This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this software or related documentation is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, the following notice is applicable:

U.S. GOVERNMENT RIGHTS Programs, software, databases, and related documentation and technical data delivered to U.S. Government customers are "commercial computer software" or "commercial technical data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, duplication, disclosure, modification, and adaptation shall be subject to the restrictions and license terms set forth in the applicable Government contract, and, to the extent applicable by the terms of the Government contract, the additional rights set forth in FAR 52.227-19, Commercial Computer Software License (December 2007). Oracle USA, Inc., 500 Oracle Parkway, Redwood City, CA 94065.

This software is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications which may create a risk of personal injury. If you use this software in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure the safe use of this software. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software in dangerous applications.

Oracle is a registered trademark of Oracle Corporation and/or its affiliates. Other names may be trademarks of their respective owners.

This software and documentation may provide access to or information on content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services.

Value-Added Reseller (VAR) Language

Oracle Retail VAR Applications

The following restrictions and provisions only apply to the programs referred to in this section and licensed to you. You acknowledge that the programs may contain third party software (VAR applications) licensed to Oracle. Depending upon your product and its version number, the VAR applications may include:

(i) the **MicroStrategy** Components developed and licensed by MicroStrategy Services Corporation (MicroStrategy) of McLean, Virginia to Oracle and imbedded in the MicroStrategy for Oracle Retail Data Warehouse and MicroStrategy for Oracle Retail Planning & Optimization applications.

(ii) the **Wavelink** component developed and licensed by Wavelink Corporation (Wavelink) of Kirkland, Washington, to Oracle and imbedded in Oracle Retail Mobile Store Inventory Management.

(iii) the software component known as **Access Via**™ licensed by Access Via of Seattle, Washington, and imbedded in Oracle Retail Signs and Oracle Retail Labels and Tags.

(iv) the software component known as **Adobe Flex**™ licensed by Adobe Systems Incorporated of San Jose, California, and imbedded in Oracle Retail Promotion Planning & Optimization application.

You acknowledge and confirm that Oracle grants you use of only the object code of the VAR Applications. Oracle will not deliver source code to the VAR Applications to you. Notwithstanding any other term or condition of the agreement and this ordering document, you shall not cause or permit alteration of any VAR Applications. For purposes of this section, "alteration" refers to all alterations, translations, upgrades, enhancements, customizations or modifications of all or any portion of the VAR Applications including all reconfigurations, reassembly or reverse assembly, re-engineering or reverse engineering and recompilations or reverse compilations of the VAR Applications or any derivatives of the VAR Applications. You acknowledge that it shall be a breach of the agreement to utilize the relationship, and/or confidential information of the VAR Applications for purposes of competitive discovery.

The VAR Applications contain trade secrets of Oracle and Oracle's licensors and Customer shall not attempt, cause, or permit the alteration, decompilation, reverse engineering, disassembly or other reduction of the VAR Applications to a human perceivable form. Oracle reserves the right to replace, with functional equivalent software, any of the VAR Applications in future releases of the applicable program.

Preface

This user guide concentrates on how to use the components of the radio frequency (RF) hand-held device, the truck-mounted (TM) device, and the wrist-mounted (WR) device with Oracle Retail Warehouse Management System. It provides you with:

- Overviews of each functional area of the application.
- Step-by-step procedures for completing specific tasks.

You are advised throughout the manual when a function is not available on the truck-mounted and wrist-mounted devices. All functions are available on the hand-held device.

Audience

This document is intended for the users of Oracle Retail Warehouse Management System on Radio Frequency, Truck mount, and Wrist mount devices.

Documentation Accessibility

Our goal is to make Oracle products, services, and supporting documentation accessible to all users, including users that are disabled. To that end, our documentation includes features that make information available to users of assistive technology. This documentation is available in HTML format, and contains markup to facilitate access by the disabled community. Accessibility standards will continue to evolve over time, and Oracle is actively engaged with other market-leading technology vendors to address technical obstacles so that our documentation can be accessible to all of our customers. For more information, visit the Oracle Accessibility Program Web site at <http://www.oracle.com/accessibility/>.

Accessibility of Code Examples in Documentation

Screen readers may not always correctly read the code examples in this document. The conventions for writing code require that closing braces should appear on an otherwise empty line; however, some screen readers may not always read a line of text that consists solely of a bracket or brace.

Accessibility of Links to External Web Sites in Documentation

This documentation may contain links to Web sites of other companies or organizations that Oracle does not own or control. Oracle neither evaluates nor makes any representations regarding the accessibility of these Web sites.

Access to Oracle Support

Oracle customers have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/support/contact.html> or visit <http://www.oracle.com/accessibility/support.html> if you are hearing impaired.

Related Documents

For more information, see the following documents in the Oracle Retail Warehouse Management System Release 13.2 documentation set:

- *Oracle Retail Warehouse Management System Installation Guide*
- *Oracle Retail Warehouse Management System Online Help*
- *Oracle Retail Warehouse Management System Operations Guide*
- *Oracle Retail Warehouse Management System Release Notes*
- *Oracle Retail Warehouse Management System UI User Guide*
- Oracle Retail Integration Bus Documentation

Customer Support

To contact Oracle Customer Support, access My Oracle Support at the following URL:

<https://support.oracle.com>

When contacting Customer Support, please provide the following:

- Product version and program/module name
- Functional and technical description of the problem (include business impact)
- Detailed step-by-step instructions to re-create
- Exact error message received
- Screen shots of each step you take

Review Patch Documentation

When you install the application for the first time, you install either a base release (for example, 13.2) or a later patch release (for example, 13.2.2). If you are installing the base release, additional patch, and bundled hot fix releases, read the documentation for all releases that have occurred since the base release before you begin installation. Documentation for patch and bundled hot fix releases can contain critical information related to the base release, as well as information about code changes since the base release.

Oracle Retail Documentation on the Oracle Technology Network

Documentation is packaged with each Oracle Retail product release. Oracle Retail product documentation is also available on the following Web site:

http://www.oracle.com/technology/documentation/oracle_retail.html

(Data Model documents are not available through Oracle Technology Network. These documents are packaged with released code, or you can obtain them through My Oracle Support.)

Documentation should be available on this Web site within a month after a product release.

Conventions

The following text conventions are used in this document:

Convention	Meaning
boldface	Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.
<i>italic</i>	Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.
<code>monospace</code>	Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.

Overview

Oracle Retail Warehouse Management System facilitates the coordinated movement of merchandise and information throughout the distribution process. Using sophisticated, yet flexible configuration and built-in best practices, it ensures the efficient utilization of resources—people, equipment, and space in your distribution process.

With Oracle Retail Warehouse Management System you can maximize your investment in distribution facilities and equipment, even extending execution capabilities beyond your four walls to increase visibility through trading partner collaboration.

RWMS manages merchandise in the distribution center via radio-frequency systems for general inventory functions, directed put-away, and movement of inventory, inventory adjustments, returns processing, and cycle counting.

Radio Frequency (RF) devices have the Equipment assignment functionality. These devices allow you to perform various activities which are listed in separate chapters.

This guide contains the following chapters:

- [Chapter 2, "Security and Access"](#)
- [Chapter 3, "Equipment Assignment"](#)
- [Chapter 4, "Inventory Management"](#)
- [Chapter 5, "Picking"](#)
- [Chapter 6, "Processing/Others"](#)
- [Chapter 7, "Receiving"](#)
- [Chapter 8, "Replenishment"](#)
- [Chapter 9, "Shipping"](#)
- [Chapter 10, "Task Administration"](#)
- [Chapter 11, "Trailer Management"](#)

Security and Access

This chapter describes the security and logon features of Oracle Retail Warehouse Management System (RWMS).

Security

RWMS features two security measures: passwords and privilege levels.

Passwords

A password is required to access RWMS. Logon standards require that you change passwords after a predefined number of days have passed. The system administrator sets this parameter. Passwords must be unique and be at least five alphanumeric characters in length. Passwords are case-sensitive.

After a predefined number of days, you are prompted to change your password. This parameter is also set by the system administrator. You must change your password sometime between the date of the first prompt and the password expiration date or you can no longer access RWMS.

Change a Password

1. In the Enter New Password field, enter a new password.
2. In the Confirm New Password field, enter the new password again.
3. Select the Change Password option in order to save the new password.

Privilege Levels

Each user is assigned a privilege level by the system administrator. Not all menu options and screens in RWMS are accessible to users with lower privilege levels. RWMS recognizes each user's privilege level and allows menu or screen entry accordingly.

RF Function Key Usage

Because the RF devices now access the application through a remote session, it is necessary to use a different keystroke combination to issue function key commands. Instead of pressing the function command button on the RF, and then the desired number key (as done in previous versions), you should now press the Control (Ctrl) key and then the desired number key.

These keystrokes are still referred to as "function keys" (e.g. "F3=Exit", etc.) in this documentation to match how they are illustrated on the included screen shots. The F3 function key is used to return to the Main menu from all the sub-menus.

Log On to and Exit RWMS

Follow the procedures given below to log on or exit the application.

Start RWMS

On starting the application, the initial Start Up screen opens.

Figure 2–1 StartUp Screen

ORACLE[®]

1. Hand Held Device
2. Truck Mount Device
3. Wrist Mount Device
4. Exit System

Choice:

Key Choice and
Press Enter

1. Select the device by entering the appropriate number in the **Choice** field, and press the Enter key. The logon procedure is the same for hand-held, truck-mounted, and wrist-mounted devices.

The behavior for each choice is as follows:

- 1 - The system configures the screen display to match the regular hand held RF devices and takes you to the main RWMS menu.
- 2 - The system configures the screen to fit truck mount displays and takes you to the main RWMS menu.
- 3 - The system configures the screen to fit wrist mount displays and takes you to the main RWMS menu.
- 4 - The terminal server session is closed and the application is shut down.

Note: The default entry is "4". Pressing Enter will cause you to exit the application.

Figure 2–2 RWMS Log On ScreenA screenshot of the 'User Log On' window. The title bar is blue with a red icon and the text 'User Log On'. Below the title bar, the text 'RWMS' and 'LOGON' are displayed. The main area contains three input fields: 'USER ID' with a text box, 'PASSWORD' with a text box, and 'FACILITY ID' with a small dropdown menu. At the bottom, the text 'F3=CANCEL' and 'F4=DONE' is displayed.

2. In the User Logon Screen, enter the user ID in the **USER ID** field.
3. Enter the password in the **PASSWORD** field. If you enter a wrong ID or password, you get the following screen:

Figure 2–3 Error MessageA screenshot of the 'Warning Alert' window. The title bar is blue with a red icon and the text 'Warning Alert'. Below the title bar, the text 'INVALID USERID/PASSWORD.' is displayed. At the bottom right, there is an 'OK' button.

4. After entering the user id and password, go to the **FACILITY ID** field. The F5 option appears. To get a list of values for the **FACILITY ID** field, press F5. The Facilities screen appears.

Figure 2–4 Facilities

Select the facility ID or enter % to get a list of values. After selecting a facility ID, click OK.

5. Press F4 (Done) key. The Main Menu RF screen opens.

Figure 2–5 Main Menu

To go to the module you require, specify your selection in the CHOICE field and press Enter.

Exit System

To exit from the application, enter 10 in the **CHOICE** field. The Message Alert screen opens.

Figure 2–6 Exit System RF screen

When prompted to confirm the request to exit, enter **Yes** and press the Enter key.

The Start Up screen appears. The default value is 4. Press Enter to exit from the application. To re-enter the application enter your choice.

Application Notes

When using the application, please take note of the following features:

- Use the F3 function key to return to the Main menu from all the submenus.
 - In the Inventory Menu, More Options, the user will return to the Inventory Menu screen.
 - In the Picking Menu, PTS Picking Options, the user will return to the Picking Menu screen.
- You can exit the application only from the main menu.
- A new HTML file now displays menu options for exiting users from the terminal server as well as choices for the hand held, truck mount, and wrist mount devices.

Equipment Assignment

Equipment assignment functionality is used for assigning an equipment class or piece of equipment to a user ID. The assignment stays valid throughout the RF session. Equipment must be assigned to a user if XYZ functionality is used in the DC.

From the main menu, select Equip Assign. The Equip Assign screen opens. The user ID is automatically filled in.

Figure 3–1 Equip Assign screen

EQUIPMENT

F3=EXIT

F4=DONE

1. On the Equip Assign screen, enter the ID of a piece of equipment or the name of an equipment class in the Equipment field.
2. Press the F4 (Done) key to accept the assignment.

Inventory Management

The RF Inventory Management module allows you to perform processes outside the normal picking and shipping processes. This includes activities such as: build containers (pallets), check the contents of a container or pallet, perform cycle counts, mark locations for cycle counts, move containers from receiving to shipping or internal picking locations, put away container/pallets to storage, confirm returns shipment, return containers to stock, store reassignment of outbound containers, and manage forward pick locations, and so forth.

From the Main Menu select Invent Mgmt. The Invent Mgmt main menu opens.

CHOICE F3=PREVIOUS MENU

Build Containers

The Build Container (pallet) function allows you to build pallets of containers with same item and destination. You can exit the Build Container process at any time by pressing the F3 (Exit) key and return later to add more valid containers to the existing pallet.

The build container function also allows the contents of one pallet to be combined with the contents of another pallet for the purpose of consolidating pallets in the shipping area.

The following constraints apply to this functionality:

- Both pallets must either be bulk or have no child labels; or both pallets must have cartons with child labels. It is not possible to mix a pallet with child labels with another pallet that has no child labels.
- Both pallets must be distributed (this functionality applies only to outbound merchandise).
- If the same item exists on both pallets, it must be the same case pack size. In addition, perishable items must have the same best before dates.
- Both pallet must be destined for the same destination (for example, same store or same distribution center) and be routed on the same carrier/service/route.
- All restrictions for Building Containers in receiving also apply to Building Containers in shipping.

Build a Generic Container

Note: Once containers are added to a generic container ID (pallet), any movement through the system of that container will move all associated child containers.

On the Main Menu screen, select Invent Mgmt. On the Invent Mgmt Menu screen, select Build Container. The Build Container screen opens.

Figure 4–2 Add To Container RF screen

The screenshot shows a screen titled "PR BUILD CONTAINER" with a red icon. Below the title are three input fields: "GENERIC CONT ID" with the value "MY-CONT-29-01", "LOCATION ID" with the value "PWSTGGEN", and "CONTAINER ID" which is empty. At the bottom of the screen, it says "F3=EXIT" and "F4=CLEAR".

1. In the Generic Cont ID field, scan or enter the ID of the generic container.

Note: If you scan any children from an existing pallet, the ID of the master pallet is displayed.

2. In the Location ID field, scan or enter your current location.

Note: The location is displayed automatically if the container already exists.

3. In the Container ID field, scan or enter the container ID being added to the generic container. This container must be valid on the system. An Information screen pops up, verifying the successful operation.

