

# Oracle® Retail Markdown Optimization

Release Notes

Release 13.1.3

January 2011

---

Welcome to Oracle Retail Markdown Optimization (MDO) Release 13.1.3.

This document contains the release notes for the MDO v13.1.3 and highlights the enhancements and fixed defects for this release.

---

---

**Note:** Installation media files for an Enterprise release (13.x) are available on the *Oracle Electronic Delivery* Web site (<http://edelivery.oracle.com>) and Patch releases (13.1.x) and Hot Fixes (13.1.x.y) are available on the *My Oracle Support* Web site (<https://support.oracle.com>).

---

---

## MDO 13.1.3 Build IDs:

**Table 1** *Package Matrix Build IDs*

Component Name	Version Number
MDO 13.1.3	Price-13.1.3-242-201101200300-259736
Framework 3.1.3	Framework-3.1.3-128-201101190900-259705
Installer 3.1.3	Installer-3.1.3-130-201101190950-259705
Suite 3.1.3	Suite-3.1.3-129-201101190915-259705
Enginepkg 5.4.3	Enginepkg-5.4.3-219-201101191130-259705
APC-MDO 13.1.2	APC_MDO-13.1.2-152-200912220200-247175

## Hardware and Software Requirements

For more information on the hardware and software requirements, see the *Oracle Retail Markdown Optimization Installation Guide*.

## Upgrading to Markdown Optimization

For more information on upgrading to MDO Release 13.1.3, see the *Oracle Retail Markdown Optimization Installation Guide*.

## Noteworthy Bug Fixes in this Release

The following bugs have been fixed in MDO Release 13.1.3:

**16712** – The tables and indexes in NOLOGGING mode have been changed to LOGGING mode.

**17072** – The Maintaining Merchandise view now supports configurations with more than 1000 worksheets. The module used to throw an error earlier for more than 1000 worksheets case.

**17283** – The calculation has been fixed for the 'Total Buy' metric in the case when a forecast for an item was not available.

**17322** – The model start date calculation has been fixed for items with negative net sales in the beginning of life.

**17391** – The message that was provided for What If in the situation when the item did not have a model run forecast due to insufficient data has been modified.

**17392** – The MD\_FLAG\_VIEW metric (Markdown status of the item) now displays the correct value (instead of garbled characters) for an aggregated Merchandise Maintenance View.

**17412** - In the Report Creation pop-up message, the spelling of "Optimization" has been corrected.

**17416** – The issues with BRM rules deletion when the attributes are null has been fixed.

**17716** – The proj\_oh\_units\_eff\_dt calculation when item is projected to be sold out before the week of effective date has been fixed.

**18016** – The out-of-memory issue that occurred while processing a heavy load of small reports or a few large reports has been fixed. Two additional configuration properties have been added. See the section "[Configuration Changes](#)" for details.

## Documentation Change

The special character ampersand (&) should be included in the list of special characters that are not permitted in the standard interface flat files (as described on page 2-2 of the *Oracle Retail Markdown Optimization Operations Guide*).

## Configuration Changes

The following changes are for Reporting module (see **18016**.)

The MDO reporting module uses the application server JVM memory. The MDO report columns are configured based on XML file. Memory usage is directly proportional to the report size, which in turn depends on the number of columns and rows. An out-of-memory exception and a server crash can be mapped to the following scenarios.

- Creating a single large report.
- Running more than one report concurrently.

For the first issue, the maximum records in the report should be set based on the JVM memory available for reports. The maximum rows limit can be set in the relevant report xml file. An excerpt from the report xml:sample-md-analysis-report-1.xml present in \$CONFIGROOT/Price/grids is shown below:

```
<report xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
      xsi:noNamespaceSchemaLocation="../../../../CommonComponents/conf/Grid.xsd"
```

```
name="p4pgui.reports.sampleMDAnalysisReport1"
generator-class="com.profitlogic.pricefe.util.reports.appcommon.GenericP4PItemReportGenerator"

show-row-group-only="false"
show-report-header="true"
max-rows="40000"
zip-stream="false"
```

For the second issue, when more than one report is running in parallel, the total heap size used is the sum of the heap sizes used by each report.

The following two configuration parameters have been added to address this issue:

#### **p4pgui.reports.concurrency = true**

When this parameter is set to false, MDO processes one report at a time sequentially. This limits the heap size used by the reporting module. When this parameter is set to true (the default), all the pending reports are run in parallel. The heap size used depends on the number of reports running at that time and the number of records per report.

When this parameter is set to true, MDO processes the reports requests in parallel mode.

#### **p4pgui.max.reports = 25**

This parameter defines the hard limit for the number of pending report requests. Users requesting reports will be prompted to try again later when the number of pending requests reaches this limit. The default value is 25. Set this value depending on the heap size available for reports and the number of records per report.

Both the properties are defined in `<MDOInstalledDirectory>/config/Price/config.properties` and are commented by default.

## **Screen Message Modifications**

The Impact/Usage of the configuration parameters are as follows:

- Set `p4pgui.max.reports` to a higher value and `p4pgui.reports.concurrency=false`.  
This setting is recommended when many large reports have to be processed.  
This can result in an increase in the time it takes to process the reports.
- Set `p4pgui.max.reports` to a higher value and `p4pgui.reports.concurrency=true`.  
This setting is recommended when a large number of small reports have to be processed quickly.  
This can result in an `OutOfMemoryException`. This setting is equivalent to the previous report module behavior.
- Set `p4pgui.max.reports` to a lower value and `p4pgui.reports.concurrency=true`.  
This setting is recommended when only a few small reports have to be processed.  
This can result in the "max report reached" alert message.
- Set `p4pgui.max.reports` to a lower value and `p4pgui.reports.concurrency=false`.

