The Programs (which include both the software and documentation) contain proprietary information; they are provided under a license agreement containing restrictions on use and disclosure and are also protected by copyright, patent, and other intellectual and industrial property laws. Reverse engineering, disassembly, or decompilation of the Programs, except to the extent required to obtain interoperability with other independently created software or as specified by law, is prohibited.

The information contained in this document is subject to change without notice. If you find any problems in the documentation, please report them to us in writing. This document is not warranted to be error-free. Except as may be expressly permitted in your license agreement for these Programs, no part of these Programs may be reproduced or transmitted in any form or by any means, electronic or mechanical, for any purpose.

If the Programs are delivered to the United States Government or anyone licensing or using the Programs on behalf of the United States Government, the following notice is applicable:

U.S. GOVERNMENT RIGHTS

Programs, software, databases, and related documentation and technical data delivered to U.S. Government customers are "commercial computer software" or "commercial technical data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the Programs, including documentation and technical data, shall be subject to the licensing restrictions set forth in the applicable Oracle license agreement, and, to the extent applicable, the additional rights set forth in FAR 52.227-19, Commercial Computer Software–Restricted Rights (June 1987). Oracle Corporation, 500 Oracle Parkway, Redwood City, CA 94065.

The Programs are not intended for use in any nuclear, aviation, mass transit, medical, or other inherently dangerous applications. It shall be the licensee's responsibility to take all appropriate fail-safe, backup, redundancy and other measures to ensure the safe use of such applications if the Programs are used for such purposes, and we disclaim liability for any damages caused by such use of the Programs.

The Programs may provide links to Web sites and access to content, products, and services from third parties. Oracle is not responsible for the availability of, or any content provided on, third-party Web sites. You bear all risks associated with the use of such content. If you choose to purchase any products or services from a third party, the relationship is directly between you and the third party. Oracle is not responsible for: (a) the quality of third-party products or services; or (b) fulfilling any of the terms of the agreement with the third party, including delivery of products or services and warranty obligations related to purchased products or services. Oracle is not responsible for any loss or damage of any sort that you may incur from dealing with any third party.

Send Us Your Comments

Oracle iSetup User Guide, Release 11i

Part No. B10695-04

Oracle welcomes customers' comments and suggestions on the quality and usefulness of this document. Your feedback is important, and helps us to best meet your needs as a user of our products. For example:

- Are the implementation steps correct and complete?
- Did you understand the context of the procedures?
- Did you find any errors in the information?
- Does the structure of the information help you with your tasks?
- Do you need different information or graphics? If so, where, and in what format?
- Are the examples correct? Do you need more examples?

If you find any errors or have any other suggestions for improvement, then please tell us your name, the name of the company who has licensed our products, the title and part number of the documentation and the chapter, section, and page number (if available).

Note: Before sending us your comments, you might like to check that you have the latest version of the document and if any concerns are already addressed. To do this, access the new Applications Release Online Documentation CD available on Oracle Metalink and www.oracle.com. It contains the most current Documentation Library plus all documents revised or released recently.

Send your comments to us using the electronic mail address: appsdoc_us@oracle.com

Please give your name, address, electronic mail address, and telephone number (optional).

If you need assistance with Oracle software, then please contact your support representative or Oracle Support Services.

If you require training or instruction in using Oracle software, then please contact your Oracle local office and enquire about our Oracle University offerings. A list of Oracle offices is available on our website at www.oracle.com.

Preface

Intended Audience

Welcome to Release 11i of the *Oracle iSetup User Guide*.

This guide assumes you have a working knowledge of the following:

- The principles and customary practices of your business area.
- Oracle iSetup.
- The Oracle Applications graphical user interface.

To learn more about the Oracle Applications graphical user interface, read the *Oracle Applications User's Guide*.

See Related Documents on page viii for more Oracle Applications product information.

TTY Access to Oracle Support Services

Oracle provides dedicated Text Telephone (TTY) access to Oracle Support Services within the United States of America 24 hours a day, seven days a week. For TTY support, call 800.446.2398.

Documentation Accessibility

Our goal is to make Oracle products, services, and supporting documentation accessible, with good usability, to the disabled community. To that end, our documentation includes features that make information available to users of assistive technology. This documentation is available in HTML format, and contains markup to facilitate access by the disabled community. Accessibility standards will continue to evolve over time, and Oracle is actively engaged with other market-leading technology vendors to address technical obstacles so that our documentation can be accessible to all of our customers. For more information, visit the Oracle Accessibility Program Web site at <http://www.oracle.com/accessibility/>.

Accessibility of Code Examples in Documentation

Screen readers may not always correctly read the code examples in this document. The conventions for writing code require that closing braces should appear on an otherwise empty line; however, some screen readers may not always read a line of text that consists solely of a bracket or brace.

Accessibility of Links to External Web Sites in Documentation

This documentation may contain links to Web sites of other companies or organizations that Oracle does not own or control. Oracle neither evaluates nor makes any representations regarding the accessibility of these Web sites.

Structure

1 Introduction

This chapter gives you an overview of Oracle iSetup. It also gives you a brief introduction to Oracle iSetup's footprint and usage scenarios.

2 Configuring iSetup

This chapter helps you to configure iSetup. It covers the prerequisites for using iSetup and suggestions to tune iSetup for optimal performance.

3 iSetup Home

This chapter talks about information available on the Home screen of Oracle iSetup.

4 Instance Mapping

This chapter helps you to maintain instance mappings. Mapped instances act as the source instance or target instances during migration.

5 Migrations

This chapter helps to create and maintain Selection Sets, Extracts, Transforms and Loads.

6 Reports

This chapter helps you to generate standard or comparison reports. You can generate new reports or view existing reports.

A Selection Set Templates

Oracle iSetup provides you with a set of Selection Set templates. This chapter provides information on these selection sets.

Glossary

Related Documents

Other Information Sources

You can select from many sources of information, including documentation, training, and support services, to increase your knowledge and understanding of Oracle iSetup.

If this guide refers you to other Oracle Applications documentation, use only the Release 11*i* versions of those guides.

Online Documentation

All Oracle Applications documentation is available online (HTML or PDF).

- **PDF Documentation** - See the Online Documentation CD for current PDF documentation for your product with each release. This Documentation CD is also available on *OracleMetaLink* and is updated frequently.
- **Online Help** - You can refer to Oracle Applications Help for current HTML online help for your product. Oracle provides patchable online help, which you can apply

to your system for updated implementation and end user documentation. No system downtime is required to apply online help.

- **Release Content Document** - See the Release Content Document for descriptions of new features available by release. The Release Content Document is available on *OracleMetaLink*.
- **About document** - Refer to the About document for information about your release, including feature updates, installation information, and new documentation or documentation patches that you can download. The About document is available on *OracleMetaLink*.

Related Guides

Oracle iSetup shares business and setup information with other Oracle Applications products. Therefore, you may want to refer to other guides when you set up and use Oracle iSetup.

You can read the guides online by choosing Library from the expandable menu on your HTML help window, by reading from the Oracle Applications Document Library CD included in your media pack, or by using a Web browser with a URL that your system administrator provides.

If you require printed guides, you can purchase them from the Oracle Store at <http://oraclestore.oracle.com>.

Guides Related to All Products

Oracle Applications User's Guide

This guide explains how to enter data, query, run reports, and navigate using the graphical user interface (GUI). This guide also includes information on setting user profiles, as well as running and reviewing reports and concurrent processes.

You can access this user's guide online by choosing "Getting Started with Oracle Applications" from any Oracle Applications help file.

Guides Related to This Product

Oracle XML Database Developer's Guide

This guide describes how to enable the XML DB feature. It also provides information about managing and configuring Oracle XML DB applications.

Oracle Cash Management User Guide

This guide describes how to reconcile bank statements with your outstanding balances, payments, transactions, and receipts. It also provides information about generating cash forecasts and cash positions.

Oracle Assets User Guide

This guide describes how to add, maintain, and retire assets. It also provides information about depreciation, asset accounting, and capital budgeting.

Oracle General Ledger User Guide

This guide explains how to plan and define your chart of accounts, accounting period types and accounting calendar, functional currency, and set of books. It also describes how to define journal entry sources and categories so you can create journal entries for your general ledger. If you use multiple currencies, use this manual when you

define additional rate types, and enter daily rates. This manual also includes complete information on implementing Budgetary Control.

Oracle Payables User Guide

This guide describes how accounts payable transactions are created and entered in Oracle Payables. This guide also contains detailed setup information for Oracle Payables.

Oracle Receivables User Guide

Use this manual to learn about Oracle Receivables invoice processing and invoice formatting, defining customers, creating transactions, importing transactions using AutoInvoice, and defining Automatic Accounting in Oracle Receivables.

Oracle Purchasing User's Guide

This guide describes how to enter and manage the requisitions and purchase orders that relate to your projects.