To continue adding containers to this pallet, repeat this step.

4. Press the F4 (Clear) key to clear the screen.
5. Press the F3 (Exit) key, when finished, to return to the Inventory Management Menu.

Build a Tote Pallet

The Build Tote Pallets function allows to you place totes going to the same destination on the same pallet. The pallets are held in a tote staging location. Only one open pallet per destination is permitted in this location at a time.

On the Main Menu screen, select Invent Mgmt. On the Invent Mgmt Menu screen, select Build Tote Pallet. The Build Tote Pallet screen opens.

Figure 4–3 Build Tote Pallet RF screen

PR BUILD TOTE PALLET

CONFIRM PALLET ID

F3=EXIT F5=CLEAR

F4=DONE F6=CLOSE

1. In the Tote ID field, enter the ID of the tote.
2. If the system determines that a pallet exists for totes going to the same destination, you are directed to the pallet. If no such pallet exists, enter the ID of a generic pallet in the Confirm Pallet ID field.
3. Press the F4 (Done) key. The record is saved and you can enter another tote.
4. When done adding totes to a pallet, press the F6 (Close) key.

Note: To clear the fields without saving the current information, press the F5 (Clear) fields. When done building

Container Inquiry

The Container Inquiry screen allows you to scan containers throughout the DC to view container details such as current location, current inventory status, final destination, container quantity, and user who created the container. The Items function key shows you the item ID, inner pack and casepack of the container. The Ship and Recv function keys display shipping and receiving information for the queried container.

On the Main Menu screen, select Invent Mgmt. On the Invent Mgmt Menu screen, select Cont Inquiry. The Cont Inquiry screen opens.

Figure 4–4 Container Inquiry screen

The screenshot shows the 'PR CONT INQUIRY' screen with the following fields and values:

Viewing Receiving Details

1. On the Cont Inquiry screen, press the F8 (Recv) key. The Cont Inquiry (Receiving) screen displays receiving information for the container.

Figure 4–7 Cont Inquiry (Receiving) RF screen

The screenshot shows a radio frequency (RF) screen titled "PR CONT INQUIRY". It contains several input fields and labels:

- APPT NBR**: A text input field.
- PO**: A text input field.
- ASN**: A text input field.
- RECEIVED**: A text input field.
- TRANSSHIPMENT NBR**: A text input field.
- PUTAWAY**: A text input field.
- F3=EXIT**: A label at the bottom indicating the function of the F3 key.

2. Press the F3 (Exit) key to return to the primary Cont Inquiry screen.

Cycle Count

Cycle counting is the process of counting the physical inventory in reserve (storage), Forward Case Picking (FCP), or Less Than Case (LTC) locations and comparing it to the system count. The frequency for counting an item is determined by the cycle count plan defined in the item master or value set in the `cycle_count_period` SCP parameter is taken as default. RWMS randomly selects locations for counting daily based on the number of uncounted locations and the number of days remaining in the cycle count period. Normal operations at the distribution center are not affected by the system-selected, cycle counting process.

RWMS supports four types of cycle counts:

1. System Selected based on random selection algorithm.
2. System Selected based on user selection.
3. Manual Marked which is marked manually when there is an inventory problem.
4. Audit Count which is system generated when SS or MM count is outside the defined tolerance levels.

Cycle counting can be interleaved with the putaway functionality to optimize productivity.

While cycle counting a location that includes a container that has not been picked and the Pick Not After Date has passed, you may see a message in a pop-up screen that states "Cycle count to 0." This occurs when the status of the container is set to Expired (X).

Manual marking renders all items in the marked location as unavailable.

When you select cycle counting from the menu, the system first checks for the security level associated with you. If you have sufficient privileges, RWMS allows you to perform the cycle count process.

Upon starting cycle counting you need to choose whether you want to Cycle Count by Priority or by Cycle Count (CC) sequence.

Cycle Counting by Priority means that the highest Priority locations are presented first for counting. Priority is determined by the Cycle Count Status and Audit Count Required indicators. The Cycle Count Status must be MM or SS and the Audit Count Required must be Yes (Y) or No (N) for a location to be included during a cycle count. The priorities are as follows:

- Location with Cycle Count Status = MM and Audit Count Required = Y are given the highest priority. Hence locations with this combination are presented for counting first. You must count all locations with Cycle Count Status = MM and Audit Count Required = Y combination.
- Locations with Cycle Count Status = MM and Audit Count Required = N are the second or next priority. These locations are presented for counting after locations with Cycle Count Status = MM and Audit Count Required = Y are counted. You must count all locations with Cycle Count Status = MM and Audit Count Required = N combination.
- Locations with Cycle Count Status = SS are given the third or last priority. These locations are presented after locations with Cycle Count Status = MM and Audit Count Required = N are counted. You may skip a location or locations to count wherein you are taken back to the beginning of the Cycle Count Status = Y locations.

Cycle Counting by Cycle Count (CC) sequence means that locations with the lowest Location Cycle Count sequence number are presented for counting in sequence order. The locations are presented in Location Cycle Count sequence regardless of the Cycle Count Status.

Note: The locations presented for cycle counting depend on the privileges assigned to you. You may not have privileges to count any/all of the location Cycle Count Status combinations above.

On the Main Menu screen, select Invent Mgmt. On the Invent Mgmt Menu screen, select Cycle Count. The Confirm Alert screen is displayed depending on the user privileges associated.

Figure 4–8 Confirm Alert Screen

Unit Pick Locations

The Cycle Count screen displays the first location that is marked for cycle count. If the DISP_CC_TYPE attribute is applied to your user ID, the system displays the type of cycle count you are processing at the top of the screen. If this attribute is not applied, the cycle count type is not seen.

1. On the Cycle Count screen, enter the ID of the suggested or alternative unit pick location to be cycle counted in the Confirm field.

Figure 4–9 Cycle Count

The screenshot shows a terminal-style interface for the 'FN CYCLE COUNT' screen. At the top, a blue header bar contains a red square icon and the text 'FN CYCLE COUNT'. Below this, the 'COUNT TYPE' is set to 'Manually Marked'. The 'LOCATION ID/CONFIRM' field contains '1A004LTC0101' in two lines. The 'DESCRIPTION' field contains 'fpl unit locations'. Below this are three empty input fields for 'CID', 'ITEM ID', and 'CONTAINER QTY'. At the bottom, function key instructions are listed: 'F3=EXIT', 'F4=DONE', 'F8=ACCEPT', and 'F9=SKIP'.

Note: You can press the F9 (Skip) key in order to proceed to the next suggested location without processing the current location. The skipped location remains marked for cycle count.

2. Press the Enter key to confirm the location and the Cycle Count (Detail) screen is displayed.

Figure 4–10 Cycle Count (Detail) screen

The screenshot shows a terminal-style interface for a cycle count. At the top, a blue header bar contains a red square icon and the text "PR CYCLE COUNT". Below this, there are three input fields: "ITEM ID" with the value "CWITEM30", "INNER PACK QTY" with the value "1.0", and "GRAB QTY" which is currently empty. At the bottom of the screen, the text "F3=EXIT" and "F4=DONE" is displayed.

3. In the Item field, enter the ID of the first unique container. The number of units in an inner pack is displayed.
4. In the Grab Qty field, enter the number of grabs available. If the system displays a quantity mismatch error, count the number of grabs again and enter the quantity. The system requires two entries of the same quantity to successfully process the cycle count.
5. To accept an updated record:
 - Press the Enter key to save the item count. Enter the next item ID for the same location.
 - Press the F4 (Done) key to save the location count. The next location marked for cycle count opens.

Reserve Locations

The Cycle Count screen displays the first location that is marked for cycle count. If the DISP_CC_TYPE attribute is applied to your user id then the system will display the type of cycle count you are processing at the top of the screen. If this attribute is not applied you will not see the cycle count type.

1. On the Cycle Count screen, enter the ID of the suggested or alternative reserve location to be cycle counted in the Confirm field.

Figure 4–11 Cycle Count Screen

The screenshot shows a terminal-style interface for a cycle count. At the top is a blue header bar with a red square icon and the text 'FN CYCLE COUNT'. Below this are several input fields: 'COUNT TYPE' with 'Audit Count' entered, 'LOCATION ID/CONFIRM' with '1A010FCP0101' entered twice, 'DESCRIPTION' with 'Forward Case Pick' entered, 'CID' (empty), 'ITEM ID' (empty), and 'CONTAINER QTY' (empty). At the bottom, there are two columns of function key instructions: 'F3=EXIT', 'F4=DONE' on the left, and 'F8=ACCEPT', 'F9=SKIP' on the right.

Note: You can press the F9 (Skip) key in order to proceed to the next suggested location without processing the current location. The skipped location remains marked for cycle count.

2. Press the Enter key to confirm the location.
3. In the CID field, enter the ID of the first container.
4. In the Item field, enter the ID of the first unique item in the container.
5. In the Container Qty field, enter the number of containers on that pallet.

Note:

- If the system displays a quantity mismatch error, count the number of containers again and enter the quantity. The system requires two entries of the same quantity to successfully process the cycle count.
 - If the Labeled_Reserve system parameter is set to N (No), it means no child IDs are attached to the pallet. Thus the system makes an immediate inventory adjustment if the value is within the defined cycle count tolerance.
 - If the Labeled_Reserve system parameter is set to Y (Yes), this means child IDs are attached to the pallet. Hence the system requests you to scan all children on the pallet. The system determines the missing child IDs and places them in the Unlocated Location. It does not create an inventory adjustment.
 - When Labeled_Reserve is set to Y the Scan Child Container screen is displayed (shown below). Scan all the child containers found on the pallet and then press F4 (Done) key to complete the process.
-

Figure 4–12 Reserve Location Cycle Count screen

PR CYCLE COUNT

6. To accept an updated record:
 - Press the Enter key to save the item count. Enter the next item ID for the same container and location.
 - Press the F8 (Accept) key to save the container count. Enter the next container ID for the same location.
 - Press the F4 (Done) key to save the location count. The next location marked for cycle count opens.

Case Pick Locations

The Cycle Count screen displays the first location that is marked for cycle count. If the DISP CC TYPE attribute is applied to your user ID then the system displays the type of cycle count you are processing at the top of the screen. If this attribute is not applied, the cycle count type is not seen.

1. On the Cycle Count screen, enter the ID of the suggested or alternative case pick location to be cycle counted in the Confirm field.

Figure 4–13 Cycle Count Screen

Note: You can press the F9 (Skip) key in order to proceed to the next suggested location without processing the current location. The skipped location remains marked for cycle count.

2. Press the Enter key to confirm the location and the Cycle Count (Detail) screen is displayed.

Figure 4–14 Case Pick Location Cycle Count Screen

3. In the Item field, enter the ID of the first unique item. The number of units in a case pack opens.
4. In the Container Qty field, enter the number of containers available. If a warning opens regarding the quantity that you enter, enter the same quantity a second time. The system accepts the new quantity after the second entry.
5. To accept an updated record:

- Press the Enter key to save the item count. Enter the next item ID for the same location.
- Press the F4 (Done) key to save the location count. The next location marked for cycle count opens.

Split Containers

The Split Container screen allows you to split a container with more than one item ID into a new separate container. RWMS allows the user to split outbound containers, with the same destination ID, as well as received containers with undetected dye lot differences.

On the Main Menu screen, select Invent Mgmt. On the Invent Mgmt Menu screen, select Split Container. The Split Container screen opens.

Figure 4–15 *Split Container screen*

1. On the Split Container screen, enter the ID of the source container in the From Container field.
2. In the To Container field, enter the new container ID for the item.
3. In the Item field, enter the item ID that is to be moved to the new container.
4. In the Cont Qty field, enter the number of cases to be moved to the new container.
5. In the Unit Qty field, enter the number of units to be moved into the new container.

Note: The number of units must divide evenly into the container quantity.

6. To associate the container with a dye lot:
 - a. Press the F9 (Lot) key. The ID of the new container is automatically filled in.

Transport Containers

The Transport Containers screen move containers to their next destination as defined by the system. When a container/pallet is scanned the system determines if the container is supposed to be moved to shipping (crossdock), internal destinations (flowthrough), WIP processing, or reserve storage and directs you to the correct location. When using the transport screen you must consider the following system parameters, attributes, and conditions for clarity in your operation:

1. Override (System Control Parameter) and Override (User Attribute)
 - a. When the SCP Override is set to N and/or the user attribute Override is not applied, the Transport screen directs you to a specific storage location or hot replenishment location. It allows you to drop the pallet at a staging location but prevents the scanning of another storage location. When the pallet is scanned again in staging, the transport screen directs you to a specific location but not allow a different storage location to be selected.
 - b. When the SCP Override is set to Y and/or the user attribute Override is applied the Transport screen direct you to a specific storage location or hot replenishment location. It allows you to the pallet at a staging location or a different storage location. When the pallet is scanned again in staging, the transport screen directs them to a specific location but allow a different storage location to be selected if desired.

2. WIP Code

When you scan a container with only a WIP code, the transport screen displays the following message: CID has WIP, do you want to move to process area? Y or N.

- a. If you select Y, the system displays the move screen and provide the location for WIP processing. If you override the location with a reserve location or staging location, then you must use WIP picking to get the container to the WIP processing area.

- b. If you select N, the system directs you to a storage location or allow confirmation of a staging location. WIP picking must then be used to get the container to the WIP processing area.

3. Trouble Code

The transport screen first checks if the SCP parameter `allow_trouble_putaway` is set to Y or N. If it is set to Y then the transport screen displays the following message: CID has trouble. Do you want to Putaway? Y or N.

- a. If you select Y, the system directs you to a valid storage location or allow drop-off at a valid staging location. You must also consider the Override SCP parameter and attribute to determine if you can override the suggested storage location.
- b. If you select N, the transport screen displays the move screen and only allow valid staging locations to be scanned.

4. WIP and Trouble Codes

When you scan a container with a WIP Code and Trouble Code, the transport screen displays the following message: CID has WIP. Do you want to move to process area? Y or N.

- a. If you select Y, the system displays the move screen and provide the location for WIP processing. You must confirm the processing location or a staging location but you are not allowed to confirm a storage location when Trouble Putaway parameter is set to N. If Trouble Putaway parameter is set to Y then you can confirm a storage location.
- b. If you select N, the system displays the move screen and only allow a staging location to be scanned.

On the Main Menu screen, select Invent Mgmt. On the Invent Mgmt Menu screen, select Transport Containers. The Transport Containers screen opens.

Figure 4–20 Transport Containers screen

1. Scan the container ID in the Container ID field.

If the scanned ID is a grandfather pallet ID and the receipt confirmation is already done, the system asks if you want to breakdown the pallets. If you select Yes, the

FPR Pallet Breakdown screen opens. Refer to the [Pallet Breakdown \(Generic\)](#) section for more information.

