* For design and development tools support, see the "Configuration Requirements" section below.

✓ Supported
✗ Not supported

Note: On December 31, 2005, BEA will end support for WebLogic Platform 7.0 on Solaris 7 configurations. BEA recommends that all customers currently running WebLogic Platform 7.0 on Solaris 7 upgrade to a version of Solaris for which support will be continued.

This section provides the following information:

- [Configuration Requirements](#)
- [Known Issues](#)

Related Information

- For information about supported database configurations, Web servers, and browsers, plus support for interoperability tools and WebLogic Platform product support information, see [WebLogic Platform 7.0 Supported Configurations](#).

- For details about Sun Solaris 7, visit Sun’s Solaris Web page at: <http://www.sun.com/software/solaris>.
- For Sun’s support services information site, see <http://www.sun.com/service/warrantiescontracts>. If you have a support contract for the use of Solaris platforms, you may be able to obtain support for general Java issues (for example, JVM problems).
- You can run WebLogic software on Solaris using the SDK available from Sun Microsystems at: <http://java.sun.com/products/?frontpage-main>. BEA recommends using the latest available versions of the JVMs supported by BEA, except where noted otherwise in our *Supported Configurations* document.

Configuration Requirements

Table 1-1 Requirements for 7.0 SP6 on Sun Solaris 7 on SPARC

| | |
|--|----------------------|
| Operating System Version and Patches | Solaris 7 |
| Chip Architecture and Minimum Processor Speed | UltraSPARC (168 MHz) |

Table 1-1 Requirements for 7.0 SP6 on Sun Solaris 7 on SPARC (Continued)

| | |
|-------------------------------------|--|
| SDK | Fully-supported |
| | <p>Sun Java 2 SDK 1.3.1_14 (32-bit) and all later service packs of 1.3.1</p> <ul style="list-style-type: none"> • Supports the Java HotSpot™ Client and Server VMs. • WebLogic Integration and WebLogic Portal are configured to use the Sun Java 2 SDK 1.3.1_14 with the Java HotSpot Server VM. For details, see “Using the HotSpot Virtual Machine” in “Performance Tuning” in “System Administration” in the <i>WebLogic Portal Administration Guide</i> at the following URL: http://e-docs.bea.com/wlp/docs70/admin/sysadmin.htm |
| | Client-only |
| | <p>Sun Java 2 SDK 1.4.2_06 (32-bit) with Java HotSpot™ Client VM and all later service packs of 1.4.2</p> <ul style="list-style-type: none"> • Supported only for WebLogic Server clients and the WebLogic Workshop IDE. Can be used to run WebLogic Server RMI or Web Services clients that remotely connect to a server running in a separate VM. • It is not supported by WebLogic Portal or WebLogic Integration clients and development tools. Is is also not supported by running server instances of WebLogic Server or other WebLogic Platform components. |
| Design and Development Tools | <p>Supports WebLogic Server development tools.</p> <p>For more information about WebLogic Platform design and development tools support, see “Supported Configurations for Design and Development Tools in Version 7.0 SP6” in <i>Supported Configurations for WebLogic Platform 7.0</i>.</p> |

Table 1-1 Requirements for 7.0 SP6 on Sun Solaris 7 on SPARC (Continued)

| BEA jDrivers for Oracle | For this Oracle client version: | The following shared libraries are provided: |
|-------------------------|---------------------------------|--|
| | Oracle 8.1.7 | <ul style="list-style-type: none"> • <code>lib/solaris/oci817_8/libweblogicoci38.so</code> • <code>lib/solaris/oci817_8/libweblogicoxa38.so</code> |
| | Oracle 9.2.0 | <ul style="list-style-type: none"> • <code>lib/solaris/oci920_8/libweblogicoci38.so</code> • <code>lib/solaris/oci920_8/libweblogicoxa38.so</code> |

Known Issues

- The 7.3.4 jDriver for Oracle is not supported with JDK 1.3.1.
- Some Solaris JVMs report an incorrect IP number. The IP number reported for the machine is the first number in the `/etc/hosts` file. Unfortunately, this number is frequently `127.0.0.1`, the standard loopback network address for the machine. This problem affects licenses granted for specific IP numbers. We have also observed this problem in a cluster where an HTTP request is passed by a Web server or another WebLogic Server via the `HttpClusterServlet`, to a WebLogic Server running on a Solaris machine with this configuration problem. The `127.0.0.1` IP number is carried with the server's response. Subsequent calls to that machine time out because the IP number is incorrect.

