The Programs (which include both the software and documentation) contain proprietary information; they are provided under a license agreement containing restrictions on use and disclosure and are also protected by copyright, patent, and other intellectual and industrial property laws. Reverse engineering, disassembly, or decompilation of the Programs, except to the extent required to obtain interoperability with other independently created software or as specified by law, is prohibited.

The information contained in this document is subject to change without notice. If you find any problems in the documentation, please report them to us in writing. This document is not warranted to be error-free. Except as may be expressly permitted in your license agreement for these Programs, no part of these Programs may be reproduced or transmitted in any form or by any means, electronic or mechanical, for any purpose.

PRODUCT MODULES AND OPTIONS. This guide contains descriptions of modules that are optional and for which you may not have purchased a license. Siebel's Sample Database also includes data related to these optional modules. As a result, your software implementation may differ from descriptions in this guide. To find out more about the modules your organization has purchased, see your corporate purchasing agent or your Siebel sales representative.

If the Programs are delivered to the United States Government or anyone licensing or using the Programs on behalf of the United States Government, the following notice is applicable:

U.S. GOVERNMENT RIGHTS. Programs, software, databases, and related documentation and technical data delivered to U.S. Government customers are "commercial computer software" or "commercial technical data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the Programs, including documentation and technical data, shall be subject to the licensing restrictions set forth in the applicable Oracle license agreement, and, to the extent applicable, the additional rights set forth in FAR 52.227-19, Commercial Computer Software--Restricted Rights (June 1987). Oracle USA, Inc., 500 Oracle Parkway, Redwood City, CA 94065.

The Programs are not intended for use in any nuclear, aviation, mass transit, medical, or other inherently dangerous applications. It shall be the licensee's responsibility to take all appropriate fail-safe, backup, redundancy and other measures to ensure the safe use of such applications if the Programs are used for such purposes, and we disclaim liability for any damages caused by such use of the Programs.

Oracle, JD Edwards, PeopleSoft, and Siebel are registered trademarks of Oracle Corporation and/or its affiliates. Other names may be trademarks of their respective owners.

The Programs may provide links to Web sites and access to content, products, and services from third parties. Oracle is not responsible for the availability of, or any content provided on, third-party Web sites. You bear all risks associated with the use of such content. If you choose to purchase any products or services from a third party, the relationship is directly between you and the third party. Oracle is not responsible for: (a) the quality of third-party products or services; or (b) fulfilling any of the terms of the agreement with the third party, including delivery of products or services and warranty obligations related to purchased products or services. Oracle is not responsible for any loss or damage of any sort that you may incur from dealing with any third party.

Introduction to Siebel CRM Integration Pack for Trade Promotion Management

Preface

Welcome to the Siebel CRM Integration Pack for Trade Promotion Management Implementation Guide.

TTY Access to Oracle Support Services

Oracle provides dedicated Text Telephone (TTY) access to Oracle Support Services within the United States of America 24 hours a day, seven days a week. For TTY support, call 800.446.2398.

Accessibility of Links to External Web Sites in Documentation

This documentation may contain links to Web sites of other companies or organizations that Oracle does not own or control. Oracle neither evaluates nor makes any representations regarding the accessibility of these Web sites.

Structure

- 1 Introduction to Siebel CRM Integration Pack for Trade Promotion Management
- 2 Siebel CRM Integration Pack for Trade Promotion Management Environment
- 3 Installation and Configuration

Do Not Use Database Tools to Modify Oracle Applications Data

Oracle STRONGLY RECOMMENDS that you never use SQL*Plus, Oracle Data Browser, database triggers, or any other tool to modify Oracle Applications data unless otherwise instructed.

Oracle provides powerful tools you can use to create, store, change, retrieve, and maintain information in an Oracle database. But if you use Oracle tools such as SQL*Plus to modify Oracle Applications data, you risk destroying the integrity of your data and you lose the ability to audit changes to your data.

Because Oracle Applications tables are interrelated, any change you make using an Oracle Applications form can update many tables at once. But when you modify Oracle Applications data using anything other than Oracle Applications, you may change a row in one table without making corresponding changes in related tables. If your tables get out of synchronization with each other, you risk retrieving erroneous information and you risk unpredictable results throughout Oracle Applications.

When you use Oracle Applications to modify your data, Oracle Applications automatically checks that your changes are valid. Oracle Applications also keeps track of who changes information. If you enter information into database tables using database tools, you may store invalid information. You also lose the ability to track who has changed your information because SQL*Plus and other database tools do not keep a record of changes.

Glossary

360° View. A screen within the Oracle Customer Online application that displays a comprehensive list of contracts, credit information, email interactions, install base, invoices, orders, quotes, payments, projects, and service requests for a given customer.

Account. In Oracle, an account describes the specific attributes of a party that are relevant to the selling relationship that the implementing organization has established with a party. An account in Oracle cannot exist by itself without a party. It can be associated with an individual (person) or a company (organization).

BES. Oracle Business Event System based on Oracle Workflow

BOM. Bill of materials - defines components and hierarchy of a product.

BPEL. Business Processes Execution Language, a standards-based extensible language.

Catalog Category. A category is a logical classification of items that have similar characteristics.

Category Set. Category sets may be used as a means to develop custom lists of items on which to report and sort. A category set is a distinct grouping scheme and consists of categories.

CBM. The "created_by_module" column in TCA tables

CDH. Oracle Customer Data Hub

Chargeback. Amount of a deduction that is rejected by the manufacturer and charged back to the wholesaler/retailer.

Connector. Siebel product that supports point-to-point integration

Consumer Products Goods or CPG Manufacturer. Consumer Products manufacturers typically sell one of the following types of consumer products: Durable Goods, Packaged Goods, Food and Beverage, Health and Beauty and Configured Products. One key characteristic of Consumer Products Manufacturers is that they sell “consumer” products but typically always use a retailer, distributor or wholesaler to distribute their product instead of selling directly to the consumer. Consumer Products Manufacturers have a unique requirement because they offer their customers trade dollars to market and sell their products.

Contact. In Oracle E-Business Suite 11i, a contact describes a specific relationship between two parties, more specifically between an Organization and a Person party, which is also called an Organization Contact. The Organization Contact can also be associated with a Customer Account in Oracle, which is then called an Account Contact. In Siebel CRM On Demand a contact describes an individual customer that may or may not be related to an Account (Organization customer) or another Contact (individual customer).

Consumer Products Industry. The Consumer Products industry is divided into two segments: Durables and Non-Durables. Durable goods are items that the purchaser assumes will be used for long periods of time. Examples are washer/dryers, refrigerators, exercise equipment, bicycles, and clothing. Non-Durable goods include 3 sub segments. 1.) Shelf stable consumables (such as cereal, shampoo, and cleaners) 2.) Perishable food (such as fresh baked goods and refrigerated food) 3.) Beverages.

Corporate Promotion. A trade promotion designed to drive sales across numerous accounts and generated by a manufacturer at a national, divisional or corporate level.

Customer. In Oracle E-Business Suite 11i, a customer is defined as a party with whom the implementing organization has established a selling relationship. All relevant information of the specific selling relationship with a party is modeled in the account layer entities in Oracle, whereas all the base information like name, address information, contact points are modeled in the party layer entities. A customer in Oracle can be an individual (person) in case of a Business-to-Consumer relationship or a company (organization) in case of a Business-to-Business relationship. In Siebel CRM On Demand, a customer can be either modeled as an Account or as a Contact. An Account in Siebel is the equivalent of an organization party plus account in Oracle, and a Contact is the equivalent of a person party plus account in Oracle.

Deal. A record that consists of the funding source, estimated costs, and parameters for the trade offer presented.

Deduction. When an account does not pay the full amount of a manufacturer's invoice for the settlement of a trade related expense.

EAI. Enterprise Application Integration

EBS. Oracle E-Business Suite Applications

FMW. Oracle Fusion Middleware

Fund Group. A Siebel Trade promotions concept for facilitating the creation of multiple trade funds.

Fund Transfers. Moving the assignment of a trade fund from one account to another.

Install Base. An Oracle record of the goods and services a customer owns.

Item. A product or service that is manufactured or sold. Item can be used to represent grouping assemblies or placeholder such as phantoms.

Live Budget. A live budget is a fully accrued budget that starts at zero and increases based on order activity. In some systems this is referred to as a Rolling Fund. The initial budget is calculated based on a past shipment period and as shipments are made, the fund accrues additional budget amounts.

Merchandising Activity. The details of one aspect of a trade promotion. A trade promotion can have 1 or more merchandising activities/types. For example, a Summer Promotion can be comprised of 3 Merchandising Activities/Types: Temporary Price Reduction of \$100 off/case given directly off of the invoice, Temporary Price Reduction of \$250 off/case given in the form of a rebate and a \$2000 Lump sum payment for putting up an end aisle display promoting my products.

Middleware. Integration software that is used to connect applications, such as Webmethods.

OAF. Oracle Applications Framework for Development

Order Management. Refers to organizations as warehouses on all Order Management windows and reports.

Organization. A business unit such as a plant, warehouse, division, department, and so on.

OS. The "orig_system" column in TCA table

OWB. Oracle Warehouse Builder

Party. In Oracle E-Business Suite 11i, more specifically in the Trading Community Architecture (TCA), a party is defined as any individual or organization with whom the implementing organization can do business. A party in Oracle TCA can be a customer, in case a selling relationship has been established or for example a vendor or an employee. The same party can have multiple such roles within Oracle E-Business Suite 11i. This integration solution addresses those parties in Oracle E-Business Suite 11i that represent customer data.

Period. Duration of time for the promotion. By default, the Start and End dates for the promotion, shipment, and consumption fields are equal to the start and end dates of the period.

Plan. A group of trade promotions

Pre-authorized deduction. Manufacturer provides retailer prior approval to take a deduction to settle a trade payment claim.

SOD. Siebel CRM On Demand Application

Tactics. Select tactics to use for the promotion. For example, select a feature display or temporary price reduction as a tactic to promote the selected promoted category.

TCA. Trading Community Architecture

Trade Fund. An amount of money appropriated for the execution of trade promotions. Can be fixed or accrual.

Trade Promotion. A term used in the Consumer Product industry to refer to a merchandising event done for, or given to, a retailer in exchange for selling or better positioning the manufacturer's products. Can be a discount given either off-invoice or in the form of a bill back based on incoming sales orders or can be a lump sum payment unrelated to sales orders. Can be made up of one or more merchandising activities/types. The promotion stores high-level information like customer, dates, and description. Trade promotions are always funded out of funds specifically targeted for trade promotions.

UAN. Universal Application Network, a Siebel integration product that support hub-spoke environment

Write Off. Amount of a deduction that cannot be identified and therefore is absorbed by the manufacturer

WS. Web Service

Siebel CRM Integration Pack for Trade Promotion Management Environment

This chapter contains the following information:

- [About Siebel CRM Integration Pack for Trade Promotion Management on page 13](#)
- [Software Requirements on page 13](#)
- [Cross-References on page 14](#)

About Siebel CRM Integration Pack for Trade Promotion Management

The Siebel CRM Integration Pack for Trade Promotion Management integrates information between Siebel Trade Promotion Management and Oracle Trade Management. This integration provides the following functionality:

- Synchronizing Foundation objects with modules such as Customers and Products
- Synchronizing Siebel Trade Deal with Oracle Trade Management Offer
- Synchronizing Siebel Flexible Budgets from Trade Promotions to Oracle Trade Management Budgets and Offers
- Synchronizing Siebel Live Funds with Oracle Trade Management Budgets
- Synchronizing Oracle E-Business Suite Deductions with Siebel Trade Promotion Management Deductions for notification that a deduction needs resolution
- Enabling Siebel Trade Promotion Management Deduction Disposition back to Oracle E-Business Suite Deductions

Software Requirements

The software requirements for Siebel CRM Integration Pack for Trade Promotion Management are as follows:

- Oracle 10.1.3.1 Application Server Enterprise Edition
- Oracle E-Business Suite, 11.5.10 CU2
- Oracle JDeveloper 10.1.3.1 (upgraded to the latest patch)
- Oracle SOA Suite 10.1.3.1 (upgraded to the latest patch)

Cross-References

To support ongoing customer integration between Oracle Trade Management and Siebel Trade Promotion Management, a cross reference of the unique identifiers of customer data is maintained in the middle tier of the integration. The entities that are cross referenced on the Siebel side are account, address, and contact, which correspond to organization, party site, and organization contact in Oracle Trade Management and Oracle E-Business Suite.

For newly created customer and product records in Oracle Trade Management that need to be synchronized with Siebel Trade Promotion Management, Oracle Trade Management publishes Oracle unique identifiers that can be mapped to the External ID attribute of the appropriate entity in Siebel Trade Promotion Management to establish the cross-references within Siebel Trade Promotion Management.

For updated customer and product records that need to be synchronized with Siebel Trade Promotion Management, Oracle publishes the Oracle unique identifiers. The Siebel Trade Promotion Management Web Service interfaces are able to uniquely identify the records in Siebel Trade Promotion Management that need to be updated.

Similarly, on the Siebel side, newly created or updated fund, deduction, and promotion records in Siebel Trade Promotion Management are correctly reflected in corresponding records in Oracle Trade Management.

Language Support

The Siebel CRM Integration Pack for Trade Promotion Management supports only the English-American language for databases. This language uses the WE8MSWIN1252 character set.

3

Installation and Configuration

This chapter contains the following information:

- [Downloading and Installing Siebel CRM Integration Pack for Trade Promotion Management Software on page 15](#)
- [Configuring the Oracle E-Business Suite Environment on page 21](#)
- [Configuring the Siebel Trade Promotion Management Environment on page 33](#)
- [Setting Up Common Integration Server \(Including DVMs and Common Services\) on page 130](#)
- [Process of Deploying BPEL Processes Using Oracle JDeveloper on page 148](#)
- [Synchronizing Records after the Oracle Server Has Gone Down on page 152](#)

Downloading and Installing Siebel CRM Integration Pack for Trade Promotion Management Software

Read the following topics to learn how to download and install the software and patches needed for Siebel CRM Integration Pack for Trade Promotion Management.

- [Downloading Required Software on page 15](#)
- [Installing Oracle E-Business Suite Patches on page 16](#)
- [Installing Fusion Middleware Software on page 17](#)
- [Installing Oracle Fusion Middleware and Oracle JDeveloper Patches on page 18](#)

Downloading Required Software

The required software for Siebel CRM Integration Pack for Trade Promotion Management is available on Oracle E-Delivery.

To download the files

- 1 Log in to Oracle E-Delivery (<http://edelivery.oracle.com>).
- 2 From the Product Pack menu, choose Oracle Application Integration Architecture.
- 3 From the Platform menu, choose your platform, and click Go.
- 4 Download the following files:

- Siebel CRM Integration Pack for Trade Promotion Management Implementation Guide, v1.0 (Documentation_TPMIPv1.0.zip)
- Oracle Database 10g Release 2 (10.2.0.1) (file name(s) and count vary by platform)
- Oracle Database 10g Release 2 Patches (DB_Patches_AIAv1.0.zip)
- Oracle SOA Suite 10g (10.1.3.1.0) (file name(s) and count vary by platform)
- Oracle Fusion Middleware 10.1.3.1 Patches (FMW_Patches_AIAv1.0.zip)
- Siebel CRM Integration Pack for Trade Promotion Management, v1.0, E-Business Suite Patch (EBS_Patches_AIAv1.0.TPM.zip), which contains the following files:
 - E-Business Suite Generic Patch (EBS_Patches_AIAv1.0.TPM_generic.zip)
 - E-Business Suite Operating System Patch (as needed)

Operating System	Patch File Name
AIX Based Systems (32-bit)	EBS_Patches_AIAv1.0.TPM_aix.zip
HP Tru64 UNIX	EBS_Patches_AIAv1.0.TPM_tru64.zip
HP-UX PA-RISC (32-bit)	EBS_Patches_AIAv1.0.TPM_hpux11.zip
Linux x86	EBS_Patches_AIAv1.0.TPM_linux.zip
Microsoft Windows (32-bit)	EBS_Patches_AIAv1.0.TPM_winnt.zip
Solaris Operating System (SPARC 32-bit)	EBS_Patches_AIAv1.0.TPM_solaris.zip

- Siebel CRM Integration Pack for Trade Promotion Management, v1.0, Siebel CRM Patches
- Siebel CRM Integration Pack for Trade Promotion Management, v1.0 (SEBLTPMIntegPkEBSTMv1.0.zip)

Installing Oracle E-Business Suite Patches

Install the Oracle E-Business Suite patches described in this section. If a patch has already been installed, there is no need to reinstall it. The latest version of each patch can be downloaded from <http://metalink.oracle.com>.

NOTE: Always check Metalink for the latest versions of all patches.

To install Oracle E-Business Suite Patches

- 1 Download the Oracle E-Business Suite patch. The file name is: EBS_Patches_AIAv1.0.TPM.zip.
- 2 Use a zip utility to extract the Oracle E-Business Suite generic patches and applicable operating system patch from the patch file.
Extracting from the patch file yields a set of patch zip files.
- 3 Apply each of these patches to your Oracle E-Business Suite application.

- 4 Install the patches listed in [Table 1](#), in the specific order of installation.

