AquaLogic Enterprise Repository Administration

Within the Flashline Registry **Admin** section, administrators can configure the application, add users, and assign roles and access settings for users. The **Admin** section also provides the means to configure sessions and add departments. Typically, **Admin** tasks are restricted to system or access administrators.

The **Admin** section encompasses seven administrative functions:

- **Users**
 - Create users, enable searches (either filtered or not), and return a list of all users.
- **Sessions**
 - Monitor which users are logged into the system. Using this function an

administrator can also log a user out of the system.

- **Roles**

- Allows the administrator to add, edit, modify, and assign roles to specific users. Examples: *general*, *user*, *administrative user*.

- **Departments**

- Create, list, or edit departments. Departments must be created before users can be assigned to them.

- **Access Settings**

- **Basic:** Default permission settings that determine the role-based access to the various features of AquaLogic Enterprise Repository.
- **Custom:** Customizable role-based permission settings.

- **System Settings**

- System configuration for general, authentication, LDAP (if enabled) and access settings, as well as enabling additional system properties.

- **Email Templates**

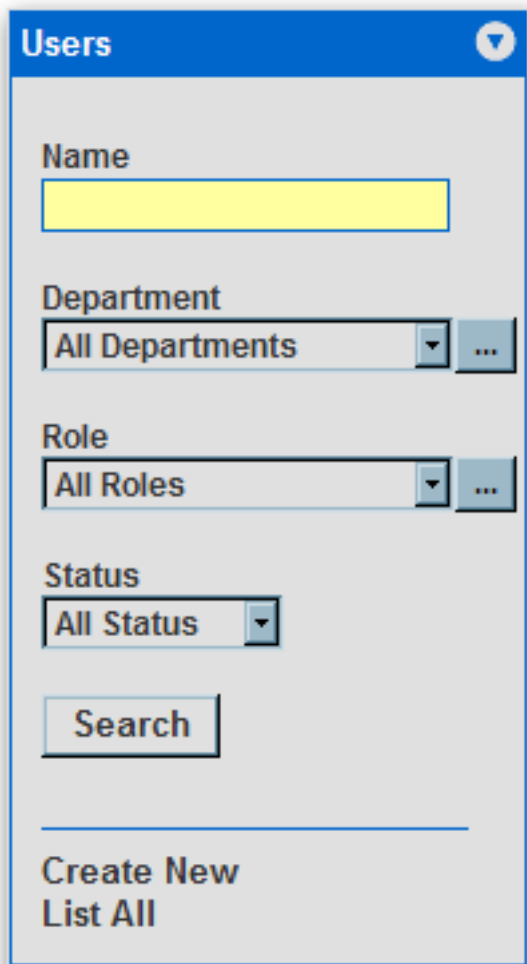

- Edit automatic email templates used for various notifications of activity in AquaLogic Enterprise Repository.

Users

Creating a New User

This procedure is performed on the BEA AquaLogic Enterprise Repository **Admin** screen.

1. Click **Create New** in the **Users** section.

The screenshot shows a 'Users' pop-up window with a blue header. Below the header, there are four input fields: 'Name' (a yellow text box), 'Department' (a dropdown menu with 'All Departments' selected), 'Role' (a dropdown menu with 'All Roles' selected), and 'Status' (a dropdown menu with 'All Status' selected). Below these fields is a 'Search' button. At the bottom of the window, there are two links: 'Create New' and 'List All'.

The **Create New User** pop-up opens.

2. Enter the appropriate information in each of the text boxes in the **Overview** section.

Overview

Username*:

First Name:

Middle Name:

Last Name*:

Email*:

Phone:

Status:

Password*:

Must change password on next login

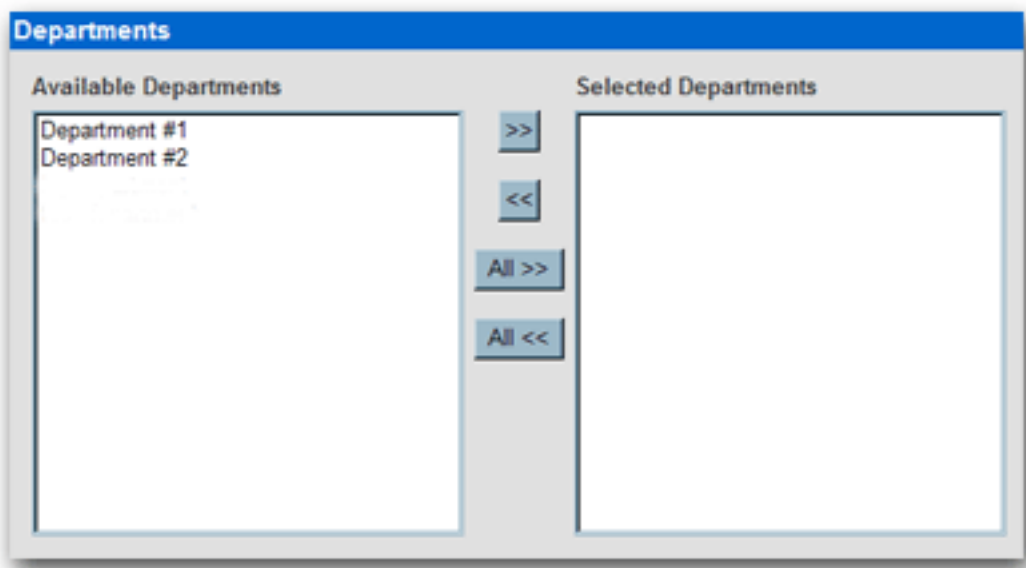

Password never expires

3. Select **Active** in the **Status** drop-down.
4. In the **Roles** section, assign roles to the new user by using the **>>** and **<<** buttons to move items from the **Available Roles** column to the **Selected Roles** column. (The **User** role is the default role for all new users.)

Roles

Available Roles		Selected Roles
accessAdministrator	>>	user
admin	<<	
advancedSubmitter		
businessAnalyst		
projectAdministrator	All >>	
projectArchitect		
registrar		
registrarAdministrator	All <<	
systemAdministrator		

5. In the **Departments** section, assign the new user to departments by using the **>>** and **<<** buttons to move items from the **Available Departments** column to the **Selected Departments** column.

6. When finished, click **Save**.

Viewing User Information

This procedure is performed on the BEA AquaLogic Enterprise Repository **Admin** screen.

1. In the **Users** section, use **Search** or **List All** to locate the user(s) to be viewed.

The list of users opens in the main pane.

Results (7)

User Name	Display Name	Status
bwilson	bwilson	Active
cstella	stella, F.	Active
flashline	flashline	Active
Fred	Tomlinson, Fred (50006)	Active
jsmith	Smith, John J. (50004)	Active

User: **jsmith**    

[View Access](#)
[Clone](#)
[Edit](#)

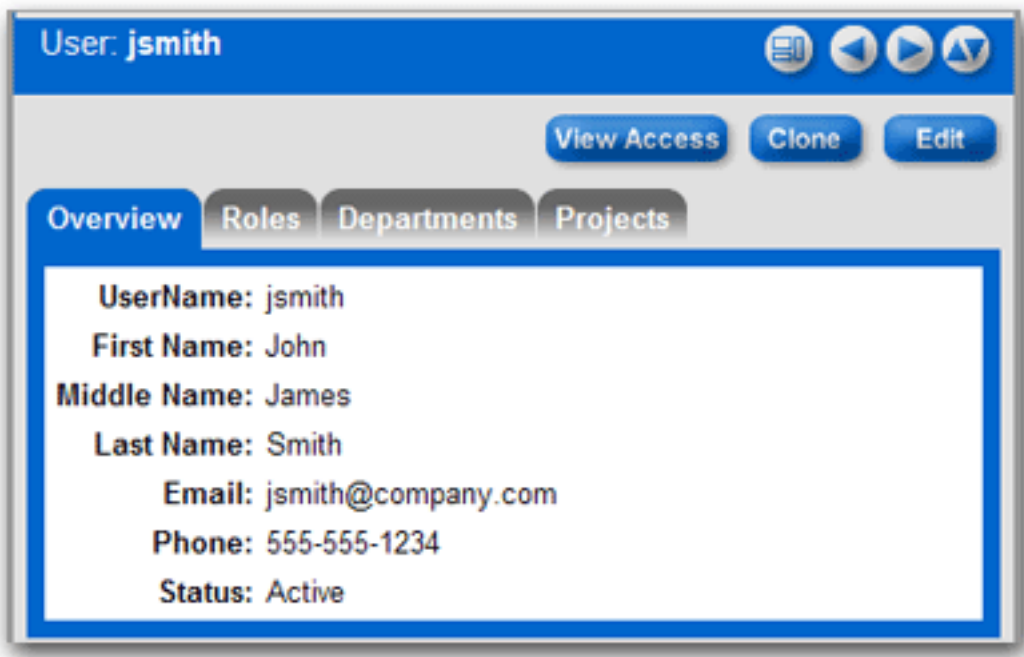

Overview	Roles
UserName: jsmith First Name: John Middle Name: James Last Name: Smith Email: jsmith@company.com Phone: 555-555-1234 Status: Active	admin user
	Departments
	Department #1
	Projects
	Big Project
	example jsmith - MyProject (Closed)
	example jsmith - Project1a (Closed)
	Example Project
	Project 1
	Project 1a
	test-project

2. Select a user from the list.

The user's information is displayed in the lower pane.

3. Click  to expand the **User** detail to fill the main pane.

4. Click  to switch to the tabbed view of the **User** detail.

5. Click  to switch back to the standard view of the **User** detail.
6. Click  to scroll through the list of users.

User Search

This procedure is performed on the BEA AquaLogic Enterprise Repository **Admin** screen.

1. Enter appropriate text in the **Name** text box.

Users

Name

Department
All Departments

Role
All Roles

Status
All Status

Search

Create New
List All

2. Use the Department, Role, and **Status** drop-downs as appropriate to narrow the search.
3. Click the **Search** button.

Search results appear in the list in the upper frame of the main pane.

Cloning a User

Overview

Cloning a user provides an easy way for administrators to quickly duplicate user accounts.

This procedure is performed on the BEA AquaLogic Enterprise Repository **Admin** screen.

1. In the **Users** section, use **Search** or **List All** to locate the user to be cloned.
2. Click  in the user detail.

The **Clone User** pop-up opens (same form as the **Create New User** pop-up). The **Overview** section will be blank, but information in the **Roles** and **Departments** sections duplicates that of the cloned user.
3. Enter the appropriate information in each of the text boxes in the **Overview** section.
4. If necessary, edit the information in the in the **Roles** and **Departments** sections by using the >> and << buttons to move items between the **Available** and **Selected** columns.
5. When finished, click **Save**.

Editing user Information

This procedure is performed on the BEA AquaLogic Enterprise Repository **Admin** screen.

1. In the **Users** section, use **Search** or **List All** to locate the user(s) to be edited.

The list of users opens in the main pane.

2. Select a user from the list.

The user's information is displayed in the lower pane.

3. Click  in the user detail.

The **Edit User** pop-up opens (same form as the **Create New User** and **Clone User** pop-ups).

4. Make changes as necessary in the **Overview**, **Roles**, and **Departments** sections.

5. When finished, click **Save**.

User Status

Overview

BEA AquaLogic Enterprise Repository users are assigned to one of four states:

- **Active**
 - User can log in to BEA AquaLogic Enterprise Repository. Active users are counted as valid users regardless of the licensing model in effect.

- **Inactive**
 - User is unable to log in to BEA AquaLogic Enterprise Repository.
 - Example: **Inactive** status is assigned to terminated employees.

- **Locked Out**
 - Users who have exceeded the maximum number of failed login attempts (as configured in **System Settings**). The user will remain locked out until an access administrator changes the user's account status to **Active**.

- **Unapproved**
 - Valid when using LDAP or SSO.
 - User account is newly created, but requires a user with access administrator privileges to update the user's account (roles, departments, etc.)
 - *Under LDAP*
 - User account is created on initial BEA AquaLogic Enterprise Repository login, status: **Unapproved**.

 - Options:
 - If the **Unapproved User Login** property is set to **True**:
 - User can login, with permissions as determined by the assigned default role.

(Behavior is consistent with **Active** user.)

- If the **Unapproved User Login** property is set to **False**:
 - User can login, but will be unable to see any assets or perform any BEA AquaLogic Enterprise Repository tasks until the access administrator changes the user's status to **Active**, and assigns to a **Role** and optionally to **Departments**. (Behavior is consistent with **Inactive** user.)

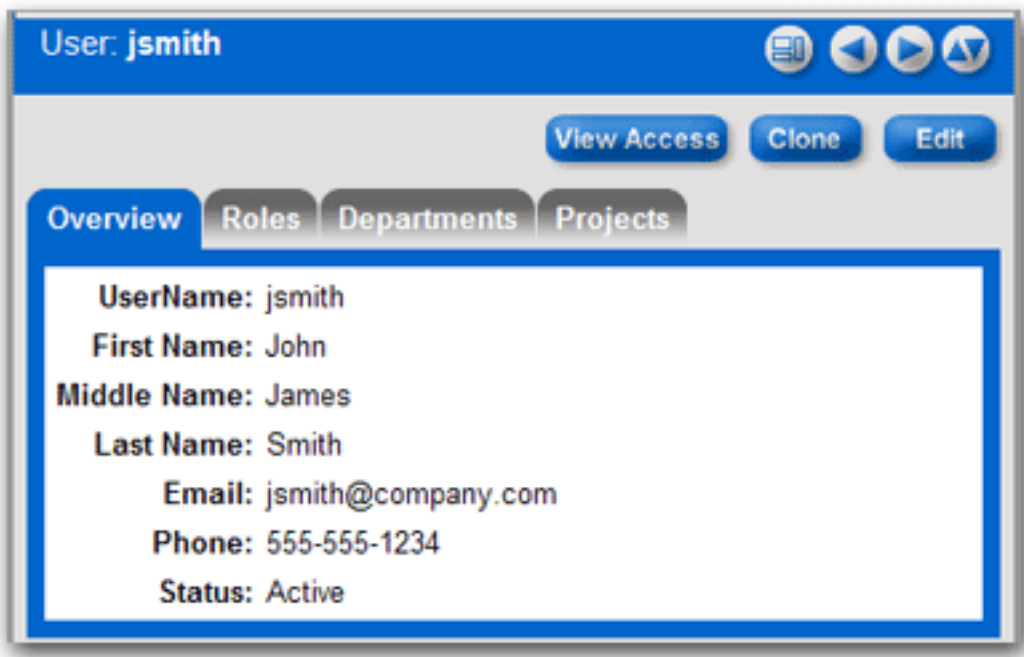

- *Under SSO*
 - User accounts under SSO are best managed via the default BEA AquaLogic Enterprise Repository **Roles** and their relevant permissions. User access to assets and BEA AquaLogic Enterprise Repository features can be controlled by limiting the permissions granted to the default role assigned to the user at login. These roles must be assigned via BEA AquaLogic Enterprise Repository if role synchronization through the User Directory is not in use.

A user's access may be reset by removing all of his/her permissions. Upon subsequent login, the user will be assigned only the permissions assigned to the default role.

Changing User Status

This procedure begins on the BEA AquaLogic Enterprise Repository **Admin** screen.

1. Use **User Search** or other means to locate the user whose status is to be changed.
2. Click the **Edit** button in the **User Detail**.

The **Edit User** pop-up opens.

3. Use the **Status** drop-down in the **Overview** section of the **Edit User** pop-up to select the new user status.

4. Click the **Save** button to save changes and close the **Edit User** pop-up.

Sessions

Overview

Sessions allows the administrator to see which users are logged in to AquaLogic Enterprise Repository and, if necessary, shut down a user session.

Using Sessions

This procedure is performed on the AquaLogic Enterprise Repository **Admin** screen.

(Requires the **Delete** permission. See [Access Settings](#).)

1. Click **Sessions**.

A list of sessions opens in the main pane.

