Common Elements Used in This Peoplebook.....xvii

Chapter 1

Getting Started with PeopleSoft EnterpriseOne Resource Assignments.....1

Resource Assignments Overview.....1

Resource Assignments Implementation.....1

 Global Implementation Steps for Resource Assignments.....1

 Implementation Steps for the Resource Assignments System.....2

Chapter 2

Understanding the Resource Assignments System.....3

Resource Assignments System.....3

Chapter 3

Setting Up the Resource Assignments System.....	5
Setting Up User Defined Codes for Work Order Resource Assignments.....	5
Setting Up Resource Assignment Constants.....	6
Understanding Resource Assignment Constants.....	6
Form Used to Set Up Resource Assignment Constants.....	7
Setting Up Resource Assignment Constants.....	7
Defining Resource Working Hours.....	8
Understanding Resource Working Hours.....	8
Prerequisites.....	8
Forms Used to Define Resource Working Hours.....	9
Adding a Base Calendar.....	9
Adding a Resource Calendar.....	11
Defining Crew Maintenance Schedule Periods.....	12
Understanding Crew Maintenance Schedule Periods.....	12
Forms Used to Define Crew Maintenance Schedule Periods.....	13
Defining Crew Maintenance Schedule Periods.....	13

Chapter 4

Entering Resource Master Records.....	15
Understanding Resource Master Records.....	15
Entering Resource Master Records.....	16
Prerequisites.....	16
Form Used to Enter Resource Master Records.....	16
Setting Processing Options for Resource Master (P48310).....	16
Adding Resource Master Records.....	17
Updating the Resource Master Table.....	19
Understanding the Resource Master Global Update Programs.....	19
Running the Resource Master Global Update Programs.....	20
Setting Processing Options for Resource Master Global Update - Address Book/Equipment Master (R48350/R48351).....	20
Assigning Resources to a Crew.....	24
Understanding Assigning Resources to a Crew.....	24
Forms Used to Assign a Resource to a Crew.....	24
Assigning a Resource to a Crew.....	24

Chapter 5

Managing Crew Scheduling.....	27
Understanding Crew Scheduling.....	27
Common Elements used in this Chapter.....	30
Work Order Entry and Planning for Crew Scheduling.....	32
Understanding Work Orders and Planning for Crew Scheduling.....	32
Forms Used to Create Work Orders for Crew Scheduling.....	33
Reviewing Work Order Detail (P13714).....	33
Reviewing Labor Detail Steps (P13732).....	34
Working with Crew Availability.....	36
Understanding Crew Availability.....	36
Prerequisites.....	36
Forms Used to Work with Crew Availability.....	37
Setting Processing Options for the Crew Schedule Metric program (P48315).....	37
Defining Crew Availability.....	37
Creating the Crew Schedule.....	38
Understanding the Crew Schedule.....	38
Forms Used to Work with the Crew Schedule.....	39
Review the Crew Schedule.....	39
Save Schedule Changes.....	39
Searching for Unscheduled Work for Crew Scheduling.....	40
Understanding the Search for Unscheduled Work.....	40
Forms Used to Search for Unscheduled Work.....	41
Reviewing Unscheduled Work.....	41
Reviewing Crew Availability by Craft.....	42
Rescheduling Work Not Completed.....	43
Understanding Rescheduling Work Not Completed.....	43
Forms Used to Reschedule Work Orders.....	44
Reviewing Carryover Work.....	44
Enter Reason Code to Track Rescheduling Metrics.....	44
Working with PM Forecasts in Crew Scheduling.....	45
Understanding PM Forecasts in Crew Scheduling.....	45
Forms Used to Work With PM Forecasts in Crew Scheduling.....	46
Reviewing PM Forecasts.....	46
Reviewing the Crew Schedule.....	47
Understanding Reviewing the Crew Schedule.....	47
Prerequisite.....	48
Forms Used to Review the Crew Schedule.....	48
Setting Processing Options for the Crew Scheduling Workbench Program.....	48
Reviewing Future and Historical Work Scheduled.....	49

Managing Large Jobs in Crew Scheduling.....	50
Understanding Managing Large Jobs in Crew Scheduling.....	50
Forms Used for Managing Large Jobs in Crew Scheduling.....	51
Splitting a Labor Detail Step.....	51
Scheduling Parent/Child Work Order Jobs.....	51
Assigning a Crew and Schedule Period.....	52
Revising the Current Crew Schedule.....	53
Understanding Crew Schedule Revisions.....	53
Forms Used to Revise the Crew Schedule.....	53
Adding Unplanned Items to the Crew Schedule.....	53
Checking Inventory Availability for the Crew Schedule.....	54
Understanding Inventory Availability for Crew Scheduling.....	54
Forms used to Work with Parts Availability.....	55
Checking Inventory Availability for the Crew Schedule.....	55
Printing the Crew Schedule Report (R48342).....	55
Understanding the Print Schedule Program.....	56
Rolling the Schedule.....	56
Understanding Rolling Schedules.....	56
Forms Used to Roll the Schedule for Crew Scheduling.....	57
Setting the Current Period Manually.....	57
Running the Maintenance Schedule Roll Periods Program.....	57
Setting Processing Options for the Maintenance Schedule Roll Periods Program.....	57
Crew Work and Resource Assignments	58
Understanding Crew Work Assignments	58
Forms Used to Assign Resources to the Schedule	60
Setting Processing Options for the Crew Schedule Assignments Program.....	60
Assigning Resources to Crew Schedule.....	62
Splitting Work Over Multiple Days for a Single Resource.....	63
Splitting Work Between Multiple Resources.....	63
Completing Orders on the Schedule.....	64
Understanding Completing Orders on the Schedule.....	64
Forms Used to Complete Work Orders on the Schedule.....	65
Completing Work Orders on the Schedule.....	65
Completing Labor Detail Steps on the Schedule.....	67
Running the Crew Schedule Completion Metrics Program.....	68
Reviewing Schedule Metrics.....	68
Understanding Schedule Metrics.....	68
Prerequisites.....	69
Forms Used to Review Schedule Metrics.....	69
Reviewing Schedule Achievement	69

Reviewing Percent Scheduled.....	70
Reviewing Percent Reason for Reschedule.....	70

Chapter 6

Working with Resource Assignments.....	71
Understanding How to Assign Resources to Work Orders.....	71
Prerequisites.....	71
Setting Processing Options for Resource Assignments (P48331).....	72
Working with Work Orders	75
Understanding Work Orders.....	75
Forms Used to Work with Work Orders	76
Reviewing Work Orders.....	76
Revising Work Orders.....	77
Downloading Work Order Backlogs.....	81
Understanding Work Order Backlogs.....	81
Downloading Work Orders.....	81
Setting Processing Options for Work Order Backlog Downloads.....	81
Locating Resources.....	82
Understanding How to Locate Resources.....	82
Prerequisite.....	83
Forms Used to Locate Resources.....	83
Locating Resources.....	83
Assigning Resources to Tasks.....	84
Understanding How to Assign Resources to Tasks.....	84
Forms Used to Assign Resource to Tasks.....	86
Assigning Resources to Tasks.....	86
Revising Resource Assignments.....	87
Understanding Revising Resource Assignments.....	87
Forms Used to Revise Resource Assignments.....	88
Revising Resource Assignments.....	88

Chapter 7

Integrating Employee Assignment with Resource Assignment.....	91
Understanding Employee Assignment Integration with Resource Assignment.....	91
Setting Up Users.....	92
Understanding User Setup.....	92
Prerequisite.....	92
Forms Used to Set Up Users.....	93

User Setup.....	93
Setting Up Employee Assignment for Integration.....	93
Understanding Employee Assignment for Integration.....	93
Forms Used to Set Up Employee Assignment for Integration.....	94
Set Up Pay Types to Use in Assignments.....	95
Set Up User Defined Code.....	95
Set Up a Default Pay Type.....	95
Set Up Versions of the Time Entry MBF Processing Options program.....	95
Set Up Versions of the Speed Time Entry Program.....	96
Setting Up Resource Assignment for Integration.....	96
Understanding Resource Assignment for Integration.....	96
Forms Used to Set Up Resource Assignment for Integration.....	97
Set Up A Resource Assignment Record.....	97
Set Up a Work Order.....	99
Attach a Resource to a Work Order.....	99
Set Up a Version of the Time Entry Self Service Director.....	99
Set Up Time Entry Fields.....	99
Set Up Pay Types.....	100

Glossary of PeopleSoft Terms.....	109
--	------------

Index	119
--------------------	------------

About This PeopleBook Preface

PeopleBooks provide you with the information that you need to implement and use PeopleSoft applications.

This preface discusses:

- PeopleSoft application prerequisites.
- PeopleSoft application fundamentals.
- Documentation updates and printed documentation.
- Additional resources.
- Typographical conventions and visual cues.
- Comments and suggestions.
- Common elements in PeopleBooks.

Note. PeopleBooks document only page elements, such as fields and check boxes, that require additional explanation. If a page element is not documented with the process or task in which it is used, then either it requires no additional explanation or it is documented with common elements for the section, chapter, PeopleBook, or product line. Elements that are common to all PeopleSoft applications are defined in this preface.

PeopleSoft Application Prerequisites

To benefit fully from the information that is covered in these books, you should have a basic understanding of how to use PeopleSoft applications.

You might also want to complete at least one PeopleSoft introductory training course, if applicable.

You should be familiar with navigating the system and adding, updating, and deleting information by using PeopleSoft menus, and pages, forms, or windows. You should also be comfortable using the World Wide Web and the Microsoft Windows or Windows NT graphical user interface.

These books do not review navigation and other basics. They present the information that you need to use the system and implement your PeopleSoft applications most effectively.

PeopleSoft Application Fundamentals

Each application PeopleBook provides implementation and processing information for your PeopleSoft applications. For some applications, additional, essential information describing the setup and design of your system appears in a companion volume of documentation called the application fundamentals PeopleBook. Most PeopleSoft product lines have a version of the application fundamentals PeopleBook. The preface of each PeopleBook identifies the application fundamentals PeopleBooks that are associated with that PeopleBook.

The application fundamentals PeopleBook consists of important topics that apply to many or all PeopleSoft applications across one or more product lines. Whether you are implementing a single application, some combination of applications within the product line, or the entire product line, you should be familiar with the contents of the appropriate application fundamentals PeopleBooks. They provide the starting points for fundamental implementation tasks.

Documentation Updates and Printed Documentation

This section discusses how to:

- Obtain documentation updates.
- Order printed documentation.

Obtaining Documentation Updates

You can find updates and additional documentation for this release, as well as previous releases, on the PeopleSoft Customer Connection website. Through the Documentation section of PeopleSoft Customer Connection, you can download files to add to your PeopleBook Library. You'll find a variety of useful and timely materials, including updates to the full PeopleSoft documentation that is delivered on your PeopleBooks CD-ROM.

Important! Before you upgrade, you must check PeopleSoft Customer Connection for updates to the upgrade instructions. PeopleSoft continually posts updates as the upgrade process is refined.

See Also

PeopleSoft Customer Connection, <https://www.peoplesoft.com/corp/en/login.jsp>

Ordering Printed Documentation

You can order printed, bound volumes of the complete PeopleSoft documentation that is delivered on your PeopleBooks CD-ROM. PeopleSoft makes printed documentation available for each major release shortly after the software is shipped. Customers and partners can order printed PeopleSoft documentation by using any of these methods:

- Web
- Telephone
- Email

Web

From the Documentation section of the PeopleSoft Customer Connection website, access the PeopleBooks Press website under the Ordering PeopleBooks topic. The PeopleBooks Press website is a joint venture between PeopleSoft and MMA Partners, the book print vendor. Use a credit card, money order, cashier's check, or purchase order to place your order.

Telephone

Contact MMA Partners at 877 588 2525.

Email

Send email to MMA Partners at peoplesoftpress@mmapartner.com.

Additional Resources

The following resources are located on the PeopleSoft Customer Connection website:

Resource	Navigation
Application maintenance information	Updates + Fixes
Business process diagrams	Support, Documentation, Business Process Maps
Interactive Services Repository	Interactive Services Repository
Hardware and software requirements	Implement, Optimize + Upgrade, Implementation Guide, Implementation Documentation & Software, Hardware and Software Requirements
Installation guides	Implement, Optimize + Upgrade, Implementation Guide, Implementation Documentation & Software, Installation Guides and Notes
Integration information	Implement, Optimize + Upgrade, Implementation Guide, Implementation Documentation and Software, Pre-built Integrations for PeopleSoft Enterprise and PeopleSoft EnterpriseOne Applications
Minimum technical requirements (MTRs) (EnterpriseOne only)	Implement, Optimize + Upgrade, Implementation Guide, Supported Platforms
PeopleBook documentation updates	Support, Documentation, Documentation Updates
PeopleSoft support policy	Support, Support Policy
Prerelease notes	Support, Documentation, Documentation Updates, Category, Prerelease Notes
Product release roadmap	Support, Roadmaps + Schedules
Release notes	Support, Documentation, Documentation Updates, Category, Release Notes
Release value proposition	Support, Documentation, Documentation Updates, Category, Release Value Proposition
Statement of direction	Support, Documentation, Documentation Updates, Category, Statement of Direction

Resource	Navigation
Troubleshooting information	Support, Troubleshooting
Upgrade documentation	Support, Documentation, Upgrade Documentation and Scripts

Typographical Conventions and Visual Cues

This section discusses:

- Typographical conventions.
- Visual cues.
- Country, region, and industry identifiers.
- Currency codes.

Typographical Conventions

This table contains the typographical conventions that are used in PeopleBooks:

Typographical Convention or Visual Cue	Description
Bold	Indicates PeopleCode function names, business function names, event names, system function names, method names, language constructs, and PeopleCode reserved words that must be included literally in the function call.
<i>Italics</i>	Indicates field values, emphasis, and PeopleSoft or other book-length publication titles. In PeopleCode syntax, italic items are placeholders for arguments that your program must supply. We also use italics when we refer to words as words or letters as letters, as in the following: Enter the letter <i>O</i> .
KEY+KEY	Indicates a key combination action. For example, a plus sign (+) between keys means that you must hold down the first key while you press the second key. For ALT+W, hold down the ALT key while you press the W key.
Monospace font	Indicates a PeopleCode program or other code example.
“ ” (quotation marks)	Indicate chapter titles in cross-references and words that are used differently from their intended meanings.

Typographical Convention or Visual Cue	Description
... (ellipses)	Indicate that the preceding item or series can be repeated any number of times in PeopleCode syntax.
{ } (curly braces)	Indicate a choice between two options in PeopleCode syntax. Options are separated by a pipe ().
[] (square brackets)	Indicate optional items in PeopleCode syntax.
& (ampersand)	When placed before a parameter in PeopleCode syntax, an ampersand indicates that the parameter is an already instantiated object. Ampersands also precede all PeopleCode variables.

Visual Cues

PeopleBooks contain the following visual cues.

Notes

Notes indicate information that you should pay particular attention to as you work with the PeopleSoft system.

Note. Example of a note.

If the note is preceded by *Important!*, the note is crucial and includes information that concerns what you must do for the system to function properly.

Important! Example of an important note.

Warnings

Warnings indicate crucial configuration considerations. Pay close attention to warning messages.

Warning! Example of a warning.

Cross-References

PeopleBooks provide cross-references either under the heading “See Also” or on a separate line preceded by the word *See*. Cross-references lead to other documentation that is pertinent to the immediately preceding documentation.

Country, Region, and Industry Identifiers

Information that applies only to a specific country, region, or industry is preceded by a standard identifier in parentheses. This identifier typically appears at the beginning of a section heading, but it may also appear at the beginning of a note or other text.

Example of a country-specific heading: “(FRA) Hiring an Employee”

Example of a region-specific heading: “(Latin America) Setting Up Depreciation”

Country Identifiers

Countries are identified with the International Organization for Standardization (ISO) country code.

Region Identifiers

Regions are identified by the region name. The following region identifiers may appear in PeopleBooks:

- Asia Pacific
- Europe
- Latin America
- North America

Industry Identifiers

Industries are identified by the industry name or by an abbreviation for that industry. The following industry identifiers may appear in PeopleBooks:

- USF (U.S. Federal)
- E&G (Education and Government)

Currency Codes

Monetary amounts are identified by the ISO currency code.

Comments and Suggestions

Your comments are important to us. We encourage you to tell us what you like, or what you would like to see changed about PeopleBooks and other PeopleSoft reference and training materials. Please send your suggestions to:

PeopleSoft Product Documentation Manager PeopleSoft, Inc. 4460 Hacienda Drive Pleasanton, CA 94588

Or send email comments to doc@peoplesoft.com.

While we cannot guarantee to answer every email message, we will pay careful attention to your comments and suggestions.

Common Elements Used in PeopleBooks

Address Book Number

Enter a unique number that identifies the master record for the entity. An address book number can be the identifier for a customer, supplier, company, employee, applicant, participant, tenant, location, and so on. Depending on the application, the field on the form might refer to the address book number as the customer number, supplier number, or company number, employee or applicant id, participant number, and so on.

As If Currency Code	Enter the three-character code to specify the currency that you want to use to view transaction amounts. This code allows you to view the transaction amounts as if they were entered in the specified currency rather than the foreign or domestic currency that was used when the transaction was originally entered.
Batch Number	Displays a number that identifies a group of transactions to be processed by the system. On entry forms, you can assign the batch number or the system can assign it through the Next Numbers program (P0002).
Batch Date	Enter the date in which a batch is created. If you leave this field blank, the system supplies the system date as the batch date.
Batch Status	Displays a code from user-defined code (UDC) table 98/IC that indicates the posting status of a batch. Values are: <i>Blank:</i> Batch is unposted and pending approval. <i>A:</i> The batch is approved for posting, has no errors and is in balance, but it has not yet been posted. <i>D:</i> The batch posted successfully. <i>E:</i> The batch is in error. You must correct the batch before it can post. <i>P:</i> The system is in the process of posting the batch. The batch is unavailable until the posting process is complete. If errors occur during the post, the batch status changes to E. <i>U:</i> The batch is temporarily unavailable because someone is working with it, or the batch appears to be in use because a power failure occurred while the batch was open.
Branch/Plant	Enter a code that identifies a separate entity as a warehouse location, job, project, work center, branch, or plant in which distribution and manufacturing activities occur. In some systems, this is called a business unit.
Business Unit	Enter the alphanumeric code that identifies a separate entity within a business for which you want to track costs. In some systems, this is called a branch/plant.
Category Code	Enter the code that represents a specific category code. Category codes are user-defined codes that you customize to handle the tracking and reporting requirements of your organization.
Company	Enter a code that identifies a specific organization, fund, or other reporting entity. The company code must already exist in the F0010 table and must identify a reporting entity that has a complete balance sheet.
Currency Code	Enter the three-character code that represents the currency of the transaction. PeopleSoft EnterpriseOne provides currency codes that are recognized by the International Organization for Standardization (ISO). The system stores currency codes in the F0013 table.
Document Company	Enter the company number associated with the document. This number, used in conjunction with the document number, document type, and general ledger date, uniquely identifies an original document. If you assign next numbers by company and fiscal year, the system uses the document company to retrieve the correct next number for that company.

If two or more original documents have the same document number and document type, you can use the document company to display the document that you want.

Document Number

Displays a number that identifies the original document, which can be a voucher, invoice, journal entry, or time sheet, and so on. On entry forms, you can assign the original document number or the system can assign it through the Next Numbers program.

Document Type

Enter the two-character UDC, from UDC table 00/DT, that identifies the origin and purpose of the transaction, such as a voucher, invoice, journal entry, or time sheet. PeopleSoft EnterpriseOne reserves these prefixes for the document types indicated:

P: Accounts payable documents.

R: Accounts receivable documents.

T: Time and pay documents.

I: Inventory documents.

O: Purchase order documents.

S: Sales order documents.

Effective Date

Enter the date on which an address, item, transaction, or record becomes active. The meaning of this field differs, depending on the program. For example, the effective date can represent any of these dates:

- The date on which a change of address becomes effective.
- The date on which a lease becomes effective.
- The date on which a price becomes effective.
- The date on which the currency exchange rate becomes effective.
- The date on which a tax rate becomes effective.

Fiscal Period and Fiscal Year

Enter a number that identifies the general ledger period and year. For many programs, you can leave these fields blank to use the current fiscal period and year defined in the Company Names & Number program (P0010).

G/L Date (general ledger date)

Enter the date that identifies the financial period to which a transaction will be posted. The system compares the date that you enter on the transaction to the fiscal date pattern assigned to the company to retrieve the appropriate fiscal period number and year, as well as to perform date validations.

PeopleSoft EnterpriseOne Resource Assignments Preface

This preface discusses:

- Peoplesoft products.
- Peoplesoft application fundamentals.
- Common elements used in this Peoplebook.

Peoplesoft products

The Peoplebook refers to these PeopleSoft products:

- Capital Asset Management
- Human Resources
- Human Capital Management Fundamentals
- Time and Labor

Peoplesoft Application Fundamentals

Additional, essential information describing the setup and design of your system appears in a companion volume of documentation called *PeopleSoft Capital Asset Management 8.11 PeopleBook*.

See Also

PeopleSoft EnterpriseOne Capital Asset Management 8.11 PeopleBook, “PeopleSoft EnterpriseOne Capital Asset Management Preface”

Common Elements Used in This Peoplebook

Branch

A secondary or higher level business unit.

In tenant work orders, this business unit is the building number. It is edited against the Business Unit Master file (F0006). You can assign subordinate business units to it:

- Building Number (MMCU)
- Unit A (MCU)

- Unit B (MCU)
- Job 123 (MCU)

Note. This is a required field if a unit number is entered.

In the Engineering Change Order system, this is the branch or plant for the engineering change order.

Business Unit

Enter a value that identifies a separate entity within a business for which you want to track costs. For example, a business unit might be a job, project, work center, or branch/plant.