Table 1. Patches Needed for Oracle E-Business Suite

Order	Patch Number	Comments
1	3618299	TCA Patchset HZ.n
2	4280097	Customer - HZ.N fixes party merge
3	5046954	Customer - TCA Backported Integration Service Patch
4	5221609	Customer – Integration patch
5	6021150	Simple Products
6	6021155	Simple Products - Integration patch. Backports business event changes.
7	5929632	OZF - Trade Management

Installing Fusion Middleware Software

Install the following Fusion Middleware components:

- 1 Oracle Database 10g Release 2 (10.2.0.1) Enterprise Edition.
Download and install the database only if you do not already have an Oracle 10.2.0.2 (or higher) database instance available for the SOA Suite to access. For information on installing Oracle Database, refer to the Oracle Technology Network. Oracle Technology Network link has the following URL:
<http://www.oracle.com/technology/documentation/index.html>
After installation, apply the appropriate patch from DB_Patches_AIAv1.0.zip (choose the patch appropriate to the operating system that your database is installed on.) This patch brings the database up to required version 10.2.0.2.
- 2 SOA Suite 10g10.1.3.1
For information on installing Oracle SOA Suite, refer to the Oracle Application Server Documentation Library. The library is available on the Oracle Technology Network. Oracle Technology Network link has the following URL:
<http://www.oracle.com/technology/documentation/index.html>.
Click Oracle Application Server 10g Release 3 (10.1.3.1)
Make sure to install the full SOA suite using the Advanced Installation Mode.
- 3 Oracle JDeveloper 10.1.3.1 (Studio Version)
Download Oracle JDeveloper from:
<http://www.oracle.com/technology/software/products/jdev/archives.html>.
This is a free download. Support for JDeveloper is not included. If desired, support for JDeveloper can be purchased separately. For information on installing Oracle JDeveloper, refer to the Oracle Technology Network. Oracle Technology Network link has the following URL:
<http://www.oracle.com/technology/documentation/index.html>

- 4 Oracle Warehouse Builder 10gR2 10.2.0.1 (optional component)
Oracle Warehouse Builder is an optional component that should be used to perform initial data synchronization from Oracle E-Business Suite to Siebel CRM if customer or product data already exists in Oracle E-Business Suite. Use of OWB for initial data synchronization requires the ETL and Data Quality options from Oracle Warehouse Builder. OWB is not included in this media pack and, if needed, must be licensed separately.

Installing Oracle Fusion Middleware and Oracle JDeveloper Patches

Install all Fusion Middleware and JDeveloper patches described in this section. If any particular patch has already been installed, there is no need to reinstall it. The latest version of each patch can be downloaded from <http://metalink.oracle.com>.

To install SOA Suite patches

- 1 Download the Fusion Middleware and JDeveloper patches. The file name is: FMW_Patches_AIAv1.0.zip
- 2 Unzip the file to yield the mandatory bug-fix patches listed in the following table.

Patch Number	Comments
5473225	Fixes problems that involve catching an exception during a transform.
5596476	Fixes problems that involve the XSLT map not rendering in the user interface.
5609537	Fixes issues with commit in child processes.
5917910	Fixes problems that involve: <ul style="list-style-type: none">■ Creating <XSL:variable> with value "&#0;"■ Java heap error on Service Oriented Architecture Suite, V10.1.3.1 release on Linux.■ Invoking PL/SQL procedure with a large output parameter.
5931554	Fixes problems that involve: <ul style="list-style-type: none">■ Cross-reference feature■ XPATH function, LOOKUP-DVM, but does not work in assign activity of Business Processes Execution Language.

- 3 Apply each of these patches to your installation.
- 4 Refer to the ReadMe.txt in each patch for guidance on how to apply the patch.

Deployment Steps

The following deployment steps are listed at a high level. Some of the steps are simple, and this section provides instructions for them. Others are described in more detail in subsequent sections.

- 1 Before you begin:
 - Verify EBS Environment for such items as test logons, Concurrent Manager, and Database Connect Strings.
 - Verify Siebel Environment for such items as test logons, and Database Connect Strings.
 - Verify 10.1.3 Environment for such items as test launch of BPEL Console, ESB Console, and Application Server Control. Deploy and test a simple BPEL Process. Test connectivity from Jdeveloper.
 - NOTE: Required 10.1.3 ST Patches: The following ST patches are required to be installed in the 10.1.3 environment to proceed. Verify with that these are applied.
 - 5917910: ISSUE WITH CREATING <XSL:VARIABLE> WITH VALUE "�" JAVA HEAP ERROR ON SOA 10.1.3.1 GA RELEASE ON LINUX INVOKING PLSQL PROCEDURE WITH LARGE OUTPUT PARAMETER CAUSES OUT-OF-HEAP SPACE
 - 5596476: XSLT MAP NOT RENDERING IN THE UI.
 - 5609537: COMMIT IN CHILD PROCESS HAPPENS EVEN IF THE PARENT BPEL PROCESS IS FAULTED
 - 5931554: XPATH FUNCTION LOOKUP-DVM DOES NOT WORK IN ASSIGN ACTIVITY OF BPEL CROSS REFERENCE FEATURE IN 10.1.3.1. See [Post-Installation Instructions for Patch 5931554 on page 21](#) for further details about this patch.
 - 5473225: UNABLE TO CATCH AN EXCEPTION DURING A TRANSFORM
- 2 Download and configure a released build for Siebel CRM Integration Pack for Trade Promotion Management:
 - a Download the required SEBLTPMIntegPkeBSTMv1.0.zip to <SOA Home>\bpel\samples.
 - b Unzip to SEBLTPMIntegPkeBSTMv1.0 folder.
 - c Go to <SOA Home>\bpel\samples\SEBLTPMIntegPkeBSTMv1.0\ SEBLTPMIntegPkeBSTM\SetUp.
 - d Open CRMIntegProcessParametersTPM2TM.xml and, against each parameter name, replace the current parameter value with a current relevant value for deployment of BPEL processes.
- 3 Make the following changes in CRMIntegProcessParametersTPM2TM.xml:
 - a Change PARAMVALUE for PARAMNAME "http://127.0.0.1:8888/orabpel/default" to "http://your SOA host: port/orabpel/your bpel domain".
 - b Change PARAMVALUE for PARAMNAME "http://127.0.0.1:8888/orabpel/xmllib" to http://your SOA host: port/orabpel/xmllib.
 - c Change PARAMVALUE for PARAMNAME <property name="PARAMNAME">[SIEBEL SERVER LOCATION]</property> to <property name="PARAMVALUE">http://<Siebel Server Location>/eai_enu/start.swe</property>.

- d Change PARAMVALUE for PARAMNAME `<property name="PARAMNAME">[SIEBEL USERNAME]</property>` to `<property name="PARAMVALUE"> UserName=<Siebel Username></property>`.
 - e Change PARAMVALUE for PARAMNAME `<property name="PARAMNAME">[SIEBEL PASSWORD]</property>` to `<property name="PARAMVALUE"> Password=<Siebel Password></property>`.
- 4 From the command prompt, navigate to `<SOA Home>\bpel\samples\SEBLTPMIntegPkeEBSTMv1.0\SEBLTPMIntegPkeEBSTM\SetUp\scripts` and execute the following command:
 - For Windows:

```
java -jar EditParam.jar -i <SOA Home>\bpel\samples\SEBLTPMIntegPkeEBSTMv1.0\SEBLTPMIntegPkeEBSTM\BusinessProcesses -f <SOA Home>\bpel\samples\SEBLTPMIntegPkeEBSTMv1.0\SEBLTPMIntegPkeEBSTM\SetUp\CRMIntegProcessParametersTPM2TM.xml -verbose -t D:\temp
```
 - For Linux:

```
<SOA_HOME>/jdk/bin/java -jar EditParam.jar -i <SOA Home>/bpel/samples/SEBLTPMIntegPkeEBSTMv1.0/SEBLTPMIntegPkeEBSTM/BusinessProcesses -f <SOA Home>/bpel/samples/SEBLTPMIntegPkeEBSTMv1.0/SEBLTPMIntegPkeEBSTM/SetUp/CRMIntegProcessParametersTPM2TM.xml -verbose -t /tmp
```

NOTE: To run EditParam.jar, you need Java Development Kit version 1.4 or newer installed.

For all the BPEL Processes in the Business Processes folder, all the parameter names set are replaced with the values as set in CRMIntegProcessParametersTPM2TM.xml.
- 5 Apply prerequisite patches and set up the Oracle E-Business Suite environment. See [Configuring the Oracle E-Business Suite Environment on page 21](#).
- 6 Apply prerequisite patches and set up the Siebel environment. See [Configuring the Siebel Trade Promotion Management Environment on page 33](#).
- 7 Perform common integration setups. See [Setting Up Common Integration Server \(Including DVMs and Common Services\) on page 130](#).
- 8 Deploy BPEL processes. See [Process of Deploying BPEL Processes Using Oracle JDeveloper on page 148](#).
- 9 Set syncMaxWaitTime in BPELConsole. The default wait time is only 45 seconds in the BPEL console. Logon to BPELConsole Manage BPEL Domain and set the syncMaxWaitTime value to 120 seconds.
- 10 Before you start to compile any Siebel artifacts, make sure that the Script Compilation Folder is set correctly:
 - a In Siebel Tools go to the View > Options > Scripting tab.
 - b For the Script compilation folder, set the value as (for the ST environment) `D:\19224\eappweb\PUBLIC\enu`. If you do not set this value, then the configurator launch fails.

Post-Installation Instructions for Patch 5931554

Make sure to follow the post-install step for patch 5931554, especially the following patch post-installation instructions:

To perform post-installation instructions for patch 5931554

- 1 Execute the sql file \$ORACLE_HOME/integration/esb/sql/oracle/xreftables.sql.
- 2 Restart all managed components if you are on a mid-tier installation:
\$ORACLE_HOME/opmn/bin/opmnctl startall
- 3 Make sure that ASControl is restarted as well, from OS services console.
- 4 To patch JDev, copy over \$ORACLE_HOME/integration/esb/lib/bpm-ide-common.jar to the following:
 - a \$JDEV_HOME/integration/lib/ after backing up
 - b \$JDEV_HOME/integration/lib/bpm-ide-common.jar

Configuring the Oracle E-Business Suite Environment

This section contains the following information:

- [Patches on page 21](#)
- [Setting Profile Options for a Customer on page 22](#)
- [Defining Oracle Trade Management on page 22](#)

Patches

Oracle E-Business Suite 11.5.10 CU2 and Oracle Trade Management rollup 3 are the baseline for installation. Apply the following Oracle E-Business Suite patches to the Oracle E-Business Suite environment. Patches are listed by Oracle E-Business Suite participating module:

- 1 Customer
 - a 3618299 (HZ.N)
 - b 4280097 (HZ.N oneoff to fix party merge)
 - c 5046954 (TCA Bakported Business Objects)
 - d 5221609 (Genesis Specific Code for customers)
- 2 Products
 - a 6021150 (Simple)
 - b 6021155 (back porting business event changes)

- 3 Trade Management
 - a 5929632(OZF)

Setting Profile Options for a Customer

To set profile options for a customer

- Set the following profile options at the site level as indicated in the following table.

Profile	Value to Set
HZ: Execute API Callouts	All Events Enabled
HZ: Format Business Object Business Events as Bulk	N

Defining Oracle Trade Management

This section covers the definition of the elements of Oracle Trade Management. Complete the following tasks in the order listed:

- 1 [Creating an Employee on page 22](#)
- 2 [Importing a Resource for an Oracle Trade Management User on page 23](#)
- 3 [Creating an Oracle Trade Management User on page 24](#)
- 4 [Setting System Profiles on page 25](#)
- 5 [Setting the Oracle Accounts Receivable System Option for Write-Off Limits on page 26](#)
- 6 [Setting System Parameters on page 26](#)
- 7 [Creating a Budget Approval Bypass Rule on page 27](#)
- 8 [Creating a Trade Profile on page 28](#)
- 9 [Creating a Trade Profile on page 28](#)

Creating an Employee

To create an employee

- 1 Log into Oracle Forms with HRMS Manager Responsibility.
- 2 Navigate to People > Enter & Maintain.
- 3 In the Find Person box, select New.
- 4 Enter the following information:

- Last Name and First Name
 - Title
 - Gender
 - Type = Employee
 - Social Security # (This is checked against existing Social Security numbers.)
 - Birth Date
- 5 Save your work.
 - 6 Select Assignment and enter the following:
 - Organization
 - Team/Group
 - Location
 - Supervisor
- If a dialog box with Update and Correction buttons appears, then select Correction to revise existing data and Update to create a new record.
- 7 Save your work.
 - 8 Select Yes to use the new location.
 - 9 Save your work.

Importing a Resource for an Oracle Trade Management User

To import a resource

- 1 Log into Forms with CRM Administrator responsibility.
- 2 Navigate to Resource Manager > Maintain Resources > Import Resources.
Resource Category is defaulted to Employee.
- 3 In the Name field, pick the employee that you created in the step [Creating an Employee on page 22](#).
- 4 Click Search.
One record appears in Search Results panel.
- 5 Click Start Import.
The Set Resource Attributes form opens.
- 6 Click OK.
The Review and Import Selected Resources form opens
- 7 Click Save Resource.
- 8 After the confirmation appears, Click OK.

- 9 Navigate to Resource Manager.
- 10 Select the user as the resource.
- 11 Click Details.
- 12 On the Roles tab, select a role type of Sales and a role of Sales Representative.
- 13 On the Group tab, select a group with Usages of Sales and TeleSales and Oracle Trade Management.
- 14 Make sure that the Group Member Role Sales Representative is associated with the above group on the Resource Details window, and save your work.

Creating an Oracle Trade Management User

To create an Oracle Trade Management user

- 1 Log into Forms with System Administrator responsibility.
- 2 Navigate to the Security > User > Define > Users form.
- 3 In the User Name field, enter SIEBEL.
- 4 In the Person field, pick the employee you created in the step [Importing a Resource for an Oracle Trade Management User on page 23](#).
- 5 In the Responsibilities block, assign the following responsibilities to the Implementation User:
 - General Ledger Super User
 - HRMS Manager
 - Inventory
 - CRM Administrator
 - Oracle Trade Management User
 - Oracle Trade Management Administrator
 - Account Manager
 - Workflow User Web Applications
 - System Administrator
 - Oracle Receivables
 - Oracle Payable
 - Advanced Pricing
 - Receivables Manager
- 6 Save your work.
- 7 Assign the resource to the group selected in AMS: Admin Group profile option.
- 8 Run the concurrent request AMS: Group Access Refresh.

Setting System Profiles

You must set values for budget-related system profiles, deduction-related system profiles, and deduction-related system profiles.

To set system profiles

- 1 Set values for budget-related system profiles according to the following table:

BR #	Profile Option	Value	Comments
1	OZF: Allow committed budget to exceed total budget	Yes	None
2	OZF: Allow Recalculation of Committed Budget	Yes	None
3	OZF: Validate market and product eligibility between object & budget	No	None

- 2 Set values for deduction-related system profiles according to the following table:

BR #	Profile Option	Value	Comments
1	OZF: Implement Payables Integrations	Yes	None
2	OZF: Derive Accrual Account during Claims Settlement	No	None
3	OZF: Implement Contra Charge payment method	No	None
4	OZF: AR Credit Method For Rule	Prorate	None
5	OZF: Under Write Off Threshold Approval Required	No	None
6	OZF: AR Credit Method For Installment	Prorate	None
7	OZF: Allow Un-Related Ship To On Claims	Yes	None

- 3 Use the following table to set values for promotion-related system profiles according to your business requirements:

BR #	Profile Option	Value	Comments
1	OZF: Default phase for Line Group level discounts		None
2	OZF: Default phase for Line level discounts		None
3	OZF: Default phase for Order level discounts		None

BR #	Profile Option	Value	Comments
4	OZF: Default value for print on invoice flag		None
5	OZF: Default Bucket for discount rules		None
6	OZF: Default value for product precedence		None
7	OZF: Offer Override Flag in QP		None
8	OZF: Default value for incompatibility group		None

Setting the Oracle Accounts Receivable System Option for Write-Off Limits

You must set the Oracle Accounts Receivable system option for Write-off Limits Per Receipt to resolve non-invoice deduction with the write-off settlement method.

To set the Accounts Receivable system option for write-off limits

- 1 Navigate to Receivables, Vision Operations (USA) > Setup > System > Systems Options > Miscellaneous.
- 2 Set Write-off Limits Per Receipt = -100 to 100.

Setting System Parameters

Use [Table 2](#) to set values for system parameters based on your business requirements.

Table 2. System Parameters for Oracle E-Business Suite

BR #	Name	Description	Comments
1	Set of Books		
2	Accounting Method		
3	GL Accounts		
4	Receivable Batch Source		
5	Credit Memo Transaction Type		
6	Chargeback Transaction Type		
7	Payable Source		
8	Payable Payment Terms		
9	Write Off Activity		

Table 2. System Parameters for Oracle E-Business Suite

BR #	Name	Description	Comments
10	Claim Type		
11	Claim Reason		

Creating a Budget Approval Bypass Rule

Use the following procedure to create approval rules to bypass the budget approval workflow.

To bypass the budget approval workflow

- 1 Log into CRM self service as user SIEBEL with Oracle Trade Management User responsibility.
- 2 Navigate to Administration > Trade Management > Setup > Approval Rule > Create.
- 3 Enter the following information and click Create:
 - Approval Rule Name
 - Start Date
 - Approval Rule For = Root Budget Request
 - Budget Category = SIEBEL
 - Setup Type = SIEBEL FIXED FUND
 - Minimum Amount = 0

The Approvers table appears in the bottom half of the window.

- 4 Enter the following information and click Update:
 - Order=1
 - Type=User
 - User/Role=the user that you just created

The application successfully creates a bypass approval rule for the fixed fund.

- 5 Navigate to Administration > Trade Management > Setup > Approval Rule > Create.
- 6 Enter the following information and click Create:
 - Approval Rule Name
 - Start Date
 - Approval Rule For = Root Budget Request
 - Budget Category = SIEBEL
 - Setup Type = SIEBEL LIVE FUND
 - Minimum Amount = 0

The Approvers table appears in the bottom half of the window.

7 Enter the following information and click Update:

- Order=1
- Type=User
- User/Role=the user that you just created

The application successfully creates a bypass approval rule for the accrual fund.

Creating a Trade Profile

This section covers the creation of a trade profile.

