Preface

This guide describes how to install and configure Oracle Database Client 10g Release 2 (10.2) on Apple Mac OS X (Intel).

Audience

This guide is intended for anyone responsible for installing Oracle Database Client 10g Release 2 (10.2) on a single Apple Mac OS X (Intel) system.

Documentation Accessibility

Our goal is to make Oracle products, services, and supporting documentation accessible to all users, including users that are disabled. To that end, our documentation includes features that make information available to users of assistive technology. This documentation is available in HTML format, and contains markup to facilitate access by the disabled community. Accessibility standards will continue to evolve over time, and Oracle is actively engaged with other market-leading technology vendors to address technical obstacles so that our documentation can be accessible to all of our customers. For more information, visit the Oracle Accessibility Program Web site at http://www.oracle.com/accessibility/.

Accessibility of Code Examples in Documentation

Screen readers may not always correctly read the code examples in this document. The conventions for writing code require that closing braces should appear on an otherwise empty line; however, some screen readers may not always read a line of text that consists solely of a bracket or brace.

Accessibility of Links to External Web Sites in Documentation

This documentation may contain links to Web sites of other companies or organizations that Oracle does not own or control. Oracle neither evaluates nor makes any representations regarding the accessibility of these Web sites.

TTY Access to Oracle Support Services

To reach AT&T Customer Assistants, dial 711 or 1.800.855.2880. An AT&T Customer Assistant will relay information between the customer and Oracle Support Services at 1.800.223.1711. Complete instructions for using the AT&T relay services are available at http://www.consumer.att.com/relay/tty/standard2.html. After the AT&T Customer Assistant contacts Oracle Support Services, an Oracle Support Services engineer will handle technical issues and provide customer support according to the Oracle service request process.
Command Syntax

UNIX command syntax appears in monospace font. The dollar character ($), number sign (#), or percent character (%) are UNIX command prompts. Do not enter them as part of the command. The following command syntax conventions are used in this guide:

<table>
<thead>
<tr>
<th>Convention</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>backslash \</td>
<td>A backslash is the UNIX command continuation character. It is used in command examples that are too long to fit on a single line. Enter the command as displayed (with a backslash) or enter it on a single line without a backslash:</td>
</tr>
<tr>
<td>braces {}</td>
<td>Braces indicate required items:</td>
</tr>
<tr>
<td>brackets [ ]</td>
<td>Brackets indicate optional items:</td>
</tr>
<tr>
<td>ellipses ...</td>
<td>Ellipses indicate an arbitrary number of similar items:</td>
</tr>
<tr>
<td>italics</td>
<td>Italic type indicates a variable. Substitute a value for the variable:</td>
</tr>
<tr>
<td>vertical line</td>
<td>A vertical line indicates a choice within braces or brackets:</td>
</tr>
</tbody>
</table>

Accessing Documentation

The documentation for this release includes platform-specific documentation and generic product documentation.

Platform-Specific Documentation

Platform-specific documentation includes information about installing and using Oracle products on particular platforms. The platform-specific documentation for this product is available in both Adobe portable document format (PDF) and HTML format on the product disc. To access the platform-specific documentation on disc:

1. Use a Web browser to open the welcome.htm file in the top-level directory of the disc.
2. For DVD only, select the appropriate product link.
3. Select the Documentation tab.

If you prefer paper documentation, then open and print the PDF files.

Product Documentation

Product documentation includes information about configuring, using, or administering Oracle products on any platform. The product documentation for Oracle Database 10g products is available in both HTML and PDF formats in the following locations:

- In the doc subdirectory on the Oracle Database 10g DVD
To access the documentation from the DVD, use a Web browser to view the welcome.htm file in the top-level directory on the disc, then select the Oracle Database 10g Documentation Library link.

- Online on the Oracle Technology Network (OTN) Web site:
  
  http://www.oracle.com/technology/documentation/

**Related Documentation**

The platform-specific documentation for Oracle Database 10g products includes the following manuals:

- **Oracle Database**
  - *Oracle Database Release Notes for Apple Mac OS X (Intel)*
  - *Oracle Database Installation Guide for Apple Mac OS X (Intel)*
  - *Oracle Database Administrator’s Reference for UNIX-Based Operating Systems*

- **Oracle Database Companion CD**
  - *Oracle Database Companion CD Installation Guide for Apple Mac OS X (Intel)*

Refer to *Oracle Database Release Notes for Apple Mac OS X (Intel)* for important information that was not available when this book was released. The release notes for Oracle Database 10g are updated regularly. You can get the most recent version from Oracle Technology Network at

http://www.oracle.com/technology/documentation/index.html

**Conventions**

The following text conventions are used in this document:

<table>
<thead>
<tr>
<th>Convention</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>boldface</strong></td>
<td>Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.</td>
</tr>
<tr>
<td><strong>italic</strong></td>
<td>Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.</td>
</tr>
<tr>
<td><strong>monospace</strong></td>
<td>Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.</td>
</tr>
</tbody>
</table>
This chapter describes the different types of Oracle Client installations that you can perform, and issues that you must consider before installing the software. It includes information about the following topics:

- Overview of Client Installation
- Oracle Client Installation Methods
- Oracle Client Installation Types
- Installation Considerations

1.1 Overview of Client Installation

The Oracle Client installation process consists of the following phases:

1. **Reading the release notes:** Read the Oracle Database 10g release 2 (10.2) release notes before you begin the installation. The release notes are available with the platform-specific documentation. The latest version of the release notes is available on Oracle Technology Network at:

   http://www.oracle.com/technology/documentation

2. **Planning the installation:** This chapter describes the Oracle products that you can install and issues that you must consider before starting the installation.

   You can also refer to Appendix D which covers frequently asked questions about installing Oracle Database components, such as how to install Oracle Database if the site uses Oracle applications or if you need multiple Oracle Database client connections.

3. **Completing preinstallation tasks:** Chapter 2 describes preinstallation tasks that you must complete before installing the product.

4. **Installing software:** Use the following section to install Oracle Database Client:

   - Chapter 3 describes how to use Oracle Universal Installer to install Oracle Client.
   - Appendix A provides information on performing noninteractive (silent) installations, which you may want to use to perform multiple installations of Oracle Database.
   - Appendix B describes globalization support information.
   - Appendix C provides troubleshooting advice in case you encounter problems with the installation.
Chapter 5 describes how to remove Oracle Database.

5. Completing postinstallation tasks: Chapter 4 describes recommended and required postinstallation tasks.

1.2 Oracle Client Installation Methods

You can choose different installation methods to install Oracle Client, as follows:

- Interactive Installation Methods
- Automated Installation Methods Using Response Files

1.2.1 Interactive Installation Methods

When you use the interactive method to install Oracle Client, Oracle Universal Installer displays a series of screens that enable you to specify all of the required information to install the Oracle Client software.

1.2.2 Automated Installation Methods Using Response Files

By creating a response file and specifying this file when you start Oracle Universal Installer, you can automate some or all of the Oracle Client installation. These automated installation methods are useful to perform multiple installations on similarly configured systems or if the system where you want to install the software does not support a GUI.

When you use a response file, you can run Oracle Universal Installer in the following modes, depending on whether you specify all of the required information or not:

- **Silent Mode:** Oracle Universal Installer runs in silent mode if you use a response file that specifies all required information. None of the Oracle Universal Installer screens are displayed.
- **Suppressed Mode:** Oracle Universal Installer runs in suppressed mode if you do not specify all required information in the response file. Oracle Universal Installer displays only the screens that prompt for the information that you did not specify.

For more information about these modes and about how to complete an installation using response files, refer to Appendix A.

1.3 Oracle Client Installation Types

You can choose an installation type, when installing Oracle Client:

- **Instant Client:** Enables you to install only the shared libraries required by Oracle Call Interface (OCI), Oracle C++ Call Interface (OCCI), Pro*C, or Java database connectivity (JDBC) OCI applications. This installation type requires much less disk space than the other Oracle Client installation types.

  **See Also:** Oracle Call Interface Programmer’s Guide or Oracle Database JDBC Developer’s Guide and Reference for more information about Instant Client

Included in the Instant Client installation is Instant Client Light. You may want to use this version of Instant Client if the applications generate error messages in American English only. Instant Client Light is beneficial to applications that use a supported character set and can accept error messages in American English. The following are the supported character sets:
Installation Considerations

1.4 Installation Considerations

This section contains information that you should consider before deciding how to install this product. It contains the following sections:

- Hardware and Software Certification
- Multiple Oracle Homes

---

Caution: AL32UTF8 is the Oracle Database character set that is appropriate for XMLType data. It is equivalent to the IANA registered standard UTF-8 encoding, which supports all valid XML characters.

Do not confuse Oracle Database database character set UTF8 (no hyphen) with database character set AL32UTF8 or with character encoding UTF-8. Database character set UTF8 has been superseded by AL32UTF8. Do not use UTF8 for XML data. UTF8 supports only Unicode version 3.1 and earlier; it does not support all valid XML characters. AL32UTF8 has no such limitation.

Using database character set UTF8 for XML data could potentially cause a fatal error or affect security negatively. If a character that is not supported by the database character set appears in an input-document element name, then a replacement character (usually "?") is substituted for it. This terminates parsing and raises an exception.
1.4.1 Hardware and Software Certification

The platform-specific hardware and software requirements included in this installation guide were current at the time this guide was published. However, because new platforms and operating system software versions might be certified after this guide is published, review the certification matrix on the Oracle MetaLink Web site for the most up-to-date list of certified hardware platforms and operating system versions. The Oracle MetaLink Web site is available at the following URL:

https://metalink.oracle.com

If you do not have a current Oracle Support Services contract, then access the same information at the following Web site:

http://www.oracle.com/technology/support/metalink/content.html

1.4.2 Multiple Oracle Homes

This product supports multiple Oracle homes. Therefore, you can install this release or previous releases of the software more than once on the same system, in different Oracle home directories.