Business unit security can prevent you from locating business units for which you have no authority.

Calendar Type

A user defined code (42/WD) that specifies how the calendar is used. For example, the calendar might be specific to an industry such as banking or it might be used to schedule delivery persons for a route.

Note. If you use the default value of *, the system updates the value to blank even though blank is not set up as a valid value in the UDC table.

Calendar Value

Enter a code used to classify values within a calendar type. For example, if the calendar type is *ROUTE*, you can enter a code that specifies a particular route, such as Daily or Weekend.

Note. The system does not validate the code that you enter.

Crew

Enter the address book number of a group of employees covering a number of lead crafts (trade) which is responsible for carrying out the work in a specific area or for a particular craft across multiple areas.

Note. A processing option for some forms allows you to enter a default value for this field based on values for category codes 1 (Phase), 2, and 3. You set up the default values on the Default Managers and Supervisors form. After you set up the default values and the processing option, the default information displays automatically on any work orders that you create if the category code criterion is met. You can either accept or override the default value.

For example, if address book number 4100 (Total Solutions) has a long address TOTAL and an * distinguishes it from other entries (as defined in the Address Book constants), you could type *TOTAL into the field, and the system would return 4100.

Effective Date

Enter the date on which this transaction takes effect. The effective date is used generically. The date can be the date of the next raise, a lease effective date, a price or cost effective date, a currency effective date, a tax rate effective date, a change in well status, or any other date that is appropriate.

Expired Date

Enter the expiration date of the log entry. For example, in the case of a submittal requirement for an insurance certificate, the termination date for the policy would be entered in the Expired Date field. The termination date would then be used by the Submittal Status Update program to update the status field.

If the Expired Date is earlier than the date that you run the program, the system sets the status to *N* for the log entry.

Lead Craft

Enter an alphanumeric code used to define the lead craft required to complete the work. The value entered is used as the default craft (work center) when new labor detail records are added to the work order.

Resource Type

Enter a code that identifies the type of resource for which you are entering competency information. This is a user defined code (05/RT). Values are:

01: Individual

02: Asset, such as equipment

Note. If you change the resource type, ensure that the spread of the assigned hours matches the estimated labor and machine hours

Resource Number

A number that represents either the address number or the asset number, depending on whether the resource that you are working with is a person or a piece of equipment. The system uses the resource number in conjunction with the resource type to uniquely identify the resource.

For Resource Type 01, you can use these formats to enter an address number:

- Short address number
- Long address number
- Tax ID

For Resource Type 02, you can use these formats to enter an asset number:

- Asset number
- Unit number
- Serial Number

Shift Code

Enter a user defined code (00/SH) that identifies daily work shifts.

In payroll systems, you can use a shift code to add a percentage or amount to the hourly rate on a timecard.

For payroll and time entry: If an employee always works a shift for which a shift rate differential is applicable, enter that shift code on the employee's master record. When you enter the shift on the employee's master record, you do not need to enter the code on the timecard when you enter time. If an employee occasionally works a different shift, you enter the shift code on each applicable timecard to override the default value.

Site

A user-defined name or number that identifies an address book record. You can use this number to locate and enter information about the address book record. If you enter a value other than the address book number (AN8), such as the long address or tax ID, you must precede it with the special character that is defined in the Address Book constants. When the system locates the record, it returns the address book number to the field.

For example, if address book number 4100 (Total Solutions) has a long address TOTAL and an * distinguishes it from other entries (as defined in the Address Book constants), you could type *TOTAL into the field, and the system would return 4100.

Supervisor

A user-defined name or number that identifies an address book record. You can use this number to locate and enter information about the address book record. If you enter a value other than the address book number (AN8), such as the long address or tax ID, you must precede it with the special character that is defined in the Address Book constants. When the system locates the record, it returns the address book number to the field.

For example, if address book number 4100 (Total Solutions) has a long address TOTAL and an * distinguishes it from other entries (as defined in the Address Book constants), you could type **TOTAL* into the field, and the system would return 4100.

CHAPTER 1

Getting Started with PeopleSoft EnterpriseOne Resource Assignments

This chapter discusses:

- Resource Assignments overview
- Resource Assignments implementation

Resource Assignments Overview

The Resource Assignments applications provide the capability to assign resources to a work order or to specific work order instructions while checking the current availability and assignments of the resources.

Once work orders and instructions have been entered into the system, you can assign resources to either the work order or the instruction that is based on the work order document type. Resources can be either individuals who are validated against the address book or equipment that is validated against the equipment master.

Resource Assignments Implementation

This section provides an overview of the steps that are required to implement the Resource Assignments system.

In the planning phase of your implementation, take advantage of all PeopleSoft sources of information, including the installation guides and troubleshooting information. A complete list of these resources appears in the preface in the *PeopleSoft EnterpriseOne FMS 8.11 Application Fundamentals PeopleBook, About These PeopleBooks*, with information about where to find the most current version of each.

Global Implementation Steps for Resource Assignments

This table lists the suggested global implementation steps for PeopleSoft EnterpriseOne Resource Assignments:

Step	Reference
1. Set up companies, fiscal date patterns, and business units.	<i>PeopleSoft EnterpriseOne Financial Management Solutions Application Fundamentals 8.11 PeopleBook</i> , “Setting Up an Organization”
2. Set up accounts, and the chart of accounts.	<i>PeopleSoft EnterpriseOne Financial Management Solutions Application Fundamentals 8.11 PeopleBook</i> , “Setting Up Accounts”

Step	Reference
3. Set up the General Accounting constants.	<i>PeopleSoft EnterpriseOne General Accounting 8.11 PeopleBook</i> , “Setting Up the General Accounting System”
4. Set up multicurrency processing, including currency codes and exchange rates.	• <i>PeopleSoft EnterpriseOne Multicurrency Processing 8.11 PeopleBook</i>, “Setting Up General Accounting for Multicurrency Processing” • <i>PeopleSoft EnterpriseOne Multicurrency Processing 8.11 PeopleBook</i>, “Setting Up Exchange Rates”
5. Set up ledger type rules.	<i>PeopleSoft EnterpriseOne Financial Management Solutions Application Fundamentals 8.11 PeopleBook</i> , “Setting Up Ledger Type Rules for General Accounting”
6. Enter address book records.	<i>PeopleSoft EnterpriseOne Address Book 8.11 PeopleBook</i> , “Entering Address Book Records”

Implementation Steps for the Resource Assignments System

This table lists the implementation steps for the Resource Assignments system.

Step	Reference
1. Set up user defined codes, Resource Assignment constants, and resource working hours.	<u>Chapter 3, “Setting Up the Resource Assignments System,” page 5</u>
2. Set up system integrations with Employee Assignment. Set up a system constant, users, Employee Assignment integration settings, and Resource Assignment integration settings.	<u>Chapter 7, “Integrating Employee Assignment with Resource Assignment,” page 91</u>

CHAPTER 2

Understanding the Resource Assignments System

This chapter provides an overview of the Resource Assignments system.

Resource Assignments System

Assigning resources to work orders involves matching the work order requirements against the resources; checking the availability, competencies, or skills of the resources; and creating resource assignments that can be monitored and against which reports can be run.

When you use work order resource assignments, you define the available capacity of resources by setting up a base calendar with available working hours. You also can set up a resource calendar for a specific resource to override the base calendar—for instance, if an employee takes a vacation. Once the base calendar is defined, you can associate resources with the base calendar in the Resource Master application (P48310) to define their availability. At any time, you can review the resource assignment information to determine whether resources are loaded according to their capacity.

If you want to be able to check the HR competencies or skills of your resources, you need to have the HR Foundation system installed.

CHAPTER 3

Setting Up the Resource Assignments System

This chapter describes how to:

- Set up user defined codes for work order resource assignments
- Set up resource assignment constants
- Define resource working hours
- Define crew maintenance schedule periods

Setting Up User Defined Codes for Work Order Resource Assignments

The following user defined codes are used by the applications in the work order resource assignments module:

User Defined Code	Description
42/WD	Resource Calendar (Work Day Calendar Type). A user defined code that specifies how the calendar is used. For example, the calendar might be specific to an industry such as banking, or it might be used within Resource Assignments.
48/TP	Assignment Type. A user defined code that specifies the type of assignment in scheduling, notification, and assignment. For future use.
48/LP	Load Profile Method. A user defined code that indicates the load profile method for resources. The load profile method indicates how the work of an assignment is distributed. Currently only a float load profile is supported.
48/PT	Period Type. A user defined code that indicates the type of period used for displaying the availability and assignments of the resources. You can set a default value in the processing options for the Resource Assignment program (P48331).
48/CT	Calendar Type. A user defined code that indicates the selected calendar type (for example, base calendar) when you define working hours in the Resource Working Hours application (P48307). You access values if you click the Search button for the Type field.

User Defined Code	Description
48/RD	Resource Details. A user defined code that indicates whether the resources' assignments or availability appears on the Work with Resource Assignments form in the Resource Assignment program (P48331). You can set a default value in the processing options for the Resource Assignment program.
48/01-48/20	Resource Attributes. User defined codes that define additional filter criteria for resources. For example, if the HR/Payroll system is not installed, these codes can be used to define criteria such as job type or competency.
48/SD	Scheduling Day of Week. A user defined code that specifies the days for which working hours are defined. This code is used in the Resource Working Hours program.
48/WD	Work Day. A user defined code that indicates which day of the week is the starting workday. You can set a default value in the processing options for the Resource Assignments program.
48/TK	Task Status. A user defined code that specifies the status of a task in scheduling, notification, and assignment. For future use.
48/CK	Calendar Key. A user defined code that classifies different resource calendars. For example, you might define normal shift, day shift, and night shift calendars.
48/RL	Resource Assignment Level. A user defined code that specifies whether resource assignments are at the level of the work order or the work order labor detail, based on the work order document type. To make assignments at the labor detail level, you must use this UDC to specify the work order document type.

Setting Up Resource Assignment Constants

This section provides an overview of resource assignment constants and describes how to set up the constants.

Understanding Resource Assignment Constants

Before you use the programs that are required for assigning resources to work orders, you must use the Resource Assignment Constants program (P48301) to provide default values for the work day calendar and hours that can be set up for your resources.

The work day calendar default values are used when the resource master record is created. The business unit from the address book or the equipment master is used to determine which default values are used.

The working hours default values are used when the working hours are created in the Resource Working Hours program (P48307). The business unit ALL is used for the base calendars, and the business unit from the address book or the equipment master record of the resource is used for the resource calendars.

You must define business unit ALL to provide global default values. You can then define default values for a specific business unit. For any resources that are associated with this business unit, the values for calendar type, calendar value, branch, and shift that you have defined for this business unit are default values within the Resource Master program (P48310).

Form Used to Set Up Resource Assignment Constants

Resource Assignment Constants - Revision form

Start Time

The start time is used to calculate available hours for the day. Currently not used when scheduling tasks.

End Time	The finish time is used to calculate available hours for the day. Currently not used when scheduling tasks.
Available	The number of hours a resource is available for scheduling on a single day.

Defining Resource Working Hours

This section provides an overview of resource working hours and describes how to define the hours.

Understanding Resource Working Hours

After you have defined default working hours in the Resource Assignment Constants application (P48301), you need to use the Resource Working Hours application (P48307) to set up working hour calendars. You can set up two types of working hour calendars:

- **Base calendar**

The base calendar allows you to set up the working hours for a typical work week for a group of resources that is associated with the same work day calendar in the Resource Master application (P48310). The working hours from the business unit ALL that are set up in the Resource Assignment Constants application (P48301) are used as default values. You can edit these default values as necessary. For days on which no work is done—for example, Saturday and Sunday—you can override the normal working hours by entering 0 in the Start Time and End Time fields. In addition, you can specify that certain days, such as holidays, be considered nonworking days.

- **Resource calendar**

The resource calendar allows you to override the capacity for a particular resource for a particular date or date range. The resource calendar is used for exceptions to the base calendar such as vacation time for a specific resource.

The calendar values that are defined in this application are stored in the Resource Working Hours table (F48307).

Prerequisites

Before you complete the tasks in this section:

- Verify that the resource assignment constants have been set up for business unit ALL and other business units, if required.
- Verify that the resource exists in the Resource Master application (P48310) before entering a resource calendar override.

Forms Used to Define Resource Working Hours

Form Name	Form ID	Navigation	Usage
Work With Resource Working Hours	W48307A	Periodic Resource Assignment Processing (G13RA20), Resource Working Hours Click the Base Calendar tab or the Resource Calendar tab, and click the Add button.	View existing calendar values. Add a calendar value or resource calendar value.
Working Hours Detail — Base	W48307B	On the Work With Resource Working Hours form, select the Base Calendar tab.	View and create the available calendar types and work hours for the branch and shift codes.
Work Hours Detail — Resource	W48307D	On the Work With Resource Working Hours form, select the Resource Calendar tab.	View or update the available working hours by day and shift for a specific resource. This calendar will consider exceptions to the schedule such as vacation or time off for scheduling resources.

Day of Week Default to each day of week Date

Override Reason

Working Hours

Start Time End Time Hours Available

Working Hours Details — Base form

Shift

A user defined code (00/SH) that identifies daily work shifts.

In payroll systems, you can use a shift code to add a percentage or amount to the hourly rate on a timecard. For payroll and time entry: If an employee always works a shift for which a shift rate differential is applicable, enter that shift code on the employee's master record. When you enter the shift on the employee's master record, you do not need to enter the code on the timecard when you enter time. If an employee occasionally works a different shift, you enter the shift code on each applicable timecard to override the default value.

Day of Week

A code in the Resource Working Hours program (P48307) that specifies the working hours for a particular day of the week. Enter the day of the week for which the base or resource working hours apply. If you do not specify a day of the week, the system uses 0 (zero). Values are:

- 0: Assign base or resource working hours to every day of the week.
- 1: Assign base or resource working hours to Monday.
- 2: Assign base or working resource hours to Tuesday.
- 3: Assign base or resource working hours to Wednesday.
- 4: Assign base or resource working hours to Thursday.
- 5: Assign base or resource working hours to Friday.
- 6: Assign base or resource working hours to Saturday.

7: Assign base or resource working hours to Sunday.

9: Override working hours for a specific date. If you want to define an override value for a specific date, type 9 in the Day of Week field. Doing so enables the Date field.

Override Reason	A code in UDC 48/RC to indicate the reason for the working hours override.
Date	Enter the override date for a base calendar entry in this field.
Date From	The beginning date for a resource calendar entry for which the transaction or code is applicable.
Date Thru	The ending date for a resource calendar entry for which the transaction or code is applicable. If you enter a date range, the system adds a new record for each day in the date range.
Start Time	The start time is used to calculate available hours for the day. Currently not used when scheduling tasks. The default values for this field comes from the business unit "ALL". You can override this value.
End Time	The finish time is used to calculate available hours for the day. Currently not used when scheduling tasks. The default values for this field come from the business unit "ALL". You can override this value.
Hours Available	The number of hours a resource is available for scheduling on a single day. The calculated result for the start and end times that you entered appears in this field.

Defining Crew Maintenance Schedule Periods

This section provides an overview of how to define crew schedule periods.

Understanding Crew Maintenance Schedule Periods

The crew maintenance schedule periods are used to define the maintenance schedule period that the crews schedule work against. The Maintenance Schedule Periods program (P48302) is used to create a schedule pattern code and the schedule period date ranges. The schedule pattern code is then associated with the Crew when it is defined using the Resource Master program (P48310). The schedule date ranges defined are used to default the schedule period date ranges on the crew scheduling programs such that the current, next, following and future periods can be displayed without having to manually enter the date ranges. A typical schedule period might define weekly work starting on Monday and finishing on Sunday. Depending on customer requirements, the schedule period can be defined as four days or 14 day cycle.

Note. The number of days utilized for display and processing is defined in the special handling code of UDC 13/SP (Schedule Pattern).

The user defined schedule pattern code and the number of days will be used to generate the date ranges into the future. Once the date ranges have been generated, the current schedule period will manually be selected for a particular date pattern. Going forward, the current schedule period can be moved manually or can be automatically rolled to the next schedule period using a batch program.

Note. If the schedule periods are re-generated once they are in the system, the system will delete all existing schedule periods from the start date entered and insert the new schedule periods.

CHAPTER 4

Entering Resource Master Records

This chapter provides an overview of resource master records and describes how to:

- Add resource master records
- Update the Resource Master Table

Understanding Resource Master Records

You use the Resource Master application (P48310) to maintain resource master information and attributes for individual and equipment resources. Individual resources are validated against the address book, and can represent either a crew of people or a single person. You can review resource information by resource type and resource number. You also can retrieve all resources, both active or inactive. Depending on whether the resource type is an individual or equipment, the information is retrieved from the Address Book Master table (F0101) or the Asset Master File table (F1201).

You use this program to add resources to the Resource Master table (F48310). By adding resources to the Resource Master, they become available for work order assignments. On the Basic Data tab of Resource Assignments, you can select the resource type that you want to add, and the address book number or asset number of a specific resource. You can define an effective date range for the resource and associate the resource with a Crew, Supervisor, Site, and Lead Craft. The values for Calendar Type, Calendar Value, Branch, and Shift Code (if applicable) are default values from the Resource Assignment Constants. They are based on the resource setup in the address book or asset master. If no Resource Assignment Constants are set up for the business unit, then the system uses the default values for business unit ALL. You can select the time zone manually, or the value can be provided from the processing options.

If you are using Crew Scheduling, crews must be defined in the Resource Master for scheduling work. The crew is a group of resources responsible for the maintenance of a particular area. The crew and each individual resource is defined in the Resource Master. The Schedule Period Code is assigned to specify what schedule period the crew operates under.

Once the crew is setup, individual resources are assigned to the crew. Each resource that is assigned to a crew is setup in the Resource Master and linked to the crew by filling in the associated Crew field. Multiple resources can be associated to a crew based on the number of individuals qualified to work the particular craft. The Lead Craft (trade) of the individual resources is also defined on the Resource Master record for use in crew scheduling and work assignments.

You can declare a resource inactive. If a resource is inactive and you use Advanced Search on Resource Assignments to search for active resources in the Resource Master Search & Select application (P48310S), this resource is not displayed as available for assignments.

In addition, the Resource Master application makes 20 Resource Attribute category codes available for the further classification of resources in the context of assignment requirements.

Entering Resource Master Records

This section describes how to:

- Set processing options for Resource Master (P48310)
- Add resource master records

Prerequisites

Before you complete the tasks in this section:

- Verify that resource assignment constants have been set up.
- Set up desired default values in the processing options.

Form Used to Enter Resource Master Records

Form Name	Form ID	Navigation	Usage
Work with Address Book Resources or Work with Equipment Resources	W48310A, W48310B	Periodic Resource Assignment Processing (G13RA20), Resource Master	Depending on a processing option setting, the Work with Address Book Resources or Work with Equipment Resources form appears. Review existing resource records.
Resource Master Revisions	W48310C	On the Work with Address Book Resources or Work with Equipment Resources form, click the Add button.	Add resource master records.

Setting Processing Options for Resource Master (P48310)

Processing options enable you to specify the default processing for programs and reports.

For programs, you can specify options such as the default values for specific transactions, whether fields appear on a form, and the version of the program that you want to run.

For reports, processing options enable you to specify the information that appears on reports. For example, you set a processing option to include the fiscal year or the number of aging days on a report.

Do not modify EnterpriseOne demo versions, which are identified by ZJDE or XJDE prefixes. Copy these versions or create new versions to change any values, including the version number, version title, prompting options, security, and processing options.

Defaults

These processing options control the default values the system uses when you add resources to the Resource Master table (F48310).

1. Resource Type

Use this processing option to specify the default resource type. The system uses this information to determine what type of resources to display. Enter a

value from UDC 05/RT (Record Type). If you leave this processing option blank, a resource type of 01 is used. Values are:

01: Individual. The system displays the Address Book Resources form.

02: Asset, such as equipment. The system displays the Work with Equipment Resources form.

2. Resource Activity

Use this processing option to specify if you wish to see resources that are active, inactive, or both. Values are:

Blank: Use all resources.

0: Use active resources.

1: Use inactive resources.

3. Effective Date

Use this processing option to default the effective date when adding resources in the Resource Master program (P48310). The system uses the effective date with the expiration date to determine when a resource is active.

4. Expiration Date

Use this processing option to default the expiration date when adding resources in the Resource Master program (P48310). The system uses the expiration date with the effective date to determine when a resource is active.

5. Time Zone

Use this processing option to default the time zone when adding resources in the Resource Master program (P48310). Use of the time zone when displaying date and time for resources is scheduled for a future release.

6. Daylight Saving

Use this processing option to default the daylight savings rule when adding resources in the Resource Master program (P48310). Use of the daylight savings rule when displaying date and time for resources is scheduled for a future release.

Versions

This processing option controls the version that the system uses when this program is called.

1. Resource Competencies (P05100) Version

Use this processing option to specify the version that the system uses when accessing the Resource Competency Information program (P05100). If you leave this processing option blank, the system uses version ZJDE0001.

Adding Resource Master Records

Access the Resource Master Revisions form.

Resource Master Revisions form

Basic

Select the Basic tab.

Crew

A user defined name or number that identifies an address book record for a crew. You can use this field to enter and locate information. If you enter a value other than the address book number (AN8), such as the long address or tax ID, you must precede it with the special character that is defined in the Address Book constants. When the system locates the record, it returns the address book number into the field.

Supervisor

A user-defined name or number that identifies an address book record for a supervisor. You can use this number to locate and enter information about the address book record. If you enter a value other than the address book number (AN8), such as the long address or tax ID, you must precede it with the special character that is defined in the Address Book constants. When the system locates the record, it returns the address book number to the field.

Lead Craft

The "Lead Craft" is the primary craft for the resource, and is used to group individual resources when determining the availability for the craft within the crew during crew scheduling.

Assignment Percentage

A percentage that indicates the proportion of a resource's time that will be allocated to the task.

