Introduction

This guide provides information on the interface tables used with Enterprise Information Manager (EIM) to import, export, merge and delete information in Siebel eBusiness Applications.

NOTE: This document may contain references to functionality, products, platforms and language support that are not available as part of the Siebel products your organization has licensed. Use the content in this document that is applicable to your deployment and the products that you are licensed to use. Please consult Siebel Technical Support with any questions regarding the applicability of specific functionality to your deployment.

This manual is *not* intended for use by the end user. This book will be useful primarily to people whose title or job description matches one of the following:

Database Administrators	Persons who administer the database system, including data loading, system monitoring, backup and recovery, space allocation and sizing, and user account management.
Siebel System Administrators	Persons responsible for the whole system, including installing, maintaining, and upgrading Siebel products.
Siebel Application Administrators	Persons responsible for planning, setting up, and maintaining Siebel applications.
Siebel Application Developers	Persons who plan, implement, and configure Siebel applications, possibly adding new functionality.

Readers should have familiarity with relational database application design concepts and advanced SQL skills.

How This Guide Is Organized

This manual provides detailed information about each Siebel interface table. Use it as a reference for importing data to and exporting data from the Siebel database. For more information on how to use EIM, see *Siebel Enterprise Integration Manager Administration Guide*.

If you are unfamiliar with EIM and the use of interface tables, you should read [Chapter 1](#) first. You can refer to the material in [Chapter 2](#) and the appendixes in any order.

[Chapter 1, “Overview,”](#) discusses interface tables and how they are used, and naming conventions.

[Chapter 2, “Interface Mapping Summary,”](#) provides the interface mapping summary, which illustrates the mappings between columns in the interface table and the destination columns in the base schema.

[Appendix A, “Siebel Interface Table Mappings,”](#) provides information on the functional areas served by each interface table and a high-level map of interface to target tables.

[Appendix B, “Interface Table Transition Matrix,”](#) provides a matrix by which you can transition from existing tables to the enhanced tables, and makes recommendations for new installations and upgrades.

Revision History

Interface Tables Reference for Siebel Industry Applications, Version 7.5

An interface table is a staging area where you import and export data to and from the Siebel database. Interface tables are designed to be simple and straightforward so they can be loaded or read by way of external programs. Each interface table usually supports a group of base tables that can be imported or exported in a single batch.

Siebel Enterprise Integration Manager (EIM) is the engine that manages the exchange of data between the Siebel database tables and the interface tables. EIM can be used to perform bulk imports, exports, merges, or deletes. For more information on EIM, see *Siebel Enterprise Integration Manager Administration Guide*.

Detailed information about each Siebel interface table can be found in [Chapter 2](#).

Naming Conventions

This section provides naming conventions for interface tables and columns as follows:

- [Table Naming Conventions](#)
- [Column Naming Conventions](#)

Table Naming Conventions

Interface tables in the Siebel database use a three-part naming convention; the syntax is: PREFIX_NAME_SUFFIX.

PREFIX	Table names in Siebel eBusiness Applications have a one- to three-letter prefix (S_, EIM_, and so on) in order to distinguish them from other tables in your system.
NAME	A unique table name that is generally composed of an abbreviation of an entity type name. If more than one interface table is required to fully support an entity, a sequential number may be added to the name of each table after the first one.
SUFFIX	A supertype name may be followed by a suffix that indicates the types of data supported by the interface table or to distinguish it as an interface table.

The prefix indicates the family of interface table and some basic characteristics. [Table 1](#) provides the standard prefixes for tables and their descriptions.

Table 1. Prefixes for Table Names

Prefix	Description
EIM_	This family of EIM interface tables was introduced with version 6.0 of Siebel eBusiness Applications. Two of the important functional enhancements of EIM, explicit primary mappings and full multiple-organization visibility support, were introduced at that time and are available only by way of these interface tables. The EIM_ tables are the only interface tables that new customers should use. Customers who are upgrading from prior versions should transition to this new family of interface tables as soon as possible. This is the only family of interface tables that will be enhanced in future versions.
S_	This was the principal set of interface tables provided in pre-6.0 versions of Siebel eBusiness Applications. These tables have have been inactivated and are no longer available.

