Oracle Financials for the Czech Republic User Guide, Release 11i
Part No. A81223-03

Oracle Corporation welcomes your comments and suggestions on the quality and usefulness of this user guide. Your input is an important part of the information used for revision.

- Did you find any errors?
- Is the information clearly presented?
- Do you need more information? If so, where?
- Are the examples correct? Do you need more examples?
- What features did you like most?

If you find any errors or have any other suggestions for improvement, please indicate the document title and part number, and the chapter, section, and page number (if available). You can send comments to us in the following ways:

- Electronic mail: globedoc_us@oracle.com
- FAX: (801) 659-7164  Attention: Oracle Applications Global Financials Documentation
- Postal service:
  Oracle Corporation
  Oracle Applications Global Financials Documentation
  500 Oracle Parkway
  Redwood Shores, CA 94065
  USA

If you would like a reply, please give your name, address, telephone number, and (optionally) electronic mail address.

If you have problems with the software, please contact your local Oracle Support Services.
Welcome to Release 11i of the Oracle Financials for the Czech Republic User Guide. This user guide includes information to help you effectively work with Oracle Financials for the Czech Republic and contains detailed information about the following:

- Overview and reference information
- Specific tasks that you can accomplish with Oracle Financials for the Czech Republic
- How to use Oracle Financials for the Czech Republic windows
- Oracle Financials for the Czech Republic programs, reports, and listings
- Oracle Financials for the Czech Republic functions and features

This preface explains how this user guide is organized and introduces other sources of information that can help you use Oracle Financials for the Czech Republic.

About this Country-Specific User Guide

This user guide documents country-specific functionality developed for use within your country and supplements our core Financials user guides. This user guide also includes tips about using core functionality to meet your country’s legal and business requirements, as well as task and reference information. The following chapters are included:

- Chapter 1 describes Oracle Payables functionality developed for the Czech Republic, including defining VAT box number Lookups, defining tax information, entering supplier site information, entering invoice information, Invoice Gateway, and the Czech Import Tax report.
Chapter 2 describes Oracle Receivables functionality developed for the Czech Republic, including defining VAT box number Lookups, defining tax information, entering transaction information, and the Czech Export Tax report.

Appendix A describes standard navigation paths in Oracle Financials for the Czech Republic.

Appendix B describes how to use globalization flexfields.

Appendix C describes the profile options you must set for Oracle Financials for the Czech Republic.

Appendix D describes how Oracle Payables and Receivables validate banking codes for Oracle Financials for the Czech Republic.

Appendix E overviews electronic file content provided in Oracle Financials for the Czech Republic for the Czech EFT Format.
Documentation Accessibility

Our goal is to make Oracle products, services, and supporting documentation accessible, with good usability, to the disabled community. To that end, our documentation includes features that make information available to users of assistive technology. This documentation is available in HTML format, and contains markup to facilitate access by the disabled community. Standards will continue to evolve over time, and Oracle Corporation is actively engaged with other market-leading technology vendors to address technical obstacles so that our documentation can be accessible to all of our customers. For additional information, visit the Oracle Accessibility Program Web site at http://www.oracle.com/accessibility/.

Accessibility of Code Examples in Documentation

JAWS, a Windows screen reader, may not always correctly read the code examples in this document. The conventions for writing code require that closing braces should appear on an otherwise empty line; however, JAWS may not always read a line of text that consists solely of a bracket or brace.

Audience for this Guide

This guide assumes you have a working knowledge of the following:

- The principles and customary practices of your business area.
- Oracle Financials for the Czech Republic.
  
  If you have never used Oracle Financials for the Czech Republic, we suggest you attend one or more of the Oracle training classes available through Oracle University.
- The Oracle Applications graphical user interface.

To learn more about the Oracle Applications graphical user interface, read the Oracle Applications User Guide.

See Other Information Sources for more information about Oracle Applications product information.
Other Information Sources

You can choose from other sources of information, including online documentation, training, and support services, to increase your knowledge and understanding of Oracle Financials for the Czech Republic.

If this user guide refers you to other Oracle Applications documentation, use only the Release 11i versions of those guides unless we specify otherwise.

Online Documentation

All Oracle Applications documentation is available online (HTML or PDF).

- **Online Help** - The new features section in the HTML help describes new features in 11i. This information is updated for each new release of Oracle Financials for the Czech Republic. The new features section also includes information about any features that were not yet available when this guide was printed. For example, if your administrator has installed software from a mini-packs an upgrade, this document describes the new features. Online help patches are available on MetaLink.

- **11i Features Matrix** - This document lists new features available by patch and identifies any associated new documentation. The new features matrix document is available on MetaLink.

- **About Document** - Refer to the About document for patches that you have installed to learn about new documentation or documentation patches that you can download. The new About document is available on MetaLink.

Related User Guides

This user guide documents country-specific functionality developed in addition to our Oracle Financials core products. Because our country-specific functionality is used in association with our core Financials products and shares functional and setup information with other Oracle Applications, you should consult other related user guides when you set up and use Oracle Financials for the Czech Republic.

You can read the guides online by choosing Library from the expandable menu on your HTML help window, by reading from the Oracle Applications Document Library CD included in your media pack, or by using a Web browser with a URL that your system administrator provides.

If you require printed guides, you can purchase them from the Oracle store at http://oraclestore.oracle.com.
Oracle Applications User Guide
This guide explains how to navigate the system, enter data, and query information, and introduces other basic features of the GUI available with this release of Oracle Financials for the Czech Republic (and any other Oracle Applications product).

