About this Quick Reference

This Quick Reference shows SQL*Plus command syntax. For detailed information on each command, refer to the SQL*Plus User’s Guide and Reference.

This Quick Reference has the following topics:

■ Documentation Accessibility
■ Alphabetic List of SQL*Plus Commands
■ Starting and Leaving SQL*Plus
■ Starting Up and Shutting Down a Database
■ Entering and Executing Commands
■ Manipulating SQL, SQL*Plus and PL/SQL Commands
■ Formatting Query Results
■ Accessing Databases
■ Miscellaneous

Documentation Accessibility

Our goal is to make Oracle products, services, and supporting documentation accessible to all users, including users that are disabled. To that end, our documentation includes features that make information available to users of assistive technology. This documentation is available in HTML format, and contains markup to facilitate access by the disabled community. Accessibility standards will continue to evolve over time, and Oracle is actively engaged with other market-leading technology vendors to address technical obstacles so that our documentation can be accessible to all of our customers. For more information, visit the Oracle Accessibility Program Web site at http://www.oracle.com/accessibility/.

Accessibility of Code Examples in Documentation

Screen readers may not always correctly read the code examples in this document. The conventions for writing code require that closing braces should appear on an otherwise empty line; however, some screen readers may not always read a line of text that consists solely of a bracket or brace.
Accessibility of Links to External Web Sites in Documentation

This documentation may contain links to Web sites of other companies or organizations that Oracle does not own or control. Oracle neither evaluates nor makes any representations regarding the accessibility of these Web sites.

Deaf/Hard of Hearing Access to Oracle Support Services

To reach Oracle Support Services, use a telecommunications relay service (TRS) to call Oracle Support at 1.800.223.1711. An Oracle Support Services engineer will handle technical issues and provide customer support according to the Oracle service request process. Information about TRS is available at [http://www.fcc.gov/cgb/consumerfacts/trs.html](http://www.fcc.gov/cgb/consumerfacts/trs.html), and a list of phone numbers is available at [http://www.fcc.gov/cgb/dro/trsphonebk.html](http://www.fcc.gov/cgb/dro/trsphonebk.html).

Alphabetic List of SQL*Plus Commands

```
@ (url | file_name [ .ext ] ) [ arg . . . ]
@ @ (url | file_name | .ext ) [ arg . . . ]
/ (slash)
ACC(EPT) variable [NUMBER] | CHAR | DATE | BINARY_FLOAT | BINARY_DOUBLE | [FORMAT] format | [DEF[AULT] | default] | [PROMPT | text] | NOPROMPT] | [HIDE]
APPEND | text
ARCHIVE LOG LIST
ATTRIBUTE [type_name.attribute_name | option . . . ]
BREAK | [ON report_element | action | action] . . .
BTI[TLE] | [printspec | text | variable ] . . . | [ON | OFF]
CH[ANGE] | sepchar | old [sepchar | new | sepchar ]
CL[EAR] | option . . .
COL[UMN] | [column | expr ] | [option . . . ]
COMP[UTE] | [function | LABEL ] | text . . . | OF | expr | column | alias ] . . . | ON | expr | column | alias | REPORT | ROW . . .
CONN[ECT] | [logon | / | proxy] | [AS | SYSOPER | SYSDBA | SYSASM ] | [edition=value ]
COPY | [FROM | TO | FROM | TO] database | [APPEND | CREATE | INSERT | REPLACE] destination_table | USING query
DEF[INE] | [variable | variable ] | [variable = text]
DEL | n | m | n | m | n | LAST | n | LAST | LAST | LAST
DESCRIBE | [ ] object | @connect_identifier
DISCONNECT
EXI[T] | ( | file_name | .ext ]
EXECUTE | statement
(EXIT | QUIT) | [SUCCESS] | [FAILURE | WARNING | n | variable | :BindVariable | COMMIT | ROLLBACK]
GET | [FILE] | file_name | .ext | [LIST | NOLIST]
```
Starting and Leaving SQL*Plus

Use the following commands to log in to and out of SQL*Plus.

SQLPLUS [option] [logon] / [Nologo] [start]

where option has the following syntax:
Starting Up and Shutting Down a Database

Starting up and shutting down a database requires DBA privileges.

STARTUP options | upgrade_options

where options has the following syntax:

[FORCE] [RESTRICT] [PFILE=filename] [QUIET] [MOUNT [dbname] | OPEN [open_options] [dbname] | NOMOUNT]

where open_options has the following syntax:

READ {ONLY | WRITE [RECOVER]} | RECOVER

and where upgrade_options has the following syntax:

[PFILE=filename] {UPGRADE | DOWNGRADE} [QUIET]

Starts an Oracle instance with several options, including mounting and opening a database.

