

## Price v12.0.1 Patch Readme

### Build IDs:

Price-12.0.1-189-200610270200-183338

MerchantDesktop-1.4.1-155-200607262030-174097

Engine-4.0.6-389-200609160000-179787

This Patch is an update to Price v12.0. It contains all the fixes and enhancements from previous patch releases. Refer to the individual patch readmes for details.

### Note the Following:

Price 12.0 has been certified for OAS. The following OAS patches apply to Price 12.0:

4968168

5360581

5365375

5385619

### Impact of Bug Fix on Price

The following table shows the TestTrack issues that were fixed in Price v12.0.1 and that impact either the Price front-end configuration (specifically the p4p-column-list.xml, p4pgui-config.xml, and config.properties files), the inference rules, load statements, schema, or Standard Load. (Note that some issues do not fall into any of these categories.)

TT#	Front End Configuration	Inference Rules	Load Statements	Schema Change	Standard Load
19743				X	
19993				X	
20510					X
20893					X
20945					X

## Bug Descriptions

Following is a list of the TestTrack issues that were addressed in Price v12.0.1. This list includes all the bugs in the table above, as well as other bugs that were closed in the Price v12.0.1 release:

**17118** – The Priority field in the Promotion Type has been implemented. The precedence is: 1. Floor promos win. 2. Lowest price.

**17406** – When the Take Markdown action is executed, a message is provided if logins have been disabled.

**19306** – Patch 5360581 is required by OAS in order to address the issue of a Price login failure on OAS under Linux.

**19416** – Intermittent exceptions are no longer occurring in Price with OAS.

**19431** – Redirection now works in clustered OAS. Note the following:

When using a load balancer, the following changes should be made so that redirection works properly.

**Option 1:** In the {OracleHome}/Apache/Apache/conf/httpd.conf - set the UseCanonicalName to Off. This is On by default.

**Option 2:** In the {OracleHome}/Apache/Apache/conf/httpd.conf, with UseCanonicalName set to On, set the ServerName attribute to the Load Balancer URL or IP.

OAS Cluster Topology recommends the second option.

**19476** - In the BRM grid, dates in the date column are being correctly translated for the appropriate locale.

**19650** – As a result of a configuration change (adding "-Doc4j.userThreads=true" to the open.xml file) reports can now be generated under OAS.

**19743** –RDM objects in the SVT schema compare (svt\_schema.xml) file are excluded when RDM is not installed.

**19749** – What If no longer produces multiple error messages when negative values are entered for Scenario Setting values.

**19838** – The ProfitLogic name has been removed from the online help.

**19876** – Performance improvements have been made to KPI.

**19992** – The LoadPriceLadder procedures checks for duplicate ladder IDs.

**19993** - Missing indexes have been added and the Oracle type has been re-created to match the SVT schema upgrade xml file.

**20024** – When ActiveX controls are being installed, IE assumes they are being installed from the Internet and asks for permission to install. To fix this:

Go to Tools > Internet Options > Security > Intranet > Sites > Advanced

Add the URL used to access p4pgui to the intranet zone. Save the changes, restart the browser, and try to install the ActiveX controls again. The controls install without asking for permission. You should refresh the grid page the first time around.

**20083** – What If graph displays after accessing What If for the very first time after an OAS restart.

**20297** – Price is no longer re-directing URLs.

**20359** – Performance enhancements have been made to IR\_ITEM\_DATES\_C.

**20510** – The LoadCalendar procedure does not reject records that have an eop\_calendar\_dt other than Saturday.

**20878** – Performance improvements have been made that affect the items\_modelrun\_tbl.

**20879** – Performance improvements have been made to the LoadPromotions procedure.

**20893** – Changes have been made to the character semantics so that the SVT Schema comparison does not fail.

**20945** – The IR\_ACTIVITY\_DATA, IR\_FORECAST\_METRICS\_POSTRUN, IR\_PAST\_TICKET\_PRICES, and IR\_PROJ\_MKDNS views have been modified to handle fiscal weeks that end on Friday.

**20987** - After a sort, column names that contain an ampersand (&) display correctly.

### **Known Issues**

If exceptions are seen in the Logs, for Solaris OAS standalone and clustered, the KeepAlive setting should be set to OFF.