You can also access this user guide online by choosing "Getting Started and Using Oracle Applications" from the Oracle Applications help system.

Oracle Financials Common Country Features User Guide
This manual describes functionality developed to meet specific legal and business requirements that are common to several countries in a given region. Consult this user guide along with your country-specific user guide and your financial product's manual to effectively use Oracle Financials in your country.

Oracle Financials Country-Specific User Guides
These manuals document functionality developed to meet legal and business requirements in countries that you do business in. Look for a user guide that is appropriate to your country; for example, see the Oracle Financials for the Czech Republic User Guide for more information about using this software in the Czech Republic.

Oracle Financials RXi Reports Administration Tool User Guide
Use the RXi reports administration tool to design the content and layout of RXi reports. RXi reports let you order, edit, and present report information to better meet your company's reporting needs.

Oracle General Ledger User Guide
Use this manual when you plan and define your chart of accounts, accounting period types and accounting calendar, functional currency, and set of books. It also describes how to define journal entry sources and categories so that you can create journal entries for your general ledger. If you use multiple currencies, use this manual when you define additional rate types and enter daily rates. This manual also includes complete information on implementing budgetary control.

Oracle Purchasing User Guide
Use this manual to read about entering and managing the purchase orders that you match to invoices.
Oracle Payables User Guide
This manual describes how accounts payable transactions are created and entered into Oracle Payables. This manual also contains detailed setup information for Oracle Payables. Use this manual to learn how to implement flexible address formats for different countries. You can use flexible address formats in the suppliers, customers, banks, invoices, and payments windows in both Oracle Payables and Oracle Receivables.

Oracle Receivables User Guide
Use this manual to learn how to implement flexible address formats for different countries. You can use flexible address formats in the suppliers, customers, banks, invoices, and payments windows in both Oracle Payables and Oracle Receivables. This manual also explains how to set up your system, create transactions, and run reports in Oracle Receivables.

Oracle Assets User Guide
Use this manual to add assets and cost adjustments directly into Oracle Assets from invoice information.

Oracle Projects User Guide
Use this manual to learn how to enter expense reports in Projects that you import into Payables to create invoices. You can also use this manual to see how to create Project information in Projects which you can then record for an invoice or invoice distribution.

Oracle Cash Management User Guide
This manual explains how you can reconcile your payments with your bank statements.

Using Oracle HRMS - The Fundamentals
This user guide explains how to setup and use enterprise modeling, organization management, and cost analysis. It also includes information about defining payrolls.

Oracle Workflow Guide
This manual explains how to define new workflow business processes as well as customize existing Oracle Applications-embedded workflow processes. You also
use this guide to complete the setup steps necessary for any Oracle Applications product that includes workflow-enabled processes.

**Oracle Financials Open Interfaces Guide**
This guide contains a brief summary of each Oracle Financial Applications open interface.

**Oracle Applications Character Mode to GUI Menu Path Changes**
This is a quick reference guide for experienced Oracle Applications end users migrating from character mode to a graphical user interface (GUI). This guide lists each character mode form and describes which GUI windows or functions replace it.

**Multiple Reporting Currencies in Oracle Applications**
If you use Multiple Reporting Currencies feature to report and maintain accounting records in more than one currency, use this manual before implementing Oracle Financials for the Czech Republic. The manual details additional steps and setup considerations for implementing Oracle Financials for the Czech Republic with this feature.

**Multiple Organizations in Oracle Applications**
If you use the Oracle Applications Multiple Organization Support feature to use multiple sets of books for one Oracle Financials installation, use this guide to learn about setting up and using Oracle Financials with this feature.

There are special considerations for using Multiple Organizations in Europe with document sequences, legal entity reporting, and drill-down from General Ledger. Consult the Multiple Organizations in Oracle Applications guide for more information about using Multiple Organizations in Europe.

**Oracle Applications Flexfields Guide**
This guide provides flexfields planning, setup, and reference information for your implementation team, as well as for users responsible for the ongoing maintenance of Oracle Applications product data. This guide also provides information on creating custom reports on flexfields data.

**Oracle Alert User Guide**
Use this guide to define periodic and event alerts that monitor the status of your Oracle Applications data.
Oracle Applications Implementation Wizard User Guide
If you are implementing more than one Oracle product, you can use the Oracle Applications Implementation Wizard to coordinate your setup activities. This guide describes how to use the wizard.

Oracle Applications Developer’s Guide
This guide contains the coding standards followed by Oracle Applications development. It describes the Oracle Application Object Library components needed to implement the Oracle Applications user interface described in the Oracle Applications User Interface Standards. It also provides information to help you build your custom Oracle Developer forms so that they integrate with Oracle Applications.

Oracle Applications User Interface Standards
This guide contains the user interface (UI) standards followed by Oracle Applications development. It describes the UI for the Oracle Applications products and how to apply this UI to the design of an application built by using Oracle Forms.

Installation and System Administration

Installing Oracle Applications
This guide provides instructions for managing the installation of Oracle Applications products. In Release 11i, much of the installation process is handled using Oracle One-Hour Install, which minimizes the time it takes to install Oracle Applications and the Oracle 8i Server technology stack by automating many of the required steps. This guide contains instructions for using Oracle One-Hour Install and lists the tasks you need to perform to finish your installation. You should use this guide in conjunction with individual product user guides and implementation guides.