2. If you select No, the system asks if you want to move the pallet. If Yes, depending on the final location of the container the Move screen or the Putaway screen opens. Refer to the [Move](#) and [Putaway](#) sections for more information.

Move

The Move function allows you to move merchandise between locations, view the contents of a container, and mark a location for cycle counts.

If you move a child container without moving the master/parent container, the child container is no longer associated with the master/parent container. The system updates the location and status of the child container when it is removed from the master/parent container. A labeled child container cannot be removed from a master container if, as a result of such an action, the unit quantity would be less than the distributed quantity.

Figure 4–21 Move screen

The screenshot shows a screen titled "PR MOVE" with a red icon. It contains four input fields: "CONTAINER ID", "FROM LOCATION ID", "ITEM ID", and "TO LOCATION ID". Below these fields, there are four function key instructions: "F2=DETAIL", "F3=EXIT", "F4=DONE", and "F8=MARK".

1. On the Move screen, enter the ID of the container to be moved in the Container ID field. The first item ID and a suggested to-location are displayed.
2. In the To Location field, edit the suggested to-location as necessary.
 - If the scanned container ID is a master with sub-pallets the system informs you that sub-pallets exist and ask if you wish to continue. If you select Yes, the system only allows entry of a staging location since the sub-pallets still exist.
 - If you select No, the system takes you back to the Transport Container screen to scan a sub-pallet. The system alerts you that this is a child container and asks if you wish to continue. If you select Yes, the system directs you to the final destination of the container.

The Move screen is called from the Transport screen when a scanned container has a final destination other than reserve storage. The move screen directs the containers to shipping or flowthrough locations when containers are allocated

upon receipt and also allows you to move merchandise from one storage location to another storage location.

If the container ID scanned is a master container with sub-pallets the system only allows you to move the master to a staging location. You must then scan each sub-pallet so the system can direct these container IDs to their final destination.

2. In the Location ID field, enter the ID of the location to be marked for a cycle count.
3. Press the F8 (Mark) key.
4. When prompted to acknowledge the action, press the Enter key.

Putaway

Putaway screen is called from the Transport screen when a scanned container has a final destination of reserve storage. The Putaway function directs you to valid storage locations based on defined putaway plans. The following transport methods are available:

- Reserve putaway: Put away pallets or containers into storage locations
- Multi-SKU putaway: Break down a single container that has multiple SKUs into Less Than Case (LTC) locations.
- Active replenishment: Transport cases that have been picked for replenishment from a Forward Case Pick (FCP) location to a Less Than Case (LTC) location.
- Replenishment: Transport cases or pallets that have been marked for replenishment during distribution or hot replenishment.

3. In the Cont Qty field, enter the number of containers to be moved to the designated location.
4. Press the F4 (Done) key to complete the move.

Note: The number of units on hand in the destination unit pick bin is incremented when the transaction is complete. Neither the inbound nor the distributed quantities are affected.

Mark for Cycle Count

The Mark for Cycle Count screen permits you to manually mark locations for cycle counting.

On the Main Menu screen, select Invent Mgmt. On the Invent Mgmt Menu screen, select More options and on the Inventory More Options screen, select Mark for Cycle Cnt. The Mark for Cycle Cnt screen opens.

Figure 4–35 Mark for Cycle Cnt RF screen

1. On the Mark for Cycle Cnt screen, enter the location ID in the Location ID field.
2. Press the F8 (Mark) key to manually mark the location for a cycle count.
3. When prompted to acknowledge the action, press the Enter key.

Pack Wave Split

A pack wave is defined as the number of groups that can be processed simultaneously across all chutes within a unit sorter. When all the chutes are filled to capacity and if no more orders of the appropriate type exist in a pick wave, RWMS moves on to the next sorter and begins to fill other chutes. This new sorter will be defined as a new pack wave. The distribution of the pack wave is referred to Pack Wave Split.

RWMS supports Put-To-Order slotting with respect to alternative Unit Pick System. If a wave has unit picks divided into groups and any picking which uses an alternative Unit Pick System is termed as Put-To-Order. If Put-To-Order is enabled, the system will activate only one pack wave at a time within the unit pick system.

RWMS while processing waves does the following:

- Determines the quantity of merchandise that fits into each chute of a unit sorter.
- Assigns units to the appropriate chute.
- Evenly distributes merchandise from a pick wave into multiple pack waves across multiple sorters in a sorter group

The Pack Wave Split screen directs you to the quantities that are to be inducted for a pack wave. On the Main Menu screen, select Invent Mgmt. On the Invent Mgmt Menu screen, select More options and on the Inventory More Options screen, select Pack Wave Split. The Pack Wave Split screen opens.

Figure 4–36 Pack Wave Split screen

1. On the Pack Wave Split screen enter the name of the printer in the Printer field.
2. In the Location ID field, enter the location ID for induction and press enter, the following screen opens.

3. In the CID field, enter the container ID to be split. The Item ID and the Description is displayed.
4. In the To Container field, the container ID of the pack wave-specific tote for the items in the replenishment container to be split will be displayed.
5. In the Grabs field, the number of units from the replenishment carton that should be placed in the tote is displayed.
6. In the Confirm Qty field, enter the number of units you are placing in the tote.

Note: You may update the grab quantity if necessary. If the quantity requested is less than the total quantity of the pick from container, you will need to split the item into another container.

7. Press F5 (Full) key if the tote is not able to hold the entire quantity of items specified. You are prompted to specify the number of items that have been placed in the tote. A Singles order may not be split across multiple totes.

Note: After processing the split quantity, you are prompted for a new container ID, print a label, and display the remaining number of items to be placed in the new container.

8. Press F2 (Close) key to close the To Container. Confirm the container and press F4 (Done) you will return to the Pack Wave Split screen.

9. Press F7 (Chg Cntr) key to enter a new To Container. The field is cleared.
10. Press F4 NEXT to enter a new replenishment container. The CID field is cleared.
11. Press F3 EXIT to return to the Inventory More Options screen after you have finished the Pack Wave Split process.

Reassignment

The Reassignment screen allows you to reassign containers placed in a Pack and Hold area to different outbound destinations. You may reassign a single container or all containers destined for a specific destination.

Single Container

On the Main Menu screen, select Invent Mgmt. On the Invent Mgmt Menu screen, select More options and on the Inventory More Options screen, select Reassignment. The Reassignment screen opens.

Figure 4–39 Reassignment RF screen

PR REASSIGNMENT

CONTAINER ID

CURRENT DEST ID

NEW DEST ID

QUEUE NAME

F2=REASSIGN F8=REASSIGN ALL

F3=EXIT

1. On the Reassignment screen, enter the ID of the container to be reassigned in the Container ID field. The current destination opens.
2. In the New Dest ID field, enter the ID of the container's new destination.
3. Press the F2 (Reassign) key. The reassignment is saved and you can reassign another container.
4. Press the F3 (Exit) key to exit the Reassignment screen.

Multiple Containers

The Reassignment WIP code must first be applied to all the containers that are to be reassigned to a new destination. The containers must all be traveling to the same outbound destination.

On the Main Menu screen, select Invent Mgmt. On the Invent Mgmt Menu screen, select More options and on the Inventory More Options screen, select Reassignment. The Reassignment screen opens.

1. On the Reassignment screen, skip to the Current Dest ID field and enter the current destination for the group of containers.
2. In the New Dest ID field, enter the new destination ID to which the containers must be reassigned.
3. Press the F8 (Reassign All) key. The reassignments are saved and you can reassign another container or group of containers.

4. Press the F3 (Exit) key to exit the Reassignment screen.

Return to Stock

The Return to Stock screens allows you to delete the store assignment on an outbound container and return the container to reserve storage.

On the Main Menu screen, select Invent Mgmt. On the Invent Mgmt Menu screen, select More options and on the Inventory More Options screen, select Return to Stock. The Return to Stock screen opens.

Figure 4–40 *Return to Stock screen*

1. On the Return to Stock screen, enter the ID of the container to be returned to stock in the CID field.

Note: Master Containers with children are not eligible for stock return.

2. Press the F4 (Done) key. The container is returned to the DC inventory in its entirety and the container status is reset to Inventory (I).

Note: Use the Putaway screen to physically move the merchandise back to a reserve area.

Start Up Conversions

The Startup Convert screen allows you to convert existing inventory into RWMS inventory before the initial startup of the system. You can identify merchandise in reserve storage and forward pick locations, as well as convert unlabeled inventory to labeled inventory.

On the Main Menu screen, select Invent Mgmt. On the Invent Mgmt Menu screen, select More options and on the Inventory More Options screen, select Startup Convert. The Startup Convert Inv screen opens.

Picking

The Picking module allows you to access all pick types supported by RWMS.

Figure 5–1 Picking Menu screen

Picking

Picking activities vary depending on the pick types assigned to items and locations. The following table lists the standard pick types available in RWMS.

Picking outbound	
Pick Type	Definition
B	Bulk pick from reserve to outbound door
C	Container pick from reserve to outbound door
CB	FCP to belt to outbound door
CF	FCP to pallet to outbound door
Picking UPS - Third party sorter (PPS/PTS/TLT)	
Pick Type	Definition
BP	Bulk pick from reserve to UPS
C3	Container pick from FCP to belt to UPS

Picking outbound

CP	Container pick from reserve to UPS
CS	Container pick from FCP to pallet to UPS
U	Unit pick from LTC or UPS to outbound door
UP	Unit pick from LTC to UPS

Preplanned replenishment

Pick Type	Definition
BR	Preplanned bulk replenishment from storage to FCP or LTC
CE	Preplanned container replenishment from FCP to pallet to LTC
CL	Preplanned container replenishment from FCP to belt to LTC
CR	Preplanned container replenishment from storage to FCP or LTC
PL	Preplanned pallet letdown replenishment

Reorder point replenishment

Pick Type	Definition
BD	ROP bulk replenishment from storage to FCP or LTC
CD	ROP container replenishment from storage to FCP or LTC
CO	ROP container replenishment from FCP to pallet to LTC
PR	ROP pallet letdown replenishment

Topoff replenishment

Pick Type	Definition
BT	Topoff bulk replenishment from storage to FCP or LTC
CT	Topoff container replenishment from storage to FCP or LTC
CT	Topoff container replenishment from FCP to pallet to LTC
PT	Topoff pallet letdown replenishment

Put To Store

The Put To Store (PTS) Menu offers you the option of determining the first PTS zone, performing a Put To Store Pick, and closing a PTS carton.

The Put To Store Pick is intended for use in the Put To Store area of the Distribution Center (DC). The Put To Store area is a set of fixed store locations where each location is associated to a single store.

No Pick Package

Label-less picking allows wave-associated picking without label generation. You can perform five types of picking through the No Pick Package screen: Bulk Picking, Case Picking, Unit Picking, Bulk Replenishment Picking, and Case Replenishment Picking.

Picking Direction

During the Picking process, RWMS uses the following distribution methods to determine how to direct the picking associate.

First In First Out (FIFO)

RWMS sends the picker to the location identified as holding that item based upon the putaway timestamp. This is used for merchandise with Best Before Date.

Pick to Clean

RWMS sends the picker to the most locations that will be picked clean to meet the order demand. This pick method will free up the greatest number of locations which can then be used to hold incoming merchandise.

Efficiency

RWMS sends the picker to the least number of locations that will fulfill the order. This pick method minimizes travel time. Picks are generated from stock orders downloaded from the Host.

Bulk Picking

Bulk Picking is picking an entire container of a single item from a reserve location and delivering it to its next location (shipping destination, forward picking location, sorter, etc). Bulk picks can be used in both a conveyor or non-conveyor environment if the proper equipment is used.

On the Main Menu screen, select Picking. On the Picking Menu screen, select Bulk Picking. The Bulk Pick screen opens.

Figure 5–2 Bulk Pick screen

The screenshot shows a screen titled "PR BULK PICKING" with a red icon. It contains several input fields and labels: "TO CID" with a text box, "LOCATION ID" with a text box, "CONFIRM LOCATION ID" with a text box, "CID" with a text box, "CONFIRM" with a text box, "ITEM ID" with a text box, and "REQUIRED QTY" with a text box. At the bottom, there are function key instructions: "F3=EXIT", "F4=DONE", "F6=MM", "F7=CANCEL", and "F8=EMPTY".

1. On the Bulk Pick screen, scan the first picking package label for master label confirmation and location direction. Data opens in the CID and Loc fields.
2. Confirm the pick-from location by scanning the location ID.

3. Confirm the pick-from inventory container ID label by scanning.
4. In the Required Qty field, press the Enter key to confirm the displayed container quantity. You can decrease the quantity if necessary, but you cannot increase it.

Note: Press the F8 (Empty) key if you deplete the location of merchandise.

As products are being picked, the receipt weight and the container weight is maintained at the lowest level of labeling.

You are prompted to enter a catch weight if the item was set up to require such information.

5. In the Total Weight field, enter the total catch weight for the pick. That weight is then equally divided among all containers associated to the pick. If you enter a zero, the container weight is update to zero.

Figure 5–3 Bulk Pick - Total Weight screen

The screenshot shows a handheld device screen with a blue header bar containing a red circle icon and the text "PR BULK PICK". Below the header, the text "TOTAL WEIGHT" is displayed next to a numeric input field containing ".0". At the bottom of the screen, the text "F3=EXIT" and "F4=DONE" is visible.

6. Press the F4 (Done) key.
7. If, at the completion of a pick, but prior to drop-off, RWMS detects any containers with catch weight items and a container weight of 0, you will be prompted to enter the total weight for each zero weight item. This total weight is then evenly divided between all containers with the item. The drop-off process continues after all items have been weighed. The Suggested Location screen displays the door associated with the destination ID.

Figure 5–4 Bulk Pick Suggested Location screen

The screenshot shows a terminal window titled "PR BULK PICK". It contains three input fields: "DEST ID", "SUGGESTED LOCATION", and "TO LOCATION ID". Below these fields, the text "F3=CANCEL" and "F4=DONE" is displayed.

Note: The Suggested Location screen contains a location suggested by the system for you to next move the merchandise.

For outbound shipments, the suggested location is a staging location specific to the ship destination. You can override the suggested location by entering a different location at the To-Location field. For replenishment picks, the suggested location is the location that needs replenishment or a default drop-off location for alternate unit pick systems.

8. In the To-Location field, scan the location where the merchandise is being dropped-on.
9. Press the F4 (Done) key. An Information screen pops up, verifying that the location is marked if the To-Location is marked for cycle count. The Bulk Pick screen opens with the next pick if any remain. The Message Display Line verifies that the current pick is complete.
10. Press the Enter key to acknowledge the message.
11. Enter Y (Yes) to confirm that the location is not empty, and press the Enter key. The location is then marked for cycle count.

Case Picking

Case Picking (container picking), involves pulling one or more full containers from a bulk container in a reserve location.