Column Naming Conventions

This section provides general conventions for naming interface table columns. For more information about interface table columns and how to manipulate data therein, see *Siebel Enterprise Integration Manager Administration Guide*.

[Table 2](#) describes conventions used for naming interface table columns.

Table 2. Column Naming Conventions for Interface Tables

Convention	Description
IF_ROW_BATCH_NUM	Columns that are common to every interface table and are used to control EIM batch processing as follows:
IF_ROW_STAT	A number to identify the batch.
IF_ROW_MERGE_ID	EIM updates this column after processing a row to indicate the status of the record.
ROW_ID	ROW_ID of the record into which this row will be merged.
T_	Uniquely identifies the row within the batch. The combination of IF_ROW_BATCH_NUM and ROW_ID must be unique.
T_	A prefix that identifies EIM processing columns. EIM uses temporary columns to manipulate data during processing. For example, EIM might store the ROW_ID value for a Siebel base table in a temporary column. These column names begin with T_ and indicate the table or column for which they are used. Since EIM uses these columns internally during processing, do not manipulate these columns in the interface tables.
Other	All other interface table columns that are not identified with the conventions above. Each of these columns maps to one or more base table columns. For more detailed information, refer to Chapter 2 .

Interface Mapping Summary

2

This chapter documents the mapping of the EIM interface tables to the destination (base) table columns.

Mapping Interface Tables to Destination Table Columns

Destination tables are listed for each interface table column. The target destination table, if any, is in the first column and appears with an asterisk (*). If other, nontarget destination tables exist, they are also shown in the first column but do not appear with an asterisk.

Each destination table includes a list of all columns mapped in the interface table. Listed first are the user key columns, and then the required nonuser key columns, followed by other base table columns.

NOTE: Siebel system columns will be populated by EIM; users should not attempt to populate these columns.

The following information appears for each destination table column:

- **Destination Table.** Base table.
- **Destination Column.** Column name.
- **UK.** User key sequence, if any.
- **Req.** Required by EIM (Yes or No).
- **Domain Type and Domain Value.** These two columns classify the Destination Column into the following types and lists their values, if appropriate:
 - **FK (Foreign Key):** The name of the table referenced by this foreign key column.
 - **PC (Primary Child):** The name of the table referenced by this primary child column. For example, the primary child column S_ORG_EXT.PR_ADDR_ORG_ID refers to the primary address for an account. The domain value is the table which stores the account addresses (S_ADDR_ORG), and is the foreign key table referenced by the primary child column.
 - **LOV (List of Value):** The nonbounded LOV type for this column.
 - **LOVB (Bounded List of Value):** The bounded LOV type for this column.

- MLOV (Multilingual List of Value): The multilingual LOV type for this column.
- MLS (Multiple Language Support): The name of the table in which the translation of this column in a language other than English can be found.
- blank: There is no domain specified for this column.
- **Destination Description.** Column description.
- **Source Column.** Name of interface table column that maps to the destination table.
- **Data type.** Data type and length of the interface column.
- **Comments.** This section, located below the table name, provides a short description of the interface table. It also includes information on any special restrictions and usages, such as in cases where the destination table has no user keys, and the special behavior of EIM for those tables.

The interface mapping summary tables appear in alphabetical order.

NOTE: If you have not used Siebel Tools, you may want to become familiar with *Siebel Tools Reference*. This guide provides a description of the Siebel application development environment, of which the interface tables are a part. By using Siebel Tools, you can access detailed information about each interface table.

EIM_ASSET

Main interface table for Asset. Please note that S_CTLGCAT_ASSET.ASSET_SERIAL_NUM is denormalized from S_ASSET.SERIAL_NUM. If you need to update S_ASSET.SERIAL_NUM, you need to find out the related records in S_CTLGCAT_ASSET and populate EIM_ASSET with these related records as well (for S_CTLGCAT_ASSET user key columns only). Otherwise, S_CTLGCAT_ASSET.ASSET_SERIAL_NUM will not be updated and will be out-of-sync with S_ASSET.SERIAL_NUM.

