

BEA WebLogic Server[®]

BEA Workshop IDE Support

Version: 10.3 Tech Preview

Document Date: October 2007

BEA Workshop IDE Support

A subset of the functionality of BEA Workshop is provided to support developers using Eclipse as their development environment with version 10.3 of the server. Known as the BEA WebLogic Server Tools, these plug-ins provide full support for connecting to and managing a WebLogic Server 10.3 instance, as well as support for advanced WLS features such as split-source development and Shared J2EE Libraries.

For more information on the WebLogic Server Tools, and for download and installation instructions, see <https://dev2devclub.bea.com/updates/eclipse-3.3/wls-plugins/>.

The full BEA Workshop IDE will be available with the general release of WebLogic Server 10.3.