Breaking the Label Packet functionality allows you to subdivide the picking package through the Container Pick screen.

During the distribution process, the system assigns master container IDs to group picks based on system parameters. For example, it can allow or prevent the mixture of destinations on an individual pallet. However, Zone and Pick Type (bulk, case, or unit pick) always divide the pick package of labels. The pick package is intended to be picked by one individual, which restricts the number of picks of the same type in the

same zone at the same time. The Break Label Packet removes this restriction by allowing the pick package to be subdivided as desired.

You can break the picking package within a specific master label; however, picks for multiple masters cannot be combined. Divide a pick package using the break label package function

Figure 5–5 Standard pick package

On the Main Menu screen, select Picking. On the Picking Menu screen, select Case Picking. The Container Pick screen opens.

3. In the Last Container ID field, scan the last label in the pick package. (If a single case is to be placed on the container, data in the First Container ID and Last Container ID fields are identical.)

Note: Press the F8 (Empty) key if the From-Loc (From Location) field is blank and the pick will empty out the location. The Message Display Line verifies the location is marked empty.

4. Press the F8 (Empty) key if the From Loc (From Location) field is blank and the pick empties out the location. The Message Display Line verifies that the location is marked empty.
5. Press the F5 (Full) key if you cannot fit any more cartons onto the pick-to pallet.

Note: Refer to the Full/Close Containers section for further information.

6. Press the F4 (Done) key.

Note: RWMS maintains the receipt weight and the container weight at the lowest level of labeling during the pick. You are prompted to enter a catch weight if the item was set up to require such information.

7. In the Total Weight field, enter the total catch weight for the pick. That weight is then equally divided among all containers associated to the pick. If the user enters a zero, the container weight is updated to zero.
8. Press the F4 (Done) key. The Container Pick screen opens, ready for the next pick. The Suggested Location screen opens automatically after the last pick. The Message Display Line verifies there are no remaining picks.

Note: If, at the completion of a pick, but prior to drop-off, RWMS detects any containers with catch weight items and a container weight of 0, you are prompted to enter the total weight for each zero weight item. This total weight is then evenly divided between all containers with the item. The drop-off process continues after all items have been weighed.

The Suggested Location screen contains a location suggested by the system for you to next move the merchandise. For outbound shipments, the suggested location is a staging location specific to the ship destination. You can override the suggested location by entering a different location at the To-Location field. For replenishment picks, the suggested location is the location that needs replenishment, or a default drop-off location for unit pick systems.

9. In the To-Location field, scan the location where the merchandise will be moved
10. Press the F4 (Done) key to select the location ID number. An Information screen pops up and verifies that the location is marked for cycle count if you try to move merchandise to a marked location.
11. Press the Enter key to acknowledge the message. An Information screen pops up, stating that the operation is successful if the picks are complete.
12. Press the Enter key to acknowledge the message. If additional case picks exist, the Container Pick screen opens again.

Break the Label Packet

1. On the Container Pick screen, scan a generic container ID. The data opens in the Master Container field.
2. Scan the container label of the first container in a pick directive. The data opens in the First Container field.
3. Scan the container label of the last container in a pick directive. The data opens in the Last Container field.
4. Press the F1 (Display) key. The details are automatically filled in.

F3=CANCEL

F4=DONE

7. In the To-Location field, confirm, by scanning the location where the merchandise is to be dropped off.
8. You are prompted to enter a catch weight if the item was set up to require such information.
9. Enter the total catch weight for the pick in the Total Weight field. That weight is then equally divided among all containers associated to the pick. If the user enter a zero, the container weight is update to zero.

Figure 5–14 Total weight screen

10. Press the F4 (Done) key.

Note: If, at the completion of a pick, but prior to drop-off, RWMS detects any containers with catch weight items and a container weight of 0, you are prompted to enter the total weight for each zero weight item. This total weight is then evenly divided between all containers with the item. The drop-off process continues after all items have been weighed.

11. Press the F4 (Done) key to select the location ID number. An information screen pops up, stating that the operation is successful if the drop-off is complete. Press the Enter key to acknowledge the message. If additional case picks exist, the Container Pick screen opens again.

Note: The Suggested Location screen contains a location suggested by the system for you to next move the merchandise.

For outbound shipments, the suggested location is a staging location specific to the ship destination. You can override the Suggested Location by entering a different location at the To-Location field.

For replenishment picks, the suggested location is the location that needs replenishment, or a default drop-off location for unit pick systems.

Forward Case Pick - Generic

The Forward Case Pick - Generic screen allows you to process the following types of picks using generic labels:

- Picks from forward case pick locations (FCPL) to an outbound door or unit pick system (UPS)
- Preplanned replenishment picks from FCPLs to less than case (LTC) locations

On the Main Menu screen, select Picking. On the Picking Menu screen, select Fwd Case Generic. The FCP Generic screen opens.

Figure 5–15 FCP Generic screen

The screenshot shows the 'PR FWD CASE GENERIC' screen. It has a blue header bar with a red circle icon. Below the header, there are two input fields: 'LOCATION ID' with the value '1F101FCP0030' and 'WAVE NBR' with the value '9'. Below these fields is a section labeled 'SCAN LABEL(S)' with a large empty area for scanning. At the bottom, there are two function keys: 'F3=EXIT' and 'F7=NEXT'.

1. In the Location field, enter the ID of the location to be picked from.
2. In the Wave Nbr field, enter the number of the pick wave.
3. Scan the number of pallet labels that are recommended in the Scan Labels field.

Figure 5–16 FCP Generic -Scan Labels screen

The screenshot shows the 'PR FCP Generic' screen. It has a blue header bar with a red circle icon. Below the header, there are two input fields: 'LOCATION ID' with the value '1F101FCP0030' and 'WAVE NBR' with the value '9'. Below these fields is a section labeled 'SCAN 1 LABEL(S)' with two empty input fields for scanning. At the bottom, there are two function keys: 'F3=EXIT' and 'F7=NEXT'.

Note: You can choose to scan only one of multiple labels, if desired. Press the F7 (Next) to continue the pick process without scanning all the labels.

4. On the next screen, confirm the source location and item. You can enter either the item ID or UPC to confirm the item.

F3=PREVIOUS MENU

PTS Close Containers

The PTS Close Container screen is a standalone screen that allows you to close containers without having to access the picking screen. For example, if you recognize that a container has been open for a certain number of days, the container can be closed and shipped, using the PTS Close Container screen, even if the container is not full. The status of such containers is based on the PTS Containers to Close Report.

On the Main Menu screen, select Picking. On the Picking Menu screen, select PTS Picking Options. On the PTS Menu screen, select PTS Close Container. The Close Container screen opens.

Figure 5–46 Close Container RF screen

PR PTS CLOSE CONTAINER

CONTAINER ID

LOCATION ID

DEST ID

F3=EXIT
 F4=CLOSE

1. On the Close Container screen, scan the container destination ID (CID) for the carton you want to close. The location and destination ID are displayed.
2. Press the F4 (Close) key.

Note: The PTS Close Container functionality closes a container after unit picks are performed in a Put To Store system. RWMS updates the container's final location and the to location and applies any WIP codes that are needed. The Close process applies the Weigh WIP code to containers with catch weight items. The WIP code must be processed using the Weigh Container screen in the Processing Module before the container is shipped.

PTS Unit Picking

The PTS Unit Pick screen allows you to process a standalone container. The containers must be in Distributed status and must have an internal or PTS destination. The master containers must have either an outbound destination or an internal PTS destination.

On the Main Menu screen, select Picking. On the Picking Menu screen, select PTS Picking Options. On the PTS Menu screen, select PTS Unit Pick. The PTS Unit Pick screen opens.

4. Scan the location ID where the item is located. The Loc (Location) and Confirm Loc (Confirm Location) fields must match.
5. Press the F8 (Mark) key to mark the location for cycle count if there is a problem with the location. An Information screen pops up, stating that the operation is successful.
6. Press the Enter key to acknowledge the message.

7. Press the F3 (Exit) key to exit the Confirm Location screen.
8. Confirm/scan the container you are picking the item from. The Unit Picking screen opens.

Capture the Container Weight

As products are being picked, the receipt weight and the container weight will be maintained at the lowest level of labeling.

If the item was set up to require a catch weight, you must capture the container weight before completing the pick.

1. On the Unit Picking screen, press the F9 (Weigh) key. The Weigh Container screen opens with data in the Item ID field.

Figure 5–53 Capture weight screen

2. Scan in the container ID that holds the item with a catch weight.
3. In the Weight field, enter the weight for the container. The container weight will be an accumulation of the items placed into the pick_to container.
4. Press the F4 (Done) key. You are returned to the Unit Picking screen.
5. Press the F4 (OK) key when all picks for this item are complete. The Confirmation Location screen pops up with a new picking location.
6. Move to the new location and continue the picking process.
7. Repeat Steps 2-5 until picking is complete.
8. Press the F3 (Exit) key to the exit the picking process.

Close Full Containers

When the container is successfully closed, if there are picks remaining, the Open Container screen opens.

1. On the Unit Picking screen, press the F6 (Full) key if one of the containers is full. The Close Container screen opens.

TYPE PALLET

6. In the New Container ID field, enter a generic container ID and press the Enter key.
7. In the Type field, enter the type of container.
8. Press the Enter key. You return to the Unit Picking screen.

Skip Picks

1. On the Unit Picking screen, press the F5 (Skip) key to skip a pick. The Skip Pick screen pops up.

Figure 5–56 Skip Picks Screen

2. Scan the container you want to skip. The Message Display Line states that the operation is successful.
3. Press the Enter key to acknowledge the message.
4. Press the F3 (Exit) key, after the container is scanned, to return to the Unit Pick screen.

Note: Skipped pick-to containers do not need to have an assigned weight because items with the catch weight = Y are not placed in the container.

Adjust Pick Quantities

You can decrease the number of items requested for a pick if the location does not contain the appropriate number of items. The adjusted number must be less than the requested amount. The unpicked quantity becomes a candidate for backorder, depending on the status of the backorder system parameter.

1. On the Unit Picking screen, press the F7 (Adjust) key. The Adjust Quantity screen opens.

Figure 5–57 Adjust Quantity Screen

2. Scan the container ID that is being adjusted. Available data opens in the Container ID field.
3. In the Qty field, enter the quantity able to be picked. Adjusting the quantity to zero deletes the pick.
4. Press the F4 (OK) key to accept the new quantity. The Message Display Line verifies the successful operation.
5. Press the Enter key to acknowledge the message.
6. Press the F3 (Exit) key to cancel adjusting the quantity. You return to the Unit Picking screen.

Mark Locations for Cycle Count

- On the Unit Picking screen, press the F8 (Mark) key to mark a location for cycle count.

Note: The error message “Insufficient privilege to perform this operation” is displayed, if the privilege level is less than the “mm_sec_level_rf” current value. In other words the user should have the sufficient privilege to Mark Cycle count.

Complete the Unit Pick

You are returned to the Begin Unit Picking screen when all picks are complete.

- Use the Move screen to transport merchandise to its next destination. Refer to the [Move](#) section in the Inventory Management chapter for more information.

Unit Picking By Group

In order to optimize performance and efficiency in the unit picking area, RWMS allows you to group unit picking containers together and assign them a group number. This feature is available when distributing orders manually using the Select Orders screen or when utilizing the automated wave functionality.

On the Main Menu screen, select Picking. On the Picking Menu screen, select Unit Picking. The Container Unit/Group Unit Pick screen opens.

Figure 5–58 Container Unit/Group Unit Pick and Group Unit Pick RF screens

The screen displays a menu with two options: 1. CONTAINER UNIT PICK and 2. GROUP UNIT PICK. Below the menu is a CHOICE field with two empty boxes. At the bottom, it shows F3=EXIT and F4=BEGIN.

PR UNIT PICKING	
1.	CONTAINER UNIT PICK
2.	GROUP UNIT PICK
CHOICE	
F3=EXIT F4=BEGIN	

1. Select Group Unit Pick and press the F4 (Begin) key. The Group Unit Pick screen opens.

Figure 5–59 Group Unit Pick screen

The screen displays input fields for GROUP, SLOT, CONTAINER ID, ITEM ID, and PICK FROM CID. At the bottom, it shows F3=EXIT, F4=DONE, and F6=REVIEW.

PR Group Unit Pick	
GROUP	
SLOT	
CONTAINER ID	
ITEM ID	
PICK FROM CID	
F3=EXIT F6=REVIEW F4=DONE	

2. In the Group field, enter the group number.

Note: Once the group number is entered, you are prompted to move to the first unit pick location in the location ID sequence and asked to confirm the location. The Item ID, Item UPC and Item description are displayed. After confirming the location, you are prompted to confirm the item by entering either the item ID or the item UPC. Once the confirmations are completed, you must press the F4 (Done) key to display the pick directives.

3. In the Slot field, enter the slot number.
4. In the Container ID field, scan the container you are to pick to. You can scan up to eight different container labels.
5. In the Item ID field, enter the item ID number.
6. In the Pick from CID field, enter the Container ID number that the item is picked from.
7. Press the F4 (Done) key. The system displays as many Put directives as possible.

Note: There may be more Put Directives than will fit on a single screen for a given location. It is best to work one screen at a time. The grab quantity displayed reflects the total number of inner packs needed to fulfill all puts currently displayed on the screen. When all put directives for the slots listed on the screen have been fulfilled, press the F4 (Done) key. If there are more put directives, a new unit picking location screen opens.

If you need to skip a put directive for a specific slot, you can press the F5 (Skip) key. A pop-up screen opens, prompting you to specify a slot. You can press the F3 (Exit) key to cancel the skip process, or enter the slot to be skipped and press the F4 (Done) key. If a slot becomes full and you need to close the current container and open a new container, press the F6 (Full) key.

The following pop-up screen opens:

Figure 5–60 Group Unit Pick Put Derivative screen

PR GROUP UNIT PICK

CID

GRABS

PUT	SLOT	PUT	SLOT	PUT	SLOT

TOTAL

F2=WT F6=FULL
 F3=EXIT F7=ADJUST
 F4=DONE F8=ALL ADJUST
 F5=SKIP

8. Enter the appropriate slot number and the number of units that were put into the container being closed. If labeled picking is No, then you must enter the container ID associated to the full container.
9. Press the F4 (Done) key.

Note: If you need to adjust the put quantity for a specific slot, you can press the F7 (Adjust) key. Enter the appropriate slot, the number of units being put into the slot, and then press the F4 (Done) key. You may not adjust the put quantity upward or below zero. As a result of the adjustment, the location will be manually marked for cycle count.

If you want to adjust the put quantity for a slot and as a result have all put directives set to zero for each higher slot, press the F8 (All Adjust) key. A pop-up screen will be displayed prompting you to enter the appropriate slot and number of units being put into the slot. Confirm the adjustment by pressing the F4 (Done) key. All put directives for the higher sequential slots are canceled and the location is marked for cycle count.