Schedule Pattern	A code used to specify a Schedule Pattern utilized in crew scheduling. For example, M could stand for a weekly scheduling pattern starting on Monday with a 7-day period; 2 could stand for biweekly with a 14-day period. This field is only enabled for crew resource masters.
Inactive	Active/Inactive.
Crew (Y/N)	Enable if defining a crew resource master. If selected, resource number and crew field have to be the same, and the schedule pattern code needs to be defined.
Calendar Type	
Select the Calendar Type tab.	
Calendar Type	A user defined code (42/WD) that specifies how the calendar is used. For example, the calendar might be specific to an industry such as banking or it might be used to schedule delivery persons for a route
Calendar Value	A code used to classify values within a calendar type. For example, if the calendar type is ROUTE, you can enter a code that specifies a particular route, such as Daily or Weekend.
Time Zone	Choose the time zone for which you want to view the date and time. You can specify a default time zone in the processing options.
Rule Name	Unique name identifying a daylight savings rule. Use daylight savings rules to adjust time for a geographic and political locale.

Updating the Resource Master Table

This section provides an overview of the global update programs for the Address Book and Equipment Master systems and describes how to:

- Run the resource master global update programs
- Set processing options for the resource master global update programs

Understanding the Resource Master Global Update Programs

The Resource Master Global Update - Address Book and Resource Master Global Update - Equipment Master programs allow you to add or update records in batch to the Resource Master table (F48310), which is based on the Address Book Master table (F0101) or the Asset Master File table (F1201), respectively. You use data selection to control the records that are processed. The data selection for the Resource Master Global Update - Address Book program (R48350) is based on the Address Book Master table. The data selection for the Resource Master Global Update - Equipment Master program (R48351) is based on the Asset Master File table.

You use processing options to determine the values that the system uses when creating or updating the Resource Master Table. You can use processing options to set default values for the Resource Master records. For example, you can indicate:

- Source of the calendar values
- Applicable address book numbers

- Default branch/plant
- Default assignment percentage value

Running the Resource Master Global Update Programs

Advanced & Technical Operations menu (G13RA31), select Resource Master Global Update - Address Book or Resource Master Global Update - Equipment Master.

Setting Processing Options for Resource Master Global Update - Address Book/Equipment Master (R48350/R48351)

Processing options enable you to specify the default processing for programs and reports.

For programs, you can specify options such as the default values for specific transactions, whether fields appear on a form, and the version of the program that you want to run.

For reports, processing options enable you to specify the information that appears on reports. For example, you set a processing option to include the fiscal year or the number of aging days on a report.

Do not modify EnterpriseOne demo versions, which are identified by ZJDE or XJDE prefixes. Copy these versions or create new versions to change any values, including the version number, version title, prompting options, security, and processing options.

Process

This processing option controls whether the batch program runs in proof or final mode.

- 1. Proof or Final Mode** Use this processing option to specify whether the system prints in proof mode or final mode. If you choose final mode, the system updates tables as details are processed. If you choose proof mode, tables are not updated. Values are:
Blank: Use proof mode.
1: Use final mode.

Defaults

These processing options control the default values the system uses to update the Resource Master table.

- 1. Date - Effective** Use this processing option to specify the date that the system uses to update the effective from date (DEF) in the Resource Master table (F48310). If you leave this processing option blank, the system uses the system date when you add a new record. The system does not update the Effective From Date for existing records.
- 2. Date - Expired** Use this processing option to specify the date that the system uses to update the effective thru date (EXPR) in the Resource Master table (F48310). If you leave this processing option blank, the system uses the date from the century change year (CENTCHG) when you add a new record. The system does not update the Effective Thru Date for existing records.
- 3. Default Calendar Values** Use this processing option to specify whether the system uses the default calendar values specified in the processing options or set up in the Resource Assignments Constants table (F48301). Values are:
Blank: Use the calendar values specified in the processing options.

I: Use the calendar values set up in the F48301 table.

- | | |
|--|--|
| 4. Business Unit to Retrieve Resource Constants | Use this processing option to specify the business unit that the system uses to locate the default calendar values in the Resource Assignments Constants table (F48301). If you leave this processing option blank, the system uses the business unit from the Address Book Master table (F0101). |
| 5. Branch | Use this processing option to specify the default branch that is used when creating a resource master record. The system only uses this value if the Default Calendar Values processing option is set to default calendar values from the processing options. |
| 6. Work Day Calendar Type | Use this processing option to specify the default work day calendar type that is used when creating a resource master record. Enter a value from UDC 42/WD (Work Day Calendar Type). The system only uses this value if the Default Calendar Values processing option is set to default calendar values from the processing options. |
| 7. Work Day Calendar Key | Use this processing option to specify the default work day calendar key that is used when creating a resource master record. This code is used to classify values within a calendar type. Enter a value from UDC 48/CK (Calendar Key). The system only uses this value if the Default Calendar Values processing option is set to default calendar values from the processing options. |
| 8. Shift Code | Use this processing option to specify the default shift code that is used when creating a resource master record. Enter a value from UDC 06/SH (Shift Codes). The system only uses this value if the Default Calendar Values processing option is set to default calendar values from the processing options. |
| 9. Crew | Use this processing option to specify the address book number of the default manager or planner that is used when creating a resource master record. |
| 10. Supervisor | Use this processing option to specify the default supervisor who is used when creating a resource master record. |
| 11. Site | Use this processing option to specify the default site that is used when creating a resource master record. |
| 12. Lead Craft | Use this processing option to specify the default, alphanumeric code for the lead craft required to complete the work. The value entered is used as the default craft (work center) when new labor detail records are added to the work order. |
| 13. Active/Inactive | <p>Use this processing option to specify whether the resource is active or inactive when the resource master record is created. Values are:</p> <p>Blank: Active</p> <p><i>I</i>: Inactive</p> |
| 14. Percentage - Assignment | Use this processing option to specify the default assignment percentage that is used when creating a resource master record. The system uses this information to determine what proportion of a resource's time is allocated to a task. |
| 15. Time Zone | Use this processing option to specify the default time zone that is used when creating a resource master record. Use of the time zone when displaying date and time for resources is scheduled for a future release. |

- 16. Daylight Savings Rule** Use this processing option to specify the default daylight savings rule that is used when creating a resource master record. Use of the daylight savings rule when displaying date and time for resources is scheduled for a future release.

Defaults - Attributes

These processing options control the default resource attributes that the system uses to update the Resource Master table.

- 1. Resource Attribute 01** Use this processing option to specify the default resource attribute that is used when creating a resource master record. The system uses this information to classify resources for specific scheduling requirements. Enter a value from UDC 48/01 (Resource Attribute 01).
- 2. Resource Attribute 02** Use this processing option to specify the default resource attribute that is used when creating a resource master record. The system uses this information to classify resources for specific scheduling requirements. Enter a value from UDC 48/02 (Resource Attribute 02).

Assigning Resources to a Crew

This section provides an overview of how to assign a resource to a crew.

Understanding Assigning Resources to a Crew

Once the crew is setup, individual resources are assigned to the crew. Each resource that is assigned to a crew is setup in the Resource Master and linked to the crew by filling in the associated Crew field. Multiple resources can be associated to a crew based on the number of individuals qualified to work the particular craft. The Lead Craft (trade) of the individual resources is also defined on the Resource Master record for use in crew scheduling and work assignments. You will be unable to add a Schedule Period to the resource if the resource is assigned to a Crew.

Forms Used to Assign a Resource to a Crew

Form Name	Form ID	Navigation	Usage
Resource Master Revisions	W48310C	Periodic Resource Assignments Processing (G13RA20), Resource Master	View and associate a resource to a crew by filling in the Crew field. Select a Lead Craft to associate to the resource.

CHAPTER 5

Managing Crew Scheduling

This chapter provides an overview of crew scheduling and discusses how to:

- Work orders and planning for crew scheduling.
- Work with crew availability.
- Create the crew schedule.
- Search for unscheduled work for crew scheduling.
- Reschedule work not completed on the schedule.
- Work with PM forecasts on the crew schedule.
- Review the crew schedule
- Manage large jobs in crew scheduling.
- Revise the current crew schedule.
- Check inventory availability for the crew schedule.
- Print the schedule.
- Understand rolling schedules.
- Crew work a resource assignments.
- Complete orders on the schedule.
- Reschedule work not completed.
- Review schedule metrics.

Understanding Crew Scheduling

A common practice within a maintenance environment is the preparation of a schedule of work for a crew which has responsibilities for a particular area and craft (trade). When preparing the schedule, the maintenance scheduler must consider both supply and demand variables. The demand variables can include upcoming preventative maintenance work, reactive work orders, allowance for emergency work orders and work orders not completed in previous periods. On the supply side, the variables consist of capacity by craft for a crew, vacation and holidays, training, material availability, and special scheduling requirements.

Crews

Crews consist of groups of employees designated by crafts (trades) that work as a team and are assigned work based on the total time available for the crew/craft instead of by individual resource availability.

Crew Scheduling

The crew scheduling process establishes a realistic target of work for the crew to complete during the next schedule period and monitors how well the crew performed to the schedule. The crew availability is based on the individual resource availability within the crew/craft and is reduced by the percent load target to allow for unplanned and break in work. Over time, as the crew's capacity to complete scheduled work increases, the percent load is adjusted to maintain a realistic target and to reduce the amount of unplanned work.

Work Order/Planning

The Work Order/Planning module supports the entry of the work request and the planning of the labor detail steps required to complete the work, and to assist the scheduler in deciding who should do the work and when. The work order records the crew and lead craft with overall responsibility for completing the job and specifies the material requirements to complete the work order. The labor detail contains the work steps required to complete the work and can be used when multiple crews and schedule periods are required. Work can be scheduled either at the work order level or work order labor detail level based on the work order document type and the Resource Assignment Level (UDC 48/RL) setting.

Preventative Maintenance

The Preventive Maintenance module supports projecting the preventive maintenance schedules for a specified date range in order to include the projected work load in the crew scheduling process. The Maintenance Rules program (P1393) is used to define if an asset/service type combination is to be scheduled automatically when it comes due. When the PM Projection program (R13411) is run, the projection includes the crew, work order coding and the schedule rule based on the Maintenance Rules. If the projection is flagged to be automatically scheduled it will display on the Manage Schedule program (P48320). The projection can be unscheduled if you click the Remove from Schedule button, or can be scheduled if you click the Add to Schedule button on the PM Forecast Review program (P48324). The PM Status Update program (R12807) is run to create a work order and to create a crew schedule based on the PM projection schedule rule if it exists or the Maintenance Rules.

Maintenance Schedule Periods

The Maintenance Schedule Periods program (P48302) allows you to define a Schedule Pattern Code (13/SP) and to set the date range for the scheduling periods. The current schedule period is flagged to indicate the period the crew is currently working in. The next schedule period is where the scheduler is building the work schedule for the next period. When you set up a crew in the Resource Master program (P48310), you associate a schedule pattern code to the crew.

Schedule Metrics — Crew Availability

The Schedule Metrics program (P48315) allows you to define the crew availability by schedule period which is used as the target availability when assigning work to the crew/craft during the scheduling process. The crew availability is based on the expected availability of the individual resources within the crew then reduced by the load percent. The load assignment percent is the target value used to reduce the expected availability for the crew to allow for unscheduled events so a realistic target is set for the crew to achieve.

Manage the Schedule

The Crew Manage Schedule program (P48320) allows you to review and manage the crew schedules. The scheduled preventive maintenance projections and current scheduled work orders will display. The scheduled work is either at the work order level or work order labor detail based on the work order document type and the Resource Assignment Level (UDC 48/RL) setting. The application displays scheduled work by crew, craft, and schedule period.

The Crew Manage Schedule program allows you to manage the schedule using the following programs:

- Review and update the schedule in the Current, Next, Following or Specific Schedule Periods (P48320)

- Review Crew Availability by Craft to ensure realistic target of work (P48322)
- Search for schedules not completed using the Carryover Work (P48323).
- Search for unscheduled (backlog) work using the Unscheduled Work (P48321).
- Search for PM Forecasts not scheduled using the PM Forecast (P48324).
- Schedule larger jobs using the Schedule by Work Order (P48326).
- Save schedule details and summary totals to Crew Schedule Metrics (P48315).
- Review past or future schedules using the Schedule Inquiry (P48328).

Crew Availability by Craft

As work is assigned to the crew, the Crew Availability by Craft is refreshed displaying the target available hours, scheduled hours, variance, scheduled, and load percent to assist the scheduler in producing the schedule.

Save the Schedule

Once the next schedule has been produced and agreed on by maintenance and operations, the form option to save the schedule can be used to flag the scheduled work, total the scheduled hours by crew/craft, and update the totals to the Crew Schedule Metrics table (F48315).

Roll the Schedule

At the end of each schedule period, the current schedule period needs to be forwarded to the next period so that the work assignment and scheduling applications reflect the new schedule periods. This can be done manually from the Maintenance Schedule Period program (P48302) or by running the Crew Schedule Roll Periods program (R48325).

Crew Work Assignments

The Crew Work Assignments program (P48330) allows you to review the current schedule of work for the crew that has not been completed and assign individual resources to the crew schedule. The crew schedule for the current period is displayed with the individual resources for the crew listed showing their remaining available hours.

The Crew Work Assignment program allows you to manage the work assignments and review how to:

- Assign individual resources to the crew schedule.
- Review individual resource available hours.
- Move schedules to the current, next, following or specific period or a specific date.
- Complete work order or labor detail steps.
- Reschedule work and resources.

Unscheduled Break in Work

During the week, if additional work is required to be carried out by the crew, access the Manage Schedule program (P48320) for the current period and review the current schedule for crew availability. Use the exit to the Unscheduled Work program (P48321) to add additional work to the current period. If required, remove existing scheduled work to provide capacity to complete break in work.

Reschedule Metrics

If a current schedule must be moved to a future period, the Reschedule Metrics program (P48316) is displayed to allow the input of a Reason Code (UDC 48/RS), and to enter a text description as to why the task is being rescheduled. The Reschedule Metrics program also allows you to review reschedule information by crew.

Completion

To support the completion of labor detail steps, a new form has been added to the Crew Work Assignment (P48330) program to enable the input of the operation status and completion date at the labor detail step. The completion of a work order schedule will display the work order program.

Supply and Demand Inclusion Rules

The Supply and Demand Inclusion Rules program (P34004) is used to define the work order and operation status values associates with open work order and labor detail steps.

Crew Schedule Completion Metrics

The Crew Schedule Completion Metrics program (R48327) details the work completed during the schedule period and provides totals by crew and craft for the saved schedule work and the total hours completed. Processing options enable you to run the report for a past schedule period, and will include work with a completion date within that schedule period. If the report is run in final mode, it will update the schedule completion information for the crew to the Crew Schedule Metrics table (F48315).

Schedule Metrics — Schedule Compliance

The Crew Schedule Metric program (P48315) allows you to review and maintain the schedule completion information for the crew, craft and schedule period. The schedule compliance and percent scheduled metric information is also displayed. The Schedule Completion information can be updated using the Crew Schedule Completion Metrics program (R48327), or manually input using the program.

Reports

Standard reports have been provided to support the scheduling and assignment processes. Reports for crew availability, crew schedule, carryover work, and unscheduled work can be generated using the Schedule Report program (R48342). Reports for the assignments by crew, supervisor, employee and sorted by schedule date can be generated using the Work Assignment Package program (R48345).

Common Elements used in this Chapter

Assigned Hours	Displays hours assigned to an individual or a crew.
Available Hours	The total hours available for scheduled work during the schedule period. The available hours is multiplied by the load % to calculate the target hours to schedule.
Backlog	The backlog is the list of all work that has not been completed. This includes both scheduled and unscheduled work that has not been completed.
Calculated Hours	The calculated hours for the crew/lead craft for the schedule period date range is derived using the Resource Master (P48310) and Resource Working Hours (P48307) setup information. The resource master for an individual

	employee defines which crew/lead craft they belong. The resource working hours defines their available hours.
Carryover Work	Review work orders scheduled to be completed in a previous schedule period that have not yet been completed. These work orders need to be rescheduled or returned to the unscheduled backlog.
Completed Hours	The total hours completed by the crew during the schedule period.
Completed Scheduled Hours	The total hours of scheduled work completed by the crew during the schedule period.
Craft	The craft (trade) who is required to complete the task. When the task is scheduled, the crew/craft availability is reduced by the estimated hours on the task.
Labor Detail	The labor detail is used to define the tasks required to complete the work, especially for larger jobs that require multiple crews/crafts and cross multiple schedule periods. The task contains planning information such as the task description, craft, estimated hours and task status. Each work order typically only has one task however larger jobs might required multiple tasks.
Load %	The load % is used to define the portion of the available hours that will be considered for scheduling work. The load % should be set to provide a realistic target for the crew to achieve.
Schedule Compliance	Schedule compliance is the percentage of estimated hours scheduled that was completed divided by the total estimated hours scheduled to be completed in the same period. It is a measure of the crews ability to complete the work scheduled during the schedule period. This value is typically represented by a percentage and will always be less than or equal to 100 percent. The closer the percentage to 100, the better the performance for the time period.
Schedule Dates	The schedule dates are when the work is currently scheduled to be completed, and are recorded on the crew schedule record in the Resource Assignment Detail (F48311) table.
Scheduled Hours	The total hours scheduled by the crew during the schedule period.
Schedule Pattern	A code used to specify a schedule pattern utilized in maintenance scheduling. For example, M could stand for a weekly scheduling pattern starting on Monday with a 7-day period; 2 could stand for biweekly with a 14-day period. The number of days utilized for display and processing is defined in the special handling code of UDC 13/SP (Schedule Pattern). The schedule pattern is associated to a crew in order to determine the scheduling periods tied to the crew when defining availability and scheduling work.
Schedule Period	The schedule period is the date range covering the maintenance scheduling periods. Current, Next and Following schedule periods are typically used when scheduling and cover the work currently being processed and the next two scheduling periods being developed. Typically a schedule period is defined as a week (Monday to Sunday), but could be 4 days or 2 weeks depending on the organizations requirements. Refer Schedule Pattern

Work Order Entry and Planning for Crew Scheduling

This section provides an overview of work orders and how to establish job plans to support the crew scheduling process and discusses how to:

- Create work orders.
- Plan labor detail steps.

Understanding Work Orders and Planning for Crew Scheduling

The planner/scheduler is responsible for confirming the coding on the work order and developing the job plan including the labor detail steps and materials required to complete the job. The scheduling process is supported at both the work order and job plan levels, based on the work order document type and Resource Assignments Level (UDC 48/RL). The work order level has the default crew and lead craft (trade) required to complete the work and the estimated hours and planned start and finish dates to assist when scheduling the work order. The labor detail job plan can have one step if a minor job, or multiple steps if the job requires multiple crews, crafts, or schedule periods to complete the job. Each labor detail step has a craft, description, estimated hours, and planned start and finish dates to assist when scheduling at the work order labor detail level.

The materials required to complete the work are planned against the work order on the parts list. Materials required for the work order may be stocked items or direct charge items. The stocked items will be committed to the work order and are issued out of stock. The direct charge items are ordered by means of a purchase requisition prior to the work order release. When the job plan has been completed the work order is available for inclusion in the scheduling process.

The Work Order Entry program (P13714) will be the entry point for adding and reviewing the work order for tracking the crew, lead craft, parts, and labor details. A processing option to default the crew from the SWM address book extension record for the customer, the equipment, or the work order category codes is available during work order entry. The Work Order Detail program (P13732) will be used to add and review the labor detail steps required to complete the work and to indicate the craft required to complete the step represented in the description. A processing option on the Work Order Entry program (P13714) to automatically create the labor detail will create the first labor detail step based on the work order details if the lead craft is entered. Once you start planning at the labor detail level, the estimated hours for each step is totalled and updated to the work order estimated hours field which becomes disabled. Based on the assignment level, the estimated hours on the work order or the labor detail step align with the crew scheduled hours and proportionally splits it to assignments.

The work order planned start and finished dates can be used as filters when searching for unscheduled work for a crew and a particular period. Once the work order or labor detail step is scheduled, the schedule dates become the key dates when assigning resources and moving tasks to different schedule periods. Changes to the work order/labor detail planned dates will not update the crew or resource schedules. If you are not using crew scheduling, changes to the work order/labor detail steps will continue to update the assignment dates.

The system will only allow one schedule per work order, or one schedule per labor step based on the UDC 48/RL setting.

Status

A user defined code (00/SS) that describes the status of a work order, rate schedule, or engineering change order.

Planned Start Date	The planned start date for the order. A planning date that defaults to the work order parts list and labor detail steps and indicates when job should be ready for scheduling.
Planned Finish Date	The planned finish date for the order. A planning date that defaults to the work order labor detail steps and indicates when job should be completed by.
Actual Finish Date	The date that the work order or engineering change order is completed or canceled.
Status Comment	A brief description to explain the status of the work order.
Crew	A user defined name or number that identifies an address book record for a crew. You can use this field to enter and locate information. If you enter a value other than the address book number (AN8), such as the long address or tax ID, you must precede it with the special character that is defined in the Address Book constants. When the system locates the record, it returns the address book number into the field.
Lead Craft	An alphanumeric code used to define the lead craft required to complete the work. The value entered is used as the default craft (work center) when new labor detail records are added to the work order.
Supervisor	A user defined name or number that identifies an address book record for a supervisor. You can use this field to enter and locate information. If you enter a value other than the address book number (AN8), such as the long address or tax ID, you must precede it with the special character that is defined in the Address Book constants. When the system locates the record, it returns the address book number into the field.
Parent WO	A number that identifies the parent work order. You can use this number to: Enter default values for new work orders, such as Type, Priority, Status, and Manager. Group work orders for project setup and reporting.

Work Order Labor Detail Revisions form

Review, update, and add details to the labor detail steps.