Oracle Financials Country-Specific Installation Supplement
Use this manual to learn about general country information, such as responsibilities and report security groups, as well as any post-install steps required by some countries or the Global Accounting Engine.
Upgrading Oracle Applications
Refer to this guide if you are upgrading your Oracle Applications Release 10.7 or Release 11.0 products to Release 11i. This guide describes the upgrade process in general and lists database upgrade and product–specific upgrade tasks. You must be at either Release 10.7 (NCA, SmartClient, or character mode) or Release 11.0 to upgrade to Release 11i. You cannot upgrade to Release 11i directly from releases prior to 10.7.

Oracle Applications Product Update Notes
Use this guide as a reference if you are responsible for upgrading an installation of Oracle Applications. It provides a history of the changes to individual Oracle Applications products between Release 11.0 and Release 11i. It includes new features and enhancements and changes made to database objects, profile options, and seed data for this interval.

Oracle Applications System Administrator's Guide
This guide provides planning and reference information for the Oracle Applications System Administrator. It contains information on how to define security, customize menus and online help, and manage processing.

The Oracle Global Financial Applications Technical Reference Manual contains database diagrams and a detailed description of regional and related applications database tables, forms, reports, and programs. This information helps you convert data from your existing applications, integrate Oracle Financials with non-Oracle applications, and write custom reports for Oracle Financials.

You can order a technical reference manual for any product you have licensed. Technical reference manuals are available in paper format only.

Training and Support

Training
We offer a complete set of training courses to help you and your staff master Oracle Applications. We can help you develop a training plan that provides thorough training for both your project team and your end users. We will work with you to organize courses appropriate to your job or area of responsibility.
Training professionals can show you how to plan your training throughout the implementation process so that the right amount of information is delivered to key people when they need it the most. You can attend courses at any one of our many Educational Centers, or you can arrange for our trainers to teach at your facility. We also offer Net classes, where training is delivered over the Internet, and many multimedia–based courses on CD. In addition, we can tailor standard courses or develop custom courses to meet your needs.

Support
From on-site support to central support, our team of experienced professionals provides the help and information you need to keep Oracle Financials for the Czech Republic working for you. This team includes your Technical Representative, Account Manager, and Oracle’s large staff of consultants and support specialists with expertise in your business area, managing an Oracle server, and your hardware and software environment.

Do Not Use Database Tools to Modify Oracle Applications Data
We STRONGLY RECOMMEND that you never use SQL*Plus, Oracle Data Browser, database triggers, or any other tool to modify Oracle Applications tables, unless we tell you to do so in our guides.

Oracle provides powerful tools you can use to create, store, change, retrieve, and maintain information in an Oracle database. But if you use Oracle tools such as SQL*Plus to modify Oracle Applications data, you risk destroying the integrity of your data and you lose the ability to audit changes to your data.

Because Oracle Applications tables are interrelated, any change you make using an Oracle Applications form can update many tables at once. But when you modify Oracle Applications data using anything other than Oracle Applications forms, you might change a row in one table without making corresponding changes in related tables. If your tables get out of synchronization with each other, you risk retrieving erroneous information and you risk unpredictable results throughout Oracle Applications.

When you use Oracle Applications forms to modify your data, Oracle Applications automatically checks that your changes are valid. Oracle Applications also keeps track of who changes information. But, if you enter information into database tables using database tools, you may store invalid information. You also lose the ability to track who has changed your information because SQL*Plus and other database tools do not keep a record of changes.
About Oracle

Oracle Corporation develops and markets an integrated line of software products for database management, applications development, decision support and office automation, as well as Oracle Applications. Oracle Applications provides the E-business Suite, a fully integrated suite of more than 70 software modules for financial management, Internet procurement, business intelligence, supply chain management, manufacturing, project systems, human resources and sales and service management.

Oracle products are available for mainframes, minicomputers, personal computers, network computers, and personal digital assistants, enabling organizations to integrate different computers, different operating systems, different networks, and even different database management systems, into a single, unified computing and information resource.

Oracle is the world’s leading supplier of software for information management, and the world’s second largest software company. Oracle offers its database, tools, and application products, along with related consulting, education and support services, in over 145 countries around the world.

Thank You

Thank you for using Oracle Financials for the Czech Republic and this user guide.

We value your comments and feedback. Please use the Reader’s Comment Form to explain what you like or dislike about Oracle Financials or this user guide. Mail your comments to the following address or call us directly at (650) 506-7000.

Oracle Applications Global Financials Documentation
Oracle Corporation
500 Oracle Parkway
Redwood Shores, CA 94065
USA

Or send electronic mail to globedoc_us@oracle.com.
This chapter provides an overview of Oracle Payables functionality developed for the Czech Republic, including:

- Defining VAT box number Lookups
- Defining tax information
- Entering supplier site information
- Entering invoice information
- Invoice Gateway
- Czech EFT Format
- Czech Import Tax report
Defining VAT Box Number Lookups

Oracle Payables and Oracle Receivables for the Czech Republic let you assign VAT box numbers to your tax codes. You can enter the VAT box number in the VAT Transaction Type field in the Tax Codes window in Oracle Payables or in the Tax Codes and Rates window in Oracle Receivables.

Before you can use the VAT Transaction Type field, however, you must define Lookups for the VAT box number values. Use the Application Object Library Lookups window in the Application Developer responsibility to define VAT box number Lookups.