This setting is recommended when large reports have to be processed.

This can result in a "max report reached" alert message. It may be necessary to re-submit the report.

The messages that are displayed to the user during the processing of reports have been modified, as described below. The user sees the number of reports in the queue (if there are any) in the dialog box as well as the original message.

#### **Scenario 1**

If there are reports in the queue, the following message is displayed:

"This report is being submitted to the Oracle Retail Markdown Optimization report engine for generation. If you entered an email address a message will be sent to you when the report is ready for viewing.

<no of reports in queue> report/reports <is/are> in queue already. Would you like to continue?"

#### **Scenario 2**

When the user requests a report, but the number of reports in queue has reached the maximum limit, the following message is displayed:

"The maximum number of reports which can be processed are <no of running reports> and they are already running. Your request cannot be processed now. Please try later."

## **Documentation Accessibility**

Our goal is to make Oracle products, services, and supporting documentation accessible to all users, including users that are disabled. To that end, our documentation includes features that make information available to users of assistive technology. This documentation is available in HTML format, and contains markup to facilitate access by the disabled community. Accessibility standards will continue to evolve over time, and Oracle is actively engaged with other market-leading technology vendors to address technical obstacles so that our documentation can be accessible to all of our customers. For more information, visit the Oracle Accessibility Program Web site at <http://www.oracle.com/accessibility/>.

### **Accessibility of Code Examples in Documentation**

Screen readers may not always correctly read the code examples in this document. The conventions for writing code require that closing braces should appear on an otherwise empty line; however, some screen readers may not always read a line of text that consists solely of a bracket or brace.

### **Accessibility of Links to External Web Sites in Documentation**

This documentation may contain links to Web sites of other companies or organizations that Oracle does not own or control. Oracle neither evaluates nor makes any representations regarding the accessibility of these Web sites.

### **Access to Oracle Support**

Oracle customers have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/support/contact.html> or visit <http://www.oracle.com/accessibility/support.html> if you are hearing impaired.

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this software or related documentation is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, the following notice is applicable:

U.S. GOVERNMENT RIGHTS Programs, software, databases, and related documentation and technical data delivered to U.S. Government customers are "commercial computer software" or "commercial technical data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, duplication, disclosure, modification, and adaptation shall be subject to the restrictions and license terms set forth in the applicable Government contract, and, to the extent applicable by the terms of the Government contract, the additional rights set forth in FAR 52.227-19, Commercial Computer Software License (December 2007). Oracle USA, Inc., 500 Oracle Parkway, Redwood City, CA 94065.

This software is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications which may create a risk of personal injury. If you use this software in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure the safe use of this software. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software in dangerous applications.

Oracle is a registered trademark of Oracle Corporation and/or its affiliates. Other names may be trademarks of their respective owners.

This software and documentation may provide access to or information on content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services.

#### **Value-Added Reseller (VAR) Language**

##### **Oracle Retail VAR Applications**

The following restrictions and provisions only apply to the programs referred to in this section and licensed to you. You acknowledge that the programs may contain third party software (VAR applications) licensed to Oracle. Depending upon your product and its version number, the VAR applications may include:

(i) the **MicroStrategy** Components developed and licensed by MicroStrategy Services Corporation (MicroStrategy) of McLean, Virginia to Oracle and imbedded in the MicroStrategy for Oracle Retail Data Warehouse and MicroStrategy for Oracle Retail Planning & Optimization applications.

(ii) the **Wavelink** component developed and licensed by Wavelink Corporation (Wavelink) of Kirkland, Washington, to Oracle and imbedded in Oracle Retail Mobile Store Inventory Management.

(iii) the software component known as **Access Via™** licensed by Access Via of Seattle, Washington, and imbedded in Oracle Retail Signs and Oracle Retail Labels and Tags.

(iv) the software component known as **Adobe Flex™** licensed by Adobe Systems Incorporated of San Jose, California, and imbedded in Oracle Retail Promotion Planning & Optimization application.

You acknowledge and confirm that Oracle grants you use of only the object code of the VAR Applications. Oracle will not deliver source code to the VAR Applications to you. Notwithstanding any other term or condition of the agreement and this ordering document, you shall not cause or permit alteration of any VAR Applications. For purposes of this section, "alteration" refers to all alterations, translations, upgrades, enhancements, customizations or modifications of all or any portion of the VAR Applications including all reconfigurations, reassembly or reverse assembly, re-engineering or reverse engineering and recompilations or reverse compilations of the VAR Applications or any derivatives of the VAR Applications. You acknowledge that it shall be a breach of the agreement to utilize the relationship, and/or confidential information of the VAR Applications for purposes of competitive discovery.

The VAR Applications contain trade secrets of Oracle and Oracle's licensors and Customer shall not attempt, cause, or permit the alteration, decompilation, reverse engineering, disassembly or other reduction of the VAR Applications to a human perceivable form. Oracle reserves the right to replace, with functional equivalent software, any of the VAR Applications in future releases of the applicable program.
