

Oracle® Retail Price Management

Release Notes

Release 15.0.1

E76499-01

June 2016

Oracle Retail Price Management (RPM) Release 15.0.1 is a patch release for RPM 15.0.

RPM 15.0.1 includes selected defect fixes and enhancements for RPM 15.0 code. Oracle Customer Support investigates submitted issues assuming that all released updates have been applied. It is the customer's decision when to apply a new release; however, delays in applying updates can complicate the support process.

About Patch Releases

Oracle Retail patch releases are periodic releases that can include new defect fixes and product enhancements.

Documentation for patch releases includes the following:

- New and updated guides (for example, operations and user guides) that apply to the patch release level. See "[Related Documentation](#)" for a list of the documents published for RPM 15.0.1.
- Defect reports for new fixes and enhancements for the patch release.

See the *Oracle Retail Price Management Installation Guide* for Release 15.0.1 for instructions about how to apply the defect fixes and enhancements that you have not already installed.

Applying a Patch Release

Before applying the RPM 15.0.1 patch release, be sure that:

- RPM 15.0 has been installed.

Before applying the release over your files:

- Note whether any modules have been customized. If so, the customizations must be reapplied to the new version of the module, or the fix may need to be applied to the custom version of the code.
- Copy the original files to a different directory before you copy over them, in case you need to refer to them at a later date.

Back up data before running any script, because the scripts provided *do not* preserve data. See defect reports for details.

Check with your database administrator to determine whether your database should be analyzed after a script is run. In many cases, analysis of the database is necessary to take advantage of new or modified indexes intended to improve performance of the application.

Hardware and Software Requirements

See the *Oracle Retail Price Management Installation Guide, Release 15.0.1* for information about the following:

- Hardware and software requirements
- Oracle Retail application software compatibility

Defect Fixes and Documentation

A defect fix is a modification to the base Oracle Retail code (for example, a bug fix, a performance enhancement, or a functional enhancement). Each defect fix that is included in this patch has a corresponding defect report titled *<defect-number>.PDF* (for example, 1234567.PDF) that is posted to My Oracle Support at the following location: Oracle Retail Defect Document Listings (MOS ID:2021275.1).

In the same folder, the file named **DEFECT MODULE XREF RPM 15.0.1.XLS** lists every defect number and the modules and scripts that are included in the patch. Review each defect report carefully before implementing the defect fixes. Note that scripts do not preserve data. Make sure that all data is backed up before you run any script.

Noteworthy Defect Fixes

The following defect fixes and enhancements are included in RPM 15.0.1. This is not a complete list; see the cross-reference spreadsheet and defect reports for a complete list and full details.

Defect Number	Description
22516387	An issue exists in the New Item Location batch.
22823440	The tran exception item at zone level is not updated to correct retail.
22816364	XML incomplete when approved promotions contain un-ranged items.
22954836	Exclusion contains the parent item instead of the trans items.
22954828	Conflict error instead of exclusion.
22564402	No MSG received for: "240" seconds when creating a complex promotion with 25K.
22142226	No rows in RPM_FUTURE_RETAIL when ITEM_LEVEL=TRAN_LEVEL=1 and DIFF_1.
22687316	PRICINGEXTRACT.XML does not show Arabic descriptions for promotions.
22571057	Partitioning the RPM_BATCH_LOG table in instrumentation.
23153827	RPM instrumentation enhancements.
22110063	Future regular price change resets clearance.
22110063	Null RPM_FUTURE_RETAIL.MAX_HIER_LEVEL and RPM_PROMO_ITEM_LOC_EXPL.MAX_HIER_LEVEL.
22155436	Missing timeline (item/loc) if NewItemLoc is run in multiple runs.
