1] Target should be greater than 0 for a quota based or unit based quota plan element.

[APP–1] Target should be greater than 0 for a quota based or unit based quota plan element. Please change the target to a value greater than 0 in plan element form.

[APP–2] A window system failure has been detected in Window &WINDOW, Routine &ROUTINE with error code &ERRCODE &MESSAGE.

[APP–3] Line Operations

[APP–4] Please alphabetize your #&TYPE user exit list. Your sub user exits are not listed in alphabetical order in your file xit&app&gt;c, where &lt;app&gt; is your application short name. Application Object Library can find your sub user exits faster if you alphabetize the list.

[APP–6] User exit #&EXIT is not defined. Please correct the user exit call in your form, or create the indicated user exit.

[APP–8] Please write your user exit in the C programming language. You attempted to call a user exit that was not written in the C programming language. Tokenized user–exits must be written in C.

[APP–10] AuditTrail was unable to add column &COLUMN to the audit table &TABLENAME because the type &COLUMNTYPE is not supported. Check to see that your column is not of type LONG or RAW; these types cannot be audited.

[APP–12] Routine &ROUTINE requested more than 64K of memory. Please contact your system administrator.

[APP–14] Unable to connect to Application user. Please correct password information for user, or use the username/password of Application Object Library rather than the application’s username/password.

[APP–16] No primary key information exists for table &TABLENAME, audit table not made.

Action: Define primary key information for table. Auditing cannot occur on tables without primary keys.

[APP–20] Please enter a start date less than or equal to the end date You entered a start date &START that is greater than the end date &END. You must temporarily change the start date to be less than or equal to the end date in order to move from the start date field to the end date field.

[APP–22] Please enter an end date greater than or equal to the start date You entered an end date &END that is less than the start date &START. You must temporarily change the end date to NULL in order to move from the end date field to the start date field.
[APP–24] Table &TABLENAME has too many auditing columns. Column &COLUMN was rejected. Please disable auditing for this table and audit fewer columns.

[APP–32] The application that owns this form is unknown. To correct this problem, make sure the form calls the FORM_INFO trigger at the WHEN–NEW–FORM–INSTANCE event.

[APP–44] Module &MODULE encountered an error while passing communication channel &CHANNEL to a child process. Check that your program does not use too many communication channels. Ensure that it does not pass channels that will not be used by the child process. Exit Application Object Library and try again immediately, or later when your system is not as busy.

[APP–52] Concurrent Manager cannot find application for concurrent program of your concurrent request &REQUEST. Please check if the application is registered with Application Object Library.

[APP–54] You have specified invalid arguments for your concurrent program &ROUTINE. Argument &ARGUMENT exceeds the maximum length allowed. Please enter arguments within the limits allowed.

[APP–56] Argument &ARGNO is longer than maximum allowed length of 240

[APP–58] You have specified an illegal value for the IMPLICIT token. Legal values are NO, YES, ERROR or WARNING.

[APP–60] You have specified an invalid resubmit interval type. Valid types are END or START.

[APP–62] The request resubmission unit you specified is not valid or currently supported. Valid units are: MINUTES, HOURS, DAYS or MONTHS.

[APP–64] You have entered an invalid work shift time. The time must be between 00:00 and 23:59, in accordance with the HH24:MI time format.

[APP–66] You have entered an invalid time for this work shift. The correct format for the time is HH24:MI. Example: 14:35.

[APP–70] Routine &ROUTINE cannot construct a file name &FILENAME with extension &EXTENSION. Check that the specified file name and extension are correct and valid on your system.

[APP–72] Routine &ROUTINE cannot construct the name of an executable file for your concurrent request &REQUEST. Check that the file name components are correct and valid on your system. Check that the environment for the person who started the concurrent manager is correctly set and that Application Object Library environment variables have the correct value. Important Application Object Library environment variables include, but are not limited to, FND_TOP, APPLBIN, and your application’s basepath. Refer to your installation manual for a complete list.

[APP–74] Routine &ROUTINE cannot construct the name of your concurrent request’s log file for concurrent program &PROGRAM_NAME. Check that the file name components are correct and valid on your system. Application Object Library constructs your log file name from the concurrent request ID. Check that the environment for the person who started the concurrent manager is correctly set and that Application Object Library environment variables have the correct value. Important Application Object Library environment variables include, but are not limited to,
[APP–76] Routine &ROUTINE cannot construct the name of the concurrent manager log file 
&FILENAME with path &PATH. Check that the file name components are correct and valid on
your system. Check that the environment for the person who started the concurrent manager is
correctly set and that Application Object Library environment variables have the correct value. 
Important Application Object Library environment variables include, but are not limited to, 
FND_TOP, APPLLOG, and your application’s basepath. Refer to your installation manual for a 
complete list.

[APP–78] Routine &ROUTINE cannot construct the name of your concurrent request’s output file 
for the concurrent program &PROGRAM_NAME. Check that the file name components are correct 
and valid on your system. Application Object Library constructs your output file name from your 
user name and the concurrent request ID. Check that the environment for the person who started the 
concurrent manager is correctly set and that Application Object Library environment variables have 
the correct value. Important Application Object Library environment variables include, but are not 
limited to, FND_TOP, APPLOUT, and your application’s basepath. Refer to your installation 
manual for a complete list.

[APP–80] Routine &ROUTINE cannot construct the name of your concurrent request’s log file for
your concurrent request &REQUEST. Check that the file name components are correct and valid on
your system. Application Object Library constructs your log file name from the concurrent request ID.
Check that the environment for the person who started the concurrent manager is correctly set and that Application Object Library environment variables have the correct value. Important 
Application Object Library environment variables include, but are not limited to, FND_TOP, APPLOUT, and your application’s basepath. Refer to your installation manual for a complete list.

[APP–82] Routine &ROUTINE cannot construct the name of your concurrent request’s output file 
for your concurrent request &REQUEST. Check that the file name components are correct and valid 
on your system. Application Object Library constructs your output file name from your user name 
and the concurrent request ID. Check that the environment for the person who started the 
concurrent manager is correctly set and that Application Object Library environment variables have 
the correct value. Important Application Object Library environment variables include, but are not 
limited to, FND_TOP, APPLOUT, and your application’s basepath. Refer to your installation 
manual for a complete list.

[APP–84] Routine &ROUTINE cannot create a process ID for your concurrent manager process 
&REASON. Check that the unique sequence to generate concurrent process IDs exists. If the 
sequence does not exist, contact your system administrator or support representative to create the 
sequence. Run the following SQL statement to check that concurrent process ID’s are not obtained 
from Application Object Library’s (old) unique identifier table. Run the next SQL statement to 
check that the sequence exists. SQL: SELECT NEXT_UNIQUE_IDENTIFIER FROM 
FND_UNIQUE_IDENTIFIER_CONTROL WHERE TABLE_NAME = 
‘FND_CONCURRENT_PROCESSES’; SQL: SELECT 
FND_CONCURRENT_PROCESSES_S.NEXTVAL FROM SYSTEM.DUAL;

[APP–86] Routine &ROUTINE cannot create a request ID for your concurrent request &REASON

Cause: &ROUTINE encountered an error while creating a request ID for your concurrent request. &REASON.
Action: Check that the unique sequence to generate concurrent request IDs exists. If the sequence does not exist, contact your system administrator or support representative to create the sequence. Run the following SQL statement to check that concurrent request ID’s are not obtained from Application Object Library’s (old) unique identifier table. Run the next SQL statement to check that the sequence exists. SQL: SELECT NEXT_UNIQUE_IDENTIFIER FROM FND_UNIQUE_IDENTIFIER_CONTROL WHERE TABLE_NAME = 'FND_CONCURRENT_REQUESTS'; SQL: SELECT FND_CONCURRENT_REQUESTS_S.NEXTVAL FROM SYSTEM.DUAL;

[APP–88] The concurrent manager could not delete your concurrent request’s output file &FILENAME. Your concurrent request may not have generated an output file. If your request did generate an output file, then it was not in the expected location or the concurrent manager does not have privileges to delete the file.

[APP–90] Routine &ROUTINE cannot not run the concurrent program &PROGNAME Check that the person who started the concurrent manager has privileges to run (execute) the concurrent program. Contact your system administrator to assign execute privileges.

[APP–92] Routine &ROUTINE cannot find the file &FILENAME to reprint. Check if the file exists. Check if the person who started the concurrent manager has read privileges on the directory and on the file. Contact your system administrator to assign read privileges.

[APP–94] Routine &ROUTINE cannot find the logical database with application ID &APPLID and logical database ID &QUEUEID. Please contact your support representative.

[APP–96] Routine &ROUTINE cannot find the subroutine concurrent program &PROGRAM belonging to application &APPLSHORT. Please contact your support representative.

[APP–98] Routine &ROUTINE failed to get attribute name for node &NODE, platform &PLATFORM

Cause: &REASON:

[APP–100] Routine &ROUTINE cannot construct the name of the concurrent manager executable file for the concurrent manager &QNAME and library &LIBRARY. Check that the file name components are correct and valid on your system. Check that the environment of the person who started the concurrent manager is correctly set and that Application Object Library environment variables have the correct value. Important Application Object Library environment variables include, but are not limited to, FND_TOP, APPLBIN, and your application’s basepath. Refer to your installation manual for a complete list.

[APP–102] The basepath environment variable &APPLBASE for the concurrent manager library &LIBRARY has not been set. &ROUTINE cannot locate the library. Shutdown the concurrent managers. Set the environment variable to the basepath for the concurrent program. Restart the concurrent managers.

[APP–104] Routine &ROUTINE cannot construct the name of the concurrent manager log file with basepath &BASEPATH and subdirectory &DIR. Check that the directory components are correct and valid on your system.

[APP–106] Routine &ROUTINE cannot get next queue ID – &REASON
[APP–108] Routine &ROUTINE cannot get profile option value for &PROFILE. &REASON Check that the profile option exists and that users have read privileges to the profile option. Contact your system administrator for read privileges.

[APP–110] Could not retrieve system information (node name, version, release, machine, platform and system name). Please contact your support representative.

[APP–112] Routine &ROUTINE cannot initialize concurrent request information for &REQUEST. Review the concurrent manager log file for more detailed information.

[APP–114] You cannot modify or delete an incompatible program that was defined by an application developer.

[APP–116] Routine &ROUTINE cannot open argument file &FILE for writing. Check that the file name is correct and valid on your system. Check that the person who started the concurrent manager has privileges to create and write to files in the argument file directory. Contact your system administrator to obtain create and write privileges.

[APP–118] Routine &ROUTINE cannot open your concurrent request’s log file &FILENAME. Check that the file name is correct and valid on your system. Check that the person who started the concurrent manager has privileges to create and write to files in the concurrent program’s log directory. Contact your system administrator to obtain privileges.

[APP–120] Concurrent Manager cannot open manager’s log file &AFPLOG. Check that the person who started the concurrent manager has privileges to create and write to files in the Application Object Library log directory. Contact your system administrator to obtain create and write privileges.

[APP–122] Concurrent Manager cannot open your concurrent request’s log file &AFPLOG. Check that the person who started the concurrent manager has privileges to create and write to files in the concurrent program’s log directory. Contact your system administrator to obtain create and write privileges.

[APP–124] Concurrent Manager cannot open your concurrent request’s output file &AFPOUT in append mode. Check that the person who started the concurrent manager has privileges to create and write to files in the concurrent program’s log directory. Contact your system administrator to obtain create and write privileges.

[APP–126] This request has previously been run by the concurrent manager, and cannot be rerun. Please submit a new request with the required parameters.

[APP–128] Routine &ROUTINE cannot set profile option value for &PROFILE. &REASON Check that the profile option exists and that you have write privileges to the profile option. If the profile option does not exist, you also need create privileges. Contact your system administrator for write and create privileges.

[APP–130] Unable to activate Internal Concurrent Manager. Your account may not have the privilege to activate the Internal Concurrent manager. Contact your system administrator to seek privilege in starting the Internal Concurrent Manager. Check for execution privilege of ’startmgr’.

[APP–132] Routine &ROUTINE cannot terminate the concurrent manager process with ORACLE process ID &ORACLEID and operating system process ID &OSPID. Shut down the concurrent
manager to terminate the process or use port-specific operating system commands to terminate the process. Contact your support representative.

[APP–134] Routine &ROUTINE cannot terminate the concurrent process with concurrent process ID &CPID and operating system process ID &OSPID. Shut down the concurrent managers to terminate the process or use port-specific operating system commands to terminate the process. Contact your support representative.

[APP–136] Routine &ROUTINE cannot terminate concurrent request &REQUEST_ID with controlling manager ID &CPID and manager's operating system process ID &OSPID. Shut down the database to terminate the process or use port-specific operating system commands to terminate the process. Contact your support representative.

[APP–138] This is the definition of the Internal Concurrent Manager as required by Oracle Application Object Library. You cannot change any of its information.

[APP–140] This is the definition of the Standard work shift as required by Oracle Application Object Library. You may not update or delete the record. If you wish to create a different work shift, please enter a new one.

[APP–142] You attempted to change a concurrent program from standard submission to non-standard submission, but the program has standard submission arguments defined. Please delete all arguments for your concurrent program and save your changes before changing your program from standard submission to non-standard submission.

[APP–146] Routine &ROUTINE has encountered a fatal error. &REASON Contact your system administrator or support representative.

[APP–148] A concurrent program has been incorrectly defined as a concurrent manager control program. Contact your support representative.

[APP–150] You cannot submit concurrent requests for a disabled concurrent program &PROGRAM. Contact your System Administrator to enable the concurrent program.

[APP–152] Concurrent Manager encountered an error connecting to the database. Check if you have specified a correct ORACLE username and password. Check if your ORACLE environment is setup correctly. Check if you have reached the maximum number of users on the database. Contact your Database Administrator to increase the maximum number of users on the database.

[APP–154] Please provide a valid value for the WAIT option.

[APP–156] You entered an incorrect number of arguments to the program CONCSUB. CONCSUB is a program that allows you to submit concurrent requests from your operating system. It expects arguments that it would normally get from the user profiles, as well as the arguments to your concurrent program. Syntax: CONCSUB &ORACLE ID; &Responsibility Application Short Name; &Responsibility Name; &UserName; [WAIT=Wait Flag] CONCURRENT &Concurrent Program Application Short Name; &Concurrent Program Name; [START=Requested Start Date;] [REPEAT_DAYS=Repeat Interval;] [REPEAT_END=Request Resubmission End Date;] &Concurrent Program Arguments ...

Example: CONCSUB SCOTT/TIGER SYSADMIN 'System Administrator' WAIT=Y CONCURRENT FND FNDMNRMT START='01–JAN–1999 23:00:00' REPEAT_DAYS=1 REPEAT_END='01–JAN–2001 23:59:00' Y 0 0 ORACLE ID: Username and
password of the ORACLE ID for Applications. Enter the username and password without any spaces and separated by a slash ("/"). Responsibility Application Short Name: Enter the short name of the application for your responsibility. This name, along with your responsibility name, will be used to select a responsibility for your concurrent request to run in. Responsibility Name: This name, along with your responsibility application short name, will be used to select a responsibility for your concurrent request to run in. User Name: Enter the name of your Application Object Library user. This name will be used to update the Who information for any data your concurrent program changes and to create report output file name for this request.

[APP–158] Your complex rule line is conflicting with another rule line already defined for this type. All rules combined must form valid criteria for specializing a concurrent manager.

[APP–160] Routine &ROUTINE cannot find a logical database with application ID &APPLID and logical database ID &CONFLICT_SET. Contact your support representative.

[APP–162] Concurrent Manager encountered an error while setting the value for a SQL*Forms global variable to your request ID &REQUEST. Contact your support representative.

[APP–164] Concurrent Manager cannot set a value for the field. Check that the field exists and is writeable.

[APP–168] &MANAGER manager is currently running or its definition is being used. You cannot delete the definition until it is no longer being used. Shut down the concurrent managers before deleting the concurrent manager definition.

[APP–170] Routine &ROUTINE cannot construct discard file name for the SQL*Loader program for your concurrent request &REQUEST. Check that the file name components are correct and valid on your system. Application Object Library constructs your output file name from your concurrent request ID. Check that the operating system environment of the person who started the concurrent manager is correctly set and that Application Object Library environment variables have the correct value. Important Application Object Library environment variables include, but are not limited to, FND_TOP, APPLOUT, and program’s application’s basepath. Refer to installation manual for a complete list.

[APP–174] A program library by the same name already exists for the same application. Please enter a unique Library Name/Application combination.

[APP–175] Need–By Date

[APP–176] Please enter a unique name for your concurrent program. This concurrent program name is already in use for your application. Concurrent program name, along with application name, uniquely identifies a concurrent program.

[APP–178] Concurrent Manager cannot insert with a duplicate request ID &REQUEST_ID

Cause: Concurrent Manager has generated a duplicate request ID &REQUEST_ID for your concurrent request.

Action: Check that the unique sequence to generate concurrent request IDs exists. If the sequence does not exist, contact your system administrator or support representative to create the sequence. Run the following SQL statement to check that request ID’s are not generated from Application Object Library’s (old) unique identifier table. Run the next SQL statement to check
that the sequence exists and to get its current value. SQL: SELECT NEXT_UNIQUE_IDENTIFIER FROM FND_UNIQUE_IDENTIFIER_CONTROL WHERE TABLE_NAME = 'FND_CONCURRENT_REQUESTS'; SQL: SELECT FND_CONCURRENT_REQUESTS.S.NEXTVAL FROM DUAL; The number returned must be greater than the highest request ID in FND_CONCURRENT_REQUESTS table.

Action: Check that the current sequence number is higher than the highest request ID in the concurrent requests table. If the sequence number is low, contact your system administrator to correct the sequence number and set it higher. Run the following SQL statement to get the highest request ID in the concurrent requests table. SQL: SELECT MAX(REQUEST_ID) FROM FND_CONCURRENT_REQUESTS;

[APP–180] This concurrent program is already incompatible with the registered concurrent program. Enter a concurrent program that is not already incompatible, or clear your changes.

[APP–182] Routine &ROUTINE received failure code while parsing or running your concurrent program &PROGRAM Review your concurrent request log file for more detailed information. Make sure you are passing arguments in the correct format.

[APP–184] Routine &ROUTINE cannot initialize error handling information for the concurrent manager. Contact your support representative.

[APP–186] Routine &ROUTINE cannot close the output file &FILENAME. Check that you have sufficient disk space on your system. Remove unnecessary files to free disk space. Contact your system administrator to obtain more disk space.

[APP–188] Unable to copy the file Check that the file name you entered is valid on your system. Check that you have privileges to create and write to files in the file’s directory. Check that there is sufficient disk space on your system to create a file. If necessary, contact your system administrator to obtain create and write privileges or to obtain more disk space.

[APP–190] Routine &ROUTINE cannot load profile option values for your concurrent request &REQUEST. &REASON Check if the user and responsibility information associated with the concurrent request are valid. Contact your support representative.

[APP–192] Concurrent Manager encountered an error while running the Flexfield Preprocessor for your concurrent request &REQUEST. Review your concurrent request log file for more detailed information.

[APP–194] Concurrent Manager encountered an error while running SQL*Loader for your concurrent request &REQUEST. Review your concurrent request log file for more detailed information.

[APP–196] Concurrent Manager encountered an error while running &TOOLCODE for your concurrent request &REQUEST. Review your concurrent request log file for more detailed information.

[APP–200] Concurrent Manager encountered an error while running SQL*Plus for your concurrent request &REQUEST. Review your concurrent request log and/or report output file for more detailed information.

[APP–202] Concurrent Manager encountered an error while running Oracle*Report for your concurrent request &REQUEST. Review your concurrent request log and/or report output file for more detailed information.
Concurrent Manager encountered an error while running the spawned concurrent program &PROGRAM for your concurrent request &REQUEST. &REASON. Review your concurrent request log file for more detailed information.

Routine &ROUTINE cannot write to log file &LOGNAME. Check that the person who started the concurrent managers has privileges to create and write to files in Application Object Library’s log directory. Contact your system administrator to obtain create and write privileges.

Routine &ROUTINE has encountered an error while writing to the argument file &FILE. Check that the person who started the concurrent managers has privileges to create and write to files in the argument file directory. Contact your system administrator to obtain create and write privileges.

Routine &ROUTINE has encountered an error while writing to parameter file [File Name]. Check that you have sufficient disk space on your file system that is assigned for Oracle Financials temporary files. Contact your System Administrator to obtain more disk space.

You cannot delete an executable that is currently assigned to a concurrent program. Remove the executable from the program(s) that reference it.

Please register your concurrent program executable &FILENAME with Application Object Library.

Routine &ROUTINE encountered an error while constructing the name of a temporary &FILE_TYPE file. Check that the file name components are correct and valid on your system. Check that the environment of the person who started the concurrent manager is correctly set and that Application Object Library environment variables have the correct value. Important Application Object Library environment variables include, but are not limited to, FND_TOP, APPTMP, and your application’s basepath. Refer to your installation manual for a complete list.

Cannot find status of concurrent managers. Review your error messages (Help Error) to see the cause of the error. Contact your system administrator.

Routine &ROUTINE cannot find ORACLE process ID for system process &OSPID. Routine &ROUTINE returned no rows from V$PROCESS table for the system process ID &OSPID. Contact your support representative.

Encountered an error while getting the ORACLE user account for your concurrent request to run from. Review your error messages (Help Error) to see the cause of the error. Contact your system administrator.

Concurrent Manager cannot get report parameter names for your Oracle*Report report. &REASON. Contact your support representative.

Encountered an error while submitting your concurrent request. Cannot get a request ID. Review your error messages to see the cause of the error.

Action: Check that the unique sequence to generate concurrent request IDs exists. If the sequence does not exist, contact your system administrator or support representative to create the sequence. Run the following SQL statement to make sure that the request ID for concurrent requests is NOT obtained from Application Object Library’s (old) unique identifier table. Run the next SQL statement to check that the sequence exists. SQL: SELECT...
NEXT_UNIQUE_IDENTIFIER FROM FND_UNIQUE_IDENTIFIER_CONTROL WHERE TABLE_NAME = 'FND_CONCURRENT_REQUESTS'; SQL: SELECT FND_CONCURRENT_REQUESTS_S.NEXTVAL FROM SYSTEM.DUAL;

Action: Check that SYSTEM.DUAL has only one row in the table.

Action: Check that the current sequence number is higher than the highest request ID in the concurrent requests table. If the sequence number is too low, contact your system administrator to correct the sequence number and set it higher. Run the following SQL statement to get the highest request ID in the concurrent requests table. SQL: SELECT MAX(CONCURRENT_REQUEST_ID) FROM FND_CONCURRENT_REQUESTS;

[APP–228] Routine &ROUTINE encountered an error changing request &REQUEST status. Contact your support representative.

[APP–230] Concurrent Manager encountered an error while attempting to start your immediate concurrent program &PROGRAM. Routine &ROUTINE received a return code of failure. Contact your support representative.

[APP–232] Cannot submit your concurrent request. Review the previous error messages.

[APP–236] You have not specified any arguments for the concurrent program FDPPEV. Enter the names of environment variables you wish to know the value of. FDPPEV will return the values used by the concurrent manager.

[APP–238] Please enter arguments to the concurrent program FDPSEV using a valid format. Arguments to FDPSEV should be in &lt;Environment Variable Name&gt;=&lt;Environment Variable Value&gt; ... format. Environment Variable Name: Enter the name of the environment variable whose value you wish to set. FDPSEV will set the environment variable value to the value you enter. Environment Variable Value: Enter the value to which you wish to set the environment variable. FDPSEV will set the environment variable value to the value you enter.

[APP–240] You entered an incorrect number of arguments to the concurrent program FDPSEV, or the arguments you entered are not the type expected. Syntax: FDPSEV &lt;Environment Variable&gt;=&lt;Value&gt; &lt;Environment Variable&gt;=&lt;Value&gt; ...

[APP–242] Routine &ROUTINE encountered an error while initializing log and output files for your concurrent request. &REASON. Contact your support representative.

[APP–244] FDWHOAMI environment variable contains invalid value &USERID for user ID

[APP–246] Cannot set field value for &FIELD. Review your error messages (Help Error) to see the cause of the error. Check that the field exists and is writeable.

[APP–248] Routine &ROUTINE cannot read the file &FILENAME. Check if the file exists under correct product directory. Check if the person who started the Concurrent Manager has read privileges on the directory and on the file. Contact your system administrator to assign read privileges.

[APP–250] Concurrent Manager encountered an error writing to the file &FILENAME. &REASON. Check that the person who started the concurrent manager has privileges to create and write to files in the file’s directory. Contact your system administrator to assign create and write privileges. Check that there is sufficient disk space on your system to create a file. Contact your system administrator to obtain more disk space.
[APP–252] Your concurrent program did not specify input, output, or log file name information to routine &ROUTINE. Change your concurrent program to pass all the required file name information to routine &ROUTINE.

[APP–254] You could not insert program context information Your ORACLE ID may not have insert privileges or another ORACLE error may have occurred while attempting to insert the record. Ensure your ORACLE ID has insert database privileges on the FND_DESCR_FLEXCONTEXTS table. Check for any database error message using \ Help Error (Database).

[APP–256] Concurrent Manager cannot find requestor for concurrent request &REQUEST Check if the requestor of this concurrent request is a valid application user.

[APP–258] Concurrent Manager error handler cannot find the error class for the specified error description. Contact your support representative.

[APP–260] Concurrent Manager error handler cannot process an undefined or NULL error. Contact your support representative.

[APP–262] Concurrent Manager cannot find an error handler Concurrent Manager has encountered an error, but no error handler is currently defined on the error stack or the error was raised outside of an error catch region. Contact your support representative.

[APP–264] Concurrent Manager cannot allocate memory because system is out of memory. Contact your system administrator or support representative.

[APP–266] Routine &ROUTINE received a return code of failure from routine &FUNCTION. Review your concurrent request log file for more information.

[APP–268] Please specify a valid printer. Either you have not specified a printer for your report, or the printer name you have given does not match that in the program definition. Please specify a printer in the program definition, report set definition, run reports form or as a profile option.

[APP–276] Routine &ROUTINE received an incorrect number of arguments You passed the routine &ROUTINE or your spawned concurrent program the incorrect number of arguments (&NUMBER). Refer to the Oracle Application Object Library Reference Manual for the required number of arguments for the routine &ROUTINE. Enter the correct number of arguments to your spawned concurrent program.

[APP–278] The Internal Concurrent Manager has encountered an error. Review concurrent manager log file for more detailed information.

[APP–280] Concurrent program associated with invalid application information. Cannot retrieve application information associated with this concurrent program. Contact your system administrator.

[APP–282] Cannot find application information for short name &APPLNAME Cannot find rows while selecting for application short name &APPLNAME. Check if the application short name is valid. Contact your System Administrator.

[APP–284] Program &PROGRAM is not registered under application &APPLICATION

  Cause: You submitted a concurrent request for a concurrent program &PROGRAM belonging to application &APPLICATION, which is not registered with Application Object Library.
Action: Register your concurrent program with Application Object Library.

Cause: Concurrent program &PROGRAM is registered under a different application.

Action: Check that you specified the correct application name for your concurrent program.

[APP–286] Routine &ROUTINE cannot find Concurrent manager &QUEUE with Application &APPLSNAM

Cause: The concurrent manager &QUEUE with Application short name &APPLSNAM is not registered with Application Object Library, or is registered with a different Application. Routine &ROUTINE cannot start the concurrent manager. Contact your system administrator.

[APP–288] Cannot find an ORACLE account based on the current responsibility. The responsibility information is incorrect. Contact your system administrator to verify the current responsibility information. Responsibility application ID is &APPLID. Responsibility ID is &RESPID.

[APP–290] Cannot find application short name for application ID &ID.

Action: Check if the application ID is valid. Run the following SQL statement to select information about applications that have been registered with Application Object Library. SQL: SELECT APPLICATION_ID, APPLICATION_NAME, APPLICATION_SHORT_NAME, APPLICATION_PREFIX, DESCRIPTION, BASEPATH FROM FND_APPLICATION;

[APP–292] Concurrent manager &QUEUE with application ID &APPLID cannot find row to update in routine &ROUTINE. Contact your system administrator to shut down and restart the concurrent managers.

[APP–294] You have specified invalid arguments for the program

[APP–296] Cannot submit concurrent request for program &PROGRAM Check if the concurrent program is registered with Application Object Library. Check if you specified the correct application short name for your concurrent program.

[APP–298] You have invalid data group information. Failed to find an ORACLE account for the data group of the current responsibility. Contact your system administrator to verify the information for this data group. Data group ID is &GROUPID. Responsibility application ID is &APPLID.

[APP–300] The executable file &EXECUTABLE for this concurrent program cannot be executed. Contact your system administrator or support representative. Verify that the execution path to the executable file is correct. Verify that the executable file exists and has execution permission.

[APP–302] Routine &ROUTINE encountered an error constructing the directory path and file components from the file name &FILE. Check that the file name is correct and valid on your system.

[APP–304] Routine &ROUTINE encountered an error constructing the root file and extension components from the file name &FILE. Check that the file name is correct and valid on your system.

[APP–306] Invalid option given for PRINT_TOGETHER token

[APP–308] Cannot submit concurrent requests to run from Oracle username &USER You cannot submit concurrent requests to run from the Oracle username &USER, because the username is not
registered with Application Object Library. Contact your System Administrator to register Oracle username.

[APP–310] Oracle username &ONAME is invalid because it is too long. Please enter the correct name.

[APP–312] Please enter a valid print style for the concurrent program &PROGRAM.

[APP–314] Invalid printer ( &PRINTER ) and print style ( &STYLE ) combination.

[APP–316] Please enter a valid application short name for your concurrent program. The application short name &APPLSNAME is not valid.

[APP–318] An invalid argument method &ARG_METHOD has been defined for the concurrent program &PROGRAM for your concurrent request &REQUEST. Contact your system administrator to enter a valid argument method for your concurrent program.

[APP–320] An invalid execution method &EXEC_METHOD has been defined for the concurrent program &PROGRAM for your concurrent request &REQUEST. Contact your system administrator to enter a valid execution method for your concurrent program.

[APP–322] Cannot find concurrent program &PROGRAM because it is not registered with Application Object Library. Register your concurrent program with Application Object Library and check that you specified the correct application short name for your concurrent program.

[APP–324] You have entered an invalid request start date and time: &START_DATE. Could not submit your concurrent request or report. Verify that the value for the profile option “Concurrent:Request Start Time” is in the correct date and time format of DD–MON–YY HH24:MI:SS. For example: 25–DEC–91 12:30:00. Enter a NULL value for the profile option (make it blank) if you wish to have the concurrent request or report to start immediately. Please try again to submit the concurrent request or report in your application form using the correct format for the start date and time.

[APP–326] Your concurrent request &REQUEST has an invalid status code. Contact your support representative.

[APP–328] Please enter a valid application short name for your responsibility. The application short name &APPLSNAME is not valid for your responsibility.

[APP–330] Please enter a valid responsibility. The responsibility &RESPNAME does not exist or is not active. Check that the correct application short name is specified for your responsibility.

[APP–332] Your concurrent request or report could not be submitted due to the following invalid resubmission end date and time: &END_DATE Please try again to submit the concurrent request or report in your application form with the correct resubmission end date and time, or enter NULL (blank) if no end date and time are desired. Use the date and time format of DD–MON–YY HH24:MI:SS. For example: 25–DEC–91 15:45:00

[APP–334] An invalid concurrent program information type &TYPE was requested

[APP–336] Please enter a valid application username. The application username &USERNAME does not exist or is not active.
[APP–338] The log file &FILENAME for your concurrent request is not initialized. Your concurrent program execution was not preceded by calls to standard Application Object Library routines to initialize concurrent processing. Routine &ROUTINE received a return code of failure. Change your concurrent program to initialize files by calling standard Application Object Library routines.

[APP–340] Routine &ROUTINE cannot find log file name information. Contact your support representative.

[APP–344] Concurrent Manager encountered an error inserting login information for login ID &LOGIN for your concurrent request. Contact your support representative.

[APP–346] &CONCURRENT_MANAGER is not active. Activate manager before choosing this option.

[APP–348] Routine &ROUTINE encountered an error while starting concurrent manager &MANAGER with library &LIBRARY. Check that your system has enough resources to start a concurrent manager process. Contact your system administrator to obtain more resources. Check that the concurrent program library exists under the correct product directory. Make sure that the person who started the concurrent manager has privileges to read and execute files in the directory containing the program library.

[APP–350] Marking request &REQUEST as Error. Concurrent Manager cannot get the necessary information to complete your concurrent request &REQUEST successfully. Review concurrent manager log file for error messages indicating the missing information.

[APP–352] Routine &ROUTINE encountered an error while parsing your arguments. An expected token or separator is missing from the argument list. Enter the correct arguments for the routine.

[APP–354] Concurrent Manager cannot find error description for &ERROR_NAME. Contact your support representative.

[APP–356] Concurrent Manager error handler cannot find the name of the error. Contact your support representative.

[APP–358] Program Library &LIBRARY has invalid program definitions.

[APP–360] &ROUTINE cannot find concurrent manager &QID with application ID &APPLID to update.

   Cause: Internal Manager found no rows while selecting manager &QID with application ID &APPLID from FND_CONCURRENT_QUEUES for update of running processes information.

   Action: Contact your system administrator to shutdown and restart the concurrent managers.

[APP–362] Routine &ROUTINE cannot execute request &REQUEST for program &PROGRAM, because the environment variable &BASEPATH is not set for the application to which the concurrent program executable &EXECUTABLE belongs. Shut down the concurrent managers. Set the basepath environment variable for the application. Restart the concurrent managers.

[APP–364] Routine &ROUTINE cannot get information for your concurrent request &REQUEST. Routine &ROUTINE found no rows while selecting your concurrent request &REQUEST from FND_CONCURRENT_REQUESTS. Contact your System Administrator.
[APP–366] Routine &ROUTINE cannot run ORACLE Import utility without required parameters. Please pass all the parameters to the Import utility in &lt;Token&gt;=&lt;Value&gt; format with each parameter separated by a \n. Refer to ORACLE RDBMS Utilities User’s Guide for the required parameters.

[APP–368] Could not get line width and number of lines per page information for the requested print style &STYLE.

[APP–370] Routine &ROUTINE: Please register a Oracle*Report driver for printer &PRINTER and print style &STYLE.

[APP–372] Could not get concurrent program details since the executable name is not unique.

[APP–380] You cannot delete this concurrent library because there is a concurrent manager defined to use this concurrent library. Change any concurrent manager definitions that use this concurrent library before trying to delete the library.

[APP–382] Cannot find concurrent manager information on request &REQUEST. The record of the concurrent manager process that processed request &REQUEST has been purged. No action required.

[APP–384] Cannot find concurrent manager information on request &REQUEST. The record of the Internal Concurrent Manager that was active during the processing of request &REQUEST has been purged. No action required.

[APP–388] Program failed to set the report print style.

[APP–390] Routine &ROUTINE: Failed to update request with new print style &STYLE.

[APP–392] There are no immediate concurrent programs assigned to library &LIBRARY.

[APP–394] Concurrent Manager cannot find any concurrent requests for program &PROGRAM. You requested the status of concurrent requests for concurrent program &PROGRAM belonging to application &APPL, but no concurrent requests have been submitted.

[APP–398] Request type is currently in use. There is a concurrent program defined with this request type, or there is a concurrent manager defined to run this request type. You cannot delete this request type unless it is no longer being used.

[APP–402] The concurrent program for your concurrent request exited to wait, but has no pending child requests to wait for. Routine &ROUTINE received a return code of failure.

[APP–406] Username/Password is required for the program to connect to database.

[APP–408] Concurrent Manager could not find the ORACLE user ID associated with your concurrent request &REQUEST. Check if the ORACLE user ID associated with the concurrent request is valid.

[APP–410] Routine &ROUTINE encountered an ORACLE error. &REASON. Review your error messages for the cause of the error.
[APP–412] The output file &FILENAME for your concurrent request is not initialized.

    Cause: Your concurrent program execution was not preceded by calls to standard Application Object Library routines to initialize concurrent processing. &ROUTINE received a return code of failure.

    Action: Change your concurrent program to initialize files by calling standard Application Object Library routines.

[APP–414] &ROUTINE cannot find output file name information. Concurrent manager did not specify output file name information to &ROUTINE. Please contact your support representative.

[APP–416] &FUNCTION_CALLED cannot allocate memory for &IDENTIFIER because system is out of memory. &ROUTINE received a return code of failure.

    Cause: &FUNCTION_CALLED cannot allocate memory for &IDENTIFIER because system is out of memory. &ROUTINE received a return code of failure.

    Action: Contact your system administrator or support representative.

[APP–418] Output file for this request is not available.

    Cause: You requested the Concurrent Manager to automatically delete your output file for you by setting the profile option Save Output to No before submitting your concurrent request, or request generates no output.

    Action: Change the profile option Save Output to Yes and resubmit your concurrent request if you wish to save your request output file.

[APP–420] The parent concurrent request completed before the child request started

[APP–422] &ROUTINE cannot find the parent concurrent request &PARENT_ID of child concurrent request &CHILD_ID.

    Cause: &ROUTINE found no rows while selecting the parent concurrent request &PARENT_ID of child concurrent request &CHILD_ID.

    Action: Contact your support representative.

[APP–424] The parent request completed with error before the child request started

[APP–426] &ROUTINE cannot parse your arguments

    Cause: &ROUTINE encountered an error while parsing your arguments. Argument string has invalid argument separators or has invalid characters.

[APP–430] &ROUTINE cannot print the output file for your concurrent request &REQUEST

    Cause: &ROUTINE encountered an error printing the output file for your concurrent request &REQUEST.

    Action: Review your concurrent request log file for more detailed information. Contact your system administrator.
[APP–432] &ROUTINE cannot find concurrent manager with process ID &CPID

    Cause:    &ROUTINE found no rows while selecting concurrent manager &CPID from FND_CONCURRENT_PROCESSES for update.

    Action:   Contact your support representative.

[APP–434] &ROUTINE:Failed to initialize profile option values : &REASON

[APP–440] Program name differs from executable name or program not registered

    Cause:    Program name is different from the executable.

    Action:   You may change executable name to match the program name, if you wish to.

    Cause:    Program is not registered.

    Action:   Register the program with AOL.

[APP–442] Program exited with error.

[APP–444] Concurrent program &PROGRAM exited with error

    Cause:    &ROUTINE received a return code of failure from concurrent program &PROGRAM.

    Action:   Review your concurrent request log file for more information.

[APP–446] &ROUTINE received a return code of failure from concurrent program &PROGRAM.

    Cause:    &ROUTINE received a return code of failure from concurrent program &PROGRAM.

    Action:   Review your concurrent request log file for more detailed information.

[APP–448] Concurrent Manager cannot find concurrent program for request &REQUEST

    Cause:    Concurrent Manager found no rows while selecting the concurrent program for your concurrent request &REQUEST.

    Action:   Check if the concurrent request refers to a concurrent program registered with Application Object Library.

[APP–450] Could not purge concurrent manager records and log files

[APP–452] Could not purge concurrent request records and request log/output files

[APP–456] Failed to submit concurrent request for reprint of output file

    Cause:    Encountered an error while submitting a request to reprint your output file.

    Action:   Review your error messages (Help Error) to see the cause of the error.

[APP–458] Concurrent Manager cannot find information for your concurrent request from &TABLES
Cause: Concurrent Manager found no rows while selecting information for your concurrent request from &TABLES.

Action: Review your concurrent manager log file &LOG for more detailed information.

[APP–460] &ROUTINE cannot find concurrent manager with ORACLE process ID &ORACLE for request &REQUEST

Cause: &ROUTINE found no rows while selecting concurrent manager with ORACLE process ID &ORACLE for request &REQUEST.

Action: Contact your support representative.

[APP–462] Your concurrent request exited abnormally

Cause: The concurrent program for your request exited without calling standard Application Object Library exit routines or the process could have been terminated by the operating system.

Action: Review concurrent manager log file for more detailed information. Change the concurrent program to exit by calling Application Object Library routines.

[APP–464] &ROUTINE cannot get information about concurrent request &REQUEST to reprint the output file.

Cause: &ROUTINE encountered an error getting information for concurrent request &REQUEST to reprint its output file.

Action: Request could have been deleted since the request to reprint its output was submitted. Contact your System Administrator.

[APP–466] &ROUTINE cannot find your concurrent request &REQUEST &ROUTINE found no rows while selecting your concurrent request &REQUEST. Please contact your support representative.

[APP–468] &ROUTINE cannot resubmit your concurrent request &REQUEST. &REASON

Cause: &ROUTINE encountered an error while resubmitting your concurrent request &REQUEST. &REASON.

Action: Review your concurrent request log file for more detailed information.

[APP–474] Concurrent manager server for &NODE is already running

[APP–476] &ROUTINE cannot set file options for your concurrent request &REQUEST.

Cause: &ROUTINE encountered an error setting log and output file options for your concurrent request &REQUEST. &REASON.

Action: Contact your support representative.

[APP–478] Shutting down Internal Concurrent Manager

[APP–480] Failed to submit concurrent request for concurrent program &PROGRAM
Cause: The concurrent request submission for concurrent program &PROGRAM failed.

Action: Refer to previous error messages for exact cause.

[APP–482] Internal manager failed to spawn manager process : &REASON

[APP–484] Please enter an end time greater than the start time

  Cause: You entered an end time that is less than the start time.

  Action: Enter a start time less than the end time.

  Action: Enter an end time greater than the start time.

[APP–488] &ROUTINE received a return code of failure from concurrent program &PROGRAM

  Cause: &ROUTINE received a return code of failure from subroutine concurrent program &PROGRAM.

  Action: Review your concurrent request log file for more detailed information.

[APP–490] &ROUTINE cannot initialize information for concurrent program &PROGRAM

  Cause: &ROUTINE encountered an error while initializing information for the subroutine concurrent program &PROGRAM.

  Action: Review your concurrent request log file for more detailed information.

[APP–492] &ROUTINE cannot get environment variable value for &VARIABLE

  Cause: &ROUTINE cannot get a value for the environment variable &VARIABLE.

  Action: Shutdown the concurrent managers. Set the environment variable and restart the concurrent managers.

[APP–494] There are too many arguments for this program

  Cause: Too many arguments or reports parameters have been specified for this program or report.

  Action: Contact your support representative. Additional information for support representative: Concurrent programs and reports may have a maximum of 100 arguments or report parameters, each of which may be no more than 240 characters long. Change your program or report to accept the proper number of arguments. You may also need to change the report parameters you have defined for your report, or you may also need to change the way your forms request your concurrent program.

[APP–496] This concurrent manager cannot run the following registered, immediate concurrent programs because they are not linked to this concurrent manager’s library ”&LIBRARY”

  Cause: The immediate concurrent programs listed have been registered through Application Object Library as part of the concurrent manager library &LIBRARY, but the actual codes for those programs are not linked to the library executable.
Action: Ensure that the immediate concurrent programs are entered in the application catalog files, each with an associated subroutine name. Refer to the Oracle Application Object Library Reference Manual for more information.

[APP–498] This concurrent manager cannot run the following immediate concurrent programs because they are not registered under the concurrent manager’s program library ”&LIBRARY”

Cause: The listed immediate concurrent programs are linked to the concurrent manager library &LIBRARY executable, but are not registered as part of the concurrent manager library.

Action: Register the concurrent programs as part of the concurrent manager library &LIBRARY through Application Object Library’s Define Program Library form.

[APP–500] &ROUTINE received a return code of failure from routine &CALLED. &REASON

Cause: &ROUTINE received a return code of failure from the OSD routine &CALLED. &REASON.

Action: Review your concurrent request log file for more detailed information.

[APP–502] You can only view details of a concurrent request you submitted

Cause: You attempted to view the details of a concurrent request that you did not submit. You can only view concurrent requests that you submitted.

[APP–504] Failed to build Concurrent Request Queue View

Cause: Failed to build Concurrent Request Queue View due to a lock on the view by another user.

Action: Request has been resubmitted to try again after 15 minutes.

[APP–506] Please enter a unique subroutine name that is not already in use for your application.

[APP–508] Please enter a unique execution file name that is not already in use for your application.

[APP–510] Please enter a unique program executable name that is not already in use for your application.

[APP–522] No information found for the currency code &CODE &APPLICATION cannot find information for your currency code &CODE. Check that your currency code is valid and enabled.

[APP–526] You entered a minimum accountable unit that is too small

Cause: You entered a minimum accountable unit value that is the same as or less than the lowest denomination for this currency. This causes rounding calculations to unnecessarily loose processing efficiency.

Action: Enter a minimum accountable unit value that is not less than or equal to 1 / power( 10, precision ). In this case, enter a minimum accountable unit greater than &LOWEST_DENOMINATION.

[APP–528] You entered a value that is not a multiple of the lowest denomination
Cause: You entered a minimum accountable unit value that is not a multiple of the lowest denomination for this currency.

Action: Enter a minimum accountable unit value that is a multiple of $1 / \text{power}(10, \text{precision})$. In this case, enter a minimum accountable unit that is a multiple of \&LOWEST\_DENOMINATION.

[APP–531] The amount \&amount could not be correctly formatted. The correct format is \&pos\_val or \&neg\_val.

[APP–546] \&FUNCTION function is currently not available

Cause: You pressed a function key \&FUNCTION that is currently not available.

Action: Review help text for your form (Screen Help) to determine the purpose of the form. You may need to navigate to another form to perform the function.

Action: If query is not available, you may be in a control zone. Try entering your row information.

Action: If insert, update, or delete is not available, you may be in a query–only form. Query your row information, or navigate to an edit form to edit your data.

Action: If delete is not available, you may not be allowed to delete rows of information. Try disabling your row by setting an enable flag or end date field.

[APP–548] Function is currently not available

Cause: You pressed a function key that is currently not available.

Action: Review help text for your form (Screen Help) to determine the purpose of the form. You may need to navigate to another form to perform the function.

Action: If query is not available, you may be in a control zone. Try entering your row information.

Action: If insert, update, or delete is not available, you may be in a query–only form. Query your row information, or navigate to an edit form to edit your data.

Action: If delete is not available, you may not be allowed to delete rows of information. Try disabling your row by setting an enable flag or end date field.

[APP–552] Error executing \&NAME user exit.

[APP–554] You have specified an invalid argument for the user exit DISPFILE

Cause: The first argument to the user exit DISPFILE is not of the correct type.

Action: Specify the correct file type as the first argument to the user exit.

[APP–556] You cannot update a pseudo–column. You tried to update a SQL*Plus "pseudo–column" such as USER or SYSDATE. You are not allowed to change this type of value. No action required.

[APP–558] Examine cannot get the value of \&FIELD
Cause: An error occurred while getting the value of &FIELD.

Action: Check if the field or variable exists.

Action: Review your error messages with \ Help Error for more information.

[APP–560] Examine cannot set the value of &FIELD

Cause: An error occurred while setting the value of &FIELD.

Action: Check if the field or variable exists.

Action: Check if the field or variable is allowed to be changed. You cannot change the value of system variables. You cannot change the value of profile options that are write–protected.

Action: Review your error messages with \ Help Error for more information.

[APP–561] Unable to get the flexfield title because the flexfield definition is not available. Please try again from the block where the descriptive flexfield occurs, or try querying data in that block.

[APP–563] There are no descriptive flexfields defined. Please try again from the block where the descriptive flexfield occurs.

[APP–563] You must finish the action you are performing in Excel before exporting.

[APP–564] Cannot delete file &FILENAME

Cause: Application Object Library encountered an error while deleting the file &FILENAME.

Action: Check that you have privileges to delete files in the file directory. Contact your system administrator to obtain delete privileges. If your file contains secure data, be sure to delete it manually, from the operating system command line, if necessary.

[APP–566] &ROUTINE attempted to open a stream for the log or report file &FILENAME but that stream is already open. Contact your support representative.

[APP–570] &ROUTINE cannot write to a file

Cause: &ROUTINE encountered an error while writing to a file.

Action: Check that you have privileges to create and write to files in the file’s directory. Contact your system administrator to obtain create and write privileges.

Action: Check that there is sufficient disk space on your system to create a file. Contact your system administrator to obtain more disk space.

[APP–572] &ROUTINE cannot flush file stream

Cause: &ROUTINE encountered an error while flushing the file stream.

Action: Check that you have sufficient disk space on your system. Remove unnecessary files to free disk space. Contact your system administrator to obtain more disk space.
[APP–574] Application Object Library cannot write to temporary directory

Cause:  The user–specified temporary directory is not a valid directory for creating temporary files.

Action:  Choose a different temporary directory.  This is usually specified as an environment variable.  See your installation guide for details.

[APP–576] Cannot open file &FILE for writing

Cause:  &MODULE encountered an error while opening the file &FILE for writing.

Action:  Check that the file name is correct and valid on your system.

Action:  Check that you have privileges to create and write files in the file directory.  Contact your system administrator to obtain create and write privileges.

[APP–580] Cannot read file &FILENAME

Cause:  Application Object Library encountered an error while reading the file &FILENAME.

Action:  Check if the file exists.  Contact your system administrator to create the file.

Action:  Check if you have read privileges on the directory and on the file.  Contact your system administrator to obtain read privileges.

[APP–582] Cannot rename file &FILENAME1 to &FILENAME2

Cause:  Application Object Library tried to rename file &FILENAME1 to the new name &FILENAME2.  That operation failed.

Action:  Check that &FILENAME1 exists and that you have privileges to read it.

Action:  Check that you have privileges to write to &FILENAME2 and/or its directory.

[APP–584] Cannot write to file &FILENAME

Cause:  Application Object Library encountered an error writing to file &FILENAME.

Action:  Check that the file name is correct and valid on your system.

Action:  Check that you have privileges to create and write files in the file directory.  Contact your system administrator to obtain create and write privileges.

[APP–586] Program error: The Flexfield C API function &ROUTINE has been called with an input structure that was not initialized.  Please contact your support representative. Initialize the input structure at the beginning of your routine by calling &ROUTINE with the FFINIT mode. Initialize the input structure between calls to &ROUTINE by calling &ROUTINE with the FFMODEINIT mode. The FFMODEINIT mode is only required between calls to &ROUTINE that require different mode–specific input.

[APP–588] Program error: An error has occurred while looking up a flexfield segment combination. Please inform your support representative that: The FND_FLEX_SERVER validation function has encountered a null or negative combination ID (&CCID) while trying to look up the segment values
for this combination. This may indicate an invalid entry in the unique ID column of the combinations table.

[APP–590] Program error: Please contact your support representative. The server PLSQL function FND_FLEX_EXT.GET_COMBINATION_ID() has been called incorrectly. An incomplete segment array has been passed into this function. Values must be assigned to all elements in the array even if they are null. Please refer to the Flexfields Server–Side Validation documentation for proper use of this function.

[APP–592] Program error: Please contact your support representative. The server PLSQL function FND_FLEX_EXT.GET_CCID() has been called incorrectly. An invalid format for validation date string has been passed into this function. Please refer to the Flexfields Server–Side Validation documentation for proper use of this function.

[APP–594] Invalid application column name in &ROUTINE : parameter &PARAM : row &ROWNUM You have specified a column name in a table validated value set for a column that does not exist

[APP–596] FlexBuilder failed to generate a CCID for row &ROWNUM in &ROUTINE. Please view any previous messages

[APP–598] FlexBuilder failed to generate a CCID for row &ROWNUM in &ROUTINE due to : &REASON &EXPLANATION

[APP–600] Infinite recursion encountered in &ROUTINE : parameter &PARAM : row &ROWNUM FlexBuilder has detected that a derived parameter is derived from itself in a circular fashion

[APP–602] No conditional parameter match in &ROUTINE : parameter &PARAM : row &ROWNUM FlexBuilder has found that a parameter is conditional on a non-existent parameter

    Cause: FlexBuilder cannot generate a new code combination because dynamic inserts are not allowed for this flexfield structure.

    Action: Contact your system administrator to create the combination or have your flexfield structure allow dynamic inserts

[APP–606] FlexBuilder : Cannot retrieve error messages in &ROUTINE

[APP–608] FlexBuilder PLSQL function &ROUTINE failed. Please review any previous messages

[APP–616] FlexBuilder : Internal error – parameter number &NUMBER

[APP–618] FlexBuilder : Row number &NUMBER out of range in &ROUTINE

[APP–620] Value &VALUE is not valid in value set ID &VSET_ID

[APP–622] FlexBuilder failed for parameter &PARAM : row &ROWNUM due to the following: &REASON &EXPLANATION

[APP–624] Too many segments with this qualifier in &ROUTINE : parameter &PARAM : row &ROWNUM A FlexBuilder parameter or assignment specified a flexfield qualifier used by more than one segment.
[APP–626] Invalid argument &ARG specified for the FlexBuilder user exit BUILDID.

[APP–628] No assignments have been created for FlexBuilder function &FUNCTION

[APP–630] No segments with this qualifier in &ROUTINE : parameter &PARAM : row &ROWNUM A FlexBuilder parameter or assignment specified a flexfield qualifier that is not used by the flexfield structure.

[APP–632] Cannot get value for field &FIELD in FlexBuilder user exit BUILDID

[APP–636] No FlexBuilder assignments defined for function &FUNCTION for flexfield structure &CODE : num &NUM

[APP–638] FlexBuilder out of memory in &ROUTINE : row &ROWNUM

[APP–640] No parameters have been created for FlexBuilder function &FUNCTION

[APP–642] Invalid FlexBuilder parameter type &TYPE in routine &ROUTINE

[APP–644] FlexBuilder : Row &ROWNUM – Parameter &PARAM is not defined in &ROUTINE You have attempted to use a Raw parameter that has not been passed to FlexBuilder OR You have attempted to use a parameter in a value set WHERE clause, but the parameter has not yet been defined through a FlexBuilder form

[APP–646] FlexBuilder : Row &ROWNUM : Parameter &PARAM is not defined in &ROUTINE A FlexBuilder parameter or assignment referenced a parameter that has not been defined.

[APP–648] FlexBuilder usage : FNDFBTST &lt; test name &gt;

[APP–650] Invalid column name in &ROUTINE : value set parameter &PARAM : row &ROWNUM

  Cause: A FlexBuilder assignment specified an output column for a value set that is not allowed.

  Action: You may only use the VALUE or DESCRIPTION columns as output for a value set.

[APP–652] &ROUTINE: You have not defined a context column for this flexfield

[APP–654] &ROUTINE: &COLNAME has not been assigned as a descriptive flexfield column The flexfield compiler has detected that an unrecognized application column is being assigned to a flexfield segment. Please check the FND_COLUMNS table for data integrity problems.

[APP–656] Program error: Invalid arguments to the flexfield routines. Please inform your support representative that: Routine &ROUTINE was unable to find the error message for your value validation rule. The flexfield user exits #FND LOADID, #FND POPID, or #FND VALID have been called incorrectly. Make sure the VRULE= parameter is correct. Make sure the value is in quotes, the \n’s are in lower case, there are no spaces around the \n’s, and all the information is provided.

[APP–658] Program error: Invalid arguments to the flexfield routines. Please inform your support representative that: Routine &ROUTINE was unable to find the include exclude/indicator on your
The flexfield user exits #FND LOADID, #FND POPID, or #FND VALID have been called incorrectly. Make sure the VRULE= parameter is correct. Make sure the value is in quotes, the \n’s are in lower case, there are no spaces around the \n’s, and all the information is provided.

   Action: Contact your system administrator. Make sure Security Rule Elements are defined in the Define Flexfield Rule form.

[APP–666] Program error: Invalid arguments to the flexfield routines. Please inform your support representative that: Routine &ROUTINE cannot find the segment qualifier name for your value validation rule. The flexfield user exits #FND LOADID, #FND POPID, or #FND VALID have been called incorrectly. Make sure the VRULE= parameter is correct. Make sure the value is in quotes, the \n’s are in lower case, there are no spaces around the \n’s, and all the information is provided.

[APP–668] The data that defines the flexfield on this field may be inconsistent. Inform your system administrator that the function: &ROUTINE could not find the structure definition for the flexfield specified by Application = &APPL, Code = &CODE and Structure number = &NUM

[APP–670] Program error: You have a flexfield value security rule that is neither Include nor Exclude. The rule type is not valid. Please contact your system administrator. Make sure the Security Rule Elements defined in the Define Flexfield Security Rule form all have valid types.

[APP–672] Cross-validation rule has incorrect elements. Contact system administrator.

[APP–674] Program error: Flexfields could not parse the bind variable near &VARIABLE. Legal characters for bind variables are A–Z a–z 0–9 ’’’, ‘’, ‘’‘, ‘’‘, and ‘’. Bind variables must be at least two characters long.

   Action: Find the value set that uses this bind variable and make sure it is defined correctly. The full SQL statement is &SQL.

[APP–676] The flexfield routine &ROUTINE cannot read the default reference field specified for this descriptive flexfield. The developer specified a context field (via the Register Descriptive Flexfields form) that does not exist in this block of this form.

   Action: Contact your system administrator, and choose another default reference field for this descriptive flexfield.

[APP–680] Program error: Application Object Library has detected an internal flexfields error. Please contact your system administrator or support representative. Flexfields use special pseudo fields to communicate with QuickPick and other Application Object Library features. This error has probably occurred because the system is out of memory, and the routine &ROUTINE cannot read from a pseudo field.

[APP–682] Program error: Routine &ROUTINE cannot read structure ID field. The developer specified a structure ID column (via the Register Descriptive Flexfields form) that does not exist in this block of this form.

   Action: Contact your support representative.

[APP–684] Flexfield routine &ROUTINE cannot find flexfield definition for application &APPID, and code &CODE.
Program error: Please contact your system administrator or support representative.

Cause: Flexfields use special pseudo fields to communicate with QuickPick and other Application Object Library features. This error has probably occurred because the system is out of memory, and the routine &ROUTINE cannot write to a pseudo field.

Program error: Please contact your system administrator or support representative.

Cause: Flexfields use special pseudo fields to communicate with QuickPick and other Application Object Library features. This error has probably occurred because the system is out of memory, and the routine &ROUTINE cannot write to the !FLEX pseudo field.

Program error: The data that defines the flexfield on this field may be inconsistent. Inform your system administrator that the routine &ROUTINE could not find any segments for the flexfield specified by Application ID = &APPID, Code = &CODE and structure number = &NUM.

Program error: Please contact your support representative. FLEXFIELDS SERVER–SIDE VALIDATION package could not determine whether GL is installed because of an exception in FND_INSTALLATION.GET().

The unique ID number for this code combination is too large. Inform your system administrator that the database sequence &SEQNAME should not exceed &CCIDLIMIT.

Flexfield segment combination not found. Inform your system administrator that the combination identified by the unique ID number &CCID could not be found in the combinations table for the flexfield structure identified by Application = &APNM, Flexfield Code = &CODE and Structure Number &NUM.

Concatenated segment values or descriptions exceed the maximum length of &MAXFLDLEN.

Action: The maximum length of the each segment value or description must be reduced so that the maximum concatenated length will not exceed &MAXFLDLEN. Contact your system administrator.

Program error. Please inform your support representative that the descriptive flexfields server validation function has been called incorrectly. The segment ids for column &COLNAME of type &COLTYPE were not initialized using FND_FLEX_DESCVAL.SET_COLUMN_VALUE() prior to calling FND_FLEX_DESCVAL.VALIDATE_DESCCOLS(). The error is either in a form, or in a server–side package that calls the descriptive flexfields validation routine.

Program error. Please inform your support representative that the descriptive flexfield &DESCR_FLEX_NAME in the application &APPID could not be found.

Program error. Please inform your support representative that the descriptive flexfields server validation function has been called with an invalid data field, &DATAFIELD, or with an alternate table, &TABLE, that does not exist or does not contain this data field. The error is either in the form, or in a server–side package that calls the flexfields validation routine.

Routine &ROUTINE: Detected a data error.

Program error. Please inform your support representative that the descriptive flexfields server validation function has been called with an alternate table, &TABLE, that either does not
exist or does not contain the same segment columns as those specified in the flexfield definition. The error is either in the form, or in a server–side package that calls the flexfields validation routine.

[APP–708] The data that defines the flexfield on this field may be inconsistent. Please inform your support representative that the SQL statement that selects default values for one or more segments of this flexfield has returned more than one row. The first 1000 bytes of the SQL statement that caused the error are: &SQLSTR

[APP–709] Program error. Please inform your support representative that the descriptive flexfields server validation function has been called with a rowid, &ROWID, that does not represent an existing row in the table, &TABLE. The error is either in the form, or in a server–side package that calls the flexfields validation routine.

[APP–710] An unexpected error has occurred. Please inform your system administrator that the error: &MSG occurred when the FND_FLEX_SERVER package tried to execute the SQL statement below. If tables or sequences do not exist this may indicate a problem with your installation. Make sure grants and synonyms exist so that all tables, views, and sequences in the SQL statement are visible from the database account in which the FND_FLEX_SERVER package resides (usually APPLSYS). If this is a select statement and the last portion of the where clause is in incorrect, then an invalid where clause may have been supplied in the flexfield definition. The error is probably either in the form, or in a server–side package that calls the flexfield validation routine. SQL statement (first 1000 bytes): &SQLSTR

[APP–712] You have two global segments, segments "&SEG1" and "&SEG2", in your descriptive flexfield whose segment names map to identical view column names. The view generator uses underscores ( _ ) to replace all characters in the segment name that are other than alphanumeric characters and underscores. For example, the names "Segment 1’s Name" and "Segment_1_s_Name" would be the same once the space and apostrophe become underscores ( _ ). Change one of your segment names to a new name so that the segment names in a structure will not be identical after correction for non–alphanumeric characters.

[APP–714] You have two segments, segments "&SEG1" and "&SEG2", for the &CTX context (that is, two segments in the same descriptive flexfield structure) whose segment names map to identical view column names. The view generator uses underscores ( _ ) to replace all characters in the segment name that are other than alphanumeric characters and underscores. For example, the names "Segment 1’s Name" and Segment_1_s_Name" would be the same once the space and apostrophe become underscores ( _ ). Change one of your segment names to a new name so that the segment names in a structure will not be identical after correction for non–alphanumeric characters.

[APP–716] The combinations table for this flexfield contains more than one entry that matches the entered values. Inform your system administrator that the combination identified by the number &CCID is duplicated.

[APP–718] Please enter a unique Key Flexfield &CONTEXT. This Key Flexfield &CONTEXT is already defined for some other key flexfield.

[APP–722] Program error: Please contact your support representative. There are two rows in the FND_FLEX_VALIDATION_RULE_STATS table that have the same combination of APPLICATION_ID, ID_FLEX_CODE, and ID_FLEX_NUM. This should not be possible due to
the unique index FND_FLEX_VAL_RULE_STATS_U1. Check to make sure this index is correctly installed.

[APP–724] The data that defines the flexfield on this field may be inconsistent. Inform your system administrator that the routine: &ROUTINE found a duplicate flexfield structure definition for Application = &APPL, Code = &CODE, and Structure number = &NUM

[APP–726] This is a duplicate sequence for the specified structure.

    Cause: The combination of structure and sequence that you have entered already exists.

    Action: Update the sequence number to make the combination unique. For this Structure the record with the highest sequence will be evaluated first.

[APP–728] A %TYPE% validation rule already exists. You cannot add another.

[APP–730] This flexfield has an invalid value set. It may use a special value set that uses an Edit event user exit, and the user exit has failed. If you are using a form on a graphical user interface (GUI) you may have an invalid value set of a different type, possibly a table–validated value set where the table or view does not exist or where there is an invalid WHERE clause. Contact your system administrator or support representative to check and correct the value sets this flexfield uses.

[APP–734] Please enter a valid value for the &ATTRIB segment qualifier using the Segment Qualifiers pop–up window. Or, contact your system administrator to define a default value for this segment qualifier using the Register Key Flexfield form.

[APP–736] Error loading special value set for shorthand aliases in routine &ROUTINE

[APP–738] Error detected when attempting to load value sets in routine &ROUTINE

[APP–746] Program error: Flexfield compiler could not write compiled definition to table.

[APP–750] An unexpected error has occurred. Please contact your support representative and forward the following additional information: FLEXFIELDS SERVER–SIDE VALIDATION package could not find the PLSQL function GL_FLEX_INSERT_PKG.FDFGLI(): &MSG

[APP–756] Cannot find combination CCID=&CCID CODE=&FLXCODE &QTSET&CCID2

[APP–760] Program error. Please inform your support representative that: Flexfields HASH_LOCK PLSQL function returns &ERRNUM to fdfhlk

[APP–762] Routine &ROUTINE found segment &COLNAME has invalid range validation data. The flexfield segment &COLNAME is defined as either a Low or a High segment and there is no corresponding High or Low segment in this flexfield structure. Range segments that use Low or High designations must occur in matched pairs within a flexfield structure. Redefine your flexfield segments so that you define matched pairs of Low and High segments, preferably as consecutive segments. Your segments do not necessarily need to use the same value set.

[APP–766] You cannot delete a rollup group being used by a flexfield

    Cause: You attempted to delete this rollup group. For a rollup group to be deleted, it must not be used by any values (enabled or disabled).
Action: Change all values that use this rollup group to use another rollup group, then delete this rollup group.

[APP–768] Please do not make this change. It will cause a hierarchy loop

Cause: You tried to make a change to your hierarchy definitions that would cause a loop in your hierarchy. One of the descendants of the new range is &PARENT. This value is a parent of the current value.

Action: Reduce the scope of the range to not include &PARENT.

[APP–770] Program error: Invalid arguments to the flexfield routines. Please inform your support representative that: Flexfield cannot interpret combination QuickPick column clause. The flexfield user exit #FND POPID has been called incorrectly. Make sure the COLUMN= parameter is correct. Make sure the display width is specified properly with no spaces, and with both open and close parentheses.

[APP–774] The value passed for the mode parameter to one of the Flexfield API functions is not valid. Consult the documentation for the list of valid modes.

[APP–776] Invalid column name ”&COLNAME”. Contact system administrator.

[APP–778] Invalid context field value ”&CONTEXT” passed to flexfield routine &ROUTINE

Action: Pass an existing context field value or define this context value using the Define Descriptive Segments form.

[APP–780] Program error: Please contact your support representative. Invalid value for the COPY parameter in one of the #FND POPID | VALID | LOADID user exits.

Action: Pass the COPY parameter in the form: COPY=":block.field##n[ALL | flexfield qualifier | segment number]”.

[APP–782] The COPY field you specified contains an invalid value

Cause: The COPY field specified in the COPY parameter to one of the #FND POPID | VALID | LOADID user exits contains invalid values for the segments specified in the COPY parameter. The value &VALUE is invalid for segment &SEGNAME.

Action: Change the value in the COPY field so that it contains valid values for the segments specified in the COPY parameter.

Action: Change the field specified as the COPY field so that it contains valid values for the segments specified in the COPY parameter.

[APP–784] Invalid reference &REFVAL in default value defined for segment &SEGMENT. Please check the default values you have specified for your segments.

[APP–786] The data that defines the flexfield on this field may be inconsistent. Please inform your system administrator that the default type for the &SEGNAME segment is not recognized.

[APP–788] Routine &ROUTINE cannot calculate derived value due to an invalid derivation rule code.
Action: Contact your system administrator or support representative. Check the DERIVATION_RULE_CODE column of the FND_VALUE_ATTRIBUTE_TYPES table. The only currently supported value is G12.

[APP–790] Program error: Please contact your support representative. Invalid DERIVED parameter to one of the flexfield user exits #FND POPID | VALID | LOADID. The DERIVED parameter must be in the form: DERIVED=’:block.field ##nsegment qualifier’.

[APP–792] Program error: Invalid arguments to the flexfield routines. Please inform your support representative that: Routine &ROUTINE was unable to interpret the include/exclude indicator &INCPTR on your value validation rule. The flexfield user exits #FND LOADID, #FND POPID, or #FND VALID have been called incorrectly. Make sure the VRULE= parameter is correct. Make sure the value is in quotes, the \’s are in lower case, there are no spaces around the \’s, and all the information is provided. Valid include/exclude indicator values are I and E.

[APP–794] Program error: Invalid arguments to the flexfield routines. Please inform your support representative that: Routine &ROUTINE has been called with an invalid cross-validation mode and cannot interpret control parameter. Routine must be called only with FULL or FOR_INSERT cross-validation modes.

[APP–796] The data that defines the flexfield on this field may be inconsistent. Inform your system administrator that the $FLEX$ reference in the flexfield bind variable &BTOKEN has a syntax error. This token must reference either the VALUE, ID or MEANING of some previous segment. This flexfield bind variable is in either a WHERE clause in a table–validated value set, or in a default value for one of the segments of this flexfield.

[APP–798] Invalid reference &REFVAL in value set attached to segment &SEGMENT Please check the WHERE clauses of your table validated value sets.

[APP–800] The data that defines the flexfield on this field may be inconsistent. Inform your system administrator that the profile specified in &BTOKEN could not be found. This profile is either referenced by a WHERE_CLAUSE token passed into the flexfield definition in the form, a WHERE clause in a table–validated value set, or a default value for one of the segments of this flexfield.

[APP–802] You entered an invalid query condition. Valid query conditions are constants, ”&lt; ‘value’”, ”&gt; ‘value’”, ”= ‘value’”, ”&lt;= ‘value’”, ”&gt;= ‘value’”, ”!= ‘value’”, ”&lt;&gt; ‘value’”, ”#BETWEEN ‘value1’ and ‘value2’”. You may enter one of the above conditions, or clear the field.

[APP–804] Program error: Invalid arguments to the flexfield routines. Please inform your support representative that: Routine &ROUTINE unable to find flexfield qualifier &ATTYPE. The flexfield user exits #FND LOADID, #FND POPID, or #FND VALID have been called incorrectly. Make sure the flexfield qualifiers specified match those defined in the Register Key Flexfield form.

[APP–806] The default value &DEFVAL is invalid for the &SEGNAME segment. Your default value will be ignored. Please inform your system administrator that: Add the value &DEFVAL to the value set for segment &SEGNAME, or choose another default value in the Key Flexfield Segments form or Descriptive Flexfield Segments form. Use the Edit Concurrent Program or Define Report Set form for Standard Report Submission report defaults.

[APP–808] Program error: Invalid arguments to the flexfield routines. Please inform your support representative that: Routine &ROUTINE cannot find segment &SEGNAME. This segment may not be defined.
[APP–810] Program error: Please inform your support representative that: Invalid segment number(&SEGNUM) passed to flexfield routine &ROUTINE. Routine must receive a segment number between 1 and the total number of segments in the descriptive flexfield context or the key flexfield structure.

[APP–812] Program error: Please contact your support representative. Invalid TYPE parameter specified for one of the flexfield user exits #FND POPIDR | VALIDR | LOADIDR

Action: Pass the TYPE parameter in the form: TYPE="concatenated types field##nftype field suffix”.

[APP–814] Program error: Please contact your support representative. Invalid TYPE_SIZES parameter passed for one of the flexfield user exits #FND POPIDR | VALIDR | LOADIDR

Action: Pass the TYPE_SIZES parameter in the form: TYPE_SIZES="value display size##ndescription display size”. Value display size must be between 1 and the maximum value size defined in the value set. Description display size must be between 0 and the maximum description size defined in the value set.

[APP–816] Program error: Please contact your support representative. Invalid TYPE_VALIDATION parameter specified for one of the flexfield user exits #FND POPIDR | VALIDR | LOADIDR

Action: Pass the TYPE_VALIDATION parameter in the form: TYPE="value set##nrequired##ndefault”.

[APP–818] Program error: Please contact your support representative. Invalid VALATT parameter specified for one of the flexfield user exits #FND POPID | VALID | LOADID

Action: Pass the VALATT parameter in the form: VALATT=":block.field ##nflexfield qualifier##nsegment qualifier”.

[APP–820] Program error: Invalid arguments to the flexfield routines. Please inform your support representative that: Routine &ROUTINE cannot interpret validation type. The flexfield user exits #FND LOADID, #FND POPID, or #FND VALID have been called incorrectly. Make sure the VALIDATE= parameter is correct. Valid validation types are: NONE, PARTIAL, FULL, FOR_INSERT, QUERY, and QUERY_BASE.

[APP–822] Program error: Invalid arguments to the flexfield routines. Please inform your support representative that: Routine &ROUTINE was unable to find the segment qualifier. The flexfield user exits #FND LOADID, #FND POPID, or #FND VALID have been called incorrectly. Make sure the segment qualifiers specified match those defined in the Define Qualifiers form.

[APP–824] You cannot use the menu from within this flexfield. Contact your support representative. Certain flexfields defined with the old trigger definition do not support the menu. The #FND POPID call in the form must be changed to use the new trigger format, including the argument NAVIGATE=Y.

[APP–826] The flexfield concatenated segments field does not contain values for all the enabled segments that are displayed.

[APP–828] Please enter the required context field value in the &FLEXFIELD flexfield. The context field (also known as a structure field) appears as one of the first segments in your flexfield.
Program error: Please contact your support representative. DATA_FIELD parameter missing from a flexfield user exit. If you specify USED_BFLDS="N" in one of the #FND POPDESC VALDESC LOADDESC user exits, you must use the DATA_FIELD parameter.

Action: Pass the DATA_FIELD parameter in the form: DATA_FIELD=":block.field" :.

Please enter the required &VALTYPE value for the &SEGMENT segment in the &FLEXFIELD flexfield.

&ROUTINE: Shorthand prompt is missing when shorthand is enabled

Program error: Please inform your support representative that: The flexfield on this field has been called incorrectly. Inform your support representative that the &TOKNAME token was specified incorrectly to the flexfields server–side validation function. Segment qualifier names cannot be null. The error is either in the form, or in a server–side package that calls the flexfields validation routine.

Program error: Please contact your support representative. You must pass the TYPE_HEADING parameter to a flexfield user exit

Cause: For every TYPE parameter you pass to one of the #FND POPIDR | VALIDR | LOADIDR user exits, you must pass a TYPE_HEADING parameter in the form: TYPE_HEADING="heading".

Action: Pass one TYPE_HEADING parameter to the flexfield user exits for every TYPE parameter.

Program error: Please contact your system administrator. You must pass the TYPE_SIZES parameter to a flexfield user exit

Cause: For every TYPE parameter you pass to one of the #FND POPIDR | VALIDR | LOADIDR user exits, you must pass a TYPE_SIZES parameter in the form: TYPE_SIZES="value display size##ndescription display size".

Action: Pass one TYPE_SIZES parameter to the flexfield user exits for every TYPE parameter.

Program error: Please contact your support representative. You must pass the TYPE_VALIDATION parameter to a flexfield user exit

Cause: For every TYPE parameter you pass to one of the #FND POPIDR | VALIDR | LOADIDR user exits, you must pass a TYPE_VALIDATION parameter in the form: TYPE_VALIDATION="value set##nrequired##ndefault".

Action: Pass one TYPE_VALIDATION parameter to the flexfield user exits for every TYPE parameter.

Descriptive flexfield context field is currently in use

This flexfield uses an invalid value set

Cause: This flexfield uses a special value set, and that value set is incompletely defined.

Action: Contact your support representative. Additional information for support representative: Check the value sets this flexfield uses. At least one of the value sets uses Special
Validation. This value set is missing an expected Edit event user exit. Add the correct Edit event user exit to your value set.

[APP–856] Cannot find enabled global segment. Descriptive flexfields require the mandatory Global Context to be enabled.

[APP–858] Flexfield compiler cannot find enabled key flexfield columns.

[APP–862] Program error: Please contact your system administrator. The flexfield on this field has been called incorrectly. The WHERE_CLAUSE token was specified incorrectly to the flexfields server–side validation function. The WHERE_CLAUSE token cannot refer to a previous segment using the :$FLEXS mechanism. The error is either in the form, or in a server–side package that calls the flexfields validation routine.

[APP–864] &Routine: Cannot find flexfield data

[APP–866] Out of memory

  Cause: &ROUTINE cannot allocate memory for WHERE= parameter of the flexfield user exits, or the SQL where clause of a table validated value set because the system is out of memory.

  Action: Contact your system administrator or support representative.

[APP–868] Allow Summary Values must be set to "No" for this value set. You cannot specify summary values for table validated value sets containing a ID Column or Additional Columns.

[APP–870] The data that defines the flexfield on this field may be inconsistent. Please inform your system administrator that: The parent value set for the dependent segment &CHILD could not be found in the flexfield structure specified by Application ID = &APPID, Code = &CODE and structure number = &NUM

[APP–874] Routine &ROUTINE found no rows in table &TAB. Please contact your system administrator or support representative.

[APP–876] No rows found in DUAL

  Action: Ensure one and only one record exists in DUAL.

[APP–878] Program error: Invalid arguments to the flexfield routines. Please inform your support representative that: Routine &ROUTINE was unable to find the values for your value validation rule. The flexfield user exits #FND LOADID, #FND POPID, or #FND VALID have been called incorrectly. Make sure the VRULE= parameter is correct. Make sure the value is in quotes, the \n’s are in lower case, there are no spaces around the \n’s, and all the information is provided.

[APP–880] &ROUTINE cannot find segment qualifier

  Cause: &ROUTINE cannot find segment qualifier for this segment. The segment qualifier position is &VALPOS.

  Action: Define the segment qualifiers for this value by querying it up in the Define Key Segment Values form.
[APP–882] &ROUTINE cannot find segment qualifier

Cause: &ROUTINE cannot find segment qualifier for segment number &SEGNUM. The segment qualifier position is &VALPOS. This is caused by defining values for a value set before it is assigned to all of the flexfields that will use it.

Action: Define the segment qualifiers for this value by querying it up in the Define Key Segment Values form. Use the segment qualifiers window, and save your changes. Because flexfield segment values are cached, you must change responsibilities to restore the value.

[APP–884] There is an empty required flexfield in this row. Enter values

Cause: The flexfield in this row requires values for one or more segments, but it currently does not contain any segment values.

Action: Enter the flexfield window, choose valid values for all required segments, and save your changes.

[APP–888] Program error: Invalid arguments to the flexfield routines. Please inform your support representative that: Routine &ROUTINE was unable to find the segment qualifier. The segment qualifier name parameter is required.

[APP–890] The flexfield view generator cannot create a view with more than 256 columns. Your descriptive flexfield contains more than 253 uniquely named segments. Change the names of some of your context-sensitive segments so that they share names and will both occupy the same view column (change segments in structures to share names with segments in different structures). Regenerate your view (refreeze and recompile your flexfield).

[APP–892] Out of memory

Cause: FDFQPC unable to allocate temporary 64K memory for code combination QuickPick statement because the system is out of memory.

Action: Contact your system administrator or support representative.

[APP–894] Out of memory

Cause: FDFQPC cannot allocate temporary memory for QuickPick statement because the system is out of memory.

Action: Contact your system administrator or support representative.

[APP–896] Out of memory

Cause: &ROUTINE cannot allocate memory because the system is out of memory.

Action: Contact your system administrator or support representative.

[APP–898] The output structure parameter is required in routine &ROUTINE

Cause: You passed a null pointer for the output structure in &ROUTINE.

Action: Pass a pointer to an allocated output structure.
[APP–900] Routine &ROUTINE found an unmatched Pair value set on segment &COLNAME

Cause: The flexfield routine &ROUTINE has found that the segment &COLNAME uses a Pair value set and that no other segment in this flexfield structure uses the same Pair value set. A Pair value set must be used for two segments in the same flexfield structure.

Action: Redefine your flexfield segments so that you use the same Pair value set on two segments, preferably as consecutive segments.

[APP–902] The data that defines the flexfield on this field may be inconsistent. Inform your system administrator that the segment referred to by the flexfield bind variable &BTOKEN could not be found. Make sure this variable references the segment or value set name of a prior segment in the flexfield structure. This flexfield bind variable is in either a WHERE clause in a table–validated value set, or in a default value for one of the segments of this flexfield.

[APP–904] Missing required value in a prior segment

Cause: The value for this segment depends upon the value in a prior segment, and there is no value in the prior segment.

Action: Enter a value for the prior segment. Additional information for support representative: This may also be caused by incorrect use of the DISPLAY= token to the flexfield user–exits. You may also need to specify a default value for the prior segment.

[APP–906] You can only query existing flexfield code combinations. You entered query criteria in your flexfield that does not identify an existing code combination. Therefore, your query will not return any rows. Enter a valid code combination, or enter only the flexfield segment values you know, or do not enter any values in the flexfield.

[APP–910] The flexfield on this field has been called incorrectly. Inform your support representative that the &TOKNAME token was specified incorrectly to the flexfields server–side validation function. The qualifier name: &NAME... is longer than its maximum length of 30 characters. The error is either in the form, or in a server–side package that calls the flexfields validation routine.

[APP–914] Required flexfield segment is empty but not displayed

Cause: A required segment of this flexfield is blank, but the segment is not displayed and thus cannot be entered.

Action: Exit the flexfield using the [Exit] key. Contact your support representative.

Action: Exit the flexfield using the [Exit] key. Change the value set of the non–displayed required segment to not be required, or add a valid default value for the non–displayed required segment.

Action: Exit the flexfield using the [Exit] key. Change the flexfield routine calls in your form so that the non–displayed required segment is displayed.

[APP–920] You have a segment, &SEG1 in context &CTX, whose name maps to the same view column name as the context prompt. The view generator uses underscores ( _ ) to replace all characters in the segment name that are other than alphanumeric characters and underscores. Change your segment name to a new name so that the segment name and context prompt will not be identical after correction for non–alphanumeric characters.
[APP–922] You have a context–sensitive segment, &SEG1 in context &CTX, whose name maps to the same view column name as the global segment &SEG2. The view generator uses underscores ( _ ) to replace all characters in the segment name that are other than alphanumeric characters and underscores. Change your context–sensitive segment name to a new name so that the context–sensitive segment name and the global segment name will not be identical after correction for non–alphanumeric characters.

[APP–924] You chose a segment number that is used by another segment

Cause: You chose a segment number that is used by another segment in this flexfield. If segment number is not unique, then the order (in the window) of the segments with duplicate segment numbers is random. Flexfields allows you to have duplicate segment numbers to make reordering your segments easier.

Action: Choose a unique segment number for this segment, or change the segment number for other segments that share this number.

[APP–926] &ROUTINE: Compiler found data integrity problem with segment attribute data

[APP–936] The data that defines the flexfield on this field may be inconsistent. Inform your system administrator that the SQL WHERE clause listed below does not contain the correct number of quotation marks. This SQL clause may be in a WHERE_CLAUSE token passed into the flex definition in the form, a WHERE clause in a table–validated value set, or a default value for one of the segments of this flexfield. The first 1000 bytes of the SQL statement that caused the error is: &CLAUSE

[APP–938] The flexfield on this field has been defined incorrectly. Inform your support representative that the FND_FLEX_SERVER.VALIDATE_COMBINATION() function has been called incorrectly. An invalid flag has been specified to this function. To continue using this form, have the system administrator turn off wide area operation by setting profile option – Flexfields: Validate on Server to N

[APP–940] The flexfield on this field has been defined incorrectly. Inform your support representative that the FND_FLEX_SERVER.VALIDATE_COMBINATION() function has been called incorrectly. Flexfields server–side validation does not support invoking modes other than VALID (V), POPID (P), and LOADID(L). To continue using this form, have the system administrator turn off wide area operation by setting profile option – Flexfields: Validate on Server to N

[APP–942] The flexfield on this field has been defined incorrectly. Inform your support representative that the FND_FLEX_SERVER.VALIDATE_COMBINATION() function has been called incorrectly. Flexfields server–side validation does not support validation modes other than FULL, PARTIAL or PARTIAL_IF_POSSIBLE. To continue using this form, have the system administrator turn off wide area operation by setting profile option – Flexfields: Validate on Server to N

[APP–944] Program error: Please inform your support representative that: FLEXFIELDS SERVER–SIDE VALIDATION package reports error: &MSG

[APP–946] The data that defines the flexfield on this field may be inconsistent. Please inform your system administrator that the value set &VSNAME is missing its table validation information.
[APP–948] The flexfield on this field contains a table-validated value set, &VSNAME, that has an Additional Columns clause that contains the word INTO. This prohibits operation in the mode that optimizes performance over a wide–area network. To continue using this form, have the system administrator either remove all table-validated value sets from this flexfield definition, or turn off wide area operation by setting the profile option – Flexfields: Validate on Server to N.

[APP–950] The flexfield on this field contains a segment whose default type is FIELD or ENVIRONMENT. This prohibits operation in the mode that optimizes performance over a wide–area network. To continue using this form, have the system administrator either change the default type, or turn off wide area operation by setting the profile option – Flexfields: Validate on Server to N.

[APP–952] The flexfield on this field contains a value set (&VSNAME) that uses special or pair user–exit validation. This prohibits operation in the mode that optimizes performance over a wide–area network. To continue using this form, have the system administrator either remove all special or pair validated value sets from this flexfield definition, or turn off wide area operation by setting the profile option – Flexfields: Validate on Server to N.

[APP–956] The flexfield on this field has been called incorrectly. Inform your support representative that the DISPLAYABLE, INSERTABLE, or UPDATABLE token was specified incorrectly to the flexfields server–side validation function. The qualifier &QTOKEN was not found. The error is either in the form, or in a server–side package that calls the flexfields validation routine.

[APP–958] The flexfield on this field has been called incorrectly. Inform your support representative that the DISPLAYABLE, INSERTABLE, or UPDATABLE token was specified incorrectly to the flexfields server–side validation function. The segment number &SEGNUM is invalid. The error is either in the form, or in a server–side package that calls the flexfields validation routine.

[APP–960] The flexfield on this field has been called incorrectly. Inform your support representative that the DISPLAYABLE, INSERTABLE, or UPDATABLE token was specified incorrectly to the flexfields server–side validation function. A qualifier name or segment number is null. The error is either in the form, or in a server–side package that calls the flexfields validation routine.

[APP–966] Program error: The flexfield on this field has been called incorrectly. Please inform your support representative that: The VALATT token was specified incorrectly to the flexfields server–side validation function. A separator (&SEP) is missing from the qualifier: &NAME. The error is either in the form, or in a server–side package that calls the flexfields validation routine.

[APP–968] The flexfield on this field has been called incorrectly. Inform your support representative that the VRULE token was specified incorrectly to the flexfields server–side validation function. The include–exclude flag does not start with I or E for the rule with segment qualifier name: &NAME. The error is either in the form, or in a server–side package that calls the flexfields validation routine.

[APP–970] The flexfield on this field has been called incorrectly. Inform your support representative that the VRULE token was specified incorrectly to the flexfields server–side validation function. The application short name is longer than 50 characters in the rule with segment qualifier name: &NAME. The error is either in the form, or in a server–side package that calls the flexfields validation routine.
The flexfield on this field has been called incorrectly. Inform your support representative that the &ARG argument in the flexfield definition exceeds its maximum length of &MAXLEN bytes. The error is either in the form, or in a server-side package that calls the flexfields validation routine. Try removing unnecessary white space from the argument if possible.

The flexfield on this field has been called incorrectly. Inform your support representative that the VRULE token was specified incorrectly to the flexfields server-side validation function. The error message is longer than 100 characters in the rule with segment qualifier name: &NAME. The error is either in the form, or in a server-side package that calls the flexfields validation routine.

The flexfield on this field has been called incorrectly. Inform your support representative that the VRULE token was specified incorrectly to the flexfields server-side validation function. The portion of the token that specifies included or excluded values is longer than 240 characters in the rule with segment qualifier name: &NAME. The error is either in the form, or in a server-side package that calls the flexfields validation routine.

The flexfield on this field has been called incorrectly. Inform your support representative that the VRULE token was specified incorrectly to the flexfields server-side validation function. No include or exclude flag was found for the rule with segment qualifier name: &NAME. The error is either in the form, or in a server-side package that calls the flexfields validation routine.

The flexfield on this field has been called incorrectly. Inform your support representative that the VRULE token was specified incorrectly to the flexfields server-side validation function. No error message name was found for the rule with segment qualifier name: &NAME. The error is either in the form, or in a server-side package that calls the flexfields validation routine.

The flexfield on this field has been called incorrectly. Inform your support representative that the VRULE token was specified incorrectly to the flexfields server-side validation function. No values to be included or excluded were found for the rule with segment qualifier name: &NAME. The error is either in the form, or in a server-side package that calls the flexfields validation routine.

The flexfield on this field has been called incorrectly. Inform your support representative that the VRULE token was specified incorrectly to the flexfields server-side validation function. A separator (&SEP) is missing from VRULE number &TOKNUM. The error is either in the form, or in a server-side package that calls the flexfields validation routine.

Routine &ROUTINE found too many rows in table &TAB. Please contact your system administrator or support representative.

The unique qualifier you have enabled is already being used by another segment. Disable this unique qualifier for this segment.
[APP–992] Flexfields was unable to freeze flexfield data because of an error. Determine the cause of the error. Once you resolve it, you can recompile your flexfield. Likely problems include incompletely-specified flexfield qualifiers (especially for the Accounting Flexfield) or other incomplete segment information.

[APP–994] Flexfields could not freeze flexfield data because of an error. Determine the cause of the error. Once you resolve it, you can recompile your flexfield. A likely problem is incomplete segment information.

[APP–996] Flexfields was unable to find values for VRULE routine &ROUTINE because of improper formatting of the VRULE parameter. The proper format for the VRULE parameter is: VRULE="flexfield qualifier\nsegment qualifier\n {I[clude] | E[xclude]}\nerror message\ntext\nvalidation value1\nvalidation value2..."

[APP–999] An invalid token '&TOKEN' was passed to a user exit.

[APP–999] Could not find basepath environment variable '&BASEPATH' for the '&APPLICATION_NAME' application. The variable is not set in your environment.

[APP–999] Duplicate row, please try a different key.

[APP–999] File '&FILE' could not be opened for reading.

[APP–999] File '&FILE' could not be opened for writing.

[APP–999] Incorrect arguments were passed to user exit #&USRXIT. Please correct the user exit call in your form exit.

[APP–999] Possible infinite loop detected in &ROUTINE. Abort current list.

   Cause: This form is corrupted. It may be caused by a duplicate field within this block.

   Action: Please contact your support representative.

[APP–999] Read error occurred on line &LINE of file '&FILE'.

[APP–999] The reference form cannot be launched from the current login context.

&ERROR_MESSAGE

[APP–999] The routine &ROUTINE was unable to retrieve the name of the current language.

[APP–999] The routine &ROUTINE was unable to set the working language to &NLSLANG.

[APP–999] Unmatched quote marks in string (&STRING) detected in routine &ROUTINE.

[APP–999] Write error occurred on line &LINE of file '&FILE'.

[APP–1000] Flexfields routine &ROUTINE unable to read compiled attributes field &FLDNAM. This is often caused because the field does not exist. Please contact your support representative.

[APP–1002] Flexfields routine &ROUTINE unable to read field &FLDNAME. This is often caused by the field not being defined. Contact your support representative, or check to see if the field exists and define it if it does not.
[APP–1006] Flexfields routine &ROUTINE was unable to write to the compiled attribute field &FLDNAM. This often happens because the field does not exist. Please contact your support representative.

[APP–1008] Program error: Unable to write to the field &FLDNAME. Please inform your support representative that: Flexfields routine &ROUTINE was unable to write to the specified field, &FLDNAME. This is often caused by the field’s not existing or not being defined properly. Check the form to see if the field is defined and define it if it is not.

[APP–1016] Routine &ROUTINE: Unknown structure ID &NUM for flexfield code &CODE with application ID &APPID

[APP–1020] Routine &ROUTINE detected an unknown flexfield shorthand alias profile value

[APP–1022] The flexfield on this field contains a flexfield bind variable with a :BLOCK.FIELD reference. This prohibits operation in the mode that optimizes performance over a wide–area network. To continue using this form, have the system administrator either remove all :BLOCK.FIELD references, or turn off wide area operation by setting the profile option – Flexfields: Validate on Server to N. The reference may be in a WHERE_CLAUSE token passed into the flexfield definition in the form, a WHERE clause in a table–validated value set, or a default value for one of the segments of this flexfield.

[APP–1024] You passed an incorrect value to a flexfield user exit.

   Cause: You passed USEDBFLDS=”Y” to one of the flexfield user exits #FND POPID | LOADID | VALID | POPDESC | LOADDESC | VALDESC and the form does not have all the database SEGMENT1 – SEGMENTn or ATTRIBUTE1 – ATTRIBUTEn fields.

   Action: Set USEDBFLDS=”N” if the form does not use the SEGMENTn or ATTRIBUTEn fields.

   Action: Check that all the SEGMENTn or ATTRIBUTEn fields are in the form. View previous messages to see which field is missing.

[APP–1028] The value set field for the segment &SEGMENT cannot be left blank since the underlying application table column is of a column type other than Character.

[APP–1030] Value &VALUE is longer than its maximum length of &LENGTH characters.

[APP–1032] You have a context–sensitive segment, &SEG1 in context &CTX1, whose name maps to the same view column name as the context–sensitive segment &SEG2 in context &CTX2, and these segments use different view column types (for example, one uses a number format and the other uses a date format). The view generator uses underscores ( _ ) to replace all characters in the segment name that are other than alphanumeric characters and underscores, and columns whose names map to the same view column must use the same column format type. Either change one of your context–sensitive segment names to a new name so that the two segment names will not be identical after correction for non–alphanumeric characters, or have both segments use the same value set format type.

[APP–1034] The data that defines the flexfield on this field may be inconsistent. Please inform your system administrator that the value set &VSNAME has an incorrect date or date–time format.

[APP–1036] The data that defines the flexfield on this field may be inconsistent. Inform your system administrator that the value set &VSNAME has an incorrectly formatted date or date–time in the minimum or maximum range field.
[APP–1038] The data that defines the flexfield on this field may be inconsistent. Please inform your system administrator that the value set &VSNAME has an incorrect format type (&FMT).

[APP–1040] The data that defines the flexfield on this field may be inconsistent. Inform your system administrator that the value set &VSNAME has an incorrectly formatted number in the minimum or maximum range field.

[APP–1041] The data that defines the flexfield on this field may be inconsistent. Please inform your system administrator that the value set &VSNAME has an invalid precision. The precision must be at least 0, but must be less than the value set maximum size.

[APP–1042] The data that defines the flexfield on this field may be inconsistent. Please inform your system administrator that the value set &VSNAME has an incorrect validation type (&VTYPE).

[APP–1044] Routine &ROUTINE: Error in Value Set Extension specifications

[APP–1048] Use of this combination restricted by WHERE clause ’&WHERE’.

[APP–1050] This flexfield cannot be opened because it has no displayed segments. Please contact your system administrator. Modify your flexfield definition to display one or more segments. This may also be caused by incorrect use of the DISPLAY= token to the flexfield user exits in the form. In that case, please contact your support representative.

[APP–1052] You attempted to create a segment combination that is not valid. The system administrator has defined a flexfield cross-validation rule named &RULENAME that excludes this combination of segments. However, the error message for this rule could not be found. Contact your system administrator to correct this problem.

[APP–1054] You attempted to create a segment combination that is not valid. The system administrator has defined a flexfield cross-validation rule named &RULENAME that excludes this combination of segments. However, the error message for this rule is not unique. Contact your system administrator to correct this problem.

[APP–1056] You cannot delete a segment with associated reporting attributes

[APP–1058] &HNAME is not a valid rollup group in the &TNAME template

[APP–1066] Routine &ROUTINE: There is no account segment

[APP–1068] There is no rollup segment in the &SUMTEMP template

[APP–1070] Error appending file &FILENAME1 to file &FILENAME2

  Cause: Application Object Library encountered an error appending the file &FILENAME1 to the file &FILENAME2.

  Action: Check that the file names are correct and valid on your system.

  Action: Check that the file &FILENAME1 exists. Check that you have privileges to read the file in the file directory. Contact your system administrator to obtain read privileges.

  Action: Check that you have privileges to write the file &FILENAME2. If the file does not exist, check that you have privileges to create files in the file directory. Contact your system administrator to obtain create and write privileges.
[APP–1072] &APPLICATION_NAME is invalid.

  Cause:  You have entered an application name that is unknown to Application Object Library.

  Action:  Please enter a valid application name.

  Action:  Contact your system administrator to verify that the specified application name is
  installed in your system.

[APP–1080] Error copying file &FILENAME1 to file &FILENAME2

  Cause:  Application Object Library encountered an error copying the file &FILENAME1 to the file &FILENAME2.

  Action:  Check that the file names are correct and valid on your system.

  Action:  Check that the file &FILENAME1 exists.  Check that you have privileges to read the file in the file directory.  Contact your system administrator to obtain read privileges.

  Action:  Check that you have privileges to write the file &FILENAME2 if the file exists.  Check that you have privileges to create files in the file directory.  Contact your system administrator to obtain create and write privileges.

[APP–1092] You entered an incorrect number of arguments for routine &ROUTINE

  Cause:  You entered an incorrect number of arguments to the routine &ROUTINE.

  Action:  Enter the correct number of arguments for the routine.

[APP–1094] This message is already in use.  Please enter a unique name

  Cause:  Message name uniquely identifies a message.  You entered a message name that has already been used to identify another message.

  Action:  Enter a message name that is not already in use.  Message names are case insensitive so an uppercase message name is the same as a lowercase message name.

[APP–1096] Cannot find application or user information

  Cause:  The concurrent output file cannot be located because a directory path to the file cannot be created.  Information about the application that created the output file is not available.

  Action:  Please contact your system administrator.

[APP–1102] Cannot read form name &FORMNAME

  Cause:  Application Object Library cannot find your form &FORMNAME.

  Action:  Check that the file name components are correct and valid on your system.

  Action:  Check that your environment is correctly set and that Application Object Library environment variables have the correct values.  Important Application Object Library environment variables include, but are not limited to, FND_TOP, APPLFRM, and your application’s basepath.  Refer to your installation manual for a complete list.
Action: Check if your form exists.

Action: Check if you have read and execute privileges on the directory and on the form. Contact your system administrator to obtain any necessary privileges.

[APP–1112] Out of memory

Cause: &ROUTINE cannot allocate memory because system is out of memory.

Action: Contact your system administrator or support representative.

[APP–1114] You cannot delete the printer type as a printer uses it

Cause: This printer type cannot be deleted because it is used by at least one printer on your system.

Action: You must call a different printer type for the printers that use this printer type or delete those printer definitions before you can delete this printer type.

[APP–1118] This menu is used by responsibility &RESPONSIBILITY. It cannot be deleted.

[APP–1122] Cannot close communication channel

Cause: Regression Tester received an error status when attempting to close a communication channel with the program it was testing.

Action: Contact your support representative.

[APP–1126] Cannot set up communication channel

Cause: Regression Tester received an error status when attempting to establish a communication channel with the program it was testing.

Action: Contact your support representative.

[APP–1142] Cannot delete &RECORD. This record is referenced in &BLOCK.

[APP–1162] This name is already in use. Please enter a unique name

Cause: You entered a name that has already been used to identify another form or other object in your application.

Action: Either enter a new name that is not already in use or change and save the name of the existing object first and then re-enter your name.

[APP–1172] This form name is already in use. Please enter a unique name

Cause: Form name, along with application name, uniquely identifies a form. You entered a form name that has already been used to identify another form in your application.

Action: Enter a form name that is not already in use.

[APP–1206] This record already exists. You entered a duplicate value or sequence of values that must be unique for every record.
[APP–1212] Cannot find application information
   
   Cause: The application you specified is not registered.
   
   Action: Register your application using the Register Applications form.

[APP–1214] Invalid currency information type &TYPE was requested
   
   Cause: An attempt was made to get information regarding a currency that is not supported.
   
   Action: Contact your support representative.
   
   Cause: You specified an invalid type argument &TYPE when calling fdugci().
   
   Action: Use one of the supported application types defined in the Application Object Library header file fdugci.h.

[APP–1218] Error in getting the next sequence value for &SEQUENCE.

[APP–1222] Cannot find language information
   
   Cause: The language you specified is not defined.
   
   Action: Contact your support representative.

[APP–1231] No default web browser was found in your system registry. Please install a web browser and try again.

[APP–1232] Cannot create new record
   
   Cause: You are not allowed to create new rows in this zone. This may be because this is a query–only form and you need to navigate to another form to define new rows, or because you do not have the ability (privileges) to create these objects.
   
   Action: No action required. Refer to your on–line help or documentation for the purpose of this form.

[APP–1233] Your default web browser could not be started. Please make sure your browser is installed correctly and try again.

[APP–1234] Cannot delete record
   
   Cause: You are not allowed to delete rows in this zone. This may be prevented for referential integrity reasons or because the form is not based on a data table.
   
   Action: No action required. Refer to your on–line help or documentation for the purpose of this form.

[APP–1238] Cannot set value for field &FIELDNAME
   
   Cause: Application Object Library was unable to put a value in the field &FIELDNAME.
   
   Action: Review your error messages with \Help Error for more information.

[APP–1240] Cannot set a SQL*Forms global variable &GLOBAL
Cause: Application Object Library encountered an error while setting the value for a SQL*Forms global variable &GLOBAL.

Action: Contact your support representative.

[APP–1242] Cannot read value from field &FIELDNAME

Cause: The field &FIELDNAME could not be located or read.

Action: This error is normally the result of an incorrectly-entered field name string in a trigger, or a field name string that does not uniquely specify a field in your form. Correct your trigger logic to precisely specify a valid field.

[APP–1246] You have specified invalid arguments for the routine &ROUTINE

Cause: Some of the arguments to &ROUTINE were either missing or had invalid values.

Action: Correct your program or trigger so as to pass proper arguments to the routine.

[APP–1250] You have entered an incorrect number of arguments for the routine &ROUTINE

Cause: You entered an incorrect number of arguments to the routine &ROUTINE.

Action: Enter the correct arguments for &ROUTINE.

[APP–1256] Cannot run user exit in this context

Cause: The routine &ROUTINE could not run a user-exit because there is no run user-exit function in this context.

Action: This error is normally the result of setting up a flexfield with user-exit validation. This flexfield is invoked from outside SQL*Forms, and user-exits have no meaning.

[APP–1260] Valid characters are &VALID

Cause: You may enter only the specified characters in this field. You entered a character(s) not in the list.

Action: Re-enter your value using the valid characters.

[APP–1264] You cannot delete this product installation.

Cause: You cannot delete this product installation, because the product installation for application &APP in ORACLE username &USER depends on it.

Action: Change the product dependencies so that no other product installation depends on this one. Then delete this product installation.

[APP–1266] The Application &APPL for Oracle ID &USERID has already been entered as a dependency for this installation. Please enter a unique Application/Oracle ID pair.

[APP–1268] The installation of Application &APPL for Oracle ID &USERID has already been entered. To modify it, you must first enter query mode and find that record.

[APP–1270] Error generating Julian SYSDATE.
Cause: Application Object Library could not generate the current database date as a Julian value.

[APP–1272] This language ID already exists in the database. Please choose another ID.

[APP–1274] Invalid application ID or language ID.

Cause: Your application_ID (&APPID) and/or your language_ID (&LANGID) is invalid.

[APP–1316] An invalid menu ID was found when building this menu. Please check that all entries for this menu and all its submenus are valid menu or form names.

[APP–1324] Please enter menus that do not call your menu

Cause: You attempted to make a menu a sub-menu of itself. This loop may be indirect via several layers of sub-menus.

Action: Change your menu definition so as not to call earlier menus.

[APP–1330] Application Object Library was unable to build the menu for this responsibility in the current language. Please check that the menu named for this responsibility is valid, and that all entries for this menu and all its sub-menus are valid menu or function names in the current language.

[APP–1343] This currency does not use a decimal. Please enter a whole number.

[APP–1345] List of Values is not available for this field while in Enter-Query mode.

[APP–1346] Ensure database password for this ORACLE username matches new password

Cause: You have registered a new password for this ORACLE username with Application Object Library. You must ensure that the actual database password matches this value. Until the registered password and the database password are identical you cannot use the ORACLE ID through Oracle Financials and you cannot register any ORACLE ID. If you are changing the password of an APPS schema in Application Object Library release 10.7 or later, you must also change the password of the APPLSYS account and all other APPS schema accounts to match.

Action: Ensure you change the password in the database if you have not already done so. Connect to the ORACLE username to which you wish to change the password then issue the following SQL statement to change your password. SQL: GRANT CONNECT TO [ORACLE username] IDENTIFIED BY [Password];

[APP–1350] Message file already open

Cause: &APPLICATION attempted to reopen an already open message file while using the routine msgopn().

Action: No action required.

[APP–1352] Program &OUTCOME

Cause: The program completed execution – in particular it &OUTCOME.

Action: If the program completed normally, no action is required.
Action: If the program completed with a status code indicating failure, consult your installation
guide for the meaning of that status code.

Action: If the program was terminated by a signal, consult your installation guide and
operating system manuals for the meaning of that signal. It could represent an internal error or a
termination request from another process.

[APP–1356] Your new password must be different from your old password

Cause: You entered your old password as your new password. Security requires that you enter
a new password that is different from your old password.

Action: Enter a new password that is different from your old password.

[APP–1360] Driver is currently in use

Cause: A printer type currently uses this driver. You may not delete the driver until it is no
longer in use.

Action: Change the definition of the printer type using this driver.

[APP–1362] You have entered a duplicate printer driver name for the platform entered.

Cause: A printer driver by the same name is already assigned to this platform.

Action: Please enter a unique printer driver name/platform combination.

[APP–1364] You have entered a duplicate style name for the printer type selected.

Cause: A printer style by the same name is already assigned to this printer type.

Action: Please enter a unique style name.

[APP–1366] You have entered invalid dimensions for this printer style

Cause: The dimensions &WIDTH and &LENGTH exceed the boundaries defined by the
maximum and minimum length and width of a concurrent program to which this style is defined

[APP–1372] Please register system printer &PRINTER with Application Object Library

Cause: You have a printer specified in your profile option that is not registered with
Application Object Library (if profile option is not set, the value defaults from the environment
variable PRINTER, which may not correspond to an registered printer).

Action: Register the printer with Application Object Library.

[APP–1374] In order to see profile values, it is necessary to first indicate which profile values you
want to see by checking at least one of the following check boxes: Site, Application, Responsibility,
or User.

[APP–1378] Cannot set value for profile option &OPTION

Cause: User Profiles was unable to set the value for profile option &OPTION.

Action: Check that you are accessing the correct profile option name.
Action: If the profile option &OPTION is defined in the database, you can query the profile option from the "Define User Profile Option" form. Check that the "Allow Write" flag for the profile option is set to "Yes".

Action: If the profile option &OPTION is not defined in the database, then it is created from a subroutine. Check that the subroutine that creates the profile option &OPTION allows its value to be changed by passing the "ENABLE_WRITE" flag.

[APP–1388] Cannot read value for profile option &OPTION in routine &ROUTINE.

Cause: You attempted to read a profile option that either does not exist or was set to be not readable.

Action: Check that you are accessing the correct profile option name.

Action: If the profile option &OPTION is defined in the database, you can query the profile option from the "Define User Profile Option" form. Check that the "Allow Read" flag for the profile option is set to "Yes".

Action: If the profile option &OPTION is defined in the database, check that the profile option has a default value set at the site level. A profile option that is not set at any level does not exist during your session.

Action: If the profile option &OPTION is not defined in the database, then it is created by a subroutine. Check that the subroutine that creates the profile option &OPTION allows its value to be read by passing the "ENABLE_READ" flag.

Action: If the profile option &OPTION is created by a subroutine, check that the subroutine has already been called.

[APP–1404] An invalid style, &STYLE, is specified

Cause: AOL cannot find a record for the print style &STYLE

Action: Check that the print style &STYLE is a valid style and that a record exists in FND_PRINTER_STYLES

[APP–1406] Cannot find a printer driver for printer type &TYPE and print style &STYLE

Cause: A printer driver for printer type &TYPE and print style &STYLE does not exist

Action: Check that print style &STYLE is supported on printer type &TYPE and a record exists in FND_PRINTER_INFORMATION

[APP–1408] Print style &STYLE is invalid for the given dimension and/or printer

Cause: The print style &STYLE is invalid for the given dimension minimum width: &MINWIDTH maximum width: &MAXWIDTH minimum length: &MINLENGTH maximum length: &MAXLENGTH or

Cause: The print style &STYLE is not supported for printer &PRINTER or

Cause: The print style &STYLE is invalid for the given dimension and not supported for the printer
[APP–1410] Cannot find a valid print style for the given dimensions and printer

    Cause: Cannot find a valid print style for the given dimension minimum width: &MINWIDTH
    maximum width: &MAXWIDTH minimum length: &MINLENGTH maximum length: &MAXLENGTH or
    Cause: Cannot find a valid print style with the given dimension for printer &PRINTER

[APP–1412] An error occurred in getting printer driver information from the database for printer type &TYPE and print style &STYLE

[APP–1414] An error occurred in getting print style information from the database for &STYLE

[APP–1416] An error occurred in getting printer type information from the database for printer &PRINTER

[APP–1418] An error occurred while AOL tried to spawn the print process

[APP–1420] You have specified invalid arguments for the routine &ROUTINE

    Cause: You entered an incorrect number of arguments to the routine &ROUTINE, or the arguments you entered are not the type expected.

    Action: Enter the correct arguments for &ROUTINE as follows.

[APP–1426] QuickPick definition contains invalid or unspecified key column.

    Cause: QuickPick could not find a match for the key column specified.

    Cause: QuickPick was not supplied a key column to match against.

    Action: Correct the QuickPick definition to contain a valid key column and regenerate the form.

[APP–1428] QuickPick cannot initialize window

    Cause: &ROUTINE encountered an error initializing your QuickPick window.

    Action: Check that you have entered valid parameters for the window size.

[APP–1430] Cannot get selected Responsibility values

    Cause: The Application Object Library security system did not receive the responsibility you selected from QuickPick.

    Action: Contact your support representative.

[APP–1432] QuickPick cannot return your selected value

    Cause: &ROUTINE encountered an error returning your QuickPick choice to a field.

    Action: Check that your QuickPick definition specifies a destination field for every selected column.

    Action: Check that your QuickPick definition specifies fields that exist and are writeable.
[APP–1434] &ROUTINE cannot find FROM clause in QuickCode statement

  Cause:  &ROUTINE encountered an error parsing your SQL statement. FROM clause is missing.

  Action:  Check that you have entered your QuickCode definition correctly. Check that your SQL statement works in SQL*Plus.

[APP–1436] List of Values cannot find any values for you to choose

  Cause:  The List of Values execution failed to find any values.

  Cause:  The SQL statement specified to fdlfch() failed to return any values.

  Action:  Check the message stack for any SQL statement failure messages. Check to make sure your SQL statement works in SQL*Plus.

[APP–1438] List of Values has no SQL statement

  Cause:  The List of Values definition contains no SQL= clause, and does not reference a named SQL object (via SQLNAME=).

  Action:  Correct the List of Values definition and regenerate your form.

[APP–1440] QuickPick definition must have visible column.

  Cause:  You have specified a QuickPick definition which contains no visible columns.

  Action:  Correct the QuickPick and ensure that at least one selected column appears in the COLUMN= portion of the DEFINE_LISTVAL statement.

[APP–1442] QuickPick cannot open QuickPick window

  Cause:  QuickPick routine &ROUTINE encountered an error opening your QuickPick window.

  Action:  Contact your support representative.

[APP–1444] Please enter display column names only for selected columns

  Cause:  You entered a display column name that does not correspond to any selected columns. &ROUTINE received a return code of failure.

  Action:  Enter a display column name that corresponds to a selected column. Enter the column alias if you have aliased the selected column.

[APP–1446] Opening this window may exceed available system resources. We recommend closing other windows or applications before opening this window.

[APP–1466] Cannot open file &FILENAME for regression test log file

  Cause:  The concurrent manager failed to open the regression test log file &FILENAME.

  Action:  Verify that the file directory has correct write file privileges.
[APP–1470] Changed lines found between reference and test file:

[APP–1472] Differences were detected between the control and test output files. See the error report in &ERRFILE file for details.

[APP–1474] No differences found between control and test output files.

[APP–1476] Deleted lines in reference file not in test file:

[APP–1478] A fatal error was encountered in processing. Execution has been aborted.

[APP–1480] Comparison completed. &ERRCOUNT difference(s) found.

[APP–1482] Comparison of test and reference output files:

[APP–1484] Inserted lines in test file not in reference file:

[APP–1486] Maximum DIFFERENCES count has been exceeded. Comparison is being aborted.

[APP–1488] Maximum FAILURES count has been exceeded. Execution is being aborted.

[APP–1490] File &FILE could not be found.

[APP–1491] A change of ‘&OLDTEXT’ to ‘&NEWTEXT’ occurs &COUNT times between reference and test file.

[APP–1492] Incorrect arguments to FNDRTR45. Usage: FNDRTR45 applsys/pwd 0 Y &lt;appl_short_name&gt; [&lt;subdir&gt;]/&lt;testname&gt; {GEN||RUN|COMP|RCOMP|COPY}

[APP–1496] Cannot access application ORACLE password

  Cause: Application Object Library was unable access your ORACLE password.

  Action: Contact your support representative.

[APP–1498] This data group is assigned to a responsibility

  Cause: You cannot delete a data group which is assigned to a responsibility.

  Action: Change the data group for all responsibilities which reference this data group before deleting it.

[APP–1500] This application in this data group is assigned to a responsibility

  Cause: You cannot delete an application from a data group which is assigned to a responsibility.

  Action: Change the application or data group for all responsibilities which reference this application in this data group before deleting it.

[APP–1502] Cannot encrypt application ORACLE password

  Cause: Application Object Library was unable encrypt your ORACLE password.
Action: Contact your support representative.

[APP–1504] This application has already been assigned to this data group

Cause: You chose an application which has already been assigned to this data group. An application is unique within a data group, so you can only assign each application once.

Action: Choose an application which has not already been assigned to this data group or erase your changes.

[APP–1506] This responsibility name is already in use. Enter a unique name

Cause: Responsibility name, along with application name, uniquely identifies a responsibility. You entered a responsibility name that is already being used to identify a responsibility in this application.

Action: Enter a responsibility name that is not in use in this application.

[APP–1508] Failed to connect

Cause: Application Object Library was unable to connect to the ORACLE database.

Action: Check for ORACLE errors to find out why the connect failed.

Action: Check that you entered the correct username and password by using SQL*Plus and entering the same username and password.

[APP–1518] Cannot access application system password

Cause: Application Object Library was unable to access the application system password.

Action: Contact your support representative.

[APP–1524] You cannot delete ORACLE IDs used in installation

Cause: You attempted to delete an ORACLE ID used in installation. You cannot delete the ORACLE ID.

[APP–1528] Cannot reconnect to gateway

Cause: Application Object Library is unable to reconnect to your gateway ORACLE account after you unsuccessfully attempted to sign–on.

Action: Check that your gateway environment variable is set correctly.

[APP–1530] Monitor cannot find the user name for an active user

Cause: Application Object Library found no rows while selecting the name of a user to monitor. This means that there is a referential integrity problem in your database.

Action: Contact your system administrator.
[APP–1540] Unsuccessful logins since your last session: &NUMBER

  Cause: Someone has attempted to log in to Oracle Applications using your username &NUMBER times.

  Action: If you suspect that someone without authorization is trying to log in as you by guessing your password, contact your system administrator for assistance. Change your password immediately.

[APP–1544] ORACLE ID is currently in use

  Cause: A concurrent manager currently uses this ORACLE ID. You cannot delete the ORACLE ID until it is no longer in use.

  Action: Reassign concurrent managers that currently use this ORACLE ID to use a different ORACLE ID.

[APP–1546] ORACLE ID is currently in use

  Cause: A data group currently uses this ORACLE ID. You cannot delete the ORACLE ID until it is no longer in use.

  Action: Reassign data groups that currently use this ORACLE ID to use a different ORACLE ID.

[APP–1550] ORACLE ID is currently in use

  Cause: A sequence currently uses this ORACLE ID. You cannot delete the ORACLE ID until it is no longer in use.

  Action: Reassign sequences that currently use this ORACLE ID to use a different ORACLE ID.

[APP–1554] Number to CACHE must be less than one cycle

[APP–1560] The Increment By value cannot be zero.

  Cause: The Increment By value cannot be zero.

  Action: Set the Increment By field to a positive value if you want the sequence to increase. Set the Increment By field to a negative value if you want the sequence to decrease.

[APP–1562] Application Object Library cannot get information from table &TABLENAME

  Cause: Application Object Library encountered an error selecting information from the table &TABLENAME.

  Action: Check that your ORACLE user has select privileges on the table.

  Action: Check that the table has been defined correctly.

[APP–1564] ORACLE error &ERRNO in &ROUTINE

  Cause: &ROUTINE failed due to &REASON. The SQL statement being executed at the time of the error was: &SQLSTMT and was executed from the file &ERRFILE.
[APP–1566] SQL statement contains an invalid field reference

  Cause:  A field referenced in the SQL statement does not exist, or it is not in the form :BLOCK.FIELD.

  Action:  Check all fields referenced in the SQL statement.

[APP–1568] Cannot delete row from &TABLE

  Cause:  Application Object Library was unable to delete a row from the &TABLE table.

  Action:  Check that the table exists and that your ORACLE user has the correct privileges on the table.

[APP–1570] Cannot insert row into &TABLE

  Cause:  Application Object Library was unable to insert a row into the &TABLE table.

  Action:  Check that the table exists and that your ORACLE user has the correct privileges on the table.

[APP–1572] Invalid foreign key data was found for this record. Value &VALUE for column &COLUMN does not exist in table &TABLE.

[APP–1574] Report set terminated due to failure of report: &PROGRAM

  Cause:  You defined this report set to abort if any of the reports in the report set end in error.

[APP–1576] Standard Report Submission cannot find arguments for &NUMBER reports

  Cause:  The arguments for &NUMBER reports in this report set are missing and thus these reports cannot be run.

  Action:  Resubmit the report set.

[APP–1578] You cannot delete a group that is assigned to a responsibility

  Cause:  You cannot delete this report security group because it is assigned to a responsibility.

  Action:  Remove this group from all responsibilities before you delete it.

[APP–1580] You cannot delete a set that is included in a report security group

  Cause:  You cannot delete this set because it is included in a report security group.

  Action:  Remove this set from all report security groups before you delete it.

  Action:  Disable the set by setting the end date rather than deleting it.  This will prevent the set from being submitted.

[APP–1586] This group code is already in use.  Please enter a unique code

  Cause:  Report group code, along with application name, uniquely identifies a report group. You entered a report group code that has already been used to identify another report group in this application.
Action: Enter a report group code that is not already in use for this application.

[APP–1588] Please enter a unique application, set or program

Cause: An application, set or program may only be included in a report security group once. This application, set or program is already in this report security group.

Action: Enter an application, set or program which is not already in this report security group.

[APP–1590] This group name is already in use. Please enter a unique name

Cause: Report security group name, along with application name, uniquely identifies a report security group. You entered a report security group name that has already been used to identify another report security group in this application.

Action: Enter a report security group name that is not already in use for this application.

[APP–1592] This sequence number is already in use. Enter a unique number

Cause: Sequence number is unique within a report set. You entered a sequence number that has already been used in this report set.

Action: Enter a sequence number that has not already been used in this report set.

[APP–1594] This request set name is already in use within this application. Please enter a name unique within the specified application.

[APP–1600] You have specified invalid arguments for the program &PROGRAM_NAME

Cause: You entered an incorrect number of arguments to the concurrent program &PROGRAM_NAME, or the arguments you entered are not the type expected.

Action: Enter the correct arguments for &PROGRAM_NAME as follows. Syntax: &PROGRAM_NAME &lt;ORACLE ID&gt; &lt;Request ID&gt; &lt;OS Flag&gt; &lt;Set Application ID&gt; &lt;Set ID&gt; &lt;Sequence&gt;

[APP–1602] Delete incompatible programs before changing Incompatibilities Allowed

Cause: You changed Incompatibilities Allowed to 'No', but incompatible programs have already been defined for the concurrent program associated with this report set.

Action: Delete all incompatible programs defined for the concurrent program associated with this report set before changing Incompatibilities Allowed to 'No'.

[APP–1604] Cannot find the segment for your report parameter

Cause: Flexfields cannot find the segment &SEGNAME for your report parameter in its internal data structures.

Action: Contact your support representative.

[APP–1606] You must specify the printer before running a report.

Cause: There is no printer specified for this report/program
Action: Navigate to the Print Options zone and specify a printer. You may also specify the printer in the program definition and/or as a profile option.

[APP–1608] Default values specific to report sets (Report Set level defaults) should not contain :$FLEX$, :$PROFILES$, or :PARAMETER "bind" references. Request set–level default values with bind references are supported in report sets only when the parameter record is not modified from its program–level definition. To proceed, either remove the bind reference from the default value, or clear this record.

[APP–1610] Please enter a report group code that does not contain a space

Cause: You entered a report group code containing one or more spaces.

Action: Enter a report group code that does not contain any spaces.

[APP–1612] Cannot process report # &SEQUENCE

Cause: Standard Report Submission has encountered an error processing report # &SEQUENCE. &PROGRAM has not completed yet.

Action: Contact your support representative.

[APP–1616] You cannot enter more than &NUMBER arguments

Cause: You exceeded the maximum number of arguments allowed for a program.

Action: Erase arguments so that you have no more than &NUMBER arguments defined for this program.

[APP–1618] Column &COLUMN not found

Cause: The column &COLUMN could not be found.

Action: Check your report to make sure this column exists. Contact your support representative.

[APP–1622] Token &TOKEN1 and value &VALUE1 is incompatible with token &TOKEN2 and &VALUE2

Cause: The value &VALUE1 for token &TOKEN1 is inconsistent with value &VALUE2 for token &TOKEN2.

Action: Contact your support representative. Additional information for support representative: Check the combination for the two token values is correct. See API document for more information.

[APP–1624] The token value &VALUE for token &TOKEN is inconsistent in the user exit: &USER_EXIT

Cause: The specified value &VALUE for the token &TOKEN is either invalid or inconsistent with the other tokens specified in the &USER_EXIT user exit.

Action: Contact your support representative. Additional information for support representative: Check that the token values are correctly specified.
[APP–1626] Token &TOKEN is too long. Maximum length allowed is &LENGTH

    Cause: The length of the token &TOKEN is too long. The maximum length allowed is &LENGTH.

    Action: Check that the token &TOKEN is limited to length &LENGTH.

[APP–1628] Cannot close file &FILENAME

    Cause: Application Object Library encountered an error writing to the end of the file &FILENAME and closing the file.

    Action: Check that you have sufficient disk space on your system. Remove unnecessary files to free disk space. Contact your system administrator to obtain more disk space.

[APP–1630] Cannot open file &FILENAME for &MODE

    Cause: &ROUTINE encountered an error when attempting to open file &FILENAME for &MODE.

    Action: Verify that the filename is correct and that the environment variables controlling that filename are correct.

    Action: If the file is opened in read mode, check that the file exists. Check that you have privileges to read the file in the file directory. Contact your system administrator to obtain read privileges.

    Action: If the file is opened in write or append mode, check that you have privileges to create and write files in the file directory. Contact your system administrator to obtain create and write privileges.

[APP–1632] Cannot open file &FILENAME for reading

    Cause: [Routine] encountered an error when attempting to open file &FILENAME for reading.

    Action: Verify that the filename is correct, the environment variables controlling that filename are correct, and the file exists.

    Action: Verify that protections on that file permit reading by this program.

[APP–1634] The log file &FILENAME does not exist or this program is restricted from reading it. If the concurrent request has completed then please contact your system administrator.

[APP–1636] No report available for this concurrent process

    Cause: There is no report available for this concurrent process. The report file &FILENAME either does not exist or this program is restricted from reading it. In some cases, a concurrent program may not be intended to produce a report file, and it may generate only a log file.

    Action: Verify that the concurrent request has completed.

    Action: Check the log file for this request. Verify that this request is intended to produce a report file.
Action: Verify that protections on the file permit reading by this program.

Action: Ask your system administrator if the file has been deleted.

Action: Verify that the filename is correct by checking the APPLOUT and application (app_TOP) environment variables for both the user and the Concurrent Manager.

Action: Check the log file for the concurrent manager that attempted to process this request.