EIM_CONTACT

Main interface table for Contact. Please note that S_CONTACT_BU and S_POSTN_CON contain columns that are denormalized from columns in S_CONTACT. If you want to update the source columns in S_CONTACT, you need to find out related records in these tables and populate EIM_CONTACT with these related records as well (for user key columns only). Otherwise, the denormalized columns will not be updated.

EIM_CON_DTL

Interface table for Contact Detail. (Note: This interface table contains mapping for base tables S_NOTE_CON and S_CON_SKILL_IT with no user keys. Please refer to the EIM Admin Guide for the EIM behavior of Import, Update, Export, Delete and Merge for that base table). For deleting from S_NOTE_CON and S_CON_SKILL_IT, you can use EIM_NOTE_DEL and EIM_SKLI_DEL, respectively.

EIM_EMPLOYEE

Main interface table for Employee. Please note that S_PER_RESP contain columns that are denormalized from columns in S_CONTACT. If you want to update the source columns in S_CONTACT, you need to find out related records in S_PER_RESP and populate EIM_EMPLOYEE with these related records as well (for user key columns only). Otherwise, the denormalized columns will not be updated.

EIM_GROUP

Main interface table for Group or Household. Please note that S_ORG_GROUP_BU and S_ORGGRP_POSTN contain columns that are denormalized from S_ORG_GROUP.GROUP_NAME. If you want to update S_ORG_GROUP.GROUP_NAME, you need to find out related records in S_ORG_GROUP_BU and S_ORGGRP_POSTN then populate EIM_GROUP with these related records as well (for user key columns only). Otherwise, the denormalized columns will not be updated.

EIM_GROUP_DTL

Interface table for Group Detail. (Note: This interface table contains mapping for a base table with no user keys. Please refer to the EIM Admin Guide for the EIM behavior of Import, Update, Export, Delete and Merge for that base table). For deleting from S_NOTE_ORGGROUP and S_ORGGRP_SKLI, use EIM_NOTE_DEL and EIM_SKLI_DEL, respectively.

EIM_NOTE_DEL

This interface table should only be used for deleting notes from S_NOTE_* tables (e.g. S_NOTE_ACT). To use it, populate ROW_IDs of records to be deleted into corresponding columns in the interface table and then use DELETE EXACT to delete them. For example, to delete records from S_NOTE_ACT, populate EIM_NOTE_DEL.ACT_ROW_ID with the ROW_IDs of records in S_NOTE_ACT to be deleted, then run EIM delete process with "DELETE EXACT = TRUE", "ONLY BASE TABLES = S_NOTE_ACT" specified in the IFB file.

EIM_OPTY_DTL

Interface table for Opportunity Detail. (Note: This interface table contains mapping for a base table with no user keys. Please refer to the EIM Admin Guide for the EIM behavior of Import, Update, Export, Delete and Merge for that base table). For deleting from S_NOTE_OPTY and S_OPTY_SKILL_IT, use EIM_NOTE_DEL and EIM_SKLI_DEL, respectively.

EIM_ORG_EXT_UK

This interface table is to be used for updating S_ORG_EXT U1 user key columns only. Please note that S_ACCNT_POSTN, S_CTLG_CAT_ORG, and S_ORG_BU contain columns that are denormalized from NAME and LOC of S_ORG_EXT. When you update NAME and/or LOC of S_ORG_EXT, you need to find out the records in S_ACCNT_POSTN, S_CTLG_CAT_ORG, and S_ORG_BU that are related to the records in S_ORG_EXT to be updated and then populate EIM_ORG_EXT_UK with these related records as well. Otherwise, the denormalized columns in these

EIM_PROJECT

Main interface table for Project. Please note that S_PROJ_BU, S_PROJ_POSTN contain columns that are denormalized from columns in S_PROJ. If you want to update the source columns in S_PROJ, you need to find out the related records in S_PROJ_BU and S_PROJ_POSTN and populate EIM_PROJECT with these related records as well (user key columns only). Otherwise, the denormalized columns will not be updated.

Interface Mapping Summary

EIM_PROJECTDTL

Third interface table for Project. (Note: This interface table contains mapping for a base table with no user keys. Please refer to the EIM Admin Guide for the EIM behavior of Import, Update, Export, Delete and Merge for that base table). For deleting from S_NOTE_PROJ and S_PROJ_SKILL_IT, use EIM_NOTE_DEL and EIM_SKLI_DEL, respectively.

EIM_PROPOSAL

Interface table for Proposal. Please note that S_DOC_PPSL_BU contain columns that are denormalized from columns in S_DOC_PPSL. If you want to update the source columns in S_DOC_PPSL, you need to find out related records in S_DOC_PPSL_BU and populated EIM_PROPOSAL with these records as well (for user key columns only). Otherwise, the denormalized columns will not be updated.

EIM_SKLI_DEL

This interface table should only be used for deleting skill items from S_*_SKILL_IT tables (e.g. S_ACT_SKILL_IT). To use it, populate ROW_IDs of records to be deleted into corresponding columns in the interface table and then use DELETE EXACT to delete them. For example, to delete records from S_ACT_SKILL_IT, populate EIM_SKLI_DEL.ACT_ROW_ID with the ROW_IDs of records in S_ACT_SKILL_IT to be deleted, then run EIM delete process with "DELETE EXACT = TRUE", "ONLY BASE TABLES = S_ACT_SKILL_IT" specified in the IFB file.

EIM_SOLUTION

Interface table for Resolution Item. Please note that S_CTLGCT_RESITM contains columns that are denormalized from S_RESITEM. If you want to update the source columns in S_RESITEM, you need to find out related records in S_CTLGCT_RESITM and populate EIM_SOLUTION with these related records as well (for S_CTLGCT_RESITM user key columns only). Otherwise, the denormalized columns will not be updated and will be out-of-sync with the source columns.

EIM_SR_DTL

Interface table for Service Request Detail. (Note: This interface table contains mapping for a base table with no user keys. Please refer to the EIM Admin Guide for the EIM behavior of Import, Update, Export, Delete and Merge for that base table). For deleting from S_NOTE_SR and S_SR_SKILL_IT, use EIM_NOTE_DEL and EIM_SKLI_DEL, respectively.

Interface Mapping Summary

EIM_TMPL_PLNITM

Interface table for Planning Item Template. Please note that S_TMPL_PLNIT_BU.PLNIT_TMPL_TYPE_CD is denormalized from S_TMPL_PLANITEM.TMPL_TYPE_CD. If you want to update S_TMPL_PLANITEM.FMPL_TYPE_CD, you need to find out related records in S_TMPL_PLNIT_BU and populate EIM_TMPL_PLNITM with these related records as well (user key columns only). Otherwise, S_TMPL_PLNIT_BU.PLNIT_TMPL_TYPE_CD will not be updated and will be out-of-sync with S_TMPL_PLANITEM.TMPL_TYPE_CD.

Interface Mapping Summary

Mapping Interface Tables to Destination Table Columns

Siebel Interface Table Mappings

A

This chapter provides a table-level overview of interface table mappings.

Data and Related Interface Tables

Table 3 lists specific data and file attachments that EIM can process, the names of the interface tables, the target base tables mapped to the interface tables, and any secondary tables associated with the target tables. Data from the interface tables might ultimately reside in these secondary tables.

Tables marked with an asterisk (*) are obsolete base tables in this release. The first base table listed for a given interface table is the primary target table for that interface table.

Table 3. Data and Related Interface Tables

Functional Area	Interface Table	Base Table	Table Description
Accounts	EIM_ACCOUNT	S_PARTY	Party
		S_ACCNT_POSTN	Position for Account
		S_ADDR_ORG	Address for Account or Division
		S_ORG_BU	Business Unit for Account or Division
		S_ORG_EXT	Organization
		S_ORG_REL	Business Partnership between Accounts
		S_PARTY_PER	Visibility Relationship through Membership in Party
	EIM_ACCOUNT1	S_PARTY	Party
		S_ACCNT_CHRCR	Characteristics of an Account
		S_ACCNT_CO_MSTR	Account Company Master
		S_ACCNT_ISS	Issues Related to an Account
		S_ACCNT_MKT_SEG	Market Segment Classification for an Account