NOTE: The values defined in a customer's trade profile override the values set in system parameters, which are set as defined in [Setting System Parameters on page 26](#).

Complete these tasks in the order listed:

- 1 [Entering Basic Customer Information on page 28](#)
- 2 [Defining Autopay Parameters on page 29](#)
- 3 [Defining Claim Parameters on page 29](#)
- 4 [Defining Earnings Payments Parameters on page 30](#)
- 5 [Defining a Valid Pair for Deduction Type and Deduction Reason on page 31](#)

Entering Basic Customer Information

Use the following procedure to enter basic customer information.

To enter basic customer information

- 1 Log in to Oracle Trade Management.
- 2 Navigate to Administration > Trade Management > Customer > Trade Profiles.
- 3 On the Trade Profile Overview page, click Create.
- 4 Enter the basic customer information in the Party Name, Account Number, Site Use, and Address fields.
 - a If the customer already has a trade profile, then it is displayed when you select the party name or account number.
 - b The primary Bill To site for the account is displayed by default. To change the site, click the icon next to the Site Use and select another site.

Sites are striped by organization. As such, the site can be used only within an operating unit.
- 5 If the customer is also a vendor, then enter the vendor information in the Vendor, Vendor Site, and Address fields.
 - a A vendor is a person or company that sells to your company. Vendors are set up in Oracle Payables and are separate from TCA. To settle claims using a check, you must set up that customer as a vendor in Oracle Payables and Purchasing.

- b** Values for Vendor and Vendor Site are mandatory for the Checkbook-Check Settlement method.
- c** The trade profile provides a link between the two setups in the two systems. Vendor information on claims is completed automatically. Therefore, claim processors do not need to determine this. Vendors are not striped by organization. They can be seen and used across operating units. If the vendor is not set up in the trade profile, then the claim owner must enter the vendor information on the first claim to be settled by check for this account. When this occurs, the trade profile information for the account is updated automatically.

Defining Autopay Parameters

If Autopay is used, then it evaluates the accruals for this customer and automate payments as required. If it is not used, then automatic payments are not made even if accruals exist. To define Autopay parameters for the Trade profile, use this procedure, which continues from the previous step.

To define Autopay parameters for this customer

- 1** Select the Autopay check box.

- 2** Enter a numeric value in Frequency and select a Frequency Unit.

Together, these values define the frequency with which the customer is paid. These values override those in system parameters. For example, if you enter 1 as the frequency and select month as the frequency unit, then this customer is paid once a month as long as the threshold amount is met.

- 3** Enter a Threshold Amount.

The threshold amount is also used to trigger Autopay. The threshold currency is the functional currency of the set of books selected in system parameters. For example, if frequency is set to once each month and the threshold amount is \$100, then the customer is paid whenever one of these two conditions is met.

- 4** Select a Payment Method:

- Check: If selected, then you must fill in vendor and vendor sites fields.
- On Account Credit Memo: If selected, then you must fill in the Site Use field. This field retrieves the Bill-to Site of the customer account.

Defining Claim Parameters

To define Autopay parameters for the Trade profile, use this procedure, which continues from the previous step.

To define autopay claim parameters

1 Enter the days due.

Claim managers may require that claims for this account are resolved within a certain number of days. Enter that number here.

For example, your company may require that all claims for an important customer account are resolved with 15 days of creation. In the customer trade profile, you can assign 15 as the default days due. If a claim for this customer account is created on January 1, then the due date defaults to January 16.

2 Enter values for the overpayment and deduction writeoff thresholds.

Deductions and overpayments less than the amounts specified here are automatically written off.

Threshold example are as follows:

- Writeoff Threshold (Deduction) example: Suppose that you enter 200 as the threshold. If you receive a deduction of \$190, then it is under the threshold and is eligible for automatic writeoff. Always enter a positive number here.
- Writeoff Threshold (Overpayment) example: Suppose that you enter 150 as the threshold. If you receive an overpayment of \$140, then it is under the threshold and is eligible for automatic writeoff.

Defining Earnings Payments Parameters

The values selected for earnings payment parameters for a trade profile determine customer eligibility and the threshold for unearned payments for offers. These affect all promotional claims and deductions except those related to scan data offers, whether they are settled by credit memo or check. If a customer does not have a trade profile, then the application behaves as if the trade profile setting is Null.

If no explicit threshold is set either on the System Parameters page or on the trade profile, but unearned payments are allowed, then the threshold is zero. Claim payment within the thresholds can be settled like any other promotional claim and go through the regular claim approval process.

To define earnings and payments parameters for the Trade profile, use this procedure, which continues from the previous step.

To define earning and payments parameters

1 Select a value for the Unearned Payments for Offers field:

- Null: The customer may or may not be eligible for unearned payments depending on the system parameter setting. If set to Allow for All, then this customer is eligible for unearned payments. If set to Allow for Selected, then this customer is not eligible for unearned payments.
- Allow: Unearned payments are always allowed for this customer. This setting overrides the system parameter setting.
- Disallow: The customer is not eligible for unearned payments for offers regardless of the system parameter setting.

2 Select a threshold type:

- Amount: Threshold is a currency amount. If 50 is entered in the threshold field, then the threshold is \$50. (Assuming the currency being used is U.S. dollars.)
- Percent: Threshold is a percentage. If 90 is enter in the threshold field, then the threshold is 90% of the earnings.
- Unconditional: The threshold is infinity. Special approval for overriding the unearned payments threshold is never required. Claims simply go through the regular claim approval process.

3 Enter a value in the Threshold field.

This value can be greater than 100 if the threshold type is Percent.

- Example for Percent: The threshold is 20%. Customer Y's earnings total \$10,000 for an offer. Claim payments up to \$12,000 can be made.
- Example for Amount: The value is 2,000, and the functional currency is \$. Customer Y's earnings total \$10,000 for an offer. Claim payments up to \$12,000 can be made.

4 Select the Override Threshold check box to allow the initiation of settlements for unearned payments where the amount is greater than the threshold.

These claims are subject to both the regular approval process and a special approval process, and. This setting overrides the setting on the System Parameters page.

Defining a Valid Pair for Deduction Type and Deduction Reason

Several valid combinations of claim (deduction) type and claim reason exist in Siebel Trade Promotion Management. Therefore you must create a claim type and a claim reason in the Trade Management Page and set a valid combination in the System Parameter page. Table 3 lists valid combinations of claim type and reason type in Siebel Trade Promotion Management. For example, you can create Promotion as a value for Claim Type and Bill Back an associated value for Reason and set the values in the system parameter to default.

Table 3. Valid Combinations of Claim Type and Reason Type

Claim Type	Reason Type
Invoicing	Coupon, Discount, Penalty, Post-audit, Price, Quantity
Unsaleable	Expired, Packaging, Penalty, Post-audit, Spoiled
Returns	Discontinued, Penalty, Post-audit, Product, Quantity
Transportation	Delivery time, Location, Pallet config, Penalty, Post-audit
Unknown	No OOTB option
Promotion	Bill Back, Fixed, Intro Marketing, Off Invoice, Penalty, Post-audit, Slotting

To create a claim type

- 1 Navigate to Oracle Trade Management > Administration > Claim -> Claim Type.
- 2 Click Create.
- 3 Refer to [Table 3](#) and enter a valid claim type.

To create a claim reason

- 1 Navigate to Oracle Trade Management > Administration > Claim -> Claim Reason.
- 2 Click Create.
- 3 Refer to [Table 3](#) and enter a valid claim reason.

Defining a Claim Default Setup

For any deduction created from Oracle Receivables, you must set a valid pair of type and reason.

To define a claim default setup

- 1 Navigate to Oracle Trade Management > Administration > Claim > Claim Defaults.
- 2 Use the following example to set default values:
 - a Claim Source to Invoice Deduction
 - b Custom Setup to SIEBEL DEDUCTION
 - c Claim Type to Promotion
 - d Claim Reason to Bill Back
 - e Start Date to some valid date

Defining the Indirect Sales Parameters

The values defined in a customer's trade profile override the values set in system parameters.

To define the indirect sales parameters

- 1 Set the batch tolerance as follows:
 - a For Batch Tolerance Type, select Percent or Amount.
 - b Enter a numeric value in the Batch Tolerance field.
- 2 Set the line tolerance as follows:
 - a For Line Tolerance Type, select Percent or Amount.
 - b Enter a number value in the Line Tolerance Field
- 3 To finish, click Update.

Enabling a Business Event

You must enable two business events.

To enable business events

- 1 Navigate to Workflow Administrator Web Applications responsibility > Business Events.
- 2 Search for each of the following business events and enable it from the Details screen:
 - oracle.apps.ozf.order.accrual.info
 - oracle.apps.ozf.bpel.claim

Configuring the Siebel Trade Promotion Management Environment

This section lists the setups, patches and manual steps that must be performed in the Siebel Trade Promotion Management environment during integration.

Applying Quick Fix

You must apply Siebel 8.0[20405]QF2007 Quick Fix.

To apply the quick fix

- 1 Install Siebel Tools 8.0[20405].
- 2 Download Siebel Tools 8.0[20405]QF2007 from ftp.siebel.com:
ftp://ftp.siebel.com/staging/8.0sba_20405_W32_QF2007
- 3 Expand the downloaded file.
- 4 Navigate to [local directory]\8.0[20405]QF2007\Release\Windows\Client\Siebel_Tools and double click install.exe.

Siebel Tools 8.0SIA[20405] is patched, and the quick fix is installed.
- 5 Navigate to the Siebel Tools home directory, open the REPPATCH folder, and confirm that the following sif files have been imported into Siebel Tools:
 - ACR358_GenesisErrorHandler.sif
 - ACR358_Accounts.sif
 - ACR358_Products.sif
 - ACR358_Deductions.sif
 - ACR358_Funds.sif
 - ACR358_Promotions.sif

Subsequent sections describe applying any prerequisite patches and using the sif files for setting up the Siebel environment.

Verifying that Component Groups Are Enabled

After the Siebel servers are installed, verify that required component groups are enabled.

To verify that the component groups are enabled

- 1 Navigate to Site Map > Administration - Server Configuration > Component Groups.
- 2 Query for Name as Enterprise Application Integration or Alias as EAI.
- 3 Query for Name as Siebel eConsumerSector or Alias as eConsumer.
- 4 Query for Name as Workflow Management or Alias as Workflow.

If any of the above component groups are not enabled, click Enable to activate the component groups.

Setting Up Customer Integration

This section includes the following setups:

- [Preparing for the Customer Integration Setup](#)
- [Setting Up a Siebel Trade Promotion Management Inbound Customer](#)
- [Setting Up Siebel Trade Promotion Management Client](#)
- [Setting Up Funds](#)
- [Setting Up Deductions](#)
- [Setting Up Promotions](#)

Preparing for the Customer Integration Setup

To prepare for setting up customer integration, complete the following procedure.

To modify the configuration file for the customer integration setup

- 1 In Siebel Tools, navigate to \$SiebsrvrHome\bin\enu.
- 2 In the Tools.cfg file, change SymStrPrefix from X_ to SBL_.
- 3 Re-login to Siebel Tools.

Setting Up a Siebel Trade Promotion Management Inbound Customer

Projects

To set up projects

- 1 Log in to Siebel 8.0 Tools and lock the following projects:

New?	Name	Description
Modified	Account	Modified Account BC, Added New Bus Service and Int Object.
Modified	Account (SCW)	Modified applets

- 2 Import ACR358_Accounts.sif from the Siebel Quick Fix build, which contains new and modified repository objects.
- 3 For each repository object, shut down Siebel Server and compile the locked projects into the server .srf file.

Business Component

Name: Account (Modified)

Table 4. Multi Value Link

New?	Name	Description
Modified	Business Address	Auto Primary is selected.

Applet

Name: Account Address List Applet (SCW)

Table 5. List Columns

New?	Name	Description	Comments
New	Bill To	Mapped to Bill Address Flag field	By default, this flag must not be checked when a new address is created.
New	Ship To	Mapped to Ship Address Flag field	By default, this flag must not be checked when a new address is created.

Setting Up Siebel Trade Promotion Management Client

To set up Siebel Trade Promotion Management Client

- 1 Navigate to Site Map > Administration - Web Services > Inbound Web Services.
- 2 Import the SEBLCGIntegAccount Web Service.

The Web Service xml file is available in
 <BuildLocation>\SEBLTPMIntegPKEBSTM\ApplicationChanges\SiebelCRMSIA\8.0\Customer\WebServices\SEBLCGIntegAccount.xml

- 3 Validate the address of the Siebel server name in the Service Ports applet.
 The address must have the correct Siebel server name that the client connects to.

- 4 Provide a valid user name and password.

Service Port:

Name	Type	Business Service/ Process	Transport	Address	Binding
SEBLCGIntegAccount	Business Service	Siebel Account	HTTP	http://<webserver>/eai_<lang>/start.swe?SWEEExtSource=SecureWebService&SWEEExtCmd=Execute&UserName=<UserName>&Password=<Password>	SOAP_RPC_LITE RAL

Operations:

Name	Method Display Name	Authentication Type
SEBLCGIntegAccount Delete	Delete	None
SEBLCGIntegAccount Insert	Insert	None
SEBLCGIntegAccount InsertOrUpdate	Insert or Update	None
SEBLCGInSEBLCGIntegAccount QueryByExample	Query by Example	None
SEBLCGIntegAccount QueryById	Query by ID	None
SEBLCGIntegAccount Synchronize	Synchronize	None
SEBLCGIntegAccount Update	Update	None

- 5 Click Clear Cache.

Setting Up Product Integration

Repository Changes for Simple Products

Project

To make repository changes in a project

- 1 Log in to Siebel 8.0 Tools and lock the following projects:

New?	Name	Description
New	CG Products Interface	Holds CG Product Integration related new objects
Modified	ISS VOD Import Export	Modify Object Product ImpExp BC and ISS Prod Def ImpExp
Modified	Symbolic Strings	None

- 2 Import ACR358_Products.sif from the Siebel Quick Fix build, which contains new and modified repository objects.

The table below gives you a description of changes for each repository object:

Business Component

Object Product ImpExp BC (Modified)

Name	Column	Force Active	PickList	Type	Text Length
Description	DESC_TEXT	Y		DTYPE_TEXT	255
IntegrationId	INTEGRATION_ID	Y		DTYPE_TEXT	30
Status	STATUS_CD	Y	PickList Impl Phase	DTYPE_TEXT	30

- Integration Object: ISS Prod Def ImpExp (Modified)
- Integration Component: Object Linked Items ImpExp BC
- Integration Component Fields:

Name	XML Tag
Context Variable Name	ContextVariableName

Object Product Bu ImpExp BC

Integration Component Fields

Name	Date Type	Required	User Visible	Type	External Name	External Required	XML Style	XML Tag
Org Id	DTYPE_ID	Y	Y	Data	Org Id	Y	Element	OrgId

Integration Component Key

Name	Key Sequence Number	Key Type
User Key:2	2	User Key

Integration Component Key Field

Name	Field Name	Sequence
Prod Int Name	Prod Int Name	1

Object Product ImpExp BC

Integration Component Field

Name	Date Type	Length	User Visible	Type	External Name	External Data Type	External Length	XML Style	XML Tag
Description	DTYPE_TEXT	250	Y	Data	Description	DTYPE_TEXT	250	Element	Description
IntegrationId	DTYPE_TEXT	30	Y	Data	IntegrationId	DTYPE_TEXT	30	Element	IntegrationId

Map Oracle Items to Siebel Products	Business Service	CSIntegSEBLFormatMsgandProductImp	Execute	MapName, SiebelMessage	SiebelMessage
End	End	Not Applicable	Not Applicable	Not Applicable	Not Applicable

Workflow Deployment

To deploy workflows

- 1 Log in to Siebel Tools and navigate to Workflows.
- 2 Right click and select the Import workflow process.
- 3 Enter the workflows listed above.

- 4 Select the Project as CG Products Interface and click OK.
- 5 Query for the workflow and deploy the workflow by clicking Publish/Activate button on the WF/Task Editor Toolbar.
Toolbar is visible by selecting View > Toolbars > WF/Task Editor Toolbar.
- 6 Log in to the Siebel UI, navigate to Administration > Business Processes > Workflow Deployment.
- 7 Query for the Workflow deployed and click Activate.

Web Service Deployment

To deploy Web Services

- 1 Log in to Siebel UI and navigate to Administration > Web Services > Inbound Web Services.
- 2 Click Import and specify CSIntegSEBLSimpleProductInboundFlow_WS.xml as the Web Service to be imported.

- 3 After the import is complete, verify that the address in the Service Ports applet has the correct Siebel server name that the client should connect to.

If required, change the address and provide a valid username and password.

Namespace	Name	Status	Comment
http://siebel.com/asi/	CSIntegSEBLSimpleProductInboundFlow	Active	None

Service Ports

Name	Type	Business Service	Transport	Address	Binding
CSIntegSEBLSimpleProductInboundFlow	Workflow Process	CSIntegSEBLSimpleProductInboundFlow	HTTP	http://<webserver>/ eai_<lang>/ start.swe?SWEE xtSource=Secur eWebService&S WEExtCmd=Exec ute&UserName= <UserName>&P assword=<Pass word>	SOAP_RPC_LI TERAL

Operations

Name	Method Display Name	Authentication Type
CreateProduct	RunProcess	None

- 4 Click Clear Cache.

Create a Project Workspace

To create a project workspace

- 1 Log in to the Siebel application and navigate to Site Map > Administration - Product > Workspace Projects.
- 2 Create a new workspace project with the name as CRMIntegProductWS.

Create an Organization in Siebel

Create an Organization in Siebel similar to the Organization in Oracle E-Business Suite which is used in the business. For example, if Vision Operations is an Organization created in the Oracle E-Business Suite application, create Vision Operations as an Organization in the Siebel application as well.