SHUTDOWN [ABORT | IMMEDIATE | NORMAL | TRANSACTIONAL [LOCAL]]

Shuts down a currently running Oracle instance, optionally closing and dismounting a database.

Entering and Executing Commands

Use the following commands to execute and collect timing statistics on SQL commands and PL/SQL blocks.

/ (slash)

Executes the most recently executed SQL command or PL/SQL block which is stored in the SQL buffer. Does not list the command. Use slash (/) at the command prompt or...
line number prompt in SQL*Plus command line. The buffer has no command history and does not record SQL*Plus commands.

EXECUTE statement
Executes a single PL/SQL statement or runs a stored procedure.

RUN
Lists and executes the most recently executed SQL command or PL/SQL block which is stored in the SQL buffer. The buffer has no command history and does not record SQL*Plus commands.

TIMING [START text] | SHOW | STOP
Records timing data for an elapsed period of time, lists the current timer’s name and timing data, or lists the number of active timers.

Use the following command to access the help system.
HELP | ? [topic]

Use the following command to execute operating system commands.
HOST [command]
Executes an operating system command without leaving SQL*Plus. Enter HOST without command to display an operating system prompt. You can then enter multiple operating system commands.

With some operating systems, you can use another character instead of HOST such as "!" (UNIX) and "$" (Windows). See the Oracle installation and user's manuals provided for your operating system for details.

Manipulating SQL, SQL*Plus and PL/SQL Commands

Use the following commands to edit SQL commands and PL/SQL blocks.

APPEND text
Adds specified text to the end of the current line in the SQL buffer. To separate text from the preceding characters with a space, enter two spaces. To append text that ends with a semicolon, end the command with two semicolons (a single semicolon is interpreted as a command terminator).

CHANGE sepchar old[sepchar new [sepchar]]
Changes first occurrence of old on the current line of the SQL buffer. You can use any non-alphanumeric character such as "/" or "!" as a sepchar. You can omit the space between CHANGE and the first sepchar. The buffer has no command history list and does not record SQL*Plus commands.

DEL [n | m | n m | n | m | LAST | * | LAST | LAST]
Deletes one or more lines of the SQL buffer ("*" indicates the current line). You can omit the space between DEL and n or *, but not between DEL and LAST. Enter DEL with no clauses to delete the current line of the buffer. The buffer has no command history list and does not record SQL*Plus commands.

[INPUT][text]
Adds one or more new lines of text after the current line in the SQL buffer. The buffer has no command history list and does not record SQL*Plus commands.

[LIST][n|m|nLAST|*|nLAST|LAST]
Lists one or more lines of the most recently executed SQL command or PL/SQL block which is stored in the SQL buffer. Asterisk (*) indicates the current line. You can omit the space between LIST and n or *, but not between LIST and LAST. Enter LIST with no clauses to list all lines. The buffer has no command history list and does not record SQL*Plus commands.

Use the following commands to run scripts.

@ {url|file_name[.ext] } [arg...]
Runs the SQL*Plus statements in the specified script. The script can be called from the local file system or a web server. You can pass values to script variables in the usual way.

@@ {url|file_name[.ext] } [arg...]
Runs the SQL*Plus statements in the specified script. This command is almost identical to the @ command. It is useful for running nested scripts because it has the additional functionality of looking for the specified script in the same path as the calling script.

START {url|file_name[.ext] } [arg...]
Runs the SQL*Plus statements in the specified script. The script can be called from the local file system or a web server. You can pass values to script variables in the usual way.

Use the following commands to create and modify scripts.

EDIT [file_name[.ext]]
Invokes an operating system text editor on the contents of the specified file or on the contents of the SQL buffer. To edit the buffer contents, omit the file name. The buffer has no command history list and does not record SQL*Plus commands.

GET file_name[.ext] [LIST|NOLIST]
Loads a SQL statement or PL/SQL block from a file into the SQL buffer. The buffer has no command history list and does not record SQL*Plus commands.

REM[ARK]
Begins a comment in a script. The REMARK command must appear at the beginning of a line, and the comment ends at the end of the line (a line cannot contain both a comment and a command). SQL*Plus does not interpret the comment as a command.

SAV[E] file_name[.ext] [CREATE | REPLACE | APPEND]
Saves the contents of the SQL buffer in a file. The buffer has no command history list and does not record SQL*Plus commands.