Delete Results (1)

<input type="checkbox"/>	<u>Username</u>	<u>Display Name</u>	<u>Date Logged In</u>
<input type="checkbox"/>	brhubart	Rhubart, Bob	5 Sep 2006 01:40:04 PM

Session: **brhubart** [Navigation Icons] **Delete**

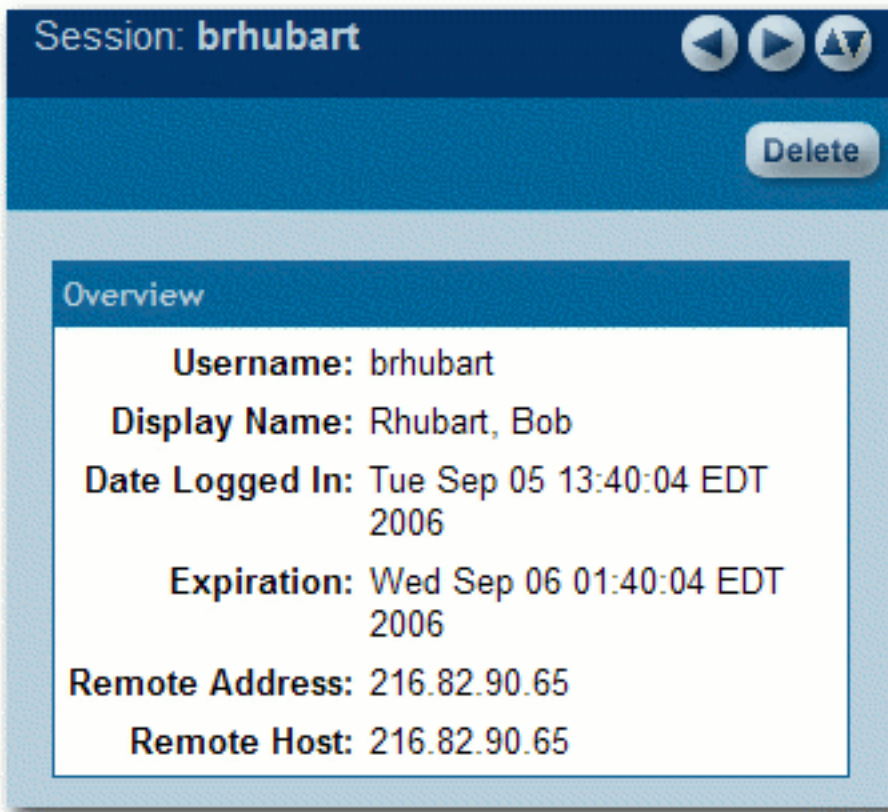

Overview

Username: brhubart
Display Name: Rhubart, Bob
Date Logged In: Tue Sep 05 13:40:04 EDT 2006
Expiration: Wed Sep 06 01:40:04 EDT 2006
Remote Address: 216.82.90.65
Remote Host: 216.82.90.65

Deleting a Single Session

1. Select the session to be deleted from the list in the main pane.

The session's detail opens in the bottom frame.

2. Click the **Delete** button in the session detail.

A confirmation pop-up opens.

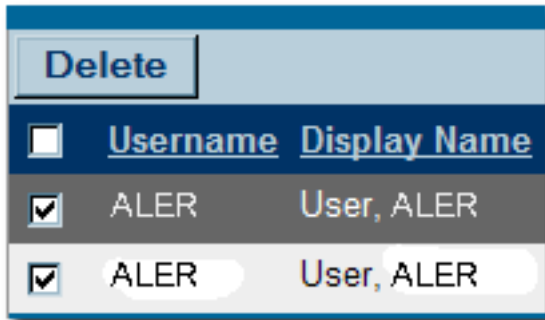

3. Click **OK**.

The session is deleted.

Deleting Multiple Sessions

1. In the list of session in the main pane, place a checkmark next to each session to be

deleted. (Place a checkmark in the checkbox at the top of the column to select all listed sessions.)

2. Click the **Delete** button above the list.

A confirmation pop-up opens.

3. Click **OK**.

The sessions are deleted.

Roles

Clicking the **Roles** link in the AquaLogic Enterprise Repository menu bar allows administrators to set up roles for an organization's various functions. AquaLogic Enterprise Repository access settings are established for each role, and each user is assigned a specific role based on his/her function within the organization.

Users assigned the **admin** role have unlimited access to all AquaLogic Enterprise Repository (ALER) functions. By default, in either a new installation or a migration from a previous version, the user account identified as **Flashline** is assigned the **admin** role in order to facilitate initial installation and configuration. It is highly recommended that you limit the assignment of **admin** privileges to the original **AquaLogic Enterprise Repository** user account and no more than one additional account. The various default roles established in AquaLogic Enterprise Repository offer a variety of privileges to satisfy the functions and responsibilities for any and all AquaLogic Enterprise Repository users. These roles may be customized to suit the particular needs of your organization.

User Role Descriptions

The various default roles shipped with AquaLogic Enterprise Repository are listed below. Users with access to the **Admin** tab can change role names to suit organizational needs. The permissions granted to these roles can be changed in the **Access Settings** section.

- **User**

- Anyone with an AquaLogic Enterprise Repository user name and password is considered to be a user. This role can be assigned as the default role for any new users at the time the user is created. All AquaLogic Enterprise Repository users can:
 - View news about the company's reuse initiatives
 - Locate, evaluate, and use/download assets
 - View projects that are associated with assets
 - Generate reports
 - Submit assets to the registrar

- **Access Administrator**

- The access administrator creates all AquaLogic Enterprise Repository users, and assigns permissions to them. The access administrator must be familiar with the functions of the Admin Tab. Typically, access administrators can:
 - Create, view, and edit users and permissions
 - Generate reports

- **Advanced Submitter**

- The advanced submitter role is typically assigned to asset builders and harvesters. Asset builders focus on building the asset content base. They respond to organization-wide asset needs as well as individual project needs. Harvesters study post-implementation projects for asset reuse potential. Typically, advanced submitters can:
 - Locate, evaluate, and use/download assets
 - View projects that are associated with assets
 - Generate reports
 - Submit assets to the registrar
 - Edit asset metadata prior to asset registration

- **Registrar**

- The registrar is responsible for the acceptance or rejection of any asset. There may be more than one person functioning as a repository registrar, depending on the functions addressed. Typically, registrars can:
 - Locate, evaluate, and use/download assets
 - View projects that are associated with assets
 - Generate reports
 - Submit assets to the registrar
 - Edit asset metadata prior to asset registration
 - Accept assets for the registration process
 - Approve tabs
 - Register assets
 - Edit access settings

- **Registrar Administrator**

- The registrar administrator is able to establish Types within AquaLogic Enterprise Repository, using the **Type Manager**. Typically, registrar administrators can:
 - Locate, evaluate, and use/download assets
 - View projects that are associated with assets
 - Generate reports
 - Submit assets to the registrar
 - Edit asset metadata prior to asset registration
 - Accept assets for the registration process

- Approve tabs
- Register assets
- Edit access settings
- Edit repository hosts and Types

- **Project Administrator**

- AquaLogic Enterprise Repository tracks asset use at the project level in order to maintain a history for maintenance purposes. Project administrators create projects and assign users to projects using the Projects Tab, visible to users with appropriate permissions. Project administrators can also close projects, indicate which assets were deployed, and review, validate, and optionally override the predicted and consumer-reported value of assets used in a project through the project-reported asset value user interface. Typically, project administrators can:
 - Create, edit, and view projects
 - Generate reports

- **System Administrator**

- The system administrator configures AquaLogic Enterprise Repository for use, including, possibly, installation as well as the post-installation configurations. The system administrator typically can:
 - Enable and edit system settings
 - Generate reports

(The system administrator role should not be assigned to general users.)

Creating a New Role

This procedure is performed on the AquaLogic Enterprise Repository **Admin** screen.

1. Click **Roles**.

2. Click **Create New**.

Roles

Name

Default

Unspecified

Search

Create New

List All

3. In the **Create New Role** dialog box, enter a role name and description in the text fields in the **Overview** section.

Create New Role

Overview

Name*:

Description:

Automatically assign to new users?

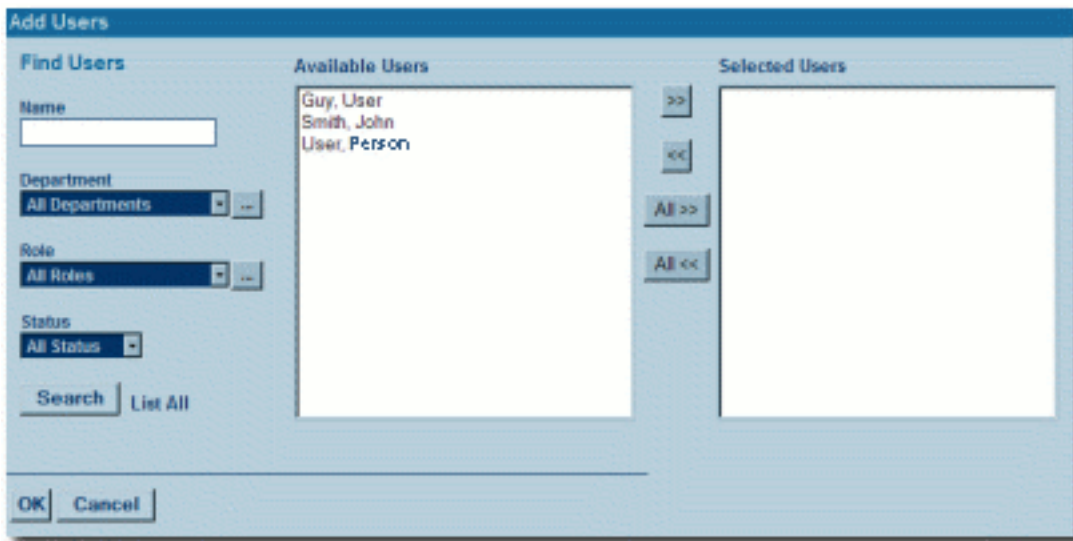

Users

*Denotes required field

4. If necessary, check the **Automatically assign to new users?** box.

5. Click the **Edit Users** in the **Users** section.

The **Add New Users** pop-up opens.

6. Use **Search** or click **List All** to locate users.
7. Use the **>>** and **<<** buttons to move users between the **Available Users** and **Selected Users** columns.
8. When finished, click **Save**.

Editing a Role

This procedure is performed on the AquaLogic Enterprise Repository **Admin** screen.

1. Click **Roles**.

A list of roles is displayed in the main pane.

2. Use **Search** or browse the list to locate the Role to be edited.
3. Click on the role to display its information in the lower pane.
4. Click the **Edit** button in the role detail (bottom frame).

The **Edit Role** pop-up opens.

Edit Role: user

Overview

Name*: user

Description: Normal User

Automatically assign to new users?

Users

- Aguiar, Archee
- am, sam I.
- Anderson, Derek
- Beiter, Randy B.
- Boruz, Alex X.
- Bums, Dennis A.

Edit Users

*Denotes required field

Save Cancel

5. If necessary, click **Edit Users** in the **Users** section to edit the users assigned to this role. (Same as **Step 5** in **Creating a New Role**.)
6. When finished, click **Save**.

Deleting a Role

This procedure is performed on the AquaLogic Enterprise Repository **Admin** screen.

(Requires the **Delete** permission. See [Access Settings](#).)

1. Click **Roles**.

2. Use **Search** or browse the list in the main pane to locate the role to be deleted.
3. Option 1:
 - In the list in the upper frame, place a check in the box next to each role to be deleted.
 - Click **Delete**.
4. Option 2:
 - Select the role in the list in the upper pane to display its information in the lower pane.
 - Click the **Delete** button in the role detail (lower frame).
5. Click **OK** in the delete confirmation.

- **Note:** Deleted roles will no longer appear in **Access Settings**.

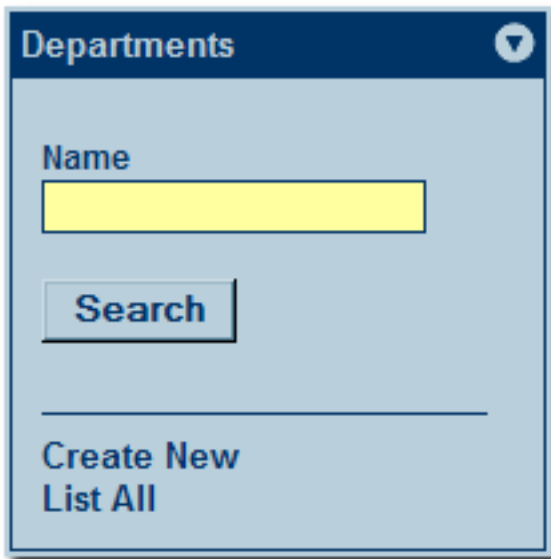

Departments

Departments should be set up before **Users** and **Projects**.

Creating a New Department

This procedure is performed on the **Admin** screen.

1. Click **Departments**.
2. Click **Create New** in the **Departments** section.

The screenshot shows a dialog box titled "Departments" with a dropdown arrow in the top right corner. Inside the dialog, there is a "Name" label above a yellow text input field. Below the input field is a "Search" button. At the bottom of the dialog, there are two links: "Create New" and "List All".

3. In the **Create New Department** dialog box, enter the appropriate information in each of the text boxes.

Create New **Department**

Name*:

Description:

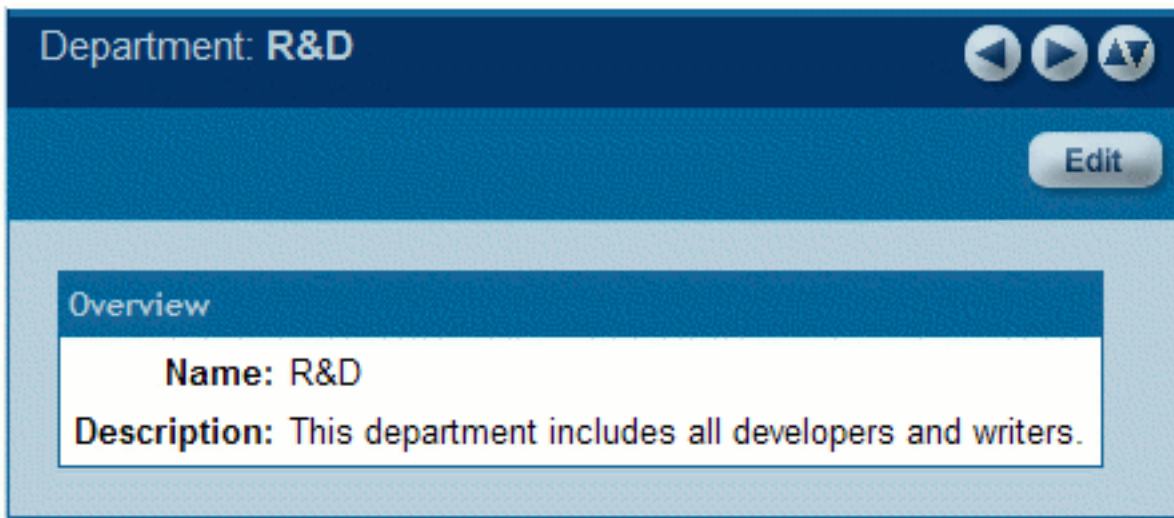

*Denotes required field

4. When finished, click **Save**.

Editing Department Information

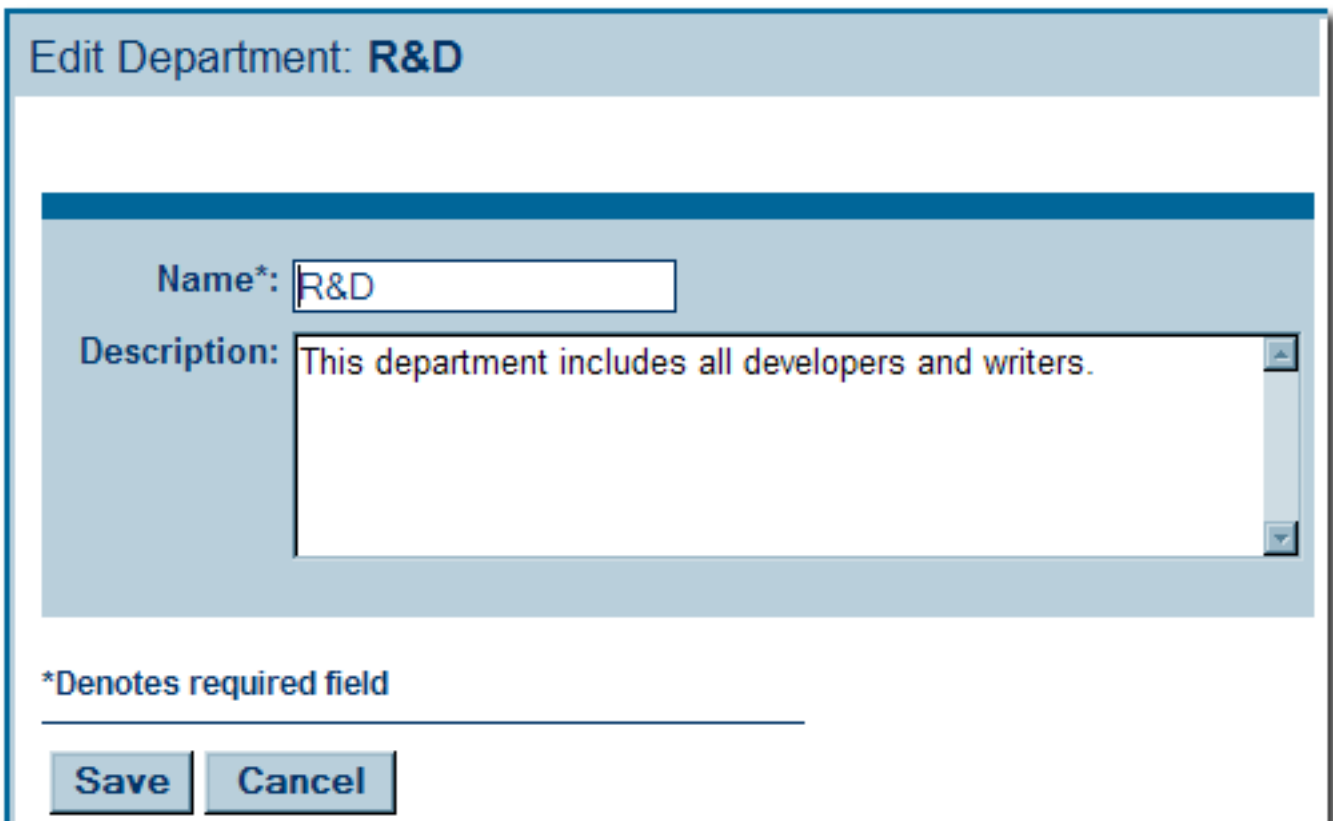

This procedure is performed on the **Admin** screen.