Work Center

An alphanumeric code that identifies a separate entity within a business for which you want to track costs. For example, a business unit might be a warehouse location, job, project, work center, branch, or plant, maintenance work group (craft).

Operation Sequence

A number used to indicate an order of succession.

In routing instructions, a number that sequences the fabrication or assembly steps in the manufacture of an item. You can track costs and charge time by operation.

In bills of material, a number that designates the routing step in the fabrication or assembly process that requires a specified component part. You define the operation sequence after you create the routing instructions for the item. The Shop Floor Management system uses this number in the backflush/preflush by operation process.

Description

Brief information about the labor detail step; a remark or an explanation.

Estimated Hours

The standard hours of labor that you expect to incur in the normal production of this item. The run labor hours in the Routing Master table (F3003) are the total hours that it takes the specified crew size to complete the operation. The hours are multiplied by the crew size during shop floor release and product costing.

Working with Crew Availability

This section provides an overview of crew or crafts availability and discusses how to:

- Set processing options for crew availability
- Define crew availability.

Understanding Crew Availability

One of the first processes performed each schedule period is estimating the available capacity of the crew to complete scheduled work during the schedule period. The crew capacity is typically broken down into a number of lead crafts indicating availability to work on the backlog of unscheduled work.

The crew availability is based on the expected availability of the individual resources within the crew/craft and reduced by a load percent. The load percent is a target value used to reduce the expected availability of the crew/craft work group to allow for unscheduled events in order to achieve a realistic target for the work group. As the crew/crafts estimating and capacity to complete scheduled work improves, the load percent is adjusted to maintain a realistic target.

The Crew Schedule Metrics program (P48315) will be used to define crew availability. When defining availability, the system will default in the schedule pattern and the next schedule period that needs to be defined for the crew. As you proceed to enter data for the crew, the system will default in a line for each lead craft defined in the resource master for each individual associated with the crew. The system will calculate the resource available hours for the crew/craft by totaling the working hours for the individuals with the same crew/craft combination for the schedule period. The crew standard hours, available hours, and load percent can then be entered for each lead craft. At a minimum, you should maintain the current, next, and following crew/craft availability metric information. The copy option will copy the details for the selected row and default the dates for the next schedule period not currently defined.

Prerequisites

Complete the following steps prior to creating the Crew Availability:

1. Setup Schedule Periods (P48302) and current period.
2. Setup crews using Resource Master (P48310) associating the schedule period code.
3. Setup individuals within each crew, specifying the lead craft for each individual.
4. Setup resource hours for individuals using Resource Working Hours (P48307).

Work With Maintenance Schedule Metrics form

Lead Craft

An alphanumeric code used to define the lead craft required to complete the work. The value entered is used as the default craft (work center) when new labor detail records are added to the work order.

Standard Hours

The total hours that should be available to carry out work during the schedule period based on all the resources in the crew being fully available for scheduled work.

Available Hours	The total hours available for scheduled work during the schedule period. The available hours is multiplied by the load % to calculate the target hours to schedule.
Load %	The load % is the portion of the available hours that is to be considered for scheduling work. The load % should be set to provide a realistic target for the crew to achieve.
Target Hours	The target hours available for scheduling work. The value is the product of the available hours multiplied by the load %.
Calculated Hours	The calculated hours for the crew or lead craft for the schedule period date range is derived using the Resource Master (P48310) and Resource Working Hours (P48307) setup information. The resource master for an individual employee defines which crew or lead craft they belong. The resource working hours defines their available hours.

Creating the Crew Schedule

This section provides an overview of how to create the crew schedule and discusses how to:

- Review the crew schedule.
- Save schedule changes.

Understanding the Crew Schedule

The Manage Schedule program (P48320) is used to review the work orders and PM projections scheduled for the current schedule period or to select a different schedule period to review. The processing options determine the default schedule period that will be used to review the crew schedule. The scheduled work can either be removed from the schedule or moved to a different schedule period or a particular date.

Work is added to the schedule using the following search links:

- Carryover Work program (P48323) allows the review of work scheduled in a previous period that was not completed.
- Unscheduled Work program (P48321) allows multiple searches for work not currently scheduled for inclusion in the schedule.
- PM Forecast program (P48324) allows the review of the PM projections.

As work is scheduled to the crew, the Crew Availability by Craft is refreshed displaying the target available hours, scheduled hours, variance, scheduled and load percent to assist the scheduler in producing the schedule.

The schedule for the next schedule period can be created at the same time as the execution of the current schedule. The planner will finalize changes to the next period, including removing PM projections, and will confirm the scheduled work and crew availability statistics, prior to saving the schedule.

Once the schedule for the next period has been finalized and approved, the Save Metrics form action is used to save the schedule detail and update the scheduled compliance information to the F48315 metrics table.

Searching for Unscheduled Work for Crew Scheduling

This section provides an overview of searching for unscheduled work to include in the crew schedule.

Understanding the Search for Unscheduled Work

One of the main sources of work when creating the next schedule is searching through the work in the backlog that is currently not scheduled. Once a work order is in the backlog, the job plan is developed to support the scheduling of the tasks required to complete the work. During the scheduling meeting, the unscheduled backlog of work is reviewed and selected work is agreed to be included in the next schedule. After the meeting, the scheduler searches through the list of unscheduled jobs and selects those that were agreed to be included. This can involve doing multiple searches by work order number or work order coding to find and select the work orders or labor detail steps. As work is selected for inclusion in the schedule, the crew/craft availability is refreshed.

The Manage Schedule program (P48320) is the entry form used to select work to review for a specific crew and schedule period. The search for unscheduled work (backlog) is accessed by selecting the link to work with the Search for Unscheduled Work program (P48321). Work from the unscheduled work display is selected and added to the crew and schedule period described at the top of the form. To schedule additional backlog work to another crew or period, you must return to the Manage Schedule program and change the crew and schedule period or use the Schedule by Work Order program (P48326).

The filters in the header section of the Unscheduled Work program are from the work order except for the craft that can be used to additionally filter to the labor detail level. As work is selected, click the Add to Schedule button to display a list in the Selected Unscheduled Work grid, following the Unscheduled Work for review and removal if incorrect.

A processing option is available that will enable you to select a work order that has a document type requiring scheduling at the labor detail level, and instead of giving an error will schedule all the labor detail steps associated with the selected work order. All unscheduled labor steps are scheduled, even if not displayed due to filtering.

The Crew Availability by Craft at the bottom of the form can be used to confirm that the target and scheduled hours are as expected prior to the when you click the Save and Close button that updates the tables with the work selected.

Forms Used to Search for Unscheduled Work

Crew Availability by Craft

Scroll to the bottom of the screen to review the crew target hours, scheduled hours, variance, and calculated schedule and load percent for each craft.

Target Hours	The target hours available for scheduling work. The value is the product of the available hours multiplied by the load %.
Scheduled Hours	The total hours scheduled by the crew during the schedule period.
Variance	The hours available by craft. Negative hours will highlight as a warning.
Scheduled %	The percent scheduled is the percentage of scheduled hours to target hours.
Load %	The load % is the portion of the available hours that is to be considered for scheduling work. The load % should be set to provide a realistic target for the crew to achieve.

Rescheduling Work Not Completed

This section provides an overview of the rescheduling process and discusses how to:

- Review carryover work.
- Enter a reason code to track the reschedule metrics.

Understanding Rescheduling Work Not Completed

The process to reschedule work requires the user to review the work previously scheduled that has not been completed and move the work to the current schedule period, to a future schedule period, or back to the unscheduled backlog. When the option to move is selected, the rescheduling details form is displayed allowing the entry of a reason code and text explanation as to why the work is being rescheduled. The rescheduling details form is available from the Carryover Work program (P48323) when moving a schedule and from the Manage Schedule program (P48320) and Work Assignments program (P48330) when moving a schedule from the current period.

When a crew schedule is moved to another schedule period, the start and finish dates on the crew schedule are updated to the start and finish dates of the schedule period it is moved to. If any resource assignments are associated with the crew schedule, they are also updated to the start date of the new schedule period.

The processing option for the Carryover Work program (P48323) is used to define the Supply and Demand Inclusion rule to be used to determine what work order and labor detail step status values are considered still open.

To conclude the process, you can choose to go to the Maintenance Rescheduling Metrics Revisions program (P48316) in order to review reasons for rescheduling by crew, rescheduling code and date range.

Working with PM Forecasts in Crew Scheduling

This section provides an overview of how to review and included PM projections on the crew schedule.

Understanding PM Forecasts in Crew Scheduling

PM projections are another component of creating the crew schedule which provides a method of including the PM work load on the crew schedule prior to creating the assigned work order. The maintenance schedule flag set in the maintenance rules table is used to determine if the PM projection is to be scheduled when due or added to the unscheduled work backlog. Scheduled PM projections are displayed on the crew schedule either as the projection if scheduling at the work order level, or as the labor detail steps from the associated labor master setup using the Standard Routing program (P3003). The PM projections, both scheduled and unscheduled can be reviewed and the maintenance schedule flag changed from the maintenance rules table default value if required. When the work comes due, a work order is generated and can either be added to the crew schedule or unscheduled backlog based on the maintenance schedule flag on the projection.

The crew schedule process is initiated by running the PM Projection program (R13411) which creates the forecast table. The Manage Schedule program (P48320) is used to review and remove the PM projections generated from the crew schedule. The Remove from Schedule button will remove the PM projection from the schedule period by updating the maintenance schedule flag on the projection to unscheduled. The PM Forecast Search & Select program (P48324) is used to review the PM projection based on the selected crew, schedule date range, and the maintenance schedule flag. This program will allow you to review the PM projections by schedule period that are currently flagged for inclusion on the crew schedule, or the unscheduled backlog when the work order is created. The unscheduled PM projections that are new, or originally removed from the schedule, can be moved to the crew schedule if you click the Add to Schedule button.

When the PM comes due, a work order must be created by running a version of the PM Update Status program (R12807) which has the PM forecast type defined as a processing option. The PM Update Status program can be run in batch or for selected PM projections. Select the PM Forecast link to review the PM projections for the current schedule. The work order can be generated if you click the Create Work Order button to convert the PM projection to an active work order. The work order number is displayed on the current schedule instead of the PM projection.

When the PM Update Status program is run and a work order is created, the system will first check for a matching PM projection if a forecast type is defined in the processing option, or it will use the maintenance schedule flag in the maintenance rules table to determine if a crew schedule should be created. If the PM projection is found for the equipment/service type, the PM forecast will be deleted.

Click the Create Work Order button to generate a work order for the PM forecast.

Reviewing the Crew Schedule

This section provides an overview of how to review current, future, and historical crew schedules.

Understanding Reviewing the Crew Schedule

The review of the crew schedule will be performed by the planner/scheduler to verify the work to be completed by the crew/craft for the schedule period. Multiple searches can be conducted using the crew, craft, supervisor, and schedule period combinations. The schedule period allows the scheduled work to be displayed for the current, next, following, or specific period in the future. The Manage Schedule program (P48320) will display the following crew/craft scheduling details including:

- PM projections for the schedule period.
- Work order and labor detail steps scheduled for the schedule period.
- Crew/Craft availability and scheduled hours for the schedule period.
- Highlight work orders with materials planned and shortage/availability indicator.

The Manage Schedule program (P48320) is used to review, add, and update the work on the schedule for the crew and selected schedule period. From this form, there are a number of form and row exits to perform updates to the schedule based on your requirements. These will be discussed in more detail in the following sections.

The Schedule Inquiry program (P48328) is a useful application to review all future and historical work scheduled for a crew for a specified date range. Once you know the date when it was scheduled, you can review that specific schedule period if required.

Prerequisite

Set the Crew Scheduling Workbench (P48320) processing option to designate the schedule period to display.

Forms Used to Review the Crew Schedule

Form Name	Form ID	Navigation	Usage
Manage Schedule	W48320B	Crew Scheduling (G13RA12), Crew Scheduling Workbench.	View work orders and PM work orders by crew/craft for a specified schedule period.
Schedule Inquiry	W48328A	On Manage Schedule, select the More Form Actions option Schedule Inquiry.	View work completed and work scheduled in future periods.

Setting Processing Options for the Crew Scheduling Workbench Program

Use these processing options to specify the defaults for the Manage Schedule program (P48320).

Defaults

Use this table to set default values for schedule period, crew, supervisor, and craft. Values are:

- 1: Current Period (default)
- 2: Next Period
- 3: Following Period

Process

Use this processing options to determine the forecast type to define the PM Projection to be considered for display on the crew schedule review. Values reside in UDC table 34/DF.

Versions

Use these processing options to set versions for these programs:

- Unscheduled Work Search and Select (P48321).
- Carryover Work Search and Select (P48323).
- PM Forecast Search and Select (P48324).
- Work Order Parts List Inquiry (P3121).
- Work with Bill of Material (P3002).
- Open Order Inquiry (P4310).
- Maintenance Schedule Metrics (P48315).
- Work Order Parts Detail (P17730).

- Work Order Labor Detail (P17732).
- Parts List (P3111).
- Routing Instructions (P3112).
- Maintenance Work Assignments (P48330).
- Scheduled Work Inquiry (P48328).

WO Entry

Use this processing option to specify the work order program that the system will use when you select a work order to review. Values are:

- 1: Use CAM Work Order revisions (P13714)
- 2: Use Work Order Revisions (P17714)
- 3: Use Manufacturing Work Order Revisions (P48013)

This processing option also specifies the labor and parts details programs that the system will use. Values 1 and 2 use the Work Order Labor Detail program (P17732) and the Work Order Parts Detail program (P48013), else the Work Order Routing program (P3112) and the Work Order Parts List program (P3111) is used.

Reviewing Future and Historical Work Scheduled

Managing Large Jobs in Crew Scheduling

This section provides an overview of reviewing parent/child work order jobs and splitting jobs over multiple crews and schedule periods. This section discusses how to:

- Split labor detail steps.
- Review parent/child work order jobs.
- Assign crews and schedule periods to a labor detail step.

Understanding Managing Large Jobs in Crew Scheduling

The scheduling of large jobs typically cover multiple work orders, labor detail steps, crews and schedule periods. With this type of work order, the job has been broken down into smaller tasks that are managed and scheduled separately, but need to be viewed together to show the relationship between the tasks and the schedule periods. The parent/child work order structure is used to create a group of related work orders that are to be carried out against different business units or equipment for tracking costs and history. The labor detail steps are created to further break down a work order on a particular machine for scheduling the job and not required against the equipments history. It is necessary to be able to search and filter by the parent work order number and view the associated child work orders and associated labor detail steps if scheduling at that level.

During the planning or scheduling process, it becomes apparent that the work shall require multiple crews or schedule periods to complete the work. This will required the scheduler to access the work order labor detail program and create new steps for the work and split the estimated hours based on the scope for each new step. By splitting the labor detail steps, the scheduler then has the ability to assign a crew and or resources to the individual steps and monitor progress and schedule compliance at this level.

The Manage Schedule program is used to locate the work order in order to break down the labor detail steps. The link to the Unscheduled Work program (P48321) is first used to select either the first step or all current steps planned on the job. When selecting on the steps scheduled, use the More Row Actions option to access the Labor Detail program (P17732) in order to access the screen required to break a job down into multiple steps by creating a new operation step and splitting the estimated hours as required. Each step should have a clear description such that reporting completion can be easily verified especially if splitting over schedule periods.

Once the labor detail steps are defined, select the Work Order link from the Manage Schedule program to access the Schedule By Work Order program (P48326) to review and schedule the labor detail steps for a work order, and to review the parent/child work order relationship with the associated labor details to schedule. The labor detail line is selected to assign a crew and schedule period, repeating until all lines are assigned.

Work already scheduled can be moved to a different crew or schedule period by selecting the labor detail step and updating the crew or schedule period.

This section provides an overview of updating the current schedule and discusses how to include unplanned and minor items to the crew schedule.

Understanding Crew Schedule Revisions

After the schedule has been created the system must allow for scheduling emergency, unplanned, or minor work that was not originally scheduled. The planner/supervisor is typically responsible for initiating and managing break in work to the schedule. This process is initiated from the Manage Schedule program by reviewing the current schedule and then accessing the link to **Unscheduled Work (P48321)** to select additional work to add to the schedule. The work selected is added to the current schedule and will now appear on the **Work Assignments program (P48330)** for the current period for the crew to carry out.

During this process, the planner/scheduler can review the work in the current schedule and potentially remove work to allow capacity to take on the new jobs added. When removing work from the current schedule, the **Maintenance Rescheduling Metrics Revision program (P48316)** is displayed to allow entry of the reason for rescheduling. Work can be removed from the current schedule if you click the **Remove from Schedule** or **Move To** buttons. The **Remove from Schedule** button move the work back to the unscheduled backlog for rescheduling at some future time. The **Move To** button moves the work to the **Next, Following, or Specific** period in the future.

Checking Inventory Availability for the Crew Schedule

This section provides an overview of how to check inventory availability for the current crew schedule.

Understanding Inventory Availability for Crew Scheduling

As the job planning process continues, the system checks availability for the materials required for the orders in the schedule period. During the review of the crew schedule, a parts availability flag is displayed for each task on the schedule. The flag indicates:

- No materials planned.
- Materials planned and no shortages.
- Materials planned and there are shortages.

A material shortage warning is displayed if there is a negative stock availability for an open part on the parts list, or an open purchase order exists for the work order. The parts availability screen can be accessed to review the availability for the individual parts on the work order, or to review the open order inquiry displaying open purchase orders required for the work order.

Printing the Crew Schedule Report (R48342)

This section provides an overview of the crew schedule reports.

Understanding the Print Schedule Program

Prior to the scheduling meetings between maintenance and operations, it is necessary to run the Crew Schedule Reports program (R48342) and distribute for review prior to the meeting. Once corrections have been marked on the printed report, the maintenance scheduler can update the schedule and backlog to prepare the planned schedule for the following week. The reports that can be printed for the crew selected include:

- Crew availability
- Crew carryover
- Crew schedule
- Crew unscheduled backlog

The different sections report the same information that is available using the online applications or individual report menu options. When this report is run selecting a number of crews, all sections selected for each crew is printed prior to processing the next crew. In this way, the report can be split and issued to each crew efficiently.

Rolling the Schedule

This section provides an overview of the schedule roll process and discusses how to:

- Set the schedule flag manually.
- Run the Maintenance Schedule Roll Periods program.
- Set processing options for the Maintenance Schedule Roll Periods program.

Understanding Rolling Schedules

When the current schedule has ended, the schedule period needs to be rolled to the next period so the work assignment and scheduling programs display the new schedule period. The schedule for the next period is reviewed by the scheduler prior to rolling the schedule to ensure complete and that it has been saved.

The Maintenance Schedule Roll Periods program (R48325) is run to move the current flag in the maintenance schedule period program to the next schedule period. This program is typically run for a schedule period and checks the date range of the current schedule with the through date in the processing options. If the through date is greater than the current period date range, the system will increment the current period to the next period. The through date will default to the system date if left blank. You can also manually reset the current period by using the Maintenance Schedule Periods program (P48302).

Note. This program is typically run on a regular schedule utilizing a system date to initiate the roll of the current period.

Process

Use these processing option to run the program in proof or final mode; to determine where the report will write errors; to enter the address number of the message recipient; and to enter the through date to process the program.

- | | |
|---------------------------------|---|
| 1. Proof or Final Mode | Use this processing option to determine if the program results will be reviewed first, or if the system will be updated with the changes. Values are:

Blank: Proof Mode
/ : Final Mode |
| 2. Work Center Or Report | Use this processing option to determine where the system will publish messages. Values are:

Blank: Write errors to Work Center.
/ : Write errors to Report. |
| 3. Job Status Recipient | Use this processing option to specify the address book number of the recipient for receiving job status messages.

<hr/> Note. If this processing option is left blank, the system will enter the address book number of the current user. <hr/> |
| 4. Through Date | Use this processing option to specify the through date the system will use to process selected schedule periods that will be rolled. The schedule periods that are defined as current and that have a period end date that is less than the date in the processing options, will be selected.

<hr/> Note. If this processing option is set to blank, the system date is used. <hr/> |

Crew Work and Resource Assignments

This section provides an overview of crew work and resource assignments and discusses how to:

- Assign resources to the crew schedule.
- Split work over multiple days for a single resource.
- Split work between multiple resources.

Understanding Crew Work Assignments

Once the crew schedule has been agreed to and saved by the scheduler, the schedule sits in wait until the schedule period is rolled and the crew has begun to execute on the schedule. Resources are assigned or removed from the current crew schedule based on availability and competency for the work to be completed during the schedule period and in a scheduled day. If the work cannot be completed, or if it is determined that additional resources are required, adjustments can be made to the crew schedule to split the hours and resources required to complete the task.

Crew Work Assignments

The crew reviews the current schedule for the period and begins to assign resources to the current schedule based on the availability of resources in the crew which is displayed in the resource search window following the list of scheduled work. Tasks on the schedule can be moved to a particular day to allow for plant outages or balancing of individual resource availability for a particular day. During the schedule period, additional break in work can be added to the current schedule and the crew can revise their work assignments to allow for the changes or move/reschedule existing work. When the scheduled work is done, the work order and scheduled is reported as complete. If work is not completed for the schedule period or schedule day, the work is rescheduled.

The Work With Work Assignments program (P48330) allows you to review, assign, or remove resources to the schedule of work based on the resource availability for the period and day. The top section of the form supports the filtering and display of the work scheduled for the crew for the schedule period. The supply and demand inclusion rule defined in the processing options enables you to remove the completed work for the list during the schedule period.

The bottom section of the form supports filtering and display of resources available within the crew to complete the work, and displays the current available hours for the resources for the days within the schedule. The Advanced Resource Search and Select (P48310S) is available using the visual assist on the resource number and allows for searches using resource competencies. For the resource selected, the resources detailed availability and current assignments are displayed following the resource search for more information.

