

Oracle® Universal Records Manager Adapter for Documentum

Release Notes

December 2009

These release notes outline new features and enhancements as well as any specific installation and implementation considerations for the Universal Records Manager (URM) Adapter 10gR3 (10.1.3.3.2) for Documentum.

1 What's New

There are three enhancements in the Documentum Adapter.

1. Migration of Record and Freeze documents content to URM repository– This enhancement involves to provide a configurable option which would allow migrating the content of record/frozen documents to URM repository. The actual document in Documentum repository would be replaced by a stub (i.e. an HTML file with the reference link) rather than using the TBO module in Documentum to manage record/frozen functionality.
2. Provide the Full Text Search in the Adapter – This enhancement involves providing the full-text search capability of Documentum repository. It is applicable for both kinds of search - declaration search as well as federated search.
3. Provide the Federated Search through the Adapter – Federated Search is used for items that are located on Documentum repository. This is a search of all possible content using adapters to schedule the search. Searching for content in Remote Repository is not in real time, and is dependent on adapters to complete the search. This will be a separate call to the adapter API with search criteria that will need to find the results matching those criteria for the source in question and return all metadata (not just mapped) as well as the document data itself.

2 Installation Considerations

Refer to the *Universal Records Manager Adapter for Documentum Installation Guide* for system requirements and *Universal Records Manager Adapter for Documentum Administration Guide* for instructions for installing the URM Adapter for Documentum. The following special considerations should be taken into account when using URM Adapter for Documentum:

Compatibility with Content Server 10gR3

This URM Adapter for Documentum version is designed to work seamlessly with Content Server 10gR3 (10.1.3.3.2). Content Server 10gR3 (10.1.3.3.2) must be installed and functioning correctly before you can install the Oracle URM Adapter for Documentum software.

Compatibility with Documentum Content Server 5.3

This URM Adapter for Documentum version is designed to work seamlessly with Documentum CS 5.3. Documentum Content Server 5.3 must be installed and functioning correctly before

you can install the Oracle URM Adapter for Documentum software.

Compatibility with JDK

This URM Adapter for Documentum version is designed to work seamlessly with JDK 1.5. JDK 1.5 must be installed and functioning correctly before you can install the Oracle URM Adapter for Documentum software.

Time Zone

You should not modify the Time Zone of the machine where the URM Adapter for Documentum Content Server 5.3 has been installed. You may change the Time Zone prior to installing the URM Adapter or running the Adapter.
