The Oracle Technology Network (OTN) Web site (<http://www.oracle.com/technology/documentation/agile.html>) contains the latest versions of the Agile Advantage PDF files. You can view or download these manuals from the Web site, or you can ask your Agile administrator if there is an Agile Advantage Documentation folder available on your network from which you can access the Agile Advantage documentation (PDF) files.

Note To read the PDF files, you must use the free Adobe Acrobat Reader™ version 7.0 or later. This program can be downloaded from the Adobe Web site (<http://www.adobe.com>).

Accessibility of Code Examples in Documentation

Screen readers may not always correctly read the code examples in this document. The conventions for writing code require that closing braces should appear on an otherwise empty line; however, some screen readers may not always read a line of text that consists solely of a bracket or brace.

Accessibility of Links to External Web Sites in Documentation

This documentation may contain links to Web sites of other companies or organizations that Oracle does not own or control. Oracle neither evaluates nor makes any representations regarding the accessibility of these Web sites.

CHAPTER 1

Agile Advantage API Reference

This chapter provides developer documentation for the Agile Advantage API.

It contains the following topics:

- ❑ *Constants*
- ❑ *Constants*

Constants

The Agile Advantage API uses several sets of enumerated constants. These meaningful constants make your code easier to read. Wherever possible, you should use a string constant instead of its number because the number may change with subsequent releases of the Agile Advantage API. Some development environments, such as Visual Basic for Applications (VBA), do not support the Agile Advantage API enumerated constants. For those environments, use the numbers listed in the constant tables.

ActivityQuery Type Constants

Types of Activity reports.

Table 1-1: ActivityQuery type constants

Name	Number	Description
aqtUnknown	0	Reserved for future use
aqtItem	1	The Item Activity report
aqtChange	2	The Change Activity report

CCBQuery Interval Type Constants

Type of time interval used for the CCB report.

Table 1-2: CCBQuery interval type constants

Name	Number	Description
cqitUnknown	0	Reserved for future use
cqitNone	1	No time interval is selected
cqitDay	2	Day time interval
cqitWeek	3	Week time interval
cqitMonth	4	Month time interval
cqitQuarter	5	Quarter (three months) time interval
cqitYear	6	Year time interval

CCBQuery Value Type Constants

Types of values represented by a cell in a CCB report. These constants are used with `CCBQuery::GetItemValue`.

Table 1-3: CCBQuery value type constants

Name	Number	Description
cqvtDaysSince-InitialState	0	Value for the number of days since the initial state was set
cqvtDaysAt-CurrentState	1	Value for the total number of days at the current state
cqvtDaysBetween-States	2	Value for the number of days since the previous state to the current state

CCBQuery Type Constants

Types of CCB reports.

Table 1-4: CCBQuery type constants

Name	Number	Description
cqtUnknown	0	Reserved for future use
cqtChangeMetrics	1	The Change Metrics report
cqtChangeBacklog	2	The Change Backlog report
cqtChangeCycleTime	3	The Change Cycle Time report

CriteriaBag Logical Operator Constants

Constants that define the logical relationship between one set of criteria and another set. When you have two or more sets of criteria, also called search conditions, the relationship between them is defined as either a logical And or Or.

The And operator narrows a search by requiring that both conditions are met. Each search result must match both conditions.

The Or operator broadens a search by including any result that meets either condition. Each search result must at a minimum match at least one of the conditions.

Table 1-8: CriteriaBag logical operator constants

Name	Number	Description
cbloNone	0	No logical operators assigned
cbloAnd	1	AND operator; narrows a search by requiring that both search conditions are met
cbloOr	2	OR operator; broadens a search by including any result that meets either search condition

Criteria Bag Relational Operator Constants

Constants that define how a criteria attribute relates to the specified value for which you are searching. For example, if you are searching for Changes whose “Cover Page.Number” starts with C1, the relational operator constant is `cbroStartsWith`. There is only one relational operator specified for each criterion in the CriteriaBag object.