When assigning resources, the selected resource is added to the crew schedule task's selected using the crew assigned hours which is the same as the work order or labor detail estimated hours. If multiple resources are assigned to a crew schedule, the hours are split evenly between the resources. You can access the Assignment Detail (W48331B) form and adjust the individual assigned hours and dates as required using the hyper-link in the assignment column for the More Row options.

Note. If you change the estimated hours on the work order/labor detail steps, the crew schedule assigned hours is updated to reflect this change and the resource assignment hours are updated proportionally. If you change the planned start/finish dates on the work order/labor detail, they will not update the crew schedule or assignment dates. Changing crew schedule dates must be done using the Crew Scheduling programs.

From the form, exits exist to review the work order details, assignment details, and to run the Assignment Work Sheet report (P48342) which lists the assignment details by crew, supervisor, and individual resource for the schedule period.

Once the scheduled work is complete, the More Row Actions to the Completions program is selected to access either the work order header or work order labor detail in order to report the status as complete. Work orders not completed for the previous day, or orders that may not get done in the current period schedule can be moved to a specific date or a different schedule period.

Note. The crew assignment process follows the same general rules as the Resource Assignment program (P48331), the only difference is that the assignment is to the crew schedule and not directly to the work order/labor detail. Both applications create resource assignments in the Resource Assignments table (F48331).

Forms Used to Assign Resources to the Schedule

Form Name	Form ID	Navigation	Usage
Work with Work Assignments	W48330E	Crew Scheduling (G13RA12), Crew Schedule Assignments	View the work orders on the weekly crew schedule for the specified period. Select work order number and click Assign Resource to assign a resource to the order or move to a different schedule period or date. View and revise Resource Search region for resource availability.
Availability and Assignments tabs	W48330ES1	On Work with Work Assignments, view the Availability and Assignments tab.	View resource capacity, load, and availability.
Manage Schedule	W48320B	On Work with Work Assignments, select Go to: Manage Schedule	Select the application link to Unscheduled Work to include break in work on the schedule.

Setting Processing Options for the Crew Schedule Assignments Program

Use these processing options to specify the defaults for the Crew Schedule Assignments program (P48330).

Defaults

Use these processing options to specify whether to default values on the Work With Assignments form.

- | | |
|-------------------------------|---|
| 1. Schedule Period | Specify the default valued for the Schedule Period, Crew, Supervisor, Craft, and Resource Type. Values are:
<i>1</i> : Current Period (default)
<i>2</i> : Next Period
<i>3</i> : Following Period |
| 6. Load Profile Method | Specify how the work will be distributed across the duration of an assignment when a resource is assigned. For example, when using the flat load profile the load is evenly distributed for the assignment across the duration. Current default value is:
<i>1</i> : Flat Load Profile |

Process

Use these processing options to designate the number of periods; to default a period type; to enter the supply and demand inclusion rules; to update the work order assigned to field; and to determine the operation status completion code.

1. Number of Periods	Specify the number of periods to calculate availability and assignment load. The periods are expressed as days or weeks based on the Period Type field.
	Note. If the Number of Periods is set beyond 52, the system will automatically default 14.
2. Period Type	Specify the Period Type to group the display of assigned hours and capacity hours for a resource. UDC 48/PT (Period Types) will be used to select values. Default value is: <i>Blank:</i> Days
3. Set Default for Supply/Demand Inclusion Rules	Specify the default value from UDC 40/RV.
4. Update Work Order Assigned To Field	Specify if the system will automatically update the Assigned To field on the work order header when the Resource Assignments program (P48331) is run. The system will also update the Assigned To field when it is blank or when you change the assignment resource number, which is the same as the number on the work order. Values are: <i>Blank:</i> Do not update the Assigned To field <i>1:</i> Update the Assigned To field
Note. This processing option only applies when you assign resources at the work order level.	
5. Operation Completion Status	Specify the operation completion status that the system uses to update the labor detail step when completed. Select the default value from UDC 31/OS (Operation Status).

Versions

Use these processing options to set versions for these programs:

- Maintenance Schedule Review (P48320) Version.
- Work Order Labor Details (P17732) Version.
- Routing Instructions (P3112) Version.
- Assignment Detail (P48331) Version.
- Assignment Worksheet (P48435) Version.
- Settings for all version processing options use default version ZJDE0001.

Work Order Entry

Use these processing options to set the work order program to be used and the default version.

- | | |
|------------------------------|--|
| 1. Work Order Program | Specify the work order default program. Values are:
<i>1:</i> CAM work order (P13714) (default)
<i>2:</i> Work Order (P17714)
<i>3:</i> Manufacturing Work Order (P48013) |
|------------------------------|--|

2. Work Order Program Version

Specify the work order default version by entering a version or using the default value of ZJDE0001.

Work With Work Assignments form

Check the work order or labor detail step to assign a resource.

Review the resources in the Resource Search region, select the resource to assign to the order, and click the Assign Resource button.

Repeat this process until all resources required are assigned to the order and the system will split the estimated hours.

Completing Orders on the Schedule

This section provides an overview of completing orders on the schedule and discusses how to:

- Complete work orders on the schedule.
- Complete labor details steps on the schedule.
- Run Crew Schedule Completions Metrics program (R48327).

Understanding Completing Orders on the Schedule

It is important for the current schedule to be updated to reflect the work that has been completed to ensure that only the current remaining work is displayed on the schedule. The Work With Work Assignments program (P48330) contains a Row Action to Complete a scheduled task, which could be at the work order or labor detail step.

Scheduling completions can be executed either at the work order level or the labor detail level. If completions are performed at the work order level then the work order program will display allowing the update of the work order status and completion date. Scheduling completed at the labor detail level will display the labor detail completion program allowing the update of the operation status and completion date for the labor step. Completing multiple labor detail steps can be accomplished using the Work Order Labor Detail program (P13732) and updating the operation status and completion date on the required steps. Completed work orders or labor detail steps will no longer display on the Work Assignments form based on the Supply and Demand Inclusion Rules set in the processing options.

The Crew Schedule Completion Metrics program (R48327) is run to report the work that was completed and to update the crew metrics. If the schedule is at the work order detail level, the report will support the completion of the labor detail step and the work order.

Forms Used to Complete Work Orders on the Schedule

Form Name	Form ID	Navigation	Usage

OK Cancel

Labor Step Completion form

Operation Status User defined code system 31, type OS. The operation status code that identifies the current status of a work order or engineering change order as the operation

steps in the routing are completed. A processing option is available to default the operation status for completed.

Actual Finish Date

The date that the work order or engineering change order is completed or canceled.

Running the Crew Schedule Completion Metrics Program

Select Crew Scheduling (G13RA12), Crew Schedule Completion Metrics.

The Crew Schedule Completion Report lists all work orders/labor detail steps with a crew schedule that has a work order or labor detail completion date within the schedule period defined in the processing option. The report is grouped by crew schedule and lead craft and lists both the saved schedule and total hour of work completed. The information can be used to automatically update the Crew Schedule Completion metric information stored in the Crew Schedule Metrics table (F48315).

See Also

Appendix A, “PeopleSoft EnterpriseOne Resource Assignments Reports,” page 103

Reviewing Schedule Metrics

This section provides an overview of the scheduling metrics and discusses:

- Schedule Achievement
- Percent Scheduled
- Reason for Reschedule.

Understanding Schedule Metrics

The schedule metrics table contains all of the crew/craft availability and schedule compliance metric information supported throughout the crew scheduling process. The schedule compliance metric measures the performance of the crew in the process of creating a schedule of work and then completing that work. The following information is maintained by crew/craft for a schedule period:

- Schedule Hours
- Completed Schedule Hours
- Completed Hours
- Available Hours
- Load Percent

The Manage Schedule program (P48320) creates a schedule for the crew in the next period and allows you to view current, following, and future scheduled work. Once the schedule has been reviewed and updated by the scheduler, the More Form Actions to Save Metrics is pressed to save the next schedule and updates the scheduled hours for the crew/craft in the Schedule Metrics table (F48315). The Schedule Completion Metrics report (R48327) is run once orders on the schedule are completed and updates the Completed Scheduled Hours and Completed Hours also located in the schedule metrics table. This batch program is typically run one to two weeks after the work has been completed to capture the completion metrics for the crew/craft..

The Schedule Metrics program (P48315) is used by the scheduler to get an aggregate view of the metric information. The two key scheduling metrics calculated are:

- Schedule Compliance — Scheduled Completed / Total Scheduled.
- Percent Scheduled — Scheduled Completed / Total Work Completed.

The Crew Reschedule Metrics program (P48316) is used to review the reasons why work is being rescheduled by crew or craft and date range. The reason codes and text descriptions by work order are available for review and analysis.

Prerequisites

Following are the prerequisites required to be complete prior to evaluating the schedule metrics:

1. Setup Crew Availability for the next period.
2. Create and save the schedule of work for the crew in the next period.
3. Report completions of the work scheduled and other unscheduled work completed during the schedule period.

CHAPTER 6

Working with Resource Assignments

This chapter provides an overview of assigning resource to work orders and discusses how to:

- Set processing options for Resource Assignments (P48331)
- Work with work orders
- Locate resources
- Assign resources to tasks
- Revise resource assignments

Understanding How to Assign Resources to Work Orders

After you define the resources in the Resource Master and set up their capacity by associating them with a work hour calendar, you can start assigning resources to work orders or work order labor detail.

You assign resources to work orders or work order labor detail by using the Resource Assignment program (P48331). This program allows you to search for work orders and resources, and to carry out the assignment. You define work order types in the Resource Assignment Level UDC table (48/RL) to enable resource assignments at the labor detail level.

Note. Because resources cannot be assigned to a work order header and a work order labor detail line on the same work order, the word *task* is used when referring to an assignment process that can be carried out at either the work order or work order labor detail level, based on the Resource Assignment Level UDC table.

Prerequisites

Before you complete the tasks in this section:

- Add equipment or individual resources to the resource master.
- Add base calendars for resources.
- Define the Resource Assignment Level by work order document type in the UDC table 48/RL.
- Set up a Supply & Demand inclusion rule to determine what work order status values will display assignments and resource capacity.

Setting Processing Options for Resource Assignments (P48331)

Processing options enable you to specify the default processing for programs and reports.

For programs, you can specify options such as the default values for specific transactions, whether fields appear on a form, and the version of the program that you want to run.

For reports, processing options enable you to specify the information that appears on reports. For example, you set a processing option to include the fiscal year or the number of aging days on a report.

Do not modify EnterpriseOne demo versions, which are identified by ZJDE or XJDE prefixes. Copy these versions or create new versions to change any values, including the version number, version title, prompting options, security, and processing options.

Defaults

These processing options control default values for the filter fields on the Work With Resource Assignments form.

- | | |
|----------------------------------|--|
| 1. Crew | Use this processing option to specify the address book number of the manager or planner that the system uses to search for work orders. |
| 2. Supervisor | Use this processing option to specify the supervisor whom the system uses to search for work orders. |
| 3. Customer | Use this processing option to specify the customer whom the system uses to search for work orders. |
| 4. Scheduled Start Date | Use this processing option to specify the scheduled start date. The system uses this date when searching for work orders. If you leave this processing option blank, the system uses the system date with the Starting Workday processing option to determine the scheduled start date. |
| 5. Scheduled End Date | Use this processing option to specify the scheduled end date. The system uses this date when searching for work orders. If you leave this processing option blank, the system uses the scheduled start date with the Number of Periods and Period Type processing options to determine the scheduled end date. |
| 6. Order Type | Use this processing option to specify the order type. The system uses this default when searching for work orders. Enter a value from UDC 00/DT (Document Type - All Documents). |
| 7. Type - W.O. | Use this processing option to specify the classification of work orders or engineering change orders. The system uses this default when searching for work orders. Enter a value from UDC 00/TY (Work Order/ECO Type). |
| 8. Priority | Use this processing option to specify the relative priority of a work order or engineering change order in relation to other orders. The system uses this default when searching for work orders. Enter a value from UDC 00/PR (Work Order Priority). |
| 9. Work Order Status From | Use this processing option to specify the beginning status code for a range of work orders. The system uses this default when searching for work orders. Enter a value from UDC 00/SS (Work Order Status). |

- | | |
|-----------------------------------|---|
| 10. Work Order Status To | Use this processing option to specify the ending status code for a range of work orders. The system uses this default when searching for work orders. Enter a value from UDC 00/SS (Work Order Status). |
| 11. Service Address Number | Use this processing option to specify the service address number (site) that the system uses to search for work orders. |
| 12. Business Unit | Use this processing option to specify the business unit that the system uses to search for work orders. |
| 13. Parent W.O. Number | Use this processing option to specify the parent work order that the system uses to search for work orders. |
| 14. Project Number | Use this processing option to specify the EPM (engineering project management) number that the system uses to search for work orders. |
| 15. Resource Type | Use this processing option to specify the default resource type. The system uses this to determine what type of resources to display. Enter a value from UDC 05/RT (Record Type). If you leave this processing option blank, a resource type of 01 is used. Values are:

01: Individual
02: Asset, such as equipment |
| 16. Resource Details | Use this processing option to specify the type of details that display for a resource. Enter a value from UDC 48/RD (Resource Details). |
| 17. Resources Assigned | Use this processing option to specify whether the Resource Assignment program (P48331) displays only those work orders that have resources assigned to them, those without resource assignments, or both. Values are:

Blank: Display all work orders.
0: Display only work orders without resource assignments.
1: Display only work orders with resource assignments. |
| 18. Load Profile Method | Use this processing option to specify the load profile method. The system uses the method to distribute the work across the duration of an assignment when a resource is assigned. For example, when using the flat load profile, the system spreads the work for an assignment evenly over the duration. Currently, the system uses only the flat load profile value 1, which is also the default value. Enter a value from UDC 48/LP (Load Profile Method). |

Process

These processing options control processing in the Resource Assignment program.

- | | |
|-----------------------------|--|
| 1. Number of Periods | Use this processing option to specify the number of periods that the system uses to calculate availability and assigned workloads. Periods are expressed as days or weeks, based on the value in the Period Type field. Enter a value within a range of 1 to 52. |
| 2. Period Type | Use this processing option to specify the period type that the system uses to group the display of assigned hours and capacity hours for a resource. Enter a value from UDC 48/PT (Period Type). If you leave this processing option blank, the system uses Days as the period type. |

3. Starting Workday

Use this processing option to specify the starting workday. The system uses this processing option with the system date to determine the scheduled start date that is used when searching for work orders. If you leave this processing option blank, the system uses Monday. Enter a value from UDC 48/WD (Work Day).

Note. The system uses this processing option only if the Scheduled Start Date processing option is blank.

4. Supply/Demand Inclusion Rule

Use this processing option to specify the supply/demand inclusion rule that the system uses to calculate availability.

For assignments at the work order level, the system determines if the assignment is included in availability calculations by using the rule in this processing option, the work order document type (DCTO), and the work order status (SRST).

For assignments at the labor detail level, the system determines if the assignment is included in availability calculations by using the rule in this processing option, the work order document type, and the operation status (OPST). If the Operation Status field is blank, the system uses the work order status.

If you leave this processing option blank, the system calculates availability by using all assignments that have been identified for inclusion.

5. Automatically Expand Instructions

Use this processing option to specify whether the system automatically expands the tree structure when displaying work orders on the Work With Resource Assignments form. The expanded tree structure shows the labor detail steps for work orders. Values are:

Blank: Do not automatically expand the tree structure.

I: Automatically expand the tree structure.

6. Update Work Order Assigned To field

Use this processing option to specify whether the system automatically updates the Assigned To field on the work order header when you update assignments with the Resource Assignment program (P48331). This applies only when you assign resources at the work order level. In addition, the system updates the Assigned To field only when it is blank or you change an assignment resource number that is the same as the number on the work order. Values are:

Blank: Do not update the Assigned To field.

I: Update the Assigned To field.

Versions

These processing options control which versions the system uses when the following programs are called:

1. Routing Instructions (P3112) Version

Use this processing option to specify which version of Routings (P3112) will be used. If this field is left blank, the system uses default version (ZJDE0001).

2. Labor Details (P17732) Version

Use this processing option to determine which version of Work Order Labor program (P17732) the system uses. If you leave this processing option blank, the system uses version ZJDE0001.

3. Work Order Backlog Download (R13460) Version

Use this processing option to specify the version of the Work Order Backlog Download program (R13460) that the system uses. If you leave this processing option blank, the system uses version XJDE0001.

WO Entry

These processing options control which work order entry program and version the system uses.

1. Work Order Program

Use this processing option to specify the work order program that the system uses when you select a work order to review. Values are:

1: CAM Work Order (P13714) (default)

2: Work Order (P17714)

3: Manufacturing Order (P48013)

Note. This processing option also specifies the routing/labor detail program the system uses. For value 1, the system uses the Work Order Labor Detail program (P17732). Otherwise, the system uses the Work Order Routing program (P3112).

2. Work Order Program Version

Use this processing option to specify the version of the selected work order program. If this option is left blank, the system uses the default version (ZJDE0001).

Working with Work Orders

This section provides an overview of work orders and discusses how to review and revise work orders.

Understanding Work Orders

You can locate work orders by applying search criteria. For example, you can locate work orders by manager, work site, status, and order type. Additionally, you can display work orders that are based on whether an assignment already exists. You can also download work order backlog information outside of the PeopleSoft EnterpriseOne software by downloading the work order to a text file format. You can then upload this information into a project management package for further processing.

If you are working with engineer-to-order projects, you can search for work orders by project number. You can set default values on the Defaults tab of the processing options for some of the search fields. The work orders that match the search criteria appear in the detail area with their associated instructions, as well as, any resource assignments that are already made. Each row provides detailed information about the task.

If work order labor detail exists for a work order and you are assigning resources at this level, it is displayed in the detail area following the work order. You can set a processing option on the Process tab to automatically display the labor detail following the work order. If a resource assignment already exists for a task, it always appears with the associated task, and its associated assignment details appear in the detail area.

When you select a task that requires a resource, you can review the available resources in the Resource Search area. You search for resources by resource type. If a supervisor or work center branch is associated with the task, that information is supplied to the resource search fields by default to limit the search for available resources.

If the basic resource search does not provide enough search criteria, you can use the Advanced Search option to access the Resource Master Search & Select program (P48310S). This program allows you to apply additional search criteria (for example, job type and competency) to match a resource to the requirements of a particular task. If you have already defined competency information on the labor detail line, the system uses this information as search criteria on the Resource Master Search & Select form. However, you can change the search criteria if necessary. You can review the availability of or current assignments for all of the resources that are retrieved by this search in the Resource Detail area.

Resource assignments can be carried out on the Work with Resource Assignments form if you select a task and an available resource, then click the Assign Resource button in the center of the form to make the actual assignment.

Forms Used to Work with Work Orders

Form Name	Form ID	Navigation	Usage

Work Order form

Work Order

Equipment Number

An identification code that represents an asset. You enter the identification code in one of the following formats:

- 1 Asset number (a computer-assigned, 8-digit, numeric control number).
- 2 Unit number (a 12-character alphanumeric field).
- 3 Serial number (a 25-character alphanumeric field).

Every asset has an asset number. You can use unit number and serial number to further identify assets. If this is a data entry field, the first character you enter indicates whether you are entering the primary (default) format that is defined for your system, or one of the other two formats. A special character (such as / or *) in the first position of this field indicates which asset number format you are using. You assign special characters to asset number formats on the fixed assets system constants form.

Review and revise the Parts, Labor, Status History, and Related Actions tabs.

Planning

Status	A user defined code (00/SS) that describes the status of a work order, rate schedule, or engineering change order. Any status change from 90 through 99 triggers the system to automatically update the completion date.
Requested Date	The date that the work order or engineering change order is planned to be completed.
Planned Date	The start date for the order. You can enter this date manually, or have the system calculate it using a backscheduling routine. The routine starts with the required date and offsets the total leadtime to calculate the appropriate start date.
Planned Finish	The date that an item is scheduled to arrive or that an action is scheduled for completion.
Actual Finish	The date that the work order or engineering change order is completed or canceled.
Parent W.O. No	A number that identifies the parent work order. You can use this number to: • Enter default values for new work orders, such as Type, Priority, Status, and Manager. • Group work orders for project setup and reporting.

Access the Work Order form, review the Responsible Persons region.

Responsible Persons region

Crew

A user-defined name or number that identifies an address book record for a crew. You can use this number to locate and enter information about the address book record. If you enter a value other than the address book number (AN8), such as the long address or tax ID, you must precede it with the special character that is defined in the Address Book constants. When the system locates the record, it returns the address book number to the field.

Lead Craft

An alphanumeric code used to define the lead craft required to complete the work. The value entered is used as the default craft (work center) when new labor detail records are added to the work order.

Supervisor

A user-defined name or number that identifies an address book record for a supervisor.

Assigned To

A user-defined name or number that identifies an address book record for assigned to.

Inspector

A user-defined name or number that identifies an address book record for an inspector.

Originator

A user-defined name or number that identifies an address book record the record originator.

Downloading Work Order Backlogs

This section provides an overview of work order backlogs and discusses how to:

- Set processing options for work order backlog downloads
- Download work order backlogs

Understanding Work Order Backlogs

Use the Work Order Backlog Download program (R13460) to allow users to work with resource assignments outside of PeopleSoft EnterpriseOne. You download the work order backlog and assignments to a text file format (CSV). You can then upload this information into a project management package for further processing.

This download process is configured in such a way that customers can use the process as a template for developing their own specific requirements, depending on their data setup and project management software.

By using the Work Order Backlog Download program (R13460), you can download work orders, work order instructions, and assignment details into these two .csv text files:

- JDEToMSProjTasks.csv

This file contains task information.

- JDEToMSProjAssign.csv

This file contains resource assignment information.

You need to create an export folder in the EnterpriseOne software directory for the text files that are generated by the Work Order Backlog Download program. Create this folder before the report is run on the machine for the first time. If the job is run locally, label this folder as: C:\B7\Prod Env\Export.