1.4.2.1 Installing the Software on a System with an Existing Oracle Installation

You must install this product into a new Oracle home directory. You cannot install products from one release of Oracle Client into an Oracle home directory of a different release. For example, you cannot install release 10.2 software into an existing Oracle9i Oracle home directory. If you attempt to install this release into an Oracle home directory that contains software from an earlier Oracle release, then the installation fails.

You can install this release more than once on the same system if each installation is installed in a separate Oracle home directory.
This chapter describes the tasks that you must complete before you start Oracle Universal Installer. It includes information about the following tasks:

- Logging In to the System as root
- Checking the Hardware Requirements
- Checking the Software Requirements
- Creating Required Operating System Group and User
- Identifying Required Software Directories
- Identifying or Creating an Oracle Base Directory
- Configuring the oracle User’s Environment

2.1 Logging In to the System as root

Before you install the Oracle software, you must complete several tasks as the root user. To log in as the root user, complete the following procedure:

1. Log in to the system as a user that is a member of the admin group.
2. Start a local terminal session (/Applications/Utilities/Terminal).
3. If you are not logged in as the root user, enter the following command to start a shell session with root privileges:
   ```
   $ sudo sh
   ```
4. When prompted, enter your password.

2.2 Checking the Hardware Requirements

The system must meet the following minimum hardware requirements:

- 512 MB of physical RAM.
- The following table describes the relationship between installed RAM and the configured swap space requirement.

<table>
<thead>
<tr>
<th>Available RAM</th>
<th>Swap Space Required</th>
</tr>
</thead>
<tbody>
<tr>
<td>Up to 512 MB</td>
<td>2 times the size of RAM</td>
</tr>
<tr>
<td>Between 513 MB and 726 MB</td>
<td>1.5 times the size of RAM</td>
</tr>
<tr>
<td>More than 726 MB</td>
<td>0.75 times the size of RAM</td>
</tr>
</tbody>
</table>
The minimum client install TMP space required is 115 MB. The minimum disk space requirement in the $/tmp$ directory depends on the installation type you select. The following table lists the minimum disk space requirements for the $/tmp$ directory in each type of installation.

<table>
<thead>
<tr>
<th>Client Installation Type</th>
<th>Disk Space Required for the $/tmp$ Directory (MB)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Administrator</td>
<td>850</td>
</tr>
<tr>
<td>Runtime</td>
<td>470</td>
</tr>
<tr>
<td>Custom (all components selected)</td>
<td>780</td>
</tr>
<tr>
<td>Instant</td>
<td>150</td>
</tr>
</tbody>
</table>

Between 34 MB and 820 MB of disk space for the Oracle software, depending on the installation type.

To ensure that the system meets these requirements, follow these steps:

1. To determine the physical RAM size, use System Profiler (/Applications/Utilities/System Profiler) or enter the following command:
   ```bash
   # /usr/sbin/system_profiler SPHardwareDataType | grep Memory
   ```
   If the size of the physical RAM is less than the required size, then you must install more memory before continuing.

2. To determine the size of the configured swap space, enter the following command:
   ```bash
   # df -h /
   ```

   **Note:** Mac OS X dynamically creates swap files as required in $/private/var/vm$ directory. Ensure that you have at least 512 MB of available disk space on the root (/) file system to accommodate newly created swap files.

3. To determine the amount of disk space available in the $/tmp$ directory, enter the following command:
   ```bash
   # df -k /tmp
   ```

4. To determine the amount of free disk space on the system, enter the following command:
   ```bash
   # df -h
   ```

The following table shows the approximate disk space requirements for software files for each installation type:

<table>
<thead>
<tr>
<th>Installation Type</th>
<th>Requirement for Software Files (MB)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Administrator</td>
<td>870</td>
</tr>
<tr>
<td>Instant Client</td>
<td>130</td>
</tr>
<tr>
<td>Runtime</td>
<td>495</td>
</tr>
<tr>
<td>Custom (maximum)</td>
<td>790</td>
</tr>
</tbody>
</table>
5. To determine whether the system architecture can run the software, enter the following command:

```
# uname -p
```

**Note:** This command displays the processor type. The command output must be `i386`. If you do not see the expected output, then you cannot install the software on this system.

### 2.3 Checking the Software Requirements

Depending on the products that you intend to install, verify that the following software is installed on the system. The procedure following the table describes how to verify whether these requirements are addressed.

<table>
<thead>
<tr>
<th>Item</th>
<th>Requirement</th>
</tr>
</thead>
<tbody>
<tr>
<td>Operating system</td>
<td>Apple Mac OS X Server 10.5.4</td>
</tr>
<tr>
<td>Tools</td>
<td>■ Xcode 3.0 or later</td>
</tr>
<tr>
<td></td>
<td>■ GNU C compiler (gcc) version 4.0.1 or later</td>
</tr>
<tr>
<td></td>
<td>This version of gcc is included in Xcode 3.0 or later.</td>
</tr>
<tr>
<td></td>
<td>■ JDK 1.4.2_16</td>
</tr>
<tr>
<td>Pro*C/C++, Oracle Call Interface, Oracle C++ Call Interface</td>
<td>The version of the GNU C and C++ compiler listed previously is supported for use with these products.</td>
</tr>
<tr>
<td>Oracle JDBC/OCI Drivers</td>
<td>You must use the following JDK version with the Oracle JDBC/OCI drivers:</td>
</tr>
<tr>
<td></td>
<td>■ JDK 1.4.2 with the JNDI extension</td>
</tr>
</tbody>
</table>

**See Also:** If you plan to use GNU Compiler Collection as the primary compiler, then refer to *Oracle Database Installation Guide for Apple Mac OS X (Intel)* for instructions on configuring the primary compiler.

To ensure that the system meets these requirements:

1. To determine the operating system version, enter the following command:

```
# sw_vers
```

The output of this command must be similar to the following:

```
ProductName:    Mac OS X Server
ProductVersion: 10.5.4
BuildVersion:   9E17
```
2. To determine whether the required version of gcc is installed, enter the following command:

```bash
# gcc -v
```

This command returns output similar to the following:

```
Using built-in specs.
Target: i686-apple-darwin9
Configured with: /var/tmp/gcc/gcc-5465~16/src/configure --disable-checking
--enable-werror --prefix=/usr --mandir=/share/man
--enable-languages=c,objc,c++,objc++
--program-transform-name=/^[cg]\[^.-]*$/s/$/-4.0/
--with-gxx-include-dir=/include/c++/4.0.0 --with-slibdir=/usr/lib
--build=i686-apple-darwin9 --with-arch=apple --with-tune=generic
--host=i686-apple-darwin9 --target=i686-apple-darwin9
Thread model: posix
gcc version 4.0.1 (Apple Inc. build 5465)
```

If the required version (including the date and build number) or a later version is not installed, download and install Xcode 3.0 or later. You can download this software from the Apple Developer Connection Web site:

```
http://connect.apple.com/cgi-bin/WebObjects/MemberSite
```

After you log in, choose Download Software, then Developer Tools to display the download page.

### 2.3.1 Instant Client Light Requirements

In addition to the requirements described in the preceding section, if you plan to use Instant Client Light, then your applications must use the following languages and character sets:

- **Language**: US English
- **Territory**: Any territory that is supported by Oracle
- **Character sets**:
  - Single byte
    - US7ASCII
    - WE8DEC
  - Unicode
    - UTF8
    - AL16UTF16
    - AL32UTF8

The language, territory, and character sets are determined by the NLS_LANG environment variable.
2.4 Creating Required Operating System Group and User

Depending on whether this is the first time Oracle software is being installed on this system and on the products that you are installing, you may need to create the following operating system group and user:

- The Oracle Inventory group (typically, oinstall)

  You must create this group the first time you install Oracle software on the system. The usual name chosen for this group is oinstall. This group owns the Oracle inventory, which is a catalog of all Oracle software installed on the system.

- The Oracle software owner user (typically, oracle)

  You must create this user the first time you install Oracle software on the system. This user owns all of the software installed during the installation. This user must have the Oracle Inventory group as its primary group.

A single Oracle Inventory group is required for all installations of Oracle software on the system. After the first installation of Oracle software, you must use the same Oracle Inventory group for all subsequent Oracle software installations on that system. However, you can choose to create different Oracle software owner users for separate installations.

The following sections describe how to create local users and groups. As an alternative to creating local users and groups, you could create the appropriate users and groups in a directory service, for example, Network Information Services (NIS). For information about using directory services, contact your system administrator or refer to your operating system documentation.

The following sections describe how to create the required operating system users and groups:

- Creating the Oracle Inventory Group
- Creating the Oracle Software Owner User

2.4.1 Creating the Oracle Inventory Group

You must create the Oracle Inventory group if it does not exist. The following subsections describe how to determine the Oracle Inventory group name, if it exists, and how to create it if necessary.
Determining Whether the Oracle Inventory Group Exists
When you install Oracle software on the system for the first time, Oracle Universal Installer creates the `oraInst.loc` file. This file identifies the name of the Oracle Inventory group and the path of the Oracle Inventory directory.

To determine whether the Oracle Inventory group exists, enter the following command:

```
# more /var/opt/oracle/oraInst.loc
```

If the output of this command shows the `oinstall` group name, then the group exists.

If the `oraInst.loc` file exists, then the output from this command is similar to the following:

```
inventory_loc=/u01/app/oracle/oraInventory
inst_group=oinstall
```

The `inst_group` parameter shows the name of the Oracle Inventory group, `oinstall`.