Action: Check the log file for the internal concurrent manager.

[APP–1644] System error: &MESSAGE

Cause: Application Object Library encountered a system error: &MESSAGE.

Action: Take appropriate action for your operating system, or contact your system administrator.

[APP–1646] Application Object Library has detected an internal error.

Cause: An argument representing an invalid address was passed to Application Object Library routine [Routine].

Action: Contact your support representative.

[APP–1648] Invalid arguments to routine &ROUTINE

Cause: Invalid arguments were passed to routine &ROUTINE.

Action: Ensure the arguments are correct.

[APP–1654] Out of memory in routine &ROUTINE

Cause: &ROUTINE cannot allocate memory because system is out of memory.

Action: Contact your system administrator or support representative.

[APP–1660] Application Object Library cannot set environment variable &LOGICAL

Cause: The system is out of memory or a system error occurred.

Action: Contact your system administrator to check for available system memory.

[APP–1662] Cannot get the value of environment variable &LOGICAL

Cause: The named environment variable is undefined or the system is out of memory.

Action: Verify that the &LOGICAL variable is defined in your environment.

Action: Contact your system administrator to check for available system memory.

[APP–1680] Cannot find file &FILENAME

Cause: The specified system file could not be located or opened.

Action: Ask your system administrator to verify that the system file exists, and to check the directory and file protections to be sure you have access to it.
[APP–1682] Cannot create canvas

Cause: The specified text display canvas could not be created. Canvas creation failures can occur for many reasons, such as memory allocation failures, window system failures, etc.

Action: Consult the message listing to determine the cause of the failure. If necessary, contact your support representative.

[APP–1696] This territory cannot be deleted because it is being referenced by the a Currency code. Use the Currencies form to remove the reference and then try deleting.

[APP–1700] This sequence is used on an active assignment.

Cause: You are trying to deactivate a sequence that is used on an active assignment record.

Action: Deactivate the assignment record in the Assign Sequences screen first or leave the end date null.

[APP–1702] An assignment does not exist for these parameters and one is mandatory.

Cause: The profile option Sequential Numbering is defined to have sequential numbering always used. The current set of parameters does not have a sequence assigned.

Action: Go to the Assign Sequences screen and assign a sequence to the current set of parameters.

[APP–1706] Error updating &COLUMN in &TABLE.

[APP–1710] The date range overlaps with other assignments for this flexfield.

Cause: There can only be one active assignment record for a given date. You have attempted to enter dates that overlap with and existing assignment record for this Document Flexfield.

Action: Query up the existing assignments for this Document Flexfield and review their dates. Then enter this new record so the date ranges do not overlap.

[APP–1714] You have entered a duplicate code for this Application.

Cause: This code is a duplicate for this application.

Action: Please update the code. Category Code must be unique within an Application.

[APP–1716] This sequence number is already in use. Enter a unique number.

Cause: Sequence number is unique within a sequence. You entered a sequence number that has already been used for this sequence.

Action: Enter a sequence number that has not already been used for this sequence.

[APP–1718] The assigned sequence, &SEQUENCE is disabled.

Cause: The sequence assigned to this document flexfield has been disabled.

Action: Go to the Assign Sequences screen and disable the current assignment and enter a new one using an active sequence.
You cannot insert this sequence record because there are no accesses defined for it. Navigate to the Access block, and enter one or more accesses. Then try to commit.

No accesses have been defined for this sequence.

Cause: This sequence does not have any access records defined. Without access records this sequence can never be used.

Action: Go to the Access zone of the Define Document Sequences form and enter an Oracle user name for this sequence.

An assignment does not exist for these parameters.

Cause: An attempt was made to find a sequence for this document flexfield. The profile option says Sequential Numbering is only partially used.

Action: None is necessary unless you expected this document flexfield to have a sequence defined.

This Category cannot be deleted. It is already used on an Assignment.

Cause: This category code has already used in a sequence Assignment. It may not be deleted.

Action: You can update the name and description, or you can enter a new record with a different code.

No rows to process.

A synonym does not exist for the sequence &SEQUENCE.

Cause: The sequence exists in the database, however a synonym within the current Oracle id does not exist.

Action: Go to the Define Sequences screen and make an update. This will cause a concurrent program to be submitted that will create the missing synonym.

The sequence &SEQUENCE is type Manual. You must enter a value.

An assignment with a null end date already exists.

Cause: An assignment record for this document flexfield already exists with a null end date. Since a given document flexfield can only have one active assignment record for a given date, only one assignment record for the flexfield can have a null end date.

Action: Either enter an end date or query the existing assignment record and enter an end date for the existing record.

This sequence is already associated with a different table.

Cause: A give sequence can only be assigned to documents that are all stored in the same table. As such a sequence is associated with a transaction table. You attempted to assign this sequence to a document that is stored in a different table from the other documents this sequence is assigned to.

Action: Choose a different sequence.
[APP–1744] Please register the unique identifier &TABLE with Application Object Library

Cause: The unique identifier &TABLE has not been registered with Application Object Library. Application Object Library cannot generate a unique number.

Action: Register the unique identifier with Application Object Library.

[APP–1746] Usage is : FNDCPPUR &lt;Username/Password&gt; 0 Y [[keyword=]value ... ]
Valid keywords: ENTITY – Type of records to purge : REQUEST, MANAGER, ALL MODE – Purge records based on : AGE, COUNT MODE VALUE – Age of records to be purged ( in number of days ) OR Number of records to retain The following are optional keywords: ORACLEUSER – Oracle username USERNAME – Financials user name RESPAPPL – Responsibility Application short name RESPNAME – Responsibility name PROGRAMAPPL – Program Application short name PROGRAMNAME – Program name MANAGERAPPL – Manager Application short name MANAGERNAME – Manager name Optional keywords and values can be used to purge records that belong to a given responsibility, program, oracle account, requestor OR run by a given manager.
Usage is Purge request | manager age= count = ...

[APP–1750] &ROUTINE cannot redirect standard input

Cause: &ROUTINE encountered an error redirecting standard input for a child process.

Action: If standard input is redirected to a file, check that the file name is correct and valid on your system. Check that the file exists. Check that you have privileges to read the file in the file directory. Contact your system administrator to obtain read privileges.

Action: If standard input is redirected to a communication channel or a character string, check that your system has enough resources to open a communication channel. Contact your system administrator to obtain more resources.

Action: Exit Application Object Library and try again immediately, or later when your system is not as busy. You may have reached a process limit for open channels and files.

[APP–1752] &ROUTINE cannot redirect standard output

Cause: &ROUTINE encountered an error redirecting standard output for a child process.

Action: If standard output is redirected to a file, check that the file name is correct and valid on your system. Check that you have privileges to create and write the file in the file directory. Contact your system administrator to obtain create and write privileges.

Action: If standard output is redirected to a communication channel or a character string, check that your system has enough resources to open a communication channel. Contact your system administrator to obtain more resources. Exit Application Object Library and try again immediately, or later when your system is not as busy. You may have reached a process limit for open channels and files.

[APP–1754] Cannot close standard input

Cause: Application Object Library has encountered system error &ERRNUM while closing standard input.

Action: Consult your operating system error manual. Take appropriate action for that error number, or contact your system administrator.
[APP–1756] &ROUTINE cannot close file handle

    Cause: Application Object Library routine &ROUTINE has encountered a system error while closing a duplicated file handle.

    Action: Consult your operating system error manual. Take appropriate action for that error, or contact your system administrator.

[APP–1758] System error closing pipe communications

    Cause: &ROUTINE encountered a system error attempting to close one end of a communications channel pipe.

    Action: Take appropriate action for your operating system, or contact your system administrator.

[APP–1760] System error &ERRNUM closing pipe &HANDLE

    Cause: &ROUTINE encountered system error &ERRNUM attempting to close one end of a communications channel pipe – descriptor &HANDLE.

    Action: Take appropriate action for your operating system, or contact your system administrator.

[APP–1762] &ROUTINE cannot create a new process

    Cause: &ROUTINE encountered an error creating a new process. [Reason].

    Action: Check that your system had enough resources to start a new process. Contact your system administrator to obtain more resources.

    Action: Try again immediately, or later when your system is not as busy.

[APP–1764] &ROUTINE cannot create pipe

    Cause: &ROUTINE encountered a system error creating a pipe for inter–process communications.

    Action: Verify that your process has enough resources, including memory and file handles, or contact your system administrator.

[APP–1766] &ROUTINE cannot duplicate file handle

    Cause: &ROUTINE encountered system error &ERRNUM duplicating a file handle.

    Action: Take appropriate action for your operating system, or contact your system administrator.

[APP–1768] &ROUTINE cannot access environment

    Cause: &ROUTINE encountered system error attempting to access the process’s environment and arguments via DosGetEnv.

    Action: Contact your system administrator.
[APP–1770] Child process &CHILDDID &ACTION

Cause:  A child process stopped or completed execution – in particular it &ACTION.

Action:  If the program completed normally, no action is required.

Action:  If the program completed with a status code indicating failure, consult your installation guide for the meaning of that status code.

Action:  If the program was terminated by a signal, consult your installation guide and operating system manuals for the meaning of that signal. It could represent an internal error or a termination request from another process.

Action:  If the program was stopped by a signal, consult your installation guide and operating system manuals for the procedure to restart that program.

Cause:  &ROUTINE was asked to describe an event of unknown class &EVENTCLASS.

Action:  Contact your support representative.

[APP–1774] Failure handling an event of class &EVENTCLASS; &OUTCOME

Cause:  Application Object Library routine fdewev() received an event of class &EVENTCLASS that it failed to handle. &OUTCOME.

Action:  Contact your support representative.

[APP–1778] &ROUTINE cannot redirect standard input to a character string

Cause:  usdsln() cannot set the value of logical name SYSSINPUT to redirect standard input. &ROUTINE received a return code of failure.

Action:  Contact your system administrator.

[APP–1780] You requested invalid file type when calling routine &ROUTINE

Cause:  You did not request a concurrent program file type of either AFWRT_LOG or AFWRT_OUT.

Action:  Ensure your concurrent program requests a file type of either AFWRT_LOG or AFWRT_OUT when calling routine &ROUTINE.

Action:  Check for any database error message using \Help Error (Database).

[APP–1782] Invalid process ID &PID passed to routine &ROUTINE

Cause:  &ROUTINE was passed &PID as an process id argument, but that argument is invalid for your system.

Action:  Contact your support representative.

[APP–1784] Cannot get process ID
Cause: Application Object Library encountered a system error getting process ID.

Action: Contact your system administrator.

[APP–1786] System error &ERRNUM occurred opening a file for standard input

Cause: usdspn received system error &ERRNUM while opening a file for standard input.

Action: Check that environment variables are set correctly. Check that the file exists. Check that you have privileges to read the file in the file directory. Contact your system administrator to obtain read privileges.

[APP–1788] System error &ERRNUM opening log file &FNAME

Cause: Application Object Library received system error &ERRNUM while opening log file &FNAME for writing.

Action: Consult your operating system error manual. Take appropriate action for that error, or contact your system administrator.

Action: Check that the file name is correct and valid on your system. Check that relevant environment variables are set correctly.

Action: Check that you have privileges to create and write files in the log directory and on that logfile. Contact your system administrator to obtain create and write privileges.

[APP–1792] &ROUTINE cannot write to pipe

Cause: &ROUTINE attempted to write data to another process using a pipe, but an error occurred during the write.

Action: Check the other process for abrupt termination. Check that you have sufficient resources for this operation.

[APP–1794] Program exited with status &STATUS

Cause: The program terminated, returning status code &STATUS.

Action: Check your installation manual for the meaning of this code on this operating system.

[APP–1796] Program killed by outside signal

Cause: Another process terminated this process by sending a signal.

Action: Run the program again, if desired.

[APP–1798] Program terminated by hard error

Cause: The program received a hard error from the operating system and was forced to terminate.

Action: Check the logfile for the program. Try running it by hand if the problem recurs.

[APP–1800] Program terminated by trap
Cause: The program received a trap from the operating system and was forced to terminate.

Action: Check the logfile for the program. Try running it by hand if the problem recurs.

[APP–1804] &ROUTINE cannot reset standard output or standard error

Cause: &ROUTINE attempted to reset standard output and standard error to normal by deleting the logical names SYS$OUTPUT and SYS$ERROR, but received a system error doing so.

Action: Contact your system administrator.

[APP–1806] The program received a signal while waiting for events

Cause: A signal was received while the program was waiting for events. This signal could either represent an internal trap or an external signal.

Action: Check the program for parallel (asynchronous) logic. Check that such logic is not causing a trap signal.

[APP–1808] Invalid arguments passed to usdsop()

Cause: The Application Object Library routine usdsop() was called with a null pointer rather than program arguments.

Action: Ensure that the program enters the correct arguments for the child process.

[APP–1810] The routine spiini failed in routine &ROUTINE

Cause: The operating system dependent routine spiini failed when called by the routine &ROUTINE.

Action: Review your error messages with \ Help Error for more information.

[APP–1814] Unknown USD signal: &SIGNUM

Cause: Application Object Library routine usdiop() was called to terminate a process, but the second argument (ussig) was not a valid usdsig signal.

Action: Contact your support representative.

[APP–1816] Routine afuepp cannot free tokens

Cause: Routine afuepp encountered an error freeing a token structure.

Action: Contact your support representative.

[APP–1818] Routine afuepp subroutine failed

Cause: Routine afuepp encountered an error running a concurrent subroutine.

Action: Contact your support representative. Be sure to note the name of the subroutine that failed, if displayed.

[APP–1820] Routine afuepp tokenizer failed
Cause: Routine afuepp encountered an error creating a token structure for a concurrent subroutine.

Action: Contact your support representative.

[APP–1824] Your buffer allocation size must be 1

[APP–1832] Please enter a valid SQL statement

Cause: The SQL statement had unbalanced quote marks.

Action: Contact your support representative.

[APP–1834] Please enter a table name for your unique identifier

Cause: A NULL table name was specified for a unique identifier request to fduuid.

Action: Contact your support representative.

[APP–1836] You have requested a buffer size that exceeded the maximum limit

[APP–1842] Cannot get value for field

Cause: Application Object Library cannot get the value for a form field.

Action: Check that the field exists and is uniquely specified (often the same field name is used in multiple blocks in a form).

[APP–1844] Incorrect password. Diagnostics not enabled

Cause: You entered an incorrect password. The diagnostics system cannot be activated until a correct password is entered.

Action: Please enter the correct password. Contact your system administrator if you do not know the correct password.

[APP–1854] The view name &VIEW_NAME is already in use.

[APP–1860] An error has occurred in workflow processing: &ERROR_MESSAGE The stack trace of the error is: &ERROR_STACK

[APP–1872] &FORMAT is not a valid date format for FND SYSDATE.

Cause: A trigger specified an unrecognized format for FND SYSDATE.

Action: Correct the trigger code and regenerate the form.

[APP–1874] Please link in &OWNER program library

Cause: A user–exit was requested from a product library that is not included in this version of Application Object Library.

Action: Contact your system administrator to verify that the specified product library is included with Application Object Library. If necessary, contact your support representative for that product to request its inclusion in Application Object Library.
[APP–1882] Unable to put date into field &FIELDNAME

Cause: You encountered an error when trying to write a value into the field &FIELDNAME.

Action: Ensure that the field exists and is writeable.

[APP–1896] Program error: The "context" argument passed to FND_CLIENT_INFO.&ROUTINE is too long. The "context" that caused this error was "&BAD_ARG". Please inform your support representative that: Your current ORG_ID (or similar system-generated ID) is too long.

[APP–1900] Attempt to process folder failed with error: &ERROR_MESSAGE

[APP–3000] Please enter bill-to address; otherwise clear Bill To Customer

[APP–3002] Component is not valid for the current product. Please enter another

[APP–3004] You cannot create new rows in this zone

[APP–3006] You cannot delete rows in this zone

[APP–3008] Please enter the name of the zone you want to see

[APP–3010] This value already exists. Please enter a different, unique value

[APP–3012] Please enter an end date that equals or follows the start date

[APP–3014] This function does not have any effect in this zone

[APP–3016] Enter a number greater than zero

[APP–3018] Please enter install address; otherwise clear Installed At Customer

[APP–3020] Invalid Order Type: &ORDER_TYPE

[APP–3022] Invalid Unit Of Measure Code: &UOM_CODE

[APP–3024] Please mark "x" or "X" to select the current row

[APP–3026] This zone contains only one record

[APP–3028] Enter a number greater than or equal to zero

[APP–3030] You cannot query in this zone

[APP–3032] Please requery next zone first

[APP–3034] Please enter a value for this field

[APP–3036] Please save your pending changes before proceeding

[APP–3038] Please enter ship-to address; otherwise clear Ship To Customer

[APP–3040] Enter a date that equals or follows the current date

[APP–3042] Please enter the value in the format HOURS:MINUTES
You cannot update the value in this field

Enter a high value that is greater than or equal to the low value

Please enter a value between &LOW and &HIGH

You cannot change this value to a non-set value because it has values assigned to it

Please use flex to update values. Press FIND Key for Flex.

Error encountered while calculating credit

CP is cancelled so you cannot change its most recent status

CP’s most recent status is No so you cannot cancel it

CP is cancelled so you cannot change its status

You cannot change the CP’s current status to a different status

You cannot copy a CP that was created from order entry information

You cannot copy a revision that was created from order entry information

The end date of the CP has been cleared since you changed the status

CP is not cancelled or terminated so you must clear end date

Customer Product is Cancelled, so its end date must be less than or equal to the current date.

CP is terminated so it must have an end date

You cannot define customer products manually in this form

Cause: You tried to enter information to define a new customer product. Oracle Service does not allow manual definition of customer products when both of the following are true: 1) Oracle Order Entry is also installed and Oracle Service is creating customer products automatically from order entry information. 2) The Application Object Library profile option "OCS:Manual CP Definition Allowed" has been set to No.

Action: Verify that the profile option listed above is actually set to No. If the profile option is set to No, use this form only to view and update existing customer products and to define usage measurements and revisions for these customer products.

Action: If the profile option is set to Yes, contact Oracle Service support personnel and report the problem.

Another CP with the same original CP already has most recent status of Yes

Cause: You tried to change the current customer product’s most recent status to Yes when a related customer product’s most recent status is already Yes.

Action: Leave the current customer product’s most recent status set to No. If you need to change this status to Yes, first change the related customer product’s most recent status to No, then
return to this customer product and change its most recent status to Yes. A related customer product is a customer product that has the same original customer product as your current customer product.

[APP–3080] CP is not under Revision Control

[APP–3082] Customer product not present; you cannot navigate to Details zone

[APP–3084] You cannot terminate first revision; terminate the CP instead

[APP–3086] CP is Copy License parent of another CP so you cannot make it a Copy License child

[APP–3088] Copy License Reference is invalid, probably because target product is ineligible to be copied.

[APP–3090] Current customer product is unconfirmed; you cannot order services

[APP–3092] Current customer product has no services. Please choose another option

[APP–3094] ATO products can not be split

[APP–3096] Split completed. Requery Customer Products zone to view results

[APP–3098] Customer product could not be split. Review CP information to determine why

[APP–3100] You must confirm the CP before you can split it

[APP–3102] Current customer product is not most recent so you cannot split

[APP–3104] Current customer product has quantity of 1 so it cannot be split

[APP–3106] Please enter a new, positive quantity that is less than the current quantity

[APP–3108] Current customer product is no longer active so it cannot be split

[APP–3110] Current customer product is not most recent so it cannot be split

[APP–3112] Current customer product reserved for update or upgrade so it cannot be split

[APP–3114] Current customer product has pending service order so it cannot be split

[APP–3115] Please enter all required information and save before leaving this window

[APP–3116] Current customer product reserved for order creation so you cannot split

[APP–3118] Current customer product reserved for order processing so you cannot split

[APP–3120] Current CP’s service reserved for termination so you cannot split

[APP–3122] Status change is not allowed for a cancelled type status

    Cause: You tried to enter Yes in both the Cancelled and Status Change Allowed fields.

    Action: Enter No in the Status Changed Allowed field.

    Action: If you want to allow subsequent status changes to customer products that have or will have the current status, make this status a non-cancelled-type status by entering No in the Cancelled field.
[APP–3124] Current status reserved for special use, so you cannot update its dates

  Cause: You tried to change the start date or end date of a customer product status that Oracle Service automatically provides and uses for specific Oracle Order Entry transactions.

  Action: Do not change the start date or end date of the current customer product status.

  Action: Define additional customer product statuses with the availability dates you want.

[APP–3126] Current status reserved for special use, so you cannot update its name

  Cause: You tried to change the name of a customer product status that Oracle Service automatically provides and uses for specific Oracle Order Entry transactions.

  Action: Do not change the name of the current customer product status.

  Action: Define additional customer product statuses with the names you want.

[APP–3128] CP is cancelled so you cannot change it

[APP–3130] You cannot set a status to be both cancelled and terminated

  Cause: You tried to enter Yes in both the Cancelled and Terminated fields.

  Action: Enter No in either or both the Cancelled and Terminated fields.

[APP–3132] Current customer product has no system. Please choose another option

[APP–3134] Please enter in a Product Agreement for the CPs new customer.

  Cause: You tried to transfer a product to a new customer without entering a Product Agreement.

  Action: Enter a Product Agreement for the CP.

[APP–3136] Please enter a Bill To Address for the CP’s new customer

  Cause: You tried to transfer a product to a new customer without entering a Bill To Address.

  Action: Enter a Bill To Address for the CP.

[APP–3138] Please enter a Bill To Contact Name for the CP’s new customer.

  Cause: You tried to transfer a product to a new customer without entering a Billing To Contact Person.

  Action: Enter a Bill To Contact Person for the CP.

[APP–3140] Please enter an Install Address for the CP’s new customer.

  Cause: You tried to transfer a product to a new customer without entering an Install address.

  Action: Enter an Install Address for the CP.

Cause: You tried to update/insert product information before entering a New Customer.

Action: Enter a New Customer

[APP–3144] Please enter a Ship To Address for the CP’s new customer.

Cause: You tried to transfer a product to a new customer without entering a Ship To Address.

Action: Enter a Ship To Address for the CP.

[APP–3146] Please enter a Ship To Contact Person for the CP’s new customer.

Cause: You tried to transfer a product to a new customer without entering a Ship To Contact Person.

Action: Enter a Ship To Contact Person for the CP.

[APP–3148] Please enter a Technical Support Name for the CP’s new customer.

Cause: You tried to transfer a product to a new customer without entering a Technical support person.

Action: Enter a Technical Support Person for the CP.

[APP–3150] Current customer product is unconfirmed; you cannot enter usage measurements

[APP–3152] You cannot enter date ranges that overlap for duplicate product measurements

Cause: The usage measurement you entered for the current customer product is the same as one that already exists and the active dates of the two measurements overlap.

Action: Enter an end date for the existing usage measurement entry. Then, enter a start date for the new entry that is greater than the end date of the first entry.

[APP–3154] Do you want this product’s Warranty Dates to be updated?

[APP–3156] Please enter the customer’s number; otherwise enter the customer’s name

[APP–3158] From Revision must be less than or equal to the To Revision

[APP–3160] To Revision must be greater than or equal to the From Revision

[APP–3162] From Serial Number must be less than or equal to the To Serial Number

[APP–3164] To Serial Number must be greater than or equal to the From Serial Number

[APP–3166] Current availability information already entered; enter unique information

[APP–3168] Enter the product, customer, date range, or product revision range to which the service is to be limited.

[APP–3170] Current type automatically provided, so you cannot change name

[APP–3172] You must enter a status since you entered No for Revision Only
[APP–3174] Current usage automatically provided, so you cannot change name

[APP–3176] Required fields need to be entered before the transfer of this product

[APP–3178] Product already notified or reserved for notification and cannot be selected

[APP–3180] This record has been updated

[APP–3182] Update not allowed – service being used as an active base warranty

[APP–3184] You cannot classify the item as both a serviceable and service item

[APP–3186] The current item is not eligible to be serviced by the new service

[APP–3188] You cannot terminate a service whose end date follows the effective date

[APP–3190] You cannot change all selected services because their dates overlap

[APP–3192] The lead selected cannot be selected since it is reserved

[APP–3194] Failed to delete record(s) from &TABLE

[APP–3196] Please enter an effective through date that follows the effective date

[APP–3198] CP shipment/delivery pending so service cannot be ordered yet

[APP–3200] Shipped date plus shipping delay days is greater than the end date so service can not be ordered.

[APP–3202] Product already has the current service for dates that will overlap

[APP–3204] The current service for this product overlaps another existing service.

[APP–3206] Please enter a duration period; otherwise clear the duration amount

[APP–3208] Please enter an end date or duration and period

[APP–3210] Please enter an ending date that follows the starting date

[APP–3212] You have an entered an invalid date or duration

[APP–3214] You have not selected anything so you cannot generate your order

[APP–3216] No order to cancel

[APP–3218] No row selected

[APP–3220] Current service has no start or end date.

[APP–3222] Order cancelled

[APP–3224] No order generated since you entered No in the Generate Order field

[APP–3226] Please enter the number of the order that you want to add lines to

[APP–3228] Order Import successfully created order &ORDER_NUM
[APP–3230] Order Import could not create your order

[APP–3232] Please enter a price list for your new order

[APP–3234] Product is not eligible to be serviced by your selected service

[APP–3236] Product needs to be selected

[APP–3238] Please enter a renewal duration or renew–through date

[APP–3240] New end date does not follow current end date so you cannot renew current service.

[APP–3242] There has been a lapse in service. The lapse in the service will be billed.

[APP–3244] Service reserved for a different transaction so it cannot be selected

[APP–3246] Service order not allowed because customer product’s status prohibits it

[APP–3248] Please enter a start date and/or starting delay

[APP–3250] You cannot adjust the current transaction’s credit amount

[APP–3252] Multiple transactions affected; adjust credit amount in next zone

[APP–3254] Please enter a credit amount between zero and total transaction amount

[APP–3256] Please enter a credit percent between 0 and 100

[APP–3258] Please enter a credit amount

[APP–3260] Effective date must be between service’s current start and end dates

[APP–3262] No service present so you cannot navigate to next zone

[APP–3264] This service has expired, so you cannot terminate it.

[APP–3266] Effective date invalid because it falls within an uninvoiced transaction

[APP–3268] Please commit your changes before performing this function

[APP–3270] Do you wish these changes to reflect in all Customer Products which make up this System?

[APP–3272] Please enter a coterminate day; otherwise clear Coterminate Month

[APP–3274] Please enter a unique system name

  Cause: You have entered a system name that has already been used for another system.

  Action: Enter a different name for this system.

[APP–3276] Please enter install address; otherwise clear Installed At Customer

[APP–3278] Please enter invoice–to address; otherwise clear Invoice To Customer

[APP–3280] You must enter a name for this system
Cause: You did not specify the name for the new system.

Action: Enter a name for the new system.

Action: Contact your System Administrator to change the setting of the application profile option "CS: Auto-generate System Name" to Yes.

[APP–3282] Please enter a non-numeric name for your system

Cause: You attempted to change the name of the current system to a numeric name.

Action: Enter a unique, non-numeric name for the current system.

[APP–3284] Please enter ship-to address; otherwise clear Ship To Customer

[APP–3286] You cannot update system type while system usage measurements exist

Cause: You tried to change the system type for the current system while system usage measurements based on the current system type still exist.

Action: Leave the system type unchanged for the current system while active usage measurements of this system type exist.

Action: To change the system type of the current system, navigate to the Usage Measurements zone and inactivate all existing system usage measurements that are based on the current system type. Inactivate measurements by entering the date that you no longer want them active in the End Date field. Then, return to the System zone and change the system type to the type you want.

[APP–3288] You cannot enter date ranges that overlap for duplicate system measurements.

Cause: You entered a usage measurement for this system that is the same as one that already exists, for the same time.

Action: If you want to have the same usage measurement active for this system, be sure that the active dates don’t overlap.

[APP–3290] Please enter a unique line number for this usage measurement.

Cause: You entered a line number for this usage measurement that has already been used for this system.

Action: Change the line number to one that has not already been used.

[APP–3292] One or more contacts is no longer valid for your system’s new customer

Cause: Your system has one or more invalid contacts because these contacts are not related to your system’s new owning customer.

Action: Change the invalid contact(s) to valid contact(s).

Action: Relate the customer associated with your invalid contact(s) to your system’s new customer so that your contact(s) remain valid.

Action: Remove the invalid contact(s) from your system.
[APP–3294] Invalid date. Please re-enter.

[APP–3296] You have entered an invalid coterminate day or month

[APP–3298] One or more locations is no longer valid for your system’s new customer

  Cause: Your system has one or more invalid locations because these locations are not related to your system’s new owning customer.

  Action: Change the invalid location(s) to valid location(s).

  Action: Relate the customer associated with your invalid location(s) to your system’s new customer so that your location(s) remain valid.

  Action: Remove the invalid location(s) from your system.

[APP–3300] You cannot change the name of the current system

  Cause: You tried to change the name of the current system.

  Action: Do not change the name of the system.

  Action: Contact your System Administrator to change the setting of the application profile option "Service: System Name Update Allowed" to Yes. Then, change the name of the system, as desired.

[APP–3302] Parent system is invalid because it is child of another system

[APP–3304] Current system is already parent so it cannot have parent system

[APP–3306] System has been transfered. Requery before transfering it again

[APP–3308] Please transfer your system to a new customer first

[APP–3310] Enter a new customer or clear the system to cancel your transfer

[APP–3312] Contact no longer valid. Please validate or choose different contact

  Cause: You tried to navigate past the Relate field while the current contact for your system is no longer valid.

  Action: Validate the contact by relating the contact’s customer to your system’s new customer.

  Action: Choose a different, valid contact.

  Action: Clear the contact altogether.

[APP–3314] Location no longer valid. Please validate or choose different location

  Cause: You tried to navigate past the Relate field while the current location for your system is no longer valid.

  Action: Validate the location by relating the location’s customer to your system’s new customer.
Action: Choose a different, valid location.

Action: Clear the location altogether.

[APP–3501] This location already has a different Trading Partner value. Overwrite?

[APP–3502] No gaps allowed between keys.

[APP–3503] This Category Code is assigned to a transaction. You cannot delete it.

[APP–4000] Oracle Alert was unable to substitute output values in your action. This occurred most likely because your system is out of memory. Contact your system administrator.

[APP–4002] Oracle Alert was unable to substitute output values in your action because it could not find the output variable &VALUE. Check that all outputs you reference in your action are the correct enabled outputs for your alert.

[APP–4003] Syntax: ALUPCR &lt;ORACLE ID&gt; &lt;Request ID&gt; &lt;OS Flag&gt; &lt;Application Basepath&gt; &lt;Request ID&gt;.. Example: ALUPCR apps/apps 0 Y FND_TOP 12345

[APP–4004] Oracle Alert was passed an unknown action type. Contact your support representative.

[APP–4006] Oracle Alert was passed an invalid error type. Contact your support representative.

[APP–4007] Oracle Alert could not process a response because the alert message &VALUE has already been closed to responses. Check that the response was within the number of follow-up days defined for the alert message. Check that another response to the alert message had not already been received.

[APP–4008] Oracle Alert did not perform the detail action because it is disabled

[APP–4008] Your alert references an invalid alert output: &VALUE. Check that your alert only references outputs that exist.
[APP–4009] Oracle Alert was unable to perform the detail action because it was unable to find an action at the action level that was last performed.

[APP–4010] Oracle Alert could not find an enabled alert definition for the parameters that were passed to this program. Check that you have passed a valid set of arguments to Oracle Alert. Check that your alert is enabled and active.

[APP–4010] Oracle Alert was unable to find the critical exception group for an exception in file &FILE in routine &ROUTINE on line &LINE. Contact your support representative.

[APP–4012] Oracle Alert cannot recognize a structure type. Contact your support representative.

[APP–4012] Oracle Alert was passed an unknown event alert type of &VALUE. Valid types are "INSERT" and "UPDATE".

[APP–4013] Oracle Alert was unable to initialize a mail posting in file &FILE in routine &ROUTINE on line &LINE. This may most likely occur because your system is out of memory. Contact your system administrator.

[APP–4014] Oracle Alert was unable to insert header information into a mail message in file &FILE in routine &ROUTINE on line &LINE. Contact your support representative.

[APP–4014] Your alert references a variable (&VALUE) that is too long. Alert cannot substitute a value for &VALUE because it is cannot search for a valid output of this length. This restricts the length of any word in an action to be less than the valid length for an output variable. Check that your alert actions do not contain words with ampersands that exceed the valid length for an output.

[APP–4015] Oracle Alert was unable to insert a body into a mail message in file &FILE in routine &ROUTINE on line &LINE. Contact your support representative.

[APP–4016] Oracle Alert did not successfully end a mail system posting session in file &FILE in routine &ROUTINE on line &LINE. Check with your mail system administrator to see if the mail system is working correctly.

[APP–4016] The alert &VALUE already exists on the destination database account.

[APP–4018] Syntax: ALUTAD &lt;ORACLE ID&gt; &lt;Request ID&gt; &lt;OS Flag&gt; &lt;Source Application Name&gt; &lt;Source Alert Name&gt; &lt;Destination Application Name&gt; &lt;Destination Alert Name&gt; &lt;Destination ORACLEID&gt; Example: ALUTAD applsys/fnd 0 Y "Oracle Purchasing" "Expense Reports On Hold" "Oracle Purchasing" "New Expense Reports On Hold" applsys/fnd

[APP–4020] Oracle Alert was unable to execute ":VALUE". Check that this file exists and that its read protection is set correctly.

[APP–4020] There are &VALUE action output(s) not copied

[APP–4021] Oracle Alert was unable to perform the command ":VALUE". Check that this is a valid command on your operating system.

[APP–4022] Oracle Alert was unable to find the concurrent program specified for your action. Check that the concurrent program that you specified for this action exists and is enabled.
[APP–4022] There are &VALUE action set input(s) not copied

[APP–4023] Oracle Alert was unable to successfully terminate response processing. Check that the mail system is working properly.

[APP–4024] Oracle Alert was unable to read the file "&VALUE". Check that the file exists and that its read protection is set correctly.

[APP–4024] There are &VALUE action set member(s) not copied

[APP–4026] There are &VALUE action set output(s) not copied

[APP–4028] Oracle Alert was unable to format your summary message because it does not contain a summary template. Check that your summary message contains a summary template. You should be careful not to remove the summary template, even if you choose not to display text within the summary template.

[APP–4028] There are &VALUE group member(s) not copied

[APP–4029] Oracle Alert was unable to check for duplicates because you have defined too many outputs for Oracle Alert to handle with duplicate suppression. This is a limitation that requires you to reduce the number of outputs in your duplicate check configuration.

[APP–4030] Oracle Alert was unable to get the current mail account message in file &FILE in routine &ROUTINE on line &LINE. Check with your mail system administrator that the mail system is working correctly.

[APP–4030] There are &VALUE response action(s) not copied

[APP–4031] Oracle Alert was unable to open the mail account inbox in file &FILE in routine &ROUTINE on line &LINE. Check with your mail system administrator that the mail system is working.

[APP–4032] Oracle Alert was unable to log out of the mail system. Check with your mail system administrator to see if the mail system and all appropriate network connections are working.

[APP–4032] There are &VALUE response variable(s) not copied

[APP–4033] Oracle Alert did not perform any actions because you have not defined any enabled actions for your response set.

[APP–4034] Oracle Alert was unable to get values for your response variables. This is most likely caused by the database going down or by running out of memory on your system. Check that the database is operational.

[APP–4034] There are &VALUE response set action(s) not copied

[APP–4035] Oracle Alert was unable to get actions for your response set. Check that you have defined enabled actions for your response set.

[APP–4036] Oracle Alert requires that your response actions are ordered sequentially starting with sequence number 1. You cannot skip sequence numbers. Check that your response actions are ordered sequentially.
There are &VALUE valid response(s) not copied

Oracle Alert was unable to initialize response processing either because it was unable to connect to the mail system or because it was unable to resubmit the response processor. Check that Oracle Alert is properly configured with the mail system. Check that the mail system password registered with Oracle Alert is defined correctly.

Invalid destination application name

Oracle Alert was unable to get new mail from the inbox. Contact your support representative.

Oracle Alert was unable to get all of the mail messages from the inbox in file &FILE in routine &ROUTINE on line &LINE. Contact your support representative.

Oracle Alert was unable to get a mail message from the inbox in file &FILE in routine &ROUTINE on line &LINE. Contact your support representative.

Oracle Alert was unable to get the current date and time. Contact your support representative.

Oracle Alert was unable to retrieve information for an action because of data integrity problems. This error occurred in file &FILE in routine &ROUTINE on line &LINE. Contact your support representative.

Oracle Alert was unable to retrieve information for an action because of data integrity problems. This error occurred in file &FILE in routine &ROUTINE on line &LINE. Contact your support representative.

Oracle Alert was unable to retrieve information for an action because of data integrity problems. This error occurred in file &FILE in routine &ROUTINE on line &LINE. Contact your support representative.

Oracle Alert was unable to retrieve information for an action because of data integrity problems. This error occurred in file &FILE in routine &ROUTINE on line &LINE. Contact your support representative.

Oracle Alert was unable to retrieve information for an action because of data integrity problems. This error occurred in file &FILE in routine &ROUTINE on line &LINE. Contact your support representative.

Oracle Alert was unable to open the temporary file for the following reasons: &VALUE. Check that you have the proper write permissions to create a temporary file.

Oracle Alert was unable to retrieve information for one of your actions because of data integrity problems. This error occurred in file &FILE in routine &ROUTINE in line &LINE. Contact your support representative.
[APP–4047] Oracle Alert was unable to retrieve information for an action because of data integrity problems. This error occurred in file &FILE in routine &ROUTINE on line &LINE. Contact your support representative.

[APP–4048] Oracle Alert was unable to print the file &VALUE. Check that the file &VALUE exists with the proper read permissions. Check that the printing executables portrait, qldprint, qlwprint, and qa4print all exist with the proper execute permissions under the BIN directory for Application Object Library.

[APP–4048] Oracle Alert was unable to process your response because of an invalid response set ID in file &FILE in routine &ROUTINE on line &LINE. This most likely occurs because of a data integrity problem. Contact your support representative.

[APP–4049] Oracle Alert was unable to process your response because it contains a null value for a response variable ID in file &FILE in routine &ROUTINE on line &LINE. This error most likely occurs because of data integrity problems. Contact your support representative.

[APP–4050] Oracle Alert was unable to process your response because it contains a null value for a response variable type in file &FILE in routine &ROUTINE online &LINE. This error occurs most likely because of a data integrity problem. Contact your support representative.

[APP–4050] Oracle Alert was unable to submit the concurrent program &VALUE. Contact your support representative.

[APP–4051] Oracle Alert was unable to create a mail header structure in file &FILE in routine &ROUTINE on line &LINE. This may most likely occur because your system is out of memory. Contact your system administrator.

[APP–4052] Oracle Alert was unable to get the value for a profile option for the following reason: &VALUE

[APP–4052] Oracle Alert was unable to update the table ALR_ACTION_SET_CHECKS in file &FILE in routine &ROUTINE on line &LINE. Check that the table exists.

[APP–4053] Oracle Alert was unable to update the date last checked for your alert in file &FILE in routine &ROUTINE on line &LINE. Check that the table is not locked.

[APP–4054] Oracle Alert was unable to initialize the concurrent program for the following reason: &VALUE

[APP–4056] Oracle Alert was unable to resubmit the Periodic Alert Checker to the concurrent manager in file &FILE in routine &ROUTINE on line &LINE. Check with your database administrator.

[APP–4056] Retrieve action history data (output variables) failed.

[APP–4057] Oracle Alert was unable to purge history in file &FILE in routine &ROUTINE on line &LINE. Check that all of the Oracle Alert history tables exist.

[APP–4058] Oracle Alert was unable to request periodic alert checks in file &FILE in routine &ROUTINE on line &LINE. Check with your database administrator.

[APP–4058] Unable to lock ALR_ACTION_SET_INPUTS in SHARE UPDATE MODE. Contact your database administrator.
[APP–4060] Oracle Alert was unable to purge outdated action history in file &FILE in routine &ROUTINE on line &LINE. Check that the table ALR_ACTION_HISTORY exists.

[APP–4060] Unable to lock ALR_ACTION_SET_OUTPUTS in SHARE UPDATE MODE. Contact your database administrator.

[APP–4061] Oracle Alert was unable to purge outdated alert inputs in file &FILE in routine &ROUTINE on line &LINE. Check that the table ALR_ALERT_INPUTS exists.

[APP–4062] Unable to schedule &VALUE. Contact your system administrator.

[APP–4064] Unable to terminate &VALUE. Contact your system administrator.

[APP–4065] Oracle Alert was unable to connect to the ORACLE ID &VALUE. Check that this ORACLE ID exists and that the password registered with this ORACLE ID is correct.

[APP–4066] Oracle Alert was unable to reconstruct history. Contact your support representative.

[APP–4068] Oracle Alert could not insert the alert check information into the table ALR_ALERT_CHECKS in file &FILE in routine &ROUTINE on line &LINE. Check that the table exists.

[APP–4068] You did not specify a valid Alert name.

[APP–4070] Oracle Alert was unable to update the success flag in ALR_ALERT_CHECKS or ALR_ACTION_SET_CHECKS in file &FILE in routine &ROUTINE on line &LINE. Check that both tables exist.

[APP–4070] You did not specify a valid Application Name.

[APP–4071] Oracle Alert was unable to insert history information into ALR_ACTION_HISTORY in file &FILE in routine &ROUTINE on line &LINE. Check that the table exists.

[APP–4072] Oracle Alert was unable to build your exception history report. Contact your support representative.

[APP–4072] Oracle Alert was unable to successfully check for duplicates and escalate actions in file &FILE in routine &ROUTINE on line &LINE. Contact your support representative.

[APP–4074] The folder &VALUE does not exist. Create the folder in the mail account

[APP–4074] This installation has already been defined. If you wish to modify it, please query the existing row.

[APP–4075] Oracle Alert was unable to login to the mail system account. Check with your mail system administrator to see if the mail system and all appropriate network connections are working. Check that the mail account password registered with Oracle Alert is correct.

[APP–4076] Syntax: ALECTC &lt;ORACLE ID&gt; &lt;Request ID&gt; &lt;OS Flag&gt; &lt;ORACLE Username&gt; &lt;Table Name&gt; &lt;Rowid&gt; &lt;Mode&gt; &lt;Mailid&gt; where &lt;Mode&gt; is ’I’ for an insert event and ’U’ for an update event. Example: ALECTC apps/apps 0 Y APPS FND_DUAL 003.0000.001 ’U’ jatims

[APP–4076] You cannot delete this custom installation as there is one or more alerts registered for this application. If you wish to delete this installation, you must first delete the alert definitions.
Syntax: ALECDC &lt;ORACLE ID&gt; &lt;Request ID&gt; &lt;OS Flag&gt; &lt;Application ID&gt; &lt;Alert ID or Periodic Set ID&gt; &lt;Alert Type&gt; where &lt;Alert Type&gt; is 'A' for an alert and 'S' for a periodic set. Example: ALECDC apps/apps 0 Y 160 10001 A

Oracle Alert was unable to interpret the message handle &VALUE in file &FILE in routine &ROUTINE on line &LINE. Check that the message handle is in the proper format and has not been altered.

You cannot delete this default installation — it has been created by AutoInstall. You may only delete custom installations.

Oracle Alert was unable to connect to the database. Contact your support representative.

Oracle Alert was unable to run your mail action. Check that the mail system is working properly.

Oracle Alert was unable to run your SQL action. Check that you have defined a valid SQL command or that your SQL script exists.

Oracle Alert was unable to get the value for the profile option &VALUE. Check that the Oracle Alert profile option exists.

Oracle Alert was unable to run your Operating System action. Check that you have defined a valid operating system command or that your operating system executable file exists.

Oracle Alert was unable to submit your concurrent program request action to the concurrent manager. Check that you have defined an enabled concurrent program for your action.

Oracle Alert was unable to find a response account

Oracle Alert was unable to process your response because it was passed an unknown action type in file &FILE in routine &ROUTINE on line &LINE. Contact your support representative.

Oracle Alert was unable to process your no response actions. Check that you have properly defined your actions for the no response case.

Oracle Alert was unable to find the end of your response message. Contact your support representative.

Your response message references an invalid response variable &VALUE. Check that the response variable is properly defined for your response set.

Oracle Alert cannot interpret the response variable in your response message because it is not properly formatted. Check that all response variables are formatted in this manner: RESPONSE_VARIABLE=VALUE. Be sure that the value is enclosed in double quotes.

You cannot delete an action that is a member of a response set

Oracle Alert was unable to free a mail header in file &FILE in routine &ROUTINE on line &LINE. Contact your support representative.
[APP–4092] &PROGRAM is activated.

[APP–4092] Oracle Alert was unable to create the folder &VALUE in file &FILE in routine &ROUTINE on line &LINE. Contact your mail system administrator.

[APP–4093] Oracle Alert was unable to move a mail message to the folder &VALUE in file &FILE in routine &ROUTINE on line &LINE. Check that the folder exists.

[APP–4094] Oracle Alert was passed an unknown return code from the mail system in file &FILE in routine &ROUTINE on line &LINE. Contact your support representative.

[APP–4094] Submitted request &REQUEST_ID to deactivate the Internal Concurrent Manager.

[APP–4095] Invalid arguments were passed to routine &ROUTINE in file &FILE on line &LINE. Contact your support representative.

[APP–4096] &PROGRAM is deactivated.

[APP–4098] The Internal Concurrent Manager is not active.

[APP–4100] SQL error number &NUM occurred

[APP–4102] Internal SQL error occurred.

[APP–4104] SQL error &ERROR_MESSAGE occurred while performing the following: &DESC

[APP–4106] Oracle Alert was unable to reconstruct history because of data integrity problems in file &FILE in routine &ROUTINE on line &LINE. Contact your support representative.

[APP–4106] Please correct the user–defined SQL statement for this alert.

[APP–4108] SQL error &ERROR_MESSAGE occurred while executing the user–defined SQL statement for this alert

[APP–4110] Oracle Alert found an invalid number of bind variables in the SQL Statement: &VALUE

[APP–4111] Oracle Alert was unable to purge outdated alert inputs in file &FILE in routine &ROUTINE on line &LINE. Check that the table ALR_ALERT_INPUTS exists.

[APP–4112] Oracle Alert was unable to interpret the inputs in the SQL Statement: &VALUE

[APP–4112] Oracle Alert was unable to purge outdated actions in file &FILE in routine &ROUTINE on line &LINE. Check that the table ALR_ACTIONS exists.

[APP–4113] Oracle Alert was unable to purge outdated output history in file &FILE in routine &ROUTINE on line &LINE. Check that the table ALR_OUTPUT_HISTORY exists.

[APP–4114] Oracle Alert was unable to purge outdated action data history in file &FILE in routine &ROUTINE on line &LINE. Check that the table ALR_ACTION_DATA exists.

[APP–4114] Oracle Alert was unable to set inputs and outputs for your SQL statement. Check previous errors to determine the cause of this problem.
[APP–4115] Oracle Alert was unable to purge outdated action set checks in file &FILE in routine &ROUTINE on line &LINE. Check that the table ALR_ACTION_SET_CHECKS exists.

[APP–4116] Oracle Alert was unable to purge outdated alert checks in file &FILE in routine &ROUTINE on line &LINE. Check that the table ALR_ALERT_CHECKS exists.

[APP–4116] Oracle Alert was unable to remove comments from the SQL Statement: &VALUE.

[APP–4117] Oracle Alert was unable to purge outdated running alerts in file &FILE in routine &ROUTINE on line &LINE. Contact your support representative.

[APP–4118] Oracle Alert found more than one output name for "&VALUE". Check that you have chosen a different name for each output in your SQL Statement. Check that this output name does not conflict with an existing response variable name for your alert.

[APP–4118] Oracle Alert was unable to purge outdated running alert checks in file &FILE in routine &ROUTINE on line &LINE. Contact your support representative.

[APP–4120] An invalid number of outputs was found in the user–defined SQL Statement. The number of outputs must match the number of items in the select clause. &VALUE

[APP–4122] Oracle Alert was unable to locate the FROM clause in the SQL statement: &VALUE

[APP–4123] Oracle Alert was unable to find the response set associated with your alert message &VALUE in file &FILE in routine &ROUTINE on line &LINE. Check that the response set associated with this message is enabled. Check that only one installation of Oracle Alert is sending response messages to this mail system account.

[APP–4124] Oracle Alert was unable to deliver your message

[APP–4124] Oracle Alert was unable to locate the INTO clause in the SQL statement: &VALUE

[APP–4126] Oracle Alert was unable to close the temporary message file – &VALUE. Delete this file manually.

[APP–4126] Oracle Alert was unable to locate the SELECT clause in the SQL Statement: &VALUE

[APP–4127] Oracle Alert was unable to output the message to an external file. Verify with your system administrator that Oracle Alert has the write privilege to /tmp directory and /tmp is not full.

[APP–4128] Oracle Alert requires a SQL statement to define an alert. You must enter a SQL statement when you define an alert.

[APP–4128] Oracle Alert was unable to delete the temporary message file – &VALUE.

[APP–4129] Oracle Alert was unable to delete the temporary message file (&VALUE). This may indicate that Oracle Alert does not have delete privilege or file system error has occurred. You need to delete the file manually.

[APP–4130] Oracle Alert was passed an unknown data type for the input &VALUE. Contact your support representative.

[APP–4130] Oracle Alert was unable to retrieve the optional arguments for mail command. Verify with your system administrator that MAIL_COMMAND_FLAGS profile option exists.
[APP–4131] Cannot send mail (system failed)

[APP–4132] Invalid or no mail system specified. Your system administrator either defined an invalid mail system or did not define at all. Inform your system administrator about this problem.

[APP–4133] Oracle Alert was unable to allocate sufficient memory. Contact your system administrator.

[APP–4134] Your system administrator should specify the mail system for you. Inform your system administrator about this problem.

[APP–4135] Oracle Alert was unable to find a matching ID while transferring your alert definition. This is most likely because of data integrity problems in your alert definition from your source database account. Check that the alert definition on the destination database account is accurate.

[APP–4136] You need to specify one or more users to receive the message. The recipient name is the name that the user used to log in. Oracle Alert does not verify whether the recipient names are valid.

[APP–4137] Oracle Alert was unable to retrieve information for an action because of data integrity problems. This error occurred in file &FILE in routine &ROUTINE on line &LINE. Contact your support representative.

[APP–4138] Oracle Alert was unable to commit changes to the database. Contact your database administrator.

[APP–4139] Oracle Alert was unable to retrieve information for an action because of data integrity problems. This error occurred in file &FILE in routine &ROUTINE on line &LINE. Contact your support representative.

[APP–4140] Oracle Alert was unable to retrieve information for an action because of data integrity problems. This error occurred in file &FILE in routine &ROUTINE on line &LINE. Contact your support representative.

[APP–4141] Oracle Alert was unable to establish a database connection. Contact your database administrator.

[APP–4142] Syntax: ALUMMM &lt;ORACLE ID&gt; &lt;Request ID&gt; &lt;OS Flag&gt; &lt;Mail Username&gt; &lt;Folder&gt; &lt;Purge Date&gt; &lt;

[APP–4143] Oracle Alert was unable to retrieve information for an action because of data integrity problems. This error occurred in file &FILE in routine &ROUTINE on line &LINE. Contact your support representative.

[APP–4144] Oracle Alert was unable to set the value for field &VALUE. Check that the field exists.

[APP–4145] Oracle Alert was unable to set the value for field &VALUE. Check that the field exists.

[APP–4146] Oracle Alert was passed an unknown datatype. Contact your support representative.

[APP–4147] Oracle Alert encountered the following UPI error: &VALUE

[APP–4148] An action with this name already exists for this alert.

[APP–4149] Oracle Alert was unable to get the value from field &VALUE. Check that the field exists.

[APP–4150] Oracle Alert was unable to set the value for field &VALUE. Check that the field exists.
[APP–4150] Alert is required

[APP–4150] Oracle Alert found an invalid input name &VALUE. Input names must only contain alphanumeric characters.

[APP–4151] Application is required

[APP–4152] One or more arguments are missing for routine.

[APP–4153] Days between checks is required for this type of periodic alert.

[APP–4154] This message was truncated by Oracle Alert because it exceeds maximum length of 64K

[APP–4154] Unable to check list name.

[APP–4155] Whether to check once daily is required for periodic alerts.

[APP–4156] You cannot clear this zone.

[APP–4159] Copy application_id failed.

[APP–4162] Unable to copy Who information

[APP–4165] Day number must be greater than or equal to 1.

[APP–4166] Day number is required for monthly periodic alerts.

[APP–4167] Day number must be less than or equal to 31.

[APP–4168] Days to keep history must be greater than or equal to zero.

[APP–4173] You cannot delete an installation with alerts assigned to it

[APP–5000] WIP Supply Type is required when BOM Item Type is Standard

  Cause:
You have not chosen a value for the WIP Supply Type attribute

  Action:
  Go to the Define Item form and choose a value for the WIP Supply Type attribute

[APP–5001] Error validating demand source header ID
An error has been encountered in validating the demand header ID for. Please check the demand source header ID and/or demand source header segments.

[APP–5002] You may not use this selection when total compile value is zero

[APP–5003] Invalid source type

[APP–5003] You cannot use this form to delete a physical inventory

  Cause:
You cannot use this form to delete a physical inventory.

  Action:
Use the Purge Physical Inventory form.
[APP–5004] You cannot query in this zone. Use quickpick

[APP–5005] Cannot add the given information to the quantity tree
System could not add the quantity information to the specified quantity tree. Please check additional messages for further explanation.

[APP–5005] Please use \ Row Delete to erase committed rows

[APP–5006] Please enter a valid category

[APP–5007] Cannot build dynamic SQL statement in routine &ROUTINE

  Cause:
The routine you called had a failure in building dynamic SQL statements.

  Action:
Please refer to additional messages to determine the actual cause.

[APP–5008] Required when vendor warranty is "yes"

[APP–5009] New quantity tree could not be constructed with information

  Cause:
Quantity tree recently created could not be constructed with information from the database.

  Action:
Please check additional messages in the stack for further explanation.

[APP–5011] Cannot convert quantities to &UOM in routine &ROUTINE

  Cause:
Calculated quantities could not be converted to the &UOM from the primary unit of measure for the item.

  Action:
Please check the correctness of the value for UOM parameter.

[APP–5012] Items under lot/serial control must have the same UOM across organizations

[APP–5013] Items to be transacted must have the same UOM classes across organizations

[APP–5013] New quantity tree could not be created

  Cause:
A new quantity tree could not be created.

  Action:
Please refer to additional messages for further explanation.

[APP–5015] Cannot delink the configuration item

  Cause:
Your request to delink a configuration could not be completed. Following may be the reasons: (1) a work order has already been opened or completed for any or all order line quantity; (2) any or all
quantity of configuration item has already been shipped to the customer; (3) models and options associated with the configuration item may not exist in the demand table. Delinking a configuration automatically enables the models and options which created the configuration item.

[APP–5017] Cannot find the quantity tree node

Cause:
System could not find the quantity tree node with the given set of item attributes. This error occurred in &ROUTEINE. Following may be the causes for this error: (1) quantity tree would not have been built yet; (2) item attribute combinations may be invalid or nonexistent; (3) given set of item attributes may have been created newly, and the tree information may be old.

[APP–5017] This count has been submitted for processing and cannot be updated

[APP–5019] Cannot query available quantity information from quantity tree

Cause:
System had some type of internal error which caused an error in querying up available quantity information from the quantity tree.

Action:
To identify the root cause, please refer to additional error information.

[APP–5021] Backflush lot error

[APP–5021] Cannot update auto serial data for this &ENTITY

[APP–5022] Lot number records for this backflush transaction are missing, lot quantity is not enough to fulfill this pull requirement, or lot number records require verification

[APP–5023] Backflush serial number error

[APP–5023] No SQL statement found to execute the query

[APP–5024] Serial number records for this backflush transaction are missing

[APP–5025] An application–related data corruption was found in database by &ROUTEINE

Cause:
An application–related data corruption or inconsistency was found by &ROUTEINE in file &ERRFILE. This corruption was found by the SQL statement &SQLSTMT. Possible problems are: (1) &ROUTEINE was trying to update a row based on rowid, and the rowid may not exist; (2) &ROUTEINE was trying to delete a row based on rowid and the rowid may not exist.

Action:
Please call your Support representative for further help and explanation on this.

[APP–5025] You cannot update this field when you use average costing

[APP–5027] You must define an organization first

[APP–5028] Tag quantity cannot be less than zero

[APP–5029] "To" locator must be entered for item &entity
[APP-5029] Cannot find the parent row while performing &ENTITY

Cause:
Your &ENTITY request could not be completed because the system could not find the parent row. The function you called expects a parent (summary) demand row to exist before creating or modifying a child record.

Action:
Please check your function call and parameters, and for additional help, contact your support representative.

[APP-5030] "To" subinventory is not in the restricted list for this item

Cause:
The item has a restricted list of subinventories. "To" subinventory is not in this list.

Action:
Choose a subinventory from the list of restricted subinventories for the item

[APP-5031] Cannot reserve a quantity of (&QUANTITY) Cause
You had requested a quantity of (&QUANTITY) to be reserved and the system could not complete your request. Currently, the system has an available quantity of (&AVAILQTY) to reserve in the unit of measure &UOM. If you have asked to increase the existing reservation quantity, then quantity to be reserved also includes the existing reservation quantity.

[APP-5031] You must select an asset or expense, tracked subinventory

[APP-5033] One of the demand/reservations requests in the group has failed

Cause:
One of the requests in the current group of demand/reservations requests has failed. You may have requested that if any of the requests in the group were to fail, treat all the requests in the group as failed.

Action:
Please review all your requests to identify the root cause of failure.

[APP-5033] This subinventory is not locator–controlled

[APP-5034] Bad option

[APP-5035] Error validating demand source header ID

Cause:
System has encountered an error while validating the demand header ID in &ROUTINE. Following may be reasons: (1) you may have passed no demand source header ID nor any demand source header flexfield segments. Please check the parameters have passed; (2) the demand header ID you have passed does not exist against the demand source type you have specified. Please check the valid list of values for Demand header ID and type; (3) setup for demand source type you have specified may not allow dynamic creation of demand header ID’s or impose few restrictions which may disallow creation of new Demand header ID’s.

Action:
Please check the additional error messages for further explanation and/or call your support representative.
[APP–5035] Immediate processing is not available

[APP–5036] No MRP plan is available

[APP–5037] Message not found

[APP–5037] The action code provided for the routine &ROUTINE is invalid

   Cause:
The action code that was passed to the routine &ROUTINE was an invalid one.

   Action:
Please check the list of valid action codes and pass the action code again.

[APP–5038] Primary unit of measure and unit of issue must be in the same UOM class

[APP–5039] Set of books is different from Purchasing’s
The set of books used by the organization is different from the one used by Oracle Purchasing. To create requisitions and purchase orders, these two have to be the same.

[APP–5039] You have specified invalid values for control options

   Cause:
You have specified an invalid value for an item control option. Possibly, you have specified value other than 1 or 2 for lot control or serial control options.

   Action:
Please check your list of parameters and their values again.

[APP–5041] Invalid demand quantity (&QUANTITY) is given in the demand request

   Cause:
Your demand request cannot be processed with the specified demand quantity (&QUANTITY). Following may be the reasons: (1) a new demand row cannot be created with a quantity of zero; (2) quantity to be removed from an existing demand row cannot exceed total demand or reservation quantity; (3) quantity to be reserved cannot be lower than existing completed quantity for that demand.

[APP–5042] Unprocessed material transaction(s) exist(s) for this period

[APP–5043] Invalid demand type

[APP–5043] Uncosted material transaction(s) exist(s) for this period

[APP–5044] Pending WIP costing transaction(s) exist(s) in this period

[APP–5045] Quantity on hand fails to satisfy reservation

[APP–5045] You cannot use an expense item in an in–transit transfer

[APP–5046] You cannot transfer from an expense item/sub to an asset item/sub
If either of your source subinventory or current item is expensed, you cannot transfer it to another organization where both the item and subinventory are considered non–expensed (ie. asset).
[APP–5047] Requested item is not a reservable item

Cause:
You have requested to reserve an item which is not reservable.

Action:
Please check the item master attributes for the current item. An item can be made reservable only if it is an inventory item. Please turn on the reservable attribute for the item and try again.

[APP–5049] More than one calendar found in a group ATP

[APP–5051] Locator restrict code requires at least one locator per subinventory

[APP–5051] Quantity to be transacted exceeds on-hand quantity

Cause:
The transaction quantity you have requested exceeds the on-hand quantity. Your system setup indicates that negative inventory balances are not allowed.

Action:
Please review your transaction before trying again.

[APP–5052] Locators are already assigned to this subinventory

[APP–5053] Lot/serial numbers must be entered for item &entity

[APP–5053] Warning: Quantity will drive negative if the transaction is performed

Cause:
The transaction you have requested will cause the quantity on this location to be negative. However, your setup indicates that negative quantities are allowed.

Action:
Please review the transaction and proceed further.

[APP–5054] Lot number length must be at least 3 greater than alpha prefix

[APP–5055] &entity1 are not required for this &entity2

[APP–5055] Unable to find ATP calendar for ATP calendar organization. Possible causes for this error are (1) ATP calendar organization is not defined in group ATP or (2) BOM calendar is not associated with ATP calendar organization.

[APP–5057] There are no auto-load serial values defined for this item or organization

[APP–5058] The count type you selected may only be used for min-max planned items

[APP–5059] Unable to find the corresponding calendar date for the requirement date
Make sure that calendar date is defined for the organization and that calendar extends long enough into the future

[APP–5060] Inventory item is not defined in the destination organization

Cause:
Item must exist in organization where you are performing transaction
Action:
Use Define Item form to enable item in destination organization

[APP–5061] Cannot find an item master record for this item

[APP–5062] &entity1 is not permissible to transact. &entity2

[APP–5063] At last record

[APP–5063] No primary unit of measure could be found for the given item

  Cause:
Primary Unit of Measure or Primary UOM code is not found in the item master for the given item.

  Action:
Please verify the item information and define the primary unit of measure and primary UOM code
for the item.

[APP–5065] Item cost should be defined before you transact

  Action:
Check if the cost–enabled flag is set correctly in the item master, and also check if the item cost is
defined in the costing module.

[APP–5066] Locator control is required

[APP–5067] A maximum of 30 characters may be specified for a serial number

[APP–5067] Parent model row not found to create configuration item demand

  Cause:
Your request to create demand for the configuration item has failed, because the system could not
find the model item associated with the configuration item. Following may be the reasons: (1) the
RTO model line given may not exist or may not have any model item associated with it; (2) the
demand source header information may be incorrect; (3) BASE_ITEM_ID in item master for the
configuration may be null, pointing to a non–model item or pointing to an inconsistent model item
from the demand table; (4) either model item or the configuration item is not defined in the item
master for the current organization.

[APP–5069] Cannot create any more quantity trees

  Cause:
The system cannot create any more quantity trees, as existing slots are now filled.

  Action:
Please either free up all trees to obtain space or contact your support representative to recompile the
program with increase number of slots.

[APP–5071] Cannot find any information for the given organization

  Cause:
No information can be found in inventory parameters table for the given organization.

  Action:
Please check the organization ID or the existence of information about the organization.
[APP–5073] Unable to find requirement date

[APP–5075] Rule not found

[APP–5077] No subinventory record found for &SUBINV in organization &ORG

  Cause:
The Subinventory record is missing in MTL_SECONDARY_INVENTORIES for the &SUBINV in organization &ORG.

  Action:
Define the subinventory using inventory setup forms.

[APP–5079] Request does not have adequate &ENTITY information

  Cause:
Your demand management request does not have all necessary &ENTITY information to process. You may not have provided supply source information for a function to link/unlink a supply source to/from a demand source.

  Action:
Please check your demand request elements and the action code

[APP–5080] One download on date &DATE is processing

[APP–5081] Quantity to be transacted exceeds available to transact. Please re-enter

  Cause:
The transaction quantity you have requested exceeds the quantity available to transact. You may not be able to perform the transaction under this situation.

  Action:
Please check your on-hand balances and available to transact and try the transaction again.

[APP–5082] The original download process is missing

[APP–5083] Cannot find the root node for the quantity tree

  Cause:
System cannot find the root node for the quantity tree with specified item parameters.

  Action:
Please check the value of the parameters.

[APP–5083] Return to page 1 to erase, delete, insert or copy rows

[APP–5085] An error occurred while executing quickpick function

  Cause:
Your request to list item details for available quantity [QUICKPICK] has failed with an error code of &ERRORCODE.

  Action:
Please refer to additional error messages and/or call your support representative.
[APP–5086] Cycle count control item ignored unless automatic scheduling enabled

[APP–5087] Cannot construct serial numbers from null starting serial number

[APP–5087] Your &ENTITY request failed with an error code &ERRORCODE

Cause:
Your &ENTITY request failed with an error code &ERRORCODE in &ROUTINE. Following may be the reasons: (1) the action you have requested may be invalid; (2) the action you have requested may be incompatible with some other action, such as demand–modify and reservation–modify together in a single call; (3) demand and/or reservation action would have failed due to an error in another routine called by the current function.

Action:
Please review additional messages regarding this

Action:
Please review the list of parameters and function calls to correct the problem

Action:
For additional help, contact your support representative.

[APP–5088] Please enter Service Level
Service level must be entered when method is mean absolute deviation (MAD)

[APP–5089] Please enter Safety Stock Percent
Safety stock percent must be entered if the method is user–defined percentage

[APP–5089] You must define a set of books for this organization

[APP–5090] Error from &FDFUNC: &ERROR

Cause:
An error occurred while creating the item flexfield view

Action:
Contact your support representative

[APP–5091] "From” locator must be entered for item &entity

[APP–5091] Subinventory &SUBINV is not reservable

[APP–5092] "From” subinventory is not in the restricted list for this item

Cause:
The item has a restricted list of subinventories. From subinventory is not in this list

Action:
Choose a subinventory from the list of restricted subinventories for the item

[APP–5093] Check the class breakpoint assignments. Every class has to have a breakpoint assigned to it and it has to be greater than the breakpoint of the previous class.

[APP–5094] The input percent exceeds percent remaining
[APP–5095] You have specified an incorrect number of arguments for &TOKEN

[APP–5095] You should assign classes to your group first.

[APP–5097] You have to assign a compile to the group first.

[APP–5097] You must enter &ENTITY1

[APP–5098] You must enter a forecast
Forecast must be entered when reload safety stock is "yes."

[APP–5099] &ENTITY1 is not valid

[APP–5099] You must have items in your compile.

[APP–5100] You must enter Method field
You must choose a forecast method before doing a reload safety stock

[APP–5101] Acceptable early days must be greater than zero

[APP–5101] You must enter a value for MRP percent

  Cause:
You must enter MRP percent for safety stock type = "MRP planned percent"

  Action:
Enter an MRP percent greater than 50% and less than 100%

[APP–5102] Please enter a value for "Reload Safety Stock"

  Cause:
You have not entered a value for the field "Reload Safety Stock"

  Action:
You must enter "Yes" or "No" in the field "Reload Safety Stock"

[APP–5103] Adjustment(s) processed

[APP–5105] An error occurred while processing adjustment transactions. Please contact your system administrator or support representative for further assistance.

[APP–5105] Please enter a count name before navigating to the Items zone

[APP–5107] &ENTITY already exists

[APP–5108] Please enter search option(s) before going to next screen

[APP–5109] Approver is required

[APP–5109] You must select a physical inventory before continuing

[APP–5110] Please enter a subinventory before proceeding

[APP–5111] &ENTITY are required
[APP–5111] &ENTITY1 must equal &ENTITY2

[APP–5112] You have entered an effective date that already exists

[APP–5113] Assemble to Order cannot = "No" because ATP Components = "Yes"

[APP–5113] Unit conversion already exists for item. Please query

[APP–5114] Select different locators for the same subinventory

[APP–5115] You must assign all items of this type to the new set first

[APP–5117] Cannot update to "yes"

  Cause:
  Cannot update to "Yes" unless Assemble to Order is "Yes" or Pick Components is "Yes" or WIP Supply Type is "Phantom"

[APP–5117] Dynamic creation of locator is not allowed

[APP–5118] Employee not defined for the user

  Cause:
  The user is not associated with the employee

  Action:
  Please associate the employee name to the user in the Define Application User form

[APP–5119] Warning: This change could cause incorrect ATP results

  Cause:
  If any bills of material exist for this item that contain components with Check ATP = "Yes," available to promise calculations for these components could be incorrect. Demand for these components will not be captured when demand is placed for the parent item

  Action:
  Use View Bill of Material to see if any components are Check ATP = "Yes"

[APP–5121] ATP Calendar too short.

  Cause: One or more of the ATP rules used in this inquiry has an infinite supply time fence that is beyond the last date for which the calendar has been built.

  Action: Rebuild the calendar with a later End Date in the Define Workday Calendar form or decrease the number of Infinite Supply Days for the ATP rule in the Define Available to Promise Rule form

[APP–5121] Digit increments field is required

[APP–5122] Check ATP setting of "Material and Resource" for a Standard Assembly could cause incorrect ATP results.

  Cause:
  ATP will be calculated based on the material availability of the end assembly and the routing resource requirements.
Action:
Either change ATP to "Material Only", or proceed anyway. Proceed anyway?

[APP–5123] Starting lot number prefix is required when Lot Control = Full lot control

[APP–5124] Verifying that subinventory is not in use...

[APP–5125] Duplicate conversions have been entered

[APP–5125] Starting serial number prefix is required

Cause:
Starting serial number prefix is required when Serial Number Control = Predefined serial numbers

[APP–5127] Reservable not allowed — &SUBINV is a backflush subinventory

[APP–5127] You have entered duplicate organizations. Please erase

[APP–5128] You have specified the same category set more than once

Cause:
A particular category set can only be associated with any particular item once for each organization

Action:
Please clear any duplicate associations before committing

[APP–5129] &ROW_PROCESSED record(s) marked for background processing

[APP–5129] Duplicate tag number found during tag generation. Tag &TAG_NUM already exists!

Cause:
Tags may have already been generated

Action:
A purge of tags might be necessary to delete these tags. CAUTION! A tag purge will delete all existing tags for this physical inventory

[APP–5130] Standard unit conversion already exists. Please query

[APP–5131] Subinventory information could not be found. Please contact your DBA or Oracle Support.

[APP–5132] You do not have privileges to access this form

Cause:
You tried to access a form to which you do not have access privileges

Action:
Please contact your system administrator to request access.

[APP–5133] Item costs are different in this costing organization

Cause:
Changing the master organization will also change the costing organization. The item costs for the new organization you selected are different from the item costs for the current costing organization.
[APP–5133] This item cannot have a base model

   Cause:
   An item cannot have a Base Model when the BOM Item Type is not "Standard" or when Pick Components is "Yes"

[APP–5134] Costing organization is using a different set of books

   Cause:
   The current organization and the costing organization are not using the same set of books

[APP–5135] Base Model specified does not exist in &ORG You must assign the model to &ORG first. Or, choose a Base Model that exists in all organizations to which you will be assigning this item.

[APP–5135] Prior physical inventory snapshot failed or incomplete

   Cause:
   A physical inventory is defined for which a snapshot has not been completed. This could be the result of an error, or because the snapshot program has not yet completed, or because a snapshot was not requested.

   Action:
   The physical inventory may be queried up and a snapshot requested

[APP–5137] Model is not defined in all organizations where &ITEM is defined. When Base Model is controlled at the Item-level, the model you choose will be the Base Model for this item in all organizations where this item is defined. Therefore, you must select a model that exists in all organizations where this item exists. Or, assign the model to all organizations where this item exists

[APP–5138] Warning: &ENTITY1 is more than one month from today

[APP–5139] The date entered is not open in &ENTITY

[APP–5139] You may only define or query inter-class conversions for base units of measure

[APP–5140] Default locator is not defined in the destination organization

   Action:
   Either the transfer locator should be populated or a default locator should be setup for the destination organization using the inventory forms

[APP–5141] BOM Allowed can be set to “Yes” only if the item is an Inventory Item or a Support Service Item under Vendor Warranty

[APP–5141] Default subinventory is not defined in the destination organization

   Action:
   Either the transfer subinventory should be populated or a default subinventory should be setup for the destination organization using the inventory forms

[APP–5143] Cannot update because the item exists in a bill of material

[APP–5143] You cannot delete a status that is not pending
**Cause:**
The status rows which have already been processed cannot be deleted. This restriction ensures that item status history will be complete.

[APP–5145] Conversion &VALUE1 to &VALUE2 is already defined

[APP–5145] When BOM Item Type is "Option Class" or "Model," then either Assemble to Order or Pick Components must be "Yes"

[APP–5146] Cannot update BOM Item Type

**Cause:**
The item exists in a bill of material.

[APP–5146] You must create an organization

[APP–5147] Build in WIP cannot be "Yes"

**Cause:**
Build in WIP must be "No" when either Inventory Item is "No" or BOM Item Type is not "Standard"

[APP–5148] Cannot change BOM Item Type to "Product Family"

**Cause:**
Item exists in an open sales order

[APP–5148] Either "from" or "to" organization must be current organization

**Action:**
You must select the current organization as either the "From" organization or the "To" organization

[APP–5149] Inventory value entered greater than total ABC compile value

[APP–5149] Record not reserved for update or delete. Try again later

[APP–5150] Category flexfield Product Family structure definition is inconsistent with the System Items flexfield System Items structure definition

**Action:**
Please ensure identical segment mapping for the Product Family and System Items structures.

[APP–5150] Please complete the line information

[APP–5151] You cannot approve an unentered count record

[APP–5152] Cannot delete product family item

**Cause:**
Category flexfield segments for the Product Family structure currently are not enabled or have not been defined.

**Action:**
Please define Product Family structure of the Category flexfield to be identical to System Items structure of the System Items flexfield.
[APP–5153] Adjustment transaction failed due to internal error

Cause:
Oracle error &ERROR occurred at &SQL in the CYCC_TRANSACT user exit while trying to create the adjustment transaction.

Action:
Please contact your system administrator.

[APP–5153] You cannot change the serial number entry format while there are rows in the serial number zone.

[APP–5154] Item must have BOM Allowed set to Yes when BOM Item Type is Product Family

[APP–5154] You cannot assign subinventories to organization-oriented cycle counts

Cause:
Your cycle count has Scope = Organization

Action:
If you want to cycle count items that exist in specific subinventories only, then you must ensure that Scope = Subinventory

[APP–5155] Period Close may not continue.

[APP–5156] Product family item template not found

Cause:
A template specified in the "INV: Product Family Item Template Name" profile option does not exist or the profile option value has not been set.

Action:
Contact your system administrator to have the profile option assigned an existing template for product family items.

[APP–5156] You may not enter a later date unless zone is cleared

[APP–5157] You cannot delete &ENTITY

[APP–5158] BOM Item Type for this item cannot be set to "Product Family"

Cause:
The item is not an inventory item.

Action:
Set Inventory Item flag to "Yes" then change BOM Item Type to "Product Family".

[APP–5158] Code has been disabled

[APP–5159] The status of this item indicates that it is not permissible to transact

Cause:
Value of attribute Transactable = "No"
Action:
Go to Define Item form and set Transactable = "Yes"

[APP–5159] This catalog is associated with an item

[APP–5160] Category flexfield segments for the Product Family structure are not enabled or have not been defined. Proceed with commit?

[APP–5161] Deletion of a category is not allowed.

[APP–5161] You cannot delete rows with past start date

[APP–5163] You cannot delete this picking rule

Cause:
You cannot delete this picking rule because it is referenced by an item, an item template, or the organization level parameters.

[APP–5165] Failed to get the next period ID

[APP–5166] Category set must be maintained at the item/organization level

[APP–5167] You cannot recount a count entry already marked for recount

[APP–5168] You cannot dynamically create tags for this physical inventory

Cause:
Allow Dynamic Tag Entry = "No" for this physical inventory

Action:
Go to Define Physical Inventory form and set Allow Dynamic Tag = "Yes"

[APP–5169] You cannot recount an unentered count record

[APP–5170] Cannot insert new records

[APP–5170] You cannot update &ENTITY

[APP–5171] Unable to update End Date.

[APP–5171] You cannot query in this &ENTITY

[APP–5172] You cannot recount a completed count record

[APP–5173] You cannot delete effective revisions

[APP–5174] You cannot recount a rejected count record

[APP–5175] Not allowed — the following period’s status must be ‘Future’

[APP–5176] You cannot reject a completed count record

[APP–5177] Start date has passed. You may not revert period to a future status.

[APP–5177] You cannot reject a count record that is already rejected
[APP–5178] You cannot specify a subinventory scope

Cause:
You cannot specify a subinventory scope for this physical inventory because you have already specified that this physical inventory is for all subinventories.

Action:
Change the count all subinventories field to "No" to specify a subinventory scope

[APP–5179] You cannot add new data in a query–only screen

[APP–5179] You must commit or clear pending changes in the units of measure window before navigating to the conversions window.

[APP–5180] You cannot approve a completed count record

[APP–5181] You cannot approve a rejected count record

[APP–5183] You cannot commit on query forms

[APP–5184] You cannot create &ENTITY

[APP–5185] This category has been assigned to an item

[APP–5185] You cannot create requisitions — employee not assigned to user ID

[APP–5187] This category has been set up as a category set default category

[APP–5188] You cannot delete data in a query–only screen

[APP–5189] This category has been assigned to a category set valid category list

[APP–5189] You cannot delete a tag — void it instead

Action:
Go to Void Physical Inventory Tags form and void tags

[APP–5190] Cannot disable transaction source type

Cause:
Corresponding transaction type(s) must be disabled before disabling this transaction source type

Action:
Go to Define Transaction Type form and disable transaction type(s) corresponding to source type

[APP–5191] This category set is used in an Item Catalog Group.

[APP–5193] &ENTITY1 must be between &ENTITY2 and &ENTITY3

[APP–5193] This category set has valid categories assigned to it.

[APP–5195] You have already assigned a category to this item

[APP–5197] Warning: Changing organization will clear associated queries
[APP–5198] Invalid Check ATP value

Cause:
Check ATP cannot be set to "Materials and Resources" or "Resources Only" unless Assemble to Order is set to "Yes".

[APP–5199] All remaining items must be assigned to the last class

[APP–5199] Cannot set Check ATP to "None" for this item

Cause:
Bills of material exist for this item that contain components with Check ATP = "Yes".

[APP–5201] Available to promise code is required

[APP–5201] You may not enter a close date that is less than the start date

[APP–5202] Error occurred during attribute update

[APP–5203] Closing current accounting period...

[APP–5205] Leave this field blank if you want the system average cost

[APP–5205] There has been a database insert error, contact your dba or Oracle Support

[APP–5206] Adjustments still pending approval — no adjustments posted

Cause:
There are still adjustments requiring approval in this physical inventory. Oracle Inventory has not posted any adjustments for this physical inventory

Action:
Approve adjustments in Approve Physical Inventory Adjustments form

[APP–5207] All items have been assigned. Please commit your changes

[APP–5207] Please commit your changes and re-query the data

Cause:
Modifying this attribute will update related attributes in the database

Action:
You must commit and re-query the data in order to keep the database and form information consistent

[APP–5208] Tag numbers may only be alphanumeric

[APP–5210] &ENTITY are not required

[APP–5211] Transaction(s) request &REQUEST_ID has been sent to the concurrent manager

[APP–5212] You must assign items to all classes
[APP–5213] Lengths of tag numbers and digit increments must be consistent

[APP–5214] The item details you have specified do not follow reservation structure

   Cause:
The item details you have specified for reservation violates the hierarchical structure defined by Oracle Inventory at level &LEVEL. The hierarchical structure is item, revision, lot number, subinventory and locator. You cannot specify lower level of details by missing some higher level details. For example, if an item is under lot control and locator control, you cannot reserve an item by just specifying the item, subinventory.

   Action:
Please check the values passed to the reservation scheduler function

[APP–5215] This change may cause data inconsistencies

   Cause:
The value of this attribute for an item could be different for different organizations even though it would be specified as being maintained at the item level. In the course of regular item maintenance, an attribute that is maintained at the item level propagates its value down to all the child organizations in which the item is defined. However, this consistency is not enforced here when the control level is switched to the item level.

   Action:
You should first ensure that the attribute values are the same across organizations before making this change

[APP–5216] Accounting rule is required for invoiceable items

[APP–5217] Item must have the same &ENTITY setting across organizations

[APP–5217] This change will cause data inconsistencies in WIP — update not allowed
Setting the control level to Item level will cause the costing organization to be set to the item master organization for all organizations under standard costing. This action will cause inconsistencies in Oracle Work in Process if an organization does not point to itself for costs.

[APP–5219] Conversion rate must be entered

[APP–5220] Reservation transfer

[APP–5221] This category set is used in cost update history.

[APP–5223] An Oracle error occurred – ORA–&ERRNO

   Cause: Oracle error ORA–&ERRNO occurred while accessing the database

[APP–5223] This category set is used in default costing for item overheads.

[APP–5225] Planning items may not be customer-ordered items

   Cause:
Customer Ordered Item may not be "yes" when BOM Item Type is "Planning"

[APP–5227] Customer Orders Enabled cannot be "Yes" unless Customer Ordered is "Yes"
&entity1 must be greater than or equal to &entity2

This category set is defaulted for a functional area.

Warning: Clearing organization will clear associated queries

Cancel the transfer of transactions to General Ledger?

Invalid locator control code (&LOCCODE) found

Cause:
The system has found invalid locator control code &LOCCODE for item ID &ITEMID under the organization ID &ORGID. Possible causes are: (1) locator control code value may be out of bounds of the defined set of values; (2) locator control may have been defined in a recursive fashion.

Action:
Please refer to the valid list of choices available to determine the locator control and correct the data

Demand time fence days is required

Cause:
You must enter a value for Demand Time Fence Days when your choice for Demand Time Fence = User–defined time fence

Please navigate to the main information page

Disable date must be greater than or equal to current date

Disable Date must be greater or equal to Effective Date

Download process failed

Item status you have entered already exists

&VALUE1 is already defined

Processing the demand request will cause an invalid &ENTITY state

Cause:
Your demand request will cause an invalid &ENTITY state if processed. You may have asked for a new demand row to be added or update an existing demand quantity for an item under a specific disposition, for which there is already a row with inactive status. Specifically, if the item is a model or an option and there exists a row for that item under same dispositions, but with inactive status.

Error consuming open demand for your reservation request

Cause:
Your request to modify an existing/create a new reservation has failed, as the system encountered an error while consuming the open demand for the same demand source line.

Action:
Please check the quantities and the state of open demand and/or reservation.

Action:
Please check additional error messages for further explanation on the cause of error and/or call your support representative.
[APP–5247] You have entered a duplicate item. Please clear your changes

[APP–5249] Period already opened by another user

[APP–5251] The status entered for this effective date already exists

[APP–5253] Default receiving locator exists.

  Cause:
  A default receiving locator already exists for this item and subinventory.

[APP–5255] Default receiving subinventory exists.

  Cause:
  A default receiving subinventory already exists for this item.

[APP–5257] Duplicate Report Sequence Number, must be unique.

[APP–5259] Locators cannot be restricted with dynamic entry allowed

  Cause:
  Item is under Locator Control = Dynamic entry locator control

  Action:
  Locator control should be either "Prespecified locator control" or "No locator control"

[APP–5261] Effective date must be greater or equal to current date

[APP–5263] Token QUANTITY must be greater than zero

[APP–5265] Invalid date — cannot enter past date for period end date

[APP–5265] Specify a prefix and beginning number for the item or organization

  Action:
  In the Define Organization Parameters form, if serial number generation is at the organization level, you must specify the prefix and starting number in the Define Organization Parameters form. If serial number generation is at the item level, you must specify the prefix and starting number for that item in the Define Item form.

[APP–5266] No workdays defined for the current year

  Action:
  You must compile the calendar first.

[APP–5267] Cannot close this period — Period’s ’To’ Date has not passed.

[APP–5269] Please enter an inventory item

[APP–5270] Quantity entered exceeds maximum available receipt quantity

  Cause:
  At any time, you can only a receive a maximum of RMA quantity – delivered quantity

[APP–5271] Please enter either an inventory item or a subinventory
[APP–5271] Receipt quantity must be positive

[APP–5273] Error creating quantity tree in &ROUTINE

  Cause:
  A fatal error has occurred in constructing the quantity tree while calling &ROUTINE.

  Action:
  Please refer to additional support messages for the cause and call your support representative

[APP–5274] A child of an average costing organization must also use average costing

[APP–5275] Expense Account is required when Inventory Asset Value is "No" and Inventory Item is "Yes"

[APP–5275] Transactions exist — update not allowed

  Cause:
  If you are trying to update the master organization to one that is under average costing, you may also be changing the child's costing method to average costing. If transactions exist for this child, you cannot change the costing method and therefore, you cannot change the master organization.

[APP–5276] &ENTITY should be an expense item for the given &ENTITY2 combinations

[APP–5277] Quantity on hand exists for this subinventory — cannot change field

[APP–5277] You must enter field

[APP–5278] Quantity on hand exists for this subinventory — account cannot be edited

[APP–5279] Date must be greater than or equal to current date

[APP–5280] Item is already associated with all organizations for this item master
  All of the organizations belonging to this Item Master Organization are already associated with this item.

[APP–5281] You can only delete rows that have a status of 'Error'

[APP–5283] One GL download is processing. Please close the period later

[APP–5285] &ENTITY1 must be greater than or equal to &ENTITY2

[APP–5286] Bucket–type must be periodic to enter seasonality indices
  Bucket type must be periods to enter seasonality indices

[APP–5287] &ENTITY1 must be greater than &ENTITY2

[APP–5287] Transaction completed — &NUMBER rows processed

[APP–5288] You must select a physical inventory before continuing

[APP–5289] "From" serial number must be specified

[APP–5289] You must choose a physical inventory name
[APP–5290] Must open this period if any period afterward is open

[APP–5291] Primary issue subinventory is required before WIP supply locator

[APP–5291] Ranges cannot be built over different alphanumeric prefixes

[APP–5293] All serial numbers in a range must have the same number of digits

[APP–5294] Nettable code is required

[APP–5295] Serial number &token1 is currently used in the system

[APP–5297] Invalid transaction and serial control combination

[APP–5298] Item is manufactured, cannot be purchased

[APP–5299] On–hand quantity is negative for item ID &token choose a different update option

[APP–5301] Total lot transaction quantity does not match transaction quantity

[APP–5303] Lot transaction quantity cannot be zero

[APP–5303] You cannot commit until all items are assigned

[APP–5304] Item was not copied

[APP–5305] Transaction quantity cannot be zero

[APP–5307] &ENTITY1 must be a whole number greater than or equal to zero

[APP–5307] Bad safety stock code for item &item — changed to non–MRP planned
The MTL_SYSTEMS_ITEMS row for item &item contained an invalid value in the column
MRP_SAFETY_STOCK_CODE. This problem should be reported as a bug. The data problem has
been corrected by your form and you should be able to continue.

[APP–5309] &ENTITY1 must be a whole number greater than or equal to 1

[APP–5311] &ENTITY1 must be a whole number greater than zero

[APP–5312] You must enter a source organization when Source Type is inventory

[APP–5313] &ENTITY must be an integer quantity in the primary UOM under serial control
You have entered a transaction quantity of &QTY1 which converts to &QTY2 in primary unit of
measure. Please re–enter the transaction quantity.

[APP–5314] Invoicing rule is required for invoiceable items

[APP–5315] Planning items may not be internally–ordered items
Internal Ordered item may not be ”Yes” when BOM Item Type = ”Planning”

[APP–5317] Internal Orders Enabled cannot be ”Yes” unless Internal Ordered is ”Yes”

[APP–5319] Internal error in user exit &UXIT
There is an internal error in user exit &UXIT. Please contact application support for resolution
&ENTITY not valid. Please re-enter

&entity1 is not valid. &entity2

BOM Item Type must be "Standard" when Internal Ordered Item is "Yes"

You must define an inter-organization shipping network for this Source organization. You must have an inter-organization shipping network defined between the current organization and the Source Organization.

You must choose a Source Subinventory that is non-nettable. For intra-organization replenishment of an MRP planned item, you must choose a non-nettable Source Subinventory.

Value adjustment not allowed for item with no onhand quantities

Lot number is not unique across items

Subinventory is not reservable. Choose another

Subinventory not defined for item. Please define or change restriction code

Transaction date cannot be a future date

Error launching tag generation concurrent process

Invalid action code to the routine &ROUTINE. An invalid action was requested to the &ROUTINE. Please check the call parameters to the &ROUTINE.

Invalid conversion rate between &VALUE1 and &VALUE2. The error is probably caused by a division by zero.

You cannot commit until attributes have been queried

Interclass conversion between &VALUE1 and &VALUE2 is not defined. Use Define Interclass Conversions form to define interclass conversions

Invalid transfer subinventory

Transfer subinventory is not valid for the given transfer organization

Invalid transaction source segments

Item not found. Please re-enter

The transaction source segments are invalid. Please re-enter

Invalid transaction source type

Please enter a period start date as defined by your manufacturing calendar

The entered source type ID is either invalid or not supported by the open interface

Invalid subinventory
[APP–5342] Subinventory code is either not entered or not valid for the given organization

[APP–5343] Invalid transaction date

[APP–5343] UOM conversion between &VALUE1 and &VALUE2 is not defined

Action:
Use Define Unit of Measure Conversions form to define conversions

[APP–5345] Invalid transaction UOM

[APP–5345] Please enter a week start date as defined by your manufacturing calendar

[APP–5347] Please enter a valid work day as defined by your manufacturing calendar

[APP–5347] Transaction UOM is invalid for the given item and organization combinations

[APP–5348] Invalid transfer locator

[APP–5349] Invoice enabled cannot be "yes" unless item is invoiceable

Cause:
You cannot set Invoice enabled = "Yes" unless you set Invoiceable Item = "Yes"

[APP–5349] The Transfer Locator segments are invalid for the given transfer subinventory transfer organization combination

[APP–5350] Invalid transfer organization

[APP–5351] Item not found. Please re-enter

[APP–5351] Transfer organization is either missing, invalid, or not setup in the interorganization shipping network

[APP–5352] Invalid item segments

[APP–5353] The entered item segments are invalid or not found

[APP–5353] You have items assigned to the existing flex structure

[APP–5354] Invalid locator segments

[APP–5355] Change rejected — default category set/item attribute control level mismatch

Cause:
You cannot change the maintenance level to Item for a Category Set that is a Default Category Set if the controlling attributes are maintained at the item/organization level

Action:
Use Define Default Category Sets to see which functional areas your Category set is attached to.
Use the following table to see which attributes to change maintenance level for in the Define Item Attributes form.

<table>
<thead>
<tr>
<th>Functional Area</th>
<th>Item Attribute</th>
</tr>
</thead>
<tbody>
<tr>
<td>Inventory</td>
<td>Inventory Item</td>
</tr>
<tr>
<td>Purchasing</td>
<td>Purchasing Item</td>

</tbody>
</table>

Order Entry Customer Ordered Item
[APP–5355] The Locator segments are invalid for the given subinventory, organization combination

[APP–5357] For this transaction row either the lot records are missing or the lot quantity does not match the transaction quantity

[APP–5357] Warning: Altering the category set maintenance level may corrupt your data

[APP–5359] Item is not under serial number control

[APP–5360] Invalid organization

[APP–5361] \&ENTITY1 must be less than or equal to \&ENTITY2

[APP–5361] Organization ID is either blank or invalid. Please re-enter

[APP–5363] Invalid transaction source

[APP–5363] Locator selected has already been assigned to this item and subinventory

[APP–5364] Transaction source is either invalid or blank for this WIP transaction

[APP–5365] Can’t be ”dynamic” when locators are restricted

[APP–5365] Invalid distribution account segments

[APP–5366] The distribution account segments are invalid. Please re-enter

[APP–5367] Invalid item

[APP–5367] Locator is disabled or defined for another subinventory

[APP–5368] Engineering items are not allowed

[APP–5369] Locators cannot be restricted if subinventories are not restricted

[APP–5370] Cannot update when Internal Ordered Item = ”Yes”

[APP–5371] Locator is not valid for subinventory

[APP–5372] Transaction processor error

[APP–5373] Failed to generate lot number automatically. Please check lot defaulting controls.

[APP–5374] Demand-relieve error

[APP–5375] Oracle error

[APP–5375] There has been a database error in cleaning up lot numbers

[APP–5376] This item cannot be built because build in WIP = ”No”

The Make or Buy attribute may not be ”Make” unless the Build in WIP attribute is ”Yes”

[APP–5377] Only purchasable items may be bought

Make or Buy cannot be ”Buy” unless the Purchasable attribute is ”Yes”

[APP–5377] There has been a database insert error, please contact your dba or Oracle Support
[APP–5379] Category must be entered

[APP–5379] Lot number length must be greater than or equal to alpha prefix and less than or equal to 30.

[APP–5381] Lot numbers exist that have been used for different items Lot uniqueness will be violated – update not allowed

[APP–5381] Unit of measure conversions do not exist for this item

[APP–5383] No dynamic locators in an issue if negative on-hand balances are not allowed

[APP–5383] Warning: This master does not contain all the items defined in the child

[APP–5385] Maximum quantity must be greater than or equal to minimum quantity

[APP–5386] No valid item-revision combination exists in the destination organization

[APP–5387] Maximum order quantity must be a multiple of the fixed lot multiple

[APP–5388] Could not set new organization value

[APP–5389] Minimum quantity must be less than maximum quantity

[APP–5390] No transactions to commit

[APP–5391] Item is not an assembly

[APP–5391] The minimum min-max quantity must not exceed the maximum min-max quantity

[APP–5393] Item exists in another master organization — catalog groups must match

  Cause:
  This item has already been created in another master organization. Oracle Inventory ensures that the Item Catalog Group for an item is consistent across organizations. The ICG currently specified is not the same as the ICG of the existing item

  Action:
  Please change the ICG

[APP–5393] Option only enterable when in purchasing validation organization

[APP–5394] &ENTITY is not under lot or serial number control

[APP–5395] Item exists in another master organization — UOM’s must be in the same class

  Cause:
  This item has already been created in another master organization. Oracle Inventory ensures that the primary unit of measure for an Item belongs to the same unit of measure class across master organizations. The primary unit of measure currently specified does not belong to the unit of measure class of the existing item.

  Action:
  Please select a new primary unit of measure
[APP–5395] Not valid for item

[APP–5397] Average Cost has not been initialized for this item

[APP–5397] Item is defined in another master organization. Please clear your changes

  Cause:
The same item has just been inserted into another master organization with a different inventory item ID. Oracle Inventory ensures that the same item will have the same unique identifier across organizations. In this case, the duplicate item was inserted during the small window of time between the integrity check and commit time. This item cannot be inserted without causing severe data integrity problems

  Action:
Please clear your changes

[APP–5398] You must select statistical forecast method to add seasonality indices

[APP–5399] There are required descriptive element values that are missing
The Catalog Complete status for an item cannot be Yes until all the required descriptive elements values have been specified. If you have specified all the required descriptive element values, the form may not recognize this until you have committed your changes since the form checks the database to determine which descriptive elements are required and which ones have values specified.

[APP–5401] Pick Components must be "Yes" when Ship Model Complete is "Yes"

[APP–5401] Subinventory field is mandatory. Please enter

[APP–5403] Item cannot have pick components and be MRP– or MPS– or DRP– planned. Item cannot have Pick Components = "Yes" if MRP Planning Method is not 'Not Planned'

[APP–5405] This item cannot be OE–transactable
An item may not have OE Transactable = "Yes" unless Reservation Control = "Reservable" and Calculate ATP = "Yes"

[APP–5405] You must have at least one approval tolerance specified

  Cause:
When approval is required for out of tolerance adjustments, at least one tolerance must be specified.

[APP–5407] Quantity will drive inventory negative

[APP–5408] Starting serial number is required when serial number control is "Predefined serial numbers"

[APP–5409] To serial number must be after from serial number

[APP–5410] Failed to fetch status details
Update of the function controlling attribute failed because the relevant status and status attribute value information could not be found.

[APP–5411] Changing conversions that have been used in transactions may cause severe data corruption. Please make certain that this conversion has not been used before accepting changes.
[APP–5413] You can’t delete this ABC Class. It is used either in an ABC Group or as a Cycle Count Class.

[APP–5415] You cannot delete &ENTITY that is in use

[APP–5417] &ENTITY is not defined

[APP–5419] Requested serial quantity &token exceeds possible range of serial numbers

[APP–5419] You cannot create additional &ENTITY

[APP–5421] ATP Components cannot = ”Yes” when Pick Components = ”No,” Assemble to Order = ”No,” and WIP Supply Type is not ”Phantom”

[APP–5421] Service level must be greater than or equal to 0.5 and less than 1.0

[APP–5423] You may not define intra–class conversions for base units. Please select a non base unit of measure before attempting to define or query intra–class item–specific conversions.

[APP–5425] No calendar for this organization: Create a calendar via the Define Workday Calendar form and link that calendar to your organization via the Define Organization Parameters form.

[APP–5427] No changes to commit

[APP–5429] Cannot delete/update default category if Use Valid Category List is Yes.

[APP–5429] Cannot inspect items being received into stores

[APP–5430] Scheduled return quantity has already been received

[APP–5431] Please select an item with non–MRP planned safety stock

[APP–5431] You can not define conversions for inactive units of measure or classes with inactive base units. Requery the zone to view existing conversions, or select a non–disabled unit of measure for which to define conversions.

[APP–5432] Sequence number exceeds number of items in ABC compile

[APP–5433] Dynamic tag entry is not enabled for this physical inventory

[APP–5435] &ENTITY is a future date
The date you have entered cannot be a date in the future. Please enter a past date or today’s date.

[APP–5437] Item not defined under the organization

[APP–5439] The locator you selected does not exist within this subinventory

[APP–5439] You must enter a value for &ENTITY
You must enter a value for &ENTITY

[APP–5440] Reservable type is required

[APP–5441] Form is unable to find master organization information
Navigate to the Define Organization Parameters form and either associate your organization with a Master Organization or make your organization a Master Organization by associating it with itself. If Oracle Inventory is not installed, verify that the MFG_ORGANIZATION_ID profile is set.
[APP–5441] Required when response time period is specified

[APP–5442] Please enter a value greater than or equal to &MINVALUE and less than &MAXVALUE

[APP–5443] Negative balances not allowed

[APP–5443] Receiving parameters must be defined before items

[APP–5445] Cannot close this period — No open period exists for this organization

[APP–5447] No open period found for date entered

[APP–5449] &ENTITY cannot be a past date
The date you have entered cannot be a date in the past. Please enter a future date or today’s date

[APP–5451] &ENTITY is in the past open period
The date you have entered is in the past open period

[APP–5453] You cannot delete a status which is pending assignment

[APP–5455] You cannot delete a status which has item assignments

[APP–5456] Quantity must be entered for item &entity

[APP–5457] Quantity does not convert to integer number of serial numbers. Please re-enter

[APP–5457] You cannot delete a status which has item template assignments

[APP–5458] Please query first to view information

[APP–5459] Please query an existing record first

[APP–5459] You cannot delete a Transaction Source Type associated to a Transaction Type or Material Reservation

[APP–5460] The character "'" is not allowed. Please re-enter

[APP–5461] Digit increments must be numerical

[APP–5461] Previous accounting period is not opened yet

[APP–5462] Only one primary subinventory allowed per item

[APP–5463] Only one primary locator allowed per subinventory

[APP–5463] Warning: Sales order line processing may be affected At least one open sales order line exists which has a different value for &ATTRIBUTE than the value you are trying to enter. If such an order line has not passed all of the following cycle actions or processes, you are likely to encounter problems processing the order line(s): * Order Scheduling * Demand Interface * Pick Release * Ship Confirmation * Update Shipping * Inventory Interface

[APP–5464] Sequence for inventory value must be greater than prior class end sequence

[APP–5465] Error while finding the difference between two Oracle numbers
[APP–5465] Sequence number must be greater than last sequence number of prior class

[APP–5466] Value must be greater than prior class value

[APP–5467] The minimum order quantity must not exceed the maximum order quantity

[APP–5468] &PROCESS completed

[APP–5469] You can update records only related to the previously selected item

[APP–5471] On–hand quantity exists for this locator — subinventory cannot be changed

[APP–5471] This organization is a master for other organizations — update not allowed

[APP–5473] The physical inventory you selected does not require approvals

[APP–5473] Warning: Another organization has specified that serial numbers be unique across organizations

[APP–5475] This adjustment has been posted. No changes may be made

[APP–5475] Updatable only when Purchased Item is "Yes"

[APP–5477] Outside Processing Unit Type is required for Outside Processing items
If Outside Processing = "Yes" then you must choose a value for Outside Processing Unit Type

[APP–5477] Purchasing information only enterable when item is purchased

[APP–5478] Option only enterable when Oracle Purchasing is available

[APP–5479] Item is purchased — cannot be manufactured

[APP–5479] Please commit or clear your changes first

[APP–5480] You are over–receiving item &token

[APP–5481] Partial values must be entered

[APP–5481] Pending changes to the status exist at the item/org level — cannot change
You cannot change the control level of the Item Status to Item Level when there are pending changes to the Item Status at the Item/Organization level. Oracle Inventory ensures that item attributes that are controlled at the Item level have consistent values across organizations. However, pending changes at the Item/Organization level would violate this constraint. These pending changes must be deleted from the Pending Status form (or from the mtl_pending_item_status table)

[APP–5483] Period Close cancelled

[APP–5485] Period Close failed

[APP–5486] Further information not yet available — period not closed

[APP–5487] Order of period end dates must be preserved

[APP–5488] Material parameters must be defined before defining items
[APP–5489] Item cannot have Pick Components = "Yes" when Assemble to Order = "Yes" or BOM Item Type = "Planning" or MRP Planning Method is other than "Not Planned"

[APP–5490] &MINMAX order quantity must be a multiple of the fixed lot multiple

[APP–5491] Pick Components cannot = "No" because ATP Components = "Yes"

[APP–5493] Inventory parameters must be defined for &ENTITY

[APP–5493] Picking rule already used

[APP–5495] Planning time fence days is required
Planning Time Fence Days is required when the Planning Time Fence is "User–Defined"

[APP–5496] Release Time Fence Days is required

Cause:
Release Time Fence Days is required when Release Time Fence is "User–Defined"

[APP–5497] An error has occurred while building RMA information for querying. Please check your RMA number.

[APP–5497] Subinventory must be entered

[APP–5498] You cannot enter unscheduled counts for this header

[APP–5499] An item may not be purchasable unless it is a purchased item An item may not have Purchasable set to "Yes" unless Purchased is also set to "Yes"

[APP–5499] This physical inventory has generated adjustments and cannot be updated

[APP–5500] Zone Erase is not allowed in this zone

[APP–5501] &PROCESS failed

[APP–5501] &VALUE number already used

[APP–5503] Purge tags only (alternatively, purge the entire physical inventory)?

[APP–5505] Not valid for phantom assembly

[APP–5505] You cannot update this field when on–hand quantity exists

[APP–5506] Purchasing class must be entered

[APP–5507] There were no &ENTITY records found

[APP–5507] You cannot update this field when: – On–hand quantity exists – Pending transactions exist – Uncosted transactions exist

[APP–5508] Row copy not allowed

[APP–5509] Cannot update when using the form in Query Mode

[APP–5509] Row create not allowed
[APP–5510] Row delete not allowed

[APP–5511] No safety stocks are stored for MRP–planned safety stock type
You cannot navigate to the Item Safety Stock Zone for an MRP Planned Item because MRP will
calculate the Safety Stock, not this form. If you wish to calculate your own safety stock you must
change Safety Stock Type to: Non–MRP planned.

[APP–5511] Results will return a subset of rows selected through main query

[APP–5512] Screen Erase is not allowed in this zone

[APP–5513] Status must be entered

[APP–5513] Token ISSUE_RECEIPT must be either I or R

[APP–5515] At least one numeric digit must be specified to use ranges

[APP–5516] &ROUTINE cannot allocate enough memory to &VAR

[APP–5517] All serial numbers in a range must have same number of digits

[APP–5517] MRP not installed
You selected an option that required MRP to be installed. The MRP application is not installed.

[APP–5519] ”To” serial number must be greater than ”from” serial number

[APP–5521] Ranges cannot be built over different alphanumeric prefixes

[APP–5521] Receipt quantity exceeds available quantity
Receipt quantity should always be less than or equal to (RMA Quantity – Received Quantity)

[APP–5522] Return quantity exceeds available quantity
The total return quantity should always be less than or equal to (Received Quantity – Delivered Quantity)

[APP–5523] Quantity must be greater than zero

[APP–5524] You must define receiving parameters for the destination org

[APP–5525] On–hand quantity exists for item, cannot change this value

[APP–5526] Invalid locator

[APP–5527] Invalid item revision

[APP–5527] Warning: On–hand quantity exists for this subinventory

[APP–5528] Invalid transaction reason

[APP–5529] Invalid transaction type

[APP–5529] Receipt quantity exceeds available quantity (difference between total and already
received quantities)

[APP–5530] Invalid transaction action
[APP–5531] Invalid user

[APP–5531] You cannot relate an item to itself

[APP–5532] Invalid shipment number

[APP–5533] Invalid freight code

[APP–5533] This shipping network is being used by a transaction. It cannot be deleted.

[APP–5534] Invalid freight account

[APP–5535] Invalid distribution account

[APP–5535] Repetitive planning is required for MRP– or MPS– or DRP– planned items. You must choose either "Yes" or "No" for the attribute Repetitive Planning if your item is an MRP or MPS or DRP planned item.

[APP–5536] Invalid transaction quantity

[APP–5537] Cannot update because the item has already been scheduled
Cannot update when rows exist for this item in the mrp_schedule_items table

[APP–5537] Invalid job

[APP–5538] Transaction source — sales order is invalid. Please re-enter

[APP–5539] Item cannot have Assemble to Order = "Yes"
This condition applies when Pick Components = "Yes" or BOM Item Type = "Planning"

[APP–5539] Transaction source — GL account is invalid. Please re-enter

[APP–5540] Transaction source — account alias is invalid. Please re-enter

[APP–5541] Report request &REQUEST_ID has been sent to the concurrent manager

[APP–5541] Subinventory code is not in the restricted list of subinventories for the item

[APP–5542] Locator is not valid. Please re-enter

[APP–5543] &ENTITY is required.

[APP–5543] Locator is not in the restricted list of locators for the item

[APP–5544] The item revision is not valid. Please re-enter

[APP–5545] Transaction reason is not valid. Please re-enter

[APP–5545] You must enter a value for &ENTITY

[APP–5546] Transaction action is not valid or not supported by open interface. Please re-enter

[APP–5547] Field is required

[APP–5547] Transaction type is not valid or not supported by open interface. Please re-enter
[APP–5548] Transaction quantity has an incorrect sign for the given transaction action

[APP–5549] Inventory item is not valid in the transfer organization or does not have the right status to be processed

[APP–5549] Item cannot be “not reservable” when there are reservations defined

[APP–5550] The user processing the transaction is not defined

[APP–5551] Cannot be restricted
Cannot be Restricted when Subinventories are not restricted or when Locators may be Dynamically specified.

[APP–5551] The subinventories have incompatible types with respect to transaction type and item type

[APP–5552] The shipment number is not unique, it has been used previously

[APP–5553] An error occurred while retrieving the open period ID

[APP–5553] Freight code is not valid. Please re-enter

[APP–5554] The transportation account is not valid for the given freight code

[APP–5555] Return quantity exceeds available quantity (quantity in inspection)

[APP–5555] Transfer locator is not in the restricted list for the given item in transfer organization

[APP–5556] Transfer locator is not valid for the item in the transfer organization

[APP–5557] Revision and effectivity date must be in the same order

[APP–5557] Transfer subinventory is not in the restricted list for the item in transfer organization

[APP–5558] Distribution account is not valid for the given organization. Please re-enter

[APP–5559] An error has occurred while updating the RMA tables.

[APP–5559] Replenishment count item(s) must be entered first

[APP–5561] Rolling back database changes...

[APP–5563] Attempting to reserve record for update or delete (^C to cancel)...

[APP–5565] An error has been encountered while cleaning up database changes made by RPC.

[APP–5565] You cannot generate tags for this physical inventory

  Cause: You have selected a physical inventory the snapshot for which has not completed.

  Action: Wait for the snapshot to complete and then reselect.

  Action: Select another physical inventory.

[APP–5566] Inconsistent data found in the On–hand quantity stack This error is due to inconsistent data in the On–hand quantity stack table (MTL_ONHAND_QUANTITIES). In particular, the
locator control attribute for an item with On–hand quantity different from zero is flipped. To fix this problem, you need to put the On–hand quantity information for the item that failed in synch with the item’s current locator control attributes. For example: if the item is no longer under locator control, then you would first empty out all the locators with item quantity, then change the locator control attribute, and finally receive item’s quantities back in.

[APP–5567] A database error has occurred for transaction header id = &header_id

[APP–5567] You have not entered values for all required columns in mtl_system_items_interface

Cause:
You cannot create an item unless you enter values for all required columns in mtl_system_items_interface.

Action:
Please enter values for process_flag, organization_code or organization_id, item_number or segment1 through segment20, process_flag and transaction_type.

[APP–5568] You entered an invalid value for the attribute

Cause:
Invalid value for attribute

[APP–5569] Safety Stock cannot be ’MRP planned percent’ unless MRP– or MPS– or DRP– planned. MRP Planning Method must not be ’Not Planned’ for Safety Stock to be ’MRP planned percent’

[APP–5569] You have violated one or more interdependency conditions between two attributes

[APP–5571] There has been database error cleaning up serial numbers

[APP–5573] Length of prefix plus number cannot exceed 30 digits

[APP–5574] Compile is currently used in an ABC Group. Cannot Purge.

[APP–5575] Count quantity for items under serial control must be 1 or 0

[APP–5575] Successfully purged MTL_ABC_COMPILES table.

[APP–5577] You are trying to use one or more serial numbers that are not available for use in this transaction.

[APP–5579] Successfully purged MTL_ABC_ASSIGNMENTS table.

[APP–5579] There are serial numbers that already violate this uniqueness constraint – update not allowed
[APP–5580] Successfully purged MTL_ABC_ASSGN_GROUP_CLASSES table.

[APP–5581] Total serial numbers does not match the transaction quantity

[APP–5583] Service Item cannot be "Yes" when Serviceable Product is "Yes"

[APP–5585] Required when service duration period has been specified

[APP–5587] Serial number &token has an invalid current status
The valid current status for a serial number is 1,3,4,5.

[APP–5588] You can only delete records that have a status of 'Processing'

[APP–5589] Serial number &token1 resides in a different locator

[APP–5591] Serial number &token1 is defined for under a different lot number
The serial number &token1 is defined under a different lot number &token2.

[APP–5593] Serial number &token does not exist for the given item
The serial number does not exist for this item. Also you cannot dynamically create a serial number for this item.

[APP–5595] &ENTITY cannot be a date in the past
The date you have entered is in the past. Please enter today’s date.

[APP–5595] Serial number &token is defined in a different organization

[APP–5596] Internal applications error has occurred

Cause:
An internal error has occurred in this application. Please contact your support representative for assistance.

[APP–5597] Serial number &token1 is defined for a different revision
The serial number &token1 is defined for a different revision number &token2

[APP–5598] &ENTITY1 must be Unique.

[APP–5599] Please enter all &SOURCE_TYPE information before continuing

[APP–5599] Serial number &token is not available for this transaction
The serial number has a current status that is invalid for this transaction.

[APP–5601] Do you wish to re–calculate the &ITEM?

[APP–5601] Serial number &token1 resides in a different subinventory &token2

[APP–5603] Serial number &token1 is used in another organization and it fails the uniqueness constraint across organizations

Cause:
In the Define Organization Parameters form, the Serial Number Uniqueness option = Unique across organizations
Action:
Use another serial number

[APP–5605] Serial number &token1 is currently used in this organization

[APP–5606] You cannot update or delete a frozen movement

[APP–5607] You must maintain the related category set at the Item/Org level

Cause:
The default category set for a functional area must be maintained at a level equal to or below that of the related item–defining attribute. By changing the control level of the current item defining attribute, you would be violating this requirement.

Action:
Do not change the control level of the current item–defining attribute

[APP–5608] The deletion of this movement will be immediately committed. Continue?

[APP–5609] Required when under shelf–life control

[APP–5609] This is the first page for zoom transactions

[APP–5610] Movement Parameters already exist for this Entity Name

[APP–5611] Planning items and Support Service items may not be shippable items. Shippable Item may not be "Yes" when BOM Item Type = "Planning" or Support Service is "Yes"

[APP–5611] You cannot delete records for entities used in movement statistics

[APP–5612] You can only enter movement details for In–transit Transfers

[APP–5613] Please enter a transaction before recording the movement details

[APP–5613] Shrinkage must be less than 1

[APP–5614] No closed period found for date entered

[APP–5615] Source Organization is required when Source Type is Inventory

[APP–5616] You cannot delete a Transaction Type associated with material transactions

[APP–5617] OE transactable cannot be "no" when demand exists for the item

[APP–5617] You can only decrease the Quantity

[APP–5619] Ending tag digits must match starting tag digits

[APP–5621] Starting lot number is required when lot control code is "full lot control"

[APP–5623] This attribute is not updatable because it is under status control

[APP–5625] The control level may not be updated when there are pending changes
When updating the control level for the item status attribute, the form ensures that the status attributes that are under status control or default control are maintained at the same level. If
pending changes are not committed or cleared, the form may not be using the current state of the
status attributes and may not correctly keep the control levels consistent.

[APP–5627] An item may not be stockable unless it is an inventory item
An item may not have Stockable = "Yes” unless the Inventory Item attribute is also "Yes”

[APP–5629] Subinventory selected is already assigned to this item

[APP–5631] Subinventory is required

[APP–5633] Submission of transaction worker to process header ID &TOKEN failed

[APP–5635] Warning: This may cause on–hand balances in subinventories to be invalid

[APP–5637] Non–numeric digits must be constant

[APP–5639] Ending tag number must be greater than or equal to starting tag number
You have entered a starting and ending tag combination in which the ending tag is less than the
starting tag. Oracle Inventory will not generate any tags

[APP–5641] Digit increments must be numerics

[APP–5643] This tag already exists. Please enter a unique tag number

[APP–5645] You must have enough digits in your tag numbers to accommodate this number of tags

[APP–5647] The Remote Call failed because no manager was available.

[APP–5649] The Remote Call failed due to a time out.

[APP–5651] You must define a Transaction Source Type before defining Transaction Type

[APP–5653] An item may not be transactable unless it is stockable

Cause:
An item may not have Transactable = "yes” unless Stockable = "yes.”

Action:
First set Stockable = "yes” and then set Transactable = "yes”

[APP–5655] &ENTITY failed. Try again?

[APP–5657] Transactions exist — update not allowed

[APP–5659] &VALUE1 is already assigned to another class

[APP–5661] Unit of measure information for &UOM is not found
Unit of measure &UOM does not exist

[APP–5663] If you change your costing method you must update your setup accounts

[APP–5665] You must review your item, subinventory and organization encumbrance accounts

[APP–5667] Row exists. Query this row and update
[APP–5669] Warning: Altering this value will cause every item’s (assigned this status) attribute to be updated

[APP–5670] Posting is not allowed for this account

[APP–5671] Updating the item master organization may corrupt your data. The compatibility of items, item attributes, and item costs in the new item master should be verified before proceeding. Accept changes?

[APP–5673] Warranty must be "No" if BOM Item Type is not "Standard" or Support Service is set to "No"

[APP–5675] WIP Supply Type must = "Phantom" because ATP Components = "Yes"

[APP–5677] Calculation and update of WIP cumulative values failed

[APP–5679] Warning: WIP will not build this item when Pick Components = "Yes"

[APP–5681] Value must be a number

[APP–5683] Zero count, no adjustment performed.

[APP–5685] This function will clear the entire form

[APP–5688] Inventory item ID is invalid or does not have the flags enabled correctly to be processed by material processor

[APP–5691] An error occurred while cleaning up orphaned dynamic serial numbers.

[APP–5694] Transaction quantity is greater than available RMA quantity in inspection.

[APP–5695] Item should be Container for Container Type to exist

[APP–5696] Make the item Container or Vehicle before entering values here

[APP–5699] An error occurred while relieving reservations.

[APP–5700] Returnable must be "No" when Support Service is set to "Yes"

[APP–5700] Warning: Mandatory Intercompany Relation not defined

  Cause:
The selling and shipping operating unit belong to different legal entities but the intercompany relation has not been defined.

  Action:
Use the Define Intercompany Relations form to define the intercompany relation between these two operating units.

[APP–5701] Inventory Item cannot be "Yes" when Support Service is set to "Yes"

[APP–5701] Warning: Cannot retrieve the currency exchange rate

  Cause:
Currency conversion rate for the desired date and rate type has not been defined.
Action:
Use the Define Daily Conversion Rates form in Oracle General Ledger to define the required conversion rate.

[APP–5702] Purchased Item must be "No" when Support Service is set to "Yes"

[APP–5702] Warning: Cannot create invoice header

[APP–5703] Cycle Count Enabled must be "No" when Support Service is set to "Yes"

[APP–5703] Warning: Set of books info not found for id &ID

[APP–5704] Check ATP must be "No" when Support Service Item is set to "Yes"

[APP–5704] Warning: Cannot create invoice line

[APP–5705] Postprocessing Lead Time must be 0 when Make or Buy = "Make"

[APP–5705] Warning: FlexBuilder failed to generate a CCID for this invoice line

[APP–5706] Cannot enter Tax Code

Cause:
The item is not taxable.

Action:
Set Taxable to Yes.

[APP–5706] Warning: Cannot retrieve transfer price for the item

[APP–5707] Customer and site use info not found for this operating unit.

[APP–5708] Vendor and/or vendor site information not found

[APP–5709] Invalid Receivables transaction type for id &ID

[APP–5710] Source length must be less than 30

[APP–5711] Cannot get profile value &PROFILE for the operating unit &ORG.

[APP–5711] Successfully purged MTL_CC_SCHED_COUNT_XREFS table.

[APP–5712] Multiple, conflicting profile values &PROFILE for the operating unit &ORG.

[APP–5713] Successfully purged MTL_CC_SCHEDULE_REQUESTS table.

[APP–5713] Warning: Cannot retrieve code combination

[APP–5714] Successfully purged MTL_CYCLE_COUNT_ITEMS table.

[APP–5714] Warning: Cannot retrieve freight code combination

[APP–5715] Successfully purged MTL_CC_SUBINVENTORIES table.
Warning: Tax code &CODE does not have a code combination

Successfully purged MTL_CYCLE_COUNT_CLASSES table.

Warning: This vendor site has no default tax code

Successfully purged MTL_CYCLE_COUNT_HEADERS table.

Warning: Invalid batch source attribute

Cause:
Batch source &BATCH does not allow sales credit while your AutoAccounting rule for operating unit &OU uses salesrep in one or more of the account segment assignments.

Action:
Please change the Allow Sales Credit flag for the batch source to Yes before proceeding.

The subinventory you specified was not found. It may have been non-reservable.

Warning: Invoice creation aborted

Warning: Cannot retrieve seeded batch source information

Warning: Invalid freight item

Warning: Cannot retrieve price list from bill-to site information

Warning: Cannot retrieve payment term from bill-to site information

&MISSING_FIELD is required. Please enter a valid value

Please enter the time in the 24 hour format: HH:MM

Please enter the date in the format DD-MON-YYYY

Save your &INFORMATION_TYPE or display another before continuing

The Inactive Date must be on or after today’s date.

This record has been entered already

System Error: Concurrent manager failure

Element rules already exist for this Classification.

Cause:
You are trying to &INS_OR_DEL a &CLASSIFICATION_NAME classification rule for which &INC_OR_EXC element rules already exist within this set.

Action:
Please delete the &INC_OR_EXC element rules for the &CLASSIFICATION_NAME classification first.

Too many hours for the frequency you have chosen.
Cause:
You are trying to define too many working hours for the frequency you have chosen.

Action:
Enter a suitable number of working hours: Up to 24 working hours per Day ” 168 ” per Week ” 744 ” per Month ” 8784 ” per Year.

[APP–6016] The value name includes reserved words or characters

Action:
Only alphanumeric or underscore (_) characters are valid. Also, you cannot start a name with a number.

[APP–6018] &MINIMUM value must be less than or equal to &MAXIMUM value

[APP–6020] You cannot update predefined system data.

[APP–6021] End Date must be later than the Start Date

[APP–6024] You cannot delete information in a 'query–only' region

[APP–6028] A restriction with this value already exists

[APP–6030] A customization with this name already exists

[APP–6034] You created this employee in another Set of Books

Cause:
You are trying to enter the expense account field for an employee someone created in another set of books.

Action:
You must use that set of books to edit the employee’s expense account information.

[APP–6035] Warning: Invalid data in key flexfield

[APP–6039] Cannot get &FLEXFIELD_STRUCTURE flexfield structure

[APP–6041] This screen cannot be accessed when Human Resources is installed

Cause:
The screen attached to this menu option cannot be used when either Oracle Human Resources or Oracle Payroll is installed.

Action:
Replace the screen with the appropriate screen from Oracle Human Resources.

[APP–6042] You cannot update predefined system data

[APP–6043] Please define a security profile for your Business Group

[APP–6044] You cannot delete predefined system data

[APP–6045] You cannot delete predefined system data
[APP–6046] Your user–profile options are set incorrectly to use this screen.

    Cause:
    Your ’HR:Business Group’ user–profile option is not set correctly.

    Action:
    Your System Administrator should set your ’HR:Business Group’ user–profile option to a valid
    business group.

[APP–6047] This employee is not assigned to a Payroll

    Cause:
    You cannot create Nonrecurring, additional, adjustment or override element entries for employees
    who are not assigned to a Payroll.

[APP–6048] You cannot delete this record. It is used by Oracle Purchasing

[APP–6050] This set is used in a form customization

    Action:
    You must first delete this element set from the form customization that uses it.

[APP–6051] You cannot delete a set that is used in an element definition.

    Cause:
    You are trying to delete a set that is used in the definition of an element on the Define Element
    Form.

    Action:
    You must first delete the element definition on the Define Element form, if it is not being used,
    before you can delete this set.

[APP–6052] You cannot insert generic data.

    Cause:
    You are attempting to insert data in generic mode without defining any ownership definitions for
    this session.

    Action:
    Remove the changes you have made. Then enter at least one ownership definition using the ’Define
    Default Owning Parameters’ (PAYLODOP) screen.

[APP–6053] You cannot insert startup data.

    Cause:
    You are attempting to insert data in startup mode without defining any ownership definitions for
    this session.

    Action:
    Remove the changes you have made. Then enter at least one ownership definition using the ’Define
    Default Owning Parameters’ (PAYLODOP) screen.

[APP–6054] You cannot delete a set that is used by a payroll action.
Action:
You must delete the payroll action that uses this set before you can delete the set from this form.

[APP–6055] Enter a unique name for this set

[APP–6058] You cannot delete a period type that is used by a Payroll

[APP–6064] This element has been closed for entry

[APP–6067] This application has a future end-date

Cause:
You cannot create an assignment for an application that already has an end date in the future. This may have been caused by hiring or terminating the applicant, or by a date-effective deletion.

[APP–6068] You must choose a &RECORD before you can continue

[APP–6069] This action will interrupt the assignment continuity

Cause:
An application must have at least one assignment at all times. This operation will delete or date effectively end the assignment so that the continuity is broken.

[APP–6071] You cannot end an assignment with future changes

[APP–6073] Invalid or inactive status

[APP–6074] Current or future payroll periods are closed
You cannot create or modify any element entries unless the period is open for input or the element cannot be processed.

[APP–6075] A recurring entry for &ENTRY_TYPE already exists
You can change the existing entry to show the new values, or delete the existing entry.