STORE [SET] file_name[.ext] [CREATE | REPLACE | APPEND]
Saves attributes of the current SQL*Plus environment in a file.

WHENEVER OSERROR (EXIT [SUCCESS | FAILURE | n | variable | :BindVariable] [COMMIT | ROLLBACK] | CONTINUE [COMMIT | ROLLBACK | NONE])
Performs the specified action (exits SQL*Plus by default) if an operating system error occurs (such as a file writing error).

WHENEVER SQLERROR (EXIT [SUCCESS | FAILURE | WARNING | n | variable | :BindVariable] [COMMIT | ROLLBACK] | CONTINUE [COMMIT | ROLLBACK | NONE])
Performs the specified action (exits SQL*Plus by default) if a SQL command or PL/SQL block generates an error.

Use the following commands to write interactive commands.

ACCEPT variable [NUMBER | CHAR | DATE | BINARY_FLOAT | BINARY_DOUBLE] [FORMAT format] [DEFAULT default] [PROMPT text | NOPROMPT] [HIDE]
Reads a line of input and stores it in a given substitution variable.

DEFINE [variable] | [variable = text]
Specifies a substitution variable and assigns a CHAR value to it, or lists the value and variable type of a single variable or all variables.

PAUSE [text]
Displays the specified text then waits for the user to press RETURN.

PROMPT [text]
Sends the specified message or a blank line to the user’s screen.

UNDEFINE variable ...
Deletes one or more substitution variables that you defined either explicitly (with the DEFINE command) or implicitly (with a START command argument).

Use the following commands to create and display bind variables.

PRINT [variable ...]
Displays the current values of bind variables, or lists all bind variables.
VAR[ABLE] [variable [type]]

where type represents one of the following:

- NUMBER
- CHAR
- CHAR (n [CHAR | BYTE])
- NCHAR
- NCHAR (n)
- VARCHAR2 (n [CHAR | BYTE])
- NVARCHAR2 (n)
- BLOB
- BFILE
- CLOB
- NCLOB
- REF_CURSOR
- BINARY_FLOAT
- BINARY_DOUBLE

Declares a bind variable that can be referenced in PL/SQL, or lists the current display characteristics for a single variable or all variables.

Use the following symbols to create substitution variables and parameters for use in scripts.

- \&n
  Specifies a parameter in a script you run using the START command. START substitutes values you list after the script name as follows: the first for &1, the second for &2, and so on.

- \&user_variable, \&\&user_variable
  Indicates a substitution variable in a SQL or SQL*Plus command. SQL*Plus substitutes the value of the specified substitution variable for each substitution variable it encounters. If the substitution variable is undefined, SQL*Plus prompts you for a value each time an \& variable is found, and the first time an \&\& variable is found.

- . (period)
  Terminates a substitution variable followed by a character that would otherwise be part of the variable name.

### Formatting Query Results

Use the following commands to format, store and print your query results.

- ATTRIBUTE [type_name.attribute_name [option ...]]
  Specifies display characteristics for a given attribute of an Object Type column, such as the format of NUMBER data. Columns and attributes should not have the same names as they share a common namespace. Lists the current display characteristics for a single attribute or for all attributes.

Where option represents one of the following clauses:

- ALI[AS] alias
- CLE[AR]
FOR\[MAT\] format
LIKE {type_name.attribute_name | alias}
ON | OFF
BRE[A]K] [ON report_element [action [action]] ...]

Specifies where changes occur in a report and the formatting action to perform, such as:
- suppressing the display of duplicate values for a given column
- skipping a line each time a given column value changes
- printing computed figures each time a given column value changes or at the end of the report

Enter BREAK with no clauses to list the current BREAK definition.

Where report_element has the following syntax:
{column | expr | ROW | REPORT}

and where action has the following syntax:
[Skip] n | [Skip] PAGE | NODUPLICATES | DUPLICATES

BTIT[LE] [printspec [text | variable ...]] | ON | OFF

Places and formats a title at the bottom of each report page, or lists the current BTITLE definition. Use one of the following clauses in place of printspec:
- BOLD
- CENTER
- COL n
- FORMAT text
- LE[FT]
- RIGHT
- SKIP [n]
- TAB n

CLE[AR] option ...

Resets or erases the current value or setting for the specified option.

Where option represents one of the following clauses:
- BREAKS
- BUFFER
- COLUMN
- COMPUTES
- SCREEN
- SQL
- TIMING

COL[UMN] [column | expr [option ...]]

