This documentation contains the following sections:
  ■ Platforms
  ■ Software requirements and installation
  ■ Known problems
  ■ Documentation Accessibility

1 Platforms
The System Monitoring Plug-in for Oracle TimesTen In-Memory Database is supported on all platforms that TimesTen 11.2.1.5.0 or later and Enterprise Manager Agent 10.2.0.x and Enterprise Manager Agent 11.1.0.1 support.

2 Software requirements and installation
For software requirements please refer to the Oracle Enterprise Manager System Monitoring Plug-in for Oracle TimesTen In-Memory Database Installation Guide.

For information on installing Oracle Enterprise Manager Agent 11.1.0.1:
http://download.oracle.com/docs/cd/E11857_01/index.htm

For information on installing Oracle Enterprise Manager Agent 10.2.0.5 or later:
http://download.oracle.com/docs/cd/E16240_01/doc/nav/portal_booklist.htm

3 Known problems
This section lists known problems and limitations.

3.1 Collecting metrics
  ■ The plug-in can no longer collect metrics for the target in these situations:
    - If the user of the target is dropped.
    - If the user’s password is changed while the plug-in is running.
    - If a database that corresponds to a target DSN is unloaded.
    - If the TimesTen daemon for a target DSN is stopped.
3.2 Access Control

- In some versions of Oracle Enterprise Manager, if access control is enabled, after clicking Test Connection, you must re-enter the password. If you click OK to add the target after doing a Test Connection, the plug-in gets a TimesTen authentication error. The password can be re-entered after the target is added by choosing Monitoring Configuration on the target’s main page.

3.3 Credentials

- The EM Agent Credentials (host username/password) need to be set correctly for the EM Agent to work.

3.4 Database destroyed

- If a TimesTen database being monitored by the plug-in is destroyed, the plug-in’s script continues to run (unsuccessfully) once per minute until the target is removed.

3.5 Direct-linked DSN

- The plug-in is not designed to be used with Client/Server DSNs. Only direct-linked DSNs should be used with this plug-in.

3.6 Performance

- The plug-in should not be deployed on the same machine as either the Enterprise Manager Oracle Management Server or the Oracle Enterprise Manager Repository.
- When a TimesTen database is recreated or overwritten, the metrics in the SYS.MONITOR table are reset to zero. If the database was being monitored during this re-creation, some performance rates may temporarily become negative. This behavior corrects itself and is not an error.
- The performance of the plug-in reports suffers if the server on which the Enterprise Manager Oracle Management Server or the Enterprise Manager Repository database is low on memory or is CPU bound or I/O bound.

3.7 Remove a target

- If you remove a target and try to add it again with the same name, you may get an EM error such as: java.sql.SQLException: ORA-20600: The specified target is in the process of being deleted. You can either wait and retry, or use a different target name.

3.8 Target properties

- The Target Properties page may lose values (for example, comment, line of business). This does not affect either the accuracy or the performance of the plug-in.

3.9 Windows

- The host username must be specified as windows_domain\username.
The security privilege Log on as a batch user must be granted to the user who runs the EM Agent service.

4 Documentation Accessibility

Our goal is to make Oracle products, services, and supporting documentation accessible to all users, including users that are disabled. To that end, our documentation includes features that make information available to users of assistive technology. This documentation is available in HTML format, and contains markup to facilitate access by the disabled community. Accessibility standards will continue to evolve over time, and Oracle is actively engaged with other market-leading technology vendors to address technical obstacles so that our documentation can be accessible to all of our customers. For more information, visit the Oracle Accessibility Program Web site at http://www.oracle.com/accessibility/.

Accessibility of Code Examples in Documentation

Screen readers may not always correctly read the code examples in this document. The conventions for writing code require that closing braces should appear on an otherwise empty line; however, some screen readers may not always read a line of text that consists solely of a bracket or brace.

Accessibility of Links to External Web Sites in Documentation

This documentation may contain links to Web sites of other companies or organizations that Oracle does not own or control. Oracle neither evaluates nor makes any representations regarding the accessibility of these Web sites.

Access to Oracle Support

Oracle customers have access to electronic support through My Oracle Support. For information, visit http://www.oracle.com/support/contact.html or visit http://www.oracle.com/accessibility/support.html if you are hearing impaired.