[APP–6076] These dates overlap those for an existing hierarchy

[APP–6077] You cannot enter duplicate hierarchy version numbers

[APP–6078] System Error: Form &FORM Block &BLOCK Trigger &TRIGGER Step &STEP

Cause:
System Error at Form: &FORM Block: &BLOCK Trigger: &TRIGGER Step: &STEP

[APP–6080] You cannot use this status
The first status for an assignment must have a system value of ’ACTIVE_APL’

[APP–6083] This assignment has a future status of TERM_APL or ACTIVE_ASSIGN

[APP–6084] You cannot delete this hierarchy while versions still exist

[APP–6085] You may have only one primary hierarchy

[APP–6087] This is the top position in this hierarchy

[APP–6088] System Error: Form &FORM Trigger &TRIGGER Step &STEP
Cause:
System Error at Form: &FORM Trigger: &TRIGGER Step: &STEP

[APP–6091] Cannot get &LOOKUP_TYPE lookup type

[APP–6093] System Error: Cannot retrieve information from &TABLE

[APP–6094] System Error: Cannot update &TABLE

[APP–6099] System Error: Failure retrieving &USER_PROFILE user profile

[APP–6102] The position is now inconsistent with the new organization

Cause:
You have changed the organization but not the position. The position does not exist in the organization you have selected.

Action:
Enter a valid position for the organization.

[APP–6105] The dates overlap those of an existing budget version

[APP–6107] This budget version number already exists

[APP–6108] A balance with this name already exists

[APP–6110] Delete recruiting for records first. This recruitment activity is recruiting for one or more vacancies.

[APP–6111] Other recruitment activities are within this activity. Update or delete the subsidiary recruitment activities before you delete this one.

[APP–6113] A recruitment activity with this name already exists

[APP–6114] The closing date must be later than the start date

[APP–6116] This element classification already feeds this balance

[APP–6117] This dimension already exists for this balance

[APP–6120] This vacancy already exists for the recruitment activity

[APP–6121] Vacancy does not exist at start of recruitment activity

Cause:
You have changed the start date of the recruitment activity so that one of the vacancies is no longer valid.

Action:
The recruitment activity start date must be on or before the start dates of all the vacancies covered by that activity.

[APP–6122] Organization is not valid at start of recruitment activity

Cause:
The 'Run By' organization must exist at the start date of the recruitment activity. You have changed the start date of the activity so that this is no longer true.
Action:
Check the start date of the ‘Run By’ organization for the earliest start date of the activity.

[APP–6123] This &INFORMATION_TYPE name already exists

[APP–6124] You must delete any vacancies for this requisition first

[APP–6125] This vacancy has an applicant assigned to it
You must delete the applicant assignment before you can delete the vacancy.

[APP–6126] This vacancy is used in a recruitment activity
Delete the &VACANCY_NAME vacancy from any recruitment activity that uses it. Then delete
the vacancy.

[APP–6127] &INPUT_VALUE_NAME must be entered

[APP–6128] There is no hot default value for &INPUT_VALUE_NAME

Cause:
&INPUT_VALUE_NAME has been defined with a 'hot' default, but no value can be found for the
default at the element type or element link levels.

Action:
Ask your System Administrator to check the definitions for this element. If you do not require a
default value for &INPUT_VALUE_NAME, then enter the value.

[APP–6130] You cannot delete this organization, people are assigned to it

[APP–6131] You cannot delete this Organization, Jobs exist for it

[APP–6132] Element link does not exist for the duration of the entry

Cause:
The link has been purged or date effectively deleted.

Action:
Check the effective start and end dates on the link definitions for this element.

[APP–6136] This classification is not enabled

[APP–6137] This name already exists

[APP–6138] This Reporting Name already exists

[APP–6140] You cannot define a standard link for a nonrecurring element

[APP–6141] You cannot have a supplementary run for a nonrecurring element

[APP–6142] Nonrecurring elements cannot have an additional entry

[APP–6143] An 'HR User' cannot define elements with indirect results

[APP–6144] An 'HR User' cannot define elements as adjustment only

[APP–6145] Output currency must match the currency of your business group
[APP–6146] This assignment number already exists

[APP–6147] You cannot update this field
If element links exist for this element you cannot change any of the following attributes: Standard Link, Input Currency, Output Currency, Adjustment Only, Indirect Only, Additional Entries Allowed, Termination Rule. Changes to these attributes could cause processing to become inconsistent.
You must delete the links before you can update any of these fields.

[APP–6148] System Error: A unique assignment number cannot be generated

[APP–6149] You cannot update the processing priority
This may produce a formula result rule with a result that conflicts with the element that feeds it.
Check the processing priority values of your elements.

[APP–6150] Probation end date must be greater than assignment start date

[APP–6151] Projected Date must be less than or equal to Actual Date

[APP–6152] Projected Date must be greater than Start Date

[APP–6153] System Error: Procedure &PROCEDURE at Step &STEP

  Cause:
The procedure &PROCEDURE has created an error at Step &STEP.

  Action:
Contact your system administrator quoting the procedure &PROCEDURE and Step &STEP.

[APP–6154] Termination notified date must be greater than start date

[APP–6155] You cannot delete an element while links exist
You must delete the element links before you can delete the element.

[APP–6157] You cannot delete elements that have formula result rules
Delete any formula result rules before trying to delete the element.

[APP–6158] Standard Process date must be greater than Actual Termination date

[APP–6159] Final Process date must be greater than Standard Process date

[APP–6160] Final Process date must be greater than Actual Termination date

[APP–6161] You cannot delete an organization that has a classification

[APP–6162] No translation can be found for this Pay Value name

[APP–6163] This User Name already exists

[APP–6164] The Default value must also be Active

[APP–6167] You can define only six input values for an element

[APP–6168] This input value name already exists for this element
[APP–6169] Database items for nonrecurring input values must be numeric

[APP–6170] This validation combination is incorrect
The only combinations that will be accepted are:
Default, Maximum and Minimum
Default and Lookup (Default must be valid for lookup type)
Formula Id (No other validation)

[APP–6171] Default value is invalid for Lookup Type

[APP–6173] You cannot update a vacancy that has an applicant assignment

[APP–6176] You cannot update a vacancy that has an applicant assignment

[APP–6177] You cannot update the input value name
Possible causes are: The input value is the 'Pay Value'; You are trying to make this input value the 'Pay Value'; You are trying to date effectively update the name; You have already used this input value name in a compiled formula.

[APP–6178] You cannot change the unit of measure
You can only update units of measure for elements that are not processed in a payroll run.

[APP–6179] You cannot make this a required value if links already exist

[APP–6181] You cannot update the 'Error' option when entries exist

[APP–6183] This is the top organization in the hierarchy

[APP–6185] This balance feed already exists

[APP–6186] This subordinate already exists

[APP–6187] An override already exists for this element
You can override the entry for an element only once in a period. Check the override entry that already exists.

[APP–6188] This date would invalidate part of your vacancy
This would make the start date of the vacancy before the start date of the &PART in your vacancy.

[APP–6189] You cannot override an entry when an adjustment already exists

[APP–6190] You cannot delete organizations that also have subordinates

[APP–6191] You cannot delete this default value
You are trying to delete a hot default value that may invalidate some of the entries for this element. Replace the default value and check the links for this element to make sure that all your entries will have a default value that is available at run time.

[APP–6192] You cannot delete the minimum value
This action would mean that some hot defaulted mandatory values would not have a value at run time.
Check that all your element links have a minimum default value.

[APP–6193] You cannot delete the maximum value
This action might result in maximum values not being available at run time for mandatory entries.
Check that all the links for this element have maximum default values or re-enter the maximum value.

[APP–6194] The entry does not exist for the duration of the adjustment
You are trying to enter an adjustment when the recurring entry does not exist for the whole of this period.
Check the start and end dates of the recurring entry before trying to make the adjustment.

[APP–6195] You cannot adjust an entry that already has an override
Check the entry and the override values for more information.

[APP–6196] You can enter an adjustment only once in each period
Check the existing adjustment for this entry for more information.

[APP–6197] You cannot enter new input values
If you are trying to define a required input value there must be no existing element entries.
If the input value is not required there must be no entries that have been processed in a payroll run.

[APP–6200] This operation is not allowed
You cannot remove an assignment that has been terminated by the termination of the Period of Service.

[APP–6202] Cannot view results when status is incomplete or error

[APP–6203] Cannot view results for an action that is marked for retry

[APP–6204] You cannot delete this version, it contains organizations

[APP–6205] You cannot delete this version it contains positions

[APP–6209] Future change delete not allowed

[APP–6210] You cannot delete input values if links exist

[APP–6211] You cannot delete input values if entries exist

[APP–6212] You cannot delete input values if run results exist

[APP–6213] Formula result rules use this input value
Check your formula result rules for indirect results that feed this input value.

[APP–6214] Absence or attendance records exist that use this input value

[APP–6215] Backpay rules exist that use this input value

[APP–6216] You cannot rollback the assignment action &ACTION_ID
You can only roll back the most recent run, reversal, Quickpay or balance adjustment.
An assignment action cannot be rolled back if it is a PURGE action or it has other sequenced actions that follow it and depend on it.

[APP–6219] Input value is invalid for standard links
Check that all required input values have a default value that can be used when entries are created automatically. Also, check that none of the input values have formula validation. This is not allowed with a standard link.
[APP–6220] The account must be in territory &TERITORY

[APP–6221] Amount or percentage must be given

[APP–6223] The specified external account does not exist

[APP–6224] This payment method does not exist

[APP–6225] This assignment already has a payment method with this priority

[APP–6226] Pre-payments exist for this payment method

[APP–6227] Formula and validation flag must be supplied for category `MT`

[APP–6228] Validation days or validation value must be supplied

[APP–6229] You cannot use a payment method of this category as default

[APP–6230] You must specify an account and a type for the payment method

[APP–6231] This payment method should use a currency of &CURRENCY

[APP–6232] You must enter a valid payment type for the payment method

[APP–6233] No payments balance has been defined

[APP–6234] Future pre-payments exist for this method

[APP–6235] Personal payment methods exist for this payment method

[APP–6236] This payment method is used as a default for a payroll

[APP–6237] You cannot delete this person, assignment actions exist

[APP–6238] There is no default payment method for this payroll

[APP–6239] The override payment method is invalid

[APP–6242] You cannot delete this element, it has run results

[APP–6254] This person is not a current employee
You cannot update assignment information after the period of service has been terminated.

[APP–6259] You must commit outstanding changes before deleting a person

[APP–6274] You cannot delete application users

[APP–6281] Cannot remove future changes, the link is deleted in the future

[APP–6283] You cannot remove future changes
This entry has been closed in the future according to a termination processing rule. You cannot remove this future change for the entry.

[APP–6284] You cannot remove future changes, there is an assignment deletion

[APP–6303] You must enter a value within the minimum and maximum range
[APP–6304] You cannot delete this entry while it has future adjustments

[APP–6305] You cannot delete this record
This person has an assignment that is the only member of an assignment set. Deleting this person would create an empty set, and this would mean that all assignments are members of the set. You must delete the assignment set before you can delete this record.

[APP–6306] Incorrect format for &UNIT_OF_MEASURE unit of measure

[APP–6307] Terminated Date must be on or after the Received Date

[APP–6310] This classification name already exists

[APP–6311] This priority is out of sequence

Cause:
You are trying to define a priority that is out of sequence with the other default priorities.

Action:
Enter the priorities in sequence; Low is less than or equal to the Default, is less than or equal to High.

[APP–6313] You cannot delete this record while secondary classifications exist

[APP–6314] This classification is used by existing elements

[APP–6315] This classification is used in an element classification rule

[APP–6316] This classification is used in a balance definition

[APP–6317] This classification is used in a sub classification rule

[APP–6318] You must have only one default name for &SYSTEM_NAME
You can have any number of active user names for each system name, but you must set only one as the default type.

[APP–6320] You cannot delete this terminated assignment
You are trying to delete a 'terminated' assignment status record. The next datetracked record for this assignment also has a terminated status, but it begins after the actual termination date for the employee. The deletion would mean that there would be a time after termination when the assignment would not be 'terminated'
Cancel the employee termination before you try to make this change.

[APP–6323] The primary employee assignment does not include a payroll

[APP–6324] You cannot delete people who have changed their 'person' type

[APP–6325] You cannot delete people with letter requests

[APP–6326] You cannot delete people who are contacts, or who have contacts

[APP–6328] You cannot delete people who are contacts for an event

[APP–6329] You cannot delete interviewers or people who are booked on events
[APP–6330] You cannot delete people who have assignment changes  
[APP–6331] You cannot delete people who are recruiters or supervisors  
[APP–6332] You cannot delete people who have accepted terminations  
[APP–6334] You cannot delete people with special information details  
[APP–6335] You cannot delete people who have absence information  
[APP–6336] You cannot delete people who have replaced or authorized absences  
[APP–6337] You cannot delete people who are recruitment contacts or authorizors  
[APP–6338] You cannot delete people who have raised requisitions  
[APP–6339] You cannot delete people who have authorized vacancies  
[APP–6340] You cannot delete people who have element entries  
[APP–6341] You cannot delete people with extra assignment information  
[APP–6342] You can only enter a zero adjustment if the action is ’replace’  
[APP–6343] You cannot enter negative adjustment values  
[APP–6344] You cannot delete people who have scheduled interviews  
[APP–6346] This person does not have a current period of service  
[APP–6361] A &OBJECT with this name already exists  
[APP–6365] This name cannot be used as a database item  
Database item names must start with an alphabetic character and contain no special characters such as ? * &  
[APP–6366] The assignment does not exist for the duration of the entry  
The entry cannot be created for this assignment. Check for future changes on the assignment, or the element link rules.  
[APP–6368] You must delete the table columns first  
[APP–6369] You must delete table rows first  
[APP–6370] You cannot create an entry past the termination rule date  

Cause:  
You are trying to create an element entry for an employee assignment which does not end before the termination rule date.  

Action:  
Please remove your current changes.  

[APP–6371] You must enter a Terminated Date before terminating an applicant.
Cause:
You are trying to terminate an applicant without putting an end date on the application.

Action:
Please enter an end date that is later than the Application Received Date.

[APP–6375] You cannot delete people with entry overrides or adjustments

[APP–6379] You cannot delete people with quickpaint results

[APP–6380] The End Date of this Assignment is before the Final Process Date.

Cause:
In order for an Assignment to become the Primary Assignment it must not end before the Employees Period of Service Final Process Date.

[APP–6381] Assignment cannot be Primary. It is terminated before Actual Termination Date

Cause:
The assignment has a termination status before the actual termination date. If this assignment is becomes the Primary Assignment it will be Primary for some time after termination. The only time an assignment can be Primary after termination is after the Actual Termination Date on the Employee’s Period of Service.

[APP–6382] You cannot terminate the applicant because person type changes exist.

Cause:
You are trying to terminate an applicant on &DATE but the applicant has a person type change after this date and so you cannot terminate the applicant.

Action:
You must change the Termintion Date to a date after the applicant has any person type changes before you can terminate the applicant.

[APP–6383] You cannot change the category as absence details exist for this type

[APP–6384] This operation removes a primary assignment. Another one cannot be found.

Cause:
The operation removes a future primary assignment record. Ther must be one and only one primary assignment at any point within the duration of a period of service. No candidate assignment can be found to meet this requirement.

Cause:
You are trying to cancel the application termination when future changes exist for the person after the Termination Date.

Action:
You must first delete any changes that the person’s record has after the termination date before you can cancel the termination on this form.
[APP–6387] Cannot terminate an assignment that has non-terminate future changes

   Cause:
You can only terminate an assignment if the changes in the future are of type TERM_ASSIGN

[APP–6390] This is not the payments defined balance for this legislation

[APP–6391] This payroll ends in the future. It cannot be entered on an assignment.

   Cause:
The Payroll has been deleted at some time in the future. Payrolls must be continuous until
31–DEC–4712 in order that they can be inserted or updated on an assignment record. Deletion of
future changes will also be prevented if the current payroll has been deleted at some time in the
future.

[APP–6392] Payroll cannot be entered for an Employee who has no Date of Birth.

   Cause:
The Payroll procedures require that a Date of Birth be entered for the Employee

[APP–6395] A set with this name already exists. Enter a new name.

[APP–6396] You cannot delete this set, it is a default for a payroll

[APP–6397] You cannot delete this set, payroll actions exist

[APP–6398] This element link is not mutually exclusive.
If it is possible for a person to have an element assigned to them more than once through different
links then the links entered are not mutually exclusive. To ensure that links are mutually exclusive
at least one of the criteria must always be different for links which are for the same element.

[APP–6399] The Payroll does not exist for all the duration of the entry

[APP–6404] Input Value cannot be costed
Only input values that belong to costed elementlinks can be costed. The costable type must be
either 'Costed' or 'Fixed'. All Pay Values can be costed but any other input value must have units
of hours type to be costed.

   Action:
Change flag to No or change element link costable type.

[APP–6405] No exchange rate exists to convert &RATE1 to &RATE2

[APP–6408] You cannot change the &TYPE as future assignment changes exist.

   Cause:
You are trying to update the &TYPE for this applicant assignment but this applicant’s assignment
has changes further in the future than your current Session Date. You cannot therefore change the
&type.

   Action:
You must first delete the future assignment changes before you can change the &TYPE on this
form.
[APP–6412] Date Received must be less than Effective Date.

[APP–6414] Applicant has Date Effective Changes. Delete Not Permitted.

[APP–6415] Applicant has more than one address. Delete not Allowed.

[APP–6416] You cannot delete amended startup assignment statuses

[APP–6417] You can only delete non–startup assignment statuses

[APP–6420] You cannot delete default assignment statuses

[APP–6421] Cannot remove future changes when Assignment Ended in Future.

[APP–6422] Cannot remove Last Change when Assignment has Ended.

[APP–6424] You cannot delete primary statuses used by assignments

[APP–6425] You cannot delete secondary statuses used by assignments

[APP–6427] You cannot delete statuses used to generate letters

[APP–6428] The person has no accepted assignments. Hire cannot continue.

   Cause:
   You have tried to hire an applicant with no accepted assignments.

   Action:
   Accept one of the applicant’s applications.

[APP–6429] Future applicant assignments exist for this person. Hire is aborted.

   Cause:
   You have tried to hire an applicant who has future applicant assignments.

   Action:
   Delete the future assignments and try again.

[APP–6433] You can only have one budget value for a unit of measure

[APP–6434] You cannot enter a new assignment for a closed period of service

[APP–6435] You cannot delete an employee’s first assignment

   Cause:
   You are trying to delete the first assignment created for an employee.

   Action:
   This assignment is created when you first enter the employee into &APPLICATION and you cannot delete this assignment.

[APP–6436] A user status cannot start more than once on the same day
Cause:
You are trying to enter a user status that starts on the same day as an existing identical user status.

Action:
If you want to enter this user status again for this assignment, change the start date to be different to that of the existing identical user status.

[APP–6438] Primary Assignment End Date will be set earlier than end of Period of Service

Cause:
As a result of the operation being performed future Assignment Termination rows will be removed. This has the effect of moving the Assignment End Date to the Day after the Actual Termination Date. At the same time an attempt to make this Assignment the Primary Assignment is made. A Primary Assignment must be continuous until the End of the Period of Service therefore this operation will result in an invalid state.

Action:
Ensure that the Assignment is continuous until the End of the Period of Service before attempting to make it the Primary Assignment.

[APP–6439] Please choose an element before continuing.

[APP–6440] Cannot delete this rate as Pay Bases exist for this rate.

[APP–6441] Grade Name is required. Please enter a valid value

[APP–6442] The payment cannot be fully paid with the monetary units available

[APP–6443] Cannot delete this Grade. Valid Grades exist

[APP–6444] Cannot delete this Grade. Vacancies exist for it

[APP–6447] Cannot delete Grade. Budget Elements exist

[APP–6448] You cannot delete this grade because a grade scale exists for it.

[APP–6456] Cannot Enter Interview Future Changes to Assignment Exist

[APP–6457] Projected date is outside the dates for this absence type

[APP–6460] The process in run flag must be the same for the lifetime of the element. The process in run flag can only be changed by correction and this is only valid if there are no date effective changes for the duration of the element type.

[APP–6461] The Parent Recruitment Activity is not valid at the start of the Child Activity

Cause:
The parent recruitment activity either starts after or ends before the start date of the child recruitment activity.

Action:
Change the start date of the recruitment activity or choose another parent from the QuickPick List.

[APP–6462] Distributed elements cannot be in distribution sets.
[APP–6464] This status must start on or after the start date of the assignment

  Cause:
  For an assignment status, you are trying to enter a start date which is outside the start and end dates for the assignment.

  Action:
  Enter a start date for this assignment status which is within the start and end dates for the assignment.

[APP–6465] Costable type cannot be updated if entries exist
This would cause a breakdown in data integrity in the system as the entries would contain different information from the link.

  Action:
  Delete entries and then update costable type or change costing information on entries.

[APP–6466] Costable type must be corrected over the whole lifetime of the link
The costable type must be the same over the whole lifetime of the link. This is to ensure data integrity in the system.

[APP–6467] You cannot delete links which have non-recurring entries

[APP–6468] Bank Details need to be filled

[APP–6471] Cannot delete. Personal Payment Methods exist

[APP–6472] Cannot delete. Pre Payments exist

[APP–6473] Cannot delete. Valid Payment Methods exist for Payrolls

[APP–6475] Currency cannot be changed

[APP–6476] You cannot delete people with enrollments to COBRA

[APP–6478] This Formula Result Rule record already exists.

[APP–6488] Cannot delete. Payroll actions exist for this payroll

[APP–6489] Cannot delete. Assignment sets exist
In order to delete this payroll you need to delete assignment sets defined for this payroll.

[APP–6490] Cannot delete. Payroll lists exist

[APP–6491] Cannot delete. Security payrolls exist

[APP–6495] Can only update Number of Years to a greater number

[APP–6497] Cannot delete. Personal Payment Methods have been assigned

[APP–6498] Cannot delete. Pre Payments exist for this payment method

[APP–6500] This Assignment has no Payroll, you cannot enter Payment methods.

[APP–6501] Invalid unit of measure
Cause: The unit of measure of the Pay Value of the Element for which you are trying to create a Direct Formula Result is inconsistent with the data type of the selected Formula Result Name.

Action: Check unit of measure of the Pay Value and Item Name, amend if required and retry.

[APP–6503] A Direct Formula Result already exists

Cause: There can only be one Direct Formula Result per Processing Rule.

Action: Removing the existing Direct Formula Result.

[APP–6510] This Person already has a primary address during this period.

[APP–6513] Employee has already been terminated.

Cause: You are trying to terminate an employee whose current period of service has already been terminated.

Action: If you want to change the termination details then cancel the termination and re-terminate specifying the correct details.

[APP–6514] Employee has not been terminated

Cause: You are trying to set the final process date for an employee who has not yet been terminated.

Action: Initiate termination by setting the actual termination date. You can set the final process date when terminating or you can terminate and set the final process date later.

[APP–6515] Employee has not been terminated. Can not initiate cancellation

Cause: You tried to initiate cancellation for an employee whose period of service is still open.

Action: n/a:

[APP–6516] Can not terminate employee, future actions exist.

Cause: You were trying to terminate an employee which has actions beyond the actual termination date.

Action: Rollback / remove actions beyond the actual termination date before trying to terminate this employee again.

[APP–6517] Can not set final process date, future actions exist.
Cause:
You are trying to set the final process date for an employee which has actions beyond that date.

Action:
Rollback / remove actions beyond the final process date or set the final process date beyond the latest action.

[APP–6522] National Identifier is invalid

Cause:
You have tried to enter a National Identifier which is invalid within your current legislation.

Action:
Correct the format of the National Identifier

[APP–6523] The Date of Birth is greater than start date

[APP–6524] You must enter sex for an employee.

Cause:
You have tried to enter an employee without entering a value for their sex.

Action:
Enter a value for the employee’s sex.

[APP–6527] The details entered for gender/sex and title are inconsistent.

[APP–6527] The details entered for gender/sex and title are inconsistent.

[APP–6528] Cannot enter. Name exists already

[APP–6537] Termination date must be later than employee’s start date

[APP–6541] Invalid number of parameters passed to routine

[APP–6543] You cannot enter this date if the actual termination date is blank

[APP–6547] You cannot create a classification for &CREDIT_OR_DEBIT costing

Cause:
You are trying to create an element classification rule for a distribution set which does not have corresponding &CREDIT_OR_DEBIT costing classification rule.

Action:
Remove the selected element classification rule or select an element classification rule which is not defined as being a &CREDIT_OR_DEBIT costing.

[APP–6552] The date must lie within a time period

[APP–6557] You cannot delete this Organization, Positions exist.

[APP–6558] You cannot delete this Organization, Budget values exist.

[APP–6568] You cannot delete this Organization, Recruit Activities Exist.
[APP–6569] You cannot delete this Organization, it exists in a hierarchy.

[APP–6570] You are not permitted to delete this QuickCode

[APP–6571] You cannot delete this Organization, it is a current Business group.

[APP–6583] You cannot terminate the applicant because assignment changes exist.

   Cause:
   You are trying to terminate an application when the applicant has future assignment changes at a date after &DATE.

   Action:
   You must first delete any future assignment changes which exist beyond the date on which you want this application to end. You can either change the termination date you have entered to a future date after the applicant’s last assignment change or you can delete the applicant’s assignment changes. Use DateTrack History on a form that has assignments to see the last assignment change for this applicant.

[APP–6584] Cannot increase the end date beyond that of the payroll

   Cause:
   In performing the delete selected the end date of the exchange rate would be greater than that of the payroll.

   Action:
   The only way to increase the duration of this exchange is to increase the end date of the payroll first.

[APP–6585] You must enter a currency
   All Legislation specific Elements must have a currency

[APP–6588] Unprocessed nonrecurring entries will be invalidated

[APP–6589] &TYPE nonrecurring entries will be invalidated

[APP–6590] Payroll does not exist for the duration of the assignment

[APP–6591] Assignment actions exist for a payroll being altered

[APP–6592] You cannot insert a row for system defined data

   Cause:
   You are trying to insert a row where the definition has been created as part of the product.

   Action:
   Please remove your changes and see your System Administrator.

[APP–6593] Please commit before moving on

[APP–6601] Invalid period type
   An unrecognised period type was specified for the payroll.

[APP–6602] You cannot have duplicate balance feed controls
[APP–6603] No periods can be generated for this payroll
No processing periods can be generated for this payroll. The start and end dates of processing periods must both lie within the start and end dates of their payroll. This problem should only arise because the start date of the first processing period is before the start date of the payroll. To solve this, specify a later first period end date.

[APP–6604] The number of years must be greater than zero
The number of years’ worth of processing periods to be generated must be greater than zero. The form should trap this data error.

[APP–6608] You cannot delete balance feeds with balance type &BALANCE
Balance feeds that feed this balance have been created by balance classifications and balance control rules. They can be deleted by deleting the balance classification or the balance control rule for this balance feed.

[APP–6609] Hot defaulted values must be mandatory

[APP–6611] This Information type already exists for this Organization.

[APP–6612] Organizations with this classification must have a location

[APP–6614] No time periods exist for this payroll currently

[APP–6616] Hot defaulted values must be 58 characters long or less

[APP–6618] You cannot delete default Person Types

[APP–6619] You cannot delete this person type, its currently in use

[APP–6621] Start Date is after Child Recruitment Activity Start Dates.
  Cause:
The Recruitment Activity Start Date has been changed such that it is now after the Start Date of one or more Subordinate Recruitment Activities.
  Action:
Alter the Start Date so that it is on or before the Start Date of all its Subordinate Recruitment Activities.

[APP–6622] End Date is before Start Date of Child Recruitment Activity Start Dates.
  Cause:
The Recruitment Activity End Date has changed such that it is now before the Start Date of one or more of its Subordinate Recruitment Activities Start Dates.

[APP–6624] You cannot update the name of an element on a startup record
Some elements have been supplied with your legislation specific installation. You cannot update the name of these elements.

[APP–6627] The Organization is no longer valid – you may not change this event.

[APP–6628] The location is no longer valid – you may not change this event

[APP–6629] Cannot move status start date. Use Enter Applicant Assignment.
[APP–6632] The input value name must be corrected for the entire input value.
If the input value has been date effectively updated then it is no longer possible to update the name.
This is so it is constant over the entire lifetime of the input value.

[APP–6633] You must correct the db flag over the entire input value.
If the input value has been date effectively updated previously it will no longer be possible to do an update correction on this record. This is to ensure that the Database items flag remain the same over the entire lifetime of the input value.

[APP–6634] The uom must be corrected over the entire input value.
If the input value has previously been date effectively updated then it will no longer be possible to do a correction for this field. This is to prevent the unit of measure being different over the lifetime of the input value.

[APP–6636] This person already has an interview at this time. Continue?

[APP–6637] This interview is outside the current period of service. Continue?

[APP–6638] This vacancy name already exists. Please enter a new name.

Cause:
You are trying to insert a new vacancy name or update an existing vacancy name for the &REQ_NAME requisition but the vacancy name is not unique for this requisition. Vacancy names must be unique for each requisition name.

Action:
Please enter a new vacancy name or amend your existing vacancy name so that it is unique for this requisition.

[APP–6639] You cannot delete links which have additional entries.

[APP–6640] The vacancy Date From date is outside the Requisition dates.

Cause:
You are trying to insert or update the vacancy Date From date, but it must be within the requisition dates. It must be on or after the requisition Date From date, and before the requisition Date To date, if one exists.

Action:
Please change your vacancy Date From to a date that is on or after the Requisition Date From date, and before the requisition Date To date if one exists.

[APP–6641] The date is invalid for a recruitment activity that uses this vacancy.

Cause:
You are trying to update the Date From of the vacancy but the vacancy is used by a recruitment activity and the date you are trying to enter is outside the Start and End Dates of the recruitment activity.

Action:
Please enter a date that is valid for the recruitment activity that uses this vacancy.

[APP–6642] This date is not valid for the recruiter.
Cause:
You are trying to update the Date From date for the vacancy but the recruiter will be invalid on this new date since the recruiter’s personal details had not been entered into the system by this date.

Action:
Please enter a date that is valid for the recruiter of this vacancy.

[APP–6643] This date has made the Raised By person invalid.

Cause:
You are trying to update the requisition Date From date but you have changed it to a date which now means the person in the Raised By field is invalid. The person who raises the requisition must have personal details in the system at the start of the requisition.

Action:
Please enter a date which does not make the person invalid.

[APP–6644] This requirement has already been entered.

[APP–6645] This operation will cause duplicate Costing Data to be Created.

Cause:
For a given Assignment on a specific day there may only be one occurrence of any Cost Code Combination. This operation will cause duplicate information to created for one or more days during the lifetime of the Assignment.

Action:
Rollback the change and ensure that any further operations will not cause duplicate data.

[APP–6646] Job keyflex must be compiled and have Dynamic Inserts set to Yes

[APP–6648] Your formula has failed with an error status

Cause:
Your formula validation for the current entry value has failed with an error status and no associated user error message.

Action:
Examine your formula or enter a correct value which satisfies your formula validation. For a more meaningful error message it is always a good idea to supply an error message from within the formula being executed.

[APP–6656] You may not update this event – the booking will become invalid

[APP–6657] This requirement has already been entered – please enter another.

[APP–6660] You cannot update the event – the internal contact will be invalid

[APP–6661] This product already exists.

[APP–6667] A payroll with this name already exists

[APP–6673] The Business Group is not defined.
Cause:
You tried to run the form when either the Business Group Profile was not set or there was no row in FINANCIAL_SYSTEM_PARAMETERS.

Action:
Either create the profile, using a current existing Business Group or add a row to FINANCIAL_SYSTEM_PARAMETERS with a current Business Group identifier.

[APP–6674] Cannot delete. Assignments exist
[APP–6675] Cannot delete. Element links exist
[APP–6676] Cannot delete. Exchange rates exist
[APP–6678] Bank details needed for magnetic tape payment types
[APP–6679] Cannot delete. Pre payments exist
[APP–6680] Either amount or percentage need to be entered
[APP–6682] This Recruitment Activity cannot be deleted as it is used by Assignments

Cause:
This Recruitment Activity is referenced on an Applicant Assignment record. It therefore cannot be deleted.

Action:
Remove the reference to the Recruitment Activity from the Assignment.

[APP–6684] Cannot delete. Grade rules exist
[APP–6694] You cannot view the same inquiry twice for the same assignment
[APP–6695] The &PER_TYPE1 &PER_TYPE2 is not a current employee on this start date.
[APP–6697] Position keyflex must be compiled and dynamic inserts set to Yes
[APP–6698] If the element is costed then the Balancing keyflex must be available
It is essential that the balancing keyflex be populated at this stage as it cannot be found at any other level. If a costing account is specified at any level then there must be a balancing account.
[APP–6699] A Distribution set must be specified for Distributed Links
[APP–6700] Distribution set must be of the same type as the classification
When a distribution set is created all the members of that set will be costed either as a credit or a debit. The classification of the element must have the same credit or debit type as the element set.
[APP–6701] You are trying to enter more than one grade with the same name

Cause:
For a grade rate, you are trying to enter two or more grade rules with the same name.

Action:
Enter a unique name for your grade rate.
[APP–6703] A rate with this name already exists. Please enter a new name

Cause:
You are trying to enter more than one rate with the same name.

Action:
Enter a unique name for your rate.

[APP–6704] Incorrect format for the rate units

Cause:
You are trying to enter a value in a format inconsistent with the units of the rate.

Action:
Check the value you enter in this field is consistent with the units of the rate. For example, if the Units are Numbers, ensure you only enter numbers in this field.

[APP–6705] This point already exists for the rate. Enter a different point or query the existing point and change the information, if required.

[APP–6706] You must enter a pay scale when the rate type is ’Scale’.

[APP–6707] Recurring Entries cannot be indirect only

[APP–6712] Recurring elements cannot be adjustment only

[APP–6713] You cannot purge this element because it is used in an element set. An element set uses this element.

Action:
Remove the element from the element set or date—effectively delete on the element instead

[APP–6714] This payment type name already exists.

Cause:
You have tried to create a Business Group and it has Payrolls attached to it.

Action:
Delete the Payrolls or cancel operation.

[APP–6718] Cannot Create Business Group, Assignments exist.

Cause:
You have tried to create a Business Group and it has assignments attached to it.

Action:
Delete the assignments or cancel operation.

Cause:
You have tried to create a Business Group and it has element links attached to it.
Action:
Delete the element links or cancel operation.

Cause:
You have tried to create a Business Group and it has Budget Elements attached to it.

Action:
Delete the Budget Elements or cancel the operation.

[APP–6721] Cannot Create Business Group, Events exist.

Cause:
You have tried to create a Business Group and it has events attached to it.

Action:
Delete the events or cancel the operation.

[APP–6722] Cannot Create Business Group, Organization is in a hierarchy.

Cause:
You have tried to create a Business Group and it exists in an organization hierarchy.

Action:
Delete from hierarchy, if possible, or cancel operation.

[APP–6723] Cannot Create Business Group, Recruitment Activities exist.

Cause:
You have tried to create a Business Group and it has Recruitment activities attached to it.

Action:
Delete the Recruitment activities or cancel the operation.

Cause:
You have tried to create a Business Group and it has security profiles defined.

Action:
Delete the security profile or cancel the operation.

[APP–6725] Cannot Create Business Group, Vacancies exist.

Cause:
You have tried to create a Business Group and it has vacancies defined.

Action:
Delete the vacancy or cancel the operation.

[APP–6726] Cannot Create Business Group, Positions exist.

Cause:
You have tried to create a Business Group and it has positions defined.
Action:
Delete the positions or cancel the operation.

[APP–6727] The element name must be for the lifetime of the element
If the element name is date effectively updated this will invalidate the database items as these exist for all time.

Action:
If there is only one date effective record for this element then do a correction rather than a date effective update. If you wish to do this and there are more than one date effective records then do a next change delete on this record and do a correction.

[APP–6731] You cannot delete a payroll which has a message line.

Cause:
You are trying to delete a payroll that has a message line (created by a payroll action).

Action:
You must delete the message line that belongs to this payroll before you can delete the payroll from this form

[APP–6732] You cannot cancel this termination, there are commits outstanding

[APP–6735] Either Final Process Date or Termination Status must be entered

[APP–6737] You cannot view the same inquiry twice for the same assignment set

[APP–6739] This payment method has been used as a default

Cause:
You are trying to delete–next–change or date–effectively–delete a payment method that has been used as a default payment method by a payroll.

Action:
Remove this as a default payment method for all payrolls.

[APP–6740] You Cannot Delete this link, Hierarchy structure depends upon it.

[APP–6744] You cannot move your Actual Start Date outside the current period

Cause:
You have specified an Actual Start Date which falls outside the period for your current absence entry.

Action:
If you want to keep your current absence entry then, specify an Actual Start Date which falls between the current period range: &PERIOD_FROM to &PERIOD_TO. If you require the absence to fall outside of the period range then, delete and recreate the absence with the new Actual Start Date.

[APP–6747] The location is not valid for this start date.

[APP–6749] The payment type chosen does not exist
[APP–6750] You cannot delete a pay–method that is used by a personal pay–method

  Cause:
  You are trying to delete a payment method that is used by a personal payment method

  Action:
  You must delete the personal payment method that uses this payment method before you can delete
  the payment method from this form

[APP–6751] This assignment has ended. You cannot change the status.

  Cause:
  You are trying to change the assignment status of an applicant assignment that has already ended.
  You cannot therefore change the status of the assignment on this form.

  Action:
  If you want to change the status of this applicant assignment you must first delete the change that
  ended the assignment on the Enter Applicant Assignment form.

[APP–6752] This interview date will invalidate current interviewers.

[APP–6753] You cannot delete security profile organizations from hierarchies

[APP–6758] The Date From must be earlier or the same as the Date To.

  Cause:
  You are trying to enter a Date From which is later than the Date To you have entered. The Date
  From must be earlier or the same as the Date To date value.

  Action:
  Please enter a new date that is earlier or the same as the date in the Date To field.

[APP–6777] A monetary unit with this name already exists. Enter a new name

  Cause:
  For a currency, you are trying to enter more than one monetary unit with the same name.

  Action:
  Enter a unique name for each monetary unit of a currency.

[APP–6779] Please enter a monetary value greater than zero

  Cause:
  You are trying to enter a value for a monetary unit equal to or less than zero.

  Action:
  Enter a value greater than zero.

[APP–6780] You cannot delete monetary units used by cash analyses

  Cause:
  You are trying to delete monetary units which are used by one or more cash analyses.

  Action:
  If you want to delete this monetary unit, first delete the cash analysis rule. You cannot change the
  currency of a cash analysis rule.
[APP–6782] Please commit change before moving.

[APP–6784] Please save your changes before navigating.

[APP–6785] Cannot make this a business group, it is not an Internal Organization.

[APP–6788] Grade keyflex must be compiled and have Dynamic Inserts set to Yes.

[APP–6789] ELement details invalid for this date

[APP–6790] Change of start date will invalidate some absence entries

[APP–6791] This person type change is invalid, the person has no unaccepted assignments.

  Cause:
  You have tried to change a person type to one which requires that unaccepted assignments exist, and there are no unaccepted assignments.

  Action:
  Ensure an unaccepted assignment exists currently or choose a different person type.

[APP–6796] A current period of service already exists, you cannot insert a new one.

[APP–6797] You may not delete this profile – defaulted by a business group

[APP–6802] A period with this name exists in the calendar. Enter a new name

  Cause:
  You are trying to enter more than one period in a calendar year with the same name.

  Action:
  Enter a unique name for your period in the calendar year. Periods can have the same name in different calendar year.

[APP–6807] Invalid date. Please check format is correct and the date exists

  Cause:
  You are trying to enter a date in a format other than DD–MON.

  Action:
  Enter the date in the format DD–MON, for example enter August 13 as 13–AUG.

  Cause:
  You are trying to enter a date which does not exist, for example April 31 or February 29 in a year other than a leap year.

  Action:
  Enter a date which exists.

[APP–6809] You must set view all records to Yes for base user

[APP–6815] You Cannot create employee without them having a valid sex defined.

[APP–6820] This sequence already exists for this set. Enter a new sequence.
[APP–6824] Condition must be blank for the first criteria

  Cause:
  You are trying to define the first criteria with a value in the Condition field. This field must be blank for the criteria with the lowest sequence number.

  Action:
  Blank out the Condition field.

[APP–6825] Cannot be less than or equal to lowest sequence number

[APP–6828] Condition can only be blank for the first criteria

[APP–6829] Value/Database Item type must match the Database Item type

[APP–6831] You cannot delete a set, when set criteria exist

[APP–6834] The Requisition Date From now invalidates a vacancy.

  Cause:
  You are trying to change the requisition Date From but it is now rendering invalid a vacancy that is within this requisition.

  Action:
  If you want to change the Requisition Date From then you must change it to a date that will not invalidate a vacancy that is within this requisition. Alternatively you could delete the vacancy that is causing the requisition’s new date to be invalid.

[APP–6835] The Requisition Date To now invalidates a vacancy.

  Cause:
  You are trying to change the requisition Date To but this new date is now rendering invalid a vacancy that is within this requisition.

  Action:
  If you want to change the Requisition Date To then you must change it to a date that will not invalidate a vacancy that is within this requisition. Alternatively you could delete the vacancy that is causing the requision’s Date To to be invalid.

[APP–6836] Entries exist between the old and new dates.

[APP–6837] Grade step placements exist between the old and new dates.

[APP–6838] Assignment status changes exist between the old and new dates.

[APP–6839] Assignment changes exist between the old and new dates.

[APP–6840] The new date is in a previous period of service

  Cause:
  You are trying to enter a Start Date for an employee which overlaps with a previous period of service for the employee.

[APP–6841] Person changes exist between the old date and the new date.
[APP–6843] The Vacancy Date To date is outside the Requisition dates.

**Cause:**
You are trying to insert or update the vacancy Date To date but it must be within the requisition dates. It must be on or before the requisition Date To date, and after the requisition Date From date.

**Action:**
Please change your vacancy Date To date to a date that is on or before the Requisition Date To date.

[APP–6844] This operation invalidates Personal Payment Methods for the Assignment

**Cause:**
The operation resulted in an attempt to transfer a payroll (i.e. to change the Payroll at some point on the Assignment). This is only allowed as long as any Personal Payment Methods for the Assignment remain valid for the new Payroll. In this case one or more Personal Payment Methods does not have a Payment Method that is valid for the new Payroll.

**Action:**
Ensure that all Personal Payment Methods for the Assignment have Payment Methods that are valid for the new Payroll before attempting to transfer the Payroll.

[APP–6847] Actual date must be greater than &ABS_DATE_FROM and less than &ABS_DATE_TO.
This is because this is the effective date range of the absence attendance type.

[APP–6851] The Status End Date must be within the duration of the Assignment

**Cause:**
The Status End Date is either earlier than the Start Date of the Assignment or later than its End Date.

[APP–6855] Cannot restart, Payroll is processing.

**Cause:**
The payroll action you are attempting to start is marked as currently processing. This can mean that you are attempting to restart an already running process, or one that may have errored in a severe way and appears to be running.

**Action:**
You may force the process to run by using the FORCE_CONTINUE option, or you may roll back using the FORCE_UNDO option. However, in any case be sure that the process is not really running when you attempt this.

[APP–6856] The assignment chunk size you have set is invalid.

**Cause:**
The value of the CHUNK_SIZE parameter set in the table PAY_ACTION_PARAMETERS is either less than one or greater than the allowed maximum.

**Action:**
change the value of the parameter to be positive and less than the maximum. Values in the region of 20 tend to be optimal.
[APP–6857] Payroll Action is currently locked by another process.

    Cause:
    Interlock Failure. The specified Payroll was locked by another process.

    Action:
    Wait for the current processing of the Payroll is complete before attempting to run the process yourself.

[APP–6858] Invalid process name.

    Cause:
    an invalid process name, i.e. not in the following list has been specified: SLAVE, FORCE_CONTINUE, RUN, PREPAY, MAGTAPE, CHEQUE, CASH, COSTING, TRANSGL, ROLLBACK, FORCE_UNDO, RETRY.

    Action:
    please enter a correct process name from the list above.

[APP–6859] An error has been detected by another process.

    Cause:
    During processing, the master or another slave process has detected an error, communicated by setting the Payroll status to 'Error'.

    Action:
    Examine the error log file and payroll messages to investigate the cause of the error.

[APP–6860] Specified payroll is invalid.

    Cause:
    The Payroll specified does not exist.

    Action:
    Enter a valid (existing) Payroll value.

[APP–6862] An invalid number of arguments has been specified for this process.

    Cause:
    Either too few or too many arguments have been specified for the current process.

    Action:
    specify the correct number of arguments.

[APP–6863] Must specify Payment Type

    Cause:
    Payment Type has not been specified for this process.

    Action:
    re–run process, specifying Payment Type.

[APP–6864] Please specify value for Payroll parameter.
Cause:
a value has not been specified for the Payroll parameter.

Action:
re-run the process, specifying a value for Payroll.

[APP–6865] The output datatype of formula &FORMULA_NAME does not match data type of input value name &TARGET_INPUT_VALUE_NAME.

Cause:
the data type of an output from the formula &FORMULA_NAME does not match the Unit Of Measure of the Input Value name &TARGET_INPUT_VALUE_NAME.

Action:
please inspect the data types of the formula returns and the Input Value Unit Of Measure for inconsistencies.

[APP–6866] Mandatory input value name &INPUT_NAME is missing for Element Type Name &ELEMENT_NAME.

Cause:
a mandatory Input Value &INPUT_NAME is missing for the Element &ELEMENT_NAME.

Action:
please supply a value for the missing input value.

[APP–6868] You cannot extend this record

Cause:
You are trying to extend an end date of a record which cannot be extended because it has already reached the maximum end date of the payroll.

Action:
Extend the end date of the payroll.

[APP–6869] You cannot extend this record

Cause:
You are trying to extend an end date of a record which cannot be extended because there already exists another valid payment method with the same name starting on the day after the current end date.

Action:
Remove that valid payment method.

[APP–6871] You cannot delete a formula used by a QuickPaint inquiry

[APP–6872] You cannot delete a formula used by an assignment set

[APP–6873] You cannot delete a formula used by an input value
[APP–6876] This currency has an exchange rate defined at some point in time

  Cause:
  For a currency, you are trying to define more than one exchange has been defined over all time.

  Action:
  Enter another currency, or date effectively change the existing record for the currency’s exchange rate.

[APP–6878] You cannot delete a formula used by a processing rule

[APP–6879] You cannot delete a formula used by a User Column

[APP–6881] Error &SQLERRMC has occurred in table &TABLE_NAME at location &SQL_NO

  Cause:
  an oracle error has occurred. The failure was reported on table &TABLE_NAME at location &SQL_NO with the error text &SQLERRMC.

  Action:
  please contact your Oracle Support Representative.

[APP–6883] The result data type for &RESULT_NAME is not compatible with Input Value.

  Cause:
  The formula result data type for result name &RESULT_NAME returned from the formula &FORMULA_NAME is not compatible with the data type of the input value &TARGET_INPUT_VALUE_NAME, for element &TARGET_ELEMENT_NAME

  Action:
  please refer to your setup.

[APP–6884] This element does not exist

  Cause:
  You are trying to select element information on the &DATE_SUPPLIED when the element does not exist.

  Action:
  Please change your session date to the effective start date of the element.

[APP–6886] Costing flexfield structure could not be found for this Organization

  Cause:
  The Classification of business group has been disabled for this Organization.

  Action:
  Re-query the classification of Business Group and set its Enabled flag to Yes.

[APP–6888] You cannot disable the business group of your responsibility.

[APP–6890] Legislation subgroup already exists.
[APP–6891] You cannot insert legislation sub groups.

[APP–6892] You can only update the status field.

[APP–6893] You cannot delete legislation sub groups.

[APP–6898] Projected Hire Date Must be greater than Date Received.

[APP–6899] Your legislation code profile is not defined

   Cause:
   You are trying to use a startup data logic form without using the 'Define Owner Parameters’ (PAYLODOP) form first.

   Action:
   Navigate to the 'Define Owner Parameters’ form and enter your legislation details.

[APP–6904] Adjustment only and Multiply value cannot both be yes.

[APP–6905] Formula Validation must have error flag and no max and min
If the input value is to be validated using a formula then it must have a warning or error flag. This is so when the input value is entered and the formula fails the system will know how to react to this. No default, Maximum or Minimum is allowed with formula validation.

[APP–6906] Lookup validation is incorrect
If a lookup type is entered to validate the input value then no maximum, minimum or warning or error flag can be entered. A default may be entered from the quickcode list.

[APP–6907] Minimum and maximum validation is incorrect
If a minimum or maximum value is entered for an input value then there can be no lookup or formula validation. A warning or error flag must be entered.

[APP–6908] Warning or Error flag must have other validation with it.
If you have entered the warning or error flag then you must enter some other validation for the warning or error to fire. This can be either a maximum and/or minimum value or a validation formula.

[APP–6909] Processing fields cannot be updated if Run results exist
If any processing has been done for this element then you cannot update the Indirect Only flag, the adjustment only flag or the Termination Processing rule. This is to prevent any processing that has been done becoming invalid.

[APP–6911] This &TABLE is not valid for the duration of the &BASE_TABLE record

[APP–6912] The processing fields cannot be updated.
If there exist any Formula result rules where this element is the subject of indirect results then the Indirect only flag, Process in run flag and Termination Processing Rule cannot be updated. If they were then this could invalidate any processing that has already taken place.

[APP–6913] No new input values can be inserted if there are run results
If any run results exist for this element then no new input values can be inserted. This would mean that the existing run results would become invalid.
Next change delete will result in invalid priorities
By effecting a next change delete you have changed the processing priority over a portion of the
lifetime of the element. This has resulted in an indirect result which feeds an element higher in the
processing chain (ie with a lower number) than the one you are changing.

Action:
Change the priority or cancel the next change delete.

Please delete lower levels in the hierarchy before this level

You have selected an empty distribution set
The distribution set has no elements available to be distributed over.

Action:
Make sure that the distribution set has some sets available or choose another distribution set.

You must enter both the increment and frequency

You can only create one restriction of this type for the specified form

Cause:
The restriction type you have specified can only be used once for this customized form.

Action:
Either clear the current row or update the previously defined restriction type.

Failed to open the output file.
The magnetic tape process failed to open the output file required for the transfer of data to magnetic
tape.

No formula id has been specified.
The magnetic tape process has not received a formula id from the format specifying procedure.
Execution cannot continue.

An input to the specified formula is missing. The formula cannot be executed unless all inputs are
specified by the format procedure.

An error has occurred while the magnetic tape process has been attempting to write to the output
file for transfer to magnetic tape.

The maximum number of return parameters permitted from a formula by the magnetic tape process
has been exceeded.

Failed to close the output file.
The magnetic tape process has failed to close the output file for transfer of data to magnetic tape.

No payment type found.
No payment type has been found when attempting to create a magnetic tape following a payroll run.

No payroll action found.
No payroll action id has been found when attempting to create a magnetic tape file following a
payroll run.
[APP–6930] Cannot create the output file path.
Failed to create the output path for the requested output file.

[APP–6931] FORMULA CONTEXT NOT FOUND
The magnetic tape process does not have a required context value for execution of the specified formula. The formula cannot be executed.

[APP–6932] This valid payment method cannot be deleted

  Cause:
The valid payment method that you are trying to purge has been used by this payroll as a default payment method in the past.

  Action:
In order to continue to purge you need to insure that the payment method has not been used as a default payment method in the past

[APP–6937] There is not keyflex for source bank

  Cause:
A payment method requires source bank details but no keyflex has been constructed for that source bank country

  Action:
Contact your system administrator who can provide you with a keyflex

[APP–6938] Earlier Marked For Retry action exists for this Assignment.

  Cause:
At least one Marked For Retry AssignmentAction exists in the past for this Assignment

  Action:
Please retry those assignment actions before proceeding.

[APP–6939] The formula’s inputs do not match the elements input values
This is a warning that either: – the formulas inputs do not match the input values of the element, the data types of the formula’s inputs do not match the data types of the element’s input values or the formula has not been verified. It is not an error because the formula inputs and/or the element’s input values may change before a payroll is run when this information will actually be used.

[APP–6939] The formula’s inputs do not match the elements input values
This is a warning that either: – the formulas inputs do not match the input values of the element, the data types of the formula’s inputs do not match the data types of the element’s input values or the formula has not been verified. It is not an error because the formula inputs and/or the element’s input values may change before a payroll is run when this information will actually be used.

[APP–6941] Payroll cannot be nulled – Amendments exist.

  Cause:
A payroll cannot be removed or updated if amendments exist for it.

  Action:
Remove amendments first.
[APP–6942] Assignment already exists

    Cause:
    Duplicate Assignment Number entered.

    Action:
    Enter a different Assignment Number.

[APP–6943] Assignments must be either all Exclusions or all Inclusions
As there are no criteria specified for this Assignment set, Assignment records must be either all Inclusive or all Exclusive.

[APP–6944] Mixed Inclusions/Exclusions exist for this Set.

    Cause:
    Amendments exist with combinations of Inclusive/Exclusive attributes.

    Action:
    Delete the amendments OR change them all to either Exclusive only or Inclusive only.

[APP–6945] You cannot delete a Job for which a recruitment activity exists

[APP–6946] You cannot delete a Job to which an element is linked

[APP–6949] Please set the &PROFILE profile for your responsibility

[APP–6954] 'Multiple Entries Allowed' cannot be updated while the element is subject to an update–recurring formula result rule.
This element is subject to 'Update Recurring' Formula result rules, hence the Multiple Entries Allowed flag cannot be updated.

[APP–6955] You cannot delete a formula used by an Element Type

[APP–6956] Element entry overlaps with another entry of the same type

[APP–6957] Only one balance in a legislation can be the 'Remuneration' balance

[APP–6958] Defined Balance Types are used by Organization Payment Methods
This error is displayed when : – updating the Remuneration flag from 'Y' to 'N' OR – deleting a Balance Type with Remuneration of 'Y' AND Organization Payment Methods exist which use any of the Defined Balance Types of the Balance Type.

[APP–6962] You have already mapped this Accounting flexfield segment

[APP–6965] You cannot delete input values if Salary Bases exist.

[APP–6968] COBRA Benefits exist after the proposed Final Process Date

    Cause:
    COBRA Coverage Benefits exist after the proposed Final Process Date. These must date effectively deleted manually before the Employee record can be shutdown.

[APP–6970] Cheque procedure name is mandatory
Cause:
No Cheque Procedure name was specified as a parameter to the Cheque Writer process.

Action:
This is an internal parameter that is usually set up as a hidden parameter. Check this and if missing reset it.

[APP–6971] Cheque report name is mandatory

Cause:
No report name was entered as a parameter to the Cheque Writer process.

Action:
The report name must be entered as it tells the Cheque Writer process which report to run to produce a batch of cheques.

[APP–6972] Cheque start number is mandatory

Cause:
No start cheque number was entered for the Cheque Writer process.

Action:
Enter the start number and retry.

[APP–6974] You cannot delete a Time Period used by a COBRA Coverage Enrollment

Cause:
The Time Period that you are attempting to delete is referenced by a COBRA Coverage Enrollment.

Action:
Change the Time Period on the COBRA Coverage Enrollment before attempting to delete this Time Period.

[APP–6975] Cannot delete this Contact as they have COBRA enrollments

Cause:
The Contact you are attempting to delete has COBRA Coverage Enrollments.

[APP–6980] You must delete the &ROWCOL values first before deleting the &ROWCOL

Cause:
You attempted to remove a row or column from a table while there are values defined for it.

Action:
Remove the values defined for this row or column.

[APP–6981] Cannot delete this person while a contact has COBRA coverage

Cause:
An attempt has been made to delete a person who has contacts with COBRA Coverage. COBRA Coverage is related to the assignment of the person, and deletion would result in removal of the assignments.
Action:
Remove the COBRA records for the Contact before deleting the Person.

[APP–6982] You must date effectively delete the values for this row first

Cause:
You attempted to date effectively remove a Row while there were values that were still active.

Action:
Date effectively remove all values for this row and then the row can be date effectively removed.

[APP–6985] Bad parameters passed to the user exit

Cause:
The user exit was called with bad parameters

Action:
Check the parameters passed to the user exit.

[APP–6986] User exit is unable to insert an Assignment Action

Cause:
The user exit in date mode called the PL/SQL procedure hrbaldtm.get_bal_ass_action which was unable to return an Assignment Action.

Action:
Check the PL/SQL procedure, and the parameters passed to it.

[APP–6987] Cheque Writer report name is null

Cause:
The report name supplied as a parameter to the Cheque Writer process was null.

Action:
Enter a valid report, present in PAY_TOP/srw

[APP–6988] Output file name is invalid

Cause:
The output file name specified as a parameter to the Cheque Writer process was found to be invalid.

Action:
Check filename for length and the use of alphanumeric characters.

[APP–6990] Cheque Writer report failed with an error

Cause:
The report failed to complete and returned an error condition.

Action:
Check the report logfile in PAY_TOP/APPLOUT/xx.lg for reason for the failure.

[APP–6991] Report name is invalid
Cause:
The report name generated by concatenating the path PAY_TOP/srw/&lt;report name&gt; was invalid.

Action:
Check the process log file and retry with valid name.

[APP–6992] The Pay Date offset must be within the range 0 and &MAX_OFFSET
[APP–6993] The Pay Date offset must be less than zero
[APP–6999] Regular Pay Date lies outside Time Period – No periods created

Cause:
The Regular Pay Date must lie within the Period to which it applies.

[APP–7000] Rollback mode should be RETRY, ROLLBACK or RETROPAY
[APP–7001] Items for assignment process &ASSACTID require rollback Run Results, Message Lines, Assignment LatestBalances, Person Latest Balances or Element Entries exist for this assignment process. You must roll these backfirst.
[APP–7002] The Time From must be earlier than the Time To
[APP–7003] The Date To must be equal to or later than the Date From. Enter a new date
[APP–7004] The Date From must be earlier than the Date To. Enter a new date
[APP–7005] You can book an &EMP_OR_APP on an event only once

Cause:
For an event, you are trying to book an &EMP_OR_APP more than once.

Action:
As this &EMP_OR_APP is already booked for this event, either delete the information you have already entered (using \ Row Erase) or change the &EMP_OR_APP

[APP–7006] Please delete all bookings for this event before deleting the event

Cause:
You are trying to delete an event for which people have been booked at some time.

Action:
If you want to delete this event, first delete all bookings made for the event at any time.

[APP–7007] You must roll back assignment processes before a payroll process.
[APP–7008] Cannot roll back assignment process : &FAILING_ASSACT Unable to roll back this assignment process because of an interlock. Check whether a sequenced process exists later for this assignment or the row is locked by another process.
[APP–7009] Future purge prevents assignment process insert

Cause:
You are attempting to insert an assignment process when there exists a purge assignment process in the future.
Action:
Change your effective date.

[APP–7010] Cannot insert assignment process

Cause:
You are attempting to insert an assignment process when there is a future process or an incomplete past process for this assignment.

Action:
Either roll back future processes, rerun past processes to completion, or change your effective date.

[APP–7011] Cannot reverse process on this date. The effective date of the reversal cannot be earlier than the effective date of the assignment process you are reversing.

[APP–7012] Element is not valid at the effective date of reversal.

[APP–7013] Assignment process has already been reversed

[APP–7014] You cannot update an element entry that was not created by this form. This element entry was created for &CREATOR_MEANING and must be updated where it was created.

[APP–7015] You cannot delete an entry that was created by another form. You must delete this &CREATOR_MEANING element entry from the owning form.

[APP–7016] Your changes will affect element entries. Do you want to continue?

[APP–7017] You cannot correct or delete this salary element entry. To update the entry, either create a new salary proposal or perform a date effective update. To delete the entry, delete the salary proposal or perform a date effective delete.

[APP–7021] Your effective date cannot be earlier than &DATE

Cause:
You are trying to change your effective date, before the minimum start date of the parent record.

Action:
Change your effective date to on or after &DATE.

[APP–7022] Your effective date cannot be later than &DATE

Cause:
You are trying to change your effective date, after the maximum end date of the parent record.

Action:
Change your effective date to on or before &DATE.

[APP–7023] Rate values exist – they will be deleted

[APP–7024] The row must be of type &FORMAT
[APP–7026] The assignment does not exist on &DATE

[APP–7027] The element link does not exist on &DATE

[APP–7028] The partial cost code does not exist

[APP–7029] The comment does not exist

[APP–7030] The adjustment is not valid

[APP–7031] The setting of original_entry_id is invalid

[APP–7032] The element entry reason is invalid

[APP–7033] The QuickCode is invalid for &LOOKUP_TYPE

[APP–7034] The type of this payroll process is invalid. The valid types are Reversal, Balance Adjustment or Non Tracked.

[APP–7035] This function is not available

  Cause:
The function you have requested is not available.

  Action:
Contact your system administrator.

[APP–7036] This retropay rule already exists for this retropay set

[APP–7037] This rule will cause a balance to be fed twice by the same input value

[APP–7038] A value already exists for this row and column

[APP–7039] System Error: The #PAY QUICKPAINT exit call has failed

  Cause:
The #PAY QUICKPAINT user exit has returned a status of fail. This user exit attempts to create a file in $PAY_TOP/log and will return a status of fail if it is unable to do so.

  Action:
Check that $PAY_TOP/log exists and you have permission to write into it.

[APP–7040] Percentage must be between 0 and 100.

[APP–7041] Priority must be unique within an organizational payment method.

[APP–7042] Invalid value for amount

[APP–7044] The Pay Date must lie between &P_START_DATE and &P_END_DATE

  Cause:
The Pay Date does not lie between the Period Start Date, &P_START_DATE, and the Period End Date &P_END_DATE.

  Action:
Change the date so that it lies between &P_START_DATE and &P_END_DATE.
[APP–7046] Dimension is used by a Backpay set

[APP–7047] Balance feeds exist in the future

[APP–7048] Balance feed must exist within lifetime of input value

[APP–7050] You cannot enter this form in GENERIC mode

[APP–7053] Cannot Update REE for assignment &ASSIGNMENT and element &ELEMENT_NAME.
Reason: The attempt to update the standard REE for assignment number &ASSIGNMENT and element &ELEMENT_NAME has failed. This is due to the payroll run being asked to perform a correction on the entry. This is not allowed.

Action:
Either perform the payroll run on a different date or alter the entry to avoid it’s effective start date being on the date of the payroll run.

[APP–7055] This organization already has a parent in this hierarchy

[APP–7056] The Social Security Number is Invalid

Cause:
You have tried to enter a Social Security Number with an incorrect format. The correct format is 999–99–9999, for example 123–45–6789.

Action:
Correct the format to be as specified above.

[APP–7060] You cannot delete a reason used for an employee absence

[APP–7061] This payroll already exists for the security profile

Cause:
For a security profile, you are trying to enter the same payroll more than once.

Action:
As the payroll already exists for the security profile either erase (using \ Row Erase) the information you have entered or enter another payroll.

[APP–7062] A security profile with this name already exists. Enter a new name

Cause:
You are trying to enter more than one security profile with the same name.

Action:
Enter a unique name for your security profile.

[APP–7063] This Oracle Username already has a security profile

Cause:
For an Oracle Username, you are trying to define a security profile when a profile already exists for that username.
Action:
A username can have only one security profile. Rather than inserting a new profile, change the current profile. Notice that you must run the pyucsl program before the information you save can be used in &APPLICATION.

[APP–7068] An invalid workflow was specified, no navigation available

[APP–7069] The date must be on or after the employees hire date

[APP–7072] This menu option is invalid. There are no customizations with this name.

Cause:
The menu option you have chosen has been defined to pass an incorrect form customization name. No customizations exist with this name.

Action:
Ask your System Administrator to correct the error.

[APP–7073] &PERSON is not valid for the duration of the absence

[APP–7074] This menu option is invalid. Customization not enabled.

Cause:
The menu option you have chosen has been defined to pass an incorrect form customization name. The customization is not enabled.

Action:
Ask your System Administrator to correct the error.

[APP–7075] You cannot terminate the only Assignment on this screen.
In order to terminate it you must use the Terminate Assignment Screen.

[APP–7077] You cannot cancel the hire of employees with no previous person type

[APP–7078] Cannot cancel this hire. The employee has future person type changes

[APP–7079] HR is not Installed. You cannot use an HR Responsibility

[APP–7080] You Cannot cancel application, further Person type Changes exist.

[APP–7081] You Cannot cancel application, no Previous Person type Changes exist.

[APP–7087] At least one year of time periods must exist

[APP–7088] Time periods are used for budgetting

[APP–7089] You may not update the standard link flag to ’Yes’ if entries already exist.

Cause:
Updating the standard link flag to ’Yes’ would cause standard entries to be created for all assignments matching the link criteria, but there are existing (discretionary) entries, which may clash with the standard entries.
Action:
Remove any discretionary entries before updating the standard link flag to 'Yes', or create all required entries as discretionary ones.

[APP–7092] This action is invalid for the current record

Cause:
You were attempting to mark for retry a &ACTION_NAME assignment action. This is a Payment type of action and this is not allowed for this type of action.

Action:
Roll back the entire Payroll Process and re-run.

[APP–7095] Standard Links must have defaults

Cause:
Standard entries cannot be created for the link because it has a mandatory input value with no default value.

Action:
Ensure a default is present for all mandatory input values, make the offending input value non–mandatory, or make the link non–standard.

[APP–7096] The effective dates for using this payment method (with)/(as default for) this payroll must lie within the effective dates of the payment method.

Action:
If the start date of the payroll is before the start date of the payment method you should choose to update the payroll definition with the payment method.

[APP–7097] Enter a valid &ASS_SET before running the quickpaint report

Cause:
You must enter a valid assinment or assignment set before running the quickpaint report.

[APP–7098] There are no future changes to delete.

Cause:
You may only delete future changes to the input value, and none exists.

Action:
None.:n/a:

[APP–7099] This operation cannot be performed on system data

Cause:
You are trying to perform an operation on data which was supplied with the product or the legislation.

Action:
n/a:
[APP–7100] Cannot delete as a Pay Change exists for this employee.

[APP–7101] You cannot delete this person. Addresses exist

    Cause:
    You are trying to delete a person for whom one or more addresses exist.

    Action:
    If you want to delete this person, first delete any addresses for the person. Use the next zone on this form to delete addresses.

[APP–7102] Classification rule already exists for the element’s classification

    Cause:
    You are trying to insert an element for which a classification rule already exists within the set. The element is already a member of the set.

    Action:
    Do not add the element to the set.

[APP–7103] Function cannot be performed as insufficient criteria has been entered

[APP–7104] The location is not valid for the date specified.

    Cause:
    You have entered a location which is not valid on the date entered. Remedy: Enter a valid location or change the date.

[APP–7105] This application is already terminated.

    Cause:
    You are trying to terminate this application but the application is already terminated.

    Action:
    Reverse the termination and then re-terminate the application.

[APP–7106] This Unit has already been defined

[APP–7109] Global Values should be preceded by ’G_‘.

[APP–7111] Are you sure there are many units in this Form

[APP–7112] You cannot enter a placement for this assignment because there is no grade scale defined for its grade.

[APP–7114] Oracle error &ERRNO in &ROUTINE

[APP–7115] Error scanning button number (&TEXT) in &ROUTINE

[APP–7116] Could not access navigation information in &ROUTINE.

[APP–7117] Could not convert string &STR to number in &ROUTINE.

[APP–7119] Call to &CALL failed from &ROUTINE
[APP–7120] Could not obtain name of current form.

[APP–7122] Future person changes exist. You cannot cancel the termination

  Cause:
  You are trying to cancel a termination when there are future person type changes.

  Action:
  You must undo all person type changes that exist after the termination date before you can cancel
  the termination from this form.

[APP–7124] You may not enter more than 15 input values for an element.

  Cause:
  You have entered too many input values for a single element.

  Action:
  Do not enter so many input values.

[APP–7125] This employee already has a primary contact

  Cause:
  You are trying to enter more than one primary contact for an employee.

  Action:
  Enter ‘No’ in the Primary Contact field and save your contact information.

[APP–7127] You have entered a duplicate sequence number

[APP–7128] This balance feed control already exists.

  Cause:
  You have attempted to duplicate a balance feed control which is already defined.

  Action:
  Remove the offending record.

[APP–7129] Phase &PHASE_NUMBER will cause exceptions to be raised.

[APP–7130] You cannot say 'yes' to all the view options if the 'view all records’ option is not
selected. Please say 'No' to one or more of the other 'view’ options
Only the base table Oracle user can see all the records.

[APP–7133] A valid balance must be given

[APP–7134] You cannot delete links which have entries within the deletion period.

  Cause:
  You have attempted to shut down a link which has entries within the deletion period you have
  selected.

  Action:
  Delete all entries starting after the session date and try again or do not shut down the link.
[APP–7135] Delete result rules before updating formula.

Cause:
You have attempted to update a formula and this will invalidate result rules that fall within the update period.

Action:
Delete all result rules for the period of the update before trying again.

[APP–7136] Please enter the cost as a number.

[APP–7137] You Cannot Delete Statuses in Startup or Generic mode

[APP–7138] You cannot query a detail record when there is no master record.

[APP–7139] You cannot CORRECT the first assignment status

Cause:
You attempted to modify the status to one with a system status value of something other than 'ACTIVE_ASSIGN'. Only 'ACTIVE_ASSIGN' is permissible for the first occurrence of each employee assignment.

[APP–7143] You cannot enter Actual Start Time without Actual Start Date

[APP–7144] A person must have a primary address

[APP–7145] You must enter Start and End Times if you have entered Duration Hours

[APP–7147] This replacement will be terminated before the Actual Start Date

Cause:
You are trying to enter a replacement whose employment is due to be terminated before this absence or attendance occurs.

Action:
Choose another replacement.

[APP–7148] Warning: Replacement’s employment is terminated before absence is over
Information: You have entered a replacement whose employment is due to be terminated before the last day of this period of absence.

[APP–7151] FORM_MODE parameter not set
You must set up the FORM_MODE parameter

Cause:
The FORM_MODE parameter is required but has not been set for this form

Action:
Please see your system administrator.

[APP–7152] &G_NAME cannot be Mandatory Input and Output for same unit

[APP–7153] &G_GLOBAL is already inserted as &pram – Duplicate not allowed
[APP–7154] Cannot delete &G_GLOBAL as it is used in Context Rules

[APP–7155] The HR object is invalid

    Cause:
The HR object which is attempted to be locked is inconsistent with the corresponding object in the
    HR Schema.

    Action:
Retry the action with the correct object version number.

[APP–7165] The current row is locked

    Cause:
You are trying to lock a row in the &TABLE_NAME table which is currently being locked by
another user.

    Action:
Re-query and attempt to lock the row again.

[APP–7166] Constraint violation against the &TABLE_NAME table

    Cause:
The check constraint &CONSTRAINT_NAME has been violated against the &TABLE_NAME
table.

    Action:
Examine the arguments to establish the offending column violation.

[APP–7167] Cannot delete unit &F_NAME – Incompatibility Rules exist

[APP–7168] Cannot delete unit &F_NAME – as it is used in Navigation Nodes

[APP–7172] The Actual End Date and Time must be after the Start Date and Time

[APP–7174] Referential Error

    Cause:
Referential Integrity error – &node exists in NAVIGATION NODE USAGES

    Action:
You must delete &node from NAVIGATION NODE USAGES

[APP–7176] You cannot delete a type used for an employee absence

[APP–7177] You cannot navigate to another zone when QuickPay changes to this or other records
have not been saved. Do you want to commit your changes?

[APP–7178] You cannot start or retry a process when QuickPay change to this or other records have
not been saved. Do you want to commit your changes?

[APP–7179] DateTrack update not allowed for a record which started today

    Cause:
You have tried to complete a date effective update for the record which starts on the same day.
Action:
Change your DateTrack mode to correction or alter your effective date.

[APP–7180] No DateTrack row found in table &TABLE_NAME as of &SESSION_DATE

Cause:
For the effective date of &SESSION_DATE no corresponding row was found in the table &TABLE_NAME

Action:
Please ensure that the table name, primary key name and value have been correctly specified.

[APP–7181] DateTrack has detected overlapping rows in the table &TABLE_NAME

Cause:
DateTrack has detected that overlapping rows exist on the DateTracked table &TABLE_NAME as of the effective date &SESSION_DATE

Action:
Please call your local support representative quoting the error message number and the following details: Table Name : &TABLE_NAME Effective date : &SESSION_DATE Primary Key Value: &PRIMARY_VALUE:

[APP–7182] No DateTrack row found in table &TABLE_NAME

[APP–7183] Cannot perform the mode &DT_MODE when future rows do not exist

Cause:
The DateTrack mode &DT_MODE cannot be perform if no future rows exist after the current effective date.

Action:
Either perform a DateTrack update operation or clear your changes.

[APP–7184] The DateTrack mode &DT_MODE is unknown

Cause:
The DateTrack mode &DT_MODE supplied to the DateTrack Application Program Interface (DT_Api) is unknown therefore, is invalid.

Action:
Please specify a valid DateTrack mode.

[APP–7185] DateTrack delete not allowed

Cause:
You cannot perform the DateTrack delete operation because your effective date is set to the last datetracked row.

Action:
Clear your changes and move your current effective date back in time.

[APP–7186] Please specify value for Earned Date parameter.
[APP–7187] You cannot extend the end date using the DateTrack mode &DT_MODE

Cause:
You are trying to extend the end date of the current record by using the DateTrack mode &DT_MODE which cannot be extended.

Action:
Clear your changes.

[APP–7188] You cannot extend your end date past the end of time

Cause:
You are currently trying to extend your end date past the end of time.

Action:
Clear your changes.

[APP–7192] You cannot terminate this employee, future assignment changes exist

Cause:
You are trying to terminate an employee for whom you have entered assignment changes in the future, although this employee does not have element entries in the future.

Action:
If you want to terminate this employee, first delete all assignment changes scheduled in the future.

[APP–7194] You have not entered a top node for this task flow

[APP–7195] This node cannot be the top node of a task flow
This node cannot be the top node of a task flow. It must be passed context information from another node.

[APP–7196] Sequence numbers of all nodes following the same node must be unique

[APP–7197] This sequence number does not correspond to a button position

[APP–7198] There may only be one top node in a task flow

[APP–7199] This node already exists in this task flow

[APP–7201] Cannot perform a delete with child rows existing in the future

Cause:
You are attempting to do a date effective delete where child rows will exist in the future.

Action:
Clear your changes and remove any future child rows.

[APP–7202] Cannot select comment text

Cause:
The comment text does not exist for the specified comment identifier.

Action:
Please contact your local support representative.
[APP–7203] The datetrack update mode supplied is invalid

   Cause:
   An invalid datetrack update mode has been passed to an API which is datetracked

   Action:
   Specify a correct datetrack update mode when calling the required datetrack API.

[APP–7204] The datetrack delete mode supplied is invalid

   Cause:
   An invalid datetrack delete mode has been passed to an API which is datetracked.

   Action:
   Specify a correct datetrack delete mode when calling the required datetrack API.

[APP–7207] The mandatory argument &ARGUMENT value cannot be null

   Cause:
   The mandatory argument &ARGUMENT has either not been specified or has been explicitly set to
   null in the API &API_NAME .

   Action:
   Either specify a value for the &ARGUMENT argument which is not null or contact your local
   support representative.

[APP–7208] The business group specified is invalid

   Cause:
   You have specified an incorrect business group identifier or name.

   Action:
   Correct the business group value or call your local support represenative.

[APP–7209] The lookup code you have specified is invalid

   Cause:
   You have specified a lookup code which is invalid.

   Action:
   Respecify the lookup code.

[APP–7210] The attribute &ARGUMENT cannot be updated

   Cause:
   The attribute &ARGUMENT cannot be updated with the API &API_NAME because it has already
   be set.

   Action:
   Respecify the attribute value for &ARGUMENT or contact your local support representative.

[APP–7211] You cannot perform a DateTrack update where rows exist in the future

   Cause:
   The DateTrack update operation cannot be performed where rows exist in the future.
Action:
Consider performing a Datetrack Change Insert or Override operation.

[APP–7212] Cannot rollback payroll of type &ACTION_NAME
Reason: You have attempted to roll back a Payroll Action of type &ACTION_NAME. This is not allowed.

Action:
Do not attempt to roll this back.

[APP–7213] Error return from Fast Formula in the wrong format.

[APP–7214] You must have one and only one default assignment status for each personnel system status

[APP–7215] You cannot perform a delete operation when child rows exist

Causes:
You are doing a delete operation where dependant child rows exist for &TABLE_NAME.

Action:
Delete the dependant child rows in &TABLE_NAME before attempting to delete this row.

[APP–7216] The datetrack update has violated integrity rules

Causes:
The datetrack update operation has cause an integrity error for &TABLE_NAME

Action:
Contact your local support representative.

[APP–7217] Invalid return name from Fast Formula

[APP–7218] Could not map onto costing flexfield

[APP–7220] The primary key specified is invalid

Causes:
The primary key values specified are invalid and do not exist in the schema.

Action:
Check the primary key values before attempting to carry out the operation again.

[APP–7224] No assignment process.
You have tried to include an element entry in QuickPay for an assignment process that does not exist. The p_rec.assignment_action_id (or p_assignment_action_id) argument has been set to an incorrect value.

[APP–7227] You must commit outstanding changes before deleting this person

[APP–7228] You can only have one budget value for a period

[APP–7230] Invalid payroll process type.
You have tried to include an element entry in QuickPay for an invalid type of payroll process. The
payroll process corresponding to the assignment process (p_rec.assignment_action_id) must be of
the type QuickPay Run.

[APP–7231] Please enter a unique combination for the Budget Element record

[APP–7232] No element entry.
You have tried to include a non–existent element entry for QuickPay. The p_rec.element_entry_id
(or element_entry_id) argument has been set to an incorrect value.

[APP–7233] Element entry not date effective.
You have tried to include an element entry for QuickPay that does not exist at Date Earned. You
can only include element entries that are date effective at this date.

[APP–7234] Element entry does not match assignment.
You have tried to include an element entry for QuickPay that is not for the same assignment as
defined for the QuickPay run.

[APP–7236] Element cannot be processed.
You have tried to include an element entry for QuickPay for an element that cannot be processed in
a payroll run.

You have tried to include an element entry in a QuickPay run that can only be used for a balance
adjustment, replacement adjustment or additive adjustment.

You have tried to include the same element entry more than once in the QuickPay run.

[APP–7239] Status change required.
You have tried to include or exclude an element entry for a QuickPay run that has completed
successfully. To do this you must change the assignment process status to Marked for Retry.

[APP–7240] Run in progress.
You have tried to include or exclude an element entry from a QuickPay run while the run is
processing.

[APP–7241] Run in progress.
You have tried to update a field or to delete the QuickPay run while the run is processing.

[APP–7242] No payroll component.
You have tried to define QuickPay for an assignment that has no payroll component valid at Date
Paid. For the run to process, you must create a payroll component that is valid at this date.

[APP–7243] Effective date invalid.
You cannot change to this effective date, because the current assignment is not on a payroll as of the
new date.

You have tried to define QuickPay for an assignment that is to a different Business Group, or does
not exist at Date Paid.

You have tried to define QuickPay for a consolidation set that does not exist, or does not exist in the
Business Group defined for the run.
[APP–7246] No payroll component.
You have tried to define QuickPay for an assignment that has no payroll component defined at Date Paid.

[APP–7247] No payroll period.
You have tried to define QuickPay for an assignment that has no payroll period defined at Date Paid.

[APP–7248] You cannot delete a &STRUCTURE defined in a security profile

[APP–7249] No payroll component.
You have tried to define QuickPay for an assignment that has no payroll component defined at Date Earned.

[APP–7250] No payroll period.
You have tried to define QuickPay for an assignment that has no payroll period defined at Date Earned.

[APP–7251] Different payroll components.
You have tried to define QuickPay for an assignment that has different payroll components for Date Earned and Date Paid. The assignment must be to the same payroll for both dates.

You have tried to enter an invalid status for a completed QuickPay run. You can only update a completed assignment process status to Marked for Retry.

You have tried to alter the Regular/Supplemental flag for a completed QuickPay run. You can only change this flag before a run commences.

[APP–7254] Wrong parameter setting.
For US Business Groups the payroll process legislative_parameters must be set to 'R' (for Regular) or 'S' (for Supplemental).

[APP–7255] Parameters attribute must be null.
For this legislation, you must set the payroll process legislative_parameters attribute to null.

You have tried to update or delete a QuickPay Pre-payment while the corresponding payroll process has a status of Processing.

[APP–7257] Invalid QuickPay Pre-payment.
You have tried to create a QuickPay Pre-payment for a target_payroll_action_id that does not exist, or for a QuickPay run that does not have the status Complete.

[APP–7258] Pre-payment already exists for this QuickPay run.
You cannot create more than one QuickPay Pre-payment for the same run.

[APP–7259] Pre-payment invalid because of batch process.
You cannot create a QuickPay Pre-payment if the QuickPay run has been or will be processed by the batch Pre-payments process.

The business_group and date_paid attributes for the QuickPay Pre-payment must have the same values as the business_group and date_paid for the QuickPay run.
[APP–7261] Invalid Override Payment Method.
The Override Payment Method you have tried to enter does not exist as at Date Paid, or is not in the same Business Group as the QuickPay Pre-payment.

You cannot enter the payment category Magnetic Transfer for the QuickPay Pre-payment org_payment_method_id.

[APP–7263] Choose a QuickPay run.
Query a QuickPay process with a status of Complete before trying to define or process a QuickPay Pre-payment.

[APP–7264] Request is still waiting or running.
You cannot update or delete a QuickPay definition when a request is still running or waiting to run on the AOL concurrent manager. You may need to contact your system administrator to resolve this problem. Please quote AOL concurrent request_id &REQUEST_ID.

[APP–7265] Query and repeat operation.
You have attempted to issue a Start or Retry operation, after querying this record but before another operation has finished. You need to query this record and issue the operation again.

[APP–7266] No request submitted.
You have attempted to wait for a request to finish, when no request has been submitted for this QuickPay Run or QuickPay Pre-payment.

[APP–7267] Operation not started.
You have requested to Start or Retry a QuickPay operation. Your request has been submitted but has not started to run yet. You may need to contact your system administrator to resolve this problem. Quote AOL concurrent manager request_id &REQUEST_ID. Possible causes are the AOL concurrent manager is not running or the concurrent manager is too busy to run your request. Once this request has finished you will need to query this record to see the most up-to-date status.

[APP–7268] Operation started but not finished.
You have requested to Start or Retry a QuickPay operation. Your request has been submitted and has started to run on the AOL concurrent manager. You may need to contact your system administrator to resolve this problem. Quote AOL concurrent manager request_id &REQUEST_ID. Once this request has finished you will need to query this record to see the most up-to-date status.

[APP–7269] Too many errors encountered while processing

[APP–7270] This legislation has no bank keyflex structure defined
You cannot create payment methods for this legislation, because no bank keyflex structure has been defined for it. Your System Administrator should install the keyflex structure by loading the startup data for your current legislation.

[APP–7271] Database item requires context &CONTEXT_NAME to be set

[APP–7272] No rows returned for DB item : &DATABASE_NAME

[APP–7273] Database item returned more than 1 row

[APP–7274] Unable to execute package : &EXPIRY_CODE
[APP–7275] Failed in Expiry Checking code : &ERROR_MESSAGE

[APP–7276] Dynamic SQL for DB item failed : &ERROR_MESSAGE

[APP–7277] Cost allocation structure is null.

[APP–7278] No balance keyflex id given.

[APP–7279] No set Id exists for distributed costs

[APP–7280] Unknown cost type.

[APP–7281] Costing sum for assignment &ASSIGN not 100 percent

[APP–7282] No suspense account in pay_payrolls_f table

[APP–7283] Unable to find distribution member

[APP–7284] Element Entry already processed.  
You have tried to include an element entry in a QuickPay run that has already been processed. It is either a processed non–recurring entry or a processed recurring, additional or override entry.

[APP–7285] You have tried to start a QuickPay Run process without saving a QuickPay definition.  
Do you want to commit this default definition, use the automatically included element entries and start the Run process?

[APP–7286] Invalid Date Paid.  
The QuickPay Date Paid must be the same as a payroll period regular payment date.

[APP–7287] You have tried to start a QuickPay Pre–payment process without saving a QuickPay definition.  
Do you want to commit this default definition and start the Pre–payment process?

[APP–7288] Invalid Date Earned.  
You must use the default value for the QuickPay Run Date Earned, when using GB legislation.

[APP–7289] You cannot navigate to the Element Selection zone, without saving a QuickPay definition.  
Do you want to commit this default definition?

[APP–7290] You cannot make any changes on this form  
This is because there is no period defined for your payroll at your effective date. Change your effective date or increase the number of years defined for the payroll.

[APP–7291] QuickPay Pre–payment is being defined.  
You cannot retry the QuickPay Run while defining a QuickPay Pre–payment.

[APP–7292] You can only delete the latest salary administration record  

[APP–7293] You cannot create new salary proposals when future approvals exist  

[APP–7294] You may only have one unapproved proposal at any time.

[APP–7295] Please save your salary administration changes first  

[APP–7296] Invalid value.  
This version of the API does not support the &ARG_NAME argument being set to &ARG_VALUE.
[APP–7297] Invalid value.
This version of the API only supports the &ARG_NAME being set to &ARG_ONLY.

[APP–7298] This person does not exist.

[APP–7298] This person does not exist.

[APP–7299] This address type does not exist.
The value you have entered for the address type does not exist, or has been disabled, or is not currently date effective for the current address.

This country does not exist in the system.

[APP–7301] Date To must be later than or equal to Date From.

[APP–7302] A non Primary Address cannot exist without a corresponding Primary Address. The Date change has left a Non Primary Address without a corresponding Primary Address.

[APP–7302] A non Primary Address cannot exist without a corresponding Primary Address. The Date change has left a Non Primary Address without a corresponding Primary Address.

[APP–7303] Date From must be earlier than or equal to Date To.

[APP–7304] No address format has been defined for the style you have chosen.

[APP–7306] Postal Code cannot be longer than 8 characters

[APP–7307] The value for Region_1 is invalid.
The value you have entered for Region_1 does not exist, or has been disabled, or is linked to a non GB address style.

[APP–7308] Cannot delete this Primary Address.
You cannot delete a person’s primary address unless you first delete all their date–corresponding non–primary addresses.

[APP–7309] Invalid start date
You have tried to enter a position start date which is outside the active date range for the organization.

[APP–7310] Invalid Rate Type
You have tried to enter an invalid rate type for a grade rule. The rate type you enter must be ’Spinal Point’ or ’Grade’.

[APP–7311] Invalid Grade
You have linked the grade rule to a grade that has not been defined, or does not exist as of the effective date

[APP–7312] Invalid spinal point
You have linked the grade rule to a spinal point that has not been defined.

[APP–7313] This grade rule combination already exists as of effective date

[APP–7314] Non–existent pay rate
No pay rate with this ID exists in the system
[APP–7315] Invalid pay rate combination
The combination of rate id and rate type has not been defined in the system.

[APP–7316] Invalid value
The value you have entered is outside the ‘minimum’ or ‘maximum’ range.

[APP–7318] Invalid grade sequence
The value you have entered for the grade sequence is not defined in the system.

[APP–7319] Invalid spinal point sequence
The value you have entered for the spinal point sequence is not defined in the system.

[APP–7320] Please select a letter request before generating the mail merge file

[APP–7321] Please specify a mail merge file to generate

[APP–7323] At this date the location you chose is not active
You have tried to enter a position start date which is after the date on which the location became inactive.

[APP–7324] Attribute must not be entered
The attribute &ARGUMENT must not be entered for this address style.

[APP–7325] Invalid Primary Flag
Primary Flag must be ‘Y’ or ‘N’

[APP–7326] Element entries currently reference this benefit contribution record

[APP–7327] A Primary Address already exists in the date range. There can only be one Primary Address on a given date. Check the addresses and make one address the Primary or Main Address.

[APP–7327] Primary address already exists in date range.

[APP–7328] Cannot find Recurring Entry to Update.
An attempt was made to process an Update Recurring Entry Formula Result Rule for Input Value &IV_NAME of Element &ELEMENT_NAME. The updated value would have been &UPDATED_VALUE. However, no entry could be found to update. Most likely cause is that the entry does not exist for assignment at date paid.

Action:
check that the assignment has an entry for Element &ELEMENT_NAME at date paid.

[APP–7329] Cannot find Recurring Entry to Stop
An attempt was made to process a Stop Recurring Entry Formula Result for Element Name &ELEMENT_NAME. However, no entry could be found to stop. Most likely cause is that no entry exists for assignment as of Date Paid. This may be because the entry has already been stopped.

Action:
check that there is an entry for assignment for Element &ELEMENT_NAME at Date Paid.

[APP–7330] You Cannot delete this record, element links exist.

[APP–7331] You cannot delete this Organization, Payrolls exist.
[APP–7333] You cannot delete this Organization, Assignments exist.

[APP–7334] You cannot delete this Organization, Events exist.

[APP–7335] You cannot delete this Organization, Budget Elements exist.

[APP–7336] You cannot delete this Organization, Recruitment Activities exist.

[APP–7337] You cannot delete this Organization, vacancies exist.

[APP–7340] The assignment is terminated as of this review date.

[APP–7341] You cannot delete a formula used to generate magnetic tapes.

[APP–7342] Cannot create a reporting Establishment without a location.

[APP–7343] You cannot change batch totals when the batch status is set to Ready. First set the batch status to Hold.

[APP–7344] Unknown context &CONTEXT_NAME required by formula &FORMULA_NAME.

  Cause:
The formula &FORMULA_NAME requires a value to be supplied for context &CONTEXT_NAME. However, no such value could be found in the udca User Context area.

  Action:
Please check that you have supplied values for all the relevant contexts to the udca structure and that the set flag has been set to true in the structure.

[APP–7345] Your software is out of date. Ask your system administrator to upgrade the file &filename.
The latest version of the file &filename is &latest_version. You are using version number &old_version. Failure to upgrade may mean that your application does not work correctly or you may not take advantage of new features. Ask your system administrator to upgrade this file.

[APP–7347] Invalid organization payment method
This organization payment method has not been defined for the payment type.

[APP–7348] Non-existent assignment
No assignment with this ID exists in the system on the current effective date.

[APP–7349] Amount not enterable
You cannot enter an amount.

[APP–7350] This letter request already exists. Please reenter.

  Cause:
You are trying to enter more than one letter request with the same letter name, date and automatic or manual status.

  Action:
As this letter request already exists, either change the letter request details or erase (using \Row Erase) the information you have entered.
This letter has no letter request lines

This person is already included in this letter request

Cause:
For a letter request, you are trying to enter the same person more than once.

Action:
As this person already exists for the letter request either change the person or erase (using \ Row Erase) the information you have entered.

Percentage error
The percentage must be 100 for non–remunerative balance types

Amount less than 0
Enter 0 or positive numbers only

External account not enterable
Only enter an external account for magnetic payments

Priority required
The priority of the personal payment method must be entered

Priority out of range
The value for Priority must be between 1 and 99 for remunerative balance types

Priority must be 1 for non–remunerative balance types

Delete not allowed
You cannot delete a personal payment method if pre–payments exist for future payroll processes

Negative price
Price of car cannot be negative

A surcharge with this name already exists for this state

A surcharge with this formula position already exists for this state

You must enter the first formula position first

You must delete the second formula position before the first

Invalid mileage band
Invalid mileage band

Invalid car registration date
Registration date is invalid

Invalid fuel scale charge
Invalid fuel scale charge

Invalid annual payment
Invalid amount for annual payment for private use of company car
[APP–7370] Invalid payroll
This payroll does not exist at all, or is not completely within the assignment’s date range.

[APP–7371] Invalid business group for grade.
The business group entered is invalid for the grade defined for this assignment.

[APP–7372] Invalid business group for assignment status type.
The business group entered is invalid for the assignment status type defined for this assignment.

[APP–7373] Invalid business group for payroll.
The business group entered is invalid for the payroll defined for this assignment.

[APP–7374] Invalid business group for person.
The business group entered is invalid for the person linked to this assignment.

[APP–7375] Invalid business group for special ceiling step.
The business group entered is invalid for the special ceiling step defined for this assignment.

[APP–7376] Invalid business group for organization.
The business group entered is invalid for the organization to which the assignment is linked.

[APP–7378] Date of birth required.
You cannot enter a payroll component when no date of birth has been defined for this person.

[APP–7379] Invalid special ceiling step
This special ceiling step does not exist at all, or is not completely within the assignment’s date range.

[APP–7380] Invalid special ceiling step for grade.
The special ceiling step entered is invalid for the grade specified for the assignment.

[APP–7381] Value for special ceiling step too high
The special ceiling step value is greater than the spinal point placement defined for the assignment.

[APP–7382] The location you entered does not exist or is flagged as inactive.

[APP–7383] Invalid soft coded keyflex value.

The soft coded keyflex value cannot be linked to the legislation defined for the assignment’s business group.

[APP–7385] Invalid people group
This people group does not exist at all, or is not completely within the assignment’s date range.

The people group value entered is not linked to the people group structure defined for the assignment’s business group.

[APP–7387] Normal hours value required.
The value for frequency cannot be entered without a corresponding value for normal hours.

[APP–7388] You have entered an invalid frequency value.
[APP–7389] Invalid organization. This organization does not exist at all, or is not completely within the assignment’s date range.

[APP–7390] An employee number is required for the employee

[APP–7391] Invalid period of service
This period of service does not exist at all, or is not completely within the assignment’s date range.

[APP–7392] Delete not allowed
You cannot delete an assignment unless there is at least one contiguous primary assignment running either to the end of time or to the end of the person’s period of service.

[APP–7393] Invalid grade
This grade does not exist at all, or is not completely within the assignment’s date range.

[APP–7396] Frequency value required.
The value for frequency must be entered if a corresponding value exists for normal hours.

[APP–7399] You cannot delete a non primary assignment that is changed to primary in the future.

[APP–7400] You cannot delete an assignment that has events linked to it.

[APP–7401] You cannot delete an assignment that has letter requests linked to it.

[APP–7402] You cannot delete an assignment that has cost allocations linked to it.

[APP–7403] You cannot delete an assignment that has payroll actions linked to it.

[APP–7404] You cannot delete an assignment that has personal payment methods linked to it.

[APP–7405] You cannot delete an assignment that has COBRA coverage enrollments linked to it.

[APP–7406] You cannot delete an assignment that has COBRA coverage benefits linked to it.

[APP–7407] You cannot delete an assignment that has secondary assignment statuses linked to it.

[APP–7408] This position already exists in the hierarchy

[APP–7410] You cannot delete an assignment that has assignment set amendments linked to it.

[APP–7412] You cannot delete an assignment if it is terminated in the future.

[APP–7413] The new amount is outside the range defined at the link level

[APP–7414] The new amount is outside the range defined at the element level

[APP–7415] A position with this name already exists. Please enter a new name

    Cause:
    You are trying to enter more than one position with the same name.

    Action:
    Enter a unique name for your position.

[APP–7416] You cannot delete a position that is within a hierarchy
Cause:
You are trying to delete a position whilst the position is part of a position hierarchy.

Action:
If you want to delete this position, first remove it from the position hierarchy to which it currently belongs. Use \Navigate Define Work Position Hierarchy, the Define Position Hierarchy form, to delete positions from a hierarchy.

[APP–7417] You cannot delete a position to which employees are assigned

Cause:
You are trying to delete a position to which employees are currently assigned.

Action:
If you want to delete this position, first assign the employees to another position using \Navigate Employee Assignment Enter, the Enter Employee Assignment form.

[APP–7418] You cannot delete parent positions when subordinates exist

Cause:
You are trying to delete the parent position of the current position, when the current position has subordinate positions.

Action:
The current position is the link between the parent position and the subordinate positions. You cannot delete this link between the positions.

Action:
If you want to delete the current position, first remove any subordinates from the hierarchy using \Navigate Define Work Position Hierarchy, the Define Position Hierarchy form.

[APP–7419] This parent must already exist in the hierarchy

Cause:
You are trying to enter a parent position for the current position when the parent position does not exist in the position hierarchy.

Action:
Choose a parent for the current position from the positions which exist within the hierarchy.

Action:
Enter the parent position you require into the current position hierarchy using \Navigate Define Work Position Hierarchy, the Define Position Hierarchy form.

[APP–7420] This parent already exists in the hierarchy

Cause:
You are trying to enter a parent position for the current position when the parent already exists in the position hierarchy.

Action:
A position may appear only once in a position hierarchy. If you want the current position to be below this parent, find the parent in the hierarchy and enter the current position below.
[APP–7421] This parent already exists in the hierarchy below the position

    Cause:
    You are trying to enter a parent position for the current position when this position is currently a
    subordinate of the current position.

    Action:
    If the parent position you chose is the parent you want, remove the parent from lower in the
    hierarchy and enter it here.

    Action:
    If the parent position you chose is in the right place in the hierarchy; enter a new parent for the
    position.

    Action:
    If you want the parent position you chose to remain in its current place in the hierarchy, BUT you
    want to show a hierarchical relationship between the current position and the parent, define a new
    position hierarchy.

[APP–7423] Invalid ID
The &ARGUMENT value does not exist as of the effective date.

[APP–7424] At this date the job you chose is not active

    Cause:
    You entered a position start date earlier than the start date of the job you chose in the Position zone.

    Action:
    Enter a position start date later than the start date of the job you chose in the Position zone.

[APP–7425] You must commit outstanding changes before setting state to Ready.

[APP–7426] Employees age must be between &MIN and &MAX, please re–enter Birth date.

[APP–7427] Invalid assignment type.
The assignment type must be set to 'E'(Employee) or 'A'(Applicant).

[APP–7428] Invalid primary flag.
The primary flag must be set to 'Y' or 'N'.

[APP–7429] The manager flag must be set to 'Y' or 'N'.

[APP–7431] You may not update the input value name or sequence.
There are Paylink Batch Lines which rely on the ordering of this element’s input values. You may
not update the name or sequence of any input value for this element until all batch lines which use it
are purged.

[APP–7432] The person you entered does not exist.
This person does not exist at all, or is not completely within the assignment’s date range.

[APP–7433] This value should be between &LOW and &HIGH, please re–enter.
[APP–7434] Grade required.
The value for grade must be entered if a value exists for the special ceiling step.

[APP–7435] This person already has a primary assignment for these dates.

[APP–7436] No primary assignment exists during the date range of the non primary assignment.

[APP–7437] The coverage level is not valid for this benefit plan

[APP–7438] Invalid reference field value.
The reference field value for the descriptive flexfield is not supported.

[APP–7439] Invalid attribute argument.
You have tried to set attribute arguments when the descriptive flexfield reference field is null or validation logic has not been implemented.

[APP–7441] Invalid value.
This version of the API does not support the &ARG_NAME argument. This argument must be left blank.

[APP–7442] Element Entries including at least one Salary Entry have changed. Do you want to continue?

[APP–7443] Case Number must be unique
The Case Number entered for an OSHA incident report must be unique. The Case Number entered has been used previously.

[APP–7444] Cannot alter balance feeds
The balance is defined using classifications and as such all the balance feeds exist due to the classifications. To preserve the definition of the balance, the creation, alteration, or removal of individual balance feeds is not allowed.

[APP–7445] Cannot create balance classification
The balance has been defined using individual balance feeds and as such it is not possible to feed the balance using classifications.

[APP–7446] Hot Defaults must have a default value
You may leave the creation of a default value until you create the link, but this is a warning in case you wanted to enter a default here. A default here will be inherited by all links for this element.

[APP–7448] This person is not eligible for the element associated with this absence type.

[APP–7449] A value must be entered for &COLUMN_NAME

[APP–7450] A body has not been defined for the user validation package

[APP–7451] You may not delete next change this processing rule.
There are result rules for future versions of this processing rule. These must be deleted before the processing rule may be overridden by your action.

[APP–7452] Entry values exceed number of input values associated with this element at the effective date
[APP–7453] Costing details have been entered for a non costable element

[APP–7454] Multiple entries are not allowed for this entry

[APP–7455] An entry exists for this element at the effective date

[APP–7456] Cannot update as more than one entry for this element exists at the effective date

[APP–7457] Future changes exist for this entry

[APP–7458] Entry values not required as there are no input values associated with this element at the effective date

[APP–7459] Employee is not eligible for this element entry at the effective date

[APP–7460] A cost allocation structure has not been defined for business group &BUSINESS_GROUP_ID

[APP–7462] An invalid value has been entered for &COLUMN_NAME

[APP–7464] Element type id &ELEMENT_TYPE_ID is invalid at the effective date

[APP–7465] Element &ELEMENT_NAME is invalid at the effective date

[APP–7466] Assignment number &ASSIGNMENT_NUMBER is invalid at the effective date

[APP–7467] Assignment id &ASSIGNMENT_ID is invalid at the effective date

[APP–7468] A status must be returned by &USER_PROCEDURE

[APP–7469] An invalid status was returned by &USER_PROCEDURE

[APP–7470] &USER_PROCEDURE returned a status that is invalid in this context. Valid statuses are (V)alid,(E)rror,(W)arning

[APP–7471] The external account flexfield structure is invalid

[APP–7472] Unable to process batch &BATCH_ID as it contains transferred record(s)

[APP–7473] Job Requirements using this type exist currently
This Special Information Type cannot be removed from this category because there are Job Requirements currently using the type.

[APP–7477] Control types have not been defined by the user

[APP–7478] Either the element type id &ELEMENT_TYPE_ID or element name &ELEMENT_NAME does not exist on the effective date, or the element type id and element name do not match.

[APP–7479] Either the assignment id &ASSIGNMENT_ID or the assignment number &ASSIGNMENT_NUMBER does not exist on the effective date, or the assignment id and assignment number do not match

[APP–7481] An error occurred within &USER_PROCEDURE
Both &COL1 and &COL2 are null. At least one value should be entered.

When a payroll is assigned, the Last Standard Process Date must equal the last assignment end date.

The Final Process Date must be blank when creating a new Period of Service.

The Leaving Reason must exist within the HR Lookups values.

The Notified Termination Date must be on or after the Date Start.

The Notified Termination Date must be blank when creating a new Period of Service.

The person accepting the termination date must be different to the person terminated.

The Leaving Reason must be blank when creating a new Period of Service.

The person must exist as an employee at the time specified by Date Start.

The Projected Termination Date must be on or after the Date Start.

The Accepted Termination Date must be blank when creating a new Period of Service.

The Actual Termination Date must be on or after the Date Start.

The Final Process Date must be blank when creating a new Period of Service.

The Last Standard Process Date must be blank if the Actual Termination Date is blank.

The Projected Termination Date must be blank when creating a new Period of Service.

The Termination Accepted By person is not valid.
The person accepting the termination must be an employee at the Actual Termination Date.

The Termination Accepted Person must be blank when creating a new Period of Service.

The Actual Termination Date must be blank when creating a new Period of Service.

The Final Process Date must be blank if the Actual Termination Date is blank.

The Final Process Date must be on or after the Last Standard Process Date.

The Last Standard Process Date must be on or after the Actual Termination Date.

Can only mark for retry a completed assignment action

Cause:
an attempt was made to mark for retry an assignment action that did not have an action status of Complete. This is not allowed. The assignment action is for Assignment Number &ASG_NO

Action:
either rollback or rollforward the assignment action.
[APP–7507] Assignment action interlock rule failure You cannot mark this process for retry as there has been subsequent post-run processing for this payroll. To remedy this you can mark the subsequent process for retry. Marking for retry deletes the results of the subsequent process and enables you to retry the first process. Please note an exception to this procedure. If the subsequent process is a payments process (magnetic transfer, check, or cash) you can only delete it in order to retry the preceding process.

[APP–7507] Assignment action interlock rule failure You cannot mark this process for retry as there has been subsequent post-run processing for this payroll. To remedy this you can mark the subsequent process for retry. Marking for retry deletes the results of the subsequent process and enables you to retry the first process. Please note an exception to this procedure. If the subsequent process is a payments process (magnetic transfer, check, or cash) you can only delete it in order to retry the preceding process.

[APP–7508] Undo rule failure for action name &ACTION_NAME

    Cause:
    the rollback or mark for retry of an individual assignment action for an action of &ACTION_NAME is not allowed.

    Action:
    either rollback/mark for retry the entire payroll action or do not perform either action.

[APP–7509] Bad dml mode

    Cause:
    the dml_mode parameter to the rollback procedure can only have the values FULL, PARTIAL or NONE.

    Action:
    specify one of the values above.

[APP–7510] You cannot continue, Future changes exist.

[APP–7511] The entry for gender/sex is not recognized. Check and re-enter M or F.

[APP–7512] The entry for Title is not recognized. Check and re-enter the Title.

[APP–7513] Invalid person type
    You have tried to enter a person type that does not exist on the system.

[APP–7514] Invalid start date
    You have tried to enter a start date that does not exist on the system

[APP–7515] The interview start date must be on or after: &RECEIVED_DATE

    Cause:
    For an applicant interview, you are trying to enter a Start Date which is before &RECEIVED_DATE – the start date of the application.

    Action:
    You are trying to interview an employee before he or she has applied to your business! Enter a interview Start Date which is on or after the Date Received of the application.
[APP–7516] The interview end date must be on or before: &END_DATE

Cause:
For an applicant interview, you are trying to enter an End Date which is after &END_DATE – the end date of the application.

Action:
You are trying to interview an applicant after his or her application has lapsed! Enter an interview End Date which is on or before the Terminated Date of the application.

[APP–7517] You cannot delete this interview, interviewers are booked for it

Cause:
For an application, you are trying to delete an interview for which you have booked interviewers.

Action:
If you want to delete this interview, first delete all interviewers booked to participate in the interview. Use the next zone to delete interviewers.

[APP–7518] The entry for Marital Status is not recognized. Check and re-enter the Marital Status.

[APP–7522] The entry for Nationality is not recognized. Check and re-enter the Nationality.

[APP–7585] Please enter a job before moving to the career path map.

[APP–7586] Please enter a career path before moving to the career path map.

[APP–7587] You can only use Quickpick if there is more than one holder.

[APP–7588] This step is not valid for the duration of the grade scale.

[APP–7589] This step is not valid for the duration of the assignment.

[APP–7594] You cannot cancel the termination of a hired applicant

Cause:
You are trying to cancel the termination of an application that you have not actually terminated.
You have hired the applicant, that filed this application, into the assignment he/she applied for and
the application has ended, not terminated.

Action:
If you want to cancel the hire, Use the Enter Employee Personal Information form.

[APP–7597] This application is not terminated, you cannot cancel it

Cause:
You have entered ‘Yes’ in the Initiate Cancellation field, when you have not entered any termination
details for the application.

Action:
You are trying to cancel a termination when you have not entered termination information! Enter
‘No’ in the Initiate Cancellation field.

[APP–7599] Supervisor is not valid for the duration of the assignment.

[APP–7600] Standalone Personnel users cannot query a Payroll Status

[APP–7601] You can have only one default status for primary system status type
[APP–7602] This user status already exists. Please enter a new user status

[APP–7603] Personnel status is for applicants, cannot enter a Payroll status

    Cause:
    You are trying to enter a Payroll system status for a Personnel system status relating to applicants.

    Action:
    Personnel system statuses for applicants do not require corresponding Payroll system statuses.

[APP–7604] Please enter a Payroll status for this Personnel status

    Cause:
    You are trying to define a Personnel system status for employees without entering a related Payroll system status.

    Action:
    Personnel system statuses for employees require a related Payroll system status. Enter a Payroll system status for this Personnel system status.

[APP–7605] Please enter ‘P’ for Primary or ‘S’ for Secondary

[APP–7607] You must an active default value for a primary status

[APP–7610] Job is not valid for the duration of the assignment.

[APP–7612] Grade is not valid for the duration of the assignment.

[APP–7614] Payroll is not valid for the duration of the assignment.

[APP–7615] Progression point step has changed or there are future deletes.

[APP–7616] The actual end date must be after the actual start date.

[APP–7617] The projected end date must be after the projected start date.

[APP–7618] The actual End time must be after the actual Start Time.

[APP–7619] The Projected end Time must be after the Projected Start time.

[APP–7620] You cannot enter Actual End Time without Actual End Date.

[APP–7621] You cannot enter Projected End Time without Projected End Date.

[APP–7622] The absence duration in Days is greater than the length of time absent.

[APP–7623] The absence duration in hours is greater than the actual time absent.

[APP–7625] You cannot delete the assignment when application assignment rows exist.

[APP–7628] Please enter a frequency for the working hours

[APP–7634] You cannot delete the assignment when Letter Requests rows exist.

[APP–7637] You cannot end the assignment when future Letter Requests rows exist.
[APP–7638] You cannot delete the assignment when Costing rows exist.

[APP–7641] you can not end the assignment when future Costing rows exist.

[APP–7642] You cannot delete the assignment when Extra Assignment Information rows exist.

[APP–7646] You must enter a value for Organization Hierarchy

[APP–7647] You must enter a value for Top Organization

[APP–7648] You must enter a value for Position Hierarchy

[APP–7649] You must enter a value for Top Position

[APP–7651] You cannot change View All Payrolls to ‘Yes’, specific payrolls exist

  Cause:
  You are trying to change a security profile to view all records when you have already defined the View All Payrolls field as ‘No’ and entered the payroll(s) which the profile includes or excludes.

  Action:
  If you want this security profile to view all records, first remove these payrolls.

[APP–7652] you cannot delete the assignment when Secondary Assignment Status rows exist.

[APP–7655] You cannot end the assignment when future Secondary Assignment Status rows exist.

[APP–7656] You cannot delete the assignment when Payment Method rows exist.

[APP–7659] You cannot end the assignment when future Payment Method rows exist.

[APP–7660] You cannot delete a period type which is used in a calendar

  Cause:
  You are trying to delete a period type used by a calendar.

  Action:
  You cannot delete a period type once it is used by a calendar. Delete the calendar if you wish to delete the period type.

[APP–7662] At least one period type of &PERIOD_TYPE must exist

  Cause:
  You are trying to delete the only &PERIOD_TYPE period type.

  Action:
  &APPLICATION requires at least one &PERIOD_TYPE period type. If you want to delete this period type, first define and save another.

[APP–7663] A time period with this name already exists. Enter a new name

  Cause:
  You are trying to define more than one time period type with the same name.

  Action:
  Enter a unique name for your time period type.
You cannot delete the assignment when Assignment Action rows exist.

You cannot end the assignment when future Assignment Action rows exist.

You cannot end the assignment when future COPBRA Benefits rows exist.

You cannot delete the assignment when COBRA Enrolments rows exist.

You can end the assignment when future COBRA Enrolments rows exist.

No payment detail information found. Contact your Sys Admin. Payment information could not be found. Contact your System Administrator.

Startup data is missing for balance dimensions. Startup data provided with Oracle Payroll is missing – PAY_BALANCE_DIMENSIONS. Contact your System Administrator.

Please delete the base element, not the Special Features element. The base element must be queried from the database and deleted. You cannot delete the "Special Features" or "Special Inputs" elements. These are deleted when the base element is deleted.

Please delete the base element, not the Special Inputs element. Special Inputs and Special Features elements are deleted when you delete the base element. Query base element and retry deletion.

You must re-query this earning before deletion. Earnings cannot be deleted immediately after insertion. Please re-query the element and try delete again.

Please PURGE all links before deleting this earnings type. Elements may not be deleted when element links for the element exist.

You cannot delete an earnings type that has run results. Rollback any runs including this element type before deletion.

Batch Lines for this earnings type must be PURGED. All batch lines for this earning must be purged before delete.

Please PURGE all COBRA coverage benefits for this earning. COBRA coverage benefits must be purged for this earning before deleting.

Element Name must be entered.

Element Name must be less than 25 characters. The earnings generator creates additional data for you when you commit. Some of this data uses the
name you have entered as a basis for the name of another object. If the concatenated name is too long, an error will occur. Please enter an element name less than 25 characters.

[APP–7754] Please select a Calculation Method.

[APP–7755] Calc Rule must use "Hours" when FLSA Hours = Y Hours entered for this earning get included in the FLSA Overtime base rate calculation (FLSA = Y), so you must select a Calculation Method using "Hours" – ie. Hours x Rate.

[APP–7756] Element names must start with a letter of the alphabet.

[APP–7757] Element names can include only letters, numbers and underscores.

[APP–7759] Reporting names must begin with a letter of the alphabet.

[APP–7760] Reporting names can include only letters, numbers, and underscores.

[APP–7761] Element names must begin with a letter of the alphabet.

[APP–7762] Element names can include only letters, numbers and underscores.

[APP–7763] Payroll Table must be entered. When calculation method is "Payroll Table”, you must provide the table information required for processing of this deduction.

[APP–7764] Table Column must be entered. Payroll Table details are required for processing of this deduction – ie. calculation method = "Payroll Table”.

[APP–7765] Row Type must be entered.

[APP–7766] Please delete base element, not Special Features element Special Features and Special Inputs elements are deleted when the base element is deleted.

[APP–7767] Please delete base element, not Special Inputs element. Special Inputs and Special Features elements are deleted when the base element is deleted.

[APP–7768] You cannot delete deductions included with the system. Startup data deductions cannot be deleted by the user.

[APP–7769] You must query a deduction before you can delete it. Deductions cannot be deleted immediately after insertion. Requery deduction before deleting.

[APP–7772] Please PURGE all links before deleting this deduction.

[APP–7776] Please PURGE all COBRA coverage benefits for this deduction.

[APP–7777] Please delete contributions before deleting this benefit. Data entered on the Benefit Contributions form for this benefit must be purged before deleting.

[APP–7778] Please delete element set rules referencing this deduction.

[APP–7779] You cannot delete earnings included with the system.
[APP–7781] Delete element set rules referencing this earning before deletion.

[APP–7782] Could not find latest assignment action for this assignment.

[APP–7783] No assignment or assignment action passed to SOE. Contact your System Administrator.

[APP–7784] Cannot find balance &BAL_DIM_ID. Contact your system administrator.

[APP–7785] No GRE is on record for this employee’s assignment. Please enter one.

[APP–7786] Enter Zip Code correctly, should be between &zip_start and &zip_end.

[APP–7787] You cannot set up a third party payment method for this payment type.

[APP–7788] The Address identified must be of style GB.

[APP–7789] Assignment is not linked to payroll on &ADJ_DATE.

[APP–7792] Failure when attempting to open file &FILE.

  Cause:
  a failure was reported when attempting to open the file $FILE.

  Action:
  check that you have the permissions to open a file for writing in the particular directory. Also check
  that the directory actually exists.

[APP–7793] The date earned must be within the effective dates of the entry.
The date earned of an entry must be a date within the payroll period to which the entry belongs.

[APP–7794] The date earned may not be entered for recurring entries.
You may only enter a date earned for entries which are nonrecurring. This could be an entry for a
nonrecurring element, or an additional, adjustment or override entry for a recurring element.

[APP–7795] You may not enter a payee for this entry.
Only elements denoted as being for third party payments may have a payee on the entry.

[APP–7796] There is no such payee.
The payee specified is not valid for the assignment specified.

[APP–7797] The payee record does not exist for the lifetime of the entry.
The effective dates of the entry must fall within the effective dates of the payee selected.
Otherwise, there is ambiguity in the details which should be used for the entry.

[APP–7798] You cannot delete this entry.
This entry has been processed in a payroll run. Backpay is not currently supported for third party
payments (garnishments in the US). If you want to remove this entry, you must first rollback or
mark for retry the run in which this entry was processed.

[APP–7800] This element’s end date is before that of the absence type.
Cause:
You are trying to associate an element with an absence type but the element does not exist for the entire duration of the absence type.

Action:
Choose another element to associate with this absence type OR Navigate to the Define Element form and perform a remove future changes delete, with your session date set to a date for which the element exists. You can then associate the required element with this absence type.

[APP–7801] The unit of measure for this absence type is Days. PayMIX currently supports only absences measured in Hours.

[APP–7804] Employee will not be terminated.
You have not entered an Actual Termination Date so the employee will not be terminated. Choose OK if you want to save the information you have entered.

[APP–7805] You cannot delete this absence/attendance type, reasons exist

Cause:
You are trying to delete an absence or attendance type for which reasons exist.

Action:
If you want to delete this absence or attendance type, first delete all reasons defined for the type.

[APP–7806] This absence/attendance type already exists. Please enter a new name

Cause:
You are trying to enter more than one absence or attendance type with the same name.

Action:
Enter a unique name for your absence or attendance type.

[APP–7807] This reason already exists. Please enter a new name

Cause:
For an absence or attendance type, you are trying to enter more than one reason with the same name.

Action:
Enter a unique name for your reason.

[APP–7808] This grade must become valid on or before grades are valid for jobs

Cause:
You are trying to change the date on which the grade becomes valid, when that date is after the grade has been defined as valid for one or more jobs.

Action:
Either change the date from which this grade is valid, or change the date the grade is valid for jobs.

[APP–7809] This employee is not terminated.
You cannot cancel the termination of an employee who is not currently terminated.
[APP–7810] This job already exists. Please enter a new name

  Cause:
  You are trying to enter more than one job with the same name.

  Action:
  Enter a unique name for your job.

[APP–7811] You cannot delete this job, it exists in a career path

  Cause:
  You are trying to delete a job which is included in a career path.

  Action:
  If you want to delete this job, first delete it from any career paths currently using the job. Use \Navigate Define Work Job Map, the Map Career Path form, to delete jobs.

[APP–7812] You cannot delete this job, it has valid grades

  Cause:
  You are trying to delete a job for which valid grades exist.

  Action:
  If you want to delete this job, first delete all grades defined as valid for this job. Use this form to delete such grades.

[APP–7813] You cannot delete this job, it has positions

  Cause:
  You are trying to delete a job for which positions exist.

  Action:
  If you want to delete this job, first delete any positions which use this job. Use \Navigate Define Work Position Description, the Define Position form, to delete jobs.

[APP–7814] You cannot delete this job, it has job requirements

  Cause:
  You are trying to delete a job for which job requirements exist.

  Action:
  If you want to delete this job, first delete all job requirements defined for the job. Use this form to delete job requirements.

[APP–7815] You cannot delete this job, it has job evaluations

  Cause:
  You are trying to delete a job for which job evaluations exist.

  Action:
  If you want to delete this job, first delete all job evaluations defined for the job. Use this form to delete job evaluation.

[APP–7816] You cannot delete this job, it has budget values
Cause:
You are trying to delete a job for which budget values exist.

Action:
If you want to delete this job, first delete all budget values defined for the job. Use \ Navigate Define Work Position Budget, the Define Budget form, to delete budget values.

[APP–7817] You cannot delete this job, employees are assigned to it

Cause:
You are trying to delete a job to which employees are assigned.

Action:
If you want to delete this job, first reassign employees to other jobs. Use \ Navigate Employee Assignment Enter, the Enter Employee Assignment form, to reassign employees.

[APP–7818] This grade already exists. Please enter a new name

Cause:
For this job, you are trying to enter the same grade as a valid grade more than once.

Action:
As this grade already exists for this job, erase (using \ Row Erase) the information you have entered in this zone and enter another grade.

[APP–7820] Invalid payee details.
You can only enter payee and payee type when the organization payment method is for a third party payee.

[APP–7821] Grade must become valid on or after the grade start date: &DATE

Cause:
You are trying to define the date on which this grade is valid for the job, when that date is prior to the start date you have defined for the grade.

Action:
You are trying to use the grade before it exists in &APPLICATION Enter the date after which the grade becomes valid for the job as on or after the start date which you have defined for the grade.

[APP–7822] Incomplete payee details.
You must enter both the payee and the payee type when the organization payment method is for a third party payee.

[APP–7823] This grade must become valid on or after the job start date

Cause:
You are trying to define the date on which this grade is valid for the job, when that date is prior to the start date you have defined for the job.

Action:
You are trying to use the grade for a job before the job exists in &APPLICATION

Action:
Enter the date after which the grade becomes valid for the job as on or after the start date you have defined for the job.
[APP–7824] This grade must no longer be valid on or before the job end date

  Cause:
You are trying to define the date on which this grade is no longer valid for the job, when that date is after the end date you have defined for the job.

  Action:
You are trying to use the grade for a job after the job has ceased to exist in &APPLICATION

  Action:
Enter the date after which the grade is no longer valid for the job on or before the end date you have defined for the job.

[APP–7825] This job must become valid on or before all grade start dates

  Cause:
You are trying to change the date from which this job is valid, when that date is after the start date for at least one of the grades you have entered for the job.

  Action:
Either change the start dates of grades starting before the job, or change the start date of the job to be before the first grade.

[APP–7826] This job must still be valid on or after all grade end dates

  Cause:
You are trying to change the date on which the job is no longer valid for the job, when that date is before the last date of one or more grades valid for the job.

  Action:
Either change the end dates of grades valid for the job, or change the end date of the job to be after all grades.

[APP–7830] A grade with this name already exists. Please enter a new name

  Cause:
You are trying to enter more than one grade with the same name.

  Action:
Enter a unique name for your grade.

[APP–7833] Please enter an integer sequence number greater than zero

  Cause:
You are trying to enter a Sequence Number which is not an integer, or is less than zero.

  Action:
Enter a Sequence number which is an integer.

  Action:
Enter a Sequence number greater than zero.

[APP–7834] You cannot delete this grade, it is currently assigned
Cause:
You are trying to delete a grade which is currently assigned to one or more employees in your business.

Action:
If you want to delete this grade, first assign a new grade to all employees currently at this grade. Use the Navigate Employee Assignment Enter, the Enter Employee Assignment form, to change employee grades.

[APP–7836] An information type with this name already exists. Enter a new name

Cause:
You are trying to enter more than one further information type with the same name.

Action:
Enter a unique name for your further information type.

[APP–7837] You cannot delete this information type, people are using the type

Cause:
You are trying to delete a further information type used by one or more person in or applying to your business.

Action:
If you want to delete this further information type, first delete the information type from the records of all people currently using the type.

[APP–7839] The payee organization does not exist.

[APP–7840] You cannot delete this career path, career maps use it

Cause:
You are trying to delete a career path used by one or more career maps.

Action:
If you want to delete this career path name, first delete all career maps using the career path.

[APP–7841] A career path with this name already exists. Please enter a new name

Cause:
You are trying to enter more than one career path with the same name.

Action:
Enter a unique name for your career path.

[APP–7843] The organization you have entered is not active or of type payee.

[APP–7845] You cannot delete a job to which other jobs progress

Cause:
You are trying to delete a job to which other jobs progress.

Action:
If you want to delete this job from the career path map, first delete any jobs which progress to this job. Use the Job Progression From zone to delete jobs below the current path.
[APP–7846] The payee person does not exist as of the effective date.

[APP–7847] Invalid payee contact.
The payee you have entered is not a contact with a contact relationship of the correct type for third party payments.

[APP–7848] Invalid payee type.

You cannot remove this personal payment method because it is referenced by at least one element entry in the delete date range.

[APP–7851] Only the value attribute can be set for a pay scale value – not the maximum, mid-value and minimum attributes.

[APP–7852] A budget with this name already exists. Please enter a new name

  Cause:
  You are trying to enter more than one budget with the same name.

  Action:
Enter a unique name for your budget.

[APP–7853] Assignment not yet eligible for this accrual
The assignment period of service is not yet long enough to be eligible for this accrual plan. Time taken against this accrual cannot be entered until ineligibility period has expired.

[APP–7854] The Value Rule identified must be for a Grade Rate.

[APP–7855] The Value Rule identified must be of Pay Scale type.

[APP–7856] A letter type with this name already exists. Please enter a new name

  Cause:
  You are trying to enter more than one letter type with the same name.

  Action:
Enter a unique name for your letter type.

[APP–7857] You cannot delete this letter type. Statuses exist

  Cause:
  You are trying to delete a letter type for which one or more statuses are defined.

  Action:
  If you want to delete this status, first delete any statuses defined for this letter type. Use the Application Statuses zone of this form to delete statuses.