Oracle Inventory User's Guide

This guide describes how to define items and item information, perform receiving and inventory transactions, maintain cost control, plan items, perform cycle counting and physical inventories, and set up Oracle Inventory.

Oracle Order Management User's Guide

This guide describes how to enter sales orders and returns, copy existing sales orders, schedule orders, release orders, create price lists and discounts for orders, run processes, and create reports.

Oracle Engineering User's Guide

This guide enables your engineers to utilize the features of Oracle Engineering to quickly introduce and manage new designs into production. Specifically, this guide details how to quickly and accurately define the resources, materials and processes necessary to implement changes in product design.

Oracle Bills of Material User's Guide

This guide describes how to create various bills of materials to maximize efficiency, improve quality and lower cost for the most sophisticated manufacturing environments. By detailing integrated product structures and processes, flexible product and process definition, and configuration management, this guide enables you to manage product details within and across multiple manufacturing sites.

Oracle Advanced Pricing User's Guide

This guide describes how to set up and use Oracle Advanced Pricing features such as price lists, modifiers, qualifiers, formulas, multi-currency lists, agreements, archive and purge tools, reports, and concurrent programs.

Oracle Advance Planning Implementation and User's Guide

This guide describes various types of plans and the setup tasks for Oracle Advanced Supply Chain Planning and Oracle Inventory Optimization. How to set up the supply chain, stimulate plan changes, optimize and constrain plans, as well as how to plan in various manufacturing environments are also addressed in this guide.

Oracle Work in Progress User's Guide

This guide describes how Oracle Work in Process provides a complete production management system. Specifically this guide describes how

discrete, repetitive, assemble-to-order, project, flow, and mixed manufacturing environments are supported.

Oracle Enterprise Asset Management User's Guide

This guide discusses how to manage and maintain work orders and maintenance workbench, as well as provides Oracle enterprise Asset Management (eAM) preventive maintenance solution. The eAM's integration with other Oracle products including Oracle Property Management, Cost Management, Project Manufacturing, and Quality are also addressed in this guide.

Oracle Shipping Execution User's Guide

This guide provides information on setting up and using Oracle Shipping.

Oracle Quality User's Guide

This guide describes how Oracle Quality can be used to meet your quality data collection and analysis needs. This guide also explains how Oracle Quality interfaces with other Oracle Manufacturing applications to provide a closed loop quality control system.

Oracle Public Sector Financials (International) User's Guide

This guide extends Oracle Financials functionality and provides the basis for an integrated financial management solution for public sector agencies. It describes relevant features such as budgeting extensions, construction industry scheme, exchange protocol, dossier, and single third party. Additionally, setup steps and procedures are also addressed in this guide.

Oracle Applications User's Guide

This guides explains how to enter data, query and run reports, as well as navigate using the graphical user interface (GUI) available with this release of Oracle iSetup User Guide (and any other Oracle Applications products). This guide also includes information on setting user profiles, as well as running and reviewing reports and concurrent processes.

You can access this user's guide online by choosing "Getting Started with Oracle Applications" from any Oracle Applications help file.

Oracle HRMS Documentation Set

This set of guides explains how to define your employees, so you can give them operating unit and job assignments. It also explains how to set up an organization (operating unit). Even if you do not install Oracle HRMS, you can set up employees and organizations using Oracle HRMS windows. Specifically, the following manuals will help you set up employees and operating units:

Using Oracle HRMS – The Fundamentals. This user guide explains how to set up and use enterprise modeling, organization management, and cost analysis.

Managing People Using Oracle HRMS. Use this guide to find out about entering employees.

Installation and System Administration

Oracle Applications Concepts

This guide provides an introduction to the concepts, features, technology stack, architecture, and terminology for Oracle Applications Release 11i. It provides a useful first book to read before an installation of Oracle Applications. This guide also introduces the concepts behind Applications-wide features such as Business Intelligence (BIS), languages and character sets, and Self-Service Web Applications.

Installing Oracle Applications

This guide provides instructions for managing the installation of Oracle Applications products. In Release 11*i*, much of the installation process is handled using Oracle Rapid Install, which minimizes the time to install Oracle Applications and the Oracle technology stack by automating many of the required steps. This guide contains instructions for using Oracle Rapid Install and lists the tasks you need to perform to finish your installation. You should use this guide in conjunction with individual product user guides and implementation guides.

Upgrading Oracle Applications

Refer to this guide if you are upgrading your Oracle Applications Release 10.7 or Release 11.0 products to Release 11*i*. This guide describes the upgrade process and lists database and product-specific upgrade tasks. You must be either at Release 10.7 (NCA, SmartClient, or character mode) or Release 11.0, to upgrade to Release 11*i*. You cannot upgrade to Release 11*i* directly from releases prior to 10.7.

“About” Document

For information about implementation and user documentation, instructions for applying patches, new and changed setup steps, and descriptions of software updates, refer to the “About” document for your product. “About” documents are available on *OracleMetaLink* for most products starting with Release 11.5.8.

Maintaining Oracle Applications

Use this guide to help you run the various AD utilities, such as AutoUpgrade, Auto Patch, AD Administration, AD Controller, AD Relink, License Manager, and others. It contains how-to steps, screenshots, and other information that you need to run the AD utilities. This guide also provides information on maintaining the Oracle applications file system and database.

Oracle Applications System Administrator's Guide

This guide provides planning and reference information for the Oracle Applications System Administrator. It contains information on how to define security, customize menus and online help, and manage concurrent processing.

Oracle Alert User's Guide

This guide explains how to define periodic and event alerts to monitor the status of your Oracle Applications data.

Oracle Applications Developer's Guide

This guide contains the coding standards followed by the Oracle Applications development staff and describes the Oracle Application Object Library components that are needed to implement the Oracle Applications user interface described in the *Oracle Applications User Interface Standards for Forms-Based Products*. This manual also provides information to help you build your custom Oracle Forms Developer forms so that the forms integrate with Oracle Applications.

Oracle Applications User Interface Standards for Forms-Based Products

This guide contains the user interface (UI) standards followed by the Oracle Applications development staff. It describes the UI for the Oracle Applications products and how to apply this UI to the design of an application built by using Oracle Forms.

Other Implementation Documentation

Oracle Applications Product Update Notes

Use this guide as a reference for upgrading an installation of Oracle Applications. It provides a history of the changes to individual Oracle Applications products between Release 11.0 and Release 11*i*. It includes new features, enhancements, and changes made to database objects, profile options, and seed data for this interval.

Oracle Workflow Administrator's Guide

This guide explains how to complete the setup steps necessary for any Oracle Applications product that includes workflow-enabled processes, as well as how to monitor the progress of runtime workflow processes.

Oracle Workflow Developer's Guide

This guide explains how to define new workflow business processes and customize existing Oracle Applications-embedded workflow processes. It also describes how to define and customize business events and event subscriptions.

Oracle Workflow User's Guide

This guide describes how Oracle Applications users can view and respond to workflow notifications and monitor the progress of their workflow processes.

Oracle Workflow API Reference

This guide describes the APIs provided for developers and administrators to access Oracle Workflow.

Oracle Applications Flexfields Guide

This guide provides flexfields planning, setup and reference information for the Oracle iSetup implementation team, as well as for users responsible for the ongoing maintenance of Oracle Applications product data. This guide also provides information on creating custom reports on flexfields data.

Oracle eTechnical Reference Manuals

Each eTechnical Reference Manual (eTRM) contains database diagrams and a detailed description of database tables, forms, reports, and programs for a specific Oracle Applications product. This information helps you convert data from your existing applications, integrate Oracle Applications data with non-Oracle applications, and write custom reports for Oracle Applications products. Oracle eTRM is available on [OracleMetalink](#)

Training and Support

Training

Oracle offers a complete set of training courses to help you and your staff master Oracle Applications and reach full productivity quickly. These courses are organized into functional learning paths, so you take only those courses appropriate to your job or area of responsibility.

You have a choice of educational environments. You can attend courses offered by Oracle University at any one of our many education centers, you can arrange for our trainers to teach at your facility, or you can use Oracle Learning Network (OLN), Oracle University's online education utility. In addition, Oracle training professionals can tailor standard courses or develop custom courses to meet your needs. For example, you

may want to use your organization structure, terminology, and data as examples in a customized training session delivered at your own facility.

Support

From on-site support to central support, our team of experienced professionals provides the help and information you need to keep Oracle iSetup working for you. This team includes your technical representative, account manager, and Oracle's large staff of consultants and support specialists with expertise in your business area, managing an Oracle server, and your hardware and software environment.

Do Not Use Database Tools to Modify Oracle Applications Data

Oracle **STRONGLY RECOMMENDS** that you never use SQL*Plus, Oracle Data Browser, database triggers, or any other tool to modify Oracle Applications data unless otherwise instructed.