Table 3. Data and Related Interface Tables

Functional Area	Interface Table	Base Table	Table Description
		S_ACCNT_NODE	Siebel Remote Processing Table
		S_ACCNT_PRI_LST	Price Lists to be Used by an Account
		S_CMPT_CO_FEA	Stores Company Specific Values for a Feature
		S_ORG_DISCNT	Discount for an Account
		S_ORG_EXT	Organization
		S_ORG_INDUST	Industry Classification for an Account
		S_ORG_SYN	Synonym for an Organization
		S_ACCNT_CLS_RNK	Account Ratings and Rankings
		S_ACCNT_MED_PRO C	Medical Procedures at an Account
		S_ACCNT_MED_SPE C	Medical Specialties at an Account
		S_ORG_TYPE	Account Classification
	EIM_ACCOUNT2	S_PARTY	Party
		S_ACCNT_PRDEXT C*	Consumption Data for External Products
		S_CON_ADDR	“Usage of an Address, either by a Contact or Account”
		S_ORG_DEDUP_KEY	Deduplication Keys for an Account
		S_ORG_EXT	Organization
		S_ORG_PRDEXT	Record of Ownership of an External Product
		S_ORG_PROD *	Installed Base of Products for an Account
		S_ORG_TERR	Territories to which an Internal Account is Assigned

Table 3. Data and Related Interface Tables

Functional Area	Interface Table	Base Table	Table Description
		S.CG.OGRELOGPRD	Account-specific Supplier for Specific Products
		S_ORG_CTLG_CAT	Catalog Categories for an Account
		S_ORG_DLVR_SCHD	Delivery Schedule
	EIM_ACCOUNT3	S_PARTY	Party
		S_ACCNT_OBJCTV	Account Objectives
		S_ENTOFFR_ACCNT	Offerings for an Account
		S_ORG_COMM_SUBJ	Communication Subject for an Organization
		S_ORG_CRDT_AREA	Account Credit Area
		S_ORG_EXT	Organization
		S_ORG_MKT_SEG	Market Segment Classification for an Organization
		S_ORG_PRODLN	Intersection Between S_ORG_EXT and S_PROD_LN
		S_ORG_PRTNR	Extension of S_PARTY (Partner Specific Information)
		S_ORG_PRTNR_EXP	Expertise Information of Partners
		S_ORG_SRV_LOC	Service Location for an Organization
		S_OU_PRTNR_TIER	Partnership Tier Description for an Organization
		S_OU_PRTNR_TYPE	Types of Partnership Roles for an Organization
		S_PROMO_ACCNT	Promotions Tied to an Account
		S_PRTNR_POSTN	Positions Responsible for Issues with a Partner
		S_PTSHP_MKT_SEG	Market Segment Classification for a Partner
		S_ORG_PRI_LST	Tax List for an Organization

Interface Table Transition Matrix

B

A new generation of interface tables was introduced for Siebel eBusiness Applications beginning with version 6.0. These tables are identified by their EIM_ prefix (for example, EIM_ACCOUNT). This appendix provides a matrix by which you can transition from the previous S_*_IF tables to these new EIM_ tables and makes recommendations for new installations and upgrades.

If this is your first purchase of a Siebel application, you should use only the new tables; do *not* use any other tables. If upgrading, you should transition your EIM processes to the EIM_ tables as soon as possible. The new EIM_ tables fully support the multiple-organization visibility feature introduced in Siebel eBusiness Applications version 6.0 and provide support for the new Party Model.

NOTE: Some of the EIM_ tables do not map 1:1 to the older tables. Please see the Interface Mapping Summary in [Chapter 2](#) for information on which columns are mapped into specific tables.

The old interface tables (identified by the S_ <tablename > _IF naming convention) are provided with this release for upward compatibility. However, because of row length and column-count limitations, these tables have not been enhanced in the current release. These tables will be removed in a future release of Siebel eBusiness Applications.

Transition Matrix

Table 4 provides a matrix mapping of S_ interface tables to the new EIM_ interface tables.