[APP–7858] You cannot delete this letter type. Requests exist

  Cause:
  You are trying to delete a letter type for which letter requests exist.

  Action:
  If you want to delete this letter type, first delete any requests for this type of letter. Use Navigate Start Letter, the Request Letter form, to delete requests for letters.
[APP–7859] This status already exists for the letter type. Please reenter

Cause:
For a letter type, you are trying to enter the same application status more than once.

Action:
As this application status already exists for the letter type, either change or erase (using \RowErase) the information you have entered on this form.

[APP–7860] Costing records exist between the old and new dates.

[APP–7861] You cannot delete a position for which a recruitment activity exists

[APP–7862] You cannot delete a position for which staff budgets exist

[APP–7863] You cannot delete a position having element links

[APP–7865] You cannot delete this position, it has valid grades

[APP–7866] You cannot delete this position, it has position requirements

[APP–7867] You cannot delete this position, it has position evaluations

[APP–7868] This grade already exists. Please enter a new name

[APP–7869] A valid payment method does not exist for the employee assignment payroll

[APP–7870] This grade must become valid on or after the position start date

[APP–7871] Grade must become valid on or after the grade start date: &DATE

[APP–7872] This position must still be valid on or after all grade end dates

[APP–7873] Warning, unable to reinstate one or more element entries

Cause:
The run that you are trying to reverse has the following entries that have been either deleted or updated as of the payroll run and is unable to reinstate the entries. Check the entries by looking at the Element History screen, and manually reinstate the entries before performing the reversal: &ELEMENT_NAME1 &ELEMENT_NAME2 &ELEMENT_NAME3 &ELEMENT_NAME4 &ELEMENT_NAME5 &ELEMENT_NAME6 &ELEMENT_NAME7 &ELEMENT_NAME8 &ELEMENT_NAME9 &ELEMENT_NAME10 &ELEMENT_NAME11 Do you want to continue with the reversal run?

[APP–7874] You cannot update value, Person is recipient of Payment.

[APP–7875] There can only be a single initial balance feed

[APP–7876] This input value has been processed in a Payroll Run

Cause:
You are trying to use or update the usage of an input value as a balance feed where the input value has been processed in a payroll run.
[APP–7877] Database constraint violated
The database check or unique constraint &CONSTRAINT_NAME has been violated. Please contact your system administrator quoting the package procedure &PROCEDURE and constraint &CONSTRAINT_NAME.

[APP–8135] Oracle General Ledger was unable to get the install status of JG from &ROUTINE. Contact your system administrator.

[APP–8136] The reversal period for this journal has not been defined.

[APP–8137] This date is after the reversal date of one or more of the journals in your batch.

[APP–8138] You can only use standard amount types (PTD or YTD) with budget balances.

[APP–8139] You can only use standard amount types (PTD or YTD) with revenue and expense accounts.

[APP–8140] This date must be within an open encumbrance year.

[APP–8141] There is a gap in your &CALENDAR_NAME calendar. Not all dates between &START_DATE and &END_DATE are assigned to a period. Please fix the calendar or pick another one.

[APP–8142] Please reverse your batch from the primary set of books.

[APP–8143] Please reverse your journal from the primary set of books.

[APP–8144] You cannot drill down from this journal line. Please ensure that:
– Payables is the journal source.
– Import Journal References is enabled for Payables in the Journal Sources form.
– Accounts Payable is installed on the same instance as General Ledger.

[APP–8145] You cannot drill down from this journal line. Please ensure that:
– Receivables is the journal source.
– Import Journal References is enabled for Receivables in the Journal Sources form.
– Accounts Receivable is installed on the same instance as General Ledger.

[APP–8146] You cannot drill down from this journal line. Please ensure that:
– Consolidation is the journal source.
– Import Journal References is enabled for Consolidation in the Journal Sources form.
– The consolidation data is from a subsidiary in the same instance as this set of books.

[APP–8147] You cannot drill down from this journal line. Please ensure that Move/Merge is the journal source.

[APP–8148] Consolidated amount does not tie to subsidiary balance. Please verify validity.

[APP–8149] You cannot enter ‘D’ for every segment of a summary template because this would create a summary account for every detail account. Summary accounts are meant to summarize groups of detail accounts.

[APP–8150] Only Standard balances are available for budgets.

[APP–8151] There is no record for the lookup type ‘ALL’ in the lookup table.

[APP–8152] Could not find an approver for this employee.

[APP–8153] Cannot find a manager for this employee.

[APP–8154] If you want to enable average balance processing, your accounting periods must include no more than 35 days. Please choose a different accounting calendar or period type.

[APP–8156] This date is either in a Never Opened period or in an undefined period. Please choose another date.

[APP–8157] The period for this batch is in an unopened budget year.

[APP–8158] You cannot use this budget rule with the current rounding option because your period range does not contain all periods to which the amount should be distributed. Please choose a different rounding option.

[APP–8159] This batch has a control total violation.

[APP–8160] The period for this batch is in an unopened encumbrance year.

[APP–8161] One or more of the budget journals in this batch is for a frozen budget.

[APP–8162] The batch period is not open or future enterable for the set of books.

[APP–8163] Funds are not reserved for this batch.
There is no consolidation journal for the current consolidation process status.

This batch contains untaxed journals.

Your subsidiary, as specified by your Intercompany: Subsidiary profile option, must have the same chart of accounts as your set of books, as specified by your GL Set of Books Name profile option.

This consolidation hierarchy is currently being constructed for another user. Please try again later.

Please enter a valid amount type.

This mapping set consolidates a parent set of books as a subsidiary of itself. Please check your mapping and mapping set definitions.

You cannot delete this mapping because you have consolidated at least once using this mapping.

This mapping is part of a mapping set. Remove the mapping from the mapping set before deleting this mapping.

You have already translated average balances using different optional amount types. Changing your optional amount types would invalidate your past translated average balances. Therefore, you must purge all translated average balances before changing your optional average translation amount types.

You cannot use detail ranges with a summary transfer level.

You must assign an action for each parent segment.

You cannot use parent ranges with the detail transfer level.

Quarter Average–to–Date balances are consolidated into the first period of the quarter of the standard period you selected. This period does not exist.

You may only select the Summary Transfer Level when the Using is Parent or Parent Ranges.

You may only select Detail Transfer Level when the Using is Parent or Detail Ranges.

You may only select between Parent and Parent Ranges when the Transfer Level is Summary.

You may only select between Parent and Detail Ranges when the Transfer Level is Detail.

This consolidation includes Parent Value and/or Parent Rollup Ranges rules, which are only available when consolidating balances.

Year Average–to–Date balances are consolidated into the first period of the year of the standard period you selected. This period does not exist.

You may only select Parent or Detail Ranges when your consolidation method is transactions.
Quarter Average-to-Date balances are consolidated into the first period of the quarter of the standard period you selected. This period must be Open or Future enterable.

This consolidation mapping has expired.

Oracle General Ledger could not retrieve your subsidiary information. Please make sure the profile option Intercompany: Subsidiary is set up properly for your responsibility.

The current set of books does not match the parent or the subsidiary set of books for this consolidation mapping.

The Usage is Average. Average balances is not enabled for the subsidiary set of books in this consolidation mapping.

The Amount type is EOD. Average balances is not enabled for the subsidiary set of books in this consolidation mapping.

This form failed to submit your concurrent request for mapping &MAPPING. Please ensure that your concurrent manager is functioning.

You can only use the Balances method when you have defined Summary rollup rules.

Please note: You have one or more unmapped subsidiary segments. This consolidation will include summary accounts which total all values for the unmapped segments. Therefore, please ensure that your summary templates are defined with 'T' for the unmapped segments.

You can only consolidate average balances if: – Average balance processing is enabled in both the subsidiary and parent sets of books. – The parent set of books is a consolidation set of books. – The consolidation method is Balances.

Year Average-to-Date balances are consolidated into the first period of the year of the standard period you selected. This period must be Open or Future Enterable.

This rollback segment is currently not available. Please ensure that this rollback segment is online before running the applicable programs.

[APP–10003] You are about to &ACTION for &TYPE number (&NUMBER). Continue?

[APP–10004] Enter the amount you wish to apply.

[APP–10005] You must specify either percent due or amount due.

[APP–10006] The date you entered is not in an Open accounting period. Open the period in "AP Accounting Periods."

[APP–10007] The date you entered is beyond the latest open encumbrance year. Update the latest encumbrance year in general ledger, or contact the system administrator.

[APP–10009] You cannot manually release this type of hold. Correct the condition that caused the hold and resubmit Approval.

[APP–10010] You cannot apply the same hold more than once for an invoice.

[APP–10011] Payables cannot get the proper application installation information. Contact your Oracle Support representative.

[APP–10012] Please choose the button corresponding to the process you wish to begin.
[APP–10013] You attempted to initiate a purge process while a purge process is already running. Wait for the current process to complete before initiating another process.

[APP–10014] You cannot commit before you enter values in all required fields. Enter all required values before you commit.

[APP–10015] You entered a duplicate purge name. Enter a unique name.

[APP–10017] You cannot enter a number for Days From that is less than the number for Days To. Re–enter.

[APP–10018] You cannot enter a duplicate period line Sequence Number. Re–enter.

[APP–10019] You cannot delete an invoice batch that contains invoices. Delete all invoices in a batch, then delete the batch.

[APP–10020] Rate information is not available for this currency, date, and exchange rate type. Enter rate information for this currency, date, and exchange rate type in "Daily Rates."

[APP–10021] The exchange rate may not be zero or a negative number. Re–enter.

[APP–10022] The Document Number you entered is below the Next Available Number. Verify that the Document Number you entered is unused then either confirm that you want to proceed, or re–enter the Document Number.

[APP–10023] The first Document Number you entered is greater than the last Document Number. Adjust either the first Document Number or the Last Document Number.

[APP–10024] This value already exists. Re–enter.

[APP–10025] This must be a positive number. Re–enter.

[APP–10026] The Payment Date must be on or after the system date. Re–enter.

[APP–10027] Payables is reserving the payment document...

[APP–10028] The minimum amount cannot be greater than the maximum amount. Re–enter.

[APP–10029] The High Payment Priority you entered has a lower priority than the Low Priority you entered. Adjust either the High Payment Priority or the Low Payment Priority. Remember, Payables considers 1 to be the highest payment priority and 99 to be the lowest.

[APP–10031] All required fields have not been entered.

[APP–10032] The payment amount plus the discount amount cannot be greater than the amount due. Re–enter.

[APP–10033] You cannot partially pay a prepayment.
You cannot pay a Pay Alone invoice with other invoices on the same payment document unless the payment document is a Manual payment. Update the Pay Alone status of an invoice in the Invoice Workbench.

This invoice is past due. Interest is due on this invoice.

You cannot commit if a record has not been selected. Select a record.

The payment amount cannot be different from the running total. Re-enter the payment amount.

You can only pay &STUB invoices per single computer-generated payment with this Payment Document. Create another payment for the additional invoice(s), or select a Payment Document that can accommodate more invoices.

The start date cannot be after the end date. Re-enter.

The To Document number you entered is less than the From Document number. Re-enter.

Payables could not flexbuild valid accounts for some payment distributions. Fix the invalid accounts in "Invalid GL Accounts".

The bank account you selected does not allow zero amount payments. Select a bank account that allows zero amount payments.

The payment document format you chose is for zero amount payments only. Continue?

Payables will use the Asset GL Account since you have not defined a Cash Clearing GL Account for this payment document.

The Document Number you entered is below the last document used.

Enter a number between 1 and &NUM.

The Hold All Payments option is enabled for this supplier site. You can only pay invoices entered for this supplier site by using a manual payment. Control the Hold All Payments option in "Suppliers."

You have not selected a record. Select at least one record.

You chose Enter/Adjust Invoices or View Invoices for a payment document that does not have any invoices associated with it because it is a Spoiled, Set Up or Overflow payment document. Payment documents with these statuses have no associated invoices and are automatically voided by Payables when you confirm a payment batch.

You cannot perform an action on the payment you selected.

You can only perform actions on payments of the same type. Deselect one or more payments.

The Allow Print system option is not enabled. Enable the Allow Print system option in "Payables Options," or contact the system administrator.
You cannot void a payment document that has been used to pay prepayments that have been applied to invoices. Unapply the prepayments paid by this payment then void the payment document.

Enter a Void Date that is on or after the most recent invoice payment GL Date of &GL_DATE. Re-enter.

Payables is unable to submit your concurrent request. Contact the system administrator.

Payables submitted the program to create your single computer-generated payment. The request number is &REQUEST. Check the status in the "Concurrent Requests Summary".

Request number is &REQUEST. Check the status of the request in "Concurrent Requests Summary."

You have not entered a Hold Name.

The Allow Void and Replace option is not available. Enable the Allow Void and Replace option in "Payables Options," or contact the system administrator.

You can only select one payment for this action. Deselect one or more payments.

The payment document has no associated invoice payments.

You cannot enter a negative payment amount. Re-enter.

The Payment Amount you entered is not equal to the invoice total. Adjust either the Payment Amount or the invoices you selected for payment.

The supplier name has changed since payment creation due to a supplier merge.

The supplier site has changed since payment creation due to a supplier merge.

You have not entered a Match Amount.

Starting match to invoice &INVOICE_NUM...

The total of the distribution match amounts does not equal the Control Total. Adjust either the Match Amount in the Match to PO window or adjust the Match Amount of one or more of the purchase order distributions to which you matched.

You cannot prorate across all invoice distributions if at least one of the invoice distributions was created through PO matching. Choose Distribute to manually distribute the tax, freight, or miscellaneous amount.

This must be a negative number. Re-enter.

Starting match to invoice &INVOICE_NUM, distribution &DIST_NUM...

You cannot adjust the Quantity Billed for a shipment line to be less than zero. Re-enter the Quantity Invoiced.

This purchase order line is closed.
[APP–10075] The payment terms you entered for this invoice differ from the payment terms on the purchase order (&PO_TERMS). Payables defaults the supplier site’s payment terms (&VENDOR_TERMS) to the invoice, unless the Recalculate Scheduled Payment option is Yes, in which case the most advantageous terms will be used. You can optionally modify the terms. Verify that the payment terms for the invoice are correct and adjust if necessary.

[APP–10076] Starting shipment match to PO &PO_NUM, shipment &SHIP_NUM...

[APP–10077] Starting shipment price correction to PO &PO_NUM, shipment &SHIP_NUM...

[APP–10078] You have not entered a Match Amount. Enter two of the following fields and Payables automatically calculates and displays the third: Quantity Invoiced, Unit Price, Match Amount. For example, if you enter Quantity Invoiced and Unit Price, Payables uses the equation Quantity Invoiced x Unit Price = Match Amount to determine Match Amount.

[APP–10079] This number cannot be zero. Re-enter.

[APP–10080] This match would result in an overbill.

[APP–10081] You cannot reduce the total Quantity Billed below zero. Re-enter the Quantity Invoiced.

[APP–10082] For a Price Correction, you cannot enter a Quantity Invoiced that is greater than the Quantity Billed. Re-enter the Quantity Invoiced.

[APP–10083] This number cannot be a negative number. Re-enter.

[APP–10084] This number cannot be a positive number. Re-enter.

[APP–10085] Starting shipment match to PO &PO_NUM, shipment &SHIP_NUM, distribution &DIST_NUM...

[APP–10086] Starting price correction to PO &PO_NUM, shipment &SHIP_NUM, and distribution &DIST_NUM...

[APP–10087] This number cannot be zero or a positive number. Re-enter.

[APP–10088] This number cannot be zero or a negative number. Re-enter.

[APP–10089] You cannot enter a date in the past. Re-enter.

[APP–10090] The total percent distribution for a Distribution Set must be either 0 or 100.

[APP–10091] This action is not allowed. Refer to the User’s Guide or to the on-line help.

[APP–10092] You cannot simultaneously perform actions on payment batches with different statuses. Deselect one or more payment batches.

[APP–10093] Payables submitted your payment batch request to Select Invoices. The request number is &request. Check the status in the "Concurrent Requests Summary".

[APP–10094] Payables submitted your payment batch request to Build Payments. The request number is &request. Check the status in the "Concurrent Requests Summary".
[APP–10095] Payables submitted your payment batch request to print the Preliminary Register. The request number is &request. Check the status in the "Concurrent Requests Summary".

[APP–10096] Payables submitted your payment batch request to Format Payments. The request number is &request. Check the status in the "Concurrent Requests Summary".

[APP–10097] Payables submitted your payment batch request to Confirm Payment Batch. The request number is &request. Check the status in the "Concurrent Requests Summary".

[APP–10098] Payables submitted your payment batch request to print the Final Register. The request number is &request. Check the status in the "Concurrent Requests Summary".

[APP–10099] Payables submitted your payment batch request to print the Separate Remittance Advice. The request number is &request. Check the status in the "Concurrent Requests Summary".

[APP–10100] Payables submitted your payment batch request to Cancel Payment Batch. The request number is &request. Check the status in the "Concurrent Requests Summary".

[APP–10101] There is at least one unfinished concurrent request for this payment batch. Check the status of this request in the "Concurrent Requests Summary".

[APP–10102] No payments exist for this payment batch. Use the Modify Payment Batch window of the Payment Workbench to add invoice payments to this payment batch, or cancel this payment batch, review the payment batch criteria and submit another payment batch.

[APP–10104] Prepayments cannot have more than one Tax type distribution.

[APP–10105] Oracle Projects is not installed.

[APP–10106] The Transaction Code profile option is currently disabled. Enable the profile option in "System Profile Values" or contact the system administrator.

[APP–10107] You cannot enter more than one Item type distribution and one Tax type distribution for a prepayment.

[APP–10108] An error has occurred while trying to commit.

[APP–10111] When you update the sign (+/–) of an invoice distribution amount, you must also update the sign of the Statistical Quantity of the invoice distribution.

[APP–10112] You cannot choose Done for Final Matching. Enter Yes and Payables automatically updates the field to Done when you commit.

[APP–10113] You cannot adjust an invoice distribution if the invoice has been selected for payment.
[APP–10114] You cannot prorate if the distribution amount is zero.

[APP–10115] Payables defaults the payment terms from the supplier site to the invoice. Verify the payment terms for credit or debit memos. You may want to change the payment terms to Immediate for credit and debit memos.

[APP–10116] You cannot reduce the amount of a credit or debit memo below the amount already applied to another invoice(s). Adjust the amount of the credit or debit memo so that the amount is greater than or equal to the amount to the amount already applied to another invoice(s).

[APP–10117] You cannot delete a prepayment that has been applied to an invoice(s). Unapply all prepayment applications, void the payment document that paid the prepayment, then delete the prepayment.

[APP–10118] You cannot delete an invoice to which prepayments have been applied. Unapply all prepayment applications for the invoice, then delete the invoice.

[APP–10119] The invoice distribution total is not equal to the invoice amount. During Approval, Payables will place a Distribution Variance hold to all invoices where the invoice distribution total does not equal the invoice amount. This hold prevents both payment and the creation of journal entries. Adjust the distribution total.

[APP–10120] The amount subject to discount cannot be greater than the invoice amount. Adjust the amount subject to discount.

[APP–10121] The invoice payment amount cannot be greater than the Amount Remaining on the scheduled payment. Re-enter the Payment Amount.

[APP–10122] WARNING: You entered an invoice date that is in the future.

[APP–10123] The Hold Future Invoices option is enabled for this supplier site. A supplier hold will automatically be placed on this invoice. Use “Suppliers” to control the Hold Future Invoices option.

[APP–10124] This supplier is on hold. Payables will calculate the balance anyway.

[APP–10125] You entered an invoice amount that exceeds the invoice limit for this supplier site. An Amount hold will automatically be applied to this invoice and will prevent payment. Use “Suppliers” to control the invoice amount limit for a supplier site. You can manually release Amount holds in the Holds window of the Invoice Workbench.

[APP–10126] You cannot reduce the liability amount below the amount already paid. Re-enter.

[APP–10127] You cannot delete invoices that have a status of Posted or invoices that are matched to a purchase order.

[APP–10128] There is no active pay site available for this supplier. Verify the supplier site for the invoice. Use “Suppliers” to either enable the Pay Site option for an existing supplier site or enter a new supplier pay site.

[APP–10129] You cannot adjust or delete this invoice distribution because you are using encumbrance accounting and the invoice distribution has been approved. You can reverse and re-enter invoice distributions in the "Distributions” window in the Invoice Workbench.
[APP–10130] The system option that controls the ability to update paid or partially paid invoices has been disabled. Enable the Allow Paid Invoice Adjustments system option in "Payables Options", or contact the system administrator.

[APP–10131] When you update the supplier name, number, or site for an existing invoice, Oracle Payables does not update the invoice with the defaults from the new supplier or site. Update each invoice value individually.

[APP–10132] This invoice is selected for payment and cannot be adjusted or deleted.

[APP–10133] You must enter a purchase order number for this invoice type. Enter a valid purchase order or change the invoice type.

[APP–10134] Invoice number &SIMILAR is similar to this credit/debit memo. You are entering a credit or debit memo for the same supplier, site, currency and amount as an existing debit or credit memo. Verify that this is not a duplicate.

[APP–10135] If you adjust tax information at the invoice header level after invoice distributions have been created, Payables will not automatically update the invoice distributions with the updated tax information. Manually update each invoice distribution with the updated tax information.

[APP–10136] This date is more than one year old. Verify that this is the date you wish to enter.

[APP–10137] The date you entered is before the invoice date.

[APP–10138] The date you entered is before the terms date.

[APP–10139] You cannot enter a Discount Amount that is greater than Payment Amount. Re-enter.

[APP–10140] The Discount Date you entered is after the Due Date. Re-enter.

[APP–10141] You entered a Discount Date without entering a corresponding Discount Amount. Enter a Discount Amount or clear the Discount Date.

[APP–10142] You entered a Second Discount Date without entering a corresponding Second Discount Amount. Enter a Second Discount Amount or clear the Second Discount Date.

[APP–10143] You entered a Third Discount Date without entering a corresponding Third Discount Amount. Enter a Third Discount Amount or clear the Third Discount Date.

[APP–10144] Enter a value greater than or equal to zero.

[APP–10145] Enter a value less than or equal to zero.

[APP–10146] &TOTAL prepayments exist for this supplier. &AVAILABLE are available. To apply or unapply prepayments, choose Actions and check Apply/Unapply Prepayments.

[APP–10147] The payment terms you entered for the invoice differ from the payment terms on the purchase order (&PO_TERMS). Payables defaults the supplier site’s payment terms (&VENDOR_TERMS) to the invoice, where you can optionally modify them. Verify that the payment terms on the invoice are correct and modify them if necessary.

[APP–10148] Payables will use the default invoice currency you entered for the invoice batch rather than the supplier site default invoice currency (&curr).
[APP–10149] You selected an electronic payment method but have not yet entered bank information for the supplier and its sites. You must enter bank information for the supplier and its sites if you want to pay the supplier using an electronic payment method. Enter bank information for suppliers and supplier sites in "Suppliers."

[APP–10150] The Voucher Number you enter must be a number of 8 digits or less. Re-enter.

[APP–10151] Automatically calculate the invoice tax amount?

[APP–10152] The Cancel Invoice action is currently unavailable.

[APP–10153] You cannot apply a prepayment to a credit or debit memo.

[APP–10154] Select the document for which you would like to see an overview. If you select "Prepayment," Payables will show you an overview of the invoice that the prepayment was applied to. If you select "Payment," Payables will show you the Payment Overview of the payment that paid the invoice.

[APP–10155] You have not indicated the type of match you wish to perform. Indicate the type of match.

[APP–10156] You cannot perform actions on a cancelled invoice.

[APP–10157] This window cannot be opened while performing a credit match. Close the Credit Match window.

[APP–10158] This window cannot be opened while the Distributions window is active. Close the Distributions window.

[APP–10159] This window cannot be opened while you are in Enter–Query mode. Execute the query or cancel Enter–Query.

[APP–10160] This window cannot be opened while the Scheduled Payments window is active. Close the Scheduled Payments window.

[APP–10161] This window cannot be opened while performing a match to a purchase order. Close the Match to PO window.

[APP–10162] This window cannot be opened while performing a prepayment application. Close the Apply Prepayments window.

[APP–10163] Use the Invoice Date as the Invoice Number?

[APP–10164] The last document number is greater than last available document number for the payment document. Re-enter.

[APP–10165] The field you have selected to display is not used because the USSGL option, used primarily in public sector accounting, is not enabled.

[APP–10166] The Discount Date you entered is before the Invoice Date. Re-enter.

[APP–10167] The Discount Date you entered is before the Terms Date. Re-enter.

[APP–10168] The field you have chosen to display is not used because Oracle Projects is not installed.
[APP–10169] The purchase order number you entered is not valid. Enter the number of an approved and open purchase order.

[APP–10170] An invoice you selected for payment cannot be paid because the supplier is different from that of other invoices you also selected for payment. Check the supplier of each invoice.

[APP–10171] An invoice you chose for full payment cannot be paid because the supplier site is different from that of other invoices that have also been selected for full payment. Check the supplier site of each invoice.

[APP–10172] When selecting multiple invoices for full payment, all of the invoices must be the same currency.

[APP–10173] An invoice or scheduled payment that you selected for full payment cannot be paid because the payment method is different from that of other invoices or scheduled payments you selected. Check the payment method of each invoice.

[APP–10174] An invoice you selected for full payment cannot be paid because it is designated as a Pay Alone invoice and you selected multiple invoices for payment. Check the Pay Alone status of each invoice.

[APP–10175] The number of invoices you selected to pay exceeds the number of invoices that Payables can pay at once using this Pay In Full feature. Deselect one or more invoices.

[APP–10176] The USER EXIT (&USER_EXIT_NAME) did not run successfully. Contact your Oracle Support representative.

[APP–10177] You can only clear or delete the last row of data shown in this window.

[APP–10178] You cannot enter a Gross Amount that is greater than the invoice amount. Re-enter the Gross Amount.

[APP–10179] You cannot enter a positive Gross Amount for credit or debit memos. Re-enter the Gross Amount.

[APP–10180] You cannot enter a Gross Amount that is less than zero for Standard, QuickMatch, and PO Default invoice types. Re-enter the Gross Amount.

[APP–10181] You cannot choose Split for paid or partially paid scheduled payments.

[APP–10182] You cannot enter a total gross amount that exceeds the invoice amount. Re-enter the Gross Amount.

[APP–10183] Check Funds

[APP–10184] Budgetary Control

[APP–10185] You cannot use the same Sequence Number for another period line. Re-enter.

[APP–10186] Please commit or clear your changes before continuing.

[APP–10187] An invoice you selected for full payment cannot be paid because it is not approved.

[APP–10188] An invoice or scheduled payment you selected for full payment cannot be paid because it is already fully paid.
You have made net adjustments to the liability of this invoice. Payables has made the corresponding adjustments to the gross amount of the scheduled payments. You may also want to adjust payment discounts for the scheduled payments.

You have made net adjustments to the liability and/or discounts for this invoice. Payables has made corresponding adjustments to the gross amount of one or more scheduled payments. Any uncommitted changes you made in the Scheduled Payments window will be ignored. You may want to adjust additional scheduled payments using the Scheduled Payments window.

You cannot adjust the Liability GL Account of a fully encumbered invoice. Enter a new, unencumbered invoice distribution. Then adjust the Liability GL Account.

You cannot adjust the Liability GL Account of a fully posted invoice. Enter a new, unposted invoice distribution. Then you can adjust the invoice Liability GL Account.

You cannot adjust distributions on this invoice because it has been paid and the Allow Adjustments to Paid Invoices option is not enabled. Enable the Allow Adjustments to Paid Invoices option in "Payables Options" or contact the system administrator.

Cash Basis Accounting is your Accounting Method and you are attempting to adjust an invoice associated with a void payment that has not transferred to the general ledger. You cannot adjust/delete this invoice until the void payment is transferred to the general ledger. Transfer payments to the general ledger then adjust this invoice.

This invoice has no scheduled payments. Create one or more scheduled payments for this invoice.

Payables must create a scheduled payment(s) before you can adjust the liability of this invoice.

Take all available discounts on these invoices?

The action you are attempting to perform is not available to you. Either this form is display only, or you do not have sufficient privileges to perform this action. Contact the system administrator.

You cannot navigate to "Invoice Batches" because the invoice batch control system option has been disabled. Navigate to the Invoice Workbench through "Invoices", enable the invoice batch control system option in "Payables Options", or contact the system administrator.

The document number you entered in the From field is not a set up check. Re-enter.

[APP–10213] The Document Number you entered to restart the batch must be greater than the highest document number already recorded for the batch. Re-enter.

[APP–10214] The Document Number you entered is greater than the last available document number for the payment document. Re-enter.

[APP–10216] Payables submitted your payment batch programs. The request numbers are &first to &last. Check the status in the "Concurrent Requests Summary."

[APP–10217] This action will delete some or all of the payment batch. Continue?

[APP–10218] You entered a period name for Special Invoice Amount1 without entering a Special Invoice Amount1.

[APP–10219] You entered an amount for Special Invoice Amount1 without entering a period name. Enter a period name for Special Invoice Amount1.

[APP–10220] You entered a period name for Special Invoice Amount2 without entering an amount for Special Invoice Amount2. Enter Special Invoice Amount2.

[APP–10221] You entered an amount for Special Invoice Amount2 without entering a period name. Enter a period name for Special Invoice Amount2.

[APP–10222] The system option that requires the entry of a tax name for an invoice has been enabled. Enter a tax name, disable the require tax entry system option in "Payables Options," or contact the system administrator.

[APP–10223] You entered a special invoice amount that is greater than the control amount. Re-enter the special invoice amount.

[APP–10224] You must enter a Change % that is between –100 and 100. Re-enter.

[APP–10225] When entering a recurring invoice template, you must use a Full (100%) distribution set.
[APP–10226] For this period type, there are insufficient periods left to equal the total Number of Periods you have defined for this recurring invoice. Re-enter the First period, define more periods for the Period Type, or choose another Period Type.

[APP–10227] The Number of Periods you entered exceeds the number of periods defined for this Period Type. Reduce the Number of Periods, define more periods for the Period Type, or enter another Period Type.

[APP–10228] This invoice has an effective payment.

[APP–10229] This invoice is selected for payment in a payment batch.

[APP–10230] This invoice is already cancelled.

[APP–10231] You may not cancel this prepayment. See the User’s Guide or on-line help.

[APP–10232] This invoice is matched to a Finally Closed PO.

[APP–10234] This invoice has posting holds.

[APP–10235] This period overlaps a previously defined period. Change the Start Date or the End Date.

[APP–10236] &NUM_CANCELLED invoices cancelled &NUM_NOT_CANCELLED invoices not cancelled

[APP–10237] The total of all scheduled payments must equal the invoice amount. Adjust the Gross Amount for one or more scheduled payments.

[APP–10238] You have already confirmed all documents for the batch. You cannot restart the batch or cancel the remainder once you confirm all documents.

[APP–10239] You cannot choose Confirm if the payment batch has no payment documents or if you have not specified a Status to record for each of the documents in the batch.

[APP–10240] You cannot record a Printed or Set Up range after a Spoiled range. Re-enter the range.

[APP–10241] The First Discount Date must fall on or before the Second Discount Date. Re-enter.

[APP–10242] The Second Discount Date must fall on or before the Third Discount Date. Re-enter.

[APP–10243] The First Discount Amount must be greater than or equal to the Second Discount Amount. Re-enter.

[APP–10244] The Second Discount Amount must be greater than or equal to the Third Discount Amount. Re-enter.

[APP–10245] You cannot split a scheduled payment if the sum of the existing scheduled payments is greater than or equal to the invoice amount. Reduce the gross amount for one or more scheduled payments and choose Split.
The scheduled payment you selected for full payment is on hold and therefore cannot be paid. Remove the hold.

You cannot delete a scheduled payment if it is paid or partially paid, or if the scheduled payment is for a prepayment.

Document numbers within this range have already been confirmed. Re-enter.

You cannot restart the batch without entering a document number from which you would like to restart. Continue?

You can only apply a fully paid prepayment. Fully pay a prepayment from the Actions window of the Invoices Workbench or the Payment Workbench.

You can only apply a prepayment to an approved invoice. Submit Approval for this invoice.

You cannot Confirm a payment batch that does not have any payment documents.

The payment batches you selected to perform actions on have already been cancelled. You cannot perform actions for payments batches with a status of Cancelled.

This update is not allowed for Oracle Projects expense reports.

An invoice has been created for this expense report. You cannot update or delete an expense report once an invoice has been created for the expense report.

You cannot delete an expense report until you delete all expense items for the expense report.

This expense report already exists. Check your records for duplicates and re-enter this expense report with a unique number if necessary.

Enter a default GL Account for this employee.

The total of the expense items must equal the expense report total. Adjust one or more expense items or the expense report total.

You cannot modify the Tax Name for an expense item with a type of Tax.

You cannot Apply Advances for an expense report if there are no available prepayments for the employee, or if the expense report total is negative.

The low check number cannot be greater than the high check number. Re-enter.

Enter a supplier number greater than &NUM.

Enter an employee number greater than &NUM.

Number Type cannot be Numeric because alphanumeric supplier numbers exist.

You cannot change this period status.

The number of periods entered is less than the number of periods for which an invoice has already been created. Re-enter.
This payment batch will be deleted. Continue?

This purchase order line was cancelled at &CANCEL &UNIT.

Encumbrance Accounting has been turned off.

Insufficient Funds remain in your budget for this invoice or distribution. Payables includes encumbered funds in its funds check.

Payables was unable to perform funds check because this invoice or distribution has a GL Account that does not exist.

Payables was unable to perform funds check because this invoice or distribution has a GL Account that is disabled.

Payables was unable to perform funds check because this invoice or distribution has a GL Account that does not allow detail posting or detail budget posting.

Payables was unable to perform funds check because the calendar is incorrectly defined. Correctly define the calendar used by this set of books in Oracle General Ledger.

Payables was unable to perform funds check because it was unable to find a budget for this GL Account in this period. Create a budget in Oracle General Ledger for this GL Account in this period.

This invoice or distribution failed funds check.

This invoice or distribution passed funds check.

Adjust the liability of this invoice?

This invoice requires exchange rate information. Enter the exchange rate type, date, and rate.

The manual sequence type is prohibited for this invoice.

The recurring invoice template is expired. Enter a new template or change the expiration date.

The number you entered is greater than the number of periods remaining. Re-enter.

Active date cannot be after the inactive date.

When you define an amount due payment terms, the last terms line must be defined as '0' Amount Due.

You cannot commit a payment term without entering scheduled payment lines for the term.

Period sequence numbers must be unique within a type and year. Enter a unique value.

Period name and year must be unique within a period type. Enter a unique value.
[APP–10289] The period sequence cannot exceed the number of periods allowed.

[APP–10290] The end date cannot be before the start date. Re-enter.

[APP–10291] You cannot maintain periods for which reports have already run.

[APP–10292] You cannot delete periods if there is a recurring invoice template that uses this Period Type.

[APP–10293] You cannot delete periods if a Withholding Tax type tax name uses this Period Type.

[APP–10294] You cannot overlap an existing period within this period type.

[APP–10295] If you define a due Percent or a due Amount, you must enter either Days, Day of Month and Months Ahead, or Fixed Date.

[APP–10296] If you enter due Day of Month or discount Day of Month, you must enter Months Ahead.

[APP–10297] If you define a discount Percent, you must enter either discount Days or Day of Month and Months Ahead.

[APP–10298] You cannot use percentage due amounts and specific due amounts in the same payment terms line or payment terms.

[APP–10299] You must enter a Batch Name when the batch control option is on.

[APP–10300] Refresh Status 1

[APP–10301] No holds placed or released.

[APP–10303] No invoices found for approval. Check parameters.

[APP–10304] Due to unposted distributions or payments, the period cannot be closed. Submit the Preliminary Invoice Sweep report.

[APP–10305] The total Percent for all payment terms lines must equal 100.

[APP–10306] You can only enter overlapping effective date ranges if you enter unique contiguous amount ranges for the same effective date range. Re-enter.

[APP–10307] You must enter both Amount Basis and Period Basis, or neither.

[APP–10308] If period basis is Period, Period Type must be entered.

[APP–10309] If you are creating withholding tax invoices, you must enter Tax Authority Supplier for Withholding Tax type tax names.

[APP–10311] The To amount must be greater than the From amount. Re-enter.

[APP–10312] This tax name is inactive. Re-enter.
[APP–10313] Duplicate Record is only available for new records.

[APP–10315] This option is invalid for this record.

Saved Expense Report Confirmation

&FIELD_NAME is missing. Please enter a value for &FIELD_NAME.

Single currency is required.

The Ending Date is before the Starting Date. Please re-enter the Ending Date.

The value for ’&START_DATE’ is not valid. Starting Date must be in format ’&PROPER_FORMAT.’

Submitted Expense Report Confirmation

Oracle Web Employees Expense Entry

Too many employees match the the name you entered for Overriding Approver. Enter search criteria that can uniquely identify an employee. Use the Wizard for assistance.

The value for ’&TOTAL_AMOUNT’ is not valid. Please enter a valid number for Total.

Total Amount &Total_Amount does not match our calculation.

Total is missing. Please enter an amount for Total.

The following receipt(s) contains no errors:

The Calculate Amount process is in progress. Do not perform any actions until this process completes.

The confirmation process is in progress. Do not perform any other actions until this process completes.

Please wait until the application is fully loaded before performing any actions.

The total amount you entered for this receipt (in the receipt currency) is:

Are you entering the receipt amount as a daily rate that should be multiplied by the number of days for the receipt, or are you entering the receipt amount as the total amount?

Would you like to designate an Overriding Approver for your expense report, or use the default approver? The default approver is your direct manager.

To Calculate All, you must enter the Expense Date(s), and either Daily Amount or Receipt Amount.

For custom message

Here is a summary of the amounts you entered for this receipt. Press the Next button if these amounts are correct, or press the Back button to make corrections.

Message not used.
Select the Currency for this receipt. If you also enter the Conversion Rate, the total amount in the Reimbursement Currency is automatically calculated. Otherwise, you must enter the total amount in the Reimbursement Currency in the next Wizard window.

If your receipts are all in the same currency, select the currency in which all of your receipts are denominated. Select OTHER if the desired currency does not appear in this list. Optionally enter a Conversion Rate for all receipts you enter.

For custom message

Enter the Cost Center that should receive the charge for this expense report. The default Cost Center is the one associated with your employee information. You can enter another Cost Center if the default is not the Cost Center that should receive the charge for this expense report.

For custom message

Enter the expense date of the receipt. If this is a receipt for a range of days, the date entered here will be used as the starting date. Click on the calendar date to enter the expense date, or type the date in the Starting Date field if it is not displayed in the calendar.

Enter the Ending Date of the receipt. Click on the calendar date to enter the date, or type the date in the Ending Date field if it is not displayed in the calendar.

Enter the Daily Rate for the receipt.

Your default Cost Center is &costctr.

Default approver

Are all of your receipts in a single currency or in multiple currencies?

Here is a summary of the currency information you entered for this receipt. Press the Next button if this information is correct, or press the Back button to make corrections.

Enter another receipt using Wizard

Enter another receipt without using Wizard

Return to Enter Receipts page for current receipt

You have completed the Enter Receipts page. You now have three options; you can enter another receipt using the Wizard, you can enter another receipt without using the Wizard, or you can close the Wizard and return to the Enter Receipts page for the current receipt.

Enter Receipts Wizard

Select the Expense Type for this receipt.

Optionally enter an Expense Group for this receipt. If you have a receipt with multiple expense types, such as a hotel bill, you can enter each expense type individually and assign an Expense Group to each individually entered type to easily reconcile the total amount of all the expense types to the total receipt amount.
Welcome to the Expense Report Wizard! The Expense Report Wizard assists you as you enter your expense report by providing an explanation of what you need to enter for each field as you enter it. Use the Wizard from start to finish to enter your expense report, or just to get started – you can cancel the Wizard at any time. If you need help for any single field, just click on the field label. Click on Next to proceed with the Wizard!

Please enter an Overriding Approver from the following list of employees:

Enter the first few letters of the Overriding Approver’s last name.

You have selected the following employee as the Overriding Approver for this expense report:

Close Wizard and proceed

Close Wizard

You have completed the Start Report page. You now have two options: you can close the Start Report Wizard and automatically proceed to the Enter Receipts page, or you can close the Start Report Wizard without proceeding to the Enter Receipts page. If you choose the second option, press the Enter Receipts button to proceed to the Enter Receipts page. Press the Wizard icon on the toolbar of the Enter Receipts page to start the Enter Receipts Wizard.

For custom message

Overriding Approver

Briefly describe the Purpose of your expense(s).

For custom message

Enter the total amount of the receipt.

Select the currency in which your expense report will be reimbursed. The payment for your expense report will be in this currency.

For custom message

Enter the date of your most recent expense for this expense report. The default is today’s date.

For custom message

Indicate if the original receipt for this expense is missing or available. If the original receipt is missing, be certain to include a justification (previous Wizard window) for the expense.

Enter a brief Justification for the expenses incurred for this receipt. Justification is required for certain expense types.

Enter the Conversion Rate from the Receipt Currency to the Reimbursement Currency.

Range of days
[APP–10558] Single day

[APP–10559] Is this receipt for a single day or for a range of days?

[APP–10560] Do you have any receipts in a currency other than your Reimbursement Currency? Your Reimbursement Currency is:

[APP–10561] For custom message

[APP–10563] More than &maxrecord employees matched your query. Enter additional search criteria to narrow the search for an employee for Overriding Approver.

[APP–10564] Select an Expense Template for your expense report. The template you select determines what type of expenses you can enter for your expense report.

[APP–10565] For custom message

[APP–10566] Enter the total receipt amount in the reimbursement currency.

[APP–10567] There are no employees whose last name starts with the letters you entered as search criteria. Re-enter your search criteria.

[APP–10568] Days is not valid. Please enter a valid number for Days.

[APP–10569] This transaction has been updated by another user. To review the change, press the Cancel button to go back to the Open Credit Card Transactions page.

[APP–10570] The update process is in progress. Do not perform any actions until this process completes.

[APP–10571] You entered a Tax-type line without entering a Tax Name. Enter a Tax Name.

[APP–10572] An Invoice that you selected can not be paid in full because it has already been selected for payment by a Payment Batch.

[APP–10763] The Apply, Create Withholding combination specified is invalid.

[APP–10764] Discount Amount cannot be ‘No’ if Apply Withholding is ‘Approval’.

[APP–10765] You have not yet chosen a set of books. Please use the Choose Set of Books form to do this first.

[APP–10766] There are overlaps in the amount ranges.

[APP–10767] There are gaps in the Amount Ranges. Modify the Amount Range value or Add in one new record.

[APP–10768] The last Start Amount should be equal to the maximum End Amount in the Amount Range. Modify the last Start Amount.

[APP–10769] The last End Amount should always be NULL. Modify the last End Amount.

[APP–10770] Only one End Amount with same Rate Type and Period should be NULL.

[APP–10772] Check Expired Values

[APP–10773] Create Positive Pay file(s) for &NUM_OF_RECS payment batch(es)?

[APP–10774] Incomplete bank information exists for this bank account. Enter the Branch Number and Account Number for this bank account in "Banks".

[APP–10775] Tax Calculation Level

[APP–10776] Only Payment Batches with status Unstarted or New are allowed to be deleted.

[APP–10777] Please enter bank account name, bank account number, and bank branch if payment method for the supplier or supplier site is Electronic Payments.

[APP–10778] The Control Total cannot be less than Released Total.

[APP–10779] Payment Batch total is over maximum outlay.

[APP–10780] Automatic Payment Programs

[APP–10781] Automatic Receipt Programs

[APP–10782] No conversion rate was found for this currency, type, and date.

[APP–10783] This check was already reconciled.

[APP–10784] You are trying to clear a check that was already cleared.

[APP–10785] The Cash Account for the check you are trying to clear has an invalid code combination id. Please go into the Update Payment Distributions Form and fix the Cash code combination id for the check you are clearing.

[APP–10786] No checks were found to reconcile.

[APP–10787] &PROCEDURE procedure raised unhandled exception &EVENT

[APP–10788] One of the ranges has to start from 0.

[APP–10789] The last Transaction_Amount(to) should always be NULL. Modify the last Transaction_Amount(to).

[APP–10790] The last range must be open–ended and the others must not.

[APP–10791] This bank charge already exists.

[APP–10792] No bank charges/tolerance limit found.

[APP–10793] You cannot choose Other Banks/Branches in Receiving side while you choose All Banks/Branches in Transferring side.

[APP–10794] &TOTAL advances exist for this employee. &AVAILABLE are available. To apply or unapply advances, check the Apply Advances box before importing.
[APP–10795] Only one Primary Bank Account per currency is permitted.

[APP–10796] Bank Account Name already exists.

[APP–10797] This purchase order has been closed.

[APP–10798] VAT Registration Number is not unique.

[APP–10799] VAT Registration Number is invalid.

[APP–10802] You cannot reconcile this payment with charges, errors or exchange rate information unless the Oracle Payables Option "Allow Reconciliation Accounting” is enabled.

[APP–10804] Duplicate Bank Account assigned to Supplier Site. It may be caused by the default Bank Account from the Supplier level.

[APP–10805] You must define one Primary Bank Account for each currency. Vendor Name = &VENDOR_NAME, Currency Code = &CURRENCY_CODE.

[APP–10806] You must define one Primary Bank Account for each currency for this site. Vendor Site Id = &VENDOR_SITE_ID, Currency Code = &CURRENCY_CODE.

[APP–10807] Since you have chosen to use bank charges, the Transfer Priority field is required.

[APP–11891] Invalid currency code (CURRENCY_CODE)

[APP–11892] Invalid conversion type (CONVERSION_TYPE)

[APP–11893] Invalid account class (ACCOUNT_CLASS)

[APP–11894] The valid account classes are: REV, FREIGHT, TAX and REC

[APP–11895] The valid account classes are: REV, FREIGHT, TAX, REC and UNEARN

[APP–11896] The valid account classes are: REV, FREIGHT, TAX, REC and UNBILL

[APP–11897] The total distribution amount for a transaction line must equal the transaction amount

[APP–11898] The total distribution percent for a transaction line must be 100 for each account class

[APP–11899] You can only supply one freight account for a transaction of line type FREIGHT

[APP–11900] You can supply at most one Receivables account for a transaction (an invoice, a debit memo or a credit memo)

[APP–11902] The document created must have a non-negative total amount because the creation sign for your transaction type is Positive

[APP–11903] The document created must have a non-positive total amount because the creation sign for your transaction type is Negative

[APP–11904] The total amount of your credit memo cannot exceed the balance of the debit item it is crediting

[APP–11905] You cannot apply a transaction with a negative amount to another transaction with a negative balance and vice versa

[APP–11906] A credit memo created with a positive total amount cannot credit an invoice which is against a commitment

[APP–11907] An invoice against a commitment cannot have a negative total amount
The Receivables account of your credit transaction must be the same as that of the transaction being credited, if the credit transaction has the Open Receivables Flag set to No.

Invalid reference line id (REFERENCE_LINE_ID)

Invalid reference line attribute value (REFERENCE_LINE_ATTRIBUTE1–15)

All enabled segments of Transaction Flexfield must have a value

Duplicate Transaction Flexfield

Your credit memo transaction can only credit an invoice or a debit memo line

Your debit memo transaction cannot be against a commitment, or credit any other transaction

Invalid payment method name (RECEIPT_METHOD_NAME)

Invalid payment method id (RECEIPT_METHOD_ID)

Invalid customer bank account name (CUSTOMER_BANK_ACCOUNT_NAME)

Invalid customer bank account id (CUSTOMER_BANK_ACCOUNT_ID)

Invalid credit method for crediting an invoice line which uses an accounting rule (CREDIT_METHOD_FOR_ACCT_RULE)

Invalid credit method for installments (CREDIT_METHOD_FOR_INSTALLMENTS)

Invalid tax code (TAX_CODE)

Invalid memo line name (MEMO_LINE_NAME)

Invalid memo line id (MEMO_LINE_ID)

The entered amount does not have the correct currency precision

The supplied accounted amount does not match the one computed by AutoInvoice within the specified tolerance

Invalid set of books id (SET_OF_BOOKS_ID)

You cannot supply tax and related information when the Tax Calculation option for your transaction type is No

The supplied amount must match unit selling price times quantity when you do not use AutoInvoice Clearing account

You must supply an invoice number when your batch source indicates manual invoice numbering; otherwise you must leave invoice number blank

You cannot supply tax precedence number when you disable compound tax

You cannot supply payment terms for your credit memo transaction
[APP–11934] You cannot supply invoicing and accounting rules for your on account credit memo transaction

[APP–11935] You cannot supply values in the RELATED_BATCH_SOURCE_NAME, RELATED_TRX_NUMBER and RELATED_CUSTOMER_TRX_ID fields for credit memo transactions

[APP–11936] You must supply a reason code for your credit memo transaction

[APP–11937] The Open Receivable flag of your credit memo must match the flag of the transaction you are crediting

[APP–11938] You must supply unit of measure for transactions with items

[APP–11939] You must supply payment terms for your non-credit transaction

[APP–11940] You cannot supply system items for your debit memo transaction

[APP–11941] You must supply related batch source name when you supply related invoice number

[APP–11942] You must supply conversion rate when you supply conversion type of type User

[APP–11943] You must not supply conversion rate when you supply conversion type of types other than User

[APP–11944] You must supply an invoicing rule, but not GL date when you supply an accounting rule

[APP–11945] You must supply an accounting rule duration when you supply an accounting rule of type variable duration

[APP–11946] Invalid related document value (RELATED_TRX_NUMBER)

[APP–11947] Invalid related document id (RELATED_CUSTOMER_TRX_ID)

[APP–11948] Duplicate invoice number

[APP–11949] Duplicate document number

[APP–11950] You must supply document number

[APP–11951] You must either pass amounts for all the compound tax lines or not pass any amounts at all

[APP–11954] You cannot supply the customer bank account when the supplied or defaulted payment method is of type Manual

[APP–11955] The supplied payment method must have already been set up for the bill to customer or site

[APP–11956] Your transaction currency must match one of the currencies which are associated with the payment method

[APP–11957] When the payment method is of type Automatic, you must either supply a valid bank account or ensure that a primary bank account for the currency code of the transaction has been set up for the Bill To customer
The GL date of your credit memo transaction cannot be prior to the GL date of the invoice it is crediting.

CM date cannot precede the date of the transaction being credited.

The bill to customer of your credit memo transaction must be the same or related to the one of the invoice it is crediting.

You cannot supply any account assignment for your credit memo transaction when the system option 'Use Invoice Accounting for Credit Memos' is Yes.

The valid values for credit method for accounting rule are: PRORATE, LIFO and UNIT.

The valid values for credit method for installments are: LIFO, FIFO and PRORATE.

The line type of your credit memo transaction must match the line type of the invoice line or debit memo line it is crediting.

The currency code of your credit memo transaction must match the currency code of the invoice line or debit memo line it is crediting.

An invoice can only reference a commitment.

The supplied accounted amount does not have the correct currency precision.

The two linked transactions must have the same set of books id.

The two linked transactions must have the same currency code.

The transaction to which you link this transaction to must have the line type 'LINE'.

You must supply a value for the sales credit amount.

You must supply a value for the distribution amount.

You must supply a distribution percentage when your batch source indicates you supply percentages, or when your transaction uses an accounting rule.

The valid account classes for this line type are: 'REV', 'UNBILL' and 'REC'.

The valid account classes for this line type are: 'REV', 'UNEARN' and 'REC'.

The valid account class for this line type is 'TAX'.

The valid account class for this line type is 'FREIGHT'.

The supplied unit of measure and the primary unit of measure of your system item must share the same unit of measure class.

Conversion rate for the given date, currency code, set of books and conversion type has not been defined.

You must supply either tax amount or tax rate when passing tax lines.
[APP–11990] You cannot link a transaction whose line type is 'LINE' or 'CHARGES' to another transaction.

[APP–11991] You must link the transaction of line type 'TAX' to a transaction of line type 'LINE'.

[APP–11992] You must supply sales credit assignments for this transaction when you specify you require salesperson.

[APP–11993] You cannot supply any transactions in a non-functional currency if you have not set up both realized gains account and realized losses account.

[APP–11994] You must supply the same transaction code as the one this transaction is linked to.

[APP–11996] You must supply the amount for this transaction.

[APP–11997] Unable to adjust your gl date which is in a closed period to a non–closed period because there is more than one subsequent period which is open.

[APP–11998] Unable to adjust your gl date which is in a closed period to a non–closed period.

[APP–11999] Unable to derive a gl date for your transaction. Please ensure that your transaction is in a gl period which you have defined.

[APP–12005] This customer reference has two different customer prospect codes.

[APP–12006] There are rejected records in &BADFILE.

[APP–12007] The Tax Code does not allow override of the amount includes tax flag.

[APP–12008] You cannot set the amount includes tax flag when using a Tax Group.

[APP–12009] Cannot enter adjustment for an invoice selected for automatic receipt.

   Cause:
   You are trying to enter an adjustment against an invoice selected for automatic receipt.

[APP–12010] Cannot change adjustment invoice is selected for automatic receipt.

   Cause:
   You cannot modify adjustment because the invoice ha

[APP–12012] CUST_SHIP_VIA_CODE is not defined in ORG_FREIGHT.

   Cause:
   The CUST_SHIP_VIA_CODE must be defined in the ORG_FREIGHT table.

   Action:
   Enter a CUST_SHIP_VIA_CODE defined in ORG_FREIGHT or define a new one.

[APP–12013] CUSTOMER_CATEGORY_CODE is not defined in AR_LOOKUPS.

   Cause:
   The CUSTOMER_CATEGORY must be defined in AR_LOOKUPS with a LOOKUP_TYPE of CUSTOMER_CATEGORY.
Action:
Enter a value defined in AR_LOOKUPS or define a new one using the Define QuickCodes form.

[APP–12014] CUSTOMER_CATEGORY_CODE is not enabled in AR_LOOKUPS

Cause:
The CUSTOMER_CATEGORY_CODE must be enabled.

Action:
Update the enabled flag in the Define QuickCodes form to enable this customer category.

[APP–12015] CUST_TAX_CODE is not defined in AR_VAT_TAX

Cause:
The tax code specified must be defined in AR_VAT_TAX

Action:
Use the Define VAT Rates form to enter a new tax code.

[APP–12016] CUST_TAX_REFERENCE cannot be null when CUST_TAX_CODE is 'EXEMPT'

[APP–12017] SITE_USE_TAX_CODE is not defined in AR_VAT_TAX

[APP–12018] SITE_USE_TAX_REFERENCE is required when SITE_USE_TAX_CODE is 'EXEMPT'

[APP–12019] You may have only one active Dunning site use for each customer

[APP–12020] Amount applied cannot be greater than the original line amount of &AMOUNT.

[APP–12021] A new location was created for a value in an address segment field

Cause:
A value specified in an address field that constitutes part of your sales tax location flexfield structure was not defined in AR_LOCATION_VALUES. This value has been created in AR_LOCATION_VALUES.

[APP–12022] A cash receipt with this number, date, amount and customer already exists.

[APP–12023] A miscellaneous receipt with this number, date and amount already exists.

[APP–12024] The Bank Account cannot be null. This Receipt Source is being used by AutoLockBox.

[APP–12025] The customer reference specified is invalid

Cause:
The customer reference specified does not exist in the RA_CUSTOMERS table or the RA_CUSTOMERS_INTERFACE table. The customer reference could also be in error in the RA_CUSTOMERS_INTERFACE table.

Action:
Specify a different customer reference or rectify the errors reported in RA_CUSTOMERS_INTERFACE.
[APP–12026] The address reference specified is invalid

  Cause:
The address reference specified does not exist in the RA_ADDRESSES table or the RA_CUSTOMERS_INTERFACE table (in the Insert mode). The address reference could also be in error in the RA_CUSTOMERS_INTERFACE table.

  Action:
Specify a different address reference or rectify the errors reported in RA_CUSTOMERS_INTERFACE.

[APP–12027] The address reference specified is not valid for this customer

  Cause:
The address reference specified is not valid for this customer reference.

  Action:
Specify an address reference that is defined for this customer reference.

[APP–12028] Payment Method is not defined in AR_RECEIPT_METHODS

  Cause:
The payment method name specified must exist in AR_RECEIPT_METHODS.

  Action:
Use the Receipt Classes Window to define a new payment method or enter an existing one.

[APP–12029] A bank account does not exist for the specified customer

  Cause:
To assign a payment method to a customer, the customer must have a bank account defined.

  Action:
Assign a bank account to this customer.

[APP–12030] The end date specified cannot be before the start date

  Cause:
You have specified an end date that is before the start date.

  Action:
Enter an end date equal to or after the start date.

[APP–12031] The address specified must have an active BILL_TO site defined

  Cause:
The address specified must have an active BILL_TO site defined. The address specified may be in error in the RA_CUSTOMERS_INTERFACE table.

  Action:
Specify an address with an active BILL_TO site or rectify the errors reported in the RA_CUSTOMERS_INTERFACE table.

[APP–12032] Customer payment method already active between the dates specified
Cause:
This payment method is already assigned to this customer and is active between the dates specified.

Action:
Modify the dates for which this customer payment method is active.

[APP–12033] Customer site payment method already active between the dates specified

Cause:
This payment method is already assigned to this customer site and is active between the dates specified.

Action:
Modify the dates for which this customer site payment method is active.

[APP–12034] Customer already has a primary payment method for specified dates

Cause:
This customer has a primary payment method defined for the dates specified.

Action:
Modify the dates for which this customer payment method is active.

[APP–12035] Customer site has a primary payment method on the dates specified

Cause:
This customer site has a primary payment method defined for the dates specified.

Action:
Modify the dates for which this customer site payment method is active.

[APP–12036] This customer payment method is already active in this date range

Cause:
This customer payment method is already defined to be active for the date range specified within the interface table.

Action:
Modify the date range for which this payment method is active.

[APP–12037] Multiple primary payment methods defined

Cause:
There are multiple primary payment methods defined in the interface table for assignment to the same customer or customer site

Action:
Define only one primary payment method for a customer or customer site.

[APP–12038] If you require automatic receipts to be confirmed, you must also choose the clearance method of "By Matching".

[APP–12039] The bank account specified must be of type 'EXTERNAL'
Customer banks accounts must be defined to be of type 'EXTERNAL'.

Specify a bank account defined to be 'EXTERNAL'.

Cause:
The dates on which this customer bank account is active overlap with an existing assignment of this bank account to this customer.

Action:
Assign a different bank account or alter the dates on which this customer bank account is active.

Cause:
The dates on which this customer site bank account is active overlap with an existing assignment of this bank account to this customer site.

Action:
Assign a different bank account or alter the dates on which this customer site bank account is active.

Cause:
The dates for which this primary customer bank account is active overlap with an existing primary customer bank account assignment.

Action:
Alter the dates for which this account is active or do not specify this as the primary account.

Cause:
There is a primary customer site bank account already defined for this customer for the dates specified.

Action:
Alter the dates for which this account is active or do not specify this as the primary account.

Cause:
The assignment of this bank to this customer is defined already defined in the interface table to be active for this date range.

Action:
Alter the date range for which this assignment is active.

Cause:
There are multiple records defined within the interface table to be the primary bank account for customer or customer site. The dates for which these records are active overlap.
Action:
Alter the dates for which this primary account is an active.

[APP–12046] You must specify either the customer_trx_line_id or the request_id

Cause:
You have failed to specify either a customer_trx_line_id or a request_id when calling the credit memo module.

Action:
Modify your call to the credit memo module to specify a either the customer_trx_line_id, customer_trx_id and previous_customer_trx_line_id or the request_id of the credit memos that you wish to process.

[APP–12047] If you require automatic receipts to be confirmed, you must also choose a remittance method.

[APP–12449] You have specified invalid arguments for the user exit CHANGE_OK

  Cause:
  You have not specified the FORM or MODE arguments for the CHANGE_OK user exit.

  Action:
  Modify the call to the CHANGE_OK user exit to pass the correct parameters.

[APP–12483] General Ledger is not installed. Please commit here

[APP–12497] AR Lookup Type and Code not found ( &TYPE, &CODE )

  Cause:
  Your database does not contain seed data for ar_lookup

[APP–12498] BANK_NAME is mandatory when creating a new bank account

  Cause:
  When creating a bank account the associated bank branch must also be created. To create a bank branch the BANK_NAME and BANK_BRANCH_NAME fields must be populated.

  Action:
  Enter a value into the BANK_NAME field.

[APP–12499] BANK_BRANCH_NAME is mandatory when creating a new bank account

  Cause:
  When creating a bank account the associated bank branch must also be created. To create a bank branch the BANK_NAME and BANK_BRANCH_NAME fields must be populated.

  Action:
  Enter a value into the BANK_BRANCH_NAME field.

[APP–12500] BANK_ACCOUNT_CURRENCY_CODE is mandatory creating a new bank account

  Cause:
  The bank account does not exist. To create a bank account the BANK_ACCOUNT_CURRENCY_CODE field must be populated.

  Action:
  Enter a value into the BANK_ACCOUNT_CURRENCY_CODE field.

[APP–12504] AUTO_REC_INCL_DISPUTED_FLAG mandatory when profile class is null

  Cause:
  A value to indicate whether disputed items are to be included when using automatic receipts must be entered when no profile class is specified.
Action:
Enter a valid value into the AUTO_REC_INCL_DISPUTED_FLAG field.

APP–12505] TAX_PRINTING_OPTION is mandatory when no profile class specified

Cause:
A value for the tax printing option must be specified when the profile class is null.

Action:
Enter a value into the TAX_PRINTING_OPTION field.

APP–12506] GROUPING_RULE_NAME is mandatory when no profile class is specified

Cause:
Grouping rule name must be specified when no profile class is specified.

Action:
Enter a value into the GROUPING_RULE_NAME field.

APP–12507] CHARGE_ON_FINANCE_CHARGES_FLAG has an invalid value

Cause:
Valid values for the CHARGE_ON_FINANCE_CHARGES_FLAG are 'Y' and 'N'.

Action:
Enter a valid value.

APP–12508] GROUPING_RULE_NAME has an invalid value

Cause:
The GROUPING_RULE_NAME is not defined in the database.

Action:
Use the Define Grouping Rules form to define a new grouping rule or enter an existing one.

APP–12509] CURRENCY_CODE has an invalid value

Cause:
The currency code is not defined.

Action:
Use the Currencies Window to define a new currency or enter an existing one.

APP–12510] CREDIT_BALANCE_STATEMENTS is mandatory when STATEMENTS is "Yes"

Cause:
A value for credit balance statements must be entered when statements are to be sent.

Action:
Enter a valid value into the CREDIT_BALANCE_STATEMENTS field.

APP–12511] CREDIT_BALANCE_STATEMENTS must be "No" when STATEMENTS is "No"

Cause:
Credit balance statements cannot be sent when statements are not to be sent.
Action:
Enter 'N' into the CREDIT_BALANCE_STATEMENTS field.

[APP–12512] STATEMENT_CYCLE_NAME must be null when STATEMENTS is "No"

Cause:
The statement cycle name must be null when statements are not to be sent.

Action:
Update the STATEMENT_CYCLE_NAME field to null.

[APP–12513] OVERRIDE_TERMS is mandatory when no profile class is specified

Cause:
A value for override terms must be specified when the profile class is null.

Action:
Enter a valid value into the OVERRIDE_TERMS field.

[APP–12514] CREDIT_BALANCE_STATEMENTS must be null when STATEMENTS is null

Cause:
Credit balance statements cannot be sent if statements are not being sent.

Action:
Do not enter a value into the CREDIT_BALANCE_STATEMENTS field.

[APP–12515] STATEMENT_CYCLE_NAME must be null when STATEMENTS is null

Cause:
When statements are not to be sent a statement cycle name is not applicable.

Action:
Do not enter a value into the STATEMENT_CYCLE_NAME.

[APP–12516] CHARGE_ON_FINANCE_CHARGE_FLAG must be null when INTEREST_CHARGES is null

Cause:
When interest is not being charged, compound interest charge is not applicable.

Action:
Do not enter a value into the CHARGE_ON_FINANCE_CHARGE_FLAG.

[APP–12517] INTEREST_PERIOD_DAYS must be null when INTEREST_CHARGES is null

Cause:
When interest is not being charged the number of days in an interest period is not applicable.

Action:
Do not enter a value into the INTEREST_PERIOD_DAYS field.

[APP–12518] DISCOUNT_GRACE_DAYS must be null when DISCOUNT_TERMS is null
Cause:
When no discount terms have been specified the number of discount grace days is not applicable.

Action:
Do not enter a value into the DISCOUNT_GRACE_DAYS field.

[APP–12519] DISCOUNT_GRACE_DAYS must positive

Cause:
The discount grace days must be greater than zero.

Action:
Enter a valid discount grace days.

[APP–12520] DISCOUNT_GRACE_DAYS must be null when DISCOUNT_TERMS is "No"

Cause:
When there are no discount terms, the number of discount grace days is not applicable.

Action:
Do not enter a value into DISCOUNT_GRACE_DAYS.

[APP–12521] DUNNING_LETTER_SET_NAME must be null when DUNNING_LETTERS is "No"

Cause:
When dunning letters are not to be sent, the dunning letter set name is not applicable.

Action:
Do not enter a value into DUNNING_LETTER_SET_NAME.

[APP–12522] DUNNING_LETTER_SET_NAME must be null when DUNNING_LETTERS is null

Cause:
When dunning letters is not set, the dunning letter set name is not applicable.

Action:
Do not enter a value into the DUNNING_LETTER_SET_NAME field.

[APP–12523] CURRENCY_CODE is mandatory when a profile amount value is populated

Cause:
When a value has been specified in a profile amount field, the currency code field is mandatory.

Action:
Specify a valid CURRENCY_CODE.

[APP–12528] You have not designated this inventory item to appear on invoices

Cause:
This inventory item has Invoice Enabled flag set to No.

Action:
Set the Invoice Enabled flag in the Invoicing zone of the Define Items form to Yes for this inventory item.
[APP–12529] Please correct the revenue account assignment for line &LINE_NUMBER

[APP–12530] TAX_PRINTING_OPTION has an invalid value

   Cause:
   TAX–PRINTING_OPTION must be defined in AR_LOOKUPS with a LOOKUP_TYPE of 'TAX_PRINTING_OPTION'

   Action:
   Use the Define QuickCodes Form to define a new value of enter an existing one.

[APP–12531] The customer profile for this customer reference already exists

   Cause:
   A customer profile already exists for this customer.

   Action:
   Enter a different customer reference.

[APP–12532] The customer profile class for update does not exist

   Cause:
   The customer profile class is not defined.

   Action:
   Enter a customer profile that exists in the database.

[APP–12533] Both TRX_CREDIT_LIMIT and OVERALL_CREDIT_LIMIT must be populated

   Cause:
   If one of the TRX_CREDIT_LIMIT or OVERALL_CREDIT_LIMIT fields are populated then both
   must be populated.

   Action:
   Enter a value into both the TRX_CREDIT_LIMIT and the OVERALL_CREDIT_LIMIT fields.

[APP–12535] Duplicate record within the interface table

   Cause:
   You have defined a duplicate record in the interface table.

   Action:
   Delete one of the duplicate records.

[APP–12536] Conflicting profile classes specified for this customer/site

   Cause:
   You have specified different profile classes for records relating to the same customer or the same
   customer site.

   Action:
   Enter profile classes that are the same for a customer or customer site.

[APP–12539] TRX_CREDIT_LIMIT may not be greater than the OVERALL_CREDIT_LIMIT
Cause:
The credit limit for a transaction cannot be greater than a customer’s overall credit limit.

Action:
Enter a TRX_CREDIT_LIMIT limit less than or equal to the OVERALL_CREDIT_LIMIT.

[APP–12540] DUNNING_LETTER_SET_NAME must have a unique value

Cause:
The dunning letter set name specified must be a unique value in the AR_DUNNING_LETTER_SETS table.

Action:
Enter a unique value.

[APP–12541] COLLECTOR_NAME must have a unique value

Cause:
The collector specified must be a unique value in the AR_COLLECTORS table.

Action:
Enter a unique value.

[APP–12542] STANDARD_TERM_NAME must have a unique value

Cause:
The term name specified must be a unique value defined in the RA_TERMS table.

Action:
Enter a unique value.

[APP–12543] STATEMENT_CYCLE_NAME must have a unique value

Cause:
The statement cycle name specified must be a unique value defined in the AR_STATEMENT_CYCLES table.

Action:
Enter a unique value.

[APP–12544] SITE_SHIP_VIA_CODE not defined in ORG_FREIGHT

Cause:
The SITE_SHIP_VIA_CODE must be defined in the ORIG_FREIGHT table.

Action:
Enter a SITE_SHIP_VIA_CODE defined in ORG_FREIGHT or define a new one.

[APP–12547] BANK_ACCOUNT_NUM is mandatory when creating a new bank account

Cause:
The bank account specified does not exist. To create a bank account requires a bank account number.
Action: Enter a value into the BANK_ACCOUNT_NUM field.

[APP–12548] AUTO_REC_INCL_DISPUTE_FLAG has an invalid value

Cause: Valid values for the AUTO_REC_INCL_DISPUTE_FLAG are 'Y' and 'N'.

Action: Enter a valid value.

[APP–12549] PAYMENT_GRACE_DAYS must be a positive value

Cause: PAYMENT_GRACE_DAYS must be greater than zero.

Action: Enter a valid value.

[APP–12554] Token: &TOKEN expanded to nothing, Invalid Flexfield

Cause: The Flexfield structure is not valid, possible errors include: 1) Structure Not defined/frozen 2) Segment qualifiers not used

Action: Check each of the install and upgrade steps and ensure that the flexfield is correctly frozen.

[APP–12558] BANK_ACCOUNT_CURRENCY_CODE is not defined in FND_CURRENCIES

Cause: The currency code specified must be defined in the FND_CURRENCIES table.

Action: Use the Currencies Window to enter a new currency or specify an existing one.

[APP–12560] Customer record for insert must have validated profile record defined

Cause: A new customer record marked for insert must have a valid customer profile record defined in the RA_CUSTOMER_PROFILES_INTERFACE table.

Action: Define a profile record for this customer in the RA_CUSTOMER_PROFILES_INTERFACE table or ensure that the profile record defined passes validation successfully.

[APP–12562] CREDIT MEMO userexit is not initialized

Cause: The software has made a call to AR AUTOACC without having already made a call to AR AUTOACC STARTUP in the same session.

Action: Ensure that a call to AR AUTOACC STARTUP is made during a startup trigger of this form and that a corresponding call to AR AUTOACC CLEANUP is made during a post-form trigger.
[APP–12574] Quoted string too long for protection
CAUSE:
Quoted Strings was too long
ACTION:
Shorten the length of your string data.

[APP–12583] To Postal Code falls outside the range defined for the parent segment

[APP–13102] A job can have only one worker’s compensation code per state

Cause:
a job may have only one worker’s compensation code per state. A worker’s compensation code for this job in each state.

Action:
correct the job field, or remove the existing record for this job.

[APP–13104] This combination of carrier, state and location already exists

[APP–13105] This worker’s compensation code is already defined for this fund.

[APP–13106] You cannot delete a fund if codes and rates exist for it.

[APP–13107] This coverage already exists

[APP–13108] There are no future changes to delete

[APP–13109] A future change to the benefit prohibits the entered change

[APP–13110] This person has not been terminated

Cause:
The person you are attempting to enrol in COBRA due to termination has not actually been terminated.

Action:
Check that the person has been terminated as of the COBRA qualifying date

[APP–13111] This person has not had their hours reduced

Cause:
The person you are attempting to enrol in COBRA has not had their standard hours reduced.

Action:
Check that the person has had their standard hours reduced as of the COBRA qualifying date.

[APP–13112] No COBRA eligible benefit plans exist for this person

Cause:
As of the COBRA qualifying date no COBRA eligible benefit plans exist for this person.

Action:
Check the qualifying date and element entries for the person in question.

[APP–13113] You must enter the period dates for an elected coverage

Cause:
You attempted to elect COBRA coverage without entering coverage period start and end dates

Action:
Enter period start and end dates.
[APP–13115] Coverage start date must be on or after qualifying date

**Cause:**
The coverage start date you have entered is before the COBRA qualifying date.

**Action:**
Enter a coverage start date equal to or after the COBRA qualifying date.

[APP–13116] Coverage end date must be on or after the start date

[APP–13117] The period end date must be later than the period start date

[APP–13128] A job is using this code. You cannot delete it.

[APP–13129] This code is in use as an override for an employee. You cannot delete it.

In order to view a balance of this dimension, you must enter a Tax Unit.

[APP–13131] You must enter a Jurisdiction
In order to view a balance of this dimension, you must enter a Jurisdiction.

[APP–13134] You must elect or reject the coverage first

**Cause:**
You attempted to terminate a coverage before electing or rejecting it

**Action:**
Either accept or reject the coverage first

[APP–13135] You must notify before electing or rejecting

**Cause:**
You must first notify before electing or rejecting the COBRA coverage

**Action:**
Notify the COBRA coverage

[APP–13136] You cannot elect and reject a COBRA coverage

**Cause:**
You attempted to elect or reject a COBRA coverage which had already been rejected or elected

**Action:**
delete the offending elect or reject status first

[APP–13137] You must choose a termination reason

[APP–13139] This line has no errors or warnings.

[APP–13140] &1 element does not exist OR is not linked to payroll.
Action – [1] If element does not exist, contact your support representative. [2] If element has no link to employee’s payroll, create a link. [3] If element has a link to the payroll and you still get an error, contact your support representative.
[APP–13141] A COBRA enrollment already exists for this person, event and date

Cause:
You attempted to enter an enrollment for given person, qualifying event and qualifying date which already exist.

Action:
Re-query the existing enrollment.

[APP–13143] This COBRA status already exists

Cause:
The status you attempted to enter already exists.

Action:
Enter a different status or re-query the exist status.

[APP–13144] Payments must start on or before COBRA termination

[APP–13145] A payment schedule with this due date already exists

[APP–13146] You must enter both period start and period end dates

[APP–13148] You cannot change the batch type after you have entered batch lines.

Action:
Delete the batch lines you have entered and then change the batch type.

[APP–13149] Please enter the batch type.

[APP–13150] You must enter batch header information

[APP–13152] System totals do not equal user totals.

Action:
Correct the user totals or correct the batch line entries.

[APP–13153] Users cannot change the status to Error or Warning. This is a system function.

[APP–13156] You cannot change the status of Transferred.

Cause:
The batch has transferred to the HRMS database. You can no longer add, change or delete data in it using MIX windows.

[APP–13157] Batch Header is for a different Batch type

[APP–13158] You must enter the Units for the Absence Information

[APP–13159] Please save your changes before moving to the next screen.

[APP–13160] You are not allowed to delete this record.

[APP–13161] This accrual band will overlap with another.
This input value is already being used by this plan.

Each accrual plan must have a unique name.

This plan name is invalid.

**Cause:**
you have selected a name for a plan which would result in duplicate element type names.

**Action:**
rename the accrual plan.

A ceiling must be present for all band or no bands at all.

Please enter the amount received.

Please enter the date received.

No input value &IV_NAME exists for this element.

&VALUE does not exist.

Systems batch totals do not match user defined totals

No recurring entry exists to increase or decrease.

No input value can accept this amount. Contact your System Administrator.

A duplicate of this entry exists.

Please enter a revision less than or equal to the current revision

**Cause:**
You cannot enter an acceptance revision number that is greater than the current revision of your purchase order document.

**Action:**
No action is required.

**WARNING:** You are accepting against a previous revision

**Cause:**
You are accepting against a previous revision of the Purchase Order document.

**Action:**
No action is necessary.

You cannot unselect this line. Please unselect shipments first

**Cause:**
You have attempted to unselect a line which has selected shipments.

**Action:**
Unselect the shipments before unselecting the line.
[APP–14006] You must select the line before selecting a shipment

  Cause:
  You are trying to select shipments and you did not select the corresponding line.

  Action:
  Select the line first, then select the shipments you want to copy for this line.

[APP–14008] Unable to find Receipt Accruals accounting flexfield

  Cause:
  You did not provide a valid Receipt Accruals accounting flexfield in your purchasing options setup.

  Action:
  Use the Define Purchasing Options forms to specify the Accounting Flexfield you want to use for your receipt accruals.

[APP–14010] Unable to find next period

  Cause:
  You are trying to create accrual entries for your uninvoiced receipts prior to defining your calendar for your next period. You may not have defined accounting periods at all or this purchase order may be referencing a date that your current calendar does not include.

  Action:
  To set up your calendars, use \ Navigate Setup Financials Calendars Types, \ Navigate Setup Financials Calendars Periods and \ Navigate Setup Financials Books.

[APP–14012] Unable to find set of books

  Cause:
  You are trying to create accrual entries for your uninvoiced receipts prior to defining your set of books.

  Action:
  Use \ Navigate Setup Financials Books to set up your set of books.

[APP–14014] Unable to find purchasing period

  Cause:
  You are trying to create accrual entries for your uninvoiced receipts prior to defining your calendar. You may not have defined accounting periods at all or this purchase order may be referencing a date that your current calendar does not include.

  Action:
  To set up your calendars, see \ Navigate Setup Financials Calendars Types, \ Navigate Setup Financials Calendars Periods and \ Navigate Setup Financials Books.

[APP–14016] You cannot &action a document if it is &status

  Cause:
  You are attempting to perform an approval or control action on a document. You cannot complete the action on a document with this status.
Action:
Determine the required approval or control action to be completed on the document.

[APP–14018] You must enter a due date if you require acceptance

Cause:
You have not entered an acceptance due date.

Action:
Enter an acceptance due date.

[APP–14020] This range overlaps another range for the same authorization group

Cause:
You entered an accounting flexfield range that overlaps with another accounting flexfield range for the same authorization group.

Action:
Enter \ Row Erase to clear the current values, then enter new values that do not overlap any other range.

[APP–14024] You cannot automatically autocreate a blanket release because at least one requisition line: &REQ, &REQ_LINE has a one–time item on it. Please use the manual mode and select the blanket purchase order source line against which you wish to create the release.

[APP–14026] You cannot inactivate an item category with active items

Cause:
You are attempting to inactivate an item category that contains active items.

Action:
Inactivate all items in the item category before inactivating the category.

[APP–14028] You must enter a value in all the required fields

Cause:
You tried to leave this zone without entering a value in all the required fields.

Action:
Enter a value in the required fields.

[APP–14030] &ROUTINE–&ERR_NUMBER: Error during commit

Cause:
Oracle Purchasing was unable to save your changes while executing the routine &ROUTINE.

Action:
Take note of both this error number and actions you were trying to perform. Contact your system administrator for assistance.

[APP–14032] You cannot use \Screen Save here
Cause:
You are trying to save your changes in a zone where you cannot save your changes.

Action:
Navigate to the first zone of this form and save your changes.

[APP–14034] Concurrent program &CONC_NAME returned error

Cause:
&CONC_NAME encountered an internal error. Parameters: &PARAMETERS

Action:
Note both this error number and the actions you are trying to perform. Contact your system administrator for assistance.

[APP–14036] Expiration date must be greater than or equal to the effective date

Cause:
You entered a date in the expiration date field that pre-dates the date you entered in the effective date field.

Action:
Enter an expiration date that is greater than or equal to the effective date.

[APP–14038] Please enter a charge account

Cause:
You are trying to leave the accounting flexfield window without entering any information. You must enter an accounting flexfield combination in this form.

Action:
Enter a valid accounting flexfield combination in the accounting flexfield window.

[APP–14040] Please enter a valid charge account

Cause:
Charge account is mandatory and you did not enter one.

Action:
Enter a charge account.

[APP–14042] Please enter a valid requisition number

Cause:
You did not enter a valid requisition number.

Action:
Use Field QuickPick to choose a valid requisition number.

[APP–14044] Please enter a numeric value

Cause:
You entered alphanumeric values into a field that requires numbers.
Action:
Enter only numbers into the field or use your Define Purchasing Options forms to change your system options to accept Alphanumeric values.

[APP–14046] Please enter a percent value between zero (0) and one hundred (100)

Cause:
You are trying enter a value less than zero or greater than 100.

Action:
Enter a percent value between 0 and 100

[APP–14048] Please enter a valid purchase order number

Cause:
You did not enter a valid purchase order number.

Action:
Use Field QuickPick to choose a valid purchase order number.

[APP–14050] Please specify your search criteria

Cause:
You must provide some search criteria in this zone in order to limit your query retrieval.

Action:
Enter at least one search criterion in the Search Criteria zone.

[APP–14052] Please enter a unique value

Cause:
You entered a value that already exists for this field. You must enter a different value.

Action:
Enter a unique value for this field.

[APP–14054] Enter ‘Yes’ before saving your request

Cause:
You are trying to save a request without specifying if you want Oracle Purchasing to process your request.

Action:
Enter ‘Yes’ if you want Oracle Purchasing to process your request.

Action:
Use the menu to navigate to another form without saving your request if you do not want Oracle Purchasing to process your request.

[APP–14056] User Exit #PO &EXIT_NAME returned error

Cause:
#PO &EXIT_NAME encountered an internal error. Parameters: &PARAMETERS
Action:
Note this error number and the actions you are trying to perform. Contact your system administrator for assistance.

Cause:
A user exit or concurrent program was called with too many arguments. &NUMEXPECTED were expected, and &NUMACTUAL were received.

Action:
Note both this error number and the actions you are trying to perform. Contact your system administrator for assistance.

Action:
Modify the calling form to provide the correct number of arguments.

[APP–14060] You cannot use \ Field Copy here

Cause:
You are trying to copy the previous row's values into the current row. You cannot duplicate fields in this zone.

Action:
Enter all the information for the row you want to insert.

[APP–14062] You cannot use \ Field Delete here

Cause:
You are trying to clear a field that does not allow update.

Action:
No action is required.

[APP–14064] Error getting form pathname

Cause:
Oracle Purchasing cannot find information to bring up your requested screen.

Action:
Take note of both this error number and the actions you were trying to perform. Contact your system administrator for assistance.

[APP–14066] The item cannot be purchased in the default destination organization

Cause:
You chose an item that is not stockable in the default destination organization and subinventory.

Action:
Choose a valid stocking default destination organization for your item.

[APP–14068] The item cannot be purchased in the source organization

Cause:
You chose an item that is not stockable in the source organization and subinventory.
Action:
Choose a valid stocking source organization for your item.

[APP–14070] Missing required argument: &ARG

Cause:
A user exit or concurrent program was called without a required argument.

Action:
Modify the calling form to provide the correct argument.

Action:
Note this error number and the actions you are trying to perform. Contact your system administrator for assistance.

[APP–14072] You cannot change Accrue On Receipt to ’No.’

Cause:
You tried to change Accrue On Receipt to ”No” or clear the field when Inventory or Shop Floor destined distributions exist for this shipment. All inventory goods are always accrued on receipt.

Action:
No action required.

[APP–14074] Please enter a currency exchange rate greater than zero (0)

Cause:
You entered a currency exchange rate that is less than or equal to zero.

Action:
You must enter a currency exchange rate that is greater than zero.

[APP–14076] This is a new value. Use \ Field QuickPick to see existing values

Cause:
You entered a new value for this field. You can review and enter existing values.

Action:
Use \ Field QuickPick to see existing values.

[APP–14078] Unable to find an accrual account

Cause:
An accrual account is mandatory and Account Generator could not find a valid accrual account.

Action:
Remove this record and review your Account Generator setup.

[APP–14080] Unable to find a budget account

Cause:
A budget account is mandatory and Account Generator could not find a valid budget account.

Action:
You must remove this record and review your Account Generator setup.
Unable to find a charge account

**Cause:**
A charge account is mandatory and Account Generator could not find a valid charge account.

**Action:**
Remove this record and review your Account Generator setup.

Cannot find control function for &ACTION on &DOC_SUBTYPE &DOC_TYPE

**Cause:**
Oracle Purchasing was unable to find a control function for the given combination of document type and action type.

**Action:**
Define a control function for the given document and action combination using the Define Position Control form.

Unable to find the employee id for your user id

**Cause:**
You did not associate an employee with your user name

**Action:**
Use \ Navigate Setup Organization Personnel Employees Enter to define yourself as an employee.

Action:
Ask your System Administrator to associate your user name with your employee record. Use the \ Navigate Security User option of the System Administrator responsibility.

Unable to find job for &EMP_NAME

**Cause:**
Oracle Purchasing was unable to find a jobassignment for this employee.

**Action:**
Assign a job to this employee using the Enter Employee form.

No requisition lines were autocreated. Possible causes: 1) You tried to autocreate lines onto a blanket release where the combination rules were not satisfied. 2) Some other error occurred during the autocreate process.

Unable to find position for &EMP_NAME

**Cause:**
Oracle Purchasing was unable to find a position assignment for this employee.

**Action:**
Assign a position to this employee using Define Employees form.

No records meet your search criteria

**Cause:**
There are no records that match your search criteria.
Action:
Re-enter your search criteria with fewer or different parameters.

[APP–14096] No requisitions meet your search criteria

Cause:
There are no requisitions or requisition lines that match your search criteria.

Action:
Re-enter your search criteria with fewer or different parameters.

[APP–14098] Unable to find an invoice variance account

Cause:
A variance account is mandatory and Account Generator could not find a valid variance Account.

Action:
Remove this record and review your Account Generator setup.

[APP–14100] &ROUTINE–&ERR_NUMBER: Output field name &OUTFIELD is incorrect

Cause:
You have encountered an internal Oracle error.

Action:
Take note of both this error number and the actions you were trying to perform. Contact your system administrator for assistance.

[APP–14102] &ROUTINE–&ERR_NUMBER: Could not allocate memory

Cause:
You have encountered an internal Oracle error.

Action:
Take note of both this error number and the actions you were trying to perform. Contact your system administrator for assistance.

[APP–14104] &ROUTINE–&ERR_NUMBER: Incorrect number of parameters passed

Cause:
You have encountered an internal Oracle error.

Action:
Take note of both this error number and the actions you were trying to perform. Contact your system administrator for assistance.

[APP–14106] Your Concurrent Request ID is: &REQUEST

Cause:
Oracle Purchasing generated a Concurrent Request ID for your request.

Action:
Take note of this number. You can use the \Navigate Other Requests option of your menu to verify the status of your request at any time.
[APP–14108] You cannot use \ Query Count here

Cause:
You are trying to count the number of records that have been queried in a zone that does not allow the counting of queried records.

Action:
No action is required.

[APP–14110] You cannot use \ Query Enter here

Cause:
You are trying to query an inquiry zone. You do not need to use \ Query Enter in this zone to retrieve the information you need.

Action:
No action is required.

[APP–14112] You cannot use \ Query Enter here

Cause:
You are trying to query an inquiry zone. You do not need to use \ Query Enter in this zone to retrieve the information you need.

Action:
No action is required.

[APP–14114] You cannot use \ Query Run here

Cause:
You are trying to query all records in an inquiry zone. You do not need to use \ Query Run in this zone to retrieve the information you need.

Action:
No action is required.

[APP–14116] Please enter a currency exchange rate date

Cause:
You have entered a rate type other than 'User' without a rate date.

Action:
You must enter a rate date.

[APP–14118] Please enter a currency exchange rate

Cause:
You have entered a rate type of 'User' without a currency exchange rate.

Action:
You must enter a currency exchange rate.

[APP–14120] Please enter a currency exchange rate type
Cause:
You have entered a currency code without a currency rate type.

Action:
You must enter a currency rate type.

[APP–14122] No records meet your search criteria

Cause:
There are no records that match your search criteria.

Action:
Re-enter your search criteria with fewer or different parameters.

[APP–14124] Line &REQ_LINE_NUM belongs to requisition &REQ_NUM. The status of &REQ_NUM has changed while you were working due to the actions of another user. It will not be autocreated at this time.

[APP–14126] You cannot use \Row Copy here

Cause:
You are trying to copy the previous row into the current row.

Action:
Enter all information for the row you want to insert.

[APP–14128] You cannot use \Row Delete here

Cause:
You are trying to delete data from an inquiry form.

Action:
Use the entry form corresponding to this inquiry form to delete the row from the database. If you are unable to delete this information in the corresponding entry form, you may be required to inactivate or cancel it.

[APP–14130] You cannot use \Row Delete. Please inactivate the row instead

Cause:
You are trying to delete a row that you cannot delete for database integrity reasons. Other records in Oracle Purchasing may reference this row.

Action:
Inactivate the row by entering an inactivate date.

[APP–14132] You cannot use \Row Erase here

Cause:
You are trying to clear the row using \Row Erase in a zone that you cannot erase.

Action:
No action required.

[APP–14134] Please use \Row Delete to remove this record from the database
Cause:
You tried to clear a committed record.

Action:
Use \ Row Delete to remove the record instead. If you are unable to delete this information, you may be required to inactivate or cancel it.

[APP–14136] You cannot use \ Row Insert here

Cause:
You are trying to insert a row using \ Row Insert in a form that you cannot update.

Action:
You cannot insert a row in a display–only zone or between two existing rows on a complete purchase order or requisition.

[APP–14138] You cannot use \ Screen Erase here

Cause:
You cannot erase this screen using \ Screen Erase.

Action:
No action is required.

[APP–14140] Unable to get sequence number

Cause:
Oracle Purchasing is unable to get the next sequence number for the record you are creating.

Action:
Take note of both this error number and the actions you were trying to perform. Contact your system administrator for further assistance.

[APP–14142] &ROUTINE–&ERR_NUMBER: &SQL_ERR

Cause:
A SQL error has occurred in &ROUTINE. The SQL error is &LSQL_ERR.

Action:
Take note of both this error number and the actions you were trying to perform. Contact your system administrator for further assistance.

[APP–14144] &FILE–&ERR_NUMBER: Subroutine &SUBROUTINE returned error

Cause:
Subroutine &SUBROUTINE returned an internal error.

Action:
Note this error number and the actions you are trying to perform. Contact your system administrator for assistance.

Cause:
Subroutine &SUBROUTINE returned an internal error. Returned error message is: &ERROR_MSG
Action:
Note this error number and the actions you are trying to perform. Contact your system administrator for assistance.

[APP–14148] &ROUTINE–&ERR_NUMBER: Cannot read form information

Cause:
&ROUTINE is unable to retrieve information from a form field.

Action:
Take note of both this error number and the actions you were trying to perform. Contact your system administrator for further assistance.

Cause:
An unknown or incorrect code was encountered.

Action:
Note this error number and the actions you are trying to perform. Contact your system administrator for assistance.

[APP–14152] Use \ Row Erase to clear this unsaved record

Cause:
You are trying to delete a row that has not been saved to the database.

Action:
Use \ Row Erase to clear the row.

[APP–14154] You cannot use \ Zone Erase in this zone

Cause:
You are trying to clear the zone using \ Zone Erase.

Action:
No action required.

[APP–14156] You cannot use the \ Query functions in this zone

Cause:
You are trying to query records in an inquiry zone. You do not need to query information here.

Action:
No action is required.

[APP–14158] You cannot use \ Row Next while in a ZOOM

Cause:
You attempted to use \ Row Next in a zoom.

Action:
Return to the previous form to see the next record.
[APP–14160] Document action not completed successfully

   Cause:
   You attempted to perform a document action that is incompatible with the document status.

   Action:
   No action required.

[APP–14162] You must enter an approval hierarchy when using position hierarchies

   Cause:
   Approval hierarchy is required if you are using approval position hierarchies and you are forwarding or submitting a document to another approver.

   Action:
   Enter an approval hierarchy.

[APP–14164] Please enter a forward from employee

   Cause:
   You attempted to perform an approval action without including a forward from employee. Oracle Purchasing automatically defaults the employee submitting the document for approval as the forward from employee.

   Action:
   You must enter a forward from employee. You can only select another forward from employee for Requisitions.

[APP–14166] Please enter a forward to employee

   Cause:
   You do not have authority to approve this document or funds are not reserved for the document.

   Action:
   Please enter an employee to forward the document to.

[APP–14168] Cannot change approval hierarchy or forward to employee

   Cause:
   You cannot modify the approval hierarchy and forward to employee. Approval hierarchy and forward to are not required.

   Action:
   No action required.

   Cause:
   You cannot modify the approval hierarchy and forward to employee. Approval hierarchy and forward to employee is required.

   Action:
   Forward the document to the employee listed in the forward to employee field.

   Cause:
   You cannot modify the approval hierarchy and forward to employee. You are using approval hierarchies and a default approval hierarchy is not defined.
Action:
Use Navigate Setup Purchasing Document Controls to setup a default approval hierarchy.

Cause:
You cannot modify the approval hierarchy and forward to employee. You are using approval hierarchies and the default approval hierarchy does not include both the forward to and forward from employee.

Action:
Define a default approval hierarchy that includes the forward from and forward to employee.

Cause:
You cannot modify the approval hierarchy and forward to employee.

Action:
Use Navigate Setup Purchasing Document Controls to redefine your approval hierarchy document controls.

APP–14170] Cannot change forward from or forward to employee

Cause:
You cannot modify the forward from or forward to employee. Forward from and forward to employee is not required.

Action:
Continue processing the approval action.

Cause:
You cannot modify the forward from or forward to employee. Forward to employee is required.

Action:
Forward the document to the employee listed in the forward to employee field.

Cause:
You cannot modify the forward from or forward to employee. You are using approval hierarchies and a default approval hierarchy is not defined.

Action:
Use Navigate Setup Purchasing Document Controls to setup a default approval hierarchy.

Cause:
You cannot modify the forward from or forward to employee. You are using approval hierarchies and the default approval hierarchy does not include both the forward to and forward from employee.

Action:
Define a default approval hierarchy that includes the forward from employee.

Cause:
You cannot modify the forward from or forward to employee.

Action:
Use Navigate Setup Purchasing Document Controls to redefine your forward to and from document controls.
[APP–14172] Cannot change forward to employee

    Cause:
    You cannot modify the forward to employee. Forward from and forward to employee is not required.

    Action:
    Continue processing the approval action.

    Cause:
    You cannot modify the forward to employee. Forward to employee is required.

    Action:
    Forward the document to the employee listed in the forward to employee field.

    Cause:
    You cannot modify the forward to employee. You are using approval hierarchies and a default approval hierarchy is not defined.

    Action:
    Use Navigate Setup Purchasing Document Controls to setup a default approval hierarchy.

    Cause:
    You cannot modify the forward to employee. You are using approval hierarchies and the default approval hierarchy does not include both the forward to and forward from employee.

    Action:
    Define a default approval hierarchy that includes both the forward from and forward to employee.

    Cause:
    You cannot modify the forward to employee.

    Action:
    Use Navigate Setup Purchasing Document Controls to redefine your forward to and from document controls.

[APP–14174] Cannot change approval hierarchy or forward from employee

    Cause:
    You cannot modify the forward from or approval hierarchy. Approval hierarchy is not required.

    Action:
    Continue processing the approval action.

    Cause:
    You cannot modify the forward from or approval hierarchy. Approval hierarchy is required.

    Action:
    Forward the document to the employee listed in the forward to employee field or select another forward to employee.

    Cause:
    You cannot modify the forward from or approval hierarchy. You are using approval hierarchies and a default approval hierarchy is not defined.
Action:
Use Navigate Setup Purchasing Document Controls to setup a default approval hierarchy.

Cause:
You cannot modify the forward from or approval hierarchy. You are using approval hierarchies and the default approval hierarchy does not include the forward from employee.

Action:
Define a default approval hierarchy that includes the forward from employee.

Cause:
You cannot modify the forward from or approval hierarchy.

Action:
Use Navigate Setup Purchasing Document Controls to redefine your approval document controls.

[APP–14176] Cannot change approval hierarchy

Cause:
You cannot modify the approval hierarchy. Approval hierarchy is not required.

Action:
Continue processing the approval action.

Cause:
You cannot modify the approval hierarchy. Approval hierarchy is required.

Action:
Forward the document to the employee listed in the forward to employee field or select another forward to employee.

Cause:
You cannot modify the approval hierarchy. You are using approval hierarchies and a default approval hierarchy is not defined.

Action:
Use Navigate Setup Purchasing Document Controls to setup a default approval hierarchy.

Cause:
You cannot modify the approval hierarchy. You are using approval hierarchies and the default approval hierarchy does not include the forward from employee.

Action:
Define a default approval hierarchy that includes the forward from employee.

Cause:
You cannot modify the approval hierarchy.

Action:
Use Navigate Setup Purchasing Document Controls to redefine your approval document controls.

[APP–14178] Cannot change forward from employee
Cause:
You cannot modify the forward from employee. You want to forward the document using the forward from employee listed.

Action:
Continue processing the approval action. You can only modify the forward from employee for Requisitions.

Cause:
You cannot modify the forward from employee. You want to modify the forward from employee.

Action:
Use Navigate Setup Purchasing Document Controls to redefine your approval document controls.
You can only modify the forward from employee for Requisitions.

[APP-14180] The forward–to person is not an on–line user.

[APP-14182] Cannot change approval hierarchy, forward from, or forward to

Cause:
You cannot modify the approval hierarchy, forward from employee, or forward to employee. Approval hierarchy and forward to employee are not required and forward from is defaulted. Approval hierarchy, forward from employee, and forward to employee are all displayed.

Action:
Continue processing the approval action.

Cause:
You cannot modify the approval hierarchy, forward from employee, or forward to employee. You are using approval hierarchies and a default approval hierarchy is not defined.

Action:
Use Navigate Setup Purchasing Document Controls to setup a default approval hierarchy.

Cause:
You cannot modify the approval hierarchy, forward from employee, or forward to employee. You are using approval hierarchies and the default approval hierarchy does not include both the forward from and forward to employee.

Action:
Define a default approval hierarchy that includes both the forward from and forward to employee.

Cause:
You cannot modify the approval hierarchy, forward from employee, or forward to employee.

Action:
Use Navigate Setup Purchasing Document Controls to redefine your approval document controls.

[APP-14184] The Forward–To person cannot approve requisitions on–line

Cause:
You provided the name of a person that is not an Oracle Purchasing user, and cannot approve requisitions on–line.
Action:
Print your requisition immediately, or let designated buyers print all requisitions that require manual signature approval.

Action:
Select an approver who can approve requisitions online.

[APP–14186] You have insufficient authority. Please enter a Forward–To person

Cause:
You do not have enough authorization to approve this requisition. Please forward it to the next approver.

Action:
Select an approver with a higher authorization level.

Action:
If you need to change your authorization responsibility, contact your system administrator for assistance.

[APP–14188] You have insufficient authority to reserve funds for requisition

Cause:
You must reserve funds for this requisition. Enter an approver in the Forward To field who can reserve funds for the requisition.

Action:
Select an approver with a higher authorization level for funds reservation.

[APP–14190] Document account total exceeds account limit rule

Cause:
The current document includes an account whose total exceeds the account total on a control rule. The current document type is not associated with a job or position in the Define Position Controls form.

Action:
Reduce the total amount for the problem account on the document such that the relevant account control rules have a higher amount limit.

Action:
Increase the total amount on the appropriate control rule(s) using the Define Control Groups form.

Action:
Verify that the approver’s position or job in the Define Position Controls form is associated with a control rule for the document type.

[APP–14192] A document account does not exist on any rule

Cause:
One of the accounts used on the current document does not exist in any of the control rules. This automatically excludes the account from being authorized.
Action:
Change the accounts on the document.

Action:
Include the accounts in a rule using the Define Control Groups form.

[APP–14194] Document approval failed one or more item category rule(s)

Cause:
Amount limit of category control rule is less than the amount for the category on the document.

Action:
Reduce the amount ordered for the category on the document.

Action:
Increase the limit on the category control rule using the Define Controls Groups form.

Cause:
One or more of the categories on the document is excluded using exclude control rules.

Action:
Change the category on the document or remove the category from the exclude rule(s) using the Define Control Groups form.

[APP–14196] Document total exceeds document total limit rule

Cause:
The current document total exceeds the document total control rule limit.

Action:
Reduce the amount of the document to be less than the minimum control total limit rule.

Action:
Modify the control document total limit rule using the Define Control Groups form.

[APP–14198] Document approval failed one or more item rule(s)

Cause:
Amount limit of item control rule is less than the amount for the item on the document.

Action:
Reduce the amount ordered for the item on the document.

Action:
Increase the limit on the item control rule using the Define Controls Groups form.

Cause:
One or more of the items on the document is excluded using exclude control rules.

Action:
Change the item on the document or remove the item from the exclude rule(s) using the Define Control Groups form.

[APP–14200] Document approval failed due to location limit failure
Cause:
Amount limit of location control rule is less than the amount for the ship-to location on the document.

Action:
Reduce the amount ordered for the ship-to location on the document.

Action:
Increase the limit on the location control rule using the Define Controls Groups form.

Cause:
One or more of the ship-to locations on the document is excluded using exclude control rules.

Action:
Change the ship-to location on the document or remove the location from the exclude rule(s) using the Define Control Groups form.

[APP–14202] You cannot reserve a document when encumbrance is turned off

Cause:
Encumbrance has been turned off at the system level. No funds reservation can be performed.

Action:
Turn encumbrance on at system level using the Define Financials Options form, or do not attempt funds reservation if encumbrance remains turned off.

[APP–14204] You cannot inactivate a group with active employees

Cause:
You tried to inactivate a group with active employees.

Action:
Remove the active employees before inactivating the authorization group.

[APP–14206] Please enter a group limit greater than or equal to all range limits

Cause:
You attempted to define a group limit that is less than a range limit.

Action:
Enter a group limit that is greater than or equal to the largest range limit.

[APP–14208] Please enter a range limit less than or equal to the group limit.

Cause:
You attempted to define a range limit that is greater than the group limit.

Action:
Enter a range limit that is less than or equal to the group limit.

[APP–14210] Please enter an accounting flexfield

Cause:
You are attempting to navigate to the next zone without entering the accounting flex field.
Action:
Enter the accounting flex field.

[APP–14212] GL start date is greater than GL end date

Cause:
You tried to enter a GL start date that is greater than your GL end date.

Action:
Enter a GL start date that is less than your GL end date.

[APP–14214] Start period is greater than end period

Cause:
You tried to enter a start period that is greater than your end period.

Action:
Enter a start period that is less than your end period.

[APP–14216] Please enter a job

Cause:
You are not using approval hierarchies and did not enter a job. Control rule groups are associated with jobs when you are not using approval hierarchies.

Action:
Enter a job.

[APP–14218] Please enter a position

Cause:
You are using approval hierarchies and did not enter a position. Control rule groups are associated with positions when using approval hierarchies.

Action:
Enter a position.

[APP–14220] Please enter a start date that is less than the end date

Cause:
End date is greater than start date.

Action:
Enter a start date that less than or equal to the end date.

[APP–14222] Position &EMP_POSITION under superior &SUPER_POSITION not assigned

Cause:
An employee is not assigned to one or more of the positions listed in the message.

Action:
Assigned a position to the employee.

[APP–14224] You have not selected an order type or order source in Oracle Purchasing
Cause:
You have not selected an order type or an order source for internal requisitions in Oracle Purchasing.

Action:
Choose an order type and order source from the Internal Requisitions zone of the Define Purchasing Parameters form.

[APP–14226] Failed Requisition Numbers

Cause:
The following requisition numbers could not be processed because corresponding requisition line or location information was missing.

Action:
Please check the requisition numbers again.

[APP–14228] &ROUTINE–&ERR_NUMBER: An invalid object type has been specified

Cause:
Oracle Purchasing is unable to read your database information.

Action:
Take note of both this error number and the actions you were trying to perform. Contact your system administrator for assistance.

[APP–14230] The GL date is not in an open period.

Cause:
The GL date that you entered does not fall within an open period.

Action:
Choose a different GL date or open the period for this date.

[APP–14232] You cannot navigate to the next zone after entering an action

Cause:
You have entered a action that does not allow you to perform additional control actions on the document entity.

Action:
No action required.

[APP–14234] You must enter an end date if you enter a start date

Cause:
You entered a start date without an end date.

Action:
Enter an end date.

[APP–14236] You do not have sufficient privileges to modify this release

[APP–14238] You must specify a purchase order line number in order to copy
Cause:
Oracle Purchasing requires a purchase order line number in order to copy the requisition line information.

Action:
Enter a purchase order line number.

[APP–14240] Items on &OBJECT line &LINE_NUM do not match

Cause:
You are trying to place different items on the same &OBJECT line. All requisition lines you are placing on the same &OBJECT line must refer to the same item.

Action:
Revise your requisition selection. Do not place requisition lines for different items on the same &OBJECT line. Use the explode option if you need to change a requisition line.

[APP–14242] Item revisions on &OBJECT line &LINE_NUM do not match

Cause:
You are trying to place requisition lines with different item revisions on the same &OBJECT line. You should place these requisition lines on different &OBJECT lines.

Action:
Revise your requisition selection. Do not place requisition lines with different item revisions on the same &OBJECT line. Use the explode option if you need to change a requisition line.

[APP–14244] Line &LINE_NUM has a different reason code

Cause:
You are trying to place requisition lines to &LINE_NUM line that has a different reason code.

Action:
Enter the number of a &LINE_NUM line that matches the reason code.

[APP–14246] &OBJECT line &LINE_NUM has been canceled

Cause:
You are trying to place requisition lines on a cancelled &OBJECT line. You cannot add requisition lines to a &OBJECT line after you cancelled this &OBJECT line.

Action:
Enter the number of a &OBJECT line that is not cancelled.

[APP–14248] &OBJECT Line &LINE_NUM has been finally closed

Cause:
You are trying to place requisition lines on a cancelled &OBJECT line. You cannot add requisition lines to a &OBJECT line after you finally closed this &OBJECT line.

Action:
Enter the number of a &OBJECT line that is not finally closed.
[APP–14250] Line types on &OBJECT line &LINE_NUM do not match

Cause:
You are trying to place requisition lines with different line types on the same &OBJECT line. You should place these requisition lines on different &OBJECT lines.

Action:
Revise your requisition selection. Do not place requisition lines with different line types on the same &OBJECT line. Use the explode option if you need to change a requisition line.

[APP–14252] Line &LINE_NUM has a different reason code

Cause:
You are trying to place requisition lines to &LINE_NUM line that has a different reason code.

Action:
Enter the number of a &LINE_NUM line that matches the reason code.

[APP–14254] A requisition line has not been placed on an RFQ

Cause:
one or more of the requisition lines you selected requires a quotation.

Action:
Reference quotation information in the new purchase order you are creating.

[APP–14256] Cannot find rate. Currency: &CURRENCY, Type: &RATE_TYPE, Date: &DATE

[APP–14258] No rate has been defined for this date

Cause:
The rate type that you have entered uses pre-defined rates. No rate has been defined for the current rate type and rate date combination.

Action:
Enter a rate date for which a rate has been defined.

[APP–14260] &ROUTINE–&ERR_NUMBER: Control array is null

Cause:
You have encountered an internal Oracle error.

Action:
Note both this error number and the actions you were trying to perform. Contact your system administrator for assistance.

[APP–14262] &ROUTINE–&ERR_NUMBER: Quote array is null

Cause:
You have encountered an internal Oracle error.

Action:
Note this error number and the actions you were trying to perform. Contact your system administrator for assistance.
[APP–14264] Line &REQ_LINE_NUM of requisition &REQ_HEADER_ID already on purchase order

  Cause:
  You are trying to place a requisition line on a purchase order line. This line was placed on a purchase order line by another buyer while you were working.

  Action:
  Revise your requisition selection. Omit this requisition line from your purchase order line.

[APP–14266] Line &REQ_LINE_NUM of requisition &REQ_HEADER_ID has been canceled

  Cause:
  Line &REQ_LINE_NUM of requisition &REQ_HEADER_ID was been cancelled while you were working. You cannot place a cancelled requisition line on a purchase order.

  Action:
  Attempt to AutoCreate again with the same search criteria. Oracle Purchasing will not retrieve the cancelled requisition line.

[APP–14268] Line &REQ_LINE_NUM of Requisition &REQ_HEADER_ID is finally closed

  Cause:
  Line &REQ_LINE_NUM of requisition &REQ_HEADER_ID has been finally closed. You cannot place a finally closed requisition line on a purchase order.

  Action:
  Attempt to AutoCreate again with the same search criteria. Oracle Purchasing will not retrieve the finally closed requisition line to place on the purchase order.

[APP–14270] One or more of the lines you tried to place on &OBJECT was modified

  Cause:
  A buyer modified one or more of the requisition lines you tried to placed on a &OBJECT line. You cannot place a requisition line modified by a buyer onto a &OBJECT line.

  Action:
  Revise your requisition selection. Place your available requisition lines onto your &OBJECT lines as you need. Review requisition lines which buyers modified in the View Requisitions form if you need to place the modified requisition lines onto &OBJECT lines.

[APP–14272] Please copy at least one requisition line on &OBJECT Line &LINE_NUM

  Cause:
  You are trying to place several requisition lines onto a purchase order line or RFQ line without specifying the requisition information you want to copy onto the purchase order line.

  Action:
  Revise your requisition selection. Copy requisition line information from one requisition line onto the purchase order line or the RFQ line.

[APP–14274] Please use Copy once only for &OBJECT line &LINE_NUM
Cause:
You are trying to copy the information of two or more requisition lines onto one purchase order or RFQ line. You can only copy the information of one requisition line onto a purchase order or RFQ line.

Action:
Revise your requisition selection. Choose one requisition line to be the line information source for the purchase order or RFQ line.

[APP–14276] &ROUTINE–&ERR_NUMBER: Unable to store this entry

Cause:
You have encountered an internal Oracle error.

Action:
Note both this error number and the actions you were trying to perform. Contact your system administrator for assistance.

[APP–14278] &ROUTINE–&ERR_NUMBER: Option not recognized

Cause:
You have encountered an internal Oracle error.

Action:
Note both this error number and the actions you were trying to perform. Contact your system administrator for assistance.

[APP–14280] Units of measure on &OBJECT line &LINE_NUM do not match

Cause:
You are trying to place requisition lines using different units of measure on the same &OBJECT line. You should place these requisition lines on different &OBJECT lines.

Action:
Revise your requisition selection. Do not place requisition lines using different units of measure on the same &OBJECT line. Use the Explode option if you need to change a requisition line.

[APP–14282] You cannot delete this quotation line.

Cause:
The quotation line is being referenced in the AutoSourceRules Form for the item specified on this quotation line.

Action:
If you want to delete this quotation line, you must first delete the reference to the quotation line in the AutoSourceRules Form.

[APP–14284] You cannot delete this quotation line

Cause:
This quotation is referenced on a requisition line.

Action:
If you want to delete the quotation line, remove the reference to the quotation from the requisition lines.
Please provide the correct document type

Cause: You can create controls for Document Types of Quotations and Request For Quotations alone

Action: Please correct the Document Type

This document is either incomplete or you do not have access to it.

Cause: You have tried to access a document that either 1) is incomplete or 2) is unavailable to you.

Action: In case 1 above: You must take an action against the document before you can view the action history. In case 2 above: Check the document security level and access level under the Define Document Controls form. Check this security level against your status (e.g., are you an active Purchasing agent if security level is Purchasing, or are you a supervisor of the document owner if security level is hierarchy...)

Funds were not released from at least one distribution

Cause: Oracle Purchasing was not able to reverse the encumbrance on one or more distributions.

Action: Verify that your budgets are correctly defined. Verify that you are not using an inactive accounting flexfield.

Funds were not reserved for at least one distribution

Cause: Funds were not reserved for one or more distributions.

Action: Verify your requisition or purchase order through the view approval forms. Verify that your budgets are correctly defined.

Please enter an approver to whom you want to forward documents.

Please enter an approver from whom you want to forward documents.

Error from &FDFUNC: &ERROR

Cause: Oracle Purchasing has encountered an internal error.

Action: Note this error number and the actions you were trying to perform. Contact your system administrator for assistance.

A unit of issue (&UNIT_OF_ISSUE) has been specified in the source organization. Do you want to convert your order quantity and UOM from &ORDER_QUANTITY &ORDER_UOM to &CONVERT_QUANTITY &UNIT_OF_ISSUE?

Unable to find last price history for this item
Cause:
You are trying to review the last price history information for an item that either exists on unprinted purchase orders or has never been purchased in Oracle Purchasing.

Action:
No action is necessary.

[APP–14304] Customer and site must both be entered

Cause:
You attempted to enter a customer without a entering site. Both customer and site must be entered.

Action:
Enter both customer and site.

[APP–14306] You cannot delete a record associated with a requisition line

Cause:
You attempted to delete a location that is referenced on a requisition line.

Action:
No action required.

[APP–14308] An entry for &FLD is already defined

Cause:
An entry for &FLD has already been defined.

Action:
Enter another value.

[APP–14310] Please enter the name of the buyer to whom you want to assign requisition lines.

[APP–14312] Unable to get the current date

Cause:
The concurrent process was unable to select the current date from system.dual.

Action:
Note this error number and the actions you were trying to perform. Contact your system administrator for assistance.

[APP–14314] Please enter the name of the employee whose inbox you want to access.

[APP–14316] Cannot delete the notifications

Cause:
Oracle Purchasing is unable to delete your notifications from the database.

Action:
Note both this error number and the actions you were trying to perform. Contact your system administrator for assistance.

[APP–14318] Unable to delete the notifications
Cause:
Oracle Purchasing is unable to delete your notifications from the database.

Action:
Note both this error number and the actions you were trying to perform. Contact your system administrator for assistance.

[APP–14320] Unable to submit periodic concurrent request

Cause:
Oracle Purchasing is unable to submit a concurrent request.

Action:
Note this error number and the actions you were trying to perform. Contact your system administrator for assistance.

[APP–14322] The notification is obsolete. Please re-query to view updated notifications.

[APP–14324] Unable to get the next run date

Cause:
Oracle Purchasing is unable to select the date from system.dual.

Action:
Note both this error number and the actions you were trying to perform. Contact your system administrator for assistance.

[APP–14326] Please enter a unique name for this note

Cause:
You are entering a new note or copying a note from an existing one. You provided a name for your note that is already used by another note.

Action:
Enter a unique name for this note.

[APP–14328] You cannot import or reschedule requisitions while using encumbrance

Cause:
You attempted to import or reschedule requisitions while using encumbrance.

Action:
Import or reschedule the requisitions without using encumbrance.

[APP–14330] You cannot leave spaces in your alphanumeric segment value

Cause:
You entered a character value in a key flexfield segment without entering the entire alphanumeric flexfield segment value.

Action:
Enter the entire alphanumeric value for the key flexfield segment.

[APP–14332] Please enter all required outside processing information
Cause:
The outside processing details for this document line are incomplete.

Action:
You must enter job/schedule, operation sequence, resource sequence, and a line if you have chosen a
schedule. If you do not enter these fields you must remove the distribution.

[APP–14334] This range overlaps one of the existing ranges

Cause:
you entered multiple accounting flexfield range values which overlap each other.

Action:
Enter accounting flexfield range values which do no overlap each other.

[APP–14336] Attempt to setup concurrent program failed

Cause:
This form launches a concurrent program to periodically delete outdated notifications. The launch
process failed.

Action:
Note this error number and contact your system administrator for assistance.

[APP–14338] Purchase order lines not automatically converted to this currency

Cause:
You are trying to change the currency of a purchase order header after creating purchase order lines
for this header. Oracle Purchasing does not automatically convert price on the purchase order lines
after you change the currency.

Action:
Update the price information on all purchase order lines to reflect your changes in the currency.

[APP–14340] You cannot approve a range of test purchase orders

Cause:
You are trying to submit a range of test purchase order for approval. Oracle Purchasing lets you
print test purchase orders if, for example, you want to test the form alignment in your printer.
Oracle Purchasing will not attempt to approve a test purchase order.

Action:
No action is required.

[APP–14342] This blanket purchase order has no lines

Cause:
You are trying to place requisition lines on a blanket purchase order that has no lines.

Action:
Add lines to the blanket purchase order before placing requisition lines on the blanket purchase
order.
[APP–14344] The cancel date is not in an open period

Cause:
You provided a cancel date that is not in an open purchasing period. Oracle Purchasing creates an encumbrance reversal journal entry batch when you cancel a purchase order (if your use Funds Control). If the cancel date is not in an open period, Oracle Purchasing cannot create this batch.

Action:
Provide a date that is in an open period, or re–open the period.

[APP–14346] A contract purchase order has no lines

Cause:
Only standard, planned, and blanket purchase orders have lines.

Action:
No action is required.

[APP–14348] You cannot copy onto a blanket purchase order

Cause:
You are trying to copy requisition information onto a blanket purchase order line. Blanket purchase order lines already include complete item and price information. You cannot copy requisition information on these lines.

Action:
No action is required. Oracle Purchasing automatically adds this requisition line quantity to the purchase order line unless you return or omit this requisition line.

[APP–14350] You cannot copy onto an existing purchase order line

Cause:
You are trying to copy requisition information onto a purchase order line. Existing purchase order lines already include complete item and price information. You do not need to copy this information.

Action:
No action is required. Oracle Purchasing automatically adds this requisition line quantity to the purchase order line unless you return or omit this requisition line.

[APP–14352] The amount limit (&AMOUNT) on the header is too precise

Cause:
You tried to select a currency code for which the amount limit in the Header Zone is too precise.

Action:
Change the amount limit so that the precision is valid for the new currency.

[APP–14354] The minimum release amount (&AMOUNT) on the header is too precise

Cause:
You tried to select a currency code for which the minimum release amount in the Header Zone is too precise.
Action:
Change the minimum release amount so that the precision is valid for the new currency.

[APP–14356] Minimum release amount (&AMOUNT) on line &LINE_NUM is too precise

Cause:
You tried to select a currency code for which the minimum release amount in the Line Zone is too precise.

Action:
Change the minimum release amount so that the precision is valid for the new currency.

[APP–14358] You cannot change currency information on an approved purchase order

Cause:
You are attempting to change the currency information an approved purchase order. You cannot change the currency information on an approved purchased order

Action:
No action is required.

[APP–14360] You cannot change currency information on encumbered purchase order

Cause:
You are trying to change the currency information on an encumbered purchase order. You cannot change the currency information on an encumbered purchase order

Action:
No action is necessary.

[APP–14362] The amount agreed (&AMOUNT) is too precise

Cause:
You tried to select a currency for which the amount agreed in the Purchase Agreement Header Zone is too precise.

Action:
Go to the Purchase Agreement Header Zone and change the agreed amount precision so that the amount is valid for the new currency.

[APP–14364] The amount agreed (&AMOUNT) on line &LINE_NUM is too precise

Cause:
You tried to select a currency for which the agreed amount in the Purchase Agreement Line Zone is too precise.

Action:
Go to the Purchase Agreement Line Zone for the given line and change the amount precision so that the amount is valid for the new currency.

[APP–14366] You cannot delete a distribution that has been delivered

Cause:
You are trying to delete a purchase order distribution line of a purchase order after you entered deliveries against this distribution. You can no longer delete this purchase order distribution.
Action:
No action is required.

Action:
You may want to cancel or freeze the purchase order shipment associated with the distribution you want to delete.

[APP–14368] You cannot delete a distribution that has been billed

Cause:
You are trying to delete a purchase order distribution line of a purchase order after you matched an invoice distribution to this distribution. You can no longer delete this purchase order distribution.

Action:
No action is required.

Action:
You may want to cancel or freeze the purchase order shipment associated with the distribution you want to delete.

[APP–14370] You cannot delete a distribution created from an on–line Requisition

Cause:
You are trying to delete a purchase order distribution line of a purchase order that has been created from an on–line requisition. You cannot delete this purchase order distribution.

Action:
No action is required.

[APP–14372] End purchase order number is less than start purchase order number

Cause:
You are trying to specify a purchase order number range with an upper bound that is less than the lower bound.

Action:
Adjust the range of purchase order numbers you entered so that the upper bound is greater than the lower bound.

[APP–14374] The end release number must be greater than zero (0)

Cause:
You are trying to submit a range of releases for printing by providing a highest release number of zero. Release numbers must be greater than zero.

Action:
Enter an end release number that is greater than zero.

[APP–14376] Please enter a GL Date within an open purchasing period

Cause:
You provided a GL date that is not within an open purchasing period.
Action:
Use the Control Purchasing Periods form to open the period corresponding to the date you entered.

Action:
Enter a date that is within an open period.

[APP–14378] Please enter a release date within effective and expiration dates

Cause:
You are trying to enter a date for your blanket purchase order release that is not within the effective and expiration dates of the blanket agreement.

Action:
Enter a release date that is within the effective and expiration dates of the blanket agreement.

Action:
Change the effective date or the expiration date of your blanket agreement header to include the release date of your purchase order release.

[APP–14380] Destination details for this document line are incomplete

Cause:
You tried to create an internal requisition line with incomplete destination details.

Action:
Enter deliver to person, deliver to location, and destination organization.

[APP–14382] Incorrect number of arguments passed

Cause:
Oracle Purchasing could not print your purchase order.

Action:
Note this error number and the action you are trying to perform. Contact your system administrator for assistance.

[APP–14384] You cannot change category a pre-defined item category

Cause:
You are trying to change the category of a pre-defined item. You cannot change the category of a pre-defined item.

Action:
No action is required.

[APP–14386] You cannot change a pre-defined item description

Cause:
You are trying to change the item description of a pre-defined item. You cannot change the description for this item.

Action:
No action is required.
Action:
If you want to allow item description changes for this item, use the Define Items form to change this system–level option.

[APP–14388] No blanket purchase order exists for this item

Cause:
You are trying to review the blanket purchase order information of an item that you have not previously ordered on a blanket purchase order.

Action:
No action is required.

[APP–14390] You cannot change the description of a received or billed item

Cause:
You are trying to update the description of an item that you have already received or matched to an invoice. You cannot update the description of an item that has been received or billed.

Action:
No action is required.

[APP–14392] You cannot update the item description when a release exists

Cause:
You are trying to update an item description which already exists on a release.

Action:
No action is required.

[APP–14394] The last accept date must be greater than the promised date

Cause:
You are trying to enter a last accept date that is earlier than the promised date. You cannot enter a last accept date that is less than promised date.

Action:
Enter a later last accept date or an earlier promise date.

[APP–14396] Oracle Purchasing saves your changes when you leave this zone

Cause:
You are trying to save your changes in the Multisource or Explode ZOOM forms. You do not need to save your changes here. Oracle Purchasing automatically saves your changes when you leave the forms and return to the AutoCreate form.

Action:
No action is required.

[APP–14398] Line quantity (&LINE_QTY) and shipment quantities (&SHIPMENT_QTY) do not match

Cause:
Your line quantity and shipment quantities do not match. You cannot approve a purchase order with quantity mismatches.
Action:
Adjust your line or shipment quantities so they match.

[APP–14400] The need–by date must be greater than the promise date

Cause:
You entered a need–by date that is earlier than the promised date. You must enter a need–by date that is later than or equal to the promised date.

Action:
Enter a later need–by date or an earlier promised date.

[APP–14402] You cannot create new distributions for encumbered shipments

Cause:
You are trying to create a new distribution for an encumbered shipment. You cannot create new distributions on encumbered shipments.

Action:
No action is required.

[APP–14404] Changing the amount agreed may affect your notification controls

Cause:
You have created notification controls based upon the amount agreed of this purchase order.

Action:
Please review your amount based notification controls.

[APP–14406] Please enter an amount for your notification controls

Cause:
You have created a notification control without an amount.

Action:
Enter a notification control amount.

[APP–14408] Changing the expiration date may affect your notification controls

Cause:
You have created notification controls based upon the expiration date of this purchase order.

Action:
Please review your date–based notification controls.

[APP–14410] Changing the unit price may affect your notification controls
You have created notification controls based upon the amount agreed for this purchase order. Please review your amount–based notification controls.

Action:
You may want to revise the Amount on your Notification Controls.

[APP–14412] Changing the line quantity may affect your notification controls
Cause:
You have created notification controls based upon the amount agreed for this purchase order.

Action:
Please review your amount–based notification controls.

[APP–14414] Please enter an effective date for your notification controls

Cause:
You have created a notification control without an effective date.

Action:
Enter a notification control effective date.