1. Click **Departments**.
2. Click **List All**, or search for a particular department.
3. Select the department to be edited from the list in the main pane.

The department's detail is displayed in the bottom frame.

4. Click **Edit** in the department detail.
5. In the **Edit Department** dialog box, make changes as necessary to information in each of the text boxes.

6. When finished, click **Save**.

Access Settings

Access Settings allow the administrator to assign permissions to each role. Access settings identify the functions and responsibilities of a role, and determine each role's level of access to assets and asset management features in AquaLogic Enterprise Repository (ALER).

System safeguards prevent an administrator from inadvertently modifying permissions in such a way that would prevent his/her subsequent access to **Access Settings**.

- **Basic Access Settings (BAS)**
 - Control the access to assets in AquaLogic Enterprise Repository across the board, based on the roles to which users are assigned. Access to ALER tools, such as the **Asset Editor** or the **Type Manager**, is similarly controlled. Basic Access Settings establish access across the system. For example, permission to view assets applies to all assets; as does permission to **Use/Download** assets.
- **Custom Access Settings (CAS)**
 - Establish Advanced Role-based Access Control to restrict access to specific assets or groups of assets in AquaLogic Enterprise Repository to specific user roles.

Security Considerations

Role-based Access Control (RBAC) allows AquaLogic Enterprise Repository to track asset usage and production on a by-user basis and personalizes the presentation of assets, limiting visibility to designated portions of AquaLogic Enterprise Repository. **However, Role-based Access Control is not intended to provide security for asset metadata, nor is it intended to supplement the security of underlying asset repositories.**

AquaLogic Enterprise Repository access settings provide no additional security for otherwise unsecured assets or data. For maximum security, asset metadata should be managed in a manner that prevents access to the metadata via an unsecured repository.

Confidential information should be embedded in the asset's payload, or attached as documentation files and secured in a host repository.

If you choose to circumvent an authentication and permission challenge from the underlying asset repository, you do so at your own risk.

The following actions also have security implications:

- Configuring SCM systems for access via a single AquaLogic Enterprise Repository user account
- Allowing system access by unapproved users
- Creating guest account logins
 - Guest accounts are strictly forbidden under the AquaLogic Enterprise Repository license.

Any of these actions has the potential to open the contents of AquaLogic Enterprise Repository to anyone with network access to ALER.

Access Settings and the Asset Editor

Depending on the **Access Settings** in use, users with access to the **Asset Editor** may be able to see relationships to assets that are otherwise invisible to them in the registry. In this situation, the name of the hidden asset is visible, as is the detail of the relationship between that asset and an asset to which the users have access. No other information on the hidden asset is visible in the Asset Editor. In this situation, it is possible to delete the relationship between the visible and the hidden asset. However, given that the invisible asset is inaccessible to the users in question, the relationship cannot be restored by those users.

Permissions

Permissions may be:

- **Granted** (Permission is explicitly granted)

- **Denied** (Permission is explicitly denied)
- **Not Granted** (Permission is not explicitly granted nor denied.)

The table below identifies permissions that may be managed within **Basic Access Settings**.

Access Definitions

Assets: Tools regulated: ALER **Asset** screen, **Asset Editor**, **Type Manager**.

Permission	Description
View	Assets may be viewed in ALER.
Use/Download	Displays/enables the Use - Download button in ALER.
Download	Asset files may be downloaded. Provides visibility to file links after pressing the Use - Download button.
Review	Reviewing assets using ALER.
Edit	Editing assets in the Asset Editor .
Accept	Accepting assets. This button, in the Asset Editor , moves assets from the Submitted -- Pending Review to the Submitted -- Under Review queue.
Approve Tabs	Approving metadata for assets. This button is available at the bottom of each tab in the Asset Editor display of each asset. Approving a tab logs the name of the approver and the date in the metadata, moves the asset out of the Submitted - Under Review queue for that tab, and changes the tab's text label to green.
Register	Registering assets. This permission provides the user with the ability to register all assets in the Asset Editor .
Edit Access Settings	Applicable only with Custom Access Settings . Provides the ability to change Custom Access Settings permissions on all assets.
Create/Submit	Gives a user the ability to submit assets through the ALER or create new assets through the Asset Editor .
Launch Asset Editor	Gives a user the ability to open the Asset Editor tool. One must use this tool to edit and register assets.

Edit Repository Hosts	Gives a user the ability to create and edit repository hosts (through the Asset Editor).
Edit Types	Gives a user the ability to configure asset type/compliance template metadata. Requires the Launch Asset Editor permission.

Access: Tools regulated: ALER **Admin** screen: **Users, Sessions, Roles, Departments, File Stores, Basic Access Settings, Custom Access Settings**

Permission	Description
View	Viewing entries in the sections noted above.
Edit	Editing entries in the sections noted above.
Create	Creating users, roles, departments, file stores, and custom access settings.
Delete	Deleting sessions, roles, and custom access settings.

Projects: Tools regulated: ALER **Projects** screen

Permission	Description
View	Viewing projects on the Projects page.
Edit	Editing projects on the Projects page.
Create	Creating projects on the Projects page.
Apply Template	Apply a compliance template to a project.

Reports: Tools regulated: ALER **Reports** screen

Permission	Description
View	Viewing reports.

System Administration: Tools regulated: ALER **Admin** screen: **System Settings, Email Templates.**

Permission	Description
Edit	Ability to edit general, security, authentication, and file store settings.

Enable

Ability to enable new general, security, authentication, and file store settings.

Granting Permissions to a Role

This procedure is performed on the AquaLogic Enterprise Repository **Admin** screen.

1. Click **Basic Access Settings**.

A rectangular button with a blue border and a light blue background. The text "Basic Access Settings" is written in a dark blue font. To the right of the text is a small circular icon containing a white right-pointing triangle.

2. Select the appropriate grouping from the list in the **Basic Access Settings** section.

A dropdown menu with a dark blue header bar containing the text "Basic Access Settings" and a white downward-pointing triangle icon. The menu items are listed below the header in a light blue background.

Assets
Access
Policies
Projects
Reports
System Administration

The selected grouping's access settings are displayed in the main pane.

Basic Access Settings for: Assets

View Access Edit

4: Edit Asset Types														✓

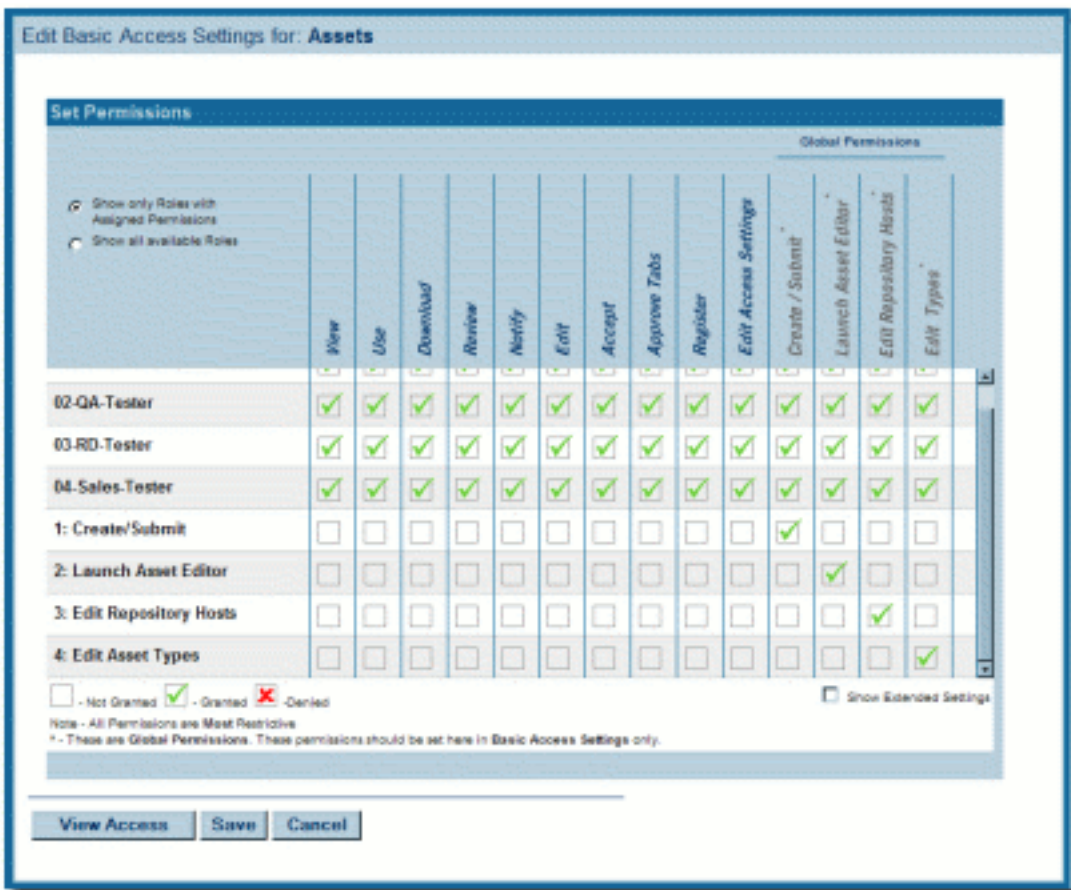

- Not Granted ✓ - Granted ✗ - Denied

Note - All Permissions are Most Restrictive

* - These are Global Permissions. These permissions should be set here in Basic Access Settings only.

3. Click the **Edit** button (upper right corner of the main pane.)

The **Edit Basic Access Settings for:...** pop-up opens.

Roles are listed on the left; Permissions are listed along the top.

4. Select the appropriate radio button to determine which roles are displayed.

5. Select the role to which permissions are to be granted.

6. Use the checkboxes to assign the appropriate permission.
- One click on an empty box adds a check mark (**Granted**)
 - A second click adds an **X** (**Denied**).
 - A third click clears the box (**Not Granted**).

7. When finished, click **Save**.

Editing Permissions

See: [Granting Permissions to a Role](#)

Verifying User Permissions

This procedure is performed on the AquaLogic Enterprise Repository **Admin** screen.

1. Click **Basic Access Settings**.

2. Select the appropriate grouping from the list in the **Basic Access Settings** section.

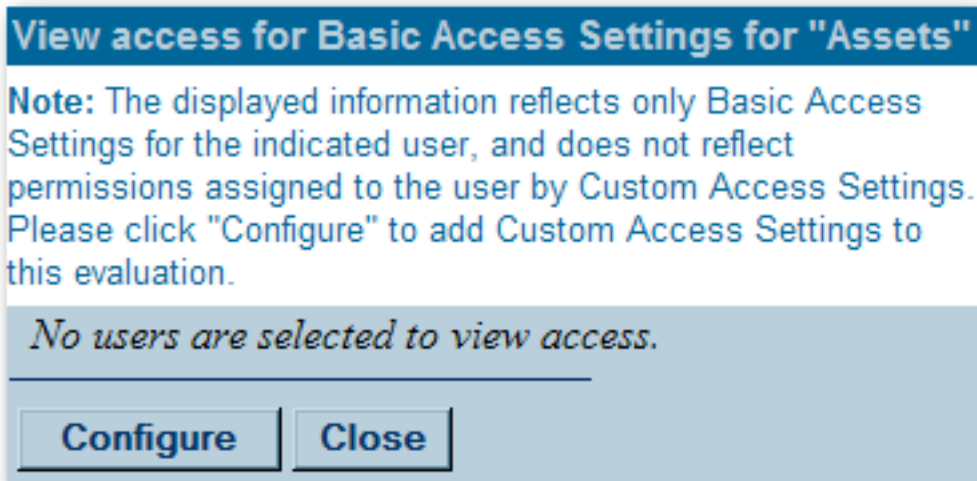

The selected grouping's access settings are displayed in the main pane.

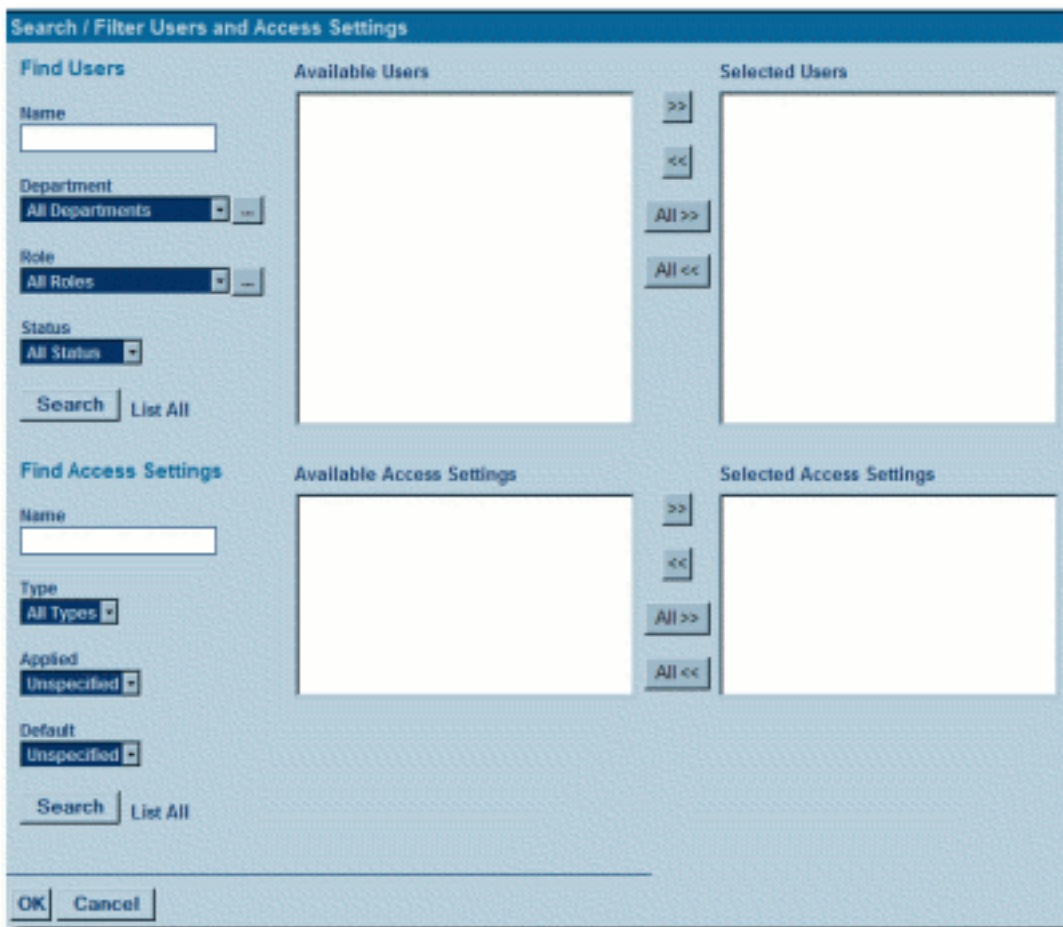

3. Click the **View Access** button (upper right corner of the main pane).

A message pop-up opens.

4. Click **Configure**.

The **Search / Filter Users and Access Settings** pop-up opens.

5. Use **Search** or click **List All** in the **Find Users** section to locate the user(s) whose permissions are to be verified.
6. Use the **>>** button to move user(s) from the **Available Users** column to the **Selected Users** column.
7. Click **OK**.

The selected user's access settings are displayed.

View access for Basic Access Settings for "Assets"

Note: The displayed information reflects only Basic Access Settings for the indicated user, and does not reflect permissions assigned to the user by Custom Access Settings. Please click "Configure" to add Custom Access Settings to this evaluation.