Complete the Group Unit Pick

You are returned to the Group Unit Picking screen when all picks are completed for a group.

Note: If the labeled picking flag is N, the system requests a container ID to be entered for each occupied slot.

1. On the Group Unit Picking screen, enter the appropriate container ID for each sequential occupied slot number. After all slots are processed, the screen will exit.
2. Use the Move screen to transport merchandise to its next destination. Refer to the [Move](#) section in the Inventory Management chapter for more information.

Repair Picking

Repair Picking is a special Picking screen as the eligible containers to pick are determined manually from the GUI Repair Order Container Assignments screen. This screen is used to pick specific containers to be shipped to a specific Repair facility.

On the Main Menu screen, select Picking. On the Picking Menu screen, select Unit Picking. The Container Unit/Group Unit Pick screen opens.

2. Enter the Container ID in the **Confirm Container ID** field and press the F4 (Done) key.
If there are more containers to be picked, confirm the container IDs.
If there are no more containers, you get a confirmation message that there are no picks left, press F6 (End) key to end picking. The Repair Picking Suggested Location screen opens.

Figure 5–63 Repair Picking Location

The screenshot shows a handheld device screen with a blue header bar containing the text "PR REPAIR PICKING" next to a red circular icon. Below the header, the screen is divided into sections. The first section is labeled "SUGGESTED LOCATION" and contains a text field with the value "SDOOR01". Below this is a section labeled "TO LOCATION ID" with an empty text field. At the bottom of the screen, there are two lines of text: "F3=CANCEL" and "F4=DONE".

3. Enter the Location ID in the To Location ID field.
4. Press the F4 (Done) key to complete the Repair Picking transaction.

You can use the following additional function keys available during Repair Picking:

- F3 (Exit) key: Allows the Exit from the Picking Screen. Any data processed to this point is rolled back.
- F4 (Done) key: Executes the transaction, as described above.
- F5 (Skip) key: Allows skipping of a specific pick. When a pick is skipped, RWMS then presents the next pick in the path.
- F6 (End) key: Forces the pick path to end and the Drop-off RF screen to display. After drop-off, the Repair Picking process can be started fresh.

Processing/Others

On the Main menu, select Processing/Others. The Processing Menu screen opens.

CONTAINER ID

F3=EXIT
F4=DONE

4. Enter the ship kit containers. If you want to pack the components into separate cartons, scan each individual ship container.

Note: The cartons are created upon scanning, if necessary. The kit item ID is added to the carton. Multiple ship containers will have the same kit item ID with an item quantity of 0. If the kit is built to replenish stock, the program creates an inventory container at the current WIP location.

5. Press the F4 (Done) key after entering the containers. You are returned to the Build Kits screen.

Disassemble Kits

Use the Disassemble Kit screen to disassemble a master item into its individual component items.

Note: This process is only valid for inventory containers.

On the Main Menu screen, select Processing/Others. On the Processing Menu screen, select Disassemble Kit. The Disassemble Kit screen opens.

Figure 6–6 *Disassemble Kit screen*

PR DISASSEMBLE KIT

F3=EXIT	
F4=DONE	

1. On the Disassemble Kit screen, enter the ID of the shipping container that you want to disassemble. The component items of the kit are displayed.
2. Press the F4 (Done) key to complete the task.

Note: Once the breakdown is completed, inventory is adjusted to indicate the loss of a master item and a gain of the component items. The component items are automatically added to the Pick From Location inventory that is associated with the WIP code location.

Process WIPs

The Process WIP screen provides you with the minimal functionality necessary to process a container's WIP code.

Record WIP Code Activity

On the Main Menu screen, select Processing/Others. On the Processing Menu screen, select Process WIP. The Process WIP screen opens.

Figure 6–7 Process WIP RF screen

The screenshot shows a screen titled "PR PROCESS WIP" with a red icon. It contains several input fields: "CONTAINER ID", "NEXT LOCATION ID", "NEXT WIP", "DESCRIPTION", and "START". Below these fields, there are function key definitions: F1=START, F3=EXIT, F8=PRSNL, F2=INSTR, and F4=FINISH.

1. On the Process WIP screen, enter the container ID in the Container ID field. The next location and WIP code are displayed.

Note: If the WIP code is currently in progress for a container, the location assigned to that specific code opens in the Next Loc field. Otherwise, the next WIP Code in sequence opens in the Next WIP field.

2. Press the F1 (Start) key to record the start time.
3. Press the F4 (Finish) key to record the end time.
4. When prompted to acknowledge the action, press the Enter key.

Note: If the start time stamp is blank, pressing the F4 (Finish) key will set it along with the end time stamp.

Order Consolidation

The Order Consolidation screen provides a concise method of consolidating nonchuteable or late-arriving items with an order that is already waved and picked. Consolidation of an order may need to occur if:

- Non-chuteable/high value items that are part of an inducted pack wave cannot be inducted into the sorter, due to physical limitations.
- Hot picks are created for an item for which the order is in the process of being packed
- Hot picks are created for an item for which the order is packed and staged.

You can also use the Order Consolidation screen in the packing area when a short tote is detected to determine if the shorted items have already been staged in the exception area, or if the outbound container itself needs to be staged in the exceptions area.

On the Main Menu, select Processing/Others. On the Processing Menu, select Order Consolidation. The Order Consolidation screen opens.

Figure 6–8 Order Consolidation screen

1. On the Order Consolidation screen, scan an outbound container or a tote that contains non-chuteable/high value merchandise or hot pick merchandise.
2. Press the F3 (Exit) key to exit the Order Consolidation screen.

Ticketing

The Ticketing screen provides you with a hand-held terminal driven ticketing solution. You also have the option of overriding default printer queues associated with one or more ticket types through the Modify pop-up screen.

Check Ticket Queues

On the Main Menu screen, select Processing/Others. On the Processing Menu screen, select Ticketing. The Ticketing screen opens.

3. In the Queue Name field, enter the name of the desired print queue.
4. Press the F4 (Done) key.

Continue the Ticketing Process

- 1. On the Ticketing (Print Queue) screen, select the desired print queue.
- 2. Press the F1 (Continue) key. The Ticketing (Container) screen opens.
- 3. In the Container ID field, enter the ID of the container requiring tickets.

Figure 6–11 Ticketing (Container) RF screen

- 4. Repeat the previous step until all of the required containers have been entered.
- 5. If the ticketing WIP code has not been assigned to the container, or the items in the container have already been ticketed, you may receive the following confirmation:

Table 6–1 WIP message and actions

Message	WIP has not been assigned to the container. Do you wish to continue? Confirm Y/N.
Action	Enter Y and press the Enter key to confirm assigning the WIP Code.
Alternative Action	Enter N and press the Enter key to cancel assigning the WIP code.

A trailer ticket is printed after the container's string of tickets has been printed. The User ID and Container ID are included on the trailer ticket. In some situations, a container can have more than one item ID, each of which can have a different ticket type. A trailer ticket for each ticket type is generated, each on the printer queue for that ticket type.

Weigh Containers

The Put To Store (PTS) Close Container process, the PPS download and the UPS upload programs apply the weigh WIP code to containers coming out of the unit pick system that contain catch weight items. The Weigh Container screen allows the user to process the weigh WIP code.

On the Main Menu screen, select Processing/Others. On the Processing Menu screen, select Weigh Container. The Weigh Container screen opens.

Note: If the container is from a storage location, and the contents of the container are either completely or partially distributed but not yet picked, a warning message opens, notifying you that the container has been distributed.

11. Continue the picking process or skip to the next pick.

Skip a Pick

When prompted to scan a location ID and a container ID on the Confirm Location screen, you can choose to skip the current pick and move on to the next pick.

1. On the Confirm Location screen, enter the location ID in the Conf Loc field.
2. In the Container ID field, enter the container ID.
3. Press the F7 (Skip) key. Data for the next pick opens.
4. Continue with picking process or skip to the next pick.

Drop a Case Pick at a Staging Location

If, when you are performing a case pick operation, the pick-to container becomes full, you can indicate that the current pick-to container must be dropped off at a staging location.

1. On the Confirm Location screen, press the F9 (Full) key. The Complete WIP Pick screen opens.

Figure 6–16 Complete WIP Pick screen

Figure 6–17 New Container ID RF screen

2. In the Confirm Loc field, enter the ID of the suggested or an alternative staging location.
3. Press the F4 (Done) key. The New Container ID screen opens.
4. In the New Container ID field, enter the ID of a new pick-to container.
5. Press the F4 (Done) key. You returned to the Confirm Location screen.

Complete a WIP Pick

Once you have completed a bulk pick or completed the last case pick in the zone, the picking operation is finished.

1. Press the F4 (Done) key. The Complete WIP Pick screen opens.
2. In the Confirm Loc field, enter the ID of the suggested or an alternative staging location.
3. Press the F4 (Done) key. The WIP Picking screen opens.

Receiving

The receiving module covers the following tasks:

- [FPR Pallet Breakdown](#)
- [FPR Print Labels](#)
- [Lot Tracking](#)
- [Measure Dimensions](#)
- [Receiving Appointments](#)
- [Return Receiving](#)
- [Vendor Non Conformance](#)

The Receiving option lets you: open appointments and receive merchandise, scan merchandise using bar code labels and RF devices, perform quality control, mark merchandise or appointments for trouble, reconcile appointments, close appointments, release trailers, build containers, track lot identification for dated merchandise, and process return receiving.

Note: When a merchandise which is beyond the receive not after date is received, the system issues a warning message. You may choose to either continue receiving merchandise or not.

On the Main menu, select Receiving, the Receiving Menu screen opens.

2. If you do not know the appointment number, enter a valid door location in the Location ID field to search for the appropriate appointment number.
3. Press the F3 (Exit) to return to the Receiving screen.

4. Press the F4 (Done) to process pallet breakdown. Refer the [Pallet Breakdown \(Generic\)](#) for more information to move to the processing screen.

The Print CID Labels detail screen allows you to select your printer and indicates how many pallets must be printed for the appointment.

1. To view the pallets that require printing press the F9 (View CIDS) key from the home screen.

Figure 7–9 Print CID Labels (Details)

F9 = VIEW CIDS	

2. When you scan a pallet the Unselected Qty is reduced and the Selected Qty is increased. Once you have scanned all of the desired pallets, press the F4 (Print Selected) key.

The system now generates the required labels for the pallets scanned.

Lot Tracking

Incoming merchandise can have lot tracking information attached to it in order to provide access to manufacturers' lot codes and identification. This information is entered upon receipt of the item or it can be added later. Lot tracking provides expiration information and picking data, and makes tracking easier if a recall should occur.

Record a Lot Number

On the Main Menu screen, select Receiving. On the Receiving Menu screen, select Lot Tracking. The Lot Tracking screen opens.

Figure 7-11 Lot Tracking RF screen

Note: This screen can be also be accessed from the following screens: ASN UCC Receiving, Blind Receipt, NSC Receiving, PO Receiving, and Receiving.

1. On the Lot Tracking screen, enter the container ID in the Container ID field.
2. In the Lot field, scan or enter the lot number provided by the manufacturer.
3. [Optional] In the Pick By Date field, enter the date that the item needs to be picked by.
4. Press the F4 (Done) key.
5. When prompted to acknowledge the action, press the Enter key.

Measure Dimensions

The Measure Dimensions screen allows you to review and update the dimensions of a received item or case. If a master container is entered, you will cycle through each child container and the unique SKUs found in the container.

Measure an Item or Case

On the Main Menu screen, select Receiving. On the Receiving Menu screen, select Measure Dimensions. The Measure Dimension screen opens.

Figure 7–12 *Measure Dimension Container prompt for RF, WR, and TM screens*

Note: If you access the Measure Dimension screen from the Receiving menu, you are prompted to enter the ID of the container. When accessed from the ASN UCC Receiving screen, the container is already known.

Figure 7–13 Measure Dimension for RF, WR and TM screen

3. Edit the dimensions as necessary. If you selected a Cubiscan device, you may want to edit the dimensions returned from the selected device:

- Press the F7 (Item) key to view and then edit the item dimensions from the selected Cubiscan device.
 - Press the F8 (Case) key to view and then edit the case dimensions from the selected Cubiscan device.
4. To apply trouble codes to the container, press the F9 (Trouble) key. Refer to the [Mark Troubled Merchandise](#) section for additional information.
 5. Press the F4 (Done) key to clear the screen in order to check another container.

Receiving Appointments

The RF receiving screen allows you to open and receive all types of appointments created in RWMS. When the appointment number is entered the system recognizes the type of appointment being received and then calls the appropriate supporting screens.

On the Main Menu screen, select Receiving. The Receiving Menu screen opens. On the Receiving Menu screen, select Receiving. The Initiate Unload screen opens.

Press the F6 (View) key to select values using LOV.

- c. The Scan Case Label option is checked by default. You can override the selection and uncheck the option if necessary.

Note: Scan Case Label field is enabled if SCAN_CASE_LABEL attribute is associated with the FPR process.

- d. Press the F3 (Exit) screen to return to Initiate Unload screen.
 - e. Press the F4 (Next) key to create appointment details. Refer to [Receive Appointments with Flexible Pallets](#) section for more information.
7. Press the F4 (Open) key to open the appointment. Depending on the type of appointment, one of the following screens opens:
- If an appointment is based on ASNs and all the containers are marked with UCC labels, the ASN UCC Receiving screen opens. Proceed to the [Receive ASN Appointments By Container](#) section.
 - If an appointment is based on ASNs and the ASNs are at the PO level, the PO Receiving screen opens. Proceed to the [Receive ASN Appointments By PO](#) section.
 - If an appointment is based on both container type and PO type ASNs, you can select which type to process first. Proceed to the [Receive Appointments with Both Types of ASNs](#) section.
 - If an appointment is not based on ASNs, but casepack and container quantities are known, the Receiving screen opens. Refer to the [Receive Non-ASN Appointments](#) section.

- If an appointment is a PO receipt and the labeled receiving parameter is turned off, the Receiving (Generic) screen opens. Proceed to the [Receive POs with Generic Labels](#) section.
- If an appointment was scheduled for unknown casepack and container quantities, the NSC Receiving screen opens. Proceed to the [Receive Non-Specified Casepack \(NSC\) Appointments](#) section.
- If an appointment was scheduled using the Flexible Pallet Receiving workflow (with or without details), the Create Appt Detail screen opens. Proceed to the [Receive Appointments with Flexible Pallets](#) section.

Receive ASN Appointments By Container

1. On the Initiate Unload screen, enter an appointment number. If the appointment is based on container type or tare type ASNs, the ASN UCC Receiving screen opens.