Creating the Oracle Inventory Group
If the `oraInst.loc` file does not exist, then create the Oracle Inventory group by using one of the following methods:

- Use Workgroup Manager (`/Applications/Server/Workgroup Manager`) to create a group called `oinstall`.
- Use command-line utilities to create the Oracle Inventory group:
  1. Enter the following command to list existing groups and group IDs (GIDs):
     ```
     # dscl . -list /groups gid name | more
     ```
  2. Identify an unused GID for the Oracle Inventory group.
  3. Enter commands similar to the following to create the `oinstall` group:
     ```
     # dscl . -create /groups/oinstall
     # dscl . -append /groups/oinstall gid gid_number
     # dscl . -append /groups/oinstall passwd "***"
     ```

2.4.2 Creating the Oracle Software Owner User
You must create an Oracle software owner user in the following circumstances:

- If an Oracle software owner user does not exist, for example, if this is the first installation of Oracle software on the system
- If an Oracle software owner user exists, but you want to use a different operating system user

2.4.2.1 Determining Whether an Oracle Software Owner User Exists
To determine whether an Oracle software owner user named `oracle` exists, enter the following command:

```
# id oracle
```

If the `oracle` user exists, then the output from this command is similar to the following:
uid=440(oracle) gid=200(oinstall) groups=201(dba),202(oper)

If the user exists, then determine whether you want to use the existing user or create another oracle user. If you want to use the existing user, then ensure that the user’s primary group is the Oracle Inventory group. Refer to the following sections for more information:

---

**Note:** If necessary, contact your system administrator before using or modifying an existing user.

---

- If you want to use the existing Oracle software owner user, and the user’s primary group is the Oracle Inventory group, then refer to "Identifying Required Software Directories" on page 2-8.
- To modify an existing user, refer to "Modifying an Oracle Software Owner User" on page 2-8.
- To create a user, refer to the following section.

### 2.4.2.2 Creating an Oracle Software Owner User

If the Oracle software owner user does not exist or if you require another Oracle software owner user, then create it as follows. In the following procedure, use the user name oracle unless a user with the same name exists.

- Use Workgroup Manager to create a user with the following properties:

<table>
<thead>
<tr>
<th>Property</th>
<th>Recommended Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Name</td>
<td>Oracle Software Owner</td>
</tr>
<tr>
<td>Short name</td>
<td>oracle</td>
</tr>
<tr>
<td>Password</td>
<td>Specify and verify a password for the oracle user</td>
</tr>
<tr>
<td>Primary group</td>
<td>oinstall</td>
</tr>
<tr>
<td>Default shell</td>
<td>Any supported shell, for example /bin/tcsh or /bin/bash</td>
</tr>
<tr>
<td>Home directory</td>
<td>A home directory consistent with other user home directories, for example /Users/oracle</td>
</tr>
</tbody>
</table>

- Use command-line utilities to create the Oracle software owner user:
  1. Enter the following command to list existing users and user IDs (UIDs):
     
     ```
     # dscl . -list /users uid name | more
     ```
  2. Identify an unused UID for the Oracle software owner user.
  3. Enter commands similar to the following to create the oracle user:
     
     ```
     # dscl . -create /users/oracle
     # dscl . -append /users/oracle uid uid_number
     # dscl . -append /users/oracle gid oinstall_gid
     # dscl . -append /users/oracle shell /bin/bash
     # dscl . -append /users/oracle home /Users/oracle
     # dscl . -append /users/oracle realname "Oracle software owner"
     ```
  4. Create the home directory for the oracle user and change the owner and group on that directory:
Identifying Required Software Directories

# mkdir /Users/oracle
# chown oracle:oinstall /Users/oracle

5. Set the password for the oracle user:
   # passwd oracle

Refer to "Identifying Required Software Directories" on page 2-8 to continue.

2.4.2.3 Modifying an Oracle Software Owner User
If the oracle user exists, but its primary group is not oinstall, then use one of the following methods to modify it:

- Use Workgroup Manager to modify the oracle user, specifying oinstall as the Primary group.
- Use command-line utilities to modify the oracle user:
  1. Enter the following command to determine the GID of the oinstall group:
     # dscl . -list /groups/oinstall gid name | more
  2. Enter the following command to change the GID of the oracle user to the GID of the oinstall group:
     # dscl . -delete /users/oracle gid
     # dscl . -append /users/oracle gid oinstall_gid

2.5 Identifying Required Software Directories
You must identify or create the following directories for the Oracle software:

- Oracle Base Directory
- Oracle Inventory Directory
- Oracle Home Directory

2.5.1 Oracle Base Directory
The Oracle base directory is a top-level directory for Oracle software installations. It is analogous to the C:\Oracle directory used for Oracle software installations on Microsoft Windows systems. On Apple Mac OS X (Intel) systems, the Optimal Flexible Architecture (OFA) guidelines recommend that you use a path similar to the following for the Oracle base directory:

/mount_point/app/oracle_sw_owner

In this example:

- mount_point is the mount point directory for the file system that contains the Oracle software.

  The examples in this guide use /u01 for the mount point directory. However, you could choose another mount point directory, such as /oracle or /opt/oracle.

- oracle_sw_owner is the operating system user name of the Oracle software owner, for example oracle.

You can use the same Oracle base directory for multiple installations or you can create separate Oracle base directories for different installations. If different operating system
users install Oracle software on the same system, then each user must create a separate Oracle base directory. The following example Oracle base directories could all exist on the same system:

/u01/app/oracle
/u01/app/orauser
/opt/oracle/app/oracle

The following sections describe how to identify existing Oracle base directories that may be suitable for your installation and how to create an Oracle base directory if necessary.

Regardless of whether you create an Oracle base directory or decide to use an existing one, you must set the `ORACLE_BASE` environment variable to specify the full path to this directory.

2.5.2 Oracle Inventory Directory

The Oracle Inventory directory (`oraInventory`) stores an inventory of all software installed on the system. It is required by, and shared by, all Oracle software installations on a single system. The first time you install Oracle software on a system, Oracle Universal Installer prompts you to specify the path to this directory. Oracle recommends that you choose the following path:

`oracle_base/oraInventory`

Oracle Universal Installer creates the directory that you specify and sets the correct owner, group, and permissions for it. You must not create it.

---

**Note:** All Oracle software installations rely on this directory. Ensure that you back it up regularly.

Do not delete this directory unless you have completely removed all Oracle software from the system.

---

2.5.3 Oracle Home Directory

The Oracle home directory is the directory where you choose to install the software for a particular Oracle product. You must install different Oracle products, or different releases of the same Oracle product, in separate Oracle home directories. When you run Oracle Universal Installer, it prompts you to specify the path to this directory, and a name that identifies it. The directory that you specify must be a subdirectory of the Oracle base directory. Oracle recommends that you specify a path similar to the following for the Oracle home directory:

`oracle_base/product/10.2.0/client_1`

Oracle Universal Installer creates the directory path that you specify under the Oracle base directory. It also sets the correct owner, group, and permissions on it. You must not create this directory.

---

**Caution:** During installation, you must not specify an existing directory that has predefined permissions applied to it as the Oracle home directory. If you do, then you may experience installation failure due to file and group ownership permission errors.
2.6 Identifying or Creating an Oracle Base Directory

Before starting the installation, you must either identify an existing Oracle base directory or if required, create one. This section contains information about the following:

- Identifying an Existing Oracle Base Directory
- Creating an Oracle Base Directory

**Note:** You can create an Oracle base directory, even if other Oracle base directories exist on the system.

2.6.1 Identifying an Existing Oracle Base Directory

Existing Oracle base directories may not have paths that follow OFA guidelines. However, if you identify an existing Oracle Inventory directory or existing Oracle home directories, then you can usually identify the Oracle base directories, as follows:

- Identifying an existing Oracle Inventory directory
  Enter the following command to view the contents of the `oraInst.loc` file:
  
  ```bash
  # more /var/opt/oracle/oraInst.loc
  ```
  
  If the `oraInst.loc` file exists, then the output from this command is similar to the following:
  
  ```
  inventory_loc=/u01/app/oracle/oraInventory
  inst_group=oinstall
  ```
  
  The `inventory_loc` parameter identifies the Oracle Inventory directory (`oraInventory`). The parent directory of the `oraInventory` directory is typically an Oracle base directory. In the previous example, `/u01/app/oracle` is an Oracle base directory.

- Identifying existing Oracle home directories
  Enter the following command to view the contents of the `oratab` file:
  
  ```bash
  # more /etc/oratab
  ```
  
  If the `oratab` file exists, then it contains lines similar to the following:
  
  ```
  *:/u03/app/oracle/product/10.2.0/db_1:N
  *:/opt/orauser/infra_904:N
  *:/oracle/9.2.0:N
  ```
  
  The directory paths specified on each line identify Oracle home directories. Directory paths that end with the user name of the Oracle software owner are valid choices for an Oracle base directory. If you intend to use the `oracle` user to install the software, then you could choose one of the following directories from the previous example:
  
  `/u03/app/oracle`
  `/oracle`

**Note:** If possible, choose a directory path similar to the first (`/u03/app/oracle`). This path complies with the OFA guidelines.
2.6.2 Creating an Oracle Base Directory

Before you create an Oracle base directory, you must identify an appropriate file system with disk space.

To identify an appropriate file system:

1. Use the `df -h` command to determine the free disk space on each mounted file system.
2. From the display, identify a file system that has appropriate free space.
3. Note the name of the mount point directory for the file system that you identified.

To create the Oracle base directory and specify the correct owner, group, and permissions for it:

1. Enter commands similar to the following to create the recommended subdirectories in the mount point directory that you identified and set the appropriate owner, group, and permissions on them:

   ```
   # mkdir -p /mount_point/app/oracle_sw_owner
   # chown -R oracle:oinstall /mount_point/app/oracle_sw_owner
   # chmod -R 775 /mount_point/app/oracle_sw_owner
   ```

   For example, if the mount point you identify is `/u01` and `oracle` is the user name of the Oracle software owner, then the recommended Oracle base directory path is as follows:

   `/u01/app/oracle`

2. When you configure the `oracle` user's environment later in this chapter, set the `ORACLE_BASE` environment variable to specify the Oracle base directory that you have created.

2.7 Configuring the oracle User's Environment

You run Oracle Universal Installer from the `oracle` account. However, before you start Oracle Universal Installer you must configure the environment of the `oracle` user. To configure the environment, you must:

- Set the default file mode creation mask (umask) to 022 in the shell startup file.
- Set the `DISPLAY` environment variable.