Specifies display attributes for a given column, such as:
- text for the column heading
- alignment for the column heading
- format for NUMBER data
- wrapping of column data

Also lists the current display attributes for a single column or all columns.

Where option represents one of the following clauses:

- ALIAS \[\text{alias}\]
- CLEAR \{ON | OFF\}
- FOLD_AFTER
- FOLD_BEFORE
- FORMAT [\text{format}]
- HEADING \[\text{text}\]
- JUSTIFY \{LEFT | CENTER | RIGHT\}
- LIKE \{\text{expr} | \text{alias}\}
- NEW_LINE
- NEW_VALUE \[\text{variable}\]
- NOPRINT | PRINT
- NULL \[\text{text}\]
- OLD_VALUE \[\text{variable}\]
- ON | OFF
- WRAPPED | WORD_WRAPPED | TRUNCATED

Enter COLUMN [\{\text{column} | \text{expr}\}] FORMAT [\text{format}] where the \text{format} element specifies the display format for the column.

To change the display format of a NUMBER column, use FORMAT followed by one of the elements in the following table:

<table>
<thead>
<tr>
<th>Element</th>
<th>Examples</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>(,) (comma)</td>
<td>9,999</td>
<td>Displays a comma in the specified position.</td>
</tr>
<tr>
<td>(.) (period)</td>
<td>99.99</td>
<td>Displays a period (decimal point) to separate the integral and fractional parts of a number.</td>
</tr>
<tr>
<td>$</td>
<td>$9999</td>
<td>Displays a leading dollar sign.</td>
</tr>
<tr>
<td>0</td>
<td>0999</td>
<td>Displays leading zeros</td>
</tr>
<tr>
<td>9</td>
<td>9990</td>
<td>Displays trailing zeros.</td>
</tr>
<tr>
<td>B</td>
<td>B9999</td>
<td>Displays a value with the number of digits specified by the number of 9s. Value has a leading minus sign if positive, a leading minus sign if negative. Blanks are displayed for leading zeros. A zero (0) is displayed for a value of zero.</td>
</tr>
<tr>
<td>C</td>
<td>C999</td>
<td>Displays the ISO currency symbol in the specified position.</td>
</tr>
<tr>
<td>D</td>
<td>99099</td>
<td>Displays the decimal character to separate the integral and fractional parts of a number.</td>
</tr>
<tr>
<td>EEEE</td>
<td>9.999EEE</td>
<td>Displays value in scientific notation (format must contain exactly four ‘E’s).</td>
</tr>
<tr>
<td>G</td>
<td>9G999</td>
<td>Displays the group separator in the specified positions in the integral part of a number.</td>
</tr>
</tbody>
</table>
In combination with the BREAK command, calculates and prints summary lines using various standard computations. It also lists all COMPUTE definitions. The following table lists valid functions. All functions except NUMBER apply to non-null values only. COMPUTE functions are always executed in the following sequence AVG, COUNT, MINIMUM, MAXIMUM, NUMBER, SUM, STD, VARIANCE.

<table>
<thead>
<tr>
<th>Function</th>
<th>Computes</th>
<th>Applies to Datatypes</th>
</tr>
</thead>
<tbody>
<tr>
<td>AVG</td>
<td>Average of non-null values</td>
<td>NUMBER</td>
</tr>
<tr>
<td>COUNT</td>
<td>Count of non-null values</td>
<td>All types</td>
</tr>
<tr>
<td>MIN/MINUM</td>
<td>Minimum value</td>
<td>NUMBER, CHAR, NCHAR, VARCHAR2 (VARCHAR), NVARCHAR2 (NCHAR VARYING)</td>
</tr>
<tr>
<td>MAX/MAXUM</td>
<td>Maximum value</td>
<td>NUMBER, CHAR, NCHAR, VARCHAR2 (VARCHAR), NVARCHAR2 (NCHAR VARYING)</td>
</tr>
<tr>
<td>NUMBER</td>
<td>Count of rows</td>
<td>All types</td>
</tr>
<tr>
<td>SUM</td>
<td>Sum of non-null values</td>
<td>NUMBER</td>
</tr>
<tr>
<td>STD</td>
<td>Standard deviation of non-null values</td>
<td>NUMBER</td>
</tr>
<tr>
<td>VARIANCE</td>
<td>Variance of non-null values</td>
<td>NUMBER</td>
</tr>
</tbody>
</table>

COMP[UTE][function [LABEL] text] ... OF {expr | column | alias} ... ON {expr | column | alias | REPORT | ROW} ...
Places and formats a footer at the bottom of a report, or lists the current REPFOOTER definition.

