These Release Notes identify differences between the delivered Oracle Enterprise Manager Management Agent Release 10.2.0.1 product and its documented functionality.

**Note:** To check for updates to this document and view other Oracle documentation, see the Documentation section on the Oracle Technology Network (OTN) Web site:

http://www.oracle.com/technology/documentation/

This document contains the following sections:

- Installation Issues
- Upgrade Issues
- Application Server Instance Status Issues
- Web Cache Management Issues
- Database Management Issues
- Data Guard Management Issues
- Oracle Collaboration Suite Management Issues
- Documentation Issues
- Documentation Accessibility

1 Installation Issues

This section contains issues pertaining to the Management Agent installation.

1.1 Reconfiguring Secured Agents

In the Real Application Clusters (RAC) Agent install scenario, after you reconfigure a secured Management Agent using the "<AGENT_HOME>/bin/agentca -f" script, check its status. Ideally, the Management Agent should have regained its secured status in spite of being reconfigured. However, if the Management Agent is not secured, manually secure it by running this script:

```
<AGENT_HOME>/bin/emctl secure agent <PASSWORD>
```
2 Upgrade Issues
This section contains issues pertaining to Management Agent upgrade.

2.1 portlist.ini in Upgraded Agent Home May Not Contain Complete Information
After the Management Agent is upgraded, the port configurations are retained, and you should keep using the same ports for all the agent functions. The portlist.ini may not contain the complete or correct port numbers.

2.2 Upgrading a Management Agent Will Not Move User-Defined Metrics to New Oracle Home
When the Management Agent is upgraded, a new Oracle Home directory is created for it. Any scripts referenced by OS-based User-Defined Metrics that are located in the 10.1.0.4 Management Agent's Oracle Home directory will not be copied into the newly created Oracle Home directory.

To ensure that OS-based User-Defined Metrics continue to work, the original Oracle Home directory of the 10.1.0.4 Management Agent must not be deleted unless all the User-Defined Metric scripts are copied into a new directory (preferably outside any existing Oracle Home) and the User-Defined Metrics definitions have been updated in the Enterprise Manager Console to reflect the new script locations.

3 Application Server Instance Status Issues
This section contains issues pertaining to the Application Server status.

3.1 "Up Since" Field is Displayed as "Unavailable"
Using Enterprise Manager Grid Control 10.1.0.x (10.1.0.4, 10.1.0.5), if you visit the home page of an OC4J, Oracle HTTP Server, or OracleAS Web Cache target that is being monitored by a 10.2 Management Agent, the "Up Since" value in the General Section will always be "Unavailable".

4 Web Cache Management Issues
This section contains issues pertaining to web cache management.
4.1 Two "Administer" Links on Web Cache Home Page in 10.1.0.4
Enterprise Manager Grid Control

Using Enterprise Manager Grid Control 10.1.0.x (10.1.0.4, 10.1.0.5), if you visit the home page of a 10.1.2 OracleAS Web Cache, there will be two "Administer" links displayed in the Related Links section.

(Bug 4882466)

5 Database Management Issues

This section contains issues pertaining to database management.

5.1 Health Check Metric Error

You may encounter an "Health Check Metric Error" while monitoring the database. (Bug 5113218)

The workaround to resolve this issue is to restart the agent by executing the following commands:

```
emctl stop agent
emctl start agent
```

6 Data Guard Management Issues

This section contains issues pertaining to Data Guard management.

6.1 ORA-16826 When Adding Standby Redo Log Files to a Logical Standby Database

When using the Data Guard Verify Configuration function to add standby redo log files to a logical standby, you may encounter an ORA-16826 warning.

To clear the warning, select the logical standby database in the Data Guard overview page, then click Edit. On the General Properties page, click Reset to clear the warning.

(Bug 4652272)

7 Oracle Collaboration Suite Management Issues

This section contains issues pertaining to Oracle Collaboration Suite (OCS) management.

7.1 Internal Server Error While Configuring Oracle Collaboration Suite Services

You may encounter an internal server error when you define a generic aggregate service (or system target), and add the OCS sub-component service as one of its members. This is because an OCS sub-component service (for example, Email User Access Service, Calendar User Access Service) cannot have multiple parent services associated with it.
To fix this issue, apply ARU patch 8107532 to the Management Service, and then configure the OCS services. To obtain the patch, access the Automated Release Updates (ARU) site at http://aru.us.oracle.com, click Patches, and search for patch request number 8107532.

(Bug 4890876)

### 7.2 Internal Server Error If Component Service Name Contains Multibyte Characters

You may encounter an internal server error when you add a new OCS sub-component service (for example, Email User Access service, Calendar User Access service, and so on) from the Configure Component service page. This may happen if the OCS component service name contains multibyte characters.

To fix this issue, apply ARU patch 8111452 to the Management Service, and then configure the OCS services. To obtain the patch, access the Automated Release Updates (ARU) site at http://aru.us.oracle.com, click Patches, and search for patch request number 8111452.

(Bug 4860550)

### 7.3 Patching Ultrasearch at the Instance Level Not Supported

You cannot patch Ultrasearch at the instance level from Enterprise Manager Grid Control. However, you can still use Enterprise Manager Grid Control to apply Ultrasearch patches at the Oracle Home or host level.

(Bug 4904980)

### 8 Documentation Issues

This section contains all issues pertaining to agent documentation.

#### 8.1 New Licensing Pack Information Unavailable

The help system does not have information about the new licensing packs and plug-ins.

(Bug 4686894)

#### 8.2 Long Initial Load Time for Online Help System

After the Oracle Management Service is started or restarted, it may take a long time for the help browser to display the online help system the first time it is invoked. For all subsequent help use, topics display immediately.

To fix this performance problem, apply ARU patch 8083686 to the Management Service. This patch fixes the problem with help browser performance and provides the full set of online help files. To obtain the patch, access the Automated Release Updates (ARU) site at http://aru.us.oracle.com, click Patches, and search for patch request number 8083686.

(Bug 4865772)
9 Documentation Accessibility

Our goal is to make Oracle products, services, and supporting documentation accessible, with good usability, to the disabled community. To that end, our documentation includes features that make information available to users of assistive technology. This documentation is available in HTML format, and contains markup to facilitate access by the disabled community. Accessibility standards will continue to evolve over time, and Oracle is actively engaged with other market-leading technology vendors to address technical obstacles so that our documentation can be accessible to all of our customers. For more information, visit the Oracle Accessibility Program Web site at http://www.oracle.com/accessibility/.

Accessibility of Code Examples in Documentation

Screen readers may not always correctly read the code examples in this document. The conventions for writing code require that closing braces should appear on an otherwise empty line; however, some screen readers may not always read a line of text that consists solely of a bracket or brace.

Accessibility of Links to External Web Sites in Documentation

This documentation may contain links to Web sites of other companies or organizations that Oracle does not own or control. Oracle neither evaluates nor makes any representations regarding the accessibility of these Web sites.

TTY Access to Oracle Support Services

Oracle provides dedicated Text Telephone (TTY) access to Oracle Support Services within the United States of America 24 hours a day, seven days a week. For TTY support, call 800.446.2398.