To set the `oracle` user's environment:

1. Start a new terminal session.
2. If you are not logged in to the system where you want to install the software, then log in to that system as the `oracle` user.
3. If you are not logged in as the `oracle` user, then switch user to `oracle`:
$ su - oracle

4. To determine the default shell for the oracle user, enter the following command:
   $ echo $SHELL

5. Open the oracle user's shell startup file in any text editor:
   - Bourne shell (sh), Bash shell (bash), or Korn shell (ksh):
     $ vi .bash_profile
   - C shell (csh or tcsh):
     % vi .login

6. Enter or edit the following line, specifying a value of 022 for the default file mode
   creation mask:
   umask 022

7. If the ORACLE_SID, ORACLE_HOME, or ORACLE_BASE environment variable is set
   in the file, then remove the appropriate lines from the file.

8. Save the file, and exit from the editor.

9. To run the shell startup script, enter one of the following commands:
   - Bash shell:
     $ . ~/.bash_profile
   - Bourne or Korn shell:
     $ . ~/.profile
   - C shell:
     % source ~/.login

10. If you determined that the /tmp directory has less than 400 MB of free disk space,
    then identify a file system with at least 400 MB of free space and set the TMP and
    TMPDIR environment variables to specify a temporary directory on this file
    system:
    a. Use the df -h command to identify a suitable file system with sufficient free
       space.
    b. If necessary, enter commands similar to the following to create a temporary
       directory on the file system that you identified, and set the appropriate
       permissions on the directory:
       $ sudo mkdir /mount_point/tmp
       $ sudo chmod a+wr /mount_point/tmp
    c. Enter commands similar to the following to set the TEMP and TMPDIR
       environment variables:
       * Bourne, Bash, or Korn shell:
$ TEMP=/mount_point/tmp
$ TMPDIR=/mount_point/tmp
$ export TEMP TMPDIR

* C shell:

% setenv TEMP /mount_point/tmp
% setenv TMPDIR /mount_point/tmp

11. Enter commands similar to the following to set the ORACLE_BASE environment variable:

■ Bourne, Bash, or Korn shell:

  $ ORACLE_BASE=/u01/app/oracle
  $ export ORACLE_BASE

■ C shell:

  % setenv ORACLE_BASE /u01/app/oracle

In these examples, /u01/app/oracle is the Oracle base directory that you created or identified earlier.

12. Enter the following commands to ensure that the ORACLE_HOME and TNS_ADMIN environment variables are not set:

■ Bourne, Bash, or Korn shell:

  $ unset ORACLE_HOME
  $ unset TNS_ADMIN

■ C shell:

  % unsetenv ORACLE_HOME
  % unsetenv TNS_ADMIN

**Note:** If the ORACLE_HOME environment variable is set, then Oracle Universal Installer uses the value that it specifies as the default path for the Oracle home directory. However, if you set the ORACLE_BASE environment variable, then Oracle recommends that you unset the ORACLE_HOME environment variable and choose the default path suggested by Oracle Universal Installer.

13. To verify that the environment has been set correctly, enter the following commands:

  $ umask
  $ env | more

Verify that the umask command displays a value of 22, 022, or 0022 and the environment variables that you set in this section have the correct values.
The Oracle Client software is available on disc (DVD) or you can download it from the Oracle Technology Network Web site. In most cases, you use the graphical user interface (GUI) provided by Oracle Universal Installer to install the software. However, you can also use Oracle Universal Installer to complete silent-mode installations, without using the GUI.

**See Also:** Appendix A for information about silent-mode installations

This chapter includes information about the following topics:

- Accessing the Installation Software
- Installing the Oracle Client Software

### 3.1 Accessing the Installation Software

The Oracle Client software is available on compact disc (DVD) or you can download it from the Oracle Technology Network Web site. To install the software from the hard disk, you must either download it from Oracle Technology Network and unpack it, or copy it from the disc, if you have it.

You can access and install Oracle Client by using one of the following methods:

- To copy the software to a hard disk, refer to the following section:
  "Copying the Software to the Hard Disk" on page 3-2
- To install the software from a disc or from an existing hard disk location, refer to the following section:
  "Installing the Oracle Client Software" on page 3-3
- To download the software from Oracle Technology Network, refer to the following section.

### 3.1.1 Downloading Oracle Software from the OTN Web Site

This section describes how to download the installation archive files and extract them on your hard disk. It contains the following topics:

- Downloading the Installation Archive Files
- Extracting the Installation Files
3.1.1 Downloading the Installation Archive Files

To download the installation archive files from Oracle Technology Network:

1. Use any browser to access the software download page from Oracle Technology Network:
   

2. Navigate to the download page for the product to install.

3. On the download page, identify the required disk space by adding the file sizes for each required file.
   The file sizes are listed next to the file names.

4. Select a file system with enough free space to store and expand the archive files.
   In most cases, the available disk space must be at least twice the size of all of the archive files.

5. On the file system that you selected in step 4, create a parent directory for each product, for example `OraCl10g`, to hold the installation directories.

6. Download all of the installation archive files to the directory that you created in step 5.

7. Verify that the files you downloaded are the same size as the corresponding files on Oracle Technology Network.

3.1.1.2 Extracting the Installation Files

To extract the installation archive files, perform the following steps:

1. If necessary, change directory to the directory that contains the downloaded installation archive files.

2. To uncompress each file, enter a command similar to the following:

   `unzip filename.zip`

When you have extracted all of the required installation files, refer to "Installing the Oracle Client Software" on page 3-3.

3.1.2 Copying the Software to the Hard Disk

Before installing Oracle Client, you may copy the software to the hard disk to enable the installation process to run a bit faster. The following section describes the procedure to copy the software to a hard disk.

3.1.2.1 Copying the Oracle Client Software to a Hard Disk

If the system does not have a DVD drive, you can copy the software from the disc to a file system on another system, then use FTP to copy the files to the system where you want to install the software.

To copy the contents of the disc to a hard disk:

1. Create a directory on the hard disk to hold the Oracle software:

   `$ mkdir OraCl110g`

2. Change directory to the directory you created in step 1:

   `$ cd OraCl110g`
3. Create subdirectories for each installation disc with names similar to the following, where \( n \) is the disc number:

\[
$ \text{mkdir Diskn}
\]

4. Insert the disc into the disc drive.

5. Copy the contents of the mounted disc to the corresponding new subdirectory as follows:

\[
$ \text{cp -R /directory\_path Diskn}
\]

In this example, `/directory_path` is the disc mount point directory, or the path of the client directory on the DVD. The mount point directory is `/dvd`.

6. If necessary, mount the next disc and repeat step 5.

After you have copied all the required discs, refer to "Installing the Oracle Client Software" on page 3-3.

### 3.2 Installing the Oracle Client Software

The following sections describe how to install the Oracle Client software:

- Reviewing Installation Guidelines
- Running Oracle Universal Installer

#### 3.2.1 Reviewing Installation Guidelines

Review the following guidelines before starting Oracle Universal Installer:

- **Oracle Universal Installer**
  
  Do not use Oracle Universal Installer from an earlier Oracle product release to install components from this release.

- **Reinstalling Oracle software**
  
  If you reinstall Oracle software into an Oracle home directory where Oracle Client is installed, you must re-install components that were installed before you began the re-installation.

#### 3.2.2 Running Oracle Universal Installer

This section describes the Basic Installation as a default setting. For any type of installation process, start Oracle Universal Installer and install the software, as follows:

1. If you are installing the software from disc, mount the first disc if it is not mounted.

2. To start Oracle Universal Installer, complete one of the following steps depending on the location of the installation files:

   **Note:** Start Oracle Universal Installer from the terminal session where you logged in as the `oracle` user and set the user’s environment (as described in Chapter 2).

   - If the installation files are on disc, enter commands similar to the following, where `directory_path` is the path of the client directory on the DVD:
$ cd /tmp
$ /directory_path/runInstaller

- If the installation files are on the hard disk, change directory to the client directory and enter the following command:
  $ ./runInstaller

3. Use the following guidelines to complete the installation:

- Follow the instructions displayed on the Oracle Universal Installer screens. If you need additional information, click Help.
- When Oracle Universal Installer prompts you to run a script with root privileges, enter a command similar to the following in a terminal where you are logged in as the root user, then click Continue or OK:
  # /script_path/script_name

  Alternatively, enter a command similar to the following to run the script in a terminal where you are logged in as a user that is a member of the admin group:
  $ sudo /script_path/script_name

4. If you chose an installation type that runs Oracle Net Configuration Assistant (NetCA) in interactive mode, you must provide detailed information about configuring the network.

If you need assistance when using NetCA in interactive mode, then click Help on the screen.

Note: If you chose a default installation, NetCA runs in noninteractive mode.

5. When all of the configuration tools have finished, click Exit, then click Yes to exit from Oracle Universal Installer.

Refer to Chapter 4 for information about tasks that you must complete after installing the software.
Postinstallation Tasks

This chapter describes how to complete postinstallation tasks after you have installed the software. It includes information about the following sections:

- Required Postinstallation Tasks
- Recommended Postinstallation Tasks
- Required Product-Specific Postinstallation Tasks

You must perform the tasks listed in the “Required Postinstallation Tasks” section. Oracle recommends that you perform the tasks listed in the “Recommended Postinstallation Tasks” section after all installations.

If you installed and intend to use any of the products listed in the "Required Product-Specific Postinstallation Tasks" section, then you must perform the tasks listed in the product-specific subsections.

Note: This chapter describes basic configuration only. Refer to Oracle Database Administrator’s Reference for UNIX-Based Operating Systems and product-specific administration and tuning guides for more detailed configuration and tuning information.

4.1 Required Postinstallation Tasks

You must perform the tasks described in the following sections after completing an installation:

- Downloading and Installing Patches
- Updating Instant Client
- Connecting with Instant Client

4.1.1 Downloading and Installing Patches

Check the OracleMetaLink Web site for required patches for the installation.

Note: You cannot update Instant Client by downloading a patch. Use the procedure under "Updating Instant Client" on page 4-2 to update Instant Client.

