Oracle Retail Merchandising System (RMS) Release 13.0.7 is a patch release for RMS 13.0. RMS 13.0.7 includes selected defect fixes and enhancements for RMS 13.0 code.

Oracle Customer Support investigates submitted issues assuming that all released updates have been applied. It is the customer’s decision when to apply a new release; however, delays in applying updates can complicate the support process.

This document contains the following topics:

- Overview
- About Patch Releases
- Hardware and Software Requirements
- Applying the Patch Release
- Running Scripts
- Technical Enhancements
- Defect Fixes and Documentation
- Noteworthy Defect Fixes
- Related Documentation
- Documentation Accessibility

**Overview**

Oracle Retail Merchandising System (RMS) is used to execute core merchandising activities, including merchandise management, inventory replenishment, purchasing, vendor management, and financial tracking.

**About Patch Releases**

Oracle Retail patch releases are periodic releases that can include the following:

- New defect fixes

Documentation for patch releases includes the following:

- New and updated guides (for example, Operations Guides, User Guides, and so on) that apply to the patch release level. These documents include all updates made since the last patch release. Documents revised for this patch release supersede and replace all previous document versions. See Related Documentation for a list of the documents published for RMS 13.0.7.
- Defect reports for new fixes.
- Enhancements for the patch release.

---

**Note:** Customers must apply the entire patch release to update their installation to the currently supported level.

---

See the *Oracle Retail Merchandising System Installation Guide* for Release 13.0.7 for instructions about how to apply the defect fixes and enhancements that you have not already applied.

### Hardware and Software Requirements

See the *Oracle Retail Merchandising System Installation Guide* for information about the following:

- Hardware and software requirements
- Oracle Retail application software compatibility

### Applying the Patch Release

Before applying the RMS 13.0.7 patch release, be sure that:

- RMS 13.0.6 has been installed.

Before applying the new files over your code:

- Note whether any modules have been customized. If so, the customizations must be reapplied to the new version of the module, or the fix may need to be applied to the custom version of the code.
- Copy the original files to a different directory before you copy over them, in case you need to refer to them at a later date.

### Running Scripts

Back up data before running any script, because the scripts provided *do not* preserve data. See defect reports for details.

Check with your database administrator to determine whether your database should be analyzed after a script is run. In many cases, analysis of the database is necessary to take advantage of new or modified indexes intended to improve performance of the application.
Technical Enhancements

Oracle Retail Merchandising System Release 13.0.7 introduces the following technical enhancements.

**Note:** The list below announces the addition of Oracle Retail support for the technology described. See the Installation Guide requirements section for critical information, such as whether the enhancement below replaces previous versions or is supported in addition to already existing versions.

**Browser Support**

Oracle Retail Merchandising System 13.0.7 is now certified for use with the following Web browsers:

- Mozilla Firefox ESR 17+

**Defect Fixes and Documentation**

A defect fix is a modification to the base Oracle Retail code (for example, a bug fix, a performance enhancement, or a functional enhancement). Each defect fix that is included in this patch has a corresponding defect report titled `<defect-number>.PDF` (for example, 1234567.PDF).

In the same folder, the file named DEFECT MODULE XREF RMS 13.0.7.XLS lists every defect number and the modules and scripts that are included in the patch. Review each defect report carefully before implementing the defect fixes. Please note that scripts do not preserve data. Make sure that all data is backed up before you run any script.

**Noteworthy Defect Fixes**

The following are noteworthy defect fixes.

<table>
<thead>
<tr>
<th>Defect</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>15852228</td>
<td>An approved BillBack Complex Deal with no thresholds causes DEALINCLIB to core dump.</td>
</tr>
<tr>
<td>13545881</td>
<td>The ORDPKG .PC batch aborts with an ORA-02292 exception.</td>
</tr>
<tr>
<td>15949450</td>
<td>An item exclusion is not available in Org. Level 0. The Exclude option is disabled when adding an item exclusion to a company-level Bill Back complex deal.</td>
</tr>
<tr>
<td>14843704</td>
<td>When creating a supplier in RIB, an incorrect INV&gt;MGMT&gt;LVL value appears.</td>
</tr>
<tr>
<td>16042712</td>
<td>The RILMAINT job aborts with an error - Single row sub-query returns more than one row.</td>
</tr>
<tr>
<td>14840452</td>
<td>Items are returned to the warehouse with the TSF_PRICE in the store currency instead of UNIT_COST and warehouse currency.</td>
</tr>
</tbody>
</table>