Figure 7–19 ASN UCC Receiving RF, WR and TM screens

The screenshot shows the 'PR ASN UCC RECEIVING' screen with the following fields and values:

APPT NBR	214001
CID	AJISH-CONT-2
ASN	AJISH-ASN-2
ASN TYPE	T
DEST ID	1000
PO	AKPDPO1
ITEM ID	AKCRITEM01
CONTAINER QTY	1

Function keys displayed at the bottom:

- F2=BRKDOWN F6=DIM F9=TRBL
- F3=EXIT F7=CLOSE
- F4=DONE F8=LOT

2. In the CID field, enter the UCC number.

Note: After entering the container ID, the item number appears in the Item field. If the container is a pallet containing multiple item numbers, Multiple appears in the Item field. The number of containers on the pallet opens in the Container Qty field.

3. In the Container Qty field, enter the container quantity.
4. If a receipt weight or best before date are required, you are prompted to enter the required information. Enter the weight of the incoming container and the expiration date as necessary. Press the F4 (Done) key to save the information.
5. Press the F4 (Done) key to confirm receipt of the container.

Note: Container level details are deleted from the ASN after each container is successfully received.

6. Perform any additional tasks as necessary:
 - Press the F2 (Breakdown) key to split the contents of a container with multiple SKUs into multiple containers. Refer to the [Break Down Pallets for ASN Appointments](#) section for additional information.
 - Press the F6 (Dimensions) key to view and update the dimensions of an item or case. Refer to the [Measure Dimensions](#) section for additional information.
 - Press the F8 (Lot) key to record a lot number. Refer to the [Lot Tracking](#) section for additional information.
 - Press the F9 (Trouble) key to mark a troubled container or appointment. Refer to the [Mark Troubled Merchandise](#) section for additional information.
 - Press the F7 (Close) key to close the trailer. Refer to the [Close Trailers](#) section for additional information.
7. If there is any merchandise that is not part of the appointment, the Overages Not Received screen comes up which is used to manually enter the overage items in the system.

Note: Overages Not Received screen comes up only if the system control parameter *overage_entry_required* is set to Yes. If set to Yes, the Overages Not received screen appears when you close the appointment. You can either enter the overage details or opt to skip by exiting the screen.

Break Down Pallets for ASN Appointments

If the work Multiple appears in the Item field instead of an item number, you can choose to move cases to other pallets.

1. On the ASN UCC Receiving screen, press the F2 (Breakdown) key. The unique SKUs and number of cases of each are displayed on the ASN Pallet Break screen. You can scroll through the list of items if there are more than can be displayed on the screen at one time.

Figure 7–21 ASN Pallet Break main screen

The screenshot shows a software interface titled "PR ASN PALLET BREAK". It contains several input fields and a table. The fields are: "APPT NBR" with value "214001", "FROM CONTAINER" with value "AJISH-CONT-1", "ITEM ID", and "CONTAINER QTY". Below these is a table with two columns: "ITEM ID" and "CONTAINER QTY". The table has two rows of data: "AKBITEM1" with quantity "1" and "AKBITEM2" with quantity "1". There are four empty rows below the data. At the bottom, it says "F2=BRKDOWN" and "F3=EXIT".

2. In the PO field, enter the purchase order number.
3. In the Dest field, enter the ID of the destination for the merchandise.

Note: You may be warned that the PO/destination combination is invalid. This may happen if the combination does not exist on a valid appointment. You may choose to create a blind receipt. Refer to the [Receiving Appointments](#) section for additional information.

4. In the Container ID field, enter the ID of the generic container.

Note: RWMS automatically marks the first ASN/PO/destination container received for quality audit if the vendor percent QA sampling is greater than zero.

5. If the dimensions of the container are required, you are prompted to enter the required information. Enter the length, width, and height of a case.
6. Press the F4 (Done) key to save the dimensions.
7. If there is any merchandise that is not part of the appointment, the Overage Not Received screen comes up when closing the appointment, which is used to manually enter the overage items in the system.

Note: The Overage Not Received screen appears only if the system control parameter *overage_entry_reqd* is set to Yes. When set to Yes, the Overages Not received screen appears when you try to close the appointment. You can either enter the overage details or opt to skip by exiting the screen.

If the parameter is set to No, the PO Receiving screen closes when the F7 button is selected.

Receive Appointments with Both Types of ASNs

An appointment may be based on both container type and PO type ASNs. You can choose which type of ASN you want to process first.

1. On the Initiate Unload screen, enter an appointment number. If the appointment contains both PO type and container type ASNs, an ASN menu opens.

Figure 7–25 ASN Menu RF, WR, and TM screens

The screenshot shows a screen titled "PR ASN UCC RECEIVING". It contains several input fields and function keys:

- APPT NBR: 214001
- CID: AJISH-CONT-2
- ASN: AJISH-ASN-2
- ASN TYPE: T
- DEST ID: 1000
- PO: AKPDPO1
- ITEM ID: AKCRITEM01
- CONTAINER QTY: 1
- Function keys: F2=BRKDOWN, F6=DIM, F9=TRBL, F3=EXIT, F7=CLOSE, F4=DONE, F8=LOT

2. Enter the number of the desired option and press the Enter key:
 - Enter 1 to process a container type ASN. The ASN UCC Receiving screen opens. Refer to the [Receive ASN Appointments By Container](#) section for additional information.
 - Enter 2 to process a PO type ASN. The PO Receiving screen opens. Refer to the [Receive ASN Appointments By PO](#) section for additional information.

Receive Non-ASN Appointments

1. On the Initiate Unload screen, enter an appointment number. If the appointment is not based on ASNs, the Receiving (Container) screen opens.

Figure 7–26 Receiving (Container) RF, WR, TM screens

The screenshot shows a handheld device screen titled "PR RECEIVING". It contains several input fields and a list of function keys at the bottom. The fields are: APPT NBR (with value 71004), DOOR, CONTAINER ID, ITEM ID, and BEST BEFORE DATE. The function keys listed are F3=EXIT, F5=CLOSE, F7=NEXT, F8=LOT, and F9=TROUBLE.

PR RECEIVING

F5=CLOSE F9=TROUBLE	
F7=NEXT	

2. On the Receiving screen, enter the container ID in the Container ID field. Press the Enter key. Which screen appears next depends on the type of label.
 - If the scanned label is for a master bulk container, you are prompted to enter the number of unlabeled containers associated with the master bulk container. Refer to the [Check a Master Bulk Container](#) section for instructions.
 - If the scanned label is for the first line item on a purchase order, the Unload Check screen opens. Refer to the [Check the First PO/Line Item](#) section for instructions.
 - If the scanned label has a UCC/EAN 128 flag, then you are prompted to enter the UCC/EAN 128 label.
3. When you are returned to the Receiving screen, you can continue the receiving process. Perform any additional tasks as necessary:
 - Press the F9 (Trouble) key to mark a troubled container or appointment. Refer to the [Mark Troubled Merchandise](#) section for additional information.
 - Press the F8 (Lot) key to record a lot number. Refer to the [Lot Tracking](#) section for additional information.
4. Press the F5 (Close) key when you are done receiving the appointment. You get the following message: Message alert: Not all containers received. Ready to scan unused labels?.
5. Enter "Y" to be taken to the Scan Unused Labels screen. Enter "N" if you want to continue receiving the containers.
6. After receiving all the containers, you are prompted to close the trailer. Refer to the Close Trailers section for additional information.

Receive POs with Generic Labels

The Receiving (Generic) screen opens when a PO appointment with no printed receiving package is opened through the Initiate Unload screen. Receiving labels are not printed when the system parameter, labeled_receiving, is set to N (No).

1. On the Initiate Unload screen, enter an appointment number. If the system does not use labeled receiving, the Receiving (Generic Label) screen opens.

Figure 7-27 Receiving (Generic) RF, WR, and TM screen

1. In the Cntr Qty field, enter or edit the number of containers associated with the master bulk container.
2. Press the Enter key to return to the Receiving screen.

Receive Non-Specified Casepack (NSC) Appointments

The NSC Receiving screen allows you to receive allocated and unallocated merchandise even though casepack quantities were unknown when the appointment was scheduled. It is not possible to produce receiving labels for NSC appointments. These shipments must be labeled with generic labels or be pre-labeled by the vendor.

If there are any pre-distributions against incoming NSC containers, RWMS updates the container to reflect the outbound destination and changes its status to Distributed (D). If no pre-distributions exist for the container, RWMS determines whether the container is to be sent to Quality Assurance (QA) or Vendor Audit (VA).

Initial detection of a PO/Item or PO/Style combination causes RWMS to apply the WIP code for First Carton Seen to the container and displays a message to the user. This WIP code is defined in the system parameters and is always the first WIP code to be processed. The QA, VA, or First Carton Seen WIP codes may all be applied to the same container.

Receive NSC Appointments

1. On the Initiate Unload screen, enter an NSC type appointment number. The NSC Receiving screen opens.

Figure 7-32 NSC Receiving screen

2. In the Appt Nbr field, enter the appointment number, or press the F2 keys to view a list of NSC type of appointments. Select the desired appointment and press the Enter key.
3. If the item is set up to use UCC/EAN 128 labels, then you are prompted to scan the UCC/EAN 128 label. This label will include data such as the UPC and best before date (for perishable items).
4. In the Container ID field, enter/scan the number on the generic label.

5. In the PO Nbr field, enter the purchase order number, or press the F4 keys to view a list of purchase orders. Select the desired purchase order and press the Enter key.

Note: If you press the F1 (Clear) key, all fields are cleared except the Appt Nbr field. Press the F1 (Clear) key again to clear the Appt Nbr field.

6. In the Item field, enter the Item ID or press the F2 keys to view a list of items. Select the desired item and press the Enter key.

Note: If there is only a single SKU, the item ID is automatically filled in.

7. In the Casepack field, enter or edit the casepack quantity for the current container.
8. In the Container Qty field, edit the container quantity as necessary. The calculated unit quantity must match the scheduled quantity. If you enter more than the scheduled quantity, a warning message is displayed.

Figure 7–33 Receiving Warning Message

You cannot proceed with the receiving until the calculated unit quantity matches the scheduled quantity.

9. Perform any additional tasks as necessary:
 - To record a lot number, press the F5 (Lot) key. Refer to the [Lot Tracking](#) section for additional information.
 - To apply trouble codes to the container or appointment, press the F9 (Trouble) key. Refer to the [Mark Troubled Merchandise](#) section for additional information.

- If this is the first container for an appointment/PO/item, press the F8 (First) key to validate the contents and provide additional details. Refer to the [Check the First PO/Line Item](#) section for additional information.
10. Press the F4 (Done) key to process the container.
- When the container is successfully received, only the Container ID field is cleared. You can continue to the next container.
 - If the newly-entered container contains multiple SKUs, press the F2 (Item) key. The Container ID field is repopulated with the previous Container ID and the Item ID field is cleared. Enter the new Item ID and press the F4 (Done) key to process.
-
- Note:** When you receive a mixed-SKU container, the WIP code defined for MIXED_SKU in the System Parameters is applied to the container, unless the container is to be cross-docked.
-
11. If there is any merchandise that is not part of the appointment, the Overage Not Received screen comes up which is used to manually enter the overage items in the system.

Note: Overages Not Received screen comes up only if the system control parameter overage entry required is set to Yes. If set to Yes, the Overages Not received screen appears when you try to close the receiving. You can either enter the overage details or opt to skip by exiting the screen.

 - Reason for overage
12. Select F4 to process the data or F3 to exit the screen.
 13. When you have received all containers for the current appointment, press the F6 (Close) key to close the appointment. Refer to the [Close Trailers](#) section for additional information.

Note: NSC Receiving is the only type of receiving in RWMS in which you may over-receive for an appointment. If an over-receipt is detected, you receive a warning and may continue to receive. If receiving is automated, no message opens.

Receive Appointments with Flexible Pallets

Flexible Pallet Receiving allows you to receive merchandise on pallets and re-organize them based on the final destination and actual quantities received.

1. On the Initiate Unload screen, enter an appointment number. If an appointment is of type FPR (with or without details), the Create Appt Detail screen opens.

Figure 7–35 Create Appt Detail screen

2. The Appt Nbr and Location ID fields are populated automatically. You cannot change the Appt Nbr value, but you can change the value in Location ID field.

Note: If you change the value in Location ID field, the system uses the new location ID as the current location of the new generic pallet ID.

3. Scan the generic pallet ID in the Pallet ID field. If the generic labels are not available, you can print them. Press the F7 (Gen CID) key to print the Pallet labels. Refer to the [Generate CID](#) section for additional information. If you need to

generate some generic pallet IDs press the F7 (Gen CID) key. In the screen that opens, enter or scan your print queue, enter the number of labels to print, and press F6 key to print.

4. In the Item ID field, scan the UPC or EAN 128 label or Item ID to identify the item.
5. If the item belongs to a single PO, then the PO number is automatically populated in the PO Nbr field.

Note: You must manually enter the PO number for a blind appointment.

If the item belongs to multiple POs, then the Create Appt Details screen opens listing all the POs.

Figure 7-36 *Create Appt Detail screen (Multiple POs)*

The screenshot shows a screen titled "PR CREATE APPT DETAIL". At the top, there is a text field containing "TEST FPR". Below it is a section for "VENDOR NAME" with a dropdown menu showing "VENDOR 1". The main part of the screen is a table with three columns: "PO NBR", "CASES", and "PALLETS". The table contains two rows of data: "PO-JP1" with 9 cases and 9.0 pallets, and "PO-JP" with 0 cases and .0 pallets. There are four empty rows below the data. At the bottom of the screen, there are two lines of text: "F3=EXIT" and "F4=DONE".

PO NBR	CASES	PALLETS
PO-JP1	9	9.0
PO-JP	0	.0

Select the PO number from the list and press the F4 (Done) key. The Create Appt Detail screen opens.

SCAN CID

CIDs SCANNED 2

F4=DONE

Scan the CID values. The CIDs Scanned field indicates the total number of cases scanned. Press the F4 (Done) key to return to the Create Appt Detail (Item Detail) screen.

- d. For catch weight items (container weight attribute applied), you must enter the weight of the container/pallet. If a receiving tolerance has been assigned to the item the system displays warnings if the container weight entered exceeds the tolerance.

Figure 7–39 Capture Attribute screen

- e. Press the F6 (Item Dim) key. The Item Dimension Details screen opens.