Users/Roles	View	Use	Download	Review	Notify	Edit	Accept	Approve Tabs	Register	Edit Access Settings	Submit	Launch Asset Editor	Edit Repository Hosts	Edit Type
 User, Flashline*														

 Yes, user has permission
 No, user does not have permission
 * - user has the admin role and so has all permissions

[Configure](#) | [Close](#)

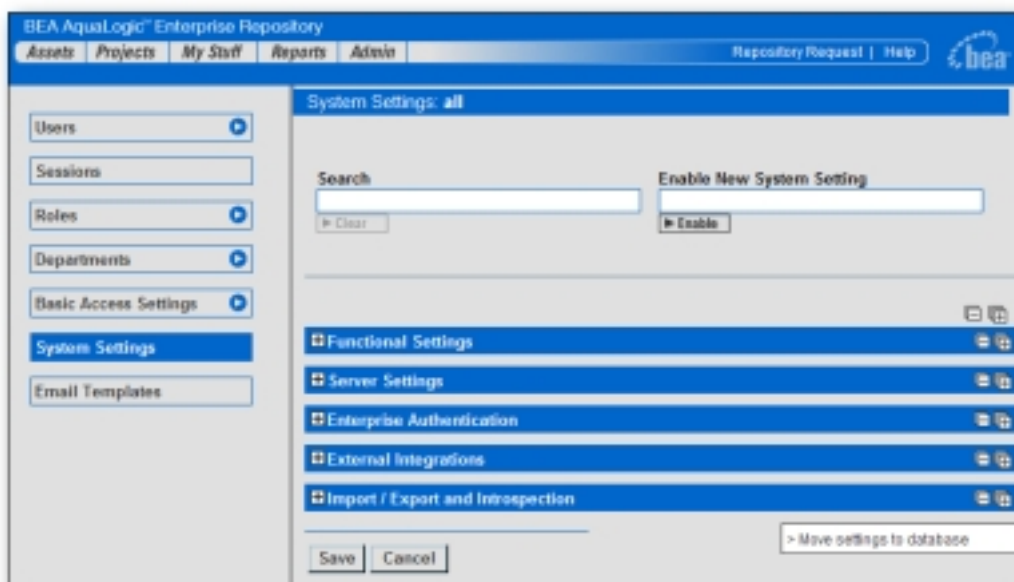

8. If multiple users are selected, clicking the  icon next to a user's name will display information specific to that user.
9. When finished, click **Close**.

System Settings Overview

AquaLogic Enterprise Repository's **System Settings** section allows administrators to configure the basic ALER operation and to enable/disable specific features.

Access System Settings

1. Click **System Settings** in the sidebar on the ALER **Admin** screen.

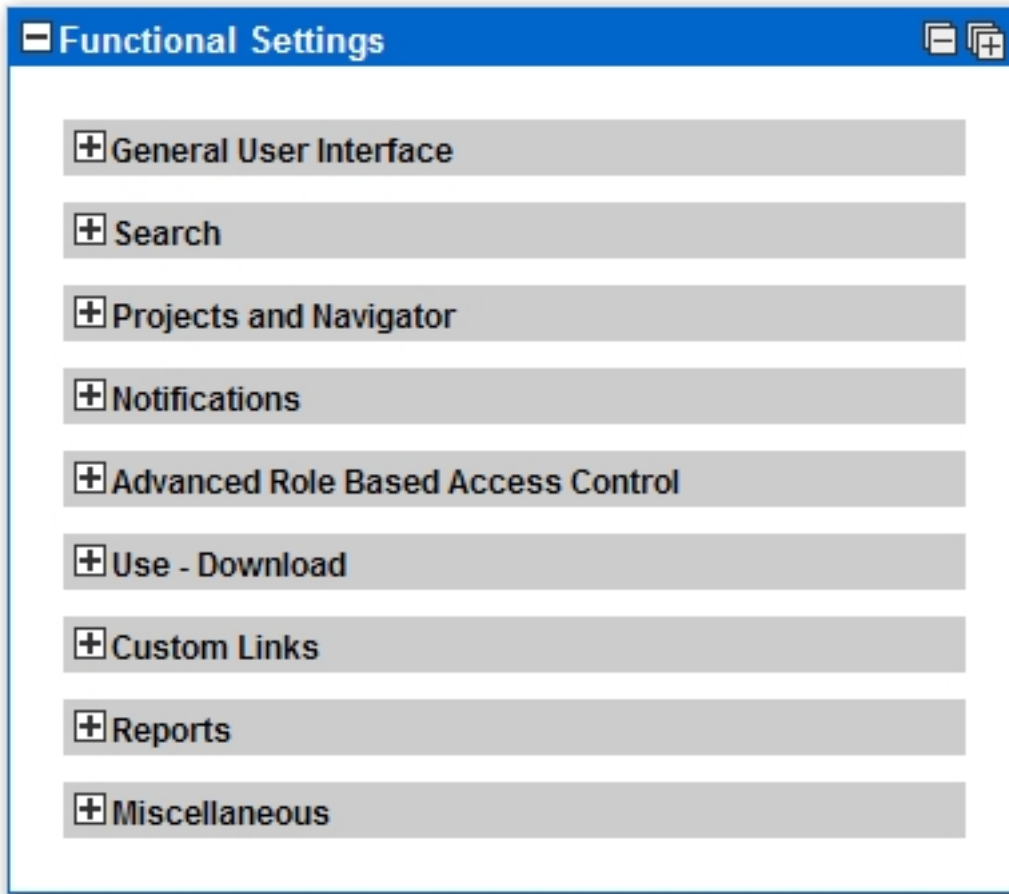

The **System Settings** section opens in the main pane.

System Settings are organized into categories:

- **Functional Settings**
- **Server Settings**
- **Enterprise Authentication Settings**
- **External Integration Settings**
- **Import/Export and Introspection Settings**

Each category is further divided into feature groups.

2. Click  to expand the display of any category or feature group.
3. Click  to collapse the display.

Search for System Settings

System settings for particular features can be located using the System Settings **Search**.

1. Enter a search term in the System Settings **Search** box.

The relevant category sections expand to display the relevant System Settings.

Search

Use External Email <small>cmee.server.smtp.send-with-ron</small>	<input checked="" type="radio"/> True <input type="radio"/> False <small>When set to false this enables ALER email. When set to true, this disables the internal email "send" mechanism. NOTE-Restart server after changing this setting.</small>
Send Email Interval <small>cmee.server.smtp.send-interval</small>	<input style="width: 40%;" type="text" value="60"/> <small>In minutes, the send interval between automatic email messages</small>
Send System Email as HTML <small>cmee.server.smtp.send.format-html</small>	<input type="radio"/> True <input checked="" type="radio"/> False <small>Enables the ability to send email in HTML format</small>

2. Click the **Clear** button to clear the search results.

Enable System Settings Properties

In some cases it may be necessary to enable specific properties in order to activate certain optional ALER features. These properties will be provided by BEA Support.

1. Obtain the necessary system setting property.
2. Enter the system setting property in the **Enable New System Setting** text box.

Enable New System Setting

3. Click 

The appropriate System Setting category will open in the lower pane.

4. Edit the system setting properties as necessary.

5. Click  when finished.

Move Settings to Database

Exercising this option moves all system settings stored in property files to the database. **This action cannot be reversed.**

1. Click 

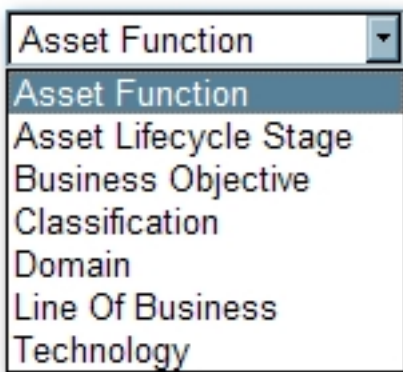

All system settings are saved to the database.

Functional Settings: General User Interface

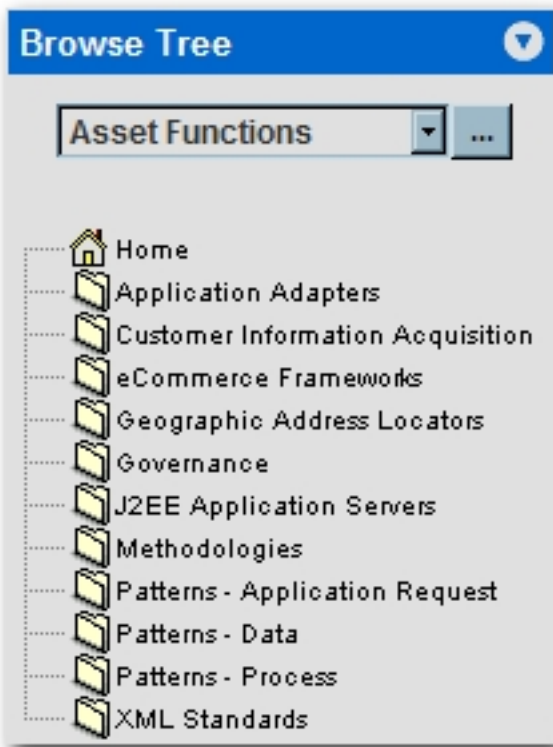

General User Interface	
Default Browse Categorization <small>cme.assettab.default-categorization</small>	<input type="text" value="Asset Function"/> <p>The categorization type initially used to group items in the Browse Assets tree.</p>
Default Browse Type <small>cme.assettab.default-categorization-show-assettype</small>	<input type="radio"/> True <input checked="" type="radio"/> False <p>Enables the default browse to show types.</p>
Sticky Registrar Queues <small>cme.registrar.adbqueues</small>	<input checked="" type="radio"/> True <input type="radio"/> False <p>The currently displayed tab in the Asset Editor remains selected when browsing from one asset to another.</p>
Table Zoom <small>cme.assettab.multiplegroupelement.force-zoom</small>	<input type="radio"/> True <input checked="" type="radio"/> False <p>Enables table elements to open in their own window.</p>
Repeat Table Header <small>cme.assettab.multiplegroupelement.show-header-interval</small>	<input type="text" value="0"/> <p>Interval to repeat the table header within large tables. Specified in number of rows.</p>
Show All Detail in Tabs <small>cme.framework.show-as-tabs</small>	<input type="radio"/> True <input checked="" type="radio"/> False <p>Make the default detail screen view to be a tabbed view.</p>
Long Date Format Specification <small>cme.server.date.format.long.default</small>	<input type="text" value="yyyy-MM-dd HH:mm:ss z"/> <p>Specifies the date format for the display of full date information (year, month, day, time, timezone, etc.) in the application. For example, to display dates in European format, enter "dd-MM-yyyy HH:mm:ss Z". See product documentation for full formatting syntax.</p>
Short Date Format Specification <small>cme.server.date.format.short.default</small>	<input type="text" value="yyyy-MM-dd"/> <p>Specifies the date format for the display of abbreviated date information (year, month, day) in the application. For example, to display dates in European format, enter "dd-MM-yyyy". See product documentation for full formatting syntax.</p>
Full Name Format <small>enterprise.defaults.fullname.format</small>	<input type="text" value="{last}, {first} {middle}"/> <p>The format used for the full names in the system. This can contain the strings "{prefix}", "{first}", "{middle}", "{suffix}" and punctuation immediately following any of these name parts in any order. Extra space is trimmed. NOTE-Restart server after changing this setting.</p>
Display Name Field <small>enterprise.defaults.displayname.field</small>	<input type="text" value="fullname"/> <p>Field to display for user. NOTE-Restart server after changing this setting.</p>
Display Name - Full Name and Initial <small>enterprise.defaults.fullname.middleinitial</small>	<input checked="" type="radio"/> True <input type="radio"/> False <p>Enables display of a full name and middle initial for the display name where visible.</p>

Properties

- **Default Browse Categorization**
 - `cme.assettab.default-categorization`
 - The drop-down menu selection determines the initial asset categorization in the **Browse Tree** on the **Assets** screen.

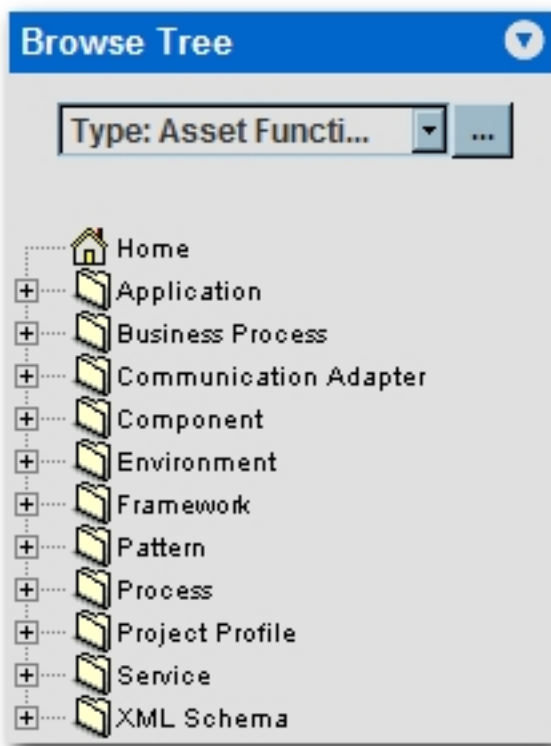

Results in...

- **Default Browse Type**

- `cmee.assettab.default-categorization-show-assettype`
- The **True** and **False** radio buttons toggle the default display of assets by Type in the **Browse Tree** on the **Assets** screen (subject to the system setting in **Default Browse Categorization**).

True results in...

- **Sticky Registrar Queues**

- `cmee.registrar.stickyqueues`
- The **True** and **False** radio buttons toggle the default display of the selected **Asset Editor** tab when browsing assets.
 - **True**: Each asset opens to the Asset Editor tab in view from the previously selected asset.
 - **False**: Defaults to the **Overview** tab for each asset viewed in the **Asset Editor**.

- **Table Zoom**

- `cmee.assettab.multiplegroupelement.force-zoom`
- The **True** and **False** radio buttons toggle the ability to open table elements in their own window.

- **Repeat Table Header**

- `cmee.assettab.multiplegroupelement.show-header-interval`
- The number entered in the text box determines the interval (number of rows) at which the table header repeats in large tables.
 - Value of 0 results in...

Functional Settings: Search

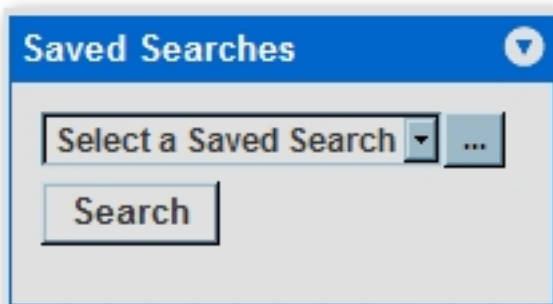

Search	
Save Searches <small>cmee.asset.registry.saved.searches</small>	<input checked="" type="radio"/> True <input type="radio"/> False Enables the ability to save search criteria.
Search Indexed Fields <small>cmee.search.general.include.indexedfields</small>	<input checked="" type="radio"/> True <input type="radio"/> False Include indexed fields in general Asset Searches
Search Categorizations <small>cmee.search.general.include.categorizations</small>	<input checked="" type="radio"/> True <input type="radio"/> False Include categorizations in general Asset Searches
Advanced Search Categorization Default Visibility <small>cmee.search.advanced.categorizations.visible</small>	<input type="radio"/> True <input checked="" type="radio"/> False If true then categorizations in the advanced search window will be initially expanded and included in the search.
Search Specific Field <small>cmee.search.specific.field</small>	<input checked="" type="radio"/> True <input type="radio"/> False Enables the ability to enter in a field name (followed by a ':') into the keyword search and search on that specific field.
Confirm Empty Search <small>cmee.empty.search.confirm</small>	<input type="radio"/> True <input checked="" type="radio"/> False Forces a warning when a user searches on a blank string.

Properties

- **Save Searches**

- `cmee.asset.registry.saved.searches`
- The **True** and **False** radio buttons toggle the **Save Searches** feature. This feature allows complex **Advanced Search** criteria to be saved and reused.

True displays the **Saved Searches** section in the sidebar on the **Assets** screen, as illustrated below.

- **Search Indexed Fields**

- `cmee.search.general.include.indexedfields`
- The **True** and **False** radio buttons toggle the inclusion of indexed fields in general asset searches.