Where printspec represents one or more of the following clauses:

- BOLD
- CE[NTER]
- COL n
- FORMAT text
- LE[F]T
- R[IGHT]
- SKIP [n]
- TAB n

REPHEADE[R] [PAGE] [printspec [text | variable] ...] | [ON | OFF]

Places and formats a header at the top of a report, or lists the current REPHEADER definition.

Where printspec represents one or more of the clauses shown for REPFOOTER.

SPOOL [filename [ext] [CREATE | REPLACE | APPEND] | OFF | OUT]

Stores query results in a file, or optionally sends the file to a printer. OFF stops spooling. OUT stops spooling and sends the file to your computer’s default printer. Enter SPOOL with no clauses to list the current spooling status. If no file extension is given, the default extension, .lst or .lis, is used.

TTITLE [printspec [text | variable] ...] | [ON | OFF]

Places and formats a specified title at the top of each report page, or lists the current TTITLE definition. The old form of TTITLE is used if only a single word or a string in quotes follows the TTITLE command.

Where printspec represents one or more of the following clauses:

- BOLD
- CE[NTER]
- COL n
- FORMAT text
- LE[F]T
- R[IGHT]
- SKIP [n]
- TAB n

Accessing Databases

Use the following commands to access and copy data between tables on different databases.

CONNECT [[logon] [proxy] [AS {SYSOPER | SYSDBA | SYSASM}] [edition=value]]

where logon requires the following syntax:

username[password] [@ connect_identifier]

where proxy requires the following syntax:

proxyuser[username][[password] [@ connect_identifier]
Connects a given username to the Oracle Database. If you omit connect_identifier, SQL*Plus connects you to the default database. If you omit username and/or password, SQL*Plus prompts you for them. CONNECT followed by a slash (/) connects you using a default (OPS$) logon.

When you run a CONNECT command, the site profile, glogin.sql, and the user profile, login.sql, are processed in that order. CONNECT does not reprompt for username or password if the initial connection does not succeed.

DISCONNECT
Commits pending changes to the database and logs the current user out of Oracle, but does not exit SQL*Plus. In SQL*Plus command line, use EXIT or QUIT to log out of Oracle and return control to your computer’s operating system.

COPY {FROM database | TO database | FROM database TO database} {APPEND | CREATE | INSERT | REPLACE} destination_table[ (column, column, column, ...)] USING query
where database has the following syntax:
username/password@connect_identifier

Copies data from a query to a table in the same or another database. APPEND, CREATE, INSERT or REPLACE specifies how COPY treats the existing copy of the destination table (if it exists). USING query identifies the source table and determines which rows and columns COPY copies from it. COPY supports CHAR, DATE, LONG, NUMBER and VARCHAR2 datatypes.

PASSW[ORD] [username]
Allows you to change a password without displaying it on an input device.

XQUERY xquery_statement
Allows you to run an Xquery from SQL*Plus.

Miscellaneous

ARCHIVE LOG LIST
Displays information about redo log files.

DESCRIBE [schema.]object @connect_identifier
Lists the column definitions for a table, view or synonym, or the specifications for a function or procedure.

RECOVER {general | managed} {BEGIN BACKUP | END BACKUP}
where the general clause has the following syntax:
[AUTOMATIC] [FROM location]
where the `full_database_recovery` clause has the following syntax:

```
[STANDBY] DATABASE ] [ UNTIL { CANCEL | TIME date | CHANGE integer | USING BACKUP CONTROLFILE } ]
```

where the `partial_database_recovery` clause has the following syntax:

```
{ TABLESPACE tablespace[, tablespace]... |
  DATAFILE { filename | filenumber[, filename | filenumber]... |
  STANDBY { TABLESPACE tablespace[, tablespace]... |
   DATAFILE { filename | filenumber[, filename | filenumber]... } |
  UNTIL { CONSISTENT WITH | CONTROLFILE } ]
```

where the `parallel` clause has the following syntax:

```
{ NOPARALLEL | PARALLEL [ integer ]
```

where the `managed` clause has the following syntax:

```
MANAGED STANDBY DATABASE recover_clause | cancel_clause | finish_clause
```