To download required patches:

1. Use a Web browser to view the OracleMetaLink Web site:
2. Log in to OracleMetaLink.

Note: If you are not an OracleMetaLink registered user, click Register for MetaLink! and follow the registration instructions.

3. On the main OracleMetaLink page, click Patches.
4. Select Simple Search.
5. Specify the following information, then click Go:
   - In the Search By field, choose Product or Family, then specify RDBMS Server.
   - In the Release field, specify the current release number.
   - In the Patch Type field, specify Patchset/Minipack.
   - In the Platform or Language field, select your platform.

4.1.2 Updating Instant Client

To update Instant Client:

Caution: A restriction on using Instant Client or Instant Client Light is that you cannot perform patch upgrades on it using the opatch utility. The reason is that the Instant Client installation does not create an inventory, which the patch upgrade process must use to perform. The absence of an inventory also means that installed interim patch reporting and conflict detection before a patch attempt are not possible.

4.1.3 Connecting with Instant Client

If you installed the Instant Client installation type, you can configure users' environments to enable dynamically linked client applications to connect to a database as follows:

1. Set the appropriate shared library path environment variable for your platform to specify the directory that contains the Instant Client libraries. For the Instant Client installation type, this directory is the Oracle home directory that you specified during the installation, for example: /u01/app/oracle/product/10.2.0/client_1

   The required environment variable is DYLD_LIBRARY_PATH:

2. Use one of the following methods to specify database connection information for the client application:
Recommended Postinstallation Tasks

4.2 Recommended Postinstallation Tasks

Oracle recommends that you perform the tasks described in the following section after completing an installation:

- Configuring Instant Client Light
- Creating a Backup of the root.sh Script
- Connecting Instant Client or Instant Client Light to an Oracle Database
- Setting Up User Accounts
- Setting the NLS_LANG Environment Variable
- Generating the Client Static Library

4.2.1 Configuring Instant Client Light

When you install Instant Client, the Instant Client libraries are installed under the ORACLE_HOME directory and the Instant Client Light specific library is installed under the ORACLE_HOME/light directory. To configure Instant Client Light, you must replace the ORACLE_HOME/libociei.dylib file with the ORACLE_HOME/light/libociicus.dylib file.

After replacing the library file, you must set the DYLD_LIBRARY_PATH environment variable to point to the location of the Instant Client shared library files. For example:

$ORACLE_HOME

4.2.2 Creating a Backup of the root.sh Script

Oracle recommends that you back up the root.sh script after you complete an installation. If you install other products in the same Oracle home directory, then Oracle Universal Installer updates the contents of the existing root.sh script during the installation. If you require information contained in the original root.sh script, then you can recover it from the backed up root.sh file.

4.2.3 Connecting Instant Client or Instant Client Light to an Oracle Database

Before you can connect Instant Client (including Instant Client Light) to an Oracle database, ensure that the DYLD_LIBRARY_PATH environment variable specifies the directory that contains the Instant Client libraries. This directory is the ORACLE_HOME directory that you specified during installation.

For example, the shared libraries for Instant Client or Instant Client Light (if you have configured Instant Client Light), are in:

Note: You do not have to specify the ORACLE_HOME environment variable.
After you have checked the DYLD_LIBRARY_PATH environment variable, you can use any of the following methods to specify Oracle Database connection information for client applications:

- Specifying a Connection by Using the Easy Connect Naming Method
- Specifying a Connection by Configuring a tnsnames.ora File
- Specifying a Connection by Using an Empty Connect String and the TWO_TASK Environment Variable

### 4.2.3.1 Specifying a Connection by Using the Easy Connect Naming Method

You can specify a connection address to an Oracle Database directly from a client application, without having to configure a tnsnames setting for the Instant Client. This method is convenient in that you do not have to create and manage a tnsnames.ora file. However, your application users must specify the host name and port number when they log in to your application.

For example, suppose you run SQL*Plus on the client system and want to connect to the sales_us database, which is located on a server whose host name is shobeen and port number is 1521. If you run SQL*Plus from the command line, then you can log in as follows:

```
Enter user-name: system@admin@//shobeen:1521/sales_us
```

Similarly, in your application code, you can use Oracle Call Interface net naming methods to create the Instant Client-to-Oracle Database connection. For example, the following formats in the OCIServerAttach() call specify the connection information:

- Specify a SQL connect URL string using the following format:

  //host[:port]/[/service_name]

  For example:

  //shobeen:1521/sales_us

- Alternatively, you can specify the SQL connect information as an Oracle Net keyword-value pair. For example:

  "(DESCRIPTION=(ADDRESS=(PROTOCOL=tcp) (HOST=shobeen) (PORT=1521))
  (CONNECT_DATA=(SERVICE_NAME=sales_us)))"

  **See Also:** Oracle Call Interface Programmer’s Guide for more information on using Oracle Call Interface Instant Client

### 4.2.3.2 Specifying a Connection by Configuring a tnsnames.ora File

By default, when you install Instant Client, Oracle Universal Installer does not include a sample tnsnames.ora file nor the Oracle Net Configuration Assistant utility, which is usually used to create it. However, if you want to shield users from having to specify actual host names and port numbers, you may want to consider using a tnsnames.ora file to set the Client-to-Oracle Database connection.

You can create the tnsnames.ora file manually by copying and modifying a version of this file from another Oracle installation, or you can install Oracle Net Configuration Assistant to create and manage it for you.

To install Oracle Net Configuration Assistant:
1. Run Oracle Universal Installer.
2. Select the Custom installation type.
3. In the Available Product Components list, select Oracle Network Utilities and click Next.
4. In the Summary screen, click Install, then click Exit and Yes to exit Oracle Universal Installer.

On each client computer, configure either of the following settings:

- Set the TNS_ADMIN environment variable to specify the location of the tnsnames.ora file and specify a service name from that file.
- Place the tnsnames.ora file in the $ORACLE_HOME/network/admin directory, and ensure that the ORACLE_HOME environment has been set to this Oracle home.

See Also: Oracle Call Interface Programmer’s Guide for more information on Oracle Call Interface Instant Client connection strings

4.2.3.3 Specifying a Connection by Using an Empty Connect String and the TWO_TASK Environment Variable

You can set the connect string to an empty connect string (""), and then set the TWO_TASK environment variable to one of the following values:

- A direct address, as described under “Specifying a Connection by Using the Easy Connect Naming Method” on page 4-4
- Oracle Net keyword-value pair
- A tnsnames.ora entry and TNS_ADMIN is set to the location of tnsnames.ora
- A tnsnames.ora entry and the following:
  - tnsnames.ora file located in $ORACLE_HOME/network/admin
  - The ORACLE_HOME environment variable set to this Oracle home

This method allows the applications to specify internally a connection string if the application code itself uses an empty connection string. The benefit of an empty connect string is that the application itself does not need to specify the tnsnames.ora entry. Instead, when a user invokes the application, the location of the database is determined by a script or the environment, depending on where you have set the TWO_TASK environment variable. The disadvantage of using empty strings is that you must configure this additional information for your application to connect to the database.

4.2.4 Setting Up User Accounts

For information about setting up additional user accounts, refer to Oracle Database Administrator’s Reference for UNIX-Based Operating Systems.

4.2.5 Setting the NLS_LANG Environment Variable

NLS_LANG is an environment variable that specifies the locale behavior for Oracle software. This variable sets the language and territory used by the client application and the database server. It also sets the character set for the client, which is the character set for data entered or displayed by an Oracle client program, such as SQL*Plus.
4.2.6 Generating the Client Static Library

The client static library (libclntst10.a) is not generated during installation. If you want to link your applications to the client static library, you must first generate it as follows:

1. Switch user to oracle.
2. Set the ORACLE_HOME environment variable to specify the Oracle home directory used by the Oracle Client installation. For example:
   - Bourne, Bash, or Korn shell:
     ```
     $ ORACLE_HOME=/u01/app/oracle/product/10.2.0/client_1
     $ export ORACLE_HOME
     ```
   - C shell:
     ```
     % setenv ORACLE_HOME /u01/app/oracle/product/10.2.0/client_1
     ```
3. Enter the following command:
   ```
   $ $ORACLE_HOME/bin/genclntst
   ```

4.3 Required Product-Specific Postinstallation Tasks

The following sections describe platform-specific postinstallation tasks that you must perform if you install and intend to use the products mentioned:

- Configuring Oracle Net Services
- Configuring Oracle Precompilers
- Configuring OCCI

4.3.1 Configuring Oracle Net Services

If you have a previous release of Oracle software installed on this system, you might want to copy information from the Oracle Net tnsnames.ora configuration file from the previous release to the corresponding file for the new release.

**Note:** The default location for the tnsnames.ora file is the $ORACLE_HOME/network/admin/ directory. However, you can also use a central location for this file, for example /etc.

If necessary, you can also add connection information for additional database instances to the new file.

4.3.2 Configuring Oracle Precompilers

This section describes postinstallation tasks for Oracle precompilers.

**Note:** All precompiler configuration files are located in the $ORACLE_HOME/precomp/admin directory.
4.3.2.1 Configuring Pro*C/C++
Verify that the PATH environment variable setting includes the directory that contains the C compiler executable. The default directory for the gcc compiler executable is /usr/bin.

4.3.3 Configuring OCCI
The Oracle C++ Call Interface (OCCI) libraries for use with GNU C++ compiler version 4.0.1 are installed with this release. The libraries are installed in the following locations:

$ORACLE_HOME/lib/libocci10.a
$ORACLE_HOME/lib/libocci10.dylib.10.1
This chapter describes how to completely remove all software from an Oracle home directory.

---

**Note:** If you want to remove an individual product, refer to the product-specific documentation for requirements and restrictions.

---

### 5.1 Removing Oracle Software

The following steps describe how to use Oracle Universal Installer to remove Oracle software from an Oracle home:

---

**Note:** Always use Oracle Universal Installer to remove Oracle software. Do not delete any Oracle home directories without first using Oracle Universal Installer to remove the software.