[APP–14416] Changing the unit of measure may affect your notification controls

Cause:
You have created notification controls based upon the amount agreed for this purchase order.

Action:
Please review your amount–based notification controls.

[APP–14418] This form cannot be used when Oracle Purchasing is not installed.

Cause:
Oracle Purchasing is not installed.

Action:
Install Oracle Purchasing.

[APP–14420] This shipment has no distributions

Cause:
Your shipment has no distributions.

Action:
Please enter at least one distribution for your shipment.

[APP–14422] This purchase order has no matched invoices

Cause:
Your Accounts Payable department has not matched any invoice to this purchase order.

Action:
No action required.

[APP–14424] No purchase order lines were processed

Cause:
AutoCreate did not process any requisition or purchase order lines.

Action:
Modify your search criteria or options on each requisition line such that AutoCreate can match the requisition lines successfully to purchase order lines.
[APP–14426] Enter a price limit greater than or equal to the unit price

    Cause:
    You entered a price limit for this blanket purchase order line that is less than the unit price. The price limit must be greater than or equal to the unit price.

    Action:
    Enter a unit price that is less than or equal to the price limit.

    Action:
    Enter a price limit that is greater than or equal to the unit price.

[APP–14428] You can only copy new records

    Cause:
    You are trying to use Row Copy on a previously saved purchase order line, shipment, or distribution. You can only use this function on new records.

    Action:
    Enter all information for your purchase order line, shipment, or distribution.

[APP–14430] You cannot enter price breaks for amount–based lines

    Cause:
    You attempted to go to the Price Breaks zone. Price Breaks are not available for Amount based lines.

    Action:
    No action required.

[APP–14432] The unit price must be less than the price limit (&NE_PRICE)

    Cause:
    You are trying to enter a purchase order shipment unit price that is greater than the price limit of the purchase agreement line. The price limit is the maximum price you can use for this item on the purchase agreement.

    Action:
    Enter a unit price for the shipment line that is less than or equal to the price limit.

[APP–14434] Quantity Ordered cannot be less than Quantity Billed (&QTY_BILLED)

    Cause:
    You are trying to reduce the quantity ordered on a purchase order line. The purchase order line was completely or partially matched with an invoice. You cannot change the quantity ordered to a value smaller than the quantity billed against the line.

    Action:
    Use Navigate Purchases View Purchases to determine the quantity billed for this purchase order line. Enter a quantity ordered larger than or equal to the quantity billed.

[APP–14436] The quantity ordered cannot be less than the quantity billed
Cause:
You are trying to reduce the quantity ordered on a purchase order shipment. The purchase order shipment was completely or partially matched with an invoice. You cannot change the quantity ordered to a value smaller than the quantity billed against the shipment.

Action:
Use the View Purchase Orders form to determine the quantity billed for this purchase order shipment. Enter a quantity ordered larger than or equal to the quantity billed.

[APP–14438] The quantity ordered cannot be less than the quantity delivered

Cause:
You are trying to reduce the quantity ordered on a purchase order line. You completely or partially delivered this purchase order line. You cannot change the quantity ordered to a value smaller than the quantity delivered against the line.

Action:
Enter a quantity ordered larger than or equal to the quantity delivered.

[APP–14440] Quantity ordered cannot be less than quantity encumbered (&QTY_ENC)

Cause:
You are trying to reduce the quantity ordered on a purchase order line. The purchase order line was completely or partially matched with an invoice. You cannot change the quantity ordered to a value smaller than the quantity billed against the line.

Action:
Use the View Purchase Orders form to determine quantity billed for this purchase order line. Enter a quantity ordered larger than or equal to the quantity billed.

[APP–14442] Quantity ordered cannot be less than quantity received (&QTY_RCVD)

Cause:
You are trying to reduce the quantity ordered on a purchase order line. The purchase order line was completely or partially received. You cannot change the quantity ordered to a value smaller than the quantity received against the line.

Action:
Use the View Purchase Orders form to determine the quantity received for this purchase order line. Enter a quantity ordered larger than or equal to the quantity received.

[APP–14444] The Quantity ordered cannot be less than the quantity received

Cause:
You are trying to reduce the quantity ordered on a purchase order shipment. The purchase order shipment was completely or partially received. You cannot change the quantity ordered to a value smaller than the quantity received for the shipment.

Action:
Use the View Purchase Orders form to determine the quantity billed for this purchase order shipment. Enter a quantity ordered larger than or equal to the quantity billed.

[APP–14446] Shipment quantity (&SHIP_QTY) and distribution quantities (&DIST_QTY) do not match
Cause:
Your shipment and distribution quantities do not match. You cannot approve a purchase order that
does not have matching shipment and distribution quantities.

Action:
Adjust your shipment and distribution quantities so they match.

[APP–14448] Please choose a valid action to process the requisition lines

Cause:
You are trying to save your changes without specifying what type of action you want to perform.

Action:
Enter an action type in the Action field, then press \ Screen Save to commit your changes.

[APP–14450] There are no requisition lines associated with this shipment.

[APP–14452] Your ship-to location is invalid for this organization.

Cause:
The ship-to location is invalid for the ship-to organization.

Action:
You must enter a valid ship-to location.

[APP–14454] The shipment end date must be before the shipment start date.

Cause: You have specified a shipment start date that is later than your shipment end date.

Action: Enter a shipment start date that is earlier than your shipment end date.

[APP–14456] Please enter a reason for canceling or freezing this purchase order

Cause:
You are trying to cancel or freeze a purchase order without providing a justification for your action.
Since you may be cancelling or freezing purchase order information shared by other buyers, Oracle
Purchasing requires you to provide a reason for your action.

Action:
Enter or reason for cancelling or freezing this purchase order.

[APP–14458] The start release date must be before the end release date

Cause:
You have specified a release start date that is later than your release end date.

Action:
Enter a release start date that is earlier than your release end date.

[APP–14460] The start release number must be less than the end release number

Cause:
The lower bound of your release range must be smaller than the higher bound of your release range.
Action:
Enter a lower bound for your release range that is lower than the higher bound.

[APP–14462] The start release number must be greater than zero (0)

Cause:
You are trying to submit a range of releases for printing by providing a lowest release number of zero. Release numbers must be greater than zero.

Action:
Enter a release number that is greater than zero.

[APP–14464] You cannot change the unit of measure on an encumbered line

Cause:
You are attempting to change the unit of measure on an encumbered purchase order line. You cannot change the unit of measure once you have encumbered at least one shipment for the purchase order line.

Action:
No action is required.

[APP–14466] Please cancel this previously approved release

Cause:
You are trying to delete a release that has been approved at least once.

Action:
Use the Control Purchase Orders form to cancel the purchase order release information you wanted to delete.

[APP–14468] Please cancel this previously approved purchase order.

Cause:
You are trying to delete a purchase order that has been approved at least once.

Action:
Use the Control Purchase Orders form to cancel the purchase order.

[APP–14470] Please cancel this encumbered purchase order

Cause:
You are trying to delete a purchase order that has been approved at least once.

Action:
Use the Control Purchase Orders form to cancel the purchase order.

[APP–14472] Please enter a value between zero (0) and one hundred (100)

Cause:
You are trying to enter a quality code rating that is not between 0 and 100.

Action:
Enter a value between 0 and 100.
[APP–14474] A quotation exists for this RFQ and supplier

Cause:
You have already entered a quotation for this RFQ and supplier.

Action:
No action is required.

[APP–14476] Please save your quotation with an Active status

Cause:
You are attempting to approve a quotation that is not active. You must save your quotation with an Active status before you can approve it.

Action:
Change your quotation Status to Active and save your changes.

[APP–14478] Please close this quotation

Cause:
You are trying to delete a quotation that is still open.

Action:
Please alter the quotation expiration date.

[APP–14480] Please enter quotation line information

Cause:
You are trying to navigate to the shipments zone before entering line information.

Action:
Enter line information before navigating to the shipments zone.

[APP–14482] You cannot delete this quotation line

Cause:
You are trying to delete a quotation line that has been used on a purchase order.

Action:
Inactivate every shipment for this line or close the quotation.

[APP–14484] Minimum quantity must be less than or equal to the maximum quantity

Cause:
The minimum quantity is greater than the maximum quantity.

Action:
Enter the quantities so that the minimum quantity is less than or equal to the maximum quantity.

[APP–14486] WARNING: You have not entered an expiration date

Cause:
You have not entered an expiration date.
Action:
No action is required.

[APP–14488] You cannot use \ Query Enter here

Cause:
You are trying to use \ Query Enter in an additional information zone.

Action:
Use \ Zone Prior to navigate to the previous zone and then use \ Query Enter.

[APP–14490] WARNING: You have chosen an expired RFQ

Cause:
You have chosen a RFQ that has expired.

Action:
No action is required.

[APP–14492] You cannot use \ Screen Erase here

Cause:
You cannot erase this screen using \ Screen Erase.

Action:
No action is required.

[APP–14494] You cannot update the supplier information when a quotation exists

Cause:
You may not change the supplier name or site because a quotation already exists for this RFQ number and supplier.

Action:
Add new suppliers from whom you require quotation information to the RFQ supplier list.

[APP–14496] You have entered a duplicate supplier site for this quotation list

Cause:
You have entered a duplicate supplier site in this supplier quotation list. You cannot enter a supplier site more than once in a supplier quotation list.

Action:
Remove the duplicate site from the supplier quotation list.

[APP–14498] Please enter a supplier list name

Cause:
You tried to go to the next zone without entering a supplier list name.

Action:
Enter a supplier list name.

[APP–14500] You have not entered enough serial numbers
Cause:
You are using lot control and your lot quantity is greater than the number of serial numbers assigned to it.

Action:
Increase your lot quantity.

Cause:
You are not using lot control and your transaction quantity is greater than the number of serial numbers you have defined.

Action:
Create additional serial numbers.

[APP–14502] You have entered too many serial numbers

Cause:
You are using lot control and have assigned too many serial numbers to the lot quantity.

Action:
Reduce the number of serial numbers.

Cause:
You are not using lot control and you have defined more serial numbers than the transaction quantity.

Action:
Increase your lot quantity.

[APP–14504] Cannot relieve funds reserved for requisition

Cause:
Oracle Purchasing is not able to reverse the encumbrance journal entry corresponding to your cancelled requisition.

Action:
Verify that your budgets are correct. Verify that you are not using any inactive accounting flexfields.

[APP–14506] You cannot change this field while requisition lines exist.

Cause:
You cannot change the value of this field. Oracle Purchasing uses this field to ensure that valid requisition lines are displayed in the requisition lines zone.

Action:
You must remove the requisition lines if you want to change the field.

[APP–14508] Revision &REVISION is not valid for &ORG

Cause:
You have enter an invalid item revision for your source or destination organization.
Action:
Enter a valid item revision for your source and destination organizations.

Action:
Change your source or destination organization.

[APP–14510] Please enter a unique RFQ or Quotation subtype.

[APP–14512] You cannot delete document types installed with Oracle Purchasing. You can delete only user-defined RFQ and Quotation types.

[APP–14514] You cannot update this document type

Cause:
You cannot update this document type.

Action:
No action required.

[APP–14516] You cannot delete a document type that has been used to create document.

[APP–14518] Please select a supplier list name

Cause:
You are trying to copy a supplier list onto this RFQ and have not specified a supplier list name.

Action:
Choose a supplier list name and press Apply to copy the suppliers onto this RFQ.

Action:
Press Cancel if you do not want to copy suppliers onto this RFQ.

[APP–14520] You cannot copy onto an existing RFQ line

Cause:
You tried to copy a requisition line onto an RFQ line that already exists.

Action:
Enter a larger number in the RFQ Line field.

[APP–14522] You cannot delete an RFQ that has been printed

Cause:
You are trying to delete an RFQ that has been printed.

Action:
No action is required.

[APP–14524] Please enter a numeric value

Cause:
You are trying to enter an alphanumeric value into a field that requires numeric values as a result of your system option setup choices.
Action:
Enter a number for this Document or change your system numbering option.

[APP–14526] No RFQ lines were processed

Cause:
No Requisition or RFQ Lines were processed.

Action:
Change your search criteria, or select a different RFQ that allows requisition lines and RFQ lines to be combined.

[APP–14528] WARNING: You have not entered a close date for this RFQ

Cause:
You have not entered a close date for this RFQ.

Action:
No action required.

[APP–14530] You cannot update a supplier for whom an RFQ has printed

Cause:
You are trying to update a supplier for whom an RFQ has printed.

Action:
No action is required.

[APP–14532] You cannot delete an RFQ you used to AutoCreate Quotations

Cause:
You are trying to delete an RFQ that was used to AutoCreate a quotation.

Action:
No action is required.

[APP–14534] You cannot update the supplier address in this form

Cause:
You are trying to update the supplier address information in an inquiry zone.

Action:
Please use the Define Suppliers forms if you want to change the supplier site address information.

[APP–14536] You cannot enter a duplicate supplier site in an RFQ supplier list

Cause:
You are trying to duplicate supplier sites in your RFQ supplier list.

Action:
No action is required.

[APP–14538] You already added this supplier and site to the RFQ supplier list
Cause:
You are trying to duplicate supplier sites in your RFQ supplier list. A supplier and site can be referenced in the RFQ supplier list only once per RFQ.

Action:
Please choose a supplier and site that is not already in the RFQ supplier list.

[APP–14540] You cannot delete a supplier for whom an RFQ has printed

Cause:
You are trying to delete a supplier from the RFQ Supplier List and an RFQ has already been printed for this supplier.

Action:
No action is required.

[APP–14542] Please enter a supplier list name

Cause:
You are trying to copy a supplier list and have not chosen a supplier list name.

Action:
Please choose a supplier list name. If you no longer wish to copy a supplier list, enter No in the Copy Supplier List field.

[APP–14544] You cannot view the RFQ until it has been created

Cause:
You are trying to view a new RFQ which does not exist.

Action:
Select Add To RFQ and enter an existing RFQ number before attempting to view an RFQ.

[APP–14546] The approver is not on the approval path for the unapproved requisition

Cause:
You entered an approver who is not on the approval path you specified. The approver must be on the approval path if USE_POSITIONS_FLAG is ’Y.’

Action:
Enter an approver who is on the approval path you specified.

Action:
Enter an approval path that the approver is on.

[APP–14548] Category or description is missing and cannot be determined

Cause:
You did not enter a item or item description.

Action:
Enter an item or item description.

[APP–14550] The requisition number is in use
Cause:
You entered a requisition number that is in use.

Action:
Enter a unique requisition number.

Cause:
The requisition number that was derived is in use.

Action:
Delete the requisition number.

[APP–14552] Approver is not an active employee.

Cause:
You entered an inactive employee as the approver. The approver must be an active employee if the requisition is unapproved.

Action:
Enter an active employee as the approver.

Action:
Make the approver an active employee.

[APP–14554] Preparer is not an active employee

Cause:
You entered an inactive employee as the preparer.

Action:
Enter an active employee as the preparer.

Action:
Make the preparer an active employee.

[APP–14556] You have provided insufficient arguments to the Requisition Import program

Cause:
Requisition Import missing arguments.

Action:
Enter the following four arguments: Import Source, Import Batch ID, Group By, Last Requisition Number

[APP–14558] Accrual account is invalid

Cause:
The accrual account that you entered or that was derived is invalid.

Action:
Enter a valid accrual account.

[APP–14560] An approval path is missing or invalid for the unapproved requisition
Cause:
You entered a missing or invalid approval path. A valid approval path is required if USE_POSITIONS_FLAG is ‘Y.’

Action:
Enter a valid approval path.

[APP–14562] Authorization status is missing or invalid

Cause:
You entered a missing or invalid authorization status.

Action:
Enter one of the following authorization statuses: APPROVED, INCOMPLETE, IN PROCESS, PRE–APPROVED.

[APP–14564] Budget account is invalid

Cause:
The budget account that you entered or that was derived is invalid.

Action:
Enter a valid budget account.

[APP–14566] Category is invalid, or category is invalid for the item

Cause:
You entered an invalid category.

Action:
Enter a valid category.

Cause:
You entered a category that is invalid for the item that you entered.

Action:
Enter a valid category for the item.

[APP–14568] Charge account is invalid

Cause:
The charge account that you entered is invalid.

Action:
Enter a valid charge account.

[APP–14570] Currency selection is invalid

Cause:
You entered an invalid currency code.

Action:
Enter a valid currency code.
[APP–14572] Deliver–to location is invalid

  Cause:
  You entered a deliver–to location that is invalid for the destination organization.

  Action:
  Enter a valid deliver–to location for the destination organization.

  Cause:
  You have not associated a customer with the deliver–to location that you entered. You must associate a customer with the deliver–to location if the source type is ‘INVENTORY’.

  Action:
  Associate a customer with the deliver–to location that you entered using the Define Location Associations form in Oracle Purchasing.

[APP–14574] Destination organization is invalid or Receiving Parameters are missing

  Cause:
  You entered an invalid destination organization.

  Action:
  Enter a valid destination organization.

[APP–14576] Destination subinventory is not valid

  Cause:
  You entered a destination subinventory that is invalid for the destination organization.

  Action:
  Enter a valid destination subinventory for the destination organization.

[APP–14578] Item is not stockable in the destination subinventory

  Cause:
  You entered an item that is not stockable in the destination subinventory.

  Action:
  Enter an item that is stockable in the destination subinventory.

  Action:
  Make the item stockable in the destination subinventory.

[APP–14580] Destination type is invalid

  Cause:
  You entered an invalid destination type.

  Action:
  Enter a valid destination type.

[APP–14582] GL date is not in a valid period

  Cause:
  GL date must be in a valid period if encumbrance is ON.
[APP–14584] Hazard class is invalid

  Cause:
You entered an invalid hazard class.

  Action:
Enter a valid hazard class.

[APP–14586] GL date is not in a valid inventory calendar and open period

  Cause:
GL date must be in a valid period inventory calendar and open period for a source type of 'INVENTORY' if encumbrance is ON.

[APP–14588] Item is not valid for the destination organization

  Cause:
You entered an item that is not valid for the destination organization. This is required for a destination type of 'EXPENSE.'

  Action:
Enter an item that is valid for the destination organization.

[APP–14590] Item is missing, invalid or not stock–enabled for the destination organization.

  Cause:
You entered an item that is missing, invalid or not stock–enabled for the source organization. This is required for a destination type of 'INVENTORY.'

  Action:
Enter a valid item that is stock–enabled for the source organization.

[APP–14592] Please review item validity

  Cause:
You entered an item that is invalid or it is not outside operation/purchasing enabled for the destination organization. This is required for a destination type of 'SHOP FLOOR.'

  Action:
Enter a valid item that is purchasing–enabled and an outside–processing item for the destination organization.

[APP–14594] Please review item validity

  Cause:
You entered an item that is invalid or it is not outside operation/purchasing enabled for the purchasing organization. This is required for a destination type of 'SHOP FLOOR.'

  Action:
Enter a valid item that is purchasing–enabled and an outside–processing item for the purchasing organization.

[APP–14596] Item is invalid for the purchasing organization
Cause:
You entered an invalid item.

Action:
Enter an item that is valid for the purchasing organization.

[APP–14598] Item not allowed for amount–based line types

Cause:
You entered an item for an amount based line type. Items are not allowed for amount based line types.

Action:
Delete the item that you entered.

[APP–14600] Revision is invalid for this item

Cause:
You entered an invalid item revision for the item that you specified.

Action:
Enter a valid item revision.

[APP–14602] Item is missing, invalid, or not internally orderable for the destination organization.

Cause:
You entered an item that is missing, invalid or not internal–order enabled for the destination organization.

Action:
Enter an item that is valid and internal–order enabled for the destination organization.

[APP–14604] Item is missing, invalid, or not internally orderable for the purchasing organization.

Cause:
The item is missing, invalid or not internal–order enabled for the purchasing organization. This is required for a source type of ‘INVENTORY’

Action:
Enter a valid, internal–order–enabled item for the purchasing organization.

[APP–14606] Item is missing, invalid, or not stock–enabled for the source organization

Cause:
The item is missing, invalid or not stock–enabled for the source organization. The item is required for a source type of ‘INVENTORY’.

Action:
Enter a valid, stock–enabled item for the source organization.

[APP–14608] Item is invalid or not purchasing–enabled for the destination organization

Cause:
You entered an item that is invalid or not purchasing–enabled for the destination organization. This is required for a source type of ‘Supplier’
Action:
Enter a valid item that is purchasing–enabled for the destination organization.

[APP–14610] Item is invalid or not purchasing–enabled for the purchasing organization

Cause:
You entered an item that is invalid or not purchasing–enabled for the purchasing organization. This is required for a source type of ‘Supplier’

Action:
Enter a valid item that is purchasing–enabled for the purchasing organization.

[APP–14612] Line type is invalid

Cause:
You entered an invalid line type

Action:
Enter a valid line type.

[APP–14614] For MRP sourced internal requisitions, the source subinventory must be a non–nettable subinventory for an intra organization transfer.

Cause:
You tried to perform an intra organization transfer from MRP. You can only do this if the source subinventory is a non–nettable subinventory.

Action:
Make sure that the source subinventory is a non–nettable subinventory.

[APP–14616] Note is invalid

Cause:
The note that you referenced is invalid.

Action:
Enter a valid note.

[APP–14618] If Oracle Projects is installed and PROJECT_ACCOUNTING_CONTEXT is ’Y’, then project, task, expenditure type and expenditure organization must be valid

Cause:
The project, task, expenditure type or expenditure organization that you entered is invalid. These fields are required if the Oracle Projects context is ’Y’.

Action:
Enter a valid project, task, expenditure type and expenditure organization.

[APP–14620] The requestor is not an active employee

Cause:
You entered a requestor who is not a valid employee. Enter: Enter a requestor who is a valid employee.
[APP–14622] Requisition type is missing or invalid

  Cause:
You entered a missing or invalid requisition type.

  Action:
Enter a valid requisition type. The requisition type must be one of: PURCHASE, INTERNAL.

  Cause:
The requisition type that was derived is invalid.

  Action:
Check the source type that you entered.

[APP–14624] Source organization is missing or invalid.

  Cause:
The source organization is missing or invalid. The source organization is required if the source type is 'INVENTORY'.

  Action:
Enter a valid source type.

[APP–14626] Source type is invalid

  Cause:
You entered an invalid source type.

  Action:
Enter a valid source type.

[APP–14628] Source subinventory is not valid

  Cause:
You entered a source subinventory that is invalid for the source organization.

  Action:
Enter a valid source subinventory for the source organization.

[APP–14630] Item is not stockable in the source subinventory

  Cause:
You entered an item that is not stockable in the source subinventory that you entered.

  Action:
Enter an item that is valid in the source subinventory that you entered.

  Action:
Make the item valid in the source subinventory that you entered.

[APP–14632] The suggested buyer is not a valid buyer or employee

  Cause:
You entered an invalid buyer.
Action:
Enter a valid buyer.

[APP–14634] UN number is invalid

Cause:
You entered an invalid UN number.

Action:
Enter a valid UN number.

[APP–14636] The USSGL Transaction Code is invalid

Cause:
You entered an invalid USSGL Transaction Code.

Action:
Enter a valid USSGL transaction code.

[APP–14638] Variance account is invalid

Cause:
The variance account that you entered or that was derived is invalid.

Action:
Enter a valid variance account.

[APP–14640] For direct transfers, you cannot transfer an asset item from an expense subinventory to an asset subinventory

[APP–14642] For intransit transfers, you cannot transfer an asset item out from an expense subinventory

[APP–14644] For direct transfers, you cannot transfer items to a destination organization that has tighter revision, lot or serial control than the source organization for that item

[APP–14646] For intransit transfers, you cannot transfer items to a destination organization that has tighter revision control than the source organization for that item

[APP–14648] Item description problem

Cause:
The item description that you entered does not match the description of the item and update of the item description is not allowed for the item.

Action:
Enter the correct item description.

[APP–14650] You cannot provide a revision without an item

Cause:
You entered an item revision without entering an item.

Action:
Enter a valid item and item revision.
[APP–14652] Destination type must be ‘SHOP FLOOR’ for an outside operation line

    Cause:
You entered an invalid line type. You must enter an outside–operation line type for a destination
    type of ‘SHOP FLOOR’.

    Action:
Enter an outside operation line type.

    Action:
Enter a destination type of ‘SHOP FLOOR’.

[APP–14654] Item must be of type ‘OUTSIDE OPERATION’ for an outside operation line

    Cause:
You entered an invalid item for the line type that you entered. You must enter an outside–operation
    item if you enter an outside–operation line type.

    Action:
Enter an outside–operation item.

[APP–14656] Source type must be ‘INVENTORY’ for an outside operation line

    Cause:
You entered an invalid line type. You cannot enter an outside–operation line type if you enter a
    source type of ‘INVENTORY’.

    Action:
Enter a line type which is not an outside–operation line type.

[APP–14658] Need–by date is missing or invalid for MRP or Inventory planned item

    Cause:
You did not enter a need by date. A need by date is required if the item that you entered is either an
    MRP or Inventory planned item.

    Action:
Enter a need by date.

[APP–14660] Please review your foreign currency exchange rate, rate type and rate date

    Cause:
Either the foreign currency exchange rate type is invalid, or the rate or rate date is missing.

    Action:
Enter a valid currency rate type, rate and rate date.

[APP–14662] Unit of measure is invalid

    Cause:
The Unit of Measure that you entered or that was derived is invalid.

    Action:
Enter a valid Unit of Measure for the item.
Action: Check the item that you entered.

[APP–14664] Inter–organization transfers are not defined for this combination of source and destination organizations

[APP–14666] Preparer is not an on–line user

   Cause:
The preparer must be an on–line user if the requisition is unapproved.

   Action:
Make the preparer an on–line user.

Action:
Enter a preparer who is also an on–line user.

[APP–14668] Please enter a quantity greater than zero (0)

   Cause:
You entered a quantity that was either missing or less than 0.

   Action:
Enter a non–zero quantity.

[APP–14670] The source subinventory is not quantity–tracked

[APP–14672] The source subinventory is not a reservable subinventory. This is required if reservations are ON in Order Entry.

[APP–14674] Some unit of measure conversions are not defined

   Cause:
Some unit

[APP–14676] Please enter a unit price greater than or equal to zero (0)

   Cause:
You entered a price that is either missing or less than 0.

   Action:
Enter a price that is greater than or equal to 0.

[APP–14678] Must be a valid repetitive schedule or discrete job if WIP is installed

   Cause:
The WIP entity that you entered must be a valid repetitive schedule or a valid discrete job.

   Action:
Enter a valid repetitive schedule or a valid discrete job.

[APP–14680] The suggested rounded quantity is &PO_RND_ADVISORY1

   Cause:
The quantity rounding routine has determined that a quantity of &PO_RND_ADVISORY1 would be beneficial.
Action:
No action required.

[APP–14682] Unit of measure conversion failed

Cause:
Unit of measure conversion is not defined for the requisition line unit of measure and item unit of issue.

Action:
Define the unit of measure conversion.

[APP–14684] A rounding factor has not been defined for this item

Cause:
A rounding factor has not been defined this item.

Action:
Define a rounding factor for the item.

[APP–14686] UOM Rounding User Exit failed

Cause:
The Unit of Measure Quantity Rounding routine was unable to place the rounded value into the quantity field.

Action:
Note error number and the action you are attempting to perform. Contact your system administrator for assistance.

[APP–14688] Please enter a valid date

Cause:
You entered an invalid date.

Action:
Enter a date that is a valid calendar date.

[APP–14690] You cannot add new lines to a complete requisition

Cause:
You are trying to change a saved requisition that has been submitted to the approval process. You can no longer change this requisition.

Action:
Use the Enter Requisitions form to create a new requisition for the additional items you need.

[APP–14692] You cannot change a complete requisition

Cause:
You are trying to change a saved requisition that has been submitted to the approval process. You can no longer change this requisition.

Action:
Use the Enter Requisitions form to create a new requisition for the additional items you need.
[APP–14694] This document is not updateable.

  Cause: You have tried to update a document that is currently not updateable.

  Action: No action required.

[APP–14696] Please enter an account for this distribution

  Cause:
You have not entered an account into the accounting flexfield to which this distribution will be charged.

  Action:
Enter an account into the accounting flexfield.

[APP–14698] Concurrent process failed. Interface table not imported

  Cause:
Oracle Purchasing could not submit the Requisitions Import process you requested to the Concurrent Manager. There may be no Concurrent Manager presently running.

  Action:
Note both your concurrent request ID and this error number. Contact your system administrator for assistance.

[APP–14700] Destination location sourced from Inventory must be linked to customer

  Cause:
Inventory sourced requisition lines require the destination location to be associated with an Order Entry customer and site.

  Action:
Associate the deliver to location with an Oracle Entry customer and site.

[APP–14702] The inventory source details are invalid for the item

  Cause:
You attempted to create a requisition line with a source organization and subinventory that is not allowed for the item entered. The item must be stockable in the source organization. The item must be defined for the source subinventory.

  Action:
Modify the source organization and subinventory to a combination that is valid for the item.

[APP–14704] You cannot source from an expense subinventory

  Cause:
You selected a expense subinventory as your source subinventory, and your destination is an asset subinventory. You cannot transfer an asset item from an expense subinventory to an asset subinventory using internal requisitions. Intransit is also consider an asset, so you cannot source an asset item from an expense subinventory if you are using intransit.

  Action:
Choose an asset subinventory to complete your requisition or modify your item, organization network, or subinventory setup options.
[APP–14706] Direct transfers not allowed between these organizations for this item

    Cause:
You cannot transfer this item directly between the source and destination organization. You cannot transfer an item that from an organization under looser item revision, lot or serial control, to an organization with stricter control.

    Action:
Choose a different source organization for your transfer or modify your organization setup and controls to allow transfers between these two organizations.

[APP–14708] Cannot find primary destination subinventory

    Cause:
You are trying to create a internal requisition for a direct inventory transfer, and you have not specified a destination subinventory. You did not setup a primary subinventory for your item, so you must specify a destination organization in this form if you want to transfer this item directly between two organizations.

    Action:
Choose an source organization that uses in–transit, or specify a destination subinventory in the destination field.

[APP–14710] You may not enter identical destination and source organizations

    Cause:
You tried to create an internal requisition using identical destination and source inventory organizations.

    Action:
Modify either your destination or source inventory information.

[APP–14712] Please enter the necessary line information.

    Cause: You attempted to create a distribution without creating a parent line.

    Action: Please enter all the required line information before attempting to create a distribution for it.

[APP–14714] This line number does not exist for the selected requisition

    Cause:
You are trying to review requisition line information for a requisition that does not have a line matching your line number.

    Action:
No action is required.

[APP–14716] You cannot un–cancel a canceled requisition line

    Cause:
You are trying to un–cancel a requisition line. You cannot un–cancel requisition lines after you cancel them.
Action:
Use the Enter Requisitions form to re-create the cancelled requisition line on a new requisition line.

[APP–14718] This line is not updateable.

Cause: You have tried to update a line that is not updateable.

Action: Please create new lines which are modified versions of the current line.

[APP–14720] You cannot source from the destination organization for planned items

Cause:
You tried to create an internal requisition using identical destination and source organizations.

Action:
Modify either your destination or source inventory information.

[APP–14722] There are multiple disposition messages for this item. Open the Define Item Cross-References form to view them.

[APP–14724] The need–by date must be greater than or equal to requisition date

Cause:
You have entered a need–by date that is earlier than the requisition creation date. You cannot request items for delivery in the past.

Action:
Enter a need–by date that is greater than or equal to the requisition creation date.

[APP–14726] The inventory source details do not include a source organization

Cause:
You tried to create an internal requisition line without a source organization.

Action:
Enter a source organization.

[APP–14728] There are no requisition lines for this purchase order line

Cause:
You are trying to review the requisition lines associated with a purchase order line, and you did not create this purchase order line from an on–line requisition.

Action:
No action is required.

Action:
If you created this purchase order line from a paper requisition, you can review the requisition number you entered by navigating to the distributions zone of the View Purchase Orders or Enter Purchase Orders forms.

[APP–14730] Please enter a destination organization.

Cause: You attempted to enter outside processing information without providing a destination organization.
Action: Please provide a destination organization.

[APP–14732] WARNING: Blanket purchase order &PO_NUM exists for this item

  Cause:
  A blanket purchase order already exists for this item.

  Action:
  You may want to review the details of the blanket purchase order instead of continuing with this document.

[APP–14734] Unable to reschedule requisitions

  Cause:
  Submission of the requisition rescheduling process to the Concurrent Manager failed.

  Action:
  Note both this error number and the actions you were trying to perform. Contact your system administrator for assistance.

[APP–14736] You cannot source from and deliver to the same subinventories.

  Cause:
  Your source organization and subinventory is identical to your destination organization and subinventory.

  Action:
  Modify either your source or destination subinventories.

[APP–14738] You cannot un–cancel a canceled requisition

  Cause:
  You are trying to un–cancel a cancelled requisition.

  Action:
  Use the Enter Requisitions form to re–create the requisition.

[APP–14740] You cannot open a finally closed requisition

  Cause:
  You are trying to open a finally closed requisition. You cannot open a requisition after you have finally closed the requisition.

  Action:
  Use the Enter Requisitions form to enter a new requisition.

[APP–14742] Item not valid for original line’s destination organization and subinventory

  Cause:
  The selected item is not valid for the original line’s destination organization and subinventory.

  Action:
  Select another item.
[APP–14744] You must cancel a complete requisition

    Cause:
    You are trying to delete a complete requisition. You cannot delete a complete requisition from the database.

    Action:
    Use the Control Requisitions form to cancel your requisition.

[APP–14746] You must cancel lines on a complete requisition

    Cause:
    You are trying to delete lines from a complete requisition. You cannot delete a requisition line from the database.

    Action:
    Use the Control Requisitions form to cancel your requisition lines.

[APP–14748] Express receiving failed

    Cause:
    You are trying to express receive incomplete shipments.

    Action:
    Enter the receipts individually for each purchase order line.

[APP–14750] Please enter a valid date range

    Cause:
    You tried to enter a date range with a lower bound that is later than your upper bound.

    Action:
    Enter a date range with a lower bound that is earlier than an upper bound.

[APP–14752] Cannot delete a control group that is assigned to a position or job

    Cause:
    You attempted to delete a control group that is assigned to a position or a job.

    Action:
    Unassign or inactivate the control group for all positions and jobs before attempting to delete the control group.

[APP–14754] Both the source document and your purchase order are in foreign currency &SELECTION_CURRENCY. The price will be copied to your purchase order as &CURRENCY_PRICE; verify that this price is correct for the purchase order exchange rate.

[APP–14756] You have selected a price that is in foreign currency &SELECTION_CURRENCY and your purchase order is in functional currency &PO_CURRENCY. The price will be converted to functional currency using the source document’s rate information. OK to continue?

[APP–14758] You have selected a price that is in &SELECTION_CURRENCY and your purchase order is in &PO_CURRENCY. It is not possible to convert from &SELECTION_CURRENCY to &PO_CURRENCY. Do you want to:
[APP–14760] Split percentage total must be less than or equal to one hundred

   Cause:
   You attempt to increase the business split percentage for all suppliers to a value greater than 100 percent.
   
   Action:
   Enter split percentages for each supplier so the sum of all suppliers is less than or equal to 100 percent.

[APP–14762] Unable to get next automatic purchase order number

   Cause:
   Oracle Purchasing was unable to retrieve the next automatic purchase order number from the database.
   
   Action:
   Note this error number and contact your system administrator for assistance.

[APP–14764] Unable to get next automatic quotation number

   Cause:
   Oracle Purchasing was unable to retrieve the next automatic RFQ number from the database.
   
   Action:
   Note this error number and contact your system administrator for assistance.

[APP–14766] Unable to get next automatic receipt number

   Cause:
   Oracle Purchasing was unable to retrieve the next automatic receipt number from the database.
   
   Action:
   Note this error number and contact your system administrator for assistance.

[APP–14768] Unable to get next automatic requisition number

   Cause:
   Oracle Purchasing was unable to retrieve the next automatic requisition number from the database.
   
   Action:
   Note this error number and contact your system administrator for assistance.

[APP–14770] Unable to get next automatic RFQ number

   Cause:
   Oracle Purchasing was unable to retrieve the next automatic RFQ number from the database.
   
   Action:
   Note this error number and contact your system administrator for assistance.

[APP–14772] Only one row is allowed in the System Parameters form

   Cause:
   There is only one set of default values in the system. You cannot enter two sets of system parameters.
Action:
No action required.

[APP–14774] Number type cannot be numeric. Alphanumeric numbers already exist

Cause:
You attempted to define the document number type as NUMERIC. This is not possible because documents with alphanumeric numbers already exist.

Action:
Select the alphanumeric document number type using Field QuickPick or make all existing document numbers numeric.

[APP–14776] Please copy only one shipment

Cause:
You are trying to copy more than one shipment.

Action:
If you want to copy this shipment, first enter 'No' for the first shipment you selected and then enter 'Yes' for this shipment.

[APP–14778] The quotation and purchase order currencies are different

Cause:
You have chosen a quotation shipment that has different currency information than the purchase order header.

Action:
Choose 'No' for Copy if you no longer want to copy the quotation information.

[APP–14780] You must specify an item or item category to source items

Cause:
You are trying to view item sourcing information and you have not entered an item number or an item category.

Action:
Enter the item number or item class of the item you want to source.

[APP–14782] The quotation and requisition currencies are different

Cause:
You have chosen a quotation shipment that has different currency information than the requisition line.

Action:
Choose 'No' for Copy if you no longer want to copy the quotation information.

[APP–14784] The quotation and purchase order supplier sites are different

Cause:
You have chosen a quotation shipment that has a different supplier site than the purchase order header.
Action:
Choose 'No' for Copy if you no longer want to copy the quotation information

[APP–14786] The quotation and purchase order terms and conditions are different

Cause:
You have chosen a quotation shipment that has different terms and conditions than the purchase order header.

Action:
Choose 'No' for Copy if you no longer want to copy the quotation information

[APP–14788] Verify your system currency and set of books information

Cause:
The currency codes or set of books details are not setup properly in your system.

Action:
Verify that your system setup has been completed correctly.

[APP–14790] This supplier site has no contacts

Cause:
There are no contacts for this supplier site.

Action:
No action is required.

[APP–14792] This supplier has no sites

Cause:
There are no sites for this supplier.

Action:
No action is required.

[APP–14794] You cannot update the item category for a pre–defined item

Cause:
You tried to update the item category for a pre–defined item.

Action:
No action is required.

[APP–14796] This job or schedule has been closed

Cause:
You tried to receive outside processing items for a job or schedule that has been closed.

Action:
Open the corresponding job or schedule within Oracle Work In Process.

[APP–14798] Purchase order receipt date tolerance exceeded
Cause:
The receipt you are trying to transact exceeds the days early or late tolerance.

Action:
Return the shipment to the supplier if you think it is necessary.

Action:
Modify the receiving controls setup at the purchase order shipment, item, or organization level so that you allow receipts exceed days early or late tolerance.

[APP–14800] The receiving and ship-to locations do not match

Cause:
The receiving location that you entered does not match the ship-to location you entered on the purchase order.

Action:
Receive the goods at the same ship-to location you entered on the purchase order.

Action:
Return the shipment to the supplier if you think this is necessary.

Action:
Modify the receiving controls to allow you to receive goods at an alternate receiving location.

[APP–14802] A duplicate locator exists for another subinventory

Cause:
The locator that you specified for the subinventory is also specified for another subinventory within the same organization.

Action:
Enter a different locator.

[APP–14804] Please enter a deliver-to location

Cause:
You are delivering goods to an expense destination without providing a deliver to location.

Action:
Enter a deliver to location.

[APP–14806] Lot number quantities do not match the transaction quantity

Cause:
The lot number quantity does not match the transaction quantity.

Action:
Change your lot or transaction quantity so that they are the same.

[APP–14808] Serial number quantities do not match the transaction quantity

Cause:
You did not enter the correct number of serial numbers for your transaction quantity.
Action:
Adjust your transaction quantity or your serial numbers

[APP–14810] Please enter a transfer-to location

Cause:
You attempted to transfer goods from one receiving location to another without providing a transfer to location.

Action:
Enter a transfer to location.

[APP–14812] Please enter a transaction date within an open accounting period

Cause:
You tried to enter a transaction date in a closed Purchasing accounting period.

Action:
Enter a transaction date that falls within an open Purchasing accounting period.

Action:
Open the closed Purchasing accounting period in which you’d like to perform this transaction.

[APP–14814] Quantity &QTY_A is greater than &QTY_B, quantity ordered plus tolerance

Cause:
Quantity you want to receive plus quantity already received is greater than quantity ordered plus the over receipt tolerance.

Action:
Either reduce the quantity to receive, increase your quantity received tolerance, or change your quantity received exception code.

[APP–14816] Please enter a valid locator combination

Cause:
You attempted to process the receiving transaction without a locator.

Action:
Enter a locator.

[APP–14818] Serial control requires an integral transaction quantity

Cause:
Transaction quantity does not convert to whole number of units in the primary unit of measure.

Action:
Enter another unit of measure or quantity.

[APP–14820] You cannot update receipt header with a missing receipt number

Cause:
You tried to update the receipt header information without specifying a receipt number for this shipment.
Action:
Navigate to the lines block and specify a receipt number for this shipment.

[APP–14822] Supplier on this PO shipment does not match supplier on receipt

Cause:
This purchase order shipment has a different supplier than you specified on this receipt.

Action:
Create a separate receipt for this supplier, or omit the purchase order shipment from the current receipt.

[APP–14824] You cannot enter a receipt date that is earlier than shipment date

Cause:
You enter a receipt date that is earlier than the shipped date.

Action:
Modify the receipt date to be greater than or equal to the shipped date on the shipment header.

[APP–14826] Please enter an expiration date

Cause:
This item requires a lot expiration date

Action:
Enter a lot expiration date

[APP–14828] Lot number is already used by another item

Cause:
This lot number is already used by another item. Your lot number uniqueness controls do not allow you to assign this lot number to a different item

Action:
Remove this lot number

[APP–14830] You have not supplied enough data to match to a purchase order

Cause:
You tried to match an unordered receipt to a purchase order without providing enough information.

Action:
Please specify a valid purchase order number, line, release (if applicable), and shipment.

[APP–14832] The unordered item cannot be matched to this purchase order shipment

Cause:
The routing control on this purchase order is direct delivery. You can only match an unordered item to a Purchase Order shipment that has standard receipt routing or no routing specified.

Action:
Match the unordered item to another Purchase Order or change the system level profile RCV:Allow routing override to yes.
[APP–14834] Next automatic receipt number is not unique

  Cause:
  Your next automatic receipt number is not unique. You must enter a unique receipt number each
time you create a receipt, and your next automatic value already exists on another receipt.

  Action:
  Do not commit this transaction. Use Screen Erase to clear the transaction and then contact your
System Administrator to reset the Next Automatic Receipt Number using the Define Purchasing
Options form.

[APP–14836] You cannot update an existing receipt header

  Cause:
  You cannot update an existing receipt header.

  Action:
  Enter a new receipt header.

[APP–14838] You cannot clear or delete this record

  Cause:
  You attempted to clear or delete the receiving options record. You cannot delete a record from the
Receiving Parameters Form.

  Action:
  No action required.

[APP–14840] Please enter a number of days greater than or equal to zero (0)

  Cause:
  You tried to enter a negative number for number of days.

  Action:
  Enter a number for number of days that is greater than or equal to zero (0)

[APP–14842] A row exists for the receiving parameters in this organization

  Cause:
  You tried to enter more than one row of receiving parameters for this organization.

  Action:
  No action is required.

[APP–14844] Please enter a percentage that is greater than or equal to zero (0)

  Cause:
  You have entered a negative percentage.

  Action:
  Enter a percentage that is greater than or equal to zero (0)

[APP–14846] Serial number is already used in another organization
Cause:
This record contains serial numbers that are already used in another organization and this breaks the uniqueness constraint across organizations. Your serial uniqueness controls do not allow this

Action:
Remove the duplicate serial numbers

[APP–14848] Serial number is already used by another unit of this item

Cause:
This record contains serial numbers that are already used by another unit of this item. Your serial number uniqueness controls do not allow you to enter the same serial numbers again

Action:
Remove the duplicate serial numbers

[APP–14850] Serial number is already used in this organization

Cause:
This record contains serial numbers that are already used by another unit in this organization. Your serial uniqueness controls do not allow you to enter the same serial numbers again

Action:
Remove the duplicate serial numbers

[APP–14852] Serial number is already used in the system

Cause:
This record contains serial numbers that are already used in the system. Your serial uniqueness controls do not allow you to enter the same serial numbers again

Action:
Remove the duplicate serial numbers

[APP–14854] Your transaction date must be within an open accounting period

Cause:
You submitted a receiving transaction with a transaction date that does not fall within an open accounting period.

Action:
Re-enter the transaction using a transaction date that falls within an open accounting period, or open the accounting period for your transaction date.

[APP–14856] Invalid Auto–Transact Code

Cause: The transaction has an invalid auto–transact code. Explanation: Valid values are: SHIP, RECEIVE, DELIVER

[APP–14858] Invalid Destination Type

Cause: The destination type on the transaction is invalid Explanation: Valid Values: EXPENSE, INVENTORY, SHOP FLOOR
[APP–14860] You cannot receive against a &PO_TYPE purchase order

  Cause:
  You submitted a receiving transaction that corresponds to a purchase order type against which you cannot receive.

  Action:
  If your transaction was created by a Receiving form, contact your system administrator for assistance. If your transaction was loaded from an external system, please correct the source transaction and re-load the interface table.

[APP–14862] Transaction quantity exceeds available quantity

  Cause:
  The transaction quantity exceeded the quantity available to be processed.

  Action:
  Enter the transaction using a smaller quantity.

[APP–14864] Invalid Receipt Source Type

  Cause: Transaction has an invalid receipt source code
  Explanation: Valid values are: VENDOR, INVENTORY, INTERNAL

[APP–14866] An invalid source document type was processed

  Cause:
  You submitted a receiving transaction that corresponds to source document type against which you cannot receive.

  Action:
  If your transaction was created by a Receiving form, contact your system administrator for assistance. If your transaction was loaded from an external system, please correct the source transaction and re-load the interface table.

[APP–14868] Invalid transaction type

  Cause:
  The receiving transaction that you are processing has an invalid transaction type.

  Action:
  If the transaction was submitted by a Receiving form, contact your system administrator for assistance. If your transaction was imported into the receiving interface tables manually, correct the transaction type and re-submit the transaction for processing.

[APP–14870] You cannot return items from stores via Receiving & Inspection

  Cause:
  You attempted to return items to stores that were shipped in response to an internal order or as part of an in-transit shipment. You can only return items to Receiving & Inspection if they were ordered from a supplier.

  Action:
  If you need to return return items to the source organization or subinventory, you must issue a subinventory transfer using Oracle Inventory.
[APP–14872] Interface transaction id or group id is missing

Cause:
You cannot process your receiving transaction due to interface transaction id or group id missing.

Action:
Contact your system administrator.

[APP–14874] Your transaction date is earlier than its parent transaction

Cause:
You tried to enter a transaction date that is earlier than the parent transaction date.

Action:
Enter a transaction date that is later than or equal to the parent transaction date.

[APP–14876] Please reduce your delivery quantity

Cause:
The sum of the delivery quantities in this zone exceeds the corresponding delivery quantity in the transactions zone.

Action:
Reduce your deliver quantity such that the sum of the delivery quantities in this zone are less than or equal to the corresponding delivery quantity in the transactions zone.

[APP–14878] Child transaction date pre-dates parent transaction date

Cause:
You tried to enter a child transaction date that is earlier than the corresponding parent transaction date.

Action:
Enter a transaction date that is equal to or later than the transaction date of the corresponding parent transaction.

[APP–14880] Express transaction failed

Cause:
Express transaction failed.

Action:
Enter the transactions individually.

Action:
Contact your system administrator for assistance.

[APP–14882] Please enter a transaction date that is not in the future

Cause:
You attempted to enter a transaction date that is in the future.

Action:
Enter a date less than or equal to current date.
[APP–14884] Please reduce your accept or reject quantity

Cause:
The sum of the individual accept and reject quantities in this zone exceeds the corresponding inspect quantity in the transactions zone.

Action:
Reduce your accept or reject quantity.

[APP–14886] Please enter a quantity less than or equal to the available quantity

Cause:
The transaction quantity exceeds the quantity available to be processed.

Action:
Enter the transaction using a smaller quantity.

[APP–14888] Primary quantity &PRIMARY exceeds available subinventory quantity &SUB

Cause:
The transaction quantity &PRIMARY in primary unit of measure exceeds the available quantity &SUB in the subinventory.

Action:
Enter a smaller quantity.

[APP–14890] &DOC_TYPE &DOC_NUMBER has been rejected by approver. Make the necessary changes and resubmit for approval.

[APP–14892] Requisition &DOC_NUMBER has been rejected by buyer. Make the necessary changes and resubmit for approval.

[APP–14894] &DOC_TYPE &DOC_NUMBER has not been completed. Open the entry form for this document to complete it.

[APP–14897] VAT Registration Number is not unique.

[APP–14898] VAT Registration Number is invalid.

[APP–14999] No support for Lot and Serial functionality in this release.

[APP–15091] &BALANCE of this invoice was applied to commitment &COMMITMENT

[APP–15095] &STATUS &COUNT row(s) marked with: Accounting rule specified when distribution records exist

[APP–15097] &STATUS Line level revenue account was specified when distribution records exist
[APP–15099] &STATUS GL date at the line does not match GL date at the header

[APP–15103] Transaction type must be an open receivable on invoice of a commitment

[APP–15105] Invoice type receivable flag is different from Credit Memo type flag

[APP–15106] Warning: Postable flag is different on invoice and commitment types

[APP–15108] Enter a date that is not in a closed period

[APP–15109] Control amount must be greater than actual amount

[APP–15110] Invoice batch source has no credit memo numbering source

[APP–15111] Please complete the revenue account for line &LINE_NUM &DESC

[APP–15112] You cannot update a record that has been processed

[APP–15113] Revenue accounts for this invoice line are not recalculated

  Cause:
  AutoAccounting link has been broken or revenue acco

[APP–15114] Recalculating the revenue accounts for &SREP

[APP–15115] Recalculating the revenue accounts for &SREP in line &LINE

[APP–15116] Invoice exceeds the balance of the commitment. Balance: &BALANCE

[APP–15117] No revenue account assignments are associated with this salesperson

[APP–15119] Please enter old customer name and new customer name

[APP–15120] Please enter customer name and customer number

[APP–15121] You cannot insert new records

[APP–15122] You cannot merge a customer with itself

[APP–15123] You cannot merge or move a site to itself

[APP–15124] A transaction must have at least one line

[APP–15174] Customer reference has two different customer class codes defined

  Cause:
The there are multiple records defined in the RA_CUSTOMERS_INTERFACE table that reference the same customer, are marked identically for insert or update but have different customer class codes defined.

  Action:
Update the customer class code of all records referencing this customer to be the same.

[APP–15176] This customer reference has two different parent customer references

  Cause:
The there are multiple records defined in the RA_CUSTOMERS_INTERFACE table that reference the same customer, are marked identically for insert or update but have different parent customer references.

  Action:
Update the parent customer references of all records referencing this customer to be the same.

[APP–15177] This customer reference has two different customer numbers defined

  Cause:
The there are multiple records defined in the RA_CUSTOMERS_INTERFACE table that reference the same customer, are marked identically for insert or update but have different customer numbers.

  Action:
Update the customer numbers of all records referencing this customer to be the same.

[APP–15178] This customer reference has two different customer names defined

  Cause:
The there are multiple records defined in the RA_CUSTOMERS_INTERFACE table that reference the same customer, are marked identically for insert or update but have different customer names.

  Action:
Update the customer names of all records referencing this customer to be the same.

[APP–15179] SITE_USE_CODE is not defined in AR_LOOKUPS

  Cause:
The SITE_USE_CODE must be defined in AR_LOOKUPS with a LOOKUP_TYPE of SITE_USE_CODE.
Action:
Enter a SITE_USE_CODE defined in AR_LOOKUPS or use the Define QuickCodes form to define a new one.

[APP–15180] COUNTRY is not defined in fnd_territories

Cause:
COUNTRY must be defined in fnd_territories.

Action:
Enter a COUNTRY defined in fnd_territories.

[APP–15181] STATE is not defined in AR_LOCATION_VALUES

Cause:
STATE must be defined in AR_LOCATION_VALUES.

Action:
Enter a STATE defined in AR_LOCATION_VALUES.

[APP–15182] CUSTOMER_PROFILE_CLASS_NAME has an invalid value

Cause:
The customer profile class name is not defined.

Action:
Use the Customer Profile Classes Window to define a new profile class or specify an existing one.

[APP–15183] CUSTOMER_CLASS_CODE is not defined in AR_LOOKUPS

Cause:
The CUSTOMER_CLASS_CODE must be defined in AR_LOOKUPS with a LOOKUP_TYPE of ‘CUSTOMER CLASS’.

Action:
Use the Define Quickcodes form to define a new customer class or change the value to an existing customer class.

[APP–15184] Error submitting concurrent request

[APP–15185] PRIMARY_SITE_USE_FLAG is mandatory when inserting an address

Cause:
The PRIMARY_SITE_USE_FLAG must be populated when inserting an address.

Action:
Enter a value into the PRIMARY_SITE_USE_FLAG field.

[APP–15186] SITE_USE_CODE is mandatory when inserting an address

Cause:
The SITE_USE_CODE field is mandatory when inserting an address.

Action:
Enter a value into the SITE_USE_CODE field.
[APP–15187] COUNTRY is mandatory when specifying an address

   Cause:
The COUNTRY field is a mandatory field when specifying an address.

   Action:
Enter a value into the COUNTRY field.

[APP–15188] ADDRESS1 is mandatory when specifying an address

   Cause:
The ADDRESS1 field is a mandatory field when specifying an address.

   Action:
Enter a value into the ADDRESS1 field.

[APP–15189] ORIG_SYSTEM_ADDRESS_REF is mandatory when specifying an address

   Cause:
To identify an existing or new address requires an ORIG_SYSTEM_ADDRESS_REF.

   Action:
Enter an ORIG_SYSTEM_ADDRESS_REF.

[APP–15190] Site use for this address reference already exists in the database

   Cause:
When inserting an address and site use the site use for the address reference must not exist.

   Action:
Specify an address and site use that do not exist.

[APP–15191] Customer reference for insert is already defined in RA_CUSTOMERS

   Cause:
When inserting a customer the customer reference specified must not exist in RA_CUSTOMERS.

   Action:
Specify a customer reference that does not exist.

[APP–15192] The address reference for update does not exist in RA_ADDRESSES

   Cause:
When updating an address record the address reference specified must exist in RA_ADDRESSES.

   Action:
Specify an address reference that exists in RA_ADDRESSES.

[APP–15193] The customer reference for update does not exist in RA_CUSTOMERS

   Cause:
When updating a customer record the customer reference specified must exist in RA_CUSTOMERS.
Action:
Specify a customer reference that exists in RA_CUSTOMERS.

[APP–15383] You cannot update the payment term on an existing invoice

[APP–15384] Total of relative amounts must sum to base amount

[APP–15385] You must specify a batch name when printing a batch of invoices

[APP–15386] INSERT_UPDATE_FLAG has an invalid value

   Cause:
   Valid values for the INSERT_UPDATE_FLAG are 'I' and 'U'.

   Action:
   Enter a valid value into the INSERT_UPDATE_FLAG field.

[APP–15387] CUSTOMER_NUMBER is mandatory when auto-numbering is set to "No"

   Cause:
   The system option 'Automatic Customer Numbering' is set to "No". The CUSTOMER_NUMBER column is mandatory.

   Action:
   Enter a value for CUSTOMER_NUMBER.

[APP–15388] CUSTOMER_NUMBER must be null when auto-numbering is set to "Yes"

   Cause:
   The system option 'Automatic Customer Numbering' is set to "Yes". The CUSTOMER_NUMBER column must be null.

   Action:
   Update the CUSTOMER_NUMBER column to null.

[APP–15389] This customer reference has two different customer types defined

   Cause:
   There are multiple records defined in the RA_CUSTOMERS_INTERFACE table that reference the same customer, are marked identically for insert or update but have different customer type values defined.

   Action:
   Update the CUSTOMER_TYPE field of all records referencing this address to be the same.

[APP–15391] Concurrent request failed

[APP–15392] Customer Number already assigned to a different customer
Cause:
Customer numbers are unique within RA_CUSTOMERS. A new customer cannot have a customer number that already exists within RA_CUSTOMERS.

Action:
Enter a different customer number.

[APP–15393] PRIMARY_SITE_USE_FLAG has an invalid value

Cause:
Valid values for PRIMARY_SITE_USE_FLAG are ‘Y’ and ‘N’.

Action:
Enter a valid value into the PRIMARY_SITE_USE_FLAG field.

[APP–15394] Please enter an invoice number for this source

[APP–15395] You cannot use \Row Delete here

[APP–15396] CUSTOMER_TYPE is not defined in AR_LOOKUPS

Cause:
The CUSTOMER_TYPE must be defined in AR_LOOKUPS with a LOOKUP_TYPE of CUSTOMER_TYPE.

Action:
Enter a value defined in AR_LOOKUPS.

[APP–15397] LOCATION is not updatable

Cause:
The LOCATION is not updatable through the customer interface.

Action:
Do not specify a value for LOCATION when the INSERT_UPDATE_FLAG is set to ‘U’.

[APP–15398] PRIMARY_SITE_USE_FLAG is not updatable

Cause:
The PRIMARY_SITE_USE_FLAG is not updatable through the customer interface.

Action:
Do not specify a value for PRIMARY_SITE_USE_FLAG when the INSERT_UPDATE_FLAG is set to ‘U’.

[APP–15399] SITE_USE_CODE is not updatable

Cause:
The SITE_USE_CODE is not updatable through the customer interface.

Action:
Do not specify a value for SITE_USE_CODE when the INSERT_UPDATE_FLAG is set to ‘U’.

[APP–15405] Telephone reference has two different addresses
Cause:
There are multiple records defined in the RA_CONTACT_PHONES_INTERFACE table that reference the same telephone but have different address references.

Action:
Update the ORIG_SYSTEM_ADDRESS_REF field of all records referencing this telephone to be the same.

[APP–15406] Please enter a batch name, no auto-numbering for this source

[APP–15407] Telephone reference has two different customers

Cause:
There are multiple records defined in the RA_CONTACT_PHONES_INTERFACE table that reference the same telephone but have different customer references.

Action:
Update the ORIG_SYSTEM_CUSTOMER_REF field of all records referencing this telephone to be the same.

[APP–15409] Telephone reference has two different area codes

Cause:
There are multiple records defined in the RA_CONTACT_PHONES_INTERFACE table that have the same telephone reference but different area codes.

Action:
Update the TELEPHONE_AREA_CODE field of all records with this telephone reference to be the same.

[APP–15410] Telephone reference has two different types

Cause:
There are multiple records defined in the RA_CONTACT_PHONES_INTERFACE table that reference the same telephone but have different type values.

Action:
Update the TELEPHONE_TYPE field of all records referencing this telephone to be the same.

[APP–15411] Telephone reference has multiple extensions

Cause:
There are multiple records defined in the RA_CONTACT_PHONES_INTERFACE table that have the same telephone reference but have different extension numbers.

Action:
Update the TELEPHONE_EXTENSION field of all records referencing this telephone to be the same.

[APP–15412] Telephone reference has two different phone numbers

Cause:
There are multiple records defined in the RA_CONTACT_PHONES_INTERFACE table that reference the same telephone but have different phone numbers.
Action:
Update the TELEPHONE field of all records referencing this telephone to be the same.

[APP–15415] Contact reference has two different addresses

Cause:
There are multiple records defined in the RA_CONTACT_PHONES_INTERFACE that reference the same contact but have different address references.

Action:
Update the ORIG_SYSTEM_ADDRESS_REF field of all records referencing this contact to be the same.

[APP–15416] Contact reference has two different customers

Cause:
There are multiple records defined in the RA_CONTACT_PHONES_INTERFACE that reference the same contact but have different customer references.

Action:
Update the ORIG_SYSTEM_CUSTOMER_REF field of all records referencing this contact to be the same.

[APP–15417] Receipt has been applied to this invoice; you cannot update it

[APP–15418] Contact reference has two different job titles

Cause:
There are multiple records defined in the RA_CONTACT_PHONES_INTERFACE table that reference the same contact but have different job titles.

Action:
Update the CONTACT_JOB_TITLE field of all records referencing this contact to be the same.

[APP–15419] Contact reference has two different titles

Cause:
There are multiple records defined in the RA_CONTACT_PHONES_INTERFACE table that reference the same contact but have different titles.

Action:
Update the CONTACT_TITLE field of all records referencing this contact to be the same.

[APP–15420] Contact reference has two different last names

Cause:
There are multiple records defined in the RA_CONTACT_PHONES_INTERFACE table that reference the same contact but have different last name values.

Action:
Update the CONTACT_LAST_NAME field of all records referencing this contact to be the same.

[APP–15421] Contact reference has two different first names
Cause:
There are multiple records defined in the RA_CONTACT_PHONES_INTERFACE table that reference the same contact but have different first name values.

Action:
Update the CONTACT_FIRST_NAME field of all records referencing this contact to be the same.

[APP–15422] CONTACT_JOB_TITLE must be defined in AR_LOOKUPS

Cause:
CONTACT_JOB_TITLE must be defined in AR_LOOKUPS with a LOOKUP_TYPE of 'RESPONSIBILITY'.

Action:
Use the Define QuickCodes Form to enter a new job title or enter an existing one.

[APP–15423] The address reference specified is not defined for this customer

Cause:
The address reference specified is not valid for the customer reference specified. The address reference may be marked in error within the RA_CUSTOMERS_INTERFACE table.

Action:
Enter a valid address for the customer reference specified or rectify the errors reports in RA_CUSTOMERS_INTERFACE.

[APP–15424] Contact reference for update is not defined in RA_CONTACTS

Cause:
When updating a contact record the contact reference specified must exist in RA CONTACTS.

Action:
Specify a contact reference that exists in RA_CONTACTS.

[APP–15425] Contact reference for insert is already defined in RA_CONTACTS

Cause:
When inserting a contact the contact reference specified must not exist in RA_CONTACTS.

Action:
Enter a contact reference that does not exist.

[APP–15426] CONTACT_TITLE is not defined in AR_LOOKUPS

Cause:
The CONTACT_TITLE must be defined in AR_LOOKUPS with a LOOKUP_TYPE of 'CONTACT_TITLE'.

Action:
Use the Define Quickcodes form to define a new contact title or change the value to an existing title.

[APP–15427] LAST_NAME is mandatory when specifying a contact
Cause:
The LAST_NAME field is mandatory when specifying a contact.

Action:
Enter a value into the LAST_NAME field.

[APP–15428] Enter a date that is not in a closed period

[APP–15429] ORIG_SYSTEM_CONTACT_REF mandatory for contact information

Cause:
To identify an existing or new contact requires an ORIG_SYSTEM_CONTACT_REF.

Action:
Enter an ORIG_SYSTEM_CONTACT_REF.

[APP–15430] Telephone reference for update does not exist in RA_PHONES

Cause:
When updating a telephone record the telephone reference specified must exist in RA_PHONES.

Action:
Specify a telephone reference that exists in RA_PHONES.

[APP–15431] Telephone reference for insert is already defined in RA_PHONES

Cause:
When inserting a telephone the reference must not exist in the database.

Action:
Specify a telephone reference that does not exist.

[APP–15432] TELEPHONE_TYPE is not defined in AR_LOOKUPS

Cause:
The TELEPHONE_TYPE must be defined in AR_LOOKUPS with a LOOKUP_TYPE of ‘COMMUNICATION_TYPE’.

Action:
Use the Define Quickcodes form to define a new telephone type or change the value to an existing type.

[APP–15433] TELEPHONE_TYPE is mandatory when specifying telephone information

Cause:
TELEPHONE_TYPE is mandatory when specifying telephone information.

Action:
Enter a value into the TELEPHONE_TYPE field.

[APP–15434] TELEPHONE is mandatory when specifying telephone information

Cause:
TELEPHONE is mandatory when specifying telephone information.
Action:
Enter a value into the TELEPHONE field.

[APP–15435] ORIG_SYSTEM_TELEPHONE_REF mandatory for telephone information

Cause:
To identify an existing or new telephone to the customer interface requires an ORIG_SYSTEM_TELEPHONE_REFERENCE.

Action:
Enter an ORIG_SYSTEM_TELEPHONE_REF.

[APP–15436] Address reference has two different customers

Cause:
There are multiple records defined in the RA_CUSTOMERS_INTERFACE table that reference the same address, are marked identically for insert or update but have different customer reference values defined.

Action:
Update the ORIG_SYSTEM_CUSTOMER_REF field of all records referencing this address to be the same.

[APP–15437] Address reference has two identical site use codes

Cause:
There are multiple records defined in the RA_CUSTOMERS_INTERFACE table that reference the same address, are marked identically for insert or update and have same SITE_USE_CODE values defined.

Action:
Update the SITE_USE_CODE field of all records referencing this address to be different.

[APP–15438] Address reference has two different countries

Cause:
There are multiple records defined in the RA_CUSTOMERS_INTERFACE table that reference the same address, are marked identically for insert or update but have different COUNTRY values defined.

Action:
Update the COUNTRY field of all records referencing this address to be the same.

[APP–15439] No postal code was found, calculating tax from city data

[APP–15440] Address reference has two different counties

Cause:
There are multiple records defined in the RA_CUSTOMERS_INTERFACE table that reference the same address, are marked identically for insert or update but have different COUNTRY values defined.

Action:
Update the COUNTRY field of all records referencing this address to be the same.
[APP–15441] Address reference has two different provinces

    Cause:
    There are multiple records defined in the RA_CUSTOMERS_INTERFACE table that reference the
    same address, are marked identically for insert or update but have different PROVINCE values
    defined.

    Action:
    Update the PROVINCE field of all records referencing this address to be the same.

[APP–15442] Address reference has two different states

    Cause:
    There are multiple records defined in the RA_CUSTOMERS_INTERFACE table that reference the
    same address, are marked identically for insert or update but have different STATE values defined.

    Action:
    Update the STATE field of all records referencing this address to be the same.

[APP–15443] Address reference has two different postal codes

    Cause:
    There are multiple records defined in the RA_CUSTOMERS_INTERFACE table that reference the
    same address, are marked identically for insert or update but have different POSTAL_CODE values
    defined.

    Action:
    Update the POSTAL_CODE field of all records referencing this address to be the same.

[APP–15444] Address reference has two different cities

    Cause:
    There are multiple records defined in the RA_CUSTOMERS_INTERFACE table that reference the
    same address, are marked identically for insert or update but have different ADDRESS4 values
    defined.

    Action:
    Update the ADDRESS4 field of all records referencing this address to be the same.

[APP–15445] Address reference has two different ADDRESS4 values

    Cause:
    There are multiple records defined in the RA_CUSTOMERS_INTERFACE table that reference the
    same address, are marked identically for insert or update but have different ADDRESS4 values
    defined.

    Action:
    Update the ADDRESS4 field of all records referencing this address to be the same.

[APP–15446] Address reference has two different ADDRESS3 values

    Cause:
    There are multiple records defined in the RA_CUSTOMERS_INTERFACE table that reference the
same address, are marked identically for insert or update but have different ADDRESS3 values defined.

Action:
Update the ADDRESS3 field of all records referencing this address to be the same.

[APP–15447] Address reference has two different ADDRESS2 values

Cause:
There are multiple records defined in the RA_CUSTOMERS_INTERFACE table that reference the same address, are marked identically for insert or update but have different ADDRESS2 values defined.

Action:
Update the ADDRESS2 field of all records referencing this address to be the same.

[APP–15448] Address reference has two different ADDRESS1 values

Cause:
There are multiple records defined in the RA_CUSTOMERS_INTERFACE table that reference the same address, are marked identically for insert or update but have different ADDRESS1 values defined.

Action:
Update the ADDRESS1 field of all records referencing this address to be the same.

[APP–15449] This customer reference has two identical primary site uses defined

Cause:
A customer cannot have multiple primary site uses defined for the same site use code. There are multiple records defined in the RA_CUSTOMERS_INTERFACE table that reference the same customer, are marked for insert and have identical site uses marked as the primary.

Action:
Update the SITE_USE_CODE field or the PRIMARY_SITE_USE_FLAG so that there is only one primary site use a customer and site use code.

[APP–15450] You cannot insert or update invoices against commitments

[APP–15451] Warning: customer name and site use are duplicate

[APP–15452] Invoice Type must be entered for this class

[APP–15453] Error generating transaction number from batch source

[APP–15454] Open Receivable must be Yes for this class

[APP–15492] Please enter a contact name before entering the communications zone
[APP–15493] End date is not in the selected GL period. Please select another date

[APP–15494] Start date is not in the selected GL period. Enter another date

[APP–15495] There are no other records to view

[APP–15496] Invalid accounting flexfield

[APP–15497] State/Country combination already exists

[APP–15500] Please enter customer profile class

[APP–15501] Use \ Screen Save or \ Zone Erase before leaving this zone

[APP–15505] Please use \ Screen Save to save your work

[APP–15506] The Number of Periods field must show the actual number of periods

[APP–15508] Please complete the sales credit distributions for this invoice line

[APP–15509] &STATUS Invalid account type when distribution records exist

[APP–15511] This transaction has been identified with some errors. Please refer to header level interface status

[APP–15513] This transaction record has not been identified with any error. Please refer to other records for this transaction for interface status

[APP–15514] DUNNING_LETTERS is mandatory when no profile class specified

  Cause:
  Dunning letters must be specified when the profile class is null.

  Action:
  Enter a value into the DUNNING_LETTERS field.

[APP–15515] INTEREST_CHARGES is mandatory when no profile class specified

  Cause:
  Interest charges must be specified when the profile class is null.

  Action:
  Enter a value into the INTEREST_CHARGES field.

[APP–15516] STATEMENTS is mandatory when no profile class specified

  Cause:
  Statements must be specified when the profile class is null.

  Action:
  Enter a value into the STATEMENTS field.

[APP–15517] CREDIT_BALANCE_STATEMENTS mandatory when no profile class specified

[APP–15519] DUNNING_LETTER_SET_NAME is mandatory when DUNNING_LETTERS is "Yes"
Cause:
A dunning letter set name must be entered when dunning letters are to be sent.

Action:
Enter a value into the DUNNING_LETTER_SET_NAME field.

[APP–15520] CHARGE_ON_FINANCE_CHARGE_FLAG mandatory when INTEREST_CHARGES is Yes

Cause:
When interest is to be charged the CHARGE_ON_FINANCE_CHARGE_FLAG must be populated.

Action:
Enter a value into the CHARGE_ON_FINANCE_CHARGE_FLAG field.

[APP–15530] INTEREST_PERIOD_DAYS is mandatory when INTEREST_CHARGES is "Yes"

Cause:
A value must entered into the interest period days field when interest is being charged.

Action:
Enter a valid value into the INTEREST_PERIOD_DAYS field.

[APP–15532] COLLECTOR_NAME has an invalid value

Cause:
The collector name is not defined.

Action:
Define this collector in the Collectors Window or enter an existing collector name.

[APP–15533] CREDIT_CHECKING has an invalid value

Cause:
Valid values for the CREDIT_CHECKING field are ‘Y’ and ‘N’.

Action:
Enter a valid value into the CREDIT_CHECKING field.

[APP–15534] TOLERANCE has an invalid value

Cause:
Valid values for the TOLERANCE field are ‘Y’ and ‘N’.

Action:
Enter a valid value into the TOLERANCE field.

[APP–15535] DISCOUNT_TERMS has an invalid value

Cause:
Valid values for the DISCOUNT_TERMS field are ‘Y’ and ‘N’.

Action:
Enter a valid value into the DISCOUNT_TERMS field.
[APP–15536] DUNNING_LETTERS has an invalid value

  Cause:
Valid values for the DUNNING_LETTERS field are ‘Y’ and ‘N’.

  Action:
Enter a valid value into the DUNNING_LETTERS field.

[APP–15537] INTEREST_CHARGES has an invalid value

  Cause:
Valid values for the INTEREST_CHARGES field are ‘Y’ and ‘N’.

  Action:
Enter a valid value into the INTEREST_CHARGES field.

[APP–15538] STATEMENTS has an invalid value

  Cause:
Valid values for the STATEMENTS field are ‘Y’ and ‘N’.

  Action:
Enter a valid value into the STATEMENTS field.

[APP–15539] CREDIT_BALANCE_STATEMENTS has an invalid value

  Cause:
Valid values for the CREDIT_BALANCE_STATEMENTS field are ‘Y’ and ‘N’.

  Action:
Enter a valid value into the CREDIT_BALANCE_STATEMENTS field.

[APP–15540] CREDIT_HOLD has an invalid value

  Cause:
Valid values for the CREDIT_HOLD field are ‘Y’ and ‘N’.

  Action:
Enter a valid value into the CREDIT_HOLD field.

[APP–15541] CREDIT_RATING has an invalid value

  Cause:
Credit rating must be defined in AR_LOOKUPS with a LOOKUP_TYPE of ’CREDIT_RATING’.

  Action:
Use the Define Quickcodes form to define a new credit rating or change the value to an existing one.

[APP–15542] RISK_CODE has an invalid value

  Cause:
RISK_CODE must be defined in AR_LOOKUPS with a LOOKUP_TYPE of ’RISK_CODE’.
Action:
Use the Define Quickcodes form to define a new credit rating or change the value to an existing one.

[APP–15543] STANDARD_TERM_NAME which contains the payment terms has an invalid value

Cause:
STANDARD_TERM_NAME must be defined in RA_TERMS.

Action:
Use the Payment Terms Window to create a new payment term.

[APP–15544] OVERRIDE_TERMS has an invalid value

Cause:
Valid value for the OVERRIDE_TERMS field are ’Y’ and ’N’.

Action:
Enter a valid value into the OVERRIDE_TERMS field.

[APP–15545] DUNNING_LETTER_SET_NAME has an invalid value

Cause:
DUNNING_LETTER_SET_NAME must be defined in AR_DUNNING_LETTER_SETS.

Action:
Use the Dunning Letter Sets Window to define a new dunning letter set or enter an existing one.

[APP–15546] STATEMENT_CYCLE_NAME has an invalid value

Cause:
STATEMENT_CYCLE_NAME must be defined in AR_STATEMENT_CYCLES.

Action:
Use the Statement Cycles Window to define a new statement cycle or enter an existing one.

[APP–15547] ACCOUNT_STATUS has an invalid value

Cause:
ACCOUNT_STATUS must be defined in AR_LOOKUPS with a LOOKUP_TYPE of ’ACCOUNT_STATUS’

Action:
Use the Define Quickcodes form to enter a new account status or enter an existing one.

[APP–15548] PERCENT_COLLECTABLE has an invalid value

Cause:
Valid values for the PERCENT_COLLECTABLE column are 0 to 100.

Action:
Enter a valid value.

[APP–15549] AUTOCASH_HIERARCHY_NAME which contains the AutoCash rule has an invalid value
Causes:

AUTOCASH_HIERARCHY_NAME must be defined in AR_AUTOCASH_HIERARCHIES.

Actions:

Use the AutoCash Rule Sets Window to define a new rule or enter an existing one.

- [APP–15555] This is an invalid MODE

[APP–16047] You must enter a valid number for this field.

[APP–16048] Invalid collection plan ID passed. Please contact your support representative.

[APP–16049] Serial numbers must end with a number.

[APP–16050] Inventory parameters have not been entered for this organization. In order to use this form you must: Define your Inventory parameters. Define your Inventory flexfields.

[APP–16051] You must enter an item category.

[APP–16052] You must enter an item or category set.

[APP–16053] You must enter a revision because the item selected is under revision control.

[APP–16054] Locator already exists.

[APP–16055] The range of Log Numbers entered is not valid.

[APP–16056] The From value must be less than the To value.

[APP–16057] The Lower Reasonable Limit must be less than or equal to the Upper Reasonable Limit.

[APP–16058] The Lower Specification Limit must be less than or equal to the Upper Specification Limit.
The Lower User–defined Limit must be less than or equal to the Upper User–defined Limit.

A collection element name or collection plan name cannot contain special characters like single or double quotes, periods, commas, and "!', '@', '#', $', '%', '^', '&', '*', '(', ')', '–', '+', '='", '|', '~', '{', '}', '[', ']', ':', ';', '>', '<', '?', '/'. Underscores ("_") can be used.

Collection element names cannot be words reserved for column names in collection plan results database views. This includes words like NAME, OCCURRENCE, ORGANIZATION_ID, and CREATED_BY.

A collection element with this name already exists. When Oracle Quality checks for duplicate collection element names, the names are first converted to UPPERCASE and then compared. The system checks that another collection element does not exist with this name in uppercase, lowercase, or mixed case. For example, 'pH', 'Ph', and 'PH' are considered the same.

No results were found that matched these search conditions.

No default action rules have been defined for this collection element. Use the Define Collection Elements window to define default action rules for this collection element.

No default values have been defined for this collection element. Use the Define Collection Elements window to define values for this collection element.

Values entered are too large to be supported. Please contact your support representative.

Creation of the Collection Plan View Failed. This is probably due to invalid seed data. Please contact your support representative.

You cannot assign values to a predefined reference collection element.

The profile QA:Quality Category Set must be set in order to use Category Set or Category.

Prompts that begin with a hyphen are not displayed in the Enter, Update, and View Quality Results windows.

Plan must contain an enabled, mandatory collection element that is not dependent on another collection element.

This record already exists. You entered a duplicate value that must be unique for every record.

You cannot delete a referenced specification. This specification is referenced by other specifications, including: &ENTITY1 &ENTITY2 &ENTITY3

Cannot delete this element from this plan because it is used in a report and/or graph.

Cannot delete this element from this plan because results have been collected.

You must enter a unique combination of values for Item, Revision, Category Set, Category, Supplier, and Customer. The combination you entered already exists on the following specification: &ENTITY1
[APP–16077] No specification was found satisfying your search criteria.

[APP–16078] The range of Log Dates entered is not valid.

[APP–16079] You cannot delete this short code because it has been copied to a collection plan.

[APP–16080] Value must be greater than or equal to the Lower Reasonable Limit of &ENTITY1.

[APP–16081] Value must be less than or equal to the Upper Reasonable Limit of &ENTITY1.

[APP–16082] You must enter a supplier.

[APP–16083] Changing this operator deletes lists associated with this rule.

[APP–16084] The saved elements on this specification will be replaced with the referenced elements. Continue?

[APP–16085] Changing the short code for this value may result in its having inconsistent codes throughout the rest of the product

[APP–16086] By changing this data item, quality data will be deleted. Do you really want to do this?

[APP–16087] No specification was found satisfying your search criteria. Using default specifications.

[APP–16088] You must add Component Subinventory to the collection plan and enable it before you can add Component Locator.

[APP–16089] You must add Component Item to the collection plan and enable it before you can add Component Lot Number.

[APP–16090] You must add Component Item to the collection plan and enable it before you can add Component Revision.

[APP–16091] You must add Component Item to the collection plan and enable it before you can add Component Serial Number.

[APP–16092] You must add Component Item to the collection plan and enable it before you can add Component Subinventory.

[APP–16093] You must add Item to the collection plan and enable it before you can add UOM.

[APP–16094] You must add Component Item to the collection plan and enable it before you can add Component UOM.

[APP–16095] You must clear this record before changing the collection plan.

[APP–16096] &ENTITY1 is not a valid plan name. Choose a new plan name for each record, and then requery to see the full set of columns.

[APP–16097] To see a list of values for this field, you must first enter a valid organization code.

[APP–16098] There are no action details for the action selected.
[APP–16100] You must enter a subgroup size between 2 and 25.

[APP–16101] There are not enough data points to create a graph with this subgroup size.

[APP–16102] You must enter control limits before creating a control chart.

[APP–16103] You must delete the control limits associated with this chart before changing the value of this field.

[APP–16104] You must enter a subgroup size before computing new limits.

[APP–16106] You must enter a positive number of bars.

[APP–16107] No criteria to copy.

[APP–16108] Changing this action will delete all of its action details. Do you want to continue?

[APP–16109] Do you want to save your changes and create or update the views in the database?

[APP–16110] Views are not created.

[APP–16111] Concurrent requests are launching to create Enter Result View and Collection Import View.

[APP–16112] You must enter a positive number of points.

[APP–16113] There is no output variable specified which matches the token '&token'.

[APP–16114] The token '&token' in Actions does not match an output variable. Please check the 'Assign a Value' action in the 'Collection Plans' form.

[APP–16115] Failed to perform SQL statement: &final_stmt Please check the 'Assign a Value' action in the 'Collection Plans' form.

[APP–16116] The value of the collection element that token '&token' corresponds to is null. Your Action 'Assign a Value' may fail. Do you want to continue?

[APP–16117] Can not execute the SQL statement because of the following error: &oraerr Please check the 'Assign a Value' action in the 'Collection Plans' form.

[APP–16118] There is more than one row returned for the SQL statement in the 'Assign a Value' action. Please check the action definition in the 'Collection Plans' form.

[APP–16119] There is no row selected for the 'Assign a Value' action. The assigned collection element will remain unchanged.

[APP–16120] Unable to compute the control limits or plot the chart, because the total number of data points collected is less than the subgroup size you specified.

[APP–16121] X Bar

[APP–16122] X

[APP–16123] R
The collection element corresponding to the token that you specified in the 'Assign a Value' action is missing from the plan. Please check the 'Collection Plan' form.

The collection element you have assigned a value to with the 'Assign a Value' action is missing from the plan. Please check the 'Collection Plan' form.

[APP–17280] Please use the Schedule Group region to update the attributes of the model line. The Schedule Group Attributes zone lets you update the shipping attributes for an entire ATO Configuration, Ship Complete Configuration, or Ship Set, which must ship as a complete set. To access the Schedule Group Attributes zone for an ATO Configuration, put your cursor on the base model line and press [Next Zone] to get the navigation QuickPick. Choose the 'Update ATO Configuration Attributes’ option directly, or by first choosing the 'Configuration...' option if your OE: Action QuickPick Method profile option is set to Dual.

[APP–17284] &RESULT

[APP–17286] ATS Quickpick failed. Scheduling failed due to an internal exception. Contact your support representative.

[APP–17290] Scheduling failed. Scheduling failed due to an internal exception. Contact your support representative.

[APP–17292] Scheduling failed. See explanation or go to View Schedule Results. &explanation

[APP–17294] Scheduling Complete. &EXPLANATION

[APP–17296] Enter a full quantity or navigate to the schedule details zone. You cannot do a partial reservation on a line that has multiple details with different attributes. You can either change the quantity to the full quantity, or navigate to the Schedule Details zone and make the reservations on individual schedule detail lines.

[APP–17298] This is a configuration item, unable to update field. This is an ATO model line and a configuration item has been linked to this line. There are some actions that you cannot perform once the configuration item has been created. If you want to perform an action on this line, you must first unschedule the line, which unlinks the configuration item, perform your action, and then relink the item if necessary.

[APP–17300] Change of schedule date is not allowed with the selected action.
[APP–17302] Change of Demand Class is not allowed with the selected action.

[APP–17310] Error. &reason

[APP–17314] The detail quantity should be greater than 0.

[APP–17316] The item is under lot control, enter a lot.

[APP–17318] The item is under revision control, enter a revision.

[APP–17320] Scheduling failed. Scheduling failed due to an internal exception. Contact your support representative.

[APP–17322] One of the group attributes failed your scheduling attempt. You tried to perform a scheduling action on a schedule group (ATO Configuration, Ship Complete Configuration, or Ship Set) and since one of the group members failed it caused the entire group to fail. Use the Schedule Group Attributes zone to update attributes and try to schedule again. The Schedule Group Attributes zone lets you update the shipping attributes for an entire ATO Configuration, Ship Complete Configuration, or Ship Set, which must ship as a complete set.

[APP–17324] Scheduling failed. The OE GROUP SCHEDULE User exit failed due to an internal exception. Contact your support representative.

[APP–17326] The requested group action can only be performed on the ATO model line.

[APP–17328] Incomplete ATO configuration, unable to schedule the whole configuration.

[APP–17330] Incomplete ATO configuration within the shipset, unable to perform scheduling.

[APP–17332] Line is a part of an internal sales order. Deleting is not allowed.

[APP–17334] Line is a part of an internal sales order. Inserting is not allowed.

[APP–17336] Line is a part of an internal sales order. Updating is not allowed.

[APP–17338] Use the Schedule Group Attributes zone to update attributes. If you have multiple warehouses, dates or demand classes within a schedule group, Oracle Order Entry is unable to perform scheduling. The Schedule Group Attributes zone lets you update the shipping attributes for an entire ATO Configuration, Ship Complete Configuration, or Ship Set, which must ship as a complete set. To access the Schedule Group Attributes zone for a Ship Set, put your cursor on the base model line and press [Next Zone] to get the navigation QuickPick. Choose the 'Update Ship
Set Attributes’ option directly, or by first choosing the 'Configuration...' option if your OE: Action QuickPick Method profile option is set to Dual.

[APP–17340] Warehouse is Invalid.

[APP–17342] Invalid action, item is not reservable.

[APP–17344] Invalid action, item is not transactable.

[APP–17346] Item is not reservable, Demand is already placed.

[APP–17348] Item is not reservable.

[APP–17350] Item is not transactable, can not place demand or reserve.

[APP–17352] Line has been fully Pick Released, unable to update field.

[APP–17354] Use the Schedule Group Attributes zone to update attributes. The Schedule Group Attributes zone lets you update the shipping attributes for an entire ATO Configuration, Ship Complete Configuration, or Ship Set, which must ship as a complete set. To access the Schedule Group Attributes zone for an ATO Configuration, put your cursor on the base model line and press [Next Zone] to get the navigation QuickPick. Choose the 'Update ATO Configuration Attributes’ option directly, or by first choosing the 'Configuration...' option if your OE: Action QuickPick Method profile option is set to Dual. To access the Schedule Group Attributes zone for a Ship Complete Configuration, put your cursor on the base model line and press [Next Zone] to get the navigation QuickPick. Choose the 'Update Ship Complete Configuration Attributes’ option directly, or by first choosing the 'Configuration...' option if your OE: Action QuickPick Method profile option is set to Dual. To access the Schedule Group Attributes zone for a Ship Set, put your cursor on the base model line and press [Next Zone] to get the navigation QuickPick. Choose the 'Update Ship Set Attributes’ option directly, or by first choosing the 'Configuration...' option if your OE: Action QuickPick Method profile option is set to Dual.

[APP–17356] Line has supply reserved details, unable to update field. This is an ATO model line and a work order has been opened in Oracle Work in Process. There are some attributes that you cannot update once the work order is open. If you want to perform an action on this line, you must first detach the work order from the sales order using the Define Discrete Job form in Oracle Work in Process.

[APP–17358] Use the Schedule Group Attributes zone to update attributes. The Schedule Group Attributes zone lets you update the shipping attributes for an entire ATO Configuration, Ship Complete Configuration, or Ship Set, which must ship as a complete set. To access the Schedule Group Attributes zone for an ATO Configuration, put your cursor on the base model line and press [Next Zone] to get the navigation QuickPick. Choose the 'Update ATO Configuration Attributes’ option directly, or by first choosing the 'Configuration...' option if your OE: Action QuickPick Method profile option is set to Dual.

[APP–17360] Change of Lot is not allowed with the selected action.

[APP–17362] An item is required on the line.

[APP–17364] A quantity is required on the line.

Corresponding Service Transaction lines locked at time of processing

Rerouting is not allowed on picking lines with scheduled details.

There are duplicate waybill numbers in the batch. Modify the pick slips.

You cannot make changes. &REASON.

You cannot delete records. &REASON.

You cannot create a new record. &REASON.

You cannot close this batch or pick slip. See explanation. You have tried to close a batch (or pick slip) with a ‘Partial’ ship action without entering the partial shipped quantities for its picking lines. Navigate to the Lines zone and enter partial quantities for those picking lines you are shipping and then close the batch (or pick slip).

You cannot ship anything on this line. &REASON.

You cannot view or change details. &REASON.

Rerouting is not allowed on picking lines with shipped quantities.

Unrecognized post-commit failure code &REASON.

Process online for shipping failed in the &PROCESS process. The process online request has failed in the &PROCESS process. Set the Process Online field to No, then close the batch or pick slip you are processing. Run the Update Shipping Information concurrent program and wait for it to complete successfully. Then run the Inventory Interface concurrent program. Monitor the log files for errors.

You are rerouting the line

A rule with the profile option &PROFILE_OPTION has already been entered for this object and attribute

A rule with the sequence number &SEQUENCE already exists for this object and attribute

A standard value rule set by the name &RULE_SET already exists

The source &SOURCE has already been selected for this object and attribute in this rule set

A rule with the value &VALUE has been entered for this object and attribute
[APP–17490] A non-override user-specified value allowed rule exists with a lower sequence

[APP–17492] The standard value rule set &RULE_SET for &OBJECT is too complex; cyclical rules likely

[APP–17494] &RULE_SET contains a Profile Option source rule with no Profile Option

[APP–17496] &RULE_SET contains a Value source rule with no value

  Cause:
  You system administrator has defined a rule in the standard value rule set &RULE_SET for the object &OBJECT and attribute &ATTRIBUTE that has a rule whose source is Value, but the rule has no value specified

  Action:
  Contact your system administrator to correct the incorrectly defined rule.

[APP–17498] You must enter a profile option for a rule with the Profile Option source

[APP–17500] You have selected &CLASS without choosing any of its options

[APP–17502] You must specify at least one option for the mandatory class &CLASS

[APP–17504] The quantity for component &ITEM is outside the valid range (&LOW to &HIGH)

[APP–17506] This discount has already been applied to this line

[APP–17508] This salesperson already has line-level sales credit

[APP–17510] Duplicate line number

[APP–17512] This discount has already been applied to this order

[APP–17514] This salesperson already has order-level sales credit

[APP–17516] You must enter an integral service duration greater than 0

[APP–17518] Invalid configuration: &REPORT

[APP–17520] &OBJECT is incomplete: &REPORT

[APP–17522] Quantity must be a multiple of &COMPONENT between &LOW and &HIGH

Oracle Order Entry requires that the ordered quantity (or ordered minus cancelled quantity) of an option line must be evenly divisible by the quantity of the option’s parent component line, and that the quantity is within the range allowed by the bill of material. The option’s quantity does not currently meet these requirements. You must change the quantity to be valid to commit.

[APP–17524] &OBJECT is incomplete: &REPORT

[APP–17526] Group component item &ITEM not found in group warehouse &WAREHOUSE

[APP–17528] Unbooked revenue sales credit total (&TOTAL) cannot exceed 100

  Cause:
  You are attempting so save sales credits for an unbooked order line whose revenue total exceeds 100. (Line-level revenue sales credit for a booked order must equal 0 or 100.)
[APP–17530] Unbooked revenue sales credit total (&TOTAL) cannot exceed 100

Cause:
You are attempting to save sales credits for an unbooked order whose revenue total exceeds 100.
(Order–level revenue sales credit for a booked order must equal 100.)

[APP–17532] Quantity must be a multiple of &COMPONENT greater than or equal to &LOW
Oracle Order Entry requires that the ordered quantity (or ordered minus cancelled quantity) of an
option line must be evenly divisible by the quantity of the option’s parent component line, and that
the quantity is greater than or equal to the minimum quantity on the bill of material. The option’s
quantity does not currently meet these requirements. You must change the quantity to be valid to
commit.

[APP–17534] Quantity must be greater than or equal to Cancelled

[APP–17536] Installation detail quantity total (&QUANTITY_TOTAL) must be less than or equal
to line open quantity (&OPEN_QUANTITY)

[APP–17538] Schedule detail quantity total (&QUANTITY_TOTAL) must equal Line open quantity
(&OPEN_QUANTITY)

[APP–17540] Shipment schedule quantity total (&QUANTITY_TOTAL) must equal Line open
quantity (&OPEN_QUANTITY). Update parent line open quantity?

[APP–17542] You must enter &ATTRIBUTE for a booked order

[APP–17544] You must enter AutoCreate Quantity and System Type for AutoCreate System

[APP–17546] The tax code attribute is missing on the order line and it is required. It is required
because the order’s ”Tax Status” value is ”Required” OR the ”Tax Calculation” value is ”Yes” on
the order type’s Receivables transaction type.

[APP–17548] You must enter &ATTRIBUTE; &REASON

[APP–17550] You must enter &ATTRIBUTE

[APP–17552] Cannot modify default quantity when bill attribute Basis is Option Class

[APP–17554] Line–level sales credit (&TOTAL) must equal 0 or 100

[APP–17556] Order–level sales credit total (&TOTAL) must equal 100%. Specify a Salesperson or
enter additional Sales Credits

[APP–17558] Price adjustment total (&TOTAL) cannot exceed 100

[APP–17560] Unable to retrieve picking lines

Cause:
Error while trying to update the order cycle for the specified order line.

Action:
Please contact your Oracle Representative.
[APP–17564] Invalid action.

  Cause:
The specified action was not a Oracle Work in Process link to order line, unlink from order line, assembly completion, or return assembly from inventory.

  Action:
Please contact your Oracle Representative.

[APP–17566] Action quantity is greater than the maximum allowed quantity.

  Cause:
Action quantity (&ACT_QTY) is greater than the maximum allowed quantity (&MAX_QTY).

  Action:
Lower the action quantity.

[APP–17568] Invalid order line.

  Cause:
Oracle Order Entry could not find detail row for the specified sales order line.

  Action:
Please contact your Oracle Representative.

  Cause:
Order line has been pick released, making it ineligible for Oracle Work in Process to change.

  Action:
Perform change through Oracle Order Entry.

[APP–17570] Order line unit of measure action quantity is not an integer.

  Cause:
Oracle Order Entry requires that the action quantity for WIP links, unlinks, completions, and returns be integers. The quantity for this record, after conversion to the sales order line’s unit of measure, had a non–integer value (&ACT_QTY).

  Action:
Enter an action quantity that is an integer value in the sales order line’s primary unit of measure.

[APP–17572] Quantity to interface is zero

[APP–17574] Expected Arrival Date is required for this internal sales order.

[APP–17576] The line has been undemanded – no actions allowed.
The ATO model was demanded and manufacturing released but was later undemanded. Therefore no actions can be taken on this line from the ATO Configured Item window. Place demand for the line in the Lines to Schedule window before navigating to the ATO Configured Item window.

[APP–18019] Order Entry Transaction Manager has detected an internal exception. This form will not be able to perform any operations, so the form will be closed.

[APP–18020] Remove '%' from your item range. You can enter the entire item, or just the first few characters of the item, for the low or high end of the item range.

[APP–18021] Please choose the action text you want included in your new PCR

[APP–18022] Please enter text for the current action

[APP–18023] The current incident cannot be related to the product change request

[APP–18024] A product change request for the current incident has been created

[APP–18025] You cannot choose an unserviced product

[APP–18026] You cannot update the product from here. Use the Incident zone instead

  Cause: You tried to change the product for the current incident. Changing the product from the current zone is not allowed.

  Action: Proceed to the Incident Details zone and choose the Complete Incident Details option. This option transfers you to the Incident zone, where you can change the product.

[APP–18027] You cannot unrelate product change requests from incidents in this zone

  Cause: You entered No in the Select field to unassociate this product change request with the incident.

  Action: Execute a new query in this zone to verify that this product change request is no longer available for selection since it is already related to the current incident. Move to the Related PCRs
zone and enter Yes in the Delete field if you wish to unassociate this product change request with the incident.

[APP–18208] You cannot relate product change requests with incidents in this zone

Cause: You entered No in the Delete field to associate this product change request with the incident.

Action: Execute a new query in this zone to verify that this product change request is no longer related to the current incident. Move to the Related Incidents zone and enter Yes in the Select field if you wish to unassociate this product change request with the incident.

[APP–18290] You can define only one rule per attribute for a given rule set

[APP–18300] Please enter an availability date that equals or follows the current date

[APP–18301] Please enter the next highest, unused number

[APP–18302] Please enter text for your product change request action

[APP–18303] You cannot unrelate incidents from PCRs in this zone

Cause: You entered No in the Select field to unassociate this incident with the product change request.

Action: Execute a new query in this zone to verify that this incident is no longer available for selection since it is already related to the current product change request. Move to the Related Incidents zone and enter Yes in the Delete field if you wish to unassociate this incident with the product change request.

[APP–18304] You cannot relate incidents with PCRs in this zone

Cause: You entered No in the Delete field to associate this incident with the product change request.

Action: Execute a new query in this zone to verify that this incident is no longer related to the current product change request. Move to the Incident Selection Criteria zone, execute a query, and enter Yes in the Select field if you wish to associate this incident with the product change request.

[APP–18305] Please return to the previous zone to query

[APP–18306] The default value for one or more PCR attributes has expired

Cause: The default value for one or more of the following product change request attributes is no longer valid: o Request Type o Status o Severity o Urgency &APPLICATION automatically leaves the attribute field blank for any attribute with an expired default value.

Action: Complete one of the following steps: 1) Use the Update Personal Profile Options form to choose a different default value for the attribute or attributes with the expired value or values, respectively. 2) Use the Define PCR Attribute Values form to update the End Date of the expired default value so that it remains valid.

[APP–18307] The default value for one or more action attributes has expired
Cause: The default value for one or more of the following product change request action attributes is no longer valid:  
- Type  
- Status  
Oracle Customer Service automatically leaves the attribute field blank for any action attribute with an expired default value.

Action: Complete one of the following steps:  
1) Use the Update Personal Profile Options form to choose a different default value for the action attribute or attributes with the expired value or values, respectively.  
2) Use the Define PCR Action Attribute Values form to update the End Date of the expired default value so that it remains valid.

[APP–18309] Please enter your selection criteria in the previous zone

[APP–18309] You cannot update the product from here. Use the PCR zone instead

Cause: You tried to change the product for the current product change request. Changing the product from the current zone is not allowed.

Action: Proceed to the Product Change Request Details zone and choose the Complete PCR Information option. This option transfers you to the Product Change Request (PCR) zone, where you can change the product.

[APP–18311] You cannot proceed to subsequent fields since you entered No for Publish

[APP–18312] Please enter a different sequence number

[APP–18313] You are not authorized to create new product change requests

Cause: You have navigated to this form with the intention of entering a new product change request or you have attempted to save the information you have entered for a new product change request.

Action: You should contact your System Administrator to obtain authorization to create new product change requests. Or, you should use this form only to query and review or query and update existing product change requests.

[APP–18475] Entity being used by one or more templates so you cannot inactivate

[APP–18476] You cannot delete a template having CPs and/or contacts assigned to it

Cause: You tried to delete the current access control template while there are still customer products and or support contacts assigned to it.

Action: You should inactivate the current access control template if you longer want to use it by entering a date in the Effective To field. If you wish to remove the template altogether, you should first delete all customer product and support contact assignments for the template. You can then delete the template.

[APP–18477] You cannot enter a date since the contact is not selected for assignment

Cause: You tried to enter a start date or end date for a contact type that you have not selected to automatically assign to access control templates.

Action: Leave the Start Date and End Date fields blank.

Action: Enter Yes in the Select field to automatically assign the current contact type to templates, then enter appropriate start and end dates to control when automatic assignment should occur.
[APP–18478] You cannot add assignments under the current option

[APP–18479] You cannot delete assignments but you can inactivate them

[APP–18480] You have already assigned the maximum number of contacts allowed

[APP–18481] Invalid number since it is less than number of contacts already assigned

[APP–18482] Access Code has to be alpha-numeric

[APP–18483] Enter a new access code that is less than &CURRENT_CODE

[APP–18500] AutoCreate Installed Base

[APP–18501] Depot Repair Control

[APP–18502] Service Termination

[APP–18515] Synchronization process cannot obtain lock on all details Oracle Order Entry is unable to lock all details that need to be synchronized with the demand in Oracle Inventory. Another session is currently locking one or more of these details. Please try this operation again later.

[APP–18518] Invalid Original System Reference

[APP–18519] Line cancellable statuses have changed. Please erase changes and requery.

[APP–18520] No currency conversion information available.

[APP–18521] Line has been fully Cancelled; Unable to update field.

[APP–18522] Your requested cancel quantity must be a whole number.

[APP–18524] Option &OPTION already exists in this configuration.

[APP–18525] This name is already in use in another Organization. Please choose another name.

[APP–18526] &SET_NAME already exists. Choose another name, please.

[APP–18527] Oracle Order Entry has detected an internal exception

[APP–18528] OE Transaction Manager &SERVER could not connect to database &CONNECT. Contact your System Manager and provide complete details on how you reached this internal exception.

[APP–18531] OE Transaction Manager &SERVER could not load profile options. Contact your Oracle Support Representative and provide complete details on how you reached this internal exception.

[APP–18536] Error initializing connection to OE Transaction Manager. This version of the client software does not match the server's version. The client has version &CVER, the server has version &SVER. Contact your System Manager and provide complete details on how you reached this internal exception.
[APP–18541] Quantity must be less than 2,100,000,000.

[APP–18542] &SEQ_NUM already exists. Choose another number, please.

[APP–18543] Please enter a valid address.

[APP–18544] Included Item Detail is incomplete. &MESSAGE

[APP–18545] Invalid Order Cycle or Currency. The order was not copied because the Order Cycle or the Currency on the order was inactive or invalid. Please review the order.

[APP–18565] &MESSAGE

[APP–18571] Reserved Quantity should be greater than or equal to the Released Quantity (&RELEASED_QUANTITY)

[APP–18572] The shipping security failed. Oracle Order Entry was unable to execute the shipping security for &object, &attribute.

[APP–18573] &ITEM and &UNIT not active in &PRICE_LIST1 &ITEM and &UNIT with these pricing attributes is not active in primary price list &PRICE_LIST1

[APP–18574] &ITEM and &UNIT not active in &PRICE_LIST2 &ITEM and &UNIT with these pricing attributes is not in primary price list &PRICE_LIST1 and not active in secondary price list &PRICE_LIST2

[APP–18575] &ITEM and &UNIT not active in &PRICE_LIST1 &ITEM and &UNIT with these pricing attributes is not active in primary price list &PRICE_LIST1. Please enter price.

[APP–18576] &ITEM and &UNIT not active in &PRICE_LIST2 &ITEM and &UNIT with these pricing attributes is not in primary price list &PRICE_LIST1 and not active in secondary price list &PRICE_LIST2. Please enter price.

[APP–18594] &ITEM and &UNIT is not in &PRICE_LIST1

[APP–18595] &ITEM and &UNIT not on &PRICE_LIST1. Please enter price.

[APP–18598] Quantity cannot be greater than the original invoice quantity

[APP–18599] Order Import did not return the header id successfully.

[APP–18600] INTERMEDIATE_SHIP_TO_LOC
No such location in RA_ADDRESSES/RA_SITE_USES, or SITE_USE_CODE is not "SHIP_TO", or status flag check failed in RA_ADDRESSES/RA_SITE_USES.

[APP–18601] ITEM_NOT_ON_PR_LIST
THE ITEM DEFINED IS NOT ON THE ORDER PRICE LIST. @PARAGRAPGEND

[APP–18602] PROJECT_ID
No such project in MTL_PROJECT_V view.

[APP–18603] Invalid value for field SOURCE_TYPE_CODE.

[APP–18604] TASK_ID
No such task in MTL_TASK_V view, or project_id was null, or project_id was invalid.
[APP–18605] Invalid SOURCE TYPE CODE for this inventory item on this order cycle.

[APP–18606] There is a fixed currency conversion rate between the sales order currency and the currency of the operating unit.

[APP–18607] You are not authorized to view or enter Orders or Returns. Contact your System Administrator.

[APP–18609] Volume discounts may no longer apply. Reprice shipment lines if needed.

[APP–18610] Existing Schedule details for line (&line_number) will be merged so that this line can be purchased externally. Purchase these from external source anyway?

[APP–18611] You cannot create schedule details for externally sourced items.

[APP–18612] The Order is interfaced through Release Accounting.

[APP–18613] &Purchasing Information

[APP–18614] Multiple

[APP–18615] Configurator Validation Hold applied to line &LINE_NUMBER.

[APP–18616] Configurator Validation Hold was removed for line (&LINE_NUMBER)

[APP–18617] Control Level in inventory is set to Project

[APP–18618] Control Level in inventory is set to Task

[APP–18619] Invalid value for source type code.

[APP–18620] Invalid value for source type name.

[APP–18621] This Order Cycle allows the item to be purchased only from an external source.

[APP–18622] This Order Cycle allows the item to be satisfied only from an internal source.

[APP–18623] There is no receiving location associated with this ship-to location. Please define a receiving location in the Location form, then associate the two locations in the Customer form Address Business Purpose Detail window.

[APP–18624] Purchase Release

[APP–18625] This line was not copied because the destination order type can only process externally sourced items; this item cannot be purchased from an external source.

[APP–18626] The person who entered the order, &USER, is not a valid buyer.

[APP–18627] The person who entered the order, &USER, is not a valid employee.

[APP–18628] You cannot update the Source Type of a line that has shipment schedules. Update the individual shipment schedule lines instead.
[APP–18629] Agreement &AGREEMENT has been cleared from this order since it is not valid for the new order type &ORDER_TYPE.

[APP–18630] You may copy regular sales orders and returns only. The source order is neither a regular sales order nor a return.

[APP–18950] You have already defined responsibilities for this service group

Cause: You selected a service group which already has service responsibilities defined for it.

Action: Please choose a different service group.

[APP–18951] You have already assigned the current user to this service group

[APP–18952] Access Codes have to be numeric

Cause: You entered a value for the access code that was non numeric

Action: Enter an access code that is numeric The value for the code should only contain characters that are numbers The access code can be a negative number Valid characters are – 1 2 3 4 5 6 7 8 9 and 0

[APP–19002] Please remove project/task references before deleting.

Cause:
Before deleting this schedule all project and task references to it must be deleted.

Action:
You can query up all projects with references to this schedule in the Enter Projects form. To find all task references, contact your customer support representative.

[APP–19004] This distribution rule cannot be deleted or updated

Cause:
The distribution rule is currently being used by a project of this type.

Action:
Please change the project’s distribution rule or type before deleting/updating the rule here.

[APP–19005] Segment already has a rule assigned to it

Cause:
This segment has already been assigned a rule.

Action:
Please choose another segment to assign a rule to.

[APP–19006] The assignment start date must be after the resource start date

Cause:
The assignment start date must be on or after the start date of the non–labor resource.

Action:
Please assign a start date after the start date of the non–labor resource.
[APP–19007] The End Date of the assignment must be before the resource end date

Cause:
The assignment end date cannot be after the end date of the non–labor resource.

Action:
Please enter an assignment end date prior to that of the non–labor resource.

[APP–19021] Please define your system implementation before using this window

Cause:
Your system implementation options must be set up before you can use this window

Action:
Enter system implementation options in the Define Implementation Options window

[APP–19022] Employment start date for this employee is &S_DATE; enter later date

Cause:
The date you have entered is before the employment start date for this employee.

Action:
Please enter a date later than this employment start date.

[APP–19023] Employment end date for this employee is &T_DATE; enter earlier date

Cause:
The date you have entered is after this employee’s termination date.

Action:
Please enter a date that is before this termination date.

[APP–19024] Your logon is not set up to use Oracle Projects.

Cause:
Your logon is not set up to use Oracle Projects.

Action:
Please contact your System Administrator. Additional Information for System Administrator: An employee has not been assigned to this user logon. Please enter an employee name after querying up this user in the Define Application User form under the System Administrator responsibility.

[APP–19025] This user is not yet registered as an employee

Cause:
Your user logon has not been attached to an employee.

Action:
Please contact your System Administrator. Additional Information for System Administrator: An employee has not been assigned to this User logon. Please enter an employee name after querying up this User in the Define Application User under the Administrator Responsibility.

[APP–19026] You may need to recalculate revenue for affected expenditure items
Cause:
This change may result in different revenue figures for affected expenditure items.

Action:
If you want to see this change affect existing revenue figures, you should recalculate revenue for those items.

[APP–19040] Please enter a SQL Select Statement

Cause:
You have not entered a SQL statement for this rule.

Action:
Please enter the SQL statement that you want the rule to use in the SQL Select Statement field.

[APP–19041] This rule has been assigned to a segment. Delete assignment first

Cause:
You cannot delete a rule that has been assigned to a segment.

Action:
Use the Assign Rules form to delete the assignment. Then delete the rule.

[APP–19042] Intermediate Values must be unique

Cause:
This Intermediate Value already exists for this lookup set.

Action:
Please change it to a unique value.

[APP–19043] Please enter a constant value

Cause:
You have not entered a constant value

Action:
Enter the constant that you want the rule to return in the Constant Value field

[APP–19044] Please enter a parameter name

Cause:
You have not entered a parameter to be returned by this rule

Action:
Use QuickPick to select a parameter into the Parameter Name field that will be used by this rule

[APP–19050] You cannot delete a job if Oracle Projects is installed

Cause:
You tried to delete a job using Oracle Projects

Action:
You can deactivate the job using effectivity dates
[APP–19051] You cannot delete a hierarchy used by Oracle Projects.

Cause:
If any of the Organizations in the hierarchy you are attempting to delete have been used in Oracle Project Accounting, they may not be deleted.

[APP–19052] You cannot delete/update link in hierarchy used by Oracle Projects.

Cause:
You cannot delete or update any hierarchy links of the organization hierarchy under the start organization specified for use by Oracle Projects.

[APP–19054] You cannot delete a hierarchy version used by Oracle Projects.

Cause:
You have requested the deletion of the Organization Hierarchy Version.

[APP–19070] Update not allowed. &FKEY_REF are charged to this &PRJ_OR_TSK

[APP–19071] This item is an adjustment. Actions cannot be applied to adjustments.

Cause:
You can perform an action only against original items, not on their adjustments. The item you are attempting to perform an action on is an adjustment.

[APP–19072] Tasks cannot be billed until they are ready to accrue

Cause:
You cannot authorize a task for billing if it has not been authorized for revenue accrual.

Action:
If you want to authorize this task for billing, you must choose the 'Authorize revenue accrual and release for billing’ option.

[APP–19073] You cannot change this project when navigating from Search Projects

Cause:
You tried to select a project other than the one you are viewing when navigating from Search Projects

Action:
Choose another project in the Search Projects window or navigate to the Enter Projects window to select a different project

[APP–19074] Project Type cannot be changed to Indirect because it has funding

Cause:
Project Type cannot be changed to Indirect since Funding has been allocated to it

Action:
You can back out the Funding and then attempt to change the Project to Indirect

[APP–19075] Organization cannot be changed since cost/revenue/invoices exist
Cause:
You cannot change the Project Organization since the Project has costed items, revenue, or invoices billed against it.

[APP–19076] Project type cannot be changed due to costed items/revenues/invoices

Cause:
You cannot change the project type since costed items, revenue or invoices exist. You can change the project type only if there are no processed transactions against the project.

[APP–19077] You cannot use this option when navigating from Search Projects

Cause:
You tried to use an option when navigating from Search Projects

Action:
You may enter the window directly in order to use this option.

[APP–19078] Project Customer cannot be removed; converted items exist.

Cause:
You may not remove the project customer because converted, revenue distributed expenditure items exist. Oracle Projects does not allow customer changes for projects with converted items that are revenue distributed.

[APP–19079] Paying project customers cannot be added; converted items exist.

Cause:
You may not add any paying project customer because converted, revenue distributed expenditure items exist. Oracle Projects does not allow customer changes for projects with converted items that are revenue distributed.

[APP–19080] You cannot add paying project customers; there is invoice activity.

Cause:
You cannot add paying project customers because there is invoice activity. Oracle Projects requires that all project invoice history reflect the customer bill split. Adding a paying customer at this stage would violate this rule.

[APP–19081] Billing contribution cannot be updated; converted items exist

Cause:
You may not update the billing contribution because converted expenditure items exist.

[APP–19082] Billing contribution cannot be updated; there is invoice activity

Cause:
Billing contribution may not be updated because there is invoice activity against this project. Updating the billing contribution could cause data inconsistencies.

[APP–19083] Update not allowed; funding, draft revenue, or invoices exist

Cause:
Update is not allowed since related funding, draft revenue, or draft invoices exist.
[APP–19084] You cannot change the distribution rule; unearned revenue exists

  Cause:
You cannot change the distribution rule because the project has Unearned Revenue.

[APP–19085] The expenditure item dates of the items to be transferred fall outside of the effective dates of the destination project or task

  Cause:
The expenditure item date is outside the effective dates of the project or task to which you are transferring items.
  
  Action:
If you wish to transfer this item to this project/task, you will need to change the effective dates of the project/task.

[APP–19086] Billing contact not defined for each paying project client.

  Cause:
Each paying client must have a billing contact in order to authorize this project for revenue accrual or billing.
  
  Action:
Please enter billing contacts for each paying client of this project.

[APP–19087] The billing allocation across project client(s) is incomplete

  Cause:
The billing contributions for all customers of this project do not add up to 100%.
  
  Action:
Please alter billing contributions or add customers to enable the billing contribution across this project’s customers to sum to 100%.

[APP–19088] All mandatory class categories have not been classified.

  Cause:
All mandatory class categories must be classified before this project can be authorized.
  
  Action:
Please enter class code(s) for each mandatory class category.

[APP–19089] A project manager is not currently defined for this project

  Cause:
A Project must have an active Project Manager in order to be authorized for distribution.
  
  Action:
Please enter an active Project Manager for this project.

[APP–19090] Completion date must be later than all task completion dates

  Cause:
A project completion date cannot be earlier than the completion date of any of its tasks.
Action:
Change the completion date of all tasks to be earlier than this date or change the project completion date to a later date

[APP–19091] Start date must be earlier than all task start dates

Cause:
A project cannot have a start date that is later than the start date of any of its tasks.

Action:
Change the task start dates to be later than this date or choose an earlier start date for the project.

[APP–19092] Cannot delete AutoAccounting code; expenditure items exist

Cause:
Costed expenditure items exist for this project. You cannot delete the AutoAccounting Code.

[APP–19093] Sum of dated billing events ($&EAMT) not equal to draft revenue budget

Cause:
For an Event billing Project, the sum of the billing events with completion dates must equal the revenue budgeted for the project.

Action:
Change the events with completion dates so that the sum adds up to budgeted revenue.

[APP–19094] You must choose a job and/or billing title override

Action:
You must choose a job and/or billing title override for this employee.

[APP–19095] You do not have authorization to update information for this project

Cause:
Only project key members for this project or Cross–Project users can update project information.

Action:
In order to update information for this project, you must be added as a project key member, or you must log in as a Cross–Project user.

[APP–19096] You do not have authorization to see details of this project or task

Cause:
Only project members or cross project users are authorized to see project or task details.

Action:
If you wish to see details, you must be defined as either a key member for this project a cross project user.

[APP–19097] Only project members can authorize distribution

Cause:
Only project key members or Cross–Project users can authorize distribution for a project.
Action:
If you wish to authorize distribution for this project, you must be added as a project key member, or you must log in as a Cross-Project user.

[APP–19098] There is no draft cost budget

    Cause:
No draft cost budget exists.

    Action:
Create a non-zero draft cost budget for this project before attempting to authorize distribution.

[APP–19099] You can use the customer QuickPick only if a project customer exists

    Cause:
There are no customers set up for this project.

    Action:
You need to set up project customers before you can use this QuickPick.

[APP–19100] This override requires an employee name or source organization

    Cause:
You entered an override without entering an employee name or source organization.

    Action:
You must enter either an employee name or a source organization.

[APP–19101] Only one billing contact can be entered for this customer/project

    Cause:
You tried to define more than one billing contact for this project customer. Only one billing contact can be defined for each project customer.

    Action:
You can define other contact types using the Define Contact Types form.

[APP–19102] Only one default distribution rule is allowed for each project type

    Cause:
A maximum of one default distribution rule is allowed for each project type.

[APP–19103] Resetting Expenditure items/Events for Revenue Distribution...

    Cause:
This action causes associated Expenditure items and Events to be reset for Revenue Distribution.

[APP–19104] Warning: Update has caused a hold on revenue accrual for the Project

    Cause:
Update has caused a hold on revenue accrual for this Project.

    Action:
To remove the revenue accrual hold, you must re-authorize the project for revenue accrual.
[APP–19105] Task is not chargeable; project has no AutoAccounting class code

    Cause:
    Task set to 'Not Chargeable' since this project does not have a class code required by AutoAccounting.

    Action:
    If a class category and class code are required by AutoAccounting, you must define the appropriate project information in the Classifications zone.

[APP–19106] You do not have authorization to transfer items to this project

    Cause:
    Only active project key members or Cross–Project users may transfer items into the target project.

    Action:
    Please transfer into a project for which you are a project key member or log in as a Cross–Project user to transfer the item.

[APP–19107] You cannot edit the expenditure comment in this form.

    Cause:
    You can only modify expenditures in the Adjust Project Expenditures form.

    Action:
    Navigate to the Adjust Project Expenditures form to modify the expenditure.

[APP–19107] You may not request an Action; use Adjust Project Expenditures

    Cause:
    You can request an action only in the Adjust Project Expenditures form.

    Action:
    Navigate to the Adjust Project Expenditures form to perform the action you want to take.

[APP–19108] No items have been found which are eligible for transfer

    Cause:
    To be transferred to another task, an item may NOT be: already a member of the destination task, already transferred to another task, a vendor invoice item, an adjustment item, a fully reversed expenditure item, or a converted item

    Action:
    Please check for the above conditions.

[APP–19111] Chargeable status not allowed; no AutoAccounting code for project

    Cause:
    The project has no Autoaccounting class categories defined

    Action:
    Set up the required AutoAccounting class categories for the project in the Classification zone of the Enter Projects window
[APP–19112] Total unprocessed writeoff may not exceed the Unbilled Receivables

    Cause:
    Your total unprocessed revenue writeoffs will exceed your unbilled receivables

    Action:
    To write off revenue you must increase your unbilled receivables by accruing more revenue or reducing the invoiced amount

    Cause:
    Your project does not exist in Compensation Rules.

    Action:
    You must set up your project in the Define Compensation Rules form in order to enter Labor Cost Multipliers for tasks.

[APP–19114] You do not have authorization to modify revenue adjustment events

    Cause:
    To modify revenue adjustment events you must be a project key member or a cross-project user

[APP–19140] Please enter a unique agreement type and number for this customer

    Cause:
    An agreement already exists for this customer with the same agreement type and agreement number.

    Action:
    Please enter a unique agreement type and number combination for this customer.

[APP–19141] The revenue limit must be greater than or equal to amount allocated

    Cause:
    You cannot reduce the revenue limit amount to less than the amount already allocated

    Action:
    Update the revenue limit amount to an amount greater than the amount already allocated or reduce the amount allocated to projects

[APP–19142] Total amount allocated cannot be less than amount accrued or billed

    Cause:
    Total amount allocated is less than amount already accrued and/or billed.

    Action:
    You must allocate enough funds to cover the revenue which has already been accrued and/or billed against the allocated funding.

[APP–19143] This is a parent organization of an existing budget organization

    Cause:
    You cannot enter multiple budget items for organizations from the same branch of the organization hierarchy. This would result in duplicate reporting of those organizations.
Action:
Enter an organization which does not fall in the same hierarchy as any organization already entered as a budget item for this project/task.

[APP–19144] Transaction rolled back — unable to update project information

Cause:
Could not update project information due to a lock on the relevant row in the Projects table.

Action:
Try again later. If error persists, ask your system administrator to resolve the problem.

[APP–19145] No update is allowed because a budget has been defined at a higher level

Cause:
A budget has been defined at a higher WBS level

Action:
If you wish to create a budget at this level, first clear the higher level budget

[APP–19146] Total percentage for each Revenue credit type for AR Transfer must be 100%

Cause:
You have made a modification to a credit receiver. As a result, the total percentage for one of the Revenue credit types for Transfer to AR does not equal 100%.

Action:
Modify other active records of the same credit type to ensure that the total percentage for Transfer to AR equals 100%.

[APP–19147] You cannot delete this credit receiver because draft invoices exist

Cause:
After invoices have been created for a project, credit receivers cannot be deleted for the project

Action:
You can deactivate this credit receiver by entering a date in the End Date field

[APP–19148] You cannot delete this credit receiver because draft revenue exists

Cause:
After revenue has been generated for the project, credit receivers cannot be deleted for the project

Action:
You can deactivate a credit receiver by entering a date in the End Date field

[APP–19149] This number already exists. Choose a unique budget line item number.

Cause:
You have attempted to create a budget item which has the same line number as an existing item.

Action:
Change the line item number.
[APP–19150] A budget already exists for this project and task

  Cause:
The combination of project and task which you have entered already exists for this budget.

  Action:
If modifications are required to the budget, query the existing budget and modify it.

[APP–19151] Please enter a unique category or job for each budget line item

  Cause:
You have attempted to enter a budget item which uses the same Expenditure Category/Type, Revenue Category, or Job as a budget item which already exists.

  Action:
Enter a unique combination or add your changes to the existing budget item.

[APP–19152] You have entered a duplicate credit type for an employee

  Cause:
You have attempted to create a credit type for an employee when the same credit type already exists in an active state.

  Action:
You can either modify the existing record or deactivate it and enter a new record. Deactivate the existing record by entering an end date.

[APP–19153] Allocated fixed fee must be greater than or equal to accrued

  Cause:
The Fixed Fee allocated for this project or task is less than what has been accrued.

  Action:
You must allocate enough funding to cover the fixed fee which has already been accrued against the baseline budget. The fixed fee accrued against the baseline budget is shown in the Agreements zone.

[APP–19154] You cannot delete an agreement after funds have been allocated for it

  Cause:
You can only delete an agreement if no funds have been allocated from it. This rule applies even if the funds have been reversed.

[APP–19155] Please enter a value other than zero

  Cause:
When allocating funding to a direct project or task, the amount allocated cannot be zero.

  Action:
Please enter either a positive or a negative value or erase the row.

[APP–19156] Warning: Receiver must be a designated salesrep
Cause:
Credit receivers for the credit type QuotaCredit must be designated as Sales Representatives in Oracle Receivables.

Action:
Enter the credit receiver as a Sales Representative in Oracle Receivables.

[APP–19157] You must enter an expenditure category for this budget item

Cause:
If you have chosen an expenditure type for a budget item, an expenditure category must also be entered.

Action:
If you choose the expenditure type using QuickPick, the appropriate category will automatically be selected.

[APP–19158] Ready to Baseline is required for draft budgets

Cause:
Ready to Baseline is a required field for draft budgets.

Action:
Enter a value of Yes or No in the Ready To Baseline field. Enter Yes in the Ready To Baseline field if you are ready to baseline the draft budget.

[APP–19159] You must be a project member to enter or modify the budget

Cause:
A budget can be queried or examined by any user, but modifications to budgets and their associated budget items can only be made by project members or cross project users.

Action:
Contact a project member or cross project user to create you as a project member or ask them to make the change.

[APP–19160] This budget is not ready to be baselined

Cause:
This budget is not ready to baseline since its "Ready to Baseline" flag is set to No.

Action:
Set the flag to Yes for the Draft budget in the Enter Budgets form.

[APP–19161] Warning: You cannot modify Baseline or Original budgets

Cause:
Baseline budgets cannot be modified directly. Original budgets can never be modified.

Action:
If you wish to change the baseline budget, change the budget status from Baseline to Draft, ensure funding is correct, and baseline this budget again. The new budget will replace your existing baseline budget.
[APP–19162] You cannot update the customer after funds have been allocated

Cause:
After the customer’s funds have been allocated to projects, you cannot update the customer.

Action:
If you wish to change a customer’s funding on a project, or add a new customer, you must back out the funds from the existing agreement and create a new agreement for the new customer to fund the project.

[APP–19163] You cannot enter budget items for this budget

Cause:
You cannot enter budget items for this budget because amounts exist at the subbudget level.

Action:
Clear the amounts at the subbudget level before attempting to enter budget items.

[APP–19164] You must clear the project budget before entering a task budget

Cause:
You cannot enter a task level budget because project level amounts exist.