For more information, see Defining Tax Information for Oracle Payables on page 1-3 and Defining Tax Information for Oracle Receivables on page 2-3.

To define VAT box number Lookups:

1. Navigate to the Lookups window.
2. Query the special Lookup type JEBE_VAT_TRANS_TYPE.
3. Enter values in the Code, Meaning, and Description fields according to the Czech VAT Return requirements.
4. Enter effective dates in the From and To fields, if applicable, and ensure that the Enabled check box is checked.

See also: Application Utilities Lookups and Application Object Library Lookups, Oracle Applications System Administrator’s Guide
Defining Tax Information

When you define a tax code in Oracle Payables, you must also define the VAT box number and the tax origin for that tax code. You can use the VAT Transaction Type field in the Tax Codes window to enter the VAT box number and the globalization flexfield to assign the tax origin to the tax code.

To enter additional tax information:

1. Navigate to the Tax Codes window.
2. Enter information to define a tax code.
3. In the VAT Transaction Type field, enter the VAT box number for this tax code.
5. Select the tax origin from the list of values in the Tax Origin field. Valid values are:
   - Domestic
   - Export
   - Import
6. Press the OK button.

See also: Tax Codes, Oracle Payables User Guide
Entering Supplier Site Information

Use the globalization flexfield in the Supplier Sites window to enter additional supplier site information.

To enter additional supplier site information:
1. Navigate to the Suppliers window.
2. Enter or query a supplier.
3. Press the Sites button.
   The Supplier Sites window appears.
5. Enter a specific symbol, for example the supplier’s identification number, in the Specific Symbol field.
6. Press the OK button.
7. Save your work.
Entering Invoice Information

When you enter invoices in Oracle Payables, use the globalization flexfield in the Invoices window to enter and apply import documents to your import invoices.

To enter additional invoice information:

1. Navigate to the Invoices window.
2. Enter information to record the invoice.
3. Navigate to the globalization flexfield. For instructions, see Using Globalization Flexfields on page B-2.
4. Enter the performance tax date for the invoice in the Tax Date field.
5. Enter the import document number assigned to the invoice in the Import Document Number field.
6. Enter the import document date assigned to the invoice in the Import Document Date field.
7. Enter the data type of the invoice. The default is 1501, and options are:
   - 1501 - Payments in CZK
   - 1502 - Collections in CZK
   - 1601 - Payments in CZK (Communications Sector)
   - 1602 - Collections in CZK (Communications Sector)
8. Enter the constant symbol assigned to the invoice in the Constant Symbol field.
9. Enter a specific symbol for the invoice in the Specific Symbol field.
10. Press the OK button.

See also: Entering Invoices Overview, *Oracle Payables User Guide*
Invoice Gateway Overview

You can enter invoices in either the Invoice Gateway window or the Invoice Workbench. The Invoice Gateway window is the quickest way to enter most invoices. Use the Invoice Gateway window to enter a large number of invoices that do not require extensive online validation or extensive online defaulting of values.

Payables uses information that you enter in the Invoice Gateway window to create invoices in Payables. When you enter invoice records in the Invoice Gateway window, you enter invoice header and line information. This invoice information is stored in the Payables Open Interface tables. Because Oracle Payables does not validate and default invoice values while you enter invoices, you can enter invoices more quickly in the Invoice Gateway than you can in the Invoice Workbench (the Invoice Workbench is the Invoices window and associated windows).

After you enter invoice records using the Invoice Gateway, you can submit a customized workflow program to automate your business processes for managing invoices. For example, you can customize the workflow program to validate the cost center on all invoices before you import them.

You submit the Payables Open Interface Import Program to validate the values that you entered, provide any default values, and create invoices with distributions and scheduled payments in the regular Payables invoice tables.

After invoices are imported, Payables provides a report that lists both the invoice records that were successfully imported, and any invoice records that could not be imported due to invalid or missing information. You can query rejected invoice records in the Invoice Gateway window and correct and resubmit the invoices for import.

When you successfully import invoice records, Payables creates regular invoices that you can view, modify, and approve in the Invoice Workbench. After approval, the invoices are ready for payment.

After you have successfully created invoices based on the information in the invoice records, you can purge invoice records purge from the Open Interface tables.

See also: Invoice Gateway, Oracle Payables User Guide
You must enter additional country-specific information when you record and pay invoices in the Czech Republic. Oracle Payables captures this information in globalization flexfields on the Invoice Workbench and in the Invoice Gateway window. You can enter the same country-specific information in both windows. The Invoice Gateway window, however, lets you enter information more quickly for invoices that do not require extensive online validation or extensive online defaulting of values.

The Invoice Gateway window has globalization flexfield in the header region. You can customize your Invoice Gateway folder forms to show or hide the globalization flexfield for the Czech Republic.

**Header Region**

To enter country-specific information in the header region of the Invoice Gateway window:

1. Navigate to the Invoice Gateway window.
   
   The Invoice Gateway Identification window appears on top of the Invoice Gateway window.

2. In the Invoice Gateway Identification window, enter the source in the Source field and the batch name in the Gateway Batch field.

3. Press the Enter button.
4. In the header region of the Invoice Gateway window, enter header information for your invoice.

5. Click in the globalization flexfield to navigate to the flexfield window. For more information, see Using Globalization Flexfields on page B-2.