---

1. If necessary, log in as the `oracle` user:

   ```
   $ su - oracle
   ```

2. Set the `ORACLE_HOME` environment variable to specify the path of the Oracle home directory to be removed:

   - Bourne, Bash, or Korn shell:
     ```
     $ ORACLE_HOME=/u01/app/oracle/product/10.2.0/client_1
     $ export ORACLE_HOME
     ```
   - C shell:
     ```
     $ setenv ORACLE_HOME /u01/app/oracle/product/10.2.0/client_1
     ```

3. Start Oracle Universal Installer as follows:

   ```
   $ $ORACLE_HOME/oui/bin/runInstaller
   ```

4. In the Welcome window, click **Deinstall Products**.

   The Inventory screen appears, listing all of the Oracle homes on the system.

5. In the Inventory screen, select the Oracle home and the products to be removed, then click **Remove**.

   Oracle Universal Installer displays a confirmation window asking you to confirm the deinstallation of the products and their dependent components.
6. Click **Yes**.

   Oracle Universal Installer displays a progress indicator as it removes the software.

7. Click **Close** on the Inventory screen.

8. When the products have been deleted, click **Cancel** to exit from Oracle Universal Installer, and then click **Yes**.
This appendix describes how to install and configure Oracle products using response files. It includes information about the following topics:

- How Response Files Work
- Creating the oraInst.loc File
- Preparing a Response File
- Running Oracle Universal Installer Using a Response File

A.1 How Response Files Work

You can automate the installation and configuration of Oracle software, either fully or partially, by specifying a response file when you start Oracle Universal Installer. Oracle Universal Installer uses the values contained in the response file to provide answers to some or all of Oracle Universal Installer prompts:

Typically, Oracle Universal Installer runs in interactive mode, which means that it prompts you to provide information in graphical user interface (GUI) screens. When you use response files to provide this information, you run Oracle Universal Installer at a command prompt using either of the following modes:

- Silent mode
  If you include responses for all of the prompts in the response file and specify the -silent option when starting Oracle Universal Installer, then Oracle Universal Installer runs in silent mode. During a silent-mode installation, Oracle Universal Installer does not display any screens. Instead, it displays progress information in the terminal that you used to start it.

- Noninteractive (or suppressed) mode
  If you include responses for some or all of the prompts in the response file and omit the -silent option, then Oracle Universal Installer runs in suppressed mode. During a suppressed-mode installation, Oracle Universal Installer displays only the screens for which you did not specify all required information. You can also use variables in the response file or command-line options to suppress other installer screens, such as the Welcome screen or Summary screen, that do not prompt for information.

You define the settings for a silent or noninteractive installation by entering values for the variables listed in the response file. For instance, to specify the Oracle home name,
you would supply the appropriate value for the `ORACLE_HOME_NAME` variable, as in the following example:

```
ORACLE_HOME_NAME="OraCLHome1"
```

Another way of specifying the response file's variable settings is to pass them as command line arguments when you run Oracle Universal Installer. For example:

```
$ /directory_path/runInstaller -silent "ORACLE_HOME_NAME=OraCLHome1" ...
```

In this command, `directory_path` is the path of the `client` directory on the DVD or the path of the `disk1` directory on the hard drive.

This method is particularly useful if you do not want to embed sensitive information, such as passwords, in the response file. For example:

```
$ /directory_path/runInstaller -silent "s_dlgRBOPassword=binks342" ...
```

Ensure that you enclose the variable and its setting in quotes.

**See Also:** *Oracle Universal Installer and OPatch User’s Guide* for more information about response file formats

### A.1.1 Reasons for Using Silent Mode or Noninteractive Mode

The following table describes some reasons why you might want to run Oracle Universal Installer in silent mode or suppressed mode.

<table>
<thead>
<tr>
<th>Mode</th>
<th>Uses</th>
</tr>
</thead>
<tbody>
<tr>
<td>Silent</td>
<td>Use silent mode if you want to:</td>
</tr>
<tr>
<td></td>
<td>■ Complete an unattended installation, which you might schedule using</td>
</tr>
<tr>
<td></td>
<td>operating system utilities such as <code>at</code>:</td>
</tr>
<tr>
<td></td>
<td>■ Complete several similar installations on multiple systems without</td>
</tr>
<tr>
<td></td>
<td>user interaction</td>
</tr>
<tr>
<td></td>
<td>■ Install the software on a system that does not support a GUI</td>
</tr>
<tr>
<td>Suppressed (noninteractive)</td>
<td>Use suppressed mode if you want to complete similar Oracle software</td>
</tr>
<tr>
<td></td>
<td>installations on multiple systems, providing default answers to some,</td>
</tr>
<tr>
<td></td>
<td>but not all Oracle Universal Installer prompts.</td>
</tr>
</tbody>
</table>
|                           | If you do not specify information required for a particular Installer screen in the response file, then Oracle Universal Installer displays that screen. It suppresses screens for which you have provided all the required information.

### A.1.2 General Procedure for Using Response Files

The following are the general steps to install and configure Oracle products using Oracle Universal Installer in silent or suppressed mode:

**Note:** You must complete all required preinstallation tasks on a system before you run Oracle Universal Installer in silent or suppressed mode.

1. Prepare a response file.
2. Run Oracle Universal Installer in silent or suppressed mode.
These steps are described in the following sections.

**A.2 Creating the oraInst.loc File**

If you plan to install Oracle products using Oracle Universal Installer in silent or suppressed mode, then you must manually create the `oraInst.loc` file if it does not exist. This file specifies the location of the Oracle Inventory directory where Oracle Universal Installer creates the inventory of Oracle products installed on the system.

---

**Note:** If Oracle software has been installed previously on the system, then the `oraInst.loc` file may exist. The `oraInst.loc` file is present at `/var/opt/oracle/oraInst.loc`. If the file exists, then you must not create a file.

---

To create the `oraInst.loc` file, follow these steps:

1. Switch user to `root`:
   
   ```
   $ su - root
   ```

2. Change directory as follows:
   
   ```
   # cd /var/opt/oracle/
   ```

3. Use a text editor to create the `oraInst.loc` file, containing the following lines:
   
   ```
   inventory_loc=ORACLE_BASE/oraInventory
   inst_group=
   ```

   In this example, `ORACLE_BASE` is the path of the Oracle base directory, for example, `/01/app/oracle`.

4. Enter the following commands to set the appropriate owner, group, and permissions on the `oraInst.loc` file:
   
   ```
   # chown oracle:oinstall oraInst.loc
   # chmod 664 oraInst.loc
   ```

**A.3 Preparing a Response File**

This section describes the following methods to prepare a response file for use during silent-mode or suppressed-mode installations:

- **Editing a Response File Template**
- **Recording a Response File**

**A.3.1 Editing a Response File Template**

This method is most useful for the Instant Client, Administrator, or Runtime installation types.

Oracle provides response file templates for each product and installation type, and for each configuration tool. These files are located in the `client/response` directory on the installation media.
Preparing a Response File

Table A–1 lists the response files provided with Oracle Client.

<table>
<thead>
<tr>
<th>Response File</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>instantclient.rsp</td>
<td>Instant Client installation of Oracle Client</td>
</tr>
<tr>
<td>clientadmin.rsp</td>
<td>Administrator installation of Oracle Client</td>
</tr>
<tr>
<td>clientruntime.rsp</td>
<td>Runtime installation of Oracle Client</td>
</tr>
<tr>
<td>clientcustom.rsp</td>
<td>Custom installation of Oracle Client</td>
</tr>
</tbody>
</table>

To copy and modify a response file:

1. Copy the response file from the response file directory to a directory on your system:

   $ cp /directory_path/response/response_file.rsp local_directory

   In this example, directory_path is the path to the client directory on the installation media. If you have copied the software to a hard drive, then you can edit the file in the response directory if you prefer.

2. Open the response file in a text editor:

   $ vi /local_dir/response_file.rsp

   In addition to editing settings specific to the Oracle Database installation, check that the FROM_LOCATION path is correct and points to the products.xml file in the stage directory in the installation media. You may want to set this variable to point to an absolute path, for example:

   FROM_LOCATION="/directory_path/stage/products.xml"

   Remember that you can specify sensitive information, such as passwords, at the command line rather than within the response file. "How Response Files Work" on page A-1 explains this method.

   **See Also:** Oracle Universal Installer and OPatch User’s Guide for detailed information on creating response files

3. Follow the instructions in the file to edit it.

**Note:** If you copied the software to a hard disk, the response files are located in the Disk1/response directory.
A.3.2 Recording a Response File

You can use Oracle Universal Installer in interactive mode to record a response file, which you can edit and then use to complete silent-mode or suppressed-mode installations. This method is useful for custom or software-only installations.

When you record the response file, you can either complete the installation, or you can exit from Oracle Universal Installer on the Summary page, before it starts to copy the software to the system.

If you use record mode during a noninteractive mode installation, then Oracle Universal Installer records the variable values that were specified in the original source response file into the new response file.

---

**Note:** You cannot use record mode to create a response file during an installation that uses the Basic installation method.

---

To record a response file:

1. Complete the preinstallation tasks listed in Chapter 2.

   When you run Oracle Universal Installer to record a response file, it checks the system to verify that it meets the requirements to install the software. For this reason, Oracle recommends that you complete all of the required preinstallation tasks and record the response file while completing an installation.

2. If you have not installed Oracle software on this system previously, create the oraInst.loc file, as described in the previous section.

3. Ensure that the Oracle software owner user (typically oracle) has permissions to create or write to the Oracle home path that you specify when you run Oracle Universal Installer.

4. To record a response file, enter a command similar to the following to start Oracle Universal Installer:

   ```
   $ /directory_path/runInstaller -record -destinationFile response_filename
   ```

   In this command:
   - `directory_path` is the path of the client directory on the DVD or the path of the Disk1 directory on the hard drive.
   - The `-record` parameter specifies that the responses that you enter in a response file must be recorded.
   - `response_filename` is the full path and file name of the response file that must be recorded.