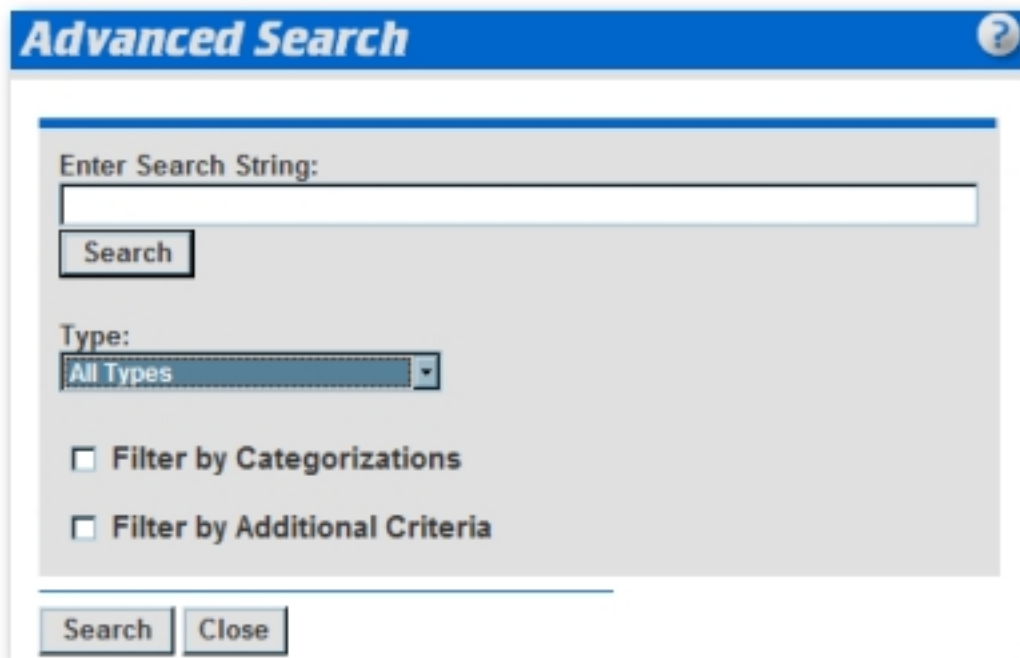

- **Search Categorizations**

- `cmee.search.general.include.categorizations`
- The **True** and **False** radio buttons toggle the inclusion of categorizations in general asset searches.

- **Advanced Search Categorization Default Visibility**

- `cmee.search.advanced.categorizations.visible`
- The **True** and **False** radio buttons toggle the default display of the Categorizations tree in the Advanced Search pop-up.

False results in...

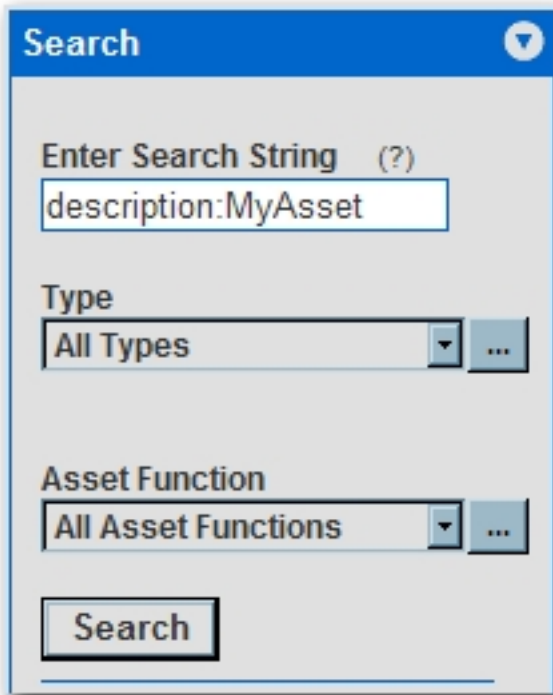

True results in...

- **Search Specific Field**

- `cmee.search.specific.field`
- The **True** and **False** radio buttons toggle the ability to search specific fields during Standard Searches by identifying the field to be searched in the Keyword text box.

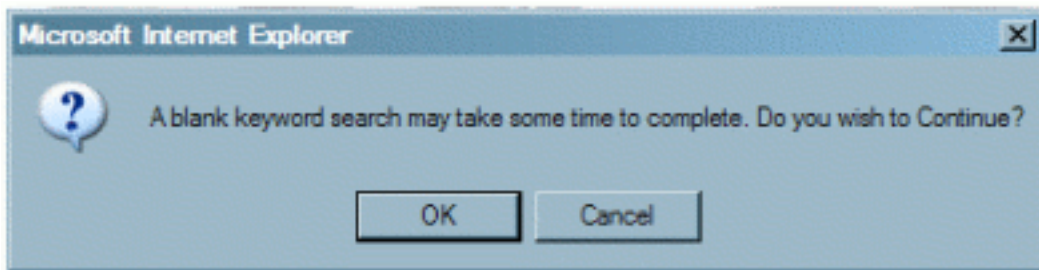

As illustrated below, the string `description:MyAsset` will search for the keyword the **MyAsset** in the **Description** field of every asset in the Repository.

- **Confirm Empty Search**

- `cmee.empty.search.confirm`
- The **True** and **False** radio buttons toggle the display of a warning message when a user performs a search on a blank string.

True will display the following when a blank search is performed:

Functional Settings: Projects and Navigator

Projects and Navigator	
Navigator & Project Hierarchy <small>cmee.projecttool.advanced</small>	<input checked="" type="radio"/> True <input type="radio"/> False Enables advanced project options including the navigator and project hierarchy
Navigator Support for Microsoft JDK <small>cmee.navigator.force-msjdk-support</small>	<input type="radio"/> True <input checked="" type="radio"/> False Uses alternative navigator applet which is compatible with Microsoft's applet plugin for Internet Explorer.
User Defined Projects <small>cmee.extraction.user-projects.enable</small>	<input checked="" type="radio"/> True <input type="radio"/> False Enables users to create their own projects feature during asset usage.
User Defined Projects - Prefix <small>cmee.extraction.user-projects.prefix</small>	<input type="text" value="example"/> Prefix used with the user name to determine the project name for the user defined project. (Useful for visual grouping in reports.)
Producing Projects <small>cmee.project.producing.enabled</small>	<input type="radio"/> True <input checked="" type="radio"/> False Enables capture of producing projects for assets.

Properties

- **Navigator and Project Hierarchy**
 - `cmee.projecttool.advanced`
 - The **True** and **False** radio buttons toggle advanced project options including the **Navigator** and project hierarchy.
- **Navigator Support for Microsoft JDK**
 - `cmee.navigator.force-msjdk-support`
 - The **True** and **False** radio buttons toggle the use of an alternative Navigator applet that is compatible with Microsoft's applet plugin for Internet Explorer.
- **User Defined Projects**
 - `cmee.extraction.user-projects.enable`
 - The **True** and **False** radio buttons toggle the feature that allows users to create a project on the fly during the asset **Use/Download** process.

True results in...

Functional Settings: Notifications

- **New User Notification**

- `cmee.new.unapproved.users.notify`
- The **True** and **False** radio buttons toggle the feature that automatically sends an email to the security admin when a new user is created via external authentication, such as LDAP or container.

Note: this information pertains to the evaluation version of AquaLogic Enterprise Repository.

Functional Settings: Custom Links

This group of settings controls the configuration and display of custom links on the right side of the AquaLogic Enterprise Repository menu bar.

Properties

- **Custom Link 1**

- `cmee.tool.show-marketplace`
- The **True** and **False** radio buttons toggle the display of Custom Link 1.

False results in...

True results in...

(Illustrates both **Custom 1 Link** and **Custom 2 Link** set to **True**.)

- **Custom Link 1 Label**

- `cmee.tool.marketplace.label`
- Text entered in the text box will appear as the label for Custom Link 1 on the ALER menu bar.

- **Custom Link 1 URL**

- `cmee.tool.marketplace.url`

- Enter the URL for Custom Link 1.
- **Custom Link 1 Target Frame**
 - `cmee.tool.marketplace.target`
 - Specifies the frame in which to open Custom Link 1.
- **Custom Link 2**
 - `cmee.tool.show-marketplace`
 - The **True** and **False** radio buttons toggle the display of Custom Link 2.
- **Custom Link 2 Label**
 - `cmee.tool.marketplace.label`
 - Text entered in the text box will appear as the label for Custom Link 2 on the ALER menu bar.
- **Custom Link 2 URL**
 - `cmee.tool.marketplace.url`
 - Enter the URL for Custom Link 2.
- **Custom Link 2 Target Frame**
 - `cmee.tool.marketplace.target`
 - Specifies the frame in which to open Custom Link 2.

Functional Settings: Reports

Properties

- **Enable PDF Output For Reports**

- `cmee.reports.pdf.enable`
- Default setting is **False**.
- **IMPORTANT:**
 - **DO NOT** set to **True** if the database in use has been configured to use the Unicode/UTF-8 character set.

The ALER reporting engine does not support the Unicode/UTF-8 character set. Attempts to export reports to PDF using this character set will result in missing data.

- **Enable Excel Output For Reports**

- `cmee.reports.excel.enable`
- The **True** and **False** radio buttons toggle the ability to export reports in Microsoft Excel format.

True results in...

Functional Settings: Miscellaneous

Miscellaneous	
Consumer Survey omee.extraction.consumer-survey.enable	<input checked="" type="radio"/> True <input type="radio"/> False Enables consumer survey of asset value on usage
Default Usage Rejection Reason omee.default.usage.rejection.reason	Other This is the default rejection reason to be used when an asset usage is rejected from a project via the Project Edit window.
Export Assets into a Microsoft Excel spreadsheet omee.asset.registry.export.excel	<input checked="" type="radio"/> True <input type="radio"/> False Allows Assets to be exported to an external Microsoft Excel file.
Affinity Threshold omee.assettab.affinity.threshold	1 The threshold value to use when determining which affinity assets should be displayed on an asset detail page.
Affinity Minimum Project Count omee.assettab.affinity.minimum	-1 Minimum number of projects to require inclusion in for assets to appear in Affinity section on asset detail page.

Properties

- **Consumer Survey**
 - `omee.extraction.consumer-survey.enable`
 - The **True** and **False** radio buttons toggle the display of the complete asset usage **Update Survey**, available for any asset listed in the **Asset Usage** section of the **My Stuff** page.

True displays the full survey...

Update Status

You recently used **Sample Comm Adapter - Customer Credit Information (3.0)** to evaluate it for use in **example jsmith - MyProject**. Your feedback is an essential resource to other developers who may wish to use this asset in the future. Please update the usage status of this asset below:

Status:

The predicted net hours saved when using this asset is **576.0**

1. As a Consumer of this asset, have you found value in it?
 - Yes
 - No

2. **Consumer Gross Savings**

Please quantify the total time in hours this asset saved you, before subtracting the time it took you to find and use the asset.

When estimating your gross savings, please consider:

- o Cost avoided -- the extra cost you would have incurred in your project if you did not have access to this asset
- o If this was a tenable asset that you leveraged/used

False displays only the **Status** drop-down menu.

Update Status

You recently used **Sample Comm Adapter - Customer Credit Information (3.0)** to evaluate it for use in **example jsmith - MyProject**. Your feedback is an essential resource to other developers who may wish to use this asset in the future. Please update the usage status of this asset below:

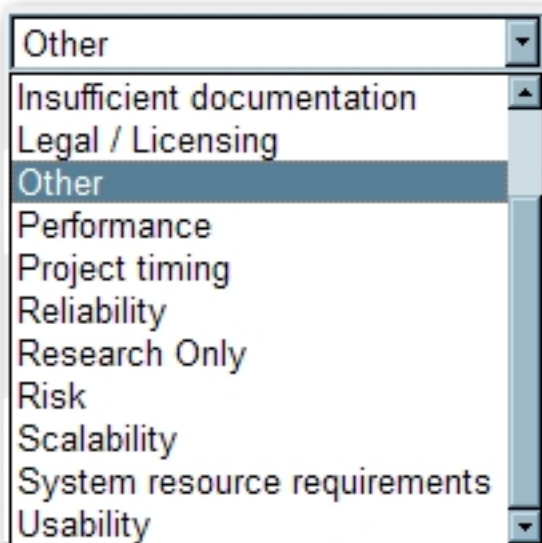

Status:

- Still evaluating
- Tentatively accepted for use
- Reject this asset

- **Default Usage Rejection Reason**

- o `cmee.default.usage.rejection.reason`

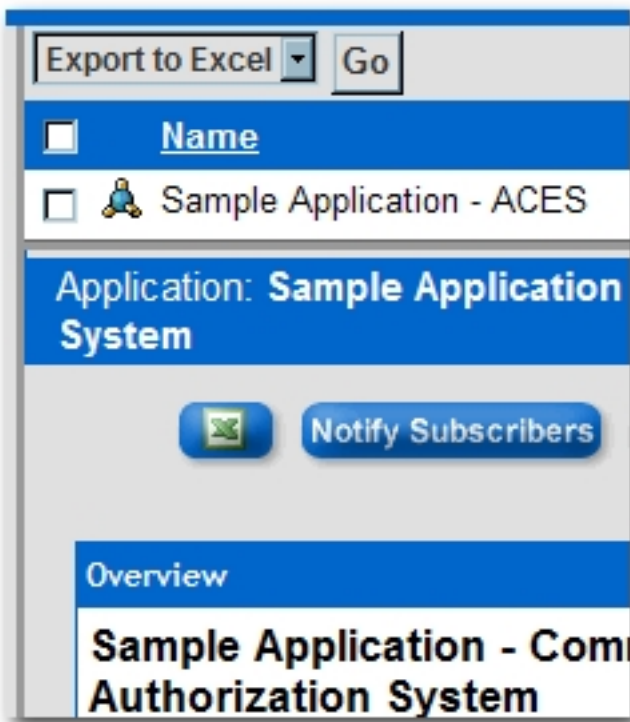

- Use the drop-down menu to select the default reason for asset rejection that will be recorded when the **Reject Selected** button is clicked in the **Consumed Assets** section of the **Edit Project** pop-up.

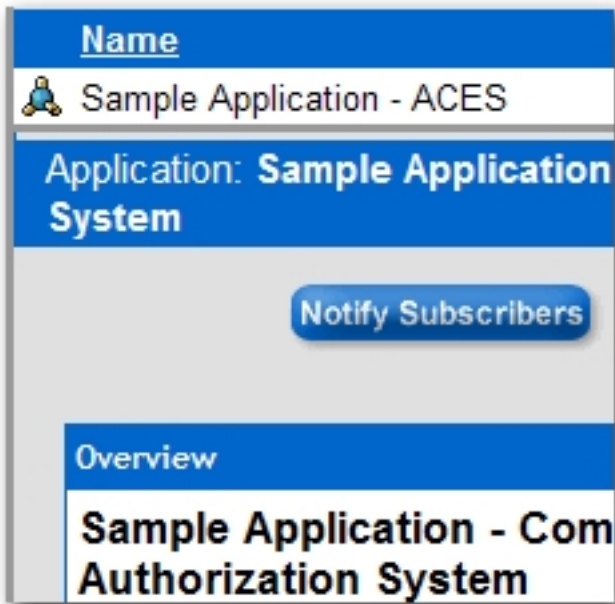

- **Export Assets into a Microsoft Excel spreadsheet**

- `cmee.asset.registry.export.excel`
- The **True** and **False** radio buttons toggle the ability to to export asset detail information to an external Microsoft Excel spreadsheet.

True displays the **Export to Excel** menu selection in the asset search results frame and the  button in the asset detail.

False removes the menu selection and button.

Affinity Settings

Within the context of ALER, **Affinity** is the condition that occurs when two or more assets are deployed in the same project. The **Affinity** element will appear in the asset detail for each asset that meets this condition, and will list other assets that have (deployed) projects in common.

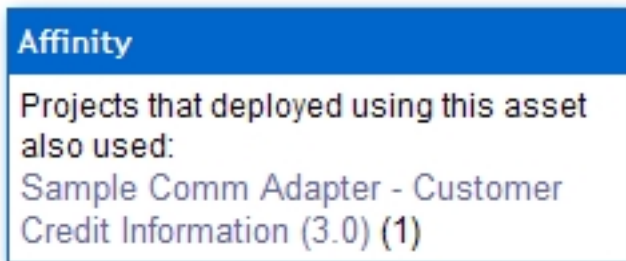

The following **Affinity** System Settings determine the specific behaviour of the **Affinity** element and its contents.

- **Affinity Threshold**

- `cmee.assettab.affinity.threshold`
- If the number of affinity matches exceeds the numerical value entered for this setting, a **View All Affinity Assets** link appears in the **Affinity** element in the asset detail.