To determine whether you have this problem on your Solaris computer, run the following command:

```
java utils.netAddresses
```

If you see `127.0.0.1` in the output, ask the system administrator to move the computer's network IP address to the beginning of the `/etc/hosts` file.

- For information about suggested values for some Solaris TCP and VM-related tunable parameters, see “[Operating System Tuning](#)” in *BEA WebLogic Server 7.0 Performance and Tuning*.

For more information about known issues with any components of this release, see the appropriate *Release Notes* document. For a complete list of *Release Notes* supporting WebLogic Platform 7.0, see:

<http://e-docs.bea.com/platform/docs70/interm/relnotes.html>

Sun Solaris 7 on SPARC with 7.0 SP2

Product Components Supported on this Configuration

| | WebLogic Server | WebLogic Workshop | WebLogic Integration | WebLogic Portal |
|-------------------|-----------------|-------------------|----------------------|-----------------|
| Run-time | ✓ | ✓ | ✓ | ✓ |
| Design/Dev Tools* | ✓ | ✗ | ✗ | ✗ |

* For design and development tools support, see the "Configuration Requirements" section below.

✓ Supported
✗ Not supported

Note: On December 31, 2005, BEA will end support for WebLogic Platform 7.0 on Solaris 7 configurations. BEA recommends that all customers currently running WebLogic Platform 7.0 on Solaris 7 upgrade to a version of Solaris for which support will be continued.

This section provides the following information:

- [Configuration Requirements](#)
- [Known Issues](#)

Related Information

- For information about supported database configurations, Web servers, and browsers, plus support for interoperability tools and WebLogic Platform product support information, see [WebLogic Platform 7.0 Supported Configurations](#).

- For details about Sun Solaris 7, visit Sun’s Solaris Web page at: <http://www.sun.com/solaris>.
- For Sun’s support services information site, see <http://www.sun.com/service/support>. If you have a support contract for the use of Solaris platforms, you may be able to obtain support for general Java issues (for example, JVM problems).
- You can run WebLogic software on Solaris using the SDK available from Sun Microsystems at: <http://java.sun.com/products/?frontpage-main>. BEA recommends using the latest available versions of the JVMs supported by BEA, except where noted otherwise in our *Supported Configurations* document.

Configuration Requirements

Table 5-1 Requirements for 7.0 SP2 on Sun Solaris 7 on SPARC

| | |
|--|----------------------|
| Operating System Version and Patches | Solaris 7 |
| Chip Architecture and Minimum Processor Speed | UltraSPARC (168 MHz) |

Table 5-1 Requirements for 7.0 SP2 on Sun Solaris 7 on SPARC (Continued)