5. On each Oracle Universal Installer screen, specify the required information.

6. When Oracle Universal Installer displays the Summary screen, perform one of the following actions:
   - Click **Install** to create the response file, then continue with the installation.
■ Click Cancel and then Yes to create the response file but exit from Oracle Universal Installer without installing the software.

The response file is saved in the location that you specified using the 
-destinationFile option.

7. If you do not complete the installation, then delete the Oracle home directory that Oracle Universal Installer created using the path you specified on the Specify File Locations screen.

8. Before using the recorded response file on another system, edit the file and make any required changes.

Use the instructions in the file as a guide when editing it.

A.4 Running Oracle Universal Installer Using a Response File

Now, you are ready to run Oracle Universal Installer at the command line, specifying the response file you created, to perform the installation. The Oracle Universal Installer executable, runInstaller, provides several options. For help information on the full set of these options, run setup.exe with the -help option, for example:

```
$ directory_path/runInstaller -help
```

The help information appears in a window after some time.

To run Oracle Universal using a response file:

1. Complete the preinstallation tasks listed in Chapter 2.

2. Log in as the Oracle software owner user (typically oracle).

3. If you are completing a suppressed-mode installation, set the DISPLAY environment variable.

4. To start Oracle Universal Installer in silent or suppressed mode, enter a command similar to the following:

```
$ /directory_path/runInstaller [-silent] [-noconfig] -responseFile responsefilename
```

In this example:

■ directory_path is the path of the client directory on the DVD or the path of the Disk1 directory on the hard drive.

■ -silent is used to run Oracle Universal Installer in silent mode.

■ -noconfig suppresses running the configuration assistants during installation, and a software-only installation is performed instead.

■ responsefilename is the full path and file name of the installation response file that you configured.

Note: You do not have to set the DISPLAY environment variable if you are completing a silent-mode installation.

Note: Do not specify a relative path to the response file. If you specify a relative path, then Oracle Universal Installer fails.
5. When the installation completes, log in as the root user and run the `root.sh` script:

```
$ su
# /oracle_home_path/root.sh
```
B

Configuring Oracle Database Globalization Support

This appendix describes these Globalization Support topics:

- About NLS_LANG Environment Variable
- Running Oracle Universal Installer in Different Languages

B.1 About NLS_LANG Environment Variable

Oracle provides Globalization Support that enables users to interact with a database in their preferred locale and character set settings. Setting the NLS_LANG environment variable specifies locale behavior for Oracle software. It sets the language and territory used by the client application and the database server. It also sets the character set for entering and displaying data by a client program, such as SQL*Plus.

The NLS_LANG environment variable uses the following format:

NLS_LANG=language_territory.characterset

where:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>language</td>
<td>Specifies the language used for displaying Oracle messages,</td>
</tr>
<tr>
<td></td>
<td>sorting, day names, and month names.</td>
</tr>
<tr>
<td>territory</td>
<td>Specifies the conventions for default date, monetary and</td>
</tr>
<tr>
<td></td>
<td>numeric formats.</td>
</tr>
<tr>
<td>charsetset</td>
<td>Specifies the encoding used by the client application (normally the Oracle character set that corresponds to the character set of the user terminal or the operating system)</td>
</tr>
</tbody>
</table>

The NLS_LANG environment variable is set as a local environment variable for the shell on all UNIX-based platforms. For example, if the operating system locale setting is en_US.UTF-8, then the corresponding NLS_LANG environment variable should be set to AMERICAN_AMERICA.AL32UTF8.

See Also: Oracle Database Globalization Support Guide for information about the NLS_LANG parameter and Globalization Support initialization parameters

The following table lists some valid values for the NLS_LANG environment variable.
Running Oracle Universal Installer in Different Languages

Note: Refer to the operating system specific documentation on how to determine the operating system locale environment setting.

Operating system locale | NLS_LANG values
-------------------------|-----------------------------------------------------------
French (France)          | FRENCH_FRANCE.WE8ISO8859P15, FRENCH_FRANCE.WE8ISO8859P1, FRENCH_FRANCE.WE8MSWIN1252, FRENCH_FRANCE.AL32UTF8

Japanese (Japan)         | JAPANESE_JAPAN.JA16EUC, JAPANESE_JAPAN.JA16SJIS, JAPANESE_JAPAN.AL32UTF8

B.2 Running Oracle Universal Installer in Different Languages

Oracle Universal Installer runs by default in the selected language of your operating system. You can also run Oracle Universal Installer in the following languages:

- Brazilian Portuguese
- German
- Japanese
- Simplified Chinese
- Traditional Chinese
- French
- Italian
- Korean
- Spanish

To run Oracle Universal Installer in a different language, you can use any of the following methods:

- Change the language in which the operating system is running before you run Oracle Universal Installer. You can change the language in which the operating system is running by clicking Language on the Login screen and selecting the required language from the list.

- To run Oracle Universal Installer in another language from the shell prompt, use a command similar to the following after changing to the Disk1 directory (or to the directory that contains the runInstaller file):

  # LANG=language_territory.charset ./runInstaller

  For example, to run Oracle Universal Installer in German, use the following command:

  # LANG=de_DE.UTF-8 ./runInstaller

See Also: Oracle Universal Installer and OPatch User’s Guide for information about running Oracle Universal Installer in different languages.
This appendix contains information about troubleshooting. It includes information about the following topics:

- Verify Requirements
- What to Do If an Installation Error Occurs?
- Reviewing the Log of an Installation Session
- Troubleshooting Configuration Assistants
- Silent-Mode Response File Error Handling
- Cleaning Up After a Failed Installation

C.1 Verify Requirements

Before performing the troubleshooting steps in this appendix, ensure that the system meets the requirements and that you have completed all of the preinstallation tasks specified in Chapter 2.

Read the Release Notes

Read the release notes for the product before installing it. The release notes are available on the Oracle Database 10g disc. The latest version of the release notes is also available on the Oracle Technology Network Web site:

http://www.oracle.com/technology/documentation/

C.2 What to Do If an Installation Error Occurs?

If you encounter an error during installation:

- Do not exit Oracle Universal Installer.
- If you clicked Next after you entered incorrect information on one of the installation screens, click Back to return to the screen and correct the information.
- If you encounter an error while Oracle Universal Installer is copying or linking files, refer to the "Reviewing the Log of an Installation Session" section on page C-2.
- If you encounter an error while a configuration assistant is running, refer to the "Troubleshooting Configuration Assistants" section on page C-2.
- If you cannot resolve the problem, remove the failed installation by following the steps listed in the "Cleaning Up After a Failed Installation" section on page C-4.
C.3 Reviewing the Log of an Installation Session

During an installation, Oracle Universal Installer records all of the actions that it performs in a log file. If you encounter problems during the installation, review the log file for information about possible causes of the problem.

To view the log file, follow these steps:

1. If necessary, enter the following command to determine the location of the oraInventory directory:
   
   ```
   $ cat /var/opt/oracle/oraInst.loc
   ```

   The inventory_loc parameter in this file specifies the location of the oraInventory directory.

2. Enter the following command to change directory to Oracle Universal Installer log file directory, where orainventory_location is the location of the oraInventory directory:
   
   ```
   $ cd /orainventory_location/logs
   ```

3. Enter the following command to determine the name of the log file:
   
   ```
   $ ls -ltr
   ```

   This command lists the files in the order of creation, with the most recent file shown last. Installer log files have names similar to the following, where date_time indicates the date and time that the installation started:

   installActionsdate_time.log

4. To view the most recent entries in the log file, where information about a problem is most likely to appear, enter a command similar to the following:
   
   ```
   $ tail -50 installActionsdate_time.log | more
   ```

   This command displays the last 50 lines in the log file.

5. If the error displayed by Oracle Universal Installer or listed in the log file indicates a relinking problem, refer to the following file for more information:
   
   `$ORACLE_HOME/install/make.log`

C.4 Troubleshooting Configuration Assistants

To troubleshoot an installation error that occurs when a configuration assistant is running:

- Review the installation log files listed in the "Reviewing the Log of an Installation Session" section on page C-2.

- Review the specific configuration assistant log file located in the $ORACLE_HOME/cfgtoollogs directory. Try to fix the issue that caused the error.

- If you see the "Fatal Error. Reinstall" message, look for the cause of the problem by reviewing the log files. Refer to the "Fatal Errors" section on page C-3 for further instructions.
C.4.1 Configuration Assistant Failure

Oracle configuration assistant failures are noted at the bottom of the installation screen. The configuration assistant interface displays additional information, if available. The configuration assistant execution status is stored in the following file:

oraInventory_location/logs/installActionsdate_time.log

The execution status codes are listed in the following table:

<table>
<thead>
<tr>
<th>Status</th>
<th>Result Code</th>
</tr>
</thead>
<tbody>
<tr>
<td>Configuration assistant succeeded</td>
<td>0</td>
</tr>
<tr>
<td>Configuration assistant failed</td>
<td>1</td>
</tr>
<tr>
<td>Configuration assistant cancelled</td>
<td>-1</td>
</tr>
</tbody>
</table>

C.4.2 Fatal Errors

If you receive a fatal error while a configuration assistant is running, you must remove the current installation and reinstall the Oracle software, as follows:

1. Remove the failed installation as described in the "Cleaning Up After a Failed Installation" section on page C-4.
2. Correct the cause of the fatal error.
3. Reinstall the Oracle software.

C.5 Silent-Mode Response File Error Handling

To determine whether a silent-mode installation succeeds or fails, refer to the following log file:

/oraInventory_location/logs/silentInstalldate_time.log

If necessary, refer to the previous section for information about determining the location of the oraInventory directory.

A silent installation fails if:

- You do not specify a response file
- You specify an incorrect or incomplete response file
  
  For example, a common problem is that while all the product-specific data is filled out correctly, the staging area location may be incorrect. If this is the case, check the FROM_LOCATION variable and ensure that it points to the products.xml file in the installation media. In the installation media, this products.xml file is in the response/stage directory.