- **Affinity Minimum Project Count**

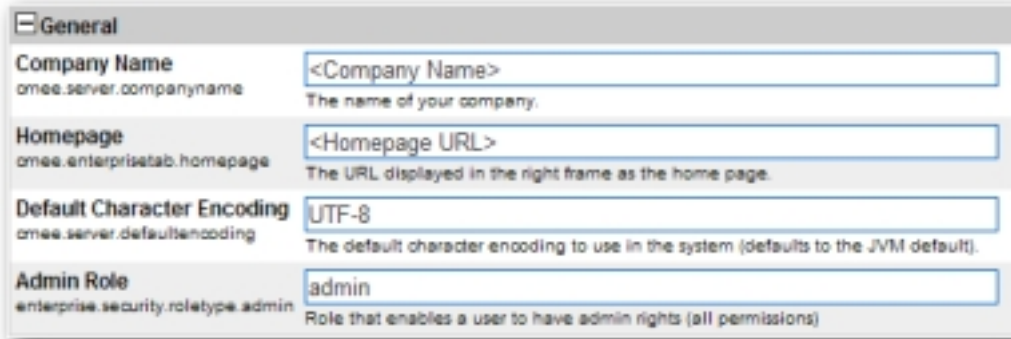

- `cmee.assettab.affinity.minimum`
- The numerical value entered in this field determines the minimum number of projects to which an asset is deployed in order to be displayed in the **Affinity** element in the asset detail.

If the number of projects that have consumed the asset is less than the supplied numerical value, the **Affinity** element will indicate that the display criteria have not been met:

Server Settings: General

The screenshot shows a 'General' settings window with four rows of configuration options. Each row consists of a label, a text input field, and a description. The input fields contain placeholder text: '<Company Name>', '<Homepage URL>', 'UTF-8', and 'admin'.

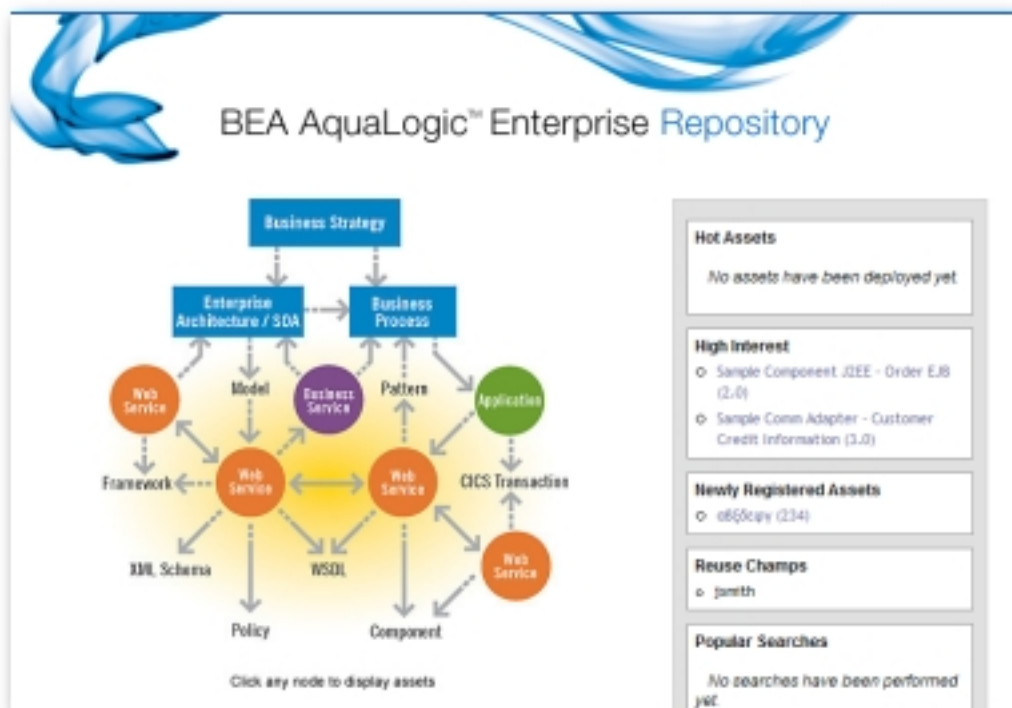

Property	Value	Description
Company Name <code>cmeeserver.companyname</code>	<Company Name>	The name of your company.
Homepage <code>cmeeserver.enterprisetab.homepage</code>	<Homepage URL>	The URL displayed in the right frame as the home page.
Default Character Encoding <code>cmeeserver.defaultencoding</code>	UTF-8	The default character encoding to use in the system (defaults to the JVM default).
Admin Role <code>enterprise.security.roletype.admin</code>	admin	Role that enables a user to have admin rights (all permissions)

- **Company Name**

- `cmeeserver.companyname`
- Enter the name of your company in the text box.

- **Homepage**

- `cmeeserver.enterprisetab.homepage`
- The default URL points to the default ALER homepage, as it appears in the main (right) frame.

Change this URL as necessary to load a different page as the ALER homepage.

- **Default Character Encoding**

- `cmee.server.defaultencoding`
- The default character encoding to use in the system (defaults to the JVM default).

- **Admin Role**

- `enterprise.security.roletype.admin`
- The text entered in this box designates the name applied to the role that has unlimited administrative rights and permissions within ALER.

Server Settings: Server Resources

Server Resources	
Web Resource Path <small>cmee.server.paths.resource</small>	<input type="text" value="http://usclicsap01.bea.com:7221/aler-web"/> <small>The Web server path to the location where Web resources are stored.</small>
Web Image Path <small>cmee.server.paths.image</small>	<input type="text" value="http://usclicsap01.bea.com:7221/aler-web/images"/> <small>The Web server path to the location where some product images are stored. This must be the 'images' subdirectory of the Web Resource Path.</small>
Web JNLP Path <small>cmee.server.paths.jnlp-tool</small>	<input type="text" value="http://usclicsap01.bea.com:7221/aler-web/webstart"/> <small>The Web server path to the location where JNLP tool jars are stored. This path cannot point to an SSL enabled service due to compatibility issues with Java Web Start.</small>
WebApp JSP Path <small>cmee.server.paths.jsp</small>	<input type="text" value="http://usclicsap01.bea.com:7221/aler"/> <small>The application server path to the location where JSPs are stored.</small>
WebApp Servlet Path <small>cmee.server.paths.servlet</small>	<input type="text" value="http://usclicsap01.bea.com:7221/aler"/> <small>The application server path to the location where product servlets are stored.</small>
Asset Detail Path <small>cmee.assettab.asset-detail-page</small>	<input type="text" value="http://usclicsap01.bea.com:7221/aler/cmee/index.jsp"/> <small>The application server path used by integrations to load asset details.</small>
Database Connection Name <small>enterprise.dbaccess.connectionname</small>	<input type="text" value="enterprise"/> <small>The database connection name</small>
WebApp JSP Path <small>enterprise.server.paths.jsp</small>	<input type="text" value="{%cmee.server.paths.jsp%}"/> <small>The application server path to the location where JSPs are stored.</small>
WebApp Servlet Path <small>enterprise.server.paths.servlet</small>	<input type="text" value="{%cmee.server.paths.servlet%}"/> <small>The application server path to the location where the servlets are hosted.</small>

- **Web Resource Path**

- `cmee.server.paths.resource`
- The filepath to the location on the Web server Web resources are stored.

- **Web Image Path**

- `cmee.server.paths.image`
- The filepath to the location on the Web server where product images are stored. This setting must include the `*images` subdirectory of the Web Resource Path.

- **Web JNLP Path**

- `cmee.server.paths.jnlp-tool`
- The filepath to the location on the Web server where JNLP tool jars are stored. Due to Java Web Start compatibility issues, this path must not point to an SSL-enabled service.

- **WebApp JSP Path**

- `cmee.server.paths.jsp`
- The filepath to the location on the application server where JSPs are stored.

- **WebApp Servlet Path**

- `cmee.server.paths.servlet`
- The filepath to the location on the application server where product servlets are stored.

- **Asset Detail Path**

- `cmee.assettab.asset-detail-page`
- The application server path used by integrations to load asset details.

- **Database Connection Name**

- `enterprise.dbaccess.connectionname`
- The name assigned to the database connection.

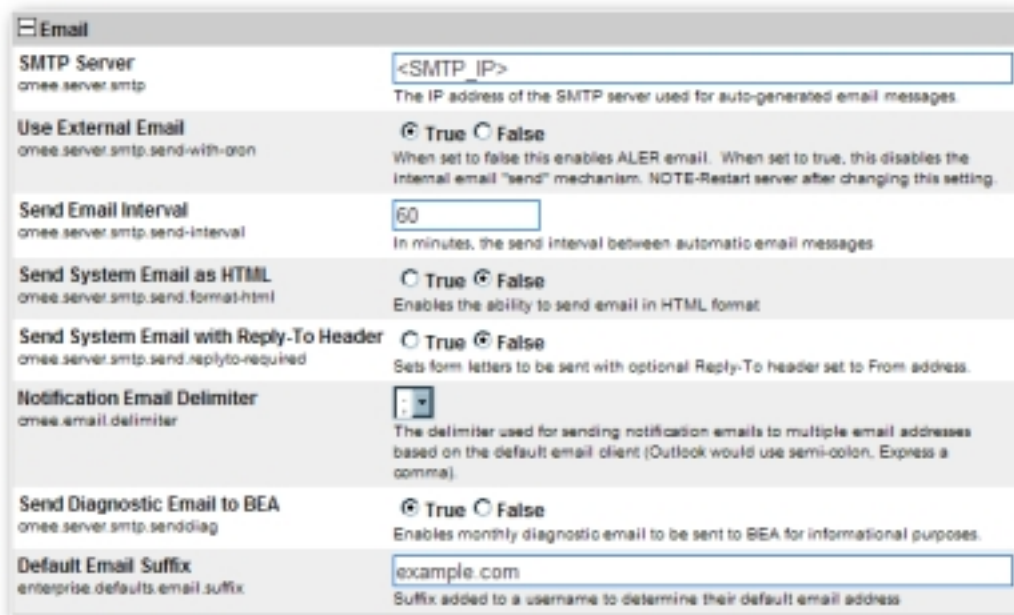

- **WebApp JSP Path**

- `enterprise.server.paths.jsp`
- The filepath to the location on the application server where JSPs are stored.

- **WebApp Servlet Path**

- `enterprise.server.paths.servlet`
- The filepath to the location on the application server where the servlets are hosted.

Server Settings: Email

- **SMTP Server**

- `cmeeserver.smtp`
- The IP address of the SMTP server used for auto-generated email messages.

- **Use External Email**

- `cmeeserver.smtp.send-with-cron`
- **True** and **False** radio buttons determine the selection of the email mechanisms for automated ALER messages. **True** enables the external mechanism. **False** enables ALER's internal email send mechanism.

Note: Changes to this setting require server restart.

- **Send Email Interval**

- `cmeeserver.smtp.send-interval`
- This setting determines the number of minutes between automatic ALER email messages.

- **Send System Email as HTML**

- `cmeeserver.smtp.send.format-html`

- The **True** and **False** radio buttons toggle the selection of HTML or plain-text formatting of automatic ALER messages.

True enables HTML formatting.

False enables plain text formatting.

- **Send System Email with Reply-To Header**

- `cmee.server.smtp.send.replyto-required`
- The **True** and **False** radio buttons toggle the option to include a Reply-to header in automated ALER messages. The Reply-to header includes the From address.

True enables the Reply-to header.

- **Notification Email Delimiter**

- `cmee.email.delimiter`
- Use the drop-down menu to select the appropriate delimiter (comma or semi-colon) for multiple email addresses as determined by the default email client. (For example, Microsoft Outlook uses the semi-colon, while Outlook Express uses the comma).

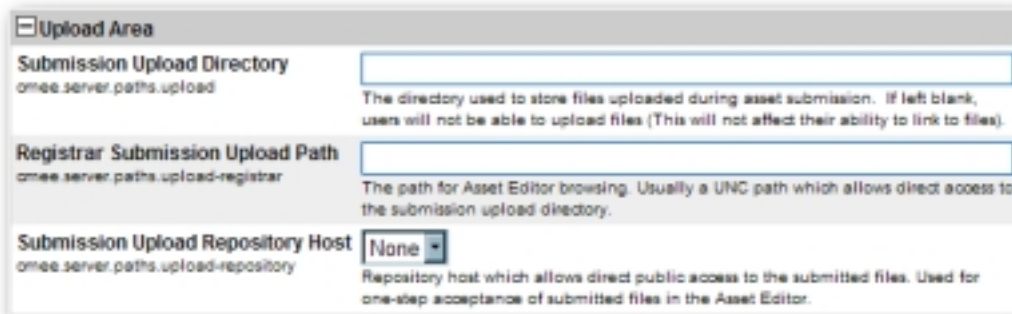

- **Send Diagnostic Email to BEA**

- `cmee.server.smtp.senddiag`
- The **True** and **False** radio buttons toggle an automatic monthly diagnostic email to BEA, for internal informational purposes only.

- **Default Email Suffix**

- `enterprise.defaults.email.suffix`
- The information supplied in this text box will be automatically suffixed to usernames to form the default user email address.

Server Settings: Upload Area

Upload Area

Submission Upload Directory
`cmeeserver.paths.upload`
The directory used to store files uploaded during asset submission. If left blank, users will not be able to upload files (This will not affect their ability to link to files).

Registrar Submission Upload Path
`cmeeserver.paths.upload-registrar`
The path for Asset Editor browsing. Usually a UNC path which allows direct access to the submission upload directory.

Submission Upload Repository Host
`cmeeserver.paths.upload-repository`
None
Repository host which allows direct public access to the submitted files. Used for one-step acceptance of submitted files in the Asset Editor.

- **Submission Upload Directory**

- `cmeeserver.paths.upload`
- Defines a locally referenced operating system path to upload files onto the application server directly via an HTTP file upload process. This property enables the following features:
 - Enables the **Add Attachment Now** option in the **Asset Submission** form. (Required if files are to be attached to assets during the submission process.)
 - Enables **Uploaded Submission Files** option in the **Asset Editor**.

- **Registrar Submission Upload Path**

- `cmeeserver.paths.upload-registrar`
- Enables file browsing through the **Asset Editor** (Optional).
 - The path, when hosted by UNC, requires Windows OS or Samba/Sharity.
 - Enables the appearance of the **Browse** button in **Uploaded Submission Files** in the **Asset Editor**.

- **Submission Upload Repository Host**

- `cmeeserver.paths.upload-repository`
- Sets the repository host to generate URLs for asset use/download.
 - Sets the repository host in which to enable uploading files to assets for use/download.
 - When this property is set:
 - Asset files available for use/download are visible.
 - The **Accept** button is visible in the uploaded submission

Proxy Downloads

AquaLogic Enterprise Repository includes an additional option that allows the Repository application server to act as a repository proxy for the user. This feature automatically removes username and password text that is supplied in the HTTP URL during file downloads. This feature is applicable to the HTTP, HTTPS, FTP and the RAW URI repository types. Contact ALER support for details.

Examples of Repository Host Configurations

- **UNC**

- *Hostname:* aler
- *Path:* upload/
- *Username:* aler
- *Password:* flash
- *URL:* file:///aler/upload/

- **HTTP**

- *Hostname:* aler
- *Path:* aler-web/upload
- *Username:* aler
- *Password:* flash
- *URL:* http://aler:flash@aler/aler-web/upload/

- **FTP**

- *Hostname:* meta.aler.com
- *Path:* upload
- *Username:* aler
- *Password:* flash
- *URL:* ftp://aler:flash@meta.aler.com/upload/

- **Raw URI**

- *Name:* Example RAW URI
- *RAW URI:* http://www.example.com/path1/path2?parameter1¶meter2
- *URL:* http://www.example.com/path1/path2?parameter1¶meter2

Server Settings: Caching

- **Preload Asset Cache at Start-up**

- `cmee.assets.preload.at-startup`
- Select the **True** radio button to preload the asset cache on application server start-up.

True preloads the asset cache.

- **Preload Asset Cache as Seperate Thread**

- `cmee.assets.preload.as-seperate-thread`
- Select the **True** radio button to spawn the preloaded asset cache as a separate thread on application server startup.