Oracle provides powerful tools you can use to create, store, change, retrieve, and maintain information in an Oracle database. But if you use Oracle tools such as SQL*Plus to modify Oracle Applications data, you risk destroying the integrity of your data and you lose the ability to audit changes to your data.

Because Oracle Applications tables are interrelated, any change you make using an Oracle Applications form can update many tables at once. But when you modify Oracle Applications data using anything other than Oracle Applications, you may change a row in one table without making corresponding changes in related tables. If your tables get out of synchronization with each other, you risk retrieving erroneous information and you risk unpredictable results throughout Oracle Applications.

When you use Oracle Applications to modify your data, Oracle Applications automatically checks that your changes are valid. Oracle Applications also keeps track of who changes information. If you enter information into database tables using database tools, you may store invalid information. You also lose the ability to track who has changed your information because SQL*Plus and other database tools do not keep a record of changes.

Introduction

This chapter gives you an overview of Oracle iSetup. It also gives you a brief introduction to Oracle iSetup's footprint and usage scenarios.

This chapter covers the following topics:

- About Oracle iSetup
- Footprint
- Usage Scenarios

About Oracle iSetup

Oracle iSetup, a data migration and reporting tool, is a part of the Oracle E-Business suite. This tool consists of the Migrator and the Reporter:

- The **Migrator** helps you to migrate data from one instance of the Oracle E-Business suite to another. Following are the steps to migrate data:
 - **Extract** select data from an Oracle E-Business suite instance.
 - **Transform** select attributes of the extracted data objects as per your requirements.
 - **Load** data to the target Oracle E-Business suite instance.
- The **Reporter** helps you to generate reports. You can:
 - Generate reports on the extracted data.
 - Compare two sets of extracted data to identify differences.

Note: Transforming the attributes is an optional step.

Footprint

Currently, iSetup helps to migrate data for the following applications:

- Oracle Application Object Library (AOL)
- Oracle Financials
- Oracle Human Resources Management System
- Oracle Manufacturing

For more details on the areas covered by Oracle iSetup, within these product families, refer to Selection Sets Templates, page A-1

Usage Scenarios

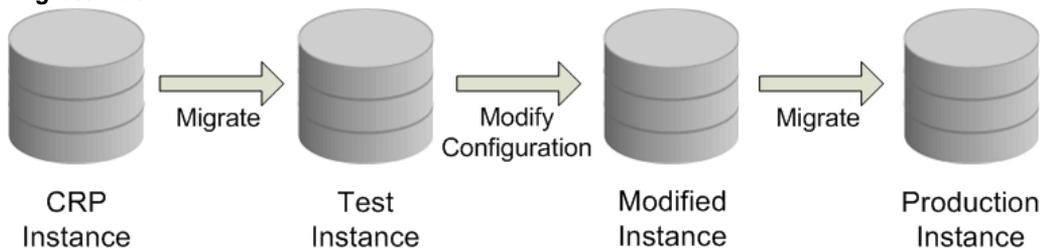

There are many scenarios where Oracle iSetup can be used. Following are some of these:

Migrate Data

The CRP instance is configured and ready for test by the quality team. Now, you need to:

1. Migrate select configuration to the test instance.
2. After testing, modify the configuration in the CRP instance.
3. Migrate the configuration to the production instance.

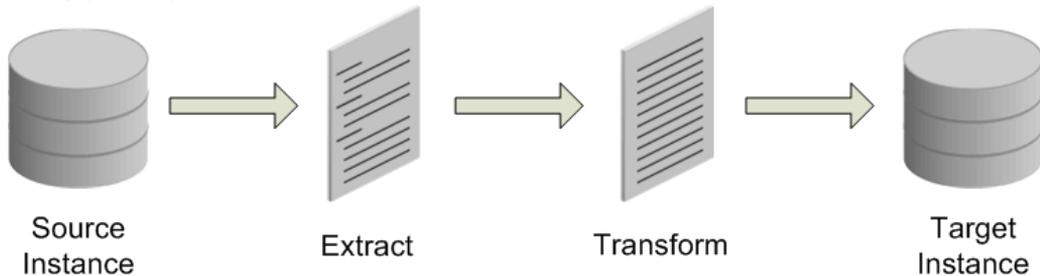

Migrate Data

Transform Data

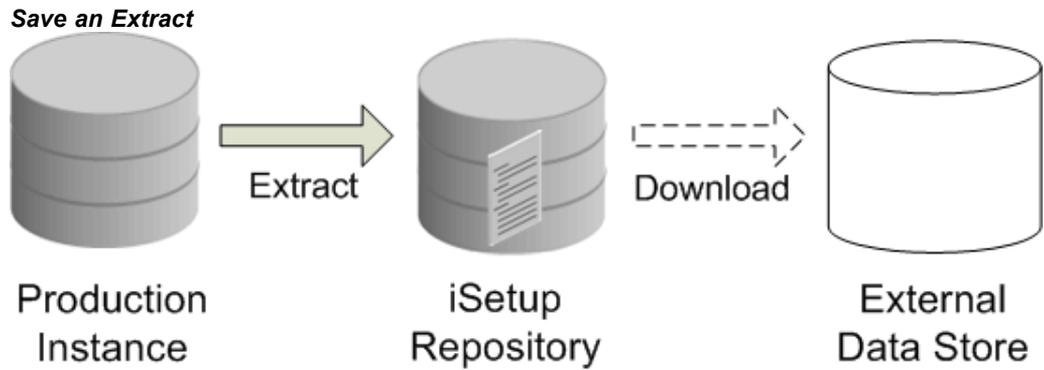

The Test instance is configured. Using Oracle iSetup you have extracted the data. You want to transform select data and load to the target instance. Oracle iSetup helps you to transform the data and load it to the target instance.

Transform Data

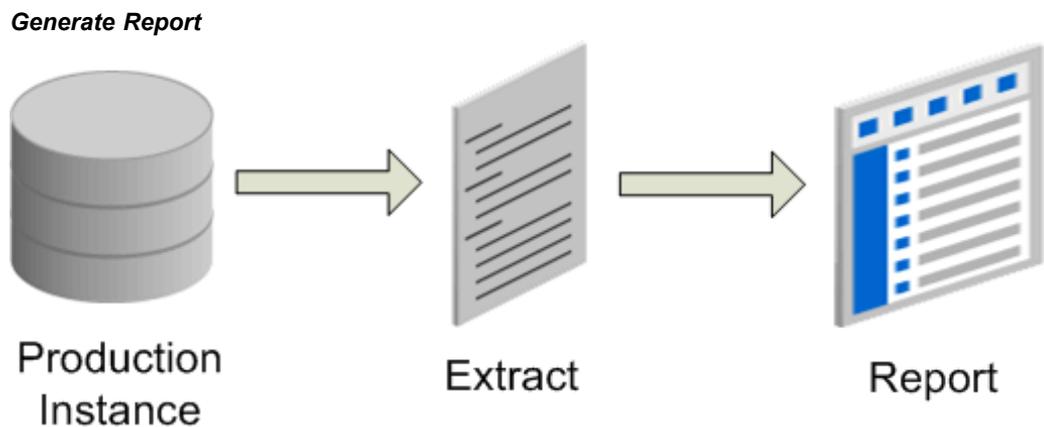

Save Configuration

Extract data from an instance using Oracle iSetup. The extracted data is stored in the Oracle iSetup repository. You can download this data and save it in an external repository.

Report on Current Configuration

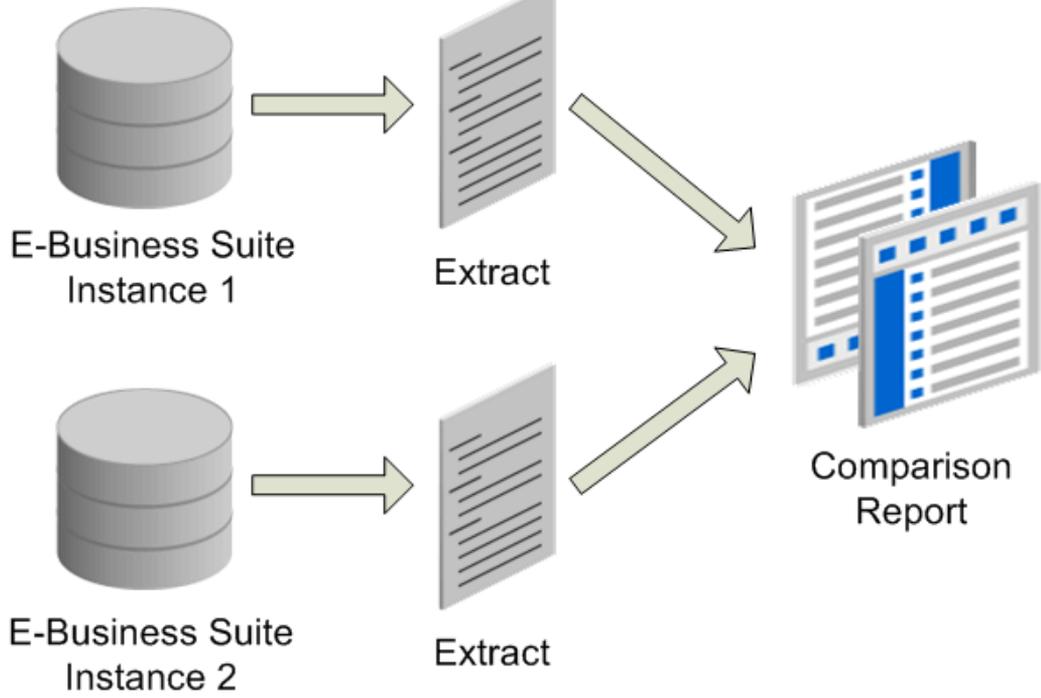

Generate a report on the extracted data available in the Oracle iSetup repository. This report can be viewed online or downloaded in different formats. The report can also, be sent to a functional analyst. The Reporter module enables this functionality.

