Customer Support

Customer Support hours:

Customer Support is available 7x24x365 via e-mail, phone and Web access.

Depending on the Support option chosen by a particular client (Standard, Plus, or Premium), the times that certain services are delivered may be restricted. Severity 1 (Critical) issues are addressed on a 7x24 basis and receive continuous attention until resolved, for all clients on active maintenance.

When contacting Customer Support, please provide:

- Product version and program/module name.
- Functional and technical description of the problem (include business impact).
- Detailed step by step instructions to recreate.
- Exact error message received.
- Screen shots of each step you take.

Retek Merchandise System (RMS)

Functional enhancements

RMS 10.1 includes the following functional enhancements.

Differentiators

The RMS 10.0 Item dialog allowed for up to two Differentiators (Diffs) to be attached to an item and multiple Diff Components underneath each Diff. To simplify the functionality and integration of the Diff structure, RMS 10.1 has been enhanced to support up to four Diffs per items. The Diff Component functionality has been removed and the expanded four Diffs functionality now supports this business function for items that require more than two Diffs. This change has been implemented in the item dialog and all related modules that reference items and Diffs.

VAT inclusive/exclusive of retail price option

In RMS 10.0, when a retailer used VAT, it was always included in the retail price across RMS and in the download to point of sale. The retailer had the option of determining whether VAT was included in the price uploaded from point of sale. RMS 10.1 has been enhanced to allow the retailer to select whether VAT should be included in or excluded from the retail price. This indicator, which can be set at the system level or system/class level, determines VAT inclusion/exclusion throughout RMS and in the download to and upload from point of sale.

Financial integration support

The RIB has been introduced in Retek 10.0 and this tool will now be leveraged in the integration with financial applications (that is, Oracle) for RMS 10.1. RMS 10.1 includes the necessary integration mapping enhancements to accept and feed the financial information required for the financial interface.

Retek Sales Audit (ReSA)

Technical upgrades

Two columns, day and store, have been added to many of the transaction and total related tables in the database to facilitate the partitioning of the data for performance and scalability.

Retek Invoice Matching (ReIM)

ReIM 10.1 will be a patch to ReIM 10.0 to support changes made for RMS 10.1.

Functional enhancement

Differentiators

The Invoice Match form (invitmch.fmb) in ReIM 10.1 reflects the revised item differentiator structure changes made for RMS 10.1.
