ORACLE®

Oracle® Retail Merchandising System Release Notes, Release 10.1.19

Preface

A Release Notes document can include some or all of the following sections, depending upon the release:

- Overview of the release
- Functional, technical, integration, and performance enhancements
- Assumptions
- Fixed defects
- Known issues

Because of their brevity, Release Notes do not include chapters, appendixes, or a table of contents.

Audience

Release Notes are a critical communication link between Oracle Retail and its retailer clients. There are four general audiences for whom a Release Notes document is written:

- Retail clients who want to understand the contents of this release
- Integrators and implementation staff who have the overall responsibility for implementing Oracle Retail Merchandising System (RMS) in their enterprise
- Business analysts who want high-level functional information about this release
- System analysts and system operation personnel who want high-level functional and technical content related to this release

Related Documents

For more information, see the following documents in the Oracle Retail Merchandising System Release 10.1.19 documentation set:

- Oracle Retail Merchandising System Installation Guide
- Oracle Retail Merchandising System Data Model

Customer Support

https://metalink.oracle.com

When contacting Customer Support, please provide the following:

- Product version and program/module name
- Functional and technical description of the problem (include business impact)
- Detailed step-by-step instructions to re-create
- Exact error message received
- Screen shots of each step you take

Conventions

Navigate: This is a navigate statement. It tells you how to get to the start of the procedure and ends with a screen shot of the starting point and the statement "the Window Name window opens."

> **Note:** This is a note. It is used to call out information that is important, but not necessarily part of the procedure.

Release Notes

Overview

Please review the enclosed defect documents promptly to establish the impact on your business operations. Oracle Retail Customer Support investigates submitted issues assuming that all release patches have been applied. While it is ultimately at the client's discretion when to apply patches, delays or lags in their application can complicate the support process. To assist in the patch review, Oracle Retail Customer Support provides a system-level assessment by assigning a priority. In addition, a cross-reference spreadsheet is provided to assist with this research (see "Defect Documentation" below). As listed below, this patch contains both general product fixes and functional enhancements and is considered the RMS 10.1.19 release.

Before installing RMS 10.1.19, confirm that RMS 10.1 and all of the following patches have been applied:

- RMS 10.1.1
- RMS 10.1.2
- RMS 10.1.3
- RMS 10.1.4
- RMS 10.1.5
- RMS 10.1.6
- RMS 10.1.7
- RMS 10.1.8
- RMS 10.1.9
- RMS 10.1.10
- RMS 10.1.11
- RMS 10.1.12
- RMS 10.1.13
- RMS 10.1.14
- RMS 10.1.15
- RMS 10.1.16
- RMS 10.1.17
- RMS 10.1.18

The 10.1.19 patch release contains batch, package, forms program modifications. Refer to the 10.1.19 patch documentation for detailed information on each fix. As with all patches, the following points should be considered before applying RMS 10.1.19:

- Copy the original files to an archive directory before you overwrite them, in case they are needed later for reference.
- The cutoff date for RMS 10.1.19 was September 06, 2006. Fixes that you received after this date and have applied to your environment may require special consideration when applying this patch.
- Note whether customizations have been made to the module. If so, the customizations will need to be reapplied to the new version of the module, or the fix may need to be applied to the custom version of the code.

Fixed Issues/Defects

As mentioned earlier, RMS 10.1.19 includes general product fixes. A defect fix is a modification to the base Oracle Retail code (for example, a bug fix, performance enhancement, or functional enhancement).

Read the provided defect reports for details. Each defect fix included in this patch has a corresponding defect report titled < defect #> <module>.pdf (for example, "123456 abcdefgh.pdf"). Fully review defect reports before implementing this patch.

To assist with the patch application process, there is also a defect module cross-reference spreadsheet in the same folder (DEFECT MODULE XREF RMS 10.1.19.xls) that lists the fixes.

Specific Issues to Note

- **Defect 5188519:** The batch sccext.pc runs slowly.
- **Defect 5129324:** There is slow performance of dlyprg.pc. This process is taking lot of time to delete any item.
- **Defect 5726918**: Whenever the package PC_STORE_SQL is executed, it consistently performs slowly because of repeated joins to the STORE table. Due to this, there is a bad execution plan with the insert into the PRICE_EVENT_ZONE table.
- **Defect 5620348:** While running storeadd.pc, performance is very slow when large volumes of stores are encountered
- **Defect 5167352:** There is a erformance issue when running the pcext batch program.