6. Enter the performance tax date for the invoice in the Tax Date field.

7. Enter the import document number assigned to the invoice in the Import Document Number field.

8. Enter the import document date assigned to the invoice in the Import Document Date field.

9. Enter the data type of the invoice. The default is 1501, and options are:
   - 1501 - Payments in CZK
   - 1502 - Collections in CZK
   - 1601 - Payments in CZK (Communications Sector)
   - 1602 - Collections in CZK (Communications Sector)

10. Enter the constant symbol assigned to the invoice in the Constant Symbol field.

11. Enter a specific symbol for the invoice in the Specific Symbol field.

12. Press the OK button to save your work and return to the Invoice Gateway window.
Payables Open Interface Tables

The Payables Open Interface tables store invoice information. The Payables Open Interface Import program builds Payables invoices based on invoice records in the Payables Open Interface tables. After the import program builds the invoices, you can view, modify, and approve the invoices in the Invoice Workbench.

The invoice information derives from Electronic Data Interchange (EDI) invoices from your suppliers, invoice records that you entered in the Invoice Gateway window, invoices that you loaded with Oracle SQL*Loader, and credit card transaction data.
Understanding the Payables Open Interface Tables

Use the Invoice Gateway window, Oracle e-Commerce Gateway, the Credit Card Invoice Interface Summary, or SQL*Loader to load invoice information into the AP_INVOICES_INTERFACE and AP_INVOICE_LINES_INTERFACE interface tables. The Payables Open Interface program validates each record that you select for import. If the record contains valid information, the program creates a Payables invoice with distributions and scheduled payments based on the invoice header and line information in the record.

Records in the AP_INVOICE_LINES_INTERFACE table create one or more invoice distributions. Note that one row may create more than one distribution. For example, if you enter a tax line in this table and prorate the tax line across three item lines, during the Open Interface Import process Oracle Payables creates three tax invoice distributions based on the single tax line in this table.

The interface tables include columns, which Oracle Payables uses to categorize and store specific invoice information. For example, invoice source information is stored in the SOURCE column within AP_INVOICES_INTERFACE.
Payables Open Interface Table AP_INVOICES_INTERFACE

This table lists the columns in the AP_INVOICES_INTERFACE Payables Open Interface table. The column descriptions indicate which columns are required values for importing invoices into Oracle Payables with Czech features.

Czech EFT Format

Use the Czech EFT Format to electronically pay supplier invoices by sending an Electronic Funds Transfer (EFT) payment order to your bank. The bank uses the information to pay your invoices. The Czech EFT Format is based on requirements from Komercni Banka (Komercni Bank) and can only be used for payments to this bank in Czech currency.

With EFT, you create and pay batches with payments to the same bank account. You can produce EFT files out of only one payment batch at a time. Your bank branch allocates an interval number range to represent the number of accounting files that you can send to the bank in one day. You can allocate all or part of this interval number range to Oracle Payables for EFT. The Last Used Interval field in the Contracts window displays IN USE until the current payment batch is canceled or confirmed. Do not create another batch until the process is finished.

Note: When you format a payment batch for the Czech EFT Format, Oracle Payables validates the bank account number according to the modulus 11 check. For more information, see Bank Information Validation on page D-2.

If you cancel a payment batch after it is successfully formatted, click the Reset button in the Contracts window to make the interval number for the canceled batch available for a different payment batch submission.

You can use one interval number in a 24-hour processing period. Once an interval number is allocated for an EFT submission, the interval number cannot be reused for the following 24 hour period. The Last Used Date field in the Contracts window shows the date for the last interval number, and Oracle Payables ensures that interval numbers are unique by date.

The EFT data file consists of accounting files. The EFT data file can have as many accounting files as the number of interval numbers. One accounting file can have up to 1000 records, including header and ending records. An accounting file is also divided into groups and has at most 98 groups distinguished by due date. Each group can consist of 992 characters or 35 records including header and ending records.
You must convert the EFT file from the UNIX to the DOS format. You must also rename the file according to the format that the bank requires, such as ddmmPPPP.kpc:

- **dd** - The date of the submission
- **mm** - The month of the submission
- **PPPP** - The abbreviated client ID
- **kpc** - The file extension

For the file content, see Czech EFT Format Content on page E-2.

**See also:** Electronic Payments, *Oracle Payables User Guide*
Prerequisites

Before using the Czech EFT Format, you must complete these tasks:

- Enter the supplier’s identification number in the Specific Symbol field of the globalization flexfield in the Supplier Sites window. For more information see Entering Supplier Site information on page 1-4.

- In the Serial Number field of the Payment Batches window, enter the variable part of the data security code from a list that your bank branch gave you. Enter the code for each payment batch header. When you create an EFT file, the serial number appears at the header of the EFT file.

  **Note:** Entering the security code in the Serial Number field is mandatory for EFT. If the field is blank, the Czech EFT Format log file contains an error: *The secret code must be entered at the batch payment level.*

- In the globalization flexfield of the Invoices window, enter:
  - The code that your bank specified for the payment type in the Constant Symbol field. Frequently used constant symbols are seeded, but you can enter new ones under the Applications Developer responsibility in the Applications Object Library Lookups. The Lookup type is JECZ_CONSTANT.
  - The type of transaction in the Data Type field. You can use only one data type within a single accounting file.
  - The specific symbol in the Specific Symbol field if the value on the invoice is different from the value entered in the globalization flexfield of the Supplier Sites window.

Enter data in these three fields in the Invoices window for each invoice and each EFT submission. For more information, see Entering Invoice Information on page 1-5.

- Enter EFT contract information in the Contracts window. For more information, see Entering Contract Information on page 1-19.

- Create payment batches.

  **See also:** Initiating Payment Batches, Oracle Payables User Guide
Entering Contract Information

Use the Contracts window to enter EFT contract information that Komercni Banka requires. You can have several bank accounts with a bank branch under one contract; you must submit separate payment files for each account.

To enter EFT contract information:

1. Navigate to the Contracts window.
2. Enter the bank name that the contract is valid for in the Bank Name field.
3. Enter the branch name where the contract is held in the Branch Name field.
4. Enter the client name and number that the bank branch assigned to you in the Client Name and Client Number fields. You may have more than one contract with a bank branch and more than one client name and number.
5. In the Interval Start and Interval End fields, enter the lowest and highest interval numbers for the range that the bank branch allocated.

In the AP Interval Start and AP Interval End fields, enter the first and last sequence number from the bank branch interval number range that you want to allocate to Oracle Payables. As a default, the AP Interval Start and AP Interval End fields show the values from the Interval Start and Interval End fields.

6. In the Security Fixed Code field, enter the fixed part of the security code that the bank branch gave you. This fixed code remains the same for each EFT file submission.

7. If the contract is no longer valid, enter the inactive date in the Inactive Date field. You can inactivate a contract only after you deactivate the bank account assignments for the contract in the Accounts window.

8. Click on the Accounts button to navigate to the Accounts window.

9. In the Account Number field, enter the accounts that the contract covers. The Account Name field shows the according account name as a default. Account numbers must satisfy the modulus 11 check for the submission to succeed. For more information, see Bank Information Validation on page D-2.

10. If an account is no longer valid under the contract, enter the inactive date in the Inactive Date field. To deactivate the contract itself, you must inactivate all accounts first.

11. Save your work.
Use the Czech Import Tax report to prepare a detail listing of all import invoices that you do not have an official import document for. You can enter and apply import documents to your import invoices through the globalization flexfield in the Invoices window. For more information, see Entering Invoice Information on page 1-5. The report is run in the functional currency only.

The Czech Import Tax report displays only recoverable tax amounts. If a transaction is subject to partially recoverable tax, the report displays the transaction’s taxable amount decreased with the tax recovery rate in proportion to the recoverable tax amount.

You can use this report to:

- View all import transactions without a reference to an import document
- Prepare your monthly VAT Return
- Provide official backup and audit trail to the Czech VAT Return

Expense reports that are entered with a tax code marked as an import tax code are included in this report. The tax date of the expense report is the merchant receipt date. For the Czech Import Tax report to correctly list expense reports, you must enter the receipt date in the Merchant Information region in the Expense Reports window, or in the invoice distributions.
Use the Standard Request Submission windows to submit the Czech Import Tax report.

See also: Using Standard Request Submission, Oracle Applications User Guide

See also: Recoverable Tax, Oracle Payables User Guide

Prerequisites

Before running the Czech Import Tax report, you must complete these tasks:

- Use the globalization flexfield in the Tax Codes window to define the tax origin when you define your import tax codes. For more information, see Defining Tax Information on page 1-3.

- Run the Payables accounting process. The Czech Import Tax report displays only transactions that you ran the Payables accounting process for.

  See also: Payables Accounting Process, Oracle Payables User Guide

- Set the MO: Top Reporting Level profile option to Set of Books at the responsibility level. The Czech Import Tax report is run at the set of books level.
Report Parameters

**Tax Type**
Enter the input tax type assigned to your input tax code. If you enter a tax code in the Tax Code field, the report runs only for tax codes with this tax type.

---

**Note:** You define the tax type in the Oracle Payables Lookups window by entering lookup codes for the Tax Type lookup type.

---

**Start Date**
Enter the General Ledger date that you want to start reporting transactions from.

**End Date**
Enter the General Ledger date that you want to report up to.

**Tax Date From**
Enter the tax date that you want to report from.

**Tax Date To**
Enter the tax date that you want to report to.

This chapter provides an overview of Oracle Receivables functionality developed for the Czech Republic, including:

- Defining VAT box number Lookups
- Defining tax information
- Entering transaction information
- Czech Export Tax report
Defining VAT Box Number Lookups

Oracle Payables and Oracle Receivables for the Czech Republic let you assign VAT box numbers to your tax codes. You can enter the VAT box number in the VAT Transaction Type field in the Tax Codes window in Oracle Payables or in the Tax Codes and Rates window in Oracle Receivables.

Before you can use the VAT Transaction Type field, however, you must define Lookups for the VAT box number values. Use the Application Object Library Lookups window in the Application Developer responsibility to define VAT box number Lookups.

For more information, see Defining VAT Box Number Lookups on page 1-2.
Defining Tax Information

When you define a tax code in Oracle Receivables, you must also define the VAT box number and the tax code origin for that tax code. You can use the VAT Transaction Type field in the Tax Codes and Rates window to enter the VAT box number and the globalization flexfield to assign the tax origin to the tax code.

To enter additional tax information:
1. Navigate to the Tax Codes and Rates window.
2. Enter information to define a tax code.
3. In the VAT Transaction Type field, enter the VAT box number for this tax code.
5. Select the tax origin from the list of values in the Tax Origin field. Valid values are:
   - Domestic
   - Export
   - Import
6. Press the OK button.

See also: Tax Codes and Rates, Oracle Receivables User Guide
Entering Transaction Information

When you enter transactions in Oracle Receivables, use the globalization flexfield in the Transactions window to enter the performance tax date for your taxable transactions.

To enter additional transaction information:
1. Navigate to the Transactions window.
2. Enter information to record the transaction.
3. Navigate to the globalization flexfield. For instructions, see Using Globalization Flexfields on page B-2.
4. Enter the performance tax date for the transaction in the Tax Date field.
5. Press the OK button.

See also: Entering Transactions, Oracle Receivables User Guide

Entering Credit Transactions

When you enter a credit memo against a specific taxable transaction in the Credit Transactions window, you can also access this same globalization flexfield. When you navigate to the globalization flexfield in the Credit Transactions window, the Tax Date field is automatically populated with the value that you entered for the original transaction. You can choose to keep the automatically populated value or enter a new performance tax date in the Tax Date field.

See also: Crediting Transactions, Oracle Receivables User Guide
Use the Czech Export Tax report to prepare a detail listing of all export invoices for a selected date range. The report is run in the functional currency only and runs only for recoverable tax, and for non-deferred or deferred paid tax.

The Czech Export Tax report is an RXi report. The default attribute set displays taxable transactions grouped and totaled by VAT box numbers and VAT box description. You can copy this attribute set and customize the layout to suit your reporting needs.

**See also:** Working with Attribute Sets, *Oracle Financials RXi Reports Administration Tool User Guide*

**See also:** Using the RXi Reports Concurrent Program, *Oracle Financials RXi Reports Administration Tool User Guide*

You should define VAT box numbers according to the Czech VAT Return requirements to help you prepare your monthly VAT Return. For more information, see Defining VAT Box Number Lookups on page 1-2.
You can use the Czech Export Tax report to:

- View all export transactions within the given tax reporting period, grouped by VAT box number
- Prepare your monthly VAT Return
- Provide official backup and audit trail to the Czech VAT Return

Use the Standard Request Submission windows to submit the Czech Export Tax report.

See also: Using Standard Request Submission, Oracle Applications User Guide

Prerequisites

Before running the Czech Export Tax report, you must:

- Assign a VAT box number to each of the tax codes when you define tax codes in Oracle Payables and Oracle Receivables. For more information, see Defining Tax Information for Oracle Payables on page 1-3 and Defining Tax Information for Oracle Receivables on page 2-3.
- Use the globalization flexfield in the Tax Codes and Rates window to define the tax origin when you define your export tax codes. For more information, see Defining Tax Information for Oracle Receivables on page 2-3.
- Post transactions to General Ledger.
- Set the MO: Top Reporting Level profile option to Set of Books at the responsibility level. The Czech Export Tax report is run at the set of books level.
Report Parameters

**Tax Type**
Enter the output tax type assigned to your output tax code. If you enter a tax code in the Tax Code field, the report runs only for tax codes with this tax type.

*Note:* You define the tax type in the Oracle Receivables Lookups window by entering lookup codes for the Tax Type lookup type.

**Start Date**
Enter the General Ledger date that you want to start reporting transactions from.

**End Date**
Enter the General Ledger date that you want to report up to.

**Tax Date From**
Enter the tax date that you want to report from.

**Tax Date To**
Enter the tax date that you want to report to.

This appendix describes how to navigate to each window in Oracle Financials for the Czech Republic.
Although your system administrator may have customized your navigator, this table shows typical navigation paths for the windows in Oracle Financials for the Czech Republic:

<table>
<thead>
<tr>
<th>Window Name</th>
<th>Navigation Path</th>
</tr>
</thead>
<tbody>
<tr>
<td>Accounts</td>
<td>Czech AP: Czech &gt; EFT Contracts &gt; Accounts</td>
</tr>
<tr>
<td>Contracts</td>

</tr>
</tbody>
</table>
This appendix describes how to use globalization flexfields.
Using Globalization Flexfields

Oracle Financials for the Czech Republic uses globalization flexfields that let you enter country-specific information in Oracle Payables and Oracle Receivables. Your system administrator should complete setup steps to enable globalization flexfields for your country-specific responsibilities.

See also: Setting Up Globalization Flexfields, Oracle Financials Country-Specific Installation Supplement

There are globalization flexfields on these windows:

**Oracle Payables**
- Invoice Gateway
- Invoices
- Supplier Sites
- Tax Codes

**Oracle Receivables**
- Tax Codes and Rates
- Transactions

The globalization flexfield appears in the window after you complete all setup steps to enable globalization flexfields. The globalization flexfield is enclosed in round brackets. Click in the globalization flexfield to display the pop-up window.
This appendix lists the profile options that affect the operation of Oracle Financials for the Czech Republic. This appendix includes a brief description of each profile option that you or your system administrator can set at the site, application, responsibility, or user levels.
Profile Options

During implementation, your system administrator sets a value for each user profile option to specify how Oracle Financials for the Czech Republic controls access to and processes data.

**Note:** To enable globalization flexfields within Oracle Financials for the Czech Republic, you must set the JG: Application, JG: Territory, and JG: Product profile options.

**See also:** Setting Up Globalization Flexfields, Oracle Financials Country-Specific Installation Supplement

**See also:** Overview of Setting User Profiles, Oracle Applications System Administrator’s Guide
This appendix describes how Oracle Payables and Receivables validate banking codes for Oracle Financials for the Czech Republic.
Oracle Payables and Oracle Receivables provide country-specific bank validation for banks in the Czech Republic. Oracle Financials displays a warning if you enter invalid bank information.
Setting up Your Country

To use bank validation functionality for the Czech Republic, you must first set up the Czech Republic as your "home" country.