where the `recover_clause` has the following syntax:

```
{ DISCONNECT [ FROM SESSION ] | { TIMEOUT integer | NOTIMEOUT } } |
{ NODELAY | DEFAULT DELAY | DELAY integer } | NEXT integer |
{ EXPIRE integer | NO EXPIRE } | parallel_clause |
{ CURRENT LOGFILE | UNTIL CHANGE integer |
THROUGH [ THREAD integer | SEQUENCE integer |
 ALL ARCHIVELOG | ALL | LAST | NEXT | SWITCHOVER ] |
{ DISCONNECT [ FROM SESSION ] | { TIMEOUT integer | NOTIMEOUT } } |
{ NODELAY | DEFAULT DELAY | DELAY integer } | NEXT integer |
{ EXPIRE integer | NO EXPIRE } | parallel_clause |
{ USING CURRENT LOGFILE | UNTIL CHANGE integer |
THROUGH [ THREAD integer | SEQUENCE integer |
 ALL ARCHIVELOG | ALL | LAST | NEXT | SWITCHOVER ] |
```

where the `cancel_clause` has the following syntax:

```
CANCEL [IMMEDIATE] [WAIT | NOWAIT]
```

where the `finish Clause` has the following syntax:

```
{ DISCONNECT [ FROM SESSION ] | parallel_clause } |
FINISH [ SKIP | STANDBY LOGFILE ] [ WAIT | NOWAIT ]
```

where the `parallel_clause` has the following syntax:

```
{ NOPARALLEL | PARALLEL [ integer ]
```

Performs media recovery on one or more tablespaces, one or more datafiles, or the entire database.

**SET system_variable value**

Sets a system variable to alter the SQL*Plus environment settings for your current session. For example, to:
- set the display width for data
- customize HTML formatting
- enable or disable printing of column headings
- set the number of lines per page

Enter a system variable followed by a value as shown below:

```
SET APPLINFO {ON | OFF | text}
SET ARRAYSIZE {1}n
SET AUTOPRINT {ON | OFF}
SET AUTORECOVERY {ON | OFF | TRACEONLY | EXPLAIN | STATISTICS}
SET BLOCKTERTERMINATOR {1 | c | ON | OFF}
SET CMDSEP {1 | c | ON | OFF}
SET COLSEP {1 | text | ON | OFF}
SET COPYCOMMAND {1 | OFF}
SET COPYTYPECHECK {ON | OFF}
SET DEFINE {& | c | ON | OFF}
SET DESCRIBE {DEPTH {1 | n | ALL} | LINENUM {ON | OFF}} | INDENT {ON | OFF}
SET ECHO {ON | OFF}
SET EDITFILE file_name[.ext]
SET ERRORLOGGING {ON | OFF | TABLE [schema | tablename] [TRUNCATE] [IDENTIFIER identifier]
SET ESCAPE {1 | c | ON | OFF}
SET ESCCHAR {@ | ? | % | $ | OFF}
SET EXITCOMMAND {ON | OFF}
SET FEEDBACK {6 | n | ON | OFF}
SET FLAGGER {OFF | ENTRY | INTERMEDIATE | FULL}
SET FLUSH {ON | OFF}
SET HEADING {ON | OFF}
SET HEADSEP {1 | c | ON | OFF}
SET INSTANCE {instance_path | LOCAL}
SET LINESIZE {80 | n | ...
SET LOGSOURCE pathname
SET LONG {80 | n}
SET LONGHUNKSIZE {80 | n}
SET MARKUP {HTML [ON | OFF] [HEAD text] [BODY text] [TABLE text]
[ENTMAP {ON | OFF}] [SPOOL (ON | OFF) [PREFORMAT] [ON | OFF]}
SET NEWPAGE {1 | n | NONE}
SET NULL text
SET NUMFORMAT format
SET NUMWIDTH {10 | n | ...
SET PAGESIZE {1}n
SET PAUSE {ON | OFF | text}
SET RECSEP {WRAPPED | EA[CH] | OFF}
SET RECSEPCHAR {1 | d}
SET SERVEROUTPUT {ON | OFF | SIZE {n | UNLIMITED} [FORMAT] [WRAPPED]
I WORD_WRAPPED] [TRUNCATED]]
SET SHIFT {INOUT | VISIBLE | INVISIBLE}
SET SHOWMODE {ON | OFF}
SET SOLBLANKLINES {ON | OFF}
```
SHOW [option]

Shows the value of a SQL*Plus system variable, or the current SQL*Plus environment.

Enter any system variable set by the SET command in place of system_variable. SHOW SGA requires a DBA privileged login. Use one of the following terms or clauses in place of option:

system_variable
