

Oracle® Universal Records Manager Adapter for Content Server

Release Notes

10g Release 3 (10.1.3.3.2)

October 2007

These release notes outline installation and implementation considerations for the Universal Records Manager (URM) Adapter for Content Server version 10g Release 3 (10.1.3.3.2).

1 Installation Considerations

Refer to the *Universal Records Manager Adapter for Content Server Administration Guide* for system requirements and instructions on installing the URM Adapter for Content Server. The following special considerations should be taken into account when using URM Adapter for Content Server 10g Release 3 (10.1.3.3.2):

Compatibility with Content Server 10gR3

This URM Adapter for Content Server version is designed to work seamlessly with Content Server 10gR3 (10.1.3.3.2). Content Server 10gR3 (10.1.3.3.2) must be installed and functioning correctly before you can install the URM Adapter for Content Server 10gR3 software.

Admin Rights Required to Configure Profiles

The Content Server Admin right is required to perform configure Retention Category, Record Folder, or Physical Records Profiles. This right is not assigned by default to any role and must be assigned before the Profiles configuration options appear on any menu.

Time Zone

You should not modify the Time Zone of the machine where the URM Adapter for Content Server has been installed. You may change the Time Zone prior to installing the URM Adapter or running batch processes.

2 Issues Not Noted in Documentation

Metadata History Action is Not Listed in the Retention Schedule Menu

The Metadata History option is not listed in the Action menu of a Category in the Retention Schedule Menu. This feature is not available on the server where URM Adapter for Content Server is installed.

Multibyte Characters Not Allowed in Custom Metadata Field Names

You may customize the Adapter by creating custom metadata fields using the Configuration Manager. The metadata field names may not contain Multibyte characters, as errors or data loss could occur.

Only Obtain Content Items with Lifecycle Attached

The URM Adapter for Content Server has been modified to upload only content items with lifecycle attached. You may set the following variable setting on the Adapter if you want all content items to upload to URM, even if a lifecycle is not attached:

```
UrmAgentUpdateAllContent=true
```

It is recommended that you set Content Server configuration variables using Admin Server. However, Content Server variables can also be set by editing the `config.cfg` file located in the `<install_dir>/config` directory.

Universal Records Manager Adapter for Content Server , 10g Release 3 (10.1.3.3.2) for Windows