Action:
Clear the project level amounts before attempting to enter a task level budget.

[APP–19165] Project level funding is not allowed because task level funding exists

Cause:
You attempted to allocate funds at the task level when funds have already been allocated at the project level. For each project, funding can only be allocated at either project or task level.

Action:
You must either fund at the project level or back out the existing project level funding and fund at the task level.

[APP–19166] Credit receivers can be created only at the project level

Cause:
Funds have already been allocated to this project at the project level. Credit receivers can be created only at the level at which funding has been allocated.

[APP–19167] You cannot update this amount

Cause:
You cannot update amounts at this level because amounts have been defined at the budget item level.

Action:
Update amounts at the budget item level by choosing the appropriate cost breakdown code and entering budget items in the Budget Item zone.

[APP–19168] You cannot update this budget amount, because it consists of multiple amounts from lower level tasks.
Cause:
You can update budget amounts only at the task level at which they were originally entered.

Action:
You may update budget amounts by drilling down to the task level at which they were originally entered.

[APP–19169] You cannot allocate funds at the task level, because funds have already been allocated at the project level.

Cause:
You attempted to allocate funds at the task level when funds have already been allocated at the project level. You cannot allocate funds at both the task level and the project level for any given project.

Action:
You can either allocate funds at the project level, or back out all project level allocations and re–allocate funds at the task level.

[APP–19170] You can create credit receivers for this project only at the task level.

Cause:
You must allocate funds and create credit receivers for a project at the same level, either the task or project level. Task level funding for this project already exists.

[APP–19171] You have allocated more funds than your revenue limit allows.

Cause:
When allocating funds to the current project, you have entered an amount greater than the Amount Not Allocated shown at the top of the window.

Action:
The figures show a negative amount. Reverse the amount you entered by entering a corresponding negative amount.

[APP–19172] A budget item organization from the same branch of the organization hierarchy already exists.

Cause:
You cannot enter multiple budget item organizations from the same branch of the organization hierarchy. This would result in duplicate reporting of those organizations.

Action:
Enter an organization that does not fall in the same hierarchy branch as any organization already entered as a budget item organization for this project/task.

[APP–19173] You cannot update the Agreement Number because draft invoices referencing this agreement number already exist.

[APP–19210] You cannot delete an expenditure group that contains expenditures with adjusted expenditure items.

[APP–19211] You cannot delete an expenditure that contains adjusted expenditure items.
[APP–19212] You cannot approve draft revenue/invoices for a project with a status of Closed.

   Cause:
   If a project is closed, you cannot charge new transactions to it or approve revenue or invoices for it. You can only run costing for uncosted transactions that have already been charged to the closed project.

   Action:
   If you wish to approve revenue or invoices for a closed project, change the project status to Active.

[APP–19213] The Running Count does not equal the Control Count.

   Cause:
   The sum of all items entered does not equal your control total.

   Action:
   Ensure that all items have been entered with correct amounts and add up to the control total.

[APP–19215] A timecard for this employee and expenditure period already exists

   Cause:
   You cannot enter more than one timecard for an employee for a given expenditure period.

   Action:
   If you wish to make changes or additions to your existing timecard, query your existing timecard and make the appropriate changes.

[APP–19216] You have entered duplicate expenditure items on a single timecard.

   Cause:
   You have entered expenditure items with the same project, task, expenditure type, employee, date, and quantity information in a single timecard.

   Action:
   A timecard cannot contain duplicate expenditure items. Delete or revise one of the duplicate expenditure items.

[APP–19217] This employee has no effective hourly cost rate.

   Cause:
   Either a cost rate has never been entered for this employee, or none of the employee’s cost rate are effective as of the expenditure item date.

   Action:
   Ask your System Administrator to enter an hourly cost rate for this employee for the period covered by the timecard in the Define Labor Cost Rates window.

[APP–19218] You cannot approve draft revenue/invoices for an inactive customer.

   Cause:
   You cannot approve draft revenue/invoices for an inactive customer.

   Action:
   Change the customer’s status to Active in the Oracle Receivables Customer Maintenance window. You can then approve draft revenue/invoices for the customer in Oracle Projects.
No approved expenditure item can be found for this adjustment.

Cause:
To adjust an approved expenditure item, you must identify the expenditure item by the following information: expenditure item date, employee (if applicable), expenditure type, non–labor resource (if applicable), and project and task. No approved expenditure item with the information entered could be found.

Action:
Please verify that you have entered the correct information identifying the expenditure item to be adjusted and revise, if necessary.

You cannot delete expenditure items from approved expenditures

Cause:
You cannot revise or delete any expenditure item included in an approved expenditure.

Action:
To make adjustments to an approved expenditure, enter a new pre–approved expenditure batch with expenditure items partially or fully reversing the items to be adjusted.

You cannot delete pre–approved timecard information using this window

Cause:
You cannot delete pre–approved timecards using the Enter Timecards window.

Action:
You can make changes to pre–approved timecards using the Enter Pre–Approved Timecards window. If the timecard is not approved, you can delete the timecard through the Enter Pre–Approved Timecards window. If the timecard is approved, you can reverse it by entering a new timecard with reversing items. If it is submitted, change the status back to Working and then delete the timecard.

You cannot delete this timecard item, because its labor cost has already been distributed

Cause:
Since costs have been distributed, you may not delete this timecard item.

Action:
You need to enter pre–approved reversing entries to back out all items entered in the original timecard.

You cannot delete submitted or approved timecards

Cause:
You cannot delete timecards with a status of Submitted or Approved.

Action:
If the timecard has not yet been approved, use the Rework Routing Action to delete the timecard. If it has been approved, contact your Expense Administrator regarding entering a pre–approved expenditure to reverse all the expenditure items in the timecard.
[APP–19225] You may not delete expenditure items from a submitted expenditure batch

Cause:
You may not delete expenditure items from an expenditure batch once it has been submitted.

Action:
Change the expenditure batch status to Working and then delete expenditure items, as necessary.

[APP–19226] This employee has no effective employee assignment as of this expenditure item date

Cause:
This employee has no effective organization and job assignment as of this expenditure item date.

Action:
Enter an organization and job assignment for this employee for this expenditure item date in the Assign Employees or Enter Employees window.

[APP–19227] You cannot release an expenditure batch that contains no expenditures

Cause:
You can release an expenditure batch only if it contains expenditures.

Action:
Enter expenditures against this expenditure batch before attempting to release it.

[APP–19228] You cannot add an expenditure to a released or submitted expenditure batch

Cause:
You cannot add an expenditure to an expenditure batch with a status of Released or Submitted.

Action:
You will have to create a new expenditure batch to enter the expenditure.

[APP–19229] You cannot add a new expenditure item to an approved expenditure batch

Cause:
You cannot add a new expenditure item to an expenditure batch with a status of Approved.

Action:
Create a new expenditure batch to enter the expenditure item.

[APP–19230] You may not add information to a pre–approved timecard from this window.

Cause:
You may not add information to a pre–approved timecard using the Enter Timecards window.

Action:
You must use the Enter Pre–Approved Timecards window to revise pre–approved timecards.

[APP–19231] You cannot add expenditure items from this window

Cause:
You cannot add expenditure items using the Release Pre–Approved Expenditure window.
Action:
Add new expenditure items using the Enter Pre–Approved Expenditures window.

[APP–19232] You cannot add expenditure items to a submitted or approved timecard

Cause:
You cannot add expenditure items to a timecard with a status of Submitted or Approved.

Action:
If the timecard is submitted, change the status to Working and then add expenditure items. If it is approved, you will need to make adjusting entries.

[APP–19233] You cannot add expenditure items to a submitted expenditure batch

Cause:
You cannot add expenditure items to an expenditure batch with a status of Submitted.

Action:
Change the expenditure batch status to Working and then add expenditure items.

[APP–19234] This employee has no active primary organization assignment as of this expenditure item date

Cause:
This employee has no active primary organization assignment as of this expenditure item date.

Action:
An organization assignment must be entered for this employee as of this expenditure item date in the Assign Employees window.

[APP–19235] A source timecard for Copy Timecard was not found

Cause:
There is no timecard for the previous expenditure period that you can copy.

Action:
You must enter a timecard for the previous expenditure period before you can copy it.

[APP–19236] You cannot revise expenditure items in a submitted or approved timecard.

Cause:
You cannot revise expenditure items in timecard with a status of Submitted or Approved.

Action:
If the timecard status is Submitted, change the status to Working and then revise the expenditure items, as necessary. If the status is Approved, you cannot revise any expenditure items in the timecard.

[APP–19237] You cannot revise expenditure items in a submitted expenditure group

Cause:
You cannot revise expenditure items in an expenditure group with a status of Submitted.

Action:
Change the expenditure batch status to Working before attempting to revise its expenditure items.
[APP–19238] You must submit the expenditure batch before releasing it

   Cause:
You can release an expenditure batch only if it has a status of Submitted

   Action:
Change the status of this expenditure batch to Submitted in a pre–approved expenditure entry form before attempting to release it.

[APP–19239] The employee organization is not in the hierarchy

   Cause:
The organization to which this employee is currently assigned is not in the Project Organization Hierarchy.

   Action:
Either reassign this employee to an organization in the hierarchy, or enter the employee’s organization into the hierarchy.

[APP–19240] You cannot enter an expenditure ending date that occurs after the expenditure batch ending date

   Cause:
The Expenditure Ending Date must fall between the beginning and ending dates for the expenditure batch.

   Action:
Enter an Expenditure Ending Date that falls between the beginning and ending dates for the expenditure batch.

[APP–19241] You cannot charge expenditure items to a closed project

   Cause:
You cannot charge expenditure items to a project with a status of Closed.

   Action:
If you wish to charge against this project for this date, you must change the project status to Active.

[APP–19242] The expenditure item date is not within the active dates of the project

   Cause:
All expenditure items charged to a project must fall within the active dates of the project.

   Action:
If you wish to charge against this project for this date, change the expenditure item date to a date within the project start and end dates, or change the project’s start or end date to include the expenditure item date.

[APP–19243] You must reverse the exact amount of the original item

[APP–19244] The Expenditure Control Total does not equal the Running Total

   Cause:
The Expenditure Control Total does not equal the Running Total.
Action:
Verify that expenditure entries have been entered correctly.

[APP–19245] The Running Total does not equal the Control Total

Cause:
The Running Total does not equal the Control Total of the expenditure batch.

Action:
Recheck your entries. If the Control Total is incorrect, correct it before submitting the expenditure batch.

[APP–19246] You cannot delete a submitted timecard

Cause:
You cannot delete a timecard with a status of Submitted.

Action:
Update your Working, Reworking, or Rejected Timecard, or contact your Expense Administrator regarding adjusting your timecard.

[APP–19247] No timecards were processed

Cause:
The action you requested could not be executed for any timecards or associated Expenditure Routing information satisfying the criteria.

Action:
If you are either Forwarding with Approval or Approving timecards, check your Authorization Limit against the totals displayed for the timecards. Otherwise, contact your System Administrator.

[APP–19248] You may not revise the Expenditure Ending Date, because items for this expenditure already exist.

[APP–19249] The expenditure item date is not within the expenditure period

Cause:
The expenditure item date must fall within the Expenditure Period.

[APP–19253] You may not delete this expenditure item, because its cost has already been distributed

Cause:
You cannot delete expense report items once their costs have been distributed.

Action:
Contact your Expense Administrator to discuss entering a reversing entry through the Enter Pre–Approved Expense Reports window.

[APP–19254] You cannot delete expenditure items from a submitted or approved expense report

Cause:
You may not delete expenditure items from an expense report with a status of Submitted or Approved.
Action:
If the expense report has not yet been approved, use the Rework Routing Action to delete it. If it has been approved, contact your Expense Administrator regarding entering a reversing entry through the Enter Pre–Approved Expense Reports window.

[APP–19255] You cannot add expenditure items to a submitted or approved expense report

Cause:
You cannot add expenditure items to an expense report with a status of Submitted or Approved.

Action:
If the expense report is Submitted, change the status to Working and then add expenditure items, as necessary. If it is Approved, you need to make adjusting entries.

[APP–19256] A source expense report for Copy Expense Report was not found

Cause:
There is no expense report for the previous period to copy.

Action:
You must enter an expense report for the previous period before you can copy it.

[APP–19257] You cannot revise expenditure items in a submitted or approved expense report

Cause:
You cannot revise expenditure items in an expense report with a status of Submitted or Approved.

Action:
If the expense report is Submitted, change the status to Working and then revise the expenditure items, as necessary. If the status is Approved, you need to enter an adjusting entry in the Enter Pre–Approved Expense Reports window.

[APP–19258] You cannot delete pre–approved expense reports using this window.

Cause:
You cannot delete pre–approved expense reports using this window.

Action:
Use the Enter Pre–Approved Expense Reports window to delete a pre–approved expense report.

[APP–19259] You cannot delete a submitted expense report

Cause:
You cannot delete an expense report with a status of Submitted.

Action:
Contact your Expense Administrator regarding adjusting your expense report using the Enter Pre–Approved Expense Reports window.

[APP–19260] You may not add expenditure items to a pre–approved expense report from this window

Cause:
You may not add expenditure items to a pre–approved expense report using the Enter Expense Reports window.
Action:
Use the Pre–Approved Expense Reports window to revise pre–approved expense reports.

[APP–19261] The expenditure items from the selected expense report were not copied

  Cause:
The process was unable to create new expense report items by copying expenditure items from a
selected expense report.

  Action:
Contact your System Administrator.

[APP–19262] The expenditure items from the selected timecard were not copied

  Cause:
The process was unable to create new timecard items by copying the expenditure items from the
selected timecard.

  Action:
Contact your System Administrator.

[APP–19263] No expense reports were processed

  Cause:
The Action you requested could not be executed for any expense reports or associated Expense
Report Routing information satisfying the criteria.

  Action:
If you chose Forwarding with Approval or Approving, check your Authorization Limit against the
totals displayed for the Expense Report. Otherwise, contact your System Administrator.

[APP–19265] WARNING: An expense report for this employee and expenditure period already
exists

  Cause:
An expense report for this employee and expenditure period already exists.

  Action:
You can record multiple expense reports for the same period if you are routing expense reports to
different organizations. You can query your existing Expense Report(s) in View Expense Reports
and Enter Expense Reports to determine if an additional expense report for this period is
appropriate.

[APP–19267] A project–level expenditure transaction control has been violated

[APP–19268] A task–level expenditure transaction control has been violated

[APP–19269] The expenditure item date is not within the active dates of the task

[APP–19270] The task is not chargeable

[APP–19271] The specified project does not exist

[APP–19272] The specified task does not exist
[APP–19273] Project/Task validation error. Contact your support representative

[APP–19274] An Expenditure Transaction Control is already recorded for this date

[APP–19275] You may not delete adjusted expenditure items.

  Cause:
  Deleting this expenditure item will cause the corresponding reversing entries to point to a non–existent expenditure item.

  Action:
  To delete this expenditure item, you must first delete this item’s reversing entries.

[APP–19277] This item requires a valid quantity

[APP–19278] Update not allowed. Please delete this adjustment and re–enter.

[APP–19310] You must enter an accrue through date to regenerate draft revenue

  Cause:
  An accrue through date is required for generating draft revenue.

  Action:
  All eligible expenditure items with a date before the accrue through date will accrue revenue. All eligible events with a completion date before the accrue through date will also accrue revenue.

[APP–19311] You cannot cancel this invoice; cash has been applied against it

  Cause:
  You cannot cancel an invoice that has cash applied against it in Oracle Receivables.

  Action:
  You can undo the cash application in Oracle Receivables and then cancel the invoice.

[APP–19312] You cannot cancel this invoice; crediting invoices exist

  Cause:
  You cannot cancel an invoice if credit memos have been processed against it.

[APP–19313] You must enter the invoice date before releasing the invoice

  Cause:
  An invoice date is required before you can release an invoice.

  Action:
  Enter an invoice date before attempting to release the invoice.

[APP–19314] You must enter the AR Invoice Number before releasing the invoice

  Cause:
  An AR Invoice Number is required before you can release an invoice.

  Action:
  Enter the AR Invoice Number before releasing this invoice.
[APP–19315] Only an active project member or cross-project user can update draft invoices

[APP–19316] You cannot release an invoice that has not been approved or has already been released

  Cause:
  You cannot release an invoice with a status of Unapproved or Released.

  Action:
  If the invoice is Unapproved, it must be approved before you can release it. If it is Released, the invoice is already in its final state and may not be updated.

[APP–19317] You must enter a bill through date to regenerate a draft invoice

  Cause:
  Bill through Date is a required field.

  Action:
  Enter a date through which to invoice items.

[APP–19318] Invoice item details only exist for payment schedule events

  Cause:
  Invoice item details only exist for payment schedule events. These are the only events that are FIFO marked against expenditure items.

  Action:
  You can view details for invoices based on expenditure items or Schedule Payment events, and not for any other event types.

[APP–19319] No invoice items were found for this invoice

  Cause:
  This invoice has no invoice items. This may be due to an error in invoice generation.

  Action:
  Regenerate the invoice after reviewing and trying to resolve the generation error. Call your Customer Support Representative.

[APP–19320] No draft invoices pending or rejected

  Cause:
  There are no previous pending or rejected draft invoices. The Invoice Generation Program will create an Invoice if there are any unprocessed eligible items or events.

[APP–19321] You cannot update the invoice date from this window.

  Cause:
  You cannot update the invoice date from this window.

  Action:
  Use the Release Invoices window to update the invoice date.

[APP–19322] Update not allowed – the invoice is not released or is already transferred
You can update this invoice only if it has a status of Released.

If the invoice is not yet released, you can update this field after the invoice is released. If it has been transferred, you may not update the record.

Cause: [APP–19323] You may not update the automatically generated Invoice Number

You may not update the automatically generated Invoice Number.

If you wish to update invoice numbers, change the Implementation Options to allow manual invoice numbering.

[APP–19324] You cannot update the invoice number from this window

You can only update the invoice number using the Release Invoice window.

If your Implementation Option allows manual invoice numbers, you can update the invoice number using the Release Invoice window.

[APP–19325] Update not allowed; the invoice is not released or is already transferred

You can update this invoice only if it has a status of Released.

If the invoice is not yet released you can update this field after it is released. If it has been transferred you may not update the record.

[APP–19326] You must enter a unique AR invoice number

The AR Invoice Numbers must all be unique.

Please enter a unique AR Invoice Number.

[APP–19327] Write–off amount must be &lt;= uncredited invoice amount : &BALANCE

Write–off amount must not exceed the Uncredited Invoice Amount. You may only write off the remaining invoice amount.

Reduce write–off amount to less than the Uncredited Invoice Amount.

[APP–19328] Write–off amount must not exceed the unpaid receivable.

Write–off amount must not exceed the unpaid receivable amount. You may only write off an amount that has not already been paid in Oracle Receivables.
**Action:**
If you wish to write off an amount greater than your existing unpaid receivable, you will have to unapply cash in Oracle Receivables before doing the write–off.

[APP–19330] You cannot process draft revenue/invoices for an inactive customer.

**Cause:**
You cannot process draft revenue/invoices for inactive customers.

**Action:**
Use Oracle Receivables to change the customer status to active.

[APP–19331] You cannot have zero Project and Task level Funding.

**Cause:** You cannot have zero Project and Task level Funding.

**Action:** Use the Enter Agreements window to create either zero Project level Funding or zero Task level Funding.

[APP–19332] Cannot delete Credit Receiver

**Cause:** Sales Credits for this Credit Receiver have been interfaced to AR

**Action:** You may turn off the Transfer To AR flag to prevent further credits from being interfaced to AR.

[APP–19333] You cannot update this field for processed events

[APP–19334] Task funding with project level events is not allowed.

**Cause:** With task level funding, you may create only task level events.

**Action:** If you want to create project level events or have existing project level events, change the funding to project level.

[APP–19335] &FIELD must be entered for this billing extension

[APP–19336] Delete not allowed. Automatic events have been generated

[APP–19337] This billing extension is already active at the project level

[APP–19338] This billing extension is already active at the task level

[APP–19339] You cannot update or delete a processed AUTOMATIC event

[APP–19340] You must specify at least one usage for this override schedule

[APP–19341] Update not allowed. Revenue–distributed items exist

[APP–19342] Date ranges between revisions must be continuous

[APP–19343] You cannot delete override schedules referenced by expenditure items

[APP–19344] Update not allowed. Override revisions exist
A schedule is already in use for &TYPE

Delete not allowed; revision date ranges must be continuous

This Burden Cost Code is already defined for the revision

Project number cannot be blank.

Task number cannot be blank.

Organization cannot be blank

GL Date cannot be blank

Direct cost cannot be blank

A Burden schedule is not defined for the given expenditure combination.

An appropriate cost base has not been defined.

The burden schedule revision is not compiled.

A compiled multiplier has not been defined for the revenue burden schedule.

A compiled multiplier has not been defined for the invoice burden schedule.

Cost base cannot be blank.

This cost base and cost base type combination already exists.

Cost base type cannot be blank

Start date cannot be blank.

This cost base has already been costed.

There are expenditure types associated with this cost base.

Cannot define a new assignment for a terminated employee.

Cause:
Start date for assignment was after the termination date of the employee.

Action:
Enter a start date for the assignment that is earlier than the termination date of the employee.

You cannot create related items for a related item

This adjustment action is not allowed on related items

This field is not updatable for related item reversals

You cannot delete a related item adjustment
[APP–19444] This adjustment action is not allowed on fully reversed items.

[APP–19447] This period contains project–related supplier invoices in Oracle Payables that are not interfaced to Oracle Projects. To identify the exceptions, run the Transaction Exception reports. Do you want to close the period?

[APP–19449] You cannot close this period because it contains revenue distribution lines that are not interfaced to GL. You must run the EXC: Transaction Exceptions reports to identify the transactions that are preventing the period from being closed.

[APP–19451] This asset has been capitalized. You may not update this field.

[APP–19452] Date Placed In Service is in a future Oracle Assets period. The asset may be rejected during the interface process.

[APP–19453] The asset cannot be placed into service until the following attributes are entered: &FIELDS_TO_COMPLETE

[APP–19455] Setup information is missing.

[APP–19456] System Error: A null lookup type parameter was passed to PAXSULKP.

[APP–19457] System Error: An invalid lookup type parameter was passed to PAXSULKP.

[APP–19458] Error occurred during auto–generation of Project Number.

[APP–19459] Revenue has not been distributed.

[APP–19460] The Resource List Assignment was not found.

[APP–19461] The Use Code was not found.

[APP–19462] No valid formats found for this resource.

[APP–19463] Error generating resource list ID

[APP–19464] Unclassified resource does not exist in PA_RESOURCES table.

[APP–19465] This window cannot be executed independently.

[APP–19466] The Project ID passed to this form is not valid.

[APP–19468] You cannot transfer an item between projects with different classes.

[APP–19469] You are not authorized to transfer items to this task.

[APP–19470] You cannot perform this action on an item which has not been approved.

[APP–19471] Your job submission failed. Check the View Requests form to get more information.
[APP–19472] You must query expenditure items in order to reverse them.

[APP–19473] A different resource list is used in the baselined budget. You cannot change the resource list for a baselined budget.

[APP–19474] There is an error in the burdened cost budget calculation client extension. Error number &ERRNO: &ERRMSG.

[APP–19475] There is an error in the raw cost budget calculation client extension. Error number &ERRNO: &ERRMSG.

[APP–19476] There is an error in the revenue budget calculation client extension. Error number &ERRNO: &ERRMSG.

[APP–19477] You must create and baseline a cost budget for a project using cost as the revenue accrual method, before the revenue budget can be created.

[APP–19478] System Error: Cannot find accumulation period type in PA_IMPLEMENTATIONS.

[APP–19479] System Error: Cannot find predefined cost budget type in PA_BUDGETS_TYPES.

[APP–19480] System Error: Cannot find predefined revenue budget type in PA_BUDGETS_TYPES.

[APP–19481] System Error: Cannot find last accumulation period for project in PA_PERIODS.

[APP–19482] System Error: Cannot create parameter list for invoices.

[APP–19484] The value is too large for this field.

[APP–19485] You cannot perform this action on an item which belongs to a contract project.

[APP–19486] Distribution rule cannot be changed since cost/revenue/invoices exist

    Cause:
    You cannot change the distribution rule because the project has costed items, revenue, or invoices.

[APP–20000] You must specify a valid, enabled activity in the ACTIVITY_ID column.

[APP–20001] Parameter &PARAM is missing in call to &PROGRAM

    Action:
    Please contact your Oracle representative.

[APP–20003] You must reference a valid activity

[APP–20006] You cannot delete this &ENTITY from this delete group

    Cause:
    You cannot delete this &ENTITY from this delete group. A deleted &ENTITY cannot be removed from a delete group.
Action: None.

[APP–20009] &ENTITY1 &ENTITY2 already exists. Please re-enter

Cause: &ENTITY1 &ENTITY2 already exists.

Action: Enter another value for &ENTITY1 or &ENTITY2.

[APP–20011] &ENTITY attribute value has been overridden by default value for Product Family item

Cause: Attribute dependency rule violation.

Action: None.

[APP–20012] You cannot delete alternate &ENTITY. It is currently in use

Cause: A bill of material, routing, or cost type currently references this alternate

Action: You must delete all references to an alternate before you can delete it

[APP–20013] Cannot update the attribute

Cause: Violation of attribute dependency rules for BOM Item Type = Product Family.

Action: None.

[APP–20014] Error in BOM_PFI_PVT package: &MSG

[APP–20015] You cannot create a new revision with an alternate bill of material

Cause: You cannot create a new revision with an alternate bill of material

Action: You can create new item revisions: – using the Define Item Revisions form – using the Define Bill of Material form to update an item’s primary bill of material – using the Define Engineering Change Order form to create an ECO that updates an item’s primary bill of material.

[APP–20016] Item assignment to Product Family category set failed

Cause: Category &CAT does not exist.

Action: Please create the category before assigning members to the corresponding product family.
[APP–20017] &PROC:
&ENTITY not found

[APP–20018] You must specify a valid item as the assembly in the column ASSEMBLY_ITEM_ID.

[APP–20019] &ENTITY template attribute values have been overridden by default values for Product Family item

  Cause:
  Attribute dependency rule violation. Optional action:
  Use correct attribute values in your Product Family item template.

[APP–20021] You must specify a 1 or 2 in the column ASSEMBLY_TYPE.

[APP–20022] You must specify an existing assembly comment record for deletion.

[APP–20023] Valid primary does not exist

[APP–20024] You must specify a valid value for assigned units

[APP–20025] Planning percent may not be 0.

[APP–20026] A baseline already exists for this Line and Family. Saving this calculation will overwrite the existing one.

[APP–20027] You must include a value in either the ASSEMBLY_ITEM_NUMBER column or the ASSEMBLY_ITEM_ID column.

[APP–20030] You must specify valid item attributes for assembly items

[APP–20033] The BOM Configuration Item Delimiter profile value is invalid

  Cause:
  You must enter a one character value for your BOM Configuration Item Delimiter profile option.
  Your profile value cannot equal your item flexfield segment separator.

  Action:
  Update the BOM Configuration Item Delimiter profile value.

[APP–20036] An internal error occurred while delinking your bill of material.

  Cause:
  Oracle Bills of Material detected an internal error while delinking your bill of material. &ERRMSG

  Action:
  Contact your Oracle support representative.

[APP–20039] Unable to find a new item number to use for configuration item

  Cause:
  Oracle Bills of Material’s Create Configuration Item program could not find a new item number.

  Action:
  Contact your Oracle support representative. Additional Information for support representative:
  Please review the concurrent program log file.
[APP–20042] Unable to explode your bill of material

   Cause:
Oracle Bills of Material was unable to explode your bill of material.

   Action:
Contact your Oracle support representative. Additional information for support representative:
Review the concurrent program log file to determine where the explosion process failed.

[APP–20045] An insert error occurred while exploding your bill of material

   Cause:
Oracle Bills of Material detected an insert error while exploding your bill of material.

   Action:
Contact your Oracle support representative. Additional information for support representative:
Review the concurrent program log file to determine where the explosion process failed.

[APP–20048] An error occurred while exploding your bill of material

   Cause:
Oracle Bills of Material detected missing data required for the bill of material explosion.

   Action:
Contact your Oracle support representative. Additional information for your support representative:
One of the following errors occurred: 1) An explosion group id was passed to the explosion routine
which didn’t match any rows on the identified table. 2) The MTL_PARAMETERS table does not
have valid values set up in the CALENDAR_CODE and/or CALENDAR_EXCEPTION_SET_ID
columns for the ORGANIZATION_ID specified. 3) The REQUIREMENT_DATE on the row
processed is a date value which is not set up on the calendar identified in the MTL_PARAMETERS
table.

[APP–20051] An internal error occurred while exploding your bill of material

   Cause:
Oracle Bills of Material was unable to explode your configuration item due to an update error.

   Action:
Contact your support representative. Additional information for support representative: Review the
concurrent log file to determine where the explosion process failed.

[APP–20054] An internal error occurred while linking your bill of material.

   Cause:
Oracle Bills of Material detected an internal error while linking your bill of material. &ERRMSG

   Action:
Contact your Oracle support representative. Please review the concurrent log for additional
information.

[APP–20057] An internal error occurred while loading your bill of material

   Cause:
Oracle Bills of Material detected an internal error while loading your bill of material. &ERRMSG
[APP–20060] An internal error occurred in the duplicate configuration item name loop

Action:
Contact your Oracle support representative. Additional information for support representative:
Review the concurrent program log file to determine where the load bill of material process failed.

Cause:
Oracle Bills of Material detected an internal error in the duplicate configuration item name loop.

[APP–20063] Order Line in use

Action:
Check to see if the row has been processed by the AutoCreate Configuration Concurrent Program or try later.

Cause:
AutoCreate Configuration found the order line being currently processed by another function.

[APP–20066] The derived date is outside the workday calendar date range.

Action:
Define additional calendar dates for your workday calendar.

Action:
Reduce the quantity demanded for your item, so the requirement or release date is within your workday calendar date range.

Action:
Adjust the fixed and variable lead times for your item so the requirement or release date is within your workday calendar date range.

[APP–20069] An internal error occurred while processing your bill of material

Action:
Contact your Oracle support representative. Additional information for support representative:
Review the concurrent program log file to determine where the bill of material process failed.

[APP–20072] You must specify a valid value in the column AUTOCHARGE_TYPE.

[APP–20075] You cannot copy this bill of material
Cause:
You cannot copy this bill of material. Copying the bill of material would cause component item overlap for the default operation sequence "1".

Action:
Create a routing with operations for this item before you copy the bill of material. Associate each component item with a routing operation when you copy the bill of material.

[APP–20078] The Bill header was created but components could not be copied

Cause:
You cannot copy components for this bill of material. Copying the components would cause component item overlap for the default operation sequence "1".

Action:
Create a routing with operations for this item before you copy the bill of material. Associate each component item with a routing operation when you copy the bill of material.

[APP–20081] A bill for the base model does not exist in this organization

Cause:
A manufacturing bill for the base model of this configuration bill does not exist in this organization.

Action:
You must define a manufacturing bill for your base model in this organization before you choose option items for your configuration bill of material.

[APP–20084] You must define all bill component items for this organization

Cause:
Component items of your bill of material do not exist for your current organization.

Action:
Define all component items of your bill of material in your current organization.

[APP–20087] This &ENTITY already exists. Please enter another alternate to create an alternate &ENTITY, or use Query Find to find an existing &ENTITY.

[APP–20090] This combination in the STANDARD_REMARKS_DESIGNATOR column and the BILLSEQUENCE_ID column already exists.

[APP–20093] Bill of material copied for this organization &ENTITY1 bill components copied of &ENTITY2 total bill components &ENTITY3 bill of material comments copied of &ENTITY4 total bill comments &ENTITY5 reference designators were copied of &ENTITY6 total reference designators &ENTITY7 substitute components copied of &ENTITY8 total substitute components

[APP–20096] You must specify a valid bill for this bill revision

[APP–20099] You must reference a valid bill in the column BILLSEQUENCE_ID.

[APP–20102] You must specify a valid bill of material
[APP–20105] Alternate bills exist for this primary bill of material
[APP–20108] Other bills reference this bill as a common bill of material
[APP–20111] A repetitive schedule exists for this item
[APP–20114] A discrete job exists for this item
[APP–20117] Open sales orders exist for this item
[APP–20120] Outstanding demand exists for this item
[APP–20123] Configuration items exist for this model bill of material
[APP–20126] Another bill references this option class bill of material
[APP–20129] You must enter a calendar name to be copied &ENTITY.
[APP–20132] Please compile your calendar &ENTITY

  Cause:
  You have not compiled your calendar &ENTITY.

  Action:
  Compile calendar &ENTITY.

[APP–20135] Date should be between calendar start and end date
[APP–20138] &ENTITY1 already exists for calendar &ENTITY2. Please re-enter.
[APP–20141] Warning: This exception set is being used by &ENTITY organization(s)
[APP–20144] You cannot enter duplicate workday exception dates. Please re-enter

  Cause:
  You cannot have duplicate workday exception dates for your calendar or shift workday exceptions.

  Action:
  Enter another workday exception date.

[APP–20147] You cannot enter a date less than the current date for a new revision

  Cause:
  You cannot create a new revision with a revision date earlier than the current date.

  Action:
  Enter a revision date greater than or equal to the current date for your new revision.

[APP–20150] You cannot delete this location. Outside processing resources exist

  Cause:
  You cannot delete a location for a department with outside processing resources.

  Action:
  Remove outside processing resources from your department before deleting this location.
[APP–20153] You cannot delete a resource with assigned shifts
   
   Cause:
   You cannot delete your resource when shifts for this resource exist.
   
   Action:
   Delete the shifts for this resource before you delete your resource.
   
[APP–20156] You cannot delete this resource. An operation references &ENTITY
   
   Cause:
   You cannot delete resource &ENTITY. A routing operation references &ENTITY.
   
   Action:
   Disable resource &ENTITY.
   
[APP–20159] You cannot delete &ENTITY. A standard operation references &ENTITY
   
   Cause:
   You cannot delete resource &ENTITY. A standard operation references &ENTITY.
   
   Action:
   Disable resource &ENTITY.
   
[APP–20162] You cannot delete &ENTITY. A WIP job references &ENTITY
   
   Cause:
   You cannot delete resource &ENTITY. A WIP job contains operations that reference &ENTITY.
   
   Action:
   Disable resource &ENTITY.
   
[APP–20165] You cannot delete an effective routing revision

[APP–20168] You cannot delete multi–department resource &ENTITY
   
   Cause:
   You cannot delete multi–department resource &ENTITY from your department. Other departments share this resource.
   
   Action:
   Delete &ENTITY from the sharing departments before you delete &ENTITY from this department.
   
[APP–20171] You cannot delete a resource shift with capacity modifications
   
   Cause:
   You cannot delete this shift for your resource. Capacity modifications exist for this shift.
   
   Action:
   Delete capacity modifications for this shift before you delete your resource shift.
   
[APP–20174] You cannot enter an autocharge of PO move or PO receipt
   
   Cause:
   You cannot enter an autocharge type of PO move or PO receipt for a resource with a negative usage rate or amount.
Action: 
Enter an autocharge type of WIP move or Manual for this resource.

[APP–20177] This capacity change already exists. Please re-enter

Cause: 
You entered a capacity change that already exists.

Action: 
Enter a unique capacity change.

[APP–20180] You cannot enter a negative usage rate or amount

Cause: 
You cannot enter a negative usage rate or amount when the resource autocharge type is PO receipt or PO move.

Action: 
Enter a positive usage rate or amount for this resource.

[APP–20183] You cannot erase &ENTITY

Cause: 
You cannot erase your &ENTITY. Values must exist for &ENTITY.

Action: 
None.

[APP–20186] You cannot navigate to the &ENTITY zone

[APP–20189] You cannot assign shifts to a resource that is available 24 hours

Cause: 
You cannot assign shifts to a resource that is available 24 hours.

Action: 
None.

[APP–20192] You cannot define resource details for uncosted resources

Cause: 
You cannot define resource details for your uncosted resource.

Action: 
None.

[APP–20195] You cannot assign shifts to a shared resource

Cause: 
You cannot assign shifts to a shared resource owned by another department.

Action: 
Assign additional shifts to your shared resource for the owning department.
[APP–20198] You already share resource &ENTITY with other departments

    Cause:
    You cannot define &ENTITY as a non–shared resource for this department. Other departments
    share &ENTITY.

    Action:
    Delete &ENTITY from the sharing departments before you define &ENTITY as a non–shared
    resource for this department.

[APP–20201] You cannot view resource details for uncosted resources

    Cause:
    You cannot view resource details for your uncosted resource.

    Action:
    None.

[APP–20204] Unable to set locator control, defaulting to no locator control

[APP–20207] You must clear component records

[APP–20210] You must reference a valid item as the common item in the column
COMMON_ITEM_NUMBER.

[APP–20213] You must reference a valid common bill in the column
COMMON_BILL_SEQUENCE_ID.

[APP–20216] You must reference a valid common routing in the column
COMMON_ROUTING_SEQUENCE_ID.

[APP–20219] The parent item for this option is on an open sales order

[APP–20222] A pending ECO references this component

[APP–20225] You cannot delete comment &ENTITY. A bill uses this comment

    Cause:
    You cannot delete a comment referenced by a bill of material.

    Action:
    Before you delete your comment, delete the reference to your comment on the bill of material.

[APP–20228] You cannot enter additional data with a common &ENTITY assigned

    Cause:
    You cannot enter additional data when your bill of material or routing references a common bill of
    material.

    Action:
    None.

[APP–20231] You must specify an existing bill as the common bill in the column
COMMON_BILL_SEQUENCE_ID.
[APP–20234] You must include a valid bill as the common bill.

[APP–20237] You cannot assign components to a common bill of material.

[APP–20240] Common bill has &ENTITY components missing from this organization.

  Cause:
  You cannot reference a common bill of material that contains components not defined for your organization.

  Action:
  Define all components to your common bill of material for your organization.

[APP–20243] The common bill information for this item is incomplete.

  Cause:
  You must enter an organization and an item for your common bill of material.

  Action:
  Enter the organization and item for your common bill of material.

[APP–20246] You cannot assign operations to a common routing.

[APP–20249] You must specify an existing organization as the common organization in the column COMMON_ORG_CODE.

[APP–20252] This item does not exist or is invalid for organizations that reference this bill.

  Cause:
  You entered a component item that either does not exist or has invalid ATO or PTO attributes in all organizations with bills of material that reference your bill of material as a common.

  Action:
  Define this item with valid ATO and PTO attributes for all organizations with bills of material that reference your bill of material as a common.

[APP–20255] You must include a valid routing as the common routing.

[APP–20258] You must specify an existing routing as the common routing in the column COMMON_ROUTING_SEQUENCE_ID.

[APP–20261] This combination of values in the columns COMPONENT_ITEM_ID, EFFECTIVITY_DATE, OPERATION_SEQ and BILL_SEQUENCE_ID already exists.

[APP–20264] You must assign components with valid attribute combinations.

[APP–20267] You must assign an existing item as a component in the column COMPONENT_ITEM_NUMBER.

[APP–20270] You cannot set Check ATP to "Yes" for this component.

  Cause:
  You cannot set Check ATP to "Yes" for a component quantity less than or equal to 0.
Action:
Enter a component quantity greater than 0.

Action:
Set Check ATP to "No" for this component.

[APP–20273] Component item exists for this operation sequence and date range

Cause:
You cannot overlap the effective date range of identical component items for the same operation sequence.

Action:
Change the effective date range or operation sequence of either component item.

[APP–20276] Each component must have a unique value in the column COMPONENT_SEQUENCE_ID.

[APP–20279] You must reference an existing component in the COMPONENT_SEQUENCE_ID column

[APP–20282] You must reference a valid component sequence in the column COMPONENT_SEQUENCE_ID.

[APP–20285] You must create a revision for a new routing

Cause:
You must create a revision for a new routing.

Action:
Specify Create Revision as "Yes" to define a new routing revision.

[APP–20288] Default not found. You must enter a change order number

Cause:
The default for your engineering change order number does not exist or is greater than ten characters.

Action:
Define default engineering change order number information for each user and organization.

Action:
Reduce the number of characters in your engineering change order prefix or next number.

[APP–20291] You must associate a calendar with your current organization

Cause:
You must associate a workday calendar with each organization.

Action:
Associate a workday calendar with your current organization.

[APP–20294] You must define parameters for this organization in Oracle Inventory
Cause:
You have not defined parameters for your current organization in Oracle Inventory.

Action:
Define parameters for your current organization in Oracle Inventory.

[APP–20297] You must define parameters for Oracle Work in Process

Cause:
You must define parameters for Oracle Work in Process before you can proceed.

Action:
Please define the necessary parameters in the Define Work in Process Parameters form.

[APP–20300] You cannot delete this group. Deleted entities exist in the group

Cause:
You cannot delete this group because it contains deleted items, bills of material, or routings.

Action:
None.

[APP–20303] You cannot delete this group. Deleted sub–entities exist

Cause:
You cannot delete this group because it contains deleted component items or operations.

Action:
None.

[APP–20306] Please enter a valid value for &ENTITY

[APP–20309] Demand exists for this item (MTL_DEMAND)

[APP–20312] RMA’s exist for this item in the interface table (MTL_SO_RMA_INTERFACE)

[APP–20315] Pending cycle count entries exist for this item (MTL_CYCLE_COUNT_ENTRIES)

[APP–20318] Supply from PO’s or transfers exist for this item (MTL_SUPPLY)

[APP–20321] Unprocessed transactions exist for this item in the transaction interface. (MTL_TRANSACTIONS_INTERFACE)

[APP–20324] Bill of Materials exist for this item (BOM_BILL_OF_MATERIALS)

[APP–20327] This item is a component in a Bill of Material (BOM_INVENTORY_COMPONENTS)

[APP–20330] A routing exists for this item (BOM_OPERATIONAL ROUTINGS)

[APP–20333] This item is a substitute component (BOM SUBSTITUTE COMPONENT)

[APP–20336] A forecast exists for this item (MRP_FORECAST_ITEMS)

[APP–20339] MRP plans exist for this item (MRP_SCHEDULE_ITEMS)
[APP–20342] Pending demand transactions exist for this item (MTL_DEMAND_INTERFACE)
[APP–20345] MRP plans exist for this item (MRP_SYSTEM_ITEMS)
[APP–20348] This item exists as a component on an ECO (ENG_REVISED_COMPONENTS)
[APP–20351] An ECO exists for this item (ENG_REVISED_ITEMS)
[APP–20354] WIP Jobs exist to produce this item (WIP_ENTITIES)
[APP–20357] WIP requirements exist for this item (WIP_REQUIREMENT_OPERATIONS)
[APP–20360] Purchase Order Lines exist for this item (PO_LINES)
[APP–20363] Receiving shipment lines exist for this item (RCV_SHIPMENT_LINES)
[APP–20366] Requisition lines exist for this item (PO_REQUISITION_LINES)
[APP–20369] Requisitions exist for this item (PO_REQUISITIONS_INTERFACE)
[APP–20372] ReqExpress template lines exist for this item (PO_REQEXPRESS_LINES)
[APP–20375] Inventory transactions exist for this item (MTL_MATERIAL_TRANSACTIONS)
[APP–20378] Purchasing Autosource rules exist for this item (PO_AUTOSOURCE_RULES)
[APP–20381] Purchase Orders exist for this item (PO_LINES)
[APP–20384] Receiving transactions are pending for this item (RCV_TRANSACTIONS_INTERFACE)
[APP–20387] WIP jobs exist for this item (WIP_DISCRETE_JOBS)
[APP–20390] WIP jobs are pending for this item (WIP_JOB_SCHEDULE_INTERFACE)
[APP–20393] Resources exist for this item (BOM_RESOURCES)
[APP–20396] Invoice, credit memo, or commitment lines exist for this item (RA_CUSTOMER_TRX_LINES)
[APP–20399] Cost adjustment details exist for this item (CST_STD_COST_ADJ_VALUES)
[APP–20402] Cost history exists for this item (CST_COST_TYPE_HISTORY)
[APP–20405] This item exists in an ABC compile (MTL_ABC_COMPILE)
[APP–20408] Inventory transactions exist for this item (MTL_MATERIAL_TRANSACTIONS_TEMP)
[APP–20411] ABC Assignments exist for this item (MTL_ABC_ASSIGNMENTS)
[APP–20414] User defined demand exists for this item (MTL_USER_DEMAND)
[APP–20417] User defined supply exists for this item (MTL_USER_SUPPLY)
[APP–20420] This item is included in a Bill of Resource Set (CRP_BILL_OF_RESOURCE_ITEMS)
[APP–20423] Sales Order Lines exist for this item (SO_LINES)

[APP–20426] Sales Order Details exist for this item (SO_LINEDETAILS)

[APP–20429] Picking Lines exist for this item (SO_PICKING_LINES)

[APP–20432] Cost update adjustment history exists for this item (CST_STANDARD_COSTS)

[APP–20435] Item still exists in child organizations

[APP–20438] On hand inventory exists for this item (MTL_ONHAND_QUANTITIES)

[APP–20441] Physical Inventory Adjustments exist for this item (MTL_PHYSICAL_ADJUSTMENTS)

[APP–20444] Physical Inventory Tags exist for this item (MTL_PHYSICAL_INVENTORY_TAGS)

[APP–20447] Replenishment lines exist for this item (MTL_REPLENISH_LINES)

[APP–20450] Pending replenishment lines exist for this item (MTL_REPLENISH_LINES_INT)

[APP–20453] You cannot update common information because demand exists for this bill

[APP–20456] You cannot delete class &ENTITY. A department uses this class

  Cause:
  You cannot delete a department class currently referenced by a department.

  Action:
  Delete all department references to this department class.

[APP–20459] You must reference a valid department in the column DEPARTMENT_CODE.

[APP–20462] You must specify a valid, enabled department in the column DEPARTMENT_ID.

[APP–20465] You must specify an active resource assigned to this operation’s department

[APP–20468] This &ENTITY is disabled

  Cause:
  You cannot reference this &ENTITY because it is disabled.

  Action:
  Choose another &ENTITY.

[APP–20471] You must include a unique value for the bill sequence in the column BILL_SEQUENCE_ID.

[APP–20474] Please disable the duplicate component item/op seq for this bill

  Cause:
  Another component row exists with the same operation sequence and component item, without a disable date.

  Action:
  You must add a disable date to the existing component before you can create a new component with the same component item/operation sequence combination.
[APP–20477] This delete group name is already used for a different delete group type.

[APP–20480] This combination of values in the columns RESOURCE_SEQ_NUM and OPERATION_SEQUENCE_ID already exists.

[APP–20483] A duplicate routing has been found.

[APP–20486] This combination of values in the columns SUBSTITUTE_COMPONENT_ID and COMPONENT_SEQUENCE_ID already exists.

[APP–20489] This combination of values in the columns COMPONENT_SEQUENCE_ID and COMPONENT_REFERENCE_DESIGNATOR already exists.

[APP–20492] You cannot assign an effective date that is greater than the disable date in the column DISABLE_DATE.

[APP–20495] This item/alternate combination already exists in Engineering

    Cause:
    You cannot define your manufacturing bill of material using the same item/alternate combination that already exists for an engineering bill of material.

    Action:
    Define your manufacturing bill of material using a unique item/alternate combination.

[APP–20498] You cannot enter an owning department. Shifts exist for this resource

    Cause:
    You cannot enter an owning department for a resource when shifts are assigned to that resource.

    Action:
    None.

[APP–20501] &ENTITY1 must be equal to &ENTITY2

    Cause:
    &ENTITY1 must be equal to &ENTITY2.

    Action:
    Enter the value of &ENTITY2 for &ENTITY1.

[APP–20504] An internal error occurred while creating your list of items

    Cause:
    Oracle Bills of Material detected an internal error while creating your list of items.

    Action:
    Contact your Oracle support representative.

[APP–20507] An internal error occurred while copying this &ENTITY

    Cause:
    Oracle Bills of Material detected an internal error while copying your &ENTITY.
Action:
Contact your Oracle support representative.

[APP–20510] You cannot change &ENTITY1 because &ENTITY2 exists.

[APP–20513] You must choose a workday exception set to compile your calendar

  Cause:
  You must choose a workday exception set in order to compile your calendar.

  Action:
  Define workday exception sets for your calendar, and choose a workday exception set when you compile your calendar.

[APP–20516] Item &ITEM_NUMBER has no valid revision on &EFF_DATE

  Cause:
  On &EFF_DATE, your item has no valid revision.

  Action:
  Define a revision for your item on &EFF_DATE.

[APP–20517] The Link between &FROM_OP_SEQ_ID and &TO_OP_SEQ_ID already Exists.

[APP–20519] An effective date for revision &REVISION does not exist

  Cause:
  There is no effective date for revision &REVISION.

  Action:
  Enter another revision.

[APP–20522] This item or routing has no valid revision and effective date range

  Cause:
  This item or routing has no valid revision and effective date range.

  Action:
  Define a revision and effective date range for your item or routing.

[APP–20525] Item &ITEM_NUMBER has no valid routing revision on &EFF_DATE

  Cause:
  On &EFF_DATE, your item has no valid routing revision.

  Action:
  Define a routing revision for your item on &EFF_DATE.

[APP–20528] Unable to implode this component item.

  Cause:
  Oracle Bills of Material is unable to implode your component item.

  Action:
  Contact your Oracle support representative.
[APP–20531] Unable to implode this range of component items

   Cause:
   Oracle Bills of Material is unable to implode this range of component items.

   Action:
   Contact your Oracle support representative. Additional information for support representative:
   Please review the log file for this concurrent program.

[APP–20534] You cannot assign an implemented component with overlapping effective date ranges

[APP–20537] You cannot assign an operation with overlapping effective date ranges

[APP–20540] &ENTITY1 must not be same as &ENTITY2

   Cause:
   You cannot enter the same value for &ENTITY1 and &ENTITY2.

   Action:
   Enter different values for &ENTITY1 and &ENTITY2.

[APP–20543] You must specify a valid standard instruction code in the column OPERATION_DESCRIPTION_CODE.

[APP–20546] You cannot delete this instruction. An operation references &ENTITY

   Cause:
   A standard operation, a routing operation or a job currently references instruction &ENTITY.

   Action:
   Delete the standard operation, routing operation or job references to instruction &ENTITY before deleting the instruction.

[APP–20549] &ENTITY must be a positive integer value

[APP–20552] You must include a valid alternate name in the column ALTERNATE_BOM_DESIGNATOR.

[APP–20555] This component item is invalid. Please re-enter

   Cause:
   You cannot enter component items where the Check ATP or the ATP Components attribute is ”Yes” on this bill of material.

   Action:
   Assign a component item where the Check ATP or ATP Component attribute is ”No”.

   Action:
   Change the parent item attributes: – Set ATP Components to ”Yes” or – Set Assemble to Order or Pick Components to ”No” – Verify that the WIP Supply Type is not ”Phantom”

[APP–20558] You must define delete constraint &ENTITY as a SQL select statement

   Cause:
   You must define delete constraints as SQL select statements. &ENTITY is not a select statement.
Action: Define your delete constraint as a SQL select statement.

[APP–20561] &ENTITY is not a valid date within the calendar.

[APP–20564] You must assign components with valid item attributes

[APP–20567] You must specify a valid operation sequence number for the component

[APP–20570] You must include a valid organization in the column ORGANIZATION_ID.

[APP–20573] You must include a valid alternate name in the column ALTERNATE_ROUTING_DESIGNATOR.

[APP–20576] You must include a valid value in the column STANDARD_REMARKS_DESIGNATOR.

[APP–20579] You must include a value in either the INVENTORY_ITEM column or the INVENTORY_ITEM_ID column.

[APP–20582] You must specify a valid item in the column INVENTORY_ITEM_ID.

[APP–20585] Bill &ENTITY &ENTITY2 exceeds the maximum number of bill levels

  Cause: Bill &ENTITY1 &ENTITY2 exceeds the maximum number of bill levels defined for this organization.

  Action: Reduce the number of levels in bill &ENTITY1 &ENTITY2.

[APP–20588] You must specify an existing location in the column LOCATION_NAME.

[APP–20591] You must specify a valid locator

[APP–20594] A loop may exist in this bill of material

  Cause: This bill of material either contains a parent item referenced as component or exceeds the maximum number of bill of material levels.

  Action: Disable the component referencing a parent item.

  Action: Increase the maximum number of bill of material levels.

[APP–20597] Lead time calculation for &ENTITY failed

[APP–20600] Order details for the parent item specify no for &ENTITY

[APP–20603] The maximum number of bill of material levels must be in the range 1..60

  Cause: You cannot enter a value greater than 60 as the maximum number of bill of material levels.
Action:
Enter a value less than or equal to 60 as the maximum number of bill of material levels.

[APP–20606] A bill exceeds the maximum number of bill of material levels

Cause:
Oracle Bills of Material detected a bill that exceeds the maximum number of bill of material levels.

Action:
Increase the parameter for the maximum number of bill of material levels or reduce the number of levels in your bill structure.

[APP–20609] You cannot copy this bill. All items must exist for this organization

Cause:
You cannot copy a bill of material if all the component items do not exist for this organization.

Action:
Define all component items for this organization before copying this bill of material.

[APP–20612] Implementation failed for some Bills of Material

[APP–20615] You cannot set quantity related to yes when you add a component

Cause:
You cannot specify quantity related reference designators when you add a component to a bill through a mass change order.

Action:
Specify "No" for quantity related when you add a component to a bill through a mass change order.

[APP–20618] An internal error was detected

Cause:
Oracle Bills of Material detected an internal error when a function received a pointer to unallocated memory.

Action:
Contact your Oracle support representative.

[APP–20621] The maximum number of bill of material levels must be in the range 1..60

Cause:
You cannot enter a value lower than 1 as the maximum number of bill of material levels.

Action:
Enter a value greater than or equal to 1 as the maximum number of bill of material levels.

[APP–20624] You must enter capacity units for this resource

Cause:
You must enter capacity units for multi–department resources.

Action:
Specify capacity units for this resource.
[APP–20627] You cannot specify a negative usage rate for this resource.

[APP–20630] NONE is not a valid name for an Alternate.

[APP–20633] You cannot update Check ATP to “Yes” for this component.

   **Cause:**
   You cannot update the Check ATP component attribute if the Check ATP item attribute is set to “No”.

   **Action:**
   Set the Check ATP item attribute to ”Yes” for this item.

[APP–20636] This &ENTITY1 is not a valid &ENTITY2. Please re-enter

   **Cause:**
   You must enter a valid &ENTITY2 for your capacity modification.

   **Action:**
   Enter a valid &ENTITY2 as the &ENTITY1 for your capacity modification.

[APP–20639] &ENTITY is not an existing message name. Please re-enter

   **Cause:**
   You must enter an existing message as your delete constraint failure message.

   **Action:**
   Define your message for Oracle Bills of Material in the Application Object Library message dictionary. Enter your message name as your delete constraint failure message.

[APP–20642] You cannot define this resource as available 24 hours because either: Shifts exist for this resource or A routing assigns more than 1 unit of this resource.

[APP–20645] You do not have the privilege required to define Currency as a Resource Type. Request your system administrator for the privilege to update cost information.

[APP–20648] You cannot delete &ENTITY due to invalid data

   **Cause:**
   Oracle Bills of Material cannot delete &ENTITY due to invalid data.

   **Action:**
   Contact your support representative. Additional information for support representative: The table BOM_DELETE_SQL_STATEMENTS does not contain SQL statements to delete &ENTITY.

[APP–20651] You cannot delete this &ENTITY1 from this organization

   **Cause:**
   You cannot delete this &ENTITY1 from your current organization. The &ENTITY1 exists in organization &ENTITY2.

   **Action:**
   Change your current organization to the &ENTITY2 before deleting this &ENTITY1.
[APP–20654] You cannot delete cost for the frozen standard cost type

    Cause:
You cannot delete your resource cost when the cost type is frozen.

    Action:
Use Cost Update to update costs for the frozen standard cost type.

[APP–20657] &ENTITY1 do not exist for this &ENTITY2

    Cause:
There are no &ENTITY1 for &ENTITY2. You can enter &ENTITY1 if: – &ENTITY2 has a delete status of "Error" – Your group type is "Component" or "Operation"

    Action:
None.

[APP–20660] This operation’s department does not have a location. A charge type of PO Receipt cannot be assigned if there is no location.

[APP–20663] You must enter an owning department or capacity units

    Cause:
You must enter capacity units for non–shared resources or an owning department for shared resources.

    Action:
Specify capacity units for resources owned by this department and not shared with other departments.

    Action:
Enter an owning department for resources assigned to this department and owned by another department.

[APP–20666] You can enter a negative usage rate only if the resource is not scheduled and the charge type is neither PO Move or PO Receipt.

[APP–20669] An internal error was detected for this item or routing revision

    Cause:
Oracle Bills of Material detected an incorrect sequence id for this item revision.

    Action:
Contact your Oracle support representative. Additional information for support representative : The sequence &SEQ_ID is invalid for this item.

[APP–20672] You cannot assign reference designators to planning bills

[APP–20675] You cannot assign reference designators to model, option class, or planning components

[APP–20678] You cannot assign substitute components to planning bills

[APP–20681] You cannot assign substitute components to model, option class, or planning components
&ENTITY1 &ENTITY2 does not have a location specified. &ENTITY3 &ENTITY4 is an outside processing &ENTITY5.

[APP–20687] You must enter a valid standard instruction in the column OPERATION_DESCRIPTION_CODE.

[APP–20690] You must include a value in the column COMPUTER_REFERENCE_DESIGNATOR.

[APP–20693] You must enter a resource sequence in the column RESOURCE_SEQ_NUM.

[APP–20696] You must include a value for the revision.

[APP–20699] You must enter a routing revision in the column PROCESS_REVISION.

[APP–20702] You must specify a resource offset percent between 0 and 100 in the column RESOURCE_OFFSET_PERCENT.

[APP–20705] You cannot assign an autocharge type of PO Move for this resource

  Cause:
  You cannot enter an Autocharge type of PO Move for more than one resource per operation.

  Action:
  Specify an Autocharge type of Manual, PO Receipt, or WIP Move for this resource.

[APP–20708] This bill of material contains a loop

  Cause:
  This bill of material contains the following loop: &ENTITY1

  Action:
  Disable the component that references a parent item.

[APP–20711] You must assign the days on and days off for this workday pattern

[APP–20714] This combination of values in the ROUTING_SEQUENCE_ID, EFFECTIVITY_DATE, and OPERATION_SEQ columns already exists.

[APP–20717] You must specify an operation with valid attributes

[APP–20720] PTO model and option class bills must have optional ATO component items.

[APP–20723] You cannot enter component yield for option class items

[APP–20726] This operation_description_code and operation_sequence_id combination already exists.

[APP–20729] You must specify a valid value in the following columns: BASIS_TYPE, STANDARD_RATE_FLAG, SCHEDULE_FLAG and AUTOCHARGE_TYPE.

[APP–20732] You cannot have more than one Next scheduled resource for an operation

[APP–20735] You cannot have more than one Prior scheduled resource for an operation

[APP–20738] You cannot schedule this resource
Each operation must have a unique value in the column OPERATION_SEQUENCE_ID.

You must reference a valid operation sequence in the column OPERATION_SEQUENCE_ID.

You must enter an operation sequence number in the column OPERATION_SEQ_NUM.

You must include a valid value for either the ORGANIZATION_CODE or ORGANIZATION_ID column.

An internal error was detected

Cause:
An internal error was detected.

Action:
Contact your Oracle support representative. Additional information for support representative: &ROUTINE failed to allocate memory. Please review the concurrent log file for more information.

An internal error was detected

Cause:
Oracle Bills of Material detected an internal error when a function received invalid values as its parameters.

Action:
Contact your Oracle support representative.

You cannot rollup costs, define jobs or schedules in &ENTITY1

Cause:
You cannot rollup costs, define discrete jobs or repetitive schedules in an organization that shares item costs with a master costing organization. Although Oracle Bills of Material lets you define BOM parameters for this organization &ENTITY1, you cannot perform a cost rollup, open a discrete job, define a repetitive schedule, or create configuration items in this organization.

Action:
Change to the master costing organization for &ENTITY1 to define your bills of material and routings. Rollup costs, define discrete jobs, define repetitive schedules, and create configuration items in your master costing organization.

You cannot update a component referenced on pending ECO &ENTITY

You must assign a supply type of phantom to this component

Cause:
You must assign a component supply type of phantom to model and option class items.

Action:
Change the component supply type for model and option class items.
[APP–20768] Only planning bills and optional components can have planning factors not equal to 100

[APP–20771] You cannot create additional details for planning bill components

[APP–20774] An internal error occurred in the program &ROUTINE

    Cause:
Oracle Bills of Material detected &SQLERRM in &ROUTINE.

    Action:
Contact your system administrator.

[APP–20777] Outside Processing resources with PO Receipt Charge Type exist for this department.

[APP–20780] &ENTITY1 does not exist for &ENTITY2

    Cause:
&ENTITY1 does not exist for &ENTITY2.

    Action:
None.

[APP–20783] You must specify a quantity of 1 for an ATO option class component that belongs to a model, option class, or standard bill

[APP–20786] You cannot define &ENTITY quantities with related reference designators

    Cause:
You cannot define &ENTITY component quantities and assign quantity related reference designators.

    Action:
Create whole number component quantities or define your reference designators as independent of &ENTITY component quantities.

[APP–20789] You cannot define &ENTITY quantity related reference designators

    Cause:
You cannot define quantity related reference designators for &ENTITY component quantities.

    Action:
Create your reference designators as independent of component quantity.

[APP–20792] You cannot enter the character ‘ for a revision. Please re-enter

    Cause:
You cannot enter the character ‘ for your revision label.

    Action:
Enter another alphanumeric character for your revision label.

[APP–20795] Starting Value and Ending Value must be the same length
[APP–20798] You must define all departments and resources for this organization

  Cause:
  You cannot copy a routing with operations that reference departments and resources not defined for your organization.

  Action:
  Define all departments and resources for your organization before copying this routing.

[APP–20801] The number of reference designators must equal the component quantity

[APP–20804] The number of reference designators must equal component quantity

  Cause:
  For quantity related reference designators, the number of reference designators must equal the component quantity.

  Action:
  Change the number of reference designators to equal the component quantity.

[APP–20807] &ENTITY1 is required for &ENTITY2

[APP–20810] &ENTITY is not a valid name for this alternate. Please re-enter

  Cause:
  &ENTITY is not a valid name for this alternate.

  Action:
  Please enter another name for this alternate.

[APP–20813] You must include a valid value in either the RESOURCE_ID or RESOURCE_CODE column.

[APP–20816] You must enter revisions and effectivity dates in ascending order

  Cause:
  A lower revision with a later effectivity date than your revision already exists.

  Action:
  Enter an effectivity date for your revision that is later than all other effectivity dates.

  Cause:
  A higher revision with an earlier effectivity date than your revision already exists.

  Action:
  Enter a revision that is higher than all other revisions.

[APP–20819] This routing has no effective revision for this date.

  Cause:
  This routing has no effective revision for the revision date entered.

  Action:
  Enter another revision date for this routing.
[APP–20822] You must assign revision labels in ascending order

[APP–20825] Routing copied for this organization &ENTITY1 operations copied of &ENTITY2 total operations. &ENTITY3 resources copied of &ENTITY4 total operation resources. &ENTITY5 operation instructions copied of &ENTITY6 total operation instructions.

[APP–20828] You must enter a routing with valid item attributes

[APP–20831] You must specify either a 1 or 2 ROUTING_TYPE column.

[APP–20834] Alternates exist for this primary routing

[APP–20837] Other routings reference this routing as a common routing

[APP–20840] A discrete job references this routing

[APP–20843] A repetitive schedule references this routing

[APP–20846] You must specify a valid routing for this routing revision

[APP–20849] You must enter a valid routing

[APP–20852] You must reference a valid routing sequence in the ROUTING_SEQUENCE_ID column.

[APP–20855] An internal error was detected for this item or routing revision

  Cause:
  Oracle Bills of Material detected an error for this item or routing revision.

  Action:
  Contact your Oracle support representative. Additional information for support representative: An invalid or insufficient number of arguments were passed to the revision user exit.

[APP–20858] You cannot update common information because sales exist for this bill

[APP–20861] Resource is not time–based. You cannot schedule a resource that is not time–based.

[APP–20864] You cannot overlap shifts. Please re–enter shift times

  Cause:
  Shift start time &ENTITY1 and stop time &ENTITY2 overlap with another shift.

  Action:
  Enter another shift start time or stop time.

[APP–20867] You must enter a shift number to be copied &ENTITY.

[APP–20869] Effective From date must be greater than or equal to current date and also less than Disable Date.

[APP–20870] &ENTITY

  Cause:
  Oracle Bills of Material detected &ENTITY.
Action:
None.

[APP–20873] An internal error occurred while imploding your range of items

Cause:
Oracle Bills of Material detected an internal error while imploding your range of component items.

Action:
Contact your Oracle support representative.

[APP–20876] You must reference a valid operation code in the column OPERATION_CODE.

[APP–20879] You must reference a valid standard operation in the column STANDARD_OPERATION_ID.

[APP–20882] You cannot delete this standard operation. A routing uses &ENTITY

Cause:
You cannot delete this standard operation. A routing references standard operation &ENTITY.

Action:
Delete routing references to standard operation &ENTITY before deleting &ENTITY.

[APP–20885] You must include a valid standard value in the STANDARD_REMARKS DESIGNATOR column

[APP–20888] You must specify a valid subinventory

[APP–20891] You must specify valid item attributes for substitute component items

[APP–20894] You must specify a standard, bom enabled item as the substitute component. You cannot assign engineering items as substitutes on a manufacturing bill.

[APP–20897] You cannot assign the assembly or component item as a substitute component

[APP–20900] You must assign an existing item in the SUBSTITUTE_COMP_NUMBER column

[APP–20903] You must include a value in the SUBSTITUTE_ITEM_QUANTITY column

[APP–20906] The substitute item quantity cannot be zero

[APP–20909] You cannot enter a subinventory or locator when supply type is push

Cause:
You cannot enter a supply subinventory or locator for a component when the supply type is push.

Action:
Enter another supply type for this component.

Action:
Delete the supply subinventory and locator for this component.

[APP–20912] You must adjust resource usage rates based on the new UOM
Cause:
You modified the unit of measure for this resource.

Action:
You must adjust the resource usage rates in routing operations and standard operations that reference this resource.

[APP–20915] You must specify the reciprocal of the value in the USAGE_RATE_OR_AMOUNT column in the USAGE_RATE_OR_AMOUNT_INVERSE column

[APP–20918] An internal error occurred while verifying your bill of material

Cause:
Oracle Bills of Material detected an internal error while verifying your bill of material.

Action:
Contact your Oracle support representative.

[APP–20919] Date To should be greater than or equal to Date From

[APP–20920] A corresponding routing does not exist.

[APP–20921] Organization cannot be blank.

[APP–20922] Transaction Type must be Insert, Update or Delete

[APP–20923] Line is not updatable if processes, line operations, or standard events exist for this routing.

[APP–20924] You must first save the delete group

[APP–20925] This item is already a member of a Product Family.

Action: Select a member which is not already a member of another Product Family or is not a Product Family itself.

[APP–20926] A Product Family for this item already exists.

[APP–20927] You cannot insert records with this form.

[APP–20928] Effective To date must be greater than or equal to Effective From date.

[APP–20928] Effective To date must be greater than or equal to current date and must also be greater than effective from date.

[APP–20929] Overlapping effectivity dates.

Cause: Effective From and Effective To dates for the planning factor cannot overlap. Only 1 planning percent can be effective at a given date.

Action: Enter effective from and to dates such that no date falls within the range of other planning percentages.

[APP–20930] &ENTITY1 is required for &ENTITY2 form.
[APP–20931] You cannot assign values to non-updatable columns.

[APP–20932] You must specify an existing bill record for update.

[APP–20933] You must specify a delete group in the BOM_INTERFACE_DELETE_GROUPS table for bills.

[APP–20934] You must specify a Delete Group with the proper Type.

[APP–20935] You must specify an existing component record for update.

[APP–20936] You must set Quantity Related to "No" because the number of reference designators does not equal the component quantity.

[APP–20937] You must specify a delete group in the BOM_INTERFACE_DELETE_GROUPS table for components.

[APP–20938] You must specify an existing implemented substitute component record for update or deletion.

[APP–20939] You must specify a component that exists in the organizations that refer to this bill as a common bill.

[APP–20940] You must specify a substitute component that exists in the organizations that refer to this bill as a common bill.

[APP–20941] You must assign an existing item as the NEW_SUB_COMP_NUMBER.

[APP–20942] You must specify an existing implemented reference designator record for update or deletion.

[APP–20943] Events are associated with this process or line operation.

[APP–20944] This process or line operation is part of a network.

[APP–20945] &Forecast Entries

[APP–20946] &Standard Operations

[APP–20947] Flow &Routings

[APP–20948] &Kanban Planner Workbench

[APP–20949] Save as &Baseline

[APP–20950] &Next Set

[APP–20951] &Previous Set

[APP–20952] &View Baseline

[APP–20953] Master &Demand Schedule Entries

[APP–20954] Master Production Schedule &Entries
[APP–20955] Line Scheduling & Workbench

[APP–20956] This line does not exist.

[APP–20957] A line is required for Product Synchronizations.

[APP–20958] Only one routing per item per line may be used in mixed model map.

[APP–20959] Operation type is required.

[APP–20960] Operation code is required.

[APP–20961] Process or Line Operation does not exist.

[APP–20962] Only events can be associated with processes or line operations.

[APP–20963] You can insert, update and delete resources only for non-referenced events. Resources cannot be associated with processes or line operations. They cannot be touched if the event is referenced.

[APP–20964] Implementation Date, Change Notice, ECN Initiation Date, Creation Date and Created By are not updatable.

[APP–20965] This operation does not exist.

[APP–20966] Operation Resources or Attachments exist. You cannot copy or reference standard operations until existing assigned resources and attachments are deleted.

[APP–20968] This operation resource does not exist.

[APP–20969] A delete group name must be specified.

[APP–20970] At first record

[APP–20971] At last record

[APP–20972] You cannot access this form

Cause:
You do not have a license for Oracle Flow Manufacturing.

Action:
Obtain a license for Oracle Flow Manufacturing.

[APP–20974] Demand Days cannot be zero.

[APP–20975] Line TAKT cannot be calculated because the total Demand is zero.

[APP–20976] The Capable to Promise flag can be set for only one routing per item per organization.

[APP–20977] This bill can not be copied because a component item either does not exist or has invalid ATO or PTO attributes in an organization with bills of material that reference your bill of material as a common.
[APP–20978] Hours Per Day cannot be zero.

[APP–20998] A Product Family for this item already exists. Action: Please perform a Query find to see existing Product Families or enter an item for which a Product Family has not been defined.

[APP–21000] You have not chosen anything to transfer

Cause:
You have set all options to 'No'

Action:
Set one of these Options to 'Yes' – Transfer Items – Transfer Bills – Transfer Routings

[APP–21002] Reference designator &ENTITY already exists. Please re-enter

Cause:
You cannot add &ENTITY as a reference designator for this component. This reference designator already exists.

Action:
Enter another reference designator.

[APP–21004] This alternate bill already exists as an engineering bill

[APP–21006] Approver Name must be entered

[APP–21008] The combined length of Prefix and Next Number exceeds 10 characters

[APP–21010] You cannot revise components for a cancelled revised item

Cause:
You cannot change revised component information for cancelled revised items.

Action:
None.

[APP–21012] You cannot create a bill of material for this item

Cause:
You are trying to create a bill of material for an item which is not allowed to have bills.

Action:
Set item attribute 'BOM allowed' to 'Yes'.

[APP–21014] You cannot delete this change type because it appears on an ECO or MCO

[APP–21016] You cannot delete or cancel the common bill &ENTITY

[APP–21018] You cannot delete this &Entity because it appears on an ECO

[APP–21020] You cannot update this item because the change type is accessed in an unimplemented ECO or MCO

[APP–21022] You cannot view revised components
Cause:
You are not allowed to revise items of this type.

Action:
Contact your Manager/System Administrator to give you access to this item. This is done by setting the values to ‘Yes’ for the following Personal Profile Options: – Model Item Access – Planning Item Access – Standard Item Access

[APP–21024] Unable to set locator control, defaulting to no locator control

[APP–21026] Change type &ENTITY already exists. Please re-enter...

[APP–21028] You cannot revise an item that references a common bill

Cause:
You cannot change an item that references a common bill.

Action:
Oracle Engineering allows you to revise the common bill.

[APP–21030] This item is missing from other organizations that refer to this bill

Cause:
You entered a component item that does not exist in all organizations that have engineering bills of material referencing your bill of material as a common.

Action:
Define this item for all organization with engineering bills of material that reference your bill of material as a common.

[APP–21032] Component Add or Change has a disable date less than the current date

Cause:
Add or change for component, &ITEM, could not be implemented because its disable date will be less than the new effective date.

Action:
Redefine the change notice so that the Disable Date is some day in the future.

[APP–21034] Unable to add or change component &ITEM

Cause:
Implementation attempted to add Component, &ITEM, to operation &OP, which already exists on the Bill of Material.

Action:
Cancel this portion of the engineering change order.

Cause:
Implementation attempted to change an existing Operation to number &OP. The new operation number has already been specified for component, &ITEM.

Action:
Change the effectivity or disable dates of component &ITEM at operation &OP.
[APP–21036] Component item already exists for this operation sequence and date range

  Cause:
  A bill cannot have identical component items for the same operation sequence with overlapping effective dates.

  Action:
  Change the effective date range or operation sequence of either component item.

[APP–21038] The new revision, &ENTITY1, is lower than the current revision, &ENTITY2

  Cause:
  New item revision, &ENTITY1, must be higher than the current revision, &ENTITY2.

  Action:
  Change the new item revision to a higher value.

[APP–21040] Default not found. You must enter a change order number

  Cause:
  The default for your engineering change order number does not exist or is greater than ten characters.

  Action:
  Define default engineering change order number information for each user and organization.

  Action:
  Reduce the number of characters in your engineering change order prefix or next number.

[APP–21042] This &ENTITY is disabled

[APP–21044] You must set the approval status to Approved for this ECO

  Cause:
  The ECO has an ECO status of scheduled, or some revised items on this ECO have a revised item status of scheduled.

  Action:
  Change the ECO status or revised item status to open, hold, released, or cancelled.

[APP–21046] You must enter a specific organization or all organization ECN number

[APP–21048] Enter a valid Employee Name

[APP–21050] An internal error occurred while transferring your data

  Cause:
  Oracle Engineering detected the following error, &TR_ERROR.

  Action:
  Contact your system administrator.

[APP–21052] An internal error occurred while copying this bill of material
Cause:
Oracle Engineering detected an internal error while attempting to copy this bill.

Action:
Contact your Oracle support representative.

[APP–21054] An internal error was detected during &ENTITY

Cause:
Oracle Engineering detected and internal error during &ENTITY.

Action:
Contact your local Oracle support representative.

[APP–21056] Component quantity of &ITEM must be an integer.

Cause:
You cannot enter a fractional component quantity for components to a pick to order bill.

Action:
Enter an integer for the component quantity on all components to a pick to order bill.

[APP–21058] You have already added this component to this operation sequence

Cause:
You cannot add a component to an operation sequence more than once.

Action:
Add this component to another operation sequence

[APP–21060] This component item has already been revised on this date

Cause:
You cannot modify a component more than once for the same effective date.

Action:
Choose another effective date.

[APP–21062] You cannot see details for an implemented revised item

Cause:
You cannot review details for revised items you have already implemented.

Action:
None.

[APP–21064] &ECO &ITEM &ALT Implementation failed: &ERROR

[APP–21066] You cannot add a component item with these ATP item attributes

Cause:
You cannot add a component item where the Check ATP or the ATP Components item attribute is "Yes".
Action:
Assign a component item where the Check ATP or ATP Components item attribute is "No".

Action:
Change the parent item’s attributes: – Set ATP Components to "Yes" or – Set Assemble to Order or Pick Components to "No" – Verify that the WIP Supply Type is not "Phantom"

[APP–21068] There are no ECO’s revising this &ENTITY

Cause:
You have selected an item that does not appear in any ECO as a revised &ENTITY.

Action:
Enter an item for which an ECO exists where that item is a revised &ENTITY.

[APP–21070] Implementation failed for &ECO &ITEM &ALT: &ERROR

[APP–21072] &ENTITY is ‘Yes’ for this component and ‘No’ for the revised item

[APP–21074] &ITEM &ALT Implementation failed: &ERROR

[APP–21076] An internal error was detected and the data was not transferred

Cause:
Oracle Engineering detected an internal error. Oracle Engineering was not able to access enough memory to transfer your engineering data.

Action:
Contact your System Administrator

[APP–21078] An alternate bill for this item already exists in manufacturing

Cause:
You cannot create an engineering bill of material for this item and alternate combination. You already have defined an alternate bill in manufacturing for this item and alternate.

Action:
Choose another alternate or item to create an engineering bill of material.

[APP–21080] A primary bill for this item already exists in manufacturing

Cause:
You cannot define a primary engineering bill of material for this item. You have already defined the primary bill for this item in manufacturing.

Action:
Define an alternate engineering bill of material for this item.

[APP–21082] You cannot add reference designators or substitute components to non–standard components.

[APP–21084] &ENTITY1 is not equal to &ENTITY2

Cause:
&ENTITY1 is not equal to &ENTITY2.
Action:
Make &ENTITY1 equal to &ENTITY2.

[APP–21086] &ENTITY not found

[APP–21088] Program could not transfer item – &ENTITY

[APP–21090] Program could not transfer item – out of memory

Cause:
Program could not transfer this item due to lack of memory space.

Action:
Contact your System Administrator to rectify this problem.

[APP–21092] You cannot change or delete &ITEM for this bill

Cause:
You cannot change or delete &ITEM. This component has already been disabled from the bill.

Action:
Remove this revised component from your ECO.

[APP–21094] You cannot change or delete &ITEM for this bill

Cause:
You cannot delete or change &ITEM. This component has a future effective date for this bill of material.

Action:
Implement the revised item after &ITEM is effective for this bill.

Action:
Remove revised component &ITEM for this revised item on your engineering change order.

Action:
Wait until the effectivity date has passed.

[APP–21096] You cannot change or delete &ITEM for this bill

Cause:
You cannot change or delete &ITEM. This component is not implemented for this bill.

Action:
Implement the revised item that adds this component to your bill, before you change or delete &ITEM.

[APP–21098] You must enter an operation sequence of 1 for this item

Cause:
You must enter an operation sequence of 1 for all items that do not have a routing.

Action:
Enter an operation sequence of 1 for this item.
[APP–21100] You cannot enter a yield for option class items

[APP–21102] &ROUTINE: &SQLERRM

[APP–21104] ECO &ENTITY already created this revision.

  Cause:
  An ECO has already created this revision.

  Action:
  Enter another revision.

[APP–21106] Another process is trying to create this revision. Please re-enter

  Cause:
  Another process is attempting to create this revision.

  Action:
  Enter the next higher revision for this item.

[APP–21108] The effective date for this revised item is past due

  Cause:
  You have an unimplemented ECO for this item that is earlier than today.

  Action:
  Implement the ECO on this item or cancel the ECO.

[APP–21110] You cannot view revised component details for planning bills

[APP–21112] You cannot add reference designators or substitute components to planning bills.

[APP–21114] Another prefix has been defined as &ENTITY

  Cause:
  You have entered an existing prefix name.

  Action:
  Enter an unique prefix name.

[APP–21116] This prefix already exists for user &ENTITY1 in organization &ENTITY2

  Cause:
  You have entered an existing prefix name.

  Action:
  Enter an unique prefix name.

[APP–21118] This prefix already exists for all users across all organizations

  Cause:
  You have entered an existing prefix name.

  Action:
  Enter an unique prefix name.
This prefix already exists for all users in organization &ENTITY

Cause:
You have entered an existing prefix name.

Action:
Enter an unique prefix name.

This prefix already exists for user &ENTITY across all organizations

Cause:
You have entered an existing prefix name.

Action:
Enter an unique prefix name.

This organization &ENTITY1 already exists for user &ENTITY2

Cause:
You have entered an existing organization.

Action:
Enter an unique organization.

This organization &ENTITY1 already exists for all users

Cause:
You have entered an existing organization.

Action:
Enter an unique organization.

A primary engineering bill already exists for this item

Cause:
You cannot create a primary bill of material for this item.

Action:
Create an alternate engineering bill for this item.

This component must have &ENTITY reference designators

Cause:
Components with quantity related reference designators must have the same number of designators as the component quantity.

Action:
None.

You cannot enter additional details for deleted revised component

A lower revision for this part is pending on another ECO.

Cause:
You cannot implement revisions out of sequence.
Action:
Either implement or cancel the pending lower revision first.

[APP–21136] This item does not have a valid revision as of this date

Cause:
This item does not have a valid revision as of this date.

Action:
Enter another date that references a valid revision for this item.

[APP–21138] The substitute item cannot be a component or assembly item.

Cause:
You cannot enter the component or assembly item as the substitute component.

Action:
Enter another item as the substitute component.

[APP–21140] User name must be unique

[APP–21142] User name is required

[APP–21144] You cannot delete an item which has revised components

Cause:
You cannot delete an item that has revised components.

Action:
Delete all revised components before deleting the item.

[APP–21146] You cannot delete an ECO which has revised items

Cause:
You cannot delete an ECO that has revised items.

Action:
Delete all revised items on the ECO before deleting the ECO.

[APP–21148] You can insert, update or delete data for your user name only

[APP–21150] An internal error was detected when rescheduling your ECO

Cause:
Oracle Engineering detected and internal error when rescheduling your ECO.

Action:
Contact your system administrator.

[APP–21151] You must enter a valid value for ACD_TYPE

[APP–21152] The referenced component item has invalid Bom Item Type.

[APP–21153] The revised item’s latest revision is referenced in another ECO.
[APP–21154] You must specify a requestor name that is valid

[APP–21155] You must not change the Priority of the ECO when the ECO or any of its revised items are scheduled.

[APP–21156] You must enter an existing Change Notice

[APP–21157] The Change Order Type you entered must have an Assembly Type compatible with that of the revised item’s.

[APP–21158] You must enter an existing change order type

[APP–21159] You cannot change the ECO status when approval has been requested.

[APP–21160] You cannot access an ECO that is either implemented or canceled

[APP–21161] Implementation Date and Initiation Date cannot be updated.

[APP–21162] You cannot update the values for Implementation Date, Change Notice, Auto Implement Date, Organization Id, Bill Sequence Id, Alternate BOM Designatory, or Revised Item Id.

[APP–21163] The ECO record you are trying to update does not exist anymore.

[APP–21164] The referenced Change Order Type does not exist anymore.

[APP–21165] You cannot reschedule a revised item if approval has been requested for the ECO, or if the Scheduled Date value is greater than the Disable Date value of any of its revised components with ACD Type of 1 or 2.

[APP–21166] You must enter a valid organization that is going to be responsible for the ECO

[APP–21167] You cannot change the status of the revised item if an approval has been requested for the ECO or if the ECO does not have Status Type set to 1.

[APP–21168] You must enter a valid organization

[APP–21169] You must enter a unique value for Bill Sequence Id

[APP–21170] You must enter values for Status Type and Approval Status Type.

[APP–21171] You cannot access the referenced Change Order Type.

[APP–21172] You do not have access to this revised item’s item type.

[APP–21173] The Revised Item you entered must have an assembly type compatible with that of the Change Order Type.

[APP–21174] The approval status for the ECO must be ’Approved’

[APP–21175] A Scheduled Date value could not be found for this use up item and use up plan combination.

[APP–21175] The substitute component must exist and must have valid attributes.
[APP–21176] You cannot delete an ECO while it still has revised items

[APP–21178] You must enter a Responsible Organization Id.

[APP–21179] The substitute component is for a common bill. The substitute component must exist in all organizations that have the common bill.

[APP–21180] You must enter a unique revision for the ECO

[APP–21181] You cannot update the values for Change Notice, ACD Type, or Component Sequence Id.

[APP–21182] You must enter a valid REVISION_ID value

[APP–21183] The row you want to lock has already been locked.

[APP–21184] The row you want to lock has already been deleted.

[APP–21185] Some columns in the row which you want to lock have already been changed.

[APP–21186] The row you want to update does not exist in the table.

[APP–21187] The Assembly Item Id was not found. You must enter valid values for Organization Id, and Component Item Number.

[APP–21188] You must enter a valid value for REVISED_ITEM_SEQUENCE_ID

[APP–21189] The Substitute Component Id was not found. You must enter valid values for Organization Id, Substitute Component Number.

[APP–21190] You cannot delete a revised item if it is canceled, implemented, or if it has unimplemented components.

[APP–21191] The Component Item Id was not found. You must enter valid values for Organization Id, and Component Item Number.

[APP–21192] You must enter a unique value for REVISED_ITEM_SEQUENCE_ID

[APP–21193] You cannot enter a new item revision for an alternate bill.

[APP–21195] Revision value is required.

[APP–21196] You must specify a new revision for this item

[APP–21197] You cannot update the values for Change Notice, Organization Id, or Revision. To update the Revision, please enter a value for New Revision.

[APP–21198] You must specify a valid use up item

[APP–21199] Disable Date for a component must be greater than current date.

[APP–21200] Product Family items cannot be added as components to a bill.

[APP–21201] Planning Factor must be 100 for the combination of attributes. Planning factor can be other than 100 only if: Revised item is a Planning bill OR Revised item is a Model or Option Class
bill and component is optional OR Revised Item is Model or Option Class bill and component is not optional and revised components forecast control is set to Consume and Derive.

[APP–21202] The new item revision is being used in another ECO – you must enter a unique new item revision

[APP–21203] Invalid value for Supply Subinventory. Please verify the value against the values of the profile option INV:Allow Expense To Asset Transfer, and the value of the Restrict Subinventory field.

[APP–21204] The new item revision must be greater than the current revision

[APP–21205] The component record you are trying to update or delete does not exist or may have been deleted.

[APP–21206] You must enter an existing component item

[APP–21207] The component record you are trying to update has already been modified by another user.

[APP–21208] The component item you are referencing is an invalid BOM item type

[APP–21209] Creation date, Created by, Change notice, and Reference Designator cannot be updated.

[APP–21210] You must enter a valid value for ITEM_NUM

[APP–21211] The Approval Request Date must not be greater than the approval date.

[APP–21213] The assembly item used is either implemented or canceled. You cannot add, delete or modify components whose assembly item is implemented or canceled.

[APP–21214] The revised item effective date must be greater than or equal to today’s date

[APP–21215] The reference designator record you are trying to update or delete does not exist or may have been deleted.

[APP–21216] You must enter a value for Component Sequence Id.

[APP–21217] Use up item must be either the revised item or one of its implemented components.

[APP–21218] The component item does not have the BOM_ENABLED_FLAG set to yes

[APP–21219] The combination of Operation Sequence Number, Effectivity date, Bill Sequence Id, and Component item id already exists. Please enter a different Operation Sequence Number.

[APP–21220] No Bill Sequence Id was found. You must enter a Bill Sequence Id value.

[APP–21221] The reference designator record you are trying to update has been changed by another user.

[APP–21222] You must enter a valid Revision Id Value.

[APP–21223] You must assign an existing item as the substitute component.
[APP–21224] The Approval Status must be either Approved or Rejected.

[APP–21225] The ECO must be approved before it can be scheduled.

[APP–21226] No value was found for the Scheduled Date. You must enter a value for the Scheduled Date.

[APP–21227] The revised item record you are trying to modify does not exist anymore.

[APP–21228] You have entered a component whose effective and disable dates overlap with the existing dates for the same component.

[APP–21229] You cannot schedule an ECO if it has a Workflow Approval Process.

[APP–21230] The bill for this component is a common bill referenced by bills in other organizations. There this component must exist and have the correct attributes in those other organizations as well.

[APP–21231] The revised item does not have a current (implemented) revision.

[APP–21232] The component violates the bom matrix.

[APP–21233] You must not enter an Implementation Date value.

[APP–21234] The component you are adding already exists.

[APP–21235] The component record you are trying to modify does not exist.

[APP–21236] You cannot add a component to a bill that is referencing another bill as a common.

[APP–21237] The revised item referenced by this component does not have a primary bill. ACD type for the component should be add if the primary bill does not exist.

[APP–21238] You must not enter a Status Type value of Implemented.

[APP–21239] You must not enter a Status Type value of Cancelled when trying to create a revised item for an ECO.

[APP–21240] You must not enter a Status Type value of Cancelled while creating a new ECO.

[APP–21244] The component must be optional for this combination of attributes.

[APP–21248] You cannot have ATP CHECK set to yes for the existing combination of attributes.

[APP–21250] Component cannot be required to ship or required for revenue if the assembly item is an ATO item.

[APP–21252] Minimum quantity must be less than or equal to component quantity.

[APP–21254] Maximum quantity must be greater than or equal to component quantity.

[APP–21256] The component yield factor must be equal to one for the combination of attributes you have entered.

[APP–21258] Component cannot have MUTUTALLY_EXCLUSIVE_OPTIONS set to yes for the combination of attributes you have entered.
[APP–21560] Component WIP_SUPPLY_TYPE must be Phantom for the combination of attributes you have entered

[APP–21570] You must enter a value for ACD_TYPE

[APP–21572] You cannot add, change or disable reference designators or substitute components if the parent component’s ACD_TYPE is set to disable in the ECO

[APP–21576] Reference Component Sequence Id does not exist

[APP–21580] Old component sequence Id does not exist

[APP–21582] You must enter a unique reference designator value

[APP–21586] You must enter a valid BILL_SEQUENCE_ID value

[APP–21594] You must assign an existing implemented item as the substitute component

[APP–21600] You must enter a substitute component that is not the same as the assembly item or parent component.

[APP–21602] Substitute component quantity cannot be zero

[APP–21604] The substitute component you entered for the component already exists

[APP–21610] The Bill Sequence Id was not found. You must enter valid values for ORGANIZATION_ID, ASSEMBLY_ITEM_ID and ALTERNATE_BOM_DESIGNATOR

[APP–21614] The Component Sequence Id was not found. You must enter valid values for effectivity date, Operation seq num, component item id and bill sequence id.

[APP–21616] You must enter a valid supply locator for the organization you have chosen

[APP–21618] You must enter a valid revised item

[APP–21620] You must enter a valid Disposition Type

[APP–21622] Early Scheduled Date must be less than or equal to the Scheduled Date

[APP–21624] You must enter a value of 1 or 2 for QUANTITYRELATED

[APP–21626] You must enter a value of 1 or 2 for SO_BASIS

[APP–21628] You must enter a value of 1 or 2 for OPTIONAL

[APP–21630] You must enter a value of 1 or 2 for CHECK_ATP

[APP–21632] You must enter a value of 1 or 2 for MUTUALLY_EXCLUSIVE_OPTIONS

[APP–21634] You must enter a value of 1 or 2 for INCLUDE_IN_COST_ROLLUP

[APP–21636] You must enter a value of 1 or 2 for REQUIRED_TO_SHIP

[APP–21638] You must enter a value of 1 or 2 for REQUIRED_FOR_REVENUE
You must enter a valid value for INCLUDE_ON_SHIP_DOCS
You must enter a value of 1 or 2 for USE_UP
You must enter a valid value for WIP_SUPPLY_TYPE
You must enter a value of 1 or 2 for SHIPPING_ALLOWED
You must enter a value of 1 or 2 for INCLUDE_ON_BILL_DOCS
You must enter a valid value for USE_UP_PLAN_NAME
You must enter a valid Supply Subinventory
You must enter a value of 1 or 2 for PICK_COMPONENTS
A Workflow Process was found for this ECO. You must not enter an Approval List when a Workflow Process exists.
You must enter a valid value for REQUESTOR_ID
You must enter values for ORGANIZATION_ID and CHANGE_NOTICE
You must enter a valid Approval Status value
You must enter a valid Approval List value
You must enter a Change Order Type value
You must enter a valid Status Type value
You must enter a valid value for REASON_CODE
You must enter a valid value for PRIORITY_CODE
The CHANGE_NOTICE value you have entered already exists
You cannot create, update or delete an already implemented or canceled ECO
The Approval Status you have entered is not valid for an ECO that has an Approval List assigned to it
You must update or delete an already existing record. The original referenced record does not exist in the database.
You must enter a value for CHANGE_NOTICE
You must enter an Organization Id
You must enter an ECO revision value
You must enter a value for the ECO REVISION_ID
The Approval Status you have entered is invalid since a Workflow Process exists for this ECO
APP–21704] You cannot update an ECO if it has been implemented or canceled, or if an approval has been requested through a Workflow Process.

APP–21706] You cannot delete an ECO that has requested approval through a Workflow Process

APP–21710] You cannot change the approval list when approval has been requested

APP–21712] You cannot enter a Cancellation Date or Cancellation Comments when the ECO is not marked as canceled

APP–21714] You must enter a Use Up Item since you have entered a Use Up Plan

APP–21716] You must enter a Revised Item for this record

APP–21718] You must enter a value for Revised Item Sequence Id.

APP–21720] You cannot create, update or delete an already implemented or canceled revised item

APP–21724] The revision you have entered for this revised item has already been implemented

APP–21726] You must enter a valid value for MRP_ACTIVE

APP–21728] You must enter a valid value for COMPONENT_QUANTITY

APP–21730] The component is already Implemented. Modifications cannot be made to implemented components.

APP–21732] A required value from Reference Designator or Component Sequence Id or ACD Type is empty. A record cannot be secured or created if any of these values is missing.

APP–21734] ACD Type of the reference designator must be ADD if the ACD Type of the parent component is ADD.

APP–21736] Reference Designators and Substitute Components cannot be added if the bill is a Planning Bill, or if the component is Model, Option Class, or Planning item.

APP–21740] The reference designator record could not be locked. The record values are invalid or the record might have already been deleted.

APP–21742] Querying of record failed. The record does not exist or may have been deleted.

APP–21744] The revised component could not be secured. The record values may be invalid or the record might have been deleted.

APP–21746] Required for Revenue field has an invalid value. It can only have either 1 or 2.

APP–21748] The revised item is referencing a common bill. Operations on these bill's cannot be performed.

APP–21760] The component’s revised item has already been implemented

APP–21762] You must enter a value for Component Sequence Id, Substitute Component Id, ACD Type, and Substitute Item Quantity.
[APP–21764] You must enter a Substitute Component

[APP–21766] You must enter a parent Component

[APP–21770] You must set ACD Type to 1.

[APP–21771] The ECO revision record is referring to a change notice, that does not correspond to the parent record. You may not enter a change notice value that does not correspond to the change notice of the business object.

[APP–21772] The revised item record is referring to a change notice that does not match the value of the parent record. You may not enter a change notice that does not belong to the same business object.

[APP–21773] The revised component record is either referring to a change notice that does not match the parent record or is referring to a revised item that does not belong to the same business object. The component must use the change notice and the revised item values that match the business object.

[APP–21774] The reference designator record is referring to a change notice that does not match the parent record or is referring to a component record that does not belong to the same business object. You may not enter values for component item and change notice that do not match the business object.

[APP–21774] The substitute component record is referring to a change notice that does not match the parent record or is referring to a component record that does not belong to the same business object. You may not enter values for component item and change notice that do not match the business object.

[APP–21775] The combination of component_sequence_id and component_item_id does not exist. Please enter a value for the component_sequence_id and component_item_id that point to a valid record.

[APP–22000] You cannot delete an active audit

    Cause:
    You have tried to delete an active audit.

    Action:
    Deactivate audits before trying to delete them.

[APP–22002] You cannot delete a predefined audit

    Cause:
    You have tried to delete a predefined audit. You can only delete audits that are not shipped as part of Oracle Master Scheduling/MRP.

    Action:
    Do not try to delete predefined audits.

[APP–22004] The Information Audit has found invalid data

    Cause:
    One or more of the information audits has found data that are incorrect and require attention.
Action:
Determine which audits have failed and resolve the problems or contact your customer support representative.

[APP–22006] A bill of resources for this assembly already exists. Query for details

Cause:
You have selected an assembly for which a bill of resources already exists.

Action:
Query the assembly and modify the existing bill of resources.

[APP–22008] A repetitive requirement for the bill of resource item already exists

Cause:
You cannot define multiple repetitive bill of resource requirements for the bill of resource item.

Action:
Delete this requirement or choose a different source item.

[APP–22010] A loop has been detected in the bill of materials for item &ITEM (Id=&ITEM_ID)

Cause:
The item &ITEM (Id=&ITEM_ID) is a component of itself.

Action:
Determine which items cause the loop, and remove the loop from the dependency structure.

[APP–22012] Run the bill of resources load

[APP–22014] You cannot access this form

Cause:
You have tried to use an Oracle Capacity form before defining capacity parameters for the current organization.

Action:
Define capacity parameters for the current organization using the Define Capacity Planning Parameters form in Oracle Capacity.

[APP–22016] Overlapping in date range occurs at Effective Date: &ENTITY

[APP–22018] Sourcing rule is already assigned and cannot be changed to planning inactive

[APP–22020] A loop has been detected in the bill of materials for item &ITEM (Id=&ITEM_ID)

Cause:
The item &ITEM (Id=&ITEM_ID) is a component of itself.

Action:
Determine which items cause the loop, and remove the loop from the dependency structure.

[APP–22022] You cannot delete a forecast set that contains forecasts
Cause:
You have tried to delete a forecast set that contains one or more forecasts.

Action:
Delete all the forecasts contained within the forecast set before deleting the forecast set itself.

[APP–22023] &ENTITY1 must be greater than or equal to &ENTITY2

Cause:
The current routine cannot successfully perform the specified comparison.

Action:
Contact your customer support representative.

Cause:
You cannot delete forecast overconsumption entries that belong to a disabled forecast set.

Action: If you need to delete forecast overconsumption entries for the current forecast set, delete or modify its disable date first.

[APP–22026] You must select a forecast with a more detailed forecast level

Cause:
You have tried to load a forecast with a less detailed forecast level into a forecast with a more detailed forecast level. This is not allowed. For example, you are not allowed to load a forecast with a forecast level of Customer into a forecast with a forecast level of Ship–to.

Action:
Choose a forecast with a forecast level which is at the same level of detail, or more detailed, than the forecast level of the forecast you are loading into.

[APP–22028] You cannot modify forecasts in disabled forecast sets. Clear your changes

Cause:
You have tried to create or modify a forecast in a disabled forecast set.

Action:
Clear your changes. If you need to create or modify forecasts for the current forecast set, delete or modify its disable date first.

[APP–22030] Warning: You cannot create or modify entries for a forecast set

Cause:
You cannot create new forecast entries or modify existing forecast entries that belong to a forecast set. The only forecast entries that can exist for a forecast set are those that were created as a result of overconsumption. You can delete these entries, but you cannot modify them or create new ones.

Action:
In order to create or modify forecast entries, you must choose a forecast instead of a forecast set.

[APP–22032] The workday calendar has not been built
Cause:
The workday calendar has not been built.

Action:
Build the workday calendar before continuing.

[APP–22033] &ENTITY1 cannot be greater than &ENTITY2

Cause:
The current routine cannot successfully perform the specified comparison.

Action:
Contact your customer support representative.

[APP–22034] Cannot load &LOAD

Cause:
The current routine cannot load the specified entity.

Action:
Contact your customer support representative.

[APP–22038] Cannot reschedule or cancel &ORDER.

[APP–22040] Cannot select &ENTITY1 for &ENTITY2

Cause:
The current routine cannot select the specified entity.

Action:
Contact your customer support representative.

[APP–22042] Cannot update &ENTITY

Cause:
The current routine cannot update the specified entity.

Action:
Contact your customer support representative.

[APP–22044] Cannot update anchor date

Cause:
The current form cannot update the anchor date for the current organization because it is unable to lock the mrp_parameters table.

Action:
Check if other users are locking this table in the Define Planning Parameters form, or contact your system administrator.

[APP–22046] &ROUTINE: Cannot launch &PROCESS

Cause:
The current routine cannot launch the specified process.
Action:
Contact your customer support representative.

[APP–22048] &ROUTINE: Could not select &COLUMN

Cause:
The current routine cannot select the specified entity.

Action:
Contact your customer support representative.

[APP–22049] &ROUTINE: Unable to &ACTION field &FIELD

Cause:
The current routine cannot perform the specified action.

Action:
Contact your customer support representative.

[APP–22050] Date falls outside the boundaries of the workday calendar

Cause:
The current date is outside the range of valid workdays. The date is either before the start of the workday calendar or after the end of the workday calendar.

Action:
Extend the boundaries of your workday calendar.

[APP–22052] &THE_DATE is outside the range of valid calendar dates

Cause:
The specified date is outside the range of valid workdays (&LOW_DATE to &HIGH_DATE). The date is either before the start of the workday calendar or after the end of the workday calendar.
(Routine: &ROUTINE)

Action:
Extend the boundaries of your workday calendar.

[APP–22056] You cannot delete exception set &ENTITY

Cause:
You have tried to delete a planning exception set that is assigned to one or more items in the Define Item form in Oracle Inventory.

Action:
Remove references to the current exception set in the Define Item form in Oracle Inventory and rerun MRP before trying to delete it again.

[APP–22058] &ROUTINE: &TEXT

Cause:
The current routine cannot perform the specified action.

Action:
Contact your customer support representative.
[APP–22062] &ROUTINE: Insufficient arguments for &OPERATION

Cause:
The current routine cannot perform the specified operation because it has been passed an insufficient number of arguments.

Action:
Contact your customer support representative.

[APP–22064] An internal error has occurred (&PROGFILE, &ERRNUMBER)

Cause:
The current routine encountered the specified internal error.

Action:
Contact your customer support representative.

[APP–22065] The Snapshot was unable to &ACTION lock file: &ERR_CODE

Cause:
The Snapshot was unable to perform the specified action to the lock file.

Action:
Contact your customer support representative.

[APP–22066] &ROUTINE: Invalid value of ’&VALUE’ for the argument ’&ARGUMENT’

Cause:
The current routine was passed an invalid value for the specified argument.

Action:
Contact your customer support representative.

[APP–22068] Forecast entries exist outside the range of valid workdays

Cause:
Forecast entries exist outside the range of valid workdays. The dates are either before the start of the workday calendar or after the end of the workday calendar.

Action:
Extend the boundaries of your workday calendar.

[APP–22070] vltoch: Invalid mask &MASK (error type &NUM)

Cause:
the function vltoch() was passed an invalid mask string. The error type specified identifies what is wrong with the mask: 1 – ’&gt;’ must come before any digits 2 – Only one ’&gt;’ allowed in mask 3 – ’(‘ is embedded in # 4 – Only one set of ()’s allowed 5 – ’)’ does not match ’(‘ 6 – ’)’ is embedded in # 7 – Only one set of ()’s allowed 8 – ’)’ does not match ’(‘ 9 – Parentheses do not match 10 – invalid ’&gt;’ character in the mask 11 – Invalid mask character (after decimal) 12 – Invalid mask character (before decimal) 13 – Multibyte character in the character mask 14 – mask length should be less than 99 characters.
[APP–22071] Profile &PROFILE has an invalid value of &VALUE

    Cause:
The current routine encountered an invalid value for the specified profile option.

    Action:
Assign a valid value to the specified profile option.

[APP–22072] Master schedule entries exist outside the range of valid workdays

    Cause:
Master Demand Schedule and/or Master Production Schedules entries exist outside the range of valid workdays. The dates are either before the start of the workday calendar or after the end of the workday calendar.

    Action:
Extend the boundaries of your workday calendar.

[APP–22074] You must enter time information using the HH:MM:SS format

    Cause:
You have tried to enter a date using a format other than HH:MM:SS.

    Action:
Enter the date using the HH:MM:SS format, where ‘HH’ represents hours, ‘MM’ represents minutes, and ‘SS’ represents seconds. For example, if you want the Planning Manager to run once every 3 hours, 2 minutes and 15 seconds, enter: 03:02:15.

[APP–22075] An internal error has occurred (&PROGFILE, &ERRNUMBER, &ARG1, &ARG2)

    Cause:
The current routine encountered the specified x

    Action:
Contact your customer support representative.

[APP–22076] This item has already been added to this &SCHEDULE. Query for details

    Cause:
You have tried to add an item to a forecast or master schedule to which the item has already been added.

    Action:
Query the existing item if you wish to create or modify entries for it.

[APP–22078] Warning: This item has order modifier associated with it

    Cause:
You have modified the quantity for an item with order modifier ‘&MODIFIER’ associated with it.

    Action:
No action required.

[APP–22082] &ROUTINE: No rows selected from &TABLE
**Cause:**
The current routine cannot select any rows from the specified table.

**Action:**
Contact your customer support representative.

[APP–22084] Entity &ENTITY doesn’t exist

**Cause:**
The current routine cannot find the specified entity.

**Action:**
Contact your customer support representative.

[APP–22086] &ROUTINE: Cannot allocate memory for &VAR

**Cause:**
The current routine cannot allocate memory for the specified entity.

**Action:**
Contact your customer support representative.

[APP–22088] The planning processes have not been run for &COLUMN

**Cause:**
The planning processes have not yet been run for the current plan.

**Action:**
Run the planning processes to generate a material plan using the Launch Planning Processes form.

[APP–22090] &ROUTINE: Failed when called from &FUNCTION, &LOCATION

**Cause:**
The current routine failed when called from the specified function.

**Action:**
Check the concurrent manager for details.

[APP–22092] The &PROCESS1 has run more recently than the &PROCESS2

**Cause:**
A valid plan depends upon the planning processes running in the following order: Exploder, Snapshot, Planner, CRP Planner. The current plan is invalid because the planning process completion dates do not increase sequentially. For example, the Planner completion date may be less than the Snapshot completion date. This can occur if one of the planning processes errors before completing, or if the plan is currently being generated.

**Action:**
Check the concurrent manager for details.

[APP–22094] Request &REQUEST_ID completed prematurely

**Cause:**
The specified concurrent request completed prematurely. This concurrent program is dependent upon the specified concurrent request either running or pending.
Action: Contact your customer support representative.

[APP–22096] Request &REQUEST_ID was deleted

   Cause: The specified concurrent request has been deleted. All of the worker requests must complete successfully for the material plan to be valid.

   Action: Examine the concurrent request log file for details.

[APP–22098] Request &REQUEST_ID is disabled

   Cause: The program to be executed by the specified concurrent request was disabled after the request was submitted.

   Action: Re–enable the concurrent program using the Define Concurrent Program form in Application Object Library.

[APP–22100] Request &REQUEST_ID failed

   Cause: The specified concurrent request exited with an error.

   Action: Examine the concurrent request log file for details.

[APP–22102] Request &REQUEST_ID is inactive

   Cause: The specified concurrent request is inactive. This request must be able to run for the concurrent program to run successfully.

   Action: Re–launch this concurrent program.

[APP–22104] Request &REQUEST_ID is on hold

   Cause: The specified concurrent request has been placed on hold. This request must be able to run for the concurrent program to run successfully.

   Action: Re–launch this concurrent program.

[APP–22106] Request &REQUEST_ID is pending

   Cause: The specified concurrent request is pending. This indicates a problem with the planning processes.

   Action: Contact your customer support representative.
[APP–22108] Request &REQUEST_ID is terminating

    Cause:
The specified concurrent request has been terminated. This request must complete successfully for
the concurrent program to run properly.

    Action:
Relaunch the concurrent program.

[APP–22110] This row was rejected due to a processing error for a previous row in the batch

[APP–22112] Running in debug mode
Debug: &DEBUG_TEXT:

[APP–22114] Warning: The Planning Manager is inactive

    Cause:
The Planing Manager is not running. Forecast consumption and master schedule relief may not be
up to date.

    Action:
Navigate to MRP Setup PlanningManager and start the Planning Manager

[APP–22116] The Planning Manager is already active

    Cause:
Only one Planning Manager can be running or pending at any one time.

    Action:
Terminate the current Planning Manager before launching the Planning Manager with a new
resubmission interval.

[APP–22120] The table &TABLE is currently locked

    Cause:
The current process is unable to lock the specified table because it is already locked by another
process.

    Action:
Terminate that process that is locking the table.

[APP–22122] MPS schedules cannot contain items that are not MPS planned

[APP–22124] Cannot load a repetitive schedule entry for a discretely planned item

[APP–22126] Transaction id does not exist or belongs to another organization or designator

[APP–22128] Duplicate initialization

    Cause:
The current routine has already been initialized.

    Action:
Contact your customer support representative.
[APP–22130] Cannot connect to database

  Cause:
The current routine cannot connect to the database.

  Action:
Contact your system administrator or customer support representative.

[APP–22132] Cannot get profile option &OPTION

  Cause:
The current routine cannot retrieve a value for the specified profile option.

  Action:
Contact your customer support representative.

[APP–22134] Cannot open file &FILE

  Cause:
The current routine cannot open the specified file.

  Action:
Contact your customer support representative.

[APP–22136] Cannot put profile option &OPTION

  Cause:
The current routine cannot update the value of the specified profile.

  Action:
Contact your customer support representative.

[APP–22138] &FUNCTION has been called

  Cause:
The current routine is trying to call the specified function more than once.

  Action:
Contact your customer support representative.

[APP–22140] Missing initialization (&FUNCTION)

  Cause:
The current routine needs to be initialized.

  Action:
Contact your customer support representative.

[APP–22142] ”&TOKEN=” argument needed

  Cause:
The current routine cannot continue without a value for the specified token.

  Action:
Contact your customer support representative.
[APP–22146] You cannot access this form

Cause:
You have tried to use an Oracle Master Scheduling/MRP or Oracle Capacity form before compiling a workday calendar for the current organization.

Action:
Compile a workday calendar for the current organization using the Define Workday Calendar form in Oracle Bills of Material. Make sure that the organization is associated with the appropriate calendar and exception set in the Define Inventory Parameters form in Oracle Inventory.

[APP–22148] You cannot access this form

Cause:
You have tried to use an Oracle Master Scheduling/MRP form before defining planning parameters for the current organization.

Action:
Define planning parameters for the current organization using the Define Planning Parameters form in Oracle Master Scheduling/MRP.

[APP–22150] You have not defined a default discrete job class

Cause:
You have not defined a default discrete job class.

Action:
Use \Navigate WIP Setup Parameters to define a default discrete class.

[APP–22152] You have not defined yourself as an employee

Cause:
You have not defined yourself as an employee.

Action:
Use \Navigate Setup Organization Personnel Employees Enter to define yourself as an employee. Ask your System Administrator to associate your user name with your employee record using the \Navigate Security User option of the System Administrator responsibility.

[APP–22154] You cannot implement duplicate schedules

Cause:
You have tried to define a schedule that already exists. Duplicate schedules are defined as schedules where the First Unit Completion Date and Line are the same.

Action:
Modify one of the duplicate schedules.

[APP–22156] This item has an invalid combination of make and buy attributes

Cause:
Either the item’s ’Make or Buy’ attribute is set to ’Make’ but it has the ’Build in WIP’ attribute set to No, or the ’Make or Buy’ attribute is set to Buy, but the ’Purchasable’ attribute is set to No.
Action:
Update the 'Make or Buy', 'Build in WIP', or 'Purchasable' item attributes in the Update Item form. Run the Audit Information Report for a complete list of items with invalid attributes.

[APP–22158] The &PROCESS has not completed for this plan

Cause:
The specified process has not successfully completed. This could be because the process errored last time it ran, or because the plan is currently being generated.

Action:
Check the concurrent manager for details.

[APP–22160] The &PROCESS has not been run for this plan

Cause:
The specified process has not yet run. This could be because a previous planning process errored, or because the plan is currently being generated.

Action:
Check the concurrent manager for details.

[APP–22162] The Snapshot was unable to lock the &TABLE table

Cause:
The Snapshot was unable to lock the specified table. As a result, Oracle Master Scheduling/MRP cannot guarantee that the data is a read–consistent snapshot.

Action:
Contact your system administrator or customer support representative.

[APP–22166] The Snapshot may have detected a loop in the dependency structure

Cause:
The snapshot may have detected a loop in the dependency structure while it was calculating low level codes. This could be because of a loop that was introduced by manually adding a component to a discrete job. For example, if you have an assembly A with a component B, and B has a component C (ie A | B | C) and you create a discrete job for B, and manually add item A as a component on that discrete job, then you have introduced a loop in the dependency structure.

Action:
The loop involves some of the items listed in the following output. Determine which items cause the loop, and remove the loop from the dependency structure.

[APP–22168] The number of Snapshot workers is set to zero

Cause:
The profile option MRP:Snapshot Workers is set to zero. The Snapshot will run without locking tables and therefore cannot guarantee a read–consistent snapshot.

Action:
Set the profile MRP:Snapshot Workers to a value greater than zero.
[APP–22170] Tables locked at &DATE_TIME

Cause:
The Snapshot will pause execution until the lock is released or until the wait time has passed.

Action:
Wait for the lock to be released or the wait time to pass.

[APP–22172] This assignment combination (assignment type, organization, item/category, source type) already exists. Please select another

[APP–22174] This assignment set contains category set references that are different than the one in the profile option. Please set the 'MRP:Sourcing Rule Category Set' profile option properly.

[APP–22176] The CRP Inquiry manager is currently not available. Please set up or activate the CRP Inquiry manager.

[APP–22178] The request sent to the CRP Inquiry Manager has timed out. The database could be overloaded. Please try again at a later time.

[APP–24002] Another cost update process is currently running in your organization.

  Cause:
  Only one Standard Cost Update can run at a time in an organization.

  Action:
  Submit your Standard Cost Update program at a later time.

[APP–24004] The interorg cost copy failed because one or more entities used in the source organization are not defined in the target organization.

  Cause:
The interorg cost copy program requires that all entities used in the source organization are defined in the target organization.

  Action:
Review the list below to identify the missing entities and define them in the target organization.

[APP–24006] &MODULE: error processing in &FUNC

  Cause:
An error is detected in function &FUNC while executing the module &MODULE.

  Action:
Examine the request log file and contact your Oracle support representative if necessary.

[APP–24008] The functional currency for this organization is disabled

  Cause:
The functional currency defined for this organization (&CURRENCY) is currently disabled.

  Action:
Contact your system administrator.
[APP–24010] &MODULE has detected an internal data error

   Cause:
   &MODULE has detected an internal data error. This is an abnormal condition.
   
   Action:
   Contact your system administrator or Oracle Customer Support.

[APP–24012] You cannot update this field for the Frozen Standard cost type

   Cause:
   The Use Rollup Defaults field is not updatable for the Frozen cost type. Cost control information for the Frozen cost type can not be defaulted from any other cost type.
   
   Action:
   No action is required.

[APP–24014] You cannot update this field for the Frozen Standard cost type

   Cause:
   The Use Default Controls field is not updatable for the Frozen cost type. Cost control information for the Frozen cost type can not be defaulted from any other cost type.
   
   Action:
   No action is required.

[APP–24016] You cannot update the field because there are user defined costs

   Cause:
   You may not update Use Rollup Defaults field from No to Yes for items that have manually entered costs for the cost type. Cost Rollup deletes all costs for items where Use Rollup Defaults is Yes.
   
   Action:
   Delete all the manually entered costs and then update Use Rollup Defaults field.

[APP–24018] You cannot update the field because there are user defined costs

   Cause:
   You may not update Use Default Controls field from No to Yes for items that have manually entered costs for the cost type. Cost Rollup deletes all costs for items where Use Default Controls is Yes.
   
   Action:
   Delete all the manually entered costs and then update Use Default Controls field.

[APP–24020] You have not defined cost information for the default cost type

   Cause:
   This cost type uses default cost type that has no information for this item. By changing Use Rollup Defaults to Yes, Cost Rollup needs to use the cost control information of the defaulted cost type.
   
   Action:
   None; Or, Define cost control information for the default cost type of this cost type.

[APP–24022] You have not defined cost information for the default cost type
Cause:
This cost type uses default cost type that has no information for this item. By changing Use Default Controls to Yes, Cost Rollup needs to use the cost control information of the defaulted cost type.

Action:
None; Or, Define cost control information for the default cost type of this cost type.

[APP–24024] You cannot update the item controls or costs because the costs are defaulted.

Cause:
You cannot edit the item costs or the cost control information when the source of the item’s cost controls are from another cost type. This defaulting occurs when you perform a cost rollup, with no cost information for the items you roll up in the selected cost type. Cost rollup uses the default cost type as the source of the cost controls. The controls are based on rollup, lot size, inventory asset, and shrinkage. The cost rollup also defaults any manually entered costs from the default cost type, such as material overhead, etc.

Action:
To edit the manually entered item costs or the cost control information you must first change Use Default Controls from Yes to No. Changing the Use Default Controls does not delete any cost information, however, when the Use Default Controls is no, the cost rollup no longer uses the cost information from the default cost type.

[APP–24026] You cannot edit the &ACCOUNT account.

Cause:
You cannot edit the &ACCOUNT account because it is maintained in the master cost org.

Action:
Change your working organization to the master organization and re-enter your request.

[APP–24028] You have already defined &ENTITY for &FIELD_VALUE

Cause:
The value you have entered exists.

Action:
Use a different value for the field.

[APP–24030] Error occurred in the Costing Open Interface

Cause:
Problem occurs in costing open interface routine

Action:
Contact the Oracle Representative

[APP–24032] &NUM transaction(s) failed processing

Cause:
There are &NUM transaction(s) left unprocessed in the interface table.

Action:
Please review the error(s) for this transaction group in the View WIP Transaction Interface form.
[APP–24034] Please save changes before you go to previous or next record

  Cause:
You have updated the lot size or shrinkage rate for the cost type. The form needs to know whether
the change needs to be saved and item costs need to be recomputed before you go to another cost
type.

  Action:
You can either discard the change or save the change.

[APP–24036] You have specified an incorrect number of arguments for &ENTITY.

  Cause:
You have not supplied all the arguments needed for &ENTITY that you are running.

  Action:
Please read Oracle Cost Management Reference Manual for requirements on running &ENTITY.

[APP–24038] You have specified an invalid value for argument &ENTITY.

  Cause:
You have entered an invalid value for the argument &ENTITY.

  Action:
Please consult the Oracle Cost Management Reference Manual for the valid values for this program.

[APP–24040] Your cost organization network uses multiple &ENTITY

  Cause:
Your cost organization network uses more than one &ENTITY.

  Action:
Examine your cost organization network and make the appropriate changes.

[APP–24042] Invalid Material Sub Element

  Cause:
Invalid Material Sub Element defined in open interface mtl_system_items_interface table

  Action:
Correct the Material Sub Element

[APP–24044] Average Cost Org could not get Material Overhead

  Cause:
An error is detected in Open Interface, Material Overhead is not allowed under Average Cost
Organization

  Action:
Update Material Overhead Sub element with NULL value in mtl_system_items_interface

[APP–24046] Invalid Material Overhead Sub Element

  Cause:
Invalid Material Overhead Sub Element in open interface mtl_system_items_interface table
Action:
Correct the Material Overhead Sub Element

[APP–24048] Option &ENTITY1 is not valid

Cause:
You have specified an invalid option &ENTITY1.

Action:
Please refer to the Oracle Cost Management Reference Manual for the options available for the program you are running.

[APP–24050] Purge option &ENTITY is not valid

Cause:
You have specified an invalid purge option &ENTITY.

Action:

[APP–24052] Item cost details are not available for this inquiry

[APP–24054] Invalid transaction type

[APP–24056] You cannot enter any cost because the inventory asset flag is set to No

Cause:
The item is designated as an expense item for this cost type. So you cannot navigate to the Item Costs zone to enter any cost for the item for this cost type.

Action:
To enter cost information for this item in this cost type change the asset flag to Yes.

[APP–24058] Item shrinkage factor must be less than 1

Cause:
Item shrinkage factor must be less than 1.

Action:
Enter a number that is less than 1.

[APP–24060] You cannot update costs when transactions exist for an item

Cause:
The item has been transacted and the item frozen cost is used to value the transaction and thus can not be altered.

Action:
Perform Cost Update to update the frozen cost for the item. Cost Update creates accounting adjustments to your inventory, intransit and WIP values.

[APP–24062] Unable to obtain a lock on table &TABLE

Cause:
The program is unable to obtain a lock on the table &TABLE.
Action: Resubmit the program at a later time.

[APP–24064] Unable to obtain a lock on table CST_ITEM_COSTS

Cause: The program is unable to obtain a lock on the table CST_ITEM_COSTS.

Action: Resubmit the program at a later time.

[APP–24066] Unable to obtain a lock on table CST_ITEM_COST_DETAILS

Cause: The program is unable to obtain a lock on the table CST_ITEM_COST_DETAILS.

Action: Resubmit the program at a later time.

[APP–24068] Lot size must be greater than zero

Cause: Manufacturing lot size must be greater than 0.

Action: Enter a number that is greater than 0.

[APP–24070] You cannot edit the &ACCOUNT account.

Cause: The &ACCOUNT account is maintained in the master cost org.

Action: Change your working organization to the master organization.

[APP–24072] This function is only valid in master costing organization.

Cause: This organization gets cost information from another master costing organization, so you cannot update cost information in this organization.

Action: Change to the master costing organization.

[APP–24076] The Report number of levels cannot be less than 0

Cause: The report number of levels cannot be less than 0 and it cannot be greater than the explosion number of levels.

[APP–24078] The repetitive line does not have schedule allocation

Cause: There is no record in WIP_TXN_ALLOCATIONS table for this repetitive schedule. For any
repetitive schedule transactions, the quantity being transacted data is stored in this WIP_TXN_ALLOCATIONS table.

Action:
Contact Oracle Support Representatives

[APP–24080] Record not found in WIP_PERIOD_BALANCE

Cause:
There is no record in WIP_PERIOD_BALANCES for the repetitive schedule or job.

Action:
Contact Oracle Support Representative

[APP–24082] You cannot delete cost for the frozen standard or non–updatable cost types

Action:
Update the Allow Update field to Yes for the cost type, or use Cost Update to update costs for the frozen standard cost type.

[APP–24084] You cannot disable the default material sub–element for the organization

Cause:
You are attempting to disable the material sub–element that is defined as the default material sub–element for this organization.

Action:
To disable this material sub–element you must first update the default material sub–element name referenced on your organization parameters.

[APP–24086] Elemental cost history is not available

Cause:
Elemental cost history is not available for standard cost history prior to Release 10.

Action:
No action is required.

[APP–24088] You cannot insert or update.

[APP–24090] Unable to obtain a lock on table &TABLE

Cause:
The profile option for CST:Wait for Locks was set to No for the Cost Rollup. The program exited since it was unable to obtain a lock on the table &TABLE without having to wait.

[APP–24092] &ROUTINE: cannot allocate memory for &VAR

Cause:
The program &ROUTINE can not allocate memory of size &VAR.

Action:
Contact Oracle Support Representative.
[APP–24094] No open accounting period is available

Cause:
No open accounting period corresponding to the transaction date is available in your organization.

Action:
Please open the appropriate accounting period in the Open Accounting Periods form.

[APP–24096] Item shrinkage is not allowed for buy items

Cause:
The item is designated as a buy item (Based On Rollup is set to No) for this cost type. Shrinkage for a buy item is not allowed.

Action:
Update Based On Rollup to Yes and enter the shrinkage.

[APP–24098] Posting is not allowed for this account

[APP–24100] You may not choose a Single Level Rollup with the Consolidated Report

Cause:
The consolidated report requires that the Assembly structures be exploded to the maximum number of levels. With the single level rollup the assembly structures are exploded to 1 level only, which is not sufficient for a Consolidated Report.

[APP–24102] The report number of levels must not exceed the bill explosion levels

Cause:
For a single level cost rollup the bill explosion levels is set to 1. For a full cost rollup it is set to the maximum number of levels defined in the Define Bills of Material Parameters form which is &MAX_LEVELS.

Action:
The number of levels on the report cannot exceed the number of bill explosion levels. Please enter a number less than or equal to the bill explosion levels for the report number of levels.