- Oracle Universal Installer encounters an error, such as insufficient disk space

Oracle Universal Installer or configuration assistant validates the response file at run time. If the validation fails, the silent-mode installation or configuration process ends. Oracle Universal Installer treats values for parameters that are of the wrong context, format, or type as if no value was specified in the file.
C.6 Cleaning Up After a Failed Installation

If an installation fails, you must remove files that Oracle Universal Installer created during the attempted installation and remove the Oracle home directory. Perform the following steps to remove the files:

1. Start Oracle Universal Installer as described in the "Installing the Oracle Client Software" section on page 3-3.

2. Click Deinstall Products on the Welcome window or click Installed Products on any Installer window.
   The Inventory window appears, listing installed products.

3. Select the Oracle home that contains the products to be removed, then click Remove.

4. Manually remove the Oracle home directory created during the failed installation.

5. Reinstall the Oracle software.
Frequently Asked Questions About Installation

Use the following guidelines to decide how to install Oracle Database components:

- Installing Oracle Database or Oracle Database Client
- Installing Oracle Database Tools
- Installing Oracle Database with Oracle Applications

D.1 Installing Oracle Database or Oracle Database Client

- I only need one instance of Oracle Database or I just want to install a test database to get familiar with the product. How do I install Oracle Database for these situations?
- How can I create an Oracle database that can handle transaction-heavy or data warehousing applications?
- What's the best way to install multiple Oracle databases?
- How do I configure client connections to an Oracle database?
- What is the best way to install Oracle Database Client if my client nodes have limited disk space?
- How do I upgrade Oracle Database?
- How do I migrate my non-Oracle databases to Oracle Database?

I only need one instance of Oracle Database or I just want to install a test database to get familiar with the product. How do I install Oracle Database for these situations?

For installation procedures and special requirements, refer to Oracle Database Installation Guide for Apple Mac OS X (Intel).

How can I create an Oracle database that can handle transaction-heavy or data warehousing applications?

If you want to create a starter database designed for transaction-heavy or data warehousing applications, then refer to Oracle Database Installation Guide for Apple Mac OS X (Intel). Select the Advanced Installation method, and then select the database type you want on the Select Database Configuration screen.

See Also: Oracle Database Data Warehousing Guide after installation
Alternatively, you can install Oracle OLAP during the Oracle Database installation. Oracle OLAP provides optimal support for database environments that must meet OLAP requirements. To do so, select Advanced Installation, then Custom, and on the Available Product Components screen, select Oracle OLAP.

See Also:
- Oracle OLAP Application Developer’s Guide
- Oracle OLAP Reference
- Oracle OLAP DML Reference
- Oracle OLAP Java API Reference
- Oracle OLAP Analytic Workspace Java API Reference

What’s the best way to install multiple Oracle databases?
Use Oracle Database Installation Guide for Apple Mac OS X (Intel) to install Oracle Database using either of the following methods:

- Installing with response files: This method lets you run Oracle Universal Installer at a command line using a response file that contains settings specific to each computer.
- Cloning an existing Oracle home: Install Oracle Database in one computer using interactive mode. Afterwards, you can clone its existing Oracle home in each location and then create a new database from there. You can also clone databases, which is described in Oracle Database Administrator’s Guide.

How do I configure client connections to an Oracle database?
1. Install Oracle Database on a server by referring to Oracle Database Installation Guide for Apple Mac OS X (Intel).
2. Refer to Oracle Database Client Installation Guide for Apple Mac OS X (Intel) to install Oracle Database Client on each client node.

If you have many client nodes, consider staging the software centrally, mapping the drive, and running Oracle Universal Installer in noninteractive mode.

What is the best way to install Oracle Database Client if my client nodes have limited disk space?
1. Install Oracle Database onto a server by referring to Oracle Database Installation Guide for Apple Mac OS X (Intel).
2. Refer to Oracle Database Client Installation Guide for Apple Mac OS X (Intel) to install Oracle Database Client on each client node, and select the Instant Client installation type.

If you have many client nodes, then consider running Oracle Universal Installer in noninteractive mode.

How do I upgrade Oracle Database?
Refer to Oracle Database Upgrade Guide.

See Also: Oracle Database Administrator’s Guide if you want to use software cloning to upgrade Oracle Database.
How do I migrate my non-Oracle databases to Oracle Database?
Use Oracle Migration Workbench to migrate your non-Oracle databases and applications to Oracle. Oracle Migration Workbench software and documentation are available at:

D.2 Installing Oracle Database Tools

■ How do I install Oracle Application Server?
■ How can I administer and monitor my Oracle Database products?
■ How do I manage security for my Oracle Database products?
■ Does Oracle Database provide OLAP tools so that I can analyze data such as trends and time series in my database?
■ Does Oracle Database provide data mining tools that I can use to discover hidden meaning in my data and predict likely outcomes based on my data?
■ How do I perform backup and recovery operations for Oracle Database?

How do I install Oracle Application Server?
Refer to Oracle Application Server Installation Guide. How you install Application Server depends on whether you already have Oracle Database installed:

■ If you do not have Oracle Database installed or you do not want Oracle Application Server to use any of your existing Oracle Databases, then Oracle Universal Installer lets you install Oracle Application Server with its own Oracle Database. This database is populated with the metadata that Oracle Application Server needs to run.

■ If you want Oracle Application Server to use an existing Oracle Database, then do the following:
  1. From the Oracle Application Server installation media, run Oracle Application Server Repository Creation Assistant to populate your database with the metadata that Application Server needs.
  2. Install the remaining Oracle Application Server components by following the instructions in the Oracle Application Server Installation Guide.

How can I administer and monitor my Oracle Database products?
To perform regular administrative functions such as creating, configuring, or deleting databases, or managing database templates, use one of the following methods:

To manage only the single database and listener that you are installing:

1. Refer to Oracle Database Installation Guide for Apple Mac OS X (Intel) to install Oracle Database.
2. From Oracle Database, use Database Configuration Assistant to manage your databases.

How do I manage security for my Oracle Database products?
Oracle provides a wide range of security solutions for your enterprise environment, including centralized administration and security features integrated with Oracle Internet Directory. The set of Oracle security services called Oracle Platform Security integrates the security features built into Oracle Database, Oracle Application Server,
and the Oracle Identity Management infrastructure. Combined, these features enable the development and deployment of secure e-business applications.

Oracle Identity Management includes Oracle Internet Directory, a centralized repository that simplifies administration of users and applications in the Oracle environment because of the following components:

- Oracle Internet Directory client tools, including LDAP command-line tools, the Oracle Internet Directory SDK, and Oracle Directory Manager.
- Oracle Internet Directory server components, including the directory server, the directory replication server, the directory integration server, and various tools for starting and stopping them.

Oracle Database includes the Oracle Internet Directory client tools, but not the Oracle Internet Directory server components.

See Also:

- Oracle Application Server Installation Guide (to install Oracle Identity Management)
- Oracle Database Security Guide
- Oracle Database Advanced Security Administrator’s Guide
- Oracle Database Enterprise User Administrator’s Guide
- Oracle Label Security Administrator’s Guide
- Oracle Application Server Security Guide

Does Oracle Database provide OLAP tools so that I can analyze data such as trends and time series in my database?

Yes, install Oracle OLAP, which is provided in the Oracle Database installation. Oracle OLAP provides optimal support for database environments that must meet OLAP requirements.

Use either of the following methods in Oracle Database Installation Guide to install Oracle OLAP:

- Select the Custom installation type, and in the Available Product Components screen, select Oracle OLAP.

See Also:

- Oracle OLAP Application Developer’s Guide
- Oracle OLAP Reference
- Oracle OLAP DML Reference
- Oracle OLAP Java API Reference
- Oracle OLAP Analytic Workspace Java API Reference

- Select the Enterprise Edition installation type, and then on the Select Database Configuration screen, select the Data Warehouse configuration.

See Also: Oracle Database Data Warehousing Guide after installation
Does Oracle Database provide data mining tools that I can use to discover hidden meaning in my data and predict likely outcomes based on my data?
Yes. Install Oracle Data Mining, which is provided in the Oracle Database installation. With the Oracle Data Mining option, you can create and execute predictive and descriptive data mining models that use a variety of algorithms.

Use the following method in Oracle Database Installation Guide for Apple Mac OS X (Intel) to install Oracle Data Mining:

2. On the Select Database Configuration screen, select the General Purpose configuration.

If you want the Database to execute predefined mining models, but not support model creation, install the Data Mining Scoring Engine instead of Oracle Data Mining. Use the following method in Oracle Database Installation Guide to install the Data Mining Scoring Engine:

1. Select the Custom installation type.
2. In the Available Product Components screen, select Data Mining Scoring Engine.

See Also: The following manuals after you have installed Oracle Data Mining:
- Oracle Data Mining Concepts
- Oracle Data Mining Administrator’s Guide
- Oracle Data Mining Application Developer’s Guide
- Oracle Data Mining Java API Reference
- Oracle Database PL/SQL Packages and Types Reference (search for Data Mining”
- Oracle Database SQL Reference (search for Data Mining)

How do I perform backup and recovery operations for Oracle Database?
Use Oracle Database Recovery Manager (RMAN), which is a backup and recovery tool integrated into Oracle Database. This tool satisfies the pressing demands of high-performance, manageable backup, and recovery. Recovery Manager is native to the database server, automatically tracks database structure changes, and optimizes operations accordingly. In addition, Recovery Manager is integrated with leading tape media management products, so that Oracle database backups can be integrated with your existing networked data protection infrastructure.

D.3 Installing Oracle Database with Oracle Applications
- How do I install my Oracle applications with Oracle Database?
- How can I migrate my non-Oracle applications to Oracle?
How do I install my Oracle applications with Oracle Database?
In most cases, install Oracle Database itself, then install the Oracle application. The Oracle Universal Installer for that application prompts you for the connection information. Check the application documentation requirements.

How can I migrate my non-Oracle applications to Oracle?
Use Oracle Migration Workbench to migrate your non-Oracle applications to Oracle. Oracle Migration Workbench software and documentation are available at:
