

# Release Notes: Oracle AutoVue Web Services

Release 19.3  
Oracle Corp.

## Introduction

Oracle AutoVue Web Services is intended for third-party developers who want to integrate AutoVue Web Version with their applications. AutoVue Web Services is written in Java and based on Java API for XML Web Services (JAX-WS).

Clients that consume AutoVue Web Services can be written in any language as long as they understand Web Services Description Language (WSDL) and communicate using Simple Object Access Protocol (SOAP).

## System Requirements

- AutoVue Web Version 19.3 (and any service packs for 19.3).
- Microsoft Windows 2003R2 32-bit, or Windows 2003R2 64-bit (Web Services running in 32-bit mode).
- A J2EE 5 Application Server
  - Oracle AutoVue Web Services is certified with Sun Java System Application Server Edition 9.1

AutoVue Web Services uses Java annotation and other features introduced in Java EE 5. As a result, AutoVue Web Services can only be deployed on a Java EE5 certified application server.

- The following pre-19.3 VueLinks have been validated with AutoVue Web Services:
  - VueLink 19.2 for SharePoint
  - VueLink 19.2 for Oracle UCM
  - VueLink 19.2 for Documentum

**Note:** Hotfixes are required for the above VueLinks if you are planning to use AutoVue Web Services with any of them. Contact your Customer Support representative for the hotfix for your VueLink. The next release of these VueLinks will have the hotfixes rolled into them.

## **Features**

### ***Text extraction Web Service***

This Web service returns text contained in a given file.

### ***File level metadata extraction Web service***

This Web service returns metadata and properties for a given file.

### ***External References (XRefs) Web service***

This Web service returns a list of XRefs associated with a given file.

### ***Part Tree extraction Web Service***

This Web service returns a list of parts contained in a given file. For example, in the case of a 3D assembly, this Web service returns a list of parts and sub-assemblies referenced by the 3D assembly.

### ***Part level metadata extraction Web Service***

This Web service returns metadata for a given part in a given file. For example, in case of a 3D assembly, this Web service returns properties of a particular part referenced by the 3D assembly.

### ***Printing Web service***

This Web service sends a given file to a printer for printing.

### ***Conversion Web service***

This Web service converts a given file into another format such as JPEG/PDF/TIFF. For example, you can generate a thumbnail in JPEG format for a given file.

### ***Utility Web Services***

These Web services return lists of available printers and each printer's available paper sizes.

## **Included in the Media Pack**

### ***docs***

This folder contains the following documentation:

- **Overview**  
Provides an overview of Oracle AutoVue Web Services.
- **Installation and Configuration Manual**  
Describes the steps required to install and configure Oracle AutoVue Web Services.
- **Developer's Guide**  
Describes technical details of Oracle AutoVue Web Services and how to use them.

- **JavaDoc**

Contains java docs for Oracle AutoVue Web services.

- **Acknowledgments**

Lists third-party components used in Oracle AutoVue Web Services.

## ***autovue\_webservices***

This folder contains files needed to generate AutoVueWS.WAR for deployment into J2EE 5 application server:

- **AutoVueWS:** A staging folder for generating AutoVueWS.war
- **sample\_config:** Contains configuration files used by AutoVueWS.war
- **createWARfile.bat:** Batch file which generates AutoVueWS.war

## ***etc***

This folder contains the following files:

- **release.pdf:** This document
- **version.txt:** Version information
- **filelist.txt:** List of files and folders structure contained in this release
- **3rdParty:** This folder contains licenses of the included software components developed by 3rd party companies. It has the following subfolders:
  - **apache:** This folder contains licenses of the included software developed by the Apache Software Foundation (<http://www.apache.org/>)
  - **sun:** This folder contains licenses of the included software developed by the SUN Microsystems Inc. (<http://www.sun.com/>)

## **Known Issues**

- The text extraction Web method, *getText*, does not work for Office formats (MS Word, Excel, and Outlook); only 2D vector formats are supported. For PDF and other formats that have large blocks of text, this method might return incomplete text.
- When the rendition option is set for the convert Web method, the generated file is not returned to the Web services client application, but is instead checked into the DMS repository.
- When the rendition option is set for the convert Web method, a valid output format is limited to the DMS integration-supported format.
  - TIFF is the only valid format for VueLink 19.2 for SharePoint and VueLink 19.2 for Documentum.
  - Rendition is not supported for VueLink 19.2 for Oracle UCM.
- The convert Web method for the PDF format is not supported for 3D files.
- When the *cameraViews* option is set to an option other than NONE in the Conversion Web service, there are some limitations for other parameters of convert Web method:
  - Converting to PNG is the only supported return format. If you select other formats, AutoVue Web Services returns an error message.

- Modify scaling for the conversion output is not supported. You can only set *ScaleType* to `TYPE_SIZE`. If you set *ScaleType* to `TYPE_SCALE`, AutoVue Web Services returns an error message.
  - Opening markups is not supported. You must set *openAllMarkups* to `FALSE`. Otherwise, AutoVue Web Services returns an error message.
  - Parameters *page*, *height*, and *width* are mandatory.
  - Other parameters (*colorDepth*, *isRendition*, *scaleFactor*, and *stepPerInch*) are optional.
- Testing on our end has revealed certain issues with the `convert Web` method when using NetBeans IDE 6.1. If you run into certain issues, use NetBeans IDE 6.0.1 or another IDE.
- When calling the *getPartTree()* method, the returned entity IDs are different if the base file is loaded from the streaming file instead of the native file. This is important to consider if you use the returned entity ID to call the *getPartProperties()* method. For more information, refer to the “Troubleshooting” section of the *Oracle AutoVue Web Services Installation and Configuration Manual*.
- AutoVue Web Services does not support loading files from the client side to the AutoVue server. The upload path for local files should be addressed from the Web Services hosts and not from the machine where the client is running.
- When the *openAllMarkups* option is set for printing or for the `convert Web` method, or when using the upload protocol for files on the Web Services hosts, the syntax for the URIs pointing to local files should be as follows:  
**upload://C:\\<folder>\\<filename.ext>**  
**Note:** Backward slashes (“\\”) are used in the file path name.