Comparison Reporting

Compare the differences in data between the production instance and the test instance.

Comparison Report

Configuring iSetup

This chapter helps you to configure iSetup. It covers the prerequisites for using iSetup and suggestions to tune iSetup for optimal performance.

This chapter covers the following topics:

- Prerequisites
- Instance Overview
- Using Oracle iSetup

Prerequisites

Following are the prerequisites for this release of Oracle iSetup:

- The Source, Central and the Target instances must be at the same patch set level. For more information, see Instance Overview, page 2-1.
- The Oracle database version should be 9.2.0.5.0 or later with the 11.i.10 release of the Oracle E-Business suite.
- The XML DB feature must be enabled. For more information on this feature, see Oracle9i XML Database Developer's Guide.

Instance Overview

An instance comprises of one or many applications of the Oracle E-Business suite along with a dedicated Oracle database instance.

Types of Instances

Following are the types of instances that you use while working with Oracle iSetup:

- **Source Instance:** The instance used to extract data.
- **Central Instance:** The instance that hosts the iSetup application and iSetup Repository.
- **Target Instance:** The instance where data is to be loaded.

Note:

- The Central Instance is optional. Oracle iSetup can be run from either the source or the target instance.
- The target instance need not be a fresh install.

Preparing an Instance

Perform the following tasks to prepare an instance of the Oracle E-Business Suite:

1. **Recompile Database Objects**

Check for invalid database objects and recompile if necessary. Invalid objects may cause the load to fail. Contact your System Administrator for more information.

2. **Set Open Cursor Limit**

Set the open cursor limit for your instance to 750. This setting is in the init.ora file for the instance. The default value is 500. If this value is not optimally set, you may encounter an error once the load may exceeds the maximum open cursor limit.

3. **Set Sleep Seconds for the Concurrent Manager**

This setting specifies the time a request remains in the pending status before being picked up by the Concurrent Manager for processing. A high setting, such as 300 seconds, slows down the load or extract process.

1. Navigate to Concurrent>Manager>Define Form.
2. Open the Define Form and query for Standard Manager. Click **Work Shifts** to continue. This takes you to the Workshifts screen.
3. Check the Sleep Seconds setting. It is recommended to set this to 30 seconds or less.

4. **AZ: VO Fetch Size**

This profile option specifies the number of records that Oracle iSetup extracts in a batch, before it writes it to a temporary location on the file system for later use. The profile option is set on the source instance only. The recommended and the maximum value for the option AZ: VO Fetch Size is 100.

5. **AZ: Commit Row Counts**

This profile option specifies the number of records that Oracle iSetup commits to the database on the target instance during load. If the value is high, you require high JVM heap size to avoid an out-of-memory error during load. This profile option is set on the target instance only. It is recommended to set this value to 1000.

6. **AZ: CP Number Of Batches**

This profile option specifies the number of threads that can be launched during extract or load. This profile option is to be set on the source and the target instances. It is recommended to set this value to 5.

Note: This option must be set to 1 when any Manufacturing APIs are used to extract or load.

7. **AZ: Reporter Max Records**

This profile option specifies the number of records that the system would fetch for rendering the online report. The maximum value is 200 and the recommended value is 100.

8. **AZ: Number Of Records For Home Tab** This profile option specifies the number of most recent Extracts, Loads, and Reports to be displayed on the Home screen. It is recommended to set this value to 4.

Using Oracle iSetup

Oracle iSetup is a part of the Oracle E-Business Suite. Hence, you must log in to Oracle E-Business Suite using the self-service login URL.

1. **Log in to Oracle E-Business Suite**

Log in to the Oracle E-Business Suite using your user name and password.

2. **Choose a Responsibility**

The user name you log in with must have the Oracle iSetup responsibility. From the list of responsibilities, select **Oracle iSetup** to access the Oracle iSetup functionality.

3. **Choose Function**

Menu options for this responsibility are:

Home: Takes you to the Home screen of Oracle iSetup. This screen displays the most recent extracts, loads and reports. It also has links to other components of the product.

Migrations: This menu provides links to Selection Sets, Extracts, Transforms, and Loads. Each of these links take you to their respective screens.

Reports: This menu provides links to Standard Reports and Comparison Reports. Clicking on them takes you to the respective screens.

Administration: Instance Mapping under this menu takes you to the Instance Mapping screen.

iSetup Home

This chapter talks about information available on the Home screen of Oracle iSetup.

This chapter covers the following topics:

- Home Page

Home Page

The home page in Oracle iSetup provides you information and lets you reach the required functionality with the least effort.

iSetup Home Page

The screenshot shows the Oracle iSetup Home Page interface. At the top, there are navigation tabs: Home, Migrations, Reports, and Administration. Below the tabs is a search bar with a dropdown menu for 'Selection Sets' and a 'Go' button. To the left of the main content area is a 'Shortcuts' section with links to Instance Mapping, Selection Sets, Extracts, Transforms, Loads, Standard Reports, and Comparison Reports. The main content area is divided into three sections: 'Most Recent Extracts', 'Most Recent Loads', and 'Most Recent Reports'. Each section contains a table with columns for Name, Request ID, Source Instance, Submitted On, Phase, and Status. The 'Most Recent Reports' section also includes sub-tabs for 'Standard Reports' and 'Comparison Reports'.

Name	Request ID	Source Instance	Submitted On	Phase	Status
Gen Fnd	242936	Test	30-Aug-2005 12:26:15	Running	Normal
GL: Accounting Calendars from Prod	2735744	Production	30-Aug-2005 11:20:35	Completed	Normal

Navigation

This screen displays the following:

Most Recent Objects

The Home Page lists the most recent Extracts, Loads and Reports.

- **Most Recent Extracts:** Lists the latest Extracts that you have created. Click Full List for a list of all existing Extracts.

- **Most Recent Loads:** Lists the latest Loads that you have created. Click Full List for a list of all existing Loads.
- **Most Recent Reports:** Lists the latest Reports that you have created. Click Standard Reports for a list of all existing Standard reports. Click Comparison Reports for a list of all existing Comparison reports.

Note: The AZ: Number Of Records For Home Tab profile option specifies the number of records to be displayed for each of the Extracts, Loads, and Reports.

Shortcuts

The Home Page provides shortcuts that help you to quickly reach any of the following components in Oracle iSetup:

- Instance Mapping
- Selection Sets
- Extracts
- Transforms
- Loads
- Standard Reports
- Comparison Reports

Search Panel

The Home Page provides a Search panel that you can use to search for specific objects of the following components:

- Selection Sets
- Extracts
- Transforms
- Loads
- Standard Reports
- Comparison Reports

Others

In addition to these, you can reach the Oracle E-Business suite home, logout of the Oracle E-Business Suite, manage preferences, access help, or perform diagnostics.

Instance Mapping

This chapter helps you to maintain instance mappings. Mapped instances act as the source instance or target instances during migration.

This chapter covers the following topics:

- Overview
- Prerequisites
- Instance Mapping
- Creating an Instance Mapping

Overview

Any instance, that needs to be used as a source or target instance during migration, must be mapped from the central instance.