To set up Oracle Payables for bank validation:
1. Define the Default Country profile option.
2. Define countries and territories and assign VAT member state codes in the Countries and Territories window.
3. Enter your VAT member state code in the Financials Options window.
4. Save your work.

Oracle Payables compares the bank’s country address that you entered in the Address region of the Banks window with your VAT member state code that you entered in the Financials Options window. The bank is a Czech bank if both countries match.

If these countries do not match, Oracle Payables performs the default minimum validation shown in this table:

<table>
<thead>
<tr>
<th>Required Fields</th>
<th>Accepted Data Type</th>
<th>Maximum Length</th>
</tr>
</thead>
<tbody>
<tr>
<td>Bank Account Name</td>
<td>alphanumeric</td>
<td>25</td>
</tr>
<tr>
<td>Bank Account Number</td>
<td>alphanumeric</td>
<td>30</td>
</tr>
<tr>
<td>Currency Code</td>
<td>value set</td>
<td>15</td>
</tr>
</tbody>
</table>

To set up Oracle Receivables for bank validation:
1. Define the Default Country profile option.
2. Specify the Czech Republic in the Default Country field in the Miscellaneous region in the System Options window.
3. Save your work.

Oracle Receivables compares the bank’s country address that you entered in the Address region of the Banks window with the Default Country that you entered in the System Options window. The bank is a Czech bank if both countries match.
If these countries do not match, Oracle Receivables performs the default minimum validation shown in this table:

<table>
<thead>
<tr>
<th>Required Fields</th>
<th>Accepted Data Type</th>
<th>Maximum Length</th>
</tr>
</thead>
<tbody>
<tr>
<td>Bank Account Name</td>
<td>alphanumeric</td>
<td>25</td>
</tr>
<tr>
<td>Bank Account Number</td>
<td>alphanumeric</td>
<td>30</td>
</tr>
<tr>
<td>Currency Code</td>
<td>value set</td>
<td>15</td>
</tr>
</tbody>
</table>

**See also:** Countries and Territories, *Oracle Payables User Guide*

**See also:** Defining Financials Options, *Oracle Payables User Guide*

**See also:** Miscellaneous System Options, *Oracle Receivables User Guide*

**See also:** Overview of Setting User Profiles, *Oracle Applications System Administrator’s Guide*
Code Validation

When you format a payment batch using the Czech EFT Format, Oracle Payables for the Czech Republic validates the bank account numbers according to the modulus 11 validation. A Czech bank account number consists of two parts: one part includes up to six additional digits on the left, and the other part includes up to ten digits on the right. The two parts are separated by a hyphen (-). The modulus 11 validation is performed separately on each part.

In the modulus 11 validation, each digit of each part of the bank account number is multiplied by a control number, and the amounts that result are added together. To satisfy the validation requirement, the sum must be divisible by 11 without a remainder. Both parts of the bank account number must satisfy the modulus 11 validation requirement for the bank account number to be considered valid.
**Example for Czech bank account validation**

This table provides an example of how the modulus 11 validation is calculated for the bank account number 158-3214151. First, each digit of the bank account number is multiplied by its control number.

<table>
<thead>
<tr>
<th>Bank Account Number</th>
<th>Control Numbers</th>
<th>Bank Account Digits Multiplied by Control Numbers</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>10</td>
<td></td>
</tr>
<tr>
<td></td>
<td>5</td>
<td></td>
</tr>
<tr>
<td></td>
<td>8</td>
<td></td>
</tr>
<tr>
<td>1</td>
<td>4</td>
<td>4</td>
</tr>
<tr>
<td>5</td>
<td>2</td>
<td>10</td>
</tr>
<tr>
<td>8</td>
<td>1</td>
<td>8</td>
</tr>
<tr>
<td></td>
<td>6</td>
<td></td>
</tr>
<tr>
<td></td>
<td>3</td>
<td></td>
</tr>
<tr>
<td></td>
<td>7</td>
<td></td>
</tr>
<tr>
<td>3</td>
<td>9</td>
<td>27</td>
</tr>
<tr>
<td>2</td>
<td>10</td>
<td>20</td>
</tr>
<tr>
<td>1</td>
<td>5</td>
<td>5</td>
</tr>
<tr>
<td>4</td>
<td>8</td>
<td>32</td>
</tr>
<tr>
<td>1</td>
<td>4</td>
<td>4</td>
</tr>
<tr>
<td>5</td>
<td>2</td>
<td>10</td>
</tr>
<tr>
<td>1</td>
<td>1</td>
<td>1</td>
</tr>
</tbody>
</table>

Next, the results of the multiplication are added together for each part of the bank account number.

*First part of account number: \(4 + 10 + 8 = 22\)*

*Second part of account number: \(27 + 20 + 5 + 32 + 4 + 10 + 1 = 99\)*

Finally, the sums are divided by 11, and the remainder is checked.

*First part of account number: \(22 / 11 = 2\), remainder = 0*
Second part of account number: $99 \div 11 = 9$, remainder = 0

Since the remainder is zero for both parts of this account number, the account number satisfies the modulus 11 validation requirement.
This appendix overviews electronic file content provided in Oracle Financials for the Czech Republic for the Czech EFT Format. This electronic information is provided to help your system administrator further understand the electronic files provided in Oracle Financials for the Czech Republic.
## Czech EFT Format Content