You can use processing options to specify whether labor details or assignment details are included in the download.

You can also access this program from the Resource Assignment program. (Note though, that this option is not available in the web version of the Resource Assignment program.) If you do access this program from the Resource Assignment program, the work order selections from the workbench are appended to any data selection that is defined for the version that you run.

Downloading Work Orders

From the Daily resource Assignment Planning menu (G13RA10), choose Work Order Backlog Download.

Setting Processing Options for Work Order Backlog Downloads

Processing options enable you to specify the default processing for programs and reports.

For programs, you can specify options such as the default values for specific transactions, whether fields appear on a form, and the version of the program that you want to run.

For reports, processing options enable you to specify the information that appears on reports. For example, you set a processing option to include the fiscal year or the number of aging days on a report.

Do not modify EnterpriseOne demo versions, which are identified by ZJDE or XJDE prefixes. Copy these versions or create new versions to change any values, including the version number, version title, prompting options, security, and processing options.

Process

These processing options control whether the associated labor detail and assignment detail is downloaded along with the work order information.

1. Download associated labor detail

Use this processing option to specify whether the system downloads associated labor detail information from the Work Order Routing table (F3112) with the selected work order. Values are:

Blank: Do not download the labor detail information.

I: Download the labor detail information.

2. Download associated assignment detail

Use this processing option to specify whether the system downloads associated assignment detail information from the Resource Assignments table (F48311) with the selected work order. Values are:

Blank: Do not download the assignment detail information.

I: Download the assignment detail information.

Locating Resources

This section provides an overview of how to locate resources for task assignments.

Understanding How to Locate Resources

The Resource Assignment program (P48331) provides a method for locating resources that can be assigned to tasks. A search is activated if you click the Find Resources button in the Resource Search region of the Work with Resource Assignments form. The default value for the Resource Type field can be set on the Defaults tab of the processing options. The filter fields in this area, such as Supervisor or work center from the work order labor detail, are populated from the selected task if the corresponding record fields contain a value. The resources that are set up in the Resource Master table (F48310) and that match the search criteria appear in the detail area. The detail area displays the current available hours for each matching resource. The current available hours are calculated by using the resource's capacity and current assignments.

The Advanced Search tab can be used to conduct a more detailed search for resources. If you have the HR/Payroll system installed, you can search by job type/step code from Payroll or the competency type, code, and level from HR. If you do not have the HR/Payroll system installed, you can use the resource attributes to set up this type of information for resources. The resources that are set up in the F48310 table and that match the search criteria appear in the detail area. The detail area displays the current available hours for each matching resource. The current available hours are calculated by using the resource's capacity and current assignments.

You can define the competencies that are required to complete a particular task in the Work Order Labor Detail program (P17732). The competencies can also default in from the Work With Routing Master program (P3003). Additionally, you can add blind assignments on the Resource Assignment Detail form (blank resource assignment) and then define competencies for each assignment. The competencies that you define act as search criteria in the Resource Master Search & Select program when you search for resources to assign to a task.

Once resources are retrieved, you can check their capacity and existing assignments for a particular time period. The availability of a resource is calculated based on the resource calendar and the Resource Working Hours table (F48307). The assigned load is calculated based on existing assignments for the time period.

Resource assignments can be displayed either in days or in weeks, depending on the setting of the processing options. The Schedule Start Date on the work order filter tab supplies the default value for the Project From date; this value can be overridden.

Prerequisite

Set the period type and the number of periods on the Process tab of the processing options to determine the time frame for which resource capacity will be displayed in the resource detail tree.

Forms Used to Locate Resources

Form Name	Form ID	Navigation	Usage
Work with Resource Assignments	W48331E	Daily Resource Assignments (G13RA10), Resource Assignment. To locate work orders, complete field information and click Find. To locate resources, scroll down to Resource Search. To assign a resource, scroll down to Resource Search and click the Assign Resource button. To delete a resource, scroll down to Resource Search, select the resource assignment, and click the Remove Resource button.	Locate and review work orders. Assign a resource (an employee or a piece of equipment) to a task. You can assign a resource to multiple tasks at the same time. Delete resource assignment for a particular resource.
Resource Master Search & Select	W48310SA	On Work with the Resource Assignments form, use the visual assist to locate the resource number.	Locate resources.

Assign Resource Remove Resources Assignment Detail

Resource Search

Find Resource Type 01 Resource Number 8447 Brown, Harvey J. Project From 10/25/04

Records 1 - 1

Resource Number	Description	Crew	Lead Craft	10/25/04	10/26/04	10/27/04	10/28/04	10/29/04	10/30/04
8447	Brown, Harvey J.	9300	ELECTRICIAN	8.00	8.00	8.00	8.00	8.00	

Work With Resource Assignments form

Review the work tasks for the scheduled date range.

To locate resources:

1. On Work With Resource Assignments, verify the Resource Type field in the Resource Search region.
2. Click the Find button in the Resource Search area.

The list box following the search area displays the available resources in a folder, labeled by resource type. If a resource is set to inactive on the resource master, it does not appear.

3. To view the availability of the resource for the scheduled period, click the name of the resource.
4. Choose the Assignments or Availability tab to review the resource capacity, load, and availability.

The resource assignment tree in the lower-right area of the form displays assignments or availability for the resource for every day or week of the scheduled period. The availability information is based on the calendar information that is associated with the resource.

Assigning Resources to Tasks

This section provides an overview of assigning resources to tasks and discusses how to assign resources to tasks.

Understanding How to Assign Resources to Tasks

After you have retrieved the tasks that require resources, as well as the available resources, you can perform the actual assignment on the Work With Resource Assignments form.

To assign a resource to a task, select the task and the resource, and then click the Assign Resource button. Once the resource is assigned, the resource displays in the Individual Resources column for the task to which the resource is assigned.

You can also delete a resource assignment on the Work With Resource Assignments form by selecting the resource assignment and click the Remove Resources button. On this form, however, you cannot change any assignment details. To change assignments details, you need to access either the Resource Assignment Detail or the Assignment Detail Review form. If you delete a work order or a labor detail step with existing resource assignments, these assignments are also deleted.

When you assign resources at the work order level, you can set processing options to insert resource assignments automatically in the Assigned To field on the work order header. You can only assign individual resources, not equipment. If you assign more than one resource to a work order, the Individual Resources field will contain the address book number for each assigned resource separated by a comma. In addition, you can set a processing option for the following programs to create individual resource assignments:

- Work Order Revisions (P17714)
- Preventive Maintenance Backlog (P12071)
- Update PM Schedule Status (R12807)

When this processing option is enabled, the system validates the address book number that was entered in the Individual Resources field against the Resource Master table (F48310). In addition to assigning resources using the Resource Assignment program, you can also insert, update, or delete resource assignments in the Work Order Revisions program. You can choose a resource by using scrolling to the Resource Search region and searching the Resource Number field to access the Resource Master Search & Select program (P48310S).

When you create a work order by running the Update PM Schedule Status program (R12807), the system can create a resource assignment if the Assigned To field on the model work order contains a value and if the processing option is set to create resource assignments. On the PM Schedule that you created, the Employee field is updated with the Assigned To address book number. In the Preventive Maintenance Backlog program (P12071), you can change the Employee, thus updating the Assigned To field in the associated work order.

When resources are assigned to tasks, the system automatically checks the resource's capacity when calculating the assignment start and end dates. The Resource Availability is defined as follows:

- Capacity
Available resource capacity by day.
- Load
Amount of work assigned to a resource.
- Availability
Available working hours for the resource.

All assignments for a selected task are shown on the Resource Assignment Detail form. You can call this form directly from the Work with Resource Assignments form if you the Assignment Details button. On Assignment Detail, you can add, update, and delete assignments.

You can review the resource assignments that you made in summary format or detail format. To review in summary format, choose the Summary Review link. The Assignment Summary Review form is primarily a review form; for example, a supervisor could review all assignments for his or her team.

To review in detail format, choose the Detail Review link. The Assignment Detail Review form allows you to use filter criteria to select resource assignments for review. It also allows you to make changes to assignments within the grid—for example, task description, assignment start and end dates, and assignment percent. Click the Assignment Detail button to make revisions.

Forms Used to Assign Resource to Tasks

Form Name	Form ID	Navigation	Usage
Work with Resource Assignments	W48331	Daily Resource Assignment (G13RA10), Resource Assignment On Work with Resource Assignments, determine how to: Assign resources to a task, select the task, select the resource you wish to assign to the task, and then click the Assign Resource button. Delete the resource assignment, click the Remove Resourcesbutton. Report distribution of hours when multiple resources are assigned to the task, click Find. Report a change in availability for the selected resource, scroll to the Availability or Assignments tab.	The Work with Resource Assignments form supports these functions: • Locates and assigns resources to tasks. • Deletes resource assignment from a task. • Equally distributes the hours required to complete the task between all assigned resources. • Reports changes in availability for a selected resource.
Assignment Summary Review	W48331C	On Work with Resource Assignments, select Summary Review from the Form menu. Change the date in the Scheduled Start Date field and click Find.	Reviews summarized assignment information about the selected resource. Adjusts assignment information based on revised Scheduled Start Date.
Assignment Detail Review	W48331D	On Work With Resource Assignments, select Detail Review from the Form menu.	Reviews detailed resource assignment information such as the tasks to which the resource is assigned, the hours required for completion, and the percentage of the resource's capacity assigned to a task.

Work with Resource Assignments form

Scroll to the Resource Search region to review and assign resources to a task.

Revising Resource Assignments

This section provides an overview of revising resource assignments and discusses how to revise resource assignments.

Understanding Revising Resource Assignments

Once resources are assigned to tasks, the application provides methods for revising assignment details for a particular task.

The Work With Resource Assignments form displays all of the current assignments for a particular task and allows you to add, update, or delete assignments on the task. If you click the Assignment Detail button, you can access the Resource Assignment Details to adjust the dates and assigned hours for all of the assignments to keep them aligned. On this form, you can also update the assignment hours, start and end dates, assignment percentage, and competency information. If multiple assignments exist, the sum of the assigned hours has to be less than or equal to the estimated hours on the task.

The Assignment Detail Review form displays all of the current assignments for a particular resource and allows you to update assignment details. This form is used to balance the load for a resource across all of the tasks assigned to this resource for the current schedule period. On this form, you can update the resource assigned, assignment start and end dates, assignment percentage and competency information.

The Work Order Revisions program (P17714) allows you to change the scheduled start and finished dates, which then can update the dates in the Work Order Labor Detail program (P17732), based on a processing option. The system updates the resource assignments at the work order or labor detail level with these date changes. The system does not check resource capacity at this point. Use the Resource Assignment Detail form to make adjustments manually, if necessary.

You update the work order estimated hours by using either the Work Order Revisions program (P17714) or Work Order Labor Detail program (P17732). The system uses this value to update the assignment hours for existing assignments on the work order.

Use the Work Order Labor Detail program (P17732) to change the scheduled start and finish dates for a labor detail step. The system uses these dates to update an existing assignment's start and finish dates for this step. The system does not check resource capacity to calculate the assignment start and finish dates.

Change the estimated hours for a labor step in the Work Order Labor Detail program (P17732). If you change the estimated hours on a labor detail line, the system uses this value to update the associated individual assignments. If you change the run machine hours, the system updates the associated asset assignments.

Changes to the labor detail key values (work center, operation sequence, operation type) also automatically update the associated assignment.

Forms Used to Revise Resource Assignments

Form Name	Form ID	Navigation	Usage
Work with Resource Assignments	W48331E	Daily Resource Assignment (G13RA10), Resource Assignment	Add, update, or delete resource assignment information for the task.
Resource Assignment Detail	W48331B	On Work with Resource Assignments form, click the Assignment Detail button.	Revise, as required, task assignment information for resources.
Assignment Detail Review	W48331D	On Work with Resource Assignments, select the Form menu, and then select Detail Review.	Review and update task assignment information for a resource. Adjust assignment details, as required, to resolve capacity constraints. You cannot add or delete assignment information here.

Assign Resource Remove Resources Assignment Detail

Work With Resource Assignments form

Work Order Details

Select the Work Order Details tab.

Start Date

The calendar date that an operation or rate is scheduled to begin.

If the Start Date is changed, the Assignment End Date is recalculated, based on the Assigned Hours, Assignment Percent, and the current capacity of the resource.

End Date

The calendar date that an activity or rate is scheduled to end. This date is calculated by the constraints-based planning system.

Note. If you clear the end date, it will be recalculated based on the Start Date, Assigned Hours, Assignment Percentage, and current capacity of the resource. This process typically occurs when the End Date is selected, which indicates that the task will not be completed on the current End Date at the current capacity.

If you update the End Date, the Assignment Percent is recalculated, based on the Start Date, Assigned Hours, and current capacity of the resource.

Assigned Hours

A number that indicates the hours that have been assigned to this task.

If you update the Assigned Hours, the assignment End Date is recalculated, based on the Start Date, Assignment Percent, and current capacity of the resource.

For more than one assignment, manually distribute the assigned hours among the resources or use the Distribute Hours option on the Form menu to automatically distribute the assigned hours.

The total Assigned Hours by resource type cannot exceed the estimated hours of the task.

Assignment Percent

A percentage that indicates the proportion of a resource's time that will be allocated to the task.

If you update the Assignment Percent, the assignment End Date is recalculated, based on the Assigned Hours, Assignment Percent, and current capacity of the resource.

CHAPTER 7

Integrating Employee Assignment with Resource Assignment

This chapter provides an overview of integrating employee assignment with resource assignment and discusses how to:

- Set up the system constant.
- Set up users.
- Set up employee assignment integration.
- Set up resource assignment integration.
- Integrate employee assignment or resource assignment with time cards.

Understanding Employee Assignment Integration with Resource Assignment

To allow companies to assign an employee to a work order as a resource and easily provide a 'template' for those employees to enter their time, the creation of Timecard Templates needs to have more flexibility to take advantage of information in the Employee master such as rates and job codes if the user so desires. Currently, the rate and job information must be included on the Employee Assignment to successfully create a Timecard Template. While this is useful for temporary employees who are constantly changing jobs and being paid different rates based on their assignment, it is not practical when simply assigning an employee to a work order using resource assignments to have to then access the Employee Assignments form and add information that already exists on the Employee Master.

In Resource Assignments, you can use integrated features to:

- Assign Resources to a Work Order.
A Project Manager assigns resources to a work order.
- Create Timecard Templates.
A Payroll Clerk creates Timecard Templates for employees to enter their time for the pay period.
- Enter Time Entry.
Employees use self-service time entry to enter their time.
- Change Resource Assignments.

When an employee does not come to work on day that work is scheduled, the supervisor must reassign the work order to another employee. If the Timecard Templates are being created as the resource is assigned, the timecard template must be updated to reflect the assignment change.

In Employee Assignment, you can use integrated features to:

- Create Employee Assignment

A Resource Coordinator creates employee assignment for temporary work assignments. The coordinator enters the different job descriptions, rates, and pay basis codes.

- Create Timecard Template

A payroll clerk creates timecard templates for employees to enter their time for the pay period.

- Enter Time Entry

Employees use Self-Service Time Entry to enter their time.

When creating timecard templates using the Generate Timecard Templates program, the system enables the user to specify whether they are creating templates from Resource Assignments or Employee Assignments. When Resource Assignments is used as the basis, pay basis (pay class) and rates are validated against the Employee Master Information table when the template is created. When the timecard is then uploaded to the live table, the information is defaulted according to the processing options on the Time Entry MBF.

Setting Up Users

This section provides an overview of user setup and discusses how to enter appropriate settings:

Understanding User Setup

After you have set up one or more users whom you intend to include when you generate timecards that use employee and resource assignment integration, you need to enter setup information that identifies these users as service providers. This procedure is required only if you are generating timecards that are integrated with resource assignment.

Use the Employee Information program (P0801) to enter new employee records and generate a new Address Book record. To modify existing employee records for use with employee and resource assignment integration, use the Address Book Revisions program (P01012) to identify each employee as a service provider, for those employees that will access or update work orders.

Prerequisite

Set up one or more users in Address Book whom you intend to include when you generate timecards that use employee and resource assignment integration.

Forms Used to Set Up Users

Form Name	Form ID	Navigation	Usage
Address Book Revisions	W01012B	Daily Processing (G0110), Address Book Revisions Select an employee and then select S/WM from the Row menu.	Access the Work With Service/Warranty Management Information form.
Work With Service/Warranty Management Information	W1782C	Click Add.	Access the Service/Warranty Management Information form.
Service/Warranty Management Information	W1782A	Click the Service Provider button.	Access the Service Provider Revisions form.
Service Provider Revisions	W1782C	Click OK.	Enter values for Time Zone and Daylight Savings Rule.

User Setup

Access the Service Provider Revisions form.

Time Zone List

Choose the time zone for which you want to view the date and time.

Daylight Savings Rule Name

Enter a unique name that identifies a daylight savings rule. Use daylight savings rules to adjust time for a geographic and political locale.

Setting Up Employee Assignment for Integration

This section provides an overview of setting up Employee Assignment for Integration and discusses how to set up:

- Pay types that are used in assignments.
- User defined code: product code 07, code AB.
- Employee assignment default pay type.
- Two new versions of the Time Entry MBF Processing Options program (P050002A).
- A new version of the Time Entry Batch Processor program (R05116Z1I).
- A new version of the Generate Timecard Templates in F06116Z1 program (R0716711).

Understanding Employee Assignment for Integration

This task applies specifically for setting up users who are connected to timecards that display information from employee assignments. After setting up these parameters, you need to use Employee Assignment functions to set up an assignment for an employee that uses these integration settings.

Forms Used to Set Up Employee Assignment for Integration

Form Name	Form ID	Navigation	Usage
Work With Pay Types	W059116A	Pay/Deduction/Benefits Setup (G05BD4), PDBA Setup	Set up pay types to be used in assignments.
Work With User Defined Codes	W0004AA	Enter UDC in the Fastpath.	Set up UDC 07/AB.
Work With EE Assignment Default Pay Types	W0716704A	Employee Assignment (G05EA10), EE Assignment Default Pay Type	Set up the default pay type (code 9) with a value of <i>HRC</i> .
Work With Interactive Versions	W983051I	Enter IV in the Fast Path.	Enter P050002A, click Find. Select Time Entry MBF Processing Options (ZJDE0001) and then select processing Options from the Row menu. Set up a version to keep timecards locked. Set up another version to release timecards to Payroll.
Work With Interactive Versions	W983051I	Enter IV in the Fast Path.	Enter P051121, click Find. Select Speed Time Entry (ZJDE0001) and then select processing Options from the Row menu. Set up a version of the Speed Time Entry program that uses the Time Entry MBF Processing Options program version that you previously set up to keep timecards locked. Set up another version that uses the Time Entry MBF Processing Options program version that you previously set up to release timecards to Payroll.

Page Name	Object Name	Navigation	Usage
Available Versions	W98305WA	Enter BV in the Fast Path.	Enter <i>R05116Z11</i> in the Batch Application field and then click Find. Create a version of the Time Entry Batch Processor program (R05116Z11) to update the Employee Transaction Detail File (F06116).
Available Versions	W98305WA	Enter BV in the Fast Path.	Enter <i>R0716711</i> in the Batch Application field and then click Find. Create a version of the Generate Timecard Templates in F06116Z1 program (R0716711) to update the Employee Transactions Batch File (F06116Z1).

Set Up Pay Types to Use in Assignments

Access the Work With Pay Types form.

Set up pay types that you use in assignments. For example:

- *9*: Regular pay
- *109*: Overtime 1.5
- *209*: Overtime 2.5
- *50*: Contractor
- *150*: Contractor 1.5

Set Up User Defined Code

Access the Work With User Defined Codes form.

Enter a value of *HRC* for Pay Basis.

Set Up a Default Pay Type

Access the Work With EE Assignment Default Pay Types form.

Set up the default pay type (code 9, in the previous pay type setup) with a value of *HRC*.

Set Up Versions of the Time Entry MBF Processing Options program

Access the Work With Interactive Versions form.

Set up two versions of the Time Entry MBF Processing Options program (P050002A). One version keeps timecards locked. The second version releases timecards for payroll processing.

Set Up Versions of the Speed Time Entry Program

Access the Work With Interactive Versions form.

Set up two versions of the Speed Time Entry program (P051121). Each version uses one of the Time Entry MBF Processing Options versions that either keep timecards locked or release timecards for payroll processing.

Setting Up Resource Assignment for Integration

This section provides an overview of setting up Employee Assignment for Integration and discusses how to set up:

- A resource assignment record.
- A work order.
- Resource that is attached to a work order.
- A version of the Time Entry Self-Service Director.
- Fields that the system displays on timecards.
- Pay types for resource assignment.
- Default estimated hours.
- A version of the R05116Z11 program.
- A version of the R0716711 program.

Understanding Resource Assignment for Integration

This task applies specifically for setting up users who are connected to timecards that display information from resource assignments. After setting up these parameters, you need to use Resource Assignment functions to set up an assignment for an employee that uses these integration settings.

Forms Used to Set Up Resource Assignment for Integration

Form Name	Form ID	Navigation	Usage
Work with Address Book Resources	W48310A	Periodic Resource Assignment Processing (G13RA20), Resource Master Select an employee record and then click Select.	Access the Resource Master Revisions form.
Resource Master Revisions	W48310C	Click OK.	Enter appropriate resource assignment values.
Work With Work Orders	W48201F	Work Order (G1316), Work Order Entry	Add a work order.
Work With Resource Assignments	W48331E	Daily Resource Assignments (G13RA10), Resource Assignment Select a work order and then click Attach Resource.	Attach a resource to a work order
Work Order Detail	W48331B	Select a resource and the click the arrow button.	Assign the resource to the work order.
Work With Interactive Versions	W983051I	Fast Path: IV (Interactive Versions) Enter P051125 Select Processing Options from the Row menu.	Add a version of the Time Entry Self Service Director program and set up the processing options.
Work With ESS Time Entry Setup	W051123A	Time Entry Self Service Setup (G05BESS41), Self Service Screen Setup Click Add.	Access the ESS Time Entry Setup Revisions form.
ESS Time Entry Setup Revisions	W051123B	Click OK.	Define the fields that the system displays on the time entry form.
Work With Classification/Pay Cross Reference	W05932A	Rate Derivation Setup (G05BRD4), Classification Pay/X-Ref Click Add.	Access the form.
Classification/Pay Cross Reference Revisions	W05932C	Click OK.	Set up the pay types you need to use in resource assignment integration. You can set up pay types by job or by business unit.

Set Up A Resource Assignment Record

Access the Resource Master Revisions form.

Enter values in the resource assignment record that you use in generating a timecard. Sample values for the Basic Data tab are:

- *01/01/05*: Effective Date
- *12/31/05*: Expired Date
- *9400*: Crew
- *4803*: Supervisor
- *6074*: Site
- *ELECTRICIAN*: Lead Craft

Address Book Number

Enter an identification code that represents an asset. You enter the identification code in one of the following formats:

- 1 Asset number (a computer-assigned, 8-digit, numeric control number)
- 2 Unit number (a 12-character alphanumeric field)
- 3 Serial number (a 25-character alphanumeric field)

Every asset has an asset number. You can use unit number and serial number to further identify assets. If this is a data entry field, the first character you enter indicates whether you are entering the primary (default) format that is defined for your system, or one of the other two formats. A special character (such as or *) in the first position of this field indicates which asset number format you are using. You assign special characters to asset number formats on the fixed assets system constants form.

A number that represents either the address number or the asset number, depending on whether the resource that you are working with is a person or a piece of equipment. The system uses the resource number in conjunction with the resource type to uniquely identify the resource.

For Resource Type 01, you can use these formats to enter an address number:

- Short address number
- Long address number
- Tax ID

For Resource Type 02, you can use these formats to enter an asset number:

- Asset number
- Unit number
- Serial number

Assignment Percentage

Enter a percentage that indicates the proportion of a resource's time that will be allocated to the task.

Schedule Pattern

Enter a code used to specify a Schedule Pattern utilized in maintenance scheduling. For example, M could stand for a weekly scheduling pattern starting on Monday with a 7-day period; 2 could stand for biweekly with a 14-day period. The number of days utilized for display and processing is defined in the special handling code of UDC 13/SP (Schedule Pattern).

Sample values that you might add to the Calendar tab are:

- *23*: Time Zone
- *USA*: Rule Name
- *NORMAL*: Calendar Value

Time Zone Select the time zone for which you want to view the date and time.

Rule Name Enter a unique name identifying a daylight savings rule. Use daylight savings rules to adjust time for a geographic and political locale.

Set Up a Work Order

Access the Work With Work Orders form.

To set up a work order for integrated resource assignments:

1. Add values on the Detail tab. For example:
 - *M30*: Branch
 - *EE ASSIGNMENT 8.11 TEST*: Failure Description
 - *1001*: Customer Number
2. Add values to the Planning tab. For example:
 - *40*: Estimated Hours
 - *01/01/05*: Planned Start Date
 - *01/15/05*: Planned Finish Date
3. Add a value on the Accounting tab. For example: *M30* for the Business Unit field.

Attach a Resource to a Work Order

Access the Work With Resource Assignments form.

To attach a resource to a work order:

1. Enter the scheduled start and end dates.
2. Enter a Supervisor number to narrow the search, and then click Find.
3. Select a work order record and then click Assign Resource.
4. Select an employee record on Resource Assignment Detail and click the arrow to assign the resource to the work order.

Set Up a Version of the Time Entry Self Service Director

Access the Work With Interactive Versions form.

Enter *P051125* in the Interactive Application field and then select Processing Options from the Row menu.

Set up a version of the Time Entry Self Service Director program that can be called from the client web portal.

Set Up Time Entry Fields

Access the ESS Time Entry Setup Revisions form.

Setting Processing Options for Time Entry Batch Processor

Access the Available Versions form.

Enter R05116Z11 in the Batch Application field and then select Processing Options from the Row menu.

Create a new version that you can use with any of the time entry programs. Enter a new version name for Time Entry and add these values:

- User defined name: Version — Time Entry
- I: Final Flag
- I: Purge Flag
- I: Payroll Lockout Processing

See Also

PeopleSoft EnterpriseOne Time and Labor 8.11 PeopleBook, “Setting Up Time Entry Batch Processing”

Setting Processing Options for the Generate Timecard Templates in F0611621 program (R0716711)

Access the Available Versions form.

Enter R0716711 in the Batch Application field and then select Processing Options from the Row menu. Values listed here are specific to timecards using resource assignment integration.

Selection

Although processing options are set up during EnterpriseOne implementation, you can change processing options each time you run a program.

- | | |
|---------------------------------|--|
| 4. Pay Period Start Date | Use this processing option to specify the beginning date for the pay period. |
| 5. Pay Period End Date | Use this processing option to specify the ending date for the pay period. |
| 6. Generate Templates | Use this processing option to specify whether the system automatically generates templates. Values are:
Blank (default): Use value from Employee Assignment.
I: One per pay period (Work date equals pay period end date). |

7. Source for Timecard Template

2: One template per day within the Pay Period Start/End date.

Use this processing option to specify the program version that the system uses to generate the timecard. Values are:

Blank (default): Employee Assignment

I: Resource Assignment

Time Entry

Although processing options are set up during EnterpriseOne implementation, you can change processing options each time you run a program.

1. Create assignment records in EE Transaction Detail File F06116

Use this processing option to specify whether the program creates assignment records in the F06116 table. Values are:

Blank: Do not create records

I: Create assignment records

Note. Turn the Final Flag on in processing options for R05116Z11.

2. Batch Time Entry Processor Version to Submit, if records are to be created in EE Transaction Detail File F06116

Use this processing option to specify the program version of the Batch Time Entry Processor. The system uses the default version ZJDE0001 if left blank.,

Resource Assignment

Although processing options are set up during EnterpriseOne implementation, you can change processing options each time you run a program.

Pay Code Source

Use this processing option to specify the source table. Values are:

Blank (default): Pay type Setup Table (F0716704)

I: Employee Master Default Auto Pay Type

APPENDIX A

PeopleSoft EnterpriseOne Resource Assignments Reports

This appendix provides an overview of Resource Assignment reports and allows you to:

- View summary tables of all resource assignment reports
- View details for selected resource assignment reports
- View details for crew resource assignments report

PeopleSoft EnterpriseOne Resource Assignment Reports: A to Z

The following table lists the Resource Assignment book reports, sorted alphanumerically by report ID.

Report ID and Report Name	Description	Navigation
R48340 Resource Assignment Detail Report	Use the Resource Assignment Detail Report to generate a detailed list of the jobs and the hours that are assigned to an individual resource. It displays the information that is available on the Assignment Detail Review form.	Daily Resource Assignment Planning menu (G13RA10), Resource Assignment Detail Report
R48341 Resource Assignment Summary Report	Use the Resource Assignment Summary Report to generate a summarized list of capacity and assigned workload for resources. This report also calculates totals for the capacity and assignment hours for each resource and for a team, as well as the current assigned hours.	Daily Resource Assignment Planning menu (G13RA10), Resource Assignment Summary Report
R48342 Crew Schedule Reports	Use the Crew Schedule Reports to generate a detailed crew schedule report including crew availability, carryover, schedule, and unscheduled work.	Crew Scheduling menu (R13RA12), Crew Schedule Report

Report ID and Report Name	Description	Navigation
R48345 Crew Work Assignment Report	Use the Resource Work Assignments Report to generate a detailed schedule package, including a summary of work and the work order details, by resource assignment for the schedule.	Crew Scheduling menu (R13RA12), Crew Work Assignment Report
R48327 Crew Schedule Completion Metrics program	Use the Crew Schedule Completion Metrics program to report the work that was completed and to update the crew metrics.	Crew Scheduling menu (R13RA12), Crew Schedule Completion Metrics program

PeopleSoft EnterpriseOne Resource Assignment Reports: Selected Reports

This section provides detailed information, including processing options, for individual reports. The reports are listed alphanumerically by report ID in this appendix.

R48340 - Resource Assignment Detail Report

Use the Resource Assignment Detail Report (R48340) to generate a detailed list of the jobs and the hours that are assigned to an individual resource. It displays the information that is available on the Assignment Detail Review form.

You use processing options to specify the period type, the starting work day, and the supply/demand inclusion rule that is used to calculate resource availability.

R48341 - Resource Assignment Summary Report

Use the Resource Assignment Summary Report (R48341) to generate a summarized list of capacity and assigned workload for resources. This report also calculates totals for the capacity and assignment hours for each resource and for a team, as well as the current assigned hours. The report includes information that is available on the Assignment Summary Review form.

Use processing options to specify the period type, the starting workday, and the supply/demand inclusion rule that is used to calculate resource availability.

Processing Options for Resource Assignment Reports (R48340, R48341)

Processing options enable you to specify the default processing for programs and reports.

For programs, you can specify options such as the default values for specific transactions, whether fields appear on a form, and the version of the program that you want to run.

For reports, processing options enable you to specify the information that appears on reports. For example, you set a processing option to include the fiscal year or the number of aging days on a report.

Do not modify EnterpriseOne demo versions, which are identified by ZJDE or XJDE prefixes. Copy these versions or create new versions to change any values, including the version number, version title, prompting options, security, and processing options.

Defaults

Although processing options are set up during EnterpriseOne implementation, you can change processing options each time you run a program.

- | | |
|-------------------------------|--|
| 1. Schedule Start Date | Use this processing option to specify the scheduled start date. The system uses this date with the Period Type to determine the dates that are used to display assigned hours and capacity hours for a resource. If this processing option is left blank, the system uses the system date with the Starting WorkDay processing option to determine the scheduled start date. |
|-------------------------------|--|

Process

Although processing options are set up during EnterpriseOne implementation, you can change processing options each time you run a program.

- | | |
|-----------------------|---|
| 1. Period Type | Use this processing option to specify the period type the system uses to group the display of assigned hours and capacity hours for a resource. Enter a value from UDC 48/PT (Period Type). If you leave this processing option blank, the system uses Days as the period type. |
|-----------------------|---|

Blank = Days	Use this processing option to specify the period type that the system uses to group the display of assigned hours and capacity hours for a resource. Enter a value from UDC 48/PT (Period Type). If you leave this processing option blank, the system uses Days as the period type.
---------------------	--

- | | |
|----------------------------|---|
| 2. Starting WorkDay | Use this processing option to specify the starting workday. The system uses this processing option in conjunction with the system date to determine the scheduled start date when displaying the assigned hours and capacity hours for a resource. Enter a value from UDC 48/WD (Work Day). Note: The system uses this processing option only if the Scheduled Start Date processing option is blank. |
|----------------------------|---|

Blank = Monday	Use this processing option to specify the starting workday. The system uses this processing option with the system date to determine the scheduled start date when displaying the assigned hours and capacity hours for a resource. Enter a value from UDC 48/WD (Work Day).
-----------------------	--

Note. The system uses this processing option only if the Scheduled Start Date processing option is blank.

- | | |
|--|--|
| 3. Supply/Demand Inclusion Rule | Use this processing option to specify the supply/demand inclusion rule that the system uses to calculate availability. |
|--|--|

For assignments at the work order level, the system determines if the assignment is included in availability calculations by using the rule in this processing option, the work order document type (DCTO), and the work order status (SRST).

For assignments at the labor detail level, the system determines if the assignment is included in availability calculations by using the rule in this processing option, the work order document type, and the operation status

(OPST). If the Operation Status field is blank, the system uses the work order status.

If you leave this processing option blank, the system calculates availability by using all assignments that have been identified for inclusion.

R48345 — Crew Work Assignment Report

Use the Crew Work Assignment Report (R48345) to generate and print a schedule package by resource assignment for the schedule. The package will include a summary of the work to be completed and the work order detail print. The report includes information that is available on the Crew Schedule Assignments program (P48330).

Use processing options to specify the report title, schedule period, and supply and demand inclusion rule.

Default

Although processing options are set up during EnterpriseOne implementation, you can change processing options each time you run a program.

1. Report Sub Title: Use this processing options to create a free form Report Sub Title.

Process

Although processing options are set up during EnterpriseOne implementation, you can change processing options each time you run a program.

1. Schedule Period Use these processing options to set default values for schedule period. Values are:

1: Current Period (default)

2: Next Period

3: Following Period

2. Supply and Demand Inclusion Rule: Set the default Supply & Demand Inclusion Rules processing option based on the 40/RV UDC. Use this processing option to specify the supply/demand inclusion rule that the system uses to determine what work orders/labor detail steps are active.

R48342 — Crew Schedule Report

Use the Crew Schedule Reports to generate a detailed crew schedule report including the crew schedule, availability, carryover, and unscheduled work. Each section of the report can also be printed from the menu directly. It displays the information that is available on the Manage Schedule program.

Use processing options to specify the records that you want to include on the printed schedule

Default

Use this processing options to create a free form Report Sub Title.

1. Report Sub Title: Use this processing options to create a free form Report Sub Title.

Process

Use these processing options to set default values for schedule period. Values are:

1: Current Period (default)

2: Next Period

3: Following Period

Set the default Forecast Type processing option based on the 34/DF UDC.

Set the default Supply & Demand Inclusion Rules processing option based on the 40/RV UDC. Use this processing option to specify the supply/demand inclusion rule that the system uses to determine what work orders or labor detail steps are active.

Print

Use these processing options to select which reports to print by selecting:

- Print Crew Availability Report
- Print Carryover Report
- Print Schedule Report
- Print Backlog Report

Note. Each of these reports can also be printed directly from the menu selection.

R48327 — Crew Schedule Completion Metrics

Use the Crew Schedule Completion Metrics program to report the work that was completed and to update the crew metrics. It displays the information that is available on the Crew Schedule Metrics program

Use processing options to specify the defaults for the Crew Schedule Completion Metrics (R48327).

Default

Use this processing options to set the number of periods.

- | | |
|--|--|
| 1. Number of Periods Prior to Current | Use this processing option to specify the number of periods prior to the current period the system uses to calculate completion metrics. For example, if you enter a "1" in this processing option the system will calculate completion metrics for the period just prior to the current period. If the current period is this week, one period prior is last week. If you leave this option blank, the system will default to one period prior to the current period. |
|--|--|

Process

- | | |
|---------------------------------|---|
| 1. Proof or Final Mode | Use this processing option to determine if the program results will be reviewed first, or if the system will be updated with the changes. Values are:

<i>Blank:</i> Proof Mode
<i>1:</i> Final Mode |
| 2. Work Center or Report | Use this processing option to specify where the system writes errors. Values are: |

Blank: Write errors to Work Center.

I: Write errors to Report.

**3. Job Status Message
Recipient**

Use this processing option to specify the address book number of the recipient of job status messages that result from the Maintenance Schedule Completion Metrics report (R48327). If you leave this processing option blank, the system uses the address book number of the current user.

**4. Supply and Demand
Inclusion Rule**

Use this processing option to specify the supply/demand inclusion rule that the system uses to select completed work.

Glossary of PeopleSoft Terms

activity	A scheduling entity in PeopleSoft EnterpriseOne Form Design Aid that represents a designated amount of time on a calendar.
activity rule	The criteria by which an object progresses from one given point to the next in a flow.
add mode	A condition of a form that enables users to input data.
Advanced Planning Agent (APAg)	A PeopleSoft EnterpriseOne tool that can be used to extract, transform, and load enterprise data. APAg supports access to data sources in the form of relational databases, flat file format, and other data or message encoding, such as XML.
application server	A server in a local area network that contains applications shared by network clients.
as if processing	A process that enables you to view currency amounts as if they were entered in a currency different from the domestic and foreign currency of the transaction.
alternate currency	A currency that is different from the domestic currency (when dealing with a domestic-only transaction) or the domestic and foreign currency of a transaction. In PeopleSoft EnterpriseOne Financial Management, alternate currency processing enables you to enter receipts and payments in a currency other than the one in which they were issued.
as of processing	A process that is run as of a specific point in time to summarize transactions up to that date. For example, you can run various PeopleSoft EnterpriseOne reports as of a specific date to determine balances and amounts of accounts, units, and so on as of that date.
back-to-back process	A process in PeopleSoft EnterpriseOne Workflow Management that contains the same keys that are used in another process.
batch processing	A process of transferring records from a third-party system to PeopleSoft EnterpriseOne. In PeopleSoft EnterpriseOne Financial Management, batch processing enables you to transfer invoices and vouchers that are entered in a system other than EnterpriseOne to PeopleSoft EnterpriseOne Accounts Receivable and PeopleSoft EnterpriseOne Accounts Payable, respectively. In addition, you can transfer address book information, including customer and supplier records, to PeopleSoft EnterpriseOne.
batch server	A server that is designated for running batch processing requests. A batch server typically does not contain a database nor does it run interactive applications.
batch-of-one immediate	A transaction method that enables a client application to perform work on a client workstation, then submit the work all at once to a server application for further processing. As a batch process is running on the server, the client application can continue performing other tasks. See also direct connect and store-and-forward.
business function	A named set of user-created, reusable business rules and logs that can be called through event rules. Business functions can run a transaction or a subset of a transaction (check inventory, issue work orders, and so on). Business functions also contain the application programming interfaces (APIs) that enable them to be called from a form, a database trigger, or a non-EnterpriseOne application. Business functions can be combined with other business functions, forms, event rules, and other components to make up an application. Business functions can be created through

	event rules or third-generation languages, such as C. Examples of business functions include Credit Check and Item Availability.
business function event rule	See named event rule (NER).
business view	A means for selecting specific columns from one or more PeopleSoft EnterpriseOne tables whose data is used in an application or report. A business view does not select specific rows, nor does it contain any actual data. It is strictly a view through which you can manipulate data.
central objects merge	A process that blends a customer's modifications to the objects in a current release with objects in a new release.
central server	A server that has been designated to contain the originally installed version of the software (central objects) for deployment to client computers. In a typical PeopleSoft EnterpriseOne installation, the software is loaded on to one machine—the central server. Then, copies of the software are pushed out or downloaded to various workstations attached to it. That way, if the software is altered or corrupted through its use on workstations, an original set of objects (central objects) is always available on the central server.
charts	Tables of information in PeopleSoft EnterpriseOne that appear on forms in the software.
connector	Component-based interoperability model that enables third-party applications and PeopleSoft EnterpriseOne to share logic and data. The PeopleSoft EnterpriseOne connector architecture includes Java and COM connectors.
contra/clearing account	A general ledger account in PeopleSoft EnterpriseOne Financial Management that is used by the system to offset (balance) journal entries. For example, you can use a contra/clearing account to balance the entries created by allocations in PeopleSoft EnterpriseOne General Accounting.
Control Table Workbench	An application that, during the installation Workbench processing, runs the batch applications for the planned merges that update the data dictionary, user-defined codes, menus, and user override tables.
control tables merge	A process that blends a customer's modifications to the control tables with the data that accompanies a new release.
cost assignment	The process in PeopleSoft EnterpriseOne Advanced Cost Accounting of tracing or allocating resources to activities or cost objects.
cost component	In PeopleSoft EnterpriseOne Manufacturing Management, an element of an item's cost (for example, material, labor, or overhead).
cross segment edit	A logic statement that establishes the relationship between configured item segments. Cross segment edits are used to prevent ordering of configurations that cannot be produced.
currency restatement	The process of converting amounts from one currency into another currency, generally for reporting purposes. You can use the currency restatement process, for example, when many currencies must be restated into a single currency for consolidated reporting.
database server	A server in a local area network that maintains a database and performs searches for client computers.
Data Source Workbench	An application that, during the Installation Workbench process, copies all data sources that are defined in the installation plan from the Data Source Master and Table and Data Source Sizing tables in the Planner data source to the System-release number data source. It also updates the Data Source Plan detail record to reflect completion.

date pattern	A calendar that represents the beginning date for the fiscal year and the ending date for each period in that year in standard and 52-period accounting.
denominated-in currency	The company currency in which financial reports are based.
deployment server	A server that is used to install, maintain, and distribute software to one or more enterprise servers and client workstations.
detail information	Information that relates to individual lines in PeopleSoft EnterpriseOne transactions (for example, voucher pay items and sales order detail lines).
direct connect	A transaction method in which a client application communicates interactively and directly with a server application. See also batch-of-one immediate and store-and-forward.
Do Not Translate (DNT)	A type of data source that must exist on the iSeries because of BLOB restrictions.
dual pricing	The process of providing prices for goods and services in two currencies.
edit code	A code that indicates how a specific value for a report or a form should appear or be formatted. The default edit codes that pertain to reporting require particular attention because they account for a substantial amount of information.
edit mode	A condition of a form that enables users to change data.
edit rule	A method used for formatting and validating user entries against a predefined rule or set of rules.
Electronic Data Interchange (EDI)	An interoperability model that enables paperless computer-to-computer exchange of business transactions between PeopleSoft EnterpriseOne and third-party systems. Companies that use EDI must have translator software to convert data from the EDI standard format to the formats of their computer systems.
embedded event rule	An event rule that is specific to a particular table or application. Examples include form-to-form calls, hiding a field based on a processing option value, and calling a business function. Contrast with the business function event rule.
Employee Work Center	A central location for sending and receiving all PeopleSoft EnterpriseOne messages (system and user generated), regardless of the originating application or user. Each user has a mailbox that contains workflow and other messages, including Active Messages.
enterprise server	A server that contains the database and the logic for PeopleSoft EnterpriseOne or PeopleSoft World.
EnterpriseOne object	A reusable piece of code that is used to build applications. Object types include tables, forms, business functions, data dictionary items, batch processes, business views, event rules, versions, data structures, and media objects.
EnterpriseOne process	A software process that enables PeopleSoft EnterpriseOne clients and servers to handle processing requests and run transactions. A client runs one process, and servers can have multiple instances of a process. PeopleSoft EnterpriseOne processes can also be dedicated to specific tasks (for example, workflow messages and data replication) to ensure that critical processes don't have to wait if the server is particularly busy.
Environment Workbench	An application that, during the Installation Workbench process, copies the environment information and Object Configuration Manager tables for each environment from the Planner data source to the System-release number data source. It also updates the Environment Plan detail record to reflect completion.
escalation monitor	A batch process that monitors pending requests or activities and restarts or forwards them to the next step or user after they have been inactive for a specified amount of time.