Figure 7–40 Item Dimension Details screen

- f. Confirm or enter the item/case dimensions and DC TI/HI.
 - g. Press the F3 (Exit) key to return without updating the dimension details.
 - h. Press the F4 (Done) to process any changes and to return to the Create Appt Detail screen.
6. Perform any additional tasks as necessary:

- Press the F2 (Print CID) key to print labels for pallets. Refer to the [Print Pallet Label \(Pre-printed\)](#) section for additional information.
- Press the F6 (Conf Rcpt) key to confirm the pallets received. Refer to the [Confirm Receipts](#) section for additional information.
- Press the F7 (Gen CID) key to create and print the pallet ID or container ID. Refer to the [Generate CID](#) section for additional information.
- Press the F4 (Rmve Cntr) key to remove cartons from pallet. Refer to the [Remove Cartons](#) section for additional information.
- Press the F8 (View Pallet) key to view pallet details before confirming the receipt. Refer to the [View Unconfirmed Pallets](#) section for additional information.
- Press the F9 (Trbl) key to mark a troubled pallet during the receiving process. Refer to the [Mark Troubled Merchandise](#) section for additional information.
- Press the F5 (Close Appt) key to close the trailer once the receipt confirmation is complete for the appointment. Refer to the [Close Trailers](#) section for additional information.

Print Pallet Label (Pre-printed)

The labels for the pallets can be printed either during or after the receiving process but before transport. The generic pallet ID's must be confirmed (received) for the F2- Print key is enabled.

1. On the Create Appt Detail screen, press the F2 (Print CID) key. If the appointment is for pre-printed labels, the Print CID Labels screen opens.

Figure 7-41 *Print CID Labels screen*

PR PRINT CID LABELS	
APPT NBR	1592020
PRINTER QUEUE	1
SCAN PALLET ID	
LAST SELECTED	MARKED
DOC P1	☐
UNSELECTED QTY	1
SELECTED QTY	0
F3=EXIT F5=SELECT ALL	
F4=PRINT SELECTED	
F9 = VIEW CIDS	

Note: The same screen opens when you press the F5 (Confirm/Print) key from the Process Pallets - Confirm screen. Refer to the [Confirm Receipts](#) section for additional information.

Refer to the [Print Pallet Label \(Pre-printed\)](#) section for information on generic label print process.

2. The appointment number is automatically populated by the system in the Appt Nbr field and you cannot to override it.
3. The Printer Queue field is populated with the printer associated with your user id. If no printer is associated with your user id, you must enter the value for Printer Queue field manually.
4. To print labels for specific pallets, scan the pallet id in the Scan Pallet Id field.

Note: You can scan only those pallets which are received/confirmed but not printed and are part of the current appointment. An error message is displayed if the pallet label is already printed.

5. The Last Selected field displays the last valid pallet scanned. The Marked checkbox is checked to indicate that the pallet is marked for label printing.

To remove a pallet from a group, scan the pallet id that is previously scanned, again in the Scan Pallet Id field. The pallet id thus scanned is displayed in the Last Selected field and the Marked checkbox is unchecked.

6. The Unselected Qty field displays the total number of pallet labels yet to be printed for an appointment.

Note: Scanning a pallet id does not change the value displayed in the Unselected Qty field as these scanned pallets are still not printed in the system. However, when the screen is refreshed, the value in this field may change as some of the labels may be printed by other users.

7. The Selected Qty field displays the number of pallets scanned and marked for printing.
8. To print labels for all the confirmed pallets, press the F5 (Select All) key. The Selected Qty field is updated to represent all the confirmed pallets for which labels must be printed in the appointment.

Note: You cannot scan any pallet id in the Scan Pallet Id field once this option is selected.

9. Press the F4 (Print Selected) key to print labels for the selected pallets.

Labels are printed for every confirmed pallet selected. If a pallet is associated with a sub-pallet, the sub-pallet labels are also printed.

You can also skip printing labels for pallets based on the values set in the following attributes:

- FPR_SKIP_LABEL_STOCK: If the attribute is set, the system does not print labels if the receiving label is a pallet label (and not a sub-pallet label) going to storage.
- FPR_SKIP_LABEL_CASE_PTS: If the attribute is set, the system does not print labels if the receiving label is a pallet label (and not a sub-pallet label) going to case put to stor.

Note: If you press the F5 (Select All) key, all the pallets are selected for printing labels irrespective of the value set in the attributes.

Pallet Breakdown (Generic)

The F2 (Breakdown) key is displayed when the Labeled Flag parameter is set to N for FPR appointments. In this situation the system does not print labels. You must apply generic sub-pallets for any pallets requiring breakdown.

1. On the Create Appt Detail screen, press the F2 (Print CID) key. If the appointment is for generic labels, the FPR Pallet Breakdown screen opens to break down the pallets and assign generic CID.

Note: You can use these case labels to make receiving adjustments in the GUI Container Checking screen. The adjustments made using the GUI screen are reflected once you refresh the screen.

7. Press the F3 (Exit) key to exit the screen.

Confirm Receipts

The Confirm Receipt screen allows you to scan individual pallets or select all pallets for receipt processing.

Note: The scanning of the pallets on this screen does not receive the pallets. The system opens a Destination Preview screen to show you the final destination of the cases being received. From the Destination Preview screen if you press F4 (Confirm) key or F5 (Confirm/Print) key, the pallets are received into the system.

1. On the Create Appt Detail screen, press the F6 (Conf Rcpt) key. The Confirm Receipt screen opens.

Figure 7–45 Confirm Receipt screen

The appointment number is automatically populated by the system in the Appt Nbr field and you cannot to override it.

2. To confirm specific pallets, scan the pallet id in the Scan Pallet Id field.

Note: You can scan only those pallets which are not received and are part of the current appointment. An error message is displayed if the pallet validation fails.

3. The Last Scanned Pallet field displays the last valid pallet scanned. The Marked checkbox is checked to indicate that the pallet is marked for confirmation.

To remove a pallet from a group, scan the pallet id that is previously scanned, again in the Scan Pallet Id field. The pallet id thus scanned is displayed in the Last Scanned Pallet field and the Marked checkbox is unchecked.

4. The Unselected Qty field displays the total number of pallets yet to be confirmed for an appointment.

Note: Scanning a pallet id does not change the value displayed in the Unselected Qty field as these scanned pallets are still not confirmed in the system.

5. The Selected Qty field displays the number of pallets scanned and marked for confirmation.
6. Press the F3 (Exit) key to cancel the pallet confirm operation and return to the Create Appt Detail screen.
7. To confirm all the unconfirmed pallets for an appointment, press the F5 (Select All) key. The Selected Qty field is updated to represent all the unconfirmed pallets for the appointment. Hence, same value is displayed in both Selected Qty and Unselected Qty fields.

Note: The F5 (Select All) option is available only if Confirm_All_Pallets attribute is assigned to you by your administrator.

8. Press the F4 (Process Selected) key to confirm all the pallets selected. The Process Pallets - Confirm screen opens.

Figure 7-46 Process Pallets - Confirm screen

The Appt Nbr and Selected Qty fields are automatically populated. The system also groups the destinations by destination type (Dest Type column) and displays the number of cases (Nbr cases) for each destination. You cannot edit any detail on this screen. The purpose of this screen is to provide information regarding the allocation of the pallets being processed.

9. Press the F3 (Cancel) key to cancel the confirmation process and return to the Process Pallets screen.
10. Press the F4 (Confirm) key to confirm the pallets that are selected and return to the Create Appt Detail screen. At this time the pallets have been received into inventory.

Note: When you select Confirm, the pallets are allocated based on the pre distribution logic provided. If this appointment was created for a trusted vendor and you want to receive individual pallets, turn on the Bypass Apportionment flag to restrict pallet breakdown.

11. Press the F5 (Confirm/Print) key to confirm the pallets that are selected and to print the labels for the pallets. The screen opens. Refer to the [Print Pallet Label \(Pre-printed\)](#) section for additional information.

Generate CID

You can generate a pallet ID during the receiving process and print them.

1. On the Create Appt Detail screen, press the F7 (Gen CID) key. The FPR Print Pallet ID screen opens.

Figure 7–47 FPR Print Pallet ID screen

2. Enter the printer details in the Printer Queue field and number of labels to be printed in the Nbr of Labels field.
3. Press the F6 (Print) key to print the labels.
4. Press the F3 (Exit) key to cancel generating and printing labels and return to the Create Appt Detail screen.

Remove Cartons

You can remove cartons from a pallet. This must be done before you confirm the receipts.

1. On the Create Appt Detail screen, press the F4 (Rmve Cntr) key. The Remove Cartons screen opens.

Figure 7–48 Remove Cartons screen

2. Scan the item ID of the item to be removed in the Item ID field.

Note: You can only remove cartons from a pallet which is not yet received for an appointment.

3. The Casepack and PO Nbr field are automatically populated by the system if there is only one casepack - PO combination on the pallet for the item.

Note:

- If there is a single casepack quantity and multiple POs for the item, the Casepack field is automatically populated. Enter the correct PO from the PO list.
 - If there is a single PO for the item but multiple casepack quantities, then the PO number is automatically populated in the PO Nbr field. Enter the casepack quantity in the Casepack field.
 - If there are multiple POs and multiple casepack quantities for the item on the pallet, first enter the casepack quantity in the Casepack field, then select the correct PO from the PO list.
-
-

4. The Nbr of Cases field is updated by the system with the total number of cases for the PO - casepack - item combination. You cannot edit this field.
5. If Scan Case Labels option is selected for the appointment, then the Scan CID to Remove field is enabled. Scan the IDs of the cartons to be removed in the Scan CID to Remove field. As you scan the ID of each carton to be removed, the value in the Nbr of Cases field is decremented by 1.

If Scan Case Labels option is not selected for the appointment, then the Qty to Remove field is enabled. Enter the number of cartons to be removed in the Qty to Remove field. The Nbr of Cases field is automatically updated.

6. Press the F4 (Done) key to remove the selected cartons and return to the Create Appt Detail screen.
7. Press the F3 (Exit) key to cancel generating and printing labels and return to the Create Appt Detail screen.

View Unconfirmed Pallets

You can view the details of the pallets that are not confirmed before confirming the receipt.

1. On the Create Appt Detail screen, press the F8 (View Pallet) key. The Pallet Item Details screen opens.

 - The Receiving Receipt Report is printed automatically.

- The Unresolved Appointments Report provides a record of the unreconciled appointments.

Return Receiving

When processing consumer-direct orders, it is necessary to be able to process any returns that result after delivery of the product. In order to process returns, a Return Merchandise Authorization (RMA) number is needed. The RMA number is generated by the distribution process for any outbound container. The number consists of a system generated sequence number.s

Process a Return

On the Main Menu screen, select Receiving. On the Receiving Menu screen, select Return Receiving. The Return Receiving screen opens.

Replenishment

Replenishment is the process of moving inventory from reserve locations to picking locations to support picking. RWMS supports Pre-planned replenishment and ROP replenishment.

Pre-planned replenishments are calculated and generated during wave creation and the exact inventory is sent to the pick locations to satisfy the wave picks.

ROP replenishments are triggered based on inventory levels at the pick locations. When the quantity in a pick location drops below its re-order point a replenishment task is generated.

Replenishments are done at the Bulk or Container level.

On the Main Menu screen, select Replenishment. The Start Replenishment (or Start Replenishment Pick) screen opens.

Figure 8-1 Start Replenishment RF screen

PR REPLENISHMENT

FROM ZONE

TO ZONE

ITEM ID

MASTER CONTAINER ID

F3=EXIT F9=CONTAINER

F8=BULK

Bulk Replenishment

Bulk Replenishment picking does not use a preprinted label. The stock label on the container is used instead.

You can select data from any of the following criteria to narrow the picking scope:

- Reserve Zone (From Zone field) - Zone you want to pick from.

- Unit Pick Zone (To Zone field) - Zone you want to pick to.
- Item ID (Item ID field) - Specific item to replenish.

Prior to the generation of each bulk replenishment pick, RWMS determines the volume type of the location picked from. Based on this criteria, RWMS determines the cube or number of units associated to the pending bulk replenishment and decides if there is enough available space in the bank of locations. The volume_type for a valid location matches the volume_type associated to the pick_from location.

1. [Optional] On the Start Replenishment screen enter the criteria in one or more of the following fields: From Zone, To Zone, Item.
2. Press the F8 (Bulk) key. The first bulk replenishment directive that matches the criteria opens on the Bulk Replenishment screen.

Figure 8–2 Bulk Replenishment screen

3. In the Confirm field, enter the ID of the suggested or alternative pick-from location.
4. In the Confirm CID field, enter the ID of the suggested or alternative pick-from container.

Note: If there are fewer containers than expected, you must adjust the quantity downward. If the container has more containers than expected, you can cancel the pick that marks the location for cycle count.

5. In the Qty field, adjust the container quantity as necessary.
6. Press the F8 (Empty) key if the pick depletes the location. The Message Display Line verifies that the location is now empty.
Or
Press the Enter key to acknowledge the message. The Confirm To Location screen opens.
Or

Press the Done key to confirm the pick. The Confirm To Location screen opens.

Figure 8–3 Confirm Location screen

7. In the Confirm Location ID field, enter the ID of a staging location or the suggested forward pick location.
8. Press the F4 (Done) key to complete the pick operation.

Container Replenishment

Container replenishment picking uses a generic label rather than a preprinted label. Another option is to scan an existing labeled Container ID. Cases are picked onto an empty pallet and the generic label is used to identify the pallet.

You can select data from any of the following criteria to narrow the picking scope:

- Reserve Zone (From Zone field) – Zone you want zone to pick from.
 - Unit Pick Zone (To Zone field) - Zone you want to pick to.
 - Item ID (Item field) - Specific item to replenish
1. [Optional] On the Start Replenishment screen enter the criteria in one or more of the following fields: From Zone, To Zone, Item.
 2. In the Master Container field, enter the ID from an existing container label or a generic label.
 3. Press the F9 (Container) key. The first container replenishment directive that matches the criteria opens on the Container Replenishment screen.

Note: If the item to be picked is marked as perishable, the date in the Date field is the Best Before Date. Otherwise, the date is the receipt date.

4. Confirm the location and from-container ID by scanning.
5. Press the F9 (Desc) key to view an item description.

Note: If the cases on the pick-from Container ID are not labeled, you should affix generic labels to the cases as they are picked. If the system parameter, labeled_reserve, is set to Y, you must indicate which labeled container is being removed. Do not place generic labels over existing labels. In a labeled_reserve = Y DC, all containers have unique IDs.

6. Scan each of the containers as you place them on the pallet until the Qty field reads 0. The quantity is decreased after each scan.
7. Press the F4 (Done) key when all container picks from a single inventory container are completed. The Message Display Line verifies that the location is not empty. Press the Enter key to acknowledge the message. The To Location screen opens.

Or

Press the F8 (Empty) key if the location is empty. The Message Display Line verifies that the location is empty. Press the Enter key to acknowledge the message. The To Location screen opens.

Or

Press the F5 (Full) key if the pick-to container is full. The To Location screen opens.

Note: You must decide whether the pallet should be staged or the cases should be put away into forward pick locations.

8. Scan a staging location ID. Press the F4 (Done) key. All containers are updated with the location and the picking operation is complete.

Or

Scan a forward picking location ID. The Putaway screen opens.

Note: Press the F2 key to view a pop-up item description.