To create an organization in Siebel

- 1 Log in to the Siebel application, and navigate to Site Map > Administration - Group > Organization.
- 2 Create a new organization.

Setting Up Funds

Repository Changes for Funds

To import Siebel Artifacts

- 1 Log in to Siebel 8.0 Tools and lock the following projects:

New?	Project	Description
New	CS CG Fund Integration	Holds CG Fund Integration related objects (It is a new project, so it would be available for initial import)
Modified	CPG Fund	Modify CS Account Fund BC to apply date specific validations at Fund level
Modified	CS CG MDF Planning	Modify Shipment and Revenue read only at Source Product level
Modified	CPG Account Fund	Added Status field on the form applet
Modified	Symbolic Strings	None

- 2 Import the ACR358_Funds.sif file from the Siebel Quick Fix build.

This contains new and modified repository objects. The following table gives the description of changes for each repository object.

Symbolic Strings

Name	Current String Value	Definition
SBL_CS_FUND_CREATE_-_SIEBEL_OUTBOUND	CS Fund Create - Siebel Outbound	Business Service Display Name for CS Fund Outbound WS
SBL_CS_FUND_UPDATE_-_SIEBEL_INBOUND	CS Fund Update - Siebel Inbound	Business Service Display Name for CS Fund Inbound WS

PickList

New?	Name	Description	Comments
Modified	PickList CPG Fund	Search Spec = [Fund Type] = LookupValue("CS_FUND_CODE", "Account Fund") AND [Status] = LookupValue("CS_FUNDGROUP_STATUS", "Completed")	Modified searchspec to include condition of Completed Status Funds.

Business Component

Name: CS Account Fund (Modified)

CS Account Fund Fields

New?	Name	Description	Comments
New	Calc Today	Type = DTYPE_DATE, Calculated = Y, Calculated value = Today ()	None
New	Fund Period Read Only Field	Type = DTYPE_BOOL, Calculated = Y, Calculated value = IIf([Calc Today] >= [Mdf Start Date], "Y", "N")	Used in making the Start and End Dates read-only after reaching the Start Date
New	No Delete Flag	Type = DTYPE_BOOL, Calculated = Y, Calculated value = IIf (([Mdf Alloc Total Estimate Pending Amount] > 0) OR ([Mdf Alloc Total Estimate Committed Amount] > 0) OR ([Status] = LookupValue ("CS_FUNDGROUP_STATUS", "Completed")), "Y", "N")	Used in for disabling the Delete button, after the deal has been created for the fund. NOTE: This is applicable to "CS Account Fund" BC Only.
New	Fund Basis Date Field	Type = DTYPE_BOOL, Calculated = Y, Calculated value = IIf([Calc Today] >= [Basis Start Date], "Y", "N")	Used in Products code to determine the Basis Start Date value
Modified	Mdf Start Date	Validation: <= [Mdf End Date]	New validation
Modified	Mdf End Date	Validation: >= [Mdf Start Date]	New validation
Modified	Basis Start Date	Validation: <= [Basis End Date]	New validation
Modified	Basis End Date	Validation: >= [Basis Start Date]	New validation
Modified	Amount	Validation: >= 0	New validation
Modified	Status	Added Picklist = PickList CS Fund Group Status, Predefault Value = Expr: 'LookupValue("CS_FUNDGROUP_STATUS", "In Progress")'	None
New	Read Only Condition Field	Type = DTYPE_BOOL, Calculated = Y, Calculated value = IIf([Status] = LookupValue("CS_FUNDGROUP_STATUS", "Completed"), "Y", "N")	New field used for making some other fields read-only based on its value

BC User Properties

New?	Name	Value
New	No Update Condition Field	Read Only Condition Field
New	No Update Fields	Basis Start Date, Basis Period, Mdf Start Date, Period, Amount, Status.
New	NoDelete Field	No Delete Flag

Name: CS Child Account Fund (Modified)

CS Child Account Fund Fields

New?	Name	Description	Comments
New	Fund Period Read Only Field	Type = DTYPE_BOOL, Calculated = Y, Calculated value = Iif([Status] = LookupValue("CS_FUNDGROUP_STATUS", "Completed"), "Y", "N")	Used in making some other fields read-only based on its value
Modified	Amount	Validation: >= 0	New validation
New	Status	Column = STATUS_CD, Picklist = PickList CS Fund Group Status, Predefault Value = Expr: 'LookupValue("CS_FUNDGROUP_STATUS", "In Progress")'	None

BC User Properties

New?	Name	Value
New	No Update Condition Field	Fund Period Read Only Field
New	No Update Fields	Account, Name, Amount, Status,
New	NoDelete Field	Fund Period Read Only Field
New	Generate Event On Parent BC	Y

Name: CS Fund Group (Modified)

CS Fund Group Fields

New?	Name	Description	Comments
New	Calc Today	Type = DTYPE_DATE, Calculated = Y, Calculated value = Today ()	None
New	Fund Period Read Only Field	Type = DTYPE_BOOL, Calculated = Y, Calculated value = IIf([Calc Today] >= [Mdf Start Date], "Y", "N")	Used in making the Start and End Dates read-only after reaching the Start Date
New	Fund Basis Date Field	Type = DTYPE_BOOL, Calculated = Y, Calculated value = IIf([Calc Today] >= [Basis Start Date], "Y", "N")	Used in Generate Account Funds code to determine the Basis Start Date value
Modified	Mdf Start Date	Validation: <= [Mdf End Date]	New validation
Modified	Mdf End Date	Validation: >= [Mdf Start Date]	New validation
Modified	Basis Start Date	Validation: <= [Basis End Date]	New validation
Modified	Basis End Date	Validation: >= [Basis Start Date]	New validation
Modified	Amount	Validation: >= 0	New validation

BC User Properties

New?	Name	Value
New	GenerateCurrent StartDate	N

Name: CS Fund Source Product

CS Fund Source Product Fields

New?	Name	Description	Comments
Modified	Accrual Start Date	Validation: <= [Accrual End Date]	New validation
Modified	Accrual End Date	Validation: >= [Accrual Start Date]	New validation
New	Calc Today	Type = DTYPE_DATE, Calculated = Y, Calculated value = Today()	Used in comparing the Start Date with current date for sending data to Oracle Trade Management.
New	Period Read Only Field	Type = DTYPE_BOOL, Calculated = Y, Calculated value = [Calc Today] >= [Fund MDF Start Date], Predefault value = N	Used in making the Basis Start and End Dates read-only after reaching the Basis Start Date
New	Fund MDF Start Date	Join = S_MDF, Column = MDF_START_DT, Type = DTYPE_DATE	Parent MDF start date
New	Fund Basis Start Date	Join = S_MDF, Column = BASIS_START_DT, Type = DTYPE_DATE	Parent Basis start date
New	Fund Basis Date Field	Type = DTYPE_BOOL, Calculated = Y, Calculated value = IIf([Calc Today] >= [Fund Basis Start Date], "Y", "N")	Used in the Product code
New	Fund Type	Join = S_MDF, Column = FUND_CD, Type = DTYPE_TEXT	Parent Fund Type
New	Is Account Fund	Type = DTYPE_BOOL, Calculated = Y, Calculated value = If ([Fund Type] = LookupValue("CS_FUND_CODE", "Account Fund"), "Y", "N")	Used in Runtime event condition
New	Source Product Id	Type = DTYPE_ID, Calculated = Y, Calculated value = [Id]	Needed by Integration object
New	Fund Status	Join = S_MDF, Column = STATUS_CD	Parent Fund Status

New?	Name	Description	Comments
New	Read Only Condition Field	Type = DTYPE_BOOL, Calculated = Y, Calculated value = Iif (ParentBCName() = 'CS Account Fund', Iif([Fund Status] = LookupValue ("CS_FUNDGROUP_STATUS", "Completed"), "Y", "N"), "N")	None
New	Integration Data Update Flag	Column = DIST_FLG	Used in BPEL processes to force incoming update if values are the same

BC User Properties

New?	Name	Value
New	GenerateCurrentStartDate	N
New	Cumulative Accrual Data	Y
New	Generate Event On Parent BC	Y
New	No Update Condition Field	Period Read Only Field
New	No Update Fields	Accrual Start Date, Period,
New	NoDelete Field	Read Only Condition Field

Name: CPG Fund

CPG Fund Fields

New?	Name	Description	Comments
New	Status	Column = STATUS_CD, Picklist = PickList CS Fund Group Status, Link Specification = Y	Used in the PickList CPG Fund search spec

Applet

Name: CS Fund Source Product Admin List Applet

CS Fund Source Product Admin List Applet List Columns

New?	Name	Description	Comments
Modified	Shipment	Read Only = Y	Read only in UI because these values are coming from Oracle Trade Management.
Modified	Revenue	Read Only = Y	Read only in UI because these values are coming from Oracle Trade Management.

Name: CS Fund Admin List Applet

CS Fund Admin List Applet List Columns

New?	Name	Description	Comments
New	Status	Field = Status, Show in List = Y	New field exposed in UI for Account Funds

Map the List column in Edit List Applet Web Template Item.

Name: CS Fund Auto Admin List Applet

CS Fund Auto Admin List Applet List Columns

New?	Name	Description	Comments
New	Status	Field = Status, Show in List = Y, Read Only = Y	New field exposed in UI in Read only mode for Fund Group - Account Funds (bottom applet)

Map the List column in Edit List Applet Web Template Item.

Name: CS Fund Child Admin List Applet

CS Fund Child Admin List Applet

New?	Name	Description	Comments
New	Status	Field = Status, Show in List = Y	New field exposed in UI for Child Funds

Map the List column in Edit List Applet Web Template Item.

Name: CS Fund Summary Admin Form Applet

CS Fund Summary Admin Form Applet Controls

New?	Name	Description	Comments
New	Status	Field = Status	New field exposed in Account Funds form applet

Map the Column in Edit Applet Web Template Item.

- 3 Shut down the Siebel server and compile the locked projects into the server .srf file.

Workflow Deployment

To deploy workflows

- 1 Log in to Siebel Tools and navigate to Workflows.
- 2 Right click and select the Import Workflow process.
- 3 Enter CSIntegSEBLSIAFundUpsertOutboundFlow as the workflow to import.
- 4 Select the Project as CS CG Fund Integration and click OK.
- 5 Query for the workflow. The workflow should be created as follows:
 - Workflow Process Name: CSIntegSEBLSIAFundUpsertOutboundFlow

■ Workflow Mode: Service Flow

WF Process Properties

Name	In/Out	Business Object	Data Type	Access Mode
BinaryMSG	In/Out	CS Fund	String	RW
Error Code	In/Out	CS Fund	String	RW
Error Message	In/Out	CS Fund	String	RW
Fault Message	In/Out	CS Fund	Hierarchy	RW
IsError	In/Out	CS Fund	String	RW
Object Id	In/Out	CS Fund	String	RW
Process Instance Id	In/Out	CS Fund	String	RW
Siebel Outbound Message	In/Out	CS Fund	Hierarchy	RW
Siebel Operation Object Id	In/Out	CS Fund	String	RW

WF Steps

#	Name	Type	BS Name	BS Method	Input Argument	Output Argument
1	Start	Start				
2	Query Account Fund	Business Service	CSIntegSEBLSI ACGFundUpdate	QueryById	PrimaryRowId	SiebelMessage
3	Send Account Fund	Business Service	CRMIntegUpsert FundSEBL80ToE BS11i10Sync	process	CSIntegSEBL SIAFundSync RequestMessage: payload	faultMessage
4	Check Errors	Business Service	Genesis Error Handler	CheckForErrors	SiebelMessage	IsError
5	Error?	Decision Point				
6	Translate Errors	Business Service	Genesis Error Handler	TranslateErrors	SiebelMessage	OutputErrorMessages
7	Display Errors	Business Service	Genesis Error Handler	DisplayErrors	ErrorMessage	

- 6 Deploy the workflow by clicking Publish/Activate on WF/Task Editor Toolbar.
The toolbar can be enabled by selecting View > Toolbars > WF/Task Editor Toolbar.
- 7 Login to Siebel UI and navigate to Administration > Business Processes > Workflow Deployment.
- 8 Query for the Workflow deployed and click Activate.

Web Service Deployment

To deploy Web Services

- 1 Login to Siebel UI and navigate to Administration > Web Services > Inbound Web Services.
- 2 Click Import and specify the Web Service CSIntegSEBLSIACGFundUpdate.xml to be imported:
Inbound Web Service: CSIntegSEBLSIACGFundUpdate
- 3 After the inbound Web Service is imported, verify the Siebel server name address in the Service Ports applet.

The server address should be the one that the client should connect to. If required, change the address and provide a valid username and password.

Name: CSIntegSEBLSIACGFundUpdate (New)

Service Port

Name	Type	Business Service/ Process	Transport	Address	Binding
CSIntegSEBLSIACGFundUpdate	Business Service	CS Fund Update - Siebel Inbound	HTTP	http://<webserver>/eai_<lang>/start.swe?SWEEExtSource=WebService&SWEEExtCmd=Execute&UserName=<User Name>&Password=<Password>	SOAP_RPC _LITERAL

Operations

Name	Method Display Name	Authentication Type
SiebelFundDelete	Delete	None
SiebelFundInsert	Insert	None
SiebelFundInsertOrUpdate	Insert or Update	None
SiebelFundQueryByExample	Query by Example	None
SiebelFundQueryById	Query by ID	None

Name	Method Display Name	Authentication Type
SiebelFundSynchronize	Synchronize	None
SiebelFundUpdate	Update	None

- 4 Click Clear Cache.
- 5 Navigate to Administration > Web Services > Outbound Web Services.
- 6 Click Import and specify the Web Service CRMIntegUpsertFundSEBL80ToEBS11i10Sync.xml to be imported:

Outbound Web Service: CRMIntegUpsertFundSEBL80ToEBS11i10Sync.xml

- 7 After the outbound Web Service is imported, verify the BPEL server name in the Service Ports applet.

The server name should be the one that the client should connect to. If required, change the address and save.

Outbound Web Service is created as follows:

- Name: CRMIntegUpsertFundSEBL80ToEBS11i10Sync (New)
- Namespace: http://xmlns.oracle.com/CRMIntegUpsertFundSEBL80ToEBS11i10Sync

Service Port

Name	Service Display Name	Transport	Address	Binding
CRMIntegUpsertFundSEBL80ToEBS11i10SyncPort	CS Fund Create - Siebel Outbound	HTTP	http://<host-info>/orabpel/default/CRMIntegUpsertFundSEBL80ToEBS11i10Sync/1.0	SOAP_DOC_LITERAL

Operations

- Method Display Name: Process
 - Authentication Type: None
- 8 Click Clear Cache.

Runtime events

To manage runtime events

- 1 Navigate to Administration Runtime Events > Action Sets.

- 2 Create a new Action Set as follows:

Action Set

Name: CS Account Fund Update

Name	Action Type	Business Service Name	Business Service Method	Business Service Context
Fund Source Product Create	BusService	Workflow Process Manager	RunProcess	"ProcessName", "CSIntegSEBLSIAFundUpsertOutboundFlow"

Events

- 3 Navigate to Administration Runtime Events > Events.
- 4 Create new events as follows:

Sequence	Object Name	Object Name	Event	Conditional Expression
1	BusComp	CS Account Fund	NewRecord	[Read Only Condition Field] = 'Y'
2	BusComp	CS Account Fund	WriteRecord	[Read Only Condition Field] = 'Y'
3	BusComp	CS Fund Source Product	NewRecord	([Is Account Fund] = 'Y' AND [Read Only Condition Field] = 'Y')
4	BusComp	CS Fund Source Product	WriteRecord	([Is Account Fund] = 'Y' AND [Read Only Condition Field] = 'Y')

- 5 Choose the Load Runtime Events menu option.

Setting Up Deductions

Repository Changes for Deduction

To import the Siebel Artifacts

- 1 Log in to Siebel 8.0 Tools and create a new project CS CG Deduction Interface and lock the following existing projects:
 - CS CG Promotion Planning
 - CS CG Deduction Mgmt II

- CPG Account Fund
- CS CG Deduction Management
- CS CG MDF Planning
- CS CG Deduction (SCW)
- CS CG Deduction2 (SCW)
- Symbolic Strings

2 Import the following .sif files from the Siebel Quick Fix build, which contains new and modified repository objects:

- ACR358_GenesisErrorHandler.sif
- ACR358_Deductions.sif

The followings are the repository changes included in ACR358_Deductions.sif.

Project: New

Name: CS CG Deduction Interface

Symbolic Strings

Name	Current Display Value	Definition
SBL_CS_DEDUCTION_PAYMENT_INBOUND	Deduction and Payment - Siebel Inbound	Deduction and Payment Inbound Web Service display name
SBL_CS_RESOLUTION_PAYMENT_INBOUND	Resolution and Payment - Siebel Inbound	Resolution and Payment Inbound Web Service display name
SBL_CS_RESOLUTION_PAYMENT_OUTBOUND	Resolution and Payment - Siebel Outbound	Resolution and Payment - Siebel Outbound

Business Components

- CG MDF Promotion Allocation - Pick (Modified)
 - Add new field "Promotion Status" which maps to Column STATUS_CD by Join "Fund Promotion".
- CG Split Deduction (Modified)
 - Add MVL: CPG Deduction Child Payments using Link CG Split Deduction/CPG Deduction Child Payments:
 - No Copy = Y
 - Add new calculated fields:
 - Field: Count Resolution Record
 - Calculated Value: IfNull(Count("CPG Deduction Child Payments"), 0)

- Field: Deduction Amount Read Only Flag
Calculated Value: IIf (ParentFieldValue("Sum Resolution Record Count") > 0 or [Payment Status] = LookupValue("DEDUCTION_STATUS","Inactive"), "Y", "N")
- CPG Account Credit Memo (Modified)
 - Add new Business Component User Property:
 - Name: CG Auto Submit On WriteRecord
Value: Y
 - Name: Named Method 1
Value: "SubmitPayment", "INVOKESVC", "CPG Account Credit Memo", "Workflow Process Manager", "RunProcess", "'ProcessName'", "CSIntegSEBLSIAPaymentInsertOuboundFlow", "'RowId'", "[Id]"
 - Name: On Field Update Invoke 1
Value: "Payment Status", "CPG Account Credit Memo", "SubmitPayment", "[Payment Status]=LookupValue('FUNDRO_STATUS', 'Submitted')"
- CPG Check Payment (Modified)
 - Add new Fields:
 - Field: Account Id
Column: ACCNT_ID
 - Field: Integration Id
Column: INTEGRATION_ID
Predefault Value:Field: 'Id'
 - Modify an existing field:
 - Field: Allocation Id
Change PickList to "CPG Checkbook Payment Allocation PickList"
 - Add a new Business Component User Property:
 - Name: On Field Update Invoke 1
Value: "Payment Status", "CPG Check Payment", "SubmitPayment", "[Payment Status]=LookupValue('FUNDRO_STATUS', 'Submitted')"
 - Name: On Field Update Invoke 5
Value: "Payment Status", "CPG Check Payment", "SaveRecord", "[Payment Status]=LookupValue('FUNDRO_STATUS', 'Submitted')"
 - Name: Named Method 1
Value: "SubmitPayment", "INVOKESVC", " CPG Check Payment", "Workflow Process Manager", "RunProcess", "'ProcessName'", "CSIntegSEBLSIAPaymentInsertOuboundFlow", "'RowId'", "[Id]"

- Name: Named Method 2
Value: "SaveRecord", "INVOKE", "CPG Check Payment", "WriteRecord"
- CPG Deduction (Modified)
 - Add new Fields:
 - Field: Integration Id
Column: INTEGRATION_ID
Predefault Value: Field: 'Id'
- CPG Deduction (Modified)
 - Add new Fields:
 - Field: Integration Id
Column: INTEGRATION_ID
Predefault Value: Field: 'Id'
 - Modify existing Fields:
 - Field: Chargeback Amount
Validation: ≥ 0
 - Field: Credit Memo Amount
Validation: ≥ 0
 - Field: Total Resolved Amount
Validation: ≥ 0
 - Field: Trade Funds Amount
Validation: ≥ 0
 - Modify existing MVL: "CPG Resolution Payments" set "No Copy" = Y.
- CPG Deduction Admin (Modified)
 - Modify MVL: "CPG Resolution Payments" set "No Copy" = Y.
 - Add MVL: CG Split Deduction using Link CS CG Deduction and Payment/CG Split Deduction.
 - Add new MVFs:
 - Field: Child Deduction Amount
Destination Field: Deduction Amount
Multivalue Link: CG Split Deduction
 - Field: Child Resolution Record Count
Destination Field: Count Resolution Record
Multivalue Link: CG Split Deduction

- Add new calculated fields:
 - Field: Sum Child Deduction Amount
Calculated Value: Sum ([Child Deduction Amount])
 - Field: Sum Resolution Record Count
Calculated Value: IfNull(Sum ([Child Resolution Record Count]), 0)
- CPG Deduction Chargeback (Modified)
 - Add new calculated field:
 - Name: CG Auto Paid OnSubmit Flag
Calculated value: Y
 - Add new Business Component User Property:
 - Name: On Field Update Invoke 1
Value: "Payment Status", "CPG Deduction Chargeback", "SubmitPayment", "[Payment Status]=LookupValue('FUNDRO_STATUS', 'Submitted')"
 - Name: On Field Update Invoke 2
Value: "Payment Status", "CPG Deduction Chargeback", "SaveRecord", "[Payment Status]=LookupValue('FUNDRO_STATUS', 'Submitted')"
 - Name: Named Method 1
Value: "SubmitPayment", "INVOKESVC", "CPG Deduction Chargeback", "Workflow Process Manager", "RunProcess", "ProcessName", "CSIIntegSEBLSIAPaymentInsertOuboundFlow", "RowId", "[Id]"
 - Name: Named Method 2
Value: "SaveRecord", "INVOKE", "CPG Deduction Chargeback", "WriteRecord"
 - Name: CG Auto Paid OnSubmit
Value: CG Auto Paid OnSubmit Flag
- CPG Deduction Resolution - Payment (Modified)
 - Add new calculated field:
 - Name: CG Auto Paid OnSubmit Flag
Calculated value: If ([Payment Credit Num] is not null, "Y", "N")
 - Add a new Business Component User Property:
 - Name: On Field Update Invoke 1
Value: "Payment Status", "CPG Deduction Resolution - Payment", "SubmitPayment", "[Payment Status]=LookupValue('FUNDRO_STATUS', 'Submitted')"

- Name: On Field Update Invoke 2

Value: "Payment Status", "CPG Deduction Resolution - Payment", "SaveRecord", "[Payment Status]=LookupValue('FUNDRO_STATUS', 'Submitted')"

- Name: Named Method 1

Value: "SubmitPayment", "INVOKESVC", "CPG Deduction Resolution - Payment", "Workflow Process Manager", "RunProcess", "ProcessName", "CSIntegSEBLSIAPaymentInsertOuboundFlow", "RowId", "[Id]"

- Name: Named Method 2

Value: "SaveRecord", "INVOKE", "CPG Deduction Resolution - Payment", "WriteRecord"

- Name: CG Auto Paid OnSubmit

Value: CG Auto Paid OnSubmit Flag

■ CPG Deduction Write-Off (Modified)

- Add new calculated field:

- Name: CG Auto Paid OnSubmit Flag

Calculated value: Y

- Add a new Business Component User Property:

- Name: On Field Update Invoke 1

Value: "Payment Status", "CPG Deduction Write-Off", "SubmitPayment", "[Payment Status]=LookupValue('FUNDRO_STATUS', 'Submitted')"

- Name: On Field Update Invoke 2

Value: "Payment Status", "CPG Deduction Write-Off", "SaveRecord", "[Payment Status]=LookupValue('FUNDRO_STATUS', 'Submitted')"

- Name: Named Method 1

Value: "SubmitPayment", "INVOKESVC", "CPG Deduction Write-Off", "Workflow Process Manager", "RunProcess", "ProcessName", "CSIntegSEBLSIAPaymentInsertOuboundFlow", "RowId", "[Id]"

- Name: Named Method 2

Value: "SaveRecord", "INVOKE", "CPG Deduction Write-Off", "WriteRecord"

- Name: CG Auto Paid OnSubmit

Value: CG Auto Paid OnSubmit Flag

■ CPG Mdf Checkbook (Modified)

- Add new Fields:

- Field: Payments Pending

Column: CG_PENDING_AMT

- Field: Payments Sub
Column: CG_SUBMITTED_AMT
- Field: Payments Paid
Column: CG_PAID_AMT
- Modify existing calculated field:
 - Field: Payment Lock Flag
Change calculated value:
If ([Payment Status] = LookupValue("FUNDRO_STATUS", "Submitted") or [Payment Status] = LookupValue("FUNDRO_STATUS", "Paid") or [V/C Flag] = 'Y' or [Payments Sub] > 0.00 or [Payments Paid] > 0.00, "Y", "N")
- CS CG Deduction and Payment (New)
 - Clone CPG Deduction Business Component.
 - Make the following changes:
 - Remove Search Specification.
 - Set Buscomp View Mode "Sales Rep" Inactive = Y.
 - Business Component User Property:
Add a new User Property:
Name: Is Integration BC
Value: Y

Inactivate the existing User Properties: Name: Deep Copy, Deep Copy 1, Deep Copy 2, Deep Copy 3, Deep Copy 4, Rollup Fields 1 and User Position Visibility.
 - Remove existing User Property: On Field Update Set.

Join
Inactive Join "S_SRC_PAY_ATT".

Modify the existing fields:
Account: Set Required = N
Account Id: Set Required=Y, Set Read Only = N, PickList = PickList CPG Account
Payment Status: PickList = PickList Deduction and Payment Status
Attachment: Inactive = Y
Attachment Name: Inactive = Y
Chargeback Amount
Validation: >= 0
Credit Memo Amount
Validation: >= 0
Total Resolved Amount
Validation: >= 0
Trade Funds Amount
Validation: >= 0

Enter the following seed data by Siebel Client:

Workflow Deployment

To deploy workflows

- 1 Log in to Siebel Tools and navigate to Workflows.
- 2 Right click and select the Import workflow process.
- 3 Give the above listed workflow "CSIntegSEBLSIAPaymentInsertOuboundFlow.xml" and select the Project as CS CG Deduction Interface and click OK.
- 4 Query for the workflow and deploy it by clicking Publish/Activate on the WF/Task Editor Toolbar.
Enable the toolbar by selecting View > Toolbars > WF/Task Editor Toolbar.
- 5 Login to the Siebel UI and navigate to Administration > Business Processes > Workflow Deployment.
- 6 Query for the Workflow deployed and click Activate.

Web Service Deployment

To deploy Web Services

- 1 Log in to Siebel UI and navigate to Administration > Web Services > Inbound Web Services.
- 2 Click Import and specify the following Web Services to be imported:
 - CSIntegSEBLSIADeductionAndPayment_InboundWS.XML
 - CSIntegSEBLSIAResolutionAndPayment_InboundWS.XML
- 3 After the inbound Web Service is imported, validate the address of the Siebel server in the Service Ports applet.

The address must be the correct Siebel server name that the client must connect to. If required, change the address and provide a valid username and password.

Inbound Web Service is created as follows:

- Name: CSIntegSEBLSIADeductionAndPayment

- Namespace: http://siebel.com/asi/

Service Port

Name	Type	Business Service/ Process	Transport	Address	Binding
Default	Business Service	Deduction and Payment - Siebel Inbound	HTTP	http://<webserver>/eai_<lang>/start.swe?SWExtSource=SecureWebService&SWExtCmd=Execute&UserName= <UserName>&Password= <Password>	SOAP_RPC_LITERAL

Operations

Name	Method Display Name	Authentication Type
SiebelDeductionPaymentInsert	Insert	None
SiebelDeductionPaymentInsertOrUpdate	Insert or Update	None
SiebelDeductionPaymentQueryById	Query by ID	None
SiebelDeductionPaymentSynchronize	Synchronize	None
SiebelDeductionPaymentUpdate	Update	None

- 4 Click Clear Cache.

Inbound Web Service is created as follows:

- Name: CSIntegSEBLSIAResolutionAndPayment

- Namespace: http://siebel.com/asi/

Service Port

Name	Type	Business Service/ Process	Transport	Address	Binding
Default	Business Service	Resolution and Payment - Siebel Inbound	HTTP	http://<webserver>/eai_<lang>/start.swe?SWEEExtSource=SecureWebService&SWEEExtCmd=Execute&UserName=<UserName>&Password=<Password>	SOAP_RPC_LITE RAL

Operations

Name	Method Display Name	Authentication Type
SiebelPaymentQueryById	Query by ID	None

- 5 Navigate to Administration > Web Services > Outbound Web Services.
- 6 Click Import and specify the Web Service "CRMIntegUpsertDeductionSEBL80ToEBS11i10Sync.xml" to be imported.
Outbound Web Service: CRMIntegUpsertDeductionSEBL80ToEBS11i10Sync.xml
- 7 After the outbound Web Service is imported, validate the address of the BPEL server in the Service Ports applet.
The address must be the correct BPEL server that the client must connect to. If required, change the address and save.
The outbound Web Service is created as follows:
 - Name: CRMIntegUpsertDeductionSEBL80ToEBS11i10Sync

- Namespace: `http://xmlns.oracle.com/CRMIntegUpsertDeductionSEBL80ToEBS11i10Sync`
Service Port

Name	Service Display Name	Transport	Address	Binding
CRMIntegUpsertDeductionSEBL80ToEBS11i10SyncPort	Resolution and Payment - Siebel Outbound	HTTP	<code>http://<host-info>/orabpel/default/CRMIntegUpsertDeductionSEBL80ToEBS11i10Sync/1.0</code>	SOAP_DOC_LITERAL

Operations

Method Display Name	Authentication Type
Process	None

- 8 Click Clear Cache.

State Model

To manage states

- 1 Log in to Siebel UI and navigate to Administration > Application > State Model.
- 2 Click New to create a new state model:
 - Name: CS CG Deduction and Payment Status
 - Business Component: CS CG Deduction and Payment
 - Field: Payment Status
- 3 Click the State tab to create the following states:

State Name	Default	No Delete	No Update	Restrict Transition	Description
Closed	N	N	N	Y	Closed
In Progress	N	N	N	Y	In Progress
Inactive	N	N	N	Y	Inactive
Open	Y	N	N	Y	Open
Resolved	N	N	N	Y	Resolved
Submitted	N	N	N	Y	Submitted

- Click the Transitions tab to create the following transactions:

From State	To State	Public	Rule Expression
In Progress	Inactive	Y	[Deduction Status Read Only Flag] = "N"
In Progress	Open	Y	[Deduction Status Read Only Flag] = "N"
Inactive	Open	Y	[Deduction Status Read Only Flag] = "N"
Open	Inactive	Y	[Deduction Status Read Only Flag] = "N"
Resolved	Open	Y	[Deduction Status Read Only Flag] = "N"
Resolved	Closed	Y	
Resolved	Inactive	Y	[Deduction Status Read Only Flag] = "N"
Submitted	Closed	Y	

Leave other columns empty.

- Restart the Siebel Server.

Setting Up Promotions

Repository changes for Promotions

To import Siebel Artifacts

- Log into Siebel 8.0 Tools and lock the following projects:

New/Modified	Project	Description
Modified	CPG Plan	Holds Promotion Integration related objects. Changed BO, New Int Objects, New Bus Comps. New Links
Modified	CPG Promotion	None
Modified	CPG Promotion Product	None
Modified	CS CG Promotion Category	None
Modified	Symbolic Strings	None

- 2 Import the ACR358_Promotions.sif file from the Siebel Quick Fix build, which contains new and modified repository objects.

The following table contains the description of changes for each repository object:

Symbolic Strings

Name	Current String Value	Definition
SBL_CG_INTEG_PROMOTION_UPSERT_SERVICE_OUTBOUND	CGIntegPromotionUpsertService - Siebel Outbound	Siebel Bus Service created while importing BPEL Process, used to invoke the process
SBL_CG_PROMOTION_UPSERT_SERVICE_OUTBOUND	CGPromotionUpsertService - Siebel Outbound	Siebel Bus Service to QueryById to create input for Outbound BPEL Web Service
SBL_CG_PROMO_PRODUCT_UPDATE_SERVICE	CGPromoProductUpdateService - Siebel Inbound	Siebel Inbound Service for Promoted Product

Business Components

- Name: CPG Plan Account Promotion (Modified)

Seed Data Changes

- 1 Navigate to Administration Application > State Models.
- 2 Query for Plan Account Promotion Status.
- 3 Click the Transitions tab and query for the Finalized state using the From State field.
A record is retrieved with From State as Finalized and To State as Re-opened.
- 4 Delete this record.

Workflow Deployment

To deploy workflows

- 1 Log in to Siebel Tools and navigate to Workflows.
- 2 Right click and select the Import Workflow process.
- 3 Enter the above listed workflow "CGIntegSEBLPromotionUpsertOutboundFlow" and select the Project as CPG Plan.
- 4 Click OK.
- 5 Query for the workflow. The workflow should be created as follows:
 - Workflow Process Name: CGIntegSEBLPromotionUpsertOutboundFlow
 - Workflow Mode: Service Flow

■ WF Process Properties:

Name	In/Out	Business Object	Data Type	Access Mode
BinaryMSG	In/Out	CPG Account Promotion	String	RW
Deal Id	In/Out	CPG Account Promotion	String	RW
Deal Instance	In/Out	CPG Account Promotion	Hierarchy	RW
Error Code	In/Out	CPG Account Promotion	String	RW
Error Message	In/Out	CPG Account Promotion	String	RW
Fault Message	In/Out	CPG Account Promotion	Hierarchy	RW
IsError	In/Out	CPG Account Promotion	String	RW
Object Id	In/Out	CPG Account Promotion	String	RW
Process Instance Id	In/Out	CPG Account Promotion	String	RW
Promotion First Exec	In/Out	CPG Account Promotion	String	RW
Siebel Operation Object Id	In/Out	CPG Account Promotion	String	RW

- 6 Deploy the workflow by clicking Publish/Activate on the WF/Task Editor Toolbar.
Display the toolbar by selecting View > Toolbars > WF/Task Editor Toolbar.
- 7 Login to Siebel UI and navigate to Administration > Business Processes > Workflow Deployment.
- 8 Query for the Workflow deployed and click Activate.

Web Service Deployment

To deploy Web Services

- 1 Log in to Siebel UI and navigate to Administration > Web Services > Inbound Web Services.
- 2 Click Import and specify "CGIntegSEBLPromoProductUpdate.xml" as the Web Service to be imported.
Inbound Web Service: CGIntegSEBLPromoProductUpdate
- 3 After the inbound Web Service is imported, verify the Siebel Server address in the Service Ports applet.

It should have the address of the correct Siebel server that the client must connect to. If required, change the address and provide a valid user name and password.

Inbound Web Service is created as follows:

- Name: CGIntegSEBLPromoProductUpdate (New)
- Service Port

Name	Type	Business Service/ Process	Transport	Address	Binding
CGIntegSEBLPromoProductUpdate	Business Service	CGPromoProductUpdateService - Siebel Inbound	HTTP	http://<webserver>/eai_<lang>/start.swe?SWEExtSource=SecureWebService&SWEExtCmd=Execute&UserName=<UserName>&Password=<Password>	SOAP_RPC_LITE RAL

- Operations

Name	Method Display Name	Authentication Type
SiebelPromoProductDelete	Delete	None
SiebelPromoProductInsert	Insert	None
SiebelPromoProductInsertOrUpdate	Insert or Update	None
SiebelPromoProductQueryByExample	Query by Example	None
SiebelPromoProductQueryById	Query by ID	None
SiebelPromoProductSynchronize	Synchronize	None
SiebelPromoProductUpdate	Update	None

- 4 Click Clear Cache.
- 5 Navigate to Administration > Web Services > Outbound Web Services.
- 6 Click Import and specify CRMIntegUpsertPromotionSEBL80ToEBS11i10Sync.XML as the Web Service to be imported.

Outbound Web Service: CRMIntegUpsertPromotionSEBL80ToEBS11i10Sync

- 7 After the outbound Web Service is imported, verify the BPEL server name in the Service Ports applet.

The address must have the right BPEL server name that the client must connect to. If required, change the address and save.

Outbound Web Service is created as follows:

- Name: CRMIntegUpsertPromotionSEBL80ToEBS11i10Sync (New)
- Namespace: http://xmlns.oracle.com/CRMIntegUpsertPromotionSEBL80ToEBS11i10Sync

■ Service Port

Name	Business Service/Process	Transport	Address	Binding
CRMIntegUpsertPromotionSEBL80ToEBS11i10SyncPort	CRMIntegUpsertPromotionSEBL80ToEBS11i10Sync	HTTP	http://<host-info>/orabpel/default/CRMIntegUpsertPromotionSEBL80ToEBS11i10Sync/1.0	SOAP_DOC_LITERAL

■ Operations

- Method Display Name: Process
- Authentication Type: None

Setting Up Common Integration Server (Including DVMs and Common Services)

This section describes some integration setup steps that are common across all modules. The topics covered in this section are:

- [Defining Data Sources](#)
- [Setting Up Asynchronous Error Handling](#)
- [Setting Up a Custom GUI Generator](#)
- [Setting Up Common Functions](#)
- [Setting Up Common Objects](#)
- [Importing ID-Xref Seed Data](#)
- [Creating Siebel Trade Promotion Management Business Units and Price List Data Mapped to Oracle Trade Management.](#)
- [Populating Mappings in ID-Xrefs and DVMs](#)
- [Validating and Loading DVMs.](#)

Defining Data Sources

NOTE: All names for data sources and connection pools that are created here are case sensitive.

Define the following data sources using Oracle Enterprise Manager:

Data Source	JNDI Name	Details
Xref	jdbc/xref	A data source pointing to a xrefuser on the 10.1.3 Dehydration Database. Usually it is the database with which the SOA is installed.
CRMIIntgDataSource	jdbc/crmintgce	A data source pointing to a xrefuser on the 10.1.3 Dehydration Database. Usually it is the database with which the SOA is installed.
locOracleEBSDataSource	OracleEBSDataSource	A data source pointing to the Oracle E-Business Suite data source
jdbcOracleEBSDataSource	jdbc/OracleEBSDataSource	A data source pointing to the Oracle E-Business Suite data source
locErrorDB	loc/ErrorDB	A data source pointing to error database. It can be any database with proper error schema setup in section Setting Up Asynchronous Error Handling . Usually it is the database with which the SOA is installed. For username and password, please refer to section Setting Up Asynchronous Error Handling .
jdbcErrorDB	jdbc/ErrorDB	A data source pointing to an error database. It can be any database with a proper error schema setup in section Setting Up Asynchronous Error Handling . Usually it is the database with which the SOA is installed. For username and password, please refer to section Setting Up Asynchronous Error Handling .

To create database connections

- 1 Log in to the Application Server Control (for example URL <http://localhost:8888/em>) as an administrator user (oc4jadmin/welcome1).
- 2 Click oc4j_soa > Home > Administration tab.
- 3 Click the Go to Task icon for JDBC Resources under Administration Tasks > Services.
A list of Data Sources and Connection Pools is displayed.

To create Connection Pools and Data Sources for Xref and CRMIIntgDataSource

- 1 Under Connection Pools, click Create.
- 2 Accept defaults, and click Continue.

- 3 Enter the following (leave defaults for the rest):

Name	Xref Connection Pool
JDBC URL	<according to DB Setup> such as jdbc:oracle:thin:@//host:port/service name
Username	<according to DB Setup> such as orapel
Password	<according to DB Setup> > such as orapel

- 4 Click Finish.
5 Click the Test Connection icon for your new connection pool.
6 In the new screen, click Test.

On the main page, a successful connection message is displayed. If you get an error message, check the URL and credentials to ensure you have entered the correct information.

- 7 Click Finish.
8 Under Data Sources, click Create.
9 Accept the defaults, and click Continue.
10 Enter the following (leave the defaults for the rest):

Name	Xref
JNDI Location	jdbc/xref
Connection Pool	Xref Connection Pool
Transaction Level	Global & Local Transactions

- 11 Click Finish.
12 Under Data Sources, click Create again.
13 Accept the defaults, and click Continue.
14 Enter the following (leave the defaults for the rest):

Name	CRMI ntgDataSource
JNDI Location	jdbc/crmintg
Connection Pool	Xref Connection Pool
Transaction Level	Global & Local Transactions

Creating an Oracle E-Business Suite Data Source

To configure the Oracle e-Business Suite Data Source

- 1 Under Connection Pools, click Create.
- 2 Accept the defaults, and click Continue.
- 3 Enter the following (leave defaults for the rest):

Name	OracleEBSDataSource
JDBC URL	<according to Oracle E-Business Suite DB Setup> jdbc:oracle:thin:@//host:port/service name For example: jdbc:oracle:thin:@//ap6132rt.us.oracle.com:1525/cgtut102
Username	<according to Oracle E-Business Suite DB Setup> enter an E-Business Suite username that has APPS schema Privilege (for example, APPS)
Password	<according to Oracle E-Business Suite DB Setup> enter an E-Business Suite username password that has APPS schema Privilege (for example, APPS)

- 4 Click Finish.
- 5 Click the Test Connection icon for your new connection pool.
- 6 In the new screen, click Test.

Back on the main page, a successful connection message is displayed. If you get an error message, check the URL and credentials to ensure you've entered the right information.

- 7 Click Finish.
- 8 Under Data Sources, click Create.
- 9 Accept the defaults, and click Continue.
- 10 Enter the following (leave the defaults for the rest):

Name	locOracleEBSDataSource
JNDI Location	loc/OracleEBSDataSource
Connection Pool	OracleEBSDataSource

- 11 Click Finish.
- 12 Under Data Sources, click Create.
- 13 Accept the defaults, and click Continue.

14 Enter the following (leave the defaults for the rest):

Name	jdbcOracleEBSDataSource
JNDI Location	jdbc/OracleEBSDataSource
Connection Pool	OracleEBSDataSource

15 Click Finish.

Creating Error Database Connection Information

To configure the Error DB Data Source

- 1 Under Connection Pools, click Create.
- 2 Accept defaults, and click Continue.
- 3 Enter the following (leave the defaults for the rest):

Name	ErrorDB
JDBC URL	<according to error DB Setup> jdbc:oracle:thin:@//host:port/service name For example, jdbc:oracle:thin:@//SDCHS20N405.siebel.com:1521/oracle
Username	<according to error DB Setup>
Password	<according to error DB Setup>

- 4 Click Finish.
- 5 Click the Test Connection icon for your new connection pool.
- 6 In the new screen, click Test.

Back on the main page, a successful connection message is displayed. If you get an error message, check the URL and credentials to ensure you have entered the right information.

- 7 Click Finish.
- 8 Under Data Sources, click Create.
- 9 Accept the defaults, and click Continue.
- 10 Enter the following (leave the defaults for the rest):

Name	locErrorDB
JNDI Location	loc/ErrorDB
Connection Pool	ErrorDB

11 Click Finish.

- 12 Under Data Sources, click Create.
- 13 Accept the defaults, and click Continue.
- 14 Enter the following (leave the defaults for the rest):

Name	jdbcErrorDB
JNDI Location	jdbc/ErrorDB
Connection Pool	ErrorDB

- 15 Click Finish.

Creating Adapter Data Source

To configure Adapter Data Source

- 1 From the Oracle SOA Suite main page, click the link for Application Server Control.
- 2 Log in as an administrative user.
- 3 Under All Application Servers, click your SOA application server name.
- 4 Click your OC4J J2EE container name.
- 5 Click Applications tab.
- 6 Click domain name.
- 7 Configure AppsAdapter
 - a Click AppsAdapter module.
 - b Click Connection Factories.
 - c Click Create above JNDI Location.
 - d Leave default for Connection Factory Interface and click Continue.
 - e For JNDI location, enter eis/Apps/OracleEBSDataSource.
 - f Under Connection Pooling, select No Connection Pool.
 - g Under Configuration Properties, enter dataSource as loc/OracleEBSDataSource and xADataSource as jdbc/OracleEBSDataSource.
 - h Click Finish.
- 8 Configure AQ Adapter
 - a Click AqAdapter module.
 - b Click Connection Factories.
 - c Click Create above JNDI Location.
 - d Leave default for Connection Factory Interface and click Continue.

- e For JNDI location, enter eis/AQ/OracleEBSDataSource.
 - f Under Connection Pooling, select No Connection Pool.
 - g Under Configuration Properties, enter the data source as loc/OracleEBSDataSource and xADataSource as jdbc/OracleEBSDataSource.
 - h Click Finish.
- 9 Configure DB Adapter
- a Click DbAdapter module.
 - b Click Connection Factories.
 - c Click Create above JNDI Location.
 - d Leave default for Connection Factory Interface and click Continue.
 - e For JNDI location, enter eis/DB/OracleEBSDataSource.
 - f Under Connection Pooling, select No Connection Pool.
 - g Under Configuration Properties, enter the data source as loc/OracleEBSDataSource and xADataSource as jdbc/OracleEBSDataSource.
 - h Click Finish.
 - i Click Create above JNDI Location.
 - j Leave default for Connection Factory Interface and click Continue.
 - k For JNDI location, enter eis/DB/ErrorDB.
 - l Under Connection Pooling, select No Connection Pool.
 - m Under Configuration Properties, enter the data source as loc/ErrorDB and xADataSource as jdbc/ErrorDB.
 - n Click Finish.

Setting Up Asynchronous Error Handling

CRMIntegErrorHandlerService requires a database to store information. Connect to the error database using SQL client, as sys user, for example, sys/manager, and do following configuration.

To configure the error database

- 1 Create Tablespace.

This step is optional; you can use existing table spaces for ERRORADMIN user.

```
CREATE SMALLFILE TABLESPACE "ERRORHANDLING" DATAFILE  
'D:\ORACLEDB10G\PRODUCT\10.2.0\ORADATA\GENESISO\ERRORHANDLING.DAT' SIZE 100M  
AUTOEXTEND ON NEXT 1024K MAXSIZE UNLIMITED LOGGING EXTENT MANAGEMENT LOCAL SEGMENT  
SPACE MANAGEMENT AUTO;
```

- 2 Create User:

```
CREATE USER ERRORADMIN  
  IDENTIFIED BY VALUES <PASSWORD here>  
  DEFAULT TABLESPACE ERRORHANDLING  
  TEMPORARY TABLESPACE TEMP  
  PROFILE DEFAULT  
ACCOUNT UNLOCK;
```

3 Grant User Privileges:

```
GRANT ALTER ANY TABLE TO ERRORADMIN;  
GRANT ALTER ANY TYPE TO ERRORADMIN;  
GRANT CREATE SESSION TO ERRORADMIN;  
GRANT CREATE SYNONYM TO ERRORADMIN;  
GRANT CREATE ANY TABLE TO ERRORADMIN;  
GRANT CREATE ANY TYPE TO ERRORADMIN;  
GRANT DROP ANY TABLE TO ERRORADMIN;  
GRANT CREATE ANY TYPE TO ERRORADMIN;  
GRANT UNLIMITED TABLESPACE TO ERRORADMIN;  
GRANT INSERT ANY TABLE TO ERRORADMIN;  
GRANT SELECT ANY TABLE TO ERRORADMIN;  
GRANT UPDATE ANY TABLE TO ERRORADMIN;
```

4 Create ERROR_DATABASE table in ERRORADMIN schema

```
CREATE TABLE ERROR_DATABASE  
(  
  CALLINGPROCESSNAME      VARCHAR2(60 BYTE),  
  CALLINGPROCESSINSTANCEID VARCHAR2(10 BYTE),  
  FAULTTEXT                VARCHAR2(1000 BYTE),  
  FAULTSTACK               VARCHAR2(1000 BYTE),  
  FAULTCONTEXT             VARCHAR2(200 BYTE),  
  PROCESSINPUTPAYLOAD     CLOB  
);
```

5 Configure SMTP for notification

Edit <ORACLE_AS_HOME>/bpel/system/services/config/ns_email.xml.

Set NotificationMode to EMAIL. Set SMTPHost, SMTPPort.

```
<EmailAccounts xmlns="http://xmlns.oracle.com/ias/pcbpel/NotificationService"
```

```
    EmailMimeType=""
```

```
    NotificationMode="EMAIL">
```

```
<EmailAccount>
```

```
    <Name>Default</Name>
```

```
    <GeneralSettings>
```

```
        <FromName>Oracle BPM</FromName>
```

```
        <FromAddress>accountid@yourdomain.com</FromAddress>
```

```
    </GeneralSettings>
```

```
    <OutgoingServerSettings>
```

```
        <SMTPHost>mail.oracle.com</SMTPHost>
```

```
        <SMTPPort>25</SMTPPort>
```

```
    </OutgoingServerSettings>
```

```
    <IncomingServerSettings>
```

```
        <Server>yourdomain.com</Server>
```

```
        <Port>110</Port>
```

```
        <Protocol>pop3</Protocol>
```

```
        <UserName>accountid</UserName>
```

```
        <Password ns0:encrypted="false" xmlns:ns0="http://xmlns.oracle.com/ias/pcbpel/NotificationService">password</Password>
```

```
        <UseSSL>false</UseSSL>
```

```
        <Folder>Inbox</Folder>
```

```
        <PollingFrequency>1</PollingFrequency>
```

```
        <PostReadOperation>
```

```
            <MarkAsRead/>
```

```
        </PostReadOperation>
```

```
    </IncomingServerSettings>
```

</Email Account>

6 Create DVM Map for mapping mail IDs:

CRMIntegErrorHandlerService queries the Email ID of the owner of the faulted process from DVM Map CRMIntegProcessMailId.

a Create DVM Map with the following details:

■ Name: CRMIntegProcessMailId

■ Domains:

□ ProcessName

□ MailID

b After creating the map, enter process names and the respective email ids. You can also use following to import the map:

```
<?xml version="1.0" encoding="UTF-8"?>
```

```
- <dvm name="CRMIntegProcessMailId" isNew="null">
```

```
  <description>DVM description</description>
```

```
- <columns>
```

```
  <column name="ProcessName" />
```

```
  <column name="MailID" />
```

```
</columns>
```

```
- <rows>
```

```
- <row>
```

```
  <cell>default</cell>
```

```
  <cell>manish.aml@oracle.com</cell>
```

```
</row>
```

```
- <row>
```

```
  <cell>CRMIntegSyncAccount</cell>
```

```
  <cell>manish.aml@oracle.com</cell>
```

```
</row>
```

```
</rows>
```

```
</dvm>
```

Setting Up a Custom GUI Generator

Set up the following environment variables at common prompt. For example, if you are using csh, enter

```
setenv CRMINTG_DB_USER "APPS"
```

- CRMINTG_DB_URL <the same as used by data source CRMIntgDataSource >
- CRMINTG_DB_USER <the same as used by data source CRMIntgDataSource >
- CRMINTG_DB_PASSWORD <the same as used by data source CRMIntgDataSource >
- OC4J_USERNAME
- OC4J_PASSWORD
- CLASSPATH add <SOA_HOME>/bpel/system/classes
- GUID_GENERATOR <set to oracle.crmintg.common.xpath.CRMIntgGUIDGenerator>

Setting Up Common Functions

All related files required for this part are located under the build folder \\build number\SEBLTPMIntegPkeBSTM\SharedComponents\Utility\CommonFunctions.

- Execute create_crminthCommon_schema.sql on the database that you wish to use for Common Functions. (same database and user which the data source CRMIntgDataSource created in section [Defining Data Sources](#)).
- Extract jar file crmintg-common.jar from build folder to <SOA_HOME>\bpel\system\classes with folder structure. You can run jar -xvf crmintg-common.jar at the command prompt.
- Open crmintg-xpath-functionEntries.xml from build folder and copy the contents of this file to the end of <SOA_HOME>\bpel\system\config\xpath-functions.xml file. Before modification, please make a backup copy of xpath-functions.xml.

NOTE: This content should go inside the top-level element (bpel-xpath-functions), not after that, that is, between <function> and </bpel-xpath-functions>. Reapplying a cross-reference patch requires that this step be performed again.

- In order to show the crmintg common functions in your JDev, do the following;
 - a Create an xml file with any name, say anyName.xml. Copy the below contents in a file.

```
<?xml version="1.0" encoding="UTF-8"?>
<extension-functions>
  <!-- Cross Reference Functions -->
  <functions xmlns:crminth="http://www.oracle.com/XSL/Transform/java/oracle.crmintg.common.xpath.CRMIntgXPathFunctions">
    <function name="crminth:generateCommonID" as="string">
```

```
</function>  
<function name="crmintg:generateUniqueID" as="string">  
</function>  
</functions>  
</extension-functions>
```

- b** Open Oracle JDeveloper and navigate to JDeveloper > Tools > Preferences > XSL Maps.
- c** In the first box, User Defined Extension Functions Config File, browse for the file created in Step a and restart JDeveloper.

Importing ID-Xref Seed Data

Use the following steps to import the ID Xref table and column definitions using Xref Command Line Tool:

- 1** Copy crmintg_seed_data.txt from <Build Location\SEBLTPMIntegPKEBSTM\SharedComponents\Utility\CommonFunctions to <SOA_HOME>\integration\esb\bin.
- 2** Execute the following command at <SOA_HOME>\integration\esb\bin:
 - On Windows: xreftool -f crmintg_seed_data.txt
 - On linux: ./xreftool.sh -f crmintg_seed_data.txt

NOTE: This step needs a cross reference patch setup done. Please refer to cross reference documentation for any help to run xreftool command.

Populating Xref Data

This section gives instructions on populating xref data using the xrefimport utility.

To import the metadata and xref values from the specified xml file, the xml file to be imported should comply with xref.xsd.

Some salient points about xref import:

- Can be performed on a clean repository. Xref table and columns are created if they do not exist.
- User can specify the preferred way of handling the duplicate values (Details below).
- User can specify the generation of an xref column along with the values during import.

Syntax:

Can be added to xrefimport classpath by any of the following:

- In Windows: xrefimport -file <fileName> [-mode <ignore | overwrite>] [-generate <columnName>]

- In Unix: `./xrefimp.sh -file <fileName> [-mode <ignore | overwrite>] [-generate <columnName>]`
- `-file <fileName>` Fully qualified location of the file from which the data is imported
- `-mode <ignore | overwrite>` (Optional) Preferred way of handling the existing data in case of conflicts. The value "ignore" would keep the existing data in the repository and "overwrite" would overwrite the existing data with the data present in the xml file which is getting imported. Please note that the mode kicks in only in the case of conflicts. The default is "ignore".
- `-generate <column name>` (Optional) Column name that has to be created automatically during import.

The import utility is used to create mapping between Oracle Trade Management and Siebel Trade Promotion Management data and the mapping is stored in Xref schema. For example, to create a mapping between Oracle E-Business Suite customer account and Siebel account, use the following steps.

To create a mapping between Oracle E-Business Suite customer account and Siebel Trade Promotion Management account

- 1 Create a Siebel Trade Promotion Management Account or use an existing account say SiebelTestAcct1 and get the account id as well, say SiebelId1. You can similarly have SiebelTestAcct2, with SiebelId2, and so on.
- 2 Create an account in Oracle Trade Management or use an existing account, say OracleAcct1, and get the account id for the same, say OracleId1. You can similarly have OracleAcct2, OracleId2.
- 3 To map, SiebelAcct1 to OracleAcct1, SiebelAcct2 to OracleAcct2, in ACCOUNT table in Xref schema, use the following sample file, AccountXref.xml:

```
<xref xml ns="http://xml ns.oracle.com/xref">
  <table name="ACCOUNT">
    <columns>
      <column name="SIEBEL78_01"/>
      <column name="ORACLE11110_01"/>
    </columns>
    <rows>
      <row>
        <cell col Name="SIEBEL78_01">Siebel Id1</cell >
        <cell col Name="ORACLE11110_01">Oracle Id1</cell >
      </row>
      <row>
```

```
<cell col Name="SIEBEL78_01">SiebelID2</cell >
<cell col Name="ORACLE11110_01">OracleID2</cell >
</row>
</rows>
</table>
</xref>
```

- 4 Put this file, AccountXref.xml, under the <SOA server install directory>\integration\esb\bin directory.

Next, run xrefimport on this file to create a mapping between Siebel Trade Promotion Management and Oracle Trade Management accounts.

- 5 On windows: Navigate to the Command Prompt.
On linux: Open a Shell window.
- 6 Go to the <SOA server install directory>\integration\esb\bin directory.
- 7 Make sure that following variables are set correctly, before running the tool.
 - CRMINTG_DB_URL <SOA database connection details>
 - CRMINTG_DB_USER
 - CRMINTG_DB_PASSWORD
 - OC4J_USERNAME
 - OC4J_PASSWORD
 - CLASSPATH <SOA_HOME>/bpel/system/classes
 - GUID_GENERATOR oracle.crmintg.common.xpath.CRMIntgGUIDGenerator

The values should point to the schema where Xref tables were created during Xref setup. Sample values are:

- DB_URL=jdbc:oracle:thin:@stapm21.us.oracle.com:1521:orcl
 - DB_PASSWORD=oraesb
 - DB_USER=oraesb
- 8 Run following command to import the above XML file using the ID-Xref import utility with the custom GUID generation option configured in CRMIntg custom GUID Generator setup-
 - On Windows: xrefimport -file <import xml file name with full path> -generate COMMON

- On Linux: `./xrefimport.sh -file <import xml file name with full path> -generate COMMON`
For example, `./xrefimport.sh -file AcoountXref.xml -generate COMMON`

Follow similar steps for Product, Organization, and so on to create corresponding mappings between Siebel Trade Promotion Management and Oracle Trade Management data. Details on mapping Oracle Trade Management and Siebel Trade Promotion Management Organizations are explained later in Sections [Setting Up Common Objects](#) and [Creating Siebel Trade Promotion Management Business Units and Price List Data Mapped to Oracle Trade Management](#).

A sample file:

```
<xref xml ns="http://xml ns.oracl e. com/xref">
  <tabl e name="ORGANI ZATI ON">
    <col umns>
      <col umn name="SI EBEL78_01" />
      <col umn name="ORACLE11I 10_01" />
    </col umns>
    <rows>
      <row>
        <cel l col Name="SI EBEL78_01">42-4YGU0</cel l >
        <cel l col Name="ORACLE11I 10_01">888</cel l >
      </row>
      <row>
        <cel l col Name="SI EBEL78_01">42-4YGUI </cel l >
        <cel l col Name="ORACLE11I 10_01">911</cel l >
      </row>
      <row>
        <cel l col Name="SI EBEL78_01">42-4YGUB</cel l >
        <cel l col Name="ORACLE11I 10_01">204</cel l >
      </row>
      <row>
        <cel l col Name="SI EBEL78_01">42-4YGUU</cel l >
        <cel l col Name="ORACLE11I 10_01">207</cel l >
      </row>
    </rows>
```

</table>
</xref>

Setting Up Common Objects

Use the following procedure to set up common objects.

To set up common objects

- 1 Copy the <Build Location>\SEBLTPMIntegPKEBSTM\xml\lib\SEBLTPMIntegPKEBSTM folder to the <SOA_HOME>/bpel/system/xml\lib directory.
- 2 Restart SOA.

Creating Siebel Trade Promotion Management Business Units and Price List Data Mapped to Oracle Trade Management

You must create Business Units and Price Lists in Siebel Trade Promotion Management for every Operating Unit (OU) in Oracle Trade Management. This is a manual task, and at this point no scripted or automated mechanism exists to pre-populate this into Siebel Trade Promotion Management.

To create and map Siebel Trade Promotion Management Business Units and Price Lists to Oracle Trade Management

- 1 For every operating unit (Organization) in Oracle Trade Management, gather the following information:
 - Name, ID, and Code
 - Location
 - Address
 - Name and ID of an Oracle Trade Management Responsibility that has this OU assigned as the Default.
 - Name and ID of a Oracle Apps User to which this responsibility is assigned.
- 2 In Siebel Trade Promotion Management, create business units corresponding to every one of the Oracle Trade Management OUs. Note the Siebel Trade Promotion Management IDs for the following:
 - a Log in to Siebel Callcenter Client, navigate to Site Map > Administration > Group/Organizations
 - b Click New in the Organizations applet.
 - c Enter the exact name as in Oracle Trade Management and save.

Validating and Loading DVMs

This integration requires a number of other DVMs. These store various mappings between Oracle Trade Management and Siebel Trade Promotion Management lookup values. These are provided with sample data, and should each be verified for the specific integration scenario.

All DVM map xml files can be found in the following directory:

```
<Build Location>\SEBLTPMIntegPkeBSTM\SharedComponents\Utility\DVM\Maps
```

To upload DVM

- 1 Log in to ESB Control.
- 2 Click the icon on the top right hand corner.
The Domain Value Map is displayed on the left panel.
- 3 Click Create and select Import a new map.
- 4 You must import the following DVM used by each module:
 - Customer
 - STATE
 - COUNTRY
 - GENDER
 - DEFAULT ORG: After importing this DVM map, please change the Siebel Trade Promotion Management column value according to the setup in Siebel. The value in this DVM map is just a sample.
 - PERSONAL TITLE
 - ACCOUNT STATUS
 - CONTACT STATUS
 - ADDRESS STATUS
 - PHONE TYPE CODE
 - WEB TYPE CODE
 - ADDRESS TYPE CODE
 - CUSTOMER TYPE
 - HOME OWNER FLAG
 - MARITAL STATUS
 - Product
 - PRODUCT STATUS
 - UNIT OF MEASURE
 - Fund

- BUDGET TYPE
- ACCRUAL BASIS TYPE
- CURRENCY CODE
- Deduction
 - CLAIM STATUS
 - DEDUCTION REASON
 - DEDUCTION TYPE
 - PAYMENT METHOD TYPE
 - CURRENCY CODE
- Promotion
 - CURRENCY CODE
 - PROMOTION STATUS
 - PROMOTION TYPE
 - DISCOUNT TYPE

Process of Deploying BPEL Processes Using Oracle JDeveloper

To deploy BPEL processes using Oracle JDeveloper, perform the following tasks:

- 1 [Configuring the Application Server on page 148](#)
- 2 [Configuring the Integration Server on page 149](#)
- 3 [Deploying BPEL Processes for Siebel CRM Integration Pack for Trade Promotion Management on page 149](#)

Configuring the Application Server

Use this procedure to configure the application server.

To configure the application server

- 1 Open Oracle JDeveloper.
- 2 Click Connections Navigator.
- 3 Under Connections, double-click Application Server.
- 4 Click Next.
- 5 Enter a name for ConnectionName to represent the SOA Suite application server.

- 6 From Connection Type, select Oracle Application Server 10g 10.1.3.
- 7 Click Next.
- 8 For UserName, enter the SOA instance username.
- 9 For Password, enter the SOA instance password.
- 10 Select Deploy Password.
- 11 Click Next.
- 12 For Hostname, enter the server on which the SOA instance runs.
- 13 For OPMN Port, leave the default.
- 14 For OC4J Instance Name, enter the OC4J instance name given during the installation.
- 15 Click Next.
- 16 Click Test Connection.

If the test is successful, a confirmation message is displayed.

Configuring the Integration Server

To configure the integration server

- 1 Open Oracle JDeveloper.
- 2 Click Connections Navigator.
- 3 Under Connections, double-click Integration Server.
- 4 Click Next.
- 5 Enter a name for ConnectionName to represent the SOA Suite application server.
- 6 Click Next.
- 7 Under Application Server, select the server created in previous step.
- 8 Change the port name, as needed, to indicate the port at which the SOA Suite instance runs.
- 9 Click Next.
- 10 Click Test Connection.

If the test is successful, a confirmation message is displayed.

Deploying BPEL Processes for Siebel CRM Integration Pack for Trade Promotion Management

The final step is to deploy the BPEL processes. A number of BPEL processes exist for every module. The list of all BPEL processes to be deployed follows. The processes are ordered according to the recommended sequence of deployment:

- 1 CRMIntegErrorHandlerService
- 2 CRMIntegMapAccountCOMToKeyCrossRefSync
- 3 CRMIntegMapAccountCOMToSEBL8Sync
- 4 CRMIntegMapAccountSEBL8ToKeyCrossRefSync
- 5 CRMIntegXformAcctEBS11i10ToCOM
- 6 CRMIntegXformEBSToSEBLAndSyncAcct
- 7 CRMIntegSaveAcctEBS11i10ToSEBL782Sync
- 8 CSIntegMapSimpleProductCOMToSEBL80
- 9 CRMIntegXformProductOPoraToComEBS11i10ToSEBL782
- 10 CSIntegSimpleProductEBSToSEBL80Sync
- 11 CRMIntegSyncProductOPEBS11i10ToSEBL782Async
- 12 CRMIntegSubscribeToCreateProductOPEBS11i10ToSEBL782
- 13 CRMIntegSubscribeToUpdateProductOPEBS11i10ToSEBL782
- 14 CRMIntegMapPromotionCOMToSEBL80InboundSync
- 15 CRMIntegMapPromotionCOMToSEBL80OutboundSync
- 16 CRMIntegMapPromotionSEBL80ToCOMInboundSync
- 17 CRMIntegMapPromotionSEBL80ToCOMOutboundSync
- 18 CRMIntegPromotionCOMToEBS11i10Sync
- 19 CRMIntegUpdatePromotionCOMToSEBL80Sync
- 20 CRMIntegUpsertPromotionSEBL80ToEBS11i10Sync
- 21 CRMIntegFundCOMToEBS11i10Sync
- 22 CRMIntegMapFundCOMToSEBL80InboundSync
- 23 CRMIntegMapFundCOMToSEBL80OutboundSync
- 24 CRMIntegMapFundSEBL80ToCOMInboundSync
- 25 CRMIntegMapFundSEBL80ToCOMOutboundSync
- 26 CRMIntegUpdateFundCOMToSEBL80Sync
- 27 CRMIntegUpsertFundSEBL80ToEBS11i10Sync
- 28 CRMIntegAccrualEBS11i10ToSEBL80Sync
- 29 CRMIntegDeductionCOMToEBS11i10Sync
- 30 CRMIntegMapDeductionCOMToSEBL80InboundSync
- 31 CRMIntegMapDeductionCOMToSEBL80OutboundSync
- 32 CRMIntegMapDeductionSEBL80ToCOMInboundSync
- 33 CRMIntegMapDeductionSEBL80ToCOMOutboundSync

- 34 CRMIntegUpsertDeductionCOMToSEBL80Sync
- 35 CRMIntegUpsertDeductionSEBL80ToEBS11i10Sync
- 36 CRMIntegDeductionEBS11i10ToSEBL80Sync

To deploy BPEL processes

- 1 Launch Oracle JDeveloper.
- 2 In Oracle JDeveloper, select File > New > Application.
- 3 Click OK to continue.
- 4 Enter a meaningful application name e.g BPELDeployer.
A single application can have all the projects or multiple applications can be created for each module.
- 5 Click OK to continue.
- 6 When prompted to create a project, click Cancel.
- 7 In the Applications Navigator, right-click on the BPELDeployer application and select Add to BPELDeployer.jws.
- 8 Browse to <Build location>\SEBLTPMIntegPkeBSTM\BusinessProcesses\CommonServices\CRMIntegErrorHandler Service.
 - a Select CRMIntegErrorHandlerService.jpr.
 - b Click Open.
This brings one process into the workspace. In the same way, bring all the processes from the <Build location>\SEBLTPMIntegPkeBSTM\BusinessProcesses folders (Customer, Deductions, Promotions, Products), into the workspace. Now they are ready for deployment.
- 9 Deploy the process in the order specified above for each module.
NOTE: This fails if the BPEL PM Server has not been started.
 - a Right click each project name in the workspace BPELDeployer.jws.
 - b Select Deploy > LocalBPELServer (Integration server connection name) > Deploy to default domain.
 - c Enter a password for BPEL server.
 - d If the Deploy Properties window is displayed, click OK to overwrite the current version.
 - e Verify that a successful deployment message appears in the lower left portion of the JDeveloper window (Apache int log).
 - f Ignore any compilation warnings.

Repeat Steps 9a to 9f for all the projects added to BPELDeployer.jws.

Synchronizing Records after the Oracle Server Has Gone Down

If the Oracle server goes down, you can synchronize records between Siebel Trade Promotion Management and Oracle Trade Management from either application. This section contains the following topics:

- [Synchronizing Records from Siebel Trade Promotion Management on page 152](#)
- [Synchronizing Records from Oracle Trade Management on page 157](#)

Synchronizing Records from Siebel Trade Promotion Management

If the Oracle server is down when a user adds or modifies a record in Siebel Trade Promotion Management, then Siebel CRM Integration Pack for Trade Promotion Management cannot synchronize this entry with Oracle Trade Management. Therefore the integration provides ways for the administrator to resend the data from Siebel Trade Promotion Management to Oracle Trade Management after the Oracle server comes up. This section discusses two ways to resend data:

- [Sending Siebel Data with the User Interface on page 152](#)
- [Using Workflow to Send Data Through the Database Layer on page 153](#)

This section uses the Fund module as an example, but you can use the same approach for other modules, such as Promotion.

Sending Siebel Data with the User Interface

To send Siebel data through the user interface

- 1 Within BC: CS Account Fund, add a BC user property as the following table shows.

Name	Value
Named Method 1	"SendFundData", "INVOKESVC", "CS Account Fund", "Workflow Process Manager", "RunProcess", "'ProcessName'", "CSIntegSEBLSIAFundUpsertOutboundFlow", "'RowId'", "[Id]"

- 2 Within applet: CS Fund Admin List Applet, expose a new button for sending a record on CS Fund Admin List Applet by defining Control as the following table shows.

Name	Caption	HTML Type	Method Invoked
SendFundUpdate	Send	MiniButton	SendFundData

The button is enabled for all the funds with status Completed.

- 3 Add a new applet user property as the following table shows.

Name	Value
CanInvokeMethod: SendFundData	[Read Only Condition Field]

- 4 Compile the modified objects.
- 5 If you do not want to expose the button to all users, then do the following:
 - a Create a new view + clone of CS Fund Admin List Applet with the button.
 - b Add the new view to the desired responsibility.

Using Workflow to Send Data Through the Database Layer

You can create a workflow policy object and columns to identify columns to monitor in the Siebel database or extension columns. Configure each module as follows to enable a database trigger to send data from Siebel Trade Promotion Management to Oracle Trade Management.

Configuring a Workflow Policy Column

Workflow Policy Column identifies a column to monitor from the Siebel database or extension columns.

To configure a workflow policy column

- 1 Login to Siebel Tools.
- 2 Navigate to Project.
- 3 Query for CS CG Fund Integration project.
- 4 Select the Locked checkbox to lock the project.
- 5 Navigate to Workflow Policy Column.
- 6 Query for Fund Group Status.
- 7 Lock Object from the R-popup menu.
- 8 Edit the object as the following table shows.

New?	Name	Table Name	Column Name	Comments
Modified	Fund Group Status	S_MDF	STATUS_CD	Change Picklist from "PickList Deduction Payment Status" to "PickList CS Fund Group Status". Remove Pick Applet "CPG Deduction Payment Status Pick Applet".
New	Fund Type	S_MDF	FUND_CD	None

Configuring a Workflow Policy Object

A workflow policy object groups workflow policy component columns that can be monitored in the same workflow policy. Use this procedure to configure the workflow policy object.

To configure a workflow policy object

- 1 Navigate to Workflow Policy Object.
- 2 Create an object with Name = CS Account Fund.
- 3 Navigate to Workflow Policy Component.
- 4 Create a workplace policy component as follows:
 - Name = CS Account Fund
 - Source Table = S_MDF
- 5 Navigate to Workflow Policy Component Col.
- 6 Add component columns as the following table shows.

#	Name	Source Table Name	Source Column Name
1	Fund Group Status	S_MDF	STATUS_CD
2	Fund Type	S_MDF	FUND_CD

- 7 Shut down Siebel Server.
- 8 Compile the locked projects into the server srf file.

Enabling Workflow Policy and Creating Actions

To make Siebel Tools objects, such as workflow policy objects and columns, accessible in Siebel Client, you must update Siebel Repository in the Siebel database. Workflow policy objects and columns are read from Siebel Repository, not from the compiled Siebel Repository file (.srf). You can connect to the Siebel application database using Siebel Tools and import workflow policy objects and columns. Use the following procedure to enable the workflow policy object.

To enable workflow policy and create actions

- 1 Login to the Siebel eConsumersector application.
- 2 Navigate to Administration - Business Process > Workflow Policy Actions.
- 3 Use the following table to create a new action for the workflow.

Name	Program	Workflow Object
CS Account Fund	Run Workflow Process	CS Account Fund

- 4 Use the following table to create an argument for the action.

Argument Name	Value
ProcessName	CSIntegSEBLSIAFundUpsertOutboundFlow

- 5 Navigate to Administration - Business Process > Workflow Policy Groups.
 6 Use the following table to create a new workflow policy that defines conditions and generates database triggers to capture updates.

Policy	Workflow Object	Workflow Policy Group	Batch Mode	Units	Duration
CS Account Fund	CS Account Fund	CS Account Fund	Y	Days	1

- 7 Use the following table to create a condition for this workflow.

Condition Field	Operation	Value
Fund Group Status	=	Completed
Fund Type	=	Account Fund

- 8 Use the following table to create an action for this workflow.

Action	Sequence
CS Account Fund	1

- 9 Use the following table to create the argument for this action.

Argument	Value
ProcessName	CSIntegSEBLSIAFundUpsertOutboundFlow

Generating Triggers

With the Generate Trigger (GenTrig) component on the Siebel Server, you can create database triggers. Policy Manager uses these database triggers to identify which records may match policy conditions. You must regenerate Generate Trigger whenever new policies are created or deleted.

You can run the Generate Triggers component with either the Server Manager graphical user interface (GUI) or command line mode. Both the GUI and the command line use the same parameters.

To run Generate Triggers from the command line

- 1 Go to cmd.
- 2 Navigate to the Siebel Enterprise Server Installation>\siebsrvr\bin directory.
- 3 Type

```
Srvrmgr /g <gateway server name:port> /s <Siebel server name> /e <Enterprise name> /u <username> / p <password> (Example: srvrmgr /g sdc1952i028:4330 /s sdc1952i028 /e siebel /u sadmi n /p sadmi n)
```
- 4 Press Enter to connect to the server manager.
- 5 Type

```
start task for comp gen trig with Pri vUser=' <Previ l edge Username>' , Pri vUserpass=' <Previ l edge User Password>' , exec=' True'
```

(Example: start task for comp gen trig with Pri vUser=' siebel ' , Pri vUserPass=' db2' , exec=' true')
- 6 Press Enter to start the GenTrig task.
NOTE: You must have sufficient privilege to run the GenTrig task.
- 7 Type list task for comp gen trig
- 8 Press Enter to display the status of the task.

Running the Workflow Monitor

You must start Workflow Monitor Agent in order to execute your policies. Workflow Monitor Agent checks to see when the conditions of policies are met.

To run Workflow Monitor Agent from the command line

- 1 If you are not connected to the server manager, then do the following steps:
 - a Go to cmd.
 - b Go to the <Siebel Enterprise Server Installation>\siebsrvr\bin directory.
 - c Type

```
Srvrmgr /g <gateway server name:port> /s <Siebel server name> /e <Enterprise name> /u <username> / p <password>
```

Example: srvrmgr /g sdc1952i028:4330 /s sdc1952i028 /e siebel /u sadmi n /p sadmi n
 - d Press Enter to connect to the server manager.
 - e Type

```
start task for comp workmon wi th Tabl eOwner=' <Tabl e Owner>' , tabl eownpass=' <Tabl e Owner Password >' , Acti onagent=' fal se' , Groupname=<Workfl ow Pol i cy Group Name>'
```

```
Example: start task for comp workmon with  
TableOwner=' smkrdev' , tableownpass=' smkrdev' , Actionagent=' false' ,  
BatchMode=' true' , Groupname=' CS Account Fund'
```

f Press Enter to start the WorkMon task.

2 Type

```
list task for comp workmon
```

3 Press Enter to display the status of the task.

Synchronizing Records from Oracle Trade Management

Oracle Trade Management has a procedure to update records after the Oracle server has gone down. After a connection is restored, the integration passes an error message asynchronously. The error message is part of a notification to the administrator that includes the process name, BPEL instance ID, and the text of the error message.

Generally, the message text stores error information in a table of entries under object type and object ID. For deductions, the object type is Deduction, and the object ID is DeductionID. Similarly for accruals, the object type is Accrual, and the object ID is UtilizationID.

A CC job, OZF-TM: Reprocess Accruals and Claims, resends the data, depending on the parameter that you specify provide.

The message reflects two processes:

- CRMIntegDeductionEBS11i10ToSEBL80Sync - Deduction Oracle To Siebel
- CRMIntegAccrualEBS11i10ToSEBL80Sync - Accrual Oracle To Siebel

To run the OZF-TM job

- 1** Navigate to Oracle Trade Management Administrator > Run > Request.
- 2** Select job OZF-TM: Reprocess Accruals and Claims.
- 3** Select the desired parameter:
 - a** Deduction ID/Deduction for deductions
 - b** Utilization ID/Accrual for accruals
 - c** No parameter, the default, to process everything in the table
- 4** Submit the job request.

4 Integrations

This chapter describes the integration points in the Siebel CRM Integration Pack for Trade Promotion Management for the Oracle E-Business Suite. This product consists of the following integration points:

- [Budget Integration on page 159](#)
- [Deduction to Resolution Integration on page 164](#)
- [Promotion-Deal Integration on page 165](#)
- [Product Integration on page 166](#)
- [Account Integration on page 166](#)

Budget Integration

A trade fund is a named appropriation of money to be spent on promotions over a specific period of time for specific accounts and specific categories and products. The two types of funds are fixed and accrual. Fixed funds are fixed amounts of money allocated in a lump sum. Accrual funds are funds in which the amount of money is calculated based on product movement. Consumer goods companies spend millions of dollars in trade funds to promote growth and favorably impact the point of sale at retailers. Effectively facilitating the process by which trade funds are created and allocated to accounts is a critical success factor for any comprehensive CRM solution. The Siebel Trade Promotion Management and Oracle Trade Management-Oracle E-Business Suite integration supports this functional need by using the Siebel user interface to create, administer, and manage trade funds. The integration also leverages the connectivity of Oracle Trade Management to facilitate the flow of trade fund information to Oracle E-Business Suite to perform the necessary accounting transactions.

Creation of Fixed and Accrual Funds

All fixed funds, accrual funds, and related budgets created in Siebel Trade Promotion Management are imported into Oracle E-Business Suite when the budget status is changed to Complete in Siebel Trade Promotion Management. Only active budgets are imported into Oracle E-Business Suite because all approval related processes are managed within Siebel applications and have no interaction point with Oracle E-Business Suite.

Fund Allocation

The Siebel Funds module supports an infinite funds hierarchy. For example, a parent fund can have child funds, which in turn can have child funds. With this capability, marketing administrators can break up a large fund into smaller funds. Child funds are sent to Oracle Trade Management when the status on each individual child fund is changed to Complete.

Fund Grouping

Fund grouping is similar to fund allocation and involves creating a parent fund with the intent to distribute funds across customer accounts. In this case, a parent fund is created without a customer association, and then child funds and allocations are generated for the parent fund by specifying a distribution percent for each child fund. Further, each child fund is associated with a customer account.

In the case of a group fund, only the child fund details are imported into Oracle E-Business Suite both because the parent fund is not treated as an independent fund or budget and the child fund created by group funds does not carry any association with the parent fund. Child funds are sent to Oracle Trade Management when the status of each individual child fund is changed to Complete. The status field for child funds appears read-only on the fund group screen, and you must navigate to the account funds screen to change the status of individual account funds. Also, because multiple fund grouping records can have an interface at the same time, the integration provides for it.

Fund Updates

Siebel users can update or make changes to funds after they are active. Siebel administrative users can perform most of these changes, which have an impact on the functioning of the funds. [Table 82](#) lists updates and changes that can occur in Siebel Trade Promotion Management and their impact on the integration. All updates listed are synchronously integrated with Oracle E-Business Suite to ensure accurate accrual calculations and posting to Oracle General Ledger.

Table 82. Updates and Changes in Siebel Trade Promotion Management and Their Impact on the Integration

Update in Siebel Trade Promotion Management	Action	Impacted Fields
Siebel users can change the account associated with a fund.	Oracle E-Business Suite internally updates the market eligibility on the budget based on the updates performed in Siebel Trade Promotion Management. No retroactivity in terms of customer or market eligibility adjustments is supported by Siebel Trade Promotion Management.	Market eligibility on the funds
Siebel users can change the source categories associated with a fund.	Oracle E-Business Suite internally updates the product eligibility on the budget based on the updates performed in Siebel Trade Promotion Management. No retroactivity in terms of product or product categories adjustment is supported by Siebel Trade Promotion Management.	Product eligibility on the funds
Siebel users cannot delete funds but can end-date them. In case of fund end-dating in Siebel Trade Promotion Management, Oracle E-Business Suite ensures that no active deals or promotions sourced from the funds exist at the time of end-dating.	An end date is added to or updated on funds so that they stop accruing.	No impact

Table 82. Updates and Changes in Siebel Trade Promotion Management and Their Impact on the Integration

Update in Siebel Trade Promotion Management	Action	Impacted Fields
Siebel users can modify the accrual rate or percent associated with a source category on live funds. Also users can change or edit the end date for source category items.	Oracle E-Business Suite internally updates the discount percent or amount and end date for discount lines on the accrual budget based on the updates performed in Siebel Trade Promotion Management. No retroactivity in terms of accrual rate adjustments is supported by Siebel Trade Promotion Management.	Discount rules table for accrual budgets
Siebel users can change the Organization associated with a fund.	No Action	No Impact
Siebel users can change or edit the basis end date for accrual funds.	Oracle E-Business Suite internally updates the end date on the accrual budgets based on the updates performed in Siebel Trade Promotion Management.	End date on accrual budget

Budget Mappings

Table 83 lists the mappings for fixed fund creation.

Table 83. Budget Mappings for Fixed Fund Creation

Attribute Name in Siebel Trade Promotion Management	Attribute Name in Oracle E-Business Suite
Account	Customer Account
Name	Budget Name
Type	Setup Type
Amount	Budget Amount
Organization	Operating Unit
Currency	Currency
Exchange Date	Exchange Date

Table 83. Budget Mappings for Fixed Fund Creation

Attribute Name in Siebel Trade Promotion Management	Attribute Name in Oracle E-Business Suite
Start Date	Budget Start Date
N/A	Category

Table 84 lists the mappings for accrual fund creation.

Table 84. Budget Mappings for Accrual Fund Creation

Attribute Name in Siebel Trade Promotion Management	Attribute Name in Oracle E-Business Suite
Account	Customer Account
Name	Budget Name
Type	Setup Type
Organization	Operating Unit
Basis Start Date	Budget Start Date
Basis End Date	Budget End Date
Currency	Currency
N/A	Accrue To
N/A	Accrual Basis
N/A	Discount Level
N/A	Liability Flag
N/A	Category
Source Category	Item Category for discount rules table
Source Product Id	Line Id
Start	Date From
End	Date To
Accrual Rate	Discount & Discount Type
Accrual Percent	Discount & Discount Type
N/A	Tier Type

Deduction to Resolution Integration

Oracle Trade Management passes deductions created in Oracle Receivables, manually or by lockbox, to Siebel Trade Promotion Management so that salespersons, sales managers, and customer sales representatives can research and resolve these deductions. In addition, all settlements for the deductions established in Siebel Trade Promotion Management are communicated back to Oracle Trade Management, which, in turn, passes the settlement document to Oracle Receivables or Oracle Payables based on the settlement method.

From the viewpoint of Oracle Trade Management, two main components are involved in the execution of this flow:

- 1 Deduction and subsequent receipt or adjustment export:
 - Exporting all new deductions to Siebel Trade Promotion Management
 - Exporting any changes or updates to deduction that occur in the Oracle Receivables system, such as the following:
 - Subsequent receipts
 - Subsequent adjustments
- 2 Resolution Import:
 - Importing a resolution document from Siebel Trade Promotion Management for the following items:
 - Credit Memo
 - Previous Open Credit
 - Check
 - Chargeback
 - Write Off
 - Importing deduction split details from Siebel Trade Promotion Management
 - Importing promotional accrual settlement details from Siebel Trade Promotion Management

Deduction Creation

All deductions that come into Oracle Trade Management from Oracle Receivables are exported into Siebel Trade Promotion Management. Oracle Trade Management internally generates values for various fields captured here in a way similar to how it does currently with some exceptions. However because only some values are exposed on the Siebel user interface, these are the only values that are exported to the Siebel application. Similarly all subsequent receipts, adjustments, and updates to deductions that occur in Oracle Receivables are exported to Siebel Trade Promotion Management on a real time basis.

Deduction and Claim Resolution

After you research the deductions in Siebel Trade Promotion Management, you initiate settlement of these deductions from that application. An import mechanism pulls resolution information from Siebel Trade Promotion Management into Oracle Trade Management. This import qualifies all claims and deductions that have a resolution of status Submitted for a feed into Oracle Trade Management. On receiving this feed, Oracle Trade Management internally triggers an update to its deductions, releases accruals if any are associated with the deduction, and coordinates the settlement document either with Oracle Receivables or Oracle Payables based on the resolution type. Deduction resolution requires and uses synchronous integration. Siebel Trade Promotion Management supports the following methods for deduction and claim resolution:

- **Credit Memo Resolution:** A user determines that a company owes money to a customer and indicates that a credit be generated for the customer. A credit memo resolution can result from a promotional or accrual payment, in which case the user also associates a promotion or fund with the resolution.
- **Previous Open Credit Resolution:** A user can query existing open credits and apply them to open deductions and indicate resolution by a previous open credit.
- **Chargeback Resolution:** A user determines that a deduction is invalid and indicates a chargeback be generated for a customer.
- **Write Off:** A user cannot associate the deduction with a valid justification but at the same time realizes that the claim amount is minimal and hence simply chooses to write off the deduction.

Promotion-Deal Integration

To achieve synchronization between Siebel Trade Promotion Management and Oracle Trade Management, Siebel CRM Integration Pack for Trade Promotion Management passes all customer deals from Siebel Trade Promotion Management to Oracle Trade Management. The integration also ensures that if a deal is updated, then the recall, deletion, or update of the deal in the Siebel Trade Promotion Management is also reflected in Oracle Trade Management.

The integration creates and updates the following deal types:

- Bill-Back Deal
- Off-Invoice Deal
- Fixed-Cost Deal

After Siebel Trade Promotion Management creates a deal, Oracle Trade Management creates a corresponding offer, and all promotional accruals are calculated against the offer from Oracle Trade Management. Upon calculation, the accruals are adjusted against the Oracle Trade Management Offer/Budget and corresponding Siebel Trade Promotion Management deal or fund. Accrual related information and all the shipment related information are passed back and made available to Siebel Trade Promotion Management.

Product Integration

The integration of a simple product within Siebel CRM Integration Pack for Trade Promotion Management has the following basic steps. Steps 1 through 4 occur in an Oracle BPEL business process flow, while steps 5 through 7 occur in a Siebel workflow process:

- 1 Query for a simple product from Oracle E-Business Suite.
- 2 Transform the product message object to a common message object (COM) for simple products (coProduct).
- 3 Transform the common message object to a Siebel message.
- 4 Invoke the Siebel web service to create or update the product in Siebel Trade Promotion Management.
- 5 Receive the Siebel product messages.
- 6 Map the Siebel product messages to the wrapper business service.
- 7 Invoke the Siebel ImpExp business service to create the product.

Figure 1 shows the synchronization flow for a simple product, as described in the preceding text of this paragraph.

Account Integration

Whenever a new customer account is created within Oracle E-Business Suite, Siebel CRM Integration Pack for Trade Promotion Management initiates real-time synchronization between the related party-customer account in Oracle E-Business Suite and a new account in Siebel CRM applications.

All entities in the initial bulk load are synchronized with Siebel CRM so that users can transact against them in Siebel applications. Therefore, users can tie an opportunity or capture an order in Siebel CRM against a customer that was created in Oracle E-Business Suite. Similarly, new account sites and new account site are synchronized with Siebel applications when a new or existing party site (use) is associated with an account as an account site (use).

Updates to any supported customer entities in Oracle E-Business Suite are synchronized with Siebel CRM in real time.