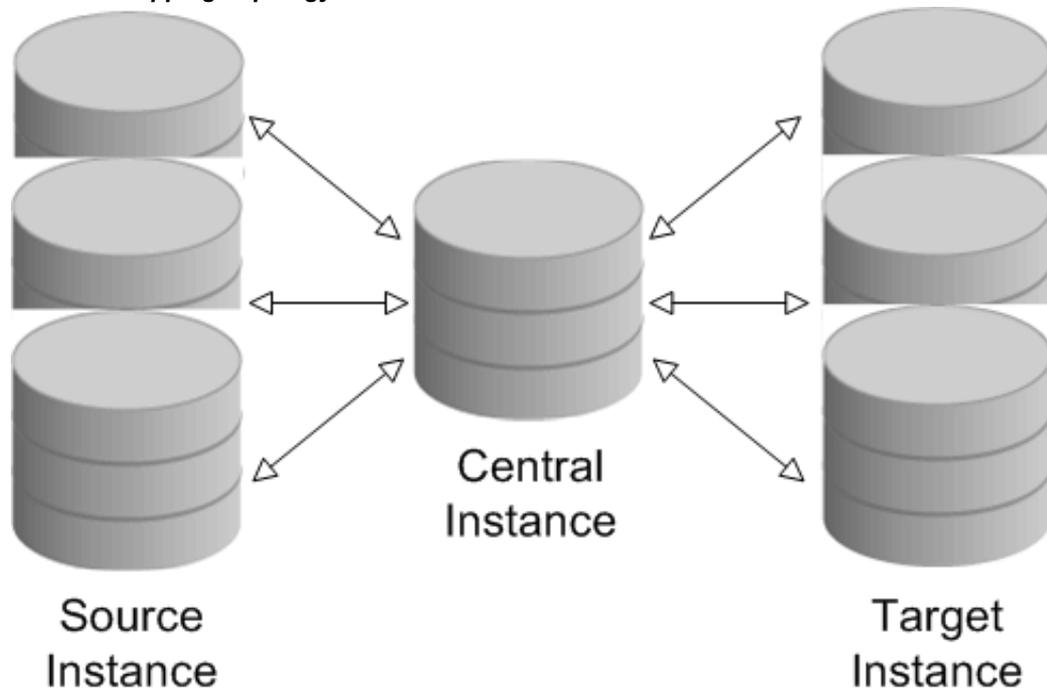

The Administration tab lets you create and maintain instance mappings. These instances appear as a list of values for the source and target instances in the Extracts and the Loads screens.

The DBC file is used to connect to the instance to process any Extract or Load request.

Though Oracle iSetup may be functional on either the source or the target instance, it is recommended to have a central instance from which Oracle iSetup runs. The central instance helps you to monitor all migrations.

The instance mapping topology is shown in the following figure:

Instance Mapping Topology

Prerequisites

Following are the prerequisites for mapping an instance:

- The remote instance must have the Database Configuration (DBC) file for the central instance.
- The central instance must have a DBC file for each remote instance.
- The DBC file name is case-sensitive.
- Each instance to be mapped must have the same, valid user created as that logged into the central instance with the Oracle iSetup responsibility.
- The central, source, and target databases must be enabled to connect with each other. To do that, edit the required parameters in the `$TNS_ADMIN/sqlnet.ora` file.

Note: Map the central instance to use it as a source or a target instance.

Instance Mapping

The Instance Mapping screen displays the instance mappings that are already present. If you have not created any instance mappings, the table would be empty.

Instance Mapping

TIP To establish a mapping you need to place the DBC file of the remote instance you want to map in this instance. Please consult with your System Administrator

Create			
Name 	DBC Filename	Responsibility	Delete
Production	ap649sdb_azmd1.dbc	Oracle iSetup	
Test	azmt3.dbc	Oracle iSetup	

The Instance Mapping table consists of the following columns:

- **Name** Displays the name you specified during instance mapping.
- **DBC Filename** Displays the database file name you have specified.
- **Responsibility** Displays the responsibility used to create the mapping. For all mappings, this must be 'Oracle iSetup responsibility'.

Note:

- At any time, a maximum of 10 records appear in the table.
- You can click on some of the column headers to sort the records.
- By default, the table is sorted on instance name.

To maintain Instance Mappings, you can perform the following actions from this screen:

Create: Click **Create** to create a new instance mapping. This takes you to the Create Instance Mapping screen, page 4-3.

Deleting an Instance Mapping

Click the delete icon to delete an instance mapping. Confirm the delete in the Warning screen. Once a mapping has been deleted, it cannot be used as a source or a target instance for a new migration. Any load process that was not completed cannot be restarted if the target instance has been deleted. It is recommended that you do not delete an instance mapping till all the extract or load processes involving this instance mapping are completed.

Creating an Instance Mapping

Prerequisites: Before you map an instance, ensure that the DBC file for that instance is available in the central instance.

Administration: Create Instance Mapping

ORACLE iSetup

[Home](#) [Logout](#) [Preferences](#) [Help](#) [Diagnostics](#)

[Home](#) [Migrations](#) [Reports](#) [Administration](#)

Create Instance Mapping

* Indicates required field

* Name

* DBC Filename

DBC Filename is case sensitive. Ensure that you enter DBC Filename with the extension .dbc.
For example hostname_sid.dbc

* Responsibility Name

[Home](#) | [Migrations](#) | [Reports](#) | [Administration](#) | [Home](#) | [Logout](#) | [Preferences](#) | [Help](#) | [Diagnostics](#)

[About this Page](#)

[Privacy Statement](#)

Following are the steps to create a new instance mapping:

1. Navigate to the Create Instance Screen

Click **Create** in the Instance Mapping screen. This takes you to the Create Instance Mapping screen.

2. Enter Mapping Parameters

1. Enter a unique instance mapping name. It is used in the source and target instance drop-down boxes on the Extract and Load screens.
2. Enter a DBC file name for mapping.

The DBC filename is case sensitive.

Note: The location of the DBC filename is available in the environment variable FND_SECURE.

3. Select Responsibility

Select the Oracle iSetup responsibility from the list of values.

4. Save New Instance mapping

Click **Apply** to save the new instance mapping. This takes you back to the Administration screen with a confirmation that the instance is mapped.

Note:

- The DBC file is generated as part of the Rapid Install of Oracle Applications
- You can generate the DBC file using the Admin AppServer Tool. The Admin AppServer Tool is a Java utility that you can run from the command line. The Oracle Applications System Administrator's Guide describes how to use this tool.
- For more information on the contents of the DBC file, see Oracle Applications System Administrator's Guide.

Migrations

This chapter helps to create and maintain Selection Sets, Extracts, Transforms and Loads.

This chapter covers the following topics:

- Overview
- Selection Sets
- Extracts
- Transforms
- Loads

Overview

Data migration is a four-step process:

- Create a **Selection Set**
- **Extract** data from the source instance, using the selection sets.
- **Transform** the extracted data, if required. (Optional)
- **Load** the extracted or transformed data to the target instance.

Selection Sets

Selection Sets are the building blocks for the migration process. Oracle iSetup provides a set of templates that you use to create a selection set.

You can Create, Search, Update, Duplicate, or Delete a selection set.

Selection Sets

Selection Sets

Simple Search

Please enter your search criteria and select the "Go" button to see the result. Note that the search is case insensitive.

[Advanced Search](#)

Name

Select Selection Set: |

[About this Page](#)

Following are the steps to set filters:

1. Click the Filter icon. All filterable attributes appear on the screen.
2. You can also search for values to set the filter on. To search, click the Search icon. In the new window, search and select the value you want to filter on. These values are retrieved from the selected source instance.

You can filter on more than one condition and the result is a filter of all the conditions.
3. Click Apply. You are routed back to the Create Selection Set: Set Parameters screen.
6. Click Finish to set the filter.

This takes you to the Selection Set screen with a confirmation that the selection set is created.

Note:

- The Supports Update flag indicates if the data object updates the target data during load.
- Only instances mapped using the Administration > Instance Mapping page are available as source instance during creation of the selection set.
- Some FND objects have predefined filters already set.

Updating a Selection Set

You can change the Source Instance, Description field, or the Filter Criteria for a selection set. However, changing the source instance may invalidate previous filter settings.

Selection Set: Update

Selection Set: Update

* Indicates required field

Name **AZ.G GL: Accounting Calendars**

Source Instance **Test**

Selecting a different source may invalidate filters already set.

Description **AZ.G GL: Accounting Cal**

TIP Below are the objects which form part of the Selection Set selected. You can set the filters for the objects which has the filter icon.

[Expand All](#) | [Collapse All](#)

Focus	Filter	Filter Set	Supports Update
▼ AZ.G GL: Accounting Calendars			
Accounting Calendars			<input checked="" type="checkbox"/>

Duplicating a Selection Set

You can create a copy of a selection set, modify it to suit your business requirement and save it as a new selection set. By using Duplicate, you save the time and effort of creating a new selection set with similar criteria.

Selection Set: Duplicate

Selection Set: Duplicate

* Indicates required field

* Name **Copy of AZ.G GL: Accoun**

Source Instance **Test**

Selecting a different source may invalidate filters already set.

Description **AZ.G GL: Accounting Cal**

7. **Finish:** Click Finish to submit the extract creation process.

This takes you to the Extract screen with a confirmation that the extract is in process.

