

# ORACLE® HYPERION PROVIDER SERVICES

RELEASE 11.1.1

## NEW FEATURES

**ORACLE®**  
ENTERPRISE PERFORMANCE  
MANAGEMENT SYSTEM

### CONTENTS IN BRIEF

Overview .....	2
Support for Multiple Data Sources .....	2
Java APIs .....	2
Installation and Configuration .....	2

## Overview

This document describes the new features introduced in Oracle Hyperion Provider Services Release 11.1.1.

## Support for Multiple Data Sources

In previous releases, Oracle Essbase was the only data source integrated with Oracle Hyperion Smart View for Office, Fusion Edition through Provider Services. In release 11.1.1, Provider Services acts as a common provider for Oracle Hyperion Planning, Fusion Edition and Oracle Business Intelligence Enterprise Edition and well as for Essbase. This feature enables:

- A simpler and easier way to connect and manage connections from Smart View to data sources.
- The ability of Oracle Hyperion Planning, Fusion Edition and Oracle Business Intelligence Enterprise Edition as well as Oracle Essbase users to perform ad hoc analysis, reporting, and other Smart View operations, including the enhancements made to Oracle Hyperion Smart View for Office, Fusion Edition for 11.1.1.

## Java APIs

New Java APIs are included in Provider Services to provide the following functionality:

- Varying Attributes through Member Selection (Query mode)
- Smart List, Format String, and Date in MDX Query and in data query
- Varying Attributes

## Installation and Configuration

Oracle Hyperion Provider Services is installed by the Oracle Hyperion Enterprise Performance Management System Installer, Fusion Edition.

The new Oracle Hyperion Enterprise Performance Management System Installer, Fusion Edition and Oracle's Hyperion Enterprise Performance Management System Configurator provide a streamlined and simplified approach to product installation, upgrade, and configuration. Oracle's Hyperion Enterprise Performance Management System Configurator uses the new Oracle's Hyperion Shared Services Registry, which simplifies product configuration by storing and re-using configuration information.

Oracle's Hyperion Enterprise Performance Management System Diagnostics confirms that product components were successfully installed, configured, and are up and running.

The reorganized installation and configuration documentation set reduces the number of installation guides and makes it easier to find the information you need. Individual product installation guides are replaced by the following guides:

- *Oracle Hyperion Enterprise Performance Management System Installation Start Here*
- *Oracle Hyperion Enterprise Performance Management System Installation and Configuration Guide*
- *Oracle Hyperion Enterprise Performance Management System Security Administration Guide*

You might also need to use one or more of the following guides:

- *Oracle Hyperion Enterprise Performance Management System Manual Deployment Guide*
- *Oracle Hyperion Enterprise Performance Management System High Availability Guide*
- *Oracle Hyperion Enterprise Performance Management System Installation and Configuration Troubleshooting Guide*
- *Oracle Hyperion Enterprise Performance Management System Backup and Recovery Guide*
- *Oracle Hyperion Enterprise Performance Management System Lifecycle Management Guide*
- *Oracle Hyperion Enterprise Performance Management System SSL Configuration Guide*
