How to Download and Apply a Private Patch

To retrieve and apply a private patch that BEA Customer Support has provided for you, complete the following steps.
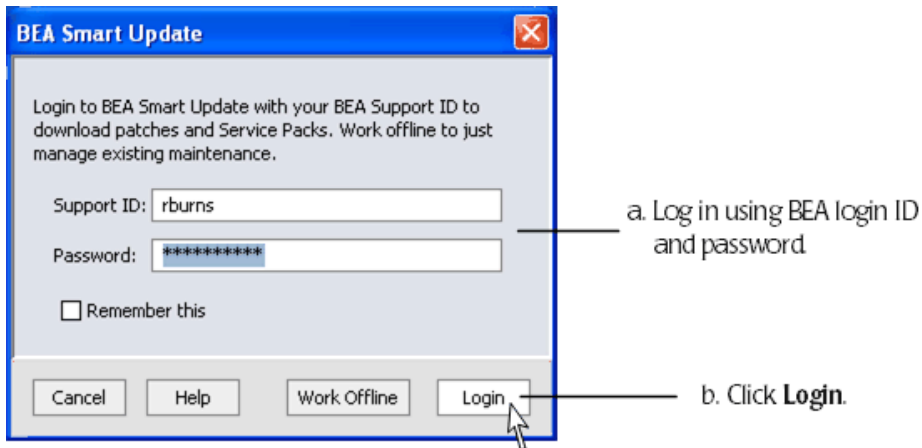

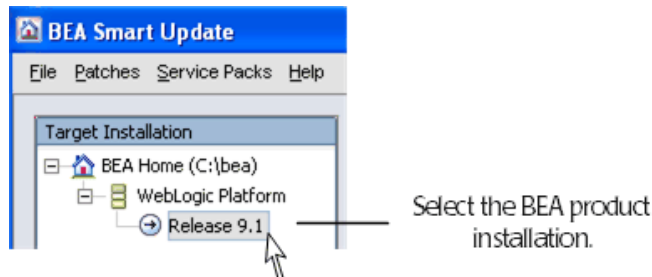

1. Launch Smart Update:

   Windows:

   From the Start menu, choose **Start→Programs→BEA Products→Smart Update**.

   UNIX:

   a. Change to the *BEA_HOME*/utils/bsu directory.

   b. Enter the bsu.sh command.

2. Log in to BEA Customer Support:

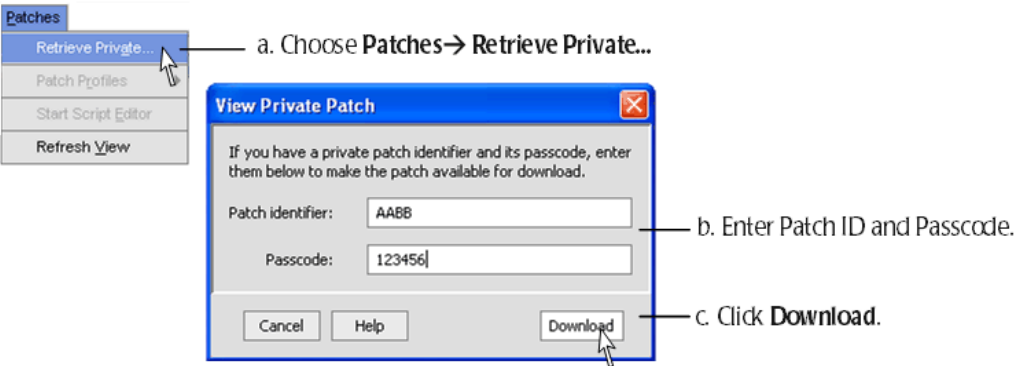

3. In Smart Update main window, select the BEA product being patched in the Target Installation panel.
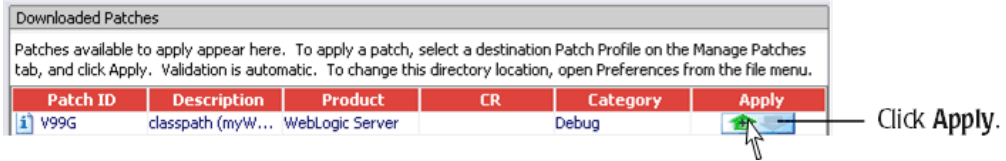

4. Select the **Get Patches** tab.

Select the Get Patches tab. ——

Get Patches	Manage Patches

(bea) | Logged in as: **rburns**

These are the patches currently available from BEA Support, compatible w
maintenance level of the selected BEA Product Home, and not already pre:

Patch ID	Description	Product	CR
□ Critical			
i 6I9Z	BIG patch (uddi...	WebLogic Server	254095
i H4KT	BIG patch	WebLogic Server	

5. In the Smart Update main window, choose **Patches→ Retrieve Private...**, enter patch identifier and passcode, and click **Download**.

Patches

Retrieve Private...	——— a. Choose **Patches→ Retrieve Private...**

The default patch profile is the active s
entire installation. To develop custom

Patch ID	Description	
i 4N1M	classpath (my...	W
i IYCY	other artifacts ...	W

8. In the Downloaded Patches panel, click **Apply** next to the listing of the private patch you downloaded.

Patch ID	Description	Product	CR	Category	Apply
ℹ V99G	classpath (myW...	WebLogic Server		Debug	

Downloaded Patches

Patches available to apply appear here. To apply a patch, select a destination Patch Profile on the Manage Patches tab, and click Apply. Validation is automatic. To change this directory location, open Preferences from the file menu.

— Click **Apply**.

When you apply a patch, the patch is automatically validated against the other patches that have been applied to the target installation. If no conflicts are detected, Smart Update displays the following dialog box. Click **OK**.