[APP–24104] The alternate designator &DESIG for the cost type &COST_TYPE is invalid.

Cause:
The default alternate bom designator &DESIG for the cost type &COST_TYPE is invalid for the &ORG organization.

Action:
Define the alternate designator &DESIG for the &ORG organization.

[APP–24106] Please select a cost update session

Cause:
A specific cost update session is required for the functionality you are currently using.

Action:
Please type in a cost update date or use quickpick to select a cost update session.
[APP–24108] Error processing in &PROCEDURE

  Cause:
  &MODULE has detected an ORACLE error (ORA–&ERROR) while executing stored procedure &PROCEDURE.

  Action:
  Contact your system administrator or your Oracle support representative.

[APP–24110] This function is only valid for a standard costing organization

  Cause:
  The selected function is valid for a standard costing organization only.

[APP–24112] Failed to submit concurrent request

  Cause:
  Unable to submit a concurrent request.

  Action:
  Contact your system administrator or Oracle support representative.

[APP–24114] You cannot directly debit or credit a summary account

[APP–24116] Currency code is missing for this foreign currency transaction.

  Cause:
  This transaction is missing the currency code. Whenever a transaction has a currency conversion rate (foreign exchange rate) the currency code must be populated.

  Action: Please populate the currency code for this transaction.

[APP–24118] Exchange rate is missing for this foreign currency transaction.

  Cause:
  When the interfaced transaction is in a currency code that is not the same as the currency code of the organization, the currency exchange rate (CURRENCY_CONVERSION_RATE) must be populated. Since the interface validation does not check against the Oracle General Ledger rate table (GL_DAILY_TRANSLATION_RATES) this rate may be from any source. However, all Oracle Purchasing transactions in a foreign currency will have an exchange rate.

  Action:
  Please populate the CURRENCY_CONVERSION_RATE in the interface table.

[APP–24120] Assembly is not costed. Please re-enter

[APP–24122] Cost type &ENTITY is not updatable

  Cause:
  You cannot change the cost controls, costs or rollup the item when the cost type does not allow changes. You cannot directly change the Frozen cost type unless the item has never been transacted. Under average costing, you use the Average Cost Update form to change your average costs.

  Action:
  If the cost type is not Frozen or Average, change the Allow Updates attribute from No to Yes in the Define Cost Type form.
[APP–24124] Insufficient privilege to maintain cost information.

   Cause:
You do not have the privilege required to access this form.

   Action:
Request privilege to maintain cost information.

[APP–24126] Insufficient privilege to view cost information

   Cause:
You do not have the privilege required to access this form.

   Action:
Request your system administrator for the privilege to update cost information.

[APP–24127] This function is valid only in organizations that are enabled for projects

   Cause:  This organization is not enabled for the use of projects, so this function is not available.

[APP–24128] This function is only valid for manufacturing average costing

   Cause:  The selected function is only valid for a manufacturing average costing organization.

[APP–24129] Another actual cost worker is currently running in your organization.

   Cause:
Only one Actual Cost Worker can run at a time in an organization.

   Action:
Actual Cost Worker will run when the currently running worker has completed.

[APP–24130]

   Cause: &MODULE already running for the current organization.

   Action: Please run the &MODULE at a later time.

[APP–24131] The current Organization is not set–up for any type of cost collection. Either set the Organization parameter 'cost_collection_enabled' to 1 or define at least one Capital project related transaction type.

[APP–24132] Expenditure types association with cost elements are incomplete. Define 'IN' and 'OUT' expenditure types for all cost elements.

[APP–24133] Either project or the task fields for the current transaction is NULL. Enter the project and task for the transaction.

[APP–24134] Either transfer project or the task fields for the current transaction is NULL. Enter the transactions transfer project and task.

[APP–24135] Either source project or the task fields for the current transaction or job is NULL. Enter the transactions source project and task.
[APP–24136] System failed to arrive at the first material sub–element for the current item. Either define at least one material sub–element for the item in the AVERAGE RATES COST TYPE or else define the organization level default material sub–element.

[APP–24137] Expenditure type associated with the current sub–element is NULL. Associate a valid expenditure type to the sub–element.

[APP–24138] ‘Expenditure Organization Id’ associated with the current department is NULL. Associate a valid ‘Expenditure Organization Id’ with the department.

[APP–24139] Project Manufacturing transaction sources are missing. Create valid transaction sources in Oracle Projects.

[APP–24140] Project Manufacturing system linkages are missing. Create valid system linkages in Oracle Projects.

[APP–24141] Warning: The current transaction has zero actual cost and was not reported to Oracle Projects.

[APP–24143] The costing of this WIP transaction failed.

[APP–24144] No capitalization accounts were obtained from the manufacturing subledger for this transaction. Either the cost distributor failed or the setup may have changed since the transaction was initiated and before the cost collector was run.

[APP–24145] The hook returned an account with the value NULL. Either the account was not set up or the hook logic is incorrect.

[APP–24146] The costing snapshot failed due to a database error. Please take the these error messages to your database administrator.

[APP–24147] No conversion rate has been defined for the combination of foreign currency and conversion rate type used in this transaction, or the defined conversion rate is not valid on the date of this transaction.

[APP–25000] This assembly is not under lot or serial number control

    Cause:
The assembly you are using is not under lot or serial control. You cannot navigate to a lot or serial number page.

    Action:
You can define the assembly to be under lot or serial number control in Oracle Inventory, if you want to use lot or serial numbers.

[APP–25001] Assembly status does not allow transactions

    Cause:
This assembly is not currently transactable.
Action:
You can change the Item Status in the Define Item form in Oracle Inventory or select another assembly.

[APP–25002] Date must be less than or equal to most recent period close date (&ENTITY)

Cause:
You entered a cutoff date that does not fall in a closed accounting period.

Action:
Enter a date that falls before or on the most recent period close date. To find the most recent period close date, you can navigate to the View Period Close Information form in Oracle Inventory.

[APP–25003] Cannot backflush components under lot and serial number control

Cause:
Oracle Work in Process does not support components under both lot and serial number control.

Action:
You can transact components under either lot number control only or serial number control only. You can also transact components under neither control.

[APP–25004] Job/Schedule is cancelled, no transactions allowed

Cause:
You cannot perform transactions against this job or schedule.

Action:
You cannot change this job or schedule to a transactable status. You can close it if it is a discrete job. Please select another job or schedule to perform transactions against.

[APP–25005] Unable to create ORDER BY clause

Cause:
An error occurred in the routine that builds the dynamic ORDER BY clause. This error may be due to a lack of system memory.

Action:
Please use \Help Error to review previous messages for more information.

[APP–25006] Cannot delete this sales order because of quantity completed

Cause:
You cannot delete a sales order against which a net quantity of units has been completed.

Action:
If the completed units have not been shipped to the customer yet, you can return them from inventory to work in process and then unlink the sales order.

[APP–25007] You cannot change the rate of the current schedule

Cause:
You cannot modify the daily rate of the current schedule.
Action:
You can create another schedule on the same line for the same assembly and cancel the current schedule.

[APP–25008] You cannot receive this assembly into inventory

Cause:
You cannot receive an assembly into inventory if it is not stockable.

Action:
You can change the item attribute Stockable in the Define Items form in Oracle Inventory to Yes.

[APP–25009] You cannot unrelease the only open schedule on a line

Cause:
You cannot unrelease the only open schedule on a line, since there may be pending charges against this assembly/line combination.

Action:
You can create a new unreleased schedule and cancel the existing schedule.

[APP–25010] You cannot cancel this job because you have linked sales orders

Cause:
You tried to cancel a job with sales orders linked to it.

Action:
Please navigate to the Sales Orders zone and unlink the sales orders attached to your job by using Row Delete.

[APP–25011] You cannot update a disabled WIP accounting class

Cause:
You cannot update any information except the disable date when a WIP accounting class is disabled.

Action:
You can update the disable date to a future date, then make any other changes you want.

[APP–25012] Job/Schedule is closed, no transactions allowed

Cause:
You cannot perform transactions against a closed job.

Action:
You cannot change the status of this job to make it transactable. Please select another job or schedule.

[APP–25013] You cannot close a job in a closed accounting period

Cause:
The period in which you are attempting to perform the job close transaction is closed.

Action:
You can change the transaction date for the close transaction to fall into an open accounting period.
[APP–25014] Close process failed, no transactions allowed

   Cause:
   You cannot perform transactions against this job or schedule because Oracle Work in Process failed in closing it.

   Action:
   You cannot change this job to a transactable status. You should try to close it again. Please enter another job or schedule to perform transactions against.

[APP–25015] Close process pending, no transactions allowed

   Cause:
   You cannot perform transactions against this job because Oracle Work in Process is in the process of closing it.

   Action:
   Please select another job or schedule.

[APP–25016] You cannot delete a comment code currently in use

   Cause:
   You cannot delete a comment that is currently in use in a repetitive schedule or open discrete job.

   Action:
   You can remove the comment from the repetitive schedules and discrete jobs that currently use it. If the schedules and jobs have statuses that do not allow updates, you can close the jobs and purge the table wip_entity_comments.

[APP–25017] Job/Schedule is Complete – No Charges, no transactions allowed

   Cause:  You cannot perform transactions against this job or schedule.

   Action:  You can change the status of this job to Complete to perform transactions against it, if it is a discrete job. You cannot change the status of a repetitive schedule with a status of Complete – No Charges.

[APP–25018] Unable to load units into Queue of the first operation

   Cause:
   The SQL statement that loads the total job or schedule units into the queue of the first operation upon release failed. This may be due to a problem with the scheduling process, or with system memory.

   Action:
   Use \Help Error to review previous messages for more information. If this does not indicate a problem, use the View WIP Operations form to examine the operations records for this job or schedule. Reschedule via the define form if necessary.

[APP–25019] This date is not in the current accounting period

   Cause:
   The date you entered is not in the current accounting period.
Action:
Enter a date that is in the current accounting period. You can also change your accounting period information in the Update Accounting Periods form.

[APP–25020] This transaction date is not in an open period

Cause:
The transaction date you entered is not in an open accounting period. You cannot perform transactions in a closed accounting period.

Action:
Enter a transaction date that does fall in an open accounting period, or use the Open Accounting Periods form to open the accounting period that contains your desired transaction date.

[APP–25021] You must define parameters for the Bills of Material module

Cause:
You must define parameters in Oracle Bills of Material before you can proceed in Work in Process.

Action:
Please define necessary parameters in the Define Bills of Material Parameters form.

[APP–25022] You must define parameters for the Inventory module

Cause:
You must define parameters in Oracle Inventory module before you can proceed in Work in Process.

Action:
Please define the necessary parameters in the Define Inventory Parameters form.

[APP–25023] You must define parameters for the Work in Process module

Cause:
You must define Work in Process parameters before you can proceed.

Action:
Please define the necessary parameters in the Define Work in Process Parameters form.

[APP–25024] You can only delete records with a status of Error

Cause:
You can only delete records with a status of Error.

Action:
You must wait until the transaction is processed before taking action. If it errors then you can delete it. If not, then you must create a reversing transaction.

[APP–25025] You cannot delete this operation

Cause:
You can only delete an operation from a discrete job if: 1) there are no assemblies at the operation, 2) no assemblies have been completed at the operation, 3) there are no pending move transactions in
the open move interface table, 4) no resources at the operation have been charged, and 5) there are no pending resource transactions for resources at the operation.

Action:
You can move assemblies currently at the operation and any assemblies previously completed to the previous operation in the routing. This will automatically reverse resource charges for WIP move resources at the operation. You also need to undo any manual resource charges that might have taken place. Finally, after pending move and resource transactions have been processed, you can reverse them. When you delete an operation, Oracle Work in Process automatically deletes all resources and instructions attached to it.

[APP–25026] You cannot delete this resource

Cause:
You can only delete a resource from a discrete job or repetitive schedule if the resource has not been charged and there are no pending charges in the open resource interface table.

Action:
You must wait for any existing pending transactions to be processed and then enter reversing transactions before you can delete the resource.

[APP–25027] Cannot use this count point at an operation with assembly pull components

Cause:
You cannot assign a "direct charge" count point type to an operation that has assembly pull components.

Action:
You can assign an "autocharge" count point type to the operation, or you can change the supply type of the components.

[APP–25028] Queue intraoperation step must be enabled

Cause:
You cannot delete or disable the queue intraoperation step.

Action:
Please enable the queue intraoperation step.

[APP–25029] Job/Schedule is on hold, no transactions allowed

Cause: You cannot currently perform transactions against this job or schedule.

Action: You can change this job or schedule to a status of Released or Complete to perform transactions against it.

[APP–25030] This item is not under lot or serial number control

Cause:
You tried to navigate to the lot or serial number entry page.

Action:
You cannot enter lot or serial numbers when you transact an item that is not under lot or serial number control.
[APP–25031] Item status does not allow transactions

  Cause:
  This item is not currently transactable.

  Action:
  You can change the Item Status attribute in the Define Item form in Oracle Inventory, or you can use a different item for your transaction.

[APP–25032] Job/Schedule does not exist, no transactions allowed

  Cause:
  This job cannot be found in the discrete jobs table.

  Action:
  Please select another job.

[APP–25033] Item under lot and serial number control, no transactions allowed

  Cause:
  You cannot perform transactions against an item that is under both lot and serial number control.

  Action:
  You can change the controls on the item in Oracle Inventory or you can transact a different item.

[APP–25034] You must define start and stop times for the line

  Cause:
  You have attempted to define a production line without specifying start and stop times.

  Action:
  Define start and stop times for the production line in the Define Production Line form.

[APP–25035] You cannot lower the job/schedule quantity

  Cause:
  You cannot decrease the job/schedule quantity if there are no more assemblies in the Queue step of the first operation.

  Action:
  You can cancel the job or schedule if you want to stop production on it and define another job or schedule with the quantity you want.

[APP–25036] Mass load pending, no transactions allowed

  Cause:  You cannot perform transactions against a repetitive assembly through a schedule with a Pending – Mass Loaded status.

  Action:  You can update this schedule to Released to perform transactions against it.

[APP–25037] Resource sequence already exists and has different resource code

  Cause:
  You entered a resource sequence that has already been matched to a resource code.
Action:
Please enter another resource sequence if you want to assign the current resource code to it.

[APP–25038] &ENTITY profile is missing

Cause:
You have not set one of your personal Work in Process profile options.

Action:
Please navigate to the Update Personal Profile Option form and assign a value to the appropriate profile.

[APP–25039] Unable to find an open accounting period

Cause:
Oracle Work in Process was unable to find an open accounting period.

Action:
Please navigate to the Open Accounting Period form in Oracle Inventory to open a new period.

[APP–25040] Non–standard job has no assembly, no transactions allowed

Cause:
You cannot perform transactions against a non–standard job without an assembly.

Action:
Please select another job or schedule to perform transactions against.

[APP–25041] To define a job, you must first define a WIP accounting class

Cause:
There are no discrete or non–standard WIP accounting classes defined for the current organization.

Action:
Please navigate to the Define WIP Accounting Class form and create at least one accounting class. To define a standard discrete job, you need only define a discrete accounting class. To define a non–standard job, you can define either an expense non–standard class or an asset non–standard class.

[APP–25042] Cannot delete this line because schedules have been defined on it

Cause:
You tried to delete a line with schedules defined on it.

Action:
You can delete a line only if you purge all schedules on that line.

[APP–25043] You cannot enter a future transaction date

Cause:
You attempted to enter a future date as a transaction date.

Action:
Please enter a past or current date for your transaction date.
[APP–25044] You cannot navigate to the detail zones for jobs with this status

    Cause:
    You cannot see details for a job with this status.

    Action:
    You can change "Pending" or "Failed" statuses by resubmitting the failed or pending process. You can never see details for closed jobs.

[APP–25045] No query allowed on Specific component transaction type

    Cause:
    You cannot perform a query in the Items zone when the transaction type is Specific component.

    Action:
    You can select any other transaction type to perform a query in the Items zone.

[APP–25046] Job/Schedule has no routing, no transactions allowed

    Cause:
    You cannot perform move or resource transactions against a routingless job or schedule.

    Action:
    Please select another job or schedule to perform transactions against.

[APP–25047] You must enter more daily rate or processing days information

    Cause:
    You did not enter enough daily rate or processing days information.

    Action:
    Please enter two of the following: daily rate, processing days and total quantity.

[APP–25048] No valid schedule statuses exist, no transactions allowed

    Cause:
    You selected a repetitive assembly/line combination that does not have any valid schedules defined for it.

    Action:
    You can select another line for your assembly or create one or more released schedules on your current line.

[APP–25049] You cannot use the view for this component item

    Cause:
    You tried to navigate to the View Requirements page for a component that is not a requirement of your job or schedule.

    Action:
    You can only navigate to the View Requirements page when the current line item is a requirement for your job or schedule.

[APP–25050] Only one resource per operation can have Scheduled set to Next
Cause:
You cannot have more than one resource per operation scheduled as 'Next'.

Action:
Please select one resource only to be scheduled as 'Next' before committing your changes.

[APP–25051] Only one resource per operation can have Scheduled set to Prior

Cause:
You cannot have more than one resource per operation scheduled as 'Prior'.

Action:
Please select one resource only to be scheduled as 'Prior' before committing your changes.

[APP–25052] No valid schedule statuses on this line, choose another line

Cause:
You selected a repetitive assembly/line combination that does not have any valid schedules defined for it.

Action:
You can select another line for your assembly or create one or more released schedules on your current line.

[APP–25053] Transaction date precedes release date for the job/schedule

Cause:
You entered a date that precedes the release date for your job or schedule.

Action:
Please enter another date. You can find the release date of your job or schedule in the Define Discrete Job, View Discrete Job, Define Repetitive Schedules or View Repetitive Schedules by Assembly forms.

[APP–25054] You must enter both the start date and the completion date

Cause:
You did not enter enough information to define your job without a routing or routing reference.

Action:
You must enter both the start date and completion date when you define a job that has no routing or routing reference.

[APP–25055] You must enter either the start date or the completion date

Cause:
You did not enter enough scheduling information to define or reschedule your discrete job.

Action:
Please enter either the start date or completion date for your job.

[APP–25056] You must enter either the start time or the completion time

Cause:
You did not enter enough scheduling information to reschedule your discrete job.
Action:
Please enter either the start time or completion time for your discrete job.

[APP–25057] Requirements load failed, no transactions allowed

Cause:
You cannot currently perform transactions against this job or schedule because Oracle Work in Process was unable to load its requirements.

Action:
Please enter another job or schedule.

[APP–25058] Requirements pending, no transactions allowed

Cause:
You cannot currently perform transactions against this job or schedule because Oracle Work in Process is in the process of loading its requirements.

Action:
Please select another job or schedule, or try performing transactions against this job or schedule later.

[APP–25059] Routing load failed, no transactions allowed

Cause:
You cannot currently perform transactions against this job or schedule because Oracle Work in Process was unable to load its routing.

Action:
Please select another job or schedule.

[APP–25060] Routing pending, no transactions allowed

Cause:
You cannot currently perform transactions against this job or schedule because Oracle Work in Process is in the process of loading its routing.

Action:
Please select another job or schedule, or try performing transactions against this job or schedule later.

[APP–25061] You cannot move assemblies within the same operation and step

Cause:
You tried to perform a shop floor move within a single operation and intraoperation step. You can only move assemblies between distinct operations or between distinct steps of the same operation.

Action:
To perform a move from one operation to a different operation, make sure the From operation sequence number is different from the To operation sequence number. To perform a move from one intraoperation step to another intraoperation step in the same operation, make sure the From intraoperation step is different from the To intraoperation step.
[APP–25062] Repetitive schedule has no routing, no transactions allowed

Cause:
You cannot perform transactions against this repetitive assembly because it doesn’t have a routing.

Action:
Please select another repetitive assembly/line combination.

[APP–25063] This schedule overlaps an existing schedule on the line

Cause:
You cannot have two schedules overlapping each other on the same line for the same repetitive assembly.

Action:
You can modify the dates and/or times for the overlapping schedules.

[APP–25064] You cannot enter serial numbers for less than a single unit

Cause:
The shop floor move or completion transaction you are trying to perform requires that a partial number of serially controlled components be backflushed.

Action:
Please modify the transaction quantity so you can enter a whole number of serial numbers for the components to backflush.

[APP–25065] No quantity left to allocate against this SO/line/delivery

Cause:
The entire job quantity has already been allocated to one or more sales orders.

Action:
You cannot link any additional sales orders to your job.

[APP–25066] Status at this operation step disallows transactions

Cause:
You have assigned a status that prevents assemblies to be moved from this operation step.

Action:
Please navigate to the Update Shop Floor Statuses form and remove the shop floor status at this operation step using \Row Delete.

[APP–25067] Status at To Move of last operation disallows transactions

Cause:
You assigned a status that prevents assemblies to be moved from the To Move step of the last operation back into inventory.

Action:
Navigate to the Update Shop Floor Statuses form and remove the shop floor status at this operation step using \Row Delete.
[APP–25068] You entered too many lot numbers

  Cause:
  You selected more lot numbers than needed for this transaction.

  Action:
  Please navigate to the lot number entry page and delete the unnecessary lot numbers.

[APP–25069] You entered too many serial numbers

  Cause:
  You selected more serial numbers than needed for this transaction.

  Action:
  Please navigate to the serial number entry page and delete the unnecessary serial numbers.

[APP–25070] Unable to calculate total units

  Cause:
  You have not entered enough information for Oracle Work in Process to calculate the total quantity.

  Action:
  Please enter the number of processing days and the daily rate for this schedule.

[APP–25071] To operation sequence number must be positive

  Cause:
  You entered a negative operation sequence number.

  Action:
  Please enter a positive integer for your operation sequence number.

[APP–25072] Please unlink the sales order to change the assembly

  Cause:
  When you linked the sales order to your job, Oracle Work in Process assigned the assembly associated with it to your job. You cannot change the assembly until the sales order has been unlinked.

  Action:
  Please use \Row Delete to unlink the sales order.

[APP–25073] Please unlink the sales order to change the demand class

  Cause:
  When you linked the sales order to your job, Oracle Work in Process assigned the demand class associated with it to your job. You cannot change the demand class until the sales order has been unlinked.

  Action:
  Please use \Row Delete to unlink the sales order.

[APP–25074] The job quantity must not be lower than the total quantity you have allocated to sales orders.
[APP–25075] Job/Schedule is Unreleased, no transactions allowed

Cause: You cannot currently perform transactions against this job or schedule.

Action: You can change this job or schedule to a status of Released to perform transactions against it.

[APP–25076] You cannot unrelease this job/schedule

Cause: You cannot unrelease a job or schedule that carries a net balance, or that has pending transactions.

Action: You can reverse any transactions that resulted in charges against the job or schedule, and you can resolve pending transactions. You can also cancel the existing job or schedule and create a new job or schedule with a status of Unreleased.

[APP–25077] Please use disable date to delete this record

Cause:
You tried to delete a record manually.

Action:
Please enter a disable date equal to or greater than today’s date to delete this record.

[APP–25078] Only valid employees may transact moves into operations requiring outside resources

Cause:
You tried to transact moves into operations requiring outside resources but you are not a valid employee yourself.

Action:
Please use the Enter Employee form to define yourself as an employee for this organization. You must also associate your user name with your employee name in the Define Applications User form under the System Administrator’s responsibility.

[APP–25079] Enter a valid locator before proceeding to lot number page

Cause:
You tried to navigate to the lot number entry page without entering a locator.

Action:
Please use Quickpick to select a locator before proceeding to the lot number entry page.

[APP–25080] Enter a valid locator before proceeding to serial number page

Cause:
You tried to navigate to the serial number entry page without entering a locator.

Action:
Please use Quickpick to select a locator before proceeding to the serial number entry page.

[APP–25081] Enter a valid subinventory before proceeding to lot number page
Cause:
You tried to navigate to the lot number entry page without entering a subinventory.

Action:
Please use Quickpick to select a subinventory before proceeding to the lot number entry page.

[APP–25082] Enter valid subinventory before proceeding to serial number page

Cause:
You tried to navigate to the serial number entry page without entering a subinventory.

Action:
Please use Quickpick to select a subinventory before proceeding to the serial number entry page.

[APP–25083] You must define a calendar for your organization

Cause:
You have not specified a value for the Calendar field in the Define Inventory Parameters form. A value is required to perform scheduling in Work in Process.

Action:
Please navigate to the Define Inventory Parameters form and assign a value to the Calendar field.

[APP–25084] Operation dates fall outside defined calendar days

Cause:
Oracle Work in Process is unable to schedule your job or schedule because operation dates fall outside defined calendar dates.

Action:
You can define additional calendar dates in Oracle Bills of Material or decrease your job or schedule quantity.

[APP–25085] Bill revision does not exist as an item revision

Cause:
The revision of the common bill you are attempting to complete is not valid as a revision for the assembly item itself. See "Completing Assemblies from WIP into Inventory" in the WIP Material Control Essay for more information.

Action:
You should update the revisions of the common bill to match those of the assembly itself in the Define Item Revisions Form in Oracle Inventory.

[APP–25086] This assembly is invalid, please re-enter

Cause:
This assembly is invalid because 1) it does not exist in the item master, or 2) it is not buildable in Work in Process, or 3) it is an engineering item and the WIP:See Engineering Items profile is set to No.

Action:
You can 1) define this item in Oracle Inventory, or 2) set the buildable flag for this item in Oracle
Inventory to Yes and/or set the pick components flag for this item in Oracle Inventory to No, or 3) set the WIP:See Engineering Items personal profile to Yes in the Update Personal Profile Options form.

[APP–25087] This component is invalid, please re-enter

  Cause:
  This component is invalid because 1) it does not exist in the item master, or 2) it cannot be used on a bill of materials, or 3) it is an engineering item and your WIP:See Engineering Items profile is set to No.

  Action:
  You can 1) define this item in Oracle Inventory, or 2) change the Bom Allowed attribute in Oracle Inventory to Yes, or 3) set the WIP:See Engineering Items personal profile to Yes in the Update Personal Profile Options form.

[APP–25088] This component is not on the bill, please re-enter

  Cause:
  You cannot transact a component that is not on the bill when you perform a transaction other than "Specific component".

  Action:
  Please enter a component that exists on the bill for this job or schedule or choose the "Specific component" transaction type.

[APP–25089] Error in zooming to the Lot Number Entry page

  Cause:
  A process error occurred while zooming to the Lot Number Entry page.

  Action:
  Please contact your support representative.

[APP–25090] Error in zooming to the Serial Number Entry page

  Cause:
  A process error occurred while zooming to the Serial Number Entry page.

  Action:
  Please contact your support representative.

[APP–25091] Cannot assign shop floor status to a routingless job or schedule

  Cause:
  There are no operations to assign shop floor statuses to.

  Action:
  Please select a job or schedule with a routing.

[APP–25092] Invalid Reservation Type for transfer to new delivery

  Cause:
  Reservation Type (&RSV_TYPE) must be 2 or 3 for quantity transfers.
Action:
Please contact your Oracle Support representative.

[APP–25093] Invalid quantity (&MOVE_QTY) to transfer to new delivery

Cause:
The transfer quantity (&MOVE_QTY) is negative. OR The transfer quantity (&MOVE_QTY) is greater than the allowed quantity (&ALLOWED_QTY) for the allocation record with ALLOCATION_ID = &ALLOC_ID.

Action:
Please contact your Oracle Support representative.

[APP–25094] Bill loop detected

Cause:
There is a phantom in the assembly you just attempted to explode that either directly or indirectly contains itself.

Action:
Please run a Verify Bill of Material process or report to determine where the loop is occurring. Use the Define Bill of Material form to correct the problem.

[APP–25095] This item name is already in use as a discrete job name

Cause:
This item name already exists as a discrete job name.

Action:
Please navigate to the Define Discrete Job form and modify the name of the job with the same name as your item.

[APP–25096] You cannot define new schedules for a disabled line

Cause:
You tried to define a new schedule on a line that is currently disabled.

Action:
You can update any existing schedules on the line in the Define Repetitive Schedules form. You can also update the disable date of the line in the Define Production Line form.

[APP–25097] You cannot define new schedules for an item with these attributes

Cause:
You tried to define a schedule for an item with inappropriate inventory item attributes.

Action:
You can update the item attributes in the Define Item form. The Work In Process attribute "Build in WIP" should be set to Yes, and the Order Entry attribute "Pick Components" should be set to No, if you want to define new schedules for this item. You can also update any existing schedules for the item.

[APP–25098] Warning: You have pull components that may remain unissued
Cause:
You are: 1) either scrapping assemblies at an operation with the backflush flag set to No and with operation pull components, or 2) scrapping assemblies at an operation with assembly pull components. At this point, Oracle Work in Process has not issued these components to your job or schedule. However, you may have physically issued these components. In addition, Oracle Work in Process cannot backflush all the component requirements because you have reduced the number of assemblies in the job or schedule. Also, when you scrapped the assemblies, Oracle Work in Process removed the standard cost of these assemblies through the operation, including the cost of the components you have not yet issued.

Action:
Navigate to the WIP Material Transaction form and manually issue these components to your job or schedule. This will update the job or schedule to correctly reflect the actual component quantities and costs.

[APP–25099] Cannot define WIP parameters

Cause:
Your costing organization is different from your current organization.

Action:
To define WIP parameters, you must change the control level for the Costing Enabled and Inventory Asset Value item attributes from Item level to Item/Org level in the Define Item Attribute Controls form in Oracle Inventory. This change will require that costs be defined for all organizations that point to other organizations for their costs. Please refer to the Cost Management topical essays in the Oracle Inventory or Oracle Cost Management reference manuals.

[APP–25100] Transaction subinventory (TXN_SUB) must match demand subinventory (SO_SUB)

Cause:
Under the WIP automated allocation algorithm, a transaction line was picked to fulfill a sales order with a demand subinventory different from the transaction subinventory.

Action:
Please change the transaction subinventory to match the sales order demand subinventory or override the allocation algorithm by explicitly entering a sales order for each transaction line.

[APP–25101] Transaction spans across multiple schedules with different bill revisions

Cause:
You are performing a completion or return from inventory transaction that overlaps several schedules with different bill revisions.

Action:
You must perform a transaction for each bill revision. For example, if your transaction spans across two schedules with bill revisions A and B, you must split the transaction into two transactions: one for bill revision A and the other for bill revision B.

[APP–25102] This date is not defined in your organization’s workday calendar

Cause:
The date you have entered is not a valid date from your organization’s workday calendar.
Action:
You can either enter a valid date from your organization’s calendar or you may need to define the workday calendar in the Define Workday Calendar form in Oracle Bills of Material.

[APP–25103] Non–standard job has no assembly, no move and completion transactions allowed

Cause:
You can perform neither move nor completion transactions against a non–standard job without an assembly.

Action:
Please select another job to perform move or completion transactions against.

[APP–25104] An active schedule exists on the line with a different routing

Cause:
You tried to release a repetitive schedule whose routing is different than other released schedules on the line

Action:
You can change the routing revision of the current schedule to match that of the other active schedules on the line. Or you can update the operations of the schedule in the Update WIP Operations form to also match the routing of the other active schedules on the line. You must ensure that the operation sequences, departments, count point types, and backflush flags of all operations for the current schedule are identical to that of the other active schedules on the line for the assembly.

[APP–25105] Failed backflush transactions exist for TRANSACTION_HEADER_ID &TXN_ID

[APP–25106] You must define a deliver–to location for the PO Move resource

Cause:
You tried to move into an operation with a PO Move resource. The department of the next operation or, if this is the last operation, this operation, has no location.

Action:
Assign a location to the department of the next operation or, if this is the last operation, this operation, in the Define Departments form. This will be used as the deliver–to location on the purchase order.

[APP–25107] A Hold was found on an ATO Line in order &ORDER_NUMBER and order type &ORDER_TYPE

[APP–25108] You cannot complete assemblies if a sales order is linked to the job and you are performing transactions online with the profile TP:Server Side Online Processing set to No.

[APP–25109] You cannot assign a shop floor status to a job with this status.

[APP–25110] You cannot assign a shop floor status to a disabled intraoperation step.

[APP–25111] You cannot assign a disabled shop floor status to an intraoperation step.

[APP–25112] You cannot change the status of this job to On Hold.
[APP–25113] The department is not assigned to the operation sequence number

[APP–25114] Backflush transaction(s) failed

[APP–25115] Operation does not exist in the routing

[APP–25116] You cannot delete this schedule group. There are discrete jobs that are using this schedule group.

[APP–25117] Please enter a valid class or select a valid default class in the WIP Parameters window.

[APP–25118] The sales order request failed. This block will be refreshed.

[APP–25119] This may be a long–running query. Continue?

[APP–25120] You cannot delete this resource or operation. This resource or a resource attached to this operation is linked to a purchase order or a purchase requisition.

[APP–25121] Value for column &COLUMN is being ignored.

[APP–25122] Value for column &COLUMN is invalid.

[APP–25123] Invalid value for Load Type.

[APP–25124] Invalid value for Last Updated By. Check that you have chosen a valid user name.

[APP–25125] Invalid value for Created By. Check that you have chosen a valid user name.

[APP–25126] Invalid value for start quantity. Possible causes: 1. You must enter a value for start quantity to create new jobs. 2. The start quantity must be greater than 0 for standard jobs. 3. The start quantity must be greater than or equal to 0 for nonstandard jobs.

[APP–25127] Invalid value for Start Quantity. Possible causes: 1. You cannot lower the job quantity below the quantity that has already been completed. 2. You cannot lower the quantity below the quantity that has been allocated to sales orders.

[APP–25128] Invalid value for Net Quantity. Possible causes: 1. The net quantity must be greater than or equal to 0. 2. The net quantity must be less than or equal to the start quantity. 3. The net quantity must be 0 for nonstandard jobs without assemblies.

[APP–25129] Invalid value for Firm Planned. Possible causes: 1. The value you entered is not valid. 2. You have tried to firm plan a nonstandard job.

[APP–25130] Invalid value for Organization. Possible causes: 1. You must select a valid and enabled organization. 2. The organization must have WIP and Inventory Parameters defined for it.

[APP–25131] Invalid or missing WIP Accounting Class. Possible causes: 1. You must specify a class or define a default discrete class. 2. The class must exist and be enabled in this organization. 3. The class must have the correct class type for this job.

[APP–25132] Invalid value for Schedule Group. Make sure that the schedule group exists and is enabled in this organization.
[APP–25133] Invalid value for Line. Make sure that the line exists and is enabled in this organization.

[APP–25144] Build Sequence is invalid Possible causes: 1. You cannot enter a Build Sequence without choosing a Schedule Group. 2. This Build Sequence is already being used in this Schedule Group. 3. The Build Sequence must be greater than zero

[APP–25145] Invalid value for Supply Type. Possible causes: 1. You cannot use Operation Pull if the job has no routing. 2. You cannot use Operation or Assembly Pull for nonstandard jobs without assemblies.

[APP–25146] Demand Class is invalid. Make sure that the demand class exists and is enabled.

[APP–25147] You have entered a value for WIP_ENTITY_ID that is already being used.

[APP–25148] You cannot update this job. Possible causes: 1. You have chosen a job that does not exist in this organization. 2. You cannot update jobs of this status.

[APP–25149] You can only have one record with this Group ID that updates this job.

[APP–25150] Alternate Routing is invalid. Choose a routing that exists for this assembly or routing reference.

[APP–25151] Alternate Bill is invalid. Choose a bill that exists for this assembly or bill reference.

[APP–25152] Invalid Assembly. Possible causes: 1. The item does not exist in this organization. 2. The item has attributes that are not allowed for an assembly.

[APP–25153] You cannot define schedules for this assembly/line. You must first create a repetitive assembly/line association.

[APP–25154] Invalid routing reference. Possible causes: 1. The item does not exist in this organization. 2. The item has attributes that do not allow it to be used as an assembly.

[APP–25155] Invalid Bill Reference Possible causes: 1. The item does not exist in this organization. 2. The item has attributes that do not allow it to be used as an assembly.

[APP–25156] Invalid value for Project. Possible Causes: 1. No such project currently exists. 2. Project References are not enabled in your organization.

[APP–25157] Invalid value for Task. Possible causes: 1. The Task you have entered does not belong to this Project. 2. You have entered a Task without a Project. 3. If your Project Control Level is task level, you must enter a Task for this Project.

[APP–25158] One or more of your scheduling dates is missing or invalid. Possible causes: 1. You must select dates that are defined in your manufacturing calendar. 2. You must enter at least one schedule date when creating jobs or schedules. 3. You must enter both dates for nonstandard jobs without a routing reference.

[APP–25159] You must enter a value for Processing Days that is greater than 0.

[APP–25160] You entered a value for REPETITIVE_SCHEDULE_ID that is already in use.

[APP–25161] Daily Quantity must be greater than 0.
[APP–25162] Invalid value for Scheduling Method. Possible causes: 1. You must enter start and completion dates to use manual scheduling. 2. The start date must be earlier than the completion date when using manual scheduling. 3. You cannot use lead time scheduling for nonstandard jobs without routing references.

[APP–25163] Completion subinventory is invalid. Possible causes: 1. Choose a subinventory that exists in this organization. 2. Make sure the assembly can be transacted into this subinventory.

[APP–25164] Completion Locator cannot be specified without a Completion Subinventory.

[APP–25165] Duplicate value for Job Name. Possible causes: 1. A job with this name already exists in this organization. 2. Job names must be unique. You cannot import jobs with the same name into the same organization.

[APP–25166] Invalid Status. You can only define jobs as Unreleased, Released, or On Hold. You can only update jobs to Unreleased, Released, Complete, On Hold, or Cancelled.

[APP–25167] One or more of your scheduling dates is invalid. You should enter only one scheduling date if the assembly has a routing or if the line has a fixed lead time. You should enter a start date and a completion date if your line is routing–based and your assembly has no routing.

[APP–25168] Invalid Bill Revision information. Possible Causes: 1. You have chosen an invalid revision. 2. No valid revision exists on the revision date you have chosen.

[APP–25169] Invalid Routing Revision information. Possible Causes: 1. You have chosen an invalid revision. 2. No valid revision exists on the revision date you have chosen.

[APP–25170] &Concurrent Request

[APP–25171] This Schedule Group, Build Sequence combination is already being used by another job.

[APP–25172] Invalid or insufficient Locator information. Check that you have entered valid locator information based on the organization, subinventory, and assembly that you have chosen.

[APP–25173] &ENTITY1 of &ENTITY2 records failed. You cannot resubmit a record to be mass loaded unless the last attempt to process the record failed.

[APP–25175] Pending transactions for this job will not be affected. Only future transactions will be affected by this change.

[APP–25176] Submit Request to purge data?

[APP–25178] At least one of the include options must be selected.

[APP–25179] Rows: &NUMBER

[APP–25180] There is no information in the current record. You cannot proceed with the purge activity.

[APP–25181] Not all transactions deleted: Some transactions scan multiple schedules, one of which is not eligible for purge.
WIP period balances for this Job/Schedule is non-zero.

Oracle Work in Process is unable to schedule your job or schedule because calculated scheduling dates fall outside defined calendar dates. You can define additional calendar dates in Oracle Bills of Material.

You may not insert or delete operations because there are other active schedules on this line with the same routing. You also may not update the Operation Code, Count Point, Autocharge, or Backflush fields.

The default WIP Accounting Class &class_code that you have chosen is disabled. You should choose a different default WIP Accounting Class in the WIP Parameters form.

You cannot perform this action on a new or changed record.

Assembly pull is not a valid supply type because the operation is not autocharge.

You can only update the status of this job.

&ENTITY1 of &ENTITY2 records failed. Work in Process does not allow the status changes you tried for those records.

&ENTITY1 of &ENTITY2 records failed. You are not allowed to close jobs with these statuses.

&ENTITY1 of &ENTITY2 records failed. You cannot change the status of these jobs. Either a concurrent program exists to close these jobs or the jobs did not have status Pending Close.

&ENTITY1 of &ENTITY2 records failed. You are not allowed to unclos e these jobs. You can only unclos e jobs that were closed in accounting periods that are still open. You cannot unclos e jobs that are linked to sales orders.

You cannot create this job until you have completed departure planning.

You must define a deliver-to location for the PO Move resource at the first operation.

You tried to release a job with a PO Move resource at the first operation. The department of the next operation or, if this is the last operation, this operation, has no location.

Assign a location to the department of the next operation or, if this is the last operation, this operation, in the Define Departments form. This will be used as the deliver-to location on the purchase order.

Only valid employees can release a job if the first operation requires outside resources.

You tried to release a job whose first operation requires outside resources but you are not a valid employee yourself.

Please use the Employees form to define yourself as an employee for this organization. You must
also associate your user name with your employee name in the Define Applications User form under the System Administrator’s responsibility.

[APP–25196] You cannot reschedule this job. Possible causes: 1. The job that is identified in this interface record does not exist. 2. You can only reschedule jobs that have status Unreleased, Released, Complete, or On Hold.

[APP–25197] Invalid Scheduling Level. The Scheduling Level must be set to Operation or Resource.

[APP–25198] The start date must be less than the completion date.

[APP–25199] The operations in the interface table do not match the operations for the job you are rescheduling.

[APP–25200] The resources in the interface table do not match the resources for the job you are rescheduling.

[APP–25201] The Usage Rate or Amount must be greater than or equal to zero.

[APP–25202] This record cannot be processed because other records for this job have failed validation.

[APP–25203] Cannot convert date format.

[APP–25204] You can only enter one completion transaction at a time for this average costing organization.

[APP–25205] You cannot define repetitive items or schedules because the current organization is an average costing organization.

[APP–25206] A No Move shop floor status exists between the From Operation and Intraoperation Step and the To Operation and Intraoperation Step.

[APP–25207] You must define at least one WIP Accounting Class before using this module.

[APP–25208] The estimated scheduling date does not exist in your manufacturing calendar.

[APP–25209] Invalid Interface Record. Be sure that you are inserting records with the correct values for PROCESS_PHASE and PROCESS_STATUS.

[APP–25210] Total quantity must be greater than or equal to the quantity in queue of the first operation.

[APP–25211] You have entered an invalid project or task for this transaction.

[APP–25212] Invalid Substitution Type – The Substitution Type entered at Operation Sequence &ENTITY1 is invalid, please re-enter a valid Substitution Type – 1) Change, or 2) Delete or 3) Add or 4) Lot/Serial.

[APP–25213] Invalid Completion Assembly – The Completion Assembly is invalid because either 1) it does not exist in the item master, or 2) it is not buildable in Work in Process, or 3) it is an engineering item and the WIP:See Engineering Items profile is set to No.
[APP–25214] Invalid Substitution/Change at Operation Sequence &ENTITY1.

[APP–25216] Error occurred in the Substitution Merge program, while Substituting components at Operation Sequence &ENTITY1.

[APP–25217] Error occurred while inserting costing information into the WIP_COST_TXN_INTERFACE table.

[APP–25218] Error occurred while performing the inventory validation for the material issues associated with the Work Order–less Completion Transaction – &ENTITY1.

[APP–25219] Error occurred while creating the Work Order–less Completion Entity &ENTITY1.

[APP–25220] The Work Order–less Completion Transaction failed as the Project/Task related Locator could not be created dynamically.

[APP–25221] Error occurred while generating the revisions for the material Issues associated with the Work Order–less Completion Transaction whose transaction Interface ID is : &ENTITY1.

[APP–25222] Error occurred while backflushing the components for the Work Order–less Completions Transactions whose Transaction Interface ID is : &ENTITY1

[APP–25223] The transaction processor errored out while moving information from MATERIAL_TRANSACTIONS_INTERFACE table to MTL_MATERIAL_TRANSACTIONS_TEMP table for Work Order–less Completions.

[APP–25225] An ATP rule cannot be found for some selected components.

[APP–25226] You have selected some components which are not Check ATP enabled.

[APP–25227] You need to save your changes before doing an ATP check.

[APP–25229] Invalid Substitution Item – The Substitution Item is invalid because either 1) it does not exist in the item master, or 2) it is not buildable in Work in Process, or 3) it is an engineering item and the WIP:See Engineering Items profile is set to No.

[APP–25230] Error occurred while deleting the Work Order–less Completion Entity &ENTITY1.

[APP–25231] Invalid Flow Schedule Flag 'N' for the Substitute Item at Operation Sequence &ENTITY1.

[APP–25233] Pre–Inventory Validation routine for the Material Issues associated with the Work Order–less Completion transaction errored out.

[APP–25234] Post–Inventory Validation routine for the Material Issues associated with the Work Order–less Completion transaction errored out.

[APP–25236] Invalid Lot Serial Substitution at Operation Sequence &ENTITY1.

[APP–25237] Error occurred while performing the post substitution merge operations.

[APP–25238] WIP Accounting Class &class_code defined in Project parameters is disabled.

[APP–25239] Flow Schedules

[APP–25240] You have selected an assembly whose only routing is a flow routing. Oracle Work in Process does not currently support such routings. Please select a different assembly.

[APP–25241] The routing you have chosen for your assembly is a flow routing. Oracle Work in Process does not currently support such routings. Please select a different routing.

[APP–25242] Please use clear block to clear the form.

[APP–25243] Changing this field will cause all dependent fields to be cleared. Are you sure?

[APP–25244] Could not default all fields for the assembly.

[APP–25245] Work in Process does not support Resource and Overhead transactions entered manually for flow schedules – i.e., with PROCESS_PHASE = 1 in the WIP_COST_TXN_INTERFACE table.

[APP–25246] Error occurred while validating the Work Order-less Completion Entity &ENTITY1.

[APP–25247] Error occurred while defaulting for the Work Order-less Completion Entity &ENTITY1.

[APP–25248] The assembly chosen is under revision control but has no bill.

   Cause: You cannot complete or return assemblies from the Move Transactions form for this type of item.

   Action: Use the Assembly Completions form instead.

[APP–25249] Changing the project and/or task information will cause all substitution information to be deleted. Are you sure?

[APP–25250] The project and task references specified do not match the project/task references for the locator.

[APP–25251] The backflush component &ENTITY1 for this Work Order-less Completion is under Serial Control and its serial number is not provided. Work In Process cannot generate serial numbers automatically.

[APP–25252] The backflush component &ENTITY1 for this Work Order-less Completion is under Lot Control and its Lot number is not provided. Work In Process cannot generate Lot numbers automatically as the Lot Selection Method is set to Manual Entry.

[APP–25253] The backflush component &ENTITY1 is under Lot Control. The Work Order-less Completion/Return has this component in the bill with a negative/positive Quantity Per. Work in Process cannot automatically generate a New Lot for this component.
Material allocations exist for this schedule.

&Transaction Summary

The Substitute Component &ENTITY1 s, Transaction UOM &ENTITY2 is different from its Primary UOM &ENTITY3. For Lot Serial Substitution the Transaction UOM should be the same as Primary UOM.

The WIP accounting class &class_code that you have chosen does not have an enabled association with a Cost Group. This association is required in the case of an average costing organization with project reference enabled.

No default accounting class exists for specified assembly and/or project reference.

Invalid Completion Locator for Project and Task.

Schedule number

WIP Accounting Class &class_code defined for Product line accounting is disabled.

No resource/material requirement substitutions can be done for this job, because status_type are not valid. The valid status_types are: 1) Unreleased, 3) Released, 4) Completed, 6) Hold

No resource/material requirement substitutions can be done for this job, because this job is firmed and can not be changed

Invalid Load OR Substitution Type – Substitution Type must be: 1) WIP_DELETE, or 2) WIP_ADD or 3) WIP_CHANGE; Load_Type must be : 1) WIP_RESOURCE or 2) WIP_MTL_REQUIREMENT

Invalid Last_Updated_By OR Created_By – They must be a valid user.

This record failed because there are other failed records in this job. If any record in a job fails, all records in this job will fail.

When deleting resources, resource_seq_num AND resource_id_old in WIP_JOB_DTLS_INTERFACE table can NOT be NULL.

Resource can NOT be deleted or changed, because there is NOT such a combination of wip_entity_id/organization_id/operation_seq_num/resource_seq_num/resource_id.

Resource can NOT be deleted or changed, because WIP_OPERATION_RESOURCES.applied_resource_units is not 0, which means this resource have been applied.

Resource can NOT be deleted or changed, because there are pending transactions associated with this resource.

When adding resources, you must specify resource_seq_num, resource_id_new, AND usage_rate_or_amount.

Resource can NOT be added or changed, because resource_id_new is invalid or disabled.
[APP–25273] Resource can NOT be added, because resource_seq_num already exists, OR the to–be–added resource_seq_num &lt;= 0

[APP–25274] Resource can NOT be added or changed, because usage_rate_or_amount must be &gt;= 0.

[APP–25275] Resource can NOT be added or changed, because autocharge_type can NOT be NULL.

[APP–25276] When change resources, resource_id_old, resource_id_new, resource_seq_num and usage_rate_or_amount can not be null

[APP–25277] When deleting material requirments, inventory_item_id must be specified.

[APP–25278] Materail requirements can NOT be deleted or changed, because it does not exist.

[APP–25279] Materail requirements can NOT be deleted or changed, because there are quantities already issued

[APP–25280] Materail requirements can NOT be deleted or changed, because there are pending transactions with this materail requirement

[APP–25281] When adding materail requirements, inventory_item_id AND quantity_per_assembly MUST be specified

[APP–25282] Materail requirements can NOT be added or changed, because the same material already exists in the specified job/operation

[APP–25283] Materail requirements can NOT be added or changed, because the new material is not valid

[APP–25284] Materail requirements can NOT be added or changed, because defaulted wip_supply_type is NULL

[APP–25285] When change material requirements, inventory_item_id_old, inventory_id_new and quantity_per_assembly can not be null

[APP–26003] Pick Slips from different organizations cannot be processed online

[APP–26004] Error occurred while retrieving list of document set usages

[APP–26005] Currency formatting failed for this line

[APP–26006] A document set must contain at least one document

[APP–26007] Amount must be in format &FMT_MASK

[APP–26009] Currency formatting cannot be performed without a currency code

[APP–26012] Launching Pick Release failed. Your request was deleted.

[APP–26013] Error occurred while submitting concurrent request to create exception reports.

[APP–26014] The Details window could not be released from semi–modality. Please contact your Oracle representative.

[APP–26015] Shipping Transaction Manager is down. Please start it before proceeding.

[APP–26016] Cannot launch Pick Release Online without specifying an order number.

[APP–26017] Clearing will remove all serial number information for these line details.

[APP–26018] Please finish your work in the Details window and close it before saving here.

[APP–26020] You cannot ship &DETAILS_SHP_QTY for a line with a requested quantity of &LINE_REQ_QTY. Please reduce the quantity shipped on the details.

[APP–26021] Quantity information for line &LINE does not match its details. Please check the details entered.

[APP–26022] Please finish your work in the Serial Number window and close it before saving here.

[APP–26023] There are no open periods for this shipment to ship against.

[APP–26028] Quantity validation failed for a line detail(s). Please check Error Explanation to see which line details are inconsistent with the picking lines.

[APP–26029] The quantities on the picking lines and details do not match for picking lines &PICK_LINES of pick slip &PICK_SLIP. Please query these lines and check the quantities.

[APP–26030] You are confirming a shipment in a past period.

[APP–26033] The Transaction Manager failed to execute &PROGRAM online. Please contact your Oracle representative.

[APP–26034] Total shipped quantity (&DETAILS_SHP_QTY) on the line details does not match the shipped quantity on the picking line (&LINE_SHP_QTY).

[APP–26035] There are duplicate serial numbers on the line details for picking lines &PICK_LINES of pick slip &PICK_SLIP. Please choose unique serial numbers for these line details.

[APP–26036] Process online for shipping failed in the 'Inventory Interface' process. The process online request has failed in the 'Inventory Interface' process. Run the Inventory Interface concurrent program. Monitor the log files for errors.

[APP–26037] Process online for shipping failed in the 'Update Shipping' process. The process online request has failed in the 'Update Shipping' process. Run the Update Shipping Information concurrent program and wait for it to complete successfully. Then run the Inventory Interface concurrent program. Monitor the log files for errors.

[APP–26038] The effective date can not be less than the current date.

[APP–26039] Please finish your work in the Details window and close it before proceeding.
[APP–26040] Total shipped quantity (&DETAIL_SHP_QTY) for the line detail does not match the total requested quantity (&DETAIL_REQ_QTY) for the line detail.

[APP–26047] Expected Arrival Date cannot be before Shipped Date

[APP–26048] Transaction Out of Sequence. Pick slip is being closed by a transaction before this one. Please correct the sequence of these transactions.

[APP–26049] This Serial Number is used by another transaction in the interface. Update the transaction to make it unique.

[APP–26050] Cannot use this Serial Number because it is already used in the database

[APP–26051] Check Freight Charges for errors

[APP–28052] Disable date should be later than the Effectivity date

[APP–33001] Syntax error : line &1 position &2

  Cause:
The formula contains some unexpected text which cannot be verified. The line number and position of the text is given.

  Action:
Correct the error in the formula and verify again.

[APP–33002] Syntax error : line &1 position &2

  Cause:
The formula contains some unexpected text which cannot be verified. The line number and position of the text is given.

  Action:
Correct the error in the formula and verify again.

[APP–33003] Line &1: ‘&2’ is of type &3 but has &4 type assigned into it.

  Cause:
The data type of the expression on the right hand side of the assignment statement does not match
the data type of the variable on the left hand side of the assignment, probably because of an earlier assignment to the variable of a different data type.

Action:
Ensure data types of assignments match, or that variable being set has not been set before to another data type.

[APP–33004] Line &4: Item &1 is incorrect type: &2 expected, &3 actual.

Cause:
An unexpected data type was found during type testing. The line number, item and expected and actual data types are given.

Action:
Check that the data type of the item is what you expect. Does the use of the item break FastFormula rules. Possibly a conversion function such as to_char() is needed. Please consult the documentation for further information.

[APP–33005] The local variable &1 was used before being initialized

Cause:
The variable named in the error message is being used before any value has been assigned to it, so it has no meaningful value.

Action:
Please ensure variables have been assigned to before using them.

[APP–33006] The statement at line &1 has an invalid combination of data types

Cause:
A statement contains an invalid combination of data types, for example an expression which contains sub-expressions of different data types.

Action:
Ensure data types within expressions match.

[APP–33008] Unknown function ‘&1’ used in statement at line &2. The user specified a function in his formula, the next name of which was not matched with any function in the function table.
Number: abs (n) Absolute value of n. floor(n) Integer value of n. roundup(n[,m]) Round up n to m decimal places; round_up if m omitted, to 0 places. trunc(n[,m]) Truncate n to m decimal places; truncate if m omitted, to 0 places. round(n[,m]) Round n to m decimal places; if m is omitted to 0 places. least(n,n[,n]...) Return the lowest number listed. least_of greatest(n,n[,n]...) Return the highest number listed. greatest_of Text: length(exp) Return length of exp. least(exp,exp[,exp]...) Return the expression first least_of in alphabetical order. greatest(exp,exp[,exp]...) Return the expression last_greatest_of in alphabetical order. substr(exp,m[,n]) Return the substring of exp, substring beginning at the mth character, n characters long; if n is omitted, to end of exp. Date: days_between(d1,d2) Days between dates d1 and d2. months_between(d1,d2) Months between dates d1 and d2. years_between(d1,d2) Years between dates d1 and d2. least(d,d[,d]...) Returns earliest date. least_of greatest(d,d[,d]...) Returns latest date. greatest_of add_days(d,n) Add n days to date d. add_years(d,n) Add n years to date d. Conversion: to_char(n) Converts the numeric value nto_text into it’s text equivalent. to_date(exp) Converts the text expression exp into a date.
&1 was named twice in INPUTS or RETURN statement at line &2

Cause:
A Local variable was named more than once as a parameter of an INPUTS or RETURN statement.

Action:
Please refer to variables once only in INPUTS and RETURN statements.

Formula contains more than one INPUTS statement

Cause:
You have more than one INPUTS statement in your formula.

Action:
Use a single INPUTS statement containing all input variables.

Line &1: '&2' is not a local variable: assignment is not allowed

Cause:
An illegal assignment was found caused by assignment to a variable that was not a local variable.

Action:
Please ensure that only local variables are assigned values.

Line &2: Global '&1' illegally used in INPUTS or RETURN statement

Cause:
A global variable has been used in an INPUTS or RETURN statement.

Action:
Please use only local variables in INPUTS or RETURN statements.

Line &2: DB Item '&1' illegally used in INPUTS or RETURN statement.

Cause:
A database item has been used in an INPUTS or RETURN statement.

Action:
Please use only local variables in INPUTS or RETURN statements.

&1 is not a Local Variable – not allowed in INPUTS statement

Cause:
This error should not occur as there are now specific errors for global and database items used in INPUTS and RETURN statements. Only Local Variables may be named in the INPUTS statement.

Action:
Please refer to your local support representative.

&1 is Global variable: type declaration not allowed

Cause:
A type declaration has been made for a global variable.
Action:
Please do not make type declarations for global variables.

[APP–33017] &1 is Database Item: type declaration not allowed

  Cause:
  A type declaration has been made for a database item.

Action:
Please do not make type declarations for database items.

[APP–33018] The Item &1 is declared as being of conflicting types.

  Cause:
  An item has been declared twice but with conflicting data types.

Action:
Please only make type declarations once per variable, and only if necessary such as non-numeric INPUT variables.

[APP–33019] Line &1: Item or Function name is too long: &2

  Cause:
  The Item or Function Name exceeds the maximum length allowed for names. At present this length is set to 60.

Action:
Please use item names of 60 bytes or less.

[APP–33020] Formula is too large

  Cause:
  The formula is too large.

Action:
Please reduce the size of the formula until it verifies.

Information message to tell user that named formula is being run.

[APP–33025] Initializing
Information message to tell the user that ffuevf is initializing.

Information message to tell user that the formula is being parsed.

Information message to tell user that the formula is being checked.

Information message to tell user that PL–SQL is being generated.

[APP–33029] Formula &1 verified successfully.
Information message to tell the user that the formula has successfully been verified (compiled).
[APP–33030] Running formula &1
This information is displayed when formulas are run via AF.

[APP–33032] Translating ’&1’
This message does not indicate an error, but is for information only. When a QuickPaint report has been written, and is being committed to the database, it is also translated into a formula. This message indicates that the translation is taking place.

[APP–33039] The Value is in an incorrect format for the Type.

  Cause:
  For a global, you are trying to enter a Value which is inconsistent with the Type you have chosen.

  Action:
  Enter a value in the correct format for the type. For example, check a global of Number type contains only numbers, or a global Date is in the format DD–MON–YYYY (so August 14 1992 would be 14–AUG–1992)

[APP–33052] The name ’&1’ is already used by a &2

  Cause:
  There is already a &2 called by the name that you have chosen.

  Action:
  Please choose another name.

[APP–33054] &VALUE_NAME name includes reserved words or characters. Re–enter

  Cause:
  You are trying to enter a name with words or characters the application reserves for its own use.

  Action:
  You cannot use reserved words or characters in a name. The name must contain only A–Z, a–z, 0–9 or underscore (_) characters. Also, you cannot start a name with a number.

[APP–33055] Line &1: Function ’&2’ has mixed token and non–token arguments.

  Cause:
  The function &2 was called with a mixture of tokenized and non–tokenized arguments.

  Action:
  Use the function &2 with either all tokenized or all non–tokenized arguments

[APP–33061] Syntax error at line &1 position &2: Date format must be &3

  Cause:
  The date supplied is not the correct format (as indicated).

  Action:
  Format the date in the correct format shown.

[APP–33062] Line &1: Alias for &2 not allowed. Can only alias globals and DB items

  Cause:
  You have tried to alias a formula variable that was not a global or a database item
Action:
Only alias items whose name you cannot change such as database items or global variables.

[APP–33063] Alias &3 at line &2 of &1 is already used by another variable.

Cause:
You have specified an alias which has the same name as an existing variable.

Action:
Rename your alias to be different from existing variables.

[APP–33064] Line &1: Statements are ordered incorrectly.

Cause:
You have written an alias, default or input statement after a formula statement.

Action:
Alias and default statements must be first in your formula, followed by any input statement and lastly the formula statements.

[APP–33065] Line &1: Only database items or input variables can be defaulted.

Cause:
You have specified an item to be defaulted which is not a database item or an input variable.

Action:
Use a database item or input variable in the default statement. If you want to change the value of a local variable, simply assign a value to it. You can change global variable values using the Manage Globals form.

[APP–33066] This formula contains no formula statements.

Cause:
You have written a formula which contains no statements, and as such, will not perform any useful function.

Action:
Add some statements to the formula. Refer to FastFormula guide for more details.

[APP–33067] Error: Global variable &1 ends before end date of current formula.

Cause:
You are referencing a global variable whose end date is before the end date of the current formula.

Action:
Set the end date of the current formula to before the end date of the global variable, or extend the global variable beyond the end date of the current formula.

[APP–33068] Global variables referenced in the formula have expired.

Cause:
The DateTrack operation selected for this formula causes the new date range for the formula to be invalid because global variables which are referenced by the formula expire before the new formula end date.
Action:
Investigate lifetime of global variables referenced within formula, and either extend their lifetime to that of the formula or reduce the formula lifetime so it does not exceed that of referenced global variables.

[APP–33069] Error at line &1 position &2: Empty string ” not allowed

Cause:
FastFormula does not allow empty strings.

Action:
Please use one or more characters in quotes to form a string.

[APP–33070] There are no more contexts available (maximum allowed is &1)

Cause:
The maximum number of allowed contexts has been reached.

Action:
Remove any old or unused contexts.

[APP–33071] The formula &1 has not been verified with this version.

Cause:
The formula has not been verified with the current version of FastFormula.

Action:
Reverify the formula before attempting to run it again.

[APP–33072] Database item '&1' cannot be found [&2,&3,&4]

Cause:
The named database item could not be found within the FastFormula dictionary [Formula Type Id,Business Group Id, Legislation Code]

Action:
Please contact your local support representative.

[APP–33074] The variable '&1' matches a context name and must be changed.

Cause:
The variable '&1' has been used in the formula, but is also used as a context name on which a database item has been based.

Action:
Please choose another name for variable '&1'

[APP–33075] The item '&1' is referenced by one or more verified formulae.

Cause:
You have attempted to change or remove an item which is referenced by one or more formulae. Removal of this item will invalidate the verified formula and cannot be allowed.

Action:
Remove the verified formula before removing the item.
[APP–33076] Action will invalidate one or more compiled formula.

Cause:
An action has been requested which will invalidate one or more compiled formula.

Action:
Remove compiled formulae and retry. Then reverify all formulae.

[APP–33077] Error at line &1: Only local variables can be used for OUT parameters

Cause:
You have passed a variable other than a local variable to a function parameter which the function expects to modify.

Action:
Please use local variables only for function parameters which may be modified.

[APP–33099] Token too long: line &1 position &2

Cause:
A Name, or Text String exceeds its maximum permitted length.

Action:
Please reduce the length of the token.

[APP–33101] QuickPaint error detected (FF–&1)

[APP–33102] &1 parameter(s) passed to QUICKPAINT_GET instead of expected &2

Cause:
The userexit was called with the wrong number of parameters.

Action:
This is an error in the application calling FastFormula. If you are running an Oracle application please refer to your local support representative.

[APP–33104] Unable to access field QP_CONTEXT.QP_REPORT_ID

Cause:
There must be a field (usually a hidden field) called QP_REPORT_ID which holds the numeric unique key for the report.

Action:
This is an error in the application calling FastFormula. If you are running an Oracle application please refer to your local support representative.

[APP–33105] Bad value (&1) in field QP_REPORT_ID

Cause:
The (hidden) field QP_REPORT_ID was accessed by the userexit, and found to have a value of zero or less.

Action:
This is an error in the application calling FastFormula. If you are running an Oracle application please refer to your local support representative.
[APP–33106] Unable to write to field ’&1’

   Cause:
   One of the fields that receive a line of report text could not be accessed for writing. This would
   normally indicate that the field field does not exist in the current block.

   Action:
   This is an error in the application calling FastFormula. If you are running an Oracle application
   please refer to your local support representative.

[APP–33107] No parameter list passed to QuickPaint user exit

   Cause:
   Application Foundation passes a parameter list, called ”argv”, to the QuickPaint user exit, but this
   was found to be missing.

   Action:
   This is an error in the application calling FastFormula. If you are running an Oracle application
   please refer to your local support representative.

[APP–33108] &1 parameters expected, &2 found

   Cause:
   The wrong number of parameters was passed into a QuickPaint user exit.

   Action:
   This is an error in the application calling FastFormula. If you are running an Oracle application
   please refer to your local support representative.

[APP–33110] Negative or zero report identifier (value = &1)

   Cause:
   The report identifier is a number that acts as the unique identifier for each report in the table
   FF_QP_REPORTS. It is generated from a sequence.

   Action:
   This is an error in the application calling FastFormula. If you are running an Oracle application
   please refer to your local support representative.

[APP–33111] QuickPaint report name missing

   Cause:
   A blank report name was passed to a QuickPaint user exit.

   Action:
   Please supply a name for an existing report.

[APP–33112] Bad NUMBER_OF_LINES parameter (value = &1 : should be 1 – &2)

   Cause:
   The NUMBER_OF_LINES parameter, which indicates the number of lines on the QuickPaint
   screen, is outside the acceptable range.
Action:
This is an error in the application calling FastFormula. If you are running an Oracle application please refer to your local support representative.

[APP–33113] Unable to access field '&1'

Cause:
There should be a field on the screen, holding QuickPaint text, with a name of the form LINEnn (where nn is a two–digit number). If the parameter to the QUICKPAINTBUILD exit indicates that there will be e.g. 12 lines, then there should be fields called LINE01, LINE02, up to LINE12.

Action:
This is an error in the application calling FastFormula. If you are running an Oracle application please refer to your local support representative.

[APP–33114] QUICKPAINTSAVE: bad formula_id (&1)

Cause:
The formula_id parameter to the QUICKPAINTSAVE exit has a value that it is either a negative number, or starts with a non–digit.

Action:
This is an error in the application calling FastFormula. If you are running an Oracle application please refer to your local support representative.

[APP–33115] QUICKPAINTDELETE: No parameter list passed

Cause:
Application Foundation passes a parameter list, called ”argv”, to the QuickPaint user exit, but this was found to be missing.

Action:
This is an error in the application calling FastFormula. If you are running an Oracle application please refer to your local support representative.

[APP–33116] QUICKPAINTDELETE: &1 parameters expected, &2 found

Cause:
The wrong number of parameters was passed into a QuickPaint user exit.

Action:
This is an error in the application calling FastFormula. If you are running an Oracle application please refer to your local support representative.

[APP–33117] QUICKPAINTDELETE: bad formula_id (&1)

Cause:
The formula_id parameter to the QUICKPAINTDELETE exit has a value that is either a negative number, or starts with a non–digit.

Action:
This is an error in the application calling FastFormula. If you are running an Oracle application please refer to your local support representative.
A QuickPaint error occurred (in QUICKPAINT_DELETE trigger)
This is a cover message, giving the name of the userexit in which the error occurred. The real error
information follows in the subsequent message (usually displayed when carriage–return is pressed).

Zero value for formula_id (as held in FF_QP_REPORTS)

Cause:
The FF_QP_REPORTS table has a column called FORMULA_ID, which is a foreign key into the
FF_FORMULAS table. When the QUICKPAINT_DELETE trigger is called, the value of
FORMULA_ID is passed in. This value, as passed in, was zero. It should have a positive numeric
value.

Action:
This is an error in the application calling FastFormula. If you are running an Oracle application
please refer to your local support representative.

This Report Name Already Exists For A Formula Of The Same Type.

Cause:
A QuickPaint report name was entered which already exists.

Action:
Choose another report name.

Cause:
The character ‘ was used in the name of the QuickPaint report.

Action:
Choose a report name which does not contain the ‘ character.

QUICKPAINT_SAVE: bad formula type id &1

Cause:
The Formula_type_id parameter to the QUICKPAINT_SAVE exit contains invalid characters. It
should only contain the digits 0–9 with an optional preceding ‘−’ character.

Action:
Please refer to your local support representative.

Empty formula supplied (Formula_Id=&1)

Cause:
A formula with length 0 was presented for execution. The length refers to the compiled (pl/sql)
formula, not the original formula text, as found in the FF_COMPILED_INFO table.

Action:
Please refer to your local support representative.

No such formula (&1)

Cause:
The Application–ID, Formula Type, and Formula Name, used to identify the formula in the
FF_COMPILED_INFO table, do not correspond to any known formula.
Action:
Please refer to your local support representative.

[APP–33205] Formula &1: &2

Cause:
During the PL/SQL execution part, an Oracle error was detected.

Action:
Please refer to your system administrator.

[APP–33208] ORA&2 occurred at line &3 of formula &1

Cause:
Whilst executing PL/SQL, an Oracle error occurred. The line number and line position, are given where available

Action:
Please refer to your system administrator.

[APP–33209] Unable to open file for reading (&1)

Cause:
Attempting to open a text file that contains data that is to be read in to memory.

Action:
Check that file exists and you have permission to read it.

[APP–33210] Unable to write to file (&1)

Cause:
An error occurred attempting to open a file for writing.

Action:
Please check you have permission to create or write to the file.

[APP–33211] Error writing to file (&1)

Cause:
An error occurred while attempting to write data into a file. The file has been successfully opened for writing, but the fputs() function was unable to write.

Action:
Please refer to your system administrator.

[APP–33212] Unable to open file for reading (&1)

Cause:
An error occurred attempting to open a file for reading.

Action:
Check that the file exists and you have permission to read it.

[APP–33214] error while reading file (&1)
Cause:
An error was returned by the ftell() function.

Action:
Please refer to your system administrator.

[APP–33215] Attempt to convert NULL numeric (length=&1,item=&3)

Cause:
An attempt was made to convert an Oracle internal number to a character representation of that number. The length provided with the Oracle number was less than, or equal to, zero. This normally occurs if a formula returns a NULL value through one of the numeric variables in its RETURN statement. If a database item returns either a NULL, or no data was found for that database item (which causes a NULL value), and the NULL gets put into a numeric variable, which gets RETURNed, this error arises. This error occurs with either output data, or debug printing (e.g. ffxprs())

Action:
Please refer to your local support representative.

[APP–33216] Variable &3 not initialized at line &2 of &1

Cause:
An attempt has been made to use a local variable before it was initialized. This is normally detected by the verifier, but in certain cases this is not possible, and will result in this error. This problem can be corrected by altering the formula. Assign an initial value to the variable before it is referenced in the formula.

Action:
Please refer to your system administrator.

[APP–33217] Divide by zero at line &2 of &1

Cause:
An attempt was made to divide a number by zero. Suppose that a formula has an input called NUMBER_IN, and a line of the form NUMBER_OUT = 100 / NUMBER_IN. If NUMBER_IN was passed a value of zero, then this error would result.

Action:
Please refer to your system administrator.

[APP–33218] Data &3 not found at line &2 of &1

Cause:
A SQL SELECT statement, obtained from the application dictionary, returned no rows when executed.

Action:
Please refer to your local support representative.

[APP–33219] Too many rows returned for &3 at line &2 of &1

Cause:
The application dictionary has not been set up correctly. One of the SQL statements that it contains would cause more than one row to be selected.
Action:
Please refer to your local support representative.

[APP–33220] Value exceeded allowable range (line &2 of &1)

Cause:
Caused by Oracle error 6502 occurring during the execution of the formula which is raised when an arithmetic conversion error, or string truncation error occurs. This can also be caused by invalid dates, e.g. 39–DEC–1991, 24–MAR–5000

Action:
Check your formula for possible invalid dates,numbers or strings greater than 255 characters in length.

[APP–33221] Invalid number at line &2 of &1 (Object &3)

Cause:
An attempt was made to convert a character string to a number, but the character string did not contain a valid numeric literal.

Action:
The formula may need altering, or there may be a problem with a value being returned from the database.

[APP–33222] NULL value for &3 at line &2 of &1

Cause:
A SQL SELECT statement, obtained from the application dictionary, returned a column whose value was NULL.

Action:
Please refer to your local support representative.

[APP–33223] Bad data type (&2) for Global Table Entry (&1)

Cause:
The global table has a row whose data type is not one of N (numeric), T (text) or D (date)

Action:
Please refer to your local support representative.

[APP–33224] Bad datatype (&1) in FF_FDI_USAGES (Item &2, Fmla &3)

Cause:
Only N,T or D permitted in the usage column of the FF_FDI_USAGES table. (These refer to Numeric, Text or Date data).

Action:
Please refer to your local support representative.

[APP–33226] Item ’&1’ has &2 Fillers provided, but no placeholders for them

Cause:
In the Application Dictionary Route table, the route text for the database Item specified in Code 1
did not contain 1 or more matching placeholders for the User Where Clause Fillers associated with the Database Item. For example, an B4 filler may have been provided, and when scanning the route text for a placeholder in which to insert it, no matching placeholder was found.

Action:
Please refer to your local support representative.

[APP–33227] Item ‘&1’ has &2 Column usages provided, but no placeholders for them

Cause:
Bad route or Route Column Usages in the Application Dictionary In the Application Dictionary Route table, the route text for the database Item specified in Code 1 did not contain 1 or more matching placeholders for the Route Column Usages associated with the Database Item.

Action:
Please refer to your local support representative.

[APP–33228] Placeholders in route text for &1 remain uncompleted.

Cause:
After replacement of the User Where Clause Fillers and the Route/ Context usages placeholders in the Database Item’s Route text, some placeholders remain. This probably means that either incorrect route text was entered, or the definition of the database item is incomplete.

Action:
Please refer to your local support representative.

[APP–33229] Global variable &1 has invalid data type (must be D, N or T)

Cause:
The data type for the item &1, as held in the Globals table, is invalid. It must be one of T (Text), D (Date) or N (Number).

Action:
Change the data type for this global variable using the Define Globals form.

[APP–33230] The Item &1 is both a Global Variable and a Database Item

Cause:
The item named in &1 appears both in the FF_GLOBALS table, as a global variable and in the FF_DATABASE_ITEMS table as a database item.

Action:
Remove or rename the global variable to a unique name.

[APP–33231] The DB Item &1 has an invalid data type: must be D, N or T

Cause:
The item named in &1 was found in the FF_DATABASE_ITEMS table to have an invalid data type. The data type must be either N (Number), T (Text) or D (Date).

Action:
Please refer to your local support representative.
[APP–33232] &1 has null or not found allowed, but no default set specified.

Cause:
If a Database Item has null allowed, or not found allowed, then the item must also specify a default set to be used to provide default values in the event of these occurring. The item named has one of these conditions allowed, but the default set column in the FF_DATABASE_ITEMS table is null.

Action:
Please refer to your local support representative.

[APP–33234] Internal Error : (&1)

Cause:
Formula details could not be found for the formula id named.

Action:
Please refer to your local support representative.

[APP–33236] Bad data type (&1) for database item &2

Cause:
When reading values from the FF_DATABASE_ITEMS table, QuickPaint found a data type other than 'N', 'T', or 'D'.

Action:
Please refer to your local support representative.

[APP–33238] UDF Error in formula &1 at line &2: &3

Cause:
An error occurred in the formula at the line indicated because of a UDF error. The UDF error message is also shown.

Action:
Please correct the problem within the UDF, or refer to your system administrator.

[APP–33239] Internal Error: &1, &2

Cause:
An unexpected error has occurred whilst attempting to match context levels.

Action:
Please refer to your local support representative.

[APP–33302] The tester entered TYPED–ASSIGNING mode without its data type set up.

Cause:
The tester entered TYPED ASSIGNING mode without having it’s data type set up. This should never happen, as this mode is only entered when the LHS of an assignment statement is entered, by which time, if the RHS did not provide a type, an error should already have been detected.

Action:
Please refer to your local support representative.
[APP–33303] Bad data type non terminal node found in LHS of assignment statement

Cause:
While type testing, a non-terminal node was encountered at the LHS of an assignment statement, and it had a different data type to the type that the tester expected. (At present there are no nonterminals at the LHS of assignment statements, so this represents a double error condition.)

Action:
Please refer to your local support representative.

[APP–33304] Internal error : Code 1 is &1

Cause:
An unknown node type was encountered in the tree, which could not be found in the unflattening table.

Action:
Please refer to your local support representative.

[APP–33305] Internal error : Code 1 is &1

Cause:
A bad action was received from tree walker: at present this means that the action was not one of VISIT, LEAVE or BB. Code 1 is the actual action code received.

Action:
Please refer to your local support representative.

[APP–33306] Internal error : Code 1 is &1

Cause:
A bad tester current mode was encountered : the offending mode is displayed in &1.

Action:
Please refer to your local support representative.

[APP–33307] Internal error : Code 1 is &1

Cause:
An unrecognized action was encountered.

Action:
Please refer to your local support representative.

[APP–33309] Internal Error

Cause:
A match action taken from the Flattening table for this node type was found to be invalid.

Action:
Please refer to your local support representative.

[APP–33310] Internal Error – Code 1 is &1
Cause:
While searching the Unflattening table for the node type no match was found, i.e this is an unrecognized node type.

Action:
Please refer to your local support representative.

[APP–33311] Internal Error – Code 1 is &1

Cause:
While performing unflattening, a node of unexpected type was found in the parse tree. The node type is in Code 1.

Action:
Please refer to your local support representative.

[APP–33312] Internal Error – Code 1 is &1

Cause:
A node was found in the unflattening table, but the data type in the table for the node was not recognized. Code 1 is the unknown data type.

Action:
Please refer to your local support representative.

[APP–33313] Internal Error – Code 1 is &1, Code 2 is &2

Cause:
Calling the tree walking function to go to the first child under an INPUTS node resulted in a bad return code. Code 1 is the Node ID of the INPUTS statement, Code 2 is the return code from the goto child function.

Action:
Please refer to your local support representative.

[APP–33314] Internal Error – Code 1 is &1

Cause:
Bad return code from tree walker attempting to goto an adjacent node. Return code is in Code 1.

Action:
Please refer to your local support representative.

[APP–33322] Internal Error – Code 1 is &1, Code 2 is &2

Cause:
While calling a tree walking function to go to the first child of an ASSIGNMENT node, a bad return code was received. The code received is in Code 2, and the ASSIGNMENT node ID is in Code 1.

Action:
Please refer to your local support representative.

[APP–33323] Internal Error – Code 1 is &1, Code 2 is &2
Cause:
Bad return code from tree walker attempting to go to a child node. Code 1 contains the node ID of the parent node Code 2 contains the return code.

Action:
Please refer to your local support representative.

[APP–33324] Internal Error – Code 1 is &1, Code 2 is &2

Cause:
Bad return code from tree walker while attempting to go from node to adjacent node. Code 1 is the return code.

Action:
Please refer to your local support representative.

[APP–33330] Internal Error – Code 1 is &1

Cause:
A node was found in the Unflattening table, but the action associated with it indicated that this node type should not be encountered at this time. Code 1 contains the node type.

Action:
Please refer to your local support representative.

[APP–33331] Internal Error – Code 1 is &1

Cause:
A bad return code was received from the quote stripping function. Code 1 contains the return code received.

Action:
Please refer to your local support representative.

[APP–33332] Internal Error – Code 1 is &1

Cause:
A bad return code was received from the utility function which performs a normal format on a node’s data. Code 1 contains the return code.

Action:
Please refer to your local support representative.

[APP–33333] Internal Error – Code 1 is &1

Cause:
The unflattening table entry for this node contained an unrecognized formatting action. Code 1 contains the action which caused the error.

Action:
Please refer to your local support representative.

[APP–33335] Internal Error – Code 1 is &1
Cause:
Bad return code from tree walker attempting to move between two nodes. Code 1 is the return code.

Action:
Please refer to your local support representative.

[APP–33338] Internal Error – Code 1 is &1

Cause:
An internal error occurred in the character handling functions. Code &1 is an identifier of the point in the code where the error was detected.

Action:
Please refer to your local support representative.

[APP–33340] Internal Error:

Cause:
An attempt was made to delete a symbol from the symbol list that did not exist ie it was a null pointer.

Action:
Please refer to your local support representative.

[APP–33342] Internal Error:

Cause:
An attempt was made to set the branch details for an IF statement but the current symbol list was NULL (empty).

Action:
Please refer to your local support representative.

[APP–33343] Internal Error:

Cause:
No IF symbol could be found when searching for one while setting the branch of an IF symbol. This should not be possible, because if there was no IF symbol the search would not be performed in the first place.

Action:
Please refer to your local support representative.

[APP–33344] Internal Error: &1

Cause:
An unknown branch type was encountered when attempting to set the IF symbol branch. The code that was tried for the branch type is given.

Action:
Please refer to your local support representative.
[APP–33345] Internal Error:

Cause:
The symbol list pointer did not point to an IF symbol but should have done as an if branch is current being processed.

Action:
Please refer to your local support representative.

[APP–33346] Internal Error:

Cause:
The symbol list was empty attempting to process IF branches.

Action:
Please refer to your local support representative.

[APP–33347] Internal Error:

Cause:
NULL symbol found when IF symbol expected.

Action:
Please refer to your local support representative.

[APP–33349] Internal Error: Code 1=&1, Code 2=&2, Code 4=&4

Cause:
A variable name of unknown data type was requested. Code 1 is the item name, code 2 is the variable type and code 4 is the function number.

Action:
Please refer to your local support representative.

[APP–33350] Internal Error: Code 1=&1, Code 2=&2, Code 4=&4

Cause:
A host variable was requested for an unknown data usage. Code 1 is the item name, code 2 is the variable usage and code 4 is the function number.

Action:
Please refer to your local support representative.

[APP–33351] Internal Error: Code 1=&1, Code 2=&2, Code 4=&4

Cause:
The function ffgnns called by the tree walker has been passed a node type which the generator does no know about. Code 1 is the visit or leave flag, code 2 is the node id and code 4 is the node type.

Action:
Please refer to your local support representative.

[APP–33352] Internal Error: Code 1=&1, Code 4=&4
Cause:
The visit_or_leave flag passed into the language strategy function given is not a valid operation. Code 1 is the visit or leave flag and code 4 is the function number.

Action:
Please refer to your local support representative.

[APP–33353] Internal Error: Code 4=&4

Cause:
A stack pop was attempted from the function given when the stack was empty. Code 4 is the function number.

Action:
Please refer to your local support representative.

[APP–33354] Internal Error: Code 1=&1

Cause:
The stack was not empty after supposed successful execution of all previous elements, meaning some text was not written. Code 1 is the stack text.

Action:
Please refer to your local support representative.

[APP–33355] Internal Error: Code 1=&1, Code 4=&4

Cause:
An append to stack text was made when the stack was empty. A push must be done before a stack append can be done. Code 1 is the text and code 4 is the function number.

Action:
Please refer to your local support representative.

[APP–33356] Internal Error: Code 1=&1, Code 2=&2, Code 4=&4

Cause:
An attempt was made to pop the text of an empty stack. The parameter number, parameter delimiter and calling function are given. Code 1 is the parameter number, code 2 is the parameter delimiter and code 4 is the function number.

Action:
Please refer to your local support representative.

Cause:
The parameter number requested to be returned from the stack was not present or the delimiter specified was not that used when the parameters were put onto the stack. Code 1 is the parameter number, code 2 is the parameter delimiter, code 3 is the stack text and code 4 is the function number.

Action:
Please refer to your local support representative.
[APP–33358] Internal Error: Code 4=&4

Cause:
When attempting to count the parameters on the stack, the stack was empty. Code 4 is the function number.

Action:
Please refer to your local support representative.

[APP–33359] Internal Error: Code 1=&1, Code 2=&2, Code 4=&4

Cause:
No parameters were found on the stack. Code 1 is the parameter delimiter, code 2 is the stack text and code 4 is the function number.

Action:
Please refer to your local support representative.

[APP–33360] Internal Error: Code 1=&1, Code 4=&4

Cause:
A request for a temporary variable causes the maximum allowed number of temporary variables to be exceeded. Code 1 is the maximum allowed number of temporary variables and code 4 is the function number.

Action:
Please refer to your local support representative.

[APP–33361] Internal Error: Code 1=&1, Code 4=&4

Cause:
A temporary variable of unknown type was requested by the calling function. Code 1 is the requested variable’s type and code 4 is the function number.

Action:
Please refer to your local support representative.

[APP–33362] Internal Error: Code 1=&1, Code 2=&2, Code 4=&4

Cause:
A zero length string resulted when trying to convert the current node’s line number into text format. Code 1 is the line number, code 2 is the node id and code 4 is the function number.

Action:
Please refer to your local support representative.

[APP–33363] Internal Error: Code 1=&1, Code 4=&4

Cause:
The text pointer associated with the given node number is NULL. Code 1 is the node id and code 4 is the function number.

Action:
Please refer to your local support representative.
[APP–33364] Internal Error: Code 1=&1, Code 2=&2, Code 4=&4

Cause:
A host variable of unknown type was requested based on the name given. Code 1 is the variable type, code 2 is the variable name and code 4 is the function number.

Action:
Please refer to your local support representative.

[APP–33365] Internal Error: Code 1=&1, Code 2=&2, Code 4=&4

Cause:
The maximum number of host variables allowed has been exceeded. Code 1 is the maximum number of host variables, code 2 is the name of the variable and code 4 is the function number.

Action:
Please refer to your local support representative.

[APP–33368] Verified formula is too long. Max len=&1, Current len=&2

Cause:
The code generated from your formula has exceeded the maximum size allowed.

Action:
Please reduce the size of your formula.

[APP–33370] Internal Error: Code 1=&1, Code 4=&4

Cause:
The number passed into ffguit was not properly converted into a string. The string length of the result was zero. Code 1 is the number and code 4 is the function number.

Action:
Please refer to your local support representative.

[APP–33401] Unable to allocate memory

Cause:
Insufficient memory for FastFormula parser.

Action:
Please refer to your system administrator.

[APP–33402] Unable to allocate memory: Code 1 &1 Code 2 &2

Cause:
Insufficient memory for FastFormula parser. Code 1 is the return code (FFSTR_XXX) from the tree function. Code 2 is the point at which the error was encountered.

Action:
Please refer to your system administrator.

[APP–33403] Unable to allocate memory: Code 1 &1
Cause:
Insufficient memory for allocating bind descriptor.

Action:
Please refer to your system administrator.

[APP–33404] Unable to allocate memory: Code 1 & 1 Code 2 & 2

Cause:
Insufficient memory during execution of a formula.

Action:
Please refer to your system administrator.

[APP–33405] Unable to allocate memory: Code 1 & 1

Cause:
Insufficient memory during testing phase.

Action:
Please refer to your system administrator.

[APP–33409] Unable to allocate memory

Cause:
Insufficient memory

Action:
Please refer to your system administrator.

[APP–33410] Unable to allocate memory

Cause:
Insufficient memory.

Action:
Please refer to your system administrator.

[APP–33411] Unable to allocate memory

Cause:
Insufficient memory.

Action:
Please refer to your system administrator.

[APP–33412] Unable to allocate memory: Code 1 & 1

Cause:
Insufficient memory.

Action:
Please refer to your system administrator.
[APP–33413] Unable to allocate memory for SQLDA size &1 (&2)

    Cause:
    A SQLDA could not be allocated due to insufficient memory.

    Action:
    Please refer to your system administrator.

[APP–33414] Unable to allocate memory: Code 1 &1

    Cause:
    Insufficient memory.

    Action:
    Please refer to your system administrator.

    Cause:
    Insufficient memory.

    Action:
    Please refer to your system administrator.

    Cause:
    Insufficient memory.

    Action:
    Please refer to your system administrator.

    Cause:
    Insufficient memory.

    Action:
    Please refer to your system administrator.

    Cause:
    Insufficient memory.

    Action:
    Please refer to your system administrator.

    Cause:
    Insufficient memory.

    Action:
    Please refer to your system administrator.

   Cause:
   Insufficient memory.

   Action:
   Please refer to your system administrator.

   Cause:
   Insufficient memory.

   Action:
   Please refer to your system administrator.

[APP–33424] Unable to allocate memory: Code 1 & 1 Code 4 & 4

   Cause:
   Insufficient memory.

   Action:
   Please refer to your system administrator.

[APP–33425] Unable to allocate memory: Code 1 & 1 Code 4 & 4

   Cause:
   Insufficient memory.

   Action:
   Please refer to your system administrator.

   Cause:
   Insufficient memory.

   Action:
   Please refer to your system administrator.

[APP–33427] Unable to allocate memory: Code 1 & 1

   Cause:
   Insufficient memory.

   Action:
   Please refer to your system administrator.

[APP–33431] Unable to allocate memory

   Cause:
   There is too much text in the QuickPaint report that has been painted. There is not enough available memory to hold it all.
Action:
Reduce the size of your QuickPaint report.

[APP–33432] Unable to allocate memory

Cause:
The QuickPaint report is converted into a formula. The text of the formula that is generated is held in memory while it is being created, but ran out of memory.

Action:
Please reduce the size of your QuickPaint report.

[APP–33433] Unable to allocate memory: Code 1 &1

Cause:
The QuickPaint report is converted into a formula. The text of the formula that is generated is held in memory while it is being created, but ran out of memory.

Action:
Please refer to your system administrator.

[APP–33434] Unable to allocate memory: Code 1 &1

Cause:
Insufficient memory.

Action:
Please refer to your system administrator.

[APP–33435] Unable to allocate memory

Cause:
Insufficient memory.

Action:
Please refer to your system administrator.

[APP–33438] Unable to allocate memory: Code 1 &1

Cause:
Insufficient memory.

Action:
Please refer to your system administrator.

[APP–33439] Unable to allocate memory: Code 1 &1 Code 2 &2

Cause:
Insufficient memory.

Action:
Please refer to your system administrator.

[APP–33440] Unable to allocate memory: Code 1 &1
Cause:
Insufficient memory.

Action:
Please refer to your system administrator.

[APP–33441] Unable to allocate memory

Cause:
QuickPaint attempts to build an internal list of Database Items (which it use to validate items named in a QuickPaint report). It was unable to find enough memory to build this list.

Action:
Please refer to your system administrator.

[APP–33442] Unable to allocate memory

Cause:
QuickPaint attempts to build an internal list of Database Items (which it use to validate items named in a QuickPaint report). It was unable to find enough memory to build this list.

Action:
Please refer to your system administrator.

[APP–33443] Unable to allocate memory

Cause:
QuickPaint failed to find memory for the lexical analyzer input buffer.

Action:
Please refer to your system administrator.

[APP–33444] Unable to allocate memory

Cause:
QuickPaint failed to find memory to store the QuickPaint report.

Action:
Please refer to your system administrator.

[APP–33445] Unable to allocate memory

Cause:
QuickPaint failed to find memory for the to store the formula text associated with the QuickPaint report.

Action:
Please refer to your system administrator.

[APP–33446] Unable to allocate memory: Code 1 &1

Cause:
Insufficient memory.
Action:
Please refer to your system administrator.

[APP–33447] Unable to allocate memory: Code 1 &1 Code 2 &2

  Cause:
  Insufficient memory.

  Action:
  Please refer to your system administrator.

[APP–33448] Unable to allocate memory: Code 1=&1

  Cause:
  Insufficient memory.

  Action:
  Please refer to your system administrator.

[APP–33449] Internal Error: &1, &2

  Cause:
  An internal error has occurred allocating memory.

  Action:
  Please refer to your system administrator or local support representative.

[APP–33502] Oracle Error ORA&0 occurred while reading FF_GLOBALS (stage &1)

  Cause:
  Error occurred during Global Table Build module

  Action:
  Please refer to your system administrator.

[APP–33504] Oracle error ORA&0 occurred at the &1 stage

  Cause:
  An Oracle error occurred parsing or executing the PL/SQL for the formula.

  Action:
  Please refer to your system administrator.

[APP–33505] Oracle error ORA&0 occurred while reading FDI_USAGES (&1)

  Cause:
  An Oracle error occurred accessing the FF_FDI_USAGES table.

  Action:
  Please refer to your system administrator.

[APP–33508] Oracle error &0 performing fetch: Code 1 = &1: Item is &3

  Cause:
  An Oracle error occurred in the function fftbfc().
Action:
Please refer to your system administrator.

[APP–33509] Oracle warning: character data truncated (&1)

Cause:
A character string was truncated when fetched from the database.

Action:
Please refer to your system administrator.

[APP–33510] Oracle warning: rollback occurred (&1)

Cause:
An unexpected rollback has occurred.

Action:
Please refer to your system administrator.

[APP–33511] Oracle warning: data not query-consistent (&1)

Cause:
The current data is no longer read-consistent.

Action:
Please refer to your system administrator.

[APP–33512] Oracle error ORA&0 occurred (stage &1, length=&3)

Cause:
An Oracle error occurred in the long field functions.

Action:
Please refer to your system administrator.

[APP–33513] Error ORA&0 closing cursor for &1

Cause:
An Oracle error occurred while closing a cursor.

Action:
Please refer to your system administrator.

[APP–33514] Oracle error &0 while accessing FF_GLOBALS table for &1

Cause:
An Oracle error occurred while accessing the FF_GLOBALS table.

Action:
Please refer to your system administrator.

[APP–33515] ORA&0 occurred while accessing FF_DATABASE_ITEMS for &1

Cause:
An Oracle error occurred while accessing the FF_DATABASE_ITEMS table.
Action:
Please refer to your system administrator.

[APP-33518] Oracle Warning Occurred (&1:&2)

Cause:
One of Oracle’s warning flags was set (sqlca.sqlwarn). Use the Pro*C guide to determine the meaning of each flag. The first parameter in brackets in the error message shows the warning flags. The second shows the direction (dm = database –&gt; memory, md = memory –&gt; database)

Action:
Please refer to your system administrator.

[APP-33519] Name &1 : &2

Cause:
The named pl/sql could not be parsed. This is normally due to (a) a table or column, referred to by SQL in the Application Dictionary, no longer exists or has been renamed, or (b) invalid SQL has been entered into the Application Dictionary, or (c) the formula is so big that it has generated more pl/sql than can be handled by the pl/sql parser.

Action:
Please refer to your system administrator.

[APP-33520] ORA&0 occurred while parsing SQL

Cause:
An Oracle error occurred in the long field functions.

Action:
Please refer to your system administrator.

[APP-33521] ORA&0 occurred while parsing SQL

Cause:
An Oracle error occurred in the long field functions.

Action:
Please refer to your system administrator.

[APP-33522] Oracle error ORA&0 occurred (stage &1, length=&3)

Cause:
An Oracle error occurred in the long field functions.

Action:
Please refer to your system administrator.

[APP-33523] Oracle Error &0 verifying &1. &2

Cause:
An Oracle error occurred in the function ffscmp().

Action:
Please refer to your system administrator.
[APP–33530] Oracle error ORA&0 deleting from FF_FORMULAS (FORMULA_ID=&1)

    Cause:
    An Oracle error has occurred deleting from the FF_FORMULAS table.

    Action:
    Please refer to your system administrator.

[APP–33531] Oracle error ORA&0 inserting into FF_FORMULAS

    Cause:
    QuickPaint converts its text into a formula, which it then attempts to write into the FF_FORMULAS table. In this case, an Oracle error occurred writing to the table.

    Action:
    Please refer to your system administrator.

[APP–33532] Oracle error ORA&0 fetching FF_FORMULAS_S.NEXTVAL

    Cause:
    An Oracle error occurred accessing the sequence FF_FORMULAS_S.

    Action:
    Please refer to your system administrator.

[APP–33534] Oracle error ORA&0 deleting from FF_COMPILED_INFO (FORMULA_ID=&1)

    Cause:
    An Oracle error has occurred deleting from the FF_COMPILED_INFO table.

    Action:
    Please refer to your system administrator.

[APP–33535] Oracle error ORA&0 deleting from FF_FDI_USAGES (FORMULA_ID=&1)

    Cause:
    An Oracle error occurred deleting from the FF_FDI_USAGES table.

    Action:
    Please refer to your system administrator.

[APP–33536] Oracle error ORA&0 reading FF_FORMULAS (typeid=&1,name=&3)

    Cause:
    An Oracle error occurred accessing the FF_FORMULAS table.

    Action:
    Please refer to your system administrator.

[APP–33537] Oracle error ORA&0 updating FF_QP_REPORTS (qp_report_id=&1)

    Cause:
    An Oracle error occurred accessing the FF_QP_REPORTS table.
Action:
Please refer to your system administrator.

[APP–33538] Internal Error: Code 1=&1: ORA&0

Cause:
An Oracle error occurred in the function ffgadu().

Action:
Please refer to your system administrator.

[APP–33540] &2

Cause:
An unexpected Oracle error has occurred.

Action:
Please refer to your system administrator.

[APP–33564] Oracle error ORA&0 occurred whilst accessing FF_FORMULAS table

Cause:
An Oracle error occurred accessing the FF_FORMULAS table.

Action:
Please refer to your system administrator.

[APP–33569] Oracle error ORA&0 accessing FF_UDFS table

Cause:
An Oracle error occurred accessing the FF_UDFS table.

Action:
Please refer to your system administrator.

[APP–33570] Oracle error ORA&0 occurred whilst accessing FF_UDFS

Cause:
An Oracle error occurred accessing the tables FF_FTYPE_CONTEXT_USAGES, FF_UDF_CONTEXT_USAGES and FF_UDFS.

Action:
Please refer to your system administrator.

[APP–33572] Oracle error ORA&0 occurred while accessing FF_UDF_PARAMETERS

Cause:
An oracle error occurred while accessing the FF_UDF_PARAMETERS table.

Action:
Please refer to your system administrator.

[APP–33574] Oracle error ORA&0 opening cursor on FF_DATABASE_ITEMS
Cause:
An Oracle error occurred accessing the FF_DATABASE_ITEMS table.

Action:
Please refer to your system administrator.

[APP–33575] Oracle error ORA&d fetching from FF_DATABASE_ITEMS

Cause:
An Oracle error occurred accessing the FF_DATABASE_ITEMS table.

Action:
Please refer to your system administrator.

[APP–33576] Internal Error: ORA &0

Cause:
An Oracle error occurred inserting into the FF_FDL_USAGES table.

Action:
Please refer to your system administrator.

[APP–33578] Internal error: &1, &3, &0, &2

Cause:
An oracle error occurred in &1 accessing &3.

Action:
Please refer to your system administrator.

[APP–33580] &1: &2

Cause:
An oracle occurred in &1

Action:
Please refer to your system administrator or local support representative.

[APP–33581] Internal Error: ORA &0

Cause: An Oracle error occurred selecting from the FF_CONTEXTS table.

Action: Please refer to your system administrator.

[APP–33602] Output count (=&2) invalid for formula &1

Cause:
The 'FFARG' structure (created by ffxcrs()) has an 'ffargocn' which is greater than zero (the actual value is given in the error message). However, 'ffargodt' which points to the descriptions of each of the outputs is NULL.

Action:
Please refer to your local support representative.
[APP–33603] Formula &1 has surplus input DATAELEMENTs (&2)

Cause:
The input or uidcol dataelement structure passed into ffxers() contains references that are
unnecessary for the current formula. These surplus inputs are normally ignored, but if the
in_surplus element of the FF_OPTIONS structure is set to 1, these extra inputs are rejected. The
name of the surplus input is given in brackets at the end of the error message.

Action:
Please refer to your local support representative.

[APP–33604] Incorrect datatypetype ('&3': '&4') for &2 in formula &1

Cause:
The data type of the variable declared using ffxdrs differs from the data type for the variable as used
in the formula.

Action:
Please refer to your local support representative.

[APP–33605] Bad data type ('&3') found in input/uidcol (&2) for formula (&1)

Cause:
Permissible data type are 'N', 'T', and 'D' (Numeric, Text, Date). This was picked up when
examining the DATALIST passed into ffxers()

Action:
This is a problem with the application calling FastFormula. If running an Oracle application you
should refer to your local support representative.

[APP–33606] Formula &1 has duplicate DATAELEMENTS for elements &2

Cause:
One of the DATAELEMENT structures in the DATALIST for INPUT or UID has the same name as
one of the other structures.

Action:
Please refer to your local support representative.

[APP–33607] FFARG structure has ffarguct=&2 but ffargudt=NULL (Formula &1)

Cause:
The FFARG structure has an element 'ffarguct' that indicates the number of UIDs referenced by the
formula. However 'ffargudt' (which points to an array of structures that describe the UIDs) is
NULL. It should be either (1) ffarguct=0, ffargudt=NULL, or (2) ffarguct>0 and ffargudt !=
NULL

Action:
Please refer to your local customer representative.

[APP–33608] FF_ARGS has icount=&2 but idata=NULL (formula &1)

Cause:
The FFARG structure indicates one or more INPUT variables, but the INPUT data area is NULL.
Action:
Please refer to your local support representative.

[APP–33609] Output '&2' unknown in formula &1

Cause:
The OUTPUT structure has an element which names which is not part of the formula.

Action:
Please refer to your local support representative.

[APP–33610] Formula &1 (element '&2') has mismatched data type ('&3':'&4')

Cause:
The data type given in the output element named in the error message does not match the type that the formula verifier believes the variable is defined as. All formula variables are numeric, unless the (TEXT) or (DATE) overrides are used. The 2 letters at the end of the error message ('x':'y') refer to the type named by the application programmer, and the type that the formula verifier detected (N=numeric, T=Text, D=Date).

Action:
Please refer to your local support representative.

[APP–33611] Output element ('&2') is not an output type ('&3') in formula &1

Cause:
Output element &2 is not an output type in the formula The formula verifier has recorded the output element as having a type other than 'O' (Output only), or 'B' (Both output & input). If the type is 'I' then this element should appear in the INPUT data list instead. Similarly, if the type is 'U', the element should be in the UID data list, not the OUTPUT data list.

Action:
Please refer to your local support representative.

[APP–33612] Output element '&2' has bad data type '&3' in formula &1

Cause:
Each DATANODE structure in the OUTPUT list, has a data type which must be one of 'T' (Text), 'D' (Date), 'R' (Real [double-precision] number), 'A' (Ascii number), 'O' (Oracle internal format number)

Action:
Please refer to your local support representative.

[APP–33613] Output data list has NULL dldata, but dlcound = &2 (formula &1)

Cause:
The OUTPUT data list provided can only have a NULL data pointer if it has a data element count of zero.

Action:
Please refer to your local support representative.
[APP–33615] Uidcol (&2) missing from formula &1

Cause:
The uidcol DATALIST pointed to by the FFARG parameter passed to ffxers, does not contain a DATALIST describing this missing UID. The formula uses a UID, so ffxdr() should be called to set up the address and other details of this UID.

Action:
Please refer to your local support representative.

[APP–33624] ffxdr: null data pointer for formula &1 (var &2)

Cause:
An NULL pointer was passed to ffxdr() as a data area for a formula value.

Action:
Please refer to your local support representative.

[APP–33625] Too few parameters to ffxxit (&1 supplied instead of &2)

Cause:
Insufficient parameters passed to execute formula user exit.

Action:
Please refer to your local support representative.

[APP–33626] Element &2 should be a UIDCOL (formula &1)

Cause:
Unexpected type found where UIDCOL type expected.

Action:
Please refer to your local support representative.

[APP–33627] Element &2 should be INPUT type (formula &1)

Cause:
Unexpected type found where INPUT type expected.

Action:
Please refer to your local support representative.

[APP–33628] Datatype missing from ”&1” line (trigger for &2)

Cause:
The formula has been invoked from an Application Foundation #USR trigger step. The syntax of the #USR trigger step is wrong for one of the lines, either INPUT=, UIDCOL=, or OUTPUT= as indicated in the message. The correct syntax is e.g.

HOURS_WORKED(N)=:BLOCK1.HRS_WORK

Action:
Please refer to your local support representative.

[APP–33629] Unexpected end of ”&1” line (trigger for &2)
Cause:
A formula was invoked via Application Foundation. It was invoked using a #USR trigger step. One of the INPUT=, or UIDCOL=, or OUTPUT= lines appears to have been truncated.

Action:
Please refer to your local support representative.

[APP–33630] No ‘)’ found after data type in ”&1” line (trigger for &2)

Cause:
The data type letter (N,T or D) should be enclosed in brackets e.g.
HOURS_WORKED(N)=:BLOCK1.HRS_WORK

Action:
Please refer to your local support representative.

[APP–33631] Invalid data type ”&1” in &2 line (trigger for &3)

Cause:
Only N, T, or D are allowed for the data type, depending on whether the data is of type Numeric, Text or Date.

Action:
Please refer to your local support representative.

[APP–33632] Missing ‘=’ before value in &1 line (trigger for &2)

Cause:
The data type part e.g. (N) should be separated from the value part by an equal (=) sign. No white space is permitted before the equal sign.

Action:
Please refer to your local support representative.

[APP–33633] ’)’ found before ‘(’ in ”&1” line (trigger for &2)

Cause:
The data type, which is enclosed in brackets, was found to have its ’(’ bracket missing. E.g.
HOURS(N)=:B1.HOURS
would generate this error condition.

Action:
Please refer to your local support representative.

[APP–33634] Data type missing from ”&1” line (trigger for &2)

Cause:
Between the variable name, and it’s value, there should be a data type enclosed in brackets. E.g.
SALARY(N)=1500 is correct, but SALARY=1500 is incorrect and would cause this error condition.

Action:
Please refer to your local support representative.
[APP–33640] Internal Error: &1

   Cause:
   Incorrect number of parameters passed to test formula user exit.

   Action:
   Please refer to your local support representative.

[APP–33642] Internal Error: &0

   Cause:
   An Oracle error occurred accessing the FF_HARNESS table.

   Action:
   Please refer to your system administrator.

[APP–33644] Internal Error: &1

   Cause:
   An unknown data type was found in the test formula user exit.

   Action:
   Please refer to your local support representative.

[APP–33646] Internal Error &0. &2

   Cause:
   An Oracle error occurred in the test formula user exit.

   Action:
   Please refer to your local support representative.

[APP–33647] Internal Error: &1

   Cause:
   The number of parameters passed to user exit ffuevf was incorrect. The actual number of parameters passed is given.

   Action:
   Please refer to your local support representative.

[APP–33648] Internal error

   Cause:
   Number of memory allocations does not match number of free operations.

   Action:
   Please refer to your local support representative.

[APP–33651] Number couldn’t be converted (&2 in formula &1)

   Cause:
   A number (FF_NUMASC) was passed into ffxdss(). At runtime, this number is converted to Oracle’s internal number format, but the conversion failed. Probable cause is passing a double to ffxdss(), but using the FF_NUMASC parameter instead of FF_NUMREAL.
Action:
Please refer to your local support representative.

[APP–33654] ffxchr() invoked at the wrong time

Cause:
ffxchr() should be called just BEFORE ffxdei(). ffxfrs() will not affect the statistics. The statistics are reset to zero by ffxdei().

Action:
Please refer to your local support representative.

[APP–33655] Null address passed to ffxchr() at parameter 1

Cause:
The address of an integer variable should be given to ffxchr. E.g. return_code = ffxchr (&ratio, &number_of_caches); Leaving out the ‘&’ before ‘ratio’ will often cause this error.

Action:
Please refer to your local support representative.

[APP–33657] Null parameter 2 passed to ffxchr()

Cause:
ffxchr() expects 2 parameters, both of which are pointers to integers. E.g. int ratio=0, cache_size=0; return_code = ffxchr (&ratio, &cache_size);

Action:
Please refer to your local support representative.

[APP–33660] ffsdcf: formula id not present

Cause:
Formula identifier not provided by caller.

Action:
Please refer to your local support representative.

[APP–33661] ffsdcf: Session effective date was not found in FND_SESSIONS table

Cause:
Missing session date in FND_SESSIONS table.

Action:
Please refer to your local support representative.

[APP–33662] ffsdcf: formula could not be found for given formula ids

Cause:
The formula could not be found.

Action:
Please refer to your local support representative.
[APP–33663] ffsdcf: Invalid DateTrack mode

    Cause:
    An invalid DateTrack mode was detected in ffsdcf(),

    Action:
    Please refer to your local support representative.

[APP–33664] ffsdcf: stage &1 ORA&0

    Cause:
    An Oracle error occurred in ffsdcf.

    Action:
    Please refer to your system administrator.

[APP–33665] Internal Error: &1

    Cause:
    The number of parameters passed to the Delete Compiled Formula user exit was incorrect.

    Action:
    Please refer to your local support representative.

[APP–33666] Internal Error

    Cause:
    The DateTrack mode was not passed into the delete compiled formula user exit. DateTrack mode is a mandatory parameter.

    Action:
    Please refer to your local support representative.

[APP–33667] ffxcrs: parameter 1 has NULL address

    Cause:
    The first parameter of the ffxcrs() call should be an address E.g. FF_ARGS *F; ... F = (FF_ARGS *) NULL; rc = ffxcrs (&F, ...);

    Action:
    Please refer to your local support representative.

[APP–33668] ffxcrs: parameter 1 has non–null pointer

    Cause:
    The first parameter of the ffxcrs() call should be the address of a pointer, and the pointer should be initialized to NULL. Failure to initialize the pointer to NULL (as in the example below), will cause this error message. FFARG *F; ... F = (FFARG *) NULL; /* Don’t forget the initialization */ rc = ffxcrs (&F, ...);

    Action:
    Please refer to your local support representative.

[APP–33669] Internal Error
Cause:
An error occurred while reading the profile for session effective date.

Action:
Please refer to your local support representative.

[APP–33671] Output (&1) has wrong type ("&2") in formula &3

Cause:
ffxdrs() has been called for an item and ffxdrs() was told that this item is an OUTPUT. However, its usage in the actual formula text indicates that it has some other use (e.g. INPUT, UIDCOL, GLOBAL).

Action:
Alter the parameter passed to ffxdrs (FF_OUTPUT) to the correct type (FF_INPUT/FF_UIDCOL). Please refer to your local support representative.

[APP–33672] Missing output ’&2’ in formula &1

Cause:
When a formula returns an input (e.g. "inputs are x ... return x") then separate input and output datanodes are required. This means that there must be two calls to ffxdrs (1. ffxdrs (...FF_INPUT...) and 2. ffxdrs (...FF_OUTPUT...)). This error arises when ffxdrs is called to set up the INPUT half, but not the OUTPUT half.

Action:
Call ffxdrs (...FF_OUTPUT...). Please refer to your local support representative.

[APP–33673] Duplicate declaration of ’&2’ in formula &1

Cause:
This error is concerned with variables that are both INPUT and OUTPUT (e.g. "INPUTS ARE FRED ... FRED=FRED + 1... RETURN FRED") If ffxdrs(...FF_INPUT...) is called twice, instead of once for input and once for output, then this error arises.

Action:
Prevent ffxdrs (...FF_INPUT...) being called more than once for the named input variable. Please refer to your local support representative.

[APP–33677] Item &2 has wrong usage (should be ' &3') in formula &1

Cause:
The call to ffxdrs() declares the wrong usage for a formula item. For example, if a formula has an input called ABC ("INPUTS ARE ABC"), but the ffxdrs() call says that ABC is something other than an input (e.g. ffxhrs ("ABC"...FF_UIDCOL...)) then this error arises. The actual usage ("&3") is given in the error text, and should be one of the following : 'I' (Input), 'U' (Uidcol), 'O' (Output), 'G' (Global), 'B' (Both Input and Output), 'D' (Database Item).

Action:
Please refer to your local support representative.

[APP–33678] Empty name encountered in formula &1
Cause:
This error occurs if ffxcrs() is called to set up space for inputs, UIDs and outputs, but ffxdrs() is not called to fill in the names. E.g. ffxcrs (... 1, 2, 5, ...) says that there is one UID, 2 inputs and 5 outputs. This totals 8 elements, so ffxdrs() must be called 8 times, after ffxcrs() but before ffxers().

Action:
Please refer to your local support representative.

[APP–33681] No such formula (&1)

Cause:
A compiled version of this formula cannot be found.

Action:
Check that the formula has been compiled before attempting to run it.

[APP–33682] No such formula (&1)

Cause:
A compiled version of this formula cannot be found.

Action:
Check that the formula has been compiled before attempting to run it.

Cause:
An attempt was made to use FastFormula before it had been properly initialized.

Action:
Call ffxcrs() before any other FastFormula function. ffx(...) was called before ffxcrs() or ffxini()

[APP–33684] Validation start date or end date missing from ffsdcf() call.

Cause:
Either NULL or empty string were passed for validation start date or validation end date.

Action:
Ensure that the validation start dates are passed properly and are not NULL.

[APP–33687] Internal error

Cause:
The 'context_level' parameter passed to ffadnc was NULL.

Action:
Please refer to your local support representative.

[APP–33688] Internal Error: &1

Cause:
The user exit CONTEXT_LEVEL was not passed a valid field name when called from a form.

Action:
Please refer to your local support representative.
Cause:
An internal error has occurred because an item name was missing where one was expected.

Action:
Please refer to your local support representative.

[APP–33694] Internal Error (&1,&2)

Cause:
The pl/sql described contains too many bind variables (&1) to fit into the SQLDA (&2)

Action:
Please refer to your local support representative.

Cause: An attempt was made to use FastFormula before it had properly been initialized.

Action: Call init_formula before calling run_formula.

[APP–33701] Memory error: &1

Cause:
Error allocating memory.

Action:
Please refer to your system administrator.

[APP–33702] File error: Failed to open file &1

Cause:
The named file could not be opened.

Action:
Please refer to your system administrator.

[APP–33703] File error: Failed to read from file &1

Cause:
An error occurred reading from named file.

Action:
Please refer to your system administrator.

[APP–33704] Oracle error: &0 at stage &1
This error message is generated whenever a PRO*C operation fails. This is typically either a failure to read from the database or open a cursor or fetch from an open cursor. The position in the source where this occurs is indicated by variable 1. Note that rows not found is a case which is handled separately.

[APP–33705] Database error: No rows retrieved from table &1
This error message is generated whenever no rows are retrieved from a database table and some rows are expected.
[APP–33706] File error: File &1 contains no test run names
This error message is generated when the file specifying test runs to be performed contains no test run names. Note that the file need not necessarily be empty; it may simply contain comments i.e. lines whose first character is '#'.

[APP–33707] Test run &1 does not exist or has no test steps
This error message is generated whenever the PRO*C query to retrieve the test step details of the specified test run returns no rows. If the test runs were specified by file, then this could be due to there being no test run of that name on the database, or the test run may be empty. If the test runs are taken by default from the database, only the latter can be the cause.

[APP–33708] Error in reading system time for timer &1
This message is generated whenever the call to time(), within a start or stop timer test step fails.

[APP–33709] Attempted to start timer &1 which is still in use
This message is generated when an attempt is made to start a timer which has already been started and is still going.

[APP–33710] Attempted to stop timer &1 which is not in use
This message is generated when an attempt is made to stop a timer which has not been started.

[APP–33711] Negative elapse time returned for timer &1
This message is generated when the elapse time returned for a timer pair is negative. This could be caused by the system date being prior to 01/01/70, since the value returned by system call time() is the number of seconds since 01/01/70.

[APP–33712] Load long data – filename expected in file &1
This message is generated from the load long test step. A load long command file is specified, which should contain pairs of SQL command strings and the filenames of their corresponding load long data. If no corresponding filename is found for a SQL command, then this message is generated.

[APP–33713] Null &2 specified in load long file &1

    Cause:
This message is generated whenever a null SQL command string or loadlong data filename is specified in a load long file, as part of a load long test step.

    Action:
Check test step or load long file.

[APP–33714] Oracle error &0 occurred when running SQL command &1 in file &3
This error message is generated from a RUN_SQL test step. For such a test step, a file containing any number of SQL command scripts is run against the database. If failure of the test step is not to be ignored then this message is produced, giving sufficient details to identify which SQL string failed.

[APP–33715] End-of-file encountered when reading SQL command in file &1
This message is generated from a RUN_SQL test step. It is produced when eof is encountered before the '/' terminator of the current SQL command string being read from the file identified by &1.
[APP–33716] Regression test aborted: results of test step unexpected
When the abort option is set, if the actual results of a test step do not match the expected ones, then the regression test harness aborts, with this message. Note that this error message is not generated by any internal test harness error.

[APP–33717] Invalid usage &1 for data element encountered
A data element may be used as input, output, both or uid (I, O, B or U) If the usage of the element as retrieved is not on this set, then this error message is generated.

[APP–33718] Invalid type &1 encountered for data element
A data element can be of type: ASCII number, Oracle number, real number, date or text (A, O, R, D, T). If the element type retrieved from the database is not in this set, then this message is generated.

[APP–33719] Oracle error &0 encountered when accessing FF_FORMULA_TYPES table
This error message is generated whenever an error is encountered on accessing the table FF_FORMULA_TYPES, in order to validate that the application shortname and formula type name of the test formula to be compiled is already known to the Formula Facility. The most likely error is that a row is not found ie. there is not an entry in FF_FORMULA_TYPES for the application shortname, formula type name pair associated with the test formula. If the test formula details are correct, then the appropriate row can be inserted into FF_FORMULA_TYPES using a RUN_SQL test step prior to compilation.

[APP–33720] SQL command &2 in file &1 exceeds the maximum length of 512 characters
This error message is generated when a single SQL command (terminated by a "/") as the first character on a new line) within a RUN_SQL script file exceeds the maximum length of 512 characters.

[APP–33721] Oracle error &0 occurred when inserting into FND_SESSIONS table.
This error message is generated whenever an Oracle failure occurs on insertion of a row into the FND_SESSIONS table. This is only attempted by the date–effective version of the regression test harness.

[APP–33722] Oracle error &0 encountered at stage &1 in compilation test step.
This error message is generated by an Oracle error in the procedure frtlfo(), which is responsible for loading formula text into FF_FORMULAS and cleaning up FF_FDI_USAGES and FF_COMPILED_INFO prior to compilation, possibly date–effectively. The stage number indicates where in the source code, the error occurred.

[APP–33723] Call to ffxgem() failed.
The function ffxgem() is called by frtchr (check test step results) to retrieve the actual Formula Facility and/or Oracle error message generated when the Boolean result or error code returned by performing the test step is not as expected. This error is generated when that call fails.

[APP–33724] Error encountered in forming full filename for file &1
This error is generated by the harness utility procedure, frufop(). Using the filename specified from the command line, and the base pathname derived from environment variables FF_TOP and FR_TESTDIR, it creates the full pathname using the AF function sficpn(). The failure of this function results in the above error message; this could be caused by either the base pathname or filename being null.

[APP–33725] Error encountered in generating base pathname.
This error message is generated when the call to sficpn() in frciap() fails. The likely cause is that the environment variable FF_TOP is not set up.
[APP–33726] Failed to read system time for run formula timer. This error message is generated by a run formula test step, when the call to getcpu() fails. This call is made before and after the execution of the test step, to establish how long it took, but only when the Time Formula Runs option is on. This option is switched on or off within a test run by the corresponding test steps. Note that this should not be confused with Stop and Start Timer test steps.

[APP–33727] A negative cpu time was calculated for the formula run. This error message is generated by a run formula test step, when the Time Run Formula option is on, and the calculated cpu time for a single run of the formula is negative.

[APP–33751] Internal Error Code 1 &1 Code 2 &2

    Cause:
    Error found while constructing parse tree. The Code returned was &1, and the point in the YACC code where the failure was detected was &2.

    Action:
    Please refer to your local support representative.

[APP–33753] Internal Error – Code 1 is &1

    Cause:
    The tree walker was invoked with an invalid mode. Code 1 contains the mode.

    Action:
    Please refer to your local support representative.

[APP–33754] Internal Error

    Cause:
    The top node in the subtree that the tree walker was invoked on had no children.

    Action:
    Please refer to your local support representative.

[APP–33755] Internal Error – Code 1 is &1

    Cause:
    While executing a tree walker function to go to the parent of a node, a bad return code was received. Code 1 contains the return code.

    Action:
    Please refer to your local support representative.

[APP–33756] Internal Error

    Cause:
    While executing a tree walker function to go from a node to it’s parent a bad return code was received. Code 1 contains the return code.

    Action:
    Please refer to your local support representative.
[APP–33757] Internal Error – Code 1 is &1

Cause:
While executing a tree walker function to go to the child of a node, a bad return code was received. Code 1 contains the return code.

Action:
Please refer to your local support representative.

[APP–33758] Internal Error

Cause:
Internal error in tree dumping routine.

Action:
Please refer to your local support representative.

[APP–33759] Illegal data type combination in line &1: &2 not allowed.

Cause:
While performing unflattening, an invalid combination of node type and data type was encountered, that has no valid flattened node type.

Action:
Please refer to your local support representative.

[APP–33760] Internal Error: Code 1 = &1

Cause:
Internal error attempting to delete a Database Item Group from a node where it did not exist.

Action:
Please refer to your local support representative.

[APP–33761] Internal Error: Code 1 is &1

Cause:
Internal error searching for named database item in the DB ELEMENT list in memory.

Action:
Please refer to your local support representative.

[APP–33762] Internal Error

Cause:
The function ffbfp() which prints the function table details was passed a NULL function table pointer.

Action:
Please refer to your local support representative.

[APP–33763] Internal Error

Cause:
The definition text for a UDF could not be found.
Cause:
A symbol that should have been found in the symbol table could not be found

Action:
Please refer to your local support representative.

[APP–33783] Internal Error: &1

Cause:
A generated name was empty where one was expected.

Action:
Please refer to your local support representative.

[APP–33785] Internal Error: Bad Route Text length (&3) [&2, &1]

Cause:
The route text fetched for the item and route ID shown was either empty or too long. The actual length is shown.

Action:
Please contact your local support representative.

[APP–33786] Internal Error: &1

Cause:
A bad control code was passed to fftbfa.

Action:
Please refer to your local support representative.

[APP–33787] Internal Error: &1 &2

Cause:
A null pointer was detected internally.

Action:
Please refer to your local support representative.

[APP–33788] Internal Error: &1

Cause:
A SQL element could not be found for the route id shown.

Action:
Please contact your local support representative.

[APP–33789] An alias symbol &1 has been found where an alias is not allowed

Cause:
An alias symbol has been found. The most common cause is an alias of a function which is the same as the function name.

Action:
If the name corresponds to a function, check whether its alias has the same name. If it does, rename
the alias to be different. If the name is not a function, please contact your local support representative.

[APP–33790] Procedure calls (&1) are not supported by FastFormula

Cause:
A procedure has been detected whilst loading function definitions from the FF_FUNCTIONS table (procedures have null data types). Procedures are not supported by FastFormula in this release.

Action:
If the procedure has been defined as part of user data, please remove the procedure or replace it with a function. If the procedure has not been defined as part of user data, please refer to your local support representative.

[APP–33791] Formula calls (&1) are not supported by FastFormula

Cause:
A Formula has been detected whilst loading function definitions from the FF_FUNCTIONS table (procedures have null data types). Called Formulas are not supported by FastFormula in this release.

Action:
If the Formula has been defined as part of user data, please remove the formula or replace it with a function. If the Formula has not been defined as part of user data, please refer to your local support representative.

[APP–33792] Internal Error [&1, &2]

Cause:
An internal error has occurred whilst loading function information. A function has OUT or IN/OUT parameters which have been specified as Optional or Variable Argument, neither of which is legal.

Action:
Please contact your local support representative.

[APP–33801] Internal Error (&1,&2)

Cause:
The length of the compiled formula was zero, or the buffer pointer was NULL.

Action:
Please refer to your local support representative.

[APP–33802] Internal error (&1,&2)

Cause:
An internal error has occurred.

Action:
Please refer to your local support representative.

[APP–33803] Internal error (&1,&2)
Cause:
An internal error has occurred.

Action:
Please refer to your local support representative.

[APP–33804] Internal error (&1,&2)

Cause:
An internal error has occurred.

Action:
Please refer to your local support representative.

[APP–33805] Internal error (&1,&2)

Cause:
An internal error has occurred.

Action:
Please refer to your local support representative.

[APP–33806] Internal error (&1, &2)

Cause:
The memory version of the FDIU has become out of step with the table FF_FDI_USAGES.

Action:
Please refer to your local support representative.

[APP–33807] Internal error (&1)

Cause:
An internal error has occurred.

Action:
Please refer to your local support representative.

[APP–33808] Internal error (&1,&2,&3)

Cause:
Invalid parameter value to ffxlfe().

Action:
Please refer to your local support representative.

[APP–33810] Internal error (&1)

Cause:
After doing a DESCRIBE BIND VARIABLES, bdp–&gt;F was negative. A new bind descriptor was allocated, but the redescribe still thought that the bind descriptor supplied was too small.

Action:
Please refer to your local support representative.
[APP–33812] Internal error (&1,&2)

Cause:
One of the names that appeared in the SQLDA after a describe of the bind variables, has a name whose length is zero. The first number in brackets after the message is the position in the SQLDA (starting from zero), and the second number is the total size of SQLDA entries.

Action:
Please refer to your local support representative.

[APP–33813] Internal Error (&1)

Cause:
A variable name appeared in the formula compiled text that was not in the FF_FDI_USAGES table. The 4 parameters in brackets refer to variable name, SQLDA position, total entries in SQLDA and formula ID.

Action:
Please refer to your local support representative.

[APP–33815] Internal Error (&1,&2,&3)

Cause:
An error occurred accessing the FF_FDI_USAGES table. A row with an invalid usage was encountered. The 3 parameters refer to (Formula_id,Item_name,Usage)

Action:
Please refer to your local support representative.

[APP–33816] Internal Error (&1,&2)

Cause:
ffxlge() could not locate the global in the core global table.

Action:
Check that the global variable has not been deleted. If still present, this is an internal error and should be referred to your local support representative.

[APP–33817] Internal Error (&1)

Cause:
Global table is being searched before it has been built

Action:
Please refer to your local support representative.

[APP–33818] Internal Error (&1)

Cause:
ffxfgv() was invoked with a null parameter for this formula

Action:
Please refer to your local support representative.
[APP–33819] Internal Error (&1,&2)

    Cause:  
The structure passed into ffxfgv() contains an invalid data type: one of ‘N’, ‘T’ or ‘D’ was expected.

    Action:  
Please refer to your local support representative.

[APP–33820] Internal Error (&1,&2)

    Cause:  
Attempt to allocate &2 bytes is incorrect.

    Action:  
Please refer to your local support representative.

[APP–33821] Internal Error (&1,&2)

    Cause:  
ffxsii was called with the wrong usage type. It should be one of FDE_INPUT, FDE_UIDCOL or FDE_GLOBAL.

    Action:  
Please refer to your local support representative.

[APP–33822] Internal Error (&1)

    Cause:  
A null DATAELEMENT pointer was passed in ffxsii().

    Action:  
Please refer to your local support representative.

[APP–33823] Internal Error (&1,&2,&3)

    Cause:  
The element does not have an indicator variable associated.

    Action:  
Please refer to your local support representative.

[APP–33824] Internal Error (&1,&2,&3,&4)

    Cause:  
An element named in the FDIU does not have a corresponding entry in the SQLDA. Either the EXEC SQL DESCRIBE BIND VARIABLES part is not picking up all the bind variables, or the FDIU table contains spurious entries (that unfortunately just happens to be referenced by the user).
  Formula Id = &1, Output element name = &2 Position in FDIU table = &3 Value of v_sqlda for this element in the FDIU = &4

    Action:  
Please refer to your local support representative.
[APP–33825] Internal Error (&1,&2,&3,&4)

Cause:
The SQLDA's pointer to the host variable is NULL. &1 = Formula_id &2 = Output element name &3 = Location in FDIU &4 = Location in SQLDA

Action:
Please refer to your local support representative.

[APP–33826] Internal Error (&1,&2)

Cause:
&1 = Formula Identifier &2 = Current Execution State (ffxces) The execution state should be in AT_START_STATE but was not.

Action:
Please refer to your local support representative.

[APP–33827] Internal Error (&1,&2)

Cause:
Formula &1, dataelement &2 ffxsii has been called to setup a global, but the FDIU table says that it is not of type global.

Action:
Please refer to your local support representative.

[APP–33828] Internal Error (&1,&2,&3,&4)

Cause:
&1 = Formula ID &2 = Variable name &3 = Position into FDIU table (array index) &4 = Position into SQLDA (array index: –1 means entry not in SQLDA) The variable has appeared in the original formula text and the FDIU, but does not show up as a bind variable in the PL/SQL and so has no entry in the SQLDA. Since data space is only allocated for those variables that show up in the SQLDA, the input/uid being presented has nowhere to go.

Action:
Reverify the formula and run again. If the problem persists, refer to your local support representative.

[APP–33831] Internal Error (&1)

Cause:
Attempt to close a cursor, number &1. The number supplied is out of range.

Action:
Please refer to your local support representative.

[APP–33832] Internal Error (&1, &2)

Cause:
Attempt to declare cursor outside the range available.
Action:
Please refer to your local support representative.

[APP–33833] Internal Error (&1)

Cause:
A formula cache was given to the ffxfes() function to be freed, but either its nxt or prv pointer was not null. The cache is still linked into a chain.

Action:
Please refer to your local support representative.

[APP–33834] Internal Error (&1,&2)

Cause:
Attempt to use a cursor whose cursor number is out of range.

Action:
Please refer to your local support representative.

[APP–33835] Internal Error (&1, &2)

Cause:
An internal error has occurred.

Action:
Please refer to your local support representative.

[APP–33836] Internal Error (&1, &2)

Cause:
An internal error has occurred.

Action:
Please refer to your local support representative.

[APP–33837] Internal Error (&1, &2)

Cause:
An internal error has occurred.

Action:
Please refer to your local support representative.

[APP–33838] Internal Error

Cause:
A NULL parameter passed into ffxahf()

Action:
Please refer to your local support representative.

[APP–33839] Internal Error (&1)
Cause:
Attempt to add a cache to the free list while it is still connected to surrounding caches.

Action:
Please refer to your local support representative.

[APP–33840] Internal Error (&1)

Cause:
Attempt to add a free cache to the free list, when it is already on the free list.

Action:
Please refer to your local support representative.

[APP–33841] Internal Error (&1)

Cause:
Infinite loop detected in the free list.

Action:
Please refer to your local support representative.

[APP–33842] Internal Error

Cause:
Null cache pointer passed to ffxahm()

Action:
Please refer to your local support representative.

[APP–33843] Internal Error

Cause:
Attempt made to add a cache to the MRU when the cache is already being used.

Action:
Please refer to your local support representative.

[APP–33844] Internal Error

Cause:
MRU cache and Free cache lists start at the same place.

Action:
Please refer to your local support representative.

[APP–33845] Internal Error (&1)

Cause:
A cache has been lost from the MRU and Free lists.

Action:
Please refer to your local support representative.
[APP–33846] Internal Error (&1, &2)

Cause:
An internal error has occurred.

Action:
Please refer to your local support representative.

[APP–33847] Internal Error

Cause:
Infinite loop detected.

Action:
Please refer to your local support representative.

[APP–33848] Internal Error

Cause:
An internal error has occurred.

Action:
Please refer to your local support representative.

[APP–33849] Internal Error

Cause:
An internal error has occurred.

Action:
Please refer to your local support representative.

[APP–33850] Internal Error (&1)

Cause:
An internal error has occurred.

Action:
Please refer to your local support representative.

[APP–33851] Internal Error (&1)

Cause:
An internal error has occurred.

Action:
Please refer to your local support representative.

[APP–33852] Internal Error

Cause:
Null pointer passed to ffxfc

Action:
Please refer to your local support representative.
[APP–33853] Internal Error

Cause:
An internal error has occurred.

Action:
Please refer to your local support representative.

[APP–33854] Internal Error

Cause:
Either ffx000 or ffx000-&gt;env are missing.

Action:
Please refer to your local support representative.

[APP–33855] Internal Error (&1, &2)

Cause:
ffx000-&gt;dcs reports a different size from ffxdcs()

Action:
Please refer to your local support representative.

[APP–33856] Internal Error

Cause:
Infinite loop in the Free list detected during logging.

Action:
Please refer to your local support representative.

[APP–33857] Internal Error

Cause:
Null pointer passed to ffxucm()

Action:
Please refer to your local support representative.

[APP–33858] Internal Error

Cause:
Infinite loop detected in MRU list by ffxucm()

Action:
Please refer to your local support representative.

[APP–33859] Internal Error (&1)

Cause:
A cache was supposed to be unlinked from the MRU but it wasn’t on the MRU in the first place.

Action:
Please refer to your local support representative.
[APP–33860] Internal Error

  Cause:
  An internal error has occurred.

  Action:
  Please refer to your local support representative.

[APP–33861] Internal Error

  Cause:
  An internal error has occurred.

  Action:
  Please refer to your local support representative.

[APP–33862] Internal Error

  Cause:
  An internal error has occurred.

  Action:
  Please refer to your local support representative.

[APP–33863] Internal Error (&1)

  Cause:
  Attempt to evict a cache from MRU but not enough caches on MRU. If the total number of caches equals one, this error results. A minimum of 2 caches is required.

  Action:
  Please refer to your local support representative.

[APP–33864] Internal Error (&1)

  Cause:
  Attempt to evict a cache occupied by the current (active) formula.

  Action:
  Please refer to your local support representative.

[APP–33865] Internal Error (&1)

  Cause:
  ffxvec called before ffx000 set up.

  Action:
  Please refer to your local support representative.

[APP–33866] Internal Error (&1)

  Cause:
  ffxvec called before ffx000–&gt;env set up.
Action:
Please refer to your local support representative.

[APP–33867] Internal Error

Cause:
An internal error has occurred.

Action:
Please refer to your local support representative.

[APP–33868] Internal Error (&1:&2:&3)

Cause:
The indicator variable that shows the status of a formula output is normally either –1 (not used), 0 (variable referred to, but not set), &gt;= 1 (variable set, indicates the return position). If the indicator variable is less than –1, then this error will arise.

Action:
Please refer to your local support representative.

[APP–33869] Internal Error

Cause:
ffxcoc received a NULL Penv pointer

Action:
Please refer to your local support representative.

[APP–33870] Internal Error: &1, &2

Cause:
An unknown item cache usage (&2) was detected in function &1.

Action:
Please contact your local support representative.

[APP–33871] Internal Error: &1, &2, &3

Cause:
An item was being referenced which had a different declaration to the internal representation of the item.

Action:
Please refer to your local support representative.

[APP–33872] Internal Error: &1, &2, &3

Cause:
The context mask for the referenced item was different to the context mask stored internally for the item.

Action:
Please refer to your local support representative.
[APP–33873] Internal Error: &1

  Cause:
  A type mismatch was detected when comparing date or text values

  Action:
  Please refer to your local support representative.

[APP–33874] Internal Error: &1, &2

  Cause:
  An internal error was detected due to an unknown internal data type.

  Action:
  Please refer to your local support representative.

[APP–33875] Internal Error: &1

  Cause:
  An internal error was detected due to an unknown host variable class.

  Action:
  Please refer to your local support representative.

[APP–33876] Internal Error: &1, &2

  Cause:
  An internal error occurred due to a NULL context dependency mask being fetched from FF_FDI_USAGES for a database item or context named

  Action:
  Please refer to your local support representative.

[APP–33877] Null CONTEXT_ID for item &ITEM_NAME for formula &FMLA_NAME

  Action:  Please refer to your local support representative.

[APP–33878] Internal error.

  Cause:  An unknown PLSQL exception &ERROR was raised.

  Action: Please refer to your local support representative.

[APP–33879] The item named &NAME does not exist in your formula.

  Action: Please check the variable and context names in your formula.

[APP–33901] Internal Error (&1)

  Cause:
  An error occurred in fful2m() due to an attempt to select more than one item.

  Action:
  Please refer to your local support representative.
[APP–33902] Internal Error

Cause:
Selection criteria passed to ffuldm() is either too restrictive (no rows found) or not selective enough (more than one row found).

Action:
Please refer to your local support representative.

[APP–33903] Internal Error

Cause:
The SQL statement passed to ffulmd() contained more than one bind variable.

Action:
Please refer to your local support representative.

[APP–33904] Internal Error (&1)

Cause:
The address of the data (longtext) area was passed into the function as NULL.

Action:
Please refer to your local support representative.

[APP–33905] Internal Error (&1)

Cause:
The WHENEVER SQLWARNING condition was invoked, but the general warning flag was not set.

Action:
Please refer to your local support representative.

[APP–33906] Internal Error (&1)

Cause:
The sqlca.sqlwarn[2] flag was set (see the Pro*C manual). A null value was used in calculating a SUM, AVG, MIN, MAX etc.

Action:
Please refer to your local support representative.

[APP–33907] Internal Error (&1)

Cause:
sqlca.sqlwarn[3] flag set to 'W' (see Pro*C manual) A SQL statement had more (or less) columns named in the SELECT statement than appear in the INTO clause.

Action:
Please refer to your local support representative.

[APP–33908] Internal Error (&1)
Cause:
An UPDATE or DELETE statement was executed without a WHERE clause.

Action:
Please refer to your local support representative.

[APP–33909] Internal Error (&1)

Cause:
sqlca.sqlwarn[5] was set to 'W' (see Pro*C manual). This should never happen since sqlwarn[5] is 'not used'.

Action:
Please refer to your local support representative.

[APP–33912] Cannot create path name for log directory.

Cause:
An error occurred building the directory name for the log directory.

Action:
Please refer to your system administrator.

[APP–33913] Cannot build filename &1&2

Cause:
An error occurred building a file name from it’s component parts.

Action:
Please refer to your system administrator.

[APP–33914] Cannot add filename &1 to path &2.

Cause:
An error occurred building the full path name of a file.

Action:
Please refer to your system administrator.

Cause:
An error occurred creating a file.

Action:
Please refer to your system administrator.

[APP–33916] Internal Error (&1)

Cause:
An error occurred allocating memory for a long field.

Action:
Please refer to your system administrator.
[APP–33917] Internal Error (&1, &2)

  Cause:
  ffultest : fetched data differs from inserted data. &1 = number of bytes inserted : position of
  null–terminator &2 = number of mismatched bytes : position of first incorrect byte : position of last
  incorrect byte

  Action:
  Please refer to your local support representative.

[APP–33918] Internal Error (&1, &2)

  Cause:
  ffultest : ffulfs returned an invalid file size. &1 = size returned by ffulfs() &2 = name of file

  Action:
  Please refer to your local support representative.

[APP–33919] Internal Error (ORA&0)

  Cause:
  An Oracle error occurred deleting any spurious rows from the FFULTEST_TEMP table. This is a
  temporary table have a number column (IDCOL) and a long column (LONGCOL), which is set up
  in the FastFormula Regression Tester. The number in brackets is the Oracle error.

  Action:
  Please refer to your local support representative.

[APP–33920] Internal Error

  Cause:
  Null parameter passed to ffqblt().

  Action:
  Please refer to your local support representative.

[APP–33921] Internal Error: &1, &2

  Cause:
  The bind variable &1 could not be bound because its name is different from the expected bind name
  &2

  Action:
  Please refer to your local support representative.

[APP–33951] Internal Error

  Cause:
  The ffqdef() function was passed a null parameter (parameter 1).

  Action:
  Please refer to your local support representative.

[APP–33952] Internal Error
Cause:
Parameter 2, as passed to ffqdefc(), was null.

Action:
Please refer to your local support representative.

[APP–33953] Internal Error

Cause:
Parameter 3 of the ffqdefc() function was null.

Action:
Please refer to your local support representative.

[APP–33954] Internal Error (&1)

Cause:
When reading the report from the database into memory, a fixed chunk of memory is made available to receive the report. The report was bigger than the space available to hold it, and has overwritten memory beyond the end of the buffer. This is a QuickPaint internal error.

Action:
Please refer to your local support representative.

[APP–33955] Internal Error (&1,&2,&3,&4)

Cause:
Function ffqdefc() returned a type that was not known about. &1 = function type returned &2 = Column to jump to &3 = Position in input text (should point to a ’$’ character) &4 = first 10 characters of the input text passed to ffqdefc().

Action:
Please refer to your local support representative.

[APP–33956] Internal Error (&1)

Cause:
Null pointer passed to ffqcdt()

Action:
Please refer to your local support representative.

[APP–33957] Internal Error (&1,&2)

Cause:
ffqddt() returned an unknown data type (&1) for item &2.

Action:
Please refer to your local support representative.

[APP–33958] Internal Error (&1)

Cause:
A NULL pointer was passed as a parameter to ffqddt()
Action:
Please refer to your local support representative.

[APP–33959] Internal Error (&1)

Cause:
At position &1 in the internal database item list, the pointer to the database item name was found to be NULL.

Action:
Please refer to your local support representative.

[APP–33961] Internal Error (&1)

Cause:
Null parameter passed to ffqpsr()

Action:
Please refer to your local support representative.

[APP–33962] Internal Error (&1)

Cause:
Null parameter(s) passed to stage 2 parsing function

Action:
Please refer to your local support representative.

[APP–33963] Internal Error (&1,&2)

Cause:
Bad value for either previous token, or current token

Action:
Please refer to your local support representative.

[APP–33964] Internal Error (&1,&2,&3,&4)

Cause:
Bad value taken from action/copytype matrix

Action:
Please refer to your local support representative.

[APP–33965] Internal Error (&1)

Cause:
Bad action – something other than APPEND and REPLACE was found

Action:
Please refer to your local support representative.

[APP–33966] Internal Error
Cause: Null QP parameter passed to ffqbf2()

Action: Please refer to your local support representative.

[APP–33967] Internal Error (&1,&2)

Cause: After reading a QuickPaint report from the database, the attempt to unpack it into separate lines failed. One of the lines (line_number &2, starting from 1), had too many characters before reaching a newline or null–terminator (&1 characters)

Action: Please refer to your local support representative.

[APP–33968] Internal Error (&1, &2)

Cause: Bad copy type encountered (out of range). &1 = copy type number &2 = action number

Action: Please refer to your local support representative.

[APP–33980] Failed to generate package &1

Cause: A Compilation error has been detected while attempting to generate package &1

Action: Please refer to your system administrator.

[APP–33981] ORA&0 occurred while attempting to compile package &1.

Cause: An Oracle error occurred while attempting to compile the package with name &1.

Action: Please refer to your system administrator.

[APP–33982] ORA&0 occurred while attempting to drop package.

Cause: An Oracle error occurred while attempting to drop a package. The command being executed was &1. The Oracle Error was &0.

Action: Please refer to your system administrator.

[APP–33983] Parameter type mismatch for function ’&1’ at line &2
The user has specified a function whose name has been recognised but whose parameter types do
not match any known version of the function. Please check that the types of any variables or literals passed to the function are of the appropriate types for the function definition.

[APP–33992] Assertion failed at location &LOCATION Cause : An internal assertion test has failed. Action : Please refer to your local support representative.

[APP–34002] &FTYPE_NAME:&FMLA_NAME:&EFFSTART verified OK

[APP–34004] &FTYPE_NAME:&FMLA_NAME:&EFFSTART FAILED

[APP–34005] No formulas selected: exiting

[APP–34006] Unexpected SQL error &SQLCODE: statement &SQLSTATE

[APP–34100] This program performs the bulk compilation of a set of formulas in an Oracle account. Where a formula has more than one version, all the different versions will be compiled. SQL wildcard characters (%% and _) may be used to specify the set of formulas. Use apostrophes around parameters containing spaces. The program produces PL/SQL packages which are dropped if they fail to compile. The –K option allows the packages that fail to compile to be kept for error analysis. For example, to compile all formulas of all Formula Types, which begin with 'NI', the command would be &lt;BULKCOMPILE&gt; joe/bloggs 0 Y %% NI%% The same command but keeping all packages would be &lt;BULKCOMPILE&gt; joe/bloggs 0 Y –K %% NI%%

[APP–34101] Current Zone is not DateTracked.
DateTrack History was selected for a non–DateTracked Zone. DateTrack History is only available for zones which are DateTracked ie zones which have an Effective Start Date and Effective End Date.

[APP–34102] No DateTracked instances exist on the database
There are no committed instances of the current record on the database. DateTrack History only displays instances that have been committed to the database.

[APP–34111] DateTrack History is not available for the current security access.
If the DATETRACK:DATE_SECURITY profile is set to "PRESENT" or null, then no history information can be displayed.

[APP–34114] Record cannot be extended as it already ends on &1.

  Cause:
You have selected 'Remove all scheduled changes' or 'Remove next change', but the record cannot be extended in time further because it already ends at the latest possible date, which has been determined by the parent record’s end date.

  Action:
You need take no action because the record already ends on the date you require, and there are no subsequent changes to the record.

[APP–34207] Current rowid has NULL rowid
Normally caused when the DateTrack userexit is called for a record that is in INSERT mode on the screen (i.e. has no rowid yet)
[APP–34209] Oracle error ORA&0 accessing DT_CODE table
The error code table could not be accessed when an error occurred. Possible reasons are (a) user not connected to Oracle (b) table has been renamed (c) table has been dropped (d) user has no synonym DT_CODE in his account (e) user has no SELECT access to the table

[APP–34210] Table &1 has no ENDDATE column
Every DateTracked table must have an ENDDATE column

[APP–34502] Memory Allocation Error (&1)
sqald() failed attempting to allocate a SQLDA descriptor. The number of column requested is given in brackets after the message.

[APP–34503] Unable to allocate memory
A 64k byte block of memory was requested via Application Foundation’s fdugvb function. This returned NULL.

[APP–34504] Insufficient memory (&1 bytes)
A memory allocation call to AF’s fdugbf() failed.

[APP–34505] Insufficient memory (&1 bytes)
Unable to allocate memory calling AF’s fdugbf() function.

[APP–34507] Unable to allocate memory
Called sqald() to allocate a 2 column descriptor.

[APP–34508] Unable to allocate memory
Attempt to allocate memory for a small descriptor failed.

[APP–34601] Oracle error ORA&0 occurred while accessing table &1
During either PREPARE, DECLARE or DESCRIBE an Oracle error occurred.

[APP–34602] Oracle warning (&1) occurred on table &2

[APP–34603] Oracle error ORA&0 accessing &1 table
Attempting to fetch one row from the SQL*Forms base table.

[APP–34604] Oracle warning while accessing &1 table (&2)

[APP–34605] Oracle error ORA&0 occurred writing to &1
Attempt to copy a row in the table (named in error message).

[APP–34606] Oracle warning occurred writing to &1 (&2)
 Attempting to copy a row within the SQL*Forms base table.

[APP–34609] Oracle error ORA&0 (&3)
Oracle error occurred during the prepare, declare, describe stage.

[APP–34611] Oracle error ORA&0 occurred (&4.&1=&3)
While fetching the count of rows, having a Primary Key(&1) with a value (&3), from base table &4, an Oracle error occurred.

[APP–34612] Oracle warning occurred (&1) on table &2
The contents of sqlca.sqlwarn[] is printed in brackets. The first code is always ’W’, and one other
between sqlwarn&1 and sqlwarn[7] will also be set to 'W', indicating the nature of the error (see
Pro*C manual).

[APP–34613] Oracle error ORA&0 occurred
While dtdb20() was preparing some SQL an Oracle error was detected.

[APP–34615] Oracle error ORA&0 (&1)
Oracle error occurred while deleting rows

[APP–34616] Oracle warning (&1) while deleting from &2

[APP–34617] &2

[APP–34701] Name of base table unavailable for current block
DateTrack PRE–BLOCK trigger not being called.

[APP–34702] Name of base table unavailable for current block
DateTrack PRE–BLOCK trigger not being called.

[APP–34703] Name of Primary Key column unavailable for &1
In order to select from the base table, the name of that table’s primary key/UID column must be
available.

[APP–34704] Session Effective Date unavailable
A previous trigger should have set up the value of the current Session Effective Date.

[APP–34705] Two digit year used where four–digit year expected (&1)
A date of the format DD–MON–YYYY is expected.

[APP–34706] Wrong date format (&1) : should be DD–MON–YYYY
A date whose length is greater than 11 characters was encountered.

[APP–34716] There are commits outstanding
The ChangeDate window cannot be called when there are outstanding commits. Commit your
changes before calling the ChangeDate window.

[APP–34717] Date security does not allow the effective date to be changed
The DATETRACK:DATE_SECURITY profile is set to PRESENT. The effective date cannot be
changed.

[APP–34719] You may not use an effective date earlier than today.
The DATETRACK:DATE_SECURITY profile is set to FUTURE and does not allow any changes of
date less than SYSDATE

[APP–34720] You may not use an effective date later than today.
The DATETRACK:DATE_SECURITY profile is set to PAST and does not allow any changes of
date greater than SYSDATE.

[APP–34802] Rowid exceeds maximum length
A rowid of more than 18 characters was obtained for current record being processed by SQL*Forms.

[APP–34803] No data found in &1 table for current record
The record being processed by SQL*Forms has a rowid, which is used in the DateTrack user exit to
select the row. When the select takes place if no data is selected, then this error occurs.
[APP–34901] Internal Error (&1)
EXEC SQL DESCRIBE SELECT LIST indicated initially that the descriptor provided was not big enough to hold the SELECT LIST. A new descriptor had been allocated (successfully) of the required size, but the DESCRIBE still indicates that the descriptor is too small.

[APP–34902] Error &1 occurred, but no message found in DT_CODE table
There should be an entry in the DT_CODE table for every error that can occur within the DateTrack system. However an error has occurred for which there is no entry in the DT_CODE table.

[APP–34903] Internal Error (&1)
A descriptor has been created of exactly the right size (given that the exact number of bind variables is known). However the DESCRIBE function found more than the expected number of bind variables.

[APP–34904] Internal Error (&1)
An unknown bind variable has turned up in the SQL.

[APP–34905] Internal Error (&1)
Having generated the SQL to be executed, the precise number of SELECT columns is known. A descriptor of the appropriate size is created. However, the EXEC SQL DESCRIBE felt that the provided descriptor wasn’t big enough.

[APP–34906] Internal Error (&1;&2)
Only one column should appear in the select descriptor ("COUNT(*)"). However some other column has slipped in (name in brackets after error message along with name of the base table)

[APP–34910] Internal Error (&1)
The mode parameter was passed with an invalid value into dtdbtr(). Use DT29_ALL or DT30_FUTURE_ONLY.

[APP–34911] Internal Error ('&1')
Parameter 2 of dtdbtr(), which should have a rowid value, contained an invalid rowid.

[APP–34912] Internal Error
dtuidc has no value, is empty, or has address of NULL

[APP–34913] Internal Error
dtuidv is NULL, or empty.

[APP–34914] Internal Error
Name of base table (dtbtab) unavailable.

[APP–34915] Internal Error
Session effective date unavailable. This error will occur if dtdbtr() is called with a mode of DT30_FUTURE_ONLY and there is no value in dtsedt.

[APP–34916] Internal Error
The global variable dtuidv is either null or empty.

[APP–34928] Internal error (&1)
Internal errors encountered in dthedp(), as a result of a call to AF menu or window code, are reported with this error message. The stage number in brackets serves to identify the problem area. Clearly, this error should not occur.
[APP–34939] Internal error
This internal error is generated when no default display name is derived for a virtual column. This should never occur. The default name is derived from the first real column encountered in the definition which is neither EFFECTIVE_END_DATE nor EFFECTIVE_START_DATE.

[APP–34948] Internal error
This error is reported when the value of a real column constituting a foreign key virtual column is found to be null in dthrld(). This should not occur since such a condition is filtered out before calling dthrld().

[APP–34950] Title Prompt is missing for the &VIEW view

Cause:
The DateTrack History window title is missing for the &VIEW view.

Action:
Contact your Oracle support representative quoting this error message. Please provide the name of the view (&VIEW) and the value of your language profile.

[APP–34951] Missing date prompts for language &LANGUAGE

Cause:
The DateTrack History prompts for the Start Date and/or End date fields are missing for the current language.

Action:
Contact your Oracle support representative quoting this error message. Please provide the value of your language profile.

[APP–34952] Cannot access the database table &TABLE

Cause:
DateTrack History attempted to reference the database table called &TABLE.

Action:
Ensure the current user is given access to this table. Otherwise disallow the user from using datetrack history, by setting the Datetrack:Date_security profile to 'PRESENT'.

[APP–34954] DateTrack History is unavailable for this zone

[APP–35003] Birth date cannot be specified in the future.

Cause:
You entered a birth date that is greater than TODAY

Action:
Re-enter the birth date

[APP–35007] The Intended Return Date must be after the Earliest MPP Start Date

Cause:
You specified the Intended Return date as being BEFORE the Earliest MPP Start Date.
Action:
Ensure the Intended Return date is after the Earliest MPP Start date.

[APP–35008] If you pay SMP as a lump sum, you may have to reclaim some overpayment if the woman’s circumstances change after payment is made.

[APP–35010] The due date specified is more than 9 months from today.

[APP–35011] This person has been recorded as having had an actual birth within 9 months of the specified due date. Check the entered due date.

[APP–35018] There is a maternity leave record for this woman. Do you wish to update the maternity leave end date to the return date specified?

[APP–35020] There is already a medical evidence record for this person from this source on this date.

[APP–35021] You cannot enter the evidence date in advance.

[APP–35022] The evidence received date must be after the evidence date.

[APP–35023] You cannot enter the evidence received date in advance.

[APP–35024] Average earnings cannot be calculated automatically unless you have installed Oracle Payroll. You must enter the figure yourself.

[APP–35025] Oracle Payroll is unable to calculate the earnings of directors because it has no way to distinguish between voted fees and fees drawn in anticipation of voting. Please enter the average earnings figure for directors yourself.

[APP–35026] This is a new employee whose earnings have not yet been processed. Oracle Payroll cannot derive the average earnings for new employees who have not yet received any pay on which to base a calculation. Please enter the average earnings figure yourself, based upon the employee’s contracted weekly earnings.

[APP–35027] The medical evidence was received late. Please enter the reason for the late evidence and state whether or not you accept it.

[APP–35029] Oracle SSP is attempting to insert an entry for SSP/SMP, but cannot determine a payroll period in which to put it. This means that there is no payroll period for the person’s primary assignment payroll which is: a) open: open the payroll period. b) defined as having a cut–off date which is later than the effective date: change effective date. c) after the start of the maternity pay period (SMP only): create more payroll periods for the payroll. d) before the woman’s final close date (SMP only): delay the woman’s final close date. e) before the person’s last standard process date (SSP only): delay the person’s last standard process date. e) before the person’s last standard process date (SSP only): delay the person’s last standard process date. f) after the date the entry was earned (the end of the week for which it is a payment). This is not a requirement if the entry is for SMP paid as a lump sum or if the date earned is after the last standard process date: create more payroll periods for the payroll. Please resolve this problem before continuing with the SSP/SMP transaction.

[APP–35031] You have entered a maternity leave start date which is too early. Maternity leave is not permitted until the Qualifying Week.
[APP–35032] You have attempted to create maternity leave for a person for whom you have no maternity record.

[APP–35034] The absence start date may not be before the sickness start date.

[APP–35035] The absence end date may not be after the sickness end date.

[APP–35036] The absence notification date may not be before the sickness start date.

[APP–35037] You cannot insert or delete a sickness absence if there are later sickness absences recorded. Nor may you change sickness start/end dates if this will affect the linking of periods of incapacity for work. To proceed with this change, you must first remove all the later sickness absences.

[APP–35046] There is no withholding reason which corresponds to the reason ‘&REASON’ for the element type selected. Contact your Oracle Applications Support Desk.

[APP–35048] There is no SSP qualifying pattern for this person. You must define one for the person or for the business group to which they belong.

[APP–35054] The MPP start date must be a Sunday.

[APP–35056] The absence notification date cannot be in the future.

[APP–35061] The linked absence specified does not exist.

[APP–35062] You must enter either both sickness end date and absence end date, or neither. If entered, sickness end date may not be earlier than the absence end date.

[APP–35063] You cannot enter both maternity and sickness attributes for a single absence.

[APP–35064] The absence start date must be before the absence end date.

[APP–35067] The sickness start date cannot be after the notification date.

[APP–35077] No Statutory Sick Pay element exists on &EFFECTIVE_DATE. Either the element has not been set up correctly or the date passed in was not set correctly. Contact your Oracle Applications Support desk.

[APP–35078] No Statutory Sick Pay correction element exists on &EFFECTIVE_DATE. Either the element has not been set up correctly or the date passed in was not set correctly.

[APP–35079] There is no SSP rate specified on &EFFECTIVE_DATE. Either the SSP element was not correctly set up or the effective date passed was not set correctly.

[APP–35080] Oracle SSP is trying to create an entry for SSP/SMP, but cannot find a payroll for the primary assignment as at &DATE_EARNED. The primary assignment must be on a payroll if the person is to be able to receive SSP/SMP entries.

[APP–35216] This absence overlaps another absence of category sickness

[APP–35217] Only one absence of sickness category is allowed with open end dates
[APP–35219] You cannot delete an absence when a PIW is defined for it

[APP–36066] The sickness start date may not be after the absence start date.

[APP–36067] The date you enter must be a Sunday.

[APP–36068] The date must be a Saturday.

[APP–36069] You must enter the time in the 24 hour format (eg 22:15).

[APP–36070] The element &ELEMENT_NAME has not been set up correctly. One of the Developer Descriptive Flexfield segments does not have a value. Contact your Oracle Applications Support representative.

[APP–36071] The element &ELEMENT_NAME has been set up incorrectly. Either some of its input values have been incorrectly named or they do not exist. Please consult your Oracle Applications Support desk.

[APP–36072] You have entered values in fields which are inappropriate for the absence type. Check the sickness–related fields.

[APP–36073] You have indicated a pregnancy–related illness for a person for whom you have no record of maternity.

[APP–42211] Maximum number (&PARAMETER) of different tax codes exceeded for Transaction

[APP–42214] For each customer, you may only have one active Legal site

[APP–42215] Number of returned columns (&PARAMETER) is incorrect CAUSE: The SQL Statement that has been used to drive the tax engine returns

[APP–42216] Clearing Days must be greater than or equal to zero

[APP–42217] Address language is not installed

[APP–42218] Address reference has different languages

[APP–42598] The Open Receivable flag &CM_OPEN_REC_FLAG of your credit memo must match the flag &INV_OPEN_REC_FLAG of the transaction you are crediting.
The valid account classes are: REV, UNEARN. The account class of &ACCOUNT_CLASS is invalid.

You cannot supply Unbilled account sets Bill In Advance transactions.

The valid account classes are: REV, UNBILL. The account class of &ACCOUNT_CLASS is invalid.

You cannot supply Unearned account sets Bill In Arrears transactions.

The valid account class for this line type is CHARGES. The account class of &ACCOUNT_CLASS is invalid.

The account class for freight account assignment and account set records must be FREIGHT, not &ACCOUNT_CLASS.

Invalid Account Class (ACCOUNT_CLASS: &ACCOUNT_CLASS)

The account class for tax account assignment and account set records must be TAX, not &ACCOUNT_CLASS.

Accounting duration cannot be specified on tax and freight lines. (ACCOUNTING_RULE_DURATION: &ACCOUNTING_RULE_DURATION)

Accounting rules cannot be used on tax and freight lines. (ACCOUNTING_RULE_ID: &ACCOUNTING_RULE_ID)

The tax rate may not be specified for tax lines that are not ad hoc.

The distribution amount must not be specified for transactions that use invoicing rules. (AMOUNT: &AMOUNT)

The accounting flexfield is invalid. Additional information: &GENERIC_TEXT

All lines on transactions with rules must have accounting rules specified. Otherwise, accounting rules are not allowed.

The accounting rule duration &ACCOUNTING_RULE_DURATION must be positive for invoices with rules and be null for invoices without rules.

The bill–to site must exist in Oracle Receivables, and it must be assigned to the Bill–to customer. (BILL_TO_SITE_USE_ID: &BILL_TO_SITE_USE_ID)

The Bill–to contact id must exist and must be assigned to the Bill–to customer. (BILL_TO_CONTACT_ID: &BILL_TO_CONTACT_ID)

Invalid Bill–to customer id. (BILL_TO_CUSTOMER_ID: &BILL_TO_CUSTOMER_ID)

Only debit memos and credit memos may have a line types of CHARGES. (CLASS: &CLASS)

The Last Period to Credit &LAST_PERIOD_TO_CREDIT must be greater than 0 but less than the accounting rule duration &INV_ACCOUNTING_RULE_DURATION of the invoice line you are crediting.
An invoice against a commitment cannot have a negative total amount. (Total amount: TOTAL_AMOUNT)

No foreign currency code is allowed if realized gain and realized losses accounts are not set up. The currency code CURRENCY_CODE is invalid.

The transaction currency must match one of the currencies associated with the customer bank account. (BANK_ACCOUNT_ID: BANK_ACCOUNT_ID)

Your transaction currency must match one of the currencies associated with the receipt method unless multi currency is allowed for a bank account associated with the receipt. (RECEIPT_METHOD_ID: RECEIPT_METHOD_ID)

For lines without rules or the lines using the Bill in Advance rule, the GL Date must be in an open or a future-enterable period. (GL_DATE: GL_DATE)

For Bill in Arrears transactions, the GL Date &GL_DATE must not be in an closed period.

A credit memo created with a positive total amount cannot credit an invoice which is against a commitment. (Total amount: TOTAL_AMOUNT)

The inventory item flexfield is invalid. Additional information: GENERIC_TEXT

The line type for transaction lines must be LINE or CHARGES. (LINE_TYPE: LINE_TYPE)

Sales Credit lines can only be associated with transaction lines, not tax or freight lines. (SALESREP_ID: SALESREP_ID, LINE_TYPE: LINE_TYPE)

The supplied Ship-to site must exist and must agree with the supplied Ship-to customer. (SHIP_TO_SITE_USE_ID: SHIP_TO_SITE_USE_ID)

The supplied Ship-to contact id must exist and must agree with the supplied Ship-to customer. (SHIP_TO_CONTACT_ID: SHIP_TO_CONTACT_ID)

Invalid Ship-to customer id. (SHIP_TO_CUSTOMER_ID: SHIP_TO_CUSTOMER_ID)

Invalid sold to customer id. (SOLD_TO_CUSTOMER_ID: SOLD_TO_CUSTOMER_ID)

The territory flexfield TERRITORY_ID is invalid. Additional information: FLEX_ERROR_TEXT

The total distribution percent of PERCENT must be 100% for account class ACCOUNT_CLASS.

The child invoice transaction date &TRX_DATE must be between commitment start date and end date.

Invalid Transaction Status INVALID_VALUE.

Batch does not exist (BATCH_ID: BATCH_ID).
You cannot supply customer bank accounts when the supplied or defaulted payment method is of type Manual. (RECEIPT_METHOD_ID: &RECEIPT_METHOD_ID)

When the payment method is of type Automatic, you must either supply a valid bank account or ensure that a primary bank account for the currency code of the transaction has been set up for the Bill–to customer. (RECEIPT_METHOD_ID: &RECEIPT_METHOD_ID)

You cannot delete transactions that have activity.

You cannot delete chargebacks.

You cannot delete debit memo reversals.

You cannot add new lines when your accounting method is cash basis.

You cannot update chargebacks.

You cannot update column &COLUMN_NAME. (Value: &VALUE).

You cannot update debit memo reversals.

You cannot update posted transactions.

You cannot update printed transactions.

You cannot update transactions on which you have run the Revenue Recognition Program.

Charges lines must have quantities of 1 or –1. The quantity &QUANTITY you provided is invalid.

The credit_method_for_rules must be null if invoicing rule is not used, or if the current transaction is not a regular CM. The credit_method_for_rules you provided is &CREDIT_METHOD_FOR_RULES.

Credit memo charges lines can only be applied to debit memo charges lines. Either the line type &CREDITED_TRANS_LINE_TYPE or the transaction type &CREDITED_TRANS_CLASS is invalid.

The currency code &CM_CURRENCY of the credit memo must match the currency code &INV_CURRENCY of the invoice the credit memo is crediting.

You cannot supply account assignments for regular credit memos when the system option ‘Use Invoice Accounting for Credit Memos’ is Yes.

The GL Date &CM_GL_DATE of the credit memo must not be prior to the GL Date &INV_GL_DATE of the invoice the credit memo is crediting.

The line type of &CM_LINE_TYPE on your credit memo must match the line type of &INV_LINE_TYPE on the transaction line that it is crediting.

The transaction date &CM_TRX_DATE of the credit memo must not be prior to the transaction date &INV_TRX_DATE the invoice the credit memo is crediting.
The Receivables account of your credit transaction must be the same as that of the transaction being credited, if the credit transaction has the Open Receivables Flag set to No.

The Bill-to customer of your transaction must be the same or related to the one of the commitment. (BILL_TO_CUSTOMER_ID: &BILL_TO_CUSTOMER_ID)

Distribution does not exist. (CUST_TRX_LINE_GL_DIST_ID: &CUST_TRX_LINE_GL_DIST_ID).

There are duplicate tax line numbers for transaction line &LINE_NUMBER.

If exchange_rate_type is 'User', the exchange_rate cannot be null.

Exchange rate, rate type, and exchange date must be null for base currency transactions.

If exchange_rate_type is not 'User', the exchange_rate cannot be specified. The exchange rate type you provided is &EXCHANGE_RATE_TYPE.

The extended amount &EXTENDED_AMOUNT must have the correct precision and minimum accountable unit for the specified currency &CURRENCY_CODE.

The total distribution amount of &DIST_AMOUNT for this freight line must equal the freight amount of &FREIGHT_AMOUNT.

You cannot supply freight charges when the Allow Freight option for your transaction type is No.

The invoice GL Date &INV_GL_DATE must not be prior to the commitment GL Date &COMMITMENT_GL_DATE.

The entered amount: &VALUE for the column &NAME does not have the correct currency precision.

Invalid account class. (ACCOUNT_CLASS: &ACCOUNT_CLASS)

If an invoicing rule is used, the account_set_flag must be Y. Otherwise, it must be N. The account_set_flag of &ACCOUNT_SET_FLAG you provided is invalid.

The Open Receivable flag must be Y for child invoices that reference commitments. The Open Receivable flag &OPEN_RECEIVABLE_FLAG is invalid.

Invalid accounting rule id. (ACCOUNTING_RULE_ID: &INVALID_ID)

Invalid agreement id. (AGREEMENT_ID): &INVALID_ID

Invalid customer bank account id. (BANK_ACCOUNT_ID: &BANK_ACCOUNT_ID)

Invalid Batch Status &INVALID_ID.
[APP–42678] Invalid customer bank account id. (CUSTOMER_BANK_ACCOUNT_ID: &INVALID_VALUE)

[APP–42679] The valid values for Credit Method For Installments are: LIFO, FIFO and PRORATE. The value &CREDIT_METHOD_FOR_INSTALLMENTS that you provided is invalid.

[APP–42680] If invoicing rules are used, the Credit Method for Rules must be either ’PRORATE’, ‘LIFO’, or ‘UNIT’. The Credit Method for Rules &CREDIT_METHOD_FOR_RULES is invalid.

[APP–42681] A regular credit memo can only point to an invoice, debit memo, or commitment. The transaction your credit memo is crediting is a transaction of class &CREDITED_TRANS_CLASS.

[APP–42682] Invalid conversion type. (EXCHANGE_RATE_TYPE: &INVALID_VALUE)

[APP–42683] Invalid currency code. (INVOICE_CURRENCY_CODE: &INVALID_VALUE)

[APP–42684] Quantity, unit_selling_price, and amount must be null or zero for tax–only and freight–only lines. The memo line type of this line is &MEMO_LINE_TYPE.

[APP–42685] Invalid tax exempt reason code. (TAX_EXEMPT_REASON_CODE: &INVALID_VALUE)

[APP–42686] If the system option Allow Exemptions is No then valid values for tax exempt flag are S or R, otherwise the valid values are S, R or E. (TAX_EXEMPT_FLAG: &INVALID_VALUE)

[APP–42687] Invalid fob point. (FOB_POINT): &INVALID_VALUE)

[APP–42688] The GL_Date of this distribution line, &GL_DATE, must be the same as the Receivable GL Date, &REC_GL_DATE

[APP–42689] The transaction line specified on this distribution of class &ACCOUNT_CLASS does not exist.

[APP–42690] The valid invoicing rule ids are –2, –3, or null. The invoicing rule id &INVOICING_RULE_ID is invalid.

[APP–42691] Invalid line type. (LINE_TYPE: &LINE_TYPE)

[APP–42692] Invalid memo line id. (MEMO_LINE_ID: &INVALID_VALUE)

[APP–42693] Invalid printing option. (PRINTING_OPTION: &INVALID_VALUE)

[APP–42694] Invalid primary salesrep id. (PRIMARY_SALESREP_ID: &INVALID_VALUE)

[APP–42695] Invalid reason code. (REASON_CODE: &INVALID_VALUE)

[APP–42696] Invalid receipt method id. (RECEIPT_METHOD_ID: &INVALID_VALUE)

[APP–42697] Invalid salesrep id. (SALESREP_ID: &SALESREP_ID)

[APP–42698] The set of books id must match the set of books id specified in ar_system_parameters. (SET_OF_BOOKS_ID: &SET_OF_BOOKS_ID)

[APP–42699] Invalid ship via. (SHIP_VIA: &INVALID_VALUE)
[APP–42700] Invalid batch source ( BATCH_SOURCE_ID: &BATCH_SOURCE_ID )

[APP–42701] The tax code you provided is not active, or it is not an adhoc tax code for tax–only line. ( VAT_TAX_ID: &VAT_TAX_ID )

[APP–42702] Invalid payment terms id. (TERM_ID: &INVALID_VALUE)

[APP–42704] Invalid transaction type id. (TRANSACTION_TYPE_ID: &INVALID_VALUE)

[APP–42705] Invalid unit of measure code. (UOM_CODE: &INVALID_VALUE)

[APP–42706] The currency code &INV_CURRENCY of the commitment invoice must match the currency code &COMMITMENT_CURRENCY of the commitment.

[APP–42707] An invoice’s commitment must be either a Deposit or a Guarantee. Your invoice references a transaction whose class is &COMMITMENT_CLASS.

[APP–42708] For on–account credit memos, the invoicing rule id must be null. (INVOICING_RULE_ID: &INVOICING_RULE_ID )

[APP–42709] If the system parameter ’Accounting Method’ is CASH, the invoicing rule id must be null. The invoicing rule id &INVOICING_RULE_ID is not allowed.

[APP–42710] The total distribution amount of &DIST_AMOUNT must equal the line amount of &LINE_AMOUNT.

[APP–42713] Either the memo_line_id or the inventory_item_id may be specified, but not both. (INVENTORY_ITEM_ID: &INVENTORY_ITEM_ID MEMO_LINE_ID: &MEMO_LINE_ID)

[APP–42714] The document created must have a non–negative total amount because the creation sign for your transaction type is Positive. (Total amount: &TOTAL_AMOUNT)

[APP–42715] The primary key &COLUMN must be null when inserting new records. (Value: &VALUE).

[APP–42716] You must supply a value for the distribution amount.

[APP–42717] You must supply the amount for a freight–only or tax–only line. The memo line type of this line is &MEMO_LINE_TYPE.

[APP–42718] The specified commitment does not exist. (INITIAL_CUSTOMER_TRX_ID: &INITIAL_CUSTOMER_TRX_ID)

[APP–42719] You must supply the amount for this transaction line.

[APP–42720] You must supply the GL Date for this account assignment or account set line.
The accounting period for the last GL Date is not defined.

You must supply the percent for all account assignment and account set records of Account Class.

Accounting periods must be defined for the GL Date.

The specified credited transaction does not exist.

This transaction line credits an invoice line that does not exist.

You must supply a quantity to credit when creating Unit credit memos.

The receivable gl date must be specified.

You must supply a value for the sales credit amount.

You must supply a percentage for the sales credit.

If a line is tax exempt, a tax exempt reason must be specified.

The Tax Rate columns must be specified.

The transaction line which this distribution line points to does not exist.

You must supply a unit of measure for transaction lines that use standard items.

If either the non–revenue amount or the non–revenue percent is specified, then both must be specified.

You supplied &FREIGHT_COUNT distributions for this freight line. You must supply one and only one freight account for each freight line.

You supplied &REC_DIST_COUNT Receivable distributions for your transaction. Each transaction must have one and only one Receivable account.

The document created must have a non–positive total amount because the creation sign for your transaction type is Negative.

The Bill–to customer of your credit memo must be the same or related to the one of the invoice it is crediting.

This transaction line credits the wrong transaction.

The supplied amount, &EXTENDED_AMOUNT, must match unit selling price times quantity of &QUANTITY_TIMES_PRICE when AutoInvoice Clearing is disabled.
[APP–42742] Related transactions must have the same or related Bill–to customers
(BILL_TO_CUSTOMER_ID: &BILL_TO_CUSTOMER_ID)

[APP–42743] Credit memos cannot have related transactions. (RELATED_CUSTOMER_TRX_ID:
&RELATED_CUSTOMER_TRX_ID )

[APP–42744] The specified related transaction does not exist. (RELATED_CUSTOMER_TRX_ID:
&RELATED_CUSTOMER_TRX_ID)

[APP–42745] Invoicing and accounting rules cannot be used on charges lines.
(INVOICING_RULE_ID: &INVOICING_RULE_ID ACCOUNTING_RULE_ID:
&ACCOUNTING_RULE_ID )

[APP–42746] Sales credits have been specified for CHARGES line &LINE_NUMBER. CHARGES
lines cannot have sales credits.

[APP–42747] Sales Credit does not exist. (CUST_TRX_LINE_SALESREP_ID:
&CUST_TRX_LINE_SALESREP_ID).

[APP–42748] The rule start date must be the same as the accounting rule’s first date.

[APP–42749] For Bill in Advance transactions, the supplied rule start date &RULE_START_DATE
must be in a open or future–enterable period.

[APP–42750] For Bill in Arrears transactions, the rule start date &RULE_START_DATE must
result in the last GL Date &LAST_GL_DATE in an open, future–enterable or never opened period.

[APP–42751] The total distribution amount of &DIST_AMOUNT for this tax line must equal the
tax amount of &TAX_AMOUNT.

[APP–42752] You cannot supply tax and related information when the Tax Calculation option for
your transaction type is No

[APP–42753] You cannot supply payment terms for credit memo transactions. (TERM_ID: 
&TERM_ID )

[APP–42754] Terms are required for all transaction except for credit memos.

[APP–42755] You can have at most one Freight transaction line at either the line level or the invoice
level, but not at both levels.

[APP–42757] The child invoice transaction date &INV_TRX_DATE must not be prior to the
commitment transaction date &COMMITMENT_TRX_DATE.

[APP–42758] The supplied unit of measure &UOM_CODE and the primary unit of measure
&ITEM_UOM_CODE of your system item must share the same unit of measure class.

[APP–42759] You may not specify a unit of measure for Charges lines. (UOM_CODE: 
&UOM_CODE )

[APP–42760] Your selection is not a valid option for this tax code. Please choose either "Yes" or
"No" for "Amount Includes Tax."
[APP–42761] You have assigned the same sequence to more than one default in the tax hierarchy. Each default must have a distinct sequence in the tax hierarchy. Please re-enter.

[APP–42762] Transaction line number &LINENO does not match its Revenue account tax code &GL_TAX_CODE.

[APP–42763] Tax Group &TAX_CODE cannot be used on a tax line, Use a singular tax code. A tax group was incorrectly assigned to a tax line by your tax-defaulting source. Oracle Receivables is unable to calculate the necessary tax when a tax group is used on a tax line. Ensure that a singular tax code is available for the tax line.

[APP–42764] Multiple inclusive taxes cannot be defined within overlapping time periods with the same criteria.

[APP–42765] Unable to calculate multiple inclusive taxes.

[APP–42766] Validation of tax code(s) from Revenue Account failed. Would you like the system to correct the tax code automatically?

[APP–42767] Please check your set of books and period set up.

[APP–42769] Starting Module: Sales Tax Rate Assignments

[APP–42770] Completed Module: Sales Tax Rate Assignments. &TOTALLINES processed, &BADLINES in error

[APP–43000] Invalid Item Definition Level in &TABLE table. Ensure that the &COLUMN column in the &TABLE table contains a valid Item Definition Level. Valid values are: 1, 2, 3, ( in the ITEM_DEFINITION_LEVEL column ) or 'CUSTOMER', 'ADDRESS CATEGORY', and 'ADDRESS' ( in the ITEM_DEFINITION_LEVEL_DESC column ).  

[APP–43001] No Item Definition Level specified in the &TABLE table. Ensure that the Item Definition Level information is specified in the &TABLE table.  

[APP–43002] Inactive Customer in &TABLE table. Ensure that the &COLUMN column in the &TABLE table contains an active Customer.  

[APP–43003] No Customer information specified in the &TABLE table. Ensure that the Customer information is specified in the &TABLE table.  

[APP–43004] Invalid Customer in &TABLE table. Ensure that the &COLUMN column in the &TABLE table contains a valid Customer.  

[APP–43005] Multiple Customers with the same specified criteria in the RA_CUSTOMERS table. Ensure that the Customer information specified in the &TABLE table refers to only one existing Customer.
[APP–43006] Inactive Address in &TABLE table. Ensure that the &COLUMN column(s) in the &TABLE table contain(s) an active Address.

[APP–43007] No Address information specified in the &TABLE table. Ensure that the Address information is specified in the &TABLE table.

[APP–43008] Invalid Address in &TABLE table. Ensure that the &COLUMN column(s) in the &TABLE table contain(s) a valid Address. If the Address_Id is not provided, you must ensure that all the address columns match character by character. An extra blank space will cause two records to mismatch.

[APP–43009] Multiple Addresses with the same specified criteria in the RA_ADDRESSES table. Ensure that the Address information specified in the &TABLE table refers to only one existing Address.

[APP–43010] Disabled Address Category in &TABLE table. Ensure that the &COLUMN column in the &TABLE table contains an enabled Address Category.

[APP–43011] Inactive Address Category in &TABLE table. Ensure that the &COLUMN column in the &TABLE table contains an active Address Category.

[APP–43012] No Address Category information specified in the &TABLE table. Ensure that the Address Category information is specified in the &TABLE table.

[APP–43013] Invalid Address Category in &TABLE table. Ensure that the &COLUMN in the &TABLE table contains a valid Address Category.

[APP–43014] Invalid Container Item in &TABLE table. Ensure that the &COLUMN column(s) in &TABLE table contain(s) a valid Container Item.

[APP–43015] Inactive Commodity Code in &TABLE table. Ensure that the &COLUMN column in the &TABLE table contains an active Commodity Code.

[APP–43016] No Commodity Code information specified in the &TABLE table. Ensure that the Commodity Code information is specified in the &TABLE table.

[APP–43017] Invalid Commodity Code in &TABLE table. Ensure that the &COLUMN column in the &TABLE table contains a valid Commodity Code.

[APP–43018] Multiple Commodity Codes with the same specified criteria in the MTL_COMMODITY_CODES table. Ensure that the Commodity Code information specified in the &TABLE table refers to only one existing Commodity Code.

[APP–43019] Inactive Model Customer Item in &TABLE table. Ensure that the &COLUMN column in the &TABLE table contains an active Model Customer Item.

[APP–43020] Invalid Model Customer Item in &TABLE table. Ensure that the &COLUMN column in the &TABLE table contains a valid Model Customer Item.

[APP–43021] Multiple Model Customer Items with the same specified criteria in the MTL_CUSTOMER_ITEMS table. Ensure that the Model Customer Item information specified in the &TABLE table refers to only one existing Model Customer Item.
[APP–43022] Demand Tolerance is out of range in the &TABLE table. Valid numeric values are between 0 and 999.99, inclusive.

[APP–43023] Minimum Fill Percentage (MIN_FILL_PERCENTAGE) column in &TABLE table is out of range. Valid numeric range is from 0 to 100, inclusive.

[APP–43024] Invalid Departure Planning Flags in &TABLE table. Valid values are: '1' (meaning Yes) and '2' (meaning No). The following rule may have been violated: &RULE.

[APP–43025] Record was not inserted into destination table. Could not insert record from the &TABLE table into destination table.

[APP–43026] Record was not deleted from &TABLE table.

[APP–43027] Inactive Item Master Organization in &TABLE table. Ensure that the &COLUMN column in the &TABLE table contains an active Item Master Organization.

[APP–43028] Invalid Item Master Organization in &TABLE table. Ensure that the &COLUMN column in the &TABLE table contains a valid Item Master Organization.

[APP–43029] Multiple Item Master Organizations with the same specified criteria in the MTL_ORGANIZATION_UNITS table. Ensure that the Master Organization information specified in the &TABLE table refers to only one existing Master Organization.

[APP–43030] No Inventory Item information specified in the &TABLE table. Ensure that the Inventory Item information is specified in the &TABLE table.

[APP–43031] Invalid Inventory Item in &TABLE table. Ensure that the &COLUMN column(s) in the &TABLE table contain(s) a valid Inventory Item.

[APP–43032] Invalid Inactive Flag (INACTIVE_FLAG) value in &TABLE table. Valid values are: '1' (meaning Yes) or '2' (meaning No).

[APP–43033] No Concurrent Program information specified in the &TABLE table. Ensure that the Concurrent Program information has been populated in the &TABLE table. Please, contact your support representative.

[APP–43034] Record with the same unique key combination already exists in the MTL_CUSTOMER_ITEMS table. Ensure that the following columns, in the &TABLE table, contain a unique (non-existent in the MTL_CUSTOMER_ITEMS table) combination: CUSTOMER_ITEM_NUMBER, CUSTOMER_ID, CUSTOMER_CATEGORY_CODE, ADDRESS_ID, and ITEM_DEFINITION_LEVEL.

[APP–43035] Record with the same unique key combination already exists in the MTL_CUSTOMER_ITEM_XREFS table. Ensure that the following columns, in the &TABLE table, represent a unique combination in the MTL_CUSTOMER_ITEM_XREFS table: &COLUMN1, &COLUMN2, COLUMN3.

[APP–43036] Missing required column(s) in &TABLE table. Ensure that information for all the required columns in the destination table (MTL_CUSTOMER_ITEMS or MTL_CUSTOMER_ITEM_XREFS) is provided in the appropriate interface table.

[APP–43037] No Customer Item found in the MTL_CUSTOMER_ITEMS table with the specified criteria.
[APP–43038] No Customer Item Cross Reference found in the MTL_CUSTOMER_ITEM_XREFS table with the specified criteria.

[APP–43039] Inactive Customer Item found in MTL_CUSTOMER_ITEMS table.

[APP–43040] Inactive Customer Item Cross Reference found in MTL_CUSTOMER_ITEM_XREFS table.

[APP–43041] Returned attribute value is NULL. Successful Customer Item and Customer Item Cross Reference fetch.

[APP–43042] Required parameters are missing. Ensure that all the required parameters are being passed to the API call.

[APP–43043] Invalid column name specified in the Attribute_Name parameter. Ensure that the value passed to this parameter is a valid column name in the MTL_CUSTOMER_ITEMS table or one of the following values: Inventory_Item_Id, Master_Organization_Id, or Preference_Number.

[APP–43044] Mismatch between API parameter Attribute_Name and the MTL_CUSTOMER_ITEMS columns.

[APP–43045] No Item Master Organization defined in the &TABLE table. Ensure that a valid Item Master Organization is specified in one of the following columns: &COLUMN1, &COLUMN2, &COLUMN3.

[APP–43046] Warning: Records with validation errors. &ERROR_COUNT record(s) in the &TABLE table failed validation. Please correct the errors in &TABLE table and re-submit the concurrent program.

[APP–43047] No seeded data in Oracle Applications for Item Definition Level. Contact your support representative. Error found while processing records in the &TABLE table.

[APP–43048] Multiple Item Definition Level codes found in MFG_LOOKUPS. Contact your support representative. Error found while processing records in the &TABLE table.

[APP–43049] No Master Container has been defined in the &TABLE table. Ensure that a valid Master Container is specified for the Detail Container. Detail Containers cannot be specified without a valid Master Container.

[APP–43050] A Model Customer Item with a lower Item Definition Level than the Customer Item’s Definition Level has been specified in the &TABLE. Ensure that a Model Customer Item with an Item Definition Level greater than or equal to the Customer Item’s Definition Level is specified in the &COLUMN column.

[APP–43051] Required Customer Item information is missing from the &TABLE table. Provide a value for the CUSTOMER_ITEM_ID or the CUSTOMER_ITEM_NUMBER column.

[APP–43052] Invalid Customer Item specified in the &TABLE table. Ensure that a valid Customer Item is specified in the &COLUMN column.

[APP–43053] Multiple Customer Item records have been found in the MTL_CUSTOMER_ITEMS table with the same specified criteria. Ensure that unique criteria for a Customer Item is specified in the &TABLE table.
A default shipping subinventory already exists for this item.

A shipping locator already exists for this item and subinventory.

[APP–44143] Reference 2 (Destination Abbreviation) for Trading Partner ‘&TP_CODE’ and Trading Partner Group ‘&GROUP_CODE’ in the EDI Trading Partner form is required to export item information to CARaS.

[APP–44145] EDI Location for Customer ‘&CUST_NAME’ and Address ‘&ADDR_1’ in the Receivables Customers form, is required to export address information to CARaS.

[APP–44146] Master container type ‘&M_CONT_TYPE’ needs to be cross referenced in the EDI Code Conversion Values form to export the item to CARaS.

[APP–44154] Translator code for Trading Partner ‘&TP_CODE’ and Trading Partner Group ‘&GROUP_CODE’ in the EDI Trading Partner form is required to export item information to CARaS.

[APP–44155] Converted UOM Code ‘&C_UOM_CODE’ needs to be cross referenced in the EDI Code Conversion Values form to export item information to CARaS.
[APP–44156] Inner Pack UOM Code ‘&I_UOM_CODE’ needs to be cross referenced in the EDI Code Conversion Values form to export item information to CARaS.

[APP–44157] Primary UOM Code ‘&P_UOM_CODE’ needs to be cross referenced in the EDI Code Conversion Values form to export item information to CARaS.

[APP–44158] Standard Pack UOM Code ‘&S_UOM_CODE’ needs to be cross referenced in the EDI Code Conversion Values form to export item information to CARaS.

[APP–44159] Standard Pack Dim UOM Code ‘&SD_UOM_CODE’ needs to be cross referenced in the EDI Code Conversion Values form to export item information to CARaS.

[APP–44160] Automotive Address extension information for Customer ‘&CUST_NAME’ and Address ‘&ADDR_1’ in the Automotive Address Extension form, is required to export address cross-reference information to CARaS.

[APP–44170] Detail Container Quantity for Customer ‘&CUSTNAME’ and Customer Item ‘&CUSTITEM’ in the Shipping Container Load form needs to be between 0 and 9999999, to export item information to CARaS.

[APP–44171] Detail Container Weight for Customer ‘&CUSTNAME’ and Customer Item ‘&CUSTITEM’ in the Inventory items form needs to be between 0 and 9999.99, to export item information to CARaS.

[APP–44180] Master Container Quantity for Customer ‘&CUSTNAME’ and Customer Item ‘&CUSTITEM’ in the Shipping Container Load form needs to be between 0 and 9999999, to export item information to CARaS.

[APP–44181] Master Container Weight for Customer ‘&CUSTNAME’ and Customer Item ‘&CUSTITEM’ in the Inventory items form needs to be between 0 and 9999.99, to export item information to CARaS.

[APP–44182] Minimum Fill Percentage for Customer ‘&CUSTNAME’ and Customer Item ‘&CUSTITEM’ in the Inventory Customer Items form needs to be between 0 and 99, to export item information to CARaS.

[APP–44195] Max Load Quantity for Master and Detail Containers for Customer ‘&CUSTNAME’ and Customer Item ‘&CUSTITEM’ in the Shipping Container Load form needs to be between 0 and 9999999, to export item information to CARaS.

[APP–44197] Unit Weight for Customer ‘&CUSTNAME’ and Customer Item ‘&CUSTITEM’ in the Inventory Items form needs to be between 0 and 99999.9999, to export item information to CARaS.

[APP–44209] City ‘&CITY’ for Customer ‘&CUST_NAME’ and Address ‘&ADDR_1’ in the Receivables Customers form, needs to be 30 characters or less, to export address information to CARaS.

[APP–44215] Customer Category Code &CATCODE in the Inventory Item form should be 5 characters or less, to export item information to CARaS.

[APP–44216] WARNING: Customer Item Description in Inventory Customer Item form is too long for Customer ‘&CUSTNAME’ and Customer Item ‘&CUSTITEM’. It has been truncated to 30
characters. Original Customer Item: &ORIG_CUSTITEMDESC Value exported: &NEW_CUSTITEMDESC

[APP–44218] Commodity Code &CCODE in the Inventory Commodity Code form needs to be 16 characters or less to export commodity code information to CARaS.

[APP–44219] Item Number length for Item &INVITEM in the Inventory Item form should be &PART_LENGTH characters or less, to export item information to CARaS.

[APP–44220] Country &COUNTRY for Customer &CUST_NAME and Address &ADDR_1 in the Receivables Customers form, needs to be 10 characters or less, to export address information to CARaS.

[APP–44221] Detail Container Type &DET_CONT in EDI Code Conversion Values form for Customer &CUSTNAME and Customer Item &CUSTITEM needs to be 5 characters or less to export item information to CARaS.

[APP–44235] EDI Location &EDI_LOCN for Customer &CUST_NAME and Address &ADDR_1 in the Receivables Customers form, needs to be 15 characters or less, to export address cross-reference information to CARaS.

[APP–44237] Master Container Type &MAST_CONT for Customer &CUSTNAME and Customer Item &CUSTITEM in the EDI Code Conversion Values form needs to be 5 characters or less to export item information to CARaS.

[APP–44239] Postal Code &POSTAL_CODE for Customer &CUST_NAME and Address &ADDR_1 in the Receivables Customers form, needs to be 15 characters or less, to export address information to CARaS.

[APP–44240] Inventory Item Number &INVITEM for Customer &CUSTNAME in Inventory Items form needs to be 30 characters or less to export item information to CARaS.

[APP–44242] Returnable Container Part Number for Customer &CUSTNAME and Inventory Item &INVITEM in the Inventory Items form needs to be 30 characters or less to export item information to CARaS.

[APP–44245] EDI Location Code for Customer &CUSTNAME and Group &GROUPCODE in the Receivables Addresses form needs to be 5 characters or less to export item information to CARaS.

[APP–44248] Reference 2(Destination Abbreviation) &TP_REF_EXT2 for Trading Partner &TP_CODE in Group &TP_GROUP_CODE in the EDI Trading Partner Definition form, needs to be 5 characters or less, to export address information to CARaS.

[APP–44251] There are multiple Automotive Address extension records for Customer &CUST_NAME and Address &ADDR_1 in the Automotive Address Extensions form. A single address extension record is required to export information to CARaS.

[APP–44254] Master container &CONTAINER_PART_NUMBER and Load Item &LOAD_PART_NUMBER for Customer Item &CUSTOMER_ITEM_NUMBER has multiple relationships setup. A single relationship is required to export to CARaS.

[APP–44255] Master container &CONTAINER_PART_NUMBER and Load Item &LOAD_PART_NUMBER for Customer Item &CUSTOMER_ITEM_NUMBER has multiple relationships setup. A single relationship is required to export to CARaS.
[APP–44270] Ending Automatic Trading Partner Export. File name for export was ‘&FNAME’ in path ‘&PATHNAME’.

[APP–44287] EDI Cross reference information has not been setup for this Unit Of Measure. Please setup this Cross reference.

[APP–44289] Ending Automatic Address Cross–reference Export. File Name for Export was ‘&FNAME’ in path ‘&PATHNAME’.

[APP–44293] Addr
Auto
Ext Cus No/Add Name

[APP–44294] Customer No/Item Number

[APP–44297] Converted Standard Pack Unit of Measure Code ’&CSP_UOM’ for Customer Item ’&CITEM’ must be exactly 2 characters in the Automotive Customer Items form, to export item information to CARaS.

[APP–44301] Commodity Code has been left blank and is a required field. Please enter a valid value in this field.

[APP–44302] Customer Name has been left blank and is a required field. Please enter a valid value in this field.

[APP–44303] Trading Partner Group Code has been left blank and is a required field. Please enter a valid value in this field.

[APP–44304] The customer ’&CUSTOMER_NAME’ is not part of any group. Please add this customer to a group.

[APP–44501] Concurrent program &CONC_NAME returned error. Parameters: &PARAMETERS. Contact your system administrator for assistance.

[APP–44503] Missing required argument: &ARG. Please note the error and the actions you are trying to perform. Please contact your system administrator for assistance.

[APP–44505] You have provided insufficient arguments to the Release Accounting Demand Processor program. Please provide the following four arguments: External Customer Name, External Destination Name, Transmission Name, Archive Flag.

[APP–44506] You have provided an external ship–to address without an external customer name. Please resubmit the concurrent request with a valid external customer name.

[APP–44600] &ROUTINE–&ERR_NUMBER. Please take note of both this error number and the actions you were trying to perform. Contact your system administrator for further assistance.
[APP–44601] &ROUTINE–&ERR_NUMBER: &SQL_ERR. Please take note of both this error and the actions you were trying to perform. Contact your system administrator for assistance.

[APP–44602] For transmission &TRANSMISSION_NAME, unable to validate customer &CUSTOMER_EXT without a valid external address. A valid external address must be included in the transmission.

[APP–44603] Line records in table &TABLE_NAME with order number &ORDER_NUMBER, order type &ORDER_TYPE in transmission &TRANSMISSION_NAME could not be locked. Please run the Release Management Demand Processor program again.

[APP–44604] Records in table &TABLE_NAME for order number &ORDER_NUMBER, order type &ORDER_TYPE could not be locked. Please run the Release Management Demand Processor program again.

[APP–44605] Records in table &TABLE_NAME with forecast &FORECAST_DESIGNATOR could not be locked. Please run the Release Management Demand Processor program again.

[APP–44606] Duplicate requirements exist for customer &CUSTOMER, address &ADDRESS, customer item &CUSTOMER_ITEM, on &PLANNED_DATE in transmission &TRANSMISSION_NAME.

[APP–44607] For transmission &TRANSMISSION_NAME, unable to resolve the EDI cross reference address for external customer &CUSTOMER_EXT, and &DEST_TYPE external address &DESTINATION_EXT. Please verify your EDI trading partner cross references.

[APP–44608] Unable to resolve the EDI cross reference for &EXT_NAME external value &EXT_VALUE for transmission &TRANSMISSION_NAME. Please verify your EDI trading partner cross references.

[APP–44609] For transmission &TRANSMISSION_NAME, external customer &CUSTOMER_EXT does not have a valid forecast designator. Please create a forecast designator for this customer and assign it to the Release Management source list.

[APP–44610] For transmission &TRANSMISSION_NAME, order number &ORDER_NUMBER, order type &ORDER_TYPE does not exist for external customer &CUSTOMER_EXT.

[APP–44611] For transmission &TRANSMISSION_NAME, customer &CUSTOMER, ship-to &SHIP_TO_EXT, order type name &ORDER_TYPE_NAME, and order number &ORDER_NUMBER, a blank customer_item_ext was passed with an ato_model_method other than 3.

[APP–44612] Customer item &CUSTOMER_ITEM for customer &CUSTOMER and address &ADDRESS is invalid in transmission &TRANSMISSION_NAME. Please create your customer items for each customer and/or address.

[APP–44613] Unable to resolve default model for order number &ORDER_NUMBER, order type &ORDER_TYPE in transmission &TRANSMISSION_NAME. Customer item &CUSTOMER_ITEM for customer &CUSTOMER does not have a valid default model.

[APP–44614] Transmission &TRANSMISSION_NAME in table &TABLE_NAME could not be locked. Please run the Release Management Demand Processor program again.
Multiple forecasts exist in the Release Management source list for customer &CUSTOMER, ship to address &ADDRESS1, bill to address &ADDRESS2. Please assign only one forecast to this source list for the listed values.

Demand Management was unable to change or delete line number &LINE_NUMBER on order number &ORDER_NUMBER, order type &ORDER_TYPE. This line has been manufacturing or pick released.

Exceptions occurred while importing order number &ORDER_NUMBER and order type &ORDER_TYPE for transmission &TRANSMISSION_NAME. Please review the following text generated during the OE Import process and review the request log of Process Demand:

&OE_IMPORT_ERROR_TEXT

Warnings exist for order number &ORDER_NUMBER, order type &ORDER_TYPE, transmission &TRANSMISSION_NAME. Please review the following text generated during the OE Import process and review the request log of Process Demand:

&OE_IMPORT_ERROR_TEXT

Exceptions occurred while interfacing lines for order number &ORDER_NUMBER, order type &ORDER_TYPE, and transmission &TRANSMISSION_NAME. Please review the following text generated during the OE Import process and review the request log of Process Demand:

&OE_IMPORT_ERROR_TEXT

Warnings exist for lines on order number &ORDER_NUMBER, order type &ORDER_TYPE, transmission &TRANSMISSION_NAME. Please review the following text generated during the OE Import process and review the request log of Process Demand:

&OE_IMPORT_ERROR_TEXT

Demand Management was unable to change or delete the quantity for requirement &REQUIREMENT_EXT on order number &ORDER_NUMBER, order type &ORDER_TYPE. The remaining quantity cannot be cancelled as this order line has been manufacturing released, partially pick released or ship confirmed.

Demand Management was unable to change or delete order line &LINE_NUMBER for order number &ORDER_NUMBER and order type &ORDER_TYPE. This line is sequenced and has already been assigned to a delivery or has included items which have been assigned to a delivery.

Demand Management was unable to change order line &LINE_NUMBER for order number &ORDER_NUMBER, order type &ORDER_TYPE. This line has already been assigned to a delivery, manufacturing released or partially pick released.

Demand Processor failed to lock required records in Oracle Order Entry for order number &ORDER_NUMBER, order type &ORDER_TYPE. Please run the Release Management Demand Processor program again.

Demand Management was unable to resolve default model for order number &ORDER_NUMBER, order type &ORDER_TYPE in transmission &TRANSMISSION_NAME.

For transmission &TRANSMISSION_NAME, Demand Management was unable to add, change, or delete order lines on the closed order number &ORDER_NUMBER, order type &ORDER_TYPE. Please assign an open sales order to the appropriate customer items.
For transmission &TRANSMISSION_NAME, requirements for customer item &CUSTOMER_ITEM and Schedule Ship Date &PLANNED_SHIP_DATE exceed the assigned demand tolerances. Please verify the assigned tolerance against this percentage change of &PCT_DELTA

Transmission '&TRANSMISSION_NAME' already exists in the RLA_DEMAND_INTERFACE table.

No data found in file '&FILENAME'.

Successfully loaded &RECORDCOUNT record(s) from file '&FILENAME' in '&DIRECTORY'

File not found. '&FILENAME' not found in '&DIRECTORY'.

Cannot read file '&FILENAME' in '&DIRECTORY'. Please verify the file is in the correct directory and has the appropriate access privileges.

For transmission &TRANSMISSION_NAME, Demand Management was unable to add, change, or delete order lines on order number &ORDER_NUMBER, order type &ORDER_TYPE. The order has not been booked. Please assign a booked sales order to the appropriate customer items.

For transmission &TRANSMISSION_NAME, unable to resolve the EDI cross reference customer for external customer &CUSTOMER_EXT, and external address &DESTINATION_EXT. Please verify your EDI trading partner cross references.

Unable to process forecast for organization &ORGANIZATION_ID and forecast_designator &FORECAST_DESIGNATOR. MRP API failure.

Unable to process forecast for organization &ORGANIZATION_ID and forecast_designator &FORECAST_DESIGNATOR. The following message text was provided: &MESSAGE_TEXT

For order number &ORDER_NUMBER, order type &ORDER_TYPE, item number &ITEM_NO and planned shipment date &PLANNED_SHIPMENT_DATE, the quantity of the new requirement &NEW_QTY is less than the summed quantity of past due requirements. The quantity of the new line must be equal to or greater than the total quantity of previously linked requirements.

For transmission &TRANSMISSION_NAME, customer &CUSTOMER, ship-to &SHIP_TO_EXT, order type name &ORDER_TYPE_NAME, and order number &ORDER_NUMBER, the header level Purchase Order Number does not match the line level Purchase Order Number.

Demand Management was unable to change or delete order line &LINE_NUMBER for order number &ORDER_NUMBER and order type &ORDER_TYPE. This line has already been departure planned.
[APP–44642] You are changing order line &LINE_NUMBER for order number &ORDER_NUMBER and order type &ORDER_TYPE. This line has already been assigned to a delivery or has included items which have been assigned to a delivery.

[APP–44643] External Ship To should be specified for External Customer Name &CUSTOMER_EXT.

[APP–44644] For transmission &TRANSMISSION_NAME and order type &ORDER_TYPE, an invalid order number &ORDER_NUMBER has been specified.

[APP–44645] Unable to resolve the quantity for the default model of order number &ORDER_NUMBER, order type &ORDER_TYPE, and customer item &CUSTOMER_ITEM, in transmission &TRANSMISSION_NAME.

[APP–44646] Demand Management was unable to change or delete order line &LINE_NUMBER for order number &ORDER_NUMBER and order type &ORDER_TYPE. This line has included items which have been departure planned.

[APP–44647] Demand Management was unable to change or delete order line &LINE_NUMBER for order number &ORDER_NUMBER and order type &ORDER_TYPE. This line has included items which have been pick released.

[APP–44648] No records available to be processed for transmission ’&TRANSMISSIONNAME’

[APP–44650] There were some errors in Loading the records from file(s). Please review Demand Management Exception Report for the Exceptions.

[APP–44651] &FILE_COUNT File(s) were loaded Successfully. Please review Demand Management Exception Report If there were more Files.

[APP–44652] There were no files available to Load.

[APP–44653] &REC_COUNT record(s) have been deleted from Interface Table.

[APP–44660] For order number &ORDER_NUMBER and order type &ORDER_TYPE, the quantity of the new requirement is greater than the summed quantity of past due requirements. The new lines have been linked to the past due requirements.

[APP–44661] An internal error occurred when trying to open ’&FILENAME’ in ’&DIRECTORY’. Please contact your system administrator.

[APP–44662] Invalid filehandle for ’&FILENAME’ in ’&DIRECTORY’ is being used. Please contact your system administrator.

[APP–44663] Unable to open ’&FILENAME’ in ’&DIRECTORY’ with existing file permissions. Please verify the file is being opened in the correct mode and has the appropriate access privileges.

[APP–44664] Cannot write to file ’&FILENAME’ in ’&DIRECTORY’. Please verify the file is in the correct directory and has the appropriate access privileges.

[APP–44665] For order number &ORDER_NUMBER, order type &ORDER_TYPE, item number &ITEM_NO and planned shipment date &PLANNED_SHIPMENT_DATE, the quantity of the new requirement &NEW_QTY is equal to the summed quantity of past due requirements. Hence a new line will not be inserted for this requirement.
For order number &ORDER_NUMBER, order type &ORDER_TYPE, item number &ITEM_NO and planned shipment date &PLANNED_SHIPMENT_DATE, the quantity of the new requirement &NEW_QTY is greater than the summed quantity of past due requirements. Hence a new line will be inserted for the difference.

For the transmission &TRANSMISSION_NAME, the customer_item &CUSTOMER_ITEM is not enabled in the organization &ORGANIZATION_CODE.

For Transmission '&TRANSMISSION_NAME', there are &NUM records that are neither Firm (disposition S), nor Forecast (disposition F).

Cannot acquire serial port for dialing.

The profile value for the Modem Serial Port is not found. Please select the default serial port in the Personal Profiles window before proceeding.

The OSM: Freight Carrier profile value is inconsistent with the OSM: Freight Carrier Source and the OSM: Collateral Organization profile values. Please have your system administrator correct these values.

KEY user exit failed to create &KEY key.

You must define at least one organization to be able to run Oracle Sales and Marketing.

Merge records exist for this batch. Do you want to delete them and create new ones?

The file name extension must be ".doc". A valid filename would be letter.doc

You do not have access to this window. To gain access to it, please ask your system administrator to link your Employee Name to your Application Object Library User Name.

Oracle Order Entry rejected fulfillment request &REQ_ID. All lines must include an item number.

Use your word processor to merge file &FILE_NAME with letter &LETTER_NAME.

[APP–47413] &MODULE: Fail to &PROCESS asset &ASSET

Cause:
You have a database problem.

Action:
Contact your system administrator.

[APP–47416] Distribution lines are out of balance

Cause:
The sum of the distributed units is not equal to the total units of the asset that you entered on the Depreciation Books form.

Action:
Use the Transfers form to change the distributions so that the distributed units matches the total units of the asset.

[APP–47418] You cannot retire this asset because an adjustment is pending

Cause:
Oracle Assets does not allow you to perform an expensed adjustment followed by a retirement in a single period.

Action:
Perform your retirement in a later period.

[APP–47419] Some retirement transactions are pending. Please run the Calculate Gains and Losses program. If you wish to cancel or undo the retirement, please query it first.

[APP–47420] Trade In Asset Number cannot be the asset you are retiring.

[APP–47423] This asset is not assigned to any depreciation books

Cause:
You tried to retire an asset that you have never assigned to a depreciation book.
Action:
To remove the asset from Oracle Assets, find it on the Additions form and then use \ Row Delete.

[APP–47424] Please enter a Straight–line Method and Life

Cause:
You depreciated this asset using a non–straight–line method. Oracle Assets calculates your gains and losses for tax purposes, and these calculations require you to assign a straight–line method and life to assets in your tax books.

Action:
Enter a straight–line method and life for this asset.

[APP–47425] &MODULE: Failed to get &INFO information for asset &ASSET

Cause:
You have a database problem.

  Cause:
  You have a database problem.

Action:
Contact your system administrator.

[APP–47542] Error: Unable to define main select statement

  Cause:
  You have a database problem.

Action:
Contact your system administrator.

[APP–47543] Error: Aborted &ERROR_COUNT transactions with errors

[APP–47544] Error: Unable to get transaction header ID for Mass Change

  Cause:
  You have a database problem.

Action:
Contact your system administrator.

[APP–47545] Processed &ASSET_COUNT transactions successfully
[APP–47546] Error: Unable to create new FA_BOOKS records

   Cause:
   You have a database problem.

   Action:
   Contact your system administrator.

[APP–47547] Error: Unable to get company code or sysdate

   Cause:
   You have a database problem.

   Action:
   Contact your system administrator.

[APP–47548] No depreciation books are set up to allow mass changes

   Cause:
   You cannot use Mass Change because the Allow Mass Changes field in the Book Controls form is set to No for all depreciation books.

   Action:
   Find the book in which you want to perform a mass change in the Book Controls form and change the value of the Allow Mass Changes field to Yes.

   Cause:
   You have a database problem.

   Action:
   Contact your system administrator.

   Cause:
   You have a database problem.

   Action:
   Contact your system administrator.

[APP–47553] Error: Unable to fetch transactions for main select statements

   Cause:
   You have a database problem.

   Action:
   Contact your system administrator.

[APP–47555] You can only reverse capitalize assets added in the current period.

[APP–47556] Mass Change program encountered over 100 errors. Program aborted
Cause:
Mass Change program was aborted because the program detected more than 100 transaction errors.

Action:
Contact your system administrator.

[APP–47557] Assets have changed since you previewed your mass changes

Cause:
You have manually changed one or more of your assets since you ran the Preview Mass Change program. The Mass Change program will skip those assets which have changed.

Action:
Re–run the Preview Mass Changes program to reflect the current state of your assets. Or, manually change those assets which are skipped by the Mass Change Program.

[APP–47558] Please enter at least one change criterion.

[APP–47560] Error: Could not commit FA_MASS_CHANGES update

Cause:
You have a database problem.

Action:
Contact your system administrator.

[APP–47561] Error: Failed to create an unique transaction header id

Cause:
You have a database problem.

Action:
Contact your system administrator.

[APP–47562] Error: Could not insert into FA_BOOKS table

Cause:
You have a database problem.

Action:
Contact your system administrator.

[APP–47563] No mass additions are ready to post into this book

Cause:
No mass additions have the status POST for this book. You can give a status POST when you have entered all necessary information.

Action:
Use the Create Mass Additions form (in Oracle Payables) to create new mass additions. Use the Prepare Mass Additions form to examine the mass additions and add any missing information. Change the status to POST by entering POST in the Queue name field for mass additions which are ready to become assets.
[APP–47564] You cannot undo a split if you already posted part of the split mass additions.

[APP–47565] Error: Unable to determine if the asset was added in current period

  Cause:
  You have a database problem.

  Action:
  Contact your system administrator.

[APP–47566] Enter all required fields before posting this Mass Addition

  Cause:
  You tried to post a mass addition before first entering all required fields on the Prepare Mass Additions form.

  Action:
  Make sure that you have entered a value in the following required fields: Asset Type, Description, Location, Expense Account, Units, Cost, Date Placed In Service, Depreciate, and Split.

[APP–47567] Error: Unable to insert records in FA_MASS_ADDITIONS table

  Cause:
  You have a database problem.

  Action:
  Contact your system administrator.

[APP–47568] Error: Unable to get mass addition id

  Cause:
  You have a database problem.

  Action:
  Contact your system administrator.

[APP–47569] No mass additions are in the DELETE queue for this book

  Cause:
  You tried to run the Mass Additions Delete program with no mass additions to delete for the book that you entered.

  Action:
  No action necessary.

[APP–47576] Please enter a destination asset or clear the Adjust Asset Cost Zone

  Cause:
  You did not enter a destination asset for this mass addition.

  Action:
  Assign a destination asset to this mass addition in the Destination Asset zone.

[APP–47577] This Asset Number does not exist
Cause:
The asset number you entered does not exist.

Action:
Verify that the asset number is correct.

[APP–47578] Invalid CIP asset category

Cause:
The specified asset category is incompatible with a CIP asset.

Action:
Change either the asset type or the asset category.

[APP–47579] You must enter the category and description before reclassifying an existing asset to that of the mass addition.

[APP–47580] Error: Invalid asset type

Cause:
You have a database problem.

Action:
Contact your system administrator.

[APP–47581] Error: Invalid data retrieved from database

Cause:
You have a database problem.

Action:
Contact your system administrator.

[APP–47582] Error: Invalid posting status for mass addition

Cause:
You cannot post a merged child or split parent. If you merge a mass addition, you can post only the merged parent. Or, if you split a mass addition, you can post only the split child.

Action:
Set the posting status of the merged parent or the split child to POST.

[APP–47583] Error: Invalid queue name for mass addition

Cause:
You have a database problem.

Action:
Contact your system administrator.

[APP–47584] This asset is not assigned in the same book as the mass addition

Cause:
The asset is not in the same corporate book as the mass addition.
Action:
Assign the mass addition to an asset in the corporate book.

[APP–47585] You cannot assign an expensed mass addition to an asset.

[APP–47586] You cannot assign this mass addition to other assets

Cause:
This invoice is either split or merged into other invoice lines. You cannot assign this invoice to other assets.

Action:
Undo the split or merge if you want to assign this invoice to an asset directly.

[APP–47587] This invoice line is already assigned to the parent asset

Cause:
This invoice line is already assigned to a parent asset and you cannot add it to another existing asset.

Action:
To add this invoice line to another asset, first clear the Parent Asset Number field.

[APP–47589] Warning: Invalid units. Mass addition created with 1 unit

Cause:
The invoice line from which you created a mass addition has units greater than the limit of 9999, null units, or fractional units. Therefore, Oracle Assets cannot use the invoice units for the Mass Addition. The mass addition was created with one unit.

Action: Use The Prepare Mass Additions form to enter a value for units between 1 and 9999.

[APP–47590] Payables Units: [Payables Units]

[APP–47591] Cost adjustments are not allowed on this asset

Cause:
You tried to adjust the cost of an asset that is either fully retired, fully reserved, or has a pending retirement.

Action:
No action is needed if the asset is fully retired or fully reserved. If the asset has a pending retirement, submit the Calculate Gain/Loss program to process the retirement. When the concurrent process finishes, make your cost adjustment.

[APP–47595] You cannot assign ITC to an asset that has a cost ceiling.

[APP–51000] Invalid position
This position does not exist at all, or is not completely within the assignment’s date range.

[APP–51001] This vacancy does not exist

[APP–51002] Cannot submit report
Possible causes could be that the report does not exist, The concurrent request manager is not working.

[APP–51003] Assignment must have a valid pay period at actual termination date

[APP–51005] Person type must be a type of EMP at actual termination date

[APP–51006] Payroll must have a valid pay period at actual termination date

[APP–51007] Actual termination date must exist before setting final process date

[APP–51008] Person type must be a type of EX_EMP at final process date

[APP–51009] This position is not in the same business group as the assignment.

[APP–51011] Person does not exist at specified date

[APP–51012] Cannot rehire a person who is not a type of EX_EMP
[APP–51013] This person does not have a previous period of service

[APP–51014] Cannot rehire a person unless a final processing date exists for their previous period of service

[APP–51015] The rehire date must be later than the final processing date of the previous period of service

[APP–51017] Assignment Number must be null for applicant assignments

[APP–51018] Hierarchy Level must be greater than 0. The Hierarchy level specified must be greater than 0.

[APP–51019] Primary Key Constraint Error
Combination of Entity Name and Pattern Purpose is not unique.

[APP–51020] Unique Key Constraint Error.
Combination of Entity Name and Pattern Purpose is not unique.

[APP–51021] Unique Key Constraint Error.
Combination of Pattern Purpose and Hierarchy Level is not unique.

[APP–51022] Invalid primary key specified.
The Primary key specified is invalid.

[APP–51023] The Pattern Bit Specified is not unique.
Pattern Bit specified is not unique.

[APP–51024] Multiplier must be positive whole number.
Multiplier must be greater than 0.

[APP–51026] This record is locked by another user.
The Object specified is currently locked. Try again later.

Invalid Object Version Number. Re-query and try again.

[APP–51028] Employment category is not valid

[APP–51029] Choose a date on which the assignment includes a payroll

[APP–51030] There is a gap in the continuity of Primary Addresses.

[APP–51030] There is a gap in the continuity of Primary/Main Addresses.

[APP–51031] Employee is a supervisor, changing hire will invalidate this.

[APP–51032] Employees previous Employment, has not been closed for more than a day.

[APP–51033] Future dated salary administration records exist

[APP–51034] Retropay encountered an Incomplete Assignment Action
Retropay is unable to process any Assignment Action with a status that is not complete. The effective date for the incomplete action is &EFFECTIVE_DATE.
[APP–51036] The assignment must be an applicant assignment as of the effective date. When attempting to update an applicant assignment the assignment type should be of type 'A' (Applicant). An error occurs when the update of an employee assignment is attempted with assignment type of 'A'.

[APP–51037] This action MAY affect the value of balances. Do you wish to continue? By deleting a balance feed, or taking action which may result in balance feeds being deleted, you may affect the value of balances which have already been fed by this input value.

[APP–51038] The usage may not start before the calendar starts. You may not assign someone to a calendar for a period of time before the calendar has come into being. Please choose a date later than &CALENDAR_START_DATE.

[APP–51039] A Workers Compensation override rate for this state and carrier is being referenced

[APP–51040] The applicant assignment position doesn’t match it’s vacancy position. The position_id for the assignment should match the position_id of the assignment’s vacancy but only if the position_id for the vacancy is not null.

[APP–51041] The applicant assignment location doesn’t match it’s vacancy location. When the vacancy_id for an assignment is not null and the location_id for this vacancy in PER_VACANCIES is also not null. Then the location_id of the vacancy should match the location_id of the assignment.

[APP–51042] The applicant assignment organization doesn’t match it’s vacancy organization. When the assignment vacancy_id is not null and the organization_id for this vacancy is not null then the vacancy organization_id should match the assignment organization_id.

[APP–51044] The Balance Dimension does not exist.

[APP–51045] Initial Balance Upload does not Support this Balance Dimension.

[APP–51046] The Tax Unit does not exist.

[APP–51047] The ORIGINAL_ENTRY_ID context must be specified.

[APP–51048] The Original Element Entry does not exist.

[APP–51050] Balance does not have an initial balance feed.

[APP–51051] Balance does not have an element link for its initial balance feed.

[APP–51052] Assignment must be an employee assignment.

[APP–51053] Assignment has already been processed before the upload date.

[APP–51054] The position definition flexfield structure is invalid

[APP–51055] The assignment position and organization combination is invalid. The position and organization combination for the assignment should match the position and organization combination in PER_POSITIONS.
[APP–51056] The assignment position and job combination is invalid
The position and job combination for the assignment should match the position and job combination
in PER_POSITIONS.

[APP–51057] The job for the assignment position and job combination cannot be null
The POSITION_ID and JOB_ID combination for the assignment should match the position
combination in PER_POSITIONS. Hence the assignment JOB_ID cannot be a null value.

[APP–51058] An error occurred in hrentmnt.validate_adjust_entry. Contact your Oracle Support
Representative.
The cursor csr_ele_info in the pl/sql package, hrentmnt.validate_adjust_entry returned no rows
(unexpectedly). The parameters of the procedure were: p_mode = $P_MODE p_assignment_id =
$P_ASSIGNMENT_ID p_element_entry_id = $P_ELEMENT_ENTRY_ID p_start_or_end_date =
$P_START_OR_END_DATE p_old_date = $P_OLD_DATE p_new_date = $P_NEW_DATE
p_effective_start_date = $P_EFFECTIVE_START_DATE p_effective_end_date =
$P_EFFECTIVE_END_DATE p_entries_changed = $P_ENTRIES_CHANGED

[APP–51059] The absence duration in days/hours must be entered.
The absence duration in days or hours must be entered. Enter a duration value in the duration field
to proceed.

[APP–51060] The calendar start position must be between 1 and $MAXIMUM
The pattern consists of $MAXIMUM distinct parts. You may not enter a number which does not
 correspond to one of the parts.

[APP–51061] The start position must be positive
The start position must be greater than zero.

[APP–51062] The calendar starts on the wrong weekday.
The pattern definition specifies that any calendar using it must start on a $WEEKDAY. If you have
 specified a pattern start position greater than 1 then the system will go back from the start time to
 work out the day on which the first pattern bit would fall.

[APP–51063] The calendar starts at the wrong time.
The pattern definition specifies that any calendar which uses it must start at $START_TIME. If you
 have specified a pattern start position greater than 1 then the system will take into account the offset
to work out the time at which bit 1 of the pattern would start.

[APP–51064] The calendar name must be unique

[APP–51065] The calendar_id must be unique.
The sequence in use was HR_CALENDARS_S.

[APP–51066] The pattern is not valid.
You must choose a valid pattern on which to base your calendar.

[APP–51067] The primary key value is invalid.
The specified identifier of the $ENTITY_NAME does not correspond to a record which exists on
$START_DATE. Enter a valid identifier.

[APP–51068] The calendar is not valid.
The calendar you specified does not exist. Please enter a valid calendar.
The entity and purpose may not be combined. You may not attach a calendar to the entity selected for the purpose you specified. Please choose a different combination.

The start date must precede or equal the end date.

The pattern is not appropriate for SSP. The pattern on which the calendar is based is not appropriate for an SSP qualifying pattern. Choose a calendar based on a pattern which comprises only qualifying and non-qualifying days.

There is already a calendar for this entity and purpose at this time. At any given time, there may be only one calendar attached to an entity for a given purpose. Check the start and end dates you have selected.

SSP qualifying patterns must be whole days. The pattern is defined as being potentially used for an SSP qualifying pattern. You chose a pattern construction which consisted of a time period which was not a whole multiple of a day. This is not allowed for SSP qualifying patterns.

Not a valid availability. The availability must be one of the pre-defined values which you set up in the lookups screen. Choose a valid one (a list of values may be available if you are using Oracle Forms), or set up the new one in the lookups screen.

Patterns may be broken down to only one further level. Patterns may consist of other patterns, but only if the component pattern is not itself further broken down into patterns. Choose a different pattern.

Not a valid pattern You must choose a valid pattern for the pattern purpose.

The pattern purpose must be unique for the pattern.

The pattern purpose is not valid. The pattern purpose must be one of the pattern purpose lookup values.

Not a valid SSP qualifying pattern. In order to be used as an SSP qualifying pattern, a pattern must: 1. Be composed only of whole days or multiples of whole days. 2. Be required to start at 00:00 hours. 3. Be composed only of ‘qualifying’ and ‘non qualifying’ days. 4. Be guaranteed to have at least one day in every seven as a qualifying day.

The time must be specified in the format HH24:MI. For example, 22:37.

The pattern name must be unique.

This grade does not exist.

This grade does not exist for your current Business Group.

The valid grade’s start date must be earlier than or equal to its end date.
[APP–51085] The start date you enter must be between the grade’s start and end dates.

[APP–51086] The valid grade’s start date must be later than or equal to the start date of the job.

[APP–51087] The valid grade’s start date must be later than or equal to the start date of the position.

[APP–51088] Enter a valid grade for either job or position, not for both.

[APP–51089] Enter a valid grade for either job or position.

[APP–51090] This job does not exist.

[APP–51091] This job does not exist in your current Business Group.

[APP–51092] A valid grade already exists for this job and grade combination.

[APP–51093] This position does not exist.

[APP–51094] This position does not exist in your current Business Group.

[APP–51095] A valid grade already exists for this position and grade combination.

[APP–51096] The valid grade’s end date must be later than or equal to its start date.

[APP–51097] The end date you enter must be between the grade’s start and end dates.

[APP–51098] The valid grade’s end date must be earlier than or equal to the end date of the job.

[APP–51099] The valid grade’s end date must be earlier than or equal to the end date of the position.

[APP–51100] Prior employment SSP weeks must be an integer greater than zero.

[APP–51101] SSP1L details must be fully entered.
If you enter prior employment SSP details, you must complete both the weeks paid and the paid to date fields.

[APP–51102] The SSP paid to date must be before the hire date.
The prior employment SSP paid to date refers to the last date SSP was paid to an employee with the employer he had before this period of service began.

[APP–51103] This Assignment was not moved to the target position.

    Cause:
This assignment has a future change pending. Mass Moves does not move such assignments.

    Action:
Use the assignment or application form to associate this assignment with target position.

[APP–51104] This assignment was not moved/updated.

    Cause:
You must change an assignment’s organization, position, location, standard conditions, GRE/Legal Entity or grade.
Action:
Define a new mass move changing at least one of these attributes.

[APP–51106] Currency required for monetary Element Type
Currency code must not be null for an Element Type that has an Input Value with Money Unit Of Measure.

[APP–51108] You cannot clear saved components in this region.
Saved components cannot be cleared in components region.

[APP–51109] A job requirement already exists for this job and analysis criteria.

[APP–51110] A job requirement already exists for this position and analysis criteria.

[APP–51111] The analysis criteria does not exist.

[APP–51112] Enter a job or position, but not both.

[APP–51113] Essential must be ‘Y’ or ‘N’.

[APP–51114] This special information type does not exist.

[APP–51115] This special information type is not enabled.

[APP–51116] This task flow name already exists.

[APP–51117] To use multiple components, clear the changes in the change amount field.

[APP–51118] Error was encountered when processing assignment &ASGNO

[APP–51120] Error was encountered when processing formula &FMLANAME

[APP–51121] Error was encountered when processing Skip formula &FMLANAME

[APP–51122] A Task Flow name is required. Please enter a valid value.

[APP–51123] You cannot copy a Task Flow that you haven’t saved.

[APP–51124] No manager exists in this assignment’s source organization.

Cause:
The manager assignment has been moved from the source organization, leaving no manager.

Action:
None, this is a warning only.

[APP–51126] This assignment change has altered at least one salary element entry.

[APP–51128] This position change has altered at least one valid grade.

Cause:
Deactivating the source position has resulted in deactivating the valid grades for this position.
Action:
None, this is a warning only.

[APP–51129] Assignments associated to a vacancy are not moved to the target position.

Cause:
This assignment has an associated vacancy. Assignments with vacancies will not move to the target position.

Action:
Use the assignments form to associate with the target position.

[APP–51131] You can only perform a word processor mail merge from Microsoft Windows.

[APP–51132] Link does not exist for element &ELEMENT
Link for the element does not exist.

[APP–51133] The location is not a valid work location for the assignment.
The location is not a valid work location for the assignment.

[APP–51134] The total tax withheld is not equal to the difference between the gross and net earnings.
The total taxes withheld is not equal to the difference between gross and net earnings.

[APP–51135] Cannot determine the assignment_id and/or business_group_id.
Cannot determine the assignment_id and/or business_group_id.

[APP–51136] Could not determine the consolidation_set_id.
Could not determine the consolidation_set_id.

[APP–51139] You have already created an address for this person and address type which overlaps this date range.

[APP–51140] An earnings element must be specified.
An earnings element must be specified since the gross earnings are non-zero.

[APP–51141] SIT withheld entered for a state that does not have SIT tax.
SIT Withheld entered for a state that does not have an SIT tax.

[APP–51142] SDI_EE withheld entered for a state that does not have SDI_EE tax.
SDI_EE tax withheld for a state that does not have SDI_EE tax.

[APP–51143] The employee cannot supervise themselves.
The employee for the assignment cannot be the same as the supervisor. As a supervisor cannot supervise themselves.

[APP–51145] The supervisor’s business group should match the employee’s business group.
The supervisor should be in the same business group as the business group on the employee assignment.

[APP–51147] The date probation end must be after the earliest effective start date for the assignment.
[APP–51148] The default code combination does not exist for the date effective period of the assignment.
The specified default code combination does exist in the table GL_CODE_COMBINATIONS or exists but is not active for the date effective period of the assignment.

[APP–51149] The performance review period frequency doesn’t exist.

[APP–51151] This type of probation unit does not exist.

[APP–51249] You entered a value that is not on the list of valid values for vendor id.

[APP–51250] You can only enter a value for vendor id if the system person type is EMP, EMP_APL, EX_EMP or EX_EMP_APL.

[APP–51251] You specified an invalid value for 'expense check send to address.'

[APP–51252] Enter an enabled people group.

[APP–51254] A salary proposal cannot be created for an applicant.

[APP–51256] You entered an Employee Data Verified date earlier than the start date.

[APP–51259] Please enter a review date, before entering the next performance review date.

[APP–51261] Please enter 'Y' or 'N' for the Multiple_Components field.
The first salary proposal for the assignment cannot have multiple components.

This event is not valid for this assignment.

The Performance rating must not be entered, if the review date is not entered.

The record is protected against update.

You cannot approve a salary proposal, if the salary amount is not entered.

You cannot unapprove a proposal which has already being approved.

The assignment is not eligible for the element. You may not grant the element &ELEMENT_NAME to assignment number &ASSIGNMENT_NUMBER on &SESSION_DATE. The assignment is not eligible for the element on that date. Eligibility is determined by the element link. In order to be eligible, the link criteria must be met by the assignment at all times during the life of an element entry.

The value you entered for Additional Pension Years is outside the valid range of 0 to 99.

The value you entered for Additional Pension Months is outside the valid range of 1 to 11.

You must enter Y or N for the NI Multiple Assignments flag.

You cannot modify an applicant assignment with an initial terminated status.

You have entered a city that is invalid.

The organization should be an HR organization for all assignments other than the first.

Please enter ‘Y’ or ‘N’ for the approved flag.

Invalid combination of city, county and state

The recruiter you enter must exist on the effective date of the assignment.

Enter the same recruiter for applicant assignment and vacancy.

Zip code is incorrect for the city, county and state entered for this address.

The address must be US style

Enter the same Business Group for recruiter and applicant assignment.

You entered a value that is not on the list of valid values for new hire.

You cannot enter a value for New Hire Exception Reason if you enter ‘Exclude’ in the New Hire field.

The value you entered for New Hire Exception Reason is not on the list of valid values.
[APP–51288] Enter either Y or N in the Child Support Obligation field.

[APP–51289] You have entered the same name for applicant and recruiter.

[APP–51290] The recruiter must be an employee.

[APP–51291] Enter the same grade for applicant assignment and vacancy.

[APP–51292] The review date cannot be before the assignment date. Please enter a valid review date.

[APP–51293] Enter the same job for applicant assignment and vacancy.

[APP–51294] Enter a person type for an applicant assignment which is either 'APL', 'APL_EX_APL', 'EMP_APL' or 'EX_EMP_APL'.

[APP–51295] QuickPay cannot process entries that require 'separate check' or 'tax separately' processing. To run QuickPay for this assignment you must deselect these earnings types. To include these earnings types you should include the employee in an assignment set and submit the batch Payroll Process for this one employee. The batch process will manage both standard and separate processing.

[APP–51296] Enter the same people group for applicant assignment and vacancy.

[APP–51297] The vacancy you enter must exist on the start date of the assignment.

[APP–51300] Enter the same Business Group for vacancy and assignment.

[APP–51302] The 'person referred by’ does not exist on the database at the start of the assignment.

[APP–51303] Enter the same Business Group for 'person referred by’ and assignment.

[APP–51304] The 'person referred by’ cannot be same person as the applicant.

[APP–51305] The 'person referred by’ must be an employee.

[APP–51306] The recruitment activity does not exist at the start of the assignment.

[APP–51307] Enter the same Business Group for recruitment activity and assignment.

[APP–51308] The source organization does not exist at the start of the assignment.

[APP–51309] Enter the same Business Group for source organization and assignment.

[APP–51310] The proposal_id is not valid. Please enter a valid proposal_id.

[APP–51311] You cannot insert or update a salary component, if the associated salary proposal has already been approved.

[APP–51312] Salary component cannot be created for this salary proposal.

[APP–51313] The reason for a salary component must be unique.

[APP–51315] You cannot delete a salary component, if the associated proposal has already been approved.
[APP–51316] The set of books must exist as a financials system parameter for the assignment Business Group.

[APP–51317] The business_group_id is not valid. Please enter a valid business_group_id.

[APP–51318] A component reason must be entered before approving the salary component.

[APP–51319] The component_id is invalid. Please enter a valid component_id.

[APP–51320] Enter the same Business Group for period of service and assignment.

[APP–51322] The effective date for all DateTracked operations must not include a time component.

[APP–51323] Do not enter an end date when you first create a primary assignment.

[APP–51324] Cannot make an adjustment to a non-recurring element entry.

[APP–51325] The source type must be the same as the type of the assignment recruitment activity.

[APP–51326] This salary proposal has one or more components. Please delete the components before deleting the overall proposal.

[APP–51327] SDI withheld in a state that is not currently the primary work state.

[APP–51328] The SUI state for this assignment does not have employee SUI taxes.

[APP–51329] Enter a person type for an employee assignment which is either 'EMP' or 'EMP_APL'.

[APP–51330] The target position already exists outside the target organization.

  Cause:
  Two organizations may not have the same position definition. You have attempted to create a new position when an identical position already exists to another organization.

  Action:
  Make the position unique.

[APP–51331] Assignments were not moved from the source position to the target position.

  Cause:
  The mass move effective date is outside the date range of the target position.

  Action:
  Update the target position effective dates to encompass the mass move effective date, or alter the mass move effective date.

[APP–51332] This combination of categories already exist. Please clear the form and query for this combination.

[APP–51333] Vacancies associated with the source position did not move to the target position.

  Cause:
  Automatic moving of vacancies is not enabled.
Action:
Use the Requisition and Vacancy form to associate with the target position.

[APP–51334] Job Evaluations associated with the source position did not moved to the target position.

Cause:
Automatic moving of job evaluations is not enabled.

Action:
Use the Position form to associate the target position with the job evaluation.

[APP–51335] The target position has a future end date.

Action:
None, this is a warning only.

[APP–51336] Your initial amount cannot exceed your maximum amount. Please adjust the amounts.

[APP–51337] A value for the key flex segment cannot be entered.

[APP–51346] The supervisor should be an employee.

[APP–51348] The object version number is invalid.

[APP–51349] The date of a salary proposal cannot be updated.

[APP–51350] No personal payment method external account structure exists for the organisational method you selected.

[APP–51351] The personal payment method you selected does not exist.

[APP–51356] Timeout while writing to dbms_pipe. You must run monitor the trace pipe using PYUPIP if trace is enabled.

[APP–51774] Display Order is invalid

[APP–51776] A Web user cannot have more than one ICX_HR_PERSON_ID attribute.

[APP–51776] Web User can not have more than one ICX_HR_PERSON_ID attribute.

[APP–51779] Assignment id is valid but Assignment type is not ‘ACCEPTED’.

[APP–51780] This combination of categories already exist. Please clear the form and query with a session date after &1.
[APP–51781] PRORATION RULE CANNOT BE N/A FOR A SUPPORT CATEGORY.

[APP–51782] The annualized hours cannot be less than zero or more than 8766 hours.

[APP–51783] You must enter a value for the annualized hours field.

[APP–51784] The assessment needs to have a date. Enter a date for the assessment.

[APP–51785] Invalid district_code against per_jp_address_lookups is entered.

[APP–51786] Invalid address_line1 against per_jp_address_lookups is entered.

[APP–51787] Query on per_jp_address_lookups returned more than one row.

[APP–51788] Query on per_jp_address_lookups returned more than one row.

[APP–51789] Both district_code and address_line1 can not be null.

[APP–51790] Invalid address_line1_kana against per_jp_address_lookups is entered.

[APP–51796] Invalid school_id against per_jp_school_lookups is entered.

[APP–51797] Invalid school_name against per_jp_school_lookups is entered.

[APP–51798] Invalid school_name_kana against per_jp_school_lookups is entered.

[APP–51799] Invalid major against per_jp_school_lookups is entered.

[APP–51800] Invalid major_kana against per_jp_school_lookups is entered.

[APP–51801] The date of birth was in an incorrect format. It has been set to empty. Please enter a date in a correct format.

[APP–51801] The format of the date of birth was incorrect. The incorrect date has been erased. Please enter a date in a correct format.

[APP–51802] Either you did not check a primary contact or you have checked more than one primary contact. You must have one primary contact.

[APP–51802] You either do not check a primary contact or you have more than one primary contacts checked.

[APP–51806] The assessee is does not belong to the current business group. Enter one that does.

[APP–51807] The Effective date you entered is too early. The Effective date has been reset to the earliest date allowed.

[APP–51807] The effective date you entered is too early. It has been reset to the earliest date allowed.

[APP–51808] The assessor does not exist in the current business group. Enter one that does.

[APP–51809] This competence is used in a competence element. The dates you have entered are outside the competence element dates.
[APP–51810] Completed payroll actions exist.

[APP–51811] Contiguous periods of service exist.

[APP–51812] This assessment is being referenced by competence elements. Remove the competence elements before removing the assessment.

[APP–51813] The qualification record being referenced does not exist.

[APP–51814] The Primary Key for the Subject Taken record is incorrect. It should be null on insert and non updatable on update.

[APP–51815] This subject already exists for this qualification with the same subject status.

[APP–51816] The subject start date must be before the subject end date.

[APP–51817] The start and end dates for the subject are outside of the dates for the qualification.

[APP–51818] The lookup value for subject major is invalid.

[APP–51819] This subject does not exist as a lookup.

[APP–51820] The subject status does not exist as a lookup.

[APP–51821] The start date or the end date for this subject overlaps with the identical subject for the same qualification.

[APP–51830] The appraisal this assessment should belong to doesn’t exist. Attach it to another appraisal.

[APP–51833] The person or the establishment attendance must be entered but not both.

[APP–51834] This person does not exist as of the system date.

[APP–51835] The value of the qualification status is invalid.

[APP–51836] The qualification awarded date is invalid. The awarded date must be greater than or equal to the start date and greater than or equal to the end date.

[APP–51838] Job codes have already been assigned for this state.

[APP–51840] A fee has been entered without the currency having been entered or the fee currency has been entered without the fee having been entered.

[APP–51841] The start and end dates for the qualification are outside of the start and end dates of the establishment attendance.

[APP–51842] The qualification start and end dates do not bound the subjects taken records, either change the dates of the related subjects taken or change the start and end dates of the qualification.

[APP–51844] The projected completion date is earlier than the start date of the qualification. The projected completion date can not be entered unless the start date has been entered.

[APP–51845] The tuition method value is invalid and doesn’t exist in the lookup

PER_TUITION_METHODS
[APP–51847] This qualification record already exists within the date range specified. A qualification record must be unique and not bounded by an identical qualification’s start and end dates.

[APP–51848] The business group for the establishment attendance being referenced is different to the business group for the qualification.

[APP–51849] The business group for the person referenced is different to the business group for the qualification.

[APP–51850] The establishment attendance being referenced is invalid and does not exist in the PER_ESTABLISHMENT_ATTENDANCES table.

[APP–51851] The qualification type being referenced is invalid and does not exist in the PER_QUALIFICATION_TYPES table.

[APP–51852] The business group being referenced is invalid and does not exist in the HR_ORGANIZATION_UNITS table.

[APP–51853] The start date for the qualification is after the end date for the qualification.

[APP–51854] The primary key for the qualification is invalid. It should be null on insert and should be non–updatable on update.

[APP–51855] This currency code is invalid as it does not exist in the fnd_currencies table.

[APP–51856] FTE availability must be a number between 0.00 and 100.00, with two decimal places.

[APP–51857] This record can not be deleted as it is referenced by some subjects taken.

[APP–51859] The template end date is before the start date.

[APP–51860] At least one assessment of this type has an assessment date later than the date that this type is valid until. Change the date that the type is valid until.

[APP–51861] At least one assessment of this type has an assessment date earlier than the date that this type is valid from. Change the date that this type is valid from.

[APP–51862] Either you did not check a main address or you have checked more than one main address. You must have one main address.

[APP–51862] You either do not check a primary address or you have more than one primary addresses checked.

[APP–51863] The start date for the Establishment Attendance is not in a valid date format.

[APP–51864] You must enter selection criteria before entering a record here.

[APP–51865] Please select a position before pressing the Find button.

[APP–51866] The competence element type must be ‘PERSONAL’ when updating a persons competence profile.
[APP–51867] The person already has this competence at some time during the period you have specified.

[APP–51868] The Qualification Projected Completion Date is in an invalid date format.

[APP–51869] The License Expiry Date is in an invalid date format.

[APP–51870] Position status is invalid.

[APP–51871] The training completed amount is not in a valid numeric format.

[APP–51872] The total training amount value is not in a valid numeric format.

[APP–51873] The start date for the subject is invalid.

[APP–51874] The end date for the subject is invalid.

[APP–51875] Commit your Establishment Attendance before moving.

[APP–51876] For each copy transaction you can only select one of the core competencies, organization, job or position.

[APP–51877] Please select one of the core competencies, organization, job or position before pressing the copy button.

[APP–51878] The date from field must be entered for copying process.

[APP–51879] Save the assessment template before adding competences.

[APP–51880] The value of the category is invalid, this value does not exist as a lookup.

[APP–51881] The person must have a current primary address for them to be entered on a payroll.

[APP–51882] The person’s address must have a county for them to be entered on a payroll.

[APP–51883] The appraisal template is invalid for your business group.

[APP–51884] The appraisal template does not exist as of the effective date.

[APP–51887] You must enter an appraisee for the appraisal.

[APP–51888] You must enter an appraiser for the appraisal.

[APP–51889] This person does not exist.

[APP–51890] This person does not exist in the appraisal’s business group.

[APP–51891] This person does not exist as of your effective date.

[APP–51892] The appraisal type you have entered is invalid. Enter a valid one.

[APP–51893] The appraisal status you have entered is invalid. Enter a valid one.

[APP–51894] You must enter the start date for this appraisal.

[APP–51895] You must enter the end date for this appraisal.
[APP–51896] The appraisal period start date must be earlier than or equal to the appraisal period end date.

[APP–51896] The appraisal start date must be earlier than or equal to appraisal end date.

[APP–51897] The appraisal end date must be later than or equal to appraisal start date.

[APP–51898] The overall rating level you entered does not exist.

[APP–51899] The overall rating level does not exist in the appraisal’s business group.

[APP–51900] The overall rating level must be for the rating scale defined for the appraisal template.

[APP–51902] You cannot delete an appraisal that has an overall rating set.

[APP–51903] You cannot delete an appraisal that is used in proposal answers.

[APP–51903] You cannot delete an appraisal where questionnaire answers exist

[APP–51904] You cannot delete an appraisal that is used in objectives.

[APP–51905] You cannot delete an appraisal that is used in an assessment.

[APP–51906] You cannot delete an appraisal that is used in a performance rating.

[APP–51907] You must enter a name for the appraisal template.

[APP–51908] A template with this name already exists. Enter a new name.

[APP–51909] The date from has to be earlier than or equal to date to.

[APP–51910] The date to has to be later than or equal to date from.

[APP–51911] This template is used in an appraisal. The dates you have entered are outside the appraisal dates.

[APP–51912] The assessment type you have entered does not exist.

[APP–51913] The assessment type is invalid for your business group.

[APP–51914] The assessment type is outside the start date and end date of the appraisal template.

[APP–51915] The questionnaire template you have entered does not exist.

[APP–51916] The questionnaire template must be of type 'APPRaisal'.

[APP–51917] You cannot update the questionnaire template as this template is used in proposal answers.

[APP–51918] You must enter an appraisal for the performance rating.

[APP–51919] The appraisal you have entered for this performance rating does not exist.

[APP–51920] You must enter an objective for the performance rating.

[APP–51921] The objective you have entered for this performance rating does not exist.
[APP–51922] The objective must be in the performance rating’s business group.

[APP–51924] The objective you have entered already exists for this appraisal. Enter a new objective.

[APP–51925] The rating level you have entered for this performance rating does not exist.

[APP–51926] The rating level must be in the performance rating’s business group.

[APP–51927] The rating level must be for the rating scale defined in the appraisal template.

[APP–51928] The rating scale you have entered does not exist.

[APP–51929] The rating scale should be in the appraisal template’s business group.

[APP–51930] You can only assign rating scale’s of type PERFORMANCE to appraisal templates.

[APP–51931] You cannot update this rating scale as this appraisal template is used in an appraisal which has the overall rating set.

[APP–51932] You cannot update this rating scale as this appraisal template is used in a performance rating.

[APP–51933] You cannot delete this appraisal template as it is used in an appraisal.

[APP–51936] The Establishment Attendance is invalid, please select a valid Establishment Attendance from the LOV.

[APP–52076] You must provide a last name.

[APP–52077] The employee’s eligibility for Advance Pay is not valid over the period you have selected. Check element link and payroll transfer details, then specify Advance Pay criteria again for the assignment.

[APP–52078] Legislative features for Advance Pay may not have been correctly installed. Check predefined balances, element types and input values.

[APP–52079] The system cannot match the number of pay period deferments to the total number of Advance Pay periods. Check element link and payroll transfer details, then specify Advance Pay criteria again for the assignment.

[APP–52080] The Create Batches process has failed to insert a set of batch lines into the temporary batch table. See your System Administrator about this.

[APP–52081] The Create Batches process failed when inserting a new batch header record into the temporary batch tables. See your System Administrator about this.

[APP–52082] Assignment Set is a required parameter. To include the whole payroll, define the assignment set to be equal to or larger than the payroll.

[APP–52083] You must enter a valid background check status.

[APP–52084] The MIX transfer has failed for this process. To see what action to take, view the messages for the failed batch in the Batch Lines window.

[APP–52085] The payroll you have entered for the assignment set does not match the payroll you have entered for the Advance Pay process.

[APP–52086] The Business Group you have entered for the assignment set does not match the Business Group you have entered for the Advance Pay process.
[APP–52087] The batch header name you have entered is not unique. Please update with a unique name.

[APP–52088] Commit your deployment factor record to the database or save your changes before moving.

[APP–52090] The business group and person id combination is invalid.

[APP–52091] The analysis criteria id that you have entered not exist in the system.

[APP–52092] The Person ID that you have entered does not exist.

[APP–52093] The id flex num and analysis criteria id combination is invalid.

[APP–52094] The date_from and date_to combination is invalid.

[APP–52095] Date_from is not null if date_to has value.

[APP–52096] Person type must be either APL or APL_EX_APL.

[APP–52097] The applicant that you have entered does not exist in the system.

[APP–52098] The assignment specified by person id is invalid.

[APP–52099] The assignment specified by assignment id does not exist.

[APP–52100] The assignment type specified by assignment id is not 'ACCEPTED'.

[APP–52101] The combination of person id and assignment id is invalid.

[APP–52102] Do you want your batch lines to be created?

[APP–52103] Pay period does not exist. The dates that you have entered do not correspond to the existing pay period. Define time periods for the assignment's payroll starting from at least one period before the advance period and ending at least one period after the advance period.

[APP–52104] Incorrect date entered. You have either entered a start of advance period date later than the end of advance period or a payment date later than the start of advance period date. Correct advance dates.

[APP–52105] Assignment does not exist or it has no payroll. Assignment must be valid and have a payroll at least between the start date of the payment period and the end date of the one period after the last advanced period. Correct advance dates or review assignment information.

[APP–52106] Save this record or display another before continuing.

[APP–52107] You have not entered sufficient criteria, please enter some criteria.

[APP–52108] The assignment must not already have a status type of TERM_ASSIGN on or after the actual termination date.

[APP–52109] No competencies exist for the enterprise, organization, job, position or vacancy you selected.
[APP–52111] You must enter a valid Blood Type.

[APP–52112] You must enter a valid Student Status.

[APP–52113] You must enter a valid Work Schedule.

[APP–52114] You must enter a valid Rehire Recommendation.

[APP–52115] You must enter a valid On Military Service Status.

[APP–52116] You must enter a valid Resume Exists Status.

[APP–52118] The Module Name parameter was not entered in upper case.

[APP–52119] The combination of Module Type and Module Name is not unique in the table.

[APP–52121] The Module Type has been set to an invalid value.

[APP–52122] The Data Within Business Group parameter has been given an invalid value.

[APP–52123] The Legislation Code has been given an invalid value.

[APP–52124] Module Package must be set when Module Type is BP.

[APP–52125] Module Package must be NULL when Module Type is RH.

[APP–52126] This Organization/Job/Position/Competence does not exists. Use List of Values to select valid names.

[APP–52127] The API Hook Type parameter has been given an invalid value.

[APP–52128] There already exists an API Hook of that type defined for the API Module.

[APP–52129] The API Hook cannot be associated with the parent API Module because there is a mismatch between their types.

[APP–52130] The combination of Hook Package and Hook Procedure must be unique within the table.

[APP–52131] Legislation Package must be NULL when the parent Module has a Data Within Business Group value of N.

[APP–52132] Legislation Function must be NULL when the parent Module has a Data Within Business Group value of N.

[APP–52133] Legislation Package and Legislation Function must be both not null or both null.

[APP–52134] The API Hook ID must reference a hook on the HR_API_HOOKS table.

[APP–52135] The API Hook Call Type parameter has been given an invalid value.
[APP–52136] The Enabled Flag value must be YES or NO.

[APP–52137] The Call Package value is invalid for that particular Hook Call Type.

[APP–52138] The Call Procedure value is invalid for that particular Hook Call Type.

[APP–52139] Check that the values for CALL_PACKAGE, CALL_PROCEDURE, LEGISLATION_CODE and API_HOOK_ID form a unique combination in the HR_HOOK_CALLS table.

[APP–52140] The Status value is invalid.

[APP–52141] Status must be set to N on insert.

[APP–52142] The Encoded Error value must be NULL during insert.

[APP–52143] Encoded Error should be null if Status is set to ’V’ or ’N’.

[APP–52144] Preprocessor Date should be null during insert.

[APP–52145] Sequence must be greater than or equal to 1000 and less than or equal to 1999 when Legislation Code is not null.

[APP–52146] Sequence number must be less than 1000 or greater than 1999 when Legislation Code is null.

[APP–52147] Warning: Advance Pay has detected no amount to advance from this pay period

[APP–52148] Warning : Advance Pay has processed the relevant advance periods for this payment. There is a zero amount for this assignment.

[APP–52149] Deleting this entry invalidates any future Advance Pay runs for the assignment. Are you sure you want to delete this entry?

[APP–52151] Cannot cost this assignment because the run that has been reversed has not been costed for this assignment.

[APP–52152] The system person type must be EMP.

[APP–52152] This combination of balances is invalid for the load date

[APP–52153] You cannot save this update as element entries exist.

[APP–52154] The API Module ID does not reference a Module on the HR_API_MODULES table.

[APP–52155] Cannot delete this Module because it is referenced by a child row in the HR_API_HOOKS table.

[APP–52158] The Assessment Period Start Date has an incorrect format.

[APP–52159] The Assessment Period End Date has an incorrect format.
[APP–52160] The Assessment Date has an incorrect format.

[APP–52161] No reviewers have yet been defined.