External Integrations: UDDI

UDDI	
UDDI omee.uddi.enabled	<input checked="" type="radio"/> True <input type="radio"/> False Enables UDDI Web service plugin.
UDDI - Default Business omee.uddi.default.business	Select default business name here ▾ Default UDDI Business Entity. This will be assigned to any UDDI services that do not have a business.
Default UDDI User Name omee.uddi.user	<input type="text"/> Default UDDI user name, to be used for UDDI searches when no user has been supplied.
Business Service Relationship Name omee.uddi.business.service.relationship	Prescribed Asset(s) ▾ Name of the relationship that links UDDI Business Services to UDDI Business Entities. (Requires App Server restart before changes take affect)
UDDI omee.uddi.server.enabled	<input checked="" type="radio"/> True <input type="radio"/> False Enables repository to act as a UDDI registry for select apps.
UDDI - Suppress Instance Details omee.uddi.server.suppress.instanceDetails	<input type="radio"/> True <input checked="" type="radio"/> False Some UDDI clients cannot properly process the instanceDetails element in a bindingTemplate response. This setting controls whether that element is returned as part of the response to a get_serviceDetail request to the built-in UDDI server.
UDDI - AccessPoint Mapping omee.uddi.server.accesspoint.mapping	<input type="text" value="//access-point"/> For AssetTypes that are exposed through UDDI as services, this property allows the specification of an element in the AssetType to be used for the access point of the service in the UDDI model.
UDDI - AccessPointType Mapping omee.uddi.server.accesspointtype.mapping	<input type="text" value="//access-point-type"/> For AssetTypes that are exposed through UDDI as services, this property allows the specification of an element in the AssetType to be used for the protocol type of the access point of the service in the UDDI model.
UDDI - WSDL Location Mapping omee.uddi.server.wsdl.mapping	<input type="text"/> For AssetTypes that are exposed through UDDI as services, this property allows the specification of an element in the AssetType to be used for the Location of the WSDL. If this value is left undefined, then the system will inspect the associated Files on each Asset, in an attempt to discover WSDL that has been specified as a payload of the asset.
Import - Enable UDDI import omee.import.uddi.enabled	<input checked="" type="radio"/> True <input type="radio"/> False Enables functionality to import assets from an external UDDI registry.
Import - Default UDDI Service Type omee.import.uddi.service.assettype	Service ▾ Specifies the name of the default AssetType to which UDDI services will be imported.

- **UDDI**

- `omee.uddi.enabled`
- Enables the UDDI Web Service Plugin.

- **UDDI - Default Business**

- `omee.uddi.default.business`
- Use the drop-down menu to select the default business entity to be assigned to any UDDI services to which no business has been assigned.

- **Default UDDI User Name**

- `cmee.uddi.user`
- The text entered in the text box provides the default user name for UDDI searches when no user has been supplied.

- **Business Service Relationship Name**

- `cmee.uddi.business.service.relationship`
- Use the drop-down menu to select the relationship that will link UDDI Business Services to UDDI Business Entities.

Note: Changes to this setting will take effect after appserver restart.

- **UDDI**

- `cmee.uddi.server.enabled`
- Select the **True** radio button to allow ALER to act as a UDDI registry for selected applications.

- **UDDI - Suppress Instance Details**

- `cmee.uddi.server.suppress.instdet`
- Some UDDI clients cannot properly process the `instanceDetails` element in a `bindingTemplate` response. Select the **True** radio button to suppress the `instanceDetails` element in the response to a `getServiceDetail` request to the built-in UDDI server.

- **UDDI - AccessPoint Mapping**

- `cmee.uddi.server.accesspoint.mapping`
- For asset types that are exposed through UDDI as services, this property specifies the asset type element that is to be used for the access point of the service in the UDDI model.

- **UDDI - AccessPointType Mapping**

- `cmee.uddi.server.accesspointtype.mapping`
- For asset types that are exposed through UDDI as services, this property specifies the asset type element that is to be used for the protocol type of the access point of the service in the UDDI model.

- **UDDI - WSDL Location Mapping**

- `cmee.uddi.server.wsdl.mapping`
- For asset types that are exposed through UDDI as services, this property specifies the asset type element that is to be used for the location of the WSDL.

If this value is left undefined, the system will inspect each relevant asset's

associated files in an attempt to discover WSDL that has been specified as part of the asset payload.

- **Import - Enable UDDI Import**

- `cmee.import.uddi.enabled`
- Select the **True** radio button to display **Import from UDDI** link in the **Import Export** section in the **Admin** sidebar. This setting allows the import of assets from an external UDDI registry.

- **Import - Default UDDI Service Type**

- `cmee.import.uddi.service.assettype`
- Use the drop-down menu to specify the default asset type to be assigned to imported UDDI services.

Import / Export and Introspection: Import/Export Client

- **Import/Export Client**

- `cmee.importexport.enabled`
- The **True** and **False** radio buttons toggle the Import/Export client.

True displays the **Import / Export** section in the sidebar on the **Admin** screen.

Import / Export and Introspection: WSDL and XSD

WSDL and XSD	
Import - Enable WSDL import <small>cmee.import.wsdl.enabled</small>	<input checked="" type="radio"/> True <input type="radio"/> False Enables the import process that introspects WSDL files to automatically populate service and schema asset metadata and their relationships.
Import - Default WSDL Service Type <small>cmee.import.wsdl.service.assettype</small>	Service Specifies the name of the default AssetType to which WSDL services will be imported.
Import - Default XML Schema Type <small>cmee.import.wsdl.xsd.assettype</small>	XML Schema Specifies the name of the default AssetType to which XML Schemas will be imported when importing WSDL and/or a UDDI registry.
Import - Default DTD Type <small>cmee.import.wsdl.dtd.assettype</small>	[Empty] Specifies the name of the default AssetType to which DTDs will be imported when importing WSDL and/or a UDDI registry.
Import - Relationship for imports <small>cmee.import.wsdl.relationship.imports</small>	References Specifies the Relationship for imports found during WSDL introspection.
Import - Relationship for same WSDL services <small>cmee.import.wsdl.relationship.same-wsdl</small>	Related to Specifies the Relationship between multiple services found during the same WSDL introspection.
Enable WSDL Introspection Element <small>cmee.wsdl-introspection.enabled</small>	<input checked="" type="radio"/> True <input type="radio"/> False Enables an asset detail plugin element that introspects WSDL files to automatically populate the web service asset metadata.

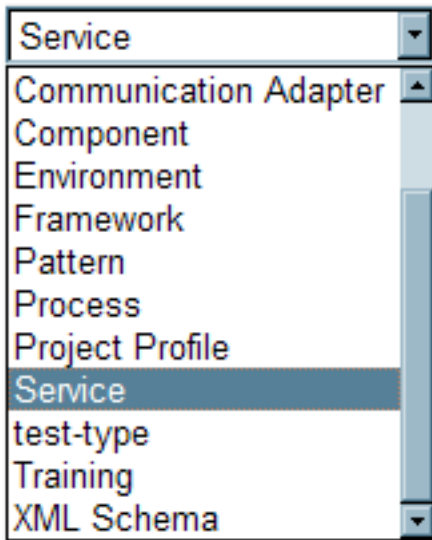

- **Import - Enable WSDL import**

- `cmee.import.wsdl.enabled`
- Select **True** to display the **Import from WSDL** link in the **Import Export** section in the **Admin** sidebar and to enable the import process that introspects WSDL files to automatically populate service and schema asset metadata and their relationships.

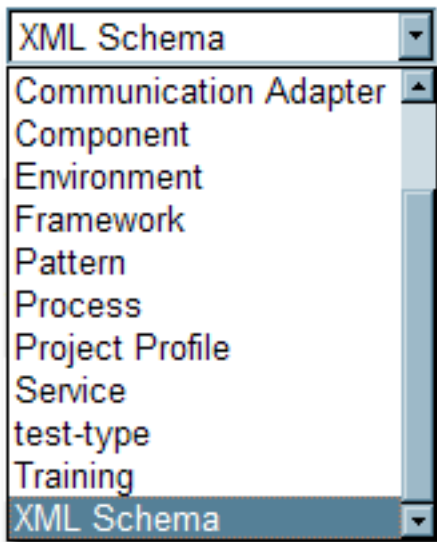

- **Import - Default WSDL Service Type**

- `cmee.import.wsdl.service.assettype`
- Use the drop-down menu to select the default asset type to which WSDL services will be imported.

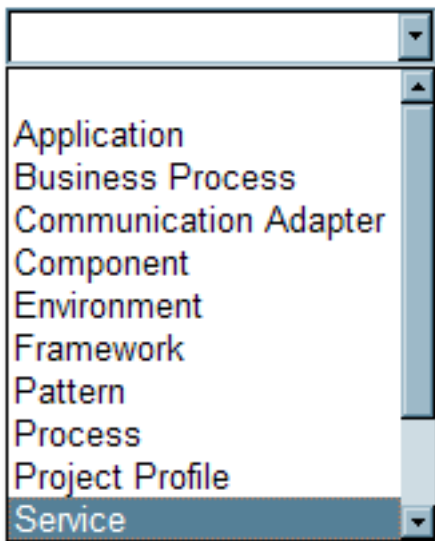

- **Import - Default XML Schema Type**

- `cmee.import.wsdl.xsd.assettype`
- Use the drop-down menu to select the default asset type to which XML Schemas will be imported when importing WSDL and/or a UDDI registry.

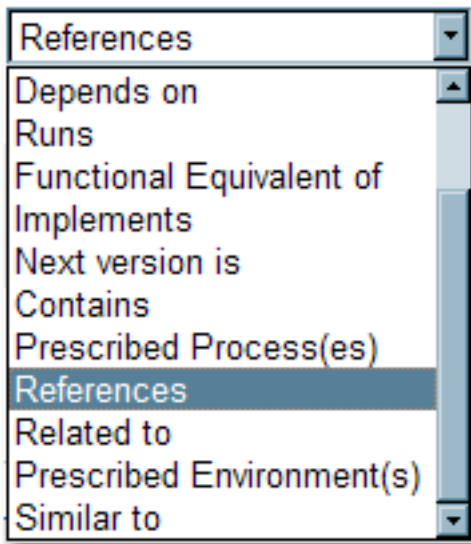

- **Import - Default DTD Type**

- `cmee.import.wsdl.dtd.assettype`
- Use the -drop-down menu to select the default asset type to which DTDs will be imported when importing WSDL and/or a UDDI registry.

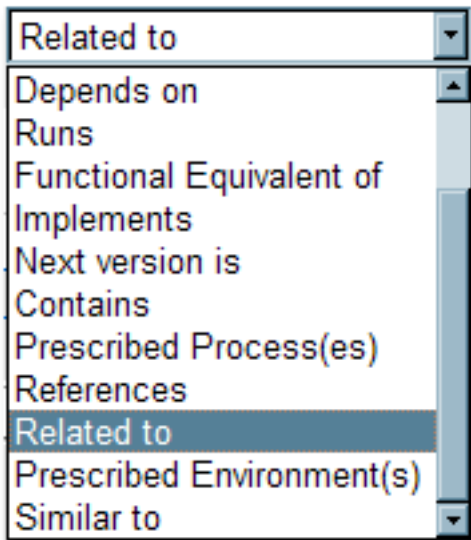

- **Import - Relationship for imports**

- `cmee.import.wsdl.relationship.imports`
- Use the drop-down menu to select the default relationship to be assigned to artifacts imported during WSDL introspection.

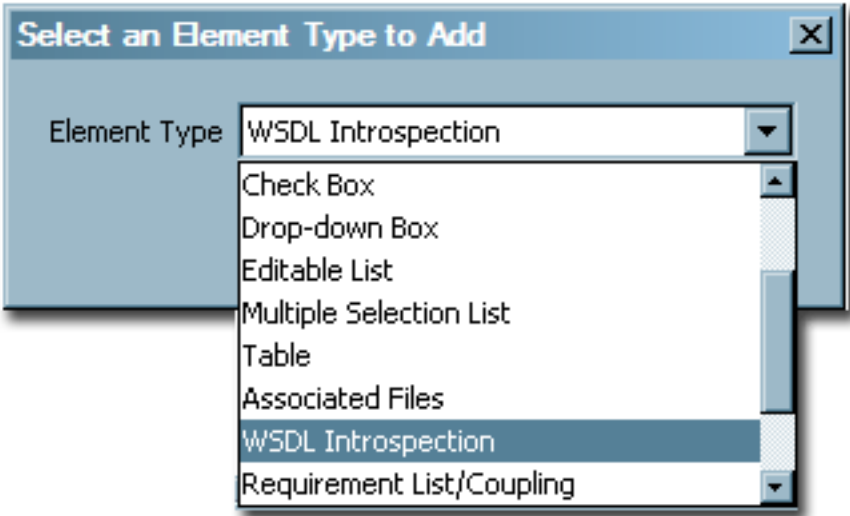

- **Import - Relationship for same WSDL services**

- `cmee.import.wsdl.relationship.same-wsdl`
- Specifies the Relationship between multiple services found during the same WSDL introspection.

- **WSDL Introspection Element**

- `cmee.wsdl-introspection.enabled`
- Select **True** to add the **WSDL Introspection** element to the list of elements available in the **Type Manager**.

Email Templates

Overview

Certain specific events within AquaLogic Enterprise Repository trigger automated email responses. For instance, when a new asset is submitted, an email notification is sent to the registrar. The various templates are described below.

- **Name:** All Asset Tabs Approved
- **Description:** Notifies user assigned to asset and Registrar that all tabs have been approved.
- **From:** User logged in that approves tab
- **To:** Registrar email address, User(s) that is/are assigned to asset
- **Content:** "The final tab, <%asset.tab%>, for the asset <%asset.name%> has been approved. All tabs are now approved."

- **Name:** Asset Accepted
- **Description:** Notifies the submitter that the asset has been accepted.
- **From:** User logged in that submits asset
- **To:** User logged in that submits asset
- **Content:** "The asset <%asset.name%> has been accepted."

- **Name:** Asset Active
- **Description:** Notifies submitter/subscriber(s) that asset has been marked active.
- **From:** User updating the asset to Active
- **To:** User logged in that submits asset
- **Content:** "The asset <%asset.name%> has been marked active."

- **Name:** Asset Assign
- **Description:** Notifies user when assigned to asset.
- **From:** Registrar user
- **To:** User logged in that submits asset
- **Content:** "You have been assigned to the asset <%asset.name%>."

- **Name:** Asset Deletion

- **Description:** Notifies submitter/subscriber(s) that asset has been marked deleted.
 - **From:** User updating the asset to Deleted
 - **To:** User logged in that submits asset
 - **Content:** "The asset <%asset.name%> has been deleted."
-
- **Name:** **Asset Editor** Submission
 - **Description:** Notifies registrar that a new asset has been submitted through the **Asset Editor**.
 - **From:** User submitting asset through the **Asset Editor**
 - **To:** Registrar email address that submitted asset
 - **Content:** "<%user.name%> submitted the Asset <%asset.name%> using the **Asset Editor**."
-
- **Name:** Asset Inactive
 - **Description:** Notifies submitter/subscriber(s) that asset has been marked inactive.
 - **From:** User updating the asset to Inactive
 - **To:** User logged in that submits asset
 - **Content:** "The asset <%asset.name%> has been marked inactive."
-
- **Name:** Asset Registered
 - **Description:** Notifies submitter that asset has been registered.
 - **From:** Registrar email address
 - **To:** User logged in that submits asset
 - **Content:** "The asset <%asset.name%> has been registered."
-
- **Name:** Asset Retired
 - **Description:** Notifies submitter/subscriber(s) that asset has been marked retired.
 - **From:** User updating the asset to Retired
 - **To:** User logged in that submits asset
 - **Content:** "The asset <%asset.name%> has been retired."
-
- **Name:** Asset Submission Rejection
 - **Description:** Notifies submitter that asset has been rejected.
 - **From:** User logged in that rejects asset
 - **To:** User that submits asset
 - **Content:** "Your submission of the asset <%asset.name%> has been rejected."
-
- **Name:** Asset Tab Approved
 - **Description:** Notifies Registrar that tab has been approved.
 - **From:** User logged in that approves tab
 - **To:** Registrar email address
 - **Content:** "The tab <%asset.tab%> for the asset <%asset.name%> has been

approved."