event rule	A logic statement that instructs the system to perform one or more operations based on an activity that can occur in a specific application, such as entering a form or exiting a field.
facility	An entity within a business for which you want to track costs. For example, a facility might be a warehouse location, job, project, work center, or branch/plant. A facility is sometimes referred to as a <i>business unit</i> .
fast path	A command prompt that enables the user to move quickly among menus and applications by using specific commands.
file server	A server that stores files to be accessed by other computers on the network. Unlike a disk server, which appears to the user as a remote disk drive, a file server is a sophisticated device that not only stores files, but also manages them and maintains order as network user request files and make changes to these files.
final mode	The report processing mode of a processing mode of a program that updates or creates data records.
FTP server	A server that responds to requests for files via file transfer protocol.
header information	Information at the beginning of a table or form. Header information is used to identify or provide control information for the group of records that follows.
interface table	See Z tables.
integration server	A server that facilitates interaction between diverse operating systems and applications across internal and external networked computer systems.
integrity test	A process used to supplement a company's internal balancing procedures by locating and reporting balancing problems and data inconsistencies.
interoperability model	A method for third-party systems to connect to or access PeopleSoft EnterpriseOne.
in-your-face-error	In PeopleSoft EnterpriseOne, a form-level property which, when enabled, causes the text of application errors to appear on the form.
IServer service	Developed by PeopleSoft, this internet server service resides on the web server and is used to speed up delivery of the Java class files from the database to the client.
jargon	An alternative data dictionary item description that PeopleSoft EnterpriseOne or People World displays based on the product code of the current object.
Java application server	A component-based server that resides in the middle-tier of a server-centric architecture. This server provides middleware services for security and state maintenance, along with data access and persistence.
JDBNET	A database driver that enables heterogeneous servers to access each other's data.
JDEBASE Database Middleware	A PeopleSoft proprietary database middleware package that provides platform-independent APIs, along with client-to-server access.
JDECallObject	An API used by business functions to invoke other business functions.
jde.ini	A PeopleSoft file (or member for iSeries) that provides the runtime settings required for EnterpriseOne initialization. Specific versions of the file or member must reside on every machine running PeopleSoft EnterpriseOne. This includes workstations and servers.
JDEIPC	Communications programming tools used by server code to regulate access to the same data in multiprocess environments, communicate and coordinate between processes, and create new processes.

jde.log	The main diagnostic log file of PeopleSoft EnterpriseOne. This file is always located in the root directory on the primary drive and contains status and error messages from the startup and operation of PeopleSoft EnterpriseOne.
JDENET	PeopleSoft proprietary communications middleware package. This package is a peer-to-peer, message-based, socket-based, multiprocess communications middleware solution. It handles client-to-server and server-to-server communications for all PeopleSoft EnterpriseOne supported platforms.
Location Workbench	An application that, during the Installation Workbench process, copies all locations that are defined in the installation plan from the Location Master table in the Planner data source to the System data source.
logic server	A server in a distributed network that provides the business logic for an application program. In a typical configuration, pristine objects are replicated on to the logic server from the central server. The logic server, in conjunction with workstations, actually performs the processing required when PeopleSoft EnterpriseOne and World software runs.
MailMerge Workbench	An application that merges Microsoft Word 6.0 (or higher) word-processing documents with PeopleSoft EnterpriseOne records to automatically print business documents. You can use MailMerge Workbench to print documents, such as form letters about verification of employment.
master business function (MBF)	An interactive master file that serves as a central location for adding, changing, and updating information in a database. Master business functions pass information between data entry forms and the appropriate tables. These master functions provide a common set of functions that contain all of the necessary default and editing rules for related programs. MBFs contain logic that ensures the integrity of adding, updating, and deleting information from databases.
master table	See published table.
matching document	A document associated with an original document to complete or change a transaction. For example, in PeopleSoft EnterpriseOne Financial Management, a receipt is the matching document of an invoice, and a payment is the matching document of a voucher.
media storage object	Files that use one of the following naming conventions that are not organized into table format: Gxxx, xxxGT, or GTxxx.
message center	A central location for sending and receiving all PeopleSoft EnterpriseOne messages (system and user generated), regardless of the originating application or user.
messaging adapter	An interoperability model that enables third-party systems to connect to PeopleSoft EnterpriseOne to exchange information through the use of messaging queues.
messaging server	A server that handles messages that are sent for use by other programs using a messaging API. Messaging servers typically employ a middleware program to perform their functions.
named event rule (NER)	Encapsulated, reusable business logic created using event rules, rather than C programming. NERs are also called business function event rules. NERs can be reused in multiple places by multiple programs. This modularity lends itself to streamlining, reusability of code, and less work.
<i>nota fiscal</i>	In Brazil, a legal document that must accompany all commercial transactions for tax purposes and that must contain information required by tax regulations.
<i>nota fiscal factura</i>	In Brazil, a <i>nota fiscal</i> with invoice information. See also <i>nota fiscal</i> .

Object Configuration Manager (OCM)	In PeopleSoft EnterpriseOne, the object request broker and control center for the runtime environment. OCM keeps track of the runtime locations for business functions, data, and batch applications. When one of these objects is called, OCM directs access to it using defaults and overrides for a given environment and user.
Object Librarian	A repository of all versions, applications, and business functions reusable in building applications. Object Librarian provides check-out and check-in capabilities for developers, and it controls the creation, modification, and use of PeopleSoft EnterpriseOne objects. Object Librarian supports multiple environments (such as production and development) and enables objects to be easily moved from one environment to another.
Object Librarian merge	A process that blends any modifications to the Object Librarian in a previous release into the Object Librarian in a new release.
Open Data Access (ODA)	An interoperability model that enables you to use SQL statements to extract PeopleSoft EnterpriseOne data for summarization and report generation.
Output Stream Access (OSA)	An interoperability model that enables you to set up an interface for PeopleSoft EnterpriseOne to pass data to another software package, such as Microsoft Excel, for processing.
package	EnterpriseOne objects are installed to workstations in packages from the deployment server. A package can be compared to a bill of material or kit that indicates the necessary objects for that workstation and where on the deployment server the installation program can find them. It is point-in-time snap shot of the central objects on the deployment server.
package build	A software application that facilitates the deployment of software changes and new applications to existing users. Additionally, in PeopleSoft EnterpriseOne, a package build can be a compiled version of the software. When you upgrade your version of the ERP software, for example, you are said to take a package build. Consider the following context: “Also, do not transfer business functions into the production path code until you are ready to deploy, because a global build of business functions done during a package build will automatically include the new functions.” The process of creating a package build is often referred to, as it is in this example, simply as “a package build.”
package location	The directory structure location for the package and its set of replicated objects. This is usually \\deployment server\release\path_code\package\package name. The subdirectories under this path are where the replicated objects for the package are placed. This is also referred to as where the package is built or stored.
Package Workbench	An application that, during the Installation Workbench process, transfers the package information tables from the Planner data source to the System-release number data source. It also updates the Package Plan detail record to reflect completion.
PeopleSoft Database	See JDEBASE Database Middleware.
planning family	A means of grouping end items whose similarity of design and manufacture facilitates being planned in aggregate.
preference profile	The ability to define default values for specified fields for a user-defined hierarchy of items, item groups, customers, and customer groups.
print server	The interface between a printer and a network that enables network clients to connect to the printer and send their print jobs to it. A print server can be a computer, separate hardware device, or even hardware that resides inside of the printer itself.
pristine environment	A PeopleSoft EnterpriseOne environment used to test unaltered objects with PeopleSoft demonstration data or for training classes. You must have this environment so that you can compare pristine objects that you modify.

processing option	A data structure that enables users to supply parameters that regulate the running of a batch program or report. For example, you can use processing options to specify default values for certain fields, to determine how information appears or is printed, to specify date ranges, to supply runtime values that regulate program execution, and so on.
production environment	A PeopleSoft EnterpriseOne environment in which users operate EnterpriseOne software.
production-grade file server	A file server that has been quality assurance tested and commercialized and that is usually provided in conjunction with user support services.
program temporary fix (PTF)	A representation of changes to PeopleSoft software that your organization receives on magnetic tapes or disks.
project	In PeopleSoft EnterpriseOne, a virtual container for objects being developed in Object Management Workbench.
promotion path	The designated path for advancing objects or projects in a workflow. The following is the normal promotion cycle (path): 11>21>26>28>38>01 In this path, 11 equals new project pending review, 21 equals programming, 26 equals QA test/review, 28 equals QA test/review complete, 38 equals in production, 01 equals complete. During the normal project promotion cycle, developers check objects out of and into the development path code and then promote them to the prototype path code. The objects are then moved to the productions path code before declaring them complete.
proxy server	A server that acts as a barrier between a workstation and the internet so that the enterprise can ensure security, administrative control, and caching service.
published table	Also called a master table, this is the central copy to be replicated to other machines. Residing on the publisher machine, the F98DRPUB table identifies all of the published tables and their associated publishers in the enterprise.
publisher	The server that is responsible for the published table. The F98DRPUB table identifies all of the published tables and their associated publishers in the enterprise.
pull replication	One of the PeopleSoft methods for replicating data to individual workstations. Such machines are set up as pull subscribers using PeopleSoft EnterpriseOne data replication tools. The only time that pull subscribers are notified of changes, updates, and deletions is when they request such information. The request is in the form of a message that is sent, usually at startup, from the pull subscriber to the server machine that stores the F98DRPCN table.
QBE	An abbreviation for query by example. In PeopleSoft EnterpriseOne, the QBE line is the top line on a detail area that is used for filtering data.
real-time event	A service that uses system calls to capture PeopleSoft EnterpriseOne transactions as they occur and to provide notification to third-party software, end users, and other PeopleSoft systems that have requested notification when certain transactions occur.
refresh	A function used to modify PeopleSoft EnterpriseOne software, or subset of it, such as a table or business data, so that it functions at a new release or cumulative update level, such as B73.2 or B73.2.1.
replication server	A server that is responsible for replicating central objects to client machines.
quote order	In PeopleSoft EnterpriseOne Procurement and Subcontract Management, a request from a supplier for item and price information from which you can create a purchase order.

	In PeopleSoft EnterpriseOne Sales Order Management, item and price information for a customer who has not yet committed to a sales order.
selection	Found on PeopleSoft menus, a selection represents functions that you can access from a menu. To make a selection, type the associated number in the Selection field and press Enter.
Server Workbench	An application that, during the Installation Workbench process, copies the server configuration files from the Planner data source to the System-release number data source. It also updates the Server Plan detail record to reflect completion.
spot rate	An exchange rate entered at the transaction level. This rate overrides the exchange rate that is set up between two currencies.
Specification merge	A merge that comprises three merges: Object Librarian merge, Versions List merge, and Central Objects merge. The merges blend customer modifications with data that accompanies a new release.
specification	A complete description of a PeopleSoft EnterpriseOne object. Each object has its own specification, or name, which is used to build applications.
Specification Table Merge Workbench	An application that, during the Installation Workbench process, runs the batch applications that update the specification tables.
store-and-forward	The mode of processing that enables users who are disconnected from a server to enter transactions and then later connect to the server to upload those transactions.
subscriber table	Table F98DRSUB, which is stored on the publisher server with the F98DRPUB table and identifies all of the subscriber machines for each published table.
supplemental data	Any type of information that is not maintained in a master file. Supplemental data is usually additional information about employees, applicants, requisitions, and jobs (such as an employee's job skills, degrees, or foreign languages spoken). You can track virtually any type of information that your organization needs. For example, in addition to the data in the standard master tables (the Address Book Master, Customer Master, and Supplier Master tables), you can maintain other kinds of data in separate, generic databases. These generic databases enable a standard approach to entering and maintaining supplemental data across PeopleSoft EnterpriseOne systems.
table access management (TAM)	The PeopleSoft EnterpriseOne component that handles the storage and retrieval of use-defined data. TAM stores information, such as data dictionary definitions; application and report specifications; event rules; table definitions; business function input parameters and library information; and data structure definitions for running applications, reports, and business functions.
Table Conversion Workbench	An interoperability model that enables the exchange of information between PeopleSoft EnterpriseOne and third-party systems using non-PeopleSoft EnterpriseOne tables.
table conversion	An interoperability model that enables the exchange of information between PeopleSoft EnterpriseOne and third-party systems using non-PeopleSoft EnterpriseOne tables.
table event rules	Logic that is attached to database triggers that runs whenever the action specified by the trigger occurs against the table. Although PeopleSoft EnterpriseOne enables event rules to be attached to application events, this functionality is application specific. Table event rules provide embedded logic at the table level.
terminal server	A server that enables terminals, microcomputers, and other devices to connect to a network or host computer or to devices attached to that particular computer.

three-tier processing	The task of entering, reviewing and approving, and posting batches of transactions in PeopleSoft EnterpriseOne.
three-way voucher match	In PeopleSoft EnterpriseOne Procurement and Subcontract Management, the process of comparing receipt information to supplier's invoices to create vouchers. In a three-way match, you use the receipt records to create vouchers.
transaction processing (TP) monitor	A monitor that controls data transfer between local and remote terminals and the applications that originated them. TP monitors also protect data integrity in the distributed environment and may include programs that validate data and format terminal screens.
transaction set	An electronic business transaction (electronic data interchange standard document) made up of segments.
trigger	One of several events specific to data dictionary items. You can attach logic to a data dictionary item that the system processes automatically when the event occurs.
triggering event	A specific workflow event that requires special action or has defined consequences or resulting actions.
two-way voucher match	In PeopleSoft EnterpriseOne Procurement and Subcontract Management, the process of comparing purchase order detail lines to the suppliers' invoices to create vouchers. You do not record receipt information.
User Overrides merge	Adds new user override records into a customer's user override table.
variance	In Capital Asset Management, the difference between revenue generated by a piece of equipment and costs incurred by the equipment. In EnterpriseOne Project Costing and EnterpriseOne Manufacturing Management, the difference between two methods of costing the same item (for example, the difference between the frozen standard cost and the current cost is an engineering variance). Frozen standard costs come from the Cost Components table, and the current costs are calculated using the current bill of material, routing, and overhead rates.
Version List merge	The Versions List merge preserves any non-XJDE and non-ZJDE version specifications for objects that are valid in the new release, as well as their processing options data.
visual assist	Forms that can be invoked from a control via a trigger to assist the user in determining what data belongs in the control.
vocabulary override	An alternate description for a data dictionary item that appears on a specific PeopleSoft EnterpriseOne or World form or report.
wchar_t	An internal type of a wide character. It is used for writing portable programs for international markets.
web application server	A web server that enables web applications to exchange data with the back-end systems and databases used in eBusiness transactions.
web server	A server that sends information as requested by a browser, using the TCP/IP set of protocols. A web server can do more than just coordination of requests from browsers; it can do anything a normal server can do, such as house applications or data. Any computer can be turned into a web server by installing server software and connecting the machine to the internet.
Windows terminal server	A multiuser server that enables terminals and minimally configured computers to display Windows applications even if they are not capable of running Windows software themselves. All client processing is performed centrally at the Windows terminal server and only display, keystroke, and mouse commands are transmitted over the network to the client terminal device.

work day calendar	In EnterpriseOne Manufacturing Management, a calendar that is used in planning functions that consecutively lists only working days so that component and work order scheduling can be done based on the actual number of work days available. A work day calendar is sometimes referred to as planning calendar, manufacturing calendar, or shop floor calendar.
workflow	The automation of a business process, in whole or in part, during which documents, information, or tasks are passed from one participant to another for action, according to a set of procedural rules.
workgroup server	A server that usually contains subsets of data replicated from a master network server. A workgroup server does not perform application or batch processing.
XAPI events	A service that uses system calls to capture PeopleSoft EnterpriseOne transactions as they occur and then calls third-party software, end users, and other PeopleSoft systems that have requested notification when the specified transactions occur to return a response.
XML CallObject	An interoperability capability that enables you to call business functions.
XML Dispatch	An interoperability capability that provides a single point of entry for all XML documents coming into PeopleSoft EnterpriseOne for responses.
XML List	An interoperability capability that enables you to request and receive PeopleSoft EnterpriseOne database information in chunks.
XML Service	An interoperability capability that enables you to request events from one PeopleSoft EnterpriseOne system and receive a response from another PeopleSoft EnterpriseOne system.
XML Transaction	An interoperability capability that enables you to use a predefined transaction type to send information to or request information from PeopleSoft EnterpriseOne. XML transaction uses interface table functionality.
XML Transaction Service (XTS)	Transforms an XML document that is not in the PeopleSoft EnterpriseOne format into an XML document that can be processed by PeopleSoft EnterpriseOne. XTS then transforms the response back to the request originator XML format.
Z event	A service that uses interface table functionality to capture PeopleSoft EnterpriseOne transactions and provide notification to third-party software, end users, and other PeopleSoft systems that have requested to be notified when certain transactions occur.
Z table	A working table where non-PeopleSoft EnterpriseOne information can be stored and then processed into PeopleSoft EnterpriseOne. Interface tables also can be used to retrieve PeopleSoft EnterpriseOne data. Interface tables are also known as interface tables.
Z transaction	Third-party data that is properly formatted in interface tables for updating to the PeopleSoft EnterpriseOne database.

About This PeopleBook Preface

PeopleBooks provide you with the information that you need to implement and use PeopleSoft applications.

This preface discusses:

- Related documentation.
- Comments and suggestions.

Documentation Updates and Printed Documentation

This section discusses how to:

- Obtain documentation updates.
- Order printed documentation.

Obtaining Documentation Updates

You can find updates and additional documentation for this release, as well as previous releases, on the PeopleSoft Customer Connection website. Through the Documentation section of PeopleSoft Customer Connection, you can download files to add to your PeopleBook Library. You'll find a variety of useful and timely materials, including updates to the full PeopleSoft documentation that is delivered on your PeopleBooks CD-ROM.

Important! Before you upgrade, you must check PeopleSoft Customer Connection for updates to the upgrade instructions. PeopleSoft continually posts updates as the upgrade process is refined.

See Also

PeopleSoft Customer Connection, <https://www.peoplesoft.com/corp/en/login.jsp>

Ordering Printed Documentation

You can order printed, bound volumes of the complete PeopleSoft documentation that is delivered on your PeopleBooks CD-ROM. PeopleSoft makes printed documentation available for each major release shortly after the software is shipped. Customers and partners can order printed PeopleSoft documentation by using any of these methods:

- Web
- Telephone
- Email

Web

From the Documentation section of the PeopleSoft Customer Connection website, access the PeopleBooks Press website under the Ordering PeopleBooks topic. The PeopleBooks Press website is a joint venture between PeopleSoft and MMA Partners, the book print vendor. Use a credit card, money order, cashier's check, or purchase order to place your order.

Telephone

Contact MMA Partners at 877 588 2525.

Email

Send email to MMA Partners at peoplesoftpress@mmapartner.com.

PeopleSoft Customer Connection, <https://www.peoplesoft.com/corp/en/login.jsp>

Comments and Suggestions

Your comments are important to us. We encourage you to tell us what you like, or what you would like to see changed about PeopleBooks and other PeopleSoft reference and training materials. Please send your suggestions to:

PeopleSoft Product Documentation Manager PeopleSoft, Inc. 4460 Hacienda Drive Pleasanton, CA 94588

Or send email comments to doc@peoplesoft.com.

While we cannot guarantee to answer every email message, we will pay careful attention to your comments and suggestions.

CHAPTER 1

PeopleSoft EnterpriseOne Resource Assignments Reports

This appendix provides an overview of Resource Assignment reports and allows you to view summary tables of all resource assignment reports

PeopleSoft EnterpriseOne Resource Assignment Reports: A to Z

The following table lists the Resource Assignment book reports, sorted alphanumerically by report ID.

Report ID and Report Name	Description	Navigation
R48340 Resource Assignment Detail Report	Use the Resource Assignment Detail Report to generate a detailed list of the jobs and the hours that are assigned to an individual resource. It displays the information that is available on the Assignment Detail Review form.	Daily Resource Assignment Planning menu (G13RA10), Resource Assignment Detail Report
R48341 Resource Assignment Summary Report	Use the Resource Assignment Summary Report to generate a summarized list of capacity and assigned workload for resources. This report also calculates totals for the capacity and assignment hours for each resource and for a team, as well as the current assigned hours.	Daily Resource Assignment Planning menu (G13RA10), Resource Assignment Summary Report
R48342 Crew Schedule Reports	Use the Crew Schedule Reports to generate a detailed crew schedule report including crew availability, carryover, schedule, and unscheduled work.	Crew Scheduling menu (R13RA12), Crew Schedule Report

Report ID and Report Name	Description	Navigation
R48345 Crew Work Assignment Report	Use the Resource Work Assignments Report to generate a detailed schedule package, including a summary of work and the work order details, by resource assignment for the schedule.	Crew Scheduling menu (R13RA12), Crew Work Assignment Report
R48327 Crew Schedule Completion Metrics program	Use the Crew Schedule Completion Metrics program to report the work that was completed and to update the crew metrics.	Crew Scheduling menu (R13RA12), Crew Schedule Completion Metrics program

CHAPTER 2

Report Samples

This chapter provides report samples.

For the online samples of these reports, see the PDF files that are published on CD-ROM with your online documentation.