Table 1-9: CriteriaBag relational operator constants

Name	Number	Description
cbroEQ	0	Equal to
cbroNEQ	1	Not equal to
cbroGT	2	Greater than
cbroGE	3	Greater than or equal to
cbroLT	4	Less than
cbroLE	5	Less than or equal to
cbroLike	6	Like (matches any single character)
cbroNotLike	7	Not like (does not match any single character)
cbroStartsWith	8	Starts with

Table 1-9: CriteriaBag relational operator constants

Name	Number	Description
cbroNotStartsWith	9	Does not start with
cbroContains	10	Contains the specified value
cbroNotContains	11	Does not contain the specified value
cbroIsNull	12	Contains no value
cbroIsNotNull	13	Contains a value
cbroNull	14	No relational operator specified

Query Logical Operator Constants

Logical operator constants correspond to logical operators supported for queries. When you have two or more sets of query criteria, also called search conditions, the relationship between them is defined as either a logical And or Or. You can specify a logical operator constant when using Query::SetCriteriaData.

The Where Used set operators (loUnion, loIntersect, or loMinus) allow you to further define relationships between grouped search conditions.

You cannot use the And/Or logical operator in the same search condition row as a Where Used set operator. Except for the last row, each row in the search conditions table must have one and only one operator: either a logical operator (loAnd or loOr) or a Where Used set operator.

Table 1-30: Query logical operator constants

Name	Number	Description
qloNone	0	No logical operators assigned.
qloAnd	1	AND operator. Narrows a search by requiring that both conditions are met.
qloOr	2	OR operator. Broadens a search by including any result that meets <i>either</i> condition. Each search result must at a minimum match at least one of the conditions.
qloUnion	3	Produces records that are the combination of results from two groups of search conditions.

Table 1-30: Query logical operator constants

Name	Number	Description
qloIntersect	4	Produces records that appear in both result sets from two different groups of search conditions.
qloMinus	5	Produces records that result from the first group of search conditions but not the second.

Query Relational Operator Constants

Relational operator constants correspond to relational operators supported for queries.

Query Type Constants

Constants that identify the different types of Agile queries. You can use query type constants to test the type of Agile query before you open, edit, or save a query.

Table 1-32: Query type constants

Name	Number	Description
qtPrivate	0	Queries that are accessible only to the query owner; also known as Personal Searches. Only the query owner can modify a private query.
qtPublic	1	Queries that are accessible to all Agile users; also known as Global Searches. Only users with sufficient privileges can save and modify public queries.
qtSystem	2	Predefined queries included with the Agile system. Most system queries cannot be renamed, edited, or deleted.

Row Action Type Constants

Types of actions that can be performed on a row of an Agile Advantage table. The Agile Advantage eHub automatically logs most row actions to the history list. Some actions, such as printing a tab or getting an attachment, must be logged to the history list using `Row::LogAction`.

Table 1-33: Row action type constants

Name	Number	Description
ratGetAttachment	1	Equivalent to getting an attachment from the Attachments table
ratPrintTab	14	Equivalent to printing a tab

Row Operation Constants

Types of operations that can be performed on a row in an Agile Advantage table. You can use row operation constants to check if a particular operation is valid. If the operation is invalid, `Row::CheckValidOperation` or `DataObject::CheckValidOperation` returns 0.

Table 1-34: Row operation constants

CHAPTER 3

Error Messages

This chapter lists runtime errors for the Agile Advantage system.

Table 3-1 shows the complete list of runtime errors for the Agile Advantage system. A percent symbol (%) in the message represents a parameter that is inserted into the error message.

By default, all error messages are enabled. A checkmark (✓) in the Can Be Disabled column in the following table indicates an error message that can be disabled using `Base.disableError()`. To enable an error message after it's been disabled, use `Base.enableError()`.