- **Name:** Asset Tab Unapproved
 - **Description:** Notifies user assigned to asset and Registrar that tab has been unapproved.
 - **From:** User logged in that submits asset
 - **To:** Registrar email address, User(s) that is/are assigned to asset
 - **Content:** "The tab <%asset.tab%> for the asset <%asset.name%> has been unapproved."
-
- **Name:** Asset Unaccepted
 - **Description:** Notifies submitter that asset has been unaccepted.
 - **From:** User who unaccepted the asset
 - **To:** User who submitted the asset
 - **Content:** "The asset <%asset.name%> has been unaccepted."
-
- **Name:** Asset Unassign
 - **Description:** Notifies user assigned to asset that they have been removed from asset.
 - **From:** User logged in that unassigns user
 - **To:** User that is unassigned from asset
 - **Content:** "The asset <%asset.name%> is no longer assigned to you."
-
- **Name:** Asset Unregistered
 - **Description:** Notifies submitter that asset as been unregistered
 - **From:** Registrar email address
 - **To:** User that submitted the asset
 - **Content:** "The asset <%asset.name%> has been unregistered."
-
- **Name:** Asset Unsubmitted
 - **Description:** Notifies submitter that asset has been unsubmitted.
 - **From:** User logged in that unsubmitted the asset
 - **To:** User that submitted the asset
 - **Content:** "The asset <%asset.name%> has been moved to the Unsubmitted queue."
-
- **Name:** Asset Used
 - **Description:** Notifies the contact specified in the asset **Notification Email** field that the asset has been used.
 - **From:** User who has initiated usage of an asset
 - **To:** User who is identified on the asset as the owner/maintainer
 - **Content:** <%user.name%> has used asset <%asset.name%> in a project.
-
- **Name:** Compliance Template Applied

- **Description:** Notifies project leaders when compliance template applied to project.
 - **From:** Registrar email address
 - **To:** User who is identified as the Project Leader on the project
 - **Content:** "The compliance template <%asset.name%> has been applied to the project <%project.name%> by <%updatedby.name%>."
-
- **Name:** New Asset Version under development
 - **Description:** Notifies subscribers when a new version of an asset is being developed.
 - **From:** Registrar email address
 - **To:** User who have subscribed to an asset
 - **Content:** "A new version of <%asset.name%> is under development. You will be notified again when this version is registered."
-
- **Name:** New Version Registered
 - **Description:** Notifies subscribed user that new version of asset has been Registered.
 - **From:** Registrar email address
 - **To:** Subscribed user that used-downloaded an asset and selected checkbox to subscribe to previous version of asset
 - **Content:** "A new registered version of the asset <%primaryasset.name%> is now available in AquaLogic Enterprise Repository, named <%secondaryasset.name%>. You are being sent this notification because you previously subscribed to <%primaryasset.name%>."
-
- **Name:** Repository Submission
 - **Description:** Notifies registrar that new asset has been submitted through the **Submit an Asset** link on the **Assets** screen.
 - **From:** User submitting asset through the **Submit an Asset** link on the **Assets** screen
 - **To:** Registrar email address
 - **Content:** "<%user.name%> submitted the Asset <%asset.name%> using the Asset Submission Tool."
-
- **Name:** Usage Query 1
 - **Description:** Queries the asset consumer regarding the intended use of the asset.
 - **From:** Registrar email address
 - **To:** User who indicated use of the asset
 - **Content:** "Please visit <%followup_url%>?id=<%pcid%>&uid=<%uid%> to update the status of your usage of the asset <%asset.name%> for use in <%project.name%>."
-
- **Name:** Usage Query 2
 - **Description:** Queries the asset consumer again regarding the intended use of the asset.

- **From:** Registrar email address
- **To:** User who indicated use of the asset
- **Content:** "Please visit <%followup_url%>?id=<%pcid%>&uid=<%uid%> to update the status of your usage of the asset <%asset.name%> for use in= <%project.name%>=".

- **Name:** Usage Reassigned
- **Description:** Notifies the user to whom an asset usage record has been reassigned.
- **From:** Registrar email address
- **To:** User to whom the usage information has been reassigned.
- **Content:** "As a result of an asset reassignment, the asset <%asset.name%> in the project <%project.name%> has been assigned to you."

- **Name:** New user notification - Please note this email template is not editable and is not found in the email template section of the **Admin** screen.
- **Description:** Notifies Access Administrator that new user has been created.
- **From:** Repository
- **To:** Access Administrator
- **Content:** "The following accounts have been added to the Repository as unapproved users. Please log into AquaLogic Enterprise Repository to update their status: user, flash (flashline@flashline.com)."

Notifications by Role

- **User**
 - *Usage Query 1*
 - Queries the asset consumer regarding the intended use of the asset.
 - *Usage Query 2*
 - Depending on the response to Usage Query 1, asset consumers may receive a second query regarding the intended use of the asset.
 - *Usage Reassigned*
 - Notifies the user to whom an asset usage record has been reassigned. (in a project)

- **Advanced Submitter**
 - *Asset Accepted*
 - Notifies the submitter that the asset has been accepted
 - *Asset Active*
 - Notifies the submitter and subscribers that the asset has been marked active.

- *Asset Deletion*
 - Notifies the submitter and subscribers that the asset has been deleted.
 - *Asset Inactive*
 - Notifies the submitter and subscribers that the asset has been marked inactive.
 - *Asset Registered*
 - Notifies the submitter that an asset has been registered.
 - *Asset Retired*
 - Notifies the submitter and subscribers that the asset has been retired.
 - *Asset Unaccepted*
 - Notifies the submitter that the asset has been unaccepted.
 - *Asset Unregistered*
 - Notifies the submitter that an asset has been unregistered.
 - *Asset Unsubmitted*
 - Notifies the submitter that the asset has been sent to the Unsubmitted queue.
 - *Asset Used*
 - Notifies the contact specified in the asset Notification Email field that the asset has been used (float - could be other role)
 - *Asset Submission Rejection*
 - Notifies the submitter that the asset has been rejected.
- **Registrar**
 - *All Asset Tabs Approved*
 - Notifies the registrar and the users assigned to the asset that all tabs have been approved.
 - *Asset Tab Approved*
 - Notifies the registrar that a specific tab has been approved.
 - *Asset Tab Unapproved*
 - Notifies the registrar that a specific tab has been unapproved (for both registered and unregistered assets).
 - *Repository submission*
 - Notifies the registrar of an asset submission.
 - *Asset Editor submission*
 - Notifies the registrar of an asset submission via the Asset Editor.
 - **Subscribers**
 - *Asset Active*
 - Notifies the submitter and subscribers that the asset has been marked active.
 - *Asset Deletion*
 - Notifies the submitter and subscribers that the asset has been deleted.
 - *Asset Inactive*

- Notifies the submitter and subscribers that the asset has been marked inactive.
- *Asset Retired*
 - Notifies the submitter and subscribers that the asset has been retired.
- *New Asset Version under development*
 - Notifies subscribers when a new version of an asset is being developed.
- *New Version Registered*
 - Notifies subscribers that a new version of the asset is registered.
- *Asset Registered*
 - Notifies the submitter that an asset has been registered.
- *Asset Unregistered*
 - Notifies the submitter that an asset has been unregistered.

- **Assignees**

- *Asset Assign*
 - Notifies users that the asset has been assigned to them for processing.
- *All Asset Tabs Approved*
 - Notifies the registrar and the users assigned to the asset that all tabs have been approved.
- *Asset Tab Unapproved*
 - Notifies the registrar and the users assigned to the asset that a specific tab has been unapproved (for unregistered assets only).
- *Asset Unassign*
 - Notifies users that were previously assigned to an asset that they have been unassigned.

- **Project Leaders**

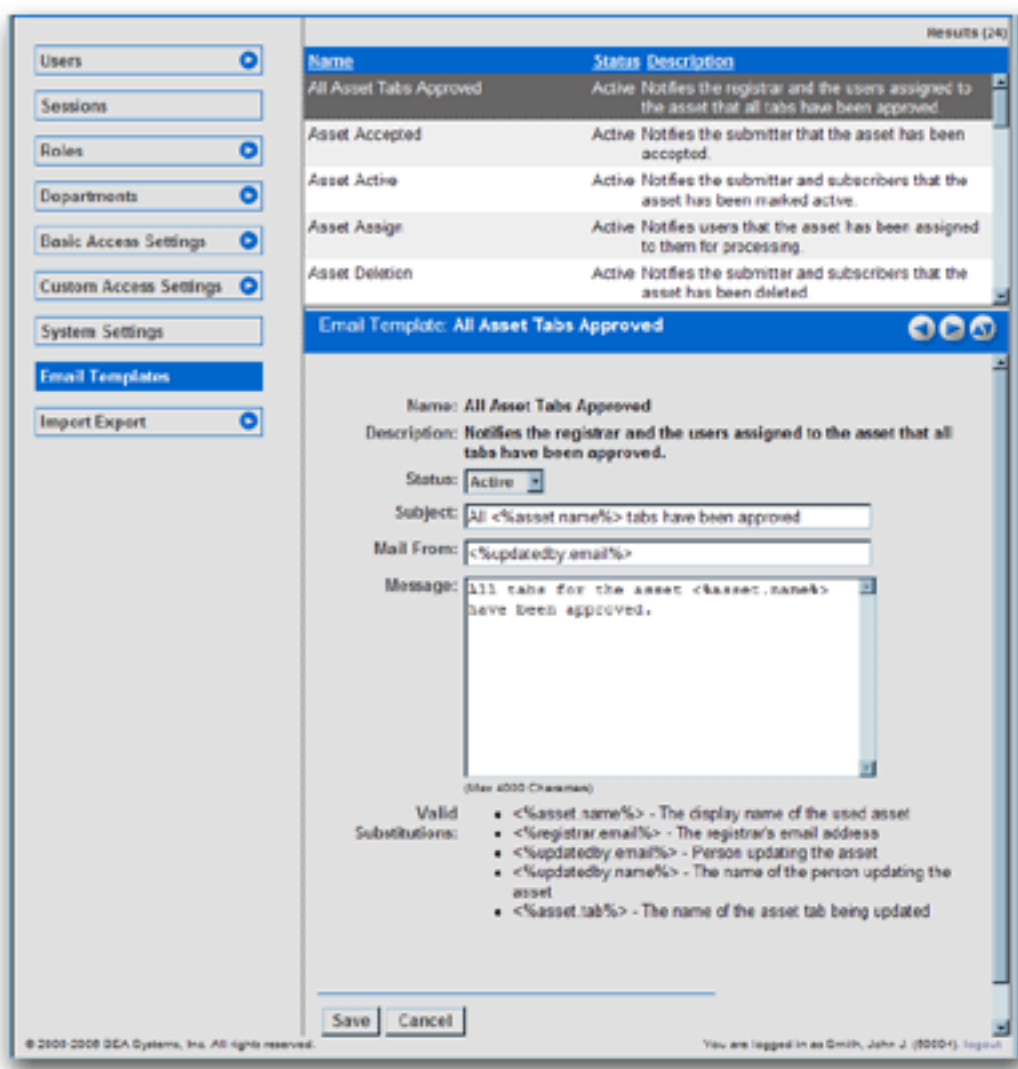

- *Compliance Template Applied*
 - Notifies project leaders when a compliance template has been applied to a project.

Editing Email Templates

The procedure begins on the AquaLogic Enterprise Repository **Admin** screen.

1. Click **Email Templates** in the **Admin** sidebar.

The list of email templates appears in the upper frame of the main pane.

The screenshot shows the AquaLogic Enterprise Repository Admin interface. On the left is a sidebar with navigation options: Users, Sessions, Roles, Departments, Basic Access Settings, Custom Access Settings, System Settings, **Email Templates** (highlighted), and Import/Export. The main pane is divided into two sections. The top section, titled 'RESULTS (24)', displays a table of email templates:

Name	Status	Description
All Asset Tabs Approved	Active	Notifies the registrar and the users assigned to the asset that all tabs have been approved.
Asset Accepted	Active	Notifies the submitter that the asset has been accepted.
Asset Active	Active	Notifies the submitter and subscribers that the asset has been marked active.
Asset Assign	Active	Notifies users that the asset has been assigned to them for processing.
Asset Deletion	Active	Notifies the submitter and subscribers that the asset has been deleted.

The bottom section, titled 'Email Template: All Asset Tabs Approved', shows the edit form for the selected template. The fields are:

- Name: All Asset Tabs Approved
- Description: Notifies the registrar and the users assigned to the asset that all tabs have been approved.
- Status: Active (dropdown menu)
- Subject: All <%=asset.name%> tabs have been approved
- Mail From: <%=updatedby.email%>
- Message: All tabs for the asset <%=asset.name%> have been approved.

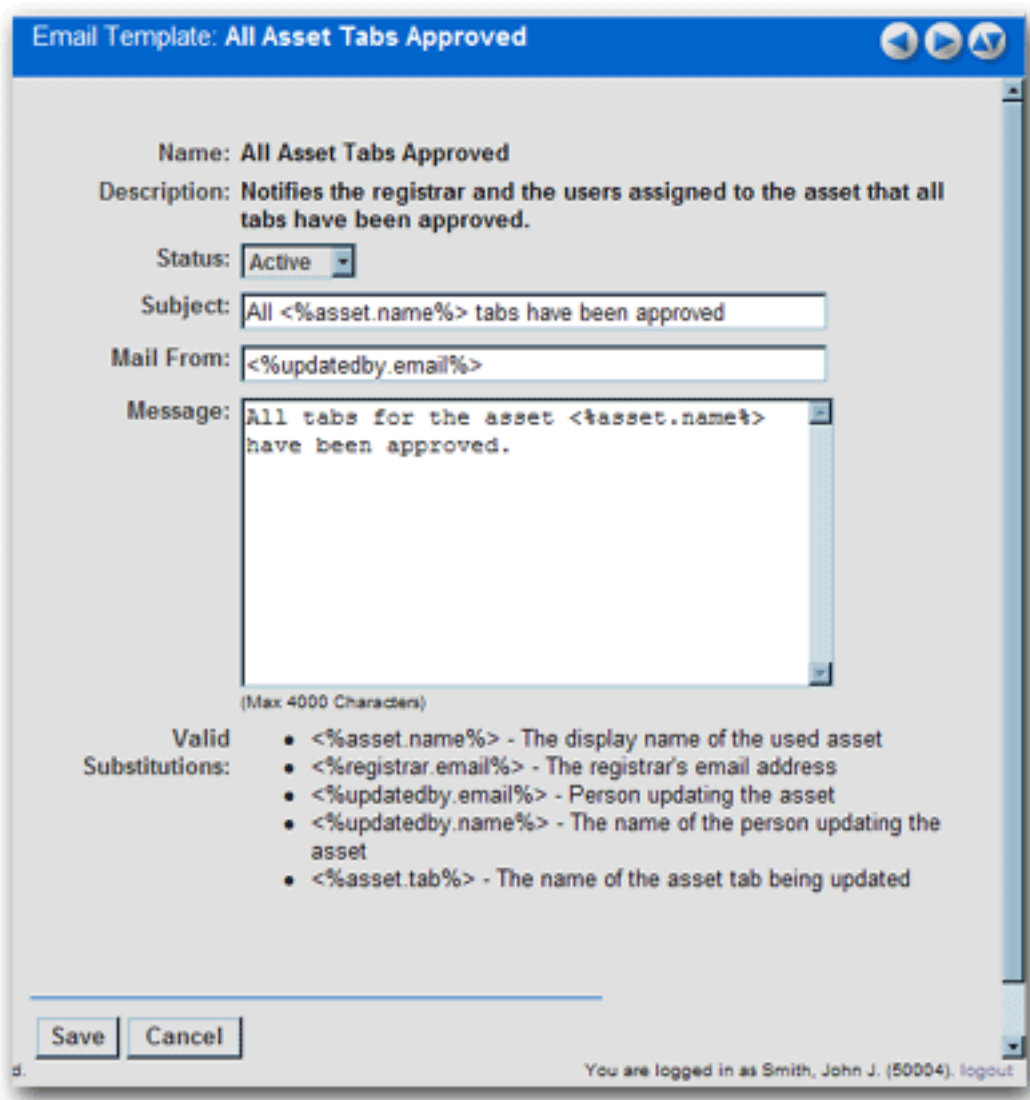

Below the message field, there is a 'Valid Substitutions' section with a list of variables:

- <%=asset.name%> - The display name of the used asset
- <%=registrar.email%> - The registrar's email address
- <%=updatedby.email%> - Person updating the asset
- <%=updatedby.name%> - The name of the person updating the asset
- <%=asset.tab%> - The name of the asset tab being updated

At the bottom of the edit form are 'Save' and 'Cancel' buttons. The footer of the interface includes the copyright notice '© 2000-2006 BEA Systems, Inc. All rights reserved.' and the user information 'You are logged in as Smith, John J. (80001) Logout'.

2. Select the email template to be edited from the list.

The **Email Template** edit screen opens in the bottom frame.

Email Template: All Asset Tabs Approved

Name: All Asset Tabs Approved

Description: Notifies the registrar and the users assigned to the asset that all tabs have been approved.

Status: Active

Subject: All <%asset.name%> tabs have been approved

Mail From: <%updatedby.email%>

Message: All tabs for the asset <%asset.name%> have been approved.

(Max 4000 Characters)

Valid Substitutions:

- <%asset.name%> - The display name of the used asset
- <%registrar.email%> - The registrar's email address
- <%updatedby.email%> - Person updating the asset
- <%updatedby.name%> - The name of the person updating the asset
- <%asset.tab%> - The name of the asset tab being updated

Save Cancel

You are logged in as Smith, John J. (50004). [logout](#)

3. Use the **Status** drop-down to activate/deactivate the email message.
4. Edit the template information as necessary.

Notes on editing

- The **Status** field can be set to *Active* or *Inactive*. When inactive, no email notification will be sent for the specified event. *Active* is the default status.
- Substitutions are dynamic variables that can be placed within the subject, message, and *Mail From* email address. When the notification is sent, these variables will be replaced with the appropriate values. The following example demonstrates the syntax for entering a substitution for the name of the asset:

You have submitted the asset called <%asset.name%>

A list of acceptable substitutions is displayed with each email notification on the **Email Templates** screen.