Uploading an Extract

You can upload an extract. The extract could be one that was stored in an external repository or downloaded from another instance. It is recommended that this extract must be an output of the extract process on an instance that was at the same patch set level as the current central instance. Also, the database character set of both instances must match.

Extract: Upload

ORACLE iSetup

[Home](#) [Logout](#) [Preferences](#) [Help](#) [Diagnostics](#)

[Privacy Statement](#)

To upload an Extract:

1. **Extract Name:** Enter the unique name of the Extract to be uploaded.
2. **File Name:** Browse and select the Extract file.
3. **Description:** Provide informative description about the Extract being uploaded.
4. **Upload:** Click Upload to upload the file.

Once the file is uploaded, it appears in the Migrations: Extracts screen and it can be used to transform or to load to the target instance.

Transforming an Extract

You can submit an Extract for transformation. For more information, see Transforms, page 5-10.

Loading an Extract

You can load an Extract to a target instance. For more information, see Loads, page 5-17.

Reporting from an Extract

You can generate a report on an extract. For more information, see Reports, page 6-1.

Deleting an Extract

You can delete an extract using the delete icon of the Extract record.

Note: Loads and Transforms are dependant on respective Extract records. Deleting an Extract would result in failure in:

- Restarting a Load dependant on that Extract.
- Freezing the Transform dependant on that Extract.

Transforms

You can transform certain attributes of the data objects, that are within the Extract, to suite your business requirements.

Note: All data objects do not support transforms.

Transforms

Simple Search

Please enter your search criteria and select the "Go" button to see the result. Note that the search is case insensitive.

[Advanced Search](#)

Name

Select Transform: |

Following are the steps to freeze a transform:

1. Click on Update icon of the Transform. This takes you to the Update screen of the transform.
2. Click Freeze.

Note:

- You can also unfreeze a frozen Transform from the Update screen. If a Transform is unfrozen and changes are made to it, you cannot restart the dependant Load that was submitted before the Transform was unfrozen.
- Only a transfer with status as complete and normal can be loaded.

Viewing a Transform

To view transformed records, click on the name of the transform in the Migrations: Transforms screen. This takes you to a view page.

Click on the view icon to see the transformed records.

Loading a Transform

You can load a Transform from either the Migrations>Transforms screen or the Transforms details screen of a particular transform.

Note: Only a Frozen transform can be loaded.

Deleting a Transform

Click on the delete icon in the Transforms screen to delete a transform. This takes you to the Warning page where you must confirm the delete. Once you confirm the deletion, you return to the Transforms screen.

Note: If there are any dependant loads that are incomplete, you cannot restart them if you delete the transform.

Loads

You can load an Extract or a frozen Transform to the target instance.

Creating a Load

Click on **Create** in the **Migrations: Loads** screen to create a load. You can also initiate this process by:

- Clicking **Load** from the **Migrations > Extracts** or the **Migrations > Extracts Details** page.
- Clicking **Load** from the **Migrations > Loads** or the **Migrations > Loads Details** page.

Create Load: Set Parameters

Following are the steps to create a Load:

1. **Name:** Enter a unique name for the Load. This is a required field.

2. **Data Source:** Select a data source (an Extract or Transform). To do this, click the search icon. This is a required field.
When Create is initiated from the details screen of the Extract, Transform, Migrations: Extract, or Migrations: Transform, this information is populated automatically.
3. **Target Instance:** Select the Target Instance from the pick list.
4. **Description:** Provide informative description that could help in identifying the Load.
5. **Update Existing:** Select the data objects that you want to overwrite during Load. By default, this is checked for objects that support update.

Note:

- The load is only allowed on extracts that are in Completed phase with the status as Normal.

- A Transform has to be frozen and should be in Completed phase with the status as Normal to initiate a load process.
- Some of the data objects must be updated during load and the update flag would be checked for these data objects by default.
- Some data objects do not support updates.

Restarting a Load

If a load process results in an error, you can restart the load process once the current process ends.

Following are the steps to restart a load:

1. Click on the Load, which resulted in an error, to be restarted in the Migrations: Loads screen.

This takes you to the details screen of the load.

2. Click Restart.

This takes you to the Set Parameters screen where you specify a Name and Description for the load.

Here you have two options:

- To restart from the failed step: Here the application will start running from the API that resulted in an error. You must use this option if you have corrected the reason of the error in the target instance.
- Skip failed step and it's dependencies: Here the application skips the Load for the data object that resulted in an error and it's dependent data objects.

3. Click Continue.

This takes you to the Schedule screen where you can schedule the Load.

Deleting a Load

Click on the delete icon in the Loads screen to delete a load. This takes you to the Warning page where you must confirm the delete. Once you confirm the deletion, you return to the Loads screen.

This chapter helps you to generate standard or comparison reports. You can generate new reports or view existing reports.

This chapter covers the following topics:

- Standard Reports
- Comparison Reports

Standard Reports

Standard reports are generated from a single Extract.

Standard Reports

The screenshot shows the Oracle iSetup interface for the Reports section. At the top, there are navigation links: Home, Logout, Preferences, Help, and Diagnostics. Below these are tabs for Home, Migrations, Reports (selected), and Administration. A sub-tab bar shows Standard (selected) and Comparison. The main heading is 'Standard Reports'. There is a 'Simple Search' section with a text input field for 'Name', 'Go' and 'Clear' buttons, and an 'Advanced Search' button. Below the search is a 'Create' button and a table of reports.

Name	Request ID	Data Source	Source Instance	Submitted On	Phase	Status	Delete	Download
AZ G AP: Suppliers Report	242929	AZ G AP: Suppliers Extract	Test	30-Aug-2005 11:08:30	Completed	Normal		None
Accounting Calendars Report	242928	Accounting Calendars Extract	Test	30-Aug-2005 11:07:42	Completed	Normal		242928.zip
General Foundation Standard Report	242879	Gen Foundation	Test	29-Aug-2005 17:24:31	Running	Normal		PDF
ProdFoundation Report from test	242715	Prod Foundation	Test	26-Aug-2005 17:39:50	Completed	Normal		242715.zip

At the bottom of the page, there are footer links: Home | Migrations | Reports | Administration | Home | Logout | Preferences | Help | Diagnostics. Copyright 2000-2005 Oracle Corporation. All rights reserved. About this Page. Privacy Statement.

Search for a Standard Report

Following are the steps to create a Standard Report:

1. **Name:** Enter a unique name for the report. This is a required field.
2. **Data Source:** Select a Data Source for the report. To do this, click the search icon and select the required Extract. This is a required field.
 - Note:** The extract must have Phase as Completed and Status as Normal. When Create is initiated from the Migrations>Extracts screen or the Migrations>Extract Details screen, this information will be populated.
 - Reporting is only allowed on Extracts that are in Completed phase with the status as Normal.
 - The Data Source is automatically populated in case the process is initiated from the Migrations > Extracts or Migrations > Extracts Details page.
3. **Downloadable Report Format:** To download a report, select the format in which you want the report. You can generate the report as a .PDF, .RTF or as a spreadsheet.
4. Click Next. Based on the snapshot you have selected, you get a list of objects that are a part of the data source. Select the objects that you want to generate the report on. You must select at least one object.

- Finish:** Click Finish to submit the report creation process.

This takes you to the Standard Reports screen with a confirmation of creating a standard report.

Viewing a Standard Report

Click on the report name to view the details of a report.

This view displays the data objects that were part of the data source. The view icon is enabled only for the objects that were selected for the report.

During such time that the report is being generated, the view icon may be disabled for some of the objects. This view also displays the number of records contained in each data object.

Refresh: Refresh the page to get the current status. The Refresh button appears as long as the status of the report is not Complete.

View Log: Click on View Log to see the log generated during the generation of this report.

Further, you can view the list of records that comprise each object and the contents of each record. Click on the View icon of the object for which you want to see the contents. A list of records appears.

Note: The online report retrieves records based on the profile option AZ: Reporter Max Records, which can be set to a maximum of 200. To restrict your search use the search filters available on the report details page.

Click Printable Page for a print version of the Standard Report.

Downloading a Standard Report

If you had specified a download format for the report, a zip file containing the report is available on the Reports: Standard screen. Click the Download link for the required report.

Note:

- Download would be available if:
 - A download format was specified during creation of a Standard Report.
 - Report is generated without any errors and the Phase is Complete and the Status is Normal.
- Download file name is the report Request ID and is generated by the system.

The downloaded zip file contains the following files and folders:

- **File: index.html** - This file contains details of the request such as the report name, date of submission, data source name. It also contains details of the hierarchy of objects in the selection set with the number of records for that data object. The View Detail icon takes you to the report for the data object.
- **Folder: Publishedfiles** - This folder contains the different object reports.
- **Folder: index_files** - This folder contains images that appear in the index.html file.

Once you have downloaded the report, you need to extract the contents to a folder. Open the index.html file to access the report.

Note: It is recommended to navigate to the reports through the links in the index.html file.

Deleting a Standard Report

Click on the delete icon in the Standard Reports screen to delete a report. This takes you to the Warning page where you must confirm the delete. Once you confirm the deletion, you return to the Standard Reports screen.

Comparison Reports

A comparison report is generated from two Extracts. You can create a new comparison report or view an existing comparison report.

Viewing a Comparison Report

Click on the report name to view the details of a report.

This displays the objects that form the report and the number of records that are different for each of the data objects.

Refresh: Refresh the page to get the current status. The Refresh button appears as long as the status of the report is not Complete.

View Log: Click on View Log to see the log generated during the generation of this report.

To view records or differences, click on the View icon. To display records with differences only, check the Show only differences check box.

Click the object name to view the contents of the object. A comparison view of the contents of the primary data source and secondary data source appears.

Legends

Legend	Description
	Record only available in the Primary Data Source.
	Record only available in the Secondary Data Source.
	Record is present in the Primary and the Secondary Data Source, but has differences in some attributes.
	The attribute that is different for a record, which is present in the Primary and the Secondary Data Source.

Attribute differences are identified with the not equal to icon in the Different column.

Click Printable Page for a print version of the Comparison Report.

Downloading a Comparison Report

If you had specified a downloadable format for the report, a .zip file containing the report is available on the Reports>Comparison screen. Click the Download link for the required report. You can also initiate the download from the Comparison Report details screen.

Note:

1. Download would be available if:
 - A download format was specified during creation of a Comparison Report.
 - Report is generated without any errors and the Phase is Complete and the Status is Normal.
2. Download file name is the report Request ID and is generated by the system.

The downloaded zip file contains the following files and folders:

- File: index.html - This file contains details of the request such as the report name, date of submission, data source name. It contains the details of the hierarchy of data objects as in the selectionset of the Primary Data Source and the number of records that are different for those common data objects, which were selected for reporting. The View Detail icon takes you to the report for the data object.
- Folder: Publishedfiles - This folder contains the different object reports.

- Folder: index_files - This folder contains images that appear in the index.html file.

Once you have downloaded the report, you need to extract the contents to a folder. Open the index.html file to access the report.

Deleting a Comparison Report

Click on the delete icon in the Comparison Reports screen to delete a report. This takes you to the Warning page where you must confirm the delete. Once you confirm the deletion, you return to the Comparison Reports screen.

Selection Set Templates

Oracle iSetup provides you with a set of Selection Set templates. This chapter provides information on these selection sets.

This appendix covers the following topics:

- Generic Selection Sets
- Operational Data Selection Sets
- Independent Selection Sets

Generic Selection Sets

These selection sets are recommended for use when the entire module set up needs to be migrated.

1. General Foundation

This selection set is the base foundation for all other selection sets and helps in the migration of the AOL foundation setups.

Prerequisites: None

Following is a list of data objects and their parameters of the General Foundation selection set.

General Foundation Selection Set

Data Object	Filterable	Transformable	Updateable
<i>General Foundation</i>			
Lookups	N	N	Y
Printers	N	N	Y
Request Groups	N	N	Y
Menus	N	N	Y
Responsibilities	N	N	Y
Users	N	N	Y
Key Flexfields	N	N	Y
Descriptive Flexfields	N	N	Y
Compile All Flexfields	N	N	Y
Value Set Values	N	N	Y
Document Sequences	N	N	Y
Document Sequence Categories	N	N	Y

2. Product Foundation

This selection set should be used to migrate the Product Foundation data covering:

- Financials Foundation
- HRMS Foundation
- Manufacturing foundation
- General Foundation (Profile Options)

This selection set should be used to migrate data prior to using any of the other selection sets, as all other setups are dependant on data migrated by this selection set.

Prerequisites: General Foundation

Following is a list of data objects and their parameters of the Product Foundation selection set.

Product Foundation Selection Set

Data Object	Filterable	Transformable	Updateable
Financial Foundation			
Chart of Accounts	N	N	Y
Accounting Calendars	N	N	Y
Currencies	N	N	Y
Set of Books	N	N	Y
HRMS Foundation			
Locations	N	N	Y
Business Groups	N	N	Y
Enable Multiple Security Groups	N	N	Y
Legal Entities	N	N	Y
Operating Units	N	N	Y
Convert to Multi-Org Concurrent Program	N	N	Y
Organizations	N	N	Y
Manufacturing Foundation			
Unit of Measure, Conversions, and Classes	N	N	N
Carriers, Methods, Carrier-ModeServ, Carrier-Org	N	N	N
General Foundation			
Profile Options	N	N	Y

3. Financials

This selection set helps migrate the Financial setup data. It covers the following modules:

- General Ledger
- Accounts Payables
- Accounts Receivables
- Fixed Assets
- Cash Management
- Oracle Credit Management
- Public Sector Financials

Prerequisites:

- General Foundation

- Product Foundation

Following is a list of data objects and their parameters of the Financials selection set.

Financials Selection Set

Data Object	Filterable	Transformable	Updateable
<i>General Ledger</i>			
Code Combination	N	N	Y
Journal Reversal Criteria	N	N	Y
Conversion Rate Types	N	N	Y
Period Rates	N	N	Y
Summary Templates	N	N	Y
Encumbrance Types	N	N	Y
Budgets	N	N	Y
Budget Organizations	N	N	Y
Statistical Units of Measure	N	N	Y
<i>Accounts Payable</i>			
Financials Options	N	N	Y
Payables Options	N	N	Y
Payment Formats	N	N	Y
Payables Payment Terms	N	N	Y
Special Calendars	N	N	Y
Aging Periods	N	N	Y
Distribution Sets	N	N	Y
Invoice Tolerances	N	N	Y
Invoice Approvals	N	N	Y
Payables Tax Codes	N	N	Y
Withholding Tax	N	N	Y
Tax Authority Suppliers	N	N	Y
Reporting Entities	N	N	Y
Expense Templates	N	N	Y
Banks and Bank Accounts	N	N	Y
<i>Accounts Receivable</i>			
Receivables System Options	N	N	Y

Data Object	Filterable	Transformable	Updateable
Receivables Payment Terms	N	N	N
Receivables Transaction Types	N	N	Y
Transaction Sources	N	N	Y
Memo Lines	N	N	Y
Auto Accounting	N	N	Y
Approval User Limits	N	N	Y
Receivables Territories	N	N	Y
Receivables Activities	N	N	Y
Invoice Grouping Rules	N	N	Y
Invoicing Rules	N	N	Y
Line Ordering Rules	N	N	Y
Auto Cash Rule Sets	N	N	Y
Receipt Sources	N	N	Y
Receipt Classes and Methods	N	N	Y
Collectors	N	N	Y
Customer Profile Classes	N	N	Y
Remit To Addresses	N	N	Y
Statement Cycles	N	N	Y
Receivables Tax Codes and Rates	N	N	Y
Tax Exemptions	N	N	Y
Aging Buckets	N	N	Y
<i>Fixed Assets</i>			
Asset System Controls	N	N	Y
Asset Quick Codes	N	N	Y
Asset Locations	N	N	Y
Asset Keywords	N	N	Y
Asset Depreciation Calendars	N	N	Y
Fiscal Years	N	N	Y
Asset Prorate Conventions	N	N	Y
Asset Book Controls	N	N	Y
Asset Categories	N	N	Y

Data Object	Filterable	Transformable	Updateable
<i>Cash Management</i>			
Cash Management System Parameters	N	N	Y
Transaction Codes	N	N	Y
<i>Oracle Credit Management</i>			
Credit Management Setup Options	N	Y	Y
Credit Management Scores	N	Y	N
Credit Management Check Lists	N	Y	Y
Credit Management Auto Rules	N	Y	N
<i>Public Sector Financials</i>			
Budgetary Control Groups	N	N	Y
Transaction Codes	N	N	Y

4. Discrete Manufacturing and Distribution Setups

This selection set helps to migrate the Discrete Manufacturing setup data.

Prerequisites:

- General Foundation
- Product Foundation
- Financials
- HRMS - Employees

Following is a list of data objects and their parameters of the Discrete Manufacturing and Distribution Setups selection set.

Discrete Manufacturing and Distribution Setups Selection Set

Data Objects	Filterable	Transformable	Updateable
<i>Foundation</i>			
Profile Options	N	N	Y
<i>Inventory</i>			
Inventory FlexFields	N	N	N

5. **Human Resources: Organization Structure**

This selection set is used to migrate the Organization Structure data and certain HR setup data related to the structure.

Prerequisites:

- General Foundation
- Product Foundation

Following is a list of data objects and their parameters of the Human Resources: Organization Structure selection set.

Human Resources: Organization Structure Selection Set

Data Object	Filterable	Transformable	Updateable
<i>HR Organization Structure Setups</i>			
Locations	Y	N	Y
Business Groups	Y	N	Y
Legal Entities	Y	N	Y
Operating Units	Y	N	Y
Organizations	Y	N	Y
Organization Structure Versions	Y	N	Y
Organization Structures	Y	N	Y
Organization Structure Elements (Hierarchies)	Y	N	Y
Job Groups	Y	N	Y
Jobs	Y	N	Y
Grades	Y	N	Y
Position Structures	Y	N	Y
Position Structure Elements (Hierarchies)	Y	N	Y
Position Structure Versions	Y	N	Y
Positions	Y	N	Y
Payrolls	Y	N	N

Operational Data Selection Sets

These selection sets help migrate operational data. These selection sets can also be used for rollouts or incremental set ups.

1. Accounts Payable: Suppliers

This selection set is used to migrate Supplier data. It helps migrate supplier details along with their site information.

Prerequisites:

- General Foundation
- Product Foundation
- Financials

Following is a list of data objects and their parameters of the Accounts Payable: Suppliers selection set.

Accounts Payable: Suppliers Selection Set

Data Object	Filterable	Transformable	Updateable
Suppliers	Y	Y	Y

2. **Accounts Receivables: Customers**

This selection set is used to migrate customer data.

Prerequisites:

- General Foundation
- Product Foundation
- Financials

Following is a list of data objects and their parameters of the Accounts Receivables: Customers selection set.

Accounts Receivables: Customers Selection Set

Data Object	Filterable	Transformable	Updateable
Customers	Y	N	N

3. **Accounts Receivables: Tax Codes and Rates**

This selection set helps migrate tax codes and rates.

Prerequisites:

- General Foundation
- Product Foundation
- Financials

Following is a list of data objects and their parameters of the Accounts Receivables: Tax Codes and Rates selection set.

Accounts Receivables: Tax Codes and Rates Selection Set

Data Object	Filterable	Transformable	Updateable
Receivables Tax Codes and Rates	Y	N	Y

4. **Human Resources: Employees**

This selection set helps migrate employee data.

Prerequisites:

- General Foundation
- Product Foundation
- Financials
- Organization Structure

Following is a list of data objects and their parameters of the Human Resources: Employees selection set.

Human Resources: Employees Selection Set

Data Object	Filterable	Transformable	Updateable
Employees	Y	N	N

Independent Selection Sets

These selection sets are recommended for use during rollouts or incremental setups.

1. General Ledger - Set of Books

This selection set helps migrate the Set of Books. It is recommended to use this selection set when a new Set of Books must be migrated and the target instance contains a previous setup with Foundation data.

Prerequisites:

- General Foundation
- Product Foundation

Following is a list of data objects and their parameters of the General Ledger - Set of Books selection set.

General Ledger - Set of Books Selection Set

Data Object	Filterable	Transformable	Updateable
Set of Books	Y	N	Y

2. General Ledger - Chart of Accounts

This selection set helps migrate the Chart of Accounts. It is recommended to use this selection set when a new Chart of Accounts must be migrated and the target instance contains a previous setup with Foundation data.

Prerequisites:

- General Foundation
- Product Foundation

Following is a list of data objects and their parameters of the General Ledger - Chart of Accounts selection set.

General Ledger - Chart of Accounts Selection Set

Data Object	Filterable	Transformable	Updateable
Chart Of Accounts	Y	N	Y

3. General Ledger - Calendar

This selection set helps migrate the GL Calendar setup. It is recommended to use this selection set when a new Calendar data must be migrated and the target instance contains a previous setup with Foundation data.

Prerequisites:

- General Foundation
- Product Foundation

Following is a list of data objects and their parameters of the General Ledger - Calendar selection set.

General Ledger - Calendar Selection Set

Data Object	Filterable	Transformable	Updateable
Accounting Calendars	Y	Y	Y

4. **General Ledger - Currencies**

This selection set helps migrate the Currencies setup. It is recommended to use this selection set when new Currencies data must be migrated and the target instance contains a previous setup with Foundation data.

Prerequisites:

- General Foundation
- Product Foundation

Following is a list of data objects and their parameters of the General Ledger - Currencies selection set.

General Ledger - Currencies Selection Set

Data Object	Filterable	Transformable	Updateable
Currencies	Y	N	Y

5. **General Ledger - Daily Rates**

This selection set helps migrate the Daily Rates data.

Prerequisites:

- General Foundation
- Product Foundation

Following is a list of data objects and their parameters of the General Ledger - Daily Rates selection set.

General Ledger - Daily Rates Selection Set

Data Object	Filterable	Transformable	Updateable
Daily Rates	Y	N	Y

6. Financials: Financials (OU Level)

This selection set helps migrate financial data pertaining to a particular Operating Unit.

Prerequisites:

- General Foundation
- Product Foundation

Following is a list of data objects and their parameters of the Financials: Financials (OU Level) selection set.

Financials: Financials (OU Level) Selection Set

Data Object	Filterable	Transformable	Updateable
<i>Financials Operating Unit Level Setups</i>			
Operating Units	Y	N	Y
Reporting Entities	N	N	Y
Financials Options	N	N	Y
Distribution Sets	N	N	Y
Invoice Tolerances	N	N	Y
Payables Options	N	N	Y
Tax Exemptions	N	N	Y
Memo Lines	N	N	Y
Remit To Addresses	N	N	Y
Auto Accounting	N	N	Y
Receipt Classes and Methods	N	N	Y
Receipt Sources	N	N	Y
Receivables Activities	N	N	Y
Receivables System Options	N	N	Y
Receivables Transaction Types	N	N	Y
Receivables Tax Codes and Rates	N	N	Y
Transaction Sources	N	N	Y
Cash Management System Parameters	N	N	Y
Inventory Organizations	N	N	Y
Expense Templates	N	N	Y
All Profile Options	N	N	Y
Payables Tax Codes	N	N	Y

7. Profile Options

This selection set helps migrate the Profile Options.

Prerequisites:

- General Foundation
- Product Foundation

Following is a list of data objects and their parameters of the Profile Options selection set.

Profile Options Selection Set

Data Object	Filterable	Transformable	Updateable
Profile Options	N	N	Y

Glossary

Central Instance

This is an instance of the Oracle E-Business Suite where Oracle iSetup is running. However, this is optional since Oracle iSetup can be run from the source or the target instance.

Data Source

The source of setup data that you want to load or report on. The Data Source can be an extracted or a transformed snapshot.

Instance Mapping

The process of mapping instances for use as source or target instances during the extract or load process. Mapping an instance entails defining and maintaining instance Name, a DBC Filename, and an Oracle Applications Responsibility.

DBC File

Before creating an instance mapping, you must have a DBC (Database Connectivity) File created for instance that you want to map to.

Extract

The process of extracting data from the source instance. This results in an extracted snapshot.

Filter

Used to restrict or refine the selection of specific data from an instance during extract.

Instance Name

A logical name given to the instance you create during instance mapping. This Instance Name is used as the source or target instance in the Migrator user interface.

Load

The process of loading extracted or transformed data from a snapshot to a target instance.

Migrator

Migrator lets you migrate data between different instances of the Oracle E-Business Suite. The iSetup Migrator migrates data by extracting data from source, transforming data - if required, and loading data to the target instance.

Reporter

Reporter gives you the capability to create single snapshot report or report to compare snapshots.

Responsibility

Oracle Applications Responsibility that is used to access the Concurrent Manager in the source or target instances for extract and load, respectively.

Restart Load

The process of restarting a failed load process. The load process could fail due to invalid objects in your system or an improperly configured environment. When the Load fails, you can fix the problem and restart the processes from the user interface. The Load process can restart from where it failed or can skip the failed object and its dependencies and restart from the next object.

Selection Set

A Selection Set is a logically grouped set of objects. You can set filters on some of these objects as part of your selection set definition.

Selection Set Template

Oracle iSetup provides you with a set of Selection Set Templates. They are the starting point to create a Selection Set.

Setup Object

A setup entity or API that contains logic to extract or load setup data for a given entity, such as a Set of Books.

Snapshot

A Snapshot contains data that is either extracted from a source instance or transformed and ready to be loaded to the target instance.

Source Instance

This is the instance of the Oracle E-Business Suite that is the source of data to be migrated. You extract data from this instance.

Target Instance

This is the instance of the Oracle E-Business Suite that is the target where data must be migrated. You load extracted or transformed data to this instance.

Transform

Prior to loading data to the target instance, you can specify a new value (i.e. a new name or a new parent object) for certain attributes of the object you are loading. The changes made on the object's attributes will cascade to all referenced objects.

Update Existing (During Load) Flag

Flag used upon loading to determine whether or not the object should be overwritten if the same object value already exists in the target instance.