9. Scan the container you are putting away. Available data opens in the From, Item ID, and Desc (Description) fields.

Note: The Multi-SKU Put Away screen opens if the Container has more than one item ID. Refer to the [Multi-SKU Putaway](#) section in the Inventory Management module.

10. Scan the location where you are putting the item. You can enter one of the suggested locations or another location.
11. Press the F4 (Done) key to accept and save the data.

Shipping

The shipping module allows you to open, load, unload, close, and ship trailers using RF devices.

From the Main Menu select Shipping, the Shipping menu opens.

Figure 9–1 Shipping Main Menu

PR SHIPPING

1. CONVEYOR CUTOFF
2. LOAD CONTAINER
3. PRINT SHIP LABEL
4. QC OUTBOUND AUDIT
5. SHIP TRAILER
6. UNLOAD CONTAINER

CHOICE F3=PREVIOUS MENU

Conveyor Cutoff

On the Main Menu screen, select Shipping. On the Shipping screen, select Conveyor Cutoff. The Conveyor Cutoff screen opens.

Figure 9–2 *Conveyor Cutoff RF screen*

Scan the container ID of the next container on the spur (this is the first container that will not fit on the trailer).

Note: If the container ID is valid, the LOAD_TS (Load Timestamp) field is populated with the current date.

Load Containers

The trailer must be opened before containers can be loaded. Refer to the [Ship Trailers](#) or [Open Trailers](#) section for more information about opening trailers.

Trailers may be opened by single destination or by multiple destinations using a carrier/service/route combination. A separate manifest is built automatically for each destination in the trailer.

If using Load Sequencing you are prompted if you begin to load another destination while containers remain for the previous destination. You can access a series of screens which assist you in finding the unloaded containers. You can drill down from a destination to the locations of the unloaded containers, and the IDs of the unloaded containers. Even without the prompt, you can look up unloaded containers after identifying the trailer and the door.

If you scan a master container with children, the master is deleted upon completion of the loading process.

Load Containers on a Trailer

Loading of containers / pallets to a trailer is done using the Load Container screen. During the loading process, you must scan the trailer ID, door and container ID. If the value of the scp parameter ship_door_scan is set to "Y", you must scan the door after scanning the container ID to confirm the loading process. This ensures that you load the correct trailer for each pallet.

You may load a group of containers together. The maximum number of containers that can be scanned at a time is indicated using the scp parameter loading_max_nbr_cids. If the value of loading_max_nbr_cids is set to "1", then you must confirm the door

for every container loaded. If the value of `loading_max_nbr_cids` is set to a value greater than 1, then you must confirm the door only once for that many containers indicated by the `loading_max_nbr_cids` value.

Note: When the trailer is full, or all the containers for the destination are loaded, you can close the trailer. You can open another trailer or manifest in order to continue the shipping process. Refer to the [Ship Trailers](#) section for instructions on how to complete the operation.

Loading Single Container

To load single container, `ship_door_scan` must be set to "Y" and `loading_max_nbr_cids` must be set to "1".

On the Main Menu screen, select Shipping. On the Shipping screen, select Load Container. The Load Single Container screen opens.

Figure 9–3 Load Single Container screen

1. On the Load Container screen, enter the ID of the trailer to be loaded in the Trailer ID field
2. In the Door field, enter the door ID.
3. From the container picking label, scan the container ID.
4. Confirm the door ID in the Door field and press Enter.
5. Press the F3 (Exit) key to exit the Load Container screen.

Loading Multiple Containers

To load multiple containers, `ship_door_scan` must be set to "Y" and `loading_max_nbr_cids` must be set to a value greater than 1.

On the Main Menu screen, select Shipping. On the Shipping screen, select Load Container. The Load Multiple Container screen opens.

Figure 9–4 Load Multiple Containers screen

1. On the Load Container screen, enter the ID of the trailer to be loaded in the Trailer ID field
2. In the Door field, enter the door ID.
3. From the container picking label, scan the container IDs one after the other. The CIDs Scanned field indicates the number of container IDs you scan.
4. Press the F9 (View CIDs) key. The scanned container IDs and their corresponding destination IDs are displayed on the View CIDs screen.

Note: The F9 (View CIDs) option is available only when ship_door_scan is set to "Y" and loading_max_nbr_cids has a value greater than 1.

Figure 9–5 View CIDs Screen

5. Confirm the door ID in the Door field and press Enter.

Note: If the number of containers to be loaded to a trailer is less than the scp parameter loading_max_nbr_cids, then enter the door ID in the Container ID field after the last container is scanned to indicate that all the containers are scanned and to confirm the door ID.

6. Press the F3 (Exit) key to exit the Load Container screen.

View Unloaded Containers

1. On the Load Container screen, enter the ID of the trailer to be loaded in the Trailer ID field.
2. In the Door field, enter the door ID.
3. Press the F7 (Unloaded Containers) key. The destinations assigned to the trailer are displayed on the Unloaded Containers (destination) screen.

Figure 9-6 *Unloaded Containers (Destination) Screen*

DEST ID	QTY

F1=DISPLAY
F3=EXIT

4. Select the destination that you want to review. Then press the F1 (Display) key. The locations of the unloaded containers assigned to the selected destination are displayed on the Unloaded Containers (locations) screen.

Figure 9–7 Unloaded Containers (Locations) Screen

The screenshot shows a handheld device screen with a blue header bar containing a red circle icon and the text "PR LOAD CONTAINER". Below the header, there are two input fields: "DEST ID" and "LOCATION ID". The "LOCATION ID" field is currently selected, indicated by a vertical cursor. Below the input fields, there are two function keys: "F1=DISPLAY" and "F3=EXIT".

5. Select the location ID that you want to review. Then press the F1 (Display) key. The containers found at the selected location are displayed in the Unloaded Containers (containers) screen.

Figure 9–8 Unloaded Containers (Containers) Screen

The screenshot shows a handheld device screen with a blue header bar containing a red circle icon and the text "PR LOAD CONTAINER". Below the header, there are three input fields: "DEST ID", "LOCATION ID", and "CONTAINER ID". The "CONTAINER ID" field is currently selected, indicated by a vertical cursor. Below the input fields, there is one function key: "F3=EXIT".

6. When done reviewing the information, press the F3 (Exit) key to exit each screen.

Print Shipping Labels

The Print Ship Label option triggers the printing of a UCC128-compliant shipping label for each valid container id as it is scanned.

Containers must have a status of Distributed or Manifested. Shipping labels cannot be printed for stock containers. When a master container ID is scanned, labels are printed for the child containers only, unless the master container contains merchandise.

On the Main Menu screen, select Shipping. On the Shipping screen, select Print Ship Label. The Print Ship Label screen opens.

Figure 9–9 Print Ship Label screen

Figure 9–10 Queue RF screens

1. On the Print Ship Label screen, enter the print queue for the label printer in the Ship Label field. Or Press the F6 (Ship Label) key. The Queue screen opens. Select a print queue and press the Enter key. The selected print queue is automatically entered in the Ship Label field.
2. Scan the container label. The shipping label is created and is printed. An audible, double-beep sound verifies a successful container scan and print.

QC Outbound Audit

The QC Outbound Audit screen allows the DC to verify the pick accuracy prior to shipment. The Outbound Quality Audit Report is automatically generated upon completion of the audit.

Containers must be valid, have a status of Distributed, and contain items. A master container with labeled child containers is not eligible for audit.

If you press the F3 (Exit) key while the audit is in progress, all processing is aborted and no information is retained with respect to the container.

If a container is re-audited, all previously captured information is overwritten by the new audit.

On the Main Menu screen, select Shipping. On the Shipping screen, select QC Outbound Audit. The QC Outbound Audit screen opens.

Figure 9–11 QC Outbound Audit RF screen

1. On the QC Outbound Audit screen, enter the container ID in the Container ID field.
2. Enter the ID of each item found in the container.
3. Press the F4 (Done) key after recording all items in the container. The Outbound Quality Audit Report is printed automatically.

Ship Trailers

Trailers can be opened by specific destination or carrier/service/route combination.

You must open a trailer to begin loading containers or to continue loading merchandise that does not fit on the original trailer. After opening a trailer, you can choose to print the Unloaded Container report. The report provides you with a list of all the containers that are candidates to be loaded onto the current trailer

On the Main Menu screen, select Shipping. On the Shipping screen, select Ship Trailer. The Ship Trailer screen opens.

Figure 9–12 Ship Trailer screen

Open Trailers

Open a Trailer By Single ship destination

1. On the Ship Trailer screen, enter the ID of the trailer to be opened in the Trailer ID field.

Note: Skip the Carrier, Service, and Route fields.

2. In the Destination field, enter the specific destination ID.
3. In the Door field, enter the door ID.
4. Press the F5 (Open) key.
5. When prompted to acknowledge the action, press the Enter key.

Open a Trailer By Carrier/Service/Route

1. On the Ship Trailer screen, enter the ID of the trailer to be opened in the Trailer ID field.
2. In the Carrier Code field, enter the carrier.
3. In the Service Code field, enter the service code.
4. In the Route field, enter the route.

Note: Skip the Dest field.

5. In the Door field, enter the door ID.
6. Press the F5 (Open) key.
7. When prompted to acknowledge the action, press the Enter key.

Note: All destinations with the specified carrier/service/route as either their expedite carrier/service/route or default carrier/service/route, as defined in the Ship Destination table, are opened on the trailer.

Generate the Unloaded Containers Report

Generate the Report for a Trailer with a Single Destination

1. On the Ship Trailer screen, enter the ID of the trailer to be closed.
2. In the Dest field, enter the specific destination ID.
3. In the Door field, enter the door ID.
4. Press the F7 (Unloaded Containers) key.
5. When prompted to confirm the request, enter Y (Yes). Press the Enter key. The report is sent to the printer.

Generate the Report for a Trailer with Multiple Destinations

1. On the Ship Trailer screen, enter the ID of the trailer to be closed.
2. Leave the Dest field blank in order to close all destinations.
3. In the Door field, enter the door ID.
4. Press the F7 (Unloaded Containers) key.
5. When prompted to confirm the request, enter Y (Yes). Press the Enter key. The report is sent to the printer.

Close Trailers

You can close trailers either when they are full or when you are finished loading merchandise for the destination.

Closing a trailer also closes the associated manifest.

When closing a trailer, you might be warned about qualified containers that have not yet been loaded onto the trailer. If you want to close the trailer even though such containers exist, type Y (Yes), then press the Enter key. The trailer will be closed. If you want to investigate the matter, enter N (No), then press the Enter key. The trailer is not closed.

To investigate unloaded containers, you can run the Unloaded Containers report.

Close a Trailer with a Single Destination

1. On the Ship Trailer screen, enter the ID of the trailer to be closed.
2. In the Dest field, enter the specific destination ID.
3. In the Door field, enter the door ID.
4. Press the F8 (Close) key.
5. When prompted to acknowledge the action, press the Enter key.

Close a Trailer with Multiple Destinations

1. On the Ship Trailer screen, enter the ID of the trailer to be closed.

2. Leave the Dest field blank in order to close all destinations.
3. In the Door field, enter the door ID.
4. Press the F8 (Close) key.
5. When prompted to acknowledge the action, press the Enter key.

Ship Trailers

If a trailer was not previously closed, it will be closed when you choose to ship it. You might be warned about qualified containers that have not yet been loaded onto the trailer. If you want to close and ship the trailer even though such containers exist, type **Y** (Yes), then press the Enter key. The trailer will be marked as closed and shipped. If you want to investigate the matter, enter **N** (No), then press the Enter key. The trailer is neither closed nor shipped.

To investigate unloaded containers, you can run the Unloaded Containers report.

1. On the Ship Trailer screen, enter the ID of the trailer to be shipped.
2. In the Dest field, enter the destination ID.
3. In the Door field, enter the door ID.
4. In the Seal field, enter the seal number for the shipment.
5. Press the F9 (Ship) key.
6. When prompted to acknowledge the action, press the Enter key.

Add Seals to a Trailer

Depending on system settings, you have the following options regarding seal numbers:

- A trailer can be closed and shipped without any seal numbers.
- A trailer can be closed and shipped with a single seal number for the trailer.
- A trailer can be closed and shipped with one seal number per destination for the trailer.

If only a single seal number is needed, you can simply enter it on the Ship Trailer screen. When multiple seal numbers are used for a trailer, you would enter the seal numbers on the Ship Trailer (Multiple Seal) screen.

If a seal number is entered when closing a trailer, you can accept or change the seal number when shipping the trailer.

Close or Ship a Trailer with Multiple Seals

1. On the Ship Trailer screen, enter the ID of the trailer to be shipped.
2. In the Carrier, Service, and Route fields, enter the appropriate information. Or, enter the ID of the destination in the Dest field.
3. In the Door field, enter the door ID.
4. Press the F6 (MSeal) key. The Ship Trailer (Multiple Seal) screen opens.

5. Enter the seal number next to each destination.
6. After all the seal numbers are entered, press the F9 (Ship) key. Respond to any prompts that may appear.

Unload Containers

You can unload containers only from an open manifest. Because the master container is deleted during the loading process, each child container must be scanned individually.

On the Main Menu screen, select Shipping. On the Shipping screen, select Unload Container. The Unload Container screen opens.

Figure 9–14 Unload Container screen

PR UNLOAD CONTAINER

CONTAINER ID

F3=EXIT

1. On the Unload Container screen, scan the container ID that you are unloading.

2. When prompted to acknowledge the action, press the Enter key.
3. Continue unloading and scanning containers until you are finished.
4. Press the F3 (Exit) key to exit the Unload Container screen.

Task Administration

The task administration module provides you with access to the tasks assigned to your user ID. By entering a few parameters, such as equipment class, start and end locations, and so on, the system determines which tasks to present you.

Task Administration

The Task Admin screen allows you to access the tasks assigned to your user ID. Depending on how the system is set up, tasks may be presented in location ID order, priority order, or randomly. This functionality is not available if the DC is set up for labeled picking.

From the Main Menu screen, select Task Administration. The Task Admin screen opens.

6. Select how you want to proceed:
 - Press the F1 (Accept) key to accept the task. The appropriate screen for processing the task opens. Process the task.
 - Press the F5 (Skip) key to progress to the next task without processing the current task. Decide whether to accept the next task.

Equipment Assignment

You can use the Equip Assign screen to designate which equipment class or piece of equipment is assigned to a user ID. The assignment stays valid throughout the RF session. Equipment must be assigned to a user if XYZ functionality is used in the DC.

For more information, see the [Chapter 3, "Equipment Assignment"](#).

Trailer Management

The trailer management module provides you with the capability to view and update information about specific trailers by yard location.

Location Inquiry

The Location Inquiry screen allows you to view trailer information for a specific yard location.

On the Main Menu screen, select Trailer Mgmt. The Trailer menu screen opens.