| | |
|-------------------------------------|--|
| SDK | <p>Fully-supported</p> <hr/> <p>Sun Java 2 SDK 1.3.1_06 (32-bit) and all later service packs of 1.3.1</p> <ul style="list-style-type: none"> • Supports the Java HotSpot™ Client and Server VMs • WebLogic Integration and WebLogic Portal are configured to use the Sun Java 2 SDK 1.3.1_06 with the Java HotSpot Server VM. For details, see “Using the HotSpot Virtual Machine” in “Performance Tuning” in “System Administration” in the <i>WebLogic Portal Administration Guide</i> at the following URL: http://e-docs.bea.com/wlp/docs70/admin/sysadmin.htm <hr/> <p>Client JVM</p> <hr/> <p>Sun Java 2 SDK 1.4.1 (32-bit) with Java HotSpot™ Client VM and all later service packs of 1.4.1</p> <ul style="list-style-type: none"> • Supported only for WebLogic Server clients and the WebLogic Workshop IDE. Can be used to run WebLogic Server RMI or Web Services clients that remotely connect to a server running in a separate VM. • It is not supported by WebLogic Portal or WebLogic Integration clients and development tools. Is is also not supported by running server instances of WebLogic Server or other WebLogic Platform components. |
| Design and Development Tools | <p>Supports WebLogic Server development tools.</p> <p>For more information about WebLogic Platform design and development tools support, see “Supported Configurations for Design and Development Tools in Version 7.0 SP2” in <i>Supported Configurations for WebLogic Platform 7.0</i>.</p> |
| RAM | 512 MB required; 1 GB recommended |
| Disk Space | For any components of WebLogic Platform or for the full WebLogic Platform product, see Disk Space Requirements . |
| Performance Pack | Included |
| Node Manager | Java |

Table 5-1 Requirements for 7.0 SP2 on Sun Solaris 7 on SPARC (Continued)

| BEA jDrivers for Oracle | For this Oracle client version: | The following shared libraries are provided: |
|--------------------------------|--|--|
| | Oracle 8.1.7 | <ul style="list-style-type: none"> • lib/solaris/oci817_8/libweblogicoci38.so • lib/solaris/oci817_8/libweblogicoxa38.so |
| | Oracle 9.0.1 | <ul style="list-style-type: none"> • lib/solaris/oci901_8/libweblogicoci38.so • lib/solaris/oci901_8/libweblogicoxa38.so |
| | Oracle 9.2.0 | <ul style="list-style-type: none"> • lib/solaris/oci920_8/libweblogicoci38.so • lib/solaris/oci920_8/libweblogicoxa38.so |

Known Issues

- The 7.3.4 jDriver for Oracle is not supported with JDK 1.3.1.
- Some Solaris JVMs report an incorrect IP number. The IP number reported for the machine is the first number in the `/etc/hosts` file. Unfortunately, this number is frequently `127.0.0.1`, the standard loopback network address for the machine. This problem affects licenses granted for specific IP numbers. We have also observed this problem in a cluster where an HTTP request is passed by a Web server or another WebLogic Server via the `HttpClusterServlet`, to a WebLogic Server running on a Solaris machine with this configuration problem. The `127.0.0.1` IP number is carried with the server's response.

To determine whether you have this problem on your Solaris computer, run the following command:

```
java utils.netAddresses
```

If you see `127.0.0.1` in the output, ask the system administrator to move the computer's network IP address to the beginning of the `/etc/hosts` file.

- For information about suggested values for some Solaris TCP and VM-related tunable parameters, see “[Operating System Tuning](#)” in *BEA WebLogic Server 7.0 Performance and Tuning*.
- If you have problems with `OutOfMemory` errors and the JVM crashing with JDK 1.3, try setting: `-XX:MaxPermSize=128m`. For WebLogic Integration, use the following setting:
`-XX:MaxPermSize=256m`.

For more information about known issues with any components of this release, see the appropriate *Release Notes* document. For a complete list of *Release Notes* supporting WebLogic Platform 7.0, see:

<http://e-docs.bea.com/platform/docs70/interm/relnotes.html>

✓ Supported
✗ Not supported

Notes: The version of WebLogic Server included with WebLogic Platform 7.0 GA is version 7.0.0.1. It contains updates to the WebLogic Server 7.0 GA version (7.0.0.0). Support information that applies only to WebLogic Server 7.0 GA is identified below.

On December 31, 2005, BEA will end support for WebLogic Platform 7.0 on Solaris 7 configurations. BEA recommends that all customers currently running WebLogic Platform 7.0 on Solaris 7 upgrade to a version of Solaris for which support will be continued.

This section provides the following information:
